TO

HIS ROYAL HIGHNESS

GEORGE AUGUSTUS FREDERICK,

PRINCE OF WALES, DUKE OF CORNWALL AND

ROTHSAY, &c. &c. &c.

AND

PRINCE REGENT

OF THE

United Kingdom of Great-Britain and Ireland.

SIR,

IMPELLED by a desire of being useful to my native country and to its parent state, it is with the utmost deference I most respectfully offer to your Royal Highness's acceptance a Topographical Map and Description of the Province of Lower Canada, completed after several years of unremitting efforts, and I may venture to add of unwearied diligence. If it

1074530

should obtain the distinguished favour of being honoured by your approval, I shall ever consider such a circumstance as an additional testimony of the readiness with which your Royal Highness patronises any work that may convey information of real utility, however humble, rather than as an indication of superior talent on my part. A servant of our revered Monarch for the greatest part of my life, I have ever believed it incumbent to repay the trust reposed in me, by making the public service a consideration paramount to all others, whenever the performance of my duties or other personal exertions could in any way contribute thereto. This desire, acting as the main spring of my endeavours, has induced me to think, that whatever has a tendency to demonstrate the actual state of the Canadas, and to place their greatly improvable resources in a true point of view, as valuable jewels of the British diadem, would neither be deemed unimportant nor destitute of advantage; I have therefore directed all the abilities at my disposal towards that

object. If I have been at all successful, the gracious benevolence of your Royal Highness will cause me to lament the limited capacity displayed in performing the task imposed upon myself. By birth a Canadian, I have at a distance contemplated with admiration and heart-felt reverence the unequalled blessings of our constitution, which holds its protecting ægis over the most remote as powerfully as over its domestic subjects, and has so bountifully extended its inimitable purity and justice to my fellow countrymen in particular; but this reverence is exalted to the highest degree now that I experience how it endues an individual like myself, from another hemisphere, with the privilege freely to approach his Sovereign, and lay the result of a well intentioned labour on the steps of the Throne. Scarcely with diminished admiration do I express my acknowledgments for the courtesy that your Royal Highness has so condescendingly shewn, by permitting my performance to make its appearance under your auspices;

such a mark of distinction will increase the grateful impressions with which I feel proud to subscribe myself,

Your Royal Highness's

Most devoted, faithful,

and most obedient servant,

JOSEPH BOUCHETTE.

PREFACE.

THE surrender of Quebec to the army of General Wolfe, in the year 1759, ultimately gave England possession of the immense extent of territory that now forms the provinces of Upper and Lower Canada. The value of the conquest was highly rated while the glorious circumstances of the victory continued to attract universal admiration; but after the ebullitions of joy had abated, the magnitude and importance of the acquisition became less attended to, and in a short time it obtained scarcely a greater share of consideration than the other North American provinces. In the war waged by the colonies against the mother country, the population of Canada, although so recently become British subjects, resisted with fidelity every attempt that was made to seduce them from their new allegiance, and with bravery repulsed every endeavour to subdue them by force. Such devotedness was highly appreciated, and England, at the termination of that unnatural contest, turned her at-

tention towards giving an increased consequence to her remaining possessions, with the design of drawing from them some of the supplies she had been accustomed to receive from the countries just separated from her dominion. This greatly brightened the prospects of the colonists, and gave a fresh spur to their industry, whereby both agriculture and commerce were considerably extended. But unfortunately the hopes thus excited were soon repressed by the great advantages given to the people just protruded upon the world as an independent state, and against whom it was not in the power of the colonies to contend successfully in the great market, that of supplying the West India islands with provisions and timber, owing to the commercial regulations being formed so eminently favourable to their opponents. The importance of these provinces should be estimated less by their territorial extent than by the resources they already offer, their capabilities of improvement, and the great increase that may be given to their commerce, which even now will be seen, on an examination of their export and import returns, to require something more than 300,000 tons of shipping. Ships thus employed and navigated by British subjects secure the ad-

ditional advantage of furnishing a supply of hardy and experienced seamen, whenever it may be necessary to send forth the warlike fleets of Britain to repel aggression or defend her possessions; the nature of the freights too from these provinces is of first rate consequence, as they consist of articles of indispensable necessity to the West India islands, and large quantities of timber for naval uses to England; and to which could be added, in a very few years, other naval stores at present supplied by other countries. The real value of these colonies to the parent state, and the great amelioration they are susceptible of, appears to have been known hitherto, on this side of the Atlantic; but by a few persons having some connection with them: however, it may be reasonably expected that a more minute investigation will ere long take place upon this subject, from seeing the efforts recently made by the Americans to obtain them; and which will most assuredly be repeated should a convenient occasion ever again present itself. Towards their permanent security the attention of government may be profitably turned in several ways; one of the most prominent is the encouragement of agricultural improvement. Of the many hundred thousand acres of excel-

lent land now covered by thick forests, much would be cleared and soon brought into cultivation, were adequate inducements given by the supreme authority, to promote the introduction of a regular, judicious, and practical system of husbandry: in fact, to shed prosperity over the province, little more is required than to subject the soil to the operation of the plough. If a spring be given to the industry of the cultivator, amendment in most other branches of political economy is a matter of course; the substantial riches and internal strength of every country are produced by it, and it is also the cause of wealth flowing in from other states. Twenty-five years of the most arduous and expensive warfare that ever exhausted a country have at length, by England's fortitude, and an achievement in arms transcending in lustre and heroism all her former recorded glories, opened upon us the prospect, and, we are authorised to hope, laid the foundation of a peace that will be uninterrupted for a long series of years. During such a protracted time of general exertion and sacrifice, when our country was struggling to maintain its existence as a first rate nation, it will not greatly excite our wonder, that although many plans of national improvement have been

adopted, many more should have been unwillingly laid aside until the coming of a more propitious period for carrying them into effect. That period, so long sighed for by suffering millions, is perhaps nearly arrived, when the talents and attention of statesmen will have no other view than to diminish the chance of similar calamities recurring, and to give energy and fresh vigour to industry and the arts of peace; at such an epoch the wants and claims of the British North American provinces will undoubtedly obtain the notice they are entitled to. In what manner their internal situation can be most beneficially improved, their population most speedily increased by the encouragement of industrious settlers, and particularly the cultivation of hemp and flax supported, which may, in fact, be pursued to almost any extent, belongs to the sagacity of political economists to point out; and if the means proposed should receive the countenance and support of the imperial government, their safety, welfare and prosperity will neither be dubious, or, after a short period, liable to sustain serious injury from casualties. The interior of Lower Canada being so little known beyond the limits of the province, a belief that a detailed account of it would not only be useful by shewing its present state, but by

bringing it under more general notice, might possibly assist in the developement of its vast resources, has led to the construction of a Topographical Map upon a large scale, and to the publication of the following Book to illustrate the same more fully. The result of several years continued labour is now presented to the world, but not without its author's feeling the greatest diffidence in bringing his work before the tribunal of public opinion, of whose decisions even the most scientific and accomplished often feel a dread. The manner and method of the performance must speak for themselves, but of the subject matter it may be worth while to say a few words; and on this point he may perhaps be pardoned for a little self-gratulation, when he notes with confidence the authenticity and correctness of the materials he has had to work upon, which principally consist of the valuable documents and official records, that in his capacity of Surveyor-General of the Lower Province, are lodged with his department, and which he has been permitted the free use of. These, as accurately descriptive of the date and extent of the feudal tenures, and of all the grants made by the English government, may consequently be relied upon; beside this source, a long period of pro-

fessional field service has enabled him to acquire a very critical local knowledge of almost every part of the province, and to verify the same by numerous surveys, and careful observations on the nature, quality, and properties of the best and most valuable tracts; and from which he ventures to believe he has been able to present a body of information, relative to this part of the British Trans-Atlantic dominions, that has, up to this period, been sought for in vain from any other work. Nothing has been admitted into the description without mature reflection, nor any thing but what he entertains a well grounded confidence is borne out by the actual state of the country. What is said of the province of Upper Canada is the substance of notes and memoranda made in that country very recently, as well as a knowledge obtained of it during an anterior service of six years as an officer of the provincial navy upon the lakes; these have been corroborated and enlarged from other sources of undeniable intelligence and veracity. If in the detail of the work he may be thought prolix, it has arisen from a desire to display the features, the nature, and the productions of the country in such a manner as to point out where it is most susceptible of amelioration, and its agriculture of

being carried beyond the limited science and experience of Canadian farmers, with prospects of success amounting almost to an absolute certainty. Neither on the style or arrangement of his book will he presume to trouble the reader with a single remark, but, sensible as he is of its being defective in both points, he throws himself upon the public candour. His object is to convey information that he feels assured is wanted, and he has to lament the scope of his abilities being incompetent to second his wishes to the utmost extent, by finishing the sketch with a more masterly hand, or as most likely it would have been done by any person whose occupations have permitted him to devote more time to literary pursuits. Three and twenty years of his life have been passed in the service of government, both in its civil and military branches, wherein the duties have almost always been of too active a description to afford much of the quiet and repose, so necessary for the attainment of science, and such a maturity of knowledge as prepares a writer for launching himself upon the ocean of public opinion with a fair chance of acquiring fame. To such a hope, the *ignis fatuus* that has deluded so many, he conscientiously disclaims any pretension, but an honest, though humble zeal to

procure some advantage to the land of his birth, by impartially giving it that character, and holding it forth in that true light through whose medium he firmly believes it ought to be viewed, has been the cause of intruding himself upon the public attention; and if his feeble endeavours should have the good fortune to obtain approbation, rather for the attempt than their real merits, his greatest ambition will be amply gratified.

LONDON,
November, 1815.

and to look after the property of the
 deceased and to see that the same is
 properly distributed to the persons
 entitled to it. It is also the duty
 of the executor to see that the
 debts of the deceased are paid
 and to see that the same are
 properly accounted for to the
 persons entitled to the property.

Yours truly,
 J. H. [Name]

TOPOGRAPHICAL DESCRIPTION,

&c.

ANTECEDENT to the year 1791, the whole extent of country now known as Upper and Lower Canada was denominated the province of Quebec, but as difficulties occurred in managing the concerns of so large a track, it was judged expedient, for better regulating and more effectually providing for its government, that it should be divided into two provinces; which plan was sanctioned by an act of the British parliament.

The province of Lower Canada lies between 45 and 52 degrees of north latitude, and 63 and 81 of west longitude, nearly, from Greenwich. It is bounded on the north by the territory of the Hudson's Bay company or East Maine; on the east by the gulf of St. Lawrence, the river St. John, and that part of

the Labrador coast *, which was, by an act of the British parliament in 1809, together with the island of Anticosti at the mouth of the St. Lawrence, finally annexed to the government of Newfoundland; on the south by New Brunswick and part of the territories of the United States, viz. the district of Maine, the province of New Hampshire, the state of Vermont, and the state of New York; and on the west by a line which separates it from Upper Canada, as fixed by the first mentioned act of parliament, and promulgated by proclamation in the province on the 18th day of November 1791, as follows:

“ To commence at a stone boundary on the
 “ north bank of the lake St. Francis, at the
 “ cove west of Pointe au Baudet, in the limit
 “ between the township of Lancaster and the
 “ seigniory of New Longueil, running along
 “ the said limit in the direction of north, 34
 “ degrees west, to the westernmost angle of the
 “ said seigniory of New Longueil; then along
 “ the north-western boundary of the seigniory
 “ of Vaudreuil, running north, 25 degrees east,
 “ until it strikes the Ottawa river; to ascend

* Under the French government this portion of the Labrador coast was deemed within the province of Quebec; in 1764 it was separated therefrom by act of parliament, and annexed to the government of Newfoundland; it was afterwards re-incorporated with the province of Quebec, and in 1809 finally subjected to the governor of Newfoundland.

“ the said river into the lake Temiscaming,
 “ and from the head of the said lake by a line
 “ drawn due north, until it strikes the bound-
 “ ary line of Hudson’s Bay, including all the
 “ territory to the westward and southward of
 “ the said line to the utmost extent of the
 “ country commonly called or known by the
 “ name of Canada *.”

* This western boundary, as just recited, must have been founded upon an erroneous map of that part of the country, whereon the westerly angle of the seigniorie of New Longueil, and the south-westerly angle of the seigniorie of Vaudreuil are represented as co-incident; when, in reality, they are about nine miles distant from each other: the true intent and meaning of the act appears to be as follows: viz. That the boundary between Upper and Lower Canada shall commence at the stone boundary above Pointe au Baudet, and run along the line which divides the township of Lancaster from the seigniorie of New Longueil, (and this line it is necessary to observe, as well as most of the seigniorial lines of the province, ought to run north-west and south-east, reckoning from the astronomical meridian, in conformity to an ancient ordinance of the province, or “ Arrêt et reglement du conseil superieur de Quebec, daté 11 de Mai 1676”) to the westerly angle of the said seigniorie; thence along a line drawn to the south-westerly angle of the seigniorie of Rigaud, and continued along the westerly line of Rigaud until it strikes the Ottawa river, as represented on the topographical map by the letters AB, BC, CD. It must be observed that the westerly line of the seigniorie of Rigaud, as well as the other lines on the Ottawa, ought to run by the ancient ordinance, nord quart-nord-est, equal to 11 degrees 15 minutes east from the astronomical meridian. There is also a variation between the bearing of the Lancaster township line and the seigniorial line of New Longueil, when, in fact, they ought to be precisely the same; and some grants that have been made by government are supposed to infringe upon the seigniorie, from which law-

The etymology of the name of Canada is very uncertain, and whether given by its aboriginal inhabitants, or bestowed by its first European discoverers, there is not sufficient authority to warrant a positive decision; therefore, it must suffice to say, that since the year 1535, when Jacques Cartier, a Frenchman, explored the river St. Lawrence, so called by him from first entering it on St. Lawrence's day, we find the name of Canada applied to the country on both sides of the river as far as he ascended it. Cartier had visited the gulf of St. Lawrence in 1534, but did not attempt any discoveries beyond its shores, although most probably he conceived a design at that time, and sketched a plan of operations, which was put into execution the year following, when he sailed up the river to Montreal, or rather the Indian village, on the spot where that city now stands. Here ended his researches, and Canada has attained its present extension by the various discoveries of indus-

suits between the grantee of the crown and the seignorial tenant have originated; others may, perhaps, frequently recur, as this part of the province is now in a flourishing state of cultivation, unless the governments of both provinces bestow some consideration upon the subject, now that the claims of individuals settled on each side of the line may be more easily adjusted, than after long and undisturbed possession has produced great improvement upon the estates.

trious or adventurous settlers at many different periods. From the time of its being taken possession of by Europeans, the government and management of the country, under French dominion, was very irregular, and not unfrequently disastrous; being entrusted either to trading companies more eager to extract present profit than prudent in proposing designs for the future aggrandisement of an infant colony, or, to daring individuals who had interest enough to procure commissions to conquer and settle wherever their arms could make them masters of the soil. Nor did this system vary much until the year 1663, when the court of France, beginning to entertain more distinct ideas of its importance, thought proper to bestow attention upon the administration of its concerns, and raised it to the dignity of a royal government. From this period its governors were appointed by commission from the king; and the colony, hitherto but little noticed, became generally known to Europe as Canada, or La Nouvelle France. At this time the population very little exceeded 7000 souls: but under the new arrangement and better management, with the advantages derived from its trade, now left almost free, an accelerated progress, from barbarism and poverty towards civilization and prosperity, be-

came visible. If the policy of its governors had been exerted to conciliate the surrounding native tribes, and avoid the destructive wars with them, by which it was continually distressed, it is not unreasonable to presume that its advance to a flourishing state would have been as rapid, or, from its local advantages, probably more so than colonies are in general; but, unhappily, as a conciliatory system was never, or if at all but rarely adopted, the numerous incursions of the Indians, whose movements were always traced by the devastation they committed, paralyzed its efforts so much, that in 1714 the population could hardly number 20,000 souls. Other and very great disadvantages were felt from the wars carried on between the mother country and England*, which invariably extended their disastrous influence to the colonies, and were indeed waged by the colonists on both sides with a rancour and animosity unknown between the chief belligerents. Under the pressure of such frequent and protracted calamities, any amelioration could scarcely be expected, and the affairs of Canada continued to fluctuate be-

* In 1629 Canada was taken by the English, but was then held in so little estimation, that three years afterwards they again transferred it to its former owners, deeming their conquest not worth the expense of maintaining.

tween partial benefits and positive evils, until it became the conquest of the English arms, directed by the victorious genius of General Wolfe in 1759; at which period the population of the country may be estimated at 70,000. A new epoch in the history of the province now opens; from this date its prosperity has been progressive, and if not aided by every powerful stimulus that might have been applied, yet it has never been retarded by its new government, either from parsimony or partiality to more ancient possessions. On the termination of the successful enterprize against Quebec, which placed the whole of the French possessions under British dominion, the conquerors lost no time in devising measures which would make the change of allegiance from one sovereign to another as little onerous to the inhabitants as the nature of such a circumstance could permit, and endeavoured to frame them in such a manner as to shew a liberality that might be likely to attract their good-will. This was in some degree effected, by allowing their laws to remain unaltered; securing to them quiet possession of their lands under their ancient tenures; the free and undisturbed use of their religion; the inviolability of all religious property; and by many other concessions of importance, which rendered changes

of customs and peculiar habits almost unnecessary. The Canadian was so far fortunate, that he passed from the dominion of one sovereign to that of another professing a different religious faith, without prejudice to his own style of living, his form of worship, his long practised modes of commerce and traffic, or the education of his children. From this period until the commencement of the war between England and her revolted American colonies, the greatest improvement that did take place is to be found in the stability and regularity acquired by the new government in all its branches, and in the strong affectionate attachment evinced by the Canadians towards a constitution that confirmed and protected them in all their natural as well as acquired rights. The strength of this attachment was decidedly and unequivocally shewn by the enthusiasm with which they fled to arms, and in the courage with which they fought to repel every aggression offered to their soil by the inveterate enemies who were so lately their fellow-subjects. Some increase in the population is observable, for in the year 1775 it amounted to something more than 90,000, in which estimate the present province of Upper Canada is included; but as very few settlements had as yet been made there, its inhabitants could form

but a very trifling difference in the census. The American army that had entered Canada obtained some successes, but not of such a magnitude as to be enabled to maintain its ground for any considerable period; for in the latter end of the year just mentioned, it was expelled from the territory in a manner that must have conveyed to it but slender hopes of achieving any thing beyond temporary advantages at any future period; so long as the native of the soil remains firm in the loyalty and love of his country which had stimulated him to such vigorous efforts for the expulsion of its enemy*. Invasion so repelled produced security enough for agricultural and commercial pursuits to be carried on without fear of molestation, and which from that time have been continued in a gradual increase to their present conspicuous magnitude, with much benefit to the individuals, but more important

* As one of these natives, I can take upon myself to say in behalf of my countrymen, from the accurate knowledge I possess of their sentiments and feelings, that the services they then rendered, as well as the more brilliant exploits they recently performed against the same enemy, but now become more malignant and implacable, are proofs of an unalterable attachment to their government, as far as that term can be fairly applied to the minds of a grateful people; and they are also indices by no means equivocal, that the energies of such a people, mildly and honorably ruled as they now are, will always rise commensurate with the magnitude of the dangers that menace them.

advantage to the state. With the increase of agriculture, from whence flow the fundamental riches of every state, commerce and all the useful arts usually experience a relative amelioration; an enlarged population is invariably the consequence; and in the course of 39 years a capitulation shews an increase to have taken place from 90,000 to no less a number than 335,000 souls, as the whole population of the province of Lower Canada. This aggregate, drawn from sources, and formed upon data that cannot deviate much from the general correctness of round numbers, will be viewed with astonishment by every reflecting person; and must convey to the mind a powerful conviction of the importance of such a colony, whose natural resources, as yet but partially unfolded, have, in so short a space of time, been the means of fostering so vast an increase. Of this total number 275,000 may be called native Canadians, descendants of the original French settlers; the remainder is composed of a mixture of many nations, as English, Scotch, Irish, Americans; in fact, almost of every nation.

At the time this country fell under the English government, the feudal system universally prevailed in the tenure of lands, and which, as before mentioned, still continues

with respect to such as were then granted; but the townships and tracts disposed of by the British administration have been granted in free and common soccage; only two or three instances to the contrary being known.

By the ancient custom of Canada, lands were held immediately from the king *en fief*, or *en roture*, on condition of rendering fealty and homage on accession to the seignorial property; and in the event of a transfer thereof, by sale or otherwise, except in hereditary succession, it was subject to the payment of a *quint*, or the fifth part of the whole purchase money, and which, if paid by the purchaser immediately, entitled him to the *rabat*, or a reduction of two-thirds of the *quint*. This custom still prevails.

The tenanciers, or holders of lands *en roture*, are subject to some particular conditions, but they are not at all burthensome; for instance, they pay a small annual rent, usually between 2s. 6d. and 5s. (though in many seigniories the rents of new concessions have been considerably increased); to this is added some article of provision, such as a couple of fowls, or a goose, or a bushel of wheat, or something else of domestic consumption. They are also bound to grind their corn at the *moulin banal*, or the lord's mill, where one-fourteenth part of it is

taken for his use as *mouture*, or payment for grinding; to repair the highways and by roads passing through their lands, and to make new ones, which, when opened, must be surveyed and approved by the grand voyeur of the district, and established by proces verbal. Lands are sometimes held by *bail ampiteotique*, or long lease of 20, 30, 50, or any number of years, subject to a very small rent only. *Franc alleu* is a freehold, under which lands are exempt from all rights or duties to seigneurs, acknowledging no lord but the king. *Censive* is a feudal tenure, subject to an annual rent, paid either in money or produce.

The *seigneurs*, by the old laws that have not been repealed, are entitled to constitute courts and preside as judges therein, in what is denominated *haute et basse justice*, which take cognizance of all crimes committed within their jurisdiction, except murder and treason. This privilege has lain dormant ever since the conquest, nor is it probable that it will ever be revived, as such ample provision is made for the regular administration of the laws. The *lods et vents* constitute part of the seigneur's revenue. It is the right to a twelfth part of the purchase money of every estate within his seigniory that changes its owner by sale, or other means equivalent to a sale. This twelfth

is to be paid by the purchaser, and is exclusive of the sum agreed upon between him and the seller; for prompt payment of it a reduction of a fourth part is usually made. In cases of a sale of this nature the lord possesses the *droit de retrait*, which is the privilege of pre-emption at the highest bidden price within forty days after the sale has taken place; it is, however, a privilege but seldom exercised. All the fisheries within a seigniorie contribute to increase the proprietor's revenue, as he receives a tithe of all the fish caught, or an equivalent sum. Besides these rights, he is privileged to fell timber anywhere within his seigniorie for erecting mills, repairing roads, or constructing new ones, or other works of public and general utility. Many proprietors of seigniories have become very wealthy from these revenues, as the sales and exchanges of estates have been of late years very numerous. Lands held by Roman Catholics under any of the aforementioned tenures are further subject to the payment to their curates of one twenty-sixth part of all grain produced upon them, and to occasional assessments for building and repairing churches, parsonage houses, or other works belonging to the church. The remainder of the granted lands within the province, not held under any of these tenures, are in free

and common soccage, from which a reservation of two-sevenths is made; one thereof is appropriated to the crown, and the other set apart for the maintenance and support of the Protestant clergy. Many of the lots thus reserved for both purposes are now leased for twenty-one years on the following conditions: viz. for the first seven years twenty-five shillings, or eight bushels of wheat per annum; the second seven years fifty shillings, or sixteen bushels of wheat; and for the remainder of the period seventy-five shillings, or twenty-four bushels of wheat per lot: the lessors having the option of requiring payment to be made in either of the modes stipulated*. These reserves have, for many years past, been exposed to various and very extensive depreciations by persons settling thereon and occupying many of the best lots without any title or payment of any rent; and by others felling and carrying away much of the finest

* In 1812 the quantity of land thus reserved amounted to 1,438,872 acres, out of which 363 lots of 200 acres each were let on lease for twenty-one years on the terms above recited. The total value thereof for that period will be found £19,057 10s. currency of the country, or one-ninth part less than sterling; but if the wheat rent be taken, and calculated upon an average price of 6s. 8d. per bushel, a rate rather below the medium price in the province, the amount will be £40,656. In the same year descriptions of 307 lots were made out for different applicants, and a great many of them have since been let.

timber, especially on those situated along the borders of the rivers; these trespasses, it is well known, are chiefly committed by natives of the United States. It cannot be doubted but that a remedy might be very easily applied to this evil.

In forming the plan of government for Canada, the general principles of the English constitution were introduced wherever it was practicable: in the upper province no impediments to this course of proceeding were met with; but in the lower one some small deviations from them were found necessary, in order to reconcile it to the genius of a people so long accustomed to a different regime. The civil department is administered by a governor, who is generally a military officer and commander of the forces, a lieutenant governor, an executive council, a legislative council, and a house of assembly, or the representatives of the people. The governor and lieutenant governor naturally exercise their authority under the royal commission. The members of the executive council, amounting to seventeen, derive their appointments from the king, and this body exercises a direction over the concerns of the province, nearly similar to that of the privy council in the affairs of England. The legislative council, by the act of the con-

stitution, consists of fifteen members (although at present that number is increased), all of whom are appointed by mandamus from the king, and may be termed the second estate of the province; and, with the third branch or house of assembly, forms the provincial parliament. The governor is invested with power to prorogue, and in the exercise of his own discretion, to dissolve the parliament; to give the royal assent or refusal to bills passed by it, or to reserve them in cases of doubt or difficulty, until his majesty's pleasure be made known thereon. Such acts as receive the governor's assent are usually put into immediate force, but he is enjoined to have copies of them transmitted to England, that they may receive the approbation of the king in council, and his majesty has the right, with the advice of his council, to cancel any act so passed by the provincial parliament within two years from the date of its arrival in England; but hitherto its wisdom has been so well directed in the arduous task of legislating, that there is no instance on record of this prerogative ever having been exercised. The acts that emanate from the provincial parliament are all of a local nature, such, for instance, as providing for the internal regulations of the country through the various departments; for its defence as far as

relates to enrolling and embodying the militia, and imposing taxes for raising the necessary supplies to defray the expenses of government. But any acts having for their object the alteration or repeal of any laws existing antecedent to the constitution granted in 1791; the tithes; grants of land for the maintenance of the Protestant clergy; the rights of presentation to rectories or the endowments of parsonages; whatever relates to the exercise of religious worship, or disqualification on account of religious tenets; the rights of the clergy; to changes or modifications of the discipline of the church of England; or of the royal prerogative on the subject of waste crown lands, must, after having passed the provincial parliament, be submitted to the British parliament, and receive the royal assent before they can pass into laws. The house of assembly is composed of fifty-two members, and is a model on a small scale of the house of commons of the imperial parliament; the representatives are extensive proprietors of land, and are elected for the districts and counties by the votes of persons being actual possessors of landed property of at least forty shillings clear annual value: for the city of Quebec and the towns, they are chosen by voters who must be possessed of a dwelling-house and piece of

ground of not less annual value than five pounds sterling, or else have been domiciliated in the place for one year previous to the writ of summons issuing, and have paid one year's rent, not under ten pounds sterling, for a house or lodging. There exists no disqualification either for the electors or the elected on account of religious tenets, for, in this country, where toleration reigns in its plenitude, every one, whatever may be his faith, is eligible to fill any office or employ, provided the other qualifications required by law are not wanting. The sittings of the house begin in January, and all the public and private business is usually gone through by the latter end of March, about which time it is prorogued, so that the session never exceeds the term of three months between January and April. Should parliament not be dissolved by the governor, a circumstance that, indeed, very seldom occurs, its duration is limited by the act of the constitution to the period of four years, when its functions expire, and writs are immediately issued for the election of another: at such a crisis the independence and energy of the various voters, the professions and humility of the candidates, are as strikingly portrayed as in the more turbulent contests that take place on similar occasions in the mother

country. The criminal code of the united kingdom extends to Canada, and is carried into effect without the slightest variation. For the administration of civil justice there is a court of appeal, in which the governor presides, assisted by the lieutenant governor, not less than five members of the executive council, and such of the principal law officers as have not had cognizance of the previous trial; against the decisions of this court, as a final resource, an appeal may be made to the king in council. A court of king's bench, a court of common pleas, with each a chief justice and three puisne judges. Quarter sessions of the peace held four times a year, besides a police and subordinate magistrature for determining affairs of minor importance.

From its having been already mentioned that by far the largest portion of inhabitants are descended from French ancestors, the reader will readily surmise that the prevailing religion is Roman Catholic; of this persuasion there is a Bishop of Quebec, a co-adjutor with the title of Bishop of Salde, nine vicars general, and about 200 curates and missionaries spread over the different districts of the province, by whom the tenets of their religion are inculcated with assiduity and devotion, but little tinctured with bigotry or intolerance, unhappily

so frequently characteristic of the same faith in the old world. Exercising their sacred functions under the auspices of a Protestant government, they feel the value of mildness in their own conduct, and strenuously endeavour to repay its protecting power by a zealous performance of their duties, and by instilling into the minds of their flock a grateful obedience to the laws, with a reverence for the constitution, as well as the obligations imposed upon them in their character of good citizens. They are also chiefly employed in the important cares of education, of which they acquit themselves in a manner that reflects the highest credit upon their exertions. To this fact the seminaries of Quebec and Montreal, and the college of Nicolet, bear a powerful testimony. In these establishments, where the higher and abstruse sciences yield to those of more extended and primary utility, professors are employed to teach the various branches of the classics, mathematics, and belles-lettres, whose learning would acquire them reputation in any country. In communicating their instructions the French idiom is in general use, but in the college there is a professor for the English tongue, an example worthy of being followed by the two former, as this language now becomes an essential part of youthful studies. The revenues of the

Catholic clergy are derived from grants of land made to them under the ancient regime; and the usual contributions ordained by their ecclesiastical government, which are, perhaps, more cheerfully paid by the Canadians, and collected in a manner much freer from vexatious exactions than in any country whatever. The spiritual concerns of the Protestant part of the community are under the guidance of the Lord Bishop of Quebec, nine rectors, and a competent number of other clergymen, who are supported by annual stipends from the government, by the appropriation of one-seventh of all granted lands as provided for in the act of the constitution, and the other sources of revenue peculiar to the church of England, in a degree of moderate affluence, exempt on the one hand from inordinate impropration, and on the other free from penurious parsimony; thereby giving to the clerical order the degree of consequence in the superior ranks of society that is due to its ministry. In the unrestrained exercise of two systems of divine worship, so widely differing in their tenets, it is a pleasing fact, that the discipline of the two churches never encounters the smallest obstruction from each other; on the contrary, the greatest goodwill and harmony is observed to prevail, as well between the pastors as the flocks committed to their charge.

For the defence of the two Canadas a regular military establishment is maintained by the British government, which, in time of peace, may amount to about six or seven thousand men, including artillery, engineers, commissariat, &c.; but when we are at war with the United States, this force is increased as the pressure of circumstances demands; and at this period (1815) I may venture to compute it, although without official documents to fix the precise numerical strength, at from twenty-seven to thirty thousand men in both provinces. In aid of the regular troops, and in order that, under any exigency, the government may be enabled to bring an efficient force into the field, the lower province is apportioned into fifty-two divisions, wherein all males from sixteen to sixty years of age are bound by law to enrol their names every year with the captains of companies appointed for their parish, within the month of April. After the enrolment is completed, they are mustered four times in a year, either on Sundays or holidays, when they are instructed in as much of the rudiments of military exercise as the occasion will allow; beside these four muster days, they are, once in each year, reviewed by the commander in chief, or the officer commanding the division. This is denominated the sedentary militia; and as the average

strength of each division so enrolled may be computed about a thousand, it makes the aggregate amount upwards of fifty-two thousand men*. The incorporated militia, by an act passed in the provincial parliament on the 19th May 1812, is fixed, during the war, at two thousand men; but by virtue of authority vested in the governor, it is at present increased to five battalions, or nearly double the number, which, on the re-establishment of peace with the United States, will be again reduced to the standard named in the act. This body is chosen by ballot from the unmarried men of the sedentary militia; its term of service is two years. It is also provided that one-half of each regiment may be discharged annually, and the vacancies filled up by a fresh ballot; a plan that will have the good effect of extending gradually a certain degree of military discipline over the greater part of the population capable of bearing arms. The battalions thus formed of single men, renders the military service less obnoxious to the individual, and less expensive to the state, by saving the provision otherwise necessary to be made for wives and children of militiamen actually embodied. By the same act, the sum of twelve thousand pounds annually is raised for the maintenance

* The adjutant-general's report gives 52,500.

of this constitutional force. The incorporated militia is well equipped, and in a state of discipline that merits the highest commendations, by which it has been enabled to brigade with the regular troops during the existing contest, and take so distinguished a part in some of the actions fought, that it must press upon the consideration of government a firm reliance upon its future exertions and devotedness in the cause of its country. In the upper province the same system, with some trifling modification, prevails, but from the more scanty population the force is proportionably much less; however, the militia of Upper Canada has had its full share of the hardships of the war, as well as many opportunities of distinguishing itself in presence of the enemy; and the real magnitude of its service may be estimated, when it is considered, that, by availing himself of it, the governor general, Sir George Prevost, was enabled with a number of troops of the line, inadequate according to usual military calculations, not only to repel every attempt of the American commanders to invade the British territory in the years 1813 and 1814, but to overwhelm the assailants with defeats, that for a long time will leave an indelible stain upon their military reputation.

To convey a general idea of the face and outline of the province previous to entering on a more minute description, I will assume Quebec as a central point, where the Saint Lawrence is about fifteen hundred yards broad; from the high banks opposite the city the land rises in a gradual ascent for a distance of probably ten leagues towards the first range of mountains; pursuing then a north-easterly course, this chain ends upon the river in the neighbourhood of River du Loup, bounding between it and the two rivers a level well cultivated and fertile space, singularly marked with several extraordinary isolated hills, or rather large rocks, thinly covered with small trees about their summits. Returning again opposite to Quebec for a new departure, the same chain is found to take nearly a south-west direction, crossing the line which separates the province from the United States to the west of Lake Memphremagog, and continuing the same course until it meets with the Hudson river, leaving the extent between its direction and the Saint Lawrence, excepting two or three of the afore-mentioned isolated hills, nearly level, and which, from the richness of its soil, is very thickly settled and populous. Beyond this range, at about fifty miles distance, is the ridge, generally deno-

minated the Land's-Height, dividing the waters that fall into the Saint Lawrence from those taking a direction towards the Atlantic ocean, and along whose summit is supposed to run the boundary line between the territories of Great Britain and the United States of America. This chain commences upon the eastern branch of the Connecticut river, takes a north-easterly course, and terminates near Cape Rosier in the gulf of Saint Lawrence. The extent of country lying between these two ridges varies very much in quality and fruitfulness according to its peculiar situation, but, perhaps, a tolerable idea may be formed by the following division of it. From the boundary on the 45th degree of north latitude as far as the river Chaudiere, is a district of excellent and fertile land, divided mostly into townships, many parts thereof settled and under cultivation; offering generally facilities for agricultural speculations, which, in the hands of enterprising settlers, would not fail to afford ample returns for capital applied to such pursuits. In fact, this track bounded by the Saint Lawrence, the Chaudiere, and the province line in shape of a triangle, whose western extremity is St. Regis, holds out the flattering prospect, if due encouragement be given, of becoming, at no very distant period, the most

flourishing part of Lower Canada, not from its luxuriant soil alone, but also from its lying contiguous to the United States, and comprehending the main roads and principal points of communication between the two territories, both by land and water, by which an uninterrupted intercourse can be at all times, and in defiance of prohibition, so easily maintained. From the Chaudière to Lake Temiscouata the land is much broken, irregular, and of an indifferent quality; but here and there are interspersed some good and productive tracks, that would soon repay the expense of clearing and cultivating.

From Lake Temiscouata, near where it enters the district of Gaspé, to Cape Rosier, the interior has been but partially explored; however, such parts of it as are known bear an appearance of sterility that encourages but slender hopes of remunerating the labours of the husbandman, even with a scanty crop, being generally of a rugged and mountainous character. This description must be understood as applicable in its full extent to the interior only, because, on the banks of the Saint Lawrence, some good spots are frequently met with, but hitherto none of them have been settled upon. On the south side of the ridge down to the shores of Gaspé and Chaleur bay,

the general description of the country is also mountainous; notwithstanding which, in many parts of the district, particularly the latter, there is a considerable portion of excellent land, well settled, and containing a population of 3000 inhabitants, most of whom being employed in fisheries, unfortunately pay but little attention to the important duties of cultivation, that, from situation and other advantages, would soon become as productive to them, at all events, as the labours they now pursue. On the north side of the Saint Lawrence, and from the river St. John, the eastern extremity of Lower Canada, a ridge of heights takes a course parallel with and close to it, or rather, in most parts forms its shores as far up as Cape Tourment, where, taking a direction west south-west, it ends upon the Ottawa river about 38 leagues above its confluence with the St. Lawrence, enclosing within it and the two rivers a beautifully picturesque country, well watered and level, particularly so from Deschambault westward, which, in respect to population, good cultivation, and a generous soil, especially along the course of the river, must be considered as the best part of the province. On the north side of the ridge just described lies the remaining part of Lower Canada, yet unnoticed, and which is contained

within the Ottawa river, the 81 degree of west longitude, and the 52 parallel of north latitude, intersected laterally by another and higher range of mountains that forms the Land's Height, and divides the waters that empty into the St. Lawrence from those that descend into Hudson's Bay. Of this great space, so little has been explored, that it is only known to be covered with immense forests, whose dreary solitudes are interrupted only by the wandering tribes of natives who occasionally resort thither in their hunting parties to procure furs for traffic with the nearest posts of the north-west company. It is in America that nature has displayed her powerful hand in forming objects of sublimity and grandeur, more imposing than what are to be met with in other parts of the world; the mountains there rise to an elevation but rarely equalled, and range to a distance unexampled on the old continent. The rivers roll their gigantic streams to the ocean, unparalleled for length of course, and affording facilities for intercourse with the most remote parts that are quite unknown in other countries; the forests spread out to an extent, and abound with trees of a variety, magnitude, and utility that defies comparison with the most enormous of the other hemisphere. But, perhaps, of all the

stupendous efforts that unfold so wide a field for the inquisitive researches of human wisdom to investigate the effects of her creative power, none are more calculated to excite admiration, and baffle the progress of philosophic enquiry, than the vast collections of fresh waters forming the chain of lakes, that through the channel of the Saint Lawrence descend like another sea to swell the bosom of the Atlantic. To trace the means, and lay open the secret agency by which these magnificent objects are produced, is left to the abler hand of science; my design is to relate, with the humble ability I am possessed of, the actual state of some of these extraordinary features of a country, even now but little known, comparatively speaking, to the rest of the world, as they have appeared to me, and as they are connected with the work I have undertaken. In this relation, the majestic river Saint Lawrence, from its importance to the British dominions on this continent, and, in fact, to the general interests of the British empire, will claim the first place in whatever way it can be examined. Embracing an inland navigation of little less than 1000 miles up to Niagara upon its own stream only, and which distance, with the exception of about 300 miles, is entirely within British territory* ; it confers

* From the mouth of the St. Lawrence up to St. Regis, a

benefits of no ordinary kind upon the country through which it flows, benefits that would be increased to a value almost inestimable, upon judicious means being adopted by the administration of the mother country to secure to Canada all, or even some, of the great advantages that its natural resources will ensure to it. Its real consequence to the general interests of the empire will never be questioned, when it is viewed as the outlet by which produce, the property of British subjects, and of vital importance to the state, can be exported in British shipping to the mother country, and render her independent of political chances, by which continental confederacy might again attempt to exclude her from the ports of Europe. That these advantages are not ideal, a comparison of exports from the colony for the last ten years will abundantly prove; and although they have been neglected or overlooked during a long and eventful period of almost universal war, there remain hopes that, with the return of peace, the views of statesmen will be turned towards the arts of industry and commerce, and that this subject will be

distance of about 660 miles, the river is wholly within the British dominions; but, from the latter place, the boundary between the Canadas and the United States is considered to pass along the middle of it and the lakes.

examined with as great a degree of attention as its magnitude lays claim to. The river St. Lawrence, (which, from its first discovery in 1535, has been called by the inhabitants of the country, to mark its pre-eminence, the Great River,) receives nearly all the rivers that have their sources in the extensive range of mountains to the northwards, called the Land's Height, that separates the waters falling into Hudson's Bay still further to the north, from those that descend into the Atlantic; and all those that rise in the ridge which commences on its southern bank, and runs nearly south-westerly until it falls upon Lake Champlain. Of these, the principal ones are the Ottawa, Masquinongé, Saint Maurice, Saint Anne, Jacques Cartier, Saguenay, Betsiamites, and Manicouagan on the north; and the Salmon river, Chateaugay, Chambly or Richelieu, Yamaska, St. Francis, Becancour, Du Chene, Chaudiere, and du Loup on the south. In different parts of its course it is known under different appellations; thus, as high up from the sea as Montreal, it is called St. Lawrence; from Montreal to Kingston in Upper Canada, it is called the Cataraqui, or Iroquois; between Lake Ontario and Lake Erie it is called Niagara river; between Lake Erie and Lake St. Clair, the Detroit; between Lake St. Clair and

Lake Huron, the river St. Clair; and between Lake Huron and Lake Superior, the distance is called the Narrows, or the Falls of St. Mary, forming thus an uninterrupted connection of 2000 miles. Lake Superior, without the aid of any great effort of imagination, may be considered as the inexhaustible spring from whence, through unnumbered ages, the St. Lawrence has continued to derive its ample stream. I am not aware that the source of this river has thus been defined before; but examining the usual mode of tracing large rivers from their heads to their estuaries, I venture to believe that I am warranted in adopting the hypothesis. This immense lake, unequalled in magnitude by any collection of fresh water upon the globe, is almost of a triangular form; its greatest length is 381, its breadth 161, and its circumference little less than 1152 miles; and as remarkable for the unrivalled transparency of its waters, as for its extraordinary depth. Its northern coast, indented with many extensive bays, is high and rocky; but on the southern shore the land is generally low and level; a sea almost of itself, it is subject to many vicissitudes of that element, for here the storm rages, and the billows break with a violence scarcely surpassed by the tempests of the ocean. In the distant

range of mountains that form the Land's Height beyond its northern and western shores, several considerable rivers, and numerous small ones, have their rise, which being increased in their course by many small lakes, finally discharge themselves into Lake Superior. To the southward also there is another lofty range dividing the waters that find their way to the gulf of Mexico through the channel of the Mississippi, from those that take a northern course into the great lake; so that its vastness is increased by the tributary streams of more than thirty rivers. On its north and north-east sides there are several islands, of which one, called Isle Royale, is the largest, being one hundred miles long and forty broad. Out of Lake Superior a very rapid current is interrupted and broken by many small islands, or rather huge masses of rock, through a channel of twenty-seven miles in length, at the end of which it flows into Lake Huron. The Falls of Saint Mary are nearly midway between the two lakes: this denomination, though generally given, but little accords with the usual appellation of Falls, as applied to the descent of large bodies of water precipitated from great heights, that so frequently occur on the rivers of America; for, in this place, it is only the impetuous stream of the enormous discharge

from Lake Superior, forcing its way through a confined channel, and breaking with proportionate violence among the impediments that nature has thrown in its way; yet this scene of tumultuous and unceasing agitation of the waters, combined with the noise and dazzling whiteness of the surge, is not deficient either in grandeur or magnificence. Lake Huron, in point of extent, yields but little to Lake Superior; its greatest length from west to east is two hundred and eighteen statute miles; at the western extremity it is less than one hundred, and at about one hundred miles from its eastern shore barely sixty miles broad; but near the centre it suddenly trends away southward to the breadth of one hundred and eighty miles; measuring the circumference through all its curvatures, will give a distance of little less than eight hundred and twelve miles: in shape it is exceedingly irregular, yet, with a little assistance from fancy, may be fashioned into something like a triangular form. From its western side an extensive series, called the Manatoulin islands, stretches in an easterly direction for one hundred and sixty miles, many of them measuring from twenty to thirty miles in length, by ten, twelve, and fifteen in breadth, on some of which the land rises into elevations of considerable

neight: besides this great chain, there are many others of inferior dimensions, numerously grouped in various parts, rendering the navigation intricate, and in some places, particularly towards the west end, dangerous. On this lake also, the navigator is often assailed by violent storms, attended with thunder and lightning, more terrific than in any other part of North America. At the western angle of Lake Huron is Lake Michigan, which, although distinguished by a separate name, can only be considered as a part of the former, deepening into a bay of two hundred and sixty-two miles in length by fifty-five in breadth, and whose entire circumference is 731 miles. Between it and Lake Huron there is a peninsula that, at the widest part, is one hundred and fifty miles, along which, and round the bottom of Michigan, runs part of the chain forming the Land's Height to the southward; from whence descend many large and numerous inferior streams that discharge into it. On the north side of Lake Huron many rivers of considerable size run from the Land's Height down to it. One of them, called French river, communicates with Lake Nipissing, from whence a succession of smaller ones, connected by short portages, opens an intercourse with the Ottawa river that joins the St. Lawrence near Montreal. On

the eastern extremity of the lake is the Matchedash river, which, through another succession of lakes, separated only by one short portage, establishes a communication by Lake Simcoe, Holland river, and Yonge-street, with the town of York, now called the capital of Upper Canada; this route would most materially shorten the distance between the upper and lower lakes, and is capable of such improvement, as would render it highly beneficial to Upper Canada, a subject that will be hereafter adverted to. From the extremity of Lake Huron to the southward, the course of the waters is contracted into a river (called St. Clair's) that flows between moderately high banks, adorned by many natural beauties, for a distance of sixty miles, nearly due south, when it again expands into the small Lake St. Clair, almost circular in form, its diameter about 30 miles, and about 90 in circuit, too diminutive when compared with the preceding ones, (and not being otherwise remarkable) to demand a further description. Out of this lake the waters again-assume the form of a river (called Detroit) continuing the same southerly course for 40 miles into Lake Erie; its stream is divided into two channels from space to space by islands of various sizes, the largest being about ten miles long. On the east side of this river the

prospect is diversified and agreeable, displaying some of the beauties of an exuberant soil, aided by a very respectable state of cultivation, and enlivened by the cheerful appearance of settlements, and villages gradually rising into consequence by the industry of an increasing population. The Detroit opens into the south-west end of Lake Erie. This lake extends from south-west to north-east two hundred and thirty-one miles, in its broadest part it is $63\frac{1}{2}$, and in circumference 658 miles; near the Detroit it is adorned by many pleasing and picturesque islands, while its shores on both sides have many indications of settlement and cultivation. Gales of wind frequently occur, and bring with them a heavy swell, with every characteristic of a gale of wind at sea; but there are many good harbours, particularly on the northern side, that afford protection to the numerous vessels that navigate it; its greatest depth of water is between 40 and 45 fathoms, its bottom generally rocky, which renders the anchorage precarious, particularly in blowing weather. From the north-east end of Lake Erie, the communication to Lake Ontario is by the Niagara river, 36 miles in length, and varying from half a mile to a league in breadth, its course nearly north; the stream in some places is divided into two channels by islands, the

largest of which is seven miles in length. The current is impetuous, and being broken in many places by the uneven rocky bottom, is very much agitated: the banks on each side of the river are almost perpendicular; and considerably more than one hundred yards high. On the western side the road passes along its summit, and delights the traveller with many interesting views both of the river and the country, which is thickly inhabited and under excellent culture. Here also his mind will be lost in wonder at viewing the stupendous Falls of Niagara, unquestionably one of the most extraordinary spectacles in nature, that presents to the imagination as powerful a combination of sublimity and grandeur, magnificence and terror, as it can well experience. Any description, however animated, whether portrayed by the glowing pencil of art, guided by the liveliest fancy, or flowing from the most eloquent pen that embellishes the page of narrative, would, most probably, fall short of doing adequate justice to the reality. The attempt, however, has been so frequently made, and in some few instances with tolerable success, as to conveying an idea of its immensity, that "a description of the falls of Niagara" has become familiar to almost every general reader. For this reason, and also because in any new

endeavour I should certainly feel but little confident of either reaching the merit of the subject, or contributing to the stock of knowledge already obtained thereon, I will excuse myself from repeating what has been so often related before, and proceed in describing, with my best means, the general outlines of this majestic river. Five miles from the great Falls is another, and scarcely less tremendous natural curiosity, called the Whirlpool; it is occasioned by the stream as it passes from the cataract, sweeping with impetuous violence round a natural bason enclosed between some rocky promontories, wherein it forms a vortex that ensures inevitable destruction to whatever comes within its attraction. By thus diverging from its forward direction, and being as it were embayed for a time, the velocity of the current is checked, and subdued to a more tranquil course towards Lake Ontario. Four miles from hence is Queen's Town, a neat well built place, deserving of notice, as being the depot for all merchandize and stores brought from Montréal and Quebec for the use of the upper province; but not less so for the romantic beauty and local grandeur of its situation. For seven miles further on, to the town of Newark or Niagara; the river forms an excellent capacious harbour for vessels of any size, exceedingly well shel-

tered by high and bold banks on each side, with good anchorage in every part. The river of Niagara communicates with the west end of Lake Ontario, rendered memorable by events recently passed, and most probably destined to become the scene of contests that will be pregnant with momentous import to North America in future ages. In length it is 171 miles, at its greatest breadth $59\frac{1}{2}$, and 467 in circumference; the depth of water varies very much, but is seldom less than three or more than 50 fathoms, except in the middle, where attempts have been made with 300 fathoms without striking soundings; its position is nearly east and west; the appearance of the shores exhibits great diversity; towards the north-east part they are low, with many marshy places; to the north and north-west they assume a lofty character, but subside again to a very moderate height on the south. Bordering the lake the country is every where covered with woods, through whose numerous openings frequent patches of settlements are seen that give it a pleasing effect, which is greatly heightened by the white cliffs of Toronto, and the remarkable high land over Presqu'île, called the Devil's Nose, on the north; the view on the south is well relieved with a back ground produced by the ridge of hills that, after forming the pre-

cipice for the cataract, stretches away to the eastward; the finishing object of the prospect in this direction is a conical eminence towering above the chain of heights, called Fifty Mile Hill, as denoting its distance from the town of Niagara. Of the many rivers flowing into Lake Ontario, if the Genesee and Oswego be excepted, there are none that lay claim to particular notice, unless it be for the peculiarity of all of them having a sandy bar across the entrance. There are some fine bays and inlets, wherein vessels of every description may find protection against bad weather. Burlington Bay is both spacious and secure; but these advantages are rendered of little importance by its narrow entrance being so shallow as to admit nothing larger than boats. Hungry Bay, on the contrary, is conspicuous, as affording good anchorage and safe shelter among the islands to ships of the largest size at all seasons. York and Kingston harbours, belonging to the English, and Sacket's harbour to the Americans, are unquestionably the best upon the lake, as they possess every natural requisite; the two latter are strongly fortified, being the arsenals where ships of war, even of the first rate, have been constructed by both powers, and from whence have been fitted out those powerful hostile squadrons that have con-

ferred so much consequence upon the naval operations in this quarter. Very heavy squalls of wind frequently occur, but they are unattended either with difficulty or danger, if met by the usual precautions every seaman is acquainted with. Of the many islands at the east end of Ontario, the Grand Isle, lying abreast of Kingston, is the most extensive, and, by being placed at the commencement of the Cataraqui river, forms two channels leading into it, that bear the names of the North, or Kingston Channel, and the South, or Carleton Island Channel. The Cataraqui, from its entrance to the place called Petit Detroit, about 39 miles, is almost filled with one continued cluster of small islands, so numerous, as to have occasioned the general denomination of Milles Isles. The distance between Kingston and Montreal is about 190 miles; the banks of the river display a scene that cannot fail to excite surprise, when the years which have elapsed since the first settlement of this part of the country (in 1783) are considered; they embrace all the embellishments of a numerous population, fertility, and good cultivation. Well constructed high roads, leading close to each side, with others branching from them into the interior, render communication both easy and expeditious, while the numerous loaded bat-

teaux and rafts incessantly passing up and down from the beginning of spring until the latter end of autumn, demonstrate, unequivocally, a very extensive commercial intercourse. The islands, the shoals, the rapids, with contrivances for passing them, form altogether a succession of novelties that gives pleasure while it creates astonishment. Before reaching Montreal, the lakes St. Francis, St. Louis, and des Deux Montagnes, present themselves: they do not admit of comparison with those already noticed, and can, indeed, only be considered as so many widenings of the river; they are of no great depth, but form an agreeable variety by having many pretty islands scattered about them. St. Francis is 25 miles long by five and a half broad; the shores in some places are marshy, as they do not rise much above the level of the water. St. Louis and Deux Montagnes are formed at the junction of the Ottawa with the St. Lawrence; the first is 12 miles long by six broad; the latter is very irregular, and in its whole length is 24 miles, but varying in breadth from one mile to six. At the confluence of the two rivers are the islands of Montreal, Isle Jesus, Bizarre, and Perrot; the first is probably the most beautiful spot of all Lower Canada, and will, in the course of this work, be described with particular attention.

On the south side of this island is the city of the same name, and its convenient port 580 miles from the gulf of St. Lawrence, to which ships of 600 tons can ascend with very little difficulty. On the north-west lies Isle Jesus, that, by its position, forms two other channels of a moderate breadth, one called La Riviere des Prairies, and the other La Riviere de St. Jean ou Jesus; they are both navigable for boats and rafts, and unite again with the main river at Bout de l'Isle, or the east end of Montreal island. From this city the navigation assumes a character of more consequence than what it does above, being carried on in ships and decked vessels of all classes; in the distance from hence to Quebec (180 miles) the impediments to vessels of large tonnage sailing either up or down are not many, and may be overcome with much ease, if it be judged expedient that their cargoes should be so conveyed in preference to transporting them in small craft. On either side the prospect is worthy of admiration; the different seigniories, all in the very highest state of improvement that the agriculture of the country will admit of, denote both affluence and industry; the views are always pleasing and often beautiful, although the component parts of them do not possess that degree of grandeur which is per-

ceivable below Quebec ; numerous villages, for the most part built round a handsome stone church, seem to invite the traveller's attention ; while single houses and farms at agreeable distances appear to keep up a regular chain of communication ; in fact, whoever passes from one city to the other, whether by water or by land, will not fail to have his senses highly gratified, and to meet with many subjects worthy both of observation and reflection. About 45 miles below Montreal, on the south side, is the town of William Henry or Sorel, built at the entrance of the river Richelieu into the St. Lawrence, not far from which the latter spreads into another lake, the last in its progress towards the sea ; it is called St. Peter's, is 25 miles long and nine broad ; like most of the others, this has a group of islands covering about nine miles of the western part ; between them two distinct channels are formed, the one to the south being the deepest and clearest, is consequently the best for ships ; the banks on each side are very low, with shoals stretching from them to a considerable distance, so that only a narrow passage, whose general depth is from 12 to 18 feet, is left unobstructed. About 45 miles from William Henry on the north side, at the mouth of the river St. Maurice, stands the town of Three Rivers, the third in rank

within the province; at this place the tide ceases entirely, and, indeed, is not much felt at several miles below it: from hence there is scarce any variation in the general aspect of the St. Lawrence until arriving at the Richelieu rapid (about 52 miles), where its bed is so much contracted or obstructed by huge masses of rock, as to leave but a very narrow channel, wherein at ebb tide there is so great a descent, that much caution and a proper time of the ebb is necessary to pass through it; at the end of the rapid is a good anchorage, where vessels can wait their convenient opportunity. From Montreal, thus far, the banks are of a very moderate elevation, and uniformly level, but hereabout they are much higher, and gradually increase in their approach to Quebec, until they attain the height of Cape Diamond, upon which the city is built. At this capital of the province and seat of government there is a most excellent port and a capacious bason, wherein the greatest depth of water is 28 fathoms, with a tide rising from 17 to 18, and at the springs from 23 to 24 feet. From whence, and from Point Levi on the south shore, one of the most striking panoramic views perhaps in the whole world offers itself to notice; the assemblage of objects is so grand, and though naturally, yet appear so artificially con-

trasted with each other, that they mingle surprise with the gratification of every beholder. The capital upon the summit of the cape, the river St. Charles flowing for a great distance through a fine valley abounding in natural beauties, the falls of Montmorency, the island of Orleans, and the well cultivated settlements on all sides, form together a coup d'œil that might enter into competition with the most romantic. At the basin the St. Lawrence is two miles across, and continues increasing in breadth until it enters the gulf of the same name, where, from Cape Rosier to the Mingan settlement on the Labradore shore, it is very near 105 miles wide. A little below the city is the Isle of Orleans, placed in the midway, consequently forming two channels; the one to the south is always used by ships; the shore on that side is high, and on the opposite, in some places, it is even mountainous, but in both extremely well settled, and the lands in such a high state of improvement, that a large track in the vicinity of Riviere du Sud is familiarly called the granary of the province. Beyond the island of Orleans are several others, as Goose Island, Crane Island, and many smaller ones; these two are tolerably well cultivated, but the rest are neglected. At Riviere du Sud the great river is increased to eleven miles in width, and

the country that adjoins it cannot be easily rivalled in its general appearance; the great number of churches, telegraph stations, and villages, whose houses are almost always whitened, are so well exhibited by the dark contrast of the thick woods covering the rising grounds behind them up to their very summits, and the termination so completely defined by the distant range of lofty mountains forming the boundary before noticed, that very few landscapes will be found actually superior to it. Beyond Riviere du Sud is a channel named the Traverse, which deserves mention from the circumstance of the river being here 13 miles across; yet the Isle aux Coudres, the shoal of St. Roch, and another called the English Bank, interrupt the fair way so much, that this passage, which is the usual one the pilots choose, is not more than from 17 to 1800 yards between the two buoys that mark the edge of the shoals; it is the most intricate part of the river below Quebec; the currents are numerous, irregular, and very strong, on which account large ships must consult the proper time of the tide to pass it without accident. On the north shore between the Isle aux Coudres and the main there is another channel, but the current is so rapid, the depth of water so great, and the holding ground so bad in case of being obliged to anchor within

it, that pilots always give the preference to running through the Traverse. Not the smallest difficulty will ever be found in making this passage good, if the bearings and directions laid down upon my Topographical Map be duly attended to; I can speak with confidence, from having had the satisfaction to verify them most completely in August, 1814, when I passed it on board H. M. S. Ajax, of 74 guns, Rear Admiral Otway, to whom I feel happy in acknowledging my obligations for the politeness with which he facilitated, by all the means in his power, my wish to make such additional remarks as appeared to me to be necessary. Passing the Traverse, a very agreeable view of the settlements of the bay of St. Paul, enclosed within an amphitheatre of very high hills, and the well cultivated Isle aux Coudres at its entrance, presents itself. Continuing down the river, the next in succession are the islands of Kamourasca, the Pilgrims, Hare Island, and the cluster of small ones near it, named the Brandy Pots; these are reckoned 103 miles from Quebec, and well known as the general rendezvous where the merchant ships collect to sail with convoy. From hence, at no great distance, is Green Island, on which is a lighthouse, where a light is shewn from sun-set until sun-rise, between the 15th April and the 10th

December. Near Green Island is Red Island, and abreast of it on the northern shore is the mouth of the river Saguenay, remarkable even in America for the immense volume of water it pours into the St. Lawrence. Proceeding onwards is Bic Island, 153 miles from Quebec, a point that ships always endeavour to make on account of its good anchorage, as well as being the place where men of war usually wait the coming down of the merchantmen; next to Bic is the Isle St. Barnabé, and a little further on the Pointe aux Peres. From this point the river is perfectly clear to the gulf, and the pilots being unnecessary any longer, here give up their charge of such as are bound outwards, and receive those destined upwards. Below Pointe aux Peres are two very extraordinary mountains close to each other, called the Paps of Matane, and nearly opposite them is the bold and lofty promontory of Mont Pelée, where the river is little more than 25 miles wide, but the coast suddenly stretches almost northerly, so much, that at the Seven Islands it is increased to 73 miles. The settlements on the south side reach down thus far, but hereabouts they may be considered to terminate, as to the eastward of Cape Chat the progress of industry is no longer visible; on the north side the cultivated lands extend only to Mallbay. In the

river itself nothing claims our attention except the separation of its shores to the distance already mentioned, from Cape Rosier to the Mingan settlement*. In the mouth of the St. Lawrence is the large island of Anticosti, 125 miles long, and in its widest part 30, dividing it into two channels. As it is of importance to mariners in making the river, the geographical position has been ascertained with exactness, and is thus laid down: the east point lat. 49. 5. long. 62. 0.; the west point lat. 49. 48. long. 64. 35; and the south-west point lat. 49. 23. long. 63. 44. Through its whole extent it has neither bay nor harbour sufficiently safe to afford shelter to ships; it is uncultivated, being generally of an unpropitious soil, upon which any attempted improvements have met with very unpromising results; yet, rude and inhospitable as its aspect may be, it is not absolutely unprovided with the means of succouring the distress of such as suffer shipwreck on its coasts, there being two persons who reside upon it at two different stations all the year as government agents, furnished with provisions for the use of those who have the misfortune to need them. Boards are placed in different parts,

* In describing the course of the river, and wherever distances are given in miles, they always imply the statute mile of $69\frac{1}{2}$ to a degree, unless otherwise specified.

describing the distance and direction to these friendly spots: these establishments were made in the year 1809, the humane intention of which will be honoured wherever it is made known, because the crews of vessels driven on shore here have, sometimes, at the utmost peril of their lives, forsaken them to make their escape to Gaspé. Anticosti forms no part of the province of Canada, but is at present within the government of Newfoundland. With the powerful conviction upon my mind of the great estimation the river St. Lawrence ought to be held in, from presenting itself as the outlet, designed as it were by nature to be the most convenient one for exporting the produce of these two extensive and improving provinces, the country stretching to the north-west nearly to the Pacific ocean, and even the adjacent parts of the United States, which, in defiance of prohibitory decrees, will find an exit by this channel, I have, it is feared, exposed myself to a charge of being prolix in wishing to convey to others a clear conception of its importance; yet I must still trespass upon the patience of my readers long enough to mention that the observations hitherto made apply only to one part of the year; and also to notice, that from the beginning of December until the middle of April, the water communication is

totally suspended by the frost. During this period, the river from Quebec to Kingston, and between the great lakes, except the Niagara and the Rapids, is wholly frozen over; the lakes themselves are never entirely covered with ice, but it usually shuts up all the bays and inlets, and extends many miles towards their centres; below Quebec it is not frozen over, but the force of the tides incessantly detaches the ice from the shores, and such immense masses are kept in continual agitation by the flux and reflux, that navigation is totally impracticable in these months. But though for this length of winter the land and water are so nearly identified, the utility of the river, if it be diminished, is far from being wholly destroyed, for its surface still offers the best route for land carriage (if the metaphor can be excused); and tracks are soon marked out by which a more expeditious intercourse is maintained by vehicles of transport of all descriptions than it would be possible to do on the established roads, at this season so deeply covered with snow, and which are available until the approach of spring makes the ice porous, and warm springs, occasioning large flaws, render it unsafe. When this alteration takes place it soon breaks up, and by the beginning of May is either dissolved or carried off by the current. The gulf of St.

Lawrence, that receives the waters of this gigantic river, is formed between the western part of Newfoundland, the eastern shores of Labradore, the eastern extremity of the province of New Brunswick, part of the province of Nova Scotia, and the island of Cape Breton. It communicates with the Atlantic ocean by three different passages, viz. on the north by the straits of Belleisle between Labrador and Newfoundland; on the south-east by the passage between Cape Ray, the south-west extremity of the latter island, and the north cape of Breton island; and lastly by the narrow channel, named the Gut of Canso, that divides Cape Breton from Nova Scotia. The distance from Cape Rosier to Cape Ray is 79 leagues; and from Nova Scotia to Labrador 106. On its south side is the island of St. John, otherwise called Prince Edward's island, something in shape of a crescent, about 123 miles long, in its widest part 32, and in its narrowest, at the extremities of two deep bays, less than four: it possesses a good soil, fit for all general purposes, though, from its exposure to frequent thick fogs, the produce of grain is precarious; it is well settled, and can boast at present of a population of 10,000 souls at least; the chief place is Charlotte Town, where the governor resides, it being a distinct government,

though subordinate to the commander in chief in North America. To the northward of St. John's are the Magdalen islands, seven in number, thinly inhabited by a few hundred persons chiefly employed in the fisheries; from some anomalous cause or other these islands are considered within the district of Quebec. Islands of ice are sometimes met with in crossing the gulf during the summer months: the ice that drifts out of the St. Lawrence all disappears by the latter end of May, but these masses make no part of it. The conjecture is, that they are not formed on any of the neighbouring coasts, but descend from the more northerly regions of Hudson's Bay and Davis's Straits, where it is presumed they are severed by the violence of storms from the vast accumulations of arctic winter, and passing near the coast of Labrador, are drawn by the indraught of the current into the straits of Belleisle; they often exceed an hundred feet in height, with a circumference of many thousands; the temperature of the atmosphere is very sensibly affected by them, which, even in foggy weather when they are not visible, sufficiently indicates their neighbourhood; by day from the dazzling reflection of the sun's rays, also by moon-light their appearance is brilliant and agreeable.

America possesses a climate peculiar to itself; the quantity and prevalence of heat and cold seems to be governed by laws materially differing from those that regulate the temperature of other parts of the earth. It is certain that a person would be materially led astray were he to form an opinion of the temperature of Canada from the analogy of local situation; it lies, for instance, in the same parallel of latitude as France, but instead of exhaling the exquisite fragrance of flowers, and ripening delicate fruits into delicious excellence, as is the case in that country, its surface is covered with accumulated snows for nearly one-half of the year, and vegetation is suspended for the same period by continued frost. Yet this circumstance is unattended with so much rigour as any one would be disposed to suspect, and notwithstanding the apparent severity, Canada enjoys a climate that is congenial to health in an eminent degree, and highly conduces to fertilize its soil. Heat and cold are certainly felt to extremes; the latter, both for duration and intensity by far the most predominant, is supposed to derive much of its force from the following cause, viz. the land stretches from the St. Lawrence towards the north pole, which it approaches much nearer to, and with a less intervention of sea than that on the old continent;

it expands also an immense distance to the westward; therefore the winds between the north-east and north-west, passing over a less surface of water than in the same portion of the other hemisphere, are consequently divested of a smaller quantity of their intense frigor, and afterwards sweeping across the immense chain of mountains covered with perpetual snows and ice that intersects the whole of these cheerless regions, they acquire a penetrating severity by traversing so vast a track of frozen ground, that even their progress into lower latitudes cannot disarm them of. Of these winds the north-west is the most rigorous; and even in summer, as soon as it prevails, the transition from heat to cold is so sudden, that the thermometer has been known to fall nearly thirty degrees in a very few hours. The highest range of the summer heat is usually between 96 and 102 degrees of Fahrenheit; but an atmosphere, always particularly pure, abates the oppressive fervor felt in other parts at the same point. In winter the mercury sometimes sinks to 31 degrees below zero, but this must be considered its very greatest depression, and as happening only once or twice in a season, or perhaps not more than thrice in two seasons, and then its continuance rarely exceeds 48 hours; but the general range of cold in medium years may be

estimated from twenty degrees above, to twenty-five degrees below 0. The frost, which is seldom interrupted during the winter, is almost always accompanied with a cloudless sky and pure dry air that makes it both pleasant and healthy, and considerably diminishes the piercing quality it possesses when the atmosphere is loaded with vapours. At the eastern extremity of the province, from its vicinity to the sea, fogs are brought on by an easterly wind, but to the westward they seldom prevail, and even at Quebec are almost unknown. The snow usually lies on the ground until the latter end of April, when it is melted by the powerful rays of the sun, rather than dissolved by the progress of thaw, the air continuing still pure and frosty ; when it has disappeared, the spring may be said to commence ; and as the ground, being protected by so thick a covering during winter, is seldom frozen many inches deep, the powers of vegetation almost immediately resume their activity, and bring on the fine season with a rapidity that would excite in a stranger to the country the greatest degree of astonishment. Rain prevails most in the spring and fall of the year, but is seldom violent or of long duration in the level parts of the province : towards the mountains, however, their frequency

and duration are both increased. Bordering on the gulf of St. Lawrence, as the face of the soil is rugged and mountainous, the climate, somewhat influenced thereby, participates in its ungenial nature; but advancing to the westward, it becomes more mild, and encourages the resumption of agricultural labours at a much earlier period, particularly in the western district of the lower, and all the settled parts of the upper province; at Montreal for instance, only 79 geographical miles southward and 145 due west from the meridian of Quebec, the spring is reckoned to commence from five to six weeks earlier than at the latter place. Vegetation is proportionately more luxuriant and vigorous, producing crops of greater increase, by seldom experiencing checks in their early stages from the hoar frost, so injurious to the rising growth wherever it prevails. In a comparison between the climates of Great Britain and the Canadas, some advantages result to the latter, because the prevalence of fine clear weather and a pure atmosphere greatly exceeds that in the former; besides, the degree of cold is proved by actual experiment not to be proportionate to the indication of the thermometer; as a corroborating instance, it is remarked, at its utmost severity, which is in the months of

January and February, the labour of artisans in out-door employments is rarely suspended many days in succession.

From the climate of a country, its soil comes under notice by a sort of natural transition. On making a calculation of the superficial contents of the area enclosed between the two principal ranges of mountains before spoken of, about 16,028,000 square acres may be computed to include the greater part of the land in the lower province yet surveyed that is capable of being turned to any favourable account in an agricultural point of view. In so great an extent undoubtedly every gradation of quality between very bad and very good is to be found ; but it would be attended with some difficulty to state with tolerable correctness the relative proportion of each kind. Sensible that, in thus generalising the whole, only an imperfect sketch can be given, it is my intention that as much care as possible shall be used to render the subject more clear and familiar when treating the different districts and divisions topographically. For the present then it may suffice to say, that with respect to goodness, the eastern parts are inferior to the western, being of a more irregular and uneven surface, in many places consisting of a light soil of a sandy nature laid upon a stratum of perfect sand or gravel ; in others it

is varied with mixtures of clay, loam, and sometimes a good vegetable mould upon a reddish argillaceous bottom, constituting a medium between the two extremes; this latter species is supposed rather to exceed the inferior classes in quantity, and with a moderate degree of careful husbandry will yield the farmer pretty fair returns. In the western part of the province, although the variety is nearly as great as in the other, in its nature it is very superior; the sort most esteemed is a composition of fine rich loams, both a yellow and a bluish colour, with a good black earth, forming a soil, that in the country is supposed to be endued with the greatest share of fertilizing properties of any of the natural classes; and of this sort consists the chief portion of land in the western division; the remaining part is always above mediocrity; in fact, it may be fairly asserted, that through the whole of North America, or indeed in many other countries, it will be difficult to meet with land more inviting to form new settlements upon, or where it is already cultivated, capable of being made more generous and productive by the introduction of an improved system of husbandry. Its superiority over the contiguous districts of the United States is fully manifest by the readiness with which American families in considerable numbers have, for years past;

abandoned the less fertile fields of their nativity, to settle upon a soil that they are certain will abundantly repay the industry and art bestowed upon it. Undoubtedly the burthen of the taxes and peculiar laws will have had some share in causing these migrations across the borders into a country where neither would be felt. But be that as it may, many farmers thus changing the scene of their labours, have, either by purchase or by lease, obtained extensive estates and endenized themselves under the British government; whilst others, as eager to enjoy the same advantages, but less honest in their manner of obtaining them, have selected convenient situations among the reserved lands, wherein they have unceremoniously domiciliated without licence or title; and even without the acknowledgment of rent have continued to cultivate and improve their favourite spots thus chosen. This species of tenure certainly ought not to be allowed by the crown, and means should undoubtedly be taken to eject such tenants, because their prior occupancy, the irregularity of it being generally unknown, deprives the natural subject of taking the lots upon the terms before recited in page 14. It is also desirable not to permit the pernicious example of such unauthorized possession of valuable property to communicate its

influence, or, indeed, to exist at all. It is much to be wished that the system of management in Lower Canada was as good as the land upon which it is exercised; agricultural riches would then flow in a copious and inexhaustible stream; for if the natural excellence of soil and goodness of climate, contending against the disadvantages of a very inferior, not to say bad mode of husbandry, be capable of yielding crops of 15 to 18 for one, what might not be expected from it, were the modern improvements in implements as well as culture, that have been introduced with so much benefit in England, to be applied to it? The Canadian farmer unfortunately, and it is a circumstance much to be lamented, has hitherto had no means of acquiring instruction in the many new and beneficial methods by which modern science has so greatly assisted the labours of the husbandman. Unskilled in any other mode, he continues to till his fields by the same rule that his forefathers followed for many generations, which long habit and an unprofitable partiality engrafted thereon, seems to have endeared to him; knowing the natural bounty of his land, he places his greatest reliance upon it, and feels satisfied when he reaps a crop not inferior to the one of the year gone by, apparently without a wish to increase his stores by the adoption of

untried means. Apprehensions of failure and consequent loss operate more strongly than disinclination; for a desire to enlarge his profits is full as lively in him as in other men, which, aided by a genius active in imitating, would certainly impel him to try his success at any innovation, productive of corresponding advantages, that might be introduced by another. Example is the only stimulus required, and it is well worth the attention of those to whom the welfare of the British colonies is confided, and who must be sensible of the importance of this one in particular, to consider of means by which this stimulus could be most effectually excited! Whatever encouragement might be given as an incentive to the industry of the native, or the alien settler, to persevere in an approved plan of clearing, draining, and getting under cultivation the new lands, or of improvement upon such as are already under management, by a reform of the present system, a judicious variation of crops, and the introduction of new articles suitable to the climate, of which there are many, would be attended with so much benefit that in a very few years these provinces must become one of the most valuable of all the exterior possessions of Great Britain.

The practice of husbandry in Canada is defective in some very principal points: in the

first place the use of the plough, which ought to be viewed as the basis of all agrarian improvement, is not enough attended to, and where it is applied, it is done in a manner so inadequate to the purpose, that the good intended to be derived from it is powerfully counteracted; generally speaking, this operation is performed so lightly, that scarcely more than the surface of the ground is broken by it; the weeds that ought to be extirpated are only cut off, they consequently shoot out again and absorb much of the vigour of the soil that otherwise would nourish the seed and plants committed to it. If the Canadian husbandman could witness the difference between the style of ploughing in England and his own, I am certain that he would readily be convinced of its utility, and willing to adopt a method so much in favour of his autumnal expectations. Another main object in farming improvements is the judicious application of the various manures to different soils, in which essential particular it must be admitted the Canadian practice is much in arrear, as it is only within a few years, and in the neighbourhood of the large towns, that it has been in some degree attended to by a few farmers more intelligent than their brethren; this neglect, added to the pernicious practice of sowing the same sort of

grain year after year upon the same land without other means of renovation than letting it lie fallow for a season, must excite wonder that it should produce such crops as it actually does. When the heart of the land is supposed to be gone or greatly deteriorated, the remedy is, after taking a crop of wheat from it, to allow a natural layer of clover and grass, which serves as summer feed for cattle; in the autumn it receives a ploughing in the usual way, and in the ensuing spring is again put under wheat or oats. This plan is unprofitable and injudicious, the stock derives but little advantage from the herbage, while with a little more care the grounds might be turned to much better account. The introduction of different kinds of grasses and other succulents, regulated by a moderate degree of skill, could not fail being attended with complete success; among the various sorts, the English red and Dutch white clover are worthy of notice, being calculated as well for summer feed as excellent winter store; to these might be added the yellow Swedish turnip, a species perhaps superior to any other of its class, as it will endure the most violent frost, and maintains its goodness until the spring, as well as in autumn: that the acquisition of such a plant to a country always subject to a long winter would soon become

valuable does not admit of a question ; it is entitled to the farmer's attention as being a profitable article : from 20 to 25 tons per acre may be raised by careful management, which, if housed before the winter sets in, would furnish an undeniable food for cattle during that season ; by its means he would obtain a beneficial employment in fattening his stock intended for market, and also a large quantity of valuable manure from his farm-yard, ready to be applied to the poor and exhausted lands at the breaking up of the frost. Many other advantages would be the result, if a systematic arrangement in the change of crops were to take place of the undeviating practice at present existing ; by it a great progress would be made in the science of agriculture, and a long catalogue of hereditary errors would no more remain unopposed by any radical improvement. I must again repeat, that example only is wanting to induce the Canadian farmers to explode the unproductive methods they have so long followed, and yield to the admission of profitable innovations. There is yet another article or two of culture of the very first importance to the mother country, which would most certainly prove highly beneficial to these provinces if sufficient attention were to be paid to them. The first of these is hemp, well known to be a

native plant of the country, with climate and soil peculiarly well adapted to its growth; in small quantities it has been raised on many farms, though as an object of commerce, the cultivation of it has not been attended with success, notwithstanding it has been tried under the sanction of government, that held out the encouragement of premiums, with the additional inducement of a certain good price per ton for all such as might be produced fit for its purposes; as so desirable an object hath not been accomplished under these circumstances, it would seem to imply that some insurmountable obstacle opposes it. In reality there is none such; both soil and climate are favourable as nature could form them, and the extensive demand of Great Britain must ever ensure an undoubted market at prices high enough to remunerate the growers very handsomely; the cause of failure in the attempt must be sought for somewhere else than in any natural deficiencies. That time and considerable sums of money have been wasted is unquestionably true, but it is equally a fact, that the good intentions of administration have been defeated by the inadequate measures pursued in the execution of the plans, and not a little impeded by a want of general agricultural knowledge in the persons to whom its management was con-

fided. It is not to be denied but there are some existing difficulties to be removed before the cultivation of hemp can be made generally agreeable to all persons interested in the agricultural produce of the province; but as the chief of these arise from the discountenance the clergy might shew to its introduction on an extensive scale, from a supposition that it would interfere with raising wheat and other grain upon the lands now in tillage, and thereby somewhat diminish their revenues, may they not be surmounted by making it a tythable article, and fixing the rate to be paid as it is in England, namely, five shillings per acre, or otherwise in the same proportion as the contribution of grain is at present taken by them, a 26th part? Under such a regulation the ecclesiastical body would consult its own interest by promoting the increase of this production, a measure which could be easily accomplished by the powerful influence that body possesses in all the concerns of the country people, whether temporal or spiritual. I have been unequivocally assured by a gentleman who has devoted the greatest part of his life to the improvements of growing and dressing both hemp and flax, that he has carefully examined several parcels of the former, sent some time ago from Canada to London, and is decidedly of opinion

the *growth* is much superior to what is in general imported from Russia; but on the other hand, from mismanagement after pulling, and from being steeped in bad water, its quality and colour are greatly inferior to what they would have been had it undergone a proper process. The management of this plant contains nothing of mystery, and is so plain that it may be carried on by the least intelligent husbandman in the colony, if he be but once put into the proper routine. The choice of a soil fit for the purpose is a leading point, and the kind which is considered the best is a rich deep loam, whereon a very good crop may be raised without manure, but it may be grown on almost any species not absolutely of a bad quality, if it be well manured, except where there is a cold subsoil or a very shallow staple. To ensure a good crop, the most careful attention must be paid to ploughing and preparing the land; the tilth should be as fine and as deep as possible, a circumstance hitherto but little noticed by the most part of our Canadian farmers, and in consequence of this neglect their produce has been most materially reduced in quantity. The seed, of which about four bushels should be allowed per acre, ought not to be put in the ground until the weather is become warm; for the young plants when they begin to shoot up are ex-

ceedingly tender, and liable to be injured if night frosts happen in the early period of their growth. May is generally the best month for sowing it; but in Canada this time must be pointed out by a correct knowledge of the climate. After the seed is got in, a light harrow should be used, and nothing more is required until it is fit for pulling; this will be in from ten to fourteen weeks. In hemp the male and female plants are more distinctly defined than in almost any other species; the former bears a light-coloured flower, but never produces any seed; the latter, on the contrary, yields the seed, but does not bear a flower. Land is not at all impoverished by the growth of hemp, for after a good crop has been pulled, it cannot possibly be in better condition to be laid under wheat, or indeed any thing else. The different soils both of Upper and Lower Canada are likewise admirably well calculated for the growth of flax, an article well deserving the farmer's consideration, from its yielding, with tolerable good management, a larger as well as more certain profit than the greater part of other crops. Loam, loam mixed with clay, gravel, or sand, or clay alone, indeed any land but such as is very wet or very shallow, is good for raising it. On warm dry soils the sowing may commence in the middle of March, and continue, accord-

ing to the condition and quality of the land, until the first week in May ; but with it, as with hemp, the seed time must be guided by a knowledge of the climate. The ground may be prepared by a moderate ploughing, which is not required to be very deep. From two and a half to three bushels of seed per acre may be sown, which must be harrowed in, or bush-harrowed, and afterwards well rolled. When the plants are from four to six inches high, care should be taken to have them well weeded, and then no further attention is required until the season for pulling arrives : it remains on the ground from twelve to sixteen weeks, and is sufficiently hardy not to receive any injury from night frosts. Flax and flax seed, as well as hemp, may be produced in Canada fully equal, to say the least of it, to what is obtained from any other country ; but they have always been so injudiciously managed after pulling, that their natural good qualities have been seriously deteriorated ; from whence one might deduce, that unless a very different system be resorted to, no reasonable expectation of profit from growing it can be formed, and consequently few endeavours will be made to extend the cultivation of these valuable articles. But to combat such a supposition, I feel infinite pleasure in being able to make known among my

countrymen generally, that the process of steeping and dew rotting now in practice, whereby the fruits of their labour have been so seriously injured, may be entirely superseded, and henceforward the culture of these important productions may be pursued with an absolute certainty of deriving an ample profit therefrom. However doubtful this assertion may appear to many, it will nevertheless be realised by the use of machines for threshing out the seed, and separating the woody from the fibrous parts both of hemp and flax, invented by Mr. Lee, to whom a patent has been granted for his highly valuable discovery. From a minute and attentive inspection of this machinery, simple in its construction beyond all conception, as well as completely effectual in its performance, and from the ocular demonstration of the perfect success of its operation I have had the satisfaction to receive from this gentleman at his factory, I am warranted in saying with the utmost confidence, that if it be introduced into the British North American colonies, the greatest benefits will be derived, not only by them, but by Great Britain also; as it will stimulate the occupiers of land to pursue this branch of husbandry more than any premiums offered, or means resorted to by government, would be able to do under the old method. By

the use of this invention, the necessity of steeping and dew rotting being avoided, the farmer, after having pulled his crop, has nothing to do but stack it, when sufficiently dry for that purpose, and let it remain until convenient opportunities occur of bringing it into a marketable state, which may now be performed in a very few hours. The superiority of this mode of preparation is very great, and the advantages obtained by it in equal proportion. All the labour and attendant expense of steeping, spreading, drying, &c. as well as the losses incident to these operations, is wholly saved; the produce of fibre is full one-third greater by this than by former methods; while the fibre itself preserves the whole of its natural strength unimpaired by any destructive process. In cleaning flax the whole of the seed is preserved, and some parts of the plant that by steeping are entirely destroyed, are now saved to be turned to a very profitable account; the chaff, for instance, is an excellent food for horses, cows, sheep, &c. and the woody part, when separated from the fibre, is a strong manure, particularly good as a top dressing for wheat; both of these have hitherto been wasted. The mode of using the machines is so easy as to be worked by women or even children; they may, without inconvenience to a family, be fixed in cottages

or the outhouses of any description, so as to furnish a constant in door employment through the winter months. Hemp or flax prepared by this invention is found, from experiment, to be greatly superior in strength to any other. The most impartial criterion, namely, that of suspending a weight by a line made from different sorts, of the same length, thickness, and weight, has been had recourse to, when the one prepared in this manner has supported more than double the weight of the other. From many conversations I have had with Mr. Lee on the subject of his patent, besides frequent proofs of its efficacy, I feel the strongest conviction that the value of his invention will be soon appreciated when it is introduced into Canada: with such an impression upon my mind, I am persuaded I shall be aiding to increase both the interest and comfort of my fellow countrymen, by promoting, as far as lies in my power, the general use of so simple and so well contrived an apparatus. To establish, in some degree, the reality of what has been adduced, I will insert the following estimate of the expenses and produce of one acre of flax, which I have been repeatedly assured by the patentee is the result of many years practical experience as a grower, and formed upon such a calculation as any fair average crop, pro-

perly attended to, will not fail of realising always, and most frequently somewhat exceed it.

EXPENSE PER ACRE.

	£	s.	d.

This account is made out from the ratio of agricultural expenses in England: some of its items are undoubtedly different from what they would

be in the colonies ; but the excess in one would be balanced, or nearly so, by the reduction of another ; and as the prices allowed for the produce are such as the ordinary state of the market will always afford, and after making a reasonable allowance for tythes, freight, &c. the general result is sufficient to induce speculation with tolerable fair prospects of success. It must be also taken into consideration, that the expense of the machinery is very moderate ; nor should it escape notice that a steady demand will be found in England both for flax and seed at fair prices. With respect to hemp, it can never be doubted but what his majesty's government will be again ready to lend every support and encouragement to the production of an article in our own dominions that we have long been forced to purchase from strangers ; which cultivation meeting with success, in a few years may render our country wholly independent of the north of Europe for its supply, or at any rate liberate it from the apprehension of ever being put to serious inconvenience by any change of political sentiments in sovereigns. The welfare of my native province and its parent state has ever been with me the strongest incentive to exertion ; and a ray of hope that I may be an humble

instrument towards promoting a pursuit which would redound to the advantage of both, hath occasioned me to enter more largely into this subject than I at first intended. If my expectations are too sanguine to be borne out by the opinions of persons more enlightened thereon than I can pretend to be, I would much rather they may be attributed to an erroneous judgment, than a willingness to commit myself to the chance of misleading a single individual, by hazarding any unguarded or unfounded representations.

To ascertain, in the scale of importance, to what degree the North American colonies rise, their present value, and how much that value is capable of being increased, it is necessary to take a view of their commercial concerns, in order to bring their resources fairly before us. In attempting to introduce this subject, I feel no small degree of diffidence, from the reflexion that it is one much out of the line of my professional pursuits, in the discussion of which erroneous opinions are very liable to intrude, and that by meddling with it I may be blamed by many for the imperfect performance. My object is to attract to this point the attention of men well informed on the intricate questions of mercantile policy, in the hope that some much abler pen than mine may, at no remote period,

place it in a more clear and palpable state, rather than to promote decision by any observations of my own; the extent of my endeavours will be limited to conveying some general ideas of the capabilities possessed by these provinces of rising into commercial greatness, if their interests be attended to and protected. The situation both of Upper and Lower Canada is replete with conveniences for trade: the great extent and many ports of the St. Lawrence accessible to ships of considerable burthen; its inland navigation, even to the extremity of the lakes; the numerous rivers and streams that fall into it, by which produce of all kinds may be conveyed from the most distant settlements to Quebec or other places of shipment, open greater facilities to mercantile speculations than perhaps any other country can offer. This river is the only channel by which the commodities of these two provinces find their way to distant countries, and is also by far the most natural, as well as most easily available egress for such productions of the districts of the United States that lie contiguous to its southern bank, as they are able to furnish beyond their own consumption. Prohibitory laws of the American senate have, indeed, of late been passed to bar its subjects from exportation by this route, but they have not ob-

tained so much attention as it was imagined they would. A very large track of fertile country on their side of the border is thickly settled and in high cultivation; the industry of its inhabitants always insures a large disposable stock of the fruits of their labours, which the vigilance and invention of a speculative disposition will not fail to discover means of transferring to the readiest market, in despite of enactments that are no less disagreeable than disadvantageous. By fostering this intercourse, Canada would always secure a vast addition of articles of the first necessity, in aid of its own surplus produce, to meet a great increase of its export trade, were that trade relieved by the British government from some of the impediments thrown in its way by existing regulations that are highly favourable to American commerce.

The principal exports from the Canadas consist of new ships, oak and pine timber, deals, masts, and bowsprits, spars of all denominations, staves, pot and pearl ashes, peltry, wheat, flour, biscuit, Indian corn, pulse, salt provisions, fish, and some other miscellaneous articles, employing generally about 150,000 tons of shipping. In this enumeration, the articles of primary consequence to England are the growth of the forests, whether considered as the source of

employment to British ships and native sailors in the carriage of it, if they were able to contend for the freights against the indulgences granted to their opponents ; or as to their being of great and continued consumption, therefore of indispensable necessity. Since the year 1806, the timber trade of the colonies, but of the Canadas in particular, increased in an extraordinary degree, until the state of the country at the commencement of hostilities with America not only checked its further progress, but, from very obvious causes, reduced it below the standard of former years. This diminution, however, must be considered only accidental, and totally unconnected with the resources of the trade, which, according to the most discreet methods of calculation, is not only adequate to supply abundantly the demand of the British West India islands with square timber, planks, deals, staves, and whatever comes under the general name of lumber, but to furnish a large proportion of the same for the use of Great Britain. This ability it was, and perhaps with many may be still the fashion to consider problematical ; but let the return of exports from 1806 to 1810 be examined, and it will be readily seen, that in these four years they advanced from about 100,000 to nearly 375,000 tons from all the provinces, of which nearly one-half

was from Quebec alone. To meet this demand, no difficulties were encountered in procuring the necessary quantities, either with respect to the number of hands to be employed in collecting it, or any thing like a failure in the forests; and had it been as large again, it might have been answered with proportionate facility. Within the period cited, the increase of this trade in the Canadas only was much more than equivalent to the total consumption of the West India islands, estimated at 142,000 tons annually; and in the year 1810, the oak timber shipped from Quebec was 28,165 tons, which is but little less than half the quantity annually required for the service of the royal navy. The export of timber in this year is, perhaps, the greatest of any that has taken place, yet the ease with which it was procured is certainly an argument that weighs strongly against the assertion, that the North American colonies are unable to supply the necessities of the West Indies.

With respect to the exportation of flour and grain, the progress is certainly not so satisfactory as that of timber; yet this circumstance is far from being conclusive of inability to furnish such quantities as are required for the use of the West India islands, whose annual demand for flour, grain, and biscuit, is computed

at something more than 1,200,000 bushels. Of this quantity, Canada hitherto has seldom exported, upon an average, but little more than a third part. So great a disparity of numbers is not a sufficient reason to abandon, without some further reflection, the supposition that the supply may be made to equal the demand. Immediately indeed it could not; but after the lapse of a very few years, may not so desirable an object be obtained, when the good effects of an improved system of agricultural management, and to the encouragement of which the most rigid attention ought to be paid, begin to shew themselves, combined with such measures as would make it the interest of the people of the well cultivated countries of the United States that lie contiguous to our frontier, to bring their disposable produce to the ports of the St. Lawrence? The foundation of these advantages would certainly be laid, were the colonial merchants placed in a situation to contend against those of America in supplying the islands. Until the commencement of hostilities with us, the latter enjoyed the profits of supplying our West Indian possessions both with provisions and lumber, and which were, in fact, secured to them by an act that passed the British parliament, 1807, whereby the privy council was authorised to suspend the operations of

the act of 12th Charles the Second, excluding foreign ships from trading with the English colonies. Under favour of this suspension, they employed an immense number of ships in this trade, every ton of which was a manifest detriment both to our provinces and our commercial navy. The admission of American produce into the ports of Great Britain upon paying the same duties only as are charged upon the importation of similar articles from our own colonies, is another very powerful check upon their prosperity, which, from these various combinations against it, will experience much difficulty in rising to the eminence it would speedily attain, if that country, so recently ceased to be an inveterate enemy, be not again placed by the liberality of the British government in a situation to impede its progress, and be hereafter viewed in the same light, and put upon a par with other foreign nations, in respect to restrictions and countervailing duties; then the North American provinces will soon greatly improve their internal situation, and the mother country derive such benefit from them as will render her more independent of other nations for supplies of the first importance than she has hitherto been.

With this imperfect notice of the commerce of Canada, I will close the succinct account that I have deemed expedient to offer to my readers, in order that they may have before

them a summary of the present state and government of the Lower Province previous to entering upon a topographical detail. My object has been to present a short sketch, not to write its history; and my wishes have succeeded, if I have been fortunate enough to convey so much information as will help to place this important appendage to his majesty's crown in its true point of view.

DIVISIONS OF LOWER CANADA.

THE province of Lower Canada is divided into the districts of Montreal, Three Rivers, Quebec, and Gaspé, which, by proclamation of the government, dated May 7, 1792, were subdivided into the following twenty-one counties, viz. Bedford, Buckingham, Cornwallis, Devon, Dorchester, Effingham, Gaspé, Hampshire, Hertford, Huntingdon, Kent, Leinster, Montreal, St. Maurice, Northumberland, Orleans, Quebec, Richelieu, Surrey, Warwick, and York. The minor divisions are, 1st, The seigniories, or the original grants of the French government under the feudal system; these are again partitioned out into parishes, whose extents were exactly defined by a regulation made in September, 1721, by Messrs. De Vaudreuil and Bigon, assisted by the Bishop

of Quebec, and confirmed by an "*Arret du Conseil Supérieur*" of the 3d of May, 1722. These limits however were not strictly adhered to, for as the population increased, and settlements became numerous and extensive, it was found expedient to build many new churches, that the means and accommodations for religious worship might keep pace with the numerical increase of the communicants; for the support of these, portions of ancient parishes have from time to time been constituted into new ones.

2d. The townships or grants of land made by the English government since the year 1796, in free and common soccage.—The general divisions being thus pointed out, we are at liberty to enter upon the details of such parts as lay claim to particular attention; and, commencing our topographical account where the two provinces are separated from each other, the district of Montreal first presents itself.

THE DISTRICT OF MONTREAL

Is bounded on the north-east by the district of Three Rivers, on the south by the states of New York and Vermont, where the boundary-line, running on the parallel of 45 degrees north latitude, divides the territories of the English and

American governments; on the south-west by the province of Upper Canada and the Grand or Ottawa river; and on the north and north-west it may be supposed to run as far as the limits of the province in that direction, which is the 52 degree of north latitude. The perpendicular breadth from St. Regis, along the general course of the river, is $73\frac{1}{2}$ miles. It contains the counties of York, Effingham, Leinster, Warwick, Huntingdon, Kent, Surrey, Bedford, Richelieu, and Montreal; each sending two members to the provincial parliament, except Bedford, which elects but one; 56 seignories and fiefs; 32 whole townships, and part of eight intersected by the district line of Three Rivers; all of these are already laid out into separate lots, besides 32 others, that have only been projected; and 54 parishes, with a part of that of Yamaska, lying principally within the adjoining district. The lands granted *en fief et seigneurie* amount to 2,786,101 acres, or 3,269,966 superficial French arpents; and of the townships mentioned as being laid out 816,776 acres have been granted. The proportion of these two quantities now under cultivation may be taken at somewhat more than one half for such as are held under the French grants; but in the townships the amount is comparatively small, as must necessarily be the case from the

recent date of the patents; some indeed, though completely surveyed and allotted, have scarce any settlers upon them. As the seigniories offer the best criterion whereby to judge of the general improved condition and comfort of the peasantry, as also to what degree of prosperity the province has reached, it may not be amiss to begin our description with them, and notice the townships and other more recent settlements afterwards.

NEW LONGEUIL (the seigniorship of)—the most westerly of all the Lower Province, on the north side of the river St. Lawrence, is in the county of York, and runs along the shore of lake St. Francis, two leagues in front, as far as the boundary-line of Upper Canada, which forms its south-west limit, by three leagues in depth; on the north, a location of 1000 acres to the late Lieutenant-Colonel De Longeuil separates it from the township of Newton; and on the north-east it is bounded by the seigniorship of Soulange. On the 21st April, 1734, it was granted to Sieur Joseph Lemoine, Chevalier de Longeuil, and is now the property of Saveuse de Beaujeu, Esq. This tract of land lies rather low; on the north-east side part of a great swamp spreads over a large space, which is covered with cedar, spruce fir, and hemlock trees, the sure indicatives of such a soil; but

which requires only the operation of draining to be converted into good and profitable land. To the south-west the ground rises much above the level of the opposite side, and abounds with many spots suitable to the production of grain of all sorts, as well as favourable to the cultivation both of hemp and flax, and every other requisite purpose of farming. The woods afford abundance of fine trees, but beech and maple most predominate; there is, however, great plenty of all the other useful sorts, either for timber or fuel. The rivers Delisle and Baudet water it very commodiously: the first crosses it diagonally from Upper-Canada, where it has its source, into the seigniory of Soulange; and the latter at its south-west angle, from the upper part of the township of Lancaster to Pointe au Baudet: neither of them are navigable, though on the latter, whose banks are much the highest and the current strongest, large quantities of staves and other timber felled in its vicinity are floated down to the Saint Lawrence in the spring, when the stream is swelled by the melted snow and ice; they both turn some good grist and saw mills. The front of the seigniory, along the St. Lawrence, between Ance aux Batteaux and Pointe au Baudet, is very low, and overflowed so frequently as to make it impracticable to maintain a road fit to

keep up a communication through this distance ; but in winter, the route upon the ice along this part, and on the north side of the lake into Upper Canada, is preferred, as being shorter than the road leading by the side of the river Delisle : this road is, however, called the principal one between the two provinces, but it will require much amendment to render it so convenient as it ought to be for the increasing intercourse between these parts. The greatest part of the concessions *, in New Longueil, are about Ance aux Batteaux and Pointe au Baudet, on each side of the river Delisle, and still further to the rear in the Cotes St. George and St. André, where a number of Scotch families are settled, whose industry has so far benefited their lands, that they are now among the best parts of the seigniory, although the other conceded lots are in a very fair state of agricultural improvement. The male inhabitants of this and three or four other seigniories in this part of the

* By the term *concession* is meant the lots of land usually about three acres in front by 20, 30, or 40 in depth, which are let by the seigniors at some trifling rent, either of money or produce, according to their quality, to such persons as are willing to settle upon and cultivate them. As it is an object worthy the attention of proprietors to concede as many of these lots as they can, the conditions are in general favourable to the tenants, in order to give every encouragement to bringing new lands into tillage.

district are mostly *voyageurs*, a name given to the persons employed in the north-west fur trade, whose wandering mode of life, toilsome and laborious as it is in the extreme, has superior charms for them than the more regular and profitable pursuits of husbandry. Such a disinclination to yield to the quiet sameness of a fixed residence is seriously inimical to the progress of cultivation on tracks that are but sparingly peopled; and from such a cause, neither this or the adjoining grants, that contain many men who follow this employment, are in so flourishing a state as it is highly presumable they would be, from their great fertility and numerous natural advantages, were all their inhabitants of a more domesticated disposition.

SOULANGE (the seigniory of) stretches four leagues on the north bank of the Saint Lawrence, from that of New Longueil to the Pointe des Cascades: a small part of the township of Newton and the seigniory of Rigaud bound it on the south-west, as does the seigniory of Vaudreuil on the north; with the latter it occupies the whole of the tongue of land that is formed by the confluence of the Ottawa and the Saint Lawrence, at the upper extremity of lake Saint Louis; it was granted October 12th, 1702, to the Chevalier de Soulangue, and is now the property of Saveuse de Beaujeu, Esq. The general cha-

racter of the soil through the whole of this grant is good, and so advantageously varied as to be fit for all the productions natural to the country. In the south-west corner the same extensive swamp that runs into New Longueil spreads over a considerable space: elm, ash, oak, beech, and a great variety of other trees, produce fine timber and wood for all purposes in abundance. The rivers à la Graise, Rouge, and Delisle conveniently intersect and water it with their streams; the last is the largest, though no use can at present be made of it for conveyance; it might, however, become navigable for boats to the distance of several miles, merely by clearing its bed from the trunks of trees, that, with gradual decay, have for ages continued to fall into and obstruct it. The whole extent of this property, in front of the Saint Lawrence, is very thickly settled, and were the inhabitants as strongly attached to husbandry as they are to the occupation of *voyageurs*, it might be improved into a most excellent and productive track; but even now it is far above mediocrity. At five miles from Pointe des Cascades is the pleasant village of the Cedars, consisting of about forty houses and a well-built church: being the point of rendezvous for all boats passing up or down the river, and having an established ferry to the oppositè seigniory of Beau-

harnois, it is a place of great resort both for travellers and traders. There is but one grist mill within the seigniory, which is situated on a point of land about a mile and a half below the village, and well known by the name of Longueil's mill. A short distance from the Pointe des Cascades lies the Isle des Cascades, that, with two or three smaller ones, break the current of the river at its entrance into lake Saint Louis. A sudden declivity in its bed, obstructed by rocks in some places, and scooped into cavities in others, produces the most singular commotion, called the Cascades; it is an extraordinary agitation of the waters precipitated with great velocity between the islands, which being repelled by the rocks and hollows underneath, the waves are thrown up in spherical figures much above the surface, and driven with the utmost violence back again upon the current, exhibiting nearly the same effect as would be produced by the most furious tempest. To avoid the danger of passing this place, a canal usually called the military canal has been constructed across the point of land, and through which all boats now make their way to the locks at Le Buisson; it is 500 yards in length, and furnished with the necessary locks; on each side a space of ground 100 feet deep has been relinquished by the proprietors of Soulange and

Vaudreuil, and is reserved for public purposes; at the entrance to the canal, from the lake St. Louis, is a guard-house, where a small party of military is always stationed. At a place near Longeuil's mill the batteaux going up the St. Lawrence are unloaded, and their freights transported in carts to the village, in order that they may be towed up light through the Grande Batture or Rapide du Coteau des Cedres. On the opposite shore is the Rapid de Bouleau, deeper, but not less difficult to pass; the combined effects of these two make this the most intricate and hazardous place that is met with between Montreal and Lake Ontario. In a military view it is one of the most important spots that can be chosen, if it should ever unfortunately be again necessary to adopt defensive measures, as works thrown up on the projecting points of each side would completely frustrate any attempt to bring down by water a force sufficient to undertake offensive operations against Montreal. At Coteau du Lac, just above river Delisle, boats again enter locks to avoid a very strong rapid, between Prison Island and the point abreast of it, where a duty is collected upon wines, spirits, and many other articles that are carried by them into Upper Canada. This place has been always esteemed a military post of some consequence; works are

here erected and kept in good repair that command the passage on the north side of the river; and was another thrown up on Prison Island it would render the pass so difficult as to make it very improbable that any enemy, however enterprising, would run the hazard of it, or even venture through the outer channel between Prison Island and Grande Isle. The stream is interrupted hereabouts by several islands, between which it rushes with great impetuosity, and is so much agitated that boats and rafts encounter great inconvenience in descending; to go down in safety they must keep close under the shores of Prison Island. At two miles from Coteau du Lac is M'Donell's tavern, a very good house for the accommodation of travellers towards the upper province, and conveniently situated for that purpose. The main road, those between the concessions, and three good bridges over the rivers, are all kept in excellent repair throughout this seigniory.

