THE IMPERIAL DICTIONARY OF UNIVERSAL BIOGRAPHY is now complete: we would say a few words in presenting it to the Public.

Next to History, in its larger sense, Biography is the most valuable and interesting record which Literature can offer to mankind. If the one presents us with the great drama of humanity in its entire action and full development, the other furnishes us with the innumerable and subordinate dramas of all the prominent actors on the world's stage. It is often only in the lives of individuals that we discover the secret springs and hidden causes of those mighty events which advance or retard the progress of man—which influence his destiny and revolutionize the world; and thus the rays of light emitted from individual Biography converge upon the page of History, and enable us to read it more clearly.

We do not deem any apology necessary for the appearance of a new English biographical work at the present moment. The subjects for Biography are ever increasing, but at no period has that increase been more rapid or important than now. Whatever stimulates the energies of an age, makes it fruitful in events and multiplies its actors. Sciences and arts are moving with an accelerated pace, and new discoveries and inventions are daily making their authors notable. Great political influences have, within a recent period, passed over the world, and are still agitating it. The wars in Europe and Asia, especially in the Crimea and India, have produced great men as suddenly as the exigencies that required them, and names unheard of one year were illustrious the next. Our most recent biographical works thus became prematurely deficient: we have stepped in to remove the defect.

While we have availed ourselves of all accessible sources of information, we have secured the independent treatment of every memoir. Facts and dates are the common property of all chroniclers, while the mode of dealing with subjects, and the light in which they are presented, will ever be affected by the minds of original thinkers.

The limits of the Work have necessitated the exclusion of names of minor importance. In the delicate and arduous duty of selection, both as regards the dead and the living, the importance of the individual has been our guide; though we have, where the claims were otherwise equal, given the preference to celebrities of our own nation.

J. F. W.

TO THE  
Right Honourable Henry Baron Brougham and Vaux,  
&c. &c.

---

MY LORD,

In offering to the public this work commemorating the great minds that in every age and in every country have, each in its own department, aided the progress of humanity, no fitter name can be found to adorn its dedication-page than that of your Lordship.

Philosopher, statesman, and jurist—author, orator, and scholar—you combine in yourself those elements that, singly, have made so many illustrious. We recognize in you what high genius, assiduous cultivation, indomitable energy, and a life-long industry can achieve in almost every department of intellectual acquirements. Our own age honours you as one of the great diffusers of knowledge—one of the truest of social civilizers: posterity will place you amongst the intellects, many-sided and capacious, that leave their impress on the age in which they have lived.

The very favourable judgment which your Lordship has been pleased to pronounce on the work is its highest recommendation to the public, and has been the strongest incentive to myself and my fellow-labourers to make "THE IMPERIAL DICTIONARY OF UNIVERSAL BIOGRAPHY" worthy of your Lordship's patronage.

My Lord,

Your Lordship's obedient Servant,

JOHN FRANCIS WALLER, LL.D.  
EDITOR.

## LIST OF CONTRIBUTORS TO VOL. I.

- W. L. A. Rev. W. LINDSAY ALEXANDER, D.D., Professor of Divinity, Edinburgh.
- A. A. Sir ARCHIBALD ALISON, Bart.
- J. A. Rev. JAMES ANDERSON, Edinburgh.
- W. A. WILLIAM ANDERSON, Secretary to the Scottish Literary Institute.
- J. A. Rev. JOSEPH ANGUS, D.D., President of Stepney College, Regent's Park, London.
- J. A., D. JOHN ANSTER, LL.D., Regius Professor of Civil Law in the University of Dublin.
- T. A. THOMAS ARNOLD, B.A., Professor of English Literature, R.C. University, Dublin.
- G. A. Rev. GEORGE ASPINALL, Ph.D.
- E. B. EDWARD BAINES, M.P., Leeds.
- J. B., O. Rev. JOHN BAINES, M.A., St. John's College, Oxon.
- T. B. THOMAS BAINES, F.S.A., London.

THE  
**IMPERIAL DICTIONARY**  
 OF  
**UNIVERSAL BIOGRAPHY:**  
 A SERIES OF ORIGINAL MEMOIRS.

AA

AAR

AA, CHRISTIAN CHARLES HENRY VAN DER, for fifty-one years pastor of a Lutheran congregation at Haarlem, was born at Zwoll in 1718. He studied theology at Leyden and Jena, and was long secretary to the Haarlem academy of sciences, to the establishment of which he had prominently contributed. A medal was struck to commemorate the celebration of the fiftieth anniversary of his pastorship. Various able dissertations of his on physical science were published in a Dutch periodical. Died at Haarlem in 1793.—E. M.

AA, GERARD VAN DER, and his two sons, ADOLPHUS and PHILIP, three Dutch patriots, who acted a distinguished part in the emancipation of their country from the Spanish yoke in the reign of Philip II.

AA, PETER VAN DER, an eminent lawyer and writer on jurisprudence, born at Louvain about 1535. After being professor of law in the university of Louvain, he was appointed in 1565 assessor of the supreme council of Brabant, and in 1574 president of the high court of justice at Luxemburg. Died in 1594.

AA, PETER VAN DER, a celebrated Dutch publisher. He commenced business at Leyden about 1682, receiving into partnership his two brothers, HILDEBRAND, an engraver, and BALDWIN, a printer. His principal publications were,—“Voyages and Travels relating to the East and West Indies,” in 28 vols. 12mo; “Pleasant Gallery of the World, with Maps and Views,” in 33 vols. folio; “Icones Arborum;” “Travels in Tartary, Persia,” &c., in 2 vols. 4to; “Vaillant’s Botanicæ Parisiense;” “Gronovius’ Greek Antiquities,” in 13 vols. folio; “Grævius’ Roman, Italian, and Sicilian Antiquities,” in 57 vols. folio; and “Erasmus’ Works,” in 11 vols. folio. Died in 1730.—E. M.

AA, THIERRY VAN, a Dutch painter, born at the Hague in 1731, was a pupil of Johann Heinrich Heller. Both as a man and as an artist, he was very remarkable for his grace, for his brilliancy of conception, and erudition. His specialty was to paint the panels of carriages, which, according to the then prevailing fashion, were most elaborately ornamented with pictures. Thierry excelled in representing Cupids, and other graceful subjects. He died, universally esteemed, in 1809.—R. M.

AACS or ACS, MICHAEL, a Hungarian philosopher and divine, was born at St. Martin in 1631. After studying in Germany, he successively held a pastoral charge at Hemegeyes-Ala, Raab, and Rosenau. In 1669 he published at Tübingen a work, entitled “Fontes Calvinismi Obstructi,” and a Hungarian work at Strasburg in 1700. Died in 1708.

AACS or ACS, MICHAEL, a Hungarian divine, son of the preceding, was born at Raab in 1672. After completing his studies at Wittemberg and Tübingen, he was appointed chaplain to a Hungarian regiment. He wrote several theological works in Latin and Hungarian. Died in 1711.

AAGARD, CHRISTIAN, born in 1616 at Wiborg, was appointed in 1647 professor of poetry in the university of Copenhagen, where he had studied, and in 1658, principal of the college of Ribe. He has left some Latin poems remarkable for purity and elegance of diction. Died in 1664.

AAGARD, NIELS or NICHOLAS, elder brother of the preceding, born at Wiborg in Denmark in 1612. At first pastor at

Faxoe, he became in 1647 professor of rhetoric, and librarian at Soroe. Besides several Greek and Latin poems, he published various critical dissertations, one of which is on the style of the New Testament. Died in 1657.

AAGESEN, SVEND, the oldest Danish historian, better known by his Latin name of SUENO AGGONIS FILIUS. Under the auspices of Absalon, archbishop of Lund, he drew up in barbarous Latin a compendious history of the Danish kings from the year 300 to 1187. He also translated into Latin the military code of Canute the Great. Died about the beginning of the thirteenth century.—E. M.

AALI, a celebrated Turkish writer, author of a history of the Ottoman empire from its foundation to within a few years of his death, which took place in 1597.

AALST, the name of several Dutch artists. See ÆLST.

AARE, DIEDERIK or DIRK VAN DER, bishop and prince of Utrecht, famous for his obstinate and sanguinary war with the count of Holland. Died in 1212.

AARON, a Hebrew of the tribe of Levi, the son of Amram, and the brother of Moses, with whom he co-operated in effecting the deliverance of his countrymen from Egypt. He was a man of ready and effective eloquence, and served as a medium of communication between Moses and the people of Israel. After they reached the desert of Arabia, he was invested with the office of high priest, which was made hereditary in his family. Although a more persuasive speaker than Moses, Aaron was not possessed of the same strength of character or depth of religious conviction. While his brother was upon the mount, receiving the law from Jehovah, he yielded to the solicitations of the people, and made for them a golden calf, doubtless an imitation of the Egyptian idol Mnevis. At another period, he manifested some jealousy of the superior position and influence of Moses, for he joined with Miriam, their sister, in the attempt to raise up opposition to his authority. Afterwards he was doomed to encounter a similar trial himself, for a number of the leading men in the different tribes conspired against him, on the ground that he had no exclusive right to the priesthood. This conspiracy was signally defeated. The rebels were swallowed up by the yawning earth, and when their friends murmured at the severity of the stroke, a fiery pestilence broke out and destroyed great numbers of them. On the occasion of the miraculous supply of water at Zin, Aaron exposed himself to the divine displeasure, by failing to honour God as the source of the blessing, and therefore he was prevented from entering the promised land. When the Israelites reached mount Hor, he was commanded to ascend to its summit, to strip himself of his priestly garments, to transfer them to his son, and then prepare for death. He died in the year 1451 B.C., aged 123 years, and the whole congregation mourned for him thirty days. The supposed place of his burial is still pointed out.—W. L.

AARON, ABIJOB or AVIOV, a celebrated rabbi of Thessalonica, author of “Notes on Esther,” selected from rabbinical writings. Lived in the sixteenth century.

AARON, ACHARON (or the younger), a learned Karaite Jew of Nicomedia, author of various MS. works on rabbinical theology. Flourished in the fourteenth century.

AARON OF ALEXANDRIA, a presbyter, and writer on medicine, of the seventh century. His work, entitled "Pandects," is a translation into Syriac of extracts from Greek medical authors. It contains the first mention of the small-pox, which, as is supposed, originated in Egypt, and was diffused by the Arabs with their conquests. A translation of Aaron's work into Arabic in 683, is said to have first led the Arabs to the study of the medical writings of the Greeks.—E. M.

AARON AL RASCHID. See HAROUN.

AARON, BEN-ASHER, a rabbi of the eleventh century, who wrote a treatise on Hebrew accents, and laboured to correct the Hebrew text of the Old Testament, by collecting various readings. While he was collecting MSS. in the West, Ben Naphtali was travelling for the same purpose in the East. These two laborious critics have, by some, been erroneously supposed inventors of the Hebrew vowel-points.—E. M.

AARON, BEN CHAJIM, chief Rabbi of Fez. Died at Venice, about 1609. Author of various works.

AARON, BEN JOSEPH SASON, chief of the synagogue of Thessalonica, known as the author of two works, "Torath Emeth," or "The Law of Truth," Venice, 1616; and "Sephath Emeth," or "The Lip of Truth," Amsterdam, 1706. The former of these works treats of certain niceties in the Hebrew code.

AARON, BERACHIA, a celebrated Italian rabbi, who wrote the book called, "Maavar Jabbok," a treatise on holy living and dying. Printed at Mantua, A.D. 1626.

AARON, HARISSON, a learned and amiable Karaïte Jew, who practised medicine at Constantinople in the thirteenth century, author of various theological works, parts of which have been published with a Latin translation.

AARON, ISAAC, a Byzantine Jew, interpreter of western languages to Mannel Comnenus. For alleged treachery, Manuel deprived the wretched man of his eyes, and the Emperor Isaac II. caused his tongue to be cut out.

AARON MARGALITHA, a Polish rabbi, and professor at Slawkow in Bohemia, who afterwards became a convert to the Christian faith. He was born in 1665. After his conversion, he wrote several tracts and books, in which he employed his rabbinical learning to illustrate various parts of Christian doctrine. It would appear that he first joined the Calvinists; then, at a later period, became connected with the Lutheran church; and it is asserted, that before the close of his life he renounced Christianity altogether, and sought to return to Judaism, pleading, we are told, that the Christians had deserted him, and left him in destitution. He died about the year 1730 in a dungeon at Copenhagen, into which he had been cast as an apostate.—J. B.

AARON NASI BABEL, a Jewish cabbalistical writer, who lived at an early period of the Christian era. His name signifies "Aaron, prince of Babylon," which has been explained as "Head of the College." This is the title given him in the Mantuan edition of his works, published in 1562.

AARON, PIETRO, a musician, and a monk of the order of the Bearers of the Cross of Jerusalem, who was born of obscure parentage at Florence in 1480. The schools of music established in Naples and other parts of Italy, during the latter half of the fifteenth century, by the Flemings, who were the first nurses of the infant art, excited the interest of the people, and engaged the care of their rulers; and when an Italian appeared among his countrymen who was competent to teach on the same subject, the feeling of nationality was added to that of artistic esteem, to give him encouragement. He was accordingly appointed one of the singers in the pontifical chapel by Leo X.; and when he opened his own school of music in 1516, it was most numerously attended. He published several tracts upon music, treating of its history, of its arithmetical, geometrical, and harmonic proportions, of the principles of counterpoint, and of the practice of ecclesiastical singing: they contain little original matter, but consist chiefly of an elucidation of the principles of Guido, and a development of those of Tinctor. They were all written in Italian, but the "Libri tres de Institutione Harmonica" was translated into Latin by his friend Flaminio, who did him also the good office of reconciling a quarrel between him and the famous Franchino Gaffurio, relative to a passage in one of his books, which the mediator finally proved to be a misprint, and thus prevented the ill consequences the dispute might have drawn upon Aaron. The date of his death is uncertain, but it must have been subsequent to 1545, when his "Lucidario in Musica" was first published. He had the individual distinction

of having his portrait placed among those of eminent musicians in the ducal gallery at Florence while he was yet living. He died, holding the office of canon at Rimini. A list of his printed works, interesting because of their early date, is to be found in Schilling's "Lexicon der Tonkunst."—G. A. M.

AARON, ST., a monk of the sixth century, who founded the oldest monastery in Brittany, near which afterwards rose the town of St. Malo, so called from his fellow-labourer in converting the pagan natives.

AARON, ZALAHIA, a Spanish rabbi of the thirteenth century, author of a work on the "Precepts of Moses."

AARON and JULIUS, two British martyrs, whose original names are unknown. They were put to death with cruel torments under Diocletian in 303. Two churches in which they were buried were dedicated to their memory at Caerleon, the old metropolis of Wales.

AARSCHOT, PHILIP DE CROI, Duke of, a native of the Netherlands, representative of Philip II. at the Diet of Frankfurt, convened for the election of an emperor. Disgusted at the intolerance and cruelty of the Spanish authorities in his native country, he retired to Venice, where he died in 1595.

AARSENS, CORNELIUS VAN, a Dutch statesman, born in 1543. After being forty years pensionary, and registrar to the States-General, he died in 1624.

AARSENS, FRANCIS VAN, son of the preceding, a Dutch statesman, on whose memory the share he took in the judicial murder of the popular leader Barneveldt has left an indelible stain, was born at the Hague in 1572. Early trained by his father to diplomacy, he proved an able and successful negotiator. He was fifteen years at the French court, first as resident, and afterwards as ambassador from the United Provinces. He was sent to England in 1640, and negotiated the marriage between William, son of the prince of Orange, and the daughter of Charles I. He long exerted great influence at the court of Louis XIII. Cardinal Richelieu thought so highly of his capacity, that he used to say he had known only three great statesmen—Oxenstiern, Viscardi, and Francis van Aarsens. He died in 1641.—E. M.

AARSENS, FRANCIS VAN, grandson of the ambassador; author of a book entitled "Voyage en Espagne," &c., Paris, 1665. He was drowned in 1659, on the passage between England and Holland.—The names of three other persons belonging to this family are mentioned in the Dutch annals.

AARTSBERGEN, ALEX. VAN DER CAPELLEN, a Dutch statesman, adherent of the house of Orange, published historical memoirs, comprehending a view of Dutch affairs from 1611 to 1632. Enlightened by study, travel, and experience, he was tolerant and conciliatory, and was highly eulogized by Gerard J. Vossius. Died in 1656.

AARTSEN, PETER. See AERTSEN.

AASCOW, URBAN-BRUAN, a Danish naval surgeon, who published at Copenhagen, in 1774, an interesting journal of observations on the maladies which raged in the Danish fleet equipped in 1770 for the bombardment of Algiers.

AASSIM, son of Abderrahman Effendi, and author of a continuation of Kaefssade's "Turkish Anthology." Died in 1675.

AASSIM, ISMAEL EFFENDI, a Turkish mufti, author of several historical works, letters, &c., which have been very highly praised. His library, at his death, contained more than 1000 volumes. Died in 1758.

ABA, SAMUEL, king of Hungary, brother-in-law of St. Stephen, the first Christian king of that country. Elected in 1041, he drove from Hungary his rival Peter, "the German," nephew of St. Stephen, but was afterwards defeated by the Emperor Henry III., and finally massacred in 1044 by his own subjects.

ABAD I., appointed grand-cadi of Seville and governor of the province by the Moorish king of Cordova, took advantage of the defeat and death of that prince to assert his independence, and assume the title of king of Seville. By energy and artifice he triumphed over a confederation formed against him, but in 1042 died suddenly when on the point of reducing Cordova, and extending his sway over southern Spain.

ABAD II., his son and successor, was born in 1012, and surpassed his father in power and celebrity. He made himself master of Cordova by treachery and bribery, and conciliated the inhabitants by largesses and public entertainments. He built many splendid palaces, but only one mosque. He had several magnificently ornamented cups, made of the skulls of enemies. We read that he died of grief for the loss of a favourite daughter.

and that on his deathbed he exhorted his son to aim at the entire conquest of Spain, an enterprise he himself would probably have achieved had not luxury diverted his attention. Died in 1069.

ABAD III., son and successor of the preceding, was less brave and able, and far more humane than his father. He excelled in poetry, and ardently encouraged science and literature. Alarmed at the progress of Alfonso, king of Castile, he invited into Spain, Yusuf, second king of Morocco, who having discomfited Alfonso in a great battle, began to treat Abad and the other Moslem princes as vassals. Abad having ventured to resist, was completely subdued and sent captive into Africa, where he died in 1095, after four years' confinement, during which his daughters supported him by their manual labour. Through all vicissitudes he displayed unvaried equanimity.—E. M.

ABAD Y QUEYPEO, MANUEL, a Spanish bishop, born in 1775. After taking orders, he went to settle in Mexico, where he held the office of judge. In 1809 he became bishop of Mechoacan; but when the insurrection in New Spain broke out, he adhered to the royal cause, and was obliged to retire for a time from his diocese. When the course of events permitted his return, he urged on the royalist authorities conciliatory measures, and, in consequence, was denounced by them as a traitor. On the restoration of Ferdinand VII., the bishop, who had ventured to express without reserve his opinion of the Inquisition, was recalled from his see, brought to Spain, and kept in prison till the revolution of 1820 restored him to liberty. He was appointed a member of the provisional Junta, and, subsequently, bishop of Tortosa; but the Inquisition again arrested him, and condemned him to six years' solitary confinement. He died in prison, but the date and circumstances of his death have never been precisely ascertained.—E. M.

ABADIA, FRANCIS XAVIER, a Spanish general, born at Valencia in 1774. Being first staff-officer of the insurgent army of La Mancha, when Spain was occupied by the French, he retired with what remained of his troops to Cadiz, where, after acting for a few days as minister of war, he was made a major-general. In 1812 he obtained the command of the army of Galicia, which he had organized; and, on the restoration of Ferdinand VII., he was made a lieutenant-general, and inspector of the forces assembled at Cadiz for the expedition to Spanish America. Died in 1830.—E. M.

ABAFFI or APAFI, MICHAEL, became in 1661 prince of Transylvania. During the truce between Austria and the Porte, Abaffi quietly enjoyed his throne under Ottoman protection, and remained faithful to the sultan till 1683. The reverses sustained by the Turks induced him to enter into a defensive alliance with the emperor in 1687. Died in 1690.

ABAFFI, MICHAEL, the son and successor of the preceding, was born in 1677. Count Tekeli, abetted by the Turks, laid claim to the principality, and gained possession of part of it in 1690. At the same time the grand vizier, Cuprili, defeated the Imperial army, and retook Belgrade and other important places. Tekeli proved ultimately unable to maintain his ground, and, at the peace of 1698, Transylvania was definitively ceded to Austria. The young prince Michael was obliged to renounce his rights, and, receiving an Austrian pension, he resided at Vienna till his death in 1713.—E. M.

ABAGA or ABAKA KHAN, second Mogul emperor of Persia, succeeded his father, Hulaku Khan, in 1265. He restored Bagdad, then in ruins, and extended his sway over a great part of Western Asia. He died at Hamadan in 1282.

ABAILARD. See ABELARD.

ABA'ISI, TOMMASO, an Italian sculptor of the fifteenth century, mentioned as having executed in 1451 several wooden statues for the cathedral of Ferrara.

ABALLA, a learned lady, born at Salerno about the middle of the 13th century, became celebrated as a physician in the reign of Charles of Anjou. She left a work, "De atra bili."

ABAMONTI or ABBAMONTE, JOSEPH, a Neapolitan lawyer and patriot of great talents, born about the year 1759. In 1798 he was appointed secretary-general to the Cisalpine republic, and member of the Neapolitan executive. On the restoration of the king of Naples in 1799, Abamonti was condemned to death, but pardoned. He then repaired to Milan, and resumed his functions as secretary-general, which he continued to discharge till, in 1805, the Cisalpine republic merged in the kingdom of Italy. He returned to Naples, and spent the remainder of his life in retirement. Died in 1818.—E. M.

ABANCOURT, CHARLES X. J. F. D', born in 1758. In June, 1792, he became minister of war under Louis XVI., but was put to death at Versailles the following August.

ABANCOURT, F. J. V. D', a French poet and dramatic writer, born at Paris in 1745. Died in 1803.

ABANO, PIETRO DI, or PETRUS APONUS, a famous professor of medicine at Padua, was born in 1250, and died in 1315. His most important work is his "Conciliator differentiarum Philosophorum et præcipue Medicorum," printed at Mantua in 1472, folio.

ABANTIDAS, son of Paseas. He murdered Clinias, father of Aratus, 264 B.C., and thus became tyrant of Sicyon, but was himself murdered some years afterwards.

ABARBANEL. See ABRABANEL.

ABARCA DE BOLEA Y PORTUGAL, DON GERONIMO, a grandee and historian of Aragon, of the sixteenth century. He wrote, in Latin, a history of the kingdom of Aragon, still unpublished. The historian Zurita, who praises it highly, derived from it many important documents.

ABARCA, DONA MARIA D', a Spanish lady, celebrated as an amateur painter of portraits. Her productions were greatly admired, even at a time when painting had attained its highest degree of cultivation in Spain. She was living in 1650.

ABARCA, PEDRO, a Spanish jesuit, professor of theology at Salamanca, born in 1619. Besides various theological works, he published "Annals of the Kings of Aragon." Died 1693.

ABARIS, a Scythian and priest of Hyperborean Apollo, lived, some say, before the Trojan war, and others, in the time of Pythagoras. His history is mostly mythical, as well as self-contradictory. He was fabled to have traversed the air on an arrow, the gift of Apollo, and to have lived without food. He professed to work miraculous cures. Plato speaks of him as a great enchanter, and the later Platonists tried to invest with importance his pretended miracles.—E. M.

ABASCAL, DON JOSE FERNANDO, viceroy of Peru, was born at Oviedo in 1743, and entered the army in 1762. For distinguished military and civil services in the West Indies and South America, he was made viceroy of Peru in 1804. Lima greatly flourished under his able and enlightened administration. He zealously promoted public instruction, and effected many important administrative and judicial reforms. By great prudence and energy, he maintained the authority of the mother-country in Peru, after the other Spanish provinces had declared their independence. He even sent extensive military supplies to his countrymen in Spain, during their war with Napoleon. In 1812 he received high honours, but in 1816 was abruptly superseded. He died at Madrid, 1821.—E. M.

ABASSAIL, sister of the famous caliph, Haroun al Raschid, given by him in marriage to his vizier, Ja'far, on condition that she should remain a virgin. But the compact was broken, herself disgraced, and her husband put to death. See HAROUN.

ABATI. See ABBATE.

ABAUDIUS, abbot of St. Peter's at Chartres, a contemporary of Abelard, and one of his literary opponents in a tract called "De fractione corporis Christi."

ABAUNZA, PEDRO D', born in Seville in 1600. He was an advocate in the courts of his native town, and left two works on subjects connected with his profession, only one of which was thought worthy of publication. He died in 1649, during the prevalence of a pestilence in Seville.

ABAUZIT, FIRMIN, a distinguished scholar and theological writer, born in Languedoc, 1679. The Huguenots were at that time suffering severe persecution, and Abauzit, in his tenth year, was forcibly taken from his widowed mother, who belonged to the protestant church, and placed in a Roman catholic seminary. His mother soon succeeded in rescuing him, though at the price of her own imprisonment, and sent him to Geneva, where she ultimately joined him. Here Abauzit prosecuted his studies, and made rapid progress in the various arts and sciences. He subsequently visited Holland and England, and was honoured with the friendship of Bayle and of Sir Isaac Newton. William III., who had a high opinion of his talents and learning, urged him to take up his residence in England; but in accordance with the entreaty of his mother, he returned to Geneva, and took an active part in the translation of the New Testament, published in 1726. He made many important scientific discoveries, and also found leisure to prepare various theological treatises, dogmatical, exegetical, and apologetical, as well as some controversial

writings against the Roman catholic church. His "Essay upon the Apocalypse" excited great attention at the time, but the opinions advanced in it are by no means satisfactory. An imperfect edition of Abauzit's works was published in London, 1773. He died at Geneva in 1767.—J. T.

ABAZA, Pasha of Bosnia, a general of great military capacity, born in 1617. He revolted against the sultan, Mustapha I., on the pretext of wishing to avenge the murder of Sultan Osman. Abaza was afterwards sent by the Porte, at the head of an army of sixty thousand men, against the Poles; and subsequently against the Persians, but died soon afterwards.

ABBA, a Jewish author, who wrote a work, printed in 1543, explaining the difficult and foreign words in the Talmud. It has been conjectured, and with great probability, that Abba is not the full name of the author, but a contraction, composed of the initial letters of some such name as Abraham Ben Asher.

ABBA ARICA, a learned Jew, better known under the title of Rav, the founder of a celebrated college in the city of Sora, over which he presided till his death in A.D. 243. He was the author of two works called "Siphra" and "Siphri."

ABBA THULLE, sovereign of the Pelew islands, who showed remarkable kindness to Captain Wilson and the crew of the *Antelope*, after their shipwreck in 1783. His son, a youth of great promise, whom he sent to London for his education, died there of the small-pox in December, 1784. Keate's "Account of the Pelew Islands, from the Journal of Captain Wilson," will be found extremely interesting.—E. M.

ABBACO, ANTONIO, an Italian architect and engraver of the sixteenth century, disciple of San-Gallo. In 1558 he published a work on architecture, with engravings by himself. He also engraved the plans of St. Peter's from designs by San-Gallo.

ABBACO, PAOLO DEL, a Florentine mathematician and poet of the fourteenth century. He left several unpublished works on arithmetic and algebra, and is said to have been author of the first almanac—the first, at least, that appeared in Italy.

\* ABBADIE, ANTOINE and ARNOLD MICHEL D', French naturalists, of Irish extraction, who visited Abyssinia in 1835, and, after spending many years in exploring that kingdom and the adjacent regions, communicated to the Geographical Society of Paris, on their return, the result of their observations; but these have been superseded by the explorations of still more recent travellers.—E. M.

ABBADIE, JAMES, born 1658, was intended for the ministry among the French protestants, but accepted a proposition from the elector of Brandenburg, to take charge of a French church at Berlin. In 1688, his patron being dead, he accompanied Marshal Schomberg into England and Ireland. He afterwards served the French church in the Savoy, and was eventually, by King William's interest, though he was unacquainted with English, made dean of Killaloe, in possession of which preferment he died, 1727, aged sixty-nine. His works, which were numerous and much thought of in their day, attract no attention now.—J. B. O.

ABBADIE, PETRUS, a French preacher of Charenton, about the middle of the seventeenth century, who published some sermons of quaintness and power on the baptism of Christ, &c.

ABBAN, commonly called SAINT ABBAN, son of one of the kings of Leinster in the sixth century. He is said to have been very successful in his efforts to convert the heathen natives.

'ABBAS IBN 'ABDI-L-MUTALIB, uncle of Mahomet, and ancestor of the dynasty of the Abassides. It is usually stated that he was long the determined enemy of his nephew. It has, however, been established, that even when, from necessity or policy, he remained in the ranks of his nephew's adversaries, he was secretly his agent and correspondent, if not yet a believer in his prophetic mission. Captured by his triumphant relative at the battle of Bedr, he obtained his liberty, on paying, for the sake of appearances, a high ransom. Returning to Mecca, he brought about Abou Sofian's submission to Mahomet. He then formally professed his own conversion to the prophet's creed. At the battle of Honein, when the Mussulman army began to give way, Abbas, by his valour and conduct, turned the fortune of the day. He survived his nephew a number of years, and continued to be sincerely esteemed and singularly honoured by Mahomet's followers. Died in 652.—E. M.

ABBAS, EBU ABBAS ABDALLAH, son of the preceding, was chief of the Sahabah, or companions of the prophet, and author of a commentary on the Koran.

ABBAS. Three shahs of Persia bore this name:—

'ABBAS I., seventh of the Sufi dynasty, a prince of remarkable talents and energy, but perfidious and sanguinary, born in 1557. At the death of his father he was governor of Khorassan, and, though only eighteen, declared his independence, and soon afterwards became shah. He greatly extended his kingdom on the north and east by conquest; and, on the west, recovered from the Turks a large territory that formerly belonged to Persia. With the assistance of an English fleet, he took the island of Ormuz from the Portuguese in 1622. The vigour and wisdom of his administration, and his efforts to protect the weak from the tyranny of subordinate functionaries, endeared him to the bulk of his subjects; and his success in war and his great public works, have rendered his name memorable in Persian history. Like most Eastern despots, he tarnished by capricious ferocity whatever was meritorious in his character. From groundless suspicion, he put to death his eldest son. Convinced soon after of his innocence, he ordered the courtier he had employed as executioner, to bring him the head of his own son. Suspecting the khans of Mazenderan of disaffection, he invited them to a banquet, and destroyed them all by a poisoned draught, gazing with delight on their agonies. Died in 1628.

'ABBAS II., great-grandson of the preceding, born in 1629, succeeded to the throne at the age of thirteen. He was a patron of the fine arts, excelled in drawing and calligraphy, but was grossly intemperate, and at times wantonly inhuman. Various instances of his revolting cruelty have been recorded. Died in 1666.

'ABBAS III., last of the Sufi dynasty, born in 1732, was only eight months old when the usurper Nadir Shah proclaimed him sovereign, and reigned under his name. He died in 1736, and is supposed to have been cut off by the usurper.—E. M.

ABBAS-MIRZA, celebrated for his efforts to introduce into Persia European civilization, born in 1785. He was the third and favourite son of Shah Fatah Ali, who declared him presumptive heir to the crown, to the exclusion of his eldest son Mahommed-Ali-Mirza. It was expected that the death of the shah would be immediately followed by a civil war between his two rival sons, and that the claims of Abbas would be supported by Russia, and those of Mahommed-Ali by Britain. Both princes, however, died before their father; Mahommed-Ali in 1820, and Abbas in 1832. Abbas commanded the army in the wars between Russia and Persia in 1803, 1813, and 1826. He endeavoured to introduce European organization and discipline into the army, and the first printing-press in Persia was established by him. On the death of Abbas, his son, Mahommed-Mirza, was declared crown prince, with the sanction of both Russia and Britain.—E. M.

ABBAS PASHA, viceroy of Egypt, and grandson of the celebrated Mehemet Ali, was born at Yedda in Arabia in 1813, and educated at Cairo; he succeeded his uncle Ibrahim Pasha, who died on the 10th November, 1848. He repaired to Constantinople in January, 1849, where he was solemnly invested by the sultan with the dignity of viceroy of Egypt. He had a great dislike to the introduction of European improvements, and spent his vice-royalty in sensual seclusion and indolence. He died of apoplexy in 1854.—E. M.

ABBATE, ANDREA, a Neapolitan artist, who assisted Luca Giordano in the decoration of the Escorial in Spain, by executing flowers, fruits, and other ornaments from still life. Died in 1732.

ABBATE, BOCCA DELL', a Florentine of the time of Dante, who took part with the Guibelines, and is therefore classed by the great poet amongst the traitors to his country.

ABBATE, DELL', or DEGLI ABBATI, an Italian family in the 16th century at Modena, which brought forth several distinguished artists. They are:—

ABBATE, GIOVANNI DELL', a good painter and an excellent modeler, died in 1557, father of the more famous—

ABBATE, MESSER NICOLÒ DELL', who, born in 1509 or 1512, originally studied under his father, and then at Bologna. In this town he executed several good frescos with Pellegrino di Tibaldi, which helped to enlarge his style. When Primaticcio was sent to Italy by Francis I. of France, to gather ancient relics and recruit the best artists for the embellishment of his palaces, Messer Nicolò was persuaded to follow him, and proceeded to France, where he executed, at Fontainebleau, a large number of frescos, from Primaticcio's designs, with very great success. These fine works were unfortunately destroyed in 1738, during some alterations of the palace. They were much admired for grace and elevation of style, and by many were con-

sidered as good, if not better, than any by Primaticcio himself. Messer Nicolò died at Fontainebleau in 1571. Whilst in France, he had been followed and assisted by his son Gian Camillo, also a distinguished artist.

ABBATE, PIETRO PAOLO DELL', the Elder, another son of Giovanni, continued in the meanwhile to keep his father's school at Modena, where, by his pictures of battle scenes, and especially of horses, he acquired a very great reputation. He died about 1580. Amongst his pupils, there was his nephew—

ABBATE, ERCOLE DELL', son of Gian Camillo, noted both for his great artistical talents, and for his disordered life. Ercole died in 1613, leaving his son—

ABBATE, PIETRO PAOLO DELL', the Younger, born in 1592; died in 1630—an artist of less importance.—R. M.

ABBATUCCI, GIACOMO PIETRO, a Corsican general of brigade in the French service, born in 1726. He attempted to defend Corsica against the British in 1793, and retired to France when the island came under British protection in 1794. Though brave and skilful as a guerilla chief, he was found entirely unfit to command regular troops in the French army. In 1799 he returned to Corsica, where he died in 1812, having survived three sons who were killed in the French service.—E. M.

ABBEVILLE, PERE CLAUDE D', a Capuchin who wrote the history of a mission to Maragnan, 1614, in which he took part.

ABBIATI, FILIPPO, an Italian painter, born at Milan in 1640. He was a pupil of Carlo Nuvolone, but in his works he preferred following the style of the Pamfilo school. Like his master, he delighted in treating religious subjects. He worked for the Santuario of Saronno, near Milan.

ABBIATTI, GIUSEPPE, another Milanese painter, flourishing about 1700. He is especially noted for some spirited compositions of battle scenes, which he afterwards engraved.

ABBO, surnamed CERNUUS or the CROOKED, a monk of Saint-Germain-des-Prés, born about the middle of the ninth century. He wrote an account of the siege of Paris by the Normans, at which he had been present. His work, though very indifferent as a poem, is an historical document of great value. Guizot has published a French translation of it in his collection of documents relating to French history. Abbo died in 923.—E. M.

ABBO, abbot of Fleury, born near Orleans about 945, renowned in his time as a philosopher and divine. Killed in 1004.

ABONDANTI, ANTONIO, called in Latin ABUNDANTIUS A IMOLA, an Italian poet and historian. In 1630 he published a poetical eulogium on Count John de Tilly, one of the most celebrated generals in the Thirty Years' war. He also wrote "Travels to Cologne and to Treves," and an "Historical Outline of the Wars of the Netherlands, from 1559 to 1609."

ABBOT, CHARLES, Baron Colechester, an English statesman, born at Abingdon in 1757, the son of a clergyman, the Rev. Dr. John Abbot. Mrs. Abbot, after her husband's death, married in 1765 Mr. Jeremy Bentham, father, by a previous marriage, of the famous jurist. Distinguishing himself at Westminster school, Mr. Abbot was elected a student of Christchurch, Oxford, in 1775; and in 1777 obtained the medal for Latin poetry. In 1781 he was sent to Geneva to study foreign jurisprudence. In 1783 he took the degree of B.C.L. at Oxford, and was shortly afterwards admitted to the bar. In 1795 he published a work on the Welsh judicature, and earnestly recommended its abolition. About the same time he was appointed clerk of the rules in the court of King's Bench, and, some time afterwards, published his "Rules and Orders of the King's Bench." In 1795 he also became a member of parliament. In Mr. Abbot's publications, as well as his unwearied efforts during his parliamentary career to promote legislative and administrative reforms, may be traced the advantages of his continental residence, and of his intercourse with the greatest of modern legists. The reforms he successively proposed and carried in parliament related to the efficient promulgation of acts of the legislature, the improvement of the diction of the statutes in clearness and brevity, the management of the public records, the responsibility of revenue collectors, the adoption of an accurate and periodical census of the population, &c., &c. During Mr. Pitt's administration, he usually spoke on the ministerial side. On Pitt's retirement he became chief-secretary for Ireland, and a privy councillor. On the 10th of February, 1801, he was elected to the office of Speaker, which he held till the 30th of May, 1817, when an attack of erysipelas obliged him to resign. When in April, 1805, the house divided on the motion to impeach Lord Melville, and

there happened to be an equality of votes, Abbot gave his casting vote for the impeachment. As Speaker of the House of Commons, he was admired for courteous attention and presence of mind, as well as fairness and accuracy in maintaining the forms of the house. On retiring from the speakership, he was raised to the peerage under the title of Baron Colechester. He died in London in 1829.—E. M.

ABBOT, CHARLES, a distinguished English judge, born in 1762 at Canterbury, where his father exercised the trade of a hairdresser. From King's School at Canterbury he passed in 1778 to Corpus Christi College, Oxford, where he gained the chancellor's medal for Latin verse and English prose, and was elected to a fellowship. In 1788 he entered his name upon the books of the Inner Temple, and shortly afterwards became a pupil of Mr. Wood, a distinguished special pleader at the bar, who subsequently became a baron of the exchequer. In 1795 he was called to the bar, and rapidly rose to distinction, being employed frequently as junior counsel to the treasury. The patronage of Sir John Scott, afterwards Lord Eldon, told favourably upon the fortunes of Mr. Abbot, who very soon commanded a large practice both on the Oxford circuit and in London. His "Treatise of the Law of Merchant Ships and Seamen" greatly enhanced his reputation. It was published in 1802, and has continued to be the standard work upon maritime law both in England and America. In 1808 Mr. Abbot was offered a seat in the court of king's bench, which pecuniary considerations induced him to decline. In 1816, however, after eight years more of singularly lucrative practice at the bar, he accepted a seat in the court of common pleas, and immediately afterwards was transferred to the court of king's bench. In 1818, on the resignation of Lord Ellenborough, he was raised to the dignity of Lord Chief-Justice, and in 1827 was made a peer with the title of Baron Tenderden. He died in 1832.—J. S., G.

ABBOT, GEORGE, Archbishop of Canterbury, was the son of Maurice Abbot, a cloth-worker of Guildford in Surrey, and Alice, his wife, both warmly attached to the Reformation. He was born October 29, 1562, and entered at Baliol college, Oxford, in 1578. After passing through the intermediate degrees, he became D.D. in 1597, and master of University college. It was whilst serving the office of vice-chancellor that his quarrel with Laud began. Abbot's views accorded with the sentiments of the English reformers, and necessarily exposed him to the enmity of Laud and his adherents. Abbot was made dean of Winchester in 1599, and in 1604 was intrusted with the translation of the New Testament, except the Epistles. For his services in Scotland in 1608, in disposing the Scotch to a more favourable reception of episcopacy, he was made bishop of Lichfield, bishop of London in 1609, and in 1611 archbishop of Canterbury. In politics Abbot took the popular side, and more than once had the courage to oppose the king; as in the case of the earl of Essex's divorce, and the publication of the king's declaration respecting Sunday sports in 1618, which he forbade to be read at Croydon. Finding the infirmities of age increase, and his influence at court declining after the death of the queen, he retired to Guildford, where in 1619 he laid the first stone of his hospital, which he liberally endowed. In 1621 he had the misfortune, while hunting in Lord Zouch's park, to miss the deer and kill the keeper. Laud attempted to set him aside, by insisting that even casual homicide canonically unfits a clergyman for every clerical function. James, with commendable candour, observed that "an angel might have miscarried in this sort;" but it was necessary for him to institute a court for formal inquiry. The court recommended that his majesty should grant a special pardon, which he accordingly did, and authorized a commission of eight bishops to absolve Abbot from all the censures he might have incurred, and to declare him still invested with all metropolitan rights and authority. After this he returned to court, and was with James at the time of his death in 1625. Abbot did not long remain in favour with the new monarch; he was soon ordered by his majesty to retire to his country house at Ford, and shortly afterwards was suspended from his archiepiscopal functions. This suspension was, however, removed in 1628, on petition of the house of lords, and Abbot continued to exercise the duties of the primacy till his death, August 4, 1633, at Croydon. He gave his firm support to the Petition of Right addressed to his majesty, which, in 1628, was adopted by both houses of parliament. He died unmarried, and was succeeded in the primacy by his old adversary Laud.

Abbot left several writings which had been called forth by the controversies of the time; the principal are—"An Exposition of Jonah," 1600; "An Answer to the Citizens of Cheapside respecting the Erection of the Cross," 1600; "Dr. Hill's Reasons Unmasked," 1604; "Sermon on the Death of the Earl of Dorset," 1608; "Questiones Sex," 1616; "Brief Description of the Whole World," 1617; "A Treatise on Perpetual Visibility and Succession of the Church," 1624; "Judgment on Bowing at the Name of Jesus," 1632; "The Massacre in the Valtaline in Fox's Arts and Monuments."—J. B., O.

ABBOT, GEORGE, an English divine, born in 1604, author of a paraphrase of the Book of Job, a "Defence of the Christian Sabbath," and notes on the Psalms. Died in 1648.

\* ABBOT, JACOB, a pious and accomplished American writer, whose numerous, lucid, and attractive publications for the young have procured him great and merited popularity in this country, as well as in America, was born in 1803 at Hallowell in Maine. He was educated at Bowdoin, and at the theological seminary of Andover. A complete edition of his works was published in Glasgow in 1851, in one vol. 8vo.—E. M.

\* ABBOT, JOHN S. C., an American Congregational minister, and, like his brother Jacob Abbot, an amiable writer for the rising generation, author of a series of royal biographies, and of a history of Napoleon Bonaparte—a work admired for its easy style and graphic narrations, but censured by many as exhibiting the character and conduct of that extraordinary man under too favourable a point of view.—E. M.

ABBOT, LEMUEL, an English portrait painter of some distinction, born in 1762; died in 1803.

ABBOT, SIR MAURICE, youngest brother of the archbishop, a London merchant, and able director of the East India Company. He was the first person knighted by Charles I. In 1625 he was elected member of parliament for the city of London, and in 1638 became lord mayor. Died in 1640.

ABBOT, ROBERT, brother of the archbishop, was born in 1560, and entered Baliol college, Oxford, in 1575, of which college he was elected master in 1609. In 1612 he became regius professor of divinity, and in 1615 was promoted to the see of Salisbury. He only held the see two years; but finding his cathedral in bad repair, he carefully restored it, and left behind him the reputation of a good active bishop, a diligent preacher, and most hospitable man, at whose table the poor were as frequent and as welcome guests as the rich. He died in 1617, and was buried at Salisbury. Though he was as decided a Calvinist as his brother, he was of a far more genial temper. He was twice married; once after his elevation to the episcopate, to the great displeasure of his brother the archbishop. His numerous and masterly writings were directed against the church of Rome, and intended to show that the Reformation was simply a revival of the doctrine and discipline of the ancient catholic church.—J. B., O.

ABBOT, ROBERT, M.A., author of a volume of sermons, was originally of Cambridge, but was admitted at Oxford in 1607. He joined the presbyterian party at the period of the Rebellion, and became ultimately minister of St. Austin's, Watlin-street, London, and published some controversial tracts on church government, as well as a catechism, called "Lac Infantium." Died in 1653.—J. E.

ABBOT, THOMAS, a German author of considerable eminence and great promise, born at Ulm in 1738. After studying theology at Halle, he devoted himself to philosophy, mathematics, and literature. In 1760 he was appointed extraordinary professor of philosophy at Frankfort-on-the-Oder, and in 1761 ordinary professor of mathematics at Rinteln. A distaste for his professional career soon turned his attention to the study of law, and in 1765 he was appointed aulic counsellor at Bücken-burg. His numerous writings on literary and moral subjects attained great popularity, and, along with those of Lessing, contributed in no small degree to the improvement of the German language and the progress of German literature. He died in 1766, at the early age of twenty-eight.—E. M.

ABDALMELEC or ABDOMELEC, an astronomer and mathematician under Caliph Ahnamonn. See ALIS-IBN-ISA.

ABDAS, Bishop of Susa in the fifth century, who, having in 430 destroyed a Magian sanctuary, and refused redress, was condemned to death. His execution gave rise to a persecution of the Persian christians, and a war between Persia and the Eastern empire.

\* ABD-EL-KADER, an illustrious Arab emir, who displayed

consummate genius, intrepidity, and perseverance, in resisting for fourteen years the French arms in Africa, was born in 1807. Algiers was taken by the French in July, 1829. Its capture, and the extinction of the Algerine central authority, threw the population of the Algerine territory into a state of anarchy, except where the French held actual possession. This territory, extending along the Mediterranean from Tunis to Morocco, is about 250 leagues in length, and from 60 to 80 in breadth. The indigenous inhabitants consisted of four distinct races. Two of these, the Moors and Jews, feeble and pacific, chiefly resided in the towns; while the Arabs and the Kabyles (the latter of whom are descendants of the ancient Numidians), energetic and warlike, occupied the mountains, valleys, and plains. The military force of the Arabs consisted mainly of cavalry, and that of the Kabyles in infantry. Part of the population requested French protection, but the greater portion stood aloof, unmistakably detesting the invaders, and planning their expulsion. In undertaking the expedition to Algiers, Charles X. had disclaimed all intention of permanent conquest, assuring his allies that his sole object was the suppression of piracy, and that the future condition of Algiers and its territory would be left to the decision of a European congress. In fact, his real object was to gratify the national vanity and supposed interests of the French, and divert their attention from political agitation. Louis Philippe, on becoming sovereign of the French, at once found the Algerian conquest a source of embarrassment, and was forced to temporize. To hold it definitively might endanger the peace of Europe; while to relinquish it might peril his own throne, as public opinion in France had declared for retaining and extending the Algerian conquest at all hazards. Hence the passive attitude enjoined for several years on the French commanders in Africa; and hence the subsequent change of measures, and final definitive conquest of Algeria. Marshal Clausel, notwithstanding his instructions to remain on the defensive, deemed it imperative to meet the menacing preparations and encroachments of the bey of Tartary; and having defeated and deposed him, took possession of his capital, Medeah. In the meantime, determined hostility to the French was manifesting itself among the native tribes; an extensive confederation was formed, and a venerable Marabout, doctor of the Moslem law, was invited to put himself at its head. He declined, on account of his advanced age; but recommended his third son, Abd-el-Kader, as a person in every respect peculiarly fitted to direct the enterprise. Abd-el-Kader was elected emir and commander-in-chief, and soon found himself at the head of 10,000 cavalry. He had been carefully trained under his father's superintendence, had early distinguished himself by unrivalled proficiency in every branch of a superior Arab education, and was admired for his accomplishments, and revered for his zeal in upholding the tenets of the Moslem faith. The first movement of the confederates was an attack on Oran, in May, 1832, then in possession of the French, as its bey had submitted to them soon after the capture of Algiers. The assault, though renewed with great daring for several successive days, was unsuccessful, but proved of great advantage to the emir. Abd-el-Kader now proceeded to extend, by policy or force, his power among the tribes; while General Desmichels satisfied himself with merely occupying two advanced military positions, Arzew and Mostaganem, and shortly after, in conformity with the desire of the French government to appease the natives and prevent hostilities, entered into a treaty with Abd-el-Kader, which gave the emir the virtual sovereignty of Oran, with an entire monopoly of the trade. This treaty, on the one hand, invested the emir with an important prestige, but awakened the envy of native chieftains. By one of these he was surprised in April, 1834, and, after a most heroic resistance, signally defeated. The news of this disaster extended the insurrection, which the emir, however, abetted by General Desmichels, was soon able to suppress. The proceedings of this general were condemned at Paris, and General Trezel was sent to supersede him. The new French commander, professing to regard the emir's operations as a breach of the existing treaty, marched against him, but sustained a serious defeat at Macta, 28th June, 1835. The news of this reverse created an immense sensation at Paris. Public opinion denounced the temporizing policy of Louis Philippe, and demanded an immediate and entire change of measures in Africa.

Marshal Clausel was now sent to act against Abd-el-Kader with earnestness and vigour. He marched at once on Mascara,

which he found abandoned and in ruins. Returning to Oran, he proceeded in January, 1836, to Tlemsen, in the vicinity of Morocco, and occupied the town, which the emir had just quitted. The marshal traversed a large extent of country, but with little permanent result; the emir hanging on his rear, and harassing his troops in their march, and, shortly afterwards, inflicting a signal defeat on a large French convoy intended for Tlemsen. The French government now sent out General Bugeaud, with instructions to neutralize by treaty or force the restless activity of the emir. Bugeaud's proffered terms were rejected; and the emir attempted, by laying waste the country along the tract to Tlemsen, to baffle the efforts of the French to provision that place. But Bugeaud, amply provided with loaded camels and mules, continued his march. The emir, having suddenly attacked him in the defile of Sakkak, was repulsed with the loss of 1200 killed and wounded. The terms previously offered by Bugeaud were now accepted. The emir agreed to pay tribute to France, and obtained a large accession of territory. Without loss of time, he proceeded strenuously to assert his authority over the provinces ceded to him, and to extend his influence in the interior beyond them. It has been generally stated and believed that Abd-el-Kader had previously, by a breach of his treaty with Desmichels, given occasion to Trezel's renewal of hostilities; and that now, by the alleged massacre of a tribe, and other proceedings, he had flagrantly violated his treaty with Bugeaud. But a distinguished French officer, Major Boissonet, has proved by facts, that these charges are utterly groundless, and that the emir strictly observed on all occasions his stipulations with the French. The alleged massacre was a fiction. On the remonstrances of the governor-general, a new treaty, partly explanatory and partly supplementary, was agreed to at Algiers in July, 1838. In the meantime the emir proceeded with vigour to improve his civil and military administration, and to make every possible provision for the easily foreseen renewal of the war. The emir's growing power alarmed the French authorities; and, to counteract his influence, a French army was marched into the interior, and through a celebrated defile called the Iron Gates, which the Turks, at the height of their power, had never ventured to pass without special leave of the natives. This demonstration produced, as was intended, an immense sensation, and was regarded by the tribes as the preliminary or commencement of hostilities. The emir, in the spirit of chivalry, gave due notice by letter to the French governor-general, that, in spite of his remonstrances, a holy war had been proclaimed, and that his countrymen, with himself at their head, were about to appeal to arms. After some unsatisfactory operations on the part of Marshal Vallée, Bugeaud was sent a second time to Africa. He had now instructions to subdue the emir, and complete the conquest of Algeria. Bugeaud soon captured the new forts which the emir had erected; and, by carrying off the flocks, destroying the crops, and burning the villages of all who refused submission, he caused great numbers of the emir's troops to desert, and, in the next campaign, reduced him to such straits, that Algeria was officially announced at Paris as now an integral part of the French dominions. But the spirit of the bold Arab was not yet crushed. By the amazing rapidity and fearlessness of his movements, he continued to inflict on the French no small annoyance and damage. In October, 1843, however, he sustained so thorough a defeat, that he instantly sought refuge in the empire of Morocco. The population declared in his favour, and the emperor, but for his fear of the French, would have eagerly espoused his cause. The French declared war against Morocco, and forced the emperor to send an army against the emir. After an unavailing night-attack of amazing boldness on the emperor's camp, Abd-el-Kader gave up all for lost, and proposed to surrender to the French on terms which were accorded, both by General Lamoricière and the Duke d'Aumale, the governor-general. The emir arrived at Toulon on the 29th January, 1848, and in violation of the solemn stipulations that had been made, was imprisoned in the fortress of Lamalgue, whence he was transferred to Pau, and afterwards to Amboise. In October, 1852, he obtained his liberty, on pledging his honour not to return to Algeria, or conspire against France. He reached Brussa in Asia Minor in 1853—the place, by curious coincidence, where Hannibal expired—and resided there till its almost total destruction by an earthquake in 1855, when he removed to Constantinople, his present residence. In the

autumn of 1855, he paid a short visit to Paris to see the Exhibition.—E. M.

**ABDIAS.** The name assumed by the writer of an apocryphal history of the labours of the apostles. The book professes to be written by "Abdias, bishop of Babylon, who was ordained by the apostles themselves;" but various arguments make it certain that the work is a forgery of the sixth, or at the earliest, of the end of the fifth century.

**ABDIAS BARTENO'RA,** an Italian rabbi, author of a celebrated commentary on the Mishna.

**ABDIAS BEN SHALOM,** a Jewish rabbi, noted as the first convert from Judaism to the faith of Islam. He went with three Jews to dispute with Mahomet and at the end of the discussion exclaimed—"Enough, most excellent Mahomet, thou hast conquered; receive me as thy disciple." He was received among the Arabs, and named Abdallah Ibn Shelem. The famous disputation is found at the end of the Koran.—J. B.

**ABDI-L-MUTALIB,** Mahomet's grandfather and guardian, a rich and beneficent citizen of Mecca, to whom a variety of achievements are attributed in Moslem legends; born A.D. 497, and died at Mecca when upwards of eighty years old.

**ABDOLO'NYMUS,** a Sidonian of royal descent, though in very humble circumstances, whom Alexander the Great is said to have made sovereign of Sidon and Tyre.

**ABDON,** one of the judges of Israel. He preceded Samson, and governed, according to Hales, from 1160 to 1152 B.C.

**'ABDU'-L-AZIZ,** the third Arab governor of Spain, greatly aided his father Músa, lieutenant of the Caliph Walid I., in the conquest of the peninsula. He was assassinated in a mosque near Seville, by order of the Caliph Soliman, in 716.

**ABDU'-L-'AZIZ,** sheikh (or prince) of the Wahabites, murdered in 1803 by a Persian fanatic, who, to accomplish his purpose, had professed to be a convert to the Wahabite creed.

**\*ABDUL-HAMED-BEG** (whose real name was **DU COURET**), a French traveller, was born at Huningue in 1812. In 1834 he departed for Egypt, where he ascended the Nile as far as Abyssinia, and returned into Egypt along the western coast of the Red Sea. He adopted Islamism, made the pilgrimage to Mecca, which gave him a right to the title of hadji, traversed a great part of Arabia, and at last landed on the Isle de Bourbon, exhausted by fatigue and sickness. From thence he went into Persia, where he was accused of political intrigues, and thrown into prison. Delivered by ransom, he returned to France in 1847, but very soon again left his native country to penetrate central Africa as far as Timbuctoo.—S.

**'ABDULLAH,** fourth and last chief of the Wahabites, a warlike Moslem sect in Arabia. He succeeded his father Schoud in 1814. Mehemet Ali, instructed by the sultan to exterminate the sect, sent a large force against them, and defeated an army of thirty thousand men, commanded by 'Abdullah's brother. After a feigned submission, 'Abdullah concentrated the most heroic of his adherents in the town of Dereyeh, his capital, determined to hold out to the last. Ibrahim Pasha, after besieging the place for six months without effect, contrived to decoy 'Abdullah to an interview, and took him prisoner by treachery. 'Abdullah was sent to Constantinople, where he was publicly executed on the 16th December, 1818.—E. M.

**'ABDULLAH, ABU-MOHAMMED,** a Moslem sovereign of the thirteenth century, of the dynasty of the Almohades. Though his dominions comprehended part of Africa, as well as Moslem Spain, his presence was permanently required in the latter country, to oppose the growing strength of the christian princes of the peninsula. He rendered himself odious to his own subjects, by whom he was massacred in 1225.—E. M.

**'ABDULLAH, IBN ABDI-L-MUTALIB,** father of Mahomet, born at Mecca in 545. Two months after the birth of his son in 570, he died at Medina, then called Yathreb, whither he had been sent to procure a supply of dates.

**'ABDULLAH IBN BALKIN,** the fourth and last sultan of Granada, of the dynasty of the Zeyrites, succeeded to the throne A.D. 1073. He, with other Moslem rulers, implored the king of the Almoravides of Africa, to aid them against Alfonso I. of Castile; but, by the treachery of their ally, Abdullah was taken prisoner, and sent in chains to Africa, where he died.

**'ABDULLAH IBN MOHAMMED,** seventh sultan of Cordova, of the Omniade dynasty, distinguished for his wars with the rebel Ibn Hafssún. He is remembered also as a poet and lover of literature. Died A.D. 912.

'ABDULLAH IBN MOHAMMED IBN YUSUF NASR AL-AZDI, a historian, born at Cordova A.D. 942; was killed at the taking of his native city by Suleymán in 1013.

'ABDULLAH IBN MOSLEM IBN KOTEYBAH, a celebrated historian, born at Bagdad A.D. 828-9, where he died A.D. 889-90. He held a professorship in one of the colleges of his native city.

'ABDULLAH IBN MOSLEMAH IBN AL-AFTTAS AT-TOJIBI, founder of the dynasty of the Beni Al-Afttas. Born in 1004-5; died in 1060-63.

ABDULLAH IBN SA'D, one of Mahomet's first converts. He was employed by the Prophet in writing down his revelations. At a subsequent period the Khalif 'Othman appointed him governor of Egypt.

'ABDULLAH IBNU-L-HIJA'RI, a celebrated historian, born at Cangaera in 1105. He possessed a very large library, collected in his travels through Africa, Egypt, and Syria, which was valued at his death, in 1195, at 30,000 dinárs, or about £15,000. He wrote a valuable history of Spain.

'ABDULLAH IBN YASIN, founder of the dynasty of the Almoravides, who ruled over the greater part of Africa and Spain for nearly a century. He was sent to Africa as a teacher of religion, but soon adopted the sword as a means to force the faith of Islam on the various tribes. He exercised the functions of royalty, but preferred the title of fakib (or theologian).

'ABDU'-L-LATTIF, an Arab philosopher and physician, born at Bagdad in 1162. He studied in his native city, and practised medicine there for some time. He left it in 1185, and resided successively at Mosul, Damascus, and Jerusalem. He obtained the friendship of Bahadin, the vizier and favourite of Sultan Saladin. Through the vizier's influence he was furnished with the means of travelling in Egypt. On his return, he was appointed to a professorship at Damascus. After traversing Asia Minor, and residing some time at Aleppo, he returned to Bagdad with great renown as a physician, and died there in 1231, when on the point of proceeding on a pilgrimage to Mecca. An Arab author mentions the titles of more than a hundred treatises written by 'Abdu'-l-Lattif. The only one of these known in Europe is an abridgment of a larger work of the author's, on the history, antiquities, and geography of Egypt. This interesting production was brought from the East by Pococke, and has been translated into Latin, and also into German and French.—E. M.

ABDU'-L-MALEK I., fifth prince of Khorassan of the Samanide dynasty, began to reign in 954. Oriental historians extol his energy and wisdom.

ABDU'-L-MALEK II., IBN NUH, ninth and last prince of Khorassan of the Samanide dynasty, succeeded his brother Mansur II. in 988. He reigned only till 999, having been deposed and imprisoned for life by Eylek Khan, sovereign of Turkistan.

ABDU'-L-MALIK, sultan of Morocco in the sixteenth century. He usurped the throne, to the exclusion of his nephew Mahomet, the lawful heir, who afterwards obtained the aid of Don Sebastian, king of Portugal, to assert his rights. In the famous battle of Aleasar in 1578, Abdu'-l-Malik, Mahomet, and Don Sebastian were all slain.

ABDU'-L-MALEK, IBN MERWAN, fifth Omniade caliph of Damascus surnamed "Sweat of the Stone," from his avarice, succeeded his father, Merwan I., in 685. During a reign of twenty years, he achieved extensive conquests both in Asia and Africa. Died at Damascus in 705.

ABDU'-L-MALEK, IBN OMAR, called MARSILLO in the legends of western chivalry, an able and devoted general of Abdu'-R-Rahman I., and governor of Saragossa and the whole of eastern Spain, at the period of Charlemagne's invasion.

'ABDU'-L-MUMEN, IBN 'ALI, surnamed ABU MOHAMMED, second sultan of Africa of the dynasty of the Almohades, born in Africa in 1101. At the age of eighteen he became the adherent and adviser of Mohammed Ibn Tiumarta, surnamed Al-Mahdi, a native of Cordova, who had studied at Bagdad, under the famous Arab philosopher, Abu Hamid Al-ghazzali. Availing themselves of a popular impression that the Mahdi or Forerunner of the expected Moslem Messiah was about to appear, the two associates devised a stupendous scheme of imposture, which, mainly through the genius and intrepidity of 'Abdu'-l-Mumen, was ultimately crowned with success. 'Abdu'-l-Mumen boldly proclaimed his friend the longed-for Mahdi, and was appointed his prime minister. So rapidly did the crowd of

fervid followers increase, as soon to constitute a large and formidable army. The new sect, assuming the name of Almohades, or Unitarians, commenced a sanguinary war with the Almoravide emperor of Africa and Moslem Spain, and continued it with almost uninterrupted success, till they accomplished the extinction of the Almoravide dynasty. Mohammed dying at an early period of the movement, declared 'Abdu'-l-Mumen his successor, who, after a brilliant reign of thirty-three years, died in 1163 when on the point of starting at the head of an immense army he had raised in Africa, to achieve in one campaign the entire conquest of the Iberian peninsula. Though unceasingly occupied with warlike enterprises, he devoted a share of his attention to the social improvement of his subjects, by the encouragement of science and literature, and the promotion of public instruction.—E. M.

ABDU'-L-WAHAB, founder of the sect of the Wahabees or Wahabites, born about the year 1691 at Al-'aynah, a village in the district of Arabia called Nejd, on the banks of the Euphrates, and died in 1787. Being of poor parentage, he was adopted by Ibrahim, a rich Arab, studied at Ispahan, travelled through Khorassan, and afterwards resided at Bagdad and Bussora. Here he taught religious doctrines resembling those of the celebrated Abu Hanifah. Several sheiks of the Nejd adopted his creed, and ranged themselves under the banner of the new prophet. Discord being thus introduced among the Arab chiefs, recourse was had to the sword, and the two parties, accusing each other of heresy, engaged in sanguinary conflicts. The principles of the new sectaries may be regarded as theistic in a more elementary form than Moslemism. Wahab denied that the Koran was inspired or written by the angel Gabriel; he rejected the doctrine of saints or holy persons, and taught that prayers ought to be addressed to God alone. His followers also permitted a person attacked to slay the aggressor without waiting for the sentence of law, and they regarded as wicked, vows undertaken in time of danger. Niebuhr (Travels in Arabia) has given valuable details respecting Wahab and his sect.—P. E. D.

'ABDUN or ABDU'-L-MEJID, IBN 'ABDILLAH IBN 'ABDUN, an Arabian poet, lived in Spain about the end of the eleventh century. He was vizier to the last king of Badajoz, of the dynasty of the Al-Afttas, assassinated in 1094. Besides his commentary upon a poem entitled Ab-besamali, he has left an elegy on the rise and fall of the dynasty of the Al-Afttas.—S.

ABDU'-R-RAHMAN. Three potentates of the Omniade dynasty, in Spain, bore this name:—

ABDU'-R-RAHMAN I. (IBN MU'AWIYAH IBN HISHAM), surnamed ABU-L-MODHAFFER and ABU SULEYMAN, the founder of the Omniade power in Spain, born near Damascus A.D. 728-9, and died in September, 788. When the Saracen dynasty of Ommia was overthrown in 753, Abdu'-R-Rahman narrowly escaped, and passed into Mauritania, finding shelter with the Zenites, to which tribe his mother belonged. He there, as the last scion of the Omniades, received the offer of the crown of Spain made to him by a deputation of the Saracen chiefs resident in that country. In 755 he landed at Almunecar, where twenty thousand men awaited him. At Seville he was hailed as the legitimate monarch, and in a short time received the submission of the neighbouring towns and cities. After the battle of Musarah, in which his opponents were defeated, he entered Cordova as a conqueror, and took possession of the Saracen kingdom. Notwithstanding his successes in Spain, the loss of Narbonne effectually excluded the hope of retaining the Saracen dominions on the French side of the Pyrenees, and he therefore consolidated the Saracen kingdom of Cordova—a course strenuously opposed for a time by the Saracens of Egypt, by whom he was proscribed as a rebel. Various expeditions were undertaken from Africa to destroy his power. Abdu'-R-Rahman having captured the leader of one of these expeditions, cut off his head, and caused it to be fixed to a column at Kairwan with this inscription—"Thus Abdu'-R-Rahman, successor of the Omniades, treats the rash and the presumptuous." When Charlemagne advanced into Spain, it would appear that the kingdom of Cordova was in the enjoyment of tranquillity, and at a later period (A.D. 778) the kingdom of Saragossa was annexed to that of Cordova. The Saracen prince now applied his utmost energies to the internal improvement of the kingdom, building mosques—among others the splendid mosque of Cordova, at which he wrought with his own hands for an hour each day—designing and constructing gardens,

importing and planting fruit-trees, and exhibiting the Moorish power in its most favourable aspect. He planted the first palm-tree ever grown in Spain; all the other palm-trees of that country being supposed to descend from this original, which flourished in the magnificent gardens of Cordova. Abdu'-R-Rahman left the reputation of being a great, good, and wise man, and his youngest son succeeded to his dominions without opposition.

ABDU'-R-RAHMAN II., surnamed AL-MUTREF or AL-MUD-HAFFER, fourth Omniade emir of Cordova, son and successor of Allhakem I., born in 788; died in 852. He ascended the throne at the age of thirty-four. Although engaged in almost continual war with the Asturians, with the French under the son of Charlemagne, and with the caliph of Bagdad, he devoted his attention to the welfare of his people, encouraged industrial pursuits, commerce, the arts, science, and all objects of public utility. He composed in Arabic the "Annals of Spain," and procured the translation into that language of the works of the Greek philosophers, whose writings he had at great cost procured from the East. His court was the most brilliant in Europe, and the residence or resort of the poets and learned men of his time. He was, however, a strict Moslem, and published an edict authorizing Moslems to slay on the spot any Christian who should speak ill of Mahomet or the Koran. After a brilliant but disturbed reign of thirty years, he died esteemed and respected; and was succeeded by his son Mohammed I., on whose education he had expended the greatest care.

ABDU'-R-RAHMAN III., AN-NASSIR LIDINI-LLAH (Protector of the worship of God), eighth Omniade king of Cordova, and the first who bore the title of caliph of Spain; born in 891; died in 961. He succeeded to the throne in 912, and after insuring the tranquillity of Cordova, he advanced with an army of forty thousand men against the rebel Omar Ibn Hafssun, who had usurped the half of the caliphate of Spain, and reigned at Toledo. In 913 a decisive battle was fought, by which he regained the submission of two hundred towns and fortified villages. He next engaged in the construction of a fleet to protect his coasts from the Moorish corsairs who infested the Mediterranean, and who had recently committed atrocities in Sicily and Calabria. Ja'far, the son of Omar, having sought the assistance of the Christian princes, the young king of Leon crossed the Douro at the head of an army, ravaged the province of Toledo, and took Talavera. This aggression was speedily repelled with great loss to the Christian army. The Zenite sheiks of Africa having applied to Abdu-R-Rahman, he sent an army to Fez to dispute the suzerainty of the founder of the Fatimites; but, though temporarily successful, his forces were eventually compelled to abandon the place. Wars with the Christians of Spain, and plots among his own subjects, now engaged his attention. At Zamora, in 939, he fought a great battle with the king of Leon, in which the Moors, after a successful attack upon the town, were defeated with tremendous loss. His own son Abdullah having originated a plot to supplant him on the throne, he did not hesitate to put the young man to death—a circumstance that embittered the whole of his after life. He lived in splendour, and when ambassadors arrived from Constantine, emperor of the East, he dazzled them with the magnificence of his court. His reign is unquestionably the most brilliant period of the Moorish domination in Spain. He encouraged and protected letters, cultivated the arts and sciences, founded a school of medicine—the only one then existing in Europe—and at three leagues from Cordova built a town and gorgeous palace called Azzhara. After a reign of forty-nine years, he expired in the seventy-second year of his age, and was succeeded by his eldest son Al-hakem. After his death, the following record of a monarch's experience was discovered, written by his own hand:—"Fifty years have passed away since first I was caliph. Riches, honours, pleasures—I have enjoyed all, and exhausted all. The kings my rivals esteem me, fear me, and envy me. All that men desire has been showered on me by Heaven. In this long period of seeming happiness I have numbered the days on which I have been happy. They amount to fourteen. Know then, mortals, what is the real value of greatness, the world, and human life."—P. E. D.

ABDU'-R-RAHMAN, an African prince, born at Timbuctoo about the middle of the eighteenth century. In an expedition against the Kebohs he was captured, sold as a negro slave, and at Natchez, in the United States, was recognized by Dr. Cox as an African friend who had hospitably entertained him in the

interior of Africa. Dr. Cox succeeded in procuring his emancipation; but the unfortunate exile died before he could return to his own country, in July, 1829.—P. E. D.

ABDU'-R-RAHMAN, emperor of Morocco, born in 1778. In 1823 he succeeded his uncle, Muley Solimad, who had occupied the throne from 1794. The first years of his reign were disturbed by revolts of various tribes; but these he succeeded in quelling. Several of the maritime powers of Europe had formerly been in the habit of paying tribute to the emperor of Morocco, and to the Barbary states, to secure their vessels from the piracy of the corsairs. In this reign the tribute was discontinued, Austria being the first to set the example in 1828, when a Venetian vessel had been captured in the port of Rahat, and the crew reduced to slavery. An Austrian force was despatched to release the ship and crew, and the tribute ceased from that period. The celebrated Abd-el-Kader, in his efforts to repel the French invaders of Algeria, induced the emperor of Morocco to join him in what was termed a holy war; but the battle of Isly (13th August, 1844) put an end to the coalition, and broke down the Moslem power in northern Africa.—P. E. D.

'ABDU'-R-RAHMAN IBN ABDILLAH ALGHAFKI, Moslem governor of Spain under the caliphs of Damascus, in the eighth century. With the design of adding France and Italy to the caliph's dominions, he entered Aquitaine in the spring of 732, at the head of the most powerful Saracen army that had ever appeared in the West, took Bordeaux and other towns, defeated the duke of Aquitaine, and traversed the French provinces, plundering as far as Burgundy. At length the famous Charles Martel, with an army raised in Asturias, Burgundy, and Neustria, hastened to stop the progress of the triumphant Arab, when one of the most obstinate and sanguinary, as well as important battles on record, took place on the banks of the Loire, between Tours and Poitiers. The most adventurous Arab chieftains had already penetrated the Christian squadrons, when the duke of Aquitaine was directed to attack the Moslem camp. This movement proved decisive. The eagerness of the Saracens to protect their accumulated booty, threw their whole army into confusion. 'Abdu-R-Rahman, after the most heroic efforts to rally his troops, was slain, and his death completed the Christian victory. The remains of the Moslem army returned to Spain. This memorable engagement delivered France, Italy, and Northern Germany from future Saracen invasion, and perhaps from permanent Saracen conquest. The number of Saracens killed must have been immense, though greatly inferior to the fabulous amount of three hundred thousand, the number stated by some early historians.—E. M.

ABDU'-R-RAHMAN IBN HASSAN, a modern Arab historian, born at Cairo about the middle of last century. He died at Constantinople about 1820. During the French expedition to Egypt he enjoyed a high reputation, and in General Kleber's administration was a member of the divan of Cairo. His works are—"An Account of the Victory that delivered Egypt," translated into Turkish, and thence into French by M. Cardini; and a general history of modern Egypt, in 3 vols., 4to, beginning at the year 1688, and ending in 1806. His father wrote a treatise on weights and measures, the Arab manuscript of which is in the Imperial library of Paris.—P. E. D.

'ABDU'-R-RAHMAN IBN MOHAMMED IBN KHALDUN AL-HADHRAMI, a famous African historian, born at Tunis in 1332; died at Cairo in 1406. In 1348-49 he was taken into the service of the sultan, in which he appears to have remained for upwards of twenty years. In 1382-83 he left Tunis for the purpose of performing his pilgrimage. His purpose miscarrying, through the unsettled state of Syria, he took up his residence in Cairo, and, becoming known to the Sultan Barkuk, was appointed to a judicial post in the city. Having followed the Egyptian sultan to Syria, he was taken prisoner by Timur. He left a general history, which is highly valued.

ABDU'-R-RAZZAK, founder of the dynasty of the Sarbadarians, born at Bashteyn, a dependency of Sebbuzwar, died about the year 1340. He was at first employed by the sultan Abu Said-Khan, and acquired popularity by delivering his native town from a tyrannical governor, after which he defeated the troops of the vizier 'Alau-d-din, who had been sent against him. The vizier fell into his hands, and was put to death in the year 737 of the Hegira (A.D. 1336-7). Abdu-R-Razzak now became master of Sebbuzwar, and proclaimed himself sovereign. On a threat from his brother Mas'nd who succeeded

him, he leaped from a window, and died in consequence of the fall.—P. E. D.

'ABDULLAH IBN ZOBEYR, caliph of Mecca, born A.D. 622. He was the constant enemy of the caliphs of the house of Umeyyah, and perished after all his soldiers had deserted him, when Mecca was besieged by the caliph 'Abdu-l-Malek. His history is made interesting by the bravery and devotion of his mother Asma, a woman of 90, who stood by him to the last during the fatal siege.

'ABDU-L-MALEK IBN HISHA'M IBN AYUB AL-HIM-YARI', an Arabian historian and poet, born at Cairo in the latter half of the eighth century.

'ABDU-L-MA'LIK IBN SHOHEYD, poet and historian, born at Cordova about the middle of the tenth century.

ABDU-L-MEDJID, the late Ottoman sultan, the twenty-eighth since the capture of Constantinople, and the final overthrow of the Greek dynasty by Mahomet II., was born on the 23d of April, 1823, and succeeded his father Mahmoud II. on the 1st of July, 1839. It is difficult to form a just estimate of his character or his policy, so variously are they represented, according to the political or religious bias of those who have described them. He began his eventful reign at the early age of sixteen, and at a desperate crisis of the Turkish power. The old party in the state, backed by the prejudices of the Mahometan population, and comprehending the mass of them, restrained no longer by Mahmoud's iron rule, were fully determined to restore the order of things which he had begun to supersede. They were secretly assisted by the emissaries of Russia, an empire which had everything to gain by the complication of Turkish affairs. Mehemet Ali placed himself at the head of this party, and adopted its fanaticism. They regarded him as the rightful champion of the orthodox Mussulmans; and only awaited the triumphal march of his representative, Ibrahim Pacha, on Constantinople, to proclaim the pacha of Egypt "Makan of the two seas," and thus to overthrow the Ottoman throne. Just eight days before the sultan's accession, his army had sustained an apparently willing defeat at the battle of Nisib, fought on the 24th of June, 1839. Scarcely had the news of that disaster reached the ears of his counsellors, than his admiral carried his fleet to Alexandria, and surrendered it to Mehemet Ali. No time was to be lost. A treaty was signed at London on the 15th July, 1839, by all the leading powers of Europe, except France, which was deemed by many to have been paralysed at that juncture by Russian double intrigue. A series of prompt warlike operations, in which England bore a conspicuous part, suppressed the rebellion. The forces of Mehemet Ali were compelled to evacuate Syria, and the balance of power in Europe was for a season restored.

The young sultan had now leisure to apply himself in earnest to pursue the measures of reform which his father had bequeathed to him. In this task he was assisted by Reschid Pacha, his first minister, an enlightened and patriotic statesman. On the 3rd of November, 1839, was promulgated the Tanzimat, or edict of Gulhané, promising improvement in the administration of public affairs, and professing to guarantee to all Ottoman subjects an equality of civil rights; but it is to be regretted that, beyond the precincts of Constantinople, and a few other localities, the Tanzimat remains a dead letter. This decree was followed by another, not less important, dated the 12th of May, 1850, which proclaimed the professors of all creeds equal in the eye of the law. The principles of justice and toleration involved in this document had already received signal illustration, in the frank and generous hospitality given by the sultan and his advisers to the Polish and Hungarian refugees after the disastrous events of 1848. The dignity and firmness with which he refused their extradition entitle him to the gratitude of posterity.

But soon a new difficulty arose. Russia had long been advancing her frontier, with silent and certain footsteps, in the direction of Constantinople. The Muscovite czar claimed as of right the protectorate of all the subjects of the Porte who belonged to the Greek communion, enlisting their religious sympathies on his side by costly presents to the Greek churches in Turkey, and enforcing his claims by all the arts of intrigue. In pursuance of this supposed protectorate, a demand was made that Greek ecclesiastics should obtain the whole custody of what are called the "holy places" at Jerusalem. This claim was disputed by France, which, now governed by a Bonaparte, and in-

clined by traditional policy to maintain the rights of the Latin church in the East, also demanded a share in the management of those venerable localities. The key, say some, of a chapel in Palestine was given to the wrong ecclesiastic. Jesuit trickery, it is affirmed by others, was wielding the power of French diplomacy to extend over Palestine and Syria the despotism of the popedom. The probability is, that Russia was glad to avail herself of the opportunity afforded her by some over-zealous Latin churchmen, of fastening a quarrel on the Porte; and began to develop her long-cherished design of adding the territories of the sultan to her vast dominions. Turkey, it is intimated, was to be divided. England was to receive Egypt, the high road to her Indian and Australian possessions. Austria was to be bribed to acquiesce in the scheme of partition by the western provinces of the sultan's dominions. The claims of France were to be ignored, as her influence was at that moment weakened by intestine dissensions. But Russia was to take the lion's share. The Black Sea was to become a Russian lake; Russia was to levy a fiscal tax on every bale of merchandise which went up or down the Danube; and while, in the extreme north, St. Peterburg, Sweaborg, and Cronstadt were the standing memorials of the humiliation of Scandinavia, in the south, Constantinople, converted into the capital of the czars, was to demonstrate that the Slavonic race was everywhere on the ascendant, and that the Turcoman incursion into Europe was at an end.

Such is said to have been the scheme. It began by negotiations between France, Russia, and Turkey; which, of course, never arrived at a satisfactory termination. Meanwhile, Russia, obeying the single will of Nicholas, who felt that he could enforce his protectorate of the Greek Christians, and any other plan for weakening Turkey, with an enormous army, and with a fleet ready to sail from Sebastopol at a few hours' notice, became impatient at this delay. The final refusal of the sultan to concede the protectorate was made a pretext for war. Troops, already prepared for the enterprise, were marched into the Moldo-Wallachian provinces. These were to be held by the czar as a material guarantee until Turkey succumbed. This audacious aggression unveiled the ambitious projects of Russia, and alarmed the rest of Europe. However divided public opinion might be in consequence of the cruelties exercised by the Turkish subordinate governors on the Christian populations under their sway; however anxiously the protestants of Europe regarded any extension of the papal authority, the strong impression in England and France was, that the future peace of Europe was imperilled. Those two great nations, whose alliance in war had been so rare that at St. Petersburg it was deemed impossible, combined to sustain the sultan and his court in their hour of danger, and to resist the encroachments of their grasping neighbour. Abdu-l-Medjid saw, from the terraces of his palace, the mighty fleets of his Western allies anchored in the Bosphorus, and welcomed their legions at the Golden Gate. After various preliminary operations, the armies—the English and French armies under the command respectively of Lord Raglan and Marshal St. Arnaud—embarked at Varna for the Crimea, in numbers variously stated, and amounting probably to about 45,000 men. The vast armada that bore them, and was destined to cover their disembarkation, arrived at the Crimean peninsula on the 14th September, 1854. They landed without encountering any serious opposition, at a favourable spot between the town of Eupatoria and the river Alma. Marching thence in the direction of Sebastopol, the great arsenal of Russia in the south of Europe, they found the Russians awaiting their arrival on an entrenched plateau in front of the Alma, near its mouth. A sanguinary battle ensued on the 20th of September, and the Russians were routed with the loss of nearly 5,000 men.

The allies reached Sebastopol, and began the siege. It was remarkable for brilliant deeds of daring, among which the charge of the English cavalry at Balaclava will for ever rank among the wonders of bravery; for a great battle, that of Inkermann; for the skill of the Russian engineers, especially in their use of earthworks; for the first application of the modern inventions of civil engineering to the purposes of war; and for the death of the allied commanders by whom it had been begun. At last, the capture by the French of a commanding point, called the Malakhoff tower, rendered the defensive works untenable. The Russians evacuated and burnt the city, destroying their fleet, and retreating across the harbour to the northern side. It has

been well remarked, that the conflict before Sebastopol assumed such gigantic proportions, that it became the war itself. The preceding efforts of the Turks on the banks of the Danube under Omar Pasha, and the subsequent conquest of the allies at Kinlurn and in the sea of Azoff, are all forgotten in the memory of this great siege. The armies of Russia were absorbed in it, and perished in detail; so that when Sebastopol fell (September 8, 1855), the Muscovite was glad to relinquish his exorbitant claims, and to accept conditions of peace.

The treaty of peace signed at Paris on the 30th of March, 1856, between Russia, Turkey, and the Western Powers, including Sardinia, whose troops took an honourable share in the contest before Sebastopol, secured to Turkey the full exercise of her legitimate power, and gave her an interval of security to work out plans of internal improvement. But the task before the sultan was one which required a cool head and a stout heart. The more fanatical of his Mussulman subjects viewed his measures for administrative reform with mistrust and dislike. Amiable, voluptuous, and profuse, well-meaning, but feeble, Abdu'l-Medjid was little fitted to reinvigorate a country exhausted by the struggle with Russia. He died in June, 1861, and was succeeded by his more resolute and energetic brother, now Sultan Abdul-Aziz.—T. J.

ABDU'-L-MUMEN or ABD-EL-MUMEN, IEN' ALI, surnamed ABU MAHOMMED—according to some second sultan of Africa, of the dynasty of Almohades; according to others, virtual founder of that dynasty—was born in Africa in 1101. At the age of eighteen he became the adviser of Mohammed Ibn Tiumarta, surnamed Al-Mahdi, a native of Cordova, who had studied at Bagdad under the famous Arab philosopher, Abū Hámid Alghazali. Availing themselves of a popular impression that the Mahdi or expected Moslem Messiah was about to appear, the two associates devised a scheme, which, mainly through the genius and intrepidity of Abdu'l-Mumen, was ultimately crowned with success. Abdu'l boldly proclaimed his friend the longed-for Mahdi, and was appointed his prime minister. So rapidly did the crowd of fervid followers increase, that they soon constituted a large and formidable army. The new sect, assuming the name of Almohades, commenced a sanguinary war with the Almoravide emperor of Africa and Moslem Spain, and continued it with almost uninterrupted success, till they accomplished the extinction of the Almoravide dynasty. Mohammed dying in 1130, Abdu'l-Mumen was declared his successor, and, after a brilliant reign of thirty-three years, he died in 1163, when on the point of starting at the head of an immense army he had raised in Africa, to check the career of Alfonso VIII.—E. M.

A'BECKET, GILBERT ABBOT, an English writer of great talents, and extraordinary wit and humour, born in 1811. He was admitted to the bar in 1841, but devoted himself to political and light literature, for which he had more taste than for the practice of the law. He was successively on the staff of the Times and other leading journals, and long continued to be one of the most copious, as well as one of the most brilliant contributors to Punch. After holding, with much credit, the office of assistant poor-law commissioner, he was appointed stipendiary magistrate for Southwark; and by the able and efficient discharge of his functions, showed it was not want of aptitude for business that prevented his success in the legal profession. His literary productions, though replete with the boldest drollery, are, happily, free from every trace of indelicacy or malignity. His acknowledged works, mostly republications of detached effusions, are—"Comic Blackstone;" "Comic History of England;" "Comic History of Rome;" and "Quizziology of the British Drama." He died at Boulogne in August, 1856.—E. M.

A'BECKET, THOMAS. See BECKET.

ABEELE, PETER VAN, a Dutch medallist of great merit, flourished in the second half of the 17th century.

\* ABEGG, JULIUS-FREDERICK-HENRY, born at Erlangen in 1796, was in 1824 appointed professor of law in the university of Königsberg, but left this chair for one in Breslau in 1826. He is the author of several works on jurisprudence.

ABELLE, ABBÉ GASPARD, born at Riez in Provence in 1648; died at Paris, 1718, was secretary to Marshal de Luxembourg, whom he followed through all his campaigns. He wrote numerous odes and several dramas.

ABELLE, LOUIS-PAUL, a political economist, was born at Toulouse, 1719; died at Paris, 1807. He was inspector-general

of manufactures in France, and secretary-general of the Board of Trade. He has left several works on political economy, and a preface, with notes, to Maiesherbes' Observations sur l'Histoire Naturelle de Buffon.

ABELLE, SCIPION, brother of Gaspard, a surgeon of the department of St. Côme, died at Paris, 1697. He was also a poet, and chose, as the themes of his muse, the singular subjects of anatomy and surgery.

ABEL (*Vanity*), the second son of Adam and Eve, who was murdered by his brother Cain.

ABEL, king of Denmark, succeeded his brother Erick, whom he had caused to be assassinated in 1250, and died in 1252. In order to obtain the suffrages of the people (who were ignorant of his guilt), he awarded them greater privileges than they had ever enjoyed under any of his predecessors: but insisting on the maintenance of an extraordinary tax instituted by his brother, the Frisians revolted. He marched against them and defeated them; but the day after the battle, the rebels returned to the charge, attacked and killed the king in his camp, putting his army to flight. He was succeeded by Christopher I.—S.

ABEL, CARL FRIEDRICH, a player on the viol da gamba, an instrument of a larger size than the viola now in use, which was originally distinguished from it by the name of viol da braccia. He was born at Köthen in 1725 (M. Fétis states in 1719), where his father was kapellmeister, from whom he received his first instruction on the instrument for which he became famous, and on the harpsichord. He studied composition under the great Bach at Leipzig, with success only inferior to that with which he applied himself to his principal instrument. In 1748 he obtained an appointment in the court of the electoral king of Poland, at Dresden, where Hasse was gaining celebrity by the production of his operas, from hearing which Abel is supposed to have acquired that peculiarly expressive character that especially distinguished his compositions, and still more his playing. Here he remained for ten years, till his patron abruptly dismissed him, and he left Dresden with but three dollars in his pocket, but with half a dozen compositions in his folio, which he sold to a publisher for as many ducats, directly he arrived at Leipzig. Pleased with this good fortune, and with the applause that attended his public performances, he proceeded on foot from city to city with his instrument. His wanderings led him the following year to London, where he had recommendations to the duke of York, through whose interest he at once was engaged as chamber musician to the queen. He had, in this capacity, to play nightly a solo on his viol da gamba at the palace concerts, by which he gained a rapid distinction, or, in the absence of both J. C. Bach and Schröter, to accompany the other performances on the harpsichord. He now obtained a high price for all he wrote, he had as many pupils as he chose to teach, and gave frequent concerts in conjunction with J. C. Bach, by which he always made considerable profit. Here he remained for twenty-three years, and in 1782 he visited Germany, to create anew the same powerful impression by his playing that he had done in the days of his youthful freshness. He next went professionally to Paris, to meet with his universal success, and thence came back to London, where he died on the 20th of June, 1787. His cotermporaries speak of his playing, especially of adagios, in terms of unqualified rapture, and say that it had great influence upon the style of all the string-instrument players of his day. He wrote some songs in "Love in a Village," in "Berenice," and in several Italian operas, but never a complete dramatic work; his fame as a composer, however, which in his own time was very considerable, rests upon his numerous instrumental productions, of which the principal are named in M. Fétis' Biographie, and in Dr. Schilling's Lexicon. He was particularly extolled for his improvisations, and his best composition is said to have been a solo he played a few days before he died.—G. A. M.

ABEL, DR. CLARKE, an English surgeon and naturalist, was born about 1780. He accompanied Lord Amherst on his embassy to China in 1816-17, and on his return to England published "A Narrative of a Journey to the Interior of China," which contains much information interesting to the student of natural history. He was afterwards appointed surgeon-in-chief to the East India Company, in which capacity he resided for some years at Calcutta, where he died, 26th December, 1826.—S.

ABEL, FREDERICK-GOTTFRIED, son of Gaspard Abel, was born 8th July, 1714; died in November, 1764. He was an en-

lightened physician, and has left a work entitled "Dissertatio de Stimulantium Mechanica Operandi ratione."

ABEL, GASPARD, a German preacher, born at Hindenburg, 1676; died at Westdorf, 1763, was a prolific writer in theology and politics, and translated the "Heroides of Ovid."

ABEL, JAMES FREDERICK, a German philosopher, was born in Wurtemberg, 1751, died 1829; was professor of philosophy at the university of Tubingen, and archbishop of the protestant church of Wurtemberg. His philosophy is borrowed from the doctrines of Kant.

ABEL, JOHANN JOSEPH, a historical painter, was born at Aeschach in Austria, 1768; died at Vienna, 1818. He was a pupil of Füger, of the Academy of Painters at Vienna, and resided for six years at Rome, to perfect himself in his art. On his return to his own country, he executed a series of historical pictures which form part of the collections of the Imperial Academy, and Belvedere gallery at Vienna.—S.

ABEL, NICHOLAS HENRY, a Swedish mathematician, born in 1802, at Findöe, in Norway. At first he manifested little taste for learning, but, at the age of sixteen, he gave himself up with such ardour and success to the pursuit of mathematical science, as soon drew upon him the attention of the government, which provided him with the means of prosecuting his studies in different universities in Germany, France, and Italy. He went first to Berlin, where he formed an intimacy with Crelle, then engaged upon his Journal of Mathematics. From thence he travelled through southern Germany, Switzerland, and Italy, and finally arrived in Paris, where his works were coldly received by the French Academy, which, however, afterwards, though too late for their author, did them justice by a high tribute of admiration. He returned to his own country in 1827, and died of consumption on the 6th of April, 1829. The most celebrated mathematicians agree in considering Abel as one of those men, whose career, had it been prolonged, would have marked an epoch in the science. His principal works are—"A general method for finding the function of a variable, when a property of that function is expressed by an equation between two variables," a treatise published in the Magazine of Natural Sciences of Christiana, in 1820: "A treatise on the impossibility of resolving the equations of degrees above the fourth;" "An inquiry as to the elliptic functions;" and a "Treatise upon some general properties of a certain kind of transcendental functions;" besides some articles in Crelle's Journal of Mathematics, and Schumacher's Astronomical News.—S.

ABEL, THOMAS, a divine of the sixteenth century, who wrote a book against Henry the Eighth's divorce from his queen Catherine, for which, and for his denial of the king's supremacy, he suffered death at Smithfield in 1540. He was associated with Elizabeth Barton, known as the Holy Maid of Kent, in her so-called treason.

ABELA, GIOVANNI FRANCESCO, a learned archæologist, was born at Malta, 1582; died 1655. He was commandant of the knights of Malta, and author of a curious and now rare work entitled "Malta Illustrata," a Latin translation of which was inserted in the fifteenth volume of the "Thesaurus Antiquitatum et Historiarum Siciliæ" of Grævius.

ABELARD, PETER, an illustrious mediæval philosopher and divine, the eldest son of a nobleman of Brittany, was born at Palais (or Palet), near Nantes, in 1079, in the reign of Philip I., king of France, and of Hoël IV., duke of Brittany. The name of Abelard is familiar to most readers; but it is only the romance of his biography that is generally known, and even that has seldom, if ever, been accurately traced, and fairly appreciated in reference to the circumstances of the times. Recently, however, his life and writings have obtained, mainly through the labours of his countrymen. Guizot, Cousin, and Remusat, the prominent attention they merit, in connection with the history of philosophy and the progress of modern civilization. Even the boyhood of Abelard gave striking indications of future celebrity. His marvellous genius, his ardour in the pursuit of knowledge, his amiable disposition, his handsome person, beautiful features, and melodious voice, made him an object of general interest. His father encouraged his predilection for a literary career, and spared no expense to procure him the benefit of the most able instructors. About the age of twenty he repaired to Paris, and studied under William of Champeaux, the most celebrated dialectician of the day, whose lectures were attended by crowds of students, not only from all parts of what is now called France,

but from Italy, Germany, and Britain. There was then no university, properly so called, in France, but conventual and diocesan schools, conducted respectively under the auspices and inspection of the abbot and bishop. William was at the head of the diocesan school, and archdeacon of Paris. Abelard's attainments, capacity, and eloquence, joined to his polished manners and interesting appearance, soon attracted the esteem and regard of both master and students. His subsequently losing the master's favour, did not, as is usually assumed, arise from mere envy on the part of the archdeacon, or arrogance on the part of Abelard. In those times, contradiction was the usual mode of eliciting truth, and the very essence of the scholastic system was controversy, simulated or in earnest. The spirit of knight-errantry reigned in the schools, and challenges to a public combat were every-day occurrences among gowned dialecticians, as among mailed knights. What deeply offended and alarmed William of Champeaux in regard to Abelard was, not that he formally contested statements delivered from the chair, but that, from unmistakable conviction, he gave utterance to views which the archdeacon, who was an ardent champion of Realism, conscientiously deemed not merely unsound, but heretical. But a few years before, a council of the Gallican church had denounced as a heretic, and driven into exile the famous Roscelinus, for assailing the theory of the Realists, and maintaining the opposite doctrine called Nominalism. Abelard had been, as he himself states, a pupil of Roscelinus, and though he disclaimed that philosopher's extreme views, he cordially agreed with him in rejecting Realists, and in asserting the right and duty of free inquiry. In fact, Abelard, from the earliest age, had manifested that surest token of a philosophic mind—the habit of thinking for one's self, and approving, not what is sanctioned by custom, or believed without examination, but what, after the fullest investigation, is found to be true. The sentiments Abelard was understood to entertain, and to which his youthful fervour and frankness occasionally gave expression, naturally awakened alarm in the sincere and zealous Realist, in proportion to his estimation of Abelard's powers, whom he always spoke of as possessing "a sublime eloquence and a perfect mastery of logical science." After remaining about two years in Paris, Abelard was encouraged to assume the functions of a public teacher of logic and metaphysics, which he did with great and increasing success, first at Melun, and afterwards at Corbeil. After some time, his arduous labours having seriously affected his health, he was induced to travel. It is not certain whether it was during this interval, or before his first journey to Paris, that he had an opportunity of hearing Roscelinus. Returning to Paris, he obtained an opportunity of encountering William of Champeaux in a public disputation, in which, by power of argument, he forced from his old master a modification of his theory—a circumstance which, with several subsequent defeats, destroyed the venerable Realist's scholastic prestige, and gave Abelard undivided sway.

Abelard was a most powerful and instructive speaker. He could bring the most profound truths within the reach of the most ordinary understanding. His delivery was imitatively graceful and impressive; his voice had remarkable sweetness and compass; and his discourses were enlivened with pleasing and instructive anecdotes, and beautified with appropriate quotations from the Latin poets. Unrivalled in philosophy, Abelard now resolved to study theology, and repaired to Laon to attend the lectures of the celebrated Anselm, whom he has described as a pious and learned man, and fluent speaker, though to a philosophic mind a very unsatisfactory instructor, confining himself to a statement of traditional interpretations of the sacred text. Abelard soon left him, and, applying himself to a more original and independent study of Scripture, began to deliver, in his own way, theological lectures, which soon attracted crowds of admiring auditors, though they awakened the indignation of the venerable Anselm, who thought Abelard's teaching heretical innovation. Returning to Paris, Abelard commenced a course of theological lectures, which soon made him as renowned in theology, as he had previously been in philosophy. He now entered on the most brilliant period of his career, and attained the very summit of scholastic glory. The students that flocked to his lectures from most parts of Europe amounted to many thousands, and raised him to affluence. Enjoying a popularity amounting almost to adoration, sufficient to turn the head of the most sober-minded mortal; without a rival in the field, and, therefore, without the stimulant of ambition to sustain the energy which had hitherto

marked his character, and still a stranger to that living piety which he was afterwards enabled in the school of affliction to attain, he soon fell under the influence of those allurements, which, unless restrained and directed by religious principle, lead to folly and guilt. At the mature age of thirty-eight, the renowned philosopher and divine fell in love, and the ardour of his passion corresponded to the attractions of the noble creature who was its object—Heloisa, the niece of Fulbert an ecclesiastic, a young lady under twenty, with a combination of beauty, genius, learning, and goodness, that could not but render her irresistibly attractive to such a man as Abelard. It is usually asserted that Abelard perpetrated premeditated seduction, but such assumption is unwarranted by evidence or probability. Hitherto he had lived a life of comparative innocence and purity, and he evinced the utmost readiness to redress by marriage the wrong he had done. He was not yet in orders. This point seems clearly established by M. Remusat, in his learned and accurate work on the life and writings of Abelard. Strange to say, Heloisa, from an unparalleled combination of generosity and perverted moral and religious sentiment, objected to matrimony, and after the marriage, which was private, denied its existence on oath. It has been justly remarked by Hallam, that Pope, in his beautiful poem, "has done great injustice to the character of Heloisa, by putting into her mouth the sentiments of a coarse and abandoned woman." "Her refusal to marry Abelard," he adds, "arose, not from an abstract predilection for the name of mistress above that of wife, but from her disinterested affection, which would not deprive him of the prospect of ecclesiastical dignities, to which his genius and renown might lead him." Even Hallam's explanation, true as far as it goes, does not fully express the sentiments of Heloisa. Her own singular argumentation on the subject has been preserved, and deserves to be studied in connection with the social and ecclesiastical condition of the age. Not long after their marriage, Abelard and Heloisa assumed the monastic habit, he entering the abbey of St. Denis, and she the convent of Argenteuil. This remarkable step should not be attributed, necessarily and solely, to the consequences of the well-known barbarous outrage perpetrated by Fulbert, which cannot be discussed here. Abelard's own father and mother had, but a few years before, done, by mutual consent, the same thing, bidding adieu to secular life, and spending the remainder of their days in conventual retirement. Such a decision, in fact, for various reasons, was then extremely common. Abelard at different places and periods resumed, with renown, his lectures both philosophical and theological; and nothing could be more suggestive than the fact, that the virulence of his opponents or enemies never made his illicit intercourse with Heloisa matter of reproach, though his marriage would have been universally deemed a depreciating weakness, as well as a bar to preferment.

Guizot, speaking of Abelard's labours, says:—"In this celebrated school were trained one pope (Celestine II.), nineteen cardinals, more than fifty bishops and archbishops, French, English, and German; and a much larger number of those men with whom popes, bishops, and cardinals had often to contend, such as Arnold of Brescia, and many others." Abelard considered himself, and wished to be, orthodox, though his fearless application of philosophy to divinity was not merely fitted to alarm timid and narrow-minded believers, but was such as to lead inevitably to what is called Rationalism, unless kept under the guidance of those restrictive principles which the gospel so clearly points out. At St. Denis, and still more at St. Gildas in Brittany, to which he afterwards retired, Abelard was in constant collision with the monks, whose conceited ignorance and gross debauchery he could not help trying to enlighten and reform. About the year 1120 he commenced a course of lectures in a solitary place on the territory, and under the protection, of the count of Champagne. Here he was soon followed by a crowd of devoted auditors, amounting, it is said, to 3000, who continued to reside in tents and temporary huts. His lectures, as brilliant as ever, now exhibited a far higher tone of spirituality than before, indicating the change that had taken place in his own mind. The spirit of his teaching, and the boldness of his statements, soon brought on him ecclesiastical prosecutions. In 1121 he was condemned without a fair trial, by a council held at Soissons, to burn a dissertation he had published, and which, in spite of all his protestations of orthodoxy, was declared to contain heretical statements in reference

to the Trinity. He after this found refuge and temporary repose in the priory of St. Ayoul, at Provins, on the territory of his former protector, the count of Champagne. In 1122 he selected for a retreat a locality near Troyes, where he built a humble oratory, which he dedicated to the Paraclete, or Comforter. Here, again, students crowded to his lectures. He resided at the Paraclete till 1125, during which time the original oratory was superseded by a monastic establishment of considerable size and importance. In 1125, harassed by critics and opponents, and threatened with fresh prosecutions, he accepted the position of abbot of St. Gildas, offered him by the duke of Brittany, and retired to his native province. All this time Heloisa had been in the convent of Argenteuil, and had become its prioress. But in 1127 the priory was claimed by the crown, and the inmates were dispossessed. In 1129, Abelard, ascertaining this catastrophe, hastened from Brittany, and made over to Heloisa the establishment of the Paraclete. Here she spent the rest of her life as abbess. Abelard finally quitted St. Gildas in 1140, reserving the title and rank of abbot. In 1136 he was again delivering lectures in Paris, when John of Salisbury was one of his devoted hearers. Twenty years had nearly elapsed since the council of Soissons. Abelard was now again prosecuted for heresy, with far more vigour and bitterness than before, and, mainly through the influence of St. Bernard, condemned, in a council held at Sens in 1140, to perpetual confinement, and inhibited from writing or teaching. He appealed to the pope, and by the kindly interference of Peter, the venerable abbot of Cluni, the matter was ultimately compromised, and Abelard took up his abode with the abbot, enjoying at Cluni, for two years, more repose and satisfaction of mind than probably he had ever experienced before; and manifesting a growing sense of the consolations of religion. He died in 1142 at St. Marcellus, near Chalons-sur-Saône, whither he had gone for a change of air. For an account of Heloisa's life as abbess of the Paraclete, and of the touching epistolary correspondence between her and Abelard during that period, see under HELOISA.—E. M.

ABELE, MATTHIAS, a famous doctor of laws, and a count palatine and occupant of some high offices in the Austrian empire, flourished at Lillianberg, during the latter half of the seventeenth century. His brother CHRISTOPHER, count of Abele, was also a noted jurist; died at Vienna, 1685.

ABELIN, JOHANN PHILLIP, a German historian, chiefly known as the founder of the "Theatrum Europæum," an immense compilation in 21 vols., comprising all the contemporary history of Europe. His works are still valuable as references for the history of the seventeenth century. Died 1646.

ABELLI, ANTOINE, a French ecclesiastic, born at Paris in 1527, was made abbot of the Augustinian monastery of Livry, near Paris. He is the author of three works, the chief of which is "La manière de bien prier." Died about 1600.

ABELLI, LOUIS, a French theologian, and author of numerous works, born 1603, died 1691, was at one time bishop of Rodez, and was a great adversary of the Port Royalists.

ABEN-BITAR, ABDULLAH-IBN-AHMED, better known as IBNU-L-BEYTTAR, an Arabian physician and botanist, was born about the close of the twelfth century; died in 1248. He has written in Arabic on vegetable medicines, and corrects many of the errors of Dioscorides, Galen, and Oribasus.

ABENDANA, JACOB, a Spanish Jew, wrote a Hebrew commentary on some portions of scripture; died in London, 1685.

ABENDANA, ISAAC, a brother of the preceding, and a rabbi, wrote in English a "Calendarium Judaicum."

ABENDROTH, AMEDEUS-AUGUSTUS, in 1810 mayor of Hamburg, was born 1767; died 1842. He was the first who instituted establishments of sea-water baths.

ABEN EZRA, or more fully ABRAHAM BEN MEIR ABEN EZRA, was one of the most able and famous Jewish grammarians and commentators of the middle ages. He was born in Toledo, probably in 1119, and died either in Rhodes or in Rome, probably in 1194. To extraordinary natural talents he added indefatigable ardour and industry in the pursuit of knowledge, and he enjoyed besides, in his youth, the advantage of the best teachers; among whom was the Karaite, Japhet Hallevi or Levita, to whom he is believed to have owed his taste for etymological and grammatical investigation, and his preference for the literal to the allegorical and cabbalistical interpretation of scripture. He was afterwards married to Levita's daughter,

He acquired a profound knowledge of the Hebrew, Chaldee, and Arabic languages, and became not only a master of all rabbinical learning, but also a distinguished mathematician, astronomer, and physician, and a respectable poet. He travelled extensively in foreign countries—England, France, Italy, Greece, &c.—in search of knowledge, and to converse with learned men. Many of his works were published in foreign cities, where he was resident at the time. These works were very numerous. The latest and fullest catalogue of them will be found in "Fürst's Bibliotheca Judaica" (Leipzig, 1849). His writings on Hebrew grammar were highly valued by his contemporaries, and continued in the hands of all students of Hebrew philology and literature for several centuries. His astronomical and other philosophical writings added considerably, by their original contributions, to the stock of human knowledge; but it was as a commentator on the Old Testament that he was most distinguished. His commentary on the Pentateuch is characterized by Fürst as "the most scientific produced in the middle ages, embracing a preface on the history of Scripture interpretation of distinguished excellence." This work was the author's last and greatest; it was finished in 1167, the probable year of his death. Maimonides, his great contemporary, esteemed his writings so highly for learning, judgment, and elegance, that he recommended his son to make them for some time the exclusive subject of his study. By Jewish scholars he is preferred as a commentator even to Raschi in point of judiciousness and good sense; and in the judgment of Richard Simon, confirmed by De Rossi, he is the most successful of all the rabbinical commentators in the grammatical and literal interpretation of the Scriptures. Though occasionally marked by a bold and free spirit, and discarding in general the use of superstitious fables and legends, Aben Ezra was conservative, on the whole, of the traditions of rabbinic orthodoxy. Many of his commentaries were translated into Latin for the use of Christian divines, and the Hebrew originals were incorporated into the great Rabbinical Bibles of Bomberg and Buxtorf. They are still frequently reprinted for the use of Jewish readers.—P. L.

ABEN-GNEFIT, an Arabian physician of the twelfth century, the author of a now rare treatise entitled "De virtutibus medicinarum et ciborum."

ABEN-ILAMYN, a Moor of Granada, the supposed author of an Arabic work, translated into Spanish, upon the civil wars of Spain during the Moorish occupation of that country. Perez de Hita, however, appears to be the real author, and not merely the translator of it. It contains numerous Moorish romances.

ABEN-HUMEYA, the last king of Granada of Spanish origin, was born about 1520; died 1568. The Moors having revolted against Philip II., elected Aben-Humeya king of Granada and Cordova, and placed him in a condition seriously to injure Spain and its monarch Philip II., whom he bitterly hated. Betrayed by his own people, he was put to death by strangulation, but his decease did not extinguish the insurrection of the Moors.—S.

ABEN-MELECH, a learned Jewish rabbi of Spain in the 16th century, who wrote a commentary on the whole Hebrew Scriptures, which he proudly called *Michlol Jophi*—"perfection of grace," and which was published at Constantinople in 1554. In this book Kimchi's exposition is rather slavishly followed.

ABEN-RAGEL, an Arabian astrologer, lived towards the close of the eleventh century. He has left two published works on his favourite science, and several MSS. preserved in the library of the Escorial.

ABERCROMBY, ALEXANDER, a Scottish judge and elegant essay writer, brother of Sir Ralph Abercromby, born 15th October, 1745. He was admitted advocate in 1776, and appointed soon after sheriff-depute of Stirlingshire. In 1780 he resigned that office to become advocate-depute. He was one of the originators of the *Mirror*, published in 1779 and 1780, and also a contributor to the *Lounger*, 1785 and 1786,—two Edinburgh periodicals esteemed among the most classical of British works of this order. Appointed in May, 1792, a judge of the Court of Session, he took his seat as Lord Abercromby, and, the following December, was made a Lord of Justiciary. Died 17th November, 1795.—W. A.

ABERCROMBY, DAVID, a Scotch physician, who lived about the middle of the seventeenth century. He was the author of four short medical treatises, collected under the title of "Opuscula Medica," and of various other works enumerated in Watt's "Bibliotheca Britannica."

ABERCROMBY, JAMES, BARON DUNFERMLINE, son of Sir Ralph, was born 7th November, 1776. He entered parliament in 1832 as member for Edinburgh, and was speaker of the House of Commons under Lord Melbourne. On resigning that office in 1839, he was raised to the peerage. Died 1858.

ABERCROMBIE, JOHN, an eminent horticulturist, the son of a respectable gardener near Edinburgh. He studied the art of horticulture under his father, and was sent to London at the age of eighteen. He was employed in the gardens at Hampton Court, St. James', and Kensington, and acquired celebrity as a landscape gardener. He published several valuable works, such as a "Dictionary of Gardening and Botany;" "The Gardener's Companion and Calendar;" "The Hot-house and Forcing Gardener," &c. He died in 1806, at the age of eighty.—J. H. B.

ABERCROMBIE, JOHN, M.D., the most eminent Scotch physician of his time, and author of various religious and philosophical works, was the son of a minister of the Established Church of Scotland, at Aberdeen, where he was born 12th October, 1780. He studied medicine at the university of Edinburgh, taking his degree of M.D. in 1803, and soon obtained an extensive and lucrative practice in the Scottish metropolis as a physician. On the death of Dr. Gregory in 1821, he was appointed physician to the king for Scotland. He was a fellow of the Royal College of Physicians and Surgeons, Edinburgh, and a vice-president of the Royal Society of that city. In 1834, the university of Oxford conferred on him the honorary degree of M.D., and the following year he was chosen lord rector of Marischal college in his native city. In 1837 he was confirmed in the appointment of first physician to the queen in Scotland. On commencing practice, he had made his name widely known in the profession by his contributions to the "Medical and Surgical Journal," and in 1828 he published "Pathological and Practical Researches on the Diseases of the Brain and Spinal Cord." In the following year he issued a similar treatise on "The Abdominal Organs." He is, however, better known in England by his productions on the philosophy of human nature, in which he shows himself to be a thinker of no mean order. In his "Inquiries concerning the Intellectual Powers and the Investigation of Truth," which appeared in 1830, he supports the general mental theory propounded by Reid and Stewart. The most interesting portions of the volume are those which bear on his professional pursuits, such as dreaming, insanity, idiocy, spectral illusions, and cases of somnambulism. In 1833 he published a work of a similar nature, entitled "The Philosophy of the Moral Feelings," which is but limited in its range, being confined to one or two phases of what he terms the "intuitive articles of moral belief." He published also several tracts on religious subjects, a treatise on the cholera, and "Observations on the Moral Condition of the Lower Orders in Edinburgh," 1834, 8vo. Dr. Abercrombie was held in great and deserved estimation by his contemporaries, in a measure beyond what might be imagined by readers of his writings. His active beneficence, guided by uncommon sagacity, prudence, earnestness, and Christian zeal, although never obtrusive, was recognized as his distinguishing characteristic. He was much beloved, as well as greatly honoured. Dr. Abercrombie died suddenly at Edinburgh, 14th November, 1844.—J. C.

ABERCROMBIE, PATRICK, physician and historical writer, was born at Forfar in 1656, and graduated at the university of St. Andrew's in 1685. Having embraced the Roman catholic religion, he was appointed physician to James VII., but lost that office at the Revolution. In 1707 he published a translation of a rare French work, entitled "The Campaigns in Scotland in 1548 and 1549," 8vo, reprinted in the original for the Bannatyne Club in 1829. His best known work is the compilation entitled "The Martial Achievements of the Scots Nation," 1711-1715, 2 vols. folio. He also wrote the "Memoirs of the Family of Abercrombie." He died in poor circumstances in 1716; some authorities say 1726.—W. A.

ABERCROMBY, SIR RALPH, a distinguished British general, the eldest son of George Abercromby of Tullibody, Clackmannanshire, was born 7th October, 1734. He entered the army in 1756, and gradually rose till he became major-general in September, 1787. He first served in the Seven Years' war, and in 1792, 1793, and 1794 was employed with the local rank of lieutenant-general in Flanders and Holland, against the revolutionary armies of France. He was wounded at Nimeguen, and, throughout that disastrous campaign, his military knowledge,

ability, and courage were signally shown. Upon him and General Dundas devolved, along with the care of the guards and the sick, the arduous duty of conducting the retreat through Holland during a most severe winter. In 1795 he was made a knight of the Bath, and appointed commander-in-chief of the forces in the West Indies. Besides the island of St. Lucia, he obtained in 1796 possession of St. Vincent and Grenada, and of the Dutch settlements of Demerara, Essequibo, and Berbice. In 1797 he also took the Spanish island of Trinidad, but was unsuccessful in an attempt upon the island of Porto Rico. On his return to England, he was made governor of the Isle of Wight, and raised to the rank of lieutenant-general. In 1798 he was appointed commander-in-chief of the forces in Ireland, and subsequently held the same post in Scotland. In the disastrous attempt upon Holland in 1799, Sir Ralph had the chief command on the landing of the troops, and his first operations were successful; and even after the arrival of the duke of York, when Abercromby was reduced to a subordinate position, success uniformly crowned the operations intrusted to his own charge. In 1800 he was appointed commander-in-chief of the expedition sent to Egypt, with the view of expelling the French from that country. He landed at Aboukir, after a severe contest with the enemy, March 8, 1801, and on the 21st of the same month fought the decisive battle of Alexandria. After a sanguinary struggle, the British were victorious, but their brave commander was mortally wounded. On the retreat of the French, he was conveyed on board the admiral's flag-ship, where he died seven days after. His body was deposited under the castle of St. Elmo at Malta, and a monument to his memory was erected by parliament in St. Paul's cathedral, London. His widow was created Baroness Abercromby, with remainder to his heirs male. The military talents of Sir Ralph were of a very high order. His dauntless courage, activity, and promptitude, were guided by the greatest caution and circumspection, while his integrity, humanity, high sense of honour, and singular sagacity, gained him the confidence and warmest affection both of the king and the nation.—W. A.

**ABERCROMBY, SIR ROBERT**, youngest brother of the preceding, a general in the army, died in 1827. He was a knight of the Bath, and at one period governor of Bombay and commander-in-chief of the forces in India, and afterwards for thirty years governor of the castle of Edinburgh.

**ABERDEEN, LORD**. See GORDON.

**ABERLI, JOHN LOUIS**, a Swiss artist, born at Winterthur in 1723, at first painted portraits at Bern, but afterwards devoted his talents to landscape painting, and is celebrated for his views of Switzerland. Died 1786.

**ABERNETHY, REV. JOHN**, an eminent Irish dissenting minister, born at Coleraine, on the 19th October, 1680. He ministered in Antrim till the year 1730, when he removed to Dublin. He was engaged in much of the controversial discussions of the times, and was the author of numerous publications. The principal of these are "Sermons on Various Subjects," 4 vols. 8vo; and "Discourses concerning the Being and Natural Perfections of God," 2 vols. 8vo. This last has been much admired for the clearness of its style, and the acuteness and force of its reasoning. He died in December, 1740.—(Life by Duchal; *Biog. Brit.*)—J. F. W.

**ABERNETHY, JOHN**, a celebrated surgeon, and distinguished lecturer on anatomy, was born in the parish of St. Stephen's, Coleman-street, London, on the 3rd April, 1764. Descended from a presbyterian family of Scottish origin, which had long resided in the north of Ireland, his character and disposition exhibited much of the shrewdness of the former nation, with all the wit and comic humour of the latter. After completing his preliminary education at the grammar school of Wolverhampton, he was apprenticed, at the age of sixteen, to Sir Charles Blicke, one of the surgeons of St. Bartholomew's hospital, at which period he enjoyed the advantage of attending the prelections of Pott, Hunter, and Blizard, then the most eminent surgeons in the kingdom, and by this means laid the foundation of his future brilliant career. At the early age of twenty-two years, he was appointed assistant-surgeon to St. Bartholomew's hospital, and soon after was promoted to the lectureship of anatomy, physiology, pathology, and surgery, which at that period were all conjoined. Having been an enthusiastic admirer of John Hunter, and his most diligent pupil in the dissecting-room, he early adopted his physiological views, and continued during life to advocate his

opinions with unflinching perseverance. His treatise on the constitutional origin and treatment of local diseases, exhibited great originality of mind, and stamped him as a man of superior mental powers. His lectures at the Royal College of Surgeons were characterized by that clearness of description, and that vividness of illustration, which marked his future life.

It was not, however, so much to his numerous and able writings on physiology, as to his oral lectures on surgery in the theatre of St. Bartholomew's hospital, that he was indebted for his celebrity. Combining as he did, for upwards of fifty years, the extensive experience obtained in the hospital wards, with a careful observation of nature in the dissecting-room, he was enabled to make both tell admirably on the minds of his numerous pupils. In fact he must be regarded, in every point of view, as the father of British clinical surgery; illustrating his lectures with a naïveté and dramatic power which have never been paralleled. His stature was small, his features rather comical than reflective, his eyes quick and searching, one of his hands while lecturing generally thrust into his breeches' pocket, or hanging carelessly by his side. His hair was powdered, elevated in front, and prolonged into a pig-tail queue behind. His character may be thus summed up: benevolence of the most unobtrusive kind; intense and persevering application to study and his professional duty, both in public and private; genius accompanied with a store of exuberant wit; and a temper and manner, though eccentric and abrupt, still exhibiting great kindness and beneficence. He died at his country seat at Enfield, in April, 1831.

The following are Mr. Abernethy's principal writings:—"Surgical Works," in 2 vols. 8vo; "An Inquiry into the Probability and Rationality of Mr. Hunter's Theory of Life;" "Physiological Lectures, exhibiting general views of Mr. Hunter's Physiology," &c., 8vo, 1817; "The Hunterian Oration for 1819;" "Reflections on Gall and Spurzheim's System of Physiognomy and Phrenology," 8vo, 1831—these four works form one volume. "Lectures on the Theory and Practice of Surgery," 8vo, 1830, &c.—M. S. B.

**ABESCH, ANNA BARBARA**, a famous painter on glass, lived about 1750. The celebrated monastery of Muri in Switzerland, possesses several specimens of her talents.

**ABGARUS**, the name of successive sovereigns of Edessa in Mesopotamia. Abgarus Mannus, by decoying the Roman army under Crassus into an arid desert, caused its destruction by the Parthians. Another Abgarus is the alleged writer of an apocryphal letter, addressed, as was pretended, to Jesus Christ.

**ABGILLUS**, better known as **PRESTER JOHN**, was the son of a king of Friesland, and the companion of Charlemagne to the Holy Land. He did not return to Europe with his prince, but continued his travels and conquests till he founded the empire of Abyssinia. He wrote two histories, one of Charlemagne's conquests in the East, and the other of his own subsequent expeditions. They are said, however, to partake more of the character of romances than real histories. The name, Prester John, was conferred on account of the peculiar austerity of his life.—J. B.

**ABIATHAR**, high-priest of the Jews, deprived of his office by Solomon, for attempting to place his brother Adonijah on the throne of David, about the year 1014 B.C.

**ABICHT, JOHANN GEORG**, a German orientalist, was born 21st March, 1672, at Kœnigsee, in the principality of Schwarzburg-Rudolstadt; died at Wittenberg, 5th June, 1740. He was a professor in the university of Wittenberg, and distinguished himself in a controversy with J. Franke upon the grammatical, prosodical, and musical use of the Hebrew points. The greater part of his numerous writings (of which a list has been given by Michael Ranft) have been inserted in the *Thesaurus Novus*, &c., of Ikenius.—S.

**ABICHT, JOHANN HEINRICH**, professor of philosophy at Erlangen; born at Volkstedt in 1762; died at Wilna in 1804. Abicht was at first a Kantist, but he broke from his master, and endeavoured unsuccessfully to find a new system. His works are very numerous, but it is scarcely necessary to enumerate them.

**ABICOT**, a French surgeon, born at Bonny in the Gatinais; died in 1624. He acquired a great reputation in his profession, and has left a "Treatise on the Plague," and other medical works.

**ABIDENUS** or **ABYDENUS**, a Greek historian, to whom have been attributed two works entitled "Assyriaca" and "Chaldaica." The period at which he lived is uncertain. He

must not be confounded with another Abydenus, quoted by Suidas, and who was a disciple and contemporary of Aristotle.

ABIHU, the son of Aaron, high-priest of the Jews. As a punishment of his impiety, he was destroyed by fire, along with his brother Nadab, 1490 B.C.

ABILDGAARD, NICHOLAS ABRAHAM, historical painter to the king of Denmark, born at Copenhagen in 1744; died in 1809. He was a professor in the academy of fine arts at Copenhagen, and director of that institution; and is considered the greatest painter Denmark ever produced. He was not less distinguished as an instructor than as an artist, having trained both painters and sculptors who alike do honour to their master and their native country. The greatest of his pupils was the celebrated Thorwaldsen. His admirers have named Abildgaard the "Raphael of the North," on account of the perfection of his colouring. Unfortunately for the interests of art, the finest works of this master were lost in the destruction by fire of the palace of Christiansburg in 1794. His writings on the subject of art are much and justly esteemed.—S.

ABILDGAARD, PETER CHRISTIAN, a Danish physician and naturalist, born at Copenhagen about 1740; died in 1808. He has written several works on medicine, mineralogy, and zoology, and described the famous "Megatherium" simultaneously with Cuvier. He was secretary to the academy of sciences in Copenhagen, one of the founders of its Society of Natural History, and the first who established a school of veterinary medicine in his native country.—S.

ABILLON, ANDREAS D', grand-vicar of the bishop of Amiens, flourished about the middle of the seventeenth century, and wrote some metaphysical and polemical works, such as a "Nouveau Cours de Philosophie," in four vols.

ABIMELECH (*Father of the king*), a name which appears to have been common to all the Philistine kings of Gerar, and indeed to have been in general use amongst the ancient sovereigns of the East. The first of whom the Bible makes mention, was a contemporary of Abraham and Sarah; the second, of Isaac and Rebekah; and the third was the son of Gideon, and succeeded him as judge in Israel.—S.

ABINGER. See SCARLETT, JAMES.

ABINGTON, FRANCES, the celebrated actress, was born either in 1731 or 1738. Her father, whose name was Barton, is said to have been a common soldier. In very early life she earned a livelihood by running on errands. She made her first appearance on the stage in 1775, at the Haymarket, then under the management of Theophilus Cibber. Next year she acted at Bath and Richmond; and, after a short engagement at Drury Lane, went to Dublin, where, as "Kitty" in *High Life below Stairs*, she met with decided success. In 1765 she returned to England, and was warmly welcomed by Garrick, and no less warmly by the crowded audiences of Drury Lane. She rapidly rose to the first rank as a comic actress. In 1782 she quarrelled with the management of Drury Lane and went over to Covent Garden. She died in 1815.

ABINGTON or HABINGTON, THOMAS, an English antiquary, and son of Queen Elizabeth's treasurer, was born at Thorpe, Surrey, in 1560; died in 1647. Having been accused, with his brother Edward, of aiding Babington in his attempt to restore Mary Queen of Scots to liberty, he was for six years confined in the Tower of London. On recovering his freedom, he retired to Hindlip in Worcestershire, where he gave asylum to the two jesuits, Garnet and Oldcorn, engaged in the famous Gunpowder Plot. He was immediately seized, tried, and condemned to death; but through the influence of his brother-in-law, Lord Monteaigle, the capital punishment was commuted to that of exile from London. He had some hand in a history of Edward IV., published by his son after his death, and he translated the works of the historian Gildas.—S.

ABINGTON or HABINGTON, WILLIAM, an English poet, eldest son of the preceding, was born at Hindlip in Worcestershire in 1605. He was educated in the Jesuits' college at St. Omer's, and afterwards at Paris. On his return to England he declined active employment, and devoted his attention to scholarly and poetical pursuits. He married a daughter of the first Lord Powis, a lady to whom, under the name of Castara, the first and happiest efforts of his muse were consecrated. A volume of these love effusions was published in 1635, with the title of "Castara;" they exhibit a lively fancy, and are singularly free both from the affectation of the metaphysical, and from

the grossness of the anatory, poets of his time. Habington is the author of a tragi-comedy called "The Queen of Arragon," printed in 1640, and reprinted by Dodsley in his collection of *Old Plays*. He also wrote "Observations upon History," 1641; and a "History of Edward IV." Wood asserts that this latter work was written and published at the express desire of Charles I. Habington died in 1645.

ABISBAL, ENRIQUE O'DONNELL, Count of, a Spanish general, born in Andalusia in the year 1770. He was descended from the Irish family of O'Donnells, who had settled in Spain after the defeat of the earl of Tyrone, in the reign of Queen Elizabeth. Several members of that family have occupied a conspicuous place in the history of Spain. Abisbal is specially known in the annals of the war of resistance to Napoleon's invasion. He held various positions of trust, but his character seems to have commanded little esteem. He died of a broken heart, after the execution of his son Leopold in 1834.—J. B.

ABLA'BIUS, a Greek poet, of whose writings a few fragments are preserved in the "Anthologia Græca," flourished about the end of the fourth century.

ABLURIS or ABLUVIIS, GANFREDUS D', a French Dominican, who was general-inquisitor at Carcassone about 1300, and died about 1319. He was brought into notoriety at the death of Pope Benedict XI.

ABNER, the son of Ner, was the general of Saul, first king of Israel, but forsook his service for that of his rival, David. He was murdered by Joab, 1068 B.C.

ABNER, a Jewish rabbi, was born at Burgos in Spain about 1270; died 1346. He practised medicine in his native city; and having been converted to Christianity, wrote a refutation of the work of Quinchi entitled "Milchamoth Hasem."

ABNEY, SIR THOMAS, was the son of James Abney, Esq., of Willersley in Derbyshire, where he was born in January, 1639. Educated at Loughborough, under the care of his aunt, Lady Bromley, he came, whilst yet a youth, to London, where he entered into business, and ultimately realised a large fortune. Though a dissenter, he was raised to the highest civic honours, having been elected sheriff of London in 1693, alderman of Vintry ward in 1694, and lord mayor in 1700, some years before his time. He was knighted by William III. in 1694, and, during his mayoralty, he so exerted himself in the cause of that sovereign and the protestant succession, that a person of distinction complimented him by saying, "You have done more service to the king, than if you had raised him a million of money." Sir Thomas was member for the city of London in the parliament which passed the bill securing the throne to the house of Brunswick, and materially contributed to the success of that measure. He was twice married; first to a daughter of the well-known Joseph Caryl, and on her decease, to Mary, daughter of John Gunston, Esq., of Stoke Newington. Dr. Isaac Watts lived in his family as friend and private chaplain for thirty years. Sir Thomas lived to be father of the city of London, and died at the age of eighty-three, on February 6, 1722. Part of his property at Stoke Newington has been converted into a cemetery, which is called after him.—W. L. A.

ABOACEN, ALBOACEN, ALBOHAZEN, or ALBUASIN, an Arabian astronomer of distinguished merit and services. When King Alphonso of Castile undertook to revive the study of astronomy in the West, he sought the aid of Arabians. His early assistants were Aben Musa and Mohammed of Seville; Joseph Aben Ali, and J. Abuena of Cordova; Aben Ragel and Alcabitius of Toledo. The choice of Alphonso was not a happy one. We know nothing of these persons, except that they were utterly under the bondage of astrology, and, what was worse, of ridiculous hypotheses concerning the motions of the fixed stars, which quite disfigured the first edition of their tables. Alphonso was rescued from the dominion of these men by the sagacity and vigour of Aboacen, who showed up the absurdity of their fancies in a work expressly on the motions of the fixed stars. The king, convinced by this remarkable treatise (translated into Spanish by Rabbi Juda), caused the tables to be recast: so that for those famous Alphonsine tables, the world is in the main indebted to Aboacen.—J. P. N.

ABONDIO, ALESSANDRO, a historical and portrait painter of Florence, was a pupil of Michel Angelo. He was also a modeler, and his portraits in wax were highly valued. He went to Germany, where he worked until his death, which occurred at Prague during the last years of the 16th century.

ABOS, MAXIMILIAN-FRANCIS and GABRIEL, born in Bearne towards the end of the seventeenth century, two brothers, knights of Malta, and heroic seamen, who with four vessels defeated a Turkish fleet of fifty galleys at Ios, one of the Cyclades. Maximilian died a few days after the action. Gabriel, while returning towards Malta with immense booty, was driven on the Tunisian shore by a storm, sent to Constantinople by the Tunisians, and, by order of the sultan, there beheaded in 1793.

ABOUL ILHASAN ALI EBN OMAR OF MOROCCO; an astronomer, who wrote about the beginning of the thirteenth century. Modern inquiry is indebted for the great work of this observer and important writer to the labours of M. Sedillot. A very few notices in Montucla—these also given at second-hand—was all we knew of him, until M. Sedillot produced, in French, his invaluable treatise on Philosophical Instruments. This work is one of far more than curiosity, by showing us the exact nature of the instruments with which the Arabians worked. Aboul Ilhasan has supplied an essential element of criticism,—we can now all the better form an opinion as to the value or weight of their results. The work in question is not the work of a mere mechanic, but of a distinguished astronomer. The author does not stop with description of the external form of instruments. Deeming that the exactness of observations is the foundation of all progress in astronomy, and knowing how needful it is that they who construct instruments should have precise notions as to the end for which they are destined, he discusses and illustrates his subject by aid of all the light derivable from his own experience, and from the best writings of his time. After laying down, as a preliminary, a certain number of theoretical propositions, regarding cosmography, chronology, and gnomonics (employing therein trigonometrical tangents and secants), he devotes three books to the description of instruments for measuring time, and other four to that of purely astronomical instruments, among which we find several quadrants, a sphere, a planisphere, four mesâtirahs, traced upon planes parallel to the horizon or to the meridian; ten cuts of astrolabes, including those of Arzachel; the sextant, the ring, and other constructions, specially destined for the observation of eclipses, of new moons, and several other celestial phenomena. The book terminates with illustrations of the use of such instruments, and a number of problems for exercise. In so far as his geometry, or his general management of the subject goes, Aboul Ilhasan is inferior to few writers. For the clear insight thus given into the scientific workshops of those early times, too much gratitude cannot be felt to M. Sedillot.—J. P. N.

ABOUL-WÉFA AL BUZGIANI, a contemporary of Ibn Jounis; lived at Bagdad about the year 980 A.D. In the first books of his *Almagest*, Aboul-Wéfa goes over preliminary or elementary considerations; but the rest of his work is very remarkable. It contains formulæ for tangents and secants, and tables of tangents and co-tangents for the entire quarter of the circumference. Abul-Wéfa used them as geometers do now in all trigonometrical calculations: he changed the formulæ for triangles; he banished those inconvenient composite expressions which include both sines and co-sines of the unknown angle: in fine, he completed that revolution whose origination is uncertain, but which, on no authority, has been attributed to Regiomontanus, who did not know so much as either Abul-Wéfa or Ibn Jounis. This commodious trigonometry was not employed in Europe until six centuries after its invention by the Arabs. Delambre has given a full summary of all we owe to Abul-Wéfa.—J. P. N.

ABOVILLE, FRANÇOIS-MARIE, Comte d', a French general, born at Brest in 1730. He entered the military service in 1744, and after acquiring much experience under Marshal Saxe, and in the Seven Years' war in Germany, he greatly distinguished himself as a colonel of artillery in the French army sent to aid the Americans in the war of Independence. His efficient direction of the French and American artillery is said to have mainly contributed to the defeat and surrender of Marquis Cornwallis at York Town. On returning to France he was made a major-general, and in 1791 gave his adherence to the National Assembly. In 1792, when General Dumouriez attempted to pervert his troops, Aboville, then lieutenant-general of the army of the north, remained faithful to the convention. He received from Napoleon numerous honours and promotions. In 1814 he adhered to the Bourbons. In June, 1815, he again sided with Napoleon, and was made a peer. He was ultimately admitted to the Chamber of Peers by Louis XVIII. Died 1819.—E. M.

ABRABANEL, ABARBANEL, BARBINELLUS, or RAVANELLA, RABBI DON ISAAC, was born at Lisbon in 1437. His family was of high antiquity, and even boasted of its descent from the royal house of David. In early life, Abrabanel was introduced to the court of Alphonsus V., and even in that age of intolerance, the young and versatile Jew became one of the chief counsellors of the Portuguese sovereign. At his death, Abrabanel found no favour in the eyes of John II., his successor; for falling under suspicion of treason, he fled to Castile, where he was well received by Ferdinand, and in whose financial service he remained from 1484 to 1492. During this year a decree was issued ordering all Jews to leave Spain, and neither the talent nor the services of the Jewish statesman could save him from exile. Accordingly he repaired with his family to Naples, where again he rose into the royal favour of Ferdinand and Alphonsus, and fled with the latter to Messina, from the power of Charles VIII. of France. At the demise of Alphonsus he betook himself to Corfu; then in 1496 to Monopoli, a town of Apulia; and finally he went to Venice, and was instrumental in producing peace between that republic and Portugal. He died at Venice in 1508, in his seventy-first year, and was buried at Padua with great honour. Some Christian writers have asserted that Abrabanel was not wholly free from blame at the period of his flight from Portugal; and that, especially at the court of Ferdinand and Isabella, his avarice, vanity, and favouritism for his race, his financial exactions, his love of such place and honour as would set him on an equality with the old grandees of Spain, and his antipathy to the established faith, contributed to raise, or at least to augment the storm, which scattered his people to the four winds of heaven.

The industry and erudition of Abrabanel were alike surprising. One wonders that, amidst incessant toils and flights, he found time to write so much. His ripe scholarship was the result of early acquirement and incessant application. Hours of leisure were hours of labour, and his nation honour him by the name of the Sage, the Prince, and the Politician. His principal works have reference to the Jewish scriptures and the Jewish faith. He was a resolute foe to Christianity, and was well able to maintain his ground. His commentaries on the Old Testament are clear and acute, though certainly tedious and trifling on many occasions. The commentary on the Pentateuch, "*Perosch al Hattorah*," appeared at Venice in 1579; that on the earlier and later prophets, at Pesaro in 1520, and it is disfigured by some virulent assaults on Christianity, which have been omitted in subsequent editions. What he had suffered from the Inquisition had embittered his spirit, and he almost thirsts for revenge. His discourse on the Messianic prophecies, named "*Mushmia Jeshua*," or "*Preacher of salvation*," was published at Amsterdam in 1644—an earlier edition being printed probably at Salonichi in 1526. In this treatise he freely indulges in violent tirades against Christianity. But his implacable enmity to Christianity did not so sour him, as to prevent him from equitable and urbane intercourse with Christians. His "*Rosh Amana*," "*Sum of Truth*," or an exposition and defence of the articles of the Jewish faith, was published at Constantinople in 1505. Other works belong to him, which need not be characterized. Several of his treatises have been translated into Latin. Of his sons, one was distinguished in medicine and poetry, and another embraced Christianity.—(Wolf, Bale, De Rossi, Fürst's *Bibliotheca Judaica*).—J. E.

ABRADATES, king of Susiana, who, according to Xenophon's *Cyropædia*, rendered great service to Cyrus the Great in his war with the Assyrians.

ABRAHAM, the founder of the Hebrew nation, was born at Ur, a city of Chaldea, A.M. 2008. His father's name was Terah, and he married Sarah, the daughter of his elder brother Haran. Abraham abode in Ur during the first sixty years of his life. He left it, in obedience to a divine call, along with his father, and other members of the family, "not knowing whither he went." The place where he first sojourned was Haran, where he abode fifteen years, and where his father died. After that event he left his brother Nahor, and journeyed onwards to Canaan in company with Lot. The habits of the people of Canaan were all of a nomadic character, similar to those which still prevail among the Arabs. This was Abraham's mode of life. The removals which he made were all towards the south, and it was his practice, wherever he came, to build an altar to the Lord, and to call upon his name. At length a famine in

Palestine obliged him to go down to Egypt, the land of corn. Returning thence with a great augmentation of wealth, Abraham once more pitched his tent in Canaan. As his nephew had also become a man of extensive possessions, strife arose between their respective herdsmen about wells and pastures, which suggested the propriety of a separation. Lot chose the well-watered plain where Sodom and Gomorrah stood, and Abraham therefore moved towards the plain of Mamre in Hebron. Shortly after his settlement here, intelligence was brought to him of an incursion which had been made upon the cities of the plain, by the combined forces of several neighbouring kings, in which his nephew and all his family had been carried away captive. Without a moment's hesitation, he armed the servants of his family, amounting to 318; and, aided by some friendly neighbours, he pursued the enemy, attacked them by night, and defeated them. Lot and his family were brought back in safety, and all the captives were restored to liberty.

While Abraham dwelt in Mamre, the promises already given to him were repeated and confirmed. Yet, amid all references to his numerous seed, he was still childless, though at the advanced age of seventy-five. This apparent incongruity seems to have suggested to Sarah the idea of giving him as a wife her handmaid Hagar. Accordingly Ishmael was born, and for many years considered as the child of promise. At length, however, when Abraham was in his ninety-ninth year, another most remarkable vision was granted to him. He was assured that he was to be the father of many nations, and it was now the change of his name took place from Abram (*Exalted father*), to Abraham (*Father of a multitude*). Circumcision was appointed as a sign of the covenant made with him and his posterity. He was told, too, that Ishmael was not the child in whom the promises were to be fulfilled, but that Sarah herself should bear him a son.

At length Isaac was born, and Ishmael with his mother Hagar, was, at Sarah's request, cast out from the family circle. As the promise of God regarding the birth of Isaac had furnished an occasion for the display of Abraham's faith, so when this child of promise grew up to be a young man, he was made the means of a far severer trial of it. The patriarch was commanded to take his son, and to offer him up as a burnt-offering upon one of the mountains of Moriah. Abraham hesitated not. For three days the father and the son journeyed together to the appointed place. The altar was set up, the wood was cleft and arranged, Isaac was bound, and the knife of sacrifice was already grasped, when a voice from heaven arrested the father's arm. The patriarch's faith was rewarded with a renewal, in a more explicit and extended form, of all the promises already given to him.

After Sarah's death, which took place when she was 127 years old, Abraham despatched one of his servants for a wife to Isaac, from among the daughters of his own people. He also himself married again, and had several sons, to whom he gave suitable portions, sending them away from the presence of Isaac. The patriarch at length died in the 175th year of his age, and was buried by Isaac and Ishmael in the same sepulchre with Sarah. His character is one of the most illustrious described in Scripture. fervent piety, unshaken trust in God, generosity in his dealings with others, faithfulness in the instruction of his own household, and polite and courteous manners, are beautifully blended together in the "Father of the faithful."—W. L.

ABRAHAM BEN DIOR, or DAVID the Levite, a Spanish rabbi born at Toledo in 1166, author of a work entitled "The Book of Tradition," being a chronology and genealogy of the patriarchs, princes, and doctors of the Jews, from the creation to the year 1141. A Latin translation of it was printed at Paris in 1572. Died in 1180. Another Spanish rabbi of the same name, distinguished as the YOUNGER, died about 1199.

ABRAHAM, USQUE, a Portuguese Jew of the sixteenth century, who, along with Tobias Athias, translated the Old Testament into Spanish. The translation was printed at Ferrara in 1553, and dedicated to Renée of France, duchess of Ferrara. It is so literal as to be in many passages very obscure. Copies of it are now extremely rare.

ABRAHAM A SANCTA CLARA, an Augustine friar and celebrated preacher, born in Suabia in 1642. His great reputation procured him the appointment of chaplain to the imperial court of Vienna, where he continued to preach for forty years. He spoke with remarkable fluency, his delivery was fervid and energetic, and his discourses were full of sound sense, as well as fancy and eccentricity. Died in 1709.—E. M.

ABRAM, NICHOLAS, a learned jesuit, born in Lorraine in 1589. He was professor of divinity at Port-a-Mousson, and published several theological and literary works, but is best known as author of commentaries on the *Æneid*, and on some of Cicero's orations. Died in 1655.

ABRANTES, DON JOSÉ, Marquis of, eldest son of Don Pedro, and representative of one of the most illustrious families in Portugal, was born at Abrantes castle in 1784. He entered the guards at an early age, and soon obtained the friendship and confidence of the prince regent. When, on the French invasion in 1807, the court retired from Portugal to Brazil, the old marquis of Abrantes was left president of the regency, soon afterwards dissolved by Marshal Junot, who, on arriving at Lisbon, began, in concert with Napoleon, to carry out his scheme of procuring for himself the crown of Portugal. Through Junot's influence, both the old and the young Abrantes were sent to France as members of a deputation from the Portuguese nobility, and the younger was detained there as a hostage till 1814. Entering zealously into the views of Queen Carlotta and her son Don Miguel, Don José took an active part in the counter-revolution of 1823, and in 1824 was one of the accomplices in the murder of the marquis of Loulé by that infamous prince. Banished from the kingdom, he took up his abode in Italy. When in 1826 a general amnesty for political offences was published, on the death of King John VI., he proceeded to Lisbon; but being refused permission to land, he retired to London, where he died of apoplexy on the 11th February, 1827.—E. M.

ABRESCH, FREDERICK LOUIS, an eminent German Hellenist, born at Hess-Homberg in 1699. He studied Greek and Latin literature at Utrecht, under Duker and Drakenborg. He was principal, first of the college of Middleburg, and afterwards of that of Zwolle, where he died, at a very advanced age, in 1782. His critical writings are still highly esteemed.

ABRESCH, PETER, son of the preceding, and professor of theology at Göttingen. His works are more valuable for the interpretation of the New Testament than those of his father, especially his annotations on the first six chapters of the Epistle to the Hebrews.

ABREU, ALEXIS, a Portuguese physician of the 17th century, wrote on the maladies most incident to people of high rank.

ABREU, DON JOSEPH ANTONIO, a learned Spanish jurist and laborious compiler of diplomatic documents, and translator of several standard works on international law; died in 1775.

ABREU, DON FELIX JOSEPH, brother of the preceding, a Spanish diplomatist, author of a work on maritime law, born in 1722. He was Spanish envoy in London about 1760.

ABREU, JOAM MANUEL, a Portuguese mathematician, author of various geometrical treatises. Born 1754; died 1815.

ABRIAL, ANDRE-JOSEPH, Count d', a French lawyer and statesman, born in 1750. At the commencement of the Revolution—which he favoured—he was at the bar, after having been, as superintendent of a factory, at Senegal. Soon after the new judicial organization in 1791, he became state procurator-general in the Court of Cassation, and preserved that office through all the storms of the Revolution. In 1799 he was sent to Naples to organize the new government, a service he executed with great judgment. In 1800 he returned to Paris and became minister of justice, and in 1802 was created a senator. In 1814 he voted for Napoleon's dethronement, and, on the restoration of Louis XVIII., after the battle of Waterloo, was called to the chamber of peers. Died 1828.—E. M.

ABRIANI, PAUL, an Italian professor, preacher, and author, born at Vicenza in 1607, died at Venice in 1699. Besides original productions, he published poetical translations of Lucan's "Pharsalia," and of a portion of Horace.

ABRIL, PETER SIMON, a learned and ingenious Spaniard of the sixteenth century, professor of Latin and Greek for twenty-five years, and afterwards professor of rhetoric, author of many valuable philological works. His writings and oral instructions greatly promoted a taste for classical literature in Spain.

ABSALOM (*Father of peace*) son of King David by Maacah, daughter of Talmai, king of Geshur, was noted for his singular personal beauty. To avenge the wrongs of his sister Tamar he slew his elder brother Amnon, for which he was exiled from the court. On the intercession of Joab he was restored to favour, but the royal clemency was ill repaid; for Absalom used every effort to subvert his father's authority, and at last became an open rebel. He was, however, subdued, and, contrary to the

king's express command, was put to death by Joab, near Mahanaim, about 1036 B.C.—J. B.

ABSALOM, the ecclesiastical name of the Danish Axel, archbishop of Lund in the twelfth century, and chief counsellor to Waldemar I. Died at Sora in 1201. The famous Saxo Grammaticus was in the archbishop's service, and has left many notices of his patron's life and labours.

ABSALOM, archbishop of Lund and primate of Denmark, one of the most remarkable men of the twelfth century, was born in Zeland in 1128. On his return from Paris, where he studied, he soon distinguished himself by his energy and talents, not only in the church, but in the civil and military administration of Denmark. Died in 1202.

A'BSCHATZ, HANS-ASSMAN, Baron von, a German statesman and poet, born in 1646. Many of his hymns are still sung in the protestant churches of Germany. Died in 1699.

ABSIMARUS, TIBERIUS, a military adventurer, who became emperor of Constantinople in 698. Commanding the fleet, and proving unsuccessful in a naval engagement with the Saracens, he saved himself from the punishment he apprehended from his sovereign, by inducing the forces under his command to raise him to the throne. He confined the Emperor Leontius in a monastery, after putting out his eyes and cutting off his nose; but was himself dethroned and put to death at the restoration of Justinian II. in 705.—E. M.

ABSTEMIUS, LAURENTIUS, an Italian critic, but known chiefly as a fabulist, born near Ancona towards the end of the fifteenth century. His real name was Bevilaqua, "Water-drinker." He became librarian to the duke of Urbino, whose preceptor he had been.

ABU BECER or IBN TOFAIL; (ABOU BECR MOHAMMED BEN-ABD-AL-MELIC IBN TOFAIL AL-KEISI),—one of the greatest philosophers among the Spanish Arabs: born about the commencement of the twelfth century at a small town in Andalusia, now named *Guadix*. Tofail was a disciple of Ibn Bâdja, or Avempace, and rendered himself illustrious in many ways. For an account of the deeds and deservings of the brilliant Andalusian period to which Abu-Becer belonged, we refer to article AVERROËS; suffice it to narrate at present something concerning his personal merits. One work of this remarkable writer alone remains, out of the many quoted by his successors. It is a philosophical romance, in which a fictitious personage, HAY, is born without father or mother, and made to pass through the education presented by the external universe. The idea that profound philosophical truths might be illustrated by such a fiction, is thus both an old and favourite one. Tofail shows, or attempts to show, the scientific developments of the elements of intelligence in the mind of a being thus solitary and forlorn. The knowledge first acquired by Hay, is limited to that of specific facts and sensible things; through which he comes to comprehend somewhat concerning the surrounding world. Traces of order or uniformity next arrest him, and he discovers that, amid an almost bewildering variety, there is yet a link or chain binding everything together. Multiplicity is an *accident*; the Unity of things is their *essence*. Another step, and the Solitary inquires wherein reside the accidents, and wherein the essence of things: on which he arrives at the famous distinction of Matter or Substance, and Form. But who or what impresses on has impressed FORM? Matter itself is probably eternal; not so its forms: the existence and variety of these imply an *Agent*. This agent is not a body, nor any faculty of body, but a distinct Being who is the form of the whole universe. All individual existences are thus the work of this Being or God, towards whom and his goodness and perfection, our human intelligence ascends as we contemplate the beauty of his agency.—Returning from these heights, Hay examines himself—asking the nature of his intelligence—its destiny, and the path towards supreme happiness. The pure intellect is the true substance or personality of Man; it is not born, and it cannot perish: its happiness consists in its identification with God. Tofail's conclusions, in this respect, approach those of a refined pantheism. His work, however, has a second part. He felt it necessary to show that the results to which he conducts his Solitary, are in harmony with revealed religion, especially with Moslemism. And with this object he brings Hay—now at the age of fifty—into contact with Asâl, a religious hermit. The conclusions they have reached are the same, but Hay insists that the way of reason is as good as Asâl's. The merits of the dispute are put to a practical test.

Hay discovers the actual inferiority of his mode of teaching, and in the end the friends return to Asâl's island—devoting themselves henceforward to an austere and contemplative life. Tofail's work contains many acute remarks bearing closely on controversies not thought of in his time: it has been translated into various languages; two versions exist in English,—one from the Arabic by Ockley, another from Pocockê's Latin, by a member of the Society of Friends—George Keith.—J. P. N.

ABU' BEKR, Mahomet's father-in-law, and first successor or caliph. During his brilliant reign of little more than two years, the new Moslem empire was thoroughly consolidated and greatly extended. He edited in a collective and authentic form the contents of the Koran, which previously existed in detached chapters; and, by the ability and intrepidity of his generals, and the impetuous fanaticism of his armies, suppressed formidable insurrections, and subdued Irac and the whole of Syria. He died in 634, at the age of sixty-three, the day on which his lieutenants took Damascus. He was a man of great sagacity and mildness, as well as of great simplicity of manners, disinterestedness, and self-denial. His real name was Abdallah-Atik-ben-Abi-Kohafah. He was called Abu Bekr, or "Father of the Virgin," being the father of Ayesha, distinguished by that appellation from Mahomet's first wife, who, when he married her, was a widow.—E. M.

ABU'CARA, THEODORUS, a disciple of John Damascenus, and bishop of Haran in the eighth century. His numerous dissertations in support of the orthodox faith against Jews, Moslems, and heretics, have been published in Greek and Latin.

ABU' HANI'FAH, a famous Mussulman doctor, founder of the Hanifites, one of the four great orthodox sects of Islam, and for his mildness and patience, on which the Moslem writers expatiate, called the "Moslem Socrates;" born at Kufah in 699. He refused to become a judge, though threatened for his disobedience by the caliph. Having boldly remonstrated with the caliph, who desired to punish the inhabitants of Mossul, he was imprisoned, and soon afterwards poisoned by his order.—E. M.

ABU'L-'ALA or OLA, an Arab poet, born at Maarah in 975; remarkable for his learning and knowledge of the world, though he lost his sight when three years old. His poetry is mostly satirical and sceptical. Died in 1057.

ABU'L-CACEM, a Turkish general, who took Nice, and advanced to the shores of the Propontis in the reign of Alexis Comnenus, but was driven back by the Greek general Taticius. Simultaneously harassed by the Greek emperor and the shah of Persia, he threw himself on the generosity of the latter, by whom he was put to death.

ABU'L-CACIM, a fictitious name, under which Michael de Luna, Arabic interpreter to Philip III. of Spain, published his "History of the Arab Conquest of Spain;" a work long regarded as genuine, and quoted as a high historical authority.

ABU'LFARAGE, GREGORY, a philosopher, physician, and historian, born in 1226 at Malatia in Armenia, the son of a Jacobite physician of Jewish extraction. He became an ecclesiastic, and primate of the Jacobites, a well-known Christian sect. He wrote numerous works on various subjects, but is principally known as author of a "Universal History from the Creation," down to his own time. This work is of great value, particularly for the history of the Moslems and Tartars. The author is praised for veracity and general accuracy, both by Mahometans and Christians. Died in 1286.—E. M.

ABU'LFARAJALI, an Arab author, born at Ispahan in 897. Four manuscript volumes of Arabic poems collected by him were brought from Egypt by the French in 1801, and are now in the national library of Paris.

ABU'LFAZI, an able and learned statesman and historian, for thirty-eight years prime minister of the Mogul emperor Akbar, by whom he was so much esteemed and trusted, as to be exposed to the malice of courtiers. He was murdered in 1602, two years before Akbar's death, at the instigation of Selim, the emperor's son and successor. He wrote many valuable works, but is known among Europeans chiefly as author of an interesting "Statistical and Geographical Description of the Mogul Empire," comprising an account of the religion, science, and literature of the Hindoos. This work, which is held in great estimation among Orientals, was translated into English by Mr. F. Gladwin, residing at Calcutta, in 1783-86.—E. M.

ABU'LFEDA, ISMA'IL, a Moslem prince of Hamah in Syria, renowned as a warrior and statesman, but still more as an

author, was born at Damascus in 1273. He distinguished himself as a leader under Saladin, and in 1311 was, after various vicissitudes in a civil war, firmly established in his hereditary principality of Hamah, which he retained till his death in 1331. Learned and enlightened himself, he was a zealous patron of science and literature. His principal works are a "Universal History" and a "Geography," of which considerable portions have been translated into Latin and into several modern continental languages, and are frequently quoted with respect by the most distinguished historians of modern times, in connection with the history of the Saracens.—E. M.

ABU'L-GHA'ZY-BEHADER, a descendant of Ghengis Khan, and sovereign of a country in Tartary, called Kharasm, born in 1606, ascended the throne in 1645, which he spontaneously abdicated in favour of his son several years before his death, and devoted himself to the composition of an interesting history of the Tartars, which has been translated into Russian, German, and French. Died in 1664.

ABU'L-HASSAN-KHAN, MIRZA, a Persian traveller and diplomatist, born at Shiraz in 1744. In 1809 he was sent to Constantinople and London as Persian ambassador, and was subsequently intrusted with missions to the courts of Russia and Austria. Returning finally to Persia in 1820, he held the office of minister for foreign affairs till his death in 1828.

ABU'L-MAHA'SSAN, an Arab historian, born at Aleppo about the middle of the 15th century, author of a valuable history of Egypt, named "The Brilliant Stars," and of a curious biographical dictionary, left incomplete.

ABU'-MANSUR, an Arab astronomer, superintendent of the observatories of Bagdad and Damascus, born in 885. His "Observations" were an important contribution to astronomical science. He wrote also "Lives of the Arabian Poets."

ABU'-OBAID-AL-BEKRI, an Arab geographer and historian, prime minister to the king of Almeria, was born at Onoba (now Gibraltor), in the south-west of Spain, in 1040. His principal work is a geographical description of the world. He wrote, also, a work on the botany of Spain, and a volume of poems. Died in 1094.

ABU'-OBAID-AL-CACEM-BEN-SALLAM, a native of Herat, long cad of Tarsus, and author of numerous works, of which the principal are—1. "A treatise on Prophetic Traditions," and 2. "A Collection of Arabian Proverbs and Apologues," from which Scaliger took most of his Two Hundred Arab Proverbs. Died at Mecca in 838.

ABU'-OBEIDAH, a friend and favourite companion of Mahomet, and one of the principal Moslem generals under the early caliphs, remarkable for his prudence and mildness of disposition. He saved the inhabitants of Damascus, in spite of the desire of his more sanguinary colleague to put all the males to the sword, and sack the city.

ABU-OSAIBAH, an Arab physician, born towards the end of the twelfth century. His "History of Physicians," of which there is a MS. copy in the national library of France, contains many interesting particulars relating to the medical practice of the most celebrated Arabs. Died in 1269.

ABU'-RY'AN. See AL-BIRUNIUS.

ABU'-SA'ID-MIRZA, last sovereign of the empire established by Tamerlane, and great-grandson of that conqueror, was born in 1427. He added to his dominions Transoxiana, Turkistan, and Khorassan; but, in attempting to reduce Irak and Azerbaïdjan, he was made prisoner, and put to death in 1469, after a reign of twenty years. His empire, which was partitioned among his eleven sons, extended from Kashghar to Tauris, and from the Indus to the Caspian.—E. M.

ABU'-TA'CHEFYN, last prince of the Zyany dynasty, ascended the throne of Tlemsen, by murdering his father, in 1318. On frivolous pretexts he seized on nearly all the territories of the king of Tunis, who applied for assistance to Abul Hassan, sovereign of Fez. This prince avenged his ally by taking Tlemsen, and putting Abù-Táchefyn to death.

ABU'-TA'LEB-AL-HOCÉ'INY, a native of Khorassan, who, about the end of the sixteenth century, translated from Tartar into Persian "The Memoirs of Timur" (Tamerlane), and "Timur's Political Institutes." The latter work has been published in Persian and English.

ABU'-TA'LEB-KHAN, MIRZA, a learned traveller, born at Lucknow in Hindostan, of Persian extraction, in 1752. After having served for some time in the army of the nabob of Oude,

he embarked for Europe with his friend Captain Richardson, remained three months at the Cape of Good Hope, and arrived at Cork in December, 1799. After living in London more than two years, and then visiting Paris, he returned to India by Constantinople, Bagdad, and Bassora. His "Travels in Asia, Africa, and Europe," written in Persian, have been translated into English and French. He wrote also—1. A work entitled "Marrow of History," being an abridgment of the geography and history of Europe; 2. A collection of songs; and 3. A poem in 1200 lines, being a description of the British empire.—E. M.

ABU'-TEMA'N, an Arab poet, usually styled by Arab writers "the prince of poets," born in Syria in 805. He was brought up in Egypt, where his merits as a poet raised him to celebrity and opulence. Besides his own poems, he left several volumes of extracts from the works of the most eminent Arab poets. Died at Mosul in 846.

ACA'CIUS, bishop of Amida on the Tigris, about the year 420. He sold the church plate to ransom and nourish 7000 Persian captives, who were dying of hunger, and sent them to the king of Persia. That monarch, struck with such exalted beneficence, desired an interview with the good bishop, which led to a treaty of peace between Persia and the Roman empire.

ACA'CIUS, surnamed the ONE-EYED, disciple, and afterwards successor of Eusebius, bishop of Cæsarea, was a man of great abilities, but greater ambition. Unsettled in his opinions, he successively professed and renounced every variety of belief relating to the person of Christ. He was founder of the sect called Acacians. Died in 365.

ACA'CIUS, bishop of Perea in Syria, the intimate friend of Epiphanius and Flavian, but afterwards a bitter adversary of Chrysostom. He died in 432, at the great age of 110.

ACA'CIUS, patriarch of Constantinople, whose character has been differently delineated by opposite parties. He aided Zeno in obtaining the throne, induced him to favour the Eutychians, and rescued the Empress Ariadne when Zeno had ordered her to be put to death. Died in 489.

ACADEMUS, an Attic hero, from whom, it is said, the grounds on the Cephissus, near Athens, where Plato instructed his disciples, derived the name of Academia.

ACAMAPIXTLI, first king of the Astecks, or ancient Mexicans, memorable for his wise legislation and great public works. He embellished his capital with splendid edifices; and the remains of the canals, aqueducts, and roads, made during his reign of forty years, still excite the astonishment of travellers.

ACARQ, D', a French writer on grammar and belles-lettres. His pedantic severity in criticising the style of the most illustrious authors gave great offence, but his numerous writings are not without merit. Born in 1720, and died in 1796.

ACCA, a Benedictine monk, who succeeded his friend Wilfrid as bishop of Hexham in Northumberland in 709. Having travelled in Italy and elsewhere, he embellished his cathedral and improved the church music; and wrote, besides liturgical pieces and miscellaneous letters, a discourse on the sufferings of the saints. Died in 740.

ACCAMA, MATTHIAS and BERNARDI, his brother, two celebrated Dutch portrait painters of the 18th century.

ACCARI'SI, ALBERT, an Italian grammarian, born near Ferrara about the end of the fifteenth century. He published an Italian dictionary and grammatical observations to aid in fixing and improving the Italian language.

ACCARI'SI, FRANCIS, an eminent Italian lawyer, a native of Ancona, was successively professor of jurisprudence at Sienna, Pavia, and Pisa; he died in 1622.

ACCARI'SI, JAMES, an Italian ecclesiastic, who, after having been professor of rhetoric at Mantua, became bishop of Vesta. Besides a volume of religious discourses, and a Latin translation of Ventivoglio's "History of the Civil Wars in the Low Countries," he published a dissertation, entitled "Terræ Quies," &c., in which he attempted, in opposition to Galileo, to disprove the earth's motion. Died in 1654.

ACCIAJUOLI, DONATO, an Italian statesman and scholar, remarkable for his great and varied attainments, and his disinterestedness and integrity in the public service; born at Florence in 1428. After having successively held various public offices, and lived with great simplicity, he died poor. The Florentines gave him a splendid funeral at the public expense, portioned his daughters, and appointed a few of the most illustrious citizens, including Lorenzo di Medicis, to act as guardians to his sons.

He wrote a commentary on the "Ethics and Politics of Aristotle," professedly a compilation from the lectures of Argyropulus the Greek, and translated into Latin two of Plutarch's lives, and into Italian a Latin history of Florence. Died 1478.—E. M.

ACCIAJUO'LI, NICOLAS, an Italian statesman, great seneschal at Naples, born at Florence in 1310. By his prudence and foresight, he rendered eminent service to Queen Joan I. in her flight to Avignon; and after her marriage with Louis, he greatly contributed to her restoration in 1355. Died in 1366.

ACCIAJUO'LI, RENIER, a Florentine, nephew of the preceding, became in 1364 lord of Corinth, and afterwards sovereign of Attica, and part of Bœotia. He reigned at Athens as Duke Renier I. Dying without legitimate male issue, he bequeathed Athens to the Venetians; Corinth to his son-in-law, Thomas Palæologus; and Bœotia to his natural son Antonio, who afterwards became duke of Athens, was succeeded by Nerio, and he by Antonio, from whose son and successor, Franco, Athens was taken by Sultan Mahomet II. in 1455.—E. M.

ACCIAJUO'LI, ZENOBIO, a learned Dominican, librarian of the Vatican under Leo X., born at Florence in 1451. He translated into Latin three of the minor Greek fathers, and edited the Greek epigrams of his friend Politian. He was also a poet of some distinction. Died in 1519.

ACCIAJUO'LI SALVETTI, MADALENA, a celebrated Italian poetess, born at Florence about the middle of the sixteenth century. She left miscellaneous poetry—"Rime Toscane," 2 vols. 4to, and an unfinished poem, entitled "Davide perseguitato ovvero fuggitivo." Died in 1610.

ACCIO ZUCCO, an Italian poet of the fifteenth century, author of an Italian poetical paraphrase of "Æsop's Fables."

\* ACCIO'LI, J. DE CERQUEIRA E SYLVA, a distinguished Brazilian historian and geographer, born at Brazil about the close of last century. The family Accioli, or Achioli, have long occupied a prominent place in the annals of Brazilian literature. M. Accioli is resident member of the Historical Institute of Rio de Janeiro, and resides chiefly at Bahia de todos Os Santos, and at Para. He has written some valuable works relative to the history and geography of the provinces in which he resides.—J. F.

ACCIIUS or ATTIIUS, LU'CIUS, was one of the most famous Latin tragic poets. He flourished in the second century before the Christian era. Only fragments of his tragedies have come down to us, preserved principally in the works of Cicero.

ACCIIUS or ATTIIUS PRISCUS, a Roman painter, who, with CORNELIUS PRISCUS, decorated the temple of Virtue and Honour at Rome, 69 years after Christ.

ACCOLTI, BENEDETTO, a distinguished Italian lawyer and historian, professor of law at Florence, and afterwards secretary to the Florentine republic; well known as author of two Latin works, the one a history of the Crusades, which Tasso is said to have used as the basis of his "Jerusalem Delivered;" and the other, a discourse on the worthies of the age, asserting the equality of the moderns to the ancients. Born at Arezzo in 1415, and died at Florence in 1466. Another BENEDETTO ACCOLTI, related to the preceding, having engaged in a plot against the life of Pope Pius IV., was, on conviction, publicly executed along with his principal accomplices in 1564.—E. M.

ACCOLTI, BERNARD, son of Benedetto the historian, was a celebrated Italian poet, whose rehearsals of extemporaneous poetry excited amazing enthusiasm, and attracted enormous crowds. His printed poems, though, from his habit of extemporaneous composition, deficient in polish and precision, exhibit the fancy and fire of a true poet. Born in 1465; died in 1535.

ACCOLTI, FRANCIS, brother of Benedetto the historian, taught law at Sienna and other places, with great and merited reputation, but was noted for peevishness and avarice. Born at Arezzo in 1418, and died at Sienna in 1483.

ACCOLTI, PETER, son of Benedetto the historian, was apostolical abbreviator under Leo X., and drew up the famous bull against Luther. He was afterwards secretary to Clement VII., by whom he was made a cardinal in 1527, and in 1532 was sent as governor of Ancona. Died at Florence 1549.

ACCORAMBO'NA, VITTORIA, an Italian poetess, who, on suspicion of having murdered her husband, was confined several years in the castle of St. Angelo, and, when liberated on establishing her innocence, was married to the duke of Arcenno, by whose relative, L. Orsini, she was murdered in 1585.

ACCORAMBO'NI, FABIO, son of Geronimo, was professor of law and author of several works on jurisprudence, and, having

held various offices under the papal government, became distinguished as a negotiator and statesman. Born at Gubio in 1502; died at Rome in 1559.

ACCORAMBO'NI, FELIX, grandson of Geronimo, distinguished as a poet, philosopher, and physician, author of a commentary on various works of Aristotle, Galen, and Theophrastus, flourished towards the end of the sixteenth century.

ACCORAMBO'NI, GERONIMO, an Italian physician and medical author, successively physician to Leo X., Clement VII., and Pius III., born at Gubio in 1467; died at Rome in 1537.

ACCORSO, FRANCESCO, or ACCURSIUS, a mediæval jurist, born at Florence in 1182. After being for some time professor of law in his native city, he settled at Bologna. By the writers of the 12th and 13th centuries, he was called the "Jurist's Idol." To his Great Gloss, or continuous annotations on the "Corpus Juris" of Justinian, lawyers during a great part of the middle ages referred as an infallible authority. Died at Bologna in 1260.

ACCORSO, FRANCESCO, or FRANCISCUS ACCURSII, son of the preceding, born at Bologna in 1225. Distinguished, like his father, for his knowledge of jurisprudence, he was still more remarkable for his practical wisdom and diplomatic ability. In 1273 he was induced by Edward I., then returning from the Holy Land, to accompany him to England, where he remained as that monarch's confidential adviser till 1282, when he returned to Bologna, and resumed his lectures. Died in 1293. Other two sons and a daughter of the elder Accorso are said to have been not only accomplished jurists, but public teachers of jurisprudence.—E. M.

ACCORSO, MARI'ANGELO, one of the most learned critics and remarkable linguists of the sixteenth century, born at Aquila, in the kingdom of Naples, about 1490. He was a favourite agent of the Emperor Charles V., who sent him on various missions to Germany, Poland, and other parts of the north. He was author of several literary works, editor of various ancient Latin authors, and enriched the Vatican with valuable manuscripts collected during his travels.—E. M.

ACCOTTI, GERONIMO, an Italian Dominican of Mecca, died in 1560.

ACCOTTO, REGINALD, a Sicilian Dominican, for many years primarius of the college of his order in Naples, was a famous preacher, and author of several works; died in 1590.

ACCUM, FREDERICK, a German chemist, born at Buckeburg in 1769. He came to London in 1793, and towards the close of his life retired to Berlin, where he died in 1838. He was for a short time an assistant in the laboratory of the Royal Institution, London, and settled afterwards in Compton-street, Soho, where he gave lectures on chemistry and physics, sold chemical apparatus, and instructed private pupils, amongst whom were the duke of Northumberland, Lord Camelford, and other influential persons. He took an active part in the introduction of gas-lighting into London, and several towns in England; and his treatise on that subject, published in 1815, was greatly conducive to a general appreciation of the importance and economy of this mode of illumination. He was the author of several popular treatises on subjects relating to chemistry, among which may be enumerated—"The Elements of Crystallography," 1813; "Art of Brewing;" "Culinary Chemistry," 1821; "Chemical Amusements;" "Chemical Tests and Reagents," 1826; "The Physical and Chemical Qualities of Building Materials," 1826.—F. P., G.

ACCURSIUS. See ACCORSO, FRANCESCO.

ACERBI, ENRI'CO, an Italian physician and writer, contributor to the "Bibliotheca Italiana," and author of several medical works, born near Milan in 1785; died in 1827.

ACERBI, GIUSEPPE, an Italian traveller, born near Mantua in 1773. Having in 1799 traversed Lapland, reaching North Cape, and afterwards repaired to London, he there in 1802 published in English an account of his travels. In 1816 he established the "Bibliotheca Italiana," published at Milan. In 1826 he was appointed Austrian consul in Egypt, whence he transmitted to the museums of Italy and Vienna, numerous and valuable Egyptian antiquities. Died at the place of his birth in 1846.—E. M.

ACERNUS, a name Latinized from the Polish Klonowicz (Sebastian Fabian), born at Subnierzyce, in the palatinate of Kalist, 1551. He was so distinguished for his Latin and Polish poems as to be called the "Sarmatian Ovid." After finishing

his studies at Cracow, he settled at Lublin, where he was made burgomaster, and also president of the civil tribunal for Jewish affairs. His affairs getting into disorder, he was obliged to seek refuge in the hospital of Lublin, where he died in 1608. The principal of his numerous poetical and satirical works, including his poem, "Victoria Deorum," which took him ten years to finish, and his satire, "Worek Judaszow," or the "Purse of Judas," were destroyed, some by the Polish nobles, and some by the jesuits, and are now very rare.—J. F.

ACE'SEUS or A'CESAS, an ancient Greek artist, celebrated for his skill in embroidery. Several exquisite specimens of his workmanship were to be seen in the temple of the Pythian Apollo, but his masterpiece was the famous mantle of Minerva Polias in the Acropolis of Athens.

ACE'SIUS, a disciple of Novatus, and bishop of Constantinople in the time of Constantine the Great, who, on hearing him, at the council of Nice, urge the rigid views of the Novatians, is said to have exclaimed, "Acesius, make a ladder for thyself, and mount alone to heaven!"

ACEVE'DO, CRISTOFÈ, a Spanish painter, pupil of Carducho. He executed several sacred pictures for his native town, Murcia, which are highly estimated. Died 1592.

ACEVE'DO, FELIX ALVAREZ, a Spanish patriot, born in the province of Leon. After studying at Salamanca, he was called to the bar, which he soon quitted to enter the army. As colonel of a regiment, he greatly distinguished himself in the defence of his country against Napoleon. When General Quiroga and Riego proclaimed the constitution in 1820, he took the command of the Galician insurgents, and, joined by crowds of adherents, many of whom issued from the dungeons of the Inquisition, whose doors were then thrown open, he soon drove the royalists from the left bank of the Minho, but was shot by a party of militia while he was attempting to gain them over to the constitutional cause.—E. M.

ACHEUS OF ERETRIA, a tragic poet, 484 B.C.; another, cousin to Antiochus the Great, and himself a powerful and, for a long time, a successful usurper.

ACHAINTRE, NICOLAS-LOUIS, one of the most famous philologists and scholars of France, was born at Paris, Nov. 19, 1771, and died about 1830. Though destined for the church, he never took orders, but followed the profession of a schoolmaster. During the revolutionary years of 1793, 1794, and 1795, he had to serve in the army, and was at last taken captive and sent to Hungary, where he was detained for twenty-one months. On his return to France, he resumed his profession of teacher, and busied himself with preparing annotated editions of the classics. He was so successful in editing Horace, that the celebrated bookseller, Firmin Didot, made him corrector in his printing establishment, and Achaintre in this capacity gave to the world new editions of Juvenal and Persius. He edited various other Latin works, and translated several Greek and Latin works into French, among which were some philosophical treatises of Cicero, and "The War of Troy," attributed to Dictys of Crete. His latter days were embittered by wretchedness and want, the result of intemperance.—J. D.

ACHARD, an ecclesiastic, born in Normandy, became abbot of St. Victor-lez-Paris in 1155. He was highly respected by Henry II., king of England, who promoted him to the see of Avranches in 1161. His works—still in manuscript—are, 1. "De tentatione Christi," and 2. "De divisione animæ et spiritus." Some writers have confounded him with Achard, a monk of Clairvaux, and friend of St. Bernard.

ACHARD, ANTOINE, a learned divine, pastor of the French protestant church at Werder in Prussia, author of two volumes of sermons, and an essay in refutation of fatalism, inserted in the Transactions of the Berlin Royal Academy of Sciences; born at Geneva in 1696.

ACHARD, CLAUDE FRANÇOIS, a French physician, author of various interesting works on the language, topography, and history of Provence; born at Marseilles in 1753; died in 1809.

ACHARD, FRANZ KARL, a German naturalist and chemist, was born at Berlin, 1753, and died at Kunern, 1821. He was descended from a French protestant family, who, after the revocation of the edict of Nantes, took refuge in Berlin. He was director of the physical department of the Academy of Sciences of Berlin. He devoted much attention to the manufacture of beet-root sugar, which he carried on at a domain in Silesia, granted to him by the king of Prussia.—J. H. B.

ACHARDS, ELEAZAR, a French bishop, titular of Halicarnassus, born at Avignon in 1679, and memorable for the humanity and intrepidity he exhibited when Marseilles and Provence were visited by the plague in 1721. Induced to proceed to China in order to appease dissensions among the Roman Catholic missionaries, he died in Cochin in 1741.

ACHARIUS, ERİK, a Swedish botanist and physician, was born at Gefle, 1757, and died at Wadstena, 1819. After getting the elements of his education at Gefle, he went to the university of Upsal, and studied under Linnæus, who committed to his care the natural history drawings, illustrating the Transactions of the Stockholm Academy of Sciences. He obtained the degree of doctor of medicine at Lund in 1782, and in 1796 was admitted a member of the Stockholm Academy. In 1801 he became professor of botany. His death was caused by apoplexy, at the age of sixty-two. He devoted his attention in an especial manner to lichens, and his works on lichenography, more particularly his "Lichenographia Universalis," published in quarto at Göttingen in 1804, place him among the chief authorities in this department of botany. Thunberg has named a genus Acharia after him. Acharius left an herbarium of 11,000 species, the lichens belonging to which were purchased by the university of Helsingfors.—J. H. B.

ACHARI or ASHARI, a Moslem doctor, and founder of the sect called Asharians, whose distinctive principle is such a view of predestination as virtually amounts to fatalism, was born in the latter part of the 9th century, and died at Bagdad in 936.

ACHEN, JOHANN VAN, a German historical and portrait painter, pupil of Jerigh, whom he quitted in order to perfect himself in his studies in Italy. When he left Rome, he proceeded to Prague, where he executed several works in the Rhadschin. Born at Cologne, 1556; died at Prague 1621.

ACHENWELL, GODFREY, an eminent German economist and jurist, many years professor in the university of Gottingen, and founder of the science of statistics, was born at Elbing in Prussia in 1719. His principal works are—1. "Elements of the Statistics of the principal European States," 1749, 2. "A brief history of the principal existing States of Europe," 1759; 3. "A sketch of European diplomacy during the 17th and 18th centuries," 1756; and 4. "Principles of Political Economy," 1761. Died 1772.—E. M.

ACHERY, LUCA D', a Benedictine monk, born at St. Quentin in 1609, who spent the greatest part of his life in the abbey of St. Germain-des-prés, devoting himself almost exclusively to mediæval researches. He had a great share in compiling the lives of saints of the Benedictine order, published by Mabillon, and edited numerous rare mediæval works. His principal publication is in 13 vols. 4to, and entitled "Veterum aliquot Scriptorum qui in Gallia Bibliothecis, maxime Benedictorum, Spicilegium," &c. The Spicilegium contains a mass of curious documents, and the preface and notes with which Achery has enriched each volume, evince an amazing acquaintance with the institutions, history, and literature of the middle ages. Died at Paris in 1685.—E. M.

ACHILLES, the hero of the Iliad, was the son of Peleus, king of the Myrmidons in Thessaly, and of the marine goddess Thetis, the daughter of Nereus. In his youth he was intrusted to the care of Phœnix and the centaur Cheiron. His mother foretold him that he might either have a glorious but short life, or a long and inglorious life. He chose the former, and thus became distinguished for his bravery above all the Greeks who fought at Troy. In the first book of the Iliad, Achilles is represented as retiring from the Greek army, because Agamemnon deprives him of a beautiful maiden who had fallen to his lot in the division of the spoil. In consequence of his absence the Trojans gain the superiority over the Greeks, and the Trojan hero, Hector, fights unchecked. At length, however, Achilles yields so far as to give his friend Patroclus his armour, and permit him thus accoutred to enter the lists with the Trojans. Patroclus is killed, and the armour of Achilles is taken. Achilles now no longer hesitates. He equips himself in new armour supplied him by the gods, and, rushing into the battle-field, carries everything before him, until at length he meets and slays Hector. Homer alludes to the death of Achilles, but nowhere describes it. We have given the Homeric account of Achilles. Later traditions added many stories about his youth, about his being invulnerable everywhere except in the heel, and about his dying by a wound from Apollo or from Paris.—J. D.

**ACHILLES TATIUS**, the writer of an interesting Greek romance. It is not certain at what period he lived, but the most probable conjecture assigns him to the fifth century of the Christian era. His novel is devoted to the love adventures of Leucippe and Cleitophon, and the narrative is interspersed with elaborate descriptions of places such as Alexandria, and of scenes such as life in Egypt presented. His style is stilted and pompous, but his work contains a great deal of curious and interesting information.—J. D.

**ACHILLINI, ALEXANDER**, a famous mediæval physician and philosopher, professor of philosophy and anatomy, first at Padua, and afterwards at Bologna; born at Bologna in 1463. He was the first Italian who availed himself of the edict of the Emperor Frederick II. to dissect human subjects. His lectures attracted crowds of students from all parts of Europe. He was an ardent admirer of the Arab philosophers, especially Averroes, and with Arab philosophy must have imbibed no small tincture of Oriental superstition, as he left, besides various anatomical and medical works, an elaborate treatise on "Chiromantia, or Palmistry." Died in 1512.—E. M.

**ACHILLINI, CLAUDIO**, grand-nephew of the preceding, a person of versatile genius and extensive attainments, distinguished in his time as a physician, jurist, theologian, and poet; born at Bologna in 1574, and died in 1640.

**ACHMED-BESMI-EFFENDI**, an Ottoman historian and statesman of the eighteenth century, was Turkish ambassador at Vienna and Berlin, and signed, as Ottoman plenipotentiary, the treaty of Kainardji. He is the author of a history of the war between the Ottomans and the Russians, from 1768 to 1774, and of an account of his two embassies. Both these works have been translated into German.—E. M.

**ACHMET** or **AHMET-BEN-SEREIM**, a learned Arab of the ninth century, author of a treatise on the interpretation of dreams, a Greek translation of which is usually annexed to the work of Artemidorus on the same subject.

**ACHMET-GEDUC** or **ACOMAT**, a celebrated Ottoman general, born in Albania about the year 1430. He took Otranto and other places in 1480. After the death of Mahomet II. in 1482, he raised Bajazet II. to the throne, and compelled Zizino, Bajazet's brother, and the lawful heir, to retire to Rhodes. Bajazet afterwards caused his benefactor, Achmet, to be murdered, or, according to some historians, murdered him with his own hand at a banquet.—E. M.

**ACHMET**, eldest son of Bajazet II., when on the point of mounting the throne, abdicated by Bajazet in his favour, was defeated and slain, in 1512, by his brother Selim I., who had previously murdered their father.

**ACHMET.** See **AHMED**.

**ACHTSCHELLING, LUCAS**, a Flemish landscape painter of the 17th century, pupil of Louis de Walden, whom he soon surpassed in his excellent imitation of nature.

**ACIDALIUS, VALENS**, a precocious critic and a doctor of medicine, born at Wittstock in Brandenburg, and died in 1595, when he had scarcely completed his 29th year. He was the author of several poems, and of excellent critical remarks on Tacitus, Plautus, &c.

**ACILIUS, GLABRIO MARCUS**, consul at Rome 191 B.C., famous for a victory over Antiochus the Great. His son built at Rome the temple of Piety.

**A'CKERMAN, J. C. G.**, a German physician, professor of medicine at Altdorf in Franconia, author of "Lives of the Ancient Greek Physicians;" "Institutes of the History of Medicine;" and "A Manual of Military Medicine," all works of value. Born in 1756 at Zeulenrode in Upper Saxony; died in 801.

**A'CKERMAN, RODOLPH**, was born in 1764, at Schneeberg in Saxony, where his father followed the trade of a saddler, and died in London, 30th March, 1834. Having served his apprenticeship with his father, he set out on his travels as a journeyman, and coming to London, he there formed an acquaintance with a countryman of his own, named Facius, who at that time conducted the "Journal of Fashions." With this person he formed an engagement as a designer of carriages, &c., in which he was so successful as in a very short time to be able to open that splendid establishment in the Strand, known as the Repository of the Fine Arts, whence he sent forth many elegant works, particularly the series of finely illustrated volumes called "Forget me not." Ackerman was one of the first inventors of waterproof fabrics for clothing; he assisted Accum in introduc-

ing the lighting of cities with carbonated hydrogen gas, and was the first to introduce lithography into this country.—S.

**A'CKERMAN, PETER FOURER, D.D.**, ordinarius professor of the Old Testament and Hebrew at Vienna; born there 17th November, 1771, and died there 9th September, 1831. Works:—"Introductio in libros sacros Vet. Test., usibus academicis accommodata," 1825; "Archæologia Biblica breviter exposita," 1826; "Prophetæ Minores perpet. annot. illust.," 1830.

**ACOLUTHI, JOHN**, a learned Lutheran divine, born in Silesia, 1628, and died 1689. He published some Latin tracts, such as "Postilla Evangelica," &c.

**ACOLUTHUS, ANDREAS**, professor of theology at Breslau in Silesia. In 1680 he published "Obediah" in Armenian and Latin, the first work printed in Armenian characters in Germany; and in 1701, some chapters of the Koran in Arabic, Persian, Turkish, and Latin. Died in 1704.

**ACONZIO** or **ACONTIUS**, a philosopher, jurist, and divine of the sixteenth century, a native of Trent. Renouncing the church of Rome, he retired to England, where he received a pension from Queen Elizabeth, to whom he dedicated a treatise entitled the "Stratagems of Satan." In an age of persecution he earnestly recommended to all Christian churches mutual forbearance; but his proposed basis of religious union comprehended not merely all professing Christians, but Jews, Moslems, and Pagans. His views were vehemently denounced by several divines both in England and on the Continent. He wrote a work on "Method; or the Right Mode of Studying and of Teaching Science;" and an admirable epistle on "Authorship." He was also a distinguished engineer, and wrote an able work on fortification. Died about 1565.—E. M.

**ACORIS**, king of Egypt, 374 B.C. He succeeded Nephereus, and entered into a league with the Arabians, Tyrians, and Evagoras, king of Cyprus, to make war against Artaxerxes Mnemon, king of Persia, in which he was unsuccessful.

**ACOSTA, CHRISTOVAL**, a Portuguese naturalist and physician, was born at the beginning of the sixteenth century at Mozambique, and died in 1580. He travelled much in the pursuit of science, and visited Asia in search of medicinal plants and drugs. During his voyage thither, he was seized by pirates, and had to pay a large ransom for his liberation. After spending several years in the East Indies, especially at Goa, a Portuguese colony, he returned to Europe and settled at Burgos, where he continued to practise medicine during the remainder of his life. Acosta wrote a treatise on the "Medicinal Plants and the Drugs of the East Indies."—J. H. B.

**ACOSTA, GABRIEL**, professor of theology at Coimbra, wrote a commentary on part of the Old Testament. Died 1616.

\* **ACOSTA, JOAQUIM**, an officer in the Central American service, well known in the scientific world as a geographer and historian, and residing at Santa Fé. Since 1834 he has engaged in various scientific and exploring expeditions, and has published several valuable treatises relating to the history, geography, and antiquities of South America. In 1848 he published "An Historical Compendium of the Discovery and Colonization of New Granada in the Sixteenth Century." In 1849 he edited and republished, with valuable additions, the work of the learned Caldas, so often cited by the venerable Humboldt, which presents a view of the sciences, literature, arts, and industry of New Granada. Acosta's works have been published at Paris.—J. F.

**ACOSTA, JOSEPH**, a learned jesuit, born about 1539 at Medina del Campo, of Portuguese extraction. He went to Peru in 1572 as a missionary, and became Provincial of the Jesuits. He returned to Europe in 1588, and during the last years of his life, was principal of the university of Salamanca. His works of greatest value are—"A Natural and Moral History of Spanish America;" "A Description of the New World;" and "A Dissertation on the Conversion of the Indians." Died in 1600.

**ACOSTA, URIEL**, a Portuguese gentleman of Jewish extraction, born at Oporto about the end of the sixteenth century. His parents, though apparently zealous Roman catholics, were, probably, at heart devoted to Judaism. When twenty-two years of age, he left Portugal, in order to make open profession of the Jewish faith, and escaped to Holland, with his mother and two brothers. Having investigated the principles of modern Judaism, he declared himself a Sadducee, and was solemnly cast out of the synagogue. After enduring for fifteen years all the ignominy and hardship of a Jewish excommunication, he signed and read a feigned recantation of his errors, but was again

excommunicated for unguarded indications of his real sentiments, and, after the lapse of other seven years, he submitted to the most outrageous indignities, by way of penance, to be readmitted into the Jewish communion. The severity with which he was treated completely unhinged his mind and led to suicide, about the year 1640, or, according to others, 1647.—E. M.

