DEDICATION.

By way of expressing a most loving appreciation we dedicate THE BAPTIST COOK BOOK to those faithful and much encumbered "MARTHAS," who have, with kind hearts and diligent hands, spread upon the white cloth of its pages, the daintiest and the best of their kitchen knowledge, to furnish a feast for a CAUSE of their Lord, which we happen to represent.

Albany, Ga., May, 1907.

“Cooking means the knowledge of Medea and Circe and of Helen and of the Queen of Sheba. It means the knowledge of all herbs and fruits and balms and spices and all that is healing and sweet in the field and groves and savory in meats. It means carefulness and inventiveness and willingness and readiness of appliances. It means the economy of your grandmothers and the science of the modern chemist; it means much testing and no wasting; it means English thoroughness and French wit and Arabian hospitality; and in fine, it means that you are to be perfectly and always ladies—loaf-givers.”

Soup.

Always use cold water in making all soups; skim well, especially during the first hr., there is great necessity for thorough skimming and to help the skum to rise pour in a little cold water now and then and as the soup reaches boiling point skim. Now, beat 3 eggs for several min., and when the chowder is sufficiently cool not to curdle the eggs, pour the eggs in slowly, stirring rapidly. Then add salt and red and black pepper to taste, as the chowder requires an abundance of each. C. W. RAWSON, Mayor.

FISH AND OYSTERS.

“Not all on books their criticism waste
The genius of a dish justly taste.”

Fish.

The flesh of all fish out of season is unwholesome; to be eatable they should be perfectly fresh, the eyes clear, the gills red, the scales bright, the flesh firm and free from any unpleasant odor; and to secure the best flavor, should be cooked as soon as possible after leaving the water. They should be scaled and cleaned as soon as they come from market, washed quickly without soaking, removing the smallest atom of blood. Sprinkle salt on the inside and put them in a cool place until wanted.

Planked Fish.

Planks of seasoned oak or other hard wood an inch thick are fashioned for this purpose. They are of various sizes. Some have wire supports at the back that admits of standing before an open fire. To these the fish are fastened with two or three tacks and the whole set in a dripping-pan. A new board should be used each time. Oil or butter the heated board, put the fish in place, skin side down; brush fish with oil or butter, and season with salt. Bake about 25 min., basting frequently with melted butter. Serve the fish on the plank laid on a serving-dish. Fill the spaces between the fish and edge of the board with parsley or mashed potato. To put the latter in place, use a pastry-bag and tube. Brush over the potato with beaten yolk of egg; dilute with milk and return to the oven to brown the potato. Saratoga potatoes, radishes and slices of lemon are the garnishes. Spread the fish with butter just before sending to the table.

B. M.

Fish au Gratin.

Sheepshead, Red Flounder or Red Snapper, may be used.

Put on fish in dabs, $\frac{1}{2}$ lb. butter, 3 medium size tomatoes, (sliced) also in pan 1 or 2 lemons same way, then juice of 1 lemon; 1 qt. of French canned mushrooms chopped fine, (leave liquid out) put all over fish; also 2 doz. oysters chopped fine. Pour over all $\frac{1}{2}$ pt. white wine. Put in oven not too hot. Cook $\frac{3}{4}$ of an hr. To be sure it is ready to serve pass fork into flesh at backbone, and if easily raised it is ready, and if stubborn, cook longer.

Have the tureen ready with $\frac{1}{4}$ lb. of crackers or less in it. MEATS.

“Some hae meat and cannae eat,
And some would eat that want it;
But we hae meat and we can eat
So let the Lord be thanket.”

To Boil Ham.

Wash and put to soak over night. In morning put in boiler, skin side down, and cover well with cold water. From the time it begins to boil allow 15 min. to the pound. For instance, if the ham weighs 10 lbs., let it boil $2\frac{1}{2}$ hrs. When half done turn it over in the boiler. Be sure to keep well covered with boiling water. When done set the boiler off and let ham stay in the water until it gets cold. This recipe is tried and true.

SALLIE STEELE MCINTOSH.

Meats and Game.

In cooking meats our object is to retain the nourishment and flavor, consequently we must follow directions exactly the opposite from those of making soup. The flavor and juices of meat depend as much upon the method of cooking as upon the quality of the meat. If cold water and a moderate heat will soften the fiber and draw out the juices, boiling water or a strong, dry heat will retain them, by coagulating the albumen on the surface and to a certain depth within, thus enclosing the meat within a waterproof case or crust which neither permits the juices to flow out nor the water to penetrate within; in this way only is meat juicy and well flavored.

Pot Roast.