VAUDREUIL (the seigniory of) is very eligibly situated on the south side of the Ottawa river (or rather that expansion of it called the Lac des deux Montagnes), in the county of York. It begins at Pointe des Cascades, and runs along the river as far as Rigaud, comprising one half of the large tongue of land mentioned in the preceding article: it was granted on

the 23d October 1702, to Philippe de Rigaud, Marquis de Vaudreuil, and now the property of the Honourable M. E. G. A. Chartier de Lotbiniere. This seigniory is in a very flourishing state; two-thirds of it is conceded in lots of three acres in front by twenty and from that to thirty in depth, forming six different ranges, parallel to the Ottawa; the whole number of lots is 377, and of these 290 are actually under excellent cultivation. The soil is good nearly throughout, and in many places of the best quality, producing grain and all the usual crops of the country. Three small rivers water it, that in spring are navigable for boats, but after the freshes have subsided even small canoes cannot work upon them. Oak, elm, ash, and beech of a superior quality are found, besides many other species of woods fit for all purposes. On the bank of the river, about six miles from the Pointe des Cascades, is a pleasant little village, containing from 20 to 25 houses, well built of wood, surrounding the church and parsonage-house, which are both of stone. The seignorial, or manor-house, is situated on a well chosen spot, near a small rapid, about a mile and a half from the church; surrounded by some groves of elm, plane, and linden trees, which with avenues and other plantations in the English style afford

many very pleasing prospects; at a little distance from the house are a grist-mill and a wind-mill, which serve the whole community. The major part of the men of this seigniory are voyageurs like their neighbours, yet agriculture does not languish, nor is there a want of artisans in any of the useful trades: there are also five manufactories of pot and pearl ash. The ferry-boats from St. Anne on the island of Montreal, which is the general route to Upper Canada, land their passengers on this seigniory, near the manor-house; and from the number of travellers continually passing much interest and variety is conferred upon the neighbourhood. Besides the main road, several others pass through Vaudreuil, and are all kept in very good repair, as well as the bridges. From Point Cavagnal to the house there are several small islands, all of which are appendages to the original grant. Two *arriere fiefs* within the seigniory are both in possession of M. de Lotbiniere.

RIGAUD (the seigniory of) lies on the south side of the Ottawa, in the county of York, and has for its boundaries Vaudreuil on the east, the province line of Upper Canada on the west, and the township of Newton in the rear; its dimensions are three leagues in front by three in depth, and was granted on the 29th October, 1732, to Messrs. de Vaudreuil and Rigaud; the

present proprietor is the Honourable M. E. G. A. Chartier de Lotbiniere. A very fertile soil runs through the whole of this grant, and where cultivated, is found well adapted to grain and pulse of all sorts. The Rivers à la Graise and Raquette run through it; the first, passing about the middle of the seigniory, is at all times navigable from the Ottawa up to the fall, and greatly contributes to the advantage of the settlers on each side of it; the other, in the eastern part, is not navigable. Very good elm, ash, and some oak, are found among the timber trees, and some pines of a fine growth are interspersed through the woods. From the south-east bank of River à la Graise, two mountains of great height penetrate some miles into the interior, and greatly encroach upon the quantity of cultivable land; however, about one half of this tract is conceded in 280 lots of three acres by 20 or 25, and tolerably well improved; these concessions are situated on each side of River à la Graise, where they are the most numerous, in Nouvelle Lotbiniere, and in the Cote Ste. Madelaine; near the fall are a grist mill and a saw mill, and a little below, at the end of the road leading to Nouvelle Lotbiniere, is a spacious parsonage-house built of stone, where on the second floor divine service is performed until a church can be erected, which is al-

ready begun, as well as a village surrounding it.—The men of this seigniory are chiefly voyageurs, active, resolute, and enterprising; the attention of those who follow that employment being diverted from the cares of husbandry, leaves but a comparatively small number to become farmers; but those who do undertake it carry it on with much zeal and commensurate success.

ARGENTEUIL (the seigniory of) is on the north bank of the Ottawa, in the county of York. It adjoins the seigniory of the Lac des deux Montagnes on the eastward, the township of Chatham on the westward, and a tract of waste crown lands on the northward; its front extends two leagues along the river, by four in depth. It was granted March 7, 1725, to Mons. Daillebout. The present proprietor is Sir John Johnson, Bart. Perhaps through all the upper part of the district of Montreal, no tract of equal extent will be found of greater fertility, or possessing more capabilities of being converted within a few years into a most valuable property. The land is luxuriantly rich in nearly every part of it, while the different species of soils are so well varied as to afford undeniable situations for raising abundant crops of every kind. The lower part bordering on the Ottawa is tolerably well cleared of wood, where are large

patches of fine meadow and pastures; from hence the ground rises with a gradual ascent towards the rear. In the back parts the woods run to a great extent, and yield timber of the different kinds of first rate size and goodness, which have hitherto been very little thinned by the labours of the woodman. The Riviere du Nord crosses the upper part of the seigniorie in a direction from east to west, discharging itself into the Ottawa, about four miles below the great falls, and nearly half way between the lateral boundaries; it is navigable as high up as the first mill, a distance of three miles. There is a smaller stream called Riviere Rouge, running in the same direction across the lower part of the grant as the Riviere du Nord, and falling into the navigable part of the latter. The settlements that are already formed in Argenteuil hardly amount to a third part of the whole; the remainder however presents many temptations to agricultural speculation. Of the present concessions, some are situated on the bank of the Ottawa, where they seem to be the most numerous as well as rather the best cultivated; others on the Riviere Rouge; in a range between it and Riviere du Nord; and along both banks of the latter: all shewing strong indications of a thriving industry in their occupiers. There are two grist mills, two saw mills, and a paper

mill, the only one I believe in the province, where a large manufacture of that article in all its different qualities is carried on with much success, under the direction of the proprietor, Mr. Brown, of Montreal. Not far below this mill is a good bridge, over which the main road to the township of Chatham, and the upper townships upon the Ottawa leads. On the left bank of the Riviere du Nord, upon a point of land near its mouth, is very pleasantly situated the residence of Major Murray, formerly owner of the seigniory: this stream and the bays of the Ottawa that indent the front abound with a great variety of very excellent fish, as do the low lands thereabouts with wild fowl and game of several sorts. The island Carillion, three miles long by three quarters broad, is very good land, but not put to any use; this with a smaller one near it, and another at the entrance of Riviere du Nord, are appendages to the grant. If fertility of soil and easy access to water conveyance be deemed of influence in the choice of situations, wherein to clear and break up new lands, probably it will not be easy to select a tract where these advantages are better combined than in the seigniory of Argenteuil.

LAC DES DEUX MONTAGNES (the seigniory of) lies on the north bank of the Ottawa river, in the county of York, adjoining Argen-

teuil on the west, Mille Isles on the east, and on the northward is bounded by part of the augmentation to Mille Isles, and a tract of waste crown lands. Its dimensions are three leagues and a half in front by three in depth, granted on the 17th October, 1717, to the ecclesiastics of the Seminary at Montreal, from whom it has never been alienated. The original grant has been increased by two augmentations, bearing date 26th September, 1732, and 1st March, 1735, the respective quantities of which are mentioned among the Extracts of Original Grants under this title in the Appendix. The figure of this seigniory is irregular on its eastern side by an incision made by the north-west angle of Mille Isles, about four miles deep. Through the whole of this tract the soil is very favourable, in many parts consisting of a fine strong loam with a mixture of rich black earth, that is found to contain a large share of fertile properties. The surface is uneven, but never varies into prejudicial extremes: bordering on the lake, in the vicinity of the Indian village, it is of a moderate height, from thence westward to the *Eboulis* it gradually sinks into a flat, from which it rises again near the boundary of Argenteuil; eastward of the village, nearly to the seigniory of Mille Isles, runs a low heath, having a large bay on

one side of it; at a short distance from the front are the two conspicuous mountains that give the name to both seigniory and lake; one of them is called Mount Calvart, on whose summit are the *remains* of some buildings which have long borne the appellation of the Seven Chapels. Towards the interior the ground declines below the level of the front; proceeding further to the rear there are some ranges of heights that assume rather a mountainous character, but in the spaces between them are many excellent situations for settlements. It is very well watered by the Grande and Petite Riviere du Chêne, the Riviere du Nord, and the Riviere au Prince, which in their course work several corn and saw mills. The influence of the reverend proprietors in promoting industry and directing it towards useful labours is strongly exemplified in the flourishing state of their property, as upwards of three-fourths of it is divided into 661 lots or concessions, by much the greatest number of them settled upon and well cultivated, producing grain of all sorts, pulse and other crops, with a sufficient quantity of good meadow and pasture land. Oak and pine timber are found in some places, but beech, maple, birch and other inferior kinds are plentiful in the woods. The Indian village is agreeably seated on a point of land projecting into

the lake, and consists of about 60 houses, a church, and a parsonage-house, where a missionary always resides, for the purpose of superintending and instructing the inhabitants in the doctrines of the Christian religion. The Indians of this village are the descendants of a tribe that formerly inhabited or rather frequented the lands bordering upon Lake Huron, but being engaged in one of the wars that so frequently wasted whole nations of these wanderers, they were surprised by the vigilance of their enemies, and nearly exterminated; the few who did survive the massacre effected their escape to the eastward, and their progeny now occupies two or three small villages in different parts of the province. Those of the village of the Two Mountains are become civilized, and have adopted many of the manners and customs of the Canadians who reside in their vicinity, and acquired a knowledge of the French language, which they make use of fluently enough: they are quiet and inoffensive in all their modes of life, preserving the greatest harmony among themselves, and civility towards the other inhabitants. They place an implicit confidence in the resident minister, whose influence over them is unbounded. Some lands are assigned to them near their village, which they cultivate

with wheat, Indian corn, and other grain; of late years they have also planted potatoes in considerable quantities: from these sources, increased by the produce of the chase, which a part of the men follow during the winter season, a subsistence is derived, that apparently they enjoy with some of the comforts of civilisation.

MILLE ISLES (the seigniority of) is on the north side of the Riviere St. Jean or Jesus, one part of it lying in the county of York, and the other within that of Effingham, four leagues and a half in front by three in depth, bounded south-west by the seigniority of Lac des deux Montagnes, north-east by Terrebonne, and on the rear by the township of Abercrombie. It was granted May 5th, 1714, to M. M: de Langloiserie and Petit. At present it forms two distinct seigniories, called Du Chêne and Blainville. The land within the grant of Mille Isles is for the most part a good, rich and productive soil of different compositions, very eligible for raising all the various sorts of grain and other productions usual in this part of the province. The division called Du Chêne, the property of M. Dumont, joins the seigniority of Lac des deux Montagnes, is nearly two leagues in front by three deep; extremely well watered by the Grande Riviere du Chêne or Belle Riviere, and

some smaller streams, upon all of which there are both saw and corn-mills; the prevailing sorts of timber are beech, ash, maple, and some oak. The greatest part of this property is conceded, and most of the lots settled upon by an industrious tenantry. At the mouth of Riviere du Chêne is the pleasant well built village of St. Eustache, containing from 80 to 90 houses, a handsome church, and parsonage-house. The concessions on the Riviere St. Jean and Du Chêne are in a good state of cultivation, that does some credit to the husbandry of their occupiers, and shews the beneficial effects of industry, well directed, upon a generous soil. The prospect from the village of St. Eustache is beautiful; the fine well stocked settlements upon the Isle Jesus, the mill westward of the village, with the numerous and well diversified islands scattered about the river, present altogether a very happy specimen of the picturesque.

BLAINVILLE (the second division of Mille Isles), joins Du Chêne, is nearly three leagues in front by three in depth, and the property of M. La Croix. This seigniory bears a strong affinity to Du Chêne, as far as respects the nature of its soil, local varieties, and species of timber with which it is stocked. Part of the river Mascouche runs through it, and several small rivulets conduce to its fertility by distri-

buting their waters in all parts: all of these streams turn both saw and grist-mills. By much the largest proportion of Blainville is conceded in lots of the usual extent; the greatest number of these are settled, and appear to be under a very beneficial system of management. On the banks of Riviere St. Jean, from Terrebonne to Du Chêne, the whole of the ground is occupied, besides some large ranges of settlements along the banks of the Mascouche, forming together a valuable and highly improved property.

TERREBONNE (the seigniory of), on the north side of Riviere St. Jean or Jesus, is in the county of Effingham, between those of Blainville and La Chenaie, bounded in the rear by the townships of Abercrombie and Kilkenny; was granted 23d December, 1673, two leagues in front by two in depth, to M. Dautier Des Landes; but on the 10th April, 1731, the grant of the tract called Desplaines, of similar dimensions, was added to it; and on the 12th April, 1753, an augmentation of a like quantity of land was made to Desplaines, together constituting the present seigniory, two leagues in front by six deep. It is now the property of the heirs of the late Simon M'Tavish, Esq. of Montreal. The soil towards the lower part is as rich and luxuriant as any within the province; about Des-

plains it is generally of a first rate quality, but the remote parts are mountainous, with a rough gravelly or stony soil. The rivers Achigan and Mascouche, with three or four rivulets, water it most completely. The high lands produce abundance of beech, maple, birch, and elm timber; in some few places that lie low and wet there are cedars and spruce firs: full two-thirds of this property is conceded, with the greatest number of the lots in as respectable a state of cultivation as any in the district, and extremely productive in wheat, barley, and other grains. The front along the river is particularly well settled, and in this tract there is every appearance of comfort; and even affluence, among the tenantry. The different streams turn some very good grist and saw-mills, but those distinguished by the name of the Terrebonne mills are without exception the most complete and best constructed of any in the country; they were very much improved by the late proprietor, who used every exertion and disregarded expense to render them of general utility to this part of the district. His desire of promoting the interest of the labouring part of the community has fully succeeded. Some of the houses and part of the machinery were destroyed by fire a few years ago; but they were immediately rebuilt, and placed in their former state by the present oc-

cupier, Henry M^cKenzie, Esq. A carding machine and fulling mill have also been introduced, which are found of great service, where the poor people, as is the case in this country, depend much upon the home-made woollen cloths for their common wear. The village of Terrebonne is pleasantly situated on a projecting point of land, having several beautiful islands in front, which by their varied and romantic scenery greatly contribute to embellish the prospect. It contains about 150 well built houses of wood and stone, besides the church and parsonage-house, the seignorial-house, and the mansion of Roderick M^cKenzie, Esq. which is worthy of remark for the elegance of its construction; indeed there are several houses in a very superior style to be found in this village, it being a favoured spot, where many gentlemen, who have realised large fortunes in the north-west company fur trade, retire to enjoy the comforts and luxuries of private life. It is also a place of some traffic, occasioned by the continued influx of persons bringing grain to the mills from distant parts, and by the large exports of flour that annually take place; in consequence many of the residents are traders and artisans, whose commercial concerns impose a degree of consequence upon the village. The population is sufficiently great to give a maintenance to a schoolmaster for

educating the youth. Terrebonne is a very valuable property, which for many years has been continually increasing ; some idea may be given of it, as well as some other of the seignorial properties in Canada, when it is mentioned that in the year 1803 it was purchased by Simon M'Tavish, Esq. for the sum of £25,100 currency of the province ; since that period many large sums of money have been expended in making numerous judicious and beneficial improvements.

BEAUHARNOIS OF VILLECHAUVE (the seigniority of) lies on the south side of the river St. Lawrence, in the county of Huntingdon, having its front extending upon the river six leagues by as many in depth ; it is bounded in the rear by the township of Hemmingford, on the south-west by the townships of Godmanchester and Hinchinbrook, and on the north-east by the seigniories of Chateauguay, La Salle, and the township of Sherrington. This ample tract was granted on the 12th of April, 1729, to Sieur Claude de Beauharnois de Beaumont, and is now possessed by the heirs of Alexander Ellis, Esq. In the seigniority there are the following interior divisions, viz. Catherine's Town, Helen's Town, Mary's Town, Orme's Town, North and South George Towns, William's Town, James Town, Russel Town, and Edward's Town.—

Whether estimated by the general goodness of the land, the variety of timber of every description, among which oak, elm, pine, and beech are in great quantities; the advantage of water conveyance at all times from the breaking up of the frost until the commencement of winter, or its contiguity and easy access by main roads to the State of New York, this is a most valuable tract of land, affording as good a basis for improvement as perhaps any other in Lower Canada. On the front or north-west part there are a few swampy places covered with cedar and spruce firs, but they are of no very great extent; and generally, between the banks of the Chateaugay and the St. Lawrence, a mean breadth of about three leagues, the country is unexceptionable in point of locality, as well as for all agricultural purposes, abounding with many spots particularly congenial to the growth of hemp and flax. From the Chateaugay to the township of Hemmingford there is a gradual rise, with many fine bold eminences covered with good timber of large dimensions, and where the land is, perhaps, superior to that lying towards the St. Lawrence. In the divisions of James Town and South George Town is a level space about three miles and a half by two, called Blueberry Plains, being an horizontal stratum of rock of the quartz species, from the crevices

of which sprung immense quantities of the shrubs that bear the berries after which it is named.—The rivers Chateauguay and St. Louis run through the seigniory from south-west to north-east: out of the former many, and not inconsiderable, streams branch off to the interior, some of them crossing the province line into the American territory; of these the principal ones are called the English River, Bean River, Riviere aux Outardes and Sturgeon River. The Chateauguay is a fine river, navigable for boats and the usual river-craft: rafts of large quantities of the timber felled in Beauharnois, and the adjacent townships of Godmanchester and Hinchinbrook are brought down by it into the St. Lawrence. There are roads leading along it, from whence others run to the United States. A great number of concessions are made, but as yet not much more than a fourth part of them are cleared and settled; they are dispersed over the seigniory as follows: in Russel Town, 100 lots abutting upon the township of Hemmingford; in South George Town, 17 lots reaching from the south side of the Chateauguay to the English River; in William's Town, 110 lots on the south side of Chateauguay, and on both sides of Bean River; in Ann's Town, 95 lots on the St. Lawrence and the north bank of the

Chateauguay; in North Georgetown, 43 lots; and in Orme's Town, 47 lots, all on the Chateauguay: in Mary's Town, 57 lots; in Helen's Town, 61 lots; and in Catharine Town, 20 lots, all on the St. Laurence: at the mouth of the river St. Louis is the domain called St. Louis, where there are some good corn and saw mills; there are also several others in the different concessions; in St. Mary's Town there is another domain called du Buisson. Previous to the commencement of hostilities between Great Britain and the United States, the population of Beauharnois was a mixture of Canadians and Americans, the latter amounting to about 200 families, who, on that event taking place, immediately withdrew into their own country, as did many others who were settled in the townships lying near the province line. The relative position of this property and that of the adjoining townships with the United States must ensure great advantages when the amicable commercial intercourse between the two countries is uninterrupted, from lying, as they do, contiguous to the line of communication to Montreal, with roads in many directions, numerous routes for an expeditious water conveyance, and a soil so fertile, that where it is cultivated produces abundant crops,

are undoubtedly solid reasons for conjecturing that this part of the district of Montreal will attract the attention both of traders and cultivators, and vie in a few years with most others of the province in population, as well as a flourishing state of agriculture. The Grande Isle, four miles and a half long, by nearly one and a half broad, on whose southern side a redoubt was thrown up, and a road made across it to communicate with Coteau du Lac, by Colonel de Lotbiniere in 1813, with two or three smaller ones adjoining, are appendages to Beauharnois. The Grande Isle divides the stream of the St. Laurence into two channels; that on the south side is called the Beauharnois channel, in the course of which are the rapids Croche, Les Faucilles, and de Bouleau; the latter both intricate and dangerous to pass. It was through this channel, with the view of avoiding the Rapid and Post of Coteau du Lac, then held by a British detachment, that the American General Wilkinson intended to conduct the army under his command, with the avowed object of invading Lower Canada. He was however prevented from carrying his design into execution, and the boasted superiority of his arms greatly diminished by the unexpected defeat of part of his force by a much inferior

number at a place called Christlers Farm in Upper Canada on the 11th November, 1813, which compelled him to a precipitate retreat, and to abandon the British territory, by recrossing the St. Lawrence, and ascending Salmon River to a place called French Mills, within the American boundary; in which situation, owing to the panic that embarrassed all his operations, he deemed himself so unsafe, as to think it advisable to destroy all the boats and craft he had collected for carrying his plan into effect, and retire to a position more distant, or more secure from attack. This repulse in the attempt at invasion was rendered decisive by the previous retreat, or rather complete defeat of a force amounting to 7000 men under General Hampton, that was intended to make a diversion in favour of Wilkinson, on the southwestern frontier. So sanguine were the expectations of success formed by these commanders, that a junction of their forces was contemplated at Montreal, where they promised themselves winter-quarters, and from whence in the next campaign they calculated a victorious career was to be pursued. The battle of La Fourche or Chateauguay, that annihilated this visionary glory, was one of the singular events that cannot be taken into the

ordinary calculations of military operations, and the circumstance of such a force being not only stopped in its progress, but obliged to retire by the exertions of a body of men not amounting in numerical strength to a twentieth part of the assailants, must be a matter of admiration whenever it becomes the subject of professional reflection. This exploit, for it well deserves such a name, was achieved by one company of Canadian fencibles, two companies of voltigeurs, some militia forces of different descriptions, with a few Indian auxiliaries, the whole numbering only 300 men, that formed the advanced picquets of Major-General de Watteville's chain of positions established towards the frontiers, and under the command of Lieut.-Colonel de Salaberry of the Canadian voltigeurs. About 10 o'clock A. M. of the 26th October, 1813, this active and spirited officer discovered the enemy's cavalry and light troops advancing in force on both sides of the river Chateauguay, when he immediately formed the resolution to oppose him by every obstacle that invincible courage, and the means at his disposal, could throw in the way. His handful of men were posted on the north bank of the river in the division of South Georgetown, covered in front by a small blockhouse and an abbatis hastily constructed; the right flank supported by a

party of 22 Indians, and the left by the right flank company of the third battalion of embodied militia (70 men), under Capt. Daly, on the opposite of the river, about 350 paces distant: thus in position he waited the enemy's approach. The American army left its encampment at FourCorners on the 21st, passed the boundary line, and obtained a trifling advantage by surprising a small detachment of Indians and driving in a piquet of sedentary militia posted at the junction of the Outarde and Chateauguay rivers, on whose ground it encamped, and without loss of time began to clear a communication with its former station, so as to be able to advance the artillery. On the 24th these arrangements were complete, and next day General Hampton made every preparation for his forward movement. On the morning of the 26th he passed his right column, composed of the fourth, thirtieth, and thirty-third regiments of infantry over the river, about three-quarters of a mile in front of the British piquets, and it soon afterwards formed in two lines, about 150 yards from the position occupied by Captain Daly. At the same time his left column (which he led in person) consisting of the tenth, thirty-first, and two other regiments of infantry, with two hundred cavalry, advanced in column, having his artillery, ten pieces, in the REAR, towards the

abbatis, and commenced the attack; but in spite of all his efforts to force a passage by repeated assaults, he was held in check by the vigorous well-directed fire of Colonel de Salaberry. On the opposite side of the river, the American light brigade under Colonel M'Carty, that had been detached from the right column to turn the flank of Captain Daly's position, and take it *en reverse*, was intercepted in its progress by the spirited advance of that officer, supported by a company of Chateauguay chasseurs under Captain Bruyers: the brisk fire and skilful manœuvres of these companies frustrated the attempt; but both officers being wounded, and having otherwise sustained some loss, they fell back, when their position was immediately occupied in the most resolute manner by a flank company of the first battalion of militia, who succeeded in maintaining it. On both these points, although the Americans were several times repulsed, they repeatedly rallied and resumed the attack with no better success until the close of day, when their commander, unable to make any impression upon the invincible bravery of a truly Spartan band, thought proper to withdraw from so unequal a contest, overwhelmed with defeat and disgrace. The loss sustained by the enemy from the British fire was severe, and much increased by the mis-

management of some of his own detached corps, who fired upon each other in the woods with serious execution. From the events of this day, General Hampton derived such small hopes of establishing his winter quarters at Montreal, that he determined to retire within his own frontiers; and depend more upon the resources of his country than his own endeavours to procure them as the reward of conquest. In this action the devotion of the Canadians in defence of their country stands forth most eminently conspicuous. In the absence of regular troops, that a militia embodied and disciplined hastily to meet the pressing emergency of a crisis threatening more than common danger was able to fulfil the important duties assigned to it, by opposing itself as a barrier against an enemy, elate in his own strength, and reckoning upon encountering courage only in proportion to numbers, will ever reflect the greatest honour upon it, and not only secure the admiration of succeeding ages, but spread a confidence over the whole empire, that the colours which the Prince Regent has been graciously pleased to commit to the charge of the incorporated battalions of Canadian militia will ever be defended by the enthusiastic bravery so natural to men, when prompted by the benefits of a mild and liberal government to protect the land of their birth

from the pollution of a conqueror's yoke. The Canadian, gratified by so distinguished an honour as the thanks of his prince for meritorious services, will be found willing and even desirous to shed his blood whenever a similar danger may call him to the field of action. At a time when the military resources of the province were so greatly curtailed by the most arduous continental warfare that ever Great Britain was engaged in, it is a matter of surprise that so much could have been effected with such slender means. An enemy emboldened by possessing an ample force, and inspired by the prospect of obtaining a fertile country, long the object of inordinate desire, could only be successfully opposed by a union of the greatest energy with the most active measures; that such was presented to him is incontrovertible, and the credit of having brought them into action by unceasing perseverance will attach to the judicious dispositions of the Governor-General, Sir George Prevost, and for his strenuous efforts in turning the enthusiasm of the people into a bulwark stronger and more impenetrable than entrenchments or fortresses against an invader. After an invasion defeated by the native courage of a population, resolute in maintaining the integrity of its soil, it is to be hoped the dazzling ambition of conquest may not

again excite enmity between two governments, the mutual interest of whose subjects it is to live in amity with each other.

CHATEAUGUAY (the seigniory of), on the south side of the Saint Laurence, in the county of Huntingdon, joins that of Beauharnois on the south-west, Sault St. Louis on the north-east, and La Salle in the rear; the front stretches two leagues on the river by three in depth. It was granted September 29th, 1673, to Le Moine, Sieur de Longeuil, and at present belongs to the community of Grey Sisters at Montreal. Through the whole of this property there is very little variation in the land, which lies every where nearly upon a level, generally of a good cultivable quality; the arable part producing very fair crops of grain of all sorts. The rivers Châteauguay and St. Regis cross it diagonally; the former is navigable in the whole of its course through the seigniory for bateaux and rafts, but the latter does not possess these advantages. There are some good ranges of settlements along the borders of the St. Laurence, on both sides of the Châteauguay and St. Regis rivers, and in the intermediate spaces, which may be reckoned about one half of the whole grant, under pretty good cultivation. This seigniory cannot boast of a village; but on the western side of the Châteauguay, near its dis-

charge, stands a church, dedicated to St. John; on its banks there is a corn-mill and a saw-mill. At its mouth is the Isle St. Bernard, sometimes called Nuns Island, about one superficial mile in extent, and very well cultivated, an appendage to the grant. On it there is a house, usually denominated a convent, a term certainly misapplied, for it will in no way answer the description of such an establishment, unless the residence of two members of the order to which the property belongs may be allowed to convert it into a mansion of that class.

SAULT ST. LOUIS (the seigniory of) is on the south side of the Saint Lawrence, within the county of Huntingdon, confined by the seigniories of Chateauguay, La Prairie de la Magdelaine, and La Salle: it is a square of two leagues each way, granted May 29th, 1680, to the order of Jesuits. It is now the property of the tribe of domiciliated Indians, who inhabit the Coghawaga village. The situation of this track, between the seigniories mentioned as its boundaries, will convey a sufficient idea of it without further description, as there is not much variety through the whole of the level country from La Prairie to St. Regis. The rivers La Tortue, St. Regis, and du Portage intersect it so as to water it very completely through all parts. Nearly all that half of the seigniory which lies

towards La Salle is well settled and cultivated by Canadian families; but from the river St. Regis towards the St. Lawrence the remaining part is covered with wood of all the ordinary species, except a small portion reserved by the proprietors for their own uses. The village of Coghawaga is placed on the banks of the St. Lawrence, and consists of a church, a house for the missionary, who resides with them, and about 140 others, principally built of stone, formed into two or three rows, something resembling streets, but not at all to be remarked either for interior or exterior cleanliness or regularity; their occupants may be altogether about 900, who chiefly derive a subsistence from the produce of their corn-fields and rearing some poultry and hogs, sometimes assisted by fishing, and the acquisitions of their hunting parties, which however they do not, as in an uncivilised state, consider their principal employment. This tribe, the most numerous of any that has been brought within the pale of Christianity in Canada, is of the Iroquois nation, and has long been settled within a few miles of their present village; as they are the descendants of some of the earliest converts that were made by the pious zeal of the Jesuit missionaries, and established within the protection of the colony when its own population and

limits were both very circumscribed. Notwithstanding the remote period when their ancestors were induced to abandon their forests, and the barbarous customs of savage life, and the present inoffensive demeanour of their offspring, they have not yet acquired the regularity of habit and patient industry that are necessary to the complete formation of civilized society, nor indeed will the hopes of those who have had opportunities to observe the peculiarities of their character, and try them by the opinions of philosophers and humanists, ever be very sanguine that longer time or greater exertion will effect a more radical conversion; to prevent a falling off from the improvement already made is perhaps as much as may reasonably be looked for. That the fierce and restless spirit of the wandering savage has been tamed into something like docility cannot be denied; as a proof, it may be adduced, that some of the men of this village, and also some of those of the village of the two mountains, have lately been employed as auxiliaries in the British army, and during the periods of their service no difficulty has been found in bringing them under strict subjection, or confining their operations within the laws of modern warfare. Between the island of Montreal and the main opposite to Coghna-waga village the breadth of the Saint Lawrence

is contracted to about half a mile; from this spot to the lower extremity of what is termed the Sault or Rapide St. Louis, a distance of nearly four miles, there is a gradual shelving descent of its rocky bed. In passing through this channel the stream acquires an irresistible impetus, and towards the lower part moves with a velocity of 18 miles an hour, until it is separated by some small islands below into several channels. The incessant roar of the torrent, the inconceivable rapidity with which unwieldy bodies are hurried on as it were to inevitable ruin, and the agitated surface of the water, present a scene at once extraordinary, appalling, and terrific. Boats and rafts coming down the river are compelled to run through this tremendous pass, that is never free from difficulty and imminent hazard, although guided by experienced persons, who are always employed as pilots, to whose skill may be attributed the singular good fortune that an accident has very rarely occurred; they are constrained to keep as close as possible to the southern shore, and should any mismanagement or error in steerage unhappily take place, certain destruction would ensue.

LA SALLE (the seigniory of) consists of two portions of land adjoining the rear boundaries of the seigniories of Chateauguay and Sault St.

Louis, enclosed between the lateral lines of those of Beauharnois and La Prairie de la Magdelaine; both pieces extend a league and a half in depth, bounded in the rear by the township of Sherrington. It was granted April 20th, 1750, to Jean Baptiste Leber de Senneville, and is now the property of Ambroise Sanguinet, Esq. Very little difference is perceptible between this seigniory and those of Chateauguay and the lower part of Sault St. Louis, with respect to the quality of the land, and which for the most part is applicable to the same agricultural purposes: the river La Tortue, La Petite Riviere, and Ruisseau St. Jacques run through the two pieces. That part which lies behind Sault St. Louis is nearly all settled, exhibiting a favourable specimen of husbandry; but what lies in the rear of Chateauguay is still a waste, a very small portion of it only being conceded.

LA PRAIRIE DE LA MAGDELAINE (the seigniory of) is situated on the south side of the Saint Lawrence, in the county of Huntingdon, two leagues in breadth by four deep. It is bounded in front by the river, in the rear by the seigniory of De Lery and the barony of Longeuil, on the north-east by the seigniory of Longeuil, and on the south-west by those of Sault St. Louis, La Salle, and the township of Sherrington. This track was granted on the

1st April, 1647, to the order of Jesuits, whose possessions were once so large and valuable within this province. On the demise of the last of the order settled in Canada, it devolved to the crown, to whom it now belongs. The whole of this grant is a fine level of rich and most excellent soil, where are some of the best pasture and meadow lands to be found in the whole district, that always yield most abundant crops of good hay. The arable part is also of a superior class, upon which the harvests, generally speaking, exceed a medium produce. In the part called Cote St. Catherine there is an extensive bed of limestone. The different ranges of concessions enumerate altogether about 300 lots of the usual dimensions, whereof the major part is settled upon, and in a very favourable degree of cultivation, almost entirely cleared of wood, or at any rate of timber, very little of good dimensions being now left standing. Numerous rivulets cross it in every direction; beside these it is watered by the three rivers, La Tortue, St. Lambert, and La Riviere du Portage, all of which traverse it diagonally from south-west to north-east; neither of them navigable for boats to a greater distance than half a league from their mouths, and that only during the freshes of the spring; they afford however always sufficient water to work several corn and saw-mills.

In front of the seigniory is the village of La Nativité de Notre Dame, or La Prairie, formerly called Fort de la Prairie, from having once had a rude defence, honoured with that name, thrown up to protect its few inhabitants from the surprises or open attacks of the five native tribes of Iroquois, who possessed the country in its vicinity. Such posts were established at many places in the early periods of the colony, while the Indians remained sufficiently powerful to resist and often repel the encroachments of the settlers, although at present none of them retain a vestige of their ancient form, and very few even the name by which they were originally known. La Nativité is now a flourishing, handsome village of 100 well-built houses; nearly one-fourth of them are of stone, in a very good style, giving an air of neatness and respectability to the whole. Within the parish there is a school, not very considerable indeed, although in the centre of a numerous population; yet as the good effects of such an establishment, however humble in its rudiments, will not fail to be experienced, its advantages will undoubtedly be rendered extensively beneficial to the rising generation. A convent of the sisters of Notre Dame, missionaries from the community formerly founded at Montreal by Madame Bourgeois, is in a much better condition, where all

the necessary and some ornamental branches of female education are conducted upon a very good system, with a success highly creditable to the undertaking. The position of the seigniority of La Prairie is extremely favourable, from the numerous roads that pass through it in several directions, and particularly from being the point where an established ferry from Montreal communicates with the main road leading to St. John's, and thence by Lake Champlain into the American states; the general route for travellers between the capital of Lower Canada and the city of New York. In a point of view before alluded to, viz. encouraging the transit of produce from the countries bordering on our frontiers to the ports of the Saint Laurence, the seigniories adjoining this line of communication are most eligibly situated, and if measures having that object in contemplation should be encouraged, they would indubitably attain some eminence in commercial importance.— From its contiguity to the line of boundary, this part of the district was fated to bear the brunt of the war against the lower province; and in the year 1812, when the American government formally unmasked its ill concealed project of conquest, a British corps of observation was encamped towards the centre of La Prairie to watch the motions of General Dear-

born, who had then assembled a considerable force on the frontiers; but whose enterprise exhausted itself in a few manœuvres, and a display of strength ill calculated to menace danger, or inspire respect for his professional talent: for finding himself anticipated in all his movements, and his designs penetrated, he relinquished his chance of glory in favour of the more adventurous General Wilkinson, who, in the following campaign, attempted to execute the plan, but fortunately with as little success as had attended his predecessor's demonstrations.

The beautiful island of Montreal forms the seigniory of the same name, and also the county of Montreal; it is of a triangular shape, 32 miles long by $10\frac{1}{2}$ broad, and lies at the confluence of the Grand or Ottawa River and the Saint Laurence: the Riviere des Prairies on the north-west side separates it from Isle Jesus. The greatest part of it was granted in 1640 to Messrs. Cherrier and Le Royer; but whether disposed of by them, or forfeited to the crown, does not appear from any official record that has been preserved: it is at present wholly the property of the seminary of St. Sulpice, at Montreal, the superiors of which, in rendering fealty and homage on the 3d February, 1781, produced as their titles, 1st. A deed passed before

the counsellor to the king at Paris, bearing date 20th April, 1664, by which the seminary of St. Sulpicius in that city, and other persons concerned with them, granted to the seminary in Canada the lands and seigniory of Montreal; 2d. An arret of the council of state of his most Christian Majesty, made at Versailles in the month of March, 1693, by which the king agrees to and accepts the surrender made to him by the ecclesiastics of the seminary of St. Sulpicius, at Paris, of all the property possessed by them in the island of Montreal; and 3dly, Letters patent, in form of an edict, issued by the King of France in July 1714, being a confirmation of all titles to the lands granted to the ecclesiastics of the said seminary, at Paris, by letters patent, dated March 1677, with the right of alienation. As early as the year 1657 a large part of this, even at that period valuable property, was cleared and settled, under the direction of the Abbe Quetus, who had arrived from France with authority from the seminary for that and other purposes. The island is divided into the following nine parishes, St. Ann, St. Genevieve, Point Claire, La Chine, Sault au Recollet, St. Laurent, Riviere des Prairies, Pointe-au-Tremble, and Longue Pointe. There are altogether 1376 concessions, formed into ranges, or as they are termed *cotes*, distinguished

by the names of St. Anne, Point Claire, St. Marie, St. Genevieve, St. Charles, St. Jean, St. Remi, St. Francois, de Liesse, St. Luc, St. Paul, de Vertu, Sault au Recollet, St. Laurent, des Neiges, de Verdure, St. Michel, Longue Pointe, Pointe-au-Tremble, Visitation, St. Antoine, Leonor, Riviere des Prairies, and the Coteau St. Louis, and St. Pierre, making so many irregular subdivisions, or interior districts: there is also a domain of great extent between the Cotes St. Laurent and St. Michel, which is retained for the use of the seminary. With the exception of the mountain, the ridge of the Coteau St. Pierre; and one or two smaller ones of no great elevation, the island exhibits a level surface, watered by several little rivers and rivulets, as La petite Riviere St. Pierre, Riviere Dorval, Ruisseau de l'Orme, Ruisseau de Notre Dame des Neiges, La Coulée des Roches, Ruisseau de la Prairie, Ruisseau Migeon, and a few others of inferior note. These streams turn numerous grist and saw-mills in the interior, while many more around the island are worked by the great rivers. From the city of Montreal to the eastward the shores are from 15 to 20 feet above the level of the St. Lawrence; but in the opposite direction, towards La Chine, they are low: between the Coteau St. Pierre and the river the land is so flat, and particularly near

the little lake St. Pierre so marshy, as to induce a conjecture that it was once covered by water. Over this place it is intended to cut a canal, by which a direct communication between the city and La Chine will be formed, and the difficult passage of the rapid of St. Louis avoided; for the commencement of this work the sum of £25,000 has been recently voted by the provincial parliament. The soil of the whole island, if a few insignificant tracks be overlooked, can scarcely be excelled in any country, and is highly productive in grain of every species, vegetables, and fruits of various kinds; consequently there is hardly any part of it but what is in the most flourishing state of cultivation, and may justly claim the pre-eminence over any of Lower Canada. Several roads running from north-east to south-west, nearly parallel to each other, are crossed by others at convenient distances, so as to form a complete and easy communication in every direction. Within a few years a good turnpike-road has been made from Montreal, almost in a straight line, to the village of La Chine, a distance of seven miles; by which the constant intercourse between these places is much easier than it was heretofore: by this route all the commodities intended for Upper Canada are conveyed to the place of embarkation. Within this space there is a great

variety, and some very romantic prospects: a mile or two from the town, near the tanneries, the road ascends a steepish hill, and continues along a high ridge for more than three miles, commanding a beautiful view over the cultivated fields below, the rapid of St. Louis, the islands in the St. Laurence, and the varied woodland scenery on the opposite shore; descending from the height, it passes over a flat country until it reaches La Chine. This road was formerly so bad, winding, and interrupted by huge masses of rock, that it was nearly a day's journey for the loaded carts to go from one place to the other. Stores and other articles, intended for the king's warehouses, a little beyond the rapid, are sent by another road, which runs by the river side.

La Chine is a place of greater importance than any other village on the island, being the centre of all the commerce between the upper and lower provinces, and the north-west country also: whatever merchandise is sent upwards is brought hither by land carriage from Montreal, and all the imports are here landed. It consists of only about 20 dwelling-houses, but a great number of store-houses belonging to the merchants, besides the warehouses of the Indian department. A dry dock of great extent, for laying up the bateaux, forms a valuable part of the

premises of Mr. Grant. During the months between May and November bateaux to and from Kingston and various parts of Upper Canada are continually arriving and departing, which always occasions a great deal of activity and bustle of business. The nature of these craft may be very shortly described: they are flat-bottomed; from 35 to 40 feet in length, terminating in a point at each extremity, with about six feet of beam in the centre; the usual freight is four or four and a half tons; they are worked by oars, a mast and sail, drag-ropes for towing, and long poles for setting them through the strong currents or rapids; four men manage them in summer, but in the fall of the year another is always added, one of whom acts as a guide. In the bateaux of the merchants the cargoes upwards are a general assortment of merchandise, for which they bring down flour, wheat, salt provisions, pot and pearl-ashes, and peltries. The time employed in the voyage to Kingston is from 10 to 12 days; but the return does not take more than three or four. They usually depart in brigades of from four to fifteen boats, in order that their crews may be able to afford mutual assistance in ascending the rapids: each brigade is under the direction of one man, who is called the conductor. From La Chine also the canoes employed by the

north-west company in the fur trade take their departure. Of all the numerous contrivances for transporting heavy burthens by water these vessels are perhaps the most extraordinary; scarcely any thing can be conceived so inadequate, from the slightness of their construction, to the purpose they are applied to, and to contend against the impetuous torrent of the many rapids that must be passed through in the course of a voyage. They seldom exceed thirty feet in length and six in breadth, diminishing to a sharp point at each end, without distinction of head or stern: the frame is composed of small pieces of some very light wood; it is then covered with the bark of the birch tree, cut into convenient slips, that are rarely more than the eighth of an inch in thickness; these are sewed together with threads made from the twisted fibres of the roots of a particular tree, and strengthened where necessary by narrow strips of the same materials applied on the inside; the joints in this fragile *planking* are made water tight by being covered with a species of gum that adheres very firmly and becomes perfectly hard. No iron-work of any description, not even nails, are employed in building these slender vessels, which when complete weigh only about five hundred weight each. On being prepared for the voyage they receive their lad-

ing, that for the convenience of carrying across the portages is made up in packages of about three-quarters of a hundred weight each, and amounts altogether to five tons, or a little more, including provisions and other necessaries for the men, of whom from eight to ten are employed to each canoe: they usually set out in brigades like the bateaux, and in the course of a summer upwards of fifty of these vessels are thus dispatched. They proceed up the Grand or Ottawa River as far as the south-west branch, by which, and a chain of small lakes, they reach Lake Nipissing; through it, and down the French River into Lake Huron; along its northern coast up the narrows of St. Mary into Lake Superior, and then by its northern side to the Grand Portage, a distance of about 1100 miles from the place of departure. The difficulties encountered in this voyage are not easily conceived; the great number of rapids in the rivers, the different portages from lake to lake, which vary from a few yards to three miles, or more in length, where the canoes must be unladen, and with their contents carried to the next water, occasion a succession of labours and fatigues of which but a poor estimation can be formed by judging it from the ordinary occupations of other labouring classes. From the Grand Portage, that is nine miles across, a

continuation of the same toils takes place in bark canoes of an inferior size, through the chain of lakes and streams that run from the height of land westward to the Lake of the Woods, Lake Winnepeg, and onwards to more distant establishments of the company in the remote regions of the north-west country. The men employed in this service are called voyageurs; they are robust, hardy, and resolute, capable of enduring great extremes of fatigue and privation for a long time with a patience almost inexhaustible. In the large lakes they are frequently daring enough to cross the deep bays, often a distance of several leagues, in their canoes, to avoid lengthening the route by coasting them; yet notwithstanding all the risks and hardships attending their employment, they prefer it to every other, and are very seldom induced to relinquish it in favour of any more settled occupation. The few dollars they receive as the compensation for so many privations and dangers are in general dissipated with a most careless indifference to future wants, and when at an end they very contentedly renew the same series of toils to obtain a fresh supply. Three leagues from La Chine is the village of Pointe Claire, situated on a point of land of the same name; it contains from 90 to 100 houses, built with regularity, and form-

ing small streets that cross the main road at right angles. There is a neat parish church, a parsonage-house, and one or two tolerable good houses for the accommodation of travellers. The local beauties of this place can boast of many attractions, being surrounded by extensive orchards and excellent gardens. About three leagues eastward of Montreal is Pointe-au-Tremble, a neat village of fifty houses, a church, chapel, and a parsonage-house. The main road to Quebec passes through this place, which always brings to it a constant succession of travellers, for whose reception there are some inns, where accommodation in all the principal requisites is to be obtained. These are the only villages on the island; but in every parish there is a great number of good houses scattered about, though but few are placed close together; they are mostly built of stone, as that material is to be had every where in great abundance. The city of Montreal is within this seigniory; it stands on the south side of the island, in lat. $45^{\circ}.31'$ N. and $73^{\circ}.35'$ W.; the second of the province in point of size, but with respect to situation, local advantages, and superiority of climate, it is undoubtedly unrivalled by Quebec itself: its form is a prolonged square, that, with the suburbs, covers about 1020 acres of ground, although within the walls of the old

fortifications the contents of the area did not exceed 100 acres. A few houses, built close together, in the year 1640, was the commencement of the city of Montreal, or as it was first named Villemarie; the situation being well chosen, and possessing many inducements for the colonists to associate themselves for the comforts and convenience of society, it very soon assumed the appearance of being built with some attention to regularity and solidity of the dwellings, containing a population of 4000 inhabitants; its improvement and extension were both rapid. In 1644 the Hotel Dieu was founded by the pious charity of Madame de Bouillon, and six years afterwards the zeal of Mademoiselle Marguerite de Bourgeois established the convent of Notre Dame. The infant town was exposed to, and almost from its very beginning experienced, the animosity of the Iroquois, who made many attacks upon it. As a protection against these repeated hostilities a sort of barrier was drawn round it, consisting merely of palisades; but so slight a defence not inspiring the inhabitants with much confidence in their security, the more powerful safeguard of a wall, fifteen feet high, with battlements, was substituted, and had the desired effect of repelling these formidable enemies to its prosperity; but as the ardour of the French

colonists in prosecuting the trade in furs made them more dreaded by their savage neighbours, whom they succeeded in driving to a greater distance, and repressing their incursions by erecting forts and establishing military posts, the necessary repairs of the wall were gradually neglected, and it fell into decay. The last remains of this ancient fortification have been recently removed by an act of the provincial legislature, to make way for the introduction of some improvements, planned with judicious regard to the convenience, comfort, and embellishment of the place. At different periods the city has suffered extensive damage from fire; but from the gradual widening of the streets, as new buildings take place, the better construction of the houses, and other means of precaution now resorted to, this calamity, when it does occur, seldom causes much devastation. In its present state Montreal certainly merits the appellation of a handsome city. It is divided into the upper and lower town, although the elevation of one above the other is scarcely perceptible; these are again subdivided into wards. The streets are airy, and the new ones, particularly, of a commodious width; some of them running the whole length of the town, parallel to the river, intersected by others at right angles. The houses are for the most part built of a

greyish stone, many of them large, handsome, and in a modern style: sheet-iron or tin is the universal covering of the roofs. The Rue Notre Dame, extending from the citadel to the Recollet suburbs, is 1344 yards in length, and 30 feet broad; it is by much the handsomest street in the place, and contains a great many of the public buildings; but the cathedral is so injudiciously situated, that it occupies the whole breadth of it at the Place d'Armes, which, though not an impediment to the passage, destroys the perspective that otherwise would be unobstructed from the citadel to the Recollet gate. St. Paul-street is another fine street, running the whole length of the town, but more irregular in its course and breadth than the former: from its contiguity to the river, the situation is very convenient for business. Among the edifices that attract notice, perhaps more from the value of the establishments than their beauty, are the Hotel Dieu, the convent of Notre Dame, the General Hospital, the French Cathedral, the Recollet Convent, the convent of the Grey Sisters, the seminary of St. Sulpice, the New College or Petit Seminaire, the English and Scotch churches, the Court-house, the new gaol, the Government-house, Nelson's monument, and the Quebec barracks. The Hotel Dieu, in St. Paul-street, extending 324 English

feet in front by 468 feet in depth, in St. Joseph-street, is an establishment for the reception of the sick and diseased poor of both sexes; it is conducted by a superior (La Sœur Le Pailleur) and 36 nuns. The French government formerly supplied medicines and many other necessaries, but now the funds for maintaining the charity are principally derived from some landed property, which (and it is a subject of regret) is not so ample as could be wished, when compared with its utility; however, this as well as every other charitable institution in the province is occasionally assisted with grants of money from the provincial parliament. The whole of the buildings on the space before-mentioned include the hospital, a convent, and a church; attached is a large garden, a cattery, with extensive stables and out-buildings, and a cemetery. The convent of La Congregation de Notre Dame is in Notre Dame-street, and forms a range of buildings 234 feet in front and 433 in depth along St. John Baptist-street, containing, besides the principal edifice, a chapel, numerous detached buildings for domestic uses, and a large garden. The congregation is composed of a superior (La Demoiselle Deroussel, la Sœur Nativité) and sixty sisters; the object of this institution is female instruction in its different branches, wherein the

greatest part of the members are employed; boarders are taken into the house on very moderate pensions, and receive a careful education. From this establishment some of the sisters are sent as missionaries to different parts of the district, for the purpose of giving fuller effect to the intentions of the foundation by opening schools in parishes remote from the convent. The general hospital, or convent of the Grey Sisters, situated about 300 yards south-west of Point Calliere, was founded in 1750, by Madame de Youville, as a refuge for the infirm poor and invalids; it occupies a space of 678 feet along the little river St. Pierre by nearly the same depth, containing a convent for the residence of the nuns, a church, wards for patients of both sexes, all requisite offices, and a detached building for the reception of such as labour under mental derangement. It is governed by a superior (M^{lle}. Therese Coutlée) and 24 sisters: the cares which they bestow upon those whom misfortune obliges to seek their aid, are directed with great kindness and an unremitting zeal in earnest endeavours to alleviate the burthen of human misery. The cathedral church in Notre Dame-street is plain and substantially built, 144 feet long by 94 wide; but its height is not in due proportion to its other dimensions: it is, however, in every

respect rendered convenient and suitable for the performance of the catholic service, although not sufficiently large for the increased population of the city, nine-tenths of which profess that faith. The interior decorations are rather splendid, and display some taste in the arrangement. The English church, in Notre Dame-street, is not yet finished; but from the design and style of building it promises to become one of the handsomest specimens of modern architecture in the province: some delay has been occasioned in its progress by the funds at first appropriated being found incompetent to complete it. The seminary of St. Sulpice, or Montreal, is a large and commodious building adjoining the cathedral; it occupies three sides of a square, 132 feet long by 90 deep, with spacious gardens and ground attached, extending 342 feet in Notre Dame-street, and 444 along that called St. François Xavier. The purpose of this foundation is the education of youth through all its various departments to the higher branches of philosophy and the mathematics. It was founded about the year 1657, by the Abbe Quetus, who, as before mentioned, then arrived from France, commissioned by the seminary of St. Sulpice at Paris to superintend the settlement and cultivation of their property on the island of Montreal, and also to

erect a seminary there upon the plan of their own. His instructions were so well fulfilled that the establishment he framed has existed until the present time, modified by many and great improvements. The superior of this college is M. Roux, assisted by professors of eminence in the different sciences, and other subordinate masters, who pursue a judicious plan of general instruction that reflects distinguished honour upon themselves, while it ensures a continual advance in knowledge to a very considerable number of students and scholars. The New College, or Petit Seminaire, near the Little River, in the Recollet suburbs, is most eligibly situated; the body of it is 210 feet long by 45 broad, having at each end a wing that runs at right angles 186 feet by nearly 45. It is a handsome regular edifice, built a few years ago by the seminary of St. Sulpice, at an expense of more than £10,000, for the purpose of extending the benefit of their plan of education beyond what the accommodations of their original establishment would admit of. On the exterior, decoration and neatness are so judiciously blended as to carry an air of grandeur, to which the interior distribution perfectly corresponds; the arrangements have been made with the utmost attention to convenience, utility, and salubrity, consisting of residences for the

director, professors, and masters ; a chapel, airy dormitories, apartments for the senior and junior classes, refectories, and every domestic office. The intentions of the institution through every department are promoted with the utmost regularity and good effect, both with respect to instruction and internal economy. The director, M. Roque, and chief professors are as eminently distinguished for their literary acquirements as for their zeal in diffusing them : the annual public examinations that take place demonstrate the progress made, not only in useful learning, but even in the superior walks of abstruse science, in a manner highly complimentary to their diligence, and far exceeding any expectations that would be generally entertained from the college of a colony ; but on this point, as well as on many others, the capabilities of the province have been but little understood or much misrepresented in Europe. In this college, as well as in the seminary, the number of pupils is very great, with whom a very moderate annual stipend is paid ; the benefits that arise from the dissemination of useful instruction over so large a space as the lower province will not fail to be duly appreciated by every feeling mind, and for their endeavours in so beneficent a cause the reverend Sulpiciens are fairly entitled to the gratitude

of all their Canadian brethren. Besides these principal seats of learning, wherein the French language is the vernacular idiom, there are in Montreal some good English schools, conducted by gentlemen of exemplary morals and talents, who by their exertions supply in some degree the want of an English college. It is certainly a subject of surprise that no such establishment has yet been formed, considering how eminently serviceable it would prove, by contributing to bring the language of the parent country into more general use. I feel a confident hope, however, that such a foundation will not much longer be a desideratum, particularly as a basis has been laid for it by the late Hon. James M'Gill, who died in 1814, and by will bequeathed a very handsome country-house and lands appertaining thereto, at the mountain near Montreal, with the sum of ten thousand pounds, for the purpose of endowing an English college, provided it be applied to that use within ten years after the bequest, or in failure thereof the property is to revert to his family. The first steps towards insuring to the colony the benefits of so munificent a donation have already been taken. In giving full effect to which it cannot be doubted but that the provincial, and, if necessary, the imperial legislature, will aid with its accustomed liberality the testator's praise-

worthy intentions, should his legacy be found inadequate to the design. The court-house, on the north side of Notre Dame-street, is a plain handsome building, lately erected, 144 feet in front, where the courts of civil and criminal judicature are held. The interior is distributed into halls for the sittings of the chief courts, besides apartments for the business of the police and courts of inferior decision. Within it is also a spacious room, allotted to the use of the public library of the city, that contains several thousand volumes of the best authors in every branch of literature: the good regulations under which it is managed, and the method in which the books are arranged, reflects great credit upon the committee that has the superintendance thereof, and greatly contributes to the amusement of its numerous supporters. The handsome appearance of this building is heightened by its standing some distance from the street, with a grass-plot in front, enclosed by iron railings; its proximity to the Champ de Mars renders it extremely airy and agreeable. The gaol of the district stands near the court-house; it is a substantial, spacious building, erected about seven years ago, upon the site of the old one that was destroyed by fire in 1803. The salubrious situation of this spot is peculiarly fitted for such an establishment; the interior

plan is disposed with every attention to the health, cleanliness, and comfort (as far as the latter is compatible with the nature of such a place) of its unfortunate inmates, both debtors and criminals. The government house, usually classed among the public buildings, is on the south side of Notre Dame-street; being very old, and an early specimen of the unpolished architecture of the province, it is not much entitled to notice; it is however kept in good repair, and furnished as an occasional residence of the governor in chief, when he visits the upper district: on the opposite side of the street, bordering on the Champ de Mars, is an excellent and extensive garden belonging to it. The old monastery of the Recollets stands at the western extremity of Notre Dame-street; it is a substantial stone building, forming a square of about 140 feet each way, and more remarkable as being convenient to the purposes for which it was designed than for its beauty. The church within it is still used for divine worship; but the house itself is converted into barracks, and the extensive ground belonging to it is retained by government for military purposes. At the upper part of the new market-place, close to Notre Dame-street, is a handsome monument, erected to commemorate the Hero of Trafalgar, immortal Nelson: it is composed of

a pyramidal column placed upon a square pedestal; at the base of the column, on the different angles, are allegorical figures, of very good workmanship, representing the victor's chief attributes, and on the sides suitable inscriptions; in compartments, on each face of the pedestal, are bass reliefs of four of his principal achievements, executed with great spirit and freedom, and composed with a chasteness of design guided by much classical correctness. This highly ornamental tribute to departed worth was completed in London, and the expenses defrayed by subscription among the inhabitants of Montreal, and will convey to posterity their public feelings and their gratitude towards the invincible chief who deserved so much from every part of the empire he so valorously defended. The principal streets, both lateral and transverse, have a direct communication with the suburbs, which, as will be seen from a preceding computation, occupy a much greater space than the city itself: they surround it on three sides; on the south-west are the divisions called the St. Anne, the Recollet, and the St. Antoine suburbs; on the north-west the St. Laurent, St. Louis, and St. Peter's; and on the north-east the Quebec: in all of them the streets run in the same direction as those of the city; they are very regular, and contain a great number of

superior dwelling-houses, built of stone, as several inhabitants of the first rank have fixed their residences there. Between the old walls and the suburbs there is a space upwards of 100 yards in breadth, that has hitherto been reserved by government for the purpose of erecting fortifications and for other military uses; but as the number of inhabitants and dwellings has experienced so great an increase, and the necessity of these defences almost superseded, this ground has been diverted from its original appropriation in favour of some improvements and embellishments that are in contemplation. Montreal, as it is at present, containing a population of 15,000, rivals the capital of Canada in many respects, and as a situation for a commercial town certainly surpasses it: seated near the confluence of several large rivers with the St. Laurence, it receives by their means the productions of the best settled and also the most distant parts of the district, as well as from the United States, besides being the depot of the principal trading company of North America, whose concerns are of great extent and importance. Possessing these combined attractions, it is by no means unreasonable to infer that in the lapse of a few years it will become the most flourishing and prosperous

city of the British North American dominions; and Quebec, viewed as a military position, may always be looked upon as an impregnable bulwark to them. When the act that passed the provincial parliament, in 1801, "for removing the old walls and fortifications surrounding the city of Montreal, and otherwise to provide for the salubrity, convenience, and embellishment of the said city," shall have been carried into effect, according to the plan projected, none of the external possessions of England, excepting its eastern dominions, will embrace a town of so much beauty, regularity, extent, and convenience as this. Part of these alterations, as far as the sums hitherto assigned would enable the commissioners to proceed, have already been made, and the remainder will be continued as fast as further funds become applicable. These improvements are intended to be as follows: an elevated terrace, extending from the suburbs on the south-west side of the city, along the river as far as the Quebec suburbs; which, independent of its utility as a road, will be sufficiently high to form an effectual barrier against the floating ice at the breaking up of the frost; it will also impede the communication of fire to the town, should it take place among the large quantities of timber and wood of every descrip-

tion that are always collected on the beach. The little river St. Pierre is to be embanked on both sides as far as the new college, forming a canal 20 feet wide, which is to be continued along the south-west and north-west sides to the Quebec suburbs, with bridges over it at the openings of the principal streets and other convenient places; at the angles ornamental circular basins are to be formed, and a lock near the mouth of the little river, by which the water may be drawn off for the purpose of cleansing it; this work will be so constructed as to raise boats, &c. from the St. Laurence, from whence they may proceed to the further extremity of the canal. The buildings on each side are to be retired thirty feet from the water, thereby forming a street eighty feet wide, having the canal in the centre. To the northward of Notre Dame-street there is to be another parallel to it, sixty feet wide, called St. James's-street, running the whole length of the city, and terminated at the Quebec suburbs by one of the same breadth, leading to the St. Laurence: between St. James's-street and the canal, parallel thereto and running in the same direction, will be a street of 24 feet wide. Where the Quebec gate now stands will be formed a square 174 feet by 208, extending towards the suburbs. The Place d'Armes is to have its dimensions enlarged

to 392 feet by 344, which will protract it to the canal; from the south-west side of the canal, towards the St. Antoine suburbs, another square or rather parallelogram will be made, 468 feet by 180. The Champ de Mars, from being very circumscribed, and quite inadequate as a place of military exercise, will be made level, and carried on nearly to the canal, to form a space 227 yards by 114; this has been nearly completed, and it is now an excellent parade as well as an agreeable promenade for the inhabitants: seats are fixed for the accommodation of the public, and trees planted in various parts of it. From this spot there is a fine view of the well cultivated grounds, beautiful orchards, and country houses towards the mountains. Adjoining the new college a lot of ground, 156 feet by 258, is reserved as the site of a new house of correction. The new market-place, occupying the ground where formerly stood the college, founded by Sieur Charron in 1719, and destroyed by fire a few years back, has been finished according to the proposed plan; it is 36 yards wide, and reaches from Notre Dame-street to St. Paul-street; in the middle of it are ranges of stalls for butchers, covered in by a roof supported on wooden pillars: great care is taken to enforce the regulations to ensure cleanliness in this part. The two principal market-days

in each week are well supplied with every necessary, and nearly every luxury for the table, in great abundance, at prices extremely moderate. The produce of the upper part of this fertile district is almost wholly brought hither for sale, besides a great quantity from the American states, particularly during the winter season, when fish frequently comes from Boston and the adjacent parts. The whole of the plan sanctioned by the act of parliament has been arranged and acted upon by commissioners appointed under it, who have for many years been indefatigable in their exertions to carry its provisions into effect: as their functions have been arduous and frequently unpleasing, from the numerous law-suits they have found it necessary to institute and defend in cases of disputed claims, they are entitled to the esteem of their fellow citizens for the manner in which they have always performed these duties to the public *gratuitously*. The harbour of Montreal is not very large, but always secure for shipping during the time the navigation of the river is open. Vessels drawing fifteen feet water can lie close to the shore, near the Market-gate, to receive or discharge their cargoes; the general depth of water is from three to four and a half fathoms, with very good anchorage every where between the Market-gate Island and the shore:

in the spring this island is nearly submerged by the rising of the river ; but still it is always useful in protecting ships anchored within it from the violent currents of that period, and at other times serves as a convenient spot for repairing boats, water-casks, and performing other indispensable works. Two small shoals lying off the west end of it, at the entrance of the harbour, and the narrowness of the deep water channel below it, generally make it necessary to warp out large ships, and drop them down the stream by kedge-anchors until they come abreast of the new market-place, as the leading winds for bringing them out cannot always be depended upon : at the east end of the island is a channel of which small craft can always avail themselves. The greatest disadvantage to this harbour is the rapid of St. Mary, about a mile below it, whose current is so powerful, that, without a strong north-easterly wind, ships cannot stem it, and are sometimes detained even for weeks about two miles only from the place where they are to deliver their freight. In pursuing the grand scale of improvements it may probably be found practicable to remedy this evil by the formation of another short canal, or extension of the one already designed to the foot of the rapid ; ships might then discharge their cargoes at their anchorage below the current into river

craft, which could be by such a communication conveyed immediately to the city. The environs of Montreal exhibit as rich, as fertile, and as finely diversified a country as can well be imagined. At the distance of a mile and a half from the town, in a direction from south-west to north-east, is a very picturesque height, whose most elevated point at the furthest extremity is about 550 feet above the level of the river; it gains a moderate height at first by a gradual ascent, which lowers again towards the middle, from thence it assumes a broken and uneven form until it is terminated by a sudden elevation in shape of a cone. The slopes on the lower part are well cultivated, but the upper part is covered with wood; from several springs that rise towards its top the town is plentifully and conveniently supplied with water, which is conveyed to it under ground by means of wooden pipes. The summit, to which there is a good road of very easy ascent, commands a grand and most magnificent prospect, including every variety that can embellish a landscape; the noble river St. Lawrence, moving in all its majesty, is seen in many of the windings to an immense distance; on the south side the view is bounded by the long range of mountains in the state of New York, that is gradually lost in the ærial perspective.

The space near the town, and all round the lower part of the mountain, is chiefly occupied by orchards and garden-grounds; the latter producing vegetables of every description, and excellent in quality, affording a profuse supply for the consumption of the city. All the usual garden fruits, as gooseberries, currants, strawberries, raspberries, peaches, apricots, and plums are produced in plenty, and it may be asserted truly, in as much, or even greater perfection than in many southern climates. The orchards afford apples not surpassed in any country; among them the *pomme de neige* is remarkable for its delicate whiteness and exquisite flavour; the sorts called by the inhabitants the *fameuse*, *pomme gris*, *bourrassa*, and some others, are excellent for the table; the kinds proper for cyder are in such abundance that large quantities of it are annually made, which cannot be excelled in goodness any where. On the skirts of the mountain there are many good country-houses belonging to the inhabitants of the city, delightfully situated, and possessing all the requisites of desirable residences. By the side of the road that passes over the mountain is a stone building, surrounded by a wall that was formerly distinguished by the appellation of the *Chateau des Seigneurs de Montreal*, but now generally called *La Maison des Pretres*, from its

belonging to the seminary: there are extensive gardens, orchards, and a farm attached to it, which are retained for the use of the proprietors; it is also a place of recreation, where, during the summer time, all the members of the establishment, superiors and pupils, resort once a week. About a quarter of a mile below this stands the handsome residence and farm of the Hon. Wm. M'Gillivray, member of council. A little more than a quarter of a mile to the northward, most conspicuously situated beneath the abrupt part of the mountain, is a mansion erected by the late Simon M'Tavish, Esq. in a style of much elegance: this gentleman had projected great improvements in the neighbourhood of this agreeable and favourite spot; had he lived to superintend the completion of them, the place would have been made an ornament to the island. Mr. M'Tavish, during his lifetime, was highly respected by all who enjoyed the pleasure of his acquaintance, and as much lamented by them at his decease; his remains were deposited in a tomb placed at a short distance from the house, surrounded by a shrubbery: on a rocky eminence above it his friends have erected a monumental pillar, as a tribute to his worth and a memento of their regret. Both the house and the pillar are very prominent objects, that disclose themselves in almost every direction.

Of ten established ferries from the island, in different directions, the longest is that from the town to La Prairie de la Magdelaine, a distance of six miles; it is also the most frequented, as the passengers are landed on the southern shore, at the main road, leading to Fort St. John's, and into the American States: from the town to Longeuil is the King's Ferry, three miles across, and also much frequented, as many roads branch off in all directions from the village of Longeuil, at which the boats arrive; that from the west end of the island to Vaudreuil is three miles across, in the direct line of communication between Upper and Lower Canada: from the eastern Bout de l'Isle to Repentigny, where the road between Montreal and Quebec crosses, the ferry is about 1300 yards only. The others are of much less distance: at all of them convenient bateaux, canoes, and scows are always ready to convey passengers, horses, carriages, &c. from one side to the other. From Repentigny to Isle Bourdon, in the Riviere des Prairies, and from thence to the island of Montreal, a handsome wooden bridge was constructed, at a very great expense, by Mr. Porteous of Terrebonne, authorised by an act that passed the provincial parliament in 1808; but it was unfortunately destroyed the spring after it was finished, by the pressure of the ice at the break-

ing up of the frost. The same gentleman had previously obtained an act in 1805, but in the spring of 1807 the works were carried away before his undertaking was entirely completed. Notwithstanding these failures, it is considered that some plan may yet be devised to erect one, whose span may be sufficiently high to allow the masses of ice to drift down the stream without being so lodged as to accumulate an overbearing force. In this situation such a work would be of great public utility, from connecting the most frequented main road of the province. The Isles Bourdon, just mentioned, were granted, the 3d November, 1672, to Sieur Repentigny, and are now the property of Mr. Porteous. At the confluence of Riviere des Prairies and the St. Laurence is a cluster of small islands, whose names are Isle St. Therese, Isle à l'Aigle, Isle au Cerf, Isle au Canard, Isle au Bois Blanc, Isle aux Asperges, and Isle au Ver. The first is the largest, being two miles and a half long and one broad, with a good soil, that is entirely cultivated; the number of houses upon it may amount to 20; there is a road that goes quite round it, besides others to the interior, which are kept in very good repair: it is the property of Mr. Ainse. Captain Cartwright is proprietor of Isle à l'Aigle, a very picturesque and pretty spot; mostly good meadow land:

the owner resides in the only house upon it, which is charmingly situated. The others are of little extent, but furnish excellent pasturage and some good meadow land; they belong to two persons, whose names are Dubreuil and Montreuil, who are also proprietors of the ferries, on each side of the Riviere des Prairies. The Isle St. Paul lies a short distance from that of Montreal, and a little above the town, it is about three miles in circumference, and was granted to the Sieur Le Ber, April 23d, 1700; it now belongs to one of the communities of nuns at Montreal.

ISLE JESUS (the seigniory of) is in the county of Effingham, comprehending the whole of the island, in length twenty-one miles, and six at its greatest breadth, lying north-west of that of Montreal, from which it is separated by the Riviere des Prairies, and from the main land by the Riviere St. Jean or Jesus. It was granted, with the Isles aux Vaches adjacent thereto, the 23d October, 1699, to the bishop and ecclesiastics of the seminary of Quebec, by whom it is still possessed. The original name was L'Isle de Montmagny; but soon after its grant the proprietors thought proper to bestow on it the appellative it now bears. The land is every where level, rich, and well cultivated; on the south-east side, bordering the river, there are

some excellent pasturages, and very fine meadows; the other parts produce grain, vegetables, and fruits in great perfection and abundance. From almost every corner of it being turned to agricultural uses, there is very little wood remaining, except what is left for ornament on the different farms. There is one road that goes entirely round the island, and one that runs through the middle lengthways; these are connected by others, that open an easy communication between every part of it. There are two parishes, St. Vincent de Paul and St. Rose; the houses, mostly built of stone, are dispersed by the sides of the roads; now and then a few of them are placed close together, but no where in sufficient numbers to be called a village. Around the island are several corn and saw-mills on the two large rivers; in the interior there is no stream of sufficient force to work either. About midway of the Riviere des Prairies is the strong rapid called the Sault au Recollet. The rafts of timber that are brought down the Ottawa from the upper townships descend this river into the Saint Laurencé at the Bout de L'Isle. The communication between Isle Jesus and the islands of Montreal and Bizare and the main land is kept up by several ferries in convenient situations for maintaining a continual and sure intercourse. The

Isle Bizare is separated from the south-west end of Isle Jesus by the Riviere des Prairies; it is nearly of an oval form, rather more than four miles long by two broad. No records relative to this property have been preserved in the secretariat of the province; but when the present owner, Pierre Foretier, Esq. did fealty and homage, on the 3d February, 1781, he exhibited proof of its having been granted on the 24th and 25th of October, 1678, to the Sieur Bizare. It is a spot of great fertility, wholly cleared and cultivated. A good road passes all round it, near to the river, and another crosses it about the middle; by the sides of these the houses of the inhabitants are pretty numerous, but there is neither village, church, nor mill upon it.

ISLE PERROT (the seigniority of) lies off the south-west end of the island of Montreal, comprising the island after which it is named, and the Isles de la Paix, that lie in front of the seigniorities of Chateauguay and Beauharnois; it was granted to Sieur Perrot, October 29, 1672, and is now the property of Amable D  z  ry, Esq. The length of the island is seven miles or a little more, and nearly three in breadth at its widest part: of 143 concessions, rather more than one half are settled upon, and tolerably well cultivated; the soil is of a light sandy nature generally, but where this is not the case

it is an uneven surface of rock. The wood is not entirely cleared from it yet; of what remains, beech and maple constitute the chief part. The houses of the inhabitants are scattered over the island near the different roads, but no village upon it; there is one church, and only one wind-mill. Of two fiefs within the seigniority one is called Fief Bruicy, ten acres in front by thirty in depth, the property of the representatives of Ignace Chenier; the other, named La Framboise, is of an irregular figure, containing 180 acres superficial measure, and belongs to François Freinch. There are four ferries from Isle Perrot: the first to St. Anne, on the island of Montreal, for which the charge is two shillings; one to the main land, above the rapid of Vaudreuil, and another to the foot of the same, one shilling and eight-pence each; and the fourth to the canal at Pointe des Cascades, for which the demand is three shillings and four-pence each person. The Isles de la Paix serve for pasturage only.

LONGEUIL (the seigniority of) lies on the south side of the Saint Laurence, in the county of Kent; bounded by La Prairie de la Magdelaine on the south-west; Fief Tremblay and Montarville on the north-east; and by the barony of Longueil and seigniority of Chambly in the rear: it is two leagues in breadth by

three deep; granted, 3d November, 1672, to Sieur Le Moine de Longueil, and now the property of Madame Grant, Baroness of Longueil. This tract from front to rear is quite level, the soil generally a fine black mould, very congenial to the growth of grain and most other species of agricultural produce; towards the middle is a swampy patch, called *La Grande Savanne*, and a little distance from the front is another, called *La Petite Savanne*; but a good system of drainage has proved so beneficial, that they are both nearly converted into good fertile land. Almost the whole of the seigniory is conceded, and full two-thirds of it in a good state of cultivation; it is more sparingly watered than perhaps any other lying on the banks of the Saint Laurence, as the little rivulet of St. Antoine, near its front, and another equally insignificant that crosses the lower corner into the Montreal river, are the only streams within its limits. Many good roads cross it nearly in all directions; but the most public ones are that leading from the village or church of Longueil to Fort Chambly and Fort St. John's, the middle road of Cote Noir to Longueil ferry, and the upper road from La Prairie to the same place. The village, near the rivulet St. Antoine, contains only fifteen houses that surround the old church, now in ruins; hard by it is the parson-

age-house, and at a short distance a wind-mill, recently converted into a magazine for gun-powder and ordnance stores. Near this village was the ancient fort of Longueil, one of the many formerly raised as barriers against the Iroquois nation; but its site is now covered by a very handsome well built church, which stands on the west side of the road to Chambly. The situation of this little place and its vicinity is so pleasant, that many persons of the first respectability reside hereabout; it was long the favourite retreat of the late Catholic Bishop of Quebec, M. Deneaux, who when raised to that dignity would not forsake the spot he so much admired. The Isle St. Helene, lying nearly in front of Montreal, Isle Ronde, several small ones close to it, and Isle au Heron, are appendages to Longueil. St. Helene being rather high, commands a view of the city in its most favourable point; it is reserved as a domain, very fertile, exceedingly well cultivated, and embellished by some very fine timber. The Baroness Longueil resides on the south side of it, in a handsome house, surrounded by good gardens and ornamental grounds; on the opposite side are the extensive mills called Grant's mills, belonging to the same family, besides whom there are no other inhabitants on this beautiful little spot.

CHAMBLY (the seigniory of), on the river Richelieu, is in the counties of Kent and Bed-

ford, bounded on the north-west by the seigniories of Longeuil and Montarville; on the south-east by Monnoir; on the north-east by Rouville and Belœl; and on the south-west by the barony of Longeuil: it is three leagues in length by one in depth on each side of the Richelieu, and was granted 29th October, 1672, to M. de Chambly. This valuable property is at present divided into several portions, held by General Christie Burton, Colonel de Rouville, Sir John Johnson, Mr. Jacobs, and Mr. Yule. Throughout the grant the land lies nearly level, of a quality, generally speaking, not excelled by any in the district, and is nearly all under cultivation, in a very favourable style of husbandry. The Richelieu, or River Chambly, that is navigable the whole of its length, contributes, by passing through the middle of the seigniory, many advantages to the local good qualities of the property. Within its boundary also is the beautiful expansion of the river called the Bason of Chambly, nearly circular in form, and about two miles in diameter, embellished by several little islands, covered with fine verdure and natural wood, as ornamentally disposed as if regulated by the power of art. Three of these lie at the mouth of the river Montreal; some smaller ones, called the Islets St. Jean, are spread in a very picturesque way, at the descent of the rapid of Chambly into the basin;

the dark-hued foliage of the wood, that nearly covers them, forms a pleasing contrast to the brilliant whiteness of the broken current. On the western side of the basin is Fort Chambly, which, when seen from a distance, has some resemblance to an ancient castle: it was built (of stone) by Monsr. de Chambly, some years previous to the conquest of Canada by the English, and is the only one of the kind within the province; its form is nearly square, containing several buildings and all the requisite means of modern defence, which have been recently put into substantial repair; the approaches to it are not protected by any out-works, nor is there a ditch round it. Before the late hostilities with America only a small detachment of about two companies formed the garrison, but when the war began, the advantageous position and proximity to the enemy's frontier pointed it out as a strong *point d'appui*, where troops might be assembled, and for forming an extensive depôt: during the season for operations, in the years 1812, 1813, and 1814, there was always a considerable force encamped on the plain near it, which in the last mentioned year exceeded 6000 men; during this period also additional storehouses and other buildings were erected on the ground that has always been reserved by government for such purposes. The village of Chambly is

on the west side of the Richelieu, and not far from the fort: it contains 90 or 100 houses, chiefly built of wood, forming one principal street. At the south end of the village are some large and valuable mills belonging to General Christie Burton; they are situated close to the rapid of Chambly, thereby securing the advantage of being able to work at all seasons of the year: near the mills stands a good manor house, belonging to the same gentleman. This place is a great thoroughfare, as the main road from Montreal to the American States passes through it, which, with the continual resort to the mills, occasions a good deal of activity among the traders and mechanics, and contributes very much to its cheerfulness as a place of residence; among the inhabitants are reckoned many of the most respectable families of the district, invited hither by its agreeable situation. The landscape of the surrounding country is rich and well diversified, affording several very beautiful points of view; and there are many spots from whence they may be seen to great advantage. The fort, the mills, and the church of St. Joseph, houses dispersed among well cultivated fields, all the varieties of woodland scenery, both near and remote, the distant church on Point Olivier, with the more distant mountain of Chambly or Rouville, added to the

continued change of objects on the basin and river, where vessels under sail, bateaux, and canoes are constantly passing up and down, and the singular appearance of unwieldy rafts descending the rapid with incredible velocity will amply gratify the spectator's admiration.

The barony of Longeuil, in the counties of Huntingdon and Kent, is between the seigniories of La Prairie de la Magdelaine and Chambly, bounded in the rear by the seigniorie of Longeuil, and in front by the Richelieu, extending three leagues in length by a depth of one league on each side of the river, was granted on the 8th July, 1710, to the Baron de Longeuil, and is now the property of Madame Grant, Baroness of Longeuil. This is a very level and exceeding fertile tract of land, well settled and cultivated, traversed by the great southern road and several others; watered by the Richelieu, and conveniently situated for water carriage. It contains the parishes of St. Luke and Blairfindie, the town of Dorchester and Fort St. John. Dorchester scarcely merits the name of a town, containing at most not above eighty houses, many of which are used as stores; but will probably in a few years rise to some importance, from being so favourably situated as to become an entrepot for merchandise in its transit, either by land or water, between the

two countries both in summer and winter: during the latter season a very brisk intercourse takes place by means of sleighs travelling upon the frozen surface of the lakes and rivers. Before the war the timber trade was carried on here to a great extent; and most probably with the return of peace will resume its former activity. A large proportion of the inhabitants resident here are American emigrants, who have sworn allegiance to the British government; some of them keep the best inns of the place, and are proprietors of the stage coaches that travel regularly from hence to La Prairie on one side, and to the states of Vermont and New York on the other. Fort St. John, on the west bank of the Richelieu, is of an irregular figure, and is an old frontier post; but little can be said in favour of its construction, or of the defences that surround it, as they are merely field works strengthened by pallisades and picketings; within the fort are about twenty houses, including public storehouses, magazines, &c. Being so near the frontier, it is a post of much importance; latterly a strong force has been kept at it, and the works placed in a very effective state of defence. The officer who commands here is charged with the superintendance of the more advanced posts on this line, from whence he receives all military reports, and

transmits them to the general officer commanding the district. The British naval force employed on Lake Champlain has its principal station and arsenal here, where vessels mounting from 20 to 32 guns have been built, by which our superiority on the lake was maintained until the unfortunate conflict before Plattsburgh, in 1814, that terminated in the destruction of the flotilla: this event, although disastrous, was not dishonourable to the national flag; and had the war continued, increased efforts, with the means that had been prepared, would doubtless soon have regained the accustomed ascendancy.

DE LERY (the seigniory of) is in the county of Huntingdon, bounded by the barony of Longeuil on the north-east, by the township of Sherrington and the seigniory of La Prairie de la Magdelaine on the west and north-west, by the seigniory of La Colle on the south, and by the river Richelieu on the east: it is two leagues in front by three in depth; granted 6th April, 1733, to Chaussegros de Lery, and now the property of General Burton. The whole of this tract is low, having in many parts cedar swamps and marshes that spread over a large space: where the land is dry, a good black soil generally prevails, that when cultivated proves very fertile; but the proportion yet settled upon is not

near so great as in the adjoining grants ; a large part still remains in its natural state of woodland. The river Montreal runs through, and the Bleuri and Jackson Creek have their sources in it. A small lake near the middle frequently overflows the surrounding low lands, and makes a marsh to a considerable distance round it ; but neither the marshes nor swamps are so deep but what the operation of draining, judiciously performed, would in a short time render the land fit for the plough, or convert into excellent pastures : however, while there remains so much of a good quality to be granted, that comparatively requires so little trouble to clear and improve, it is most probable that these tracts will long continue in their present condition. The best settled parts are about L'Acadie, and by the road leading to the state of New York, which, with a few other dispersed settlements, may amount to about one third of the whole seigniory. The road that passes through the woods of L'Acadie, being the military one to the frontiers, and the line of march for troops moving in that direction, has lately been benefited by some substantial repairs, and in many parts causewayed for the passage of artillery and heavy baggage. Near the boundary of La Colle is a small place called Burtonville, composed of a few houses, distributed without regularity on

each side of the main road. In the Richelieu, near where the Bleuri falls into it, is Isle aux Noix, formerly the property of the late General Christie, but now belonging to the Crown; it is a flat, but a little above the level of the river, containing altogether only eighty-five acres, lying ten miles and a half from the boundary-line, in an excellent situation to intercept the whole communication by water from Lake Champlain; consequently a most important military station, that has been fortified with all the care its commanding position deserves. At the west end of it the principal work is an irregular fort, very well constructed, and of great strength, surrounded by a ditch, and mounted with guns of large calibre; in advance of this, at a short distance, are two other forts of less extent, but proportionately strong, with ditches round them also; besides these there are several block-houses at the different points that could be deemed assailable by an enterprising enemy. In 1814 the island was further strengthened by a boom extended across the river, and a line of gun-boats moored in a direction that their fire might completely enfilade the whole passage; by these means it was always safe from attack, even if the enemy should have an unopposed force on the lake. At the east end of the fort is a slip for

building ships, and from thence the *Confiance* of 32 guns was launched.

BEAUJEU, or LA COLLE (the seigniory of), on the west side of the river Richelieu, in the county of Huntingdon, bounded by De Lery on the north, the state of Vermont on the south, and the township of Hemmingford in the rear; extends two leagues along the river in front by three deep: it was granted March 22, 1743, to Daniel Lumard de Beaujeu, and is now the property of General Christie Burton. Towards the front of the seigniory the land is rather low, with some few swampy patches; yet, with these exceptions, of a general good soil, very well timbered: in the rear it is much higher, and although partially intersected by strata of rocks and veins of stone, lying a little below the surface, the soil is rich, and perhaps superior to that of the low lands. On these upper grounds there is much beech, maple, and elm timber; the wet places afford abundance of cedar, tamarack, spruce fir, and hemlock. Although the greatest part of this seigniory is very eligible for all the purposes of cultivation, and would produce all sorts of grain abundantly, besides being peculiarly well suited to the growth of hemp and flax, there is not more than one third of it settled. The river La Colle, winding a very sinuous course from west

to east, intersects it and falls into the Richelieu ; but is not navigable even for canoes : at the numerous rapids that mark the descent from its source, there are many excellent situations for mills. A number of houses, situated on each side of the road that runs along the ridge from the state of New York, about two miles and a half towards La Colle, have obtained the name of Odell Town, from Captain Odell, who was one of the first and most active settlers in this part : he is an American by birth, and so are the greatest part of the other inhabitants, but they are now in allegiance to the English government. The effect of the activity and good husbandry that are natural to American farmers is much to be admired in this small but rising settlement : fields well tilled and judiciously cropped, gardens planted with economy, and orchards in full bearing ; above all, the good roads in almost every direction, but particularly towards the town of Champlain, attest their industry ; and it is likely, from its vicinity to the thickly inhabited townships on the American side of the boundary, the small distance from Champlain, Plattsburgh, and Burlington, the easy access to the Richelieu for expeditious water carriage, and especially from the persevering labour of its population, that it will advance in agricultural improve-

ment, and become a wealthy, flourishing, little town. The river Richelieu, and the road by Odell Town, being two principal points of entrance into Lower Canada, made this place lately the scene of military operations, and it consequently shared some of the usual disasters that inevitably attend a state of warfare, from the necessity of defending these passes against the intrusion of an American army. In 1813 a log breast-work was thrown up on the north side of La Colle, sufficiently extensive to cover the road and blockade the passage; a short distance in front, and on the left of the road, a redoubt was constructed to flank the approach to this defence; to the left of the breast-work, and in the rear of La Colle mills, was Sydney redoubt, a strong work, defending the passage of the river at that point; in support of these positions were different small encampments of troops, nearly along the whole line of front. The enemy at various times made several demonstrations against this line, when trifling skirmishes ensued; but the most worthy of notice was the affair at La Colle mills, which took place on the 30th of March, 1813, and terminated very brilliantly in favour of the British arms. General Wilkinson had collected at Burlington and Plattsburg what he calculated was a sufficient force to ensure success to his

operations; he advanced by the road leading through Odell Town to Burtonville, in the seigniority of De Lery, as far as the road that turns off to La Colle mills, where, leaving a body of troops to mask his design, he hastily made a flank movement towards the mills. The approach of the enemy was somewhat impeded by the advanced piquets, as they retired in good order and fighting against his superior numbers. The attack on the main road, being intended as a feint, was not long persevered in, and the principal one was directed against the post at the mills, which Major Handcock, of the 13th regiment, defended with no less skill than bravery. His piquets, stationed about a mile and a half in front, were driven in, and the enemy shortly afterwards appearing in force, was able to establish a battery of 12 pounders, that was soon opened against the British position. Major Handcock, being advertised of the near approach of two flank companies of the 13th to reinforce him, made a gallant dash against the guns, but was unable to carry them, as the surrounding woods were filled with infantry for their support; and after a smart conflict succeeded in withdrawing his party. Another favourable opportunity occurring soon afterwards, it was seized with eagerness by a company of grenadiers of the Canadian Fenci-

bles, and another of Canadian Voltigeurs, who had hung upon the enemy's left flank during the whole of his movement, in order to afford support to whatever point he might direct his attack against; but their bravery was unavailing from the same cause as before, yet they were not impeded from reinforcing the post. On the first report of the enemy's attempt, a sloop and some gun-boats were promptly moved up from Isle aux Noix to the mouth of La Colle River, which opening a destructive fire upon the Americans, left them but little chance of victory; they persevered, however, in their fruitless efforts until night, when they moved off their guns and retreated by Odell Town to Champlain, after sustaining severe loss, but without the British force being able to molest them in the retrograde movement. Near the mouth of the river La Colle is Isle aux Tetes, or Ash Island, on which there is a redoubt commanding the whole breadth of the Richelieu. This little spot and the flotilla moored between it and La Colle, in July 1814, formed the advanced naval position towards Lake Champlain, at which period the American flotilla was stationed at Pointe au Fer and Isle à la Motte, about ten miles distant.

BLEURIE (the seigniory of), in the county of Bedford, on the east side of the Richelieu, is

bounded on the north-east by the seigniories of Chambly and Monnoir, on the south by the seigniority of Sabrevois, and on the west by the river: it was granted, November 30, 1750, to Sjeur Sabrevois de Bleurie, and is now the property of General Christie Burton: according to the terms of the original grant it ought to be three leagues in front by three in depth; but as the grants of the adjoining seigniories are of a prior date, and as such an extent could not be taken without infringement upon others, it now forms a triangular space of much less superficial measurement. Although lying generally low, with large swamps in many places, there are some tracts of very good land, and also some fine timber; the spots that are cultivated lie chiefly upon the Richelieu, and bear but a small proportion to the whole. A new road, called the Bedford Turnpike, crossing it diagonally to the river, opposite Fort St. John, has been traced and measured in the field, and is now proceeding upon. A joint company has undertaken it, and obtained an act of the provincial parliament for the purpose: when completed it will greatly enhance the value of this and the other properties through which it passes, by opening a shorter communication with Montreal, and rendering the intercourse with distant places much more easy.

SABREVOIS (the seigniorship of), in the county of Bedford, on the east side of the Richelieu, bounded on the north by Bleurie, on the east by the townships of Stanbridge and Farnham, on the south by the seigniorship of Noyan, and on the west by the river; it was granted, November 1, 1750, to Sieur Sabrevois, two leagues in front by three deep; it is now the property of General Christie Burton. Between this and the preceding seigniorship of Bleurie there is a great resemblance in situation and quality of the land; the swamps are perhaps rather more extensive in this one, but here and there some patches of fertile good soil are met with, and many of greater extent might be added by draining, which could in several places be performed with but little labour or expense. At present the quantity of land under cultivation is rather insignificant. The Bedford Turnpike will pass through this seigniorship, and may probably be the means of increasing the settlements in it.

NOYAN (the seigniorship of), in the county of Bedford, joins Sabrevois on the north, the township of Stanbridge on the east, the seigniorship of Foucault on the south, and the river Richelieu on the west; it was granted, July 8, 1743, to Sieur Chavoie de Noyan, and is now possessed by General Christie Burton. The Isle aux

Tetes, or Ash Island, near the mouth of River La Colle, is included in this grant. The same lowness and swampy nature of the soil that marks the two preceding seigniories characterises this one also; but such parts of it as are cultivated, or capable of being so, are of a rich quality and very fertile: it abounds with fine timber of many sorts, among which there is found some pine of large dimensions. The Riviere du Sud, that falls into the Richelieu a little below Isle aux Noix, waters this seigniory very conveniently, and is navigable for boats and canoes about six miles. To it there is a road from Missisqui Bay, by which produce, after being brought from Phillipsburg by the ferry, is conveyed in waggons to be embarked and sent down the Richelieu to St. John's and other places: both here and in the adjoining seigniories, on the boundary, there is a field for improvements of the greatest utility. Were a canal to be cut to connect Missisqui Bay and Riviere du Sud (which would not require more than two miles and a half or three miles), it would be most eminently serviceable, not only to the settlers of the neighbourhood, but likewise to the new townships on the Canadian frontier, containing a population that, in 1812, exceeded seventeen thousand; by such a canal the intercourse with the Richelieu would be to-

tally unobstructed, and it would besides materially contribute towards drawing much of the produce of the populous townships on the American territory into the hands of British traders, for the purposes of exportation by the Saint Laurence, at all times either in war or peace. This route to a certain market would be shorter and much less expensive than to convey the growth of these districts to New York, or other places, for exportation; and whoever is acquainted with the character of an American farmer, will be convinced that he will always continue so keen a speculator as to prefer that market by which he can most speedily convert the produce of his fields into capital without risk: prompted by an insatiable desire of gain, any convenient mode of realising his profits will obtain a much greater share of his attention than the prohibitory laws that deprive him of choosing the persons with whom he would deal. The increasing value and importance of the English townships and settlements on this line will, in a few years, become apparent, and is a subject at this period well entitled to a serious consideration, as they will not only be instrumental in enlarging the prosperity of the province, but mainly contribute to its future safety and protection. If the attention of government could be directed to this point, with

a determination to avail itself fairly and justly of the ample means it affords for amelioration, the most important advantage to Lower Canada, and consequently to the empire, would soon be the result of its care ; but if left merely to the strength of their own efforts, the period of extensive improvement must of necessity become much more remote.

There is however one subject on which the British settlers in this district have a strong claim to the interference of government in their behalf, to rescue them from the vexatious delays and arbitrary impositions they have been forced to submit to for years, from the custom-houses established on Lake Champlain by the Americans. The navigation from Phillipsburg, on the eastern side of Missisqui Bay, to St. John's on the river Richelieu, by which nearly all the produce of these townships is conveyed to a market, for a considerable distance runs within the American waters ; as vessels of all descriptions must proceed several miles down the lake before they can double the point of Alburg to get into the river. In doing this they are brought to by the United States revenue boats, and often detained, under very frivolous pretences or litigious objections, for a long period, frequently to the injury of their cargoes, and always detrimental to the proprietors. Against

such proceedings all remonstrances with the local authorities have been hitherto treated with inattention or disrespect, and redress sought for in vain ; it is therefore become necessary for government, whose interest it is to watch over the welfare of all its subjects, and protect the most distant of them from injustice, to provide against the continuation of such a practice ; otherwise, from the spirit of appropriation natural to the American government, long forbearance will be construed by the opposite side into a natural right.

FOUCAULT (the seigniory of), in the county of Bedford, is bounded on the north by the seigniory of Noyan, on the south by the state of Vermont, on the east by Missisqui Bay, and on the west by the Richelieu ; it was granted, May 1st, 1743, to Sieur Foucault ; two leagues in front by two and a half in depth, and is now possessed by General Burton. The line of boundary between Lower Canada and the United States runs through this seigniory, whereby great part of it is placed within the state of Vermont. The land hereabout is low, but far superior in quality to the other low lands on the east bank of the Richelieu, and may be cultivated with the greatest success for grain or all other produce ; but this superiority, joined to the benefit of having water communica-

tion at its east and west boundaries, has yet attracted but few settlers, chiefly American farmers, fixed in different parts of the seigniory: however, as the neighbouring townships advance in prosperity, the local advantages of Foucault are likely to procure it an increase of inhabitants.

ST. ARMAND (the seigniory of), situated on the east side of Missisqui Bay, in the county of Bedford, is bounded on the north by the townships of Stanbridge and Dunham, on the south by the state of Vermont, on the west by Missisqui Bay, and on the east by the township of Sutton; was granted, September 28, 1748, to Sieur Nicolas René Le Vasseur, and is now the property of the Honourable Thomas Dunn. According to the terms of the original grant, this seigniory ought to have an extent of six leagues in front by three in depth; but as the boundary line of the United States intersects it, there is not now more than one league and a half of it in that direction within the British territory. The greater part of the land is of a superior quality, affording good situations and choice of soil for every species of cultivation; the surface is irregular, and in some places, particularly towards the township of Sutton, there are ridges that rise a considerable height, and many large swells that approach almost to

mountains, covered with beech, birch, maple and pine timber. The shores of the bay, south of the village, are rather high, with a gentle slope down to the water's edge; but they subside to the general level on advancing towards the head of it. It is watered by several streams, the largest of which is Pike River, that has its source in the adjoining township of Dunham, and, after winding a very irregular course through the seigniory and the township of Stanbridge, falls into Missisqui Bay. This property is well located with respect to the means of improvement, as it adjoins the state of Vermont, which is both a populous and flourishing district, with good roads leading in every direction, besides the main road that runs through Phillipsburg by Burlington and Vergennes, down to Albany, and which is the most direct line of communication with New York; it cannot but benefit by the advantages to be derived from so easy an intercourse with a country that has already made great progress in agricultural knowledge. The first settlement made within this seigniory was in the year 1785, by some Dutch loyalists, whose industry was so well applied that the increase has been so rapid as to make it an estate of great value; there are 187 lots of 200 acres each conceded, besides an extent of nearly three miles in depth from Mis-

sisqui Bay, by the whole breadth, divided into much smaller portions, and now extremely well cultivated. The village of Phillipsburg is conveniently situated on the edge of the bay, about one mile from the province line; it is a handsome place, containing about sixty houses, exceedingly well built of wood, many of them in the peculiar style of neatness common to the Dutch, and the others more in the fashion of the American than the Canadian villages: some regard has been paid to regularity in the formation of the principal street, which has a lively and agreeable appearance; between this street and the bay are many store-houses, with wharfs for landing goods at a short distance from them. At this place there are many of the inhabitants employed in trade and mercantile pursuits, besides artizans, and perhaps more than a due proportion of tavern-keepers. On the south side of the road, leading from the village to the eastern part of the seigniory, is a handsome church (built of wood) dedicated to St. Paul, and a good parsonage-house; there are also two baptist meeting-houses, a public free school, and several private schools; from the wharfs there is a ferry to the opposite side of the bay, a distance of about four miles. The village of Frelighsburg is on the south side of Pike River,

about twelve miles from Phillipsburg, consisting of only seventeen houses, a free school, forge, trip-hammer, mills, and some out-buildings; the church (Trinity) is a short distance from the river, on the north bank. The population of St. Armand has within a few years greatly added to its numbers, being at present 2500 souls: emigration from the United States has been one great occasion of this increase. Among the persons so settled, it should be noticed, that a great proportion of them have not sworn allegiance to the British government, a duty the magistracy of the district ought not to dispense with from those who choose to domiciliate so near the borders; as in the event of hostilities, and which latterly was the case, many of these people would remove the whole of their property and stock to the American territory. Lands are not granted by the crown to any individual who has not previously sworn allegiance, and the same precautions should be taken with respect to strangers, particularly in the frontier townships, who acquire lands by purchase or otherwise. The different streams work many grist and saw-mills, which about the villages are eight in number. The Pinnacle Mountain, one of the large swells already spoken of, covers a superficies of about 600 acres; and

rises in a conical shape to a considerable height; it is seen at a great distance in the surrounding country. Between Phillipsburg and the boundary line is a high ridge of land, on which General Macombe encamped in March, 1813, when he made an incursion into the province, and held possession of the village for some time; he succeeded so far as to spread alarm among the inhabitants, drive off some cattle, and destroy the young orchards, before he received intelligence of a British detachment advancing upon him: on that information being communicated, his orders for a retrograde movement were promptly given, and obeyed with unanimous celerity by his troops.

MONNOIR (the seigniory of), in the county of Bedford, with its augmentation, extends from the rear of the seigniory of Chambly to the township of Farnham and the banks of the river Yamaska; bounded on the south-west by the seigniory of Bleurie, and on the north-east by those of St. Hyacinthe and Rouville: its extent is two leagues in front by three in depth; granted 25th March, 1708, to Sieur de Ramzay: the augmentation, equal in dimensions to the seigniory, was granted June 12, 1739, to Sieur Jean Baptiste Nicolas Roc de Ramsay: the whole is now the property of Sir John Johnson, Bart. Throughout this tract the land, though

various in its nature, is of a moderately good quality, and where it is under management raises very good crops of grain; many of the parts not yet broken up, would prove very favourable to the growth of flax: the upper division, adjoining Chambly, is nearly all cultivated, as well as an extensive range on the left bank of the Yamaska, and on both banks of a rivulet near the township of Farnham; towards the western boundary it is somewhat low, and rather inclining to swamp. The upper part is watered by several streams that branch off from the river Huron, and penetrate towards the middle of the seigniory. The uncleared land is pretty thick of wood, mostly of the inferior sorts, though here and there some good timber of large dimensions may be met with. There are many roads, nearly in all directions, some of them principal ones, taking a southerly course towards the frontier townships, and into the United States. Near the middle of the seigniory there is a single hill, called Mount Johnson, of no great circumference, but rising high enough to be conspicuous for many miles round; it is however not so remarkable as several others of the same isolated nature in some of the adjoining seigniories. This property touching, or very nearly so, upon the rivers Richelieu and Yamaska, that are both naviga-

ble all the summer season for boats and rafts, offers many inducements to settlers in the advantages of its situation, and possessing in other respects great capabilities of being highly improved.

MONTARVILLE (the seigniory of) lies in the county of Kent, between those of Boucherville and Chambly, bounded on the north-east by the seigniory of Beloeil and its augmentation, and on the south-west by Fief Tremblay: it extends one league and thirty French arpens in front, by one league and a half in depth; was granted, October 17, 1710, to Sieur Boucher, and is now the property of René Labruere and X. Beaubien, Esqrs. The land in this grant is of a good species, producing grain and vegetables of all the sorts common to the country, in great abundance; about two thirds of it is under a very favourable system of husbandry. What wood remains is chiefly of the inferior sort, used for fuel, with but very little timber among it. Towards the north-eastern angle of the seigniory is the Mountain of Boucherville, on whose summit are two small lakes, from whence descends the only rivulet that waters the property, which, in its course down the declivity, turns two grist-mills; the first of them agreeably and singularly enough situated on the brow of the mountain. A road leading from the St. Lawrence to the Richelieu

and several others in a transverse direction traverse this seigniory.

TREMBLAY (fief) is on the south side of the St. Laurence, in the county of Kent, between the seigniories of Longeuil and Boucherville, bounded in the rear by Montarville; its front is only twenty-eight French arpens; its depth is two leagues; granted 29th October, 1672, to Sieur de Varennes, and now the property of Joseph Dubai, Esq. and the heirs of Edward William Gray, Esq. In this small tract the land is of an excellent quality, fit for every branch of husbandry, and nearly all under cultivation; it is but sparingly watered.