ACOSTER, surnamed SACCAS, a tragic poet of Athens, and a contemporary of Aristophanes. Another of the same name, a sculptor of Cnossus, mentioned by Pausanias.

ACQUAVIVA, ANDREA MATTEO, a Neapolitan nobleman, noted as a patron of men of letters; born in 1456. The only one of his own works ever published was a commentary on the Latin translation of one of Plutarch's moral treatises. Died in 1526.

ACQUAVIVA, BELIZARIUS, brother of the preceding, and, like him, on terms of intimate friendship with all the distinguished authors of his age and country. He was himself author of several works.

ACQUAVIVA, CLAUDIUS and OCTAVIUS. See AQUAVIVA.

ACRAGAS, one of the four best chasers in silver in Greece, mentioned by Pliny. Nothing is known about his birthplace, or the epoch in which he lived; but the fact of works of his being found nowhere else but at Rhodes, coupled with that of his having generally treated bacchantes, hunters, and other similar subjects, induce the belief that he was established in that town, and belonged to the school which the followers of Lysippus had instituted there.—R. M.

ACREL, OLAUS, a Swedish surgeon and physician, born near Stockholm early in the eighteenth century. After studying at Upsal and Stockholm, he resided in Germany and France, and served for two years in the French army. He returned to Stockholm in 1745, and published works named "A Treatise on Recent Wounds," "Observations on Surgery," "Reforms Necessary in Surgical Operations," and "On the Cataract of the Eye." Died in 1807.

ACRON or AGRON, a Greek physician, born at Agrigentum about 460 B.C., who, by means of fires kindled in public places of its cities, delivered Greece from the plague which devastated it at the beginning of the Peloponnesian war.

ACRON or ACRO, HELENUS, a scholiast; judging by his commentary upon the *Adelphis* of Terence, he lived about the end of the fourteenth century. His principal work is a commentary upon Horace.

ACRON, JOHN, a protestant theologian, was born in a small town in Friesland in the year 1506; died in 1565. He has left several theological works.

ACRONIUS or ACRON, JOHN, a Dutch physician, was born 1520, in the village of Acron in Friesland. He taught medicine and mathematics at Basle, where he died in 1562. He has left treatises on the "Motion of the Earth," &c.

ACROPOLITA, CONSTANTINE, a Byzantine writer, lived at Constantinople in the end of the thirteenth and beginning of the fourteenth centuries. He has left some discourses against the Latins, some homilies, and eulogies of the saints.

ACROPOLITA, GEORGE, a Byzantine chronicler, father of the preceding, was born at Constantinople in the year 1220, died 1282. He there held the office of "logothete," a sort of comptroller-general of the revenue, at the court of Michael Paleologus, from whence he took the surname of LOGOTHETES. His pupil, Theodore Lascaris, made him governor of the western provinces of the empire, and Michael Paleologus sent him as ambassador to Constantine, prince of Bulgaria, and intrusted to him many important negotiations. His *History*, discovered by Douza, begins at the period in which that of Nicetas ends, and extends from the year 1205 to the expulsion of the French emperors in 1261.—S.

ACROTATUS, eldest son of Cleomenes II., king of Sparta, reigned in the beginning of the fourth century B.C. According to Pausanias, he had the command of an army, which the Lacedæmonians sent against Aristodemus, tyrant of Megalopolis; and perished in a sanguinary encounter, in which the Lacedæmonians were defeated.

ACTISANES, a king of Ethiopia, dethroned Amenophis, king of Egypt, and for a short period united both kingdoms under his sceptre. He freed his states of robbers whom he sent to a penal colony in the desert between Egypt and Arabia.

ACTON, in 944, bishop of Verceil. His works, consisting of a capitulary in a hundred articles, a summary of moral philosophy, letters, discourses, commentaries, &c., were collected by Baronio in 1708.

ACTON, JOSEPH, prime minister of Naples during Lord Nelson's presence there, the son of a physician, was of Irish descent. Born at Besançon in France in 1737, he was at first an officer in the French navy, and subsequently in that of Tuscany. Employed in the Spanish expedition against the Barbary corsairs, he was the means of rescuing four thousand Spaniards from slavery. Entering the Neapolitan navy, he soon became known at court, and through the patronage of Queen Caroline was appointed successively minister of the marine, minister of war, director of the finances, and finally prime minister. Hatred of the French prompted him to the most extravagant and cruel measures, and his policy was disadvantageous alike to the king and kingdom. He was dismissed from office in 1803, and retired to Sicily, where he died in 1808.—W. A.

ACTUARIUS, JOHN, a Greek physician of the lower empire, who lived somewhere between the eleventh and fourteenth centuries. He has left several works on medical subjects, which have all been gathered together in the "*Actuarii Opera*," published in Paris in 1556.

ACUNA, DON ANTONIO D', bishop of Zamara, member of an ancient Spanish family, famous for the important part he took in the civil war in Spain, in the reign of Charles V. Joining the insurgents, he was received by them with boundless enthusiasm, and, becoming one of their leaders, rendered them immense service. Though a bishop, he displayed the skill of an experienced general; and, though sixty years of age, he still retained all the activity and fire of early manhood. He raised and disciplined a regiment of priests, at the head of whom he always marched to battle, and who, on all occasions, fought with amazing heroism. After the decisive defeat of the insurgents at Villalar, the warrior prelate attempted to escape to France, but was made prisoner when on the point of entering the French territory, and confined in the castle of Simancas. After remaining here for some time, treated with every respect, he killed the governor by a blow on the head with a brick he had concealed for the purpose, and had nearly escaped, but was seized, and afterwards, by special permission of the pope, tried and condemned by a secular tribunal, and executed.—E. M.

ACUNA, CHRISTOPHER, a jesuit missionary, born at Burgos in 1597. After labouring for some time among the Indians of Peru and Chili, he in 1638 accompanied a flotilla despatched to explore the river Amazon, and, on returning to Spain, published, in 1641, an interesting account of his voyage. Acuna returned to Lima, where he died about 1675.

ACUNA, HERNANDO D', a Spanish soldier and poet in the reign of Charles V. He belonged to a noble family, originally Portuguese. As a soldier, Acuna is noted for his services in various military exploits, but he is best known as a translator of the "*Chevalier Délibéré*" of Oliver de la Marche.

ACUNA, DON PEDRO BRAVO D', a Spaniard, who took a distinguished part in the wars of his country, about the end of the sixteenth and beginning of the seventeenth centuries. Among other services, he was prominent in the resistance to the attack made on Cadiz by Sir Francis Drake in 1587. He was appointed governor of Carthagena in 1593, and in 1602 was promoted to the government of the Phillipines. While occupying that position he conquered the Moluccas, which had fallen into the hands of the Dutch.—J. B.

ACUSILAUS OF ARGOS, one of the earliest writers of Greek prose. Most probably he lived during the sixth century B.C., and is sometimes said to be one of the seven wise men of Greece. He belongs to a class of authors called logographers, who collected the early Greek legends, generally local, and paved the way for the more stately historical efforts of Herodotus. The work of Acusilaus was named "*Genealogies*." Only a few fragments of it have come down to us.—J. D.

ADEUS or ADDÆUS, a Greek poet, born in Macedonia, supposed to be the author of five epigrams in the "*Greek Anthology*," though only one of these is expressly assigned to the Macedonian Addæus. He lived probably about 320 B.C.

ADAIR, JAMES, an English merchant and traveller, lived about the middle of the eighteenth century. He resided for four years amongst the savage tribes of North America, and published in 1770 an interesting work, entitled "*History of the American Indians*," in which he sought to prove that the tribes of the north were the descendants of a Jewish colony.

ADAIR, JAMES MAKINTRICK, a native of Scotland, the date of whose birth is unknown, practised for several years at Bath,

and subsequently became physician to the commander-in-chief and the colonial troops at Antigua, and one of the judges of that island; he wrote several works on diet and regimen, the *materia medica*, fashionable diseases, &c.; also a pamphlet of "Unanswerable arguments against the abolition of the Slave Trade." Died at Harrowgate, 24th April, 1802.—W. A.

ADAIR, JOHN, F.R.S., an eminent Scottish hydrographer, of whose personal history little is known. He lived at the close of the seventeenth and beginning of the eighteenth centuries, and his name is connected with various coast surveys of Scotland, and maps which have been preserved.

ADAIR, ROBERT, of Holybrooke, in the county of Wicklow, was descended from Robert, elder son of Maurice, fourth earl of Kildare, who, in a family feud or quarrel, killed in single combat Gerald, commonly called "The White Knight," second son of Gerald, earl of Desmond, at a place called the ford of *Ath-daire*, in the county of Limerick, and made his escape to Scotland in the reign of Robert Bruce, taking the name of Ath-darè or Adair. The family assumed the title of Lairds of Kinhilt in Galloway, and returned to Ireland in 1630. Robert Adair of Holybrooke, from whom Sir George Hodson, Bart., the present proprietor, is lineally descended, is the "Robin" of the song set to the music of the old Irish air "Aileen Aroon." He was remarkable for his convivial habits, as memorials of which, two claret goblets of mighty proportions yet exist at Holybrooke, and the recollection of his musical tastes is still preserved in an Irish harp of rude workmanship, but of graceful proportion, which bears his name. Died in 1737.—J. F. W.

ADALARD. See ADALHARD.

ADALBERON, archbishop of Rheims, and chancellor of France, was born about the middle of the tenth century, and died 988. He distinguished himself, both as prelate and minister, under Lotharius, Louis V., and Hugh Capet. Some of his letters are to be found amongst those of Gerbert, and two of his sermons appear in the Chronicle of Moissac.

ADALBERON, ASCELIN or AZELIN, bishop of Laon, born about the middle of the tenth century, died 19th July, 1030. Besides a satirical poem dedicated to King Robert, in which are to be found some curious historical traits, several unpublished writings of his still exist.

ADALBERT, a French bishop, who was accused of heresy by Boniface, archbishop of Mayence, and in 747 convicted by a council held at Soissons. The accounts of Adalbert that have reached us are from his accusers, and cannot be received with implicit faith; but there seems little doubt that he laid claim to inspiration, and inculcated the worship of angels.

ADALBERT I. lived in the ninth century, was the son of Boniface, count of Lucca, and assumed the title of Marquis of Tuscany. He supported the claims of Carloman, son of Louis of Germany, to the throne of Italy, and was in that struggle the opponent of Pope John VIII.—ADALBERT II., surnamed "the Rich," his son and successor, is noted for the fickleness of his conduct in the contests for the throne of Italy, which occupied the end of the ninth and beginning of the tenth centuries. He even aspired to that throne himself, but was baffled in his attempt. Died in 917.—J. B.

ADALBERT, SAINT, of Prague, the apostle of Prussia, was born about the middle of the tenth century; died in 997. In 983 he was promoted to the see of Prague, of which he was the second bishop. His extreme severity repelled the Bohemians, whom he vainly strove to wean from their pagan rites; and, discouraged, he withdrew to Rome, until the Bohemians recalled him in 993. After several years spent in fruitless labour, he was assassinated in 997.

ADALBERT, archbishop of Bremen, was descended from Otho II., emperor of Germany, and the Greek princess Theophania. His archbishopric was the centre of missionary efforts among the Slavonic tribes north and east of the Elbe, and to the discharge of its peculiar duties he applied himself with great fervour. He sought by every means to aggrandize his church, and was thus the constant opponent of the secular nobility of Saxony. He died at Goslar in 1072.—J. B.

ADALBERT, archbishop of Mayence, to which dignity he was raised in 1111 by Henry V., emperor of Germany. The history of this churchman is not unlike that of Thomas A'Becket. He had been chancellor to the emperor, and had assisted him in laying claim to the power of installing bishops. No sooner, however, was he made archbishop, than he became a zealous

champion of the rights of the church, and the enemy of his former patron. He was imprisoned by the emperor, but released in 1115 in consequence of a popular tumult raised in his behalf. He revenged his sufferings by exciting a rebellion among the nobility, and at the death of the emperor he prevented the election of his nephew, Frederick of Suabia, and secured the elevation of Lothar, duke of Saxony, to the imperial dignity.—J. B.

ADALHARD, abbot of Corbie (born about 753, died 826), was one of the first who openly preached that obedience to the laws was a duty equally obligatory on the patrician and the plebeian. Charlemagne intrusted him with many important missions, and named him his delegate at the council of Rome in 809; but he fell into disgrace with Louis le Debonnaire, the nobles having represented him to that monarch as an ambitious demagogue.—S.

ADALOALDUS, king of the Lombards, born at Modena about A.D. 602, was the son of Agilulfus, who induced the Lombards to acknowledge him as king when he was only three years of age. In 616, at the death of his father, he entered on the duties of government in conjunction with his mother. After her death he showed symptoms of insanity, and was guilty of several deeds of cruelty, on account of which he was deposed.

ADAM, (from a root signifying "to be red," or from "adamah," ground), was the name of the first man.

ADAM, a learned monk of London, who lived early in the 14th century. His works are—1st, "The Life of St. Hugh of Lincoln;" 2d, "Two Treatises on the advantages of Tribulation," London, 1530; 3d, "Scala-cæli;" "De Sumptione Eucharistiæ;" "Speculum Spiritualium." The last exist in MS.

ADAM. Three brothers of this name, all sculptors, flourished about the middle of the eighteenth century. LAMBERT SIGISBERT, the eldest, was born in 1700, died in 1759. Cardinal de Polignac intrusted to him the reparation of twelve marble statues, found in the palace of Marius at Rome, and known as the family of Lycomedes; a commission which he executed with much skill. His "Neptune stilling the waves" is well known, and it was he who finished the "Neptune and Amphitrite" which adorns the fountain of Neptune at Versailles. His anatomy is correct, and his draperies beautiful, but he prostituted his genius to the bad taste of the period. The "Prometheus devoured by a Vulture," of his brother, NICHOLAS-SEBASTIAN, is a fine work, but his *chef-d'œuvre* is the tomb of the queen of Poland, wife of Stanislaus. The third brother, FRANÇOIS GASPARD, has left no work of consequence.—S.

ADAM, ALEXANDER, LL.D., an eminent scholar and teacher, was born June 24, 1741, at Coates of Burgie in the parish of Rafford, Morayshire, where his father rented a small farm. He was taught the elements of English by a schoolmistress, to whose gentle treatment he was afterwards wont to attribute his love of learning. He was next sent to the parish school, where his progress was so rapid, that his father resolved to give him a learned education, and sent him to the university of Edinburgh. During his course there he was compelled to support himself by private teaching, and his remuneration was so scanty that he was obliged, as he tells us in his MS. memoranda, to live "at the rate of little more than fourpence a day, including everything." In the spring of 1760, when only nineteen years of age, he was elected, after a very strict comparative trial, to the situation of head-master in George Watson's hospital; and he continued to officiate in this capacity three years and a half, during which period he entered himself a student of divinity. In November, 1763, that he might have more leisure for prosecuting his studies, he resigned his situation in Watson's hospital, and engaged himself as domestic tutor to Mr. Kincaid, who was then his majesty's printer for Scotland, and afterwards Lord Provost of the city. On June 8, 1768, he was elected rector of the High School of Edinburgh. He now enthusiastically devoted himself to his profession, and employed his leisure hours in the composition of works, all of them demanding great labour, for facilitating and promoting a relish for the study of classic literature. His first performance was a Latin and English grammar, which he undertook by the advice of Principal Robertson and Dr. Blair. It was published in May, 1772. Owing to the opposition of the undermasters of the High School, this excellent work was not allowed to be introduced into that institution, but was, notwithstanding, extensively adopted as a text-book, not only in Britain, but also in the United States of America. On August 9, 1780, Adam received the degree of LL.D. from the university of Edinburgh. His

second and most important work—his “Roman Antiquities,” which was published in 1791—at once established his reputation as a scholar. His “Compendious Dictionary of the Latin Tongue,” was published in 1805. Dr. Adam may be regarded as the founder of the Burgh and Parochial Schoolmasters’ Widows and Orphans’ Fund, established by Act of Parliament in the beginning of this century. On December 13, 1809, when in his class-room, he was seized with apoplexy, of which, after lingering five days, he died. Becoming delirious before his dissolution, he imagined that he was still in school, conducting the business of his class. After some expressions of applause or censure, he suddenly stopped short, and said, “But it grows dark, boys, you may go,” and instantly expired. During the course of his life, Dr. Adam had under his training many pupils who afterwards rose to high distinction, among whom may be particularly named, Dugald Stewart, Francis Horner, Sir Walter Scott, Lord Jeffrey, Lord Coekburn, and Lord Brougham. (See Lockhart’s “Life of Scott,” vol. i., p. 33.) Besides the works already mentioned, Dr. Adam was the author of a “Summary of Ancient Geography and History,” Edinburgh, 1794; and “Classical Biography,” Edinburgh, 1800. His large Latin dictionary, which he had been preparing, and the MS. of which is now in the High School, he had only brought down to the word “Com-buro.”—J. A.

ADAM D’AMBERGAU, a printer, born at Amberg in High Bavaria. He lived in the fifteenth century, and his name is marked on an edition of Cicero’s orations, printed at Venice in 1472. Editions of Lactantius and Virgil had appeared in the previous year, bearing the name Adam, but these cannot be with certainty attributed to the subject of our notice.

ADAM OF BREMEN, a chronicler and geographer of the eleventh century, was a native of Upper Saxony. He went to Bremen in 1067, and there became canon and director of the public school. From thence he appears to have made many journeys into the northern countries for missionary purposes, and to these are due the interesting details he has furnished respecting the ecclesiastical condition of Denmark, Sweden, and Russia at that period. His works, however, require to be consulted with discretion, as there is much fable mixed up with the facts contained in them.—S.

ADAM, CHARLES ADOLPHE, a musician, the son of Jean Louis, was born at Paris on the 24th of February, 1804. He had the great advantage of his father’s instructions on the piano-forte, till he entered the Conservatoire in 1817. In this institution he studied composition, first under Reicha, and subsequently under Boieldieu. His first complete work was the comic opera, in one act, of “Pierre et Catherine,” performed at the Opera Comique in 1829; this, however, did little but open a course of opportunities for the production of several others, and they little more than gain him a reputation for facility. In 1832 he came to London, and wrote the music for a ballet called “Faust,” which was brought out at the King’s theatre, then under the management of his relation Laporte; this had very considerable dramatic character, and was marked by the fluency of melody and brilliancy of instrumentation that are his chief distinctions. He introduced much of this music in his ballet of “Giselle,” brought out several years later at the Academie Royale, which, together with his “Diable à Quatre,” written for the same theatre in 1843, entitles him to consideration, not only as being one of the best writers of ballet music, but as giving to this class of composition an artistic character. His fame in the higher department of dramatic music was more decidedly established by his opera of “Le Proscrit,” at the Opera Comique in 1833; and in 1836, his “Postillon de Lonjumeau” fixed him as one of the most esteemed writers for that theatre, and immediately spread his popularity all over Europe; this will always be esteemed his best work, but “Le Brasseur de Preston,” and still less “Le Chalet” (both one act operas), must not be disregarded, since these are, as their vivacity and piquancy entitle them to be, especial favourites of the French lyric stage. In 1847 he wrote his first mass, and in 1850 another; but though they have elicited admiration, his talents little fitted him for this class of composition. In style he was a follower of Auber, but never wrote with the intensity of expression that elevates some of the more earnest works of his original, above all imitation. He was elected a member of the French Institute in 1844, and appointed a professor of composition in the Conservatoire in 1848. He was mainly concerned in the establishment, and subsequently

director of the Theatre Lyrique, the fourth theatre for operas in Paris. He died suddenly in 1856.—G. A. M.

ADAM, DANIEL, born at Prague in 1546, was a professor in the university of his native town, and has left several works on Bohemian history, language, and literature. One of those he names “A Journal of all the Memorable Events which have happened at Prague,” published in 1577.

ADAM, GEORG, a German landscape painter and etcher. He died at Nüremberg in 1823.

ADAM DE LA HALE. See HALE.

ADAM, JACQUES, a French writer, born at Vendôme in 1663. He was recommended by Rollin to the Abbé Fleury, whom he assisted in the preparation of his “Histoire Ecclesiastique.” He had the charge of educating two princes of the house of Bourbon Conti, and wrote several translations.

ADAM, JAMES, a German engraver, who lived at Vienna about the close of the last and the beginning of the present century. He is known as the engraver of the plates for the celebrated “Picture Bible” of Vienna (*Bilder-Bibel*), and also for an engraving of the Marriage of Francis, archduke of Austria, with the Princess Elizabeth of Wurtemberg.

ADAM, JAMES, brother of Robert Adam the architect, was the designer of Portland Place, London, and for some time architect to the king. “The works in architecture of R. & J. Adam,” were published in numbers in 1773. Died in 1794.

ADAM, JEAN, a jesuit, was preacher before the French court in Lent, 1656, and afterwards head of the professed jesuits’ house at Bordeaux. Died in 1684.

ADAM, JEAN LOUIS, an eminent composer for the piano-forte, born about 1760 at Mietersboltz, department of the Lower Rhine, and died at Paris, April 8, 1848. When very young, he gave himself passionately to music. After receiving a few lessons from a relative, and from an organist of Strasburg, named Hepp, he went to Paris at the age of seventeen to teach music. In Paris he attracted attention by producing at a concert two symphonies arranged for the piano, harp, and violin, the first compositions of the kind ever attempted. Glück, who saw the merits of the young composer, favoured him with his friendship and employment. In 1797 he was appointed professor to the Conservatory of Music. In 1829 the government acknowledged the value of his services, by creating him a member of the Legion of Honour. His works, and especially his books of instruction, were highly valued; and he reared up a class of pupils who in their turn have become famous in the musical world.—J. F.

ADAM, MELCHIOR, or less correctly ADAMI, deserves honourable mention in these pages, as one of the most laborious and useful of biographical writers. Bayle acknowledges his great obligations to him, and would have been glad to express his gratitude in the form of a full account of his life, if he could have found the necessary materials. But no life of him had then appeared, nor has the deficiency been supplied since. He was born at Grotkau in Silesia, in the last quarter of the sixteenth century, and was educated first in the protestant gymnasium of Brieg, where he was supported by the bounty of a Silesian nobleman, and where he remained for eight years. He afterwards studied in the university of Heidelberg, which he joined in 1598, and where he publicly disputed in theology in 1601, under the presidency of David Pareus. He took the degree of Phil. Mag., and earned the distinction of prize poet. In 1606 he was appointed co-rector of the gymnasium of Heidelberg, which office he continued to hold in 1613. He was afterwards rector of the gymnasium, and a professor in the university. According to some accounts, he was parish pastor of Heppenheim in 1622, when he died.

His great work was the “Vitæ Germanorum Philosophorum, Theologorum, Jurisconsultorum, Medicorum,” &c. Confining himself to the sixteenth century, and the first decade of the seventeenth, he published in 1615 the first volume of the series, containing the philosophers, under which name he included poets, humanists, and historians, as well as philosophers more strictly understood. Three additional volumes followed—the theologians in 1619, the lawyers and physicians in 1620. In 1618 he published a volume of lives of foreign theologians, extending to twenty, including Calvin, Farel, Beza, Cranmer, Knox, &c. In all, his lives of the theologians amount to 156, all protestants. The first editions of these volumes are the most correct and valuable, having been brought out in Heidelberg, under the author’s own eye. He was the author of various

other works, also written in Latin, which are, however, less known and less valuable.

The author bestowed extraordinary pains, and incurred considerable expense, in the collection of materials for these numerous biographies. He gathered together from all quarters an immense store, amounting to upwards of sixty large volumes, of funeral sermons, programmes, éloges, &c., in manuscript and in print. Though of a weak frame and sickly habit, he restricted himself to five or six hours' sleep, and not unfrequently wrought at his desk all night long. His biographies are very unequal in length and fullness. Some, as those of Luther, Melancthon, and Calvin are pretty copious, including extracts from their writings, letters, and official documents. Others contain only the barest outlines, and these not always given with the necessary accuracy. Still the collection is esteemed, even at the present day, as in the highest degree valuable, especially for the history of the German, French, and English Reformation.—P. L.

ADAM OF ORLETON, an English bishop, whose name is associated with the intrigues which disturbed England during the reign of the feeble Edward II. He is the author of the ambiguous reply given to those who were planning the cruel murder of the king, "Edwardum regem occidere nolite timere bonum est," which, according to the punctuation adopted, may be construed either into a sanction or a prohibition of the murder. He was born in 1285, and held successively the bishoprics of his native Hereford, of Worcester, and of Winchester.—J. B.

ADAM OF PETIT PONT, an Englishman belonging to the beginning of the twelfth century. He studied in Paris under Matthew of Angers and Peter Lombard,—afterwards opening a school of his own at the Petit Pont. John of Salisbury had a high opinion of him,—celebrating the extent of his knowledge, his sagacity and acuteness, and his attachment to Aristotle. M. Cousin has recently called attention to the only work that remains of all Adam's labours, viz., the "Ars disserendi." Its value is purely historical.—J. P. N.

ADAM, ROBERT, author of "The Religious World Displayed," born at Udney, Scotland, about 1770, was an episcopal clergyman, first at Edinburgh, afterwards in the Danish island St. Croix, and lastly, at Tobago. Died in 1826.

ADAM, ROBERT, an architect, who produced a great change in the architecture of Great Britain, born at Kirkcaldy, Scotland, in 1728; died in 1792. Appointed in 1762 architect to the king, he resigned that office in 1768, on being elected to represent Kinross-shire in parliament. He published a work entitled "Ruins of the Palace of the Emperor Dioclesian at Spalatro in Dalmatia," seventy-one engravings, folio, 1764. With his brother James, he furnished numerous designs for noblemen's mansions and public buildings, both in England and Scotland, including the Register House and University, Edinburgh, and the Royal Infirmary, Glasgow. The "Adelphi" buildings, Strand, London, designed by them, were so called from the Greek word for brothers.—W. A.

ADAM, SCOTUS, a canon regular of the order of Premonstratenses, and in his latter years a monk of Melrose in Scotland, wrote the "Life of St. Columbanus," and of some other monks of the sixth century, and also of David I. of Scotland. His works were printed at Antwerp in 1659. Died about 1195.

ADAM, THOMAS, an eminent minister of the church of England, was born at Leeds, February 25, 1701. He was educated first at Leeds, and then at Wakefield, after which he studied at Christ college, Cambridge whence, he removed to Hart-hall (now Hertford college), Oxford, under the care of Dr. Newton, head of that seminary, and its founder as a college. The only academical degree he took was that of bachelor of arts. In 1724 he was presented to the living of Wintringham in Lincolnshire; and he continued rector of this parish fifty-eight years, steadily refusing, to the close of his life, all additional preferment. He died March 31, 1784, in the eighty-fourth year of his age. His theological sentiments, formed chiefly from the study of Luther's works, much resembled those held by such theologians as Hervey and Romaine, or the Marrow-men of Scotland. His works are:—"Practical Lectures on the Church Catechism;" "A Paraphrase and Annotations on the first Eleven Chapters of St. Paul's Epistle to the Romans;" "Evangelical Sermons;" his "Posthumous Works," in 3 vols. 8vo; and his "Exposition of the Four Gospels."—J. A.

ADAM, WILLIAM, nephew of the two great architects of the name, and the first lord chief commissioner of the jury court for

the trial of civil causes in Scotland, born 21st July, 1751, passed advocate at the Scottish bar in 1773, but, in 1782, became a barrister-at-law in England. On the institution in 1816 of the jury court for civil causes in Scotland, he was constituted its head. Died 17th February, 1839.

ADAMI, ADAM, a German ecclesiastic, known both as a statesman and historian, born at Mülheim on the Rhine in 1610. He sat in the congress where the negotiations for peace were made which led to the close of the Thirty Years' war. He died in 1663 at Hildesheim, to the bishopric of which he had been raised.

ADAMI DA BOLSENA, ANDREA, a musician, known for his "Osservazioni per ben regolare il coro dei cantori della capella pontificia," published in 1711, which contains, besides the directions for regulating the music in the pontifical chapel, the biographies and portraits of twelve of the most famous members of that college of singers, and a prefatory history of the musical establishment of the pope, from its foundation down to the author's time; it is a work of great authority, and is cited by most subsequent writers on musical history. Adami must have been born at Bolsena, as his name implies, in 1664, though M. Fétis states him to have been born in Rome in the October of the preceding year. He received his chief instruction from his father, entered the service of Cardinal Ottoboni, and was transferred from this to that of the pope, being appointed maestro di capella by that dignity, and officiating also as head of a musical academy. He died in 1742.—G. A. M.

ADAMI, LEONARDO, nephew of Andrea, and author of a history of Arcadia from the earliest times to the 28th Olympiad. He died in 1719.

ADAMI, MELCHIOR. See ADAM.

ADAMNAN (sometimes called ADOMNAN, and in Latin ADAMNANUS), an ecclesiastic celebrated for his great learning and christian graces, who flourished in the seventh century, was born in the county of Donegal in Ireland, about the year 624. He was the ninth abbot of Ily or Iona, in succession after the founder, St. Columba; having been elected in 679. In 686 he was sent on an embassy to Aldfrid, king of Northumberland, where he became a convert to the true views with regard to the time of celebrating Easter. Arenlph, a French bishop, being shipwrecked on the coast of Britain in returning from the Holy Land, came at length to Adamnan, who joyfully entertained him, and having learned from him the result of his travels, wrote a book "De situ Terræ Sanctæ," or "De locis Sanctis," as it is sometimes entitled, which he presented to King Aldfrid. It is the earliest account of the Holy Land extant, and was published at Ingolstadt, in 1619. He is the author of various other works, amongst them a life of St. Columba, in three books. This last is pronounced by Pinkerton to be "the most complete piece of such biography that all Europe can boast of, not only at so early a period, but even through the whole middle ages." He died on the 23rd of September, 704.—(Ware, Colgan, Bede, O'Reilly, Reeves.)—J. F. W.

ADAMS, ABIGAIL, the wife of John Adams, the second president of the United States. She is known as the writer of a collection of letters, which are valuable as giving a picture of the manners of that eventful age in which she lived.

ADAMS, CHARLES B., a distinguished American naturalist, born in 1814 at Dorchester, Massachusetts. He studied at Amherst college, where he took his degrees in 1834, and held a tutorship during 1836 and 1837. Ardently devoted from early youth to natural science, he soon attained a high reputation as a naturalist, and in 1839 became professor of geology and natural history in Marion college, Mobile. In 1845 he was appointed director of the geological survey of the state of Vermont, and continued to discharge with great efficiency the duties of that service, till, in 1847, he accepted the chair of natural history in Amherst college. He published, in various scientific journals, numerous important papers, chiefly on his favourite subject of conchology; and his observations on Jamaica, where he resided some time, have shed copious light on the geology of that island. He died at St. Thomas in 1853.—E. M.

\* ADAMS, FRANK, colonel of the 28th regiment (brother of the gallant officer who died of a wound received at Inkerman), served throughout the Eastern campaign, with a short interval of absence in England, and for a time commanded a brigade of the army. He is a commander of the Bath, and has received a medal and clasps for his services in the Crimea.—W. H. R.

\* ADAMS, GEORGE, a commissary-general, and senior on the

active list of the department,—commander of the Bath, &c., served under Mr. Commissary-General Filder in Balaklava, during the winter of 1854-5, and was present during the Crimean campaign. He has received the Crimean medal and clasps, and at the close of the war he was for some time in charge of the commissariat of the army.—W. H. R.

ADAMS, HANNAH, an American lady, born at Medfield, near Boston, in 1756. When only ten years old she lost her mother, and, owing to her father's want of success in business, she was obliged, at a very early age, to support herself by manual labour. Evincing from childhood a thirst for instruction of every kind, she studied with eager attention every book within her reach, and with the occasional assistance of students who boarded in her father's house, she attained an accurate and extensive knowledge of Latin and Greek. While earning a scanty livelihood by giving instructions in Greek and Latin to a few students in divinity, she wrote her "View of Religious Opinions," published in 1784. The work sold well, but the publisher appropriated nearly all the profits. A second and improved edition appeared in 1791, and, through the judicious arrangements of friends, its success more than relieved her for a time from pecuniary difficulties. Her "History of New England" appeared in 1799. Her last and most original work was her "History of the Jews." The profits of her writings, and the considerate efforts of friends, enabled her to spend her declining years in comfort, highly and universally respected. Died at Brooklyn, near Boston, in 1832.—E. M.

ADAMS, HENRY WILLIAM, a major-general in the army at the time of his death. This gallant officer was colonel of the 49th foot at the time of their departure for the East, and he commanded a brigade of General De Lacy Evans' division at the battle of the Alma. He was promoted as major-general on the 12th December, 1854, but ere he was aware of the honour conferred upon him, he received a wound in the foot, in one of the hottest onsets at Inkerman, where he was handling his brigade with his usual gallantry. After many months of suffering, his wound proved fatal, and he died in the month of July, 1855, at Scutari hospital, leaving behind him the reputation of a kind, gallant, and devoted soldier.—W. H. R.

ADAMS, REV. JOHN, a clergyman, born at Aberdeen about 1750. He established an academy at Putney, and is known as the author of several educational works.

ADAMS, JOHN, the assumed name of ALEXANDER SMITH, one of the mutineers who in 1789 took possession of H.M.S. *Bounty*, and sailed to Otaheite, where most of them remained. Adams and eight others proceeded in January, 1790, to Pitcairn's island, taking with them six male and ten female natives of Otaheite. The oppression of these by the whites soon produced murderous conflicts, which ended in the extermination of the Otaheitan males. One of the whites having succeeded in distilling spirits from an indigenous plant, brought about his own destruction. Another of the three who now alone remained was put to death by the other two for an attempt on their lives. Adams and Young, the survivors, now felt the necessity of religion for the welfare or even existence of any community, and began to hold a regular religious service, and to give religious instruction to all the other members of the colony, now consisting of the females and eighteen children, all under nine years of age. The result was marvellous. Peace and affection soon reigned in the island. The mothers, as well as the children, speedily adopted the principles and practised the precepts of the gospel, and under the patriarchal rule of Adams the community continued to prosper. The island was visited in 1814 by two British frigates, and in 1825 by the *Blossom*, commanded by Captain Beechey, who has published an interesting account of the settlement. Adams died in 1829, at the age of sixty-nine. After his death the want of an efficient authority was soon felt. An ill-advised proposal was made and adopted for the removal of the colony to Otaheite, which led to melancholy consequences, both moral and physical, but most of its members subsequently returned. The Pitcairn colony, consisting of 190 persons, were recently settled, at the expense of the British government, in Norfolk island, from which the convicts were previously removed. The colonists reluctantly quitted their natal spot, but the inadequacy of its resources compelled them to emigrate.—E. M.

ADAMS, JOHN, of the Inner Temple, a civil engineer of the seventeenth century, who wrote an interesting work, which may

still be consulted with advantage, entitled "Index Villaris, or a Geographical Table of all the Cities, Market-Towns, Parishes, Villages, and Private Seats in England and Wales."

ADAMS, JOHN, one of the great leaders of the American revolution, and second president of the United States, was born at Braintree, Massachusetts, in 1735. After studying science and literature at Harvard college, and subsequently completing the usual course of legal training, he was admitted a member of the Suffolk bar, began to exercise his profession at Quincy, and soon obtained extensive practice. Having also, by the death of his father, succeeded to a small estate, which had belonged to his ancestor, one of the original settlers, he married, in 1764, Abigail Smith, a young lady of great intelligence and moral worth. In 1765 he removed to Boston, where his accomplishments, business habits, and public spirit speedily procured him popularity and professional success. At this period (1765) the mistaken policy of the British ministry had produced in the American colonies, and especially in Massachusetts, intense excitement, and a firm determination to resist unconstitutional aggression. Adams had maturely studied the questions at issue between the colonies and the mother country, and threw himself at once, with all the ardour of youthful patriotism, into the contest. The conversation and the writings of his friend James Otis, who so early as 1760 had begun to sound the trumpet of American freedom, claiming for the colonies, with fearless eloquence, constitutional justice, had produced a deep impression on his mind; and he was at this time one of the few Americans who foresaw and desired that the approaching struggle would terminate in American independence. The great mass of the colonists continued, even after the commencement of the war, to deprecate a separation from the mother country; and confined their claims and aspirations to the enjoyment of those rights which the British constitution guarantees to all British subjects. Though Adams desired, from principle, American independence, his sympathies never ceased to be English. He preferred a republic in America, as best suited to its social condition, but he was far from wishing, and especially on abstract grounds, the overthrow of the British monarchy. In fact, his great wish was to maintain in America English institutions and English principles, minus a hereditary chief magistrate, a privileged aristocracy, and a privileged church. The cause of the first American war was simply the unconstitutional determination of the British ministry, in spite of the memorable remonstrances of Pitt (Chatham), Burke, Barré, &c., in parliament, and of numberless enlightened men throughout the nation, to tax America without her consent. Though the harsh and illegal measures employed in America to enforce commercial restrictions which true political science has shown to be absurd and inexpedient, had produced great irritation, American grievances would have been amicably arranged, but for the infatuation of the ministry in ignoring the inseparable connection between taxation and representation. It is now matter of history that the Americans, in resisting an attempt to suppress constitutional rights, acted in the spirit of our common forefathers, and achieved the triumph of a fundamental principle of the British constitution. In 1765, Adams printed in the "Boston Gazette" the papers afterwards published under the title of "Dissertation on the Canon and Feudal Law." The same year he supported, along with his friends Gridley and Otis, before the governor and council, the petition of the Bostonians for the re-opening of the courts, which had been shut in consequence of the general resistance to the Stamp Act. In 1767 he declined the office of advocate-general in the Court of Admiralty, offered to him by the governor. In April, 1770, at the risk of impairing his popularity, he defended Captain Preston and the soldiers prosecuted for firing on the citizens of Boston; yet in May he was elected a member of the State Assembly. From this time his energies were almost exclusively devoted to public affairs. In 1774 he defended, in letters to the "Boston Gazette," the proceedings of the colonists; acted as a member of the Boston committee in preparing resolutions regarding the Boston port bill; and was one of the five deputies appointed by the assembly of Massachusetts to meet deputations from other colonies. These deputations assembled at Philadelphia in September, 1774, and formed the first continental congress. So general was still the feeling in favour of British connection, that Adams was, on this occasion, exposed to great obloquy, from being supposed desirous of colonial independence. When congress reassembled in 1775, the sentiments of the colonists had

undergone a change, as the position of affairs was materially altered. The colonial forces, tested at Lexington and Concord, were besieging the British troops in Boston. Mainly through the influence of Adams, it was resolved to form a continental army, and George Washington was appointed commander-in-chief; but even Adams, whose zeal was always combined with prudence and circumspection, deemed a declaration of independence premature. When congress met again, 1776, Adams moved that such a government be established as would best conduce to the safety and happiness of America; and on the 15th of May, after much opposition, the motion was adopted. On the 7th June, Richard Henry Lee moved that all connection between the colonies and Great Britain be declared to have ceased, and that the colonies are henceforth free and independent states. This gave rise to keen and lengthened discussions; but on the 2d of July, Lee's motion passed, and on the 4th a formal declaration of independence, drawn up by Jefferson, and afterwards slightly modified, was unanimously adopted.

After efficiently contributing, by his labours and counsels, to the organization of various departments of the public service, Adams was appointed in November, 1777, one of the commissioners of congress to the court of France, and left Boston for Europe in February, 1778. Returning to America in the autumn, he was again sent to Europe as minister plenipotentiary, and arrived in Paris in February, 1780. He thence repaired to Holland in October, 1782, and negotiated a commercial treaty between that country and the United States. On the 30th November, 1783, he signed at Versailles, with Dr. Franklin and others, the preliminaries of the treaty of peace with Great Britain, which was ratified by congress on the 14th January, 1784. In 1785, Adams went to London as American minister, and returned to Boston in June, 1788. When in London, he published his "Defence of the Constitutions of Government of the United States." In 1789 he was elected vice-president of the United States, re-elected in 1793, and, on the retirement of Washington in 1797, he was elected president. Through the increasing strength of the democratic party, who regarded Adams' principles as too conservative, he was not re-elected to that office, Jefferson being preferred. The remaining part of Adams' life was devoted chiefly to agriculture and literature. From his retreat he vindicated, in a series of letters to the "Boston Gazette," in 1812, those principles of international law, the maintenance of which on the part of the United States led to the second American war, but which are now recognized by all the states in Christendom as fundamental maxims of the law of nations. The upright and illustrious career of John Adams was closed on the 4th July, 1826. By a remarkable coincidence, Thomas Jefferson expired on the same day, which was the anniversary of the declaration of American independence.—E. M.

\* ADAMS, JOHN COUCH, an astronomer, and one of the mathematical tutors of St. John's college, Cambridge, where he distinguished himself as a student, and became senior wrangler. While still a boy, he evinced a special taste and extraordinary aptitude for mathematical studies; and his name has been rendered memorable as an astronomer, in connection with the planet Neptune. Whether he or M. Le Verrier had the priority of discovery, was, at the time, keenly contested among men of science. It would now appear that the question may be fairly decided in favour of our countryman. In October, 1845, Mr. Adams communicated to the astronomer-royal, Greenwich, the result of his investigations, to the effect that the perturbations of Uranus indicated the presence of an unknown planet within a specified range; and M. Le Verrier's announcement, of essentially the same import, was published in Paris on the 10th November following. The council of the Royal Astronomical Society, instead of awarding its gold medal to either of the parties, gave to each a printed testimonial. Mr. Adams possesses that modesty of bearing, and that simplicity of character, which usually accompany true genius.—E. M.

ADAMS, JOHN QUINCY, son of John Adams, and sixth president of the United States, was born at Braintree, Massachusetts, on the 11th July, 1767. Owing to his father's frequent and lengthened absence in the public service, his early education was conducted mainly under the care of his accomplished, pious, and patriotic mother. In his eleventh year he accompanied his father to Paris, where he attained a thorough command of the French language—an acquisition of immense importance in his subsequent career—and by his capacity and his ardour in the

pursuit of knowledge, gave unmistakable indications of future eminence. He returned to America with his father in 1779, and in 1781 went to Russia as private secretary to Mr. Dana, American envoy to the court of St. Petersburg. In April, 1783, he joined his father at the Hague, and in the following September accompanied him to London. Returning to America in 1785, he took his degree of A.M. at Harvard college, qualified himself for the bar, and began to practise as a barrister and to write for the press. In 1794 he was sent as minister to the Hague by Washington, who considered him the ablest of American diplomatists. He returned on his father's election to the presidency; was minister in Berlin in 1800–1801; and during that period published, in letters to a Philadelphia paper, an interesting and instructive account of his travels in Silesia. He was recalled when Jefferson became president; was elected in 1801 to the State senate, and in 1803 to the senate of the United States. From 1806 till 1809 he was professor of rhetoric in Harvard college. In 1810 he was appointed minister to Russia, and remained at St. Petersburg till 1815, when he was sent in the same capacity to London. In 1817 he was appointed secretary of state, and continued in office eight years. In 1825 he was honoured with the presidency of the United States, but held that dignity only one term of four years. From 1829 he continued a member of the house of representatives till his death, the eloquent and intrepid leader of the antislavery party. The circumstances of the decease of John Quincy Adams resemble the touching close of Chatham's earthly career. Being in his place in the House on the 21st of February, 1848, when a motion was made to present thanks and gold medals to various officers for services in the Mexican war, he expressed his dissent by an emphatic "No!"—the last testimony he ever uttered as a member of the legislature. He expired shortly afterwards in the speaker's apartment; his last words being, "This is the end of earth—I am content."—E. M.

ADAMS, JOSEPH, an English physician, born in 1756. After residing a year in Madeira, he was, from 1805 till his death, principal physician to the Small-Pox Hospital, London, and wrote "Observations on Morbid Poisons;" "A Guide to the Island of Madeira;" and a "Popular View of Vaccination."

ADAMS, JOSEPH, father and son, two London opticians of the eighteenth century, authors of various valuable works on microscopes, mathematical instruments, electricity, geography, and astronomy. The father died in 1786, and the son in 1795.

ADAMS, RICHARD, a non-conforming English Presbyterian divine, born about 1630. He was minister of St. Mildred's church, Bread-street, London, but was obliged to resign his living at the restoration of Charles II. He is the author of several theological works.

ADAMS, ROBERT, an architect and surveyor of buildings to Queen Elizabeth. Died in 1595.

\* ADAMS, ROBERT, inventor and patentee of "Adams's Revolver,"—the revolver-pistol now exclusively employed in the British service—is a native of Devonshire, and managing director of the London Armoury Company.

ADAMS, SAMUEL, one of the leaders in the American revolution, born at Boston in 1722. He studied at Harvard college. He held for some time the office of revenue collector, which gave him an opportunity of becoming accurately acquainted with the social and political condition of his native province. From boyhood a theoretical and uncompromising democrat, he fearlessly urged the colonists to assert their independence, while almost every other champion of colonial rights aimed merely at the redress of grievances. His patriotic exertions proved, on the whole, highly beneficial to his country; but, under other circumstances, his temperament and sentiments might, with the best intentions, have done it infinite harm. He was the first, or among the first, to move in organizing political associations throughout the colonies. Though far inferior to his namesakes, John and John Quincy, in literary taste and attainments, as well as in comprehensive views of political science, he possessed, in a rare degree, practical good sense, administrative capacity, moral intrepidity, and a clear, forcible, and persuasive style, both in speaking and writing. In 1766 he became, and continued till 1774, member and clerk of the Massachusetts house of representatives; and through his zeal, tact, and indefatigable industry, exerted very great influence during that period over its proceedings. He was one of the five deputies sent from Massachusetts to Philadelphia in September, 1774, and was elected a

member of the constitutional congress in 1775. He zealously promoted, and, in 1776, had the honour of signing the declaration of independence. His ultra-democratic convictions led him to oppose the formation of a regular army, as well as to desire that the chief command should, in 1788, be transferred from the great and good Washington to General Gates. In 1789 he was appointed lieutenant-governor, and in 1794, governor, of his native state. In his later years, political experience is said to have rendered his views and sympathies more conservative. His stature was short and slender, forming a contrast to the vigour of his mind; but his aspect was dignified and engaging. He lived throughout in honoured poverty, revered for his public and private virtues, and died in 1808 at the advanced age of eighty-two.—E. M.

ADAMS, THOMAS, a minister of the Church of England in the seventeenth century, and the author of various works on religious subjects, some of which are noted for the quaintness of their titles, and their curious strain of figurative discussion. He was officiating at Willington in Bedfordshire in 1614, and at London in 1618, at which time he was chaplain to Sir Henry Montagu, Lord Chief Justice of England. An edition of his whole works was published at London in 1730.—J. A.

ADAMS, SIR THOMAS, lord mayor of London in 1645, and renowned for his chivalrous loyalty. He transmitted to Charles II. the sum of £11,000 during his exile, and was made a baronet when sent by the city of London as one of a deputation to congratulate that monarch at the Restoration.

ADAMS, WILLIAM, an English navigator, born about 1575, at Gillingham, Kent. After receiving instructions at Limehouse naval academy, he in June, 1598, embarked on board the Dutch squadron, under Admiral De Mahn, bound for the Moluccas. In April, 1600, the ship in which he sailed was stranded on a small island dependent on Japan. By his skill in various useful arts he obtained the notice and favour of the emperor, and procured for the Dutch and English important commercial privileges. Two of his letters have been published, giving an account of his adventures, and interesting information regarding Japan.—E. M.

ADAMS, WILLIAM, a London surgeon, who, after long and special experience in treating diseases of the kidneys, &c., published in 1773 a valuable disquisition on the subject.

ADAMS, WILLIAM, D.D., master of Pembroke college, Oxford, canon of Gloucester, and archdeacon of Llandaff. He is perhaps chiefly known as a friend for many years of Dr. Samuel Johnson. It has been said that he was his tutor at Pembroke college; but this is not correct, Johnson having left the university the term before Adams was appointed to that office in 1731. He had, however, considerable influence over him; for Bishop Percy of Dromore writes: "I have heard Johnson say that the mild but judicious expostulations of this worthy man (then one of the junior fellows), whose virtue awed him, and whose learning he revered, made him really ashamed of himself." Dr. Adams published an answer to "Hume on Miracles," which Sir James Stenhouse (himself no mean judge) calls "one of the most excellent pieces of controversy extant, and most satisfactory." He was born at Shrewsbury, A.D. 1707; elected fellow of Pembroke college, 1723; tutor, 1731; and master, 1775. Before his appointment to the mastership he was for some time vicar of St. Chad's, Shrewsbury, where he was much respected for his learning, amiable character, and piety. From 1774 till his death he was rector of Counde in Shropshire. He died January 13, 1789, aged eighty-two, and was buried in Gloucester cathedral, where a monument, with a medallion portrait, is erected to his memory.—T. S. P.

ADAMS, REV. WILLIAM, M.A., late fellow and tutor of Merton college, and vicar of St. Peter's-in-the-East, Oxford. His life was short and uneventful, but far from useless. He was the second son of the late Mr. Sergeant Adams, assistant-judge at the Middlesex sessions. He was educated at Eton and Oxford, where he obtained the highest honours, a double-first class in 1836. In the following year he was elected fellow and tutor of Merton college, and was shortly after presented to the vicarage of St. Peter's-in-the-East, in Oxford, his immediate predecessors having been Dr. Denison the late, and Dr. Hamilton the present, bishop of Salisbury. Here he distinguished himself as an active parish clergyman and an earnest preacher, till the year 1842, when, bathing at Eton, after a day of much excitement and mental exertion, he caught a violent cold, the commencement of an illness which terminated fatally in the winter of 1847-48. He died and was buried at Bonchurch in the Isle of Wight.

His reputation as an author rests chiefly upon his "Sacred Allegories," viz.:—"The Shadow of the Cross;" "The Distant Hills;" "The Old Man's Home," and "The King's Messengers." Besides these he published, "The Warnings of the Holy Week," a course of elegant and practical sermons, preached at St. Peter's-in-the-East; and "The Fall of Croesus, a story from Herodotus; designed to connect the study of history with the doctrine of a superintending Providence."—T. S. P.

ADAMSON, HENRY, a Scottish poet of the 17th century, a native of Perth, author of "The Muses Threnodie." Died 1639.

ADAMSON, PATRICK, archbishop of St. Andrews during a very stormy period of the Reformed Church of Scotland, a man of brilliant talents and attainments, who, through the allurements of ambition, drew on himself great obloquy and much suffering, was born at Perth in 1536. In the records of the period he is frequently named Patrick Constance or Constantine. He studied at St. Mary's college, St. Andrews, and having embraced the reformed doctrines, he was in 1560 invested with the clerical office, and soon after became minister of Ceres in Fife. As a preacher he was eloquent and impressive, and as a writer of Latin poetry, he was little inferior to Buchanan, Arthur Johnston, or Andrew Melville. About 1565 he quitted his pastoral charge, and, in the capacity of tutor, accompanied James, the eldest son of Sir James Macgill of Rankeilour in Fife, clerk-register, in his travels to France. At the universities of Padua and Bourges he studied civil and canon law; and upon his return to Scotland in 1570, when he married, he vacillated as to the choice of the profession he should follow. Declining the office of principal of St. Leonard's college, St. Andrews, which, before his return, Buchanan had resigned in his favour, he commenced practice at the bar; but, at the urgent request of the General Assembly, he resumed his original profession, and was appointed minister of Paisley. In the contest between the supporters and the opponents of prelacy and royal supremacy in matters ecclesiastical, Adamson professed a concurrence in the views of Melville, whose society he courted. In 1575 he left his charge at Paisley, on being appointed chaplain to the Regent Morton; in 1577 he was appointed archbishop of St. Andrews, and primate of all Scotland; and though, before being admitted, he declared his adhesion to the principles of ecclesiastical polity contained in the Book of Discipline, few or none of his brethren had any confidence in the sincerity of his professions. Adamson resided some time in England as ambassador from James to Elizabeth, and after his return in 1584, continued to correspond with Archbishop Whitgift, and Dr., afterwards Archbishop, Bancroft. In April, 1586, he was excommunicated by the Synod of Fife for having assumed the office of bishop, and supported the measures of the court for the overthrow of the Presbyterian polity. In 1588 he was formally accused before the Assembly, and his deposition was the result. The unfortunate man, deprived of his emoluments, and neglected even by James, whose policy he had but too zealously promoted, was now left to endure sorrow, privation, and sickness. He even sought and obtained relief for himself and his family from his opponent, Andrew Melville. He was also released by the Synod of Fife from their sentence of excommunication, in compliance with his professedly earnest entreaties, upon his transmitting a subscribed recantation of the views on which he had previously acted. The genuineness of the document is unquestionable, but the sincerity of his submission, and the value to be attached to the recantation, are, from the circumstances under which they were made, still matters of ecclesiastical controversy. He died February 19, 1592. It is pleasant to add, that a beautiful little Latin poem, published in his works, and breathing a spirit of ardent piety, was composed by him a short time before his death. A collected edition of his works, in quarto, was published by his son-in-law, Thomas Wilson, at London, in 1619.—J. A.

ADAMUS ANGLICUS, an Englishman by birth, a doctor of theology and professor at Paris. He must have been a Dominican in doctrine, as Petrus Vincentinus names him among the impugnors of the immaculate conception of the Virgin.

ADAMUS CATHANENSIS, a bishop of Caithness in the reign of Alexander II. of Scotland. He was hated by the people of his diocese for his rigour in exacting his tithes, and was burned alive in his own house in 1222. The king avenged his death by the destruction of four hundred persons supposed to have been concerned in the murder.

ADA'MUS EVESHAMENSIS or ADAM OF EVESHAM, an ecclesiastic of the twelfth century, one of the messengers who brought the pall to Thomas A'Becket in 1162. He was abbot of the Benedictine monastery of Evesham. Died in 1191.

ADA'MUS GODDAMUS or GODHAM, probably a native of Ireland, author of a commentary on Peter Lombard, and of several treatises of scholastic theology. He was a Minorite or Franciscan, and an Oxford doctor of divinity.

ADA'MUS MARISCUS or DE MARISCO, lived in the thirteenth century, and was a distinguished teacher in the Franciscan monastery at Oxford. He was celebrated for his theological learning, being called by his contemporaries "Doctor Illustratus." Roger Bacon makes honourable mention of "Friar Adam de Marisco," in his "Opus Majus."

ADA'MUS MUREMUTHENSIS or ADAM DE MURIMUTHI, an English historian, who wrote a Latin chronicle of the events of his own time, extending from 1303 to 1337. The chronicle has been continued to 1380; but it is almost certain that Murimuth's death took place before that year, and that the continuation is the work of some anonymous writer.

ADANSON, MICHEL, a French naturalist (but of Scotch extraction), was born at Aix in Provence on the 7th April, 1727. He was educated at Paris, and enjoyed the benefit of studying under Reamur and Bernard de Jussieu. He exhibited a great love for natural history. In the year 1748, when only twenty-one years of age, he embarked for Senegal, with the view of examining the productions of that part of Africa. He spent five years in the colony, and made extensive collections of animals and plants. He also devoted attention to the meteorology of the country, and to the languages of the natives. He returned to Paris in 1753, and four years afterwards published his "Histoire Naturelle du Senegal, avec la relation abrégée d'un voyage fait en ce pays, en 1749-1753." This work has been translated into English and German. He devoted much attention to the classification of plants, and he propounded a system which, in many respects, is in accordance with the natural system of the present day. His work entitled "Familles des Plantes," containing his views of classification, was published in Paris, in two volumes, in 1763. In it he displays much knowledge of the philosophy of botany, but he unfortunately adopted a nomenclature which was not received by the botanical world. During the French Revolution, he suffered great troubles and privations, and seems to have been reduced to a state of penury. He died on 6th August, 1806, in the eightieth year of his age. He appears to have been a man of liberal and philanthropic sentiments, and to have nobly advocated the liberation of the slave. The name of *Adansonia digitata*, in honour of him, is given to a famous tree of tropical Africa. The tree is known as the Baobab-tree, or Ethiopian Sour-gourd, or Monkey-bread, and is remarkable for the size of its trunk, which attains a diameter of thirty feet.—J. H. B.

ADASHEV, ALEXAY THEODOROVICH, minister of the czar Ivan IV., at a remarkable period of Russian history. In 1547 a terrible conflagration destroyed the greater part of Moscow, along with 1700 of its inhabitants. The population suffered great misery, and, exasperated by the neglect of the young czar Ivan IV., rose in revolt. The sovereign, afraid of his rebel subjects, and moved by an appeal made by a priest named Sylvester, was roused to action, and appointed Sylvester, along with his chamberlain Adashev, to manage the affairs of the state. Under them great reforms were wrought, and vast advances made by the country in intelligence and commerce, as well as in military glory. Adashev occupied the most prominent position; but gradually he began to decline in favour, and in 1561 died in a prison at Dorpat, into which he had been thrown on an accusation of causing by sorcery the death of the czaritza Anastasia. After his death the czar became noted for his cruelty, and gained for himself the title of Ivan the Terrible.—J. B.

ADASHEV, DANIEL THEODOROVICH, son of the preceding, distinguished in various military expeditions during his father's administration, especially in that against the Crim Tartars. He was put to death by Ivan soon after his father's decease.

ADDA, IL CONTE FRANCESCO D', distinguished as a poet, painter, and soldier. He executed the picture of John the Baptist, which forms an altar-piece in the church of Santa Maria delle Grazie in Milan.

ADDINGTON, ANTHONY, an English physician of some reputation, author of several medical works, and father of Lord

Sidmouth, was born about 1718. He was honoured with the intimate friendship of Lord Chatham, and, when examined before the House of Lords respecting the malady of George III., gave an opinion which was afterwards gratifying to that sovereign, and, at the time, useful to the ministry of Pitt. Both circumstances had subsequently an influence on Lord Sidmouth's success in life. Died in 1790.—E. M.

ADDINGTON, HENRY, Lord Viscount Sidmouth, son of Dr. Anthony Addington, was born in 1755. After qualifying himself for the medical profession, he soon quitted it to devote himself to a political career, for which he had always cherished a strong predilection. Entering parliament in 1782, he showed himself an ardent and valuable adherent of his early friend Pitt. When, in 1792, the motion of Mr. Wilberforce on the slave trade came before the house, Pitt and Addington took different sides, the former eloquently pleading for its immediate, the latter desiring its gradual abolition. Mr. Addington was raised in 1789 to the dignity of speaker of the House of Commons, which he retained till March, 1801, when he became premier. In this capacity he displayed great power in making dry administrative subjects attractive, by a lucid and polished eloquence. He zealously promoted the peace of Amiens, but some clauses in the treaty exposed him to the violent attacks of the opposition, now comprehending some of his previous supporters. When hostilities were resumed, he was the foremost in urging the vigorous prosecution of the war. Towards the end of 1803, he called the nation to arms, and put the coasts in a state of defence. But he wanted the requisite energy to command public confidence at such a crisis. The nation, therefore, demanded a change of ministry, and Pitt was again invited to take the reins of government. Addington resigned the seals in May, 1804. The king, with whom he was a special favourite, raised him to the peerage, under the title of Viscount Sidmouth, and made him a privy councillor. After Pitt's death, Sidmouth, with Fox and Grenville, formed a new ministry in January, 1806, which was dismissed by the king a few months afterwards on the death of Fox. When Lord Liverpool became premier, on the assassination of the unfortunate Percival, Sidmouth again entered the cabinet as home secretary; but in 1822, on the death of the Marquis of Londonderry (Castlereagh), he retired, and was succeeded by Peel. He died at the age of eighty-nine, on the 15th February, 1844.—(*Life of Lord Sidmouth* by Dean Pellew, 3 vols. 8vo.)—E. M.

ADDINGTON, STEPHEN, D.D., successively minister of the dissenting congregation at Market Harborough, tutor at the theological seminary at Mile-End, London (from 1783 to 1788), and minister of the congregation in Miles' Lane (from 1788 to 1796), was born in 1729, and died in February, 1796, in his sixty-seventh year. His works are a "Life of the Apostle Paul," a "Defence of Infant Baptism," a "Dissertation on the Religious Knowledge of the ancient Jews and Patriarchs," and some minor publications.—W. L. A.

ADDISON, JOSEPH, poet, statesman, moralist, and a consummate master of the English language, was the eldest son of Dr. Lancelot Addison, by Jane his wife, and was born at Milston, Wiltshire, May 1, 1672. Like Sir Isaac Newton, and many other illustrious men, he was a weakly child, and baptized on the day of his birth, under the impression that he could not long survive. His first teacher was the Rev. Mr. Naish, at Amesbury school. Thence he removed to Sarum school, under the tuition of the Rev. Mr. Taylor. He was prepared for the university at the great school of the Charterhouse in London, where Richard Steele was his companion, and where the foundation of their friendship was laid. In 1687 he was entered at Queen's college, Oxford. His classical attainments, refined taste, and gentle character, soon made him favourably known in the university. Some of his verses fell into the hands of Dr. Lancaster, then dean of Magdalen college. He was consequently chosen a member of that house, where he took the degree of bachelor and master of arts.

Already esteemed for his skill in Latin versification, at the age of twenty-two he addressed an English poem to Dryden, containing some pleasing compliments on that poet's translations from Virgil, Ovid, Juvenal, and Persius; and he afterwards assisted Dryden in the composition of his works. At this time he was strongly importuned by his father to enter holy orders, and among his friends we find "Mr. Henry Sacheverell," afterwards so celebrated as a party controversialist. In 1695 he wrote a poem on King William, addressed to Sir John Somers, then lord

keeper of the great seal. To this flattering production he owed the friendship of that nobleman. A little before, he had dedicated his Latin poems to Mr. Montague, afterwards Lord Halifax. Halifax and Somers procured him, in 1699, a pension of £300 a year from the crown, that he might add to his stores of information by foreign travel; and we find him writing a "Letter in 1701, from Italy, to the Right Honourable Lord Halifax," in smooth and graceful English verse. In 1702 he set in order at Vienna the materials which he had collected in Italy for his "Dialogues on Ancient Medals." In the same year, on making arrangements to return to England, he found himself chosen as secretary from King William III., to attend the army under Prince Eugene, who had just begun the war in Italy. He heard the news of the king's death while enjoying the picturesque scenery of Geneva, in which his pure taste must have felt exquisite delight. The change of ministry at the beginning of the new reign destroyed his hopes of present advancement. He had leisure for a tour in Germany on his way home, and did not arrive in London until nearly the close of 1703. He shortly afterwards published his "Travels," which he appropriately dedicated to Lord Somers, then no longer in office. In 1704, requested by the Lord-Treasurer Godolphin, on the suggestion of Lord Halifax, to celebrate the recent victory of Blenheim, he commenced the beautiful poem of the "Campaign." Lord Godolphin saw a specimen of the work before its completion, and was so charmed with the imagery, that he appointed the author commissioner of appeals, vacant by the removal of the celebrated Mr. Locke to the council of trade. In 1705 he accompanied Lord Halifax to Hanover. In 1706 he was made under-secretary of state. In 1707 he published, anonymously, an able pamphlet, entitled "The Present State of the War," &c.

At this time he resided in a venerable mansion at the east end of Fulham, once the residence of Nell Gwynn. His friends persuaded him to flatter the new taste for operas, by writing one called Rosamond, which did not succeed on the stage; but from letters which he dated from Fulham, we find that Addison preferred the hedgerows to the theatre, the oratorio of birds to the most musical opera, and the voice of the nightingale to Mrs. Tofts, the finest singer of that age. In 1709 he went to Ireland as secretary to the lord-lieutenant, the marquis of Wharton. The salary of the keeper of records in Ireland was increased, and the office was bestowed on Addison as a mark of the queen's favour. At the change of ministry in 1710, he returned to England, where he remained in political retirement, until in 1714, on the death of Queen Anne, he was made the secretary to the regency. But though in retirement, he was not unemployed; for, from his lodging in St. James's Place, with its exquisite literary breakfasts, out-rivalling the feasts of Samuel Rogers in our own day, he sent forth those celebrated papers in the Spectator and Guardian, which bear the initials CLIO, and which have not more wonderfully contributed to the improvement of the English morals, than to the purity of the national taste; while, in 1713, he published the "Tragedy of Cato," alike remarkable for its preservation of the classical unities, and as designed to awaken the nation to a love of civil freedom. About the same time he formed the noble purpose of compiling a new English dictionary.

He was now at the height of popularity, and though "a whig, when whigs were at a discount," he wielded an influence all but universal. Taverns, in those days, like the modern clubs of Pall Mall and St. James's Street, were the reunions of fashionable society, both literary and political. Sadly illustrative of the irreligion of the age, one was called the "Devil's Tavern." It was situated between the Temple Gates and Temple Bar, and had been the haunt of wits from the time of Ben Jonson. In 1710 we find the great essayist dining at this well-known house, while a general election was filling the land with the riot which Hogarth afterwards so admirably painted. "I dined to-day," says Swift in a letter to Stella, "with Dr. Garth and Mr. Addison at the Devil tavern, near Temple Bar; and it is well I dine every day, else I should be longer in making out my letters; for we are yet in a very dull state, only inquiring every day after new elections, where the Tories carry it among the new members six to one. Mr. Addison's election has passed easy and undisputed; and I believe, if he had a mind to be chosen king, he would hardly be refused."

On the arrival of George I. he was again sent to Ireland, as secretary to the new lord-lieutenant, Lord Sunderland. In 1715 he became a lord of trade. From September, 1715, to July,

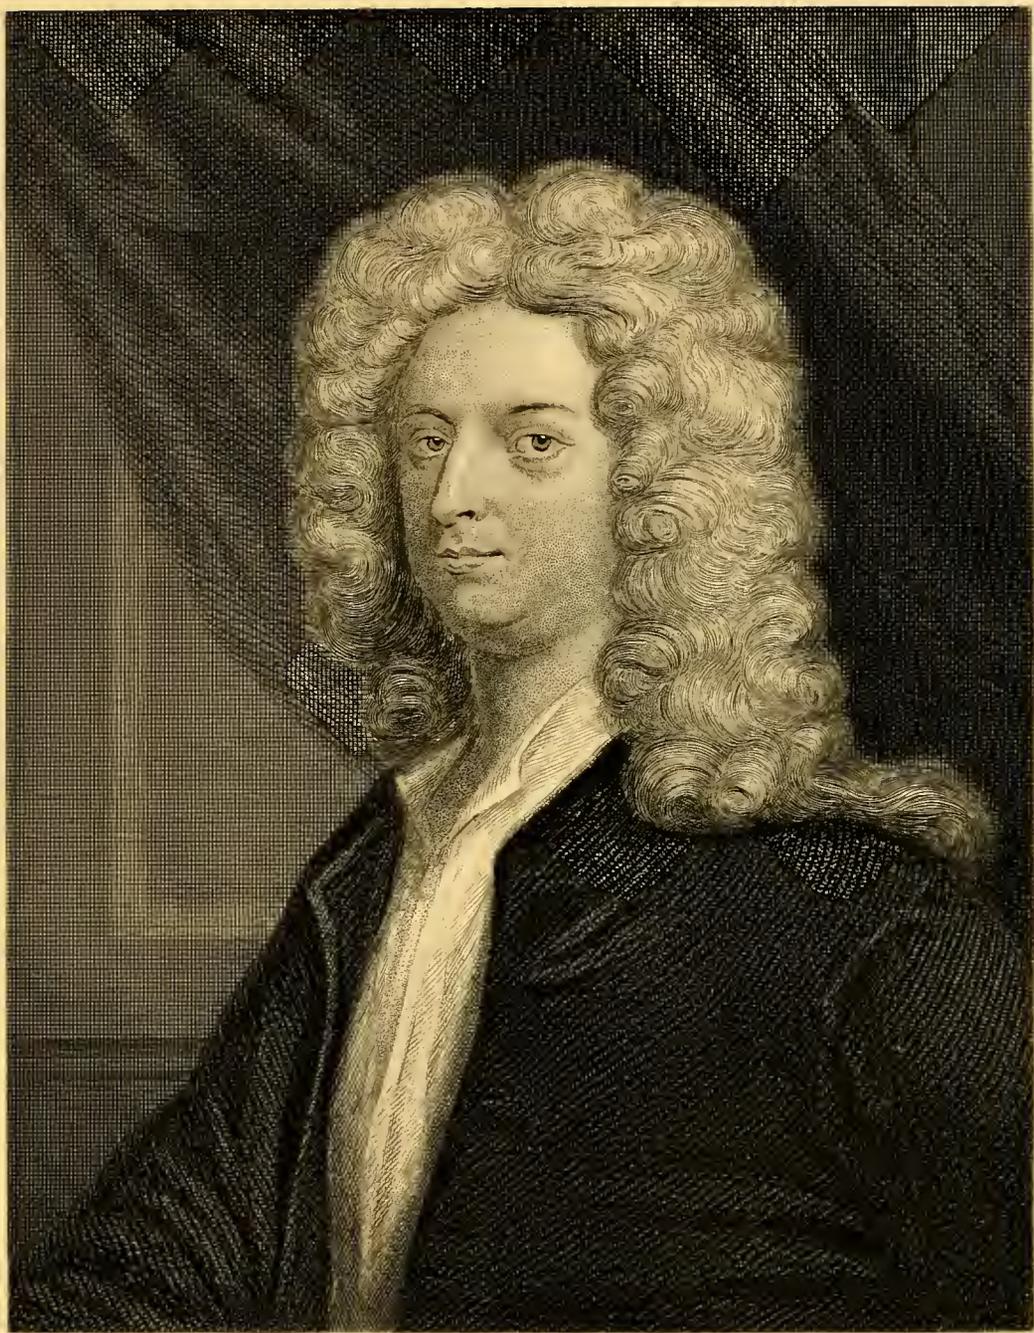

1716, he rendered important service to the government by publishing a powerful political paper twice a-week, entitled "The Freeholder." In 1716 he married the countess-dowager of Warwick, an union which does not appear to have added to his domestic happiness. In 1717 he accepted the dignity of secretary of state; more, it is understood, in compliance with the wishes of his wife, than in accordance with his own judgment. This high office he resigned after holding it about a year, in consequence of his declining health, retiring with a pension of £1500 a-year. A complicated asthma and dropsy deprived the world of his eminent services, at Holland House, Kensington, on the 17th of June, 1719.

There are few illustrious Englishmen whose characters have been more variously and richly illustrated by contemporary and succeeding writers, than that of Addison. There are yet fewer who have contributed so much to that illustration themselves. In a corrupt age, Addison exhibited a rare and refreshing example of unswerving adherence to the cause of truth, decorum, and piety. His deep respect for religion he owed to the instructions of his father's home; and though, perhaps, his personal earnestness as a Christian may have been somewhat abated by his love of conviviality in the prime of manhood, in the last years of his life he gave ample proofs of devoutness. He continued his "Evidences of Christianity." He contemplated a new version of the Psalms. Some of his hymns are sung to this day in churches, wherever the English language is understood. His last words, which were addressed to his stepson, the young earl of Warwick, are well known. Pressing the hand of the profligate youth, he softly said, "I have sent for you, that you might see with what peace a Christian can die," and calmly expired.

The story that Addison, in the latter years of his life, gave himself up to intemperance, rests on no solid foundation, and may fairly be pronounced a calumny. An old tradition connects his name with the long gallery, or library, which forms the west wing of Holland house. It is affirmed that he had there a bottle of wine placed at each end, and, when in the fervour of composition, was in the habit of pacing the narrow gallery between glass and glass. Fancy may attribute the bright humour which sparkles in so many of his essays to the inspiration of wine; but there is too much sober sense in his lucubrations, even when he most indulges in pleasantry, to admit of such an explanation of their brilliancy. He haunted, it is true, the coffee-house and the tavern, as did all the other great wits of the day. We have from his own graphic pen a sketch of St. James's coffee-house, St. James's Street; and he was a member of the Kit-cat Club, which met at an obscure inn in Shire Lane. The old White Horse Inn, on the Hammersmith Road, now known as the Holland Arms, was often his resort on an afternoon, when he wanted to beguile an hour of leisure. But the house which he most frequented was Button's, on the south side of Russell Street, Covent Garden. The landlord, whose name it bore, had been in the service of Lady Warwick. It was opened in 1712, under Addison's express auspices, and when the world had just been startled by the tragedy of "Cato." "A lion's head and paws, serving as the letter-box for literary communications, was placed in front of the building, and the editor of the Guardian says, 'whatever the lion swallows, I shall digest for the use of the public.' 'He is indeed a proper emblem of knowledge and action, being all head and paws.'" "Addison usually studied all the morning, then met his party at Button's, and dined there, staying five or six hours, and sometimes far into the night." These habits doubtless favoured the accumulation of the practical wisdom which enriches his essays, but they must have had their peculiar temptations.

Dispassionate criticism, at the present day, does not place Addison in the foremost rank of English poets. His metrical productions do not breathe the fire of high original genius; they are rather the result of a refined classical taste. Stately, rhetorical, and harmonious, they still want the rapture and boldness which mark the poet born. The celebrated tragedy of "Cato" exhibits all the author's beauties and defects. That on its first appearance it was played for thirty-five nights in succession to crowded and enthusiastic audiences, has been attributed, first, to the warm efforts of friends; secondly, to the political excitement of the time; and last, but not least, to the fact that he gave his share of the proceeds for the benefit of the "house."

It is as a prose author that Addison occupies so distinguished a place among the writers of our country. As such, his merits

J. THURSTON Pinx<sup>t</sup>

THOM

JOS. P. W. ADAMS.

are almost universally admitted to be unrivalled. As long as English literature endures, the style of the papers which he contributed to the "Tattler," "Spectator," and "Guardian," will be admired and imitated as an all but perfect model of English prose, simple and perspicuous, and full of unaffected grace. His wit outvies that of Horace; his comic power and humour are only surpassed by those qualities as found in Shakspeare, and perhaps Cervantes. His religious and moral sentiments are as far removed from sour asceticism as from coarse infidelity, exhibiting the golden mean of rational piety.

Of Addison's conversational powers, various estimates have been formed, differing with the opportunities and character of the observers. Pope tells us that his conversation had a charm in it which he had never found in any other man; but before strangers he was stiff and silent. Chesterfield declares that he was the most timorous and awkward man he ever knew. Addison used to say of his own mental resources, that although he "could draw bills for a thousand pounds, he had not a guinea in his pocket." The brilliant Mary Montague said, that she had known all the wits, and that Addison was the best company in the world. His parliamentary career seems to be almost ignored by his biographers. He sat in parliament; he rose to be one of the principal secretaries of state under the Stanhope ministry in the reign of George I.; yet his name never appears prominent in debate. His pen, so fluent in composition, did not seem made for official documents. Sir Richard Steele tells us, that when Addison "had made his plan for what he designed to write, he would walk about a room and dictate it into language with as much freedom and ease as any one could write it down, and attend to the coherence and grammar of what he dictated." It is of course impossible that one who took an active part in the stormy season during which Addison lived, should have escaped misrepresentation. He has been accused of envy and perfidy towards Pope; but these charges have been minutely investigated and distinctly disproved. Dr. Johnson tells a story, alleging that Addison dealt harshly towards his old friend Steele in a money transaction. It seems, however, that Addison's conduct on the occasion was regarded by Steele himself as considerate.

It would be a pleasant task to multiply anecdotes illustrative of his opinions, and to recapitulate and analyse his publications. After all, in these are to be found the best illustrations of their author, and an attentive perusal of them will not less contribute to the gratification than to the improvement of the reader.—T. J.

ADDISON, LANCELOT, a learned English divine, son of an English clergyman, and father of Joseph Addison, was born at Crosby Ravensworth, Westmoreland. Being a zealous royalist, he obtained no preferment till the Restoration. He was then appointed English chaplain at Dunkirk, and afterwards sent, in the same capacity, to Tangier in Africa. In 1670 he returned to England, and was made king's chaplain, and rector of Milston, Wiltshire. In 1673 he became dean of Lichfield. He was author of several excellent works, the most original of which were the result of his inquiries and studies at Tangier, and relate to the state and usages of the Jews, and the history of Western Barbary. Died in 1703.—E. M.

ADEKIRCHEN, AMB., a German Dominican monk of the 17th century, who laboured in and about Cologne.

ADEL, a king of Sweden, who reigned at Upsal, probably in the sixth century. He is said to have made Denmark tributary to Sweden, and to have been killed by a fall from his horse in a triumphal procession, on his return from his victories.

ADELAIDE or ADELHEID, empress of Germany, and daughter of Rodolph II., king of Burgundy, was born in 931, and, at the age of sixteen, was married to Lotharius II., king of Italy. After the death of her husband by poison in 950, Berenger, count of Ivrea, seized the throne, and confined her in a fortress, from which she at length effected her escape. The Emperor Otho I., whose protection she implored, hastened to her aid, conquered the usurper, and, marrying Adelaide, entered Pavia in triumph. Her beauty and her goodness gave her great power over Otho, during whose reign, and that of their son, Otho II., as well as during the minority of their grandson, Otho III., she employed her influence in doing good. She was a pattern of every virtue, and, though never canonized, is usually called Saint Adelaide. She died at Seltz on the Rhine in the 68th year of her age, on her return from Burgundy, where her efforts as peacemaker between her nephew, King Rodolph III., and his subjects, had been crowned with success.—E. M.

ADELAIDE, daughter of George, duke of Saxe-Cobourg Meiningen, and queen of Great Britain, was born in 1792. When eleven years of age she lost her father, and remained under the guardianship of her mother, till in 1818 she was married to William IV., then duke of Clarence. Her amiable disposition and habitual beneficence rendered her a great favourite with the British nation. Died in December, 1849.—E. M.

ADELAIDE, EUGÈNE-LOUISE, of Orleans, sister of Louis Philippe, was born at Paris in 1777. She possessed great capacity, and was carefully educated under the celebrated Madame de Genlis. She had much influence over her brother, who, after he was placed on the throne, found her on all occasions his safest adviser in public affairs. Her views of political complications usually evinced great penetration and admirable judgment, and many are of opinion that, had her life been prolonged, her counsels might have averted the catastrophe which occurred but three months after her demise. Died in December, 1847.—E. M.

ADELAIDE, MADAME, of France, eldest daughter of Louis XV., and aunt of Louis XVI., born at Versailles in 1732. Though seldom interfering with public affairs, she earnestly opposed the fatal measures of Calonne, of which she but too truly predicted the consequences. In 1791, foreseeing the impending horrors of the Revolution, she and her sister Victoire withdrew from Versailles, and, after several interruptions, reached Rome. In 1796 they removed to Naples, and in 1799, on the approach of the French republican troops, escaped to Corfu, and thence to Trieste, where Victoire died the same year, and Adelaide in 1800.—E. M.

ADELAIDE, MARCHIONESS, daughter of Olderic Manfredi, count of Turin and of Susa, styled Marquis of Italy, because he guarded the marches or borders and the passes which led into Italy. She was born early in the eleventh century, was three times married; the third time to Oddo, son of Humbert of "the white hands." This union laid the foundation of the power of the house of Savoy, inasmuch as Oddo inherited from his father the counties of Maurienne and Aosta, and through his wife the lordship of Turin and marquisate of Italy. Adelaide died at an advanced age in December, 1091.—J. B.

ADELAIS OF LOUVAIN, daughter of Godfrey, duke of Brabant, the second queen of Henry I. of England. She was distinguished for rare beauty and accomplishments. The troubadours, whom she constantly patronised, called her "The Fair Maid of Brabant." Her name is associated with the battle of Duras, or "The Standard," for she was the worker of the beautiful standard of silk and gold there taken from her father's army, and which lay for centuries in the cathedral of St. Lambert at Liège. After King Henry's death, she was married to William d'Albini, and died in 1151.—J. B.

ADELARD II., abbot of St. Trond, a miniature-painter and illuminator of the 11th century. He is also recorded as having been a distinguished sculptor.

ADELARD OF BATH, a learned and ingenious Benedictine monk, who, in pursuit of instruction in science, travelled in Spain, Egypt, and Arabia, and about 1130 translated from Arabic into Latin, Euclid's Elements, and a treatise on astronomy. He also wrote several original works on physical and medical science, preserved in manuscript at Oxford.

ADELA'SIA OF TORRES, queen of Sardinia in the earlier half of the thirteenth century. She died in prison, into which she had been thrown by her second husband Enzius, son of the Emperor Frederick II.

ADELBOLD, a Dutch ecclesiastic, of great learning for the age, was born in Friesland about 960. He wrote a treatise entitled "De ratione inveniendi crassitudinem sphaerae," which he dedicated to Pope Silvester II., who died in 1003. The Emperor Henry II., whose confidential adviser he had been, appointed him, in 1008, bishop of Utrecht. After asserting his episcopal rights by force of arms against the count of Holland, he applied himself to pursuits becoming his profession, founded the cathedral of Utrecht, and zealously promoted education. He wrote, besides several ecclesiastical biographies and eulogiums, a life of his benefactor, Henry II. Died in 1028.—E. M.

ADELBURNER, MICHAEL, a German mathematician and physician, member of the Berlin academy of sciences, was born at Nuremberg in 1702. In 1743 he was appointed professor of medicine and also of mathematics at Altdorf, and in 1761, of logic. He published for some time, and with great success, an astronomical journal in Latin, which, after being interrupted for

several years, was resumed in German. He wrote also various treatises, both mathematical and meteorological. Died 1779.

ADELER, CURTIUS SIVERSEN, an illustrious naval officer, born in Norway in 1672. After being trained under Tromp and Regers, he obtained a command in the Venetian fleet, and during fifteen years rendered Venice immense service, and acquired a great renown, by a series of the most heroic achievements. In 1662 he quitted the Venetian service; and after spending some time in Amsterdam, where he married, returned to Denmark in 1663, was appointed by the king, Christian V., naval commander-in-chief, and ennobled. He died at Copenhagen in 1673, when on the point of sailing to encounter the Swedish fleet.—E. M.

ADELGAR or ADELHER, canon of Liege and monk of Cluny; a scholastic philosopher and theologian of the twelfth century. Adelgar's great work, "De libero arbitrio," develops a conception regarding the divine prescience, which goes to the root of the mystery of the co-existence of supreme fore-ordination and a free-will in man. He denies the appropriateness of the term *fore-sight*, as applied to God. Past and present, he avers, do not exist in reference to the eternal mind,—all is *immediate vision*. Hence the fallacy of many of our arguments concerning *necessity*. This very conception is farther and very finely wrought out by the late Bishop Coplestone.—J. P. N.

ADELGISUS or ADELCHIS, only son of Desiderius, king of the Longobards, was defeated with his father by Charlemagne in the battle of La Chiusa, A.D. 773. He escaped to Constantinople, and in 788 was furnished by the Emperor Constantine with a body of troops, with which he landed in Calabria, expecting to be joined by his nephew Grimwald, prince of Beneventum. But Grimwald, having previously made peace with Charlemagne, united his troops with those of Hildebrand, duke of Spoletum, and defeated Adelgisus. His fate is uncertain. According to Sigonius he was taken and put to a cruel death; while others say that he escaped to Constantinople, and lived there on a pension from the Byzantine court.—J. B.

ADELGISUS, a prince of Beneventum, of the Longobard dynasty, who succeeded to the government in 854. During his reign the principality of Beneventum was invaded by the Saracens. He called to his aid Louis II., emperor of Italy, and the Saracens were defeated. While the emperor was in Beneventum, Adelgisus conspired against him, and made him a prisoner. He was only released on swearing a solemn oath never to take any revenge for the outrage, Adelgisus keeping possession of his treasures. Adelgisus was murdered by members of his own family, after a reign of thirty-four years.—J. B.

ADELGREIFF, JOH-ABB, a learned visionary, burned for heresy at Königsberg, 11th Oct., 1636.

ADELMAN, an ecclesiastic of Liege, who was made bishop of Brescia in 1048. He obtained some celebrity by an epistle he addressed to Berenger, in reply to that writer's treatise against transubstantiation. The work of Berenger had produced a great sensation, and Adelman, who had been his fellow-student under Fulbert, bishop of Chartres, proposed by his epistle, to show his zeal for orthodoxy, to reclaim an old acquaintance from error. He also wrote a Latin poem in celebration of the illustrious men of the age. Died in 1061.—E. M.

ADELUNG, FRED. D', nephew of Joh. Christ. Adelung, was born at Stettin, 13th February, 1768. He held various high offices in the Russian court, and was a councillor of state. Like his uncle he was fond of comparative philology, and has published several treatises on Sanscrit and its affinities. His "Bibliotheca Sanscrita," a second edition of his previous *Essai*, was published in 1837. He died January, 1843.—J. E.

ADELUNG, JACOB, a teacher of languages and music in the gymnasium of Erfurt, near which town he was born in 1699. He was also a maker of harpsichords, and wrote several good works on the theory of music. Died in 1762.

ADELUNG, JOH. CHRIST., the distinguished philologist and lexicographer, was born at Spantekow in Pomerania, on the 8th of August, 1743. After receiving elementary education at Anclam and Closterbergen, he finished his academic course at Halle. In 1759 he was nominated a professor in the protestant gymnasium of Erfurt, and held the situation about two years, when he resigned in consequence of some misunderstandings with the government, which was catholic. He retired to Leipzig, and commenced those prodigious literary labours which have immortalized his name, and were of signal service to the dawning science of comparative philology. In 1787 he became librarian

to the elector of Saxony at Dresden, and had also the honorary title of Aulic counsellor. This situation he held till his death in 1806. The industry of Adelung was untiring. He plodded and persevered beyond most men even in his own country, proverbial for the incessant toils and bulky achievements of its scholars. He had not the cares of a family to distract him, and his robust constitution bore him through years of unremitting labours, at the rate of fourteen hours a-day. His earlier publications treated of political affairs, diplomacy, and general history, some of them extending to several quarto volumes. In 1772 he published an excellent compend of Du Cange's great dictionary, to which, however, he added many new terms. The publication of his "Versuch eines Grammatisch-kritischen Wörterbuch," "Grammatico-critical Dictionary," was begun in 1774, and completed in 1786, in five quarto volumes. The merits of this book have been often and deservedly commended, but it has without good reason been set above the similar achievement of Samuel Johnson, on which it is plainly modelled. The conservative nature of Adelung's dictionary has been frequently animadverted on, but without just ground. Amidst conflicting dialects, produced or perpetuated by so many rival principalities, where there was no central bar or senate, and no literary metropolis, it was necessary to choose a standard and abide by it. Adelung wisely preferred the dialect of Misnia in Upper Saxony, for it had been early cultivated, and had obtained a wide currency through the writings of Luther and the Reformers. Where all had been so fluctuating both in the coinage and pronunciation of words, these needed a firm decision, though it might sometimes degenerate into obstinacy. Better keep out some terms whose inherent worth might ultimately gain admission for them, than stamp authority on others of hybrid form or provincial origin and use. Adelung published many other works bearing on the grammar, history, formation, and development of the Teutonic language. He added also four volumes of continuation to Jücher's general biography of learned men. Comparative philology owes not a little to his last work, his "Mithridates oder Allgemeine Sprachenkunde," "Mithridates, or the general study of languages," a work which contains the Lord's prayer in nigh five hundred dialects. He did not live to finish it, the task devolving on his nephew, along with Professor Vater. Adelung's works amount to forty-three separate publications, many of them comprising several volumes. But though he spent his days in literary seclusion, he was a man of cheerful habits, liked good living, and paid special attention to his cellar, which he jocularly called his *Bibliotheca Selectissima*. He was a man, too, of great amiability and pure morals.—J. E.

ADELWALT governed for a short time the province or kingdom of Deira, in the Saxon kingdom of Northumbria. At his death his kingdom was again united with Bernicia.

ADEMAR or AIMAR DE CHABANAIS, an ecclesiastic of St. Cibar in Angoulême, son of Count Raimond, flourished in the eleventh century, and was author of a chronicle of Aquitaine down to 1029, a work still consulted with interest by inquirers into the early history of France.

ADENEZ or ADANS, a celebrated French poet of the thirteenth century, court minstrel to Henry III., duke of Flanders and Brabant, after whose death, in 1260, he was patronised by the duke's daughter Marie, queen of France. He was author of five well-known romances. The most celebrated is the romance of "Cléomadès," written by desire of Queen Marie, and with her assistance and that of Blanche of Artois, sister of Robert II.

ADEODATUS, a pope who sat from 14th March, 672, to 18th May, 677, and known for a letter addressed "Ad Universos Episcopos Gallie."

ADEODATUS, the well-known son of Augustine, born before his conversion, and baptized in his 15th year along with his father. He died early.

ADER, GUILLAUME, a learned physician of Toulouse, author of two interesting medical works, the one on the diseases mentioned in the New Testament, and the other on the symptoms, prevention, and cure of the plague. Died about 1630.

ADET, PIERRE AUGUSTE, a French chemist and statesman, born at Paris in 1763. After holding various administrative offices, he was sent to Geneva, and, in 1795, to the United States, as French minister. He was a senator under Napoleon, and, in 1814, a member of the chamber of deputies. Author of "Lessons on Chemistry," and a contributor to "Annales de Chimie et de Physique." Died in 1832.

**ADGILLUS**, made duke of the Frisians by Clotaire III., king of the Franks. He did much to benefit his subjects, seeking, among other things, to promote the Christian religion. His efforts were ultimately unsuccessful, as the Frisians returned to paganism under his successor. Adgillus lived toward the end of the seventh and beginning of the eighth century.

**ADHAD-EDDAULAH**, an able and powerful, but ambitious and unscrupulous sultan of Persia, renowned for his conquests, his encouragement of science and literature, and his numerous, useful, and splendid public works, was born at Ispahan in 936. He made himself master of Bagdad, and nearly all Iraq. His friendship was cultivated by the Greek emperor, and his court was the resort of philosophers and poets, who vied with each other in recording his praises. He died in 983.—E. M.

**ADH-DHAHEBI**, a Mohammedan writer, born at Damascus, A.D. 1274-5, and raised to the dignity of mufti of his native city. His best known work is a chronological history of Mohammedanism, comprising the annals of all the Moslem nations from the creation to his own time. He also wrote biographies of the celebrated theologians of his faith. Died in 1347-8.

**ADH-DHOBI**, an historian, born at Cordova, about the beginning of the thirteenth century. His history of the Spanish Arabs is one of the most valuable sources for the history of Mohammedan Spain.

**ADHELM**. See **ALDHELM**.

**ADHEMAR, GUILLAUME**, a Provençal poet of the twelfth century, about whom a romantic story is told—that he died of grief at the proposed marriage of the countess of Die; that the lady visited him before his death, and was so filled with sorrow that she abandoned the idea of marriage, and retired to a convent, where she, too, soon died of grief. Eighteen of this poet's songs are in the public libraries of Paris.—J. B.

**ADHERBAL**, a Carthaginian officer in the first Punic war. He defeated the Roman fleet off the coast of Sicily, 250 B.C.

**ADHERBAL**, one of the Numidian kings, who shared the government with his brother Hiempsal and his cousin Jugurtha. He ascended the throne 118 B.C.

**ADHNA**, chief poet of Ireland, flourished in the early part of the reign of Connor MacNessa, king of Ulster, about 3950 A.M. Some fragments of laws, said to be the joint production of Adhna and others, are still extant in the library of Trinity college, Dublin.—(*O'Reilly*.)

**'A'DIL SHAH (YUSUF)**, born in Asia Minor, of the royal Ottoman family, near the middle of the fifteenth century. On the succession of his brother Mohammed II. in 1451, Yusuf, then a child, had to be conveyed into Persia for safety from Mohammed, who sought his life. He subsequently embarked for India, and in 1460 arrived in the Deccan. There he rapidly rose to power, and became the founder of the 'A'dil Shāhi dynasty of Bijapur, which lasted till 1689.—J. B.

**ADIMANTUS**, a Manichean, esteemed one of the greatest of the sect, wrote a book against the divine authority of the Old Testament, which was answered by Augustine, about A.D. 394.

**ADIMARI, ALESSANDRO**, an Italian poet of some note in his time, member of an ancient Florentine family, born in 1579. He translated Pindar into Italian verse. Died in 1649.

**ADIMARI, LUDOVICO**, a professor at Pisa, and a poet of some reputation, born in 1644. Besides satires, sonnets, and hymns, he wrote an excellent paraphrase of the "Penitential Psalms." Died in 1708.

**ADLER, GEORGE CHRISTIAN**, born at Wohlbacht on the southern frontier of Silesia in 1674, was most distinguished as a teacher, but is known besides as the author of several theological works. His son bearing the same name was also a theologian, but is best known for his classical attainments, and books connected with philology.

**ADLER, JAMES GEORGE CHRISTIAN, D.D.**, a learned Lutheran bishop of Denmark, was born at Arnis, Schleswig-Holstein, on the 8th of December, 1756. He was appointed professor of theology and court preacher at Copenhagen in 1783, and afterwards councillor of the supreme consistory, and general superintendent of Schleswig. He died on a visitation journey at Gilau, on the 22nd of August, 1834. His most important work is an edition of the Syriac version of the New Testament, 4to, 1789.—W. L. A.

**ADLER, PHILIP**, an early German artist, born at Nuremberg in 1484, celebrated as the great improver, and all but creator of the art of etching. The print representing the Virgin, the in-

fant Jesus, &c., which Strutt in his "Dictionary of Engravers" attributes to Adler, and pronounces his masterpiece, is the work of David Hopfer.—(*Bryan's Dictionary of Painters*.)

**ADLERBETH, GUDMUND-GEORGE**, a learned Swedish statesman and poet, born at Joenkoening in 1751. Having completed his studies for the civil service at the university of Upsal, he held successively various high public offices. In 1809 he was elected a member of a committee for drawing up the new constitution, and took a prominent part in the work. In 1813 he withdrew entirely from public life, and devoted the remainder of his days to literature. He published various excellent Swedish translations in verse from Racine, Virgil, Horace, and Ovid. Died in 1818.—E. M.

**ADLERFELDT, GUSTAVUS**, a Swedish gentleman, born near Stockholm in 1671, who accompanied Charles XII. of Sweden in all his campaigns, and kept an accurate journal, which was published under the title of "A Military History of Charles XII. of Sweden, from 1700 to the battle of Pultowa." As Adlerfeldt was killed at Pultowa, the concluding portion of the history, containing an account of the engagement there, and of Charles's subsequent adventures, was added by a Swedish officer who had been present. Killed in 1709.—E. M.

**ADLERSCREUTZ, BARON**, a Swedish general, who headed the revolution which, in 1809, drove Gustavus III. from the throne of Sweden.

**ADLERSPARRE, GEORGE**, Count, a Swedish general and author, born in 1760. On the death of Gustavus III., who had sent him on a secret mission to Norway, he withdrew from the public service, and devoted himself to literature. From 1797 to 1800, he continued to publish a literary and political journal, the liberal tone of which gave umbrage to the government. He took part in the revolution which dethroned Gustavus IV., and was the first who advanced on Stockholm with a body of troops, but, on reaching that capital, he found the revolution nearly completed. About the year 1811, he retired to his estates at Wermland, and there spent the remainder of his life. In 1830 he published an interesting collection of documents relating to the history of Sweden, and a sequel to it in 1832. Died in 1837.—E. M.

**ADLZREITER, JOHN**, a German statesman, prime minister to Maximilian I., elector of Bavaria, and author of "Annales Boicæ Gentis," born at Rosenheim in Bavaria in 1596. These annals are a history of Bavaria from the earliest times to the date of publication—1662. According to some, their real author was Father Fervaux, a French jesuit, Adlzreiter having merely supplied the materials from the secret archives of Bavaria, of which he was for some time keeper. Died in 1662.—E. M.

**ADMIRAL, HENRI L'**, a Frenchman, born at Aujolet in 1744, and originally a domestic servant, who formed the resolution of assassinating Robespierre and Collot d'Herbois. On the night of 22nd May, 1794, he fired two pistols at the latter, but missed him. Fifty-two persons were guillotined along with L'Admiral, on the pretext of participation in his design.

**ADMIRAL, JEAN L'**, a portrait miniature painter, born in Normandy in 1698. He studied under Leblond in London, and ultimately established himself at Amsterdam, where he died in 1773. He is still better known as an engraver, especially for his illustrations of Van Mander's work on the lives of painters.

**ADMON**, one of the most celebrated engravers of gems of Greece. Although no date is known in connection with Admon, the many excellent works of his that are known, point to the best period of art.

**ADO**, archbishop of Vienna in Dauphiné, a man of considerable learning, and extolled for his public and private virtues, born about 800. He was highly esteemed by Charles the Bald and Louis II., and consulted by them on affairs of state. Besides several ecclesiastical biographies, he wrote a "Universal Chronicle" in Latin, valued for the light it throws on the early history of France. Died about 875.

**ADOLPHI, CHRISTIAN MICHAEL**, author of several dissertations on medical subjects, born in Silesia in 1676, became professor in the university of Leipsig, where he died in 1753.

**ADOLPHUS I.**, of the family of the count of Schaumburg, raised in 1106 by Lothar, afterwards emperor of Germany, to the government of the country of Holstein, at the death of Count Gottfried. His descendants ruled over Holstein for 350 years. He was succeeded in 1131 by his son Adolphus II., colonized with German settlers the country of Wagrii, and the

neighbouring coasts of the Baltic. He fell at the siege of Demmin, a fortress in Pomerania, in 1164. His son ADOLPHUS III. was his successor, who had the misfortune to quarrel with Henry the Lion, duke of Saxony, and to become involved in the civil wars of Denmark, which ultimately led to his losing the county of Holstein, and retiring to his hereditary county of Schaumburg, where he soon died. Holstein was, however, recovered by his son ADOLPHUS IV. from Waldemar the Great, king of Denmark, into whose hands it had fallen. The decisive battle was fought at Bornhöved, a village in the neighbourhood of Eutin. Adolphus IV. retired in 1238 to a Franciscan monastery, and spent the last fourteen years of his life as a friar.—J. B.

ADOLPHUS, the 8th duke of Schleswig, noted for his moderation in refusing the crown of Denmark, when it was offered to him in 1448 at the death of Christopher of Bavaria, and for his labours for the good of his people. Died in 1459.

ADOLPHUS, count of Clèves and la Marck, and afterwards made duke of Clèves by the Emperor Sigismund in 1417, at the council of Constance, was born in 1371. With his eldest son, he was one of the parties to the treaty of Arras in 1435. He was much engaged in hostilities, either as principal or ally, and from his almost unvaried success, obtained the name of "the Victorious." He enlarged his dominions by various acquisitions, provided for their security by the erection of fortresses, and promoted their internal prosperity by a wise and firm administration. Died in 1448.—E. M.

ADOLPHUS, FREDERICK, of Holstein-Gottorp-Entin, born in 1710, was elected crown prince of Sweden in 1743, and ascended the Swedish throne in 1751. Of an amiable disposition and enlightened mind, he zealously endeavoured to promote the welfare of his adopted country, but was thwarted by the grasping nobles, who hardly left him the shadow of power. Disgusted with his position and the party contentions that continued to convulse the kingdom, he determined in 1768 to abdicate, but was induced, by promises and some concessions, to relinquish his intention. He died in February, 1771, sincerely regretted by the Swedish nation, and was succeeded by his son, Gustavus III.—E. M.

ADOLPHUS, duke of Gueldres, born in 1438. In 1464 he deposed and imprisoned his father Arnold, who was delivered by John, duke of Clèves. Charles, duke of Burgundy, and Adolphus's brother-in-law, endeavoured to reconcile father and son; but Adolphus would listen to no terms, and was confined in the castle of Vilyorden till his father's death. After various adventures, the unnatural son lost his life in a skirmish near Doornick, at the age of thirty-eight.—E. M.

ADOLPHUS, JOHN, duke of Saxony, born in 1685. After serving several years in the Hessian army, he entered the service of Augustus II., king of Poland. He distinguished himself against the Turks, repeatedly defeated the generals of Charles XII., established tranquillity in Lithuania and Poland, took Dantzic in the reign of Augustus III., and, after a career of unvaried heroism, fell, while exhibiting his usual gallantry, at the battle of Wildorf in 1744.—E. M.

ADOLPHUS, JOHN, an English barrister and author, born in 1770. His pleadings were distinguished for logical acumen, clearness and fluency of expression, and extent and accuracy of legal knowledge. He attained a high reputation and very extensive practice in the criminal courts. His defence of the Cato Street conspirators in 1820, added greatly to his legal reputation. His principal works are—"History of England from the Accession of George III.;" "Biographical Memoirs of the French Revolution;" "Political State of the British Empire;" and "Memoirs of John Bannister." Died in 1845.—E. M.

ADOLPHUS OF NASSAU, emperor of Germany, was elected in May, 1292, and the following June solemnly crowned at Aix-la-Chapelle. Without hereditary dominions, and without private fortune, Adolphus owed his election partly to his military reputation, to the desire of the electors to place on the imperial throne a prince they hoped to control, to private stipulations in favour of the elector-archbishops of Cologne and Mentz, but mainly to the overbearing character of his competitor, Albert of Austria. Destitute of resources, he had recourse to extortions and ignominious expedients to procure supplies. Promising to invade France with a large army, he obtained from the king of England £100,000. He excused himself from executing the compact under pretext of a papal interdiction, but kept the money. Disregarding, or unable to perform his promises of ceding towns and territories to the archbishops whose influence

had secured his election, he converted them into implacable enemies. Moreover, by his vices and follies, he gave great advantage to his disappointed competitor, who had been vigorously concerting Adolphus's overthrow and his own appointment to the imperial throne. With part of the English subsidy, Adolphus purchased the landgraviates of Thuringia and Misnia from Albert, surnamed "the Depraved," who, at the instigation of a mistress, had divorced his wife and disinherited his children. Thuringia and Misnia declaring in favour of the disinherited children of the landgrave, Adolphus, to obtain possession, had to undertake a five years' war, during which his mercenary troops committed appalling atrocities. All these circumstances, added to his arrogance and tyranny, made him generally odious. A confederation was formed against him, a diet was convoked, and by a majority of the electors he was deposed, and Albert of Austria elected in his stead in June, 1298. The illegality of the Diet's proceedings, and aversion to Albert, produced a reaction in Adolphus's favour. His faults were palliated, his delinquencies were overlooked, and in a short time he was at the head of a powerful army to assert his imperial rights. Decoyed, however, into an unfavourable position near Spire, he was defeated and slain on the 22nd July, 1298, after so heroic a defence as made one of his bitterest enemies exclaim over his dead body, "There lies the bravest knight of the age."—E. M.

ADORNI, FRANCIS, a jesuit of the 16th century, and a confessor of Charles Boromæus; wrote some poems and sermons, and died in 1586.

ADORNI, TERTIUS ANSELMUS OPITIUS, a historian and good Latin scholar of Flanders. Died at Brügge, 1610.

ADORNO: the name borne by three doges of Genoa:—

ADORNO, ANTONIO, elected in 1384, was an enlightened and public-spirited statesman, favourable to popular rights. He was thrice driven into exile, and as often restored. Unable to maintain himself in power, owing to the opposition of rivals, he induced the citizens, in 1396, to put their country under the sovereignty of France, and governed till his death in 1397.

ADORNO, GABRIEL, a Genoese merchant, appointed doge in 1356. A few years afterwards he was supplanted and exiled by Dominico Fregoso, one of his lieutenants.

ADORNO, PROSPERO, chosen in 1461. The duke of Milan, Galeas Sforza, having decoyed Adorno to his court, imprisoned him at Cremona, and made himself master of Genoa. On the assassination of Galeas, Adorno was set at liberty, resumed his office, expelled the popular leaders, and governed under the auspices of the young duke of Milan. Subsequently he put himself under the protection of the king of Naples, but was ultimately driven into exile, and died at Naples in 1486. Adorno's career strikingly illustrated the folly of ambition, and the instability of political friendship and popular favour.—E. M.

ADRASTUS, a writer on the works of Aristotle and Plato, and author of a treatise on Harmonies, which has been preserved; was born at Aphrodisias, not later than the beginning of the second century.

ADRETZ, FRANÇOIS DE BEAUMONT, Baron des, born at the chateau de la Frette in Dauphiné, in 1513. After serving in the reign of Henry II. with great distinction in the Piedmontese wars, he astonished all parties by putting himself at the head of the Huguenots of Dauphiné in 1562. This step, it is usually supposed, he took from resentment to the duke of Guise for a real or supposed injury; but some writers assert, with greater probability, that he acted as the secret agent of Catherine de Medicis, whose policy was to destroy the influence both of the Guise faction and of the Huguenots, by urging both parties to mutual extermination. By his enterprising valour, influence, and military skill, Adretz rendered great service to the Huguenot cause, but disgraced it by unparalleled atrocities. He displayed singular ingenuity in devising new modes of inflicting tortures, and enjoyed the agonies of his victims. He ultimately resolved to betray the Huguenots, either from resentment on being disappointed of a position he desired, or in pursuance of secret instructions from Catherine de Medicis. His eldest son perished in the massacre of St. Bartholomew, and his second was killed at the siege of Rochelle. Detected in corresponding with the enemy, Adretz was arrested by the Huguenot leaders in 1563, but obtained his liberty at the peace concluded the same year. He now professed himself a Romanist, and spent the remainder of his life despised and abhorred by all. Died in 1587.—E. M.

ADRIAENSES, ALEXANDER, a Flemish painter of still life, born at Antwerp in 1625; died 1685. He excelled in the imitation of bas-reliefs. Several of his works are to be seen in the galleries of Madrid and Berlin, and they are particularly noted for beauty of colouring and transparency of light and shadow.—R. M.

ADRIAN or HADRIAN (PUBLIUS ÆLIUS ADRIANUS or HADRIANUS), a Roman emperor, was born at Rome, or according to some, at Italica, in A.D. 76, the son of Ælius Adriannus Afer and of Domitia Paulina, a native of Cadiz (Gades). One of his paternal ancestors, originally of Adria, in Picenum, settled at Italica, in Spain, in the time of the Scipios. Adrian's father, who was a cousin-german of Trajan's, afterwards emperor, had attained the rank of prætor. At his death he left Adrian, then only ten years old, under the tutelage of Trajan, who had already been prætor, and Cælius Tatian, or, according to Dio Cassius, Attian, a Roman knight. Endowed with a lively imagination, singular acuteness and activity of intellect, and a memory truly marvellous, Adrian displayed from boyhood an insatiable thirst for knowledge, and, among his companions, soon obtained, for his extraordinary proficiency in every department of Grecian literature and science, the name of Græculus. His naturally generous and munificent disposition, led him, during the period of youth, into habits of profusion, which frequently called forth the faithful remonstrances and paternal admonitions of Trajan. He was passionately fond of hunting, which, without withdrawing his active mind from study, invigorated his frame, and prepared him for the toils and dangers of war. At the age of fifteen, he went, or returned, to Spain, where, entering the army, he spent several years in the exemplary discharge of his military duties, without foregoeing his favourite exercise of hunting, or abating his ardour in the cultivation of literature and science. Trajan, recalling him to Rome, procured his appointment to the office of *decemviris litibus judicandis*, a magistracy with which young men of rank then usually commenced their political career. Serving as a tribune in the army of lower Mœsia, when, towards the end of 98, Trajan was adopted by Nerva, Adrian was deputed by the troops to present their congratulations to his kinsman. Transferred, with promotion, to the army of the Rhine, Adrian was the first to announce to Trajan, then at Cologne, the news of Nerva's death, his activity and hardihood surmounting the obstacles which the artifices of his sister's husband, Servianus, who also aspired to the highest place in the new emperor's favour, created to impede his journey, and reached Cologne before his rival's messenger. The same year, 99, Adrian was married to Trajan's grand-niece, Julia Sabina. In 101 he was made the emperor's quæstor. At his first appearances in the senate in this capacity, he was laughed at for his provincial accent, rustic pronunciation, and unrefined diction, arising from his early residence in Spain, and his cultivation of Greek to the neglect of Latin. This, however, but roused his energies. Applying himself, with his characteristic ardour, to the study of Latin eloquence, he soon became one of the most polished Latin orators of the age. He accompanied Trajan in the first Dacian war, 101, and served with distinction. In the second Dacian war, he had the command of the first legion, and, by his admirable conduct and brilliant exploits, so recommended himself, that Trajan presented him with the diamond which he himself, on his adoption, had received from Nerva. This was naturally considered an indication of the emperor's intention to make Adrian his successor. In 105 he was tribune of the people, and, in 107, prætor. As prætor, he entertained the people with spectacles on a scale of great magnificence. In 108 he commanded the army in lower Pannonia, and, in 109, became consul by subrogation. While in the command of the army of Pannonia, he defeated the Sarmatians, maintained rigid discipline, and yet made himself extremely popular, in his army, and repressed the abuses of the imperial functionaries in his province. When, in 117, Trajan fell ill at Antioch, and took his departure for Rome, he left Adrian at the head of his army in Syria. On Trajan's death, which took place soon afterwards at Salentum, in Cilicia, Adrian was proclaimed emperor by the legions under his command, on the 11th August, 117. He immediately informed the senate that the army in Syria had compelled him to assume the imperial authority, and, with the most profound respect, he solicited from that assembly a confirmation of the army's decision. The senate at once conferred on him the usual imperial titles. Whether or not Adrian's formal adoption at the close of Trajan's life actually

took place, is still a disputed point. Dion Cassius, who is neither a judicious nor dispassionate authority, asserts that the alleged adoption was an artifice employed by the empress Plotina. Licinius Sura, Trajan's most intimate friend and confidant, assured Adrian, after the second Dacian war, that Adrian was the emperor's intended heir and successor; and every subsequent event during Trajan's life goes to show that such was, and continued to be, his settled determination. In the court of Trajan, Adrian had enemies and rivals, including his own brother-in-law, and to their disappointed malignity may be fairly ascribed numerous traditional aspersions on the character both of Adrian and of his steadfast friend and patroness Plotina, whose memory Adrian continued to honour with heartfelt gratitude. Immediately on his accession, he relinquished the dear-bought conquests of Trajan, the glory of whose many great qualities was impaired by his uncontrolled passion for military renown. Adrian's pacific policy, so accordant with his own enlightened views of national prosperity, as well as with the memorable advice bequeathed by Augustus, has been foolishly attributed to jealousy of his predecessor's fame. Few writers appear to have so fairly appreciated the merits of Adrian's administration, as the author of the following remarks:—"The extraordinary improvements which the Roman emperors might have effected by a judicious employment of the public revenues, may be estimated from the immense public works executed by Adrian. He left traces of his love of improvement in every portion of the empire, through which he kept constantly travelling. To lighten the weight of taxation, he abandoned all arrears of taxes accumulated in preceding reigns. He opened a new line of policy to the sovereigns of Rome; and avowed the determination of reforming the institutions of the Romans, and adapting his government to the altered state of society in the empire. He perceived that the central government was weakening its power, and diminishing its resources, by acts of injustice, which rendered property everywhere insecure. To remedy the evils in the dispensation of the laws, he published his "Perpetual Edict." It laid the foundation of that regular and systematic administration of justice, which, by forming a numerous and well-educated society of lawyers guided by uniform rules, raised up a barrier against arbitrary power. He was the first who laid aside the prejudices of a Roman, and secured to the provincials that legal rank in the constitution of the empire which placed their rights on a level with those of Roman citizens. His general system of administrative reforms was pursued by the Antonines, and perfected by the edict of Caracalla, which conferred the rank of Roman citizen on all the free inhabitants of the Roman empire."—(Finlay's "Greece under the Romans.")

As a determined reformer, with enlightened and comprehensive views, Adrian naturally incurred hostility in proportion to the magnitude of the evils he purposed to remove. His equal consideration for the natives of the provinces and the citizens of Rome, exasperated such as prided themselves on their pure Roman descent and ancestral renown. His pacific policy incensed all whose national vanity or personal interests made them desire aggressive war. His impartial administration of justice was grievous to all whose rapacity or malevolence it restrained or exposed. His enactments to mitigate the condition of slaves were unpalatable to Italian land-owners, so dependent on slave-labour. His financial system frustrated the efforts of those who sought to enrich themselves by speculation or extortion. His regulations relating to the service of the imperial palace, provoked a numerous and restless class, who owed their previous influence at court to flattery and corruption. "In according an equality of civil rights," says a living French writer, "in admitting the provinces to the benefits of a uniform legislation, in levelling the pretensions of the Roman aristocracy by the rule of philosophy, Adrian drew upon himself that rancour which pursued him beyond the tomb." Unfortunately, antiquity did not produce a dispassionate and comprehensive work on the life and administration of Adrian from the pen of a philosophic historian having access to authentic sources of information; and modern authors, in treating of Adrian's reign, have, for the most part, deduced their impressions from the very unsatisfactory statements of Spartian and Dion Cassius. Thus the lustre of Adrian's name is still greatly obscured by imputations resting on very doubtful testimony, and incompatible with the general tenor of his conduct. Though uniformly pacific, he carefully provided for the defence of the empire, maintaining an adequate force,

and the necessary frontier fortresses, in the most effective condition. With military men of all ranks he had constant familiar intercourse, visiting them in their sickness, and manifesting on all occasions a cordial concern for their welfare. In sobriety, simplicity, activity, and hardihood, he was the model of a Roman soldier. He encouraged military exercises by his presence and even participation, as well as by rewards. Under him, merit alone was the road to promotion. While he caused discipline to be rigidly enforced, he was not only held in profound respect, but sincerely beloved, by the whole army. His bearing towards his subjects in general was easy and courteous, and, though dignified, entirely free from official stateliness. In his intercourse with his friends, he was familiar and genial. All who enjoyed his acquaintance, he visited whenever they were sick, comforted in their sorrows, and counseled and aided in their difficulties. He highly delighted in the society of persons distinguished for attainments in literature, science, or the fine arts; and was himself an adept in every department of science then cultivated, an elegant author, and an accomplished artist. Numerous instances of his clemency have been recorded, and on the occasion of every public calamity, whether famine, epidemic, or earthquake, his humanity and munificence were conspicuous.

In 120 he began his travels throughout the empire, and for seventeen years continued, with little interruption, to traverse the provinces, leaving in every one of them, but particularly in Greece, and especially at Athens, enduring monuments of his public spirit. The public work of Adrian, most familiar to British readers, is the line of fortification he caused to be executed between the Tyne and the Solway Frith. Adrian is said to have read, with attention, the dissertations presented to him by Quadratus and Aristides, in defence of the Christian religion; and to have issued, in consequence, an edict in favour of the Christians, then exposed to outbursts of popular fanaticism. The only war of much importance in which the empire was engaged during the reign of Adrian, was the Jewish. The establishment of a Roman colony at Jerusalem, drove the Jews to desperation. They rose in general insurrection, headed by Barcochebas, a pretended Messiah. A war of three years, in which neither party gave or expected quarter, terminated in the destruction of a large proportion of the Jews remaining in Palestine. In 135, Adrian declared L. Ceionius Commodus his heir and successor; and, on the death of Commodus, in 138, adopted Titus Antoninus, and made him adopt M. Annus Verus, afterwards Marcus Aurelius. The latter event, which took place in February, 138, was soon followed by the death of the empress Sabina. Adrian himself died at Baia on the 10th July of the same year, after a lingering and painful illness, that had soured his temper, and reduced him to a state of mind approaching derangement. Antoninus is said to have met with great difficulty in persuading the senate to grant his deceased adoptive father the honours and titles usually conferred on the emperors after their death. Our remaining space only permits a glance at the principal imputations cast on the memory of Adrian. Writers expatiate on Adrian's confidence in various sorts of divination, as if the wisest of the heathens did not inculcate divination as a religious duty. The natural, not to say scientific, curiosity, arising from Adrian's keen intellect and ardent imagination, has been represented sometimes as a distemper and sometimes as a crime. In reference to one charge, unfit for discussion, all that seems necessary to be said is, that it applies perhaps with equal certainty to all his predecessors, and to many of the most lauded of heathen worthies—an appalling fact, which strikingly illustrates the vanity of mere heathen refinement, and the need of Christianity to purify and exalt human society. In regard to Adrian's adoption of Ceionius Commodus, it ought to be remembered, that, though represented as luxurious, Commodus possessed a cultivated understanding, was an accomplished scholar, and an able writer both in prose and verse, and that, during his command in Pannonia, he acquitted himself with credit, displaying both administrative capacity and military skill. Even Adrian's settlement of the succession, by selecting Antoninus and Marcus Aurelius, though approved by all good patriots, was censured by many, and produced, in various quarters, bitter disappointment and treasonable intrigues. Adrian's great desire was to avoid appointing a successor who would sacrifice the national happiness to a passion for war and conquest, and to find one that would cordially pursue his own favourite policy of peace and reform. Various other statements of the flippant and

far from veracious Spartian and Dion Cassius, imputing to Adrian capricious cruelty or heartless ingratitude, might be easily disproved by obvious inferences from other statements of the same unsatisfactory historian. That Adrian was a man of vast capacity, that the empire was never more prosperous than during his reign, and that his life and policy merit a more sifting investigation than they have hitherto obtained, are truths incontestable.—E. M.

ADRIAN OF TYRE, a professor of eloquence in the second century, pupil and successor of Herodes Atticus. Marcus Aurelius, who had studied under him at Athens, induced him to remove to Rome, where he died in the reign of Commodus, whose secretary he had been.

ADRIAN, a Greek writer of the 5th century, author of "An Introduction to Sacred Scripture," the text of which was reprinted in London, 1602, in the 9th volume of the "Critici Sacri."

ADRIAN, a churchman of the eighth century, born in Africa, who was abbot of the monastery, near Naples, called Monasterium Nisidanum. He was offered the archbishopric of Canterbury by Pope Vitalian in 667, but declined that dignity, to which Theodore of Tarsus was then raised. The pope, however, sent Adrian along with Theodore, that he might be his guide in the journey to England, and also, it has been supposed, that he might watch over the interests of the orthodox faith, against any encroachments which Theodore, who was of the Greek communion, might seek to make. The travellers left Rome together in May, 668, and a year later Theodore arrived at his destination. Adrian did not reach England so soon, being detained on the way by Ebrinus, who then ruled over a part of Gaul, on the suspicion that he had been sent by the Greek emperor to stir up troubles against the kingdom of the Franks. When at last the suspicion was proved to be groundless, and Adrian was permitted to cross to England, he was at once, according to the instructions of the pope, made abbot of the monastery of St. Peter (afterwards called St. Austin's) at Canterbury, over which he presided for nearly forty years. Bede, who states these facts, tells us also that Adrian was not only a distinguished theologian, but well versed in all branches of secular learning, and that he and Theodore instructed great numbers of pupils in science and literature, as well as in sacred truth. The memory of their labours was long preserved in England, and it is supposed that King Alfred refers to the period in which they lived, when, writing in the ninth century, he contrasts the state of learning among his subjects, with the advantages and acquirements of an earlier and a wiser age.—J. B.

ADRIAN; the name borne by six popes:—

ADRIAN I., son of Theodore, a Roman citizen of rank, succeeded Stephen III. in 772. Desiderius, king of the Lombards, having invaded those provinces which Pepin, king of the Franks, had annexed to the Roman see, Adrian implored the protection of Charlemagne, who forthwith entered Italy at the head of a powerful army, vanquished Desiderius, put an end to the Lombard kingdom, ratified Pepin's donation, and added further grants, retaining, however, the sovereignty, and received from Adrian the highest honours he could bestow. Adrian now turned his attention to ecclesiastical affairs, and, in particular, to the fierce and sanguinary iconoclastic contest that had long been agitating the East. He gave his adhesion to the council, held in 787 at Nice, which condemned the views of the iconoclasts; and, subsequently, he expressed his approval of the council of Frankfort, convoked in 794 by Charlemagne, to denounce the proceedings of the recent Eastern council. Adrian defended himself against the charge of inconsistency, by alleging that the tenor of the canons lately enacted at Nice, had, through ambiguity of expression and other causes, been misapprehended in the West, and that the supposed discrepancy between the decisions of the two councils was only apparent. During an inundation at Rome, Adrian displayed great energy and munificence, in furnishing, at his own expense, the inhabitants with necessaries, conveyed throughout the city by boats and other means, and in repairing public damage, and even compensating private losses, when the inundation was over. After a long pontificate of nearly 24 years, he died in December, 795.

ADRIAN II., a native of Rome, succeeded Nicholas I. in December 867. After twice declining the papal dignity, he accepted it in his 76th year, in compliance with a call from the people, nobility, and clergy of Rome, which received the emperor's concurrence. In defiance of the church's charter, the acts of all successive councils, based on primitive truth and order, as well

as of the rights of civil rulers, he tried to attain a supremacy over the metropolitans of the West, the churches of the East, and the secular power everywhere. He claimed Bulgaria, as if dependent on the see of Rome; and, by arrogating jurisdiction throughout the East, compelled the Eastern churches to assert their independence, and withdraw from intercommunion with the pope. This schism occurred when the celebrated Photius was patriarch of Constantinople. Adrian died in 872.

ADRIAN III., a native of Rome, succeeded Marinus in 884. His name was Agapetus, which he changed into Adrian on assuming the pontificate; thus introducing the usage followed by his successors, of changing their names when raised to the papal dignity. He strenuously resisted the claims of the emperors of Germany to interfere with the elections of the popes; and permanently confirmed the existing schism, by persisting in the claims of his immediate predecessors to jurisdiction over the churches of the East. He died on his way to a Diet at Worms in 885, after a pontificate of about 18 months.

ADRIAN IV., an Englishman, and the only native of the British isles that ever obtained the Roman tiara, succeeded Anastasius IV. in December, 1154. He raised himself from the humblest origin by his great capacity and force of character. He was born near St. Albans, and his name was Nicholas Breakspeare. Quitting England at an early age, to push his fortune on the continent, he was admitted into the abbey of St. Rufus in Provence, where he gradually rose from the menial position of lay-brother, till, in 1137, he was elected abbot. Having, through the envy of some of the monks, been denounced by the fraternity to Pope Eugenius III., the abbot repaired to Rome to meet the charges. Eugenius, on examining the case, was at once convinced of Breakspeare's innocence; and, in conversing with him, was so much struck with his talents and spirit, that he informed the monks he required the abbot's services elsewhere, directed them to appoint another superior, made Breakspeare bishop of Alba and a cardinal, and sent him on a mission to Denmark and Norway, where he made numerous converts from paganism, and established an archiepiscopal see at Upsal. Returning to Rome, he was received with high respect by Pope Anastasius, whose successor he became in 1154, taking the name of Adrian IV. Henry II. of England obtained from Adrian permission to undertake the conquest of Ireland, "on condition that one penny should be annually paid to the pope for every house in the island." Adrian was one of the most vigorous and intrepid asserters of the papal claims to universal supremacy. He crushed the efforts of the Roman people to establish a republic; succeeded, by the terrors of his interdicts, in causing Arnold of Brescia, a disciple of Abelard, to be seized and delivered to the flames; compelled William, king of Sicily, to acknowledge the pope as feudal superior, and pay an annual tribute; treated the emperor with boundless arrogance; extorted from him the most humiliating submission; and finally transmitted to his successors an enduring contest between the imperial crown and the Roman tiara. Adrian, in his private capacity, continued to exhibit great simplicity of manners, truthfulness, and justice. In conversing with his countryman, John of Salisbury, he declared he often looked back with a sigh to the happiness he enjoyed in his original humble position, and almost regretted he had ever left England, as his subsequent advancement, and especially his elevation to the papal chair, had afforded him no real satisfaction. He died in September, 1159, and was succeeded by Alexander III.

ADRIAN V. succeeded Innocent V. in 1276, but died 38 days after his election. He was a native of Genoa, nephew of Innocent VI. His original name was Ottobini. His uncle sent him as legate to England in 1254, to appease the dissensions between Henry III. and his barons; and in 1265 he was again appointed to the same legation by Clement III.

ADRIAN VI., Pope, born at Utrecht in 1459, studied there first, and afterwards at Louvain. His general abilities, and his proficiency in philosophy and theology were respectable, but he never evinced much taste for polite literature. He became professor of theology, and vice-chancellor of the university of Louvain; and was appointed by the Emperor Maximilian I. preceptor to his grandson, afterwards Charles V. Adrian was subsequently sent as ambassador to Spain, where he was raised successively to the highest dignities, both ecclesiastical and civil. In 1517 he was made a cardinal by Leo X., and in 1522 was elected Leo's successor in the papal chair. His election was

mainly owing to the influence of Charles V., but also, in no small degree, to a difficulty among the cardinals in the choice of any other individual, and their expectation that either Adrian's unambitious disposition would lead him to decline the dignity, or that his age and infirmities would soon cause a new vacancy. On arriving at Rome, Adrian soon found his new position was not likely to prove a bed of roses. His indifference to light literature and the fine arts, and his grave manners and pious conversation, awakened the contempt and aversion of the gay assemblage of wits, poets, scholars, and artists, that had found the brilliant but godless court of Leo X. a congenial resort; and his inexorable determination to discountenance luxury, folly, and vice, and to restore ecclesiastical discipline, soon rendered him intensely unpopular among the licentious citizens and libertine clergy of Rome. Alarmed at the spread of the Reformation, he sought to save the Roman catholic church, by a removal of flagrant abuses, and a thorough purification of clerical morality; but his zeal made him odious to multitudes within the church, while his candour stimulated her external assailants. He died in 1523. His epitaph records that he deemed his elevation to the papal dignity the greatest of his misfortunes.—E. M.

ADRIAN, the first bishop of St. Andrews. He was killed by the Danes A.D. 872.

ADRIAN, surnamed the CARTHUSIAN, resided in the Charreux near Gertrudenberg, and in 1410 wrote a dissertation entitled "*Liber de Remediis Utriusque Fortunæ, Prosperæ scilicet et Adversæ.*"

ADRIAN, called also DE CASTELLO, a cardinal of historical celebrity, a man of distinguished learning, and a zealous patron of literature, was born about 1458 at Corneto in Tuscany. He was papal nuncio in Scotland and in England, and became a special favourite of Henry VII., who appointed him bishop of Hereford, and afterwards of Bath and Wells. He became secretary, confidential minister, and treasurer to Pope Alexander VI., by whom he was raised to the dignity of cardinal. He narrowly escaped being poisoned by the infamous Cæsar Borgia, who sought to appropriate the wealth Adrian had acquired. During the pontificate of Julius II., Adrian retired from Rome to avoid, it is said, a prosecution for peculation. He returned on the accession of Leo X.; but being afterwards accused of complicity in the conspiracy of Cardinal Petrucci, was again obliged to flee. The subsequent events of his life are indistinctly known. It is generally supposed he was murdered by a domestic, whose sole object was to rob him of the money and other precious articles in his treasury. Besides various Latin poems of great purity and elegance of diction, Adrian published "*De Vera Philosophia,*" and "*De Sermone Latino, et de Modis Latinè Loquendi.*"—E. M.

ADRIAN, the last Russian primate who held the patriarchal dignity, the suppression of which, after Adrian's death, was perhaps the most important, and certainly the most legitimate, of all the resolute and salutary measures of Peter the Great.

\*ADRIAN, JOHN VALENTIN, an accomplished German professor and author, born at Klingenberg-on-the-Maine, 1793. After serving as a volunteer in the war against France in 1813 and 1814, he completed his academical studies at Wurzburg. He subsequently travelled in Italy, England, and France. In 1823 he was appointed professor of modern languages in the university of Giessen. His works are numerous and interesting, among which are "*Pictures from England;*" "*Sketches from England;*" "*A Provençal Grammar and Chrestomathy;*" "*The Grecian Priestesses;*" "*Historical and Literary Essays.*" He published some German imitations of Byron's poetry, and superintended a translation of that poet's collected works.—E. M.

ADRIANI: three distinguished Florentines bear this name—a father, son, and grandson. The first, MARCELLO VIRGILIO, born in 1464, was a professor of literature in his native city, and was made chancellor of the republic in 1498. He is the author of a translation of the Dioscorides, and of several treatises and orations. He died in 1521. His son, GIOVANNI BATTISTA, was born in 1513; was a student of classical literature, but was obliged to join the army when his country was attacked by Charles V. and the Medici. The last thirty years of his life he spent as professor of eloquence in the university of Florence, where he died in 1579. His best-known work is a history of his own time, which he wrote at the request of the Grand-duke Cosmo. It embraces the period from 1536 to 1574, and is much esteemed as an excellent continuation of the

well-known Francesco Guicciardini's history of Florence. This work was published by his son, MARCELLO, who was born in 1533, and succeeded his father in the chair of eloquence. Marcello is the author of an Italian translation of Demetrius Phalereus on elocution. He translated also Plutarch's "Morals."—J. B.

ADRIANO, a Spanish painter, born at Cordova about the middle of the 16th century, where he died in 1630. He was a lay brother of the Carmelite order. Few of his works have been preserved; among those that have, a picture of the Crucifixion is most remarkable. He was in the habit of effacing his pictures as soon as they were finished, and it was only by the earnest solicitations of his friends, in the name of some souls in purgatory, to whom the artist was accustomed to pray, that any of his productions were saved from destruction.—J. F.

ADRIANUS FRANCISCUS, author of a work published at Venice in 1567, entitled "Vesper Psalms for all the Feast Days throughout the year."

ADRICHOMIA CORNELIA, a nun of the order of St. Augustin at Beverwyk. She lived in the sixteenth century, wrote several pieces of sacred poetry, and translated the Psalms of David into verse.

ADRICHIOMIUS CHRISTIANUS, a priest, born at Delft in Holland, 1533. He was director of the nuns of St. Barbara, in his native place, till, by the revolt of the Gueux, he was driven from Holland. After various wanderings, he took refuge finally at Cologne, where he died in 1585. Under the name of Christianus Crucius, which he assumed in allusion to his sufferings, he published a life of Christ, formed by combining the four gospels; but his fame rests chiefly on his work, "Theatrum Terræ Sanctæ," a geographical description of Palestine, with a summary of scripture history.—J. B.

ADROVALD, a Benedictine monk of Fleury, who lived at the end of the ninth century, and wrote a history of the translation of St. Benedict, and a book "De Corpore et Sanguine Christi."

ADRY, JEAN-FELICISSIME, a learned Oratorian priest and librarian, contributor to the "Magazin Encyclopédique," editor of numerous works, ancient and modern, and author of a "Literary History of Port-Royal," &c.; born in Burgundy in 1749, and died at Paris in 1818.

ADRYAN, ALBIN, a Polish gentleman, who, born about 1490, studied at Cracow, attained a high reputation as a scholar and poet, and died at Cracow about 1540.

ADSO, sometimes called HORMENIUS, a French abbot of Burgundy, about the middle of the tenth century, wrote several legendary works. Another person of the same name, and employed in similar literary work, belonged to Deuvres in Champagne, and died about the year 992.

ADUARTE, DON DIEGO D', a learned Spanish Dominican, bishop of New Segovia in the Philippines, published at Manilla, in 1640, a work on Dominican missions in the East.

ADVENTIUS, elected bishop of Metz in 855, was member of several councils that deliberated on the question of divorce between King Lotharius and his queen, and procured by his efforts a decision, according to which the queen was sent to a convent and the king permitted to remarry. For this, Adventius was deposed by a council held at Metz, but was restored to his see by the mediation of Charles the Bald. Died 875.—E. M.

ÆACIDES, king of the Molossians in Epirus, and father of the famous Pyrrhus, began to reign in 326 B.C., and was killed in an engagement with an army sent against him by Cassander.

ÆANTIDES, a Greek writer who resided at Alexandria under the first Ptolemy, about 300 B.C.: and one of the seven Alexandrian poets, called by ancient grammarians the "Pleiades." Nothing remains of his works.

ÆDESIA, a female philosopher of the Neoplatonic school; famous besides for her virtue and her beauty.

ÆDESIUS of Cappadocia, a Neoplatonic philosopher of the fourth century, among whose pupils were Jamblicus, Maximus of Ephesus, Eusebius, and the Emperor Julian.

ÆGEATUS, a Nestorian presbyter of the fifth century, who wrote some sections of church history, and a tractate against the council of Chalcedon.

ÆGIDIUS of Assise, member of the order of Minor friars, was one of the companions of St. Francis of Assise; wrote various works, one of which, entitled "Aurea Verba," was printed at Antwerp in 1534. Died in 1262.

ÆGIDIUS DE COLUMNA, an Augustine monk of the thirteenth century, author of numerous works, and honoured by

the schoolmen with the title of "The most profound doctor." He was preceptor to the sons of Philip III. of France, and professor of philosophy and theology at Paris. Through the favour of Pope Boniface VIII. he was made bishop of Berri, and, by some accounts, a cardinal.—E. M.

ÆGIDIUS, GILLES DE CORBEIL, canon of Paris, physician to Philip Augustus, king of France, and author of a medical work, attributed to another ÆGIDIUS, a Benedictine of the 8th century, who is said to have resided at Athens.

ÆGIDIUS LEODIENSIS, or GILES OF LIEGE, a monk of Vallée d'Or, in the duchy of Luxemburg, lived in the early part of the thirteenth century, wrote a history of the bishops of Liege, which was continued by various monkish writers.

ÆGIDIUS, PETRUS, of Antwerp, born in 1490, travelled in Asia and Africa, and published a work entitled "A Description of Thrace and Constantinople."

ÆGIMUS or ÆGIMIUS, a physician of Velia, was, according to Galen, anterior to Hippocrates, and is said to have been the first who wrote on the pulse.

ÆGINHARD. See EGINHARD.

ÆGINITA. See PAUL of Ægina.

ÆGINITA, a Greek of Ægina, a maker of vases and images, lived, as appears, about 200 years B.C.; and was, according to Pliny, brother of Pasius, an eminent painter. The island of Ægina is remarkable at the present day for the number of beautiful ancient earthen vases obtained by excavation. Of such probably he was, as Pliny calls him a "fictor."—E. M.

ÆGINUS SPOLENTINUS, that is, of Spoleto, edited at Rome in 1550, from Vatican manuscripts, the "Bibliotheca" of Apollodorus, with a Latin translation and very erudite notes.

ÆLF, SAMUEL, a Swedish divine of the eighteenth century, archdeacon of Linköping, professor of belles-lettres at Upsal, and author of various Latin poems.

ÆLFRICUS or HELFRICH, surnamed the GRAMMARIAN, was born about the middle of the tenth century. He became successively abbot of Malmesbury, bishop of Wilton, and, in 995, archbishop of Canterbury. He left, 1. A Latin and Anglo-Saxon dictionary and grammar—a highly accurate and methodical work, which was published at Oxford in 1559; 2. A Saxon chronicle, published in London in 1628-1638; and 3. A homily on the Eucharist, printed at Cambridge, 1641.

ÆLIANUS the Tactician, a Greek writer, author of a work on Greek military tactics, quoted with great respect by the emperors Leon and Constantine Porphyrogenitus, and first translated into Latin by Theodore Gaza. Flourished in the reign of Adrian, to whom this work was dedicated.

ÆLIANUS, CLAUDIUS, a native of Præneste in Italy, and author of two well-known works, entitled "Miscellaneous History," and "On the peculiarities of Animals," flourished about A.D. 225. Though, till considerably advanced in years, he never, it is said, left Italy, he afterwards, as in the latter of these works he himself expressly states, visited Alexandria. His writings prove his extensive erudition and amiable character, but that he was superstitious and credulous in the extreme. The diction, so far as it is his own, displays great affectation and want of classic simplicity. The works entitled "On Providence," and "On Manifestations of the Deity," of which only a few fragments remain, were, in all probability, but different designations of one and the same production. The "Rustic Epistles" often attributed to him, were, in the estimation of the learned Coray, written by a native Greek, and not by Claudius Ælianus; but whether by Ælianus the Tactician or some one else, Coray does not venture to determine.—E. M.

ÆLIANUS MECCIUS, an ancient physician of the second century, who is mentioned by Galen as the first of his masters who introduced the use of electuaries.

ÆLIUS SEXTUS CATUS, a Roman juriconsult, eulogized by the poet Ennius, was consul and censor, remarkable for the simplicity of his personal manners, and for his rigorous discouragement of luxury.

ÆLNOTH, a monk of Canterbury, who resided for 24 years in Denmark, and wrote in 1155 the life of Canute, under the title "Historia ortus, vitæ et passionis S. Canuti."

ÆLST or AALST, EVERARD VAN, a Dutch painter, remarkable for the high finish of his productions, peculiarly felicitous in representing inanimate objects, and, in particular, dead birds and armour, was born at Delft in 1602, and died in 1658.

ÆLST or AALST, NICHOLAS VAN, an engraver and print-

seller at Rome. He made several engravings after eminent painters, as Giulio Romano and Teodoro Ghigi. He was born at Brussels in 1526.

**ÆLST** or **AALST**, **PAUL VAN**, a Flemish painter of the 16th century, the son and pupil of Peter Kock. He was particularly skilful in painting still-life and flowers. Fine specimens from his hand are to be seen in the galleries of London and Florence.

**ÆLST** or **AALST**, **WILLIAM VAN**, a Dutch painter, nephew and pupil of Everard Van, born in 1620, travelled, when young, in France and Italy, and obtained the friendship of many foreigners of high distinction; returned to Holland loaded with presents, and won high reputation as a painter of fruits and flowers.

**ÆMILIA**, **JULIANA**, a German writer of sacred poetry, born in 1637. She was the daughter of Albert Frederic, count of Barby, and in 1665 married the count of Schwarzburgh-Rudolstadt. Some of her pieces are to be found in the hymn books used in the service of the protestant churches of Saxony and Thuringia. The countess died in 1706.

**ÆMILIA**, **TERTIA**, third daughter of the elder Paulus Æmilius who was killed at the battle of Cannæ, wife of the first Scipio Africanus, and parent of Cornelia, the mother of the Gracchi, became memorable for her conjugal affection and domestic virtues. After her death, her fortune, which was immense, fell to her adoptive grandson, the younger Scipio Africanus, who made it over to his mother Papiria, after her divorce from his father, the second Paulus Æmilius.—E. M.

**ÆMILIANUS**, **ALEXANDER** or **ALEXANDRINUS**, prefect of Egypt in the reigns of Valerianus and Gallienus. He revolted, with his province, from the imperial government, and for some time was successful, but was at last defeated, and by command of Gallienus strangled in a dungeon.

**ÆMILIANUS**, a Christian of Mœsia, put to death in 362, under Julian, for having set fire to a heathen temple.

**ÆMILIANUS**, a native of Nice in Asia Minor, author of three epigrams in the "Greek Anthology." The precise time when he flourished is uncertain.

**ÆMILIANUS**, a Roman emperor, born in Mauritania about 206. Having, while governor of Pannonia and Mœsia under Gallus, vanquished the barbarians who had invaded his province, he distributed the spoils among his troops, who proclaimed him emperor. Gallus, marching against the usurper, was, with his son, massacred at Interamna by his own troops, and Æmilianus was acknowledged as emperor by the senate. After a reign of two or three months, he died at Spoleto, but whether by a natural or violent death is uncertain.—E. M.

**ÆMILIUS**. See **BARBULA**,—**LEPIDUS**,—**MAMERCUS** or **MAMERCINUS**,—**PAPUS**,—**PAULUS**,—**REGILLUS**,—**SOAURUS**.

**ÆMILIUS** or **ÆMILIANUS**, a Christian physician and martyr, put to death in 484 by Humeric, king of the Vandals, with frightful tortures, which, though he was of great age, he endured triumphantly.

**ÆMILIUS**, a Christian martyr, suffered in Africa under the Emperor Severus in 205.

**ÆMILIUS**, **ANTONIUS**, a distinguished professor of history, a disciple of Vossius and friend of Descartes, and author of various Latin poems and a collection of harangues, was born at Aix-la-Chapelle in 1589.

**ÆMILIUS**, **GEORGE**, a relative of Luther, and author of a paraphrase of the four gospels in Latin verse, entitled "Evangelia Heroico Carmine Reddita;" born at Mansfeld in 1517.

**ÆMILIUS**, **JULIUS**, a Roman historian in the reign of Maximianus (A.D. 287).

**ÆMILIUS**, **PARTHENIANUS**, a Roman historian, author of a work, "De iis qui Tyrannidem Affectarunt."

**ÆMILIUS**, **SURA**, a chronologist, who wrote a work "De Annis populi Romani."

**ÆNE**, **HENRY**, a Dutch technologist, born at Oldemardum in 1743, died at Amsterdam 1812. He studied at Leyden, and rose to considerable eminence in his profession; he has left some works on various branches of practical physics.

**ÆNEAS**, one of the princes who defended Troy. He was the son of Anchises, and married Creusa, the daughter of King Priam. He did many brave deeds during the Trojan war, and on one occasion encountered the great Achilles himself. In the Iliad, however, he occupies but a subordinate rank among the heroes of whom Homer sings; and by several writers, Strabo among the number, we find him accused of preserving his life

by treachery, and of being associated with Antenor in betraying his country to the Greeks. He is most celebrated for his exploits after he left the burning city, though some writers affirm that he remained there, rebuilt the ruins, and reigned over the remnant of the Trojans. In Virgil's well-known epic, of which he is the hero, and in the writings of various Latin poets, a different destiny is assigned him. They delight to surround his name with every heroic attribute, and to adorn his story with romantic incident, for they look upon him as the father of their nation, tracing to him the line of Lavinian kings, from whom the builder of Rome is alleged to have sprung. According to them, on the fatal night when Troy was taken, Æneas escaped with his household gods, bearing the old Anchises on his shoulders, and leading his son Ascanius by his side. After many wanderings by sea and land, to which he was doomed by the cruelty of the revengeful Juno, who hated all the Trojan race;—after losing both his wife and father, the latter of whom he buried in Sicily, and from whose shade he learned the fates of his posterity, he arrived at the Tiber, under the guidance of his divine mother Venus. There he settled with his followers, on the dominions of Lavinus. That king received him favourably, and promised to give him his daughter Lavinia in marriage. This excited the jealousy of Turnus, king of the Rutuli, to whom the princess had been before betrothed. The rivals went to war, and, after many battles, Æneas was victorious, killing Turnus in single combat. He then married Lavinia, and built the town of Lavinium, which he so named in honour of his wife. After the death of his father-in-law, he succeeded to the throne, and founded the dynasty of Alba Longa kings. The details of this story vary in different authors. The poem of Virgil closes with the defeat of Turnus, and among other writers the manner of the death of Æneas is variously related. Some affirm that he fell in battle with the Etrurians, while others represent him as being drowned, or, rather, as disappearing in the river Numicus. His subjects awarded him the honours of divinity, and worshipped him as Jupiter Indiges.—J. B.

**ÆNEAS**, surnamed "The Tactician," flourished about the 104th Olympiad, and, according to Casaubon, is the same with Æneas of Stymphalus, who reigned in Arcadia about 360 B.C. This is rendered probable by the circumstance that, in his work on military tactics, he refers only to those implements of war which were employed in the time of Aristotle, and to none of those subsequently invented. The greater part of his writings have been lost, but the portion of them still extant is highly interesting to archæologists.

**ÆNEAS**, **GAZEUS**, a native of Gaza, who lived in the fifth century. He was originally a zealous Platonist, but became a convert to Christianity. He has given a description of the persecution of the Christians by Hermeric, king of the Vandals. In addition to his 25 letters, he wrote a small work entitled "Theophrastus," which consists of a dialogue on the immortality of the soul, and the resurrection of the body.—F.

**ÆNEAS**, **SYLVIUS**. See **PIUS II**.

**ÆNESIDEMUS**, a philosopher of the school of Pyrrho, born at Gnosus in Crete, about 50 B.C. He taught the Alexandrian philosophy, and composed, according to Diogenes Laertius, eight books on the sceptical systems, of which Photius has preserved some fragments.

**ÆNETIUS**, **JACOB**, a Lutheran scholar and preacher of the sixteenth century. **THEOPHILUS**, his son, born at Meissen in 1574, held various offices, and died, 1631, professor at Jena.

**ÆPINUS**, **FRANCIS** **ULRIC** **THEODORE**, born at Rostock, 13th December, 1724, died at Dorpat, 1802. He was a physician of considerable reputation, and belonged to a family distinguished in the history of literature, and especially in that of protestant theology.—(See **ÆPINUS**, **JOHN**.) Æpinus devoted himself chiefly to the study of natural philosophy and mathematics, and some able treatises which he published procured him the honour of being appointed a member of the Berlin Academy of Sciences. In 1757 he became a member of the Imperial Academy of Sciences, and professor of natural philosophy at St. Petersburg, where he gained a high reputation. He was honoured with the special notice of Catherine II., who appointed him mathematical tutor to her son, Paul Petrovich, and inspector-general of normal schools. His works consist of treatises on electricity and magnetism, and on the distribution of heat, and he exhibited much ingenuity in the improvement and invention of an apparatus for physical experiments.—F.

ÆPINUS, JOHN, a distinguished German reformer of the sixteenth century, and for many years the leading theologian of the Lutheran church in Hamburg and north Germany. He was born in the Mark of Brandenburg in 1499. His family name was Hoch or Hoeck, meaning *high*, for which he substituted the Greek—*ἄψευδος*. He studied at Wittemberg under Luther, and returned to his native province full of youthful zeal. But his countrymen were not yet ripe to receive his doctrines, and the preacher was thrown into prison. After his release he repaired to Stralsund, where he was for some time at the head of a private school, but was commissioned by the magistrates, in 1525, to carry through an evangelical reform both of the churches and public schools of the city. In 1529 he removed to Hamburg, to take the pastoral charge of the church of St. Peter. The Reformation had been established that very year in Hamburg, under the guidance of John Bugenhagen or Pomeranus, pastor of Wittemberg, who had been permitted by the elector of Saxony to leave his own charge for a time, for the purpose of rendering that important service to the evangelical cause in one of the chief cities of the empire. Æpinus was soon found to be the best qualified man to build upon the foundation which had been laid by the reformer of Wittemberg, and for the next quarter of a century he was the most prominent and influential of the theologians of north Germany. In 1532 he was appointed, by Bugenhagen's recommendation, superintendent of the churches of Hamburg, and first reader in theology, in which event the reformation of Hamburg and its adjacent territory may be considered to have been completed. In 1533 he was promoted to the degree of doctor in theology, along with Cruciger and Bugenhagen, in presence of the young elector, John Frederick, and his court, at Wittemberg. These were the first three evangelical doctors of the protestant church. In 1534 he was sent into England, along with other envoys from the protestant princes of Germany to Henry VIII., who had recently opened up negotiations for a closer union with them in the great struggle with the papal power. In 1538 Æpinus signed the articles of Schmalkald, and in 1539 attended the Convents of Frankfort and Naumburg. After the death of Luther, he took a prominent part in opposing the "Interim" which the Emperor Charles V. attempted to force upon the evangelical states. The confession and declaration on the Interim given forth in 1548 by the superintendents, pastors, and preachers of Lubeck, Hamburg, and Lunenburg, was drawn up by his pen, and was subscribed by the evangelical ministers of almost all the cities and towns of Lower Saxony. In the controversies excited immediately after, by what was called the "Leipzig Interim," he took part with Flaccius Illyricus against Melancthon and the other divines of Wittemberg, but was favourably distinguished from Flaccius by the moderation and charity with which he conducted his part in the dispute. It was not his fault that the controversy became so embittered, and so unhappy in its consequences to the Lutheran church. In the controversy raised by the friends of Osiander on the subject of justification, Æpinus drew up in 1552, in concert with his colleague Westphal, a theological judgment, which was signed by twenty-one preachers of Hamburg and twelve of Lunenburg,—a document which was equally marked by decision on the side of truth as opposed to the teaching of Osiander, and by a tone of moderation and a love of peace. But these qualities did not exempt Æpinus, even in his own immediate sphere of action, from the troubles of polemical strife. Having published in 1544 a commentary on the 16th Psalm, in which he taught, after Luther and Thomas Aquinas, that the descent of Christ into hell was to be regarded as the lowest step of his humiliation, and, as such, an indispensable part of the ransom paid for human redemption, this doctrine was publicly challenged by four of his colleagues in the ministry of Hamburg, who declaimed against it with such violence from their pulpits, and produced so much excitement in the minds of the community, that the senate were obliged in 1550 to obtain a judgment from the theologians of Wittemberg upon the subject, in order to allay the public uneasiness. Melancthon's judgment, by leaving the question undecided and open, had the effect of at least acquitting Æpinus of the charge of heretical or dangerous teaching; and when his antagonists, in spite of this, proceeded to renew the pulpit war, three of them were summarily deposed by the senate and banished the city. The doctrine of Æpinus upon this point, which he stated and defended more fully in his commentary on the 68th Psalm, was afterwards taken up and pressed very

warmly by Flaccius. Æpinus was much disturbed during the last years of his life by these unhappy disputes. He died on the 13th May, 1553. Besides the writings already mentioned, he left several other works, including a "Book of Church Order for Hamburg," published in 1551. Several of his descendants rose to eminence in the duchy of Mecklenburg as men of learning: one of these was Francis Albert Æpinus, a distinguished philosopher and theologian, who died in 1750; another was his son, Francis Ulrich Æpinus, professor at Rostock and Bützow, a writer on physical science.—P. L.

ÆRIUS, a disciple of Arius, who lived in the fourth century, and added to the doctrine of his master, that a bishop was not superior to a priest, and that Easter, festivals, and fasts, were superstitious observances, savouring of Judaism. He also condemned prayers for the dead. His disciples were banished from their churches, and were obliged to assemble in woods and caves. He was a contemporary of St. Epiphanius.—F.

ÆRTSEN, PETER, surnamed from his stature, "Long Peter," a Dutch painter, was born at Amsterdam in 1519, and died in 1573. When only eighteen, this artist rendered himself remarkable for a certain boldness of style peculiar to himself. He possessed great skill in perspective as well as in the arrangement of drapery, and the adjustment of his figures. His earliest works represented interiors which he depicted with singular truthfulness; but he was no less successful as an historical painter, and some of the paintings he executed in Amsterdam were of great value. Unhappily, several of his finest productions were destroyed during the civil wars.—F.

ÆRTSZ, RYKAERT, a Dutch historical painter, called "Ryk met de stelt," or "Dick with the wooden leg," from the circumstance that, by an accident that he met with when young, he was maimed for life. He was the son of a poor fisherman, and when unable to amuse himself otherwise, he was accustomed to draw with charcoal on the floor, and the taste and ability he displayed led to his becoming a painter. He went first to Haarlem, where he received instruction and found employment. Subsequently he removed to Antwerp, where he was chosen a member of the Academy of St. Luke. Ærtsz was born at Wyck in North Holland in 1482, and died at Antwerp at the age of 95.—J. B.

ÆSCHINES, the great rival of Demosthenes, was born in Attica in 389 B.C. It is very difficult to ascertain the real facts of his life, as the principal sources are the depreciatory statements of Demosthenes, or his own too laudatory counter-statements. His parents were certainly poor, and his father supported himself and family by teaching a school, in the duties of which Æschines at an early age took a share. When eighteen years old, the Athenian youths became soldiers, and were employed as a kind of patrol in guarding various fortified places on the frontiers of Attica. Æschines informs us he had to submit to this duty. Probably immediately after this, he became scribe to the orator Aristophon, and afterwards to Eubulus, in whose employment he became thoroughly acquainted with the constitution and laws of Athens. Subsequently he took to the stage, but without any marked success. He then joined the army again, and in several expeditions won distinction, and even a crown, if we are to believe his own story. Before his last military expedition, he had spoken in the public assembly at Athens, and he soon perceived that this was his proper sphere. It was here that he met Demosthenes. At first, Æschines felt that all his endeavours should be directed to check the influence of Philip—but in the course of time he began to think that the only hope for Greece lay in submission to the Macedonian king. On this point Demosthenes differed from him, and tried to bring over the Athenians to his side. Hence their quarrel, which was embittered by several occurrences. In the end, Æschines was defeated by Demosthenes in his celebrated speech "On the Crown," and retired to Asia, where he taught rhetoric. From Asia he went to Rhodes, and established a rhetorical school there. He left Rhodes for Samos, where he died in 314 B.C. Æschines is often accused of having received bribes from Philip, and of having sacrificed his country to his own aggrandizement. He is not certainly free from blame, but he seems to have erred more through mistakes of head than corruption of heart. He published only three of his speeches, which are masterpieces of eloquence.—J. D.

ÆSCHRION, a physician of Pergamus, who lived, it is probable, in the second century of the Christian era. Galen, who ranks him among the empirics, cites from him a remedy for madness, of which the principal ingredient consists of pulverized

crabs, taken at certain lunar periods. He is not to be confounded with a writer of the same name mentioned by Pliny in his "Natural History," lib. viii.

**ÆSCHYLUS**, the father of Greek tragedy, and one of the greatest dramatic writers of any age. He was born in the year 525 B.C., in the district of Eleusis in Attica, a few miles west from Athens, on the borders of Megara. In the neighbourhood of the world-renowned sanctuary of Ceres, his youth was spent under the solemn religious influences which gave so decided a tone to his dramatic works. At the age of twenty-five, he exhibited his first tragedy; but did not gain his first dramatic prize till the year 484 B.C., when he was forty-one years of age. Meanwhile the soul of Greek nationality had been roused in all its strength by the invasion of the generals of Darius, ending in their disgraceful defeat at Marathon in 480 B.C. In this battle Æschylus fought; and the ardour of his patriotism was no less prominently manifested by the part which he took in the great naval engagement of Salamis, ten years afterwards. There can be no doubt that the lofty tone of his poetry, and that of his contemporary, Pindar, who was only seven years his junior, is to be attributed in no small degree to the impulse which the whole Greek mind received from the great political movement that terminated in the complete overthrow of the insolent claims of the Oriental autocrat. But in Æschylus there is also distinctly visible a certain soldierly attitude, and a delight in the pomp and circumstance of war, that is clearly traceable to the atmosphere of Marathon and Salamis, which the poet had breathed. The only other external event of any consequence in the life of the father of tragedy, is his sojourn in Sicily, a country which King Hiero had about that time rendered an agreeable place of residence for poets and literary men. That Æschylus, whose sympathies were aristocratic, was driven to leave Athens by his aversion to the ultra-democratic tendencies of the time, even then visible to the thoughtful eye, is probable, but not authenticated. Certain it is, however, that he died at Gela in that country, in the sixty-ninth year of his age, 456 B.C., and about twenty years before the outbreak of the calamitous Peloponnesian war. Only two years before his death he had exhibited the famous trilogy of the Orestiad, the only complete specimen of a Greek dramatic trilogy now existing, and generally allowed to be, as a whole, the masterpiece, not only of its author, but of the whole tragic literature of Greece, so far as its most notable specimens have been transmitted to modern times. As a tragic writer, Æschylus has seldom been so highly estimated as he deserves; but the large and liberal criticism of modern times has delighted to recognize his peculiar excellences, which had been somewhat obscured by the more popular graces of Sophocles and Euripides. No doubt the diction of the poet is sometimes turgid, and now and then obscure; but so far as the obscurity arises from the corruption of the text (which is generally the case), the writer must remain free from blame; and a tendency to employ now and then language somewhat inflated, will readily be forgiven where such a fine eye for dramatic effect is constantly found combined with the loftiest moral purpose, and the most sustained elevation of thought. The dramatic power of some of the scenes in the "Agamemnon" and the "Eumenides" has never been surpassed, not even by Shakspeare; the calm statuesque grandeur of the "Prometheus" has made the name of the stout-hearted Titan as familiar to the readers of English poetry in the nineteenth century, as it was to the auditors of Boeotian Hesiod 800 years before the Christian era. In the "Persians," again, by selecting a historical subject, the battle of Salamis, the daring genius of the great tragedian ventured to open a new field for the Greek dramatist; destined, however, to be triumphantly taken possession of only by our own Shakspeare, about 2000 years after the hint was given. Besides the pieces just mentioned, Æschylus composed "The Seven against Thebes," and "The Suppliants"—in all seven pieces; a small remnant of the ninety dramas which Suidas reports him to have composed. The most famous editions of this writer are those of Stanley, Schutz, Wellauer, Paley, and Hermann; the English poetical translations are by Potter and Blackie.—J. S. B.

**ÆSOPUS** most probably flourished in the sixth century before the Christian era. Little is known of his life, and some even have gone so far as to deny that there ever was such a person. There is no good reason, however, for this denial. Indeed, it seems certain that he was born a slave, and was afterwards freed, and that he composed a great many fables.

Whether he ever committed these fables to writing, is matter of doubt. In all likelihood he did not. Nevertheless they were handed down by retentive memories to after generations, and in the best days of Greek literature there were collections of Æsopic fables. Very many of them have been preserved to us in Babrius and in the Latin Phædrus. Plutarch informs us that the Delphians, in consequence of a dispute about money which Æsop had been sent to distribute, threw him down a precipice, and thus he perished.—J. D.

**ÆTHELNOT**. See **AGELNOTH**.

**ÆTHELWOLD**, an Englishman, and pupil of St. Dunstan, an abbot at Glasgow, and ultimately bishop of Winchester, died in 984. He published various tracts, and translated the "Regula Benedicti" into Anglo-Saxon.

**ÆTHERIUS**, an architect, who flourished in the beginning of the sixth century, during the reign of Anastasius I. His merit procured him the emperor's favour, and he executed several important works in Constantinople.

**ÆTION**, a Grecian painter, supposed, from some expressions in Cicero and Lucian, to have been a contemporary of the celebrated Apelles. One of his pictures, exhibited at the Olympic games, excited such admiration, that Proxenides, the judge of the games, gave him his daughter in marriage.

**ÆTION**, according to Lucian, another Greek painter, flourishing at Rome during the reign of Hadrian or of Antoninus. His masterpiece represented Alexander and Roxana, surrounded by Cupids, playing with the arms of the hero. This picture had such success, that it was often repeated in after times, both in paintings and on gems. There is, however, great reason to suppose that he is identical with the preceding, and that he lived, instead, at the time of Alexander the Great.—R. M.

**ÆTIUS**, a Roman general and patrician, born in Mysia towards the end of the fourth century, died in 454. Having for several years been detained as a hostage among the Goths and Huns, he exercised considerable influence over those barbarians. He raised a large army to support the claims of John against those of the descendants of Theodosius, and may be said to have saved Rome from the otherwise inevitable destruction with which it was menaced. He gained several brilliant victories over the Franks and Visigoths, and rendered effectual aid to the Gauls in repulsing their invaders. His high reputation, however, exposed him to the jealousy of the emperor, who had previously promised him his daughter in marriage: but on claiming the fulfilment of the promise, Valentinian, forgetful of all that the hero had effected for his country, basely put him to death.

**ÆTIUS**, a Greek physician of Amida in Mesopotamia (Diarbekir), who lived, it is probable, towards the close of the fifth or beginning of the sixth century. Little is known of his history. He was a Christian; he studied at the celebrated school of Alexandria, and ultimately established himself in Constantinople, where he became physician to the court. His works exhibit great learning, and are valuable, from the circumstance that they contain many fragments from Greek writers whose works have been lost. Ætius composed an able work, in sixteen books, on a variety of topics connected with the theory and practice of medicine. According to Boerhaave, his works are to the physician what the pandects of Justinian are to the lawyer.—F.

**ÆTTENKHOVER**, **JOSEPH ANTOINE**, a German historian; died at Munich, 1775. He was keeper of the archives of the elector of Bavaria, and has left a history of the dukes of Bavaria from the time of Otho the Great of Wittelsbach.

**AFER**, **DOMITIUS**, whom Quintilian mentions as the greatest orator he had ever known, was born at Nemausus (Nismes), 26 B.C., and held the office of prætor. He rendered himself acceptable to Tiberius by the accusation he brought against Claudia Pulchra, a relative of Agrippina, and afterwards against her son; and flattered Caligula by not replying to the discourse in which the son of Agrippina poured out his wrath against the rhetorician. Quintilian quotes some fragments in his writings.—S.

**AFESA**, **PIETRO**, surnamed **DELLA BASILICATA**, a Neapolitan painter, who lived about the middle of the seventeenth century. His chef-d'œuvre is the picture of the Assumption, which decorates the high altar of the church de Frati Conventuali di Marisco Nuovo at Naples.

**AFFAITATI**, **FORTUNIO**, an Italian physician, was born at Cremona about the end of the fifteenth century; died 1550. He was patronised by Pope Paul III., after whose death he retired into England, where he was drowned in the Thames.

**AFFAROSI CAMILLO**, a Benedictine monk, was born at Reggio in Lombardy, 1680; died 1763. He has left a history of his native city.

**AFFELEN, JOHANN**, a publicist of the end of the sixteenth century. He has left a treatise entitled "Vir Politicus."

**AFFELMAN, JOHANN**, a theologian, was born at Soest in Westphalia, 1588. For twenty-one years he was professor of theology at Rostock, where he died in 1624.

**AFFICHARD, THOMAS L'**, the author of some plays and romances, born at Pont Floh, 1698; died at Paris, 1753.

**AFFLECK, SIR EDMUND**, a distinguished officer, who served in the British navy during the reigns of the second and third Georges. He gradually rose to the rank of admiral, and was made a baronet for the services he rendered on board the *Bedford*, in the celebrated encounters with the Count de Grasse in 1782. He died in November, 1787.—J. B.

**AFFLECK, PHILLIP**, a younger brother of Sir Edmund, and distinguished in the same profession. His exploits were not so brilliant, but he was known as an officer of great daring.

**AFFLITTO, CÆSARE D'**, born in 1615, was originally intended for holy orders, but, at the request of his father, became a lawyer. In 1654, however, he returned to the cloister, and was appointed advocate for the poor. He was raised to the bishopric of Cava in 1670. Died in 1682.

**AFFLITTO, EUSTACHIO D'**, (or Father Eustace d'), a Dominican friar, died at Naples in 1790. In 1782 he published the first part of a great work on the literary history of Southern Italy; a second part appeared in 1792, but it has never been completed.

**AFFLITTO, GIOVANNI MARIA**, a Dominican friar, born about the end of the sixteenth century; died at Naples, 1673. Having devoted himself to mathematics and the art of fortification, he was invited into Spain by John, duke of Austria, where he wrote works on fortification, philosophy, and theology.

**AFFLITTO, MATTEO D'**, an Italian jurist, born at Naples about 1448, died 1524. He applied himself early to the study of law, and became professor of civil law, and president of the royal chamber. He has left many works on jurisprudence.

**AFFLITTO, MATTEO IGNAZIO D'**, born in 1710, was vicar-general of the Principato Citra in the kingdom of Naples; was afterwards doctor of theology, and died insane in 1771.

**AFFLITTO, TOMASO**, a Neapolitan jurist, born 1570, died 1645. He taught philosophy at Rome.

**AFFO, IRENEUS**, an Italian writer, born at Busetto, 1742; died about 1805. He was professor of philosophy at Guastalla, and afterwards director of the library at Parma.

**AFFRE, DENIS AUGUSTE**, was born at Saint Rome de Tarn, September, 1793. In 1839 he was appointed archbishop of Paris, and was killed by a chance shot at the barricade in the Faubourg St. Antoine, Paris, in the month of June, 1848, during the revolution which overthrew the Orleans dynasty. He has left many writings, in particular a small pamphlet respecting the insufficiency of Champollion's method of explaining the Egyptian hieroglyphics.—S.

**AFFHACKER, GILLES**, a Dutch theologian, was professor of theology at Utrecht, about the beginning of the seventeenth century. He is the author of a curious history of the disputes between the Gormarists and the Remonstrants in Holland.

**AFFRA, ST.**, a Christian convert, burnt at Augsburg in 304, during the Diocletian persecution. Little else is known of her.

**AFFRANIO**, said by Albonesio to have invented the bassoon, was a native of Pavia, and canon of Ferrara in the middle of the sixteenth century.

**AFFRANIUS, L.**, a Roman comic poet, who flourished about 93 B.C., according to some 153 B.C. His comedies were great favourites with the Romans, and were acted even down to the time of Nero. Their subjects were principally scenes of common, especially low life in Rome. He himself confesses that he borrowed not only from Menander, to whom he has been often compared, but from any one who had anything to suit his purpose. Only fragments of his plays remain, which are in the *Collectio Poetarum* of Mattaire; London, 1713.—J. D.

**AFFRASIAB**, the ninth king of Persia of the Peshdādian dynasty. The period of his reign is not certainly known, but it is supposed that he was a contemporary of King Solomon. He was descended from Feridun, a celebrated king of ancient Persia, but through a branch of the family which had been long exiled for rebellion, and had reigned over the Tartars. He defeated Naudar, the prince in the direct line of succession, and ruled

over Persia for twelve years with the most tyrannical cruelty. As last his subjects rose in revolt, and placed another descendant of Feridun on the throne. Afrasiab made several unsuccessful attempts to regain the sovereignty, and at last fell into the hands of his enemies at Azerbaijan, and was put to death.—J. B.

**AFRICANER, CHRISTIAN**, a South African chief, the story of whose life forms one of the most interesting pages in the annals of modern Christian missions. He was the head of a Hottentot family, whose territory had become occupied by the settlers at the Cape of Good Hope, and who were employed as shepherds on the farm of a Dutch boor. The tyranny of their masters exasperated the chieftain and his men, and hints having reached them of a plot for their destruction, they broke out in open rebellion, and, having killed the farmer and several members of his family, they made their escape, under the leadership of the subject of our sketch, then called Jager, to the banks of the Orange river, where they obtained possession of a territory in Great Namaqualand. Africaner became the terror of the whole surrounding country, making frequent inroads, not only on the colonists, but also on the neighbouring native tribes. He was outlawed by the colonial government, and a large sum was offered for his head. He first came into contact with missions at Warm Bath, a station established within 100 miles of his kraal; but a quarrel having arisen, in which the people of Warm Bath took part against Africaner, he blamed the missionaries, and the whole settlement was destroyed by his infuriated followers. Soon after this, the Rev. J. Campbell having occasion to pass through the territory of the dreaded chief, sent him a conciliatory letter, which was well received, and which resulted in Mr. Ebner being sent as missionary to Africaner's own kraal. Under his teaching, and that of Mr. Moffat, his successor, the chief embraced Christianity, and became distinguished for his gentleness and zeal in behalf of the mission. Mr. Moffat bears testimony to the noble qualities for which the brave South African was distinguished, even as an outlawed warrior, and which, after his conversion, made him of the utmost service in the improvement of his people. He visited the colony with Mr. Moffat, where the appearance of the man at whose name all had once trembled excited the greatest interest. Africaner continued faithful to the cause he had espoused, and was often known to be the peacemaker between hostile tribes. He died in 1823.—J. B.

**AFRICANUS, SEXTUS CÆCILIUS**, a Roman jurist, cited by Paulus and Ulpian, the author of nine books of *Questiones*. He was the contemporary, perhaps the pupil, of the jurist Salvius Julianus, and has been thought to be identical with the Sextus Cæcilius who discussed the subject of the Twelve Tables with the philosopher Favorinus; but this is doubtful.—J. B.

**AFRICANUS, SEXTUS JULIUS**, a Greek Christian historian, was born at Emmaus in Palestine about the middle of the second century; died probably about A.D. 232. He was deputed to obtain from Heliogabalus authority to rebuild his native city, which had fallen into decay, and which from that time received the name of Nicopolis. He is the author of a chronology which extends from the creation of the world to the third year of the Emperor Heliogabalus, adopted by almost all the churches of the East, and known as "The Era of the Alexandrian Historians."—S.

**AFZELIUS, ADAM**, a Swedish naturalist, was born on 8th October, 1750, at Larf in West Gothland, and died on 26th January, 1837. He studied under Linnæus, and in 1785 was appointed botanical demonstrator in the university of Upsal. He visited the western coast of Africa in 1792, and made large collections of plants in the neighbourhood of Sierra Leone. The greater part of his collections were lost when that colony was taken possession of by the English. Some of his specimens of plants were obtained by Sir Joseph Banks and Sir J. E. Smith. In 1796 he was appointed secretary of the Swedish embassy in London, and in 1812 he was elected professor of materia medica in the university of Upsal. He published the "Autobiography of Linnæus," as well as various botanical papers on the plants of Guinea, on the species of cultivated clover, and on Swedish roses. The genus *Afzelia* is named after him. His herbarium was given to the university of Upsal.—J. H. B.

**AFZELIUS**, a Swedish author, was born 6th May, 1785. In concert with Geiger, he has published a collection of the popular songs of his country.

**A'GABUS**, an early Christian prophet, of whom we read in the "Acts of the Apostles." At Antioch he foretold a coming famine, and induced the Christians there to send aid to their

brethren in Judea. We find him at a later period at Cæsarea, warning St. Paul against his last journey to Jerusalem.

AGA-MAHMED, one of the most powerful tyrants of Persia during the last century, and founder of the present Persian dynasty, born A.D. 1734; murdered by two slaves, whom he had ordered to be put to death, at Theesha, 14th May, 1797. His grandfather, governor of the Mazanderan, was put to death by Thamas Kouli-Khan. After the death of his father, who had made himself master of the countries south of the Caspian, and was slain, 1758, his mother married again, and her children became determined foes of their brother. In spite of all his rivals, Aga-Mahmed ultimately became master of Persia, and, notwithstanding the determination, intrigues, and arms of Russia, successfully opposed her progress in the East during his lifetime; the better to watch and resist her movements, he established his residence at Teheran, which is now the capital of Persia. Though accustomed to the cruel and sanguinary policy of his times, he appears on the whole to have been the friend of order and of justice; and to have contributed materially to the consolidation, tranquillity, and commercial prosperity of Persia.—J. F.

AGAMEDES and TROPHONIUS, two brothers, the most ancient Greek architects we read of. They are said to have lived before Homer's time, to have built the fourth temple of Apollo at Delphi, a temple to Neptune in Arcadia, and a treasury for Hyrieus, a king in Bœotia; but much that is evidently mythical is mingled with their history.—J. B.

AGAMEMNON, called by Homer "King of Men," was the commander-in-chief of all the Greek forces that went to besiege Troy. He accordingly occupies a prominent position in the Iliad. He is there said to be the son of Atreus, while other writers represent him as the grandson of that hero. At the time of the expedition to Troy, he was king of Mycenæ, and his territories were probably very extensive, as he is called the "wide-ruler," and is said to reign over Argos, which, in Homeric language, means Peloponnesus. Though he was under the special protection of Jove, and though, as being the leader of the Greeks, he boasts his superiority to Achilles, yet Homer assigns him a character very much inferior to those of several of the Greek chiefs, and other traditions coincide with the poet's statements. When the Greek fleet was about to set sail for Troy, the sea became perfectly calm. The cause of this was found to be the anger of Artemis, which Agamemnon had excited by killing a stag, an animal sacred to the goddess, and by the use of irreverent language. The goddess was appeased, only after Iphigenia, Agamemnon's daughter, had been wiled into the camp and laid on the altar. When on the very point of being sacrificed, however, the goddess carried the maiden off to Tauris. In the Iliad, the wrath of Achilles is the result of the insolence and stubbornness of Agamemnon, who seized a female slave, Briseis, from Achilles, in lieu of another, Chryseis, whom he had been forced to give up. In this transaction, we find Agamemnon guilty of insolence towards a priest of Apollo, overweening in his estimate of himself, haughty towards others, and not very solicitous about his absent wife, for he positively declares that he prefers Chryseis to Clytemnestra. Shortly after this Agamemnon is introduced, deliberately telling lies to the people, seemingly for mere fun. Several times he becomes despondent and would fain return to Greece, were not other chiefs strongly set against such a step. At the same time he is declared to be both a good king and a brave soldier; his appearance is described as imposing and king-like, and when he fights in person, he generally slays a number of Trojans. The manner of his death is described in the Odyssey. On his return from Troy he was murdered by Ægisthus, who had seduced Clytemnestra, and taken possession of the kingdom. Æschylus, and several other writers, as well as some paintings on vases, represent Clytemnestra as throwing a net over her husband, and then murdering him with an axe.—J. D.

AGANDURU, RODERIC MAURICE, a Spanish missionary to the natives of Loochoo and Japan about the end of the sixteenth century.

AGAPETUS, a deacon of Constantinople, lived about A.D. 527. He addressed to the Emperor Justinian a work in seventy-two chapters, entitled "Charta Regia," containing counsels on the duties of a Christian prince. In his youth, Louis XIII. of France caused it to be translated into French.—S.

AGAPETUS, the name born by two popes:—AGAPETUS I. was elected 3rd June, 535; died 22nd April, 536. He pawned the sacred vessels of St. Peter, in order to travel to Constanti-

nople for the purpose of endeavouring to divert the emperor from carrying the war into Italy, in which he was unsuccessful. AGAPETUS II. was a Roman by birth. He was elected pope in 946, and died in 956. He has left a reputation for wonderful sanctity.—S.

AGAPIUS, various persons of this name are known; one, a physician of Alexandria, who wrote commentaries on medicine; another, a Manichee of the fourth century, spoken of by Photius as composing an account of his sect; a third, a bishop of Cæsarea, who wrote a life of Eusebius; and a fourth, a Greek monk of Mount Athos, who was the author of a book called "Ἀμαρτωλῶν σωτηρία"—"Salvation of Sinners"—which was printed at Venice, 1641, and which at a subsequent period was translated into Arabic.—J. E.

AGARD, ANTOINE, a goldsmith and antiquary, who lived at Arles, towards the close of the sixteenth or beginning of the seventeenth century. He was a great collector of medals and other articles of archæological research.

AGARDE, ARTHUR, a celebrated antiquarian who lived in the reign of Elizabeth, was born at Foston in Derbyshire in 1540. He studied law, and for forty years held the office of deputy-chamberlain in the Exchequer, in which capacity he had charge of many of the national records. Of this he took advantage, and formed large collections of facts calculated to throw light on the history of England. He was a distinguished member of the first society of antiquaries, instituted by Archbishop Parker in 1572, and was the friend of Sir Robert Cotton and most of the learned men of his age. He died in 1615.—J. B.

AGARDH, CARL ADOLPH, professor of botany and rural economy in the university of Lund in Sweden, and Protestant bishop of Carlstadt, was born on 23d January, 1785, at Bostad, a town in Scania, where his father was a merchant. In 1799 he entered upon his studies at the university of Lund, and was appointed professor of mathematics in 1807. His favourite pursuit, however, was natural history, which he prosecuted with vigour. He devoted his attention in a special manner to the department of cryptogamic botany, and published several valuable works on algæ. He also contributed numerous important papers to the Transactions of scientific societies. Among his other works may be mentioned, "A Manual of Botany;" "Treatises on the Organography and Physiology of Plants;" and "A Life of Linnæus;" besides several papers on mathematical and theological subjects. He also, on several occasions, represented his native district in the Swedish chamber of deputies. His son, James George Agardh, has also distinguished himself as a botanist by his works on algæ, ferns, and other cognate subjects.—J. H. B.

AGAS or AGGAS, RADULPH, an English land-surveyor and engraver, who lived in the sixteenth century. He published a treatise on surveying, also plans of Oxford and Cambridge; but his chief work was a large view of London, with the Thames and adjacent country, published by Vertue in 1748.

AGASIAS, the name of a family of Greek sculptors at Ephesus. They were flourishing between 200 and 100 B.C., and are considered amongst the best artists of the Ephesian school. Three of them are particularly recorded in the history of art. AGASIAS, father of Heraclides; AGASIAS, son of Monophilos; and AGASIAS, son of Doritheos,—this last being the most celebrated. He is the author of the great masterpiece, known as the "Borghese Gladiator," now in the Louvre collection. This statue is one of the best relics of Greek art still in existence. Although not possessing the matchless grandeur and simplicity of the Phidian period, yet the work of Agasias fully deserves the universal admiration it has obtained, on account of the liveliness of conception and exquisite carefulness of execution, that render it equal, if not superior, to the best productions of the Lysippian school. The anatomical knowledge displayed in this statue is one of the most perfect of antiquity, and it is owing to its completeness that the extreme instantaneousness of the pose never becomes tiresome or obtrusive.—R. M.

\*AGASSIZ, LOUIS, an eminent naturalist, son of a protestant pastor, was born at Orbe in Waatlande in 1807. After distinguishing himself at the gymnasium of Biel and academy of Lausanne, he studied successively at Zurich, Heidelberg, and Munich, medicine and natural science, for which he had, from boyhood, manifested an ardent predilection. While he resided at Heidelberg, his attention was chiefly directed to comparative anatomy. Editing, in 1826, Spix's description of the fishes of

Brazil, he submitted to the public that new classification of fishes to which he still adheres. He afterwards published his "Researches on Fossil Fishes," and his "Description of Echinodermes;" and in 1839 his "Natural History of the Freshwater Fishes of Europe." The production, however, which first raised him to European celebrity was his "Studies on Glaciers," in which he propounded a new geological theory that has commanded the attention of all subsequent writers on geology. Some years ago he settled in the United States of America, held for some time a chair in Harvard college, and subsequently was appointed professor of comparative anatomy in the university of Charleston. He has published in America, besides many occasional papers of great value, two interesting and instructive works—"A Tour on Lake Superior," and "Principles of Zoology;" and continues, with indefatigable application, to cultivate his favourite pursuits.—E. M.

AGATHANGELUS, an Armenian historian of the fourth century secretary to Tiridates, first Christian king of Armenia. There is a Greek translation of his highly esteemed "History of the Introduction of Christianity into Armenia," and "Life of Tiridates;" and the original Armenian, admired for its purity and elegance, was printed at Constantinople in 1709. Some critics think the Greek the original, but in all probability the work was written by its author in two languages.—E. M.

AGATHANGELUS, a mediæval monk, to whom are attributed a great number of popular prophecies relating to the expected restoration of the Eastern empire, which have long continued to exert an amazing influence on the minds of the Christian and even Ottoman population of Turkey and Greece. Every unlettered member of the Eastern church in those parts, and many of the educated whose faith in Daniel and the Apocalypse is more than lax, firmly believe in the infallibility of the prophecies of Agathangelus.—E. M.

AGATHARCHIDES, a Greek geographer and historian, a native of Cnidos, flourished in the second century B.C. Of his voluminous and valuable works only fragments, and brief summaries by Photius, remain.

AGATHARCUS, a painter of Samos, who flourished about 450 B.C., celebrated for his application of perspective to theatrical decorations, and a learned treatise on the principles of his art. He resided at Athens, and it is said to have been Æschylus who induced him to turn his attention to scenic painting.

AGATHE, SAINT, a Christian young lady of great beauty and high rank, a native of Palermo, who died in prison in 251, after enduring the most appalling tortures inflicted by command of Quintianus, governor of Sicily, because, on the ground of his being an idolater, she persisted in rejecting his addresses. Her memory is held by the Sicilians in boundless reverence.

AGATHIEMERUS, a Greek geographer, who flourished about the beginning of the third century, author of an "Outline of Geography," in which he mentions the wall erected in Britain in the reign of Septimius Severus.

AGATHIAS, one of the Byzantine historical writers. He was a native of Myrina, a town of Æolic Asia. After pursuing his studies in Alexandria, he returned in 554 A.D. to Constantinople, where he followed the profession of an advocate, but occupied himself mainly in historical investigations. He was born in 537 or 538 A.D. The date of his death is uncertain. Niebuhr conjectures 582 A.D. His principal work is "Five Books of Histories," containing a narrative of the events that happened between the years 553 and 558 A.D. He also tried his hand at verse-making with considerable success.—J. D.

AGATHINUS, a Greek physician of the first century, a native of Sparta, and disciple of that Athenæus who founded the sect of Pneumatists. Agathinus was the author of various medical treatises, of which fragments have been preserved in the works of later medical writers.

AGATHIUS, a Neapolitan who taught Hebrew at Rome and at Paris, compiled a Hebrew grammar, and wrote commentaries on the Song of Solomon, and on some of the Psalms. Died in 1542. Another of the same name and country, in the seventeenth century, wrote several pieces in Italian, and was chaplain to the king of Naples.

AGATHIO, an Athenian dramatic poet, and disciple of Socrates and Prodicus, mentioned by Aristotle as fond of antithesis, and ridiculed by Aristophanes for his effeminacy. Only a few verses from his works have been preserved.

AGATHIO. Pope a native of Sicily. He gave his whole patri-

mony, which was large, to the poor; was ordained a presbyter in 678, elected pope in 679, obtained the condemnation of the Monothelites in a council of 190 bishops by him convoked at Rome, encouraged the emperor to convene the sixth general council for the same object, and obtained the abolition of the tax which was paid to the emperors on the elections of the popes. Died in 682.—E. M.

AGATHOCLEA, a courtesan of Alexandria, celebrated for her beauty and accomplishments, her power over Ptolemy Philopator, king of Egypt, and the crimes she occasioned or perpetrated. She was massacred by the populace of Alexandria in 204 B.C.

AGATHOCLES OF CYZICUS, a Greek historian, whose "History of Cyzicus," of which only a few fragments remain, is mentioned, with great respect, by Cicero, Pliny, and Athenæus. He flourished probably about 100 B.C. There were three other Greek writers of the same name, the titles of whose works have been preserved.

AGATHOCLES, tyrant of Sicily, one of the most extraordinary men of antiquity. He was the son of a potter, who was a native of Rhegium, but a citizen of Syracuse, and at an early age he entered the military career. His majestic stature, elegant form, and handsome features, together with his activity, courage, and intelligence, soon attracted attention, and procured him the special patronage of Darnas the general, who raised him to the command of a battalion. On the death of his patron, he married his widow, and at once became one of the richest of the citizens, and a popular leader. The ascendancy of Sosistratus forced him to seek shelter, for a time, in southern Italy. Returning to Sicily, he succeeded, after various vicissitudes, in making himself sovereign of Syracuse, by affecting zeal for popular rights, massacring several thousands of the wealthier citizens, banishing a still greater number, and giving their property to his adherents. Determined to extend his sway over all Sicily, he attacked the Carthaginians, and gained a succession of victories, but was afterwards signally defeated by Amilcar at Himera. Besieged in Syracuse by the Carthaginians, he formed the daring but judicious project of passing over into Africa with part of his army, which he executed with skill and success. By repeated victories, and by combining the native princes against Carthage, he reduced her to the greatest straits; but his treacherous murder of the Grecian prince of Cyrene, and his absence in Sicily, whither various revolts compelled him to repair, ruined his cause in Africa. On returning to that continent, he found his allies alienated, and his troops in a state of mutiny. After vainly attempting to appease his army, he saved his life by immediate flight. The troops put two of his sons to death, and came to terms with the Carthaginians. To punish the revolted forces, he massacred multitudes of their relatives in Sicily. These atrocities excited against him a formidable insurrection, which compelled him to conclude a peace with the Carthaginians. He defeated the insurgents in a great battle, suppressed the insurrection, secured himself firmly in the sovereignty of Syracuse, and, in two or three years, reduced under his dominion the whole of Sicily, with the exception of the towns ceded to the Carthaginians. He died in 289 B.C., at the age of 72.—E. M.

AGATHODEMON, the reputed author of the maps found in the most ancient MSS. of the geography of Claudius Ptolemy; but we know nothing of his life.

AGAY, FRANÇOIS MARIE BRUNO, *Compte d'*, a French lawyer, was born at Besançon, 1722; died at Paris, 1805. He has left a treatise upon the utility of the arts and sciences, and another on the advantages of internal navigation.

AGAZZARI, AGOSTINO, an Italian musician, was born at Sienna about 1578; died 1640. He was the pupil of Viadana of Rome, and has left some admirable church music.

AGELADAS or AGELAS OF ARGOS, a Greek sculptor, flourishing between 510 and 460 B.C. He was one of the first who attempted to disengage sculpture from the trammels and conventionalities of the hieratic or sacred style, and to bring about, by the study of nature, the more rational forms of popular or demotic art. Associated with Canachus and Aristocles, he executed a group of Muses described by Antipatros; and, besides this, he produced, unaided, several statues of conquerors in the Olympic games; one of Jupiter for the Messenians of Neupactus, and one of a young Hercules, of which a marble in the Lansdowne collection is supposed to be a copy. But what has above all immortalized the name of Ageladas, is the fact of his having been the master of the best three sculptors of the follow-

ing period—Polycletus, Phidias, and Myron. Some suppose that there were two Ageladas, father and son, and that the first of them was still a strict adherent of the Hieratic school.—R. M.

AGELET, JOSEPH PLAUTE D', a French astronomer, was born at Thone-le-long, 1751. He took part in the expedition of La Perouse, in which he perished. He has left some treatises on the aphelion of Venus and the length of the year.