Five lb. beef roast, 1 qt. boiling water, 1 pod red pepper, 1 tb. salt. Place meat in kettle over a good fire, brown on one side, turn and brown on the other. Now, add the boiling

water, salt and pepper; cover and cook slowly 15 min. to every lb. After the water evaporates add no more, as there should be fat enough to finish cooking the meat. Serve with brown sauce.

MRS. L. RAWLINGS.

If garlic is used, do not put in till onions are nearly done; broil a good sirloin steak as usual and pour this sauce over it; will serve 4 persons.

MRS. C. R. NEWSOM.

Steak and Tomatoes.

Place in frying pan 1 tb. of lard, 1 onion, let fry a light brown, place steak, after being floured, in this and fry to light brown on both sides. You can't deny

That your success in cooking depends very largely upon the materials you use. A *good* cook and inferior ingredients made a *bad* combination and the result of this combination is inevitable—a failure.

Failures are expensive. They waste alike your labor and your money, to say nothing of the aggravation they cause.

Then why have failures at all when it's so easy to avoid them? Follow the receipts in this cook-book and use only the *best materials* and ninety-nine times out of a hundred you will succeed.

To furnish these materials is our part of the programme. Our long experience in the fancy grocery business has taught us three very good lessons:—

What goods to buy; *When* to buy them, and, most important of all, what goods to let alone. We have passed the experimental stage in our business, and feel that you can rely on our judgment. Purchase your materials from us, and no matter what article you buy, you can depend upon getting the finest quality and absolute freshness.

List of Vegetables to serve with Meat.

Not more than 1 or 2 varieties of vegetables should accompany a course.

With roast beef, the favorite methods of serving potatoes are Franconico or baked with the beef, escaloped, mashed—or mashed and browned. Other vegetables that may accompany the roast are cauliflower, brussels sprouts, new beets, beet greens, spinach, salsify, tomatoes, onions, squash, white turnips, green corn, peas, beans and rice, hominy, javina or macaroni.

Beefsteak, mutton or lamb chops, are accompanied by sweet or white potatoes in any form, freshly cooked or warmed over, or any of the vegetables served with the roast beef. Asparagus is often served with meat, but it is more appropriately served as a course by itself.

PLANTENE is a perfect substitute for either hog lard or butter; use about one-half the quantity of "Plantene" as of either. Observe directions on can.

With stewed or braised beef, potatoes, turnips, parsnips, carrots, tomatoes, peas, beans or vegetables a-la-jardiniere are served. With corn beef serve boiled potatoes (sweet or white); turnips, cabbage, beets, carrots, beet tops, spinach, dandelions, brussels sprouts, cauliflower and parsnips.

Boiled mutton or lamb may be accompanied by boiled potatoes, turnips, salsify, onions, carrots, cauliflower, brussels sprouts, spinach or green beans.

Roast mutton calls for same vegetables as roast beef and also red current jelly.

With roast lamb serve potatoes, green peas, beans, spinach, summer squash, white turnips and asparagus, if this be not desired as a separate course.

With veal, roast or braised, choose white turnips, spinach, beet tops, young beets, peas, beans, dandelions or escalloped cabbage.

Roast pork calls for potatoes (white or sweet), squash, onions, turnips, parsnips, spinach, salsify or cauliflower and apple sauce.

With poultry, roasted or boiled, serve potatoes (white or sweet), turnips, celery (cooked or uncooked), onions, brussels sprouts, cauliflower, squash, mushrooms, green corn, peas, beans, rice and cranberry sauce. Asparagus accompanies broiled spring chicken.

With game, the vegetables are usually prepared in a somewhat elaborate manner. The vegetable considered the vegetable par excellence is celery, which may be served plain, stewed in cream sauce or as a salad, cauliflower au gratin, spinach a-la-cream or peas. Olives or black currant jelly are passed with the duck; currant jelly with venison, and fried hominy with goose and duck.

PLANTENE is a perfect substitute for either hog lard or butter; use about one-half the quantity of "Plantene" as of either. Observe directions on can.

VEGETABLES.

“Fruits, vegetables and doctors do not thrive together.”

Vegetables.

All vegetables should be used when as fresh as possible. Wash and let them lie in cold water till ready to use. Young green vegetables should be cooked in boiling salted water.

Onions, if boiled in pure, soft water, are almost tasteless, and all the after salting cannot restore to them the sweet, saline taste, and the strong aroma which they possess when boiled in salted water. Strong flavored vegetables, like turnips, cabbage, and greens, should be put on in a large quantity of water. More delicate ones, such as green peas, asparagus, etc., require less water.