BOUCHERVILLE (the seigniory of), on the south side of the Saint Laurence, in the county of Kent, having the fief Tremblay on the west, the seigniory of Varennes on the east, and bounded by Montarville in the rear; its dimensions are 114 French arpens (eighty-four of which make a league) in front, by two leagues in depth; was granted 3d November, 1672, to Sieur Boucher, and now belongs to Madame Boucherville. The quality of the land in this grant, if it cannot be rated in the first class, is yet far above mediocrity, being for the most part a lightish mould, inclining something towards sandy, and with careful husbandry is found by no means deficient in fertility; in

fact, nearly the whole of it is now under cultivation, and generally produces very good average crops of all sorts. The wood remaining upon it is inconsiderable in quantity, and only of the inferior species. Two small rivulets that fall into the St. Laurence partially water it towards the front, one of which works the seignorial mill in its course; there is no stream whatever in the lower part. There is a main road leading from the village of Boucherville down to the Richelieu, and from thence to Chambly; several other roads that are well kept up, pass through all the settled parts of the seigniority. The village is most agreeably and conveniently seated on the bank of the river; it contains from 90 to 100 houses, a church and parsonage-house, a chapel and a convent, or rather a residence for two or three of the sisters of the congrégation of Notre Dame at Montreal, who are sent hither from the chief establishment as missionaries for the education of females. There is likewise a school for boys. In this place many families, who still retain some of the titles of the ancient *noblesse* of the country, have fixed their residence, and formed a society to themselves, wherein much of the ceremony and etiquette that used to characterise the titled circles of the French nation is still observable, diminished indeed in splendour,

but unabated in precision. Many of these residents have built some very good looking houses for themselves, that are rendered rather conspicuous by forming a strong contrast with the major part of those belonging to the other inhabitants, which in that respect are by no means calculated to attract notice; for symmetry and proportion seem to have been as much set at defiance in their construction, as regularity has been neglected in the streets. This omission, however, detracts little or nothing from the general amenity of situation.

The Isles Communes, or Isles Percées, a range that extends along the front of nearly the whole seigniory, are included in the grant; the largest is about three quarters of a mile in breadth; they are quite flat and very level; some of them afford good meadow land, and the others are common pasturage for the cattle belonging to the inhabitants of the village.

VARENNES (fief), in the county of Surrey, between the seigniories of Boucherville and Cap St. Michel, or La Trinité, is bounded in the rear by the augmentation to the seigniory of Beloeil; its content is twenty-eight French arpens in front by one league in depth; was granted 29th October, 1672, to Sieur de Varennes, and is at present the property of Paul Lussier, Esq. The whole of this little fief is

good and fertile land, nearly all in cultivation, and pleasantly watered by two or three little streams. The church, belonging to this property, surpasses in beauty all those of the surrounding seigniories, and merits some notice for the style both of its outward ornament and interior decoration: in coming down the river its three spires form a conspicuous object, which may be seen from Montreal, a distance of five leagues: a very good parsonage-house stands near it; there is also a neat chapel within the fief. The houses of the tenants are, many of them, well built, and dispersed through every part of it; but no where in sufficient number to form a village.

CAP ST. MICHEL, or LA TRINITE' (the seigniorship of), in the county of Surrey, joins Varennes on the south-west, the fief Guillaudiere on the north-east, and is bounded by the augmentation to Beloeil in the rear; one league in front by a league and a half in depth; was granted 3d November, 1672, to Monsieur de St. Michel, and is now the property of Jacques Le Moine Martigny, and Trapui Gautier, Esqrs. A diversity of soil prevails through this seigniorship, the greater part of which is good, being either a fine black or a greyish mould, that proves fertile where it is tolerably well managed; the quantity under culture amounts to two thirds

of the whole. The rivers St. Charles and Notre Dame run across it, and are sufficiently deep to be navigable for boats of burthen. The uncleared lands, that scarcely exceed in extent half a league square, afford hardly any other wood than the spruce fir, a species of very trifling value. On the rivers there are two grist-mills and one saw-mill. A part of the seigniority is divided into four small fiefs, that are the property of Messrs. Delette, Beaubien, Gautier and Mondelette, containing together one-fourth of a league broad by half a league deep. Two islands in the St. Laurence, lying in front of this grant, are appendages to it; each of them is nearly three quarters of a mile long, and from eight to ten arpens broad; cattle are sometimes pastured on them.

GUILLAUDIÈRE (fief) is in the county of Surrey, adjoining Cap St. Michel, and contains thirty arpens in front by a league in depth; was granted 3d November, 1672, to Sieur de Grand-maison, and now belongs to ——— Hertel, Esq.

ST. BLAIN (fief), between Guillaudiere and the seigniority of Vercheres, is twenty-three arpens broad by two leagues deep; was granted 29th October, 1672, to Sieur de Vercheres, now the property of Madame de Boucherville. There is a strong affinity between the soils of these

two fiefs, which consist principally of a blackish friable mould, that if moderately well managed is very fruitful; about three-fourths of each are under tillage.

VERCHERES (the seigniority of), on the south side of the Saint Laurence, in the county of Surrey, joins the fief St. Blain on the south-west, the fief Bellevue on the north-east, and is bounded in the rear by Cournoyer; it extends one league in front by two deep; was granted October 29, 1672, to Sieur de Vercheres, and now the property of Madame Boucherville. The land is for the most part good, with several varieties of soil; the largest proportion of which is under a creditable state of culture: it is watered by a small river and two or three rivulets, that turn a grist-mill, and some saw-mills. It has a neat church, a parsonage-house, and a chapel, in the centre of a small village.

BELLEVUE (fief) lies between the seigniorities of Vercheres and Contrecoeur, bounded by Cournoyer in the rear, and contains half a league in front by a league in depth; was granted 3d November, 1672, to Sieur de Vitré, and now belongs to ——— Chicoine, Esq. All this slip is under good cultivation, but is not watered by river or stream.

CONTRECOEUR (the seigniority of), on the south side of the Saint Laurence, in the county

of Surrey, is bounded by the fief Bellevue and Cournoyer on the south-west, the seigniority of St. Ours on the north-east, and the seigniority of St. Denis in the rear; is two leagues in front by two in depth; was granted October 29th, 1672, to Sieur de Contrecoeur, and is now the property of the heirs of Monsieur de Laperriere. The land in this seigniority is rich and fertile; in some few places it is flat and low, but is almost every where in a favourable state of cultivation, and produces good crops of grain of excellent quality; so much of it is settled upon, that the tracts of woodland remaining are insignificant in proportion to the whole extent, and in these timber of large dimensions is scarce. The Ruisseau La Prade, that has its source about the middle of the seigniority, and several smaller streams, contribute to the fertility of the soil, and in their course work some mills of both kinds. There are five ranges of concessions of different depths, that are separated by as many public roads, which are again intersected by others running from the Saint Laurence, and also by the main road from St. Denis and St. Antoine on the Richelieu, up to the former, a distance of two leagues, from whence there is a ferry to La Valtrie on the opposite side; the fare is two shillings for each person, and seven shillings and sixpence for a

horsé and carriage. In the second range of concessions is the Brulé St. Antoine, and in the fourth Le Grand Brulé: these places derive their appellations from the method sometimes adopted of clearing the lands by burning the wood, upon the ground where it is felled, after such parts of it as are wanted for immediate use are removed; or else by setting fire to the trees and underwood while standing: when once fairly on fire, they will often continue to burn for weeks before the flames are again subdued. How far the conflagration has spread is shewn by the blackened and scorched appearance of the contiguous woods, and many of the half consumed trunks and roots, that remain for years in the ground; being extirpated only as the farmer's leisure offers convenient opportunities. Accidental fires sometimes occur in the forests, which, being spread by the wind, and no means taken to extinguish them, occasion brulés to a great extent. There are two neat churches and parsonage-houses in the seigniory, but no village; the houses however are numerous, distributed along the different roads in the concessions, and towards the banks of the Saint Laurence. The group of small islands in front, called Les Islets de Contrecoeur, is an appendage to the property.

ST. OURS (the seigniory of) and its augmenta-

tion, lies on the south side of the St. Laurence; a small part in the county of Surrey, and the rest in Richelieu; bounded on the south-west by the seigniories of Contrecoeur, St. Denis and St. Hyacinthe, on the north-east by those of Sorel and Bourchemin, and in the rear by the river Yamaska; is two leagues in breadth by rather more than seven in depth; was granted 29th October, 1672, to Sieur de St. Ours, and is now in possession of Charles de St. Ours, Esq. The land in this extensive grant is every where of a good quality, with varieties adapted to almost every species of agriculture; full nine-tenths of the whole of it is in a state of cultivation. There are ten ranges, containing altogether 800 concessions; those situated along the Saint Laurence and on both banks of the Richelieu are perhaps the richest parts of the soil, and greatly superior, as to cultivation, to those in the rear of the seigniorie. Some timber of the best kind and largest dimensions still remains, and also some of the inferior sorts. The river Richelieu, that traverses the upper part diagonally, is navigable from the St. Laurence for craft of 150 tons burthen; the Yamaska, at the lower extremity of it, is also navigable, by both of which it possesses the advantages of expeditious water conveyance in an eminent degree: in addition to these, it is watered by

three other rivers (not navigable) called La Prade, La Plante, and Salvayle. On the right bank of the Richelieu is the village of St. Ours, of about sixty houses, many of them substantially and well constructed of stone; in the centre of it is a handsome church and parsonage-house, and at a little distance the manor-house: besides traders and artizans, many persons of considerable property reside here, who are corn-dealers, and make large purchases of grain of all kinds, that is produced in abundance throughout this and the adjoining seignories; which is put on board large river craft in the Richelieu and Yamaska, and sent to Quebec for exportation. Nearly in every direction there are many public roads, kept in good repair, particularly on both sides of the two large rivers, and those leading from the Saint Lawrence to the Yamaska. From the village there is a ferry across the Richelieu, on the left bank of which are two excellent grist-mills. The Island Deschaillons, a short distance from the village, is full a mile-long and half a mile wide. In front of the seignory there is a group of islands belonging to it; the largest of them is called Isle Commune; and has some good pasture on it. Under the various considerations of extent, situation, local advantages, the quantity of land in cultivation, the state of husbandry,

and the population, which amounts to 3000 souls, there are certainly but few possessions in the province superior in value to this one.

BELOEIL (the seigniory of), on the north-west side of the Richelieu, in the county of Surrey, is bounded to the westward by the seigniory of Chambly, to the eastward by that of Cournoyer, to the southward by the river, and to the northward by lands stretching to the rear of the seigniory of Cap St. Michel and the adjoining small fiefs, and which form an augmentation to Beloeil; its dimensions are two leagues in front by one and a half deep; the augmentation is nearly of the same superficies. The principal grant was made, January 18, 1694, to Sieur Joseph Hertel, and the accessory one, March 24, 1731, to Sieur de Longeuil. The Baroness de Longeuil is now proprietor of both. The land of this tract is good, resembling in its varieties that of Chambly, having some patches of as rich a soil as any in the district of Montreal. On the border of the river and the eastern side the settlements are numerous; about three-fourths of the whole being in cultivation. The uncleared parts afford some beech, maple, and birch timber, but more of spruce fir, cedar, and inferior sorts. The north-eastern part is well watered by the little river Beloeil, that flows into the Richelieu,

and along whose banks is a range of excellent concessions ; in its course it works a grist-mill and a saw-mill : some smaller streams traverse the lower part, and likewise fall into the Richelieu. Various good roads lead through the seigniory ; but the one that follows the course of the river is the main public one. The houses of the settlers, many of which are extremely well built, are dispersed through the different concessions ; here and there a few together, but no village. The church and parsonage-house are near the Richelieu.

ROUVILLE (the seigniory of), on the river Richelieu, opposite to Beloeil, is in the county of Bedford ; bounded on the west by Chambly, on the east by St. Charles, on the south by the seigniory of St. Hyacinthe, and in front by the river ; two leagues in front by one and a half in depth ; was granted January 18th, 1694, to Jean Baptiste Hertel, Sieur de Rouville, and now the property of J. B. M. H. de Rouville, Esq. This tract contains land of so good a quality that nearly the whole of it is in a very advanced state of improvement, principally under grain : the concessions are divided into eight ranges, all running nearly parallel to the river ; they are watered by several small streams besides the Riviere des Hurons, which is one of considerable magnitude, that winds through the

lower part, and, continuing the same serpentine course, falls into the Basin of Chambly ; it rises in the seigniory of St. Charles, and runs about twenty miles, not only contributing to the fertility of the soil, but by its sinuous meanders forming a strong feature of embellishment. Towards the middle of the seigniory, between the second and third ranges, is the Mountain, frequently called Chambly and Beloeil ; but most correctly Mount Rouville : at its base it spreads over about 600 acres, extending principally from south-west to north-east, and rising to an elevation little inferior to the mountain of Montreal ; on the south side the acclivity is gentle, but in the opposite direction it is very steep and abrupt. On the summit of this mountain there is a beautiful little lake of fine clear water, from whence a rivulet flows, in a pretty winding stream, into the Riviere des Hurons, turning in the upper part of its course a grist-mill. The slopes of the mount are in many places broken by woods that greatly increase its picturesque beauty. The church of St. Jean Baptiste is situated to the southward, and a little in the rear of the height ; in its front, near the Riche-lieu, is the church and parish of St. Hilaire, facing that of Beloeil in the opposite seigniory. The roads leading along the bank of the Riche-lieu and on both sides of the Riviere des Hu-

rons are good; there are also two that take a southerly direction, and open a direct communication with the river Yamaska.

ST. CHARLES (the seigniory of), on the south side of the river Richelieu, in the county of Richelieu, is bounded on the south-west by the seigniory of Rouville, on the north-east by the seigniory of St. Denis, on the south by the seigniory of St. Hyacinthe, and on the front by the river; containing a space two leagues square: it was granted, March 1st, 1695, to Sieur Hertel de la Fresniere, and at present belongs to the Honourable P. D. Debartzch. The generality of the land in this grant is not surpassed by that of any one that surrounds it: the soil most prevalent is a fine strong loam; in some places there is a rich vegetable mould upon a stratum of clay, and in others a mixture of clay and sand: an inconsiderable proportion of it remains uncultivated. The mode of husbandry is very fair, and is most years rewarded with abundant harvests. The population of the settled parts is somewhat above the numerical ratio in proportion to their extent. The lower part of the seigniory is watered by the Riviere des Hurons, and the north-east or upper angle of it is crossed by the little river Miot. The houses of the tenantry are scattered about the concessions, but there is no village: the church,

dedicated to St. Charles, and the parsonage-house, stand on the bank of the Richelieu, about midway between the lateral boundaries; and near the same spot is a handsome manor-house, where the proprietor resides. At the western extremity of its front the Richelieu, by a sudden turn, spreads to a breadth of more than half a mile, in which expansion there are two small islands, called *Les Isle aux Cerfs*, that form part of the seignorial property.

COURNOYER (the seigniorship of), on the river Richelieu, in the county of Surrey, is bounded on the north-west by Vercheres and Bellevue, on the south-west by Beloeil, on the north-east by Contrecoeur, and in the rear by the river; two leagues in front by an equal depth; was granted, March 1st, 1695, to *Sieur de Cournoyer*, and now possessed by *A. Bellefeuille, Esq.* The land in this seigniorship is nearly similar to that of Vercheres and Contrecoeur, and for the most part of a good quality, producing, like many of the adjacent properties, wheat and other grain in abundance: the best cultivated part is on the bank of the river and towards Contrecoeur: the quantity under management is about two thirds of the whole. The uncleared lands are chiefly at the north-west angle, and afford wood of the inferior species only. It is watered by the Richelieu, but has no stream in

its interior. An excellent road leads from the village of Vercheres, close to the St. Laurence, down the Richelieu, where it joins the main public road to Chambly, &c. The church of St. Mark is on the bank of the river, but there is no village.

ST. DENIS (the seigniory of), in the county of Richelieu, is bounded in front by the seigniory of Contrecoeur, on the north-east by that of St. Ours, on the south-west by Vercheres, and in the rear by St. Hyacinthe; it is two leagues in breadth by as many in depth; and was granted, September 20th, 1694, to Louis de Ganne, Sieur de Falaise. The property now belongs to the heirs of —— Montarville, Esq. Nearly all the land within these limits is of a good sort and very fertile, being chiefly a light earth covering a yellow loam: wheat and other grain is found to thrive extremely well upon it, and yield ample returns. Rather more than two-thirds of it are cleared and under tillage, there being five ranges of concessions, making together 300 lots, very few of which are unoccupied. The river Richelieu runs across the front, and the rear is watered by the little river, or rather rivulet, called Le Miot. On the south bank of the Richelieu is the village of St. Denis, that numbers about eighty houses, and a very

fine church, the whole tolerably well built, in an agreeable and pleasant situation, which when seen from the opposite side of the river, where some of the best houses, and the church, with its three handsome spires, present a front view, exhibit a favourable specimen of picturesque beauty: between the main street and the river are some capacious store-houses, chiefly used as granaries, and wherein large quantities of corn are collected from the adjacent seigniories for exportation; as the lands for many leagues about this part are considered the most productive in grain of the whole district of Montreal. In the river, nearly fronting the village, is the Isle de Madere, and a smaller one: from this place there is a ferry to the opposite seigniory of Contrecoeur. It is remarkable that there are neither saw nor grist-mills on either of the streams; wind-mills supply the place of the latter. There is a school for females, conducted by two sisters of the congregation of Notre-Dame, missionaries from Montreal. In proportion to the superficies of this seigniory it is very well inhabited; the number of houses dispersed over it (including the village) exceeding 400. There is a fief of twelve acres in front, called Cascarinette, but it is now the property of the seignior. The public roads in all directions are numerous; the

principal ones are those by which the communication between the rivers St. Laurence and Yamaska is kept up.

ST. HYACINTHE (the seigniory of), in the county of Richelieu, is bounded on the south-west by the seigniory of Monnoir and the township of Farnham, on the north-east by the seigniories of St. Ours and de Ramzay, on the north-west by those of Rouville, St. Charles, and St. Denis, on the south-east by the townships of Milton and Granby; six leagues in front by six in depth, being three leagues on each side of the river Yamaska; was granted, November 23, 1748, to Sieur François de Rigaud, Seigneur de Vaudreuil, and is now the property of Monsieur Desolles and the Honourable P. D. Debartzch, heirs of the late H. M. Delorme, Esq. This capacious grant is in a situation that, combined with its many other advantages, renders it a most valuable and highly improvable possession. So great an extent naturally embraces many varieties of soil; but the best species here predominate, and the proportion anywise below mediocrity is very trifling; the least improvable is towards the north and north-east side, where it is low, and in some places rather swampy; approaching the township of Granby it rises higher, presenting a valuable tract for every species of culture requiring a

rich dry soil. In many parts there are lands admirably well adapted to the production of hemp and flax in large quantities; to the growth of all the grains peculiar to the country no part of the district is more congenial. The banks of the Yamaska and the other streams afford plenty of good meadow land; in fact, the different classes of arable, meadow, and pasture may be nearly all denominated of first rate superiority. There is much fine beach, maple, and basswood timber; cedar and spruce-fir are abundant on the low wet lands; oak and pine are found in tolerable quantities, and of large scantling towards the townships of Granby and Farnham. The part of the seigniory lying on the north-west side of the Yamaska is nearly all employed in agriculture; the opposite bank, and the parts towards the south-eastern extremity, also present many wide ranges of cultivated grounds. The Yamaska flowing along the middle of this spacious property, and being navigable for large boats and rafts, affords ample means of speedy conveyance for the fruits of the field, and the produce of the forests. A branch of the same river diverging to the eastward into the new townships, and which receives several minor streams, plentifully waters that division; while the river Salvayle, that has its rise near the boundary of St. Charles, with some of less note,

completely answer the purpose of irrigation for the western part. The roads are well kept, and pass in almost every direction; those on each side of the river are the main public ones, by which the communication between Three Rivers, Quebec, and the state of Vermont, is directly maintained; and, in consequence of the importance of this route, every attention is paid by the proper officers of the different districts to preserve it in the best possible state of public accommodation. From these roads others of no less general utility strike off into the new townships, and thence in several ramifications to the state of New Hampshire, &c.; together forming the means of intercourse invaluable to this part of the province. There are several parishes within the seigniory, and although they are tolerably well inhabited, there is only the single village of St. Hyacinthe, which is most conveniently situated on an angle, formed in the north-east part by a large bend of the Yamaska, containing from eighty to ninety houses, for the most part built in a superior style, and very respectably tenanted, a large handsome church and good parsonage-house, and a college, or rather public school. Being in the main road, there is a continual influx of strangers travelling to and from the frontiers, for whose reception there are one or two inns, wherein the

accommodation is every way respectable; the environs are most agreeably diversified by gardens and orchards in a flourishing state, meadows, pastures, and other farm inclosures. At a short distance from the village are a grist and a saw-mill. Near the boundary of the seigniory of Rouville there is a single mountain, similar to that of Beloeil, but inferior in elevation and extent, adorned nearly to the summit with woods, beautiful in their appearance on the slopes, and containing some fine timber. On the south-west side of the river is another, called the Yamaska Mountain, almost of the same form and magnitude, but having, among the woods that spread over it, some excellent fine timber.

BOURCHEMIN (the seigniory of), on the river Yamaska, in the county of Richelieu, is bounded by the seigniories of St. Hyacinthe and St. Ours on the south-west, St. Charles, Yamaska, and de Ramzay on the north-east, and by Sorel on the north-west; a league and a half in breadth, by each side of the river, and three leagues in depth; was granted, 22d June, 1695, to Sieur Jacques François Bourchemin, and is now the property of Mrs. Barrow.

BOURGMARIE WEST (the seigniory of), extending from the rear of the seigniory of Sorel to the river Yamaska, joins Bourchemin on the

south-west; it is sixty arpens in front by a league and a half in depth, and was granted, August 1, 1708, to Marie Fézéret, and now the property of Mrs. Barrow.

LOUISE DE RAMZAY is a small piece of land, about a league and a half superficial, of a triangular form, lying in the rear of the seigniory of Sorel, between those of St. Ours, Bourchemin, and Bonsecours; granted, June 18, 1739, to the Demoiselles Angelique, Louise, and Elizabeth de Ramzay.

BONSECOURS (the seigniory of), lies between the seigniory of Sorel and the river Yamaska, having the seigniory of Yamaska for its north-eastern boundary; it is seventy-four French arpens broad by two leagues deep; granted, April 16, 1678, to Sieur Villeneuve, and now possessed by Mrs. Barrow. The same kind of land prevails generally throughout these four several concessions, of which but a small part can be deemed of superior quality. Bourchemin, where the Yamaska runs through it, is the best settled, but even there cultivation has not made a very favourable progress; in fact, much the largest proportion of each grant still remains covered with its natural wood: among it a little good timber may be found; but the inferior species are abundant enough.

DE RAMZAY (the seigniory of), in the county of Richelieu, is bounded on the south-west by St. Hyacinthe, on the east and north-east by the township of Upton, and on the north-west by St. Charles Yamaska and Bourchemin; three leagues in front by as many in depth; was granted, 17th October, 1710, to Sieur de Ramzay, and is now the property of the heirs of P. Langan, Esq. Of this seigniory very little is cultivated, or even cleared. Judging of the quality of the land from the timber growing thereon, gives every reason to suppose that it might be brought into use with very good prospects. Towards the north-east there are some swamps, thickly covered with cedar and spruce fir, the certain indication of such a soil; but the woods on the higher parts are of much better kinds, and in some places shew the ground to be of a strong and good quality. It is watered by the river Chibouet, that has its source in the recesses of the forests, and after an irregular course falls into the Yamaska.

ST. CHARLES YAMASKA (the seigniory of), on the eastern bank of the Yamaska, in the county of Richelieu, is bounded on the north by the seigniory of Bourgmarié East, on the south by Bourchemin, on the east by de Ramzay, and on the west by the river; it contains

a league and a half in superficies; granted, August 14, 1701, to *Sieur René Fézéret*, and is now the property of *Mrs. Barrow*. The best and only cultivated part of the land lies along the bank of the river, but extends only a short distance from it, producing grain in moderately good crops. With the exceptions of this tract the seigniorship is nearly all wood-land, in some places bearing the appearance of a soil that would reimburse the expense and trouble of bringing it into use, if persevered in with industry and managed with a little skill.

SOREL (the seigniorship of), on the south side of the *Saint Laurence*, in the county of *Richelieu* and *Surrey*, is bounded on the south-west by the seigniorship of *St. Ours*, on the north-east by the seigniorship of *Yamaska*, and in the rear by the little grants of *Bourgmarie West* and *Louise de Ramzay*; two leagues and a half in breadth by two in depth (one on each side of the river *Richelieu*); was granted, 29th October, 1672, to *Sorel, Sieur de Saurel*; it was purchased, in 1781, from its then possessor, for the use of government, by *Sir Frederick Haldimand*, governor and commander in chief. Part of this seigniorship is of a lightish, good soil, in some places inclining to a mixture of sand and clay; on the north-east it is low, where the *Bay of La Valliere* or *Yamaska* cuts into it, occasion-

ing swamps and marshes of considerable extent. Of the whole grant about two-thirds are cultivated, and afford a tolerable proof that where a proper mode of husbandry is introduced the land is rendered very productive. The low, wet parts, particularly that called the Great Swamp, lying between the Riviere Pot au Beurre and the town of William Henry, now covered with spruce fir and cedar-trees, might by ditching and draining be converted into good meadow and pasture, and some spots made fit for the growth of hemp. The rising grounds afford timber of the best sorts, in small quantities, and also some situations where the culture of flax could be introduced with good prospects of success. The Riviere Pot au Beurre, branching into three distinct streams that flow into the Bay of La Valliere, waters the rear of the seigniory; the Richelieu traverses the upper part, and here discharges itself into the St. Laurence; on the banks of these streams there are some of the concessions and farms in a state of improvement much superior to the other ranges. From the town of Sorel there are roads in many directions, of which the two main ones leading to Yamaska and along the course of the Richelieu are the best, and of most importance. The town of Sorel, or William Henry, is very well and pleasantly situated

at the confluence of the Richelieu, Sorel or Chambly River (known by each appellation), with the Saint Laurence, on the scite of a fort built in the year 1665, by order of Mons. de Tracy, similar to those erected in the neighbourhood of Montreal, &c. as a defence against the incursions of the Indians, and which received its name from Sorel, a captain of engineers, who superintended its construction. The plan of it covers about 120 acres of ground, although at present the number of houses does not much exceed 150, exclusive of stores, barracks, and government buildings. It is laid out with regularity, the streets intersecting each other at right angles, and having in the centre a square 170 yards on each side; the dwelling-houses are of wood, substantially and well constructed, but the Protestant and the Catholic churches are both stone buildings: there are eight principal streets, that, like the town itself, are named after different branches of the royal family; the whole population is about one thousand five hundred. Before the town the bank of the Richelieu is from ten to twelve feet high, having near the point two small wharfs or landing-places; the river is here two hundred and fifty yards broad, with from two and a half to five and a half fathoms of water. On the opposite shore there are convenient places for

building vessels, and where some of large tonnage have been constructed; but latterly this branch of trade has not been so much attended to here as it used to be, notwithstanding the accommodations for carrying it on would induce a belief that great encouragement would be given to it. A small distance from a little rivulet to the southward of the place is a blockhouse and an hospital, and a little further on a good wooden building, with out-houses, gardens, &c. called the Government-house, serving as a residence for the commanding officer of the troops stationed here, usually one or two companies of infantry. On the south-east side of the town there is a rising ground, whereon it was once in contemplation to erect some substantial military works, but hitherto slight field works have been the only defences thrown up. Such a measure ought not to be entirely neglected, for the position being one of importance to the safety of the province, supposing it necessary to contend against a well directed invasion, and not naturally a strong one, should receive such assistance from art as would render it tenable for a long time to oppose a considerable force, as it is a point against which an enterprising enemy would endeavour, for several reasons, to direct a main attack. The present town of Sorel was begun

about the year 1785, when some loyalists and disbanded soldiers settled at it, and it still continues to be the residence of many old military servants of the crown, who exist upon pensions allowed them by government. Some trade is carried on here, but not so much as might be supposed its situation at the junction of two navigable rivers would command: the timber trade, the export of grain from this part of the country, and the interchange between the American states, might be extended to a considerable amount, and apparently with many advantages. Within a short time there has been established a regular post road from William Henry to St. John's, whereon travellers from Quebec to the new townships and into the United States proceed with expedition, and find every requisite accommodation of horses and carriages, at rates fixed by the government of the province. The Richelieu, affording a quick and easy water communication from the American territory into the very centre of the province, is entitled to consideration in more than one point of view. As a medium of commerce between the fertile districts of each country, it merits attention; and it has a forcible claim to consideration from being a main inlet into the British territory, through which hostile operations might be directed with an alarming rapidity, and perhaps

for some time with serious consequences, before they could be checked and repelled. The first may be encouraged, and in all probability advantageously extended, as easily as the latter can be guarded against when the possibility of the attempt and its contingencies are understood. This river flows from Lake Champlain in a northerly course, to its confluence with the St. Laurence, through the well cultivated seigniories that have been already described. Its banks are generally between eight and twelve feet high, diversified on each side by many farms and extensive settlements, in a very high state of improvement; some neat, populous, and flourishing villages, handsome churches, numerous mills of various kinds, good roads in all directions, with every other characteristic of a country inhabited by an industrious population. The navigation is carried on by boats, canoes, and other craft of large dimension and burthen, and by rafts. From its junction with the St. Laurence, decked vessels of one hundred and fifty tons may ascend from twelve to fourteen miles. This river is noticeable for the unusual circumstance of being much narrower at its discharge than at the place from whence it flows, and for the gradual diminution of the breadth of its bed. At its mouth it is about two hundred and fifty yards wide, which it preserves,

with the exception of one or two expansions occasioned by some small islands, which greatly increase the beauty of its scenery, up to the bason of Chambly, that has been already mentioned; from hence to the Isle du Portage the breadth is five hundred yards; beyond this it spreads to double that distance, and continues to widen still more up to St. Johns, from whence there is a ship navigation to the towns on Lake Champlain. From the bason down to the St. Lawrence the current is regular and gentle, and although there are some shoals and flats, they do not disturb the smoothness of its course; but from Lake Champlain the stream is hurried, in some places rather violent, and in others broken by rapids. The passage downwards for loaded boats, &c. is in general quick and unattended with the smallest difficulty, except what is occasioned by the rapids. Upwards to Chambly nothing more than ordinary care is required to avoid the shallows, but from thence to St. Johns the ascent is attended with more labour, from the causes just spoken of. The number of river craft, canoes, &c. with their various loadings, with the immense quantities of timber composing the numerous rafts that are continually descending, and upon which many hundred tons of pot and pearl ashes, and large cargoes of flour are brought down every summer,

exclusive of what is conveyed by the boats, unequivocally point out the value and importance of this communication. The Isle St. Therese, between Chambly and St. Johns, is two miles long, and about half a mile broad, and with the smaller island adjacent, was granted Nov. 3, 1672, to Sieur Dugué; it is flat and low, partly covered with small timber and brush-wood, but where it is clear there are some good meadows and fine pasturage for cattle. The Isle du Portage, a little below it, is of no value. Near Isle Therese is a ferry, where the charge for taking across a horse and carriage is one shilling and three-pence; a single horse, seven-pence halfpenny; and two-pence halfpenny each person: in several other places there are ferries, in the vicinity of the main roads from Montreal to the new townships.

LA CHENAIE (the seigniorie of) lies on the north side of the river St. Jean, or Jesus, in the county of Leinster; bounded on the north-east by the seigniorie of St. Sulpice, on the south-west by that of Terrebonne, and by the townships of Kilkenny and Rawdon in the rear; it contains four leagues in front by six in depth, and was granted 16th April, 1647, to Pierre Legardeur. This tract was afterwards divided, and at present forms the two distinct seigniories of La Chenaie and L'Assomption; the

former is the property of Peter Pangman, Esq. and the latter belongs to the heirs of the late P. R. de St. Ours, Esq. except a small portion, which is the property of General Christie Burton. La Chenaie adjoins Terrebonne, and has a front of two leagues. The quality of the land is various, but throughout proves tolerably good, as very few parts indeed fall below mediocrity. The usual sorts of grain, and other produce of the country, are cultivated here, and return excellent crops: there are also many patches well suited to the growth of flax, that might be carried on with success to a considerable extent. The rivers Achigan and Mascouche, with several smaller streams and rivulets branching from them, water it very favourably; neither river is navigable for boats, but timber is brought down them to the St. Lawrence. In the spring and autumn their waters greatly increase, and in these seasons some rapids in them are very violent; but even in the usual periods of drought there is seldom any want of a sufficient supply to keep the mills at work. On the borders of the St. Jean, Achigan, Mascouche, Ruisseau des Anges, St. Pierre, and the other streams, there are nine ranges of concessions, containing together 456 lots, nearly equal to one half of the seigniory; of this number rather more than 400 are cleared, well settled, and much im-

proved. Although so well inhabited, there is not a village worth notice; of two churches, one is dedicated to St. Henri, and the other named La Chenaie. On the Achigan there is a grist-mill, and upon the Mascouche a grist and a saw-mill. About a mile from the river Jesus is a fief, of 18 acres in front, that runs into the adjoining seigniory of L'Assomption as far as the limits of St. Sulpice, and of which Mrs. Deviene is the proprietor. Over the different rivers there are good bridges, and from La Chenaie two ferries, one to the Rivière des Prairies, where one shilling and eight-pence is charged; the other to isle Jesus, where only ten-pence is demanded for each person.

L'ASSOMPTION (the seigniory of) possesses many local advantages, and a variety of soil favourable to the encouragement of cultivation in almost every branch. Towards the township of Rawdon the land is higher than it is in the front; consisting chiefly of a yellow loam, mixed in some places with sand, which, when tilled, is very fertile, but still perhaps something inferior to the lower parts, where there are many exceeding fine tracts fit for the culture of every species of grain. On the uplands, birch, beech, and maple timber is found in great perfection, with some pine of a good growth; but in the valleys the wood is inferior

in quality; the best sorts very partially intermixed. The River Assomption falls into the Riviere St. Jean and waters the lower part; the Achigan crosses the seigniory of La Chenaie, enters L'Assomption towards the middle of its depth, forms a considerable bend in it, and afterwards recrosses the division line: the upper part is intersected by some smaller streams that contribute greatly to its fertility, and are no less ornamental to it. The Assomption and Achigan may both be called large rivers, but neither of them are navigable, although both of them are made use of to bring down the timber felled in the upper parts of the adjacent seigniories and townships. Very few grants exceed this property in the proportion of cultivated land, four-fifths of it being cleared and well settled; there are ten ranges of concessions, containing 1000 lots; upon them are nearly 700 houses of all classes. The most improved settlements are those situated on the banks of the two large rivers. In the bend of the Achigan, upon a beautiful and well chosen spot, is the handsome church of St. Roc, and around it a few well-built houses, the commencement of a village; and although as yet not very considerable, there is a good public school in it. Beside the church of St. Roc, there is another towards the rear of the seig-

niory. The Achigan turns two corn-mills and one saw-mill.

ST. SULPICE (the seigniory of) on the north side of the Saint Lawrence, in the county of Leinster, is bounded in front by the river, in the rear by the township of Rawdon, on the north-east by the seigniory of La Valtrie, and on the south-west by that of L'Assomption; two leagues in front by six in depth; was granted, 17th December, 1640, to Messrs. Cherrier and Le Royer, and is now the property of the seminary of St. Sulpice at Montreal. More than three-fourths of this seigniory is well cultivated, and for the goodness of its soil, the quality of the timber, and state of improvement, is not surpassed by any that surround it. It is particularly well watered by the River L'Assomption, the Achigan, St. Esprit, Ruisseau St. George, Ruisseau Vacher, Riviere Rouge, Ruisseau Point de Jour, and Lake Ouareau, most of them flowing into the Assomption after a mazy course, that in some parts, where the ground is high and clothed with wood, present points of view truly picturesque and beautiful. The different ranges of concessions contain upwards of 300 lots of various dimensions, nearly all of which are settled upon, and generally speaking under a respectable system of husbandry; but those in the greatest state of im-

provement lie on the banks of the St. Lawrence; and on both sides of the Assomption. The seigniory contains two churches and parsonage-houses, and one village; many grist and saw-mills are worked by the different streams and rivers. The village is situated on the south-west side of the Assomption, and covers about half a mile square, having from eighty to ninety houses, besides many storehouses, some for general merchandise and the others for grain, as large quantities are collected here for exportation; and from hence also are dispersed over the other seigniories, and the townships towards the Ottawa, a good deal of merchandise, and many articles of general consumption, so that it is a place of some little trade: the houses of the most wealthy inhabitants are exceedingly well built of stone. From hence there are many good roads leading to the interior of this and into the adjacent seigniories; and over the large rivers, bridges at convenient intervals.

LA VALTRIE (the seigniory of) and its augmentation, in the county of Warwick, has the River St. Lawrence on its front, the seigniory of St. Sulpice on its south-west, that of La Noraye on the north-east, and the township of Kildare in the rear; a league and a half in breadth by the same depth; was granted 29th October, 1672, to Sieur de la Valtrie. The

augmentation, similar in breadth to the seigniory, but having a depth of two leagues and a half, was granted 21st April, 1734, to Sieur Marganne de la Valtrie; they both remain in possession of the heirs of the original grantee. This is a very valuable property; the land, generally speaking, is level from the rear to the St. Lawrence, whose banks hereabouts are rather low. The quality of the soil varies a little, but the major part of it is good and productive, either of a light greyish earth, a yellowish loam, or clay mixed with sand; nearly the whole of it under culture, and yielding ample crops to a system of husbandry that in several respects is creditable to the farmers. The Riviere L'Assomption winds its broad but shallow stream through the upper part of the seigniory, and the lower portion of it is watered by La petite Riviere de la Valtrie, that falls into the St. Lawrence. Wheat and other grain forms the chief part of the disposable produce of this tract; good hay in great abundance is made from some very extensive and excellent ranges of meadow land. Although well inhabited, yet there is not a village in La Valtrie; the houses are spread about among the concessions, and thickly placed by the sides of the roads that lead along the St. Lawrence; the church, with the parsonage, a chapel, the manor-house, with

a few others, are situated a little to the eastward of the Riviere La Valtrie; and from thence at no great distance is the wood of La Valtrie; that, even in Canada, is worthy of notice, for the fine, lofty, and well grown timber trees of various kinds that compose it. The main road from Quebec to Montreal passes through this wood and along the bank of the river, offering to the traveller in the summer season for several miles a succession of beautiful and romantic scenery. Besides the main road, there are several that lead into the populous seigniories on each side, which are intersected by others running at right angles into Kildare, and opening a most convenient and easy intercourse with the neighbouring townships. On the River La Valtrie there is a grist and a saw-mill. The rear boundary line of this seigniori had not until very recently been accurately measured, when it was discovered, that in addition to its proper depth of four leagues, there was still a space of about a mile in breadth between it and Kildare, which had always been supposed to form part of the grant, and many persons had settled thereon with titles from the seignior of La Valtrie; this extra space is very well cultivated, and has a church, with a great many houses, built within it, from the erroneous confidence of all parties that they were within the just limits of

the grant. Under these circumstances of encroachment, occasioned by ineffectual measurement at first, a compromise has been made, and an order passed the governor and council to grant the cultivated part to the present proprietor of La Valtrie, and to reserve the remainder for the use of the Protestant clergy and future disposition of government. In front of the seigniori are the two Isles de la Valtrie, appendages to it.

LA NORAYE and DAUTRE' (the seigniories of) with their augmentation, lie on the north side of the River St. Lawrence, in the county of Warwick; are bounded on the south-west by La Valtrie, on the north-east by the seigniori of Berthier, in front by the river, and in the rear by the seigniories of D'Aillebout D'Argenteuil and De Ramzay. La Noraye, two leagues broad and two deep, was granted April 7th, 1688, to Sieur de la Noraye. Dautré was granted in two portions; the westerly one, half a league broad by two leagues deep, to Sieur Jean Bourdon on the 1st December, 1637; the easterly one, of precisely the same dimensions, on the 16th April, 1647, to Sieur Jean Bourdon also. The augmentation, under the title of Derriere Dautré, and La Noraye, being the breadth of the two former (three leagues) and extending to the Riviere L'Assomption, about

four leagues, was granted 4th July, 1739, to Sieur Jean Baptiste Neveu. The whole is now the property of the Hon. Ross Cuthbert. The extensive tract included in these several grants contains a vast quantity of excellent arable land, that lies in general pretty level. The soil is various; in the front a light reddish earth with some clay, but growing stronger by the mixture of different loams towards the rear, where it is a strong, rich, black earth. The timber embraces almost every variety, with much of a superior quality in the different classes, and some very good oak and pine. It is conveniently watered on the south-west side by the rivers St. Joseph, St. John, and the little Lake Romer; a little westward of the St. John is another small lake connected with that river by a short canal that always ensures to it a permanent stream. The rivers La Chaloupe and Bayonne cross its north-east side into Berthier; on them there are several good corn and saw-mills. In the rear of the seigniori, towards the River L'Assomption, is an eminence called Castle Hill, commanding a diversified and beautiful prospect over the surrounding country, on which the present proprietor is about erecting a handsome house for his future residence. In this property cultivation is in a very advanced state, about two-thirds of it being thickly settled,

of which the parishes of St. Elizabeth in the rear, the banks of the St. Lawrence, the Coteaus St. Martin and St. Emily, are perhaps the most flourishing. There is no village; but good houses, with substantial and extensive farm buildings, are dispersed over it in all parts.

D'AILLEBOUT D'ARGENTEUIL (the seigniory of), in the county of Warwick, is bounded in front by the Riviere L'Assomption, on the south-west by the township of Kildare, on the north-east by the seigniory of De Ramzay, and in the rear by waste crown lands; a league and a half in front by four leagues in depth: was granted October 6th, 1736, to Sieur Jean D'Aillebout d'Argenteuil.

DE RAMZAY (the seigniory of) joins d'Aillebout, and is bounded on the north-east by the township of Brandon; of precisely the same dimensions as the preceding one; was granted 7th October, 1736, to Dame Genevieve de Ramzay, widow of Sieur de Boishebert. Both seigniories are now the property of the heirs of the late Hon. P. L. Panet. These grants consist of good rich land in the lower part, but in the rear, approaching the mountains, the soil is either a hard unfruitful clay, upon which the farmer's labour would be thrown away, or irregular and broken strata of rock. It is however tolerably well timbered, beside the common

sorts for fuel, with beech, birch, and maple, some oak, and a little pine. A small range on the west bank of L'Assomption is all that in either seigniory is under culture.

BERTHIER (the seigniory of), on the north bank of the St. Lawrence, in the county of Warwick, with its fiefs and augmentations, is bounded on the south-west by the seigniory of Dautré and augmentation, as recently described; on the north-east by those of Dusablé or New York, and Maskinongé; in the rear by the township of Brandon, and in front by the St. Lawrence; was granted 27th April, 1674, to M. Berthier; the augmentation was granted 31st December, 1732, to Sieur Pierre L'Etage: the property, as it is at present possessed by the Hon. James Cuthbert, is two leagues and three quarters in front, by four and a half in depth. Of ten ranges of concessions, containing 600 lots or thereabouts, nearly all are in the hands of tenants, but many of them retained as woodlands, and not settled upon. The soil in general is good, except towards the rear, where it is rocky and sterile; in the concession called St. Cuthbert it is a fine vegetable earth several inches deep, on a subsoil of strong clay; in that of St. Esprit a strong deep loam; in St. Pierre a rich light earth; in St. Catherine a small part is a good loam, and the rest of some-

what inferior quality; in St. Jean there is a mixture of several species, which taken together is fully equal in fertility to either of the others. In front the land is low, especially towards the north-east boundary, but the arable is very productive, and the remainder a succession of very fine meadows. The other parts of the seigniori are but indifferent in quality, and some of it about the back boundary even barren and unfit for tillage. Most of these concessions are farmed in a very good style; but those whereon the greatest improvement is visible are St. Cuthbert, St. Esprit, and St. Pierre, where industry and careful arrangement has given an appearance to much the greatest number of the farms that conveys an idea of the ease and even affluence enjoyed by their occupiers. Wheat is the chief production of these lands, but they are fit, generally speaking, for every species of culture; and the important articles of hemp and flax might be raised in almost any quantities, would the farmers attend to it properly, and adopt a different method in its cultivation to that hitherto used in the province. The Rivers Chicot, La Chaloupe, Bayonne, and the Bonaventure Creek, a branch of the latter that runs almost to the rear boundary, afford a convenient and equal irrigation: the first is navigable for boats up to the seigniorial mill, about

two leagues, but the two others only a mile or two from their mouths. Near the Bayonne there is a spring highly impregnated with salt, from the waters of which that article may and sometimes is made of a very good quality. On the best cultivated ranges the wood is nearly all cleared away; but on the others, and in the back districts, there still remains abundance of *bois de chauffage*, or fuel, with some little maple, beech, and cedar. The village of Berthier is pleasantly situated on the north side of the Chenail du Nord, and forms one principal street, consisting of at least eighty houses; or rather, they are placed sometimes at long intervals on the side of the main road to Quebec: many of them are extremely well-built and handsome. There are, exclusive of dwellings, a great many granaries and store-houses for general merchandise, it being a place of some trade, from whence British manufactured goods are dispersed over the neighbouring populous seignories, and from whence also large quantities of grain are annually exported. The church, that claims notice not only as being a handsome structure, but for the elegance of its interior decoration, is situated at a small distance behind the main street. This village being about mid-way between Montreal and Three Rivers, in the direct route of the public stage coaches that have been

established upon the plan of those in England between the former place and Quebec, and also the principal intermediate post-office station, makes it a place of great resort and considerable traffic: several inns are kept, where travellers will always find good and comfortable accommodation. On passing through the Chenail du Nord, the village with its gardens, orchards, meadows, and surrounding cultivated fields, form together an agreeable and pleasing assemblage of objects, although from the flatness of the country it is not marked by any of those traits of grandeur so frequently observable on the north side of the St. Lawrence, descending towards Quebec. Indeed, it is so little above the level of the river, that in the spring, when the melted snow and ice occasion a rise of the waters, it is sometimes overflowed to a considerable distance inland, causing much damage to the lower parts of the houses in the village, and goods deposited in the stores; so great has been the rise as to make it necessary to remove large quantities of wheat from the upper stories of the granaries to save it from injury. A similar inconvenience happens at Vercheres and its vicinity, on the south side of the river. Besides the village of Berthier, there is another in the upper part of the seigniory called Pierreville, of about twenty houses, all of

wood. On the west side of the River Chicot, and about two leagues in the interior, is the church called St. Cuthbert's, belonging to a parish of the same name, that spreads over a large portion of this and the adjoining seigniory to the north-east. There are also four schools; two of them supported by the Roman Catholic clergy. Including the villages, the dwelling-houses dispersed in the various concessions amount to about 500, and the total population of the seigniory is estimated to exceed 5000, which certainly will not be supposed an exaggerated computation, when it is known that it furnishes 1000 able-bodied men for the militia. In Berthier and its dependencies there are two grist-mills, two saw-mills, and one pot-ash manufactory. The main road by the St. Lawrence, and the different roads through the concessions, are maintained in excellent repair. Across the rivers there are bridges, all free of tolls. The domain of Berthier is on the south-west side of the River Bayonne, and contains 335 arpens, approaching in goodness to the best of the district. In front of the seigniory several fine islands form the south boundary of the Chenail du Nord; they are named Isles Randin, Du Pas, Castor, &c. On Dupas, which is the largest, and was granted November 3d, 1672, to Sieur Dupas, there is a church and several

flourishing settlements; the others consist principally of meadow and grazing land. A little to the southward of this group are Isles St. Ignace, Isle Madame, Isle aux Oies, Isle Ronde, and Isle de Grace, belonging to government; these, and some others to the eastward, at the entrance into Lake St. Peter, are very low, but clothed with good timber; they abound with all sorts of wild fowl, as do the intervals between them with excellent fish of various kinds.

LA PETITE NATION (the seigniory of), is situated on the north side of the Grand or Ottawa River, in the county of York, occupying the ground of two projected townships, between those of Grenville and Lochaber, five leagues in front by five in depth; was granted May 16th, 1674, to Messire Francois de Laval, Bishop of Pétrée, the first Bishop of Quebec. It is now the property of I. Papineau, Esq. The whole of this grant, with the exception of a small spot, remains in a state of wood-land; recently, however, the present proprietor, a gentleman of Montreal, and for many years a member of the provincial parliament, has retired to it with an intention to commence a plan of improvement, that, if persevered in, will be likely to realise many of the advantages that its situation and other favourable contingencies hold forth the promise of. The Ottawa indents the front by

several bays and large ponds, towards which the land is low, but of excellent quality, where there are ranges of soil stretching a great distance to the interior, fit for the cultivation of every species of grain, hemp, flax, and grasses of all descriptions. On the margin of the rivers, large tracts of fine natural meadows and pastures at present enrich only the earth with their exuberant plenty. The inlets and ponds abound with fish in great variety, and the neighbouring grounds with game, duck, teal, and other wild fowl, in great quantities. Penetrating deeper into the seigniory, the land has a gradual ascent, and is clothed with timber of the best kinds; the oak is of superior quality, particularly some of the largest dimensions, fit for ship-building. The main ridge of mountains, that runs a westerly course from Quebec until it falls upon the Ottawa, crosses La Petite Nation about the middle; beyond this intersection the remainder of the grant has been only partially explored, but the quality of the part that has been observed is much inferior to that of the south; although the various sorts of timber appear to retain their superiority, or at any rate it is but very little diminished. From the range of heights and the upper lands several small streams have their sources, from whence in various directions they water the valleys in their

way to the grand river, but they are too inconsiderable for other purposes than irrigation and working of mills.

LES ISLES BOUCHARD, lying in front of the seigniories of Vercheres and Contrecoeur, in the St. Lawrence, were granted Oct. 29th, 1672, to Sieur Fortel. They are together about five miles in length, by half a mile broad. Some good meadow and pasture land is found upon them, the rest is covered with wood, and among it some very fine timber. On all of them the soil is excellent.

Having now finished a compressed description of all the feudal tenures in the district of Montreal, I will next notice such grants as have been made by the English government in free and common soccage under the title of

TOWNSHIPS.

KILDARE is situated in the county of Warwick, and in the rear of the seigniory of La Valtrie; it was erected into a township by letters patent, dated June 24, 1803*, and lands

* As a list of the several grants in free and common soccage, made since the year 1796, under the great seal, in such tracts as are actually erected into townships within the province of Lower Canada, specifying by whom each was made, the time when, to whom, what quantity, and the proportion of

therein, equal to one-fourth of a township, granted to P. P. M. de la Valtrie and his associates; which grant is now the property of the heirs of the said M. de la Valtrie, and the widow of William Vondenvelden, Esq. This township has twelve ranges of concessions, but is only thirteen lots wide*. No part of it has

crown and clergy reservations, is given in the appendix, a recital of the same individually is thereby rendered unnecessary. The reader will please to refer to it for whatever concerns any original township grant. In the description, where individuals may be named, they are the actual proprietors of large tracts, either by purchase or otherwise.

* To avoid repeating the dimensions of townships and their subdivisions, the same is here given precisely. The most exact content of ten miles square, the usual dimensions of an *inland township*, as prescribed by the warrants of survey, is sixty-one thousand acres, exclusive of the usual allowance of five acres on every hundred for highways. This quantity is contained in a tract of ten miles and five chains in length; by ten miles, three chains, and fifty links, in perpendicular breadth; or such other length and breadth as may be equivalent thereto. A rectangular township of this admeasurement contains eleven concessions or ranges of lots, each lot being seventy-three chains and five links long, and twenty-eight chains seventy-five links broad. Each range is divided into twenty-eight lots, so that each township contains three hundred and eight lots of two hundred acres, with the allowance for highways. Of these lots two hundred and twenty are granted to settlers, and the remaining eighty-eight reserved for the crown and protestant clergy. In like manner it may be observed, that the quantity nearest to the content of nine miles broad by twelve miles deep, the usual dimensions of a *river township*, is sixty-seven thousand two hundred acres, exclusive of the allowance for highways. These are contained in a tract of seven hundred and twenty-eight chains broad, by nine hundred and sixty-nine chains and sixty

yet been cultivated, although the soil appears to be of a superior quality, and some of it fit for hemp and flax, as well as all sorts of grain. Most of the timber is good. It is watered by part of Rivière L'Assomption and some inferior streams.

RAWDON, in the county of Leinster, joins Kildare on the south-west. This is a full township, of which very little has yet been granted or even surveyed. The surface of it is uneven, in many places rocky, but in others having extents of good land upon which grain might be raised with profit, and on some few hemp and flax. On the uplands the greater part of the timber is maple, beech, and birch; cedar and spruce fir abound on the lower ones. It is watered by several small streams.

KILKENNY and ABERCROMBIE are on the south-west of Rawdon; they have both been surveyed, but from the badness of the soil, which in fact is scarcely improvable by any means, at least such as settlers could have recourse to,

links long, or other equivalent length and breadth. A rectangular township of these dimensions contains twelve concessions or ranges of lots, each lot being eighty chains and eighty links long, and twenty-six chains broad, and in each range twenty-eight lots, making in all three hundred and thirty-six lots of two hundred acres, with the highways. Of this number two hundred and forty are grantable to settlers, and the remaining ninety-six are reserved as before mentioned.

some persons who had obtained grants therein were on these considerations permitted to locate their lands in the township of Acton.

CHATHAM is situated on the north side of the Ottawa River, in the county of York, bounded on the east by the seigniory of Argenteuil, on the west by Grenville, and in the rear by Wentworth. It has been surveyed, divided into farm lots, and all granted. Colonel Robertson, who obtained the largest proportion of any person therein, has been the active promoter of an extensive settlement along the river, where the soil is well varied and good, fit for grain, hemp, flax, or indeed most other productions, and which is also the case with the greatest portion of the township. There are also many fine tracts of natural meadow, and some rich pastures. In the rear the surface is broken and uneven, the land inferior in quality, and choked with rocks and other impediments to cultivation. The timber in general is of the best sorts, with much valuable pine and oak, fit for naval purposes. By the side of the Ottawa there is a good road, that is the main route from Montreal to the upper townships on the bank of that river. The Rivière du Nord and several smaller streams water it; by the first mentioned, the timber felled in this and some of the adjoining townships is floated down

to the Ottawa. In front of the township are some small islands, that in the intervals between them form several rapids.

WENTWORTH is situated in the rear of Chatham, and has the full dimensions of an inland township, about one quarter of which is subdivided and granted. The greater part of this tract is mountainous and rocky, very inapplicable to arable purposes; but on the three first ranges, all that has hitherto been surveyed, the land is found to be of a tolerable good quality, but not any part of it is yet settled upon. Although there are no very strong inducements to attempt cultivation, this township produces most excellent timber for naval purposes, in great abundance, with the advantage of easy conveyance by the Rivière du Nord, by which it is watered, besides several other streams and small lakes.

GRENVILLE, including an additional parcel of land added thereto since the original grant, is the second township to the westward on the Ottawa River, situated between the seigniory of La Petite Nation and Chatham, and bounded in the rear by unsurveyed lands of the township of Harrington. In the nature of the soil, the species and quality of the timber, it greatly resembles Chatham. A grant of large extent has been made to Archibald M'Millan and

others, emigrants from Scotland, but very little of it is at present under culture.

LOCHABER, on the north side of the Ottawa River, between the seigniory of La Petite Nation and the township of Buckingham, in the county of York, has been partly surveyed; thirteen thousand two hundred and sixty-one acres were granted in the year 1807, to Archibald M^c Millan and others, emigrants from Scotland; of this portion very little has been yet cultivated. Along the front, the river forms several deep bays, in which direction the land is so low, that it is frequently overflowed; but if the settlements should become more numerous, embankments might be raised to repress the incursion of the waters; this part would then become good meadow, and a short distance towards the interior, much of it would be good arable. Proceeding to the rear, the land is broken and rugged up to the ridge of mountains, beyond which there is nothing at all improvable, at least in their vicinity. Much of the timber within this tract, both oak and pine, is fit for naval purposes. Several rivers and streams wind through the township; neither of the former are navigable for boats, though timber may be floated down them to the Ottawa, which here expands greatly in breadth, and has several islands in it that are all well covered with wood;

the largest of them is a mile long, and about a quarter of a mile broad.

BUCKINGHAM, on the north bank of the Ottawa, in the county of York, joins Lochaber; four ranges of it have been surveyed, and little more than one quarter granted. Bordering the river the land is low, and from several large bays and ponds that run a great way into it, is frequently overflowed; but when that is not the case, there is some excellent meadow land, and also some that is tolerably good for other purposes. In the rear the soil is but indifferent; in places, so uneven and stony as to be fit for no sort of tillage. It is watered by several small streams, descending from the rear into the Ottawa. A few families have settled on convenient spots in front of the township, and pursue their agricultural labours with success, and favourable prospects of improvement.

TEMPLETON is the next township to Buckingham; about one half thereof has been granted to Archibald M' Millan and others, his associates, but as yet very few persons have settled upon it. The land approaching the Ottawa is rather low, but the soil tolerably good for the production of most species of grain and many of the most useful succulents; the back parts are not much inferior to the front. The timber is mostly beech, maple, basswood, pine, and

some oak, with cedar and hemlock on the lower grounds. It is well watered by the River Gatineau, the Riviere Blanche, and some smaller streams.

HULL joins Templeton on the west. In 1806 one quarter of this township was surveyed and granted to Philemon Wright and his associates. This portion is situated on a large bend or turn of the Ottawa, and as the mountains here abut upon the river, and the land behind them not being arable, the whole of it was laid out along the front. The soil is of a fair medium quality, fit for all the farmer's general purposes; what part of it is cultivated produces very good crops of all kinds of grain, &c. About thirty families are settled here, and have their farms in a very respectable state of cultivation and progressive improvement. The timber is for the most part of the best sort, the oak fit for naval purposes, and much of the pine for masts of large dimensions. Mr. Wright, as the head of the township, has been indefatigable in promoting the increase and prosperity of this infant settlement. In viewing the progress already made, the greatest encomiums will be called forth for the manner in which, by his own example and encouragement, he has so essentially promoted it, and for settling upon the lands himself. He carries on the timber trade

to a great extent, and a large manufactory of pot and pearl ashes ; he has established a school, erected a meeting-house, and adopted various means to excite the industry, and secure comfort and happiness to all classes of his little society. His own habitation is pleasantly situated at the east end of the township, on the bank of the Ottawa ; close by it there is a short portage, and nearly fronting it are some small islands that greatly obstruct and break the current of the river ; on the opposite side a fall, twenty-six feet high, forms an agreeable object in the prospect ; a little above this place is a reef of rocks, stretching nearly across the river, and the falls of La Petite Chaudiere. The townships on the Ottawa abounding with timber of the best growth, either for ship-building, masting, planking, or staves, it may be worth while to remark that a very great proportion of that trade has been furnished from them to Montreal and Quebec ; not from those on the north side only, but vast quantities have been supplied from those on the south, in the Upper Province, and the rafts of it brought down the rivers Rideau and Petite Nation, into the Ottawa. From the former, a road leading to the settlements in the neighbourhood of Kingston will in a short period, from the increasing population and consequence of that district, become of

great necessity. It is an object therefore worthy the attention of the government of that province to give every encouragement to facilitate its immediate formation: when completed, a communication from the back townships to Montreal will be opened, more direct and much shorter than the present one, for the conveyance of their produce to a certain market.

EARDLEY and ONSLOW are the two last townships on the Ottawa that have been surveyed, and partial grants made therein, although several others are projected, and names given to them. The front of both of them extends along Lake Chaudiere, or Kettle Lake. The lands that have been examined in the former are found to be of a favourable description; many parts suitable both for hemp and flax, as well as grain, but no settlements have been yet established upon them. The main westerly ranges of mountains terminate upon the river hereabouts. In the latter township, the first range and part of the second are an almost continued ledge of flat rocks, with scarce any soil upon them, except only a very few lots that have been granted; the third and fourth ranges appear to be very good land, that would soon become profitable with careful culture; but the fifth and sixth are poor and swampy, not worth

the trouble of draining, and covered with hemlock and other woods of small value. At the west end of this township is one of the many rapids of the Ottawa, called the Rapide des Chats.

NEWTON, in the county of York, lying between the seigniories of Rigaud, Soulange, and New Longueil, is of an irregular figure, and very advantageously situated, contiguous to the settlements in the Upper Province. On the western side the land is of a very superior quality, and will produce all sorts of grain; many parts also might be employed to great advantage in growing hemp and flax. The eastern side is much lower, inclining here and there for short distances to be marshy: there is, however, no actual swamp; and if the low grounds, that are rather wet, were carefully ditched and drained, they would prove most excellent land, and furnish luxuriant meadow and pasture, as well as good arable. On the most elevated parts, the principal timber is maple, beech, and birch; on the others, cedar, red spruce, alder, and hemlock. As the grants in this township are all recent, only a few of the lots are yet cultivated, but the goodness of situation and several other local advantages are likely soon to induce settlers in much greater numbers. The greatest

landholders are the Honourable A. C. de Lotbiniere, Saveuse de Beaujeu, Esq. and Mr. John M'Nider.

GODMANCHESTER is situated on the south side of Lake St. Francis, in the county of Huntingdon, bounded in the rear by the River Chateauguay, that separates it from Hinchinbrook, and by a small part of the Province Line, or the forty-fifth parallel of north latitude, which is the boundary between the British and American dominions. This township was laid out in the year 1785, and lands assigned therein to officers and soldiers of disbanded Canadian corps. It is divided into five ranges, and these into lots differing a little from the usual dimensions, being nineteen chains wide, and one hundred and five in depth. The whole of it is granted, though only a very small proportion is yet settled upon, and which is about the margin of the lake, where a few houses now and then present themselves, at considerable distances from each other; on the bank of the Chateauguay, also, there are a few settlements. About the front of the township the land is low and flat, but the soil generally good, although in some places wet; further towards the interior, and stretching onward to the Chateauguay, it is greatly superior, being in every respect suitable for the cultivation of any sort of grain,

hemp, flax, or other productions of the country. The timber, of which much still remains, although immense quantities have been felled and carried to market, is of the first rate quality. On the north bank of the Chateauguay there is a good road, leading into the state of New York. Among the holders of large tracts of land in this township are the heirs of the late Alexander Ellice, Esq. who now retain twenty-five thousand nine hundred acres, which that gentleman acquired by purchase, and afterwards had secured to him by patent. Adjoining Godmanchester, on the west, is a space reserved for the use of the domiciliated Indians of St. Regis, and commonly known by the name of the Indian Lands: it forms a triangle bounded by Lake St. Francis, Godmanchester, and the line of 45° ; its side on the lake is about ten miles, and that on the line twelve miles and a half. The land is of a very superior class, and well furnished with fine timber, but much neglected by the proprietors, as there are no other settlements upon it than a few of their own around the village, which is very well situated, at the western extremity of the tract, close to the St. Lawrence. The boundary line runs through the middle of it, and from hence divides the river upwards, in mid-channel. That the village of St. Regis should be thus circumstanced is a subject of regret,

on account of the animosity it frequently occasions among people of the same tribe, from the residents of the huts on one side of it being inhabitants of a different country, as it may be termed, from those on the other. During the late war with America, part of them espoused the cause of each belligerent, but a more prudent few remained neutral; quarrels and bloodshed ensued; indeed no precautions could have prevented such events among so many turbulent and untamed spirits living together, and supposing themselves of political consequence to the contending powers. About fifty houses, or more properly speaking, hovels, a church, a chapel, and a house for the Catholic minister resident with them as missionary, compose their village. The habitations are poor, ill-built, and more than commonly dirty; attached to them are small gardens, or rather enclosures, wherein Indian corn and potatoes are planted, and which, with what they raise on the Petite Isle St. Regis, and some others in the St. Lawrence, near the village, that are their own property, increased by the produce of their fishing, and sometimes hunting parties, constitute nearly their whole means of subsistence; as indolence, mistaken for the spirit of independence, destroys every idea of improving their condition by the profits of agriculture. A similar reservation of

land has also been made for them by the American government on that side of the line.

HINCHINBROOK is in the county of Huntingdon, on the boundary line; joining the seigniory of Beauharnois on the north-east, and separated from Godmanchester by the River Chateaugay. Nearly the whole of this township is granted. From the province line northward there are three full ranges, but the remainder of it is more irregularly divided and appropriated to crown and clergy reservations, in large portions, or blocks, as they are technically termed. The land is somewhat uneven, but the soil is excellent, excepting only a very few swampy tracts, that are covered with cedar, spruce fir, and hemlock trees. The large knolls, or rising grounds, are thickly clothed with good timber, as beech, maple, birch, pine, oak, butternut, and basswood. Towards the Chateaugay, in some places, it subsides into valleys and gentle slopes, where there are large breadths of fine meadows, well watered by several branches of that river. At present the township contains but few inhabitants, some of them settled on thriving farms by the river side, and others in very eligible situations along the frontier, in which direction there are several roads passing into the state of New York. An immense stock of fine timber still remains in this

township, although for years past vast quantities have been cut and rafted down the Chateauguay, to Montreal and Quebec.

HEMMINGFORD, in the county of Huntingdon, is also situated on the boundary line, having on its north-west side the seigniorie of Beauharnois, and that of La Colle on the north-east. This township has been laid out for close settlements, that is, to be granted by single lots to persons, upon condition of immediately taking possession and beginning to improve them; indeed its situation, as well as that of Hinchinbrook, and generally those along this line of frontier, require every attention and encouragement in this respect; the political results of any measures that increase the settlements and population of this part of the district will appear obvious when it is recollected that every male, from the age of sixteen to sixty, must become a militia-man. There are five complete ranges of two hundred acre lots, and the remainder of the township is divided in a similar manner to Hinchinbrook; but a proportion of these reservations has been let under lease. Although the surface is very uneven, and several high ridges rise in various directions, with many places where there are large seams of flat rock a little below the surface, there are nevertheless many tracts whereon the soil is of a rich and very su-

perior quality, fit for the growth of grain, hemp, flax, and indeed for every other agricultural purpose. On the north-west and north-east sides are found some swamps, abundantly covered with cedar, spruce fir, tamarack, and trees of similar nature. On the high lands the timber is of the best sorts, and consists of beech, maple, elm, birch, &c. ; along the second range some oak and pine, of large dimensions and good quality, is found. It is very well watered by the little river Montreal, that falls into the Richelieu, and many small streams that descend from the heights to the Chateauguay. In this township very considerable settlements have been made, and some of the farms are in a very thriving state. On the different streams there are several mills of both kinds. Of the many roads that traverse the township, the greater number are but very indifferent ones, and practicable only in the winter time, when rendered firm and solid by the frost.

SHERRINGTON is an irregular township lying between the seigniories of La Salle and De Lery, in the county of Huntingdon, bounded on the south-west by Beauharnois and Hemmingford, and on the north-east by the seigniorship of La Prairie de la Magdelaine. This tract is greatly diversified both with respect to quality of soil and species of timber. On the south-

west the lands rise gently in many places to considerable eminences ; in this part there are several sorts of soil, but almost the whole unexceptionable and plentifully covered with beech, elm, maple, basswood and white ash. To the north-east there are many swamps, some of them overgrown with black ash, and others with cedar, &c. ; those covered with ash might soon be rendered fit for culture, and would, by ditching, become very good meadow land. The river La Tortue winds through the township, and with many smaller streams conveniently waters it ; it is not navigable for boats, but rafts are brought down to La Tortue mills. The eleventh, twelfth, thirteenth, and fourteenth ranges are settled by Canadians, who had their titles originally from Mr. Sanguinet, proprietor of the seigniory of La Salle, under an erroneous belief of the same being within his boundary. About the eighth and ninth range is a small settlement of twelve English families, who have made great progress, and got their farms into a very thriving state, considering how recently they have taken possession of them. The road from La Tortue into Hemmingford passes through Sherrington, and there is also another leading by the Douglass settlement. Surrounded as this township is by settlements in a good state of cultivation, and possessing within itself great inducements for

settlers, it is likely to become in a few years a very fertile and valuable tract. The principal landowners are the Lord Bishop of Quebec, the Honourable F. Baby, and Mr. M'Callum of Quebec, who has acquired his proportion from the Honourable John Young.

SUTTON is situated on the province line, in the county of Bedford, having the seigniory of St. Armand on the west, the township of Potton on the east, and that of Brome on the north. It consists of very good land, generally speaking, on which cultivation in every branch might be carried on to advantage, except on some few marshy parts, but which could easily be drained, and would then become very good meadow land. The timber is chiefly ash, elm, maple, and beech; and on the low parts, the species usually found on wet soils, as cedar, spruce fir, hemlock, &c. It is watered by the River Mississqui, that crosses the south-east corner of it, and by many small rivers; several roads have opened in different directions towards Mississqui bay, the other townships, and the state of Vermont. In this township settlements to a large extent have been made, and agriculture appears to be carried on with a spirit that promises both an increase in tillage and improvement in method; on the streams that intersect the cultivated parts there are two grist and

three saw-mills. The whole population at present exceeds 1200 souls.

POTTON joins the eastern boundary of Sutton, and extends along the province line as far as Lake Memphremagog; the western part of it is in the county of Bedford, and the eastern in that of Richelieu. Though having a surface for the most part hilly and uneven, the land is of a good quality; the different species of soil offering good situations for raising all sorts of grain, as well as most other productions. It is watered by the River Mississqui, and a great number of tributary streams flowing from the hills into it in almost every direction, and many others that fall into the lake. The timber consists of elm, beech, and maple, with all the common sorts. There are some thriving settlements on the banks of the Mississqui River, and the margin of the lake, where the land is particularly good; the population thereon amounts to upwards of 800 souls. A few roads leading into the neighbouring townships are the only ones that have yet been made, and these are not very good.

STANSTEAD, on the eastern side of Lake Memphremagog, in the county of Richelieu, stretches along the province line until it is bounded by Barnston on the east, and Hatley on the north. This certainly obtains a supe-

rriority over all the new townships on this frontier, both in the advantages of its locality, the excellence of its soil, and the quality of its timber. There are many large swells of land, some of them of considerable elevation, that are clothed with oak, pine, and nearly all of the best sorts of hard woods; in the low parts there is great abundance of common timber. Besides Lake Memphremagog and Lake Scaswepus, it is watered by numerous streams that flow into them, and turn several mills of both sorts. The southerly half of this township, that was granted in the year 1800 to Isaac Ogden, Esq. is well settled and in a very thriving state of cultivation, producing every species of grain peculiar to the province; the wheat superior in quality to most other parts of it; many excellent situations and congenial soil offer opportunities to promote the growth of hemp and flax to almost any extent. The northerly half is not so well settled as the opposite one, but for no other reason than having been granted only in the year 1810, as the land is good, and fit for every species of agriculture. It is the property of Sir R. S. Milnes, Bart. being a portion of 48,000 acres granted to him by the crown, as a special mark of his Majesty's approbation and royal favour for the many important services rendered by him to the province,

during the period of his being its lieutenant-governor; at present it is greatly inferior to the other half in the number of its population, yet as it holds forth almost every strong inducement for such persons as may be desirous of settling upon new lands, its improvement is likely to be rapid. The remainder of Sir R. Milne's grant is located in Compton and Barnston. In the south-east part of the township is the village of Stanstead, which though small has some good houses in it; the main stage road from Quebec into the states of Vermont, New Hampshire, &c. passes through it, from which, as bringing a continual influx of strangers, some little consequence is derived. From hence the same road leads to Derby in Vermont; at that place the communication to almost every part of the United States is easy. The settlements along the border of the beautiful Lake Memphremagog are most delightfully situated, and in a very forward and promising state of improvement. The houses dispersed over them are well built, and surrounded by neat well-stocked gardens, fine young orchards, and every requisite comfort of rustic life; their appearance conveys to the traveller a very favourable opinion of the content and happiness of their owners. In the township there are several manufactories of pot and pearl ashes. The aggregate population exceeds 2500 souls.

BARNSTON, in the county of Richelieu, is on the province line, and next to Stanstead. In this township, where the surface is a continual succession of hill and dale alternately, the chief part of the land is good, answering very well for the growth of grain and other usual productions; some swamps are met with in the low parts. The timber upon it embraces almost every sort, but the best are beech, maple, elm, ash, fir, and some oak. The soil is watered by several small lakes, rivers, and streams, on which there are mills of both sorts. The westerly half of the township was granted in 1801 to Messrs. Lester and Morrogh, and contains at present a population of 500 souls. The largest part of the easterly half belongs to Sir R. S. Milnes, Bart. none of which is settled.

BARFORD is situated between Hereford and Barnston, in the counties of Richelieu and Buckingham. It is not a full township, having only seventeen lots in each range. Isaac W. Clarke, Esq. obtained a grant of the greatest part of it in 1802. None of it is yet settled, although it is a tract that promises to become valuable, as the land is every where excellent and the timber good. It is watered by many rivulets and streams.

HATLEY is in the second row of townships northward from the province line, in the counties of Richelieu and Buckingham; bounded

by Stanstead on the south, Ascot on the north, Compton on the east, and by Lake Memphremagog, a branch of the River St. Francis, and Lake Scaswinepus on the west. The surface is irregular, in some places hilly, and the quality of the land very variable. On the east and north-east the soil is good, whereon most species of grain might be grown; to the west it is rather superior, but about the middle it is very indifferent, rugged, and swampy. On the best lands beech, elm, maple, and ash timber grows in abundance; in the swamps spruce fir, cedar, and alder. Towards Ascot and Compton some extensive settlements present themselves, where the houses and out-buildings are substantially constructed, the farms cultivated with industry and much ability, and well stocked with cattle. On the border of Lake Memphremagog is another range of improving settlements. The township is watered by several lakes, some small rivers and streams, which as they wind their courses through the cultivated lands turn mills of both sorts. Lake Tomefobi extends diagonally from the fourth range to the ninth, a distance of about eight miles; its breadth is one mile. The banks are beautiful and picturesque, with landscape and woodland scenery as romantic as the most fertile genius of an artist could well imagine; it abounds with excel-

lent fish of many sorts, and is the resort of innumerable wild fowl of various descriptions, as indeed are all the smaller ones. Many roads lead to the adjacent townships, and also communicate with the main ones, leading into the states of Vermont and New Hampshire. One of the most extensive landholders is Henry Cull, Esq. Lieutenant-Colonel of the Militia; a gentleman highly esteemed in this part of the country for his public spirit, for the industry and good will with which at all times he is ready to set an example, or to second and encourage every species of improvement having the welfare of this newly settled district for its object, as well as for supporting every measure of government introduced with the same laudable intention. The population of this township at present is but little more than 1000 souls.

BOLTON, on the west side of Lake Memphremagog, in the county of Richelieu, is bounded by Stukeley and Oxford on the north, Potton on the south, and Brome on the west. This is one of the first townships that was laid out. The surface of it is uneven and rather mountainous, being crossed diagonally by an irregular chain of heights, wherein several rivers have their sources, and which divides the waters that fall into the Yamaska, and other

large rivers to the northward, from those flowing into Lake Memphremagog and the Mississiqui in the opposite direction. The lands on the low parts are tolerably good, but those to the eastward are the best, whereon there are some fine settlements, well cultivated and producing every sort of grain. On the streams that intersect this part are several corn and grist-mills. Some tolerably good roads have also been opened into the other townships. The population is not very great, being about 800 souls.

BROME, in the county of Richelieu, is next to Bolton, and joins Dunham and Farnham on the west, Sutton on the south, and Shefford on the north. Some part of the land in this township is good, but the other is so mountainous and rocky as to be unfit for culture. The best kind will produce grain of most sorts; hemp and flax might also be grown in several places. On the north-west side, where it is rugged and high, some good timber is to be found, and also great quantities of a very good species of iron-ore. Near Lake Brome, about nine miles in circumference, a few settlements have been made, that afford a favourable specimen of what may be done, upon the lands that are at all susceptible of tillage. Several small rivers fall into the lake, upon which some grist and

saw-mills have been erected. The population is 600 souls or thereabouts.

DUNHAM, between the seigniory of St. Armand's and Farnham, in the county of Bedford, touches upon Sutton and Brome to the eastward, and Stanbridge to the westward. The situation and quality of the land throughout renders it a valuable tract; it has plenty of timber, such as maple, beech, birch, elm, butternut, iron-wood, white and black ash; also good oak and pine. The upper lands are rather hilly, having many horizontal seams of rock lying a little below the surface; but on the more level parts the soil is found to be generally a rich black mould, with here and there a mixture of sand. It yields all sorts of grain in abundance; in many places it is peculiarly fit for the growth of flax, and in some others for hemp. Swamps, but not very extensive ones or numerous, are met with, covered generally with cedar and tamarack, but they might be drained without much trouble, and cleared to great advantage. The township is watered by several branches of the Yamaska and the Pike River, and by two beautiful little lakes, the largest spreading over about 600 acres in the sixth range. There are a greater number of roads, and mostly kept in good repair, within

this township, than perhaps will be found in any other, connecting it with the surrounding ones, leading through Farnham to the Yamaska, and also to the state of Vermont. The Pike River, and some of the smaller streams, work three or four mills of both sorts. This was the first of the townships erected, in Lower Canada, by letters patent, bearing date in the year 1796; it was granted to the Honourable Thomas Dunn, who is at present the greatest landholder therein. Nearly the whole of it is settled, and many extensive farms are worthy of notice for their flourishing and improved state, producing great quantities of wheat, barley, and oats, besides most other articles peculiar to the country; and in fact the same may be said of the major part of the settlements within it. Perhaps no tract of land of similar extent through the whole of the lower province is better calculated than this for a judicious experimental farmer to demonstrate how much the present stock of agricultural knowledge among the Canadian husbandmen may be increased. Several pot and pearl-ash manufactories are carried on here. The population is 1600 souls.

STANBRIDGE, in the county of Bedford, is situated between Dunham and the seigniories of Sabrevois and Noyan, having St. Armand's on the south, and Farnham on the north. This

township presents a great variety both of land and timber; the westerly part is low and rather marshy, with a good deal of cedar, hemlock, tamarack, and some white oak. Near Missisqui Bay and Pike River the soil is chiefly of clay mixed with sand; to the eastward it is higher and better, composed of rich black and yellow loam, with a little sand. The timber is beech, elm, and maple, with some fine oak; but bearing only a small proportion to the other sorts. The Pike River and its numerous branches water it very conveniently, and work several saw and corn-mills. It is intersected by many roads; the two principal ones are those that lead southward, through St. Armand's into the state of Vermont, and northward through Farnham to St. John's on the Richelieu, and Montreal; whither the inhabitants of these parts convey the greatest portion of their disposable produce. A large tract of this township is settled, especially on the northeastern side, where, on the elevated ridges, are many farms, exceedingly well situated, and in a state of cultivation that bespeaks much practical knowledge of agriculture; the houses well built, the gardens and orchards well laid out, and the general arrangements not unworthy of being imitated in many of the townships more recently settled.

FARNHAM, in the counties of Bedford and Richelieu, extends along Stanbridge and Dunham to the south, bounded by the seigniory of St. Hyacinthe and Granby on the north, Monnoir on the west, and Brome on the east. The land is here of a good quality, generally similar to that of Stanbridge, though perhaps with a greater proportion of indifferent tracts: the north-west has swamps that spread widely. The best is timbered principally with beech, elm, and maple; on the marshy parts there are the usual inferior species. It is watered by large branches of the river Yamaska, on which there are many corn and saw-mills. Several roads cross it in every direction, besides the two principal ones mentioned in the preceding article. Along the banks of the streams some good patches of settlements shew themselves. Nearly all this township has been granted. In 1798, Samuel Gale and others obtained a large portion of it, and still continue the greatest landholders: in 1805, a grant was made to the family of the late Colonel Cuyler; and in 1809 the westerly part, being the "rest and residue of Farnham," was laid out, and 10,176 acres thereof granted to John Allsop, Esq. and others his associates, who still retain the property.

GRANBY and MILTON: the first in the counties of Bedford and Richelieu, and the

other wholly in Richelieu, reaching along St. Hyacinthe on the west; bounded by Roxton, Shefford, and part of Farnham on the south, and by Upton on the north. In the former the land is for the most part of a serviceable description, composed principally of a blackish loam, over which, in some places, there is a layer of fine vegetable mould: good crops of wheat and other grain might reasonably be expected from it; many parts are particularly eligible for hemp, and some also for flax. The timber consists of beech, elm, butternut, maple, pine, and a little oak. The lands of Milton are not so good, as they lie much lower, and in many places run into swamps that would require much perseverance in a good system of draining to be rendered of any utility; but while there remain so many thousands of acres to be granted, not needing this operation, it is not probable that it will be undertaken here. There is however abundance of very fine grass-land: the timber is a mixture of beech, pine, cedar, and tamarack. The parts of these townships that have been laid out were granted, in 1785, to officers and privates of the British militia, who served during the blockade of Quebec by the Americans in 1775-6.

SHEFFORD, in the county of Richelieu, between Granby and Stukely, joins Brome on the

south, and Roxton on the north. The face of the country in this township is uneven, and towards the west mountainous; the soil in most places is exceedingly rich, but the uplands and high ridges are too stony to be of much value: the timber almost universally of the best species. It is watered by several branches of the Yamaska and other streams, and intersected by many roads communicating with the other townships. The south-east part is the best and most populous, where some fine settlements present themselves, that are, to the extent of their cultivation, in a very flourishing state. The banks of the rivers display many good breadths of meadow and grazing land. In the inhabited parts some corn and saw-mills have been erected. The population of the whole township is but small, scarcely exceeding 500 souls.

STUKELY, in the county of Richelieu, between Shefford and Orford, has Ely on the north, and Bolton on the south. Although the surface of this tract is generally uneven and broken, the land in some parts of it is rather above the medium quality. Beech, maple, and bass-wood, with hemlock and cedar in the hollows and moist lands, are the prevailing sorts of timber. It is watered by streams falling into the Yamaska, that have their sources among

the hills stretching across it, and also by some small lakes. But little progress has been made by settlers, as the entire population is but 250 souls, occupying a few small farms in the southern part of the township.

ORFORD, partly in the two counties of Richelieu and Buckingham, has its front to the river St. Francis and Lake Scaswinepus, joins Stukely in the rear, Brompton on the north, and Bolton on the south. But little can be said of this township, and that little not very favourable. It is mountainous, rough, and almost unfit for tillage. Some good timber, however, is to be had in it. In the interior there are some large lakes, one of which, about four miles long and three-quarters of a mile broad, stretches into Brompton. As may naturally be inferred, but few lots of it are occupied; its population numbering only about 100 souls.

ELY and ROXTON: the first in the counties of Richelieu and Buckingham, and the other in Richelieu; they are between Shefford and Stukely on the south; Acton, Dunham, and Melbourne on the north. Ely has been all surveyed, and the south-easterly quarter of it granted; of Roxton, the southerly half has been surveyed and granted. The land of both townships is good, and if cultivated would prove fertile. The low

land is rather wet, but not unfit for tillage. It produces some of the best species of hard, black woods. Branches of the Yamaska and several other streams water these townships. Only a very few persons are settled in either.

ACTON is partly in the counties of Richelieu and Buckingham, stretching along Roxton and Ely on the south, bounded by Upton on the west, and by Grantham, Wickham, and Durham on the north and north-east. About one-half of it has been surveyed and granted, but no part thereof is settled upon. The land is level, and lying rather low, is overspread with several swamps, that are covered with spruce fir, white pine, cedar, &c. ; the drier tracts are timbered with ash, beech, maple, and birch. It is watered by two large branches of the Yamaska.

UPTON, in the counties of Richelieu and Buckingham, is of an irregular figure, extending along the boundaries of the seigniories of De Ramzay and De Guir, to the river St. Francis ; it is bounded on the south-east by Acton and Grantham, and abuts upon Milton on the south. The land is here flat and low, with many extensive swamps spreading over it, covered with tamarack, alder, and cedar. By the side of the St. Francis, and other streams that intersect it, there are some few spots of

land, that, if under cultivation, might produce good crops of grain ; but the general soil does not admit of a description much in its favour. Neither roads nor settlements have yet been made, if a few scattered houses, with small patches of ground attached to them along the line of De Guir, be excepted. It is watered by some branches of the river David.

Having given a detailed account of the seigniories and townships in the district of Montreal, a convenient opportunity now offers to make an observation or two upon this part of the frontier of Lower Canada, and of the line of demarcation between it and the states of New Hampshire, Vermont, and New York, which extends from a stone monument erected on the west bank of the Connecticut River, for the purpose of marking its commencement, to the village of St. Regis, on the river St. Lawrence, a distance of $146\frac{1}{2}$ miles. In the years 1771, 2, 3, and 4, this line was established by actual measurement, in pursuance to orders from the respective governments of the provinces of Quebec and New York, at that period both under the British dominion ; and, more particularly, according to specific instructions issued by the late Lieutenant-Governor, Crémahé, to the Honourable John Collins, Deputy

Surveyor-General of the former province. By more recent surveys that have been made in laying out the several townships now established along this line, its course is accurately ascertained, and clearly demonstrated to be irregular in the field, at some places inclining towards the north, and at others diverging to the south. These points of aberration will be readily discovered by inspecting the delineations upon my Topographical Map. The correctness of its position at St. Regis is unimpeachable; but it deviates widely from its true latitude at the monument on the Connecticut, which spot is nearly on the meridian of Quebec. The exact latitude and longitude of that city has been so repeatedly corroborated by eminent astronomers, that it may be assumed with safety as a correct point of departure. Proceeding upon that datum, which will hardly be controverted, the boundary line, fixed as it now is, proves to be at the Connecticut, an encroachment upon the province of Lower Canada exceeding three geographical miles. An assertion, however, has been made to the contrary; for in a report made in the year 1806 to the government of the state of Vermont by Dr. Williams, it is stated to be no less than fourteen miles too far south at the monument, and seven miles too far south where it intersects Lake Memphremagog; and the

same is maintained to be an infringement to that extent upon the state: but assertion does not establish a fact. I do not permit myself to question that gentleman's scientific abilities, and can therefore attribute the result of his operations, differing so widely as it does from that of others, which have been carefully performed, only to the use of very imperfect astronomical instruments, which have betrayed him into so serious an error with respect to the true position of that line. But, for argument's sake, admitting the doctor to have been correct, no advantage could accrue to the United States from the supposed discovery; for it is palpably evident, that a line drawn through these two fixed points of latitude, and extending westerly to the St. Lawrence, would take a much greater superficies from the state of New York than what it cuts off from Lower Canada. This, however, is a subject that will no doubt be critically investigated, and satisfactorily adjusted, by carrying into effect the provisions of the fourth and fifth articles of the treaty of peace of 1815, between his Britannic Majesty and the United States of America. It has indeed become a case of necessity, and a matter of great importance to each government respectively, as there are numerous settlements on each side of the boundary already in a flourishing state of cultivation, and

rapidly increasing both in population and improvement. From the Connecticut River the height of land on which the boundary is supposed to pass runs to the north-east, and divides the waters that fall into the Saint Lawrence from those flowing into the Atlantic; and which height, after running some distance upon that course, sends off a branch to the eastward, that separates the heads of the streams falling into Lake Timiscouata and River St. John, and by that channel into the Bay of Fundy, from those that descend in a more direct course to the Atlantic. The main ridge, continuing its north-easterly direction, is intersected by an imaginary line, prolonged in a course astronomically due north, from the head of the river St. Croix, and which ridge is supposed to be the boundary between Lower Canada and the United States; at least such appears to be the way in which the treaty of 1783 is construed by the American government; but which ought, more fairly, to be understood as follows, viz. That the astronomical line running north from the St. Croix should extend only to the first or easterly ridge, and thence run westerly; along the crest of the said ridge, to the Connecticut; thereby equitably dividing the waters flowing into the St. Lawrence from those that empty into the Atlantic *within the limits of the United States;*

and those that have their estuaries within the British province of New Brunswick. It is important, and must always have been had in contemplation, that an uninterrupted communication and connexion should exist between all his Majesty's North American possessions; but by the manner in which the treaty is insisted upon by the opposite party, a space of more than eighty-five miles would be placed within the American limits, and by which the British provinces would be completely severed; it would also produce the inconvenience of having the mail from England to Quebec carried over that distance of American territory; and which may either be deemed a matter of indulgence, or complained of as an encroachment, according to the temper of the times. Within this tract also is the Madawaska settlement, consisting of nearly 200 families, all holding their grants from the British government. England, at all times high minded and generous, never shrinks from the strict fulfilment of her engagements; even though from oversight, or want of political acuteness in the persons employed, they may have been framed in a way prejudicial to her true interests. But at the same time she has a right to require that the interpretation of them should not be overstrained or twisted from their obvious meaning and intent by a

grasping cupidity after a few miles of territory; which if acquired, could be but of little available advantage to the other party. To her, however, this tract is of more value, as securing a free access to all the British provinces, without being obliged to the forbearance of any neighbouring state for that enjoyment. If in the final fulfilment of the fourth and fifth articles of the treaty of 1815 it should be awarded that the claim of the American government to have the boundary pass along the north-easterly ridge of land is just, and ought to be acceded to, it is very desirable, and even important to his Majesty's colonies, that one of the instructions to the British negociator should be, to obtain the cession of this tract of country, either by exchange or other equivalent means, in order that the communication from Nova Scotia and New Brunswick with Lower Canada may be henceforth secured from the chance of interruption.

In addition to these exterior boundaries between us and a *foreign* territory, the settlement of which is in the hands of the imperial government, there are also some relating to interior division that ought to occupy the attention of the provincial legislature. Of these the most prominent are the district boundaries, that, as they are now fixed, produce embarrassment

and inconvenience. On the north side of the St. Lawrence they are, it is true, identified with the seignorial divisions; but on the south side they are only ideal lines, prolonged to the boundary of the province, not only cutting several townships, but even farm lots in them, by which they are placed in two districts. The evil consequence of this has been frequently apparent in judicial proceedings, when persons summoned to attend the courts of law have gone from a great distance, and at much expense,—to Montreal, for instance,—before they discovered that their attendance was required in the district court of Three Rivers; and so with respect to the others. Men living far in the interior cannot be supposed to have a critical knowledge of the direction that an imaginary line should take, even though it be liable to interfere with their rights and privileges; it ought, therefore, to be made plain to them, and which certainly could be accomplished without difficulty. It might be done by having the boundaries surveyed and marked in the field along their whole line, if it be deemed preferable for them to preserve a straight direction; or otherwise, they might be made to run along the limits of the townships that they now intersect, and which, although irregular, would thereby be as exactly defined as by any other method,

and indeed with less trouble, as nothing more would be required than to establish the same by *proces verbal*. At all events some regulation in this respect is necessary, in order that the southern townships, now containing a population of nearly 20,000, and that is every year acquiring fresh accessions, may no longer be involved in similar inconvenience. The county boundaries from the same cause call for a revision.

THE DISTRICT OF THREE RIVERS

Lies between those of Montreal and Quebec, is bounded on the south by part of the line of 45 degrees of north latitude, and the ridge of mountains stretching to the north-east; northward its limit is indefinite, or it may be presumed to have only the province boundary for its limit in that direction. Its breadth, on the north side of the St. Lawrence, from the seignior of Berthier to that of St. Anne, is fifty-two miles and a half; but on the south side, from Sorel to Deschaillors, no more than fifty miles and a half. It contains the county of St. Maurice, and the greater part of Buckingham, forty seigniories and fiefs, thirty-two whole townships, part of eleven others that are divided by the district lines, thirty-two that are pro-

jected only, and twenty-two parishes. The lands granted “*en fief et seigneurie*” are 1,039,549 superficial acres, or 1,220,308 superficial French arpents. In the townships 824,679 acres have been granted in free and common soccage. The cultivated part of the seigniories may be taken at a little more than one third; but the townships fall very short of the same proportion, and the recent date of their grants sufficiently assign the reason of it.

MASKINONGE' (the seigniorie of), situated on the north side of Lake St. Peter's, in the county of St. Maurice, is bounded on the south-west by Berthier, on the north-east by the seigniorie of Riviere du Loup, and in the rear by Dusablé or Nouvelle York and Carufel: it contains two separate grants; that of the north-east part, a league and a half in front by the same depth, was made November 3, 1672, to Sieur Baptiste Le Gardeur de St. Michel; and the south-west part, a league in front by a league in depth, on the same date, and to the same person. The soil is rich, fertile in the production of all sorts of grain, and in some places would be excellent for hemp and flax. The land in general is rather flat, and towards the front is so low as to be sometimes overflowed in the spring; but this only serves to enrich the fine meadows and good pasture grounds that border the river.

The timber has been very much thinned in this seigniory, but it is very well watered by the large river Maskinongé that winds through the centre of it, and is navigable for boats and canoes for several miles up, and by some small streams. About two-thirds of it is in cultivation. The best settlements are on the borders of Chenail du Nord, on both sides of the road leading to Quebec, and on the east bank of the Maskinongé, over which there is a bridge. There is no village in the seigniory, but it has a church and parsonage-house, one grist-mill and one saw-mill. At the entrance of the Masquinongé there are two or three large islands, forming different channels into it; they are all flat and low, but covered with various sorts of inferior wood. Timber from Carufel, &c. and the townships in its rear, are brought down it into the St. Lawrence.

DUSABLE' OF NOUVELLE YORK (the seigniory of), in the county of St. Maurice, is situated in the rear of Maskinongé, between Berthier and Carufel, one league in front by three in depth; was granted, August 15, 1739, to Adrien Dandonneau Dusablé, and is now the property of the Honourable Ross Cuthbert. A small ridge of rising ground crosses this grant a little to the northward of the road to Quebec, which seems to separate the fertile from the

barren parts, for to the southward of it the soil is rich, productive, well settled, and under good cultivation; but on the opposite side of the height it is very indifferent, and thinly settled by a few farmers, who have occasion to exert their utmost industry to procure a living. The whole tract is almost free from wood; the little remaining is only fit for fuel. A small stream, called Riviere Cachée, runs through the lower part, and works one corn and one saw-mill.

CARUFEL (the seigniory of), in the county of St. Maurice, lies in the rear of the seigniory of Maskinongé, between Dusablé and fief St. John, about two leagues in front by two in depth; was granted, in March 1705, to Jean Sicard, Sieur de Carufel, and is now possessed by the heirs of the late Honourable Charles de Lanaudiere. In this grant the land is of a pretty good quality, mixed here and there with a reddish clay and sand. Almost every kind of good timber is found upon it, and some of the pine rising to large dimensions. The river Maskinongé traverses it from the north-west, by which the timber felled here is sent down to the St. Lawrence. A small part of it lying on the front is all that is yet cultivated, where, however, there are some very respectable farms and good houses by the side of the main road.

LAKE MASKINONGE OF LANAUDIÈRE (the

seigniory of), in the counties of St. Maurice and Warwick, lies in the rear of Berthier, Dusablé and Carufel; it is two leagues in front, and extends in depth so far as to comprehend Lake Maskinongé; it was granted, March 1, 1750, to Charles François Tarieu de Lanaudiere, and is now the property of T. Pothier, Esq. Some difficulties have occurred with respect to the depth and other limits of this seigniory, because the Lake Maskinongé has been found to lie much further to the westward than it was supposed to do at the time it was granted; however, it was at that period sufficiently known not to be mistaken for any of the inferior lakes. The claims to this property set up by the heirs of the late M. de Lanaudiere are marked on the topographical map by the letters *a, b, c, d, e, f, g, h, i, k, l*. It is a fine tract of land, of a strong rich soil, and very well timbered with beech, maple, birch, pine, and some oak. It is watered by several small lakes, but principally by the river Maskinongé, whose stream flows from the lake of that name, which is about nine miles in circumference, and well stocked with various sorts of excellent fish. The scenery around it possesses many natural beauties of the wild and sublime description, presenting an amphitheatre of rising grounds and lofty hills, backed by the magnificent ridge of mountains running westerly

from Québec, and many other bold features of a romantic country. Very few settlements have yet been made here, but it certainly may be improved in a very short time into a valuable estate.

ST. JEAN (fief), in the county of St. Maurice, is placed between the seigniories of Riviere du Loup, Maskinongé and Carufel; three-quarters of a league in front by two leagues in depth; granted, October 13, 1701, to Les Dames religieuses Ursulines des Trois Rivières. A confirmation of this grant, with its augmentation, bearing date December 10, 1737, gives it one league more in depth. The Ursulines still retain the property. The land is good and productive; of the fief nearly the whole is cultivated, but very little of the augmentation. It has some fine timber upon it.

RIVIERE DU LOUP (the seigniority of), in the county of St. Maurice, is situated on the north side of Lake St. Peter, between the fief St. Jean and Grand Pré: one league in front, that is, half a league on each side of the river, by four leagues in depth; it was granted, with an augmentation, April 5th, 1689, to Sieur Villerai for Sieur D'Artigny. This seigniority surpasses in value, perhaps, every property of similar extent in the province; its soil is commonly a light reddish earth, a little sandy, sometimes

mixed with clay; in many places it is a fine yellow loam, altogether very fertile, producing abundant crops of grain, and every article of general growth in the country; some parts are particularly eligible for raising hemp and flax. It is generally level, but towards the margin of the lake it is flat and low, consisting chiefly of meadow and grazing land, both excellent. About the front there is no timber of superior growth remaining, and indeed not much of any other; but towards the rear there are many spots where some of the largest size both of pine and oak is to be found. The Grande and Petite Rivières du Loup, and some inferior streams, water the seigniory extremely well; the former crosses it diagonally, and by its serpentine course greatly heightens the other natural attractions of the place. A variety of good roads lead in every direction. The Quebec road is embellished on each side by many good houses, and farms in a very improved state. Numerous settlements and roads extend on each side of the two Rivières du Loup, whose banks for several miles upwards are lofty, and agreeably varied with woodland and landscape scenery, which, combining with the luxuriance of the well cultivated fields, leaves very little to be desired with respect to prospect. On the westerly side of the great River is the village du

Loup, containing about 30 or 40 houses only ; but the settlements on each side of the road are so thickly inhabited, that they may be almost considered as an extension of it to a great distance. In the village fronting the road is a new church, remarkable for its size, the elegance of its structure, and the good taste of its interior decoration ; of three steeples that surmount it, the two in front are covered with tin, which renders them conspicuous objects at a considerable distance. Near the village the Grand Rivière du Loup is crossed by a very fine bridge, both handsomely and solidly constructed of timber. The population and wealth of this place are considerable ; many trades are carried on, and many shops kept open for the sale of all kinds of manufactured goods and produce ; large quantities of grain are collected here for exportation, and deposited in store-houses kept for that purpose. The whole of the seigniory and part of the augmentation are cultivated. On the rivers there are some grist and saw mills.

GRAND PRÉ (the seigniory of), in the county of St. Maurice, is situated on the north side of Lake St. Peter, between the augmentation to Rivière du Loup, Grosbois, and Dumontier, a league in front by three in depth ; was granted 3d July, 1695, to Pierre Boucher, Sieur de Grand Pré. This seigniory is singularly over-

laid by that of Rivière du Loup, which from being a prior concession to this one, and the term of the grant expressing half a league on each side of the river, leaves but a small irregular frontage on the lake for Grand Pré. This tract, in the quality of the land and species of the timber, strongly resembles that of Rivière du Loup, but is not near so well settled as that property, although there is every probability of its becoming, in a few years, an estate of considerable value.

GROS BOIS or YAMACHICHE (the seigniory of), in the county of St. Maurice, on the north side of Lake St. Peter, between Grand Pré and Gatineau, is bounded in the rear by Fief Dumontier; it is a league and a half in front by two leagues in depth; was granted Nov. 3, 1672, to Sieur Boucher, and is now the property of Louis Gogy, Esq. It is rather low towards the front, but retiring from the lake there are some few rising grounds. The soils and different kinds of timber upon it are very similar to the two last mentioned grants. The Rivière du Loup and the Grande and Petite Rivières Machiche water it, over which, where they are intersected by the main roads, bridges, substantially built of timber, that have a light and pleasing appearance, have been erected. About three-fourths of the grant are conceded;

the settlements in front and on the banks of the river are in good order, and very flourishing; the houses and farm buildings, well constructed, bespeak their proprietors to be very industrious and in easy circumstances. On the east side of the main or Quebec road, that here resumes its course close to the River St. Lawrence, are the church and parsonage-house of Machiche, with a cluster of houses, forming a small neat village around them. The interior is traversed by many roads leading to the seigniories in the rear, as well as those on each side. On the different streams there are some good mills of both descriptions.

GATINEAU (fief and augmentation), in the county of St. Maurice, joins Yamachiche; it is three quarters of a league in front by a league and a half in depth; was granted Nov. 3, 1672, to Sieur Boucher, fils; the augmentation, of the same breadth as the fief, and four leagues deep, was granted Oct. 3, 1750, to Demoiselle Marie Josephe Gatineau Duplessis. The land in this fief is of rather a lighter soil than the adjoining grants, equally fertile, and subject to nearly the same mode of culture. It is watered by the two rivers Machiche, whose banks for a considerable distance upwards display some good and thriving settlements, connected by many good roads, beside the public one that crosses them.

POINTE DU LAC OF TONNANCOUR (the seigniory of), in the county of St. Maurice, has part of Lake St. Peter and the St. Lawrence in front, St. Marguerite and St. Maurice on the north-east, and Gatineau on the south-west; it is a league and a quarter in front by two leagues in depth, comprising therein the fiefs Normanville and Sauvaget; was granted Nov. 3, 1734, to *Sieur René Godefroi de Tonnancour*, and is now possessed by the heirs of the late *Nicholas Montour, Esq.* A reddish light soil, upon clay or a good marl, spreads over the greatest part of this seigniory; the front of it is flat and low, towards the interior it gradually gets higher, and rises more abruptly to the rear. Beech, ash, birch, and some pine, are the prevailing species of timber. It is watered by *La Rivière de la Pointe du Lac*, that passes through it in a northerly direction, by part of the *River Machiche*, and some smaller streams; on their banks there are some good settlements, which with those along its front embrace about one half of the grant. Several roads pass through the interior; the main one crossing the front on the bank of the river. The *Pointe du Lac* is a large projection from the front of the seigniory, forming the north-east extremity of *Lake St. Peter*: on this promontory are some remains of barracks that were erected for the

accommodation of troops during the first American war, when it was necessary to have a force stationed at different places above Quebec, to defend the passage of the St. Lawrence. On the east side of La Rivière de la Pointe du Lac stands a good-looking church, parsonage-house, and a chapel; not far removed from this spot are Montour's Mills, large, commodious, and well-built; near to them are some extensive store-houses and dwellings; on the opposite side of the road, a little above the mills, stands the proprietor's manor-house, a very handsome building, finely situated, and commanding a fine prospect over a tract of country abounding in picturesque beauties.