AGELLI or AGELLIUS, appointed bishop of Acerno in 1593, was born at Sorrento, 1532; died, 1608. He superintended the correction of the Vulgate and the Latin version of the Septuagint in the printing-offices of the Vatican.

AGELNOTH, an Anglo-Saxon prelate of the eleventh century, was in the year 1020 nominated archbishop of Canterbury. He is chiefly remembered for refusing to crown Harold, who, in the absence of Hardicanute, had seized upon the kingly power.

AGERIUS or AGER, NICHOLAS, was born towards the close of the sixteenth century. He was professor of medicine and botany at Strasburg, and by his botanical discoveries has added something to the materia medica.

AGESANDER of RHODES, a Greek sculptor, flourishing about 160 B.C., who, with Athenodorus his son and Polydorus, executed the celebrated group of "Laocoon," now in the Vatican. Certain writers on art assert that this masterpiece is the production of sculptors living at Rome during the reign of Vespasian; but this assumption, based upon a misinterpretation of a passage in Pliny, cannot resist the evidence stamped upon the work itself, which, in every detail, presents all the characteristics of the Rhodian school in its imitation of the great Lysippus. These characteristics are,—the choice of a stirring subject; the extreme pathos of expression in treating it; the elaborate and emphatic style of execution; the peculiar type of the heads, &c., &c., one and all of which point out this group as being one of the greatest productions of Greek sculpture during the bloom of its last period. This is also the opinion of Winkelmann, who wrote a most scientific notice on this group; whilst his rival, Lessing, of the opposite opinion as regards its probable date, has produced the best æsthetic essay that has ever been written upon the masterpiece of Agesander and his fellow-labourers.—R. M.

AGESIAS, a Platonist philosopher of Cyrene. Ptolemy ordered his school to be shut, because many of his disciples committed suicide to satisfy themselves of the truth of the doctrine of the immortality of the soul.

AGESILAUS I. This monarch was the seventh king of Sparta. His reign was not distinguished.

AGESILAUS II., king of Sparta, born in 445 B.C., and died in 361 B.C. Almost immediately on his accession to power, he was sent, at the head of an army of eight thousand men, into Persia, under pretence of freeing the Grecian cities. He gained a signal victory over Tissaphernes, near the river Pactolus, where he forced the enemy's camp and gained considerable booty. This success induced the Persian monarch to subvert the power of Agesilaus among the Greek states by the influence of bribery, rather than openly to meet him in the field. By this means a confederacy of the other Greek states having been organized against Sparta, Agesilaus found himself obliged, in the midst of his success in Persia, to return home to defend his kingdom from the aggressions of his enemies. Passing through Macedonia and Thessaly, he arrived in Bœotia, where, upon the plains of Coronea, he obtained a considerable victory over the Athenians and their allies, the Argives, Thebans, Corinthians, and Eubeans. This war was carried on with various success for some time, until the Greek states, finding themselves weakened by their mutual jealousies, and tired of a conflict in which none gained advantage, sued for a peace, which was concluded in the ninety-eighth Olympiad, and which, on account of the many stipulations it contained in favour of Persia, Plutarch terms "the reproach and ruin of Greece." Thus freed from the fear of a foreign enemy, the Spartans turned their arms against the lesser states of Greece; humbling the Mantineans, by compelling them to throw down their walls; obliging the Corinthians to withdraw the garrison from Argos; subduing the Olynthians, and finally interfering in a most insulting manner in a domestic quarrel of the Thebans, by placing a garrison of their own in the citadel of which Phœdibas had taken possession. For four years after this event the Thebans submitted to the Spartan yoke, but then took occasion by a desperate stroke to throw it off. This was accomplished by a conspiracy between the Theban exiles in Athens, and those well-affected to the cause in the city

of Thebes itself. In concert, by means of stratagem, they seized and put to death the principal Spartans in the place; Pelopidas appearing, encompassed by priests, in the midst of the people, proclaimed liberty to the Thebans, and exhorted them to fight for their country and their gods. The Spartans having in this manner been driven from Thebes, still resolved to take the lead in the affairs of Greece, and Agesilaus was selected to command the army which was to humble its separate states. With varying fortune he attacked several of these states in succession, but was not himself present at the battle of Leuctra, at which the Spartans met with the bloodiest defeat their arms had ever sustained. So great, however, was his influence with the citizens, that they gave him power to dispense with, abrogate, or impose such new laws as he might see necessary to save the honour of many citizens, which their cowardice had for ever tarnished. He would neither abolish nor alter the law; but, by suspending its action for a single day, saved the citizens from infamy. Twice after this was Sparta threatened by the victorious Thebans under Epaminondas; but this great general having been killed in the hour of victory at the battle of Mantinea, and his countrymen losing by his death all the courage with which his heroic example had inspired them, a peace was concluded, which, with the exception of an expedition under Agesilaus into Egypt, whither he went to assist Tachos in his usurpation of that kingdom, preserved the quiet of Greece for some years. Agesilaus, from avarice and the hope of being preferred to the chief command, had readily complied with the overtures of Tachos; but on his arrival in Egypt he met with very different treatment from him to what he had expected, being allowed no command but over the mercenaries. This conduct so disgusted Agesilaus that he immediately joined himself to Nectabanus, the nephew of Tachos, who had commenced hostilities against him, and succeeded in seating him peaceably on the throne. For this service he received two hundred and thirty talents of silver, and the most distinguished marks of gratitude and respect. In returning home during the ensuing winter, he was driven into the haven of Menelaus on the coast of Africa, where he was attacked by an acute disease, which carried him off in the eighty-fourth year of his age and fortieth of his reign. He was so sensible of the meanness of his appearance that he would allow no statues to be raised to him in his lifetime, and implored the Spartans to erect none after his death. In youth he was impetuous and ambitious, in age perverse and obstinate. He was capable of enduring immense fatigue and pain, and was scrupulously frugal and temperate in his habits. Undue partiality for his friends may be forgiven in consideration of his generous humanity to his enemies. He was a fastidious observer of the laws, and was actually condemned to a fine by the ephori for making himself too much beloved by the people.—S.

AGESILAUS, an Athenian general, and brother of Themistocles, lived about 480 B.C. Having fallen into the hands of the Persians, Xerxes ordered him to be sacrificed on the altar of the sun, when he held his right hand in the flames until it was consumed, without exhibiting the faintest evidence of the torture he suffered. His fortitude so excited the admiration of the Persian monarch that he granted him his life.—S.

AGETA, CAJETAN NICHOLAS, a Neapolitan jurist, lived about the middle of the seventeenth century. He has left some works on the feudal laws.

AGEZIO, THADEUS, who preceded Lavater in the science of physiognomy, lived in the sixteenth century.

AGGENUS, URBICUS, a writer on the science of agriculture, flourished in the latter half of the second century.

AGIAS, a poet, often quoted by Greek writers. He wrote a poem in five books, narrating the return of the Greeks from the Trojan war, some fragments of which are found in Proclus.

AGIER, PIERRE JEAN, born at Paris, 1748; died, 1823. He became an advocate in 1789, and in 1802 was made vice-president of the tribunal of appeal. Skilled in the doctrines, and imbued with the spirit of the Port Royalists, he distinguished himself on the side of religion, liberty, and justice, through all the period of the Revolution, and the changes subsequent to that event. Besides some legal works, he wrote several works on theology.—J. F.

AGILA, the thirteenth king of the Visigoths in Spain. He ascended the throne in 549. His short reign of about five years, like that of his predecessor, who was strangled by his nobles, was very unhappy. Tyrannical and exacting in his administration, he was put to death in 554.

**AGILES, RAYMOND D'**, a canon of Puy, who wrote a history of the crusade of 1095, the materials for which he collected in the East, whither he went as chaplain with the count of Toulouse; it is entitled "Raymondi de Agiles, canonici Pedienensis, Historia Francorum qui ceperunt Hierusalem."

**AGILULF** or **AGISUSPHAS**, a duke of Turin and king of Lombardy. On the death of Antharis, king of the Lombards, in 590, his widow, with the consent of her subjects, bestowed both her hand and the kingdom on Agilulf, who was crowned in 591. Influenced by his wife, it is said, he left the Arian communion and joined the catholic. Having suppressed some rebellious dukes, extended his dominions, and established peace, he employed himself in rebuilding and founding monasteries and churches. He died in 616 or 619. The golden crown of Agilulf, which had long been preserved in Paris, was stolen and melted down in 1804.—J. F.

**AGINCOURT, JEAN-BAPTISTE-LOUIS-GEORGE VEROUX D'**, an archaeologist and numismatist; born at Beauvais, 5th April, 1730; died at Rome, 24th September, 1814. Well-born and highly educated, he travelled in England, Holland, Germany, and Italy, and became famous as an amateur. At Rome he laboured to complete his great work, which, however, was not finished till 1823, by M. Gence; it is named "L'histoire de l'art par les monuments, depuis sa decadence au quatrième siècle jusqu'à son renouvellement au seizième," 6 vols. folio, with 325 plates. It has been translated by Owen Jones, and published in London. Besides this there was published at Paris in 1814, his "Recueil de fragments de sculpture antique, en terre cuite," 1 vol. 4to, with 37 engravings and portrait.—J. F.

**AGIS**. There were four Spartan kings of this name. The first belonging to the oldest branch of the Heraclidæ, and the others to the second branch, or that of the Proclides.

**AGIS I** is said to have lived about 980 B.C. He belongs to the legendary epoch of Spartan history.

**AGIS II**. succeeded his father, Archidamus II., in 427 B.C. He was distinguished for his warlike spirit and achievements. He gained a brilliant victory at Mantinea, and assisted in bringing to a close the Peloponnesian war, which had embroiled Greece for twenty-seven years.

**AGIS III.**, a contemporary of Philip and of Alexander the Great, having succeeded his father, Archidamus III., in 338 or 346 B.C., he made repeated but unsuccessful attempts to throw off the Macedonian yoke. He was defeated and slain in the battle of Megalopolis by Antipater. In the conflict 5300 Spartans were slain, and Agis, when unable from wounds and fatigue to stand upright, continued to fight on his knees until he was killed by being struck through the body with a dart.

**AGIS IV.** ascended the throne on the death of his father, Eudamidas II., in 242 B.C. He is famous in history and poetry for his personal virtues and love to the old Spartan manners and discipline, his attempts to re-establish the laws of Lycurgus, and his early and cruel death. His colleague, Leonidas II., being opposed to his efforts to reform Spartan manners and revive ancient customs, was deposed, and Cleombrotus, who supported his views, was associated in the government. Before he could accomplish his projected reforms and changes, he was obliged to march on an expedition against the Athenians. During his absence a conspiracy was formed against him, and Leonidas was recalled. On his return, Agis and Cleombrotus were obliged to take refuge in the temple of Minerva; the latter was dragged forth and banished; and after a time, Agis, betrayed by his friends, was strangled in prison in the twenty-fourth year of his age. He met death with great fortitude.—J. F.

**AGIUS DE SOLDA'NIS**, an Italian antiquary, who died in 1760. Among his works are—1. "Della lingua punica presentemente usata da' Maltesi," 8vo, Roma, 1750; 2. "Discours Apologetique contre la dissertation historique et critique (of the Abbe Ladvocat) sur le naufrage de St. Paul dans la mer Adriatique," 12mo, Avignon, 1757.

**AGLAOPHON** of **THIASOS**, a Greek painter, flourishing about 416 B.C., was the father and teacher of the celebrated artists, Aristophon and Polygnotus. One of his works is quoted as his masterpiece, representing Alcibiades and the nymph Nemæa.

**AGLIONBY, JOHN**, a theologian, born in Cumberland, 1567, and died at Islip, of which he was rector, in 1610. He was educated at Oxford; made chaplain to Queen Elizabeth; was chosen principal of Edmund Hall college in 1601, and took part in the translation of the New Testament.

**AGNEAUX, ROBERT** and **ANTOINE**, two brothers, natives of Normandy, who lived during the second half of the sixteenth century. They were the first translators into French verse of the works of Virgil and the odes of Horace. The Virgil was dedicated to Henry III., and printed at Paris in 1582. The Horace appeared in 8vo in 1588.

**AGNE'LLUS, ANDREW**, an archbishop of Ravenna. His father having conspired against Pope Paul I., was taken to Rome, where he died in prison. The treatment of the father made the son indifferent to the interests of the court of Rome, and his writings are regarded as prejudicial to papal authority. His work is entitled "Agnelli, qui et Andreas, abbas S. Mariæ ad Blachernas, liber pontificalis, sive Vitæ pontificum Ravenanatum." Moreri has confounded the archbishop with another Agnellus or Agnel, who wrote a letter, "De ratione fidei, ad Armenium," and died in 556. Vossius, in his "Histoire des ecrivains Latins," has fallen into the same error.—J. F.

**AGNEN, JEROME**, a painter of the Dutch school, born at Bois-le-Duc in 1450 or 1470; died in 1530. He was one of the first to introduce, at the same time as Van Owater, oil-painting in Holland. He affected to treat infernal subjects, and excelled in strong effect. He spent much of his life in Spain, where he executed a large number of works.—R. M.

**AGNES, SAINT**, a noble Roman virgin, put to death under Diocletian about A.D. 303. The legend tells that she suffered when only thirteen years of age.

**AGNES OF FRANCE**, daughter of Louis VII. and sister of Philip Augustus. She was successively married, first, when nine years old, to Alexius Comnenus, the young emperor of Constantinople, A.D. 1180; then to Andronicus Comnenus, who caused Alexius to be killed, and seized the empire; and, last of all, after Andronicus had been put to death in 1185, to Theodorus Branas, A.D. 1205, to whom she had a daughter, the stepmother of William de Villehardouin.—J. F.

**AGNES**, queen of France, daughter of Berthold, duke of Dalmatia; married to Philip Augustus, A.D. 1196, after he had divorced Ingeburge, sister of Canute VI., king of Denmark. Philip being obliged by the church to separate from Agnes, she died of a broken heart in the Chateau de Poissy, A.D. 1201. Her children, a son and daughter, were declared legitimate by Pope Innocent III.—J. F.

**AGNES, SORREL** or **SOREAU**, the famous mistress of Charles VII. of France, was the daughter of a gentleman of the house of Clermont; born at Fromenteau in Touraine, A.D. 1409, and died 9th February, 1450. She was celebrated for her beauty, and for the influence she is said to have exercised over the king, and the stirring events of her time. Her three children were declared children of France.—J. F.

**AGNE'SI, MARIA GAETANA**, an Italian lady, celebrated for her extraordinary abilities and vast learning, born at Milan, A.D. 1718, where she also died, in the convent of the rigorous order of Blue nuns to which she had retired, 4th August, 1799. When nine years old, she spoke Latin fluently; and became so skilled in the Hebrew, Greek, Latin, German, Spanish, and French languages, that she was called the "Walking Polyglot." Having made great progress in speculative philosophy, she published, in her twentieth year, under the title of "Propositiones Philosophicæ," a series of 191 theses, which she had previously defended. In her thirty-second year, her attainments in mathematics were so eminent, that she was appointed to her father's chair at Bologna, when he became unable to discharge his professional duties. Her famous work, "Analytical Institutes" ("Istituzioni Analitiche"), 1745, was translated into English by Professor Colson of Cambridge.—J. F.

**AGNE'SI, MARIA TERESA**, sister of the above, born at Milan, 1750, was eminent as a musician, and the composer of the music of several songs, and of three operas: "Sofonisba," "Ciro in Armenia," and "Nitoeri."

**AGNEW, SIR ANDREW**, Bart., of Lochnaw in Wigtonshire, who is chiefly known from his zealous efforts in promoting the better observance of the Sabbath, was born at Kinsale, Ireland, March 21, 1793. He was the only child of Lieutenant Andrew Agnew, eldest son of Sir Stair Agnew, the sixth baronet of Lochnaw. Upon the death of Sir Stair in 1809, Andrew, who was then only sixteen years of age, left Ireland for his paternal estate. In 1816 he was married to Madeline, daughter of Sir David Carnegie of South Esk, baronet. His estate having been allowed to fall into neglect before it came into his hands,

he applied himself to its improvement, expending not less than £30,000. From 1830 to 1837 he sat in parliament as representative of Wigtonshire, and having been recommended by Sir Thomas Fowel Buxton as a fit leader in the agitation then being made against Sabbath traffic and recreation, he brought a Sabbath bill before four different sessions of the House of Commons. His motions for a second reading, however, were uniformly lost till 1837, when the second reading was carried by 110 against 66. But, notwithstanding this triumphant vote, the bill never passed into committee. The death of William IV. having led to a dissolution of parliament, Sir Andrew failed in securing his return, and no other member being equally zealous in the Sabbath question, nothing farther was done with his bill. In agitating the subject in parliament, he certainly displayed singular decision of character; and from the urbanity of his manners, and the meekness of his temper, he disarmed personal antipathy, and conciliated favour even where his politics were disliked. In almost every philanthropic and patriotic question of the day, Sir Andrew took a share, and was ever ready to contribute his personal advice and pecuniary assistance. As a landlord, he was highly popular among his tenantry, to whom he was invariably kind and considerate, especially in times of agricultural distress. He died April 12, 1849, and was interred in the Grange Cemetery, Edinburgh.—(Dr. M'Cric's *Life of Sir Andrew Agnew*.)—J. A.

A'GNOLO, BACCIO D', a Florentine sculptor and architect, born 1460; died 1543. Recommended by Michel Angelo, and employed by Clement VII., he went to Rome in 1530, and restored the statues of Apollo, Laocoon, and Hercules, in the Belvidere Museum.

A'GNOLO, GABRIEL D', a Neapolitan architect, who died in 1510. The Gravina palace and the churches of St. Mary of Egypt and of St. Joseph at Naples, are amongst the public buildings erected by him.

AGNONIDES, a Greek orator, 300 B.C. He accused Theophrastus of impiety, and sought to have him burnt. Having been driven from Athens, he was permitted to return through the favour of Phocion, whom he ungratefully repaid by accusing him of betraying the Piræus to Nicanor. After the death of Phocion, the Athenians remembered his services, raised statues to his memory, and put Agnonides to death.—J. F.

AGNOSCIOLA or ANGUISCIOLA, SOFONISBA, a famous female painter, sprung from a noble family at Cremona; died at Genoa, 1620, about ninety years of age. She was a disciple of Bernardino, and soon became famous, especially for her portraits. Philip II. invited her to Spain as court painter, where, besides the royal family, she painted Pope Pius IV., and many princes and nobles. Vandyck visited her when she was infirm and blind, and declared that he had learnt more from her than he had from any other painter. Her portraits are highly esteemed in Italy.—J. F.

AGOBARD, a celebrated archbishop of Lyons, born A.D. 779; died 6th June, 840. He assisted Lotharius and Pepin in their rebellion against their father, Louis le Debonnaire, and took an active part in the events of his time. He stood high among the literary men of the period; wrote against the heresy of Felix, bishop of Urgella, and the practice of duels, and of trial by fire and water, exposed the absurdities of the Jewish opponents of Christianity, and zealously opposed in his famous book—"De Picturis et Imaginibus"—the worship and use of images. The first edition of his works, by Papirius Masson, appeared in 1405; another was edited by Baluze in 1666.—J. F.

AGORACRITES OF PAROS, a Greek sculptor and brass-caster of the school of Phidias, flourished 450 years B.C. He was one of the best and most favourite pupils of that great master, who is said to have allowed several of his own works to pass as being the productions of Agoracrites. His most celebrated statue was that of Adrastia or Nemesis, which the Greeks erected at Ramnos in memory of the victory of Marathon. This statue was cut out of a block of Parian marble which the Persians had brought with them, intending to use it for the construction of a trophy of their expected triumph. Others relate that this statue originally represented Venus Aphrodites, and that Agoracrites had executed it for the city of Athens in competition with Alcamenes, another pupil of Phidias. The Athenians, however, preferred the work of their fellow-citizen, Alcamenes, and rejected that of Agoracrites, although superior in merit. The discarded artist avenged his slight by altering his Venus

into a Nemesis, and placing it at Ramnos. Whichever be the correct version, all the ancient writers combine in praising this statue as one of the finest existing in Greece. Bronze statues of Jupiter and Minerva by Agoracrites were also in the temple of Delphi.—R. M.

AGOP, JOHN, a learned Armenian priest, who lived at Rome in the latter half of the seventeenth century. He published an "Armenian Grammar," 1674; a "Latin Grammar in Armenian," in 1675; and an "Italian Translation of the Correspondence of Constantine the Great and Pope Sylvester with Tiridates, king of Armenia," in 1683, at Venice.

AGOSTINI, LEONARDO, an Italian antiquary of the seventeenth century, a native of Sienna. Pope Alexander VII. appointed him inspector of antiquities for the Roman states. He was the author of two valuable and now rare works. The first is entitled "La Sicilia di Filippo Paruta, descritta con medaglie, con la Giunta di Lionardo Agostini," Rome, 1649. The second, "Le Gemme Antiche figurate di Lionardo Agostini, con le annotazioni del Sig. Geo.-Pietro Bellori," Rome, 1636, 1657, 1670.—J. F.

AGOSTINI, MIGUEL, a famous Spanish agriculturist, born about 1560, and died about 1630. Having served for some time, and distinguished himself, with the knights of Malta, he obtained the priory of St. John of Perpignan, and became a careful and zealous cultivator of the soil. He published the results of his experiments and observations in 1626, in a book which has been frequently reprinted, entitled "Libro de los Segretos de Agricultura, Casa de campo y pastoril:" Perpignan, 4to, with plates, 1626.

AGOSTINO, and his brother ANGIOLO or ANGELO, DA SIENNA, celebrated Italian sculptors and architects of the fourteenth century. They were pupils of Giovanni Pisano, whom they assisted in the execution of his works for the façade of the cathedral of Orvieto. Their masterpiece is the monument of Guido Tarlati, bishop of Arezzo, completed in 1330. It is said that Giotto gave the design for this work. It comprises a large number of bas-reliefs, illustrating the life of the bishop, executed with a peculiar but not unpleasant quaintness. An altar, formerly in the church of San Francesco at Bologna, is also attributed to them by several writers; although the character of its details, pointing to a more advanced period of art, may justify the assertion of others, that the altar is the production of the Venetian sculptors, Jacobello and Pietro Paolo, during the later part of the century. As architects they were employed for their native town, Siena, in erecting two of the city gates, and the church and convent of San Francesco.—R. M.

AGOSTINO DA MILANO, or AGOSTINO DALLE PROSPETTIVE, an Italian artist, who died in 1525. He was a pupil of B. Sarti, and excelled in painting architectonic and prospective views. He worked chiefly at Bologna, where many of his works are still extant.—R. M.

AGOSTINO, PAOLO, a musician, who was born at Valerano in 1593. He was a pupil of Bernardino Nanino, whose daughter he married. He was successively organist of the churches of S. Maria Traste Vere and S. Lorenzo in Damaso, and finally he was appointed to succeed his fellow-pupil, Vincenzo Ugolini, in the same office at St. Peter's; some say because his predecessor refused to compete with him in a composition on a given subject, and was consequently displaced in his favour; but others deny the truth of the anecdote. He printed psalms, magnificats, and other canticles, and masses for several voices; but he is most renowned for his compositions for four, six, and eight choirs of four voices in each. Pope Urban VIII., on hearing the public performance of one of these dense masses of contrapuntal elaboration, a piece written in forty-eight real parts, was so impressed with its effect, that he bowed in acknowledgment before the author, in the sight of the assembled congregation. Padre Martini prints an "Agnus Dei" for eight voices of his, as a remarkable specimen of fluent melody, pure counterpoint, and close canonic imitation. Besides his printed works, he left many manuscripts, which are preserved in the library of the Vatican, and in that of the Casa Corsini alla Lungara. He died in 1629, but some writers have erroneously represented him as living till 1660. He was buried at Rome.—G. A. M.

AGOUB, JOSEPH, an Egyptian scholar, born at Cairo, 1795. When about six years old, he was brought to France with the army, and in 1820 was made professor of Arabic at Paris. He died at Marseilles in October, 1832, in indigent circumstances.

His historical, critical, and poetical contributions to various journals, were published at Paris in 1835.

AGOULT, GUILLAUME D', a knight of Provence, famous as "a good poet and a tender lover." He wrote several songs and poems, and a satire on the decay of virtue, and the vices of the clergy. He died in 1181, and it was said of him—"he was a model of sanctity and virtue, the father and chief of all the troubadours."

\* AGOULT, MARIE DE FLAVIGNY, Countess of, born about 1800 at Frankfort, educated in France, married to Count Agoult in 1827, afterwards paid frequent visits to Italy and other parts, and, since 1840, has contributed many clever literary and political productions to Paris newspapers and periodicals.

AGRATE, MARCO FERRERIO D', a Milanese sculptor, flourishing about 1500. He was employed in the works at the Certosa of Pavia, and executed several statues for the cathedral of Milan; amongst others that of St. Bartholomew, displaying a considerable amount of anatomical knowledge, derived from having seen the examples of the great Leonardo da Vinci. The fame attached to this statue is, however, but little deserved, and only to be attributed to the strange impression which an anatomical figure produces upon the ignorant masses.—R. M.

AGREDA, MARY (Coronela) OF, abbess of a convent at Agreda in Spain, where she was born in 1602, and died in 1665. She wrote, as a record of pretended visions, a "Life of the Holy Virgin," translated into French by father Crozet, gravely condemned by the doctors of the Sorbonne, and denounced as preposterous and indecent by Bossuet.

AGRESTI, LIVIO, an Italian historical painter, born at Forlì in the beginning of the sixteenth century. He studied with great success under Pierin del Vaga, whom he surpassed in imitating Giulio Romano's style. Worked at Rome and in Germany. Died about 1580.—R. M.

AGRICIUS, CENSORIUS ATTICUS, a celebrated professor of eloquence and literature at Bordeaux, in the fourth century, author of a work on Latin synonyms.

AGRICOLA, CNEUS JULIUS, an able and enlightened Roman general and statesman, and one of the most virtuous and amiable characters of heathen antiquity, was born A.D. 37 at Forum Julii, a Roman colony (now *Frejus* in Provence); and studied literature, philosophy, and jurisprudence, in the Grecian city of Massilia (Marseilles), long the Athens of the west. His father, Julius Gracinus, a Roman senator and a distinguished orator, was put to death by Caligula, for refusing to conduct a calumnious prosecution against Silanus, the tyrant's father-in-law, but intended victim. His mother, Julia Procilla, a matron of great talents and primitive virtues, superintended with care and success the early education of her orphan son. He served his military noviciate in Britain, under Suetonius Paulinus, a commander of eminent capacity and great experience. Returning to the capital in 62, he married Domitia Decidiana, a lady belonging to one of the most illustrious families of Rome. In 63 he was chosen questor, or treasurer, for what was then called the province of Asia; and his scrupulous integrity in that capacity formed a striking contrast to the usual rapacity of Roman functionaries of that period. Towards the end of Nero's reign, he held successively the nearly nominal offices of tribune of the people and praetor. Under Vespasian he was appointed to the command of a legion in Britain. On his return in 73 he was raised to the rank of patrician, and made governor of Aquitania. He was continued in the administration of that province nearly three years, and by his justice, wisdom, and courtesy endeared himself to the inhabitants. After being honoured with the consulship, he was appointed in 78 governor of Britain, where he now remained till 85, when Domitian, envious of his renown, recalled him, under pretext of conferring on him another appointment, which, by indirect hints, that tyrant prompted Agricola formally to decline. Agricola's brilliant achievements, while commander-in-chief in Britain; his conquest of North Wales and Anglesey; his erecting a line of forts between the Clyde and the Forth; his circumnavigation of Britain; his defeating, in a great battle at the foot of the Grampians, the Caledonians under Galgacus; his success in introducing among the subjugated Britons a taste for Roman civilization and the Latin language; his preparations for the conquest of Ireland;—are all well known. After his recall, he spent the remainder of his life in retirement. He died in 93, generally supposed to have been secretly poisoned at the instigation of Domitian. His life, written by his son-in-law, Tacitus the great historian, is a masterpiece of biography.—E. M.

AGRICOLA, CHRISTOPHORUS ALOYSIUS, a German painter, born at Regensburg in 1667. He executed a large number of landscapes, enlivened with figures. Several of his works are now in the galleries of Vienna, Dresden, and Florence. He travelled a great deal, continually studying from nature. He died at Vienna in 1719.—R. M.

AGRICOLA, FRANCIS, a German ecclesiastic of considerable theological learning, a vehement opponent of the Reformation, and author of numerous Latin dissertations in support of the claims of the church of Rome, was born at Lunen, near Aldenhoven, and died at Siltard in 1621.

AGRICOLA, GEORGE, was born at Glaucha in Saxony, or at Chemnitz (it is not certain which), 24th March, 1494. From his connection with Chemnitz, he obtained the name of Kempnizius. His real name was GEORGE LANDMANN, the Latin translation being Agricola (agriculturist). He studied medicine, and began the practice of his profession at Joachimstadt, to satisfy his friends. But, from the love which he had in his youth acquired for minerals in the mountains of Bohemia, he continued to make these his predominating study; and, giving up his medical pursuits, he repaired to Chemnitz, where he became entirely absorbed in the pursuit of metals and mining. Judging from his work "De re Metallica," he seems to have acquired a large amount of practical knowledge, by visiting the mines, studying the processes, and making himself completely master of their details. But he was likewise a man of learning, as he was thoroughly imbued with the knowledge which the ancients—Pliny, Dioscorides, Galen, and Strabo, &c., had left on such subjects. He collected likewise specimens of different ores, studied their chemical characters, and described them with great accuracy. He was allowed a pension by Maurice, duke of Saxony, at the instance of G. Cammerstadt, a scientific friend; but this he spent in the pursuit of metallurgic knowledge, as well as part of his own estate. Latterly, he became in some measure involved in theological disputes, in consequence of his views, which were at one time favourable to protestantism, having turned to his original catholic principles. He died at Chemnitz, 15th Nov., 1555; and so strong were the theological prejudices of the time, that the Lutherans, annoyed at his opposition to their doctrines, allowed his body to remain five days unburied, so that it was obliged to be carried from Chemnitz to Zeitz, in the principal church of which place it was interred. He enjoyed the friendship of Erasmus, George Fabricius, Wolfgang Meurer, Valerius Cordus, John Dryander. The most important work of Agricola is his book "De re Metallica," first published in 1546. It is divided into twelve books. In the first of these he discusses the nature of the education of the metallurgist; in the second, third, fourth, and fifth books, he treats of the nature and history of metallic veins, &c.; in the sixth, of mining machines; in the seventh, of the assay of ores; in the eighth, of the treatment of ores; in the ninth, of the reduction of ores in furnaces; in the tenth, of the refining of metals, especially gold and silver; in the eleventh, of the separation of silver from other metals; in the twelfth, and last book, he relates the method of preparing various salts, as common salt, saltpetre, alum, and sulphate of iron, the mode of preparing and purifying sulphur, and of making glass. The work is, upon the whole, a most remarkable one, and exhibits, considering the times, much talent and accuracy. Such a work was an admirable starting-point, and no doubt contributed to preserve many subsequent inquirers on the right road, instead of wasting their time in the vain speculations so prevalent in that age. His language, too, is more than usually correct, and free from the barbarous terms so much in fashion at the time. His book, "De Animalibus Subterraneis (1549)," contains an account of the demons of the mines, as well as of certain animals. In "De Ortu et Causis Subterraneorum (1546)," we find a description of some curious facts connected with volcanic action. In "De Natura eorum quæ Effluent ex Terra (1558)," is contained an account of sea shells and mineral waters, &c., and of caverns yielding various exhalations. He wrote other three works, entitled "De Natura Fossilium;" "De Veteribus et Novis Metallis" (1530); and "Bermannus" (1530), a dialogue with the purity of style of the Colloquies of Erasmus. He wrote also several other works on miscellaneous subjects.—R. D. T.

AGRICOLA, GEORGE ANDREW, a physician and naturalist, was born at Ratisbon in 1672, and died in 1738. He prosecuted botanical studies, and devoted himself particularly to the multiplication of plants by cuttings and by grafting.

AGRICOLA, JOHANN, a distinguished German reformer, and the first divine of the Lutheran church who promulgated the antinomian theory of Grace, was born at Eisleben in Saxony, 20th April, 1492. Hence he is often called John Eisleben, or Islebius. His family name was probably Schmitter or Schneider, which, understood in its agricultural sense, he Latinized into Agricola. He was sent to study philosophy and theology at Wittenberg, where he became an attached disciple and intimate friend of Luther. In 1519 he assisted at the Leipzig disputation, in the capacity of scribe or secretary. Having been made bachelor of theology along with Melancthon, he taught for some years in Wittenberg, probably as an *extraordinary* professor; from whence, in 1525, he was recommended by Luther to the magistracy of Frankfort-on-the-Maine, to assist in introducing the Reformation into the churches and schools of that important city. Later in the same year, he was appointed by Graf Albrecht of Mansfeld rector of the newly-erected school of Eisleben, and preacher of the church of St. Nicholas in his native town. Here he acquired such fame as a preacher, that, in the following year, 1526, he was invited to accompany his native princes to the diet of Spire, in the capacity of court chaplain. In 1527 he took exception to some directions given by Melancthon to the pastors of the Saxon churches, to the effect that they should make use of the "law" as well as the "gospel," to bring men to repentance. Agricola maintained that the preaching of the law for that end was set aside by the gospel, and formed no part of the proper subject-matter of the evangelical ministry. Luther and Bugenhagen succeeded to some extent in overcoming his objections to Melancthon's views, which were also their own, but the event showed that he was rather silenced than convinced. In 1530 he was present at the memorable diet of Augsburg, and was only inferior in importance, among the evangelical divines there assembled, to Melancthon and John Brentz. In 1536 he left Eisleben to resume his academic duties at Wittenberg. In 1537 he subscribed the articles of Schmalcald. In the same year he re-opened the antinomian controversy at Wittenberg, where he was now vigorously confronted by Luther himself. A rapid series of public disputations took place between them, in the course of which Agricola became so heated and embittered against his impregnable adversary, that he took the extreme step of attacking his former master and friend, in a letter addressed to the elector himself. This was in 1540. The elector immediately appointed commissioners to try the cause, and enjoined Agricola to abide in Wittenberg the result of the process. But before the commissioners could enter upon the business, Agricola had repented of the rashness of his appeal, and, in spite of the elector's injunction, withdrew from the city. He was soon afterwards invited to Berlin by Joachim, elector of Brandenburg, who had just then determined to introduce the Reformation into his dominions. At Berlin he published in 1541 a "Retraction," which he addressed to the elector of Saxony, and to the preachers and council of Eisleben; but this retraction could only have been meant to extend to his personal charges against Luther, as he continued to hold his antinomian opinions to the end of his life.

The pulpit eloquence of Agricola had obtained for him the appointment of court preacher at Berlin, and, ere long, his eminent business-talents raised him to the honourable position of general superintendent of the evangelical churches of the Mark of Brandenburg. After the death of Luther in 1546, his ill-regulated ambition would seem to have aimed at reaching the summit of ecclesiastical influence in evangelical Germany. And in 1548, when the disastrous war of Schmalcald had laid the Reformation for a time at the emperor's feet, Agricola accepted from Charles the sinister commission to draw up, along with Julius Pflug and Michael Sidonius, what was called the "Augsburg Interim," a compromise with the papal church, in doctrine and worship, which was rejected with indignation by all honest protestants; and the violent enforcement of which, in several parts of Germany, was attended with severe loss and suffering to many faithful ministers. By this act of flagrant treachery to the cause of the Reformation, and of equally flagrant inconsistency with his own previous zeal in behalf of evangelical doctrine—a zeal which he had pushed even to an erroneous extreme—it is no wonder that Agricola brought himself under the disgraceful suspicion of having accepted bribes, both from the emperor and his brother, King

Ferdinand. He still continued, however, to enjoy the favour of the house of Brandenburg, and, long after the troubles of the Interim had passed away, his doctrinal zeal continued to display itself with as much antinomian one-sidedness as ever. In 1588 he thundered from the pulpit at Berlin against the teaching of George Major of Wittenberg, concerning the necessity of good works, and declared roundly that such teaching was no better than a doctrine of devils, devised to rob men of Christ and his gospel altogether. He died at Berlin, 22nd September, 1566, in the seventy-fifth year of his age.

A very unfavourable view of Agricola's character has been taken by Walch, Planck, Bretschneider, and other writers of the Lutheran church, who attribute his opposition to the doctrine of Luther and Melancthon in some points, to the most unworthy personal motives, and trace his conduct in the matter of the Augsburg Interim to sources still more dishonourable. But in the more recent judgment of a very competent authority, Professor Schenkel of Heidelberg, who has made the history of the Reformation-period the subject of long-continued and profound study, Agricola was rather egotistical and self-opinionated than dishonest and corrupt, and his doctrinal errors were merely the result of a want of clearness of head, and of a narrow way of viewing the Lutheran doctrine of justification by faith. His diligence as an author was not inconsiderable, but few of his writings have come down to our times. His principal work was a collection of 750 German proverbs—a selection out of 5,000 which he professed to have amassed—a work of national interest and value, which has secured to him an honourable place in the literature of Germany—P. L.

AGRICOLA, JOHANN AMMONIUS, a German physician, an ardent admirer of the ancient Greek and Roman medical writers, and author of numerous erudite and able notes and treatises in illustration of their works, was born about the beginning of the sixteenth century, and died at Ingolstadt in 1570.

AGRICOLA, JOHANN FRIEDRICH, a musician, was born at Dobitchen in the duchy of Gotha, on the 4th of January, 1720. He studied law in the university of Leipzig, and, at the same time, music under J. Sebastian Bach. He went to Berlin in 1741, to be considered one of the ablest organists of the day, and to continue his theoretical studies under Quantz. In 1750 he wrote his comic opera, "Il Filosofo Convinto," for the Royal theatre at Potsdam, in acknowledgment of the merit of which Frederick the Great, who was already predisposed in his favour, gave him an appointment as court composer. The next year he visited Dresden, where he was so impressed by the operas of Hasse, then being performed there, that his style was ever after influenced by them. On the death of Graun in 1759, he was made kapellmeister at Berlin. He died in 1774. He wrote many operas, much church music, and several theoretical papers, the principal of which are named in M. Fétis' Biographie.—G. A. M.

AGRICOLA, MICHAEL, a Swedish missionary, and translator of the New Testament into the Finnish language, was a native of Finland, and flourished in the sixteenth century. Having studied under Luther at Wittenberg, he was made bishop of Abo by Gustavus I., and sent as a missionary to the Laplanders. Died in 1557.

AGRICOLA, RUDOLPH, one of the most distinguished revivers of classical learning and taste in the fifteenth century, was born in 1442, in the village of Bafflen, near Groningen, in Friesland. His family name was Husmann. He went to the university of Louvain, but found little pleasure in the exercises of scholastic philosophy, and preferred the study of Cicero and Quintilian to the rhetoric and dialectics of the schools. After taking his master's degree, he repaired to Paris, and from thence to Italy, with the view of improving his attainments in ancient literature. He stayed two years in Ferrara, where Theodore Gaza, one of the learned fugitives from Constantinople, was expounding the Greek originals of Aristotle. Here he studied Greek and taught Latin, and excited the surprise and admiration of the fastidious scholars of Italy by the purity of his Latin style and accent. The conceited Italians, to whom everybody beyond the Alps was a barbarian, were chagrined that so accomplished a scholar was not an Italian. Having returned to Groningen, he undertook a commission, in behalf of his native city, to the court of the Emperor Maximilian I., which occupied him six months, and which he discharged with success. He was invited soon after to accept the principality of a college in Antwerp, which, after much hesitation, he decided to decline, preferring to oc-

copy a chair at Heidelberg, under the patronage of the elector of the Palatinate and the enlightened Von Dalberg, bishop of Worms. He settled at Heidelberg in 1482, where, by his lectures, writings, and conversation, he did much to revive and cultivate a taste for ancient literature, and to awaken a repugnance to the long-established scholastic barbarism. He resided much with the bishop at Worms, where he delivered lectures, as well as in Heidelberg. At the request of the elector, he drew up for his use an abridgment of ancient history. At the age of forty he commenced the study of theology, and with that view put himself under the instruction of a learned Jew, to acquire the Hebrew language, in which he made considerable progress. He deplored, we are told by Melancthon, the darkness of the church, and objected in particular to the corruptions of the mass, the celibacy of the clergy, and the doctrine of the monkish divines on the subject of justification. His principal work was his treatise "De Inventione Dialectica," in three books, which he wrote with great rapidity in the course of a journey which he undertook with the bishop of Worms, in 1485, to Rome. He died at Heidelberg the same year, soon after his return from Rome. His funeral oration was pronounced by John Reuchlin. He was the oracle of German learning in his time, not only for his personal erudition, but also on account of his extensive and precious library of ancient literature. His works were collected and published at Cologne in 1539, *cura* Alardi. Erasmus regarded him with the highest admiration. "There is nothing," he exclaimed, "produced by that man which has not something of a divine quality in it." In several places of his writings, he calls Agricola "a divine man." But Erasmus was peculiarly proud of him as his countryman, and as the master of Alexander Hegius, his own first instructor. The reader will find a highly interesting account of Agricola, and of other early promoters of classical culture in Germany during the 15th century, in "Meiner's Lebensbeschreibung," vol. ii.—P. L.

AGRIPPA, a Roman patrician, renowned for his wisdom, disinterestedness, and valour, was consul in 502 B.C., gained a signal victory over the Sabines, was the first Roman general that obtained the honour of a solemn triumph, and was mainly instrumental, by his weight of character and powers of persuasion, in effecting a reconciliation between the patricians and plebeians, when the latter had quitted the city, and repaired to the Sacred Mount; on which occasion he is said to have rehearsed the apology of the stomach and the revolted limbs.—E. M.

AGRIPPA, an ancient astronomer, celebrated for having observed in Bithynia, A.D. 92, as recorded by Ptolemy, that the moon was in conjunction with the Pleiades.

AGRIPPA, a philosopher of antiquity, meriting honourable mention in the history of Scepticism. We know him only as the author of "Five Reasons for Doubt," a work quite superior to that of Pyrrho, and evincing a keen insight into the laws and conditions of the human intelligence. The purely relative value of first principles,—the *necessity* and, at the same time, the *impossibility* of any absolute criterion,—the subjective character of all human evidence,—in a word, all that the genius of scepticism has been able to conceive, or to produce in its subtlest and most profound arguments, is summed up by Agrippa in a severe, exact, and powerful body of propositions. (See *DIOGENES LAERTIUS*, *SEXTUS EMPIRICUS*, and *EUSEBIUS*.)—J. P. N.

AGRIPPA, an eminent Italian architect and engineer, author of several dissertations, now extremely rare, on subjects of mechanical science, was born at Milan in the sixteenth century.

AGRIPPA, CAIUS, second son of Agrippa Vipsianus and of Julia, was adopted, together with his elder brother Lucius, by Augustus, and died in Lycia at the age of twenty-four, deeply and universally regretted, his death being the consequence of a poniard wound treacherously inflicted by Lullius, governor of the town of Artogete.

AGRIPPA, HENRY CORNELIUS, a man of considerable literary and scientific attainments, and, if we believe some authors, a great magician, who flourished during the sixteenth century. He was born at Cologne on the 14th of September, 1486. His family was ancient and noble, and had long been employed by the princes of the house of Austria. He entered, as a private secretary, very young, into the service of the Emperor Maximilian, and fought with distinction in his Italian wars. Not content with having been knighted for his valour, he sought university honours, and took the degrees of Doctor of Laws and Doctor of Medicine. He visited France in 1507, Spain in 1508, and read

lectures at Dole in 1509. To please Margaret of Austria, he composed a "Treatise on the Excellence of Women;" but he did not publish it, for fear of the monks, with whom he had an implacable feud. Shortly afterwards he spent some months in England, and occupied himself in illustrating the Epistles of St. Paul. On his return to Cologne, he read public lectures on nice questions of divinity; after which he went to Italy to join the army of the Emperor Maximilian, and taught theology publicly at Pavia and Turin. At this time he was married to a lady of noble family and a sweet disposition, to whom he alludes in his letters in the warmest terms. She died in the year 1521, and was buried at Metz, where he resided a considerable period, and held some of the most honourable offices in the corporation. A strange controversy forced him to quit it. He refuted the monkish notion that St. Anne, the mother of the Blessed Virgin, had three husbands; and he protected from persecution and horrible death a poor woman who was accused of witchcraft. Such an assault on the prejudices of the age excited against him a host of enemies, and he retired, as he tells us, without reluctance from a city which was the cruel stepmother of learning and the sciences. After a short sojourn in his native place, he removed with his family to Geneva. Disappointed in the expectation which he had formed of receiving a pension from the duke of Savoy, he began to practise physic at Fribourg in Switzerland, but the year following he went to Lyons, and obtained a pension from Francis I. The queen-mother appointed him her physician, but he never had an opportunity of attending her; and just when he hoped he had made his fortune, he found that he had lost both his pension and his patroness. It is said that he received orders from his royal mistress to consult the stars about the future affairs of France, that he freely complained of being employed in such impertinent follies, and that the queen was extremely piqued. Thus abandoned by the court, he murmured and threatened; but at last, after some delay, he proceeded to the Low Countries. On his demanding a passport for that purpose, the duke of Vendome, instead of signing the document, tore it to pieces, and protested that he would never encourage a conjuror. In the year 1529, he became historiographer to the Emperor Charles V., and published, by way of introduction, the history of that monarch's government. Soon after, he pronounced the funeral oration over Margaret of Austria. Meanwhile, his enemies secretly accused him of blasphemy and irreligion. Two treatises that he published in 1530, one on the "Vanity of the Sciences," and the other on "Occult Philosophy," furnished the pretext for this imputation. But Cardinal Campeggio, the legate of the pope, and Cardinal de la Marek, the bishop of Liege, spoke in his favour. Their kind offices could not procure him one farthing of the salary attached to his historical office, nor prevent his being imprisoned at Brussels in the year 1531. Liberated from gaol, he visited the archbishop of Cologne, to whom he dedicated his "Occult Philosophy." His debts drove him from that city, and the inquisitors attacked his book. He stayed at Bonn till 1535. That year he resolved to return to Lyons. He was imprisoned in France for a libel against Francis the First's mother, but having been freed from his confinement, he went to Grenoble, where he died in the same year. He married twice after the death of his first wife. Though a great admirer of Martin Luther, because he opposed the tyranny which the mendicant friars exercised over the consciences of mankind, Agrippa lived and died in the Roman catholic communion. There is no proof that he was addicted to magic. His familiar letters breathe the language of Christianity; and it is strange, if he were an illustrious magician, that he was so often in want of bread. A story is told, that upon his travels he used to pay money at the inns, which at the time seemed good, but which turned out in a few days to be mere pieces of horn and shell;—and that he had a favourite dog which ate at his table and lay at his bed, but which vanished after his death, being a devil in disguise. These calumnies were, in all probability, invented by the Dominicans, whose legends he had vehemently exposed. His theological language savours of the more modern doctrine of the Quietists. His works were published at Lyons in two volumes 8vo, and are, for the most part, so dull, that they are now altogether forgotten. His supposed love of alchemy, astrology, and necromancy, have made his adventures a favourite theme for the novelist; and strange stories of his wand and his mirror, which brought before the spectator visions of the absent and the dead, have often been repeated by the writers of poetical romance.

In this respect he may be compared to Faust, the celebrated printer, who was nearly his contemporary. His principal works were the following:—"De Nobilitate et Præcellentia Fœminæ Sexus," written in 1509. "De Occulta Philosophia," published in 1533, in three books; a fourth book often appended to these is not genuine. "De Triplici Ratione Cognoscendi Deum," written at Casale in 1515. "De Incertitudine et Vanitate Scientiarum et Artium, atque Excellentia Verbi Dei Declamatio," written at Lyons in 1526, while he held the thankless office of physician to the queen-mother of France, and first published in Antwerp in 1530—a satire of extreme severity upon the existing state of learning, or rather upon its scholastic professors and dictators. "Apologia pro Defensione Declamationis de Vanitate Scientiarum, contra Theologos Lovanienses," written in Flanders in 1533. His whole works have been several times printed in two volumes. A large and curious analysis of the chief of them will be found in his *Life* by Morley.—T. J.

AGRIPPA, HEROD, king of Judea, son of Aristobulus and Berenice, and grandson of Herod the Great, was born in the year 10 B.C. In early life he resided many years in Rome, but his profuse expenditure reduced him to great difficulties, and forced him, in A.D. 23, to repair to Judea. After residing there in extreme penury till A.D. 26, he revisited Rome, and was kindly received by Tiberius. Becoming the associate of Caius, afterwards Caligula, he was thrown into prison by Tiberius, and kept in chains, for having in conversation expressed a wish that his friend might speedily mount the throne. Caligula, on his accession, set him at liberty; gave him a gold chain equal in weight to the iron one with which he had been loaded in prison; and conferred on him, with the title of king, the two vacant tetrarchies, which had belonged respectively to Philip and Lysanias. Agrippa, in his way to Judea, visited Alexandria, and entered that city with such extravagant pomp as to excite the ridicule of the Alexandrians. He was involved in perplexity and peril by Caligula's mad determination to have his image placed in the sanctuary at Jerusalem. Agrippa proceeded to Rome, and adroitly induced Caligula to defer the execution of his orders; and by the violent death of that emperor, which took place soon after, he was saved from the destruction which the tyrant's obstinacy would have occasioned. Agrippa, being at Rome at the period of Caligula's assassination, and perhaps not a stranger to the plot that led to it, is said to have greatly contributed to raise Claudius to the throne. The new emperor confirmed the grants of his predecessor to Agrippa, and, by adding Judea and Samaria, made him sovereign of the whole territory that had formed the dominions of Herod the Great. Agrippa governed his subjects with moderation and acceptance, though his introduction of Roman customs and manners offended the more strict adherents of the Jewish law. To gain popularity, he commenced a persecution of the Christians, putting James to death, and apprehending Peter with the same intention. The fortifications he commenced at Jerusalem would, in the opinion of Josephus, have rendered that city impregnable, had not their completion been prevented by his death. Neighbouring rulers, who found it expedient to cultivate his friendship, secured his favour by gratifying his characteristic vanity with the most fulsome adulation. The circumstances of his decease in the fifty-fourth year of his age, as recorded in the Acts of the Apostles, entirely agree with the narrative of Josephus, and derive corroboration from the luxurions and voluptuous habits, and the unparalleled love of admiration, that had marked the whole of Herod Agrippa's career.—E. M.

AGRIPPA, HEROD, II., son of the preceding, was born and educated at Rome. The Emperor Claudius was disposed to appoint him his father's successor, but was dissuaded by his ministers from intrusting to an inexperienced youth—for he was only in his seventeenth year at his father's death—the administration of an important and disaffected kingdom. Accordingly, Judea was reduced into the form of a Roman province. Young Agrippa, on the death of his uncle Herod, prince of Chalcis, in A.D. 48, was appointed sovereign of that principality, superintendent of the temple and sacred treasury, and elector of the high priest. In 53, Claudius gave him, in exchange for Chalcis, the tetrarchies which had formerly belonged to Philip and Lysanias, and Nero added a part of Galilee, and a city with a small district in Peræa. It was before this Agrippa that the apostle Paul delivered his memorable defence. Agrippa's devotedness to Rome, and partiality to Roman manners, rendered

him unpopular among the Jews. He aided Titus with great zeal and efficiency during the siege of Jerusalem, and, after the destruction of that city, retired to Rome, where he died about A.D. 94. In him the Herodian line became extinct.—E. M.

AGRIPPA, MARCUS POSTHUMUS, the posthumous son of Agrippa Vipsanius by Julia, was adopted by Augustus, banished from Rome through the artifices of Livia, and murdered by order of her and her son Tiberius after the death of Augustus.

AGRIPPA, MARCUS VIPSANIUS, the early associate and devoted adherent, to whose sagacity, valour, and energy Augustus was mainly indebted for the success of his whole career, was born in the year 64 B.C. Both he and Octavianus, afterwards Augustus, were at Apollonia, when the unexpected intelligence of Cæsar's murder arrived. Agrippa, with characteristic promptitude, instantly urged his friend to seize the propitious moment, and, repairing at once to Rome, assume the name, and rally round him the adherents, of his uncle and adoptive father. To Octavianus and his relatives, this counsel at first seemed too adventurous; but Agrippa's spirit and decision overcame their timid hesitation. Octavianus started for Rome, accompanied, it would appear, by Agrippa, who, soon afterwards, assisted in the impeachment of the leading conspirators. There is no mention of his having taken part in the civil war that was terminated by the battle of Philippi; but, in the Persian war, he rendered Octavianus very effective service. After a successful and decisive campaign in Gaul, against native insurgents and German invaders, he was appointed by Octavianus to the direction of his naval affairs. It was necessary to equip a naval force capable of contending with Sextus Pompeius, who, at this period, had the complete superiority at sea. The measures now devised and executed by the genius and vigour of Agrippa, not merely effected this, but led directly to the succession of naval victories, which soon made Octavianus undisputed sovereign of the Roman world. Agrippa's first step was to create a safe and extensive haven, afterwards called Portus Julius, where, in all weathers, the largest fleet might not only enjoy commodious anchorage, but manœuvre with freedom. There, while the skill and dexterity of the rowers were improved by incessant exercise, a select body of troops, specially destined for naval service, were trained to combat with the same firmness and energy at sea as on shore. The immense superiority of such troops in the naval warfare of the ancients is at once manifest. The bravest veterans, if unaccustomed to the rolling of a vessel in a rough sea or a swell, might prove utterly inefficient in a naval engagement. To this improvement, accordingly, are mainly to be attributed Agrippa's naval victories. It was in close combat, historians agree, that his forces proved irresistible. A warlike machine, also devised by himself, he is said to have employed with amazing effect. After the entire defeat of S. Pompeius, Agrippa, in 35 B.C., served in the Illyrian war, as second in command under Octavianus. In 33 B.C. he consented to become ædile, and rendered himself for ever memorable by the magnificent and useful public works he executed, at his own expense, during this period. Some time after the victory at Actium, of which Agrippa had all the merit, an estrangement occurred between him and his chief. Finally, Octavianus, convinced that Agrippa was too powerful and too necessary to be treated with indifference, resolved to make him his virtual associate and presumptive heir in the empire. He gave him his daughter Julia in marriage, and subsequently adopted Caius and Lucius, the male issue of that union. In the year 14 B.C. Agrippa visited Syria, was received by Herod the Great with studied demonstrations of honour, sacrificed a hecatomb at Jerusalem, feasted the citizens with great magnificence, and afterwards interested himself in confirming the privileges accorded to the Jews settled in the province of Asia. He died in Campania in 12 B.C., on his return from a winter campaign in Pannonia. Less interested than Mæcenas in elegant literature, Agrippa had always devoted special attention to such inquiries and pursuits as are of most practical importance to the general and the statesman, and published a statistical survey of the empire, which was afterwards promulgated as an official document, by Marcus Aurelius and Alexander Severus.—E. M.

AGRIPPINA, the grand-daughter of Pomponius Atticus, and daughter of Marcus Vipsanius Agrippa, was married to Tiberius, afterwards emperor, who, though much attached to her, divorced her to espouse Julia, the daughter of Augustus, and widow of Agrippa. She afterwards became the wife of Asinius Gallus, whom Tiberius imprisoned for life.

AGRIPPINA, the elder, was the daughter of Marcus Vip-sanius Agrippa, and of Julia, the daughter of Augustus. She became the devoted wife of C. Germanicus, whom she accompanied in most of his expeditions. By her sagacity and heroism she suppressed, on one occasion, a mutiny in the camp; and, on another, prevented the destruction of the bridge over the Rhine, and thus saved the remnant of a Roman army. When her husband died at Antioch, of poison, as was suspected, she returned to Rome with his ashes. Tiberius, dreading her influence over his subjects, by whom she was universally beloved and revered, banished her to the island of Pandataria, where, in 33 A.D., she was put to death by order of the tyrant. She had nine children by Germanicus, one of whom was the Emperor Caligula, and another, the mother of Nero.—E. M.

AGRIPPINA, the younger, daughter of the preceding and of Germanicus, and mother of Nero, was a woman of great capacity, boundless ambition, and matchless wickedness in every form. Her first husband, and the father of Nero, was Domitius Ahenobarbus. After his death, and that of another whom she is said to have poisoned, she married, in defiance of the laws and moral sentiments of the Romans, her own uncle, the Emperor Claudius, whom she eventually poisoned, to make way for her son Nero, by whose order she was put to death in 59 A.D.—E. M.

AGRECIUS or AGRETIUS, a Roman grammarian, author of a work still extant, entitled "De Orthographia, et differentia Sermonis." He is favourably mentioned by Ausonius, and is supposed to have lived about the middle of the fifth century.

AGUADO, FRANCIS D', a celebrated Spanish jesuit, who, by his indefatigable labours and voluminous writings, exerted great influence in promoting the views of his order, was born at Torrejon, near Madrid, in 1572. Died in 1654.

AGUANI, JUVENAL D', a German Capuchin of the seventeenth century, of Tyrolese extraction, and author of various works, who attained great notoriety in his time by his attainments and his intrigues.

AGUCCHIA, LACTANTIUS, an Italian mathematician of the seventeenth century, author of a curious treatise, now rare, on ready reckoning.

AGUERO, BENITO MANUEL, a Spanish painter, born in Madrid in 1626. He was a pupil and a successful imitator of Juan Batista del Mazo, and generally painted battles and landscapes. The Spanish king, Philip IV., who was very fond of him, used to frequent his studio and keep him company whilst at work. Towards the end of his career he tried, but in vain, to imitate the style of Titian. Died in 1670.—R. M.

AGUESSEAU, HENRI FRANÇOIS D', chancellor of France, was born at Limoges in 1668. Displaying from his earliest years pre-eminent capacity and great ardour in the pursuit of knowledge, he soon attained, under the superintendence of his accomplished and amiable father, who was "intendant" of Bordeaux, remarkable proficiency in classical and modern languages and literature, as well as in mathematics, history, and philosophy. While prosecuting, for a series of years, the study of jurisprudence, both Roman and French, he was most assiduous in the practice of composition, incessantly perusing and eagerly imitating the choicest models of Latin, Greek, and French eloquence. Through the influence of his relatives and youthful associates, he was early imbued with that tone of patriotism and piety which pervades the writings of Pothier and Domat, and of all the great French legists of the seventeenth century. Possessing all the requisites of a true orator—acumen, memory, knowledge, taste, expression—with the love of truth and righteousness, he became, almost from the very commencement of his public career, the most classic model of French forensic eloquence. After serving for a few months as king's counsel in an inferior court, he was appointed, at the age of twenty-two, "avocat-general" for the parliament (supreme judicature) of Paris, and seems to have at once eclipsed his two colleagues; all three being subordinate to the "procureur-general," but more frequently required to exercise their powers of oratory. So completely successful, in fact, were his first appearances, that one of the most eloquent veterans of the parliament declared they resembled, not the attempts of a novice, but the feats of a practised and consummate orator. According to the legal institutions of France, as law officer of the crown, he was not expected to be the echo of a ministry, but the independent voice of truth and righteousness. The parliament, also, by exercising their privilege of refusing to register an "ordonnance," or by carrying remonstrances to the throne, were able, even under

the old Bourbons, to apply a constitutional check to the arbitrary acts of the sovereign; and, though their efforts in behalf of freedom might be overruled, they exerted a powerful influence on public opinion. According to the fundamental principles of French ecclesiastical law, a papal bull has no legal force in France till formally sanctioned by the civil and ecclesiastical power of the realm; and on no pretext can the church interfere with the free action of the secular authority. These principles constitute what are called the "Gallican liberties"—a platform long heroically upheld by the sovereign, the national church, and the people of France, in spite of all the efforts of the court of Rome to accomplish its destruction. Louis XIV., after having long asserted the Gallican liberties, became, during the latter part of his reign, a willing vassal of the papacy and a tool of the jesuits, mainly through the instrumentality of Madame de Maintenon, whose permanent influence over Louis was an achievement of that wily and unscrupulous fraternity. In 1699 the papal censure of the illustrious Fénelon arrived at Paris, and D'Aguesseau was directed to demand its registration by the parliament. This task, so peculiarly difficult, owing to the parliament's jealousy of papal encroachment, he executed with success. The discourse he delivered on the occasion displays great eloquence and admirable tact. He complimented Fénelon on his meek acquiescence in the papal decision, and urged the registration of the brief on the ground of its having received the approval of the secular power and of all the bishops in France. Thus the measure was carried, while the Gallican liberties were preserved from infringement.

In 1700 he was promoted to the office of "procureur-general," and entered on a new field of labour, in which his special attainments soon became conspicuous. His singular habits of application, and his minute acquaintance with French history and feudal jurisprudence, enabled him to render immense service to the crown in the recovery of fiefs and jurisdictions. The reforms he introduced into the management of charitable institutions, and the measures he recommended or enforced, to alleviate the suffering of the people during the famine of 1709, procured him universal esteem. The Jesuits, encouraged by their success in crushing the Huguenots and humbling the Jansenists, now determined to strike a final blow for extinguishing all resistance to papal supremacy in France, and under pretext of condemning certain propositions of the Jansenist Quesnel, Clement XI., urged by the king's confessor, Le Tellier, issued the famous bull "Unigenitus" in 1713. The vindictive ferocity of Le Tellier had intimidated numerous individuals; and a party in the parliament of Paris, to which the attention of the whole nation was now directed, was disposed to sacrifice the independence of the Gallican church and French nation, by the registration of the uncanonical and unconstitutional bull. D'Aguesseau fearlessly opposed the papal aggression, and, as member of a deputation from the parliament to the king, gave expression to the boldest remonstrances. Jesuit influence, however, prevailed, and the bull was registered both by the parliament and the Sorbonne. On the death of Louis XIV. in 1715, the regent Orleans favoured for some time the opponents of the jesuits, and in 1717 D'Aguesseau was made chancellor of France; but owing to his opposition to the delusive scheme of the famous Law, was dismissed from office, and banished from Paris in 1718, through the influence of Dubois, afterwards made cardinal for his subserviency to the court of Rome. In 1720, Dubois, alarmed at the disastrous consequences with which the explosion of Law's bubble threatened the nation, afforded D'Aguesseau a signal triumph, by sending Law himself to implore his return to office, to aid in saving France from impending ruin. D'Aguesseau's again accepting office in connection with Dubois and the regent, has been regretted by his greatest admirers. He acted, no doubt, from the noblest motives, hoping to conciliate opponents, and mitigate evils he was unable to prevent. Seven distinguished members of the Sorbonne having solemnly protested against the registration of the bull "Unigenitus," the court and jesuits deemed it expedient, in order to neutralise the protestation, to insist on the parliament's registering a royal declaration in favour of the bull, and D'Aguesseau unfortunately urged the registration. His conduct on this occasion raised a general outcry, and seemed, at least, a melancholy inconsistency. He endeavoured to justify himself on the ground that, as the bull had been, in spite of his opposition, previously registered, the refusal to register the declaration, under existing circumstances, would exasperate opponents and

drive them to still more violent proceedings. The parliament resisted, and by a *coup d'état* was exiled to a distance from Paris. At length the registration was effected, and Dubois was rewarded with the promised promotion to the dignity of cardinal. D'Aguesseau, after sharing in the obloquy justly cast on Dubois, was again dismissed and banished. The five years he now spent in literary retirement and domestic enjoyment, he always called the happiest days of his life. In 1727, on the death of Dubois, he was invited to Paris by Cardinal Fleury, Dubois' successor, and in 1737 again accepted the office of chancellor. Henceforth, withdrawing his mind as much as possible from political and ecclesiastical contentions, he devoted his energies mainly to law reform, introducing important ameliorations, and seriously contemplating that gigantic enterprise of national codification, to which the writings of Pothier and Domat powerfully contributed, and which was completely accomplished after the Revolution. No country could have required such a measure more than France. It consisted of many provinces, originally distinct states, having each special institutions, and a separate jurisprudence of its own—circumstances inevitably producing interminable conflicts of legal principles and jurisdiction, and all those evils, direct and indirect, which flow from the "glorious uncertainty of the law." Retaining his mental vigour unimpaired, D'Aguesseau finally retired from public life in 1750, and spending the remainder of his days chiefly in the devout study of the holy scriptures, died in 1751, at the age of eighty-three. His collected works were first published in 1759, in 13 vols. 4to.—E. M.

AGUIAR, TOMMASO DE, a Spanish miniature painter in oil, of the seventeenth century, a disciple of Velasquez, and celebrated for his striking felicity in taking likenesses.

AGUILA, C. F. E. H. D', an engineer officer and traveller, author of various works, the most important of which is a history of the reign of Gustavus III., king of Sweden, of whose assassination he was an eye-witness. Died at Paris in 1815.

AGUILA, FRANCISCO DEL, a Spanish artist of the sixteenth century, who in 1570 painted the celebrated monument of Alfonso the Wise in the cathedral of Murcia.

AGUILA, MIGUEL DEL, a Spanish painter, whose productions, which are in the style of Murillo, and finely coloured, have been highly admired, died at Seville in 1736.

AGUILAR, GRACE, an accomplished Jewess, daughter of Emanuel Aguilar of Hackney, and author of an eloquent book, "The Women of Israel," London, 1845. Died at Frankfort, 1847, at the age of 31.

AGUILE'RO, DIEGO DE, a Spanish historical painter of some celebrity, a native of Toledo, flourished about the end of the 16th century. Most of his pieces were destroyed by an accidental fire.

AGUILLON, FRANÇOIS D', a Belgian jesuit, successively professor of philosophy at Douay and of theology at Antwerp, author of an able treatise on optics, was the first to diffuse among his countrymen a taste for mathematical studies. Born at Brussels in 1567, he died in 1617.

AGUIRRE, JOSEPH SAENZ D', a Spanish Benedictine, of great talents and considerable learning, successively theological professor at Salamanca, censor and secretary to the Spanish Inquisition, author of numerous ecclesiastical works, was born at Logrono in 1630. Pope Innocent XI., in 1686, conferred on him the dignity of cardinal, as the reward of his ability and zeal in promoting the interests of the papacy. Died in 1699.

AHAB succeeded his father Omri on the throne of Israel, about 918 years before Christ, and reigned twenty-two years in Samaria, which had been built by Omri for the royal city. He married Jezebel, the daughter of the Zidonian king, and at her instigation introduced the impure worship of Baal, and became noted as one of the most idolatrous and cruel of the kings of Israel. His life is associated with the name of Elijah, who boldly denounced his sins, and thus exposed himself to persecution. The character of Ahab is well illustrated by the story of the vineyard in Jezreel, which he coveted, and at last seized; his wife having secured the death of Naboth, its proprietor, by a false accusation of blasphemy. For this the prophet denounced a fearful curse on his house, the fulfilment of which we read of in the sacred history. Ahab was for several years at war with Syria, and at last, having allied himself with Jehoshaphat of Judah, went against Ramoth Gilcad. He entered the battle in disguise, having persuaded Jehoshaphat to occupy the royal chariot, but was wounded by a random arrow, and died before the evening.—J. B.

AHASUE'RUS or ACHASVE'ROSH, the title of four Median and Persian kings.

(1.) The father of Darius the Mede, is mentioned in Daniel ix. 1, and is most probably Astyages.

(2.) The king to whom we are told (Ezra iv. 6) an accusation against the Jews was brought, is probably the tyrant Cambyses, the immediate successor of Cyrus.

(3.) The king of whose fickleness and tyranny we read in the book of Esther. In the third year of his reign, he made a great feast for 180 days. During the revelry he sent for Vashti, to show her beauty to his guests. She refused thus to violate the rules of Eastern decorum. The king was enraged, and divorced her; and, after a while, the young Esther was chosen her successor. Haman, a royal favourite, being displeased with Mordecai the Jew, who had been Esther's guardian, plotted against his nation, and obtained from the king an edict for the destruction of all the Jews on a certain day. Esther having heard of this, used her influence with the tyrant, and though the laws of the Medes and Persians could not be altered, another decree was at once published, empowering the Jews to act on the defensive. In consequence, 800 of the native subjects of Ahasuerus perished in Shushan, and 75,000 in the provinces. Several incidents in the life of Xerxes, the invader of Greece, correspond to what we are told of Ahasuerus, and the arguments in favour of his being the king mentioned in Esther are almost conclusive, though some maintain that the character and incidents point rather to Artaxerxes Longimanus.

(4.) The Ahasuerus mentioned in Tobit xiv. 15, in connection with the destruction of Nineveh, must be Cyaxares I.—J. B.

AHAZ, the eleventh king of Judah, succeeded his father Jotham, about 775 years before Christ, and reigned for sixteen years. During his reign, Judah was invaded by the allied kings of Israel and Syria, against whom Ahaz sought and obtained assistance from the king of Assyria, who attacked and conquered Damascus. On a visit to that city, Ahaz saw and admired an altar of peculiar construction, and ordered various changes in the temple at Jerusalem, to make it correspond with the Syrian model. He was guilty of great idolatry, the kingdom was in a most unhappy state under his administration, and the accession of his son, the good Hezekiah, was hailed with universal joy.—J. B.

AHAZIAH (1.), the son of Ahab, who succeeded him on the throne of Israel, about 897 B.C., and reigned for two years, following the evil practices of his father, under the direction of Jezebel. During his reign, the Moabites revolted from Israel. He died in consequence of a fall from the roof of his palace.

AHAZIAH (2.) or JEHOAHAZ, the sixth king of Judah, son of Jehoram, and grandson of Ahab, by his mother Athaliah. He closely resembled that king of Israel, and being allied with his relative Jehoram, in the war against Hazael of Syria, he was with him at his summer palace of Jezreel when Jehu appeared to take vengeance on the house of Ahab. After Jehoram was slain, Ahaziah was pursued, and received a wound, of which he died at Megiddo, having reigned only one year, 885 B.C.—J. B.

AHIAH, probably the same as Ahimelech (see AHIMELECH). This was the name of other two persons mentioned in the Old Testament, in 1 Kings iv. 3, and in 1 Chron. viii. 7.

AHIMAAZ (*Brother of anger*), a faithful follower of King David during the revolt of Absalom, was the son and successor of Zadok the priest.

AHIMELECH (*Brother of the king*), the priest at Nob, who supplied David with bread as he fled from the face of King Saul, for which he and his house were destroyed by the tyrant.

AHITHOPHEL (*Brother of foolishness*), a counsellor of King David, who joined Absalom in his revolt.

AHLE, JOHANN GEORGE, a poet and musician, son of the following, born at Mühlhausen in 1650, succeeded his father as organist of St. Blaise. He left many works connected with his art, including both songs and sacred pieces, with instrumental accompaniments.

AHLE, JOHANN RODOLPH, a noted German musician, born at Mühlhausen in 1625. He studied at Göttingen and Erfurt, was appointed in 1649 organist of the church of St. Blaise in his native town, and died in 1673, leaving a great many works, chiefly motets and hymns, with some instrumental compositions.

AHLSTRÖM, JOHN, a Danish astronomer of the seventeenth century, wrote a book entitled "Disputatio Mathematica de triplici solis facie adulterina, in hoc horizonte ortivo, die 23 Octobris, anni 1690."

AHLWARDT, CHRISTIAN WILHELM, a noted German linguist, born at Greifswald, 23d July, 1760. He studied in his native town, and became a private teacher of languages. He was then appointed successively manager of the public school at Auklam, rector of the gymnasiums of Oldenburg and Greifswald, and lastly, was raised to the professorship of ancient literature in the university of that latter town. He translated portions from the writings of the chief classic authors; but his best known work is a translation of Ossian from the original Gaelic.—J. B.

AHLWARDT, PETER, a German professor of logic and metaphysics at Greifswald, his native town. He has left some metaphysical works, and an essay on the phenomena of thunder and lightning. He was born in 1710, and died in 1791.

AHMED, ABU-MAZAR, the author of a work on the interpretation of dreams according to the doctrine of the Indians, Persians, and Egyptians. It is supposed that he was an Arab physician, and lived in the ninth century.

AHMED, AL-MAKKARI, a celebrated Arab writer, best known from his history of the Arabs in Spain, from the conquest of the country in the year 711–712 to the expulsion of the Moriscos under Philip III. in 1610. He was born at Telemsán in 1577, studied at Fez, travelled in Egypt, Arabia, Palestine, and Syria, and resided for several years at Damascus and Cairo. He died in 1632. A translation of portions of his history was published in London in 1840.—J. B.

AHMED or ACHMET, the name of three Ottoman emperors.

AHMED or ACHMET I., born in 1590, succeeded his father, Mahomet III., in 1603. After unsuccessfully assisting the Hungarians and the prince of Transylvania in a war with the Emperor Rudolph II., he concluded a truce for twenty years with that monarch at Sitvatorok in 1606. This is said to have been the first occasion on which the Turks negotiated on the principles of international law. Previously, every peace with a Christian nation was regarded by them as a respite accorded by Islam to infidel dogs on their submission and payment of tribute; and such is the notion of the ordinary orthodox Turk at the present day. The *charatch* ticket given to a Christian subject of the Porte, still certifies that the bearer has paid for permission to wear his head on his shoulders for another year longer. In 1612, Achmet terminated a disastrous war with the Persians, by ceding to them the city of Tauris, and all the other conquests they had made. In 1616 the war was renewed, and the Turks were defeated by a Persian army far inferior in numbers. Achmet had a taste for the fine arts, but was voluptuous and cruel.—E. M.

AHMED or ACHMET II. was born in 1643, and ascended the throne in 1691, after living, from his birth down to that period, a prisoner in the seraglio. His brief reign was inglorious and disastrous. In 1691 the Turkish army, under the grand vizier Kiuprili, was defeated with great slaughter by the Imperialists at Sankamen in Hungary. To this calamity were added earthquakes, the plague, a famine, and the usual token of political discontent—a terrific conflagration at Constantinople, that desolated a large portion of the city. These and other disasters entirely crushed his spirit; and he died in 1695.—E. M.

AHMED or ACHMET III. was born in 1673, and was raised to the throne in 1703, on the deposition of his brother, Mustapha II., by a revolt of the janissaries. He was the first sultan who announced his accession to the sovereigns of Europe. In 1709, Charles XII. of Sweden, after his defeat at Pultowa, took refuge on the Turkish territory, and was kindly received, and even furnished with a large sum of ready money, by Achmet. During the war between Russia and the Porte in 1711, the Czar Peter the Great was placed in a perilous position near the Pruth, from which he could not have escaped, had not the Turkish commander accepted a bribe, and betrayed his trust, by sparing the enemy, and recommending the treaty of Pruth, 22nd July, 1711. In 1715 the Turks took the Morea from the Venetians; but in 1716, the sultan's army was signally discomfited by Prince Eugene in the memorable battle of Belgrade. From 1723 till October, 1727, the sultan was engaged in a war with Persia, which, after reverses and advantages on both sides, was terminated by a treaty favourable to the Porte. In 1728 great preparations were made at Constantinople for renewing the war, but the reign of Achmet was suddenly brought to an end by a revolt of the army and people of Constantinople. After vainly attempting to save himself by sacrificing to the insurgents his unpopular ministers, he was dethroned, and succeeded by his nephew Mahmoud, in October, 1730. He survived this event

several years, and died of apoplexy in April, 1739. He was a man of imposing appearance, and possessed many estimable and amiable qualities. He had a taste for literature and the arts. In his reign, 1727, the first printing-office was established at Constantinople, and under Achmet's auspices, numerous historical works, as well as treatises on other important subjects, were published. He also established five libraries, of which three were for the use of the public.—E. M.

AHMED-BEN-FARES, surnamed EL-RAZY, a writer on jurisprudence, and author of an Arab dictionary, named Modj-mil-Alloghat, copies of which are preserved in the libraries of Paris and Leyden. He died at Hamadan in the year 1000.

AHMED-BEN-MOHAMMED (ABU AMRU), an Arabian poet and historian, born at Jaen in Spain, about the beginning of the tenth century. He lived at Cordova under the patronage of Al-hakem, the sultan. Besides writing original poetry, he made a collection of the best poems written by the Spanish Arabs, which he named "Hadáyik," or "Enclosed Gardens." He wrote also histories of the sultans of the Umeyyah dynasty. He died in the year 970.—J. B.

AHMED-BEN-THOULON (ABU'-L-'ABBA'S), the founder of the Egyptian dynasty of the Tulúnites, was born at Samarra in the year 835. He inherited from his father a position of dignity at the court of the Turkish caliph, and in 873 rose to be governor of Egypt, to which province he had gone in the suite of the governor Bakbak but a few years before. Suspicions being entertained of his loyalty, an attempt was made to displace him. He resisted, and proclaimed himself independent of the caliph. He then proceeded to extend his dominions by conquest, marched into Syria, and took Emessa, Hamah, Aleppo, and Antioch. A rebellion, headed by his son whom he had left to govern in his absence, recalled him to Egypt, and while he was engaged in settling matters there, Lulu, whom he had set over his new territory in Syria, rebelled in turn. He proceeded at once against him, but never succeeded in regaining all his conquests, and he died at Antioch in the year 833. He is represented as a wise and generous prince, who cared for the interests of his subjects, was hospitable at his palace, and gave largely to the poor. The dynasty which he founded lasted till the year 905, and numbered four sultans.—J. B.

AHMED-IBN-ABDI-R-RABBISHI, an Arabian poet and historian; born at Cordova, A. D. 860; died in 940.

AHMED-IBN-ABABSHAH, GUERASIP, an Arabian historian, and the biographer of Timour, or Tamerlane. He died at Damascus, A. D. 1450.

AHMED-KHAN or NYGOUDAR, a Mongol emperor of Persia, of the family of Jenghis-Khan, succeeded to the throne A. D. 1282, on the death of his brother Abaca-Khan.

AHMED SHAH, founder of the Durani dynasty in Afghanistan, was born at a place situated between Herat and Kandahar in 1723. His father, Zaman-Khan, was chief of the Afghan tribe called the Abdalis. In 1738, after a gallant resistance, the Abdalis submitted to the famous conqueror, Nadir Shah. Following that extraordinary man, young Ahmed was soon intrusted with the command of a body of cavalry, and evinced such heroism as to gain Nadir's confidence. In 1747 Nadir Shah was murdered in his tent. Ahmed, after attempting to avenge his chief, effected his retreat to Afghanistan, on finding the assassins were supported by the whole Persian army. He was now proclaimed monarch of Afghanistan, and solemnly crowned at Kandahar in October, 1747, at the early age of twenty-three. He displayed remarkable discretion in respecting the prejudices of his countrymen, and abstaining from interference with the internal arrangements of the tribes. He was, by an unexpected occurrence, furnished with resources for undertaking an enterprise that was to extend his fame and power, as well as enrich his adherents. A convoy with a large amount of treasure on its way to Nadir Shah fell into his power, and he had already come into possession of the famous diamond, of enormous value, called the Koh-i-noor, or "Mountain of light," which ultimately passed into the hands of the British, on the conquest of the Punjab in 1847. A numerous army, full of hope and vigour, was soon collected under his banner, with which he at once marched for Hindostan. Before the end of 1752 he had subdued the Punjab, and made himself master of Kashmir. In 1757 he entered Delhi, which, in spite of his efforts to prevent them, his followers recklessly pillaged. Maladies in his armies, and other causes, compelled him to hasten his departure homewards, and his victorious troops returned to

Afghanistan loaded with spoils. In 1759 Ahmed undertook another expedition to Hindostan, mainly to oppose the growing power of the Mahrattas, already most formidable. He defeated them at Badli, near Delhi, but they soon collected a new and far more powerful army, under the command of the heir-apparent of their country. In 1761, 7th January, the Afghans gained a complete victory in the memorable battle of Paniput. Ahmed, instead of aiming at establishing for himself an empire in India, judiciously led back his triumphant army to Kabul. After repeated hostilities with the Sikhs, he allowed them to take permanent possession of the Punjab. He wisely contented himself with maintaining his authority throughout his extensive dominions to the west of the Indus. In the spring of 1773, he was obliged, by the impaired state of his health, to repair to the hills of Toba. He died at Murgha in June, 1773, leaving his dominions to his son, Timur Shah. The empire he founded began to decline under his son, and under his grandsons it disappeared.—E. M.

AHRENS, FL., recently professor of philosophy and of the Laws of Nations in the university of Brussels. A clear and most instructive writer, whose merits are very inadequately known in England. Adopting the metaphysical system of Krause, the principle of which has recently been advocated in England by Mr. Morell, Ahrens exposed it in his valuable "Cours de Philosophie;" but his great and most compact work is a volume, entitled "Cours de Droit Naturel," of which we feel entitled to say, that it takes rank with the best treatises produced in modern times, on the foundations of public and national Morals. Ahrens' style is as clear as his thought is accurate and profound. An interesting commentary on the system adopted by Ahrens and Krause has recently been produced by M. Tiberghien.—J. P. N.

AHUITZOL, the eighth Aztec emperor, was elected in 1477, on the death of Anajacath. He extended the boundaries of the Mexican empire, adorned the capital, and was a patron of the useful arts. This monarch is remembered for his attempts to abolish sacrifices. He was succeeded by Montezuma II., during whose reign Mexico was conquered by the Spaniards.

AIBEK, AZED-EDDYN, the first sultan of Egypt, of the dynasty of Baharite Mamelukes; died April 10, 1257. Having been brought to Egypt in his youth as a slave, his courage soon raised him to a high military rank, under Touran Shah, who reigned during the invasion of the crusaders under St. Louis of France. Aibek took part in the sanguinary conflicts around the walls of Damietta. After Louis had been taken prisoner, a mutiny raised Aibek to the rank of atabek, or commander-in-chief, Touran Shah being succeeded by Chadjr-Eddour. He successfully defended Louis and the other French prisoners from the violence of his followers, and set them at liberty, on payment of 200,000 livres as a ransom. After a variety of intrigues, plots, and revolutions, he became undisputed sovereign of Egypt, A.D. 1254, but died shortly after by the hand of an assassin. Aibek was a patron of learning, and founded a magnificent college at Old Cairo, on the banks of the Nile. He was succeeded by his son Ali, surnamed Melik-al-Mansour, who, after a short reign, was deposed by the Mameluke Keouthuz.—J. W. S.

AICARDO, JOHN, an Italian architect, who constructed various admired public works at Genoa, was born at Cuneo in Piedmont, about the end of the 16th century, and died in 1650.

AICHER, P. OTTO, a Benedictine of Salzburg, celebrated as an eloquent professor of rhetoric, poetry, and history, and author of various treatises, antiquarian and historical. Died in 1705.

AIDAN, a king of the Daldriadic Scots, who reigned in the sixth century. Bede tells us that, in 603, he invaded the territory of Edilfrid, king of the Northumbrians, but was defeated. He died two years later, and was buried at Kilcheran in Kintyre.

AIDAN, St., abbot or bishop of Lindisfarne, was originally a monk of Iona, where Oswald, king of Northumbria, had been educated. When Oswald came to the throne, finding that his subjects had returned to Paganism, he sent to Iona for some one to teach them Christianity. Cormac was sent, an austere, morose man, who had but little success, and soon returned to tell his brothers that the task was hopeless. Aidan chided him for not dealing kindly enough with the people; his speech pleased the monks, and they asked him to undertake the mission. He accepted, and soon his gentleness won the rough Northumbrians, and the whole country embraced the faith he taught. He was assisted in his work by Oswald, who acted as his interpreter. He died, according to Bede, August 31, 651. Aidan was the founder of the monastery of Lindisfarne, and is

reckoned the first in the line of bishops who take their title from Durham. He is also remembered for his adherence to the ancient usage of the British and Irish churches, in the dispute about the proper season for the observance of Easter.—J. B.

AIDEN, a king of Ireland, who succeeded Donchad in the year 797. The events of his reign are of serious importance, though little can be recorded of his personal history. During his reign, numerous armies of Danes landed on the coasts of Ireland upon several occasions, and though more than once repulsed, they committed terrible devastations and slaughter. After a troubled reign of twenty-two years, Aiden was slain in the battle of Da Fearta by Muolcanaigh.—(Wills.)—J. F. W.

AIGNAN, ÉTIENNE, a French writer and academicien, author of a poetic version of the Iliad, and of numerous treatises in prose, among which are "A History of Trial by Jury;" "State of the Protestants in France;" "Justice and Police," &c., was born at Beaugency-sur-Loire in 1773, and died in 1824. Doomed, during the Reign of Terror, for his humanity, and moderate though republican sentiments, he was saved from the guillotine by the death of Robespierre.—E. M.

AIGREAUX, ROBERT, and ANTOINE LECHEVALIER, two brothers, joint authors of translations of Virgil and Horace, and of various original poems, were born in Normandy about the middle, and died about the end, of the sixteenth century.

AIGUEBERRE or AIGUERERT, JEAN DUMAS D', a member of the parliament of Toulouse, author of several dramatic pieces, the principal of which is a sort of tripartite opera, consisting of a tragedy, "Polyzema;" a comedy, "The Miser in Love;" and a heroic pastoral, "Pan and Doris;" born in 1692, died 1755.

AIGUILLON, ARMAND VIGNEROT DU PLESSIS RICHELIEU, DUC D', great grand-nephew of Cardinal Richelieu, and foreign minister of France during the last three years of the reign of Louis XV., 1771-4, was born in 1720. Though polished in his manners, and not deficient in shrewdness and vigour, he was destitute of all the qualities that constitute the able or the upright statesman; and was raised to his high position, and maintained in power, solely by the combined court influence of courtesans and jesuits. The means employed for his elevation, and the measures of his inglorious ministry, greatly contributed to undermine the throne, and prepare the popular enthusiasm of 1788, and the horrors of 1793. During the Seven Years' War, Aiguillon was commander of the forces in Brittany, and, by his tyranny and iniquities, had rendered himself intensely unpopular. An illustrious patriot, M. de la Chalotais, procureur-general in the parliament (or judicature) of Rennes, incurred his implacable resentment by denouncing his delinquencies, and still more by indulging in witty allusions to his alleged cowardice. Aiguillon formally accused him of treason, and by false testimony procured a sentence of death against the innocent man. Chalotais was afterwards liberated through the intrepidity of the parliament of Rennes, who detected and exposed the whole drama of iniquity. Aiguillon was arraigned before the parliament of Paris; the proceedings excited a deep interest all over France, and the whole legal profession of the kingdom manifested a determination that justice should be done. The feeble and debauched monarch, swayed by the artifices of his mistress in concert with priestly influence, saved Aiguillon from merited punishment, by destroying the independence of the judicature, and stripping the parliaments of those time-hallowed privileges which, under the most absolute sovereigns, had served as a constitutional check on the royal authority. The last remnant of liberty being thus crushed, Aiguillon was, in defiance of public opinion, appointed minister of foreign affairs. Immediately on the accession of Louis XVI. he was ignominiously dismissed from office, and spent the rest of his life at a distance from Paris, generally despised and detested. Died in 1780.—E. M.

AIGUILLON, ARMAND DE VIGNEROT DU PLESSIS RICHELIEU, DUC D', son of the preceding, was born about 1750. From resentment against Louis XVI. for the dismissal of his father, he gave his ardent adherence to the Revolution; became a member of the constituent assembly, where he frequently spoke with ability, though with violence; renounced his titles and privileges of nobility; connected himself with the notorious duke of Orleans; succeeded Custines in the command of the forces stationed at the passes of Poventruy; escaped to London, on ascertaining that he had been doomed by the dominant party at Paris; and, on being very ill received by the royalist refugees, re-

tired to Hamburg, where he died in 1800, when on the point of accepting an invitation from Bonaparte to return to France.

**AIKEN, JAMES**, son of Henry Aiken, sheriff and commissary of Orkney, was born at Kirkwall in 1613, studied literature and philosophy at Edinburgh, and divinity at Oxford, and in 1638 became chaplain to the marquis of Hamilton. After enduring, for many years, privations and perils at home and abroad, for his devotedness to the exiled house of Stuart, he was in 1677 made bishop of Moray, and in 1680 translated to the see of Galloway. Died at Edinburgh of apoplexy in 1687.—E. M.

**AIKIN, ANNA LAETITIA**. See BARBAULD.

**AIKIN, EDMUND**, son of Dr. Aikin, was an ingenious and accomplished architect, author of numerous dissertations on architectural subjects. He was born at Warrington in 1780; died 1820.

**AIKIN, JOHN, M.D.**, was born at Kebworth, Leicestershire, in 1747. He received an excellent classical education in a dissenting academy at Warrington, of which his father, John Aikin, D.D., was classical tutor. With a view to the medical profession, he was trained, for several years, under a surgeon-apothecary at Uppingham. Having attended medical classes in Edinburgh for two winters, he continued from 1766 till 1770, first in Manchester and afterwards in London, to study various departments of medical science, devoting, however, a considerable portion of his time and attention to poetry and polite literature. In 1770 he established himself as a medical practitioner at Chester, but soon afterwards settled in the same capacity at Warrington. Among the friends he acquired at Chester and Warrington were Pennant, Priestley, Roscoe, and Howard, the well-known philanthropist. In 1771 he published, besides several professional productions, "Essays on Song-writing;" and, in 1774, a translation of Tacitus' "Life of Agricola," and of his treatise "On the Manners of the Germans." In 1775 appeared his essay entitled "A Specimen of the Medical Biography of Great Britain," and a few years afterwards, the first and only volume of a projected work under the title of "Biographical Memoirs of Medicine in Great Britain, from the Revival of Literature to the time of Harvey." In 1784 he took the degree of M.D. at Leyden, and the same year removed to Yarmouth. In 1792 he left Yarmouth, and settled in London, on finding that his sympathy with the earlier phases of the French Revolution, and his avowed sentiments regarding the civil rights of dissenters, had induced a large and influential portion of the inhabitants of Yarmouth and its vicinity to withdraw from him their countenance and professional support. Between 1792 and 1796 appeared the well-known and still deservedly popular "Evenings at Home," the joint production of himself and his accomplished and amiable sister, Mrs. Barbauld; and, soon afterwards, his excellent "Letters from a Father to his Son, on Various Topics relative to Literature and the Conduct of Life." From 1796 to 1806 he was editor of the "Monthly Magazine." In 1799 he published the first volume of his "General Biography," the tenth and last volume of which did not appear till 1815. In this work, Dr. Enfield and a few other able writers were his coadjutors to the extent of about one-half of the publication. Dr. Aiken was so voluminous a writer, that our space precludes a complete list of his valuable publications. He was long editor of Dodsley's "Annual Register." Besides his "Lives of John Selden and Archbishop Usher," and his "View of the Character and Public Services of the late John Howard;" his "Annals of the Reign of George III.," and his "Select works of British Poets," are highly valued. Died of apoplexy in 1822. An interesting memoir of Dr. Aikin has been written by his accomplished daughter, Lucy Aikin, 1823, 2 vols.—E. M.

**AIKMAN, WILLIAM**, a Scottish portrait painter of considerable eminence, was born in Aberdeenshire in 1682. He studied for the bar, but an early enthusiasm for the fine arts led him to renounce his prospects in the legal career, and follow painting as a profession. After cultivating the theory and practice of the art under Sir J. Medina, then in Scotland, he disposed of his patrimony in Forfarshire, and went abroad for professional improvement. He spent five years mostly in Italy, visited the Levant and other parts, and, returning to Scotland in 1712, resided there till 1723, when he removed to London. There, through the patronage of the duke of Argyle, he soon attained great success in his profession. When Thomson arrived in London, friendless and unknown, Aikman, appreciating his merit, had the privilege of opening to him the way to competence and fame. He was a very accomplished and amiable man, and lived

on terms of cordial intimacy with many of the most illustrious persons of the age. Died in London in 1731.—E. M.

**AILBE**, a bishop of Emly in Ireland, who was born in 360, is said to have been consecrated at Rome, and returned to Ireland in 412, where he converted and baptized great numbers of the heathen people. There is an old life of this bishop, preserved by Colgan, in which it is stated that Ailbe is called a disciple of St. Patrick, and is supposed to have received holy orders at his hands. According to Usher, he died in 527. If this be correct, he must have lived to the extreme old age of 167; but in all probability, either the recorded date of his birth or of his death is inaccurate.—(*Ware*.)—J. F. W.

**AILERAN**, surnamed "the Wise," and also designated by the Latin and Irish writers by the names of **AIRERAN** and **ERICAN**, a celebrated Irish writer of the seventh century, and regent of the great school of Clonard in Meath. He was a contemporary of St. Fechin, whose life he is said to have written, as also those of St. Patrick and St. Brigid. His most celebrated work is "An Allegorical Exposition of the Genealogy of Christ," first published in 1667. His death is recorded in the "Annals of Ulster," as having occurred in the year 665.—J. F. W.

**AILLAUD, PIERRE TOUSSAINT**, a French ecclesiastic, professor and librarian at Montauban, and a poet of some distinction; born at Montpellier in 1759. His poetic works are voluminous, and mostly epic. Died at Montauban in 1826.

**AILLY, PIERRE D'**, a celebrated French prelate, metaphysician, and divine, author of numerous works, mostly theological, was born at Compiègne in Picardy, in 1350. An eloquent preacher, an acute and ardent assertor of the philosophical theory of the Nominalists, and an intrepid champion of the liberties of the Gallican church in opposition to ultramontane views of papal supremacy, D'Ailly was one of the most remarkable men of one of the most interesting periods in mediæval history. In 1384 he became *grandmaitre* of the college of Navarre, Paris, where his lectures in philosophy and divinity were attended by crowds of admiring students, including Clemangis and the still more famous John Gerson. In 1389 he became chancellor of the university of Paris; in 1398 he was raised to the see of Cambrai; and in 1411 he was made a cardinal by Pope John XXIII., and appointed his legate in Germany. His indefatigable exertions greatly contributed to put an end to the scandalous schism in the church occasioned by the existence of two rival popes; and he zealously strove to promote such an ecclesiastical reformation as would have consisted in the removal of flagrant abuses, and the restoration of ancient discipline. With all his attainments and admirable qualities, he was not uninfluenced by the lingering darkness of the times. He fully believed in astrology, and he considered the capital punishment of what he deemed heresy, a Christian duty. At the council of Constance, where he presided during the third session, he was accessory to the death of John Huss. Agreeably to the mediæval usage of conferring on celebrated philosophers and divines a distinctive appellation, he was surnamed the "Hammer of Heretics, and the Eagle of the Doctors of France." Died about 1425.—E. M.

**AILRED**, called also **ETHALRED** or **EALRED**, abbot of the Cistercian monastery of Rievaulx in Yorkshire, in the twelfth century, and author of numerous works, historical and theological, was born about 1109, probably in Scotland. He was at least educated in that country, along with Prince Henry, son of King David. The most important of his historical writings were printed in 1652. These have been overrated as sources of authentic history. Some of his theological works were printed at Douay in 1631, and afterwards republished in the "Bibliotheca Cisterciensis."—E. M.

**AIMERIC DE PEGUILAIN**, a troubadour, author of more than fifty poems still extant, though mostly in MS., was born at Toulouse about 1175. He travelled over the south of France, Italy, and Spain, and was treated with great distinction at the most brilliant courts of the age.

**AIMERICH, FATHER MATHEW**, a Spanish jesuit, author of numerous treatises, partly theological and partly literary, was born at Bordil in 1715, and, on the expulsion of the jesuits from Spain, fixed his residence at Ferrara, where he died in 1799.

**AIMERY** or **AMAURY DE LUSIGNAN** lived in the twelfth century. In 1194 he obtained the kingdom of Cyprus on the death of his brother Guy, and, in 1197, that of Jerusalem, through his wife Isabella, daughter of Aimery I. In alliance with the German crusaders, he was distinguished in the war

against the Saracens, who were led by Malek Al-'adhil, the brother of Saladin. He died at Acre in 1205.—J. B.

AIMON, a Benedictine monk, pupil of Abbo, and abbot of Fleury-sur-Loire, author of a legendary work, which he entitled "History of France," was born about the middle of the tenth century, and died 1008.

AIMON or AIME DE VARENNE, a French poet, by birth a Greek, author of a poetic romance, entitled "Florimont and Philip of Macedon," MS. copies of which are still extant at Paris, London, and Venice.

AIMON or AYMUN, ALARD, RICHARD, GUISCARD, and ROLAND, said to have been sons of the duke of Dordogne, personages famous in the poetic legends of chivalry, though their historical existence is very doubtful.

AINGY, SOLIMAN, a native of Bosnia, of Christian parents, became grand vizier to Sultan Mahomet IV., displayed great vigour and capacity, was a strict disciplinarian, obtained a victory over the Poles, but was completely defeated by the dukes of Bavaria and Lorraine in 168, and finally beheaded, by order of the sultan, to gratify the mutinous Ottoman army.

AINSLIE, GEORGE ROBERT, a British general, some time governor of Dominica, devoted much of his leisure to the study of numismatology, made a valuable collection of Anglo-Norman coins, and published in 1830, in a handsome quarto volume, "Illustrations of the Anglo-French Coinage," &c. Born in Edinburgh, 1776; died in his native city in 1839.

AINSWORTH, HENRY, an eminent biblical scholar and commentator, and one of the founders of the Independent body in England. Of the time and place of his birth, or the events of his early history, no record has been preserved. He is mentioned for the first time by Bishop Hall, as in close alliance with the church of the exiled Brownists, who had fled from the severity of Queen Elizabeth and her bishops, and were wont to assemble "in a blind lane at Amsterdam." This was in the year 1592-93. We find him still at Amsterdam in 1596, whence he wrote some letters preserved by Limborch in his "Epistolæ Viror. Eruditor.," p. 74. He appears to have been at this time in great poverty, as, in order to obtain the necessaries of life, he became porter to a bookseller, from whom he received a miserable pittance in return for his services. Whilst thus employed, he came under the notice of several eminent scholars who appreciated his learning, and encouraged him in those literary labours which have established for him a permanent reputation. Not long after his settlement in Amsterdam, he was chosen as doctor or teacher of the church there, over which Francis Johnson presided as pastor. Finding that their views were in many quarters misrepresented to their injury, Johnson had drawn up a confession of faith of the English exiles, which he published in 1596; this, after being republished in 1598, was issued a third time in an enlarged form, as the joint production of Johnson and Ainsworth, by the latter of whom it was translated into Latin, and sent forth in this guise in his own name. This document will be found cited in "Hanbury's Memorials relating to Independents," vol. i., p. 91. During his connection with the church at Amsterdam, Ainsworth paid a visit to Ireland, where he left some disciples, returning again to Holland. Ainsworth was frequently involved in controversy. His concluding years, however, appear to have been spent in comparative peace. He died in 1622 very suddenly, and not without suspicion of violence. Ainsworth's works consist of Annotations on the Pentateuch, the Psalms, and Solomon's Song, published first separately, between 1612 and 1623, afterwards collectively, in one vol. folio, in 1627, again in 1639, and recently in 2 vols. 8vo. His minor writings are very numerous. The most valuable are his "Controversial Tracts with Hugh Broughton," on archæological questions; his "Communion of Saints;" his Discussion with John Ainsworth on subjects connected with the Popish Controversy; his "Seasonable Discourse," in reply to a work on Predestination, "by the servants of God, grossly called Anabaptists;" and his posthumous work, entitled "The Orthodox Foundation of Religion." Ainsworth left behind him an extensive reputation as a man of profound learning, sound judgment, rare rectitude and candour, and a lovely union of firmness and boldness with "the gentleness of Christ," in the avowal and defence of his opinions.—W. L. A.

AINSWORTH, ROBERT, a well-known grammarian and lexicographer, was born at Woodyale in Lancashire in 1660. He received his early education at Bolton, where he afterwards

resided some time as a schoolmaster. In 1698 he removed to London, opened a boarding-school in the environs, and, in course of time, acquired a competency which enabled him to retire from scholastic drudgery. In 1736 he published his English and Latin and Latin and English Dictionary. Died in 1745.—E. M.

\* AINSWORTH, WILLIAM FRANCIS, a distinguished physician, geologist, and traveller, cousin of William Harrison Ainsworth, was born at Exeter in 1807. Having taken his degree of M.D. at Edinburgh in 1828, he visited Auvergne and the Pyrenees for geological purposes. Returning to Edinburgh in 1828, he became editor of the "Journal of Natural and Geographical Science," and a lecturer on Geology. In 1835 he was attached as physician and geologist to Colonel Chesney's expedition to the shores of the Euphrates, and in 1837 returned by Kurdistan, Taurus, and Asia Minor. In 1838 he was sent with Rassam and Thomas Russell, by the Geographical Society and the Society for Promoting Christian Knowledge, to Kurdistan, &c. In 1840 he visited the Nestorians; and in 1841 published "Researches in Assyria," and "Travels and Researches in Asia Minor," &c. Besides reports and memoirs, he also published, in 1844, "The Claims of the Christian Aborigines in the East," and "Travels in the Track of the 10,000 Greeks."—E. M.

\* AINSWORTH, WILLIAM HARRISON, a popular English author, born at Manchester in 1805. He was at first intended for the bar, but his taste led him to a literary career. Besides copiously contributing to English periodical literature, he has published the following works:—"Sir John Chiverton;" "Rookwood;" "Jack Shepherd;" "Guy Fawkes;" "Crichton;" "James II.;" "The Miser's Daughter;" "Old St. Paul's;" "St. James;" "The Tower of London;" "Windsor Castle;" "The Lancashire Witches;" "The Star Chamber;" "The Flicht of Bacon." He founded "Ainsworth's Magazine" in 1842; and in 1845 became proprietor of the "New Monthly Magazine."—E. M.

AIRAY, CHRISTOPHER, an Englishman of Clifton in Westmoreland, and rector of Milford in Hampshire. Wrote a book of logical precepts. Died 1670.

\* AIRD, THOMAS, whose contributions have long been known to all the readers of "Blackwood's Magazine," was born at Bowden, Roxburghshire, in 1802. He was at first destined for the Scottish church, and studied at Edinburgh, where he won high distinction at college, and soon found employment as a contributor to the periodical literature of the day. After the death of Mr. James Ballantyne, Mr. Aird became editor of the "Edinburgh Weekly Journal;" thence he passed to Dumfries, where he still remains as editor of the "Dumfries Herald," having never chosen to leave his retirement to fill any wider sphere. His publications, both in prose and verse, have at various times appeared to enrich our literature. He has lately collected his poems into one volume, and his stray tales and sketches have appeared in a sort of medley, which he has named "The Old Bachelor in the Scottish Village." He has also written "Religious Characteristics" and a memoir of the author prefixed to an edition of the "Poems" of his friend Dr. Moir (Delta), the publication of which he superintended. Among Mr. Aird's poetical works, that on which his fame must rest, and which has already raised him to no mean place among the poets of our country, is the "Devil's Dream," a work combining weird power with exquisite beauty. Of his prose works, the most popular is "Buy a Broom," a pleasing little tale, to be found in "The Old Bachelor."—J. B.

\* AIREY, JAMES TALBOT, lieutenant-colonel in the army, and captain in the Coldstream Guards, a C.B. and K.L.H., is brother of the quartermaster-general,—an officer who has seen much service for his years. He served under Sir R. Sale and General Elphinstone in Cabul and Afghanistan, and was in the hands of the enemy for some time, which afforded him an opportunity of writing an interesting account of his captivity. He also served under Sir J. M'Carroll, and was present at the battle of Punniar. On the commencement of the Russian war he went out to the East, and as assistant quartermaster-general to Sir George Brown's division, he was engaged in the hard work of that great campaign in the Crimea, and was present at Alma and Inkerman. As a reward for his services, he was appointed to the Guards, and he holds the honours indicated above.—W. H. R.

\* AIREY, SIR RICHARD, K.C.B. This officer, who is now quartermaster-general of the British army, went out to Turkey in the year 1854, as colonel commanding a brigade of Sir George Brown's division. He had not seen any active service in

the field, but he was reputed to be a smart regimental officer, and to possess considerable abilities, which indeed he displayed whilst engaged at the Horse Guards previous to the war with Russia. As brigadier, he exhibited activity and intelligence in Bulgaria; and just at the moment that the expedition was about to sail to the Crimea, he was appointed to succeed Lord de Ros, in the responsible post of quartermaster-general to the forces. In that capacity he remained with the army in the East till he was called home after the fall of Sebastopol, and soon after his arrival in England he was nominated to the high military office which he now holds. The conduct of this officer whilst acting as quartermaster-general in the Crimea has been much canvassed, and grave charges have been brought against the department over which he presided, by two commissioners sent out by the government to report on certain matters connected with the commissariat of the army. He defended himself in an elaborate speech before the Chelsea commissioners; and whatever may be the opinions entertained by the public respecting the merits of his defence, or the validity of the accusations against him, it should be in fairness recollected, that he was appointed to the post of quartermaster-general under circumstances of great difficulty, and that the onerous nature of his duties was much increased by the death of Major Wellesley, who had conducted much of the details of the department. His health in the winter of 1854 was indifferent—his eyesight was imperfect, and he was unable to take that active personal superintendence of the army which an effective quartermaster-general may be expected to exercise; but he on all occasions displayed great zeal for the service, and the rewards, promotion, and honours he has received, testify to the sense entertained by the authorities of the value of his exertions.—W. H. R.

\* AIRY, GEORGE BIDDELL, one of the first mathematicians, astronomers, and physicists now living (1859). Having entered Trinity college, Cambridge, in 1819, he gained, in 1823, the honour of senior wrangler. In 1824 he was elected a fellow of his college,—in 1826, Lucasian professor in the university,—in 1828, Plumian professor, and astronomer of the Cambridge observatory. In 1835 he was appointed by the crown to the office of astronomer-royal, which he now holds. Mr. Airy is a fellow of the Royal Society, and of various other scientific bodies, vice-president of the Astronomical Society, and a corresponding member of the Institute of France. In 1851 he enjoyed the well-deserved honour of holding the office of president of the British Association for the Advancement of Science, which in that year met at Ipswich. The following are a few amongst the many scientific achievements by which he has been distinguished:—The establishment, first at Cambridge, and afterwards at Greenwich, of an improved system of recording astronomical observations; the discovery of the "Long Inequality of Venus and the Earth," for which, in 1833, he received the gold medal of the Astronomical Society; the discovery of important principles relative to the effect of the magnetism of ships on the compass, and the means of correcting it; the investigation of the wave-theory of the tides; the determination of the laws of the circular and elliptic polarization of light in doubly-refracting crystals; the investigation of the density of the earth, by comparing the rates of a pendulum in a deep mine and at the earth's surface, &c., &c. To explain fully the nature of Mr. Airy's long series of scientific labours, and to do justice to their importance, would require an article far exceeding the limits which can reasonably be afforded in a biographical dictionary; and even were such an article now published, it would require a supplement for each additional year of the life of its subject. The following brief remarks have reference merely to a few points of general interest, in connection with those of Mr. Airy's researches which have been enumerated above. One of the distinguishing features of the system of recording astronomical observations which he introduced, is the publishing, not only of the *reduced* observations, corrected for refraction, for instrumental and personal errors, and for other sources of inaccuracy, but also of the original observations *exactly as made*, together with the various corrections applied to them. This enables every astronomer, by inspection of the published records of an observatory, to judge for himself how far the exactness of the observations, and the soundness of the methods of correcting their results, are worthy of confidence. It has further this advantage: that in the event of any new discovery being made respecting the operation of causes of errors of observation, and the methods of allowing for such errors, the benefit of that discovery can be extended to

former observations, by reducing them anew. With respect to the wave-theory of the tides, it may be remarked, that Newton gave the outlines of two theories of the tides, and left it to subsequent inquirers to investigate their details, and to determine which was right. By the first theory, the ocean was considered as revolving (as it really does) round the axis of the earth once in a sidereal day, and it was proposed to determine, by the principles of dynamics, what would be the disturbing effect of the sun and moon on that motion. This may be called the *dynamical* theory, and is the sound one. By the second theory, well known as the "*equilibrium theory*," it was proposed to investigate, what form the ocean would assume by reason of the attraction of the sun or of the moon, supposing it always to present the same face towards the disturbing body. This theory is essentially unsound; but unfortunately it received the preference of Newton's immediate successors, and was developed by eminent mathematicians in very voluminous researches; and although its unsoundness has now been known to scientific men for half a century, it still holds its ground in popular manuals. Laplace was the first fully to investigate the dynamical or true theory of the tides. He arrived at the complete solution of the problem of the disturbing action of the sun and moon on the ocean, revolving in a day, as it really does; but his results were in a form too intricate and abstruse for ordinary use; and a theory was still wanting to explain the phenomena of the tides as modified by the interference of the land with the motions of the sea, especially in narrow seas, estuaries, and channels, where the motion of the waters is rather the effect of impulse transmitted from the ocean, than of the direct action of the sun and moon. Mr. Airy very much simplified the theory of the tides of the ocean, and produced a most satisfactory theory of the tides in narrow and shallow waters, by first investigating the theory of waves in water, and then applying its results to the phenomena of the tides, considered as great waves. The wave-theory of the tides is not only scientifically interesting, but of great practical utility, and well worthy of study by those concerned in the designing and execution of harbours and sea-works. Besides the papers relating to his original discoveries, Mr. Airy is the author of various treatises for the purposes of instruction in physico-mathematical science. One of the most remarkable of these is the article "Gravitation" in the Penny Cyclopædia, in which the general nature of the theory of astronomy is made clear to persons of limited mathematical knowledge, and which may be of service even to expert mathematicians, by leading them to attach clear ideas to the symbols with which they work.

AIROLA or AIROLI, FRANCESCA, an Italian canoness and distinguished painter, of the 17th century, at Genoa. She executed several historical and sacred pictures for her native town.

AIROLDI, PAUL, a Dominican of Maryland, who flourished at the beginning of the 17th century, was a popular teacher and preacher, published lectures on the Lord's Prayer, and on the seven penitential Psalms.

AISSE, MADemoiselle, a Circassian, carried off in childhood by Turkish marauders, purchased, when four years of age, in the slave market of Constantinople by the French ambassador, and carefully educated in France, was born in 1693, and died in Paris in 1733. The romance of her life, her beauty and intelligence, her generosity of character, her high position in French society, her misfortunes, together with her letters published with notes by Voltaire, have procured her celebrity.—E. M.

AITKEN, JOHN, lecturer on anatomy, surgery, and chemistry in Edinburgh, inventor of various important surgical instruments, and author of numerous medical works, was admitted member of the College of Surgeons in 1770, and died in 1790.

AITON, WILLIAM, an eminent horticulturist, was born at a village near Hamilton, Lanarkshire, in 1731. He was educated as a gardener, and in 1754 he went to England, and became assistant to Miller (author of "The Gardener's Dictionary"), at that time superintendent of the Chelsea physic garden. In 1759 he was appointed curator of the garden at Kew, and made great improvements in it, both as regards its arrangement and the construction of conservatories. In 1789 he published a work, entitled "Hortus Kewensis," or a catalogue of the plants cultivated in the Royal Botanical Garden at Kew. In the first edition, from 5000 to 6000 plants were enumerated. They were arranged according to the Linnæan system. He secured the friendship of many eminent patrons of science, such as the Earl of Bute, Sir Joseph Banks, and Dr. Solander. He died from

disease of the liver on the 1st February, 1793, in the sixty-third year of his age. A genus of plants was called by Thunberg "Aitonia," in compliment to him.—J. H. B.

**AITON, WILLIAM TOWNSEND**, was the eldest son of William Aiton, gardener to the Princess Dowager of Wales, and superintendent of the garden at Kew. He was born on 2nd February, 1766, and after going through his school education at Chiswick and Canberwell, was, in 1783, placed under his father in the royal gardens. He became eminent as a landscape gardener, and on the death of his father in 1793 he was appointed by George IV. superintendent of the royal gardens at Richmond and Kew. During the reign of George IV. he was employed to lay out the gardens of the pavilion at Brighton and of Buckingham palace, and to superintend the plantations at Windsor. In 1841, after a service of fifty years, he resigned his appointment at Kew. In 1810-13, he published a second edition of his father's "Hortus Kewensis," in 5 vols. 8vo., being assisted in the work by Sir Joseph Banks, Mr. Dryander, and Mr. Brown. He calmly breathed his last on the 9th October, 1849, in the eighty-fourth year of his age.—J. H. B.

**AITZEMA, LEON VAN**, a learned historian, arid accomplished and upright statesman, long Resident at the Hague for the Hanseatic towns, was born at Dockum in Friesland in 1600, and died at the Hague in 1661.

**AITZEMA, FOPPE VAN**, a Dutch diplomatist and jurist, known as special envoy on several occasions during the Thirty Years' War, and as author of "Dissertations on the Civil Law," republished in the sixth volume of Meerman's "Thesaurus Novus Juris Civilis et Ecclesiastici," died at Vienna about 1640.

**AJAX**, son of Oileus, king of the Locrians, was one of the Grecian princes engaged in the siege of Troy; distinguished himself on various occasions by his bravery and military skill; was shipwrecked through the hostility of Minerva, after the sack of Troy; escaped to a rock through the favour of Neptune, but perished shortly after in the sea, having, by setting all the gods at defiance, provoked that deity to dash to pieces with his trident the rock on which Ajax was standing. Later poets have added to the story of Ajax many circumstances not contained in the Homeric poems.—E. M.

**AJAX**, son of Telamon, king of Salamis, was in stature superior to all the Grecian heroes at the siege of Troy, and in valour and manly beauty, inferior only to Achilles. When, after the decease of Achilles, the armour of that hero had to be adjudged to the most valiant of the Greeks, Ajax claimed it as his right. The decision of the chiefs, which awarded it to Ulysses, caused the death of the son of Telamon, though the manner in which he died is not specified by Homer.—E. M.

**AJELLO, SEBASTIAN**, a distinguished physician of Naples, who flourished in the seventeenth century. He published in 1675 a narrative of the pestilence which had recently desolated the Neapolitan territory, a treatise on catarrhal affections, and some verses in honour of Albert of Aragon.

**AKAKIA, MARTIN**, or **SANS-MALICE**, a French physician, was born at Chalons towards the end of the fifteenth century, and died in 1551. He wrote several commentaries upon the works of Galen, and a treatise on the diseases of females.

**AKAKIA, MARTIN**, the son of the foregoing, was born at Chalons in 1539, and died in 1588. He was professor of surgery at the Royal college of France.

**AKBAR, JELLALLADIN MOHAMMED**, one of the Mogul emperors, the seventh in descent from Timour, and son of Houmayoon, was born at Amarcot in the valley of the Indus in 1542, and died in 1605. During childhood he was exposed to great danger from the treachery of his uncles and the misfortunes of his father, who had been driven into exile, but recovered his kingdom by the victory of Sirhind. Akbar succeeded to the throne at the early age of thirteen. His claims were, however, opposed by Shah-Sikander-Soor and Mohammed Adil-Shah (Adili). Himmon or Hemon, the vizier of the latter, after a brilliant career, was defeated and slain by Behram-Khan, the tutor of Akbar, on the plains of Panipat, A.D. 1556. Adili himself perished shortly afterwards in Bengal. Akbar next turned his arms against Sikander-Shah, who had seized a part of the Punjab, and speedily reduced him to submission. He then employed himself in establishing a regular administration, and in checking the insubordination of his generals and governors. Being completely successful in these internal reforms, he next carried his arms into central India, and after

an obstinate resistance, he effected the subjugation of all the Rajpoot states. In accordance with his ruling idea of amalgamating his Mohammedan and Hindoo subjects into one compact nation, he married two Rajpoot princesses, and caused his son, Jehaughire, to contract similar alliances. By his wise toleration he gained the confidence of the Hindoos, who were freely admitted to the highest civil and military employments. Man-Sing, his most skilful general, and Todarmâl, his minister of finance, were of this nation. His next enterprise, after the conquest of Gujerat in 1573, was the invasion of Bengal, which was then in the hands of the Afghans, and which was not completely subjugated until 1592. Meantime Akbar quelled two dangerous rebellions raised by his brother, Mirza-Hakin, in Cabul and Cashmere, and conquered the Zoussoufzeis, or Eastern Afghans, after an obstinate struggle. Finally, he turned his arms against the kings of the Deccan, and brought them to obedience. Thus the whole of India, from Cashmere to the Nerbudda, and from Assam to the Soleimaun mountains, obeyed his sceptre.

The latter part of his reign was troubled by the misconduct and the dissensions of his sons. He died in the sixty-fourth year of his age, beloved and regretted throughout his vast dominions. His private and his public character were equally worthy of esteem, and he shines at once as a warrior, a legislator, and a patron of arts and learning. His favourite capital, Akbarabad or Agra, is now in decay, but the tomb of Houmayoon at Delhi, the forts of Agra, of Allahabad at the junction of the Ganges and the Jumna, and of Attock on the Indus, still call forth the admiration of the traveller. His wise laws are, however, the noblest monument of his name. One of his most valuable performances was the compilation of the "Ayeen Akberry," a complete statistical account of the empire, its extent, productions, and revenue. In his reign the first European mission of a religious nature arrived at the Mogul court.—J. W. S.

**AKEMOFF**, a Russian painter of modern times, who studied under Loszinszko, and executed several pictures for the churches of St. Petersburg with such success, that he was named director of the Imperial Academy of that metropolis. Died 1814.

**AKEN, JOHANN VAN**, a Flemish painter and engraver of the 17th century, celebrated for his landscapes and pictures of horses.

**AKEN, JOSEPH VAN**, a Flemish painter of figures and ornaments. He established himself in England, where, besides painting figures in many of the works of the best landscape painters of the time, he executed several exquisite pictures on satin or velvet on his own account.—R. M.

**AKENSIDE, MARK**, the author of the "Pleasures of Imagination" and other poems, was born at Newcastle-on-Tyne, on the 9th of November, 1721. His father, who was by trade a butcher, was a dissenter, and Akenside, according to Dr. Johnson, inherited from him, and retained through life, "an unnecessary and outrageous zeal for what he called and thought liberty." He received his education first at Edinburgh, and afterwards at Leyden, where he graduated as a doctor of medicine in 1744. He then returned to England, and established himself as a physician in London. The "Pleasures of Imagination," the work by which he is chiefly known, was composed in Holland, and published soon after his return to England. It obtained at the time a large share of popularity, but few persons at the present day would have the patience to read it through. The analysis of the feelings and powers of the human mind was a favourite subject with the philosophers of that age, and Akenside seems to have composed this poem, not so much under the influence of poetical inspiration, as with a view to illustrate certain philosophical theories. Johnson says that he had adopted "Shaftesbury's foolish assertion of the efficacy of ridicule for the discovery of truth;" and the greater part of the third book of the poem is the expansion of this notion. He does not seem to have met with much success in his profession, but, fortunately for him, he had formed at Leyden a close intimacy, which afterwards ripened into an ardent friendship, with Mr. Dyson, who became a lord of the Treasury, and generously made his friend an allowance of £300 a year while he lived. Akenside's character was upright, sincere, and disinterested, though tinged with pedantry. He was a great lover of classical antiquity, and is said to have furnished the prototype of the physician in Smollet's "Peregrine Pickle," who treats his friends to a "symposium after the manner of the ancients." He published a collection of odes in 1745, but they excited little attention. "When," says Dr. Johnson, "he lays his ill-fated hand upon his harp, his former powers seem to

desert him; he has no longer his luxuriance of expression nor variety of images. His thoughts are cold, and his words inelegant." He died in the year 1770, and was buried in St. James's churchyard, Westminster. The professional works of Akenside consist of a "Dissertation on Dysentery," 1764, written in elegant Latin, but since translated into English, and two papers which appeared in the "Philosophical Transactions" for 1763. His poetical works are comprised in one small volume.—T. A.

AKERBLAD, JOHN DAVID, a Swedish archæologist, born about 1760, and died in 1819. Whilst attached to a Swedish embassy at Constantinople, he visited Jerusalem, the Troad, and other places of historical interest. He has left some important essays on the celebrated stone of Rosetta, on Runic inscriptions, on the Varingians, &c.

AKERHJELM, ANNA, a remarkable Swedish lady of the seventeenth century, who, with her three younger sisters, clubbed their little all to give their brother a university education. He became ultimately chancellor and secretary of state, and forgot not the kindness of his sisters. All of them had a taste for scientific pursuits, but the object of this memoir, for some time a chambermaid, mastered various languages, and travelled into other countries with the Countess Königsmark, to whom she was companion and maid of honour. She went as far as Greece, and sent home to the university of Upsal a rare Arabian MS. Her letters and diary evince great powers of observation, and are the product of a cultivated mind. Died at Bremen, 1698.—J. E.

AKERMANN, a Swedish engraver, who flourished at Upsal about the middle of the eighteenth century. He was celebrated for his skill in the manufacture of celestial and terrestrial globes.

AKIBA BEN JOSEPH, a Jewish rabbi, lived in Palestine in the first century of the Christian era. Until his fortieth year he was a shepherd in the employ of a rich citizen of Jerusalem, named Calba Schwa, and first turned his attention to study in order to gain the affections of his master's daughter. He acquired such vast knowledge, that his school, near Jaffa, was attended by multitudes. His disciples are said to have amounted to 24,000. He was one of the principal compilers of Jewish traditions, and was held in great reverence by his countrymen. It is said that he was master of seventy languages. At an advanced age, he adopted the cause of the insurgent leader Barcotheba, whom he asserted to be the Messiah. When the rebels were routed by the troops of Adrian, Akiba was taken prisoner in the fort of Bither, and condemned to the stake along with his son Pappus. The most celebrated work ascribed to him is named "Jetsirah," or "On the Creation," a Latin version of which was published at Koenigsberg in 1642.—J. W. S.

AKOUI, a Tartar general, and prime minister to the Chinese emperor Kien-Long, flourished in the latter half of the eighteenth century. He distinguished himself by the subjugation of the Miao-Se, a semi-barbarous tribe, inhabiting the mountains of Setchuen and Kouer-Tcheon, who, for two thousand years, had defied all the power of China. After this campaign, Akoui was received by the emperor with extraordinary honours, and entered Pekin in triumph. He was next employed in obviating a terrible inundation of the river Hoangho, which had laid waste a large part of the province of Houan. By a skilfully-planned canal, he drew off the superfluous waters, and restored the land to cultivation. In 1782, a second inundation of the same river gave fresh scope for his engineering skill. He preserved throughout life the favour of his master, and the esteem both of Tartars and Chinese. The exact period of his death is unknown.—J. W. S.

ALABASTER, WILLIAM, an English divine, born at Hadleigh, Suffolk, probably about 1567. Having accompanied Essex on the Cadiz expedition of 1596, he remained in Spain, and joined the Roman catholic church, a member of which he continued till 1610, when the hostility of the jesuits drove him back to his native country and the church of England. He then became a prebendary of St. Paul's, and rector of Tharfield, and died in 1640. He was deeply read in cabalistic divinity, and published in 1610 a work named "Apparatus in Revelationem Jesu Christi;" but his chief fame rests on a Latin tragedy named "Roxana," acted at Cambridge in 1592, and published in 1632. Of this production Johnson speaks in terms of high praise, but Hallam has discovered that it is grounded on, and, to a great extent, copied from an Italian tragedy named "La Dalida," written by Luigi Grotto. The poetical powers of Alabaster are, however, the theme of praise in the writings of many of his famous contemporaries.—J. B.

ALA'DIN or ALA'-EDDIN, surnamed the "Old Man of the Mountains," a prince of the Assassins, lived about the middle of the thirteenth century. He established an independent principality in Syria, and was universally dreaded, owing to the murderous fanaticism of his followers.

ALA'-ED-DIN, the son of Osman, founder of the Ottoman empire, lived towards the end of the fourteenth century. He instituted the corps of janissaries.

ALA'-ED-DIN-KEIKOBAD, a prince of the Seljukian Turks in Asia Minor, died in 1237, after a reign of seventeen years. His capital, Iconium, was the seat of learning and arts. Like our Alfred the Great, he is said to have divided his time into three parts, for business, study, and recreation.

ALAHMAR, BEN MOHAMMED, the first king of Grenada, built the palace of the Alhambra, and died in 1237.

ALAIN, ALAN, or ALANUS (called ALAIN the Elder, as distinguished from the subject of next notice), a French bishop, born near Lille about the end of the eleventh or beginning of the twelfth century. After being a monk under St. Bernard, at Clairvaux, he became in 1140 abbot of the Cistercian abbey of La Rivour, and in 1152, bishop of Auxerre. From the love of study, he resigned his see, and spent the remainder of his life in monastic seclusion, partly at La Rivour, but latterly at Clairvaux. He wrote a biography of his friend St. Bernard.—E. M.

ALAIN DE LILLE or ALANUS DE INSULIS, one of the most renowned schoolmen of the twelfth century. For his extensive attainments, and his great and diversified capacity, he was surnamed "the Universal Doctor." The details of his history are uncertain, or unknown. He is often confounded with the preceding, and it is difficult to determine whether certain works attributed to him are really his. Born at Lille in Flanders, he was, in 1128, quite a boy (*puerulus*). It is most probable he is the author of the famous commentary on the prophecies of Merlin. His principal works are: 1. "Anti-claudianns, or Encyclopædia," a moral allegory in Latin hexameters, in nine books; 2. A collection of proverbs and maxims in Latin elegiac verse; 3. A treatise against heretics and unbelievers.—E. M.

ALAIN, a Benedict of Tours, who lived about the middle of the fourteenth century, and wrote a history of the earls of Galloway, and some other works.

ALAIN, ROBERT, was born at Paris in 1680. He was the son of a saddler, and was educated for the church, but disliking theology, he determined to follow his father's occupation. He did not, however, renounce literature, but wrote in conjunction with Le Grand, a comedy called "L'Épreuve Réciproque," which was first represented in 1711.

AL-AKHAFSII, the surname of three celebrated Arab grammarians of the school of Basrah, rival to that of Kufah. The first was instructor of the famous grammarians, Sibawayh and Abu-Obeydah; the second died 830; and the third 927.

ALALEONA, GIUSEPPE, an Italian jurist, from 1721 till his death professor of civil law at Padua, author of "Reflections on the Art of Thinking," "Miscellaneous Poetry," and a treatise on succession *ab intestato*; born at Macerata 1670, died 1749.

ALAMAN, SICARD D', a favourite minister of Raymond VII., count of Toulouse, from whom he received many favours. During his frequent absences, Alaman acted as his lieutenant, and was left executor on his will, along with Bernard, count of Comminges. A like confidence was reposed in him by Raymond's daughter and successor, and by her husband, Alphonse of France. He was, however, no favourite with the nobles and people, but was accused of managing the count's affairs for his personal aggrandizement, and was cited to appear and answer this charge, but died (3rd June, 1275) soon after his summons.—J. B.

ALAMANDE, PHILIPPA, a learned French lady, born in the fifteenth century, mother of Jacques de Sasenage, first equery to Louis XI. She was famous for the extent of her library.

ALAMANNI.—See ALEMANNI.

ALAMIR, a Moslem emir in the ninth century, who, after ravaging various provinces of the Greek empire, was defeated by a Greek army and slain.

ALAMOS DE BARRIENTOS, DON BALTHASAR, a learned Spaniard, born at Medina del Campo in Old Castile, about 1550. He was a devoted adherent of Antonio Perez, secretary of state to Philip II. of Spain. On the fall of that statesman he was thrown into prison, where he remained twelve years. During that time he produced a Spanish translation of Tacitus, with notes, &c. On recovering his liberty, he received great kindness

from the duke of Lerma, and ultimately obtained important offices under the government. Died in 1640.—E. M.

ALAMUNDAR, an Arab prince, who, after invading Palestine in 509, and massacring a great number of Christian anchorites who lived in the desert, is said to have been converted, and to have become an anchorite himself.

ALAN, bishop of Caithness, became chancellor of Scotland in 1291, and died a few months afterwards. He is the reputed author of two works in Latin, entitled "Super Regalitatem Roberti Brussii," and "Epistolæ ad Robertum Brussium."

ALAN OF LYNN, a divine of the fifteenth century, was educated at Cambridge, and celebrated as a preacher and expounder of scripture, though too much given to allegorizing. He entered a Carmelite order in his native town, where he died.

ALAN OF TEWKESBURY, author of a treatise on the life and exile of Thomas A'Becket, and of some other works; died 1201.

ALAN or ALLEN or ALLEYN, WILLIAM, cardinal of the Roman catholic church. He was born of a good family in the county of Lancaster, 1532, and educated at Oxford, where, at the age of twenty-four, in 1556, he was made principal of St. Mary's Hall. In 1558 he received a canonry of York, but his hopes of further promotions were destroyed by the accession of Queen Elizabeth. Alan left England in 1560, and retired to Louvain; but in 1565 he returned secretly, and exerted himself in the interests of his church. His zeal rendered him obnoxious, and after many narrow escapes, he arrived safely in Flanders in 1568. After lecturing at Malines with great success, he went to Douay, where he established a seminary for the English youth of his own religion. He was employed as one of the translators of the New Testament, known as the Rheims translation, published 1582, and which forms part of the Douay Bible, at which place the Old Testament was published in 1609, after Alan's death. He now entered more heartily than ever into the cause of his church, and allowed all feelings of loyalty and honour to be merged in fanaticism. He wrote in defence of Sir J. Stanley's base surrender of Daveirleux, and having been made cardinal in 1578, by the title of S. Martin de Montibus, he, the year after, drew up his famous "Declaration of the Sentence of Sixtus V. against Queen Elizabeth," and his "Admonition to the Nobility and People of England." The Armada was plentifully supplied with copies of these tracts, but after its failure they were bought up and destroyed. In 1588 he was appointed archbishop of Malines by the king of Spain, but the pope would not allow him to leave Rome, where he died in 1594. Besides the works mentioned above, he wrote a "Defence of the Power of the Priesthood to Remit Sins;" "A Treatise on the Sacraments;" and "A modest Defence of English Catholics."—J. B., O.

ALAND. See SIR JOHN FORTESCUE.

ALANDUS, principal of the Jesuit college of Nieswicz in Lithuania, and author of several ascetic treatises, and of a biography of Prince Nicolas Radziwill, founder of his college, was born at Leopold in 1561, and died at Nieswicz in 1641.

ALARCON, DON ANTONIO SUAREZ, a Spanish historian, born in 1636, was a son of the marquis of Trocical, and was thus descended from one of the most illustrious families in Spain. After studying at Salamanca, he joined the army and served for a short time under his father against the Moors at Ceuta in Africa. He then retired from the service, and devoted himself to writing a history of his famous ancestors, which embraces the period from 1177 to the seventeenth century. But the book is occupied chiefly with the exploits of Don Fernando de Alarcon. He died as soon as the work was finished, at the age of 27.—J. B.

ALARCON, DON FERNANDO D', Marques de Valle Siciliana y de Renda, born in 1466, a distinguished Spanish warrior, who was known as "Del Senor Alarcon." He took part in the wars of Grenada and Italy; after the battle of Pavia, was intrusted with the custody of Francis I. of France; and, on the capture of Rome in 1527, had charge of the person of Pope Clement VII. His life and exploits form the principal part of the chronicle written by his kinsman, Don Antonio Suarez de Alarcon.—J. B.

ALARCON, FERNA'N MARTI'NEZ D', the founder of the house of Alarcon, so distinguished in arms and letters in the history of Spain. His family name was originally Zevallos; but having, in the reign of Alfonso VIII. of Castile, taken the fortress of Alarcon, in the province of Cuenca, from the Moors, he was appointed to its command, and assumed its name. He lived in the twelfth century.—J. B.

ALARCON, HERNANDO D', a Spanish navigator of the six-

teenth century, who ascertained that California, previously believed to be an island, was a peninsula. Sailing from Acapulco in May, 1540, he proceeded to explore the coasts of California, and, on his return in 1541, presented to the viceroy an interesting narrative of his voyage, accompanied with accurate charts and maps. Alarcon was not the first who made this discovery. Another navigator, Hernando d'Ulloa, returning to Acapulco two or three weeks after Alarcon's departure, made the same announcement as the result of his observations. The discovery was further verified by Melchior Diaz, an officer in the land expedition of discovery, despatched simultaneously with Alarcon. Diaz, after surmounting incredible difficulties, reached the shores of the Pacific, and the spot where the two expeditions had been directed to meet. On a solitary tree he found a Spanish inscription, desiring the reader to examine the papers deposited at the foot of the tree. These stated that Alarcon had found that California was a peninsula. As the policy of the Spanish government was to conceal geographical discoveries, it appears that so late as 1716, the navigator Wood Rogers was still in doubt whether or not California was connected with the continent. The date and circumstances of Alarcon's death are unknown.—E. M.

ALARCON Y MENDOZA, DON JUAN RUIZ D', a celebrated Spanish dramatic poet, who flourished in the reign of Philip IV. He is generally supposed to have been a native of Tacho in Mexico, but of noble Spanish descent. He resided in Spain from an early age, studied jurisprudence, and held an important government office in the colonial department. His dramas exhibit great originality, as well as classical purity and elegance of diction. They breathe a tone of generous and dignified sentiment, and, for the most part, illustrate some important moral truths. During his lifetime, however, he did not attain popularity, though his pre-eminent merits were duly appreciated by the discerning and impartial few. Corneille's piece, entitled "Le Menteur," is avowedly a close imitation of one of Alarcon's dramas; and that illustrious Frenchman often expressed, in the strongest terms, his high admiration of the Spanish original. Alarcon's works are only to be found in collections of Spanish dramas. The precise dates of his birth and of his death are uncertain.—E. M.

ALARD or ADALARD, viscount of Flanders, lived in the eleventh century, and is commemorated as founder of the *Domeurie*, or hospital of Aubræ, in connection with which mediæval legends detail various pretended miracles.

ALARD or ADELARD, a Dutch ecclesiastic, born at Amsterdam in 1490. He was noted as a Latin and Greek scholar, and has left behind him a great many works on literature and controversy. He died at Louvain in 1544.

ALARD, FRANCIS, a theologian, born at Brussels about the beginning of the sixteenth century. He belonged to a Roman catholic family, and was himself a preacher of that faith, but afterwards became a Lutheran, for which he incurred the displeasure of his family, especially of his mother, who denounced him to the Inquisition. His life was attempted, but he succeeded in making his escape to Oldenburg. Twice after this he returned home, and as often was obliged to flee. He settled at last as pastor of Wilster in Holstein, where he died in 1578. He wrote several works, none of which are of much note.—J. B.

ALARD, LAMBERT, son of William, born at Krempen in 1602. He studied at Leipzig, and became a pastor at Brünsbüttel in Denmark. He wrote several works in prose and verse.

ALARD, NICHOLAS, born at Tönnigen in 1683, studied at Kiel, and became pastor of various congregations, and finally of the cathedral at Hamburg. He is the author of various works; that best known being a "Biography of his Ancestors," which treats chiefly of his great grandfather, the persecuted Francis Alard. He died in 1756.

ALARD, WILLIAM, son of Francis, born in 1572, was, after distinguishing himself at Wittemberg, made in 1595 joint rector of the college of Krempen, and afterwards pastor of the church there. He wrote several Latin treatises, and died in 1644.

ALARIC THE GOTH, the first captor of the city of Rome, subsequent to the days of its glory, was born about the middle of the fourth century, and sprang from the royal Gothic family of the Baltai. The tribe or nation of the Visigoths, to which he belonged, crossed the river Danube in his childhood, driven onward by vast hosts of Huns, who pressed forward from the wilds of Asia and northern Europe, and laid waste the ancient territory of the Goths. They had at first entered the Roman

empire as fugitives and suppliants, and had humbly sought permission to settle in the waste lands lying to the south of the Danube; but mutual jealousies had subsequently arisen, and in the reign of the emperor Valens, the Goths had risen in arms, and in the year 378, under the command of a chief named Fritigern, they had defeated and killed the emperor Valens, and 60,000 of his best soldiers, in a great battle fought under the walls of Adrianople. They had subsequently themselves been defeated by Theodosius in more than one battle; but in the year 382, they had concluded a peace, which left them in possession of Mæsia, and other provinces on the banks of the Danube, and in the position of allies rather than subjects of the Greek and Roman emperors. They agreed to furnish the emperor Theodosius with an army of 40,000 men, under the command of their own officers, and it was in this army and in the service of the Greek and Roman emperors, that Alaric acquired that knowledge of the art of war which he afterwards turned with such fatal effect against the inhabitants of Greece and Italy. Before these events, the Goths had become converts to Christianity, though with a strong leaning to Arian doctrines; and it is clear, from a translation of the gospels into the Mæso-Gothic language, considerable part of which still exists, that these first conquerors of Rome were of the same Teutonic or Gothic race which at that time or subsequently peopled Germany, Scandinavia, and the British islands.

On the death of Theodosius, in the year 393, the empire devolved on his two sons, Arcadius and Honorius, both youths of feeble minds. One of the first acts of Arcadius was to drive Alaric from his service and to rouse him to revenge, by an insulting refusal of all promotion. The fiery Goth returned to his own countrymen, who received him with enthusiasm, raised him on a shield (according to their custom), saluted him king, and vehemently urged him to lead them to an attack on the dominions of Arcadius. As soon as the news of the proposed expedition was spread abroad, multitudes of Seythians crossed the Danube to share in the plunder of the empire.

In the beginning of the year 396, Alaric advanced at the head of an immense army to the walls of Constantinople, the capital of the Eastern empire, laying waste the whole country as he advanced. Constantinople being too strong to be taken without a regular siege, the Goths next threw themselves into Greece, plundering all the cities, except Athens, to which Alaric granted a capitulation on payment of a large ransom, and laying waste the country on every side. Before he had entirely wasted this beautiful region, Stilicho, the commander of the legions of Honorius, arrived from Italy, and by a series of masterly movements, placed Alaric and his army in a position of extreme difficulty, from which there seemed to be no escape; but the treachery and mean jealousy of the ministers of Arcadius saved Alaric and his army, for, rather than allow Stilicho to acquire the glory of conquering Alaric, they allowed the latter to escape, and concluded a treaty with him, by which Alaric was again taken into the service of Arcadius, and appointed master-general of the emperor's infantry in Illyricum.

By this arrangement Alaric was placed in possession of the four greatest arsenals of arms in the empire, and had the opportunity of thoroughly arming and training his soldiers. After doing so, he crossed the Alps of Friul into Italy, in the autumn of the year 402, and advanced rapidly on Milan, where Honorius then resided. By prodigious efforts, Stilicho brought together an army of 30,000 men from Gaul and Britain. With this army he attacked Alaric at Pollentia, on the 29th March, 403, defeated and drove him back on Verona, where he defeated him a second time, and compelled him to retire from Italy.

After this second defeat, Alaric remained quiet for some years, and in this interval, in the year 406, Stilicho, his old rival, had the opportunity of again saving the empire, by defeating an immense army of Germans which had advanced into Italy in that year. Radogast, the leader of this army, was taken prisoner, and delivered up to Honorius, who put him to death; and two years later, Stilicho himself, having become an object of envy, jealousy, and hatred to the feeble-minded Honorius and his courtiers, was beheaded at Ravenna, by order of the emperor, on the 23rd August, 408.

By this act of insane cruelty, Italy was deprived of its last defender; and in the month of October, in the same year, Alaric again crossed the Alps, and advanced to Ravenna without any resistance. Ravenna was at that time protected by swamps

and lagoons, like those which have so long defended Venice. Behind these the cowardly Honorius and his vile courtiers remained in safety, leaving Italy at the mercy of Alaric.

Early in the spring of the year 409, Alaric appeared before Rome, which had never been threatened by a foreign enemy since the time—619 years before—when it was threatened, but not taken, by Hannibal the Carthaginian. Rome, though somewhat diminished in power by the rivalry of Constantinople, and by the removal of the court to Ravenna, was still the most magnificent city in the world. It was eighteen miles in circumference, contained a population of at least a million of inhabitants, was adorned with 1780 senatorial palaces, and with innumerable temples, baths, amphitheatres, and churches, the proudest works of the republic and the empire. Many of the Roman nobility possessed incomes equal to from £100,000 to £160,000 a year of our money, and the wealth of the whole city was probably equal to that of London or Paris in the present age, whilst in the magnificence of its public buildings it greatly surpassed them both. But the free and warlike spirit of Rome was utterly dead, and this vast population, abounding in wealth, saw the approach of the army of Alaric without an effort to arrest its progress. After enduring all the horrors of famine, they concluded a treaty with Alaric, by which they agreed to pay to him the sum of five thousand pounds weight of gold, and a great mass of precious effects, on condition that he would spare the city. He consented to do so, and withdrew his army into Tuscany.

At this time, Alaric was willing to conclude peace on condition of receiving a province from Honorius, but that wretched puppet was alike incapable of defending his dominions by war or by policy. Several negotiations were begun and broken off, and at length Alaric advanced again upon Rome, seized the city of Porto, at the mouth of the Tiber, and after reducing the Roman capital to the verge of famine, compelled the Romans to choose another emperor, in the person of Attalus, a prætorian prefect, in the place of Honorius. Attalus, however, proved himself as imbecile as Honorius; before the lapse of a year he was deposed, and for the third time the army of the Goths appeared before Rome. After a short siege, the Salarian gate was thrown open in the night to the army of Alaric, and for six days and nights, Rome, the capital of the world, endured the horrors which it had itself been the means of inflicting on a thousand cities.

Although we commonly speak of the Goths as barbarians, yet it is only just to say that they did not inflict on Rome anything like the wholesale destruction which the Romans had inflicted on Carthage, and Numantium, or even on Corinth. Only a small part of the city was burnt, and that by accident; the churches, and all who had taken refuge in them, were spared. Alaric took precautions to preserve the public buildings, and at the end of the sixth day he withdrew his army from Rome, and marched into Campania. It was on the 24th April, A.D. 410, and in the year 1163 from the founding of the city, that Alaric and the Goths captured the capital of the world.

Alaric lived only a few months after the capture of Rome. After leaving that city he marched to the south of Italy, intending to conquer Sicily and the Roman provinces of Africa, but at Cozenza he was seized with a fatal disease, which cut him off in a few days. His body was buried in the bed of the river Bisentium, that it might not be torn up and desecrated after his army had left the country; and that the place of interment might not be discovered, the unfortunate captives who were employed in burying his remains were afterwards put to death.—T. B.

ALARIC II., King of the Spanish Goths, succeeded his father Evaric in the year 484. Clovis, the first of the Merovingian dynasty in France, slew him with his own hand in a battle fought near Poitiers in 507. The dominions of Alaric included, besides the peninsula, provinces in Gaul, Languedoc, and Provence, and it is recorded, to his credit, that he administered the affairs of his kingdom in a wise and temperate spirit. He continued the concord that had subsisted between the Goths and the Franks during his father's reign, and he had for his allies the kings Gondebaud and Theodoric. It was in defence of his provinces in Gaul that he led his forces against Clovis. Like his predecessors, Alaric was a zealous Arian; but from the fact of a council of bishops having been held with his consent in 506, it may be inferred that he exercised a laudable spirit of toleration in matters ecclesiastical. The celebrated code of laws

known by the name of "Breviarium Alaricianum," and also of *Lex Romana*, and *Corpus Theodosii*, dates its origin from the time of Alaric II. In the twentieth year of his reign, he caused a commission of jurists to assemble in Gascony, for the purpose of embodying in a code whatever was best in the Roman statutes and decrees; and this code, signed by Ananius, who is supposed to have superintended the preparation of it, was distributed by Alaric throughout his dominions.—J. S., G.

ALARY, BARTHELEMY, born at Grasse about the middle of the seventeenth century, acquired a large fortune as a seller of secret remedies. He first practised in his native place, and then removed to Paris, where, having cured various persons at the court of Louis XIV., he obtained the royal patronage. He published a book on the mode of administering his medicine, and the different effects produced by it.—J. B.

ALARY, GEORGE, a French missionary, born in 1731. He was sent to Siam; but at the sack of Mergui, after suffering great privation, he was taken prisoner to Rangoon, in the kingdom of Ava. In 1768, he entered China, where he laboured with much success till he was recalled to Paris in 1772, to become the Director of the Seminary of Foreign Missions. He was interrupted in the discharge of the duties of that office by the Revolution, and obliged to take refuge in England; but in 1802 he returned to France, and re-established the seminary, which he superintended till its dissolution in 1809.—J. B.

ALARY, JEAN, a French advocate and poet, who lived in the close of the sixteenth and beginning of the seventeenth century. He was born at Toulouse, and practised in the parliament of that city. An intricate lawsuit took him to Paris, where he lived several years, and where he published the most of his works. Among these were several poems; but the book in connection with which his name is best known, is entitled "*Abrege des langues études, ou pierre philosophique des sciences.*"—J. B.

ALARY, PIERRE JOSEPH, prior of Gournay-sur-Marne, and member of the French Academy, was born at Paris in 1689. He was a favourite pupil of the Abbé de Longuerue, and the correspondent of Lord Belingbroke. Though distinguished for his acquirements, he was indifferent to literary fame, and has left no completed work. Died in 1770.

ALASCO or à LASCO, JOHN, one of the reformers of the sixteenth century, born in Poland in 1499, and connected with a family of high rank in that country. After his elementary education was finished, he visited the most celebrated European universities. On his return to Poland he was offered two bishoprics, but he chose rather to seek a sphere of action abroad. After visiting Wittenberg, where he became acquainted with Melancthon, he went to Emden in East Friesland, where he was appointed preacher, and where he was largely instrumental in completing the Reformation. In 1548, Cranmer, at the request of Edward VI., invited him to England, where he organized a congregation of foreign protestants who had taken refuge in London. On the accession of Mary these foreigners had to leave their asylum, and Alasco went with them to Denmark, but soon left that country, because his views on the Lord's Supper were inconsistent with the ritual adopted by the Danish church. At Frankfort he again organized a body of foreign protestants, consisting chiefly of those who had been under his care in London. In 1556 Alasco returned to Poland, and became one of the most zealous reformers in his native country. He was one of eighteen divines who undertook to prepare a Polish translation of the Bible; but he died in 1560, before the completion of the work. He has left various theological and controversial works.—J. B.

ALASHARI, ABU-L-HASAN 'ALI IBN ISMA'IL, founder of the sect of the Ash'arites, was born at Basrah about 860.

ALASHKAR or ALISHKAR, RABBI MOSES, an African rabbi, was, according to Rossi, judge or ruler of his people in Egypt, and has left various works on the Hebrew scriptures.

ALATINO, MOSES, a Jewish physician, born at Spoleto, in Italy, towards the end of the sixteenth century. He wrote two Latin translations, one of Galen on the treatise of Hippocrates, "*De aere, locis, et aquis,*" the other from the Hebrew of Themistion on Aristotle's work, "*On the Heavens and the World.*"

ALATINO, VITA'LE, a Jewish physician, born at Spoleto, the author of many medical works. He lived in the early part of the 16th century, and was chief physician to Pope Julius III.

ALATRINO, JOCHANAN-MORDECAI, better known as ANGELO ALATRINO, was an Italian rabbi, who lived early in the sixteenth century. He wrote an Italian translation of some

Hebrew verses by R. Nathan Jedidja ben Elieser. It was named "*The Trumpet of the Angel of M. Angelo Alatrino the Jew, with some spiritual sonnets of the same.*" Venice, 1628.

ALAVA, MIGUEL RICARDO, a Spanish general and statesman, was born at Vittoria in 1771, and died at Bareges in France, in 1843. During the usurpation of Joseph Bonaparte, he took the side of the French, and became known as a zealous "Afrancesado." About 1811 he returned to his duty, and served with some distinction under Wellington. After the peace, he was elected president of the Cortes, joined the liberal movement of 1822, under Generals Murillo and Ballasteros, and was employed on several diplomatic missions.—J. W. S.

ALAVA Y NAVARETE, DON IGNA'CIO MARI'A DE, a Spanish sailor, a native of Vittoria, who, in 1779, joined the fleet of Admiral Cordova, engaged in the war with England. After serving for a number of years, he was appointed admiral, and sailed to South America, doubled Cape Horn, crossed the Pacific to the Philippines, touching at the Mariana isles, and rectifying many errors in the charts of the South and Asiatic seas. On his return he was made second in command of the fleet under Admiral Gravina, and fought at Trafalgar, where he was severely wounded. He was raised, in 1817, to the rank of high admiral and president of the board of admiralty. He died at Chiclana, near Cadiz, on the 26th May of the same year.—J. B.

ALAVIN, a chief of the Goths, invaded the Eastern empire, and defeated Valens at Adrianople about 378.

ALAWY, a Persian physician, was born at Schiraz in 1669, and died at Delhi in 1749. He enjoyed the friendship of the Emperor Aurengzebe, and afterwards that of Nadir Shah, whom he cured of the dropsy. His greatest work is the "*Djenia Al Djervami,*" an encyclopedia of medical science.

ALAYMO, MARCO ANTONIO, an Italian physician, was born at Regalbuto in 1590, and died in 1662 at Palermo, where he had rendered great services during the plague in 1624.

ALBA, MACRINO D', called by some writers GIAN GIACOMO FAVA, an Italian historical painter, born at Alba in Piedmont in 1460, studied and worked for some time in Rome. Having returned to his native place, he excited such admiration amongst his fellow-citizens, that they used to call him the "Modern Apelles." The many authentic pictures by this artist that are to be seen at Alba, Asti, Pavia, &c., and the few belonging to galleries, one especially at Frankfort-on-the-Maine, are very remarkable for intensity of expression and carefulness of execution, but leave much to desire as regards colour, which is still hard and poor. He is supposed to have died in 1520.—R. M.

ALBAN, SAINT, the English protomartyr, was a native of Verulam, one of the most populous cities in Roman Britain, in which place he held military rank. When Diocletian's persecution extended to Britain, Alban was yet a heathen; but having sheltered a Christian priest who was striving to escape his persecutors, was by him converted to the Christian faith. The Roman governor, hearing that the priest was concealed in Alban's house, sent soldiers to take him, when Alban, having previously secured the priest's retreat, presented himself in the dress of his guest. He was captured, and led before the governor. On confessing himself a Christian, he was scourged and then beheaded, after his saintly demeanour had won another convert to the gospel, in the person of the soldier who was appointed to behead him. The date of his martyrdom is variously given; the most probable is A.D. 303; and after ages have disfigured the simple and affecting narrative, by the addition of various legends. The noble church which bears his name was founded at the place where he suffered martyrdom, by Offa, king of Mercia, A.D. 793, in the room of one which had been destroyed by the pagan Saxons. Part of Offa's work still remains, and there are few spots so interesting to the English Christian as the abbey of St. Alban. The church of Rome celebrates this saint's memory on June 22nd; the church of England, June 17th.—J. B., O.

ALBAND, DENIS and GEORGE D', scientific agriculturists, who flourished about the year 1770, and turned their attention to the improvement of heaths and worn-out meadow lands.

ALBANI, THE, a celebrated Roman family, the founders of which came originally from Albania, having been expelled thence by the Turks. Several of the Albani became cardinals of the church of Rome, and one of them pope, with the title of Clement XI. The most famous of the name are the five following:—

ALBANI, GIOVANNI GIROLAMO, Cardinal, was born at Bergamo on the 3rd January, 1504, and died the 23d April, 1591

He was raised to the purple by Pius V. in 1570. He is the author of several works on canonical jurisprudence.

ALBANI, ALESSANDRO, Cardinal, was born at Urbino on the 15th of October, 1692, and died on the 11th December, 1779. Himself thoroughly versed in classical learning, he was a patron of literature and art. Winckelmann has described in his "History of Art," many of the ancient remains with which he adorned his country house, the Villa Albani, which, however, was despoiled by the French of numbers of its most beautiful antiques.

ALBANI, ANNIBALE, Cardinal-camerlingo of the church of Rome, born 1682; died 1750. He wrote "Historical Memoirs of the City of Urbino," and other works.

ALBANI, GIOVANNI-FRANCESCO, Cardinal, brother of Annibale; born in 1720, died in 1809. While yet a mere youth, he was made bishop of Ostium and Velletri, and was only twenty-seven when he attained the purple. Gifted with a handsome person, he was courted for his wit and learning, and passed the early part of his life chiefly in pleasure. He owed his influence in political and ecclesiastical affairs to the jesuits, on whom his family had conferred favours. During the wars of the French Revolution, he was at first a decided opponent of its principles, and a warm partisan of Austria. The French invasion compelled him to flee from Rome, and subsequently from Naples. He then took refuge in Venice, where he aided in procuring the election of Pope Pius VII. Not long after, when the new pope took the side of France, Albani returned to Rome, where he died as president of the Sacred College.

ALBANI, GIUSEPPE, Cardinal, nephew of the preceding; born at Rome in 1750; died on the 3rd December, 1834. He became a member of the Sacred College in 1801. Like the rest of his family, he attached himself to the Austrian interest, and in 1796 was sent to Vienna in behalf of the Papal See. Here the French occupation of Rome forced him to remain for a long time, and meanwhile his property was confiscated. He did not return till 1814. Under Pius VIII., Joseph Albani became secretary of state, and Gregory XVI. made him apostolic commissary for establishing order in the Four Legations. He is accused of violence and cruelty in discharging this office. He died at Pesaro, at the age of 84.—A. M.

ALBANI, FRANCESCO, commonly called L'ALBANO, was born in 1578 at Bologna, where he died in 1660. He justly deserved to be called the Anacreon of art, and the painter of Graces and Cupids. His skill in treating idyllic subjects, combining figures and landscapes, stands as yet unparalleled. His having been a pupil of Denis Calvart, the Flemish painter, and then of Annibale Caracci, coupled with his long connection with Guido Reni, and Domenichino, and the subsequent rivalry with the first of these artists, resulted in giving to his style a peculiar cast, rich with the individualities of the others, and enhanced by his own geniality, which produced the most charming harmony. Numerous are the works of this great master that now embellish the galleries of the world, the product of an active and successful life, embittered only by the excessive spirit of emulation which deprived him of many early friends, surrounding him with the most stinging troubles during the last years of his life. Many good artists sprang from his school, amongst whom Sacchi and Cignani stand foremost. L'Albano recorded his views upon art in some writings on the principles of painting.—R. M.

ALBANS, JOHN OF SAINT, known also as JOHANNES ÆGIDIUS, an English theologian and physician, flourished in the beginning of the thirteenth century. He studied at Oxford, became principal physician to Philip II. of France, and taught at the schools of Paris and Montpellier.

ALBANS, SAINT, Duchess of, HARRIET MELLON, originally an actress, was married to the wealthy banker, Coutts, and on his death, to William, the ninth duke of St. Albans. Died in 1837.

ALBANUS MONACHUS, a Benedictine of Saint Albans monastery, author of a book called "Versus Vaticanæ," and of a book of "Prophetiæ." He laid claim to the gift of prophecy.

ALBANY, LOUISA MARIA CAROLINE, Countess of, a cousin of the last reigning prince of Stolberg-Geldern, was born in 1753, and died in 1824. She married Prince Charles Edward Stuart, from whom she was afterwards separated, and spent the remainder of her life at Florence, in the society of the poet Alfieri.

ALBARELLI or ALBERELLI, JACOPO, an Italian historical painter and sculptor at the beginning of the seventeenth century. He was of the school of the younger Palma, and has left several good works in Venice, his native city.—R. M.

ALBATEGNIUS; ALBATENI; MOHAMMED BEN GEBER BEN SENAN ABU ABDALLAH AL-BATANI: probably the greatest of Arabian astronomers; flourished about the year 880 of our era. The signal industry of *Sedillot* has recently obliged us to correct our estimate of the class of observers of whom Albategnius is the ornament. Injustice has been done them mainly because of the difficulty of reaching their original works; the Arabic MSS. lying untouched in forbidding masses in chests in our public libraries, and known in Europe only through wretched translations. These remarkable men were not mere commentators or slavish copyists. Taking advantage of the writings of Ptolemy, they yet did so *critically*, and were not disposed to be misled by his imperfections and errors. Even to professed copyists like Abderrahman-Suphi, we are indebted for the most authentic reproduction of the precious catalogue of Ptolemy. The specific services of Al-Batani, who was the Arabian Ptolemy, may be summed up as follows:—First, he approached much nearer than Ptolemy to the determination of the true precession of the equinoxes: Secondly, he also approximated more nearly to the eccentricity of the solar (the terrestrial) orbit: Thirdly, he determined the length of the solar year to within two and a half minutes of its real length; and, as Halley remarks, he committed this error through too great reliance on some of the dicta of Ptolemy: Fourthly, he discovered the motions of the sun's apogee, the position of which was previously considered fixed,—disentangling it from the motion of precession: Fifthly, he established errors or incompetency in the theory of Ptolemy, as applied to the moon and planets;—these errors he could not wholly correct, but he advanced theory a great step by surmising that these bodies also have a motion in apogee: Sixthly, he constructed new stellar tables, which, because of their greater accuracy, supplanted those of Ptolemy, and long continued the standard tables of the East. The labours of this astronomer are exposed in his treatise "De scientia stellarum." The native city of Albategnius was Batan in Mesopotamia, whence his surname. He was commandant of the caliphs in Syria: he observed at Antioch, the seat of his government, and at Aracta (Ractia) in Mesopotamia. It is singular that Albategnius was not a Mahomedan, but a Sabean, —a worshipper of the stars: singular that he enjoyed credit with caliphs, as a Sabean is held in abhorrence by every true Mussulman. Albategnius died in the year 928.—J. P. N.

ALBEDYHILL, GUSTAVUS, Baron of, was a Swedish diplomatist. He has written a "Collection of Memoirs relative to the affairs of Europe, and particularly those of the North, during the latter part of the 18th century." (Stockholm, 1798–1811, 2 vols. 8vo.) He died on 11th August, 1819. His wife wrote a poem called "Gefion," in four cantos (Upsal, 1814), which has enjoyed some reputation.—A. M.

ALBELADORY, ABOUL-ABBAS-AHMED, was an Arabian historian, and Imaum of Bagdad. He was tutor to one of the sons of the Caliph Almotavakkel. He wrote a work on the Mahomedan conquests, in which he gives detailed accounts of the state of the countries which come under notice. Rainaud, in the "Fragments Arabes et Persans inédits sur l'Inde," translates the chapter of Albeladory on the occupation of the valley of the Indus by the Mussulmans. He died A.D. 895.—A. M.

ALBELDA, MOSES, a Greek rabbi, chief of the synagogue at Saloniki (Thessalonica), in the latter half of the 16th century. He wrote "Commentaries on the Pentateuch."

ALBEMARLE, Duke of. See MONK.

ALBEMARLE, Earl of. See KEPPEL.

ALBENAS, JEAN POLDO D', a French antiquary, born at Nismes in 1512; died in 1563. He studied law, and became in 1552 councillor in the presidial court of his native town. He wrote a history of Nismes, and also a work with the title, "Prognosticorum, sive de origine mortis humanæ, de futuro sæculo, et de futuræ vitæ contemplatione."

ALBER, ERASMUS, generally known under the Latinized form of his name, ALBERUS, was born towards the close of the fifteenth century, and died on the 5th May, 1553. Alber, who was a zealous partisan of the Reformation, and one of the most learned and genial men of his time, had studied at Wittenberg under Luther, and continued the intimate friend of the great reformer. He preached the doctrines of the Reformation in various parts of Germany, but generally with so much satirical vehemence as to prevent his remaining in a permanent benefice. He was for some time chaplain to Joachim II., elector of Brandenburg, and subsequently was preacher in Magdeburg. Alber died at Neubran-

denburg in Meeklenburg, shortly after he had been appointed to the office of superintendent-general, a species of bishopric. His writings, which are mostly directed against the Roman catholics, are full of bitter satire, and the coarse humour characteristic of the period. One of the most remarkable is:—"Der Barfüßer Mönche Eulenspiegel und Alkoran, mit einer schönen Vorrede von Martini Lutheri." (The Joe Miller and Alcoran of the Barefooted Monks, with a beautiful preface by Martin Luther.) This is a translation, with a running parodied commentary, of a work by Bartholomew Albizza of Pisa, which purports to exhibit the resemblance between St. Francis and Christ. Another is a piece of personal controversy directed against one George Witzel, a monk who adopted the doctrines of the Reformation, and then apostatized; it is entitled, "Eilend aber doch wohlgetroffener Contrafactur, da Jörg Witzel abgemalet ist, wie er dem Judas Ischariot so gar ähnlich sieht." (A hasty but well-hit portrait, being the likeness of George Witzel, showing his exceeding great resemblance to Judas Ischariot.) Alber also wrote a book of forty-nine fables in German verse, and a number of hymns which became popular.—A. M.

ALBERGATI, FABIO, a political writer, died about the year 1605. He was a native of Bologna, but passed a great part of his life at the court of Francis Maria della Rovere, duke of Urbino. Two of his books are these:—"Del modo di ridurre alla pace le inimicizie private" (On the mode of reducing private enmities to peace), Rome, 1583, folio; and "La Republica Regia" (The Royal Republic), Bologna, 1627, folio.

ALBERGATI, LUCIO, a learned Italian, who lived in the latter half of the tenth century. He was a native of Bologna. He wrote, among other works—"De Virginitate Libri III.;" "De Angelorum lapsu;" "Super Pentateuchum Commentaria."

ALBERGATI, NICHOLAS, Cardinal, was born at Bologna in 1375. He commenced life as a student of law, but at twenty became a member of the order of Carthusians. In 1417 he became bishop of Cologne under Pope Martin V., who subsequently raised him to the cardinalate, and intrusted him with the discharge of several important missions. One of these was to mediate as nuncio between Charles VI. of France, and Henry V. of England. He was appointed to preside at the council of Basle by Pope Eugenius IV., whose prerogatives he strenuously maintained in that assembly. On his return from a mission as apostolic nuncio to the congress of Nürnberg in 1439, he was made grand penitentiary and treasurer to the pope, but died in 1443, before he had long enjoyed these dignities. He has left a number of works on theological subjects.—A. M.

ALBERGATI CAPACELLI, FRANCIS, Marquis, an Italian dramatic author; born at Bologna on the 29th of April, 1728, and died on the 16th of March, 1804. In the theatre which he erected at his villa, near Bologna, he acted in his own and other pieces so admirably, as to acquire the appellation of "the Garrick of Italy." His private life was of dubious fame. He divorced his first wife, and was accused of murdering his second, an actress. Of this crime, however, Albergati was judicially acquitted. His third wife, with whom he lived unhappily, was a dancer of the name of Zampieri. Goldoni wrote for his theatre, and he corresponded with Voltaire and Alfieri. His own dramatic works are nineteen in number; the best is "Il pregiudizio del falso onore." (The prejudice of false honour.)—A. M.

ALBERGONI, ELEUTERIO, an eloquent Italian preacher, provincial of Milan, adviser to the Inquisition, bishop of Monmarani from 1611 till his death, and author of various religious works, and of an explanation of the doctrines of Scotus, was born at Milan in 1560, and died in 1636.

ALBERGOTTI, FRANCESCO, an Italian jurist of the fourteenth century, of great celebrity and influence in his time, author of a commentary on the Pandects and on part of the code of Justinian, and surnamed "Doctor solidæ veritatis."

ALBERIC or ALBERT, an ecclesiastic of Aix in Provence, author of "Chronicon Hierosolymitanum," compiled from the statements of eye-witnesses, and containing a history of the crusaders from 1085 to 1120.

ALBERIC, a Benedictine monk, born at Beauvais in 1080. He was made cardinal-bishop of Ostia, and sent as legate to London, where he held a council of the English church in 1138. He convoked at Antioch, in 1140, a council of Latin bishops, which deposed the Latin patriarch Rodolphus. He afterwards proceeded to France, where he co-operated with St. Bernard in the suppression of heresy. Died at Verdun in 1147.

ALBERICO DA BARBIA'NO, a soldier, who acted a prominent part in the internal wars of Italy, toward the close of the fourteenth century. He took the side of Urban VI. in his quarrel with Clement VII., and afterwards assisted Charles of Durazzo in his conquest of Naples, and was appointed great constable of that kingdom. He died at Trani in Apulia.

ALBERICO D' ROSCIATI, a native of Bergamo, and one of the most eminent jurists of the fourteenth century, author of various treatises on civil and canon law.

ALBERICUS or ALBERICO, THE ELDER, count of Tusculum, and duke of Spoletum and Camerinum, married Marozia, a noble lady, through whom he attained to great influence in Rome. He was allied with Pope John X. and the prince of Beneventum in a successful expedition against the Saracens in 916. He afterwards quarreled with the pope, was exiled from Rome, and killed at Orta in 925.—ALBERICUS THE YOUNGER, son of the preceding, and brother of Pope John XI., quarreled with Hugh of Provence, king of Italy, who had married his mother Marozia, headed a successful insurrection against him, and seized on the temporal power at Rome, which he continued to hold till his death in 954. Very little is known of the events of his twenty-three years' reign. He was succeeded by his son Octavian, who, as Pope John XII., once more united the spiritual and temporal power.—J. B.

ALBERO or ADELBERO I., a bishop and prince of Liege, who, by numerous important measures, and, in particular, by the suppression of robbery, and the abolition of an odious impost called "The right of dead hand," rendered his administration memorable. Died in 1129.

ALBERO II., bishop and prince of Liege from 1136 till 1145. The condition of the principality, during his administration, formed a striking contrast to the tranquillity, security, and decorum maintained by his namesake Albero I. Summoned to Rome to account for his conduct, he died in Italy in 1145, on his return homewards.—E. M.

ALBERONI, GIOVAN BATTISTA, a distinguished Italian painter and architect, flourishing at Bologna about the middle of the eighteenth century.

ALBERONI, GIULIO, Cardinal, a statesman of singular capacity and vigour, prime minister of Spain during an eventful period, was born of humble parentage in the vicinity of Piacenza in 1664. Having acquired distinguished proficiency in Latin and Italian literature, he visited Rome, where he perfected himself in various branches of science and literature. On visiting Piacenza, he was engaged to accompany a deputation from the government of Parma to the duke of Vendome, commander of the French forces in Italy, who retained him as secretary and counsellor. Alberoni went to Paris with the duke in 1706, attended him during his campaign in Flanders, and was mainly instrumental in arranging his appointment as commander-in-chief of the armies of Philip V. of Spain, whither he accompanied him. In 1713 Alberoni was appointed the duke of Parma's agent at the court of Madrid; and in September, 1714, through his adroitness, the Princess Elizabeth Farnese of Parma became queen of Spain. In a few months afterwards he was appointed prime minister. He was also made a cardinal, and bishop of Malaga. His great ambition was to restore Spain to her previous power and splendour, and his efforts would, to a great extent at least, have been crowned with success, had not the impatience of the Spanish court forced him to engage reluctantly in premature hostilities, and had not reverses, for which he was not to blame, brought his brief administration to an untimely close.

So ignominious and exorbitant appeared to Philip the concessions extorted from Spain by the treaty of Utrecht, that he naturally meditated seizing the first opportunity to assert his rights, and, in particular, to recover his Italian dominions. There existed a powerful Spanish party in Naples, Sicily, and Sardinia, and it was on the ground of attempting to foment its disaffection to Austria, that the emperor ordered the arrest of the Spanish ambassador in Italy. This at once determined the Spanish court, in spite of the faithful and judicious counsels of Alberoni, to commence hostilities. In August, 1717, a Spanish fleet with 9000 troops landed in Sardinia, and in two months reduced the whole island. This conquest, and the equipment of a second expedition at Barcelona, led to the quadruple alliance. A British fleet, under Admiral Byng, was sent to the Mediterranean. The Spanish armament had reached Sicily, Palermo

and Messina were already captured, and the island was on the point of submitting to the Spaniards, when, on the 10th August, 1718, Byng, at the battle of Passaro, took or destroyed the whole Spanish fleet. This fearful blow, instead of crushing the spirit, roused the energies of the intrepid cardinal. To give occupation to the British government at home, he conceived and proceeded to execute a scheme for restoring the exiled house of Stuart, with the aid of Charles XII. of Sweden and Peter the Great. But the death of Charles frustrated the daring enterprise. He also, in concert with a faction in France, formed a plan for seizing the Regent Orleans, and proclaiming Philip legitimate guardian of the youthful king of France. The plot, however, was discovered, and the regent instantly commenced hostilities, sending a formidable army into Spain. Undaunted by disappointments and difficulties, the cardinal now despatched from Cadiz, under the duke of Ormond, a fleet of ten ships of war, and numerous transports, having on board 6000 regular troops, with additional arms for 12,000 men. This formidable expedition, bound for Great Britain, would, it was hoped, excite and sustain a new insurrection. It was, however, dispersed and shattered by a tempest off Cape Finisterre. Only two frigates reached the British shores, and the few troops they landed were soon obliged to surrender. Such a succession of disasters overpowered the firmness of the Spanish court, and made Philip accede to the alliance. The cardinal became the victim of intrigues; for, as a foreigner, and far more as a fearless and impartial administrative reformer, he had necessarily incurred the rancour of many, while the enemies of Spain sought the destruction of a statesman whose talents might still render her formidable to the nations of Europe. Alberoni was the ablest prime minister Spain has ever had since Ximenes. The abuses he suppressed, and the improvements he introduced in connection with every department of the public service, during his brief administration, were truly wonderful. He is said to have usually devoted to business eighteen hours in the twenty-four. Ordered to quit Spain, he encountered disasters and privations in his journey, reached Italy with great difficulty in disguise, and, for several years, was exposed to peril and persecution. At length, on the death of Clement XI. in 1721, he was permitted to repair to Rome, and finally was restored by Innocent XIII. to all his rights and privileges as a cardinal. In 1732 he visited his native district, and was kindly received by Don Carlos, who had obtained the duchies of Parma and Piacenza. In 1734 he was appointed by Pope Clement XII. legate of Ravenna. After holding this charge for two or three years, continuing to display, notwithstanding his advanced age, his characteristic energy, vivacity, and public spirit, he retired from public life. He founded, and munificently endowed at Piacenza, an educational institution, which still exists and bears his name. He died in 1752, at the age of eighty-eight.—E. M.

ALBERS, HEINREICH PHILIPP FRANZ, physician to the watering establishment at Rehburg, and author of a dissertation on the Rehburg mineral springs, and of numerous contributions to medical journals, was born at Hemeln 1768, and died 1830.

ALBERS, JOHANN ABRAHAM, a German physician, born at Bremen in 1772; died 1821. He and Jurieu received jointly the prize offered by Napoleon in 1807, for the best essay on the croup. By contributing to periodicals, and by translating valuable treatises from English and French, he greatly promoted the progress of medicine and surgery in Germany.

ALBERSTEN, HENRY HAMILTON, a Danish poet, born at Copenhagen in 1592; died in Egypt 1630. He has left some poems, and a "Disputation concerning the Causes or Principles of Natural Things," both in Latin.

ALBERT. The chief princes and churchmen of this name follow in the alphabetical order of their countries:—

#### I.—ALBERTS OF AUSTRIA.

ALBERT I., Duke of Austria, and Emperor of Germany, born in 1248. Son of Rudolph of Hapsburg, an ambitious prince of the Germanic empire, he was put forward by his father as a candidate for the imperial crown; but the family character, which was notoriously avaricious and tyrannical, rendered his pretensions odious, and the electors bestowed their suffrages on Adolphus of Nassau. At the diet of Mayence, however, in 1298, Adolphus was deposed, and Albert elected. The armies of the two princes encountered at Gelheim, a place situated between Worms and Spire, and there Albert, successful in a charge of cavalry, with his own hand dispatched his rival. A war with

the Holy See threatened to be the first occupation of Albert, king of the Romans, but this was averted by the diplomacy of the emperor, who, to please the pontiff, allowed himself to be confirmed in his dominions by papal courrant. Several years of his reign were fruitlessly spent in an attempt to reclaim Holland, Zealand, and Friesland, formerly parts of the empire, and in a war with Wenceslas IV. of Hungary, whose province of Bohemia Albert claimed for his son Rudolph. In the former enterprise he was opposed and defeated by a count of Hainault; and in the latter, after a short period of success, during which Rudolph, as king of Bohemia, was made the instrument of his father's tyranny, he succumbed to the efforts of a people determined to defend their liberties at all hazards. His invasion of Thuringia in 1308 had no better success, and before he could collect an army for another campaign in that province, disturbances, which he had himself fomented, broke out in Switzerland, whither he hastened with what forces he could muster, determined to unite Helvetia to the empire. This design, the brave compatriots of Tell were spared the toil of frustrating, by a conspiracy of nobles, headed by Duke John, the emperor's nephew, who fell upon him while separated from his suite, and dispatched him with their daggers.—J. S., G.

ALBERT II., Duke of Austria, surnamed the Wise, fourth son of Albert I., succeeded in his minority to the estates of his father, his brothers having died without issue. He merited his surname by a course of conduct which presented in almost all respects a contrast to that of his father. He refused to put himself in competition with Charles, son of the king of Bohemia, when that prince claimed to succeed Louis of Bavaria, although urged, or rather commanded, by Pope John XXII. to assume the crown of Germany. Paralytic from his thirty-second year, he commanded in person the expeditions into Switzerland, which, like those of his father, adventured into a land of patriots only to find that neither force nor fraud could impose a foreign yoke, where every village and hamlet sent forth a band of warriors to dispute the first step of an invader. He besieged Zurich with an army of 16,000 men; but, baffled in every assault, and in danger of being overwhelmed by the forces of the Helvetic Confederation, reorganized for the defence of the place, he had to return to Vienna, leaving the possessions of the House of Hapsburg in the hands of the patriots. Died 1358.—J. S., G.

ALBERT III., Duke of Austria, son of the preceding, succeeded in his seventeenth year to one-half his paternal estates, the other half being claimed, contrary to the testament of Albert II., by his younger brother Leopold. Albert submitted to this partition with the temper of a man who had other ambitions than that of governing extensive dominions. Addicted to letters and the arts of peace, for which he did much, by founding several chairs at the university of Vienna, even after the death of Leopold had left him in temporary possession of the whole of his estates, he engaged in war only when his honour bound him to arm in behalf of his allies, or to assist those who claimed his help. He conciliated the people by repressing the insolence and forbidding the exactions of his barons, a rare effort in the cause of justice for the times in which he lived. He attempted unsuccessfully to rescue the inhabitants of Trieste from the yoke of Venice, and afterwards espoused the cause of some nobles of Bohemia who had revolted from their king. But while leading an army into that country, he was seized with an illness which proved fatal. He died in 1395.—J. S., G.

ALBERT IV., Duke of Austria, son of the preceding, succeeded his father in 1395. Shortly after his accession to power, he made a pilgrimage to Jerusalem, leaving the government of his dominions in the hands of his cousin William, son of Leopold, an ambitious prince, who, like his father, had wrested from the head of the house a share of the family estates. On his return, he resumed the care of his duchies, but passed much of his time in a monastery, where he practised a rigid asceticism. His devotion to his duties as a brother of a religious order, procured for him the surname of "the Pious." Not deficient in administrative talent, he earned, by a wise arbitration of their disputes, the gratitude of his uncles Sigismund of Hungary and Wenceslas of Bohemia, both of whom named him successor to their kingdoms. He was engaged in subduing a revolt in the dominions of Sigismund, and had laid siege to the fortress of a refractory baron, when his career was terminated by poison administered by an agent of the besieged, September, 1404.—J. S., G.

ALBERT V., Duke of Austria and Emperor of Germany, son

of Albert IV., at the death of his father in 1404 had only reached his seventh year. Educated by worthy persons, who were good friends of the young sovereign at the expense of being bad servants of the regency, he early displayed an amount of talent and decision that formed the only hope of the people during the years of rapine and murder that constituted the period of his minority. A rebellion of his subjects closed the administration of his cousin Leopold III., who under the name of Regent had plundered his estates, and placed Albert at the head of affairs. He set himself laboriously to the task of re-establishing law and order, and succeeded in a manner that justified the enthusiasm with which his subjects hailed the commencement of his reign. In 1421 he married Elizabeth, daughter of the Emperor Sigismund, the persecutor of the Hussites, and, in consequence of this alliance, became involved in the civil wars of Bohemia, and eventually, on the death of his father-in-law, in a contest for the crown of that kingdom with the widow of Sigismund, whose cause the Hussites espoused with great ardour. Successful in several skirmishes, he was crowned at Prague in 1438, and shortly after elevated to the imperial throne amid congratulations from all parts of the empire. His reign was illustrated by reforms in every branch of the public service, especially by the abolition of secret tribunals, and the institution of courts of justice. He was indefatigable in his labours for the public good, and seemed to have inaugurated a new and better era for Germany; but his peaceful reforms were cut short by an unexpected invasion of the Turks, under Sultan Murad II., who forced his way into the centre of Hungary. Albert with difficulty mustered an army to oppose the march of the invader, and proceeded to the frontiers. But the treachery of his chiefs, and an epidemic which began to prevail in his camp, gradually dispersed his forces; and, worn out with toil, he died at a village of Hungary in 1439.—J. S., G.

ALBERT I., Archduke of Austria, and governor of the Low Countries, was at an early age, in accordance with his ambition to be a prelate, appointed cardinal-archbishop of Toledo; but in his twenty-fifth year he resigned his spiritual functions, and became viceroy of Portugal under his uncle Philip II., who gave him his daughter in marriage, and afterwards intrusted him with the government of the Low Countries, where his administration continued to be popular till his death in 1621.—J. S., G.

#### II.—ALBERTS OF BRANDENBURG.

ALBERT I. or ALBRECHT, surnamed the BEAR, Margrave of Brandenburg, which possession he received from the Emperor Lotharius for services rendered in a war with the Bohemians, was a son of Otho the Rich, count of Ballenstadt, and possessed, previous to his accession to the margraviate, the counties of Lusatia and Salzwedel. In 1138 he laid claim to the duchy of Saxony, and succeeded after a long struggle in wresting it from the reigning house. He took an active part in the wars of the empire, and endeavoured still further to extend his dominions. An attempt which he made to subdue Pomerania proved abortive; but he was more successful in a contest with Henry the Lion for the possession of the counties of Prosecke and Winzenburg, the former of which was awarded to him by the adjudication of the emperor, Frederick I. He took advantage of a year of tranquillity in his dominions, to make a pilgrimage to Jerusalem, and on his return renewed his attack on Pomerania; this time, however, in the interest of Henry the Lion. No progress had been made in the enterprise when the princes quarreled, and were only prevented from waging war to the death by the threats of the emperor. Albert died in 1176, seven years after his resignation in favour of his eldest son, and left behind him a name which conferred consequence on a long line of successors.—J. S., G.

ALBERT II., Margrave of Brandenburg, succeeded his brother Otho II. in 1206. He encouraged Otho IV. to brave the thunders of the Holy See, and make war on his own and the emperor's enemy, the archbishop of Magdeburg, whose territories he wasted in repeated invasions. In the course of a three years' war, he acquired some territory in Pomerania, which, after the decline of Otho's administration, was confirmed to him by Frederick II. Died in 1221.—J. S., G.

ALBERT III., Margrave of Brandenburg, complimented by historians with the title of the German Achilles and Ulysses, while margrave of Bareuth, distinguished himself in the wars of the emperor with Poland, and succeeded his brother Frederick II., enjoying a renown for personal valour which belonged to no other hero of the empire. Victor in seventeen tournaments, and

the terror of at least one city, Nuremberg, the inhabitants of which he had eight times defeated, he was not without reason distinguished by the former of his surnames. The latter he earned by his success in negotiating a peace between the emperor and the duke of Burgundy, and perhaps also by his careless abandonment of the government to his son John, while he pursued his old habit of fighting for the empire. This wise and valorous prince, after dividing his estates among his three sons, died at Frankfort-on-the-Maine in 1486.—J. S., G.

ALBERT, Margrave of Brandenburg, and first duke of Prussia, born May 17, 1490, was the son of Frederick of Anspach, and Sophia, sister of Sigismund I., king of Poland. At an early period of life he became connected with the order of the Teutonic knights, who, on their return from the Holy Land to Germany, had invaded the province of Prussia, the inhabitants of which were still pagans, and subdued it about the middle of the 13th century. The kings of Poland, who came to the assistance of the Prussians, compelled the order, in a pacification concluded in 1466, to agree that the grand-master should, in all time coming, render homage to the kings of Poland, in acknowledgment that the order held its possessions as a fief of that crown. In 1511, being then only twenty-one years of age, Albert was chosen grand-master of the order, in the hope that, through the friendship of Joachim I., elector of Brandenburg, his cousin, and especially of Sigismund, king of Poland, his uncle, he might have it in his power to emancipate the order from this degrading vassalage. But as Sigismund refused to surrender his claim, and the knights determined no longer to submit to it, a war was the consequence. In April, 1525, a peace was concluded at Cracow, by which, through Albert's skilful management, the eastern part of Prussia was converted into a duchy, and secured to him and his male heirs, but to be held as a fief of the crown of Poland. In this way was the government of the Teutonic knights overthrown in Prussia. Albert at the same time avowing himself a Lutheran, changed the religion of the duchy from popery to protestantism, and afterwards married; measures which Luther, with whom he had previously had an interview, advised him to take. In 1544 he founded the university of Königsberg. He died March 20, 1558.—J. A.

#### III.—ALBERTS OF BRUNSWICK.

ALBERT I., Duke of Brunswick, surnamed the GREAT. On the death of his father Otto he retained for himself the states of Wolfenbüttel and Göttingen, and gave to his brother Lüneburg and Zelle. Albert was famous for personal bravery, a peaceable disposition, and a courteous demeanour. He assisted Ottocar, king of Bohemia, against Bala IV. of Hungary, and took him prisoner. In 1263 he was himself taken prisoner by Henry, landgrave of Thuringia, and had to pay for his ransom a considerable sum of money, besides surrendering several towns and estates. Having assisted to rescue the dowager queen of Denmark, and Eric, the young king, from their detention in Holstein, the queen caused him to be made regent of Denmark, and thought to offer him her hand; the Danes, however, refused to submit to the reforms which he proposed to make, and he was obliged to quit the country. He married Adelaide, daughter of Boniface of Montferrat. Died 15th August, 1278.—J. F.

ALBERT II., Duke of Brunswick, son of the preceding. His possessions included the city of Göttingen, the states of Kalenberg, Nordheim, and Hanover, and the countries on the Leine, to which Brunswick and its dependencies were afterwards added. Albert was sagacious and gentle; he conferred many important rights on the citizens of Brunswick and Göttingen, and laboured to promote the welfare of his people. Died in 1318.—J. F.

#### IV.—ALBERT OF HOLLAND.

ALBERT, Count of Holland, born 1337, was a weak and indolent prince. He thus drew upon himself the indignation of his people, who, headed by Count Ostrevant, his son, broke out in insurrection. Albert, however, defeated his enemies; and the rebellious prince afterwards conducted himself so loyally as to efface the memory of his revolt. It is under Albert that we first meet with the office of Stadtholder, which has since become so important. It was the duty of the person elevated to this dignity, to represent the prince as his lieutenant; the office seems to have had its origin in the indolence of Albert, and his readiness to delegate to his ministers the authority which he was too weak to exercise in person. Died in 1404.—F.

#### V.—ALBERTS OF LIEGE AND LIVONIA.

ALBERT I., son of Godfrey, duke of Brabant, was elected

prince-bishop of Liege in 1191. His election was set aside by the emperor, Henry VI., who appointed Lotharius to the vacant see, but was confirmed by Pope Celestin II. In 1192, Albert was, at the instigation of the emperor and Lotharius, cruelly murdered by three German assassins at Rheims.

ALBERT DE CUYCK was elected prince-bishop of Liege in 1194, and, by his gentle and beneficent administration, made himself popular, but disgraced his clerical character by the most barefaced simony. Died in 1200.

ALBERT, Bishop of Livonia, but a native of Germany, instituted in 1204, with the authorization of Pope Innocent III., a monaco-military order for the propagation of Christianity, and, what was more in accordance with the undertaking, several missionary colleges. Died at Riga in 1230.—E. M.

#### VI.—ALBERTS OF MAGDEBURG.

ALBERT I., Archbishop of Magdeburg, was ordained a bishop, and sent at the head of a mission to Russia in 961; but the perils and hardships he encountered soon forced him to return. In December, 968, he was installed first archbishop of Magdeburg, and continued the conscientious and zealous discharge of his duties till his death in June, 981. He was a man of respectable attainments for the age, an ardent promoter of education, and indefatigable in missionary labours. His efforts to convert the Wends and other pagans to the east of the Elbe, were attended with much success.—E. M.