The cooking of potatoes is indeed an art! They are dressed in some way in almost every family every day. The nutritious part of the potato lies near the skin; if pared at all, should be very thin. They are best cooked in the jacket, either boiled or baked. When boiled, they should be put on in just boiling water enough to cover them, without salt, and boil slowly, till nearly done, then throw in a c. of cold water; it will chill the surface, and the potatoes will be mealy throughout. When done drain off every drop of water and sprinkle with salt; leave off top and shake occasionally, and expose every side to the air. Remove skins and serve immediately in uncovered dish with butter, pepper and salt.

Potatoes are more wholesome baked than boiled. If the shell of a baked potato is broken open, but not pulled apart, and put in a warm place, they will be as nice as when served right from the oven.

PLANTENE is a perfect substitute for either hog lard or butter; use about one-half the quantity of “Plantene” as of either. Observe directions on can.

Stuffed Cabbage.

Use a head of white cabbage; remove carefully $\frac{1}{2}$ doz. of the outer leaves, cut a good sized circle in the top with a sharp knife; reserve a few pieces cut off the top, and then remove the inside of the cabbage, leaving only a frame; be very careful not to cut into it, or the dressing will escape. Now, put the frame in salted water and boil 10 min.; chop the inside of the cabbage into small bits; put in cold water and boil until tender; soak $\frac{1}{3}$ of a loaf of bread in cold water; squeeze out all the water; add $\frac{1}{4}$ lb. of pork; put on a fryer with 2 tb. butter; when hot, put in the soaked bread and cooked cabbage; fry until it leaves the side of the fryer; remove to a bowl; season with salt, pepper and ginger. Add 2 eggs, mix well, fill in the cabbage; put on the top, tie the outside leaves around and bake.

BREAD.

“Truly, bread is the staff of life.”

Hints on Bread Making.

Good bread should have first place on our table every day in the year. Three things are essential to good bread, viz: Good flour, good yeast and judicious baking, of course, might be added, experience, without which none of the domestic arts can be carried on successfully. One pint of liquid should be used with every loaf of bread. The excellency of bread depends much upon the thoroughness of its kneading. Kneading renders the gluten so elastic that it is capable of expanding to twice its bulk without breaking or cracking. Always give bread plenty of time to expand, but be careful that it does not fall, as it is then sour and nothing can be added to restore its original sweetness. As soon as bread is done remove it from the oven, tip it on the bread board so that the air can circulate around it. Do not cover if you like a sweet, crisp crust. When perfectly cold put it in a clean tin bread box without any wrapping, as cloth absorbs the moisture and soon sours and moulds, destroying the flavor of the bread.

To test oven, if one can hold the hand in the oven to count 20 it is right, or throw a little flour on the floor of the oven, if it browns quickly, it is right. Hot bread, or hot cake, should always be cut with a hot knife. If so cut it will not become clammy.

Quick Yeast.

Put no water to it, it will make its own essence, and from time to time during the process of cooking pour the essence into a bowl and keep to return to chicken when salad is made. All the meat can be used in the salad. Strip the meat from bones and cut in squares $\frac{1}{2}$ in. thick; have 8 hard boiled eggs mashed and mix with meat; also, $\frac{1}{2}$ t. of English mustard. Then take celery that has been on ice and cut up in blocks like the meat, half as much celery as you have eggs and meat; lastly add juice of 3 lemons and mayonnaise to taste. PRESERVES, JELLIES, ETC.

“Give no more to every guest
Than he’s able to digest;
Give him always of the prime,
And but little at a time.”

—Swift.

The richest juices of any fruit lie immediately under the skin and around the core. Here, also is the gelatinous principle without which the fruit cannot jelly. Therefore do not make the mistake of peeling and coring any fruit for jelly.

Cantaloupe Preserves.

Take a melon half ripe, cut in pieces of equal size, peel off the rind and take out the seed. Soak in lime water for 6 or 8 hrs. (dissolving 2 handfuls of lime in 3 gals. of water). Change the pieces from top to bottom while soaking. Then soak in clear water, changing twice. Then scald in weak alum water, let them remain in until cold put again in cold water.

Make a rich syrup, using $1\frac{1}{2}$ lbs. sugar to 1 lb. fruit. Strain the boiling syrup over the fruit and let stand until the next morning, turning a large dinner plate over to hold the fruit in the syrup. Next day boil slowly until tender and clear. Flavor as you like with lemon, vanilla or ginger.

MRS. ANNA TAYLOR.

Watermelon Rind Preserves.

make a syrup of 6 lbs. sugar and water sufficient to cook the fruit well done and transparent. If the flavor of ginger is liked make a strong tea and add to syrup. Cinnamon and cloves are good also for flavoring.