St. MARGUERITE (the seigniory of), in the county of St. Maurice, is situated in the rear of several small grants made to the late order of Jesuits, Sieur de St. Paul, and others; it is bounded on the north-east by the River St. Maurice, on the south-west by Tonnancour or Pointe du Lac, and on the north-west by the seigniory of St. Maurice; it is about three quarters of a league in front by a league in depth, and was granted 27th July, 1691, to Sieur Jacques Dubois de Boguinet. The little fief of Vieux Pont, about a quarter of a mile in front, is within the seigniory of St. Marguerite, and extends from the Saint Lawrence

to the rear boundary; was granted August 23, 1674, to Joseph Godefroi, Sieur de Vieux Pont. This seigniory is of a light sandy soil, mixed in some places with clay, in others with loam; it has some good timber upon it, is watered by several small streams, and the greatest part of it is well cultivated. The small tracts marked *a*, *b*, *c*, *d*, on the topographical map, were granted at different periods to the Jesuits and others. The soil of these pieces is the same as the rest of the seigniory, but they are entirely cleared of timber, and all in a good state of cultivation. All these grants are intersected by the roads from Three Rivers to Montreal and the different seigniories, and on the north-east by those to the forges of St. Maurice.

The town of Three Rivers is situated on the north-west side of the River St. Maurice, at its confluence with the St. Lawrence: it derives its name from the entrance into the former river being separated, by two islands lying at the mouth, into three channels. The town plot covers nearly 400 acres, forming a front of rather more than 1300 yards on the bank of the St. Lawrence. It stands on an exceeding light and sandy soil, which extends also over the environs; to the bank of the St. Maurice the ground rises very considerably; but in the op-

posite direction it sinks almost to a level with the river. Three Rivers ranks as the third town in the province, but compared with either of the others it is small indeed, containing only about 320 houses, with a population not much exceeding 2500 souls. It sends two members to the provincial parliament. In the year 1618 some French colonists began building this place, with a view of making it a depot from whence the fur trade might be carried on with the Indians to the northward; their plan experienced at first many flattering indications of success, but after Montreal was founded, and had so increased as to be able to defend itself against the attacks of the natives of the country, it was supposed to be a situation better suited to this improving traffic, and was consequently preferred; from that period Three Rivers, being greatly neglected, did not much enlarge either its extent or population. About the beginning of last century, however, it began again to entertain hopes of rising into some consequence by opening the iron mines at Saint Maurice; but they proved nearly as delusive as the former, and up to the present time its improvement has been upon a very moderate scale. The trade carried on here is chiefly in British manufactured goods, that from hence are plentifully distributed through the middle district

of the province; the exports consist of wheat, timber, though now not so much as formerly, and the produce of its iron foundery, added to that of the mines of St. Maurice: peltry in small quantities still continues to be brought hither by the Indians from the northward, and which is received by the agents of the North West Company. Several pot and pearl ash manufactories, two or three breweries, and an extensive brick manufactory, considerably increase the general trade of the place: many of the bark canoes used in the north-west voyages are built here, and of the same material a variety of ingenious and ornamental works and toys are made. As a shipping port it is conveniently situated, there being a sufficient depth of water for ships of large tonnage to lie close to the wharfs and receive or discharge their cargoes by a temporary stage from their gangways. The town itself possesses but little to attract a stranger's notice; the streets are narrow and unpaved; the principal one is Rue Notre Dame, running the whole length of it, almost parallel with the river; next to this are the Rues des Forges, du Fleuve, du Rempart, St. Maurice, du Platon, des Casernes, St. Louis, St. Jean, and St. Pierre, which may be said to constitute nearly all the inhabited part of the place. The shops and storehouses are numer-

ous, wherein may be had British goods of all denominations; several inns afford to travellers very respectable accommodations. On the south-west side of the town are the remains of some military works thrown up for its defence by the English army, during the war of the rebellion, which are now honoured by the inhabitants with the high-sounding title of "*Anciennes Fortifications.*" On the outside of these works is an extensive tract of common land. The principal public buildings in the town are the Ursuline convent, the protestant and catholic churches, the court-house, gaol, and barracks. The major part of the private dwelling-houses, &c. are built of wood, the oldest of them only one story high, having small gardens about them; but those of more recent date are in a much better style, many of them higher than the old ones, and rather of handsome appearance. The Ursuline convent was founded in 1677, by Mons. de St. Vallier, Bishop of Quebec, for the education of youth, chiefly females, and as an asylum for the sick and infirm poor. The establishment is for a superior and twenty-four nuns. In 1806, the old building was destroyed by fire, when its inhabitants, dispersed by that calamity, were received into the different religious houses of Quebec and Montreal, until the present edifice was erected. It is a

regular stone building, two stories high, of considerable extent, surrounded by fine gardens; it includes a parochial church and hospital, with all the apartments and offices requisite both for the dwellings and carrying on the different functions of the establishment. As the Ursulines were held in great estimation for the general utility and the charitable nature of their institution, public subscriptions were opened immediately after the accident that deprived them of their residence, from the proceeds of which, with a little pecuniary aid from the legislature, they were able to rebuild their convent in its present improved and substantial manner, and which, though not quite finished, they took possession of in 1808. The old monastery of the Recollets, a stone building, is now delapidated; near it is a powder magazine. The protestant and catholic churches are good plain buildings, but neither of them sufficiently remarkable to attract particular attention. The court-house and gaol are handsome modern stone edifices, both in good situations, and well designed for their respective purposes. The building now occupied as barracks is solidly constructed of stone, situated on the north side of Notre Dame Street, and on the highest ground about the town. It was originally erected as a residence for the French governor.

From Rue des Forges there is a road leading to the foundery of St. Maurice. On the eastern side of the town are several small fiefs and separate lots of ground belonging to different proprietors, most of them in a good state of cultivation.

ST. MAURICE (the seigniory of), in the county of Saint Maurice, lies on the west side of River St. Maurice, a league in breadth by a league and a half in depth: the original grant was two leagues in depth, but owing to the seigniory of Pointe du Lac, by which it is bounded on the south-west, being of a prior date, so great an extent could not be taken. St. Maurice was reunited to the king's domain on the 6th April, 1740, and on the 13th of the same month granted to the company of the forges, with an additional piece of land three leagues in depth by two in breadth, called fief St. Etienne; on the north-west of St. Etienne is another tract of the same dimensions, that has lately been annexed to the above grants, as part of the lands belonging to the forges. The whole is the property of the crown, but let on lease for twenty-one years, together with the forges, &c. to Messrs. Munro and Bell, for the sum of 500*l.* per annum only. The soil in St. Maurice (seigniory) is light and sandy, generally upon a bottom of clay or good marl; the sur-

face is a continual alternation of gradual rise and fall; in the low parts there are a few swamps, with a good deal of hemlock and cedar upon them; the acclivities are mostly clothed with a general mixture of timber trees, but the chief sort is pine of a middling growth: a very small part only of this grant is cultivated. A fine road from Three Rivers crosses it, leading mostly through the woods to the foundery. The fief St. Etienne is but little cultivated, though of a better soil, having a superior mixture of marl, and in many places a rich black vegetable earth; the ground is irregular, as in St. Maurice, but rising into stronger ridges on the north-west. The fief has several divisions called *Cotes Rouge*, *de Grand Pont*, *Croche*, *Turcotte*, *de 14 Arpens*, and *St. Jean*. The upper lands are well covered with maple, birch, beech, and ash, but on the low grounds, that are wet in some places, there are only the usual inferior species, but these in great abundance. In this grant there are several pineries, which produce trees of a superior growth, particularly the one a little below and on Pigeon Island. Iron ore, that at one time was found plentifully in several parts of this fief, is now only met with in the rear. Quarries of lime-stone, a good grey stone, and some other hard species fit for building, are opened on the banks of the St. Maurice, near

the falls of Gros, and those of Gabelle a little below. Wood for the purposes of the forges is produced in abundance; great quantities of it are felled and carried by sleighs every winter to the furnaces, where it is made into charcoal for the use of the melting-houses; it was in consequence of the great demand, from the continual consumption of this article, that the additional tract of crown land was super-added to the others on the renewal of the lease. The foundery of St. Maurice is situated in this fief, in a beautiful valley, at the confluence of a small stream with the St. Maurice, about eight miles above the town of Three Rivers; the high banks of the river, embellished with every variety of fine trees in groups on each side, the dark hue of the large pineries and immense surrounding forests, and the more distant and softened shades of the lofty mountains that bound the view, form together a bold and magnificent prospect, when viewed from the place where the road ascends the brow of the ridge that overlooks the valley. The foundery itself is replete with convenience for carrying on an extensive concern; furnaces, forges, casting-houses, workshops, &c. with the dwelling-houses and other buildings, have altogether the appearance of a tolerably large village. The articles manufactured here consist of stoves of

all descriptions, that are used throughout the provinces, large cauldrons or kettles for making pot-ashes, machinery for mills, with cast and wrought iron work of all denominations; there are likewise large quantities of pig and bar iron exported: the number of men employed is from 250 to 300; the principal foremen and persons engaged in making models, &c. are either English or Scotch men; the workmen are generally Canadians. In the early establishment of this foundery, about 1737, the ore was found in great abundance near the surface, of a quality not inferior to many of the best mines of Europe for the pliability of the metal. At first the mode of working the different veins was managed with very little skill, but in 1739 an artizan was brought from France, who combined a knowledge of the different branches of manufacturing wrought and cast iron with a competent skill in working the mines; from this acquisition great improvements took place, which have progressively increased, and the establishment is now carried on with almost as much ability, and on the same principle, as similar concerns in England and Scotland. It will appear somewhat singular that neither of the provinces should produce sand proper for the purposes of casting iron, but such is the fact, and the proprietors of these works, in conse-

quence, import from England all they use in that operation. Since the year 1806, Messrs. Munro and Bell have occupied these valuable premises on the terms before named; previous to that period their annual rent was 800*l.* per annum; on the termination of their former lease they were, very reasonably, entitled to the consideration of the government in reletting them, as indeed is every tenant on the expiration of a given term, after his ability and exertions have materially enhanced the value of the property; but it very rarely occurs that similar circumstances of improvement have operated as a cause for a reduction of the rent almost fifty per cent; at any rate these gentlemen, whose industry and skill prove undoubtedly useful to the province, have many good reasons to be satisfied with their bargain.

CAP DE LA MAGDELAINE (the seigniory of), in the county of St. Maurice, is bounded by the river St. Maurice on the south-west, the seigniory of Champlain and its augmentation on the north-east, and by the river St. Lawrence on the front; its breadth is two leagues, its depth extends twenty leagues into the interior northwards; it was granted March 20, 1651, to the Order of Jesuits, and has now devolved to the crown. The soil of this extensive seigniory, in such parts of it as have yet come

under observation, nearly resembles that of the lands belonging to the foundery of St. Maurice ; but where it differs therefrom there is rather less of a sandy earth, with a bluish and a yellow loam prevailing in a greater proportion. The timber is almost of the same species, and towards the interior much of it has attained a very fine growth. Compared with the great extent of the grant, a small portion only is under cultivation, which lies principally on the St. Lawrence, and on the bank of the St. Maurice, almost up to the Falls of Gabelle: the settlements, however, are not noticeable for any thing in their system of management above mediocrity ; in consequence their wheat and other crops are but indifferent, on land that might be made to yield abundantly. The situation of the farms on the banks of the rivers, and the quality of the soil, are both favourable to agricultural improvement ; circumstances, that if judiciously attended to could not fail of rendering this part of the seigniory extremely valuable. The Quebec road passes almost close to the St. Lawrence, by the ferry over the St. Maurice to the town of Three Rivers ; this ferry, by which the established post-road is continued, is nearly two miles across ; the price demanded from each person is two shillings and sixpence, and in like proportion for horses and carriages ;

but about a mile and a half higher up the river there is another, where the charge is only three-pence each person, and fifteen-pence for a horse and carriage. By the side of this road stands the church of the seigniory, with its parsonage-house. At the mouth of the Saint Maurice are the islands Bellerive, au Cochon, St. Christophe, La Croix, and L'Abri; they are low, and almost covered with wood of the inferior sorts, but afford some very good grazing land. It was in contemplation some time since to throw a bridge across this river opposite to the Isle St. Christophe. Such a measure would prove of so great public utility as to excite hopes that the design is not abandoned. On a route so much frequented as this is, the undertakers of the plan could hardly fail of deriving a handsome profit by their speculation; the impediments to carrying it into effect, from the experience derived already in the execution of similar projects, are not very difficult to be overcome. Between Isle Bellerive and the main there is a very good situation for laying up river craft during the winter season, where they remain secure, in about eight feet water, and escape all injury from the breaking up of the ice in the spring. The St. Maurice is one of the large rivers that pour their streams into the St. Lawrence: the depth of it is inconsider-

able, being navigable for small boats and canoes to a short distance only upwards from its mouth. It takes its rise in the interior, about the skirts of the north-west ridge of mountains, and flows through Lake St. Thomas, from whence the magnitude of its stream is greatly increased; the banks on each side are high, and covered with large groups of fine majestic trees; some of the small islands in it are thickly clothed with large pine-trees. In the interior the stream is passable for some of the Indian canoes, but not without many difficulties and much labour, caused by the numerous falls and rapids, that occasion very long portages; however, a party or two of the Indian hunters persevere through this toilsome route, and descend every season to Three Rivers with a few furs.

CHAMPLAIN (the seigniory of and its augmentation), in the county of St. Maurice, on the north side of the River St. Lawrence, lies between Cap de la Magdelaine (seigniory) and Batiscan, a league and a half in front by a league in depth; was granted Sept. 22, 1664, to Etienne Pezard, Sieur de la Touche; the augmentation, of the same breadth as the seigniory, and three leagues deep, is bounded in the rear by the township of Radnor, and waste crown lands; it was granted April 28th, 1697, to Madame de la Touche. In this seigniory the soil is favourable to the growth

of all sorts of grain, and in many places so excellent for the cultivation of flax, that it is a subject of regret so profitable and important an article is not attended to. The timber is various, and though not of first rate quality, yet is not overstocked with the more useless sorts. It is watered by the little River Champlain, and by many small streams, whose sources are at a short distance in the interior, which winding down the gradual descent to the St. Lawrence in little rivulets, cross the main road, and agreeably diversify the meadows and cultivated grounds along the front. The little Champlain works a grist and a saw-mill. About one third of this seigniory is cultivated in a neat style, and by the side of the Quebec road displays many good houses with thriving farms, almost wholly cleared of the wood: it has one church, and a parsonage-house near the road. Only a very small proportion of the augmentation is yet brought into use; the remainder continues in a state of woodland, which produces some capital timber.

BATISCAN (the seigniory of), in the county of St. Maurice, has the St. Lawrence in front, Champlain and its augmentation on the southwest, and Ste. Marie with the augmentation to Ste. Anne on the north-east; its breadth is about two leagues, and its depth twenty;

granted March 3d, 1639, to the Order of Jesuits, and now reverted to the crown. Bordering the St. Lawrence the land is low, but it soon obtains a gradual rise for the distance of nearly four leagues and a half to the interior; it then becomes mountainous, as it gains upon the north-western ridge. The soil in the lower parts, like the adjacent seigniories, is a light earth, rather sandy, laid over a stratum of good clay; but proceeding northward, it gets stronger, and is enriched for a considerable space with fine black mould, affording many capital tracts for the growth of all kinds of grain. On the front the wood is nearly all cleared away and the land cultivated for two or three miles inward, and rather more than five miles upwards, on both sides of the River Batiscan, upon which there are many good settlements, where the different farms appear very neat and well managed. The whole of its depth has not been explored, but as far as it has been visited is found to produce timber of the best species, and excellent of the different kinds. La Petite Riviere Champlain, with some smaller streams, water the front, besides the large River Batiscan, that rolls a much broader current, but is so shallow as not to be accessible for boats higher than six or seven miles from its mouth. Over this and the Champlain there are ferries, where

canoes and scows are always in readiness on either side for travellers, carriages, &c. In addition to the main road that crosses the seigniory, others ascend for several miles on each side of the Batiscan, and communicate with the adjacent grants. About six miles up on the east side of this river is the foundery of the same name; it consists of a furnace or smelting-house, a casting-house, two forges, dwelling-houses, and various other buildings. The manufactures carried on here are similar to those of St. Maurice; some pig and bar iron are also exported, but neither upon so extensive a scale as from the other foundery. The establishment is the property of several individuals; the chief owners were formerly the Hon. T. Dunn, John Craigie, Esq., Mr. Frobisher, and Mr. Coffin; the first named gentleman has for some time past withdrawn himself from the concern, and one or two of the latter are deceased: it is now continued by their heirs and successors. From the expensive nature of these works, that require the continual application of large sums of money to keep them going, the revenue in proportion to the trade is by no means equal to that of St. Maurice. In opening a field for ingenuity and industry, as well as causing a competition in supplying articles of internal consumption, they are undoubtedly of

service to the provinces, yet they are said not to be a very profitable speculation to the owners of the property.

STE. MARIE (the seigniority of), in the county of St. Maurice, joins Batiscan; it is three quarters of a league in breadth, by half a league in depth; was granted Nov. 3d, 1672, to Sieur le Moine, and is now the property of M. Boisvert. STE. ANNE, next to Ste. Marie, nearly of the same breadth, and a league in depth, was granted Oct. 29th, 1672, to Messieurs Sueur and Lanaudiere. This grant has three augmentations: the first, extending in breadth from the seigniority of Grondines to Batiscan, and three leagues in depth, was granted March 4th, 1697, to Madame Denis, veuve de Sieur Lanaudiere: the second, one league and a half deep, and the breadth of the former, granted Oct. 30th, 1700, to Sieur Thomas Tarieu de la Perade: and the third, three leagues deep by a similar breadth, granted April 20th, 1735, to Thomas Tarieu de la Perade: they are now the property of the heirs of C. Lanaudiere, Esq. The front of these two seigniories is so low as to be inundated in the spring of the year by the rising of the St. Lawrence, but this temporary inconvenience contributes greatly to the luxuriance of the fine meadows that border the river. The soil is sufficiently fertile, and consists of a light

sandy earth lying upon a reddish clay about the front, but further to the rear is found a mixture of yellow loam and black mould; altogether it is very productive in grain of all kinds, and most other articles of general growth. In Ste. Marie the quantity of land under cultivation is nearly two-thirds of the grant, and in Ste. Anne it amounts to nearly 300 lots or farms, somewhat irregularly dispersed along each branch of the River St. Anne, and at the descent of a small ridge that stretches across the seigniori a short distance from its front. Of the augmentations to Ste. Anne but very little is cultivated; it is almost wholly woodland, producing timber of all species, and some of excellent growth and great value: the quality of the land, as indicated by the various kinds of wood growing upon it, is very good. Both grants are watered by the Rivers Batiscan and St. Anne, with a few other streams, not of much consequence; the two rivers are large, but scarcely at all navigable; the former is about 350 and the latter 400 yards wide; they run nearly parallel to each other, about seven miles apart, and in a direction almost opposite to the other large streams, as they take a north-easterly course for about 70 miles, until they come to the rear of the city of Quebec, at about 30 miles distant in the township of Stoneham,

when they strike off to the northward, in which direction they are supposed to have their sources in some of the lakes of that part of the country which at present is but very little known. Their streams are interrupted by many falls and rapids, that would render them unnavigable, even if the shallowness of the water did not do so: near where they discharge into the St. Lawrence, their banks are low, but more to the interior they are much higher, in some places rocky, but generally covered with fine timber. On the east side of River St. Anne, and near the St. Lawrence, is the village of St. Anne, containing about 30 houses, a handsome church, a parsonage-house, and a chapel; here are also a few shopkeepers, and an inn with good accommodations, where the stage-coaches put up, and also a post-house. At the village is a ferry, where canoes and scows are always to be had for transporting travellers, carriages, &c. The river is here so shallow that the large boats are set across by poles: the charge for each person is three-pence, and one shilling for a horse and carriage. The property of this ferry was granted in perpetuity by letters patent to the late Honourable C. de Lanaudiere, his heirs, &c. Owing to the inundation during the spring, the main road from Quebec is further retired from the bank of the St. Lawrence at

this place than at most others ; it passes along the ridge or eminence before mentioned, until it arrives near to the village, where it resumes its usual direction : on both sides of the river St. Anne there are roads that follow its course through several seigniories to the north-east. There is a grist-mill in Ste. Anne, and a grist and a saw-mill in Ste. Marie. The manor-houses in each seigniory are agreeably situated near the two points formed by the rivers St. Anne and St. Lawrence. That belonging to the family of Lanaudiere is surrounded by excellent gardens, and many fine groups of beautiful trees. On the eastern side of the seigniory of Ste. Anne is fief Dorvilliers, containing one league superficial measure. At the confluence of the two rivers lie the Isles St. Ignace, Ste. Marguerite, Dularge and Dusable, all belonging to the seigniory ; they are low, but yield fine pasture and some good meadow land ; being well clothed with wood, they afford several very pleasing prospects from both the houses.

YAMASKA (the seigniory of), on the south side of the river St. Lawrence, in the county of Buckingham, is bounded on the south-west by the seigniory of Sorel and Bonsecours, on the north-east by St. François, and in the rear by Bourgmarié East ; a league and a half in front by three leagues deep ; it was granted September

24th, 1683, to Sieur de la Valliere, and is now the property of J. M. Tonnancour, Esq. Cultivation of a favourable description extends over nearly one half of the seigniory; the different concessions, large and small, amount to upwards of 160, lying on each side of the River Yamaska, by the Petit Chenail, and in the Cotes St. Louis, and Ste. Catherine. The Bay of La Vallier, or Yamaska, extends across the upper part of it into Sorel, and that of St. François makes rather a deep incision on its eastern side; immediately surrounding these bays the land is low and marshy, but a short distance from them are many large tracts of most excellent meadow; further to the rear the soil is rich, and very productive, consisting of good yellow loam, and a fine clay intermixed with light earth, affording much good arable for grain of all sorts, and some spots well adapted to the culture of flax and hemp. The front part of the seigniory is moderately well furnished with timber of a middling and inferior quality, as white fir, spruce fir, hemlock, &c.; but in the rear upon the drier grounds, some of a superior description is produced, as plane, beech, hickory, and oak. The land is tolerably well watered by several small streams, in addition to the little river David that has its source in the adjoining savannes, or large swamps. The

convenience of good roads is afforded in every direction. The main one, from the eastward, leading to the town of William Henry, crosses the Yamaska at a ferry, just above la Petite Isle Tonancour: the price of passage is three-pence each person, six-pence for a horse, and one shilling for a carriage. A grist-mill and a wind-mill are near the ferry. In front of the seigniory are the Isles du Moine, aux Raisins, and some others; in the mouth of the river is the large island St. Jean, entirely covered with wood, some of it of good quality. The bays beforementioned yield a great variety of fine fish, and along their shores game of several sorts is found in abundance. The river Yamaska admits of inland navigation of some importance for batteaux and rafts: its medium breadth is about 400 yards. Its sources are in the high lands about the townships of Bolton and Brome; the current is also supplied by some of the large lakes in the same neighbourhood: one large branch of it crosses the township of Farnham, and another, at about 22 miles further on, diverges into the adjoining townships: from thence it pursues a north or north-westerly direction to Lake St. Peter; the whole of its course is about 90 miles. As the new townships in this part of the province become more populous, and the increase of agriculture furnishes produce beyond their own

consumption, this route of communication will prove not much inferior in consequence to that by the River Richelieu.

ST. FRANÇOIS (the seigniory of), on the south side of the St. Lawrence, in the county of Buckingham, has Yamaska on the south-west, Lussaudiere on the north-east, and De Guir and Pierreville in the rear: it is one league in front by nearly two in depth; granted October 8th, 1678, to Sieur de Crevier, and is now the property of Mons. Le Gendre, and some families of the Abenaqui Indians. This seigniory, like the preceding one, is low towards the Lake St. Peter. The Bay of St. François, and some others, indent it rather deeply, and occasion large tracts of marsh land along their shores; a little removed from them are some very fine meadows, and further to the interior the soil is good, in most parts rather light and sandy. The timber is but of indifferent quality, and consists more of spruce fir, hemlock, and cedar, than any other; on the driest land there is a little maple and beech. The River St. Francis, with a few smaller streams, water it very well. About one half of this grant is in a state of cultivation; the best settled and most improved parts lie on each side of the St. Francis. At the descent of this river into the St. Lawrence are several islands that are attached to the

grant; the largest of them is nearly four miles long, partly cultivated, and very well settled; the church and parsonage-house belonging to the seigniory stand on this island, from whence, although not an established ferry, there are always in readiness canoes to convey travellers to William Henry, at the rate of five shillings each person; a route generally preferred in summer-time to that by the post roads. The other islands are low, some of them affording a little meadow land, but they are principally covered with wood. On the east side of the river is situated the Indian village of St. François, of about 25 or 30 very indifferently built wooden houses, inhabited by some families of the converted Indians of the Abeniqui tribe, who subsist themselves upon the lands that are their own property within this seigniory, by raising, in their peculiarly careless manner, some Indian corn, growing potatoes, and rearing poultry and pigs; they sometimes increase these means by fishing, and during the winter months by hunting parties; the latter is but a precarious resource, as they are compelled to go an immense distance before they can meet with game to repay their labour; for as the habitations of civilized man have spread over the province, the animals that were the prior occupants have fled for pro-

tection to the recesses of more distant forests. In this village there is a church and a parsonage-house, at which the missionary, who superintends the religious concerns of the tribe, always resides. An interpreter also has a permanent residence among them. There are several roads leading through this property; the main one, from the eastward to William Henry, crosses the river at a ferry by the Abenaki village, where three-pence is paid for each person, and one shilling for a horse and carriage. The river St. Francis is another of the communications by which a considerable and increasing traffic is carried on with the southern townships, and also with the United States. The navigation of it is difficult and exceedingly laborious, owing to the great number of violent rapids and falls that occur in its course; but as it presents a direct route for sending the produce of these districts to a certain market, these obstacles are resolutely overcome by the industrious settlers on each side of the boundaries, and large quantities of pot and pearl-ashes, and various other commodities, are every summer brought down by it into the St. Lawrence for Quebec. Great quantities of British manufactured goods are also sent upwards to the States. The source of the St. Francis is a large lake of the same name, lying in the townships

of Garthby and Colerain, from whence it flows in a south-westerly direction for about thirty miles; part of this distance is but imperfectly known, never having been correctly surveyed: it then assumes a course nearly north-westerly, runs about eighty miles, and discharges itself into Lake St. Peter. In the township of Ascott a branch of it connects with Lake Memphremagog, from the extremity of which several streams descend into the state of Vermont; by this means the transport of goods is continued in that direction. As the navigation from Lake Memphremagog to the St. Lawrence is opposed by many and powerful natural obstructions, a particular account of it will help to shew what patient and persevering industry is required to surmount them. From the outlet of the lake to the place where the stream joins the St. Francis is about 19 miles, in which distance there is a singular alternation of violent rapids and still water where the current is most tediously slow; about three quarters of a mile before it enters the river there is what is termed a *fall*, not indeed from a perpendicular height, but the bed of the river being very much contracted, and the current broken by high ledges of rock, it is impossible for boats to pass it; even single sticks of timber are seldom sent down it, as experience has proved

that they never escape without being much bruised, if not absolutely shivered to pieces: in this distance of three quarters of a mile the whole descent is from 170 to 180 feet. At this place the scows and boats are unloaded, their contents carried to the end of the fall, and there re-embarked in other craft ready to receive them; from hence they are borne down by a gentle current about six miles, to the Great Brompton Falls, that are about two miles in length: as empty boats can run down them on the west side only, the cargoes are again taken out and conveyed to the foot of the falls, where the boats are re-laden, and proceed about seven miles further to the Little Brompton Falls; a repetition of the former labours must again take place, as they can be passed by nothing but light craft: at this point the portage is no more than 250 yards. A mile or two further on is Dutchman's Shoot, where the river is narrowed by a ledge of rocks, and two small islands forming a rapid, that with much care and some difficulty loaded boats may pass through. After this a current, rapid and slow in succession, continues without impediment for fifteen miles to Kingsey portage; this is a confined part of the river, with a large rock in the middle of it, that is covered when the water is very high, and at which time only

the loaded boats are able to pass it; the current rushes through the channel with great impetuosity, and retains its violence for more than a mile beyond it. From hence no material obstacles present themselves until arriving at Menue Falls, a distance of about twenty miles; these are three-quarters of a mile long, and only practicable for the empty boats: Lord's Falls, two miles further down, and about the same length as those of Menue, are subject to the same inconvenience, or even greater, for unless the water be very high they cannot be passed by the light boats. At six miles below this fall is the commencement of a very rapid current, that continues for fifteen miles, and when passed all difficulties are overcome, and the river is free into Lake St. Peter. From the upper to the lower part of the river it varies in breadth from 100 yards to nearly a mile. Notwithstanding this troublesome medley of land and water carriage, the trade carried on by it is now very considerable, as more than 1500 barrels of ashes only have been brought down it in one summer very lately.

LUSSAUDIERE (the seignory of), in the county of Buckingham, is situated next to St. François, one league square; was granted 26th July, 1683, to Sieur de la Motte de Luciere. In this grant the land is generally

of a better quality than that in the preceding one, with less of a sandy description: the front is so low as to be overflowed in the spring by Lake St. Peter, and consists of very fine meadow and good pasturage: proceeding to the rear the ground rises gradually; in this direction there are some patches of fair arable land. The timber is not of the best kinds, particularly in front, although it improves further back. About one third of the seigniorie is cultivated; the most improved settlements are contiguous to the main road on each side of it, where some of the lots and farms bespeak an attention to husbandry that shews them in a very favourable light.

PIERREVILLE (the seigniorie of), in the county of Buckingham, is situated in the rear of St. François, bounded on its south and south-west sides by the seigniorie of De Guir, and on the north and north-east by waste lands of the crown, a league and a half in front by a league in depth; it was granted August 3, 1683, to Sieur Laurent Phillippe, and is now the property of the Baroness de Longeuil. A middling good soil is the general characteristic of the whole of this grant; in some parts it lies low, but not so as to occasion swamps. The best land is found close on each side of the St. Francis, where are the principal settlements

and the best cultivation; the quantity under hand amounts to one third of the whole, or a little more. The River St. Francis runs through the seigniory, dividing it nearly in half, and affords the advantages of easy and expeditious conveyance; as its current hereabouts, and towards the St. Lawrence, is very rapid. An inferior description of timber prevails; enough however of the better sorts is found to supply the wants of the inhabitants. The river turns a grist and a saw-mill; in it there are two or three small islands covered with trees of no real value, although exceedingly decorative.

DE GUIR (the seigniory of), in the county of Buckingham, bounded on the north and north-west by Pierreville and St. François, on the south-east by the township of Upton, on the south-west by Bourgmarié East, and on the north-east by Courval; its figure is irregular, the greatest length being two leagues and a half; as it is now possessed, it does not agree at all with the original grant, which specifies two leagues of front by two leagues deep: it was granted September 23, 1751, to Sieur Joseph De Guir, dit des Rosiers; the property now belongs to Josias Wurtel, Esq. Nearly all this tract remains in a state of woodland; in many places it is low, but of a soil that if cleared would be fit for the productions of every

sort common to the country. The timber is generally of a superior class. Several branches of the River David water it, and along them are dispersed a few settlers who have their farms in a forward state of cultivation: were a critical revision of the boundaries to take place, some of these tenants now holding from the seignior of De Guir would prove to be located within the township of Upton.

BOURGMARIE EAST (the seignior of) is an instance in support of the observations made some pages back relating to the inconvenience of the present district and county boundaries, as it lies within the districts of Montreal and Three Rivers, and in the counties of Richelieu and Buckingham; it is situated in the rear of the seignior of Yamaska, bounded on the west by the river Yamaska, on the south by St. Charles, and on the east by De Guir; fifty arpents in front by nearly two leagues in depth; it was granted on the 1st of August, 1708, to Marie Fézéret, and is now the property of Mrs. Barrow. This tract is what the Canadian farmers term very good land; in fact it is of rather a superior quality, and such as if moderately well managed would yield abundant crops of grain; at present about a third part of it is under cultivation. A little good timber is found upon it, with abundance of the inferior sorts, such as

basswood, spruce fir, hemlock and cedar. Besides having the navigable river for one of the boundaries, it is watered by the River David, that winds a very mazy course through it, and turns one grist-mill. On each side of this river there is a road, and one that coasts the Yamaska. The church of this seigniory has no resident *Curé*, but the duties of it are performed by the minister of St. Michael de Yamaska.

BAIE ST. ANTOINE or LEFEBVRE (the seigniory of) is on the south side of the St. Lawrence, in the county of Buckingham; bounded on the south-west by Lussaudiere, on the north-east by Nicolet, and in the rear by Courval; two leagues in front and the same in depth; granted September 4th, 1683, to Sieur Lefebvre, and is now the property of Louis Guoin, Esq. This is in all respects a very productive tract of ground: in the front the Longue Pointe, Pointe aux Pois, and Pointe à la Garenne, all stretching boldly into the St. Lawrence, form the extremities of two large bays; to the east of Pointe à la Garenne is the Baie de Febvre, also trenching deeply upon the seigniory; for some distance on the margin of these bays is a marsh that in the summer affords excellent pasture, singularly intersected in all directions by numerous small and clear rivulets;

rising from hence to the main road crossing the seigniory from east to west, are some very rich and luxuriant meadows. From this road the land continues a gradual elevation to the rear; the soil is mostly a fat clay or good black mould highly fertile. Except in the marshes and meadows, that have plenty of common wood; the timber is of the best kinds. The River Nicolet, crossing a small part of the south-east corner, is the only stream towards the back of the seigniory: full one half of this property is under culture, and can boast of some farms in a very flourishing state, particularly by the road side. The want of water-corn-mills is supplied by several wind-mills. The church is placed about the middle of the grant, on a rising ground; below it are many good houses, almost sufficient in number to form a respectable village; among them are two or three shops, and a *tavern*, for which the situation is not ill chosen, as the place is a great thoroughfare, from whence a main road strikes off towards the southern townships.

COURVAL (the seigniory of), in the county of Buckingham, is situated in the rear of Baie St. Antoine or Lefebvre, two leagues in breadth by three in depth, and stretching in that direction to the township of Wendover; it was granted September 25th, 1754, to Sieur Cressé,

and is now possessed by Louis Guoin, Esq. But little of this grant is cleared; the land however is much above mediocrity: a few swampy places present the usual kinds of timber upon a wet soil, but the uplands produce beech, maple, birch, and pine. The south-west branch of the Nicolet and the St. Francis water it; on the latter is a grist-mill belonging to the seignior. The few settlers who have begun to cultivate are established upon the banks of the two rivers, and have managed to improve their farms very fast. The only road is the one from St. Antoine to the new townships.

NICOLET (the seignior of, and its augmentation), on the south side of the St. Lawrence, or rather Lake St. Peter, in the county of Buckingham, is bounded by Baie St. Antoine (seignior) and Courval on the south-west, Roquetaillade and the township of Aston on the north-east, and the township of Wendover in the rear; two leagues in front by two in depth; was granted October 29th, 1672, to Sieur de Laubia: the augmentation, two leagues in breadth by three in depth, was granted November 4th, 1680, to Sieur de Cressé; they are at present possessed by Mons. Cressé, a lineal descendant of the original proprietor. The soil of this grant is not remarkably good, but industry has

Village of Nicolet.

in some degree made up for its natural deficiencies, as there are 250 concessions in a very fair state of cultivation, producing good crops of grain of most kinds. Towards the St. Lawrence the land is poor, of a light sandy nature, but more in the interior it grows stronger and obtains a better heart: it lies rather low, and is generally level, timbered with the ordinary sorts of wood, and but little of a superior quality or growth. The River Nicolet waters it advantageously. A village containing 50 houses, with the church in the midst of them, is noticeable for its beautiful situation on the side of a gentle acclivity, covered with some majestic oaks (the best timber of the seigniory), and crested with a tuft of lofty pines: below the village, and on the opposite side of the river, are the remains of the old church and parsonage of Nicolet. Both sides of the river, for about three leagues upwards, are embellished by settlements, and the appearance greatly enlivened by a number of neat houses, which in various parts of the seigniory, including the village, exceed 300; many of them well built of stone. At the entrance of the river is Isle Moran, the property of Mons. Paul Beaubien, of which a grant was made October 29th, 1672, to Sieur de Moran. The main road to William Henry passes through the village, and

crosses the river at a ferry, where the toll is three-pence each person, nine-pence for a horse, and fifteen-pence for a horse and carriage; besides this road, several others intersect the seigniori in different directions, and pass along each side of the river, upon which there are three grist-mills and as many saw-mills. The Nicolet takes its source from a lake of the same name, in the township of Weedon, and runs north-westerly through the townships of Ham, Arthabaska, Bulstrode, &c. for about 47 miles, when it is met by a large branch from the townships of Simpson, Kingsey, and Ship-ton, navigable for boats and scows, and which sends off numerous streams on each side; this point of junction is called the second forks: from hence its course through the augmentation and seigniori, until it falls into Lake St. Peter, is about twenty-one miles. The banks, in the interior townships, are high, and generally covered with woods down to the water; but in the lower part of its course they diminish their height very much, and are less woody: from the village downward there are several small islands covered with trees, that form very pleasing groups from the acclivity before mentioned. In the upper part of the river there are some rapids, but of no great impediment, as the Indians frequently ascend and descend

them in canoes. In the spring, when the stream is increased by the freshes, small decked vessels can sometimes get up from the St. Lawrence as high as the village, but this cannot be depended upon, as the entrance is obstructed by a sandy bar, upon which craft drawing two feet water frequently strike in the summer or dry season: it is called the Batture aux Sables. The scenery on both banks is varied and beautiful in many places, but especially on the north-east side it is particularly interesting: in passing down the St. Lawrence, the front of the seigniory presents a prospect peculiarly pleasing, as bordering on that river the wood is pretty thick, with several clear intervals, through which the settlements and the village are seen in different points of view to the greatest advantage. A little above the village is the college of Nicolet, founded about ten years ago, and maintained in its infancy by the liberality of the Catholic Bishop of Quebec. It stands on a spot well calculated by the natural beauties of its situation to assist the views of so excellent an establishment. The building is on a simple, unostentatious, but convenient plan, possessing all requisite accommodation for the director, masters, and seventy pensioners. This institution is entirely for instruction, and since its foundation has

been so much encouraged as to exhibit many pleasing proofs of having completely answered the expectations of its benevolent patron. There are six professors in the different branches of philosophy, classics, belles lettres, &c. and one for the English language; the whole system and progress of the studies are carried on under the immediate inspection of a director, who always resides at the college. In addition to the advantages of a liberal and polished education, the pupils here enjoy a salubrious air, with every means of acquiring vigour of body, as well as cultivating the mind.

ROQUETAILLADÉ (fief), on the south side of the St. Lawrence, in the county of Buckingham, joins Nicolet on the south-west, and is bounded by the township of Aston in the rear, half a league in front by three leagues in depth; was granted April 22, 1675, to Sieur Pierre Godefroi de Roquetaillade.

GODEFROI (fief), adjoining Roquetaillade, is three quarters of a league in front by three leagues in depth; was granted August 31, 1638, to Sieur Godefroi, and is now the property of Etienne Le Blanc, Esq. and Mons. Loiseau. Estimated generally, the land of these two fiefs is valuable; in the front, indeed, it is rather light and sandy, but it soon loses that character, and towards the interior

improves into a fine black mould; in the rear it lies low, and has one or two small swamps, and perhaps as many *brulés*: a little draining would, in a short time, convert the first into fine meadows, and the latter might be as easily improved into good arable land. Wood is plentiful, although but little of first rate quality among it. The Rivers Ste. Marguerite and Godefroi, with many small rivulets, wind through both fiefs so as to water them completely; two mills are turned by them. About two-thirds of each property is settled, and some of it in a state of superior cultivation, particularly on the road, or *Chemin du Village* as it is called, that goes from Becancour to Nicolet, the Coteaux Vuide Poche, Beausejour, St. Charles and Cote du Brulé; between the different ranges there are roads leading to the Route de St. Gregoire, which communicates with the main road near the ferry across the St. Lawrence. The church of St. Gregoire, surrounded by a few well built houses, is situated on the east side of the route near the Chemin du Village. The easterly boundary of Godefroi is supposed to pass down the middle of the River Godefroi from Lake St. Paul.

BECAINCOUR (the seigniory of), on the south side of the St. Lawrence, in the county of Buckingham, is bounded by Godefroi on the

south-west, by fief Dutord on the north-east, and by the townships of Aston and Maddington in the rear; two leagues and a quarter in front by two in depth; was granted April 16, 1647, to Sieur de Becancour, and is now the property of the heirs of the late Lieut. Colonel Bruere, Etienne Le Blanc, Esq. and Mr. Ezekiel Hart. This grant, which towards the river is flat, possesses an excellent and exuberant soil, not materially differing in its peculiarities from that of the two preceding descriptions; the wheat, oats, and barley produced upon it, but particularly the former, are considered as fine, if not better than any other in the province. Hemp and flax are both grown here, and both excellent in quality. The timber is not much entitled to notice, the lowlands affording none but of the most inferior sorts, and the higher situations only beech, maple, birch, and a little pine. More than one half of the seigniory is in cultivation, and several of the farms exhibit a high state of improvement; the best of which are situated on the St. Lawrence, and on each side of the Becancour and Blanche. It is watered by the Rivers Becancour, Godefroi, and Blanche, Lake St. Paul, and Lac aux Outardes: the first is a large river, winding in a beautiful manner through the middle of the seigniory; its source is in the townships of

Broughton and Leeds, from whence it branches into those of Inverness, Halifax, and Ireland, where many minor streams flowing from numerous small lakes fall into it. After traversing the townships of Nelson and Somerset, and the front of Stanfold and Bulstrode, in an easterly direction, for about 46 miles, it alters its course to north-west, flowing about 21 miles more between Aston and Maddington, and through the seigniory, it discharges itself into the St. Lawrence. The banks towards its source are high, steep, and frequently rocky, but they decrease their elevation very much as they descend towards its mouth. The current being greatly embarrassed by falls, rapids, and shoals, is not navigable. In the broader parts there are some small islands covered with fine trees, that viewed from the banks display the varied hues of their foliage with pleasing effect. Within the limits of Becancour there are two mills upon the river. Lake St. Paul is an expanse about four miles and a half long and half a mile broad, not very deep, but abounding in fish of many sorts: its waters pass by the channel of the river Godefroi into the St. Lawrence. The margin of it is a perfect landscape, set off by almost every description of charming scenery: well cultivated farms, with neat and good houses belonging to them, are seen in all

directions round it, and in many places groups of fine trees, as decorative as they can be conceived to be in a well preserved park, give to the whole view an appearance most beautifully picturesque. Lac aux Outardes connects with St. Paul, and participates in the general amenity of the situation; it derives its name from the immense quantities of birds of that species (bustards) that formerly frequented its borders, although now even one of them is but rarely seen, as the increase of settlements has long since driven them to more solitary situations. The Isle Dorval, a small low island, covered with underwood, divides the entrance of the Becancour into two channels. Just above this island, and on the west side of the river, are the hemp-mills, &c. established by government, and placed under the direction of Mr. Campbell: the spot was selected by him, and with respect to situation and soil is admirably well calculated for the production of that article; but whatever pains have been taken to give full effect to the plan, the success has been only partial: perhaps something like the real cause of failure may have been mentioned in a former page of this work, as well as some of the means that might be adopted, and would ensure more favourable results in the cultivation of that valuable plant. The church of Becancour, with

the parsonage-house and a few others surrounding it, is situated on the east side of the river: a short distance above it is a village of Abenaki Indians, consisting of a few ill-built wooden houses, or, more correctly speaking, hovels; the manners and occupations of these people are precisely similar to those of the village in St. François. The main road to the westward crosses the river just above Isle Dorval, two others ascend it for some distance on each side, and one or two range in different directions among the settlements. From the front of the seigniory, there is a ferry over the St. Lawrence to Three Rivers.

DUTORD (fief), adjoining Becancour on the south-west, is bounded in the rear by the township of Maddington. The original title of this concession has not been found among the other records, therefore its date and dimensions, as granted, are both uncertain; it is however at present a quarter of a league in front by nearly three leagues in depth.

COURNOYER (fief) lies contiguous to Dutord, and is bounded on the north-east by Gentilly. The extent of this fief is half a league in front by three leagues in depth, but, as with the preceding grant, neither the original title nor other record relative to it have been discovered. The former is the property of Mons. Bellefeuille,

and the latter belongs to Etienne Le Blanc, Esq. Towards the rear of these two fiefs the land is higher, but in all other respects precisely similar to Becancour, and the timber nearly of the same species that prevails there. Two thirds of the land is well settled, and in a superior state of cultivation.

GENTILLY (the seigniority of), in the county of Buckingham, is bounded on the north-east by Livrard, on the south-west by fief Cournoyer, and in the rear by the townships of Maddington and Blandford; two leagues and a half in front by two in depth; was granted August 14th, 1676, to Michel Pelletier, Sieur de la Perade: it is now the property of Messrs. de Lery. For a great distance the southern bank of the St. Lawrence has been described as low, in many places but little above the water's level; it here assumes a different character, rising high and steep, from whence there is a gradual descent towards the rear. The soil in front is a sandy loam and good clay, but further back it changes to a strong black mould, that is very favourable to most species of agriculture. The first and second ranges of concessions near the St. Lawrence, and on the river Gentilly, shew a very good specimen of judicious management: the whole of the land in culture will amount to

about one third of the seigniory. The timber upon the banks of the latter river is of the best kind and capital quality, but that in other parts is only fit for fire-wood; and as such, large quantities are cut and rafted down to Quebec. This property is watered by the river Gentilly and two or three smaller streams, which work one grist and one saw-mill.

LIVRARD OF ST. PIERRE LES BECQUETS (the seigniory of), in the county of Buckingham, is bounded in front by the St. Lawrence, by the district line between Quebec and Three Rivers on the north-east, the seigniory of Gentilly on the south-west, and by the township of Blandford in the rear; two leagues in front and four deep; granted April 27, 1683, to Sieur Livrard, together with Isle Madame below the Island of Orleans. It is now the property of A. Lanaudiere, Esq. and the Honorable F. Baby. This seigniory is but very little settled, although the soil is fertile, and yields good crops of grain in all its varieties; it is composed generally of fine clay and a rich black mould. It is plentifully stocked with timber, some of which is of the best description, but much the greater proportion is *bois de chauffage*, that is supplied in large quantities for the consumption of the capital. It

is watered by part of the Rivière du Chêne, and some small streams. In the first and second ranges of concessions, there are a few farms in a very improved state. The church of St. Pierre, the parsonage, and a chapel, are situated on the bank of the St. Lawrence, along which the main road passes.

TOWNSHIPS.

GRANTHAM, on the west side of the St. Francis, in the county of Buckingham, is bounded by Upton on the west and north-west, and Wickham on the south. On the bank of the river the ground is high, but broken by several deep ravines; in other directions it is considerably lower, and very level. The soil almost every where is good, being, on the uplands, either a yellow or a blackish loam with sand below it; in other situations it is more incorporated with sand. The timber on the land contiguous to the river is birch, pine, maple, elm, beech, basswood, and iron wood; cedar, fir, and tamarack, are abundant in the inferior parts. The Black River, with a few other streams, water it, and present many excellent situations for the erection of mills.

A very small number of settlers have established themselves on the margin of the rivers, upon well chosen spots, where the land is propitious to almost every species of culture; and so it is upon a great many others that might be selected. In several parts of this township are large extents, producing a fine luxuriant natural grass, that after coming to maturity dries upon the ground, and in that state is but little inferior to good meadow hay. The principal proprietors are the heirs of the original grantee, the late William Grant, Esq.

WENDOVER, in the county of Buckingham, has its front on the east bank of the St. Francis, opposite to Grantham; bounded on the north-west by Courval and the augmentation to Nicolet, on the south-east by Simpson, and in the rear by waste crown lands. The quality of this tract cannot be highly praised: the land near the river is the best, and will admit of cultivation; but a short distance from thence it sinks into low deep swamps, where the soil is chiefly yellow sand and gravel; these extend nearly as far back as the rear boundary, and are overflowed in the spring. On the driest situations the timber is maple, birch, beech, and pine; in the swamps, hemlock, &c. Two branches of the Nicolet and some other streams

water it. Only a quarter of this township has been yet surveyed, and with the trifling exception of two single lots, none of it settled; but possibly, as the main road from the St. Lawrence into the United States passes through it, and is likely to become a route of much importance, some adventurous cultivators may hereafter be induced to establish themselves in its vicinity.

SIMPSON, in the county of Buckingham, lies between Wendover and Kingsey, on the east side of the River St. Francis; is bounded in the rear by Warwick, and waste lands of the crown. The whole of this tract has been surveyed, and granted to officers and privates of the Canadian Militia, who served during the blockade of Quebec, in 1775 and 6. The land is low and level, with very few swamps: it is of a good quality, and if brought under cultivation would produce grain of all sorts; hemp and flax in many places would find a soil highly favourable to their growth. Good timber, principally beech and maple, is found partially, but the kinds of little value are in abundance. It is watered by several branches of the Nicolet, and some small streams that fall into the St. Francis; the former presenting many excellent situations for the erection of

mills. A few lots, situated by the road side, contiguous to the river, are settled upon, and agriculture has already made some progress thereon.

WICKHAM, in the county of Buckingham, on the west side of the River St. Francis, opposite to Simpson. The interior and rear of this tract are so swampy and thickly covered with cedar, spruce fir, and hemlock, as to be little capable of being converted to any agricultural purpose. Near the river, and also drawing towards the townships of Grantham and Dunham, the land is more elevated, considerably better in quality, and might soon be made fit for production of most species of grain, and useful for most other purposes of the farm. In these districts the timber consists of oak, pine, maple, and beech, each of good dimensions. In the interior there are but a few rivulets, and these very diminutive; but it has the advantage of being traversed in front by a very beautiful and serpentine course of the St. Francis, that affords complete irrigation to the best lands. In this township, 23,786 acres have been granted to William Lindsay and others; but settlement or clearing any parts of it has scarcely yet commenced.

DURHAM, in the county of Buckingham, on the west side of the St. Francis, joins Wickham

on the north-west, Melbourne on the south-east, and Acton and Ely on the south-west. The land here is generally good, presenting several extensive and improvable tracts that might be turned to advantage under most sorts of cultivation. On the bank of the river a small settlement is forming, and if in good hands, from the nature of the soil fixed upon, it will undoubtedly be attended with success. Beech, maple, birch, butternut, pine, ash, and cedar, are to be found in great plenty; there is some oak, but it is less abundant than the others. It is watered by numerous small rivulets. The principal proprietors of lands are the heirs of the late Thomas Scott, Esq. The Abenaqui Indians of the village in the seigniority of St. Francois hold 8150 acres by letters patent.

KINGSEY, in the county of Buckingham, is on the east side of the river St. Francis; bounded by Simpson on the north-west, Shipton on the south-east, and Warwick on the rear. A line drawn through this township from west to east would nearly separate the two qualities of land that compose it. The front, and the side next to Shipton, are of the very best quality, and equal to every species of cultivation: they produce beech, birch, maple, butternut, basswood, and oak timber. The part adjoining

Warwick and Simpson is low and swampy, covered with cedar, spruce-fir, and similar woods. Several branches of the Nicolet water it advantageously enough; on the banks of these streams a few settlers have established themselves, but the greatest shew of cultivation is in front, upon the St. Francis, where some industrious farmers have made great progress, considering how recently they have begun to clear the land; their successful example will be likely to attract other settlers of similar habits, and in a few years, from the natural fertility of the soil, aided by their exertions, this, in all probability, will become a populous and thriving township. The principal proprietors are the heirs of the late Major Samuel Holland, Surveyor-General of the northern district in America, previous to the rebellion; also the heirs of the late Doctor George Longmore: a small proportion is held by the family of Donald Maclean.

SHIPTON, in the county of Buckingham, lies between Kingsey and Windsor, having Tingwick in the rear. This tract, equally good in nearly all its parts, is of a very superior quality, and decidedly the best of all the townships within this district: cultivation of every description may be carried on with the greatest success, but hemp, flax, and wheat, would be found particularly beneficial; the latter, indeed,

is scarcely surpassed in goodness upon any tract of the province. Numerous gradual rises in several parts of the township are peculiarly fit for such productions as require a rich dry soil. The timber is beech, oak, maple, birch, and pine, intermixed with great abundance of inferior kinds. It is exceedingly well watered by a large branch of the Nicolet; and by several small rivulets that rise in the uplands, and after winding very sinuous courses, descend into the St. Francis. Agriculture is pursued here with great attention, and over a large extent of land: the farms are dispersed on the banks of the St. Francis, the Nicolet, and the rivulets; many of them displaying an advanced state of improvement. The Nicolet is navigable for boats and scows from hence to the St. Lawrence, and, with the St. Francis, furnishes water conveyance from nearly every part of the township; by which routes large quantities of pot and pearl ash, made here, are transported to Quebec. Besides these means of sending its surplus produce to market, there is also the advantage of Craigs Road passing nearly through the middle of it; that certainly, and at no very distant period, is destined to be the direct communication between the capital of Canada and the United States: the main road on the east side of the St. Francis to the St. Lawrence; as before noticed,

and some others leading into the neighbouring townships, are considerations that, ere long, will have great influence in rendering this a rich, populous, and flourishing part of the district of Three Rivers. Industrious men are not always speculative, but there are inducements here sufficiently strong to excite the most parsimonious to extend their views; while to new settlers a rich and luxuriant soil is presented, that with care and industry, under the guidance of a moderate degree of agricultural skill, will hardly fail to realize the most flattering expectations: some good corn and saw-mills have been erected already: the present population is about 1000 souls. Elmer Cushing and William Bernard are the principal proprietors of land in this township.

MELBOURNE, in the county of Buckingham, on the west side of the St. Francis, joins Durham on the north-west. The land here is, in general, but little inferior to that in the township of Shipton, and well clothed with good maple, beech, elm, pine, and oak timber; several rivers and streams spread over it in every direction; and after completely answering all the purposes of irrigation, fall into the St. Francis. Large settlements have been made in this township, and considering them as lands but newly redeemed from the state of nature,

great advances in cultivation are perceptible, and which have been guided by a competent knowledge in a judicious system of husbandry. The soil is excellent, and requires but little aid to render it uncommonly fertile; it will produce grain of all sorts in great perfection, and most species of succulents. In several parts flax and hemp could be raised in great quantities. Pot and pearl ash are made here, and with the wheat form a principal part of the traffic that is carried on; there are, however, several saw-mills in almost constant work. A communication by roads in various directions has been opened with the adjacent townships. In the River St. Francis there are several small islands along the front of this tract, and although they are rather obstructive to the navigation, yet from their beauty, and the picturesque variety exhibited by the foliage of the different species of trees they are covered with to the water's edge, they can hardly be wished away. A large extent of this valuable land is the property of the Honourable John Caldwell. The population is about 350 persons.

BROMPTON, in the county of Buckingham, is irregular in figure, bounded on the north-east and north-west by Melbourn, on the south by Orford, on the east by the St. Francis, and on the west by Ely. In the northerly part and by

the River the land is of a very fair quality, fit for cultivation, and likely to produce good crops of wheat or other grain; the superior sorts of the timber consist of elm, maple, beech, basswood, and birch. The southerly part is uneven, rough, and rocky, and generally speaking, useless untractable land. It is watered by several brooks and streams; there is also a lake covering several lots in the tenth and eleventh range, and spreading thence into Orford. On the River St. Francis, and contiguous to Melbourne, some settlements have been formed, where a few well cultivated farms display themselves. The portages, occasioned by the great and little Brompton falls, are on the west side of the river within this township. The population at present amounts to about 200 souls: the principal landholders are William Bernard and his associates, who were the original patentees.

WINDSOR, in the county of Buckingham, on the east side of the River St. Francis, lies between Shipton and Stoke, bounded in the rear by Wotton. This is a very fine tract of land, of an excellent rich soil, with varieties suitable to almost every species of culture, and particularly hemp and flax. The surface is undulated by moderate elevations that are well

clothed with maple, beech, birch, and fir-trees of good size; on the flat lands ash and cedar prevail. A few swamps occur here and there, but they are of so trifling a depth as to be drained with very little trouble, and might then be converted into excellent meadows. It is watered by two large streams and several small ones flowing into the St. Francis. Notwithstanding the superior excellence of the land, this township is badly settled; but the whole of it has been granted to the officers and privates of the Canadian Militia, who served in 1775 and 6; it was intended as some compensation for their past services, but scarcely any of them were inclined to make the most advantage of the reward, by turning their swords into ploughshares, and themselves into industrious cultivators; instead of which, they preferred disposing of their lots for whatever present profit they could turn them to: indeed, the lands granted in this manner have been almost generally neglected. The population of this township scarcely exceeds 50 souls, a circumstance difficult to be accounted for, when the advantages of its locality and goodness of soil are taken into consideration.

STOKE, in the county of Buckingham, on the east side of the St. Francis, joins Windsor

on the north-west, Ascott, Eaton, and Westbury on the south-east, and Dudswell on the north-east. This tract is likewise in the same neglected state as Windsor, most probably from being granted in the same manner. The land is of first rate quality, and fit for all the purposes of agriculture: in general, beech, basswood, ironwood, and maple, are the most prevalent kinds of timber. A few swamps occur, but neither extensive nor deep; in fact, they are scarcely more than common wet-lands, and require only careful ditching to become very good meadows, of which there are already, in different parts, many large extents of the most luxuriant kind. It is uncommonly well watered by several rivers and streams, that, after winding in all directions, fall into the St. Francis; in the fourteenth range there is a small lake. On the banks of some of the minor rivulets many good patches for the growth of hemp can be found, and on the parts that lie a little higher is a fine soil for the culture of flax. The population hardly merits an estimate.

ASCOTT, in the county of Buckingham, is advantageously situated at the forks of the River St. Francis, bounded on the north by Stoke, on the south by Hatley and Compton, on the east by Eaton, and on the west by part of the branch of the St. Francis that connects

with Lake Memphremagog. In every point of view, this is a desirable tract: the land is of an exceeding good quality, and so well varied in the nature of its soil as to answer all the purposes of the farmer; the timber is beech, maple, pine, basswood, and oak. It is watered by some rivers of considerable magnitude branching off into the adjacent townships of Compton, Clifton, and Eaton, that in their course through this one turn several grist and saw-mills. Settlements on a very large scale have been made here, and several farms by the sides of the rivers have attained a degree of flourishing superiority, that shows their improvement to have been very rapid, as no part of the land was granted prior to the year 1803. The majority of the settlers here, as well as in most of the neighbouring townships, are Americans, who, since their domiciliation, have taken the oaths of allegiance to the British Government: these people are in general very industrious and persevering, unquestionably much better managers upon their farms than the Canadians are, particularly when they take the land in a state of nature; by the system they pursue, a tract of ground from its first clearing becomes fruitful, and turns to account in a much shorter period than it would under the hands of provincial farmers; the latter would

proceed by the methods of his forefathers, but the other is an experimentalist, and varies his operations in whatever way he thinks the nature and quality of the materials he has to work upon may be most speedily made to produce his only object, gain. The population of this township is at present 1000 souls. Several pot-ash manufactories, and mills of both descriptions, have already, in some degree, laid the foundation of commercial speculations that bid fair to obtain a considerable increase; in the encouragement of these, the navigation by the St. Francis into the St. Lawrence on the one hand, and through Lake Memphremagog and the rivers branching from it into the United States on the other, the main road by the St. Francis towards Three Rivers and Quebec, with several others leading into the different townships, will be greatly instrumental. At the forks of the St. Francis, and the foot of the great fall, are Hyat's mills, in a most convenient situation; a little below them, in the river, is a very singular high rock, on the pinnacle of which there is one solitary pine-tree of large dimensions, making together an appearance both extraordinary and unique: the mills are a valuable property, belonging to Gilbert Hyat, to whom, with several associates,

the township was originally granted, and who is at present the greatest landholder.

COMPTON is situated in the districts of Montreal and Three Rivers, and the counties of Richelieu and Buckingham; it joins Ascott on the north-west, Barnston and Barford on the south-east, Hatley on the south-west, and Clifton on the north-east: this township is in no respect inferior to Ascott. It has in various parts many wide spreading but gentle rises of most excellent land, thickly covered with pine, maple, and beech timber, of fine quality and large size. It is completely watered by the Coaticook and Moose rivers; the former connecting with Lake Tomefobi, and both with the St. Francis, besides many more inconsiderable streams, in whose vicinity there are some fine breadths of luxuriant meadow and pasture. An industrious population, though not much exceeding 700 souls, inhabits numerous settlements on the banks of the rivers, where most of the farms appear to be in a very thriving and excellent condition, generally producing crops of wheat of excellent quality, and in quantity far beyond the home consumption: many large patches of the land might be very beneficially employed in the culture of flax and hemp. The principal rivers work several mills of both sorts, and there are some manufactories of pot

and pearl-ash. Through the most cultivated parts of the township, roads have been opened and bridges thrown over the rivers, that are each kept in good repair, by which a communication is formed with the main road to Quebec, and with the state of Vermont. Among the inhabitants there are a few traders and artisans, who, in following their respective avocations, occasion something like the first rudiments of commerce, and confer a little importance upon this increasing settlement among the neighbouring ones. This township was erected by patent in 1802, when 26,460 acres were granted to Jesse Pennoyer, Esq., and several associates, much of which was immediately cleared, and is, in fact, the part that is now the best settled and cultivated; the greatest portion of this grant is at present held by various settlers, M. Pennoyer having retained no more than a sufficiency for his own use. In the year 1810, 13,110 acres in the easterly part were granted to Sir Rob. S. Milnes, Bart. Within this tract several lots are now in an advanced state of cultivation: indeed, from the general quality of the soil, by a little industry and good management, the whole might be turned to a very profitable account.

CLIFTON, in the county of Buckingham, joins Compton on the west, Auckland on the

east, Eaton on the north, and Barford and Hereford on the south. The surface of the land is tolerably level, except in the vicinity of the rivers, where there is an easy rise and fall, that forms rather an agreeable diversity; the quality of it is unexceptionable, and would produce grain of every kind abundantly. Some swamps covered with cedar and black ash spread in different directions, but they are such as might be drained with the greatest facility. The timber is spruce, beech, ash, maple, birch, and basswood; the spruce greatly predominating. It is watered by two or three rivers, and numerous less considerable streams, all of which ultimately fall into the St. Francis; on the fifth range there is a small lake. Though large grants of land have been made in this township to several persons since the year 1799, they have attracted but few settlers; the inconsiderable cultivation that has taken place is toward the boundary of Compton. The population does not exceed 100 souls.

HEREFORD, in the county of Buckingham, has Clifton and Auckland on the north, Barford on the west, Drayton on the east, and the boundary of the province on the south. The greater part of this township may be called fair good land, and generally applicable to any kind of agriculture; the surface of it is un-

even, and as it approaches the Connecticut rather bearing a mountainous character: several branches of that river, aided by many small streams descending from the high lands, and the lake called Leeches Pond, lying on the American boundary, water it very well. The timber is various, and in general good, consisting of maple, beech, oak, birch, pine, ash, besides cedar and spruce. In the year 1800 the southern half of the township was granted to James Rankin and others; but a very small progress has been made towards its settlement: there are indeed a few farms in tolerable good condition, but a population of no more than 200 souls is not much calculated to increase the number of them. Roads have been opened leading southward into the state of Vermont, and one to the township of Compton.

EATON, in the county of Buckingham, lies between Westbury and Clifton. The land in this tract is of a uniform and favourable quality, generously repaying the farmers, wherever any part of it is under tillage. The timber is more remarkable for its diversity of kind than excellence of quality; among it beech, maple, elm, pine, birch, basswood, spruce, and hemlock are plentiful. It is not watered by any stream of magnitude, but it is intersected by numerous small rivulets and brooks. The westerly half

of this township was granted in 1800, to Josiah Sawyer and others; of this a great part is now settled. The farms by care and industry are brought into good condition, and assume a very flourishing aspect. Several corn and saw-mills have been erected on some of the streams. The inhabitants number about 600.

WESTBURY, in the county of Buckingham, is a very small township of a triangular figure, containing no more than 12,262 acres, exclusive of the proportionate reserves, and lying between Stoke, Eaton, Dudswell, and Bury. It was granted in 1804, to the late Honourable Henry Caldwell, receiver-general of Lower Canada, and is now possessed by his son, John Caldwell, Esq. The soil of the westerly part of this tract is favourable to the encouragement of agriculture in most of its branches; but on the eastern side is of a much inferior description, being rough, uneven, and swampy. The timber, partaking of the quality of the land, consists, on the first part, of very good beech, maple, pine, and birch; inferior kinds only are produced on the latter. The River St. Francis is here navigable for canoes and small boats, and by it the logs felled in the adjacent woodlands are floated singly down to the Eaton falls: numerous streams of inconsiderable note fall into that river. A few settlers on the river side have

got their farms into a very respectable state. The inhabitants of this township do not exceed 60, but its good situation is likely to increase the number.

DUDSWELL, in the county of Buckingham, has Westbury and Stoke for its south-west boundary, Weedon for the north-east, Wotton for the north-west, and Bury for its south-east. The land of this township, where it is level, is applicable to the culture of grain of all the species peculiar to the country; in some places it is uneven, and from the sixth range rises into a considerable mountain, that stretches westward into Wotton; the top of it is a flat table land, and from being wholly unclothed with trees or underwood derives its name of the Bald Mountain. In the timber there is a great variety, as beech, maple, birch, basswood, butternut, elm, some oak, pine, spruce, and cedar. The St. Francis with many small streams provide an ample and complete irrigation. Only one quarter of it has been laid out, which was granted to John Bishop and others; he is now the principal landholder: on this part some farms have obtained a very respectable state of prosperity. The population is about 90 souls.

BURY, in the county of Buckingham, is irregular in its figure, bounded by Dudswell on

the north, Lingwick on the north-east, Newport and Westbury on the north-west. One quarter of it is all that has been surveyed, but the land in general is of a moderately good soil, very susceptible of cultivation, and to all appearance would furnish good crops of grain of most sorts. The timber is butternut, maple, beech, ash, birch, cedar, and basswood. Many little streams water it. An intended road into the state of Vermont, striking off from Craig's Road, at a place called Kemps Bridge, in the township of Ireland, will pass through it; this route has been already marked and blazed in the field, and mile-posts fixed along the whole of its distance.

LINGWICK, in the county of Buckingham, has Bury on the south-west, and is surrounded on its other sides by the unsurveyed townships of Weedon, Stratford, and Hampden. This tract of land is very similar in quality to the level district of Dudswell: the timber upon it also answering nearly the same description. It is watered by several streams of tolerable size that flow into the St. Francis. The westerly half has been surveyed and granted to divers individuals, but not one of them has yet undertaken to break up the ground.

NEWPORT, in the county of Buckingham, is situated between Eaton and Ditton, having

Auckland on the south, and Bury to the northward. Although the land in many parts of this tract is uneven, the general tendency of the soil is good. Beech, maple, and birch, spruce, basswood, and fir, are the prevalent sorts of timber. A great number of rivulets descending into the St. Francis water it in almost every direction. About one-half of it has been granted; and on the south-west quarter some progress has been made in cultivation, where the land is found very productive in most species of grain, and congenial to the growth both of hemp and flax. Several roads passing to the adjacent settlements intersect it, as does the intended new one from Craig's Road. The inhabitants amount to about 160.

DITTON, in the county of Buckingham, is bounded by Newport on the west, Marston and Chesham on the east, Hampden on the north, and Emberton on the south. The surface of this township is irregular, in several places rising into large eminences; but yet, in general, of a moderately good soil, timbered with beech, birch, basswood, and maple. It is intersected by some large streams that fall into the St. Francis. The south-west quarter has been surveyed and granted, but no part thereof settled upon.

AUCKLAND, in the county of Buckingham,

lies between Hereford, Drayton, and Newport, bounded by Clifton on the west, and Ember-ton on the east. The land is here uneven and rugged, in some places mountainous, and in others sinking into swamps; the level and dry tracts have a pretty good soil, that if brought under culture would answer moderate expectations: there are some patches in lower situations that appear fit for hemp. The timber is a mixture of most species that are found on the surrounding tracts. It is abundantly watered by a great number of streams and brooks, some of them flowing into the St. Francis, and others into the Connecticut river. The northerly half of the township has been granted, but no part whatever is settled. A sort of foot-path runs through it, by which the Indians frequently make their way to the River Chaudiere.

MARSTON, in the county of Buckingham, is well situated on the westerly side of Lake Megantick; the whole of it has been surveyed, but only one quarter of it granted, and no part thereof settled. The land is irregular, hilly, and frequently very stony, but mostly of a moderately good soil, that would answer very well for agriculture in general; many spots present eligible situations for the culture both of hemp and flax. The timber forms but an

indifferent mixture of maple, fir, hemlock, cedar, and spruce. It is watered by several streams and small lakes, besides Lake Megantick that has a considerable expansion, being nine miles in length, and two upon the average in breadth, running deeply into the land in several bays, closing upon which, and around the lake generally, are some very excellent meadows. The scenery in the vicinity is beautifully picturesque, as the land rises gradually from its borders clothed with a rich verdure, and embellished by large groups of stately trees ranging above each other until they crest the summit, and exhibit a most enchanting variety of foliage. The waters abound with excellent fish, and the country around this sequestered and romantic spot is the resort of almost every species of game.

CLINTON, in the county of Buckingham, is a small tract, only equal in dimension to the quarter of a township; it is most agreeably situated at the southern extremity of Lake Megantick, joining Marston on the north, and in other directions surrounded by Chesham and unsurveyed wastes. In almost every respect the land is here marked by a superiority of character; the soil in general is of the very first quality, exhibiting many large patches of luxuriant pastures. The timber is pine, beech,

maple, birch, fir, spruce, and cedar. It is watered by the River Arnold, and some other streams falling into the lake; the former derives its name from the American General Arnold, who in the year 1775 passed part of his troops down it, when conducting his army through an almost unknown country to besiege Quebec. No part of this township is settled, although it abounds with numerous excellent situations, where the land is fit for every species of agriculture.

HAM, in the county of Buckingham, lying between Wotton and Wolfestown, joins Tingwick and Chester on the north-west, and Weedon on the south-east. The complete outline of this township has been run, and one half of it granted among several individuals. The land is here of a quality that might be brought into cultivation with great advantage, and would produce wheat or any other species of grain natural to the country: many parts of it are fit for the growth of flax and hemp. The surface is diversified by many large swells of inconsiderable elevation, covered with the kinds of wood that denote them to be of a fine rich soil: in some few places in the valleys it is a little swampy. The timber is maple, beech, basswood, birch, hemlock, and cedar. It is watered by part of the River Nicolet, which here has its

source in the beautiful little lake of the same name, situated on the borders of Weedon and Ham; it is about two miles and a half long and one broad, with several small islands scattered about it, which are the resort of vast quantities of wild-fowl. The surrounding country possesses every trait of wild romantic beauty; it is environed by rising grounds clothed with trees, in some places thickly clustered together, and in others irregularly dispersed over the acclivities: beyond the first heights are seen in the distance the softened and fantastic forms of a much more elevated chain. The intended road to communicate with Craig's Road passes on the south-east side of this lake.

WOLFESTOWN, in the county of Buckingham, lies between the townships of Ham and Ireland, is joined by Chester and Halifax on the north-west, and unsurveyed lands on the south-east. The north-westerly half of the township is moderately good, of which a part lying towards the north has been granted, and might be made to repay the trouble of cultivation; the timber upon it is pine, beech, basswood, cedar, and hemlock. The south-easterly half is a chain of rocky heights of which no part is arable, or indeed convertible to any use.

HALIFAX is in the districts of Three Rivers and Quebec, and the county of Buckingham;

it lies between Chester and Inverness, bounded on the north-west by Arthabaska and Somerset, and on the south-east by Wolfestown and Ireland. The land is here excellent and fertile, and would yield abundantly under almost any system of agriculture; it presents many good situations for hemp and flax: the north-easterly part, being low, has a few swamps, but they might be easily reclaimed by ditching; in the opposite direction it is uneven, and rises as it inclines towards the south: the soil almost every where of the best quality. The kinds of timber are nearly the same as are produced in Wolfestown and Ham. It is watered by some small rivers and streams, and the picturesque little Lake Pitt of about five miles long and half a mile broad, spreading across the seventh, eighth, ninth, and tenth ranges, and communicating by a small channel with Lake William, from whence the waters discharge into the River Beçancour. The south-easterly half of the township has been laid out and granted, but none of it is yet cultivated. Craig's Road passing through a part of it, may be, perhaps, the means of attracting some settlers to its neighbourhood. The principal landholders are the heirs of the late Joseph Frobisher, Esq. and Mrs. Scott and family.

CHESTER, in the county of Buckingham,

lies between Tingwick and Halifax; bounded on the north-west by Arthabaska, and on the south-east by Ham and Wolfestown. The land in this township has great advantages in point of locality, with a soil in every respect fit for all the purposes of agriculture, though still remaining unbroken by the plough. The timber is mostly beech, maple, pine, birch, elm, basswood, butternut, cedar, spruce, and hemlock. It is watered by large branches of the Nicolet and Becancour, that wind through it in various directions. Craig's Road crosses it diagonally. The south-east and north-west quarters have been surveyed and granted; they are both valuable tracts of land, well meriting attention. The proprietors of one quarter are the heirs of Joseph Frobisher, Esq. and the other belongs to various individuals.

WARWICK, in the county of Buckingham, joins Tingwick on the south-east, Stanfold on the north-west, Kingsey on the south-west, and Arthabaska on the north-east. This is a poor and rather sterile tract, that, excepting the three first ranges, is almost unserviceable, being rough, broken, and swampy,—defying all the art and labour of industry to give it any value. It is thickly covered with spruce and hemlock. The tract of waste lands adjoining it on the north-west is of the same description; in

the spring it is deeply overflowed by several branches of the River Nicolet, and rendered impassable for a considerable distance. The south-east half of the township has been subdivided, and granted to various persons, but, as may be expected from its nature, no one has found sufficient inducement to attempt a settlement.

ARTHABASKA, in the county of Buckingham, is a triangular piece of land, situated between Chester and Halifax on the north-east, Bulstrode, Stanfold, and Somerset on the north-west, and Warwick on the south-west; containing a much less extent than a full township: one quarter of it is subdivided, and granted to John Gregory, Esq., who at present holds it. The land is much of the same nature as that in the townships of Halifax and Chester, but in some parts lower, and rather swampy. The timber is chiefly birch, beech, elm, and some pine, with much of inferior quality upon the swamps. Several branches of the Nicolet and Becancour run through it. No part thereof is settled.

STANFOLD, in the county of Buckingham, is situated on the south-east side of the River Becancour, that bounds it in front; it has Arthabaska on the rear, Nelson on the north-east, and Bulstrode on the south-west. From lying

very low and being extremely swampy, not much of the land is fit for cultivation. It is traversed by some rivers and small streams that fall into the Becancour. One half of this township was granted to the Honourable Jenkin Williams, who is the present holder of it. No attempt has been made to clear it.

BULSTRODE, in the county of Buckingham, joins Stanfold on the north-east, Warwick in the rear, and waste lands of the crown on the west. The country hereabout is level and low, with many swamps and numerous *brulés*, particularly towards the middle of the township; near the river, and also inclining towards the limits of Warwick, the land rises a little, and is of a moderately good quality: the swamps and low lands are in some places of a sandy soil, and in others a black mould. On the highest situation the timber consists of beech, maple, and black birch; in the swamps cedar, hemlock, and tamarack. The main branch of the Nicolet, and several rivulets running into the Becancour, water it very well. Half of the township has been granted to the late Patrick Langan, Esq., and is now the property of his heirs. No settlements have yet been made.

ASTON, in the county of Buckingham, is situated in the rear of the seigniories of Becancour and Godefroi; bounded on the north-east by the

River Becancour, and on the south-west by waste lands of the crown. By the sides of the Becancour and River Blanche the land is pretty high, but a short distance from thence it descends into a low flat; the soil in general is good, and would no doubt prove highly productive if brought into cultivation. In situations near the rivers the timber is oak, elm, pine, beech, birch, and maple; in other directions it is either cedar, hemlock, or spruce. The Riviere Blanche and the Becancour, the banks of which are extremely picturesque, water it very completely. The whole township has been surveyed, and granted to various persons, but not one of them has yet undertaken to cultivate, or procured one single settler upon it.

MADDINGTON, in the county of Buckingham, is situated on the east side of the Becancour, opposite to Aston; bounded on the north-west by the seigniories of Becancour, Dutord, Cournoyer, and Gentilly; on the south-west and south-east by the River Becancour, and on the north-west by Blandford. In the surveyed parts of this township lying contiguous to the river the land is of the same nature and quality as in Aston, and like it is capable of being turned to good account in the hands of able farmers: in some places the soil would suit very well for hemp and flax.

On the superior grounds some excellent timber may be found, but on the lower parts only the indifferent assortment of cedar, hemlock, and similar kinds. The Becancour presents several eligible situations for the erection of mills. No part of this tract has yet been settled: the principal proprietor is the Honourable Jenkin Williams.

HUNTERSTOWN, in the county of St. Maurice, on the north side of the St. Lawrence, is situated in the rear of the seigniories of Riviere du Loup, Grand Pré, and Dumontier; is bounded on the east by the projected township of Caxton, and on the west by lands claimed by the late Charles Lanaudiere, Esq. as belonging to the seigniory of Maskinongé, and on the north-west by waste crown lands. This is a tract of very little value, being continued strata of rock lying very near the surface; toward the rear it rises into broken and almost mountainous ridges. Pine and maple are abundant, but cedar, spruce, and hemlock much more so. The Riviere du Loup with some small lakes and little rivulets water it very well. 24620 acres of this township were granted in 1800 to Mr. John Jones, the present proprietor. The unsurveyed or projected townships in this district are Caxton, Blandford, Wotton, Weedon, Garthby, Coleraine, Stratford, Hamp-

den, Gayhurst, Chesham, Emberton, and Drayton. In Weedon, Coleraine, and Garthby, is situated Lake St. Francis, of considerable dimensions, forming two expanses of water that are connected by a short river or channel. It is surrounded in every direction by lofty wood-covered mountains, approaching each other so close on either side of the little river as almost to cut off the communication of the waters between the two parts of the lake: these mountains contain iron ore in many places. On the topographical map, Lake St. Francis is delineated by dotted lines, and laid down from the reports of various persons who have penetrated that country, and of the Indian hunters: it may not therefore be correct in all its points; but as there never has been a survey of it made, such authorities are all that afford any resources for its description.

THE DISTRICT OF QUEBEC

Extends from the seigniory of Grondines, whose western boundary joins the district of Three Rivers, down the St. Lawrence on the north side as far as the River St. John, on the coast of Labrador; and on the south side from the seigniory of Deschaillons as far down as Cape Chat, where it is met by the district of

Gaspé; to the southward it is bounded by the ridge of mountains already designated as the north-easterly chain, and on the northward by the 52d degree of north latitude. It contains the counties of Cornwallis, Devon, Hertford, Dorchester, Hampshire, Quebec, Orleans, and Northumberland; eighty-seven seigniories, fourteen whole townships, four that are partly within the district of Three Rivers, eighteen projected townships, and forty-two parishes. The quantity of land granted in *fief et seigneurie* amounts to 4,352,500 acres, or 5,109,319 French arpents: in free and common soccage, 561,234 acres. Of the old tenures, one third part, or perhaps a little less, is under cultivation: in the townships the proportion under tillage is yet but small.

GRONDINES (the seigniorship of, and its augmentation), in the county of Hants, on the north side of the River St. Lawrence, is bounded on the south-west by the seigniorship and augmentation of Ste. Anne, in the district of Three Rivers, by La Tesserie on the north-east, and by the unsurveyed township of Alton and waste lands of the crown in the rear. It was granted in three parts, viz: the western part, one league in front by ten in depth; on the 20th March, 1638, to the Duchess d'Aiguillon, for *Les Dames Hospitalieres* of the Hotel Dieu of Quebec; the

eastern part, three quarters of a league in front by three leagues in depth, on the 3d November, 1672, to the poor of the said hospital; and the augmentation to the eastern part, two leagues in depth by three quarters of a league in front, on the 25th April, 1711, to Louis Hamelin: the whole is now the property of Mr. Moses Hart. Throughout the greater part of these grants the soil is of an indifferent character, being only a thin layer of poor earth upon a solid bed of stone: here and there a few patches of better quality may be found. A small ridge extends across the seigniority at a short distance from the front, and thence down to the borders of the river the space is principally occupied by very good meadow land. The timber is altogether of the most inferior sort. The principal settlements lie by the main road, passing just beneath the ridge, and upon the River Ste. Anne: taken in the aggregate, the soil and timber on this property are barely above mediocrity, yet it is not without some well cultivated farms upon it; they, however, owe more to the industry of their occupiers than to original fertility for that distinction. Somewhat more than a fourth part of these tracts are under culture. It is very well watered by the River Ste. Anne, the Batiscan, and a small river falling into the St. Lawrence; the

latter turns a grist and a saw-mill. There is a church and a parsonage-house, but the service is performed by the curé of a neighbouring parish. The main road crosses the seigniorie near its front: one ascends the Ste. Anne on each side, and another leads to the back concessions. In the St. Lawrence the extensive shoal, called Les Battures des Grondines, stretches along the front. There is a small fief called Francheville, within Grondines, which, by default of inheritance, has reverted to the crown.

LA TESSERIE (fief), on the north side of the St. Lawrence, in the county of Hants, is bounded on the south-west by Grondines, on the north-east by La Chevrotiere, in the rear by the township of Alton, and by the river in front; one league in breadth by three in depth: was granted November 3d, 1672, to Demoiselle de la Tesserie. In this grant the land greatly resembles that of Grondines, but perhaps has some little advantage over it as to the general quality of the soil; it is watered in the rear by the River Ste. Anne: by the main road there are a few well-cultivated concessions, but in other respects there is nothing meriting particular notice.

LA CHEVROTIERE (the seigniorie of) is on the north bank of the St. Lawrence, in the

county of Hants, between La Tesserie and Deschambault, bounded in the rear by waste lands of the crown; one league in front by three leagues in depth: the date of the grant is uncertain, as the original title has never been found among the records of the province, or among the registers of fealty and homage; but from the tenor of the grants of La Tesserie and Deschambault, it appears to have been conceded sometime before the year 1652, to M. Chavigny de la Chevrotiere: it is at this day possessed by M. de la Chevrotiere, a lineal descendant of the person who first received the grant. Of the soil in this seigniory the generality possesses a good share of fertility, and is well suited to the produce of wheat and all other grain, though at this time not more than one third of the land is under tillage. The surface of it is uneven, and the same will be observed to be the case more and more on approaching Quebec from the westward; the banks of the St. Lawrence also increase greatly in height, and the beach becomes more rocky and irregular, with the battures or shoals running out to a considerable distance from it. Beech, maple, and some excellent pine-timber, are found close to the river. The seigniory is watered by many small streams besides the River Ste. Anne, that crosses it near its rearward limit,

and the Chevrotiere, that winds along the middle about six miles, and then strikes off to the northward into the seigniory of Deschambault: this little river rolls its slender stream between two banks of considerable altitude, and after crossing the ridge in front descends through a valley into the St. Lawrence, in which by the side of the main road there are a dwelling-house, a grist and a saw-mill, most delightfully situated. On the west bank of this river the road is rather difficult, from its steepness and circuitous course; but on the opposite side the rise is gradual, and easy of ascent to the top of the eminence along which it passes onwards to Quebec: besides this road, which is the main one, there are several others running in different directions. On the summit of the elevation and each side of the highway many handsome farms, in a good state of improvement, present themselves to notice.

DESCHAMBAULT (the seigniory of), in the county of Hants, on the north side of the River St. Lawrence, is bounded by the barony of Portneuf on the north-east, by La Chevrotiere on the south-west, by the river in front, and by waste lands of the crown in the rear; one league in breadth by three in depth; granted March 1, 1652, to Demoiselle Eleonore de Grande Maison: it belongs at present to Louis de la Gor-

gendiere, Esq. and the Honourable Juchereau Duchesnay. This, in almost every respect, is a very valuable property, with a soil of unexceptionable quality; being a mixture of good clay with a little sand, a fine yellow loam, and in many places a rich black mould, which in the vicinity of Point Deschambault has a stratum of rock beneath it. The surface is uneven, and from being a fine level flat near the river, it rises in small ridges, mounting by gradations one above another nearly to the limits of the seigniority in the rear: from the westward also there is a gradual acclivity from the plain to the height of Point Deschambault. On this flat the land is every where fertile, and fit for the production of every article of the country, whether grain, fruit, or vegetables; the principal part of it is in an excellent state of cultivation, and the numerous farms on each side of the main road, with their substantial houses, and every requisite appendage, afford a pleasing evidence of the industry and good husbandry of the proprietors. On the different ranges of concessions towards the interior many of the lots display an equal share of good management, and which indeed is the case with nearly all the land under tillage, amounting to a full third of the whole seigniority. The timber is of a moderately good quality, though but of little

diversity of species, being for the most part beech, maple, and pine; there is, however, wood of inferior descriptions. The Rivers Ste. Anne crossing the rear, La Chevrotiere, Belleisle, and a few smaller streams, contribute to the luxuriant fertility of the soil. The Point of Deschambault has a considerable elevation, and stretches boldly into the river to the Richelieu rapid; the face of it appears a firm clay and sand, without any interposition of rock or stone. On this Point the church of Deschambault is built, and on the summit of the salient extremity is a very beautiful grove of pine-trees, remarkable rather for the regularity and equality of size than for their individual magnitude: a little below the church, on the sloping side of the Point, is the manor-house of Monsr. de la Gorgendiere. The River St. Lawrence forms a large curve between Cap Santé and Point Deschambault, and either in ascending or descending the combination of objects that it presents is highly interesting and agreeable. The Point was formerly a sort of military post, as the French, in the year 1759, had a battery upon it, for the purpose of defending this pass of the river against any force that might have been sent upwards; indeed, this situation, and the superior height of Platon on the opposite side, might easily be fortified so as completely to

command the passage either way, and, together with the difficulties of the Richelieu rapid, would render any attempt to force it very disastrous to an enemy that should undertake the enterprise.

PORTNEUF (the barony of), in the county of Hants, has its front to the St. Lawrence, bounded on the south-west by the seigniory of Deschambault, on the north-east by that of Jacques Cartier, and in the rear by Perthuis; one league and a half in breadth by three leagues in depth: was granted April 16th, 1647, to Sieur de Croisille; it now belongs to the convent of the Hotel Dieu, at Quebec, but is let on a long lease to Messrs. Coltman and Co. This is a fine and valuable estate, the land fertile, and that part of it that is under tillage in a good state of cultivation: the soil is a light sandy earth mixed with clay, and in many places a good black mould upon a bed of clay. The timber in the rear of the tract is a general mixture of the middling sorts, but along the banks of the River Portneuf some very good pine may be collected. This river, that with several small streams waters the property, is not navigable either for boats or canoes; it has its source in a small lake within the seigniory of Faussambault, and passing through Bourglouis, Neuville, Belair, and Jacques Cartier, it

flows into the St. Lawrence, near Deschambault. The banks on each side are high, and very well wooded; the stream is precipitated through so many rapids and along a broken rocky bed with such violence, as to render it impassable for any sort of boat, however light. At the entrance into the river from the St. Lawrence the land, for a short space, is low, and extremely well cultivated on each side. At a small distance up, on the western side, are the valuable grist and saw-mills belonging to Messrs. Coltman and Co., most conveniently and agreeably situated in a hollow near the main road, from whence the ground rises almost in form of an amphitheatre; on the gentle acclivities there are several fine settlements, and many good houses dispersed, that greatly enliven a prospect naturally beautiful. From the mills the exportation of flour is very great, and with the shipments of timber almost continually carried on, the place generally presents a bustling scene of business: the mercantile concerns of the proprietors being very extensive, they have been induced to establish a depot here for the collection of all sorts of timber for exportation; and it is no uncommon thing to see almost a small fleet of vessels of various classes lying at anchor off the mouth of the River Portneuf, receiving

their freights on board, besides those that usually anchor here in their passage up or down the river, on account of the Richelieu rapid. Proceeding to the eastward from the mills, the bank of the St. Lawrence takes a gradual rise as far as the church at Cap Santé, and from thence it almost immediately obtains an elevation of more than 150 feet above the level of the river, by a very steep ascent up what is called the Cote du Cap Santé. From the front to the rear of this tract there are many rising grounds, generally of a very good soil, between which the hollows are in some places swampy, and covered with cedar and hemlock. The church of Cap Santé, standing nearly on the point of the cape, is a handsome building, usually attracting a stranger's notice by its exterior ornaments as well as interior decoration. To vessels coming down the river the clump of trees on Point Deschambault and this church serve as sailing marks; the latter, by its three spires, is distinguishable at a great distance. Near the church is the parsonage-house, and a group of others surrounding it, forming almost a respectable sized village. Along each side of the Quebec road the houses are numerous, and being surrounded by neat gardens and extensive orchards, afford, particularly during the spring, a most enchanting appearance. From

the main road there are two that branch off to the back concessions, and which continue as far to the interior as any settlements have been made; at different distances others take a transverse direction towards the adjacent seigniories on each side. From Cap Santé the large shoal called *Batture du Cap Santé* stretches almost down to the entrance of Jacques Cartier River: it is thickly beset with rocks that are uncovered at low water.

PERTHUIS (the seignior of), in the county of Hants, is situated immediately in the rear of the barony of Portneuf; partly bounded on the south-west by the lands forming the projected township of Alton, and partly on the north-east by the seignior of Jacques Cartier; its other limits are closed upon by waste crown lands; one league and a half in breadth, by nine leagues in depth; was granted October 11, 1753, to Sieur Perthuis. From the boundary of Portneuf, the land rises in a broken and irregular series of heights towards the rear, where it falls in with the north-westerly ridge of mountains: the soil, for a league or two to the interior, is a light loam or clay, sometimes covered with a thick layer of fine black mould; these spots, if brought under cultivation, would, no doubt, prove very productive: of the quality further back nothing has yet been ascer-

tained. No part of the grant is appropriated to agriculture. The timber is in general very good, and also abundant, consisting of the best species that are found upon a dry good soil, as maple, beech, ash, birch, and pine. The lower portion of the seigniory is watered by the River Ste. Anne, which runs across it, but in the other parts there are only a few small streams that break from the sides of the mountains.

JACQUES CARTIER (the seigniory of) is in the county of Hants, having its front on the River St. Lawrence, bounded on the south-west by the barony of Portneuf, by Belair and its augmentation on the north-east, and in the rear by waste crown lands; half a league in breadth by five leagues in depth; granted 29th March, 1659, to Dame Gaguier, widow of Jean Clement de Wauls, Chevalier and Seigneur de Monceaux. It is now the property of Messrs. de Lery, and Mr. Alsop. Although the surface is very irregular and broken, the land in general is of a moderately good quality; in some places the soil is light and sandy, in others a layer of black vegetable mould upon a stratum of lime-stone, and to the rear, where it becomes rather mountainous, a good light loam; each of these different kinds is sufficiently fertile, and several ranges of concessions are in an excellent state of cultivation, having among them many pro-

ductive and valuable farms. The timber is various both in kind and quality, but there is good maple and birch, and along the banks of the different rivers some superior pine: the common species are very abundant. The Rivers Ste. Anne and Portneuf, already mentioned, cross this seigniory, but the principal one by which it is watered is the Jacques Cartier: to many it may be superfluous to mention the origin of its name, which was derived from the navigator who first examined the River St. Lawrence, and secured his vessels at the entrance of this river during the winter of 1536. It takes its source from several small lakes in the interior, near the parallel of 48° north latitude, and about 71° 20' of west longitude. After running a very circuitous course through a mountainous country that is but little known, it reaches the townships of Tewkesbury and Stoneham, passes through them, and flows on in a south-south-westerly direction, a distance of about forty-six miles, across the seigniories of St. Ignace, St. Gabriel, Faussembault, Neuville, Belair, and the fief Jacques Cartier, where it falls into the River St. Lawrence. From the townships its stream displays a character of great wildness, and is both grand and impetuous in its course, hurrying through valleys between the lofty mountains, and fre-

quently dashing with violence over the precipices and immense fragments of rock that oppose its progress. The bed being extremely rocky, the great number of falls and rapids, and the vehemence of the torrent, particularly in the spring and after the autumnal rains, render it generally impassable for canoes or boats of any description. The banks are exceedingly high, and at intervals, for considerable distances, are formed of strata of limestone, or of granite rock that in many places are lofty, rugged, and majestic, partially displaying a few stunted pines in the interstices, or covered with creeping shubbery, but in many parts presenting only the frowning aspect of huge barren masses heaped perpendicularly one upon another. From the heights on each side of the river spread extensive forests, through which there are various paths traced out and kept open during all the changes of seasons by the Indians, and chiefly those of the village of Lorette, who consider the lands to an immense distance northwards as their hunting grounds. The general view along the course of the river is varied, picturesque, and extraordinary, presenting a thousand combinations of the grandeur, beauty, and wild magnificence of nature that stand unrivalled by that of any other country. In its course through the seig-

niory of St. Gabriel, it approaches within sixteen miles of Quebec; about nine miles before it reaches the St. Lawrence is the new bridge of Jacques Cartier. The stream is here precipitated over many large fragments of granite that occasion a perpendicular fall of considerable height, the effect of which is greatly increased by the incessant roar of the torrent as it forces its way through the hollows and excavations that by the lapse of time it has wrought for itself in the rocky bed and sides of the channel: from hence it flows with the same impetuous character, until its waters are lost in the current of the St. Lawrence. The River Jacques Cartier, viewed with a military eye, forms a most powerful natural barrier, and may be termed one of the outworks to the city and environs of Quebec; the velocity of the stream would make it extremely dangerous to attempt fording it; the height of the banks renders them inaccessible, except in a very few places, and those could only be ascended with much difficulty by a small number of persons at a time, which, with the numerous advantageous positions along the whole range of the river for posting a defensive force, would altogether constitute it a complete line of security; indeed, the French, after they were expelled from Quebec in 1759, retired behind this river, and

manifested some intention of establishing themselves in force upon its western bank, where they hastily threw up some works, under the persuasion that they could there remain safe for some time from the molestation of their conquerors on the Plains of Abraham. On the eastern side of the river, at a short distance before its confluence with the St. Lawrence, where the high bank receding considerably from the margin, leaves a rather extensive flat only a little elevated above the water's level, are some corn-mills, and several stores belonging to the heirs of the late Mr. Allsop of Quebec. They are the remains of a much greater and more valuable establishment that was nearly destroyed some years ago by fire; a large sum of money had been expended a short time previous to the accident to render it every way complete, and capable of carrying on a very extensive concern, and in which a flourishing progress had been made: since that period none of the buildings have been restored, consequently its importance is at this time greatly diminished. The main road passes along the front of the seigniory, and crosses the Jacques Cartier by a ferry, of about 160 toises broad, where, on account of the violence of the stream, the boats are traversed from side to side by means of hawsers stretched across; the

charge for each person is three-pence, for a horse six-pence, a horse and carriage nine-pence, and fifteen-pence for a carriage and two horses. The road, as it passes in the vicinity of the river and winds up the lofty banks, is exceedingly steep; but notwithstanding the difficulty and fatigue of it to passengers, it is much frequented, although there is another road from Quebec passing over Jacques Cartier bridge, that is something shorter in its distance, and by which almost all the inequalities of the ground are avoided. Less than one third of this seigniory is cultivated; some of the best farms are near the road that passes by the St. Lawrence, and on the south-west side, by the road leading from the bridge to the barony of Portneuf.

BELAIROF LES ECUREUILS (the seigniory of, and its augmentation), in the county of Hants, joins Jacques Cartier. It has its front to the St. Lawrence, is bounded on the north-east by Pointe aux Trembles, and in the rear by D'Auteuil; half a league in breadth by one league in depth; was granted November 3d, 1672, to the Sieurs Toupin, father and son. The augmentation, of the same breadth as the seigniory, and two leagues in depth, was granted January 20th, 1706, to Marie Magdeleine Mézérai, widow of Jean Toupin. Though composed of

a soil nearly similar to the front part of the seigniory of Jacques Cartier, Belair cannot vie with that property in fertility; but it is nearly all settled, and can show some neat, well-managed farms. The Jacques Cartier river crosses it diagonally, and it is otherwise watered by the Riviere aux Pommes, a pretty winding stream that flows into the former. The timber has been nearly all cleared off, and what little does remain is very inferior both in kind and value. Several roads cross this grant, having one intersecting them at right angles, that runs from the banks of the St. Lawrence up to the Jacques Cartier. The augmentation is generally mountainous, but the land is not of a bad quality. It is only partially cultivated near where it joins the seigniory: it is tolerably well timbered with beech, ash, maple, pine, and birch, and watered by the River Portneuf and some of its branches. The road from Jacques Cartier bridge crosses it, on each side of which there are a few neat settlements.

D'AUTEUIL (the seigniory of), in the county of Hants, is immediately in the rear of the augmentation to Belair, bounded on the north-east by Bourglouis, on the south-west by Jacques Cartier seigniory, and on the north-west by waste crown lands; half a league in breadth by four and a half leagues in depth;

granted February 15th, 1693, to the Sieur d'Auteuil. This mountainous tract is still in a state of nature, and indeed likely so to remain. It produces some good timber, and judging from the different species thereof one would conclude that the land is above mediocrity.

NEUVILLE, or LA POINTE AUX TREMBLES (the seigniority of), in the county of Hants, is bounded by the St. Lawrence in front, Belair and its augmentation on the south-west, Desmaure, Guillaume Bonhomme, and Faussembault on the north-east, and by Bourglouis in the rear; two leagues and three quarters in front by four leagues in depth; was granted December 16th, 1653, to Jean Bourdon, and is at present the property of the Reverend Mr. Descheneaux, Grand Vicar. Viewing this seigniority as the possession of an individual, it must be estimated as one of great value, above two thirds of it being under cultivation and very productive in grain, as well as almost every other species of growth natural to the country. The surface, as is the case almost invariably within several leagues of Quebec, is very uneven, rising from the St. Lawrence in a series of irregular ridges to the elevated banks of the Jacques Cartier: beyond which it is mountainous and abrupt. The soil in front is a lightish mixture of sand and black friable

earth, but advancing to the north-west it becomes much stronger, and soon changes to a fine loam, in some places pretty thickly strewed with stones: large masses of granite lie about in different directions as if rolled down from the heights, although there is scarce any trace of rock until reaching the bank of the Jacques Cartier river. The timber is for the most part very good; but between the two rivers not in great plenty, as the whole of that space is laid out in fruitful settlements; further back, beech, maple, pine, ash, and birch, are found in abundance. It is watered by several branches of the River Portneuf, the Riviere aux Pommes, that traces a beautiful meandering course through it, and the impetuous Jacques Cartier, besides many rivulets descending from the sides of the different ridges, the whole amply providing for the irrigation, particularly of the settled parts. Of the many roads that intersect the seigniory, the one in front of the St. Lawrence, one in the direct line from Quebec by the village of Capça to Jacques Cartier bridge, and another, striking from the St. Lawrence, about midway between the village of Pointe aux Trembles and Belair, to the same place, are the principal; the others open a convenient communication between the different concessions. The bridge itself deserves

notice for the easy lightness, and at the same time solidity of its construction; the natural high bank of the river on each side is finished by masonry into solid piers, from whence the arch, entirely of timber, forms a handsome segment raised to more than the ordinary elevation above the stream; its appearance altogether is well calculated to attract attention: near the west end of it is a small well-built cottage most romantically situated, wherein the collector of the bridge toll resides. The village of *Pointe aux Trembles*, consisting of about 25 houses, a church, parsonage-house, and what is termed a convent, is exceedingly well seated on a projecting point of the same name, rising but a few yards above the level of the *St. Lawrence*; it is backed by an amphitheatre of gently rising hills cultivated to their very summits, embellished by farm-houses mostly built of stone, surrounded by gardens and extensive orchards, affording in every direction, but from the river particularly, a rich, variegated, and pleasing *coup d'œil*. Many of the houses in the village are of stone, their inhabitants industrious and wealthy, which is also the case with most of the *habitans* of this seigniory. The convent is an establishment for female education, conducted by two sisters of the congregation of *Quebec*, who reside in it

as missionaries for disseminating religious and other useful knowledge. From the Point reaching nearly down to the seigniory of Desmaure runs a shoal called *La Batture de la Pointe aux Trembles*, thickly beset with rocks that are uncovered at low water.

BOURGLOUIS (the seigniory of), in the county of Hants, immediately in the rear of *Pointe aux Trembles*, is bounded on the south-west by *D'Auteuil*, on the north-east by *Faussembault*, and in the rear by waste lands; two leagues and three quarters in front by three leagues in depth; was granted May 14th, 1741, to *Sieur Louis Fornel*. This grant still remains in its natural state, no part whereof is cultivated, although the soil is tolerably good, being principally a strong loam. The timber is various, and among it is found ash, beech, birch, pine, and maple of good quality and large dimensions. It is watered by the River *Ste. Anne* towards the rear, and by many small streams that rise in the mountains southward of that river, and fall into the *Portneuf*.