ALBERT, Count of Hallermonde, archbishop of Magdeburg and cardinal, effected a reconciliation between Philip of Suabia and Pope Innocent III., and was made papal legate for Germany. In 1210 he promulgated, though reluctantly, the pope's sentence of deposal against the Emperor Otho, and took part in the election of Frederick II. in 1212; he was twice taken prisoner by Otho's commanders, but on both occasions speedily rescued through the attachment and valour of his own troops and allies. Albert enjoyed the confidence of Frederick II., and was appointed his viceroy in Saxony during his absence in the crusade; and in capacity, discretion, and energy, was equal to any of the most distinguished statesmen of the age.—E. M.

ALBERT III., Count of Sternberg, archbishop of Magdeburg, to which see he was appointed through the influence of Charles IV., under whom he had enjoyed the dignity of chancellor, lived in the latter half of the fourteenth century. He squandered his revenues so recklessly as to incur the anger of his subjects, from whose murmurs he at length took refuge in an exchange of his archbishopric for the bishopric of Leutermitz.—J. S., G.

ALBERT IV., Lord of Querfurt, archbishop of Magdeburg, an oppressive and turbulent prelate, who embroiled himself with his subjects on the question of tithes, and had recourse unsuccessfully to the terrors of the church. Died in 1403.

ALBERT V., Cardinal-archbishop of Magdeburg, son of John, elector of Brandenburg, shortly after his election in 1583 became also bishop of Halberstadt, and, in the year following, archbishop of Mayence. The three dignities cost him thirty thousand ducats, a sum the half of which the pope allowed him to raise by the sale of indulgences. He was a special enemy of Luther and his creed, was one of those most eager to have the reformer brought before the edict of Worms, persecuted Lutheranism in his own dominions, and leagued with the elector of Brandenburg and the duke of Brunswick to suppress it elsewhere. To supplement his own care of the church, he assumed as his coadjutor one of his cousins, but his efforts against the spread of the new doctrines were unavailing. He was forced to conclude a treaty with the protestant electors at Nuremberg in 1532; and although he afterwards exhibited, when he could, that rancour against the enemies of the church for which he was caressed by the pope, and bitterly denounced by Luther, his persecution of the protestants of Halle in 1534, his accession to the catholic league in 1538, and his measures in general, only diffused what they were intended to suppress. Four years before his death in 1545, Halle, Magdeburg, and Halberstadt were protestant cities, or at least had obtained toleration for the protestant faith.—J. S., G.

#### VII.—ALBERTS OF MAYENCE.

ALBERT I. or ALBRECHT, Archbishop of Mayence, was the son of Sigebert, count of Saarbruck, and chancellor to the Emperor Henry V. He owed his elevation to the episcopal dignity to the favour of the emperor, to whom he nevertheless exhibited the utmost ingratitude, for when, in 1112, the council of Vienna excommunicated Henry, Albert immediately declared against

him. On the death of Henry V. in 1125, he convoked the diet for the election of a new emperor; and in the hostilities which subsequently took place between Lotharius and Frederick, the rival candidates for the crown, he exhibited great zeal in behalf of the former. Died in 1137.—F.

ALBERT II., Archbishop of Mayence, succeeded his brother Albert I. in the archiepiscopal dignity in 1138. In 1141 he joined in the attempt made by the Saxon nobility to annul the election of the Emperor Conrad. He died in the same year.

ALBERT, Elector of Mentz or Mayence, the youngest son of John, surnamed Cicero, elector of Brandenburg, was born June 28, 1490. In 1513 he was chosen archbishop of Magdeburg, and in the following month, administrator of the diocese of Halberstadt. In 1514 he was elected archbishop and prince-elect of Mayence. Having involved himself in debt, he applied to the pope for a commission to sell indulgences within his own diocese. A bull was granted for three years, on the stipulation that the profits should be divided between him and the pope. He employed as his agent the well-known Tetzl, whose conduct was so scandalous, that Luther wrote a letter of remonstrance, which was, however, entirely disregarded. In 1518 Albert was created a cardinal. From the agitation which these indulgence-sales had created, he had for some time suspended or relaxed the traffic; but in 1521, when Luther was in Wartburg, he commenced it with renewed activity in the churches of Halle, where he was then residing with his court. Luther wrote him a second letter, which was expressed in bold and defiant terms. Albert returned a conciliatory answer. In 1525 the peasants' war, which especially threatened the ecclesiastical states, caused him great alarm. He was then urged to profess the new opinions, to marry, and to secularize his dioceses, as the only means of preserving them. He was almost persuaded. Through his privy councillor Rühel, he requested Luther to prepare the people for this bold measure, by setting forth the advantages certain to result from it. This Luther did in a letter addressed to him, and intended to be published to the world; but the peasants' war having come to a termination, the cardinal renounced all thoughts of the proposed measure. At the diet at Augsburg in 1530, he made great efforts to restore harmony between the Roman catholics and protestants, and many were led to believe that his convictions inclined to the Reformation. But after that he became increasingly averse to tolerate the new opinions within his own territory. His own town of Magdeburg having joined the Schmalkald league, he pressed the emperor to place it under the ban of the empire, as had been previously done with his approbation in 1527; but such was the timidity of his disposition, that, afraid of involving himself in difficulties or dangers, he interposed in both cases to prevent the execution of the sentence. In early life he was the patron of literature, and corresponded with Erasmus, whose Greek New Testament he highly eulogized, and to whom he sent the present of a silver cup of considerable value. He died September 24, 1545.—(Seckendorff, *Hist. Luth.* Jortin's *Life of Erasmus*. D'Aubigne's *Hist. of Ref.*)—J. A.

#### VIII.—ALBERTS OF MECKLENBURG.

ALBERT I. or ALBRECHT, Duke of Mecklenburg, succeeded his father, Henry IV., at an early age, and distinguished himself by his patriotic efforts to rid his country of the brigands by whom it was infested. Died in 1375.

ALBERT II., Duke of Mecklenburg, son of the preceding, was, before his father's death, elected king of Sweden (1363), by the states-general, who were dissatisfied with the government of Magnus Eriksen, and his son Hako. The earlier years of his reign were occupied in opposing the attempts of Hako to recover the sovereignty. At a later period Margareta of Denmark laid claim to the crown, and was supported by the Swedish nobility. She defeated Albert in 1388. He remained a prisoner for several years, and was only released on the payment of a heavy ransom. A few years after, heart-broken and weary, he retired into a convent, leaving his rival in undisturbed possession of the throne. He died in 1412.—J. B.

#### IX.—ALBERTS OF SAXONY.

ALBERT I. or ALBRECHT, Duke-elect of Saxony, succeeded his father, Duke Bernard, in 1212. Matthew Paris relates that his stature was so gigantic, that, when he visited London, he was an object of universal interest and astonishment. He distinguished himself in the war with Waldemar II. of Denmark, and in the crusades, having accompanied Frederick II. to the East in 1228. He died in 1260.

1. *Portrait of W. ...*

W. ...

ALBERT II., Duke-elect of Saxony, son of the preceding. He assisted at the election of three emperors—Rodolphe I., Adolphus, and Albert I., and hence arose the claim of his successors to the sole right of electing the emperor. He obtained the palatinate of Saxony from Rodolphe I. The accounts as to the time of his death are conflicting: he died, according to some authors, at Aix-la-Chapelle in 1298, according to others between 1302 and 1308.

ALBERT III., Duke-elect of Saxony, the last elector of the Anhalt family, succeeded his brother Rodolphe in 1418. He died in 1422, from the effects of a fright into which he was thrown by a conflagration.

ALBERT or ALBRECHT, Palatine of Saxony, succeeded his father Henry as landgrave of Thuringia in 1288. On account of his tyrannical and merciless disposition he was surnamed **THE CRUEL**. Died in 1314.—F.

ALBERT DURER. See DURER.

ALBERT (ALBERT FRANCIS AUGUSTUS CHARLES EMANUEL), Prince of Saxe-Coburg Gotha, Duke of Saxony, and late Prince-consort of her Majesty Queen Victoria, was born at Rosenau castle, about four miles from Coburg, on the 26th of August, 1819. His father was Ernest I.; his mother, Dorothea Louisa, princess of Saxe-Gotha-Altenburg. Prince Albert was the younger son; his elder brother, Ernest II., is now reigning duke of Saxe-Coburg-Gotha. His native country is one of the smallest principalities of Germany, lying out of the course of the great roads; but remarkable for the beauty of its scenery, the unsophisticated manners of the people, and above all for the renown of the reigning family, which has achieved a prouder position than ever Hapsburg or Bourbon held. They were originally sovereigns of Coburg only; but Prince Albert's father succeeded to the inheritance of the duchy of Saxe-Gotha. His uncle, Leopold I., married first the Princess Charlotte, heiress of the throne of England, and secondly, a daughter of Louis Philippe, at that time king of the French. After declining the throne of Greece, Leopold was chosen king of Belgium. One of Prince Albert's aunts was espoused to the grand-duke Constantine of Russia. Another married the late duke of Kent, and is mother of Queen Victoria. A younger uncle became the husband of one of the greatest heiresses of the Austrian empire, the daughter of the prince of Kohary. Prince Albert acquired the rudiments of instruction at his birthplace. His father appears to have diversified his studies as much as possible, and never suffered him to continue long in one place. In 1836 the late duke of Saxe-Coburg-Gotha with his two sons visited England, when Prince Albert was introduced to his cousin and future wife, then the Princess Victoria, now our beloved queen. On returning to Germany, the prince and his brother visited the courts of Berlin, Vienna, and Dresden, and travelled through Hungary, and part of France and Belgium. During the time that they were on a visit to King Leopold at Brussels, the latter with characteristic prescience obtained for his nephew lessons in the English language. Thus prepared, he entered the university of Bonn. Here he was highly esteemed for his benevolence, morality, and decorum. He not only applied himself under the guidance of privy-councillor Florschütz to the study of the subjects usually taught in a German university; but made excellent progress in poetry, music, and painting. While at Bonn, Prince Albert published for the benefit of the poor of the place a collection of songs, with music composed by his brother. After residing in the modest house of Dr. Bischof for three terms at Bonn, rambling on foot during the vacations through Switzerland and the north of Italy, the prince was declared of age in 1839. He had always been fond of athletic exercises and sports of the field; he was tall and muscular, and his countenance a perfect model of the type of German beauty. In October, 1839, he visited this country a second time; and at a meeting of the privy council in November, the young and beautiful maiden queen, his cousin, announced her intention of marrying the prince. Her words on this solemn occasion are memorable for their piety and simplicity; and in the auspicious future they anticipated, were for many years most providentially fulfilled:—"I have caused you to be summoned," said her majesty, "in order that I may acquaint you with my resolution in a matter which deeply concerns the welfare of my people and the happiness of my future life. It is my intention to ally myself in marriage with Prince Albert of Saxe-Coburg and Gotha. Deeply impressed with the solemnity of the engagement which I am about to contract, I have not come to this decision without

mature consideration, nor without feeling a strong assurance that, with the blessing of Almighty God, it will at once secure my domestic felicity and serve the interests of my country." The British nation were delighted with the example which their youthful sovereign thus set to the courts of Europe, of marriage founded on affection and mutual esteem. Prince Albert, having been naturalized by act of parliament a few days previously, was married to Queen Victoria at the chapel royal in St. James' palace on the 10th of February, 1840. The adjoining park was filled with a vaster and more enthusiastic multitude than probably ever assembled on a like festival. It was determined by another act, passed during the same year, that he was to be the regent of Great Britain, if the queen should die before her next lineal descendant arrived at the age of eighteen. In order that in Germany he might take due precedence among the princes of his native country, he was in 1857 made Prince-consort. On settling in England, he applied himself to the studies and occupations which best became one so closely allied to the throne. He investigated the rise and progress of the English constitution and law under Mr. Selwyn, one of the most eminent jurists of the age. As her husband and nearest friend, it was naturally his duty to advise the queen on matters of government and prerogative, a duty which he discharged with singular unobtrusiveness and caution; for he wisely kept aloof from party politics, and never unduly interfered with the ordinary course of the constitutional government of the country. When it was once urged against him that he had so interfered, the most eminent members of all parties of the state—among them Lord Aberdeen, Lord Derby, and Earl Russell—combined to vindicate his conduct. The prince rather preferred to be prominent as the active promoter of the national culture, and of whatever would contribute to the moral and social well-being of the mass of the people, and especially of the poor—such as model lodging-houses, public baths, industrial and other schools of primary and secondary instruction, and institutions designed to further science, mechanical invention, and the fine arts. To his fostering care and energy we owe not a little of the improvement, which of late years has characterized objects of English manufacture in point of shape and form. Soon after his marriage, he cheerfully accepted the presidency of the Society of Arts. As its president, he originated the Crystal Palace Exhibition of 1851 in Hyde Park, which would never have attained its height of splendour and usefulness, had not Prince Albert further aided it by applying to the vast and complicated details of its organization a marvellous combination of energy, tact, and perseverance. The Exhibition of 1851 survives only in its results; but the South Kensington museum is a standing memorial of his solicitude for the education of the people, in the widest sense of the expression. He opened in person the collection of fine art treasures at Manchester in 1857, with the hope that by elevating the taste and increasing the æsthetic culture of the nation, it might also promote the beautiful and true in the manufactures of our country. In the government of his family he set an example to every household in England, so emphatically the land of good homes. He superintended the education of his children with unremitting care. He prepared the prince of Wales to appreciate his responsibilities as heir to the English throne, in a manner which can be only imperfectly understood by the present generation. History will record with satisfaction, that in 1857 he took his illustrious son to be present at the opening of a free school for the children of the lowest costermongers. To the improvement of the education of the higher and highest classes of the community he made important contributions. By instituting prizes for proficiency in modern history and languages, he enlarged the curriculum of Eton study; and as chancellor of the university of Cambridge, he aided in procuring the success of useful academic reforms demanded by the spirit of the age. He was the liberal patron of innumerable benevolent institutions. His skill as a practical agriculturist was evinced by his many successes when he entered the lists as a competitor at the Smithfield club, and other agricultural gatherings. His model farms at Windsor and Osborne were something more than royal playthings; they were rather valuable institutions in which the speculations of agricultural economists were tested in practice. His speeches upon public occasions bear remarkable testimony to his originality of thought and expression. The claims of domestic servants out of place, the foundation of docks, the presentation of regimental colours, the missions of the Church of England to

the colonies and heathen, served him as texts for chosen thoughts and forcible phrases, many of which are current to this day, though men who use them forget their origin. Happily, the Society of Arts adopted the suggestion made by Lord Ashburton in 1857 for a publication of the prince's speeches; and in few works is there so much condensed practical wisdom as in the volume of his addresses on public occasions, which appeared in 1858. These his sayings were public and avowed; but his best deeds were anonymous, for he ever remembered that he stood behind the throne of the sovereign. Towards the close of the year 1861, the country was startled by the announcement that he was dangerously ill. His disease was gastric fever, which soon assumed a typhoid form, and at ten minutes before eleven o'clock on the night of Saturday, 14th December, he yielded back his soul to God. He died in the "King's room" at Windsor Castle, where George IV. and William IV. had breathed their last. Her majesty, the prince of Wales, the Princess Alice, the Princess Helena, with the prince and princess of Leiningen, were by his side when he expired. He was buried at Windsor on the Monday week following, plainly by his own desire, but in the presence of the most illustrious men in church and state, assembled to do honour to his obsequies. Never, perhaps, has there been such a mourning in the annals of the empire; that for Nelson was not so universal, that for the Princess Charlotte was not so deep. For the first time in history, probably, the flag at the Tuileries was hoisted half mast high in reverence for the memory of an English prince. On the meeting of parliament in February, 1862, the chiefs of the great parties of the state in both houses of the legislature, vied with each other in the splendour of their encomiums; while there was an evident determination to avoid, during the session, every topic of discussion which could add to the sorrow or anxiety to the widowed queen. A subscription, which soon amounted to £50,000, was at the same time set on foot for a monument to his memory. The new edition of Tennyson's *Idylls of the King*, contains an exquisite summary of the prince's character, of which the following is part:—

" We have lost him; he is gone;  
We know him now: all narrow jealousies  
Are silent; and we see him as he moved,  
How modest, kindly, all-accomplished, wise,  
With what sublime repression of himself,  
And in what limits, and how tenderly;  
Not swaying to this faction or to that;  
Not making his high place the lawless perch  
Of wing'd ambitions, nor a vantage-ground  
For pleasure; but thro' all this tract of years  
Wearing the white flower of a blameless life,  
Before a thousand peering witnesses,  
In that fierce light which beats upon a throne,  
And blackens every blot: for where is he,  
Who dares foreshadow for an only son  
A lovelier life, a more unstained than his?  
Or how should England dreaming of *his* sons  
Hope more for these than some inheritance  
Of such a life, a heart, a mind as thine,  
Thou noble Father of her Kings to be,  
Laborious for her people and her poor,  
Voice in the rich dawn of an ampler day,  
Far-sighted summoner of war and waste  
To fruitful strifes and rivalries of peace,  
Sweet nature gilded by the gracious gleam  
Of letters, dear to science, dear to art,  
Dear to thy land and ours, a prince indeed,  
Beyond all titles, and a household name  
Hereafter, through all times, Albert the Good."

Statues of the prince have been erected in a number of the chief towns of the country, and in August, 1865, the queen, accompanied by her family, presided at the uncovering of one raised to his memory in Coburg.

The following are some of the titles of the late prince:—He was allowed that of Royal Highness, 6th February, 1840; was appointed field-marshal, 8th February, 1840; knight of the garter; chancellor of the university of Cambridge, 1852; colonel of the 11th Hussars from 30th April, 1840, to 26th April, 1842; colonel of the Scots Fusilier Guards from April, 1842, to September, 1852; knight of the golden fleece of Spain, 1841; grand master of the order of the bath, 1843; governor of Windsor Castle, 1843; lord-warden of the Stanneries, 1842; high-steward of Plymouth, 1843; master of the Trinity house, 1852; president of the Zoological Society, 1850; of the Horticultural Society, 1858; of the British Association, 1859; and knight of the Seraphim (of Sweden), 1856.—T. J.

ALBERTANO DE BRESCIA, governor of Gavardo in the thirteenth century, during the reign of the Emperor Frederick II. He was, during the political troubles which then agitated Italy, cast into prison, where he occupied his constrained leisure in composing several Latin treatises on moral subjects, which were published at Florence in 1610.—J. B.

ALBERTI, LEON BAPTISTA, a celebrated man of letters, and architect, born in 1404; some say at Venice; others, at Florence. At the age of twenty he published a Latin comedy called "Philodoxias," in which he imitated the ancients so successfully, that in 1588 Manuzio, the younger, published it under the name of Lepidus, an ancient comic poet. At a later period he wrote on several branches of science in the style and spirit which were then prevalent; but his best known work is the "De Re Ædificatoria," which has gained him great fame, having been translated into Italian, French, and English. But it was as much by his own architectural works as by the principles he promulgated in his book, that he won for himself the titles of the Florentine Vitruvius, and the restorer of the architecture of Italy. He erected various famous edifices in different parts of Italy, but his greatest work is the church of San Francisco at Rimini. He died in 1484.—J. B.

ALBERTINELLI, MARIOTTO DI BIAGIO, an Italian historical and portrait painter, born at Florence about 1467. He studied at first under Cosimo Rosselli, but soon joined his friend and schoolfellow Baccio Della Porta, better known as Frà Bartolommeo di S. Marco, with whom he worked until the latter entered the order of Dominican friars. This separation proved fatal to the artistical career of Mariotto. He grew tired of painting, and turned tavern-keeper for a while; but soon disgusted with such occupation, left it to resume his artistical pursuits in Rome. After having executed a few pictures of a sacred character, he returned to his native city, where he died of melancholy and exhaustion about 1512. Albertinelli entirely adopted the style of his friends, and left several excellent works, many of which are now in the galleries of Florence, Paris, Munich, and Berlin. His masterpiece, the "Visitation," is in the first of these places.—R. M.

ALBERTINI, FRANCIS, a learned Florentine, who lived in the beginning of the sixteenth century. He devoted himself to the study of antiquities, and produced some able works.

ALBERTINI or ALBERTI, ANNIBALE, an Italian physician, who produced a work in three books on the diseases of the heart; Venice, 1618, 4to.

ALBERTINI, GIORGIO FRANCESCO, an Italian theologian, born at Parenzo in 1732. He studied at Venice, and became a member of the order of St. Dominic, and ultimately professor of theology in the college of the Propaganda at Rome. Died 1810.

ALBERTINUS, ÆGIDIUS, born in 1560, a German poet of considerable satirical power. He was private secretary to the Elector Maximilian of Bavaria, and produced several works in history and general literature. Died in 1620.

ALBERTO, ANTONIO, an Italian painter of the fifteenth century, a native of Ferrara, and pupil of Angelo Gaddi. His pictures at Urbino and Città di Castello are remarkable for beauty of colouring and delicacy of design. Died about 1450.

ALBERTOLLI, CAVALIER GIOCONDO, an Italian artist of eminent merit and unparalleled virtues. He was the reformer in decoration at the same time that Canova and Hamilton were regenerating the other branches of art. Born in 1758 in Canton Ticino, he distinguished himself at the Milanese academy, where he ultimately became director of the school of ornaments. In this capacity he published a series of ornaments of exquisite beauty, such as had never been witnessed since the best days of the Cinquecento. Many and highly distinguished have been his pupils, amongst whom were Ferdinando Albertolli his nephew, D. Moglia, and the brothers Brusa. The Emperor Napoleon, Francis I. of Austria, and Alexander I. of Russia, all vied in bestowing marks of their admiration upon the venerable artist. Arrived at an advanced age, he retired from the direction of the school, being succeeded by his nephew and D. Moglia; but remained attached up to his death, in 1845, to the academical council, in which his sound judgment and vast erudition proved of immense advantage to art in Italy. The great Thorswalden used to say that it was worth a journey to Milan only to see and hear this great man, most appropriately surnamed the "Nestor of Modern Art." His death, although a natural event at so advanced an age, was considered by the Italians as a national calamity.—R. M.

ALBERTOLLI, FERDINANDO, a distinguished Italian architect and decorator of our days, nephew and pupil of Giocondo Albertolli, and also a native of Canton Ticino. He succeeded his uncle when this latter retired from the professorship at the academy of Milan. Designed and executed some of the finest palaces of this city, in a style full of purity and harmony. Died in 1846.—R. M.

ALBERTRANDY, JOHN CHRISTIAN, a Polish bishop and historian, of Italian origin, was born at Warsaw in 1731. He entered the Society of Jesuits at sixteen years of age, and from 1760 held successively the offices of librarian to the bishop of Zaluski, and preceptor to the nephew of the primate. While employed in this latter capacity, he was taken notice of by King Stanislas Augustus, who commanded him to transcribe into the library of the Vatican whatever was of importance in the public records of the kingdom, and this trust he executed in 110 volumes, written with his own hand. He was afterwards named royal librarian and bishop of Zenopolis. Besides numerous dissertations on the history of his own country, he published two volumes of Roman antiquities. Died in 1808.—J. S., G.

ALBERTUS MAGNUS; ALBERTUS TEUTONICUS; FRATER ALBERTUS DE COLONIA; ALBERTUS Ratisboniensis; ALBERTUS GROTIUS:—without question the most distinguished and prolific inquirer of the middle ages: of the family of the counts of Ballstadt. The date of his birth is doubtful; some place it in the year 1193, others in 1205. A student at the school of Padua, he became rapidly famous for the extent of his acquirements—the consequence of untiring industry. About 1222 he joined the Dominicans, and was raised by them to the chair of Theology. He taught with prodigious success in many cities, such as Friburg, Ratisbon, Strasburg, Cologne, &c.; afterwards residing for three years in Paris, accompanied by his great disciple, Thomas Aquinas. In 1260, after having travelled again through Germany, he accepted the bishopric of Ratisbon; but finding that the duties of the episcopate interfered too much with his studies, and were therefore unsuitable to his tastes, he resigned the see into the hands of Pope Urban IV., and retired to a convent at Cologne. The exigencies of public affairs soon drew him from his cherished privacy. We find him in 1270 preaching the Crusade in Austria and Bohemia, and, three years later, he proceeded to Paris to defend Aquinas. Albert died in 1280.—The labours of this extraordinary person extend over the whole domain of the sciences; his learning was encyclopædical. No other man represents so fully or so well the state of the physical sciences in the middle ages; and he ranged, besides, through every department of philosophy and theology. At that time the foundations of Chemistry were being laid, by those researches to which the term Alchemy has been applied. Doubtless, such researches were, in the hands of many men, confined to the quest of the philosopher's stone, and made instruments of imposture; but, with inquirers like Albert, the aim was loftier and sounder, being really the search of all true chemical science—the search, viz., after the simple elements of which bodies are composed. Even the greatest of the Alchemists are undoubtedly chargeable with an error common to pioneers in all the sciences—that of generalizing prematurely; but no impartial historian can withhold the acknowledgment that they manifested quite as much sagacity as could be expected from men of great power; that they were gradually arising to a right idea, or at least to a right practice of the inductive method of research; and that we farther owe them many important special discoveries. Albert, for instance, had realized the processes of distilling and sublimating; he was acquainted with some of the modes of purifying metals; and he had become familiar with many substances and products, not often found, by themselves, in nature. But the place occupied by Albertus in history, is mainly due to his services in another region of thought. The true representative of Peripateticism, the honour belongs to him of having diffused, far and wide, a knowledge of Aristotle, and asserted and secured his dominion. All the leading monuments of the philosophy of the Lycæum were familiar to him; and he had carefully studied the commentaries of the Arabians, as is proved by the mass of his citations from Avicenna, Al-Gazali, Alfarabi, Tofail, and Averrhoës. The conclusions to which his researches led him, bear throughout the impress of Aristotle, freed from that influence of Platonism which had affected the Stagyrte through means of the later Alexandrian school. Faithful to the church, he stood unwaveringly by the supremacy and the rights of Theology; but

he claimed for Reason, the power to raise men, by itself, to Truth. His analysis of the Reason is elaborate, occupying many treatises. He has discoursed much and acutely on Logic—espousing the cause of Realism. In Metaphysics he occupied himself mainly with the idea of absolute substance, or Being in itself,—discussing the ideas of matter, form, accident, eternity, duration, and time. His Psychology had one signal merit, he somewhat rescued its researches from the domain of mere dialectic,—recalling inquirers to the necessity of studying its facts. As to Theodicy, his aim was simply to determine the bases, the extent, and certainty of our knowledge of God. He excludes all positive dogmas—among others, that of the Trinity; insisting that the mind cannot know truths of which it has no image within itself: but he considers that the Being of God is demonstrable in many ways. All his views in morals are excellent: opposing Aristotle, in this case, he insists powerfully that Conscience is the supreme law, which commands us to do or not to do, and which judges concerning the right or the wrong in actions.—The student will gather from these few remarks how extensive the field over which this remarkable person ranged and speculated. If, indeed, his genius had equalled his learning, the history of philosophy would have contained few names superior to his. But those days were mostly the days of commentaries; patience and toil, rather than originality, were in request—knowledge rather than invention. One desiderates in the writings of Albert even that vigorous intellect which makes the opinions of others really its own: instead of a vast system with its parts firmly knit, he has left accordingly only a collection of various essays or treatises, in each of which something of value may be found. His works are enormous in volume, consisting of twenty-one large folios; six of which are devoted to commentaries on Aristotle; five on the Scriptures; two on Dionysius the Areopagite; three contain an explanation of the Book of Sentences of Peter Lombard; two are occupied with a Summa Theologiæ; one with the Summa de Creaturis; one is a treatise on the Virgin; and the last contains his Opuscula, one of which is on Alchemy.—Fuller information will be found in the great dictionary of Bayle, in the *Histoire Littéraire de France*, and the *Dictionnaire de Sciences*. Albertus is of course mentioned and estimated by every historian of Philosophy.—J. P. N.

ALBERÛS. See ALBER, ERASMUS.

ALBI, HENRY, a learned French jesuit, successively rector of the colleges of Avignon, Grenoble, Lyons, and Arles, and author of several ecclesiastical works, was born at Bolene in 1590; died at Arles in 1659.

ALBICUS, SIGISMOND, archbishop of Prague, and afterwards of Cesarée in the reign of Wenceslas IV. of Bohemia. He was suspected of a leaning to the doctrines of Huss and Wickliff, and during the persecutions of the Hussites retired to Hungary, where he died in 1427.

ALBIGNAC, LOUIS ALEXANDER BARON D', a lieutenant-general in the army of the French Republic, was born in 1739. He was appointed to command a department, and to suppress some royalist risings. He served under Marshal Richelieu at the taking of Minorca in 1791, and died in 1820.

ALBIN, an Irishman, who flourished in the eighth century, and was conspicuous for his learning, wisdom, and piety. In company with his friend and countryman Clement, he repaired to Paris, to the court of Charles the Great, who was a zealous promoter of learning, and a patron of learned men. Notker Balbulus, a contemporary French writer, quoted by Ware, mentions that they arrived in France in the company of some British merchants, and observing the people crowd around the merchants to buy their wares, Albin and Clement cried out, "If anybody wants wisdom, let him come to us and receive it, for we have it to sell." Persisting in this strange conduct, the people thought they were deranged, and carried an account of their proceedings to the king, who without delay sent for them, and when they were conducted into his presence, they repeated their assertion, demanding for payment only, "ingenuous souls, convenient apartments, with food and raiment." Charles received them hospitably, and after some time he dismissed Albin to Italy, for the purpose of educating the people, assigning to him the monastery of St. Augustine, near to the city of Ticinum, now Pavia, "that as many as pleased might resort thither to him for instruction." Albin continued there till his death. Some of his epistles are still extant. He is sometimes confounded with an Englishman of the name of Aleuin.—(Hills.)—J. F. W.

ALBIN, ELEAZAR, a painter, who flourished in the middle of the last century at London, and distinguished himself as an able illustrator of works on natural history.

ALBINA, GIUSEPPE, surnamed Sozzo, a Sicilian painter, sculptor, and architect, who died at Palermo in 1611.

ALBINEUS, NATHAN, an alchemist of Geneva, who lived in the latter part of the seventeenth century, author of a work entitled "Bibliotheca Chemica Contracta."

ALBINI, ALESSANDRO, an Italian historical painter, born at Bologna in 1568, died in 1630. He was a pupil of Lodovico Caracci, and worked especially in his native town, where he left many works highly praised both for conception and execution.

ALBINI, FRANCIS JOSEPH BARON D', a distinguished German diplomatist, born in 1748. In 1787, while in the service of Frederic Charles, elector of Mayence, he attracted the attention of the Emperor Joseph II., and was honoured with several missions to the courts of Germany. After the accession of Leopold II. he was appointed chancellor of the court of Mayence, and his administration of the affairs of the electorate was such as to command at once the confidence of his sovereign and the gratitude of the people. Died at Diesburg in 1816.—J. S., G.

ALBINIUS, LUCIUS, a Roman citizen of plebeian origin, commended in history for an act of piety to the vestal virgins. In his flight from Rome, 390 B.C., then threatened by the Gauls, he overtook the priestesses of Vesta, and, descending from his carriage with his family, he caused the vestals to mount and proceed out of danger.—J. S., G.

ALBINOVANUS, C. PEDO, an epic poet of considerable fame in his own day, and a friend of the poet Ovid. Three elegies attributed to him find a place in the collections of the "Lesser Latin Poets."

ALBINUS. See ALCUIN.

ALBINUS, ADRIAN, a distinguished scholar of the seventeenth century, and an intimate friend of Luther and Melancthon, born at Lauban in 1513. He betook himself to various studies in that unsettled age, but ultimately was a teacher of law at Frankfort-on-the-Oder, and held a high legal position under one of the reigning dukes of Brandenburg. Died in 1590.

ALBINUS, DECIMUS CLAUDIUS, a Roman general who served in Britain under the emperors Marcus Aurelius and Commodus, and on the assassination of Pertinax became a claimant for the empire. After some time spent in negotiations, he was defeated, and taken prisoner at Lyons by his rival, Septimus Severus, and immediately put to death, A.D. 198.

ALBINUS, JOHANN, a German poet, was born at Coburg, became professor of Latin poetry at Leipzig, and died in 1607.

ALBINUS or WEISS, JOHANN GEORG, born in 1624 at Unter-Neisse, and died at Naumburg in 1679. He was connected with one of the fraternities of poets then prevalent in Germany, and has left a variety of compositions.

ALBINUS or WEISS, PETER, a German poet and historian, professor of poetry and mathematics at Wittenberg, and afterwards secretary to the elector of Dresden. Died in 1598.

ALBINUS or WEISS, a family of German physicians. Of these we notice:—

ALBINUS, BERNARD, a German physician, professor of medicine at Frankfort-on-the-Oder, and afterwards at Leyden, was born at Dessau in 1653, and died in 1721. He is the author of numerous dissertations on professional subjects. His lectures were published long after his death under the title of "The Causes and Symptoms of Diseases."

ALBINUS, BERNARD SIGFRIED, son of the preceding, an anatomist of great celebrity, professor of anatomy and surgery at the university of Leyden, was born at Frankfort-on-the-Oder in 1696. Not satisfied with the instructions he received from his father and other equally distinguished professors of Leyden, he went to reside a year in France, and became the friend of the most celebrated anatomist of that country. His success as a professor rewarded his labours as a student. Died in 1770. His works are numerous and highly esteemed.

ALBINUS, CHRISTIAN BERNARD, a brother of the foregoing, was born in 1696, and taught anatomy at Utrecht.

ALBINUS, FREDERICK BERNARD, another brother, born at Leyden in 1715, succeeded Bernard Sigfried as professor of medicine and surgery.—J. S., G.

ALBINUS DI VILLANOVA, PETER CONSTANT, an astrologer and alchemist, lived at the beginning of the 17th century, and wrote a treatise on his favourite sciences.

AL-BIRUNIUS; ABU, RIHAN, MOHAMMED; an Arabian astronomer and geometrician of the eleventh century. He wrote a number of works, *e. g.*, on spherical superficies; on the motions of the stars; on the trisection of the angle and the duplication of the cube; on the determination of time; commenting on the *Almagest*, &c., &c. He was a great traveller, and had penetrated into the Indies.—J. P. N.

ALBISSON, JEAN, a French jurist, born at Montpellier, 1732, died 1810, published several works on jurisprudence.

ALBITTE, ANTOINE LOUIS, a member of the French convention, and one of the most ferocious of the Jacobins. Escaping the perils to which, after the fall of Robespierre, his atrocities exposed him, he became an ardent adherent of Napoleon, and after long service as an administrative functionary in the army, perished in 1812, during the retreat from Moscow.—E. M.

ALBIUS, RICARDUS, or RICHARD WHITE, an English jesuit of the seventeenth century, remarkable for his mathematical genius, and author of a treatise on geometry.

ALBIZZI, BARTOLOMEO, or BARTHOLOMEW OF PISA, a Franciscan monk, a very voluminous writer, who attained great notoriety as author of a work, entitled "Conformities of St. Francis to Jesus Christ." He died at Pisa in 1401.

ALBIZZI, PIETRO, leader of the Guelphs at Florence, and one of the three directors of the republic from 1372 to 1378. When overpowered by a conspiracy of the Ghibeline—papal and democratic—party in 1379, he magnanimously required his judges to order the immediate, though unjust, execution of himself and colleagues, to appease the infuriated populace, who declared that unless the Guelph leaders were immediately put to death by the executioner, they would instantly tear them to pieces, and commence a massacre of their friends and families.—E. M.

ALBIZZI, RINALDO, son of TOMMASO, was left under the care of his father's judicious and faithful friend, Nicolo d'Uzzano, after whose death in 1433, he was hurried by wilfulness and incapacity into a series of measures which proved disastrous to the public, and terminated in his being driven into exile in 1434, from which he was never able to return. Died at Ancona in 1452.

ALBIZZI, TOMMASO, or MASO, nephew of PIETRO, and leader of the Florentine republic from 1382 to 1417, was born in 1347, and died in 1417. He was exiled at the time his uncle was put to death, but was recalled in 1382. His patriotism, talents, and energy rendered his long administration the most glorious period in the annals of Florence.

ALBO, JOSEPH, a Spanish rabbi, born towards the end of the fourteenth century, author of a famous work, entitled "Ikkanim," *i. e.*, "Foundations," being a defence of Judaism, and an attack on Christianity. Albo is celebrated also for the part he took in a public discussion before the anti-pope, Benedict XIII.

ALBOIN, founder of the Lombard kingdom in Italy, succeeded in 561 his father Audoin as king of the Lombards, then in Pannonia; all but exterminated, in 566, the Gepidæ; espoused as his second wife Rosamond, daughter of their king, whom he had slain; crossed the Alps in 568 at the head of an immense army, comprehending auxiliaries from various nations; took possession of the whole north of Italy, and, by the capture of Pavia after a siege of three years, completed his conquest, making Pavia his capital; and was murdered in 573 at Verona, by his own armour-bearer.—E. M.

ALBON, CLAUDE-CAMILLE-FRANÇOIS D', an accomplished but rather whimsical French landed proprietor and writer, a devoted follower of the great economist Quesnay, and author of several works on economical and historical subjects.

\* ALBONI, MARIETTA, an Italian singer, whose musical powers, natural and acquired, have awakened vast admiration, during her professional visits to most of the capitals of Europe, was born in 1824 at Cesena, a small town in Romagna.

ALBONI, PAOLO, a Bolognese landscape painter, born in 1677, died in 1734. He left Italy when still young, and proceeded to Germany, where he adopted a style mixed of the Dutch and Flemish.—R. M.

ALBORESI, GIACOMO, an Italian painter, whose excellence lay in painting architectural views in fresco, was born at Bologna in 1622, and died in 1677.

ALBORNOZ, DIEGO-FELIPE, a learned Spanish ecclesiastic, who flourished in the seventeenth century, author of an excellent work on "Virtues and Vices," in the order of the alphabet; and translator of Bissachioni's "Civil Wars of England."

ALBORNOS, GIL (or ÆGIDIUS) D', a Spanish ecclesiastic, and one of the greatest men Spain ever produced, was born at Cuenza about the beginning of the fourteenth century. Of noble and even royal extraction, he was raised, while quite a youth, to the archiepiscopal see of Toledo; and he rendered Alfonso XI. great service in his wars with the Moors, procuring him subsidies, and by his valour saving his life in battle. Having, by his faithful remonstrances, incurred the enmity of Pedro the Cruel, he resigned his archbishopric; and, repairing to Avignon, was made a cardinal by Clement VI., and appointed to recover by arms the states of the church. This he accomplished by force or policy; and continued to govern as legate the ecclesiastical territory with singular judgment and success, displaying eminent military talents, political discretion, and administrative capacity, as well as dignified sentiments and rare disinterestedness. Died at Viterbo in 1367.—E. M.

ALBOSIUS or AILLEBOUT, JEAN, physician to Henry III. of France, and author of a medical work, entitled "Portentosum Lithopædium," containing the description of a medical phenomenon which attracted great attention, and led to the discovery of similar petrifications.

ALBOUZDJANY, ABUL-YEFA-MOHAMMED, an Arab astronomer, a native of Bouzdjan, in Khorassan, who flourished at the court of the caliphs of Bagdad in the tenth century, and contributed to the progress of astronomical science.

ALBRAND, FORTUNÉ, a French orientalist and traveller, who visited the interior of Madagascar, established a colony there, and died in 1827, at the age of 32, while engaged in composing a dictionary of the language of that island.

ALBRECHT, BALTAZAR AUGUSTIN, a Bavarian historical painter, born in 1687, died in 1765. He studied in Italy, and distinguished himself especially in sacred subjects. He was deservedly appointed, by the elector, surveyor of the Munich gallery.—R. M.

ALBRECHT, CHRISTIAN, a native of Suabia, who in 1805, under the auspices of the London Missionary Society, established a mission settlement in Southern Africa at Warm-bath, to the north of the Orange river; and continued his arduous labours for the conversion of the heathen, first at Warm-bath, and, after its desolation by the famous chief Africaner, at Pella, on the south of the Orange river, where he collected the remnant of his flock, till his death in 1815.—E. M.

\* ALBRECHT, FREDERICK-RODOLPH, son of the celebrated Archduke Charles, was born in 1817, became in 1845 general and commander of the forces in Lower Austria, was unjustly represented as having in 1848 ordered the troops to fire on the people at Vienna, as he was then absent and had resigned the command, served in 1848 under Radetski in Italy, and in 1849 was made governor of the federal fortress of Mayence.—E. M.

ALBRECHT VON HALBERSTADT, an old German poet, one of the "minnesingers," flourished early in the thirteenth century. His productions consist mainly of imitations and translations. Besides imitations of two French *Romans*, he wrote a free translation of "Ovid's Metamorphoses."

ALBRECHT, JOHANN FREDERICK ERNEST, a German physician, author of numerous but indifferent novels, was born in 1752 at Stade in Hanover, practised medicine at Reval, became a bookseller at Prague, then director of a theatre at Altona, and latterly resumed his medical practice. Died in 1816.

ALBRECHT, JOHANN SEBASTIAN, a German physician and naturalist, professor of natural history at Coburg, remarkable for his attention to strange and abnormal phenomena in the animal and vegetable kingdoms, and author of numerous memoirs containing the results of his observations, was born in 1695, and died at Coburg. The precise time of his death is uncertain.

ALBRECHT, JOHANN WILLIAM, a German physician, successively professor at Wittenberg, from 1734, and professor of anatomy, surgery, and botany at Göttingen, author of numerous learned professional works, including an ingenious dissertation on the influence of music on the state of animated bodies, was born at Erfurt in 1703, and died in 1736.

ALBRECHT, WILHELM, a celebrated German agriculturist, born in 1786. After being trained under Thaër, he was for some time teacher of rural economy in M. de Fellenberg's establishment at Hofwyl, near Berne. In 1819 he was appointed by the duke of Nassau, editor of a weekly journal of agriculture, and in 1820 director of the Normal Agricultural Institute at Idstein, which was subsequently transferred to Geisberg in the

vicinity of Nassau, and became a prominent source of agricultural improvements for the west of Germany. The object of the establishment was neither to form men of science, nor to train farm servants, but to send forth agricultural instructors and enlightened farmers, acquainted with the theory, and versed in the practice, of agriculture. During the summer months, the students were expected to be engaged in agricultural labour and observation on well-managed farms. As secretary to the Nassau Agricultural Society, he continued for fifteen years, from 1819, to publish its transactions annually, in one volume 8vo. A short time before his death, which occurred in 1848, he resigned the directorship of the institute at Geisberg, and spent the remainder of his days in retirement.—E. M.

\* ALBRECHT, WILHELM EDWARD, a German legist, was born at Elbing in 1800, studied at Göttingen, became in 1829 professor of German law in that university, lost his chair in 1837, by joining in a protest against the king of Hanover's abolition of the constitution of 1833, and in 1840 was appointed professor of public law in the university of Leipzig.

ALBRECHTSBERGER, JOHANN GEORG, a musician, was born at Klosterneuburg, a small town near Vienna, in 1736. At seven years old he was placed in the choir of the free school, where he immediately attracted attention by his natural talent for music; his parents, however, were too poor to afford him any instruction, but in this emergency, Leopold Pittner, an organist in the town, undertook the gratuitous tuition of the young chorister on the organ and harpsichord, and in harmony. Among other acts of kindness of which Albrechtsberger always spoke with gratitude, his master had a small organ erected for him to practise upon, that is still kept in one of the neighbouring Danubian villages as a relic. After a few years, he was appointed a singing boy in the abbey of Melk; in this capacity, taking part in the performance that was customary during the carnival, of some little operas, on an occasion when the emperor was passing through the place, and so witnessed the entertainment, the imperial Joseph was so pleased with his bright soprano voice that he personally presented him with a golden ducat. Here he derived great advantages from the lessons of Kimmerling the organist. When his voice broke, he obtained an engagement to play the organ at Raab, for which he was now admirably qualified; he quitted this for a more lucrative one at Maria Taferl, from whence in 1760 he was appointed to the same office at Melk. In 1765, when the Princess Maria Josepha passed through the town on the way to her nuptials with the emperor, an ode in her honour was performed, which Albrechtsberger had composed, and which brought him a second time under the favourable notice of royalty. Some time later, the emperor again passed through Melk, and, attending mass at the abbey, heard him accompany the service, and afterwards extemporise upon the organ, when he again spoke to him personally, and promised him the first appointment in Vienna that should become vacant: accordingly, in 1772 he became organist of the Carmelite church, in the Austrian capital. Indefatigable in the study of his art, he took advantage of his new situation to place himself under Mann, the court organist, for his esteemed instruction. Four years prior to this he married the daughter of Weiss the sculptor, by whom he had fifteen children. On the death of Hoffman, the organist of St. Stephen's church in Vienna, Mozart, who had for long desired such an office, was nominated by the emperor to succeed him; already, however, the hand of death was upon the master, and the fulfilment of his earnest wish came too late for him to enjoy it; but such was his esteem for Albrechtsberger, that almost his last words were an injunction to conceal his death from every one else, until he should have time to apply for and obtain the appointment. Thus in 1792, he entered upon this engagement, which afforded him still greater scope than his former one had done for the exercise of his talent. He was elected member of the Stockholm academy in 1798. He died on the 7th of March, 1809, and was interred in the same churchyard as Mozart had been nearly eighteen years earlier, and Haydn was a year later. He was the master of many of the most distinguished musicians of the last generation, among whom may be specially noted, Weigl, Seyfried, Hummel, Eybler, and Beethoven, which last said of him, "Now Albrechtsberger is dead, there is no one to teach counterpoint." Of his extremely voluminous compositions a very small number are printed, and of these his excellent organ fugues are the most

esteemed; the chief of his other works, consisting mostly of sacred music, but comprising every class of vocal and instrumental production, are in the library of Prince Esterhazy Galata; a list of the whole is to be found in Dr. Schilling's Lexicon. With regard to the great facility in the contrapuntal style that prevails throughout his writings, he used to say that he never had an idea which did not present itself to him in the form of double counterpoint. His last composition was a "Te Deum," designed for the entry into Vienna of the Emperor Francis; but as he did not live to witness this event, he desired that it might be presented to his patron on the first public occasion, with these words: "In his last moments, a faithful subject offers his sovereign his homage," which loyal behest was fulfilled shortly afterwards by his daughter, on the occasion of the emperor's marriage. Albrechtsberger is best known in England by his theoretical works, which were collected and published by Seyfried, and of which Messrs. Cocks and Messrs. Novello each print a translation.—G. A. M.

ALBRET, CHARLES, Lord of, became constable of France in 1402, commanded the French during 1405 and 1406 against the English in Guienne, and fell at the head of the French army in the memorable battle of Agincourt, 25th Oct., 1415.

ALBRIC, ALBRICUS, ALBERICUS, or ALFRICUS, an English philosopher and physician, flourished at London about 1080, according to some, and about 1220, according to others; author of 1. "De deorum imaginibus;" 2. "De ratione veneni;" 3. "Virtutes antiquorum;" 4. "Canones speculativi." The first only has been printed.

ALBRION, DOMINGO D', a Spanish sculptor of the sixteenth century, admired for the accuracy of his figures, and the simplicity of his drapery. Two of his statues are in the cathedral of Tarragone.

ALBRIZZI, JEROME, a Venetian publisher of the seventeenth century, author of a concise description of the countries watered by the Danube, with engravings, and a summary of Hungarian and Turkish history. He published also "The Gallery of Minerva, or European Bibliography," 3 vols. folio.

ALBRIZZI, ISABELLA TEOTOKI, Countess of, a learned and accomplished Greek lady, daughter of Count Teotoki, and wife of Joseph Albrizzi, a Venetian nobleman, was born at Corfu in 1770, and died at Venice in 1836. Her house in Venice was long the resort of illustrious men of genius. Byron calls her the Venetian Madame de Staël. She wrote—1. "Portraits of Distinguished Characters;" 2. "Dissertations on the Works of the Sculptor Canova," 4 vols. 8vo; and 3. "A Life of Vittoria Colonna."—E. M.

ALBUCASIS, ABULCASIS BUCHASIS or BULCHASIM, a skilful Arab physician, author of a curious work on surgery, was born at Azzahra in Spain, and died at Cordova in 1106-7. His work, "Al-Tassrif," contains, among much other ingenious matter, an interesting discussion of the appliances of practical surgery, as these were apprehended in his time.

ALBUMAZAR, a famous Arabian astronomer, was born at Balkh in the Khorassan, A.D. 776-7. His life, by an anonymous writer, and a list of fifty of his works, are preserved in the library of the Escurial. He destined himself for the profession of law, and during his preparatory studies declared himself an enemy of all natural science as irreligious. When considerably advanced in years, however, he turned his attention to the study of mathematics, and to the practice of judicial astrology, the results of his labours in both of which he embodied in a curious work still preserved: "The Book of the Introduction to the Science of the Stars." He is also supposed to be the author of an astrological treatise entitled "Olouf" (a thousand years), in which it is asserted that the world was created when the seven planets were in conjunction in the first degree of Aries, and that it will terminate when they are in conjunction in the first degree of Pisces. Died A.D. 885.—J. S., G.

ALBUQUERQUE, ALFONSO D', more properly AFFONSO D'ALBUQUERQUE, surnamed the GREAT, was second son of Gonzalvo, lord of Villaverde, who was descended from Affonso Sanchez, an illegitimate son of Diniz, king of Portugal, and married Da. Tarija, daughter of Sancho, king of Castile. His son Don Juan first assumed the territorial designation, D'Albuquerque, from the castle of that name, which he rebuilt; and this name became afterwards familiar in the history of the Peninsula, not only from the actions of his descendants, but from those which occurred at the place whence their name was derived.

Alfonso was born in the year 1452 at Alhandra, near Lisbon, which, though but a small seaport town, could boast a considerable fishery, and, consequently, a race of bold and enterprising seamen. He was educated at the court of Alfonso V., where both classical and mathematical learning were sedulously cultivated, and where the latter received its characteristic application in what was then termed the science of cosmography. After the death of Alfonso, he went into Africa, and served in the war against the Moors; from whence returning, he became principal equerry to John II., under whose influence Albuquerque doubtless acquired those enlarged views of policy and commerce which influenced his after life. At the death of John, he went again to Africa; but losing a brother in battle, returned to Portugal, and became principal gentleman of the bedchamber to King Emanuel. Subsequently he was sent with the fleet to Tarento, to assist Ferdinand, king of Naples, against the Turks, and was then placed in command of Fort Gracioza, which the Portuguese had built on the coast of Larache in Morocco.

Thus prepared for more important services, in 1503 Alfonso sailed from Belem as commander of a squadron of three ships, and second in command to his cousin Francisco d'Albuquerque, who sailed from Lisbon with the same number, to build a fort at Cochin, on the coast of Malabar. Having performed this service, he returned to Portugal; but Francisco, who had parted from him in anger, was lost during the voyage. In 1506 he again left Portugal, never to return. Tristan d'Acunha had been placed in command of a fleet of fourteen vessels, with instructions to support the native Christians of India against the Mahometans, and for this purpose to build a fort at Socotra; with him Alfonso d'Albuquerque was sent ostensibly as second in command, but really to supersede Almeyda, who was then acting as viceroy in India. On reaching Madagascar, Acunha determined to examine the shores of that island, while Albuquerque sailed with six ships to explore the N.E. shores of Africa. Having done this, and returned with pilots, the united fleet sailed to Socotra, and built there the fort of Coco, after which Acunha sailed to India, leaving Albuquerque with his squadron to operate against the enemy in the Gulf of Persia and the Red Sea. He shortly found an opportunity to secure the throne of Ormuz, then the commercial emporium of the Indian seas, for a chief disposed, in consequence, to further the interests of the Portuguese; but being deserted by Juan de Nova, and some of his captains, he was reluctantly compelled, after examining the Persian Gulf, to abandon the scene of his success for a time, and sail for India. He arrived in 1508, but his claim to authority was not acknowledged by Almeyda, who, at the instigation of the disaffected captains, threw him into prison. On the arrival, however, the following year, of Fernando Continho, a relative of his own, and high in office in the court of Emanuel, with the authority of captain-general, he was immediately released, and Almeyda superseded. Continho being shortly after slain at the taking of Calicut, and Almeyda having quitted India, Albuquerque was left alone to carry out his schemes for the extension of the Portuguese power in the East. His first act was to take possession of the town of Goa, which had been built by the Mahometans for the security of their commerce, the surrounding country being in the possession of the Hindoos, who were willing to join the Portuguese in expelling the Arabs. The town had a large but motley population, and the government was weak and undecided. Albuquerque's first conquest was therefore easy; but through the disaffection of his officers, he was obliged to abandon it as he had done Ormuz. His perseverance was, however, rewarded in the autumn of the same year, 1510, and Goa became the metropolis of Portuguese India.

Diego Lopez Sequiera, who had joined in inciting Almeyda against Albuquerque, sailed shortly after the arrival of Continho to Malacca. He was one of those brave but unprincipled men, who caused the Portuguese name to be no less hated than feared in the East. Some of his crews having been taken by the Moors, Albuquerque sailed at the head of nineteen ships and 1400 men, of whom 800 only were Portuguese, to release them, and capture Malacca. This was one of the most important cities in the East, said to contain not less than 100,000 persons, defended by 30,000 soldiers and a numerous artillery. Albuquerque, at the head of his Portuguese, and 200 Malabar Indians, stormed the town, and effected its capture after a desperate resistance. He was greatly assisted in this action by a wealthy Javanese, whom he afterwards employed in an important civil office; but

subsequently discovering that he was carrying on a traitorous correspondence, he put him to death, with his nearest male relatives, although his wife offered 2,800 pounds of gold for their redemption. Some writers accuse Albuquerque in this, of treachery and cruelty, asserting that his only reason for the execution was his fear of the man's power, he being the chief of 10,000 of his countrymen. Such a motive was clearly foreign to the character of Albuquerque, and his words on the occasion, as recorded by De Barros, should be received as evidence of the real one: "He was," he said, "the minister of justice of his king, who was not accustomed to sell justice for money:" indeed there is every reason to believe that there were conclusive proofs of the man's treachery. On his return to Goa, Albuquerque built a church in honour of "Our Lady of the Annunciation," and decorated it with ornaments from the tombs of the kings of Malacca; from whence also he took four bronze lions to grace his own tomb. These, however, were lost, with much treasure, in a storm at sea, during which Albuquerque risked his own life to save that of one of the sailors. From this, as well as from the fact, that throughout his career he was beloved by the men, though disliked by some of the officers; that at the storming of Calicut, he would have prevented the plundering which led to the defeat of the Portuguese and the death of Continho, and that he died without enriching himself; we may well conclude that Albuquerque was disliked, deserted, and misrepresented by the officers, because he would not let them seek their private advantage to the detriment of the public service.

After the conquest of Malacca, Albuquerque sent his nephew, Francisco de Noronha, to whose valour he had already been much indebted, to the conquest of Mozambique; and to complete the reduction of the fortresses by which the Mahometan power was protected in the Indian seas, he himself sailed to Aden. In the attack on this fortress, however, he was unsuccessful. Determined to end his days in India, Albuquerque requested the title of Duke of Goa. This gave an opportunity for the malice of his enemies at the court of Portugal, who at last prevailed on the king to supersede him, and L. Soarez and Diego Mendez were appointed respectively to the government of India, and the command of the fortress of Cochin. They did not, however, reach that country until after the completion of his last great act, the capture of Ormuz. This he effected by policy, ejecting the vizier Ras Ahmed, and causing his execution, dismantling the batteries, and erecting a fortress which he garrisoned with Portuguese for the defence of the town.

His health gave way before the evil news of his being superseded reached him, but this announcement completed what his labours under a burning sun had begun; and leaving his nephew, Pero d'Albuquerque, in command at Ormuz, he sailed for India, praying only to be permitted to die at Goa. He expired as he was about to enter that harbour, on the night of December 13, 1515, and was buried in the church which he had built, the lamentation of the people overpowering the voices of the officiating priests. Albuquerque was of commanding presence, though not of lofty stature, the contour of his features indicating that haughty spirit which, no doubt, hindered some of his noblest projects, by making him personal enemies. His eyes were dark and piercing, and his beard descended below his waist. Ambition was his ruling passion, and he may deserve to be surnamed "the Great," not only on account of his actions, which brought all the coasts of India into subjection to the king of Portugal, but because those actions were not the result of any meaner motive. His letter to the king, written on his deathbed, in which he requests the aggrandizement of his natural son, his only child, shows this plainly; as does his desiring the title of Duke of Goa, when taken in connection with his carelessness of personal enrichment. Not inferior to Cortez himself in the largeness of his views, or his persistency in their pursuit, his chief object in life was to lessen the Mahometan power, and especially that of the caliph of Egypt. With him, war with the Moors was, in India as in Africa or the Peninsula, a crusade, and pursued with corresponding devotion.

The Portuguese were indebted to Albuquerque for their first knowledge of the Persian Gulf and the coasts of Arabia. His lieutenants explored the Eastern archipelago. His ambassadors were sent to the courts of the most powerful Asiatic princes, and true to his policy of availing himself of the quarrels of others to forward his own views, we find him sending ordnance to the Persians to assist them against the Turks, and stimu-

lating the king of Abyssinia to attack Egypt; and if we now smile at the impossibility of his scheme to make Egypt a desert by turning the Nile into the Red Sea, we must at least admit the greatness of the idea, and confess that schemes as impracticable have gained the attention even of scientific men in our own day. As strong feelings of religion and loyalty marked the end of Albuquerque, so did a consciousness of having performed the duty which had been intrusted to him: he could say that "the state of India would speak for him." Nothing but the conquest of Aden remained to complete his original purposes; but the glory and power which he had gained for the Portuguese in India soon faded before the selfishness of his successors. He died without the poor satisfaction of knowing that the king, though superseding him in the government of India, had left him in command of his recent conquest, and those regions on the Red Sea and coast of Africa, which he no doubt hoped the valour and policy of Albuquerque were then bringing into subjection to the crown of Portugal.—C. G. N.

ALBUQUERQUE, ALFONSO BRAZ D', was born in 1500, and died at Lisbon in 1580. A natural son of the conqueror of the Indies, he was at an early age placed in the marine service, and, as commander of the convoy, accompanied to Savoy the unfortunate Beatrice of Portugal, through whose influence he was afterwards married into a family of distinction, attached to the court. After a time he quitted the profession of his youth, and in the situation of financier, to which he was appointed by Joao III., displayed the same ability, zeal, and disinterestedness that had characterized him as an officer of marines. His exertions in 1569, when a plague ravaged the kingdom, to provide accommodation for the sick, are recorded in terms of exaggerated praise by the historians of the time. He prepared for publication a volume of memoirs left by his father.—J. S., G.

ALBUQUERQUE, COELLO ANTOINE, a Portuguese captain, whose voyage from Goa to Madras, and from Madras to Macao, at the beginning of the eighteenth century, has been narrated at length by one of his officers.

ALBUQUERQUE, DUARTE COELHO D', Portuguese governor of San Salvador in 1638, when that city was besieged by the Dutch. Died at Madrid in 1658.

ALBUQUERQUE, MATTHIAS D', a Portuguese general, governor of the province of Pernambuco in Brazil, and after his return to Europe in 1635, for services rendered in the war that resulted in the separation of the crowns of Portugal and Spain, elevated by John IV. to the rank of grandee, and named Count of Allegrete. Died at Lisbon in 1646.

ALBUTIUS, CAIUS TITUS, a celebrated Roman orator, who flourished in the reign of Augustus, was born in Lombardy, and exercised there for some time the function of ædile. Injuringly treated in a public revolt, he repaired to Rome, where his extraordinary powers of eloquence procured him distinction. In his old age he returned to Lombardy, and having been long afflicted with an abscess in the lungs, he announced to his fellow-townsmen of Novarre his intention of committing suicide, and accomplished his design by starving himself.—J. S., G.

ALBUTIUS, TITUS, an Epicurean philosopher, banished from Rome about the beginning of our era. He had held office under the empire in Sardinia, and was convicted of peculation.

ALCACOBA or ALCAZOVA, SIMON, a Portuguese navigator, captain of one of the ships fitted out for the West Indies in 1522 by Charles V., was afterwards appointed by that monarch one of the arbiters to adjust the boundary line between the colonial possessions of Spain and Portugal. In 1534, at his own expense he equipped two ships, and set sail on a voyage of discovery. He reached the coast of Patagonia, but, driven to extremity by bad weather, returned to Port de Lobes, and there disembarked. Advancing into the interior of the country, he was seized with sickness, and had to resign the command of his troops to his lieutenant, Rodrigo d'Isla, who led them back to the ships. On board they rose in a mass, and murdered Alcaçoba, the pilot, and three others.—J. S., G.

ALCADINUS, an Italian physician and litterateur, was born at Syracuse about the year 1170. He celebrated in elegiac verse the triumphs of his patrons, Henry VI. and Frederick II., and also wrote a treatise on the baths of Pouzzoles. Died 1234.

ALCÆUS, a Greek comedian, of whose works only a few fragments have reached us; said to have lived about 380 B.C.

ALCÆUS of Messenia, a Greek poet, flourished about 170 B.C. His works have been lost, except a few epigrams.

**ALCÆUS**, one of the greatest of the Greek lyric poets, was a native of Mitylene, and flourished about the end of the seventh century B.C. His family seems to have been noble, and he and his brother struggled hard to gain for themselves the supreme power in their native state. They were unsuccessful, and Alcæus never spared abusive language against the successful aspirants, especially Myrsilus, on whose death he wrote a triumphant ode of joy. Poets in these days were men of action, and accordingly Alcæus fought against the Athenians, under Pittacus, but for some reason or other threw his shield away. There is no cause to suspect his bravery on this account, and indeed he seems to have exaggerated his misdeeds. When Pittacus was appointed governor-general of the state, in opposition to the efforts of Alcæus and his brother, the poet withdrew from his native place, but hurled back biting and sarcastic verses on the ruler. After a time the poet grew weary, repented, and was forgiven by Pittacus. And so it is likely that he spent the rest of his days in peace, amidst the scenes of his childhood. The lyric efforts of Alcæus are very various. Now he sings of wine, of which he was perhaps too fond; now of love, now of war. His most famous were his poems on the civil broils in which he took so prominent a part. We have only fragments of this great poet's works, but there is enough to show his extraordinary gifts. Horace imitated him very frequently.—J. D.

**ALCAFORADA, FRANCIS**, a Portuguese traveller, who took part in the expedition under the command of John Gonzalve Zarco, which, sixty years before that of America, made the discovery of the isle of Madeira. He drew up an interesting history of the voyage, which bears the date of 1420.

**ALCAFORADA, MARIANNA**, a Portuguese lady of noble birth, whose appellation of "une religieuse Portugaise" has acquired a remarkable celebrity, lived in the second half of the seventeenth century. Immured in one of the rich convents of Beja, in the year 1662 she had an opportunity of making the acquaintance of Count Bouton de Chamilly, for whom she conceived a violent passion, which she expressed in a series of letters of remarkable power and pathos. These letters, the vanity of the chevalier led him to deliver to a friend for publication, and in this way the world has become acquainted with the sorrows and the genius of Marianna Alcaforada. Her letters have been frequently reprinted, sometimes with unworthy additions, and are best known in the French translations, published with the title "Lettres Portugaises."—J. S., G.

**ALCALA', PARAFAN D' RIVERA**, Duke d', viceroy of Naples under Philip II. king of Spain, was born in 1508. He removed many abuses, and by his extraordinary energy, obviated many calamities that threatened the existence of the Spanish power in Italy. Died in 1571.

**ALCALA', PEDRO DE**, a Spanish missionary, commissioned by Ferdinand and Isabella in 1491 to labour among the Moors of Grenada. He wrote an Arabic grammar, now very rare.

**ALCALA' Y HERRERA**, a Portuguese poet, born at Lisbon in 1599. He was originally a merchant, and seems to have carried into his worship of the muses some of the crotchets of his trade. He has left songs without an *a*, and hymns without an *e*; both without poetry.

**ALCAMENES**, king of Sparta in 747 B.C., finished the war with Helos, and began that with Messenia, two of the many Spartan quarrels with neighbouring states.

**ALCAMENES OF ATHENS**, a sculptor and toreutes, living about 450 B.C. He was the best pupil, and almost the rival of Phidias, whom he assisted in many of his important enterprises. Amongst his works are recorded—a statue of Venus Aphrodite, which he made in competition with Agoracrites, another pupil of Phidias, over whom he obtained the prize—(this statue was placed in the public gardens at Athens); the group in the western pediment of the temple of Zeus at Olympia, representing the son of Jupiter, Perithous, rescuing his wife from the Centaurs; a statue of Vulcan, which, according to Cicero, represented the lameness of the god without degenerating into deformity; a bronze statue of Mars, of which the Ludovisi Mars is supposed to be a copy, in the same way that the Achilles of the Louvre is considered to be an imitation of another statue by this great sculptor. Even the Venus of Milo is, with some apparent reason, attributed to Alcamenes, who undoubtedly was one of the best artists of the best period of Greek sculpture.—R. M.

**ALCAMO, CIULLO D'**, a very ancient Italian poet mentioned by Dante, was a native of Sicily, and lived towards the end of

the twelfth century. One canzone preserved by Crescimbeni, and no more, has been authenticated as the work of this father of Italian song.

**ALCANTARA, DIEGO D'**, a distinguished Spanish architect of the sixteenth century. He was appointed by King Philip II. to the direction of the works of the royal palaces, and of those of the cathedral of Toledo. He died in 1587.—R. M.

**ALCAZAR, BALHAZAR D'**, a Spanish poet, of whom little is known besides the fact that he was a contemporary of Cervantes, and wrote a number of madrigals and short poems of the kind popular in the sixteenth century.

**ALCEDO, ANTONIO**, a Spanish geographer, lived in the latter part of the eighteenth century. He was the author of a geographical and historical dictionary of the West Indies, translated into English in 1812.

**ALCESTE**, the daughter of Pelias, and wife of Admetus, king of Thessaly, is said to have devoted herself to death in consequence of the declaration of an oracle, to save the life of her husband, who was afflicted with a dangerous disease, but who was rescued from the infernal powers by Hercules.

**ALCETAS**, a king of Epirus, predecessor of Pyrrhus.

**ALCHINDIUS or ALKINDI, ABOU YAKOOF IBN ISHAK IBN ASSABAH**, an Arabian physician and philosopher, born at Bassora, who lived at the court of the caliph Al-Mamûn. He was the author of more than two hundred works on medicine, mathematics, logic, and music, a catalogue of which may be found in the work of Casari, "Arabica philosophorum bibliotheca." Several of his writings were translated into Latin during the middle ages. He endeavoured to found his medical system upon mathematical principles.—J. W. S.

**ALCIATI, ANDREA**, an Italian jurist of Alzano in the Milanese territory. He was born in May, 1492, and died in June, 1550. He gained great distinction as professor of civil law at the universities of Avignon, Bourges, Pavia, Milan, Bologna, and Ferrara. He introduced some degree of literary refinement into the barbarous language of jurisprudence, but he disgraced himself by avarice and gluttony. Towards the latter part of his life, he was created prothonotary of Rome by Pope Paul III., and was raised by the emperor to the rank of a count palatine. He wrote a commentary upon Tacitus, and a history of Milan.—J. W. S.

**ALCIBIADES**, son of Clinias and Dinomache, was born at Athens about the year 452 B.C. Through his father, he claimed descent from Eurysaces the son of Ajax, while his mother was a member of the noble house of the Alcæonidæ. His father dying while he was yet young, appointed Pericles his guardian. The concurring testimony of the ancients proves Alcibiades to have been endowed with all the gifts of nature and of fortune, in an extraordinary degree. To extreme personal beauty, a point to which the Greeks attached an importance which we should now think extravagant, were united in him a boundless ambition, an indomitable courage, and the rarest intellectual powers. He was a most persuasive orator, and yet, at the same time, an astute and versatile statesman, and, still further, an able and successful general: he was Demosthenes, Talleyrand, and Marlborough, all in one. But with all this, he was essentially unprincipled, and, after a life of incessant activity, the latter part of which was employed in neutralizing the work of the former part, he found himself unable to repair the ruin he had wrought; he lived to see the fall of Athens, in consequence of his own previous machinations against her, in spite of the extraordinary efforts he had made in the last years of his life to avert her doom.

The beauty and genius of Alcibiades drew around him, as was natural, a crowd of flatterers and admirers; the influence which his eloquence obtained for him with the people caused him to be courted and loaded with presents by the tributaries of Athens who had any point to gain in the public assembly; and last, not least, the great philosopher of antiquity had a singular affection for him, and seems to have earnestly endeavoured to enlist his varied powers in the cause of virtue and justice. Alcibiades, we are told, returned the affection of Socrates, delighted to converse with him, and took in good part the tone of irony or censure which his admonitions sometimes assumed. Each had saved the other's life in battle: at Potidæa, 432 B.C., where Alcibiades was wounded, Socrates stood over him, and kept the enemy at bay until succour arrived, and, eight years later, at the battle of Delium, Alcibiades was enabled to render a similar service to Socrates. The philosopher, according to Plato, endeavoured to

persuade Alcibiades to study philosophy and the immutable laws of morality, in order to qualify himself for ruling the Athenians. But the pupil knew his countrymen even better than the philosopher, and felt that in practice the appeal to justice was less potent than the appeal to expediency. Nor can we doubt that, although he listened to Socrates with pleasure, he was also familiar with the reasonings of the Sophists, the influence of whose detestable maxims can be traced in all the great crimes and follies with which the Athenians as a nation were chargeable at this period—such as the slaughter of the Melians, and the Sicilian expedition—and whose sophistical arguments, as mirrored in the plays of Euripides, are satirized and exposed by the vigorous hand of Aristophanes.

The first mention of Alcibiades in the history of Thucydides, occurs in the fifth book, where he is described as having been mainly instrumental in inducing the Athenians to break the peace of Nicias, and re-open the war with Sparta. This was in the year 420. Five years afterwards, he was chosen, with Nicias and Lamachus, to command the great expedition against Syracuse. He had himself, Thucydides informs us, a large share in persuading the people to organize this expedition. But, in the immense plan of operations sketched out by his ambition, Sicily was but a stepping-stone. Had he been successful there, he would have attacked the Carthaginian colonies, and endeavoured to reduce Carthage itself; thence he would have passed over to Ilyat, and after giving the ascendancy to the democratic party in all the cities of the Italian Greeks, he would have directed the forces of the confederacy so formed, assisted by mercenaries whom he would have hired in Spain, against the power of Lacedæmon, in the hope of utterly demolishing it. Nor did his dreams of empire stop even here;—according to Plato, if he had succeeded in making himself the master of all Europe, he would not have been contented until he had humbled the Persian power in Asia.

These schemes, however, were nipped in the bud. Just before the expedition sailed, occurred the mysterious mutilation of the Hermæ, or statues of Mercury. Suspicion fell upon Alcibiades, not only as a man of lawless and irregular habits, but also because he was said, some time before this, to have burlesqued in his own house the sacred mysteries of Eleusis. His friends, the Sophists, had probably taught him to disbelieve, and secretly to deride, the ancient superstitions and customs of his country. However, he was permitted to sail with the expedition. The fleet arrived in safety on the Sicilian coast, and its first operations were successful. But suddenly the Salaminian ship, one of the state triremes, arrived with orders for Alcibiades to return to Athens, and stand his trial. But he knew his excitable countrymen too well to trust himself in their hands. On the voyage home he contrived to escape, and shortly after crossed over to the Peloponnesus, and visited Sparta. He then began to devote all his energies to the task of crippling the power of Athens. It was in consequence of his advice that the Lacedæmonians sent the able general Gylippus to take the command of the Syracusan forces, and encourage them in their strenuous, and at last successful, struggle with the Athenian armament. At his instance, too, they fortified and permanently occupied Decelea, a town within the borders of Attica. He further induced them to send him with a small squadron to Ionia, where he succeeded in persuading the greater part of the allied cities and islands to revolt from Athens. But the leading men at Sparta were jealous of his commanding influence, and King Agis in particular, who had personal reasons for hating him, was determined upon his death. Orders were sent accordingly to Astyoehus, the Spartan admiral, to have him put to death; but Alcibiades heard of it, and escaped to Tissaphernes, satrap of Caria, with whom he soon gained unbounded influence. This was in the year 412.

An Athenian could not be permanently happy anywhere but at Athens, and Alcibiades, although with his usual versatility he had for three years conformed to the rigid and simple manners of the Spartans, was now thoroughly disgusted with them, and thought of nothing but how to repair the injury done to his country, and pave the way for his own recall. He made overtures for that purpose to an oligarchical faction in the Athenian army at Samos, of which the leaders were Pisander, Antiphon, and Theramenes. But after this faction had succeeded in changing the government at Athens, and had established the council of the Four Hundred, they would do nothing for Alcibiades.

In a few months, however, the Four Hundred were expelled, and the people then unanimously passed a decree for his recall, 411 B.C. But he resolved that he would not return before he had rendered his country some signal service. For the next four years, therefore, he carried on military operations in the Ægean, the Hellespont, and the Propontis, in which he proved himself to possess all the qualifications of an able general. He defeated the Lacedæmonians wherever he met them, and brought back most of the revolted cities of Ionia to the allegiance of Athens. The details of these campaigns are to be found in Xenophon and Plutarch. In 407 he returned to Athens, and was welcomed by the people with acclamations. He was again sent out to Ionia in command of the forces, but a disaster which occurred to the fleet soon after, while he was unavoidably absent, furnished his enemies with a pretext for fresh accusations against him, and the foolish Athenians sent out new generals to supersede him in the command. The consequence of this step was the defeat of Ægospotami in 405, occasioned by the rashness and incapacity of the new generals, in spite of the repeated warnings of Alcibiades, in which the Athenian fleet was totally destroyed. The capture of Athens, the destruction of the long walls, and the establishment of the Thirty Tyrants followed. But the people did not lose all hope, nor could the oligarchs feel secure, so long as Alcibiades lived. At the instigation of Critias, one of the Thirty, Lysander, the Spartan general, persuaded Pharnabazus, the satrap of Phrygia, to give orders for his being dispatched. Alcibiades was now living in Phrygia with his mistress Timandra. The barbarians sent by Pharnabazus, not daring to face the noble Greek, set fire to the house. Alcibiades, seizing his sword, and wrapping his cloak round his left arm, rushed through the flames into the open air. His cowardly assailants were afraid to close with him, but, standing at a distance, dispatched him with their darts and arrows. His death occurred in the year 404, in the forty-ninth year of his age. (Plutarch *in vitâ*; Thucyd., lib. v. —viii.; Xenoph., *Hellen.*; Plato, *Alcibiades.*)—T. A.

ALCIMACHOS, a Greek painter, flourishing 340 B.C. Pliny records a picture by this artist representing Dioxippus, the Athenian boxer, defeating a Macedonian soldier.

ALCIMUS, high priest of the Jews, during the reign of Antiochus Eupator (163 B.C.), was expelled from Jerusalem for idolatry, but retook the city with the aid of Demetrius.

ALCIMUS or ALETHIUS of Gaul, a poet, orator, and historian, who lived in the fourth century, and is believed to have written a life of the Emperor Julian.

ALCIONIUS or ALCYONIUS, a grammarian of Venice, born in 1487, and died in 1527. He taught the Greek language at Florence, and was engaged in the printing-office of Aldus Manutius at Venice.

ALCIPHON, a Greek rhetorician and litterateur, appears to have flourished in the second century, and to have been a contemporary of Lucian. His only remaining work is a collection of letters, which are valuable from the light they throw upon the social life, manners, and colloquial language of ancient Greece, especially as relating to the lower classes.

ALCMAN, a Greek lyric poet. He was born a slave, most probably in Sardis. At an early age he was emancipated, and we find him in Sparta, making songs for the warlike Spartans. He lived to a good old age, and is said to have died of a disgusting disease. Aleman confesses to a voracious appetite. He probably fell in love with Megalostрата, a richly-gifted poetess, and he appears to have formed a high opinion of woman, and to have been much beloved by the Spartan maidens. The subjects of his muse are various, love-songs predominating. One of his pieces, descriptive of night, has been frequently translated and lauded. Flourished in the seventh century B.C.—J. D.

ALCMEON, a Pythagorean philosopher, who lived in the sixth century B.C. He studied the sciences in the school of the Aselepiades at Crotona, and applied himself with great diligence to anatomy. He studied particularly the structure of the eye and the ear, and is by some supposed to have discovered the Eustachian canal. He placed the soul in the brain, ascribed sleep to temporary stagnation of the blood in the larger vessels, and maintained that health depended on a due proportioning of four antagonistic principles—heat, cold, moisture, and dryness. He was probably the father of philosophic dualism—the antithesis of good and evil, finite and infinite.—J. W. S.

ALCMEON, the son of Megacles, of the illustrious family of the Alcmeonides, lived at Athens about the end of the sixth

century B.C., and distinguished himself as one of the heads of the conservative faction.

ALCOCK, JOHN, bishop, a native of Beverley in Yorkshire, educated at Cambridge, and doctor of laws 1461. In 1462 he was made dean of St. Stephen's, Westminster, and henceforth his promotion was rapid in church and state. The same year he was made master of the Rolls, and in 1470 sent as ambassador to the king of Castile. In 1471 he was chosen bishop of Rochester, and in 1472 lord chancellor, during the illness of Stillington. He was again appointed to that high post in 1465, but only held the seals from April to September of that year, when Rotherham was reinstated. In 1476 he was translated to Worcester, and made president of the court of the Marches, in Wales. Edward IV. appointed him tutor to his son, but from this office he was of course dismissed by Richard III. After the battle of Bosworth, Henry VII. made him lord chancellor, and he exhibited great ability in solving the difficult questions respecting the attainders of several nobles and the king himself, which arose at that time. His wary dexterity commended him to Henry, who promoted him to Ely, in possession of which see he died in 1500. He was a man of considerable learning, and of great proficiency as an architect; and Henry so highly valued his talents, that he made him comptroller of all the royal buildings. Bishop Alcock built a charity at Beverley, where his parents were buried, and the hall of the episcopal palace at Ely; as also a chapel at the east end of the north aisle of Ely cathedral, where his own tomb is. But his chief works were the foundation of a grammar school at Kingston-upon-Hull, and Jesus college, Cambridge, which last he established out of an old nunnery of St. Radigund. He wrote a few works, of which the chief are, "Galli cantus ad Confratres suos curatos in Synodo apud Barnwell," 25th September, 1498, (with a print showing the bishop preaching to the clergy with a cock on each side, and in the front page, an allegory called "The Abbey of St. Sparte"); some homilies, and a metrical paraphrase of the penitential psalms.—J. B., O.

ALCOCK, JOHN, an eminent English musician, was a native of London, and born on the 11th of April, 1715. He received his education in the choristers' school of St. Paul's cathedral, and was afterwards articled to Stanley, the celebrated blind organist. In 1737, he was elected organist of St. Andrews' church, Plymouth, Devon; and a few years afterwards, of Reading in Berkshire. The latter situation he left in 1749, for the appointment of organist at Litchfield cathedral. In 1755, he took his degree of bachelor of music at Oxford; and in 1761 he resigned his situation as organist at Litchfield, for that of Sutton-Coldfield in Warwickshire. In addition to this latter appointment, he held the situations of organist of Tamworth in Staffordshire, and vicar-choral of Litchfield cathedral. He completed his graduation at Oxford, by taking his doctor's degree in 1765. Dr. Alcock died at Litchfield in March, 1806, at the great age of ninety-one, sincerely and deservedly lamented by his friends and professional brethren. Dr. Alcock's compositions consist of services, anthems, canons, glees, and psalm-tunes, all of which show him to have been an excellent contrapuntist, as well as a pleasing and scientific musician. He also claims the merit of having made a valuable collection of the ancient services and anthems of the church. These MSS. were consigned to the care of Dr. William Boyce, and form the groundwork of the collection now universally known as "Boyce's Cathedral Music."—E. F. R.

ALCON OF THIEBES, one of the few Greek sculptors who executed works in cast-iron. Pliny quotes a statue of Hercules as being from the hand of this artist. Most likely this Alcon is the same as Alcon the son of Nileus, a chaser of metals, who, according to Ovid, executed a beautiful vase in commemoration of the self-sacrifice of Methiocha and Menippe, the daughters of Orion. Although no date is known about Alcon, it seems evident that he belongs to a very early period of art in Greece.—R. M.

ALCUIN or ALCWIN, called also ALBINUS, the restorer of letters in the age of Charlemagne, was born in or near York about the year 732. Being of noble family, his education was intrusted to the care of Egbert, archbishop of York, whose cloister-school was then one of the most efficient and renowned in Europe. Alcuin's principal master in the school was Ælbert, whom he is said to have accompanied to Rome, by the desire of Egbert, for the purpose of purchasing books for the library of the monastery. On Ælbert's accession to the see in 766, Alcuin succeeded him in the presidency of the school, in which he continued till 782. The increased celebrity which his learning and

success as a teacher of youth procured for the seminary, attracted to it numerous scholars from all quarters, and among other distinguished men who were then educated under his eye was St. Lutger, the apostle of the Saxons. On Ælbert's death in 781, Eantald, a pupil and friend of Alcuin's, was appointed to the see, and Alcuin was despatched to Rome to obtain the pallium for the new archbishop. It was on his way back from Rome through Italy, that he met at Parma the Emperor Charlemagne, by whom he was earnestly pressed to settle in France, with the view of restoring the light of letters and arts to what was then a rude and semi-barbarous kingdom. Alcuin's ambition of usefulness could desire no nobler field of exertion, and he promised to return to the emperor after completing the commission which he had undertaken for Eantald. He arrived at the court of Charlemagne in 782, and the magnanimous emperor himself became his first scholar. The imperial palace was transformed into an academy—the first of those palatine schools which long vied with the schools of the monasteries in usefulness and fame. Charles studied the holy scriptures, dialectics, and rhetoric, under the most learned master of the age; and his noble example was followed by his sons, his daughters, his sisters, and all his principal courtiers. A court life, however, and the scenes of war and disorder through which Alcuin had often to follow the movements of the emperor, were little congenial to the scholar's habits, who for fifty years had been accustomed to the simplicity and tranquillity of monastic life. He began to sigh for the quiet cloisters which he had forsaken at York, and Charles, in order to retain him in France, successively bestowed upon him the abbeys of Ferrières, St. Loup, and St. Jossa. In 790 he made a visit to England, from which he was again called back in 792, by the urgent solicitations of the emperor, to take part in repressing the heresy of the Adoptionists respecting the sonship of Christ, which had recently been put forward by Felix, a French bishop, and Elipand, bishop of Toledo. At a council convoked at Frankfort-on-the-Maine in 794, Alcuin took the lead against Felix, and refuted the heresy by a triumphant display of scriptural and patristic learning. His arguments were embodied in a work, entitled "Liber Albini contra Hæresim Felicis." In 796 Alcuin became abbot of the monastery of St. Martin at Tours; and though now far advanced in life, he resolved to make that great abbey, which was enriched with magnificent domains, a model of discipline and intellectual activity. He restored among its numerous monks the strictness of the rule of St. Benedict. He added greatly to the riches of the library, by the purchase and transcription of books; and he founded a school for instruction in languages, science, and arts, which speedily became a rendezvous of students from all the kingdoms of Europe. Alcuin gave lessons himself in the holy scriptures, in the ancient languages, in grammar, rhetoric, dialectics, and astronomy. The seminary retained its celebrity throughout almost the whole of the middle ages. The most famous of its scholars was Raban Maurus, archbishop of Mainz; Haymo, bishop of Halberstadt; and Richbod, archbishop of Treves. Alcuin never quitted again his abbey of Tours. In 800 he was invited by the emperor to assist at his coronation at Rome; but he earnestly prayed that so fatiguing a journey might not be imposed upon his advanced age and many infirmities. "Have a pious compassion," he pleaded with his illustrious master; "permit repose to a man who is worn out with labours; suffer him to pray for you in his devotions, and to prepare himself, by confession and fasting, to appear before the Eternal Judge." He died on the 19th of May, A.D. 804, and was buried in the church of St. Martin. His writings were very numerous. The best edition of them is that of Froben, abbot of St. Emmeran, published at Ratisbon in 1777, two vols. folio. His letters to the emperor, whom he sometimes addresses with an affectionate familiarity, as his "dilectissimus David," are particularly interesting. Though not entirely free of barbarisms, his Latin style is one of the best of the middle ages. Alcuin has no claim to the praise of originality of mind or creative genius; nor did he even add much that was new to the existing stores of human knowledge. All that can be claimed for him is, that his superior talents and indefatigable industry enabled him to master all the learning of his age; and that his enlightened zeal in the interests of knowledge and culture, and a skill in the work of education fully equal to his zeal, made him one of the brightest lights of the period in which he lived, and one of the greatest benefactors of mediæval Europe.—P. L.

ALDABI, a Jewish rabbi of Spain who lived in the latter

half of the fourteenth century, and obtained distinction as a theological writer.

ALDEGATI, MARCO ANTONIO, an Italian poet, born at Mantua, held the chair of Latin poetry at Ravenna about 1484.

ALDEGRAEF or ALDEGREVER, HEINRICH, a German painter, pupil of Albert Durer, born in Westphalia in 1502; died 1562. He has left several valuable series of engravings.

ALDEGUELA, JOSEPH MARTIN D', a Spanish architect, was born at Menzanede in 1730, and died in 1802 at Malaga, where he had erected an excellent aqueduct.

ALDERETE, DIEGO GARCIA D', a Spaniard, who lived in the sixteenth century, and became distinguished for his attainments in classical literature.

ALDERETE, JOSEPH and BERNARDO, two Spanish ecclesiastics, who were born at Malaga in the 16th century, and distinguished themselves as antiquarians and orientalists.

ALDERSON, JOHN, a distinguished physician, who was born at Lowestoft in 1758, practised at Hull and Whitby, and died in 1829. He wrote several treatises on various medical subjects.

ALDHELM, SAINT, of the royal blood of Wessex, and nearly related to King Ina, entered upon the monastic life at Malmesbury, where he became abbot. He spent his large estate in erecting and endowing churches, and is said to have built the first organ in England. Aldhelm was also indefatigable as a preacher, and most assiduous in teaching the ignorant, for which purpose he made a Saxon version of the Psalms. On the death of Hedda, bishop of Winchester, the see was divided, and Aldhelm, against his will, was made bishop of Sherborne. He was most anxious for union with the Welsh Christians, who refused to adopt the Roman usages, and was so far successful as to keep the peace, during his life, between Ina, king of Wessex, and Grant, the Celtic king of Cornwall. Aldheld died May 25th, 709. He had corresponded with all the learned men of the day, and was himself a scholar of no mean parts. His life, written by King Alfred, has unfortunately perished.—J. B., O.

ALDHUN, bishop of Lindisfarne, who brought St. Cuthbert's body to its final resting-place at Durham, of which see he was the first bishop, the ecclesiastical jurisdiction having been transferred thither from Lindisfarne. Died in 1018.

ALDIGHERI or ALTICHIERO DA ZEVIO, an Italian painter, flourishing about 1382. He was attached to the Scaligeri, the lords of Verona, for whom he executed several important works, noted for excellent conception and beautiful colouring.—R. M.

ALDINI, GIOVANNI, nephew of the famous Galvani, was born at Bologna, 1762; died in 1834. Being perfect master of several languages, he wrote his works in various tongues, and published them in different countries. He wrote in English:—"General Views on the Application of Galvanism to Medical Purposes, Principally in Cases of Suspended Animation," and "A Short Account of Experiments made in Italy, and Recently Repeated in Geneva and Paris, for Preserving Human Life and Objects of Value from Destruction by Fire."—S.

ALDINI, TOBIA, superintendent of the Farnesian garden at Rome, was born at Cesena in the 17th century. He has left a description of this garden, in which he was assisted by Pietro Castelli, and which contains many particulars interesting to botanists. The Farnesian minosa takes its name from him.

ALDOBRANDINI, FLORENTINO, commonly called DINO, for some time taught medicine at Bologna, but finally settled at Sienna. He has left some notes on the treatise of Hippocrates upon the nature of the fœtus. Died at Florence in 1327.

ALDOBRANDINI. A noble Tuscan family of this name flourished at Florence from the twelfth to nearly the close of the fifteenth century, and produced several celebrated men, amongst whom were:—SILVESTRO, who was a professor of law in Pisa during the sixteenth century, and was appointed advocate of the treasury and apostolic chamber by Paul III.—GIOVANNI, son of Silvestro, was created a cardinal by Pio V.—TOMMASO, his brother, has left some works of little consequence, which, however, have been admired by Casaubon.—IPPOLITO, another brother, became pope by the name of Clement VIII. (see that name).—CINZIO PASSERO, nephew of these three last, was named cardinal in 1593. Tasso has dedicated to him his "Gerusalemme Conquistata."—PIETRO, his brother, also a cardinal, was appointed legate to France, and settled the unhappy dissensions which existed between the duke of Savoy and Henri Quatre.—GIOVANNI FRANCESCO, a third brother, was a soldier, and fought

under Rodolph II. in his wars with the Turks. His son SILVESTRO became a cardinal, and his nephew GIOVANNI-GIORGIA was created prince of Rossano, in the kingdom of Naples. In his person this celebrated family became extinct, his daughter Ottavia carrying all its wealth to the families of Borghese and Pamfili, with whom she became allied by marriage.—S.

ALDOBRANDINI, GIUSEPPE, an Italian musician of the seventeenth century, was long president of the Philharmonic Society of Bologna. He has left some specimens of his art, which have been published at Amsterdam.

ALDRED, surnamed the PRESBYTER, or the GLOSSER, *i.e.*, COMMENTATOR, author of the curious and valuable Anglo-Saxon manuscript, called "The Book of Durham," preserved in the cathedral of that town. He lived about the commencement of the ninth century.

ALDRED, called also ALRED and EALRED, was originally a monk of Winchester. His first ecclesiastical dignity was the abbey of Tavistock, whence Edward the Confessor promoted him to the see of Worcester, in which capacity he undertook an embassy to the Emperor Henry II. Aldred seems to have been an avaricious man, for we find him holding many benefices, and administering the affairs of the dioceses of Hereford and Winchester in the absence of their bishop. On his elevation to the archbishopric of York in 1060, he procured the royal license to hold *in commendam* his old see of Worcester; but Pope Nicholas II. refused him the pall when he applied for it at Rome, alleging that Aldred had been guilty of simoniacal practices. The matter was, however, settled in Aldred's favour, and the pall was eventually granted at the intercession of Tosti, earl of Northumberland, who had accompanied Aldred to Rome, on that prelate's promising to resign the see of Worcester. Notwithstanding the favours Aldred had received from Edward, he did not hesitate, after the Confessor's death, to side with Harold, and when that prince had fallen at Hastings, Aldred passed over in like manner to the Conqueror, whom he crowned at Westminster. He had the courage, however, to rebuke William severely for his cruelty and oppression, when the true nature of the Norman rule was made manifest; and worn out with grief and disappointment at the failure of the inhabitants of the north to restore the national dynasty, he died soon after the capture of York by William, A.D. 1069.—J. B., O.

ALDRIC, SAINT, an ecclesiastic of high standing under the immediate successors of Charlemagne, was born in France about 800, but was of a German family. He became bishop of Le Mans in 932; died in 856. His skill in music has given rise to a false impression, that he was the first to introduce the organ into churches.

ALDRICH, HENRY, D.D., was born in 1647, and educated at Westminster school. In due course he passed to Christ's Church, Oxford, of which foundation he was afterwards a canon. Aldrich was a man of considerable attainments, a good scholar, architect, and musician. Of his skill in architecture, Oxford possesses many specimens; for example, Peckwater Quadrangle at Christ Church, the Chapel of Trinity College, and All Saint's Church. Several services and anthems attest his proficiency in sacred music, and the "Bonny Christ Church bells" prove the versatility of his musical powers. His compendium of logic is used to this day at Oxford. Aldrich died in 1710. He had collected materials for a history of music, which, however, he never published, and was employed as one of the editors of Clarendon's History of the Rebellion. Besides the "Logic" mentioned above, he left some tracts on the real presence, and a Latin work on the principles of architecture.—J. B., O.

ALDRICH, ROBERT, was born at Burnham in Bucks, and was appointed archdeacon of Colchester, 1530, canon of Windsor, 1534, and bishop of Carlisle, 1537. The doctrinal changes in Henry's, Edward's, and Mary's time, made no difference to Bishop Aldrich. He complied with them all, and died, 1555, in possession of his see. He left a few theological pieces.

ALDRINGER, JOHANN, an Austrian field-marshal under Ferdinand II., who raised himself from the position of a common soldier. He was commissary-general to the army of Wallenstein in 1625, and after many successes, drowned himself in the Iser because he failed before Landshut in 1634.

ALDROVANDINI. A family of artists of this name flourished at Bologna in the first half of the eighteenth century.—GIUSEPPE was a decorative painter, and much esteemed in his own department of art; his son TOMMASO, who died 1736, in

conjunction with Franceschini, painted the chamber of Council at Genoa; and POMPEO AGOSTINO, the nephew of Giuseppe, who resided at Rome, where he died in 1739, has bequeathed to us numerous engravings, and pictures both in oil and distemper.—S.

ALDROVANNI, ULISSE, a celebrated naturalist, was born at Bologna on the 11th September, 1522, and died on the 10th November, 1607. At the age of six he lost his father, and was placed as a page in the family of a rich bishop. Quitting this, he was at twelve years of age apprenticed to a merchant. This occupation was not congenial to his taste, and he speedily gave it up. After travelling in Spain, he returned to Bologna, where he prosecuted the study of law. He subsequently went to Padua, and attended lectures on law and medicine. Being suspected of protestantism, he was arrested and imprisoned at Rome. On his liberation, he returned to his native city, and studied botany under Lucas Ghino, who was professor of that science in the university. He continued to pursue his scientific studies both at Bologna and at Padua. In 1553 he took the degree of doctor of medicine, and in 1560 he was appointed professor of natural history and of logic at Bologna. He established a botanic garden in the city, and was chosen to be inspector of drugs. He was fond of natural history in all its departments, and spent much of his time and fortune in travelling to distant countries, and in making collections of animals, plants, and minerals. He wrote histories of birds, insects, fishes, quadrupeds, metals, and trees. He died at the age of 85, and was buried with pomp, at the expense of the state, in the church of Saint-Etienne, in Bologna. During his lifetime he published only four volumes of the large work which bears his name. The remaining ten were published partly under the direction, and at the expense, of the senate of Bologna, and partly by private parties. His botanical works are—"Dendrologia Naturalis, or Natural History of Trees," and "Pomarium Curiosum, or a Description of their Productiveness, Culture, and Economical Uses." These works were published by Montalban, professor of botany at Bologna, in 1667, being sixty years after the death of the author. Monti named the genus *Aldrovandia*, in honour of him. The genus belongs to the natural order Droseraceæ, and comprehends a singular aquatic plant, which floats in water by means of bladder-like leaves filled with air.—J. H. B.

ALDRUDA, BERTINORO, Countess of, a woman of great courage and address, belonged to the noble family of Frangipani of Rome, and by the death of her husband, Count Bertinoro, early became a widow. Supported by the Guelphs, she raised the siege of Ancona, assailed by the imperial armies in 1172.

ALDUIN, the first king of the second Lombardian dynasty, flourished about the middle of the sixth century. The Emperor Justinian entered into an alliance with him, and conceded to him the province of Pannonia, on condition of his sending mercenaries to check the Ostragoths in Italy. It is supposed Justinian fomented the wars which he carried on with varying success against the Gepidæ, down to the time of his death, in order to divert the attention of both parties from his own possessions. By his wife, a descendant of Theodoric, king of the Ostragoths, Alduin left a son, Alboin I., by whom the Lombard power was firmly established in Italy.—S.

ALDUS MANUTIUS (ALDO MANUZIO), was born at Bassiano in 1447. In early life he studied both at Rome and Ferrara. When Ferrara was besieged by the Venetians, he left it for Mirandola, the residence of the famous Pico, with whom he was on intimate terms. Under the patronage of Alberto Vero, the lord of Carpi, Aldo thought of establishing a printing-press at Pavia, and ultimately carried out his design at Venice. His labours commenced about 1488, and his first publications made their appearance about two years afterwards. Aldo soon surpassed all printers of his time in accuracy, beauty, and copiousness. Not only did he spare no expense in procuring the most correct manuscripts, but he enjoyed the assistance of a company of learned men, who met regularly at his house, and formed an academy. A Greek psalter is said to have been the first book he printed; and copies of Hesiod, and Aristotle's "Organon" were issued in 1495. A new and elegant form of type was invented by him, called often the "Italic," or cursive, and in it he printed first an octavo Virgil, while other classics followed in succession. Aldo compiled, also, a Latin and Greek grammar, and a Greek and Latin dictionary. Aldo was compelled to leave Venice in 1506, his property being plundered, and did not return till 1512, when he set up his press again, in partnership with his father-

in-law Andrew Asola. He died in the sixty-seventh year of his age—having been set upon and wounded by three unknown assassins. The Aldine editions were famed in their day, and they are still precious literary curiosities. A catalogue of the works of Aldo has been published by Renouard at Paris. His son, named PAUL, succeeded him, and was likewise eminent in learning, criticism, and printing. His edition of Cicero in 1540 was a work of great value. Born at Venice 1512, and died there 1574. ALDUS MANUTIUS, son of Paul, was one of the most learned men of his time, and famed also for his printing. Died 1597.—J. E.

ALE, EGIDIUS, a painter, born at Liege, died, according to Zani, in 1689. With Morandi, Romanelli, and Bonatti, he executed the whole decoration of the sacristy of the church of Santa Maria dell' Anima at Rome, of which his portion was an altarpiece in oil, and the ceilings of the chapels in fresco.

ALEA, LEONARD, a native of Paris, died in that city in 1812. As a man of letters, he did much for the revival of religious sentiment in France after the Revolution. His principal works are—"La Religion triomphante des attentats de l'impie," and "Reflexions contre le divorce."

ALEANDER, HIERONYMUS, the ELDER, archbishop of Brindisi, and cardinal of the Roman church, played a not unimportant part in the history of the Reformation. He was born at Motta, a small town of Italy, 13th Feb., 1480, and early distinguished himself by his taste for, and rapid proficiency in, liberal knowledge. In addition to the classical languages, he occupied himself with the study of Hebrew and Arabic, and made uncommon attainments in mathematics, astronomy, and music. His father was a physician, and for some time he contemplated adopting the same profession; but having changed his resolution in favour of the church, he devoted himself to the professional study of theology. The fame of his abilities having been carried to Rome, Pope Alexander VI. employed him on a mission to Hungary, but he was disabled from executing it by an illness which arrested him at Venice on his way. Here he made the acquaintance of Erasmus, through Aldo Manutius, and aided him in the publication of his celebrated Adagia. In 1508 he was invited into France by Louis XII., and taught Greek for six years in the universities of Paris and Orleans. Having exchanged this office in 1514 for the service of the prince-bishop of Liege, to whom he was recommended by Stephen Poncherius, bishop of Paris, and who made him his secretary and chancellor, and a canon in his cathedral, he was sent in 1516 to Rome, to promote the elevation of his patron to the cardinalate. Here he fell under the eye of Leo X., who invited him to remain in Rome, and appointed him to the honourable post of librarian of the Vatican. His zeal against Luther recommended him to Leo as a suitable man to send as his nuncio into Germany and the Netherlands, to oppose the doctrines of the German monk. The violence of his proceedings and language in this character was too much even for his friend Erasmus, who quarreled with him irreconcilably on this occasion. He was present at the diet of Worms in 1520, where he employed all his eloquence and arts, first to prevent the diet from giving a hearing to Luther, and next, when he had failed in that object, to obtain an imperial edict against the reformer. He did his utmost even to prevail upon the young emperor Charles to violate the safe-conduct which had been given to Luther. At the close of the diet he returned to the Netherlands, where he signalized himself by the cruelty of his persecuting measures against the evangelical monks of St. Augustine at Antwerp. It was at his instance that the two first martyrs of the Reformation—Henry Voes and John Esch—were burnt to ashes in the great square of Brussels, on the first of July, 1523. For these zealous but unscrupulous services Aleander was rewarded, in 1524, with the bishopric of Brindisi, by Pope Clement VII. In the following year, having been sent as nuncio to Francis I., he was taken prisoner along with that monarch at the battle of Pavia, and had to pay a heavy ransom to recover his liberty. In 1531 he went a second time into Germany as papal legate, but was unable to prevent the conclusion of the religious peace of Nurnberg in that year, which secured for the Reformation some years of tranquillity. In 1538 he was made a cardinal by Pope Paul III., and was destined, along with cardinals Campeggio and Simonata, to preside at the general council which was then in contemplation. In the same year he was a third time dispatched into Germany, to stimulate the Romish princes of the empire to more vigorous measures against the protestant states, but with no

better result than on the previous occasion. The state exigencies of Charles and Ferdinand still made it necessary for them to temporise with the Reformers; and Aleander returned in bitter disappointment to Rome. He died 31st Jan., 1542, and left behind him some fruits of his earlier studies, in several works of a grammatical and lexical character, and an unfinished work, "De concilio habendo," which is said to have been of service to the pope and his bishops and doctors, in the management of the council of Trent.—P. L.

ALEANDER, HIERONYMUS, the YOUNGER, grand-nephew of the cardinal, was born at Motta in Friuli, July, 1574; died 1629. He has left works on various subjects, antiquities, law, &c.

ALEAUME, LOUIS, a French writer of the 16th century, celebrated for his Latin poetry; was born at Verneuil 1525; died 1596.

ALEFELD, the name of several distinguished individuals connected with the duchy of Holstein:—BENEDICT, born 1506; died 1586; left behind him some Latin letters to the superintendent of the province.—CHRISTIAN ALBERT lived at the end of the seventeenth century, and published, at Copenhagen, a treatise on mathematics.—DETILEV-AB., a politician of the seventeenth century.—FRED-AB., born in 1623, lost his valuable library by fire in 1682. Died at Copenhagen in 1686.

ALEFELD, GEORGE LUDVIG, was born at Giessen, 1732, and having gained his medical diploma in 1756, was appointed professor of medicine and physics in that university. He died in 1774, leaving several works on medical subjects.

ALEGAMBE, PHILIP, a jesuit writer, was born at Brussels, 1592. He taught philosophy at the jesuit college of Gratz, where the prince of Eggenberg appointed him tutor to his son, with whom he travelled through the principal countries of Europe. He has left many writings, the chief of which is an elaborate work on the biography and bibliography of the earlier jesuit writers—a continuation of the work published at Antwerp by Ribadeniera. After the death of Alegambe at Rome, 1651, this work was enlarged by Father Nathaniel Southwell.—S.

ALEGRE, YVES, Marquis d', a field-marshal of France, was born 1653; died 1733. He distinguished himself much under Villars in his German and Flemish campaigns, and, as a reward for his services, was nominated by Louis XIV. his commissary to preside over the assembly of the states in Brittany.

ALEKSDAEEV or ALEXEJEV, FEODOR YACOVLEVITCH, a painter, called the Russian Canaletto; born 1755; died 1821. He was patronized by the Emperor Paul, and was distinguished for skill in perspective and general accuracy.

ALEMAGNA, GIUSTO D', a painter, who lived in the fifteenth century. He was probably of German origin, though his principal work, a fresco, is to be found in the convent of Santa Maria di Costello at Genoa.

ALEMAN, LOUIS, called the Cardinal of Arles, the founder of the "moderate," as opposed to the "ultramontane" party in the church of Rome, was born at Bugey in 1390. He distinguished himself as one of the presidents of the council of Basle in 1431, by his vehement opposition to Eugenius IV., who asserted the supremacy of the popes over the councils. It was Aleman who caused the election of the antipope Felix V., whom he afterwards, however, prevailed upon to abdicate. Having lost all his ecclesiastical dignities under Eugenius IV., he was restored to them by Nicolas V. Died in 1452.—A. M.

ALEMAN, MATEO, a Spanish author, who wrote in the latter half of the 16th century, and had an office in the treasury under Philip II. His once celebrated work, "Guzman de Alfarache," was translated by Le Sage into French, and may be regarded as, in some measure, the parent of Gil Blas.

ALEMAND, LOUIS AUGUSTIN, first an advocate, and afterwards a physician, was born at Grenoble in 1653. He was an author of some repute in his day. His principal works are:—"Nouvelles observations, ou guerre civile des Français sur la langue," and "Histoire monastique de l'Irlande," the basis of the "Monasticon Hibernicon." Died about 1728.

ALEMAN, CONRAD, called also CONRADUS DE MONTE-PUELLARUM, was a learned German, rector of the university of Vienna. Born at Magdeburg in 1309; died at Ratisbon in 1398. He has written a "Vita Erhardi Episcopi;" "Vita Dominici;" "Politica oeconomica et monastica," &c.

ALEMANNI or ALEMANNNO, ANTONIO, a Tuscan poet, who flourished about the end of the fifteenth and the commencement of the sixteenth centuries. He wrote sonnets, and a "Comedia," treating of the conversion of St Mary Magdalene.

ALEMANNI or ALAMANNI, COSSIMO, an enthusiastic admirer of Thomas Aquinas, and author of a summary of the writings of that remarkable schoolman, was born at Milan about 1559, and died in 1634.

ALEMANNI or ALAMANNI, LUIGI, an Italian poet and statesman, was born at Florence in 1495. The discovery of a political plot in which he had engaged, compelling him to flee, he repaired to Venice, afterwards to Genoa, and ultimately settled in France. So highly was he appreciated by Francis I., as to be sent by him as his ambassador to Charles V. He executed the mission with great address. He equally enjoyed the favour of Henry II. of France, who repeatedly employed him in important negotiations. Died at Amboise in 1556.—E. M.

ALEMANNI or ALAMANNI, NICCOLO, a Greek by descent, born at Ancona in 1583, was educated at Rome, where he became an ecclesiastic, professor of rhetoric and Greek literature, and afterwards librarian to the Vatican. Besides several Latin dissertations, he published the "Secret History" of Procopius. Died at Rome 1625.

ALEMANNNO, GIOVANNI, or GIOVANNI D'ALEMAGNA, a painter of German origin, established at Venice during the first half of the fifteenth century. Pictures of his may be seen in several churches of Venice and Padua.

ALEMANS, NICHOLAS, a Flemish miniature portrait painter of great fame during the latter part of the seventeenth century. He studied in Italy.

ALEMBERT, JEAN-LE-ROND D', one of the most eminent scientific and literary men of the eighteenth century, was born on the 16th of November, 1717, in Paris, where he also died on the 29th of October, 1783. He was the illegitimate son of the Chevalier Destouches-Canon, and the celebrated beauty, Madame de Tencin. Having been exposed by that lady on the threshold of the church of St.-Jean-Le-Rond, the infant was found by the commissary or police magistrate of the quarter, who gave him the name of the patron saint of that church, and intrusted him to the care of a woman named Rousseau, wife of a glazier, who lived in the street Michel-le-Comte. What were the qualities of that poor and humble nurse, may be inferred from the filial affection with which D'Alembert for more than forty years repaid her kindness and care.

A few days after the birth of Jean-le-Rond, his situation was discovered by his father, who provided for his education, and settled upon him an annuity of forty-eight pounds a year. He was educated with a view at first to the profession of the law, and afterwards to that of medicine; but so strong was his natural bent towards science and literature, that he finally determined to be content with his annuity as a means of subsistence, and his nurse's house as an abode, and to devote himself entirely to his favourite studies, which, though fruitful of enjoyment and honour, he well knew to be barren of emolument.

D'Alembert first acquired distinction in mathematical science by his "Mémoire sur le calcul intégral," presented to the Academy of Sciences in 1739. Of that body he was elected a member in 1741; and he afterwards continued to produce a series of treatises and papers relating to analytical mechanics, which contributed, perhaps, more than the works of any other author of the period, to reduce to a systematic form the art of applying mathematical principles to the development of the consequences of those laws of motion and force which had been established by Galileo and Newton. One of his discoveries, not involving any new physical law, but consisting in an admirably simple and general method of expressing mathematically the application of the known laws of motion to any system of bodies connected in any manner, and acted on by any system of forces, how complicated soever, is known to this day by the name of "D'Alembert's Principle." It is this—"If, from the forces impressed on any system of bodies connected in any manner, there be subtracted the forces which, acting alone, would be capable of producing the actual accelerations and retardations of the bodies, the remaining system of forces must balance each other." A general idea of the scientific labours of D'Alembert may be best given by the following lists of his mathematical, mechanical, and astronomical works:—"Traité de Dynamique," 1 vol. 4to; "Traité de l'équilibre et du mouvement des Fluides," 1 vol. 4to; "Réflexions sur la cause générale des Vents," 1 vol. 4to; "Recherches sur la Précession des Equinoxes et sur la Nutation de l'axe de la Terre," 1 vol. 4to; "Recherches sur différents points importants du système du monde," 3 vols. 4to; "Tabularum

lunarium emendatio," 1 vol. 4to; "Opuscules mathématiques," 8 vols. 4to.

In 1754, D'Alembert began to become distinguished in literature and philosophy, as well as in science. He was one of the editors and authors of the well-known Encyclopædia projected by Diderot. The preliminary discourse of that work was read by D'Alembert to the French Academy, on the 19th of December, 1754, the day of his admission into that body. His literary, historical, and philosophical works, have been published in a collected form; the most complete edition is that of Bossange, in five volumes octavo, Paris, 1821. The following are the titles of some of those works:—"Melanges de philosophie, d'histoire, et de littérature;" "Essai sur la société des gens de lettres avec les grands," a work which Condorcet, in his éloge of D'Alembert, treats as having had a large share in promoting that independent spirit and position by which the men of letters of the present age are distinguished from those of former times. "Traduction de quelques morceaux de Tacite;" "Éléments de philosophie," first published in 1759. "Sur la destruction des Jésuites." This work was one, amongst various others, which raised many enemies against its author. As holding an intermediate place between science and elegant literature, we may mention D'Alembert's treatise on music:—"Éléments de musique théorique et pratique." Having been appointed secretary to the French Academy in 1772, D'Alembert wrote éloges or discourses on the lives of nearly seventy deceased members of that body.

The frank, lively, and amiable character of D'Alembert, and his conversational talent, caused him to be a general favourite in the best society of Paris. His literary and scientific celebrity procured for him splendid offers of wealth and honours from Frederick the Great of Prussia, and Catherine of Russia; the former proposing to him the office of president of the Academy of Berlin, the latter that of tutor to her son. D'Alembert, preferring poverty and independence, steadily declined both proposals, but retained the friendship of the sovereigns. With Frederick he continued long afterwards to correspond, and accepted from him a pension of forty-eight pounds a year.

The income of D'Alembert, though augmented by legacies from Madame Geoffrin and from David Hume, was at all times very small; yet it was more than sufficient for his frugal manner of life; and even in his poorest days, he found means to support his nurse, to educate the children of his first schoolmaster, to assist various young students, and to perform other acts of munificence.

A brotherly and sisterly affection existed for many years between D'Alembert and Mademoiselle de l'Espinasse; and the most severe affliction which he ever suffered, was from the death of that lady, caused by grief at that of her affianced lover, the Marquis de Mora.

The health of D'Alembert, according to some authors, notwithstanding, but possibly in consequence of, his extreme abstemiousness, was always delicate. After a tedious and painful illness, borne with much patience and fortitude, he died at the age of sixty-six. His éloge, by Condorcet, contains the best account of his life and works.—W. J. M. R.

ALEN or OLEN, JAN VAN, a Dutch painter, an imitator of Melchior Hondekveter; born in 1631; died in 1698. Another painter of the name of Van Alen lived at Prague about 1618; and a *third* at Dantzic about 1656.

ALENCE, JOACHIM D', was born at Paris, and died at Lille in 1707. He has left works on the magnet, the barometer, &c.

ALENCON, COUNTS and DUKES of, a family of French nobility. The title originated in the tenth century, under Richard II., duke of Normandy, who conferred the fief of Alençon on William, the first count of the name. Died 1028. The last count of Alençon was Robert IV., who died in 1219. The county now reverted to the crown, and was converted into a dukedom. The first duke of Alençon was Pierre, son of St. Louis (Louis IX). He died without issue in 1283, and the title passed to the House of Valois. Charles of Valois, brother of Philip the Fair, was the first duke of this family (1293). He fell at Crecy in 1346. The last of the line was:—

ALENÇON, CHARLES IV., Duke of, son of René. He was constable of France, and commanded the vanguard at the battle of Pavia; but died of shame at his disgraceful overthrow there in 1525. The duchy of Alençon was now conferred by Charles IX. on Catherine de Medicis, who restored it to him in 1566, when he gave it to the most noted individual of the name:

ALENÇON, FRANCIS, Duke of, brother of Charles IX. of France, as also of Francis II. and Henry III.; born 1554, during the religious troubles of France in the reigns of Charles IX. and Henry III. Alençon pretended friendship for the Huguenot party, to serve his own ambitious designs; and he was one of the husbands proposed for Queen Elizabeth of England; he was, however, present with the army which besieged the Huguenots in Rochelle in 1573—a circumstance that did not aid his suit for the protestant princess. The grand aim of the duke of Alençon's ambition, besides gaining the hand of Elizabeth—which, on occasion of his visit to England in 1581, he very nearly obtained—was to make himself sovereign of the Netherlands. In consequence of the services he rendered the confederate states against the duke of Parma, he so far succeeded in this as to be made duke of Brabant and count of Flanders (1582); but the farther development of his plans for his own aggrandizement alarmed the people of the Netherlands, and Alençon found himself compelled to retire to France. His health was already broken up, and he died unregretted at the age of thirty, in 1584.

Francis of Alençon never married, and his death again threw the duchy into the hands of the crown. It was held by various members of the royal family of France in succession, and finally by Louis XVIII. before his accession to the throne.—A. M.

ALENI, TOMMASO, an Italian painter, a native of Cremona, flourishing about 1515. He was a successful imitator of Galeazzo Campi.

ALEOTTI, GIAMBATTISTA, an Italian architect and engineer; born about 1546; died 1636. He was employed by Pope Clement VII. to construct the citadel of Ferrara, and by Prince Ranuccio to erect the theatre of Parma in 1619. Aleotti also wrote on hydrostatics and pnenmatics. VITTORIA ALEOTTI, his daughter, was a musical composer of some note towards the close of the sixteenth century.—A. M.

ALER, PAUL, a learned German jesuit, professor in the university of Treves; born in 1656 in the territory of Lunembourg; died in 1727. He wrote a "German-Latin Dictionary," a "Gradus ad Parnassum," and other works.

ALÈS, PIERRE-ALEXANDRE, Viscount of Corbet, a French author, who wrote on a great variety of subjects; born in 1715; died about 1770. During one period of his life, Alès served in the army. Besides other works, he wrote "Dissertation sur les antiquités d'Irlande," 1749, 12mo; "De l'origine du mal," Paris, 1758, 2 vols. 12mo; and "Nouvelles observations sur les deux systèmes de la noblesse commerçante ou militaire," Amsterdam (Paris), 1758, 12mo.—A. M.

ALESIO, MATTEO PIETRO, an Italian historical painter of the sixteenth century, studied with remarkable success under the great Michel Angelo, whose style he strove to imitate throughout his whole career. Having passed into Spain when still young, he executed several large frescos for the cathedral of Seville; but being of a very modest character, on seeing a picture by Luiz de Varga, he declared that Spain could not want him any more, and returned to Italy. He was also an engraver. Died in 1600 in Rome, his native town.—R. M.

ALESIIUS ALEXANDER, was one of the earliest and most distinguished converts to the Reformation in Scotland. The family name was Alane; he adopted the name of Alesius (from *αλεισος*, to be a fugitive) after he was driven into exile. He was born of a respectable family in Edinburgh, 23d April, 1500, and studied at St. Andrews, where he took the degree of Bachelor of Arts in 1515. From the college of St. Leonard's, then newly founded, he passed into the Augustinian priory of St. Andrews, with which it was in close connection, where he became a canon, and applied himself, under the instruction of John Major, to the study of scholastic theology. He was at first a zealous opponent of Luther's doctrines, but was soon after gained over to them by Patrick Hamilton, the protomartyr of Scotland, whose trial and martyrdom in 1528 he witnessed, and has given an interesting account of in one of his works. (See "Patrick Hamilton,"—an historical biography by Professor Lorimer of London.) Having soon after begun to preach against the corruptions of the clergy, he was thrown into prison by his prior, Patrick Hepburn, and would have fallen a victim to his resentment if he had not succeeded in effecting his escape. He fled under night to Dundee, where he was received by a kinsman of his own on board a ship which set sail the next morning for a foreign port. This was most probably in 1530. After many wanderings in Denmark, France,

Belgium, and Germany, Alesius took up his abode in Wittemberg towards the end of 1531, where he attached himself with a special affection to the person and teaching of Melancthon, and devoted several years to the study of Greek and Hebrew, and the evangelical theology. He took an active part in the affairs of the university, and in 1534 filled the honourable office of Dean of the Faculty of Arts.

Meanwhile the bishops at home had proceeded against him for heresy, and had condemned and banished him without a hearing. On receiving intimation of this, and also that they had issued an edict prohibiting the reading of Tyndal's translation of the New Testament, which since 1526 had been finding its way into the Scottish ports, Alesius determined to appeal to the young king, James V., not only to ask a hearing for himself, but still more to implore him to cancel the unholy and oppressive edict of the bishops. In 1533 he penned at Wittemberg a highly interesting letter to the king, entitled "Epistola contra decretum quoddam Episcoporum in Scotia, quod prohibet legere Novi Testamenti libros lingua vernacula," which was printed and published, and copies of which he despatched with a messenger into Scotland. It is written with great force of argument and beauty of style, and deserved a better fate than to have been forgotten by his countrymen, and almost totally lost. It was never reprinted, apparently, and only two copies of it are known to be now in existence. It immediately involved its patriotic author in an unpleasant controversy. John Cochlaeus, a Romish theologian, who had made himself notorious by the number and the scurrility of his attacks upon the Reformers, had no sooner seen the epistle of Alesius, than he addressed a counter-epistle to James V., which had the good effect of drawing from Alesius a second epistle to the king, of greater length and still deeper interest than the first. He replies to the sophistical arguments of Cochlaeus; reargues with much power the question of allowing the use of the vernacular Bible to the laity, and enters at some length into the general questions which had been raised by the German reformers. This valuable tract, which is almost as rare as the first, is entitled "Alexandri Alesii Scoti Responsio ad Cochlaei Calumnias," and was no doubt printed at Wittemberg in 1534. By these writings, Alesius took the honourable position of being the first Scotchman who stood forward to defend, by learned argument, the right of his countrymen to possess and to read the word of God in their mother tongue—a service which it is remarkable that none of our historians record, and which was first brought into prominent notice by a recent author, the Rev. Christopher Anderson, in his *Annals of the English Bible*. There can be little doubt that Melancthon was at least *joint author* of these epistles—a highly interesting fact, bringing out, as it does, a connection between 'the preceptor of Germany' and the early Scottish Reformation, which has escaped the notice of all our protestant ecclesiastical historians, both native and foreign.

In 1535 Alesius removed from Wittemberg to England. He was the bearer of Melancthon's present of a copy of his "*Loci Communes*" to the English king, and was warmly recommended both to Henry and Cranmer by his illustrious friend. Both the king and the archbishop received him with great kindness. He lived for some time with Cranmer at Lambeth, was dubbed 'king's scholar' by Henry, and was taken into the service of Cromwell, the king's prime minister, on a handsome stipend. Acting in his capacity of chancellor of Cambridge, Cromwell sent him down to read lectures on theology in that university, and he continued there for a time, residing in Queen's college, and delivering public expositions in the schools on the Hebrew Psalter. The disciple of Melancthon, however, was not listened to at Cambridge very patiently or very long. Opposition arose. Tumults were threatened, and Alesius was obliged to quit the university and return to London. This was in 1536. For the next three years he supported himself partly by his stipend and partly by the practice of medicine, in which, he tells us, he had encouraging success. In 1537 he was taken into a convocation of the clergy by Cromwell, who presided as the king's vicar-general, and was invited to dispute with Stokesley and the other popish bishops on the subject of the sacraments, which he did with ability and effect. In the same year, or the following one, he married, in the expectation, no doubt, of being allowed to settle down permanently in England; but in 1539 the persecuting statute of the Six articles compelled him to return to Germany. He was warmly welcomed back by his old friends at

Wittemberg, and through Melancthon's influence was provided, in 1540, with a theological chair in the university of Frankfort-on-the-Oder. He was the first professor of the Reformed theology there. But his stay in Frankfort was short. A dispute arose between him and another of the professors on an important question of academic morality and discipline; and his opponent having found means to procure an order from the Elector Joachim of Brandenburg enjoining silence on Alesius, the latter was so much disgusted by this strong exertion of authority on the side of an immoral laxity of manners, that he instantly left Frankfort. His next move was to Leipzig, where, in 1543, he was appointed professor of theology in the recently-reformed university, and where he spent honourably and usefully the remainder of his singularly eventful life. He never revisited Scotland; but he continued to take the liveliest interest in its religious affairs. He addressed to his countrymen a beautiful and eloquent "*Cohortatio ad concordiam pietatis ineundam*," in which he warmly pleaded the cause of evangelical truth and purity, and exhorted them to put an end to their religious and political divisions. This interesting composition also passed through Melancthon's hands, and appears, from one of Melancthon's letters, to have been submitted to Luther's judgment before being printed, who highly approved of it.

Alesius retained the friendship of Melancthon till the last day of that great scholar and reformer's life, and was often closely associated with him in the public ecclesiastical transactions of that important period. Melancthon had a high opinion of his abilities as a theologian, and preferred him to every other coadjutor at the numerous *colloquia* which he held with the doctors of Rome, and with the heretical teachers who ere long arose in the Lutheran church. His industry as an author was indefatigable; and during the last twenty years of his life, he gave to the world a long series of works in the departments of exegetic and polemical theology, including Expositions of the First Book of the Psalms, the Gospel of John, the two Epistles to Timothy, the Epistle to Titus, and Disputations on the Epistle to the Romans. His polemical works were directed against the errors of Rome, Servetus, Gentilis, and Osiander. He translated into Latin, by Cranmer's request, the First Liturgy of King Edward. By these writings, and by his numerous personal services to the cause of truth, the reputation of Alesius became widely extended in the Reformation age. John Bale dedicated to him, along with John Knox, that part of his work on the Celebrated Writers of Britain which referred to Scotland. Beza, in his "*Icones*," celebrates him as a man who was a distinguished ornament of his country.

Alesius died at Leipzig, 17th March, 1565, after having been twice rector of the university, and frequently dean of the theological faculty. Some outlines of his life were sketched by Jacob Thomasius in one of his "*Orationes*;" and some additional facts were stated in the "*Observationes Halenses*," it is believed from the same pen. Wodrow also made some collections for his life, which are still in MS. in the library of the university of Glasgow, but these have been ascertained to be of little importance. A full and accurate life of this distinguished, but almost forgotten Scottish reformer, is still a desideratum, which the author of the present outline hopes, ere long, to be able to supply.—P. L.

ALESSANDRE ALESSANDRO or ALEXANDER AB ALEXANDRO, a Neapolitan juriconsult, was born about 1461, and died in 1523. He did not long practise as an advocate, but went to Rome, and gave himself up to the study of classical antiquity. His most remarkable book is the "*Geniales Dies*," the first edition of which appeared in 1522, in 1 vol. folio. It is an imitation of the *Noctes Atticæ* of Aulus Gellius.

ALESSANDRI, ANDREA, an Italian sculptor, native of Brescia, and flourishing in the sixteenth century. He is recorded by Cicognara as having largely contributed to the decoration of Santa Maria della Salute.

ALESSANDRI, INNOCENZO, an Italian engraver, flourishing about 1768, at Venice, where, in connection with Pietro Scataglia, he executed a large number of plates, many of which are from original drawings of his own.

ALESSANDRI, FELICÈ, a musician, was born at Rome in 1742. He was educated in the Conservatorio at Naples, and straight from thence proceeded to Turin, where, at a very early age, he produced one or more operas with success. He then made a sojourn of four years in Paris, where he gained some credit by his compositions for the Concerts Spirituels. He re-

turned to Italy to produce his opera of "Ezio" at Verona, in 1767, and then went to Vienna, where he married a famous singer named Guadagni, with whom he came to London in 1768. Here he wrote "La Moglie Fedele," and "Il Re alla Caccia," which, though they had merit, met with indifferent success. After a visit to Dresden and to Pavia, writing an opera for each place, he returned to this country in 1775, and produced "La Sposa Persiana," "La Novita," and, in conjunction with Sacchini, "La Contadina in Corte." In 1778 he again went back to Italy, and, after producing operas in several of the principal cities, in 1786 (or in 1784) he went to Petersburg, with the hope of being appointed director of the opera at that capital, in which, however, he was disappointed. He returned in 1788 to the south, and the following year brought out at Berlin "Il Ritorno d'Ulisse" with such success, that the king appointed him second kapellmeister. He now wrote "La Compagni a d'Opera a Nanchino," a piece satirising the management, poets, composers, and singers of the grand opera in Berlin, which was represented at Potsdam in 1790. This drew upon him the resentment of all the persons it ridiculed to such an extent, that not only was his opera of "Dario" hissed from the stage in 1791, but, in consequence of the ceaseless invectives against him in the public journals, in 1792 the king withdrew from him a libretto, with which he had commissioned him, and he was compelled to resign his office and return to his own country, where he closed his days in obscurity. Gerber gives a list of his dramatic works.—G. A. M.

ALESON, FRANÇOIS D', a writer of history, of the 17th century; a member of the Society of Jesus. His work, which relates to the history of Navarre from the death of Jeanne de France, forms, says the Biographie Universelle, the complement to Joseph de Moret's "Annales de Navarre," 5 vols. folio.

ALESSANDRINI, GIULIO, born 1506, died 1590. He studied medicine at the university of Padua, and was successively physician to Maximilian II., Charles V., and Frederick I. In his writings he demonstrated that the "Theriacque," attributed to Gallien, was not the work of that author.

ALESSI, GALEAZZO, an Italian architect, whose fame has spread throughout Europe, was born at Perugia in 1500. France, Germany, and Italy can boast of many of the productions of his genius, but the church and monastery of the Escorial, in Spain, are considered his *chefs-d'œuvres*. Died in 1572.

ALESSIO, PIEMONTESE, an Italian physician, who flourished in the sixteenth century, and pretended to have discovered an elixir by which he could restore the vigour of youth.

ALEVAS, a Greek sculptor and brass-caster, who, according to Pliny, excelled in portraying philosophers. No date is known in connection with this artist.

ALEXANDER. Under this head will be given, 1st, the princes of that name, in the alphabetic order of their countries; 2nd, the popes, saints, and martyrs; 3rd, all not included in these divisions, in the usual alphabetical order:—

#### I.—ALEXANDER OF CONSTANTINOPLE.

ALEXANDER, Emperor of Constantinople, third son of Basilius and Eudocia, born in 870, reigned from the death of his brother Leo in 911, with whom he had been previously associated by his father in the government of the empire. His conduct after his accession was marked by the most insane riot and debauchery. He deposed the patriarch of Constantinople, Eutimius, and banished the Empress Zoe. He had only reigned one year, when he died suddenly.—J. S., G.

#### II.—ALEXANDERS OF EGYPT.

ALEXANDER I., king of Egypt, was the son of Ptolemy Physcon; his mother was one of the Cleopatras, Physcon's niece. Alexander was at first king of Cyprus; but owing to a revolution in Egypt (107 B.C.), became king of that country in conjunction with his mother, whom he assassinated after reigning with her for sixteen years. He was in consequence forced to retire again to Cyprus. Died about 85 B.C.

ALEXANDER II., king of Egypt, son of the preceding. He reigned nineteen days in conjunction with Cleopatra, at once his wife and sister, and then assassinated her; upon which he was himself slain by the people of Alexandria.

#### III.—ALEXANDERS OF EPIRUS.

ALEXANDER I., king of Epirus, was the brother of Olympias, wife of Philip of Macedon, who placed him on the throne of Epirus, and gave him his daughter Cleopatra in marriage. He was slain during a campaign in Italy about 326 B.C.

ALEXANDER II., son of Pyrrhus, acceded to the throne of Epirus in 272 B.C. He wrested Macedon from Antigonus Gonatas; but was driven both from that country and from Epirus by Demetrius, son of Antigonus. He regained his own kingdom, however. Alexander was the author of a lost work on military tactics, which has received the commendation of Arrian. Coins of both the above monarchs exist.—A. M.

#### IV.—ALEXANDER OF GEORGIA.

ALEXANDER, king of Georgia, succeeded to the throne in 1414, and died about 1440 in a monastery, having divided the kingdom among his three sons, George, Vaktang, and Demetrius.

#### V.—ALEXANDERS OF JUDEA.

ALEXANDER JANNÆUS acceded to the throne of Judea 105 B.C. He was an energetic and warlike prince, and left his dominions more extensive than he found them; but he was detested by his subjects, who, led by the Pharisees, repeatedly rose in insurrection against him. By the aid of Greek mercenaries, he maintained himself on the throne for twenty-seven years, quelling these revolts with the utmost disregard of human life. Some of his coins are extant.—A. M.

ALEXANDER, a prince of Judea, grandson of the preceding. He figured with his father Aristobulus and the rest of his family in Pompey's triumph, after the conquest of Judea in 63 B.C.; but, escaping from Rome to Syria, Alexander endeavoured to seat himself on the throne of his ancestors, and contested the supremacy of Judea with the Romans from 57 B.C. to 49 B.C., when he was taken and put to death by Quintus Metellus Scipio, son-in-law of Pompey.—A. M.

#### VI.—ALEXANDERS OF MACEDON.

ALEXANDER I., surnamed the OPULENT, son of Amyntas I., while his father was yet alive, slew the ambassadors sent by Xerxes to demand submission previously to his invasion of Greece (507 B.C.) He had ascended the throne when the Persian army entered the country, and was forced to temporise; secretly, however, he remained a friend to the Greeks, and, by the information he sent them, was instrumental in procuring the victory of Plataeæ. Died about 455 B.C.—A. M.

ALEXANDER II., son of Amyntas II., whom he succeeded in 369 B.C. His short reign was disturbed by a claim which Ptolemy Alorites set up to his throne; but the dispute was arranged in his favour by the influence of the Thebans, with whom he concluded a treaty of alliance, sending to Thebes, among other hostages, his youngest brother Philip, father of Alexander the Great. He was assassinated, however, soon after, at the instigation of Ptolemy, in 367 B.C., having reigned scarcely two years.—A. M.

ALEXANDER III., surnamed THE GREAT, son of Olympias and Philip II., the eighteenth king of Macedon; born at Pella 356 B.C.; died 323 B.C. He lived thirty-two years. Our space forbids our attempting anything beyond a delineation of the main features of so gigantic a form.—His career may be conveniently divided into three epochs; the first including the period previous to his invasion of Asia, the second the whole of his outward march, and the third the interval between his return from the Hyphasis and his death.

I. Alexander early evinced remarkable powers, and a keen consciousness of the dignity of his station. The anecdotes of his boyhood—as the taming of Bucephalus, his interrogation of the Persian ambassadors, and his jealousy of Philip's victories—manifest a spirit of daring and restless ambition. He was well trained in horsemanship and manly sports, and we hear from Æschines of his skill on the lyre. He combined his father's prudence, fortitude, and ingenuity, with the ardent temper of Olympias; and his education served to foster both those elements of future greatness. His first guardians were Leonidas, a relation of his mother, and the Acharnian Lysimachus. The former, of stern and rigid disposition, endeavoured to train his pupil to the endurance of toil and hardship. Connected with the latter, were those Homeric studies which so soon impressed a romantic stamp upon Alexander's exploits: the tutor assumed the name of Phoenix, and the prince was pleased to be addressed as Achilles, his boasted ancestor and pattern hero. But Philip had designed for him a more famous teacher; for in 342 B.C. he invited Aristotle to undertake the education of his son. Thus, in Alexander's thirteenth year, began a connection such as has never been renewed in history—between the great Actor and the great Thinker of the age. Philip displayed a generous respect for his guest, and restored his native town of Stagira. Here,

for a space of four years, the philosopher's instructions ranged over the wide fields of poetry, rhetoric, and science. He revised, for the use of his pupil, a copy of the Iliad, and wrote for him a treatise on Government. To his incitement we may trace in part that varied knowledge and enthusiasm for discovery which so distinguished the Conqueror. It is pleasant to hear of the warm personal attachment which existed between those two illustrious men. Philip himself had trained his son in the art of war and state-craft, and on the occasion of his march against Byzantium, 340 B.C., he committed Macedonia to his charge. Some letters to Aristotle are the only records we have of this administration. Two years afterwards, before Chæronea, we hear of Alexander urging his father to a decisive engagement; and his own impetuous charge on that eventful day decided the fortune of the field. Philip's marriage with Cleopatra introduced dissension into the royal house; and strife came between the father and son. The prince violently resented an insult offered to him at the nuptial banquet, and retired with his mother from the court. Shortly afterwards, on Philip's negotiating a union between his half-brother Aridæus and a daughter of Pixodarus of Caria, he imagined the scheme a step to supplant his succession, and himself sent proposals for the hand of the lady. On discovering this, Philip imprisoned the ambassador, and banished other five of Alexander's friends. Such was the state of things when Philip—on the eve of his projected invasion of Asia—was cut off by the dagger of Pausanias (336 B.C.) The suspicions attached to Olympias of being an accomplice in the murder do not seriously affect Alexander. Suddenly called upon to assume the vacant throne, he found himself—in his twentieth year—surrounded by difficulties. The architect was removed, and the fabric he had scarcely consolidated was in danger of falling to pieces. Beset by rival claimants for the kingdom, threatened by a new Hellenic alliance, and the hostility of the northern barbarians, Alexander, nevertheless, proved himself equal to the crisis. He vigorously suppressed the first ebullitions of domestic treason, and a few of the leaders suspected of conspiracy were put to death. Demosthenes, organizing a revolt in the south, had opened a correspondence with Attalus, who had raised the standard of revolt in Asia: this general was arrested and killed, and the movements of the Greeks were disconcerted by the young king suddenly appearing with his army at Thermopylæ. He rapidly won favour by inspiring fear. He had been appointed head of the Thessalian confederacy; the Amphictyonic council at the straits chose him as their chief; and he was elected by the Greeks assembled at Corinth to the leadership of the war against Persia;—the Lacedæmonians alone withheld themselves. Thebes and Athens, which had begun to show signs of disaffection, were awed into acquiescence; and in the spring of 335 B.C. Alexander found himself at liberty to march into Thrace, and prosecute a campaign against the Triballi. Passing the Hæmus, he vanquished that tribe, and carried his arms among the Getæ, on the further shore of the Danube. The Taulantii and Illyrians had leagued against him, and he was engaged in subjugating them, when news of the revolt of Thebes induced him to hasten towards Greece. A report of his death had revived the anti-Macedonian party in that city. They had initiated an insurrection by the massacre of two officers of the garrison, before they heard of Alexander's return; and, feeling themselves compromised, shut the gates against him. He offered lenient terms, but, when they were rejected, prepared for an assault: the town was taken by storm, and a terrible retribution awaited it. The populace were exposed to an indiscriminate slaughter; six thousand fell; the prisoners numbered thirty thousand. The troops who had been drafted into Alexander's army from the surrounding Bœotian states, the Thespians, Plataeans, and Orchomenians, were foremost in the massacre, and when the fate of the city itself was submitted to their arbitration, the memory of old feuds sealed its doom. Thebes was razed to the ground; the temples alone and the Cadmea were left standing. One house was honourably exempted—the house of the poet Pindar. Thebes had more than once betrayed the interests of Hellenic freedom, and her fall was the less pitied; but the example was none the less striking, and her name remained as a terror and a warning in the mouths of all Greeks.

II. Hostilities, open or covert, between Persia and Macedon had been in progress during the former reign; and in his assumed character of champion of the Greeks, Alexander became

the minister of the Nemesis which had been hanging over Asia ever since the invasion of Xerxes. The power of the "Great King" was not to be estimated by the numbers who paid homage to his name. His vast dominion was made up of various races held together by the loose bond of a weak despotism, and disjointed tribes whose satraps exercised all the freedom of independent princes. The cumbrous mass was already tottering, and so little reliance could be placed even upon those chiefs who were nominally faithful, that the chief support of the throne lay in the Greek mercenaries of Darius. Alexander was at the head of an army which it had been one of the great triumphs of Philip to organize—the phalanx which had proved invincible against the finest armies of Greece, and the unrivalled cavalry of Thessaly and Thrace. Early in 334 B.C., having committed the government to the hands of Antipater, he sailed from Sestus with an army of 30,000 infantry and 5000 horse. Before going, he distributed his lands and houses among his friends, leaving for himself with magnanimous confidence "his hopes." One of his first acts on landing in Asia, after sacrificing to the gods, was to visit the legendary tombs on the plain of Troy. There he realized the scenes on which he had long feasted his imagination, and won a new stimulus from the theatre of great deeds. He proceeded with his army to the Granicus, which flows into the Propontis near Cyzicus. On the opposite bank of this stream, an army of 20,000 Greek mercenaries and as many native cavalry, was posted under two of the Persian satraps. Memnon of Rhodes, one of the ablest advisers of Darius, counselled the leaders to retreat and lay waste the country; but, relying on the advantages of the ground, they resolved to oppose the passage. Alexander at once led his forces to the attack, and an obstinate conflict followed, during which he conspicuously displayed his valour, and was only saved from a Persian cimeter by the prompt intervention of his friend Cleitus. The invaders were victorious; the cavalry were put to flight, and the mercenaries surrounded. Only 2000 fell alive into the hands of their enemies; these Alexander sent in chains to Macedon. He treated his Asiatic prisoners on this and all occasions with marked clemency; but, with Greeks taken in arms against him, he dealt more severely. The result of this battle secured the submission of the colonies on the Ægean; Sardis and Ephesus threw open their gates on his approach: Magnesia and Tralles gave in their allegiance. The partizans of the opposite party were expelled, and Alexander restored the democracy—acting on the rule which he observed throughout, that each state and city under his control should be governed according to its own laws. The first opposition he encountered in his march along the coast was at Miletus. The Persian fleet of 400 sail anchored outside the harbour, and, with only 160 galleys, he did not think fit to risk an engagement; but he effected a breach in the wall, and the city was taken by storm. A more serious detention awaited him before Halicarnassus. Memnon had concentrated there the whole of his available force, and made preparations for a resolute defence. The city was guarded towards the sea by the fleet; a deep ditch, high walls, and two citadels protected it on the land side. Alexander filled up the ditch, and battered the walls. After futile attempts to destroy his engines, the Persian governors, giving up the defence in despair, made their escape, and the Macedonians entered the city. Memnon, acting as admiral, proceeded to reduce several of the islands in the Ægean; but in the following year Alexander profited by the death of his formidable opponent. From Halicarnassus the army advanced through Caria and Lycia, investing, by the way, the most important towns. Leaving Phaselis, two roads lay before them. A strong south wind dashing the waves against the shore made the near path by the beach almost impracticable. Alexander, however, sending his main force by a circuitous route, resolved with a few followers to attempt the passage. The wind changed to the north, and the event by which he was enabled to skirt the cliffs in safety was exaggerated into a miracle like that of the Red Sea. He met his troops at Perge, and proceeded through Pisidia and Phrygia. His arrival at Gordium is marked by the famous cutting of the knot which tied the waggon of Midas. It was received as a warrant for his sovereignty over Asia, and is perpetuated in a modern phrase. Thence, 333 B.C., he marched through Cappadocia, across the range of Taurus, to Tarsus in Cilicia. The satrap Arsames had deserted that city, and he entered it without a contest. He was detained here by a severe

fever, brought on by plunging when violently heated into the chill stream of the Cydnus. (The story which Plutarch tells of the physician Philippus is too ostentatiously characteristic to be reliable.) On his recovery, he advanced by way of Anchiahus and Soli to Mallus, where he received intelligence of the advance of Darius at the head of a huge army. The Persian king lay at Solchi, on the borders of a great plain above the hills which environ the gulf of Issus. He was surrounded by the same pomp, and confided in the same parade of power, which Xerxes had found so useless. But he had a force of about 600,000 men, and had he followed the advice of Amyntus, to remain in a position where he could have full advantage of his numbers, the issue might have been doubtful. Alexander, who had passed the unguarded gates of Cilicia, lay at Myriandrus, detained by stress of weather. Darius, in the belief that his enemies were scared at his approach, descended from his vantage ground toward Issus, and encamped in a narrow plain on the right bank of the Pinarus. The exultation of the Macedonians may be compared to that of Cromwell's Ironsides when the Scottish army came down from the heights at Dunbar. Alexander marched quickly to the attack, and after a tremendous struggle, the compact strength of the phalanx broke the huddled masses of the Persians. Their king fled before the contest was well decided, abandoning the royal tent, with his wife and mother, to the mercy of the conqueror. They were treated by Alexander with that consideration and respect which from first to last marked his dealings with female captives. He determined next to conduct his army through Phœnicia, as from that coast and from Egypt the fleet which harassed his early course had been mainly supplied. His general, Parmenio, was sent forward to seize Damascus, where Darius had deposited a portion of his treasure. He himself was welcomed as a deliverer by several of the maritime cities. Aradus, Byblus, and Sidon willingly received him, and the Tyrians sent an embassy with offers of obedience. But it was implied that those offers did not extend to absolute submission, and Alexander returned a polite answer to their evasion. He was anxious to sacrifice to Melcart—the Phœnician Hercules—and would for that purpose cross over to their island. The envoys replied that he might have access to the temple on the mainland, but that they could not admit any stranger within their walls. The issue between Europe and Asia was yet unsettled, and they wished to retain the power of arbitration. They may have also felt a certain pride in refusing to open their gates to a conqueror. Tyre was one of the oldest cities of the ancient world. Her traditions went back for twenty-four centuries, a period surpassing that which has elapsed since the times of Alexander. The queen of merchant cities, and the parent of powerful races, she had sustained sieges from armies many times outnumbering hers, when her site gave less encouragement to defiance. Built on a storm-beaten cliff, separated from the shore by a channel of half a mile in breadth, and surrounded by a wall 150 feet high, she was safe, if any city could be safe, from attacks by land, and all but impregnable by sea. There was enough here to have daunted any ordinary captain; but it was Alexander's rule never to yield to any surmountable obstacle, and to him no obstacle appeared insurmountable. He resolved on a method of attack which has left its impress on the topography of the coast. From the dismantled buildings of old Tyre and the neighbouring forests of Libanus, he reared a gigantic mole, which was slowly built out into the channel, and threatened to convert the island into a peninsula; at the end of this mole two wooden towers were stationed, at once to protect the workmen and annoy the Tyrians by showers of missiles. The latter, however, succeeded in setting fire to the towers, and loosening the mound, thus beginning a destruction which a storm shortly afterwards completed. With dauntless patience, Alexander set his soldiers to renew the laborious construction, while he went himself to Sidon and the other towns of Phœnicia to collect a fleet. The mound was at length finished, and the city was assailed on both sides; but it was from the sea that a breach was first made in the walls. After a siege of seven months—one of the most memorable of antiquity—Tyre fell into the hands of the Macedonians 332 B.C. Exasperated by the long resistance, the rage of the soldiery knew no bounds. The town was fired, and 8000 of the inhabitants massacred. The remainder, numbering about 30,000, were sold as slaves; while, in revenge for the death of certain prisoners slain on the ramparts, 2000 were conspicuously

crucified. The old prophecies seemed to be again fulfilled against the beautiful city. She was made desolate, and the "isles shook at the sound of her fall." About this time Alexander received and rejected conciliatory overtures from Darius. Marching southward along the coast of Palestine, he was arrested by the resistance of Gaza. Her walls were of immense height, and Batis, the commander, maintained with his garrison a desperate defence, fighting when the fortress was taken till the last was slain. During the progress of this siege Alexander was severely wounded. The Jewish legends tell that he was diverted from an attack on Jerusalem by a dream, which had inspired him with reverence for their priest, but it is uncertain whether he ever visited that city. His march lay onwards toward Egypt, and at Pelusium he met his fleet, which sailed up the Nile to Memphis, while he arrived at the same point by marching across the desert. He encountered no opposition from the Egyptians, who were ready to consider him as the enemy of their old oppressors. The Persians had trampled upon their national customs and rites, whereas the policy of Alexander was to respect the altars of the gods in whatever country he fixed his dominion. In pursuance of this plan, and partly impelled by curiosity to see one of the most celebrated shrines in the world, he made a pilgrimage to the oasis of Ammon. The priests were flattered by his visit; he was saluted as the son of Jove, and received from the oracle a response according to his desires. But the event which chiefly commemorates this campaign took place at the beginning of 331 B.C. Navigating the western branch of the Delta, Alexander was struck by the situation of a strip of land which separates the lake Mareotis from the sea, and is protected from storms by the Pharos rock. The thought resulted in the foundation of Alexandria—a city, in its magnificence, duration, and influence on the civilization of mankind, destined to surpass even the hopes of the founder. In the same year he returned to Tyre, and marched to Thapsacus, a distance of 800 miles, before the end of August. Thence he proceeded without interruption through Mesopotamia to the banks of the Tigris.

Darius had assembled the whole force of his kingdom, and in a wide plain near the village of Gaugamela prepared for a last trial of strength. The vicissitudes of Issus were repeated on a grander scale. Elephants, scythed chariots, cumbersome instruments of terror, and countless hosts, were found unequal to resist the stern onset of the phalanx, and the shock of Alexander's cavalry. A second time the king set the example of flight, and the pursuit continued with great slaughter as far as Arbela, a town which has given its name to the battle. Instead of tracking Darius to Ecbatana, the victor marched southward, and made a triumphal entry into Babylon. Here too, as in Egypt, he found the people willing to accept his rule in exchange for the intolerant tyranny of the Achæmenides. He restored the temples of the old Chaldean religion, and sacrificed to their tutelary god, Belus. The civil offices of the city he apportioned among some of his own captains. The army rested for a time in the enjoyment of the surrounding luxury, and, in the midst of the splendours of Babylon, Alexander began to assume the outward signs of oriental power. Towards the end of the year he set out for Susa, and found there 50,000 talents of gold and silver. He was joined at this point by reinforcements from Greece, about 13,500 foot, and 1480 horse. Moving eastward from the acquired territory to the original seat of the Persian dynasty, he had to pass two defiles, and encounter a vigorous resistance from the mountain tribes of the Uxians and the satrap Ariobarzanes. He overcame their opposition by skilful strategics, and Tiridates the governor delivered Persepolis into his hands. There the army found a treasure richer than any they had yet secured. It was the storehouse of the plunder of centuries—the sacred city of the ancient kings—like the Indian Delhi, the seat and sign of empire. In the midst of a feast Alexander fired the royal palace, whether in a fit of drunken passion or moved by some reason of more deliberate policy, is uncertain. He may have wished to revenge the old burning of Athens, or to render it impossible that a Persian prince should again sit on the throne of his ancestors. The fire spread rapidly, and a considerable portion of the city was consumed. The white marble columns that rise from the platform of Persepolis still attest its ancient magnificence. At Pasargadæ, Alexander visited the tomb of Cyrus. In the spring of 330 B.C. he directed his course northward in pursuit of Darius. He passed

through Ecbatana to Rhagæ, and found that the king had fled through the Caspian gates towards Bactri. Darius fell a victim to the treason of Bessus, satrap of that province, who had overpowered and thrown him into chains. Alexander pressed after them to the borders of Parthia, and found the corpse of the king, who had been murdered by the conspirators. He sent it to be buried in state at Persepolis, and himself encamped at Hecatompylus. Here he dismissed a number of his Greek auxiliaries who desired to return home, and with his Macedonian troops marched into Hyrcania, a wild and rugged district to the south east of the Caspian. Having subdued the Mardians and other hostile tribes, he entered the capital, Zandracarta, where the mercenaries who had fought against him surrendered. The Athenians and Spartans were subjected to a temporary confinement; the rest he forgave, and they were set at liberty or incorporated into his army.

The subjugation of Persia proper completed, we enter upon a new career of conquest, where one is more astounded by the vastness and variety of the regions traversed, than by the number and magnitude of Alexander's previous victories. His eastern marches realize for the first time in authentic history, the fabled wanderings of the heroes, and conduct us through realms yet untraversed by a European army. We are confused by the mere names of the cities, nations, and tribes he visited. The course of those marvellous marches will never perhaps be exactly determined, and a bare outline of their results is all that can be offered here.—Alexander left Zandracarta after a sojourn of fifteen days, and passing through Aria, where he founded the city of Herat, penetrated southwards into Drangiana. He rested for some time at Prophthasia, the capital of that district, and the scene of one of the three tragedies which have left a stain upon his glory. We will anticipate a little in order to review them together. In adapting himself to the manners of his new subjects, the conqueror had assumed, with the tiara, much of the absolutism of an Asiatic despot. He claimed a divine right for his sovereignty, he paraded the response of the oracle of Ammon, and, too readily accustomed to the servile homage of the East, could not brook the censure which his arrogance excited among his old captains. Chief of these was Parmenio; his son Philotas was bound to the monarch by the ties of a long friendship. He presumed upon this to speak freely of Alexander's excesses; whether there was deeper ground for suspicion against him is unknown, but he had enemies in the camp who took advantage of a plot, formed by one of the minor officers, to accuse Philotas. He was arrested, tried, and condemned on very insufficient evidence. A confession was wrested from him by torture, implicating Parmenio, and while the son was executed on the spot, a messenger was sent to have the father cut off in Media. Similar was the fate of Calisthenes, the kinsman of Aristotle, and litterateur of the army. When in 328 B.C. Alexander was in Bactria, a conspiracy formed against his life by the royal pages was detected. They were executed, and the philosopher who had offended the king by his cynical manners was involved in the charge. There was no proof of his guilt, but he was imprisoned, and seven months after died in chains. The well-known assassination of Cleitus, which took place during the previous winter, was a sudden crime repented of as soon as it was committed; but it illustrates the fits of fury, aggravated by intemperance, to which Alexander was occasionally subject.—From Prophthasia the conqueror marched (330 B.C.) through the territory of the Ariaspans, and up the banks of the Etymander. Passing into Archosia, he founded another city on the site of the modern Candahar, and directing his course eastward, arrived at the pass by which he was to cross the Indian Caucasus. Having surmounted this lofty range, he halted for a few days at Drapsaça, a strongly fortified town on the highlands of the northern slope. Hence, after a tiresome march he reached the Oxus, and consumed six days in the passage of that river. Bessus had fled before him into Sogdiana, but he was overtaken by his own treachery. Two of his followers, Spitamenes and Dataphernes, delivered him up to the conqueror. He was conveyed to Zariaspa, the capital where Cleitus was killed, and put to death in the following year after a cruel mutilation. It was a part of Alexander's policy to visit with severity all offences against the royal dignity. Meanwhile, he proceeded through the rich country which surrounds Samarcand, and reaching the northern limit of his course on the shores of the Jaxartes, founded there a distant Alexandria. Remote Scythian races sent him

embassies. He was pleased to accept their friendship, and retrace his steps. Spitamenes had a second time turned traitor, and roused the Sogdians to revolt. The reconquest of the country was only accomplished after two years' hard fighting. On one occasion, a large detachment of Macedonian troops was entirely cut to pieces, and Alexander, in revenge, perpetrated a cruel massacre in the vale of the Polytimus. The year 328 B.C. was marked by the capture of the Sogdian rock, an insulated precipice crested by a strong fortification. Here Roxana, daughter of the chief Oxyartes, was taken, and, won by her beauty, the victor made her his wife. This alliance secured for him the goodwill of some of the native rulers: yet many more battles followed with Spitamenes, till at length the most persevering enemy Alexander had found in Asia was overwhelmed and slain. It was his desire to extend his empire on every side to the extreme limits of the old dominion of Cyrus. He was encouraged in his purpose of invading India by a visit which he received from Taxiles, ruler of an extensive district between the Indus and the Hydaspes, at war with neighbouring princes, and anxious to secure a formidable ally. Alexander left Zariaspa in 327 B.C., at the head of an army of 120,000 foot and 15,000 horse, largely recruited from the Asiatic tribes. He crossed the Caucasus, and in the same summer reached the site of Cabul. Skirting the mountains to the north of the Cophen river, he defeated the inhabitants and captured the cities on his route. On the banks of the Indus he came before the stronghold Aornus, the most celebrated of the rock fortresses, whose threatening aspect invariably provoked his attack. Hercules, it was fabled, was, ages before, baffled before this fastness; it was the more worthy prey for his successor. A select body of troops succeeded in scaling a rock, separated from the citadel by a wide gorge. Alexander carried a mound over this, and the place was captured. Early in 326 B.C. he crossed the Indus by a bridge of boats, and after being entertained by Taxiles in the capital which bore his name, marched without opposition to the Hydaspes. Porus, sovereign of the district south of that stream, had collected an immense army on the opposite bank, fronted by an imposing array of some three hundred elephants. Many days passed, during which Alexander sought to deceive Porus as to his real intentions. At length in a stormy night a large division of his army crossed in a secluded part of the river. A fierce battle followed, in which the valour of the Indian king so commended itself to the conqueror, that he consented to govern the country indirectly, and left Porus with a nominal independence, annexing to his dominions a portion of the neighbouring territory. On opposite banks of the Hydaspes Alexander founded two cities, Nicæa and Bucephala, the grave and memorial of his famous steed. He easily subdued the unwarlike Clausians who lay to the west of the Acesines, and passing that river, took possession of the country which had been resigned by the flight of another Porus, an enemy to the first prince of that name. South of the Hydraotes, the Cathæi, and their capital Sangala (Lahore), opposed an obstinate resistance. The city was at length taken and razed; seventeen thousand of the barbarians were slain during the war. The conquest of the Punjaub was complete, and the victor arrived at the banks of the Hyphasis.

III. Here, in the ninth year of his reign, Alexander had reached the limits of the known world and the goal of his conquests. His own restless spirit was unbroken. Beyond that river lay new empires, the pathway to future triumphs. But the army was indisposed to enter on a fresh train of indefinite and perilous adventures. His old Macedonian warriors, "souls that had wrought, and fought, and toiled with him," were at last grown weary of wars and wanderings. They recoiled from the immensity of the Indian plains—the rivers and nations, and citadels of hostile men: the Ganges was in a land of exile, and the distant ocean they heard of

"Far, far away did seem to moan and rave  
On alien shores."

They resolved to advance no farther. Alexander shut himself up for three days in sullen silence, mourning their weak hearts. But the determination of his soldiers was inflexible. Twelve great altars were reared to mark the term of their triumphs, and they once more turned towards the West. Alexander had fitted out a fleet on the Hydaspes. He himself in one of the ships sailed with it down the river, while the main body of the army, under the command of his favourite Hephæstion, marched

along the eastern bank. The martial tribes of the Malli and Oxydracæ were only subdued after a succession of fierce battles. On one occasion Alexander having rashly exposed himself alone among a host of enemies, was very near losing his life. He was only rescued after he had received a severe wound, which detained him for some time near the mouth of the Hydraotes. He descended the Acesines to its confluence with the Indus, and sent a division of the army, under Craterus, to Carmania, by way of the Drangæ, while he proceeded southward through the territories of Musicanus. At Pattala he founded a city and harbour. The fleet was enlarged and given in charge to Nearchus to conduct to the Persian gulf, while he himself determined to lead the rest of the army along the coast. Before setting out, he explored the Delta of the Indus and sailed some short distance into the Indian ocean. It was his last backward look towards those regions from which he was wrested. In passing through the hot, sandy desert of Gedrosia the army suffered severely from thirst. An anecdote is related of Alexander which recalls our own Sidney. A helmet full of water had been procured, and it was presented to his parched lips, but he threw the draught to the ground untasted, and shared the common lot. He rested a short time at Pura, and in Carmania was joined by Craterus, and shortly after by Nearchus, whom he had been anxiously expecting. The admiral proceeded up the Persian gulf. Hephæstion, with the main body of the troops, moved along the shore, and the king himself, with the rest, took the upper road to Pasargadæ and Persepolis. They met at Susa 324 B.C.

The task yet remained to Alexander to link together the disconnected masses of his vast dominion, and he found himself called upon to exchange the warrior for the statesman and the judge. Left in the midst of a conquered people, the officers whom he had appointed to preside over the various provinces had been guilty of acts of extortion and tyranny which demanded redress. He set himself to remove the most conspicuous offenders. In some instances his justice was swift and summary; in others it was delayed by feelings of friendship. Thus, Cleander, Heraco, and Sitalees, governors of the force in Media, had been put to death; while Harpalus, who had ruled with despotic oppression over the satrapy of Babylon, was allowed to escape with his plunder, and rouse a new opposition in Athens. The amalgamation of two nations, distinct in their race as in their civilization, was an arduous effort. It was mainly with a view to this end that Alexander celebrated his nuptials at Susa with Statira, daughter of Darius. To Hephæstion was allotted her younger sister, Drypetis; Craterus espoused a niece of the deceased monarch; and wives from among the ladies of rank in the Persian court were assigned to eighty of the other officers. Ten thousand of the soldiery followed the example of their chiefs, and to each a dowry was granted from the royal treasury. Another act of public generosity was the payment of the debts of all such as chose to register their names. Meanwhile, Alexander disbanded the Greek mercenaries throughout the kingdom, and drafted among his troops a large number of Asiatic youths trained to the European arms. This was the occasion of bitter jealousy among the Macedonians, who conceived that their posts of honour were being usurped by a barbaric race. Alexander had improved the navigation of the Tigris and Euphrates, and he sailed up to Opis to a great meeting of the army. An offer to release from service those of his old soldiers who wished to return home, gave additional offence, and a mutiny broke out, which it required all his energy and eloquence to quell. At last he succeeded in subduing their pride; a reconciliation was effected, and 10,000 veterans accompanied Craterus to Macedonia. About this time he proceeded to Ecbatana, and celebrated there one of the most magnificent of his festivals. The rejoicings were interrupted by the death of Hephæstion. Alexander's grief on this event manifested itself with the vehemence that belonged to him. The walls of Ecbatana were dismantled, and the fire quenched in all her sanctuaries. A pile, such as no monarch had ever seen before, was reared for the corpse of the favourite, and his name was enrolled among the demi-gods of Greece. After a short expedition, in which he subdued the rebel tribes of the Cossæi, the king marched to Babylon. In this gorgeous city which he had selected for his capital, he resolved to celebrate the obsequies of his friend. Here, too, a magnificent harbour was constructed, and hither (323 B.C.) embassies from all quarters of the habitable globe, Celts, Ethiopians, Carthaginians, Libyans, Italians, and envoys from the future mistress of the

world came to offer tribute, or crowns, or congratulations to the conqueror of Asia. But there was a double gloom over the pomp and splendour of the times. Omens of death had been partially fulfilled, and uneasy forebodings haunted Alexander. The Chaldeans had warned him from Babylon. On a voyage down the Euphrates, a gust of wind carried off his tiara, and it fell among the tombs of the old kings. A stranger came and seated himself on his vacant throne. One dark sign confirmed another. Patroclus had fallen, and Achilles was to survive but for a brief space. Yet the mind of the king was busied to the last on majestic designs. North and south he stretched his plans for discovery and his hopes of power. He had sent three admirals to survey the coasts of Arabia, another to navigate the Caspian sea; he was on the eve of setting out himself on a career of western conquest. A sacrifice was instituted for its success, which ended in a banquet. The festivities of that evening only augmented the fever which had already claimed its victim. From day to day the expedition was postponed, till, on the sixth, Alexander felt that he would no more march at the head of his armies. His generals too were seized with despair, and eager to behold again their great commander, were permitted to pass one by one through his chamber. He lay there yet alive, but the vital spark was rapidly expiring. A grasp of the hand and an expressive glance, was all that he could vouchsafe to the mourners in that solemn procession. He gave his ring to Perdiceas, and thus Alexander bade farewell to his old guard. The god Serapis was asked whether he should be brought into the temple, but a voice from the adytum replied, that he was better where he was. The great spirit had passed away. Demosthenes would not at first credit the report of his death; had it been true, he said, the whole earth would have smelt of his corpse. His remains were embalmed, and the sarcophagus rested in his city by the Nile. Three centuries afterwards the lid of that sepulchre was raised, and the features of the greatest conqueror of ancient times were scanned by the first of the Roman emperors.

Among the soldiers of antiquity, Alexander finds a rival in Hannibal alone. More perhaps than any other commander he combined the chivalry of the heroic age, and the more careful strategics of later times. His career is equally calculated to excite romantic enthusiasm and thoughtful study. He was at once the Achilles and the Agamemnon of his army; and if ferocity led him at times rashly to risk his life, his ingenuity cut out a way from difficulties which would have overwhelmed any other mortal. But we must grant to Alexander more than the praise of the warrior. His zeal for discovery, love of knowledge, and varied accomplishments, would alone have made him remarkable. His life became an epoch in the world's history as much by policy as by arms. Bringing, for the first time, the East and West into close contact, he acted on the only principle by which races can be moulded together, and, in his perception of harmony in diversity, showed that he had not sat at the feet of Aristotle in vain. He had scarcely begun to be a lawgiver; but his course, so rapid that he might well be said to overrun a great portion of his empire, was everywhere marked by more than ruin. Everywhere he diffused some of the blessings of Greek civilization, opened up new possibilities of progress, and scattered seeds far and wide, to spring up with various degrees of influence over the destinies of mankind. His impress on Greece itself was less beneficent; but Greek freedom was already doomed; and of the jarring fragments into which, on his premature death, his unwieldy empire fell, each was more prosperous because of his reign. He pointed many paths which no successor was found great enough to follow, and India had to wait two thousand years before culture again came with conquest to her shores. Wrath, intemperance, and pride, mar the symmetry of Alexander's story; but those are the common vices of conquerors; he had virtues of chastity, self-denial, and generous magnanimity shared by few. He was a good son, an affectionate pupil, and a warm friend. The tribute of Arrian is just—"such a man would never have been born without a special providence," nor is there in the list of the world's heroes a name more sublime than his.

Plutarch, Curtius, and Arrian are the ancient authorities for Alexander's life. The best English account of his campaigns is that given in the vi. and vii. vols. of Bishop Thirlwall's History. With reference to Mr. Grote's xii. vol., see a very able article in the *National Review*, No. v.—J. N.

ALEXANDER, ÆGUS, fourth Macedonian prince of this

name, son of Alexander the Great by Roxana, was born in 323 B.C., and declared joint king of Macedon, along with his father's half-brother, Philip Arrhidæus. He fell an early victim to the intestine dissensions which raged in the Macedonian empire after the death of Alexander, and was put to death along with his mother, by order of Cassander, in 310 B.C.—A. M.

ALEXANDER V. was the third son of Cassander, and disputed the Macedonian throne with his brother Antipater. Both were finally crushed by Demetrius Poliorcetes, in 294 B.C.

ALEXANDER, third son of Perseus, was carried captive to Rome along with his father, by Paulus Æmilius, in the year 168 B.C. He was kept a close prisoner till the death of his father in 165 B.C., when he was set at liberty, and lived the rest of his life as clerk in a public office. He distinguished himself somewhat by his skill in wood-carving.

ALEXANDER, son of Lysimachus, one of Alexander the Great's generals, and afterwards king of all the European portion of the Macedonian empire, fled from his father's court to that of Seleucus, king of Babylon, after Lysimachus had slain Agathocles, another of his sons. Alexander fought against his father in the battle in which the latter was defeated and slain by Seleucus (B.C. 281), and he subsequently made an unsuccessful attempt to gain the Macedonian throne.—A. M.

ALEXANDER, LYNCESTES, so surnamed from being a native of the district of Lyncestis in Macedonia, was implicated in the conspiracy against the life of Philip of Macedon, and though pardoned by Alexander, entered, during the course of the Persian expedition, into a treasonable correspondence with Darius. Being discovered, he was kept for some time in prison, and finally put to death in 330 B.C.—A. M.

ALEXANDER, son of Polysperchon, one of the generals of Alexander the Great, aided his father in his wars with Cassander, and making himself master of the Peloponnesus, reigned some time there as an independent prince (316 B.C.), but was assassinated by one of his officers.

#### VII.—ALEXANDER OF PHERÆ.

ALEXANDER, tyrant of Pheræ, in Thessaly, in 369 B.C., was an energetic, but cruel and perfidious prince, against whom his subjects begged the aid of the Thebans. Pelopidas, the Theban general, had not much success against him, being in his first campaign taken prisoner, and in a subsequent expedition slain. In the end, however, Alexander was forced to submit to the Thebans. After this he directed his warlike activity against the islands of the Ægean, and made piratical descents on the Cyclades, in one of which he defeated an Athenian army. Alexander of Pheræ was murdered at the instigation of his wife, by her two brothers, in 367 B.C.—A. M.

#### VIII.—ALEXANDERS OF POLAND.

ALEXANDER JAGELLO, the son of Casimir IV., king of Poland, was born in 1461, and succeeded to the throne on the death of his elder brother, John Albert, in 1501. The earlier part of his reign was spent in repelling the invasion of the Russians under their emperor Ivan Vazilivitch. Afterwards the Crimean Tartars invaded Poland, but were totally defeated at Kleck. Alexander died in 1506.—J. W. S.

ALEXANDER, BENEDICT STANISLAUS, son of John Sobieski, and pretender to the crown of Poland, was born at Dantzic, 1677, and died as a Capuchin friar at Rome, 1714.

ALEXANDER WASA, son of Sigismund III., king of Poland and Sweden, was born in 1614, and died in 1635.

#### IX.—ALEXANDER OF ROME.

ALEXANDER SEVERUS, a Roman emperor, cousin and successor of Heliogabalus, and related to the Emperor Septimius Severus, through the wife of the latter, Julia Domna, whose sister Mæsa's two daughters, Soemis and Mammæa, gave birth respectively to Heliogabalus and Alexander. The father of the latter was Gessius Marcianus, a man of consular dignity; but he owed his excellent education to his mother Mammæa, a woman of unusual capacity, favourable to the Christians, and a friend of Origen. Born in Phœnicia, the country of his maternal ancestors (A.D. 205), Alexander accompanied Heliogabalus to Rome in 219, where he became the object of the emperor's detestation and fear, the vicious excesses of that abandoned monarch appearing doubly criminal and hateful, as contrasted with the piety and moderation of his youthful and promising cousin, who had been declared heir-presumptive to the throne. The repeated attempts of Heliogabalus, however, to effect Alexander's destruction, were always unsuccessful, and at length Helioga-

balus, himself assassinated in A.D. 222, made way for a better man. The youthful prince commenced his reign auspiciously, and under the guidance of his mother, and the celebrated legist Domitius Ulpianus, who had been made prefect of the pretorians—an office at that time uniting both civil and military functions—proceeded to reform the innumerable abuses which had sprung up during the wretched reigns of his immediate predecessors. Under Alexander Severus the taxes were greatly diminished,—Lampridius, his historian, says to one-thirtieth of what they previously were,—justice was administered with purity, and corruption in the public offices generally checked by the expulsion of the unworthy creatures of Heliogabalus. What was most difficult and dangerous of all, a degree of discipline was introduced among the pretorians. This attempt, however, cost their prefect Ulpian his life; the irritated soldiers slew him in the very presence of the emperor—a fact which leads to the belief that Alexander Severus, though a well-intentioned prince, was comparatively a weak one, without sufficient energy and determination to carry through, in despite of every obstacle, the reforms he had initiated. We do not read that the pretorians were punished for this act. About A.D. 226, Ardschir (Artaxerxes) overthrew the Parthian empire, on the eastern boundary of the Roman dominions, and founded the Persian dynasty of the Sassanidæ. Alexander found himself compelled to march against the victorious Persians in person, and he is said, though the fact is somewhat obscure, to have gained a great victory over Artaxerxes in 232. At all events he celebrated a triumph on his return to Rome; and immediately thereafter set out on an expedition against the Germans, who had invaded the Roman province of Gaul. At Mayence, his legionaries rose in mutiny against him, under the leadership of Maximin, and both the emperor and his mother Mammæa were slain, A.D. 235. The unpopular character of Mammæa to whom Alexander was entirely subject, and whom the soldiers, accustomed to largess and license, disliked on account of her avarice, probably contributed greatly to this event.

Alexander Severus was thrice married, though only thirty years of age at his death; but he left no children. One of his wives, Memmia, to whom he was tenderly attached, had been banished to Africa by Mammæa, who could tolerate no rival in influence, or in her son's affections. Like his mother, Alexander showed some liking for Christianity; but the countenance he gave it was of an indiscriminate character, for he showed to Apollonius Tyanaus, the Pythagorean philosopher, to Abraham, and to Origen, the same amount of reverence that he awarded to Jesus Christ. Over the gate of his palace was inscribed his favourite maxim:—"Do to others as you would have others do to you."—A. M.

#### X.—ALEXANDERS OF RUSSIA.

ALEXANDER NEWSKI, one of the "saints" of the Russian church, the son of Jaroslav II., was born about 1219, a few years after the successful inroad of the Mongols into Russia. He was surnamed Newski, from a victory gained over the united forces of Sweden, Denmark, and the Teutonic order. A second victory on the banks of lake Peipus, obliged them to sue for peace. Alexander died in 1263.—J. W. S.

ALEXANDER I., PAULOWITCH, Emperor of Russia, was the son of Paul Petrowitch and of Maria Theodorowna, a princess of Wurtemberg. He was born at Petersburg on the 23rd, or, according to others, on the 17th of December, 1777. His grandmother, Catherine II., the reigning czarina, took him entirely out of the hands of his parents, and confided him to the care of Count Soltikoff. His instructors were Kraft the natural philosopher, Pallas the botanist, Mason the mathematician, and above all, Cæsar la Harpe, a Swiss, of republican principles. To the influence of the latter, Alexander owed those liberal ideas which broke forth from time to time during his reign, in strange contrast with the traditional policy of his race. At the early age of fifteen, he was married to the Princess Louisa Maria of Baden. This union proved unhappy; the imperial couple resorted to a separation, and Alexander afterwards set his subjects a frequent example of conjugal infidelity. Catherine II. having terminated her career of depravity in 1796, was succeeded by Paul. The folly, or more probably insanity, of this prince excited general discontent, and on March 23rd, 1801, he was murdered by a band of conspirators. The exact share of Alexander in this transaction is very obscure, but without charging him with premeditated parricide, we may safely assert that he was fully cognizant of the plot for the deposition

of his father. The young emperor, immediately on his accession, undertook a variety of internal improvements. He founded four universities, and reorganized that of Wilna; he decreed that the number of gymnasias (colleges preparatory to the universities) should be 204, besides 2000 elementary public schools. He abolished judicial torture, liberated a great number of persons unjustly condemned, gave liberty to the press, introduced a greater amount of publicity into the proceedings of government, and encouraged arts and manufactures. He made peace with England, but sought to preserve the friendship of Napoleon. Meantime, he did not deviate from the career of stealthy aggrandizement marked out by his ancestors. David, the king of Georgia, was induced by subtle diplomacy to cede his dominions to Russia. A rupture with France next followed, and Alexander formed a coalition with England, Austria, and Sweden. The decisive battle of Austerlitz broke up the alliance. Austria submitted, and Alexander, after some insincere negotiation, formed a fresh coalition with Prussia and Sweden. This proving also unfortunate, Alexander entered into a treaty with Napoleon, to whose resentment he abandoned his former ally, the king of Prussia, in violation of the most solemn engagements, and even accepted one of the provinces of which the latter was deprived. The treaty embraced also a number of secret articles directed chiefly against England. Alexander now appeared as an open supporter of the policy of Napoleon, and excluded all articles of English manufacture from his dominions. The bombardment of Copenhagen, and the seizure of the Danish fleet, he publicly denounced as a piratical expedition, whilst he privately congratulated the British government on its success. The king of Sweden having refused to exclude British manufactures from his dominions, war was proclaimed against him by Alexander, who, after a short campaign, and a liberal use of bribery, succeeded in stripping him of the province of Finland. He was equally successful in his encroachments upon the Turkish empire and upon Persia. Austria having resumed the struggle against France, Alexander, so far from assisting her, openly sided with Napoleon. The favour shown by the latter to Poland, however, led anew to a rupture between the two emperors. The well-known Russian campaign of Napoleon now ensued. On the disastrous close of this expedition, Alexander, who had previously allowed the German sovereigns to weaken themselves by struggling single-handed against the great emperor, now embraced the favourable moment to adopt a more generous policy, and by coming forward as the liberator of Europe, to secure for himself an unprecedented influence. Prussia and Sweden, forgetful of the past, acceded to his proposals. Austria and some of the minor German states joined the alliance, and in the great battle of Leipzig, the supremacy of Napoleon received its death-blow. During the allied occupation of Paris, Alexander displayed remarkable moderation. About this time he visited England, where the insinuating graces of his deportment, together with the part he had played in the overthrow of Napoleon, gained for him a great popularity. At the congress of Vienna, which now met to arrange the affairs of Europe, Alexander laid aside his recent moderation. He advocated the entire suppression of the kingdom of Saxony, and succeeded in obtaining for himself the grand duchy of Warsaw. This territory, together with some other parts of Poland, were accordingly erected into a kingdom, of which Alexander was declared sovereign, and to which he granted a "paper" constitution. He soon after, along with the emperor of Austria and the king of Prussia, entered into an agreement called the "Holy Alliance," which, when stripped of its veil of religion and philanthropy, was simply a confederacy to repress all political reforms. This league soon displayed its real nature, by the steps taken under its sanction to repress the constitutional movements in Naples, Sardinia, and Spain. Even the Greek insurrection found no favour in the eyes of Alexander, so great was his dread of revolutionary principles. He reintroduced the censorship both in Russia and in the kingdom of Poland. The administration of this latter territory proved unsuccessful. The diet claimed a greater share of power than the autocrat was willing to grant, and was accordingly dismissed. Symptoms of an insurrection appeared, and several students of the university of Wilna were thrown into prison. From this time forward, Poland was subjected to an unmitigated despotism. The latter years of Alexander's life were clouded with melancholy, arising in part from the mystical religious views which he had imbibed

from Madame Krudener, in part from the conflicting and inconsistent features of his character, and possibly also from fear of a revolutionary movement in his own dominions. Many military men of Russia, it must be observed, had, during the occupation of France, imbibed the ideas of Western Europe, and eagerly wished for an alteration of the government. In September, 1825, Alexander left his capital and repaired to the Crimea. At Taganrog he was attacked with an intermittent fever, which, from neglect, became dangerous. He died 1st of December, 1825, leaving the throne to his brother Nicholas.—J. W. S.

\* ALEXANDER II., surnamed NICOLAEWITCH, the present czar of Russia, was born on the 29th of April, 1818. He is the eldest son of the late Emperor Nicholas, by his wife Alexandra Veodorowna—a name which, according to custom, she substituted for her original appellation, Frederica Louisa Charlotte Wilhelmina, on being admitted, at the period of her marriage, into the Greek communion. She is the sister of the reigning Prussian monarch, Frederick William IV.—a circumstance which goes far to explain the reluctance of the Prussian government to join the Western alliance in the recent war against the Russian power. Alexander was educated from his earliest infancy as the heir-expectant of a great military monarchy; but it is said that he showed little relish for the arts of war; that he left to his more ambitious brother the concerns of the army; and that he thereby compromised his chances of the throne. Like many princes of the remarkable dynasty of which he is the present chief, he has sought a German alliance in marriage. His choice was one of preference and affection, rather than of political expediency. On the 28th of April, 1841, he married the Princess Maximilienne—now Marie Alexandrowna—the daughter of Louis II., the grand-duke of Hesse. When on March 2nd, 1855, his father, the Czar Nicholas died, worn down by the disasters of the war with England and France, and consumed by the personal toil which his overweening ambition had imposed on him, Alexander succeeded to the throne, and his coronation has since been celebrated at the Kremlin in Moscow with unexampled and barbaric magnificence. Though not deficient in talent and intelligence, his views as crown prince were known to be pacific, and Europe looked to him for a change of policy on the part of Russia when he became emperor. It was expected that he would pause in the attempt to enlarge the frontiers of the empire, and apply himself rather to measures of internal improvement. These tendencies did not at once develop themselves. On succeeding to the imperial sceptre, he gratified the warlike portion of his subjects by issuing a strong proclamation, in which he declared his intention of adhering to the policy of his predecessor. But when the united armament, naval and military, of England, France, Turkey, and Sardinia, had taken Kertch and Yenikale,—when on the 8th September, 1855, the great arsenal of Sebastopol fell,—when the commercial port of Odessa was seen to be at the mercy of the allies,—when Kinburn was captured and Cherson and Nicolaieff menaced,—and when it was known that the next campaign would open with a combined attack on Sweaborg and Cronstadt, within a few miles of his northern capital, and that Sweden was ready to reassert her ancient and just claim on Finland, he gladly accepted terms of peace. To this he was additionally urged by the accumulating distresses of his subjects, and the growing unpopularity of the war. Like his uncle, Alexander, he is said to be favourably disposed to a close alliance with the family of Napoleon, and to be ready to share with the present emperor of France the supremacy in continental Europe. Perhaps, however, in this policy he only displays the accustomed finesse of the house of Romanoff, and will be glad to avenge the fall of Sebastopol and the loss of his navy in the waters of the Euxine whenever circumstances will permit. Apparently intent now on establishing a large mercantile marine, and in promoting a network of railroads throughout his dominions from Abo to Odessa, and from the Volga to the Danube, it is said that he is really bent on securing steam-ships of war, and the means of easily transporting his numberless troops to any point of his empire which may be menaced, or which supplies a good base for operations against a weak neighbour. We write in the year 1857. The future alone can solve and explain the policy of the new emperor. His consort has borne him four sons and one daughter. Of these, the eldest son, Nicholas Alexandrowitch, the crown prince and heir to the throne, was born on the 20th of September, 1843.—T. J.

## XI.—ALEXANDERS OF SCOTLAND.

ALEXANDER I., king of Scotland, was the fifth son of Malcolm Canmore, by his queen Margaret, sister of Edgar Atheling. The date of his birth is unknown, but he was in the prime of life when he succeeded his brother Edgar, January 8, 1106-7. Soon after his accession he married Sybilla, one of the numerous illegitimate daughters of Henry I. of England, the husband of Alexander's sister Matilda or Maud. The principal event of Alexander's reign was his contest with the archbishops of Canterbury and York in behalf of the independence of the Scottish church. When Turgot, a monk of Durham, and the author of the "Life of Queen Margaret," was appointed to the bishopric of St. Andrews in 1109, the right to consecrate the new bishop was claimed by both of the prelates referred to, while Alexander and the Scottish clergy denied that it belonged to either. The dispute was compromised on this occasion, but it was renewed on the death of Turgot in 1115. After the lapse of five years, Eadmer, a monk of Canterbury, was nominated to the vacant see, and, in conjunction with the English prelates, used every effort to obtain the recognition of their assumed authority over the Scottish clergy, but without effect. Alexander refused to listen to their pretensions, and in the end succeeded in completely vindicating the ecclesiastical independence of his kingdom. Alexander appears to have been a monarch of good abilities, and great courage and firmness of character, though of a somewhat imperious and passionate disposition. In the chronicles and traditions of Scotland, he is distinguished by the epithet of "The Fierce," "because," says David Chalmers, "he was ane gritt punisher of malefactours and evil-doars. He dantonit Murray and Ross that had rebellit, and caused hang the Lord of Mernis' brother and sone, because they took away the guids of ane pur wyff." Alexander was a liberal benefactor to the church. Besides large grants to the church of St. Andrews, the monastery of Dunfermline, founded by his parents, and other ecclesiastical establishments, he erected the monastery of St. Colm on the island of Inchcolm in the frith of Forth, in gratitude for his preservation on that island from a tempest in which he had nearly perished. Alexander died on the 27th of April, 1124, after a reign of seventeen years and three months, and, leaving no issue, was succeeded by his brother David.—(Eadmer's *Historia Novorum*; Ailred's *Descriptio Belli Standardi*, and *Genealog. Reg. Anglor.*; Wyntown's *Cronykil of Scotland*; Hailes' *Annals of Scotland*, vol. i., *Pictorial Hist. of Scotland*, vol. i.)—J. T.

ALEXANDER II., the son of William the Lion, and his wife Ermingarde, was born in 1198. He succeeded his father December 4, 1214, and was crowned at Scone on the 10th. One of the first acts of his reign was to enter into an alliance with the English barons who had taken up arms against the infamous King John, in the expectation of regaining the counties of Northumberland, Cumberland, and Westmoreland. John was so incensed that he marched to the north at the head of a savage host of mercenaries, the outcasts of Europe, and laid waste the country from the Tyne to the Forth, vowing, as Matthew Paris informs us, that he would "smoke the little red fox out of his covert;" "because," the historian adds, "Alexander was of a red or ruddy complexion." Alexander having raised a powerful force to repel this invasion, John was forced to retreat to the south, as he was disinclined to risk a battle, and unable to remain any longer in a district which his merciless barbarity had reduced to a desert. In retaliation for these outrages, Alexander marched into England, and laid waste the western border counties. He then proceeded to the south to join Prince Louis of France, whom the insurgent barons had invited over to their assistance. On his way he made himself master of the town of Carlisle, and at Dover he is said to have done homage to Louis for the estates which he held from the king of England. The French prince and the English barons on their part expressly recognized the right of the Scottish king to the counties of Northumberland, Cumberland, and Westmoreland. After the death of John (1216), Alexander was excommunicated by the papal legate for his adherence to the cause of the insurgents, but the sentence seems to have been very little regarded either by the clergy or the people of Scotland. Next year, however, Louis was ignominiously defeated at Lincoln, and made peace with Henry III., the young king of England, without consulting his Scottish ally. Alexander on this effected his reconciliation, both with Henry and the papal see. The

bonds of amity between the two sovereigns were strengthened by the marriage of the king of Scots, 25th June, 1221, to the Princess Joan, Henry's eldest sister. A long period of uninterrupted peace followed this union, which enabled Alexander to turn his undivided attention to the regulation of the affairs of his own kingdom. About the year 1234, however, dissensions began to arise between Henry and Alexander, in consequence of the revival, on the part of the former, of the claim to the homage of the Scottish kings, and his support of the pretensions of the archbishop of York to the right of officiating at their coronation. Alexander, on the other hand, demanded the restitution of the three northern counties, which he claimed in right of inheritance, and complained that the English king had failed to perform the conditions of a treaty entered into by his father John, and for which he had received 15,000 marks. These claims were ultimately arranged in 1237, by the settlement on Alexander of certain lands in Northumberland and Cumberland, of the yearly value of two hundred pounds. In the following year, the queen of Scots, who had long suffered from a painful disease, died at Canterbury without issue. On the 15th of May, 1239, Alexander married at Roxburgh, Mary, daughter of Ingelram de Couci, surnamed "Le Grand," the head of a great family in Picardy. The good understanding between the two monarchs was so little affected at first by this marriage, that when Henry was about to set out in 1242 on his expedition to France, he confided to Alexander the care of the borders. In that year, however, an unfortunate event occurred, which led to the interruption of their alliance, and had nearly plunged the two countries into a war. Walter Bisset, a member of a powerful family in the north, was overthrown by the earl of Athol at a tournament held at Haddington. A day or two after, Athol was murdered. Popular suspicion ascribed the deed to the Bissets, and the Scottish nobility flew to arms, and demanded vengeance both on Walter Bisset and his uncle William, the chief of the family. Alexander and his queen did everything in their power to protect the accused from the fury of their enemies, but in vain. Bisset and his kinsmen were stripped of their estates, and compelled to swear that they would make a pilgrimage to Jerusalem, and there, for the remainder of their lives, pray for the soul of the murdered earl. But instead of performing his vow, Bisset repaired to the English court, and sought to inflame Henry against the Scottish king, by artfully representing that the English monarch was lord superior of Scotland, and that Alexander, being his vassal, had no right to inflict such punishments on his nobles without the permission of his liege lord. Moved by these representations, and perhaps also by other motives, Henry, in 1244, determined on an immediate invasion of Scotland, and, assembling a large army, marched to Newcastle. Alexander, on the other hand, nothing daunted at these preparations, raised a force amounting, according to Matthew Paris, to about 100,000 men, and prepared to repel the unprovoked invasion. But the Scottish king, as Paris tells us, was "a devout, upright, and courteous person, justly beloved by all the English nation, no less than by his own subjects;" and by the mediation of the English nobles, a treaty was concluded without bloodshed, and on equitable terms.