MRS. JAMES W. ARMSTRONG.

Pineapple Preserves.

Pare the fruit, and with sharp pointed knife extract the eyes. With a silver fork tear fruit off the core in pieces of moderate size. Weigh fruit and to every pound of fruit add 1 lb. of sugar. Place in saucepan in alternate layers of fruit and sugar till all is used; allow a small cup of water to each pound of sugar. Heat slowly to boiling point. When the fruit has been scalded 3 minutes skim, then dip out the fruit putting it into platters, returning to kettle all syrup that drains from fruit. Boil syrup $\frac{1}{2}$ hr., skimming frequently. Then add the pineapple and boil 25 min., when it should be done. If the syrup is not as thick as desired skim out fruit once more, placing it on platters. Then boil syrup to desired thickness, cooling a little in saucer to test its thickness. Return fruit for final scalding and seal in jars.

MRS. JORDAN.

Fig Preserves.

Peel the figs as thin as possible. Have a cup of lime dissolved in a dish pan of water and drop the figs in as you peel them. Let them stand in the lime water about 2 hours, then wash them off, using a quantity of fresh water. One pound of fruit to $\frac{3}{4}$ of a pound of sugar, add enough water to dissolve the sugar, let the sugar come to a boil before putting in the fruit. Let them boil slowly till they become transparent. About 10 minutes before taking them up drop a few drops of lemon in the preserves, it gives a flavor; don't use a whole lemon, as it does not require so much.

PLANTENE is a perfect substitute for either hog lard or butter; use about one-half the quantity of "Plantene" as of either. Observe directions on can.

Strawberry Preserves.

Scald jars and rubbers thoroughly and have ready before cooking berries. Put up air tight.

EDNA WHITTLESEY.

INVALID DIET.

Scraped Beef.

This is simply beef from which all indigestible substances have been removed. Take a tender piece of beef, cut across the grain, scrape with a spoon until all the pulp is removed; make a fresh surface by cutting off the scraped part with a thin, sharp knife; proceed in this way until all the meat is reduced to a pulp. If necessary, it may be eaten raw, spread very thin on slices of toast, or the pulp may be put in a hot fryingpan with a little butter and allowed to barely cook through, stirring and turning constantly. A weak stomach will often retain scraped beef when it refuses all other solid foods.

Buttermilk.

Buttermilk when sweet and fresh from the churn is nutritious and wholesome. There are many forms of dyspepsia in which it "will set on the stomach" when hardly anything else will. In cases of fever it sometimes becomes a question how to nourish the patient. In such cases buttermilk is sometimes found to be the best food that can be given.

MISCELLANEOUS.

Home Made Mustard.

Some one wished a recipe for prepared mustard. Here is a French mustard we have used for 15 years:

Break 1 egg into an agate dish which may be set on the fire, beat egg light. Pour enough ground mustard into a tea cup to half fill it. Stir into this 2 slightly rounded tablespoonfuls of granulated sugar and pinch of salt. Fill cup up with vinegar, mix until free from lumps; pour on the beaten egg and set on the fire. Stir constantly until it thickens, 3 or 4 minutes will do. When cooked add a lump of butter size of small walnut or teaspoonful of olive oil.

If she will take a $\frac{1}{2}$ pt. of gasoline and $\frac{1}{2}$ oz. of camphor gum dissolved in it and bathe the parts affected, the results will be magical. Be careful—the gasoline is inflammable, and must not be used near an open fire or lamp.

What is known as "Kerosene Emulsion" is one of the best insect destroyers. It is made as follows: Dissolve 1 lb. of turpentine soap in 2 gal. water. Heat this solution, and while hot add 2 gal. of kerosene, and churn the mixture with a force pump for 8 or 10 min., or until it forms a cream, which thickens on cooling, and will stick to glass without oiliness. Put this in a close jar and when to be used dilute with 1 part of Emulsion to 9 of cold water.

If circumstances are such that it is difficult to obtain ice, you may still keep your butter sweet and firm, even though you are without a cellar. If the butter is not too soft, roll in a napkin and immerse it in flour. The result will be all that could be desired. If the butter is melted, put it in a bucket, place on the lid and set in the flour, always being careful to keep it entirely covered with the flour. This is a method practiced by cowboys on the ranches, remote from centers of civilization, where ice cannot be had at any price.

"I want no monument of stone, but let my children plant at the head of my grave a Pecan tree, and at the foot of my grave a Walnut tree, and when these trees shall bear fruit, let the Pecans and Walnuts be given out among the plain people of Texas, so they may plant them and make Texas a land of trees."