DESMAURE, or ST. AUGUSTIN (the seigniory of), in the county of Hants, fronting the *St. Lawrence*, is bounded on the north-east by *Gaudarville*, on the south-west by *Pointe aux Trembles*, and in the rear by *Guillaume Bonhomme* and *Faussembault*. No official record

has been found relative to this grant, consequently its original date and precise dimensions are not known. *Les Dames Religieuses* of the General Hospital of Quebec, to whom the property belongs, in performing fealty and homage on the 19th March, 1781, produced as their title an act of adjudication, dated September 22, 1733; but which was still indecisive of its dimensions, no notice whatever being taken of the extent. By the regulation of the parishes of the province, it is designated as containing two leagues and a half in breadth, by one and a half in depth. With a surface varied and uneven, this seigniory possesses a rich and fertile soil, which on the large swells and high lands is a lightish loam, but in the hollows and valleys lying between them is generally a good black mould; the situation for all works appertaining to agriculture is so favourable, that full three-fourths of the whole is under tillage; the farms, and indeed the major part of the concessions appear to great advantage, and display many favourable specimens of careful husbandry. In proportion to the increase of cultivation, the quantity of timber has greatly diminished, and at present but little of a superior quality is standing: nor are the common kinds in much greater abundance. It is watered by the Riviere du Cap Rouge, which has its source

among the heights near the back boundaries. In the serpentine course it describes in passing diagonally through the seigniory, it sends off many small branches both to the right and left; the banks are elevated, but the eminence is attained by a very gradual slope, or it may be said more correctly, that it flows through a narrow valley abounding in natural beauties of the most picturesque kind, and possessing all the charms that can be looked for in the most artful landscape composition. Lake Calviere, about a mile and a half long, lying between La Riviere du Cap Rouge and the St. Lawrence, will always obtain a large share of admiration when viewed from the surrounding heights, where it presents a rich and diversified prospect, the margin being charmingly varied by cultivated lands, here and there broken by small woods and numerous clumps of trees, rising by gradations from the water's edge one above the other. The land bordering the St. Lawrence is the highest in the seigniory, from whence there is an alternation of ridges and valleys, the former diminishing in height as they approach the rear boundary, composing together a most agreeable undulation in the perspective scenery. This property is very conveniently crossed by roads in almost every direction, and most of them kept in good re-

pair: the one along the front is called the post road; another passing in the rear to Jacques Cartier bridge, is denominated the stage road; on each side of the Riviere du Cap Rouge a road leads to the seigniory of Pointe aux Trembles, with several intermediary ones connecting the principals: by the sides of each of them are many fine settlements, the houses well built, and the farms showing every appearance of comfort and even affluence. The church, seated on a point projecting into the St. Lawrence, a grist and a saw-mill upon a little branch of Riviere du Cap Rouge, between two lofty banks just where it discharges into the former, compose a pleasing point of view either from the Great River or the eminence just above the mills. An extensive shoal, or rather reef of rocks, bounds the whole front of the seigniory: the Islets Donbour lie upon this reef, opposite the south-west boundary.

GUILLAUME BONHOMME (the seigniory of), is situated in the rear of Desmaure, bounded on the south-west by Pointe aux Trembles, on the north-east by Faussembault, and on the north-west by the River Jacques Cartier; one league in breadth by two in depth; was granted November 24th, 1682, to Guillaume Bonhomme. This tract is uneven and mountainous; near Desmaure, which is the lowest and

most level part, the soil is a black mould; but receding from thence toward the Jacques Cartier, a light-coloured loam prevails, a good deal covered with loose stones: only a small portion of the land is in cultivation. The timber is both abundant and good, particularly on the high grounds towards the rear; but the irrigation is very sparing, as scarcely a stream or rivulet traverses the interior.

FAUSSEMBAULT (the seigniority of), in the county of Hants, is bounded on the north-east by Gaudarville and St. Gabriel, on the south-west by Guillaume Bonhomme, Pointe aux Trembles, and Bourglouis, on the south-east by Desmaure or St. Augustin, and on the north-west by waste lands. From St. Augustin to the Jacques Cartier it is only a narrow slip of land, three quarters of a league broad, and two leagues and a half deep; but beyond that river it spreads to a breadth of eight miles, with an additional depth of three leagues: it was granted February 20th, 1693, to Sieur de Gaudarville, and is now the property of Juchereau Duchenaye, Esq. That part of the seigniority lying between Gaudarville and Guillaume Bonhomme, though rather mountainous, and particularly so towards the river, is nevertheless of a good quality; the land rising gradually affords many opportunities for cultivation; the soil is a middling sort

of loam, or else a layer of black earth, of no great depth, upon a stratum of sand: on the settled places the farms exhibit an appearance of good tillage, and are by no means defective in fertility. There is a tolerable variety of timber; the maple, beech, and birch, are particularly good: inferior wood is in great abundance. Several roads lead to the adjoining seigniories on each side, and one from St. Augustin up to the Jacques Cartier, but there is scarcely a stream to be met with until reaching that river; from thence northward, it is a mountainous country, continually rising until it approaches the great north-westerly ridge; it is very well clothed with timber, but generally incapable of cultivation. In the ravines there are some small lakes; several of the little branches of the Portneuf have their sources on the skirts of the mountains.

GAUDARVILLE OR GUARDARVILLE (the seigniory of), in the county of Hants, has its front on the St. Lawrence, is bounded on the north-east by St. Gabriel, on the south-west by St. Augustin and Faussembault, and in the rear by Faussembault also; it is forty-five arpens broad by four leagues in depth; was granted February 8th, 1652, to Louis de Lauson, Sieur de la Citière. This grant consists of nearly the same species of soil as the preceding ones

of Desmaure and the lower part of Faussem-bault, though superior in its fertility and good cultivation. For a distance of nearly two leagues and a half from the St. Lawrence, it is entirely settled; but thence it becomes mountainous, with scarcely any part of it under tillage, though many patches appear to be tolerably good arable land. The front being thickly inhabited has but little timber standing, but further on good beech, maple, and pine are found in plenty. Its general fertility is aided by several little streams that trace a mazy course through it, and flow into the River St. Charles, and also by the lower part of the Riviere du Cap Rouge, mentioned in the seigniorship of Desmaure, which still preserves its character of being eminently beautiful and picturesque; it feels the attraction of the ebb tide of the St. Lawrence so strongly, that at low water its bed is nearly dry, and can be crossed with the utmost ease without the assistance of the ferry-boat; but at high-water boats of considerable burthen can enter it and ascend as high as the mill, about three quarters of a mile from the St. Lawrence; at its mouth is an established ferry where boats and scows are always ready, though, as before observed, they are not always necessary. On the west side of this river, near its discharge, there is a gradual slope from the

high bank down to a delightful and well cultivated valley extending almost to the River St. Charles, and joining the level tract of low land that spreads for a great distance in the rear of Quebec. This seigniory is intersected by numerous good roads in all directions; the main one by the St. Lawrence ascends several steep acclivities, especially in the vicinity of Cap Rouge, of which travellers seldom fail to feel the effect, particularly in the summer time.

SILLERY (the seigniory of), in the county of Quebec, is bounded by the River St. Lawrence in the front, Guadarville on the south-west, part of St. Ignace and several small grants on the north-east, and by St. Gabriel in the rear; one league broad by about one league and a half deep. This grant, originally forming part of the concession of St. Gabriel, was ceded to the King in 1664, and granted October 23d, 1669, to the Order of Jesuits: it is now the property of the crown. The bank of the river is very high, being the most elevated part of the seigniory, from whence there is a plain, varied with a few rising grounds, reaching to the road of Ste. Foi, northward of which for a short distance is an easy declivity, terminated by a steep descent into a valley that spreads nearly to the boundary of St. Gabriel, where again there is another gradual elevation. The soil is

very good near the St. Lawrence, consisting of a light reddish sandy earth intermixed with clay, in some places lying upon a bed of clay; in the vicinity of Ste. Foi there are many ledges of flat rock covered with a coat of excellent mould, but of no great depth; from the latter place on the slope already mentioned, it is a rich mould mixed with sand, with large quantities of loose stones strewed over its surface, and many massy fragments of granite lying about in various directions; in the valley, and on the rising ground towards La Vielle Lorette, there is some excellent meadow land: nearly the whole of the seigniory is cultivated, and extremely fertile in almost every variety of the productions of the country. Very little timber of a superior quality is now remaining, or indeed much wood of any description, except what is found in Sillery Wood, and a few other patches that appear to have been left in various parts as much for ornament as for use. Part of the River St. Charles passes through, and it is also watered by several small streams that wind along the valley in a very pleasing manner. At the place called Sillery Cove there is a plantation of hops, in a situation finely sheltered from every injurious wind, where the climate is friendly to their growth, and the soil admirably well adapted to their culture, which has been car-

ried on for some years with great success; the produce is not inferior to what is imported from England. Close by the plantation stand a malt-house, a brewery, and a dwelling-house, besides many other appendages, the property of Mr. Hullett, to whom the hop-grounds belong; the two former are entitled to some respect as being the venerable remains of an ancient chapel and some other buildings, erected in 1637 by the Jesuits, for the residence of a mission employed in their favourite undertaking of converting the natives to Christianity; the utter decay of these vestiges of zealous piety has been for a while suspended, as a few years since they were repaired and made applicable to their present uses. Not far from this spot the nation of the Algonquins had a village, and it is somewhat remarkable that in Sillery Wood there yet remains some of the *tumuli* belonging to their burying-place; and what is still more worthy of observation, some of their rude mementos carved on the trees are at this day sufficiently visible to be traced. In a hollow a little to the westward of Sillery Cove, on a gentle eminence now nearly overgrown with brushwood and creeping shrubbery, are the remains of a stone building, once the dwelling of a few female devotees, who, in imitation of the Jesuits, applied their religious enthusiasm

to convert and instruct the female savages. On the high bank to the westward bounding this cove is an elegant, well-built, stone house, the property of Mr. M'Nider of Quebec; the situation is commanding and agreeable: the style both of the exterior and interior of the residence deserves notice. Many roads in almost every direction form an easy communication with Quebec and all the surrounding seignories; of these, the one leading by the river side, one by the church of Ste. Foi, and another by the village of La Vielle Lorette, are the principal; on either side of each there are many well-built houses, with various plantations, and farms in a very advanced state of improvement, and strongly indicating the good circumstances of the proprietors. The front of the seigniori is indented by several coves, wherein, between the high bank of the river and the high water mark, there are level flats that afford most convenient situations for depositing, squaring, and sorting timber; and staves of all descriptions when prepared for exportation; and also beaches for receiving the rafts as they are brought down the river: these are called timber grounds. The principal of them is Sillery, or as it is now called Hullett's Cove, that gentleman having obtained from government a lease of the beach from Pointe à Puisseaux, up

to his present establishment. At a considerable distance from the high-water mark, a long reef of rocks forms a very convenient break-water, and resists the strong set of the current from reaching the logs, which are otherwise prevented from drifting away, by means of booms secured at different places, either by anchors and grapnels, or to ringbolts in the rocks as most convenient. Westward of this place is another inlet called Ritchie's Cove, and to the eastward another spacious timber-ground called Atkinson's, in each of which there are convenient booms and other securities: the former has the appearance of a small village, from the numerous huts erected for the workmen, &c. To these timber-grounds, the rafts intended for them are floated in at high-water through openings in the reef of rocks, and secured within the booms; they are then broken up, the timber sorted, and drawn ashore to proper spots either for seasoning, squaring, or reducing to standard dimensions for exportation.

SAINTE GABRIEL (the seigniory of), in the county of Quebec, is bounded on the southwest by Gaudarville, Faussembault, and waste crown lands, on the north-east by St. Ignace, in the front by Sillery, and in the rear by waste crown lands; two leagues in breadth on

the front, but as the lateral boundaries do not run parallel, its breadth in the rear is more than four leagues ; its depth is ten leagues ; granted April 16th, 1647, to Sieur Giffard, and is now the property of the crown. Of this tract two leagues and a half were granted March 13th, 1651, to the Hurons inhabiting the village of La Jeune Lorette, and the remainder transferred by donation on the 2d November, 1667, to the Order of Jesuits, by Sieur Giffard. The lower part of this seigniory is good fertile land, the soil in general a fine black mould ; near the first mountains, and in the vicinity of Lake St. Charles, it is a light loam ; the remainder, and much the largest portion of the grant, is so extremely rough and mountainous, as to be wholly unfit for agricultural purposes. Timber about the front is rather scarce, of inferior size and little value ; but on the sides of the rising grounds, and in the interior, beech, maple, and birch, are abundant, and some pine, and now and then a little good oak may be found. The River St. Charles bends a most picturesque course from south-east to north-west, for nearly two leagues along the lower part of the seigniory, and receives the waters of several small tributary streams that completely answer the purposes of irrigation. The Rivers Jacques Cartier, St. Anne, and Batis-

can, cross it at different points between the mountains. To a distance of about six miles from the front, all the land is in a flourishing state of cultivation, every where interspersed with well-built houses, good gardens and well stocked farms: beyond this part a wilderness spreads on every side, dreary and untrodden by human beings, except the Indians in their hunting excursions. The church and parsonage of St. Ambroise, the church of La Vielle Lorette, the church and village of La Jeune Lorette, one grist-mill and one saw-mill, are all within this grant; roads in every direction communicate with Quebec and the surrounding seigniories. The Indian village of La Jeune Lorette is between eight and nine miles from Quebec, situated on the eastern side of the River St. Charles, upon an eminence that commands a most interesting, varied, and extensive view; the city and environs of Quebec, always beautiful in whichever way they are seen together, form a prominent part of it, but it extends widely over the southern shore, and is terminated only by the softened forms of the southern mountains. The number of houses is between forty and fifty, which on the exterior have something like an appearance of neatness; they are principally built of wood, although there are some few of stone. The inhabitants

are about 250, descendants of the tribe of the Hurons, once so formidable even to the powerful Iroquois, until by stratagem, in which consists much of the glory and self-applause of the savage, the latter, under the specious pretence of alliance, obtained the confidence of their opponents ; when, by an indiscriminate massacre, their whole race was nearly extirpated. The few who escaped with life fled towards the habitations of civilized man, and established themselves among the forests in the rear of Quebec, many hundred miles distance from the land of their ancient tribe on the borders of Lake Huron ; by the efforts of the Jesuits they were gradually drawn nearer to Quebec, and every exertion made to reclaim them from savage life. At present they nearly resemble the other tribes already mentioned, though perhaps in a small degree superior to them in some of the acquirements of civilized life ; but as a counterbalance of evil, their contiguity to the capital affords them numerous opportunities to indulge in many vicious propensities, that they are eager enough to avail themselves of. The Curé of St. Ambroise officiates as missionary among them, and has obtained a considerable influence in religious affairs. In their worldly concerns, as they speak the French language with tolerable fluency, they are sufficiently shrewd, and know

how to take care of their own interests. The church of La Vielle Lorette is pleasantly situated on the western side of a little branch of the River St. Charles, on a rising ground, and nearly surrounded by a grove of small but handsome pine-trees. The parsonage-house is the residence of Mr. Deschenaux, the Grand Vicar, and Curé of the parish: this gentleman, who is well known and highly esteemed by a numerous circle of friends, both Catholic and Protestant, of the first rank, has exerted his well known good taste to great advantage upon the gardens and other embellishments of the place, which are on a scale of liberality quite in unison with the general hospitality of his character.

ST. IGNACE (the seigniory of), in the county of Québec, is bounded in front by the River St. Charles, on the south-west by Sillery and St. Gabriel, on the north-east by L'Épinay and the township of Stoneham, and in the rear by the seigniory of Hubert; half a league in front by ten leagues in depth; was granted October 20th, 1652, to the community of the Hotel Dieu, to whom it still belongs. With respect to the quality of land and peculiarities of soil, there is a strong affinity between this and the seigniory of St. Gabriel; the lower part is rich, fertile, and well cultivated for more than

two leagues towards the Lake St. Charles, in which tract many farms are extremely productive in grain of all species. On some of the lands flax is cultivated with great success; on the River St. Charles the pastures and meadows are so fine as scarcely to be rivalled by any in the province: beyond the lake the country assumes a mountainous and barren character, affording no land upon which industry could be exerted with any hopes of success in the way of agriculture. On the lower part of the seigniory the little timber that remains is of inferior dimensions, and confined to small woods and patches here and there; but in the vicinity of Lake St. Charles and further rearward, a great abundance of the finest sort is produced. The Rivers Jacques Cartier, St. Anne, and Batis-can, cross it in the intervals between the different ranges of mountains, while the cultivated part is exceedingly well watered by the River and Lake St. Charles, aided by many small streams. The lake affords one of the most exquisitely picturesque scenes in the whole province; it is a narrow irregular figure, rather more than four miles in length; about midway a projecting point stretches nearly across, and leaves only a narrow strait by which the almost separated waters communicate: situated in a low flat country, it is entirely surrounded by

hills of considerable elevation, covered with thick woods; these are again greatly overtopped by more distant mountains that rise very abruptly to the northward. The margin presents an appearance at once wild, romantic, and delightful; the devious course of the low banks forms numerous little bays and headlands, where the trees to the water's edge complete, by the variety of their foliage and gradation of size as they rise upon the different slopes, one of the richest views that can delight an admirer who prefers a prospect adorned only by the hand of nature to one heightened by the devices of art. This charming panorama is rather more than four leagues from Quebec, and during the spring and summer is frequently visited on account of its arcadian beauty: the road leading to it passes all the way by the side of the River St. Charles, and by its embellishments greatly heightens the satisfaction of those who make the excursion, and from whence no one returns without ample gratification.

L'EPINAY (fief), in the county of Quebec, joins St. Ignace, is bounded by the River St. Charles in front, and the township of Stoneham in the rear; eleven arpens in breadth by four leagues in depth; was granted February 28th, 1626, to Louis Hebert.

D'ORSANVILLE (another fief), on the north-

east side of L'Epinaÿ, is a small grant containing only a superficies of 3575 arpens; made — May, 1675, by Letters Patent from the King to the *Religieuses* of the General Hospital of Quebec; and from whom it has never been alienated. The land in both these pieces is of the same character, being a light sandy earth intermixed with clay about the front part; proceeding inwards it changes to a black mould, and in the vicinity of the mountains it is a good yellow loam: from the River St. Charles the surface is uneven, and continues ridge above ridge to the rear, where it is more abrupt and broken. Near the river there are fine meadows and pastures in both grants; of the arable, about one half is in a state of very good culture, producing wheat and other grain abundantly, with garden vegetables in great quantity and variety for the consumption of the city. The lower parts are but scantily timbered; but on the rising grounds, and on the skirts of the mountains, there is a profusion of fine beech, maple, birch, and other woods of the best description. The little River Jaune, and several small streams, all flowing into the St. Charles, amply and conveniently water the cultivated lands.

HUBERT (the seigniory of), in the county of Quebec, is situated in the rear of the seigniories

of St. Gabriel and St. Ignace; and from its remoteness entirely surrounded on the other sides by waste crown lands; two leagues in breadth by as many in depth; was granted June 10th, 1698, to Sieur René Louis Hubert. Being so far northward of all the cultivated lands, the quality or worth of this seigniory is wholly unknown; even the timber upon it seems never to have been deemed an object deserving enquiry.

NOTRE DAME DES ANGES (the seigniory of), in the county of Quebec, is situated between D'Orsanville and Beauport, bounded in front by the Rivers St. Charles and St. Lawrence, and in the rear by the township of Stoneham; one league broad and four leagues deep; was granted 10th March, 1626, to the Order of Jesuits; and like their other properties, now reverted to the crown. Within this seigniory the greater part of the land is of a superior quality, and equally pre-eminent for its fertility: about the front it is a good rich earth mixed with clay or sand; beyond this sort, and more to the interior, there is a fine black mould, much drier and more friable than the former; in the rear a good loam prevails; the surface is uneven; and from a fine flat near the river, rises into ridges by easy gradations to the back boundary; and, thereabouts, becomes

broken, rough, and mountainous. Of the whole superficies, about two-thirds are in the best state of cultivation, and exceedingly well inhabited. The flat space near the river is called La Canardiere, and is wholly employed as meadows and pasture; the former produce abundant crops of hay of superior quality. The arable lands are very fruitful in grain of all kinds, besides which there is a considerable quantity laid out as garden ground, where vegetables of every description and great excellence are raised for the supply of the capital. The most cultivated parts are sparingly timbered, presenting only occasionally reserves of wood, where the trees are of inferior dimension and of little estimation, but they embellish the country agreeably enough; in the rear wood is abundant, and the land is conceded to the inhabitants in small portions for the purposes of fuel and other domestic uses, of which, exclusive of their own consumption, they continually supply large quantities for the use of Quebec. The beach of the St. Lawrence, in front of the seigniory, is occupied as timber ground, and furnished with extensive booms and every necessary means of securing the timber. The village of Charlebourg is pleasantly situated on a rising ground of considerable eminence, about a league to the northward of Quebec,

and consists of about forty well-built houses, mostly of a respectable appearance, with a handsome church and parsonage-house. A good garden and small orchard are the appendages of every dwelling. The elections of members of parliament for the county are always held here. A little below the village, on the skirts of a small rising ground on the north side of a concession or cross road, stands a small group of handsome houses, usually called the Little Village, which does not yield in beauty of situation to the other. Of two roads leading from Dorchester bridge, the one on the left hand is called *Le Chemin de Charlebourg*, and the other *La Canardiere*, or *Le Chemin de Beauport*; on the latter there is a succession of good houses, excellent gardens, and farms in a high state of cultivation. Two houses of superior elegance, belonging to the Honourable P. Debonne, usually attract notice, by the advantages of a good style of architecture and excellence of situation, their beautiful gardens, and surrounding shrubberies and plantations. There is also a very spacious house belonging to the Ecclesiastics of the Seminary of Quebec, generally distinguished by the appellation of *La Maison des Prêtres*; it is retained in their own hands as a farm, and

also serves as a place of recreation for all the members of the establishment once a week.

BEAUPORT (the seigniory of), in the county of Quebec, is bounded on the north-east by the Cote de Beaupré, on the south-west by Notre Dame des Anges, on the front by the St. Lawrence, and in the rear by the township of Stoneham; one league broad by four leagues deep; was granted December 31, 1635, to Robert Giffard, Sieur de Beauport; but by that concession its depth was limited to one league and a half; on the 31st March, 1653, the other two leagues and a half were added to it: it is now the property of Monsieur Duchesnaye. The surface of this seigniory embraces a variety similar to those that surround it, being intersected by ridges of different heights; between the first rise of the ground and the beach of the St. Lawrence, there is a level space ranging the whole breadth of the grant, occupied as meadows, pastures, or gardens; the soil is black mould intermixed with clay or marl: on this flat there are many large globular fragments of granite quite detached, and lying loosely on the surface. From hence, penetrating further to the interior, the soil varies considerably, almost as frequently as the inequalities of the land; on the front ridge, where the road passes, there

are flat ledges of rock, that in some places for a considerable extent are quite bare, and in others but very superficially covered with a layer of earth; more inward these rocks disappear, and are succeeded by a dark mould, or else a yellowish loam, which continues to the skirts of the mountains. On the fore parts of the seigniory there remains but little wood; in the interior, however, and on the heights, the timber is of the best quality, beech, birch, and maple. It is watered by the River Montmorenci on the north-east side, by the Petite Riviere de Beauport, and by many small streams falling into the St. Lawrence, and forming rivulets along the beach at low water: about two leagues from the front there is a small lake, and at a short distance further on the River Jaune; some small mountain streams flow between the different ridges. The cultivated land extends about six miles from the St. Lawrence, and is for the most part in a state of excellent tillage, producing all kinds of grain abundantly, vegetables, &c. &c. In various parts of the seigniory there are quarries of stone, that furnish an excellent supply for the new buildings in the city and in the neighbourhood; there are also in many places indications of veins of coal, but no attempt has yet been made to work them. A large quantity of maple sugar is made here;

and indeed in all the adjoining seigniories ; the process of obtaining it may be described in a few words. In the spring, when the sap begins to rise in the trees, the *habitans* repair to the woods, furnished with kettles, troughs, and all the necessary apparatus for carrying on the manufacture, where they form a temporary encampment: the mode of collecting the sap is by making an incision in the tree, into which is inserted a thin bit of stick to serve as a conductor, from whence, an hour or two after sunrise, the sap begins to trickle down into a trough placed to receive it ; when a sufficient quantity of this liquor is obtained from several trees, it is put into an iron kettle and boiled, until it comes to the consistence of a thick syrup ; it is then cooled, and afterwards subjected to another process of boiling and clarifying. When this is sufficiently performed in proportion to the degree of purity they intend to give it, it is put into vessels of different sizes to harden, containing from half a pound to eight or ten pounds. Its colour is of all shades between a dark and a light brown, according to the care that is taken in clarifying it ; indeed, by a repetition of the process it may be rendered as white as common refined sugar. Being considered very wholesome, the use of it is general among the country people for all purposes, and

the consumption of it is considerable in families of respectability for ordinary occasions; the price of it varies from three pence halfpenny to six-pence per pound. It is constantly to be had in the market of Quebec. The roads communicating with the adjacent grants are enlivened by houses and gardens at short intervals from each other, throughout nearly their whole distance. On the road leading to the capital, the populous village of Beauport is situated on a gently rising ground; it contains from sixty to seventy houses, many of them built of stone, and distinguished by great neatness in their exterior appearance; the church and parsonage-house are situated on the south side of the road; the former is much more observable for its solidity than for beauty or embellishment: regularity and neatness are prevalent through the whole village. On each side of the road also, the farm and other houses are so thickly placed, that they seem to be a prolongation of the place itself; the farm-lands and garden-grounds, all in a most flourishing state; the orchards and occasional clumps of trees, all combine to render it one of the most pleasant roads in the environs of Quebec. This village is the residence of many families of the first respectability, besides tradesmen, artisans, and farmers. Westward of the church, on

the declivity of the hill, stands a manor-house, an ancient irregular stone building, designed originally for defence as well as residence: the extraordinary thickness and solidity of the walls, were it perceptible from the exterior, would attract notice; but its other advantages are not of a nature to solicit a passenger's observation. A little to the westward of this house, and on the bank of the River Beauport, are the distillery and mills, erected about twenty-five years ago by the Honourable John Young at a very great expense; they are seated on the western bank of the river, over which there is a bridge leading past them; the former belongs at present to Mr. Racy, and the latter to Mr. M^c Callum. The buildings and other appurtenances of the distillery form a hollow square exceeding two hundred yards on each side: in the middle of this square are several large stone buildings communicating with each other, and containing a still-house, malt-house, granary, machinery, &c. of every description for carrying on the whole process of distillation and rectifying to a very large extent. The River Beauport is navigable as high up as these premises, for small decked vessels that can come along the wharf adjoining. The gentleman who built these works was also proprietor of an extensive brewery at St. Roch's, in both

of which concerns he gave employment for some years to several hundred persons; but they were found to have been undertaken upon too great a scale for the consumption of the province at that period. Mr. Young's abilities were of a superior class, and having attracted the notice of Lord Dorchester when Governor-General, procured for him the nomination to a seat in the executive council, wherein, as well as in the provincial government, of which for three or four sessions he was a distinguished member, his talents were always exerted in favour of measures calculated for the benefit and interest of the province. The mill is both extensive and complete, in a building three stories high; the water for working it is received from the Beauport into a large reservoir or dam above the road, from whence it is conveyed to the mill by an aqueduct. On an eminence to the north-eastward are two handsome stone dwelling-houses with gardens and summer-houses, surrounded by a wall; from their singularly beautiful situation, and the rich prospect they command over the basin of Quebec and surrounding distant objects, they obtain much notice: the Honourable H. W. Ryland is proprietor of both. The Falls of the Montmorenci present the most majestic spectacle of the neighbourhood, and indeed one of

the grandest in the province; they have been frequently described, and with so much correctness, that a slight notice of them may now suffice. The river, in its course through a country that is almost a continued forest, rolls a stream of very trifling consequence, unless when swelled by the melting snow in spring, or autumnal rains, over an irregular broken rocky bottom, until it arrives at the precipice, where its breadth is from sixteen to twenty yards. A little declination of the bed before it reaches this point gives a great velocity to the stream, which, in being impelled over the brink of a perpendicular rock, falls in an extended sheet of water, of a whiteness and fleecy appearance nearly resembling snow, into a chasm among the rocks two hundred and forty feet below. An immense spray rises from the bottom in curling volumes, which when the sunshine displays their bright prismatic colours, produce an effect inconceivably beautiful. At the bottom of the fall the water is restrained within a basin formed by the rocks, from whence, after its impetuosity is subdued, it flows in a gentle stream into the St. Lawrence, a distance, perhaps, of two hundred and eighty or three hundred yards. The summer-house built by the late General Haldimand, and mentioned by Mr. Weld and others for its appalling situation

as projecting over the great precipice, still remains: if it be true that at the time of his visit the beams had begun to feel the gnawing tooth of time, they must be now in a very precarious state; indeed, it would be prudent to have it removed immediately, rather than allow it to fall by its natural decay; for while it keeps its present position, curiosity will attract many an unwary visitant, and perhaps ultimately produce a fatal catastrophe. The provincial parliament has recently passed an act for erecting a bridge across the Montmorenci. The houses, farms, &c. near the river, formerly the property of General Haldimand, now belong to — Patterson, Esq. From Dorchester bridge, passing towards the falls, some traces yet remain of the field fortifications thrown up by the French in the memorable year 1759, as a defence against the British army. Along the beach there is a road at low water, which, when practicable, is always preferred by the country people, passing with their carts and sleighs to and from market, not only because it is rather shorter than the high road, but for the much more important reason of its saving the toll at Dorchester bridge.

The description of the various seigniories on the north side of the River St. Lawrence having brought us close down to Quebec, an account

of that capital may be appropriately introduced. Some notice has been taken already of its situation and convenience as a sea-port, in the observations that have been made upon the River St. Lawrence; but it will perhaps be excused, should the same points be again adverted to in giving a detailed description of the city, &c. From the time that Cartier visited Canada, up to the period that the concerns of the colony came under the superintendance of Champlain, (about seventy years), the French settlers and adventurers were dispersed over various parts of the sea-coast, or islands in the Gulf of St. Lawrence, as each, or a few together, discovered convenient places to fix their habitations in; during that time none of them had attempted to settle on or near the Great River. The selection of a situation and building a town, wherein the benefits and habits of social life might be enjoyed, and from whence the management of the trading intercourse with the natives, and the government of the colony, could be more advantageously carried on than what they hitherto had been, was reserved for Samuel de Champlain, Geographer to the King: acting under a commission from the Sieur de Monts, (who a little while before had obtained from the court of France the exclusive privilege of trading between Cape

Raze in Newfoundland, and the fortieth degree of north latitude), he in 1608 made choice of the site of an Indian village called Stadaconé, upon the promontory, now named Cape Diamond, and there, in the month of July, laid the foundation of the metropolis of New France, which has through many vicissitudes risen into importance, and at the present day maintains a distinguished rank among those of the greatest consequence on the northern division of the new hemisphere.—No less difference of opinion has arisen as to the origin of its name, than about that of Canada; and the result of the disputes has not been more satisfactory in fixing its derivation: whether it comes from the Algonquin, Abenaki, or Norman languages, to each of which conjecture has assigned it, we have not the means of verifying; nor is it indeed very material: it is enough to know that Champlain called his new town Quebec. The progress of its aggrandisement there is much reason to believe was slow; for the new settlers, and indeed Champlain at their head, were not only so impolitic as to encourage the prosecution of hostilities between the two neighbouring nations of the Algonquins and Iroquois, but even to join the former against the latter. This interference drew upon the French the hatred of the powerful Iroquois, and was the means of involving the whole colony in a long and

most destructive warfare; which, at an early period, rendered some defensive fortifications necessary to protect Quebec from the enmity of her new, but implacable enemies. The defences were at first of the rudest description, being nothing more than embankments, strengthened with palisades. In 1629 it was in an untenable state against the English, and fell into their hands; but, with the whole of Canada, was restored to its former master in 1632. From this period some attention was paid to the increase of the town, until 1663, when the colony was made a royal government, and it became the capital. Its progress towards prosperity was then somewhat accelerated.

From its growing importance, the English were desirous to recover possession of the place that a few years before, there would scarcely have been started an objection against their retaining, and made an unsuccessful, because ill-timed attempt, in the latter part of the year 1690, to reconquer it, which was attended with a disastrous result, and a severe loss. As the place obtained consequence, and became an object of desire to other and far more powerful enemies than the native savages, it was in the last mentioned year fortified in a more regular manner by works according to the rules of art, built of stone, which, from that period,

have been carefully attended to, and by continual additions and rebuildings, are now improved into bulwarks that may stand in competition with some of the best constructed and strongest fortifications of Europe. From 1690 the increase was gradual while it remained under the French government; but since that period its progress towards prosperity has been much more rapid. The situation of Quebec is unusually grand and majestic, in form of an amphitheatre; it is seated on a promontory on the north-west side of the St. Lawrence, formed by that river and the St. Charles: the extremity of this headland is called Cape Diamond, whose highest point rises three hundred and forty-five feet above the level of the water; it is composed of a rock of grey granite mixed with quartz crystals (from which it obtains its name), and a species of dark-coloured slate; in many places it is absolutely perpendicular and bare; in others, where the acclivity is less abrupt, there are patches of brownish earth, or rather a decomposition of the softer parts of the stone, on which a few stunted pines and creeping shrubs are here and there seen; but the general aspect of it is rugged and barren. From the highest part of the Cape, overlooking the St. Lawrence, there is a declination towards the north by flattish ridges of a gradual decrease, as far as

the steep called Coteau Ste. Genevieve, from whence the descent is more than one hundred feet nearly perpendicular; at the foot of it the ground is level, and continues so as far as the River St. Charles, and in fact far beyond it. The distance across the peninsula from one river to the other, in front of the line of fortification, is one thousand eight hundred and thirty-seven yards; these fortifications may be called the *enceinte* of the city, and the circuit within them upon which it stands is about two miles and three quarters; out of this space forty acres or thereabouts on Cape Diamond are occupied by or reserved for military works. From the Cape in a north-easterly direction, there is an easy diminution in the height of the rock of about one hundred and fifteen feet to the Castle of St. Louis and the grand battery, that crests a perpendicular steep of two hundred and thirty feet above the level of the river, overlooking the lower town. This altitude and frowning appearance continues with very little alteration round the town as far as the entrance called Palace Gate, where it sinks to the ridge already mentioned at the foot of Coteau Ste. Genevieve, and continues its course at nearly the same elevation, through the parish of St. Foi, connecting itself with Cape Rouge, and forming between the River St. Lawrence, the valley

through which the St. Charles flows, and that under Cape Rouge, an height of land about eight miles long, rising above the general level, like an island above the surface of the ocean. The city, beside the distinction of Upper and Lower Towns, is divided into domains and fiefs, as the King's and Seminary's domains; Fief St. Joseph; ground belonging to the Hotel Dieu; the Fabrique, or church lands; and the lands that formerly belonged to the Order of Jesuits: these, with the military reserves, constitute the principal divisions, in which the suburbs are not included. In the year 1759 the population of Quebec was estimated between eight and nine thousand; at present, including the suburbs, it is about 18,000. The public edifices are the Castle of St. Louis, the Hotel Dieu, the convent of the Ursulines, the monastery of the Jesuits, now turned into barracks, the Protestant and Catholic cathedrals, the Scotch church, the Lower Town church, the court-house, the seminary, the new gaol, and the artillery barracks; there are two market-places, a place d'armes, a parade, and an esplanade. Of these buildings the Castle of St. Louis, being the most prominent object on the summit of the rock, will obtain the first notice: it is a handsome stone building, seated near the edge of a precipice, something more than two

hundred feet high, and supported towards the steep by a solid work of masonry, rising nearly half the height of the edifice, and surmounted by a spacious gallery, from whence there is a most commanding prospect over the bason, the Island of Orleans, Point Levi, and the surrounding country. The whole pile is one hundred and sixty-two feet long, by forty-five broad, and three stories high; but in the direction of the Cape it has the appearance of being much more lofty: each extremity is terminated by a small wing, giving to the whole an easy and regular character: the interior arrangement is convenient, the decorative part tasteful and splendid, suitable in every respect for the residence of the governor-general. It was built shortly after the city was fortified with solid works, consequently had but little to recommend it to notice: for a long series of years it was neglected so much as to be suffered to go to decay, and ceasing to be the residence of the commander-in-chief, was used only for the offices of government until the year 1808, when a resolution passed the provincial parliament for repairing and beautifying it; the sum of £7000 was at the same time voted, and the work forthwith commenced. The money applied was inadequate to defray the expenses upon the grand scale the improvements were

commenced, but an additional grant was made to cover the whole charge; and in the present day, as a residence for his Majesty's representative, it is highly creditable to the liberality and public spirit of the province: Sir James Craig was the first who took possession of it. The part properly called the Chateau occupies one side of the square, or courtyard; on the opposite side stands an extensive building, divided among the various offices of government both civil and military, that are under the immediate control of the governor; it contains also a handsome suite of apartments, wherein the balls and other public entertainments of the court are always given. During the dilapidated state of the Chateau, this building was occupied by the family of the governors. Both the exterior and the interior are in a very plain style; it forms part of the curtain that ran between the two exterior bastions of the old fortress of St. Louis; adjoining it are several other buildings of smaller size, appropriated to similar uses, a guard-house, stables, and extensive riding-house. The fortress of St. Louis covered about four acres of ground, and formed nearly a parallelogram; on the western side two strong bastions on each angle were connected by a curtain, in the centre of which was a sallyport; the other faces pre-

sented works of nearly a similar description, but of less dimensions. Of these works only a few vestiges remain, except the eastern wall, which is kept in solid repair. The new guard-house and stables, both fronting the parade, have a very neat exterior: the first forms the arc of a circle, and has a colonnade before it; the stables are attached to the riding-house, which is spacious, and in every way well adapted for its intended purpose; it is also used for drilling the city militia. On the south-west side of the Chateau there is a most excellent and well stocked garden, one hundred and eighty yards long, and seventy broad; and on the opposite side of Rue des Carrieres there is another, one hundred and seven yards long by eighty-four broad, both for the use of the governor: the latter was originally intended for a public promenade, and planted with fine trees, many of which yet remain.

The court-house on the north side of St. Louis Street is a large modern stone structure, the roof of which is covered with tin; its length is one hundred and thirty-six feet, and breadth forty-four, presenting a regular handsome front, approached by a flight of steps leading to an arched entrance, from whence a vestibule on each side communicates to every part of the

building. The ground floor apartments are disposed for holding the quarter sessions, and other inferior courts, offices of clerks of the different courts of law, &c. &c. Above stairs there is a spacious chamber, in which the courts of King's Bench and Common Pleas, the Court of Appeals, and the Admiralty Court are held, with separate offices for the high sheriffs and other magistrates, and a room for the occasional convening of militia courts-martial. In the same building is the hall and offices of the corporation of the Trinity-house of Quebec, established by an act of the Provincial Parliament in the 45th year of George the 3d. The embellishments of this edifice, both interior and external, are in a style of simplicity and neatness; the arrangements for public business methodical and judicious; the whole may be considered a great ornament to the city, and does honour to the liberality of the province, thus to provide for the easy and expeditious administration of justice. It occupies part of the site upon which stood an old monastery, church, and garden of the Recollets, destroyed by fire in the year 1796: it was at one time a very extensive establishment, covering the whole space between the parade, Rue des Jardins, de St. Louis, and de Ste. Anne; the order is now extinct in Canada.

The Protestant Cathedral is situated near the court-house; and parallel with Ste. Anne Street: it is one hundred and thirty-six feet long, by seventy-five broad, built of a fine grey stone, the roof covered with tin, which, being continually bright, gives a remarkable appearance of lightness and elegance to the whole structure; it occupies part of the ground of the Recollets, or Franciscans. This is, perhaps, the handsomest modern edifice of the city, and though not highly decorated, the style of architecture is chaste and correct; in the interior, a neat and unostentatious elegance prevails, wherein ornament is judiciously but sparingly introduced. There is a principal entrance at each end of the church, approached by a flight of steps: the fitting up of the inside is commodious and handsome, corresponding with the unassuming beauty of the whole. The organ is of a very superior power. The spire is lofty, light, and elegant, being covered with tin, and the church standing upon nearly the highest ground within the city, is a very conspicuous object at an immense distance; taken altogether, this is the most faultless structure in the place, or indeed within the whole province.

The Catholic Cathedral stands on the north side of Buade Street, fronting the market-

place, on ground belonging to the Fabrique, or in other words, church-land. It is a lofty, spacious, plain stone edifice, two hundred and sixteen feet in length, by one hundred and eight in breadth: the interior is divided by ranges of arches into a nave and two aisles; at the upper end of the former is the grand altar, placed in the middle of a circular choir, that for the height of about sixteen feet is lined with wainscot divided into square compartments, each including a portion of Scripture history represented in relief; the spaces between the squares are wrought into different devices. In the side aisles there are four chapels, dedicated to different saints. Being whitewashed, the interior has always the appearance of neatness and cleanliness. On the outside, the solidity of the building may perhaps attract a spectator's notice; but nothing like taste in design, or graceful combination of architectural embellishment, will arrest his attention. The steeple is lofty, with an air of lightness not altogether devoid of beauty, and like the roof, is covered with bright tin; but for some cause, that perhaps could only be traced to an affectation of singularity, it sets the rules of art and symmetry at defiance, and instead of springing from the roof, it is placed on one side of the front. The church is dedi-

cated to Notre Dame de Victoire, and is sufficiently spacious to contain a congregation of about 4000 persons. A few years ago it was not equal to the accommodation of the increased population; but the erection of galleries has, for the present, remedied that inconvenience. The organ is an excellent one. The presbytery is the residence of the curate and four vicars of the cathedral, and has a covered avenue leading from it to the church; there is also a similar one between the church and the seminary.

The extensive building called the Seminary of Quebec stands near the cathedral, and is within the precinct of the seminary's domain, occupying with its attached buildings, courtyard, gardens, &c. a large space of ground. It is a substantial stone edifice, principally two stories high, though some portions of it have been raised to three: it forms three sides of a square, each about seventy-three yards in length, with a breadth of forty feet; the open side is to the north-west. This establishment, originally intended for ecclesiastical instruction exclusively, was founded in the year 1663, by M. de Pétré, under the authority of letters patent granted by the King of France; the early regulations have long been departed from, and at present students of the Catholic persuasion,

intended for any profession, may enjoy the advantage of it. It is divided into two branches, distinguished as the Grand and Petit Seminaire. The studies of the superior department are conducted under the superintendance of M. Robert, who is himself professor of philosophy, three directors, and a competent number of professors in the different branches of literature and science. The ability and zeal of these gentlemen are sufficiently attested by the great number of pupils who have been dismissed from under their care, possessing every accomplishment of a learned, liberal, and polished education. M. Parent is director of the Petit Seminaire, which is exceedingly useful as a general school, wherein great numbers are educated free of expense, excepting only the trifling sum of five shillings per year as a compensation for fuel; boarders are also received on the very moderate pension of twelve pounds ten shillings per annum. The interior plan of this structure is judicious, and the arrangement very convenient: it contains all requisite domestic apartments, halls for the senior and junior classes, residences for the superior, directors, professors, and different masters. The situation is airy and salubrious; the house is surrounded by large productive gardens, enclosed by a wall, and extending in depth to

the grand battery, where it overlooks the harbour: the length is one hundred and seventy-two yards, and the breadth two hundred. It is well laid out and ornamented by many handsome trees. In the year 1703, the whole of the buildings belonging to the seminary were destroyed by fire, and no time was lost in replacing them; when, unfortunately, they again fell a sacrifice to a similar calamity in 1705. The Catholic Bishop of Quebec has fixed his residence in the seminary, where he lives surrounded and respected by his clergy, and not less esteemed by the laity of all persuasions for his learning, piety, and urbanity. The Hotel Dieu, including under that name the convent, hospital, church, court-yard, cemetery, and gardens, contains within its walls a space of ground extending from the French burying-ground, or Cimetiere des Picotés, to the Rue des Pauvres, or Palace Street, a length of two hundred and ninety-one yards by a depth of one hundred and ninety-six from Couillard Street to the rear wall. This establishment, for the reception of the sick poor of both sexes, was founded by the Duchess D'Aiguillon, in 1637, through whose charitable zeal some nuns were sent from France for the purpose of commencing it, and superintending its progress. The principal structure is three hundred and

eighty-three feet in length, by fifty in breadth; from the centre on the west side, a *corps de logis* ranges a length of one hundred and forty-eight feet, and of a proportionate breadth: the whole is two stories high, substantially built of stone, with more regard to interior convenience than attention to symmetry, and totally devoid of architectural decorations. It contains the convent, hospital, and nearly all the domestic offices. The church, about one hundred feet in length by forty in breadth, facing the Hotel Dieu Street, has nothing to recommend it to notice but the plain neatness of both its interior and exterior. The convent contains the residence of the superieure, and accommodations for all the sisters of the congregation. The hospital is divided into wards for the sick, wherein both sexes receive nourishment, medicine, and attendance, free of all expense. This charitable institution produces extensive benefit to the community, and continually affords relief to great numbers suffering under the accumulated oppression of disease and poverty; the funds by which it is supported are derived from landed property within the city, from whence it is entitled to all *lods et ventes*; also from the revenues of some seigniories that have been granted to it; and although these are considerable, yet, from the

liberality and extensive nature of the disbursements, the expenditure so nearly balances the revenue, that it requires, and occasionally receives, grants of public money. The whole administration, care, and attendance of the establishment, are conducted by a superieure, La Reverende Mere Ste. Claire, (Venerande Melançon), and thirty-two sisters, to whose zeal in the offices of humanity must be attributed the state of comfort, cleanliness, and good arrangement, that invariably obtains the encomiums of every stranger who visits the institution.

The Ursuline Convent is situated a short distance to the northward of St. Louis Street, within the fief of St. Joseph, a property that belongs to it: it is a substantial stone edifice, two stories high, forming a square, whose side is one hundred and twelve feet; the building is forty feet broad, containing ample and convenient accommodation for all its inmates. The church of St. Ursula, connected with the convent, is ninety-five feet long by forty-five in breadth, very plain on the outside, but eminently distinguished for the good taste and richness of its interior ornaments; to the eastward of it are several detached buildings, forming part of the establishment. The surrounding ground, six hundred and forty-five feet long,

and four hundred and thirty-six broad, is encircled by a lofty stone wall, and, with the exception of a space allotted to the court-yard, is laid out in fine productive gardens. This institution, for the purpose of extending the benefits of a careful and religious education to the females of the colony, owes its foundation in the year 1639, to Madame de la Peltrie, a lady residing in France: it consists of a superieure, La Reverende Mere Sainte Ursule, (Marguerite Marchand), and forty-five nuns, who are employed in the instruction of the pupils in the most useful branches of knowledge, besides embroidery, fine work, and other female accomplishments. The religieuses live very reclusive, and are more rigid in their manner than any other in the province. The landed property of the institution is not very great, but the industry of the sisters is incessant, and the profits arising from it are all placed to the general stock, which thereby is rendered sufficiently ample: their embroidery is highly esteemed, particularly for ecclesiastical vestments, and church ornaments; their fancy-works are so much admired, that some of them obtain considerable prices; the produce of their gardens, beyond their own consumption, also serves to increase the revenue of the community. The building is exceedingly neat,

and some parts thereof tastefully decorated. This establishment being well worth inspection, is usually visited by strangers; for which purpose a permission or introduction from the Catholic Bishop is necessary, and always willingly granted upon an application being made. The Monastery of the Jesuits, now converted into a barrack, is a spacious stone building, three stories high, forming a square, or rather parallelogram of two hundred feet by two hundred and twenty-four, inclosed within a wall extending more than two hundred yards along Ste. Anne Street, and the whole of Rue de la Fabrique. On the arrival of some of the order in Canada in 1635, their first care was the erection of a suitable habitation, which being destroyed some years afterwards, made way for the present structure: it was formerly surrounded by extensive and beautiful gardens; but these, to the great regret of many, have been destroyed since the house, in common with the other property of the order, has reverted to the crown, and now form a place of exercise for the troops; indeed, no one could view without much reluctance the fall of some of the stately and venerable trees, yet untouched by decay, that were the original tenants of the ground at the first foundation of the city. As a building, this is one of the most regular

of any in the place; when inhabited by its founders, it is said to have been planned with every attention to convenience they were so capable of bestowing upon it; but the nature of the arrangement for its present occupants being so well known to every one, they do not attract our notice.

The New Gaol is a very handsome building of fine grey stone, one hundred and sixty feet in length by sixty-eight in breadth, three stories high, having its roof covered with tin; it is situated on the north side of Ste. Anne Street, with the front towards Angel Street; standing on an elevated spot, it is airy and healthful; it has in the rear a space of ground one hundred feet in depth confined by a lofty wall, where the prisoners are allowed the benefit of exercise. The interior is most judiciously planned, as it respects the health, cleanliness, and safe custody of those who are so unfortunate as to become its inmates. The design and construction confer much credit upon the architect, and the commissioners under whose superintendance it was erected; it has been but recently finished, and was occupied only in 1814. The expense of the building, upwards of £15,000, was defrayed by the provincial legislature.

Opposite to the new gaol is the Scotch Church, a small building not distinguished for

any thing deserving particular mention, but being new and very neat, it looks well.

The building denominated the Bishop's Palace has been a fine edifice, and standing on an elevated spot, it is very conspicuous; it is situated near the grand battery, extending in an easterly direction from the gateway, or communication to the Lower Town, along Mountain Street one hundred and eighteen feet, and then in a line running at right angles to the former, one hundred and forty-seven feet; its average breadth is thirty-four feet; on the south and east sides it is three stories high, but on the others no more than two; it was built for the residence of the Catholic Bishop of Quebec; it contained a chapel with every suitable convenience, and was by no means destitute of embellishment. An annuity has been granted by the government to the head of the Catholic faith in lieu of it. A very dilapidated state at present threatens a speedy dissolution; some of the walls are bad even to the foundation, and unless almost immediate repairs are undertaken will not long support the fabric. The different divisions of the building are now occupied by many of the offices of government; the Legislative Council, the Executive Council, the House of Assembly, the Public Library, &c. &c. The chapel, sixty-

five feet by thirty-six, the only part kept in thorough repair, is fitted up for the meetings of the House of Assembly; adjoining it are different committee rooms, library, &c. : above this part, that forms the north-west angle, is the apartment where the Legislative Council holds its sittings, and on the same floor are committee rooms, council office, &c. &c. dependant on that branch of the legislature. In the other angle are chambers for the Executive Council and various offices connected with it; at the further end of the building is the Public Library, below which are the offices of the adjutant-general of militia, surveyor-general of the province, the engineer department, secretary of the province, and some others. The vaults underneath the palace, excepting such as are appropriated to the secretary of the province and clerks of the court, and occupied as depositories of the archives and most of the public records, are in a ruinous state; indeed so much so under the chamber of the legislative council, where the session of parliament is always opened, that it is now hazardous to admit a large concourse of people, who usually attend that ceremony. The public convenience of this building for the various purposes to which it is now applied makes it a matter of surprise that the attention

of government has not been directed towards giving it a substantial repair.

The Artillery Barracks form a range of stone buildings two stories high, five hundred and twenty-seven feet in length by forty in breadth, extending in a westerly direction from Palace Gate; they were erected previous to the year 1750, for the accommodation of troops, by which the garrison was reinforced, and were then distinguished as the *casernes nouvelles*: they are roughly constructed, but very substantial and well arranged: the east end of the range was for several years used as a common prison; but since the erection of the new gaol, this practice has been discontinued. Besides sufficient room for quartering the artillery soldiers of the garrison, there is an ordnance office, armoury, storehouses, and workshops. The armoury is very considerable, and occupies several apartments, wherein small arms of every description for the equipment of 20,000 men are constantly kept in complete repair and readiness for immediate use; the musquetry and other fire-arms are arranged so as to admit convenient access for the purposes of cleaning, &c.; the *armes blanches* of all classes are well displayed in various designs and emblematical devices, and present, on entering the room, a fanciful *coup d'œil*. In front of the barracks

there is a good parade. The Union Hotel is situated near the Chateau, on the north side of the Grand Parade, and contributes greatly towards its embellishment; it is a capacious well-built stone house, two stories high, in a handsome style of modern architecture, eighty-six feet in length, by forty-four in breadth. It was erected about the year 1803, under an act of the provincial parliament, by a number of persons who raised a sufficient joint stock by shares, and who, by the act, were formed into a corporate body; the object was to have a commodious hotel of the first respectability, for the reception and accommodation of strangers arriving in the capital. The entrance is under a portico of good proportions and tasteful design, approached by a flight of steps. The interior is well planned, with much attention to regularity and convenience; the principal rooms are spacious and lofty, fitted up with great elegance, and continually kept in good order. The scheme that first gave rise to this undertaking did not obtain so much success as could be wished to so public spirited an enterprise: in fact, the shareholders find the speculation to be an unprofitable, and even a losing one. Should the property be disposed of, and diverted from its original intention, a circumstance by no means impro-

bable, it would be well worth the attention of government to make the purchase, for the purpose of concentrating therein as many of the public offices as accommodation could be found for. The edifices that have been enumerated are the principal ones, or at least those most worthy of notice. The peculiar situation of the city, as already described, occasions irregularity and unevenness in the streets; many of them are narrow, but most of them are well paved; the breadth of the principal ones is thirty-two feet, but the others usually only from twenty-four to twenty-seven. The greater proportion of the houses are built of stone, very unequal in their elevation, with high sloping roofs, principally of shingles, and sometimes covered with tin or sheet iron. Great improvement has taken place of late years in the mode of building and in the appearance of the dwellings; as the old-fashioned methods of the country are gradually superseded by a modern style. No less amendment has taken place in paving the streets. Mountain Street, where formerly the ascent was so steep as to make it difficult for a carriage, is now passable for all sorts of vehicles with the greatest ease. John Street, Buade Street, Fabrique Street, and the greater part of Palace Street, may be considered as the mercantile part of the Upper Town, being in-

habited chiefly by merchants, retail traders, artizans, and abundance of tavern-keepers, and are certainly the greatest thoroughfare of any. St. Louis Street, running nearly parallel to St. John Street, is much more elevated, airy, and agreeable, and by far the pleasantest part of the town ; as such, most of the superior officers of the provincial government, and people of the first rank, reside there : many of the houses are modern and very handsome ; that belonging to the late T. A. Coffin, Esq., is now inhabited by the Protestant Bishop of Quebec, who, by his situation of Metropolitan, is member of the Legislative and Executive Councils of the Upper, as well as the Lower Province. The present Chief Justice, the Honourable Jonathan Sewell, occupies a very spacious and handsome house ; that of the late Chief Justice Elmsly, though not modern, is large and elegant. It is at present converted into a barrack for officers, who have the greatest reason to be satisfied with their quarters. On Mount Carmel there is the remnant of an old military work, near to which is agreeably situated a wooden building, usually occupied by the governor's military secretary. The market-place is one hundred and sixty-five feet long ; in front of the Jesuits barracks it is two hundred and fifty feet broad, but near the cathedral it is reduced to

one hundred and seventy-two. In the centre stands the market hall, a circular building, one hundred and twelve feet diameter, over which there is a dome, whose dimensions are every way so much at variance with proportion as to warrant a supposition that deformity had been studied instead of symmetry; it is, however, no longer to remain a public mark of bad taste, for the legislature has decreed its removal, to make way for something more appropriate. Underneath the hall is a large reservoir of water, contrived to afford a speedy supply in cases of fire. The accommodations of the place have been considerably increased by the removal of the Jesuits church, and appropriation of the ground it occupied to the wood-market. On the side of Fabrique Street is the space allotted to the hay-market. Main streets diverge from the different sides of the market to the principal entrances into the city. The market is held every day, and almost always well stocked; but Saturday usually affords the greatest abundance, when there is a good shew of butcher's meat of all kinds, furnished both by the butchers of the city, and the *habitans*, who bring it from several miles round. The supplies of poultry, fish, fruit, vegetables, herbs, and indeed every article of consumption, are brought by the country people in large

quantities from the different fertile seigniories round the capital. In fact, nothing is wanting to furnish the table, and that too at a moderate price, for every rank of society, from the humble labourer to the man of affluence, who can enjoy both the comforts and luxuries of life.

The Place d'Armes, or Grand Parade, in front of the Chateau, though not extensive, is handsome, and may be termed the court end of the town. Being surrounded by the most distinguished edifices in the capital, it affords an agreeable promenade.

The Esplanade, between St. Louis and St. John's Gate, has a length of two hundred and seventy-three yards, by an average breadth of eighty; except at the St. Ursula bastion, where it is one hundred and twenty yards; it is tolerably level, in some places presenting a surface of the bare rock. This is the usual place of parade for the troops of the garrison, from whence every morning the different guards of the town are mounted. The musters, and annual reviews of the militia belonging to the city, are held here.

The Lower Town is situated immediately under Cape Diamond, and by the continuation of merchants' stores and warehouses, reaches from L'Ance des Mères round the point of the Cape, as far to the north-west as the suburbs of St. Roch: it stands on what may be termed an

artificial ground, as formerly, at flood tide, the waters of the river used to wash the very foot of the rock: from time to time, wharf after wharf has been projected towards the low-water mark, and foundations made sufficiently solid to build whole streets, where once boats, and even vessels of considerable burden, used to ride at anchor. The greatest breadth of this place is at Rue Sous le Fort, where, from the Cape to the water's edge, the distance is two hundred and forty yards, but proceeding more to the northward, this dimension is greatly reduced. L'Ance des Mères, or Diamond Harbour, is the southern extremity of the Lower Town; it is immediately under the highest part of Cape Diamond, having around its shore a continuation of extensive wharfs, stores, and workshops in full activity, from which there is an uninterrupted routine of business carried on with other parts of the town. A commodious dock for repairing vessels, and a yard for building, from whence ships of large tonnage have frequently been launched, contribute very much to increase the importance of the place. From L'Ance des Mères to Brehaut's Wharf, the road passing by the foot of the Cape is very narrow, and that the communication may be rendered as direct as possible, it has been necessary in many places to cut through the solid rock. Near the wharf there is a landing-place, which

serves during the summer season as a sort of harbour for the gunboats and king's batteaux. From thence to the Cul de Sac is almost an uninterrupted succession of store-houses and wharfs, at the greatest part of which ships can lie without taking the ground at low water. At Dunn's Wharf are the large and valuable premises called the Cape Diamond Brewery, where an extensive business is carried on, not for the home consumption alone, but in porter and ale for exportation. The Cul de Sac is situated between the King's and Queen's Wharfs, forming an open dock, dry at every tide; ships can be there conveniently laid aground to receive any necessary repairs; in the winter, boats and small-decked vessels that navigate the river between Quebec and Montreal are also laid up in security from the ice. It spreads five hundred and forty feet in length, and about two hundred and forty in depth: all craft lying here for repair, or otherwise, must observe the rules and regulations prescribed by the Trinity-house, and are placed under the immediate superintendance of the assistant harbour-master. Between the Queen's and M^cCallum's Wharf is the principal landing-place, about two hundred feet wide, where boats and canoes usually set their passengers on shore, but where much inconvenience is

frequently occasioned by the numerous rafts of fire-wood that are brought down the river for the use of the city, and moored hereabout, sometimes to the complete obstruction of the passage. If the regulations of the harbour, properly enforced, be insufficient to prevent this public annoyance, it should be removed by legislative interference. The custom-house stands on M^cCallum's Wharf, and during that part of the year when the navigation of the river is uninterrupted it presents the crowded scene of activity and business commonly met with at such establishments. A short distance from hence, and between the premises of the Honourable John Caldwell, the Receiver-General of the province, and those of Mr. Tod, passes the boundary line between the King's and Seminary's domains; a definition of the precise extent of the former would prove tedious, as it is presumed to include generally all ground in and about the city not disposed of by deed of concession, or letters patent, either to public bodies or individuals; such parts of it as may be deemed necessary are reserved for military and other public uses, and the remainder is usually conceded subject to the payment of *lods et ventes*. The Seminary domain was granted by Monsieur de Chauvigny, the governor of the province, to the seminary

of Quebec, on the 29th October, 1686, by which concession the whole extent of beach in front, and reaching to the low-water mark in the River St. Charles, was confirmed to it. This grant is quoted by Le Maitre La Morille, Arpenteur Royal et Juré à Quebec, in his proces verbal, dated ——— ———, 1758, wherein he minutely describes the boundaries of both domains, and also of the ground granted to the Hotel Dieu. As the limits of these grants are correctly delineated upon the plan of the city of Quebec on the Topographical Map, it may suffice here to give a sort of average or general outline of them, as they are met with in the course of the description of the city. The Seminary's domain is nearly as follows; beginning at the separation from the King's domain in the Lower Town, it passes between the houses of the Honourable Mr. Caldwell and Mr. Tod; from whence it extends in an easterly direction as far as the low-water mark. Returning to the first mentioned separation from the King's domain, it shapes nearly a west-south-west course as far as the presbytery, near the Catholic cathedral, where it takes a direction nearly north-westerly to the French burying-ground, or Cimetière des Picotés, and from thence it ends by a line running north eleven degrees west by compass; to the low-water mark; dividing on this side the domain from the

grounds of the Hotel Dieu. From M^cCallum's to Messrs. Munro and Bell's wharf the line is occupied by a continuation of water-side premises and wharfs, conveniently situated towards the St. Lawrence, and well calculated for the extensive shipping concerns of their respective owners. From the avenue leading down to Munro and Bell's, the Rue Sault au Matelot is prolonged in a westerly direction as far as La Canoterie, so close under the cliff as to admit of only one row of houses; and although by undermining and cutting away the rock so as to make it quite perpendicular, in order to render the street as convenient as the nature of circumstances will admit; yet in one place, with all these contrivances, it is no more than twelve feet wide. In the rear of these houses there is another line of wharfs, that can be reached by river craft at high-water only, or a little before. From the end of Rue Sault au Matelot there is a way communicating with the Upper Town, by Hope Gate. Proceeding westward through St. Charles and St. Nicholas Street, there is a range of spacious wharfs, the King's store-houses and wharfs, the batteaux-yard, and the jetty; the latter is no more than a rude pile of loose stones, that have been heaped together year after year since 1751, at which time it was in a better state than at present; it had then a level surface

covered with a platform, and served as a public promenade. In the batteaux-yard the boats and batteaux employed in the service of government are built, repaired, and laid up during the winter. On the western side of St. Nicholas Street, and fronting that of St. Vallier, are the ruins of the intendant's palace, once an edifice of much importance and no mean share of grandeur, as the apartments were fitted up with all the splendour that the times could confer upon them, for the Council of the French Government. After the conquest in 1759 but little attention was paid to it, and in the year 1775 its ruin as a palace was completed; for when the Americans, under Arnold, blockaded the city, they found means to establish a body of troops within it; but they were soon afterwards dislodged from their quarters by shells thrown from the garrison, which set it on fire, and nearly consumed the whole. Near the ruins is a small building preserved in good repair, and appropriated for the residence of the chief engineer of the garrison; since the period of its demolition, a small part, that required but little expense to restore, has been converted into government store-houses. The distinction of Le Palais is still applied to a part of the Lower Town, in the neighbourhood of the ruins. Between Le Palais and the beach

is the King's Wood-yard, occupying a large plot of ground, wherein a sufficient quantity of fuel for a year's consumption of the whole garrison is always kept in store. On the western side of the wood-yard the suburb of St. Roch commences, and extends in a westerly direction to La Vacherie, a distance of seven hundred and thirty-five yards, and from the Coteau Ste. Genevieve to the River St. Charles, about seven hundred and thirty yards. The streets, though narrow, are regularly built and straight, crossing each other at right angles: the greater part of the houses are of wood, but a few of those lately constructed are not destitute of a showy exterior. The church of St. Roch is not yet finished, and will, when completed, prove a very handsome structure; the ground on which it stands was a free gift from J. Mure, Esq.; the work is now going on under the patronage of the Catholic Bishop, who is also the protector of a public school in this suburb, and another in St. John's. A period of ten years has produced a very great increase in this part of the town, as well in buildings as in population, and there is all appearance of the same continuing to a much more considerable degree. The inhabitants of St. Roch are entitled to vote for the representatives in parliament for the Lower Town, which elects two. From the extremity of

the suburbs to the banks of the River St. Charles, which winds beautifully through the valley as before-mentioned, there is a large extent of fine meadow and pasture land, varied at intervals by gardens, and intersected by the road leading from the city to Dorchester bridge. The beaches of the Rivers St. Charles and St. Lawrence, in the neighbourhood of Quebec, require a few words of particular observation, as they are disposed of by specific grants, and sometimes sold in portions at great prices, or let at high rents, or for other valuable considerations. That of the River St. Charles from Pointe à Carcy to Dorchester bridge is low, flat, and generally sandy, with many groups of rocks lying about it, but particularly between the Point and the Jetty, where they almost edge the low-water channel; the space that lies between a line prolonged from St. Peter Street down to the low-water mark of the St. Charles and the St. Lawrence has been conceded by the seminary to Messrs. Munro and Bell, and within its limits these gentlemen have very extensive premises. On a wharf that projects a great way into the river stands a conspicuous large red store-house, well situated to be made a sailing mark, by which directions might be laid down to prevent vessels in coming to their anchorage before the

town from keeping too much within the River St. Charles, where, at half ebb, they would get aground upon the reef that stretches nearly across its mouth. From the same wharf down to the edge of the St. Lawrence at low water the distance is two hundred and thirty feet, nearly all a reef of flat rocks; and in a northeasterly direction, the Pointe à Carcy, a large irregular ridge, runs about two hundred and forty yards beyond the wharf; it leaves a small opening for the channel of the St. Charles, from whence another chain of rocks ranges in different directions about the entrance of it, which, at low water, is uncovered, and at high water has about two fathoms and a half upon it. From the Grand Battery on the cliff, a little before the flood-tide makes, two distinct reefs can be seen stretching across it, nearly parallel to each other; the entrance into it is close within Pointe à Carcy, where several sand-banks form two or three different passages between them. Opposite to Pacquette's Wharf there is a large rock, and also a ledge lying off Hunter's Wharf; if these were removed it would greatly improve the convenience of the beach, and might be effected without much difficulty; at half ebb these, the ledge before Henderson's Wharf, and the large green plats on the opposite side of the channel, begin to

be visible. At Henderson's there is a spacious building-yard, from whence have been launched some of the largest vessels built in Lower Canada. From the western boundary of the Seminary Domaine as far as the Jetty, or Stone Dyke, the beach belongs to the Hotel Dieu, and, with the right of fishery, was granted to it on the 21st March, 1648; but the greater part thereof has been conceded by that establishment to different persons, and is now occupied either as wharfs, dock-yards, or timber-grounds. From the Jetty, as far as St. Roch Street, the whole of the beach is reserved by government, beyond which the remaining portion, in front of St. Roch, has lately been granted by the crown to the Honourable John Richardson, of Montreal, in trust for the heirs of the late William Grant, Esq. It is now divided into several dock-yards, wharfs, and timber-grounds, and occupied by various persons; among the former, Goudie's yard is the most eminent and complete, where ship-building upon an enlarged scale has been carried on for many years. Campbell's Wharf projects so far into the river as to form rather a remarkable feature of it in looking toward Dorchester bridge: the large building formerly called Grant's Mill still remains upon it; within these premises there is a very extensive wet dock, or dam, for keeping timber

afloat. From the line of La Vacherie, which in fact is the western extremity of St. Roch's suburb, the beach up to the bridge on either side of the channel is generally used as timber-grounds, and provided with extensive booms, &c. The bed of the St. Charles is flat; at low-water the two channels are narrow, winding, and frequently divided by wide spreading shoals of sand or mud; when the tide is out, the water in them varies from eight to twenty-seven inches, but at full flood the average is from two to two fathoms and a half. Dorchester bridge is six hundred and sixty feet in length, by twenty-seven in width, built entirely of wood, and supported upon piers of the same materials; its elevation is fifteen feet above high-water. From hence to the city the distance is about a mile, and the road, particularly during the summer-time, is much frequented. The prospect on every side from the bridge is agreeable and pleasing; the town, suburbs, and the Cape, are seen to great advantage. It is always kept in good repair, although the toll is frequently avoided by passengers going along the beach at low water: in winter time, as soon as a solid track can be made upon the ice, this evasion is almost general. On each side of the river, below the bridge, besides the established dock-yards, there are

several convenient places for building, where ships of large tonnage have been occasionally constructed.

The suburb of St. John, above the Coteau Ste. Genevieve, is built on very uneven ground, with an elevation towards the Grande Allée, or road to Sillery. It occupies a mile in length by half a mile in breadth, and is increasing very fast in buildings as well as population; there are several parallel streets crossed by others at right angles, except George Street, which takes a diagonal direction across Richelieu and Olivier Streets, connecting this suburb with St. Roch, by the Cote d'Abraham, and communicates with the roads to Lorette, Charlebourg, and Beauport. St. John Street is the principal one, and from the end of it the road continues to Ste. Foi. In different parts of this suburb some well-built houses present themselves, several of which are of stone: on the south side of St. John Street is the Protestant burial-ground. In the elections for members of parliament, the inhabitants of St. John's are entitled to vote for the two who represent the Upper Town. On the Chemin de la Grande Allée, just beyond St. Louis Gate, is the house and garden belonging to Mr. Jones; further along the road, on the left hand side, is the building called Fergusson's

House, standing on the highest ground of the celebrated plains of Abraham. It is calculated to be three hundred and thirty feet above the level of the river, and commands most of the works on this side of the town, except those on the very summit of Cape Diamond, which are still higher by ten or fifteen feet. To diminish the probability of this eminence being ever seized upon as a point of offence against the city, four Martello towers have been erected some distance in advance of it, extending from the St. Lawrence, across the peninsula, to Ste. Genevieve, at between five and six hundred yards distance from each other, and so posted that they can sweep the whole breadth of the plains; they are very solidly constructed, and armed with guns of large calibre. Proceeding along the Grand Allée westward, on the left hand side are several large pieces of ground belonging to the Hotel Dieu, and the Ursuline Convent; on the opposite side, well cultivated fields, and rich pastures, spread down to the Ste. Foi road. The four meridian stones fixed in 1790 by the late Major Holland, then Surveyor-General of Canada, are placed at convenient distances from each other across the plains; they represent a line astronomically north, and were established for the purpose of adjusting the instruments used in the public surveys of

lands. One of them that stood in the angle of a field redoubt where General Wolfe is said to have breathed his last, has been greatly impaired by the pious reverence of *curious* strangers, who, wishing to bear away a relic of any thing from the spot consecrated by the hero's death, have broken off pieces of the stone placed there thirty years after that event. Beyond these stones are some open fields belonging to the Hotel Dieu, but retained by government for military uses. Further to the westward is a property belonging to Dr. Mountain, Bishop of Quebec, that, from its fine and commanding situation, is admirably well calculated for the erection of a country house and formation of pleasure grounds. Contiguous to this property is the beautiful estate of the Honourable Mr. Percival, called Spencer Wood, formerly known by the name of Powel Place, and which used to be the country residence of the Governor-General. Woodfield, the property of Mr. Bell, is another house and garden, which, from its charming position, is very deserving of notice. The beach directly under the height upon which these houses stand is divided into many valuable timber grounds, extending to the westward as far as Pointe à Puisseaux, which chiefly belong to Messrs. Patterson, Dyke, and Co. Wolfe's Cove is the largest of all the bays in the vicinity of the city, and

memorable as the landing-place of the English army which achieved the conquest of the capital in 1759. It is generally a scene of great activity in the timber trade; during the summer season, numbers of ships are continually seen anchored in groups before the premises of the different merchants: it is principally the property of Messrs. Grant and Greenshields. The city, whose most vulnerable part is towards the plains of Abraham, is fortified by a strong line of regular works, from Cape Diamond to Co-teau Ste. Genevieve, with ditch, covered way, glacis, &c., strengthened by some exterior works more recently erected, between St. Louis Gate and St. John's Gate, well calculated to render the approach to the town by the main roads exceedingly difficult, if not impracticable; but from the ground rising a little towards the plain, it has been deemed expedient to construct the Martello towers before-mentioned, to prevent any advantage being taken of its superior elevation. In its present state Quebec may rank as a fortress of the first consequence: the citadel on the highest part of Cape Diamond presents a formidable combination of powerful works, from whence a strong wall, supported by small batteries in different places, runs to the edge of the precipice, along which it is continued to the gateway leading to the Lower Town, which is defended by heavy cannon, and the

approach to it, up Mountain Street, both enfiladed and flanked by many guns of large calibre; thence a line of defence connects with the grand battery, a work of great strength, armed with a formidable train of twenty-four pounders, and commanding the bason and passage of the river; from hence another line is carried on past the Hope and Palace Gates, both protected by similar defences to those of the Lower Town Gate, until it forms a junction with the bastion of the Coteau du Palais. The General Hospital stands on the bank of the River St. Charles, about a mile distant from the city, in a healthy, pleasant situation, surrounded by fine fields and meadows, having its front towards the road called Chemin de l'Hospital General; it was founded in 1693, by Monsieur St. Vallier, Bishop of Quebec, for the relief of sick and disabled poor of all descriptions; it is governed by a superieure, La Reverende Mere St. Joseph, (Esther Chalou) at the head of forty-four nuns. It has a regular handsome front, two hundred and twenty-eight feet in length, and forms nearly a square; the main body of the building is thirty-three feet in breadth, but on the south-west side a range, one hundred and thirty feet in length, projecting from it, is fifty feet in breadth. Detached from the principal edifice, and on the opposite side of

the road, are two houses belonging to it; one appropriated for the reception and treatment of persons labouring under insanity, and the other as a dwelling-house for servants, employed in a farm attached to the establishment. The interior arrangement and management of this excellent charity, with respect to accommodation, are very judicious; the patients are lodged in comfortable and spacious wards, men on the ground floor, and women on the floor above; for the superieure and the nuns there is ample room for residence, refectories, and apartments for carrying on different works in which they employ themselves, exclusive of their attendance on the sick: a spacious and neat church is attached to the convent. As this hospital administers succour to the afflicted under any of the diseases within the wide range of human calamity, it is most commonly nearly filled. Its support is drawn from the revenues of the landed property that has been granted to it, the sale of the works performed by the nuns, particularly of church ornaments, which they make and gild in great perfection, and by occasional grants of money from the provincial parliament.

To facilitate travelling in the lower province, and render it as expeditious as possible, there is a line of post-houses from Quebec to Mont-

real on one side, and by the southern shore of the river down as far as Trois Pistoles, below the island of Bic, on the other; these houses are kept under rules and regulations, established by authority of the parliament, and annually inspected by a person who is appointed superintendant of post-houses in the province, whose duty it is to see that each station furnishes a sufficient number of calashes in proper order, with good horses for the public accommodation, and that in each house the regulations are conspicuously posted up, so that every traveller may have an opportunity of knowing that no imposition is practised upon him, or how to obtain redress in cases of extortion: should these rules be deviated from by any of the post-masters, they are subject to a pecuniary fine. The expense of travelling is generally one shilling a league during the summer time, or fifteen-pence in the fall of the year with a calash and one horse; the charges of tolls and ferries must be borne by the travellers. The conveyance of the regular mail, under the direction of the post-master general, is a distinct concern from the post-houses; it is sent by couriers who leave Quebec and Montreal every day at four o'clock. Both convenience and comfort are now considerably increased by a stage-coach, that starts from each city regularly, every day during the

year : in the summer time it is furnished with four good horses quite in the English style ; in the winter the body of the coach is placed on a sledge, and drawn by the same number of horses, in which season it performs its journey somewhat quicker ; it conveys six passengers inside, with a proportion of baggage, &c. The charge by this conveyance is a trifle more than by posting, but the accommodation is certainly superior at the different stopping places, where refreshments and other conveniences of an inn are always to be obtained in a very good style. Since the year 1812, two steam-boats have been launched upon the St. Lawrence, and during the summer time there are two of them constantly navigating between Quebec and Montreal ; they are fitted up with great attention to the ease and comfort of the public. A cabin passenger, with sixty pounds of luggage, pays £3 to Montreal ; but from thence to Quebec only £2 : 10s. : 0d., the expense of the table therein included : steerage passengers pay 15s. each way : extra luggage is paid for at the rate of one penny a pound. The voyage down the river is performed in forty-eight hours ; but going upwards it is some hours longer, on account of the strong currents. The smallest of these boats measures one hundred and ten feet in length, by twenty-eight in breadth,

and commodiously accommodates fifty cabin passengers, with separate apartments for ladies, beds, &c.: the other is of greater capacity, being one hundred and forty feet by thirty-two. This mode of travelling is easy, and exceedingly pleasant: a liberal table is provided, with every other means of rendering the passage quite a party of pleasure. Mr. Moulson, of Montreal, is the person who has embarked a large capital in this undertaking, and it is pleasing to find that his enterprise has been productive of considerable profit to him; he has been countenanced in his plan by the provincial legislature, but has not obtained any exclusive privilege. On occasions of emergency, these boats have been used for the conveyance of troops, and have thereby greatly contributed to forward the public service. A courier with a mail leaves Quebec every week for Halifax and Nova Scotia, by the way of Fredericton, and St. John's, New Brunswick. As this communication across the portage of Timiscouata is one of considerable importance, it will be recurred to again, on speaking of the settlements thereabouts. Between the city and Point Levi, on the opposite shore of the St. Lawrence, a great number of ferry-boats are continually passing to and fro, the principal part of which belong to the inhabitants about the Point, as

they are all permitted, by regulation, to ply with their boats, on condition of receiving no more than the established rates, which are very moderate; in almost any weather they will cross in their canoes, which are large, and very strong, being made from the trunk of a tree hollowed out, or more frequently of two joined together, and firmly secured on the inside; they are managed with great dexterity, and sometimes take as many as eight passengers besides the three or four men who work them. In the winter, when large masses of ice are floating up and down with the tide, and often when there is a strong breeze, impelled at the rate of three or four knots an hour, this passage is singularly laborious, and to all appearance extremely hazardous, yet it is very rare that a fatal accident has happened; in snow storms, indeed, they have been frequently driven several leagues out of their course, either above or below the town, without knowing whereabouts they were, but have always reached their place of destination sooner or later. It is not an uncommon thing to see several of these large canoes, laden with provisions for the market, crossing the river as nearly in a line as they are able to keep: the cargoes are generally secured by a strong lashing; they are provided with strong poles having iron

hooks at the end for grappling hold of the ice, and drag ropes. When large sheets of ice oppose their progress, the men, by means of the poles and ropes, which they employ with an uncommon ability, get the canoe upon it, and by main force drag it perhaps fifty or sixty yards, or until they find a convenient opening to launch it again among the smaller fragments; and then, using their paddles, they proceed until they are intercepted by another flat, upon which it is again hoisted as before, continuing thus in toilsome succession across the river. Frequently, while they are forcing it over a sheet of ice, their slippery foundation breaks beneath them; but they mostly contrive to skip nimbly into the canoe, and evade the difficulty. Often in pursuing their course through a narrow vein of water between two enormous masses, they are suddenly closed upon; and, at the moment when a stranger would imagine the canoe must be ground to atoms by the collision, they skilfully contrive, by means of their poles, to make the pressure of the two bodies act upon the lower part of their vessel, and, with a little assistance of their own, heave it upon the surface, over which it is pushed and dragged as before. They are amazingly steady in this laborious work, and long habit seems to have expelled from their minds every sense of danger: thus

employed, they appear to be insensible to the severity of the cold; they are not encumbered with much clothing, which is as light and as warm as they are able to procure. If one of them happens to get an unlucky plunge, he is extricated by his comrades as expeditiously as possible; when a hearty *coup de rum* all round, with which they are never unprovided, is the usual remedy for such misfortunes. When they arrive at the landing before the market-place, sometimes the tide is low, and the ice forming the solid border perhaps ten or twelve feet above them; in this case they jump out as fast as they can, all but one man, and while the rest are getting a firm footing above, he fastens the drag rope to the fore part of the canoe, and immediately assisting his comrades, the whole is hauled up by main force out of the water, when the lading, consisting of poultry, carcasses of sheep or pigs, of fish or other articles, is transferred without delay to the market-places. It has been said by many writers, that during the winter vegetables and milk in a frozen state are brought from distant places; this certainly used to be the case, but now these articles are furnished in the best state all the year round, from the farms and gardens in the vicinity. When the river *takes*, i. e. is frozen over from Quebec to Point Levi, which does not happen

every year, it is not only productive of much amusement, but of great advantage to the city, as well as to the inhabitants of the southern shore, who can at that time bring their produce to market in large quantities without inconvenience. Hay, fire-wood, and all bulky articles of consumption are furnished in abundance, and the consumers usually experience a great reduction in price in consequence of such an influx. As soon as the surface is deemed sufficiently solid, the road across it is immediately traced out, and continues under the inspection of the *Grand Voyer* of the district, who causes proper beacons to be set up on each side, and at intervals where they are required. When the river has *taken* in the north channel between the Island of Orleans and the Main, (the southern channel is never frozen over) which is the case every year, the markets of the city never fail to feel the effect of it, as abundance of provisions of all kinds, the growth of that fruitful spot, which have been prepared for the approaching season, are immediately brought in: considerable supplies are drawn from thence during the summer; but such as do not spoil by keeping are commonly retained, until this opportunity admits of their being sent with much less trouble and expense. The summer scenery of the environs of Quebec may vie in exquisite beauty, variety,

magnificence, sublimity, and the naturally harmonized combination of all these prominent features, with the most splendid that has yet been portrayed in Europe, or any other part of the world. Towards Beauport, Charlebourg, and Lorette, the view is diversified with every trait that can render a landscape rich, full, and complete; the foreground shews the River St. Charles meandering for many miles through a rich and fertile valley, embellished by a succession of objects that diffuses an unrivalled animation over the whole scene. The three villages, with their respective churches, and many handsome detached houses in the vicinity, seated on gently rising eminences, form so many distinct points of view; the intervals between them display many of the most strongly marked specimens of forest scenery, and the surrounding country every where an appearance of fertility and good cultivation upon which the eye of the spectator wanders with ceaseless delight. As the prospect recedes it is still interesting, the land rising in gradation, height over height, having the interval between succeeding elevations filled up with primeval forests, until the whole is terminated by a stupendous ridge of mountains, whose lofty forms are dimly seen through the aerial expanse. The sense of vision is gratified to the utmost, and the spectator

never fails to turn with regret from the contemplation of what is allowed to be one of the most superb views in nature. Nor is it on this side only that the attention is arrested; for turning towards the bason, which is about two miles across, a scene presents itself that is not the less gratifying for being made a secondary one: it is enlivened by the ever changing variety of ships coming up to and leaving the port. On the right hand, Point Levi, with its church and group of white houses, several other promontories on the same shore clothed with lofty trees; in front, the western end of the beautiful and picturesque island of Orleans, displaying charming and well-cultivated slopes down almost to the water's edge, backed by lofty and thick woods, and every where decorated by neat farm-houses, present altogether an interesting and agreeable subject to the observer: in fine still weather, the *reflects* of the different objects around the margin, in all their variety of colouring, are thrown across the unruffled surface of the water with an almost incredible brilliance. On the plains of Abraham, from the precipice that overlooks the timber-grounds, where an incessant round of activity prevails, the St. Lawrence is seen rolling its majestic wave, studded with many a sail, from the stately ship down to the humble fishing-boat;

the opposite bank, extending up the river, is highly cultivated, and the houses, thickly strewed by the main road, from this height and distance have the appearance of an almost uninterrupted village, as far as the eye can reach in that direction. The country to the southward rises by a very gentle ascent, and the whole view, which is richly embellished by alternations of water, woodland, and cultivation, is bounded by remote and lofty mountains, softening shade by shade until they melt into air. Whoever views the environs of Quebec, with a mind and taste capable of receiving impressions through the medium of the eyes, will acknowledge, that, as a whole, the prospect is grand, harmonious, and magnificent; and that if taken in detail, every part of it will please, by a gradual unfolding of its picturesque beauties upon a small scale.

The Island of Orleans, below Quebec, divides the River St. Lawrence into two channels; it is about twenty miles long and five broad; was granted as a seigniory on the 15th January, 1636, to the Sieur Castellon: it is at present divided into three distinct properties, belonging to Madame Drapeau, Monsr. Poullain, and Monsr. Le Comte Dupré; it also forms the county of Orleans. This island, next in size to that of Montreal, approaches it

in fertility and richness of soil more nearly than any other part of the district of Québec: its western extremity is only four miles from Cape Diamond. The shores slant gradually to the beach, in some places there are a few rocky cliffs, but not of great extent or elevation: from the foot of the slopes there are large spaces of low meadow land, sometimes intersected by patches of excellent arable. Bordering the north channel the beach is flat and muddy, with reefs of rocks running along it; but on the southern side it is a fine sand, with only a few pointed rocks sticking up here and there. The highest part of the island is by the church of St. Pierre, about four miles from the western extremity, and almost fronting the falls of Montmorenci; and also just above Patrick's Hole, nearly abreast of St. Pierre, on the south side, on which is placed the second telegraph of the chain from Québec to Green Island. The centre part is thickly wooded, but without producing any timber of superior growth. The soil is highly fertilized in almost every part; on the high lands it is commonly a light good earth, either mixed with sand, or sand and clay; on less elevated situations there is a fine black mould, which, as it nears the shores, is likewise blended with sand. This delightful spot is but scantily

watered by the little River Dauphin, the Rivulet Maheux, and a few more trifling streams, all of which in summer-time fail of a sufficient supply to work a couple of mills that are built upon them. The parishes of St. Pierre and St. Famille on the north, St. Laurent, St. Jean, and St. Francois on the south, each of which has its church and parsonage-house, embrace the whole circuit of the island: St. Jean and St. Famille are more populous than the others, and their inhabitants wealthy and substantial farmers. Four curates perform the clerical duties of the five parishes, the incumbent of St. Famille serving St. Francois: these gentlemen have long been resident in their respective curacies, and have made themselves generally known and respected by their attention and hospitality towards strangers who are attracted by the beauties of this charming place. There is a good road that encompasses the whole island, and several others crossing it. The churches of St. Laurent and St. Jean are situated close down upon the southern shore: the distance between them is six miles; all the way through excellent well cultivated lands, richly diversified with orchards and gardens: the ground rising with an easy slope from the road displays the industry of the farmers to very great advantage. Along the road side there

are houses at short intervals from each other throughout the whole distance. Patrick's Hole, a little westward of St. Laurent, is a safe and well sheltered cove, where vessels outward-bound usually come to an anchor, to wait their final instructions for sailing. On the western point there is a group of very neat houses; at several of which the inhabitants furnish accommodations to the numerous persons who visit the island for amusement or curiosity, both in summer and winter. The fertility of this spot is so great, and the *habitans* reckoned such good cultivators, that large quantities of grain, and most sorts of provisions, are continually furnished for the consumption of Quebec: among the fruits, apples and plums attain a much greater degree of perfection than in any other place in the lower district; but still they do not equal the productions of Montreal. In St. Famille there is a large stone building, wherein several nuns reside, and keep a seminary for the education of females. The population of the island may be estimated at about 4000.

LAUZON (the seignior of), on the south side of the St. Lawrence, in the county of Dorchester, is bounded by the river in front, La Martiniere on the east, St. Antoine, Gaspé, and St. Gilles on the west, and St. Etienne and Jolliett

in the rear; six leagues in breadth by six leagues in depth; was granted January 15th, 1636, to M. Simon Le Maitre, and is now the property of John Caldwell, Esq. The soil throughout this extensive property is, generally speaking, of a superior description; it includes almost every variety, but the sort that predominates is a rich, lightish loam, and in situations lying rather low, a fine dark mould. In the front but little timber remains; in the interior, and towards the rear, beech, maple, birch, and pine are found in great plenty, besides some oak; of the inferior sorts, cedar, hemlock, and spruce, are very abundant. It is watered by the Rivers Chaudiere, the Beaurivage, falling into the Chaudiere, the Echemin, the Boyer, and several other inferior rivers and streams. The Chaudiere and Echemin traverse the seigniory in a south-easterly direction, and the Beaurivage by a south-westerly course. Neither of them are navigable for boats, or even canoes to any distance, on account of the great number of falls and rapids: their banks, but most particularly those of the Chaudiere, are lofty and steep, presenting in many places almost perpendicular rocky cliffs. The banks of the St. Lawrence are also high and steep, covered with trees of a small growth on some spots, but cleared and cultivated in others: the

beach below them is sandy, a good deal encumbered by rocks, with almost a regular reef stretching along the low water line; from the top of the bank the land rises by ridges and small hillocks (many of which are rocky) gradually to the rear. There are two extensive domains, and several small fiefs within the seigniory; three churches dedicated to St. Joseph, St. Nicholas, and St. Henry; three grist-mills, and several saw-mills. The cultivated land, which amounts to one-third of the whole, is divided into ranges of concessions, bearing the names of St. Joseph, Trompe Sourri, Arlaca, Brise Culotte, Pin Tendre, St. Jean Baptiste, St. Charles, Premier Rang, Grillade, St. Gervais, Jean Guerrin nord-est, Jean Geurrin sud-ouest, Bois Claire, St. Anne, St. Joachim, Plaisance, Bellaire, Ste. Augustin, Beauliece, Liverpool, St. Jean, St. Dennis, Ste. Anne on the Beurivage, Terrebonne, Grande Village St. Nicholas, Viveresse, &c., besides five ranges of concessions in woodlands, towards the rear. The most thickly settled and best cultivated parts of this valuable property are situated along the front, in the parishes of St. Joseph and St. Nicholas, and for several concessions towards the interior; throughout which may be seen a succession of fine arable land under a very good sys-

tem of husbandry, rich meadows, good gardens and orchards; but the produce of the latter is not of a very superior kind. The farm and other houses are neat and substantially built. In the remaining concessions, the state of agriculture is not so far advanced; on the Chaudiere, the best lands lie at some distance from the banks; nearly the same is the case with those on the Echemin, the margins of both being generally flat rock, with only a shallow covering of soil upon them. Almost every one of the ranges are intersected by roads: the main ones, or those on the bank of the St. Lawrence, the one leading from Pointe Levi Mills to St. Henri, and thence to the River Chaudiere, the route St. Gilles from St. Nicholas, along the south-west bank of the Beaurivage, and thence communicating with Craig's Road, are very good, and maintained in excellent repair. Nearly opposite to Quebec, and on a little river which there discharges itself into the St. Lawrence, are the extensive and valuable premises called the Pointe Levi Mills, and further westward, at the mouth of the Echemin, the no less important establishment called the Echemin Mills, from both of which large exportations of flour annually take place. From Pointe des Peres to the Chaudiere River, the beach is almost wholly

occupied as timber-grounds; the principal of them is New Liverpool Cove, latterly named New Glasgow, the property of Messrs. Hamilton and Co.; it is a fine sandy bay, sheltered from the north-east by a rocky point, on which there is a long wharf, where ships lie to take in their cargoes. The situation, shores, depth of water, &c. render it very convenient for ship-building; and in consequence, there is a very good dock for repairing, as well as the construction of vessels, surrounded by numerous dwelling-houses for persons employed therein. At the entrance of the Chaudiere there is another wharf, with store-houses for the shipment of flour. From Pointe des Peres, and other parts in front of the seigniory, there are ferries to Quebec. Lauzon is very populous: its quota of militia is large, and well disciplined: during part of the winter of 1813, assisted by a detachment of the division from the Island of Orleans, it performed garrison duty in Quebec, with a cheerfulness and alacrity that were highly exemplary. The River Chaudiere, that traverses this seigniory, and falls into the St. Lawrence, about two leagues above Quebec, is of considerable magnitude; and although not navigable for boats or even canoes, owing to its numerous rapids, falls, and other impediments, yet maintains a cha-

racter of some importance, and merits a few observations. It takes its source from Lake Megantic, flowing northerly forty-one miles, as far as the seigniory of Aubert Gallion; from thence north-westerly, it winds through the seigniories of Vaudreuil, St. Joseph, Ste. Marie, St. Etienne, Jolliett, and Lauzon, to the St. Lawrence, a distance of sixty-one miles, making the whole course one hundred and two from Lake Megantic to its estuary; in breadth it varies from four hundred to six hundred yards. The stream is frequently divided by islands, some of them containing many acres, and covered with timber-trees: the banks in general are high, rocky, and steep, pretty thickly clothed with wood of an indifferent growth; the bed rugged, and much contracted by rocks jutting from the sides, that occasion violent rapids. The descent of the stream over the different shelves occasions falls of considerable height; the most noticeable are those called the Chaudiere, about four miles before the river discharges itself into the St. Lawrence. Narrowed by salient points extending from each side, the precipice over which the waters rush is scarcely more than one hundred and thirty yards in breadth; the height from which they descend is about as many feet. Huge masses of rock rising above the surface of the

current, just at the break of the fall, divide the stream into three portions, forming partial cataracts, that unite before they reach the basin which receives them below. The continual action of the water has worn the rock into deep excavations, that give a globular figure to the revolving bodies of brilliant white foam as they descend, and greatly increase the beautiful effect of the fall: the spray thrown up, being quickly spread by the wind, produces in the sunshine a most splendid variety of prismatic colours. The dark hued foliage of the woods, that on each side press close upon the margin of the river, forms a striking contrast with the snow-like effulgence of the falling torrent; the hurried motion of the flood, agitated among the rocks and hollows as it forces its way towards the St. Lawrence, and the incessant sound occasioned by the cataract itself, form a combination that strikes forcibly upon the senses, and amply gratifies the curiosity of the admiring spectator. The woods on the banks of the river, notwithstanding its vicinity to the capital, are so impervious as to render it necessary for strangers who visit the falls to provide themselves with a competent guide. Although of no utility as a water communication, yet the Chaudiere is entitled to a few remarks, because it traces out a route whereby an easy

access may be had into the American territories, and from them into Canada, during the whole year. From Quebec along the eastern bank, there is an excellent road for about fifty miles, and thence a tolerably good one in continuation, as far as the River du Loup, on which the Canadian settlements at present terminate. The first settlements on the River Kennebec, within the American frontier, are seventy miles distant from those on the River du Loup: the country between them is mountainous, intersected by rivers and small streams, and every where in a state of nature. The chain of mountains is not so closely connected as to render it impracticable, or even difficult to open a road through the passes between them, that would afford a free intercourse from the state of Massachusetts to Lower Canada. Previous to the late war, the legislature of that state had nominated commissioners, for the purpose of making a route from the settlements on the Kennebec, up to the height of land dividing the two territories. If this plan be carried into execution, there will then remain no greater distance than about twenty miles to the English settlements on the River du Loup. The facility with which this line of communication may be made, and the completion of it on the American side, should be

viewed with serious attention by the British Government, particularly when it is accompanied by the consideration, that by such a road the distance from Hallowell on the Kennebec, from whence the navigation for vessels of large burthen is uninterrupted to the sea, up to Quebec, is no more than two hundred miles; and from Boston to the same place, only three hundred and seventy miles. The views of the United States with respect to Canada have been too unequivocally demonstrated to leave a shadow of uncertainty as to their ultimate object; and as the preservation of this valuable colony has always been deemed worthy of our strenuous efforts, we cannot be too much on our guard against the slow working policy by which that government endeavours to compass its ends, or too heedful in adopting precautionary measures to avert a threatening danger, however remote it may at first appear.

TILLY, or ST. ANTOINE (the seigniory of), on the south side of the St. Lawrence, and in the county of Buckingham, is bounded on the east by Lauzon, on the west by Desplaines, in front by the river, and in the rear by the seigniory of Gaspé; a league and a half in breadth by a similar depth: it was granted October 29th, 1672, to Sieur de Villieu, and is now the property of ——— Noel, Esq.

GASPE' (the seigniory of), in the rear of Tilly, has the same lateral limits as that seigniory, and is bounded in the rear by St. Gilles; it is a league and a half in breadth by the same quantity in depth; was granted March 25, 1738, to Dame Angeleque Legardeur, widow of Aubert Gaspé.

MARANDA (fief), having its front to the St. Lawrence, is a small piece of thirty arpens in breadth, and one hundred in depth, lying between the seigniories of Tilly and Bonsecours; was granted in equal moities to the Sieurs Duquet, father and son, November 3d, 1672.

DESPLAINES (the seigniory of), in the county of Buckingham, is bounded by Tilly and Gaspé on the east, Bonsecours and Ste. Croix on the west, and St. Gilles in the rear; was granted in two parts, the first, three-quarters of a league in front by three leagues in depth, from the rear of fief Maranda, to Demoiselle Charlotte Legardeur, on the 4th January, 1737; and the second, about seventy-four arpens in front, by one league sixty arpens in depth, being the space between the preceding grant and the seigniory of Ste. Croix, to the same person; the whole intended to form only one seigniory.

BONSECOURS (the seigniory of), between Desplaines and Ste. Croix, is bounded in the rear by the former; contains about a league

and a half in breadth by two leagues in depth ; was granted July 1st, 1677, to Francois Bellanger. Of these five grants only a very small portion is in a state of cultivation, which is confined to the road leading by the River St. Lawrence, through Tilly, Maranda, and Bonsecours : in this direction the soil is good and fertile, and the farms generally in high condition. Gaspé cannot produce an acre of tillage. The banks of the river are high ; but the rise is gradual. The whole tract is abundantly furnished with timber of good quality, of which large quantities are felled every year, and sent to Quebec. St. Antoine has a church and parsonage-house. Throughout the whole of these properties there is scarcely a stream of water to be met with.

ST. GILLES (the seigniority of), in the county of Buckingham, is bounded in front by the seigniories of Gaspé and Desplaines, on the east by Lauzon, Ste. Etienne, and Ste. Marie, on the west by Ste. Croix and the township of Leeds, and in the rear by the township of Broughton ; two leagues and three quarters broad by six leagues deep ; was granted April 1st, 1738, to Rageot de ———. The heirs of the late Judge Davison are the present proprietors. In this seigniority, although it may be termed a valuable property, there is only

a small proportion under tillage. The soil is a good black mould, varied with yellow and dark loams; the surface is irregular, and towards the south-west lies so low as to occasion swamps, that are thickly covered with cedar and black ash; the other parts produce a mixture of good timber of all kinds. It is very well watered by the river Beaurivage, and many small streams falling into it. The cultivated lands lie on each side of the Beaurivage, and are pretty thickly settled, with many of the farms in excellent condition. On the western bank of that river there is a good road leading from St. Nicholas, on the St. Lawrence, into the township of Leeds, where it falls into Craig's Road. As this is a great thoroughfare, it excites some surprise, considering the goodness of the land, that more of it is not under cultivation.

STE. CROIX (the seigniory of), on the south side of the St. Lawrence, in the county of Buckingham, is bounded in front by the river, on the east by Bonsecours, Desplaines, and St. Gilles, on the west by Lotbiniere, its augmentation, and the township of Nelson, and in the rear by the township of Leeds. The original title of this concession has not been found; but it appears from the registers of fealty and homage, a declaration has been

exhibited by a notary, that "the Dames Religieuses Ursulines possessed the seigniorship of Ste. Croix, containing one league in front by ten in depth, which was granted to them on the 16th January, 1637, and confirmed by M. Lauzon, the Governor, on the 6th March, 1652:" it still remains the property of the convent. On the high and steep bank of the river in front the soil is a light-coloured loam, greatly improved by a very superior style of cultivation. Receding from thence, the land decreases in height, and the soil changes to a rich dark mould, which continues for some miles, and then declines into extensive swamps, covered with cedar, hemlock, black ash, and spruce fir: with the exception of the wet lands, the whole range of the seigniorship, from front to rear, is abundantly clothed with fine timber of all sorts. No stream of magnitude is to be met with throughout the whole tract.

LOTBINIERE (the seigniorship of), with its augmentation, situated on the south side of the St. Lawrence, in the county of Buckingham, is bounded in front by the river, on the east by Ste. Croix, on the west by Deschailions and its augmentation, and in the rear by the townships of Somerset and Nelson. This seigniorship was granted in several parcels as follows, viz. November 3d, 1672, half a league in front

by a league and a half in depth, on the western side near Deschaillons, to the Sieur Marsolet. On November 3d, 1672, two leagues and a half in front by two in depth, adjoining Ste. Croix; to Sieur de Lotbiniere. On April 1st, 1685, half a league in front by two in depth to M. de Lotbiniere; being the vacant space between the two former grants. The augmentation; three leagues and a half in front by four in depth, on the 25th March, 1693, to Monsieur de Lotbiniere. The whole, being three leagues and a half in front by six deep, is now the property of the Honourable M. E. G. A. Chartier de Lotbiniere, a lineal representative of the original grantee, in whose family it has always remained. The generality of the soil over all this extensive tract is excellent; and so advantageously varied, that every production of the country may be raised upon it: It is well stocked with fine elm, ash, maple, beech, plane, merisier, and other timber: the banks of the Rivers du Chêne, Huron, and Boisclere, produce pine of first rate growth. It is very well watered by these three rivers: the former is navigable at all times as far as the place called the *portage*, distant about two miles from the St. Lawrence; but the two latter only during the rise of the waters in spring and autumn. Notwithstanding the su-

perior fertility of the soil, about an eighth part only of the grants are settled upon. There are seven ranges of concessions parallel to the St. Lawrence, and one perpendicular to it, which contain five hundred and eighty lots, of three acres in front, by thirty in depth; of this number, four hundred and five, under the management of an industrious tenantry, who are good cultivators, yield abundant crops of grain, and indeed of every other article. Near the middle of the front of the seigniory stand a handsome stone church and parsonage-house, and near to them a few neat and well-built houses; indeed, this is the characteristic of the major part of the dwellings; the number of them is considerable, as the population ascends to 3400 souls. On the eastern side, near the St. Lawrence, is a small domain of only twelve acres, wholly uncultivated, but thickly clothed with timber-trees of a superior description: in it is situated the seignorial mill. On the different streams there are six saw-mills, and five manufactories of pot-ash. The main road passing by the St. Lawrence, as well as all the others throughout the seigniory, is always kept in excellent repair.