Almost the only other events worthy of notice in the life of Alexander, are the insurrections that broke out from time to time among the Celtic portion of his subjects, who endeavoured to assert the ancient principle of succession. In 1215 a disturbance arose in the province of Moray, which was suppressed by the head of the clan Ross. Seven years later a similar insurrection broke out in Argyleshire, which was put down by Alexander in person. Again, in 1228 Gillespie Mac Scoiane, who seems to have been the representative of the ancient royal line, took up arms in the north, near the town of Inverness, and baffled the king himself. But next year both the pretender and his two sons were put to death by the earl of Buchan, justiciary of the kingdom; and though no further attempt seems to have been made to dispute the succession to the throne, the Celtic population still clung to their ancient customs. In 1233 the people of Galloway, who were of the Celtic race, on the death without male heirs of their chief, Alan, high constable of Scotland, and the most powerful subject in the kingdom, resolutely opposed the partition of their country among his three daughters, and, headed by an illegitimate son of the late lord, and an Irish chief called Gilderoy, took up arms in vindication of their ancient rights, and were not put down without great difficulty. In 1249

Alexander undertook a maritime expedition against Angus, lord of Argyle, who refused to pay homage to the Scottish crown, on the plea that he owed allegiance to the king of Norway. But on reaching the sound of Mull, Alexander was seized with a fever, and died in the island of Kerrara, on the 1st of July, 1249, in the fifty-first year of his age and thirty-fifth of his reign. He was buried in Melrose Abbey.

Alexander is justly characterized by Fordun as "a king pious, just, and brave, as the shield of the church, the safeguard of the people, and the friend of the miserable." He was a liberal patron of the clergy, and a strenuous supporter of the independence of the Scottish church. He procured from Pope Honorius IV. in 1225 the important boon of a bull authorizing the clergy of his kingdom, on account of their distance from the apostolic seat, to hold provincial councils at their own discretion. Alexander left by his second wife an only son, who succeeded him in the throne.—(*Chron. de Mailros*; Matt. Paris' *Historia Major*; Fordun's *Scotichronicon*; Rymer's *Fœdera*; Hailes' *Annals of Scotland*; *Pictorial History of Scotland*.)—J. T.

ALEXANDER III. was born at Roxburgh, September 4, 1241, and was only eight years of age at the time of his accession to the throne. He was crowned at Scone only five days after his father's death, from a well-grounded apprehension that Henry III., king of England, would, under the pretence that the Scottish king was his liegeman, endeavour to prevent the coronation of the young prince without his permission. In his infancy Alexander had been betrothed to Margaret, eldest daughter of Henry; and as the English king had now resolved upon an expedition to the Holy Land, he was anxious to secure the peace of the northern borders during his absence, and therefore consented that the marriage between his daughter and the young king of Scotland should be solemnized at York, 20th December, 1251. On this occasion Alexander did homage to Henry for the lands which he held in England, and the English king meanly attempted to take advantage of the youth and inexperience of his guest by demanding homage also for the kingdom of Scotland. But the demand had no doubt been foreseen, and the young monarch replied, as he had probably been instructed, "that he had been invited to York to marry the princess of England, not to treat of matters of state, and that he could not take a step so important without the knowledge and approbation of his nobility."

During the minority of Alexander the country was disturbed by the various factions among the nobility, who contended for the ascendancy in the government. At his accession the powerful family of the Comyns were at the head of affairs; but the interests of the rival faction were espoused by Henry and his daughter, who complained of various grievances inflicted upon her by the Comyns. Encouraged by this support, the leaders of the opposite party surprised the castle of Edinburgh, and took possession of the persons of the king and queen, while Henry marched to the border with a numerous army, and (September, 1254) held an interview with Alexander and his queen, who were removed to Roxburgh for that purpose. The result was, that the government of Scotland was remodelled, the Comyns and their friends were excluded from office, and a regency was appointed, consisting of the leaders of the English faction, who were to carry on the administration till Alexander should reach the age of twenty-one. But in 1257 the Comyns, having obtained the assistance of the queen-dowager, availed themselves of a favourable juncture afforded by a quarrel between the regents and Pope Alexander IV., in which the former were excommunicated; and suddenly taking up arms, seized the king and queen at Kinross, carried them to Stirling, and totally dispersed the English faction. In the following year a compromise took place, by which a new regency was established, consisting of six members of the Comyn party and four of their opponents. This arrangement appears to have remained undisturbed till Alexander attained his majority, and took the reins of government into his own hands.

In 1263 a quarrel broke out between Alexander and Haco, king of Norway, which led the latter to attempt the invasion of Scotland. The Scottish kings had made repeated attempts to obtain possession of the western islands, whose inhabitants were of Norwegian extraction, and, from their predatory habits, had long been formidable neighbours to the western coasts of the kingdom. According to the accounts of the Norwegian chroniclers, the earl of Ross and other northern chiefs were instigated by Alexander to invade the Hebrides, with the view of

compelling the inhabitants of those isles to become feudatories of Scotland, and it is alleged that the invaders burned and plundered the villages and churches, and inflicted the most horrible cruelties upon the helpless inhabitants. Haco, king of Norway, resolved to take vengeance for these barbarities; and having collected a formidable armament, set sail from Herlover, 7th July, 1263. Some weeks after, he entered the frith of Clyde, made himself master of the islands of Arran and Bute, and laid waste with fire and sword the western coast of Scotland. Haco, however, was ultimately defeated by Alexander, with great slaughter, at Largs, October 2. His fleet was dispersed by a tremendous tempest of wind, rain, and hail; many of the vessels were driven ashore, and their crews drowned or taken prisoners by the Scots; and Haco, collecting the remains of his shattered armament, proceeded homewards, leaving the object of his expedition unaccomplished. (See HACO.) The victory of Largs freed Scotland for ever from the attacks of these northern marauders, who had so long been the terror and scourge of western Europe; and three years after, a treaty was concluded with the son and successor of Haco, by which the sovereignty of the Isle of Man and of the Hebrides, and all the other islands in the southern and western seas, with the exception of Orkney and Shetland, was ceded to the Scottish Crown for the sum of four thousand marks, and an annual quit-rent of one hundred marks.

Margaret, Alexander's queen, died February 26, 1275. She had borne him two sons (of whom the younger died in infancy, and the other without issue in 1284), and a daughter, Margaret, who in 1281 was married to Erick, king of Norway, and died in 1283, leaving an infant daughter, named after her mother, and commonly called by Scottish historians "The Maiden of Norway." On the 15th of April, 1285, Alexander married at Jedburgh Joleteta, daughter of the count de Dreux; but on the 16th of March in the following year, as the king was riding in a dark night along the northern shore of the frith of Forth, between Kinghorn and Burntisland, his horse stumbled over a rocky cliff, and he was killed on the spot. This calamitous event took place in the forty-fifth year of his age, and thirty-seventh of his reign. His infant granddaughter, the princess of Norway, was thus left the only survivor of his family. Alexander was one of the ablest and best of the Scottish kings. Under his sway the country attained a high degree of prosperity. His memory was long and affectionately cherished by his people, and his death, occurring as it did at a most critical juncture, was perhaps the greatest national calamity that has ever befallen the kingdom of Scotland.—(*Chron. de Mailros*; M. Paris; Fordun's *Scotichron.*; Wynton's *Cronykil of Scotland*; *Norwegian Account of Haco's Expedition*, by the Rev. James Johnston, 12mo, 1782; Hailes' *Annals*; Tytler's *History of Scotland*; *Pictorial History of Scotland*.)—J. T.

#### XII.—ALEXANDERS OF SYRIA.

ALEXANDER, surnamed ZABINAS or ZEBINAS (Syriac for "purchased slave"), was a person of mean origin, who, by the aid of Ptolemy Physcon, made himself king of Syria in 128 B.C. Cleopatra, however, widow of the prince whom he had de-throned, together with her son Grypus, maintained herself in possession of part of the realm, and the arrogance of Zabinas made his former patron turn against him. Grypus and Ptolemy Physcon soon crushed him, and being taken by pirates in an attempt to make his escape to Greece, he was delivered up to the legitimate heir, who put him to death, 122 B.C.—A. M.

ALEXANDER BALAS (Balas perhaps connected with the word *baal*, lord) was brought forward as the son of Antiochus Epiphanes, and raised to the throne of Syria in 150 B.C., chiefly by the efforts of Ptolemy Philometor, king of Egypt. The Syrians becoming discontented with his government, Demetrius, son of Demetrius Soter, the predecessor of Alexander Balas, made an attempt to vindicate his claim to his father's throne, and was successful against the usurper. Ptolemy, however, made his appearance with a fleet and army, and seemed about to turn the scale in favour of Balas, when he unexpectedly declared in favour of the rightful heir. Alexander Balas, after being defeated in a battle near Antioch, was slain by an Arab chief, to whom he had fled for protection, 146 B.C.—A. M.

#### XIII.—POPES, SAINTS, AND MARTYRS.

ALEXANDER I., pope and martyr. He succeeded Evaristus in the papacy in 108 or 109, which he held nearly ten years. He is honoured as a martyr in the canon of the mass, and tradition assigns to him the introduction of holy water, and the use of

unleavened bread in the eucharist. He is commemorated by the church of Rome on May 3.—J. B., O.

ALEXANDER II., a pope, was born at Milan, and bore the name of Anselmo Bagio, previous to his elevation to the tiara. In his youth he studied under Lanfranc at Bec in Normandy. After his return to his native country, he took an active part in the controversy then raging concerning the marriage of priests, which Anselmo, in conjunction with Hildebrand, vehemently condemned. He likewise took an active part in reducing the archbishopric of Milan, which had been to a certain extent independent, under the sway of the papacy. On the death of Nicola II. in 1061, Anselmo was elected pope, without the sanction of the emperor. Cadalous, bishop of Parma, was elected pope in opposition by a council held at Basle, and took the name of Honorius II. The anti-pope now marched to Rome, but being put to flight by the duke of Tuscany, he was deposed by the council of Mantua, and Alexander remained in undisputed possession of the papal chair. His first action was to make a circuit through Italy for the purpose of strengthening the papal authority, and ejecting married priests. He gave his blessing to the forces collected by William of Normandy for the conquest of England, hoping that the success of this enterprise would extend his own jurisdiction over the free church of the Anglo-Saxons. He exerted himself in a very creditable manner to stop a persecution then raging against the Jews in France. He died in 1073, and was succeeded by his old confederate, Hildebrand.—J. W. S.

ALEXANDER III., elected in 1159, died in 1181, after a long and glorious pontificate of nearly twenty-two years. At the conclave held after the death of Adrian IV., twenty-two cardinals gave their votes for Cardinal Roland, chancellor of the Roman church. But among the cardinals were a few thorough-going political partisans of the Emperor Frederic Barbarossa, who knew that Cardinal Roland would not submit quietly to encroachments which the imperial power was attempting in that age upon the rights and independence of the church. These accordingly, to the number of five, gave their votes for Cardinal Octavian. The pope took the title of Alexander III., the antipope that of Victor III. Each party wrote to the emperor and other European princes, and also to all bishops, communicating his election. The emperor affected to be unable to decide between the rival claimants, and summoned them both to attend and submit their claims to a council which he had summoned to meet at Pavia. But when Alexander refused to take a step which would be tantamount to an admission that the validity of his election was doubtful, and that the emperor was the supreme judge in a purely ecclesiastical matter, Frederic's envoys threw off the mask, and recognized Octavian as pope. Thus began a schism which lasted for eighteen years; for though Octavian died in 1164, the emperor immediately caused to be elected in his room Guido, bishop of Crema, who took the title of Pascal III.; and again, upon the death of Guido in 1168, his adherents elected John, abbot of Sturm, who took the name of Calixtus III. At first there were but two prelates in the whole of Germany who dared to recognize the rightful pope in opposition to the emperor's will. But, on the other hand, the kings of France and England acknowledged his claims without delay, and each of these monarchs offered him an asylum in his dominions. Alexander was compelled to embrace the offer. Driven from Italy by the adherents of Octavian, he passed into France and fixed his residence at Sens. It was here, in the year 1164, that St. Thomas a'Becket came to him, to lay before him his dispute with Henry II. of England.

Various turns of fortune marked the long contest between the pope and the emperor. In 1165 when, after the reduction and destruction of Milan by Frederic, the Lombard cities entered into a league against him, Alexander seized the opportunity to return to Rome, where the people received him with the utmost joy. In 1166 Frederic marched into Central Italy and occupied Rome, where he caused himself to be solemnly crowned in St. Peter's by the antipope, Pascal III. Alexander was compelled to take refuge, first at Gaeta (an example since followed by Pius IX.), and afterwards at Benevento. At this point events seemed all to have combined in favour of Frederic; but the tide now turned. A fearful pestilence, which was regarded as a divine judgment on the adherents of the antipope, swept over North Italy, and carried off many distinguished men of the imperial faction. The Lombard league rose anew against the German rule, and founded in 1168 a new city to serve as a bulwark

against the emperor's attacks, which, in gratitude for the pope's support, they named Alexandria. After various vicissitudes, the emperor received a signal defeat on the memorable field of Legnano (1176), and he then began seriously to seek for a reconciliation with the pope. The meeting took place at Venice. The emperor having renounced the schism, was formally absolved by the papal legates. Then he went in the doge's barge from the Lido to the church of St. Mark; the pope awaited him at the door of the church, surrounded by cardinals and bishops; Frederic took off his cloak and prostrated himself at his feet; the pope, affected to tears, raised him up, and gave him the kiss of peace.

In 1179 Alexander convoked at Rome the third general council of the Lateran. Three hundred and two bishops attended it, and twenty-seven canons were passed, chiefly relating to points of ecclesiastical discipline. At this council the pope made St. Lawrence, archbishop of Dublin, his legate in Ireland. The state of the Holy Land had never ceased to engage the attention of Alexander; and when, in 1180, he heard of the successes of Saladin, he wrote a circular letter to all Christian princes, exhorting them to send succour to king Baldwin; and to all bishops, enjoining them to preach the crusade. Alexander died at Citta di Castello on the 30th August, 1181, and was buried in the church of St. John Lateran. Contemporary writers assure us that he was a very learned pope, and deeply versed in holy scripture, the canons and decrees of councils, and the Roman law. The firmness and patience with which he endured the troubles and persecutions occasioned by the schism, were, as we have seen, rewarded by a complete triumph over his opponents, and his pontificate came to an end in peace.—(Fleury, *Hist. Eccl.*)—T. A.

ALEXANDER IV., pope,—before his election Cardinal Rainald, bishop of Ostia, of the family of the counts of Segni,—elected on Christmas-day, 1254. He is described as a pious man, much given to prayer and abstinence, but too ready to give heed to flatterers. He seems to have been of a weak character; and it may be charitably supposed that some of his public acts originated with his advisers rather than with himself. Such were his excommunication of Seval, archbishop of York, for declining to induct worthless Italians into the best benefices in his diocese, and his authorizing his legate to absolve Henry III. of England from the vow he had taken to march to the Holy Land for the deliverance of Jerusalem, on condition that he proceeded to Apulia and made war upon Manfred, regent of Sicily, who was making great progress there against the papal forces. In spite of all the efforts of the pope, Manfred (who was a natural son of the Emperor Frederic II.) succeeded in establishing himself in the kingdom of the Two Sicilies, and was crowned at Palermo in 1258. On the other hand, this pope made praiseworthy efforts to promote the spread of Christianity in the then pagan countries of Lithuania and Russia. In the contest which occurred in his pontificate between the university of Paris and the mendicant orders, then newly established, the pope warmly espoused the cause of the mendicant orders. It was on this occasion that St. Thomas Aquinas wrote his famous "Apology for the Mendicant Friars" against William de Saint Amour. For the last four years of his life the pope could not live at Rome, where the faction in alliance with Manfred had gained the upper hand. He died at Viterbo in May, 1261.—T. A.

ALEXANDER V. The original name of this pontiff was Peter Pilargo, and he was a native of the isle of Candia. His origin was so obscure that he professed to have no recollection of his parentage. All that is known of his early life is, that he was placed in a religious house by a monk, who noticed him when begging. He made great progress, and afterwards visited the universities of Padua, Paris, and Oxford, at all of which he had a great reputation as a theologian and a scholar. On his return to Italy, he was promoted from one bishopric to another, and finally was appointed archbishop of Milan, 1402. In 1404, Innocent VII. made him a cardinal, and in 1409 the council of Pisa, after having deposed the rival popes, Gregory XII. and Benedict XII., elected him to the papacy. He assumed the name of Alexander V., but did not long enjoy his dignity (he was seventy when elected), dying the next year. As pope he displayed no energy or decision of character, being governed entirely by Balthasar Cossa, who succeeded him under the title of John XXIII.—J. B., O.

ALEXANDER VI., Roderic Borgia, was the son of Godfrey Lenzolia and Jane Borgia, the sister of Pope Calixtus III. He was born 1431, and originally practised as an advocate; afterwards he adopted the profession of arms, which was much more

in accordance with his taste. Pope Calixtus sent for him to Rome, and gave him the archbishopric of Valencia; and in 1456 made him cardinal-deacon, and afterwards vice-chancellor of the church, a post of great dignity, with a large revenue attached. Hitherto his life, which had been most dissolute (he had five illegitimate children by Rosa Vanozza, whose mother had previously been his mistress), had escaped detection; and inflamed with the ambition of one day sitting on the throne of St. Peter, he outwardly conducted himself in the most decorous manner, so as to win golden opinions from all, both as a preacher and a man. Little is known of him during the pontificates of Pius II. and Paul II., but we find him sent as legate by Sixtus IV., to negotiate the Spanish and Portuguese affairs. He left the court of Lisbon without accomplishing his mission, having offended the king by his dissolute habits; and on his return to Rome Sixtus was dead, and Innocent VIII. was pope. He now contrived to bring his mistress to Rome, and lodged her close to St. Peter's, where, under pretence of friendship for her reputed husband, he constantly visited her. Innocent died 1492, and it was soon seen, on the assembling of the conclave, that their choice was limited to two candidates, Roderic Borgia, the nephew of Calixtus III., and Julian della Rovera, the nephew of Sixtus IV. Borgia, the more unscrupulous and the more wealthy of the two, by lavish distributions of money and promise of offices, carried the day, and was elected pope. He assumed the title of Alexander VI., and his first act was to discharge his obligations to the cardinals, the whole of whom, save five, were said to be in his pay, though eventually he managed to dispose of all to whom he was under obligations. It is impossible, in a narrative like this, to trace at any length the political transactions in which the pope took part; we can therefore only notice briefly the league he formed with Bajazet the Second, emperor of the Turks, against Charles VIII., king of France, who claimed the kingdom of Naples. Charles invaded Italy, 1494, with twenty thousand men, and carried everything before him, taking possession of Rome itself, and forcing Alexander to take refuge in the castle of St. Angelo. The pope, driven to extremities, made terms with Charles, and granted all his demands; among others, surrendering to him the person of Zizim, Bajazet's brother, who had been detained in a kind of honourable captivity at Rome, and whom Charles wished to have in his power as an instrument against Bajazet. It is commonly said that Alexander, mindful of his obligations to the sultan, had previously given him a slow poison. Certain it is, that Zizim died very shortly after he was surrendered to the king. Charles, in return, treated the pontiff with studied courtesy and respect, waited upon him, and kissed his feet. He thus continued his march to Naples, and easily obtained possession of his prize, Alphonso II., the king, fleeing at his approach. The alliance, however, between Charles and Alexander did not last long. It did not suit Alexander's views to have the French at Naples, and aided by his son, Cæsar Borgia, the duke of Valentino, he formed a league against Charles with the republic of Venice, Ludovico Sforza, duke of Milan, and other Italian princes, the Emperor Maximilian, and Ferdinand of Spain. The battle of Fornovo decided the Italian question in favour of the allies, and Charles found he had lost his conquests as easily as he had gained them. Freed now from the presence of the French, Alexander was at liberty to devote himself to his main designs, the enlargement of the patrimony of St. Peter, and the aggrandizement of his son Cæsar. Under his rule, everything was unblushingly put to sale. His chief agent and confidant was his son, the notorious Cæsar Borgia; and after the death of the duke of Gandia, his elder son (who is said, but without proof, to have been assassinated by order of Cæsar, who was jealous of his intimacy with their common sister, Lucretia), all Alexander's affections were centered in Cæsar and Lucretia. Unscrupulous and insatiable, he removed by poison or the dagger all who were in his way, and the papal treasury was enriched by the effects of many members of the sacred college, whose deaths were commonly suspected to have taken place by foul means. It is not surprising, therefore, to find Alexander, hitherto the chief opponent of the French, forming an alliance with Louis XII., who had succeeded Charles VIII., 1498, and who was anxious to obtain a divorce from his wife Joan, and to marry his predecessor's widow, Anne of Brittany, whom he had loved as duke of Orleans. The pope consented on condition of Louis exerting his interest to bring about the marriage of Cæsar with Charlotte, the daughter of the king of Naples. The lady, however, refused,

and Louis declared he would not force her. He accordingly negotiated a marriage for Cæsar with a daughter of the king of Navarre, and a papal bull was issued which set Cæsar free from his priestly vows, and allowed him to marry. Alexander and his son now entered heartily into the schemes of Louis against the duchy of Milan, and Cæsar rode in the French king's train to Milan, whence he set out for the subjugation of the Roman nobles, who were plundered, imprisoned, spoiled of their domains, or assassinated, as the interests of the wretched father and son seemed to require. Rome itself was the centre of the most iniquitous proceedings, neither life nor property were secure; and if elsewhere a voice like Savonarola's was raised against the prevailing sins, it was silenced at the stake. Meanwhile Alexander disregarded even common decency, and celebrated the marriage of Lucretia with her third husband, Alfonso, son of the Duke d'Este, with the most shameless licentiousness and abominable orgies. In vain the oppressed nobles appealed to Louis; the pope was always ready to gratify him, and cruelty and oppression prevailed at Rome till the death of Alexander. His end was worthy of his life. It is said that he and his son drunk of poisoned wine, which they had intended for Cardinal Corneto, whose estates they were anxious to inherit. Cæsar escaped with his life, but Alexander died August 2, 1503, aged sixty-two. The most profligate pontiff that ever sat on the apostolic throne,—we may almost say the most profligate man in history,—he has left behind him a name which is a "proverb of reproach." Anxious as he was to uphold the authority of the Roman see, nothing weakened it more than his wicked life; and Luther's preaching would not have met with the success it did, had it not been for the gross practical corruptions of morals at the very centre of the church. We may mention here, that Alexander conferred upon the court of Castile the whole of the territory discovered by Columbus.—J. B., O.

ALEXANDER VII. was born at Sienna in 1599, his original name being Fabio Chigi. Of his early life very little has been recorded. He held the office of vice-legate at Ferrara, represented the pope as nuncio at the congress of Münster at the conclusion of the thirty-years' war, was appointed cardinal-minister, and in 1655 succeeded Innocent X. in the papedom, having, by his diplomatic tactics, completely blinded a powerful faction who were opposed to his pretensions. Several events of importance occurred during his pontificate. In 1656 the ex-Queen Christina of Sweden having renounced protestantism, was received into the Romish church with great pomp. The same year the states of the church were ravaged by a pestilence, which is said to have carried off nearly 200,000 of the population. Alexander, about the same time, fulminated a bull against the Jansenists. The duke de Cregin, ambassador of Louis XIV., having been insulted by the papal guards, and due satisfaction not being made, the French king seized upon the town and district of Avignon, which had up to this time belonged to the popes, and prepared to invade Italy. At the same time the Sorbonne gravely questioned the infallibility of the pope in matters temporal and spiritual. Alexander was obliged to submit, and to give up some most important places to the duke of Parma, whereupon Louis restored to him the town of Avignon. Alexander levied very heavy taxes from his subjects, and expended the money thus amassed partly in adorning Rome, and partly in enriching his own family. He built an arsenal at Civita Vecchia, decorated the gate del Popolo, cleared the square of the Pantheon, and made many other improvements. He was a friend of art and literature, and was not without poetical talent. He died in 1667, and was succeeded by Clement IX.—J. W. S.

ALEXANDER VIII. (*Ottoboni*) was born at Venice in 1610, studied at Padua and Rome, became successively bishop of Brescia and Frascati, and in 1689, succeeded Innocent XI. as pope. He assisted the Venetians with money, troops, and ships, in their wars with Turkey. He combated the jesuits, and condemned several of their doctrines. He added the splendid collection of books and MSS. of the ex-Queen Christina of Sweden to the Vatican library, and died in 1691.—J. W. S.

ALEXANDER, SAINT, bishop of Jerusalem in the third century. He succeeded Narcissus A.D. 212; and after rendering most important services to the church, died a martyr in 251.

ALEXANDER, SAINT, bishop of Alexandria, in which see he succeeded Achilles, A.D. 313. He was famous as having begun the controversy with Arius. Of his seventy epistles on that controversy, only two are extant. He died in 326.

ALEXANDER, SAINT, bishop or patriarch of Constantinople from A.D. 317 to 340. He was present in 325 at the council of Nice, in which the Arian doctrines were condemned.

ALEXANDER I., patriarch of Antioch, noted as a peacemaker in the early church. He brought the followers of Eustathius to renounce their heresy. Died in 421.

ALEXANDER, SAINT, a native of Asia Minor, and the founder of a monastic order called *ἀνοίμητοι*, or "the sleepless," from the circumstance that the monks belonging to it were divided into six choirs, who were in their turn, occupied night and day in religious service. He died in 430.

ALEXANDER, a Phrygian physician, who fell a martyr to Christianity in 177.

ALEXANDER, A., author of a well-known treatise on chess, and celebrated as a player, born at Paris in 1770.

ALEXANDER, ÆGUS, a peripatetic philosopher of the first century, and one of the preceptors of Nero.

ALEXANDER ÆTOLUS, one of the Alexandrian poets and grammarians. He was born in Ætolia, but removed to Alexandria, in the library of which he obtained a situation from the king, Ptolemy Philadelphus. Only fragments of his numerous poems have come down to us.

ALEXANDER, ALEXANDER, the son of Mark Antony and Cleopatra; born 40 B.C. In company with his twin sister, he was taken to Rome, and educated by the wife of the triumvir along with her other children.

ALEXANDER, APHRODISIENSIS, the most famous expounder of the Aristotelian philosophy, was a native of Aphrodisias in Asia Minor. His chief endeavour was to develop clearly the doctrines of his great master. His writings are numerous. Several are still in manuscript. The most interesting of his published works is one which discusses "Fate," maintaining the doctrine of freewill against the Stoics. He flourished about the end of the second century after Christ.—J. D.

ALEXANDER OF ASHBY in Northamptonshire, a learned prior, who left some MS. quoted by Fuller in his Church History, lived about the beginning of the thirteenth century.

ALEXANDER, BENJAMIN, brother of John Alexander, translated into English Morgagni's work, "De sedibus et causis morborum." Died in 1768.

ALEXANDER BEN MOSES ETHUSAN, a German Jew who composed about the beginning of the eighteenth century a history of his people, under the title of "Beth-Israel."

ALEXANDER OF BERNAY, a French poet, in considerable repute as the author of several rhymed romances, was a Norman by birth, and lived at Paris about the middle of the twelfth century. His principal work, a continuation of the Alexandriad of Lambert the Short, is remarkable for its smooth verse and graphic descriptions. It is, perhaps, the oldest romance of the kind in the French language.—J. S., G.

ALEXANDER, surnamed CELESINUS, a Sicilian abbot and historian, wrote about A.D. 1160 a history of Roger II. of Sicily.

\* ALEXANDER, CHARLES, a French philologist, of late years distinguished by numerous valuable contributions to philological science, was born at Paris in 1797.

\* ALEXANDER, CHARLES, Duke of Anhalt-Bernburg, compelled to retire from his duchy during the troubles of 1848, and since restored; succeeded his father Alexius in 1834.

ALEXANDER, CORNELIUS, a learned Greek, who lived in the century immediately before the Christian era. He wrote numerous works, chiefly on history and geography, and by his great learning won the surname of Polyhistor.

ALEXANDER OF HALÈS or ALÈS,—hence called ALEXANDER ALESIUS, from the name of his birthplace, near Gloucester. Although early raised to an archdeaconry, he resolved to study at Paris, where he quickly became one of the most famous teachers at the most brilliant epoch of the scholastic philosophy. One of his pupils was St. Bonaventura; but it is not true that he had the honour of teaching St. Thomas and Duns Scotus. He died in Paris in 1245. His great work is a "Summa Theologiæ." Aquinas reproduced many of his dicta. He was surnamed in the middle ages, "Infallible Doctor" and "Fountain of Light."—J. P. N.

ALEXANDER, INSULANUS, a monkish chronicler of Westphalia, flourished about the year 1210. He continued the "Breviarium Rerum Memorabilium" of another Westphalian monk, Isibord, and to the many incredible cures and miracles of the latter added many more equally incredible.

ALEXANDER, JAMES, a Benedictine monk, author of a celebrated French work, "Traité general des horologes," was born at Orleans in 1653, and entered a monastery of that city in his twentieth year. He addicted himself throughout his monastic life, which extended over forty years, to the study of the exact sciences; and besides the work just mentioned (not published till the year of his death, 1734), produced at intervals fourteen elaborate scientific treatises, all of which, with the exception of that on "Tides," remain in MS. He was also the inventor of a clock, ingeniously contrived to indicate at once mean time and solar time.—J. S., G.

ALEXANDER, JOHN, an English writer, author of some satirical pieces published in "The Library." Died in 1765.

ALEXANDER, JOHN, a Swiss mathematician of the seventeenth century, wrote a treatise on algebra, which has been translated into English.

ALEXANDER, LYCHNUS, a Greek poet and rhetorician of the first century B.C. He has left some fragments of astronomical and geographical forms.

ALEXANDER, The Right Rev. MICHAEL SOLOMON, was born in the year 1799, in the grand duchy of Posen, of Jewish parents, and began life as a Jewish rabbi. Becoming, however, a convert to Christianity, he was baptized in 1826, and soon afterwards was ordained to a curacy in Ireland. He then became a missionary to his own people, in connection with the "Society for promoting Christianity among the Jews," and in 1832 was appointed professor of Hebrew and rabbinical literature in King's College, London. In 1841, overtures were made by the king of Prussia to the English government for the establishment of a protestant bishopric in Jerusalem, under the joint auspices of the sovereigns of England and Prussia; and an arrangement having been entered into for the accomplishment of this object, Dr. Alexander was consecrated as the first bishop of the united church of England and Ireland in Jerusalem, on Sunday, November 7. The establishment of this bishopric gave rise to much dispute at the time, and is still condemned by many high ecclesiastical authorities. But none could do otherwise than regret the sudden death of the amiable bishop, which took place while he was on a journey to Cairo, November 23, 1845.—R. S. O.

ALEXANDER, MYNDIUS, a Greek writer on natural history, about two centuries B.C. A few fragments of his works are extant.

ALEXANDER, NICHOLAS, a Benedictine monk, favourably spoken of as a writer on medicine and surgery, was born at Paris in 1654; died in 1728.

ALEXANDER, NOEL, a French ecclesiastic of some rank, and author of an ecclesiastical history, was born at Rouen in 1637. He was a zealous Jansenist, and by his writings brought himself into trouble with Pope Innocent XI., who proscribed him in 1684. He continued his literary labours till his death in 1724. His works comprise a history of the Old, and a commentary on the New Testament.—J. S., G.

ALEXANDER, NUMENIUS, a Greek rhetorician of the 2nd century of the Christian era. He wrote a work—"De Figuris Sententiarum et Elocutionis."

ALEXANDER THE PAPHLAGONIAN, a celebrated impostor in the reign of Marcus Aurelius. He possessed a majestic figure, and great intellectual power, and was thus enabled to perpetrate a successful imposture, and maintain the credit of an oracle.

ALEXANDER, PELOPLATON, a Greek rhetorician, a native of Seleucia, celebrated for his personal endowments and oratorical talent. He was secretary to the Emperor Antoninus Pius.

ALEXANDER, SULPITIUS, a Gallic historian, fragments of whose work on the early history of France are preserved in that of Gregory of Tours, lived in the fourth century.

ALEXANDER, TIBERIUS, procurator of Judea, A.D. 46, and subsequently prætor of Egypt under Nero. He commanded a battalion under Titus at the siege of Jerusalem.

ALEXANDER OF TRALLES, a famous Greek physician, who practised at Rome in the sixth century. Nothing is known of his life, except that he visited France and Spain. He appears from his works to have been a Christian, and to have shared in most of the superstitions which disfigured the Christianity of his time. In his principal work, *Βιβλία ἰατρικὰ δωκαίδεσσα* (twelve books on medicine), an elaborate treatise on all the diseases of the human body, he mixes up with the results of much scientific investigation, not a little of the credulity with respect to magical appliances which characterized his age. But

this is only a blemish on a work of science much in advance of its era. The author composed it, he tells us, when he had retired from practice; and its minute expositions of almost every form of disease fully entitle him to credit when he claims for it the authority of a lengthy experience. It has been translated into Latin, and several times reprinted. Alexander of Tralles was one of the first writers on the practice of medicine, after Galen, to question the absolute authority of that celebrated physician. He is honourably distinguished in this respect from most of his contemporaries, who appear to have yielded a blind adherence to every dictum of Galen. Several other treatises are attributed to Alexander, but it is only certain that he published one other work, a short treatise on intestinal worms.—J. S., G.

ALEXANDER, SIR WILLIAM, first earl of Stirling, a Scottish poet and statesman, was born in 1580. A remote ancestor, Alexander Macdonald, obtained from the noble house of Argyll the small estate of Menstrie, near Stirling, and his descendants assumed the name of Alexander from his Christian name. Sir William Alexander is believed to have been educated at the university of Glasgow. He accompanied the earl of Argyll in foreign travels; and his poetical merits recommended him to the favour of the Scottish court. He was especially beloved by the short-lived Prince Henry, and received many substantial marks of royal favour from King James and his successor. In 1621 he obtained a grant of the territory of Nova Scotia; he was authorized to divide the lands into one hundred portions, and to dispose of these along with the title of baronet, for the stipulated price of £200 each. He acquired another source of revenue, by having granted to him the privilege of issuing base copper coins, denominated turners. He was appointed to a succession of lucrative and honourable offices. In 1625 he became master of requests for Scotland; in 1626, secretary of state; in 1627, keeper of the signet; in 1628, a commissioner of exchequer; and, in 1631, one of the extraordinary judges of the Court of Session. Having been raised to the peerage, he was finally created earl of Stirling, viscount of Canada, and Lord Alexander of Tullibody. In 1635 he obtained from the council of New England an extensive grant of land, including what was then called Stirling, and afterwards Long Island; and he is to be considered as the founder of that settlement, which produced the state of New York. He died at London, in February, 1640, and his body was interred in the parish church of Stirling. His earliest publication bears the title of "Aurora," containing the first fancies of the author's youth, William Alexander of Menstrie; London, 1604, 4to. His dramatic works, in a collective form, are described as "The Monarchicke Tragedies, Cressus, Darius, the Alexandrean, Iulius Cæsar, newly enlarged," London, 1607, 4to. Several of his other poems were separately published; and a few years before his death appeared "Recreations with the Muses, by William Earle of Sterline," London, 1637, folio. This collection neither includes the "Aurora" nor the "Elegie on Prince Henric," printed in 1612, and again in 1613. There is sufficient reason for suspecting that the earl of Stirling was the principal, if not the sole author of the version of the Psalms published under the title of "The Psalms of King David, translated by King James," Oxford, 1631, 12mo. Besides constructing an elegant house on his estate at Menstrie, Lord Stirling reared a magnificent mansion on the castle hill of Stirling, now known as Argyll Lodging, having subsequently passed into the hands of the noble family of Argyll. The earldom of Stirling has been dormant since the death of the fifth earl in 1739; and the question of succession, a few years ago occupied the attention both of the civil and criminal courts in Scotland.—C. R.

ALEXANDER, WILLIAM, a celebrated physician of the last century, was educated at Edinburgh, and, during the later years of his life, practised in London; died in 1783. He has left the following works:—"Experimental Essays on the External Application of Antiseptics in Putrid Diseases;" 1768. "Tentamen Medicum de Cantharidum Historia et Usu;" 1769. "An Experimental Inquiry concerning the Causes which have been said to produce Putrid Fevers;" 1771. "Directions for the Use of the Harrowgate Waters;" 1773. "The History of Women from the Earliest Antiquity to the Present time;" 1779.—J. S., G.

ALEXANDER, WILLIAM, an English engraver, who accompanied Lord Macartney to China in 1792, and executed the designs for a work descriptive of the embassy. He was afterwards appointed one of the curators of the British Museum.

\* ALEXANDER, WILLIAM LINDSAY, D.D., was born at Leith on the 24th of August, 1808. He attended the grammar school of his native town for two years, and from that was removed to an academy in East Linton, which was under the direction of the Rev. Dr. Jamieson. He then passed three sessions at the Edinburgh university, and two other sessions were spent at St. Andrews, where he attended the lectures of Dr. Chalmers. After leaving college, he was invited to undertake the office of classical tutor in the Theological Academy at Blackburn in Lancashire, where he remained for four years. He afterwards preached for some time in Newington chapel, Liverpool. Thence he removed to Edinburgh, to preside over the church of which he still remains the pastor; and since Dr. Wardlaw's death, he has acted as one of the professors to the Independent Theological Academy in Scotland. He has been repeatedly invited to other charges in Glasgow and London, and has thrice had in his offer a professorship in New College, London, and recently the principalship of that institution.

The works of Dr. Alexander are very numerous, if we include his pamphlets and published sermons. His larger works are the following:—1. "The Connection and Harmony of the Old and New Testaments," 1841; 2nd edition, 1853. 2. "Anglo-Catholicism not Apostolical," 1843. 3. "Memoirs of the Rev. John Watson," 1845. 4. "Switzerland and the Swiss Churches, being Notes of a Short Tour, and Notes of the Principal Religious Bodies in that Country," 1846. 5. "Christ and Christianity; a Vindication of the Divine Authority of the Christian Religion, grounded on the Historical Verity of the Life of Christ," 1854. 6. "Memoirs of the Life and Writings of Ralph Wardlaw, D.D.," 1856. Besides these works, Dr. Alexander has edited two treatises on "The Divinity of Christ," with notes and dissertations. He has also edited a Latin commentary of Andrew Melville's "On the Romans" for the Wodrow Society, furnishing the same volume with a life of Ferme. He has translated from the German some valuable theological works. He has also been a frequent contributor to several of the quarterly reviews; and has written for the Tract Society two of the monthly volumes, "Iona," and "The Ancient British Church." He edited for some time the Scottish Congregational Magazine, has written for the Encyclopædia Britannica, and contributed to Kitto's Cyclopædia of Biblical Literature the admirable articles on Paul and his various epistles, which exhibit a rare combination of sterling British thought and feeling, with a vast knowledge of the Greek and Latin Fathers, and of the stores of German criticism.—J. D.

ALEXANDER OF VILLEDIEU, a famous grammarian of the thirteenth century, was a native of Normandy, and exercised his profession of schoolmaster in Paris, where he published in 1209 the work by which he is remembered, "Doctrinale Puerorum." Like many other school-books of that and preceding centuries, the Doctrinale of Alexander was written in verse, and for convenience in the treatment of his subjects, as well as out of respect to the customs of poetry, duly divided into books. It had a great success at the time in the scholastic institutions of France, and also in those of Italy and Germany.—J. S., G.

ALEXANDRA, the daughter of Hyrcanus, wife of Alexander, son of Aristobulus II., and mother of Mariamne, wife of Herod the Great, died about 28 B.C. Resenting Herod's depriving her father first of his kingdom, and afterwards of the office of high priest, she did all in her power to bring him into disgrace with Antony, and even conspired against both his authority and his life. Herod having some time after appointed her son Aristobulus to the sacred office, a reconciliation seemed to have been effected between them; but it was only in appearance, for Herod still dreaded her intrigues, and commanded her to be kept prisoner in her own palace, and to desist from all interference in public affairs. Exasperated by this conduct, she appealed to Cleopatra, who recommended her to come immediately into Egypt with her son. She attempted to make her escape along with Aristobulus, but her plan was betrayed to Herod, who arrested the fugitives in the very act of flight. Fearing the anger of Cleopatra, however, he did not dare openly to punish them, but treacherously put the young man to death while they were both making merry during the celebration of the Feast of Tabernacles. Dissembling her fury at this new outrage, Alexandra pretended to believe that the death of her son was accidental; but she wrote secretly to Cleopatra, and persuaded her to stir up Antony to call Herod to account for this crime. But on the return of Herod loaded with honours, her wrath knew no bounds:

and when subsequently Herod, under false pretences, put her father Hyrcanus and her daughter Mariamne to death, she endeavoured to seize upon the fortified places, and to rouse the people to revolt. But having failed in this attempt, she was arrested by Herod's order, and cruelly put to death.—S.

ALEXANDRA, the wife of Alexander Janneus, reigned over Judea nine years after the death of her husband, but was herself in complete subjection to the Pharisees. Josephus mentions her as a woman of great courage and sagacity. She died 70 B.C., at the age of seventy-three.

ALEXANDROS, an Athenian painter, of whom four monochromatic pictures on marble have been found at Resina, near Herculaneum, 1746. He is supposed to have flourished 180 B.C.

ALEXIS, a Greek comic poet. He died at the age of 106, about the year 288 B.C. He was the uncle and teacher of Menander, and is said to have written 245 plays.

ALEXIS, patriarch of Constantinople. He was nominated to the dignity by the Emperor Basil in 1025, and consecrated on the same day on which that emperor died. Died 1043.

ALEXIS, his real name being HIERONYMO ROSELLO, was a Piedmontese, and the reputed author of the "Book of Secrets," which was printed at Basil in 1536. This book, a medical treatise, the result, according to its boastful author, of long experience and many years of travel, was given to the world in pure beneficence.

ALEXIS, GUILLAUME, surnamed THE GOOD MONK, a learned Benedictine, who flourished about the end of the fifteenth century. He died in 1486, leaving numerous works.

ALEXIS, MIKHAYLOVICH, son of the Czar Michael Theodorovich, and father of Peter the Great, was born in 1629, and came to the throne of Russia in 1645. During the earlier years of his reign, he cared little for the affairs of state, which he left almost entirely in the hands of a brother-in-law. A revolt of the inhabitants of Moscow against the measures of the favourite, roused him to his duty. With the assistance of councillors chosen from among the nobles and people, he revised and improved the whole code of laws, and made regulations as to commerce, which greatly benefited Russia, and won for him the surname of THE WISE. His reign was occupied with wars against Poland and Charles Gustav of Sweden; the former undertaken to assert the liberties of the Cossacks, or rather, to transfer their allegiance to himself; the latter, in fulfilment of the terms of a temporary truce with Poland. In the treaty then made it was agreed that, on the death of John Cassimir, Alexis should succeed to the throne of Poland; and though the Poles refused to sanction this arrangement, and in subsequent campaigns fought nobly in defence of their liberties, yet such was the prowess of Alexis, that, during his reign, the foundation was laid for the future subjugation of that unhappy country. His wise policy raised Russia to a position of consequence among foreign powers; and he was courageous enough to stand alone as the only European prince who refused to acknowledge Oliver Cromwell and the English Commonwealth. He was twice married; the second time to a poor girl, who had been charitably adopted by one of his nobles. She became the mother of Peter the Great. Alexis died in 1676.—J. B.

ALEXIS, PETROVICH, son of Peter the Great of Russia, was born at Moscow in 1690. His early training little disposed him to sympathize with his father's policy. Indeed, his mother Eudocia, who had too good reason to regard her husband with jealousy, had taught him to view with positive aversion the changes that were being introduced into Russian manners. His tutors did not counteract her influence, but rather encouraged his studious habits and the tastes he had acquired, which were so much opposed to those of his father. The czar soon regarded him with contempt, and spoke of him as one unworthy to succeed to the throne. His mother's divorce and his father's marriage to Catherine increased the causes of estrangement. Several letters passed between them, in which Peter proposed that Alexis should resign all claim to the crown, and the latter professed his willingness to comply and enter on a religious life. But while the czar was absent on a campaign against the Swedes, Alexis, consulting his own safety, fled from Russia, and placed himself under the protection of the Austrian government. He was for some time concealed in Austria, and thence removed to Naples. His flight enraged his father, who immediately sent two of his nobles to induce him to come back. They were the bearers of a letter, in which it was promised that an immediate return would secure

pardon. Trusting the pledge, he came back to Moscow; but no sooner had he thus placed himself in his father's power, than he was arraigned on a charge of rebellion. He professed submission, and the czar declared his willingness to grant a pardon, provided he would then formally renounce all claim to the crown; and an oath of allegiance to Peter, the son of Catherine, was taken from the assembled nobles. A condition was affixed to the pardon, that Alexis should reveal all the circumstances of his flight, and the names of those who had in any way given him countenance or assistance. After extorting every possible confession, and visiting with the severest punishment all who were implicated in his flight, or who had shown sympathy with him in his love for the ancient customs, the inexorable czar declared that Alexis had forfeited his claim to pardon by concealing some particulars. A sentence of death was pronounced; but the unfortunate prince died in prison before its execution.—J. B.

ALEXIS OF SICYON, a Greek sculptor, pupil of Polychitus, flourished about 420 years B.C. According to Pausanias he was the father of Cantharos, also a distinguished sculptor.

ALEXIS DEL ARCO, a Spanish painter, also known as the SORDILLO of Pereda, because he studied under Pereda. He distinguished himself as a good colourist, but his drawing never was very good. His studio was under the direction of his wife, who used to arrange all the contracts, and often, out of avarice, sold pictures executed by the pupils as being the work of her husband; nevertheless, he died very poor in 1700, seventy-five years of age.—R. M.

ALEXIUS, the name of five emperors of Constantinople:—

ALEXIUS I., COMNENUS, son of John Comnenus, deposed Nicephorus Botaniates, and was proclaimed emperor in the year 1081. He succeeded to the purple at a most critical period. The Turks, the hereditary foes of the empire, were rapidly establishing themselves in the Asian provinces, and the formidable Robert Guiscard had landed in Epirus from Italy. Alexius, found himself obliged to make friends of the republic of Venice and the court of Germany, and to supply his treasury by appropriating the wealth of the church. A considerable part of his sacrilegious gains found its way to Henry IV. of Germany, who in return relieved Alexius of his greatest fears, by withdrawing Robert Guiscard from his conquests in Greece to the assistance of the popedom, then threatened by the forces of the German emperor. To rid himself of his other terror, the Turks, was more difficult. They threatened the capital with their fleet, and Alexius had to seek assistance at the hands of the crusaders then being assembled from all parts of Europe. His capital was saved, but the crusaders took offence at some instances of double-dealing on the part of the emperor, a characteristic of his conduct, and, under various leaders, troubled a part of his reign with continual broils. After their departure for the Holy Land, he resumed the defence of his dominions, almost constantly menaced by external or internal foes, and had hardly succeeded in establishing peace, when he died in 1118, at the age of 70. His character has been very variously estimated; absurdly lauded by his daughter Anna, and unfairly depreciated by the Latin historians, we are left considerably in doubt both as to his talents and his virtues.

ALEXIUS II., COMNENUS, was born in the year 1167. He succeeded to the empire in his thirteenth year, at first under the regency of his mother Mary, and afterwards of his cousin, Alexius the Sebastocrator, who, after the marriage of the emperor in 1180 to Agnes, daughter of Louis le Jeune of France, had the empress-mother strangled, and in 1183 the emperor himself. He appears to have been at once imbecile and vicious.

ALEXIUS III., ANGELUS, was the grandson of Theodora Comnena, daughter of Alexius I., and wrested the empire from his brother Isaac, who had a little before dethroned the tyrant Andronicus in 1195. An army of crusaders, whom he had irritated by his treachery, took Constantinople in 1204, and reinstated Isaac. Alexius was allowed to retire into a monastery.

ALEXIUS IV., son of Isaac Angelus, was strangled by Murzuffle, his great chamberlain, in 1204, after a very short reign.

ALEXIUS V., MURZUFLE, took possession of the throne after the murder of Alexius IV., but his reign hardly extended to the length of his predecessor's. At the end of three months he fell into the hands of the French, and was put to death.—J. S., G.

ALEXIUS, called THE FALSE, an impostor of the reign of Isaac Angelus, who passed himself off for the son of Alexius II.

Collecting a considerable army, he plundered several provinces of the empire. He was assassinated in 1191.

ALEXIUS or ALEXIS DRAGO COMNENUS, a descendant of the imperial family of Comnenus, born at Pera in Constantinople about 1553. He was a general in the French service, and died at Paris in 1619.

ALEXIUS, COMNENUS, four governors of Trebizond bore this name: they are by some historians styled emperors.

ALEXIUS I., assumed the title of Autocrat of Anatolia in 1204, having made himself master of an extensive tract of country along the shores of the Euxine, in opposition to the emperor of Constantinople. His dominions were the theatre of continual war, and he had to resist invasions of the Turks as well as the forces of the empire. Died in 1222.

ALEXIUS II., was born in 1282. He succeeded his father John II. in 1297, and died in 1330.

ALEXIUS III., son of Basilius II., succeeded Michael I. in 1349, and allied himself by marriage to the court of Constantinople. He carried on long wars with the Turks and the Genoese. Died about the year 1390.

ALEXIUS IV., assassinated by his son, John the Handsome, the murderer also of his mother—succeeded Manuel III. in 1412. He died between 1445 and 1449.—J. S., G.

ALEYN, CHARLES, an English poet, who lived during the reign of Charles I. His works are two poems on the battles of Poitiers and Crécy, published in 1631, and a historical piece on Henry VII., and the victory of Bosworth Field, published in 1638. He is said to have written also some commendatory verses prefixed to the earlier editions of Beaumont and Fletcher. He died in 1640.—F.

ALFANI, the name of two Italian painters of eminence, DOMENICO of Paris, who died in 1540, and his son, ORAZIO, who died in 1583. Some paintings by the former, preserved in the gallery of Florence, bear a striking resemblance to the earlier pictures of Raphael.—F.

ALFARABIUS or ALFARABI, an Arabian philosopher, born at Farab in Transoxiana, about the end of the ninth century. From his native place he derived this title, his real name being Mohammed. He was an excellent scholar, and thoroughly acquainted with the Greek and Arabian systems of philosophy. His works are numerous. He died A.D. 950.—F.

ALFARAZDAK, an Arabian poet of the eighth century, whose writings are highly esteemed by his countrymen.

ALFARO Y GOMEZ, JUAN D', a Spanish painter, born at Cordova in 1640. He was a pupil of Antonio del Castillo, whom he left to enter the school of Velasquez, at Madrid. His pride alienated all his friends and colleagues. He added literary learning to artistical skill, and wrote several works in connection with art. Died about 1680.—R. M.

ALFEN, JOHANNES EUSEBIUS, a Danish miniature and enamel painter of the 18th century. His portraits were highly valued. He worked for some time at Vienna, and died in 1770.

ALFENUS VARUS, PUBLIUS, a Roman lawyer, a native of Cremona. By his genius and ability he raised himself from the humble occupation of a cobbler to the dignity of consul. He flourished about A.U.C. 754.

ALFERGANUS or ALFRAGANUS, otherwise called AHMED or MOHAMMED EBN CORTHAIS AL FARGANI, an Arabian mathematician of the ninth century, flourished about 883. He wrote *Elements of Astronomy* in Arabic, which Golius has translated into Latin, and published at Amsterdam in 1669. He published also astronomical tables, which were translated into Hebrew, and published at Venice.—J. E.

ALFIERI, OGERIO, a historian of Asti, who lived in the latter half of the thirteenth century. He has written a chronicle of his native place in Latin, entitled "*Chronicon Astense extractum e chronicis Astensibus*." This extends as far as 1294, and has been continued to 1325 by Guglielmo Ventura.

ALFIERI, COUNT BENEDETTO-INNOCENTE, architect, born at Rome in 1700, uncle of the more celebrated poet Vittorio Alfieri. He exercised his art chiefly at Turin, where he enjoyed the patronage of Charles Emmanuel III. Several edifices in that city are after designs of Benedetto Alfieri's, more particularly the theatre of the Royal Opera, which is his principal work. The façade of St. Peter's at Geneva is also due to him. Died in 1767.—A. M.

ALFIERI, VITTORIO, a distinguished Italian poet, was born in Asti, a city of Piedmont, upon the 17th of January, 1749.

His father, Antonio Alfieri, was of a noble family and affluent circumstances. In his fifty-fifth year he married Monica Mailard, a lady of Turin, and widow of the marquis of Cucherano, of which union Vittorio was the second child. When he was three years old, his father died, and his mother again married. From that period till his ninth year he was educated at home by a priest, Don Invaldi, who taught him but little; and in 1758 his paternal uncle and guardian, Pellegrino Alfieri, placed him in the academy of Turin. Here he continued till near the end of the year 1762, passing successively through the classes of humanity, rhetoric, and philosophy, without being much the better of any of them. The natural bent of his genius first displayed itself while there (1759), in consequence of the works of Ariosto having accidentally fallen into his hands. After this he was sent to the university, where, though he studied philosophy, physics, and ethics, he does not appear to have made any proficiency in them; but, while hating the sciences, his taste for poetry showed itself in the composition of his first sonnet, on the occasion of his visiting his uncle in 1762 at Cuneo, of which place he was governor. The latter was paying his addresses to a lady, who also found favour in the sight of the lad, who addressed to her the sonnet, which, he assures us, though extremely bad, was pronounced by her to be the best she ever heard. The uncle, however, being a matter-of-fact soldier, and caring not a whit for poetry, badgered him so unmercifully, that he did not venture on another rhyme till he was past his 25th year. At the end of the year 1762, he studied the civil and canon law, but with as little success as had attended his efforts in the other sciences. Indeed, his weak health contributed not a little to all his failures, and he was shortly after attacked with such severe illness that his life was endangered. His French master gave him some novels and romances, which he devoured with avidity. He also made a little proficiency in music. His uncle died when Alfieri was in his fourteenth year, upon reaching which age he became, by the laws of Piedmont, his own master. His great passion was riding, which, heretofore, had been interdicted. This he now freely indulged in, and became an expert horseman. "To this delightful and noble exercise," he says, "I was indebted for health, growth, and a robust appearance, and I entered, as it were, into a new existence." He now abandoned the study of the law, and spent the following years in idleness and horse-riding, having procured a commission in the militia of his native city; and in 1766, having obtained the king's permission, he set out on his first travels, in company with two others, and attended by a faithful servant, who had accompanied his uncle over a great part of Europe. He first went to Milan, and thence, by Piacenza, Parma, Modena, and Bologna, to Florence. Here he began to learn English, instead, as he afterwards reproaches himself, of learning the pure Italian, for as yet he could only speak what he calls a horrible patois. Lucca, Pisa, and Leghorn were next visited, and thence, by way of Sienna, he went to Rome, and afterwards to Naples, where he was introduced at court, returning again to Rome, where he was presented to Clement XIII. He next visited Venice, and went thence to France by way of Genoa, landing at Marseilles, and going by Lyons to Paris, of which capital he speaks in no very favourable terms. He landed at Dover in January, 1768, and proceeded to London. The whole aspect of England pleased him extremely, and the impressions then made were confirmed by subsequent visits, that "that happy and free country differs from the rest of Europe, in the diffusion of public happiness resulting from being better governed." In the summer he went to Holland, which would have pleased him even more had he not first seen England. Upon his return home he read some French literature, especially Voltaire and Montesquieu, and became imbued with an admiration for the heroes of Greece, from reading a translation of Plutarch. In May, 1769, Alfieri set out on his second tour, and went to Innspruck, and thence to Vienna, where he passed the summer. He was a constant guest at the Sardinian minister's, the Count di Conole, where all the poets and literati of the city were accustomed to meet in the evening; and Alfieri mentions that he declined being introduced to Metastasio, because he had seen the poet, in the gardens at Schönbrunn, make the customary obeisance to Maria Teresa, "*con una faccia sì servilmente lieta e adulatoria*." He subsequently visited Prague, Dresden, and Berlin, where he was presented to Frederick. "The king," he says, "addressed four formal words to me. I observed him with profound attention, fixing my eyes respectfully on his, and

I thanked heaven that I was not born his slave." Thence he went to Denmark, and passed the winter in Copenhagen, leaving it for Sweden in the following spring, and was delighted with "the savage majestic nature of its vast woods, lakes, and precipices." Having visited the famous university of Upsala, he went to Finland, and thence to St. Petersburg. He seems to have viewed the Russians with great disgust, and did not even seek to be introduced to the Empress Catherine, whom he calls "a philosophical Clytemnestra." He next went to Königsburg and Dantzic, and all he saw made him "understand better and long more for happy England," whither he again turned his steps, and arrived there in the end of 1770. After wasting his time in a discreditable intrigue with a married lady of rank, and being wounded in a duel by her husband, he went to Holland, and thence through France, Spain, and Portugal, and returned to Turin in May, 1772, after an absence of three years. He now took a magnificent house in the handsomest quarter of the city, furnished it splendidly, and got his old companions of the academy about him. They were, by his own account, a motley set, "rich and poor, good and bad, wits and fools, learned and unlearned." These formed a club, the president of which was elected weekly, and at which they read their bizarre compositions, generally in French, which, it would seem, was the very worst possible. In addition to these triflings, he was even more culpably occupied with an attachment which lasted two years, though perhaps from it we are to date his first successful effort as a poet. During a serious indisposition of the lady, Alfieri sat by her bed from morning to night without speaking, lest the sound of his voice should disturb her. "Upon one of these occasions," he says, "to amuse the tedium, I took up a sheet of paper that chanced to lie beside me, and commenced, without any plan, to sketch out a scene of something, I knew not what to call it, whether tragedy or comedy, whether in one act, or five, or ten, but which was to be in the form of dialogue, and in verse." This was the first scene of the "Cleopatra." He soon freed himself from his unworthy passion, and applied himself diligently to the study of Italian, in which he was very imperfect; and so enamoured was he with his new occupation, and inflamed with the captivating and exalting love for fame, that he laboured assiduously, and at length produced the third, and almost totally different, composition of "the Cleopatra," in five acts, which was performed with entire success in Turin in 1775.

He was now an author, and henceforth literature was to be his vocation. He applied with diligence to accomplish himself in Latin. "A secret voice," he says, "whispered in the depths of my heart, amid all the applause of my friends,—'You must retrace your steps, begin with your childhood again, study your grammar, and in succession everything that is requisite to enable you to write correctly and artistically.'" The veil had fallen from his eyes—he saw his own deficiencies. He says, "I made a vow to myself that I would spare neither fatigue nor inconvenience till I had placed myself in the position of knowing my own language as well as any man in Italy." The result was, that from an idler he became a most studious man. In three months after Cleopatra was acted, he had composed two tragedies, "Filippo" and "Polinice," in French prose, and subsequently translated them into Italian verse. After this came "Antigone," and, at various intervals, "Agamemnone," "Virginia," "Oreste," "La Congiura dei Pazzi," "Don Garcia," "Rosmunda," "Maria Stuarda," "Timoleone," "Ottavia," "Merope," "Saulle," the last of which was written in 1782; that is, fourteen tragedies in seven years, besides several other compositions both in prose and verse. Alfieri made two visits for literary purposes to Tuscany, and upon the second of these, in 1777, it was that he first met at Florence the beautiful Louisa Stolberg, better known as the countess of Albany, the wife of Charles Edward, who had assumed that title. His description of her is that of a singularly lovely woman. "Un dolce fuoco negli occhi nerissimi accoppiatosi, (che raro addiviene,) con candidissima pelle e biondi capelli, davano alla di lei bellezza un risalto, da cui difficile era di non rimanere colpito e conquiso." She was then only twenty-five years of age, fond of the fine arts and of literature, and married most unhappily to one more than double her years, and of an unamiable disposition and sottish habits. From his cruelty she sought protection, first in a convent, and afterwards, in 1780, at the house of her brother-in-law, the cardinal of York, in Rome. Here Alfieri again met her. After this he visited England for the third time. Meantime the countess went to

Switzerland, whither Alfieri followed her, having first disposed of all his property in Piedmont. He now resumed his studies, and wrote "Agide," "Sofonisba," "Mirra," and "Bruto."

Notwithstanding his dislike to France, Alfieri next went to live at Paris, for the purpose of bringing out an edition of all his tragedies by Didot. At the same time he brought out two prose works, "Del principe e delle lettere," and "Della Tirannide," at Kehl, in Germany, at the press of Beaumarchais. While here, the intelligence of the death of the count of Albany in Rome reached him and the countess in February, 1788. From this period to the death of Alfieri they never separated, but the same tender intimacy was continued; whether it had now the sanction of marriage is a disputed fact, which will, probably, never be settled. Alfieri remained in Paris over three years, occupied entirely with literature, and engaged upon his memoirs, which he finished up to May, 1790. Meantime, on his return to Paris, the kingly power in France was tottering to its fall, and the excesses committed by the popular party disgusted him, though an ardent lover of liberty. When the Bastille was destroyed, Alfieri and his friend Pindemonte were amongst those who collected its stones as relics; and the former composed an ode upon the subject. He then, with the countess, crossed over to England, where they remained a few months; but their property being invested in the French funds, they were soon obliged to return to France, and arrived in Paris in October, 1791, having come through Holland.

At last Louis XVI. was dethroned and imprisoned, and Alfieri determined on leaving France without delay; and on the 18th of August left the capital for Italy, having with difficulty obtained passports for himself and the countess. Even then an accident occurred, which had well-nigh defeated his arrangements. After his passports were examined and found right, and he was about to leave by the Barriere Blanche, a drunken mob assailed the carriage, and endeavoured to appropriate its contents. The guards in vain interposed; and at last Alfieri sprang from the carriage, and declaring that he was an Italian, insisted that he should pass. His courage awed the crowd, and he effected his escape, and reached Florence on the 3d of November. Here he wrote an apology for Louis XVI., and a satiric poem, called "Misogallo," relating to the events he had witnessed in France, and breathing the most intense hatred to the government then existing in that country. He now amused himself with getting up his plays for performance by an amateur society; and when he had attained the age of forty-six years, he commenced the study of the Greek language, and such progress did he make, that in less than two years he was able to read Greek with tolerable fluency, and had acquired a good knowledge of its form and construction; and in the following year Homer, Æschylus, and Sophocles were almost as familiar to him as his own language. At the same time he did not neglect Latin, but it seems that his attempts to learn English were but partially successful. The life of Alfieri was now one of methodical study, and he apportioned a great part of his day rigorously to the duties of literature.

In 1799 the French entered Tuscany, and seized upon Florence. Upon this he retired to Montugli to pursue his studies, and to withdraw himself from the notice of the French authorities, whose resentment he had, on account of his well-known dislike to their excesses, good reason to fear. Determined to resist to the utmost, he never retired to bed without having arms beside him. The dislike of Alfieri for the French is illustrated by a circumstance which occurred between him and the French general Miollis, upon a subsequent occupation of Florence. The general, anxious to see the poet, paid him several visits without succeeding, and then wrote to know when he would be visible. Alfieri replied, "If the general, in his quality of commandant in Florence, intimated that I should wait on him, I should immediately obey, as I would not resist the ruling power, whatever that might be; but that, if his wish to see me was the mere curiosity of an individual, Vittorio Alfieri was of a retiring disposition, and unwilling to form new acquaintance, and so requested to be excused." Alfieri does not give the reply of Miollis, which was very spirited: "Having read the tragedies of Vittorio Alfieri, I thought him a different man from what he is, and I wished to see him. Now that I know his nature, I no longer have that desire." When Alfieri left Paris, many of his works, which were printed, but not published, were seized and confiscated; and fearing that he might be confounded

with the republican party, which he hated, he publicly protested against all editions published without his sanction, and expressed his chagrin in a letter to his friend the abbot of Caluso, who consoled him by reminding him "that Milton had written in favour of the execution of Charles the First of England, and yet was admired by people who looked upon that monarch as a martyr." In a similar spirit, Alfieri declined to be a member of the Academy of Sciences of Turin, then called the "National Institute," after that of Paris. He would not, he wrote to his friend the abbot, belong to a society which had ejected from its bosom such men as Cardinal Gerdil, Count Balbo, and the Cavaliere Morozzo, on the plea that they were royalists. "And I, who have never been a royalist, will have nothing to do with republicans of the present fashion; for my republic is not like theirs." Alfieri now turned his attention to the composition of comedies, and with such industry did he work, that before the end of the year 1802, though obliged by illness to suspend his labour for many months, he produced six pieces, each occupying only a week in composition. Some of these were satires on the various systems of governments. These, and the continuation of his Autobiography, were now his principal literary avocations.

The severity of his application had long seriously affected his health, which now completely broke down under increased study. Over-abstemiousness aggravated, instead of mitigating, his distemper, and even the entreaties of his devoted companion could not induce him to remit his toil. On the 3rd of October, 1803, he was attacked with fever, and gout in the stomach, and expired on the morning of the 8th, watched through the long night by the same loving eyes that twenty-five years before he had looked upon with such delight. He was buried in the church of Santa Croce, in Florence, between the tombs of Michel Angelo and Machiavelli. A monument of white marble was raised to him by the countess of Albany, and executed by his friend Canova in 1810. It bears a portrait of Alfieri, which is said to be a striking likeness. For the inscription which he had designed for himself, has been substituted a better and a simpler one—"Vittorio Alfieri Astensi, Aloisia e principibus Stolbergis Albanix Comitessa." This most interesting woman survived the poet more than twenty years, and was ever faithful to the memory of him she loved. After death the wish of both was fulfilled, as she was laid by his side in the church of Santa Croce.

Beyond all question, Alfieri was one of the most remarkable men of his age. Having the misfortune to be born wealthy, and left without a father in his infancy, he wasted his early years, and yet redeemed, by his after life, the errors and follies of youth. As a writer, he may be said to have wrought a revolution in the dramatic literature of Italy. Finding nothing higher than the operas of Metastasio, or the comedies of Goldoni, his daring and ardent genius created the classic tragedy of Italy, and for the first time made it a part of the literature of the country. He has been differently judged by different critics, but none withhold from him the praise of being a man superior to all around him. French writers are scant in their encomiums, but they, too, have the generosity to admit that "he largely contributed to sustain the literary honour of his country, and even acquired for it a new glory, creating a style of poetry which up to that she did not possess." Augustus Von Schlegel, in his criticism, is severe beyond what is just, and while he dwells upon the faults of Alfieri, scarcely appreciates his merits. "His language," he says, "is so barren of imagery that his characters seem altogether devoid of fancy; it is broken and harsh, he wished to steel it anew, and in the process, it not only lost its splendour, but became brittle and inflexible. When we read the tragedies of Alfieri, the world looms upon us dark and repulsive." But Schlegel should have remembered the strength and enthusiasm, the love of freedom, and the nobility of thought that are to be found so largely in the works of Alfieri; things all the more admirable, that they were till then unknown for ages in the land from which he sprang. Perhaps the judgment of Sismondi is the truest: "The creation of a new Italian drama by Alfieri is a phenomenon which strikes us with astonishment. He has united the beauties of art, unity, singleness of subject, and probability, the properties of the French drama, to the sublimity of situation, character, and the important events of the Greek theatre, to the profound thoughts and sentiments of the English stage." The effects of the works of Alfieri were as wide in their operation as they have been permanent. "The influence of his writings," says another critic, "has been im-

mense; far greater, perhaps, in the rest of the Peninsula than in his own country. He gave tone, not only to the language which he was not born to speak, but to the character of a people to which he scarcely belonged. He wound up the Italian mind to a higher pitch than it had ever reached since the old Republican times."

Alfieri was tall in stature, and had a noble and commanding air; though marked with pride, his face was intellectual, thin, and long, with a lofty and expansive forehead, round which his hair, which was red, fell in thick masses, and his whole air was that of one who was born to command.—*Vita d'Alfieri—Biog. Univ., Copping.*—J. F. W.

ALFIROUZABADI, ABOU-DH-DHAHER-MOHAMMED-IBN-YAKOUB, an able and learned Arabian lexicographer, was born A.D. 1328-29, at Karezoun in the province of Shiraz, though, as the name indicates, his family came originally from Firouzabad. He was a great traveller, and was honourably received at more than one court—among the rest, at that of the Sultan Timour. Alfirouzabadi expended the stores of information he had amassed in compiling his celebrated Arabic dictionary, "Al-kamousou-l-Mohit," printed at Calcutta in 1827. He died A.D. 1414-15.—A. M.

ALFON, JUAN, a Spanish painter, who decorated several reliques for the cathedral of his native Toledo. Lived about 1418.

ALFONSO. The dynasties of kings who bore this name will be found in the following order:—1st, Alfonsos of Asturias and Leon, and of Leon; 2nd, Alfonsos of Castile, and of Castile and Leon; 3rd, Alfonsos of Aragon and Navarre; 4th, Alfonsos of Naples; 5th, Alfonsos of Portugal; 6th, Alfonsos d'Este. The others of the name follow in the usual alphabetical order:—

ALFONSO I., king of Asturias and Leon, son of Pedro, duke of Biscay, succeeded Favilla, son of Pelayo, in 739. He early distinguished himself in encounters with the Moors, and for his pre-eminent valour, was rewarded with the hand of Pelayo's daughter, Eresminda. His dominions, at his death, extended from the western shores of Galicia into Aragon, and from the Bay of Biscay to the confines of Toledo. He was surnamed "El Catolico" (the Catholic), an epithet expressive of his zeal for the church. He died at Cangas in 756.—J. S., G.

ALFONSO II., king of Asturias, succeeded his uncle Bermudo in 791. He was the son of Froila I., assassinated in 768, but the usurpers Silo and Mauregato had successively occupied the throne till 788; and although old enough at the death of the latter to have assumed the reins of government, the nobles who had been concerned in the murder of his father, preferred intrusting the supreme power to the brother, rather than the son of Froila. Bermudo abdicated in favour of his nephew, and retired to a monastery. A conspiracy of nobles shortly after succeeded in its object, the imprisonment of Alfonso; but he was rescued at the end of three months, and again established on the throne. He carried on occasional wars with the Moors, but piously devoted most of his time to the decoration of Oviedo, his capital, by fine churches and other public buildings. Several of these were of great magnificence. He died in 842.—J. S., G.

ALFONSO III., king of Asturias and Leon, surnamed THE GREAT (el Magno), succeeded his father Ordone I. in 866. His reign was as much characterized by civil discord as by splendid conquests. His career of victory in the Mohammedan territories was liable to constant interruptions from revolts at home, in which his nearest relations were frequently the ringleaders. For upwards of thirty years he continued to enlarge his dominions at the expense of the Moors; and, instead of the limited kingdom of his predecessors, reigned over an expanse of fertile territory that touched the Pyrenees on one side, and the Douro on another. But neither the renown of his conquests, nor the wisdom of his government, could secure to this illustrious prince the attachment even of his family; and to avoid the bloodshed which must have attended the suppression of a revolt in which his sons were concerned, he resigned his crown to Garcia the eldest. His death occurred two years after, in 912. Alfonso III. was the last to bear the title of king of Asturias. His successors in the kingdom of the north of the Douro preferred the title of king of Leon.—J. S., G.

ALFONSO IV., king of Leon, son of Ordone II., succeeded his uncle Froila II. in 924. Weak and vacillating in his character, he occupied fruitlessly for six years the throne of his ancestors, and then leaving the government in the hands of his brother, Ramiro II., retired into a monastery. A year after, he

attempted to displace his brother, and to resume his kingly functions, but without success. He died in confinement in 932.

**ALFONSO V.**, king of Leon, son of Bermudo II., succeeded his father in 999, at the age of five years. The energetic regency of his mother Elvira, and afterwards his own vigorous policy, rescued Leon from the grasp of the Moors, who had nearly effected the conquest of the kingdom. He died of a wound received at the siege of Viseo in Portugal in 1028.

**ALFONSO VI.**, king of Leon and I. of Castile, surnamed **THE BRAVE** (*el Bravo*), was the second son of Ferdinand I., and ascended the throne in 1065. Sancho, his elder brother, at the same time assumed the government of Castile, and the younger brother Garcia, that of Galicia and part of Portugal. It was thus Ferdinand had allotted his estates, in the vain hope that his sons would respect each other's rights. Sancho invaded Castile, and having, by the assistance of the famous Cid (*Rodrigo de Bivar*), defeated Alfonso, sent him to a monastery. But the dagger of an assassin terminated the career of this conqueror of his family, and Alfonso was recalled. Hardly more scrupulous than his brother, shortly after his return he dethroned Garcia, and having thus reunited into one powerful monarchy the estates of his father, declared war against the Moors, from whom he wrested the city of Toledo in 1085. In the same year, Seville, Badajoz, and Saragossa became tributary to Leon; the kings of these important cities having unsuccessfully leagued themselves against the conqueror of Toledo. A year after, Yúfuf-ben-Tachefin arrived in the neighbourhood of Badajoz with a large army of Almoravides, and there Alfonso experienced a great defeat, which, but for the speedy recall of Yúfuf into Africa, would probably have cost him many of his conquests. The departure of Yúfuf was the signal for a renewal of dissensions in the Moorish camp, and Alfonso found no difficulty in protecting, and even extending his dominions, till 1108, when Ali invaded Spain at the head of a large army. The Leonese forces which encountered him at Uclés, were led by Don Sancho, eldest son of Alfonso, whose failing health prevented him from assuming the command in person, and here again the Almoravides were successful. But roused by the death of his son, who had fallen in the battle, Alfonso once more marshalled an army and drove the enemy into Andalusia. He died at Toledo in 1109, and was succeeded by his daughter Urraca.—J. S., G.

**ALFONSO VII.** of Leon. Some writers give this title to Alfonso I. of Aragon, the husband of Urraca, the daughter of Alfonso VI., who held the throne after her father's death. See **ALFONSO I.** of Aragon and Navarre.

**ALFONSO VIII.** of Leon, called also VII. by those who do not include Alfonso I. of Aragon in this dynasty, is usually known as "Alfonso Raymond," and "the Emperor." He was the son of Raymond, count of Burgundy, and of the Princess Urraca, daughter of Alfonso VI., who, after Raymond's death, married Alfonso I. of Aragon. He succeeded on his mother's death in 1126 to the throne of Leon and Castile, notwithstanding the opposition of his stepfather. After the death of his stepfather, and the accession of Ramiro II. to the throne of Aragon, Alfonso invaded that territory and took possession of several fortresses which he would only restore as fiefs. The king of Navarre and the counts of Barcelona and Toulouse also paid him homage, and he was so elated by these successes that he assumed the title of emperor of Spain. His ambition was, however, but partially gratified, for he found all his efforts against the king of Portugal unavailing; that prince having allied himself with Garcia of Navarre, was able to humble Alfonso and assert his independence. Alfonso was distinguished for his achievements against the Moslem power; and the honour of removing the Christian frontier from the Tagus to the Sierra Morena is shared between him and Alfonso of Aragon. In 1157 he fought with but little success against the Almohades, and died when returning from the battle.—J. B.

**ALFONSO I.**, king of Castile. See **ALFONSO VI.** of Leon.

**ALFONSO II.**, king of Castile. See **ALFONSO VIII.** of Leon.

**ALFONSO III.**, king of Castile, surnamed **EL NOBLE** (the Noble), and **EL BUENO** (the Good), succeeded his father Sancho III. at the age of three years. His minority was distracted by the feuds of two powerful families, who each claimed the regency of the kingdom; and also by the interference of his uncle, Fernando of Leon. On his marriage in 1170 to Elcanor, daughter of Henry II. of England, however, he was enabled, by the assistance of that monarch, to repress the disorders of his king-

dom, and to turn its forces from intestine warfare to a crusade against the Moors. His first attempts in 1177 were successful, but in 1185 he was defeated by the Almohades at Sorillo, and in 1195, having rashly engaged Abu-Yusuf-Yakub on the plains of Alarcos, without waiting for his allies, the kings of Leon and Navarre, he suffered the loss of 20,000 infantry and all his cavalry. In 1212 Mohammed Anasir, Yakub's successor, invaded the southern provinces with an army, it was said, of 600,000 men. Alfonso and the kings of Leon and Navarre raised an immense army, marched southwards, and gave battle to the invader at the foot of the Sierra Morena. Alfonso commanded the centre of the Christian army, and experienced, in his attack on the centre of the enemy, a desperate resistance. The Castilians, obliged to give way, retreated in disorder; but mingling with the troops of Leon and Navarre, who had been successful in their assault on the enemy's flanks, they again advanced, and breaking through the terrible breastwork of spears that surrounded the African banner, they penetrated to the tent of Mohammed, who took horse only at the last moment, and fled to Seville. The Arabian historians assert, that of the 600,000 Africans whom Mohammed led to the plains of Tolosa, only 100,000 escaped. Alfonso survived this great victory only two years. He died October 6, 1214.—J. S., G.

**ALFONSO IX.**, king of Leon, succeeded his father Ferdinand II. in 1188. In this reign the courts of Leon and Castile were frequently at variance, and more than once declared war against each other; but actual hostilities were prevented, either by the interference of the bishops of the two kingdoms, or by the necessity for combining all Christian forces against the Moors. Alfonso at length married his cousin Berengaria, daughter of the king of Castile; but this settlement of their disputes found no favour with the pope, who declared the marriage null, and solemnly laid both kingdoms under interdict till it should be publicly dissolved. Alfonso defied the papal bull for a time, but in 1204 consented to a divorce. Berengaria, after the death of her father, Alfonso III. of Castile, undertook the regency of that kingdom during the minority of Henry I., and after the death of that prince in 1217, had her son Ferdinand crowned in spite of the opposition of Alfonso, who endeavoured, but without effect, to gain possession of the strongholds of the kingdom. His reign was not without lustre. He made several successful inroads into the Mohammedan territories, and took some important fortresses. He died while on a pilgrimage to the shrine of Santiago de Compostella in 1230.—J. S., G.

**ALFONSO X.**, king of Castile and Leon, surnamed **EL SABIO** (the Learned), succeeded his father, Ferdinand III., in 1252. In 1255, on the death of William, count of Holland, Alfonso put forth claims to the crown of Germany, and in order to support these by sufficient largess began a system of oppressive taxation, which gave rise to the most formidable revolts in his kingdom. When drawing to a close, his reign was likewise distracted by a question of succession that arose out of the death of his eldest son Ferdinand. That prince left two sons, the eldest of whom, by the Roman law, which on this point was the opposite of the Visigothic, should have been declared Infante in preference to Sancho, second son of Alfonso; but a decision of the Cortes affirmed the superior claims of Sancho, and a civil war followed, in which the country suffered grievously, and Alfonso was drawn into the commission of a crime that has loaded his name with infamy—the murder of his brother Don Fadrique. Alfonso expired in 1284. Although a weak monarch, he laid his people under many obligations, by his efforts in behalf of science and literature; and his digest of laws, known as "*Las siete Partidas*;" his astronomical tables, almost the only ones in use at the beginning of the sixteenth century; and his "*Cronica de Espana*," one of the earliest national histories: are to be regarded as the works of a benefactor to his country. Spain owed to him also a translation of the Scriptures, and the restoration of the university of Salamanca.—J. S., G.

**ALFONSO XI.**, king of Castile, succeeded his father Ferdinand IV. in 1312, at the age of two years. The brothers and uncles of his father contended for the regency, and rendered his minority one continued war of factions. On attaining his majority, however, Alfonso assumed the government, quickly repressed the disorders of his kingdom, and then crossed the southern frontiers to make war on the Moors. In conjunction with the king of Portugal, he destroyed a Mohammedan army of 200,000 men at the battle of Rio Salado, at which the victors

had to lament the loss of the chivalrous Douglas, the friend of Bruce, who had turned aside from his pious pilgrimage to Jerusalem, to aid the Christian kings of the peninsula in their warfare with the infidels. Alfonso, in the year 1344, reduced Algeiras after a long siege, in which it is said the Moors, for the first time, made use of gunpowder. The reduction of that place was one of the most brilliant achievements of the century in which it occurred. Alfonso's career of conquest was suddenly terminated in 1350, while he was on his way to undertake the siege of Gibraltar.—J. S., G.

ALFONSO I., king of Aragon and Navarre, whose exploits against the Moors, during a reign of thirty years entitle him to a distinguished place among the heroes of Spanish history, succeeded his brother Pedro I. in 1104. Saragossa, situated in the centre of Aragon, a stronghold of the Moorish power for four hundred years, sent out an army of Almoravides in 1111 to besiege Barcelona, and in defence of that city Alfonso fought a great battle, which resulted in the withdrawal of the enemy from the province of Catalonia. Saragossa itself, after many desperate struggles, yielded at length to his victorious arms, and became the capital of his dominions. The possession of that city had always been the first object of his ambition. It commanded the navigation of the Ebro, and as a fortress from which an army might at any moment issue to ravage and destroy, threatened the security of the whole kingdom. Alfonso entered it triumphantly on the 18th December, 1118, and profiting by the panic which the conquest of so important a city spread among his enemies, left several strongholds in his rear, and pursued his way to the frontiers of Castile, where he captured the cities of Tarragona and Talatayud; the latter after a battle in which Temim, the brother of Ali, lost 20,000 men. About the beginning of the year 1125, he marched southwards with an army of four thousand horsemen, laying waste the settlements of the Moors in Murcia, Valencia, and Andalusia. He arrived at Grenada, and expecting the Mozarabes within the city to revolt in his favour, began a regular siege; but notwithstanding the number of his troops, which had gradually increased to 50,000, he had to abandon the place, skilfully guarded within its walls by the Mohammedan wali, and courageously defended without by the heroic Temim. This campaign occupied six months, with very little effect in point of actual conquest, but with much in the way of still further depressing the spirit of the enemy. In 1126, his wife Uracca died, and the following year Alfonso crossed the mountainous frontiers of Castile, and renewed, at the head of a large army, his pretensions to the sovereignty of that kingdom. But he experienced a brave resistance from her son Alfonso VII. (or VIII., see ALFONSO VIII. of Leon); and at the end of the campaign, which lasted over three years, was only able to command the cession of a single province, Bioja, in exchange for his renunciation of the title of king of Castile. A truce was concluded on these terms, and Alfonso, who never allowed his sword to rust, forthwith crossed the Pyrennes to besiege Bayonne, which fell into his hands after a short resistance. The Moorish fortresses along the course of the Ebro next attracted his attention, and before undertaking the siege of Tortosa, the ultimate object of his expedition, he resolved to reduce Lerida, Mequinenza, and Fraga. To the reduction of the latter stronghold he bent all his energies, and was on the point of being successful, when, along with the most distinguished of his generals, he was drawn into an ambuscade, which, as a last resource, the garrison had laid in the way of the assault. Here, doubtless, he perished, although, from the fact of his body not having been found, rumours were circulated to the effect that he had escaped and retired to a monastery. Alfonso el Batalador (the Fighter) enjoyed the renown of thirty-five victories, and his successes he owed in great part to his personal valour. If, as is asserted, he added to that quality the talents of a skilful general, we shall look in vain for a greater name than his in the history of mediæval Spain.—J. S., G.

ALFONSO II., king of Aragon, son of Raymond V., count of Barcelona, inherited from his mother, Petronilla, the kingdom of Aragon, about the time of his father's death in 1166, and thus united Aragon with a very large part of the province of Catalonia. In 1167, as heir of his cousin, count of Provence, he took possession of that county, and in 1172 had added, by the testament of Guinard II., to his now extensive dominions, the province of Roussillon. Like his predecessors, he made war on the infidels, and in one of his expeditions took several frontier

fortresses of importance. His reign was generally popular, and his death, which occurred at Perpignan in 1196, was much regretted by his subjects.—J. S., G.

ALFONSO III., king of Aragon, son of Pedro III., succeeded his father in 1285. He died suddenly at Barcelona in 1291, after a reign of six years, the greater part of which was taken up in contentions with his nobility, with France, and the popedom.

ALFONSO IV., king of Aragon, succeeded his father Jayme II. in 1328. His reign was embittered by domestic dissensions, and by a struggle with the Genoese for Corsica and Sardinia, granted to him by the pope, which lasted till his death in 1336.

ALFONSO I., king of Naples and Sicily, equally well known as ALFONSO V. of Aragon, was the son of Ferdinand I. of Aragon, and, as his heir, was entitled also to the crowns of Sicily and Sardinia. He acceded to the throne of Aragon in 1416, having previously married Mary, daughter of Henry III. of Castile, with whom he lived unhappily, and who brought him no children. Alfonso V. of Aragon spent little time in his native kingdom. In 1420 he undertook the expedition to recover Sardinia, which had been alienated from him by internal faction. An agreement with the viscount of Narbonne, who, with the Genoese and the Aragonese garrisons, divided the island, put him in possession of the province of Arborea. After an unsuccessful attempt on Corsica, in the course of which occurred the siege of Bonifacio, one of the most memorable in history, Alfonso despatched his fleet to the aid of Joanna II., queen of Naples, who promised to make him heir to her throne, if he saved the realm from falling into the hands of Louis of Anjou, at that time besieging Naples. Louis was forced to raise the siege, and in 1421 evacuated Campania, in terms of a treaty with Queen Joanna. This princess, however, soon quarreled with her benefactor, and at the instigation of the seneschal Caraccioli, attempted to seize the person of Alfonso. Her design failing, she withdrew into the strong castle of Porta Capuana, and, summoning to her aid Sforza da Cotignola, lieutenant of her former foe, Louis of Anjou, successfully resisted Alfonso, till reinforcements from Spain enabled the Aragonese king to possess himself of Naples. Queen Joanna, who had taken refuge in Nola, now declared the duke of Anjou her successor instead of Alfonso, and the latter being obliged to return to Spain, and occupy himself for eight years in attending to his interests there, she in the meantime, by the aid of the duke of Milan, regained all her power.

About 1432, we find him again in Italy and Sicily, endeavouring to come to an understanding with Joanna; for Louis of Anjou was by this time dead, and Caraccioli murdered. The queen herself died in 1435, leaving her throne to René of Anjou, brother of Louis. The war between René and Alfonso continued till 1442, not without reverses to the latter; for his fleet was destroyed and himself taken prisoner, off the island of Ponza, by the duke of Milan, who, however, persuaded that it would prove the policy most advantageous for himself, set the Aragonese prince at liberty. Finally, in 1442, Alfonso seated himself on the throne of Naples, and the year after, Pope Eugenius IV. confirmed him in his sovereign rights by a bull of investiture. In 1444, the same pope legitimised Ferdinand, natural son of Alfonso, as his successor.

Alfonso spent the rest of his life in his Neapolitan dominions, and died in 1458 of an illness brought on by the fatigues of the chase, at the age of seventy-four. Alfonso was a man of energy and determination; as a prince liberal, enlightened, fond of splendour, and a patron of literature. He introduced various reforms into the administration of his Italian kingdom, and greatly improved and adorned the city of Naples; but, though aiming to deserve the title of Father of his People, he is accused of too great a wish to conciliate the nobles at the expense of the lower orders.—A. M.

ALFONSO II., king of Naples, son of Ferdinand I. and Isabella, was born in 1448. He was an avaricious and cruel prince, though not destitute of vigour and bravery, as was apparent in the campaigns he conducted against the Venetians, the Florentines, and others, previously to his accession to the throne, which took place in 1494. In 1495, when Charles VIII. of France arrived in Italy, as if panic-stricken at that event, Alfonso abdicated in favour of his son, Ferdinand II., and, retiring to Sicily, died the same year.—A. M.

ALFONSO or AFFONSO I., founder of the Portuguese monarchy, was born in 1094 at Guimaraens, and in 1112 succeeded his father as count of Portugal,—then a vassal state to

the crown of Castile. In 1128 he overturned the unworthy regency of his mother, and took the authority into his own hands. The king of Castile having interfered, was defeated, and obliged to acknowledge the independence of Portugal. The Moorish kings of Seville and Badajoz, having received reinforcements from the emperor of Morocco, resolved to attack Alfonso, but after some skirmishes, they were totally defeated at Campo Ourique in 1139. He next took Lisbon from the Moors, by the aid of a body of English and French crusaders. Having interfered in the war between the kings of Navarre and Aragon, he was taken prisoner, near Badajoz, and only released on the cession of his late conquests. In 1184, the Moors, under Aben-Yakof, invaded Portugal, and laid siege to Santarem. Alfonso came to relieve the town, and speedily drove the enemy out of his dominions. He died the year following (1185), to the universal regret of his subjects. Equally noted as a warrior and a lawgiver, he has been compared to Alfred the Great.—J. W. S.

ALFONSO or AFFONSO II., surnamed GORDO, or the Fat, third king of Portugal, grandson of the foregoing; was born in 1185, and succeeded to the throne in 1211. An unprincipled attempt to deprive his sisters of their inheritance, involved him in war with the king of Leon, in which he suffered a defeat. He next made war against the Moors, whom he defeated at Alcaccer del Sal in 1217. An injudicious attempt to tax the clergy, brought upon him sentence of excommunication from the pope. Alfonso made submission, but died suddenly before a full reconciliation had been effected, in 1223.—J. W. S.

ALFONSO III., a son of the foregoing, was born in 1210, became regent of Portugal owing to the misconduct of his elder brother Sancho, and on the death of the latter assumed the sovereignty. He expelled the Moors from Algarve, and annexed it to his dominions. The divorce of his wife Mathilda, and the desire of limiting the military orders, drew upon him the censure of the pope, and filled the remainder of his reign with troubles. He died in 1279.—J. W. S.

ALFONSO IV., was born at Coimbra in 1290. His early life was stained by repeated acts of rebellion against his father. In 1325 he succeeded to the crown of Portugal, and spent the first year of his reign in idleness. An indecisive war against Castile succeeded, terminated by a treaty in which both parties agreed to unite their forces against the Moors. In this war Alfonso distinguished himself at the battle of Tarifa. In his old age he caused Inez de Castro, the wife of his son Dom Pedro, to be murdered, a crime which involved Portugal in all the horrors of a civil war. The king, covered with shame and remorse, died in 1357.—J. W. S.

ALFONSO V. was born at Cintra in 1432, and succeeded his father Duarte in 1438, under the regency, first of his mother, and afterwards of his uncle. He embarked in a crusade against the Moors of Africa, and after a series of sanguinary conflicts made himself master of Tangier in 1471. He established a colony on the coast of Guinea. He endeavoured to seize the crown of Castile, but was defeated at Toro by Ferdinand of Aragon. He founded the first library in Portugal at Coimbra, and died of the plague at Cintra in 1481.—J. W. S.

ALFONSO VI., was born at Cintra in 1643, succeeded to the throne of Portugal in 1656, and, after a feeble reign, was deposed in 1667, to make room for his brother Pedro. Died in 1683.

ALFONSO I., D'ESTE, duke of Ferrara, was born in 1476, and succeeded his father Ercole I. in 1505. Up till his death in 1534, he was almost constantly engaged in war, first with the Venetians, and then with the popes. It was Alfonso I. who commanded the papal troops, which, on the formation of the league of Cambrai by Pope Julius II., Louis XII. of France, and the Emperor Maximilian, were sent against Venice. He was successful in this campaign, in which the poet Ariosto was present. Pope Julius II. afterwards commenced hostilities against Duke Alfonso, because the latter refused to concur in his change of policy, and join him in a league with the Venetians against the French. Alfonso, however, defeated the papal troops, and subsequently also the Spanish auxiliaries sent from Naples. In 1512, the French commander, Gaston de Foix, duke of Nemours, together with Duke Alfonso, defeated the combined papal and Neapolitan troops in a great battle before Ravenna, in which Gaston was slain. Fabrizio Colonna, the pope's general, was made prisoner in this engagement, but honourably liberated by Alfonso—a good turn which Colonna requited by contriving the escape of the duke from Rome, when, having repaired thither

to make his peace with the pope on the evacuation of Italy by the French, orders were issued for his arrest. Leo X., who succeeded Julius, proved more placable than the latter, and once more Alfonso was made gonfaloniere or general of the papal forces; but Leo X. still refused to let him have Modena and Reggio, cities which belonged to his duchy. When Francis I. invaded Italy, the Ferrarese prince, true to his old policy, again joined the French, and thus found himself a second time arrayed against the supreme pontiff, who, uniting with the Austrians, defeated the French, and would have completely crushed Duke Alfonso, had not death stayed his hand. Alfonso enjoyed a breathing-time during the papacy of Adrian VI.; but he was only saved from ruin under that of Clement VII. (1523), by allying himself with the emperor Charles V., who finally confirmed him in the possession of Modena and Reggio. This able prince died in 1534. The celebrated Lucrezia Borgia was his wife. Alfonso's favourite arm in war was artillery, and in his campaigns he made great use of cannons of his own founding.—A. M.

ALFONSO II., D'ESTE, last of the dukes of Ferrara of the house of Este, and celebrated as the prince at whose court the poet Tasso lived and loved so unfortunately, succeeded his father Ercole II. in 1559. His mother Renée was daughter of Louis XII. of France. After the death of his first wife, Lucrezia da Medici, he married Beatrice, sister of the Emperor Maximilian II., whom, in 1566, he aided with a contingent of 4000 men in his war against the Turks. In 1579, Alfonso II. married Margarita Gonzaga. He had no children by any of his three wives, and when he died in 1597 his line thus became extinct, Pope Clement VIII. claiming the reversion of Ferrara as a fief of the papal see. The court of Ferrara, though one of the smallest in Italy, was in the time of Alfonso II. perhaps the most splendid. One of his sisters was married to Francesco Maria della Rovere, duke of Urbino; the other, Leonora, the object of Tasso's affection, lived and died single (1581), at her brother's court.—A. M.

ALFONSO III., D'ESTE, succeeded his father Cesare in 1628, not as duke of Ferrara, but merely as duke of Modena and Reggio. He abdicated the year following, and retired into a convent of the Capuchins, becoming a member of that order, under the name of Giambattista da Modena. He died in 1644.

ALFONSO IV., D'ESTE, duke of Modena and Reggio, in 1658 succeeded his father Francis I., under whom he had served in the war against the Spaniards for the possession of Monferat. The command of the French troops was, on his father's death, continued to Alfonso IV., who had married the niece of Cardinal Mazarin in 1655. To this prince the gallery of paintings at Modena owes its origin. His daughter, Maria Beatrix, became the wife of James II. of England. Died 1662.—A. M.

ALFONSO DE ALCALA, a Spanish rabbi, who, having become a Christian, was by Cardinal Ximenes employed on the preparation of the Polyglot Bible of 1514-17, printed "in Complutensi Universitate," in 6 vols. folio.

ALFONSO DE BENAVENTE, a Spanish theologian, professor at the university of Salamanca, lived in the fifteenth century. He published a work with the title, "Tractatus de Pœnitentiis et Actibus Pœnitentiarum et Confessionis, cum forma absolutiois et Canonibus Pœnitentiariis."

ALFONSO DE CARTHAGENA—in Latin, Alphonsus a Sancta Maria—a Spanish historian, son of the bishop of Burgos, was born in 1396. He occupied successively the canonries of Segovia and Santiago of Compostella; and after a successful mission to one of the courts of Germany, on behalf of John II. of Castile, succeeded his father in the bishopric of Burgos. A history of Spain, from the earliest times, with the title, "Anacephalaosis, nempe regum Hispanorum, Romanorum Imperatorum, Summorum Pontificum, necnon regum Francorum," some devotional books, and a treatise on the laws of chivalry, were his principal works. He died in 1456.—J. S., G.

ALFONSO, JOHN, a celebrated navigator of the sixteenth century, was born at Cognac about the year 1500. An adventurer of the most enthusiastic character, he surveyed with admirable accuracy the shores of Asia and America, along which he performed numerous voyages. An abridgment of his narrative of these voyages, published in 1599 by a poet of the name of Mellin de Saint-Gellais, was a most valuable contribution to geographical science. A copy of verses prefixed to Mellin's work contains the only notices of Alfonso's life which have reached us, and these are of the most meagre description. He died probably about the year 1557.—J. S., G.

ALFONSO DE PALENCIA, or ALPHONSUS PALENTINUS, a Spanish historian and lexicographer, author of a chronicle of the reign of Enrique IV., a translation of Josephus, and two lexicographical works, was born in 1423. He had the honour of conducting the negotiations that preceded the auspicious marriage of Ferdinand and Isabella. Died in 1495.

ALFONSO, PETER, a Spanish theologian, of Hebrew origin, physician to Alfonso I. of Aragon; born in 1062, and baptized into the Christian faith in 1106. He published a refutation of Judaism. Died in 1140.

ALFONSO DE SPINA, or D'ESPINA, a celebrated Spanish preacher and theological writer, bishop of Orense in Galicia, flourished about the middle of the fifteenth century, and published anonymously a work entitled "Fortalium Fidei," (The Stronghold of Faith).—J. S., G.

ALFONSO DE TALAVERA, author of a compilation on veterinary surgery, published at Toledo in 1564.

ALFONSO, DE LA TORRE, a Catalonian writer of the 15th century, author of a curious medley of science, philosophy, art, and morals, which he called "La Visio Delectable."

ALFONSO DE ZAMORA, a Spanish rabbi of Leon, who became professor of Hebrew at the university of Alcalá, and was employed by Cardinal Ximenes on the Complutensian Polyglot.

ALFONSO LOPEZ DE CORELLA, a Spanish physician, a native of Navarre, and some time professor of medicine at Alcalá de Henares. Besides other works he is the author of "Annotationes in omnia Galeni opera," Madrid, 1582, 4to; "De morbo pestilente," Valentia, 1581, 4to; "Naturæ quærimonia," Saragossa, 1564, 8vo; "De arte curativa, libri iv.," Estella, 1555, 8vo; "Catalogus auctorum qui post Galeni ævum Hippocrati et Galeno contradixerunt," Valentia, 1549, 12mo; "Secretos de filosofia, astrologia, y medicina, y de las quatro mathematicas," Valladolid, 1546, 8vo.—A. M.

ALFONSO RODRIGUEZ DE GUEVARA, professor of medicine at the university of Coimbra. He wrote a "Defensio Galeni," Coimbra, 1559, 4to.

\*ALFORD, REV. HENRY, B.D., one of our most famous biblical critics, celebrated also as a poet, and as the author of some volumes of sermons, was born in London in 1810. He was educated at Trinity college, Cambridge, and was elected Fellow in 1834. In the following year he became vicar of Wymeswold, Leicestershire, and held that office till 1853, when he was appointed officiating minister in Quebec Street chapel, London. He held the Hulsean lectureship at Cambridge in 1841-2, and since that date has been examiner on logic and natural philosophy in the university of London. His best-known work is an edition of the Greek Testament, the first volume of which appeared in 1844, and the second in 1852. He has lately published a volume of sermons, entitled "The Divine Love," which has attained to great popularity. His poetical works are, "Poems and Poetical Fragments," 1831, and "The School of the Heart, and other Poems," 1835.—J. B.

AL-FRAGANIUS, often ALFERGANUS; MOHAMMED IBN COTHAIR AL FERGANI:—the surname derived, as usual, from his native town Fergana, in Sogdiana. This astronomer composed an elementary work, which, for a long time, was classical in the East, and was even translated by Golius. It is a good and succinct exposition of the doctrines of the Almagest. Alfraganus treats also of solar clocks and of the Astrolabe. He was famed for his powers in calculation.—J. P. N.

ALFRED, more justly called THE GREAT than any other sovereign to whom that term of honour has been applied, was the youngest son of Ethelwulf, king of the West Saxons and of Kent, by Osburg, the daughter of Oslac, the king's cup-bearer. He was born A.D. 849, and from his earliest childhood showed that generous disposition which joined with his great qualities to make him what he was justly termed, "the darling of England." He was born at Wantage in Berkshire, a few miles from the valley of the Thames, but on the edge of that great region of wild chalk downs and upland plains, which formed the centre of the kingdom of the West Saxons. The affection of his biographers has recorded, that, as a child, his mother showed him, and he eagerly committed to memory, many of those old Saxon poems which have ever been the delight of the Anglo-Saxon race. It is said that he was taken or sent to Rome by his father in the year 853, when he was only four years old; and the monkish historians who record this circumstance add, that he was not only blessed, but anointed as king by the pope,

an assertion which is scarcely credible, seeing that he was the youngest child, and had three elder brothers, all of whom reigned before him. His father, who was a weak man, governed by women and priests, introduced discord into his family, when Alfred was yet a child, by marrying in his old age a second wife, the beautiful Princess Judith, daughter of Charles the Bald, king of the Franks. He also excited discontent in his kingdom by granting to the ruling pope and his successors, the right to collect in England the odious tax long known as "Peter's pence." Ethelwulf did not long survive his second marriage, dying in the year 858, when Alfred was only nine years of age.

On the death of Ethelwulf, his kingdoms of Wessex and Kent were divided between his two oldest sons, Ethelbald and Ethelbert. In this partition, Ethelbald received the kingdom of Wessex, or of the West Saxons, comprising the counties of Berks, Hants, Wilts, Dorset, Somerset, and Devon (with a supremacy over the Britons of Cornwall); and Ethelbert received the kingdom of Kent, which included the counties of Kent, Surrey, and Sussex. But they were both cut off early in life. Ethelbald died in the year 860; and Ethelbert in the year 866. After the death of the latter the two kingdoms were reunited in the person of Ethelred, the third son of Ethelwulf, and the next brother of the still youthful Alfred.

It was in the reign of Ethelred, and immediately after his accession to the throne, that the grand invasion of England by the Danes commenced. Plunder and the ransom of prisoners had hitherto been the objects of the bands of northern pirates which had infested the coast of England; but in the year 866, large armies of Danes and Norwegians began to pour into the kingdom, under able leaders, thoroughly bent on conquering the whole island, and on establishing the permanent ascendancy of the Scandinavian over the Teutonic race. In the year 866, the Danes landed in Lincolnshire, and overran and partially established themselves in that district. In the year 868, they captured the city of York, the capital of the Saxon kingdom of Northumbria, killed two kings who were contending for ascendancy there, and in a short time made themselves masters of that part of England which lies to the north of the Humber and the Mersey. In the following year they invaded the kingdom of Mercia, which included the midland counties of England, from the Mersey to the Thames. Here they took the strong castle of Nottingham.

In the year in which the Danes took Nottingham, Alfred married Ealhawith, a daughter of Ethelred, earl or alderman (as the Saxons named that rank) of the Gainishmen, or people in the neighbourhood of Gainsborough; and in the same year he was first seized with a terrible disease, the exact nature of which is not known, but which was attended with frightful paroxysms of pain, and to which he remained subject to the end of his life.

On the advance of the Danes in Mercia, Burhead, the king of Mercia, who had married a sister of Ethelred and Alfred, eagerly besought their aid, which was readily given. The king and his brother advanced with a West Saxon army to Nottingham; but when they arrived there, they found the Danes strongly fortified in the castle and town. After remaining there until their provisions were nearly exhausted, and until their irregular levies, consisting of raw militia, became eager to return home, Alfred and the king were compelled to retire from Mercia, though not without concluding a treaty with the Danes, by which the latter agreed to do so likewise.

No sooner, however, had the West Saxon army retired, than the Danes overran the kingdom of Mercia; and after laying it waste, advanced into the kingdom of East Anglia, which consisted of the modern counties of Essex, Suffolk, Norfolk, and Cambridge, and of the southern parts of Lincolnshire. The Danes were commanded by two formidable chiefs, Ingvar, famed for his skill as a commander; and Ubba, dreaded for his terrible courage. After gaining a great victory over Earl Algar and the East Angles at Kesteven, in Lincolnshire, on the 21st September, 869, they advanced to East Thetford, in Norfolk. There they defeated and killed Ulfketel, the ablest earl of the East Angles, and, in the winter of the same year, they defeated Edward, king of the East Angles, whom they took prisoner, and put to death with cruel torments. Guthorm, one of the most celebrated of the Danish chiefs, seized the kingdom of East Anglia, and retained it to the end of his life. Other Danish

chiefs, in a similar manner, established themselves in the kingdom of Northumbria, which at that time extended from the Humber to the Tyne, if not to the Tweed.

In the course of the winter of the year 870, a large Danish fleet entered the Thames, conveying a numerous army under the command of two Scandinavian kings, named Halfdene and Bagseeg, and five powerful earls, named Osbearn, Frene, Harald, and two Sidrocs, father and son. The object of these invaders was to conquer for themselves principalities in the kingdoms of Wessex and Kent, as Guthorn and other Danish chiefs had done in the east and north of England. They sailed up the Thames without meeting with any resistance, and suddenly seized on the castle and town of Reading, which stands at the point where the river Kennet falls into the Thames. Here they threw up new fortifications, and thus established themselves in the very heart of the West Saxon kingdom. From this point they sent bands of plunderers to collect booty and provisions throughout the counties of Surrey, Kent, Berkshire, and Buckinghamshire, one of which parties was defeated at Englefield Green, near Windsor, by Ethelwulf, the earl of that district.

Before the mass of the Saxon troops could be got together, Ethelred and Alfred appeared before Reading with whatever troops they could collect hastily; but, after a succession of engagements, continued for three days with various results, they were compelled to retire across the Thames, near Windsor, and there to wait for reinforcements. Four days afterwards, the mass of the Saxon troops having come up, the battle was renewed at Essedun or Ashdown. Alfred led the attack, fighting, as the chronicles of that time say, "like a wild boar," and inflicted a signal defeat on the Danes. One of the Danish kings and six of the Danish earls were killed, and it was said that since the Saxons had landed in Britain, there had never been such a battle. Unfortunately, however, it did not give the Saxons possession of Reading, and there the Danes, having complete possession of the Thames and of the sea-coasts, soon brought together another large army. Two months later, the Danes were strong enough to fight another great battle at Merton, and even to keep the field against Alfred and Ethelred. Soon after this battle Ethelred died. His death took place on the 23rd April, 871, and Alfred immediately assumed the throne of the West Saxons, which was then threatened with instant destruction.

In the first year of Alfred's reign, the Danes at Reading, having received great reinforcements, advanced into Wiltshire. Alfred gave them battle at Wilton, but was defeated. After this defeat, negotiations were opened with the Danes, and they even agreed to retire from the West Saxon kingdom, though on very hard conditions; but this agreement they did not fulfil, and in the course of the year 876, they landed a large army at Wareham in Dorsetshire, and another in Devonshire, where they seized on Exeter. Alfred laid siege to the Danes in Exeter, and compelled them to surrender, and to engage to leave the kingdom. This promise they broke, as they did all similar engagements, and in the spring of the year 877, Alfred found himself assailed in all directions,—in the valley of the Thames, on the coast of Dorset, on both coasts of Devonshire, and at Chippenham in Wiltshire, by a new army advancing out of Mercia. Despair seized his subjects, and all his efforts to get together an army strong enough to keep the field, were for a while unavailing; but his heroic spirit was unbroken, and with a few resolute followers, he retired to the isle of Ethelney, a small tract of dry land, rising amidst the swamps caused by the overflowing of the rivers of Somersetshire. Here he remained during the winter of 877, concealed from his enemies, but constantly employed in organizing the campaign of the coming year.

Early in the spring of the year 878, Alfred began operations with the men of Somersetshire, and in the seventh week after Easter, he was again at the head of a powerful army, composed of the men of Somerset, Wilts, and Hampshire. With this army he attacked the Danes at Ethendune, probably Eddington, near Westbury, and, after a desperate battle, defeated them with enormous loss. The remnant fled to Chippenham, where they were immediately surrounded by Alfred's army, and in a fortnight reduced to such extremities by famine, that they surrendered, and agreed to leave the kingdom. This great victory very shortly placed Alfred in possession of his hereditary territories of Wessex and Kent, and by a treaty concluded with Guthorn and the other Danish chiefs, who had firmly established themselves in the east and north of England, he also received a large

part of the kingdom of Mercia, including all the beautiful counties along the banks of the Severn. The old Roman road from London to Chester, known to the Saxons by the name of Watling Street, was declared to be the boundary line between the Saxons and the Danes, through the greater part of its course.

The victory of Alfred over the Danes gave peace and rest to his people for several years. Even Hastings, the most formidable of the sea-kings of that age, after showing himself in the Thames for a time, shunned a conflict with Alfred, and transported his army to the banks of the Meuse and the Seine. Alfred was thus left at peace to reorganize his kingdom; and in doing this, he displayed a talent and a grasp of mind even more wonderful than the constancy which he had shown in rescuing it from the hands of its invaders.

With a view of enabling his people to resist the attacks of foreign enemies, he organized the military part of the population in such a manner, that one portion of it should always be ready to take the field while the rest did garrison duty at home. He also strengthened the fortifications of London and other principal towns of the kingdom, so as to enable them to resist not only a sudden attack, but a protracted siege. He also attempted and made some progress in organizing that most important of all means of defence, a navy, capable of contending with the pirates who then infested every sea. To effect this great object, he hired Flemish and other seamen, and attempted to train his own subjects to seamanship, by encouraging commerce, fishing, and navigation. The navy of the West Saxons—the origin of the navy of Britain—made some progress under this great king; and under his sons, grandsons, and great-grandsons, acquired a strength which only required to have been maintained, to have rendered the kingdom secure against all attacks from without.

For the purpose of giving his subjects the security of good laws, Alfred compiled a code from the laws of the West Saxons, the Kentishmen, and the Mercians, and to these he added some laws of his own. That these laws might be carried into execution, he more thoroughly organized the old Saxon system of rendering the population of every township and every hundred answerable for all offences committed within its limits. This was the only kind of police practicable in so rude an age, and it had the great advantage of giving every free subject an interest in the prevention of crimes. The principle is still retained in the laws of England. In the case of offences perpetrated openly, and with tumult and violence, the people of the hundred or county in which such offences are committed, are liable for all damage done.

But Alfred, in addition to organizing a system of national defence and of legislation, applied himself, with all the power of his great mind, and with a zeal which would have been admirable in any age, and was truly wonderful in his, to the double object of instructing his subjects in useful knowledge, and of creating a literature in the Anglo-Saxon language—the only language they understood—worthy of being studied by them. There was nothing which he more deplored than the general prevalence of ignorance both amongst the clergy and the laity. In his preface to the translation of the *Regula Pastoralis* of Gregory the First, he says, "I have very often thought what wise men there formerly were in England, both priests and laymen, and how happy were those times, when the people were ruled by kings who obeyed God and his evangelists, and how they maintained at home their peace, customs, and power, and even extended them to other lands; how they prospered in war as well as in wisdom, and how zealous were the priests also in doctrine and knowledge, and all their divine duties; and how men came hither from foreign lands to seek knowledge, which we can obtain only abroad if we desire it. So utterly was it neglected by the English people, that there were but few on this side of the Humber who understood their prayers in English, or could even explain in English an epistle from the Latin; and I likewise suspect that there were not many beyond the Humber. They were so few that I do not actually recollect one south of the Thames, when I began to reign." This state of things he set himself vigorously to remedy; his object, to use his own language, being "that the whole body of freeborn youth in his kingdom who possess the means, may be obliged to learn as long as they have to attend to no other business, until they can read English writing perfectly, and then let those who are dedicated to learning and the service of the church be instructed in Latin."

That his lay subjects as well as the clergy might have works in their possession worth reading, Alfred set himself to learn the Latin language, with a view of translating from it such works as he thought most likely to please and instruct them. The works which he so translated, arranged in the order of their importance, are as follow: first in interest and in value, is his translation of the venerable Bede's History of the English Church, which is the earliest history of the English people as well as of their church, and is still the foundation of nearly all our knowledge of the Anglo-Saxon race in the times which Bede describes. In addition to this delightful account of their own country and race, Alfred supplied his subjects with a knowledge of other countries, by means of a translation of the Universal History of Orosius, to which he made such additions as the information current in his age enabled him to supply. The most important of these additions are an account of Germany, or rather of all countries in which the German language was spoken in his times, extending from the Mediterranean to the northern bay of the Baltic, the gulf of Bothnia; and also two accounts of voyages of discovery, one to the north cape of Europe, made by Ohthere, a mariner and whaler of Norway, and another to the recesses of the Baltic, made by another mariner named Wulfstan, probably a native of Schleswic. These additions to the work of Orosius entitle Alfred to be considered the best-informed geographer of his age. In addition to these historical works, Alfred translated the work of Boethius, "On the Consolations of Philosophy," adding to it many original observations, especially in the second and third books. In the former, he lays down the wisest and freest principles of government; in the latter, leaving the philosopher, he assumes the character of the christian, and writes warmly and piously of the goodness, wisdom, and holiness of God. In addition to these works on history, geography, and philosophy, Alfred also translated the Pastoral of Gregory the First, and Gregory's work "On the Care of the Soul." Many other works have been attributed to Alfred, but of the above there is no doubt.

In the midst of these peaceful pursuits, the great king and his subjects were roused from all thoughts of peace by another frightful invasion of the Danes and Northmen, led by Hastings, a warrior of unrivalled skill amongst the sea-kings of that age; they were aided by the Danes who were already settled in the eastern and northern counties of the kingdom. In the year 892, a Danish fleet, consisting of 250 vessels, landed a large army of Danes and Northmen at Lymme in Kent; and soon after a second fleet of eighty vessels landed Hastings himself, and a host of his followers, at the mouth of the Thames. At the same time the whole Danish population in the north and east of England rose in arms, and made common cause with the invaders. But Alfred proved himself fully equal to this, as he had done to all other emergencies. In the years of peace which the kingdom had enjoyed, he had fully organized his people for the defence of their homes and country, and, after three desperate campaigns, the foreign invaders were driven out of the kingdom, and those who remained in the north and eastern counties were compelled to sue for peace and pardon.

The Danes and Northmen, having the command of the sea, landed wherever they thought fit, in spite of the feeble navy of Alfred; but wherever they landed they were defeated, either by the heroic king or his able officers and loyal subjects. In the first campaign the Danes were defeated in a pitch battle at Farnham in Surrey, and their entrenched camp at Benfleet in Essex, was stormed and taken by an army, chiefly raised in and about London. In this assault the wife and two sons of Hastings were taken prisoners, but they were generously returned to the Danish chief, not only without ransom, but loaded with presents. In the same campaign the Danes were defeated at Exeter by Alfred in person; and at Buttington, near Shrewsbury, by one of his ablest generals. It is evident from the position of these places that this was an organized system of attacks, directed against all parts of his dominions at one and the same time.

In the second campaign, the Danes were driven into Chester, from which city they were compelled to retire into Wales. After remaining there some time, they passed over into the Danish province of Northumbria, and, marching over that province and over the province of East Anglia, they again arrived in the neighbourhood of London, and constructed a strong camp near Ware or Hertford. This position they held for some time, and even defeated the Londoners in an attempt to storm it; but

in the autumn of the same year, Alfred succeeded in rendering this position untenable, by drawing off the waters of the river Lea, which formed its main defence. Driven from the banks of the Lea and the Thames, Hastings marched rapidly to the banks of the Severn, and took up a strong position at Quattbridge, near the present town of Bridgnorth. But the Saxons were at his heels, and after enduring all the horrors of famine, he was again compelled to take flight.

In the spring of the following year, Hastings again attempted to renew the war, but being foiled at all points, he fled from the country, with all those of his followers who had survived the sword of Alfred, leaving the kingdom greatly exhausted, but still free and independent. After the departure of Hastings, no other Danish or Northman chief ventured to land on the coasts of England during the reign of Alfred.

The last four years of Alfred's life were spent in peace, but his frame was giving way under the pressure of disease, and he died on the 28th October, 991, at the early age of fifty-three years, after having reigned thirty years and six months.—T. B.

ALFRED and ARIRAM, two German architects, natives of Bavaria, who lived in the ninth century. The former belonged to the convent of Tegernsee, the latter to that of St. Emmeran. They were the contemporaries of the Emperor Arnulph, and built the imperial palace at Ratisbonne.

ALFRED, son of the Saxon king, Ethelred II., and brother of Edward the Confessor, lived for many years at the court of his uncle, Richard of Normandy, whither his mother Emma had fled with her sons to escape the troubles consequent on the invasion of England by the Danes. After Emma's marriage with Canute, and the death of that king, Alfred was induced, by a letter, purporting to be written by his mother, to land in England with a small force of only six hundred men, to assert his right to the throne against Harold Harefoot. Who the real writer of the letter was cannot be certainly determined, but it is clear that it was intended to ensnare the two sons of Ethelred; and it is not improbable that Emma had to do with it, in order that the way might be more effectually cleared for the succession of Hardicanute, her son by Canute, in whose cause her sympathies were fully enlisted. Alfred was speedily betrayed through the agency of Earl Godwin; and his followers having been cruelly murdered, he was carried, first to London, and then to Ely, where he underwent a mock trial, and was sentenced to lose his eyes. The sentence was so cruelly executed that he died in a few days after.—J. B.

ALFRED, originally a Benedictine monk of Glastonbury, under Dunstan, afterwards abbot of Malmesbury, and bishop of Crediton, then the seat of the present bishopric of Exeter. He died in 999, after having held the see nine years. He maintained a strict discipline over his clergy, and took great pains with the performance of the sacred offices.—J. B., O.

ALFRED, ALURED or ALRED, a canon of the church of St. John at Beverley. He was the author of a chronicle which was published at Oxford, 1716, and which many have thought to be only an abridgment of Jeffrey of Monmouth. Alfred is said to have died about 1136.—J. B., O.

ALFRED or ALURED, who was surnamed THE ENGLISHMAN and THE PHILOSOPHER, was a writer of the thirteenth century, about whom very little is certainly known. It would appear that he travelled in France and Italy, became at Rome chaplain to Cardinal Ottoboni, whom he accompanied to England, when he came as legate from Clement IV. He seems to have written chiefly on subjects allied to physical science. Several works are attributed to him: "On the Motion of the Heart," "On the Training of Hawks," "De Musica," "De Rerum Natura," and Commentaries on Aristotle and Boethius.—J. B.

ALFRIC or ÆLFRIC, surnamed THE ABBOT and THE GRAMMARIAN, is the name of an Anglo-Saxon writer to whom many works are attributed. Little is known of his history. It is not even certain that the works which bear his name are the productions of the same man, different surnames being appended, sometimes "the Monk," and sometimes "the Bishop." He was probably born about the beginning of the tenth century, and was, it is said, of noble descent. He studied under Ethelwold at Abingdon and Winchester, and, it is supposed, was made abbot of St. Albans in 969. It is more certain that he superintended for a time the abbey of Cerne in Dorsetshire. There was an Alfric, bishop of Wilton, who succeeded to the see of Canterbury about the end of the tenth century. Some identify our author

with him, while others think he was the Alfric, archbishop of York, who died about the middle of the eleventh century.

Eighteen works have been enumerated as Alfric's, the most famous being two collections of Anglo-Saxon homilies, one of which, a "Paschal Sermon, or Sermon for Easter Sunday," attracted the attention of the sixteenth-century reformers, as an early denial of the doctrine of transubstantiation. It was published by Archbishop Parker in 1566.—J. B.

ALFTEKIN, originally a Turkish slave at Bagdad, rose to the command of considerable forces, and after making unsuccessful war against Aziz-billah was generously forgiven, and became his devoted servant. Died about 982.

ALGARDI, ALESSANDRO, an Italian sculptor and architect of great eminence, born at Bologna in 1598, and died at Rome in 1654. Brought up as a painter under Lodovico Caracci, he soon abandoned that career to become a sculptor. He proceeded to Rome, where, supported by the friendly assistance of Domenichino, and under the patronage of Cardinal Ludovisi, he obtained a very great success. Amongst his most important works are to be noted: in Rome, the great bas-relief in St. Peter's, representing Pope Leo going to meet Attila; the St. Magdalen and St. John the Baptist for the church of St. Silvester; a statue of St. Philip Neri, and the statue in bronze of Pope Innocent X.; many fountains and decorations for the Pamfili Villa; the façade of the church of St. Ignace, and the chief altar of that of San Nicola Tolentino; in Bologna, the beautiful group of the martyrdom of St. Paul, &c. Algardi imitated the mannered style of his great rival, Cavalier Bernini, to whom, however, he was often superior in purity of design, owing to his having spent some time in restoring many of the relics of ancient sculpture. He conducted a numerous school, from which sprang almost all the best sculptors of the following period.—R. M.

ALGAROTTI, FRANCESCO, an Italian author, who was alike distinguished for his cultivation of polite literature, and of the arts and sciences, was born in Venice on the 11th of December, 1712. He was one of six children of a wealthy merchant of that city. At an early age he was sent to Rome, after which he returned to Venice; and on the death of his father, his elder brother Bonomo took the charge of his education, and sent him to the university of Bologna, where he studied science and the belles lettres. In all these branches of learning he soon distinguished himself, and some of his poetical compositions were published without his knowledge in his seventeenth year. He also devoted himself to the study of Greek and Latin, and went to Florence to make himself a perfect master of his own tongue. He subsequently visited Paris, and became personally acquainted with the most distinguished savans there, being already known to them by his contributions to the transactions of the Institute of Bologna. In 1733 he published his "Newtonianismo per le donne," in which he popularized the philosophy of Newton, as Fontenelle had done that of Descartes, a work which became widely diffused throughout Europe. He next wrote several essays in verse, upon different scientific and philosophical subjects, which greatly increased his reputation.

He travelled through Italy in company with a painter of the name of Tesi, and was himself a very distinguished connoisseur, as well as proficient in the art of painting, and composed an essay upon the subject, "Saggio supra la Pittura," which was received with great admiration by his countrymen, and was esteemed by himself as one of his best productions. Algarotti visited Russia, and on his return in 1738, was introduced at Reinsburg to Frederick the Great, then crown prince, who was at once attracted towards him, and pressed him to come to him when he should ascend the throne; the intimacy then formed continued without interruption during the life of Algarotti. Subsequently, Algarotti went to London, where he was well received, and formed the acquaintance of many distinguished persons, and, amongst others, of Pitt, earl of Chatham. On his return, he settled in Berlin, for many years enjoying the friendship of Frederick, who conferred on him the title of count, and made him his chamberlain. He visited the court of the elector of Saxony, Augustus III., who gave him the rank of councillor of war. The pope, Benedict XIV., and the dukes of Savoy and Parma conferred upon him honours and distinctions, and he was everywhere received with the distinction and respect of one who, to elegance of manners and great talents, united the magnificence of a man of wealth, taste, and erudition.

The climate of Germany having sensibly affected his health,

Algarotti returned to his native city of Venice, where he remained for some time, but finally fixed his abode in Bologna. Here consumption set in, but he awaited the issue with the resignation of a philosopher. He spent his mornings in the practice of painting, architecture, and the fine arts; after dinner he occupied himself in correcting his works, and in the evening he listened to music, and thus he met calmly his end. He died at Pisa on March 3, 1764, at the age of fifty-two. He made a design for his tomb, and composed a simple epitaph, "Hic jacet Franciscus Algarottus. Non omnis." The king of Prussia, however, raised a more magnificent monument to him at Pisa, on which, in addition to Algarotti's inscription, he caused to be written, "Algarotto Ovidii Æmulo, Newtoni discipulo, Fredericus Rex," for which last word Magnus was substituted after the king's death.—(*Algarotti Opera; Biog. Univ.*)—J. F. W.

AL-GAZALI, GAZALI, or ALGAZEL (Abou-Hamed-Mohammed-ibn-Mohammed); born at Tous in Khorasan in 1038; died in A.D. 1111. Gazali occupies a very peculiar position among philosophic Arabians; a position, however, that has existed in all ages, and which has been occupied by thinkers of exactly the same character. He is essentially the *Sceptic* of Arabian philosophy; not that his life closed in doubt, but that through his conviction of the powerlessness of Reason he fled to Faith, and found refuge away from Intelligence, in the mysticism and *extasis* of the Sufis. According to the account he has given of himself, Gazali passed through utter scepticism. He doubted the evidence of the senses; he doubted or denied the evidence on which our acceptance of first principles must ever repose; and, as a necessary consequence, he declared unrelenting war against philosophy. The power and originality of Gazali were so great, that he was enabled to inflict a deadly blow on the course of metaphysical inquiry in the East—a blow the more easily inflicted because of its consonance with the inclinations and chief characteristics of the Semitic races. (See article AVERRHOËS.) The works produced by this writer were in number prodigious: two have always been held as the most remarkable—his treatise on the "Tendency of Philosophers," and that still more remarkable production, the "Overthrow of Philosophy." The first treatise seems to be simply expository. It is a resumé, and a very clear one, of the existing state of the philosophical sciences; logic, metaphysics, and physics occupying portions of it: and Gazali writes wholly as a peripatetic, or as if he had been a faithful disciple of Farabi or Avicenna. He stated afterwards, in self-defence, that he thought it right to explain fairly what he meant to demolish. The work *Tchâfot*, or the "Overthrow," rests—according to the able summing-up of M. Munk—on two propositions:—First, Although two circumstances or occurrences may exist always simultaneously, it does not follow that one of them is the cause of the other: for instance, a man born blind, to whom the sense of sight was restored during the day only, or while the sun is up, would imagine that he saw through the agency of the colours presented to him, and would take no account of the light of the sun which enables these colours to make an impression on him. Secondly, Admitting the action of certain causes, as constituted by a law of Nature, it by no means follows that even in circumstances wholly similar and on similar objects, their effects will always be the same: cotton, for instance, may, without ceasing to be cotton, assume (through the will of God) some quality which prevents it from taking fire. In a word, what philosophers designate as a law of nature or the principle of causality, merely is, "that one thing occurs habitually, because God so wills;" and we admit it as certain, because God, knowing through his prescience that things will always happen thus, has imparted to us portions of his own knowledge. But there is no immutable law of nature capable of fettering the will of the Supreme.—The fallacies inherent in this style of thought, cannot require, in these our modern times, to be specially pointed out. Averrhoës and others appear to have doubted the good faith and sincerity of Gazali. Unnecessarily, we think. There always have been clever men who rush to enormous beliefs—denying, at the same moment, and even spurning, those simple first principles, on the ground of which alone, any belief whatever can become rationally possible. Perhaps they discern some incongruity, and choose the alternative most acceptable to their moods and inclinations.—J. P. N.

ALGAZI, SAMUEL-BEN-ISAAC, a rabbi of Crete, author of some rare works. Lived in the sixteenth century.

ALGAZI, CHAJIM, a Greek rabbi, who wrote in the seventeenth century, a work entitled "Neschiboth Mischpot," (The Paths of Judgment,) Constantinople, folio, 1669.

ALGAZI, SOLOMON-BEN-ABRAHAM, a rabbi who has written a great many works on the Talmud; among others, "Ahabath Olam," (Eternal Love,) 4to, Constantinople, 1647; "Zehab Secah," (The God of Ancient Times,) 8vo, Constantinople, 1683, &c. He was a native of the Levant, and became grand-rabbi at Mayence. Died in 1683.—A. M.

ALGER, a learned churchman of the 12th century, who filled various ecclesiastical dignities at Liege, and died at Cluny in 1131. He has left works on the "Sacrament of the Lord's Supper," on the "Freedom of the Will," and other subjects.

ALGHAFIKI, ABOU-DIAFAR-AHMED-BEN-MOHAMMED, was an Arabian physician, who flourished during the earlier half of the twelfth century in Spain. There are said to be three works of his in manuscript in the Bodleian library at Oxford.

ALGHALIB-BILLAH. See ALAHMAR.

ALGHISI, GALEAZZO, was architect and military engineer to the Duke of Ferrara, towards the close of the 16th century.

ALGHISI, TOMMASO, was an Italian surgeon, celebrated in his day for his skill in operations for the stone. He graduated at Padua under Vallisneri. Born 1669; died 1713. His work on "Lithotomy" was published at Florence in 1707, and at Venice the year after.

ALGMAEDSCH, MEIR-BEN-SALOMON, a Spanish rabbi, who translated into Hebrew the Ethics of Aristotle, lived in the fifteenth century.

ALGOENER, DAVID, a Lutheran divine, born at Ulm in 1678, author of a variety of works on mathematics and theology, and editor of Sturm's *Prelectiones*. Died in 1737.

ALGOZALI, ABUD-ACHMAD, an Arabian philosopher, who wrote on the unity of God, on law, and many other topics, some of which were translated into Hebrew, and published.

ALGRIN, JEAN, was bishop of Besançon in 1225, and afterwards, as cardinal and legate under Gregory IX., preached in Aragon the crusade against the Saracens. Died in 1237. Sermons of his are still extant.

ALHAKEM I., a Moorish prince, emir of Cordova in the time of Charlemagne, whose son, Louis Debonnaire, unsuccessfully menaced his throne, in conjunction with two rebellious uncles of the emir. Though not naturally cruel, his character deteriorated towards the close of his reign, when, having settled the succession on his son Abd-er-Rahman, he shut himself up in his seraglio, and abandoned himself to pleasure, at the same time levying heavy taxes to support his excesses. By means of his numerous body-guard of Christian prisoners and Mamelukes, he crushed the revolts which ensued with such cruelty as to procure for himself the surname of Abou-l'Assin the Great in Wickedness. Four years afterwards he died of remorse A.D. 821.—A. M.

ALHAKEM II., son of Abd-er-Rahman III., and one of the most remarkable of the Moorish princes of Spain, was the ninth king of Grenada, where he reigned during the latter half of the tenth century. The reign of Alhakem II. was richer in the blessings of peace than in the questionable glories of war, and, from the munificent encouragement given to men of letters during the period, may be styled the Augustan age of Arabic literature. He founded a library of such extent, that an incomplete catalogue of it contained 4400 pages, and this magnificent collection of books he opened to the students of all nations. Alhakem II. ended his prosperous and splendid reign A.D. 976.—A. M.

ALHAKEM BIAMBILLAH, sixth Fatimite caliph of Egypt, succeeded his father Aziz-Billah in A.D. 996. At first a dissolute monarch, he afterwards became a particularly strict Mohammedan, and destroyed all the vineyards in his realm. He fell a victim to a conspiracy in the twenty-fifth year of his reign.

ALHAKEM-IBN-ATTA, the ONE-EYED (Mocanna), the original of the "Veiled Prophet" of Moore's well-known poem, founded a body of Arabian sectaries towards the close of the eighth century. His skill in the natural sciences enabled him to pass himself off for a prophet, and even for an incarnation of the Son of God. Merou in Khorassan was the scene of this imposture. When hard pressed by the soldiers of the caliph Mahdi, A.D. 780, he poisoned all his immediate followers, and then burned himself, in order to make his disappearance from the earth mysterious and complete.—A. M.

AL-HARTITH, an Arabian astronomer of the ninth century.

ALHAZEN; among the Arabians ALHAZER, deserves a

special notice. His treatise on the phenomena of twilight is astonishingly correct in theory, and indicates a distinct knowledge of astronomical refractions. He teaches how the observer may assure himself of the displacement of a star through effect of such refraction; and he very acutely refutes the common conception, that the great apparent size of the sun or moon, when in the horizon, is owing to this cause. The period at which Alhazen lived is not well determined.—J. P. N.

AL-HEDJADJ-IBN-MUTAR, an Arabian mathematician, who, about the commencement of the ninth century, or close of the preceding, translated into Arabic Euclid's Elements and Ptolemy's Almagest—the Arabic name for the *Μεγάλη Σύνταξις τῆς Ἀστρονομίας* of that author.

AL-HOMAYDI, a voluminous Arabic author of the eleventh century, who wrote a work, still extant, giving an account of the principal Spanish Moslems of celebrity. He was a native of Majorca; and a copy of his book is in the Bodleian library.

AL-HORR, emir of Spain, sent to supersede his predecessor Ayoub in 717, and himself, on account of his tyranny, superseded two years after.

ALHOÿ, LOUIS, was the successor of the Abbé Sicard as director of the Institution for the Deaf and Dumb at Paris. He has left, among other works, a "Discourse on the Education of Deaf Mutes." Born 1755; died 1826.

ALI, the name of various orientals of celebrity, whom we arrange chronologically, without reference to the order of their surnames:—

'ALI-IBN-ABI-TA'LIB, the fourth Khaleefeh, *i.e.*, "Successor" or "Vicar" (of Mahomet) in Arabia. He was born at Mecca at the close of the sixth, or the commencement of the seventh century of the Christian era. His father, Abu Talib, a member of the illustrious tribe of Koraysh, was Mahomet's uncle, and having a numerous family, he placed Ali under his nephew's care. Ali devoted himself to the prophet's service, and gave early proofs of great energy of character, as well as of remarkable courage and intrepidity. When the future legislator of Arabia assembled his relatives to announce to them the nature of his mission, and to demand from among them one who should be his vizier, Ali, after waiting impatiently for some of his seniors to reply, offered his services with the utmost zeal and enthusiasm, and in his subsequent conduct afforded ample evidence of the sincerity with which he devoted himself to Mahomet's cause. He was second only to the prophet himself, in the vigour and success with which he proclaimed and established the religion of Islâm. When the Korayshites resolved to destroy Mahomet, it was Ali who, clad in the green mantle of the prophet, deceived the conspirators, and enabled his benefactor to escape the sword of the assassins; and at the battle of Bedr, it was the heroism of Ali which mainly contributed to the victory. In almost every engagement with the hostile tribes of Arabia, in the campaigns in Syria and Yemen, the most singular success attended the arms of this intrepid warrior. As a reward for his signally important services, Mahomet gave him his daughter Fatimah in marriage, and conferred upon him the title of As'ad Allah Al-ghalib, "the Lion of God always victorious."

The eminent qualities of Ali pointed him out as the most suitable successor of Mahomet, but he does not seem to have been inspired with the love of empire. It was not till after the death of 'Othman that he was raised to the dignity of Khaleefeh, and it was with great reluctance that he permitted himself to be persuaded to assume the government. No sooner, however, was he invested with supreme power, than he found himself surrounded by enemies. Several of the most powerful chiefs, with their followers, arrayed themselves against him, and united with the governor of Syria, and 'Ayesshah, the favourite wife of Mahomet, in raising the standard of revolt. Ali lost no time in opposing the formidable confederacy, and having in vain endeavoured to bring about a reconciliation, met his adversaries in battle, and was completely victorious. Subsequently to this event he gained several important victories over his opponents, and at length united the Arabs and Irakians under his government; but Muawiyah, the governor of Syria, still retained possession of that province, while the sovereignty of Egypt was seized by his lieutenant, 'Amru. The utmost disorder was thus occasioned, and a conspiracy formed, which proved fatal to Ali, who died by the hand of an assassin, A.D. 661, in the sixty-third year of his age, and after a reign of nearly five years.

Ali, as already mentioned, had married Fatimah, the daughter

of Mahomet. As long as she lived he took no other wife, but at her death he had several wives, by whom he had a numerous progeny, who, spreading over the East and West, originated various dynasties, claiming authority as the descendants of the prophet.

Ali unquestionably possessed many qualities worthy of admiration. He was no less remarkable for his personal beauty, than for his moral and intellectual endowments. He not only possessed indomitable courage, but was generous and self-sacrificing. He was one of the most learned men of his age, and had a high reputation as a poet. These qualities and acquirements have combined to render him one of the most illustrious persons in the records of oriental history. Like Marcus Anrelius Antoninus, this celebrated prince has left behind him a collection of maxims.—F.

ALI-IBN-ZEYD, ABUL-HASSAN ATTAIMI, a Saracen astronomer, who flourished during the reign of the caliph Almanson, and translated a set of astronomical tables, from the Palwi tongue into Arabic.

ALI-ARRIDHA, a descendant of Ali, venerated by the Scheik sect as one of the twelve legitimate successors of Mahomet. He was born in 785, married a grand-daughter of Haroun-al-Raschid, and perished by poison in 819.

ALI-IBN-AL-AGRABI-ABUL-HASSAN, an Arabian astronomer of the ninth century.

ALI-IBN-AHMED-AL-EMRANI, a mathematician, astronomer, and astrologer of Mosul, who died about A.D. 955.

ALI-IBN-AHMED-ABULKASSIM ALMODJTABI, an Arabian mathematician of the tenth century, who lived at Antioch, and wrote a commentary upon Euclid.

ALI-IBN-SIDAH or EBN-ISMAIL-ABUL-HASSAN, a native of Murcia, lived in the tenth century, and compiled a very comprehensive dictionary of the Arabic language.

ALI-BEN-EL-ABBAS or ALAEDDIN-AL-MATJOUSI, known likewise as HALI ABBAS, an eminent Arabian physician of the tenth century. His principal work, the "Ketab El Málki," was held in high esteem until the appearance of Avicenna's canon, and was even subsequently preferred by many as being more practical. He treats of dietetics, of the preservation of health in different climates, of mineral waters, &c. He speaks more clearly than his predecessors concerning the gastric juice, and on biliary calculi. His knowledge of anatomy was minute and accurate, and he advises young physicians to seek knowledge not in books, but in hospitals.—J. W. S.

ALI-IBN-YOUNIS, an Arabian astronomer of great celebrity, born at Cairo about the middle of the tenth century. His works are considered by the Arabians as among the most valuable in their language. He died in A.D. 1008.

ALI-IBN-HAMMOUD, the founder of the Hammoudite dynasty in Spain. When the Edrisites, descendants of Ali, were expelled from Africa, he and his brother found safety in the court of Hescham II. at Cordova. When that prince was assassinated in 1013, Ali Hammoud resolved to avenge his death, and, in a battle near Seville, he defeated Soliman, whom he killed with his own hand. He was, however, strangled by his own attendants in 1017.—F.

ALI-ALHOSRI, surnamed THE BLIND, an Arabian poet of the eleventh century. He resided at Seville, and wrote in praise of Sultan Almotamed.

ALI-BEN-RODHOUAN, an Arabian physician, a native of Djizeh, near Cairo, who died in 1067-8. He was the author of many treatises on medical science and philosophy.

ALI-IBN-JOUSSOUF-IBN-TACHEFIN, sultan of Africa and Spain. He ascended the throne A.D. 1106. His empire included the provinces of Morocco, Andalusia, Grenada, Valencia, as well as a considerable portion of Portugal, Aragon, and Catalonia. Having lost a great part of his vast dominions, he died of grief A.D. 1142-3.

ALI-IBN-BESSAM, an Arabian historian of the twelfth century, a native of Santarem in Portugal.

ALI-IBN-KIHARUF, surnamed ABUL-HASSAN, an Arabian poet and grammarian, born at Seville about A.D. 1155, where he died in 1212.

ALI-ABAOUL-HASSAN, surnamed NOUREDEEN, or "Light of the Faith," the second sultan of the dynasty of the Ayubites, son of the celebrated Saladin, whom he succeeded in the sovereignty of Syria A.D. 1193

ALI-IBN-ABI-ALI-ASSAIF or SAIFEDDIN, an Arabian writer, born at Amida A.D. 1156; died in 1233.

ALI-IBN-AHMED-IBN-ALI-IBN-MOHAMMED-ABOUL HASSAN, an Arabian philosopher of high repute. He died at Bagdad A.D. 1215.

ALI-IBN-SAYD, an Arabian geographer and historian. He was born at Grenada A.D. 1214, and died at Tunis in 1286.

ALI, surnamed ABOUL-HASSAN, sixth sultan of Africa, of the dynasty of Beni Merin. He succeeded his father Othman in the throne A.D. 1331. He was put to death in 1351, after being defeated in battle by his son.

ALI-ASTERABADI, a Persian poet of the fourteenth century, the author of poems highly celebrated in his age, but now almost forgotten, from their merely local interest.

ALI-IBN-ABD-ER-RAHMAN, an Arabian writer, who resided at Grenada in the 14th century. He was the author of a treatise on the military art, as practised by the Moors in Spain.

ALI-KUDSCHI, a Moslem astronomer, born towards the end of the fourteenth century. He was the author of some mathematical works. He died A.D. 1474.

ALI-ABUL HASSAN, succeeded his father Mahomet X. in 1466, as the twentieth king of Grenada of the Nasrite dynasty. He was engaged in civil wars, first against the Moors of Malaga, and afterwards against his rebellious son Boabdil. He endeavoured also unsuccessfully to check the encroachments of Ferdinand and Isabella of Castile and Aragon, who took from him the stronghold of Alhama. Died about 1484.—J. W. S.

ALI-SCHIR-AMEER, vizier to the Shah Hussein of Persia, flourished in the fifteenth century, and was esteemed as a patron of literature and the arts.

ALI-BESTAMI or MUSSANIFEK, a Turkish scheik and author of the fifteenth century. He has left a poem in praise of Mohammed, and various works on divinity, philology, and law.

ALI-MAKDUM, at first a eunuch in the seraglio of the Sultan Bajazet II., afterwards pasha of Semendria, in which capacity he distinguished himself in a war against the Hungarians, took Dalmatia from the Venetians, and captured Modon and Koron in Greece. He was then advanced to the post of vizier, and fell at last in battle against the Koords, about 1512.

ALI-MOEZZIN, a Turkish admiral, who served under Selim II. He took Cyprus from the Venetians, but was finally defeated and slain at the battle of Lepanto in 1571.

ALI-ADIL-SHAH, succeeded to the throne of Visiapore in India in 1557. After some victories over his neighbours, he engaged in an unsuccessful attempt to expel the Portuguese from Goa, and died in 1580.

ALI-MUSTAPHA BEN AHMED BEN ABDEL MOTTAI, a Turkish poet and historian, was born at Gallipoli in 1542, served among the janissaries, and died in 1599.

ALI-BEY, ALBERT BOBOWSKI, a Turkish author, was born in Galicia, translated the Bible into Turkish, and died in 1675.

ALI-MUES-INSADI or DEFTERDAR, a Turkish jurist of the seventeenth century.

ALI-CHORLILI, grand vizier of Turkey, opposed the attempts of Charles XII. to engage the sultan in a war against Russia, and having been deposed from his office, died in the Crimea in 1711.

ALI-COUMMOURGI, grand vizier under Achmet III., frustrated the intrigues of Charles XII. of Sweden, conquered the Morea from the Venetians, and having invaded Hungary, was defeated and slain by Prince Eugene at Peterwardein in 1715.

ALI-BEY, a Mameluke, who, during the last century, usurped the sovereignty of Egypt. Having risen from rank to rank, he became one of the twenty-four beys who shared the supreme authority with the Turkish viceroy. In 1766 he succeeded in overpowering his colleagues, drove out the viceroy, and assumed the title of sultan. He next allied himself with Russia, then at war with Turkey, subjugated the coasts of Arabia, and penetrated into Syria. The Turks were everywhere defeated, and Damascus was about to surrender, when the treachery of Mohammed Bey, Ali's lieutenant, put an end to his conquests. Deserted by a large part of his followers, he was compelled to flee, and being seized by Murad Bey, was put to death in 1773.—J. W. S.

ALI-BEY, the assumed name of DOMINGO BADIA Y LEBLICH, a Spanish traveller, born in Biscaya in 1766. Desirous of travelling in the north of Africa and the west of Asia, he assumed the name, costume, and language of an Arab. He landed at Tangier in 1803, visited Morocco, Tripoli, Cyprus, and Egypt, and arrived in 1807 at Mecca. Finding his native country on his return occupied by the French, he became an

afrancesado, and accepted office under the usurper. This obliged him subsequently to take refuge in France, where he published an account of his travels. He afterwards set out for Syria under the name of "Ali Othman," but died rather mysteriously at Aleppo, where his papers were seized by the pasha. His researches were published at Paris in 1814.—J. W. S.

ALI, nabob of Oude, succeeded Assaf-Ed-Dowlah in 1797. Showing symptoms of hostility towards the English government in India, he was deposed in 1798, when, after procuring the assassination of Mr. Charry, the English resident, he fled, but falling into the hands of justice, spent the rest of his life a close prisoner at Fort-William. Born 1781; died 1817.—A. M.

ALI-PACHA, vizier of the pachalic of Janina or Joannina in Epirus, born in 1741, or, according to another account, in 1750; died in 1822. The life of this man, whose ambition and capacity caused his career to be at one time invested in the eyes of European statesmen with an extraordinary importance, remarkably illustrates the social and political condition of the Ottoman empire in modern times. His father was a pacha of two tails, an insignificant rank in the administrative hierarchy of Turkey, and died when Ali was thirteen years old. His native place was Tepellene, a town in the north of Epirus. His mother Kamco seems to have been a woman of fiendish character, and to have instilled into the mind of her hopeful son lessons of immorality and cruelty, which he faithfully acted upon during the long course of his after life. His career resembles, in many respects, that of a marauding baron in the middle ages. He started in life—so he was accustomed to boast—with "sixty paras and a musket;" gradually he made himself master of a number of villages round Tepellene, until he found himself in a position to buy a pachalic from the sultan. After a time he obtained possession of Joannina, and was confirmed as the pacha of that district by Selim III. Mr. Hobhouse, who visited Albania in 1809, gives a graphic account of the place and of its master. Joannina stands on the western shore of a beautiful lake, ten miles long; a chain of mountains, nearly always capped with clouds, and forming part of the great Pindus range, rises immediately from the eastern or opposite shore of the lake, while to the west and south extends for many miles a green and fertile plain. A few miles to the north, among hills and oak forests, lies the supposed site of the ancient oracle of Dodona. Not finding Ali in his capital, Mr. Hobhouse followed him to Tepellene, where he found him busily prosecuting a little war against the pacha of Berat. At the moment he arrived, he was keeping feudal state in his castle of Tepellene, the court-yard of which was thronged with soldiers and retainers. Mr. Hobhouse describes him as a short man, about five feet five inches in height, very fat, with a round agreeable face, and blue quick eyes. Though totally illiterate, the questions which he put to the English travellers evinced much intelligence; but the predominant qualities in his mind were cruelty and avarice, to the latter of which vices he became so completely a slave, that it ultimately caused his ruin. His revenue in 1809 was about six million piastres; but large and indefinite additions were annually made to this in the shape of sums paid for *protection* by towns and villages. He paid his tribute regularly to the Porte, and duly furnished his contingent of troops, when called upon, to the Turkish armies; but he would never trust himself at Constantinople, in spite of repeated solicitations from the Turkish government. With such a reputation for wealth and ability, his head, he knew well, would not have been safe on his shoulders if he had ventured to court. Instances of his atrocious cruelty might be given which would fill a volume; a single one may suffice, related by Hobhouse, who on the whole is inclined to judge leniently of Ali rather than otherwise. Visiting one day the wife of his eldest son, Monetar Pacha, he found her in tears; on being pressed to explain the reason, she alleged that her husband was unfaithful to her. Ali, with whom she was a great favourite, was very indignant, and demanded the names of the guilty parties. She named fifteen of the most beautiful and highborn ladies of Joannina, Christian as well as Mussulman. Ali immediately had these unfortunate ladies seized by his satellites, put in sacks, and drowned in the lake. Over the hideous licentiousness of the tyrant it is necessary to draw a veil. Yet Ali zealously observed the outward forms of his religion, at least in his later years; he duly kept the Ramazan, and entertained several dervishes at his court. Ali's abilities appear to have been overrated by European statesmen; in the declining and

distracted state of the Ottoman empire, he was looked upon as a man capable of erecting a powerful independent sovereignty, if not of seizing upon the throne of his master, and both France and England accordingly paid court to him; but the event belied these expectations. In 1820, Sultan Mahmoud, who coveted his riches, placed him under the ban of the empire, and sent a large force to invade his territories. A judicious use of his hoarded wealth would probably have enabled Ali to make an effectual resistance; but such was his avarice, that he could not bring himself to take this step. His troops, therefore, ill paid, abandoned him, and he was besieged in the fortress of Joannina. For eighteen months he bravely resisted the assaults of the Ottoman army, but at last he was left with only fifty followers, and obliged to treat for a surrender with Khorchid Pacha, the Ottoman general. Finding that his life would not be spared, he defended himself bravely to the last; but after killing one and wounding another of his assailants, he was shot down by a ball in the chest. This was on the 5th February, 1822. His head was cut off and sent to Constantinople.—T. A.

ALIAMET, JACQUES, a skilful French engraver, whose plates after Wouvermans, Berghem, and Vernet, are favourites with connoisseurs. Born 1728; died in 1788.

ALIBAUD, LOUIS, born at Nismes in 1810, was a man of violent political opinions, who, in June, 1836, fired upon Louis Philippe, for which he was guillotined the same year.

ALIBERTI, GIOVANNI CARLO, an Italian painter, some of whose pictures may be seen in the church of Asti, his native town. Born 1680; died about 1740.

ALIBERT, JEAN-LOUIS, Baron, a French physician, celebrated for his knowledge of diseases of the skin, was born at Villefranche in 1766. He became professor of *materia medica* at the École de Médecine of Paris, and Louis XVIII. appointed him his physician in ordinary; but Alibert made his most important studies, and gave his most important instructions in his special department of skin diseases, at the hospital of St. Louis, where he taught for twenty years. His elaborate work "Traité Complet des Maladies de la Peau, Observées à l'Hôpital Saint Louis," with plates, was published at Paris in 1806–1826; other works of Alibert's are: "Discours sur les rapports de la Médecine avec les Sciences Physiques et Morales," Paris, 1799; "Physiologie des Passions, ou Nouvelle Doctrine des Sentiments Moraux," Paris, 1825. Alibert died in 1837.—A. M.

ALIBRAND, FRANCESCO, an Italian author, died in 1711. He was a jesuit, and among other things wrote a casuistical work entitled "Dell' Opinione Probabile," Messina, 1707.

ALIBRANDI, GIROLAMO, a Sicilian painter, sometimes called the "Raphael of Messina." He was a pupil of Leonardo da Vinci's about 1497.

ALICE OF CHAMPAGNE, a daughter of Thibaut IV., count of Champagne, lived in the twelfth and thirteenth centuries. She became the wife of Louis VII. of France, and the mother of his son and successor, Philip Augustus. During the absence of the latter on a crusade, she held the regency of the kingdom with equal energy and prudence.—J. W. S.

ALIDOSI, GIOVANNI-NICOLA-PASQUALI, an antiquary who lived about the commencement of the 17th century in Bologna; his writings are among the archives of that city.

ALIGHIERI, an ancient family of Florence. See DANTE.

ALIGHIERI, GIOVANNI, an Italian miniature painter and illuminator of considerable merit, who illustrated an ancient manuscript of Virgil's works about 1193.

ALIGNAN, BENOIT D', bishop of Marseilles in 1229, has left several works, chiefly on theological and ecclesiastical subjects.

ALIGRE, ETIENNE D', chancellor of France, born at Chartres A.D. 1550; died in 1635.

ALIGRE, ETIENNE-FRANCOIS D', first president of the parliament of France in 1768. He distinguished himself by his political sagacity; but after many efforts to serve his country, he became an exile, and died in Brunswick in 1798.

ALIMENTUS, L. CINCIUS, an early Roman historian, who receives high praise from Niebuhr, for having examined the facts of Roman history in the right spirit of criticism. He was a man of high rank, acted as prætor in the second Punic war, and gained renown as a statesman.—J. D.

ALINARD or HALINARD, a learned Benedictine, born at Bourgogne, toward the end of the tenth century. His profound erudition and remarkable eloquence led to his preferment, and he became archbishop of Lyons in 1046. Died in 1052.

ALINGTON, ROBERT, a doctor and professor of theology at Oxford, chancellor of the university, and about 1400 wrote a variety of Latin tracts.

ALIPIUS, bishop of Tagaste, the pupil and friend of St. Augustine. He was a lawyer by profession, and rose to the highest judicial eminence. Like St. Augustine, he had at one time led a careless life, and been deceived by Manichæism. He followed his friend in his last great change, and was baptized with him at Milan by St. Ambrose A.D. 387. He afterwards accompanied St. Augustine to Hippo, and became bishop of Tagaste. He probably died about A.D. 429. He is commemorated by the Roman catholic church on August 15.—J. B., O.

ALIPRANDI, BONAMENTE, an Italian poet of the 14th and 15th centuries, who wrote a chronicle of Mantua in verse.

ALIPRANDO, MICHEL ANGELO, a painter of Verona in the sixteenth century, pupil of Paul Veronese.

ALIS-IBN-ISA, one of the astronomers of Almamoun. This illustrious caliph, amidst his other efforts in promotion of knowledge, proposed to obtain a more accurate determination of the magnitude of the earth. The best mathematicians were thereupon commanded to measure a degree of the meridian on Singiar, a vast plain of Mesopotamia. They arranged themselves in two divisions, the one under Chahid ben Abdomeh, the other under Alis-Ibn-Isa. One division went northward—the other southward. The degree thus measured cannot boast of remarkable accuracy; but there is considerable doubt as to the value of the *unit* employed by the observers. The expedition or experiment, however, deserves to be recorded, as the first modern anticipation of our recent grand enterprises.—J. P. N.

ALISON, ARCHIBALD, an episcopal clergyman, was born at Edinburgh—of which city his father was a magistrate—in the year 1757. His education was begun at Glasgow university, whence he went up as an exhibitor to Baliol college, Oxford. In 1784 he took orders in the English church, marrying in the same year the daughter of Dr. John Gregory of Edinburgh. He obtained rapid preferment in the church, being appointed a prebendary of Salisbury, and nominated to several benefices in different parts of England. In 1797 he received an invitation to become the senior minister of the episcopal chapel in the Cowgate, Edinburgh. He accepted the offer, and continued to act as the pastor of this congregation up to the year 1831, when ill health compelled him to retire from the active duties of the ministry. He died in the year 1839, at the advanced age of 82.

His reputation as a writer mainly rests on his "Essay on the Nature and Principles of Taste," published in 1790. This work was favourably reviewed by Jeffrey in the "Edinburgh Review" for 1811. It is written in a lively and pleasant style, much resembling that of his more distinguished son, the author of the "History of Europe during the French Revolution," but erring too often on the side of diffuseness. It may decidedly be called pleasant reading, though the subject is at first sight a dry one. The theory, to the proof and illustration of which the whole book is devoted, may be briefly stated thus. The contemplation of certain external objects exists in the mind, the emotion of the sublime, or of the beautiful, or the terrific, or the pleasing, &c. &c. Now, what is the real moving cause of the emotion in each case? "Not," says Alison, "any physical quality inherent in the object itself; it is not that a mountain is *in itself* beautiful, or a brick-wall *in itself* ugly." His explanation is, that by the law of the association of ideas, the contemplation of such objects awakens in the mind the ideas of *other* objects, which *naturally* excite in us the feelings of love, pity, fear, veneration, or any other common and lively sensation of the mind. Hence, for example, he explains the delight we feel in contemplating the aspects of nature in the season of spring, by saying that those aspects call up the idea of *infancy*, and by consequence suggest the long train of ideas, of fearful tenderness, frailty, growth, freshness, hope, and apprehension, which are naturally associated with the primary idea of infancy. He denies that natural beauty can be perceived at all by children. "The beauties of nature," he says, "have no existence for those who have as yet but little general sympathy with mankind; they are usually first recommended to our notice by the strains of the poets, whom we read in the course of our education, and who in a manner create them for us by the association which they enable us to form with the visible external phenomena." Exactly the opposite doctrine to this is taught by Wordsworth, in his "Ode on the Intimations of Immortality:"—

"Heaven lies about us in our infancy;  
Shades of the prison-house begin to close  
Upon the growing boy;  
But he beholds the light, and whence it flows,  
He sees it in his joy;  
The youth who daily farther from the east  
Must travel, still is nature's priest,  
And by the vision splendid  
Is on his way attended;—  
At length the man perceives it die away,  
And fade into the light of common day."

Neither theory seems to give an adequate explanation or analysis of the facts of our consciousness; but this defect is more excusable in a poem than in a philosophical treatise. (Knight's *English Cyclopædia*.)—T. A.

ALISON, SIR ARCHIBALD, Bart., son of the preceding, was born in 1792 at Kenley, in Shropshire, where his father was then vicar. He was, however, educated in Edinburgh, his father having removed to that city. He studied for the Scottish bar, and was admitted as an advocate in 1814. He was appointed sheriff of Lanarkshire in 1834, in 1852 was created a baronet by Lord Derby's government, and in 1853 the degree of D.C.L. was conferred on him by the University of Oxford. In 1845 he was chosen lord rector of Marischal college, Aberdeen, and of Glasgow university in 1851. His chief work is the elaborate and voluminous "History of Europe, from the French Revolution of 1789 to the Restoration of the Bourbons in 1815." A continuation, to the accession of Louis Napoleon, was published in 1859. He also wrote on the criminal law of Scotland; on the "Principles of Population;" a "Life of Marlborough;" and "Essays, Historical, Political, and Miscellaneous," which first appeared in *Blackwood's Magazine*. Sir Archibald's writings, especially his "History of Europe," have attained a very extensive circulation and great popularity. He died on the 23rd of May, 1867.—J. B.

ALISON, WILLIAM PULTENEY, M.D., Edinburgh; D.C.L., Oxon., 1850; F.R.C.P., Edinburgh; Hon. F.R.C.P., Dublin; First Physician to Her Majesty for Scotland; Emeritus Professor of Practice of Medicine in the University of Edinburgh; formerly President, Royal College of Physicians, and Professor of the Institutes of Medicine and Physiology, Edinburgh; F.R.S.E., and Vice-President, R.S.; Fellow and formerly President of the Medico-Chirurgical Society, Edinburgh; Hon. Member of Royal Medical Society, Edinburgh, &c. Dr. Alison was born at Edinburgh in 1790, and died there in 1859. His father, the Rev. A. Alison, was the author of an "Essay on Taste," and several other works. The subject of this sketch, after going through the usual course of classical studies, became a student of medicine in Edinburgh university in 1806, and obtained his degree in 1811. During this time he acted as occasional secretary and assistant to his uncle, Dr. Gregory, professor of practice of medicine, in which duties he continued till the death of Gregory in 1821. In 1819 he began to lecture on physiology, and in 1820 he obtained the professorship of medical jurisprudence and police. In 1822 he was associated with Dr. Duncan, jun., as professor of institutes of medicine, and also became one of the clinical lecturers in the infirmary. In 1828 he was appointed sole professor of institutes of medicine, in connection with which he published the "First Lines of Physiology" in 1830, and the "Outlines of Physiology and Pathology" in 1833. In 1832 he succeeded to the professorship of practice of medicine, and from that time gave regular lectures till 1855, when declining health obliged him to resign his more arduous duties.

In lecturing on the different branches of medical science, first in a general course of institutes of medicine, including the elements of physiology, pathology, and therapeutics, and afterwards in the application of the two last branches to practice, it appeared to him that the present state of our knowledge admitted of their being taught in connection, not merely as linked together by the details of anatomical structure, but as forming a grand and important department of natural science—that indeed to which many other parts of natural science may be regarded as subordinate and subsidiary—the study of the living body as existing in health, as affected by disease, and as influenced by medicines; and that in accordance with the well understood object in all the sciences, of tracing the phenomena included under each head up to certain ultimate facts or laws of nature, in this department of her works a more systematic form might be safely given to these sciences, than had yet been done by any author or teacher in this country. This accordingly was his

object in his lectures and in his writings, and stamps him as one of the soundest and most original physiologists of his time.

Besides his professional labour, Dr. Alison devoted much of his time and talents to the alleviation of the sufferings of the poor. His heart, so full of the "milk of human kindness," bled at what he saw among his fellow creatures, and accordingly he published in 1840, and subsequently, several papers and pamphlets on the condition of the poor, the management of the poor laws, and on the relief to be given. In the *Statistical Journal* of Dublin many of these papers are to be found. Others were published separately; among the first being his reply to Dr. Chalmers, the other great philanthropist of those days, written in 1841. Great as Dr. Alison's abilities were known to be, his unwearied exertions in the cause of philanthropy, and his unbounded charity, will ever encircle the knowledge of his labours with the halo of admiration and unfading honour.—G. B.

ALIX OF CHAMPAGNE. See ALICE.

ALIX, MATTHEW FRANCIS, a physician, born at Paris in 1738. The latter part of his life was spent in Germany, where he became professor of anatomy at the college of Fulda. He is distinguished as one of the earliest modern writers on the evils of intramural interment. He died at Brückenau in 1782.

ALIX, P. M., a French engraver, a native of Honfleur, born 1752. He died in 1809. He was a pupil of Le Bas.

ALIX or ALLIX, THIERRY, a historian and topographer of Lorraine, was born in 1534, became president of finance under Charles III., and died in 1597, leaving several works on history and finance.

ALKADIR-BILLAH, the twenty-second Khaleefeh of the dynasty of the Abbassides, born at Bagdad 947, died in 1041.

ALKALKASHANDI, a native of Cairo, and author of several works in the Arabian language.

ALKEMADE, CORNELIUS VAN, a Dutch antiquary, born 1654; died 1737; author of numerous original works and editions of ancient chronicles, &c.; such as, "Hollandsche Jaar-oeken of Rymkronyk," Leyden, 1699, which gives the earlier history of Holland; and "Jonker Fransen Oorlog," which gives an account of the struggle between the factions of the Hoeksen and Kabbeljawsen at Rotterdam in 1488-89.—A. M.

ALKHAZREJI, an Arabian historian of Cordova, where he flourished about the middle of the twelfth century.

ALKHOWAREZMI or ALKHARIZMY, an Arabian philosopher, a native of Khorassan, born about the commencement of the ninth century. He was librarian to the Khaleefeh Almamoun at Bagdad, and wrote some mathematical treatises.

ALKINDI, a famous Arabian physician of Bagdad, about 880. He wrote many works, and is sometimes called the "Mahometan Pythagoras."—(Bayle, D'Herbelot.)

ALKMAAR, HENRY D', a Dutch poet of the fifteenth century. In 1477 he became counsellor to David de Bourgogne, prince-bishop of Utrecht, and in 1485 entered the service of René II. of Lorraine. He was the author of several works.

ALKODHAI, AHMED-IBN-MOHAMMED, an Arabian writer, a native of Campos, near Jaën, who flourished in the eleventh century. He was the author of a biographical dictionary.

ALKODHAI, MOHAMMED-IBN-MOHAMMED, an Arabian writer, a native of Estepona in Spain. He died about the commencement of the fourteenth century.

ALLAINVAL, LEONOR-JEAN-CHRISTINE SOULAS D', was a French writer of comedies in the earlier half of the seventeenth century. He led the life of a homeless and destitute wretch in Paris, and died at the Hotel Dieu in 1753. Some of his pieces were very successful, particularly "L'Ecole des Bourgeois."

ALLAIRE, JULIEN-PIERRE, a French agriculturalist who aided in organizing the management of the public forests. Born 1742; died 1816.

ALLAIS, DENIS VAIRASSE D', a French author who wrote a "Grammaire Française Méthodique," and a political romance, styled "L'Histoire des Sévarambes." Born in Languedoc, 1630.

ALLALEONA. See ALALEONA.

ALLAM, ANDREW, born 1655, vice-principal of St. Edmund's Hall, Oxford, and one of the assistants to Anthony Wood in compiling his "Athenæ Oxonienses." Died in 1685.

ALLAMAND, JEAN-NICOLAS-SEBASTIAN, a natural philosopher, was born at Lausanne in 1713, and died at Leyden in 1787. He was member of the Royal Society of London, and professor in the university of Franeker, the museum and botanic garden of which were greatly enriched under his superintendence.

He edited the works of Prosper, Marchand, Buffon, Boerhaave, and others, and is said to have been the first to explain the phenomena of the Leyden jar.—A. M.

ALLAMAND, a protestant clergyman of the Canton de Vaud, who published in 1745, a "Lettre sur les assemblées des religionnaires en Languedoc, écrite à un gentilhomme protestant de cette province par M.D.L., F.D.M." Other anonymous works are also attributed to the same individual.—A. M.

ALLAN, DAVID, known as the Scottish Hogarth. This clever delineator of Scottish character, was born at Alloa near Stirling, February 13, 1744. In boyhood his artistic tendencies were first displayed when a burnt foot confined him to the house, and by caricaturing his schoolmaster; a proceeding which occasioned his dismissal. A friend advised the boy's attendance at the Glasgow academy of the brothers Foulis. His last work there, an oil painting, represented the studio. His talents and progress having been observed, he was sent to Rome in 1764 by Erskine of Mar. Gavin Hamilton assisted the young student, who was admitted to the Roman academy of St. Luke, and gained the silver and gold medals. His historical picture for competition was "The Origin of Portraiture"—the Corinthian maid drawing her lover's shadow. It was engraved by Cunego, and extended Allan's reputation, for the story was told effectively and with elegance. He does not seem to have equalled this academic work, or to have maintained interest in such subjects, though he painted "Hercules and Omphale" and "The Prodigal Son." Mirthful and observant, he delighted in the active world around him. His four pictures of the "Carnival at Rome" are filled with ludicrous groups, in the style of Hogarth's "Election." Leaving Italy in 1777, he remained two years in London painting portraits, and then returned to Edinburgh, where in 1786 he was appointed successor to Runciman as master of the Academy of Arts. Illustrations of Ramsay's "Gentle Shepherd," and other characteristic pictures of Scottish rustic life, occupied his pencil, and were engraved by himself in aquatint. On these his fame chiefly rests. They were almost totally devoid of idealism, but possessed genuine national humour, depending entirely on their artless truthfulness and drollery. The scenery of Newhall was literally copied to enhance their general fidelity. His "Highland Dance," "Penny Wedding," and "Repentance Stool," paved the way for the appreciation of Burnet and David Wilkie. "John Anderson," "Maggie Lander," "Turnimspike," and "Wooded an' Married," were attempts to illustrate Burns, but deficient in grace and poetic feeling. In his "Escape from Lochleven" and landscapes, Allan did not fulfil the early promise of his genius. Had he nerved himself for greater achievements, even in his own walk, he would have left a more distinguished name. Died August 6, 1796.—J. W. E.

ALLAN, GEORGE, a Scottish poet of merit, was born near Edinburgh in 1806. He published a respectable "Life of Sir Walter Scott," in octavo, and was a leading contributor to M'Leod's "Original National Melodies of Scotland." He died in 1835. Several of his songs enjoy popularity among his countrymen.—C. R.

ALLAN, ROBERT, a lyric poet of Scotland, was born at Kilbarchan, Renfrewshire, on the 4th November, 1774. He was a muslin weaver, and composed verses at the loom. He published a small volume of poems in 1836; emigrated to America, and died at New York in 1841. Many of his songs published in the "Modern Scottish Minstrel," evince fine thought, and are pervaded by remarkable pathos.—C. R.

ALLAN, THOMAS, a celebrated mineralogist, born at Edinburgh in 1777, was educated at the High School of his native city, and spent his earlier years in commercial life. He soon evinced great taste for the study and collection of minerals, and in search of different specimens visited Paris and the mining districts of Dauphine, as well as the more noted mineral and geological districts of his own country. In 1812 he spent some time in the Faro Islands, and published in the Transactions of the Royal Society of Edinburgh an account of their minerals. An accident put him in possession of a valuable addition to his cabinet, in the shape of a collection, bought by Mr. Allan from a Danish vessel which had been captured on her passage from Iceland, and which proved to have been one carefully made by M. Gieseke in Greenland. The cases contained some valuable specimens; among the rest, an entirely new species which was then named the Allanite. His cabinet, arranged with great taste, was visited and admired by persons from all parts of Europe, among

others by M. Gieseke, who had been able to trace the whereabouts of his lost Greenland collection, and who professed himself well satisfied with the hands into which it had accidentally fallen. Several contributions were made by Allan to the Transactions of the Royal Society, on geology as well as mineralogy. His only separate work is on the nomenclature of minerals. He wrote the article "Diamond," in the Encyclopædia Britannica. Died 12th September, 1833.—J. B.

ALLAN, SIR WILLIAM, R.A. and P.R.S.A., a distinguished painter, born at Edinburgh in 1782. He studied at the High School, and early displayed inclination to become an artist; was apprenticed to a coach painter, and became a fellow-student of David Wilkie and John Burnet at the Trustees' Academy, under Graham. After serving his time, he removed for additional study to London, and finding little encouragement there as a painter, he boldly started for Russia, as a new field. Driven by a storm to Memel, on the Prussian coast, he soon obtained employment at portraiture, and with increased funds journeyed to St. Petersburg and the Ukraine, where he profitably remained ten years, accumulating materials for his principal pictures. Before returning home in 1814, he beheld many episodes of warfare with the invading French army. His "Circassian Captives," exhibited next year, secured attention, and was purchased by subscription. The late Russian emperor, Nicholas, obtained Allan's "Polish Exiles journeying to Siberia," a work of simple impressive dignity and pathos, and afterwards commissioned his "Peter the Great teaching Shipbuilding." Numerous other successful works followed:—The Murder of Archbishop Sharpe, Knox reproving Queen Mary, Rizzio, Death of Regent Murray, Slave Market in Constantinople, the Pressgang, Walter Scott at Abbotsford, The Orphan, Burns, Tartar Banditti, Haslan Gherai crossing the Kuban, Jewish Wedding, Fair Maid of Perth, The Widow, Humanity of Robert Bruce, Death of Colonel Gardiner at Prestonpans, Waterloo, purchased by the duke of Wellington, and a companion picture, for the Westminster competition in 1844. Foreign travel was frequently resorted to, for study and for restoration of health. Italy, Spain, Barbary, Turkey, Greece, Russia, and Belgium were thus visited. In 1839, Allan became president of the Royal Scottish Academy. Love for Circassian subjects, and his adventurous life among the Tartars, never quitted him, and he had formed a valuable museum. "Bannockburn" was the last great subject to which he returned, but before completing it he died of bronchitis, unmarried, February 23, 1850. He was buried in the Dean Cemetery, Edinburgh; Lord Jeffrey, David Scott, and Professor Wilson lie near his grave. Allan was pre-eminently an historical painter, and few have equalled the skill and ease, or dramatic vigour, with which he represents an incident. He is never unintelligible. The clear healthy mind of the man is apparent in his paintings; his well-balanced powers, his indomitable perseverance and shrewd sense, with an appreciation of beauty, romantic wildness, and unvulgarized character, that prevented him from degenerating into either insipidity or extravagance. In private life, and as a teacher, he secured the devoted love of all who knew him. His dry humour and active benevolence will long be remembered. His sympathies were always manly, generous, and patriotic. His position in the literary circles of Edinburgh was beneficial to Scottish art. Most of his paintings are in choice collections, and have been well engraved.—J. W. E.

ALLANTSEE or ALANTSEE, LEONHARD and LUCAS, flourished as publishers in Vienna about A.D. 1500.

ALLARD or ALLERD, the name of several engravers of Holland, who lived during the last two centuries.

ALLARD, GUY, a French historian and genealogist, was born at Grenoble in 1645. He became a member of the parliament of Grenoble, and died in 1716, leaving a number of works on the history of Dauphiné and its principal families.

ALLARDI, PIERRE GILBERT LEROI, Baron d', a French financier, was born at Montluçon in 1749. He opposed the projects of Necker and of Maury, and, having survived the storms of the Revolution, died in 1809 at Besançon.

ALLART, MARY GAY, a literary lady of France; died 1821.

ALLATIUS, LEO, a learned Greek of the island of Scio, where he was born in 1586. Embracing the Roman catholic faith, he became librarian of the Vatican under Pope Alexander VII. Died in 1669. Allatius is the author of an immense number of commentaries and classical editions; and being vehemently orthodox, he wrote a good deal on theology. He is

fabled to have used but one pen during forty years. Among his principal works are: "Philo-Byzantius de Septem Mundi Spectaculis," with a Latin translation, Rome, 1640, 8vo; "Salustii Philosophi Opusculum de Diis et Mundo, cum notis Holstenii," Rome, 1638, 12mo; "Confutatio Fabulæ de Joanna Papissa, ex Monumentis Græcis," a refutation of the slanderous fable concerning Pope Joan.—A. M.

ALLE, GERONIMO, an Italian monk of Bologna, who flourished in the first half of the seventeenth century, and became famous as an orator and poet.

ALLECTUS, a favourite of Carausius, whom he assassinated, and usurped the sovereignty of Britain. Constantius Chlorus, the father of the Emperor Constantine, equipped two fleets in Gaul against him, and having succeeded in landing his forces on the British coasts, Allectus, whom the natives detested, was abandoned by the greater part of his followers, and perished in battle about A.D. 296.—J. W. S.

ALLEGRAIN, CHRISTOPHE, a French sculptor of the eighteenth century, the son of a distinguished landscape painter (A. Etienne). Although endowed with great talent, he did not always succeed in freeing himself from the absurdities of mannerism. Two statues of "Venus" and "Diana" are considered his best works. Bore the title of sculptor to the king. He was born in Paris in 1710, where he died in 1795. GABRIEL, his brother, was likewise an artist, and imitated the father in his landscape painting.—R. M.

ALLEGGRANZA, GIUSEPPE, an archæologist of Milan, born in 1713, and died in 1785.

ALLEGRETTI, ALLEGRETTO DEGLI, a councillor of the republic of Sienna, of which city he compiled the annals for the latter half of the fifteenth century.

ALLEGRETTI, ANTONIO, a Florentine poet of the 16th cent.

ALLEGRETTI, CARLO, an Italian painter of Monte Prandone, who lived in the earlier half of the seventeenth century.

ALLEGRETTI, IAGO, of Forlì, in Italy, lived in the thirteenth century, and was distinguished as a physician, an astrologer, a poet, and a grammarian.

ALLEGRI, ALESSANDRO, an Italian poet noted for the purity of his style. He was born at Florence, studied at Pisa, became successively "scholar, courtier, soldier, and priest," and died about 1597. He was most eminent in satire and burlesque.

ALLEGRI, ANTONIO. See CORREGGIO.

ALLEGRI, GERONIMO, an alchemist of Verona, who became president of the Alethophilist academy in 1688.

ALLEGRI, GREGORIO, a musical composer, born at Rome about the year 1580. He is best known as the author, along with Palestrina, of the music performed during the Holy week in the pope's chapel, to which he was admitted a singer by Pope Urban VIII. in 1629, having been a pupil in the school of Palestrina and Nanini, and afterwards an ecclesiastic holding a benefice in the cathedral of Fermo. The famous "Miserere," forming part of the service, of the overpowering effect of which we read so much in the notes of travellers, is his composition. Musicians tell us that its merit is not so high as these descriptions would lead us to suppose, but that great part of the effect is owing to the perfect performance, and to the grandeur and solemnity of the whole scene. Died in 1652.—J. B.

ALLEGRI, FRANCESCO, an Italian historical painter and decorator, was born at Gubbio in 1587, and studied at Rome under the Cavalier d'Arpino, whose style he followed with considerable success. Assisted by his son FLAMINIO, also a distinguished artist, he worked in the Vatican. Died 1663.—R. M.

ALLEIN, JOSEPH, a nonconformist divine, born at Devizes in 1633. He is the author of the well-known treatise, "An Alarm to the Unconverted." He died in 1668.

ALLEINE, RICHARD, born at Ditchet in Somersetshire in 1611, educated at Oxford, and after assisting his father in pastoral duties for some time, was in 1641 appointed to the living of Batecombe in Dorsetshire. He was, like many more, ejected at the Restoration, and died in 1681. He wrote several religious treatises, the best known among them being his "Vindiciæ Pietatis," London, 1664.—J. E.

ALLEMAND, GEORGE L', a French painter of the 17th century. He painted several pictures for the church of Notre Dame.

ALLEMAND, JEAN BAPTISTE L', a French painter, who lived at Rome in the eighteenth century. He was pupil of Joseph Vernet. Some admirable frescos in the palace of Corsini were executed by him in 1750.

ALLEMANNI, PIETRO, an Italian painter of Ascoli, flourishing towards the close of the fifteenth century. He was a pupil of Carlo Crivelli, and became one of the most distinguished artists of that school.

ALLEN, EDMUND, educated at Corpus Christi college, Cambridge, and a fugitive under Mary. Queen Elizabeth nominated him to the bishopric of Rochester, but he never held the see, dying soon after the appointment had been made in 1559. He translated Melancthon's Treatise on the Sacrament.

ALLEN, ETHAN, the famous champion of the liberties of Vermont, before and during the American war. He was born in Connecticut on the 10th of January, 1737, but ere long removed to the district with which his name has been so closely associated. There he became the leader of the settlers in their resistance to the claims made by the governor of New York, and successfully vindicated their rights till the breaking out of the Revolution.

After the battle of Lexington, Allen raised a corps in Vermont, noted in the annals of the war as "The Green Mountain Boys." It consisted of 230 men, and was speedily made illustrious by the brilliant and successful attack on the fortress of Ticonderoga in 1775, the surrender of which, Allen tells us, he demanded "in the name of the great Jehovah and of the Continental Congress." In the attempt made upon Montreal in the autumn of the same year he was not so fortunate, but was taken prisoner and carried to England, where he was confined in Pendennis castle; but having again been removed to New York, he was set at liberty after the victory at Saratoga in 1778. His brave deeds had not been forgotten by Washington, who gave him a hearty welcome, and showed him the greatest respect. The state of his health did not admit of further military service, but he retired to Vermont, and made himself active in maintaining its independence, both against the adjoining States and against the English government.

Allen occupied himself also in literary pursuits, writing in all four works; the most interesting is, "A Narrative of Colonel Ethan Allen's Captivity," (Philadelphia, 1779,) which is distinguished by the graphic style in which he details his exploits, and for the vehemence with which, disregarding the ordinary polish of historical writing, he inveighs against his enemies. He wrote also a book, named "Reason the only Oracle of Man, or a Complete System of Natural Religion," (Bennington, 1784,) to which there attaches considerable interest; for, as Dr. Dwight tells us in his book of travels, "It was the first formal publication in the United States openly directed against the Christian religion." Allen died in 1789. The latest account of his life is named, "Ethan Allen and the Green Mountain Heroes of '76, with a Sketch of the Early History of Vermont, by Henry W. De Puy," (Buffalo, 1853.)—(Duyckinck's *Cyclopedia of American Literature*, vol. i.)—J. B.

ALLEN, IRA, brother of the preceding, wrote the "Natural and Political History of the State of Vermont," 1798.

ALLEN, JOHN, D.D., archbishop of Dublin, to which see he was promoted in 1528. He was educated at Oxford, and in 1515 was employed by Warham, archbishop of Canterbury, as his agent to the see of Rome, where he resided nine years. On his return, he became chaplain to Wolsey, and was accounted "the only match for Stephen Gardiner," another of Wolsey's chaplains, for avoiding of which emulation he was sent to Ireland. He was one of Wolsey's great abettors in procuring the dissolution of forty of the lesser monasteries for the endowment of the cardinal's colleges at Oxford and Ipswich. He was about the same time appointed Lord Chancellor of Ireland, but was deprived of this office in July, 1532, at the instance of Gerald, earl of Kildare. In 1534, when Thomas Fitzgerald, commonly called the "Silken Lord," broke out into open rebellion, and laid siege to Dublin, Allen, with other lords, at first sought refuge in the castle, under the protection of the constable; but fearful of the result, he embarked in a vessel from Dames Gate, with the intention of flying to England. He was unfortunately stranded at Clontarf, where he hurried to the mansion of Mr. Hollywood of Artane. On his way he was intercepted, or, as other accounts state, on the following morning was dragged out of the house of his entertainer, and there, "feebly from age and sickness, kneeling in his shirt and mantle, bequeathing his soul to God, his body to the traitors' mercy, he was murdered in the presence of Lord Thomas on the 28th July, 1534."—(Dalton.)—J. F. W.

ALLEN or ALLEYN, JOHN, an English physician, author of several works on medical science. He died in 1741.

ALLEN, JOHN, pastor of a Baptist church, Spitalfields, a high Calvinist of ability, but deficient in principle. In 1769 he settled as pastor of a church in Newcastle, but soon left through misconduct. He then went to New York, where he preached to large congregations till his death. He was editor of "The Spiritual Magazine," (1752,) a work warmly commended by Romaine.—J. A., L.

ALLEN, JOHN, a learned dissenting layman, born at Truro in 1771, a proprietor of a private academy at Hackney for upwards of thirty years. He died in 1839. He published translations of Outram on Sacrifices (1817), of Sermons by Super-ville (1816), and of Calvin's Institutes (1813, 1838). His original works are—"The Fathers, the Reformers, &c., in Harmony with Calvin," &c., by a Layman, (1812); "Memoirs of the Life of the late Major-General Andrew Burn," (2 vols., 1815); and "Modern Judaism, or a brief Account of the Opinions, Traditions, Rites, and Ceremonies of the Jews in Modern Times," (1816 and 1830.) The last work is still the best book on this subject in the English tongue.—J. A., L.

ALLEN, JOHN, M.D., was born near Edinburgh in 1770, and took his degree at the university of that city in 1791. He was a zealous member of the association then instituted for procuring parliamentary reform, while he gained fame as a lecturer on comparative anatomy. For forty years he resided at Holland house, as the confidant and friend of Lord Holland. He was noted for his research into matters of history, especially connected with the Anglo-Saxons. His detached works are—"An Inquiry into the Rise and Progress of the Royal Prerogative in England," and "A Vindication of the Independence of Scotland;" but he was best known as a contributor to the "Edinburgh Review," for which he wrote about forty articles, of one of which Sir James Mackintosh says that it was written "by one of the most acute and learned of our constitutional antiquaries." Mr. Allen held the office of Master of Dulwich college, and died in April, 1843.—(*Gentleman's Magazine*.)—J. B.

ALLEN, JOSEPH W., a painter, whose "Vale of Clwyd," "Leith Hill," and other landscapes, attracted considerable attention. He took part in establishing the Society of British Artists, and held a professorship of drawing in the City of London school. Died in 1852.—(*Gentleman's Magazine*.)

ALLEN, RICHARD, a learned Baptist minister, who preached in Barbican, and elsewhere in London. He died in 1717, and is the author of two volumes, published anonymously, under the title of "Biographia Ecclesiastica."—J. A., L.

ALLEN or ALLEYN, THOMAS, an English mathematician of the Elizabethan era, whose attainments made the vulgar suspect him of sorcery. Patronized by the earl of Leicester, he was accused of practising magic, to obtain for that nobleman the hand of the queen. Alleyne has left some works of an astrological nature, still in manuscript. Born 1542; died 1632.—A. M.

ALLEN, THOMAS, a nonconformist, born at Norwich in 1608, was educated at Caius college, Cambridge, and became minister of St. Edmund's, Norwich. But he would not read the Book of Sports, and was therefore silenced in 1636. In 1651 he became rector of St. George's, Norwich, but was rejected for nonconformity in 1662. He published a "Chain of Scripture Chronology." Died in 1673.—J. E.

ALLEN, THOMAS, an English author, born in 1803; died in 1833. His principal works are: "The History of the Antiquities of the parish of Lambeth, and the archiepiscopal palace in the county of Surrey, including biographical sketches of the most remarkable persons who have been born, or who have resided there, from the earliest period to 1826," 4to, London, 1827; "The History and Antiquities of London, Westminster, Southwark, and the parts adjacent," 4 vols. 8vo; and "A History of the County of Lincoln."—A. M.

ALLEN, WILLIAM, a man of science and a distinguished philanthropist, was born in 1770. His father was a silk weaver in Spitalfields, London, and the son, being early introduced to the same business, received a very limited education; but the force of his natural genius, aided by habits of uncommon industry, enabled him to surmount every obstruction. Quitting his occupation at the loom, he obtained employment in the well-known chemical establishment at Plough Court, Lombard Street, in which he afterwards became the leading partner. Here the energies of his mind found a congenial sphere. Whilst his days were spent in diligent attention to business, many of the hours usually allotted to rest were devoted to study. His mind ranged

with ardour throughout the wide field of natural, chemical, and experimental philosophy; and in his thirtieth year, he commenced giving a course of instructions to an association of literary gentlemen. He was elected a fellow of the Linnæan Society, and three years later, was appointed to deliver a series of lectures at the Royal Institution; this was speedily followed by his becoming lecturer on chemistry at Guy's Hospital, an office which he continued to fill for many years. He made some valuable discoveries in chemistry, and in 1807 was elected a fellow of the Royal Society. But whilst fame and wealth opened before him a brilliant career, the religion of the New Testament became increasingly influential in his life and conduct, preserving him from the fascinations of worldly interest and honour, and attracting him to a course of devotedness to the service of God, and to the promotion of righteousness amongst men. William Allen was from conviction, as well as education, a member of the Society of Friends; yet he was no sectarian—his heart was open to embrace as brethren all the true followers of Christ. In conjunction with many of these, both in his own and foreign lands, he was actively engaged in originating and maturing a great variety of plans for the benefit of his fellowmen. He slept little, rose early, giving the first portion of the day to retirement and prayer; he shrank from no effort, he yielded to no discouragement in the pursuit of duty—all the best faculties of his soul were devoted to the cause of christian benevolence. In his house was commenced that grand movement which has resulted in expunging from the statute-book a great variety of sanguinary enactments. With untiring zeal he laboured to effect the extinction of slavery and the slave trade; he gave his support to the practice of vaccination when in its infant state; originated plans for the establishment of savings banks, and made large sacrifices of time and money in aid of the destitute poor in Spital-fields. He hailed with joy the advent of the British and Foreign Bible Society, and became one of the earliest and most efficient founders of the British and Foreign School Society. He was for many years the treasurer of this valuable institution. Through the influence of himself and an excellent friend who was his fellow-traveller in Russia, the Emperor Alexander was induced to sanction the introduction of scripture lessons into the schools of that vast empire. In the Christian church to which he belonged, William Allen held the office of a minister of the gospel, and in this capacity he visited most of the countries of Europe, declaring to people of every rank the unsearchable riches of Christ, visiting the outcasts in prisons and the sufferers in hospitals, and pleading in the presence of sovereigns and princes the cause of the ignorant, the destitute, and the oppressed. As his day's work approached its termination, his spirit became deepened in humility; he died in the seventy-fourth year of his age, in the faith and hope and peace of the gospel. His life and correspondence were published by Gilpin, London.—S. C.

ALLEN, WILLIAM, a wealthy tradesman of London, who died at an advanced age in 1686. He wrote a number of lucid and vigorous tracts on various theological subjects, which were highly esteemed. Bishop Kidder preached a funeral sermon for him; and his collected papers have a perface by Bishop Williams. He was at first a dissenter, but conformed in 1658.—J. E.

ALLENT, PIERRE-ALEXANDRE-JOSEPH, a French military man of considerable reputation under the first empire and the Restoration; born at St. Omer in 1772; died in 1837. Commencing his career as a common artilleryman in 1792, he had become *chef de bataillon* in the army of Buonaparte, whose cause, however, he did not embrace during the Hundred Days, having in the meantime been created *chef de l'état major* in the National Guard. Under Louis Philippe he rose to be a peer of France. Allent was a man of great general ability, and distinguished particularly for his knowledge of artillery and fortification. He has left some works of merit on military subjects.—A. M.

ALLEON DULAC, JEAN-LOUIS, a French naturalist, born at St. Etienne in 1723. His writings possess considerable interest. He died in 1768.

ALLESTREE or ALLESTRY, RICHARD, was born, March, 1619, at Uppington in Shropshire, and studied at Christ Church, Oxford. During his academical career he took part in the civil war on the king's side, and was present at the battle of Kington field. In 1643 he became M.A., but shortly took up arms again, and served the king till the end of the war. He then took orders, and became censor of his college. The parliamentary visitors expelled him, June, 1648, for the part he had taken against the

Solemn League and Covenant, and he retired to Shropshire, where he became chaplain to the Hon. Francis Newport, to whose father, Allestree's father had been steward. By him he was sent to France, where his father, Lord Newport, had died, to look after his property; and after the escape of Charles from the battle of Worcester, Allestree was chosen as the organ of communication between the king and his adherents. In this service he displayed much zeal, tact, and courage, and even when seized, 1659, at Dover, managed to save his papers. He was soon released, and, on the accession of Charles II., was made canon of Christ Church, king's chaplain, and in 1663 regius professor of divinity, on the death of Dr. John Creed. This important post he filled with great success till 1679, when his failing eyesight compelled him to relinquish it. He had been previously appointed provost of Eton, 1665, which post he held till his death, 1680. He was the friend of Hammond and Fell, and was very instrumental in maintaining the succession of the English bishops during the downfall of the church. He left behind him various works mentioned by Wood, of which the chief are a sermon "preached at Westminster on the consecration of four bishops," and forty sermons, published after his death. He was buried in Eton chapel.—J. B., O.

ALLESTRY, JACOB, a minor English poet. He studied at the university of Oxford, and died in 1686.

ALLEY, WILLIAM, a reforming clergyman of the church of England, persecuted in the reign of Mary, but made bishop of Exeter under Elizabeth. He has left, besides other works, a collection of sermons, which he styles "*Πτωχομυσίον*, or the Poor Man's Library," London, 1565, 1571. Died in 1571.

ALLEY, REV. JEROME, LL.B., an Irish divine, born in 1760, and educated in Trinity college, Dublin. He was rector of the parishes of Beaulieu and Drumcar in the diocese of Armagh, and a member of the Royal Irish Academy. He wrote several poems and pamphlets, and in 1826 published "*Vindiciæ Christianæ*, a comparative estimate of the Greek, the Roman, the Hindu, the Mahometan, and the Christian religions." He died shortly afterwards.—J. F. W.

ALLEYN or ALLEN, CARDINAL. See ALAN.

ALLEYN, EDWARD, famous as an actor, and as the founder of Dulwich college, was born in the parish of St. Botolph, London, on the 1st September, 1566. His life is one of peculiar interest, not only because of his excellence as an actor, to which Heywood and Ben Jonson bear testimony in flattering terms, nor even on account of the munificent deed of charity with which it closed, of which Lord Bacon says, "I like well that Alleyn playeth the last act of his life so well," but chiefly because in the records of it which have been preserved, we are brought into close contact with the greatest names in the history of the English drama. It is with strange feelings, for example, that one reads a letter from Alleyn's wife, in which she tells her husband of some poor fellow coming to ask the loan of money, and saying "that he was known unto you and Mr. Shakspeare of the Globe;" and of the said Mr. Shakspeare, on being appealed to by the cautious dame, replying that "he knew hym not, only he herde of hym that he was a roge."

We have no record as to when Alleyn first appeared on the stage, but he had risen to eminence ere 1592, and was famous for his representation of Greene's "*Orlando Furioso*" and Marlowe's "*Jew of Malta*." He took a prominent character in several of Shakspeare's plays the first time they were acted; for, with the great dramatist, Alleyn seems to have been on terms of close intimacy. There is an old letter written by George Peele, where we read that, on one occasion, "when we were all merry at the Globe," he "did not scruple to affirm pleasantly" to Shakspeare, "that he had stolen his speech about the qualits of an actor's excelleneye in Hamlet hys tragedye, from conversations manyfold whych had passed between them, and opinions given by Alleyn touching the subject." We are told, indeed, that Shakspeare did not quite relish the joke, but that Ben Johnson put an end to the strife by a witty compliment to Alleyn, saying that doubtless he must have stolen it, for he had seen him act times without number. In the year 1592 he married Joan Harwood, at the same time entering into partnership with her stepfather, Philip Henslowe, in the proprietorship of the Rose theatre on the Bankside. Only a few months after his marriage, the theatres in the metropolis were compelled to close on account of the outbreak of the plague, when we find Alleyn betaking himself to the provinces at the head of a strolling company. Some time after his return, he

and his father-in-law built the Fortune theatre in Cripplegate; and on the accession of King James in 1603, their company was known as "The Prince's players." Our actor had also a share in a bear-garden, and held with his partner the mastership of the royal games of bears, bulls, and dogs. From all these sources of revenue, it is not surprising that Alleyn amassed considerable wealth, and added not a little to his paternal inheritance, and to the dowry his wife had brought him. In 1606 he was rich enough to buy the manor of Dulwich in Kent, and in 1612 to purchase a large interest in the Blackfriars' theatre, some say Shakspeare's share, which he sold when he retired from London.

During these years he had conceived the benevolent purpose of devoting the goodly manor of Dulwich to the foundation of a college, for the maintenance of twelve poor men and women, and the education and support of as many children, with a master, a warden, and four fellows. He began in 1613 to erect the building, and about the time of his wife's death, in 1617, had everything in readiness. There was some opposition to granting the royal letters patent, for devoting his £800 annually to the support of the college. It was made chiefly by Lord Bacon, who was desirous of turning part of the money into another, and what he thought a more useful channel. In 1619, however, Alleyn's wishes were granted, and the ceremony of formally dispossessing himself of this part of his property was gone through; while he and his wife (for he had married again) entered the college on the same footing as the objects of his charity. Various motives have, of course, been assigned for this great benevolence on the part of a successful player; we are told many things "which nobody is in the least bound to believe." Some speak of the gratification of vanity, while others tell us that Alleyn was frightened into it by a real apparition of the devil made to him once, when he was acting "the part of a demon with six others." Setting aside the theory of this "forcible notice," as old Fuller calls it—for we can scarce look upon the gift as conscience-money, seeing he did not renounce his connection with the stage—the fact seems to be that Alleyn was long known as a benevolent man, and the poor authors who wrote for "The Fortune" seem often to have appealed, and not in vain, to his kind heart for payments not fully due, and for which they dared not come directly to the elder and more business-like partner. Some old papers in Dulwich college contain curious entries made by Henslowe, of sums of money "lent to Mr. Alleyn to lend unto" Ben Jonson, Thomas Decker, or some other needy writer. In addition to Dulwich college, Alleyn founded twenty alms-houses, the half of them in his native parish, and the other half in St. Saviour's, Southwark. He died 25th November, 1626, and was buried in the chapel of the college.—(Knight's *Cyclopædia*, and Chalmers' *Biographical Dictionary*.)—J. B.

ALLIBOND, PETER, born 1560, died 1629, rector of Cheyneys, Bucks, and father of JOHN ALLIBOND, the author of a Latin satire on the parliamentary visitors at Oxford.

ALLIER, ACHILLE, a French antiquary, whose work, entitled "L'Ancien Bourbonnais," splendidly illustrated, and continued by a number of learned men and artists after his death, was published at Paris in 1833–37, and contains much information on the manners, monuments, and history of ancient France.

\* ALLIER, ANTOINE, a French statuary, born at Embrun in 1793. In the earlier part of his life an officer in a cavalry regiment, he withdrew from the army in 1815, and devoted himself mainly to art, though he was, during many years previous to 1851, representative for the department of the Hautes Alpes. Allier's best statues adorn the Chamber of Deputies.—A. M.

ALLIER, LOUIS, a numismatist, part of whose rare collection of coins is now in the Bibliothèque National at Paris. His researches embraced especially the Archipelago and Asia Minor. Born at Lyons in 1766; died at Paris in 1827.

ALLIES, JABEZ, an antiquarian, born in Worcestershire in 1787, practised for some years as a solicitor in London, making while there several communications to the Society of Antiquaries, and to the Archaeological Institute. He afterwards retired to his native county, following his favourite pursuit, and died in 1856, leaving a work, entitled "The Ancient British-Roman and Saxon Antiquities and Folk-lore of Worcestershire."—(*Gentleman's Magazine*.)—J. B.

ALLIO, MATTEO, and his brother TOMMASO, two Milanese sculptors of eminent skill, working for the cathedral of Milan in 1748. They executed several bas-reliefs for the Certosa di Pavia.

\* ALLIOLI, JOSEPH FRANCIS, a German theologian, some time professor in the university of Landshut, but, since the year 1831, grand-vicar of Angsburg. His latest work is a "Handbuch der Biblischen Alterthumskunde," (Handbook of Biblical Antiquities,) published at Landshut in 1841. Allioli was born at Salzburg in 1793.

ALLIONI, CARLO, a physician in Piedmont, and professor of botany in the university of Turin, was born in 1725. He was eminent as a botanist, and published some valuable works, especially the "Flora Piedmontana," in three volumes folio, containing an account of nearly three thousand indigenous plants of Piedmont. A genus of plants is named Allionia, in honour of him. He died in 1804.—J. H. B.

ALLIOT, PETER, a French physician of the seventeenth century, was a native of Bar-le-Duc. He pretended to have discovered a cure for cancer, and was summoned from Lorraine to attend the mother of Louis XIV., attacked by that disease. His prescription, a metallic powder, only aggravated the sufferings of his patient, and, after a short residence at the court of St. Germain, he was supplanted in the care of Anne of Austria by a practitioner from Milan, in whose hands she expired. Alliot was the author of several treatises. He left two sons, the eldest of whom, John Baptist, physician to Louis XIV., in a work on the nature of cancer (1698), described the treatment pursued by his father. Both father and son were of opinion that the disease was produced by an acid humour in the glands, and that it was to be counteracted by an alkali. They recommended, therefore, as a lotion to be applied to cancerous ulcers, a preparation of realgar, dissolved in a strong alkaline solution, and precipitated by the acetate of lead.—J. S., G.

ALLIX, JAMES ALEXANDER FRANCIS, a French general, born in 1776. Colonel at twenty years of age, he took part in the battle of Marengo, and in the expedition to St. Domingo. Having been overlooked at the commencement of the empire, he transferred his services to Jerome of Westphalia, and was named general of division. He returned to France in 1815, and held an important command during the Hundred Days. Died, 1836.

ALLIX, PIERRE, a learned divine, first of the Reformed church of France, and afterwards of the church of England, was born at Alençon in 1641, where his father was a protestant minister. Endowed with excellent talents and a strong love of learning, he studied in the colleges of Saumur and Sedan, and commenced his ministry in the small church of St. Agnobile in Champagne. His eloquence in the pulpit was equal to his assiduity and success in the acquisition of theological learning; and he was ere long translated to the more important post of Rouen, and from thence again, in 1670, to the church of Charenton, near Paris, the principal charge of the Reformed church of France, in which he had the honour of being the immediate successor of the celebrated Daille. In this distinguished post he signalized himself by the ability with which he defended the Reformed church against the eloquent attacks of Bossuet, and became associated with Claude in the preparation of a new version of the Bible. In 1685 he was compelled, by the revocation of the edict of Nantes, to take refuge with his family in England, and founded in London a French church, which conformed to the liturgy of the church of England. The fame of his uncommon learning had preceded him, and he was received with great kindness by the English clergy. Continuing his studies as an exile, and having mastered the language of his adopted country, he published in 1688, and dedicated to James II., the work by which he is still best and most familiarly known, "Reflections upon the Books of the Holy Scriptures, to establish the Truth of the Christian Religion." These "Reflections" were included by Bishop Watson in his series of "Tracts," and were reprinted in Oxford as late as 1822. Directing his efforts equally against Romanists and Rationalists, he published in succession, in 1686, "Determinatio F. Joannis Parisiensis de modo existendi Corporis Christi in Sacramento Altaris," accompanied by a dissertation from his own pen, to show that the dogma of transubstantiation was not fixed as an article of the church of Rome till the council of Trent; in 1690, "Some Remarks on the Ecclesiastical History of the Ancient Churches of Piedmont," followed, in 1692, by "Remarks upon the Ecclesiastical History of the Ancient Churches of the Albigenes;" in 1689, "The Judgment of the Ancient Jewish Church against the Unitarians in the Controversy upon the Holy Trinity," a work in which he discovered the depth and accuracy of his Hebrew and rabbinical

learning. These erudite works were received with great admiration. In 1690 the university of Cambridge honoured him with the degree of D.D.; and in the same year, Bishop Burnet bestowed upon him the more substantial benefits of a canonry of Salisbury, and the treasurership of his cathedral. Although so eminent in polemical authorship, Allix was a lover of peace and union, and was particularly anxious to bring about a better understanding between the Lutheran and Calvinistic branches of the protestant church. For this purpose he made great efforts to engage the sympathy and aid of eminent ministers in Holland, Geneva, and Berlin, but without effect. Nor was he more successful in his interpretations of unfulfilled prophecy. In his "De Messia Duplici Adventu Dissertationes Duæ adversus Judæos," (London, 1701,) he fixed the year of Christ's second coming for 1736. It is certainly wonderful that a man of so great learning in ecclesiastical history should not have learned, from the innumerable past failures of others in this field, how injudicious it was to enter it. In the latter years of his life, Allix took a considerable part in the Arian controversy against Whiston and others. He died in London on February 21, 1717, in his seventy-seventh year, leaving several children, the eldest of whom was a minister of the English church.—P. L.

ALLONVILLE, FRANCIS ARMAND, Coult d', a French officer in the army of Condé, noted, like many others of his family, for his loyalty to the Bourbons; died in 1832. His brother, LOUIS ALEXANDER, a prefect and state counsellor, published a dissertation on the Roman camps of the department of the Somme.—J. S., G.

ALLORI, ALESSANDRO, also surnamed IL BRONZINO, was the nephew and pupil of Angelo. He was born at Florence in the year 1535, and died in 1607. At the age of seventeen he executed a picture of the "Crucifixion" of such merit, that it was placed in the famous chapel of Alessandro De Medici. After this success he went to Rome, to complete his studies on the relics of the antique, and the works of Michel Angelo, whose particular attention to anatomy he carefully followed and improved. He paid greater attention to design than any other artist of the day; sometimes to the extent of neglecting the colouring. Of being master also of the latter he gave, however, undoubted proofs in many of his best oil-paintings, especially in the "Sacrifice of Abraham," now in the gallery of Florence. Like his uncle, he was very successful in portraits, and executed many frescos. His treatise on the principle of design has, unfortunately, been lost, but was highly valued during his lifetime, and added greatly to his fame.—R. M.

ALLORI, ANGELO, surnamed IL BRONZINO, a historical and portrait painter, born at Florence about 1501, died in 1570. He studied with Pontorno, and, through him, adopted rather the faults than the beauties of Michel Angelo's style. His design was, however, very correct, and the grouping of his subjects very imaginative. Worked a long time for the dukes of Urbino, and at Pisa. Some historical portraits by this artist are amongst the most interesting of the Florentine gallery. He also distinguished himself as a poet.—R. M.

ALLORI, CRISTOFANO, the son of Alessandro, was, like his father and great-uncle, surnamed IL BRONZINO. He was born at Florence in 1577, and died of a wound in his foot in 1619, or, as some writers say, in 1621. He studied under Cigoli, whom he soon equalled, if not surpassed. His style greatly differs from that of his father, from whom he only imitated the accuracy of design. He was exceedingly studious and careful in his work, even to the point of interfering with its progress and ultimate success. Yet this over-nicety, coupled with great power of expression and exquisite colouring, enabled him to produce the many beautiful works that now adorn the galleries of Europe. The most celebrated amongst these are the St. Julian, the Judith, and the Magdalen at Florence; several historical portraits, both at Florence and Paris; the Philemon and Baucis at Munich, &c., &c. Some of his oil-paintings having been too much overworked whilst fresh, have greatly increased in tone, considerably however to the detriment of effect.—R. M.

\* ALLOU, CHARLES, a French archæologist, since 1821 a distinguished writer on antiquarian subjects; born at Paris, 1787.

ALLOUETTE, FRANCIS DE L', a French antiquarian, author of several histories of illustrious families and other works of research, was born at Vertus in 1530; died in 1608.

ALLSTON, WASHINGTON, an American painter and poet, born in 1779 in South Carolina, visited this country in 1814,

and made the acquaintance of Coleridge and other celebrated persons. He afterwards journeyed through Paris to Rome, and added to the number of his friends, Vanderlyn and Thorwaldsen. From 1818 he resided at a village near Boston, and here he produced a number of pictures on biblical subjects, some poems, and a novel. Died in 1843.—J. S., G.

ALLUT, ANTHONY, a French advocate, one of the writers of the Encyclopédie, was a member of the legislative assembly during the earlier times of the Revolution, was proscribed for his leanings to the party of the Girondists, and brought to the guillotine 25th June, 1794.

ALLUT, JOHN, the assumed name of a French fanatic, who declared himself in London, about 1714, the apostle of a new religion, the doctrines of which he expounded in a series of works, now extremely rare.

ALMACHUS or TELEMACHUS, a brave anchorite, who threw himself into the amphitheatre at Rome to separate the gladiators, and was torn to pieces by the mob, January 1, 404. Upon this the Emperor Honorius, by the publication of an edict, effectually put an end to these barbarous sports. The Roman church commemorates him on the day of his martyrdom.—J. B., O.

ALMADA, ALVARO VAS DE, a famous Portuguese cavalier, celebrated by the national poet Camoens. After pursuing a course of knight-errantry in various countries of Europe, where he was received with distinguished honours, he finally attached himself to Don Pedro, regent of Portugal during the minority of Alfonso V. That nobleman having fallen in battle, Almada, who had resolved not to survive his friend, threw himself into the enemy's ranks, and fighting desperately in his armour, was at length overpowered and slain in 1449.—J. S., G.

ALMADHI, BILLAH, third caliph of the race of the Abbasides, reigned nine years from the death of his father, Abu-Djafar Almansur, in 776.

ALMADHI, ABU-MOHAMMED-OBEYDULLAH, caliph of a great part of northern Africa, and first of the dynasty of Fatimites, born A.D. 873-4, was a descendant of Fatima, daughter of the prophet; and chief of the sect of Schiites. His reign was fruitful in conquest, and he left at his death in 934 an immense dominion in Africa, which his successors extended into Egypt. The fourth of the race of Fatimites reigned at Cairo.—J. S., G.

ALMADJERITTI, MOSLEMAH-IBN-AHMED, an Arabian astronomer and alchemist, died at Madrid in 1007.

ALMAGRO, DIEGO DE, a Spanish voyager, companion and rival of the renowned Pizarro, was born at Aldea del Rey in 1475. His adventures, which are related in detail by a contemporary of the name of Zarate, extended from 1525 till his death in 1538—a period in which the romance of Spanish conquest assumed one of its most splendid aspects. Setting out from Panama in the first-mentioned year, he succeeded, after some fierce encounters with the Indians, in joining Pizarro, who was reduced to great straits by the hostility of the natives and the want of provisions, at a place called Chincama, 3° north latitude. The united force of the two adventurers amounted only to two hundred men, and with these they penetrated southwards as far as the bay of Quito; but, harassed by the natives, and unable to find subsistence, they were obliged to retreat—Almagro returning to Panama to demand further supplies from the governor of that town. These being refused, he made his way back unaccompanied to Pizarro, whose forces had been diminished in the interval to a mere handful. Three years of incredible hardships followed—the adventurous Spaniards pursuing their way along shores crowded with savage tribes, and yielding only the scantiest supplies of food. They reached Truxillo on the Peruvian coast, and here, their company being still further diminished by desertion, the enterprise, hopeless from the beginning, was abandoned. Pizarro shortly after set out for Spain, to demand from Charles V. the means of making the conquest of the countries he had discovered. He returned with more promises than were fulfilled, and with a patent of vice-royalty, which had been procured by slighting altogether the services of Almagro. Pizarro and his brothers were to govern in Peru; Almagro was to content himself with the hope of being appointed commander of a fortress designed to be built at Tumbez. His anger was about to take an active shape, when Pizarro thought fit to renounce his absurd pretensions, and so conciliated his former companion by promises of equal dominion, that in 1531 Almagro willingly aided in the expedition which effected the conquest of Peru. These promises were indifferently

kept, and Almagro, having also procured a patent of vice-royalty, resolved to subdue for himself the neighbouring province of Chili. He had prosecuted this enterprise with success for some time, when he was summoned to the assistance of the brothers of Pizarro, besieged in their capital of Cuzco by some tribes of Indians. He hastened into Peru, raised the siege, recommenced it on his own account when refused entrance into the city, and carried Cuzco by storm; but having to engage an army sent by Pizarro to the relief of his brothers, he was defeated, and, after a captivity of two months and a half, shamefully put to death by his former friend.—J. S., G.

**ALMAGRO, DIEGO DE**, governor of Peru, son of the preceding, born in 1520, inherited from his father the hatred of Pizarro, who kept him in durance along with his governor, Juan de Herrada, a bold and politic man, who took the first opportunity of delivering himself and his charge from confinement. That occurred in 1541, when the two brothers of Pizarro had quitted Peru, and the partizans of Almagro, favoured by the indolent security of the governor-general, had provided themselves with arms, and all things necessary for an attack on Pizarro's residence, which the confederates were sworn to make the scene of a murder, that should avenge the death of the first Almagro. On the 26th June, Pizarro was assassinated, and Almagro proclaimed governor of Peru. Cuzco refused to acknowledge his authority, and he was on his way to besiege that city, when Christopher Baca de Castro, charged by the king to settle the affairs of Peru, appeared to dispute the legitimacy of the new viceroy's authority. Almagro having quickly reduced Cuzco to submission, gave battle to the king's commissioner. The result was disastrous. He escaped from the field of battle only to be brought to the block a few months after (1542).—J. S., G.

**ALMAMOUN.** See **MAMOUN**.

**ALMANSOR.** See **MANSOR**.

**ALMEIDA, ANTONIO D'**, a Portuguese surgeon, author of several medical treatises studied anatomy in London under the celebrated Hunter. Died in 1822.

**ALMEIDA, BRITES DE**, the Portuguese Joan of Arc, celebrated by Camoens and a host of his imitators for a feat of valour quite as extraordinary as any of those which have immortalized the French "Pucelle," was born at the village of Aljubarotta. Of humble birth, and known in her native village only in her simple calling of baker, on the occasion of its being invaded in 1385 by the troops of the king of Castile, she snatched up an instrument of her trade, a kind of shovel, and with that weapon made a furious attack on the Castilian soldiers, seven of whom were laid prostrate by this village Amazon.—J. S., G.

**ALMEIDA, DON FRANCISCO DE**, first viceroy of Portuguese India, born of illustrious parentage towards the middle of the fifteenth century, was appointed governor of the Indies in 1505. In March of that year he sailed from Belem with a fleet of twenty-two ships, being instructed to explore the Red Sea, after fortifying Sofala and Quiloa. He reached the latter place towards the end of July, and effected its reduction without difficulty. Proceeding to Mombaca, he experienced from the Moors of that port a stout but ineffectual resistance. Their treasures enriched all but Almeida, who claimed an arrow for his share of the booty. In the month of October, he reached the coasts of Portuguese India, and chose for his residence Cochin, where he assumed the title of viceroy, justified, his admirers thought, by the extent of his authority, and the homage it exacted from native sovereigns. At the same time, to shield himself from reproaches and to testify his loyalty, he sent to Portugal in 1506, as a present to King Emmanuel, eight vessels loaded with spices; and in the same spirit he proceeded to erect a fortress on the island of Sofala, a part of his instructions hitherto neglected. The brilliant career of his son (see **LOURENÇO D'ALMEIDA**) about this time shed a splendid lustre on the administration of Almeida, soon to be closed by the arrival of Albuquerque, who, shortly after the death of Lourenço in an engagement with the Moors before Daboul, announced himself at Cochin as new governor of India. Almeida, burning to avenge the loss of his son, refused to yield up his authority till he had chastised the infidels, especially the emir Hossein, admiral of the sultan of Egypt, and the rajah of Calicut, who had shared between them the triumph of Daboul. After inflicting a summary retribution on the inhabitants of the latter port, he encountered his enemies at sea, opposite the town of Din, and completely destroyed their fleet. Returning to Cochin after so brilliant a victory, Almeida showed him-

self more unwilling than ever to surrender his dignities; but Albuquerque at length prevailed, and in November, 1509, the victor of Din finally quitted the shores on which his name had become a terror and his vengeance a proverb. Three ships formed the convoy of the deposed viceroy. Entering the bay of Saldanha, near the Cape of Good Hope, to procure water, a skirmish took place between the crews and a tribe of Caffres, which necessitated the landing of Almeida with all his forces. He had penetrated about a league into the interior of the country, and was returning to the ships, when, in the midst of a cloud of dust raised by a herd of oxen which his soldiers were driving shorewards, a Caffre, perceiving Almeida's helmet raised for a moment, thrust him through the throat with a stick hardened in the fire. Thus perished in March, 1510, by the hand of a wandering savage, one who, in the course of a few years, had spread the fear of European arms over the greater part of the Indian peninsula.—J. S., G.

**ALMEIDA, DON LOURENÇO DE**, a Portuguese naval commander, one of the heroes of Camoens, was a son of Francisco d'Almeida, viceroy of Portuguese India. Inured to adventure from his earliest years, he was remarked, even among the veteran heroes of the viceroyalty, for his martial daring. Ceylon submitted to his arms in 1505; and a year or two afterwards, with a loss of only six or eight of his men, he routed at sea three thousand Mohammedans. This great victory, however, was followed in 1508 by a great reverse, involving the death of Almeida. Hossein, the admiral of the sultan of Egypt, and Melek-Iaz, admiral of the rajah of Calicut, having effected a junction of their forces in the port of Choul, gave battle to the Portuguese, and avenged the Mohammedan disaster of the preceding year by a victory over the latter, who had to regret the loss of their young and brave commander. Wounded early in the engagement, he continued to give his orders seated on a chair, till struck dead by a bullet which lodged in his breast.—J. S., G.

**ALMEIDA, MELLO E'CASTRO DON JUAN DE**, a Portuguese diplomatist, successively ambassador at Rome and London, and afterwards minister of foreign affairs; died in 1814 in Brazil, whither he had repaired some years before his death.

**ALMEIDA, NICOLAO TOLENTINO DE**, a Portuguese satirical poet, born at Lisbon in 1745, died in 1811.

**ALMEIDA or ALMEYDA, THEODOSIUS or THEODORE**, a voluminous Portuguese writer, died in 1804.

**ALMELOVEN, JOHANNES**, a Dutch painter and engraver of the first half century.

**ALMELOVEN, THEODORE JANSSON VAN**, a learned Dutch physician, born at Mydrecht in 1657, distinguished himself in languages, philosophy, and medicine at Utrecht; became professor of Greek literature and of medicine at Harderwyk in 1697, and in that capacity continued to enjoy the renown to which his various erudition entitled him till his death in 1712. He left many treatises in Latin, chiefly on medical subjects.—J. S., G.

**ALMENAR, JOHN**, a Spanish physician, author of a treatise, "De Morbo Gallico," flourished in the fifteenth century.

**ALMENDINGEN, LOUIS HERCHER DE**, a German juriconsult, distinguished as an essayist on political and philosophical subjects, son of the minister of Hesse Darmstadt at the court of France, was born at Paris in 1766; died in 1827.

**ALMEON or ALMANZOR**, an Arabian prince and mathematician of the eleventh and twelfth centuries, who wrote astronomical observations on the sun, and is not to be confounded with another author of the same name, who wrote on astrology.

**ALMER, JOHN CHRISTIAN**, a Danish painter of some celebrity, born at Copenhagen in 1742, died in 1792.

**ALMERAS, BARON LOUIS**, a French general, born in 1764, distinguished himself in 1794 by a brilliant feat of arms, having, at the head of only two hundred men, repulsed in a pass of the Alps a force of fifteen hundred; was present with Kleber in Egypt; and on his return, having been named general of division, took part in the Austrian, Prussian, and Russian campaigns of Napoleon. Died in 1823 at Bourdeaux.—J. S., G.

**ALMEYDA, DON FRANCISCO DE**, a Portuguese theologian, born of noble parentage at Lisbon in 1701, acquired a reputation as a writer on canon law, which he elucidated in a work of great research, still highly esteemed.

**ALM'CI, PIETRO-CAMILLO**, a learned Italian, born at Brescia in 1714. He has left a variety of treatises in theology, history, and general literature. He died in 1779.

**ALMODO'VAR**, the Duke of, a Spanish diplomatist of con-

siderable skill and learning. He was ambassador from the court of Spain to Russia, Portugal, and England, and on retiring from public life, occupied himself in literary pursuits, residing at Madrid, where he died in 1794.

\***ALMODOVAR, DON ILDEFONSO DIAS DE RIBERA**, Count of, a native of Valentia. After being for some time exiled from his native land, he returned to Spain on the death of Ferdinand VII., and became president of the Spanish Cortes, and minister at war. In 1843 he was minister of foreign affairs.

**ALMOLI, SALOMON**, a learned rabbi of the Levant, who lived about the end of the fifteenth and the beginning of the sixteenth century. Besides a variety of other works, he wrote a treatise on the "Interpretation of Dreams," containing the opinions of the rabbinical writers on that subject.

**ALMON, JOHN**, a native of Liverpool, born in 1738. He received his education at Warrington, and having gone to sea and visited various parts of the world, at length settled in London about the year 1759. Having attached himself to the political party represented by the celebrated Wilkes, he soon rendered himself remarkable by his zeal and ability in support of their opinions. Almon was the author of a great variety of treatises of a political character, and edited in succession several periodical works. He thus obtained a high degree of influence with his party, and having become a publisher, realized a considerable fortune. Almon is said to have emigrated to America, but subsequently to have returned, and settled at his villa of Boxmoor, where he died in 1805.—F.

**ALMONACID, SEBASTIAN DE**, a Spanish sculptor, who lived at the end of the fifteenth and the commencement of the sixteenth century. He executed various works for the cathedrals of Toledo and Seville.

**ALMONDE or ALLEMONDA, PHILIP VAN**, an admiral in the navy of Holland, born at Briel in 1646. He greatly distinguished himself by his skill and intrepidity in several naval battles, under Admiral de Ruyter, with the English fleet. He accompanied the prince of Orange in his expedition to England in 1688, and after that period continued to fight side by side with the English, against the naval forces of France and Spain, rendering most important service by his well-tryed valour and seamanship. He commanded the Dutch fleet in the battle of La Hogue in 1692, and took an important share in the destruction of the Spanish fleet at Vigo in 1702. Almonde may be justly considered one of the most distinguished heroes in the history of the naval enterprise of Holland. He died at his country seat of Haaswijk in 1711.—F.

**ALMOR, DON JUAN**, a Spanish artist, who painted several pictures for the convent of the Carthusians, near Saragossa, in which he died about the end of the eighteenth century.

**ALMOSNINO, MOSES-BEN-BARUCH**, a learned rabbi, a native of Saloniki, born in 1523, whose numerous works exhibit great scholarship and research. He was one of the greatest writers of his age. He died about the end of the sixteenth century.

**ALMOSNINO, SIMON**, son of the preceding, and an author in Hebrew.—**SAMUEL**, another rabbi of the same name, flourished in the seventeenth century, and wrote on the minor prophets.

**ALMQUIST, CHARLES-JONAS-LOUIS**, a Swedish writer, born in 1793. He was the author of several educational works, but is better known in Sweden by his poems and romances.

**ALNANDER, OLAF-JOHANN**, a Swedish antiquarian writer, a native of Norrköping. He lived about the end of the seventeenth and commencement of the eighteenth century.

**ALOMPRA**, the founder of the reigning dynasty of Burmah, born about the year 1710. By the exercise of great talent and vigour, he rose from being the chief of a petty tribe to the possession of sovereign power, and distinguished himself not less by the wisdom of his administration, than by his valour, skill, and promptitude as a military leader. He died in 1760.—F.

**ALONSO, DE MENDOZA**, a Spanish voyager of the sixteenth century, who founded, in 1548, the town of Paz in Peru.

**ALONSO, DE MERCADILLO**, a Spanish voyager of the sixteenth century, the founder in Quito of the city of Loja or Loxa, the vicinity of which is famous for producing the celebrated febrifuge, known as Cascarrilla de Loxa.

**ALONSO, DE LOS RIOS, FRANCISCO**, and his son and pupil **PEDRO**, Spanish sculptors, natives of Valladolid, flourished in the second part of the seventeenth century. They worked for the cathedral and other churches of Madrid.

**ALOPA, LORENZO D'**, a native of Venice, born about the middle of the fifteenth century. He carried on business as a printer in Florence, and being a man of learning, and well acquainted with the ancient languages of Greece and Rome, produced some admirable editions of the classic authors, equally distinguished for beautiful typography and accuracy of text. The last works printed by him issued from the press about the end of the century, none having appeared after 1500.—F.

**ALNEWICK, MARTIN**, an English Franciscan, who died in 1336, wrote on Lombard's "Sentences."—**WILLIAM**, an English Franciscan of the same period, wrote on the same favourite subject, and also on natural philosophy.

**ALNPEKE, DITLIEB VON**, a German writer. He lived at Reval towards the end of the thirteenth century. He was the author of a work called the "Chronicle of Livonia."

**ALOADIN**. See **ALADIN**.

**ALLOIS, GIAN-FRANCESCO**, an Italian poet, a native of Caserta, near Naples, who was put to death in 1564, on suspicion of having adopted some of the doctrines of the Reformation.

**ALOISI, BALDASSARE**, surnamed **IL GALANINO**, a Bolognese painter; born 1578; died 1638. He studied with his relatives, the Caracci, under whom he distinguished himself as a historical painter. In after-times, however, circumstances compelled him to attend almost exclusively to portraits.

**ALOJA, GIUSEPPE**, a Neapolitan engraver of the eighteenth century.

**ALOPÆUS, DAVID**, a younger brother of Maximilian, born at Wiborg in 1769. He was successively ambassador from the court of Russia at Stockholm and Berlin, and died in the latter city in 1831.

**ALOPÆUS, MAXIMILIAN**, a Russian diplomatist, born at Wiborg in Finland in 1748. He was appointed by Catherine II. minister plenipotentiary to the court of Prussia. Subsequently to the treaty of Tilsit, he visited London as envoy extraordinary at the British court. He died at Frankfort in 1822.

**ALOS, JOHANNES**, a Spanish physician, resident in the latter part of the seventeenth century at Barcelona, where he was professor of anatomy and pharmacy.

**ALOYSIUS, GONZAGA**, was born at Mantua in 1568. He was the son of the marquis of Castiglione, and is commemorated by the church of Rome on June 21, because, on that day, in the year 1591, he fell a victim to his zeal in visiting the sick during a pestilence at Rome.

**ALPAGO, ANDREA**, an Italian physician, a native of Belluno, lived in the sixteenth century, and wrote several works, relating chiefly to the theory and practice of medicine.

**ALPAIDE or ALPAIS**, surnamed **THE BEAUTIFUL**, the mistress of Pepin d'Héristal, mayor of the palace to Thierri II., king of France, in the eighth century. She was the mother of Charles Martel.

**ALP-ARSLAN**, a renowned Eastern warrior, the nephew and successor of Toghrol, sultan of the Seljuks, was born in 1030, and came to the throne in 1063. He showed great wisdom in the choice of his ministers, having soon after his accession raised to power Nizamü-l-Mülk, who is known for his great talents as a statesman and historian. Alp-Arslán soon entered on a career of successful conquest in Asia Minor, having, after several minor achievements, conquered the Greeks in Syria, under the command of Nicephorus Botaniates. But the Emperor Romanus Diogenes having placed himself at the head of his forces, speedily turned the tide of fortune, for, marching into Cilicia, he attacked the Turks when their leader was absent, and totally defeated them. He took advantage of Alp-Arslán's continued absence to carry on his conquests till the Turks were driven beyond the Euphrates; but in 1071, Alp-Arslán opposed the emperor with an army of 40,000, and though the latter was at the head of 100,000 men, yet his authority was so broken by disputes and mutinies among his mercenaries, that he suffered a total defeat, and was himself taken prisoner. Romanus was only set at liberty on the promise of a large ransom, an annual tribute, and the restoration to liberty of all his Mohammedan captives. It does not appear that all these conditions were fulfilled, the emperor having died in the same year. Alp-Arslán was assassinated in 1072 by Berzem, a rebellious subject, who, when brought before him a prisoner, stabbed him on his throne.—J. B.

**ALPEDRINHIA, D. JORGE DA COSTA**, cardinal, and archbishop of Lisbon, born at Alpedrinha, in Beira, about 1406, was of a noble family, and possessed considerable wealth. He was

first bishop of Evora, from which he was preferred to the archiepiscopate. He died at the advanced age of 102.

ALPETRAGIUS, an Arabian of Morocco; flourished about the middle of the twelfth century; celebrated for a new physical theory of the celestial motions. His idea was that the stars move in spirals—thus representing or rather combining both their proper and diurnal motions.

ALPHANUS or ALPHANI was a physician of Salernum, in the sixteenth century, and author of a work on the subject of the plague and other pestilential diseases.

ALPHARABIUS, JACOBUS, an antiquarian of Leonessa in the kingdom of Naples, in the beginning of the 18th century.

ALPHEGE, also ELPHIEGE, ST., and archbishop of Canterbury, was a monk of extreme strictness and holiness of life. Called to preside over the great monastery at Bath, he distinguished his rule by the suppression of many irregularities. St. Dunstan was so impressed with his value, that he procured his appointment to the see of Winchester A.D. 984, whence in 1006 he was translated to Canterbury. He received his pall at Rome, and on his return held a national synod, 1009, in which the observance of Friday as a weekly fast was confirmed, a decree which is embodied in the present English Prayer Book. When Canterbury was besieged by the Danes, the primate did not abandon his flock, but remained at his post, animating and encouraging the defenders. On the capture of the city he was taken prisoner, confined for several months, and cruelly massacred in the 59th year of his age. The date of his martyrdom is April 19, 1012, on which day he is commemorated in the English and Roman calendar.—J. B., O.

ALPHEN, DANIEL VAN, a Dutch lawyer and author. He was professor of canon and civil law in the university of Leyden. He was born in 1713, and died in 1797.

ALPHEN, JEROME VAN, a Dutch theologian, born in 1700, was protestant minister successively at Nieuw Loosdrecht, Leeuwarden, and Amsterdam, and died in 1758.

ALPHEN, JEROME VAN, a Dutch poet. He was born at Gouda in 1746; died at the Hague in 1803.

ALPHEN, JEROME SIMON VAN, a protestant theologian, born at New Hanau, 1665; died 1742.

ALPHERY, NICEPHORUS, a clergyman of the church of England in the seventeenth century, said to have been descended from a branch of the imperial family of Russia; but this is doubtful. He held the living of Wooley in Huntingdonshire, but was ejected from his charge during the Commonwealth. He lived to resume his duties after the Restoration.

ALPHEUS, a Greek engraver, who lived in the first century.

ALPHEUS, a Greek poet, a native of Mitylène, who flourished in the Augustan age.

ALPHIUS, AVITUS, a Roman poet, who lived probably in the reign of Tiberius. His works are lost, with the exception of six verses to which his name is attached, and which are preserved in the "Anthologia Latina."

ALPIN, the last of the Scoto-Irish kings, who reigned over the western district of Scotland before the union of the Piets and Scots. He reigned from 833 to 836, was distinguished for his warlike spirit, and at last fell fighting against the Piets between the rivers Ayr and Doon.

ALPINI, PROSPERO, rendered in Latin PROSPER ALPINUS, a celebrated botanist and a physician, was born at Marostica in the north of Italy, 23d November, 1553. He was educated at the university of Padua, where he prosecuted his medical studies with zeal, and took the degree of doctor of medicine in 1578. He entered on the practice of his profession as a physician, but afterwards devoted his attention chiefly to botany. As physician to the Venetian consul, Alpini visited Egypt, where he spent three years. He became acquainted with the plants of the country, and afterwards published a work on the Egyptian Flora. He returned to Venice in 1586, and was appointed physician to the prince of Melfi. He was subsequently appointed professor of botany at Padua, and continued to discharge the duties of that office until 1617, when he died in the 64th year of his age. He published works on exotic plants, on the balsam plant, and on rhubarb. The genus *Alpinia* was named after him by Linnæus.—J. H. B.

ALPRUNUS, JOHANNES BAPTISTA, a German physician. He practised medicine at Vienna, where he held the office of physician to the Empress Eleonora, wife of Leopold I.

ALPTEGHIN, the Turkish slave of Ahmed, second sultan of

the race of Sâman. Having been freed by his master, he attained rank in the army, amassed great wealth, and became governor of Khorâssân. He subsequently headed an insurrection against the reigning sultan, and, aided by a large army, took possession of Ghuznee, which he retained till his death in 975-6. His son-in-law and successor, Subekteghin, was father of the celebrated Mahmud the Ghuznevide.—F.

ALQUIÉ, FRANÇOIS SAVINIEN D', a French writer of the 17th century; author of several works, chiefly historical.

ALQUIER, CHARLES-JEAN-MARIE, a French diplomatist, born at Talmont in the department of La Vendée in 1752. In 1789 he was mayor of Rochelle, and under the National Convention in 1792, the Directory in 1799, and, subsequently, the Consular Government of France, he was ambassador successively in Bavaria, Madrid, Florence, Naples, Rome, Stockholm, and Copenhagen. He died in 1826.

ALRAKI, R. JOSHUA IBN VIBESH, a Spanish rabbi of the 12th or 13th century, and author of a herbal in Arabic.

ALS, PETER, a Danish portrait and historical painter; born at Copenhagen in 1725; died in 1775.

ALSACE, CHARLES ALEXANDRE MARK MARCELLIN, also nephew of the Cardinal d'Alsace. He was a marshal of France, and died by the guillotine at Paris in 1794.

ALSACE, PHILIPPE GABRIEL MAURICE D', nephew of the cardinal. He died at Paris in 1802.

ALSACE, THOMAS-ALEXANDRE-MARK D', also nephew of the cardinal; prince of Chimay, grandee of Spain, and colonel of the grenadiers of France. He fell at the battle of Minden.

ALSACE, THOMAS-LOUIS D' HENIN-LIETARD, Cardinal d', archbishop of Malines, primate of the Austrian Netherlands, count of Boussu, prince of Chimay; born in Brussels in 1680. He died in 1759, distinguished for devotedness to his duties, and for those virtues suited to his rank.

ALSARIO or ALZARIO, DELLA CROCE VINCENZO, an Italian physician, born at Genoa about the year 1576. His works are numerous, and exhibit much talent and erudition.

ALSCHEIK, MOSES, was a rabbi of Galilee, author of commentaries on the Old Testament. He died in 1592.

ALSLOOT, DANIEL VAN, was a Flemish landscape painter, born in Brussels about 1550, and died about 1608.

ALSOP, ANTHONY, prebendary of Winchester, and rector of Brightwell in Berkshire, was the author of a variety of works exhibiting extensive scholarship and refined taste. He possessed great skill in Latin versification, and many of his poems have been highly esteemed for their ease and elegance. He was accidentally drowned in 1772.

ALSOP, VINCENT, a nonconformist divine of considerable learning, the author of a variety of works, the best known of which are replies to Sherlock's treatise "On the Knowledge of Christ," and Stillingfleet's "Mischief of Separation." He died at Westminster in 1703.

ALSOUFY, ABUL-HASSAN-ABDEERAHMAN-BEN-OMAR, an Arabian astronomer, born at Réi in Hamadan in 903. He wrote several treatises on his favourite science, for the instruction of Sultan Adhad-Eddaulah, at whose court he lived. His death took place in 986.

ALSTED, JOHN HENRY, one of the most prolific writers of the seventeenth century, was born in 1588 at Ballersback, near Herborn, in Nassau, where his father was a pastor of the Reformed church; studied at Herborn; received there, in 1608, his first appointment as head-master of the university—pædagogium—and delivered private lectures in philosophy; was made extraordinary professor of philosophy in 1610, and ordinary professor of the same in 1615, after declining invitations to Wesel and Hanau, and another to enter the service of John Sigismund, elector of Brandenburg. In 1618 he was sent by the counts of the Wetterau to the synod of Dort. In 1619 he was made professor of theology at Herborn, and on Piscator's death in 1626, succeeded him in the principal theological chair. In 1629 he accepted a theological chair in the newly-erected university of Weissenburg in Transylvania, where he continued till his death on 8th November, 1638. Adelung gives the titles of upwards of sixty-two works which Alsted published on various subjects of theology, philosophy, and chronology; nor is the list complete. He chiefly employed himself in reducing the sciences of his day to methods and compends. His "Encyclopædia Philosophica" (Herborn, 1620, 4to), containing an abridged view of the knowledge of his age, was received with much favour, and was twice reprinted

His "Encyclopædia Biblica" was based upon the false principle, afterwards revived by Hutchinson, that the Scriptures contain the first principles of all science and art. His treatise, "De Mille Annis," embodied millenarian views, and fixed the commencement of the personal reign of Christ on the earth for the year 1694. By an anagram of his name, his contemporaries honoured him with the appellation of "Sedulitas." His writings have long been destitute of all interest and value, save as showing the state of knowledge in his time.—P. L.

ALSTON, CHARLES, a Scotch physician and botanist, was born at Eddlewood, in the west of Scotland, in 1683. His father was allied to the noble family of Hamilton. Young Alston pursued his studies at the university of Glasgow, and afterwards visited the continent. On the death of his father, he resumed his medical studies at Glasgow, and was patronized by the duchess of Hamilton. At the age of thirty-three he went to Leyden, to attend the lectures of Boerhaave. He remained there for nearly three years, and took the degree of M.D. At Leyden he became acquainted with Dr. Alexander Monro, who was afterwards professor of anatomy and surgery in the university of Edinburgh. On his return to Edinburgh, Alston gave instructions in botany in the king's garden at Holyrood, which was under the charge of the duke of Hamilton, hereditary keeper of the palace. On the 17th March, 1738, Alston was appointed professor of botany and materia medica in Edinburgh. He delivered two courses of lectures annually; one on botany, and another on materia medica. He was laborious in the discharge of his duties, and devoted his attention specially to medicinal plants. He published an introduction to botany, under the name of "Tirocinium Botanicum," in which he gives, first, a general dissertation on the study of botany, with a view of the classifications of Tournefort and Linnæus; second, elements of botany after Linnæus's "Fundamenta Botanica;" third, the names of plants, chiefly medicinal, cultivated in the Edinburgh Botanic garden, and used for demonstration. At the time of Alston's appointment to the chair, the sexual system of Linnæus was promulgated, and it seems to have been strenuously opposed by many cultivators of botany, and by Alston among others. He wrote a paper in Latin on the sexes of plants in his Tirocinium, which was afterwards translated by himself, and published in the Edinburgh Physical and Literary Essays for 1771. In this paper he opposes the Linnæan views, and states that, in spinage, hemp, and other diœcious plants, perfect seed can be produced without the contact of pollen. Alston wrote a valuable work on materia medica, in which he corrected many errors relative to species and the medicinal properties of plants. This work was published after his death by Dr. John Hope. In the Edinburgh Medical Essays, Alston wrote dissertations on tin as an anthelmintic, and on opium. In 1752 he published a dissertation on quicklime and lime-water as lithontriptic remedies, &c. He died on 22d November, 1760, at the age of 77.—J. H. B.

ALSTON, WILLIAM, a native of the United States, exercised landscape painting with considerable success. He studied at Rome, where he executed some very good pictures, and wrote an interesting handbook on landscape painting. Died in 1830.

ALSTORPH, JOHANNES, a Dutch antiquary, born at Groningen about 1680. He died in 1719.

ALSTROEMER, CLACLAS D', a Swedish naturalist, was born on 9th August, 1736, at Alingsås. He studied under Linnæus, and devoted his attention in part to botany. He travelled over Europe, and made a small collection of plants. Linnæus notices him as a contributor to his Species Plantarum; and he named a genus *Alstroemeria* after him. He died at Gasewadsholm on 5th March, 1796.—J. H. B.

ALSTROEMER or ALSTROEM, JONAS, a native of Alingsås in Sweden, born in 1685. After undergoing a great variety of adventures, he succeeded, by his indefatigable energy and enlightened patriotism, in conferring very great advantages on his native country, by introducing numerous improvements in its woollen manufactures. He ultimately attained well-merited distinction, and died at Stockholm in 1761.—F.

ALT or ALTZIUS, ELIAS, a German historical and portrait painter of Tübingen, in the second half of the 16th century.

ALT, FRANCIS-JOSEPH-NICOLAS, Baron d', a Swiss historical writer, born at Friburg in 1689. He died in 1771.

ALTANI, ANTONIO, an Italian prelate and diplomatist. He was appointed bishop of Urbino in 1436, and performed some important political duties as papal nuncio.

ALTANI, ANTONIO, surnamed THE YOUNG, a poet of the same family as the preceding, born in 1505. He studied at Padua, and became intimate with many of the most remarkable scholars of his age. He died in 1570.

ALTANI, ENRICO, surnamed THE ELDER, an Italian dramatist of the seventeenth century.

ALTANI, ENRICO, THE YOUNGER, an Italian author, who lived about A.D. 1700.

ALTAPHLISI, HOBASCH, a Jewish physician, who flourished before 1535, and whose writings are preserved in the Bodleian library at Oxford.

ALTARDJEMAY, an Arabian, who lived in the ninth century, and who was commissioned by the caliph Vatek to explore Tartary and the regions north of the Caspian. The narrative of his journey abounds in fables.

\*ALTAROCHE, MARIE MICHEL, a French literary character, born in 1811. Having been originally destined for the bar, he embraced the profession of journalism after the Revolution of 1830, and was connected with many of the leading Parisian papers; was one of the originators, and for fourteen years the principal editor of the *Charivari*, the *Punch* of France. He produced a number of novels, songs, political works, &c. In 1850 he became manager of the Odeon theatre.—J. W. S.

ALTDORFER, ALBERT, a Bavarian painter and engraver, was born at Altdorf, near Landshut, in 1488, and died at Regensburg in 1538. He is considered the best pupil of Albert Durer, and executed many important works, amongst others the "Battle of Arbela," now in the Pinacotheca at Munich.

ALTEN, KARL AUGUST, Count of, a Hanoverian officer, born at Burgwedel in 1764, served with distinction in the Peninsula under Wellington, and died at Botzen in 1840.

ALTENBURG, MICHAEL, a Lutheran divine, musician, and poet. Died in 1640.

ALTENSTEIG, JOHANN, a Roman catholic theologian of Southern Germany, flourished in the sixteenth century, and held a professorship in the university of Tübingen.

ALTENSTEIN, KARL, Baron von, minister of public instruction in Prussia, was born at Anspach in 1770, and died at Berlin in 1840. He served with great zeal and ability as a statesman and financier, co-operating with Niebuhr, Stägemann, the Humboldts, &c. His leisure was devoted to literary and scientific pursuits. He took a leading part in the foundation of the universities of Berlin (1809) and of Bonn. The last twenty-three years of his life were more particularly devoted to the superintendence of the educational system of Prussia, which owes to him many of its most admirable features.—J. W. S.

ALTER, FRANZ KARL, a distinguished scholar, born in 1749; died at Vienna in 1804. He published an edition of the New Testament, with various readings, the text being that of the Codex Vindobonensis in the imperial library. The work, though of no great critical value, was very carefully and skilfully executed.

ALTHAMMER, ANDREAS, a protestant theologian of Germany, was born at Brenz in Suabia in 1498, and died at Jagerndorf in Upper Silesia in 1564.

ALTHEN, EHAN, a Persian, was born in 1711, and died in 1774 in France, into which country he had introduced the cultivation of madder. He had in early youth been sold into slavery in Asia Minor, in consequence of the Afghan invasion of Persia, and had been employed in the cultivation of madder. He at length escaped, carrying with him some of the seed of this valuable plant, the exportation of which was forbidden on pain of death, and took refuge with the French consul, by whom he was forwarded to Marseilles. It is to be regretted that a man who had enriched France to such an extent, should have been permitted to die in poverty and neglect. A marble monument was erected to his memory in 1821, on the very day when his only daughter perished in an hospital!—J. W. S.

ALTHOL, LUDWIG CHRISTOPH, was born at Detmold, 1758, studied at Halle and Göttingen, became physician to the king of Saxony, and died, 1832, leaving several medical works.

ALTHUSEN, JOHANN, was born in 1557 at Embden, studied jurisprudence at Basle, became professor of civil law at Herborn, and died in 1638. He defended the civil and religious liberties of his native town, of which he had been chosen syndic, against the counts of East Friesland. He protested against trials for witchcraft, then very numerous. In his political writings he maintains that the sovereignty resides in the people

alone, and that kings are simply magistrates, who, may be deposed and put to death in case of misconduct.—J. W. S.

**ALTICOZZI** or **ALTICOTIUS**, **LORENZO**, a learned jesuit, born at Cortona in 1689; died 1777; wrote against Beausobre's history of Manichæism.

**ALTILIO**, **GABRIELLO**, an Italian poet of the fifteenth century, the exact time and place of whose birth are unknown. He resided at Naples, then the focus of European intellect, and wrote some admirable poems in the Latin tongue.

**ALTING**, **HEINRICH**, a celebrated theologian of the reformed church of Germany, was born at Embden in 1583. He was the third son of Menso Alting, a zealous champion of the protestant church in East Friesland. He studied first at Groningen, and then under Piscator at Herborn. In 1608 he became tutor at Heidelberg of Prince Frederick, afterwards elector of the Palatinate and king of Bohemia, to whom he was devotedly faithful, and by whom he was repaid with an unchanging attachment. In 1612 he accompanied the young elector to England, on occasion of his marriage with the Princess Elizabeth; and, on his return to Heidelberg in 1613, was made professor of theology, and rector of the Collegium Sapientiæ of that city. In 1618 and 1619 he took part with his colleagues, Scultetus and Tossanus, in the synod of Dort, where he distinguished himself by his learning. At the sack of Heidelberg by the Austrian troops under Tilly, Alting narrowly escaped being put to death by an Austrian officer, who came in quest of him into the house where he had taken refuge. After a short stay at Schorndorf in Wurtemberg, he was compelled, in 1623, to remove with his family to Embden, where he had the offer of an appointment as preacher; but he preferred to re-enter the service of his exiled prince, residing now at the Hague, and who appointed him tutor to his eldest son. In 1625 he declined the office of a theological professorship at Franeker; but accepted a similar offer in 1627 from the university of Groningen, where he remained for the rest of his life. He still continued, however, to maintain the closest correspondence with the banished elector, and was in the habit of paying him a yearly visit. Among other labours, he took part in a new Dutch translation of the Scriptures, which was undertaken by order of the synod of Dort. He died on the 25th August, 1644. His writings evince profound learning. In the department of Hebrew he was particularly eminent, and contributed much to promote those Oriental studies for which his age was so distinguished. The great Orientalist, John Heinrich Hottinger, was one of his scholars. His most important writings were the following, all posthumous:—"Scripta Theologica Heidelbergensia," Friburg, 1646; "Exegesis Augustinæ Confessionis," Amster., 1647; "Theologia Historica," Amster., 1664; "Historia Ecclesiæ Palatinæ," Francf., 1701.—P. L.

**ALTING**, **JACOB**, a distinguished Hebraist and theologian of the Cocceian school, and son of Henry Alting, was born at Heidelberg in 1618. He was still a child when the sack of Heidelberg by Tilly drove his parents into exile. He studied theology and the learned languages at Groningen, Leyden, and Utrecht, and repaired to Embden to enjoy the instructions of Gumprecht Ben Abraham, a learned Jewish rabbi. In 1640 he made a journey to England, when he made many learned friends in London and Oxford, and took orders in the church of England with a view to settle in the country. But in 1643 he gave up this design, and accepted a professorship of Hebrew and the Oriental languages in Groningen. He had for one of his colleagues in the theological faculty, Samuel des Marets (Maresius), with whom he had the misfortune to become involved in a bitter controversy, which continued for many years. Maresius was strongly addicted to the scholastic method of teaching theology, while Alting was a Cocceian in his principles and views. Maresius accused his young colleague of rationalism and heresy. The curators of the university were obliged to interfere, and enjoin silence upon the disputants. The university of Leyden absolved Alting from the charge of doctrinal error; but he continued to be regarded with suspicion all his life by the anti-Cocceian party. He died at Groningen in 1679. Next to the Buxtorfs, he was one of the most distinguished promoters and professors of Hebrew and Oriental learning of his age. He was so much addicted to rabbinical studies and opinions, that he was spoken of as half a Jew. He kept up an extensive correspondence with the learned men of his time. His collected works were published after his death by his pupil and friend, Balthasar Becker, reformed preacher at Amsterdam, in 5 vols. folio. In his work on Hebrew punct-

uation, entitled "Fundamenta Punctationis Linguae Sacrae," he brought forward a new theory on the quantity of Hebrew vowels, called the "Systema duarum morarum," afterwards further developed by Danz, but which failed to commend itself to the judgment of later grammarians. His grammatical works on the Hebrew, Chaldee, and Syriac languages were long in use in the universities of Holland, but are antiquated and obsolete.—P. L.

**ALTING**, **MENSO**, a Dutch topographer and antiquarian of the 17th century, author of several topographical works.

**ALTISSIMO**, or **CRISTOFORO FIORENTINO**, an Italian improvisatore of the fifteenth century. Collections of his verses were repeatedly published.

**ALTMANN**, **JOHANN GEORG**, a geographer, historian, and antiquarian of Aargu in Switzerland, who lived in the first half of the eighteenth century.

**ALTO**, a Scottish monk and missionary of the eighth century, who travelled into Bavaria, and founded a monastery, which was endowed by king Pepin, and dedicated to Boniface.

**ALTOFER**, **CHRIST.**, a German divine and writer. born at Heersbruck in 1606; died in 1660; author of a commentary on several of Paul's Epistles.

**ALTOMARI**, **ANTONIO DONATO**, an Italian physician of the sixteenth century, who appears to have suffered much persecution at Naples, his native city. He has left a number of works containing nothing very original or important.

**ALTOMARI**, **GIOVANNI**, the son of the preceding, practised medicine at Naples towards the end of the sixteenth century. He published an edition of the works of his father.

**ALTOMONTE**, **MARTINO**, a historical painter, born at Naples in 1657, of German parents, his real name being **HOHENBERG**. He studied at Rome under Gian Battista Gaudi, then proceeded to Poland, where he worked for some time for King Sobieski, and ultimately settled at Vienna, where he died in 1745.—R. M.

**ALTON**, **JOSEPH WILHELM EDWARD D'**, a German archæologist and naturalist, was born at Aquileia in 1772, and after residing for a long time near Weimar and at Würzburg, and travelling in several countries of Europe, was appointed professor of archæology at the university of Bonn, where Prince Albert was among the number of his pupils. He died in 1840, leaving a work on comparative osteology, which has been continued by his son, Johann Samuel Edward D'Alton.—J. W. S.

**ALTON**, **RICHARD**. Count, an Austrian general of Irish extraction, who poisoned himself at Trier in 1790, to avoid appearing before a court-martial.

**ALTOUVITIS**, a poetess of Marseilles, of the 16th century.

**ALTOVITI**, **ANTONIO**, a Florentine theologian, who was born in 1521, was appointed archbishop of Florence in 1548; took part in the council of Trent, and died in 1573.

**ALTSCHUL**, **ELIAS**, the leader of the homœopathic party in Austria, was born at Prague in 1812.

**ALUNNO**, **FRANCESCO**, a calligraphist of Ferrara, who lived in the earlier half of the sixteenth century.

**ALUNNO**, **NICOLO**, an Italian painter of the fifteenth century, born at Foligno, and flourishing about 1480. He only worked in distemper, and left several pictures in which the truthfulness of design is highly remarkable. He enjoyed the greatest consideration during his time.—R. M.

**ALVA** or **ALBA**, **FERDINAND ALVAREZ OF TOLEDO**, Duke of, a Spanish general, distinguished under Charles V. and Philip II., born in 1508, was descended from a family of Castile, illustrious in the wars of Spain for several generations. He was only two years old when his father Garcias de Toledo fell in battle against the Saracens, and his education was therefore superintended by his grandfather, who sent him to the army at the age of sixteen. He fought under the Emperor Charles at Pavia, and followed him to Algiers. He defended Perpignan against a six months' siege by the French, under the Dauphin, and at last repelled the enemy. This exploit established his fame, and from that time important trusts were committed to him. As generalissimo of the imperial forces, he attended his master in the war in Germany against the Lutheran princes of the empire, and there, while displaying great military talent, he at the same time gave indications of that cruelty and fanaticism for which he afterwards became so noted. For example, he strongly advocated the death of the conquered elector of Saxony, and when at Wittemberg, proposed to the emperor to open the grave of Luther, and burn the bones of the heretic.

But it was under Philip that Alva's name became most prominent in Spanish history. He had much in common with that tyrant, and proved an acceptable adviser and well-qualified assistant in his schemes for the attainment of absolute monarchy, and the suppression of heresy throughout his dominions. At the time of Philip's accession, Alva was conducting a war against Pope Paul IV., who had entered into an alliance with Henry of France, for the invasion of the Spanish dominions in Italy. In this campaign he was successful, and twice the city of Rome itself lay at his mercy; but either his own reverence for the sacred capital, or the instructions of the king, kept him from leading his armed forces within the gates. He concluded a peace with the pope in 1557, and subsequently attended as Philip's plenipotentiary, in concluding the treaty of Chateau Cambresis, which he afterwards cemented by negotiating the marriage of Philip with the sister of the French king. This treaty contemplated not so much peace between the contracting powers, as combined efforts for the suppression of the protestant cause in Europe. To this object Alva resolutely applied himself, and there can be little doubt that the severe measures now adopted against the protestants in France, and even the massacre of St. Bartholemew itself, are to be attributed mainly to his advice.

Meanwhile, in the Low Countries, matters were going ill for the cause of Spanish monarchy and the church of Rome. The Guesen League had been formed to resist Spanish innovation. The chief nobles, William of Orange, and the Counts Egmont and Horn, showed themselves little disposed to strengthen the hands of the duchess of Parma, against the demands of their countrymen, while the common people were forming themselves into bands of image-breakers, entering the churches, and despoiling them of their ornaments. Alarmed by these commotions, the duchess sent an earnest request for her royal brother to visit the provinces in person. He professed that it was his intention to do so, but resolved instead to send Alva at the head of an army to chastise the rebels. His approach spread terror among all classes of the inhabitants; even the regent sought to prevent the entry of his army. But he produced his commission, giving him sole power in military matters, and intimated to her that he had further instructions which he could produce if occasion required, investing him with still more absolute authority. William of Orange had wisely fled at the approach of his old enemy, but the Counts Egmont and Horn, who had all along shown more loyalty than their friend, sought to win the favour of government by remaining. These nobles were received by Alva with an appearance of goodwill, which, however, he did not long maintain; for shortly after his arrival, at a feast in Kuilemberg House, where he had taken up his residence, they were arrested at his command, and cast into prison. On the pretext of inquiring into the late disturbances, Alva instituted a tribunal of twelve persons, chiefly Spaniards, which he named "The Court of Tumults," but which speedily merited the name given to it in history of "The Bloody Tribunal." Thousands of those suspected of heresy, or who had in any way been connected with the Guesen league, as well as those more immediately concerned in the late insurrections, were brought before it, and with scarcely the show of justice, condemned to die. Vast crowds fled in terror from the country, and the duchess, weary of the appearance of power which she no longer possessed, asked and obtained from Philip her recall from the regency. Her presence had been some check on Alva's cruelty, and her departure was the signal for persecution more severe than ever.

Meanwhile the population of the northern provinces had taken up arms against the oppressor, and the Prince of Orange, and his brother Count Louis of Nassau, had levied an army in Germany for the purpose of rescuing their country from the tyranny of Alva, and on one occasion the count gained a victory over the Spanish forces sent to oppose him. This defeat exasperated the duke, and hastened the death of the unhappy Counts Egmont and Horn, who had been condemned on a charge of treason. Immediately after their execution, Alva proceeded against the two brothers, and this time succeeded in repelling them, and at length in reducing the province to submission. Emboldened by success, he proceeded to further arbitrary measures, burdening the inhabitants with taxes, for the support of the very army which had been to them such a scourge. These oppressions raised further rebellion, and afforded the Prince of Orange and Count Louis an opportunity of making another effort to restore the liberties of their country. Alva so far suc-

ceeded in repelling them once more; but it became evident to Philip that it was impossible to carry out the projects for which his chosen plenipotentiary had been sent; the duke was therefore recalled in 1573. He left the Netherlands with the boast that, during the six years of his vice-royalty, 18,000 persons had perished on the scaffold, besides the multitudes that had fallen before his troops in battle, or were murdered by them in cold blood. Soon after his return to Madrid, he lost the favour of Philip, because he defended his son, who had been guilty of seducing a lady of high rank at court. He was banished to his castle of Uzeda, where he remained an exile, till, in 1582, Philip required his services to lead the land forces in the invasion of Portugal. This trust he executed with great success, and in less than three months completely conquered that country. This was his last campaign, for he died in the same year at the age of seventy-four.—(*Biog. Univ.*, *U. K. Society's Biog. Dict.*, *Schiller's Revolt of the Netherlands*).—J. B.

ALVARADO, ALONZO DE, a captain who served under Cortes in Mexico, and after the conquest of that country joined the army of Pizarro in Peru. He held for a time the superintendence of the new city of Truxillo, and afterwards led a force sent to reduce the Chachapoyas, among whom he founded the settlement of San Juan de la Frontera. During the unfortunate disputes between Almagro and Pizarro, he stood firm in defence of Pizarro; and we hear of his defeat and imprisonment, and of a remarkable escape which he effected from his prison in Cuzco to Lima. In many of the rebellions which occupy the history of Peru during that unhappy period, we find Alvarado engaged in opposing the insurgents. The last record we have of him is of a defeat which he sustained near the Apurimac, when attempting to quell the rebellion led by Hernandez Giron.—J. B.

ALVARADO, PEDRO DE, the most noted of the Alvarados, whose names appear so frequently in the annals of Spanish discovery and conquest in America during the sixteenth century, was born at Badajoz, in Estremadura. We first hear of him sailing with Gijalva in the exploring expedition sent by Velasquez, along the coast of America, and returning with the report of the districts visited, and bearing the first rumours of Montezuma, and the wealth of his Mexican empire. In 1519 he entered on a command under Hernan Cortes in his expedition for the subjugation of Mexico; and when Cortes left to meet the force which Velasquez had sent to dispossess him of his command, the charge of the conquered city and of the person of Montezuma was committed to Alvarado. A rebellion broke out among the Mexicans during his command, but he was able to resist the insurgents till the victorious return of Cortes. In the disastrous retreat from the city after the death of Montezuma, Alvarado held a position of great responsibility and danger, and did deeds of wonderful daring, showing at the same time great physical strength. He subsequently served in the conquest of Guatemala, and was appointed by Charles V. to the government of that province, to which the province of Honduras was added. He died in 1541.—J. B.

ALVARES DE LIMA, the favourite of John II., king of Castile, born in 1388, and named Peter at his baptism. For thirty years he maintained an absolute ascendancy over the king, and was master of the treasury. At length he fell into disgrace, and was beheaded at Valladolid.

ALVAREZ, several medical men of Spain and Portugal bore this name, namely:—ANTONIO A., professor of medicine at Alcalá and Valladolid.—JUAN A. BORGES, veterinary surgeon to Philip IV. and Charles II. of Spain.—HERNANDO A. CABRAL, died at Santarem, in Portugal, in 1636.—ALVAREZ DE CASTRO, author of an unpublished work on the principles of medicine.—DIDACUS ALVAREZ CHACON wrote on the treatment of pleurisy.—BLASIVS ALVAREZ DE MIRAVAI, professor of medicine at Salamanca.—NUNEZ ALVAREZ wrote on the treatment of wounds.—PEDRO ALVAREZ, a commentator upon Galen and Hippocrates.—THOMAS ALVAREZ, employed by King Sebastian of Portugal to superintend the measures for checking a pestilence which ravaged the country in 1569.—J. W. S.

ALVAREZ, a distinguished Spanish sculptor of modern times, a native of Valencia and established at Rome. Although having enjoyed the highest patronage, he died very poor in 1830. The statue of "Adonis" is considered his masterpiece. He is believed to be nephew or son of Manuel.—R. M.

ALVAREZ, BALTAZAR, a Portuguese jesuit, employed by the Inquisition to draw up a list of prohibited books. Died 1628.

ALVAREZ, BERNARDIN DE, a Spanish adventurer of the 16th century, who, after various adventures in Mexico and Peru, founded a variety of hospitals in the former country.

ALVAREZ, EMMANUEL, a Portuguese jesuit and philologist, born in 1526 in Madeira. Died at Lisbon in 1583.

ALVAREZ, FRANCESCO, a Portuguese monk, the earliest modern traveller who visited Abyssinia. He appears to have been born at Coimbra in the fifteenth century. Helena, empress of Abyssinia, having sent an Armenian priest as ambassador to the court of Portugal, the king Emmanuel dispatched Duarte Galvão on an embassy in return, who died on the journey. Lopez de Siqueira, the Portuguese viceroy in India, intrusted this important mission to Rodrigo de Lima, to whose suite Alvarez was attached as chaplain. The expedition landed at Mesoah, in 1520, and suffered incredible hardships and dangers from the nature of the country, and the savage tribes by which it was infested. On reaching Axum, the capital, they found that the emperor was gone on an expedition into the province of Choa. On their way they visited the magnificent temples of Lalibela, excavated in the solid rock. At last, on the 20th of October, 1520, they reached the camp of the *negus*, or emperor, David. Doubts were raised concerning the power of the embassy, but the prudence of Alvarez completely overcame all the suspicions of the Abyssinian monarch. Everything was arranged satisfactorily; Alvarez was appointed patriarch of Mesoah, and the ambassador was furnished with presents and letters for his sovereign and the pope; when a quarrel among the Portuguese led to their detention for six years. This interval Alvarez devoted to a close observation of the religion, government, and manners of the Abyssinians. At last, in 1526, the embassy was allowed to depart. Lima and Alvarez, after visiting India, arrived safely at Santarem, and delivered their letters to John III. In 1533 Alvarez went to Rome to deliver to the pope the mission with which he had been charged by the Emperor David. The account of his travels was published in 1540, at the expense of the king, and is to this day a valuable authority on the history, ethnography, and even the geology and botany of Abyssinia. The observations of Alvarez, it must be noted, were made before the desolating inroads of the Gallas under Goronha. We have no particulars concerning the death of Alvarez, but he must have reached a very advanced age. The original edition of his work is rare, and the Italian and French versions are very much corrupted. The Spanish version (Antwerp, 1561) is preferable.—J. W. S.

ALVAREZ, GONÇALO, a learned Portuguese jesuit of noble birth, missionary in India, and afterwards in China, where he founded the academy of Macao, was drowned in 1573, on his passage to Japan.

ALVAREZ, JOHN, a Portuguese Benedictine of the latter half of the fifteenth century, abbot of Paço de Souza; shared voluntarily the captivity of Don Fernando, son of Joao I., in Africa, and on his return published an account of the sufferings and the piety of that prince.

ALVAREZ, MANUEL, OF SALAMANCA, born in 1729, died in 1797; a sculptor of considerable merit. He is the author of the equestrian statue of Philip V. at Madrid, and of many fine busts for that court. He was president of the academy of fine arts.—R. M.

ALVAREZ, DON MARTIN, count of Colomera, a Spanish general, in 1794 commander of the army of Navarre and Guipuzcoa, which unsuccessfully opposed the French at Bidassoa, San Sebastian, and Tolosa. Died in 1819.

ALVAREZ, THOMAS, a Portuguese writer on canon law, flourished in the seventeenth century.

ALVAREZ DE CASTRO, MARIANO, a Spanish general, born in 1775; during the peninsular war was engaged in the defence of Barcelona; assumed the command of Girona, besieged two months by the French; and made the further defence of that place memorable by a display of heroism, which only began to fail when the prevalence of an epidemic was added to the other horrors of the siege. Died in 1810.—J. S., G.

ALVAREZ DE COLMENAR, JOUN, a French writer of the beginning of the eighteenth century, author of "Les Delices de l'Espagne et du Portugal."

ALVAREZ DE CUNHA, a Portuguese author of some note, was born at Goa in 1626, and died at Lisbon in 1690.

ALVAREZ DO ORIENTE, FERNAO DE, a Portuguese poet of considerable eminence. He was born at Goa in the earlier

half of the sixteenth century, and spent his whole life in the East, sharing in the military and naval exploits of his countrymen in those regions under the viceroy Antonio Moniz Barrete. His poetry is chiefly of the pastoral kind, and is remarkable for its harmony and grace.—J. W. S.

ALVAREZ Y BAENA, JOSEPH ANTHONY, a Spanish writer, born at Madrid, author of a voluminous account of his native city; died in 1803.

ALVAROTTO, JACOB, an Italian jurist; born at Padua in 1385; died in 1453.

ALVARS. See PARISII.

ALVARUS, PAULUS, a Spanish writer, born at Cordova; died in 861.

\* ALVENSLEBEN, ALBERT, Count d', represented Prussia at the conference of Dresden in 1850; born in 1794.

ALVENSLEBEN, CHARLES-GEORGE, a Prussian general; born in 1778; died in 1831.

ALVENSLEBEN, PHILLIP CHARLES, Count d', a Prussian diplomatist and minister of state for foreign affairs; born in 1745; died at Berlin in 1802.

ALVES, ROBERT, a Scottish poet, author of a collection of odes and elegies, which appeared in 1782, and of two poems, "Edinburgh" and "The Weeping Bard," published in 1789, was born at Elgin in 1745. He left at his death, in 1794, a number of pieces in MS., which were published in 1801, with the title, "The Banks of the Esk, and other Poems."—J. S., G.

ALVIANO, BARTHELEMI, a Venetian general, born towards the middle of the fifteenth century, commanded the army which annihilated, in 1508, that of the Emperor Maximilian; was taken prisoner in the following year at the battle of Agnadell, which he had precipitated by an attack on the French lines contrary to the orders of Petigliano, commander-in-chief; was set at liberty in Mareh, 1513, and in October of that year encountered unsuccessfully a Spanish army returning laden with spoil from the Venetian territories; recovered his reputation by a series of victories over the Austrians, and by his share in the battle of Marnan, where the Swiss, opposed to the army of Francis, suffered a great defeat. Died in 1515.—J. S., G.

ALVINCZY or ALVINZY, JOSEPH, an Austrian field-marshal, born in 1735; engaged in active service at fifteen years of age, distinguished himself in the rank of major at Torgaw and Toplitz; was named major-general by Joseph II. in reward of his services during the war for the succession of Bavaria, and after his campaign, under Landon, against the Turks, was promoted to be lieutenant field-marshal. Actively employed against the French in 1792 and 1793, he shared the Austrian victory of Nerwinde and the defeat of the duke of York at Hondstchoot; was wounded in 1794, in his defence of the fortress of Landrecies; repaired to Italy shortly after, in the hope of re-organizing the Austrian army, demoralized by successive defeats; but encountering Buonaparte at Arcole and Rivoli, lost his entire army, and was generally, though absurdly, accused of treachery. Named commander-in-chief of Hungary in 1798, and in 1808 field-marshal, Alvinczy continued to be a favourite at court till his death in 1810.—J. S., G.

ALVINZI, PETER, a Hungarian theologian, author of some polemical works, and of a series of sermons; born in Transylvania; died at Cassovie in 1646.

ALVISET, BENOIT, a French Benedictine monk, author of a treatise on the privileges of convents; died in 1673.

ALWATHICK, BILLAH, an enlightened caliph of Bagdad, son of Almutasem, whom he succeeded in 842; died in 847.

ALXINGER, JOHN BAPTIST D', a German poet, born at Vienna, author of two volumes of occasional verses of no great merit, and of two poetical romances, more favourably known, died in 1797.

ALYATTES, king of Lydia, from 618 B.C., reigned fifty-five years, almost incessantly engaged in warfare. His chief adversaries were the Medes, with whom he carried on a five-years' war, that was terminated in a remarkable manner—An eclipse of the sun, predicted by Thales the Milesian, fell on the Lydians and Medes engaged in battle, and both armies regarding the phenomenon as a terrible warning from the gods to desist from strife, a peace was concluded, Alyattes giving his daughter in marriage to the son of Cyaxares.—J. S., G.

ALY-CHYR (EMIR NISAM-EL-HAK-WADDIN), a Persian vizier and poet, patron of Mirkhond the historian, and of several other celebrated contemporaries, resigned the dignities he enjoyed

under the Sultan Houssein Mirza, to abandon himself to the cultivation of poetry. He collected at Herat a splendid library, and intrusted it to the care of Khondemir. His numerous poems and notices of Persian literature, written in the dialect of the Djagatai, are preserved in the imperial library of Paris. Died at Herat in 1500, at the age of sixty.—J. S., G.

ALYM or HALYM, GHERAI, one of the Tartar khans of the Crimea, reigned three years from the death of Arslan in 1755; continued unsuccessfully the wars of his predecessors with the Nogais; excited by excessive imposts a revolt of his subjects, which was headed by his cousin, Kyrn Gherai; and in October, 1758, having vainly addressed the rebels both with threats and promises, received orders from the Porte to resign his authority into the hands of his cousin. Alym enjoyed the reputation of a talented and accomplished prince.—J. S., G.

ALYON, PETER PHILLIP, a French botanist, born in 1758, assumed in 1794 the direction of the dispensary of Val de Grace, and some years later, that of the hospital of the imperial guard. He published an elementary treatise on botany, and several other works. Died in 1816.

ALYPIUS, a Greek musician, known as the author of an introductory treatise on music (*Εισαγωγή μουσική*), some fragments of which have been preserved, and from which we learn the old Greek notations, and have some light thrown on the subject of Greek music generally. It is very uncertain in what age Alypius lived; according to some writers he wrote before Euclid. The fragments of his work were published at Leyden in 1616, under the title, "Aristoxenus, Nicomachus, Alypius auctores Musices antiquissimi hactenus non Editi."—J. B.

ALYPIUS OF ANTIUCH, an architect, employed by Julian the Apostate towards the middle of the fourth century to rebuild the temple of Jerusalem, was scared from the attempt, as he declared, by fires issuing from the ground. He was put to death some years afterwards on an accusation of practising sorcery.

ALYPIUS, LIONITAS, a saint of the Romish church, born at Adrianople about A.D. 600; a severe ascetic.

ALZATE Y RAMIREZ, JOSEPH ANTHONY, a Mexican astronomer and geographer of Spanish origin, correspondent of the Academy of Sciences of Paris, to which he dedicated numerous astronomical reports, a series of letters on natural history, and several charts. Died in 1795.

AMAC or AMIK BOKHARI, ABUL NAGHIB, a Persian poet of the eleventh century, favoured during his long life by the princes of the powerful dynasty of the Seldjoukides, became president of an academy founded by one of these, Khéder-Khan, and in that station enjoyed riches and celebrity. His elegies are admired by all readers of Persian literature.—J. S., G.

AMADE, LADISLAS, Baron d', a Hungarian poet, born in 1703; died at Felbar in 1764.

AMADEI, GIROLAMO, an Italian priest, professor of theology at Boulogne, and vicar-general of the order "dei servi di Maria Vergine," preached in Germany by authority against the doctrines of Luther, and published a work on the immortality of the soul, in which he denounced the reformer. Died in 1543.

AMADEI, STEFANO, an Italian painter, born at Perugia in 1589, died in 1644. Although a pupil of Giulio Cesare Angeli of the Bolognese school, he rather inclined to the style of that of Florence. He also cultivated literature with success.—R. M.

AMADEO or AMADEI, ANTONIO, OF PAVIA, a sculptor of the Lombard school. He is one amongst the most skilful in treating that kind of bas-relief so peculiar to the period, and of which the façade of the Certosa of Pavia presents so many and such beautiful specimens. The monument of Bartolommeo Colleoni in the cathedral of Bergamo by this sculptor, is justly considered as one of the best works of that time.—R. M.

AMADESI, DOMINIQUE, an Italian poet, born at Boulogne; died in 1730.

AMADESI, JOSEPH LOUIS, an Italian antiquarian, keeper of the archives of the see of Ravenna; favoured by his position, he published several antiquarian treatises of great research, the most considerable of which were devoted to the elucidation of canon law. Died in 1773.

AMADEUS or AMEDEO, the name borne by nine princes of the house of Savoy.

AMADEUS I., reckoned among the ancestors of the house, was the son of Humbert "of the white hand," count of Maurienne, and was living in 1030. It is uncertain whether he survived his father.

AMADEUS II., was the son of Oddo, count of Maurienne and Aorta, brother of the preceding. His mother was the Marchioness Adelaide, with whom, after the death of his father and his brother, the Marquis Peter, he was associated in the government. He died before his mother, who lived till 1091.

AMADEUS III., grandson of the preceding, succeeded his father Humbert II. in 1103. It is said that it was he who first assumed the title of Count of Savoy; but this much is certain, that he very widely extended his dominions. He joined his nephew, Louis VII. of France, in the unfortunate crusade undertaken by him in 1147, and never again reached his dominions, but died in Cyprus in 1148.

AMADEUS IV., was the son of Thomas I., count of Savoy, whom he succeeded in 1233. Like his father, he was a firm adherent of the Emperor Frederick II., and by this policy he succeeded in gaining extended power. His niece Leonora was the queen of Henry III. of England, and his brother Peter was by that prince created earl of Richmond, and built the Savoy house in London.

AMADEUS V., surnamed THE GREAT, succeeded his father Thomas II. in 1249. By marriage and successful policy he did much to extend the power of his family, and won for it the title, F. E. R. T. (Fortitudo Ejus Rhodum Tenuit), by his brave defence of Rhodes against the Turks. He died in 1323 at Avignon, whither he had gone to prevail upon the pope to preach a crusade against the Turks.

AMADEUS VI., named THE GREEN COUNT, succeeded his father Aymon in 1334. He was one of the most distinguished princes of his house; and by treaties with the king of France, and the patronage of the Emperor Henry IV., as well as by the almost uniform success of his arms, he nearly doubled his territories in Piedmont, and greatly extended them beyond the Alps. His device was appropriately a running stream, with the motto, "Vires acquirit eundo." He died in 1383.

AMADEUS VII., named THE RED COUNT, son and successor of the preceding, was born in 1360. In 1388 he acquired the dominion of Nice by the voice of the assembled citizens, and thus extended the territory of Savoy from the shores of Lake Lemane to the Mediterranean sea. He was killed while hunting in 1391.

AMADEUS VIII., styled THE PACIFIC and THE SOLOMON OF THE AGE, was the son and successor of the preceding. By purchase, he added to his dominions the county of the Genevois, and several other possessions, and by the death of Louis of Savoy in 1418, his territory in Piedmont was greatly enlarged. In 1416, the Emperor Sigismund elevated Savoy into a duchy, and named Amadeus first duke. His dominions were now so considerable that he was able to take rank among the great powers of Europe; but in 1438, after the death of his wife, he formally ceded his authority into the hands of his son Louis, and retired with six of his chosen knights into a monastery at Ripaille. It does not appear, however, that he denied himself any of his former luxuries, and he seems to have left one place of power only to aim at a higher, for in 1439 the council of Basle, having deposed Eugenius IV., elected Amadeus to the popedom, under the title of Felix V. This election was not confirmed by all the powers of Europe, many of whom still adhered to Eugenius, and, after his death, another pope was chosen, and Amadeus was compelled to abdicate. He died at Lausanne in 1451.

AMADEUS IX., grandson of the preceding, succeeded his father Louis in 1465. He was infirm in body, and his reign was but little distinguished, but he has won for himself a name, by his great charity. He died in 1472, and was succeeded by his son Philibert.—J. B.

AMADEUS, VICTOR, duke of Savoy, and first king of Sardinia. See VICTOR AMADEUS.

AMADOR REBELLO, a Portuguese jesuit, bishop of Oporto, published an account of the labours of some of his brethren in India and China. Died in 1622.

AMADUZZI, JOHN CHRISTOPHER, an Italian philologist, born at Rimini in 1740, wrote and edited in Latin a number of historical dissertations, in which he displayed great research and some ingenuity. Died in 1792 at Rome.

AMAFANIUS, one of the earliest Latin authors who wrote on philosophy. He introduced the system of Epicurus to the notice of the Romans. We know nothing of him except through a few remarks by Cicero.

**AMALAIRE** or **AMALARIUS SYMPHORIUS**, a bishop of Treves of the time of Louis le Debonnaire, by whom he was employed to write on public worship. He left, besides these works, a series of letters and some dissertations on canon law.

**AMALARIC**, king of the Visigoths, elected at the death of his grandfather Theodoric in 511; married in 526 Clotilde, daughter of Clovis I., and in consequence of a quarrel with that princess, which arose out of their religious differences, was attacked in his capital of Narbonne by her brother Childebert of France, and put to death in 531.

**AMALASONTE**, queen of the Ostrogoths, daughter of Theodoric I., married to Eutheric, of the family of the Amales, was a widow at the death of her father in 526; and according to the testament of that illustrious prince, was proclaimed regent of the kingdom and guardian of her son Athalaric, then ten years of age. Accomplished in classic literature, and a zealous patron of learning, she surrounded the young prince with instructors the most eminent in art and science, and hoped through these to instil into his mind a reverence for what remained of Roman civilization in Italy, and a distaste for the barbarous manners of his ancestors. She was doomed to disappointment. Athalaric lent an ear to other counsellors than those of his mother's choice, abandoned himself to a course of debauchery, and became a ring-leader of sedition. After his death, which happened in 534, Amalasonte, having espoused her cousin Theodat, incurred the resentment of Theodora, wife of Justinian, who incited Theodat to attempt the dethronement of his spouse. A conspiracy was formed, of which Theodat assumed the direction, and, in 535, Amalasonte was barbarously strangled.—J. S., G.

**AMALEK**, grandson of Esau, by some supposed to have been the father of the Amalekites.

**AMALIE, ELIZABETH**, a landgravine of Hesse Cassel, rewarded at the close of the Thirty-Years' War for her devotion to the protestant party, by a gift of lands and money. Died 1651.

**AMALIE, CATHERINE**, a German poetess, daughter of the count of Waldek. Born in 1640; died in 1696.

**AMALIE, ANNE**, a Prussian princess, sister of Frederick the Great, evinced her passionate love of music by the composition of an oratorio, in which she displayed a remarkable knowledge of counterpoint. Died in 1787.

**AMALIE**, duchess of Saxe-Weimar, born in 1739, administered the affairs of the duchy from the death of her husband in 1758 till 1775, when she resigned her authority into the hands of her eldest son. Her court was the resort of Herder, Goethe, Wieland, and Schiller. Died in 1807.

**AMALRIC, ARNAUD**, a churchman who holds a prominent place in the annals of the crusade against the Albigeois in the thirteenth century. He belonged to the Cistercian order of monks, and, in 1201, was made abbot of Citeaux in Burgundy, and, therefore, head of the order. He was associated with Pierre de Castelnau as papal legate in the south of France, on a mission having for its object the extirpation of heresy among the Albigenes. They tried the force of preaching and argument, but with no success; and when in 1208 his colleague was assassinated by one of the retainers of Raymond VI. of Toulouse, Arnaud became a zealous preacher and leader of the crusade against Raymond and the heretics. In his cruelties and excesses he was supported by Simon de Montfort. It is said that he was present at the battle fought by the kings of Castile, Aragon, and Navarre against the Moors in 1212, at the Sierra Morena and on his return was appointed archbishop of Narbonne. His last public appearance was at the council of Montpellier in 1224, over which he presided, when the complaints of the persecuted Albigenes were heard. He died in the following year.—J. B.

**AMALRIC OF BONA (BÈNE)**, condemned as a heretic by the university of Paris, in 1204. He advocated a species of pantheism, and dealt in spiritualistic interpretations. His bones were dug up and burned in 1209, though he had recanted before his death. Many of his followers, "brethren of the free spirit," suffered martyrdom.—(Mosheim, thirteenth century.)—J. E.

**AMALRIC, UNGIER D'**, an ecclesiastic of the 14th century, author of a history of the popes, dedicated to Urban V.

**AMALTEO, POMPONIO**, an Italian painter of considerable merit, born at San Vito in Friuli in 1505; died about 1588. He was a pupil of Pordanone, and excelled for a correctness of design and brilliancy of colouring unfortunately missing in the works of his last years. His two sons GEROLAMO and ANTONIO, but especially his daughter QUINTILIA, were his suc-

cessful pupils. This last was very clever in portraits, and also executed several works of sculpture.—R. M.

**AMALTHEUS** or **AMALTEO**, an Italian family of litterateurs, settled at Pordanone and afterwards Oderzo:—

**FRANCIS**, flourished at the end of the fifteenth and the beginning of the sixteenth century. He taught belles-lettres in several towns of northern Italy, and wrote elegant Latin verse.

**PAUL**, brother of the preceding, taught belles-lettres at Pordanone. His Latin poems were printed with the "Asturias," of Riccardo Bartolini. Died in 1517.

**MARK ANTHONY**, another brother, left in MS. some Latin epistles descriptive of his numerous journeys. Died in 1558.

**JEROME**, eldest son of Francis, graduated at Padua, taught medicine and philosophy in that city, and afterwards settled as a practitioner at Oderzo. Died in 1574.

**JOHN BAPTIST**, brother of the preceding, studied at Padua, became secretary to the cardinal of Milan, and afterwards to Pope Pius IV., famous for his Latin poems. Died in 1573.

**CORNEILLE**, another brother, died in 1603. He wrote a poem, printed at Venice in 1572, with the title of "Proteus."

**OCTAVIUS**, son of Jerome, physician, philosopher, and poet. Died in 1626.

**ATILIUS**, brother of the preceding, enjoyed the confidence of Popes Gregory XIII. and Clement V., who employed him on several important missions. Died at Rome in 1633.—J. S., G.

**AMAMA, SIXTIN**, a Dutch theologian, born at Franeker in 1593, was appointed to the chair of oriental languages in the university of that town in 1618, and attained considerable repute as a scholar by the publication of a number of works, chiefly controversial. Died in 1629.

**AMAMA**, a Danish painter and engraver, of the 17th century.

**AMAND, JAMES**, a French engraver, died at Paris in 1730.

**AMAND**, a French surgeon, distinguished in obstetrical practice, and author of a work, entitled "Nouvelles Observations sur la Pratique des Accouchements;" died in 1720.

**AMANDUS, ÆNEAS SYLVIVS**, a Roman general, who, along with Ælianus, about the year 287, headed a revolt of the provinces between the Rhone and the Loire, and after a short period of triumph, in which he and his compeer aped the majesty of Roman emperors, was beheaded by Maximin.

**AMANDUS, THE APOSTLE OF BELGIUM**, born at the end of the sixth century, bishop of Maestricht, a noted preacher and worker of miracles; died about 661 in the cloister of Elnon.

**AMANIEU, DES ESCAS**, an Aragonese troubadour of the latter half of the thirteenth century. His productions, which consist of two poetical epistles, are without value, except as records of some of the manners and customs of the time.

**AMANTHON, CLAUDE NICOLAS**, a French publicist, born at Villers-les-Ports in 1760; while actively engaged in the duties of various public offices, contributed numerous articles to newspapers and journals, and produced eighteen lengthy dissertations, chiefly archaeological and biographical. Died in 1835.

**AMAR, J. B. ANDRE**, a French advocate, born at Grenoble in 1750; arrived at Paris in 1792 as deputy to the National Convention from the department of Isere. He was distinguished throughout the Revolution as a tyrant of the most suspicious and bloodthirsty temper. He was a member of the committee of Public Safety, and in 1794 president of the National Convention. Died in 1816.—J. S., G.

**AMAR DURIVIER, JOHN AUGUSTINE**, a French litterateur, born at Paris in 1765; superintended an educational establishment at Lyons, and was afterwards named keeper of the Bibliothèque Mazarine at Paris. The publications of this writer are chiefly compilations for educational purposes. Died in 1802.

**AMARA, SINHA**, a famous Hindoo poet and grammarian, flourished about the year 50 B.C. He left a great number of works, which, with the exception of his "Amara-Kosha," a Sanscrit grammar and vocabulary, were destroyed by the Brahmins in the fifth century. "Amara-Kosha" was published in 1808 at Calcutta, with an English translation. It is a curious and most valuable work.—J. S., G.

**AMARAL, ANDRES DO**, a Portuguese chancellor of the order of St. John of Jerusalem; executed during the siege of Rhodes in 1522, for a treasonous correspondence with Sultan Soliman.

**AMARAL, ANTONIO CÆTANO DO**, a Portuguese writer, born at Lisbon in 1747, published a voluminous account of Lusitanian customs, "Memorias Sobre a forma do governo l costumes dos povos que habitarao o terreno Lusitano." Died in 1819.

\* **AMARI, MICHELE**, an Italian author and revolutionary statesman, was born at Palermo in July, 1806. His father was condemned to death in 1822, for his connection with a revolutionary movement, but the punishment was commuted to thirty years' confinement. This did not deter Amari from treading in his father's footsteps. In 1842, when he occupied a government situation at Naples, he published the work by which he is best known, and which has been translated into English by Lord Ellesmere, "La Guerra del Vespro Siciliano." It created considerable sensation, was withdrawn from sale by the Neapolitan government, and its author was forced to seek refuge in France. On the breaking out of the revolution in 1848, he returned to Sicily, and filled various important offices of state up to April, 1849, when he quitted Sicily to live at Paris, and devote himself to literature. Amari has published, besides the work above referred to, various works relating to the period of the Moorish occupation of Sicily, (1857.)—A. M.

**AMARITON, JEAN**, a learned French juriconsult of the sixteenth century.

**AMASA**, son of Ithra, an Israelite, and Abigail, daughter of Nahash, sister to Zeruah, Joab's mother, was made captain of his host by Absalom, when he rebelled against his father. Nevertheless, David, on the death of Absalom, made Amasa captain of the host in preference to Joab, and sent him to assemble troops on the breaking out of the revolt of Sheba, son of Bichri. Amasa's delay in discharging this duty rendered him suspected, and he was slain by Joab on pretence of a friendly interview with him, 1019 B.C.—A. M.

**AMASEO, GREGORIO**, was a scholar of the sixteenth century, father of the more celebrated Romolo Amaseo.

**AMASEO, POMPILO**, son of Romolo Amaseo, and also a scholar of some note. Died in 1584.

**AMASEO, ROMOLO**, a distinguished Italian scholar and orator; born at Udine, in Friuli, in 1489; died about 1552. He was professor of Humanity successively at Padua, Bologna, and Rome. Under Pope Paul III. he also discharged important political functions. Amaseo has left a considerable number of Latin orations, pronounced by him on various occasions, and also Latin translations of Xenophon's Anabasis, and of Pausanias. The latter work has been frequently reprinted.—A. M.

**AMASIS**, a king of Egypt, who is said to have reigned about six generations before the Trojan war. He was a cruel tyrant, and was dethroned by the Ethiopians under Actisanes.

**AMASIS**, a king of Egypt in 570–526 B.C., whose reign was remarkable for general prosperity and splendour, and for the wise reforms introduced into the administration of public affairs; more particularly for the removal of the restrictions upon trade and intercourse with foreigners, which had previously existed. Amasis, in accordance with this policy, was very friendly to the Greeks, and gave them the port of Naucratis in the Delta. His wife, Laodice, was a Greek princess of Cyrene. Herodotus tells us of the colossal statues and structures with which this monarch adorned the cities and temples of his realm, works surpassed by those of no other Egyptian king. He died in the 55th year of his reign, just as Cambyses was preparing to invade Egypt.—A. M.

**AMASIS**, a Persian general under Darius, son of Hystaspes, who distinguished himself by the treacherous stratagem through which he took Barca in the Cyrenaica, in 510 B.C.

**AMASTRIS**, niece of Darius Codomannus, and a woman of great abilities, became the wife successively of Craterus, one of Alexander the Great's generals; of Dionysius, tyrant of Heraclea; and of Lysimachus. Returning to Heraclea when divorced by the last, she was murdered by her two sons, whom Lysimachus, however, punished by death. (See **AMESTRIS**.)—A. M.

**AMAT, FELIX**, a distinguished Spanish churchman, born at Sabadell in 1750. He held many high offices, among others the abbacy of St. Ildefonso and the archbishopric of Palmyra. Amat, who mingled a good deal in politics, appears, on the whole, to have sided with the French on their invasion of Spain, though, it may be believed, from pure motives. In 1814 he was among the persons banished by King Ferdinand from Madrid, as having held office under King Joseph. He died in 1824. Amat was a prolific author. His principal work is, "Tratado de la Iglesia da Jesu Cristo," a church history, which was prohibited by the Inquisition.—A. M.

**AMATI**, the family of Cremona, consisting of three generations, who founded the universal celebrity of that city for the manufacture of violins, and successively practised their craft from

the latter half of the sixteenth till near the end of the seventeenth century. Accounts vary as to which were the eldest and youngest of this family; that of M. Fétis, which agrees with the majority, and appears to have been the most carefully compiled, states that **ANDREA** and his younger brother, **NICOLO AMATI**, were the first Italians who made these instruments; the elder devoting himself to the manufacture of violins, while the other constructed violas and basses. Nicolo survived his brother, and was succeeded by his sons **ANTONIO** and **HIERONIMO**; these dissolved partnership upon the marriage of the latter, who, in conjunction with his son **NICOLO**, produced the greatest number of instruments that bear the family name; this Nicolo, the grandson of the original maker, was alive at a very advanced age in 1692. M. Fétis states that, in 1789, an instrument of the kind called Viola Bastarda was in existence, which bore the name of the eldest of the family, and was dated so early as 1551, and that he has seen instruments with his and his brother's names, bearing date from 1568 to 1586. Mr. Dubourg states that some instruments of a large size, and most perfect workmanship, were made by the original brothers in 1570, for the chamber music of Charles the Ninth of France. The instruments of Antonio and Hieronimo are dated from 1589 to 1627. M. Fétis asserts that the Amati originally copied their instruments from French and from Tyrolese makers, a statement that must be received with caution, since the viol (an instrument with frets like the guitar), which was superseded by the violin, was in common use throughout Europe, until an advanced period in the seventeenth century; and it is therefore unlikely that the violin can have been brought to the perfection of those made by the first Amatis, either in France or in the Tyrol, long before the year 1551. The Amati instruments are distinguished by their beautiful shape and exquisite finish, by their usually small size, by their flatness of model, and by their softness, richness, and sweetness of tone, rather than by their brilliancy and power. Nicolo, the last in the succession, and probably also his father, Hieronimo, increased both the size of the instrument and the convexity of the model, and by this means, we may suppose, augmented the power of the tone. It is considered that the instruments bearing date from 1599 to 1620 are the best this family produced. Straduario, who was not born till 1664, was a pupil of the Amati family, and worked in their factory; and when he was established on his own account, he at first made violins after their model, but soon effected those modifications in it which distinguished his instruments from theirs. We must always believe, however, that it is to his knowledge of the principles he acquired from his famous teachers, and which they seem to have perfectly mastered, that he attained his own eminent success as a maker.

There was also another **AMATI**, named **GIUSEPPE**, who lived at Bologna at the beginning of the seventeenth century (possibly a son of the original Andrea), and who made violins and basses, his instruments being famous for the same silvery quality of tone that characterizes those of the whole family.—G. A. M.

**AMATI, CAVALIER CARLO**, one of the most eminent architects of our time, was born at Milan about 1786. He has designed many public and private buildings, churches, &c., his most renowned work being the Rotunda of San Carlo at Milan, but recently completed.—R. M.

**AMATI, GIROLAMO**, an Italian scholar of great merit; born in 1768. As librarian of the Vatican he had ample scope for developing his principal talent and favourite pursuit—that of collating and successfully deciphering ancient manuscripts. Many celebrated editors of the classics have been greatly indebted to the labours of Amati. He was the first to adopt and to demonstrate the truth of an opinion now pretty generally held, that Dionysius Halicarnassensis, not Longinus, was the author of the "Treatise on the Sublime," so long confidently attributed to the latter. Died 1834.—A. M.

**AMATI, NATHAN**, a Jewish physician, who, towards the close of the 13th century, translated Avicenna into Hebrew.

**AMATIUS, CAIUS**, an Italian of low origin, who, on the strength of a pretended relationship with Marius and Caesar, excited tumults in Rome after the assassination of the latter in 44 B.C. Antony first connived at these disturbances, and afterwards had their author strangled in prison.

**AMATO**, also **AMATUS**, a learned and talented monk of Monte Casino, in the eleventh century.

**AMATO, CIRIO D'**, an Italian barber-surgeon, who published a book on surgery in 1671 at Naples.

AMATO, FRA ELIA D', an Italian ecclesiastic of the order of the Carmelites; born 1666, died 1747. He was a voluminous author, of more learning and diligence than judgment. One of his numerous works bears the title: "Museum Literarium, in quo pæne omnium scriptorum dubia, supposita, maledica, falsa, fabulosa, satyrica, proscripta, anonyma, suffurata, insulsa, putidaque monumenta, eruditorum criterio strictim expanduntur," (Naples, 1730, 4to.)—A. M.

AMATO, GIOVANNI ANTONIO D', called IL GIOVANE, nephew of GIO. ANTONIO. He learned painting of Gian Bernardo Lama, of the school of Polidoro of Caravaggio, whose style he imitated. Born 1535; died 1598.

AMATO, GIOVANNI ANTONIO D', surnamed IL VECCHIO, a Neapolitan painter of the school of Silvestro Buoni, who chiefly treated sacred subjects. Born 1475; died 1555.

AMATO, GIOVANNI MARIA, an Italian jesuit, who wrote on Sicilian antiquities. Born at Palermo in 1666; died in 1726.

AMATO, GIUSEPPE D', an Italian ecclesiastic, born 1757, died 1832, whose labours as a missionary in Ava were less successful than his studies in natural history. The results of these latter, in the shape of extensive collections, were lost in the Burmese war of 1834.

AMATO, JOANNES CAROLUS, a Spanish physician of the seventeenth century.

AMATO, LEONARDUS, a Sicilian physician, who wrote in the seventeenth century.

AMATO, MICHELE D', an Italian ecclesiastic of great erudition. He expended his learning on numerous works of a theological nature, one of which is on the subject, "Quibus de causis in antiquis fidei symbolis Nicæno et Constantinopolitano articulis ille, 'Descendit ad Inferos,' fuerit prætermisus;" published, along with other three dissertations, at Naples in 1728. Born 1682; died 1729.—A. M.

AMATO, SCIPIONE, a skilful Italian lawyer and accomplished linguist of the seventeenth century.

AMATO, VINCENZO, a Neapolitan author, who published, in 1670, a historical work on his native town of Cantazaro.

AMATO, VINCENZO, a Sicilian musician, was born in 1629, and died in 1670. He held the office of maestro di capella at Palermo, and printed several sacred compositions for three, for four, and for five voices.

AMATRICE, NICOLA FILOTESIO DELL', a Neapolitan historical painter and architect of distinguished merit; lived for a long time at Ascoli, where he left many works. An "Assumption" and a "Death of Mary," now in Rome, are amongst his best productions. He flourished about 1533.

AMATUS, LUSITANUS, a Portuguese Jew, who became eminent as a physician and writer on medical subjects in the sixteenth century. He was one of the earliest anatomists acquainted with the existence of valves in the veins, and some of his works are still considered worthy of being referred to.

AMAURY, in Latin AMALRICUS, of Chartres, a theologian of the twelfth and thirteenth centuries, who taught dialectics at Paris, and who, in commenting on the metaphysics of Aristotle, took occasion to advance the opinion that all things were derived from a primary simple matter, possessing the quality of necessary movement, identical with the Supreme Being, and finally receiving again into itself all the creatures which it had produced. Amaury endeavoured to make his philosophical doctrines tally with the dogmas of the church, but had the mortification to find Innocent III. launching a bull of condemnation against the "Physion," his principal work, in 1204. He was compelled to retract, but it is said the process of denying his conscientious convictions went so much to his heart that he died shortly after.

According to Amaury's theory there were three periods of universal history: the first or Mosaic, corresponding to the first person of the Trinity, God the Father; the second, or Evangelical, specially presided over by the Son; the third, and this period it was which Amaury considered it his mission to initiate, appropriated to the Spirit. During this last, the ordinances of the Christian religion, necessary during the previous period, were to be superseded. His followers, of whom he left a sufficient number to excite the fears of the orthodox, carried the doctrines of their master to an extreme, and suffered severe persecution. Numbers of them were burnt; and, whether owing to the precautions of the church or not, neither the writings of Amaury himself, nor those of David de Dinant, one of his disciples who wrote a defence of him, have come down to us.—A. M.

AMAURY I. became king of Jerusalem on the death of his brother, Baldwin III., in 1165, having previously been count of Joppa and Ascalon. On the invitation of the caliph of Egypt, he undertook two expeditions to that country, in order to aid in resisting the invasion of Nouredin, sultan of Aleppo, one of whose generals was the famous Saladin. In neither of these was the king of Jerusalem particularly successful, nor was he more so when he turned against his former ally, and endeavoured to add Egypt to his own dominions. Egypt fell into the hands of Saladin, and Amaury I., trembling for his own throne, appealed for assistance to the Greek emperor. This he at first obtained, but latterly he had to resist, unaided, the repeated attacks of Saladin. He died in 1173 of extreme fatigue, incurred in one of his campaigns.—A. M.

AMAURY or AIMERY II., called AMAURY OF LUSIGNAN, was nominal king of Jerusalem from 1194 to 1205. The real masters of the realm during the entire period were the Saracens, to dislodge whom all his efforts were unsuccessful. Amaury II., who was king of Cyprus in his own right, had come to the empty title of king of Jerusalem, through his wife Isabella, widow of Henry count of Champagne.—A. M.

AMAURY, AMALRIC, or AIMERIC, a patriarch of Jerusalem, to whose efforts it was principally owing that Amaury I. was made king. He died in 1180.

AMAYA, a Spanish historical painter of the school of Carducho. He flourished about 1680. Some of his pictures are at Segovia.

AMAYA, FRANCISCO, a Spanish juriconsult of considerable repute during the first half of the seventeenth century.

AMAZIAH, son of Joash, was king of Judah when Jehoash was king of Israel. He was successful in a campaign against the Edomites, but was defeated and taken prisoner by Jehoash, who plundered the temple, yet seems to have left Amaziah in possession of his throne. Fifteen years after the death of Jehoash, he was slain by conspirators at Lachish, 811 B.C.

AMBERES, FRANCISCO DE, a historical painter and sculptor, who worked at Toledo about 1508, under the patronage of Cardinal Ximenes.

AMBERGER, CHRISTOPH, a German portrait-painter, born at or near Nürenberg about 1490, and a pupil of the Holbeins. Several of his paintings may be seen in the galleries of Munich, Vienna, and Berlin. Died 1563.

AMBIGATUS, an ancient king of Gaul, said to have reigned in the seventh century before the Christian era. During his reign the population of the country became so numerous, that immense emigrations were organized under his two sons, Bellovesus and Ligovesus.

AMBILLON. See BOUCHET.

AMBIORIX, a celebrated Gaulish chief, who offered a formidable resistance to Julius Cæsar. As prince of the Eburones, a Belgic tribe inhabiting the country between the Meuse and the Rhine, he was active in organizing, during the absence of Cæsar in Britain, that extensive conspiracy against the Romans which, in the winter of 54 B.C., burst forth in the attack on the entrenched camp of Quintus Titurius Sabinus and Lucius Varunculeius Cotta. The attack was repulsed, but subsequently Ambiorix, who was wily as well as brave, contrived to draw this division of the Roman army into an ambuscade, in which it was almost annihilated. Soon after, he instigated the Nervii to attack the winter quarters of Quintus Cicero, which they did without success. Cæsar, deeply provoked at the determined hostility of the patriotic prince, whom he had at first tried to conciliate, marched into the country of the Eburones in his next campaign, and ravaged it with fire and sword, sparing neither sex nor age. The Eburones were swept from the face of the earth, but Ambiorix himself escaped. Nothing further is known of his history.—A. M.

AMBIVÉRI, FRANCESCO, an Italian author in prose and verse, rector of the Canobian school of Novara. Born at Bergamo in 1592, died in 1627.

AMBIVIUS, LUCIUS TURPIO, a distinguished Roman actor of the time of Terence (195—159 B.C.), and in after times thought worthy of being classed with Roscius.

AMBLEVILLE, CHARLES D', a jesuit, born at Paris at the beginning of the seventeenth century. He wrote a great deal of ecclesiastical music, some of the most important of which, including a mass for six voices, was published at Paris in 1634 and in 1636.

AMBLIMONT, FUSCHEMBERG, COUNT D', a French officer of marine, and a writer on naval tactics, who, having joined the Spanish service, was killed in the battle of Cape St. Vincent in 1797.

AMBLY, CLAUDE JEAN ANTOINE, MARQUIS D', a field-marshal and commander of the order of St. Louis under Louis XV. He was a member of the States-General in 1789, and distinguished himself by his vehement opposition to the revolutionary party. He emigrated, and died at Hamburg in 1797.

AMBODIK, NESTOR-MAXIMOVITSCH, a Russian physician, was born in 1740 at Veprik, a village in the government of Pultowa, and died in 1812. He studied at the university of Kiev, and afterwards at the military hospital of St. Petersburg, and took the degree of doctor of medicine at Strasbourg in 1776. He became an eminent physician and accoucheur in St. Petersburg, and at the same time devoted attention to botany. Besides medical works, he published "Elements of Botany," and a "Botanical Dictionary."—J. H. B.

AMBOISE, the name of a noble French family which belonged originally to the town of Amboise on the Loire, and produced a number of distinguished men, most of whom were sons of Pierre d'Amboise, lord of Chaumont, chamberlain to Charles VII. and Louis XI. The most remarkable was:—

AMBOISE, GEORGE D', archbishop and cardinal, the celebrated prime minister of Louis XII., born in the year 1460. His preferments in the church began very early, for he was only fourteen when he was made bishop of Montauban; but somewhat later he received a temporary check, when, having engaged himself in a plot formed by the duke of Orleans (whose confidential friend he had become), to remove the young king, Charles VIII., from under the tutelage of Anne of Beaujeu, the affair was discovered, and D'Amboise, after being kept in confinement for upwards of two years, was "banished" to his diocese of Montauban. Better days dawned upon him when his friend the duke was restored to court favour, and in 1493 he became archbishop of Rouen and lieutenant-general of Normandy, in which last office he showed signal administrative capacity. A wider field, however, for the development of his talents as a statesman, and his excellent qualities as a man, was soon to be laid open to him. In 1498 Charles VIII. died, and the duke of Orleans acceding to the throne with the title of Louis XII., his friend D'Amboise rose into the position of prime minister of France. The archbishop of Rouen did not now belie those indications of high character which he had already given. The fiscal burdens of the nation were very greatly and, for that reign at least, permanently diminished. The licence of the soldiery was checked, and a state of admirable discipline established throughout the army. Most important of all, the courts of law were purified, and energetic and judicious measures taken to make justice as accessible to the poor as to the rich and influential. The religious orders, too, had to submit to a process of reform which D'Amboise, armed with formidable powers as pope's legate for France, imposed upon them. His foreign policy, meanwhile, was perhaps open to more objection; at least, if it was intended to be beneficial to France and Louis, it was hardly marked by a very scrupulous regard for the rights of other nations and princes. He was the right hand of Louis on his expedition to Italy, when the duchy of Milan and other parts of the north of that country fell into the hands of the French; and it was D'Amboise who, on the Milanese subsequently again placing themselves under their old duke, Sforza, once more reduced them to obedience to France.

When, in 1498, he had negotiated with Pope Alexander VI. the divorce of Louis XII. from Jeanne de France, the unhappy daughter of Louis XI., as a step to his marriage with the widow of Charles VIII., the pope had rewarded the important stipulations granted in favour of Cæsar Borgia, by making the prime minister of Louis a cardinal; and on the death of Alexander, D'Amboise was only prevented from becoming pope by the adroitness of Cardinal Julian de Rovere, afterwards Julius II. The cardinal of Amboise was only fifty when he died in the convent of the Celestines at Lyons (1510). It was while lying here on his deathbed, his thoughts dwelling sadly on the evil that had mixed with the good of his busy life, that he exclaimed to the good friar who waited on him: "Brother John! Why have I not all my life been brother John?"

AMBOISE. Three Frenchmen of note bear this name, unconnected with the above family. These are:—

AMBOISE, ADRIEN D', son of Jean d'Amboise, surgeon to Charles IX.; was rector of the university of Paris, and afterwards bishop of Treguier. Died 1616.

AMBOISE, FRANÇOIS D', his brother, became a distinguished lawyer in the time of Henry III., who showed him much favour. He wrote a number of works, mostly of a light and facetious nature. Born 1550; died 1620.

AMBOISE, JACQUES D', another brother, was originally a surgeon, but afterwards obtained the degree of doctor of medicine. He became rector of the university of Paris in 1594, and distinguished himself by the energy of his opposition to the jesuits. Died in 1606.—A. M.

AMBOISE, MICHAEL D', surnamed L'ESCLAVE FORTUNÉ, natural son of Charles Chaumont d'Amboise, born at Naples early in the sixteenth century; author of a number of amatory effusions, and translations from the Italian into French.

AMBRA, FRANCESCO D', a Florentine, author of three excellent comedies, "Il Furto," "La Cofanaria," and "J. Bernardi." Died at Rome in 1558.

AMBROGI, ANTONIO MARIA, an Italian jesuit of Florence, born in 1713, died at Rome in 1788. He was professor in the Collegio Romano, and author of numerous translations from the Latin and French.

AMBROGI, DOMENICO, a Bolognese painter of the 17th century, who studied under Francesco Brizio, whence he came to be called MENICHINO (familiar form of Domenico) DEL BRIZIO. He executed landscapes and architectural pieces.

AMBROGIO, GIOVANNI, was an artist engaged in decorating the cathedral of Florence (the Santa Maria del Fiore) in 1384. The façade with which his designs were connected has been long destroyed.

AMBROGIO or AMBROSIO, TESEO. See AMBROSE, THESEUS.

AMBROGIO DA FOSSANO, an Italian painter and architect of the beginning of the sixteenth century. His masterpiece is the celebrated façade of the Certosa, near Pavia. As a painter he followed the school of Mantegna.—R. M.

AMBROISE, AUSBERT, AUTPERT, or ANSBERT, an ecclesiastic of the age of Charlemagne, wrote a "Commentarius in Apocalypsin," Cologne, 1536; and other theological works.

AMBROISE DE LOMBEZ, PATHER, a Capuchin, author of a "Traité de la paix intérieure." Born at Lombez in 1708; died 1778.

AMBROSE, SAINT, was born A.D. 340 in Gaul, of which his father was prætorian prefect, and probably in the town of Trier or Treves, then called Augusta Trevirorum, the principal town in the prefecture. His future greatness is said to have been indicated by a circumstance which occurred in his infancy. The story is told of him, as of Plato, that while he was sleeping in his cradle, a swarm of bees settled on his lips without inflicting any injury. He received the advantage of education at Rome, and studied as an advocate under Anicius Probus and Symmachus, and then proceeded to Milan for the purpose of following the legal profession. There he gained considerable distinction by pleading causes, until he was appointed consular prefect of Liguria, the province in which Milan was situated.

The manner in which he acquitted himself in this office, was such as to give general satisfaction to the emperor and the people, when an event occurred which changed the whole course of his life. On the death of Auxentius, archbishop of Milan, the church was gathered together to elect a successor. The contention between the opposing parties was so strong, that Ambrose deemed it necessary to attend to preserve the public peace. A scene of strife and confusion ensued, in which all parties seemed to forget the important business upon which they were assembled. Ambrose, supported by the authority of his office and vigorous eloquence, commanded a hearing; in the midst of his address, in which, like the town-clerk at Ephesus, he entreated them to be quiet, and to do nothing rashly, he was saluted with the general cry, "Ambrose is bishop." The call made upon him to assume the episcopal office was so urgent, that he could not refuse to accede to the unanimous wish of the people. The methods, however, which he took to divert them from their purpose, and to impress them with an idea of his unfitness for this dignity, were strange indeed, and such as betray the singularly unhealthy tone of his mind, as well as the morbid feelings of the age. He affected the character of harshness, by inflicting undue severity on malefactors; he courted a reputation

for uncleanness, by inviting dissolute companions to his house. To avoid the importunities with which he was beset, he sought to effect his escape from Milan; but missing his way, after wandering about all night, he was found not far from the gates of the city. His objections were so strong, that, according to one account, he yielded only to the express command of the emperor, Valentinian I. According to another account, when the difficulties arising from his former reluctance were overcome, it was necessary for him to obtain the imperial consent before he could resign the secular duties of governor, and undertake the spiritual functions of bishop. In this unprecedented manner, Ambrose, the catechumen, in the thirty-fourth year of his age, was called to the high dignity of archbishop of Milan, the capital of the Western Empire, and was duly consecrated to this exalted office on the eighth day after his baptism.

The irregularities of the whole proceeding are transparent; especially as the transaction occurred in a period of the church which our imagination depicts as a scene of perfect order, purity, and peace. The following facts deserve careful consideration:—(1.) The strife between the orthodox and Arian parties was so sharp, that the interference of a magistrate was necessary to preserve the peace. (2.) The ecclesiastical feeling of propriety was so low, as to admit of the election of an unbaptized layman to the episcopal office. (3.) The consent of the emperor was necessary before the individual chosen by the church could assume the episcopal government. (4.) A person was consecrated bishop immediately after baptism.

The distinguishing feature of Ambrose's character was energetic activity: thus, he made over the whole of his property to the church for the relief of the poor; and when his feelings of compassion were strongly excited on behalf of some captives, he hesitated not to employ the treasures, and even the consecrated vessels of the church, for the purpose of redeeming them from slavery. Throughout his life he was a warm advocate of celibacy; and numbers, urged by his representations, came forward to devote themselves to a single life. His attachment to the orthodox creed, shown at the time of his baptism, was afterwards exhibited in his efforts to prevent the appointment of an Arian bishop at Sirmium, who was supported by the zeal and influence of the Empress Justina, the mother of Valentinian II. When Justina demanded one of the churches in Milan for the use of the Arian party, the archbishop distinctly and firmly refused; when violence was offered by a body of guards, who attempted to effect a forcible entrance, Ambrose calmly replied, "You may use your swords and spears against me; such a death I will readily undergo." When Symmachus and the heathen senators of Rome presented a petition, that the altar of victory should be rebuilt, and offered a vindication in behalf of idolatrous worship, Ambrose directed attention to the true source of these victories, and called upon the heathens to declare what captives they had redeemed, what poor they had relieved, to what exiles they had sent alms. The services of Ambrose were highly valued as a political agent, in spite of the resentment which the empress felt at his theological opinions. Thus Ambrose was on two different occasions employed as ambassador to Maximus, who had rebelled against the imperial authority, and was at the head of an army in Gaul. On the first occasion, 385, Ambrose induced him to defer his design of invading Italy; in the second embassy, 387, he was not equally successful; for Maximus entered Milan in triumph, when the archbishop inculcated a virtuous resignation rather than a vigorous resistance.

The career of Maximus was closed by the victories of Theodosius, and his accession to the throne. This powerful prince came into collision with Ambrose on two striking occasions. Some monks at Callinicum, on the frontiers of Persia, were commanded by Theodosius to rebuild, at their own expense, a Jewish synagogue, which had been burnt and destroyed in an outbreak of fanatical excitement. Ambrose exerted his personal and official influence against the execution of this order, and was too successful in defeating the cause of justice and equity. The great event, however, which has gained for Ambrose his eminent place in ecclesiastical history, arises out of the severe and revengeful measures which the emperor adopted against the inhabitants of Thessalonica, the metropolis of the Illyrian provinces. A petty dispute gave rise to riot, sedition, and bloodshed, in which the officers of the garrison were inhumanly murdered, and their bodies treated with base indignity. In a transport of rage, Theodosius ordered a general massacre of the inhabitants, which

was carried into effect under circumstances of complicated cruelty and treachery. When Ambrose heard of the atrocious deed, he wrote a letter to the emperor, setting forth the heinous nature of the offence, and the blood-guiltiness to which the paroxysms of passion had given birth. The emperor was sensibly affected by the remonstrances of the archbishop; but, forgetting how he had on the former occasion been debarred from occupying the usual place of honour assigned to royalty, he dared to enter the cathedral for the purpose of performing his devotions. This advance into the sacred precincts of the temple was arrested on the threshold by the archbishop, who insisted on the performance of public penance. When Theodosius pleaded the conduct of David, he received the reply, "You have imitated David in his guilt: imitate him also in his repentance." For eight months Theodosius had no other resource but to submit to this exclusion; and even on the feast of the Nativity, he touchingly lamented that he was not admitted to the sacred courts which were open to the beggar and the slave. At length, on his publicly assuming the humble language and attitude of a suppliant, the interdict was removed; and a salutary precaution was taken against the recurrence of a like massacre, by enacting a condition that thirty days should always elapse between the pronouncing of a capital sentence and the execution of the fatal decree.

The conduct of Ambrose in these struggles with the emperors, gives rise to various conflicting opinions. In a rude and uncivilized age, when the bonds of society were loosed, and the community shaken to its foundations, we contemplate with awe and delight the career of one who, in the short space of fourteen years, asserted his right to rule. We admire the successful transference to ecclesiastical government and discipline of that natural vigour and practical energy which Ambrose had acquired in secular concerns. We look upon these struggles as striking proofs of the spiritual power wielded by Christian teachers; for within the space of eighty years from the persecution of Diocletian, a successor of that unrestrained and lawless despot humbled himself before the unarmed minister of the religion which Diocletian had laboured to destroy.

The decision and impartiality of the archbishop in bringing the emperor of Rome to the bar of public opinion—in rendering him amenable for an act of atrocious tyranny—in affixing the brand of condemnation on a deed of sanguinary revenge, are justly entitled to universal approbation. This tribute to his administrative vigour has been the more cheerfully paid, as it is clear that Ambrose acted, not from the love of power or from sacerdotal ambition, but from a sincere conviction that the best interests of mankind, in their temporal welfare and eternal happiness, were involved in establishing the supremacy of the altar over the throne. It should be remembered, too, that the minister of religion had not learned to discriminate as to the extent of his powers, and recognized no distinction between political misconduct and private flagitiousness.

At this time the first blood was judicially shed for opinions deemed to be heretical. The sufferer was Priscillian, a bishop in Spain. Some of those who sympathized with him, and shared his fate, wished to prove before Ambrose their innocence of the charges brought against them, but were unable to obtain a hearing. When, however, the capital sentence was carried into execution, the humane feelings of the archbishop asserted their sway; he denounced the deed of violence, and refused to hold any intercourse with the bishops who had taken part in the sanguinary transaction.

The writings of Ambrose are not remarkable for taste or genius; they have neither the spirit of Tertullian nor the copious elegance of Lactantius; we look in vain for the lively wit of Jerome, or the grave energy of his distinguished disciple, Augustine. His public and popular compositions are far inferior to his theological works. He was led astray by his fondness for the mystic subtleties of Origen. He looked upon Scripture as one vast allegory, and traced out fantastic analogies and recondite significations in every passage. In one of his practical treatises, where he inculcates the habit of intercessory prayer, and insists on the necessity of being ready to forgive, as we would be forgiven, he expounds the passage, "Enter into thy closet," as meaning, not the closet surrounded by walls within which your limbs are enclosed, but the closet within you, within which your thoughts are enclosed, in which your feelings and associations dwell.

His treatises on Faith and on the Holy Spirit were composed for the instruction of the youthful emperor Gratian; but to judge

from his writings, the point which occupied his chief attention was the spiritual direction of virgins and widows. In one of these he recommends, in a passing remark, the invocation of angels, and is the earliest writer who makes any allusion to this practice. His zeal in the cause of celibacy is shown by the fact, that, within two years from his consecration, he wrote a work "On Virgins," which he dedicated to his sister Marcellina.

The age in which Ambrose lived was an age of childish credulity; the human mind was fast sinking into superstition. It would have been remarkable, indeed, if the archbishop had altogether escaped the infection. Accordingly we are told that he learned by a vision the spot where the bodies of some martyrs reposed, which were piously exhumed, and conveyed in solemn pomp to the Ambrosian church. By the virtue which went forth from these relics, a butcher, named Severus, recovered his eyesight, and other wonders were attributed to handkerchiefs and aprons which derived miraculous power from these sacred bones.

During the period of his open conflict with the empress, Ambrose introduced into the church at Milan the regular practice of antiphonal hymns, a usage which, though long adopted in the East, was unknown in the West. (The Ambrosian chant is not so much distinguished by the antiphonal manner in which it was performed—which is traceable to the practice of the early Jews, and to the chorus of the classic drama—as by the music thus performed, which was appropriated from the Greeks by Flavian of Antioch, being the simplest character of music included in their theory: it comprised the first four modes of the Greek diatonic genus, now known as the four authentic ecclesiastical modes, and it was in general use in the Western church, until, in the sixth century, Gregory modified the system by the addition of the four modes now known as the plagal modes; it remained still in use in Milan, until, in the sixteenth century, Carlo Borromeo first introduced the Gregorian system there, and there a single specimen of pure Ambrosian music is even now in constant employment—an introit, which forms the chief subject of Bird's anthem, "Bow thine ear." One of the Lutheran hymns, the oldest hymn in the protestant church, is also said to be of Ambrosian origin.—G. A. M.) Augustine refers, in striking language, to the intense effect which this responsive singing produced upon his mind, "bringing all heaven before his eyes." That noble hymn, "Te Deum laudamus," which has been as a well of living water springing up with devotional thoughts, feelings, and desires to the church universal, has been ascribed to Ambrose; but there is better reason for concluding that it is the production of a later age.—W. W.

AMBROSE THE CAMALDULE, so called because he became general of the order, was a distinguished Italian theologian of the early part of the fifteenth century. He was made cardinal under Pope Eugene IV., and at the council of Florence drew up an "Uniois formula inter Ecclesiam Græcam et Latinam." He was the author of numerous works in Roman Catholic theology. Died in 1439.—A. M.

AMBROSE, ISAAC, an English divine, born in Lancashire early in the seventeenth century. He took orders in the English church, but afterwards, in 1641, joined the Presbyterian party, and laboured first at Grastang, and then at Preston. We read of him, that it was his wont to spend a month every year in a lonely wood, in religious meditation. His best-remembered works are "Prima, Media, et Ultima," London, 1640 and 1650, and a popular practical treatise called "Looking unto Jesus," which has been often reprinted, and is distinguished by its homely fervour. He died at the age of seventy-two.—J. B.

AMBROSE, THESEUS, or in the Italian form, AMBROGIO, TESEO, was descended of the noble family of the Conti d'Abbonese, and born at Pavia in 1469. He gave himself at an early period to Oriental studies, at the request of the Cardinal Santa Croce, was a regular canon of the Lateran, and afterwards a professor of Syriac and Chaldee in Bologna. He has the honour of being the first public teacher of these tongues in Italy. In 1539 he published at Pavia an "Introductio in Chaldaicam Linguam," &c., at his own expense, and with his own types—*typis authoris libri*. Among his casual visitors was the Austrian chancellor Widmanstadt, whom he instructed in Syriac, and to this tuition we owe the first edition of the Syriac New Testament, which, under his learned patronage and the literary care of Moses of Marden, was printed and published at Vienna in 1555. The story is told at length in the preface.—J. E.

AMBROSINI, BARTOLOMEO, a physician of eminence, and

professor of botany in the university of Bologna, was born towards the end of the sixteenth century. He had the direction of the botanic garden in his native city, one of the earliest botanical gardens in Europe, and celebrated for its plants. Ambrosini was also curator of the Natural History Museum. He published a work on the varieties of capsicum, illustrated by figures, superintended an edition of the works of Aldrovandi, and published also several medical works. During the plague of 1630, he rendered important services to the inhabitants of Bologna. He died in 1657.—J. H. B.

AMBROSINI, HYACINTH, was brother to the preceding, and succeeded him in the garden of Bologna. He published an account of the plants cultivated in the garden, and commenced a work on the plants then known, with their synonyms and etymologies. Only one volume of the work was published, in the year 1666. The name of these two brothers is preserved in the genus *Ambrosinia*.—J. H. B.

AMBROSIUS, AURELIAN, a king of Great Britain, who lived in the latter half of the fifth century, and about whose life and exploits the most contradictory traditions prevail. He appears to have been engaged in wars against the Saxon invaders, and the usurper Vortigern. Some of the chroniclers maintain that he died by poison, whilst others assert that he was defeated and slain by Cerdic, king of the West Saxons.—J. W. S.

AMBROSIUS, an archbishop of Moscow, whose Russian name was ANDRÉ SERTIS KAMENSKY; born in 1708. He was a highly cultivated man, of great worth of character, yet met with a lamentable end. When the plague raged in Moscow in 1771, the people spread it more and more by assembling—the infected mingling with the healthy—in immense crowds around a chapel containing a certain image of the Virgin. The archbishop, to prevent the crowding, withdrew this favourite image, in return for which benevolent act the mob tore him to pieces.—A. M.

AMBUCHL, JOHANN LUDWIG, a Swiss poet, born at Wattweil, in St. Gall, in 1750, who wrote a number of historical dramas, &c., chiefly on national subjects. Died in 1800.

AMEIL, AUGUSTUS, BARON, a French general, who served with distinction under Napoleon, and being proscribed on the return of the Bourbons, died in prison in 1822.

AMEILHON, HUBERT PASCAL, a French academician, who saved upwards of 800,000 volumes from destruction during the fury of the first Revolution. He was born in 1730, and died in 1811, leaving a variety of archæological writings.

AMEIPSIAS, a Greek comic poet, lived about 419 B.C.

AMEL, HANS, of Antwerp, the architect of the façade and steeple of the Antwerp cathedral; flourished about 1422.

AMELESAGORAS, an ancient Greek historian of Chalcedon.

\* AMELIE, MARIA FREDERIKA AUGUSTA, a princess of Saxony, born in 1794, is well known in Germany as a successful dramatic authoress.

AMELINE, CLAUDE, a French ecclesiastic and writer on ethics of the seventeenth century.

AMELIUS, a Greek philosopher of the Neoplatonic school, who lived about the end of the third century, but whose birthplace is unknown. He is said to have been the pupil of Plotinus, and the master of Porphyry. Of his numerous works nothing has reached us, except a fragment of a commentary upon the opening of John's gospel. His views were of the usual mystical character of the Alexandrian school.—J. W. S.

AMELIUS, MARTIN, a German jurist of the sixteenth century, who became regent of Baden, and contributed much to introduce protestantism into that country.

AMELOT DE LA HOUSSAYE, ABRAHAM NICHOLAS, a political writer of France, who was born at Orleans in 1634, and died at Paris, 1706. Of his life very little is known. He published an account of the Venetian system of government, a history of the council of Trent, together with a variety of memoirs, essays, and translations.

AMELOTE or AMELOTTE, DENIS, a French theologian, who flourished in the reign of Louis XIV., and entered with great vehemence into the controversy against the Jansenists. He wrote a translation of the New Testament.

AMELUNGHI, GERONIMO, lived at Pisa in the sixteenth century, and obtained some celebrity as a comic poet.

AMENOPHIS I., one of the Egyptian kings of the eighteenth dynasty, and, according to the tablet of Abydos, the successor of Anon. The name signifies "one with Amun." He was a great and successful warrior, and is represented in stucco in various

places, as a god in the act of receiving homage. A fine picture of him was found at Gournou by the late Prussian expedition; a marble statue of him is in the noble collection at Turin, and a pair of sandals with his name on the strap is in the museum of Berlin. He appears to have been the originator of the great palace-temple of Karnak, and is regarded by some as the second founder of the Egyptian monarchy.—J. E.

AMENOPHIS II., son of Thothmes III., and one of the kings of the 18th dynasty, whose architectural works are found chiefly in Nubia. By some compilers of the royal lists, he was wrongly identified with "Memnon and the speaking statue."—J. E.

AMENOPHIS III. or AMENOPHIS-MEMNON, son of Thothmes IV., and one of the most famous of the kings of the 18th dynasty. The works erected by him in Egypt were numerous and magnificent—such as the great palace of Luxor, in the rooms of which his birth and education are pictured out, and the long avenue of sphinxes which joins it to Karnak. His conquests were extensive, and on a monolith statue in the Louvre is a long and proud record of them. The great fabric of the Amenophium was on the western bank of the Nile. Two colossal statues still stand in solitary grandeur among its extensive ruins, and one of these, known of old as the vocal statue described by Pausanias and Strabo, has connected this sovereign with the Memnon of the Odyssey and of Grecian story. The tomb of Amenophis is one of the most complete that has been found; 352 feet in length, and covered with hieroglyphical characters.—J. E.

AMENOPHTHIS, successor of Ramses, and a king of the nineteenth Egyptian dynasty. His name appears in one of the halls of Luxor. His reign was short, and, according to Egyptian custom, his tomb on that account was left unfinished.

AMENTA, NICOLO, a poet and philologist of Naples, who lived in the latter part of the seventeenth century.

AMENTES, a Greek surgeon of the first century.

AMERAD or AMERLAN, ELOI D', a French writer, born about the close of the fourteenth century, at the town of Bethune, in Artois, where he was master of the choir of singing boys. He was author of a remarkable book on Satanic agency.

AMERBACH, BONIFACIUS, son of Johann Amerbach, was born at Basle in 1495, became professor of civil law in his native town, and enjoyed the friendship of Erasmus and Fröben, and died in 1562.

AMERBACH, ELIAS NICOLAS, a composer for the organ. He held an appointment as organist in Leipzig in the year 1571, and published several fugues and other pieces for his instrument.

AMERBACH, JOHANN, a German printer of the fifteenth century, one of the first who introduced the Latin character in place of the Gothic. He was much esteemed by the literary men of that age, and died in 1528.

AMERBACH, VEIT, a German writer, professor of philosophy at Ingolstadt, where he died in 1557.

AMER BIAKHAM ALLAH, ABUL MANSUR AMER KAMILAH, a caliph of Egypt, of the Fatimite house, was born in 1095, and assassinated in 1130.

AMERGIN or AMERGHIN (Latin, AMERGINUS), surnamed GLUNGEAL, the "white-kneed," one of the heroes of ancient Irish history, is said to have lived ten or twelve centuries before the Christian era. Tradition represents him to have been the son of Golanh, surnamed Milo or the Milesian, and Scota, a daughter of Pharaoh, king of Egypt, in which country he was born. Holding afterwards the office of chief priest among the Milesians of Spain, he accompanied them to the conquest of Ireland as one of the leaders of the expedition, which owed much of its success to his ability and courage. Three Danaan (or Damnonian) princes then ruled the island; and on their remonstrating against the sudden and stealthy invasion, Amergin, who had been sent as the envoy to demand their submission, consented to allow them time to assemble their forces, that the matter might be decided by fair fight in the field. In the struggle that followed, the result was for some time doubtful. The invaders suffered severely from storm as well as in battle. Five of Amergin's brothers perished: but at length he and the two surviving sons of Milesius slew the three Danaan princes in the battle of Tailtan, and secured possession of the kingdom. Inbher Sceine, now called Bantry Bay, is said to have derived its name from Sceine or Sgenea, Amergin's wife, who was drowned there; and the name of his mother, Scota, is supposed to be perpetuated in her burying place, Glen Scota, in Tralee. But in the obscurity which rests on the early history of Ireland, it is impossible to

say how much of the history of Amergin is fable, and whether he be not altogether a fictitious personage.—W. B.

AMERGIN or AMALGAIDH, an Irish poet, who lived in the middle of the sixth century, and author of the "Dinn Seanchas, or history of noted places in Ireland." This has been from time to time enlarged by additions, some of them so late as the eleventh century.—(Ware, O'Reilly.)—J. F. W.

AMERGIN, MAC AMALGAIDH, an Irish writer of the seventh century, who lived in the reign of Finghin, king of Munster. He composed a treatise on the privileges and punishments of the different ranks in society. There is a copy of this tract among the Seabright MSS. in Trinity college, Dublin.—(O'Reilly.)—J. F. W.

AMERIGHI, MICHEL ANGELO DA CARAVAGGIO. See CARAVAGGIO.

AMERIGO VESPUCCI or AMERICUS VESPUTIUS (generally so written, though Vespucci was his surname), a navigator eminent for nautical science and enterprise. He was employed at the court of Ferdinand of Arragon, together with other persons, as Pinzon and Solis, at the head of a sort of board of navigation, constructing charts, and tracing out new routes for projected voyages. He was born at Florence, on the 9th March, 1451, of a wealthy family, and educated by his uncle, Giorgio Antonio, a monk of the congregation of St. Mark. He went as a merchant to Seville in connection with the Florentine house of Juanoto Bernardi, and seems to have gone to and fro between Florence and Spain for several years. It is proved by documents that he was in the latter country in 1486, though he lived at Florence in 1489. Humboldt, in his "Histoire de la Géographie du Nouveau Continent," has carefully investigated the four voyages said to have been made by Vespucci; two by the command of the king of Castile, and two by that of the reigning monarch of Portugal. His first voyage was in the capacity of pilot in an expedition of Alonzo de Hojeda, on the 20th May, 1499, which sailed from a port of Galicia. In twenty-seven days from the Canaries he reached the coast of South America, which he traced westwards as far as Cape de la Vela. Then turning northwards he touched at Hispaniola, and returned to Spain on 15th October, 1499. By some blunder, which has never been satisfactorily explained, a statement bearing the name of Vespucci was published at St. Dié in Lorraine, in which the year 1497 was substituted for 1499, which made it appear that he reached the mainland of America a year before Christopher Columbus. There is no reason, however, to believe that he ever attempted to defraud Columbus of his rightful claim to this great discovery. The suggestion that the new continent should be named after Amerigo, seems to have originated with the author of an Italian account of his voyages. The astronomical knowledge of Vespucci was considerable. His love for maritime adventure, as he himself informs us, was owing to his mercantile avocations at Seville. While fitting out ships for long voyages, he imbibed the strong desire to accompany them. His earliest expeditions were made in the service of the Spanish sovereign, and at the time of the death of the great admiral, we find him again in Spain soliciting employment. He was appointed the head of the Spanish pilots on the 2nd of March, 1508, and in his commission was ordered to take care that no one should be licensed to so responsible an office, unless he thoroughly knew the theory and practice of the astrolabe and the quadrant. Amerigo died at Seville, February 22, 1512. He had been afflicted in his old age with poverty, and left to his widow the chance of obtaining a small pension of 10,000 maravedis (a maravedi being about the seventh part of a halfpenny), which his successor in office, with difficulty, consented to pay. Amerigo was generous and enthusiastic, a good astronomer and constructor of maps, able and conscientious in victualling and furnishing fleets, and, like so many of his contemporaries, never gazing upon the Western ocean without longing to know what lay beyond. It was an age of adventure, and though surpassed by the original genius of Diaz and Gama, the two Cabots of Venice, and Columbus of Genoa, Amerigo Vespucci deserves to be remembered with admiration and respect.—T. J.

AMEROT, ADRIEN, a French philologist, who died in 1560.

AMERSFOORT, EVERT VAN, a Dutch painter of the seventeenth century.

AMERSFOORT, JACOB, a Dutch philologist, who was born at Amsterdam in 1786, and became eminent for his knowledge of the Oriental tongues. He died in 1824.

\* AMERLING, FRIEDERICH, one of the most celebrated painters of the present day in Austria, especially famed for his portraits. Some of his paintings, in which he introduces startling effects of reflected lights, have obtained extraordinary success. He was born at Vienna in 1803.—R. M.

AMES, FISHER, LL.D., born in 1758, was the son of Nathaniel Ames. Having devoted himself to the study of law, he became a barrister in 1781, but in the struggle between Britain and her American colonies, abandoned his profession for the more stirring pursuits of political life. His talents as a writer and an orator, his mental vigour and high moral character, gave him great public influence. He was a member of the convention of his own state, in which the federal constitution was considered and ratified, and he became the first representative of his own district in the legislative assembly of the new republic; in the debates of which he took a prominent part for several years. He was elected president of Harvard college a few years before his death, which took place in 1808, but declined the office in consequence of his state of health. His works, with a memoir of his life by president Kirkland, were published in 1809.—F.

AMES, JOSEPH, was a captain of marines in the British navy, born in 1619. Having entered the service at an early age, he was present in most of the engagements between the English and Dutch fleets, and distinguished himself by his gallantry in the battle in which the celebrated Van Tromp lost his life. Having retired from the service, he took up his abode at Yarmouth, where he died in 1695.—F.

AMES, JOSEPH, F.R.S., was an eminent writer on antiquarian subjects, born at Yarmouth in 1688-9. His principal work, the valuable produce of twenty-five years of laborious research, is entitled "Typographical Antiquities, being an historical account of Printing in England." Mr. Ames was long a fellow of the Society of Antiquarians, as well as of the Royal Society. He died in 1758.—F.

AMES, NATHANIEL, a physician at Dedham, in New England, author of an astronomical almanac, which was extremely popular. He was born in 1708, and died at Dedham in 1765.

AMES [AMESIUS], WILLIAM, D.D., a learned divine and casuist, was a native of Norfolk, where he was born in 1576. He was educated at Cambridge, where his theological studies were directed by William Perkins, by whom his whole intellectual character, as well as his theological opinions and leanings, was powerfully and permanently influenced. After becoming fellow of his college, he was, in consequence of being "one of the rigidest of those called Puritans" (to use his own words), expelled from his fellowship, and forced to become an exile. This took place in 1610. He first betook himself to Leyden, and after a season to the Hague, where he succeeded Dr. John Burgess, whose daughter he married, as chaplain to the English troops in that place. His strenuous adherence to Calvinistic views led him, whilst at the Hague, to a protracted controversy with Grevinchovius, a follower of Arminius, on the principal points in dispute between their respective schools. He lost his appointment as chaplain to the English troops, in consequence of being supposed to be the author of a pamphlet bitterly reflecting on the English church for her indifference in regard to the Synod of Dort. Though the charge thus brought against him was unfounded, it had some colour from his antecedents, as well as from the interest he took in the proceedings of this famous convention. Though not himself a member, he received a stipend of four florins a day from the States-General of Holland, to enable him to live in Dort, and aid the president of the Synod by his suggestions; and there can be no doubt that the influence he exerted on the proceedings was considerable. After the close of the Synod, Ames received the appointment of inspector of the youths who were studying at Leyden, supported by bursaries derived from Amsterdam: and it was for their behoof that he composed his "Medulla Theologiæ," a work which has passed through many editions. In 1622 he entered on the office of professor of theology at Franeker, where he continued to labour with increasing reputation for nearly twelve years. He enjoys the honour of being the first who assigned to practical theology its due place in the academical curriculum; and his writings in this department, all of which were published during his residence at Franeker, are still referred to by theologians and casuists with respect, especially his treatise "De Conscientia, et ejus Jure et Casibus." He issued during this period, also, several polemical writings, of which the best known are his

"Puritanismus Anglicanus," an exposition and defence of the doctrines of the more rigid of the English Puritans, originally composed by William Bradshaw, but translated into Latin by Ames; his "Anti-Synodalia," in which he replies to the arguments of the Remonstrant party in the Synod of Dort; and his "Bellarminus Enervatus," in which he assails Cardinal Bellarmine's defence of popery. His Latin works were collected after his death, and published in 5 vols. 12mo. at Amsterdam, in 1658. In 1633 he resigned his office at Franeker, and accepted a call to be one of the pastors of the Independent church at Rotterdam. It is probable that conscientious motives, rather than reasons of health, led to this step. He died in 1633, at the age of fifty-seven, leaving behind him a widow and children, who soon after emigrated to America. Ames was a man of great controversial powers, accurate in his statements, acute in his reasonings, and rigid in his deductions. As a theologian he inclined to supra-lapsarianism; but his writings do not betray any antinomian tendencies. On the contrary, as already mentioned, they are still held in repute for their ethical worth. It is perhaps to be regretted that his zeal for what he believed to be truth was not tempered by more of a charitable and gentle spirit; for it must be admitted that the rigour of his strictures on his opponents is often extreme, and so little disposed was he to allow reasons of a personal nature to interfere with the stern discharge of what he thought duty, that he attacked even his own father-in-law, Dr. Burgess, and, as a contemporary expresses it, "laid him flat on the ground." But such severity was the fault as much of the times as of the man.—(See his *Life* by M. Nethenus, prefixed to his collected Latin works; Brook's *Lives of the Puritans*, vol. ii. p. 405; Mosheim's *Eccles. Hist.*, Art. xvi., sec. 2, pt. 2, ch. 2; Hanbury's *Memorials of Independents*, *scpe.*)—W. L. A.

AMESTRIS, the wife of Xerxes, who, according to Herodotus, having discovered an intrigue between her husband and Artiante, indulged her jealousy and vengeance by cruelly mutilating Artiante's mother. Another princess of this name is known to history. (See AMASTRIS.)

AMFREVILLE, D', this name is of frequent occurrence in the history of the French navy during the seventeenth century. It was borne by three brothers, who were distinguished for their heroism during the reign of Louis XIV.; of these the eldest was the Marquis d'Amfreville, who attained the rank of lieutenant-general of the naval forces of France.

AMHERST, JEFFERY, Lord Amherst, born in 1717, was the second son of Jefferey Amherst, Esq. of Riverhead, in Kent. Having entered one of the regiments of guards at the early age of fourteen, he was a few years afterwards engaged in active service on the continent, and was present as aide-de-camp to Lord Ligonier at the battles of Roucox, Dettingen, and Fontenoy; having attracted the attention of the Duke of Cumberland, he was transferred to the staff, and was present at the battles of Laffeldt and Hastenbeck, as aide-de-camp to his royal highness. In the war with France in 1758, Amherst was appointed to command in North America, with the rank of major-general, and in the following year succeeded General Abercromby as commander-in-chief; and, by his brilliant services, amply justified the wisdom of the minister-at-war in the selection of so able an officer. He speedily made himself master of Cape Breton, a conquest of the highest importance to the British arms, and subsequently took a prominent part in the many gallant exploits by which the war was distinguished. At the termination of hostilities he received the thanks of the House of Commons, and was elevated to the dignity of a knight of the Bath. Having resigned his command in America in 1763, and returned home, he was received by the king with every mark of respect, and had several new rewards and honours conferred on him, being appointed governor of Virginia, and colonel of the third regiment of foot. In 1770 he became governor of Guernsey and its dependencies, and two years afterwards was appointed a member of the privy council, and lieutenant-general of the Ordnance. Six years later he was elevated to the peerage with the title of Baron Amherst of Holmsdale, in the county of Kent. His lordship was twice married, but having no issue, he received, in 1788, a second patent of peerage, as Baron Amherst of Montreal, with reversion to his nephew. He died in 1797.

AMHERST, WILLIAM PITT, Earl Amherst, was born on the 14th of January, 1773, and succeeded his uncle Jefferey, first Lord Amherst, in August, 1797. Lord Amherst was a lord of

the bedchamber to George III., George IV., and William IV. He was one of the Canada commissioners, and after having been employed on a diplomatic mission to Northern Italy, he undertook in 1816 an embassy to China, in order to place our commercial relations with that country upon a better footing. Lord Amherst sailed from England in February, 1816, in H.M.S. *Alceste*, commanded by Captain Murray Maxwell, and landed at Ta-ku, at the mouth of the Pei-ho, on the 12th of August. An attempt was made by the Chinese to enforce the practice of the kotau, that is, striking the head on the ground as a sign of homage, before a yellow screen, as the preliminary to a repetition of the same ceremony before the emperor. This was refused by Lord Amherst, upon the advice of Sir George Staunton, who had been present on a similar occasion with Lord Macartney in 1793, when the same thing was proposed and refused. Lord Amherst and his suite arrived at Peking on the 28th of August, at dead of night; and though it was pretended that preparations had been made for their reception, the gates were closed against them, and it was dawn of day before they entered the city, which they left the same afternoon, without having accomplished the object of this expensive expedition. Upon hearing of the failure of the English mission, the governor of Canton issued a proclamation, declaring that the ambassador would not be allowed to embark in the river, but must, after traversing the country, find his way as best he could to the ships, which were to remain at anchor among the Ladrone Islands, almost in the open sea. By the firmness, however, of Captain Maxwell, the embassy entered the river, and were in the end very civilly treated by the Chinese. He reached England in October, 1817, after an absence of twenty months. On his return, Lord Amherst was wrecked on the island of Pulo Leat, from which he proceeded in a boat to Batavia. He also visited the Emperor Napoleon at St. Helena. Lord Amherst was subsequently appointed governor-general of India, and raised to the rank of an earl in 1826, in consequence of his services there. The last thirty years of his life were spent in retirement. He died March 13, 1857, at Knowle Park, Kent, the ancient seat of the Dorset family, the heiress of which was his second wife.—J. S.

AMHURST, NICHOLAS, a poet and politician, was born at Marden, in Kent, in 1706, and having been educated at Merchant Tailors' School, entered St. John's college, Oxford, whence he was expelled in consequence of having given offence by a pamphlet entitled "Protestant Popery." He revenged himself on the university, however, in his two anonymous satires, "Oculus Britannia" and "Terræ Filius;" the latter of which is replete with malignity and exaggeration. After quitting Oxford, he settled in London, and became the associate of Pulteney and Bolingbroke in conducting the "Craftsman," in opposition to Walpole's administration. He was the author of a variety of works, including some poems and satirical pieces; but when, in 1742, his party came into power, although he had served them with the utmost zeal, he found himself neglected, and died in the same year in great distress, aggravated in no small degree by the ingratitude he experienced from those to whose service he had dedicated his life and abilities.—F.

AMICI, GIOVANNI BATTISTA, an Italian physician, was born at Modena in 1784, studied mathematics at Bologna, and in early life displayed wonderful powers in the construction of optical instruments. He was appointed to the chair of mathematics in the Lyceum of Panaro, the principal school of the duchy of Modena. He made important discoveries in the construction of mirrors for telescopes, and also constructed microscopes which have long been celebrated. He occupied for some time the situation of general inspector of education in the duchy of Modena; and on the death of Pons, was appointed by the grand-duke of Tuscany director of the observatory of Florence. Amici published numerous memoirs in the transactions of academies and in scientific journals, and wrote upon the circulation of sap in plants, on infusoria, on chara, on oscillatoria, and on the fecundation of plants. He died on the 23rd of April, 1863. His son, VINCENT AMICI, is professor of mathematics at Pisa.—J. H. B.

AMICI, TOMMASO, an Italian sculptor of the 15th century, was associated with J. Mabilla di Maso in 1495, in constructing the altar of San Niccolò, in the cathedral of Cremona.

AMICO, ANTONINO, historiographer to Philip IV. of Spain, and author of several historical works. Died 1641.

AMICO, BARTOLOMEO, an Italian jesuit, born in 1562, who

was professor and prefect of studies in the university of Naples. His chief work was an elaborate commentary on the philosophy of Aristotle. Died 1649.

AMICO, BERNARDINO, prior of the Franciscans of Jerusalem in 1596. After an absence of several years he returned to Italy, and published a description of the sacred edifices of the holy city, with engravings, which he dedicated to Philip III. of Spain.

AMICO, FAUSTINO, an Italian poet of great promise, was born at Bassano in 1524; died 1558.

AMICO, FRANCESCO, an Italian jesuit, born at Cosenza in 1578, who, after having been professor of theology at Aquila, Naples, and at Gratz, in Styria, became prefect of studies at Vienna. Died 1651.

AMICO, LORENZO, a Franciscan monk, born at Milazzo in 1633, who, after being for some years teacher of theology and philosophy to his own order, was appointed vicar-general in the province of Palo.

AMICO, STEFANO, a monk of Monte-Cassino, born at Palermo, author of a volume of Latin poems entitled "Sacra Lyra." Died in 1662.

AMICO, VITO MARIA, was born in 1693, at Catania. Having entered the Benedictine monastery of S. Nicola delle Arene, he ultimately became professor of history in the university of his native town. In 1751 he obtained from King Charles the office of historiographer of Sicily. He was the author of a variety of works relating to the history and antiquities of his native country. He died in 1762.—F.

AMICUS, BONAVENTURE D', a Capuchin monk of Amiens, who distinguished himself somewhat as a painter about the close of the sixteenth century.

AMICUS, DIOMEDES, a learned physician of Placentia, flourished at the end of the 16th and beginning of the 17th centuries.

AMIDANO, POMPONIO, an Italian painter of the sixteenth century. He was a native of Parma, and a very skilful imitator of his master, Parmigiano.

AMIGONI or AMICONI, JACOPO, a historical and portrait painter, a native of Venice, who chiefly sought to imitate the Flemish masters. He travelled and worked in Belgium, Germany, England, and Spain, in which last country he became court painter; more famed for brilliancy of colour than for design. Born 1675; died 1752.—R. M.

AMILCAR. See HAMILCAR.

AMIOT, a French jesuit missionary to China, born at Toulon in 1718. He arrived at Macao in 1750, and at Peking in 1751, where he lived till his death in 1794. He possessed a very considerable knowledge of the physical and mathematical sciences, a talent for music, a retentive memory, and indefatigable activity and perseverance. By diligent study he made himself familiar with the Chinese and Tartar languages, and was thus able to obtain very correct ideas respecting the history, philosophy, and arts of ancient and modern China. His opinions on these topics have been embodied chiefly in the "Memoires concernant l'histoire, les sciences, et les arts des Chinois," 15 vols. 4to, Paris, 1776-91. His principal works are:—1. "Eloge de la ville de Moukden," a translation of a poem by the emperor of China, in praise of the city and country of Moukden, the fatherland of the Tartar race, which was published in 8vo. in 1770, by de Guignes. It contains a great number of historical and geographical notes, by Père Amiot. 2. "Art Militaire des Chinois," a translation of the first three of the six books on military art, in which military students must undergo an examination. It may be found in the seventh volume of the "Memoires," and in the eighth volume there is a supplement with figures. 3. "Lettre sur les caractères Chinois" to the Royal Society of London, printed in the first volume of the "Memoires." 4. "De la musique des Chinois," in the sixth volume of the "Memoires." 5. "Vie de Confucius;" the most correct account of this celebrated philosopher. 6. "Dictionnaire Tartar-Mantchou Français," 3 vols. 4to, Paris, 1789. Amiot wrote also a small grammar of the Mantchou language, which is preserved in the thirteenth volume of the "Memoires." He is said to have translated "Fontaine's Fables" into Mantchou.—J. S.

AMIOT. See АМѢТ.

AMIRDOVALT, an Armenian physician, a native of Amasia, lived during the latter half of the fifteenth century. He wrote a medical work bearing the title, "Ankidatz Anbed," ("Useless for the Ignorant.")

AMLAVE. See ANLAF.

AMLETH or HAMLETH, the Hamlet of Shakspeare's tragedy, was, according to Saxo Grammaticus, the son of Horwendill, a prince of Jutland, and lived about two centuries before Christ. Fengo, brother of Horwendill, having traitorously slain the latter at a banquet, married Hamlet's mother Gerutha, whom he had previously seduced. Hamlet, fearing he might be Fengo's next victim, now feigned himself mad; but the king had his suspicions, and employed a young lady, the Ophelia of Shakspeare, to gain Hamlet's love and his secret. He also, according to Saxo, adopted the other expedient of which Shakspeare makes use, that of concealing a courtier in the queen's room while her son was holding an interview with her. Both of these attempts failing, Hamlet was sent off to England with two agents of Fengo's, and letters were written on wood requesting the king of England to put him to death. Hamlet again effected his deliverance in the manner indicated by Shakspeare, who appears throughout his drama to have adhered pretty closely to the ancient legend, which he had probably read in Belleforest's French paraphrase of the account of Saxo, or in an English translation of Belleforest. The catastrophe, however, as given in the tragedy of Hamlet, differs from the account of Saxo Grammaticus, according to whom the prince, after slaying the usurper and a great many of his adherents, went through a variety of adventures, was twice married, first to an English, and afterwards to a Scottish princess, and was finally slain in battle by Vigleth, successor to Roric, feudal superior of Horwendill. There are reasons for believing that Saxo Grammaticus derived this story from an Icelandic saga now lost; and though some recent historians are of opinion that the legend of Hamlet the Dane is a baseless fiction, others, and among these Dahlmann in his "Geschichte von Dänemark," and P. E. Müller in his "Sagabibliothek med Ammerkninger," lean to the belief that, among the early princes of Jutland, there may have been one of this name.—A. M.

AMMAN, GEO. CHRISTOPH, a physician of Ratisbon, author of some medical works, lived in the 17th century.

AMMAN, JOHANN CONRAD, a physician noted for his skill in instructing deaf mutes. He was born at Schaffhausen in 1669, practised chiefly in Holland, and died near Leyden about 1730. His principal works are: "Surdus Loquens," Amsterdam, 1692, 8vo., and "Dissertatio de Loquela, qua non solum Vox Humana et Loquendi Artificium ex originibus suis eruntur, sed et traduntur Media, quibus ii, qui ab incunabulis Surdi et Muti fuerunt, loquelam adipisci possint," Amsterdam, 1700, 12mo. The latter work appears to be a Latin translation of the former, which is in Dutch. Amman's method with the deaf and dumb was sagacious and successful; and his "Surdus Loquens," or "Dissertatio de Loquela," is well worthy of attention, not only in a medical, but in a philological point of view.—A. M.

AMMAN, JOHANN JACOB, a German surgeon, who in 1612 and 1613 travelled to Constantinople, Palestine, and Alexandria. His travels, published at Zürich in 1618, under the title, "Reise ins gelopete Land, von dannen durch die Wüste und Ägypten gen Alexandrien," &c., contain some curious and interesting information. Born 1586; died at Zürich in 1658.—A. M.

AMMAN or AMMON, JOST, a very popular old German designer and engraver, born at Zürich in 1539. He spent the latter part of his life at Nürnberg, where he died in 1591, leaving behind him, notwithstanding his comparatively short life, an immense number of works; among the rest an extensive series of female costumes, and a collection of portraits of the kings of France, from Pharamond to Henry III. He did a great deal of work for the German booksellers of his time, in the way of illustrating their publications. The plates in an edition of Hans Sachs' "Description of All Ranks upon the Earth" (Eigentliche Beschreibung aller Stände auf Erden), published at Frankfort in 1568 and 1576, are by Jost Amman. This artist was also very skilful in staining glass. For list of his engravings see *Bryan*.—A. M.

AMMANATI. See PICCOLOMINI.

AMMANATI, BARTOLOMMEO, a celebrated Florentine sculptor and architect, pupil of Baccio Bandinelli and Sansovino, was born in 1511, and died in 1589. Works by Ammanati still adorn many Italian cities, among the rest Rome, Naples, Florence, and Venice. He executed important commissions for Cardinal da Monti, afterwards Pope Julius III., and Cosmo de Medici, and competed successfully with Benvenuto Cellini for permission to execute the statue of Neptune in the Piazza del Gran Duca at Florence. The gigantic figure of Mount Apennine at Pratolino, near the same city, is also by Ammanati. His

most remarkable architectural work is the Ponte della Trinità over the Arno at Florence, a light and elegant structure, and, as the experience of three hundred years has well proved, of enduring solidity. The statues which decorate this bridge were not executed by Ammanati. He is said to have aimed in sculpture at the style of Michel Angelo, but without decided success. The wife of Ammanati was the poetess Laura Battiferri.—A. M.

AMMANATI, GIOVANNI, an Italian artist of the 14th century, remarkable for his skill in inlaying. In 1331 he superintended the decoration of the choir of the cathedral of Orvieto.

AMMANN, JOHANN, a German physician and botanist, was born at Schaffhausen in 1707. He prosecuted the study of medicine at Leyden, under the celebrated Boerhaave. In 1730 he visited London, and was elected in 1731 a fellow of the Royal Society. In 1733 he was elected professor of botany and natural history at St. Petersburg, and became a member of the Imperial Academy of Sciences there. His Herbarium is now in the museum of that city. He published a work on the rarer Russian plants, and contributed several important botanical memoirs of the Transactions of the Academy. A genus Ammannia, in the natural order Lythraceæ, has been named in honour of him. He died at St. Petersburg in 1741.—J. H. B.

AMMANN, PAUL, a German physician and botanist, was born at Breslau on 31st August, 1634. He pursued his medical studies at different German universities, took the degree of doctor of medicine at Leipsic, and in 1664 was admitted into the Academia Cæsarea Naturæ Curiosorum, the chief natural history society of Germany. He became professor of medicine, and subsequently of botany and physiology at Leipsic. Ammann was an able writer, and a man of extensive learning. He seems, however, to have been of a caustic turn of mind, and disposed to be harsh in his criticisms. Though he wrote several medical works, his fame as a writer is chiefly connected with his botanical publications. These consist of his "Character Plantarum Materialis," in which he shows that the characters of plants, as regards classification, should be derived from the fructification. His "Supplex Botanica" is an enumeration of the plants cultivated in the botanical and other gardens at Leipsic, as well as of those which grew in woods and meadows in the vicinity, with a short introduction to materia medica; and his "Hortus Bosianus" is a description of the exotics cultivated in that garden. He died at Leipsic on the 4th February, 1691.—J. H. B.

AMMAR-IBN-YASIR, surnamed ABOU-L-YOKHDIAN, one of the most celebrated of the immediate followers of Mahomet, who on one occasion miraculously saved his disciples from being burnt alive by the inhabitants of Mecca. Ammar was present at the battle of the Camel in A.D. 657-58, and commanded the cavalry of Ali at the battle of Sefayr, where he fell at the age of ninety. Abdallah-Ibn-Said, grandson of Ammar, settling in Spain, founded the Moorish family of the Beni-Said.—A. M.

AMMIANUS, author of a considerable number of epigrams, to be found in the "Anthologia Græca." He lived during the reign of the Emperor Adrian, A.D. 117-138.—A. M.

AMMIANUS MARCELLINUS, "the last subject of Rome who composed a profane history in the Latin language." He himself tells us that he was of Greek descent, and we gather from his reference to Antioch, as well as from a letter addressed to him still extant, that that city was his birth-place. He is supposed to have been of noble family, as he was admitted when a young man into the ranks of the "Domestic Protectors," a military body, composed entirely of the sons of the nobility and experienced officers. Some of the "Protectors" formed a body-guard for the emperor, while others were sent to distant provinces, under the highest military officers. The lot of the latter fell to Ammianus, who was sent by the Emperor Constantius to the East, under Ursicinus, the master of horse. With him he returned to Italy. He afterwards went to Gaul, and subsequently took part in the expedition which Julian, the successor of Constantius, undertook against the Persians. He then remained for some time at Antioch, and ultimately took up his residence in Rome, where he spent his last days, composing his history, and reading parts of it to delighted audiences. The first thirteen books of Ammianus' history are lost. The other eighteen extend from the seventeenth year of the reign of Constantius to the death of Valens. They deal principally with facts of which the writer was personally cognizant, and are remarkable for their impartiality. There is not the slightest reason for believing that he was a Christian.—J. D.

AMMIRATO, SCIPIONE, called IL VECCHIO, the Elder, an Italian author, canon of the cathedral of Florence, was born in the Neapolitan town of Lecce in 1531; died in 1601. His works, which are very numerous, are generally of a historical character. The chief of them are: "Istorie Fiorentine," which he was commissioned to write by Cosmo I., in two parts, the first extending to the year 1434, the second to 1574. This has been pronounced the most complete and exact history of Florence, up to the date mentioned, which we possess. "I Vescovi di Fiesole, di Volterra, e d'Arezzo, con l'Aggiunta di Scipione Ammirato il Giovane" (see below), Florence, 1637, 4to; "Albero e Storia dei Conti Guidi," Florence, 1650, folio, also with additions by Scipione Ammirato the Younger. The works of Ammirato are the result of a very laborious collation of an immense number of ancient documents.—A. M.

AMMIRATO, SCIPIONE, the Younger, amanuensis of Ammirato the Elder, and the editor and enlarger of several of his works. His master made him his heir on condition of his adopting the name by which he is now known, Cristoforo del Bianco.

AMMON, ancestor of the Ammonites, is stated in Genesis xix. 38, to have been the son of Lot by his younger daughter.

AMMON, CHRISTOPH. FRIEDRICH D', a German protestant theologian, born at Bayreuth in 1766, died in 1820, was famous in his day as an eloquent preacher. He has left among other works an "Entwurf einer reinen Biblischen Theologie" (Sketch of a purely Biblical Theology), Göttingen, 1802, 3 vols. 8vo.

\* AMMON, FRIEDRICH AUGUST, son of the preceding, born 1799, became professor in the Medico-Chirurgical Academy of Dresden in 1829, and has distinguished himself by his skill in eye diseases. He has published "Clinical Observations on Maladies of the Eyes," Berlin, 1838-41, 3 vols. 8vo; and other works.

AMMONAS or AMOUN ('Αμμωνίας, 'Αμοῦν) founded an ancient ascetic order in Egypt, which became celebrated. Died A.D. 320. For certain "Ascetic Rules" attributed to him, see the "Biblioth. P.P. Ascetica," vol. ii.; Paris, 1661.

AMMONIO, ANDREA, an accomplished Italian scholar, the friend of Erasmus, was born at Lucca in 1477, and died at London in 1517. On his coming to London he was for some time neglected; but in 1513 Henry VIII. made him his Latin secretary, and he also about the same time obtained some church preferments. His works, "Scotici Conflictus Historia," "Bucolica seu Eclogæ," &c., and others mentioned by Bayle, have been lost. For a number of letters by Ammonio, see the correspondence of Erasmus.—A. M.

AMMONIUS ('Αμμώνιος), an ancient Alexandrian surgeon, most probably in the time of Ptolemy Philadelphus, (B.C. 285-247), who gained the surname of Lithotomus, from his skill in treating the stone. He invented a method of breaking calculi when they are too large for extracting entire. Celsus has described it, book vii. chap. 26. The operation of Ammonius did not differ materially from the modern "lithotripsy."—A. M.

AMMONIUS, an Alexandrian grammarian, lived in the first century B.C. He was a disciple of Aristarchus, and wrote commentaries on Homer and Aristophanes. These only exist in as far as the scholiasts have used them.

AMMONIUS, a Greek philosopher, one of the instructors of Plutarch, who wrote his life, which has not been preserved. He taught at Athens in the reign of Hadrian, A.D. 117-138.

AMMONIUS, called SACCAS or SACK-CARRIER, because he was employed as a porter to carry corn at Alexandria. He is also designated "God-taught." He is regarded as the founder of the Neoplatonic school, and there can be no doubt that he was the first to attempt the reconciliation of the Platonic and Aristotelian systems of philosophy, finding a substantial unity amid minor differences. Among his scholars were Origen, Longinus, and Plotinus. It is a matter of dispute whether he was a Christian or not. That he was born of Christian parents is expressly asserted, and he wrote on Christian subjects. He died in A.D. 243, upwards of eighty years of age.—J. D.

AMMONIUS, a Christian writer of Alexandria, who lived in the third century. He is the author of "A Harmony of the Four Gospels," a Latin translation of which is to be found in the "Bibliothèque des Peres," edition of Bâle & Lyon.

AMMONIUS, an Alexandrian grammarian, author of a dictionary of synonyms. He had been priest in a temple dedicated to the ape, but was compelled to flee to Constantinople when Theodosius persecuted the pagans of Egypt in A.D. 389. Socrates, the ecclesiastical historian, there became his pupil.

The work of Ammonius, which is not without value, is entitled *Περί ὁμοίων καὶ διαφόρων λέξεων*. It was published by Valekenær at Leyden in 1739; and Schaefer reprinted this edition at Leipsic in 1822, with some additions. Ammonius is also thought to be the author of a treatise, *Περί ἀπυρολογίας* (on unclassical expressions), which has not been edited.—A. M.

AMMONIUS, a Greek poet, whose epic, called *Γαϊνία*, on the war of the Goth Gaias, has not been preserved. He read it before Theodosius II. in 438.

AMMONIUS, HERMIE, *i. e.*, son of Hermias, was an Alexandrian philosopher of the fifth century. A disciple of Proclus, and therefore a Neoplatonist, he was at the same time an admirer of Aristotle, on whose categories he has left excellent commentaries. These were included by Brandis in his "Scholia in Aristotelem," published at Berlin in 1836.—A. M.

AMMONIUS, LAMPRENSIS, a native of Lampre in Attica, wrote a work, *Περί Βωμῶν καὶ Θυσσιῶν* (on Altars and Sacrifices), quoted by Athenæus. He is conjectured to have lived in the third century of the Christian era.

AMNER, RICHARD, an English unitarian dissenting minister, born 1736, died 1803; wrote an essay toward the interpretation of the prophecies of Daniel, in order to establish the hypothesis of Grotius against that of Mede and Newton.

AMNON, son of David and Ahinoam; slain by order of Absalom for violating and then repudiating Tamar his sister by the same mother, Maacha.

AMO, ANTONY-WILLIAM, a learned negro, born in Guinea in 1703. Brought to Amsterdam when quite young, he was presented to the Duke of Brunswick-Wolfenbüttel, whose son Antony-William became his patron and friend, and maintained him as a student at the university of Halle. Here Amo greatly distinguished himself, as he also did subsequently at the university of Wittemberg, where, on occasion of his graduating as doctor of philosophy, he wrote a "Dissertatio inauguralis philosophica de humanæ mentis απασίᾳ, seu sensionis ac facultatis sentiendi in mente humana absentia, et eorum in corpore nostro organico ac vivo presentia, quam publice defendet autor Ant. Gul. Amo Guinea-Afer;" Wittemberg, 1734, 4to. Although made a councillor of state at Berlin, he left Europe on the death of the Duke of Brunswick; and all that has been heard of him since is, that David Henry Gallandat, founder of the Scientific Society of Zealand, when on a voyage to the Gold Coast, found him leading the life of a hermit at Axim, and that he subsequently removed from Axim to St. Sebastian, a Dutch fort at Chamah, also on the Gold Coast. Amo is said to have been perfectly conversant with the Hebrew, Greek, Latin, French, German, and Dutch languages. The reader may find further information in Gregoire's *De la littérature des Nègres*, and in Winkelman's life of Gallandat in the *Verhandelungen uitgegeeven door het Zeeuwisch Genootschap der Wetenschappen*, 1792, ix. 19, 20.—A. M.

AMOLON, AMULON, or AMULUS, a learned French ecclesiastic, successor of Agobard as archbishop of Lyons in 841, and held in high estimation by King Charles le Chauve and Pope Leo IV. He distinguished himself, among other things, by his opposition to the Jews, and his "Traite contre les Juifs" is still extant, together with some other writings not without interest. Died in 852.—(See the *Bibliotheca Patrum*.)—A. M.

AMOMETUS ('Αμώμητος) a Greek author, of whose voyage on the Nile ('Εκ Μέμφεως ἀνάπλους) only a few highly interesting fragments have been preserved.—(See Müller's *Fragment. Hist. Grec.* in A. F. Didot's Greek Classics.)

AMONTONS, GUILLAUME, a meritorious French natural philosopher; born 1663, died 1705. His work, entitled "Remarques et expériences physiques sur la construction d'une nouvelle clepsydre, sur les baromètres, thermomètres, et hygromètres," Paris, 1695, attracted so much attention among scientific men as to procure him admission into the Royal Academy of Sciences. Amontons has been held to be the inventor of the system of telegraphing by reading alphabetical signs with the aid of telescopes, though this method was not adopted till fifty years after he propounded it.—(See Fontenelle's "Eloge d'Amontons," in the *Histoire de l'Academie*, 1705.)—A. M.

AMORETTI, CHARLES, an Italian naturalist, was born at Oneglia in 1740. The first years of his manhood were passed in orders, but having obtained a licence from the Pope, in 1772, to resume his secular character, he resigned the chair of canon law, which he had occupied for some months at the university of Parma, and devoted himself to a laborious study of natural

science. In 1775, with the help of Padre Soave, he began the publication of a work entitled "Nuova Scelta d'Opuseuli Interessanti Sulle Scienze et Sulle Arti," which extended to twenty-seven volumes, the last of which was published in 1788. His translation of Winckelmann's "History of the Arts of Design among the Ancients" appeared in 1799, and in 1784 his "Life of Leonardo da Vinci," two works which brought him into national repute as a writer on art. As a naturalist, his celebrity rests principally on his "Viaggio da Milano ai tre Laghi," published in 1794. Died in 1816.—J. S., G.

AMORETTI, MARIA PELLEGRINA, an Italian authoress, born at Oneglia in 1756, received from the university of Pavia the degree of doctor of laws in her 21st year. Died 1787.

AMOREUX, PIERRE JOSEPH, a physician and naturalist, was born at Beaucaire about the middle of the 18th century. He settled at Montpellier, and took charge of the library of the Faculty of Medicine. He compiled numerous works on medicine, natural history, botany, and agriculture. Among these are treatises "On the Olive Tree;" "On Quick Hedges;" "On the Golden Apples of the Hesperides;" "On the Origin of the Cashew;" "On Sacred Plants;" "On the Vegetation of Montpellier;" "On the Poisonous Insects of France;" "On the Medicine of the Arabs." He died at Montpellier in 1824.—J. H. B.

AMOROS, FRANCIS, a Spanish colonel, born in 1769, recommended himself by his military services to various important posts under Charles IV. and Joseph Bonaparte; and during his subsequent exile in France was the first to introduce gymnastics into the military schools of that country. Died at Paris in 1843.

AMOROSI, ANTONIO, a painter of Ascoli, pupil of G. Ghezzi. He distinguished himself in the humorous style, called *Bamboccate*. Died in 1740.

AMORT, EUSEBIUS, a German theologian, born at Bibermühl near Tölz, in Upper Bavaria, in 1692, was ordained priest in 1717 at Pollingen, where he afterwards taught theology and canon law. The earliest of his very numerous works were dedicated to Cardinal Cereari, with whom he made a journey to Rome in 1734. Some years later, he became dean of the church of Pollingen, and in 1759 was elected a member of the academy of sciences of Munich. Died in 1775.—J. S., G.

AMORY, THOMAS, an English humorist, born about the year 1691, was a son of Councillor Amory, secretary for confiscated estates in Ireland during the reign of William III. He published in 1755 a curious work, entitled "Memoirs of Several Ladies of Great Britain, interspersed with Literary Reflections, and Accounts of Antiquities and Curious Things, in several Letters;" and some years later, "The Life of John Bunce, Esq., containing various Observations and Reflections made in several parts of the World, and many extraordinary Relations." Died in 1788.—J. S., G.

AMORY, THOMAS, D.D., an English Presbyterian minister, was born at Taunton, in July, 1701. He received the elements of his education chiefly under the tuition of a Mr. Chadwick, who is said to have been an eminent scholar. Having resolved to devote himself to the Christian ministry, he, in 1717, entered the Dissenting Theological Academy at Taunton, over which the Rev. Henry Grove, who was his uncle, and the Rev. Stephen James, then presided. There he remained between four and five years; after which he went to London, where he prosecuted his studies in natural science under Mr. Eames, the friend and occasional assistant of Newton. His proficiency as a student was such, that in 1725 he was chosen to succeed Mr. James as colleague with his uncle in the academy, where he lectured in the classics and philosophy. He at the same time began to preach, and after serving a while as colleague with a Mr. Batson at Taunton, he seceded with a portion of the congregation, who had built a new place of worship, and became their sole pastor. In 1738 he succeeded, on the death of his uncle, to the principal chair in the academy, and this post he retained till 1759, when he removed to London to assist Dr. Chandler as pastor of the congregation in the Old Jewry. He officiated also as afternoon preacher at Newington Green, as the associate of Dr. R. Price, and was appointed one of the lecturers at Salter's Hall. Dr. Chandler died in 1766, when Dr. Amory succeeded to the pastoral charge, which he retained till his death in 1774. He was a man of amiable temper, of respectable abilities, and considerable learning, in acknowledgment of which he received, in 1758, the degree of D.D. from the university of Edinburgh. But his published sermons are

excessively tame and cold, and one can easily believe that his "popularity" was not great. (See Biographia Britannica, Art. "Amory.") In his theological views he strongly inclined to Arianism, and both as a tutor and a preacher he contributed his share to the defection from evangelical sentiments which, in the course of the last century, withdrew so many of the English presbyterians from the faith of their forefathers. Dr. Amory's published writings consist of a volume of "Miscellaneous Sermons," 8vo., second edition, 1756; "Twenty-two Sermons, mostly on the Divine Goodness," 8vo., 1766; several single sermons and brief memoirs; and a "Dialogue on Devotion, after the manner of Xenophon, to which is prefixed Conversation of Socrates on the Being and Providence of God, translated from the Greek," 8vo., 1733 and 1746.—W. L. A.

AMOS, one of the twelve minor prophets, was contemporary with Isaiah and Hosea during the earlier part of their career. The place of his birth is uncertain, though the opening statement of his work, that he was among the herdsmen of Tekoa, and the subsequent declaration which he makes, when driven from Bethel on account of his predictions, that before being called to the prophetic office he had been a herdsman and a gatherer of sycamore fruit, seem to point to Tekoa as the place of his origin. At the time when Amos exercised the prophetic function, the kingdom of Israel, to which his commission mainly had respect, had recovered from the calamities brought upon it by Hazael, and was enjoying a large amount of prosperity. With returning prosperity, however, impiety, oppression, and licentiousness had anew deluged the country, and the sword of judgment was again to be drawn for the chastisement of the infatuated people. It is this approaching disaster which Amos is commissioned to declare. His view, however, is not confined to the kingdom of Israel. Denunciations of wrath are uttered against all the surrounding kingdoms and states, and also against Judah, in reference to each of which the remarkable expression "for three transgressions and for four" is employed; and at last Israel is brought upon the prophetic stage, and the main severity of judgment is described as destined for her. The approaching storm was to be a tornado of extensive circumference, but its centre was to pass over Samaria. A succession of terrible threatenings is directed against the ten tribes for their stubbornness, for their idolatry, for their impiety, for their voluptuousness, for their oppression, for their knavery. Yet the book closes with a remarkable prediction of the restoration of the people, when the fallen tabernacle of David should be raised up, and the waste cities be rebuilt and inhabited. The style of Amos partakes nothing of the rusticity of his occupation. It is at once elevated and polished. His images are most frequently borrowed from rural scenes, and present many striking pictures.—W. L.

AMOS, WILLIAM, a Scotch writer on agriculture, who died in 1824. He wrote the following works: "The Theory and Practice of Drill Husbandry," 1794; "Minutes of Agriculture and Planting," 1804; "Essays on Agricultural Machines," 1810.

AMOUR, GUILLAUME DE SAINT, a French theologian, conspicuous in the history of the thirteenth century on account of the important part he had to play as chief of the Ecole du Parvis de Notre Dame de Paris, was born at Saint-Amour, in Franche-Comté. He was canon of Beauvais, and afterwards professor of philosophy at the university just mentioned. His popularity latterly advanced him to be rector and syndic. The circumstances of the university over which he presided, however, rather than his personal character, gave rise to the celebrity which attaches to his name. In the year 1229, in consequence of a quarrel with the authorities of Paris on the subject of some street brawls, in which several students of the university had been murdered, the masters abandoned their chairs and retired from the city. The Dominicans thereupon laid claim to one of the vacant chairs of theology, and this having been granted them by the authorities, they were bold enough, on the return of the masters in 1233, to demand a second chair, which was also granted; under protest, however, of the latter, who appealed to the see of Rome against the intrusion of the regulars. Innocent IV. and Alexander IV. vainly interposed their authority in the dispute, and it was only terminated in the reign of Clement IV., who revoked the ban issued by his predecessors against Guillaume, but, like them, allowed the Dominicans to retain their chairs. Guillaume died at Paris in 1272. A complete edition of his works was published in 1632.—J. S., G.

AMPACH AUF GRÜNEFELDEN, JOHANN GEORG VON, a

German physician, professor at Salzburg, and author of a number of medical treatises, chiefly veterinary; died in 1832.

AMPELIUS, the author of a small book first brought to light by Salmasius in 1638, called "Liber Memorialis." It is not known who or what Ampelius was, nor is the period at which he lived agreed on.

AMPÈRE, ANDRÉ-MARIE, an eminent mathematician and physicist, and the founder of the science of electro-dynamics, was the son of a merchant of Lyons, in which city he was born on the 20th of January, 1775. From a very early age he evinced a strong disposition towards the study of science in general, and especially mathematics, which he pursued with extraordinary perseverance, aided only by the liberality of his father in providing him with books and instruments, at the village of Polémieux-lez-Mont-Dor, where his parents resided after having retired from business. By the judicial murder of the elder Ampère under the Reign of Terror, his son was overwhelmed with grief, so as to be for a year incapable of study. The recovery of the young Ampère from this condition was marked by an increased interest in natural history, literature, and poetry, without any diminution of his zeal for the study of the exact sciences. A few years afterwards, Ampère formed an ardent attachment to Mademoiselle Julie Carron. He was married to that lady on the 2nd of August, 1799. For about two years after his marriage, he taught mathematics at Lyons. In 1801 he found it necessary to separate himself for a time from his wife and infant son, in order to discharge the duties of professor of physics and chemistry at the Central School of Bourg. In 1802 he published his essay on the "Mathematical Theory of Games of Chance," in which the dangers of gambling, even on fair terms, were reduced to strict mathematical demonstration: a work remarkable, not only for the mathematical skill evinced by it, but for its beneficial moral effect, as serving to overthrow those fallacies by which men possessing a superficial knowledge of the theory of chances are led to ruin. This work having been laid before the Institute by Delambre, established the reputation of Ampère, who was soon afterwards enabled to rejoin his wife and child, by being appointed professor of mathematics at the Lyceum of Lyons. This event was followed, after a brief interval, by the death of Madame Ampère.

In 1805, Ampère obtained, by the recommendation of Delambre, the office of assistant-professor of mathematical analysis at the Polytechnic School, from which, in 1808, he was promoted to that of inspector-general of the university, and in 1809 to that of professor of analysis, securing the order of the Legion of Honour. In 1814 he was elected a member of the Institute. In 1820, Ampère acquired his chief title to scientific honour, by discovering the laws of the mutual attraction and repulsion of electric currents, and constructing, on the basis of those laws, the theory of a new branch of physical science, to which he gave the name of Electro-Dynamics. The investigation of this theory is contained in the sixth volume of the "Memoirs of the Academy of Sciences." During the closing years of his life, Ampère, having turned his attention to philosophy, composed a remarkable work on the classification of the sciences. In 1836, during one of his journeys of inspection, he was attacked by his last illness, of which he died at Marseilles on the 10th of June.