DESCHAILLONS, ST. JEAN DESCHAILLONS, OR RIVIERE DU CHENE (the seigniory of and its augmentation), in the county of Bucking-

ham, joins Lothiniere on the north-east, Liv-
 rard, or St. Pierre les Becquets, and the town-
 ship of Blandford on the south-west, and is
 bounded in the rear by a small piece of waste
 crown lands, that separates it from the town-
 ships of Somerset and Stanfold. The seig-
 niory, in dimensions two leagues square, was
 granted April 25th, 1674, to Sieur de St. Ours ;
 the augmentation, two leagues in breadth, by
 four leagues and a half deep, was granted
 January 25th, 1752, to Roc de St. Ours, and
 Sieur Deschaillons : they are now the property
 of Charles de St. Ours, Esq. In general, the
 soil of this seigniory is of a favourable quality,
 being either a good yellow loam, or else a fine
 black mould ; but notwithstanding these ad-
 vantages, cultivation has made but an indiffer-
 ent progress. On the bank of the St. Law-
 rence there are two ranges of concessions, con-
 taining together about one hundred and fifty
 farm lots, of which the majority appear to be
 under respectable management : their produce
 of wheat and almost all sorts of grain is com-
 mensurate thereto, and of a good quality.
 Both the original grant and the augmentation
 are thickly clothed with wood of various spe-
 cies, better calculated for firewood than any
 other purposes ; and from whence great quan-
 tities are supplied to the garrison and city of

Quebec. The Little Riviere du Chêne, which crosses it diagonally, and falls into the St. Lawrence, a little below Cap à la Roche, is the only stream that waters this tract. It is not navigable at any season for any thing larger than a canoe. About half a mile above the discharge of this river there is a good grist-mill: the augmentation has scarcely any means of irrigation. A little distance upwards from Cap à la Roche a very neat church is seated on the bank of the St. Lawrence, which, along the whole front, is a good deal elevated. The houses of the tenantry, about one hundred and twenty in all, are dispersed among the concessions, by the side of the main road that passes close to the river. They are mostly built of wood, and have a very neat appearance.

ST. ETIENNE (the seigniory of), in the county of Dorchester, is situated in the rear of Lauzon, bounded on the north-east by the River Chaudiere, on the south-west by St. Gilles, and on the east by Ste. Marie: its dimensions are three leagues by two, granted on the 7th October, 1737, to François Etienne Cugnet.

JOLLIET (the seigniory of) is also in the rear of Lauzon, separated from St. Etienne by the Chaudiere, and bounded on its other sides by the townships of Frampton and

Buckland, and the seigniory of Ste. Marie. It is of an irregular figure, its greatest length being about three leagues, and its utmost depth nearly the same: it is now the property of — Taschereau, Esq. Both these grants, with respect to the kinds of soil and species of timber found in them, bear a great affinity to the rear part of the adjoining seigniory of Lauzon; in each of them, a little removed from the rocky banks of the Chaudiere, there are some ranges of settlements where the land is tolerably fertile, and has the appearance of being well managed, through which some good roads pass. About the middle of the grant, the main road from Quebec to the new townships crosses the Chaudiere at the ferry. Jolliet is also partially watered by the river Echemin.

STE. MARIE (the seigniory of), is in the counties of Buckingham and Dorchester, bounded on the north-west by the township of Frampton, and seigniory of Jolliet; on the south-west by St. Gilles, on the west by St. Etienne and Jolliet, and on the east by St. Joseph, three leagues deep, by four leagues broad; was granted 23d September, 1736, to Sieur Taschereau, in whose family it still remains.

ST. JOSEPH (the seigniory of) touches the

rear boundary of Ste. Marie, is between the townships of Frampton and Broughton, and has Vaudreuil on the east; three leagues in depth, by four in breadth; was granted September 27th, 1736, to Sieur Rigaud de Vaudreuil; it is now the property of Monsieur Taschereau. The surface of these two grants is uneven, rocky in several places, with an irregular ridge of broken heights passing in a south-westerly direction over the rear part of Ste. Marie; yet the land is tolerably good, and in general very productive where it is under culture. Timber of almost every description is found in great plenty. The River Chaudiere passes through both grants, dividing them nearly in equal proportions. On each side of it there are settlements a little withdrawn from the bank, where agriculture has been carried on with good success. Besides these tracts, there are, in different parts of the interior, a few concessions that have also made considerable progress. The farm-houses by the road side, on each bank of the river, are numerous, neat, and substantial, with every appearance of ease and comfort among their occupants. In either grant there is scarcely any stream but the main river: there is a church and parsonage-house belonging to each. At the lower part of St. Joseph are the valuable mills

belonging to the heirs of the late —— Tasche-
reau, Esq., Grand Voyer of the district.

VAUDREUIL (the seigniority of), in the coun-
ties of Buckingham and Dorchester, is situated
in the rear of St. Joseph, and bounded on the
north-east by the township of Cranbourne, on
the south-west by the township of Tring, and
in the rear by the seigniorities of Aubert Galleon
and Delisle; its dimensions are precisely the
same as St. Joseph; granted September 23d,
1736, to Sieur Fleury de la Gorgendiere: it
belongs now to Monsieur de Lery. The sur-
face of this property is uneven and broken,
and although a good deal encumbered with
rocks, that in many places are only thinly
covered, the soil is not of an inferior quality;
the cultivated parts lie on each side of the
Chaudiere, and vary, from a quarter to half a
mile in depth; they contain about one hundred
and seventy concessions, many of them in a
flourishing state. The timber consists of a
general assortment of the best quality. Be-
sides the Chaudiere, it is watered by several
other streams, of which the Bras de Sud Ouest,
falling into the Chaudiere, is the largest; it is
supplied from several small lakes in the town-
ship of Tring, and is generally passable in
canoes, but not with boats. Within the seig-
niority there are a church and a parsonage, a

grist-mill, four saw-mills, and altogether about two hundred and twenty houses, chiefly built of wood; the population is between one thousand four hundred and one thousand five hundred. The Chaudiere may be crossed at two or three fords; but these, after a couple of days rain, are too much swollen to be safe to venture a carriage through them.

AUBERT GALLION, and DE L'ISLE (the seigniories of), in the counties of Buckingham and Dorchester, are the two last settlements on the River Chaudiere, and separated by it from each other, both in the rear of Vaudreuil. The former is bounded on the south-west by the township of Shenley, and on its eastern side by unsurveyed crown lands; it is two leagues square; granted September 24th, 1736, to Dame Aubert, and is now the property of Mr. Jacob Pozer. The latter is bounded by unsurveyed lands, except on the side towards Vaudreuil. It is of the same dimensions as Aubert Gallion, and was granted on the same day to Sieur Gabriel Aubert de L'Isle: it now belongs to M. de Lery. The land in both grants is of a good quality, and on the Chaudiere thickly settled; but the farms neither exhibit much care or good management: nor do the inhabitants bear that character of industry; or possess the attendant comforts, that

are so visible in many other parts of the district. The timber found here is generally of a good quality, and in profusion. In addition to the Chaudiere, De L'Isle is watered by Rivieres du Loup and la Famine; in the vicinity of the former there are many extensive tracts of excellent meadow land.

LA MARTINIÈRE (fief), on the south bank of the St. Lawrence, in the county of Hertford, is bounded on the south-west by Lauzon, on the north-east by Mont-à-Peine, and in the rear by the township of Buckland; its breadth is only ten arpens, but its depth is six leagues; granted August 5th, 1692, to Sieur de la Martiniere, and now belongs to ——— Reid, Esq., of Montreal.

MONT-A-PEINE (fief) joins the above, and is bounded on the north-east by St. Michel, in the rear by St. Gervais; it was granted in two parts; the first, ten arpens broad by forty deep, to Sieur de Vitré, on the 24th September, 1683; the augmentation, of the same breadth, and completing the depth of the whole to six leagues, was granted June 18th, 1749, to Claude Antoine de Berment; it is now the property of Féréol Roy, Esq. These two fiefs possess a soil nearly similar to the seigniorship of Lauzon, and are in a forward state of cultivation, two thirds of the whole

being under hand. The most flourishing settlements are near the St. Lawrence, and on each side of the River Boyer. The timber is various, but that of an inferior kind is most prevalent. Both fiefs are well watered by the River Boyer, and some inferior runs of water. The former turns a grist-mill in La Martiniere.

VINCENNES (the seigniori of), in the county of Hertford, has Mont-à-Peine on the south-west, Beaumont on the north-east, the St. Lawrence in front, and Livaudiere in the rear, seventy arpens in front, by one league in depth; was granted November 3d, 1672, to Sieur Bissot. Féréol Roy; Esq., is the present proprietor. The land in this grant lies rather high towards the river, and is, on the most elevated parts, of a lightish sandy earth; in other places a good dark mould, couched upon a substratum of rock, is prevalent. The greatest portion of the grant is under a very respectable state of culture, and produces fine crops of grain, &c. The timber has been greatly reduced; and what now remains is but of indifferent quality. Several small streams falling into the St. Lawrence provide rather a scanty irrigation; one of them works a grist-mill seated in a cove under the lofty bank of the river. There are many good farm-houses and other dwellings

by the side of the several roads that intersect the seigniory.

LIVAUDIERE (the seigniory of), in the county of Hertford, lies behind Vincennes, and is bounded by Beaumont and its augmentation on the north-east, Mont-à-Peine on the south-west, and in the rear by St. Gervais; it has about three quarters of a league in front, by three leagues in depth; granted September 20th, 1734, to Sieur Pean de Livaudiere. Upwards of one-third of this tract is in a very high state of cultivation; the soil, rich and fertile, produces large crops of grain, and almost every article peculiar to the district; the surface is somewhat uneven, but not to such a degree as to cause serious impediments to agriculture, until approaching the rear boundaries, where the elevation is abrupt. There is a great deal of beech, birch, and maple; from the latter, considerable quantities of sugar are made by the inhabitants every year. The seigniory is well watered by the River Boyer, each side of which presents some of the best cultivated land in the different concessions: towards the boundary of Vincennes there are also many specimens of very good husbandry. The church of St. Charles, and its parsonage, are seated on the north-west bank of the Boyer.

Roads, generally kept in thorough repair, pass through the seigniori to the main road on the River Echemin.

BEAUMONT (the seigniori of and its augmentation), is in the county of Hertford, between Vincennes and La Durantaie, having its front upon the St. Lawrence, and bounded in the rear by St. Gervais; about three quarters of a league in breadth, by a league and a half in depth; was granted November 3d, 1672, to Sieur des Islets de Beaumont: the augmentation was granted April 10th, 1713, to Sieur de Beaumont, and is of the same dimensions as the original grant: they now belong to Féréol Roy, Esq. This tract presents generally, rather a light and sandy soil; it rises to a considerable elevation on the bank of the river, but preserves a tolerably level surface when compared with the adjacent grants; nearly one half of the seigniori and a considerable portion of the augmentation are under a flourishing state of cultivation. Adjacent to the St. Lawrence there remains but little timber, though, penetrating further into the interior, much may be found of first rate quality; several small streams water it very plentifully: the augmentation is intersected by the Rivers Boyer and du Sud. The church and parsonage-house are seated on the bank of the river

in front, and a grist-mill on the Riviere du Sud : the seigniory is crossed by several roads leading into the adjacent grants.

LA DURANTAIE (the seigniory of and its augmentation), in the county of Hertford, fronts the St. Lawrence : it is bounded on the south-west by Beaumont, on the north-east by Berthier, and in the rear by the township of Armagh, and the seigniory of St. Gervais ; two leagues in breadth by two in depth ; was granted October 29th, 1672, to Sieur de la Durantaie : the augmentation, of the same dimensions, was granted to Sieur de la Durantaie, May 16th, 1693. The grant and augmentation are now divided in equal proportions into the two seigniories of St. Michel and St. Vallier.

ST. MICHEL contains six ranges of concessions parallel to the River St. Lawrence, divided into one hundred and eighty-five lots that are in a forward state of cultivation, and about forty-five others entirely of wood-land. Near the river the soil is light and sandy ; receding from thence about a mile, there is a fine loam of very excellent quality, but towards the rear the land grows poor and steril ; consequently none of it is occupied. On the best grounds an advantageous system of husbandry is pursued, and the crops of wheat and other

grain are in general abundant. The houses, amounting to about two hundred and thirty in all, are neatly built; the farms are well stocked, and bear every appearance of industry and care. In the back part of the grant some very good timber is produced; the best kinds are maple, birch, and beech, with some pine; but towards the St. Lawrence only a very few patches of wood remain among the concessions. The Rivers Boyer and Le Bras, besides a few small rivulets, water it; the two rivers rise considerably during the freshes of spring and autumn, though they are not of use at any time as navigable rivers. A bridge has been built of wood over each of them. There are a church and parsonage-house, surrounded by about a dozen other dwellings, occupied principally by artizans and workmen: the telegraph station, No. 3, is not far from the church. Of three saw-mills, the work is limited to spring and autumn, owing to the very scanty supply of water during the summer. Many roads pass through the seigniory in almost all directions, and are, the concession as well as the main ones, kept always in good repair. According to the size of this grant, the population is considerable, being upwards of 1700 persons.

ST. VALLIER, the property of ——— De-
lanaudiere, Esq., is, as nearly as possible, the

counterpart of St. Michel; the species and quality of the soil, and the varieties of the timber differ only in a very slight degree; but the bank of the river is much lower, and the rear part somewhat broken and rugged. The greater part of the land is in an excellent state of culture; it is divided into about one hundred and eighty or one hundred and ninety lots, the best and most flourishing of which are situated on the St. Lawrence, and along both banks of the Riviere du Sud; these, with the Belle Chasse and Boyer, and a few small streams, water it very well: each of the rivers have bridges over them. The church of St. Vallier is pleasantly situated close to the St. Lawrence; the parsonage and a few other houses surround it; at a short distance to the eastward of it is the telegraph No. 4. This grant is intersected by numerous roads, in addition to the main one by the river, all of which, as well as the bridges, are well kept up; it has two grist-mills and several saw-mills. The augmentation is cultivated only to a very trifling extent; the surface of it is irregular, and in the rear quite mountainous, but it produces very fine timber almost of every description.

ST. GERVAIS (the seigniory of), in the county of Hertford, is situated in the rear of Livaudiere, and the augmentations of Beau-

mont and La Durantaie, bounded on the north-east by the township of Armagh, in the rear by Buckland, and on the south-west by Mont-à-Peine; two leagues and a half in breadth, by the same in depth; was granted September 20th, 1750, to Sieurs Michel, Jean Hugues, and Pean de Livaudiere. Only a very partial settlement has yet taken place in this seigniory, and the cultivation of it is very insignificant, as the irregularity and mountainous nature of its surface are both inimical to the exertions of industry, although the soil itself is not bad, being principally a light-coloured loam. It abounds in timber of the best species, and is watered by the Riviere du Sud, and some small streams. The few inhabitants of this seigniory obtain a living with difficulty; one of their principal occupations during the spring is the manufacture of maple-sugar, of which they contrive to send considerable quantities to market.

BERTHIER (the seigniory of), in the county of Hertford, having the River St. Lawrence in front, St. Vallier on the south-west, St. Thomas on the north-east, and the Riviere du Sud in the rear, is two leagues in front by as much in depth; was granted October 29th, 1672, to Sieur Berthier; it is now the property of — Denechaud, Esq. This seigniory is bounded on the map according to a private survey; the

irregularity of it arises from a cession that the proprietor of it made to the Seignior of Riviere du Sud, on the 22d January, 1728. A light sandy earth, varied with a mixture of yellowish loam, is the prevalent kind of soil; it is fertile, and highly productive of grain of all kinds; the largest proportion of the land is under culture, and the general system of husbandry seems to have obtained a great degree of improvement. Many of the farms are in a flourishing condition, of which those on the Riviere du Sud, and the bank of the St. Lawrence, are perhaps the best and most conspicuous. Along the front the ground is rather low, but it gradually rises to a small ridge about a mile from the shore, from the summit of which a very interesting prospect unfolds itself; the river, between eleven and twelve miles across, is beautifully varied by the groups of islands, lying off the west end of Crane Island. The eastern end of the island of Orleans, with all its rich diversity of scenery, and the lofty mountains rising behind Cape Tourmente complete the distant view; the descent from the crest of the ridge down to the shore is a continuation of well cultivated fields, enriched with almost every object that can make a landscape perfect; these, with the addition of the church, and a small cluster of houses charmingly seated, al-

most close to the water's side, on the edge of a little cove called Le Trou de Berthier, when viewed from the main road, are well calculated to give a stranger an exalted idea of the picturesque beauty of the country. Another chain of heights, somewhat more elevated than the one just mentioned, rises between it and the Riviere du Sud, on which there is some fine timber; in other parts of the seigniory wood is not abundant. The Rivieres du Sud, à la Caille, and Belle Chasse, provide an ample and complete irrigation for every part. Near the Riviere du Sud stands the church of St. François; and a short distance from it a grist-mill, worked by a little rivulet flowing into the river. Numerous good roads intersect every part of the seigniory; the main or post-road is on the bank of the St. Lawrence.

ST. THOMAS (the seigniory of), in the county of Devon, with its front to the St. Lawrence, is bounded on the south-west by Berthier, on the north-east by Fournier, and in the rear by L'Épinay, a league and a half in breadth by four and a half in depth; was granted May 5th, 1646, to the Sieur de Montmagny. The original dimensions of this seigniory have been the subject of much litigation, and were at length fixed by an order from the Court of King's Bench of the province, according to

the line of boundary traced upon the Topographical Map, giving an average depth of about a league and a half: it is now the property of Monsr. Couillard. In proportion to its extent, this is one of the most valuable possessions in the whole province; it lies generally low, with the exception of a small ridge or two that separate the settlements on the St. Lawrence from those on the Riviere du Sud. The soil is so rich and highly productive, particularly in grain of all species, as to obtain for it the distinguishing epithet of the granary of the Lower District. As may be supposed, no part of so good a soil is neglected, and the whole is actually under a state of cultivation not surpassed by any grant. Owing to the great extent of agriculture, very little timber remains. It is advantageously watered by the Riviere du Sud, a large branch of the same called Bras St. Nicholas, the Riviere à la Caille, and many rivulets. The first mentioned is a beautifully winding stream that has its source in the mountains, about the rear of the seigniory of St. Gervais. Another principal branch of it descends from the heights much further in the interior. From the confluence of this branch with the main stream in the seigniory of St. Vallier, it meanders through a fine plain in a north-easterly direction to the village of St. Thomas, where it forms a large

basin before it discharges into the St. Lawrence; its course is much impeded by shoals, and not navigable for any thing but canoes; a little below the village its breadth is one hundred and fifty yards; the level of its bed is twenty feet above the St. Lawrence, which occasions a fall, that from the latter has a very beautiful effect. On each side of it, just at the break of the descent, are two saw-mills, in situations most advantageously chosen for ensuring a continual supply of water. The basin is spacious, and well sheltered; at high water vessels from twenty to twenty-five tons may run in for security against a gale, by taking care to avoid a muddy flat at its entrance: the channel, however, is not difficult. The branch called Bras St. Nicholas has its source in the high lands, in the rear of the seignories of Bonsecours and Islet, and flows parallel to the St. Lawrence, but in an opposite direction, until it falls into Riviere du Sud, at the village of St. Thomas. At its confluence, a handsome bridge, called Prevost Bridge, was erected in 1812 by Jacques Morrin; it is one hundred and twenty feet in length, eighteen in breadth, and fifteen above the level of the water. Over the Riviere du Sud there is a much handsomer one, called the Regent's Bridge, built in 1813 by François Frichette; this is three hundred

feet long, twenty in breadth, and fifteen above the water's level. It is built of wood, and supported by substantial neat stone piers; on the top there is a very handsome railing: the two being nearly together, and almost at right angles with each other, have a very light and pretty appearance. In every part of the seignior, but particularly by the St. Lawrence, and on each side of the Riviere du Sud, there are many good houses in the midst of fertile well stocked farms, surrounded by fine gardens and good orchards, that convey an imposing idea of the affluent circumstances of their owners. Several excellent roads pass in different directions through the seigniories, particularly by the sides of the rivers. It contains two churches, one in the village, dedicated to St. Thomas, and another to St. Peter, on the south side of Riviere du Sud. A small chapel, called La Chapelle de St. Pierre, is seated on an eminence, from whence a most agreeable prospect of the St. Lawrence and the surrounding country opens itself. On the different streams there are two grist-mills, and several saw-mills. The village of St. Thomas contains about ninety houses, exclusive of store-houses and granaries, with a population of five hundred persons; it is most delightfully situated at the confluence of the two Rivers du Sud and St.

Lawrence. The houses are nearly all built of wood, generally whitewashed, and disposed into streets with something like regularity; most of them have gardens and orchards attached, and in many instances form desirable residences. There are several shop-keepers and artizans, with some inns as they are called, though they have no great claim to distinction for the good accommodation they afford to travellers. A few highly respectable families have fixed their habitations here, and form among themselves a select and pleasant society.

L'EPINAY (the seigniory of), in the county of Devon, lies in the rear of St. Thomas, three leagues in breadth, by a league and a half in depth, on an average; it was granted April 7th, 1701, to Sieur de L'Epinay. The soil in this seigniory is of good quality, being in some places a yellowish loam, and in others a good black earth; in front the surface is rather irregular, and as it recedes towards the rear becomes mountainous. The part adjoining St. Thomas is thickly settled, and there cultivation has made considerable advances; but this portion is but of small dimensions, in comparison to the whole extent of the seigniory. The timber consists of maple, birch, and beech in profusion, with some very good

pine, besides a great plenty of inferior sorts. It is watered by a few small streams, that descend from the mountains, and flow into the Riviere du Sud.

FOURNIER (fief), in the county of Devon, fronting the St. Lawrence, is bounded on the south-west by St. Thomas and L'Épinay, on the north-east by Gagné and Ste. Claire, and in the rear by waste lands of the crown; thirty arpens in breadth, by two leagues in depth; granted November 3d, 1672, to Sieur Fournier.

GAGNE' (fief) joins the north-east side of Fournier, and bounded in the rear by Ste. Claire; ten arpens in front, by one league in depth; granted September 3d, 1675, to Sieur Louis Gagné.

CAP ST. IGNACE (fief), next to Gagné, is half a league in front, by a league in depth; it is the property of Monsr. Vincelot. No document relating to this grant has been found among the records lodged in the surveyor-general's office.

STE. CLAIRE (fief), in the rear of Gagné and Cap St. Ignace, two leagues in depth, by nearly one league in breadth; was granted March 17th, 1698, to René Le Page. Of these fiefs, the three first possess a tolerably rich and productive soil, and are in a very

good state of cultivation, particularly along the bank of the St. Lawrence, where the surface is smooth and level, but the back part of them is rugged and mountainous. In St. Ignace very little timber remains; but Fournier produces a great deal of all sorts. Excepting Ste. Claire, they are all well watered by the Bras St. Nicholas, and some rivulets that flow into the St. Lawrence. Ste. Claire is still in its natural state: the land is very uneven, but moderately good; the timber in great variety and superior quality.

VINCELOT (the seigniory of) and its augmentation, in the county of Devon, is bounded on the north-east by Bonsecours, on the south-west by Cap St. Ignace and Ste. Claire, and in the rear by waste lands; it is one league square, and was granted November 3d, 1672, to the widow Amiot. The augmentation is one league in breadth by two in depth, and was granted February 1, 1693, to Sieur de Vincelot. Towards the river the land is low, the soil a light sandy earth with clay or marl; in the rear there is a light-coloured loam as it approaches the mountains; the greatest part is under cultivation: it is rather bare of timber. The Bras St. Nicholas and some small streams water it very well. The front is indented by a large bay, near to which is situated the church and

parsonage-house, and the telegraph station No. 6. Several roads by the St. Lawrence, and on the side of the Bras, communicate with the adjoining seigniories. The augmentation is neither remarkable for the goodness of its soil nor quality of the timber; it is mountainous, and wholly uncultivated.

BONSECOURS (the seignior of), in the county of Devon, fronts the St. Lawrence, and is bounded on the north-east by Islet, on the south-west by Vincelot and its augmentation, and by waste lands in the rear; one league and a half in front by two in depth; was granted July 1, 1677, to Sieur François de Bellanger. This seignior differs but little from the preceding one, as far as respects the nature of the soil, and timber growing thereon; about one half of it may be estimated under cultivation, and is very well inhabited; the system of agriculture is good, and well adapted to the land, which towards the river lies low, with the exception of a trifling ridge that runs nearly from one side to the other, but in the rear it is rough and mountainous. Some good timber, particularly pine, is produced in the back part of the grant. It is principally watered by the Bras St. Nicholas, the other streams being very insignificant.

ISLET DE ST. JEAN (the seignior of), in

the county of Devon, is bounded by the river in front, by Lessard in the rear, and lies between Bonsecours and St. Jean Port Joli; one league in breadth by two in depth; granted May 17th, 1677, to Demoiselle G enevieve Couillard. The front of this grant is low, but receding from the river towards the mountains the land rises gradually; the soil in general is good, producing grain of all kinds; in the rear it is a light-coloured loam that continues up to the high lands. About one-third of it may be estimated to be under hand, and is pretty well managed, as well as thickly inhabited. It is watered by a continuation of the Bras St. Nicholas, and several small runs of water. Beech, birch, and maple, are the prevailing kinds of timber, but there is likewise some pine of very good growth. The church and parsonage are situated close to the St. Lawrence, near a point of land, upon which is placed the telegraph station No. 7. At high water this point is completely isolated, from which circumstance it derives its name of Islet de St. Jean.

LESSARD (the seigniory of) is situated in the rear of Islet, and encompassed on three sides by waste crown lands; it is one league square, and was granted June 30th, 1698, to Pierre Lessard. As this tract lies considerably

southward of the ridge of mountains, it is but little known. It is very well clothed with timber, but no attempt at cultivation has yet been made.

ST. JEAN PORT JOLI (the seigniory of), in the county of Devon, with its front to the St. Lawrence, bounded on the north-east by Reaume, on the south-west by Islet, and in the rear by waste crown lands; two leagues and a half in breadth by as much in depth; granted May 25th, 1677, to Noel L'Anglois: it is now the property of — Gaspé, Esq. In front the land is somewhat low, but the uniformity of it is varied by a trifling ridge, and a few rising grounds: drawing towards the rear it is mountainous and rugged. The soil is a mixture of light sandy earth and clay; about the high lands it is poor and indifferent. About one-third of the tract, however, is in a moderate state of cultivation; and the settlements, generally speaking, have been brought, by industry, into a very respectable condition. Beech, birch, maple, and pine timber are in great plenty, as well as most of the inferior species. The Riviere des Trois Saumons, and River Port Joli, have their sources in the mountains at the back of the seigniory, and descending in a westerly direction, water it very well: there are a few other streams of inconsiderable note.

The church and parsonage-house are situated close to the St. Lawrence, by which the main road passes; there are also several other roads to the adjacent grants on each side. At the mouth of Riviere des Trois Saumons the valuable mills and distillery belonging to Mr. Harrower are very eligibly placed: the latter is an establishment of considerable magnitude, with every convenience for carrying on an extensive business; at high water decked vessels of twenty tons may come up to the premises. Over the river there is a good bridge. The beach at the discharge of Riviere des Trois Saumons is flat, and thickly covered by detached rocks that run a good way out. From the St. Lawrence the view of the mills and surrounding objects, heightened by the pleasing natural scenery of the environs, is very agreeable.

REAUVE (fief) is a small strip of land, between St. Jean Port Joli and St. Roch des Annais, half a league broad by two leagues deep; was granted March 16th, 1677, to Demoiselle de la Combe. In this property the same species of soil and timber are found as in St. Jean Port Joli; about one-third of it is well cultivated and thickly inhabited. A few trifling rivulets supply a very scanty irrigation.

The main road crosses it, besides which there are some concession roads.

ST. ROCH DES ANNAIS (the seigniory of), in the county of Devon, is bounded in front by the River St. Lawrence, on the north-east by Ste. Anne, on the south-west by Reaume, and in the rear by the unsurveyed township of Ashford; three leagues in breadth by two in depth; granted April 1, 1656, to Nicholas Juchereau de St. Denis: it is now the property of Chevalier Duchesnaye, Esq. In the vicinity of the river the land is low, and intersected by some broken ridges of no great elevation, but about the rear boundaries the mountains form a close chain of considerable height. Near the front the soil is excellent, consisting of a fine light earth, with a good deal of marl in various parts: on the higher lands a yellow loam is prevalent. One-third of the seigniory is in cultivation, and exhibits every appearance of fertility and good management, especially near the St. Lawrence. On the land under culture very little timber is left, but the other parts are well stocked with the best kinds, and among them some pine of a valuable size. Several small rivers and other streams water it very well, and also work two or three mills. The church and parsonage-house, with

a small group of other dwellings surrounding them, stand on a pleasant site close to the Point of St. Roch, from whence stretch the extensive shoals, that, by greatly narrowing the deep water channel, form the traverse mentioned in a former part of this work for the difficulty of its navigation. A little westward of the church is the telegraph station No. 8. Many roads branch off in almost every direction through the seigniory, but the one passing close to the river is the main post road: they are kept in good order, as well as the different bridges.

STE. ANNE, or LA POCADIÈRE (the seigniory of), in the county of Cornwallis, lies between St. Roch des Annais and the seigniory of River Ouelle, with its front to the St. Lawrence, and bounded in the rear by the unsurveyed township of Ixworth; one league and a half in breadth by as much in depth; was granted October 29th, 1672, to Demoiselle de la Combe: it is now the property of Monsr. Schmidt. So great a similarity reigns through several grants hereabouts, that a description of one may almost serve for the whole: the soil in this one is very fertile, and produces grain of all sorts; most of the concessions are under a good system of agricultural management, and thickly inhabited: the land approaching the mountains is of good quality, but none of

it under tillage. Among a variety of fine timber, abundance of capital pine is produced: it is watered by Le Grand Ruisseau, and several other streams that turn both grist and saw-mills. It contains a church that is surrounded by several houses, very pleasantly situated on the bank of the river. Besides the main road, there are some others branching off in different directions into the seigniories of Riviere Ouelle and St. Roch, all of which are in good order.

RIVIERE OUELLE (the seignior of), and its augmentation, in the county of Cornwallis, is bounded on the south-west by Ste. Anne, on the north-east by St. Denis, in front by the St. Lawrence, and on the rear by the unsurveyed township of Ixworth; two leagues in breadth by one and a half in depth; was granted October 29th, 1672, to Sieur de la Boutellerie. The augmentation, two leagues in front by two in depth, was granted October 20th, 1750, to Dame G n vieve de Ramzay, veuve de Sieur de Bois Hebert: they are now the property of ——— Casgrin, Esq. This is a very valuable and productive tract of country, the greater part of it being a plain, of which the soil is both rich and fertile, being a fine dark mould, interspersed with clay and good marl: the equality of surface is here and there varied by a few small swells and perpen-

dicular rocks of granite, covered at top with creeping shrubbery. The greater part of the land bespeaks a superior state of husbandry; the arable yields grain of all sorts in abundance, and of a quality scarcely surpassed by any other seigniory in the province: the meadow and pasture lands are very luxuriant, and the produce of the dairies forms no inconsiderable portion of the farmer's wealth. The farm-houses and other dwellings are generally accompanied by well stocked gardens and good orchards, their inhabitants enjoying, from all appearance, every comfort that industry can procure among a people wholly cultivators. Although the lands in occupation are generally good, yet a little superiority is perceptible among those on each side of River Ouelle, on the plain stretching north-eastward from thence, and on the main road in the vicinity of the St. Lawrence. In the front part of the seigniory there is but little timber; in the rear, however, there is a profuse variety of the best kinds. It is admirably watered by the River Ouelle, many small streams, and the Lake St. Pierre. The source of the former is in the north-east range of mountains, from whence it winds a serpentine course down to the St. Lawrence: it feels the effect of the tide for some distance up, and is so far navigable for

vessels of twenty-five tons burthen, many of which are constantly employed in transporting to Quebec the produce of this excellent tract, consisting of grain, butter, poultry, live-stock, and a coarse species of woollen cloth manufactured here. Where the post-road arrives at this river there is a ferry, with scows and canoes always in attendance. In so populous a seigniory it is strange that a bridge has not been built; the want of one has, however, been so much felt, that such a measure is said to be in contemplation. A handsome church and parsonage stand on the eastern bank of Riviere Ouelle, by the side of the main road; and almost opposite is the manor-house: at the mouth of the river is the telegraph station No. 9. In the St. Lawrence, about the entrance of River Ouelle, a porpoise fishery is carried on; but, either from less attention being paid to it, or the fish not frequenting the spot so much as formerly, it is not now so productive as it used to be.

ST. DENIS (fief), in the county of Cornwallis, lies between River Ouelle (seigniory) and Camouraska, and is bounded in the rear by the unsurveyed township of Woodbridge; it has about a league in breadth by four in depth; granted May 12th, 1679, to Sieur de St. Denis, for, and in the name of, Joseph Ju-

chereau, his son. The soil in this fief is not much inferior to that of the preceding seigniory, but its surface is more overspread by small detached ridges; it is crossed by the high chain of mountains near the middle of its depth. About a quarter of the grant is under culture, and produces good wheat and other grain. The timber is excellent and plentiful, among which there is pine of a fine growth. Part of Lake St. Peter and a few small streams are the only means of irrigation. The best cultivated lands are by the sides of the roads that cross the seigniory. On a rising ground, close by a little inlet called St. Denis Cove, is the telegraph station No. 10.

CAMOURASKA (the seigniory of), on the south bank of the St. Lawrence, in the county of Cornwallis, is bounded by St. Denis on the south-west, Granville on the north-east, and the unsurveyed township of Woodbridge in the rear; three leagues in breadth by two in depth; was granted July 15th, 1674, to Sieur de la Durantaie: it is now the property of ——— Taché, Esq. This is another of the very valuable and productive seigniories of the Lower District. In the vicinity of the river the land is rather low, and forms an extensive plain, here and there marked by a few singular hillocks, or rather rocks, covered about the top

by a few dwarf pines and low underwood. The soil is excellent, being either a rich black mould, a yellow loam, or a mixture of clay and sand: towards the rear it loses some of its goodness and fertility, as it becomes mountainous.— About one half of the grant is under cultivation, and agriculture has made great progress in a very productive system: wheat and all kinds of grain seldom fail of abundant harvests; but these are not the only dependence of the farmer, as there are within the seigniory some of the best dairies in the province, from whence large quantities of excellent butter are continually sent to Quebec, where it is more esteemed than any other kind brought to the market. Except the mountainous parts, where fine beech, birch, maple, basswood, and pine, are produced, there is not much timber to be found. It is watered by the Riviere du Domaine, which in its course works a grist and a saw-mill, and by a variety of other small streams falling into the St. Lawrence. Several roads leading into the adjoining grants, and many others, open a communication with the different concessions: on both sides of them there are many farm-houses, situated in the midst of fields of most luxuriant fertility, that from spring to autumn present all the beautiful variety of an interesting country. The church and parsonage are pleasantly seated

on the main road, near the St. Lawrence: close to the former, and running south-west on each side of the road, is the village of Camouraska, consisting of forty or fifty houses, the greater part of them built of wood; but there are some few of stone, in a much superior style to the others: some families of great respectability have fixed their residence here, also some very reputable shopkeepers and artisans; it can likewise boast of one or two inns, where travellers may be comfortably lodged and well entertained. During the summer time this village is enlivened by numerous visitants, who come hither to recruit their health, as it has the reputation of being one of the healthiest spots in all the Lower Province; it is also the *watering-place*, where many people resort for the benefit of sea-bathing. The manor-house, which is the residence of M. Taché, is eligibly situated near the river, at a short distance from the village. The islands of Camouraska, in front of the grant, are appendages thereto: being almost bare rocks, they are scarcely of any value, but they are of great utility as affording a safe shelter to small vessels, of which great numbers are always passing to and from the numerous coves hereabouts; on one of them, called Isle Brulée, stands a telegraph.

The Camouraska schooners are well known at Quebec for the large quantities of provisions they are laden with, such as grain, live-stock, poultry, butter, maple-sugar, &c., besides considerable freights of deal planks and other timber. The general aspect of the country in this part of the district of Quebec will always attract the notice of attentive observers. From the bank of the river, which is not much elevated, a plain that, generally speaking, is very level, stretches almost to the foot of the north-east range of mountains: the even surface of this tract is, in various parts, singularly embossed with abrupt masses of solid rocks of granite, destitute of any thing like a covering of soil. From the crevices in them spring a few dwarf pine-trees, rising a little above a thick foliage of creeping shrubbery, issuing from the same places, and spreading over nearly their whole summits: in circumference, some of them cover from three to perhaps half a dozen acres, and vary from twenty to about thirty yards of perpendicular height. From the position, appearance, and exact resemblance of these *terra firma* islands to those of Camouraska, between which and the shore the bed of the river is almost dry at low water, a naturalist will be strongly excited to believe that what is now the continent was,

at some period or other, submerged beneath the wide-spreading wave of the St. Lawrence, and that the elevations in question formed islands, or rocks, exposed to the action of the waters. The progressive diminution of the river; and its withdrawing into the comparative narrow channel that it now occupies, would become an interesting subject for the researches of the geologist; but as it does not fall within the province of the topographer, the enquiry may be dispensed with here.

GRANVILLE (the seigniory of) is bounded by Camouraska on the south-west, Islet du Portage on the north-east, the St. Lawrence in the front, and the unsurveyed township of Bungay in the rear; one league in breadth by three in depth; granted October 5th, 1707, to Marie Anne de Granville, widow of Sieur de Soulange.

ISLET DU PORTAGE (the seigniory of) lies between those of Granville and Lachenaye, bounded in the rear by waste crown lands; one league in front along the river, and one in depth; granted October 29th, 1672, to Sieur de Granville.

GRANVILLE and **LACHENAYE** (the seigniory of), in the county of Cornwallis, having its front to the river, is bounded on the south-

west by Islet du Portage and the unsurveyed lands of Bungay, on the north-east by the seigniority of Riviere du Loup, and in the rear by Bungay and waste lands; two leagues in breadth by three in depth; granted June 2d, 1696, to Sieurs de Granville and Lachenaye. In these three seigniories there are some very fertile patches of land, but as the north-easterly chain of mountains draws closer upon the river, a great part of them is very mountainous; a small portion of each has been cultivated, but none of it is at present in a very flourishing condition. The best farms, however, in each grant, are found near the main road that passes close to the river. Timber is sufficiently plentiful, and some of it of the best kinds. They are but sparingly watered by a few small streams that descend into the St. Lawrence. In Granville there is a grist-mill. Islet has a church dedicated to St. Andrew; but Granville and Lachenaye possesses nothing at all worth notice: there are indeed ranges of concessions marked out, and bearing the names of St. André, Bouchetteville, Marie Louise Adelaide, Ste. Rachel, and St. Theodore; of these St. André only is in a good condition; in the others the ground has scarcely been broken. A grist-mill is seated on the Riviere des Caps,

at its junction with the little stream called Fouquet. The four islands called the Pilgrims lie about a mile and a half off the front of the seigniory, stretching nearly its whole breadth; they are only piles of rock covered with low brushwood and a few small trees: the westerly one is the station of the telegraph No. 12.

RIVIERE DU LOUP (the seigniory of), in the county of Cornwallis, fronts the Saint Lawrence, joining Granville and Lachenaye on the south-west, and the seigniory of Isle Verte on the north-east: in the rear it is bounded by waste crown lands. It has nearly five leagues in breadth by two in depth; granted April 5th, 1689, to the Sieurs Villeraï and Lachenaye: Alexander Fraser, Esq. is the proprietor. The general appearance of this seigniory is uneven and mountainous, but it contains some extensive patches of good arable and very fine meadow land; these are divided into several ranges of concessions, bearing the names of St. André Riviere du Loup, St. Patrick Riviere du Loup, Fraserville, Nouvelle Ecosse, St. George, or Cacona, St. Anthony, St. Andrew, and St. Jacques: the first, a great part of the second, and a little of the third, are in a very good state of cultivation and well inhabited. The whole seigniory is abundantly timbered

with beech, maple, birch, and large quantities of pine. It is watered by several streams, but the principal one is Riviere du Loup, which rises in the high lands, and flows in nearly a northerly course into the St. Lawrence; on both sides of it the banks are high, until approaching within about three quarters of a mile of its discharge, where they become low and flat: vessels of twenty-five tons may ascend it as high as the bridge, a little more than half a mile from its mouth. Fraser Lodge, the residence of the owner of the seigniory, is situated on the north side of the entrance of the river. The main road passes close to the River St. Lawrence, except near the church of St. Patrick, where it makes a *detour* by a rising ground, up to the bridge over Riviere du Loup, and afterwards descends again to the bank of the St. Lawrence, and so continues through the remainder of the grant. By the side of this road there are many ranges of well cultivated fields, that yield abundant crops of all kinds of grain; numerous farm-houses, with large and substantial outbuildings, besides a great many dwelling-houses. Through the whole of this extensive property there is but one church; however, in the concession of St. George, near Cacona, there is a chapel for

those to whom distance denies a regular attendance at the former. Cacona is almost an island, being separated from the main land by a salt marsh, that in the spring always presents a luxuriant pasturage: on the point of Cacona there are several inhabitants. About four miles and three quarters eastward of the Riviere des Caps is the commencement of the Timiscouata portage, which, as being the only route by land from Quebec to Halifax, a distance of six hundred and twenty-seven miles altogether, is of great importance, and a particular description of it therefore will perhaps be acceptable. It was first opened in the year 1783, by General Haldimand, then Governor, but was at that time, considered by many as so intricate, and to present so many difficulties, as to make it impracticable to establish a regular road by it; perseverance, however, with the few attentions it has received from time to time, have clearly shewn the contrary; and it is at this time a route (susceptible indeed of very great improvement) by which the communication may be kept up all the year round: the British mail is always conveyed by it, when landed from the packet at Halifax. From the main road of the St. Lawrence, where the portage road branches off, to Long's Farm on

the bank of Lake Timiscouata, the distance is thirty-seven miles: the direction of the road is generally to the eastward, but it has numerous turns and windings to avoid ascending several very lofty and rugged hills, or crossing deep swamps; as it is, about twenty-four miles of the distance is over a succession of mountains, many of them rough and very steep. However, none of the formidable impediments exist that were formerly considered so insurmountable; and indeed a little exertion, with an expense not very considerable, would render this road as good and convenient for travelling as can be reasonably expected in a wild and unsettled country. From the bank of the St. Lawrence, up to Coté's Ferry, on the Riviere du Loup, a distance of about five miles, the road is as good as can be desired, and by which carriages of burthen may proceed to the ferry, or to Ballentine's Mills, a little to the left: the remainder of the way to Lake Timiscouata has been much improved by *corvées* of several hundreds of militia men, who were employed in mending it in the year 1813, under the superintendence of the *Grand Voyer*, Captain Destimauville. In many parts where the bottom was unsound and swampy, causeways were formed with logs. Though much has been

done, more is yet wanting to complete the work; cutting trenches on each side of the road would be serviceable in draining off the water, and rendering the base of it more solid. Bridges should be erected over the different streams, instead of the inconvenient *make-shift* now resorted to, of placing three logs across them; a contrivance very awkward and unsafe for a horse to pass, and much too narrow for a cart. In a few years these defects will unquestionably be remedied, as the government is desirous of keeping open this line of communication, and rendering it as commodious as circumstances will permit: and in consequence of orders given for that purpose, several soldiers of the 10th Royal Veteran Battalion, with their families, were settled in 1814 upon lands allotted to them at convenient intervals, under the personal direction of the Surveyor-General of the province. These few settlers are not, however, sufficient wholly to answer the intended purpose, and most probably others will hereafter be placed on proper places, of which many may be found, where there are large portions of good land, and some extensive *brulés*, that might very speedily be brought into a state of moderate fertility: at present there are only a few sheds at different

intervals, where travellers may pass the night under shelter from the weather; but as they are uninhabited, nothing further is to be expected from them. Two of the veteran soldiers (Clifford and Gardner) who are settled on the River St. François, about midway along the portage, have got good and comfortable cottages, the accommodations of which they are always ready to afford to passengers, and it rarely happens that any one goes by who is not eager to accept them. The principal mountains over which the road runs are the St. François, Cote de la Grande Fourche, Jean Paradis, La Montagne de la Riviere Verte, and du Buard; the rivers are Du Loup, Riviere Verte, and Trois Pistoles, that flow into the St. Lawrence, and the Riviere St. François, that falls into River St. John. At Long's Farm the traveller cannot fail to be pleased with a beautiful and picturesque prospect of Lake Timiscouata, twenty-two miles in length by the average breadth of three quarters of a mile, encompassed in all directions by lofty mountains covered with thick wood almost down to its margin: several large rivers lend the aid of their powerful streams to swell the waters of this romantic and secluded expanse. In this spot, so far removed from the habitations of man and the pleasures

of society, the farm, though but an humble one, becomes an object of considerable interest; it consists only of a cottage, a barn, and two or three small out-houses, surrounded by a few cultivated fields and a garden. In summer time the scenery around it is various, and uncommonly pleasing, but it can hardly compensate for the dreary solitude of winter. Long, the proprietor of it, has a large family: himself and his sons are the ferrymen of the lake, and have always bark canoes ready to take passengers from one side to the other. From this place to the entrance of the Madawaska river the distance is fifteen miles; and five miles further on is Birch river, where there are two other settlers of the Veteran Battalion (Serjeant Smith and Simpson): twenty-three miles beyond this place are the little falls of St. John. There is a house kept by Simon Hebert, about a mile below these falls, on the westerly side of the river, where something like the accommodations of an inn may be obtained; and if they are not of the best description, the traveller is in general too pleased, in availing himself of them, to descant upon their deficiencies. At this place the Madawaska settlement begins, and continues by intervals on each side of the River St. John for about

twenty-five miles; it consists of about two hundred families of Canadians and Acadians. The cottages are for the most part neatly built, and both fields and gardens well cultivated: on the eastern side of the river, at the beginning of the settlement, there is a church and parsonage-house; there are also two grist-mills in it. From the termination of this little colony to the Great Falls of River St. John the distance is fifteen miles, where there is a military post, or more properly speaking a few old houses occupied by a non-commissioned officer and a few privates, detached from some of the corps serving within the province of New Brunswick: from this post down to Presqu'île is fifty-two miles, where a similar establishment is kept. From Long's House to Presqu'île the total distance is one hundred and thirty-five miles, of which there can be said to be only thirty-five of road already made. To keep the communication free and convenient throughout the year, it will therefore be necessary to form about one hundred miles more, but of this distance the length of the Madawaska settlement may be considered as nearly done already. This task, arduous as it may at first appear, would not be very difficult to complete, and might be performed on the west side of

the St. John and Madawaska rivers, following nearly the route taken by the 8th and 104th regiments, that, in the winter of 1813-14, marched from Presqu'île to Long's, round Lake Timiscouata in nine days. From Presqu'île to St. John's in the Bay of Fundy, one hundred and thirty-six miles, the roads are tolerably good on both sides of the river. During the summer season the water communication from Lake Timiscouata to St. John's is easy, being interrupted only by the Little and Great Falls; at the former there is a portage of about sixty yards, and at the latter another of about a quarter of a mile. From St. John's, the packet-boat crosses the Bay of Fundy to Annapolis; from thence down to Halifax (one hundred and thirty-three miles) the road is very good, along which travellers may always obtain moderately good accommodation.

ISLE VERTE (the seigniory of), in the county of Cornwallis, is bounded in front by the River St. Lawrence, on the south-west by Riviere du Loup (seigniory), on the north-east by Dartigny, and in the rear by waste lands; two leagues in breadth by two in depth; granted April 27th, 1684, to Sieurs Dartigny and La Cardonière.

DARTIGNY (the seigniory of) joins the north-east side of Isle Verte (seigniory); is two leagues

broad and two deep: no record of this grant has been found, even the date of the concession is unknown.

TROIS PISTOLES (the seigniory of), in the county of Cornwallis, is bounded by Dartigny on the south-west, on the north-east by Richard Rioux, and in the rear by waste lands; two leagues in breadth by two in depth; granted January 6th, 1687, to Sieur de Vitré.

RICHARD RIOUX, now a part of Trois Pistoles, is an extensive grant, fronting the St. Lawrence, and nearly encompassed on the other sides by waste lands; it is six leagues in length by four in breadth; granted April 6th, 1751, to Sieur Nicholas Rioux. From the seigniory of Riviere du Loup, along the banks of the St. Lawrence eastward, agriculture has kept but a very unequal pace with the other parts of the district, and the land under cultivation is insignificant in quantity; in many places it is very good, but situation and climate are both unfavourable to tillage: little therefore remains to be said of the few remaining settlements in the lower part of the district of Quebec. The four seigniories just recited are nearly throughout their whole extent mountainous and rugged; the great north-easterly ridge ranges so close to the river as to leave only a narrow slip between it and the shore. This space possesses a mo-

derately good soil, upon which there are a few settlements under a respectable state of husbandry; there are also several patches of good land more in the interior, lying in the hollows between the ridges. Close by the river side there is a very good road extending as far as Bic, and indeed to some distance below it. Isle Verte is much better settled, and in proportion to its extent far more productive than either of the others. It is watered by Riviere Verte, which has its source in the mountains south of Timiscouata portage, and flows in a northerly direction into the St. Lawrence; it has a ferry over it at the main road. Isle Verte, or Green Island, lying off the front of this seigniory, is six miles and a half in length by the extreme breadth of one mile: the soil on this spot is good, and yields fine pasturage for a large quantity of cattle; there is also some pretty good timber upon it. The light-house on the north-east point has been already noticed; the keeper of it, Mr. Hamilton, with his family, and one other family, are the only inhabitants. The island is an appendage to the Riviere du Loup, and belongs to the same proprietor. Dartigny and Richard Rioux are very scantily watered, but very well covered with timber of various species, and very good growth. Trois Pistoles is intersected by a

large river of the same name, whose current is supplied from several small lakes among the mountains that surround the end of Lake Timiscouata. Timber of all sorts may be had here in great abundance.

BIC (the seigniory of), in the county of Cornwallis, next below Richard Rioux, has two leagues in breadth upon the St. Lawrence, and two in depth; was granted May 6th, 1675, to Monsr. de Vitré, together with the Island of Bic, lying in front of it, nearly three miles in length by three quarters of a mile in breadth.

RIMOUSKI (the seigniory of) joins Bic; it has two leagues in front along the river, and two in depth; granted April 24th, 1688, to Sieur de la Cardoniere. The island St. Barnabé, lying off this seigniory, is also included in the grant.

ST. BARNABÉ (the seigniory of) extends from the north-east boundary of Rimouski, down to and comprising Pointe aux Peres, about a league and a quarter in breadth by two leagues in depth; granted March 11th, 1751, to Sieur Le Page de St. Barnabé.

LESSARD (the seigniory of) is next in succession to St. Barnabé, containing a league and a half along the St. Lawrence, by two leagues in depth; was granted March 8th, 1696, to Pierre Lessard.

LE PAGE (the seigniory of) follows Lessard ; it is about three leagues in front by one in depth ; granted November 4th, 1696, to Sieurs Louis Le Page and Gabriel Tibiérge. An augmentation to it of two leagues in depth was granted to the same persons, May 7th, 1697.

PACHOT (the seigniory of), lying next to Le Page, consists of the River Metis, from its discharge into the St. Lawrence for one league upwards, and a tract of land along the St. Lawrence, of one league in breadth by one league in depth ; granted January 7th, 1689, to Sieur Pachot.

DE PEIRAS OR METIS (the seigniory of) follows Pachot, and contains two leagues in front along the river by two in depth ; granted May 6th, 1675, to the Sieur de Peiras. The general surface of these seigniories is mountainous, and broken along the front, affording but little good soil for the purposes of agriculture. In the interior, and by the sides of the rivers that water them, a few patches of tolerable land, with some meadows and pastures, present themselves. In Bic, Rimouski, and St. Barnabé, there are some settlements in as favourable a condition as the soil and climate will admit of ; but in the others only a few scattered farms are now and then visible. The timber is abundant, and of very good quality.

in all of them. An indifferent road leads from a little below Bic down to Pointe aux Peres, where there is a little settlement consisting of a few houses, that are inhabited by pilots, surrounded by some cultivated fields and gardens. In the river, near these seigniories, there are one or two banks, where fishing might be very profitably carried on, as they abound with fine ling, cod, salmon, and other fish. Crane Island, and Goose Island, were originally appendages to the seigniory of Riviere du Sud, being granted with it on the 5th May, 1646; but they have since been dismembered from it, and are now the property of Mr. M^cPherson. They are connected with each other by a marsh, and altogether make four leagues in length: they are inhabited by about forty families, and well cultivated, producing wheat much beyond their own consumption. The marshes are peculiar for the abundance of fine hay they produce, and their pastures, which are sufficient for three thousand head of cattle.

LAC METIS (the seigniory of) consists of the lake, and one league of land surrounding it on every side; was granted February 10th, 1693, to Sieur Louis Rouer.

LAKE MATAPEDIACH (the seigniory of) is a grant of the preceding description, made

May 26th, 1693, to Sieur Nicholas Joseph Damour. Neither the lakes nor the surrounding land have been yet surveyed; consequently, no correct account of them has been yet obtained.

COTE DE BEAUPRE' (the seigniory of), on the north side of the river, in the county of Northumberland, joins the seigniory of Beauport on the south-west, and reaches to the Riviere du Gouffre on the north-east, a distance of sixteen leagues by a depth of six leagues; was granted January 15th, 1636, to Sieur Cheffault de la Regnardiere, and is now the property of the ecclesiastics of the Seminary of Quebec. This very extensive seigniory is more mountainous than any other in the province, yet it contains a large proportion of rich and fertile land. The nature of the soil varies a great deal, as may be readily conjectured, in so vast a space; but the general character of such as is fit for cultivation is nearly the following, viz. on the low grounds along the front of the seigniory, from Beauport to Cape Tourmente, is a dark-coloured mould of good quality, here and there mixed with sand and clay, and some marl; on the higher lands there is for the most part a strong black earth, which, as it approaches the mountains, gives place to a yellowish loam. Among the timber,

beech, maple, birch, pine, hickory, and basswood, are very abundant, as also the inferior species of cedar, sprucefir, hemlock, &c. From the north-eastern extremity of the seigniory of Beauport to Cape Tourmente, a distance of rather more than twenty-two miles, there is a strip of land ranging in breadth from half a mile to a mile, and bounded to the northward by an eminence of considerable elevation: the part of this space not under tillage is very excellent meadow land: the outer margin of the whole of it, at low water, is a continued marsh of not much less than a mile in width, on which, during the spring and autumn, the sportsman is sure to meet with excellent game, as it is visited by wild-ducks, snipes, and plover, in amazing quantities. Beyond the boundary of this level the ground continues to rise by gradations, until it reaches the lofty mountains in the rear. Cape Tourmente is a bold bluff point, rising more than one thousand eight hundred feet above the river, forming a very prominent object in the view of the north shore, either from the eastward or the westward. From hence to Cape Maillard, another bold promontory about five leagues down the river, there is a continuation of capes and projecting points, varying greatly in their size and height, but all of them rising abruptly from the

beach. At their bases is the route called Le Chemin des Caps, which is the only means of communication between the two places, and not passable at high water. From Cape Mailard to Cap de la Baie, a distance of nearly three leagues, there is a narrow space between the river and the rising ground in the division called La Petite Riviere, similar to that on the westward of Cape Tourmente, and which is very well cultivated. Proceeding by the Bay of St. Paul and the Riviere du Gouffre, the country is exceedingly mountainous; but the soil is good, thickly inhabited, and well cultivated. The seigniory is watered by a great many streams flowing into the St. Lawrence and the Riviere du Gouffre; the chief of them are the Montmorenci, Riviere du Sault à la Puce, Riviere au Chien, Riviere Ste. Anne, that receives the little rivers à la Rose and des Roches; Riviere du Domaine, flowing from two lakes in the rear of Cape Tourmente, that are at least eight hundred feet above the level of the St. Lawrence; Riviere du Sault au Cochon, Bras du nord-ouest du Gouffre, Riviere des Mares, Riviere Remus, &c. &c. It is divided into the six parishes of Ange Gardien, Château Richer, Ste. Anne, St. Joachim, Baie de St. Paul, and La Petite Riviere; in each of which there is a church and parsonage-house, besides a grist-

mill and several saw-mills. The best cultivated and most populous divisions of the seigniorie are Ange Gardien, Chateau Richer, Ste. Anne, St. Joachim, and the settlements about St. Féréole. Between the latter and those of La Petite Riviere there intervenes a barren tract of five leagues in length, that has always proved most seriously inimical to the progress of the settlements about St. Paul's Bay, there not being a single road through it, or other means of communication between the two settlements, except by water, and the uncertain one of Le Chemin des Caps, as already mentioned. This great inconvenience will, most probably, soon be remedied; for a road has been traced from St. Féréole to the Bay of St. Paul, to pass in the rear of the mountains, pursuant to an act of the provincial parliament, which likewise provides a sum of money to defray the expenses of the work. Ange Gardien is populous, and well settled; the main road, passing along the eminence almost fronting the river, presents a number of very good houses on each side of it, and which, with those that appear among the concessions upon the rising grounds more in the interior, have a most pleasing effect to the eye. As the county of Northumberland extends from Beauport to the extremity of the province at the River St. John, on the coast of

Labrador, when an election takes place for its members of parliament, it is held at Ange Gardien for the western part of it, and when finished there the candidates repair to St. Paul's Bay, where the votes for the eastern district are collected, and from whence the members are declared duly elected. The Riviere Sault à la Puce is a small stream, descending from the high lands in the rear of Chateau Richer: it winds through a mountainous and woody country, and is entitled to notice for two or three very romantic falls, where its stream is precipitated from the declivity of one ridge to the level of another; and for the beautiful and truly sylvan scenery that decorates its banks, and, in the fall of the year particularly, presents a most extraordinary combination of various foliage. In Chateau Richer are the ruins of a Franciscan Monastery, that was built at the beginning of the last century, upon a little rocky promontory on the bank of the St. Lawrence. Its destruction took place at the time the British army, under General Wolfe, was encamped on the eastern side of the River Montmorenci: the priests of the order at that period, paying more attention to temporal than to spiritual concerns, exerted themselves so much in preventing the country people from supplying any provisions to the troops, that

the general found it expedient to dislodge them from their house, which they had so strongly barricaded as to require the aid of a few pieces of artillery in bringing them to subjection; in consequence, the monastery was destroyed; and there now remain only some of the exterior walls, and part of an adjoining tower. On a rising ground, in the rear of these ruins, stands the parish church, rather a handsome structure with two spires: from this spot a wide-spreading and beautiful prospect unfolds itself, comprehending a large portion of the river, Cape Tourmente, the Island of Orleans and Cape Diamond, with all the intermediate scenery of the well-cultivated tracts of the surrounding country, the whole bounded by distant mountains both to the northward and the southward. The parish of St. Joachim is thickly inhabited; the lands in it are of good quality, and in high cultivation, producing wheat and other grain very plentifully; it contains also some very luxuriant pasturage. Within this parish, delightfully situated on a rising ground, a short distance from Cape Tourmente, is a country residence, with a chapel and various outbuildings, belonging to the Seminary of Quebec, and whither many of the superiors retire every year during the fine season. The settlements of St. Féréole range along the

western bank of Riviere Ste. Anne for about six miles. From the increased elevation of this part, and its great exposure to the severity of the climate, agriculture often experiences powerful checks, and the crops sometimes sustain serious injury ; however, great industry among the inhabitants, who are altogether estimated at between five and six hundred, supplies them abundantly, and leaves something to spare of all the necessaries and many of the comforts of life. The road through the settlement of La Petite Riviere is, for the space of about six miles, well settled on each side ; the houses neat, and the farms in a respectable state of tillage. The road continues to La Martine, a settlement about three miles in the interior, from whence it goes on through Cote St. Antoine and Cote St. Gabriel, as far as Riviere Remus, a distance of about ten miles and a half ; at short intervals through this route there are houses and farms in a flourishing state of agriculture. In St. Paul's Bay, and along the Riviere du Gouffre, the settlements are girt by a lofty range of mountains stretching northward from the St. Lawrence, and enclosing a valley of about thirteen miles in length, and from a mile to a mile and a half in breadth ; the greatest part of which is numerously inhabited, and very well cultivated, notwithstanding

ing the land is in many places very rocky and uneven: several spots on the sides of the hills, though difficult of access from their elevated and precipitous situation, are tilled by manual labour, and are extremely fertile in grain of most sorts. On this tract the houses of the inhabitants are nearly all of stone, very well built and whitewashed on the outside, which greatly adds to the gaiety of the general prospect of the settlement, as well as to the neatness of their individual appearance. Several small streams descend from the mountains, and after serpentizing through the valley fall into the Riviere du Gouffre, turning in their way several saw and grist-mills. The main road passes at the foot of the bounding heights to the extremity of the cultivated land in Cote St. Urbain, and on each side presents many neat and interesting farms and settlements, in a very improved state. The church of St. Pierre is situated on the bank of the Riviere du Gouffre, near its discharge into St. Paul's Bay.

LE GOUFFRE (the seigniority of), in the county of Northumberland, is bounded on the westward by the Riviere du Gouffre, on the eastward by the seigniority of Les Eboulemens, and in the rear by waste crown lands; it extends about half a league on the River St. Lawrence by four leagues in depth, along the

Riviere du Gouffre; granted December 30th, 1682, to Pierre Dupré: it is now the property of Madame Drapeau. This seigniory, on the easterly side of the river, is nearly the counterpart of the opposite settlement in Cote du Beaupré, possessing almost the same kind of soil, and cultivated in a similar manner. The Capes Corbeau and La Baie, projecting into the St. Lawrence, are of great height, and rise abruptly from the water's edge: they are connected with the chain of mountains that ranges along the Riviere du Gouffre, far into the interior; diverging at first a short distance from it, leaving an intermediate tract of good land, but afterwards drawing quite close upon its bank. The first concession, bordering upon St. Paul's Bay, and coasting the river, shows a range of settlements where agriculture has obtained no small degree of improvement: some trifling degree of amelioration has also obtained in the rear of this range. The Bay of St. Paul is about three miles in depth, and rather more than two miles at its entrance, from the capes on each side; it receives the waters of Riviere du Gouffre, which is a stream of considerable size, flowing from some lakes in the second range of mountains in the interior. From the capes that form the exterior points of the bay on either side, the ridges of high lands describe

a circuit before they close upon the river: their lofty and craggy summits form a grand amphitheatric back ground to the picturesque and highly romantic situation, generally known as the St. Paul's Bay Settlement.

LES EBOULEMENS (the seigniory of), in the county of Northumberland, fronting the St. Lawrence, lies between the seigniories of Le Gouffre and Murray Bay, bounded in the rear by waste crown lands; three leagues in breadth by two in depth. No record of this grant has been preserved, but it appears from an act of fealty and homage performed April 3d, 1723, by Pierre Tremblay, then proprietor, that he produced a concession of the land in question made to Pierre Lessard, but the date thereof was not quoted: it is now the property of M. de Sales La Terriere. The face of this seigniory is excessively mountainous; but the soil is not inferior to that about St. Paul's Bay, and is in many parts equally productive. The shore of the St. Lawrence is very lofty, especially about Cap aux Oies; but the edges of the bays, between the different projecting points, afford some good patches of meadow and pasture land: from the elevated bank of the river the ground continues to rise ridge over ridge until it reaches the mountains in the rear. In the concessions called Godefroid,

Dorothée, St. Joseph, and St. George, some very good settlements, that are in an improved condition, present themselves on the slopes of the high lands, and in the intervals between them: the whitewashed cottages and farm-houses, frequently embosomed in thick clumps of trees, have an appearance singularly picturesque. The seigniory is watered by several streams, but principally by les Russeaux du Moulin, du Mouton, de L'Eglise, and du Cap aux Oies, that descend from the rear, and wind between the different ridges in a manner truly decorative. On the first mentioned, near its discharge into the St. Lawrence, are seated an excellent grist-mill and saw-mill; at a short distance from which stands the manor-house, a large and substantial stone building, with numerous appendages. There are several roads leading along the St. Lawrence, where the ground is practicable for them, and in other places over the ridges: they are in general tolerably good, but frequently obliged to ascend some very long and fatiguing hills. The fief of Madame Drapeau, of twenty-nine arpens in front, and running the whole depth of the seigniory, is taken from the western extremity of it. From the situation of this settlement, and those of Le Gouffre and St. Paul's Bay, being denied access by land with other seig-

nories, owing to the intervention of the barren tract of Cote de Beaupré before alluded to, the principal part of their disposable produce is transported to Quebec by water, in which trade many schooners are almost continually employed during the season of navigation; their cargoes consist chiefly of grain, live cattle, and poultry, besides large quantities of pine planks. In one or two of the bays there are some good banks for fishing, on which a great abundance of excellent fish of various species is caught, and large quantities of herrings during the season for them.

ISLE AUX COUDRES (the seigniory of) lies in the St. Lawrence, about two miles from its northern shore, nearly opposite to the Bay of St. Paul, and forms part of the county of Northumberland: it is about six miles in length; its greatest breadth is three miles, but the eastern extremity of it terminates in a point; granted October 29th, 1687, to the ecclesiastics of the Seminary of Quebec, to whom it still belongs. Compared with the neighbouring mainland, the island is low, though about its centre there are some few rising grounds: the shore in one or two places rises abruptly from the water, and is covered with thick creeping shrubbery, but in general the ascent of it is gradual and easy. The soil

throughout is of a good prolific quality, and nearly all under tillage, producing grain of all sorts far beyond its own consumption: there are a few meadows and pasture grounds. The concessions are separated into two divisions, distinguished as the Cote du Cap à la Branche, and Cote de la Baleine; these are very little watered by streams of any description. A small quantity of wood of very inferior kinds still remains on the high ground, about the middle of the island. There is one parish, a church, and a parsonage-house; the inhabitants are reckoned between two and three hundred persons, living in neat well-built houses on each side of a road that makes the complete tour of the island. The battures and shoals surrounding it are very productive fishing-banks; the little bays are the rendezvous of numerous small craft, employed in transporting to Quebec the surplus produce of the island, and the opposite seignories.

MURRAY BAY, or MALBAY (the seigniority of), in the county of Northumberland, is one of the only three grants *en fief et seigneurie*, that have been made by the British government; it extends from the seigniority of Eboulemens along the river St. Lawrence, as far as Malbay, a distance of four leagues by three leagues in depth; was granted April 27th,

1762, to John Nairn, Esq., Captain in His Majesty's 78th regiment of foot: it belongs at present to Mrs. Nairn.

MOUNT MURRAY (the seigniorie of) is another British grant *en fief et seigneurie*, (the third of the same description is Shoolbred, in the district of Gaspé); it reaches from the north side of the River of Malbay, along the bank of the St. Lawrence, as far as the River Noire, by three leagues in depth; granted April 27th, 1762, to Lieutenant Malcolm Fraser, of His Majesty's 78th regiment of foot, and is now the property of Malcolm Fraser, Esq. These two seigniories are separated from each other by Malbay river, and contain only a very small proportion of cultivated land, in comparison to their dimensions. The general surface of both is mountainous, but in some places the soil is moderately good: timber of all kinds is plentiful and very fine, particularly pine. The lands under the best state of improvement are those that range along each side of Malbay river for about six miles. A tolerably good road passes through these settlements to the extremity of them, upon which there are many farm-houses and neat dwellings. Murray Bay has a church and parsonage-house, two grist-mills, and some saw-mills: there is also a well-built manor-house, belonging to the proprietor of the seig-

niory. In Mount Murray the best settlements are on the borders of Malbay river, and stretch as far as those on the opposite shore. The manor-house belonging to Colonel Fraser, called Mount Murray, is very well situated at the entrance of the bay on the east side, and surrounded by a large tract of well-cultivated lands. Both grants are watered by several streams, neither of which are more than sufficient to work the mills.

HARE ISLAND lies nearly in the middle of the St. Lawrence, abreast of the seigniory of Riviere du Loup; it is nearly eight miles in length by the average breadth of about half a mile, low and flat, extending in a direction nearly parallel to the shores of the river: the soil is good, but wholly uncultivated; at each extremity there are long and dangerous shoals stretching off from it. On the south-east side lie the three small islands called the Brandy Pots, already noticed in speaking of the navigation of the river: on the westerly one is placed the telegraph No. 13, the last in the chain from Quebec.

The RIVER SAGUENAY, which discharges itself into the St. Lawrence, at Pointe aux Alouettes, is the largest of all the streams that pay their tribute to the Great River; it draws its source from Lake St. John, a collection of

waters of considerable expanse, lying in $48^{\circ} 20'$ of north latitude, and $72^{\circ} 50'$ of west longitude, receiving many large rivers that flow from the north and north-west, from an immense distance in the interior, of which the Piekouagamis, the Sable River, and the Pariboaca are the principal ones. At its eastern extremity two large streams, one called the Great Discharge, and the other the Kinogami Land River, issue from it; which, after flowing about fifty-seven miles and encompassing a tract of land of the mean breadth of twelve miles, unite their waters, and become the irresistible Saguenay; from which point it continues its course in an easterly direction, for about one hundred miles down to the St. Lawrence. The banks of this river throughout its course are very rocky, and immensely high, varying from one hundred and seventy even to three hundred and forty yards above the stream: its current is broad, deep, and uncommonly vehement; in some places, where precipices intervene, there are falls from fifty to sixty feet in height, down which the whole volume of the stream rushes with indescribable fury and tremendous noise. The general breadth of the river is from two miles and a half to three miles, but at its mouth this distance is contracted to about one mile. The depth of this

enormous stream is also extraordinary. At its discharge, attempts have been made to find the bottom with five hundred fathoms of line, but without effect; about two miles higher up, it has been repeatedly sounded from one hundred and thirty to one hundred and forty fathoms; and from sixty to seventy miles from the St. Lawrence, its depth is found from fifty to sixty fathoms. The course of the river, notwithstanding its magnitude, is very sinuous, owing to many projecting points from each shore. The tide runs about seventy miles up it, and on account of the obstructions occasioned by the numerous promontories, the ebb is much later than in the St. Lawrence; in consequence of which, at low water in the latter, the force of the descending stream of the Saguenay is felt for several miles. Just within the mouth of the river, opposite to Pointe aux Allouettes, is the harbour of Tadousac, which is very well sheltered by the surrounding high lands, and has good anchorage for a great number of vessels of large size, where they may lie in perfect safety. On the northern shore of the St. Lawrence, and at many places on the Saguenay, there are stations for trading with the Indians in peltry, and for carrying on the whale, seal, porpoise, and salmon-fishery; these are known by the name of King's Posts,

and are now let, with all their privileges, to the North-West Company at Quebec, on a lease, at one thousand and twenty-five pounds per annum. An establishment is maintained at Tadousac, at Chicoutami on the Saguenay, at Lake St. John, at Les Isles de Jeremie, near Betsiamitis Point, at the Seven Islands, beyond Cap des Mont Pélés, and at Cap des Monts: at those towards the sea the fisheries are pursued during the summer, and at the interior ones the fur trade is carried on with the Indians during the winter. About the trading post at Chicoutami the land is tolerably fertile, and the timber of a superior quality; in the little agriculture that is here paid attention to, it has been observed that grain ripens sooner than it does in the vicinity of Quebec, although the situation is much further to the northward: another of the many anomalies that distinguish the climate of Canada.

MILLE VACHES (the seigniori of), in the county of Northumberland, situated near the River Portneuf, ten leagues below the Saguenay; it extends three leagues along the bank of the St. Lawrence by four leagues in depth; was granted November 15th, 1653, to Robert Giffard.

TERRA FIRMA OF MINGAN (the seigniori of) extends from Cape Cormorant, along the

northern shore of the Labrador Channel, to Goynish River; was granted February 25th, 1661, to Sieur François Bissot. From Cape Cormorant to St. John's River is the only part now contained in the province of Lower Canada. In both of these tracts the land is very indifferent and wholly uncultivated, indeed unfit for agriculture. The group of islands lying off the shore of the latter, called the Mingan Islands, are advantageously situated for carrying on the fisheries.

TOWNSHIPS.

The townships in the district of Quebec are, generally speaking, so much inferior to those of the other districts in the quality of the soil, and so far behind them in the quantity of settlements and state of agriculture, that the description of them will prove but little more than a recapitulation of uncultivated lands.

NELSON and SOMERSET are two irregular townships in the county of Buckingham, joining each other, and situated in the rear of the seigniories of Deschaillons and Lotbiniere. Somerset is bounded by Stanfold on the southwest, and is partly in the districts of Three Rivers and Quebec. Nelson is bounded on

the north-east by the seigniory of Ste. Croix. They were granted in April, 1804, to officers and privates of the Canadian militia. The land in these two townships lies rather low, but is of a tolerably good quality, and fit for the production of most kinds of grain: in many parts it is well suited for the growth of hemp and flax. Towards the south-east end of Nelson there are some rising grounds, of a soil much superior to the parts lying adjacent to Lotbinière. The timber on both these townships is chiefly beech, maple, birch, and pine; on the low and moist grounds, basswood, cedar, spruce, and hemlock, are prevalent. They are very well watered by the Rivers Becancour, du Chêne, and numerous small streams, that after winding through almost every part of them, fall into the two rivers. None of the land has yet been brought under culture.

HALIFAX, in the county of Buckingham, lies in the two districts of Three Rivers and Quebec, and is situated between Chester and Inverness; bounded on the north-west by Somerset and Arthabaska, and on the south-east by Wolfestown and Ireland. The land in this township is principally of a good quality, and capable of being turned to account in growing most species of grain; the northern part of it is rather low, and in some places runs into

swamps. No portion of it is yet settled upon, nor has any attempt been made to bring it into cultivation, although it might be done with almost a certainty of success. There is a great supply of beech, elm, maple, butternut, birch, and basswood, besides abundance of cedar and spruce fir in the low lands. It is watered by Lake Pitt, and several small runs of water that fall into the Becancour. The south-eastern part has been surveyed, and granted to the late Mathew Scott and Benjamin Jobert: the present proprietors are Mrs. Scott and family, and the heirs of the late Mr. Frobisher.

INVERNESS, in the county of Buckingham, lies between Halifax and Nelson, bounded on the north-west by Somerset and part of Nelson, and on the south-east by Leeds. No part of this tract is cultivated, although it contains lands in the southerly quarter of a superior quality, eligible for almost any description of cultivation; and the remainder is generally above mediocrity, except an extent of swamp of about eight thousand acres to the northward, which is covered with hemlock, spruce fir, and cedar. On the dry lands, timber is in great abundance and of an excellent description. It is watered by Lake William, which discharges itself by a small stream into the Becancour, and by another is connected with Lake Pitt,

besides several small rivulets. The south-west part was granted to the late Joseph Frobisher, Esq., and now belongs to his heirs.

IRELAND, in the county of Buckingham, joins Halifax and Inverness on the north-west, is bounded by Wolfestown on the south-west, and by Leeds and Thetford on the north-east. The north-west part of this township consists of land of an unexceptionable quality, and fit for the growth of grain of all kinds, hemp, flax, and every other purpose of agriculture. The south-east part is not arable, being only a series of rugged mountains running to a considerable distance, with many small lakes and swamps in the intervals between them. The north-west quarter, the only one that has been surveyed and granted, now belongs to the heirs of Joseph Frobisher, Esq.: this is a fertile spot, and inhabited by a few families forming what is called Lord's Settlement. Beech, maple, birch, and many other sorts of timber, are found in great abundance in this township. It is watered by several rivulets, and Trout Lake, which is connected by a little stream with Lake Pitt. Craig's Road passes through it, and crosses the Becancour at Kemp's Bridge. In Lord's Settlement there is a saw-mill, which is found of great utility in this interior part of the country.

LEEDS, in the county of Buckingham, is an

irregular tract, situated between the seigniory of St. Gilles and the township of Ireland, bounded on the north-west by Inverness, Nelson, and St. Croix, and on the south-east by Thetford and Broughton. Except the north-west quarter, where the land is poor and very stony, the generality of this township is of excellent quality, fit for the growth of all kinds of grain, flax, hemp, and other general purposes of agriculture. It is well stocked with timber of many sorts, as beech, birch, maple, basswood, elm, ash, ironwood, spruce fir, and hemlock; and very well watered by the Becancour, which divides itself into several branches, and by many other small streams. Cultivation has made but very small progress here, although some settlements have been attempted, particularly along the line of Craig's Road, where it might be reasonably inferred that better success would have attended them. This road was originally devised to open a direct communication between Quebec, the townships on the frontiers, and the adjacent American States; but its completion has been retarded by many difficulties, more apparently originating in a want of determined enterprize, than in any natural impediments. It was originally traced out by Mr. Joseph Kilborne, Deputy Provincial Surveyor, in 1800, at the expense of Joseph Fro-

bisher, Esq., and other landholders in the townships through which it passes: it extends from the bank of the St. Lawrence through the seigniority of St. Gilles, to the township of Shipton, from whence a road had already been made to the river St. Francis, and thence to the boundary line. The enterprise did not succeed very well, as Lord's Settlement, in the township of Ireland, was the only one that was attempted. In 1809, during the administration of Sir James Craig, a fresh attempt was made to render the route from Quebec to the frontiers commodious and easy; detachments of troops were employed in clearing and making the road, and in erecting bridges of timber over the rivers wherever they were found necessary. The object in view was so far obtained as to enable a stage to travel with tolerable dispatch, though not without inconvenience to those who availed themselves of its conveyance, from the want of proper places to stop at, and houses for the refreshment of travellers; as there is no accommodation of that kind from the last settlement on the River Beaurivage to the township of Shipton, a distance of about sixty miles. At Kemp's Bridge, Palmer's inn was at one time opened; but it neither answered the expectations of the public, nor produced benefit to the proprietor. Notwithstanding the

inducements held out to encourage settlers, by granting them a patent for any lots they might occupy, on condition of clearing a certain portion of land, and building a house (of timber) of given dimensions contiguous to the road; these terms were accepted only in two or three instances, and even these were of no utility in advancing the work, or of advantage to the individuals who undertook them. At the commencement of the late war very little progress had been made, and since that period no means have been used to preserve from decay that portion of the road that was completed, so that at present it is obstructed by fallen trees, and many other impediments, which render it almost as impracticable as if it still remained a wilderness. The several bridges over the rivers are named after the military officers who commanded the detachments employed on this service: they also obtained lands adjacent to the road; but military men have seldom the leisure or the means of becoming permanent cultivators. Such a communication would undoubtedly be of immense advantage to this part of the province, and it is to be hoped that, notwithstanding the hitherto unpromising results, the attempt may be again renewed under the immediate sanction of the legislature. One quarter of the township of

Leeds was originally granted to Isaac Todd, but at present that tract belongs to the heirs of Joseph Frobisher, Esq. Several individuals have obtained grants, and George Hamilton, Esq., of Quebec, holds eight thousand acres by purchase from government, as lands were sold for the purpose of defraying some of the expenses incurred in constructing the road.

THETFORD, in the county of Buckingham, lies between Broughton and Ireland, bounded by Leeds on the north-west, and Adstock on the south-east. This township, though generally mountainous, has a few intervals of good land fit for cultivation, wherein grain, hemp, and flax might be raised: the south-east part is very indifferent, and covered with a thick moss, beneath which there is a bed of stone, with not more than five or six inches of poor exhausted earth upon it. The timber generally is not bad, and consists of beech, elm, birch, and maple, with plenty of hemlock, spruce fir, &c. It is watered by two large lakes, a few moderate sized rivers, and many inferior streams. One half of it is the property of Doctor North.

BROUGHTON, in the county of Buckingham, though somewhat mountainous, contains much land of a good quality; many of the inferior swells, if cultivated, would produce wheat and

other grain ; some parts of it are well calculated for hemp and flax, and many others are naturally tolerably good grass lands. It is well stocked with beech, maple, birch, elm, and other useful timber, besides abundance of wood of inferior quality. It is watered by several branches of the Becancour, by some rivulets flowing into the Chaudiere, and by one or two small lakes. The north-west half was granted to H. Jenkins and William Hall, and is now the property of the latter, who has made some progress in forming a settlement and cultivating a part of it : he has also erected some mills. From the settlement to the seigniory of St. Joseph, on the Chaudiere, there is a moderately good road, and another to Craig's Road.

TRING, in the county of Buckingham, joins the seigniory of Vaudreuil on the north-east, and lies between Broughton and Shenley. This tract of land is, for the greatest part, of a favourable quality and fit for tillage ; it would produce grain, and in many places appears to be well adapted to the culture of flax and hemp. The timber is equally good as the land, and much of the best kinds might be collected. It is watered by a chain of five beautiful lakes, that abound with excellent fish ; they discharge their waters into the River Chaudiere, through a stream called the Bras du Sud-Ouest. One half of the township has

been granted to individuals, but no progress has been made in clearing it.

SHENLEY, in the county of Buckingham, is an irregular tract lying between Dorset and Tring, bounded on the north-east by the seigniorie of Aubert Gallion and the River Chaudiere, and on the south-west by vacant lands. The surface is irregular, in some places low and swampy, but in others possessing a moderately good soil, that would doubtless be sufficiently fertile if brought under the plough. On the dry lands the timber consists principally of beech, maple, and birch; on the others there is scarcely any thing else but cedar, and spruce fir. It is not very well watered. One quarter of the township was granted to the late James Glenny, but no part thereof is cultivated.

DORSET, in the county of Buckingham, is situated on the westerly side of the River Chaudiere, joining Shenley on the north, and encompassed on the other sides by unsurveyed lands. This is a large township, consisting chiefly of fine rises of good land, very fit for tillage, and almost every where favourable for the culture of hemp and flax, though no settlements have hitherto been made in it; the most inferior part of it is along the rocky bank of the River Chaudiere. It is well stocked with basswood, birch, maple, beech, and elm

timber: some of the swamps are covered with cedar and hemlock. It is admirably well watered by three large lakes, and a number of rivers that wind through it and fall into the Chaudiere: on their banks are found some fine breadths of excellent meadow land. The whole of it was granted to Mr. John Black, but now belongs to the heirs of the late Simon M'Tavish, Esq.

FRAMPTON is situated partly in the counties of Dorchester and Hertford; it lies in the rear of the seigniories of St. Joseph and Ste. Marie, on the River Chaudiere, and is bounded by Buckland on the north-east, by Jolliet on the south-west, and by Cranbourne on the south-east. A soil for the greatest part favourable to agriculture, though a good deal diversified with hill and dale, is the general character of this township, but a few of the low lands incline to be marshy. Beech, birch, and maple, thickly clothe the rising grounds, but cedar and spruce fir are most prevalent on the other parts. It is watered by the principal branch of the River Echemin, and some inferior rivers, on which there are some excellent situations for mills. Only a very small portion of this township is yet cultivated. The south-westerly half has been surveyed and granted to P. E. Debartzch, Esq., and to other persons; that gentleman,

however, and — Pyke, Esq., of Quebec, are the principal landholders.

BUCKLAND, in the county of Hertford, is an irregular township, situated in the rear of the seignior of St. Gervais, and the fiefs La Martiniere and Mont-à-Peine; it joins Jolliet and Frampton on the south-west, and is bounded on the other sides by waste lands of the crown. The surface of this tract is much varied, in many places rising into considerable swells, the intervals between which are rather swampy, but the soil is in general excellent; even the wet lands are by no means of a bad quality. Every species of grain and grass, besides hemp and flax, might be produced upon it in great abundance. It is principally timbered with beech, birch, maple, ironwood, basswood, and elm, with a great deal of cedar, spruce fir, and black ash. It is completely watered by several large streams and branches of the Echemin, with many rivulets, on nearly all of which there are very eligible situations for mills, and much good meadow land along their borders. Large quantities of maple-sugar are made here by the inhabitants of St. Gervais. Only one quarter of the township has been surveyed, which is now the property of William Holmes, Esq., of Quebec.

IXWORTH, in the county of Cornwallis, is an

irregular tract lying in the rear of the seigniory of Ste. Anne, and the augmentation to the River Ouelle. Of this township no more than one thousand two hundred acres have been surveyed, and granted to Matthew Omara, the whole of which is most excellent land: it joins Ste. Anne, and some part of it is in a very forward state of cultivation: on the remainder there is a large quantity of excellent pine timber, much of which is transported by the River Ouelle to the St. Lawrence, and thence to Quebec.

STONEHAM and TEWKESBURY, two townships on the north side of the St. Lawrence, in the county of Quebec, except a small part of the latter which is in the county of Northumberland; they join each other, and are situated in the rear of the seigniories of Cote de Beaupres, Beauport, and Notre Dame des Anges. The general face of the land throughout these tracts is mountainous and rocky; the largest part of it barren and unfit for cultivation, though here and there some scanty patches of arable land lie in the vallies, where the soil is moderately good, and would bear tillage. Some little exception, however, may be made in favour of that part of Stoneham from the front of it to the River Jacques Cartier, where the land is chiefly arable, and of a yellow loamy

nature. They are watered by the large rivers St. Anne, Jacques Cartier, and Batiscan, flowing majestically between the lofty ridges of mountains, by several of inferior magnitude, and by some small lakes. The timber consists of beech, maple, birch, and pine of good dimensions. The most valuable part of Stoneham was originally granted to Kenelm Chandler, Esq. and is now the property of Mrs. Brydon.

THE DISTRICT OF GASPE,

The eastern extremity of the province on the south side of the St. Lawrence, lies between the parallels of 47 degrees 20 minutes, and 49 degrees 10 minutes of north latitude; and between the 64th and 66th degrees 30 minutes of longitude west from Greenwich. It is bounded on the west by the district of Quebec, on the east and north-east by the River and Gulf of St. Lawrence, and on the south by the province of New Brunswick and the Bay of Chaleurs. It forms one county, called Gaspé, and sends one member to the provincial parliament. Less in size, it is also inferior in every respect to either of the three preceding districts; the north-easterly ridge of mountains, that terminates only at Cape Roziere, divides it nearly in two, from the north-west side of which, down

to the shore of the St. Lawrence, the whole tract is rough and unfertile, being covered with almost impenetrable forests, except a few spots on the river, where grants have been made of land that is supposed eligible to cultivation. There is not much difference on the south-east side of the ridge, until approaching pretty close to the shore of the Bay of Chaleurs, where, bordering on the sea and for some distance inland, there are in several places portions of land upon which agriculture might be successfully carried on to a much greater extent than it is at present. The line of coast from Cape Chat in the St. Lawrence round by Cape Roziere to the River Ristigouche, at the bottom of the Bay of Chaleurs, is about 280 miles: from Gaspé bay, near the latter cape, to Ristigouche bay, the coast is divided into townships called Carleton, Maria, Richmond, Hamilton, Coxe, Hope, and Nos. 7, 8, and 9, each from eight to twelve miles in breadth, and intended to be nine miles in depth. In the tract extending from Richmond to the eastern boundary of Hopetown there are several patches running at least eight miles back, that are likely to prove fertile and productive: in Coxe township the depth of the moderately good arable land is estimated to exceed 18 miles. The distance from Richmond to Hope township is about

forty-two miles, and excepting the space of Ironbound shore, lying between Richmond and Bonaventure, the front line of concessions is nearly all settled upon. The front of Maria and Richmond forms an open bay, but the anchorage, even for vessels of the smallest burthen, is a mile from the shore, on account of the shoals at low water. In Carleton such lands as are capable of being cultivated are already occupied, but they amount to one or two concessions only. Between Cape Roziere and Cape Chat the coast is mountainous and barren, having only three or four houses throughout the whole distance, besides a small settlement of a few families at Mont Louis, in the vicinity of which there happens to be some land fit for culture, although there are five seignioral grants of land within that space. The whole population of the district in 1808 amounted to 3200 souls, exclusive of three to four hundred fishermen, who sojourn in it during the fishing season, but quit it on the approach of winter: since that period it has probably not much increased. The industry of the inhabitants is chiefly employed in the fisheries, which are regulated by an act of the provincial parliament of the forty-seventh year of George the Third, and carried on to a considerable extent, as the quantity ex-

ported amounts, *communibus annis*, to about 35,000 cwt. of codfish, 5000 of salmon, and from 10 to 12,000 of herrings, pilchards, and mackarel; to this may be added the produce of some whales caught in Gaspé Bay, a trifling trade in peltry, and the building of one ship and three or four small vessels annually. The fisheries are sedentary, but the exportations and importations usually employ eight or nine square-rigged vessels, and about thirty-five small ones. Agriculture meets with only a secondary attention, and the produce of it at present does not much, if at all, overbalance the consumption. The timber consists of spruce fir, white and black birch, beech, elm, and pine, fit for masting of small dimensions, with some oak of a very inferior quality. The town of New Carlisle, the principal one, is situated in Coxe township, and laid out in a manner that hereafter it may become a compact and regular little place: the position of it is nearly central from each extremity of the Bay of Chaleurs; and the number of houses is from forty to fifty, all of wood: it has a church, a court-house, and a gaol; the two latter are now building, under the superintendance of commissioners appointed by an act of parliament. The situation is very healthy, and the surrounding lands some of the most fertile of the district. From the town nu-

merous settlements extend on each side, occupying nearly the whole front of the townships of Coxe and Hope, and, including the town itself, may be estimated to contain nearly one half of the whole population. These settlements are in a much more improved state than any of the others. The want of grist-mills is seriously felt by the inhabitants of this place, and indeed all over the district, and greatly retards the progress of agriculture: there are good situations for them on a river that takes its source from a small lake within the township of Coxe, and from its proximity to the settlement would be a very eligible place for constructing one. In front of these townships there is an excellent beach, where the fish is cured and dried. Percé, the next place in importance to New Carlisle, is situated on a rising ground that forms the southern point of Malbay, contains twenty-five or thirty houses, principally inhabited by fishermen, and like the chief town is honoured with a court-house and gaol: in front of it the beach is very good for curing fish, and lying off are some of the best banks in the bay for catching them. The island of Bonaventure lies about a mile and a half from the shore, opposite to the point; it is little better than a barren rock, but yet a few persons are hardy enough to winter there for

the sake of retaining possession of the fishing places they have occupied during the summer. Very near the southerly point of Malbay there is a remarkable rock rising about two hundred feet out of the water, and of about twelve hundred feet in length, in which there are three arches completely wrought by nature; the centre one is sufficiently large to admit a boat under sail to pass through it with ease; from this rock, round Malbay to Point Peter, there is an excellent beach for fishing, part of which is named La Belle Ance, or Lobster Beach: close to this place is the house of the late Governor Coxe. Gaspé Bay lies between Cape Gaspé and Whale Head; it runs about sixteen miles into the land, and is about five miles broad: from the extremity of it two other inlets, called the north-west and south-west arms, penetrate a considerable distance into the interior, and receive the waters of several streams that flow from the mountains: the bay itself is deep and well sheltered, and capable of affording protection to a large number of ships from bad weather; the shores are lofty, and the settlers upon them are nearly all fishermen. Douglass town, or rather the situation for it, as there are only five or six houses yet built, is at the entrance of the River St. John,

on the south side of the bay ; on the opposite shore of the river is the site of the intended town of Haldimand. At Pabos Bay, about midway between Cape Despair and Point Maquereau there is a small village on the western side, and on the opposite side, on a projecting point, stand the summer habitations of the fishermen, as they are usually termed : several streams descend into this bay from a numerous chain of small lakes to the north-westward. A little to the westward of Pabos is a small snug inlet called Port Daniel. Bonaventure is a small place, containing about twenty-five houses and a church, situated on the western side of the harbour of the same name, in the township of Hamilton : the land surrounding it is level and pretty good, but its whole dependence is the fishery. On the north shore of Ristigouche Bay the country presents a great deal of luxuriant meadow land ; from Megoacha Point there is a tract of about sixteen miles in length and about a mile and a half in breadth, granted in *fief and seigneurie* on the 4th July, 1788, to John Shoolbred, Esq. and although several parts of it claim notice as being well adapted for settling upon, it yet remains without a single individual, from the object of the proprietor not being any partial

concession, but the disposal of the whole of it, probably only at a future period. A little beyond this grant, upon the northern bank of the River Ristigouche, is a small village of domiciliated Indians of the Micmac tribe, which is superintended by a missionary, who resides at Tracadigash or Bonaventure. The communication from Gaspé to Quebec may be kept up by three different routes: one by pursuing the coast of the Gulf and River St. Lawrence; the second is by following the course of the River Ristigouche as far as the River Matapediach, and continuing along the side of it as far as Lake Matapediach; from thence there is an Indian footpath for nearly thirty miles to the River Mitis, the course of which is pursued until it reaches the St. Lawrence near about where the settlements begin; the third route is by proceeding along the Ristigouche River nearly up to its source, from whence there is an Indian footpath or portage road of eleven miles to the Grand River, which flows into the River St. John, fifteen miles above the Great Fall, from whence the traveller proceeds in the road of the Temiscouata portage; this is the least difficult of the three, and the distance by it from New Carlisle to Quebec is three hundred and ninety miles; this may be shortened by eighteen or twenty miles, by a road that has

been blazed from the River Waganitz to the Rivière Verte, that descends into the River St. John in the Madawaska settlement. With the description of Gaspé the topographical account of the whole of the province of Lower Canada closes.

UPPER CANADA.