In disposition, Ampère was kind and simple-hearted, and much given to mental abstraction. Besides the more remarkable works which have already been mentioned, Ampère was the author of a number of scientific treatises and papers, of which the titles alone would fill more than a page of this volume. They have reference, amongst other subjects, to the "Geometry of Curves," "The Differential Calculus," "Abstract Mechanics," "The Wave Theory of Light," "The Atomic Theory of Chemistry," and "The Nervous System of Articulated Animals." In Abstract Mechanics, it is worthy of note that Ampère was the first who clearly distinguished between "Cinematics," or the science of motion considered in itself, and "Dynamics," or the science of the relations between motion and force. An account of his life and works may be found in his éloge, by Francis Arago.—W. J. M. R.

AMPÈRE, JEAN JACQUES, a French writer, son of the preceding, was born at Lyons in 1800. His studies were prosecuted at Paris, in philosophy, under the brilliant Cousin, for whose lectures he exhibited an enthusiasm which strongly marked the force of his bent towards a literary career. He was appointed in 1830 to a professorship of belles-lettres at Marseilles, and in

1833 succeeded Andrieux in the college of France. He published several dissertations on French and foreign literature, and some volumes of travels. He died 27th March, 1864. J.S., G.

AMPHIA'RAUS, a Greek soothsayer, son of Oicles, married Eriphyla, sister of Adrastes, king of Argos. He predicted a fatal issue to the expedition which that monarch undertook against Thebes, and fled from court to avoid being forced to take part in it. His wife, however, treacherously disclosed his retreat, and Amphiarus set out on a journey which numerous presentiments told him would be his last. It proved so. He was killed by a fall from a precipice on his way home.—J. S., G.

AMPHICRATES, an Athenian orator of the second century B.C., was banished to Seleucia on the Tigris, the inhabitants of which were so charmed with his eloquence that they besought him to remain with them; but he was as ambitious as eloquent, and transferred himself to the court of Cleopatra, daughter of Mithridates, where, having failed to secure the favour and authority which he sought, he starved himself to death.—J. S., G.

AMPHICRATES, a Greek historian, quoted by Diogenes Laertius. He wrote "Concerning Celebrated Men."

AMPHICTYON, son of Deucalion and Pyrrha, absurdly supposed to have been the founder of the council of the Amphictyons, displaced his father-in-law about the year 1497 B.C., and reigned over Attica ten years.

AMPHILO'CHIUS, bishop of Iconium, was a native of Cappadocia, a lawyer by profession, and friend of St. Basil. On Basil's elevation to the metropolitan church of Cæsarea, Amphilocheius avoided his company, fearing he should be persuaded to take orders. It happened, however, on his passing through Iconium, which had just lost its bishop, that the clergy and people unanimously elected Amphilocheius. Regarding this as the call of God, he obeyed, and ruled that church till his death, A.D. 395. He was a resolute maintainer of the catholic faith against the Arians and Macedonians, and was present at the second œcumenical council at Constantinople, A.D. 381. The Greek and Roman churches commemorate St. Amphilocheius, Nov. 23d.—J. B., O.

AMPHION OF CNOSSUS, a Greek brass-caster, pupil of Ptoleisus, of the school of Critias. He belongs to the Pbidian period, having worked between the 82d and the 87th Olympiad.

AMPHIS, an Athenian comic poet, lived about 320 B.C.

AMPHISTRATOS, a Greek sculptor of the school of Praxiteles; lived about 320 B.C.

AMPIUS, TITUS FLAVIANUS, a Roman general of consular rank, lived about the year 70 A.D. He was a relation of Vitellius, and in the war between that general and Vespasian, unexpectedly took part with the latter, retaining his command of the army in Pannonia. His relationship to the former, however, caused him to be suspected of treachery by his troops, who demanded that he should be put to death. He was obliged to save himself by flight.—J. S., G.

AMPZING or AMPZINGIUS, JOHN ASSUERUS, a Dutch physician, studied theology, and was ordained pastor at Haarlem, but afterwards devoted himself to medicine, and became professor at Rostock. Died in 1642.

AMPZING, SAMUEL, a Dutch poet, son of the preceding, flourished in the first half of the 17th century. He was for some time pastor at Haarlem, of which city he has left a curious account in Alexandrine verse. He left also some works on theology.

AMR-IBN-ABDELRAHMAN, surnamed ALKERMANI, was a Moorish physician and geometer of the eleventh century. A native of Cordova, he gained his scientific knowledge during a residence in Mesopotamia; and on his return to Spain acquired considerable reputation by his skill in surgical operations.

AMR-IBN-OTHMAN, surnamed SIBAWAYAH, or Odour-of-apples, from his being extremely fond of that fruit, was a learned Persian, who, coming to Bagdad in the reign of Haroun-al-Raschid, distinguished himself so much by his knowledge of Arabic, that his work on Arabic grammar, called "Sibawayah" from its author, or by way of eminence "The Book," became the standard authority on the subject. The Bibliothèque Impériale of Paris possesses a copy of it, extracts from which are given by Silvestre de Sacy in his "Anthologie Grammaticale Arabe," Paris, 1829. Sibawayah died about A.D. 810.—A. M.

AMRU, BEN BAHR, surnamed, on account of his projecting eyes, AL-JAHEDIH, a Moslem geographer, naturalist, and theologian, was born at Bassora about A.D. 781-2. He is author of a work on zoology, called "Kitābu-l-haywān," analysed by Von

Hammer in his "Arabische, Persische, und Türkische Handschriften," Vienna, 1840, and of some geographical works. In religion he belonged to the sect of the Motazelites; but dissenting from them on the subject of the eternity of future punishments, he founded a sect of his own, one of whose peculiarities is the rejection of that doctrine.—A. M.

AMRU-BEN-EL-ASS, held in Arab tradition to be one of the seven companions of the prophet, and an individual of disagreeable interest to the moderns, as the instrument of the Caliph Omar in the destruction of the Alexandrian library, was an Arab of the tribe Koraysh, born about A.D. 600, who, though at first a bitter scoffer at the doctrines of Mohammed, became, after his conversion, one of the most energetic and successful propagators of Islam. As general of Omar, he took Jerusalem, after an obstinate and protracted resistance, and subsequently marching into Egypt, whither Artiyun, the Greek governor of Jerusalem, had fled, he first took Farnah, the ancient Pelusium, and afterwards Misr—the spot on which the army of Amru lay encamped for seven months before the latter town acquired the appellation of Medinat Fostât (city of tents), and close to it the city of Cairo afterwards rose. The next operation of Amru was to reduce Alexandria. In this he was considerably assisted by the Coptic Christians of Egypt, who had made a separate treaty with the Islamite leader, and were well treated by him. It was not, however, till after a siege of a year and two months, and immense loss of life in numerous ineffectual assaults, that Amru succeeded in driving the Greeks from their metropolis (about A.D. 642); and even after he had done so, they returned during his absence in Upper Egypt, retook the city, and forced him again to besiege it before he finally secured possession. Amru now penetrated westward into the Pentapolis, and ravaged the country as far as Tripoli. He retained the government of the Mohammedan conquests in Africa during the life of Omar; but Othman, in A.D. 647, deprived him of his command in favour of Abdallah-Ibn-Said, foster-brother of the latter caliph. Amru, considering this but an ungrateful recompense for his services in the cause of Islam, did everything in his power to foment and further the subsequent revolt against Othman, who was assassinated in A.D. 655-6. Mu'awigah, whom he aided against Ali in gaining the caliphate, replaced Amru in his governorship of Egypt, where he died in A.D. 663. There seems to be very little doubt that Amru destroyed a large collection of books in Alexandria. The baths of this city are said to have been supplied with fuel from the manuscripts during six months—apparently an exaggeration. That the library thus consumed, however, was not the library of the Serapeum, or temple of Serapis, as is sometimes stated, appears equally clear. The library of the Serapeum perished in the destruction of the pagan temples under Theodosius, A.D. 389; and the collection annihilated by the stupid bigotry of the followers of Mohammed, may have been the great library of the Museum, to which that of the Serapeum was an adjunct, and which had already been partly consumed by fire when Julius Cæsar was besieged in Alexandria. Amru was not altogether the willing tool of Omar in the affair now alluded to. He had contracted a friendship with a certain learned grammarian of the city, named John Philoponus, and at his request he proposed to Omar that the library should be preserved, and not destroyed. The reply sent back by Omar is well known: "If these books contain merely what is in the Book of God, they are useless; if they contain what is not there, they are pernicious: burn them."—A. M.

AMRU-BEN-KELTHUM, an Arabian poet, author of one of the Mo'allakât, or suspended poems (see above, Amru-el-Kais), lived in the sixth century of the Christian era. The Mo'allakah of this author was a laudatory poem on the subject of his own tribe, the Taghleb. It was published by Kosegarten at Jena in 1819, and Sir William Jones has translated it into English: London, 1782, 4to.—A. M.

AMRU-BEN-LEYTH, second and last sultan of Persia of the dynasty of the Benî Saffar, succeeded his brother Yakiub in A.D. 878-9, and added to his inherited dominions the province of Sejistân. Embroiling himself with the Caliph Al-Mu'tamed, he suffered from that monarch a defeat and partial deprivation of his territories, but regained the caliph's favour by defeating and sending prisoner to Bagdad their mutual enemy Rafi-Ibn-Harthamah, general of the Fatimite prince, Mohammed-Ibn-Zeyd, in A.D. 887. Amru, however, was finally dethroned by Ismail, founder of the Saman dynasty, who, at the instigation of Al-

Mu'tadhed, the successor of Al-Mu'tamed, led an army against him, and, gaining a decisive victory, sent him captive to Bagdad, where he died in prison about the commencement of the tenth century. Amru-Ben-Leyth bears the reputation in history of a cruel, avaricious, and tyrannical prince.—A. M.

AMRU-EL-KAIS, a famous Arabian poet who lived before Mahomet, but one of whose poems is of the class called Mo'allakah, or "Suspended," from their being hung up in the Kaaba at Mecca. He had a feud with his own tribe, the Beni-Asad, who had rebelled against and assassinated their chief, his father; and having repaired to the court of the Greek emperor, Heraclius, to ask assistance in punishing them, that monarch at first protected him, and even set on foot an expedition against the Beni-Asad; but a member of the tribe succeeded in so far turning the mind of Heraclius against El-Kais, that he presented him with a poisoned tunic, which killed the poet as soon as he put it on. Abulfeda questions this story. The works of Amru-el-Kais have always continued to attract attention. The best edition of his Mo'allakah is said to be that of Hengstenberg, with a Latin translation; Bonn, 1823, 4to. Of his miscellaneous poems there is a good edition, with translation and notes, by the Baron Mac-Guckin Slane: Paris, 1837, 4to. There is an English translation of the Mo'allakah by Sir William Jones.—A. M.

AMSDORF, NICHOLAS, one of the oldest and most faithful of Luther's friends and fellow-workers, was born of a noble family at Tschoppau, near Wurzen, in Misnia, 3d December, 1483. In 1502 he repaired to Wittenberg, and took his master's degree in 1504. In 1511 he was made professor of theology there, and was presented with a canonry in the church of All-Saints. From the first moment that Luther stood forward to oppose the corruptions of the papacy, Amsdorf appeared at his side, and to the last day of the reformer's life he continued his constant and almost too passionate supporter and admirer. He accompanied Luther to the Leipzig disputation, and to the famous diet at Worms, and was with him when he was carried off to the friendly castle of Wartburg. Soon afterwards, when, in Luther's absence from Wittenberg, the monks of the Augustinian monastery abolished the mass and some other Romish rites, Amsdorf united with Melancthon, Justus Jonas, and John Dolz, in a formal approbation of that step addressed to the elector, and in recommending that the example should be followed in other places. In 1524 he settled in Magdeburg, as evangelical superintendent, and pastor of the church of St. Ursula; and was the first man to set up the reformed worship in that important city. A few years after, he did the same service in the ancient imperial city of Goslar, and in 1534 in the territory of Calenberg. In 1537 he took part in the convention of Schmalkald. In 1541 he was made bishop of Naumburg by the elector, John Frederick, in opposition to Julius Von Pflug, who had been chosen by the cathedral chapter. After the defeat of the elector at Mühlberg in 1547, Amsdorf was driven from the see, and Von Pflug put in his room. He returned to Magdeburg, where he took an active, and sometimes even a violent part in the controversies which soon after arose in the Saxon church. He was a warm antagonist of the Leipzig Interimists, and acted for some time along with Flaccius Illyricus, the champion of the anti-Melancthonian party. His zeal against George Major's proposition regarding the necessity of good works to salvation, carried him into the monstrous and incredible extreme of maintaining that good works are positively injurious to salvation. In 1552 he removed to Eisenach as superintendent. In 1554 he administered the sacrament to the dying elector, John Frederick, and pronounced his funeral oration; and in 1558 he was present at the opening of the university of Jena, the foundation of which was greatly due to his advice and influence. After a most active life, he died at Eisenach in his eighty-second year. He was never married; and for ten years before his death he kept a coffin at his bedside, to remind him of his mortality. His writings were very numerous; but having never been collected, they have long been extremely rare. They were almost all of the nature of polemical tracts, and of ephemeral interest. His learning enabled him to assist Luther in his translation of the Bible: and he was the editor of the Jena edition of the reformer's works.—P. L.

AMU'LIO or DA MULA, an able and learned Italian cardinal, born at Venice in 1505, died at Rome in 1570. He had distinguished himself as a student of jurisprudence at Padua, and the Venetians employed him in public affairs of importance. He was their ambassador to Charles V. in 1553, and in 1558

discharged the functions of podestá, or chief magistrate, at Verona. Having recommended himself to Pope Pius IV. by his honourable and virtuous conduct, not less than by his abilities, he was made bishop of Rieti, and elevated to the purple. Amulio also received from the same pope a librarianship in the Vatican. He has left—"Orationes, &c., ex actis concilii Tridentini," and "Nuova Scelta di litteri di diversi nobilissimi homini,"—a selection of letters of illustrious men. (See Mazzuchelli's *Scrittori d'Italia*, and Cordella's *Memoire Storiche de' Cardinali*.)—A. M.

AMULIUS, brother of Numitor, and along with him king of Alba Longa. Amulius dethroned Numitor, though he suffered him to live as a private individual; but he put his son Egestus to death, and made Rhea Sylvia, his daughter, a vestal virgin. She, however, gave birth to two children, Romulus and Remus, whose paternity she attributed to Mars. Romulus afterwards killed Amulius, and restored Numitor to the kingly dignity. The date of these events, which, however, modern criticism (see Niebuhr's *History of Rome*) has pronounced entirely fabulous, must be assigned to the period immediately preceding the foundation of Rome, 753 B.C.—A. M.

AMURATH or MURAD, the name of four Ottoman emperors or sultans:—

AMURATH I., whose successes first established the Ottoman power in Europe, was born in the year of the Hegira 726 (1326 A.D.), and succeeded his father Orkhan in 1360. He inaugurated his reign by the expedition which resulted in the taking of Adrianople, the advance of the Ottoman arms as far as the Balkan, and a treaty of peace with the Greek emperor highly favourable to the invaders, who took advantage of it to settle themselves securely in their new possessions. It lasted till 1363, when Pope Urban V. having proclaimed a crusade, the Greeks made an ineffectual attempt to recover Adrianople. The war thus begun was carried on for several years, usually with advantage to the Turks, who had possessed themselves of some important fortresses in the course of the campaign which preceded the year 1371, when Amurath returned into Asia. His next efforts in Europe were to preserve rather than to extend his conquests. A revolt occurred in Rumania, which he hastened to suppress by besieging Apollonia. Accident put him in possession of that place—a portion of the walls having given way just as the besiegers were about to desist from what they considered a hopeless enterprise. Some years later, he sent an army into Macedonia, which overran that province as far as the frontiers of Albania. Success everywhere attended his arms. The Greek emperor, John Paleologus, humbly paid court to his rival at Adrianople, and sent his son Theodore to be trained for war under the eye of so renowned a leader. While this harmony prevailed between the two emperors, however, their sons, Andronicus and Saoudji, were engaged in plotting the destruction of both. An army of insurgents took the field under the leadership of these artful princes, but dispersed on the first summons of Amurath, who put Saoudji to death. Several other revolts followed, which Amurath suppressed with like promptitude. One more serious than the rest broke out in Servia, and demanded the personal presence of the emperor. Lazar, kral of that province, had leagued himself with Sisman, kral of Bulgaria, and had attacked the Ottoman forces, twenty thousand of whom perished in one engagement. Amurath hastened to avenge so serious a disaster, and confronted the rebel princes on the plain of Kossova. His army was inferior in numbers, but, after a consultation with his lieutenants, he determined to risk the event of a battle, and accordingly gave the signal for attack. Bajazet, his eldest son, who had eagerly urged an immediate engagement, led the advance, supported by his brother Yakub. A fearful struggle ensued, in which the Ottomans were at length victorious. Amurath lingered on the field of battle, happy to have escaped the death which, in a dream of the previous night, he had foreboded for himself. Suddenly one of the bodies on which he trod rose, plunged a dagger into his heart, and thus fulfilled the vision which had all but made a coward of one unaccustomed to fear. Amurath expired in the year of the Hegira 791 (1389 A.D.)

AMURATH II., born about the year 1404, succeeded his father Mohammed I. in 1422. Mustapha, son of Bajazet-Ildirim, opposed his accession, and was seconded by the Greek emperor Emmanuel, who took offence at the refusal of Amurath to give hostages for his good behaviour. After a short struggle, Mustapha, abandoned by his troops, was seized and put to death.

Amurath advanced towards Constantinople. Emmanuel made proposals of peace which were scornfully rejected, and the siege of the city commenced. It was, however, renounced after an unsuccessful attack, on the 24th August, 1422. In 1429, having quarrelled with the Venetians, Amurath besieged Thesalonica, and with much difficulty succeeded in reducing it. This city was lost and regained several times by the successors of Amurath, but finally remained in the hands of the Turks. Shortly after the marriage of the emperor, in 1433, to a daughter of the prince of Servia, the cordiality which prevailed between him and his father-in-law was interrupted by a report that the latter had treacherously allied himself with the sovereign of Wallachia. Amurath at length resolved on attacking the two princes, but had hardly taken the field when one made a timely submission, and the other fled to the court of Albert, Sigismund's successor. In this campaign the Turks carried by storm the town of Semendra, and routed a large army of Hungarians sent to retake it. Albert's death occurred shortly after,—and Amurath withdrew from Hungary. He encamped before Belgrade in Servia. Here his long career of victory was signally interrupted, and from his unsuccessful siege of Belgrade, dated a series of misfortunes which extended over the remainder of his reign. Mezid-Bey, one of Amurath's generals, in his attempt on the town of Hermanstadt, was forced to retreat with great loss, by the famous Hungarian general Huniades. Other reverses followed in rapid succession to diminish the prestige of the Ottomans, and to exalt that of the defender of Hermanstadt. That indomitable chief carried fire and sword into Wallachia, and with 15,000 men, completely routed 80,000 Ottomans sent to cut short his ravages. On the 3rd November, 1443, the Ottoman and Hungarian armies encountered in the neighbourhood of Nissa. Amurath lost 6000 men in killed and prisoners. He retreated behind the Balkan mountains, followed by his enemies, who triumphed in two other engagements. Amurath now sued for peace, and at length, on the 12th July, 1444, a treaty was signed, by which, at considerable sacrifice, he secured for a very brief period the tranquillity of his empire. The rejoicings proper to the occasion were hardly over, when the emperor was plunged into the most profound sorrow by the death of his son Ala-Ed-din. He determined to abandon the state of a sovereign, in order to indulge undisturbed his parental grief, and accordingly resigned his authority into the hands of his second son Mohammed, aged fourteen years, whom he took care to surround with experienced and patriotic counsellors. The rumour of his abdication had hardly gone abroad, however, when the enemies of the Ottoman empire were on the alert to take advantage of the new and comparatively feeble government. Huniades was again ordered into the field by the treacherous Wladislas, and promised the sovereignty of Bulgaria, in the event of his conquering that province. Under command of this formidable warrior, 10,000 Hungarians and 5000 Wallachians began their ravages in Bulgaria, and seriously menaced the integrity of the empire. Reluctantly, Amurath consented to leave his retirement, and to put himself at the head of an army: 40,000 men followed him into Europe, and he advanced with all possible expedition to encounter the enemy. The Hungarians, although greatly inferior in numbers, prepared to give battle. Their first onset carried the valiant Huniades almost into the tent of the sultan, and Amurath was about to seek safety in flight, when the bridle of his charger was seized by one of his officers. The next moment saw him charging at the head of his troops, and eagerly scanning the ranks of the enemy in search of his rival. The two sovereigns met, and in their fierce encounter, Wladislas was unhorsed. A janizary perceiving his fall, advanced and cut off his head. Raising it on his pike, he shouted to the Hungarians, "Behold the head of your king!" They were instantly seized with a panic, and fled in ruinous disorder. This victory at once restored security to the empire, and Amurath to his Asiatic retreat. He had hardly reached Magnesia, however, when messengers from Adrianople arrived, demanding his return. A revolt of the formidable troop of janizaries had occurred, and all attempts to suppress it had proved abortive. His presence in the capital instantly restored order. He then prepared to make the conquest of the Peloponnesus, and to check the career of Scanderberg in Albania. The Peloponnesian princes were easily mastered, but at the siege of Croya, Scanderberg, with 4,000 men, kept the Ottomans at bay for several months, and at length obliged them to retire. In 1448 Amurath defeated, on

the plain of Kossova, his old adversary, Huniades, who fled into Hungary. In this memorable battle 40,000 Turks and 17,000 Christians perished. Three years after, Amurath expired suddenly on an island near Adrianople.

AMURATH III., born in 1545, succeeded his father, Selim II., in 1574. On the day of his accession to power he caused his five brothers to be strangled—a cowardly crime, which fitly inaugurated a reign of disaster and disgrace. Some successes against the Austrians distinguished the commencement of this reign. Herbaert, baron of Auersperg, governor of the Carniole, was defeated and slain by the Turkish governors of Pakariz and Huina. The capricious temper of the sultan threatened a rupture also with France and Venice. The ambassador of the former was compelled to exchange his creed for that of the Porte, and the Venetian dragoman, on some trivial pretext, was dismissed from the divan. In the year 1578, however, several of the great powers of Europe—Venice, France, Spain, and Switzerland—opportunistically proposed to establish friendly relations with the Porte, and Amurath, who had meditated for some time the conquest of Persia, eagerly accepted the terms of alliance. The war with Persia lasted till 1590, and secured to the Turks Kurdjistan, Georgia, and several other provinces. Thrice within three years, from 1589, the janizaries surrounded the palace of the sultan, and compelled with threats whatever redress or additional licence they wanted. Everywhere throughout the empire disorders sprung up, which were attempted to be repressed, if at all, only by the local authorities, who could expect no assistance from a sovereign tyrannized over by his own guards. To divert the attention of his subjects from the ruin which impended over the empire, he engaged in a war with Hungary, in which Hassan Pacha, governor of Bosnia, attempting to take Sissek, was drowned with the greater part of his army. Sinan, the successor of Osman, gained some victories over the Austrians, but his triumphs were of short duration. Eight thousand Ottomans perished at Bucharest and at Giurgevo, the valiant pacha having been treacherously deserted by the princes of Transylvania, Wallachia, and Moldavia. Shortly after this reverse, Amurath, superstitiously affected by a dream of one of his favourites, renounced the society of his court, and at the end of three days, on January 16th, 1595, was found dead in his chamber.

AMURATH IV., born in 1611, succeeded his uncle Mustapha in 1623. The early part of his reign was disturbed by revolts of the janizaries, and by insurrections in various provinces of the empire, which the young sultan repressed as they arose, with a cruelty that horrified even the ministers of his vengeance. When roused to anger, his atrocities knew no limit, and all offences were alike capital. He prohibited the use of wine and tobacco on pain of death, and as he seldom remitted an offence, many suffered the extreme penalty of the law for these common indulgences. One incorrigible smoker the savage sultan is said to have forgiven, for the easy assurance with which he faced detection. He had roofed over part of a trench, and in this subterranean retreat was enjoying his solitary pipe, when Amurath, on his rounds in quest of transgressors, announced himself—only, however, to be thus addressed, "Hence, son of a slave; thine edict has no force underground." The sultan's own tastes were much less severe than his statutes. He abandoned himself, shortly after his accession, to the wildest excesses, and, in particular, indulged his passion for wine to a degree that undermined his health, and rendered him a prey to maladies which eventually cut short his horrible career. He died in 1640, at the age of twenty-nine years. The one event of his reign worth recording was the capture of Bagdad, which fell into the hands of the Turks on the 24th December, 1638.—J. S., G.

\* AMUSSAT, JEAN ZULEMA, a French surgeon of distinction, born in 1796, sous-prosecteur to the Faculty of Medicine in Paris, and member of the Academy. M. Amussat has written some important anatomical treatises; one of which, "Torsion des artères," was crowned by the Institute in 1829; an honour awarded also to his "Recherche sur l'introduction de l'air dans les veines," ten years subsequently. The work which procured him his admission into the Academy is entitled "Recherches sur l'appareil biliaire," Paris, 1824, in which he demonstrates the existence of a spiral valvule in the neck of the biliary vesicle. M. Amussat is also the inventor or improver of a variety of surgical and anatomical instruments.—A. M.

AMY, a French writer, about whom we have little precise information. He was advocate in the parliament of Aix, and died in 1760. His works are pronounced in the "Nouvelle Biographie Universelle" to be very remarkable. They are these: "Observations expérimentales sur les eaux des rivières de Seine, de Marne," &c., 1749, 12mo; "Nouvelles fontaines domestiques," 1750, 12mo; "Nouvelles fontaines filtrantes," 1752-1754, 12mo; "Reflexions sur les vaisseaux de cuivre, de plomb, et d'étain," 1751, 12mo.—A. M.

AMYAND, CLAUDIUS, an English army surgeon, born in 1740, and in 1761 admitted a member of the Royal Society. There are some of his papers in the Philosophical Transactions, treating of certain rare and curious surgical cases.—A. M.

AMYCLEUS (*Ἀμυκλαῖος*), a Corinthian brass-caster, mentioned by Pausanias, lived five centuries before the Christian era, and who, in concurrence with Diyllus, executed a group representing the dispute between Hercules and Apollo.—A. M.

AMYN-AHMED, EL RAZY, a Persian geographer, whose compilation on the countries of the East, called "Heft Iclym," or the seven climates, completed in 1594, has not yet been edited in Europe. A copy of it exists in the Bibliothèque Imperial of Paris.—A. M.

AMYN MOHAMMED AL AMYN B'EN HAROUN, eldest son of the Caliph Haroun Al Raschid, was born at Bagdad in A.D. 786, and in 809 succeeded his father, whom he does not seem to have resembled. Haroun Al Raschid had given his two other sons, Mamun and Motassem, the provinces of Khorasan and Mesopotamia respectively. Aryn, however, deposed his brothers from their governorships, and summoned Mamun to court. He refused to obey, and in the war which ensued, Thaher, Mamun's general, defeated the troops of Aryn, who, besieged in his own capital, was only saved from ruin by the revolt of Mamun's soldiery for want of pay. This relief, however, was only temporary, and Thaher at length possessed himself of Bagdad, and put Aryn to death, after he had vainly attempted to escape by voluntarily delivering himself up to Harthamah, Thaher's colleague in command, A.D. 813.—A. M.

AMYNTAS. Three kings of Macedon bore this name:—

AMYNTAS I. was reigning at the time the Pisistratids were expelled from Athens in 510 B.C., and offered Hippias an asylum within his realm. In 507 B.C. he entertained at his court the ambassadors of Darius, sent to demand of the Greeks earth and water in token of submission. These Persians pushed their demands on the hospitality of the Macedonian king so far, as to insist on possessing his wives and daughters. Alexander, son of Amyntas, under pretence of introducing them to the Macedonian ladies, put the deputies into the hands of a number of young men disguised in female clothing, who quickly dispatched them. Upon this Megabyzus, the Persian general, sent one of his officers, named Bubares, to inflict vengeance; but the affair seems to have been amicably settled, as Bubares accepted the hand of Gygea, daughter of Amyntas. The reign of this monarch terminated about 500 B.C.

AMYNTAS II., son of Philip, the brother of Perdicas II., and grandson of the Alexander mentioned in preceding article, reigned from 393 B.C. to 369 B.C. Driven from his throne by the Illyrians, he re-established himself by the aid of the Thessalians, and with the further aid of the Spartans reunited to his dominions the town of Olynthus. Philip of Macedon, father of Alexander the Great, was the youngest son of Amyntas II. by his wife Eurydice; and the physician Nicomachus, father of Aristotle, lived at the court of the same prince.

AMYNTAS III., son of Perdicas III., and grandson of the preceding, was still a minor at the death of his father in 360 B.C., and never in reality acceded to the throne, as his uncle Philip, who had been made regent, and whose daughter Cynane, half-sister of Alexander the Great, Amyntas married, usurped the sovereignty. He was put to death for being concerned in a conspiracy against Alexander the Great in the first year of the reign of that monarch, 336 B.C.—A. M.

AMYNTAS, a Macedonian who fled his country at the commencement of the reign of Alexander the Great, and placing himself under the protection of the Persians, received the command of the Greek mercenaries at the battle of Issus, 333 B.C.; after which he went to Egypt with a body of Greeks, and excited a revolt there against Mazaces, the Persian governor. He met with considerable success at first, but was finally defeated and slain about 330 B.C.—A. M.

AMYNTAS, son of Andromenes, one of Alexander the Great's officers, suspected of being implicated in the plot of Philotas (330 B.C.), but acquitted. He was killed in the course of the Asiatic campaigns of Alexander.

AMYNTAS, a Greek author, whose work entitled *Σταθμοί*, descriptive of certain districts of Asia, has been lost. Athenæus quotes some portions of it. (See Müller's *Fragment. Hist. Græc.*, published by Didot Frères.)

AMYNTAS, a king of Galatia, who fought on the side of Antony and Octavianus at Philippi, 42 B.C., and at Actium, 31 B.C., adhered to the latter. On the death of Amyntas, Galatia became a Roman province.

AMYNTIANUS (Ἀμυντιανός), a Greek author, who, in the time of the Emperor Marcus Aurelius (A.D. 161-180), produced a life of Alexander the Great, and a number of other biographies, which he called *Βίοι Παράλληλοι*, as he seems to have been fond of writing them in pairs. None of these works have come down to us. (See Photius in his *Myriobiblion seu Bibliotheca*.)—A. M.

AMYOT, JACQUES, a celebrated French translator, was born at Melun, of poor parents, in 1513, and died at Auxerre in 1593. When he came to Paris to attend the college of France, then recently founded by Francis I., Amyot's circumstances were so needy that he was obliged to act as servant to more wealthy students, in order to support himself in the prosecution of his own studies. Surmounting all his difficulties, he attained the degree of master of arts at Paris, and subsequently that of doctor of civil law at Bourges, where he secured the friendship of Jacques Colure, abbé of St. Ambroise, through whose influence with Madame Marguerite, sister of the king, he obtained a chair of Latin and Greek in the university of the last-mentioned town. He taught in Bourges for ten years, but the influence of Amyot was destined to be exerted not so much in extending the knowledge of the ancient tongues, as in forming and developing his native language. He devoted himself to translating from the Greek, and his translations, more particularly his "Vies de Plutarque," were found to be executed in a French style so idiomatic, easy, and elegant, that they became standard and popular works. His first book was a French version of the Greek romance of Heliodorus, called "Ethiopica," treating of "the royal and chaste amours of Theagenes, a Thessalian, and Chariclea, an Ethiopian," published at Paris in 1545 in folio, and in 1549 in octavo. He next translated some of the Lives of Plutarch, dedicating them to Francis I., who rewarded him with the abbey of Bellocane. Amyot, however, did not now give himself up to a life of ease. Finding such texts of Plutarch as he could procure in France unsatisfactory, he proceeded to Rome in the suite of the cardinal of Tournou, in order to enjoy the advantages of the library of the Vatican. The cardinal also gave him a commission to the council of Trent, which he executed with a skill that added greatly to his reputation. On his return to Paris he was made tutor to the sons of Henry II.; and, while holding this office, he completed his translation of Plutarch's Lives, dedicating this second part of his work to the reigning king. The "Morals" of the same author he dedicated to his pupil Charles IX., a prince, unfortunately, too intimately connected with the massacre of St. Bartholomew, for the credit of his master's name. Amyot was, perhaps, more a student and man of taste and cultivation than an educator. Charles IX. appears, at any rate, to have esteemed him, for he made him grand almoner, and presented him with the abbeys of Roches and St. Corneille de Compiègne, while Pope Pius V., to oblige the French sovereign, conferred on this fortunate "poor scholar" the bishopric of Auxerre.

When Henry III., also a pupil of Amyot's, acceded to the throne, he continued him in the office of grand almoner, and made him commander of the order of the Holy Spirit, inserting in the statutes of the order the following regulation, expressly on Amyot's account: "Quiconque seroit grand aumônier de France seroit aussi commandeur du Saint-Esprit, sans estre tenu de faire les preuves de noblesse."

Amyot spent the remainder of his life at Auxerre, but not quite happily or peacefully. Those unquiet times did not leave even the scholar and the priest at rest, and Amyot was involved in the troubles of the League, while at home his diocesan refused to submit to his authority. According to the "Nouv. Biog. Universelle," he died "accablé de tristesse et de chagrin." Though he had expended considerable sums on the restoration of the cathedral of Auxerre, he left great wealth, bestowing on

the hospital of Orleans a legacy of twelve hundred crowns in return for the alms of a few pence which he had there received, when, "poor and naked, he was going to Paris."

Amyot's principal works not mentioned above are "Sept livres des Histoires de Diodore Sicilien," translated from the Greek, Paris, Vascosan, 1554, folio; and "Amours pastorales de Daphnis et Chloë," from the Greek of Longus, Paris, 1559, 8vo. Both these books have been frequently reprinted.—A. M.

AMYRAUT or AMYRALDUS, MOÏSE, one of the most celebrated divines of the reformed church of France during the seventeenth century, was born at Bourqueil in Touraine, in September, 1596. His father, who was a protestant, destined him for the profession of the law, and he was for some time engaged in legal studies; but the reading of Calvin's Institutes awakened in him such a taste for theological subjects, that he resolved to devote himself to the ministry of the reformed church. He studied in the college of Saumur, under the famous Scottish professor, John Cameron; and his subsequent career evinced how deeply he had been imbued with the peculiar doctrinal spirit and tendencies of the master. Having been admitted to the ministry, his first charge was at St. Aignan, in the province of Maine. On the removal of Daillé in 1626 from the church of Saumur to Charenton, Amyraut had the honour of succeeding him at Saumur, and here his talents and learning became so conspicuous that he was appointed in 1633 to one of the theological chairs of the university. His colleagues were Lewis Cappel (Capellus) and Joshua de la Place (Placæus), who entered upon office at the same time, and with whom he united in publishing the "Theses Salmurienses." Amyraut was selected as early as 1631, by the synod of Charenton, to present a complaint to King Louis XIII. on the subject of some infractions of the edicts under which the rights of the protestant church were secured. This delicate and weighty business he managed with great address, and left a highly favourable impression of his abilities upon Cardinal Richelieu and other eminent men, whom he met on this occasion at the court of France. The cardinal was then meditating a project for the reunion of the two churches, which he soon after secretly communicated to Amyraut through the jesuit Father Audebert; but on finding from Audebert that no accommodation was proposed, or would be allowed, on the subject of the eucharist, Amyraut broke off the interview by assuring him that there was no hope of a reconciliation upon such conditions. His attachment to the reformed church was strong and sincere; and he not only warmly defended it against the attacks of the Romanists, but longed to see its divisions healed by a reconciliation of its Lutheran and Calvinistic branches. It was with these views that he published his treatise, "De Secessione ab Ecclesia Romana, deque ratione pacis inter evangelicos in negotio religionis constituendæ." But he was no latitudinarian, as was shown by his "Traité des Religions, contre ceux qui les estiment indifférentes;" and that he was no rationalist, is proved by his "Traité de l'elevation de la foi et de l'abaissement de la raison." Amyraut, however, had the boldness to stand forward as an innovator in the established doctrine, or at least in the established mode of exhibiting the doctrine of his own church; and with his name stands connected the modified system of Calvinism called Amyraldism, which excited so much agitation and alarm in the Calvinistic branches of the continental protestant church during the seventeenth century; and which the Swiss divines judged it necessary to oppose, by adopting in 1675 the "Formula Consensus," the latest of the dogmatic standards adopted by any of the great branches of the Calvinistic church. Amyraldism differed from Arminianism in retaining the Calvinistic doctrine of the absolute and unconditional election of grace; but it sought to combine with this the idea of a grace which is universal and conditional, which is offered to all upon condition of faith, although in fact accepted by none, on account of the corruption of our nature, until the grace of unconditional election takes effect in the case of some, though not of others. Amyraut hoped, by bringing forward this view, to repel the objections to Calvinism which were continually insisted upon by the Romish divines; and he was repeatedly absolved from the charge of heresy by the general synod of his own church, several of whose most eminent ministers, including Daillé and Blondel, regarded his peculiarities as harmless, and perfectly reconcilable with the Calvinistic system as usually held and taught. But his views were strongly condemned by Molinæus, A. Rivetus, F. Spanheim, F. Turretin.

Heidegger, and other eminent divines of France, Switzerland, and Holland, and were extensively regarded as opening a door to Arminianism and even to Pelagianism itself. Amyraut continued at Saumur till his death in 1664. His writings were very numerous, but were never collected and reprinted, so that they are now exceedingly rare. One of the latest labours of his life was the drawing up of a system of Christian morals, in 6 vols., Saumur, 1652-1660, one of the earliest works produced in this department of theology.—P. L.

AMYRTEUS, a king of Egypt in the fifth century B.C., who was a native of Sais, a city on the Delta. Various attempts had been made by the Egyptians to throw off the Persian yoke, in one of which Amyrteus joined the Lybian prince Inarus. Inarus, however, was defeated by treachery, and put to death by crucifixion in 456 B.C., and Amyrteus, left to his own resources, contrived to maintain himself and his forces in Lower Egypt, and died after a reign of six years.—F.

AMYTIS, daughter of Astyages, wife of Cyrus, and mother of Cambyses.

AMYTIS, daughter of Xerxes, and wife of Megabyzus, who rendered herself infamous by her immoralities.

ANACAO'NA, surnamed GOLDEN FLOWER, was the sister of Behechio, cacique or king of Xaragua, one of the kingdoms into which Hayti was subdivided at the period of its discovery by Columbus. She was the wife of Caonabo, who had entered the island and seized upon one of its kingdoms. Her husband having been treacherously captured was sent to Spain, but perished on the voyage, the ship having foundered in a storm, and Anacaona herself fell into the hands of the Spaniards, who, notwithstanding her extraordinary beauty and accomplishments, barbarously put her to death.—F.

ANACHARSIS, a celebrated philosopher, born in Scythia; brother of Kadovides, king of Scythia, and the son of Gnurus, by a Greek lady. He arrived at Athens in the 47th Olympiad, and calling upon Solon, engaged the attention of that philosopher by the vivacity of his character. He was kindly received among the Athenians for the sake of his patron, and soon became accomplished in Greek philosophy. His genius was quick and lively, his eloquence masterly and strong. He remarked that the vine produced three sorts of grape—the first of pleasure, the second of drunkenness, and the third of repentance. His diet was temperate, consisting chiefly of milk and cheese, and he constantly wore a coarse double garment. His orations were remarkable for conciseness, as though the result of inflexible resolution, and those who imitated him were said to speak in the Scythian phrase. He was a fluent writer of verses. Cræsus, the wealthy monarch of Lydia, heard of his reputation, offered him money, and sent for him to Sardis; but Anacharsis answered that he had come to Greece in order to learn the language, manners, and laws of that country; that he did not want silver or gold; and that it would be sufficient for him to return to his native land, a better man and more intelligent than when he left it. Upon his arrival at home, he attempted to change the ancient customs, and to establish those of Greece. This proved displeasing to the Scythians and fatal to himself. He had promised the mother of the gods that he would perform sacrifices to her, and establish a feast in her honour, if he returned to Scythia in safety. He entered secretly into a thicket wood in order to accomplish his vow, and was performing some ceremonies with a drum or cymbal in his hand before the image of Cybele, when he was discovered by a neighbour, who went and told the king Sautius. That monarch surprised Anacharsis, and shot him dead with an arrow. Diogenes Laertius, however, says he was killed by his brother while hunting, and expired with these words on his lips—"I lived in peace and safety in Greece, whither I went to inform myself of the manners of the country, and envy has here destroyed me in my own native land." After his death numerous statues were erected to his honour. Herodotus mentions several particulars concerning him. He is said to have invented tinder, anchors, and the potter's wheel; but Strabo proves that the last is mentioned by Homer, who lived long before Anacharsis.—T. J.

ANACLE'TUS or ANENCLETUS, was an Athenian who resided at Rome, and having been converted by the Apostles, succeeded Linus as the second bishop of the Romans, and was the immediate predecessor of Clement. His episcopate is said to have continued from A.D. 78 to A.D. 91.—F.

ANACLETUS, Antipope, known as Peter the son of Peter of Leo, was the grandson of a learned and influential Jew,

who had been baptized by Leo IX., and had assumed the name of that pontiff. On the death of Honorius II., in 1130, the majority of the college of cardinals elected Gregory of St. Angelo to the pontifical chair as Innocent II. This step displeased the rest of their number, who instantly elected Peter, under the title of Anacletus II. A schism ensued; Innocent fled to Pisa, but in two years obtained the support of the most powerful princes of Europe, while Anacletus was supported only by the kings of Sicily and Scotland. The contest was at last terminated by the death of Anacletus in 1138, when the authority of Innocent was universally acknowledged.—F.

ANAC'REON, a native of Teos, on the south-west coast of Asia Minor,—one of the most famous among the early lyrists of Greece. The dates of his birth and death are not exactly determined; but he flourished from about 560 to 475 B.C. On the invasion of Ionia by Harpagus, general of the elder Cyrus, he migrated to Abdera, in Thrace. Some time after, he repaired to Samos, and spent several years of his life in friendly intercourse with the tyrant Polycrates. They shared together the pleasures of the age; and, in requital for the favours of his host, Anacreon celebrated the name of the prince in some of his verses. After the death of Polycrates, the poet crossed the Ægean to Athens (B.C. 525), on the invitation of Hipparchus, who sent a fifty-oared galley to convey him. Among other acquaintanceships, he contracted there an intimacy with Simonides of Ceos,—his greatest rival on the lyre. On the overthrow of the Peisistratidæ at Athens, he returned to his native city; whence, after a sojourn of about five years, he was again driven by a new revolution. He betook himself a second time to Abdera, where, according to some accounts, he ended his long life of eighty-five years. There is, however, an epitaph ascribed to Simonides, which speaks of Anacreon having died at Teos. He is said to have been choked by a grape stone; but this looks like a fiction, invented to suit the habits of the poet. He appears to have been of an indolent temperament; the willing slave of those deities of love and wine under whose inspiration he wrote. One account, indeed, attributes to him a life opposed to the tenor of his verses. The ancients possessed five books of Anacreon,—containing hymns, elegies, epigrams, drinking songs, and erotic odes. Only a few of these compositions have escaped that monkish zeal which, at the beginning of the middle ages, consigned to destruction so many of the relics of antiquity. Of the sixty-eight poems which bear his name, the greater number are probably spurious. His genuine productions are all in the Ionic dialect, which is singularly adapted to the harmony of lyric verse. They are written in a peculiar modification of the iambic measure. His poems are characterized by great simplicity of expression, combined with a winning sweetness and exquisite melody. They are pervaded by a delicate sense of the beautiful, as well as a keen relish for the luxuries of life. There have been numerous imitations and translations of Anacreon; among the best of which are those of Cowley and Moore. His name has been applied to the amorous and drinking songs of every language; but few in any tongue possess the dignity and grace of the "Teian Muse."—J. N.

ANAFESTUS, PAOLUCCIO, the first Doge of Venice, elected in 697, when the tribunes or chiefs of the Venetian isles agreed to unite themselves into a republic under a single governor. He died in 717.

ANAGNOSTES, JOANNES, a Thessalonian who lived in the first half of the fifteenth century, and wrote a narrative of the capture of Thessalonica by the Turks in 1430. Upon the invitation of Amurath II. he returned to his native city, from which he had fled when it fell into the conqueror's hands; but in the course of two years he was deprived of his whole property by confiscation. The date of his death is uncertain.—F.

ANAN, BEN SHOPHET, a rabbin who lived in the third century of the Christian era, and is presumed to have been the author of the Hebrew treatises called "The Greater Order of Elijah," and "The Lesser Order of Elijah," printed originally at Venice by Zanetti, A.D. 1598.

ANAN, BEN DAVID, a learned rabbin who lived about the middle of the eighth century, and is said by R. Mordecai to have written a work on the Pentateuch. He is celebrated as the restorer of the Karaite doctrines, and as the defender of the law against the traditions of Hillel.

ANANIA SHIRACUNENSIS, an Armenian mathematician of the seventh century, surnamed "the Calculator," author of a

work of high reputation among his countrymen, entitled "The Kalendar," comprising treatises on astronomy and astrology, mathematics and arithmetic.

ANANIA, GIOVANNI D', a learned Italian, who was professor of civil and canon law at Bologna, and died in 1458.

ANANIA, GIOVANNI LORENZO, was a native of Taverna in Calabria. The fame of his erudition attracted the attention, and procured him the patronage of Mario Caraffa, archbishop of Naples, after whose death he retired to his native city, and spent the rest of his life in study and seclusion. He composed two very curious works—one on cosmography, and the other on the nature of demons—and died about 1582.—F.

ANANIAS or ANANIAH, the name of several individuals mentioned in the Holy Scriptures. The most ancient is known under the name of Shadrach, one of the three Hebrews who, by the order of Nebuchadnezzar, were cast into the burning furnace, because they refused to worship the graven image which he had made. Another Ananias is mentioned in the Acts of the Apostles as having fallen dead at the feet of St. Peter; and a third person of the same name, referred to in the Acts of the Apostles, chap. xxiii., was high-priest of the Jews, A.D. 49.—F.

ANANIAS, the name of the messenger of king Abgarus, who was, the legends tell us, sent from Edessa into Judea to procure a portrait of Christ for the cure of the diseased monarch.

ANAPIUS and AMPHINOMUS, two brothers, natives of Catana in Sicily, honoured on account of their filial affection. During an eruption of Mount Ætna, they saved their parents by carrying them away on their shoulders, and we are told that the flames spared them, while others around were consumed.

ANARAWD or ANAROD was a Welsh prince, a contemporary of Alfred the Great. He succeeded his father, who had fallen in a battle with the Saxons in 876, and died in 913.

ANASCO, JUAN D', a native of Seville, who lived in the earlier part of the sixteenth century, and was one of the ablest leaders of the Spanish expedition to Florida in 1539-43.

ANASTASIA, Saint, a Roman lady of noble birth, who was the wife of Publius, the ambassador of the Emperor Diocletian to the court of Persia, and who, having professed herself a Christian, was burnt to death at Sirmium in 303, the year in which Diocletian issued his edict against the Christians. Two letters which she wrote from prison to St. Chrysogonus, a confessor, are still extant. Two other female martyrs of the same name are mentioned in the early history of the church—one of whom had been converted by Peter and Paul, and was beheaded by order of Nero; the other suffered death at Sirmich, in Illyria.—F.

ANASTASIUS. Four popes bore this name:—ANASTASIUS I., a native of Rome, succeeded Siricius in 398 or 399. It was during his pontificate that St. Chrysostom, St. Augustine, and St. Jerome flourished, and several important councils of the church were held. St. Anastasius was a zealous opponent of the doctrines of Origen, which he condemned in his work *Περὶ ἀρχῶν*, which procured him a high encomium from St. Jerome. He died A.D. 401.—ANASTASIUS II., a Roman, who succeeded Gelasius in 496. He spent his brief pontificate in the vain endeavour to determine the disputes which disturbed the Eastern and Western churches, and died 498.—ANASTASIUS III., elected in 911, ruled for two years.—ANASTASIUS IV., a Roman, whose name was CONRAD, and who was bishop of Sabina and a cardinal, succeeded Eugenius in the papal chair in 1153. He was of advanced age at the period of his election, and held the see only a year and a half. ANASTASIUS, Antipope, was cardinal of St. Marcellus, and although protected by the emperors Lothaire and Louis in 855-6, in his opposition to Benedict III., was at last withdrawn by his patrons from the hopeless contest.—F.

ANASTASIUS, the name of two emperors of the East:—

ANASTASIUS I. was born of an obscure family at Dyrachium in Epirus, about A.D. 430. Very little is known of his early history; but at the advanced age of sixty, he occupied a humble post in the imperial household. He must, however, have possessed considerable talent; for, on the death of the Emperor Zeno in 491, he successfully opposed the design of Longinus, the late emperor's brother, to ascend the throne; and having succeeded in gaining the hand of Ariadne, the widowed empress, found himself suddenly invested with imperial power. Being a Eutychian, he found it impossible to persuade the Patriarch Euphemius to crown him, until he signed the confession of his faith according to the council of Chalcedon. Immediately after the accession of Anastasius, Longinus rose in

rebellion; but after causing great trouble for a period of seven years, he was at length seized, and put to death. A few years afterwards, a dangerous war with Persia occurred, causing a vast loss of life and treasure. At the same time the domestic tranquillity of the empire was disturbed by civil and religious troubles, chiefly arising from the emperor's animosity against the adherents of the orthodox faith, whom he persecuted with unrelenting severity, although he had originally professed their principles. Anastasius died in 518, having survived Ariadne three years. He was succeeded in the throne by Justin I.

ANASTASIUS II., born about the middle of the 7th century, was secretary to the Emperor Philippicus, on whose deposition, in 713, he was raised to the throne. On his accession, he punished the conspirators who had dethroned Philippicus, and appointed Leo the Isaurian, afterwards emperor, the commander of his armies. Anastasius was a man of great integrity, as well as experience in civil and military affairs; but the incapacity and unfaithfulness of his officers, rendered him unable to retain his position. After a brief reign, he was deposed in 716, and retired to a monastery in Thessalonica. Having endeavoured to recover the throne, he was put to death by Leo, his former general, A.D. 719.—F.

ANASTASIUS, patriarch of Constantinople, was secretary to the Patriarch Germanus, whom he contrived to supplant, and, by the patronage of the Emperor Leo the Isaurian, attained the patriarchate in 739. He died in 753.

ANASTASIUS, Saint, a name assumed by ASILC, a monk, who accompanied Adalbert, bishop of Prague, into Bohemia. He was appointed by Stephen of Hungary to the see of Colocza, and has been called the Apostle of Hungary. Died in 1044.

ANASTASIUS, surnamed BIBLIOTHECARIUS, a Roman abbot and cardinal in A.D. 848, was librarian of the Vatican, and translated several Greek works on history and biography into Latin. Although he possessed considerable learning, his Latinity is rude and barbarous. He is supposed to have died about 886.

ANASTASIUS, OLIVIER DE ST., a Carmelite monk, whose real name was DE CROCK, born early in the 17th century, author of several religious works and poems. Died in 1674.

ANASTASIUS CASSINENSIS, a monk of Monte Cassino, who was librarian to Pope Stephen III.

ANASTASIUS PALESTINUS, a native of Palestine or Antioch, who lived in the eleventh century, and was author of a work on fasting, and on the seven weeks of Lent.

ANASTASIUS SINAITA, the name of several ecclesiastical writers who were monks of Mount Sinai. Of these, four may be mentioned: The first was ANASTASIUS SINAITA, the elder, who was patriarch of Antioch about 561, and died in 599; the second was his immediate successor in the see of Antioch; another flourished during the seventh century; and a fourth was patriarch of Antioch in 629, and died in 649.

ANATOLIUS, bishop of Laodicea, was an Alexandrian, born about A.D. 230. In the various branches of science, he greatly surpassed all his contemporaries, and was the first Christian who taught the philosophy of Aristotle. He appears to have held the see of Laodicea from A.D. 270 to A.D. 282.

ANATOLIUS, a Platonic philosopher, one of the tutors of Iamblichus, who lived towards the end of the third century.

ANATOLIUS, patriarch of Constantinople from 449 to 458, who presided at the Council of Constantinople in 450, in which the Eutychian heresy was condemned.

ANATOLIUS, a Greek jurist, a native of Berytus, who lived in the first half of the sixth century, and had the honour to assist in the compilation of the Pandects of Justinian: he is said to have lost his life during an earthquake.

ANATOLIUS VINDANIUS, a native of Berytus, who wrote in Greek a treatise on agriculture, in twelve books, called *Συγγραφή Παιδείων*. He died A.D. 360.

ANAXAGORAS, born at Clazomenæ in Ionia, in the seventieth Olympiad; died in exile at Lampsacus, at the age of seventy-two. The public life of this illustrious person—or rather his relations to the state of Athens—constitute one of those painful incidents in Athenian history which have been pled over and over again in depreciation of that memorable democracy. The condemnation of Anaxagoras for the alleged crime of impiety, and the commutation of punishment from that of death to banishment—an act of mercy due to the friendship of Pericles—are indeed worthy to be placed alongside of the trial and sentence of Socrates: it appears, nevertheless, that the popular mind was exasperated, in this case, not only by appre-

hended danger to the accepted religion, but by heavy suspicion that the philosopher looked with no unfavourable eye on the progress of Persian power. We are obliged to refer the reader for whatever details are needful in illustration of this remarkable exercise of democratic authority, to the pages of historians, and, above all, to the classic work of Mr. Grote: all our disposable space is required for the right designation of the position of Anaxagoras the Inquirer.—It is extremely difficult to reproduce, in modern times, any one of these old Philosophers as he really was. We are met in the first place by the extremest paucity of documents; nor would it have been possible to reconstruct one of their modes of thought, but for the precious and apparently most faithful, although brief summaries, which we owe to the immortal Stagyrite. There is the farther difficulty too—caused by the tendency of the Thinkers of any epoch to contemplate the speculations of those of other epochs from their own *point of view*, and to interpret them according to the forms of the philosophies environing themselves—a difficulty augmenting with the intervals of time which separate them, and which in this case has been largely increased by the absurd mysticism thrown around all early inquiries by Alexandrine commentators and enthusiasts. Above all things, the student must beware of attributing extraordinary and unfathomed profundity to the systems of ancient Greece, or of expecting to find there, anything save first and rude essays to penetrate towards the laws of the Universe, by men of singular force and clearness of intellect, but all ignorant of experiment, unskilled in Observation even, and in nowise cognizant of any Method that could guide them towards ultimate physical truth.—The following rapid remarks may clear away certain errors connected with usual appreciations of the ancient philosophies; they will farther tend to fix the true and elevated place of Anaxagoras. The belief in a principle of Order is not a *result* of science, but the *cause* of it. Science grows out of that necessity felt by the human mind to realize among objective phenomena some law of Order. The effort of all the Greek schools, accordingly, was to discover an ἀρχή;—not a *beginning*, but a *principle*, or *substratum*, of all things. Inquiry soon diverged into two *methods*:—the *first*, endeavouring to detect that ἀρχή, or substratum, from indications offered by external phenomena,—the *second*, expecting to reach the same results by inquiring what laws of order are suggested by the phenomena of mind itself. The latter method was that of Pythagoras and the *Ionic* school—a school which sought, in the laws of harmony and the relations of number, some key to the solution of the problem of the Universe. The opposite method was followed by the Ionic or physical school—that of which Anaxagoras is the culminating name, or rather the supplement and philosophical completion. This school is usually said to have begun with Thales; and ordinary history presents us with a chronological list of his disciples and interpreters. But none of these ancient schools ought to be treated chronologically, or as a school, according to the modern interpretation of the word:—the inquirers, so classed, were rather independent thinkers, following something of the same method. The character of Ionic inquiry may, however, be fairly enough characterized by reference to one portion of the speculations of Thales. With him, as with all, the predominant question was, what is the ἀρχή? what the *substratum* of all this perplexing external variety of change? Thales looked around him in quest of some one physical substance capable of assuming all varieties of condition; and his limited and poor experimental knowledge induced him to consider *water* that *substratum*. A most imperfect analysis certainly, but one whose origin it is not difficult to perceive. Thales had seen water in every cardinal form which matter can assume; he had seen it a *solid*; its normal state is that of a *liquid*; and he had seen it evaporate or change into invisible *air*. No question as to the puerility of this speculation, regarded as a physical speculation; but the critic must reflect that progress in physics has been most laborious and slow. Chemistry had to pass through alchemy,—why marvel that, at the epoch of Thales, there should have been so rude a beginning of chemical analysis? Others followed in the foregoing track. One proposed *air* as the substratum; others, *earth*; others, *fire*. But the idea of a *substratum* or *principle* as a necessary existence influenced and vivified all. It is interesting also to trace the course of this unitarian speculative physics. The supposed ἀρχή became more and more purified and ethereal in the conceptions of Inquirers, until Heraclitus determined as its essence—*fire* in perpetual flux. Empedo-

cles (444 B.C.) may be said to have inaugurated a new era. He compounded all former systems, declaring that there are *four* elements or substances, and that these are *combined* or animated by forces which he termed *love* and *hate*. It is strange, that instead of discerning here the crude but meritorious initiation of Inquiry as to the existence of FORCES which may co-ordinate different natural elements, some historians of philosophy have traced to it our modern doctrine of *Polarities*! Passing from Empedocles, who indeed introduced the idea of *forces* or co-ordinating powers amid various elements, we reach at once the Clazomenian Anaxagoras. The main or central principle of his system is this,—“Matter, ever numerically the same, undergoes combination and separation from the energy and dictates of a Supreme Mind.” Previous to the period of Anaxagoras, not a trace of pure theism appears among the speculations of the Greeks; their ultimate principle (or *God*, as moderns have often written it) was a pure physical ἀρχή, with which, indeed, they conjoined, or rather to which they assimilated, the nature and action of the human soul; nor can there be a loftier tribute to the illustrious philosopher of Clazomenæ, or a more certain attestation to the reality of the revolution he inaugurated, than the words of Aristotle (*Metaphysics*, I., 3d): “When a man said, that there is in nature, as in animals, an intelligence which is the cause of the arrangement and of the order of the universe, this man appeared alone to have preserved his reason in the midst of the follies of his predecessors. Now we know that Anaxagoras of Clazomenæ first openly maintained these views.” Can a loftier tribute be offered to any philosopher? Or is it wonderful that the popular polytheism of Athens felt itself in danger, when confronted by the criticism of a man who first ascended to the idea of one harmonizing intelligence? The *νοῦς*, however, became a moral providence only in the hands of SOCRATES.—J. P. N.

ANAXAGORAS, a brass-caster of Egina, who lived about 480 B.C. He executed the famous statue of Jupiter, raised by the Greeks at Elis after the battle of Plataea.

ANAXANDRIDES, the son of Leon, was the fifteenth king of Sparta of the line of the Agidæ, and reigned about 560 B.C. He was the father of Leonidas. Died probably 520 B.C.

ANAXANDRIDES, a comic dramatist, who flourished during the time of Philip of Macedon, and was a native of Rhodes, or of Colophon in Ionia. He wrote sixty-five plays, fragments of some of which have been preserved; but having libelled the Athenian government, it is said that he was condemned to die by starvation; this, however, is doubtful.—F.

ANAXARCHUS, surnamed EUDÆMONICUS, or “the Happy,” was a Greek philosopher, a native of Abdera, who lived in the fourth century B.C., and is said to have been one of the preceptors of Alexander the Great, or rather, as Lucian observes, one of his parasites; for when Alexander killed his friend and foster-brother Clitus, the philosopher was base enough to assure the prince that “kings could do no wrong.” After the death of Alexander, Anaxarchus fell into the hands of his enemy Nicocreon, king of Cyprus, who caused him to be pounded to death in a mortar.—F.

ANAXILAS, a comic poet of Athens, a contemporary of Plato and Demosthenes, about 340 B.C.

ANAXILAUS, a king of Rhegium, descended from Alcidas, who had brought a Greek colony into Sicily. His death took place about 476 B.C.

ANAXILAUS, a Pythagorean philosopher, who lived at Rome in the Augustan age, and was a native of Larissa. He was banished from Italy on a charge of practising magic, which originated in his skill in chemistry and experimental philosophy.

ANAXIMANDER OF MILETUS, a disciple of Thales, lived 610–547 B.C. Under article ANAXAGORAS, the general character of the Ionic school has been briefly described. Anaximander, also, sought for a physical ἀρχή, and he thought he had found it, in what he termed ἀπείρον—a word usually translated by “*infinity*.” According to Aristotle, however, who renders the word by what he deems a synonym—μίσμα, or a mixing of elements—it would appear that Anaximander took, as his *substratum*, a state of being indistinct and undivided,—a condition in which all elements were in a sort of chaotic combination. In so far as this goes, he may be accounted in advance of some of the Ionic school, who, as we have seen, sought to reduce all material variety to changes in the state of some one element. Farther, the question was most strongly forced on him, What is that which divided this μίσμα—by what energy was such a chaos reduced into order, and made to evolve *definite* and *individual*

forms and things? Anaximander had no glimpse of the elevation afterwards reached by Anaxagoras. He had not even a conception of a universal *vitality*. He attempted to solve the problem by means of purely mechanical theories—within which he strove to reduce the phenomena of organization itself. Take as an instance his account of the creation of man and the animals:—"Our earth was originally a mixture of earth and water. The influence of the sun, increasing incessantly, dried the primitive humidity. The more marshy the earth, the greater the formative influence of the sun,—at present even, the power of this luminary is most visible in marshy countries. The sun having put into fermentation the humidity contained within the globe, the water is disengaged in the shape of bubbles. These are the germs of animals;—animals imperfect at first, and which soon perish: at length man appears, the last and crowning effort of solar heat." An entire system of physics was thus constructed by Anaximander, through the whole of which one may discern certain advances in observation. Not a trace, however, of the idea of a physical *force*; no approximation to any dynamical theory of the universe; infinitely less any gleam of that loftier scheme, whose discovery has conferred imperishable honour on the name of Anaxagoras.—J. P. N.

ANAXIMENES, flourished about 548 B.C. A philosopher of the Ionic school. According to Anaximenes, the ἀέρας, or substratum is *Air*. Spiritual and corporeal qualities seem united under this element, but there is not a trace of true theism in any known speculation of Anaximenes. The reader is referred to articles ANAXAGORAS and ANAXIMANDER.—J. P. N.

ANAXIMENES, a native of Lampsacus, the pupil of Diogenes the Cynic, and the grammarian Zoilus, afterwards became one of the preceptors of Alexander the Great. We read that Alexander having resolved on the destruction of Lampsacus, on account of its determined opposition to his former attack, perceiving Anaximenes about to entreat his clemency, swore he would not grant the request he was about to make. Anaximenes instantly replied, "I supplicate, O Alexander, that you sack the city, and reduce its inhabitants to slavery." The conqueror kept his promise, and Lampsacus was saved.—F.

ANAXIPPUS, a poet of Athens, who lived about B.C. 308.

ANAYA MALDONADO, was born about the middle of the 14th century at Salamanca. The manner in which he discharged his trust as tutor to the sons of Juan I., king of Castile, procured him the bishopric of his native city. He died about 1440.

ANCANTHERUS, CLAUDE, a learned physician, who was historiographer to the emperors of Germany, and lived at Vienna in the latter half of the sixteenth century. Several learned historical works from his pen have been published; there are some of his inedited MSS. in the library of Vienna.

ANCARANO, GASPARD, an ecclesiastic of Bassano, in the second half of the 16th century, the author of several hymns.

ANCARANO, PIETRO GIOVANNI D', was an Italian jurist and poet, a native of Reggio in Lombardy, who lived in the middle of the sixteenth century.

ANCELL, SAMUEL, an English military writer, author of "A Circumstantial Journal of the Siege of Gibraltar," published in 1784, and received with considerable favour. In 1801, Ansell commenced the publication in Dublin of a periodical called "The Monthly Military Companion," which, however, was interrupted by his death at the close of the following year.—F.

ANCELOT, JACQUES-ARSENE-FRANÇOIS-POLYCARPE, a dramatic writer, born at Havre, 1794, who produced a number of works evincing no inconsiderable genius and ability.

ANCELOT, MARGUERITE-VIRGINIE CHARDON MADAME, wife of the preceding, born at Dijon, 1792, the author of some popular dramatic pieces represented on the French theatre.

ANCHARANO, PIETRO D', a member of the Farnese family, born at Ancharano about the year 1350, dedicated himself to the study of civil and canon law, under the celebrated Baldus, and attained high reputation as a jurist. Died 1417.

ANCHERES, DANIEL, a French poet, born near Verdun in 1586, who enjoyed the patronage of King James I. of England, to whom several of his poems were dedicated. He died about the middle of the seventeenth century.

ANCHERSEN, JOHANN PEDER, a learned Dane, born at Ribe in 1700. In 1737 he became professor of elocution at Copenhagen. He was well versed in history, jurisprudence, and antiquities, and was the author of many works displaying accurate scholarship and laborious research.

ANCHERSEN or ANSGARIUS, MATTHIAS, bishop of Ribe, born at Colding in North Jutland in 1682, was held in high reputation for his skill in languages. He died in 1741.—F.

ANCHIETA or ANCHIETTA, JOSE D', a celebrated jesuit missionary, born of a noble family at Laguna in Teneriffe in 1533. Having studied at the university of Coimbra, and entered the society of the jesuits, he, with six other ecclesiastics, sailed for Brazil. On arriving at Bahia in 1553, he devoted himself with the utmost zeal to the object of his mission. Before a year had expired, a college was founded at Piratininga, several miles from the coast; here the missionaries were exposed to great privations; but in the course of a few years, Anchieta acquired a great degree of influence over the natives; and it has been affirmed that in 1562, when the Portuguese colonies were threatened with extinction by the warlike tribes around Espiritu Santo, it was by his efforts that the imminent peril was averted. He continued his labours for many years; and having merited, by his unwearied exertions, the title of the Apostle of the New World, died at a village near Espiritu Santo, in 1597.—F.

ANCHIETA, MIGUEL, a Spanish sculptor of the sixteenth century, was a native of Pampeluna, and celebrated for the skill and taste with which he executed the ornamental carving in several of the principal churches of Spain.

ANCHISES, the son of Capys and father of Æneas. When Troy was taken, he was carried through the flames of the burning city on the shoulders of his son, and thus his life was saved. He afterwards accompanied Æneas on his voyage to Italy, but died in Sicily in his eightieth year.

ANCILLON, CHARLES, a French writer, born at Metz in 1659. Having completed his studies, he entered on the profession of an advocate in his native city, in his twentieth year, and eventually became historiographer to the king of Prussia, and superintendent of a French college at Berlin. He was the author of a variety of works, and died in 1715.

ANCILLON, DAVID, a French protestant divine, born at Metz in Lorraine in 1617. In early life, while at the college of the jesuits, he evinced a great love of study, but firmly resisted every effort made to win him over to the church of Rome; and in 1633 he proceeded to Geneva, and having studied theology under Du Pau, Spanheim, and other learned men, entered on the ministry at Charenton. He suffered severely from the revocation of the edict of Nantes, having lost the noble library he had been collecting, at great expense and trouble, for forty years. Subsequently he became pastor of the French church at Berlin, in which city he died in 1692.—F.

ANCILLON, JEAN-PIERRE-FREDERIC, born at Berlin in 1766; died in 1837. A very distinguished thinker and writer, whose labours alike in history and philosophy, demand especial notice. Ancillon, at first a protestant clergyman, quickly rose through energy of his scientific genius to a chair in the Military Academy of Prussia; at an early age, he was elected member of the Academy of Sciences, next he became counsellor of State, and his political sagacity obtained for him successively the offices of private secretary to the king, and of minister of foreign affairs. His great political work is undoubtedly the "Tableau des revolutions du system politique de l'Europe depuis le quinzieme siecle," a work which unfolds more clearly and graphically than perhaps any other, the principle and play of the European states-system up to the period when the first French revolution overturned all systems, and inaugurated a new era. As a comprehensive but brief sketch—one through which the working of great principles is clearly traced amid all the apparent confusion of these ages, and in which exposition is not overlaid by accumulation of mere details—this work of Ancillon has few equals. It is beyond question the most intelligent *resumé* extant of the phenomena of modern European history, and should be read by the student on his closing the grand epos of Gibbon. It is to be regretted that no English translation of these valuable volumes has been undertaken hitherto. Ancillon wrote history as a philosopher—perhaps his own natural bent was towards philosophy in itself. But as his history verges on philosophy, so does his philosophy uniformly betray the tendencies and sympathies of the man of practical affairs. Ancillon's desire was to be the *moderator* between conflicting extremes. We know that in his efforts to define the virtues, Aristotle adopted the theory of the *Mean*; something of the same kind was the aim of Ancillon in regard to intellectual speculation. His results were never very wide of the true results; nevertheless, his method cannot have a place

in philosophy. In geometry, for instance, we could not recognize any theory of the Mean. The results of its inquiries are absolute. And why should not the results of philosophical science be absolute also? The difference is this: the foundations or first principles of geometry are clear, and our list of them is exhaustive. Not so as yet in philosophy; but the true remedy is in no theory of the Mean; it is in the renewed search after absolute first principles, renewed efforts to define these, and to survey the entire territory wherein alone they can be found. Pantheism, Materialism, Scepticism,—every extreme is faulty, not because it is an extreme, but because the conclusions of each spring out of the neglect of facts and truths eternal as the human reason. Ancillon failed in discerning this momentous truth; and his theory of the Mean, narrowly scrutinized, might confound itself with a scepticism which assuredly the author did not feel. It is sufficiently clear, too, that he had not thoroughly mastered the writings of the great men of antiquity; he did not know how utterly Plato and Aristotle alike, had demolished many of the difficulties which he simply evaded. Nevertheless, it must be conceded to him that his philosophical writings exercised a beneficial general influence on the side of that reaction towards spiritualism, which has distinguished the more recent portion of the last half century. These writings are,—“*Mélanges de Littérature et de Philosophie*,” 2 vols., 1809; “*Essais Philosophiques*,” 2 vols., 1817; “*Nouveaux Essais de Politique et de Philosophie*,” 2 vols., 1824; “*Mediateur entre les extrêmes*,” 1828 and 1831.—J. P. N.

ANCINA, GIOVANNI GIOVENALE, bishop of Saluzzo, was born at Fossano in Piedmont in 1545; died 1604.

ANCONA, CIRIACO D', an Italian antiquary, born at Ancona about 1391, who under the patronage of Pope Eugenius IV., Cosmo de Medici, and other persons of influence, travelled through many of the countries of the East, in search of MSS., medals, inscriptions, &c. Some of his published works have been highly eulogized. Died at Cremona about 1450.

ANCORA, GAETANO D', an antiquarian, born at Naples in 1757, who was secretary to the king, and professor of Greek in the university of his native city. His works on antiquarian subjects have been highly spoken of. Died 1816.

ANCUS MARTIUS, the fourth king of Rome, grandson of Numa, and successor of Tullus Hostilius. During the reign of Ancus Martius, according to Livy, the Romans gained important victories over the Latins, and extended their territory to the sea coast, founding Ostium at the mouth of the Tiber. The inhabitants of many of the conquered Latin towns were removed to Rome, where they received the rights of citizenship, and had Mount Aventine assigned them to build upon, while the Mons Janiculus was being for the first time united to the other part of the town by a bridge erected on piles, the Pons Sublicus. An Etrurian immigration would also appear to have established itself in Rome during the reign of Ancus, headed by the Lucumo, Lucius Tarquinius. As the ordering of the religious ritual for the time of peace is ascribed to Numa, so the laying down of the proper ceremonies to be observed in entering upon a war, is attributed to Ancus Martius. At his death he committed the guardianship of his two sons to Tarquinius, who was afterwards chosen king. The dates assigned to the reign of Ancus, are from 640 B.C. to 616 B.C.—A. M.

ANDALA, RUARD, a Dutch philosopher and theologian, born 1665, died 1727. After discharging the duties of the pastorate in various places, he was made professor of philosophy in the university of Franeker, but afterwards passed from the chair of philosophy to that of theology. Andala was an ardent admirer of Descartes. His principal works, as given in the “*Nouv. Biog. Universelle*,” are these:—“*Dissertationes Academicæ in Philosophiam Primam et Naturalem*,” Franeker, 1709, 4to; “*Synagma Theologico-physico-metaphysicum, Complectens Compendium Theologiæ Naturalis, Paraphrasin in Principia Philosophiæ Renati Descartes, ut et Dissertationum Philosophicarum Heptada*,” Franeker, 1711, 4to; “*Dissertationum Philosophicarum Pentas*,” Franeker, 1712, 4to; “*Cartesius versus Spinosismi eversor et Physiæ Experimentalis Architectus*,” Franeker, 1719, 4to; and “*Verklaring Van de Openbaringe Von Johannes*,” Leeuwarden, 1716, 4to,—a commentary on the Revelation of St. John.—A. M.

ANDERLONI, PIERRO, an Italian engraver of great eminence, born at Santa Eufemia, near Brescia, in 1784, died at Milan in 1819. He was son of Faustino (himself a distinguished en-

graver), and pupil both of his father and of Cavalier Longhi, whom he succeeded as professor at the academy of Milan. Upon the death of Longhi, Pietro Anderloni ranked with Toschi and Garavaglia as one of the three best engravers of Italy. Amongst the many works he executed, the “*Heliodorns*” and the “*Attila*,” after Raphael’s pictures in the Vatican, stand foremost. Many highly distinguished engravers have proceeded from the school of Anderloni, a great correctness of drawing and purity of style being its chief qualities.—R. M.

ARDERNE, JAMES, dean of Chester in the reign of Charles II. He died in 1691, and bequeathed his books and great portions of his estates to the foundation of a cathedral library for the use of the clergy.

ANDERSEN or ANDRECE, LAURENCE, born in 1480, was chancellor of Gustavus Vasa, king of Sweden, and archdeacon of Upsal. He was a man of great learning and ability, and acted an important part in promoting the Reformation in Sweden. He is said to have been the first translator of the Bible into Swedish. Died 1552.

\* ANDERSEN, HANS CHRISTIAN, one of the principal living litterateurs of Denmark, was born at Odensee in the island of Funen, on the 2nd April, 1805. His father, who was a shoemaker, was a somewhat remarkable man—amiable and affectionate in disposition, rather freethinking in his opinions, and fonder of reading and solitary reverie than of his business, in which he was not successful. Little Hans was piously and even superstitiously brought up by his mother, of whom, as he himself tells us, he has given a portrait in the person of old Domenica in the “*Improvisatore*,” and also in the Fiddler’s mother in “*Only a Fiddler*.” After the father’s death, which occurred while Hans was still very young, she supported herself and her only child by going out to wash. In the meantime the little boy, who had no relish for the out-of-door sports of his equals, remained solitary at home, reading, or playing with a little puppet-theatre which his father, a man ingenious in such things, had made for him. The young poet had a passion for this kind of amusement, and used to compose childish comedies for his puppet characters, a practice which procured him from the other boys the nickname of “*Playwright*.” His regular education all the while was of the most slender description; after his father’s death, the poor mother could send her boy only to a charity school. Young Andersen’s passion for reading, however, his talent for reciting dramatic pieces, and his remarkably powerful, clear, and musical voice, had already brought him into notice in his native town, and he was sometimes invited into families of the upper classes to exhibit his talents: still no material aid was extended to him. His mother wished to apprentice him to a tailor, but the boy’s literary and theatrical tastes, fostered by what he had heard people say of his fine voice and recitative powers, were already too strong to allow of his settling down to a handicraft. When Hans was about his fourteenth year, he had managed to be present at a number of representations given in Odensee by part of the company of the Theatre-Royal, Copenhagen, and even to get upon the stage in the character of page. From this time, it became a fixed idea with him that he must go to Copenhagen, where his talent for recitation, and fine soprano voice, were to procure him a connection with the Theatre-Royal. “*What will become of thee in the great city?*” asked the poor mother. “*I will become famous*,” replied the boy. Hans Andersen was but fourteen when he left his native island and native town to seek his fortune in Copenhagen, where he arrived in September, 1819, with ten dollars in his pocket.

The poor youth’s first attempts to obtain a situation in connection with the Royal Opera, were, as might have been expected, ludicrous and painful failures, and Andersen, completely dispirited, was on the point of making his way home again; when, having procured admission to Siboni, an Italian maestro, at that time director of the Royal Musical Conservatory, the boy so interested him and a number of gentlemen who chanced to be in his house, that they took him under their protection. A small sum was subscribed for his support, and Siboni was to cultivate his voice, with a view to his becoming a singer in the Opera. After he had been three-quarters of a year under Siboni, his voice broke, and its musical qualities disappeared. The maestro advised him to go home and learn a trade; but some of his patrons continued to take an interest in him, more particularly Weyse the composer, and the poet Guldberg. The latter,

seeing how defective his education had been, gave him lessons in Danish and in German, and even procured him two lessons a-week in Latin. A subscription was again set on foot in his behalf, and a bare subsistence was thus for a while secured him. Dependent, however, on mere charity, Andersen was constantly on the verge of destitution, and from 1819 to 1823 his life was one of hardship. At length, a tragedy he had laid before the directors of the Theatre-Royal, brought him under the notice of Councillor Collin—who proved a second father to him. Through this gentleman's influence, the royal bounty was moved in his behalf; the Bureau for Learned Schools granted him free instruction in the gymnasium of Slagelse, and Frederick VI. allowed him a yearly stipend for his maintenance during several years. His mother was still alive to hear of his good fortune. Andersen's future course was now comparatively secure, and we need only trace his farther career in his works.

His first book, "Foot Journeys to Amager," appeared in 1828, the same year in which he became a student at college. He could not at first obtain a publisher, but he had no sooner got it printed for himself, than the copyright was bought from him; for the little book, written in an original style pregnant with fantastic humour, had instantaneously become popular. A vaudeville, which was acted with success, and a volume of poems, which was equally well received, followed in rapid succession. Here, however, the tide of public favour began to turn, and some other volumes of verse and prose, which he subsequently published, met with a cool reception. In 1833 the king granted him a "reisestipendium," or sum of money for a tour, and Andersen travelled to Rome. The result of this tour was his romance of the "Improvisatore," Copenhagen, 1834, which the grateful author dedicated to Collin. The work was very favourably received by the public, less so by the critics, who still—and for long after—remained strangely hostile to Andersen. For many years the influential literary journals of Copenhagen treated his productions either with silent or with expressed contempt, while these same productions were being translated into all the languages of Europe. Andersen published his first collection of "Eventyr" soon after the Improvisatore. It is by these "Stories for Children," and the "Picture Book without Pictures," which have been read all over Europe and America with equal delight by old and young, that Hans Christian Andersen has mainly acquired his fame out of his own country; but in Copenhagen his fondness for writing "Eventyr" was regarded as childish and unworthy trifling. His other novels, besides the Improvisatore, are "O. T.," "Only a Fiddler," "The Two Baronesses," and "To Be or Not to Be." Andersen has also written a great deal for the stage, his principal drama being "The Mulatto." His "Poet's Bazaar" is a series of sketches of travel. Andersen's most ambitious work is his "Ahasuerus," which appeared in German and Danish in 1847. It is partly in verse and partly in prose, and its form varies between lyric, epic, and dramatic. "Ahasuerus" is founded on the legend of the Wandering Jew.

Hans Andersen enjoys a moderate pension from the Danish government. He is unmarried (1857). (*Mit Liv Eventyr, af H. C. Andersen. Kjöbenhavn*), 1855.—A. M.

ANDERSON, ADAM, author of the "History of Commerce," a native of Scotland, was born about 1693. Little is known of his early life; but, when about thirty-three years of age, he obtained a situation in the South Sea House, in which he afterwards rose to be chief clerk of the Stock and New Annuities. Here he remained forty years, during which period he was employed upon his great work, published in 1762, than which very few books in the English language afford more internal evidence of laborious research. He died at Clerkenwell in 1765.—F.

ANDERSON, ALEXANDER, an acute geometrical writer; the first editor of Vieta's tracts, "De Recognitione et Emendatione Equationum." Born at Aberdeen in 1582. Some of his works are as follow:—"Ad angularium sectionum analytice theorematum καθολικώτατα," Paris, 1615; "Vindiciæ Archimedis, sive, Elenchus Cyclometriæ novæ a Philippo Lansbergio nuper editæ," Paris, 1616; "Exercitationum Mathematicarum Decas Prima," Paris, 1619. For an analysis of the mathematical writings of Robert Anderson, see the "Lady's Diary" for 1840.—A. M.

ANDERSON, ALEXANDER, was a well-known naturalist of last century. In his young days, he visited the Caribbean islands, and reported on their geology and botany. In 1789 he communicated to the Royal Society of London a notice of the Pitch Lake

of Trinidad. He was appointed superintendent of the botanic garden of the island of St. Vincent, and in 1798 published an account of the productions of the garden. In this he gave a description of the bread-fruit tree (*Artocarpus incisa*), imported from Tahiti. Some botanical papers by him appear in the Transactions of the Society of Arts.—J. H. B.

\* ANDERSON, ARTHUR, an enterprising and public-spirited London merchant, born in Shetland in 1792. His efforts to promote the improvement of the northern isles procured him the honour of representing them in the British parliament, where he supported liberal measures, and particularly exerted himself in the agitation against the corn laws.—W. B.

ANDERSON, CHRISTOPHER, a well-known Baptist minister, was born in Edinburgh, Feb. 19, 1782, and died in the same city on the 18th February, 1852, after a ministry of forty-six years. Besides his labours as an honourable and very useful pastor, Mr. Anderson was the originator, and for many years the secretary, of the Edinburgh Bible Society, and of the Gaelic School Society. The urgent need of some such societies was impressed upon his mind during journeys he made through the Highlands and Islands of Scotland. In 1809 he travelled through a large part of Ireland: hence his "Memorial on behalf of the native Irish," afterwards enlarged into "Historical Sketches of the native Irish" (1828). These works originated the Achill Mission and the Irish Society, which are supported chiefly by members of the Churches of England and Ireland. For many years Mr. Anderson was one of the most efficient friends of the Serampore Mission. His great work, to which the latter years of his life were largely devoted, is his "Annals of the English Bible," 2 vols.; London, 1845. Mr. Anderson is also the author of a popular book on "The Domestic Constitution" (1826), a theme which he was eminently qualified to discuss, both by his genial nature and severe domestic trials.—(*The Life and Letters of Christopher Anderson*, by his Nephew, Ed. 1854.)—J. A., L.

ANDERSON, SIR EDMUND, a distinguished lawyer, born at Flixborough in Lincolnshire about 1450, or, according to some authorities, 1531, of a family originally Scottish. Edmund Anderson was educated at Oxford. After practising with success at the bar, he was, in 1579, made serjeant-at-law to Queen Elizabeth, and soon after justice of assize. In politics, determined to maintain the authority of the crown, and in religion, that of the church as by law established, he distinguished himself by his severe procedure against all malcontents and sectaries, more particularly the Brownists, in the Norfolk circuit of 1581. In 1582 he was appointed lord chief justice of the Common Pleas, and the year after he was knighted. Anderson sat as presiding or assisting judge in a number of important trials; in that of Mary Queen of Scots, and in that of the secretary Davison, for alleged rashness in proceeding with her execution; in the earl of Arundel's in 1589, in that of the earl of Essex in 1600, and in Sir Walter Raleigh's in 1603. Though usually, as already mentioned, firm in his support of regal authority, more than one instance can be mentioned in which Lord Chief Justice Anderson opposed, with equal firmness, an illegal exercise of prerogative. On the queen granting letters patent to Mr. Cavendish, an agent of the earl of Leicester, "for making out writs of *supersedeas* upon exigents in the Court of Common Pleas," the lord chief justice and his brethren refused a first and a second time to admit Cavendish to the office, on the ground that the queen had no right to grant such letters, and that compliance with them would be contrary to their oaths. The queen found herself obliged to yield. Sir Edmund was also one of the judges who signed a remonstrance "against the arbitrary proceedings of the court, by which, at the command of a counsellor or nobleman, subjects were frequently committed to prison, and detained without good cause, and contrary to the laws of the realm."

Lord Chief Justice Anderson retained his office under James I., and up till the time of his death in 1605. He is admitted to have been an able jurist, who, though attached to precedent and the letter of the law, could nevertheless, on occasion, exercise an independent judgment; and who, if in disposition the reverse of clement, was nevertheless conscientious in his decisions. He has left "Reports of Cases adjudged in the Courts of Westminster in the latter end of the reign of Queen Elizabeth," London, 1644, folio.—(See Aikin's *General Biography*, and Strype's *Annals*.)—A. M.

ANDERSON or ANDERSEN, GEORGE, author of an "Ac-

count of Travels in the East, by George Anderson and Volg. Iversen," was born at Tonderen, in the duchy of Schleswig. Between the years 1644 and 1650, he visited the Cape of Good Hope, Java, Sumatra, Arabia, Persia, India, China, Japan, Tartary, Mesopotamia, Syria, and Palestine. He was a man of no special cultivation, but endowed with a very tenacious memory; and entering, on his return home, into the service of the duke of Holstein-Gottorp, he used to entertain that prince daily with the narrative of his experiences. His book was published at Schleswig in 1669. He died about 1675.—A. M.

ANDERSON, JAMES, a Scotch genealogist, lived in the earlier half of the eighteenth century, and was pastor of a presbyterian church in Swallow Street, Piccadilly, London, and also chaplain to a lodge of Freemasons. It was, doubtless, his holding the latter office that led him to publish, in 1723, a book called "The Constitutions of Freemasons." His genealogical works, which are the result of some labour, but display little judgment, are—"Royal Genealogies, or the Genealogical Tables of Emperors, Kings, and Princes, from Adam to these times;" and "a Genealogical History of the House of Yvery," prepared and published at the expense of the earl of Egmont.—A. M.

ANDERSON, JAMES, a Scottish archæologist of eminence, was born in 1662, and was the son of the Rev. Patrick Anderson, a clergyman who suffered persecution during the reign of Charles II. After studying at the university of Edinburgh, he adopted the profession of writer to the signet, but the success of a book which he published in 1705, induced him to turn his energies into a different channel. The work referred to was his "Historical Essay, showing that the Crown and Kingdom of Scotland is imperial and independent," which was enthusiastically received, as a complete and successful refutation of the work of William Atwood, "The Superiority and direct Dominion of the imperial Crown and Kingdom of England over the Crown and Kingdom of Scotland." Honoured with a vote of thanks by the Scottish Parliament, and encouraged by promises of material aid, he commenced the great work of his life—a collection of fac-similes of ancient charters of the Scottish kings and nobles, with their seals and coins. Previously to the final dissolution of the Scottish Parliament, a sum of money had been granted him for carrying on his expensive undertaking, but he had already greatly exceeded it when the Union took place; and though he was recommended, by the afore-mentioned body, to the queen and to the parliament of Great Britain, it was long before any sufficient attention was paid to his claims. The unfortunate archæologist was, meanwhile, obliged to subsist as well as he could on empty promises and hope deferred. In 1715 he was made postmaster-general for Scotland, with a salary of £200 a year, which, though he held the office only for a year and a half, was continued till his death in 1728; but his outlay on the undertaking into which he had launched at the recommendation of the legislature of his country was never reimbursed. Such were his embarrassments that he had even been compelled to pawn the plates of his fac-similes, and had attempted to obtain subscribers for his work at the ruinously low rate of two guineas per copy. According to Wodrow the historian, he had completed his collections only three or four days before his death. The work was edited in 1739 by the celebrated Thomas Ruddiman, and sold at from ten to fifteen guineas per copy. It bears the title:—"Selectus Diplomatum et Numismatum Scotiæ Thesaurus, in duas partes distributus: Prior syllogem complectitur veterum Diplomatum sive Chartarum Regum et Procerum Scotiæ, una cum eorum Sigillis, a Duncano II. ad Jacobum I., id est, ab anno 1094 ad 1412. Adjuncta sunt reliquorum Scotiæ et Magnæ Britanniæ regum Sigilla, a prædicto Jacobi I. ad nuperam Duorum Regnorum in unum, anno 1707, Coalitionem; item Characteres et Abbreviaturæ in Antiquis Codicibus MSS. Instrumentisque usitatæ. Posterior continet Numismata, tam aurea quam argentea, singulorum Scotiæ regum, ab Alexandro I. ad supra-dictam Regnorum Coalitionem perpetua serie deducta; Subnexis quæ reperiri poterant eorundem regum Symbolis Heroicis." In the years 1724-1728, pending the completion and publication of his great work, Anderson gave to the world four quarto volumes of "Collections relating to the History of Mary Queen of Scots," a valuable series of documents, the trustworthiness of which, however, has been questioned.—A. M.

ANDERSON, JAMES, an agricultural writer, was born at Hermiston, near Edinburgh, in 1739. He was brought up amidst farming operations, and seems early to have imbibed a

taste for them; but he prosecuted the study of chemistry and other sciences at the same time that he was engaged in practical agricultural work. He took a lease of a large extent of barren ground at Monkshill, in Aberdeenshire, for the purpose of carrying on his agricultural improvements. In 1771 Mr. Anderson commenced a series of essays on Planting, in the Edinburgh Weekly Magazine, under the signature of Agricola, and he subsequently published them in a separate form. In 1780 the university of Aberdeen conferred on him the degree of LL.D. He settled afterwards near Edinburgh, and took a deep interest in the improvement of fisheries, on which he made a report to government. His literary labours were continued in two periodicals, one entitled "The Bee," and the other, "Recreations in Agriculture." He died 15th October, 1808, at the age of 69.—J. H. B.

ANDERSON, JAMES, physician-general to the army of the East India Company in Madras, distinguished himself towards the close of the eighteenth century by the energy and talent with which he advocated the introduction of various new branches of industry into British India. In 1787 he published at Madras a volume of letters addressed to Sir Joseph Banks, treating principally of an insect resembling the cochineal, which Dr. Anderson had discovered at Madras, and which was considered capable of producing a dye similar to that of the insect already in use. Actual trial, however, convinced the experimenters that the dye produced by the new insect was inferior to that of the cochineal; and a similar result was arrived at in the case even of cochineal insects brought from Brazil. Dr. Anderson did not confine his attention to the cochineal culture only, as appears from the title of a book which he published in 1791, at Madras: "Correspondence for the introduction of Cochineal Insects from America, the Varnish and Tallow trees from China, the discovery and cultivation of white lac, the culture of red lac, and also for the introduction, cultivation, and establishment of mulberry trees and silk-worms, with a description and drawing of an improved Piedmontese reel for the manufacture of raw silk, together with the cultivation of the finest cinnamon trees of Ceylon, indigo, &c." The culture of the mulberry, rearing of silk-worms, and manufacture of silk in British India, do not appear to have met with much greater success than the introduction of the cochineal, either because the method of procedure adopted was incorrect, or for reasons connected with climate and soil. To Dr. Anderson, however, belongs the merit, and it is no small one, of having personally exerted himself, and of having induced others, to put these matters to the test. He discusses in his correspondence the possibility of introducing into Hindostan various other valuable natural products, such as American cotton, the cultivation of which in our East India possessions is exciting much interest at the present time (1857). His other publications not yet mentioned are:—"Miscellaneous Communications," Madras, 1795; "An Account of the Importation of American Cochineal Insects into Hindostan," Madras, 1795, 8vo.; "State of the Silk Manufacture at Vellout and Panniwaddy," Madras, 1795; "Communications from the 1st of October, until the 12th of December, 1795: Letters, &c.," Madras, 1796, two series; "An Attempt to Discover such Minerals as Correspond with the Classification of Cronstedt, and thus lead to a more extensive Knowledge of the Mineralogy of this Country" (Coromandel); *The Phoenix*, 1797, pp. 14-17, 80-84, 116, 117; "Journal of the Establishment of Napal and Tuna for the Prevention and Cure of Scurvy, Dysentery, and Ulcers on Shipboard and Navigation; of Famine on Shore," Madras, 1808. The precise date of Dr. Anderson's death is not ascertained; it was probably about 1809.—A. M.

ANDERSON, JOHANN, was born at Hamburg in 1674. He was educated for the law at Halle, and took his doctor's degree at Leyden in 1697. On his return to Hamburg he commenced practising as an advocate, and his ability soon attracted attention and esteem. He filled various municipal offices of trust and dignity; was made syndic in 1708; and in 1732 became senior burgomaster of his native city, retaining the office till his death in 1743. As syndic of Hamburg, Johann Anderson distinguished himself by the ability with which he conducted the foreign relations of the city; and he acquired so high a reputation for statesmanship in North Germany, that George I. of England, and August Wilhelm, duke of Brunswick, both invited him to enter their service; but he refused to leave that of his native town. Besides being a skilful diplomatist and an able man of business, Anderson possessed great general cultivation, was fond

of scientific and literary pursuits, and had contracted relations of friendship with Leeuwenhoek, Réamur, Geoffroy, Jussieu, and Fontenelle. He published nothing original during his lifetime, though he edited Gerard Meyer's "Glossarium linguæ veteris Saxonica," and left some valuable works in manuscript; among others, a "Glossarium Teutonicum et Allemanicum." The book by which he is best known appeared at Hamburg in 1746, and was entitled "Herrn Johann Anderson, J. U. D. und weylend ersten Bürgermeister der freyen Kayserlichen Reichstadt Hamburg, Nachrichten von Grönland und der Strasse Davis, Zum wahren Nutzen der Wissenschaft und der Handlung." This "Information about Greenland and the Strait Davis, for the true advantage of Science and Commerce," he had obtained by conversing with seafaring men who had visited these regions. The book contains valuable notices of the Icelandic language, but is now very rare. It is preceded by a life of the author.—A. M.

ANDERSON, JOHN, of Dowlhill, Glasgow, a gentleman of good family, who suffered severely during the religious troubles of the latter half of the seventeenth century, for his adherence to the cause of the nonconforming party in the Scottish church. The fall of the Stuart family gave a favourable turn to his fortunes. We find him among the burgesses in that Convention of Estates, held at Edinburgh, which offered the Scottish crown to William and Mary; and it was he who represented Glasgow in the first parliament after the Revolution. He was also, subsequently to 1689, repeatedly provost of Glasgow.—A. M.

ANDERSON, JOHN, a presbyterian clergyman, eminent in the eighteenth century as a controversialist. He was tutor to the celebrated John, Duke of Argyll, and became minister of Dumbarton, and afterwards of the North-West church, Glasgow. His writings relate to the comparative merits of prelacy and presbytery, and contain some valuable historical information. The principal are:—"Dialogue between a Curat and a Countreyman concerning the English Service, or Common Prayer Book of England," Glasgow, 1710 or 1711, 4to.; and "A Defence of the Church Government, Faith, Worship, and Spirit of the Presbyterians, in answer to a book entitled an 'Apology for Mr. Thomas Rhind,'" 1714.—A. M.

ANDERSON, JOHN, A. M., F. R. S. S. L. & E., was born at Roseneath in Scotland, in the year 1726. Having pursued an extended course of general study in the university of Glasgow, he was appointed in 1756 to the chair of Oriental languages. Four years after, he obtained the professorship of natural philosophy, a branch of study much more congenial to his taste and acquirements. Being a man of enlightened and liberal views regarding education, he determined to make the instruction of the university available to a class which had hitherto been excluded from the academic halls. Accordingly, besides the scientific and mathematical course of physics, which he taught in all its vigour and purity, he established a second of a more popular character, to which he invited artisans and mechanics, and others, whom the want of previous mathematical education unfitted for attending the formal university lectures. This practice he kept up till the close of his life, and his lectures were attended by large numbers of working men—thus forming the rudiments of the first mechanics' institution.

Anderson was author of a work, "Institutes of Physics," which was held in great estimation, and obtained a wide circulation. He early directed his attention to experiments on projectiles, and made some modifications on the construction of fire-arms.

Professor Anderson died in January, 1796, and bequeathed by his will the whole of his library, philosophical museum and apparatus, and all his effects, as a foundation for an educational institution, to be called Anderson's University. According to the intention of the founder, it was to consist of four colleges, viz., arts, medicine, law, and theology, with a suitable staff of professors in each. The funds proving inadequate to so extensive a plan, the trustees commenced it partially; and Dr. Garnett, the professor of chemistry and natural philosophy, and subsequently Dr. Birkbeck, soon became the instructors of thousands of mechanics. It was part of the plan, that, besides the scientific courses, a class similar to that taught by Dr. Anderson himself should always be formed. Dr. Anderson was, therefore, the first who founded an educational institution, one of the essential elements of which was to throw open "the temple of science to the hard-labouring artisan, and the hitherto despised mechanic." The advantages of such courses of lectures being so obvious, they are still crowded by the working men of Glasgow. The plan of

the founder has been carried out fully with regard to two of the colleges—arts and medicine. Regular courses by teachers of acknowledged merit are given in mathematics, natural philosophy, and the modern languages. The medical department, however, has most fully come up to the intentions of the founder. The medical school of Anderson's University is one of the acknowledged medical institutions of the country; and from the eminence of the professors, many of whom have subsequently obtained positions of great importance in the country, together with the valuable character of the instruction to be obtained in the Royal Infirmary, great numbers of students come from all parts of the kingdom to receive their medical education at this school. Besides his work on physics, Professor Anderson was the author of several papers on general subjects, and principally on the Roman antiquities of Britain.—G. B.

ANDERSON, JOHN, an English physician, who practised at Kingston near London; died in 1804. He has left "Dissertatio de Scorbuto, Edinburgi, 1771, 4to.;" and "Medical Remarks on Natural, Spontaneous, and Artificial Evacuation."

ANDERSON, JOHN, a Scotchman, son of David Anderson of Portland, N. B., who, having settled at Glasgow in 1784, acquired a sum of about £500 by his own industry, and then went to Ireland. He fixed his abode in Cork, where he became an export merchant, and soon realised £25,000, which he laid out in the purchase of four-sixths of the Fermoy estate, including the little town of that name, then in a state of ruin. This he soon raised to the condition of a thriving town, by extensive and judicious buildings. When the French fleet came into Bantry Bay, government was unable to procure land for encamping the troops in the south of Ireland, unless on the most extravagant terms. Lord Carhampton, commander of the forces, stated the difficulties to Mr. Anderson, who at once removed them by giving land on his Fermoy estate, without any charge for the required encampment. He subsequently induced the government in 1797 to erect two large and handsome barracks there, by giving the site rent-free. He established a mail-coach company, and set up the first public coach between Cork and Dublin. He also founded an agricultural society, and built a school-house and military college. He soon became highly popular with all classes, and his manners, which were agreeable and even polished, gave him access to the highest circles of society. Though he took no part in politics, the government so highly appreciated his great public services, that they offered him a baronetcy, which he declined for himself, but accepted for his son. Mr. Anderson, however, unfortunately extended his operations too widely: he embarked largely in purchasing lands, the value of which fell greatly upon the close of the war: in mining, too, he was deeply involved, and lost considerably; and finally, the change of the Irish currency affected his banking operations so severely, that his career of usefulness was arrested in 1816, to the extreme regret of the whole country, the esteem and gratitude of which he never forfeited or lost. Mr. Anderson died in the year 1820; but the good which he did remains behind him, and the town of Fermoy is a noble monument of what can be accomplished by one man possessing energy and talent.—J. F. W.

ANDERSON, JOHN, a Scotch surgeon, who wrote "Historical and Genealogical Memoirs of the House of Hamilton," published at Edinburgh, 1825, 8vo. He was born in Mid-Lothian in 1789, and died in 1832.

ANDERSON, PATRICK, a Scottish jesuit, born at Elgin in 1575; studied at Rome, came back to Scotland in 1620, suffered imprisonment, and retired to London, where he died in 1623. He wrote some popular theological works.

ANDERSON, PATRICK, a Scotch physician of the seventeenth century, whose pills at one time enjoyed a great reputation. He treats of their properties in a small volume, now extremely rare, called "Grana angelica hoc est, pilularum lujus nominis utilitas," Edinburgh, 1635, 12mo.

ANDERSON, ROBERT, born in Lanarkshire in 1750, abandoned successively the professions of theology and medicine, and gave himself up to that of literature. The period of his principal activity was from 1792 to 1807, between which dates he published, at Edinburgh, his edition of the "British Poets," in fourteen volumes, with meritorious biographical and critical notices. He also published separately the lives of Johnson and Smollet. In 1820, Anderson edited the works of Dr. John Moore, and furnished them with a "Memoir of his Life and Writings." He died at Edinburgh in 1830.—A. M.

ANDERSON, ROBERT, a writer of verses, chiefly in the Cumberland dialect, was born at Carlisle in 1770. His parents being extremely poor, he received a very defective education at a charity school, from which he was removed at the age of ten, and apprenticed to the business of pattern-drawing. The greater part of his term of apprenticeship was spent in London. Going one evening to Vauxhall, the songs which he heard so disgusted him that he resolved to try if he could not write better himself. By next morning he had produced a ballad called "Lucy Gray," which, with some others, he offered at Vauxhall. They were accepted, and had a temporary popularity. Returning to his native town in 1796, he cultivated his talent for versifying; and various fugitive pieces of his, which appeared from time to time in the newspapers, attracted considerable attention, particularly his poem of "Betty Brown." These he, in 1805, collected into a volume, which, under the title of "Ballads in the Cumberland Dialect," passed through several editions. In 1820, Anderson's collected works were published at Carlisle in two volumes, accompanied by an autobiography of the poet, and an "Essay on the character and manners of the peasantry of Cumberland," written by Mr. Sanderson, a friend of the author. Robert Anderson died in 1833. The popularity of his writings had brought him little pecuniary profit; and towards the close of his life he lived on the benevolence of friends. His poems, which still enjoy some reputation in his native district, are characterized by homely vigour and coarse humour, suitable to their subjects and to those to whom they were principally addressed.—A. M.

ANDERSON, ROBERT, born 1793, respected for his piety, pastoral zeal, and earnest pulpit ministrations, became, in 1826, incumbent of Trinity chapel, Brighton, where he continued till his death in 1853. He was the author of several works, of which the chief are—"A Practical Exposition of St. Paul's Epistle to the Romans," "The Book of Common Prayer, a Manual of Christian Fellowship," "Discourses on the Lord's Prayer," &c., &c.—J. B., O.

ANDERSON, THOMAS, a Scotch surgeon, who practised at Leith, among other writings, of a paper published in volume ii. of the Transactions of the Royal Society of Edinburgh in 1790, entitled "Pathological Observations on the Brain," and devoted to the demonstration of these two theses: 1. When one side of the brain is affected, it produces its effects on the opposite side of the body. 2. When both sides are affected, the whole body suffers.—A. M.

ANDERSON, WALTER, a Scotch historical writer, fifty years minister of Clirnside in Berwickshire. He is author of a "History of Cæsar, king of Lydia," in which he discusses the question of the inspiration of the ancient oracles; also, of a "History of France," down to the peace of Munster, published in 1769-75-83, a work of no great value; and of "The Philosophy of Ancient Greece investigated in its Origin and Progress," published in 1791; superior to his other works, but now superseded.—A. M.

ANDERSON, WILLIAM, naturalist; surgeon on board the *Resolution* in Cook's second voyage round the world in 1772-5. The 66th volume of the Philosophical Transactions contains a paper entitled—"An Account of some Poisonous Fish in the South Seas, in a letter to Sir James Pringle, Bart., F.R.S., from Mr. William Anderson, late Surgeon's Mate on board his Majesty's Ship the *Resolution*, now Surgeon of that Ship." Vol. 68 of the Philosophical Transactions contains another paper by the same author; and there is now in the British Museum a work of his in manuscript, which gives descriptions of new animals and plants which he had seen during his voyages. Anderson died on board the *Resolution* during Cook's last voyage.—A. M.

ANDERSON, WILLIAM, curator of the botanic garden at Chelsea, was the son of a respectable gardener, who prosecuted his avocation first in the Highlands of Scotland, and subsequently in the neighbourhood of Edinburgh. He followed his father's profession, and, after being employed in nurseries near Edinburgh and London, was in 1815 appointed by the Society of Apothecaries superintendent of the garden at Chelsea. He made great improvements in the garden, and placed it in a thriving condition. This situation he filled for nearly thirty-two years. He was elected a Fellow of the Linnæan Society in 1815. He wrote several valuable horticultural papers, which were published in the Gardener's Magazine and the Transactions of the Horticultural Society. He died 6th October, 1846, at an age approaching 80.—J. H. B.

\* ANDERSON, WILLIAM, LL.D., was born in the year 1799 at Kilsyth, Stirlingshire, where his father, the Rev. John Anderson, is still United Presbyterian minister, and, though upwards of eighty-six years of age, continues to discharge a great part of pastoral duty (1857). Dr. Anderson studied at the university of Glasgow, and won high honour in many of his classes. During his student course, he was well acquainted with Chalmers and Irving, from the latter of whom, specially, he has imbibed much of that peculiar fervour and enthusiasm for which he is so distinguished. When only twenty-two years of age, he was ordained as minister of John-Street church, Glasgow, where he has since continued to labour, and during a period of thirty-five years has been known throughout Scotland as one of the most original and earnest preachers of the day. Perhaps, however, his fame has been greater on the platform and in the lecture-hall than in the pulpit. He has ever stood forward as the champion of civil and religious freedom, and has endured much opprobrium for his bold denunciation of the tyrannies of Europe, and his warm eulogiums on such men as Kossuth and Joseph Mazzini. He has delivered and published courses of lectures on "The Mass," "Penance," and "The Genius of Popery," which are distinguished from the common attacks on the church of Rome, by their candour and breadth of Christian sympathy. His other works are a volume of "Discourses," and a course of lectures on "Regeneration." He has also written "A defence of the Organ," for the introduction of which into presbyterian worship he is a warm pleader. Dr. Anderson's whole writings are pervaded with an earnest declaration of his belief in the pre-millennial advent, to which alone he looks with hope for the removal of the disorders of the world. For a fair estimate of his powers, the reader is referred to Mr. Gilfillan's "Second Gallery of Literary Portraits."—J. B.

ANDERSON-TORRY, THOMAS GORDON, author of the words and music of "The Araby Maid" and other songs, was the youngest son of Patrick Torry, D.D., bishop of St. Andrews, Dunkeld, and Dunblane. He was born at Peterhead, 9th July, 1805, was educated at Marischal college, Aberdeen, and the university of Edinburgh, and became incumbent of St. Paul's, episcopal church, Dundee. Died at Aberdeen, 1856.—C. R.

ANDERTON, HENRY, an English painter of the seventeenth century, the pupil of Robert Streater, and to some extent the rival of Sir Peter Lely. Charles II. and the leading members of his court sat to Anderton. Besides portraits, he also painted landscapes and still-life pictures. See "The Art of Painting, &c., from the French of M. de Piles," London, 1706.—A. M.

ANDERTON, JAMES, of Lostock in Lancashire, the probable author of a remarkable controversial work in favour of Roman Catholicism, lived about the commencement of the seventeenth century. The work in question—"The Protestant's Apologie for the Roman Church"—as well as others from the same pen, purported to be written by one "John Brerely, priest;" but the real name of this individual is involved in much obscurity. It seems most probable that John Brerely was identical with James, younger brother of Roger Anderton of Birchley in Lancashire, who died in 1640. The writer of the "Protestant's Apologie" proceeds upon the principle of justifying each separate tenet of the Roman catholic church by passages quoted from protestant writers. The work passed through three editions, and was admitted, even by the opposite party, to be weighty and important. Brerely's other writings are—"A Treatise of the Liturgy of the Mass, concerning the Sacrifice, Real Presence, and Service in Latin," Cologne, 1620, 4to; "St. Austin's Religion," 1620, 8vo; and "The Reformed Protestant," mentioned by Gee in his "Foot out of the Snare."—A. M.

ANDERTON, LAURENCE, descended from a protestant family of Lancashire, and educated in the protestant faith, became a catholic and jesuit. In his youth, at Christ's college, Cambridge, he is said by Anthony-a-Wood to have received the epithet of "golden-mouthed," on account of his eloquence. His works are—"The Progeny of Catholics and Protestants," Rouen, 1634, 8vo; "The Triple Cord," Saint Omer, 1634, 8vo; "One God—One Faith," 8vo. Amongst his jesuit brethren he was noted also as a controversialist.—A. M.

ANDJOU, FARR-EDDIN-HASSAN-BEN-DJEMAL-EDDIN-HOSSEIN, a learned Persian, who lived at the court of the Sultans Akbar and Djihanguir. He was one of the principal authors of the great Persian dictionary called "Ferhenki Djihanguiri," begun under Akbar, and completed under Djihanguir in 1609.

ANDLO or ANDLAU, ANDELO or ANDELOW, HERMAN PETER VON, author of a juristic treatise on the German empire, was descended of an Italian family settled in Alsatia. Little is known about his life. His work is interesting as presenting the earliest systematic exposition of the public law of Germany. It was composed probably about the year 1460, and was published at Strasburg in 1603 and 1612 in 4to, under the title—"De Imperio Romano, regis et augusti creatione, inauguratione, administratione et officio, juribus, ritibus et ceremoniis electorum, aliisque imperii partibus."—A. M.

ANDOCIDES, an Attic orator, was born at Athens in 467 B.C. His father, Leogoras, was a man of luxurious and depraved tastes, which his son showed no backwardness in imbibing. Being descended of a high family, he naturally sided with the oligarchical faction in Athens, and through them obtained several important commissions in the service of the state. He comes very prominently forward in history, during the period in which informers were at a premium in Athens, in reference to the mutilation of the Hermæ. These handless statues, which stood in all parts of the city, were found one morning all slashed in various parts, with the exception of a few, among which was one near the house of Andocides. The Athenians were exceedingly anxious to discover the perpetrators of this deed, as they believed a conspiracy lay at the bottom of it. Andocides was supposed to be implicated, and escaped only by informing against four of the ringleaders. He most probably mentioned a good number of others, and among them his father, as his defence of himself against this report in a speech subsequently delivered "On the Mysteries," is not very satisfactory. As Andocides could not clear himself of guilt, he had to leave Athens; and the rest of his life was spent in wanderings. Again and again he returned to his native city; at one time was allowed to remain there for six years, but at last died in exile—a punishment to which he had been condemned four times. He did not suffer more than he deserved, for he seems to have been a thoroughly bad man. Three speeches of his remain, and another has been sometimes attributed to him, though it is not now generally regarded as his production. They make no pretensions to impassioned eloquence or elevated sentiment, but are plain, distinct, business-like exhibitions of the case in hand, and are important as historical documents.—J. D.

ANDOQUE, PIERRE, a French antiquary of the sixteenth century, author of "Histoire du Languedoc, avec l'état des provinces voisines," Beziers, 1648, fol. The accuracy of this work has been called in question.

ANDRADA or ANDRADE, ALFONSO D', a Spanish jesuit, and rector of his order; born at Toledo in 1590, died at Madrid in 1658. He is author of a great many religious works.

ANDRADA, ANTONIO D', a Portuguese jesuit, was born at Villa de Oleiros in 1580. He spent the greater part of his life as a missionary in India. He made two expeditions into Thibet, a country then unknown to Europeans, and on his return to Goa he died suddenly in A. D. 1633.

ANDRADA, DIEGO LOPEZ D', a celebrated Portuguese preacher, born 1569; died 1635. His sermons and treatises were published at Madrid in 3 vols. fol. in 1656.

ANDRADA, DIEGO DE PAYVA, a Portuguese theologian, author of several controversial works. Born 1528; died 1575.

ANDRADA, DIEGO DE PAYVA, nephew of the above, author of "Exame d'Antiguidades," Lisbon, 1616, a critical examination of the *Monarchia Lusitana* of Brito Bernardo; also of "Casamento Perfecto," Lisbon, 1630.

ANDRADA or ANDRADE, FERNAN PEREZ D', surnamed "O Bo" (Gallician for "the Good,") was the friend of Henry, count of Trastamara, afterwards Henry II., king of Castile and Leon. The ruins of the castle of Andrada still form an imposing feature in the landscape to the east of Puente de Eume. The magnificent bridge built across the river Eume in 1382-88, by the same nobleman, has fifty-eight arches, and is three thousand and forty-five Spanish feet in length.—A. M.

ANDRADA, FERNAO PEREZ D', a distinguished Portuguese voyager of the earlier half of the sixteenth century, the companion of Francisco d'Almeida and of Albuquerque, under the latter of whom he fought in the sieges of Goa, and in the expedition against Malacca in 1511. Having returned to Portugal, Andrada was intrusted by King Manoel with the command of a mission to China, which he reached in 1517, being the first to open commercial intercourse with that country by

way of the Cape of Good Hope. He ended his life in his native country, after a third voyage to the Portuguese possessions in India, but the precise date of his death is not known.—A. M.

ANDRADA, FRANCISCO, a Portuguese poet, brother of Diego Payva, and author of "O primeiro cerco de Diu" (The first siege of Diu), Lisbon, 1589, and of a chronicle of the life of John III. of Portugal, written by order of Philip III., published at Lisbon in 1613.

ANDRADA or ANDRADE, FRANCISCO RADES D', a meritorious Spanish historical writer of the sixteenth century. He was prior to the Benedictine convent of Jaen, and chaplain and almoner to Philip II. Andrada's principal work, which is still held in esteem, is his "Coronica de los tres ordenes, y caballerias de Santiago, Calatrava, y Alcantara," fol., Toledo, 1572—a history of the three Spanish orders of chivalry. Andrada himself belonged to the order of Calatrava, and wrote "Catalogo de las obligaciones que los Caballeros, Comendadores, Priores y otros Religiosos de lo Orden de la Caballeria de Calatrava tienen en Razon de su Habito y Profesion," 1 vol. 8vo, Toledo, 1571.—A. M.

ANDRADA or ANDRADE, JACINTO FREYRE D', an eminent Portuguese author in prose and verse, was born of noble parents at Beja, in Alentejo, in 1597. Devoting himself to an ecclesiastical career, he repaired, after completing his education and taking the degree of bachelor of canonical law at Coimbra, to Madrid, where he was favourably received at the court of Philip IV. of Spain, and had the rich abbey of Santa Maria das Chãs conferred upon him. Portugal, however, being at that time subject to the crown of Spain, Andrada, who cherished a patriotic attachment to the house of Braganza, became by-and-by an object of suspicion, and retired to his abbey of Chãs, where he lived till John of Braganza seated himself on the Portuguese throne in 1640, under the title of João IV. This monarch gave Andrada high proofs of his esteem, making him tutor to the young prince, Don Theodosio, and offering him the bishopric of Viseu, a dignity which he could not be prevailed on to accept. His caustic wit latterly brought him into disfavour at court. Andrada died at Lisbon in 1657. His most remarkable production is his life of John de Castro (Vida de Dom João de Castro), fourth viceroy of Portuguese India, which appeared in 1651, passed through two editions the same year, and became one of the classical works in Portuguese literature. Ferdinand Denis, author of "Résumé de l'Histoire Littéraire du Portugal et du Bresil," and of the article on Jacinto de Andrada in the Nouvelle Biographie Universelle, is enthusiastic in his commendation of this work. It has been frequently reprinted. The latest Portuguese edition is that published at Lisbon in 1835, under the auspices of the Royal Academy of Sciences, with notes and original documents. A copy of this edition was published at Paris in 1837 by Aime Andre. There exists an English translation of the Vida de Dom João de Castro, executed by Henry Herringman in the seventeenth century. Andrada had written a great deal in verse, but most of his poems are said to have perished accidentally by fire. Those which remain are to be found in the poeticas dos collection, entitled "Fenix renascida, ou Obras melhores engenhos Portugueses," Lisbon, 1746, (second edition.)—B. D. Soc. Usef. Know.—A. M.

ANDRADA, MIGUEL LEITAM D', was born in 1555 at Villa de Pedrogao in Portugal, and accompanied the king, Sebastian, on his disastrous expedition to Africa, of which he has written the history.

ANDRADA, PEDRO FERNANDEZ D', a writer on military affairs, lived at Seville about A. D. 1600.

ANDRADA, PAOLO GONZALEZ D', one of the most eminent poets of Portugal, flourished in the 17th century.

ANDRADA Y SYLVA, BONIFACIO JOZÉ D', a Brazilian mineralogist and statesman, generally recognized as the founder of the independence of his native country, was born at Villa da Santos in 1765. He studied first in Brazil, then at Coimbra in Portugal, where his talents attracted so great attention, that at the age of twenty-five he was appointed travelling naturalist to government. In this capacity he visited the greater part of Europe, inspecting the principal mining establishments, and perfecting himself under the tuition of Lavoisier, Fourcroy, Jussieu, Haiüy, Werner, and Volta. On this journey he became intimately acquainted with the great Humboldt. On returning from this expedition he was appointed professor of mineralogy and geognosy at Lisbon, and inspector-general of mines in Portugal. During the French invasion he commanded a regiment

of volunteers, formed from amongst the students of Coimbra. After the expulsion of the enemy he returned to his scientific pursuits, and in 1812 was elected secretary to the academy of Lisbon. In 1819, however, he quitted Portugal and returned to his native country, where he soon took an important part in public affairs. The Portuguese government having issued orders to cancel the constitution of Brazil, and to recall Dom Pedro the regent, a junto was formed at San Paolo for the purpose of resistance. Andrada presented a remonstrance on their behalf to the regent, which, backed by the energetic demonstrations of the inhabitants of Rio de Janeiro and of Minas, proved successful. The independence of Brazil was finally proclaimed in 1822. After holding the office of minister of foreign affairs, he was banished to France, where he amused himself with poetry. In 1829 he was recalled, became reconciled to the Emperor Pedro, and spent the rest of his days in peaceful retirement. He died at Nictheroy in 1838.—J. W. S.

ANDRAGATHIUS, a Roman general, who served in Gaul under the Emperor Maximus, A.D. 383.

\* ANDRAL, GABRIEL, an eminent French physician, was born at Paris in 1797. He rose to distinction at an early age, and in 1839 he succeeded Broussais as professor of pathology to the medical faculty at Paris. He has published several works on morbid anatomy, auscultation, &c., and some important researches on the chemistry of the blood, in conjunction with J. Louis Gavarret, author of "General Principles of Medical Statistics."—W. B.

ANDRASSY, a noble family of Hungary, two members of which, Julius and Mano, served with distinction in the national armies in 1848.

ANDRE' L'ABBÈ, a theological author of Marseilles, and librarian to the chancellor D'Aguesseau, lived in the latter part of the last century.

ANDRE' D'ARBELLES, a political writer of France, born in 1770; also known as A. DE MONTLUEL. Died in 1825.

ANDRE', CHARLES, a barber of Paris, to whom the authorship of Dampierre's tragedy on the earthquake of Lisbon has been falsely ascribed.

ANDRE', CHRISTIAN KARL, an educational writer of Germany, was born in 1763 at Hildburgshausen, conducted several schools in Schnepfenthal, Gotha, and Bruenn, and died at Stuttgart in 1831.

ANDRE', DU BOIS or SYLVIUS, lived near Arras in the twelfth century, and wrote a chronicle of the kings of France.

ANDRE', EMIL, a German arboriculturist, born at Schnepfenthal in 1790, wrote on the management of forests.

ANDRE', FRANÇOIS, or SAINT ANDRE', a French medical writer who lived at the close of the 17th and the beginning of the 18th centuries, and became physician to Louis XIV.

ANDRE', HÉLIE, a grammarian of Bourdeaux, who lived in the 16th century, and published a translation of the odes of Anacreon.

ANDRE', JOHANN, an accomplished musician, and the founder of the eminent firm of music-publishers in Offenbach, at which city he was born in 1741. His family had an extensive silk factory in this place, and designing that he should follow the same trade, they discouraged his early predilection for music. When he was twelve years old, a young friend of his who went periodically to Frankfort to take lessons on the violin, repeated these to André on his return. He had not even this poor advantage in his study of the harpsichord and of composition, in which he was left entirely to his own resources. In 1760, during a visit to Frankfort, he was so charmed by the performances of the Italian and French opera companies he heard there, that, having had already some practice in vocal writing, he composed an opera, which was produced with such success, that it was very shortly followed by another; and this being equally fortunate, he was invited to Berlin, where he not only reproduced these, but also wrote several more. Here he pursued his theoretical studies under the celebrated Marpurg. Besides being a successful composer, he is spoken of as a good pianist. He is said to have been an intimate friend of Mozart, but I can find no mention of him in any biography of this master to which I have access, and his fifteen years' greater age, and his habitual residence in different parts of Germany from those where Mozart chiefly lived, renders the close intimacy of these two somewhat doubtful. He had three sons, the youngest of whom, Anton, succeeded him in the music warehouse of Offenbach. He died in 1799.—G. A. M.

ANDRE', J. ANTON, youngest son of Johann André, and his successor in the music warehouse in Offenbach, was born in 1775. He evinced very early a great talent for composition, as is proved by his first publication, a "Set of Six Minuets for Full Orchestra," which appeared when he was but thirteen years of age. He wrote very voluminously, and his music is of an earnest and genuinely artistic character, displaying contrapuntal fluency, and a command of technical resources that exceed the originality and power of invention it evinces, but never devoid of grace, if sometimes deficient in freshness. An admirable specimen of his ability is his Mass in E flat; but the most popular of all his works appears to be his setting of the whole of Bürger's wonderfully suggestive and characteristic ballad of Lenore, I believe for a single voice, which is a general favourite throughout Germany. His "School of Composition," in four volumes, is a work very greatly esteemed. He held the appointment of kapellmeister to the grand-duke of Hesse. In 1802 he invented, or at least was the first to make use of, a method of musical lithography, which, at the time, had great success. He is most generally known for his publication of many posthumous works of Mozart, which he obtained by purchase from Herr von Nissen, the second husband of the composer's widow. The musical skill of André is a valuable guarantee to the world of the authenticity of these publications, since all are willing to receive, on the authority of such an artist, what many might have been disposed to question on the mere dictum of a tradesman; but we owe no less to his enterprising spirit in this latter capacity, than to his judgment in the former, the possession of many most interesting relics of the great master. He died in the year 1842.—G. A. M.

ANDRE', JOHN, an English military officer, was born in London in 1751. He was at first destined for commercial pursuits, but soon gave up this view and joined the army. In 1775 he was taken prisoner at the surrender of St. John's in America. On his release, he rapidly rose to the post of adjutant-general to Sir H. Clinton, who then commanded the British forces. The American general, Arnold, being disgusted with his associates, wished to go over to the Royalist party, and to betray the forts and stores in his hands to the British. André was appointed by Clinton to make the necessary arrangements with Arnold, and for that purpose visited the American camp in disguise. On his return, while already within sight of the British lines, he was seized by three Americans, and his presence of mind for a moment forsaking him, he neglected to produce the safe-conduct furnished him by Arnold. Their suspicions were roused, the unfortunate officer was searched, and the plans and despatches concealed about his person being found, he was sent as a prisoner to the American head-quarters. A council of war sentenced him to be hanged as a spy, which was accordingly done on the 2nd of October, 1780, at Tappan, in the State of New York. His fate, though in accordance with the laws of war, excited the sympathy even of the Americans. In addition to the military talents which had won for him so early promotion, this young officer possessed considerable merit as an artist.—J. W. S.

ANDRE' OF LONGJUMEAU, a Dominican monk, who lived in the 13th century, and who was sent by Louis IX. of France on a diplomatic mission to the khan of the Tartars.

ANDRE', RUDOLPH, an agriculturist of Gotha in Germany, who was born in 1792, turned his attention to the improvement of the breed of sheep, and died in 1825.

ANDRE' DE SAINT NICOLAS, a Carmelite monk of Lorraine, born in 1650.

ANDRE', YVES MARIE, born at Chateaulin in Brittany, 22nd May, 1675; died 26th February, 1764. The life, character, and writings of André are sufficiently remarkable to secure him a permanent place in the history of religion, literature, and philosophy in France. His chief works have been published recently, with an introduction by Cousin, in the *Librarie de Charpentier*. Endowed with a spirit eminently religious, his earlier predilections were towards the church, and he resolved to enter the powerful "Society of Jesus." Disregarding the warnings of his friends and relatives, who discovered an utter incompatibility between the moral independence of the young André and the stern ordinances of the jesuits, he followed the dictate of inclination, and so prepared the way for conflicts and misery during the greater part of his life. In an hour evil for his temporary peace, he learned wisdom from Descartes, and nourished a personal attraction towards Malebranche which no

circumstances could shake. Although promoted by the Superiors of his Society,—who have ever known that flattery is a more certain salvation against heresy than violence—André retained although he did not feel it necessary to avow his convictions; only remaining suspiciously passive during that Anti-Cartesian war, of which in Jesuit language the issue must be, the destruction of Descartes, or the ruin of religion, of the society, and the church. Suspected of the authorship of a pamphlet reflecting on the conduct of his order, André's papers were searched, and to the horror of his superiors, they found among them the MSS. of an admiring life of Malebranche. André was sent to the Bastille,—flattery having quite failed. Unhappily force succeeded, for the rebellious father made every submission to his superiors. The days of Jesuit ascendancy, however, were happily numbered; and André passed the latter years of his long life in contemplation and peace. He wrote much. Chiefly distinguished by his treatise on the Beautiful, he has left many other writings replete with interest. See, as above, the volume edited by Cousin. Persecution had not taught him intolerance. He was one of the earliest in France who succeeded in penetrating to the root of our reciprocal obligations. His opinions were for the most part those of his friend Malebranche. He did not appreciate Bacon, he disliked Locke, and he wholly undervalued Spinoza. Still, his writings will always be read by students of the history of philosophy: they throw no slight light, also, on the condition, at that epoch, of thought and morality in France.—J. P. N.

ANDREA, ALESSANDRO D', an Italian litterateur, born at Barletta in Naples in 1519, author of a historical work entitled "Della Guerra di Compagna di Roma e del regno di Napoli nel Pontificato di Paolo IV., l'anno 1556 et 1557."

ANDREA OF CYRENE, the leader of a Jewish revolt in the second century, who, after committing frightful atrocities, was defeated by Martius Turbo.

ANDREA DA PISA or ANDREA PISANO, one of the greatest amongst the early Italian sculptors and architects, was born at Pisa in 1270. Having, by the study of nature and through the example of the antique, freed himself from the formal German influence which had crept into the school of Nicola and Giovanni Pisani, Andrea rose to so great a fame that the Florentines invited him to their city to carry out the designs of the great Giotto for the façade of Santa Maria del Fiore. He so fully succeeded in giving satisfaction to his employers, that they presented him with the freedom of the city, and intrusted him with all the public works of the day. The most important of those he carried out are part of the fortifications of Florence, the fort of Scarperia at the Mugello, the decorations of the Campanile of Santa Maria del Fiore, and the tabernacle of San Giovanni, but, above all, the bronze gates of the central entrance of the Baptistery. These were afterwards removed to the side entrance, to make room for the still greater wonder—the gates by Ghiberti. Nor were his labours limited to the embellishing and enriching of Florence, as he worked also for San Marco of Venice, for the Baptistery of Pistoja, &c. He was, moreover, a good painter, a distinguished poet, and an excellent musician. Died at Florence in 1345, the object of universal love and admiration, leaving a worthy successor in his son Giovanni (called Nino). See NINO PISANO.—R. M.

ANDREA D'ASSISI, surnamed L'INGEGNO, an Italian painter, who was rather the companion and assistant of Perugino than his pupil. They worked long together, and Andrea adhered to Perugino's manner in its severest form. Born 1479; died 1555.—R. M.

ANDREA DE CIONE or ANDREA ORCAGNA. See ORCAGNA.

ANDREA DEL SARTO. See VANNUECHI.

ANDREA DI CASTAGNO, a Tuscan painter, born 1406, died 1480. Having painted on the walls of the Podestà at Florence the execution of the archbishop of Pisa and his confederates in the conspiracy of the Pazzi, he was surnamed ANDREA DEGLI IMPICEATI. He was pupil of Masaccio, and one of the best and most active painters of the time. But a dreadful spot hangs over his name. Whilst working with Domenico Veneziano in one of the chapels of Santa Maria Novella, he became aware of Domenico's knowledge of the use of oil colours. Feigning friendship, Andrea possessed himself of poor Domenico's secret, and then murdered him. The horrid deed remained unexplained until Andrea confessed it on his deathbed.—R. M.

ANDREA DI JACOPO D'OGNIBENE, an Italian sculptor

in metals, of the 14th century, completed in 1316 the bas-relief for the altar of San Jacopo of Pistoja, representing fifteen subjects from the life of Christ, a work of remarkable ingenuity.

ANDREA, GIOVANNI (BOSSI), an Italian bishop of the 15th century, librarian and secretary to Sextus IV.

ANDREA GOBBO or ANDREA DEL SOLARI, a Milanese painter, who flourished about 1530. He belonged to the school of Gaudenzio Ferrari, and was noted as a good colourist.

ANDREA, ONOFRIO D', a Neapolitan poet of the seventeenth century.

ANDREÆ, ABRAHAM, the thirty-third archbishop of Upsal, was born in Angermannland, became rector of the university of Stockholm, opposed King John in his attempts to re-establish Romanism, lived thirteen years in exile, was recalled and raised to the primacy on the accession of Sigismund, but was finally deposed and imprisoned in Gripsholm. Died in 1607.—J. W. S.

ANDREÆ, GIOVANNI, a writer on canon law, who was born at Musello, near Florence, in 1275, and died in 1347.

ANDREÆ or ANDRESSON, GUDMUND, an Icelandic author, born at Biard, wrote a work in favour of polygamy and concubinage. He died in 1654 at the early age of twenty-four.

ANDREÆ, JACOB, a celebrated Lutheran divine of the sixteenth century, was born 25th March, 1528, at Waiblingen in Wurtemberg. His father was a smith, which led to his being sometimes called by his contemporaries *Schmidlin* or *Fabricius*. Having studied at Stuttgart and Tübingen, he was in 1549 admitted deacon at Stuttgart; in 1552 he became superintendent in Göppingen; and in 1562 he rose to be provost of St. George's, Tübingen, and chancellor of the university, in which offices he continued till his death, on 7th June, 1590. He was one of the ablest reformers and theological writers of his time, and is remembered as the principal author of the "Formula Concordiæ," one of the standard documents of the Lutheran church, by which he hoped to stifle the approximate Calvinism which had sprung up in that church from the teaching of Melancthon and the Melancthonian professors of Wittemberg and Leipzig. Whatever good or ill attended the introduction of that rigid formula was attributed mainly to Andreæ. It proved anything but a formula of concord, and it is generally acknowledged that by this, the main work of his life, he increased rather than remedied the divisions of the protestant church. His writings were very numerous—upwards of one hundred and sixty, including sixty-six disputations—and are almost all of a polemical character, directed against Catholics, Calvinists, and Flaccians. They have now nothing more than a historical value, as exhibiting the spirit of the age in which Andreæ lived, and of its different theological schools.—P. L.

ANDREÆ, JOHANN GERHARD REINHARD, a Hanoverian apothecary of some eminence in science, who was commissioned by George II. to analyse the various soils of the royal domains in Hanover. He died in 1793.

ANDREÆ, JOHANN VALENTINE, a German scholar of the seventeenth century, was born 17th August, 1586, at Herenberg in Wurtemberg, where his father, a son of the celebrated theologian, Jacob Andreæ, was Lutheran pastor and superintendent. After finishing his philosophical and theological studies in Tübingen, he travelled through Switzerland, Italy, France, and Austria,—was admitted deacon at Vaihingen in 1614, appointed superintendent in Calw in 1620, promoted to be court-preacher and ecclesiastical councillor in Stuttgart in 1639, and finally, in 1650, rose to be prelate in Bebenhausen, and, in 1654, prelate and general superintendent in Adelberg. In 1642, Augustus, duke of Brunswick, chose him to be one of his ecclesiastical councillors; and with this prince Andreæ carried on for many years an active correspondence on the spiritual affairs of his duchy. He died at Stuttgart, 27th June, 1654. He was a man of manifold culture and great learning, and far before his age in free and clear views of the moral world and the wants of mankind. Unlike his celebrated grandfather, he did not devote his strength to the interests of dogmatic theology; but, while retaining the strictness of Lutheran orthodoxy, he occupied himself in reviving practical piety and moral discipline. His lot was cast in the calamitous days of the Thirty-years' War, when not only the material, but the moral interests of the German fatherland suffered severely; and when the Lutheran church had fallen into a condition of dead orthodoxy and rigid formalism, but little calculated to restrain or heal the demoralization inseparable from a protracted war. Andreæ devoted his life and genius to the cure of these evils.

both in the state and in the church. His publications were very numerous, both in Latin and German, but all of small bulk, with a view to their wider diffusion both among the learned classes and the general mass of his countrymen. His principal works were: "Menippus, sive satyricorum dialogorum centuria;" "Subsidia sacræ et literariæ rei;" "Theophilus, seu de religione Christiana colenda;" "Syntagma de curiositatis pernicie;" "Idea Societatis Christianæ;" "Invitatio ad fraternitatem Christi." He left also an interesting autobiography, which, was translated into German, and published by D. C. Seybold in 1799. Some of his writings make it probable that he was a member of the secret fraternity of the Rosicrucians, which professed the same practical principles.—P. L.

ANDREÆ, TOBIAS, a physician and philosopher of Bremen, who lived in the seventeenth century, and suffered persecution. He was a zealous adherent of Descartes, and professed to have invented an infallible process for embalming dead bodies.

ANDREANI, ANDREA, surnamed from his birthplace IL MANTOVANO, a lively and correct painter of the Roman school, who also distinguished himself as an engraver on wood. Born in 1540; died in 1623.

ANDREAS, an archbishop of Krayna in Carinthia, who lived in the latter part of the fifteenth century. Having been sent to the court of Rome by the Emperor Frederick III., he boldly rebuked the vices and corruption of the clergy, and the pope himself. For this he was imprisoned; and when liberated by the intervention of the emperor, he hastened to Basle, attempted to convoke a general council to reform the church, and sent to all the courts of Europe a protest against the conduct of the pope. He was at last thrown into prison, where, after some months, he was privately strangled in 1484.—J. W. S.

ANDREAS, JUAN, a Spanish jesuit, was born in Valencia in 1740, devoted himself to science and literature, became librarian to the king of Naples, and died in 1817. He is the author of a great number of scientific and literary works.

ANDREAS, VALERIUS, a Flemish bibliographer, was born at Brabant in 1588, became librarian to the university of Louvain, and died in 1656.

ANDREASSI, YPPOLITO, a Mantuan painter of the sixteenth century, a pupil of Giulio Romano.

ANDREHAN, ANDREYHON, or ANDENCHAN, ARNOUL, a marshal of France of the fourteenth century, who distinguished himself in many engagements with the English and the Spaniards.

ANDREINI, FRANCESCO, an Italian comedian, who lived at the end of the 16th and beginning of the 17th centuries.

ANDREINI, GIOVANNI BATISTA, son of Francesco and Isabella, born at Florence, 1568, died at Paris, 1652. He wrote a drama on the fall of man, which is said to have suggested to Milton his "Paradise Lost."

ANDREINI, ISABELLA, an Italian poetess, the wife of Francesco Andreini, was born at Padua in 1562, became distinguished for talent and beauty, and died at Lyons in 1604.

ANDREINI, PIETRO ANDREA, a learned antiquary of Florence, was born in 1650, and died in 1720.

ANDRELINI, PUBLIO FAUSTO, an Italian poet of the fifteenth century, was professor of classical literature in the university of Paris. His poems were said by Vossius to consist of a drop of sense lost in a stream of words.

ANDREOLI GIORGIO DA GUBBIO, an Italian painter and sculptor of the beginning of the sixteenth century. He is especially noted for his beautiful terra-cottas, in the style of Lucca della Robbia, whose only successful imitator he was. His family continued working in Majolia-ware until the end of the century, at Urbino.—R. M.

ANDREOSI, ANTOINE FRANÇOIS, Count, was born at Castelnaudary in 1761, and died at Montauban in 1828. He served with some distinction under Napoleon as an artillery officer and military engineer.

ANDREOSI, FRANÇOIS, a French engineer, who assisted Riquet in constructing the canal of Languedoc. He was born at Paris in 1633, and died in his fifty-sixth year.

ANDREOZZI, GAETANO, a relation and pupil of the celebrated Jomelli. He was born about the middle of the last century, and held the office of maestro di capella to the king of Naples, in whose capital he acquired great popularity as a dramatic composer, which rapidly spread all over Italy. His opera of "Catone" was produced at Florence in 1787, and that of "Agesilao" at Venice the year following. Besides these, his "Arbace" and his

"Olimpiade" were the most esteemed among his dramatic works. From the character of his subjects, we may suppose that his predilection was for the tragic style. Such an inclination would best enable him to succeed, as we are told he did, in his oratorio of "La Passione di Gesù Cristo." He is said also to have written much chamber music, among which his violin quartets may be highly considered.—G. A. M.

ANDRES, ANTONIO, a Franciscan monk of Arragon, of the 13th and 14th centuries, a zealous disciple of Duns Scotus.

ANDRES, BONAVENTURA JUAN, a jesuit of Nürnberg, who, after the suppression of his order, became professor in the university of Würzburg, and died in 1822.

ANDRES, CARLOS, a Spanish advocate and author, brother of Juan, was born in 1753, and died in 1820.

ANDRES DE GUSSEME, THOMAS, a Spanish archæologist and numismatist of the last century.

ANDRES DE SAN NICOLAS, an Augustine monk of Peru in the seventeenth century, who was historiographer of his order, and provincial-general of New Grenada.

ANDRES DE USTARROZ, JUAN FRANCISCO, a Spanish historian, who lived in the earlier half of the 17th century. He has left numerous works.

ANDRES, JUAN, a Spanish writer on philosophy, was born in 1740; died 1817.

ANDREW, one of Christ's apostles, and brother of Simon Peter, was a native of Bethsaida in Galilee. Originally a disciple of John the Baptist, he was led by what he heard from his master to visit Jesus, and becoming fully persuaded that he was the Messiah, transferred his allegiance to him. One of the first steps which he took after reaching this conviction, was to conduct his brother Simon to the Saviour, and both of them, after a brief period, became his stated followers, in compliance with an invitation from himself. Although Andrew seems, from several circumstances mentioned in the gospels, to have enjoyed much of the confidence of Christ, yet he never took the same lead among the disciples as his brother. It is but little information that is to be found regarding him in Scripture. On Philip's application, he concurred with him in introducing to our Lord certain Greeks who were desirous of seeing him. He was one of the four who obtained from Christ private information regarding the destiny of the temple. Tradition assigns to him Greece, Asia Minor, Scythia, Thrace, as scenes of labour, and alleges that he suffered martyrdom at Patræ in Achaia. He was long regarded as the patron saint of Scotland, and the cross of St. Andrew was the badge of the Knights of the Thistle.—W. L.

ANDREW, three kings of Hungary, of the house of Arpad bore this name:—

ANDREW I. was the fourth sovereign of Magyars, and appears to have reigned from 1046 to 1061. He perished in battle against the Poles, having been betrayed by his own subjects.

ANDREW II. the eighteenth king of the dynasty, came to the throne in 1205. He signed in 1222 the celebrated "Golden Bull," the foundation of the Hungarian constitution, and died much esteemed in 1235.

ANDREW III. the twenty-second and last sovereign of the race of Arpad, succeeded to the crown in 1290; and after vanquishing several rival claimants, died in 1300.—J. W. S.

ANDREW or ANDREASSO OF HUNGARY was born at Baden in 1324, and succeeded to the throne of Naples. In 1345 he was strangled at the instigation of his wife Joanna.

ANDREW, ALEXANDROWITCH, a grand-duke of Russia, a son of Alexander Newski, who flourished in the 13th century, and was engaged in civil war against his brother Demetrius.

ANDREW, JAROSLAWOWITCH, a younger brother of Alexander Newski, rebelled against the Moguls, and died 1264.

ANDREW, HYACINTHO, a Spanish physician of Cataluna, professor at the college of Barcelona in the 17th century.

ANDREW, JAMES, a mathematician of Aberdeen, was born in 1774, and died at Edinburgh in 1833. He was head-master of the military college at Addiscombe. He is the author also of "Institute of Grammar, &c., &c.," "Key to Scripture Chronology," and published some astronomical tables.

ANDREWE, LAURENCE, a native of Calais, who settled as a printer in London at the beginning of the sixteenth century, and translated a variety of Dutch works into English.

ANDREWES, LANCELOT, D.D., bishop of Winchester, was born in the city of London, in the parish of All Saints, Barking, in the year 1555, "of honest and religious parents." He was

the eldest of thirteen children, of whom several died young, and two, Thomas and Nicholas, in the same year with himself. Having been well grounded, first at the Coopers' Free School in Radcliffe by Dr. Ward, and, second, at Merchant Tailors' School by Dr. Mulcaster, he entered Pembroke Hall, Cambridge, A.D. 1571; became B.A. in January, 1574-5; Fellow of Pembroke Hall, October, 1576; M.A., 1578; B.D., 1585; D.D., 1590. At college he soon acquired so great a reputation for learning, that in his first year he was selected as a scholar of Jesus College, Oxford, which had been lately founded. He was ordained deacon in 1580, and became, successively, vicar of St. Giles, Cripplegate; prebendary and residentiary of St. Paul's; prebendary of Southwell; master of Pembroke Hall; prebendary and dean of Westminster; and bishop of Chichester (1605), Ely (1609), and Winchester (1618). He enjoyed the favour and respect of three sovereigns, viz., Elizabeth, James I., and Charles I. He was master of Latin, Greek, Hebrew, Chaldee, Syriac, Arabic, and fifteen modern tongues; so that Fuller quaintly, and perhaps extravagantly says, "the world wanted learning to know how learned this man was: so skilled in all (especially Oriental) languages, that some conceive he might, if then living, almost have served as an interpreter-general at the confusion of tongues."

This acquaintance with language and divinity, and the known holiness of his life, caused him to be chosen as one of the translators of the English Bible, whose "uncommon beauty and marvellous English" is the admiration even of those who refuse to adopt it. The portion assigned "to Andrewes and his company was the Pentateuch, and the history from the book of Joshua to the 1st book of Chronicles exclusive."—(*Collier*.) As a preacher, it would be difficult to find his superior. He never leaves a subject till he has completely exhausted it: drawing the happiest illustrations from every source; comparing, explaining, enforcing, with a mixture of quaintness, learning, earnestness, and reverence, which cannot fail to please, interest, and persuade. His sermons and numerous works, with a life, and various other documents respecting him, have been lately reprinted in the "Library of Anglo-Catholic Theology," by Mr. J. H. Parker of Oxford. His "Devotions," which are well but not sufficiently known, were composed in Greek and Latin, for his own private daily life; and for some time before his death the MS. was scarcely ever out of his hands. It was found worn in pieces by his fingers, and wet with his tears. "Indeed," says Bishop Buckeridge, "his life was a life of prayer. Great part of five hours every day did he spend in prayer." And of his end it is said by the same writer, "When he could pray no longer with his voice, yet by lifting up his eyes and his hands he prayed still; and when both voice and eyes and hands failed in their office, then with his heart he still prayed, until it pleased God to receive his blessed soul to himself."—(*Funeral Sermon*.) He died Sept. 25, 1626, aged 71; and was buried on Saturday, Nov. 11, in the parish church of St. Saviour's, Southwark (close to London Bridge), where the original monument, with a recumbent effigy of the bishop, may still be seen. A very elegant Latin epitaph, which no longer remains in the church, is preserved in his works, and is prefixed, with a portrait, to the folio edition of his sermons. He was never married; and left nearly the whole of a very large property in various charities, especially to the parishes of which he had been minister, or in which he had lived. The whole sum thus bequeathed in his will was £6326. He had, however, not reserved his liberality till after death, "giving his goods to the poor when he could keep them no longer," but during life had been always most munificent; for, besides public charities, he gave in private alms, in the last six years alone, £1340. May "the fame of him," indeed, "stir up many to follow his example."—T. S. P.

ANDREWS, GERARD, D.D., dean of Canterbury, and rector of St. James's, Piccadilly, was born at Leicester, April 3, 1750, and died June 2, 1825.

ANDREWS, JAMES PETIT, an English historian, was born at Newbury, in Berkshire, in 1737, distinguished by his exertions on behalf of children apprenticed to chimney-sweepers, and died in 1797. He is the author of a "History of Great Britain, connected with the Chronology of Europe;" a "Continuation of Henry's History of Great Britain;" and of "Anecdotes, Ancient and Modern, with Observations."—J. W. S.

ANDREWS, JOHN, a voluminous writer on politics and history, now almost forgotten. He died about 1809.

ANDREWS, PETER MILES, an English dramatic author of little merit, who died in 1814.

\* ANDREWS, THOMAS, M.D., F.R.S., M.R.I.A., vice-president of Queen's college, Belfast, is a native of that town, where he received the first rudiments of his education. Thence he went, while still a youth, to France; and in the course of his education there, had the advantage of studying under M. Dumas of Paris, who was then taking the high position he now occupies among the distinguished chemists of that country. Returning to Ireland he entered the university of Dublin, and in the year 1835 he obtained the degree of doctor of medicine in the university of Edinburgh. From an early period of his life Dr. Andrews devoted himself to scientific investigations; and the important results of his labours have been, from time to time, published in the "Transactions of the Royal Irish Academy," the "Philosophical Transactions," and various scientific journals. His attention was for many years, in an especial degree, directed to the investigation of the important and difficult subject of the heat developed in chemical combination; and for his earlier labours in this field of research, he was, in 1845, awarded a royal medal by the council of the Royal Society of London. The council, in its report on making this award, states, "Dr. Andrews may be said to have first opened the subject of heat evolved in chemical combinations, by a valuable paper, published three years ago, which was followed by a second, and attracted to the inquiry the attention of the French Academy, who lately proposed it as the subject of the great Monthyon prize, with special reference to the experiments of Dr. Andrews." The report proceeds to describe the subsequent results obtained by Dr. Andrews in this subject, and we quote from it the opinion the council entertained as to the value of these investigations:—"This extension or generalization of his former law is possessed of much chemical interest, and is the first great step in a line of inquiry of which the further pursuit is greatly to be desired, from the light which it may be expected to throw upon the fundamental laws of chemical combination." Dr. Andrews afterwards received a reward of one thousand francs from the Academy of Sciences, Paris, for his researches on the same subject. The latest scientific work published by Dr. Andrews is an investigation into the nature and properties of that singular body to which its discoverer, M. Schönbein, has given the name of *ozone*. Upon the establishment of the Queen's colleges in Ireland in 1845, Dr. Andrews was appointed vice-president of the college at Belfast, and in 1849 was selected to fill the chair of chemistry in the same college. In the same year he was elected a fellow of the Royal Society.—J. F. W.

ANDREZEL, BARTHELEMY PHILIBERT PICON D', a French priest, inspector-general of the university; died in 1825.

ANDRIA, NICOLA, a learned physician of Massafra in Italy, afterwards professor at Naples, who wrote on a variety of physiological and chemical subjects. He died in 1814.

\* ANDRIAN-WARBURG, VICTOR, Baron von, an Austrian political writer, born in 1813.

ANDRIAS, JUAN, an author of *Xativa* in Valentia, flourished in the fifteenth and sixteenth centuries, and published a controversial work against Mohammedanism.

ANDRIES, JODICUS, a jesuit, born at Cortryek in 1588, died at Brussels in 1658; wrote an immense host of sermons, both in Latin and Dutch.

ANDRIEU, a monk, who lived before the 13th century; the author of a work entitled the "Penitence of Adam."

ANDRIEU, BERTRAND, a French medalist, was born at Bordeaux in 1761, and died in 1822.

ANDRIEUX, FRANÇOIS GUILLAUME JEAN STANISLAS, professor of belles-lettres in the Polytechnic School of Paris, was born at Strasburg in 1759. He received his early education at the college of Cardinal Lemoine, and at the age of seventeen commenced the study of law at the École de Droit. In 1741 he was admitted *avocat* by the parliament of Paris, and the following year produced his first play, entitled "Anaximandre," which was performed at the Italian theatre. The death of his father having left him to his own resources, he accepted the office of secretary to the Duc d'Uzès; but finding the duties non-congenial, he returned to law, and soon obtained some reputation by his defence of the Abbé Mulot, who was implicated in the celebrated case of the diamond necklace. The defence was published in 1786, and in 1787 he brought out his comedy, "Les Etourdis," which obtained the favourable criticisms of La Harpe and Palisot. The success of this drama induced Andrieux to devote himself more exclusively to literature than to law; and when the great Revolution broke out, he hailed its appearance in some

verses descriptive of the abuses that had so long prevailed in France. Adopting the revolutionary side of politics, he resigned, in 1791, an appointment in the government office for the liquidation of the national debt, and soon became *chef-de-division*. In 1792 he produced his "Epistle to the Pope," which was answered by Fabre d'Eglantine, and the following year resigned his office under government on account of the prevailing anarchy. Three years later he was elected a judge of the Court of Cassation, of which court he became vice-president, with a pension of two thousand francs, as a tribute to his literary eminence. He was also chosen one of the early members of the National Institute, in the class of letters, and read several of his papers before the large and brilliant audiences that assembled on the more public occasions. In 1798 he was elected a member of the Council of Five Hundred, and in this capacity sided with those who endeavoured to avoid political extremes. He devoted his pen to the great subject of national education, pleading the cause of common sense against the violent theorists of the day, and affirming that the great end of education was to make men reasonable and not merely reasoners. In 1799 he was appointed to the *Tribunat*, the only French assembly that conducted its deliberations in public.

Hitherto Andrieux had pushed his fortunes partly in the legal and partly in the political world. Circumstances now compelled him to devote himself to literature. In his character of tribune he had opposed the introduction of the new code, and Napoleon, whose name the code was destined to bear, resolved to remove all obstacles to his favourite scheme. In September, 1802, Andrieux received his formal dismissal, and closed his political career. He was offered the place of censor of the press by Fouché, but declined it with a jest—in allusion to his own writings—that he was "one of the executed, and therefore could not be executioner." His merits, however, were not overlooked by Joseph Bonaparte, who appointed him his librarian, with a salary of six thousand francs, which he enjoyed for ten years. He was also made librarian to the senate, with an official residence. In 1804 a chair of belles-lettres was founded at the Polytechnic School, and Andrieux was chosen as the first professor. He there prepared the course which at a later period was given with great success at the college of France. In 1814 he was appointed to the chair of French literature in the college of France, and being endowed by nature with a weak voice, he said that "he made the audience hear by first making them listen." The last twenty years of his life were devoted to an extensive course of lectures on French literature, and to various labours in connection with a new edition of the National Dictionary. After the death of Auger in 1829, he was appointed perpetual secretary of the French Academy, and his reports on the treatises sent in to compete for the Academy's prizes, were so distinguished by elegance, that on one occasion it was observed that the prize (ten thousand francs) should have been given to the writer of the report, rather than to the writer of the essay. In 1832 his strength began gradually to fail, but no entreaty could induce him to abandon his labours. He would "die at his post," he said, "as that was the only way in which he could now be useful." He expired in the spring of 1833, surrounded by his children, and his remains were interred at Pere la Chaise. Andrieux published fifteen plays; a Course of Grammar and Belles Lettres; a Report on the continuation of the Dictionary of the Academy; a Course of the Philosophy of Belles Lettres, and a large number of miscellaneous writings. He affected the classic style, and wrote with elegance and point; but his works contain little to procure a permanent reputation.—P. E. D.

ANDRIOLLI, MICHEL ANGELO, a physician of Verona, of the 18th century, belonged to the school of the iatro-chemists. In accordance with Sylvius de la Boe, he ascribes intermittent fevers to an improper combination of the bile with the pancreatic fluid.

ANDRISCOS, PSEUDOPHILIPPUS, an adventurer, who pretended to be the son of Perseus, the last king of Macedonia. After a wandering career, he succeeded in gaining possession of Macedonia, and obtained some advantages over the Romans; but growing careless and tyrannical, he was defeated by Metellus at Pydna, taken prisoner, and put to death, 147 B.C.

ANDROCLES, a Roman slave, who is said to have formed a friendship with a lion in the deserts of Africa. Being afterwards captured and condemned to die in the arena, the lion sent to devour him proved to be his old acquaintance, which recognized him at once, and loaded him with caresses.

ANDROCLES, an Athenian demagogue, the enemy of Alcibiades, was assassinated about 410 B.C.

ANDROCLES, a king of Messena, who died about 740 B.C.

ANDROCLUS, a king of Athens, who led a colony into Asia Minor about 1000 B.C.

ANDROCYNES, a Greek physician to Alexander the Great.

ANDROCYNES or CIZYCUS, a painter of the Ephesian school, and a rival of Zeuxis. He died about 320 B.C.

ANDROMACHE, the wife of Hector, son of Priam, after whose death she married, first Pyrrhus, the son of Achilles, and afterwards Helenus, a brother of her first husband.

ANDROMACHUS, the Elder, a Cretan, who lived about A.D. 60, and was physician to the emperor Nero. He is said to have invented the strange medicine called Theriaca Andromachi, or Venice treacle, a medley of seventy ingredients, used till very lately as an antidote to all poisons, and a remedy for all pestilential diseases.

ANDROMEDA, a mythological personage, said to have been the daughter of Cepheus, king of Ethiopia, and to have been rescued from a sea-monster by Perseus.

ANDRONICUS, the name of four emperors of the East:—

ANDRONICUS I., COMNENUS, a grandson of Alexis I., was born in 1110, and died in 1185. In early life he was imprisoned for twelve years on account of his attempts on the life of the reigning prince, Manuel. He escaped, became reconciled to the latter, offended anew, and was banished. On the death of Manuel he seized upon the throne, assassinated Alexis, the rightful heir, and deluged the capital with blood. At last he was deposed by an insurrection, and put to death with frightful torments.

ANDRONICUS II., PALEOLOGUS, was born in 1258, became associated with his father in the empire in 1273, succeeded to the undivided sovereignty in 1282, and died in 1332. His first act was to cancel the steps taken by Michael, his father, towards a reconciliation between the Greek and Latin churches. He lost great part of his Asiatic dominions to the Turks, who, under Othman, penetrated to the Bosphorus and ravaged Scio. Andronicus called in the aid of Roger de Flor, a leader of mercenaries, who gained some successes over the Turks; but becoming himself dangerous in turn, was assassinated by order of the emperor. Andronicus was next involved in war with his grandson, who ultimately compelled him to resign the crown and retire to a monastery.

ANDRONICUS III., a grandson of the former, was born in 1295, succeeded to the throne in 1332, and died in 1341. He gained several advantages over the Turks and Bulgarians, and reconquered Scio; but in 1333 he lost Nicea, which the Turks made their capital. A general league formed against these invaders proved useless.

ANDRONICUS IV. See PALEOLOGUS.—J. W. S.

ANDRONICUS was also the name of three emperors of Trebizond:—ANDRONICUS I., GUIDO COMNENUS, succeeded to the throne in 1222, became tributary to the sultan of Iconium, and died in 1235.—ANDRONICUS II. died 1263, after a reign of three years.—ANDRONICUS III., COMNENUS, succeeded in 1330, and reigned two years.—J. W. S.

ANDRONICUS, a diplomatist in the service of Attalus II., king of Pergamus, who lived about 150 B.C.

ANDRONICUS, ANGELUS, a nephew of the Emperor Alexis Comnenus, was born in 1080, and died in 1118.

ANDRONICUS CAMATERUS, a Greek author, prefect of the imperial guard under Manuel Comnenus, about 1156.

ANDRONICUS CYRRHESTES, the architect who built the Temple of the Winds at Athens, about 132 B.C.

ANDRONICUS, LIVIUS, is said by the Latin writers to have been the first to get up a play in Latin. He was a Greek by birth, Tarentum most probably being his native place. During the Roman wars in Southern Italy, he became a slave of Livius Salinator, who intrusted him with the education of his children, and presented him with his freedom for his services. His first play was produced in 240 B.C., a date which accordingly marks the commencement of Latin literature. He wrote both tragedies and comedies, or rather, he translated Greek plays into Latin, adapting them to the taste of the Romans. He also made a Latin translation or paraphrase of the Odyssey; and though it was soon regarded by educated Romans as worth little, it proved an excellent school-book, and continued to be used as such for at least two centuries. The fame of Andronicus rests more upon the earliness of the period at which he wrote, than upon

his own poetic merits, if it be safe for us to judge from the few fragments which have come down to us.—J. D.

ANDRONICUS, MARCUS POMPILIUS, a Syrian philosopher of the Epicurean school, taught at Rome about 60 B.C.

ANDRONICUS, PALEOLOGUS, the second son of the Greek Emperor, Manuel Paleologus.

ANDRONICUS OF OLYNTHUS, a general of Alexander the Great, after whose death he attached himself, first to Antigonus, and next to Ptolemy.

ANDRONICUS OF RHODES, a peripatetic philosopher, who taught first at Athens and afterwards at Rome, in the first century B.C., and is said to have first used the term "metaphysics."

ANDROS, EDMUND, one of the English governors in North America in the latter part of the seventeenth century, was born in 1637, and died at London in 1714.

ANDROSTHENES, an Athenian sculptor, pupil of Eucadmus, lived about 420 B.C., and completed several statues, which had been begun by Praxias, for the temple of Apollo at Delphi.

ANDROSTHENES OF THIASOS, one of the generals of Alexander the Great, who accompanied Nearchus in his naval expedition to explore the Persian Gulf.

ANDROTION, a Greek orator and historian of high reputation, lived about 320 B.C., was a contemporary of Demosthenes and president of the Athenian Council of Five Hundred.

ANDROUET DU CERCEAU, JACQUES, an architect, who was a native of Orleans, and lived in the latter part of the sixteenth century. Having been enabled, by the patronage of Cardinal d'Armagnac, to travel for the improvement of his art, he executed several works in Paris. Besides erecting many private edifices for the nobility, he commenced the Pont Neuf and the Gallery of the Louvre, neither of which works he completed, having been compelled to quit France in consequence of his protestantism. He is said to have died at Turin about 1592.—F.

ANDRUZZI, LUIGI, an Italian theologian, who was born at Cyprus about 1688-9. He was professor of Greek in the university of Bologna from 1709 to 1732, and the author of several works in defence of the church of Rome. He died about the middle of the eighteenth century.

ANDRY, CHARLES LOUIS FRANÇOIS, born at Paris in 1741, was physician to the hospitals, doctor-regent of the Faculty of Medicine of Paris, one of the first members of the Royal Society of Medicine, and had formerly been one of the four consulting physicians to the Emperor Napoleon. He was distinguished for his kindness to the poor. He died in 1829, leaving several works, chiefly of a professional character.

ANDRY, NICOLAS, a French physician, born at Lyons in 1658. Abandoning the clerical profession, for which he was at first preparing, he devoted himself to the study of medicine, and took his degree in 1697, subsequently becoming professor in the college of France, member of the committee for the compilation of the Journal des Savants, and dean of the Faculty of Medicine. In addition to a critical treatise on the French language, Dr. Andry was the author of a variety of works relating to his profession, all of which exhibit great ability. He died in 1742.—F.

ANEAU or ANNEAU, BARTHOLEMEW, a native of Bruges, who was professor of rhetoric and principal of the College of the Trinity at Lyons, about the middle of the sixteenth century. The college being suspected of favouring protestantism, Aneau lost his life by violence in 1565. He was the author of many Greek and Latin poems, as well as other works, which do great credit to his learning and genius.

ANEL, DOMINIQUE, a French surgeon, born at Toulouse about 1679. He entered the service of the emperor of Germany as a surgeon in the army, and subsequently distinguished himself, especially in the treatment of aneurism and the ophthalmic disease known as fistula lachrymalis. He died about 1730, leaving several interesting works relating to his profession.—F.

ANELLI, ANGELO, an Italian poet, born at Desenzano in 1761; died in 1820.

ANEPONYMUS, a Greek philosopher of the thirteenth century, known by his commentaries on Aristotle.

ANERIO, FELICE, was the successor of Palestrina, a maestro di capella to the pope, in which capacity he produced many compositions that are said to possess great contrapuntal merit; some of them being even yet in familiar use in the pontifical chapel. He was a pupil of Giovanni Maria Nanino, a musician eminent for scholastic acquirements. Besides his extensive ecclesiastical compositions, he produced a set of madrigals for six voices, pub-

lished at Antwerp in 1599, and a set of canzonets for four voices, published at Frankfort in 1610, one of which latter is well-known, with the English words adapted to it by Mr. Oliphant, "Alas, where is my true love?" as an admirably pure and melodious specimen of vocal writing.—G. A. M.

ANERIO, GIOVANNI FRANCESCO, a musician, the younger brother of the preceding, born at Rome about 1567. He was at first connected with the chapel of Sigismund III., king of Poland, and afterwards with the cathedral of Verona. He was subsequently called to Rome, where he obtained further preferment as a musician. He left several musical compositions. The period of his death is uncertain.—F.

A'NEURIN, a Welsh bard, who lived in the latter part of the sixth century. On the defeat of his tribe by the Saxons, at the battle of Cattraeth, he was one of the four, out of three hundred and sixty-three chiefs, who escaped the slaughter; and having fled to the court of King Arthur, he formed an intimate friendship with the celebrated bard Taliesin. The principal poem attributed to him is called "the Gododins."—F.

ANFOSSI, PASQUALE, was born at Naples, according to one account, in 1757, according to another, in 1736. He was a student in the conservatorio of his native city, where at first he applied himself chiefly to the study of the violin; he afterwards devoted himself more especially to the cultivation of his talent for composition, in which he was directed by Sacchini and Piccini. This latter, famous for his rivalry of Gluck, even more than for his own merits, formed a high estimate of his pupil's ability, and entertained a great personal regard for him. It was he that procured Anfossi his first engagement, which was to write an opera for the Teatro delle Dame, at Rome, which was produced in 1771 with signal unsuccess. Piccini's influence was so great, that, notwithstanding this failure, he obtained for his protégé an engagement to write another opera the following year, which had the same unfortunate fate as his first essay. Anfossi was discouraged by these repeated failures, but his master not only exerted himself to obtain for him a third engagement, but so stimulated him by his persuasion, and assisted him by his advice, that in writing "Il Sconosciuto perseguito," he so far surpassed all he had before produced, that this opera was received with acclamations. The Roman public, notable for their fickleness as for their enthusiasm, now slighted their former idol, Piccini, in favour of his pupil, and this to so great a degree, that he, more sensitive than many composers of our time would be, quitted Rome in the greatest mortification. Anfossi's first success was continued in the reception of his "Finta Giardiniera" and his "Geloso in Cimento;" but his first tragic opera, "L'Olimpiade," produced in 1776, met with as complete a failure. He then left Rome, and after visiting the principal cities of Italy, settled for a time at Venice, where he was appointed director of the conservatorio. He visited Paris in 1780, where he produced his French opera, "Caius Marius." In 1782 he came to London, but, as it seems, at a peculiarly unfavourable period; for his first master, Sacchini, had immediately preceded him, and had left so powerful an impression, that the audience of the king's theatre was unwilling to welcome any successor to him, and, added to this, the affairs of the opera were then in so embarrassed a condition, that no artist could have justice done to him by the management. He remained in England, however, until 1785, and two years later he returned to Rome, where he principally remained until his death in 1795. His best opera is said to have been "L'Avaro." Besides his dramatic works he wrote some oratorios, of which "Betulia liberata" is the one most praised, and also some ecclesiastical music, of which a "Salve Regina" is said to possess great merit.—G. A. M.

ANFOSSO, JACOPO, an Italian engraver of great skill, who lived at Pavia in the sixteenth century.

ANGAS, W. HENRY, born at Newcastle-on-Tyne, 6th Oct., 1781, was brought up a sailor; and, after visiting many parts of Europe and the West Indies, resolved to devote his life to the welfare of seamen. To qualify himself for this work, he entered as a student in the university of Edinburgh, and afterwards resided for some time at Brussels, where he perfected his knowledge of the Dutch and French tongues. After visiting the Mennonite churches of the continent, he was set apart in 1822 as a missionary to seamen. In this capacity he went (always at his own expense) to most of the large seaport towns of England, and many on the continent, and originated missions to seamen. In 1831 he visited the West Indies, on behalf of the Baptist

Missionary Society; and soon after his return he died at South Shields, in September, 1832, in the fifty-first year of his age. (*Life*, by Dr. Cox.)—J. A., L.

ANGE DE ST. JOSEPH, whose real name was JOSEPH LABROSSE, was prior of the convent of Carmelites at Perpignan, and was born at Toulouse in 1636. Having studied Arabic at Rome under Celestin, brother of the learned orientalist Golius, he proceeded on a mission to the East, visiting Smyrna, Ispahan, and Basrah. After his return to Rome in 1679, he travelled through France, Holland, England, and Ireland; died 1697.—F.

ANGE DE SAINTE ROSALIE, whose family name was FRANÇOIS RAFFARD, a member of the order of Barefooted Augustinians, was born at Blois in 1655. Devoting himself to the study of history, he greatly enlarged the historical works of Father Anselm, and produced other treatises of importance relating to the history of France. He died in 1726.—F.

ANGEL, JOHN, of Magdalen hall, Oxford, took holy orders in the English church, but afterwards seceded. He was very popular with the Puritans, and was appointed lecturer of Grantham, where he died in 1655.

ANGELA MERICI, born at Desenzano in 1511, founded the order of the Ursulines, at Brescia in 1537, after her return from a pilgrimage to Palestine. She died in 1540.

ANGELI, BONAVENTURA, an Italian historian, who was born at Ferrara about the year 1525. Being suspected of heresy, he was compelled to quit his country in 1576, and during his exile, employed himself in visiting and describing the rivers of Italy, and afterwards produced a history of Parma. He died about the end of the sixteenth century, leaving several works on law and other subjects, evincing considerable learning.—F.

ANGELI, FILIPPO, an Italian artist, born at Rome at the end of the 16th century, and attached to the court of Cosmo VI., Grand-duke of Tuscany, the distinguished patron of the fine arts. His pictures are extremely rare and valuable. Died 1643.

ANGELI, GIULIO CESARE, a historical painter of Perugia, born in 1570, died in 1630. The fame of Lodovico Caracci having reached him, he left his home at twelve years of age, went to Bologna to put himself under the tuition of that great master, and eventually became one of the best followers of that school.

ANGELI, STEFANO D', an Italian geometer, who was a pupil of the celebrated Cavalieri, and lived about the middle of the seventeenth century. He taught mathematics at Padua, and published a number of excellent works on the subject.

ANGELICO, BEATO, or FRA GIOVANNI ANGELICO DA FIESOLE. See PIETRI GUIDO DA MUGELLO.

ANGELICO, MICHEL ANGELO, an Italian apothecary, a native of Vicenza, who lived about the end of the sixteenth, or commencement of the seventeenth century. In addition to eminent success in the practice of pharmacy, he dedicated his leisure to the art of poetry, in which he exhibited considerable skill.

ANGELICO, MICHEL ANGELO, an Italian poet, the nephew of the preceding, and like him a native of Vicenza. He had studied law, but devoted nearly his whole attention to the belles-lettres, and attained high reputation as a poet. He died at Vienna in 1697.

ANGELIERI, BONAVENTURA, a Sicilian friar of the order of St. Francis, and vicar-general of the order at Madrid. He was alive in 1707.

ANGELIO or DEGLI ANGELI, PIETRO, an Italian poet, born at Barga in Lucca in 1517. Having entered the university of Bologna at the age of sixteen, in order to study law, he greatly distinguished himself for talent and scholarship; but in consequence of an intrigue, and certain satirical verses he had written, he found it necessary to quit the city. At Venice, however, the French ambassador, Pelissier, employed him to copy Greek MSS. for the royal library at Paris. In the suite of another French minister, he subsequently visited Constantinople, Greece, and Asia Minor. In 1543 he was present at the siege of Nice by the French, but in consequence of a duel fled to Florence. In 1546 he was chosen professor of Greek at Reggio. In 1575 he published his poem on the Christian Conquest of Palestine, and died at Pisa in 1596.—F.

ANGELIO or DEGLI ANGELI, ANTONIO, bishop of Massa in Sienna in 1570; died 1579.

ANGELIS or DEGLI ANGELI, ALESSANDRO, born at Spoleto in 1562, an Italian astronomer, who was prefect of studies in the college of Rome, and a member of the order of jesuits: died at Ferrara in 1620.

ANGELIS, D' or DEGLI ANGELI, FRANCESCO-ANTONIO, was born at Sorrento, near Naples, about 1567; became a jesuit in his sixteenth year, and in 1602 was sent to India as a missionary; thence he went into Abyssinia, where he preached for eighteen years, and where he died in 1623. He translated into the native language several religious books.—F.

ANGELIS, D' or DEGLI ANGELI, PAOLO, an Italian antiquary, who was a native of Syracuse, and canon of Sta. Maria-Maggiore at Rome; died in 1647.

ANGELIS, BALDASSAR D', a Neapolitan lawyer and judge in the seventeenth century, and the author of some works of reputation on the subject of law.

ANGELIS, DOMENICO D', a Neapolitan historian and biographer, born at Lecce in the province of Otranto in 1675. Having studied at Naples and entered into orders, he became vicar-general of Viesti, and chaplain to the papal and Neapolitan forces. He was also historiographer to Philippe V. of Naples, and secretary to the Duke de Gravina. He died in 1719.—F.

ANGELIS, GIROLAMO D', was born at Castro-Giovanni in Sicily in 1567. His religious zeal led him to become a jesuit missionary. He spent twenty-two years in Japan, where his labours were attended with great success, but where at last he suffered death. He wrote an account of Yeso, (Rome, 1625.)

ANGELIS, PEDRO D', a Portuguese writer, by birth an Italian, went to Paris in 1818, where he was occupied in literary pursuits. He subsequently proceeded to Buenos Ayres, and as editor of a review called *L'Archivo Americano*, supported the political views of Rosas. His principal work is a valuable collection of documents relating to the history of the provinces of the Rio de la Plata, illustrated with notes and dissertations, published at Buenos Ayres, 1836, et seq., 7 vols. fol.—F.

ANGELIS, PIERRE, a French artist, born at Dunkirk, 1685, painted in the style of Teniers and Watteau: died 1734.

ANGELO, BATTISTA D', a Veronese painter who lived about 1565. He was of the school of Torbido, whom he successfully imitated and even surpassed in gracefulness of design. His son and pupil, Marco, was highly esteemed, both as a painter and engraver, but died prematurely at Rome.—R. M.

ANGELO, JACOPO DI, an Italian Hellenist, a native of Scarperio in Tuscany, who lived about the end of the 14th and beginning of the 15th century. He settled at Florence, published a life of Cicero, and made some translations from Plutarch.

ANGELO, MICHEL. See BUONARROTI.

ANGELONI, FRANCESCO, was born at Terni, in the states of the church, at the end of the 16th century. He was secretary to Cardinal Aldobrandini, and besides forming a valuable collection of coins and medals, left behind him a number of MS. compositions in poetry, comedy, and romance; together with a piece in imitation of the *Arcadia* of Sannazarius, and some works on antiquarian subjects and numismatology.—F.

ANGELONI, LUIGI, an Italian writer, born at Frosinone in 1758; died at London in 1842.

ANGELRAM, bishop of Metz, from 768 to 791; supposed to have carried forward the chronicle known as the *Nibelung*, and his name is associated with the history of the canon law.

ANGELUCCI, ANGELO, was born at Naples in the latter part of the seventeenth century. He was a very extensive manufacturer of sheep-gut violin strings, and did very much to improve these very important essentials to musical performance. By an elaborate series of experiments, he proved that the quality of the strings depended very greatly upon the age of the sheep, and ascertained that those of from seven to eight months old, accustomed to pasture on the mountains, were by very far the most desirable for his purpose. His operations were so extensive, that he kept a hundred workmen in constant employment; and because he thus gave such very large occupation to its inhabitants, he was regarded as a benefactor of the village of Sale in the Neapolitan territory, from whence these numerous artificers of fiddlestrings were all selected. Inconsiderably as many may esteem his fabrications, Angelucci was as great an enthusiast in his calling as many an inventor, whose labours may be more easily appreciated by such as are not practically concerned in their results. He opened negotiations for establishing depôts and agencies for carrying on the manufacture and sale of his strings in several of the principal cities of the continent, but he failed in this design, and his affairs became greatly embarrassed in consequence. His pecuniary involvement was not the only, nor indeed the worst result of

his ambitious (for this worthy, an artist in his way, was ambitious even about the propagation of sound violin strings), his ambitious, if not acquisitive intention. The principles which it had been the study of his life to mature, were by this means exposed, and so became known to any and every one who could be intrusted to take advantage of his secret. He took this so sorely to heart, that it was supposed to accelerate his death, which occurred at Naples in 1765, when he had attained a very advanced age.—G. A. M.

ANGELUCCI, TEODORO, a physician and poet of Italy, a native of Belforte, near Tolentino. He was author of a number of treatises relating to his profession, and some poetical pieces of a devotional character. He died at Montagnana in 1600.

ANGELUS, ANDREW, born at Strasburg in 1561, and died in 1598; wrote a number of historical and theological works.

ANGELUS, ARNOLD, a jesuit of Holland, born at Utrecht 1620, died 1676; wrote on theology and against Lutheranism.

ANGELUS, BALDUS, a physician of Urbino, in the last half of the sixteenth century, wrote a tract "De Vipera Natura," &c.

ANGELUS, CHRISTOPHER, a learned native of Peloponnesus, who, persecuted by the Turks, came to England, and having studied at the university of Cambridge, took up his abode at Oxford, where he published several works, one of them being an account of the persecution he had endured; and another, being an encomium, in Greek and Latin, upon the sister universities of Oxford and Cambridge. He died at Oxford in 1638.—F.

ANGELUS, JOHANN, a learned physician and astronomer, a native of Aichen in Bavaria; died at Vienna in 1512.

ANGELUS, SILESIUS, a poet-philosopher, born at Glatz or Breslau in 1624; died in 1677. Under the *nome de plume* of JOHANN SCHEFFLER, he enjoys considerable celebrity in Germany. He belongs to the school of Tauler and Behmen; and his system may be defined a virtual pantheism, founded on sentiment or love. He never developed his opinions in a scientific form: we find them in a great number of poetical sentences and spiritual songs. Some of these latter have been recently imported into our English literature.—J. P. N.

ANGELY, LUDWIG, a dramatic poet, born at Berlin towards the end of the eighteenth century, was descended from a French family who had established themselves at Berlin at the revocation of the edict of Nantes. He wrote a number of original dramas, and translated a great many of the French dramatic writers into German. Died in 1835.

ANGENNES, a noble family in France, distinguished from the fourteenth to the middle of the seventeenth century. Its founder was ROBERT D'ANGENNES, Seigneur de Rambouillet et de Marolles, whose son distinguished himself in various situations of trust at the court of Charles VI., and whose grandson was chamberlain to the king, and afterwards tutor to the dauphin in 1410.—CHARLES was Cardinal de Rambouillet, and ambassador of France to Gregory XIII., and died in 1587.—NICHOLAS D'ANGENNES, Seigneur of Rambouillet, Villeneuve, and Moutonniere, was ambassador of Charles IX. to the English court, and possessed great skill as a diplomatist.—CLAUDE, born at Rambouillet in 1534, was bishop of Noyon, and afterwards bishop of Mans, and died in 1601.—LOUIS was Marquis of Maintenon. Baron of Meslai, Seigneur of Moutonniere, and French ambassador to the Spanish court. Many other members of the house were no less distinguished. The family became extinct in 1640, by the death of CHARLES D'ANGENNES, Comte de la Rochepot.—F.

ANGERVILLE, RICHARD, born at Bury and educated at Oxford, rose in the favour of Edward III., was made bishop of Durham, and afterwards chancellor and treasurer of the realm. He was a great lover of books, and wrote a "Philo-Bibloner, or De Amore Librorum." Died in 1345.

ANGHIERA, PIETRO-MARTIRE D', or PETRUS MARTYR, an historical writer, born at Arona, on Lake Maggiore, in 1455. In 1477 he visited Rome; and in 1488 accompanied Lopez Mendoza, the Spanish ambassador to the court of Ferdinand and Isabella, and took service in the army against the Moors of Grenada. In 1494 he entered into orders, and was afterwards employed in various diplomatic missions in Venice and in Egypt. He ultimately became prior of the cathedral of Grenada, where he died in 1526. His works are—"Opus Epistolarum;" and "De rebus oceanicis et orbe nova decades:" Alcala, 1530.—F.

ANGILBERT, a poet, styled the Homer of his age. He had studied under Alcuin, the preceptor of Charlemagne; and having gained the esteem of that prince, and the hand of his daughter

Bertha, he was appointed chief minister at the court of Pepin, king of Italy, and afterwards governor of one of the maritime districts of France, and finally secretary and minister of his royal patron. Undazzled by these marks of distinction, Angilbert, with the consent of his wife, retired into the monastery of St. Riquier, of which, in 794, he became abbot. He wrote a laudatory poem addressed to King Pepin; some elegiac verses on the patron saint of his monastery; a few epitaphs and inscriptions; and a history of the Abbey of Centule or St. Riquier. Died 814.—F.

ANGIOLELLO or ANZOLLELO, GIOVANNI-MARIA, an Italian litterateur, who was a native of Vicenza, and was taken prisoner by the Turks in 1469. He accompanied the army of Mahomet II. on the expedition in 1473 against the king of Persia, and wrote an account of the expedition after his return to his native land. It is said that he likewise composed a life of Mahomet. He was still alive in 1524.

ANGIOLINI, FRANCESCO, an Italian jesuit, born in 1738, who translated into Italian the history of Josephus (Verona, 1780), and also some of the tragedies of Sophocles and Euripides (Rome, 1782). When Catherine afforded an asylum in her dominions to the jesuits, Angiolini went into Russia. He wrote a MS. history of his order from its establishment in the Russian empire, and died in 1788.

ANGIVILLER, COUNT CHARLES-CLAUDE-LABILLARDE-RIE D', a French statesman, who was so zealous a patron of literature and the fine arts, that he was accused, in 1790, of a prodigal expenditure of the public money for their encouragement, and obliged to quit France. He first fled to Russia, and ultimately settled in Germany, where he died in 1810.

ANGLADA, JOSEPH, a French physician, born at Perpignan in 1775, author of the following works:—"Diss. sur les connaissances et les qualités necessaires au medecin," Montpellier, 1797; "Memoires pour servir à l'histoire generale des eaux minerales," &c., Paris, 1827; "Traité des eaux minerales et des établissements thermaux," &c., Paris, 1833; and "Traité de toxicologie generale," &c., Paris, 1835. Died in 1833.

ANGLEBERME, JEAN-PYRRIUS D', a French lawyer, born at Orleans, 1470, who was one of the pupils of Erasmus, and afterwards professor of law in the university of his native city. He was appointed by Francis I. a member of the council of state at Milan; and having entered the military profession, he lost his life by the explosion of a magazine in 1521. He left a number of works of considerable learning on a variety of subjects, as well as that of law.—F.

ANGLESEY, MARQUIS. See PAGET.

ANGLURE, OGER D', a Frenchman, who—having visited Palestine and Egypt at the close of the fourteenth century—wrote an interesting account of his travels, which was first printed in 1621, in 8vo.

ANGO, PIERRE, a French jesuit and professor of mathematics, author of works on optics, fortification, &c. Flourished in the seventeenth century.

ANGO or ANGOT, an enterprising seaman and shipowner of Dieppe. The Portuguese having in 1530 plundered several of his vessels, Angot equipped a squadron, blockaded Lisbon, and finally obtained ample compensation. After entertaining his sovereign, Francis I., with more than royal splendour, he lent that monarch a large sum of money. Subsequently he was unsuccessful in various enterprises, and applied in vain for payment of the loan. Died in 1551, at Dieppe, in great poverty.—E. M.

ANGOT, ROBERT, a French poet of some merit, born at Caen in 1581.

ANGOULEME, DUC D', third son of Francis I. Died at an early age, without issue. Charles IX. of France, also, bore the title of Duc d'Angouleme till his accession.

ANGOULEME, CHARLES DE VALOIS, DUC D', a natural son of Charles IX., and of Marie Touchet, and a natural brother of the Marchioness of Verneuil, mistress of Henri IX., was born in 1573, and died in 1650. Trained from an early age for the order of Malta, he became, in 1589, prior of France; but quitted the order in 1591, and married a daughter of Marshal d'Amville, afterwards Duc de Montmorenci. Having received, in 1589, by royal grant, the countries of Clermont-Auvergne and Lauraguais, Charles de Valois was long known as Count d'Auvergne. He held a command in the royal army at the siege of Paris, when Henri III. was assassinated. Entering the service of Henri IV., he distinguished himself at the battles of Ivry and Fontaine Française, and on various other occasions. For parti-

icipating with his sister in successive plots, he was confined in the Bastille about the end of 1604. In 1616 he was released, restored to his military rank, and entrusted with the command of an army. In 1617 he commanded the forces besieging Soissons. In 1620, a royal decree confirmed his right to the duchy of Angouleme, bequeathed to him by the late Duchess Diane. As joint ambassador to the princes of Germany, he contributed to the treaty of Ulm, signed 3rd July, 1620. In 1627 he conducted the siege of Rochelle. In 1635, he was joint-commander of the French army in Lorraine. After the death of Louis XIII., and of Cardinal Richelieu in 1643, he retired from the public service. He was a man of great capacity, activity, and eloquence, but utterly unprincipled. His published works are:—1. "Mémoires;" 2. "Speeches delivered in the Assembly of Protestant Princes in Germany;" 3. "Narrative of events in the Isle of Ré;" 4. "Translation of the Spanish work of Diego de Torres."—E. M.

ANGOULEME, LOUIS ANTOINE DE BOURBON, DUC D', son of Count d'Artois, afterwards Charles X., and of Marie Thérèse of Savoy, was born at Versailles in 1775. With his brother, the Duke de Berri, he accompanied their father, when, in 1789, foreseeing the course of events, he left France and repaired to Turin. In 1799, he married at Mittau, his cousin, Marie Thérèse, the daughter of Louis XVI. and of Marie Antoinette of Austria. The Duke d'Angouleme, joining the Anglo-Spanish army, which crossed the Pyrenees in the beginning of 1814, addressed a proclamation to the French nation, on 11th February, and on 12th March entered Bordeaux. He commanded the French army which, in 1823, entered Spain to aid Ferdinand in suppressing the constitution, and, during his stay there, displayed considerable prudence and moderation. At Rambouillet, on the 2d August, 1830, he renounced, jointly with his father, his rights to the throne in favour of the Duke de Bordeaux, and on the 16th arrived in England with the duchess and the other members of the exiled royal family. After residing a short time in Scotland, he and his wife quitted Britain, and spent the rest of their lives in various parts of the continent. He died at Goritz in 1844. The duchess, of whom Napoleon said that she was the only member of the family that had the spirit and energy of a man, died in 1851.—E. M.

ANGOULEME, LOUIS EMMANUEL, DUC D', second son of Charles de Valois, was born in 1596. Educated for the church, he had obtained, when only sixteen, a bishopric and two abbeys. On the death of his younger brother, he took the title of Count d'Alais, and entered the army, continuing, however, for a considerable time, to retain his church preferments. After serving with distinction in Italy and Lorraine, as well as in France during the civil wars, he was made colonel-general of the light horse, and governor of Provence. As his elder brother had become insane, he succeeded his father as Duc d'Angouleme. Died in 1653.—E. M.

ANGOULEME, TURPION, COUNT D', the first Count d'Angouleme, is said to have lived in the ninth century. His last male descendant died in 1218. François, Count d'Angouleme, who, in 1515, became king of France, raised Angouleme to a duchy in favour of his mother, Louise of Savoy.

ANGOULEVENT LE CADET, the assumed name of a French satirical poet, lived early in the seventeenth century.

ANGRAN D'ALLERAY, DENIS-FRANÇOIS, a French judge, famous for his benevolence and moral heroism, was born at Paris in 1715. Compelled, on one occasion, to imprison an unfortunate but honest father of a family, to enforce payment of a large debt, he paid the amount, and set the worthy man at liberty. Indicted, during the reign of terror, on the charge of having sent money to royalist emigrants, Angran d'Alleray admitted having sent various sums to his own son-in-law. "Were you not aware of the law?" said one of the jury. "I was," he replied, "but I was also aware of another law still more sacred, which bids parents aid their children." On this he was condemned to death, and led to execution, 28th April, 1794.—E. M.