SINCE the year 1791 the Province of Upper Canada has been bounded in the following manner; viz. on the east by Lower Canada, on the north-east by the Grand or Ottawa River, which in that direction separates it from the Lower Province; on the north by the territory of the Hudson's Bay Company; on the south and south-east by the United States of America, or rather by an imaginary line, beginning at the village of St. Regis, on the parallel of the forty-fifth degree of north latitude, from whence it passes up the middle of the River St. Lawrence, Lake Ontario, the Niagara River, Lake Erie, and continuing thence through the middle of the Water Communication into Lakes Huron and Superior, the Long Lake, and along the middle of the chain of lakes and water communication up to the north-west angle of the Lake of the Woods, and from thence due west to the

River Mississippi;* on the west and north-west no limits have been assigned to it, therefore it may be supposed to extend over the vast regions that spread towards the Pacific and the Northern Oceans. The separation between it and the United States is so vague and ill defined, and the prolific source of so many disagreements between the two powers, that it has long called for the revision which is now about to be performed in fulfilment of the fourth and fifth articles of the treaty of peace of 1815. The interior divisions are eight districts, viz. the Eastern, Johnstown, Midland, Newcastle, the Home, Niagara, London, and the Western; these are again subdivided into 23 counties, viz. Glengary, Stormont, Dundas, Prescott, Russel, Grenville, Leeds, Carleton, Frontenac, Lenox, Addington, Hastings, Prince Edward, Northumberland, Durham, York, Norfolk, Oxford, Middlesex, Lincoln, Haldimand, Kent, and Essex. These contain one hundred and fifty-nine townships, exclusive of Indian lands, and certain other large portions that are reserved for the crown, and the maintenance of the Protestant clergy. The townships, taken one with another, will average about 61,600 acres, making

* This boundary was fixed by the treaty of 1783, but is erroneous, inasmuch as a line drawn due west from the Lake of the Woods will not strike the Mississippi at all.

the aggregate quantity of 9,694,400 acres, that may be arranged under the following heads ; about 3,000,000 of acres are granted in free and common soccage, 2,769,828 are reserved for the crown and clergy, and 3,924,572 still remain to be granted. The extent of country thus laid out reaches from Pointe au Baudet along the north shore of the river St. Lawrence, Lake Ontario, Lake Erie up to Lake St. Claire and the communication between it and Lake Huron, a distance little less than one hundred and ninety leagues. Through this range, wide as it is, and for a depth that varies from forty to fifty miles, the soil for the most part is scarcely excelled by any portion of the continent of North America ; it is so happily varied in its nature as to present situations where agriculture may be successfully carried on in all its numerous branches ; but perhaps the particular species that most prevails is a fine dark loam mixed with a rich vegetable mould. A sameness of appearance overspreads almost the whole country, from which very little deviation is perceptible. Between Pointe au Baudet and the Bay of Quinté, comprising the eastern, Johnstown, and midland districts, the land presents an almost uniform level of exquisite beauty, rising only a few feet from the bank of the St. Lawrence, finely intersected, and admirably

well watered in almost every direction by numerous streams, several of which are navigable for boats and canoes, and obstructed only by a few falls that occasion short portages; they offer hundreds of the most convenient situations for erecting mills, while their banks are with few exceptions very desirable for the formation of new settlements. From the bay of Quinté along the edge of Lake Ontario to its western extremity, there runs a ridge of heights, of no great elevation, and extending only a short distance in breadth or to the northward, but from which the land soon descends again to its former level; the interior of this tract is intersected by a chain of lakes, that by means of a short portage or two are connected with Lake Simcoe, and thence with Lake Huron. Along the northern part also of the Niagara district runs a ridge called the Queenstown Heights, stretching across the river Niagara, and away eastward into the state of New York; the altitude of this range in any part of it does not exceed one hundred and sixty yards above the surface of the lake. This space, containing the Newcastle, the Home and Niagara districts, is watered by a great number of streams both large and small, that greatly contribute to its fertility: in the latter district is the Welland, formerly called the Chippewa, a beautiful river flowing through a

remarkably fertile country, for about forty miles, and wholly unobstructed by falls; also the Ouse or Grand River, a stream of much greater magnitude, rising in the interior of the country, towards Lake Huron, and after winding a long and picturesque course, falls into Lake Erie; across its mouth there is a bar, but always with eight feet water upon it: it is navigable for small vessels from the Lake many miles upwards, and for boats to a much greater distance. The land through the whole of this last mentioned district is uncommonly rich and fertile, with a considerable portion of very flourishing settlements upon it. From the river Ouse, proceeding along the shore of Lake Erie, up to the Lake and River St. Claire, the whole space is extremely even, with scarcely a league of it but what displays excellent situations for settlements, and in spots where the land is already under tillage, finer crops or more thriving farms are not to be met with in any part of either province. The portion of the western district lying between Lake Erie and Lake Ste. Claire is perhaps the most delightful spot of all the province; the fertility of the soil, the richly diversified and luxuriant beauties that every where court the view, the abundant variety of excellent fish that teem in the rivers, and the profusion of game of different species

that enliven the woods, the thickets, and the meadows, combine to insure a preference to this highly favoured tract for the establishment of new settlements. From the Ouse to Lake Ste. Claire the space is occupied by the London and Western districts ; it is watered by many small streams falling into Lake Erie, besides the River Chenail Ecarté and the exquisitely picturesque River Thames, formerly called the Rivière à la Tranche ; it rises far in the interior, about the township of Blandford, and after pursuing a serpentine course in a direction nearly south-west, discharges itself into Lake St. Claire. It is navigable for vessels full twenty miles from its mouth, and for boats and canoes nearly up to its source, but little less than one hundred miles. The River Chenail Ecarté runs almost parallel to the Thames, at about ten miles from it, and falls into Lake St. Claire. The portions now described are those only that are more or less settled upon ; in the rear of the townships are large tracts of land, stretching far to the northward, covered with immense forests, and little known except to the Indians ; but it has been ascertained that there are many wide spreading extents of rich and fertile soil, particularly bordering on the south-west bank of the Ottawa River. Through these regions, as yet unexplored by civilized man, there are many

streams, and some of great size, that flow both into Lake Huron and into the Ottawa River, but none of them have been sufficiently traced to admit of being delineated on any map. Timber in almost every variety is found in the greatest profusion; the oak, beech, walnut, ash, hickory, maple, elm, pine, sycamore, birch, and many other sorts, are of peculiar excellence, and of capital dimensions. The climate is so particularly salubrious, that epidemic diseases, either among men or cattle, are almost unknown; its influence upon the fertility of the soil is more generally perceptible than it is in Lower Canada, and supposed to be congenial to vegetation in a much superior degree. The winters are shorter, and not always marked with such rigour as in the latter; the duration of the frost is always accompanied with a fine clear sky and a dry atmosphere; the spring opens, and the resumption of agricultural labours takes place from six weeks to two months earlier than what it does in the neighbourhood of Quebec; the summer heats rarely prevail to excess, and the autumns are usually very friendly to the harvests, and favourable for securing all the late crops. In fact, upon so good a soil, and under such a climate, industry and an increase of population are only wanting to render this colony flourishing and happy. In reviewing the popu-

lation of this province, an important increase will be found to have taken place of late years; in 1783, the utmost amount that could be estimated did not exceed ten thousand souls, and of these the numerous frontier posts and garrisons constituted by much the greater part. After that period a great accession was made by the settlement of loyalists and disbanded soldiers, and which was considerably increased by the emigration of many people who soon grew tired of the newly acquired independence of the American States; in addition to the natural increase of the numbers thus acquired, they have been gradually augmented by emigrations from Great Britain, Ireland, Scotland, the United States, and many other places, so that in the year 1814 it was taken in round numbers at ninety-five thousand souls, and which may be trusted to as a tolerably exact statement, or at least considering the difficulty that must be experienced in collecting the returns, as nearly so as can well be obtained. Of the three millions of acres already stated to have been granted, the quantity now under tillage will be found to approach pretty near to two hundred and ninety thousand acres, dispersed over the different districts. The most populous and improved part of the colony is undoubtedly that from Pointe au Baudet to the head of the Bay

of Quinté, a range of one hundred and seventy miles, in which are contained the towns of Kingston, Johnstown, and Cornwall; Fort Wellington, the Mohawk village, Brockville, and several smaller villages; besides a continuation of houses, (many of them spacious and well built) and farms by the side of the main road, as well as the other roads that lead to the interior settlements. Great industry and attention to improvement are displayed upon most of the lands throughout this tract; the roads that were formerly made have been gradually rendered sound and good, and many new ones constructed; bridges have been thrown across the rivers, and various communications both by land and water opened to the interior; indeed various indications of a flourishing and accelerated progress are apparent in almost every direction. Of the towns just mentioned, Cornwall, lying about five miles above St. Regis, and Johnstown, three miles east of Fort Wellington, contain each from sixty to seventy houses, built of wood, with a church, courthouse, &c.; they stand close to the River St. Lawrence; the ground planned out for each is a mile square. Fort Wellington, formerly called Prescott, is situated directly opposite to the American town and fort of Ogdensburgh, or Oswegatchie, as it used to be named; between

them the river is no more than one thousand six hundred yards broad ; during hostilities shot were repeatedly exchanged between them, particularly on the passing of brigades of boats up the river. The town of Kingston, the largest and most populous of the Upper Province, is very advantageously seated on the north side of the River St. Lawrence, or rather at the eastern extremity of Lake Ontario ; it is in lat. $44^{\circ}. 8'$. north, and in long. $76^{\circ}. 40'$. west from Greenwich. On the ground upon which it is built formerly stood Fort Frontenac, an old French post. Its foundation took place in 1784, and by gradual increase it now presents a front of nearly three quarters of a mile, and extending in depth about six hundred yards. The streets are regularly planned, running at right angles with each other, but not paved : the number of houses may be estimated at about three hundred and seventy ; some of them are well built of stone, but the greater number are of wood ; many of them spacious and commodious. The public buildings are a government-house, a court-house, a Protestant and a Catholic church, a market-house, a gaol, and hospital, besides the garrison, block-houses, government magazines and stores. For the last fifteen years the town has obtained consi-

derable mercantile importance; wharfs have been constructed, and many spacious warehouses erected, that are usually filled with merchandize: in fact, it is now become the main entrepôt between Montreal and all the settlements along the lakes to the westward. From the commencement of spring until the latter end of autumn, great activity prevails; vessels of from eighty to nearly two hundred tons, employed in navigating the lake, are continually receiving and discharging their cargoes, as well as the batteaux used in the river. The harbour is well sheltered and convenient, accessible to ships not requiring more than three fathoms water, with good anchorage close to the north-eastern extremity of the town; the entrance to it is defended by a battery on Mississaga Point, and another on Point Frederick, which, with the shoal stretching from the former, with only five feet of water upon it, are quite sufficient for its protection. In the rear of the town, upon a rising ground, some temporary field-works have been thrown up for its defence upon that side; but from the growing importance of the place these cannot be deemed sufficient, and permanent works ought to be constructed in their stead. Opposite to the town, and distant about half a mile, is a long low peninsula, forming the west side of Navy

Bay; the extremity of it is called Point Frederick: Point Henry is the extremity of another peninsula, but of higher and more commanding ground, that forms the eastern side of it. This is the principal depot of the royal navy on Lake Ontario, and where the ships are laid up during the winter; the anchorage is good, but somewhat exposed to south and south-west winds; it is very well defended by batteries and block-houses on Point Frederick, and by a strong fort on Point Henry. On the western side of Navy Bay are the dock-yard, large store-houses, slips for building the men of war, naval barracks, wharfs, and several dwelling-houses for the master builder and other artificers, for whom, since their occupations have been so unremitting, it has been found necessary to erect habitations on the spot. In this yard the ships composing the present British Ontario armament were built and equipped: the construction of the St. Lawrence, a first-rate, mounting one hundred and two guns, will sufficiently prove that the power of this fleet may hereafter be increased to a vast extent. As a rival station to the American one of Sacket Harbour, Navy Bay is entitled to every consideration, and as long as it becomes an object to maintain a naval superiority on the lake, the greatest attention must be paid to this establishment;

particularly when we observe with what care our rivals complete such of their ships as were begun during the war, and also the measures they are adopting generally to be enabled to contend against us, at a future period, with numerical strength in their favour; and, in fact, the methods they pursue are well calculated to obtain the object they steadily keep in view. The conduct of an enterprising enemy should always be narrowly observed, and a countervailing power be prepared, commensurate to the means of aggression. The Americans build their ships much faster than we do on our side, and for this reason, strength is the chief object with them, and if that be obtained they care but little about beauty of model or elegance of finishing; in fact, they receive no other polish than what is given them by the axe and the adze. On the other hand, we employ as much time upon ours as we should in the European dock-yards: they are undoubtedly as strong as the Americans, they are handsomer and much better finished, but they are far more expensive, and will not endure a longer period of service. When we reflect that ships built on this lake will not last more than five, or at most six years of actual service, it may be a subject not unworthy of consideration, whether we cannot, with some advantage

to ourselves, adopt the methods of our opponents ; and if we have a fleet as strongly built, equal in number and size to theirs, and capable of keeping up the unrivalled splendour of our national banner, be satisfied with it, although it be not a rival in beauty and splendid decorations to that which has awed every enemy into submission. The situation of the town of Kingston is convenient and very well chosen ; the soil in its vicinity is very fertile by nature, and much improved by cultivation for a great distance all round ; roads lead from it to the westward, to the eastward, and to the interior ; with the latter there is a good water communication by means of the rivers Rideau and Petite Nation, and some lakes that are connected by short portages. In the lapse of time, as the townships become settled, this will prove of great advantage in facilitating the transport of their produce, either to Kingston or to Montreal, as both the Rideau and Petite Nation discharge themselves into the Ottawa. Fronting the harbour of Kingston is Wolfe Island, or Grand Isle, twenty miles in length and about six in extreme breadth ; it is uncultivated, but very well clothed with oak, elm, ash, and pine timber, and where large quantities are continually felled for the use of the dock-yard : on the south side of it a deep bay

runs in so far as to leave an isthmus of no more than one mile in breadth; up this bay is the general route from the south side of the St. Lawrence to Kingston; at the entrance of it lies Carleton Island, which has a good harbour, and was in the year 1775 the naval depot, but at present it is seldom occupied by more than a non-commissioned officer's detachment of troops. The approach to Kingston harbour is made by three different channels: the first, called the Batteaux Channel, is between Wolfe Island and Forest Island, and is generally used by small craft only, having in several places hardly two fathoms and a half water; the next is the South Channel, formed by Forest Island and Snake Island, a small spot with an extensive bank spreading from it; here also, in the fair way, the water shoals from three to two fathoms and a half: the third and best is the North Channel, between Snake Island and the main land, which, although it increases the distance a little, is by far the safest, having from four to ten fathoms water in it. A little to the westward of Kingston is the bay of Quinté, very singularly formed between the irregular peninsula of Prince Edward county on the south and the main land of the midland district on the north; the length, through the various crooked turns it makes, is little short of

fifty miles, and its breadth varies between six and twelve miles; the isthmus formed between it and Lake Ontario, in the township of Murray, is not more than three furlongs broad, over which there is a portage; this inlet affords to vessels safe shelter from the heavy gales frequently experienced on the Lake. The peninsula on every side is indented by numerous small bays and coves. Several rivers fall into the bay, of which the largest are the Appanee, the Shannon, the Moira, and the Trent; the latter, flowing from Rice Lake, is the channel by which the waters of a chain of shallow lakes in the Newcastle district are brought into Lake Ontario. On the south side of the Trent, in the township of Percy, are several springs highly impregnated with salt, and from which that article is made, but does not answer the purpose of curing provisions; being found, by repeated experiments, not to possess the preservative qualities of sea salt. The townships on the borders of the bay and on the peninsula are thickly inhabited, and in a prosperous state of cultivation; their produce of wheat and other grain is very abundant, the soil being extremely rich and very easily tilled: among the timber there is some fine oak, pine, elm, and hickory. A very short distance westward of the isthmus of the bay of Quinté there is another small in-

PLAN
 of
YORK HARBOUR
 by

Jos^t Bouchette,
 a J.M. Schooner Annandale's guns wrecked but raised by Lieut
 Joseph Bouchette and brought to,
 b Where she again grounded but was afterwards brought to c.
 The dotted lines d e f g show the breaking of the ice in the Spring

let now called the harbour of Newcastle, but formerly Presqu'ile, which is sheltered from every wind, and has good anchorage for vessels. As the prosperity of the colony obtains increase, and towns and villages are built, this place will not go unnoticed, as it offers a most excellent situation for a small town and port. At a place called Duffin's Creek, in the township of Pickering, there is a fishery both for salmon and sturgeon, that yields a large supply and of a pretty good quality, considering the great distance it is from the sea. The front part of all the townships from Kingston to York are, with few exceptions, well settled; roads lead through them, from which, in many places, others branch off to the interior; at intervals, rather distant indeed from each other, there are a few small villages, or it may be rather more correct to say groups of houses; but single dwellings and farms are continually presenting themselves all the way. On the lands that are occupied great progress has been made in agriculture; the houses, generally speaking, are well built and strong; and the inhabitants appear to be possessed of all the necessaries as well as most of the comforts that a life of industry usually bestows. The town of York, the infant capital of Upper Canada, is in lat. 43°. 33'. north, and in long. 79°. 20'.

west, exceedingly well situated in the township of the same name, on the north side of an excellent harbour. It is very regularly laid out, with the streets running at right angles, and promises to become a very handsome town. The plot of ground marked out for it extends about a mile and a half along the harbour, but at present the number of houses does not greatly exceed three hundred, the greatest part of which are built of wood, but there are however many very excellent ones of brick and stone. The public edifices are a government-house, the house of assembly for the provincial parliament, a church, a court-house, and a gaol, with numerous stores and buildings for the various purposes of government. The garrison is situated to the westward of the town, at a mile distance; it consists of barracks for the troops usually stationed here, a residence for the commanding officer, now most frequently occupied by the lieutenant governor of the province, a battery and two blockhouses, which together protect the entrance of the harbour; the space between the garrison and the town is wholly reserved for the use of government. The harbour of York is nearly circular, and formed by a very narrow peninsula stretching from the western extremity of the township of Scarborough in an oblique direction, for about six miles, and ter-

minating in a curved point nearly opposite the garrison; thus enclosing a beautiful basin about a mile and a half in diameter, capable of containing a great number of vessels, and at the entrance of which ships may lie with safety during the winter. The formation of the peninsula itself is extraordinary, being a narrow slip of land, in several places not more than sixty yards in breadth, but widening towards its extremity to nearly a mile; it is principally a bank of sand with a very little grass upon it; the widest part is very curiously intersected by many large ponds, that are the continual resort of great quantities of wild fowl; a few trees scattered upon it greatly increase the singularity of its appearance; it lies so low that the wide expanse of Lake Ontario is seen over it: the termination of the peninsula is called Gibraltar Point, where a block-house has been erected. The eastern part of the harbour is bounded by an extensive marsh, through part of which the river Don runs before it discharges itself into the basin. No place in either province has made so rapid a progress as York: in the year 1793 the spot on which it stands presented only one solitary Indian wigwam; in the ensuing spring the ground for the future metropolis of Upper Canada was fixed upon, and the buildings commenced under the immediate super-

intendance of the late General Simcoe, then lieutenant governor; in the space of five or six years it became a respectable place, and rapidly increased to its present importance: it now contains a population of two thousand five hundred souls. The parliament of the province annually holds its sittings here, as do all the courts of justice. Considerable advances have also been made in the commerce, general opulence, and consequent amelioration of its society: being the residence of the chief officers of government both civil and military, many of the conveniences and comforts of polished life are to be met with. A newspaper is printed once a week, and indeed at Kingston also. The lands of the adjacent townships for several miles round are in a high state of cultivation, so that the market of the town is always well supplied. The pressure of the late war has been considerably felt here, as it was captured by the American army on the 27th April, 1813; they held it, however, but a few days, but in that time the government-house, and all the public buildings and stores, were burnt, after removing so much of their contents as could be conveniently carried off. Immediately in the rear of the town there is a very good road, called Yonge street, that leads to Gwillimbury; a small village thirty-two miles to the northward, and thence

five miles more to Cook's Bay, from which by Lake Simcoe there is a communication to Lake Huron. This being a route of much importance, has of late been greatly improved by the North-west Company, for the double purpose of shortening the distance to the Upper Lakes, and avoiding any contact with the American frontiers; the land on each side of it, for a considerable depth, is very fertile, and many settlements are already formed, where some of the farms are in a good state of cultivation. The advantage of this communication will be in some degree shewn by the following recapitulation of it. From York to Cook's Bay, on Lake Simcoe, the distance is thirty-seven miles; the navigation through that Lake and the River Matchedash up to the old trading post on Matchedash Bay, is seventy-seven miles more, making together one hundred and fourteen. A shorter route even than this is likely to be formed very soon, by a road which has been already traced at the expense of the North-West Company, from Kempenfelt Bay on Lake Simcoe, to Penetengushene harbour, opening into Gloucester Bay on Lake Huron; this line of road being only twenty-nine miles, will reduce the distance from York to Lake Huron to eighty-eight miles, going by water from Cook's Bay into Kempenfelt Bay; another small reduction

might still be made, by opening a road from Holland river up to the last-mentioned bay. By pursuing this route the distance from York to St. Mary's Rapid, between Lake Huron and Lake Superior, is about four hundred miles, whereas by the circuitous one of Lake Erie and the River Ste. Claire it is full seven hundred; the importance of the communication is therefore obvious. From York to the westward there is another good road, called Dundas-street, leading to Coot's Paradise, at the extremity of Lake Ontario, and from thence nearly in a straight line to the township of New London upon the River Thames, altogether upwards of one hundred miles, by which an inland communication with the western district is maintained. On each side of this road there are many settlements scattered here and there, some of them very well cultivated and thickly inhabited; there are also several inns for the accommodation of travellers. The River Thames winds through a fine level country, highly fertile, and rich in every requisite for new settlements; its banks present many fine plains and large patches of excellent meadow land; the soil is principally a light sandy earth, interspersed with marl and reddish clay: the oak, pine, maple, walnut and beech growing in its vicinity, are of very superior quality. There are already roads formed along its course, and on each side of it

numerous scattered settlements down to Lake St. Claire; the Delaware Indian village, and another of Moravian settlers, are situated on it. This last is about thirty-five miles from the mouth of the river; it is under the superintendance of missionaries from the society of Moravian United Brethren, who maintain a chapel here; there are many Indian converts residing in it, whose peaceable conduct and general demeanour show some of the benefits derived from civilization; the village is surrounded by thriving corn fields, and tillage has made a considerable progress in its neighbourhood. About twenty miles further down the river is a small place called Chatham, very desirably seated at the junction of a large stream with the Thames; it is in a very central situation, and likely, as the population of the province increases, to become a town of much note. A dock-yard might be advantageously established on the point of land formed by the two rivers, from whence vessels might be conveniently launched. The Thames is deep enough for ships of any size: a bar across its entrance into Lake Ste. Claire is certainly some drawback, but as there is at all times sufficient water upon it to float small craft perfectly equipped, the resources of art would very easily pass those of a much larger rate; camels, for instance,

might be used, or even common lighters dexterously managed would prove adequate to the service. The British bank of the Niagara River is generally high, and exhibits a well-cultivated and thickly inhabited country, with roads leading along its course, from which others strike off to almost every part of the district; in this portion of the province agriculture and new settlements have been carried to a great extent, and the amount of its population is surpassed only by the three eastern districts. By the side of the roads that coast the extremity of Lake Ontario there is a continual succession of houses, and many excellent farms. The town of Newark is conveniently and very pleasantly situated at the entrance of the River Niagara from Lake Ontario, and almost fronting Fort Niagara on the American side; it was begun in 1792, and had increased to about two hundred neat and well-built houses, with a church, court-house, and one or two other public buildings; but all of these, with the greatest part of the dwelling houses, were destroyed by the Americans in the month of December, 1813, when they evacuated Fort George, which stands on the bank of the river, a little above Navy Hall, and had been captured by them a few months before. A few huts are the only remains of this once thriving town, that from its defenceless state had never

been able to make any opposition to the enemy's force: its destruction was as cold-blooded as it was unjustifiable, and betrayed a depraved ferocity not often portrayed in modern annals, but which was afterwards dearly expiated in the course of the war. From Newark to Queenstown the distance is seven miles by the road along the river: this is a place of much note, exceedingly well situated under the ridge called Queenstown Heights; it has a harbour capable of receiving vessels of all descriptions; the number of houses is about one hundred and fifty, with a good church, court-house, stores for government and for the Indian department, wharfs, and barracks for the troops always stationed here: much commercial activity takes place during the season of navigation, as all the goods sent to the north-west country are landed here from the vessels which bring them from Kingston, and returns made in peltries, provisions, and other commodities; from hence there is a portage or road to Chippewa Creek, by which the goods are transported in waggons on account of the Great Fall. Queenstown suffered very much during the war; in its vicinity was fought the action by which our country was deprived of the valuable services of that gallant and able soldier General Brock. About three miles from Queenstown, on the road leading towards the head of the lake, is the vil-

lage of St. David's, very pleasantly situated on a stream called the Four-mile Creek, and surrounded by land in a very high state of cultivation: previous to feeling the severities of American warfare it contained forty houses, but now it is much short of that number. Between Queenstown and Fort Erie there is only the village of Chippewa, containing a few houses, many storehouses, and two or three taverns; it is on the eastern bank of the River Welland, and near it a small military post called Fort Chippewa. Bordering the road throughout the whole distance, at short intervals, there are houses and farms in a very flourishing state, many of them beautifully and romantically situated on the bank of the river, and surrounded by some of the most picturesque scenery in nature: between Newark and Chippewa a stage coach travels regularly. Fort Erie stands on a little rising ground close to the entrance into the Niagara River from the Lake Erie. During the war it was considerably strengthened and connected by a chain of field-works with a strong battery on Snake Hill, about eleven hundred yards distant. The northern shore of Lake Erie is not remarkable for any strong traits of nature; all the townships are watered both by large and small streams in abundance; they increase very fast in the number of their settlements and the quantity of land brought

under culture; in many parts they are naturally but scantily timbered, and almost unencumbered with underwood, circumstances materially contributing to this increase. Along the shore there are several convenient harbours for small craft, and two or three for the armed vessels that have occasionally navigated it. Long Point, or the North Foreland, is a narrow slip of land, or rather a sandy beach, projecting eastward from the township of Walsingham, little less than twenty miles, and not greatly exceeding one hundred and eighty yards in breadth; it forms the deep nook called Long Point Bay, at the head of which there is a portage across the neck of land to the lake, that from its lowness is sometimes so much overflowed as to be passable for boats. At Turkey Point, projecting from the main land within the foreland, a spot has been surveyed and planned out for a dock-yard. From this spot to Amherstburgh nothing intervenes to break the uniformity of the coast: this town is situated about three miles up the eastern side of Detroit River, and contains about one hundred and fifty houses, a church, court-house, gaol, &c. It was a frontier post and naval depot, but the military works, dock-yard, and stores, were destroyed by the English in 1813, when they were forced to evacuate it by an overwhelming American force: there is a very safe and con-

venient harbour, with good anchorage, in $3\frac{1}{2}$ fathoms. Fourteen miles beyond Amherstburgh, pursuing the course of the river, stands the town of Sandwich, containing about one hundred houses, a church, distinguished by the appellation of the Huron church, a court-house, and gaol: there are some wharfs along the river side, where vessels may be safely laid up during the winter. From Sandwich to Lake Ste. Claire the bank of the river is every where in a high state of culture, with houses thickly placed all along the road; good gardens, and almost invariably an orchard, are attached to them: no part of the province can rival this in luxuriance of soil or picturesque beauty, nor can any one be easily conceived more agreeable than it is in the spring of the year. Beyond this valuable tract there is no cultivated land, except in small quantities round the different stations of the North-West Company in the interior. In reviewing the American frontier opposed to Upper Canada, it is found to extend from the village of St. Regis, on the parallel of the forty-fifth degree of north latitude, along the south bank of the St. Lawrence and the Great Lakes, up to the north-west angle of the Lake of the Woods, a distance of about 1570 miles: on this line many military stations and trading posts are established. Upwards of six hundred miles of it are extremely well cultivated,

thickly peopled, and divided into districts, counties, and townships. The state of New York presents by far the most interesting front along the Great River, Lake Ontario, and part of Lake Erie, comprising the counties of St. Lawrence, Jefferson, Oneida, Onondaga, Cayuga, Seneca, Ontario, Genesee, and Niagara; the counties of Erie and Crawford are within the state of Pennsylvania; thence westward, the counties of Geauga, Cayahoga, Huron, and the Miamis Country as far as the southerly line of the Michigan Territory, are in the state of Ohio; the Michigan Territory is divided into the districts of Erie, Huron, and Michilimackinac, composing the county of Wayne and the Chippewa country. The rapid progress of population and agriculture in this extent of six hundred miles is surprising, and perhaps stands without precedent in the annals of colonisation. In the year 1796 the whole of it was literally a wilderness, excepting only in the vicinity of the forts and trading establishments, and a very few settlements on the Genesee River. So different is the face of the country in the present day, that if a traveller were to view it who had witnessed the state of it at the time mentioned, he would with difficulty trust to the evidence of his own senses. The part of New York bordering the waters possesses a soil equal in fertility to almost any district of North America, abound-

ing with timber of first rate quality and finest sorts, and watered in a most singularly convenient manner, by numerous large rivers, and an extraordinary number of minor streams; many of the former have their sources from forty to fifty, and as much as ninety miles in the interior, and descend into the St. Lawrence or Lake Ontario; added to these are the Lakes Oneida, Cayuga, Seneca, Crooked Lake and Chatanque. Of the principal rivers may be mentioned the Oswego, Genesee, Black River, Oswegatchie, Grass River, Rackett River, St. Regis River, and Salmon River; the Tonnewonta Creek, Buffalo Creek, Oak Orchard Creek, and many others: on their banks are many extensive levels of fine arable, and abundance of luxuriant meadow land. In no part of the United States has the progress of industry been so eminently conspicuous as here, and perhaps in no part of the universe have numerous villages and towns, convenient and good roads, grounds clothed with harvests, and pastures covered with domestic cattle of every description, so suddenly emerged from the depths of forests and a wilderness of matted thickets. From St. Regis to the extremity of Lake Erie there are not less than twenty principal roads striking off to the interior, of which several lead by the shortest route to Washington, Albany, New York, Philadelphia; and even to Boston. Between St.

Regis and the village of Hamilton, a distance of thirty-three miles, there is a good road; the latter stands on a rising ground close by the river side, and consists of about thirty very well built houses: at this place there is a ferry over to the Canadian side, and roads diverging from it to the southward, and to the settlements on Lake Champlain. Nineteen miles further westward are the town and fort of Ogdensburgh: the former numbers about seventy houses, a church, &c.; the latter is a strong work, presenting a powerful front to the river, immediately opposite to Fort Wellington. From Ogdensburgh good roads lead parallel with the river, but there is no place of note until arriving at Sacket Harbour, a distance of fifty-nine miles. This place has risen into consequence from its rivalship to Kingston, and attracted much public attention by some ephemeral successes, that are not likely to recur if the trident of Britain be hereafter grasped with its characteristic determination. It is situated on the south-east side of an expansion of the Black River, near where it flows into Hungry Bay, bearing from Kingston south by east, distance twenty-five miles, but by a ship's course thirty-five miles; as an harbour it is convenient, but rather small, with sufficient water for the large ships, and well sheltered from every wind, being nearly surrounded by high lands. A low point of land runs out

from the north-west, upon which is the dock-yard, with large storehouses, and all the requisite buildings belonging to such an establishment. Upon this point there is a very powerful work called Fort Tompkins, having within it a strong block-house, two stories high; on the land side it is covered by a strong picketing, in which there are embrasures; twenty guns are mounted, besides two or three mortars, with a furnace for heating shot. At the bottom of the harbour is the village, that contains from sixty to seventy houses, and to the southward of it a barrack capable of accommodating two thousand men, and generally used for the marines belonging to the fleet. On a point eastward of the harbour stands Fort Pike, a regular work, surrounded by a ditch, in advance of which there is a strong line of picketing; in the centre of the principal work there is a block-house two stories high: this fort is armed with twenty guns. About one hundred yards from the village, and a little to the westward of Fort Tompkins, is Smith's Cantonments or barrack, strongly built of logs, forming a square with a block-house at each corner; it is loop-holed on every side, and capable of making a powerful resistance: 2500 men may be accommodated in it. A little further westward another large fort presents itself, built of earth, and strongly palisaded, having in the centre of it a block-house one story high; it

mounts twenty-eight guns : midway between these two works there is a powder magazine, enclosed within a very strong picketing. By the side of the road that leads from the village to Henderson's Harbour stands Fort Virginia, a square work with bastions at the angles, covered with a strong line of palisades, but no ditch; it is armed with sixteen guns, and has a block-house in the middle of it. Fort Chauncey is a small circular tower, covered in with plank, and loop-holed for the use of musketry, intended for a small-arm defence only : it is situated a small distance from the village, and commands the road that leads to Sandy Creek. In addition to these works of strength, there are several block-houses in different situations, that altogether render the place very secure, and capable of resisting a powerful attack ; indeed, from recent events, the Americans have attached much importance to it, and with their accustomed celerity have spared no exertions to render it formidable. The strength of the American armament lying in this port in the summer of 1814 is given in a subjoined table, as well as a statement of the English squadron at Kingston. The country round Sacket Harbour is neither much cleared, nor in a very high state of cultivation ; but there are moderately good roads leading to Brownville, and in various directions into the state of New York. From

Brownville a road leads to a place called Kingston Ferry, on the St. Lawrence, from whence over to Kingston, through the Bay of Wolfe Island, the distance is twelve miles, making the whole from Sacket Harbour by this route thirty-four miles; but in the winter season it may be shortened several miles by crossing the lake upon the ice, almost in a straight line. Beyond Sacket Harbour, the River Oswego furnishes an easy and very convenient communication from Lake Ontario to the Mohawk River, and thence into the Hudson River. The Oswego has its source very near the head of the Mohawk; it passes through Lake Oneida, and in its course to Lake Ontario receives the Seneca River, besides the waters of several less streams and many small lakes, that in the spring and fall of the year greatly swell its current. At the mouth of the river there is a safe and good harbour with two fathom water, but a little way up the stream the depth increases to four or five; the entrance is narrowed by a large flat on each side, covered with round stones, that are continually rolling with the flux and reflux, and occasion a sort of shifting bar, on which during the summer there is seldom more than six or seven feet water, but in the spring and fall this depth is increased about three feet. The channel is completely commanded by a well-built strong fort, situated upon an eminence on the shore of

the lake, eastward of the river; on its western bank stands the town of Oswego, consisting of about one hundred houses, and laid out with much regularity. From this place to the town of Albany, on the Hudson River, besides the communication by water, there are very good roads leading through a flourishing well-settled country, which have long constituted one of the principal approaches to Upper Canada; and although many others have been opened within the few last years, the line will always remain one of primary consequence, as being the most direct. Between Sacket Harbour and Oswego a road passes through Ellisburgh, and near the mouth of Salmon River, from which places there are others leading to Utica. Sixteen miles westward of Oswego is a bay called the Great Sodus, about four miles across, and two deep: the entrance to it is narrow, being formed by two projecting points; that on the westward is high, and near to it is the deepest water: a sandy bar stretches across the mouth of the bay, on which there is generally six feet water, but under the western point seven and eight; within it there are several fathoms: on the eastern side there is a small island: this place forms a very good station for building vessels: round the bay there are some settlements from whence roads strike off to Cananadagua. Ironduquet Bay is another large open-

ing that runs considerably inland, but the entrance to it is obstructed by a sandy bar with no more than three or four feet water upon it: in the vicinity are the settlements of Northfield, from which a road leads to the Mohawk River, and thence continues to the town of Bristol. Tracing the shore of the lake, beyond Iron-diquet Bay is the Genesee River, that has its rise in the county of Porter, within the state of Pennsylvania, and winds through a country both fertile and well inhabited; the entrance to it from Lake Ontario is narrow, with no more than six or seven feet water in the channel, but within it there is sufficient depth for vessels of two hundred tons. Hartford, Genesee Town, and Williamsburgh, are principal places upon it, and have roads in almost every direction from them to the town of Batavia and the interior of the state. The tract called the Genesee country is remarkable for the luxuriant fertility of its soil; it is every where thickly inhabited, and in a very high state of cultivation; the produce of wheat is unusually great, and the grain of a very superior quality; in many parts the land is congenial to the culture of hemp and flax, and of each article large quantities are raised every year. Braddock's Bay is large, but almost unserviceable, from the shallowness of the water. From the settlements at Fish Bay there are roads to the town of Ba-

tavia. On sweeping round the extremity of Lake Ontario the large fort of Niagara presents itself, on the eastern bank, at the entrance of the river: it was originally built by the French in 1751, taken by the English in 1759, ceded to the United States by the treaty of 1794, and delivered up to them in 1796, with several other frontier posts. It was at one time esteemed the key to the upper lakes, from being a strong place and commanding the entrance of the river, which from point to point is about 1000 yards across. Among the events of the late war it made a principal figure, having been taken by the English on the 19th December, 1813, by assault, in a very distinguished manner, and held by them until the peace, when it was returned to its former masters. On the bank of the River Niagara a very good road, with a few settlements interspersed, runs as far as Fort Schlosser. Lewistown, opposite to Queenstown, on the English side, a pretty little village of forty or fifty houses, was burnt by the British troops, immediately after the capture of Niagara, as a measure of retribution for the unnecessary and unprovoked cruelties inflicted by the Americans upon the unoffending town of Newark. From Lewistown a fine road goes to Batavia, from whence others branch off through the states of Pennsylvania and

New York, as well as almost every part of the frontier. At Black Rock and Buffalo Creek, at the eastern extremity of Lake Erie, were military posts, with a few houses and settlements around them, but they were destroyed at the same time and for the same reason as Lewistown; since that time, however, the Americans have been indefatigable in restoring the forts. From Buffalo up to Detroit, near Lake Ste. Claire, the shore of Lake Erie is generally low, except near the portage of Chataughque, where for a short distance it is rocky and lofty; and between Cleveland and the Reneshoua River, where the cliffs rise almost perpendicular nearly twenty yards above the water's level, and so continue until they approach almost close to the River Huron. Along this side of the lake there are but few points meriting particular notice: the entrance of Cataragus Creek affords a good harbour for boats, from whence there is a road to the interior. Presqu'île harbour is situated opposite to the North Foreland, or Long Point, and formed by a sandy beach or narrow peninsula stretching a great distance, and covering it from the lake; in form it bears so strong a resemblance to York harbour on Lake Ontario, that the same description would apply almost equally well to both places, with the difference, that the latter opens to the south-west and the

former to the north-east: the breadth of it is about a mile and a half, but it runs inward nearly three miles; the entrance is not more than half a mile wide, with a bar across it, on which there is in general not more than six or seven feet water. The town of Erie is seated on the south side of the harbour: it is of a respectable size, well laid out, and the streets regular; the houses altogether amount to two hundred; with a church, court-house, and a public prison: eastward of the town stands a strong battery, and on the point of the peninsula a large blockhouse, which combined completely defend the harbour. At this town there is a dock-yard, with storehouses, wharfs, &c. forming the American naval depot on this lake, and at which they have built and equipped brigs mounting twenty guns. A road leads from it by Fort Le Bœuf to Meadsville and Fort Franklin, on the Allegany River, and another by the margin of the lake to Buffalo. A little south-west of Erie is the small village of Litchfield, from whence a road continues by the lake side to Ralphsville, and by the Ashtabula River down to Jefferson and Austinburgh, from whence another proceeds to the towns of Warren and New Lisbon. From a small settlement called Newmarket, on the east side of Grand River, a road goes to Cleveland, and thence turns off to New Lisbon, and continues

on to Fort M'Intosh on the Ohio river. From Cleveland there is a very good road to Sandusky, that proceeds on to the old Fort Miami, now almost in ruins: half a mile beyond it is Fort Meggs, a place of some strength, and mounting eighteen guns. The two bays of Sandusky and Miami afford good anchorage and shelter, as do most of the islands at the west end of the lake. In Cunningham's Island there is a fine harbour called Put-in-Bay, open to the north, and very well sheltered, with excellent anchorage: it is nearly of a circular form, and the entrance to it not more than a quarter of a mile wide, having on the western side a narrow rocky point about forty feet high, but where it joins the island the isthmus is so low as to be generally overflowed; from the point a block-house and strong battery defend the harbour. The English ships Queen Charlotte and Detroit were carried in here after their capture, when the British squadron was defeated by an American one of much superior force. Without exception this is the best and most convenient harbour on Lake Erie. From Miami there is a road by French Town and Brownville to Detroit, a considerable place on the side of the river, and almost opposite to Sandwich: the town consists of about two hundred houses, a Protestant and a Catholic church, a few public buildings belonging to

the government, and wharfs in front of it: among the inhabitants there are many old Canadian settlers. The fort and military works at this place are very strong; they were taken by the British forces under General Brock in 1812, when General Hull surrendered himself and his army prisoners of war. The land about the town of Detroit and on the bank of the river is highly fertile, thickly inhabited, and under a very thriving state of culture: the settlements continue closely connected with each other along the western border of Lake Ste. Claire for about twenty miles. On both sides of the River Huron, at its embouchure in the lake, there are a few good settlements, distant about thirty-five miles from Detroit. The west bank of the River Ste. Claire is moderately good land, and settlements have been carried as high up as the Belle Riviere, about fifteen miles above the lake, as far as which there is a road all the way from Detroit. Beyond this point cultivation has not been extended, except a little at the different places where military or trading establishments are maintained. The government of Upper Canada is administered by a lieutenant-governor (who is almost always a military officer), a legislative council, an executive council, and a house of assembly. The legislative council, according to the act of the British parliament, is to consist of not less

than seven members, of which the chief justice of the province is president; and wherein the bishop of Quebec has a seat: the members are appointed by mandamus from the king, and hold their seats, under certain restrictions, for life. The executive council is composed of six members; the chief-justice is president, and the bishop of Quebec likewise has a seat in it. The house of assembly is composed of twenty-five members, who are returned by the twenty-three counties; they meet once a year, and the session is opened and prorogued by the lieutenant-governor; the duration of this assembly is limited by law to four years, at which period new elections take place; but the governor may, upon occasions that seem fit to him, dissolve it at any time, by the authority vested in him. The functions of this house are exactly similar to those of the parliament of the lower province; it votes the annual supplies for the militia, and all monies raised for the service and improvement of the colony. The civil and criminal law is administered by a chief-justice and two puisne judges. There is a court of king's bench, common pleas, and a court of appeal: the laws of England, with the rights and liberties granted by its constitution, are in force in Upper Canada in their fullest extent, and without the slightest variation. There are also an attorney and solicitor

general, a surveyor-general, and several other officers of the crown; but the amount of their salaries, and indeed the whole civil list, is defrayed by Great Britain, without the smallest encumbrance to the province. For the defence of this extensive country detachments of regular troops are stationed in it, assisted by a sedentary militia, enrolled in the same way as that of Lower Canada, and which, upon paper, amounts to 11,000 men: from among these the battalions of incorporated militia, when ordered to be embodied, are filled up by ballot; but, spread over so wide a space as they are, it is rare that, upon cases of emergency, more than a few hundreds have been brought together at one time; the chief reliance, therefore, must be placed upon the former, and the navy on the lakes. Of the troops no permanent number can be mentioned, being augmented or reduced, as circumstances require, or the amicable relations with our neighbours will permit. The defence of this large and rapidly improving colony becomes, in the present day, a subject of much importance, and demands more than ordinary attention. If the actual state of this country and that part of the United States bordering upon it be critically examined, and taking into consideration the superior population of the latter, with the easy means of access by the large rivers that fall into the St. Law-

rence and the lakes, and combining these circumstances with the ardent desire shewn and openly avowed by the American government of obtaining possession of Upper Canada, we shall not be misled by a belief that the present means of defence are adequate to its preservation, in the event of another rupture between the two powers. A war, undertaken for the express purpose of dismembering these provinces from the British dominion, has been recently terminated, in which the invader was overwhelmed with disgrace, and beaten back from the territory he attempted to subjugate, by a force that, reckoning its numerical strength only, was never competent to stand before him. This success may be attributed to two causes; in the first place, to the patient fortitude and invincible bravery of our troops; in the next, and certainly more adventitious one, to the want of discipline and military talent in their enemies. Upon the former we may always rely with the most unshaken confidence, but not so with the latter; for even defeats following quick upon each other have before now taught the conquered to become in their turn the victors. At the time the American declaration of war was known in Upper Canada, and which reached Amherstburgh on the afternoon of July 2d, 1812, there were not more than 2000 British troops distributed all

over it, and none of the militia organised; in the following year, when strengthened by every man that could be spared from the lower province and the dependent governments, the campaign was made with 7000 men, against armies, or rather collections, of much superior numbers; and it was not until the middle of 1814 that sufficient reinforcements arrived to place it in a state of security. On Lake Ontario the preponderance of naval strength was latterly with the English, but in the early part of the war it was most decidedly on the enemy's side; and to the co-operation of which he was indebted for the advantage he obtained in the few attacks that he made with success. True it is, that he never gained any victory that was eminently useful to him, even at the time when the number of regular troops in the province was at the lowest, for in nearly every one of his attempts his plans were developed and his armies overthrown by the bravery of mere handfuls of well disciplined soldiers; but the recurrence of a similar chain of fortunate events is not to be presumed upon. In the outset of the war a few hundreds of English troops found it an easy task to bear away the palm of victory from double, treble, and even quadruple their number of opponents; but towards its termination a material difference was observable; numerous disasters had taught the

Americans caution; frequent defeats brought them better acquainted with tactics; and dear-bought experience in the business of an active campaign, enabled them to take the field with many essential qualifications of good soldiers; consequently the different actions were more obstinately contested, and the side to which victory would incline rendered more dubious. The principal affairs that took place during the two first campaigns were the following, and while they prove that nothing but the uncommon firmness and heroic devotion of the different corps saved the country, will also shew that such a result was hardly to be expected. Immediately after the declaration of hostilities, General Hull, with a large force, crossed the River Detroit, and made an incursion upon the Canadian frontier, but retired almost immediately afterwards to his own side, and strengthened himself at Fort Detroit, where he was attacked on the 16th August, 1812, by 700 regulars and militia, under the command of General Brock, assisted by 600 Indians, and so completely vanquished that he surrendered himself and all his army of 2500 men prisoners of war. On the night of the 12th October another American corps of 1500 men crossed the Niagara River near Queenstown, and on the morning of the 13th, soon after day-break, were defeated by a body of 650 men under

General Brock, who unhappily for his country received a mortal wound shortly after the action commenced. On the 22d January, 1813, a detachment under General Winchester was defeated and captured at Riviere aux Raisins, on which occasion there was nearly a similar disparity of force. On the 27th April, an American force under General Dearborn, consisting of 2500 men, supported by Commodore Chauncey's squadron of ten armed vessels, carrying altogether fifty guns, effected a landing, and captured the town of York, which at that period was protected only by two companies of the 8th regiment, two weak companies of the Newfoundland regiment, 40 men of the Glengary riflemen, 220 militia, and 40 Indians, all under the personal command of General Sheaffe. An action took place, but it only served to gain time for destroying a new ship on the stocks, and some public stores; when after having sustained the loss of 130 brave men in obstructing the enemy's advance, a retreat was effected with the remainder, and the capital of Upper Canada for the first time received a conqueror, but who soon re-embarked, after destroying such of the public buildings as fell into his hands. The superiority of their fleet gave the Americans the advantage of choosing their points of attack, and on the 24th and 25th of May Chauncey's squadron,

in conjunction with Fort Niagara, bombarded Fort George, on the opposite side of the river, and in the two days nearly destroyed its defences. On the morning of the 27th the fleet received on board 4000 troops, under the command of General Lewis, which were immediately after landed between Mississaga Point and Two Mile Creek, under cover of a lively fire from the ships, and succeeded, after as much opposition as could be offered by the few troops it was possible to assemble, in capturing the fort. On this occasion the whole number of English troops did not amount to one tenth of the enemy's: when resistance was no longer of use, this small body effected a retreat unmolested, under the command of Brigadier General Vincent, to Queenstown, and subsequently to Burlington heights, where a position was taken up, and some reinforcement obtained. After his victory General Lewis moved forward with intent to attack this new post, but General Vincent, penetrating the design, determined to attempt a surprise; and with 280 men of the 8th, and 450 of the 49th regiment, before day-break on the 6th June fell upon his opponents in their camp near Stoney Creek with such vigour that they were totally routed with great slaughter: in this affair the force of the enemy was 3500 infantry, with seven field-pieces; Brigadier-Generals

Chandler and Winder, 5 field-officers and captains, and upwards of 100 men, with 4 of the guns, were taken. While these events were taking place at the western extremity of Lake Ontario, an attack was made by the English upon Sacket's Harbour, before day-break on the 29th May, but was not attended with the desired success. In this encounter the numbers of the enemy were treble those of the assailants; adverse winds prevented the co-operation of the large ships of the British squadron, and the fire of the gun-boats being incapable of producing much effect against the batteries, it was deemed impracticable to carry the place by assault; the troops were therefore withdrawn and re-embarked without opposition, taking with them four American officers and 150 soldiers prisoners, and occasioning the enemy to set fire to some of their naval store-houses, lest the place should fall into the hands of the English. The principal feature of the campaign of 1813 was the defeat of part of General Wilkinson's army on the 11th November, near Chrystlers Farm, as it entirely overthrew the plan of operations agreed upon between him and General Hampton, and which was the most formidable of any that was concerted for the invasion of the lower province. Wilkinson had collected 10,000 men at Grenadier Island, in Lake Ontario, from whence, on the 30th October, he descended the St. Law-

rence in small craft, with a view to act in concert with General Hampton; during the night of the 7th November he passed Fort Wellington; but his intention being previously observed, he experienced a very heavy and destructive fire during the whole of the time he was within reach of its guns. A corps of observation under Lieutenant Colonel Morrison, of the 89th, consisting of part of the 49th regiment, the 2d battalion of the 89th, three companies of voltigeurs; and some Indians, in all about 800 men, and two field pieces, with a division of gun-boats, followed the American army, and closely watched its movements. About two o'clock on the afternoon of the 11th, a detachment of two brigades of infantry, a regiment of cavalry, and some field-pieces, under the command of Brigadier General Boyd, in all 4000 men, attacked the British advanced guard, which gradually fell back upon the position occupied by the main body; half an hour afterwards the action became general, when several efforts were made by the enemy to turn the British left flank, and as often frustrated by spirited manœuvres; after two hours contest, and being charged in his turn, he gave way at all points from a formidable position, and precipitately retired. After this essay, in which he lost one gun and 800 men, killed, wounded, or prisoners, General Wilkinson immediately re-crossed the St. Lawrence to

his own shores, and soon afterwards quitted the command of an army he had so unsuccessfully conducted. The year 1813 closed with two other defeats of the enemy, and both on his own territory : the first took place on the 19th December, when Fort Niagara was carried by the brilliant assault of a body of troops under Colonel Murray ; and the second on the 30th of the same month, by detachments from the Royal Scots, the 8th, 41st, 89th, and 100th regiments, amounting to 1000 men, under the command of General Riall. The American general's force, upwards of 2000, was strongly posted at Black Rock ; but after a sharp attack he was driven to Buffalo, where, in another good position, he endeavoured to retrieve his fortune, but with no better success, and after a short resistance fell back to Eleven Mile Creek on Lake Erie : the result of this enterprise was seven field pieces, four sloops and schooners, a considerable quantity of ordnance and other valuable stores, and 70 prisoners ; the forts at Black Rock and Buffalo, with all the public buildings, and the four vessels, were burnt ; after which the detachment withdrew, without interruption, to the Canadian shore. The events of the campaign of 1814 were not so numerous, but they evidently proved that the British troops must look forward to contend against opponents who had greatly profited by the experience of the two

preceding years, as well as being far superior in numbers. Had the means employed by the Americans been more judiciously used, every impartial person must believe that their designs would have been realised, notwithstanding the heroism of the English soldiers. The incorporated militia, when it was organised and brought into action, always behaved nobly, and made good a title to the admiration of the country, for its bravery and loyalty; but still its support, had the invasion been conducted with skill and prudence, would not have made the defensive force sufficiently strong to avert the threatened danger. That the subjugation of both provinces hath been, and will continue to be, a favourite object with the Americans, is not to be doubted; in the late attempt upon them they sustained a loss of no less than 47,000 men, in killed, wounded, and prisoners; but this has not abated the keenness of their desires, and if appearances may be credited, or any judgment formed from the opinions of ruling men among them, the same sacrifices three or four fold would not be deemed too exorbitant a price to pay for the much envied possession. Great Britain cannot permit so valuable a part of her dominion to be wrested from her without a strife as obstinate as the richness of the jewel to be contended for demands.

A P P E N D I X.

Extrait des Titres de Concessions de Terres octroyées en Fiefs dans la Province du Bas-Canada.

ANCE DE L'ETANG.

CONCESSION du 20^{me} Septembre, 1697, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *François Hazzeur* et *Denis Riverin*, de l'Ance de l'Etang, située au bas du fleuve *St. Laurent*, six lieues au dessous de la Vallée des monts de *Notre Dame*, avec une demi lieue de front de chaque côté de la dite Ance, sur une lieue de profondeur.

Régistre d'Intendance, N^o 5, folio 18.

ANTAYA.

Concession du 29^{me} Octobre, 1672, faite par *Jean Talon*, Intendant, au Sieur de *Comporté*, d'une demi lieue de terre de front, sur une lieue de profondeur, à prendre sur le fleuve *St. Laurent*, bornée d'un côté par la concession du Sieur *Dautré*, tirant sur le fleuve et descendant vers les terres non-concédées; avec l'*Isle au Foin* et islets situés entre la terre ferme de son front et la dite *Isle au Foin*.

Régistre d'Intendance, N^o 1, folio 20.

ARGENTEUIL.

Pierre Louis Panet, Ecuier Propriétaire du Fief et Seigneurie d'*Argenteuil*, produisit un Acte de Foi et Hommage du 7^{me} Mars, 1725, rendu par Dame *Louise Denis*, Veuve de *Pierre d'Aillebout*, Ecuier, Sieur d'*Argenteuil*, faisant mention "d'une promesse (sans octroi régulier) de la part du Gouvernement François, à Mr. d'*Aillebout* et autres personnes, d'une étendue de terres qui se rencontreront au côté du Nord, la *Rivière du Nord* comprise, depuis le bas du *Long-Sault* jusqu'à deux lieues en descendant du côté de *Montréal*, (avec les Isles, &c.) sur quatre lieues de profondeur." Aussi un Arrêt du Conseil, d'où il paroît que cette Seigneurie joint celle du *Lac des deux Montagnes* et que les rumbes de vent du front et de la ligne qui termine la profondeur doivent être Est, quart de Sud-est et Ouest quart de Nord-ouest; et que les rumbes de vent des lignes qui bornent la largeur de chaque côté seront (pour la

Seigneurie du *Lac des deux Montagnes* aussi bien que pour celle d'*Argentueil*.) Sud quart de Sud-ouest et Nord quart de Nord-est.

Régistre des Foi et Hommage, N° 76. Page 346, 21^{me} Mars, 1781.
Cahiers d'Intend. 10 à 17, folio 576.

AUBERT GALLION.

Concession du 24^{me} Septembre, 1736, faite par *Charles Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, à Dame veuve *Aubert*, de deux lieues de terre de front et de deux lieues de profondeur, du côté du Sud-ouest de la rivière du *Sault de la Chaudière*, en remontant, à commencer à la fin de la concession accordée au *Sieur de la Gorgendière*, ensemble les isles et islets qui se trouveront dans la dite rivière dans l'étendue de deux lieues, et des deux côtés d'icelle, lesquels isles et islets seront partagées par égale portion entre la dite veuve *Aubert* et le *Sieur de l'Isle*, auquel nous avons accordé aujourd'hui pareille concession du côté du Nord-est de la dite rivière.

Régistre d'Intendance, N° 8, folio 11.

BAIE ST. ANTOINE OU LEFEBVRE.

Concession du 4^{me} Septembre, 1683, faite par *Lefebvre de la Barre*, Gouverneur, et de *Meulles* Intendant, au *Sieur Lefebvre*, des terres non-concédées, d'environ deux lieues de front, joignant au Nord-est la terre du *Sieur Cressé*, d'autre au *Sieur de la Lussaudière*, au Sud-ouest, au Nord-ouest sur le lac *St. Pierre*, sur pareille quantité de profondeur, à prendre dans le bois vis-à-vis la dite largeur, avec les isles, islets, et prairies qui se rencontreront sur le dit espace.

Insinuations du Conseil Supérieur, lettre B. folio 31.

BATISCAN.

Concession du 23^{me} Mars, 1639, faite par *Monsieur de la Ferté*, pour la Compagnie, aux révérends peres Jésuites, du fief de *Batiscan*, joignant d'un côté un quart de lieue au delà de la rivière de *Batiscan* au Nord-est, et d'autre côté au Sud-ouest, un quart de lieue au delà de la rivière *Champlain* en la largeur, sur vingt lieues de profondeur.

Cahiers d'Intendance, N° 2 à 9, folio 29.

VILLECHAUVÉ OU BEAUHARNOIS.

Concession du 12^{me} Avril, 1729, faite par sa Majesté au *Sieur Charles Marquis de Beauharnois*, et au *Sieur Claude de Beauharnois de Beaumont* son frere, de six lieues de front sur six lieues de profondeur, Nord-est et Sud-ouest; joignant la Seigneurie de *Chateaugay* le long du fleuve *St. Laurent*, avec les isles et islets adjacentes.

Insinuations du Conseil Supérieur, lettre F. folio 129.

BEAUPORT.

Concession du 31^{me} Décembre, 1635, faite par la Compagnie à *Robert Giffard*, *Sieur de Beauport*, de la Seigneurie de *Beauport*, contenant une lieue de terre, à prendre le long de la côté du fleuve *St. Laurent*, sur une lieue et demie de profondeur dans les terres, à l'endroit où la rivière appelée *Notre Dame de Beauport* entre dans le dit fleuve, icelle rivière comprise. De plus, prolongement du 31^{me} Mars, 1653, par *Mr. Lauzon*, Gouverneur, de deux lieues et demie de profondeur, laquelle, avec la concession ci-dessus, forme une lieue de front sur quatre de profondeur.

Le *Régistre des Foi et Hommage*, N° 16. Folio 78, 2^{me} Février, 1781,

dit que la Seigneurie de *Beauport* s'étend en front depuis la rivière de *Notre Dame* jusqu'au Sault de *Montmorency*.

Régistre d'Intendance, N° 10 à 17, folio 655.

BEAUJEU OU LACOLLE.

Concession du 8me Avril, 1733, faite par *Charles Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au Sieur *Louis Denis de la Ronde*, de deux lieues de terre de front sur trois lieues de profondeur, bornée du côté du Nord par la Seigneurie nouvellement concédée au Sieur *Chaussegros de Léry*, et sur la même ligne; et au Sud par une ligne tirée Est et Ouest du monde; sur le devant par la rivière *Chambly*, et sur le derrière à trois lieues joignant aux terres non-concédées, et en outre la petite isle qui est audessus de l'isle aux *Têtes*.

Cette concession est accordée de nouveau au Sieur *Daniel Lienard de Beaujeu*, par titre daté 22me Mars, 1743. Voyez Reg. d'Intend. No. 9, folio 10.

Régistre d'Intendance, N° 7, folio 16.

BEAUMONT.

Concession faite au Sieur *Des islets de Beaumont*, le 3me Novembre, 1672, par *Jean Talon*, Intendant, de la quantité de terre qui se trouvera sur le fleuve *St. Laurent*, entre le Sieur *Bissot*, et Mr. de la *Durantaie*, sur une lieue et demie de profondeur.

Régistre d'Intendance, N° 1, folio 31.

AUGMENTATION DE BEAUMONT.

Concession du 10me Avril, 1713, faite par *Philippe de Rigaud*, Gouverneur, et *Michel Begon*, Intendant, au Sieur de *Beaumont*, fils, d'un terrain non-concédé contenant une lieue et demie en profondeur, et sur le front et largeur de la Seigneurie de *Beaumont*, entre la Seigneurie de la *Durantaie* et celle des héritiers du Sieur *Bissot*.

Sur la carte cette Seigneurie est couchée à quatre lieux de profondeur, au lieu de trois lieux; l'autre lieue ayant été après accordée au Sieur *Jean*, dans le titre de *St. Gervais*.

Régistre d'Intendance, N° 6, folio 31.

BÉCANCOUR.

Concession du 16me Avril, 1647, faite par la Compagnie au Sieur de *Bécancour*, située au Sud du fleuve *St. Laurent*, contenant deux lieues et un quart de front sur pareille profondeur; tenant du côté du Nord-est au fief *Dutort* et du côté du Sud-ouest au fief *Godefroi*; par devant le fleuve *St. Laurent*, et par derrière les terres non concédées; avec les isles, islets et battures qui se trouvent tant dans la rivière de *Bécancour* que dans une autre rivière appelée la rivière *St. Paul* qui se décharge dans le dit fleuve.

Cahiers d'Intend. 10 à 17, folio 414.

BELAIR OU LES ECUREUILS.

Concession du 3me Novembre, 1672, faite par *Jean Talon*, Intendant, aux Sieurs *Toupin*, Pere et Fils, d'une demi lieue de front, sur une lieue de profondeur, à prendre sur le fleuve *St. Laurent*, moitié au dessus

et moitié au dessous de la pointe *Bouroila*, (*aux Ecureuils*) aboutissant des deux côtés aux terres non-concédées.

Régistre d'Intendance, N° 1, *folio* 39.

AUGMENTATION. DES ECUREUILS.

Concession du 20me Janvier, 1706, faite par *Philippe de Rigaud*, Gouverneur, et *François de Beauharnois*, Intendant, à *Marie Magdelaine Mezerai*, veuve de feu *Jean Toupin*, d'une demi lieue de terre de front sur deux lieues de profondeur derrière la Seigneurie de *Bélaïr*, le front à prendre immédiatement à une lieue du fleuve *St. Laurent*.

Régistre d'Intendance, N° 5, *folio* 41.

BELCÉIL.

Concession du 18me Janvier, 1694, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *Joseph Hiertel*, de deux lieues de terre de front, avec une lieue et demie de terre de profondeur, à prendre du côté du Nord-ouest de la rivière *Richelieu*, à la Seigneurie de *Chambly*, en descendant icelle rivière, vers les terres non-concédées.

Régistre d'Intendance, N° 4, *folio* 16.

AUGMENTATION A BELCÉIL.

Concession du 24me Mars, 1713, faite par *Phil. de Rigaud*, Gouverneur, et *François de Beauharnois*, Intendant, au Sieur *Longueuil*, le long de la rivière de *Richelieu*, d'une lieue de terre de front sur une lieue et demie de profondeur, en lieu non-concédé, à prendre depuis la Seigneurie de *Belcélil*, qu'il possède, en tirant du côté du Sud-ouest, derrière la Seigneurie de *Chambly* pour le front, et pour la profondeur dans les terres en allant au Nord-ouest.

Régistre d'Intendance, N° 6, *folio* 3.

BELLEVUE.

Concession du 3me Novembre, 1672, faite par *Jean Talon*, Intendant, au Sieur *de Vitré*, d'une demi lieue de front sur une lieue de profondeur, à prendre depuis les terres de *Contreccœur*, en remontant vers les terres non concédées.

Régistre d'Intendance, N° 1, *folio* 31.

BERTHIER.

Concession du 29me Octobre, 1672, faite par *Jean Talon*, Intendant, au Sieur *Berthier*, de deux lieues de terre de front sur pareille profondeur, à prendre sur le fleuve *St. Laurent*, depuis l'ance de *Bellechasse* incluse, tirant vers la rivière du Sud, icelle non comprise.

Cette Seigneurie est bornée sur la carte suivant un arpentage particulier. L'irregularité de ce terrain provient d'une cession que firent les propriétaires de cette Seigneurie à ceux de la rivière du Sud, par une transaction du 22me Janvier, 1728.

Régistre d'Intendance, N° 1, *folio* 7.

BERTHIER.

Concession du 27me Avril, 1674, faite à Mr. *Berthier*, de trois quarts de lieue ou environ de front sur deux lieues de profondeur, à prendre sur le fleuve *St. Laurent*, depuis la concession du Sieur *Randin* en de-

scendant, jusqu'à la rivière *Chicot* ; ensemble une Isle d'une lieue en superficie étant audessous et joignant presque l'isle *Randin*, vis-a-vis l'Isle *Dupas* ; aussi l'Isle qui est au bout d'endas de l'Isle au *Castor*, accordée à Mr. *Berthier*, le 25 Mars, 1675.

Ou les deux concessions sont accordées par un seul titre. Cahiers d'Intend. where both these concessions are granted by one title.

Régistre des Foi et Hommage, N° 9, folio 38. le 26me Janvier, 1781.

Derriere Antaya, Randin, Berthier et Chicot.

AUGMENTATION DE BERTHIER.

Concession du 31me Décembre, 1732, faite par *Charles Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au Sieur *Pierre l'Etage*, de trois lieues de terre de front, si telle quantité se trouve entre la ligne qui sépare le fief de *Dautré* d'avec celui ci-devant appelé de *Comporté* (aujourd'hui *Antaya*), et celle qui sépare le fief du *Chicot* d'avec le fief *Masquinongé* ; à prendre le dit front au bout de la profondeur et limites des dits Fiefs d'*Antaya* et du *Chicot* entre lesquels se trouve le fief de *Berthier* ; sur trois lieues de profondeur, avec les rivières, ruisseaux et lacs qui pourront se rencontrer dans la dite étendue de terre, pour être la dite concession unie et jointe au dit fief de *Berthier*.

Régistre d'Intendance, N° 7, folio 4.

LE BIC.

Concession du 6me Mai, 1675, faite par *Louis de Buade*, Gouverneur, au Sieur de *Vitré*, de deux lieues de front, le long du fleuve *St. Laurent*, du côté du Sud, à prendre du milieu de la largeur de la rivière appelé *Mitis*, et qui s'appellera dorénavant la rivière ——— en montant le dit fleuve, et deux lieues de profondeur, ensemble l'isle du *Bic* qui est vis-a-vis.

En 1774, dispute s'étant élevée entre les propriétaires du *Bic* et de *Rimousky*, la Cour des Plaidiers Communs rendit un jugement, confirmé en appel en 1778, qui détermina, que le milieu de l'embouchure de la rivière *Hatté* seroit la borne entre les dites deux seigneuries.

Insinuations du Conseil Supérieur, let. B. folio 14.

BLEURY.

Concession du 30me Oct. 1750, faite par le Marquis de la *Jonquière*, Gouverneur, et *François Bigot*, Intendant, au Sieur *Sabrevois de Bleury*, de trois lieues de terre de front sur trois lieues de profondeur, le long de la rivière *Chambly*, bornée du côté du Nord par la Seigneurie du Sieur *Hertel*, et sur la même ligne ; du côté du Sud à trois lieues de la dite Seigneurie par une ligne tirée Est et Ouest du monde ; sur le devant par la rivière *Chambly* et sur la profondeur à trois lieues joignant aux terres non-concédées.

Régistre d'Intendance, N° 9, folio 72.

BONAVANTURE.

Concession du 23me Avril, 1697, faite par *Louis de Buade*, Gouverneur, et *Jéan Bochart*, Intendant, au Sieur de la *Croix*, de la rivière de *Bonavanture*, avec deux lieues de terre de front, savoir : une demi lieue d'un côté de la dite rivière au Sud-ouest, en allant vers *Kiscabériac*, et

une lieue et demie de l'autre au Nord-est, tirant vers *Paspébiac*, sur quatre lieues de profondeur, avec les isles, islets et battures qui se trouveront dans la dite étendue ; le tout situé dans le fond de la *Baie des Chaleurs*.

Régistre d'Intendance, N° 5, folio 14.

GUILLAUME BONHOMME.

Concession du 24me Novembre, 1682, faite par *Lefebvre*, Gouverneur, et de *Meulles*, Intendant, à *Guillaume Bonhomme*, des terres qui sont au bout de celles de *Mr. Juchereau de la Ferté*, tirant vers la rivière *Jacques Cartier*, bornées d'un côté, au Sud-ouest, de *Mr. Dupont*, Conseiller, et de l'autre à *Mr. de Mesner*, Greffier, au Nord-est ; d'un bout, sur le dit *Sieur de la Ferté* au Sud ; et de l'autre au Nord-ouest à la dite rivière : la dite terre contenant environ une lieue de front avec deux lieues ou environ de profondeur dans les dites terres.

Insinuations du Conseil Supérieur, Lettre B. folio 26.

BONSECOURS.

Concession du 16me Avril, 1687, faite par *Jacques de Brisay*, Gouverneur, et *Jean Bochart*, Intendant, au *Sieur Villeneuve*, de la quantité de soixante et quatorze arpens de front sur le fleuve *St. Laurent*, du côté du Sud, sur deux lieues de profondeur, en cas qu'elle ne soit concédée à d'autres. Les dits soixante et quatorze arpens tenant d'un côté aux terres des Dames Religieuses Ursulines et d'autre côté à la veuve *Duquet*.

Cahiers d'Intendance, 2 à 9, folio 295.

BONSECOURS.

Concession du 8me Août, 1702, faite au *Sieur Charon*, par *Hector de Colière* Gouverneur, et *Jean Bochart*, Intendant, de deux lieues de terre ou environ de front, sur pareille profondeur, le long de la rivière *Yamaska*, icelle compris à prendre vis-à-vis celle accordée au *Sieur René Fézeret*, bourgeois de *Montréal*, tirant d'un côté à la Seigneurie du *Sieur Petit*, et de l'autre aux héritiers du feu *Sieur Bourchemin*, avec les isles, islets, prairies et battures adjacentes.

Régistre d'Intendance, N° 5, folio 35.

BONSECOURS.

Concession du 1er Juillet, 1677, faite par *Jacques Douchesnaux*, Intendant, au *Sieur François Bellanger*, des terres qui sont le long du fleuve *St. Laurent*, du côté Sud, entre celle qui appartient à la Demoiselle *Genevieve Couillard*, en remontant le dit fleuve, jusqu'à celle de la Demoiselle veuve *Amiot* ; contenant le tout une lieue et demie, ou environ, de front, avec deux lieues de profondeur.

Insinuations du Conseil Supérieur, lettre B. folio 88.

BOURCHEMIN.

Concession du 22me Juin, 1695, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au *Sieur Jacques François Bourchemin*, d'une lieue et demie de terre de front de chaque côté de la rivière *Yamaska*, icelle comprise, à prendre une demi lieue au-dessous du ruisseau

dit *Salvayle*, et une lieue au-dessus, en lieu non-concédé, sur pareille profondeur, courant Nord-ouest et Sud-est, avec les isles, islets et prairies adjacentes.

Régistre d'Intendance, N° 4, folio 27.

BOUCHERVILLE.

Concession du 3me Novembre, 1672, par *Jean Talon*, Intendant, au *Sieur Boucher*, de cent quatorze arpens de front sur deux lieues de profondeur, à prendre sur le fleuve *St. Laurent*, bornée des deux côtés par le *Sieur de Varennes*; avec les isles nommées *Percées*.

Cahiers d'Intendance, N° 4, folio 153.

BOURGLOUIS.

Concession du 14 May, 1741, faite par le *Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au *Sieur Louis Fornel*, de deux lieues et trois quarts, ou environ, de terre, sur trois lieues de profondeur, derrière la Seigneurie de *Neuville*, appartenant au *Sieur Déméloise*, bornée sur le front par la ligne qui sépare la dite Seigneurie de *Neuville* des terres non-concédées, au Nord-est par la ligne de profondeur du fief *St. Augustin* prolongée au Sud-ouest par une ligne parallèle à la précédente, à prendre sur la ligne du fief de *Bélaïr* aussi prolongée, et par derrière aux terres non-concédées.

Régistre d'Intendance, N° 9, folio 8.

BOURG-MARIE, DE L'EST.

Concession du 1er. Août, 1705, faite par Messieurs de *Vaudreuil*, Gouverneur, et *Raudot*, Intendant, à *Marie Fezeret*, étant un reste de terre non-concédé d'environ cinquante arpens de front sur deux lieues, moins un arpent, de profondeur sur la rivière *Yamaska*, tirant au Nord-ouest, dans la profondeur, joignant au Sud-ouest la ligne de la Seigneurie *Bourgchemin*; au Nord-est la ligne des terres concédées au *Sieur Charon*; et au Nord-ouest les profondeurs de la Seigneurie de *Sorrel*, dans l'étendue de la dite concession.

Régistre des Foi et Hommage, N° 112, folio 64.

Cahier d'Intend. 2 à 9, folio 235.

BOURGMARIE DE L'OUEST.

Et aussi au Sud-est de la dite rivière un autre reste de terre non-concédé d'environ soixante arpens de front sur une lieue et demie de profondeur, tirant au Sud-est aux terres non-concédées, joignant au Sud-ouest le fief *St. Charles*, appartenant au *Sieur Fezeret*, son pere, et au Nord-ouest la Seigneurie de *Lavallière*.

Régistre des Foi et Hommage, N° 112, folio 64.

CAP DE LA MAGDELAINE.

Concession du 20me Mars, 1651, faite par Mr. de la *Ferté*, aux révérends pères *Jésuites*, contenant deux lieues le long du fleuve *St. Laurent*, depuis le Cap nommé des *Trois Rivières*, en descendant sur le grand fleuve, jusqu'aux endroits où les dites deux lieues se pourront étendre, sur vingt lieues de profondeur du côté du Nord, et compris les bois, rivières et prairies qui sont sur le dit grand fleuve et sur les dites *Trois Rivières*.

Régistre d'Intendance, N° 2 à 9, folio 131.

CAP ST. MICHEL OU LA TRINITE.

Le titre de cette Concession n'a pas été trouvé dans le Secrétariat. Par un acte de Foi et Hommage, rendu le 3me Août, 1676, devant Mr. *Duchesneau*, alors Intendant, il paroît que ce fief doit avoir une lieue de front sur une lieue et demie de profondeur, situé sur le fleuve *St. Laurent*, entre les concessions de Mr. *de Varennes* et *Laurent Borney*, Sieur de *Grand-maison*, avec deux petites isles vis-a-vis de sa devanture.

Régistre des Foi et Hommage, N° 27, folio 182, le 10me Février, 1731.

CARUFEL.

Concession du mois de Mars, 1705, faite par *Philippe de Rigaud*, Gouverneur, et *François de Beauharnois*, Intendant, au Sieur *Jean Sicard*, Sieur de *Carufel*, de l'espace de terre qui reste dans la rivière de *Masquinongé*, dans le lac *St. Pierre*, depuis celle qui a été ci-devant accordée au Sieur *Legardeur*, jusqu'au premier sault de la dite rivière, ce qui contient deux lieues ou environ de front sur pareille profondeur.

Régistre d'Intendance, N° 5, folio 40.

Cahiers d'Intend. more authentic.

CHAMPLAIN.

Concession du 22me Septembre, 1664, faite par Mr. *de Mézy*, à *Etienne Pezard*, Sieur de *Latouche*, d'une lieue et demie de terre de front à prendre sur le grand fleuve *St. Laurent*, depuis la rivière *Champlain* en montant sur le dit fleuve, vers les *Trois Rivières*, sur une lieue de profondeur dans les terres; la dite rivière *Champlain* mitoyenne, avec ceux qui occuperont les terres qui sont de l'autre côté d'icelle, avec tous les bois, près, rivières, ruisseaux, lacs, isles et islets, et généralement de tout le contenu entre les dites bornes.

Les Jésuites ayant par leur titre antérieur de *Batiscan*, un quart de lieu au Sud-ouest de la rivière *Champlain*, cette Concession ne pouvoit s'étendre jusques-là, mais avant l'année 1721, ils cedèrent à M. *Latouche Champlain*, ce quart de lieue compris entre leurs borne et la dite rivière; et c'est ainsi que la Seigneurie est actuellement bornée.

Insinuations du Conseil Supérieur, *Régistre B.* folio 7.

AUGMENTATION DE CHAMPLAIN.

Concession du 28me Avril, 1697, faite par *Louis de Buade*, Comte de *Frontenac*, Gouverneur, et *Jean Bochart*, Intendant, à Madame de *Latouche*, de trois lieues de terre en profondeur, joignant la derrière de sa Seigneurie de *Champlain*, sur tout la largeur d'icelle; tenant d'un côté au fief de *Batiscan*, et de l'autre au fief du Sieur *Hertel*.

Hertel n'est qu'un arrière fief, concédé par les révérends Peres Jésuites dans leur Seigneurie du *Cap de Magdeleine*.

Régistre d'Intendance, N° 5, folio 16.

CHAMBLY.

Concession du 29me Oct. 1672, faite par *Jean Talon*, Intendant, au Sieur de *Chambly*, de six lieues de terre de front sur une lieue de profondeur, à prendre sur la rivière *St. Louis (Chambly)* savoir trois lieues au Nord de la dite rivière (deux lieues en deçà du Fort que y est bâti et une lieue au delà) et trois lieues au Sud de la dite rivière.

Régistre d'Intendance, N° 1, folio 10.

CHATEAUGAY.

Concession du 29me Septembre, 1673, à Mr. *Le Moine*, Sieur de *Longueil*, de deux lieues de terre de front, à commencer dix arpens au-dessous de la rivière du *Loup*, en montant dans le lac *St. Louis*, du côté du Sud ; et de profondeur trois lieues, ensemble l'isle *St. Bernard* qui est à l'embouchure de la dite rivière.

Foi et Hommage, N° 48, folio 214, le 27me Février, 1781.

Cahiers d'Intend. N° 10 à 17, folio 425.

CHICOT.

Concession du 3me Novembre, 1672, faite par *Jean Talon*, Intendant, au Sieur *Dupas*, de l'*Isle Dupas* et adjacentes, ensemble un quart de lieue au-dessus et un quart au dessous de la rivière de *Chicot*, sur un lieue et demie de profondeur, supposé que cette quantité ne touche pas à celle accordée à Mr. *Legardeur*, fils.

Régistre d'Intendance, N° 1, folio 35.

CLORIDON.

Par Acte de Foi & Hommage rendu le 3me Juin, 1736, par *Jean Claude Louet*, au nom d'*Anne Morin* son épouse, veuve de *Réné d'Eneau* et au nom du Capitaine *Réné d'Eneau*, son fils, pour le fief d'*Eneau* il paroît qu'il exhiba une ordonnance de Mr. de *Champigny*, Intendant, du 28me Mars, 1691, annexée à une requête, faite par feu le dit Sieur d'*Eneau*, exposant que ses titres lui avoient été enlevés par les Anglois, et demandant d'être maintenu dans sa possession de la rivière *Ristigouche* avec huit lieues de terre de front sur pareille profondeur, le long de la dite rivière, et les isles et battures qui se trouveront devant de la dite étendue, avec droit de chasse, pêche, &c. La susdite Ordonnance accordant le contenu de cette requête, sauf seulement les oppositions que pourra faire Mr. de *Fronsac*, Seigneur de *Miramichi*. De plus un accord entre les héritiers du dit feu Sieur *Réné d'Eneau* et Mr. de *Fronsac*, par lequel *Cloridon* fut borné comme suit, savoir, commençant à l'entrée de la rivière au *Porcépic*, qui tombe dans celle de *Ristigouche*, en montant la dite rivière *Ristigouche* ; et que les rums de vent des terres du dit Sieur d'*Eneau* soient Nord-est et Sud-ouest pour la profondeur, conformément à ceux du dit Sieur de *Fronsac*, et à l'égard du front ou largeur Sud-est et Nord-ouest.

Ins. Con. Sup. lettre D. folio 53.

CONTRECEUR.

Concession du 29me Octobre, 1672, faite par *Jean Talon*, Intendant au Sieur de *Contreœur*, de deux lieues de terre de front sur autant de profondeur ; à prendre sur le fleuve *St. Laurent*, depuis les terres du Sieur de *Ours*, jusqu'à celles du Sieur de *Villeray*.

Cahiers d'Intend. 2 à 9, folio 190.

COTE DE BEAUPRE'.

Concession du 15me Janvier, 1636, faite par la Compagnie, au Sieur *Cheffault de la Régnardière*, située du côté du Nord du fleuve *St. Laurent*, contenant l'étendue de terre qui se trouve depuis la borne du côté Sud-ouest du dit fief, qui le sépare d'avec celui ci-devant appartenant au Sieur *Giffard*, en descendant le dit fleuve *St. Laurent*, jusqu'à la rivière

du *Gouffre*, sur six lieues de profondeur dans les terres; avec les isles du cap brûlé, l'islet rompu et autres islets et battures au devant de la dite Seigneurie.

Régistre d'Intendance, N° 10 à 17, folio 667.

COURNOYER.

Situé au Sud du fleuve *St. Laurent*, contenant une demi lieue de front sur trois lieues de profondeur, tenant du côté du Nord-est au fief de *Gentilly* et du côté du Sud-ouest au fief de *Dutort*, appartenant aux héritiers de feu Sieur *Linctot*.

Par le règlement des paroisses fait par le Gouverneur et l'Intendant, cet fief est cité pour avoir deux lieues de front sur trois de profondeur.

Régistre du papier Terrier, folio 204, le 2me Mars, 1725.

COURNOYER.

Concession du 1er Mars, 1695, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur de *Cournoyer*, de deux lieues de terre de front sur pareille profondeur du côté du Nord de la rivière *Richelieu*, à commencer à la Seigneurie du Sieur *Joseph Hertel*, en descendant la dite rivière.

Régistre d'Intendance, N° 4, folio 19.

COURVAL.

Concession du 25me Septembre, 1754, faite au Sieur *Cressé*, par le *Marquis Duquesne*, Gouverneur, et *François Bigot*, Intendant, de deux lieues de front sur trois lieues de profondeur, située au bout de la profondeur de la Seigneurie vulgairement nommée la *Baie St. Antoine* ou du *Febvre*, au bord du lac *St. Pierre*, laquelle Seigneurie à deux lieues ou environ de front, sur deux lieues seulement de profondeur, et se trouve enclavée entre le fief du Sieur *Cressé* pere, au Nord-est, et un autre fief appartenant au Sieur *Lussaudière* au Sud-ouest.

Régistre d'Intendance, N° 10, folio 19.

DERRIERE LA CONCESSION DU SIEUR NEVEU AU SUD-UEST.

Concession du 6me Oct. 1736, faite par *Charles, Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au Sieur *Jean d'Aillebout d'Argenteuil*, d'une lieue et demie de terre de front sur quatre lieues de profondeur, derrière la Seigneurie de *Lanauraic*, laquelle sera bornée pour la devanture par la rive du Nord de la rivière de l'*Assomption*; du côté du Sud-ouest par la ligne de la continuation de la Seigneurie de *Lavaltrie*; d'autre côté, au Nord-est par une ligne parallèle, tenant aux terres non-concédées, et dans la profondeur par une ligne parallèle à la devanture; joignant aussi aux terres non-concédées.

Régistre d'Intendance, N° 8, folio 14.

PARTIE EST DE DAUTRE.

Concession du 16me Avril, 1647, par la Compagnie, au Sieur *Jean Bourdon*, d'une demi lieue de terre, à prendre le long du grand fleuve *St. Laurent*, du côté du Nord, entre le Cap l'*Assomption* et les *Trois Rivières*, à l'endroit où le dit Sieur *Bourdon* habitue, suivant pareille concession à lui ci-devant faite, en 1637, et de proche en proche icelle, sur pareille profondeur, revenant l'une et l'autre à une lieue de front sur deux lieues de profondeur.

Régistre d'Intendance, N° 10 à 17, folio 437.

PARTIE OUEST DE DAUTRE'.

Concession du 1er Decembre, 1637, faite par la Compagnie ; au Sieur *Jean Bourdon*, du fief *Dautré*, contenant une demi lieue de terre ; à prendre sur le fleuve *St. Laurent*, sur deux lieues de profondeur en avant dans les terres ; à prendre en lieu non-concédé.

Régistre d'Intendance, N° 10 à 17, folio 435.

D'AUTEUIL.

Concession du 15me Février, 1693, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *D'auteuil*, d'un reste de terre non-concédé, qui a pour front la ligne de profondeur du Sieur *Toupin Dusault* ; au Nord-est la ligne du Sieur *Dupont*, au Sud-ouest celle du fief du dit Sieur *D'auteuil* ; et au Nord-ouest la ligne qui sera tirée au bout de quatre lieues et demie ; ensemble les rivières et ruisseaux et tout ce que s'y trouvera compris.

Régistre d'Intendance, N° 4, folio 10.

DEGUIR.

Concession du 23me Septembre, 1751, faite par le *Marquis de la Jonquière*, Gouverneur, et *François Bigot*, Intendant, au Sieur *Joseph Deguir*, dit *Desrosiers*, de deux lieues de terre de front ou environ, sur deux lieues de profondeur, à prendre au bout de la profondeur de la Seigneurie *St. François*, bornée d'un côté, au Nord-est, à la rivière *St. François*, au Sud-ouest à la Seigneurie de la Dame *Petit*, sur le devant au trait carré de la dite Seigneurie de *St. François*, et dans la profondeur aux terres non-concédées, ensemble la rivière *David* qui se trouve dans l'étendue du dit terrain.

Régistre d'Intendance, N° 9, folio 82.

DE LÉRY.

Concession du 6me Avril, 1733, faite par *Charles, Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au Sieur *Chaussegros de Léry*, de deux lieues de front le long de la rivière de *Chambly*, sur trois lieues de profondeur ; les dites deux lieues de front à prendre depuis la borne de la Seigneurie du Sieur *de Longueuil*, qui va au Nord-ouest, en remontant vers le lac *Champlain*, à une ligne tirée est et ouest du monde, et joignant la profondeur aux terres non-concédées.

Régistre d'Intendance, N° 7, folio 13.

DE L'ISLE.

Concession du 24me Septembre, 1736, faite par *Charles, Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au Sieur *Gabriel Aubin*, De L'Isle, d'un terrain de deux lieues de front sur deux lieues de profondeur, du côté du Nord-est de la rivière du *Sault de la Chaudière*, avec les isles et islets qui sont dans la dite rivière du côté du Nord-est ; à commencer à la fin d'autres trois lieues concédées au Sieur *Joseph Fleury de la Gorgendiere* et finir aux terres non-concédées.

Régistre d'Intendance, N° 8, folio 12.

DERRIERE DAUTRE' ET LANAURAIE.

Concession du 4me Juillet, 1739, faite par *Charles, Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au Sieur *Jean Bup-*

tiste Neveu, d'un terrain non-concédé, à prendre depuis la ligne qui borne la profondeur des fiefs de *Lanauraic* et *Dautre*, jusqu'à la rivière de l'*Assomption*, et dans la même étendue en largeur que celle des dits fiefs; c'est-à-dire borné du côté du Sud-ouest par la ligne qui sépare la Seigneurie de *Lavaltrie* et du côté du Nord-est par une ligne parallèle, tenant aux prolongations de la Seigneurie d'*Antaya*; lequel terrain ne fera avec chacun des dits fiefs de *Lanauraic* et *Dautre* qu'une seule et même Seigneurie.

Registre d'Intendance, N° 8, folio 29.

DERRIERE LA CONCESSION DU SIEUR NEVEU, AU NORD-EST.

Concession du 7me Octobre, 1736, faite par *Charles Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, à Dame *Geneviève de Ramzay*, veuve du feu Sieur de *Boishébert*, d'une lieue et demie de terre de front sur quatre lieues de profondeur, bornée sur la devanture par la rive du Nord de la rivière de l'*Assomption*, du côté du Sud-ouest par la ligne de la concession nouvellement accordée au Sieur d'*Argenteuil*; d'autre, au Nord-est par une ligne parallèle, tenant aux prolongations de la Seigneurie d'*Antaya*; et dans la profondeur par une ligne parallèle à la devanture, joignant aussi aux terres non-concédées.

Régistre d'Intendance, N° 8, folio 15.

DESMAURE OU ST. AUGUSTIN.

L'Enregistrement de cet octroi n'a pas été trouvé jusqu'ici au Secrétariat de la Province. Les Dames religieuses de l'Hôpital, qui possèdent actuellement ce fief, en rendant Foi et Hommage le 19me Mars, 1781, n'ont produit qu'un Acte d'adjudication en date du 22me Septembre, 1733, dans lequel ni les dimensions ni le nom du concessionnaire de cette concession ne sont mentionnés.

Par le règlement des paroisses de cette province, l'étendue de cette Seigneurie se détermine à deux lieues et demie de front, sur une et demie de profondeur.

Régistre des Foi et Hommage, N° 64, folio 168, le 19me Mars, 1781.

Ins. Con. Sup.

DE PEIRAS.

Concession du 6me Mai, 1675, faite par le Comte de *Frontenac*, Gouverneur, au Sieur de *Peiras*, de deux lieues de front le long du fleuve *St. Laurent* du côté du Sud, à prendre du milieu de la largeur de la rivière appelée *Mitis* et qui s'appellera dorénavant la rivière en descendant le dit fleuve, et deux lieues de profondeur, ensemble les trois isles et islets appelées *St. Barnabé*.

Régistre d'Intendance, N° 2 à 9, folio 370.

Ins. Con. Sup. B. folio 3.

DE RAMZAY.

Concession du 17me Octobre, 1710, faite au Sieur de *Ramzay*, de l'étendue de trois lieues de terre de front sur trois lieues de profondeur, savoir, une lieue et demie audessous de la rivière *Scibouet*, qui tombe dans la rivière *Yamaska*, et une lieue et demie au dessus, courant du Nord-est au Sud-ouest, avec les isles et islets qui se trouveront dans la

dite rivière, vis-à-vis de la dite concession : et donnant à la dite concession le nom de *Ramzay*.

Régistre des Foi et Hommage, N° 96, folio 62, le 2me Janvier, 1781.
Cahiers d'Intendance, N° 2 à 9, folio 358.

DESCHAMBAULT.

Concession du 1er Mars, 1652, faite par Mr. de *Lauzon* à Demoiselle *Eleonore de Grandmaison*, située au Nord du fleuve *St. Laurent*, contenant une lieue de front sur trois lieues de profondeur, tenant du côté du Nord-est au fief de *Portneuf*, appartenant au Sieur *Croisille*, et du côté du Sud-ouest au fief de la *Chevretière*.

Régistre d'Intendance, N° 10 à 17, folio 592.

PARTIE NORD-EST DE DESPLAINES.

Concession du 4me Janvier, 1737, faite à Demoiselle *Charlotte Lagardeur* par le Marquis de *Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, de trois quarts de lieue de terre de front à la côté du Sud du fleuve *St. Laurent*, sur trois lieues de profondeur, à prendre au bout des profondeurs du fief *Maranda* ; bornée d'un côté, au Sud-ouest, à la Seigneurie de *Bonsecours*, d'autre au Nord-est à celle de *Tilly*, et par derrière aux terres non-concédées.

Régistre d'Intendance, N° 8, folio 19.

PARTIE SUD-OUEST DE DESPLAINES.

Concession du 26me Mars, 1738, faite par le Marquis de *Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, à Demoiselle *Charlotte Legardeur*, d'une augmentation de terrain d'environ soixante et quatorze arpens de front, qui se trouve non-concédé, et enclavé entre la concession à elle faite le 4me Janvier, 1737, et la Seigneurie de *St. Croix*, tenant par devant au fief de *Bonsecours* et *Amiot*, et par derrière aux terres non-concédées, sur une lieue et soixante arpens de profondeur, pour les dits soixante et quatorze arpens ajoutés ne faire avec sa première concession qu'une même Seigneurie.

Régistre d'Intendance, N° 9, folio 2.

DUMONTIER.

Concession du 24me Octobre, 1708, faite au Sieur *Dumontier*, d'une lieue et demie de terre de front sur trois lieues de profondeur, à prendre au bout de la profondeur de la Seigneurie de *Grosbois*, bornée de chaque côté aux terres non-concédées.

Régistre des Foi et Hommage, N° 10, folio 52, le 26me Janvier, 1781.
Cahiers d'Intendance.

DUSABLE'.

Concession du 15me Août, 1739, faite par *Charles Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au Sieur *Louis Adrien Dandonneau Dusablé*, d'une étendue de terrain d'environ une lieue de front sur trois lieues de profondeur ; laquelle sera bornée pour la devanture au bout de la profondeur de la concession accordée par Mr. *Talon*, au Sieur *Jean Baptiste Legardeur*, le 3me Novembre, 1672, appartenant aujourd'hui au Sieur *Petit Bruno* ; au Nord-est par les terres concédées par le dit Sieur *Talon*, le 29me Octobre, 1672, aux Sieurs *Pierre* et *Jean Baptiste Legardeur* ; dont le dit Sieur *Petit* est aussi propriétaire,

et par la ligne de la Seigneurie du Sieur *Sicard de Carufel*; au Sud-ouest au fief du *Chicot*, et continuation du dit fief; et par derrière aux terres non-concédées.

Régistre d'Intendance, N° 8, folio 30.

DUTORT.

On n'a pu trouver le titre de cette Concession ni dans le Secrétariat ni dans le bureau du Papier Terrier, de sorte qu'on ne connoit ni l'étendue de son front ni le nom du concessionnaire originaire. Elle est placée sur la carte d'après les lumières qu'on a pu tirer des titres des concessions voisines.

Par le reglement de l'étendue des paroisses fait par le Gouverneur et l'Intendant, cet fief paroît avoir un quart de lieue du front du précédent fief de Becancour qui devoit avoir deux lieues et trois quart de front.

LES EROULEMENS.

Le titre de cet octroi n'a pas encore été trouvé au Bureau du Secrétariat, mais il paroît par un Acte de Foi et Hommage, rendu le 3me Avril, 1723, par *Pierre Tremblay*, alors propriétaire de ce fief, qu'entr'autres titres il produisit une concession faite à *Pierre Lessard*, portant que toutes les terres en Seigneuries qui se trouvent depuis la Seigneurie, du Sieur *Dupré*, jusqu'à celle du Sieur de *Comporté*, nommée la *Malbaie*, demeureront et appartiendront à l'avenir au dit *Pierre Lessard*, (*Pierre Tremblay*, probablement.)

Reg. Foi et Hommage, folio 55, April 3, 1723.

Cahiers d'Intend. N° 2 à 9, folio 3, April 5, 1683.

BELAIR OU LES ECUREUILS.

Concession du 3me Novembre, 1672, faite par *Jean Talon*, Intendant, aux Sieurs *Toupin*, Pere et Fils, d'une demi lieue de front, sur une lieue de profondeur, à prendre sur le fleuve *St. Laurent*, moitié au dessus et moitié au dessous de la pointe *Bouvoila* (aux *Ecureuils*) aboutissant des deux côtés aux terres non-concédées.

Régistre d'Intendance, N° 1, folio 39.

* AUGMENTATION DES ECUREUILS.

Concession du 20me Janvier, 1706, faite par *Phillipe de Rigaud*, Gouverneur, et *François de Beauharnois*, Intendant, à *Marie Magdelaine Mezerai*, veuve de feu *Jean Toupin*, d'une demi lieue de terre de front sur deux lieues de profondeur derrière la Seigneurie de *Bélaïr*, le front à prendre immédiatement à une lieue du fleuve *St. Laurent*.

Régistre d'Intendance, N° 5, folio 41.

L'EPINAY.

Concession du 7me Avril, 1701, faite par *Hector de Callière*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur de *l'Epinaï*, du peu de terrain qui se trouve entre la Seigneurie de *Jean de Paris* et celle de la rivière du *Sud*, près de *Québec*, lequel terrain se termine en triangle au fleuve *St. Laurent*, et tient d'un bout aux terres non-concédées, et de l'autre par la pointe au dit fleuve; ensemble que le dit terrain sera borné à la hauteur de la concession du dit *Jean de Paris*, par une ligne parallèle

qui sera tirée Nord-est et Sud-ouest jusqu'à celle de la petite rivière du Sud.

Régistre d'Intendance, N° 5, folio 32.

FAUSEMBAULT.

Concession du 20^{me} Février, 1693, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au *Sieur de Gaudarville*, de trois lieues de profondeur au derrière du fief de *Gaudarville*, ensemble toutes les terres attenantes qui sont derrière les fiefs des *Sieurs Desmaures* et *Guillaume Bonhomme*, et jusqu'à la profondeur de la même ligne du Nord-est au Sud-ouest, qui terminera les dites trois lieues, ensorte que tout ce qui est compris en la présente concession sera borné d'un bout, par devant, au Sud-est, par les lignes qui terminent les profondeurs des dits fiefs de *Gaudarville*, *Bonhomme* et *Desmaure*, et par derrière au Nord-ouest par une ligne courant aussi Nord-est et Sud-ouest qui terminera la profondeur des dites trois lieues par derrière le dit fief de *Gaudarville*, et sera prolongée droit jusqu'au fief de *Neuville*, et par un côté au Nord-est, d'une partie des terres du fief de *Sillery*, d'une partie de celles de *Gaudarville*, et des terres du dit *Bonhomme*; et de l'autre côté, au Sud-ouest, bornée des terres du fief de *Neuville*.

Régistre d'Intendance, N° 4, folio 11.

FOUCAULT.

Concession du 3^{me} Avril, 1738, faite par *Charles, Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au *Sieur Foucault*, de deux lieues de terre de front, bornées du côté du Nord par la Seigneurie nouvellement concédée au *Sieur de Noyan*, et sur la même ligne, et du côté du Sud à deux lieues de la dite ligne par une ligne parallèle tirée Est et Ouest du monde; sur le devant par la rivière *Chambly*, et sur la profondeur par la Baie de *Missisquoui*.

Régistre d'Intendance, N° 7, folio 9.

FOURNIER.

Concession du 3^{me} Nov. 1672, faite par *Jean Talon*, Intendant, au *Sieur Fournier*, de trente arpens de terre sur deux lieues de profondeur, à prendre sur le fleuve *St. Laurent*; tenant d'un côté au *Sieur de l'Epinaï*, et d'autre aux terres non-concédées.

Régistre d'Intendance, No. 1, folio 28.

GASPE'.

Concession du 25^{me} Mars, 1738, faite par le *Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, à *Dame Angelique Legardeur*, veuve du *Sieur Aubert de Gaspé*, d'une lieue et demie de terre de front, derrière la Seigneurie de *Tilly*, appartenant aux Héritiers de feu *Sieur Legardeur*; à prendre le front au bout de la profondeur et limite de la dite Seigneurie de *Tilly*; tenant d'un côté à la Seigneurie de *Lauzon*, et d'autre à celle accordée à *Demoiselle Legardeur* sa Sœur, par concession du 4^{me} Janvier, 1737, et par derrière aux terres non-concédées.

Régistre d'Intendance, N° 9, folio 1.

GATINEAU.

Concession du 3me Novembre, 1672, faite par *Jean Talon*, Intendant, au *Sieur Boucher*, fils, de trois quarts de lieues de terre de front sur une lieue de profondeur, à prendre sur le lac *St. Pierre*, depuis la concession du *Sieur Boucher* son pere, jusqu'aux terres non-concédées.

Régistre d'Intendance, N° 1, folio 37.

AUGMENTATION A GATINEAU.

Concession du 21me Octobre, 1750, faite par le *Marquis de la Jonquière*, Gouverneur, et *François Bigot*, Intendant, à *Demoiselle Marie Josephe Gatineau Duplessis*, de quatre lieues de profondeur derrière le fief *Gatineau*, situé sur le lac *St. Pierre*, et sur le même front d'icelui.

Régistre d'Intendance, N° 9, folio 71.

GAUDARVILLE.

Contenant quarante cinq arpens de front sur quatre lieues de profondeur; tenant du côté du Nord-est au fief de *Sillery*, appartenant aux révérends pères Jésuites, et du côté du Sud-ouest au fief de *Desmaure*, appartenant au *Sieur Aubert*.

Cette Concession a pour date le 8 de Fevrier, 1652, et fut accordée au *Louis de Lauson*, *Sieur de la Citiere*.

See Cahiers d'Intendance, N° 10 à 17, folio 638.

GENTILLY.

Concession du 14me Août, 1676, faite par *Jacques Duchesneau*, Intendant, à *Michel Pelletier*, *Sieur de la Perade*, de la Seigneurie de *Gentilly*, contenant deux lieues et demie de front sur le fleuve *St. Laurent*, à prendre aux terres du *Sieur Hertel* en descendant, et deux lieues de profondeur.

Régistre d'Intendance, N° 2, folio 11.

GODEFROI.

Concession du 31me Août, 1638, faite par *Charles Huot de Montmagny*, au *Sieur Godefroi*, de trois quarts de lieues de terre le long du fleuve *St. Laurent*, sur trois lieues de profondeur dans les terres; et sont les dites terres bornées du côté du Sud-ouest d'une ligne qui court Sud-est et Nord-ouest, au bout de laquelle, du côté du Nord, a été enfoncée une grosse pierre avec des briquetons auprès d'un sicomore, sur laquelle une croix a été gravée, le tout pour servir de marque et témoignage, et du côté du Nord-est de la rivière nommée la rivière du lac *St. Paul*, sans néanmoins que le dit *Godefroi* puisse rien prétendre en la propriété du tout ou de partie de la dite rivière, et icelle y étant, ni du lac *St. Paul*, encore bien que la dite ligne s'y rencontra.

Cahier d'Intendance, N° 2 à 9, folio 151.

LE GOUFFRE.

Concession du 30me Décembre, 1682, faite par *Lefebvre de la Barre*, Gouverneur, et de *Meulles*, Intendant, à *Pierre Dupré*, d'une demie lieue de terre de front sur quatre lieues de profondeur joignant douze arpens

de terre qui sont depuis la borne de Monseigneur l'Evêque de Québec, en descendant vers le cap aux Oies ; le tout concédé a titre de fief et Seigneurie, avec le droit de chasse et de pêche ; pour la dite concession et les douze arpens plus haut mentionnés (à lui concédés par Mr. de Frontenac) ne faire qu'une seule et même Seigneurie.

Insinuations du Conseil Supérieur, Lettre B. folio 19.

GRAND PABOS.

Concession du 14me Novembre, 1696, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *Réné Hubert*, de la rivière du *Grand Pabos*, autrement dite la rivière *Duval*, située dans la *Baie des Chaleurs*, avec deux lieues et demie de front du côté de l'Est de la dite rivière, et demi lieue du côté de l'Ouest, en tirant vers la rivière du *Petit Pabos*, icelle comprise sur pareille profondeur.

Régistré d'Intendance, N° 5, folio 3.

GRANDPRE.

Concession du 30me Juillet, 1695, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, à *Pierre Boucher*, Sieur de *Grandpré*, d'une lieue de terre de front dans le lac *St. Pierre*, tenant d'un côté aux terres concédées de la rivière *Yamachiche*, et de l'autre à celles de la *Rivière du Loup* ; ensemble les isles, islets et batures adjacentes.

Régistre d'Intendance, N° 4, folio 18.

GRANDE RIVIERE.

Concession, du 31me Mai, 1697, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *Jacques Cochu*, de la *Grande Rivière*, située dans la *Baie des Chaleurs*, avec une lieue et demie de terre de front sur deux lieues de profondeur, à prendre depuis la Seigneurie du *Grand Pabos*, appartenant au Sieur *Réné Hubert*, en tirant du côté du Cap *Espoir*, vers l'isle *Perclé*.

Régistre d'Intendance, N° 5, folio 18.

GRANDVILLE.

Concession du 5me Octobre, 1707, faite à Dame *Marie Anne de Grandville*, veuve du Sieur de *Soulange*, d'une lieue ou environ de front sur le fleuve *St. Laurent*, à commencer joignant le Sieur de *Foulon*, dont la concession commence à deux lieues audessus de la rivière de *Kamouraska* et finit une lieue audessous, et en descendant au Nord-est, joignant son ancienne concession, avec les isles et islets, bancs et batures qui se trouveront vis-à-vis icelle, laquelle sera incorporée et jointe avec la dite ancienne concession, pour des deux n'en faire qu'une.

Régistre des Foi et Hommage, N° 107, folio 107, 2me Août, 1751.

Cahiers d'Intendance, 10 à 17, folio 584.

GRANDVILLE ET LACHENAIE.

Concession du 2me Juin, 1696, faite par *Louis de Buade*, Comte de *Frontenac*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur de *Grandville* et de la *Lachenaie*, de deux lieues de terre de front, sur trois lieues de profondeur en lieux nonconcédés, joignant d'un côté la terre du dit Sieur de *Grandville* nommée l'islet du *Portage*, et de l'autre la Seigneurie de *Terrebois*, appartenante au dit Sieur de *Lachenaie*, représentant *Dautier*,

situées les dites concessions sur le fleuve *St. Laurent*, du côté du Sud, audessus de la rivière du *Loup*.

Régistre d'Intendance, N° 5, folio 1.

GRANDE VALLE'E DES MONTS.

Concession du 23me Mars, 1691, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *François Hazzeur*, d'une étendue de terre de deux lieues de front, au lieu appelé la *Grande Vallée des Monts Notre Dame*, dans le fleuve *St. Laurent*, du côté du Sud, à deux lieues de la rivière *Magdelaine*, et quatre lieues de *l'Etang*, en descendant vers *Gaspé*, avec la rivière qui se rencontre à la dite *Vallée des Monts*, qui sera dans le milieu des dites deux lieues de front sur trois lieues de profondeur dans les terres, avec les isles et islets qui pourront se trouver sur la devanture des dites deux lieues, et dans la dite rivière sur la profondeur des dites trois lieues.

Régistre d'Intendance, N° 4, folio 3.

PARTIE OUEST DES GRONDINES.

Concession du 20me Mars, 1638, faite par la Compagnie, à Dame *Duchesse d'Aguillon*, pour les Dames Hospitalières de l'Hôtel-Dieu de *Québec*, de la Seigneurie des *Grondines*, contenant une lieue de terre en largeur sur le grand fleuve *St. Laurent*, sur dix lieues de profondeur ; savoir : est, depuis la pointe de l'ance des *Grondines*, du côté du Nord-Est, un quart de lieue audessous de la dite pointe, en tirant vers le Cap de *Lauzon*, borné par une route qui court Sud-est et Nord-Ouest ou environ ; et d'autre côté au Sud-Ouest trois quarts de lieue, borné aussi par une route qui court Sud-Est et Nord-Ouest, d'un bout au Nord-Ouest par une route qui court Sud-Ouest et Nord-Est.

Régistre des Foi et Hommage, folio 47.

Aussi *Reg. d'Intendance*, et *Cahiers d'Intendance*.

PARTIE EST DES GRONDINES.

Concession du 3me Novembre, 1672, faite par *Jean Talon*, Intendant, aux Pauvres de l'Hôpital, de trois quarts de lieues de terre sur trois lieues de profondeur, à prendre sur le fleuve *St. Laurent*, au lieu dit les *Grondines*, tenant d'un côté à la Concession appartenante aux religieuses du dit Hôpital, de l'autre aux terres non-concédées ; tirant en descendant le fleuve vers *Chavigny*.

Régistre d'Intendance, N° 1, folio 34.

AUGMENTATION A LA PARTIE EST DES GRONDINES.

Concession du 25me Avril, 1711, faite par *Raudot* Gouverneur, et *Vaudrevil*, Intendant, à *Louis Hamelin*, de la continuation de deux lieues de profondeur sur le front de trois quarts de lieue non-concédé, étant au bout des trois quarts de lieue de front sur la profondeur de trois lieues, en quoi consiste l'étendue de la dite Seigneurie des *Grondines* ; borné d'un côté aux terres du Sieur de la *Chevrotière* et d'un côté à celles du dit Sieur *Louis Hamelin*.

Régistre des Foi et Hommage, folio 47.

GUILLAUDIÈRE.

Concession du 3me Novembre, 1672, faite par *Jean Talon*, Intendant, à *Laurent Borney* Sieur de *Grandmaison*, de trente arpens de front sur

une lieue de profondeur, à prendre sur le fleuve *St. Laurent*, depuis les terres du Sieur de *St. Michel*, en descendant vers les terres non-concédées.

Régistre d'Intendance, N° 1, folio 28.

HUBERT.

Concession du 10me Juin, 1698, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *René Louis Hubert*, fils, de deux lieues de terre de front sur pareille profondeur, située au derrière des seigneuries nommées *St. Gabriel* et *St. Ignace*, appartenant aux pères Jésuites et aux religieuses Hospitalières de *Québec*: le dit terrain tirant au Nord-ouest, borné d'un bout des dites Seigneuries, d'autre bout et des deux cotés des terres non-concédées.

Régistre d'Intendance, N° 5, folio 23.

ISLET ST. JEAN.

Concession du 17me Mai, 1677, faite par *Louis de Buade*, Comte de *Frontenac*, Gouverneur, à Demoiselle *Genevieve Couillard*, d'une lieue de terre de front le long du fleuve *St. Laurent*, du côté du Sud, à commencer depuis les deux lieues promises à *Noël Langlois*, en remontant le dit fleuve, vers celle qui appartient à la Demoiselle *Amiot*, avec deux lieues de profondeur, ensemble un islet étant dans le fleuve, au devant de la dite lieue de front, contenant quatre à cinq arpens ou environ.

Insinuations du Conseil Supérieur, Let. B. folio 39.

ISLET DU PORTAGE.

Concession du 29me Octobre, 1672, faite par *Jean Talon*, Intendant, au Sieur de *Granville*, de l'Isle nommée du *Portage* sur le fleuve *St. Laurent*, avec une demi lieue de terre en deça et une autre au delà de la dite Isle, sur une lieue de profondeur.

Régistre d'Intendance, N° 1, folio 14.

ISLE VERTE.

Concession du 27me Avril, 1684, faite par le *Febvre de la Barre*, Gouverneur, et de *Meulles*, Intendant, aux Sieurs *Dartigny* et de la *Cardonniere*, depuis au Sieur *Dartigny* seul, contenant deux lieues de terre, prés et bois, de front sur le fleuve *St. Laurent* sur deux lieues de profondeur dans les terres; à prendre depuis une rivière qui est vis-à-vis l'isle *Verte*, du côté du Sud de la dite isle, icelle rivière comprise, jusqu'à deux lieues en descendant le dit fleuve, ensemble les isles, islets et battures qui se rencontrent vis-à-vis les dites deux lieues, jusqu'à la dite isle *Verte*, icelle même comprise.

Régistre d'Intendance, Let. B. folio 22.

ISLE PERROT, AUDESSUS DE MONTREAL.

Concession du 29me Octobre, 1672, faite par *Jean Talon*, Intendant, de l'isle *Perrot* et autres adjacentes, comprises l'isle de la *Pair*, l'isle aux *Pins*, l'isle *Ste. Geneviève* et l'isle *St. Gilles*.

Régistre d'Intendance, N° 1, folio 5.

ISLE BIZARD, AUDESSUS MONTREAL.

Concession du 24me et 25me Octobre, 1678, faite par le *Comte de Frontenac*, Gouverneur, et *Duchesneau*, Intendant, au *Sieur Bizard*, de l'isle *Bonavanture*, (*Bizard*) ensemble les isles, &c. adjacentes.

Régistre des Foi et Hommage, N° 18, folio 90. le 3me Fevrier, 1781.

Cahiers d'Intendance, N° 4, folio 141.

ISLE ST. PAUL, AUDESSUS DE MONTREAL.

Confirmation du 23me Avril, 1700, par le Roi, d'une concession faite à *Mr. le Ber*, des deux tiers de l'isle de *St. Paul*. Plus, concession de l'autre tiers fait à *Claude Robutel*, *Sieur de St. André*, le 18me Juillet, 1676.

Cons. Cahiers d'Intend. 2 à 9, folio 282, et *Rat. d'Ins. Cons. Sup. Lettre B.* folio 131.

Cahiers d'Intend. 2 à 9, folio 331.

ISLE DE MONTREAL.

Lettres patentes, en forme d'Edit, données par sa Majesté très Chretienne, en Juillet, 1714, qui confirment la concession de la Seigneurie de l'isle de *Montreal*, isles *Courcelles* et dépendances, à titres onéreux d'amortissement des dites terres, accordées à Messieurs du Séminaire de *St. Sulpice*, par lettres patentes du mois de Mai, 1677, avec les droits d'échange.

Régistre des Foi et Hommage N° 17, folio 81. le 3me Fevrier 1781.

Cahiers d'Intendance, 10 à 17, folio 535.

ISLE JESUS.

Concession du 23me Octobre, 1689, faite par *Hector de Calliere*, Gouverneur, et *Jean Bochart*, Intendant, à l'*Evêque de Québec* et Messrs. du Séminaire, de l'isle *Jésus*, des isles aux *Vaches* et autres adjacentes,

Régistre des Foi et Hommage, N° 62, folio 289, le 19me Mars, 1781.

ISLE BOUCHARD VIS-A-VIS BOUCHERVILLE.

Concession du 3me Novembre, 1672, faite par *Jean Talon*, Intendant, au *Sieur Fortel*, des isles contenues dans la carte figurative que le *Sieur de Becancour* a donnée et qui sont cottées A, reservant de disposer en faveur de qui il plaira au Roi de celles cottées B.

Régistre d'Intendance, N° 1, folio 23.

ISLE ST. THERESE, AU BOUT D'ENBAS DE L'ISLE DE MONTREAL.

Concession du 3me Novembre, 1672, de l'isle *St. Thérèse* avec les isles et islets adjacens, par *Jean Talon*, Intendant, au *Sieur Dugué*, sauf le droit de *Mr. Repentigny* pour celles qu'il peut légitimement prétendre, et qui seront adjudgées à celui des deux auquel il sera estimé à propos de les concéder.

Régistre d'Intendance, N° 1, folio 18.

ISLE BOURDON.

Concession du 3me Novembre 1672, faite par *Jean Talon*, Intendant, à *Mr. de Repentigny*, des deux isles dites *Bourdon*.

Régistre d'Intendance, N° 1, folio 36.

ISLES BEAUREGARD.

Concédées le 17me Aoust, 1674, par le *Comte de Frontenac*, Gouverneur, au *Sieur de Beauregard*, dont l'une est audevant du bout de la Seigneurie du *Sieur de Verchères*, en montant, et les deux autres étant sur la ligne qui regarde les isles appartenantes au *Sieur de Grandmaison*.

Régistre d'Intendance, Let. B. folio 1.

ISLES ET ISLETS DANS LE LAC ST. PIERRE.

Concession du 19me Octobre, 1694, faite par *Louis de Buade Comte de Frontenac*, Gouverneur, et *Jean Bochart*, Intendant, au *Sieur Redisson* des isles, islets et battures non-concédées qui se trouvent au haut du lac *St. Pierre* audessus des isles concédées au *Sieur Sorel*, jusqu'au chenail du milieu appelé le chenail de l'isle *Platte*, lesquelles isles, islets et battures contiennent environ trois quarts de lieue de large sur autant de profondeur.

Régistre d'Intendance, N° 4, folio 18.

ISLE MORAN, A L'EMBOUCHURE DE LA RIVIERE NICOLET.

Concession du 29me Octobre, 1672, faite par *Jean Talon*, Intendant, au *Sieur Moran*, de l'isle dite *Moran*, qui se trouve à l'embouchure de la rivière *Nicolet*, au bord du fleuve *St. Laurent*.

Régistre d'Intendance, N° 1, folio 16.

ISLE DU LARGE.

Concession du 6me Avril, 1697, faite par *Louis de Buade, Comte de Frontenac*, Gouverneur, et *Jean Bochart*, Intendant, à la veuve du *Sieur de Lanaudiere*, des isles qui se trouvent devant sa terre de *Ste. Anne*, et à l'entrée de la rivière et entr'autres celle où est son moulin, appelée *l'Isle du Large*.

Régistre d'Intendance, N° 5, folio 12.

ISLE D'ORLEANS.

Lettres d'affranchissement et de règlement de la Seigneurie de *Beaupréé* et de *l'Isle d'Orléans*, du 28me Mars, 1674, rapportant une concession du 15me Janvier, 1636, de l'isle d'*Orléans*, au *Sieur Castillon*.

Régistre des Foi et Hommage, N° 100. folio 80, le 15me Juin, 1781.

Cahiers d'Intend. 10 à 17, folio 758, 750.

ISLE AUX REAUX.

Concédée le 20me Mars, 1638, par *Mr. de Montmagny*, aux révérends pères *Jésuites*.

Cahiers d'Intend. 2 à 9, folio 71.

ISLE STE. MARGUERITE.

Concession du 5me Novembre, 1698, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au *Sieur de Grandville*, d'une terre située près des isles *aux Oies*, appelée les isles *Ste. Marguerite*, consistant en quarante arpens de front sur cinq de profondeur, avec trois petites isles du côté du Sud, et la batture joignant les dites isles.

Régistre d'Intendance, N° 5, folio 25.

ISLE AUX COUDRES.

Concédée le 29me Octobre, 1687, par le *Marquis de Brisay*, Gouverneur, et *Jean Bochart* Intendant, au *Séminaire de Québec*, avec les batures qui sont autour d'icelle.

Régistre d'Intendance, N° 3, folio 11.

ISLE D'ANTICOSTI.

Concédée en Mars, 1680, par *Jacques Duchesneau*, Intendant, au *Sieur Jolliet*.

Régistre d'Intendance, N° 10 à 17, folio 619.

ISLES ET ISLETS DE MINGAN.

Concédés le 10me Mars, 1677, à Messrs. de *Lalande fils* et *Louis Jolliet*.

Régistre des Foi et Hommage, N° 78, folio 365, le 28me Mai, 1781.

JACQUES CARTIER.

Concession du 29me Mars, 1659, faite par la Compagnie, à *Dame Gagnier*, veuve de feu *Jean Clement de Wauls*, Chevalier, Seigneur de *Monceaux*, d'une demi lieue de large sur le bord du fleuve *St. Laurent*, avec cinq lieues de profondeur de terre en tel endroit qu'il plaira à *Mr. Daillebout*, Gouverneur.

Ensuite de cette concession est une copie d'un certificat du *Sieur Bourdon*, du 25me Octobre, 1659, que la *Dame de Monceaux* lui ayant remis la concession ci-dessus, par ordre de *Mr. Daillebout*, lors Gouverneur, pour prendre par la dite Dame possession de la dite demi lieue ; avec demande de lui accorder la dite concession depuis la rivière *Jacques Cartier*, jusqu'à la concurrence de la dite demi lieue, descendant en bas, par lequel certificat il lui donne acte de diligence, comme elle prenoit le dit lieu pour l'emplacement et le choix de sa dite concession.

Papier Terrier, Page 96, 15me Juin, 1781.

Cahiers d'Intendance.

JOLLIET.

Concession du 30me Avril, 1697, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au *Sieur Louis Jolliet*, des islets qui sont dans la rivière des *Trechemins*, au dessus du premier sault, contenant trois quarts de lieue ou environ, avec trois lieues de terre de front sur pareille profondeur à prendre demi lieue au dessous des dits islets en montant la dite rivière, tenant d'un côté à la Seigneurie de *Lauzon*, et de l'autre aux terres non-concédées.

Régistre d'Intendance, N° 5, folio 15.

KAMOURASKA.

Concession du 15me Juillet, 1674, faite par le Comte de *Frontenac*, Gouverneur, au *Sieur de la Durantais*, qui contient trois lieues de terre de front, sur le fleuve *St. Laurent*, savoir deux lieues au dessus de la rivière appelée *Kamouraska* et une lieue audessous, icelle comprise, avec deux lieues de profondeur dans les terres ; ensemble les isles étant audevant des dites trois lieues.

Régistre d'Intendance, Lct. B. folio 30 et 31.

LABADIE.

Concession du 3me Novembre, 1672, faite par *Jean Talon*, Intendant, au *Sieur Labadie*, d'un quart de lieue de front sur une demi lieue de profondeur, à prendre sur le fleuve *St. Laurent*, depuis la concession de *Mr. Severin Haineau*, tirant vers celle du *Sieur Pierre Boucher*.

Registre d'Intendance, N° 1, folio 27.

LAC DES DEUX MONTAGNES.

Concession du 17me Octobre, 1717, faite par *Philippe de Rigaud*, Gouverneur, et *Michel Bégon*, Intendant, aux Ecclésiastiques du Séminaire de *St. Sulpice*, établi à *Montréal*, d'un terrain de trois lieues et demie de front, à commencer au ruisseau qui tombe dans la grande baie du *Lac des Deux Montagnes*, et en remontant le long du dit *Lac des Deux Montagnes* et du fleuve *St. Laurent*, sur trois lieues de profondeur.

Régistre d'Intendance, N° 6, folio 9.

Cahiers d'Intend. Rat. de la Concession.

Un brevet de ratification de l'octroi immédiatement suivant, en date du 1er Mars, 1735, accorde une augmentation de trois lieues dans les terres faisant ensemble six lieues de profondeur pour cette Seigneurie.

AUTRE AUGMENTATION AU LAC DES DEUX MONTAGNES.

Concession du 26me Septembre, 1733, faite par *Charles Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, aux Ecclésiastiques du Séminaire de *St. Sulpice*, de *Paris*, d'une étendue de terre non concédée, entre la ligne de la Seigneurie appartenante aux représentans les feus *Sieurs de Langloiserie* et *Petit*, et celle de la Seigneurie du *Lac des Deux Montagnes*, appartenante au dit Séminaire sur le front d'environ deux lieues sur le *Lac des Deux Montagnes*, le dit lac aboutissant à un angle formé par les deux lignes ci-dessus, dont les rumbes de vent ont été réglés savoir, celle de la Seigneurie du *Lac des Deux Montagnes*, Sud quart de Sud-ouest et Nord quart de Nord-est par arrêt du Conseil Supérieur du 5me Octobre, 1722 ; et celle des *Sieurs Langloiserie* et *Petit*, Sud-ouest et Nord-ouest qui est le rumb de vent réglé pour toutes les Seigneuries situées sur le fleuve *St. Laurent*, par règlement du dit Conseil du 26me Mai, 1676, Art. 28 ; avec les isles et islets non concédés et battures adjacentes à la dite étendue de terre.

Régistre d'Intendance, N° 7, folio 22.

LA CHENAYE.

Concession en date du 16me Avril, 1647, faite par la Compagnie, à *Pierre Legardeur*, *Sieur de Repentigny*, de quatre lieues de terre à prendre le long du fleuve *St. Laurent*, du côté du Nord, tenant d'une part aux terres ci-devant concédées aux *Sieurs Cherrier* et *Leroy*, en montant le long du dit fleuve *St. Laurent*, depuis la borne qui sera mise entre les dites terres des *Sieurs Cherrier* et *Leroy* et celles-ci à présent concédées, jusqu'au dit espace de quatre lieues, auquel endroit sera mise une autre borne ; la dite étendue de quatre lieues sur six lieues de profondeur dans les terres.

Cahiers d'Intend. N° 10 à 17, folio 414.

CHEVROTIÈRE.

On n'a pu trouver le titre de cette concession au Bureau du Secrétaire, ni dans le *Régistre des Foi et Hommage*. Il paroît seulement par les

concessions voisines de *Deschambault* et de la *Tesserie*, qu'elle fut faite avant mil six cent cinquante-deux, à un Mr. *Chavigny de la Chevrotière*, qui, ou ses ayant-causes, la céda au propriétaire de *Deschambault*, à laquelle elle est restée réunie sous le nom de cette dernière. Suivant les arpentages que nous avons de cette partie, ces deux concessions réunies occupent deux lieues de front sur trois lieues de profondeur.

LAC MATAPEDIACH.

Concession du 26^{me} Mai, 1694, faite par *Jean Bochart*, Intendant, au Sieur *Nicholas Joseph Damour*, du lac appelé *Matapediach*, avec une lieue de terre tout autour d'icelui.

Régistre d'Intendance, N^o. 4, folio 17.

LAC MITIS.

Concession du 10^{me} Février, 1693, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *Louis Rouer*, du lac appelé *Mitis*, avec une lieue de profondeur tout autour d'icelui, qui est éloigné environ douze ou quinze lieues du fleuve *St. Laurent*.

Régistre d'Intendance, N^o. 4, folio 9.

LA DURANTAIE.

Concession du 29^{me} Octobre, 1672, faite par *Jean Talon*, Intendant, au Sieur de la *Durantaie* de deux lieues de terre de front sur autant de profondeur, à prendre sur le fleuve *St. Laurent*, tenant d'un côté à demi arpent au delà du Sault qui est sur la terre du Sieur *Desislets*, et de l'autre le canal *Bellechasse*, icelui non compris, par-devant le fleuve *St. Laurent*, et par derrière les terres non-concédées.

Le canal de *Bellechasse* étoit si peu connu au tems de cette concession, que les parties y intéressées ne pouvant convenir de leurs bornes, des experts nommés par la Cour déterminèrent que la pointe de *Bellechasse* séparerait les deux Seigneuries de la *Durantaie* et de *Berthier*.

Régistre d'Intendance, N^o. 1, folio 7.

AUGMENTATION DE LA DURANTAIE.

Concession du 1^{er} Mai, 1693, faite au Sieur de la *Durantaie*, par *Louis de Buade* et *Jean Bochart*, Intendant, de deux lieues de terre de profondeur à prendre au bout et où se termine la profondeur de son fief de la *Durantaie*, sur pareille largeur du dit fief, qui a environ trois lieues de front, borné d'un côté au Sud-ouest aux terres de *Beaumont* et au Nord-est aux celles de *Berthier*.

La *Durantaie* diffère, quant au front de celui de l'augmentation; ce front, est sur le terrain de deux lieues cinquante arpens. Par ordre de la Cour cette Seigneurie avec son augmentation a été divisée en deux parties égales connues aujourd'hui, savoir, celle du Sud-ouest sous le nom de *St. Michel*, et celle du Nord-est sous celui de *St. Valier*.

Régistre d'Intendance, Let. D. folio 13.

LA FRESNAY.

Concession du 3me Novembre, 1672, faite par *Jean Talon*, Intendant, aux Sieurs *Gamache* et *Belleavance*, d'une demi lieue de terre sur une lieue de profondeur, à prendre sur le fleuve *St. Laurent*, depuis la concession de la *Demoiselle Amiot*, tirant vers celle du Sieur *Fournier*.

Régistre d'Intendance, N° 1, folio 26.

LA MARTINIÈRE.

Concession du 5me Aout, 1692, faite par *Louis de Bunde*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *de la Martinière*, de l'espace de terre qui se pourra trouver, si aucun il y a non concédé, entre la Seigneurie de *Lauzon* et celle de *Mont-a-peine*, ou le fief du Sieur *Vitré*, sur la profondeur semblable à la Seigneurie de *Lauzon*, si personne n'e est propriétaire.

N. B. Ce fief sur les lieux a trente-deux arpens de front.

Régistre d'Intendance, N° 4, folio 7.

LANAUDIÈRE.

Concession du premier Mars, 1750, faite par le *Marquis de la Jonquière*, Gouverneur, et *François Bigot*, Intendant, au Sieur *Charles François Tardieu de Lanaudière* de deux lieues ou environ de front, à prendre au bout du fief *Carufel*, sur la profondeur qui se trouve jusqu'au lac *Masquinongé*, le dit lac compris dans toute son étendue, avec les isles, islets et batures qui se trouveront en icelui.

Régistre d'Intendance, N° 9, folio 48.

LA NORAYE.

Concession du 7me Avril, 1688, faite par *Jacques de Brisay*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *de La Noraye*, de l'étendue de terre de deux lieues de front, sur le fleuve *St. Laurent*, et deux lieues de profondeur; à prendre entre les terres du Sieur *Dautré* et celles du Sieur *de Lavaltrie*, tirant vers *Montréal*.

Régistre d'Intendance, N° 3, folio 16.

LA PRAIRIE DE LA MAGDELAINE.

Concession du 1er Avril, 1647, faite par le Sieur *de Lauzon* aux révérends pères Jésuites, de deux lieues de terre le long du fleuve *St. Laurent*, du côté du Sud, à commencer depuis l'isle *Ste. Hélène* jusqu'à un quart de lieue au delà d'une prairie dite *de la Magdelaine*, vis-à-vis des isles qui sont proches du Sault de l'isle de *Montréal*, espace qui contient environ deux lieues le long de la dite rivière *St. Laurent*, sur quatre lieues de profondeur dans les terres, tirant vers le Sud.

Régistre d'Intendance, N° 2, à 9, folio 125.

LA SALLE.

Concession du 20me Avril, 1750, faite par le *Marquis de la Jonquière*, Gouverneur, et *François Bigot* Intendant, au Sieur *Jean Baptiste Le Ber de Senneville*, d'un terrain non concédé, situé au bout des profondeurs des Seigneuries du Sault *St. Louis* et *Chateauguay*, et qui se trouve enclavé entre la Seigneurie de *Villechauve* et celle de la *Prairie de la Magdelaine*, sur une lieue et demie de profondeur.

Régistre d'Intendance, N° 9, folio 58.

LA TESSERIE.

Concession du 3me Novembre, 1672, faite par *Jean Talon*, Intendant, à Demoiselle de la *Tesserie*, de la quantité de terre qui se trouvera entre la concession faite aux pauvres de l'Hôpital de *Québec*, jusqu'à celle de *Chavigny*, sur pareille profondeur que celle du dit *Chavigny*.

Régistre d'Intendance, N° 1, folio 35.

Régistre Foi et Hommage.

LA VALTRIE.

Concession du 29me Octobre, 1672; faite par *Jean Talon*, Intendant, au *Sieur de Lavaltrie*, d'une lieue et demie de terre de front sur pareille profondeur; à prendre sur le fleuve *St. Laurent*, bornée d'un côté par les terres appartenantes au Séminaire de *Montréal*, et de l'autre par celles non concédées; par devant par le dit fleuve et par derrière par les terres non concédées, avec les deux islets qui sont devant la dite quantité de terre, et la rivière *St. Jean* comprise.

Régistre d'Intendance, N° 1, folio 6.

AUGMENTATION A LAVALTRIE.

Concession du 21me Avril, 1734, faite par *Charles, Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au *Sieur Marganne de Lavaltrie*, d'une lieue et demie de terre de front sur deux lieues et demie de profondeur, à prendre le dit front au bout de la profondeur et limite de la lieue et demie de profondeur du Fief de *Lavaltrie*; pour être la dite prolongation en profondeur unie et jointe au fief de *Lavaltrie*, et ne faire qu'une même Seigneurie, laquelle, par ce moyen, se trouvera être d'une lieue et demie de front sur quatre lieues de profondeur.

Régistre d'Intendance, N° 7, folio 24.

LAUZON.

Concession du 15me Janvier, 1636, faite par la Compagnie, à *Mr. Simon Lemaitre*, de la côte de *Lauzon*, contenant l'étendue de terre ainsi qu'il suit savoir; la rivière *Bruyante*, (*Chaudière*) située au pays de la *Nouvelle France*, avec six lieues de profondeur dans les terres et trois lieues à chaque côté de la dite rivière.

Régistre d'Intendance, N° 2, folio 37.

LESSARD.

Concession du 30me Juin, 1698, faite par *Louis de Buade*, Comte de *Frontenac*, Gouverneur, et *Jean Bochart*, Intendant, à *Pierre Lessard*, d'une lieue de terre de front, sur pareille profondeur, située sur le fleuve *St. Laurent*, proche l'Islet *St. Jean*, au derrière de la Seigneurie de *Mademoiselle Dutartre*; tenant d'un côté à la terre du *Sieur de la Chenaille*, et de l'autre à celle de *François Bellanger*; d'un bout à la Seigneurie de dite *Mademoiselle Dutartre*, et de l'autre aux terres non concédées.

Régistre d'Intendance, N° 5, folio 23.

LESSARD.

Concession du 8me Mars, 1696, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, à *Pierre Lessard*, d'une lieue et demie de terre de front sur deux lieues de profondeur, située au lieu dit le *Bic*, le

dit front à prendre depuis la pointe aux *Peres*, appartenant au Sieur *René Lepage*, à cause d'un échange fait avec le Sieur de la *Cardonière*, et continué le dit front au Nord-est en allant le long du fleuve *St. Laurent*, tant que la dite lieue et demie pourra s'étendre.

Régistre d'Intendance, N° 4, folio 28.

LEVRARD OU ST. PIERRE LES BECQUETS.

Concession du 27me Avril, 1683, faite par les Sieurs *Lefebvre de la Barre*, Gouverneur, et de *Meulles*, Intendant, au Sieur *Levrard*, d'une étendue de terre de deux lieues ou environ de front sur le fleuve *St. Laurent*, du côté du Sud, et généralement tout ce qui se rencontre entre la Seigneurie de *Gentilly* et celle de *Deschaillons*, avec les isles et batures qui sont dans le dit fleuve, au-devant du dit espace; aussi l'isle appelée *Madame* située au Sud de l'isle et comté de *St. Laurent*, d'une lieue de tour ou environ.

Régistre d'Intendance, Let. B. folio 38.

Acte du premier Avril, 1751, fixe la profondeur de la Seigneurie qui se trouve entre *Gentilly* et *Deschaillons* (*Levrard*) à quatre lieues.

Régistre d'Intendance, No. 9, folio 78.

LIVAUDIERE.

Concession du 20me Septembre, 1734, faite par le Marquis de *Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au Sieur *Pean de Livaudiere*, de trois quarts de lieue de front ou environ, sur trois lieues de profondeur; bornée par devant au bout de la profondeur de la Seigneurie de *Vincennes*, d'un côté au Nord-est à la ligne de la Seigneurie de *Beaumont*, d'autre côté au Sud-ouest à la Seigneurie de *Mont-à-peine*, et par derrière aux terres non concédées, pour la présente concession ne faire néanmoins qu'une seule et même seigneurie avec la moitié de celle de la *Durantaie* dont le dit Sieur *Pean* est propriétaire.

Régistre d'Intendance, N° 9, folio 25.

BARONIE DE LONGUEIL.

Lettres du 26me Janvier, 1700, faite par sa Majesté à Mr. *Lemoine de Longueil*, érigeant en Baronie la Seigneurie de *Longueil*, située dans le district de *Montréal*, contenant deux lieues ou environ de front sur le fleuve *St. Laurent*, sur trois lieues et demie de profondeur. Autre concession du 5me Juillet, 1710, faite par Mr. de *Vaudreuil*, Gouverneur, et *Raudot*, Intendant, au Baron de *Longueil*, de trois lieues de front, ayant profondeur jusqu'à la rivière *Chambly*, savoir, la continuation d'une lieue et demie de front au bout de la profondeur de la Baronie de *Longueil*, devant s'étendre jusqu'à la dite rivière *Chambly* avec une autre lieue et demie de même front au Sud-ouest de la première, s'étendant pareillement jusqu'à la rivière *Chambly*, sur le rumb de vent des autres Seigneuries du pays; étant les dites concessions en augmentation de la *Baronie de Longueil*.

Régistre des Foi et Hommage, N° 20, folio 99, 6me Février, 1781.

Régistre d'Intendance, N° 5, folio 25.

Insinuations du Conseil Supérieur, lettre B. folio 131.

Cahiers d'Intend. N° 2 à 9, folio 210.

LOTBINIERE, PREMIERE PARTIE.

Concession du 3me Novembre, 1672, faite par *Jean Talon*, Intendant, au *Sieur Marsolet* d'une demi lieue de front sur une lieue et demi de profondeur, à prendre sur le fleuve *St. Laurent*, depuis la grande rivière du *Chêne*, jusqu'aux terres non concédées, tirant vers les terres de *St. Croix*.

Cahiers d'Intend. N° 10 à 17, folio 492.

LOTBINIERE, SECONDE PARTIE.

Concession du 3me Novembre, 1672, faite par *Jean Talon*, Intendant, au *Sieur de Lotbinière*, de l'étendue de terre qui se trouve sur le fleuve *St. Laurent*, depuis la concession du *Sieur Marsolet* jusqu'à celle des Religieuses Ursulines, (*Ste. Croix*) sur deux lieues de profondeur.

Cahiers d'Intend. N° 10 à 17, folio 494.

LOTBINIERE, TROISIEME PARTIE.

Concession du premier Avril, 1685, faite à *Mr. de Lotbinière* de trois quarts de lieue ou environ de terre non concédée, à prendre d'un bout le long du fleuve *St. Laurent*, à la grande rivière du *Chêne*, joignant le commencement de la demi lieue de concession, faite au *Sieur Marsolet*, et de l'autre en remontant vers la petite rivière du *Chêne*, aux terres du *Sieur St. Ours*, avec deux lieues de profondeur.

Régistre des Foi et Hommage, N° 42, Page 183, le 23me Février, 1781.

Cahiers d'Intendance, N° 10 à 17, folio 502.

LOTBINIERE, QUATRIEME PARTIE, OU AUGMENTATION.

Concession du 25me Mars, 1693, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au *Sieur de Lotbinière*, de trois lieues et demie de front avec quatre lieues et demie de profondeur, à prendre au bout et où se termine la profondeur du fief de *Lotbinière* et celui appelé la petite rivière du *Chêne* (les trois concessions précédentes à lui appartenante) ensemble tous les bois, prés, isles, rivières et lacs qui s'y trouvent.

Cahiers d'Intendance, N° 9, 10, à 17, folio 510.

LOUIS GAGNIER, DIT BELLEAVANCE.

Concession du 3me Septembre, 1675, faite par le *Comte de Frontenac*, Gouverneur, à *Louis Gagnier, dit Belleavance*, de dix arpens de terre de front, à commencer depuis sa concession, en montant le fleuve *St. Laurent*, dans les terres non-concédées, séparant icelle et ce qui appartient au *Sieur Fournier*, avec une lieue de profondeur, pour être unie à sa part du fief *Lafrenay*, qui lui a été concédé conjointement avec le *Sieur Gamache*, part qui lui appartiendra.

Régistre d'Intendance, N° 2, folio 15.

LOUIS LEPAGE ET GABRIEL TIBIERGE.

Concession du 14me Novembre, 1696, faite aux *Sieurs Louis Lepage* et *Gabriel Tibierge*, d'un terrain qui se trouve entre la concession du *Sieur Pachot*, et celle du *Sieur Lessard*, située au lieu dit *Rimousky*, sur le fleuve *St. Laurent*, du côté du Sud, sur une lieue de profondeur.

Régistre d'Intendance, N° 5, folio 3.

AUGMENTATION A LA CONCESSION PRECEDENTE.

Concession du 7^{me} Mai, 1697, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au *Sieur Louis Lepage* et *Gabriel Tibierge*, de deux lieues en profondeur, joignant le derrière de la concession à eux déjà accordée, située au lieu dit *Rimousky*, sur le fleuve *St. Laurent*, du côté du Sud, tenant d'un côté à la terre du *Sieur Pachot*, et de l'autre à celle du *Sieur Lessard*, sur toute la largeur d'icelle, avec les isles et islets qui se trouveront dans la dite étendue.

Régistre d'Intendance, N^o 5, folio 16.

LUSSAUDIERE.

Concession du 26^{me} Juillet 1683, faite par Messrs. *Lefebvre de la Barre*, Gouverneur, et *de Meulles*, Intendant, au *Sieur de Lamotte de Lucière*, de la terre et seigneurie de la *Lussaudiere*, concédée par Mr. *Talon*, Intendant, le 22^{me} Octobre, 1672, au *Sieur de la Lussaudiere*, et réunie au domaine de sa Majesté par l'Ordonnance du 26^{me} Mai, 1683, consistant en une lieue de front sur une de profondeur, à prendre depuis les terres du *Sieur Crevier*, en descendant vers la rivière *Nicolet*, le chenail tardif y compris.

Cahiers d'Intendance, N^o 2 à 9, folio 305.

Insinuations du Conseil Supérieur, lettre B. folio 125.

Régistre d'Intendance, N^o 4, folio 22.

LUSSON.

Concession du 7^{me} Novembre, 1672, faite par *Jean Talon*, Intendant, au *Sieur de St. Lussion*, d'une lieue de terre de front sur (*en blanc*) de profondeur, à prendre sur le fleuve *St. Laurent*, savoir, une demie lieue en deça de la petite rivière qui est entre l'*Echaffaud au Basque*, et le *Saguenay*, et une demie lieue au delà ; ensemble l'isle nommée l'isle au *Sieur*.

Registre d'Intendance, N^o 1, folio 45.

GROSBOIS OU MACHICHE.

Concession du 3^{me} Novembre, 1672, faite par *Jean Talon*, Intendant, au *Sieur Pierre Boucher*, de *Grandpré*, d'une lieue et demie de terre de front, sur deux de profondeur, à prendre, savoir, trois quarts de lieue au dessus de la rivière à *Marcin*, (*Machiche*) et autant audessous de la dite rivière.

Régistre d'Intendance, N^o 1, folio 39.

MAGDELAINE.

Concession du 28^{me} Mars, 1689, faite par *Jacques de Brisay*, Gouverneur, et *Jean Bochart*, Intendant, au *Sieur Riverin*, de la rivière de la *Magdelaine*, étant au dessus des monts *Notre Dame*, du côté du Sud, ensemble demi lieue au dessus et demi lieue au dessous de la dite rivière, le long du fleuve *St. Laurent*, avec deux lieues de profondeur.

Régistre d'Intendance, N^o 3, folio 26.

FIEF MARANDA PARTIE NORD-EST.

Concession faite au Sieur *Duquet*, Pere, le 3me Novembre, 1672, par *Jean Talon*, Intendant, de trente arpens de terre de front sur cinquante de profondeur, à prendre sur le fleuve *St. Laurent*, depuis la concession du Sieur *Duquet* son fils, jusqu'aux terres non-concédées.

Régistre d'Intendance, N° 1, folio 25.

FIEF MARANDA PARTIE SUD-OUEST.

Concession faite au Sieur *Duquet*, fils, le 3me Novembre, 1672, par *Jean Talon*, Intendant, de trente arpens de terre de front sur cinquante de profondeur, sur le fleuve *St. Laurent*, depuis la rivière *Vilieu* jusqu'aux terres non-concédées.

Régistre d'Intendance, N° 1, folio 25.

PARTIE NORD-EST DE MASQUINONGE.

Concession du 3me Novembre, 1672, faite par *Jean Talon*, Intendant, à *Pierre*, et *Jean Baptiste Legardeur*, Sieurs de *St. Michel*, d'une lieue et demi de terre de front sur pareille profondeur; à prendre sur le Chenail du Nord du fleuve *St. Laurent*, savoir: trois quarts de lieue au dessous de la rivière *Masquinongé*, et autant au dessus; la dite rivière comprise.

Régistre d'Intendance, N° 1, folio 24.

PARTIE SUD-OUEST DE MASQUINONGE.

Concession du 3me Novembre, 1672, faite par *Jean Talon*, Intendant, au Sieur *Jean Baptiste Legardeur*, d'une lieue de terre de front sur une lieue de profondeur, à prendre sur le fleuve *St. Laurent*, depuis les trois quarts de lieues accordés au Sieur *Legardeur* de *St. Michel*, sur trois audehors de la rivière de *Masquinongé*.

Régistre d'Intendance, N° 1, folio 34.

MATANE.

Concession du 26me Juin, 1677, faite par *Jacques Duchesneau*, Intendant au Sieur *Damour*, d'une lieue et demie de terre de front, sur une lieue de profondeur, savoir, une demi lieue au deça et une demi lieue au delà de la rivière *Matane*, et par augmentation une autre lieue de terre de front, aussi sur une lieue et demie de profondeur, y joignant, à prendre du côté de la rivière *Mitis*.

Insinuations du Conseil Superieur, Let. B. folio 9.

MILLE-ISLES.

Concession du 5me Mai, 1714, faite par *Philippe de Rigaud*, Gouverneur, et *Michel Bégon*, Intendant, aux Sieurs de *Langloiserie* et *Petit*, des terres qui sont à commencer où finit la Concession du Sieur *Dautier Deslandes*, dans la rivière *Jesus*, jusqu'à trois lieues au dessus, en montant la dite rivière, et trois lieues de profondeur, avec les isles, islets et batures qui se trouveront au devant des dites trois lieues de front; en outre d'une augmentation des terres qui sont depuis la dite concession jusqu'à la rivière du *Chêne*, icelle comprise, qui est environ une lieue et demie de terre de front, sur pareille profondeur de trois lieues, pour être

la dite lieue et demie jointe à la dite concession, et les deux n'en faire qu'une ; la première partie de cette concession faite au feu Sieur *Dugay*, le 24^{me} Septembre, 1683, mais réunie au Domaine du Roi, suivant l'Ordonnance du 1^{er} Mars, 1714.

Régistre d'Intendance, N^o 6, folio 4.

AUGMENTATION DES MILLE-ISLES.

Concession du 20^{me} Janvier, 1752, faite par le *Marquis de la Jonquière*, Gouverneur, et *François Bigot*, Intendant, au Sieur *Dumont*, de quatre lieues et demie de front sur la profondeur de trois lieues, à prendre au bout de la profondeur, et sur le même front de la concession accordée aux Sieurs *de Langloiserie* et *Petit*, située et bornée à commencer où finit la concession du Sieur *Dautier Deslandes*, dans la rivière *Jésus*, jusqu'à la rivière *Duchêne*, icelle comprise.

Régistre d'Intendance, N^o 10, folio 1.

MILLE VACHES.

Concession du 15^{me} Novembre, 1653, faite par *Jean de Lauzon*, Gouverneur pour la Compagnie, à *Robert Giffard*, Ecuyer, Seigneur de *Beauport*, de trois lieues de front sur le fleuve *St. Laurent*, du côté du Nord, audessous de *Tadoussac*, et de grandes et petites *Bergeronnes*, au lieu dit *Mille Vaches*, avec quatre lieues de profondeur, tenant par devant au dit fleuve et des trois autres côtés aux terres non-concédées.

Régistre des Foi et Hommage, N^o 86, folio 31.

Cahiers d'Intendance, N^o 10 à 17, folio 771.

TERRA FIRMA DE MINGAN.

Concession du 25^{me} Février, 1661, faite par la Compagnie au Sieur *François Bissot* de la Rivière de la terre ferme de *Mingan* ; à prendre depuis le Cap des *Cormurans* à la côté du Nord, jusqu'à la grande ancre vers les *Esquimaux*, où les *Espagnols* font ordinairement la pêche, sur deux lieues de profondeur.

Régistre des Foi et Hommage, N^o 78, folio 355.

MONNOIR.

Concession du 25^{me} Mars, 1708, faite par Messieurs *de Rigaud*, Gouverneur, et *Raudot*, Intendant, au Sieur *de Ramzay*, de deux lieues de front sur trois lieues de profondeur de terres non-concédées, le long de la rivière des *Hurons*, joignant d'un côté la Seigneurie de *Chambly*, et de l'autre côté aux terres non-concédées, courant du Nord-est au Sud-ouest, avec les isles et islets qui pourroient se trouver dans la dite rivière, vis-à-vis la dite concession, la dite concession portant le nom de *Monnoir*.

Régistre d'Intendance, N^o 2 à 9, folio 355.

AUGMENTATION A MONNOIR.

Concession du 12^{me} Juin, 1739, faite par le *Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au Sieur *Jean Baptiste Nicolas Roc de Ramzay*, de deux lieues de front sur trois lieues de profondeur, au bout de la Seigneurie de *Monnoir*, concédée le 25^{me} Mars, 1708, située près *Chambly* le long de la rivière des *Hurons*, en courant Nord-est et Sud-ouest le long de la continuation de la Seigneurie de *Rouville*,

joignant la dite Seigneurie au Nord-est et celle de *Sabrevois* au Sud-ouest.

Régistre d'Intendance, N° 8, folio 26.

MONT-A-PEINE.

Concession du 24^{me} Septembre, 1683, faite à Mr. *Charles Denis*, Sieur de *Vitré*, de dix arpens de terre de front, sur quarante de profondeur, pour en jouir, lui ses hoirs et ayans-cause à titre de fief et Seigneurie à toujours.

N. B. Cet extrait ne mentionne nullement la situation de ce fief qui n'est connu que par son augmentation et la concession précédente.

Régistre des Foi et Hommage, N° 46, folio 207, 27^{me} Février, 1781.

AUGMENTATION DE MONT-A-PEINE.

Concession du 18^{me} Juin, 1749, faite par *Roland Michel Barrin*, Gouverneur, et *François Bigot*, Intendant, à *Claude Antoine de Berment*, Seigneur de la *Martinière*, d'un restant de terre qui se trouve au bout de la profondeur du fief de *Vitré*, et qui est enclavé entre les fiefs de *Vincennes* et de *Livaudière* au Nord-est, et celui du dit *Berment de la Martinière* au Sud-ouest, jusqu'à l'égale profondeur de six lieues que contient le fief du dit Sieur *Berment de la Martinière*.

Régistre d'Intendance, N° 9, folio 41.

MONTARVILLE.

Concession du 17^{me} Octobre, 1710, faite par Messrs. de *Vaadrevil*, Gouverneur, et *Raudot*, Intendant, au Sieur *Boucher*, d'une lieue et trente arpens de terre de front sur une lieue et demie de profondeur, à prendre dans les profondeurs entre les Seigneuries de *Boucherville* et de *Chambly*; joignant au Nord-est la Seigneurie de *Varennues*, et au Sud-ouest la Seigneurie de *Tremblay*.

Régistre d'Intendance, N° 2 d 9, folio 169.

MOUNT MURRAY.

Grant of the 27th day of April, 1762, by the Honorable *James Murray*, Esq. Governor of *Quebec*, to Lieutenant *Malcolm Fraser*, of His Majesty's 78th Regiment of Foot, of all that extent of land lying on the North shore of the river *St. Lawrence*, from the North-side of the River of *Malbay* to the River *Noire*, and for three leagues back, to be known hereafter, at the special request of the said Lieutenant *Malcolm Fraser*, by the name of *Mount Murray*, together with the woods and rivers or other appurtenances within the said extent, right of fishing or fowling, within the same, included. All kind of traffick with the Indians of the back country hereby specially excepted.

English Register, Letter E. folio 709.

MURRAY-BAY OR MALBAY.

Grant of the 27th day of April, 1762, by the Honorable *James Murray*, Esq. Governor of *Quebec*, to *John Nairn*, Captain of His Majesty's 78th Regiment of Foot, of all that extent of land lying on the North shore of the River *St. Lawrence*, from *Goose-Cape*, boundary of the Seigneurie of *Eboulemens*, to the River *Malbay*, and for three leagues back, to be known hereafter, at the special request of the said Captain *John Nairn*, by the name of *Murray Bay*, together with the woods and

rivers or other appurtenances within the said extent, right of fishing and fowling on the same therein included. All kind of traffick with the Indians of the back country are hereby specially excepted.

English Register, Letter E, page 709.

NEUVILLE OU LA POINTE AUX TREMBLES.

Concession du 16me Décembre, 1653, faite par la Compagnie, à *Jean Bourdon*, contenant deux lieues trois quarts ou environ de front, sur quatre lieues de profondeur, tenant du côté du Nord-est au fief de *Desmure* et du côté du Sud-Ouest au fief de *Bélaire*; par devant le fleuve *St. Laurent*, et par derrière les terres non-concédées.

Régistre d'Intendance, N° 10 à 17, folio 660.

DERRIERE DAUTRE' ET LA NORAYE.

Concession du 4me Juillet, 1739, faite par *Charles, Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au Sieur *Jean Baptiste Neveu*, d'un terrain non-concédé, à prendre depuis la ligne qui borne la profondeur des fiefs de *La Noraye* et *Dautré*, jusqu'à la rivière de *l'Assomption*, et dans la même étendue en largeur que celle des dits fiefs; c'est-à-dire, bornée du côté du Sud-Ouest par la ligne qui sépare la Seigneurie de *Lavaltrie*, et du côté du Nord-Est par une ligne parallèle, tenant aux prolongations de la Seigneurie d'*Antaya*; lequel terrain ne fera avec chacun des dits fiefs de *La Noraye* et *Dautré* qu'une seule et même Seigneurie.

Régistre d'Intendance, N° 8, folio 29.

NICOLET.

Concession du 29me Octobre 1672, faite par *Jean Talon*, Intendant, au Sieur de *Laubia*, de deux lieues de front sur autant de profondeur, à prendre sur le lac *St. Pierre*, savoir; une lieue au dessus et une lieue au dessous de la rivière *Nicolet*, icelle comprise.

Régistre d'Intendance, N° 1, folio 15.

L'ISLE DE LA FOURCHE, ET AUGMENTATION A NICOLET.

Concession du 4me Novembre, 1680, par le Comte de *Frontenac*, Gouverneur, et *Duchesneau*, Intendant, au Sieur *Cressé*, de l'isle de la *Fourche*, étant dans la rivière *Cressé*, ensemble les isles et islets qui sont dans la dite rivière, jusqu'au bout de la dite isle; avec trois lieues d'augmentation dans la profondeur des terres qui sont au bout de toute la largeur de sa Seigneurie.

Régistre d'Intendance, N° 2, folio 21.

NOTRE DAME DES ANGES.

Concession du 10me Mars, 1626, faite par la Compagnie aux révérends peres Jésuites; de la Seigneurie de *Notre Dame des Anges*, contenant une lieue de front sur quatre lieues de profondeur, joignant du côté du Nord-Est la Seigneurie de *Beauport*, et au Sud-Ouest le Comté d'*Orsainville*; par devant le fleuve *St. Laurent* et la petite rivière *St. Charles*; et par derrière au bout de la dite concession les terres non-concédées.

Cahiers d'Intendance, N° 2 à 9, folio 85.

NOUVELLE LONGUEIL.

Concession du 21me Avril, 1734, faite par *Charles Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, à *Joseph Lemoine*, Chevalier de *Longueil*, de l'étendue de terre qui se trouve sur le bord du fleuve *St. Laurent*, au lieu appelé *les Cascades*, depuis la borne de la Seigneurie de *Soulange* jusqu'à la *Pointe du Baudet* inclusivement ; faisant environ deux lieues de front sur trois lieues de profondeur ; avec les isles, islets et batures y adjacentes.

Régistre d'Intendance, N° 7, folio 24.

NOYAN.

Concession du 8me Juillet, 1743, faite par *Charles Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au *Sieur Chavois de Noyan*, de deux lieues de front le long de la rivière *Chambly*, sur trois lieues de profondeur, laquelle sera bornée du côté du Nord à un quart de lieue au Nord de la petite rivière du Sud, par une ligne courant Est et Ouest, du côté du Sud en remontant le lac *ChAMPLAIN*, à une lieue trois quarts de la dite rivière, joignant par une ligne parallèle à celle ci-dessus au terrain concédé au *Sieur Foucault*, le premier Mai dernier, avec l'Isle aux *Têtes*, étant dans la dite rivière *Chambly*, avec les isles et islets qui se trouveront vis-à-vis le front de la dite concession.

Régistre d'Intendance, N° 9, folio 19.

D'ORSAINVILLE.

Concession du mois de May, 1675, faite par Lettres Patentes de sa Majesté, aux Dames religieuses de l'Hôpital Général, du Comté d'*Orsainville*, contenant en superficie trois mille cinq cens soixant et quinze arpens, et de la profondeur de quatre lieues ; à prendre du bord de la rivière *St. Charles*, sur différentes largeurs, tenant par devant à la dite rivière et par derrière aux terres non-concédées, d'un côté, au Sud-Ouest à un fief appartenant au *Sieur de l'Épinay* par une ligne qui va au Nord-Ouest quart de Nord de la profondeur des dites quatre lieues, et du côté du Nord-Est au fief de *Notre Dame des Anges* ; le comté d'*Orsainville*, et la Seigneurie de *Notre Dame des Anges* étant séparés, à commencer par le front du dit Comté, par le ruisseau de *St. Michel*, suivant ses contours et serpentemens jusqu'à environ quinze arpens de profondeur, où le dit Comté d'*Orsainville* commence à être de onze arpens de front, jusqu'à la hauteur de trente cinq arpens du bord de la dite rivière *St. Charles* par une ligne qui court Nord-Ouest quart de Nord, au bout desquels trente-cinq arpens commence une autre ligne qui court au Nord-Ouest la longueur de quarante arpens, au bout desquels la dite ligne fait un tour d'équerre de trois arpens, au bout desquels reprend une nouvelle ligne laquelle forme la largeur des dits onze arpens, laquelle ligne va au Nord-Ouest quart de Nord, jusqu'au surplus de la profondeur des dites quatre lieues.

Papier Terrier, N° 71, folio 324, le 24me Avril, 1781.

Cahiers d'Intendance, 10 à 17, folio 730.

PACHOT.

Concession du 7me Janvier, 1689, faite par *Jacques de Brisay*, Gouverneur, et *Jean Bochart*, Intendant, au *Sieur Pachot*, de la rivière de *Mitis*,

dans sa devanture, sur le fleuve *St. Laurent*, jusqu'à une lieue de profondeur et une lieue de terre sur le fleuve *St. Laurent*, moitié audessus et moitié audessous de la dite rivière sur semblable profondeur d'une lieue.

Régistre d'Intendance, N° 3, folio 21.

PASPEBIAC.

Concession du 10me Novembre, 1707, faite par *Rigaud*, Gouverneur, et *Raudot*, Intendant, au Sieur *Pierre Leymar*, de la pointe de *Paspébiac*, dans la *Baie des Chaleurs*, avec une lieue de front du côté de l'Est de la dite pointe et une lieue du côté de l'Ouest, avec les isles et islets qui se trouveront au devant de l'étendue de la dite concession, sur trois lieues de profondeur.

Insinuations du Conseil Supérieur, lettre C. folio 33.

PERTHUIS.

Concession du 11me Octobre, 1753, faite par le *Marquis Duquesne*, Gouverneur, et *François Bigot*, Intendant, au Sieur *Perthuis*, d'une lieue et demie de front, sur neuf lieues de profondeur, à prendre au bout des trois lieues de profondeur de *Portneuf*.

Régistre d'Intendance, N° 10, folio 17.

PETITE NATION.

Concession par la Compagnie des Indes du 16me Mai, 1674, à Messire *François de Laval*, Evêque de *Pétrée*, et premier Evêque de *Québec*, de cinq lieues de terre de front sur cinq lieues de profondeur, sur le fleuve *St. Laurent* dans la *Nouvelle France*, environ quarante deux lieues au dessus de *Montreal*; à prendre depuis le Sault de la Chaudière, vulgairement appelé la *Petite Nation* en descendant le fleuve sur le chemin des *Outawas*.

Cahiers d'Intendance, 10 à 17, folio 682.

Registre des Foi et Hommage, N° 142, page 238.

PIERREVILLE.

Concession du 3me Août, 1683, faite par *Lefebvre*, Gouverneur, et de *Meulles*, Intendant, au Sieur *Laurent Philippe*, d'une lieue et demie de terre de front sur une lieue de profondeur, joignant du côté du Sud-ouest les terres non-concédées, d'autre côté au Nord-ouest, d'un bout sur la Seigneurie du Sieur *Creviere*, d'autre aux terres non-concédées, avec les isles et islets qui se rencontreront dans la dite profondeur, la rivière *St. François* comprise dans icelle profondeur, ensorte qu'elle fut au milieu de la dite profondeur.

Cahiers d'Intendance, N° 2 à 9, folio 281.

Ins. Con. Sup. lettre B. folio 129.

TONNANCOUR OU POINTE DU LAC.

Concession du 3me Novembre, 1734, faite par *Charles Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au Sieur *René Godefroi de Tonnancour*, d'une demi lieue de terre de front sur une lieue de profondeur, à prendre le dit front au bout de la profondeur et

limite du fief ci-devant de *Normanville*, pour être la dite prolongation en profondeur unie et jointe au dite fief de *Normanville* pour ne faire ensemble avec le fief et Seigneurie de *Sauvaget* qu'une seule et même Seigneurie, sous le nom de *Tonnancour*, laquelle se trouvera être d'une lieue et quart de front sur deux lieues de profondeur : le rumb de vent courant pour le front Nord-Est et Sud-Ouest, et pour la profondeur Nord-Ouest et Sud-Est.

Régistre d'Intendance, N° 7, folio 29.

PORT DANIEL.

Concession du 12me Decembre, 1696, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *Réne d'Eneau*, de trois lieues et demie de terre de front, au lieu dit le *Port Daniel*, dans la *Baie des Chaleurs*, le dit front à commencer demi lieue à l'Est du cap qui fait un des côtés de l'ance du dit *Port Daniel*, à continuer les dites trois lieues et demie à l'Ouest, sur une lieue de profondeur ; avec les ruisseaux, rivières et étangs, si aucuns se trouvent dans la dite étendue.

Régistre d'Intendance, N° 5, folio 4.

BARONIE DE PORTNEUF.

Concession du 16me Avril, 1647, faite par la Compagnie au Sieur de *Croisille*, située au bord du fleuve *St. Laurent*, du côté du Nord, contenant une lieue et demie de front sur trois lieues de profondeur ; le front joignant au Nord-Est au fief de *Monceau*, et du côté du Sud-Ouest au fief *Deschambault*, dans laquelle se trouvent comprises les rivières de *Jacques Cartier* et de *Portneuf*.

Régistre d'Intendance, N° 2 à 9, folio 215.

DERRIERE LA CONCESSION DU SIEUR NEVEU, AU NORD-EST.

Concession du 7me Octobre, 1736, faite par *Charles Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, à Dame *Geneviève de Ramzay*, vèuve du feu Sieur de *Boishèbert*, d'une lieue et demie de terre de front sur quatre lieues de profondeur, bornée sur la devanture par la rive du Nord de la rivière de l'*Assomption*, du côté du Sud-Ouest par la ligne de la concession nouvellement accordée au Sieur d'*Argenteuil* ; d'autre, au Nord-Est par une ligne parallèle, tenant aux prolongation de la Seigneurie d'*Antaya* ; et dans la profondeur par une ligne parallèle à la devanture, joignant aussi aux terres non-concédées.

Régistre d'Intendance, N° 8, folio 15.

RANDIN.

Concession faite au Sieur *Randin*, le 3me Novembre, 1672, par *Jean Talon*, Intendant, d'une lieue de front sur le fleuve *St. Laurent*, sur une demi lieue de profondeur, à prendre depuis le Sieur de *Comporté*, jusqu'aux terres non-concédées ; avec l'isle nommée de son nom de *Randin*.

N. B. Dans le *Régistre du Secrétariat* le mot *une* a été sùstitué à la place du mot *demi* qui a été rayé.

Régistre d'Intendance, N° 1, folio 21.

AUGMENTATION DE RANDIN.

Concession faite au Sieur *Berthier*, le 27^{me} Avril 1674, d'une demi lieue de terre de front sur une lieue de profondeur, à prendre derrière et joignant la concession du Sieur *Randin*, du 3^{me} Novembre, 1672.

Régistre des Foi et Hommage, folio 38, le 26^{me} Janvier, 1781.

REAUME.

Concession du 16^{me} Mars, 1677, faite par *Jacques Duchesneau*, Intendant, à Demoiselle *de Lacombe*, d'une demi lieue de terre de front le long du fleuve *St. Laurent*, à prendre depuis celles qui appartiennent au Sieur *de St. Denis*, son père, en remontant le dit fleuve, avec deux lieues de profondeur.

Insinuations du Conseil Supérieur, lettre B. folio 16.

RIGAUD.

Concession du 29^{me} Octobre, 1732, faite par *Charles Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, aux Sieurs *de Cavagnal* et *Rigaud*, freres, d'un terrain le long du fleuve appelé *la Grande Rivière*, en tirant vers le *Long-sault*, de trois lieues de front sur trois lieues de profondeur, avec les isles, islets et batures adjacentes; le dit terrain, joignant la Seigneurie qui leur est échue par succession de feu le Marquis *de Vaudreuil*, située au lieu dit *la Pointe aux Tourtes*.

Régistre d'Intendance, N° 7, folio 3.

RIMOUSKY.

Concession du 24^{me} Avril, 1688, faite par *Jacques René de Brisay*, Gouverneur, au Sieur *de la Cardonière*, d'une étendue de deux lieues de terre, prés et bois, de front, sur le fleuve *St. Laurent*; à prendre joignant et attenant la concession du *Bic*, appartenant au Sieur *de Vitré*, en descendant le dit fleuve, et de deux lieues de profondeur dans les terres, ensemble la rivière dite de *Rimousky* et autres rivières et ruisseaux, si aucuns se trouvent dans la dite étendue, avec l'isle de *St. Barnabé* et les batures, isles et islets qui se pourront rencontrer entre les dites terres et la dite isle.

Régistre d'Intendance, N° 2, B folio 24.

RIVIERE DU LOUP, AVEC AUGMENTATION.

Concession du 20^{me} Avril, 1633, faite par Mr. *Lefebvre*, Gouverneur, et *de Meulles*, Intendant, au Sieur *Lechasseur*, d'une lieue de terre de front sur quatre lieues de profondeur, sur le lac *St. Pierre*, demi lieue audessus et demi lieue audessous de la *Rivière du Loup*, icelle comprise.

Insinuations du Conseil Supérieur, Régistre B. folio 46.

RIVIERE DU LOUP ET L'ISLE VERTE.

Concession du 5^{me} Avril, 1689, faite par *Jacques de Brisay*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *Villeraï*, pour le Sieur *d'Artigny*, et au Sieur *Lachenaie*, de l'étendue de terre qui peut se rencontrer entre leurs concessions, avec deux lieues de profondeur; de laquelle ils jouiront moitié par moitié, et des isles et batures qui se

peuvent rencontrer vis-à-vis la dite étendue, à cause de la grande quantité de terres inhabitables qui se rencontrent sur les concessions à eux ci-devant faites, savoir, au Sieur de *Villeraï* pour le dit Sieur d'*Artigny*, depuis la rivière *Verte* jusqu'à deux lieues en descendant le fleuve *St. Laurent*; et au Sieur de *Lachenaie*, savoir trois lieues et demie, savoir, une lieue au dessus de la rivière du *Loup*, et deux lieues audessous de la dite rivière.

Régistre d'Intendance, N° 3, folio 27.

RIVIERE DU SUD, AVEC LES ISLES AUX GRUES ET AUX OIES.

Concession du 5me Mai, 1646, faite par la Compagnie, au Sieur de *Montmagny*, de la rivière appelée *du Sud*, à l'endroit où elle se décharge dans le fleuve *St. Laurent*, avec une lieue de terre le long du dit fleuve *St. Laurent*, en montant de la dite rivière vers *Québec*, et demi lieue le long du dit fleuve, en descendant vers le golfe; le tout sur la profondeur de quatre lieues en avant dans les terres, en cotoyant la dite rivière de part et d'autre, et icelle comprise dans la dite étendue; et de plus les deux isles situées dans le fleuve *St. Laurent*, proche du dit lieu, en descendant le dit fleuve, l'une appelée l'isle *aux Oies*, et l'autre appelée l'isle *aux Grues*, avec les batures qui sont entre les deux, le tout contenant quatre lieues ou environ de longueur sur le dit fleuve.

Régistre d'Intendance, N° 10 à 17, folio 572.

LA RIVIERE OUELLE.

Concession du 29me Octobre, 1672, faite par *Jean Talon*, Intendant, au Sieur de la *Bouteillerie*, de deux lieues de front sur une lieue et demie de profondeur, à prendre sur le fleuve *St. Laurent*, savoir une lieue audessus et une lieue au dessous de la rivière *Ouelle*, icelle comprise.

Régistre d'Intendance, N° 1, folio 6.

AUGMENTATION DE LA RIVIERE OUELLE.

Concession du 20me Octobre, 1750, faite par le Marquis de la *Jonguiere*, et *François Bigot*, Intendant, à Demoiselle *Généviève de Ramzay*, veuve du Sieur de *Boishebert*, de deux lieues de front sur deux lieues de profondeur, à prendre au bout de la profondeur de la lieue et demie que contient la Seigneurie de la *Bouteillerie*, pour faire, avec l'ancienne concession de 1672, une seule et même seigneurie, au lieu appelé la rivière *Ouelle*.

Régistre d'Intendance, N° 9, folio 70.

ROQUETAILLADE.

Concession en date du 22me Avril, 1675, faite au Sieur *Pierre Godefroi de Roquetaillade*, par *Louis de Buade Comte de Frontenac*, des terres qui sont le long du fleuve *St. Laurent*; contenant une demi lieue ou environ de front, à prendre depuis ce qui est concédé au Sieur de *Godefroi* son pere, au dessous des *Trois Rivières*, en montant, jusqu'aux terres de la Seigneurie de *Nicolet*, avec trois lieues de profondeur.

Cahier d'Intendance, N° 2 à 9, folio 152.

ROUVILLE.

Concession du 18^{me} Janvier, 1694, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *Jean Baptiste Hertel*, Sieur de *Rouville*, de deux lieues de terre de front avec une lieue et demie de profondeur, joignant d'un côté la terre de la Seigneurie de *Chambly*, en descendant la rivière *Richelieu*; de l'autre côté les terres non-concédées du côté du Sud de la dite rivière *Richelieu*.

Régistre d'Intendance, N^o 4, folio 15.

SABREVOIS.

Concession du 1^{er} Novembre, 1750, faite par le *Marquis de la Jonquière*, Gouverneur, et *François Bigot*, Intendant, au Sieur de *Sabrevois*, de deux lieues ou environ de front, sur trois lieues de profondeur, bornée du côté du Nord par la Seigneurie concédée au Sieur de *Sabrevois de Bleuri*, le 30^{me}, Octobre dernier, sur la même ligne; du côté du Sud à deux lieues ou environ sur la dite Seigneurie par une ligne tirée Est et Ouest du monde, joignant aux terres non-concédées; sur la devanture par la rivière *Chambly* et sur la profondeur à trois lieues joignant aussi aux terres non-concédées.

Régistre d'Intendance, N^o 9, folio 73.

SAINTE ANNE.

Concession du 29^{me} Octobre, 1672, faite par *Jean Talon*, Intendant, aux Sieurs *Sueur* et *Lanaudiere*, de l'étendue de la terre qui se trouve sur le fleuve *St. Laurent*, au lieu dit des *Grondines*, depuis celle appartenante aux Religieuses de l'Hôpital de *Québec*, jusqu'à la Rivière *Ste. Anne*, icelle comprise, sur une lieue de profondeur, avec la quantité de terre qu'ils ont acquis du Sieur *Hamelin*.

Régistre d'Intendance, N^o 1, folio 15.

AUGMENTATION DE STE. ANNE.

Concession du 4^{me} Mars, 1697, par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, faite à *Marguerite Denis*, veuve du Sieur de *Lanaudiere*, de trois lieues de terre de profondeur derrière la terre et Seigneurie de *St. Anne*, sur toute la largeur d'icelle, et celle des Sieurs de *Sueur* et *Hamelin*, avec les isles, islets et batures non-concédées qui se trouvent dans la dite étendue; la dite profondeur tenant d'un côté à la Seigneurie des *Grondines*, et d'autre côté à celle de *Batiscan*.

Régistre d'Intendance, N^o 5, folio 5.

AUTRE AUGMENTATION DE STE. ANNE.

Concession du 30^{me} Octobre, 1700, par *Hector de Callière*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *Thomas Tardieu de la Perade*, de l'espace de terre qui se trouve au derrière de la Seigneurie de *Ste. Anne*, lequel espace contient environ deux lieues de front entre les lignes prolongées des Seigneuries de *St. Charles des roches (les Grondines)* et *Batiscan*, sur une lieue et demie de profondeur; ensemble la rivière qui peut traverser le dit espace, et les islets qui peuvent s'y rencontrer.

Régistre d'Intendance, N^o 5, folio 37.

TROISIEME AUGMENTATION DE STE. ANNE.

Concession du 20me Avril, 1735, faite par le *Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, à Mr. *Thomas Tarieu*, Sieur de la *Perade*, d'une étendue de terre de trois lieues de profondeur, à prendre derrière et sur la même largeur de la Concession du 30me Octobre, 1700.

Régistre d'Intendance, N° 7, folio 31.

STE. ANNE.

Concession du 28me Novembre, 1688, faite par *Jacques de Brisay*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *Riverin*, de la rivière *Ste. Anne*, située aux monts *Notre Dame*, dans le fleuve *St. Laurent*, avec une demi lieue de front sur le dit fleuve, moitié audessus et l'autre moitié audessous de la dite rivière, icelle non comprise dans la dite étendue, sur une lieue de profondeur dans les terres.

Régistre d'Intendance, N° 3, folio 19.

STE. ANNE OU LA POCADIÈRE.

Concession du 29me Octobre, 1672, faite par *Jean Talon*, Intendant, à Demoiselle *Lacombe*, d'une lieue et demie de terre de front sur autant de profondeur, à prendre sur le fleuve *St. Laurent*, tenant d'un côté à la concession du Sieur de *St. Denis*; d'autre aux terres non concédées.

Régistre d'Intendance, N° 1, folio 9.

TILLY OU ST. ANTOINE.

Concession du 29me Octobre, 1672, faite par *Jean Talon*, Intendant, au Sieur de *Villicu*, de l'étendue de terres qui se trouveront sur le fleuve *St. Laurent*, depuis les bornes de celles de Mr. *Lauzon*, jusqu'à la petite rivière dit de *Villicu*, icelle comprise, sur une lieue et demie de profondeur.

Reg. Ins. Con. Sup. lettre B. folio 20.

ST. ARMAND.

Concession du 23me Septembre, 1748, faite par *Rolland Michel Barrin*, Gouverneur, et *François Bigot*, Intendant, au Sieur *Nicolas René Levasseur*, de six lieues de terre de front sur trois lieues de profondeur le long de la rivière de *Missisquoui*, dans le lac *Champlain*, les dites six lieues à prendre à huit arpens au dessous de la première chute qui se trouve à trois lieues de profondeur de la dite rivière, en remontant la susdite rivière de *Missisquoui*.

Régistre d'Intendance, N° 9, folio 35.

ST. BARNABÉ!

Concession du 11me Mars, 1751, faite par le *Marquis de la Jonquiere*, Gouverneur, et *François Bigot*, Intendant, au Sieur *Lepage* de *St. Barnabé*, de cinq quarts de lieue de terre de front, sur deux lieues de pro-

fondeur, avec les rivières, isles et islets qui se trouveront au devant du dit terrain, à prendre depuis la concession accordée au feu Sieur *Rouer de la Cardonière*, en descendant au Nord-est, jusques et compris la pointe de l'Isle aux *Péres*, de manière qu'il se trouvera avoir trois lieues et un quart de front, sur deux lieues de profondeur, qui seront bornées en total à la concession des représentans de feu Sieur de *Vitré* au Sud-ouest, et au Nord-est à la pointe de l'Isle aux *Péres*.

Régistre d'Intendance, N° 9, folio 77.

ST. BLAIN.

Ce fief est une partie démembrée de la Seigneurie de *Verchères*, comme il paroît par un acte de Foi et Hommage rendu devant Mr. *Begon*, alors Intendant, le 13me Février, 1723, fondé sur un acte de partage du 15me Septembre, 1686, suivant lequel le front de ce fief commence à la ligne de séparation entre les Seigneuries de *Verchères* et de *St. Michel*, et contient vingt-trois arpens de front sur deux lieues de profondeur, sur le rumb de vent ordinaire des concessions de la Seigneurie de *Verchère*.

Régistre des Foi et Hommage, folio 3, datée 30me Janvier, 1723.

ST. CHARLES.

Concession du 1er. Mars, 1695, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *Hertel de la Fresnière*, de deux lieues de terre de front sur autant de profondeur, à commencer du côté du sud de la rivière *Richelieu* aux terres du Sieur *Rouville*, les dites deux lieues de front suivant et cotoyant la dite rivière, en descendant du côté de *Sorrel*, et les dites deux lieues de profondeur courant du côté du sud.

Régistre d'Intendance, N° 4, folio 20.

ST. CHARLES.

Concession du 14me Août, 1701, faite par *Hector de Callière*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *René Fezeret*, d'une lieue et demie de terre en superficie dans la rivière de *Yamaska*, icelle comprise, à prendre du côté du sud de la dite rivière, tirant sud-est, tenant d'un bout à la Concession du feu Sieur *Bourchemin*, et de l'autre aux terres non-concédées, avec les isles, islets, prairies et battures adjacentes.

Régistre d'Intendance, N° 5, folio 33.

STE. CLAIRE.

Concession du 17me Mars, 1693, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, à *Réné Lepage*, d'une lieue de terre de front à prendre à une ligne qui sera tirée au Nord-est et Sud-ouest, pour terminer la profondeur de la concession du Sieur *Couillard de l'Épinay*, située à la rivière du Sud, avec deux lieues de profondeur, joignant d'un côté au Nord-est la prolongation de la ligne qui fait la séparation des terres du dit Sieur de l'Épinay, d'avec celle du Sieur *Amiot de Vinclet*; d'autre côté, au Sud-ouest, les terres non concédées; d'un bout, au Nord-ouest, la dite ligne qui termine la profondeur de la terre du dit Sieur de l'Épinay, et d'autre bout au Sud-est une autre ligne parallèle qui terminera les dites deux lieues de profondeur.

Régistre d'Intendance, Lettre D. N° 4, folio 12.

STE. CROIX.

Le titre de cette concession n'a pas été trouvé au Secrétariat ; il paroît seulement par le Régistre des Foi et Hommage une déclaration faite par *Pierre Duquet*, Notaire Royal, au nom des Dames Religieuses Ursulines de *Québec*, propriétaires de la Seigneurie de *Ste. Croix* et autres lieux, devant *Mr. Duchesneau*, Intendant, qui dit, que les dites Dames possèdent un fief et seigneurie au lieu nommé *Platon Ste. Croix*, contenant une lieue de front sur le fleuve *St. Laurent*, sur dix lieues de profondeur, borné d'un côté au Sieur de *Lotbinière* et d'autre aux terres non encore habitées, aux dites Dames Religieuses appartenant par titre de l'ancienne Compagnie, en date du 16me Janvier, 1637, et confirmé par *Mr. de Lauzon*, Gouverneur, le 6me Mars, 1652.

Régistre des Foi et Hommage, N° 68, folio 312, le 24me Avril, 1781.

ST. DENIS.

Concession du 12me Mai, 1679, faite par le Comte de *Frontenac*, Gouverneur, au Sieur de *St. Denis* pour et au nom de *Joseph Juchereau*, son fils, des terres qui sont du côté du Sud, entre celles du Sieur de *Ladurantaie* et du Sieur de *la Bouteillerie*, le long du fleuve *St. Laurent*, contenant une lieue de front ou environ, sur quatre lieues dans la profondeur de la dite lieue.

Insinuations du Conseil Supérieur, Lettre B. folio 36.

ST. DENIS.

Concession du 20me Septembre, 1694, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, à *Louis de Ganne*, Sieur de *Falaise*, de deux lieues de terre de profondeur derrière la terre et Seigneurie de *Contrecoeur*, sur toute la largeur d'icelle, qui est de deux lieues, laquelle profondeur passera en partie au delà de la rivière *Chambly*, et courra les mêmes rums de vent que la dite terre de *Contrecoeur*; avec les isles et islets qui se trouveront dans la dite rivière *Chambly* par le travers de la dite profondeur.

Régistre d'Intendance, N° 4, folio 17.

Régistre d'Intendance, 9, folio 61.

ST. ETIENNE.

Concession du 7me Octobre, 1737, faite par le *Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au Sieur *François Etienne Cugnet*, d'un terrain restant à concéder vis-à-vis la Seigneurie appartenante aux héritiers *Jolliet*, sur la rivière du *Sault de la Chaudière*, du côté du Sud-ouest, depuis le bout de la profondeur de la Seigneurie de *Lauzon* jusqu'à celle nouvellement concédée au Sieur *Taschereau*, contenant environ trois lieues de front sur la dite rivière du *Sault de la Chaudière*, au Sud-ouest de la dite rivière, sur deux lieues de profondeur, ensemble les isles et islets qui se trouveront dans la dite rivière dans l'espace du dit terrain du côté du Sud-ouest, suivant qu'elles se trouveront situées au devant du dit terrain, et les lacs qui se trouveront situés sur les dites terres.

Régistre d'Intendance, N° 8, folio 20.

ST. FRANÇOIS.

Concession du 8me Octobre, 1678, faite par *Louis de Buade*, Gouverneur, au *Sieur Crevier*, de la Seigneurie de *St. François*, contenant une lieue de profondeur en montant dans la rivière de *St. François*; ensemble les isles et islets qui sont dans la dite profondeur, et une lieue de large d'un côté de la dite rivière au Nord, à prendre au bout de la terre et Seigneurie du *Sieur de la Lussaudiere*, ensemble les terres qui se trouveront de l'autre côté de la dite rivière au Sud; à commencer au bout de la terre et Seigneurie de *St. François* et jusqu'aux bornes du *Sieur de Lavalier*.

Régistre d'Intendance, N° 2 à 9, folio 146.

ST. GABRIEL.

Concession du 16me Avril, 1647, faite par la Compagnie au *Sieur Giffard*, de la Seigneurie de *St. Gabriel*, à prendre au même endroit que sa présente concession, (*Beauport*) rangeant icelle de proche en proche, autant qu'il se pourra faire, sur dix lieues de profondeur dans les terres vers le Nord-Ouest.

Par le papier Terrier, Tome 2e, Folio 655, le susdit fief avoit originairement deux lieues de front. Cette concession ne joint pas *Beauport*, parce que la concession de *Notre Dame des Anges* qui est entre les deux est plus ancienne.

Cahiers d'Intendance, N° 2 à 9, folio 73.

ST. HYACINTHE.

Concession du 23me Septembre, 1748, faite par *Rolland Michel Barrin*, Gouverneur, et *François Bigot*, Intendant, au *Sieur François Rigaud*, Seigneur de *Vaudreuil*, de six lieues de front, le long de la rivière *Yamaska*, sur trois lieues de profondeur de chaque côté d'icelle; les dites six lieues de front, à prendre à sept lieues de l'embouchure de la dite rivière, qui sont les dernières terres concédées.

Régistre d'Intendance, N° 9, folio 36.

FIEF ST. IGNACE.

Concession du 20me Août, 1652, faite par *Monsieur de Lauzon*, Gouverneur, aux Dames de l'Hôtel Dieu, d'une demi lieue de terre de front sur la rivière *St. Charles*, sur dix lieues de profondeur; démembrée du fief *St. Gabriel*, par donation du *Sieur Robert Giffard*, Seigneur de *Beauport*, aux dites Dames; à prendre d'un côté aux terres concédées sur la rivière *St. Charles* au *Sieur Guillaume Couillard*, d'autre part à la ligne qui fait la séparation des terres depuis peu accordées aux Sauvages, d'autre bout par derrière aux terres non-concédées, et par devant à la rivière *St. Charles*.

Papier Terrier, N° 64, folio 296, 19me Mars, 1781.

FIEF ST. JEAN.

Concession du 13me Octobre, 1701, faite par *Hector de Callière*, Gouverneur, et *Jean Bochart*, Intendant, aux Dames Religieuses *Ursulines*, des *Trois Rivières*, de l'espace de terre concédée, qui se trouve dans le lac *St. Pierre* au fleuve *St. Laurent*, du côté du Nord; consistant d'environ trois quarts de lieues de front entre le *Sieur Joseph Petit* dit

Bruno, Seigneur de *Masquinongé*, et le *Sieur Trotier de Beaubien*, Seigneur de la *Rivière du Loup*, sur la profondeur de deux lieues.

Régistre d'Intendance, N° 5, folio 34.

AUGMENTATION DU FIEF ST. JEAN.

Confirmation du 27me Mars, 1733, par sa Majesté, d'une concession faite le 10me Décembre 1727, aux Dames *Ursulines* des *Trois Rivières*, d'un terrain joignant du côté du Nord-Est au fief de la *Rivière du Loup*, appartenant aux dites Religieuses, et du côté du Sud-Ouest au fief du *Sieur Sicard*, ayant environ trois quarts de lieue de front sur trois lieues de profondeur.

Insinuations du Conseil Supérieur, *Régistre G.* folio 42.

ST. JEAN DESCHAILLONS.

Concession du 25me Avril, 1674, au *Sieur de St. Ours*, de deux lieues de terre de front le long du fleuve *St. Laurent*, à commencer quatre arpens audessous de la *Rivière du Chêne* en montant le dit fleuve, avec deux lieues de profondeur dans les dites terres, nommée la Seigneurie *Deschaillons*:

Régistre des Foi et Hommage, folio 67.

Cahiers d'Intendance, 2 à 9, folio 243.

AUGMENTATION DE ST. JEAN DESCHAILLONS.

Concession du 25me Janvier 1752, faite par le *Marquis de La Jonquiere*, Gouverneur, et *François Bigot*, Intendant, à *Roc de St. Ours*, *Sieur Deschaillons*, dans la profondeur de la rivière *du Chêne* sur le même front de la Seigneurie de la rivière *du Chêne* à lui déjà concédée, avec quatre lieues et demie de profondeur à prendre au bout des deux lieues que contient sa dite Seigneurie.

Régistre d'Intendance, N° 10, folio 28.

By this concession of augmentation, and by the ratification of it, the first concession is said to contain only one league and a half, as per the *Régister* N° 10, folio 2, et *Ins. Con. Sup. Letter K.* folio 7.

ST. JEAN PORT JOLI.

Concession du 25me Mai, 1677, faite par *Louis de Buade*, Comte de *Frontenac*, Gouverneur, et *Jean Bochart*, Intendant, à *Noël l'Anglois*, de la consistance de deux lieues de terre de front, le long du fleuve *St. Laurent*, du côté du Sud, à commencer depuis les terres qui appartiennent à la *Demoiselle Lacombe*, en remontant le dit fleuve, jusqu'à la concession de la *Demoiselle Geneviève Couillard*, avec deux lieues de profondeur.

Régistre des Foi et Hommage, N° 44, Page 194, le 23me Sept. 1781.

Cahiers d'Intend. N°. 2 à 9, folio 301.

ST. JOSEPH.

Concession du 23me Septembre, 1736, faite par *Charles Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au *Sieur Rigaud de Vaudreuil*, de trois lieues de terre de front et deux lieues de profondeur, des deux côtés de la rivière du *Sault de la Chaudière*, en

remontant, ensemble tous les lacs, isles et islets qui s'y trouvent, à commencer à la fin de la concession accordée aujourd'hui au Sieur *Taschereau*.

Régistre d'Intendance, N° 8, folio 8.

ST. JOSEPH OU L'EPINAY.

Concession du dernier jour de Février, 1626, faite par Mr. le Duc de *Vantadour*, à *Louis Hebert*, d'une lieue de terre de front, près de la ville de *Québec*, sur la rivière *St. Charles*; sur quatre lieues de profondeur.

Papier Terrier, N° 15. folio 75, 3 Février, 1781.

This fief is said to contain but one quarter of a league in front upon four in depth, by a certificate of examination of the title of Concession; as also by mention in the act of donation of this fief in marriage with Demoiselle *Chavigny*, to Sieur de *l'Épinay*.

N. B. This fief by actual measurement only eleven arpents in front.

Cahiers d'Intend. 10 à 17, folio 577.

STE. MARGUERITE.

Concession du 27^me Juillet, 1691, faite par *Louis de Buade, Comte de Frontenac*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur *Jacques Dubois de Boguinet*, de trois quarts de lieues ou environ de front, étant au derrière des concessions qui sont le long du fleuve *St. Laurent*, audessus des *Trois Rivières*, appartenantes aux Révérends Peres Jésuites et au Sieur de *St. Paul*; joignant au côté du Sud-Ouest au fief *Vioupont* et au côté du Nord-Est au dit fleuve des *Trois Rivières*; ensemble la profondeur qui se trouvera jusqu'aux fiefs de *Tonnancour* et de *St. Maurice*.

Régistre d'Intendance, N° 4, folio 5.

SAINTE MARIE.

Concession du 3^me Novembre, 1672, faite par *Jean Talon*, Intendant, au Sieur *Lemoine*, de trois quarts de lieue de terre sur demi lieue de profondeur, à prendre sur le fleuve *St. Laurent*, depuis l'habitation des pères Jésuites, jusqu'à la Rivière *St. Anne*, supposé que cette quantité y soit.

Régistre d'Intendance, N° 1, folio 32.

STE. MARIE.

Concession du 23^me Septembre, 1736, faite par le *Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart* Intendant, au Sieur *Taschereau*, de trois lieues de terre de front sur deux lieues de profondeur, des côtes de la rivière dite *Sault de la Chaudière*, en remontant, en commençant à l'endroit l'*Islet au Sapin*, icelui compris, ensemble les lacs isles et islets se qui trouveront dans la dite rivière dans la dite étendue de trois lieues.

Régistre d'Intendance, N° 8, folio 6.

ST. MAURICE.

Confirmation du 13^me Avril, 1740, par le Roi de concession faite aux intéressés de la Compagnie des forges, établies à *St. Maurice*, du fief de *St. Etienne*, réuni au Domaine de sa Majesté, par ordre du 6^me Avril précédent, et des terres qui sont depuis le dit fief de *St. Etienne*, à prendre le front sur la rivière des *Trois Rivières*, en remontant jusqu'à une lieue

audessus du Sault de la *Gabelle*, ci-devant dit le Sault de la *Verrauderie*, sur deux lieues de profondeur, pour être le dit fief et les terres qui sont audessus unis et incorporés au fief de *St. Maurice*.

Insinuations du Conseil Supérieur, Régistre H. folio 57.

ST. GERVAIS AJOUTÉ' AUX SEIGNEURIES DE ST. MICHEL ET DE
LIVAUDIERE.

Concession du 20me Septembre, 1752, faite au Sieur *Michel Jean Hugues Péan de Livaudière* d'un terrain non concédé derrière la Seigneurie de *Beaumont*, et qui se trouve enclavé entre les lignes des Seigneuries de *St. Michel* au Nord-est et de *Livaudiere* au Sud-ouest, ce qui compose deux lieues de front sur une lieue seulement de profondeur, laquelle lieue de profondeur joint la ligne du trait-quarré des profondeurs des dites Seigneuries de *St. Michel* et de *Livaudiere*, et en outre quatre lieues et un quart de front ou environ (ce qui est appelé *St. Gervais* sur la Carte) sur trois lieues de profondeur, à prendre au bout des profondeurs de *St. Michel* des deux lieues ci-dessus concédées et de la Seigneurie de *Livaudiere*, laquelle étendue de terrain de quatre lieues et un quart de front, ou environ, sera bornée par devant au trait-quarré des lignes de profondeurs de *St. Michel*, des deux lieues ci-dessus concédées, et de *Livaudiere*; par derrière par une ligne droite et parallèle joignant aux terres non-concédées; au Nord-est par la continuation de la ligne de séparation des dites Seigneuries de *St. Valier* et de *St. Michel*, et au Sud-ouest également par la continuation de la ligne de séparation de la dite Seigneurie de *Livaudiere*, à celle nouvellement concédée à *Mr. de la Martinière*; lesquels terrains de deux lieues de front sur une lieue de profondeur et de quatre lieues et un quart de front ou environ sur trois lieues de profondeur ci-dessus désignés ne feront avec les Seigneuries de *St. Michel* et de *Livaudiere*, appartenant déjà au Sieur *Pean* qu'une seule et même Seigneurie.

Régistre d'Intendance, N° 10, folio 9.

ST. OURS.

Concession du 29me Octobre, 1672, faite par *Jean Talon*, Intendant, au Sieur de *St. Ours*, d'un espace de terre de front qui se trouve sur le fleuve *St. Laurent*, depuis la borne de la concession de *Mr. de Contrecoeur* jusqu'à celle de *Mr. de Saurel*, tenant pardevant le dit fleuve, et par derrière la rivière d'*Ouamaska*. Les isles qui sont vis-à-vis de cette concession, accordées par le Comte de *Frontenac*, Gouverneur, au dit Sieur de *St. Ours* le 25me Avril, 1674.

Régistre des Foi et Hommage, N° 80, folio 5, 28me Mai, 1781.

Cahiers d'Intendance, N° 2 à 9, folio 244.

ST. PAUL.

Concession du 20me Mars 1706, faite par *Philippe de Rigaud*, Gouverneur, et *Jacques Raudot*, Intendant, à *Amador Godefroy*, Sieur de *St. Paul*, de la baie et rivière appelée *Quetzcaqui*, autrement dit la grande rivière, pays des *Esquimaux*, et de cinq lieues de terre de large de chaque côté le long de la dite rivière, sur dix lieues de profondeur, avec les isles, islets et battures qui se trouveront dans les dites baie et rivière audevant d'icelle.

Cahiers d'Intend. N° 10 à 17, folio 746.

ST. ROC.

Concession du 1er Avril, 1656, faite par Mr. de Lauzon, Gouverneur pour la Compagnie, à *Nicholas Juchereau de St. Denis*, de trois lieues de terre de front sur deux lieues de profondeur, avec les isles et battures audevant de la dite Concession.

Cahiers d'Intendance, N° 10 à 17, folio 665.

SAINT SULPICE.

Concession du 17me Décembre, 1640, faite par la Compagnie aux Sieurs *Cherrier et Leroyer*, d'une grande partie de l'Isle de *Montréal*, &c. &c. Plus une étendue de terre de deux lieues de large le long du fleuve de *St. Laurent*, sur six lieues de profondeur dans les dites terres, à prendre du côté du Nord sur la même côte où se décharge la rivière de l'*Assomption* dans le dit fleuve *St. Laurent*, et à commencer à une borne qui sera mis sur cette même côte, à la distance de deux lieues de l'embouchure de la dite rivière de l'*Assomption*, le reste des dites deux lieues de front à prendre en descendant sur le dit fleuve *St. Laurent*; tout ce qui est de la rivière des *Prairies*, jusqu'à la rivière de l'*Assomption*, et depuis la dite rivière de l'*Assomption* jusqu'à la borne cidessus, réservée à la dite Compagnie.

Ins. Con. Sup. Pour le reste de la dite isle par titre 21 Avril, 1659; Voyez le même Registre, et pour les dites titres ratifications amortissement, Voyez *Cahiers d'Intend.*

SAULT ST. LOUIS.

Concession du 29me Mai, 1680, faite par sa Majesté aux révérends peres Jésuites, de la terre nommée *le Sault*, contenant deux lieues de pais de front; à commencer à une pointe qui est vis-à-vis le rapide *St. Louis*, en montant le long du lac, sur pareille profondeur, avec deux isles, islets et battures qui se trouvent au devant et joignant aux terres de la *Prairie de la Magdelaine*.

Régistre d'Intendance, N° 2 à 9, folio 122.

Augmentation du dit fief d'une lieue et demie vers la Seigneurie de *Chateaugay*.

Le même Régistre, folio 124.

SHOOLBRED.

Grant in Fief and Seigniority to *John Shoolbred*, Esquire, made on the fourth of July, 1788, by His Excellency the Right Honorable *Guy Lord Dorchester*, Governor General, of the following tracts and parcels of land in the *Bay of Chaleurs*, videlicet:

A certain lot or tract of land lying at *Bonaventure*, beginning at the South extremity of the public road, which leads from the harbour of *Bonaventure*, to the settlement on the North bank, thence running nearly North-east to the extreme point of the said bank, and bounded by the course of the harbour, thence still bounded by the course of the said harbour, nearly North-west, two hundred and sixty-four feet, thence South-west parallel to the first course to the public road, thence South-east two hundred and sixty-four feet to the first station: Also a lot of land and space of ground whereon was built a storehouse, situate four hundred and forty-four feet from the North-east point of the said bank,

and East of the public road, which with an allowance of fifteen feet on each side and behind the space whereon the said store stood, containing five thousand and thirty-five square links. Also the lots of land and space of ground whereon were built two other storehouses, with fifteen feet on each side, and behind each of the spaces of ground whereon the said storehouses stood, the one situate two hundred and forty feet from the South end of the bank and one hundred and sixty feet West of the public road, containing three thousand eight hundred and twenty-two square links, and the other situate twenty feet distant from the North-west corner of the last mentioned ground whereon the said store formerly stood, containing five thousand and thirty-five square links, the said several lots or parcels of land above mentioned containing in the whole one acre, one rood, and twenty-one perches. Also a certain other tract of land lying at *Percé*, between the *Bays of Chaleurs* and *Gaspé*, adjacent to the Island of *Bonaventure*, being the last fishing post at present settled and established on the North beach, leading to *Mount Joli*, at *Percé*, aforesaid, bounded on the West by a deep *grève* or ditch adjoining to a fresh water brook, thence running East seven chains of sixty-six feet each along the bank, thence South ten chains, thence West seven chains, thence North parallel to the second course unto the first station, containing seven acres. Also a certain other tract of land situate on the Westernmost extremity of *Chaleurs Bay*, running up the river *Ristigouche*, about fifteen miles to the first point of land below *Battery Point*, beginning at a boundary line one hundred and fifty chains East of the bottom of the Easternmost Bay of *Nouvel Bason*, running North, twenty-two degrees East to the mountains, thence bounded by their course at an average depth of forty chains from high water mark to their base, round *Nouvel Bason* Westward to a small cove, three hundred chains West of the said first mentioned Bay, bearing from the Northernmost extremity of *Migoacha Point*, being a sand bank, South eighty-four degrees North, eighty-four degrees West, the superficial content of the said last described lands is two thousand and eighty acres. Also a tract of land, beginning at the aforesaid cove, and running the several courses of *Point Migoacha*, to the Western extremity of a salt marsh, distant from a point, where the inaccessible coast begins, about eighty chains, thence to the said point, containing one thousand six hundred acres. Also a certain tract beginning at the first mentioned point, below *Battery Point*, North nineteen degrees and a half East, eighty chains, thence South, eighty-eight degrees East, eighty-nine chains, thence North thirty-three degrees East, eighty chains, thence North eighty-three degrees East, sixty-nine chains, thence North fifty six degrees East, one hundred and seven chains, thence South eighty degrees East, twenty-three chains, thence South fifty degrees East, fifty-eight chains, thence South, sixty-seven degrees East, forty-nine chains, thence North sixty-eight degrees East, eighty-eight chains, thence South sixty-six degrees East fifty-seven chains, thence South sixty-five degrees East, eighty-four chains, thence South seventy-three degrees East, one hundred and fifty-six chains, thence South thirty-nine degrees East, ninety-five chains, thence South twelve degrees East, one hundred and seventy-five chains, thence South eleven degrees East fifty-five chains, thence South, fifty-six degrees West, forty chains to *Yacta Point*, containing six thousand five hundred and fifty acres, more or less.

Book of Patents for lands, Vol. 1. page 1.

SILLERY.

Concession du 23^{me} Octobre, 1699, faite par *Hector de Calliere*, Gouverneur, et *Jean Bochart*, Intendant, aux révérends peres Jésuites, de la Seigneurie de *Sillery*, d'une lieue de large sur le fleuve *St. Laurent*, et d'une lieue et demie ou environ de profondeur, jusqu'à la Seigneurie de *St. Gabriel* qui la termine par derrière, commençant du côté du Nord-Est à la pointe de *Puiseaux*, et du côté du Sud-Ouest à une ligne qui la sépare du fief de *Gaudarville*, lesquelles lignes ont été tirées l'une il y a environ vingt-cinq ans, et l'autre il y a quarante ans.

Régistre d'Intendance, N^o 5, folio 26.

SOREL.

Concession du 21^{me} Octobre, 1672, faite par *Jean Talon*, Intendant, au Sieur de *Sauvel*, de deux lieues et demie de terre de front sur le fleuve *St. Laurent*, savoir, une lieue et demie au delà de la rivière de *Richelieu* sur deux lieues de profondeur, et une lieue en deçà sur une lieue de profondeur, avec les Isles *St. Ignace*, l'isle *Ronde* et l'isle de *Grace*.

Régistre d'Intendance, N^o 1, folio 13.

DERRIERE SOREL.

Concession du 18^{me} Juin, 1739, faite par le Marquis de *Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, aux Demoiselles *Angélique Louise* et *Elisabeth de Ramzay*, d'un restant de terrain derrière la Seigneurie de *Sorel*, à prendre entre les lignes et bornes des Seigneuries de *Lavalière* de *Fezeret* et *St. Ours*; bornée du côté du Nord-est par la dite Seigneurie de *Lavalière*; du côté de l'Est par la dite Seigneurie de *Fezeret*; du côté du Sud-ouest par la ligne de la dite Seigneurie de *St. Ours*, ce qui compose environ une lieue et demie en superficie.

Régistre d'Intendance, N^o 8, folio 27.

SOULANGE.

Concession du 12^{me} Octobre, 1702, faite par *Hector de Calliere*, Gouverneur, et *Jean Bochart*, Intendant, à *Pierre Jacques Marie de Joybert*, Chevalier de *Soulange*, de la moitié d'une langue de terre sise au lieu dit *les Cascades*, de quatre lieues de terre de front sur une lieue et demie de profondeur au plus large de la dite langue de terre, et une demi lieue au plus étroit; à commencer à la *Pointe des Cascades*, en montant; joignant la dite terre celle accordée aux enfans de *Mr. de Vaudreuil*.

Régistre d'Intendance, N^o 5, folio 37.

TERREBOIS OU DEVERBOIS.

Cette Concession ne se trouve ni dans le bureau du Secrétaire ni dans le *Régistre des Foi et Hommage*: son front étant inconnu elle occupe sur la Carte l'espace qui se trouve entre les concessions de Messrs. de *Grandville* et de *Lachenaie*.

This concession was originally granted to Fran. Dionis Bourgeois, 15 Nov. 1673, and was to consist of three leagues by three.

See *Cahiers d'Intendance*, N^o 2 à 9, folio 61.

TERREBONNE.

Concession du 23me Décembre, 1673, faite par la Compagnie à Mr. *Dautier Deslandes*, de deux lieues de terre de front sur la riviere *Jésus* autrement appelée la riviere *des Prairies*; à prendre depuis les bornes de la *Chenaie*, en montant, vis-à-vis l'Isle *Jésus*, sur deux lieues de profondeur.

Régistre des Foi et Hommage, N° 31, folio 143, le 13me Février, 1781.

AUGMENTATION DE TERREBONNE.

Confirmation du 10me Avril, 1731, de concession faite au Sieur *Louis Lepage* de *St. Claire*, d'un terrain de deux lieues, à prendre dans les terres non concédées dans la profondeur, et sur tout le front de la Seigneurie de *Terrebonne*.

Régistre des Foi et Hommage, N° 31, folio 143. le 13me Fevrier, 1781.

AUTRE AUGMENTATION DE TERREBONNE.

Permission du 12me Avril, 1753, donnée par le *Marquis Duquesne*, Gouverneur, et *François Bigot*, Intendant, au Sieur *Louis de la Corne*, de continuer le défrichement dans la profondeur de deux lieues, au de là des fiefs de *Terrebonne* et *Desplaines*.

Régistre d'Intendance, N° 10, folio 13.

TREMBLAY ET VARENNES.

Concession du 29me Octobre, 1672, faite par *Jean Talon*, Intendant, au Sieur de *Varennnes*, de vingt-huit arpens de terre de front sur une lieue de profondeur, à prendre sur le fleuve *St. Laurent*, bornée d'un côté à la concession du Sieur *St. Michel* et d'autre celle du Sieur *Boucher*; et la quantité de terre qui se trouvera depuis le Sieur *Boucher* jusqu'à la rivière *Notre Dame*, la moitié d'icelle comprise, sur pareille profondeur, avec deux isles qu'on appellé *Percées*, et trois islets qui sont audessous des isles.

Régistre d'Intendance, N° 1, folio 17.

TROIS PISTOLES.

Concession du 6me Janvier, 1687, faite par le *Marquis de Brisay*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur de *Vitré*, de deux lieues de front le long du fleuve *St. Laurent*, du côté du Sud, à prendre depuis la concession du Sieur *Villeraï*, et descendant le dit fleuve, la rivière des *Trois Pistoles* comprise, et les isles qui se trouveront dans les deux lieues de la présente concession, sur deux lieues de profondeur, même celle au *Busque*, si elle se trouve dans la quantité présentement concédée.

Régistre d'Intendance, N° 3, folio 2.

PARTIE DES TROIS PISTOLES.

Concession du 6me Avril, 1751, faite par le *Marquis de la Jonquiere*, Gouverneur, et *François Bigot*, Intendant, au Sieur *Nicholas Rioux*, du terrain qui se trouve non concédé entre la Seigneurie de *Trois Pistoles* et les terres appartenantes aux représentans de feu Mr. de *Lachenaie*, ce qui peut faire environ trois lieues de front sur quatre lieues de profondeur, avec les isles, islets et battures qui se trouvent au devant du dit terrain.

Régistre d'Intendance, N° 9, folio 81.

TROIS-RIVIERES.

Les Régistres qui concernent cette partie de la Province ne suffisant pas pour placer, sur la Carte, les différentes concessions, elles y sont posées d'après un plan du lieu, sur lequel, dit-on, les propriétaires se réglent quant à leurs limites. Ces limites en quelques cas ne sont pas les mêmes que celles indiquées dans les titres originaux, différence qui peut avoir été causée par des échanges ou cessions faites entre les concessionnaires primitifs ou leurs représentans.

La figure A contient la ville et la banlieue des *Trois Rivières*.—B la Commune.—C suivant le susdit plan est un octroi fait aux Jésuites le 9me Juin, 1650.

VAUDREUIL.

Concession du 12me Octobre, 1702, faite par *Hector de Callière*, Gouverneur, et *Jean Bochart*, Intendant, à Mr. de *Vaudreuil*, pour ses enfans nés et à naître, de la moitié d'une langue de terre, située au lieu dit *les Cascades*, contenant quatre lieues de front sur une lieue et demie de profondeur au plus large de la dite langue de terre, et une demi lieue au plus étroit, à commencer vis-à-vis l'*Isle aux Tourtes*; joignant icelle pareille Concession accordée au Sieur de *Soulange*.

Régistre d'Intendance, N° 5, folio 38.

VAUDREUIL.

Concession du 23me Septembre, 1736, faite par *Charles Marquis de Beauharnois*, Gouverneur, et *Gilles Hocquart*, Intendant, au Sieur *Fleury de la Gorgendière*, de trois lieues de terre de front et de deux lieues de profondeur des deux côtés de la rivière du *Sault de la Chaudière*, en remontant, à commencer à la fin de la concession accordée aujourd'hui au Sieur *Rigaud de Vaudreuil*, ensemble les isles, islets et lacs qui se trouvent dans la dite rivière, dans la dite étendue de trois lieues.

Régistre d'Intendance, N° 8, folio 9.

VERCHERES AVEC AUGMENTATIONS.

Concession du 29me Octobre, 1672, faite par *Jean Talon*, Intendant, au Sieur de *Vercheres*, d'une lieue de terre de front sur une lieue de profondeur, à prendre sur le fleuve *St. Laurent*, depuis la concession du Sieur de *Grandmaison*, en descendant vers les terres non concédées, jusqu'à celle du Sieur de *Vitré*; et s'il y a plus que cette quantité [qui est la prédite Seigneurie de *St. Blain*,] entre les dits Sieurs, de *Vercheres* et de *Vitré*, elle sera partagée également entr'eux.

Régistre d'Intendance, N° 1, folio 23.

Autre concession, par le Comte de *Frontenac*, Gouverneur, au Sieur de *Vercheres* le 8me Octobre, 1678, d'une lieue de terre d'augmentation dans la profondeur de sa Seigneurie de *Vercheres*, pour être unies et jointes ensemble.

Régistre d'Intendance, N° Let. B. folio 4.

VIEUPONT.

Concession du 23me Août, 1674, faite à Mr. *Joseph Godefroi* Sieur de *Vieupont*, d'une étendue de terre sur le fleuve *St. Laurent*, du côté du

Nord, à commencer depuis la rivière appelée la *troisième rivière* jusqu'à celle appelée la *quatrième rivière* ; contenant quinze arpens de front avec une lieue de profondeur. Par une Ordonnance du 15me Juin, 1723, il a été réglé que le fief cidessus auroit dixsept arpens de front sur une lieue de profondeur.

Cahiers d'Intendance, pour l'ancienne Concession.

Au plan plus haut cité un lopin de terre entre Vieupont et Labadie est dit appartenir à Mr. Tonnancour.

Régistre des Foi et Hommage, N° 95. folio 78.

VILLÉRAY OU DARTIGNY.

Cette Concession ne se trouve pas au Secrétariat, non plus que dans les Régistres des Foi et Hommage ; elle occupe sur la Carte l'espace qui reste entre les Seigneuries de *l'Isle Verte* et des *trois Pistoles*.

VINCELOT.

Concession du 3me Novembre, 1672, faite par *Jean Talon*, Intendant, à Demoiselle *Veuve Amiot*, d'une lieue de terre sur autant de profondeur, à prendre sur le fleuve *St. Laurent*, depuis le Cap *St. Ignace*, icelui compris, jusqu'aux terres non-concédées.

Régistre d'Intendance, N° 1, folio 26.

AUGMENTATION DE VINCELOT.

Concession du 1er Février, 1693, faite par *Louis de Buade*, Gouverneur, et *Jean Bochart*, Intendant, au Sieur de *Vincelot*, d'une lieue de terre de front avec deux lieues de profondeur, derrière et au bout de son fief de *Vincelot*, au Cap *St. Ignace*, qui a pareillement une lieue de front seulement, sur une lieue de profondeur, suivant les alignemens généraux de ce pays.

Régistre d'Intendance, N° 4, folio 9.

VINCENNES.

Concession du 3me Novembre, 1672, faite par *Jean Talon*, Intendant, au Sieur *Bissot*, de soixante et dix arpens de terre de front, sur une lieue de profondeur, à prendre sur le fleuve *St. Laurent*, depuis les terres appartenantes au Sieur de *la Cisière*, jusqu'aux terres non concédées.

Régistre d'Intendance, N° 1, folio 30.

YAMASKA.

Concession du 24me Septembre, 1683, faite à Mr. de *Lavalière* des terres non concédées qui sont entre la Demoiselle de *Saurel* et le Sieur *Crevier*, vis-à-vis le lac *St. Pierre*, du côté du Sud, contenant une demi lieue de front ou environ, ensemble les isles et islets et battures au devant, jusqu'au Chenail des barques, comme aussi trois lieues de profondeur, à commencer dès l'entrée de la rivière des Savannes (*Yamaska*.)

Régistre des Foi et Hommage, N° 45, folio 197, 3me Février, 1781.
Cahiers d'Intendance, 2 à 9, folio 143.

N. B. This squadron was captured and destroyed the same year by a superior American force. Although the English ships exceeded the Americans in the number of guns, yet the calibre on the side of the latter was so much larger, that on estimating the weight of metal thrown by one broadside from each squadron, the American was to the English as 3 is to 2. The number of men on board the Americans was nearly in a similar proportion.

Leakage on Wines, Spirituous Liquors, and Molasses.

Three gallons on every hundred gallons.

Waste of Articles subject to Duties by Weight.

- An allowance of three pounds on every hundred pounds.
- On Salt, an allowance of waste of three Minots on every 100 Minots.
- Salt landed below the east bank of the River Saguenai, on the north side of the St. Lawrence, and below the east bank of the River of the Grand Mitis on the south side, is not subject to duty.

Drawback.

- There shall be allowed by the collector four-pence on every bushel of salt exported from the port of Quebec to any place beyond the above limits.
- Seven-pence on every tierce of salmon, and four-pence on every barrel of salted beef or pork, or salted fish of any sort, exported from this province.

New and additional Duties.

New and additional duties imposed by the Provincial Act 45th Geo. III. Cap. 13, intituled, "An Act to provide for the erecting of a Common Gaol in each of the Districts of Quebec and Montreal respectively, and the Means for defraying the Expenses thereof."

	<i>l.</i>	<i>s.</i>	<i>d.</i>
* On Bohea Tea, per lb. -	0	0	2
* Souchong, or other Black Teas	0	0	4
* Hyson Tea - -	0	0	6
* All other Green Teas -	0	0	4
Spirits, or other strong liquors, per English gallon -	0	0	3
Wines - do.	0	0	3
Molasses and Syrups do.	0	0	2
* All Goods, Wares, Merchandises, and Effects (with certain exceptions), that shall be put up, to auction or outcry, $2\frac{1}{2}$ per cent. on the value at which said goods, &c. shall be sold or adjudged.			
* New Duties.—Those on Spirits, Wines, Molasses, and Syrups, are in addition to what is already imposed upon them.			

The duties imposed by the above Act are to continue for six years from the passing thereof, viz. the 25th March, 1805; and are to be raised, levied, and collected, and paid in the same manner and form, and under the same rules and regulations, penalties and forfeitures, as are by law now established for the levying and collecting of other rates and duties, with the same allowance for leakage and for the waste of articles by weight, subject to the said duties.

By another act of Parliament these duties have been continued for a further term of years.

Additional Duties—1813.