ANGRIA'NI, or AIGUANI, or AYGUANI, MICHELE, a learned Carmelite monk, author of numerous theological works, some of which remain in MS., was born at Bologna about the middle of the fourteenth century, and died in 1400.

ANGUIER, FRANÇOIS, one of the most distinguished French sculptors of the seventeenth century, was born at Eu in Normandy in 1604, and died in Paris in 1669. He studied in Paris under Guillain, and in Rome under Algardi. His style,

although deeply impressed with all the mannerism of the age, is highly remarkable. The monument of the Duc de Montmorenci at Moulins is his masterpiece.—R. M.

ANGUIER, MICHEL, brother of the preceding, and a sculptor of great merit and celebrity. He also studied under Guillain and Algardi, with the last of whom he remained for ten years at Rome. On his return to Paris, he executed many works, amongst which are noted some decorations in the old Louvre, the sculptures of the arch of St. Denis, and those of the church of Val de Grace. As great a mannerist, if not more so, than his brother, his works are full of the liveliest expression. Born in 1612; died in 1686.—R. M.

ANGUILLA'RA, GIOVANNI ANDREA DELL', a poet, born at Sutri, in the papal states, about the year 1517, who translated Ovid's Metamorphoses into Italian. His habits were immoral, and rendered him the victim of successive misfortunes. The period at which he died is uncertain.

ANGUILLARA, LUIGI, an Italian physician, was born at the beginning of the sixteenth century at Anguillara. He was director of the botanic garden of Padua from 1540 to 1561; but afterwards retired to Florence, where he died in October, 1570. He was an excellent linguist, and travelled through various countries of Europe. A collection of his letters on botanical subjects was published in 1561. He appears to have made learned researches into the old names of plants.—J. H. B.

ANGUILLE'SI, GIOVANNI DOMINICO, a poet and lawyer, born at Pisa in 1766, who was secretary to the Grand-duchess Elise, the sister of Napoleon. He afterwards became professor of Latin in the university of Naples, and chancellor of the university of Pisa, where he died in 1833.

ANGU'SCIOLA or ANGUSSOLA, SOFONISBA, a female portrait-painter, born at Cremona in 1535, and possessed of great skill in her art; the pictures executed by her for Philip II. of Spain, and other sovereigns, obtained the highest admiration, and raised her reputation beyond that of most of her contemporaries. She was honoured with the friendship of many illustrious persons of her time, and died at an advanced age about the year 1620. Her three sisters, Lucia, Europa, and Anna-Maria were also remarkable for their skill in painting.—F.

ANGUS, latinised ÆNEAS or ÆNGUS, an Irish monk, remarkable for his piety and learning, who lived about the close of the seventh century. He became abbot of the monastery of Cluainach in Leinster, and is said to have been a bishop. He wrote many works; amongst them, a *Martyrology* in verse, and also one in prose; a metrical history of the Old Testament; and "De Sanctis Hiberniæ," in five books. He died between 824 and 830, and obtained the title of *Ceil-de (Colideus)* from his great piety.—(*Colgan*.)—J. F. W.

ANHALT, one of the most ancient and illustrious Saxon dynasties of Northern Germany, now divided into several branches, the chiefs of which have the rank of dukes, and are sovereign members of the Germanic confederation. The house of Anhalt is descended from Bernard, youngest son of Albert, surnamed the Bear, Marquis of Brandenburg in 1142, whose immediate representatives ruled over the greater part of Northern Germany in the middle ages, being invested with the duchy of Saxony and the marquisate of Brandenburg. We notice—

ANHALT BERNBURG, CHRISTIAN I., Prince of, was born in 1568, and in 1606 succeeded his father, Joachim-Ernst, obtaining for his share of the patrimonial dominions Bernburg, Ballenstädt, Hartzgerode, and the temporalities of the abbey of Gernrode. Before he became of age, he visited Constantinople, France, Italy, and Denmark, and in 1591 led into France an army of twenty thousand men, which the German princes had raised to aid Henry IV. in the war of the League. In 1619 he aided Prince Moritz of Orange at the siege of Jülich, and having been appointed by Frederick V., king of Bohemia, to command his forces, gained some important advantages over the imperial generals Bucquoi and Dampierre. In 1620, however, he was defeated by Maximilian, duke of Bavaria, in the battle of Prague. In the following year he was put under the ban of the empire, but was released in 1623, after which he led a retired life in his dominions, and died in 1630.

ANHALT BERNBURG, CHRISTIAN II., Duke of, son of the preceding, was born in 1599. He studied the art of war under the celebrated Charles Emmanuel, duke of Savoy. At the battle of Prague, in which his father commanded the troops of Frederick V. of Bohemia, he led two divisions of the army.

During the disorders of the Thirty Years' War, he visited in succession every part of Europe, with the exception of Russia and Turkey; and after returning to his dominions, died in 1656.

**ANHALT DESSAU, PRINCE LEOPOLD I.** of, was born 1676, entered the army at the age of twelve, early won the reputation of a distinguished soldier, and attained the rank of field-marshal. He enjoyed the confidence of Frederic William I., and his successor Frederic II., and died in 1747.

**ANHALT DESSAU, PRINCE LEOPOLD MAXIMILIAN** of, son of the preceding, born 1700. In his youth he entered the army, and served in Hungary, being present in several of the most remarkable engagements with the forces of Turkey. He ultimately attained the rank of field-marshal, and on succeeding his father, obtained great popularity for his patriotic efforts to improve the civil institutions of his country. He died in 1751.

**ANHALT DESSAU, LEOPOLD FREDERIC FRANZ**, Duke of, born in 1740, entered the Prussian army at an early age, and made several campaigns under Frederic II. before he was eighteen, at which age he entered on the government of his duchy. For some years after 1763, he engaged in travelling to foreign countries; and on his return made great improvements in his dominions with respect to education, agriculture, and jurisprudence. In 1814 he lost his only son, an event which greatly clouded his remaining years. He died in 1817.

**ANHALT KÖTHEN, LOUIS**, Prince of, was born at Dessau in 1579. In the Thirty Years' War he supported the protestant party, and was appointed, by Gustavus Adolphus, in 1631, governor of Magdeburg and Halberstadt. This prince was remarkable for his great attainments, being an accomplished Latin, Greek, and Hebrew scholar, and conversant with many of the modern languages of Europe; he was likewise the personal friend and correspondent of some of the most distinguished men of his time. The latter period of his life was entirely devoted to literary pursuits. He died in 1650.

**ANHALT KÖTHEN, FREDERIC FERDINAND**, Duke of, was born in 1769, and in 1819 succeeded to the duchy, and died in 1830.

**ANHALT ZERBST DESSAU, RODOLPH**, Prince of, born about the year 1460, was one of the most gallant soldiers of his time, and enjoyed the friendship of Maximilian I., king of the Romans, and of the Emperor Frederick III., in whose military expeditions he took an important part. He died by poison during the Italian campaign of 1513.

**ANHALT ZERBST DESSAU, JOACHIM ERNST**, Prince of, was born in 1536, succeeded his brother Charles at the age of twenty-five, and came into possession of the whole principality of Anhalt on the death of his cousin Wolfgang in 1566. He died at the age of fifty, leaving six sons.—F.

**ANHALT, ANTONIO GUNTHER**, Prince of, born in 1653, was present at the sieges of Grave, Oudenarde, and Philipsburg, and fought in the service of Prussia against the forces of the sultan at Vienna. Subsequently he had the command of a large army in the service of Holland and England. Died 1714.

**ANIANUS**, a Roman jurist, who abridged the code of Theodosius for Alaric, king of the Visigoths in Spain.

**ANIANUS**, an Italian priest, a native of Campania, who lived at the beginning of the fifth century. He defended Pelagianism at the council of Diospolis in 415, and made a Latin translation of some of the works of St. Chrysostom.

**ANIANUS**, an Egyptian monk, who lived in the first half of the fifth century, devoting himself to the study of chronography, on which, according to Syncellus, he composed a treatise.

**ANIANUS**, an astronomer of the fifteenth century, author of a remarkable Latin poem, entitled "Computus Manualis," in which the Julian calendar, solar and lunar cycles, moveable feasts, &c., are exhibited in hexameters.

**ANIBERT, LOUIS MATTHIEU**, an antiquarian and poet of France, born at Trinquetaille-les-Arles in 1742. In addition to some poems and comedies, he composed several volumes of antiquarian memoirs, relating to the republic of Arles, and the general history of Provence. Died 1782.

**ANICETUS, Sr.**, was bishop of Rome in A.D. 150 or 157, and suffered martyrdom in 161, under Marcus Aurelius.

**ANICH, PETER**, a Tyrolese peasant, born near Innsbruck in 1723. Although occupied in husbandry up to his twenty-eighth year, he had exhibited marvellous talents for scientific study, which were cultivated by the assistance of the jesuits of Innsbruck. At the recommendation of the professor of mathematics, the Empress Maria Theresa employed him to measure and con-

struct a map of the Northern Tyrol. He executed this difficult and laborious task almost unaided, and with a degree of accuracy scarcely surpassed by those who enjoy the highest scientific appliances for such undertakings. Died 1766.—F.

**ANICHINI, FRANCESCO LUDOVICO**, an engraver of gems and medals. He lived and worked at Venice about the middle of the sixteenth century. Some of his gems deserved to be honoured by the admiration of the great Michel Angelo.—R. M.

**ANICIR, ABU-L-ABBAS-AL-FADL-IBN-HATIM**, an Arabian astronomer and meteorologist, who lived at the court of the caliph Al-Matadhed, about A.D. 900.

**ANILÆUS and ASINÆUS**, two brothers, of Jewish extraction, who lived near Babylon about A.D. 20, and raised an insurrection against Artabanus, king of Parthia.

**ANIMUCCIA, GIOVANNI**, was born at Florence in the early part of the sixteenth century. He was a fellow-student of Palestrina, Nanino, and other eminent musicians, in the celebrated school that Claude Goudimel of Burgundy established at Rome in 1540. He held the office of maestro di capella in the pontifical chapel, in the discharge of which he produced many ecclesiastical compositions. He is said to have been the first who attempted to make music a medium for the expression of the sentiment of the words to which it was set, beyond the vague principle that prevailed in the church system as adopted from the Greeks, of appropriating each mode to a special character in the general sentiment of the subject; but his distinction in the history of the musical art is more important, because more certain, as the founder of the oratorio, the class of composition that is ranked above all others as embodying the highest order of expression in the grandest, the most comprehensive, and the profoundest technical means. The origin of the oratorio is remarkably analogous with that of the Greek drama, which was also, be it remembered, the development of a religious solemnity, rising gradually from the simple hymns of the people, by means of the recitations with which Thespis interspersed these to the great classic tragedies, wherein the chorus still formed an essential part. St. Filippo Neri, for the purpose of attracting the public to the evening discourses which he delivered in the oratory of the Chiesa Nuova, had some hymns of praise, or laudi, as they were called, performed when his congregation assembled. These were set to music by Animuccia, and consisted at first of laudatory verses, that were sung in responsive alternation by the two sides of the choir, like the strophe and antistrophe of the Greek chorus, with an occasional part for a solo voice, like that of the chorus-leader; subsequently they assumed the character of dialogues; then they took the form of commentary upon a narrative from sacred story, throughout the recital of which they were interspersed; and finally were modified into the mysteries or miracles, dramatic renderings of the incidents recorded in holy writ, or of allegories illustrating its tenets, which were, for long, prevalent in church practice, but, in this case, were always accompanied with music; and, from being always performed in the oratory of the church, they soon came to be defined by the name of oratorios. It appears that no specimens remain of these crude essays of Animuccia, in the form of composition in which some of the greatest masters have produced some of their greatest masterpieces; but much of his purely ecclesiastical music is preserved in manuscript in the library of the Vatican, besides a set of madrigals and motets, which he published at Venice in 1548, and some masses which he published at Rome in 1567, from which latter Padre Martini reprinted two in his treatise on composition, as exemplary specimens of the treatment of the sixth and eighth modes. He died in 1571, and was succeeded in his appointment at St. Peter's by Palestrina, who, some authorities appear to hint, officiated for him during the last two years of his life, when, probably from illness, he may have been incapacitated for the discharge of his duties. He is as highly extolled for the purity of his life, as for the excellence of his music.—G. A. M.

**ANIMUCCIA, PAOLO**, brother of Giovanni, and though not so eminent, he was still a musician of great merit. He held the office of maestro di capella in the church of St. John of Lateran at Rome, and composed many madrigals and motets. He stands in an honourable rank among that remarkable constellation of Italian contrapuntists, who, throughout the sixteenth century, did very much to advance the progress of music.—G. A. M.

**ANISIO, GIOVANNI**, a Neapolitan, born 1472, died 1540 known as a Latin poet under the name of Janus Anysius.

ANISSON-DUPERRON, a family of Dauphiné, of which the following members deserve notice:—CHARLES ANISSON, a monk, ambassador to the Roman court on behalf of Henri IV.—LAURENT, nephew of the preceding, a publisher, who lived at Lyons about 1670.—JEAN, the eldest son of Laurent, lived about the end of the seventeenth and the commencement of the eighteenth centuries. He edited the Greek lexicon of Du Cange, was appointed superintendent of the royal printing-office at the Louvre, and in 1713 was sent to London as one of the French commissioners for arranging the preliminaries of the peace of Utrecht. His eldest son, LOUIS LAURENT, became director of the royal printing-office in 1723, and was succeeded in 1733 by his brother Jacques.—ETIENNE ALEXANDRE JACQUES, a son of the latter, was born in 1748, and in 1788 succeeded to his father's office. In 1790 he undertook to print the assignats, but failed to give satisfaction, and was obliged to resign. In 1794 he was arrested on some unknown charge, and having vainly attempted to extricate himself by bribery, was executed. He claims the invention of several improvements in the printing-press.—ALEXANDRE JACQUES LAURENT was born in 1776, and after being employed in various departments of the civil service under the empire, became director of the imperial printing-office in 1809, a situation which he retained after the abdication of Napoleon. The privileges of the royal press were, however, soon abolished. On the return of Napoleon from Elba, Anisson withdrew into private life, but was re-appointed at the termination of the "hundred days." In 1823 the privileges of the royal press were restored, but on the re-establishment of the censorship in 1827, Anisson tendered his final resignation. The remainder of his life he devoted to the study of political economy. He represented, in succession, various constituencies in the chamber of deputies, and in 1844 was raised to the peerage. He was one of the founders of the French free-trade association.—J. W. S.

ANITCHKOV, DIMITRI SERGIEWITCH, a Russian metaphysician and mathematician, born 1740, died 1778.

ANJOU, COUNTS afterwards DUKES OF, a powerful French family, closely connected with the royal house, who maintained a considerable share of independence until the reign of Louis XI. The most ancient branch of these princes derives its origin from Ingelger, a favourite of Charles the Bald, A.D. 870.

ANJOU, CHARLES OF. See CHARLES OF ANJOU.

ANKARKRO'NA, THEODOR (CHRISTOFFERS), a Swedish admiral, was born in 1687, and died in 1750.

ANKARSTROEM, JOHANN JAKOB, a Swedish noble, who was born in 1759, and executed in 1792, for the assassination of the tyrant king, Gustav III.

ANKER or ANCHER, PEDER KOFOD, a Danish lawyer, professor of jurisprudence at the university of Copenhagen. He was born in 1710, and died in 1788.

ANLAF or AMLAVE. There have been several Danish chiefs of this name connected with Irish history. The first of whom mention is made in Irish annals, invaded Ireland with his brothers Sitric and Ivar, in the beginning of the ninth century. The most distinguished of the name was Anlaf, who flourished in the 10th century, probably the grandson of Ivar, a man of great abilities as a warrior, and a cautious and skilful politician. He espoused the cause of the king of Scotland against Athelstane of England, but being unsuccessful, he was forced to return to Ireland. After the death of Athelstane, Anlaf entered into communication with the Danes of Northumberland, and, with the assistance of Olaus, king of Norway, raised a large force, with which he entered Northumberland, and took possession of York without opposition. An engagement took place in 942 at Old Chester, between his troops and those of King Edmund, which, though not decisive for either side, led to a treaty by which Edmund ceded to Anlaf all the territory north of the Roman highway, and thus divided England into two nearly equal parts. Two years afterwards, however, he was involved in hostilities with Reginald, the son of his brother Godfred, in whose favour a portion of his subjects revolted, and Edmund, taking advantage of this state of things, at first mediated between them, but upon their joining to overthrow him, he attacked and utterly routed the armies of both, forcing Anlaf to retire to Ireland. In the reign of Edred, Anlaf was recalled by the Danes, and established in the government of Northumbria; but he was again driven from it and compelled to fly to Ireland, and Eric was chosen to fill his place. Once more he returned

and defeated Eric, to be again routed in his turn, and to be again victorious. After these series of defeats and successes, we find no further authentic traces of him.—(Wills.)—J. F. W.

ANN, SAINT, is said to have been the mother of the Virgin.

ANNA, the sister of Pygmalion, and of Dido, the foundress of Carthage, appears to have lived about 880 B.C.

ANNA, AMALIA, princess of Prussia, was the sister of Frederick the Great. She was born in 1723, and, like her brother, possessed considerable talent for music. She was the pupil of the celebrated contrapuntist, Kirnberger, and composed several sacred cantatas, besides other compositions, said to have much merit. She died at Berlin in 1787, and bequeathed to the gymnasium of that capital a valuable library of music.—G. A. M.

ANNA COMNENA, one of the most successful female cultivators of literature, was born in A.D. 1083. She was the daughter of the Emperor Alexius Comnenus and of Irene. She boasts that she was not "unacquainted with letters, but, on the contrary, had given the utmost study to Greek, was not unpractised in rhetoric, and had carefully read Aristotle's arts and Plato's dialogues." She was married to Nicephorus Bryennius, a man whom she represents as a paragon of excellence. On the death of her father, she induced her husband to conspire against her brother, who had succeeded to the throne, and both, in consequence of this act, were banished to Bithynia. Here Nicephorus died, and Anna, in her solitude, began to write the Alexiad, or history of her father Alexius, mainly to carry out a literary project of her husband. This work is one of the most interesting in the whole series of Byzantine productions, though the style is inflated, and the vanity of the writer frequently appears. The Alexiad is not properly a history, but a glorification of its hero. Yet Anna throws so much of her personality into the narrative, and at the same time many of the events are so noteworthy, that the reader finds great delight in the perusal.—J. D.

ANNA IWANOWNA, empress of Russia, second daughter of the Czar Ivan or John, the elder brother, and for some time the associate, of Peter the Great. She displayed all the talent and unscrupulousness of the imperial house of Romanoff; making promises which she never meant to keep, yet governing the empire with considerable tact and judgment. She was not popular, because she suffered her policy to be influenced by her favourite, Biron. She discouraged gambling and drunkenness, the common vice of her country, while she fostered music and the drama. In her reign the Italian opera was first introduced into St. Petersburg. One of her imperial freaks was the erection of the famous palace of ice. She died in 1740.—T. J.

AN-NADIM-MOHAMMED-IBN-ISHAK, otherwise known as ABU-L-FARAJ-IBN-ABI-SYAKUB, an Arabian bibliographer of the tenth century.

ANNAS or ANANUS, the elder, the son of Seth, was high-priest of the Jews, A.D. 7. He was appointed to his office by Cyrenius, governor of Syria, and deposed by Valerius Gratus, the procurator of Judea. His son, bearing the same name, likewise held the office of high priest, and died about A.D. 67.

ANNAT or ANNATS, FRANÇOIS, otherwise called CANARD, a jesuit of Rodez in France, in the 17th century, who became provincial of his order, and confessor to Louis XVI.

ANNAT, PIERRE, the nephew of the former, a French theological author, who died in 1715.

ANNATUS, JEROME, a jesuit, born in 1590, rector of various colleges, and ultimately confessor to Louis XIV.; a great opponent of the Jansenists. Died in Paris, 1670.

ANNAYA, PEDRO D', a Portuguese admiral, A.D. 1500. He reduced the kingdom of Sofala, and some adjacent provinces of eastern Africa, under the Portuguese authority.

ANNE, duchess of the Viennois, after the death of her brother John I., resisted the claims of Robert of Burgundy with remarkable address and vigour. She died 1296, greatly revered by her countrymen.

ANNE OF AUSTRIA, the queen of Lewis XIII. of France, was the daughter of Philip II. of Spain, and was married in 1615. During the lifetime of her husband, she was constantly at variance with his great minister, Cardinal Richelieu, and once, on the suspicion of conveying state intelligence to her native country, she underwent the ignominy of having her person searched, and her papers seized. The duke of Buckingham, the ill-fated minister of Charles I. of England, was deeply attached to Anne, and made open love to her. She reprimanded him so gently that it was thought she returned his affection. When

Lewis XIII. died in 1643, Anne, as mother of the infant monarch, was appointed regent, and displayed no ordinary political tact in making Cardinal Mazarin her minister. The Parisians, however, were uneasy: Mazarin was a foreigner, his financial policy was unpopular, and an insurrection arose which might have assumed fearful dimensions. It is known in French history as the war of the Fronde. The queen, the cardinal, and their partisans, were opposed to the nobility of the kingdom and the citizens of the capital. The former finally prevailed. The higher and middle classes were thoroughly humiliated, as the result of Anne's administration. She died at the age of sixty-four in 1666. She was beautiful in person, had much of German phlegm and Austrian pride, yet she was amiable and forgiving.—T. J.

ANNE OF BEAUJEU, the eldest daughter of Lewis XI. of France, was born in 1462. Her father, jealous of her talents, married her to Pierre de Bourbon, sire of Beaujeu, a prince of quiet manners and dull understanding. But on his deathbed, Lewis acknowledged the claims of Anne, by appointing her governess of the kingdom, during the minority of her brother, Charles VIII., who at that time was only fourteen years of age. John, duke of Bourbon, the brother of her husband, and Lewis, duke of Orleans, heir presumptive to the crown, disputed her claims to this pre-eminence; but such were her tact and influence, that the States-General decided in her favour. Lewis XI. had a deformed daughter, a younger sister of Anne, whom the duke of Orleans was forced to marry. He was but a sorry brother-in-law; and having insulted Anne, she ordered him to be arrested, but he shut himself up in his fortress on the Loire. Being pressed by her forces, he speedily fled, and sought refuge in Brittany. Anne, pursuing the favourite policy of her father, was not reluctant to find an excuse for annexing that country to the French crown. She attacked the Bretons, and routed them; took the duke, their leader, prisoner; and by the politic marriage of the young king of France to her namesake, the youthful duchess of Brittany, who had just succeeded her father, Francis II., she fulfilled all her wishes. She retained her rank and influence after Charles VIII. had ascended the throne, and when, dying childless in 1498, he was succeeded by the duke of Orleans, that prince respected her claims and position, and said, "that it did not become the king of France to avenge the feuds of the duke of Orleans." Anne died November 14th, 1522, leaving one daughter, Susanne, heiress of her magnificent possessions, who married her cousin, Charles de Montpensier, constable of Bourbon.—T. J.

ANNE OF BOHEMIA, first queen consort of Richard II., king of England, was the eldest daughter of the Emperor Charles IV. and his fourth wife, Elizabeth of Pomerania. She was born about the year 1367 at Prague, and married in the year 1380 to the unfortunate Richard before he attained his majority. She may justly be entitled one of the nursing-mothers of the great Reformation, for she protected Wickliffe towards the close of his life, when threatened by the council of Lambeth in 1382. She was a diligent student of the Holy Bible. It was she who obtained an amnesty for the multitude who had become involved in the insurrection headed by Wat Tyler. This mediation, and her conspicuous virtues, acquired for her the title of the "Good Queen Anne." She died without issue, on the 7th July, 1394, at the royal palace of Shene, now Richmond, and was buried at Westminster abbey. Her husband, inconsolable for her loss, buried her with splendid obsequies. There is reason to believe that the broad doctrines of the Reformation found their way through the influence of her court to Bohemia, and led to the rise, in her native country, of the Calixtines, and other bodies like-minded, whose influence yet survives. Jerome of Prague and John Huss, Ziska the blind general, and some of the most important leaders and movements of the Thirty-Years' War, would probably never have excited attention, had it not been for the marriage of good Queen Anne with Richard II.—T. J.

ANNE OF BRITTANY or BRETAGNE, only daughter of Francis II., duke of Brittany, was born at Nantes, January 26, 1476. When a child five years old, the family of Edward IV. of England had caused her to be betrothed to the young prince of Wales, and it was not until his untimely death that the contract was dissolved. Lewis of Orleans, heir presumptive to the French throne, when he fled to Brittany to avoid the anger of Anne of Beaujeu [see article, ANNE of Beaujeu], became deeply enamoured of her; and Anne, not yet fifteen, gave him in return her first love. She was soon after married by proxy to Maximilian

of Austria, whose high-sounding titles are said to have dazzled her ambition; but her clever namesake of Beaujeu had other intentions. Anxious to attach Brittany to the kingdom of France, she demanded Anne in marriage for Charles VIII., and encircled the duchy with her armies to secure the accomplishment of her desires. Anne of Brittany resisted with such means and as long as she could: nor did she yield until the duke of Orleans, her favoured suitor, advised her to give way. Married to Charles, December 16, 1491, she acted with fidelity and discretion, and at his death displayed deep grief. But her old lover, now Louis XII., divorced the deformed lady he had been compelled to espouse, and soon persuaded Anne to forget her sorrow by marrying him at Nantes. It is said that as queen of France she exercised unbounded influence over her husband, and her detractors affirm that she sacrificed France to the petty intrigues of Brittany. She died in 1514.—T. J.

ANNE OF CLEVES, the fourth wife of Henry VIII. of England, was the second daughter of John III., duke of Cleves, surnamed "the Pacificator." She was born 22nd of September, 1516, and educated in the Lutheran religion. Holbein painted a matchless miniature of the princess, which charmed the uxorious Henry; but when she arrived in England, and met him at Rochester, he recoiled from her in bitter disappointment. The portrait had evidently been flattered, for Holbein had omitted the marks of small-pox which disfigured her face. The amiable and unfortunate lady did her best to propitiate her brutal bridegroom, acting with singular courtesy and forbearance. She was married on the 6th of January, 1540, being the feast of the Epiphany; attiring herself with elaborate splendour, and gratifying all by her gentleness and dignified modesty. Perceiving that Henry's dislike to her was insurmountable, his parasites proposed that she should be divorced; a measure which was adopted by convocation and parliament in July; and Crammer, who "had pronounced the nuptial benediction, had the mortifying office of dissolving the marriage." She soon became a convert to the Roman catholic church, stayed in England, survived Henry, and died peacefully at Chelsea palace on the 17th of July, 1577. She was magnificently buried in Westminster abbey, near the high altar, at the feet of King Sebert, the original founder. To Miss Strickland's "Queens of England," the reader is referred for ample particulars concerning her daily habits, costume, and mode of life.—T. J.

ANNE OF CYPRUS, married in 1431 to Lewis, duke of Savoy. She died in 1462, celebrated throughout the country of her adoption for prudence in the management of public affairs.

ANNE, QUEEN OF ENGLAND, second daughter of James II. by his first wife, Ann Hyde, daughter of Lord Clarendon the historian, was born in the year 1664. When she was five years old, her father, then duke of York, joined the church of Rome; nevertheless, both she and her elder sister Mary, who afterwards married William of Orange and became queen of England, were educated as protestants. In 1683 Anne married Prince George of Denmark, brother of the king of that country. He was a well-meaning, inoffensive man, but intellectually a mere cipher. He went by the nickname "*Est il possible*," a phrase which was continually in his mouth. Several children were the fruit of the marriage; but all save one, the duke of Gloucester, of whom we shall speak presently, died in infancy. It was not long after their marriage that both Anne and her husband fell under the commanding influence of the Churchills, afterwards duke and duchess of Marlborough. It was by means of the ascendancy which Lady Churchill—the famous Sarah Jennings—had obtained over the mind of the princess, that she was induced to persuade her husband to imitate Churchill's treachery, and desert to the camp of William, on the very same night that he had supped with his father-in-law. Nor did Anne herself act a less reprehensible part. Her father had always treated her with the utmost indulgence; yet, at the very crisis of his affairs, she left London clandestinely with Lady Churchill and the bishop of London, and proceeded to a meeting of William's adherents at Northampton. James seems to have felt her desertion more keenly than that of any other person. On the receipt of the intelligence he burst into tears, and exclaimed, "God help me! my very children have forsaken me." By the Act of Settlement, passed after the expulsion of James, the crown was settled upon the Princess Anne and her heirs, should her sister Mary die without issue. For several years after the accession of William, Anne lived in retirement at Berkeley House. Her private character was in

every way estimable; she was a fond mother, we are told, a tender wife, and an indulgent mistress; and after being relieved from the thralldom of the Marlboroughs, she showed that she possessed a kind and charitable disposition. Queen Mary died at the end of the year 1694; and, unhappily, the sisters were not on good terms at the time of her death. After that event, the princess made overtures to William for a reconciliation, to which William consented, out of policy. He at the same time had a cordial dislike to her; he is reported to have said, that if he had married the Princess Anne, he would have been the most miserable man alive; and Lady Marlborough says that he often treated her with less respect, than if she had been the wife of a Dutch burgomaster. Anne herself seems to have heartily reciprocated his dislike. But while James II. and his son were alive, and their claims to the crown supported by the Jacobites in England and Scotland, and by several foreign powers, both William and Anne felt it necessary, interested as they were in the maintenance of the protestant succession, to wear at least the outward semblance of amity. It was arranged accordingly in 1696, that she should live at St. James's Palace, and have the use of Windsor in the summer. In 1700 Anne was plunged into the deepest distress by the death of her only surviving child, the duke of Gloucester, a few days after he had completed his eleventh year. He was a lively and precocious child, and many interesting anecdotes are told of him. But in 1698 William had appointed Bishop Burnet his tutor against the wishes of Anne; and Burnet appears to have greatly overtaken the brain of the poor little prince, to whom he taught jurisprudence, the feudal system, mathematics, &c. The boy was afflicted with water on the brain, which makes this mode of treatment the more extraordinary. The one prominent feeling in Anne's mind at his death seems to have been remorse, on account of her undutiful conduct to her father. She wrote to James II. in a strain of the deepest penitence, saying that she regarded this blow as a judgment upon her for her former conduct.

In 1702 she ascended the throne. The great and glorious events of her reign belong to the history of England, not to the biography of Queen Anne, except so far as their course was modified by her own views or prepossessions. She was thoroughly conservative in sentiment, and sincerely attached to the church of England; and it must be mentioned to her honour, that she voluntarily deprived herself of the revenue derived to the crown from the first-fruits and tenths of ecclesiastical benefices, in order to found therewith the fund for the augmentation of small livings, known to this day as "Queen Anne's bounty." This was in 1704. During all the early part of her reign, the Marlboroughs retained their ascendancy at court and at the council table. The Whigs had it all their own way; they carried on vigorously the war with France; and the great victories of Blenheim, Ramillies, and Malplaquet, attested the military genius of Marlborough. In 1708 Prince George of Denmark died. In 1709 occurred the famous trial of Dr. Sacheverel before the House of Lords, for preaching the doctrine of passive obedience. All the Tory and Jacobite feeling in the country was aroused in his favour, and the odium which his trial excited against the government was one of the chief causes of the downfall of the Whigs. Another cause was, that by this time the duchess of Marlborough had been completely supplanted in the queen's affections by a new favourite, Mrs. Masham, once a humble dependent of the duchess, but now more powerful at court than her old mistress. The Whig ministry fell in 1710; the duke of Marlborough was deprived of all his employments; a new ministry was formed under Harley, the friend and ally of Mrs. Masham; peace was concluded; and the treaty of Utrecht followed in 1713. In the following year, on the 1st August, Anne died of an attack of dropsy. In person she is described to have been stout; she had dark-brown hair, a round and comely countenance, and a remarkably pleasing and melodious voice. She had, as we have seen, many good points of character; but perhaps it was as much owing to the glories of her reign as to her personal virtues, that she has received in history the title of "the good Queen Anne."—T. A.

ANNE OF FERRARA, daughter of Hercules I., duke of Ferrara, married in 1549 Francis, duke of Guise, and manifested great energy in the wars of the League. She was for some time a prisoner at Blois.

ANNE DE GONZAGUE, wife of Edward, Count Palatine; died at Paris, 1684. Over her Bossuet pronounced an eulogium.

ANNE OF HUNGARY, daughter of Ladislas VI. (or Uladis-

laus, son of Casimir, king of Poland, who had been elected king of Bohemia), by his wife, Anne of Gascony. She married Ferdinand, archduke of Austria, infant of Spain, and afterwards emperor; and through her the kingdom of Bohemia has ever since belonged to the Austrian family, illustrating the old maxim, that the house of Hapsburg has gained its chief power by politic marriages. She died in 1547.—T. J.

ANNE OF WARWICK, the first princess of Wales, and the last queen of the Plantagenets, was born at the ancestral castle of the Beauchamps, at Warwick, in 1454. To avoid the wrath of the high-spirited Margaret of Anjou against the great earl of Warwick, the countess, Anne's mother, withdrew to Calais, where Anne was brought up, though it seems that she was often brought to England with her elder sister Isabel. From the dawn of her beauty, she was the favourite of the duke of Gloucester, afterwards Richard III., who was born at Fotheringay two years before her, and was her early playfellow. Caring little for her ill-tempered cousin, Anne was married in August, 1470, at Angers in France, to Edward of Lancaster, son of Henry VI. and Margaret of Anjou. After the battle of Tewkesbury and the cruel murder of her husband, she disguised herself as a cook-maid in London; but the spies of Richard discovered her, and she was removed to a religious sanctuary in St. Martin's-le-Grand. Forced in 1473 to marry her powerful and unscrupulous cousin, she displayed an abhorrence of him, which was not softened until after the birth of her son Edward, in 1474. Richard having gained the throne, Anne was crowned with him, July 5, 1483. In the following year, her only son died at Middleham, and, it would seem, by some fearful catastrophe. From that day she faded. Richard was suspected of wishing to divorce her, but her death, on the 16th of March, 1485, spared him the crime. It is affirmed by some that she died of poison. She suffered much during her eventful life of thirty-one years, but bore her trials with meekness, and it was not until her son expired that the heart of the hapless mother was broken. Her remains lie in the royal abbey of Westminster, near the tomb of Anne of Cleves; but no monument marks the burial-place of the daughter of Nevill the kingmaker.—T. J.

ANNEBAÛT, CLAUDE D', a Norman baron, who distinguished himself under Francis I. at the battle of Pavia, and rose to be marshal and admiral of France. Being commissioned in 1545 to attempt an invasion of England, he collected a large fleet, and ravaged the coasts of Hampshire and the Isle of Wight, without, however, venturing to attack Portsmouth. In the following reign he was disgraced, and died in 1552.—J. W. S.

ANNESLEY, ARTHUR, Earl of Anglesey, and Lord Valentia in Ireland, was born in Dublin on the 10th of July, 1614. He was sent in the year 1645 by the parliament as a commissioner to Ulster, where he acquitted himself so well that he was again sent to Ireland with the commissioner to treat with the duke of Ormond for the delivery of Dublin to the parliament in 1647. On the restoration of the Rump parliament, Mr. Annesley took a very prominent part in endeavouring to procure the admission of the excluded members; and when, in 1660, this object was effected, and a new council of state appointed, he was made its president, and in that position he aided general Monk in bringing about the restoration of Charles II. Upon that event he was made a privy councillor, and the next year was created Baron Annesley and Earl of Anglesey, having previously succeeded to the Irish earldom of Valentia by his father's death. In 1665 the office of vice-treasurer of Ireland was conferred upon him, which he afterwards resigned for that of treasurer of the navy in 1667. In February, 1672, he was appointed one of the committee of the privy council, to inspect and report upon the papers respecting the settlement of Ireland, and in the following year he was appointed lord privy seal. Lord Anglesey was one of the few who disbelieved in the existence of the Popish Plot, and he had the boldness to express his sentiments openly in the House of Lords—a course which exposed him to the charge of being a Roman Catholic; and on information by Dangerfield of endeavouring to suppress evidence in relation to the plot, Lord Anglesey fell into disfavour with Charles II., and a complaint having been preferred against him by the duke of Ormond, the privy seal was taken from him. He then retired into privacy, and occupied himself in literature, composing a "History of the Wars in Ireland." Upon the accession of James II. he returned to court, and was received into favour by that monarch. It was even supposed by his friends, that had he lived a month

longer, he would have been made lord chancellor of England; but this seems to want confirmation. He died on the 6th April, 1686, aged seventy-three years. Though Lord Annesley has been spoken of disparagingly by Burnet and others of his contemporaries, there seems no reason to doubt his honesty, whatever opinion might be entertained of his judgment or his talents. He was a man of some scholarship and literary pretensions, and left a considerable number of works.—(*Athenæ Oxonienses; Royal and Noble Authors. Biog. Brit. Lit.*)—J. F. W.

ANNESLEY, SAMUEL, born at Kenilworth in 1620. He was of good family, being related to the earl of Anglesey. Having studied at Queen's College, Oxford, he was, in 1644, made chaplain to the lord high admiral, and went to sea with him. In 1648, the university of Oxford made him D.C.L. He held several places of preferment under the Commonwealth, the last of which was St. Giles', Cripplegate, to which he was presented by Richard Cromwell. Refusing to conform, he was deprived at the Restoration, but continued to officiate in nonconformist congregations till his death, 1696. Baxter speaks in the highest terms of Annesley's excellence and piety. One of his daughters married the Rev. Samuel Wesley, and became the mother of the celebrated John Wesley. His published works consist mostly of sermons.—J. B., O.

ANNIBALE, PADOVANO, a native of Padua, as is indicated by his name, was so distinguished for his organ-playing, that he was appointed to that of St. Mark's at Venice, when he was but twenty-five years of age. He held this post for thirty years, during which time he produced many compositions, not only for the organ, but also for the lute, and for the virginals (or whatever description of keyed instrument with strings was then in use), upon both of which he was a notable player. He died in 1655, leaving behind him the reputation of being one of the most able executive musicians of his day.—G. A. M.

ANNIBALLIANUS, FLAVIUS CLAUDIUS, a nephew of the Emperor Constantine I., lived in the fourth century. On the partition of the empire he received Pontus, Cappadocia, Armenia, Bithynia, and Cæsarea, but was assassinated A.D. 337.

ANNICERIS, a Greek philosopher of Cyrene, of the Epicurean school, who lived about 330 B.C.

ANNIO DA VITERBO, or GIOVANNI NANNI, was born at Viterbo in 1432. He entered the Dominican order, and became master of the household to Pope Alexander VI., and died in 1502. His philological and antiquarian attainments were considerable, but he is chiefly known in connection with certain literary forgeries of that epoch, in which he was probably the dupe of some unknown individual.—J. W. S.

ANNO or HANNO, an archbishop of Cologne, who lived in the eleventh century, and became regent of the German empire during the minority of Henry IV.

ANNO'NE or ANNO'NI, JOHANN JAKOB, a naturalist and antiquarian of Basle, who lived in the last century. His museum is still preserved in his native town.

ANOT, PIERRE NICHOLAS, a French historian, was born in 1762, and died in 1823.

ANQUETIL, LOUIS PIERRE, was born at Paris in 1723, and died in 1806. He is the author of a history of France in 14 vols., and of several valuable works on the affairs of the "League," the "Fronde," &c. His essay on the "Motives for War" is much admired by diplomatists.

ANQUETIL-DUPERRON, ABRAHAM HYACINTHE, a younger brother of the preceding, was born at Paris in 1731, and died in 1805. At an early age he was inspired with the wish to study the languages and literature of the East. After having made himself acquainted with the Hebrew, Arabic, and Persian tongues, he enlisted as a private soldier in a regiment bound for the French possessions in India. Here he became intimate with the Parsee priests or "destours," studied under their guidance the Sanscrit, Pehlvi, and Zend languages, and obtained a number of manuscripts containing the doctrines of Zoroaster. On his return to Europe, he published a translation of these under the title "Zend Avesta." This work excited the greatest curiosity among the learned, but upon close examination it was found full of errors—the result of Anquetil's imperfect acquaintance with the original tongues. The remainder of his life was spent in Paris, amidst voluntary privations, endured in imitation of the sages of India. He died in 1805. He was aided in his researches in India by his younger brother ANQUETIL DE BRIANCOURT.—J. W. S.

ANSALDI, CASTO INNOCENZIO, a Dominican friar of Piacenza, author of many works on history, archæology, and divinity. He was born A.D. 1710, and died in 1779.

ANSALDI, INNOCENTE, a Tuscan painter, more noted for his writings on art, than as an artist. Born 1734; died 1816.

ANSALDO, GIOVANNI ANDREA, an Italian painter, born at Voltri in 1584, died in 1638. He studied first under Cambiasio, but, having seen a painting by Paolo Veronese, gave himself up entirely to the imitation of that great master, which imitation he not only carried into all his own numerous works, but even enforced it on his many pupils.—R. M.

ANSALONI, GIORDANO, a Sicilian monk of the seventeenth century, who, hearing of the persecution of the Christians in Japan, travelled thither in order to undergo martyrdom,—a project which proved completely successful.

ANSARI, ABU-L-KASIM, a Persian poet of the 11th century, who lived at the court of Mahmud of Ghizni. His chief merit lies in having brought into notice the great Firdûsi.

ANSART, ANDRÉ JOSEPH, a French writer on church history, lived in the last century.

ANSART, LOUIS JOSEPH AUGUSTE, a French ecclesiastical author, who lived from 1748 to 1823.

ANSBERT, a French saint of the seventh century.

ANSBERT, a German chronicler of the twelfth century, who accompanied the Emperor Frederic Barbarossa to Palestine, and wrote a most interesting history of that expedition.

ANSCHAR, ANSCARIUS or ANSGERIUS, surnamed the "Apostle of the North," a monk of Picardy, was born in 801, and died in 864. He was educated at the convent of Corbic, in his native province, and removed thence, as teacher of literature, to the monastery of Carvei in Westphalia. He afterwards travelled in Denmark and Sweden as a missionary, and preached in those regions with great zeal and success. He was successively appointed archbishop of Hamburg and Bremen, and papal legate amongst the Danes, Swedes, and the Slavic tribes on the Baltic. His journal appears to have been lost.—J. W. S.

ANSEAUME, a French dramatic author of the last century.

ANSEGISUS, a monk of Gaul, lived about A.D. 800, and had great influence under Charlemagne and his successor.

ANSEGISUS, an archbishop of Sens, who lived in the ninth century, and held the office of pontifical vicar in France.

ANSEGISUS (ANSUSUS, ANSERSUS, ANSEISUS or ANCIGISUS), a warlike bishop of Troyes in France, who lived in the tenth century.

ANSELIN, JEAN LOUIS, an engraver of Paris, a pupil of St. Aubin, was born in A.D. 1764, and died in 1823.

ANSELM, ST., of Canterbury, was born at Aosta in Piedmont, A.D. 1033, and belonged to a noble Lombardian family on the father's side. At an early age he entertained a strong desire to lead the life of a monk, a desire which seems to have been excited by the pious instructions of his mother. But the influence of his father, and the youthful exercises in which he was engaged, checked this propensity, so that he became frivolous and worldly-minded. Being alienated from his father, whose discipline towards him was severe, he left home, wandering about for several years in Burgundy and France, till at length he came to Avranches in Normandy, where he heard of the fame of Lanfranc, prior of the abbey of Bec. Under the superintendence of this celebrated teacher, he applied himself with untiring industry to the studies he had entered upon at a very early age; and his former desire for a monastic life returned. After many inward struggles he became a monk of Bec, at the age of twenty-seven. Three years afterwards, he succeeded his instructor as prior. The duties of this office were numerous, including the direction of the studies, disciplinary oversight, and the cure of souls. In all respects he acquitted himself with great credit to the place, and with marked success. Here he was occupied with the deepest problems of speculative theology, in free intercourse with the inquisitive and ardent spirits who had come to the abbey. He had great knowledge of the human heart, and could unfold truth with such wise moderation and earnest piety, as to secure for it a ready entrance into the mind. To the young he was very attentive, treating them with mildness and discretion. The MSS. of the cloister library he enlarged and corrected, in addition to his other labours. However occupied, he never omitted his private duties of devotion, his ascetic practices, fastings, and nightly vigils. When Abbot Herluin died in 1078, he was unanimously elected

his successor. This increased his responsibilities; but he continued to make the spiritual oversight of the abbey his chief concern, and intrusted certain brethren with external duties as far as he thought it advisable.

In consequence of the abbey having possessions in England, he made several visits to that island, and was always received most hospitably. He procured there even the respect of the king (William the Conqueror); while, on the other hand, he stood in such relation to the ecclesiastical ruler of the West, that Gregory the seventh exempted the abbey from spiritual jurisdiction. A third journey to England introduced him into a wider sphere of activity. Hugh, count of Chester, one of William's barons, being attacked with a dangerous sickness, earnestly pressed the reluctant abbot to visit him; and therefore he determined to repair to England again. Very reluctantly he was chosen archbishop of Canterbury, the place having been vacant some years—*i. e.*, since the death of Lanfranc. The English clergy were very anxious for this appointment, and brought him into the king's presence (William Rufus), who, sick of a dangerous disease, at once nominated Anselm archbishop. But the pious man foresaw difficulties and troubles in the new position. The king was arbitrary, and disposed to keep the church in subjection: the archbishop anxious to secure its freedom from worldly domination. In 1094 William rejected, as too small, a present of five hundred pounds from Anselm. The next year he refused permission to the archbishop to convene a national synod for the reformation of abuses. With great difficulty did Anselm obtain the recognition of Urban II. by William; and after several refusals, he got permission to go to Rome to consult the pope in person, on the means of remedying the evils of the church in England. He left the country in 1097. After his departure, the revenues and privileges of the see were seized by William, and all Anselm's acts invalidated. From Rome he went to a monastery in Campania, where he finished his treatise on the Incarnation of Deity (*Cur Deus Homo*). At the synod of Bari, in 1098, he defended the Latin doctrine of the procession of the Holy Spirit against the Greek church, with arguments which he afterwards published in his work on the subject. From this council he went to Rome, where he assisted at a synod which enacted strict regulations respecting lay investiture. Afterwards he set out for Lyons, where he was most kindly received by the archbishop. Here he was fully occupied with practical works of piety, as well as with the composition of treatises—"On the Conception of the Virgin," "On Original Sin," and a "Meditation on the Redemption of Man."

After the death of William Rufus, the way was open for him to return to England; and this step he resolved to take. Before he reached Clugny, a letter reached him from Henry I., expressing a desire to see him in England, and promising to follow his counsels. But when he was required to take the oath, and be reinvested by the king, he refused, pleading that he was bound by the decrees of the Roman synod not to do so. It was therefore agreed to apply to the pope, Pascal II., that he should dispense with those decrees relating to investiture by a layman. But the pope would not consent; and the king adhered to the royal prerogative. In this dilemma it was determined that Anselm should go in person to Rome, Henry sending ambassadors again. Accordingly, the archbishop went to Rome a second time in 1103, and found the pope firm in refusing to give the monarch the right of investiture. Thence Anselm departed for Lyons, and wrote to the king, asking him whether he would allow him to return to England on condition of abiding by the papal decision. As the royal answer was unfavourable, he stayed for some time at Lyons. At length the pope yielded so far as the oath of investiture was concerned; and the monarch on his part gave up investiture with the ring and crosier. Anselm now returned to England, and henceforward enjoyed the full confidence of the king, passing the remainder of his days in writing several of his works, and administering ecclesiastical discipline. He restored the rights of the see of Canterbury, which had fallen into neglect: while he insisted upon the papal acknowledgment of the English church's independence in himself, its head, whose exclusive right it was to be the pope's vicar in England. With regard to the reform of both clergy and laity—a subject that lay near his heart—he enacted important decrees in relation to it at the synod of Westminster (1102); but it was difficult to carry them into execution. Another object of his care was the reformation of monasteries, as he rightly thought that they

should be examples of piety. Nor was the sphere of his activity as archbishop confined to England. It extended to Scotland, Ireland, and the smaller islands adjoining. His influence was felt on the continent, too, in manifold ways; for the freedom and purity of the church at large were the great aims of his pious solitudes and efforts. His death took place on the 21st April, 1109, in his seventy-sixth year, and the sixteenth of his primacy: and he was buried in the cathedral at Canterbury beside Lanfranc.

There is no doubt that Anselm was possessed of the highest qualities of head and heart. While he was the man of his times, entering into all the leading questions belonging to the church, he also penetrated into the future. His understanding was clear, subtle, comprehensive, vigorous; and his piety disinterested. He had firmness and decision, tempered with moderation and wisdom. While the richness of his spiritual life flowed out in works of piety, in benevolent efforts to ameliorate body and soul, in instructing and guiding the monks and clergy over whom he presided, and in promoting the purity as well as the independence of the church; he had a metaphysical and original spirit, which worked into the depths of scientific theology with penetrating eye. Hence he is commonly considered *the father of scholasticism*, standing at the head of those subtle dialecticians, who, for several succeeding centuries, moulded the philosophy and theology of the West into systems pervaded by ingenious speculation, and by mental ability of a high order. Anselm reproduced ecclesiastical truth in the manner and spirit of Augustine, whom he resembled in metaphysical ability and constructive power. His works are numerous, embracing logic, as his "Dialogus de Grammatica," which shows an acquaintance with Aristotle; general principles of theology and philosophy united, "Dialogus de Veritate;" while others are occupied with speculative theology, pneumatology, the incarnation, redemption, free-will and its relation to grace, the divine foreknowledge and predestination, the doctrine of the Lord's Supper, the origin of evil, original sin, &c., &c.

Perhaps the ablest of his works is the "Monologium," on the existence and attributes of God; the doctrine of which was supplemented and developed in various other writings, especially the "Proslogion." The doctrine of the Trinity was unfolded in his treatise "De fide Trinitatis et de Incarnatione Verbi;" and the procession of the Holy Spirit is defended against the Greeks in "De Processione Spiritus Sancti." The treatise "Cur Deus Homo" is upon the incarnation. The great problem which Anselm endeavoured to solve was, the reconciliation of metaphysics and divinity. While he was a most devout believer in the theology of the church, he cautiously tried how far the harmony was to be established between the Godhead of Revelation and Reason. His famous philosophical axiom, the *à priori* proof of the being of God, was, "the idea of God in the mind of man is the one unanswerable evidence of the existence of God." This same thought suggested itself afterwards to the reflective minds of Des Cartes and Leibnitz; and is still the great problem of metaphysical theology. The fame of Anselm will always rest upon it.

Besides his scientific works, he left "Spiritual Meditations" (*Meditationes*); "Prayers" (*Colloquia Cœlestia*) addressed for the most part to God and Christ, but sometimes to the virgin and saints; and "Letters" (*Epistolæ*) divided into four books. A complete list of his writings comprises about thirty treatises.

The first edition of Anselm's works was published at Nürnberg in folio, 1491, reprinted there 1494. A much better edition was that of Gerberon, published at Paris in folio, 1675; second edition of the same 1721, Paris, folio. The best is that published at Venice, 1744, in 2 vols. folio. The completest modern work on Anselm is that of Professor Hasse, in 2 vols. 8vo., 1843-1852, the first being occupied with his life, the second with his doctrines. These editions of Gerberon contain the life of Anselm by his friend Eadmer, which, together with his letters, constitutes the materials of all subsequent accounts.—S. D.

ANSELM or ANSELME, a monk of the abbey of St. Remi of Rheims, was a writer of the eleventh century, of whose life nothing is now known. He is the author of a work entitled "Itinerarium Papæ Leonis," or, more properly, a history of the dedication of the church of St. Remi at Rheims. Anselm relates all that Leo did on his journey from Rome to Rheims to consecrate the church; and also the sittings of the council held in the

new church by Leo, on October 3, 1049, and two following days. Anselm's work was published by Mabillon in the "Acta Sanctorum Ordinis S. Benedicti," Sæculum VI.—S. D.

ANSELM or ANSELMO, bishop of Lucca in Tuscany, was born about 1036. Pope Alexander II., his uncle, sent him in 1073 to the Emperor Henry IV. to receive the investiture of a bishopric, but he would not accept of it from the secular power. In consequence of the death of Alexander, he was chosen to succeed him in the bishopric of Lucca the same year. He now received investiture, taking the ring and crosier from the hands of Henry; but, repenting of the act, retired to the monastery of Clugny and became a monk. But Gregory VII., into whose hands he returned the ring and staff, induced him to return to his bishopric. His efforts to establish a reform among the canons of his cathedral led to disputes and troubles. At a council held at Lucca, the refractory canons were excommunicated, and joined the party of the antipope Guibert, who, coming into Tuscany, gave the bishopric to one of them. Anselm, therefore, driven from Lucca in 1083, went to Mantua. Pope Gregory VII. appointed him his legate for all Lombardy, and to act as bishop. He was very zealous in seconding Gregory, and assisting all the clergy who adhered to him, when Henry IV. marched against Rome with Guibert, whom he wished to be pope in place of Gregory. He died in 1086, and was buried in the cathedral of Mantua. Of his numerous writings, the chief are "Collectionis Canonum Libri XIII.," only portions of which have been printed by Holstenius, the rest being in MS. in various libraries. He also wrote "Contra Guibertum Antipapam, Libri duo," first published by Canisius in his "Antiquæ Lektionen," 4to, Ingolstadt, 1604. On the 18th March, the day of his death, the Church of Rome celebrates his memory as a saint.—S. D.

ANSELM OF LAON, hence called LAUDUNENSIS, and generally styled SCHOLASTICUS, was a celebrated theological teacher. The year of his birth is not known, but is supposed to have been before the middle of the eleventh century, at Laon in France. He studied under Anselm of Canterbury in the abbey of Bec; and returning, taught scholastic theology in Paris from 1076. Here he became celebrated; and is thought to have contributed to the foundation of the university of Paris in future years. At the close of the eleventh century he returned to his native town, Laon, where he superintended the schools connected with the cathedral, having been elected archdeacon. He was subsequently dean of the church. His school of theology attracted pupils from all countries—Italy, Spain, Germany, England, and elsewhere. In 1113 Abelard came to Laon to hear his lectures, but expressed disappointment with them. His theology consisted of a simple exposition of the holy scriptures supported by the authority of the Fathers, which did not suit the metaphysical taste of Abelard. Several bishoprics were offered to him, but he refused to accept any, from attachment to his favourite calling of teacher. He died in 1117, and was buried in the abbey of St. Vincent. His principal work is an interlinear gloss upon the Old and New Testaments, consisting of short notes on the Vulgate text. He also revised and augmented the "Glossa Ordinaria," or Marginal Gloss of Walafrid Strabo. Both were printed at Basle in folio, 1502, 1508; and at Antwerp 1634. Anselm was also the author of commentaries on single books of scripture.—S. D.

ANSELM or ANSELME, count of Ribemont, a town of France, was a soldier and writer of the eleventh century. His liberality to the church is highly praised. When the famous crusade for the recovery of the Holy Land was determined upon in 1095, he took part in it under the leadership of Godefroy de Bouillon. He was engaged in the sieges of Nicæa and Antioch, whose perils he escaped; but was afterwards killed by a stone falling upon his head at the siege of the castle of Arcas, about six miles from Tripoli. This was in 1099. Anselm wrote two accounts of the memorable events in which he had been engaged, addressed to Manassé the Second, archbishop of Rheims. The first has been lost. The second, describing the siege and capture of Antioch, and the various battles between the Christians and Infidels, was published by D'Achery in his "Spicilegium." It was written after the Christians had taken Antioch in 1098.—S. D.

ANSELM OF GEMBOUX, ANSELMUS GEMBLACENSIS, was a monk of the abbey of Gembloux, a town in Brabant. He belonged to the abbey of Hautvilliers, and afterwards to that of Lagni, in both of which he directed the schools. Having returned to the

monastery of Gembloux, he took charge of the library and the school. In 1113 he was elected abbot, and discharged the duties belonging to that office with great diligence and care. He died in 1136. He wrote one work—a continuation of the Universal Chronicle of Sigebert, from 1112 to 1136—which is considered very accurate. It was published along with Sigebert's and the continuations of three Benedictines down to 1224, by Aubertus Miraëus, at Antwerp, in one quarto volume, 1608.—S. D.

ANSELM, bishop of Havelberg in Saxony, was the ambassador of Lotharius II., 1135, at the court of Constantinople when John Comnenus was emperor. He held public and private conferences with members of the Greek church relative to the points of difference between that and the Latin church. One of these was with Nicetas, archbishop of Nicomedia, about the procession of the Holy Spirit. When at Rome in 1145, Pope Eugenius the Third requested him to write an account of these conferences. Accordingly, he composed a work entitled *ἀντιζείμενα; i. e., things opposed to one another*—which is printed by D'Achery in his *Spicilegium*, vol. i., new edition. This is one of the most important controversial treatises relative to the two churches, and shows great impartiality on the part of Anselm, betraying unconsciously many things in which his Greek opponent had truth on his side. It appears that he was afterwards sent on a second embassy to Constantinople by Frederick Barbarossa, to negotiate an alliance with the Emperor Emanuel Comnenus against the king of Sicily. Having returned from this mission in 1155, he was elected archbishop of Ravenna, and Frederick gave him the exarchate of the province. He died in 1159.—(See Spieker in *Ilgen's Zeitschrift*.)—S. D.

ANSELME, canon of the cathedral of Liege, ANSELMUS CANONICUS LEODIENSIS, was a writer of the 11th century. In 1053 he accompanied Theodouin, bishop of Liege, on a pilgrimage to Rome, and, after his return, became dean of the cathedral of Liege. The times of his birth and death are equally unknown. His only work is a history of the bishops of Liege, which has never been published entire. It was originally in two parts, the latter alone being the production of Anselme himself. The best edition is that of Martene and Durand, in their collection of ancient writers and monuments, 1729, Paris, folio, tom. iv.—S. D.

ANSELME DE LA VIERGE MARIE, or LE PERE ANSELME, a writer on heraldry, was born at Paris in 1625. At the age of 19 he entered the order of Augustins Dechaussés, and observed all its austerities. He died in 1694, aged 69. His great work is "Histoire Genealogique et Chronologique de la Maison Royale de France," &c., 4to, Paris, 1674, 2 vols.—S. D.

ANSELMI, BATISTA, a Genoese physician, who lived in the seventeenth century, and wrote on the plague.

ANSELMI, MICHEL ANGELO, a historical painter, born at Lucca in 1491, died at Parma in 1554. He was one of the best pupils of Razzi, but modified his style under the guidance of Correggio, whom he assisted in his celebrated works in the cathedral of Parma.—R. M.

ANSELMO, GIORGIO, an astronomer and mathematician of Parma, died in 1440.

ANSELMUS or ANSELMI, AURELIO, a physician of Mantua, who flourished in the seventeenth century.

ANSIAUX, EMMANUEL ANTOINE JOSEPH, a jurist of Liege, was born in 1761, and died at Münster in 1800, leaving several historical memoirs relative to his native town.

ANS-IBN-MALIK, an associate of the prophet Mahommed, who died in 710, at the extraordinary age of 130 years.

ANSIDEI, BALTASAR, an author of Perugia in Italy, who was born in 1556, and became librarian at the Vatican, and keeper of the archives in the castle of San Angelo.

ANSIDEI, GIUSEPPE, an Italian poet, was born in 1642, and died in 1707.

ANSLAY (ANNESLAY), BRIAN, the author of a rare work entitled the "Cyte of Ladyes," published in 1521.

ANSLO, REINIER VAN, a Dutch poet, was born at Amsterdam in 1626, and died in 1669 in Italy, where he had embraced catholicism, and enjoyed the friendship of Christina of Sweden.

ANSON, LORD GEORGE, third son of William Anson, Esq. of Shuckborough in Staffordshire, was born in the year 1697. He went early to sea, and in 1716 was appointed second lieutenant of H.M.S. *Hampshire*. He passed rapidly through the different subordinate grades of the service, being assisted probably by the influence of the earl of Macclesfield, then lord chancellor of England, who had married his maternal aunt, until

in 1724, he was made post-captain, and appointed to the *Scarborough* man-of-war. Shortly afterwards he was ordered to South Carolina, a colony which had been founded fifty-four years before, by some settlers from Virginia. Anson seems to have possessed the English colonizing spirit to an eminent degree. He was but three years on the Carolina station; yet in that time he amassed considerable property, laid out a new town, called after him Anson Burgh, and gave his name also to a county, which is still called Anson County. In 1728 he returned to England, and was paid off. For the next four years he was but little employed; but in 1732 he was appointed to the *Squirrel*, and ordered again to the Carolina station, where he remained till the spring of 1735. Two years afterwards he was first appointed to the famous *Centurion*, a fifty-gun ship, and ordered to cruise on the coast of Guinea. He returned to England by way of Barbadoes and Carolina in 1739. In all these various employments he conducted himself with singular ability and discretion. When the war with Spain broke out in 1739, it was resolved to send an expedition to harass the Spanish settlements in the Pacific and destroy their trade, and Anson was at once selected as the commander. He hoisted his broad pennant as commodore, on board the *Centurion*, in September, 1740. The squadron consisted, besides his own ship, of four men-of-war, a sloop of war, and two victualling ships. Calling on the way at Madeira and Jamaica, he proceeded to attempt the passage round Cape Horn. There is always some difficulty in making this passage from the eastward, owing to the prevalence and strength of the westerly winds; but in the present day, when the science of navigation is better understood, and all that the master of a vessel requires is plenty of sea-room, the feat is more easily performed than in the days of Anson, when the old practice of hugging the land was in some measure followed by all navigators; and they would persist in beating backwards and forwards against a foul wind in vain attempts to weather some headland, when a bold stretch off the land for three or four hundred miles would probably have brought them into different winds, or at any rate have enabled them to fetch clear of the land. Anson had a very rough passage, in the course of which he was separated from the other vessels of the squadron, part of which never afterwards rejoined him. Scurvy now broke out among the crew, and Anson steered for Juan Fernandez, in order to obtain a supply of fresh vegetables. He helped with his own hands in carrying the sick sailors on shore. The humanity which he showed on this and other occasions endeared him wonderfully to his sailors; but he never relaxed the bonds of the strictest discipline, and the Spanish prisoners whom he took, particularly some ladies who were passengers on board the *Teresa*, a rich merchantman which fell into his hands off the coast of Peru, found with surprise and satisfaction that an English naval officer was a very different sort of person from a buccaneer, although, from the fact of many of the buccaneering chiefs having unfortunately been Englishmen, they had been accustomed to confound the two. Anson took and burned the town of Paita in Peru, and after long and weary watching, succeeded, on the 30th June, 1743, in intercepting and capturing the Manilla galleon, bound to Spain with an immense treasure. Yet, from the disasters which befell his ships, the main design of the expedition, that of humbling the Spanish power in the Pacific, was very imperfectly answered. He returned to England in 1744, and was immediately made a rear-admiral, and a vice-admiral in 1746. When commanding the Channel fleet in 1747, he engaged, off Cape Finisterre, a French fleet of inferior force, bound with a convoy to the East Indies, defeated it, and captured six men-of-war, and four East Indiamen. Two of the prizes were named *L'Invincible* and *La Gloire*. The captain of the former, M. St. George, said, when handing his sword to Anson, with a strangely-timed politeness, "Monsieur, vous avez vaincu *L'Invincible*, et *la Gloire* vous suit." For this service Anson was made a peer, with the title of Lord Anson, Baron of Soberton. He married, in 1748, a daughter of Lord Hardwicke, by whom he had no issue. In 1751 he was made first lord of the admiralty, and continued to hold the post nearly until his death in 1762; but did not again distinguish himself in action.

Anson possessed all the ingredients of a thoroughly manly character; he was courageous, cool, sincere, and humane. No better eulogy could be given of him than is contained in those touching lines in Cowper's "Castaway," alluding to one of his sailors who was lost overboard:—

"No poet wept him: but the page  
Of narrative sincere,  
That tells his name, his rank, his age,  
Is wet with Anson's tear;  
And tears, by bards or heroes shed,  
Alike immortalize the dead."

(*Biograph. Britan. Anson's Voyage.*)

—T. A.

ANSON, PIERRE HUBERT, a French financier, was born in 1744, and died in 1810. He took a share in the Revolution during its earlier stages, but retired subsequently from public life, and turned all his attention to agriculture.

ANSPACH, ANSBACH or ANOLZBACH, Margraves of,—a German princely family, connected with the house of Brandenburg. Their dominions are now merged in the kingdom of Bavaria. Of the family we notice—

ANSPACH and BAIREUTH, CHRISTIAN FREDERICK KARL ALEXANDER, Markgraf von, was born in 1736, succeeded to the principality in 1757, and passed the greater part of his life in travelling, engaged in artistic and amorous pursuits. He finally sold his dominions to the king of Prussia, and retired to England, where he married Lady Craven, and lived as a private man at Hammersmith, until his death in 1806.

ANSPACH, ELIZABETH BERKLEY, Margravine of, otherwise known as Lady Craven, was born in London in 1750, and died at Naples in 1828. She was married first to the earl of Craven, and afterwards to the subject of our last memoir. In 1821 she received Queen Caroline in her mansion at Hammer-smith, generally known as Brandenburg House. She visited most European countries; amongst others the Crimea, then little known in England. Her literary productions, both in English and French, enjoyed in their day a considerable popularity.—J. W. S.

ANSPRAND or AZIPRAND, a king of Lombardy, who succeeded Eribert II. in 712.

ANSTER, JOHN, LL.D., a distinguished poet and essayist, was born at Charleville in the county of Cork. He entered Trinity college, Dublin, in the year 1810. During his undergraduate course, he gave evidence of those poetic powers which in after years, when matured by study and thought, placed him amongst the best writers of his day. Some of these earlier pieces were published before he took his degree. Subsequently to that period, he published a prize poem on the death of the Princess Charlotte, and in 1819 he published his "Poems, with translations from the German," in which volume most of his earlier productions reappeared, and others which he had contributed to Blackwood's Magazine; among the latter were fragments of translations of Goethe's "Faust." These were at once received into favour. Their truth and vigour were at once acknowledged, and it is said that the great German poet himself recognized their excellence. These extracts were reprinted in England and America, and their success encouraged Anster to undertake the laborious task of translating the entire poem, which he completed in 1835. The publication of this work established the reputation of Anster. It is a production of rare felicity and genius, and one of the few instances in which translation attains to the level of original composition. It at once attained the highest position, and, notwithstanding the many translations, both in prose and verse, that have since appeared, retains its popularity. It is a standard book on the continent, and has been twice reprinted in Germany. In 1837, Dr. Anster published a small volume of poems under the title of "Xeniola," which contains many pieces of merit. He also contributed largely to the leading British periodicals, and was a constant writer in "The Dublin University Magazine," and the "North British Review." He was called to the Irish bar in 1824. Of late years he did not practise much, confining himself to the duties of his chair as regius professor of civil law in the university of Dublin, which he discharged with great ability. The services rendered by him to literature were recognized by a pension on the civil list, conferred upon him by her Majesty in 1841. He died in June, 1867.—J. F. W.

ANSTETT, JEAN PROTASIVS, a diplomatist in the service of Russia, born at Strasburg 1760, died at Frankfort 1835.

ANSTEY, CHRISTOPHER, an English poet, was born in 1724, and died in 1805. His principal work, the "New Bath Guide," has passed through several editions.

ANSTIS, JOHN, an archaeologist, was born in Cornwall in 1669, appointed by Queen Anne to a situation in the Herald's College, imprisoned on the accession of George I. as an adherent of the Stuart dynasty, and died in 1744.

**ANSTRUTHER, SIR JOHN**, an English statesman, was born in 1753, distinguished himself as a member of the party who endeavoured to arrest the progress of the French Revolution. He died in 1811.

**ANTA'LCIDAS**, a Spartan, who brought about a famous treaty of peace in 387 B.C., favourable to the interests of Persia. Sparta had been engaged in an unsuccessful war against several of the other Greek states, when Antalcidas succeeded in gaining over Artaxerxes, king of Persia, to his views, and in bringing the war to an end.—J. W. S.

**ANTANDROS**, a brother of Agathocles tyrant of Syracuse, whom he rivalled in cruelty.

**ANTAR**, a hero and poet of the ancient Arabians, who lived before the epoch of Mahomet, and of whose achievements the most wonderful fables are related. He is the principal character in a voluminous romance, a portion of which was translated into English by Derriek Hamilton.

**ANTELAMI, BENEDETTO DEGLI**, a sculptor and architect of Parma in the twelfth century. A bas-relief by this artist in the cathedral of that city, bearing the date of 1178, shows the most decisive step of this age in the transition from the Byzantine towards the early Tuscan style.—R. M.

**ANTELM, JOSEPH**, a writer on ecclesiastical history, who was born at Frejus in 1648, and died in 1697.

**ANTELM or ANTHELM, PIERRE**, an ecclesiastic and antiquarian, who lived at Frejus in the 17th century.

**ANTELM, PIERRE THOMAS**, a mathematician of Provence, professor at the military school, and director of the observatory, who died in 1783.

**ANTE'NOR**, a Trojan prince, said to have betrayed his country to the Greeks, and to have afterwards founded Padua.

**ANTESIGNAN, PIERRE**, a philologist of Rabestein, near Albi, lived in the sixteenth century.

**ANTHELMUS, NANTHELMUS, ANSELMUS, ANSELINUS, ST.**, a prelate of Savoy, of the twelfth century.

**ANTHEMIUS**, an able statesman of the Eastern empire, regent during the minority of Theodosius II., much praised for his public virtues by Chrysostom.

**ANTHEMIUS, PROCOPIUS**, an emperor of the West, who, after a troubled reign, was deposed, and slain by his son-in-law, Ricimer, in 472.

**ANTHEMIUS**, an architect of Tralles in Asia Minor, who flourished under the reign of Justinian, and built the cathedral of St. Sophia at Constantinople. He was also eminent as a mathematician and engineer, and appears to have been well acquainted with the force of confined steam, if not with some rude outline of the steam-engine.—J. W. S.

**ANTHING, KARL**, was governor-general of the Dutch possessions in India, and died in 1823.

**ANTHOINE, ANTOINE IGNACE, BARON D' ST. JOSEPH**, a French political economist, born in 1749, died in 1826.

**ANTHOINE, FRANÇOIS PAUL NICHOLAS**, born in 1720, became a zealous adherent of the revolution, died at Metz, 1793.

**ANTHOINE, NICOLAS**, of Lorraine, was burnt to death in 1632, for having embraced Judaism.

\* **ANTHON, CHARLES, LL.D.**, was born at New York in 1797. He studied law, and was admitted to the bar of the supreme court of his native city. But classical literature was his favourite pursuit, and the reputation which he acquired as a scholar, led to his appointment as professor of languages in Columbia college. Henceforward he has devoted himself wholly to academic labours; and by the many valuable works which he has published, he has given a stimulus, not only in America, but elsewhere, to the study of the Latin and Greek classics.—W. B.

**ANTHONY, SAINT**, the patriarch of monachism, and its founder too, unless that honour be given to Paul the Hermit, was born in the town of Coma, on the confines of the Thebais, in 251. At the age of thirty-five, after selling his property, he withdrew from the world into solitude, lived in a ruined tower among the mountains, became a severe ascetic, maintained terrible contests with troops of fiends, and sought by various mortifications to attain spiritual perfection. His fame brought crowds to visit him. The monk enjoyed visions not only of angels and devils, but of satyrs and centaurs. He lived to the long age of one hundred and four, and is the subject of extravagant eulogy by many of the fathers, such as Jerome, Chrysostom, Nazianzen, and Augustine. Two monastic establishments were formed under his patronage, and the institution rapidly spread

through the ancient church. Anthony, with all his fame, was not spoiled by it, for he repudiated the honour of working miracles, and bade such as applied to him, to look to Christ. His occasional appearances at Alexandria produced an extraordinary impression. He desired to be buried in a secret place, lest a superstitious reverence should be paid to his remains. Many of his sayings which have been handed down to us, lead us in spite of his errors, and they were those of an honest self-abnegation, in the language of Neander, "to recognize in him a great soul." His life, written by Athanasius, has been transmitted to us, as well as his monastic rules, and a few discourses. The life of him just referred to, is thought by some to be spurious, and by others to be largely interpolated, but Dupin and Tillemont argue for its genuineness. His "Opuscula," in a Latin translation from the Arabic, were published at Rome in 1646.—J. E.

**ANTHONY, FRANCIS**, an English physician and alchemist, was born in 1550, and died in 1623.

**ANTIBOUL, CHARLES-LOUIS**, born at St. Tropez about 1752, was administrator of the department of Var, and a deputy of the national convention. He was condemned for his attachment to the Girondists, and put to death in 1793.

**ANTICLI'DES**, a Greek historian during the reign of Alexander the Great, whose works, of which only a few fragments remain, were highly esteemed in that age.

**ANTI'CO, LAURENZO**, a grammarian of Lentino in Sicily, who lived about the beginning of the seventeenth century, and was the author of several works on philology.

**ANTIDOTUS**, an Athenian encaustic painter, pupil of Euphranor, lived about 364 B.C.

**ANTI'GENES**, the name of several Greek physicians, of whom one mentioned by Cœlius Aurelianus was styled Antigenes the Clephantine. Another Antigenes is said to have lived at Rome in the second century of the Christian era.

**ANTI'GENES**, a Greek historian, who wrote a life of Alexander the Great.

**ANTI'GENES**, one of the generals of Alexander the Great, and one of the chiefs of the Argyraspides. After Alexander's death he became governor of Susiana; and after the defeat of Eumenes, whose partisan he was, he fell into the hands of Antigonos, and was put to death about 316 B.C.

**ANTI'GENIDAS**, the name of two Theban musicians, both of whom were celebrated for their skill in playing the flute. The one was the son of Dionysius, and gave instructions to Alcibiades; the other, the son of Satyrus, had the honour of playing at the marriage festival of Iphicrates and the daughter of Cotys, king of Thrace, and of performing before Alexander when the poet Philoxenus recited his verses.—F.

**ANTI'GNAC, ANTOINE**, a native of Paris, born in 1772, who devoted his leisure to poetry and singing, adopting convivial and amatory subjects. A number of his verses were inserted in periodicals at the time in which he lived, and he published separately some collections of songs and poems. Died 1823.

**ANTI'GONE**, the daughter of Œdipus, king of Thebes, by his mother Jocasta, whose history forms the subject of one of the tragedies of Sophocles.

**ANTI'GONE**, a queen of Egypt, who was the second wife of Lagus, founder of the dynasty of the Ptolemies, and mother of Bernice, wife of Ptolemy I., king of Egypt.

**ANTI'GONUS, CARYSTIUS**, so called from his birth-place, Carystus in the island of Eubœa, was a naturalist who flourished in the reign of Ptolemy Philadelphus, 285-247 B.C.

**ANTI'GONUS**, surnamed CYCLOPS, was one of the generals of Alexander the Great, and born about the year 382 B.C. When the empire was subdivided after the death of Alexander, he established himself in Asia Minor, where he had already possessed the government of Phrygia and Lydia. He united with Antipater and Ptolemy in an endeavour to destroy Perdiccas, whose ambition led him to desire the government of Asia Minor; and after the death of Perdiccas in 321 B.C., he made continual war with Eumenes, whom he at last succeeded in defeating. The death of Antipater in 319 B.C. also favoured his ambitious schemes. Proceeding to Babylon, he compelled Seleucus to take refuge in Egypt, when a new league was formed, in which not only Seleucus, but Ptolemy, Lysimachus, and Cassander arrayed themselves against him. A furious war commenced 315 B.C., and continued for four years, when peace was concluded by a treaty, in which the confederates surrendered to him the whole of Asia, on condition that the Greek cities should remain

free, that Cassander should govern certain European provinces, and Lysimachus and Ptolemy should reign over Thrace and Egypt. This treaty, however, was soon broken by Ptolemy, who made a descent upon Asia Minor, but was defeated with great loss by Demetrius, the son of Antigonus. The success he thus obtained induced Antigonus to adopt the title of king, which he also conferred upon his son; and from this period, 306 B.C., his reign may be said to have begun. A new combination was soon formed against him, and in 301 B.C. he met the army of the confederates at Ipsus in Phrygia, when he was defeated, and died of his wounds in his eighty-fourth year.—F.

**ANTIGONUS**, surnamed **DOSON**, was king of Macedonia, and born about 263 B.C. He was grandson of Demetrius Poliorcetes, and governed Macedonia during the minority of his nephew Philip, son of Demetrius II., whose widow he espoused, and was in consequence proclaimed king 229 B.C. After conquering Cleomenes, king of Sparta, and obtaining various martial triumphs, he died 221 B.C., and was succeeded on the throne by Philip, the lawful heir to the kingdom.—F.

**ANTIGONUS**, surnamed **GONATAS** from the place of his birth, was the son of Demetrius Poliorcetes, and grandson of the preceding; born 319 B.C. He gave liberty to the Armenians, expelled the Gauls who had made an irruption into his kingdom, and was at last driven from his dominions by Pyrrhus, king of Epirus. But he eventually succeeded in recovering a great part of Macedonia, and having followed Pyrrhus into the neighbourhood of Argos, defeated him in battle. After this event Antigonus enlarged his territories, reigned thirty-four years, and was succeeded by his son Demetrius II., 239 B.C.—F.

**ANTIGONUS**, **SOCHÆUS**, a high priest of the Hebrews about 310 B.C., and successor of Simeon the Just.

**ANTIGONUS** was the son of Aristobulus, a king of the Jews, and the last of the celebrated Asmonean dynasty. By means of an army obtained from the king of Parthia he took possession of Jerusalem, and caused the ears of his uncle Hyrcanus to be cut off, to incapacitate him for the office of high priest. The Roman senate then proclaimed him an enemy of the republic, and Mark Antony ordered him to re-establish Herod on the throne. After an unavailing defence and a siege of six months, Jerusalem was taken 37 B.C., and Antigonus was carried in fetters to Antony, who, at the request of Herod, put him to a shameful death at Antioch, 35 B.C.—F.

**ANTILLON**, a learned Spaniard, born about the year 1760 at Santa-Eulalia in Arragon, who, having studied at Saragossa, became professor of astronomy, geography, and history, in the royal college of Madrid; died 1820.

**ANTIMACHUS**. Three Greek poets bore this name:—

**ANTIMACHUS**, a native of Claros in Ionia, who flourished about 404 B.C. His principal work was a poem on the Theban war. It was of great length, and at a public recital of the verses, all the audience left him except Plato, when Antimachus declared he would read on, as Plato was equal to a whole audience. Quintilian places him in the first rank as a poet after Homer. Of his works, the few fragments preserved have been published under the title, "Antimachi Colophonii Reliquiæ," Halle, 1786.

**ANTIMACHUS** of Teos in Ionia, flourished at a very remote period; of his works nothing is accurately known.

**ANTIMACHUS** of Heliopolis in Egypt, lived somewhat prior to the age of Augustus, and, according to Suidas, wrote a poem of 3780 hexameters on the creation of the world.—F.

**ANTIMACO**, **MARCO-ANTONIO**, an excellent Greek and Latin scholar, who was born at Mantua about 1473. Having first taught Greek in his native town, he became professor of that language in the university of Ferrara, and died in 1552.

**ANTINOUS**, a youth of Bithynia, celebrated for his extraordinary beauty. He was so great a favourite of the Emperor Adrian, that at his death he erected a temple to him, and wished it to be believed that he had been changed into a constellation. According to some authors, Antinous was accidentally drowned in the Nile; according to others, he threw himself from a rock into the river, to fulfil the decree of an oracle, which demanded for the emperor's preservation the immolation of one who was dear to him. Antinopolis or Antinoë was built in his honour; and his personal beauty has been recorded in innumerable Greek medals and statues.—F.

**ANTIOCHIS**, a Greek lady, who devoted herself to the study of medicine; she is supposed to have lived in the 3d century B.C.

**ANTIOCHUS**, king of Messene, reigned at first conjointly with his brother Androcles; but the two princes having quarrelled, a civil war commenced, in which Androcles perished. Antiochus expired shortly after, in 744 B.C.

**ANTIOCHUS**, a Greek historian, born at Syracuse, lived about the commencement of the Peloponnesian war, 424 B.C.

**ANTIOCHUS**, the name of fourteen kings of Syria:—

**ANTIOCHUS I.**, surnamed **SOTER**, the Saviour, was a son of Seleucus Nicator, and born about 324 B.C. After a reign of 19 years, during which the Syrian monarchy had been greatly diminished, he was killed in a battle with the Gauls.

**ANTIOCHUS II.**, son of the preceding and of Stratonice, succeeded his father in 261 B.C. He was poisoned at Ephesus by his queen Laodice in 246 B.C. It is supposed that the sixth verse of the eleventh chapter of Daniel refers to this Antiochus.

**ANTIOCHUS III.**, surnamed, on account of his rapacity, **HERIAX**, or **THE HAWK**, was the second son of the preceding, and inherited Cilicia. He succeeded in wresting the other estates of the family from his elder brother Seleucus, but was shortly after obliged to seek refuge in Egypt, where he was murdered by some brigands of Thrace, 227 B.C.

**ANTIOCHUS IV.**, surnamed **THE GREAT**, was the second son of Seleucus Callinicus and Laodice. He was born about the year 238 B.C., and succeeded his eldest brother, Seleucus Ceraunus, in the year 223. In the second year of his reign he wrested a part of Cœle-Syria from Ptolemy Philopator; but, repulsed from the fortress of Gerra by the Egyptian general Theodotus, and having received news of the revolt of the brothers Molo and Alexander, satraps of Media and Persia, he abandoned his conquests in that province and proceeded against the rebels. A few months sufficed for this expedition, which was terminated by the voluntary deaths of Molo and Alexander. Antiochus next reduced to submission Artabazanes, king of Media Atropatene. Seleucia was added to his dominions 219 B.C., and shortly after Cœle-Syria, Idumea, and Phenicia. Two years later the memorable battle of Raphia occurred, and Antiochus, signally defeated, was glad to secure a peace with Ptolemy by the relinquishment of all his conquests. The year following he undertook a campaign in Asia Minor against his cousin Archæus, who sustained a two years' siege in Sardes, but was finally betrayed into the hands of the king and put to death. The celebrated expedition into Upper Asia, which procured Antiochus his surname of The Great, set out in 212 B.C., and had for its object to subdue the Parthian king Arsaces, and Euthydemus, king of Bactriana. It lasted till 205 B.C., and although generally successful, terminated without displacing the obnoxious sovereigns. A year after his return to Syria, Antiochus began preparations for a war with Egypt, in which kingdom Ptolemy Philopator had just been succeeded by his son Ptolemy Philometor, a boy of five years. He regained Cœle-Syria and Palestine, but was prevented from invading Egypt by an embassy from Rome, which informed him that the youthful Ptolemy had been placed under the protection of the conscript fathers. In the year 199 B.C., while Antiochus was prosecuting a war against Attalus in Asia Minor, Palestine and Cœle-Syria were recovered by the Egyptians; but the following spring he defeated the Egyptian general Scopas at Paneas, and a third time obtained the mastery of these countries. Shortly after, commenced his warfare with the Romans, in which he was rapidly shorn of all his conquests, and finally compelled to pay a humiliating tribute. His resolution to engage the formidable masters of the West was the result of Hannibal's arrival at his court. In the year 192 B.C. he invaded Greece, but after some trifling successes was routed by M. Acilius Glabrio at Thermopylae, whence he escaped to Calchis with only 500 horsemen. Another and more ruinous defeat happened to him in the winter of 190 B.C. near Magnesia, where, of 82,000 Syrians opposed to 30,000 Romans under command of the two Scipios, 54,000 were left on the field of battle. He besought a peace from the victors, which was granted on condition that he should surrender all Asia to the west of Taurus, and that he should pay the expenses of the war. To raise the money required for the latter purpose, he attempted to plunder the temple of Jupiter Belus in Elymais, but the inhabitants would not permit the sacrilege, and in the tumult their resistance gave rise to, Antiochus perished. The prophecy in Daniel xi. 10-19, is generally referred to this king.

**ANTIOCHUS V.**, surnamed **EPHIANES**, born about the year 200 B.C., was the fifth son of the preceding, and succeeded

his brother Seleucus IV. in 175 B.C. Two years after his accession, on the death of his sister Cleopatra, he reclaimed Cœle-Syria, Phenicia, and Palestine, alienated to Egypt as the dower of her marriage with Ptolemy Epiphanes. This produced a war with the guardians of the young Ptolemy Philometor, and Antiochus made four campaigns in Egypt from 172 to 169 B.C., in which he possessed himself of nearly the whole country. The Romans, however, interfered in the last-mentioned year to have the kingdom restored to Ptolemy, and Antiochus, abandoning the siege of Alexandria which he had prosecuted for some time, returned to Syria. He despatched his army under Apollonius to pillage Jerusalem, which was abandoned during three days to the fury of the soldiers. Of the inhabitants 80,000 were massacred, and 40,000 sold as slaves. Next year, 167 B.C., he besieged in person the capital of Judea, and after burning the citadel, profaned the temple of Solomon by setting up in the holy place a statue of Jupiter Olympius. His wanton cruelty excited the revolt of the Maccabees, which, during the remainder of his reign, kept him in continual alarm. He died at Tabæ in Persis, in 164 B.C., of a loathsome disease, which Jews and Greeks concurred in regarding as a special vengeance on the most wanton of tyrants.

**ANTIOCHUS VI.**, surnamed **EUPATOR**, son of the preceding, succeeded his father 163 B.C., at the age of nine years. He was put to death by Demetrius Soter in 160 B.C.

**ANTIOCHUS VII.**, surnamed **DIONYSIUS**, son of Alexander Balas, was brought forward in 144 B.C. to dethrone Demetrius Nicator. After a reign of less than two years, he was killed by Tryphon, one of the two chiefs who had established him on the throne.

**ANTIOCHUS VIII.**, surnamed **SIDETES**, younger son of Demetrius Soter, was born at Rome in 164 B.C. He carried on the war against the Jews, was repulsed in 135 B.C. by Simon, one of the Maccabees, but defeated Simon's son John in 132 B.C., and had the walls of Jerusalem razed. He perished in a battle with the Parthians about the beginning of 128 B.C.

**ANTIOCHUS IX.**, surnamed **GRYPUS** or **THE HOOK-NOSED**, was the second son of Demetrius Nicator and Cleopatra, and succeeded his brother Seleucus V., whom his mother had put to death in 124 B.C. He was assassinated at Heracleon in 96 B.C.

**ANTIOCHUS X.**, surnamed **CYZICENUS**, youngest son of Antiochus Sidetes and Cleopatra, dethroned his brother Antiochus IX. in 113 B.C., and reigned conjointly with that prince fifteen years from 111 B.C.; but in 95 B.C. was defeated in a battle near Antioch by his nephew, Seleucus VI., and finding himself about to be taken prisoner, committed suicide.

**ANTIOCHUS XI.**, surnamed **EUSEBES**, only son of Antiochus X. and Cleopatra, on the death of his father in 95 B.C., had himself proclaimed in opposition to Seleucus VI., whom he defeated at Mopsuestia, and obliged to leave the kingdom. Victorious also over Antiochus XII., he was worsted in 92 B.C. by two other sons of Antiochus Grypus, Philip and Demetrius III., and compelled to take refuge among the Parthians. He returned to Syria shortly after, and maintained for some years a contest with Philip and Demetrius; but in 83 B.C. Tigranes, king of Armenia, during the distractions of the kingdom, possessed himself of the crown, and again forced Antiochus into exile. What became of him afterwards is not certainly known.

**ANTIOCHUS XII.**, surnamed **EPIPHANES PHILADELPHUS**, second son of Antiochus Grypus, after a reign of three years was drowned in the Orontes in 93 B.C., on the banks of which river, near Antioch, he had just been defeated by Antiochus XI.

**ANTIOCHUS XIII.**, surnamed **DIONYSIUS**, youngest son of Antiochus Grypus, succeeded his brother Demetrius III. He invaded the territories of Aretas, and perished in a battle with that sovereign in 85 B.C.

**ANTIOCHUS XIV.**, surnamed **ASIATICUS**, son of Antiochus XI., began his reign after the dispersion of the army of Tigranes the Armenian (Antiochus XI.) He was the last of the dynasty of the Seleucidæ, and witnessed the conversion of his kingdom into a Roman province, an event brought about by Pompey in 65 B.C. He survived his downfall sixteen years.—J. S., G.

**ANTIOCHUS**, the name of four kings of Commagene, a small country between the Euphrates and Mount Taurus, first noticed in history as separate from Syria, to which it originally belonged, in the year 65 B.C., when Antiochus Asiaticus was deposed by Pompey, and his dominions converted into a province of the empire.

**ANTIOCHUS I.** took part, 49 B.C., in the civil war between Cæsar and Pompey, siding with the latter, whom he assisted with 200 horsemen. Samosata, his capital, was unsuccessfully besieged by Antony in 38 B.C. Nothing further is known of his history.

**ANTIOCHUS II.**, supposed to have wrested the throne from his brother Mithridates, was accused before the Roman senate of having murdered an ambassador sent by his brother to Augustus, and condemned to death in 29 B.C.

**ANTIOCHUS III.** died in A.D. 17. After his death, Commagene became a province of the Roman empire.

**ANTIOCHUS IV.**, surnamed **EPIPHANES**, son of the preceding, after long supplication at Rome, received the crown of his ancestors from Caligula; but had only worn it a year or two when he lost the favour of the tyrant, and in consequence his kingdom. It was restored to him by Claudius in 41 A.D., and in 55, for his services against the Parthians, Nero enlarged it by the gift of Armenia. He assisted Titus at the second siege of Jerusalem, and enjoyed the favour of Vespasian; but in 72 A.D. he was accused at Rome of having formed an alliance with the Parthians, and again deposed. The remainder of his life was passed at Rome. Commagene once more lapsed into a Roman province.—J. S., G.

**ANTIOCHUS OF ASCALON**, in Palestine, a Greek philosopher, pupil of Philo, and successor to that distinguished philosopher as head of the New Academy, lived in the first half of the century before Christ. M. Terentius Varro, Brutus, and Cicero were among his disciples at Athens.

**ANTIOCHUS OF LAODICEA**, a sceptic of the first or second century before Christ. He was a disciple of Zeuxis, and master of Tenodotus.

**ANTIOCHUS**, a Greek astronomer, a number of whose works are preserved in the library of the Vatican.

**ANTIOCHUS**, a physician, contemporary of Galen at Rome in the second century of the Christian era.

**ANTIOCHUS**, a physician, saint, and martyr, of the reign of Adrian, studied medicine that he might be able to relieve the sufferings of the poor, especially among his converts, and in his double character of physician and missionary, travelled over Galatia and Cappadocia. He was put to death in the island of Sardinia in 120. His memory is celebrated as saint and martyr by the Romish church on the 13th of December.—J. S., G.

**ANTIOCHUS OF ÆGÆ** in Cilicia, a Greek sophist, flourished about A.D. 200.

**ANTIOCHUS**, another physician, saint, and martyr, whose memory is celebrated by the Greek and Romish churches on the 15th of July, was one of the victims of the persecution instituted by the Emperor Diocletian, A.D. 303-311.

**ANTIOCHUS**, bishop of Ptolemais, in Palestine, celebrated for his eloquence, lived about A.D. 400.

**ANTIOCHUS**, a Greek monk of St. Saba, near Jerusalem, lived about A.D. 614.

**ANTI-PATER**, the general and friend of Philip of Macedon, and of Alexander the Great, was the son of Iolaus, and born about 390 B.C. Alexander the Great, when setting forth on his Asiatic campaign, appointed him regent of Macedonia, leaving an army under his command. In the political troubles which followed the death of Alexander, Antipater took an active part, and when the empire was divided between the generals of the deceased conqueror, Macedonia fell to his share. Antipater cultivated and patronized literature, and one of his letters to his son Cassander has been highly extolled by Cicero. He died 319 B.C.—F.

**ANTI-PATER**, king of Macedonia, was the grandson of the preceding, and on the death of his eldest brother, Philip IV., who had succeeded Cassander, ascended the throne 296 B.C. Subsequently he lost his kingdom and fled into Thrace, to Lysimachus, whose daughter Eurydice he had married, where, being accused of treason, he was put to death about 290 B.C.—F.

**ANTI-PATER OF HIERAPOLIS** in Phrygia, a Greek rhetorician who lived 193-211 B.C.; who held the post of secretary to the Emperor L. Septimus Severus. He was raised to the consular dignity, and appointed governor of Bithynia. None of his writings have been preserved.

**ANTI-PATER OF IDUMEA**, according to Josephus, the son of a noble Idumean of the same name, who had received from Alexander Jannæus the government of that province. He took a prominent part in the affairs of the Jews during the disputes between Hyrcanus II. and Aristobulus II. In 48 B.C., the zeal

he displayed in the cause of Cæsar during the Egyptian war, obtained him the office of procurator of Judea. He died of poison, administered to him 43 B.C. by the cupbearer of Hyrcanus, at the instigation of Malichus, a man whose life he had twice preserved. His second son was Herod the Great.—F.

**ANTIPATER, LÆLIUS-CÆLIUS**, a Roman lawyer and historian, born about 153 B.C., who was much distinguished for his eloquence. Among his pupils was the orator L. Licinius Crassus, whose friendship, and that of the celebrated Cains Gracchus, he enjoyed. Only a few fragments of his works have been preserved, but that he was held in high repute as an historian, as well as an eloquent pleader, is obvious from references made to him by Valerius Maximus and the historian Livy.—F.

**ANTIPATER OF TARSUS**, a stoic philosopher, who lived in the second century B.C., and was the disciple of Diogenes the Babylonian. In addition to his writings on the controversy between the stoics and academics, he wrote works on divination, on dreams, on superstition, on the Deity, and on ethical subjects. His acuteness has been extolled by Cicero.—F.

**ANTIPATER OF TYRE**, a stoic philosopher of the first century B.C., who appears to have written a book upon Duties, and is much praised by Cicero. He died at Athens about 46 B.C.

**ANTIPATER** was the eldest son of Herod the Great by his first wife Doris. After Herod had divorced Doris and married the beautiful Mariamne, 38 B.C., he banished Antipater from his court; but after Mariamne had fallen a victim to the jealousy and cruelty of her husband, he recalled Antipater, being afraid of the vengeance of the two sons of his murdered wife. Antipater is characterized by Josephus as "a mystery of wickedness." He induced Herod to put the two sons of Mariamne to death, B.C. 6, and having conspired against the life of Herod himself, was executed by the sanction of Augustus.—F.

**ANTIPATER**. The name of three different poets, some of whose writings are extant in the Greek Anthology. The most ancient of these is **ANTIPATER** of Macedonia, a contemporary of Philip V. The second was **ANTIPATER** of Sidon, who lived about 100 B.C., and of whom Pliny reports that he was seized with a fever every year on his birth-day, and that on one of these anniversaries the malady proved fatal. The third was **ANTIPATER** of Thessalonica, who flourished during the reigns of Augustus and Tiberius.—F.

**ANTIPHANES OF ARGOS**, a brass-caster, pupil of Periclitus, lived about 372 B.C.

**ANTIPHANES**, a physician of Delos, who lived in the second century B.C., and who taught that the chief cause of human disease was the variety of food.

**ANTIPHANES**. The name of several ancient Greek writers, who flourished at different periods. One of them, referred to by Athenæus and Clement of Alexandria, wrote a book on the prostitutes of Athens. Another was a native of Berga in Thrace, and the author of a history of marvellous events, also cited by Athenæus; a third was a comic poet and native of Eubœa, contemporary with Thespiis; and the fourth was a comic poet, born at Smyrna or Rhodes, and who lived in the age of Alexander the Great, and wrote more than 260 dramas, of which Athenæus has preserved some fragments.—F.

**ANTIPHILLOS**, a Greek architect, employed in the erection of the treasury at Olympia in the fifth century B.C.

**ANTIPHILLOS OF EGYPT**, a painter, pupil of Ctesidamus, lived about 316 B.C. He was the rival of Apelles (another painter at the court of Ptolemy Philopator), whom he falsely accused of a conspiracy. For this calumny he was sentenced to become the slave of Apelles. His productions were noted for striking and unusual effects. From a burlesque picture by this artist of a certain Grillos, this name was henceforth given to all sorts of caricatures.—R. M.

**ANTIPHILLOS**, a Greek poet, who appears to have lived a little before the time of Nero. A number of epigrams written by him are still extant.

**ANTIPHON**. The name of several persons, more or less celebrated in ancient history. The most noted of these was

**ANTIPHON**, the son of Sophilus the orator, who was born at Athens about 479 B.C., and was surnamed **RIAMNIUS**. He is called the eldest of the ten Attic orators, and seems to have been the first who composed speeches to be delivered in courts of justice. He attained a high reputation for his judicial learning, and in his school of rhetoric at Athens, had among his pupils the historian Thucydides, who speaks in terms of high

commendation of his virtue, his wisdom, and his eloquence. Antiphon took a very active part in the political affairs of Greece. The chief event of his life was the overthrow of the Athenian democratic constitution, and the establishment of the Council of the Four Hundred, a revolution which Thucydides attributes entirely to him. The revolution, however, proved fatal to Antiphon. Notwithstanding all his efforts, the government of the Four Hundred was overthrown. Alcibiades was recalled to Athens, and Antiphon was brought to trial for high treason, condemned and executed 411 B.C. The only writings of this orator which have been preserved, are fifteen speeches relating to cases of murder; several of the cases referred to being merely imaginary, and intended to serve as illustrations of the method of employing evidence to establish the guilt or innocence of an accused person.

Another person of the name of **ANTIPHON** is mentioned in the "Memorabilia" of Xenophon, and is said to have written a treatise on truth, in which he denied the doctrine of Providence. There was also a tragic poet of this name, who lived in the fourth century B.C., who was put to death by Dionysius, because he refused to praise the tyrant's compositions. Another **ANTIPHON**, mentioned by Plutarch, was a philosopher, and lived before the time of Aristotle.—F.

**ANTIQUIS, GIOVANNI D'**, a musician, who lived during the latter half of the sixteenth century. His compositions were rather of a popular than an elaborate character, consisting chiefly of vilanelles for three voices, (a kind of part songs, as we should perhaps now name them,) of a simple and rhythmical character, like the fal-las and ballets afterwards in great esteem in England, and of canzonets and madrigals. His most celebrated production, and this was extremely so throughout all Italy, was a dialogue for eight voices. Antiquis was maestro di capella at Bari, in the territory of Naples.—G. A. M.

**ANTI-STHENES**, an Athenian philosopher, founder of the sect of the Cynics, flourished 400 years before Christ. In his youth he fought at Tanagra. He became a zealous disciple of Socrates, and was present at his martyrdom. He was the master of Diogenes. The date of his death is unknown. Some attribute the name of his school to the Cynosarges, a gymnasium, which was situated near Athens; and others derive it from *κύων*, a dog, for various and contradictory reasons. Cicero has handed down to us one dogma of Antisthenes, which entitles him to our respect: "Populares deos multos, naturalem unum esse." His philosophical system seems to be a caricature of the irony of Socrates. His written works extended, according to the statement of Diogenes Laertius, to ten volumes (*τόμοι*); but all have perished. Many of his witty sayings are on record. He regarded virtue as the only thing worthy of desire or esteem; but what he understood by virtue, it is difficult to ascertain. Xenophon gives the fairest picture of his character, introducing him into the *symposium* or banquet, and making him pronounce a forcible oration on the wealth of poverty. Two short orations, attributed to this author, are contained in the "Oratores Græci" of Aldus and Reiske (vol. viii.); also in Dobson (vol. iv.) Our limits do not allow us to discuss at length the details of his ethical system, or to speculate on the manner in which it was developed and modified by Diogenes.—T. J.

**ANTOINE DE BOURBON**, king of Navarre, was born in 1518. He was the son of Charles de Bourbon, duke of Vendome, and by his marriage with Jeanne d'Albret, obtained the principality of Bearn, and the title of king of Navarre. He was a prince of a feeble and irresolute character; and after the death of Francis II., when he wished to obtain the regency, Catherine de Medicis compelled him to renounce his claims, on which he was satisfied to become the lieutenant-general of the kingdom. In 1562 he commanded the army at the siege of Rouen, where he received a wound on the shoulder, which ultimately proved fatal.—F.

**ANTOINE, PAUL-GABRIEL**, a jesuit professor of philosophy and theology at Pont-a-Mousson, was born at Luneville in 1679; died in 1743.

**ANTOINE, JACQUES-DENYS**, an architect, born at Paris, 1733. He was the son of a joiner, and began life as a bricklayer; but his remarkable talents enabled him to advance himself into an eminent position as an architect. Besides erecting the mint at Paris, he built many important edifices, not only in Paris, but at Madrid, Berne, and Nancy. He died in 1801.—F.

**ANTOINE, PIERRE-JOSEPH**, a French engineer, born 1730

at Bracey, near St. Jean-de-Losne, was professor of architecture in the school of the fine arts at Dijon; died 1814. His brother, ANTOINE ANTOINE, born at Auxonne in 1744, was also remarkable for his skill as an engineer. Died 1818.—F.

ANTOINETTE D'ORLEANS, the daughter of Leonore, duke of Longueville, and Maria de Bourbon, was born about the middle of the 16th century. Wearied of the world after the death of her husband, Charles de Gondi, she entered a convent, and subsequently became coadjutrix in the abbey of Fontevault. She afterwards quitted the order to found a convent of the daughters of Calvary, according to the rule of St. Benedict; and died in 1618.—F.

ANTOINETTE, MARIE. See MARIE.

ANTOLI, a Jewish writer of the thirteenth century.

ANTOLI, JACOB BAR SAMSON, a Spanish rabbin, born in the kingdom of Naples during the reign of the Emperor Frederic, in the first half of the thirteenth century; died in 1232.

ANTOLINI, GIOVANNI, an architect born in 1755, author of a treatise on architecture, and a work entitled "Le Rovine di Velleja;" died in 1841.

ANTOLINEZ, FRANCISCO, a Spanish landscape painter of great promise, who died very young at Madrid in 1700. He used to work in secret, and on pictures of very small size.—R. M.

ANTOLINEZ, JOSE, a Spanish landscape painter of the Sevillian school, who learned the art from F. Rizzi. His pictures were especially charming for delicacy of colouring. Jose was exceedingly proud of his talents. He died also young, in consequence of a fever he caught whilst exerting himself too much in fencing. Born 1639, died 1674.—R. M.

ANTOMMARCHI, FRANCESCO, a physician, born during the latter half of the eighteenth century, who rendered himself remarkable by his devotion to the service of Napoleon during his captivity in St. Helena. He was professor of anatomy in the university of Florence, when he received the appointment of physician to the ex-emperor. He was at first coldly received by the illustrious captive, but gained at last his entire confidence. After Napoleon's decease, Antommarchi returned to France; which, however, he left to take up his abode in Poland in 1831. The controversy which arose regarding his alleged cast of the emperor's head, and the suspicion to which he was subjected, appear to have induced him, in 1836, to betake himself as a practitioner of homœopathy to America, and he died at St. Antonio in Cuba in 1838.—F.

ANTON, CLEMENS THEODOR, king of Saxony, was born in 1755. He was the second son of Frederick Christian, elector of Saxony, and succeeded to the government in 1827 on the death of his elder brother, Frederick Augustus, who had been king since 1806. His dominion was only nominal, as he cared little for the affairs of state, all his inclinations being toward the church, for which he was originally destined. He was at first unsuccessful in his choice of ministers, and various outbreaks occurred among his people; but having ultimately created Baron von Lindenau and his nephew, Prince Frederick Augustus, co-regents, the latter years of his reign were marked by various reforms in the criminal and municipal code of the country, and by a treaty with Prussia of great advantage to Saxony. Anton died in 1836, leaving the kingdom to his nephew.—J. B.

ANTON, CONRAD GOTTLÖB, an eminent philologist, born at Lauban in Upper Lusatia in 1745, became in 1780 professor of the Oriental languages at Wittenberg, and died in 1814.

ANTON, GOTTFRIED, was born in 1571, and died in 1618. He was a distinguished professor of Roman and feudal law, and became *rector* (equivalent to the English chancellor) of the university of Giessen.

ANTON, KARL GOTTLÖB, a German antiquary, born at Lauban, 1752, author of a great number of historical, antiquarian, and philological works; he died at Goerlitz in 1818. His father, JOHANN NICHOLAS ANTON, was a Lutheran divine, and archdeacon of Schmiedeberg in Saxony, where he was born in 1737. He was the author of several works on theological subjects, and died in 1814.—F.

ANTON, PAUL, a Lutheran prelate, the friend of the Pietist leader Francke, was born in 1661, and died in 1730.

ANTONELLE, PIERRE ANTOINE, Marquis d', a French political economist, was born at Arles in 1747. He early embraced the principles of the Revolution, and was chairman of the jury at the trial of the Girondins. He was afterwards accused of complicity in the conspiracy of Babeuf, and suffered much

persecution from Fouché as an "anarchist." He died in 1817, having devoted the last years of his life to literary and philosophic pursuits.—J. W. S.

ANTONELLI, LEONARDO, cardinal-bishop of Velletri, a zealous supporter of jesuitism; born 1730, died 1811.

ANTONELLI, NICCOLO MARIA, an Italian theologian, was born in 1698, and died in 1767.

ANTONELLI, SEBASTIANO ANDREA, an Italian historian, apostolic prothonotary in the seventeenth century.

\* ANTONELLI, a cardinal and prime minister to Pope Pio IX., was born towards the end of the last century.

ANTONELLO, MAMERTINI DA MESSINA, called also ANTONIO DA MESSINA, or ANTONELLO DEGLI ANTONII, a Sicilian painter, belonging to a family of distinguished artists, was born at Messina in 1414, died in 1496. Happening in 1442 to see a picture by J. Van Eyk, painted in oil colours, he was so struck with its brilliancy that he at once resolved upon seeking its worthy author. For this purpose he went to Bruges, where he remained with Van Eyk until the death of the latter in 1445. Antonello then proceeded to Venice, where he communicated the new process to Domenico Veneziano. Besides the use of oil colours, Antonello adopted also, in his after-life, the style of Van Eyk, so much so as to render it difficult to distinguish his works from those of the Flemish master.—R. M.

ANTONI, ALESSANDRO VITTORIO PAPACINO D', a Sardinian general of artillery, was born in 1714, near Nice, and died at Turin in 1786.

ANTONI, VINCENZO BERNI DEGLI, a jurist of Bologna, was born in 1747, and died in 1810.—J. W. S.

ANTONIA, the name of several noble ladies of ancient Rome:

ANTONIA, the daughter of Caius Antonius Hybrida, was married to her cousin Marc Antony the triumvir. She was divorced in 47 B.C. to make way for Fulvia. Her sister, who bore the same name, was married to Caius Caninius Gallus, tribune of the Plebs, 56 B.C. It is supposed by some that these ladies are one and the same, and that the wife of the triumvir was first married to Gallus.

ANTONIA MAJOR, elder of the two daughters of Marc Antony and Octavia, was born 39 B.C., and became the wife of L. Domitius Ahenobarbus, mother of Cneius Domitius, and then the grandmother of Nero.

ANTONIA MINOR, sister of the preceding, was born 36 B.C. She became the wife of Drusus, and grandmother of Caligula. She was noted alike for her prudence and her beauty.

ANTONIA, the daughter of the Emperor Claudius, suffered death at the instigation of Nero, because she refused to marry him after the death of two husbands.—J. B.

ANTONIANO, SILVIO, the Italian cardinal, born at Rome 1540, died 1603. He was the son of a draper, and began early to display a taste for polite literature. Pleased with his talents, Hercules II., duke of Ferrara, nominated him at the age of 16 years professor of eloquence in that city. After the death of his patron, he was invited to Rome in 1559 by Pius IV., and appointed secretary to cardinal Charles Borromeo. He was soon selected to fill the chair of belles-lettres in one of the colleges in that city, and his lectures were so popular, that on one occasion, when he explained the oration of Cicero for Marcellus, twenty-five cardinals were among his hearers. He was a highly distinguished member of the academy of the Vatican. Having been ordained priest in 1567, he was soon nominated the secretary of the sacred college, and afterwards canon and cardinal, March 3, 1598. He wrote a work, entitled "Dell' Educazione Cristiana de' Figlioli," libri tre, Verona, 1584, 4to; and also "Orationes Tredecim," Rome, 1610, 4to, published after his death, to which his life is prefixed.—T. J.

ANTONIANUS, JOHANNES, a Dominican monk of Nimwegen, who lived in the sixteenth century.

ANTONIA'SSO, a Roman painter, lived early in the sixteenth century.

ANTONIDES, several celebrated natives of Holland have borne this name:—1. JEAN VAN DER GOES, a spirited poet, born at Goes, May 3, 1647; died in 1684. 2. HENRICUS NERDENUS, born at Naerden, near Amsterdam, in 1546; died in 1604. He wrote "Systema Theologiae," 1613, and other works. The preface to the "Systema" contains some interesting details concerning the Reformation in the low countries. 3. JOHN, a celebrated oriental scholar, born at Alekmar, who flourished in the seventeenth century. He wrote "Epist. Pauli

ad Titum, Arabice, cum J. Anton interlineari versione Latina ad verbum," Antwerp, 1612, 4to. 4. THEODORE, a theologian, who flourished in the early part of the eighteenth century. He wrote, in Dutch, Commentaries on the Epistles of St. James, St. Peter, and St. Jude, and on the Book of Job.—T. J.

ANTONINA, the wife of Belisarius, a woman of abandoned character, lived towards the end of the sixth century.

ANTONINI, ANNIBALE, an Italian author and lexicographer of the last century. His principal work is a triglot lexicon of the Latin, Italian, and French languages.

ANTONINI, FILIPPO, an Italian antiquary of the 16th cent.

ANTONINI, GIUSEPPE, an Italian jurist and antiquary, lived in the earlier part of the eighteenth century.

ANTONINUS, a name borne by six Roman emperors—ANTONINUS PIUS, M. AURELIUS, L. COMMODUS, CARACALLA, DIADUMENIANUS, and HELIOGABALUS.

ANTONINUS, PIUS, the sixteenth in order of the Roman emperors from Julius Cæsar, was born at Lanuvium, A.D. 86. By a strange fatality, history is nearly silent as to the events of his reign. That portion of the history of Dion Cassius which contained the narrative of his life and actions, is unfortunately lost; and the only sources of authentic information that we possess consist of a few pages by an obscure chronicler, Julius Capitolinus, together with the numerous coins and inscriptions, dating from his reign, which have come down to us, the latter supplying a kind of knowledge eminently satisfactory so far as it goes, because contemporary and thoroughly reliable.

The name of Antoninus, written at full length, was Titus Aurelius Fulvius Boionius Arrius Antoninus. His father was Aurelius Fulvius, his mother Arria Fadilla. His grandfather was a native of Nemausus or Nismes, in Transalpine Gaul. His father dying while he was yet young, Arrius Antoninus, his maternal grandfather, took charge of his education, and brought him up at his estate of Lorium, a station on the Via Aurelia, about twelve miles from Rome, near the modern village of Castel di Guido. Arrius was the intimate friend of the Emperor Nerva, and a man of considerable distinction, having held, besides other posts, the proconsulate of the province of Asia. Thus introduced into public life under the most favourable auspices, and having constantly before his eyes an example of the highest administrative energy and ability during the successive reigns of Nerva, Trajan, and Hadrian,—gifted himself by nature with a capacious mind and an equable temperament, and fortified, through the lessons of the Stoic philosophy, with the best system of moral training which the human mind, unassisted by revelation, has ever discovered,—Antoninus soon rose into distinction in the public service, deserved and obtained the esteem of Hadrian, and developed a genius for government which that emperor was not slow to perceive, and—a rarer characteristic—was equally prompt in doing justice to. In the year 120 he was first made consul, and when his year of office was expired, he retired to his estate at Lorium, content if he had remained thenceforward in a private station. But Hadrian soon drew him from his retirement, and nominated him one of the four consular officers, to whom he confided the administration of Italy. As proconsul of Asia, a post to which he was subsequently appointed, he yet further increased his reputation for justice and generosity; he surpassed in the exercise of this employment, says Capitolinus, the glory of his grandfather, who had till then remained without a rival. His administrative talent and singular probity were not lost sight of by the discerning Hadrian, and after the death of Ælius Cæsar, he resolved to adopt him as his heir, and as his successor in the empire. In announcing this step to the senate, he concluded his panegyric upon Antoninus in these words: "In imposing the empire upon him, I do not consult *him*; I only consult the interest of the state. He will accept from patriotism the mission which his modesty would have declined."

The adoption of Antoninus took place in February, A.D. 138: four months later Hadrian died, and his adopted son assumed without opposition the reins of government. Soon after, he received from the senate the surname of PIUS, of which various explanations are mentioned by Capitolinus. The following appears to be the most probable:—Offended on account of certain severities which Hadrian had exercised towards members of their body, the senate was disposed, after his death, to withhold from him the usual divine honours paid to deceased emperors. But when Antoninus strongly opposed this, and insisted upon their decreeing the apotheosis of his benefactor, the senate, fearing,

perhaps, that they had gone too far, not only yielded the point at issue, but, in recognition of his filial zeal, decreed to him the title of Pius, the exact force of which is "dutifully affectionate."

Ascending the throne at the mature age of fifty-two, Antoninus swayed for twenty-three years the destinies of the Roman world, which, during the whole of that period, from Britain to the Libyan desert, and from Parthia to Lusitania, enjoyed with trifling exceptions a profound peace. Periods like these are usually the blank spaces of history, though changes are often silently going on in them, which are fraught with future blessings to the human race. Relieved from persecution during this mild reign, Christianity made great advances in every part of the empire. It was in this reign, also, that a great number of those wise laws and imperial rescripts were framed, and those improvements in jurisprudence effected, which, when codified and methodized under Justinian, formed the basis of the civil law and judicial procedure of modern Europe.

The private life of Antoninus was not altogether happy, owing to the irregularities of his wife Faustina. He had four children by her; two sons who died previously to his adoption by Hadrian, and two daughters, one of whom, Annia Faustina, married Marcus Aurelius. The elder Faustina died in the year 142; Antoninus procured her deification, and had a temple erected in her honour; but a more durable monument to her memory consisted in the institution which he founded for the support and education of young girls (*Puella Faustianæ*), whose parents were either dead or in needy circumstances, and which he endowed with ample revenues. The personal habits of Antoninus were simple, and such as became a Stoic philosopher. His table was supplied from the produce of his own estates; and he purposely confined his journeys within the boundaries of Italy, in order that he might not burden the provinces with the inevitable expenses of an imperial progress.

In his administration of the affairs of Italy, Antoninus happily united the character of an energetic reformer with that of a wise conservative. The great improvements in Roman law which were effected under his auspices, and by the instrumentality of the able lawyers whom he employed, have been already noticed. We learn from inscriptions that he was not less active in the prosecution of great public works, among which are mentioned the mole of Puteoli, the lighthouse of Caieta, and the port of Terracina. Again, on the side of conversatism, we find him—ignorant as he unfortunately was of that religion, the treasures of which contain equally "things new and old"—endeavouring to keep alive among his subjects a reverence for the old gods and heroes of their mythology, for Æneas, Mars, Romulus, and Æsculapius. To Christianity he granted all that she needs at the hands of princes—perfect freedom of action. Save that, in some parts of the empire, in spite of the humane intentions of Antoninus, individual governors would sometimes act upon the sanguinary edicts of former emperors, and institute partial persecutions, the Christian church was allowed to pursue her divine mission of converting the world in peace.

Of foreign or civil wars we hear almost nothing in the reign of Antoninus. The revolt of the Brigantes, a British tribe, and the invasion of the empire by the Moors, an independent people of Libya, are the most important events of the kind mentioned, and in both cases, the assailants were easily crushed by the able lieutenants of the emperor. It was on the former of these occasions that Lollius Urbicus, commander of the legions in Britain, erected the wall of Antoninus as a rampart against the barbarous Caledonians, extending from the frith of Forth to the frith of Clyde. Yet the power of Rome was respected and feared far beyond the borders of the empire; and the coins of this reign attest that Antoninus gave kings to the Armenians and the Quadi of Germany, at the request of those nations themselves.

Antoninus had a majestic presence, and a remarkably deep-toned melodious voice, which enhanced the effect of his natural eloquence. He greatly enjoyed the pleasures and pursuits of a country life, and used to escape, whenever he could find an opportunity, from the cares of state to one of his numerous estates. It was at Lorium that he died, on the 7th March, 161, at the age of seventy-five. As he lay on his deathbed, the tribune on duty came, it is said, to ask what was to be the password for the night. Antoninus replied, "Æquanimitas," the name of the favourite virtue of the Stoics: it was his last word. He was succeeded by his adopted son, Marcus Aurelius.—(*Biogr. Universelle*; Smith's *Greek and Roman Biography*.)—T. A.

ANTONINUS, an Egyptian philosopher who lived in the fourth century.

ANTONINUS, DI FORCIGLIONI, St., an Italian theologian, was born at Florence in 1389, and died in 1459.

ANTONINUS LIBERALIS, the author of a collection of metamorphoses, or tales of mythical metamorphoses, taken from poets, and narrated in prose. Nothing is known of the author. Some conjecture that he was a Latin rhetorician in the reign of Claudius, of whom the only fact related is, that he had a bitter grudge against another rhetorician. Others, with more probability, suppose that he lived in the time of the Antonines.—J. D.

ANTONIO D'ANTONIO, a Sicilian painter, flourishing at Messina about 1267. He is supposed to be the founder of the family Degli Antonii, from whom Antonello da Messina was a descendant. As an artist, Antonio ranks with the Byzantine school.—R. M.

ANTONIO, DON or DOM, prior of Crato, and titular king of Portugal, born in 1531, was the son of Louis, the second son of King Emmanuel. His efforts to assert his right to the throne were opposed by Philip II. of Spain, who considered him a bastard: and although he invoked the aid of Holland, France, and England, he found it impossible to make good his claims, and died at Paris in 1595.—F.

ANTONIO DE LEBRISA, a Spanish historian, born in Andalusia, 1444, who, having studied at Salamanca, was appointed by Cardinal Ximenes professor of eloquence in the university of Alcalá-de-Henares; he died in 1532.

ANTONIO DA LOCATE, a Milanese sculptor of the fifteenth century, who assisted Ambrogio da Fossano in executing the celebrated façade of the Certosa, near Pavia.

ANTONIO, MARGARITHA or MARGALITHA, a Jewish rabbin of the sixteenth century, who embraced Christianity, and became professor of Hebrew at Leipzig and Vienna.

ANTONIO, MOROSINO, an Italian poet of the 17th century.

ANTONIO, NICOLAS, knight of the order of St. James, and canon of Seville, was born in that city, A.D. 1617. He studied law at Salamanca, and filled afterwards (A.D. 1659) the office of agent-general of the Spanish king at the court of Rome. He compiled a "Bibliotheca of Spanish Writers," which was printed at Rome in the year 1672, in two vols. folio. He also published at Antwerp in 1659, in folio, a treatise, "De exilio; sive, de pœnâ exilii, exulumque conditione et iuribus." Recalled by his royal master from Rome, to fill important offices at Madrid, he acted with much discretion, and died poor in the year 1684. He exploded some of the ecclesiastical fables prevalent in his age, and is said to have brought on his memory the odium of the jesuits.—T. J.

ANTONIO, PASCAL FRANCISCO JUAN NEPOMUC ANIELLO SILVESTER DE BOURBON, a Spanish prince, who was born in 1755, and died in 1817.

ANTONIO, PEDRO, a Spanish historical painter, born at Cordova, 1614, died 1675. He was pupil of Antonio del Castillo, and was considered a good colourist. His best works are in his native town.—R. M.

ANTONIO, St., OF PORTUGAL, was born at Lisbon in 1195. Having studied at Coimbra, he entered the order of St. Francis, and devoted himself to missionary labour in Africa. He was cast by a storm on the shores of Italy, which country became the scene of his labours. He died at Padua at the age of 36, and was canonized by Gregory XI.—F.

ANTONIO, VENEZIANO, a distinguished painter, born at Venice in 1319, died of the plague at Florence in 1383. He was pupil of A. Gaddi, whom he soon surpassed. Envy drove him from his native city; but he found a compensation in the reception he met with in other towns. He resided and worked chiefly at Pisa and Florence. His frescos are not only noted for charm of conception, correctness of design, and harmony of colour, but also for the degree of preservation they have been able to maintain. This was attributed to some secret process of his, he being highly versed in chemistry.—R. M.

ANTONIO DA VIGGIU, a distinguished Lombard sculptor of the fifteenth century, who executed some of the best statues for the Duomo of Milan.

ANTONIUS, surnamed THE BEE, a Greek monk who lived about the end of the eighth century.

ANTONIUS, CAIUS, second son of the orator, surnamed HYBRIDA, was one of the lieutenants of Sylla about the year 82 B.C. Having detached some squadrons of the army of that

general, then at war with Mithridates, he plundered Achaia. Though accused of many crimes by the Greeks, Lucullus the prætor suffered him to go unpunished; but six years afterwards, Gallius and Lentulus, the censors, expelled him from the senate. Cicero calls him the brigand of the army of Sylla. Drumann (Gesch. Rom. i. p. 534) says that the name of Hybrida was given to him because he was *homo semiferus*, half a brute. Some writers confuse him with his nephew of the same name, who favoured the conspiracy of Catiline, and was consul with Cicero. That CAIUS was the son of Marcus Antonius Creticus, and therefore the grandson of the orator. Cicero, to remove perhaps a dangerous rival from Rome, gave up to him the government of Macedonia. Some years afterwards he was accused by Marcus Lælius, and sent into exile. He died broken down by misfortunes.—T. J.

ANTONIUS OF CARTHAGENA, a Spanish physician, who lived in the first half of the sixteenth century, and was physician to the dauphin of France, and professor of medicine at Alcalá-de-Henares. There were two other Spanish physicians of the same name, the one called ANTONIUS D'AQUILERA, the other ANTONIUS OF VIANA, who, as well as the first-mentioned, were authors of medical treatises.—F.

ANTONIUS, GOTTFRIED, a German lawyer, born at Freudenberg in Westphalia about 1550, was chancellor and one of the founders of the university of Giessen, and the author of several works on jurisprudence. He died in 1618.

ANTONIUS, LUCIUS, the brother of the triumvir, had all his vices, without a single redeeming point of character, except, perhaps, courage. He was tribune of the people in the same year that Julius Cæsar died, and consul at Rome in the year U.C. 713. The interest of Fulvia, his ambitious sister-in-law, gained him a triumph on the first day of his consulship, for a pretended victory which he had achieved over some of the inhabitants of the Alps. In the life of Mark Antony, we find her inducing Lucius to take up arms against Octavius Cæsar, with the intention of overthrowing the triumvirate. He was forced by famine to surrender at Perusium with 300 men, and afterwards liberated by the clemency or the policy of the conqueror. How he died is uncertain; some affirm that he was slain at the shrine of Julius, as having been one of his enemies.—T. J.

ANTONIUS, LUDOVICUS, professor of medicine at Coimbra, was a native of Lisbon, and the author of a variety of learned works relating to his profession. He died in 1547.

ANTONIUS, MARCUS, a celebrated Roman orator, the grandfather of the triumvir, was born 143 B.C. He was quæstor in Asia in 113, prætor in 104, proconsul in Cilicia, with a commission to put down piracy, consul at Rome in 99, and finally censor in 97. His eloquence, according to Cicero, rendered Italy the rival of Greece. He was renowned for his pathos. Aristocratic in his views and sympathies, he espoused the cause of Sylla during the civil wars, and fell a victim to the proscription of Marius and Cinna, when they seized on Rome in the year 87, B.C. His head was exposed on the tribune, which had often rung with his orations. He wrote a treatise, no longer extant, "De ratione dicendi," which is noticed by Cicero and Quintilian.—T. J.

ANTONIUS, MARCUS, commonly called MARK ANTONY, was grandson of Antonius the orator, who took the aristocratic side in the wars of Marius and Sylla, and was put to death by the former. He was born about the year 670 A.U.C. His mother, Julia, belonged to the family of the Cæsars. Her second husband, Cornelius Lentulus, was put to death by order of Cicero, in the year of his consulship, for having taken part in the Catiline conspiracy, and the fate of his stepfather is said by Plutarch to have been the original ground of the rooted feeling of animosity which Antony ever harboured towards the great orator.

Antony seems very early to have fallen into habits of dissipation and excess, chiefly through the example of his friend Curio. When the connection between them was broken off by Curio's father, Antony repaired to Greece, and studied oratory at the famous schools of Athens. The instructions he then received he knew how to put in practice on several critical occasions in his after life with remarkable success. He served his first campaign under Gabinus in Syria and Egypt, and in the course of it gave eminent proofs of courage and military skill. Upon returning to Rome, he was elected tribune of the people and augur. Having joined the party of Cæsar against Pompey, he was compelled by those of the opposite faction to leave Rome,

and resort to Cæsar's camp. Partly through his instigation Cæsar crossed the Rubicon, and commenced the civil war. In the campaign which followed, and which was terminated by the defeat of Pompey at Pharsalia, Antony played a distinguished part. After the battle, Cæsar was appointed dictator, and sent Antony, as his master of the horse, to undertake the government of Rome. While thus engaged, he indulged in scandalous debauchery and excess of every kind, so as to incur the displeasure of Cæsar. Antony seems to have stood in awe of his great chief, and the knowledge of his displeasure checked him in his profligate career. At this period he married Fulvia, the ambitious widow of the demagogue Clodius. After the murder of Cæsar, 42 B.C., Antony was at first in favour of measures of pacification; but finding that the party of the conspirators was not so strong as he had supposed, and imagining that if Brutus were removed he could easily seize the supreme power for himself, he changed his tactics, and made the celebrated inflammatory speech to the people over the body of Cæsar, which Shakspeare has so wonderfully reproduced in his play of Julius Cæsar. This policy answered for a while, but soon a new competitor appeared on the stage in Octavius, Cæsar's heir and grand-nephew. After trying the chances of war with doubtful result, they came to an understanding, the result of which was the formation of the second triumvirate, consisting of Antony, Octavius, and Lepidus, and a general proscription of their political opponents, in which Cicero fell a victim to the long-cherished hatred of Antony. The triumvirs then turned their arms against Brutus and Cassius, who, being defeated in the battle of Philippi, slew themselves, 42 B.C.

The final episode in Antony's eventful life now commenced. In Cilicia, after the battle of Philippi, he first met the beautiful Cleopatra, queen of Egypt, the last descendant of the race of the Ptolemies. He was at once fascinated by her charms, as Julius Cæsar and Pompey had been before him, and forgot at her feet his wife, Rome, and his military honour. From that time nothing succeeded with him. One more chance was given him, when, after the death of Fulvia, he came to an arrangement with Octavius, by which the empire was divided between them, and Antony took to wife the virtuous Octavia, the sister of his rival. For some time all went well, but when, in the course of his expedition against Parthia, he had landed in Syria, the consciousness of being so near Cleopatra proved too strong a temptation for a man whose life, with few exceptions, had been one career of vicious indulgence, and he sent for her and lived with her as before. Retribution was not long in falling upon him. His expedition against Parthia failed, and Octavius, to avenge the injury done to his sister, declared war. The naval battle of Actium followed, 31 B.C., in which Cleopatra, with her sixty ships, took to flight in the midst of the battle, and Antony, forgetful of his brave soldiers, of his own honour, of everything but his infatuated passion, followed her out of the action. They repaired to Egypt, which was soon invaded by Octavius; and Antony, after a vain attempt at resistance, deceived by a false report of the death of Cleopatra, fell upon his own sword, and so died. He was fifty-three, some say fifty-six, years of age at the time of his death. (Plutarch, *in vitâ*: Dion Cassius.)—T. A.

ANTONIUS, MARCUS JÜLIUS, son to the triumvir by Fulvia, was so great a favourite of Augustus, that after the conquest of Egypt he was raised from one post to another, until he reached the consulship in the year U.C. 744. He owed his advancement partly to his marriage with Marcella, the daughter of Octavia, and therefore the niece of that prince; but he was ungrateful to his benefactor, for he dishonoured Julia, the child of Augustus, and being also suspected of a conspiracy against the emperor, he was condemned to death. Some say, that in order to escape the infamy of his sentence, he destroyed himself. He wrote a heroic poem in twelve books, entitled "Diomedea," and several treatises in prose. To him Horace addressed the second ode of his fourth book. He left one son, JULIUS ANTONIUS, a noble but unfortunate youth, who was banished by the emperor to Marseilles, under the pretence of pursuing his studies. There he probably died. The honours begrudged him in life were bestowed on his bones, which, by a decree of the senate, were deposited in the tomb of the Octavii. With him the ancient house of Antonia probably terminated. It was illustrious, as Tacitus reflectively observes, but unfortunate: *Multâ claritudine generis, sed improspérâ*.—T. J.

ANTONIUS, MARCUS DE DOMNIS, a Venetian, in 1590,

bishop of Segni, and then, 1602, archbishop of Spalatro, and primate of Dalmatia. During the conflicts between the pontiff Paul and the Venetian republic, he was alienated from the pope, and being threatened by the Inquisition, he came over to England, and openly professed protestantism in St. Paul's. In London he wrote his principal work, "De Republica Ecclesiastica." James I. made him dean of Windsor. The Spanish ambassador plotted against him, and when he applied for the archbishopric of York, he received for answer a command to leave the country in three weeks. Means were taken to win him back to the church. He recanted in Brussels, and did penance in St. Peter's, but was taken up by the Inquisition, and brought, as is supposed, by them to a violent death in 1624. His body was dragged through the streets of Rome, burned by the hangman, and its ashes cast into the Tiber. It was by his influence that Father Paul's famous history of the council of Trent was first published in England.—J. E.

ANTONIUS, PARMENSIS, bishop of Ferrara, A.D. 419.

ANTONIUS, PRIMUS MARCUS, a bold and enterprising man, who contributed not a little to clothe Vespasian with the purple. He was born at Toulouse in Gallia Narbonensis (about A.D. 20), and having been convicted in the reign of Nero of forging a will, he was condemned to banishment. In those troublous times, he soon recovered his rank as a senator, commanded a legion under Galba, was neglected by Otho, and when the cause of Vitellius began to decline, subsequently attached himself to Vespasian. Brave and energetic in war, though corrupt and profuse in peace, he became of signal use to that aspirant to the imperial crown. Hearing that the army of Vitellius was demoralized by intestine feuds, he marched his legions against it, and gained a great victory at Bedriacum, a small city between Mantua and Cremona. The soldiers of Vespasian soon after arrived, and crossing over the field covered with the traces of a recent carnage, they concluded that the campaign was at an end, and began to show signs of insubordination. Meanwhile the forces of Vitellius rallied, and would have amply revenged their recent defeat, had not Antonius displayed the utmost courage and address. Animated by his eloquence and excellent arrangements for encountering the foe, his soldiers gained a second victory (A.D. 691), and by taking Cremona, still more deeply damaged the cause of Vitellius. After a series of sanguinary conflicts, Antonius became master of Rome, put an end to the civil war, and placed the crown on the head of Vespasian. Soon, however, he lost his authority with the army, and went to Vespasian, who does not appear to have manifested any gratitude towards him proportioned to his signal services. After this Tacitus mentions him no more. From an epigram of Martial, we learn that he retired to Toulouse, and amused his leisure in composing verses. According as we interpret an epigram in Martial, which says that he had passed the fifteenth Olympiad, and count an Olympiad as including four or five years, we may presume that he lived to the age of 60 or 75. Tacitus did not admire him; but Martial praises him as a noble character, and a sincere friend. He is not the only illustrious general whose youth has been tarnished by meanness, and his age by avarice.—T. J.

ANTONIUS, SAINT, a martyr, who was put to death at Wilna in 1328.

ANTONY, surnamed THE BASTARD OF BURGUNDY, was the natural son of Philip the Good, duke of Burgundy, and was born in 1421. He was distinguished for his great military talents, and, in 1478, received from Louis XI. the duchy of Chateau Thierry as a reward for his services. Died 1504.

ANTRACINO, GIOVANNI, principal physician to Popes Adrian VI. and Clement VII., died in 1530.

ANTRAIQUES, EMMANUEL LOUIS HENRI DE LAUNAY, Count, was born at Vivarrias in France in 1755. At the outbreak of the Revolution, he adopted the popular side, and published an essay on the rights of the States-General, and was returned as a member of that body. He soon, however, changed his opinions, left France in 1790, and became the most restless intriguer in favour of a counter revolution. He was finally assassinated near London in 1812, by his own servant.—J. W. S.

ANTYLLUS, a Greek surgeon of the third century, appears to have been conversant with the operation of tracheotomy.

ANUND, AMUND, or OERNUND, a king of Sweden in the seventh century, celebrated as a great maker of roads.

ANUND, JACOB, a king of Sweden, who succeeded in 1024, and died in 1035.

ANVILLE, JEAN BAPTISTE BOURGUIGNON D', an eminent French geographer, was born in 1697, and died in 1782. He was particularly versed in the geography of the classic and the mediæval epochs. His maps of the world as known to the ancients, of the Roman empire, of Gaul, Italy, and Greece, are particularly valuable.

ANWERI or ANWARI, a poet of Persia, was born in the province of Khorassan, and died at Balkh about A.D. 1200. His original name was NACOVERI. He was distinguished in elegy, satire, and amatory poetry. He also studied astrology, and made some unsuccessful predictions.

ANYTE OF TEGEA, a poetess of considerable celebrity, to whom are assigned several epigrams in the Greek Anthology. There is scarcely any clue to her exact date, and it is uncertain whether there were not two Anytes, one of Tegea, and another of Mitylene. The most probable conjecture assigns her to the period immediately subsequent to the reign of Alexander the Great. Her epigrams are full of spirit, and characterized by simplicity. An epigrammatist calls her the female Homer.—J. D.

ANYTUS, an Athenian, the son of Athenion, lived about 410 B.C. He was an influential demagogue, but deserves notice only as one of the accusers of Socrates.

AODTH, FINLIATH, an Irish monarch, who ascended the throne A.D. 863. He married Malmaria, the daughter of Kenneth MacAlpine, king of the Irish colony of Scotland. He died in A.D. 879, after a reign of sixteen years. After his death his widow married his successor to the throne, Flan Siona.—(Wills.)—J. F. W.

APA'CZAI or APATZAI-TZERE, JOHANN, a Calvinist divine, born in 1621 at Apatza in Transylvania. After pursuing his studies at Clausenburg and Carlsburg, he became professor of oriental languages and philosophy in the university of Utrecht. His zeal, however, for the doctrines of Des Cartes rendered it necessary for him to leave Holland, and he returned to his native country, where he obtained a chair in the academy at Clausenburg; at which place he died in 1559.—F.

APAME, the name of several princesses of antiquity. The first was the wife of Seleucus Nicator, and the mother of Antiochus Soter, who founded, in her honour, the city of Apamia in Phrygia; another princess of the same name was the daughter of Antiochus Soter; and the third was the wife of Amynder, king of Athamania, about 208 B.C.

APARICIO, DON JOSE, a distinguished Spanish painter of modern times. He was born at Alicante in 1773, and studied at Madrid, Paris, and Rome. His style inclines to that of David. Died in 1838.—R. M.

APCHON, CLAUDE-MARC-ANTOINE D', was born at Montbrison about 1723. He at first embraced the military profession, but subsequently entered the church, and became bishop of Dijon in 1755, and archbishop of Anch in 1776. He was a man of great excellence of character, and much distinguished for his charity and benevolence. He died at Paris in 1783.

APEL, FRIEDRICH AUGUST FERDINAND, a German lawyer, brother of Johann August, born at Leipzig, 1768, died in 1830.

APEL, JOHANN, was born at Nürnberg in 1486. In 1502 he was one of the first students enrolled in the new university of Wittemberg, in which he was afterwards rector and professor of law. He was a zealous adherent of Luther and the doctrines of the Reformation. He died about 1540.

APEL, JOHANN AUGUST, a popular German author, born at Leipzig in 1771, who wrote on a great variety of subjects, and produced a number of compositions in poetry, romance, the drama, &c. He died in 1816.

APELLAS or APOLLAS, a geographer of Cyrene, who is presumed to be the person referred to by Athenæus, as the author of a work on the towns of Peloponnesus, and who is therefore supposed to have lived 235 B.C.

APELLAS, one of the sculptors in bronze of the time and school of Phidias.

APELLES OF EPHESUS, a Greek painter of the third century B.C., who possessed high reputation at the court of Ptolemy Philopator, and is mentioned by Lucian, in his treatise of "Calumny," as having executed a fine picture, illustrative of that subject.

APELLES, one of the greatest painters of antiquity, supposed to have been born at Cos, a small island in the Ægean sea. The date of his birth is uncertain. We only know that he was at the summit of his fame in the reign of Alexander the Great, whose portrait he often painted. Alexander, indeed, refused to sit to

any one else. He employed only four colours, and was skilful in the use of his varnishes, which, while they heightened the effect of his pictures, contributed to their preservation. He was the pupil of Pamphilus, a Macedonian, then residing at Sicyon, whose works bore a high reputation, and who charged a vast sum for them. He was driven by a storm to take shelter at Alexandria during the reign of Ptolemy Lagus, who had been a sort of colonel of life-guards to the Macedonian conqueror. An enemy, wishing to injure him in the estimation of Ptolemy, told him one day that the king had invited him to dinner. On arriving at the palace, he found Ptolemy enraged at his intrusion, and was commanded to point out the author of the hoax. This was impossible, as the impostor was not in the room. Apelles seized a piece of charcoal, and sketched so lively a portrait of his enemy on the wall, that Ptolemy immediately recognized the great master. Alexander treated him with a familiarity which reminds us of the honours paid to Titian by Charles V. Many anecdotes are told of his pictures, and many sayings in connection with art owe their origin to him. He never passed a day without trying to improve himself as a draughtsman; hence the phrase, *Nulla dies sine linea*. He once hid himself behind a picture which he had placed in the street, and waited to hear the criticisms of the passers-by. A shoemaker came and complained of the boots. Apelles remedied the defect, and the cobbler returning shortly afterwards, and finding his advice taken, proceeded to criticise the leg of the figure. Apelles, stepping out from his concealment, is said to have exclaimed, "Let not a cobbler go beyond his last;" hence the well-known proverb. His favourite subject was Aphrodite, the very type and perfection of feminine grace; and some of the most celebrated beauties of Greece unveiled themselves before him, and served as copies for his pencil. Phryne bathing in the sea at Eleusis furnished the model for one celebrated picture, and he fell in love with Campaspe, one of the mistresses of Alexander, who had sent her to sit for another. Alexander is said to have presented him with the lady of whom he was thus enamoured. Ælian tells the same story, but calls her *Pancaste*. Seeing Lais of Corinth, then a young girl, returning from the fountain, and, perhaps, balancing her urn on her head, he persuaded her to become one of his models, and shamefully contributed to her ruin. His masterpiece was "Venus rising out of the sea," which Augustus dedicated in the temple of Julius Cæsar at Rome. The lower parts were injured, and no person could be found capable of restoring them. Nero had a copy, or, as some say, another picture painted by Dorotheus, and placed in the room of it. Death cut off Apelles before he had completed another Aphrodite for his native city, which was to have excelled all his previous achievements. His principal portrait of Alexander was treasured up at Ephesus in the temple of Diana. He painted King Antigonus in profile, to conceal the absence of one eye. In the time of Pliny, other triumphs of his pencil were to be found at Rome. He wrote a work on painting, which is lost. The exact date of his death is uncertain.—T. J.

APELLES, a heretic of the 2nd century, originally a follower of Marcion, but left his school in consequence of some difference of doctrine. He taught that the God of the Hebrews was an inferior deity, that there was no resurrection of the body, and that difference of sex caused a difference of soul. Although a Gnostic, he held that Christ assumed a real body composed of the elements into which, on his ascent to heaven, that body was dissolved. He wrote a book called *Ἐνεργώσεις*, containing an account of the visions of Philumene, a virgin whom he fancied to be inspired. Jerome speaks of a "Gospel of Apelles," as having given origin to many heresies in the church.—F.

APELLICON OF TEOS, a Peripatetic philosopher of the first century B.C., lived at Athens, and spent his fortune in collecting a library of old and rare books, gathered from every part of Greece. He died shortly before the capture of Athens, 86 B.C., by L. Cornelius Sylla, who took possession of his library and carried it to Rome. Among the numerous valuable MSS. in the collection, it is said there were autograph copies of the works of Aristotle and Theophrastus. Strabo speaks of him as rather a lover of books than of wisdom.—F.

APEP, a Greek grammarian, who was a disciple of Aristarchus, and lived in the earlier part of the first century.

APEP, MARCUS, a Latin orator, who lived during the reign of Vespasian. He was a native of Gaul, but on establishing himself at Rome, rose to be successively senator, quæstor, and prætor. He died about A.D. 85.

APEZTEGUIA, DON JUAN FELIPE, a Spanish sculptor of merit in the latter part of the 18th century; died 1785.

APHA'REUS, a Greek poet and orator of the 4th century B.C.

APHERDIA'NUS, PETER, a Dutch poet and grammarian in the latter part of the sixteenth century.

APHRODISIUS OF TRALLES, a sculptor at Rome, who, according to Pliny, executed, unaided, some of the statues in the palace of the Cæsars. He lived in the first century.

APHTHO'NIUS, a rhetorician of Antioch, in the third or fourth century of our era, to whom the title of the "Sophist" has been given. A work on rhetoric, rhetorical declamations, and other writings attributed to him, have been lost; but there still exist some of his "Rhetorical Exercises," and a collection of forty fables, which has been frequently reprinted.

APIANUS, PETER and PHILIP, father and son, were two eminent mathematicians and astronomers of the sixteenth century. Their real name was Bienewitz; and *Biene*, signifying a bee, gave origin to their Latinised name. The elder of the two, born at Leissnig in Misnia in 1495, was professor of mathematics in the university of Ingoldstadt, and was patronized and ennobled by the Emperor Charles V. He died in 1552. His son Philip was born at Ingoldstadt in 1531, and succeeded his father in the chair of mathematics, although not yet twenty-one years of age. He took the degree of M.D. at Bologna in 1564; and four years afterwards, having embraced protestantism, was forced to vacate his professorship; he was, however, appointed to the chair of mathematics and astronomy at Tübingen, where he died in 1589. Both of these eminent men were authors of a number of valuable scientific works, of most of which various editions have been published. We owe to Peter Apianus the first statement of the pregnant fact, that the tails of comets are turned away from the sun; the prolongation of the tail within the orbit, passing through the centre of that luminary.—F.

APICIUS, a name which has passed into a proverb for gluttony, was borne by three famous epicures. The most remarkable of these was MARCUS GABIUS APICIUS, who lived about the beginning of our era. Stories almost incredible are told of how he sailed from place to place in search of the most superior lobsters (*zægidis*), of how he spent a sum equal to £730,000 in procuring the most delicate luxuries, and when at last he found his exchequer reduced to about £80,000, he poisoned himself rather than live on such a pittance. The story is authentic; both Seneca and Dion Cassius tell it, and Martial has recorded it in an epigram. The only ancient work on the culinary art which is still extant bears the name of "Cælius Apicius," but it is generally believed that it was the production of none of those epicures, but of some later writer, who affixed to his production this name, as one proverbial in the annals of his art.—J. B.

APIN, JOHANN LUDWIG, born at Hohenlohe in Franconia in 1668, became fellow of the medical college at Nürnberg, and in 1702 was appointed to the chair of physiology and surgery in the university of Altorf; but died in the year following.

APIN, SIGISMUND JACOB, a German philologist, son of the preceding, was born at Herrspruck in 1693. He was rector of the school of St. Giles at Brunswick, and author of many learned works; died in 1732.

APION, a Greek grammarian, was a native of Oasis in Africa, and the son of Posidonius. He studied at Alexandria, and afterwards betook himself to Rome, to teach rhetoric. He was famed as an interpreter of Homer, and his wide and varied knowledge is praised by the ancients. He was a man of the most inordinate vanity. There is scarcely a fragment of his writings now extant; but the memory of one of his books, written against the Jews, is preserved by the reply to it which Josephus has left in his work, "Against Apion." Josephus says that he died a victim to a disease brought on by his licentiousness, but we cannot rely on the testimony of so keen an antagonist. He flourished in the first century of the Christian era.—J. D.

\* APJOHN, JAMES, M.D., an able Irish chemist, was born on the 1st of September, 1796, in the parish of Grean, and county of Limerick, at Sunville, the property of his paternal ancestors. He was educated at the diocesan school of Tipperary, then conducted by the late Rev. Marshal Clarke, where he was placed as a boarder, and continued there for about four years, after which he entered as a student of Trinity college, Dublin, in the year 1814, under the tuition of the Rev. Dr. Wall. In his college course, Apjohn exhibited those talents which made

him eminent in after life, having obtained a scholarship in 1816. Two years after, he took his degree of bachelor of arts, and applying himself to the study of medicine, he took the degree of M.B. in 1821. Dr. Apjohn now settled in Dublin, and applied himself sedulously to his profession, and actively co-operated with Sir Henry Marsh, Dr. Jacob, Dr. Graves, and Mr. Cusack, in establishing the medical and chirurgical school in Park Street in that city, and was appointed lecturer in chemistry in that institution in 1825. To this branch of his profession, Dr. Apjohn devoted much of his attention, and his character as an accomplished chemist was speedily established, so that in 1828 he was unanimously elected to the professorship of chemistry in the Royal College of Surgeons in Ireland. Dr. Apjohn took his degree of M.D. in 1837, and the board of Trinity college appointed him, in 1841, lecturer on applied chemistry. In the year 1850, the chair of chemistry in the university becoming vacant, Dr. Apjohn was unanimously elected to fill it, with which professorship that of mineralogy was subsequently combined. Dr. Apjohn has long been an efficient and distinguished member of the Royal Irish Academy, of which he is a vice-president, and has contributed many valuable papers in its publications;—in particular, a very able essay, read before the academy in 1837, on "A new method of investigating the specific heats of the gaseous bodies," for which he was awarded the high honour of the Cunningham gold medal. As a chemist, practical and theoretical, Dr. Apjohn has long confessedly held the first place in Ireland, and his reputation has extended beyond his native land, being well known to the physicists of England and the continent of Europe. In 1853 he was elected *unanimously* a member of the Royal Society. He has from time to time contributed to the progress of science by his publications, of which more than twenty original memoirs on various subjects connected with chemistry and general physics, have appeared from his pen. In the Encyclopædia of Practical Medicine, the articles on "Spontaneous Combustion," on "Electricity," on "Galvanism," and on "Toxicology," were written by Dr. Apjohn.—J. F. W.

APOCAUCUS, ALEXIS, grand-duke of the Byzantine army in the reign of John Palæologus, was born about the end of the 13th century; and although of obscure origin, raised himself to a position of great dignity and authority. During the minority of the young prince, his ambition led him to aspire to the throne itself, and greatly accelerated the fall of the Greek empire. After causing much disorder in the state, he at length reaped the reward of his tyranny. While inspecting a prison at Constantinople, in which were confined a number of the partisans of his rival, he was attacked by two of the prisoners who were of the race of the Palæologi, and put to death in 1345.—F.

APOLLINARIS, AURELIUS, a Latin poet of the third century, who wrote in Iambic verse a biography of the Emperor Carus. The work has perished.

APOLLINARIS, C. SULPICIUS, a celebrated grammarian of Rome, supposed to be a native of Carthage, who taught during the reign of the Antonines. Among his pupils were Aulus Gellius, author of the *Noctes Atticæ*, and Helvius Pertinax, who, from a teacher of grammar, rose to be emperor of Rome.

APOLLINARIS, SAINT, was bishop of Valence, a town on the Rhone, during the earlier part of the sixth century.

APOLLINARIUS or APOLLINARIS, a learned native of Alexandria, who lived in the earlier part of the fourth century, and taught grammar and rhetoric at Berytus and at Laodicea, where he married and became a presbyter. For associating with the heathen sophist Epiphanius, and attending his lectures, he and his son, who is styled APOLLINARIUS or APOLLINARIS, JUNIOR, were both excommunicated; they were afterwards restored to the church, and Apollinarius, junior, became bishop of Laodicea. In A.D. 362, when the Emperor Julian prohibited the Christians from reading the works of the classic writers, they undertook to compose some sacred classics to supply the place of the heathen authors. The father turned the Pentateuch into heroic verse, in imitation of Homer; and composed, it is said, dramas and lyrics out of the rest of the Old Testament, after the manner of Menander, Euripides, and Pindar. His son employed himself on the New Testament, and turned the gospels and epistles into dialogue, in imitation of Plato. Nearly all these writings are lost; but there is extant a Greek poetical version of the Psalms, which is ascribed to the elder Apollinarius, and the tragedy of the sufferings of Christ, published among the works of Gregory Nazianzen.

is presumed to have been from his pen. A few fragments only remain of the writings of the younger of these two scholars, who died between A.D. 380 and 392.—F.

**APOLLINARIUS, CLAUDIUS**, Saint, was bishop of Hierapolis in Phrygia, in the second century. Little is known of his history; but he is highly spoken of by Theodoret as a scholar and divine. He died prior to A.D. 211.

**APOLLODORO, FRANCESCO**, an Italian painter of the seventeenth century, was born at Friuli, and lived at Padua; where, under the name of *Il Porcia*, he became celebrated for his portraits of the literary men of the period.

**APOLLODORUS**, a Greek mathematician, referred to by Diogenes Laertius and by Athenæus, as having transmitted the famous theorem of Pythagoras to posterity.

**APOLLODORUS**, an Athenian philosopher, and friend of Socrates, who lived in the course of the fifth century B.C., and is mentioned by Xenophon and by Plato.

**APOLLODORUS**, an Athenian sculptor, mentioned by Pliny, flourished during the earlier part of the fourth century B.C. He became noted for his fastidiousness and severity in criticising his own works, and for his frantic energy in breaking to pieces many of them, which, though admired by others, failed to come up to his own standard of excellence.

**APOLLODORUS**, an Athenian merchant, lived about 400 B.C., and is noted as having been the plaintiff in a lawsuit against Phornio, who was defended by Demosthenes.

**APOLLODORUS**, a celebrated ancient grammarian, was by birth an Athenian. He was the son of Asclepiades, and one of the scholars of the Rhodian philosopher Panætius, and the grammarian Aristarchus. He flourished about 140 B.C. He wrote a considerable number of books, but only one of them has come down to us. It is called the "Library," and gives an account of the heathen gods and heroes. It begins with the first state of things, when Heaven ruled all the world, and breaks off with the exploits of Theseus, the latter part of the work being lost. It is a compilation, made principally from the Cyclic poets. It has become valuable to us, because many of the sources from which it was drawn have perished; but even in ancient times it was highly esteemed as a consecutive compendium of the traditions relating to the gods and heroes. A collection has been made of fragments of eleven other works by Apollodorus.—J. D.

**APOLLODORUS**, an Epicurean philosopher, mentioned by Diogenes Laertius. He flourished about 80 B.C.

**APOLLODORUS**, an eminent lawyer, lived about the end of the fourth and beginning of the fifth century of the Christian era. He was one of the compilers of the Theodosian Code.

**APOLLODORUS**, author of a history of the Parthians, cited by Strabo and Athenæus.

**APOLLODORUS**, the name of several physicians mentioned by Pliny and Athenæus.

**APOLLODORUS OF ATHENS**, surnamed the "Shadow Painter" (*Σκιαγράφος*), lived about the ninety-third Olympiad. He was the first who paid attention to the modification of colours by the effect of light and shade. He is supposed also to have introduced the first prospectical graduation of tints for producing the effect of various distances.—R. M.

**APOLLODORUS OF CARYSTUS** in Eubœa, a Greek poet, who lived at Alexandria towards the end of the fourth century B.C., and wrote many comedies, since lost. These works achieved a high reputation, and were largely borrowed by the Latin comic poets, according to their usual practice, to which a parallel might easily be found in modern times. He is mentioned by Suidas.

**APOLLODORUS OF CASSANDRIA**, first a demagogue, afterwards a tyrant, flourished about 280 or 300 B.C., and was remarkable for perfidy and cruelty. He was overthrown and put to death by Antigenus. He is mentioned by Diodorus, Polybius, and other historians.

**APOLLODORUS OF DAMASCUS**, a celebrated architect and engineer, was born about A.D. 60. He designed and executed most of those splendid edifices and great works of engineering with which the Emperor Trajan delighted to adorn and improve his dominions, and of which some remains exist, and are admired at the present day,—such as the column of Trajan, the ruins of his forum, the triumphal arch of Benevento, the triumphal arch, the bridge, and the harbour of Ancona, and probably also, the best part of that triumphal arch which was finished and appropriated by Constantine, but which is believed to have

been commenced by Trajan. The greatest engineering work of Apollodorus was the immense bridge of Trajan over the Danube, afterwards destroyed by Adrian. The high spirit of Apollodorus, capable of respecting true greatness alone, led him to show more openly than was consistent with prudence, his contempt for the taste and understanding of Adrian; and on the accession to the empire of that mean tyrant, the great architect became an object of persecution, and his works of destruction; and at length, by means of a false accusation, he was judicially murdered, A.D. 130. During a period of exile, Apollodorus composed a treatise on engines of war (*Πολιορκητικα*), which is still extant in the collection called "Veteres Mathematici." Information respecting him may be found in the works of most of the historians who have treated of the period when he lived, such as Pausanias and Eutropius.—W. J. M. R.

**APOLLODORUS, EPHILUS**, a Stoic philosopher, mentioned by Diogenes Laertius.

**APOLLODORUS OF GELA**, a Sicilian poet, mentioned by Suidas, who flourished about the end of the fourth and beginning of the third centuries B.C. He wrote comedies, of which a few fragments are preserved.

**APOLLODORUS OF LEMNOS**, about 400 B.C., wrote a work on agriculture, cited by Aristotle and Pliny.

**APOLLODORUS OF PERGAMUS**, a rhetorician, and the instructor of Augustus in oratory. Born 60 B.C.; died A.D. 22. He is mentioned by Suetonius and Tacitus.

**APOLLODORUS OF TARSUS**, a tragic poet, mentioned by Suidas.

**APOLLO'NIDES**, a Greek physician of the fifth century B.C.

**APOLLONIDES**, a governor of Argos, under Cassander, in the fourth century B.C.

**APOLLONIDES**, a citizen of Chios, who was banished to Upper Egypt by Alexander the Great.

**APOLLONIDES OF NICÆA**, a Greek philologist and commentator of the first century B.C.

**APOLLONIO, JACOPO**, a landscape painter of great merit, a pupil and imitator of the Bassani, born at Bassano in 1586; died in 1638.

**APOLLO'NIS** or **APOLLO'NIA**, the wife of Attalus I., king of Pergamus, lived about 220 B.C., and is celebrated on account of the filial love of her four daughters.

**APOLLONIUS**, the name of a number of Greek physicians, of whom we mention:—**STRATONIUS**, of the school of Erasistratus, lived about the third century B.C.—**HEROPHILUS**, flourished at Alexandria under the Ptolemies.—**THE EMPIRIC**, lived in the second century B.C.—**GLAUCUS**, flourished about the same time.—**ORGANICUS**, supposed by some to be identical with Herophilus.—**A. OF PRUSA**, an accoucheur of the same century.—**ANIMAL**, of the first century B.C.—**OPHIS**, and **A. OF TARSUS**, both of the same century.—**A. OF PERGAMUS**, a writer on hydrophobia, of the same epoch; and **A. OF CITIUM** in Cyprus, lived about 70 B.C., and wrote on epilepsy.—J. W. S.

**APOLLONIUS**, a Roman senator of the second century, who suffered death for having embraced Christianity.

**APOLLONIUS**, a Greek mosaicist, established at Venice during the 13th century, and employed in the church of San Marco.

**APOLLONIUS**, a Stoic of Chalchis, summoned to Rome by Antoninus Pius, to superintend the education of his nephew, Marcus Aurelius.

**APOLLONIUS**, the son of Nestor, of the school of Lysippus of Sicyon, lived between 330 and 300 B.C. He is the sculptor of the celebrated *Belvedere Torso*, which Michel Angelo used to consider superior to all the other relics of antiquity. But for the appearance of the Phidian marbles, brought into light by Lord Elgin, the work of Apollonius would still hold the same pre-eminence in the public estimation.—R. M.

**APOLLONIUS OF CYRENE**, an obscure philosopher of the Megaric school, who lived during the third century B.C.

**APOLLONIUS, DYSCOLUS**, a Greek historian and grammarian of Alexandria, who flourished in the second century. His criticism on the veracity of ancient historians has unfortunately been lost; but his philosophy of language is a most interesting work.

**APOLLONIUS, LAERINUS**, a Dutch traveller of the sixteenth century.

**APOLLONIUS, MOLON**, an orator of the first century B.C., noted as the master of Cicero. He afterwards served Julius Cæsar as an interpreter.

**APOLLONIUS OF PERGA**, lived at Alexandria, under the

reign of Ptolemy Philopator, from 222 to 205 B.C. Amid that constellation of illustrious geometers, which comprehends the names of Euclid, Archimedes, Apollonius, and Ptolemy, the great writer, whose achievements we shall briefly explain, occupies no second place. Unfortunately, it is of his works only that we can speak; for, concerning the man Apollonius, or any incidents of his life, nothing whatever is known.—I. The distinctive place occupied by Apollonius may be easily defined. Geometry in its largest signification consists of two parts. The **FIRST** concerns itself with the *measurement* or evaluation of enclosed or finite spaces; a subject of remarkable simplicity, so long as its inquiries are limited to spaces enclosed by *straight* lines, but at once difficult and complex when the bounding lines are *curves*. The glory of having effected the transition from the simple to the arduous class of such problems, belongs unquestionably to Archimedes, whose genius indeed still illumines all this region of inquiry. His memorable discovery of the method of Exhaustions, contains the germ of our potent Infinitesimal Calculus, or at least the fundamental idea of that calculus as it presented itself to the mind of Newton. With this portion of geometrical science, the labours of Apollonius had little to do. But there is a **SECOND** great division of the subject; and if we do not allege that Apollonius stands towards that division, altogether as Archimedes to the *first*, it is only because it is impossible to forget the *Data* of EUCLID, and those fragments of his treatise on *Porisms*. The large and imposing section of geometrical inquiry now referred to, is that which the Stagyrite must have had in his eye, when he asks (*Metaphysics*, Book II., chap. 3,) “With what conceptions are mathematicians engrossed, if not such as relate to *order* and *proportion*?” It is occupied not with the measurement of spaces (unless incidentally), but with consideration of the properties of *Form*, as *Form*—with the properties of enclosed spaces, in so far as such properties result from their figure and position; and with no great injustice to the well-known author of the “*Elements*,” this division of the science may rightly be termed “The Geometry of Apollonius.” Here also, the acknowledged Head and Leader of future inquiry is pre-eminently distinguished, if not by the inauguration, at least by the confirmation and development of a most fertile and powerful *method*. It is known to every reader of the *Elements* that geometers often advance to new theorems by starting from bases or truths already demonstrated; which truths they combine by tentative methods, and reach at length the end aimed at. This method the Greeks termed *Synthesis*. But synthesis is a difficult and confined method; permitting little freedom to invention, rightly so called. The honour of suggesting an inverse process—the process called *Analysis*—is attributed to Plato. Geometrical analysis consists in assuming as true, the truth supposed to be true, or assuming as constructed, the problem required to be constructed; and then, by reasoning downwards, in endeavouring to reach some truths already established, or some recognized property. There is no doubt of the vast superiority of this analytic method, or of the amazing freedom within which an expert inquirer feels himself, while he is exercising it. If, from a plain, one is required to ascend to a mountain top, how limited his choice of a pathway—how uncertain the best that he can think of! But, from the top of the mountain, practicable routes may be descried on every side—routes apparently practicable at least,—for in neither case can the adventurer escape deceptions caused by the foreshortenings of perspective. If Plato suggested the process of geometrical analysis, it was reserved for Apollonius to realise it,—to exemplify, in the more arduous regions of inquiry, its consummate freedom, its vast capacity, its power to excite an infinity of *tours de force*. From causes which cannot now be specified, this method was lost for ages. But it ever suggested itself anew—although in modified and comparatively feeble forms—to men of genius; and its late but confirmed triumph over comparatively barren *Synthesis*, is at the root of the revival, which, in our modern times, is rapidly restoring geometrical methods to their rightful place. It was an intimate sense of the power inherent in analysis, as well as the feeling of its great beauty, that more than justified the emphatic words of CARNOT,—“This is the geometry that was so fertile in the hands of Archimedes, of Hipparchus, of Apollonius; none other was known to Napier, Vieta, Fermat, Descartes, Galileo, Pascal, Huygens, Roberval; and surely a geometry which was cultivated, as if with the force of a predilection, by our Newtons, Halleys, and Maclaurins, cannot be supposed

to be without its peculiar advantages.”—II. But passing from general considerations, let us glance at the specific works of Apollonius. These were arduous and numerous; but owing to the loss and destruction of monuments of literature and science that accompanied the fall of the Empire, we should have known little of them, unless for the indications contained in those most precious “*Collections of Pappus*.” In the first place, as to his smaller treatises. These, according to Pappus, who has given us the heads of their contents, although in a most enigmatical form, were entitled, “*De Sectione Rationis*,” “*De Sectione Spatii*,” “*De Sectione Determinata*,” “*De Tactionibus*,” “*De Inclinationibus*,” “*De Locis Planis*.” Of these six treatises, in which the great geometer appears to have unfolded all the resources of analysis in the resolution and discovery of problems and theorems, one alone survived the ravages of time, viz. the “*Section of Ratio*,” a translation of which from an Arabic manuscript we owe to our admirable Halley. The hints given by Pappus, however, have enabled skilful men so far to recover the others, that we may safely account ourselves to be in possession of most of the methods of Apollonius. The treatise on “*Plani Loci*” was, after the failure of many previous geometers,—amongst whom we must place even Fermat,—ultimately reproduced by Robert Simson of Glasgow, in a work that will ever be accounted a model of geometrical rigour and elegance. The character and contents of the “*Section of Space*” were divined by Halley. The “*Determinate Section*” was revived also by Simson. The two books on *Inclinations* we owe anew to Marinus Ghetaldus; and the two books on *Tangencies*, to Vieta, Ghetaldus, and Anderson of Aberdeen. Several of these treatises were published in English by the late Mr. Lawson. Whoever refers to the scantiness and obscurity of those hints of Pappus which led to so successful a reconstruction of the works of Apollonius, will not consider it inappropriate to recall the triumphs of the modern comparative anatomist, which, through effect of determinate laws, have enabled him to reconstruct out of a few scattered bones, races of animals that for ages have been extinct. But the grand production of the ancient geometer is unquestionably his “*Conic Sections*,” a work in eight books, which we may venture to say are now possessed by us, almost if not wholly, in their original purity and completeness. Our magnificent edition of the *Conics*, printed by the liberality of Oxford, is one of the greatest of those achievements which make science so profound a debtor to Dr. Halley. The first four books are given in their original form, accompanied by a Latin equivalent; three are translated from an Arabic manuscript; and the eighth as it was restored after Pappus, by the unsurpassed sagacity of the editor. It were not easy to overrate the merits of this memorable work. Not only is every logical geometrical artifice, known until quite modern times, developed and employed in it, but that remarkable power of generalization—of finding his way from single propositions towards new and large fields of thought—which pre-eminently distinguished Apollonius, inspires it all. In the first four books all the finest properties of conics are brought out with the penetration, and co-ordinated with the skill of a master. In the third book, for instance, we find a proposition that is in reality the basis of the modern theory of reciprocal polars—the proposition, viz. :—“If, from the points of meeting of two tangents to a conic section, a transverse be drawn cutting the curve in *two* points, and the chord joining the points of contact of the two tangents in a *third* point, then this third point and the point at which the two tangents meet, will be harmonic conjugates, in reference to the first *two* points.” It is in the fifth book, however, that the genius of Apollonius chiefly appears. In that book, for the first time, we find researches concerning *Maxima* and *Minima*; and no initiated reader can fail to detect the germ of our modern theory of centres of osculation, and therefore of a perfect determination of the evolute of a conic.—Our space limits us to one general reflection. It were vain, of course, to expect, in the Greek geometry, resources in any way comparable to those of the science in the posture it has assumed since the times of Carnot and Monge. At length its procedures have escaped all limitation; so soon as one new property of figurate space is established, we can discern that property penetrating a wide range of forms, modified by fixed laws. Pure geometry, indeed, which has nothing of the obscurity of the algebraic methods of the middle ages, now surpasses them in facility and generality. Nevertheless, the *rudiments* of the greater part of these recent and

most potent methods, are found amid the writings of such men as Apollonius; and the great historic task remains, to detect and scrutinize these rudiments, and to track that flow of thought which, notwithstanding breaks and large and dreary spaces of barrenness, is yet continuous, and unites an Apollonius with a Monge. The opportunity is clear. The important task may be accomplished by whomsoever, with the requisite acuteness and knowledge, shall—mainly on the ground of those precious fragments, by Robert Simson, now resting in unread manuscript in the library of the university of Glasgow—have the courage to occupy some years of his life in preparing a new and adequate edition of Pappus.—J. P. N.

**APOLLONIUS OF RHODES**, a Greek poet, who was born in Alexandria about 237 B.C., fled, to avoid a persecution, to Rhodes, where he completed his epic poem on the Argonauts, but was recalled in his old age to Alexandria, where he became librarian to the museum, and died about 186 B.C.

**APOLLONIUS THE SOPIHIST**, an Alexandrian lexicographer, who lived in the reign of Augustus.

**APOLLONIUS OF TRALLES**, a Greek sculptor of the Rhodian school, who, with Tauriscus, executed the colossal group of Amphion and Zethus, now existing at Naples, and known as the *Toro Farnese*. At the time of Pliny this group was in Rome. Apollonius is said to have lived about 184 B.C.—R. M.

**APOLLONIUS OF TYANA**, a mystic of antiquity, concerning whose life and doctrine the greatest uncertainty prevails, and whose very existence has been called in question. The following facts are all that can be disentangled from the web of mythology and fiction in which the career of this remarkable thinker has been enveloped. He was born about 4 B.C. at Tyana, a city of Cappadocia, his birth being, according to tradition, accompanied by various prodigies. His education was at first committed to Euthydemus, a rhetorician of Tarsus; but, disgusted with the laxity of morals prevalent in that city, he removed to Aegae, and there made himself acquainted with the tenets of the leading philosophical schools of Greece. He devoted himself finally to the Pythagorean doctrines, renounced all the pleasures of sense, and distributed his patrimony among his relatives. He now travelled about the country, instructing the people, reforming public morals, and restoring the Greek religion to its original purity. He is next said to have visited Babylonia, Parthia, and India. We next find him in Asia Minor, exhorting the people to virtue and philosophy. He visited Rome during the reign of Nero, being actuated with the desire of seeing "what sort of a beast a tyrant was." He next travelled in Spain, Africa, Sicily, and in Egypt, where he became acquainted with Vespasian, who placed the greatest confidence in his advice and predictions. He visited Upper Egypt and Ethiopia, and on his return met, by invitation, with the Emperor Titus in Cilicia. On the accession of Domitian he ceased to enjoy the imperial favour, and became involved in a conspiracy against the tyrant, who issued orders for his arrest. Apollonius voluntarily repaired to Rome, confuted his accusers, and is said, after his acquittal, to have returned by magical means to Greece, and afterwards, whilst lecturing at Ephesus, to have announced to his audience the assassination of Domitian, which was at that moment happening at Rome. He died, it is said, about A.D. 97. His earliest biographer was Philostratus, who lived in the reign of Septimius Severus. Apollonius laid very little weight on the scientific doctrines of Pythagoras, turning his attention exclusively to morals and religion. He was probably a wise and virtuous man, whose earnestness, bordering perhaps upon fanaticism, attracted general attention, and made him the subject of innumerable fables.—J. W. S.

**APOLLONIUS, WILHELM**, a Dutch reformed theologian of Zeeland, who lived in the seventeenth century, and is chiefly known from his controversy with Wedel, on the power of government in ecclesiastical affairs.

**APOLLOPHANES**, a Greek comic dramatist, who lived about 400 B.C.

**APOLLOPHANES**, physician to Antiochus Soter, lived about the middle of the third century.

**APOLLOS**, born at Alexandria, and descended from Jewish parents, was a man of great eloquence, and thoroughly versed in the Old Testament scriptures. At first he was only acquainted with the baptism of John; and having come to Ephesus, he began to teach the things of the Lord. His zeal and ability attracted the notice of Aquila and Priscilla, who instructed him

more fully in the doctrines of the gospel. He now became desirous of proceeding to Achaia; and having obtained letters of introduction to the brethren there, he was hailed as a valuable accession to their cause, and laboured among them with distinguished ability and success. He was a powerful preacher; and in consequence of his extensive acquaintance with the Old Testament, he was particularly successful in convincing the Jews that Jesus was the Messiah. At Corinth, he watered the seed which had been sown by Paul; his eloquence was so attractive, that a numerous party became his special adherents, as there were others who named themselves after Paul and Cephas. On account of the unhappy divisions which thus arose, Apollos left Corinth, and returned to Ephesus; and it was probably from him that Paul received his first accounts of what was transpiring in Achaia. The contentions at Corinth, though relating to themselves, had no effect upon the friendship of the two preachers; for, when Apollos was altogether averse to return to that scene of labour, though he was so much admired there, Paul, with an entire freedom from the meanness of jealousy, used every persuasion to induce him to go back. He retired, however, for a time to Crete, carrying with him a recommendation from Paul to Titus; and it is the opinion of Jerome, that, after the divisions at Corinth were healed, he returned to that city, and laboured in preaching the gospel.—W. L.

**APONO, PETER OF**. See **ABONO**.

**APOSTOLI, FRANCESCO**, a Venetian author, was born in 1746, and died in 1816, having spent the latter part of his life in the position of a police agent.

**APOSTOLI, GIOVANNI FRANCESCO**, an Italian poet of Monterrat, who wrote chiefly in the Latin language. He lived in the latter part of the sixteenth century, became professor of "humanity" (classical literature) at Casale, and was admitted a member of the academy *degl Illustrati* of that town.

**APOSTOLI, PIETRO** (or **PEDRO DE LOS APOSTOLOS**), an Italian Carmelite of the sixteenth century.

**APOSTOLI, PIETRO FRANCESCO DEGLI**, an Italian theologian of Novara, who lived about A.D. 1650, and was much celebrated as a preacher.

**APOSTOLIUS, ARISTOBULUS**, an unimportant Greek poet of the fifteenth century.

**APOSTOLIUS, MICHAEL**, a divine and rhetorician, one of the Greeks who fled to Italy on the taking of Constantinople in 1423. He was at first patronized by Cardinal Bessarion, but having offended this dignitary by a controversial essay on the respective merits of Aristotle and Plato, he repaired to Crete, where he died in 1480.

**APOSTOOL, SAMUEL**, a Dutch theologian of the 17th century, a leader of the more acrimonious party among the anabaptists.

**APPEL, JACOB**, a Dutch portrait and landscape painter, who followed the style of Tempesta. Born at Amsterdam in 1680; died 1751.

**APPELMAN, BERNARDT (HECTOR)**, a Dutch landscape painter of the seventeenth century,—a native of the Hague.

**APPENDINI, FRANCESCO MARIA**, an Italian linguist, historian, and critic, of Pririne in Turin, afterwards professor of the new college of Ragusa, lived from 1768 to 1837.

**APPERLEY, CHARLES JAMES (Nimrod)**, a writer on various sporting subjects, was born at Plasgronow in Denbighshire in 1777. He was educated at Rugby, served for some time in the army, and finally settled as a gentleman-farmer, devoting his time to fox-hunting. He wrote for the "Sporting Magazine," but becoming embarrassed in circumstances, he withdrew to France. He is the author of "Nimrod's Hunting Tours," 1835; "The Life of the late John Mytton, Esq.," 1837; "The Chase, the Turf, and the Road," 1837; "Nimrod's Northern Tour," &c., 1838; "Sporting by Nimrod," 1840; "The Horse and the Hound," 1842; "Nimrod Abroad," &c., which have had a wide circulation. Apperley died in 1843.—J. W. S.

**APPERT, BENJAMIN-NICHOLAS MARIE**, born at Paris in 1797, early devoted himself to the cause of education. When only sixteen, he was appointed an assistant sub-professor in the school of design; but a few years afterwards, he conceived the project of instituting a system of mutual education among those classes whose circumstances placed them in a great measure beyond the reach of the ordinary means of instruction. His efforts met with distinguished success. A vast number of military schools were established, and in the course of two or three years, more than one hundred thousand persons in the army had learnt

to read and write. He subsequently extended his scheme to the prisons of France, in which he was aided by the Duc d'Angoulême. In 1846 he visited the various hospitals and prisons in Belgium, Prussia, Germany, and Austria, and afterwards published the results of his observations.—F.

APPERT, FRANÇOIS, brother of the preceding, discovered a mode of preserving animal and vegetable substances for human food, which he describes in his treatise, "L'art de conserver toutes les substances animales et végétales," Paris, 1831.

APPIANI, ANDREA, the greatest Italian painter of modern times, was born at Monza, near Milan, in 1754. Already, at an early age, he distinguished himself as a designer of incomparable grace, and was soon called fully to display his talents in some frescos intrusted to him. The success of his first productions having been immense, he was directly afterwards called upon to paint the cupola of Santa Maria di San Celso at Milan. He carried out this work in a manner little dreamt of since the splendid era of the fifteenth and sixteenth centuries. He was unanimously styled the Modern Raphael, and was beset, from every quarter, with requests to execute works. However, with the exception of an excursion to Rome, he preferred remaining at Milan, where he executed a great number of works for churches, for private and public palaces, and especially for those of the court. On the occasion of a Napoleonic fête, he was called upon to decorate a triumphal arch, which he did in the most astonishingly short time, and with a skill almost without parallel, by a series of battles painted in distemper, in the chiaro-scuro style. The fête finished, the temporary structure of the arch was removed, and the twenty-four subjects painted for it by Appiani were taken care of by the Academy, and eventually published in prints executed by the first engravers of Italy, who vied also for the honour of illustrating his more important productions. Beloved by his fellow-citizens, he was not overlooked by the governative powers. Napoleon appointed him his painter, and conferred on him the cross of the Legion of Honour, and that of the Iron Crown, besides granting him an annual pension. He was made member of the Institute, and almost all the important academies of Italy and France. He died in 1818.—R. M.

\* APPIANI, ANDREA, OF MILAN, grandson of the preceding, a living artist of great merit. He studied under the celebrated Hayez, and distinguished himself in several of the exhibitions both in his native country and abroad.

APPIANI, FRANCESCO, a painter of Ancona, born in 1702, one of whose finest pictures, representing the death of St. Dominic, was executed for Pope Benedict XIII. He continued to paint at the advanced age of ninety, and died in 1792.

APPIANO, the name of a family, the members of which possessed sovereign authority in Pisa and in the island of Elba, from the fourteenth to the seventeenth century. The founder of the dynasty was VANNI D'APPIANO, a man of humble birth, and a native of the village of Appiano, who, having established himself in Pisa, became a member of the Guelph faction, known as the Bergolini, and opposed to the Guibeline faction of the Raspanti. When Charles IV. of Germany returned to Pisa from Rome in 1355, a fire which took place in the palace was represented as the work of Vanni and his party, and the charge being believed by the emperor, Vanni suffered death. JACOPO D'APPIANO, on the death of his father Vanni, succeeded to his authority with the party he had supported, became secretary to Pietro Gambacorti, who in 1369 was proclaimed captain-general of the community of Pisa, and whom in 1392 he contrived to supplant and put to death. Jacopo himself died in 1398, at an advanced age, and was succeeded in the sovereignty of Pisa by his son, GHERARDO D'APPIANO, who sold Pisa to the duke of Milan for 200,000 gold florins, and the sovereignty of the town and district of Piombino, and of the islands of Elba, Pianosa, and Montecristo, and who took possession of his new principality in 1399. Gherardo, the first sovereign of Piombino, died in 1405, and was succeeded by his son JACOPO II., D'APPIANO, who having died in 1440, without issue, was succeeded by Count Rinaldo Orsino, the husband of Jacopo's sister, and who died of the plague in 1450. His successor, EMMANUELLO D'APPIANO, being strongly supported, obtained possession of Piombino and its dependencies from the relatives of Orsino, and dying in 1457, left his territories to JACOPO III., D'APPIANO. This prince, by his arbitrary proceedings, gave great offence to his people. A conspiracy was formed against him, which, however, failed; but was followed by an attack from the troops of the duke of Milan, although

with no better success. In 1465 he made an arrangement with Ferdinand, king of Naples, and became entitled to assume the royal coat-of-arms of Naples, and to add the name of Arragon to that of Appiano. He died in 1474, and was succeeded by his son, JACOPO IV., D'APPIANO D'ARRAGONA, who was a good prince, and restored to his people those privileges of which his father had deprived them. His reign, however, was much disturbed by disputes with the pope, and his territories were invaded by Caesar Borgia, who placed a garrison in Piombino; but Jacopo, after an appeal to the Emperor Maximilian I., was reinstated in his dominions amid the rejoicings of his people in 1503. He died eight years afterwards, and was succeeded by his son, JACOPO V., D'APPIANO D'ARRAGONA, who, in 1520, obtained from the Emperor Charles V. a renewal of the investiture of his principality, and the addition of the imperial eagle in his armorial bearings. From 1539, for some years his territories were threatened by the celebrated Barbarossa, when it was necessary for the duke of Tuscany to aid Jacopo in protecting his state. Jacopo died in 1545, and was succeeded by his son, under the title of JACOPO VI., D'APPIANO D'ARRAGONA, who, during his minority, was under the guardianship of Charles V., and had nearly been deprived of his territories by Cosmo, duke of Tuscany, but took possession of his patrimony in 1559, much to the joy of the people, who were weary of foreign dominion. At his death in 1585, he left the sovereignty to his natural son, ALESSANDRO D'APPIANO, whose tyrannical conduct led to his assassination in 1589. He was succeeded by his son, JACOPO VII., D'APPIANO, the last of the family who held the sovereignty, and who died in 1600, without issue.—F.

APPIANO, NICOLA, an Italian painter of the fifteenth century, and one of the pupils of Lionardo da Vinci.

APPIANO, PAOLO ANTONIO, an eloquent jesuit preacher, born at Ascoli in 1639, and author of a variety of historical works. He died at Rome in 1709.

APPIANUS, the author of a Roman history in Greek, was, as he himself tells us, an Alexandrian. He attained the highest position in his native place, and afterwards went to Rome, where he acted as an advocate in the courts of the emperors. Through the urgent solicitation of the orator Fronto, who was his close friend, Appian obtained the office of procurator from the Emperor Antoninus Pius. It is not known what province it was of which he was made procurator; but we gather from Fronto's letter of application, that Appian was considerably advanced in years when he got the appointment, and that he sought it not from motives of ambition or for the sake of money, but that he might spend his remaining years in dignity. The history of Appian was divided into twenty-four books, of which only eleven have come down to us, along with fragments of some of the others. Appian grouped his facts, not according to chronological order, but according as they referred to particular nations. Thus one book narrated the transactions of the Romans with the Gauls, another with the Spaniards, and another with the Sicilians, while a few books discuss particular wars; one, for instance, being devoted to the Mithridatic, and nine to the civil wars. Appian does not stand high as a historian. His work is a mere compilation, not always very carefully executed; but it has become valuable on account of the loss of some of those books from which he has drawn his materials.—J. D.

APPIUS CLAUDIUS, the name of a patrician family of great celebrity in the annals of ancient Rome, the founder of which was APPIUS CLAUDIUS SABINUS REGILLENIS, who was by birth a Sabine, and came to Rome A.U.C. 250, with a great number of adherents under his command, by whom new territories were acquired on the Anio, and a new tribe formed, to which the title of *Claudia gens* was given, after the name of its originator. Appius Claudius became consul A.U.C. 259 (482 B.C.), and distinguished himself by his zealous support of the patrician order against the plebeians. His son of the same name lived in the second half of the fifth century B.C., and became consul in 471. He inherited the prejudices of his father against the common people, and made himself so unpopular, that in the war he conducted against the Volsci, A.U.C. 283, the Roman army suffered themselves to be defeated, to show their dislike to their general. His brother, CAIUS CLAUDIUS APPIUS, was consul 460 B.C.; and although, like his family, he resisted the encroachments of the plebeians, he was nevertheless a man of great moderation. His colleague was the famous Cincinnatus.

—APPIUS CLAUDIUS CRASSINUS, became consul 451 B.C., in

the year of Rome 303; and notwithstanding his strong aristocratic prejudices, he gave his support to the popular measure of creating the Decemviri, of whom he was appointed one. His tyrannical conduct, however, produced great commotions in Rome; and his attempt upon the chastity of Virginia, the daughter of the centurion L. Virginius, so incensed the army, that he was arrested and thrown into prison, where, according to Livy, he destroyed himself, or, according to Dionysius Halicarnassus, was put to death by order of the tribunes.—**APPIUS CLAUDIUS CÆCUS** was elected censor A.U.C. 442, and rendered his period of office memorable by constructing the aqueducts of Rome and the Appian way, or *Regina Viarum*. He triumphed over the Samnites in two successive campaigns; and in his old age gained the surname of Cæcus, from having become blind. Cicero pronounces a high encomium upon the patriotism with which he exerted himself, although suffering from age and blindness, to prevent the seate from granting to Pyrrhus, king of Epirus, a peace which would have been dishonourable to the Roman name.—(Cic. *Tusc. Disp. de Animi Perturbationibus*; *De Senectute*; *Cato Major*; Livy, iii. 33, &c.)—F.

\* **APPLEGATH, AUGUSTUS**, famous for his inventions in the art of printing, was born in 1790, at Mile-end, near London, and was educated at Dr. Wainostrocht's, Alfred house, Camberwell. He became partner with his brother-in-law, Edward Cowper, late professor of mechanics in King's college. When associated with that gentleman, Mr. Applegath made the machine for stereoplates in 1816, and the type perfecting machine in 1818; and when the great attempt was made, in 1816–20, by the Bank of England to prevent the forgery of their notes, Mr. Applegath invented and took a patent in 1818 for the plan adopted. When Mr. Cowper retired in 1820, the subject of our notice pursued his inquiries alone, and made improvements in the perfecting machine, and contrived several new machines for the *Morning Herald* and *St. James' Chronicle*, which were patented in 1821, 1822, and 1824. In 1826 he made the machine for the *Times*, known by the name of the "four feeder," and also several machines for the imperial card factory in Russia, and many machines both for block and plate in silk printing. In 1846 he devised the rotary vertical machines, which have printed the *Times* ever since at 12,000 and 13,500 impressions per hour, and has just completed a ten feeder for the service of the *Penny Standard*. He is now engaged in several machines for printing in colours, from the largest handbill down to a perfumer's label, one of which produces the picture on coloured cards at one operation. Mr. Applegath considers himself only a tyro in comparison with the wide field yet remaining unoccupied.

**APPLETON, COMMODORE**, an English admiral in the time of the Commonwealth, who was celebrated for having fought a desperate battle with the Dutch fleet under Van Galen, in the harbour of Leghorn, in 1652.

**APPLETON, JESSE**, an American divine, born at New Ipswich, U.S., 1772, who in 1797 became pastor of the church at Hampton in New Hampshire; and in 1807 was appointed president of Bowdoin college in the state of Maine, where he died in 1819. A collected edition of his works was published at Andover in 1837.

**APPONY, ANTON RODOLPHUS, COUNT D'**, an Austrian diplomatist, born in 1782, who was successively ambassador at Florence, Rome, London, and Paris, where he exercised his diplomatic functions for many years.

**APPULEIUS, LUCIUS**, a Roman ambassador, sent with C. Petronius into Asia, 156 B.C., to inquire into the origin of the hostility between Attalus, king of Pergamus, and Prusias, king of Bithynia.

**APPULEIUS, MARCUS**, a Roman who in 44 B.C. was quæstor, probably in some part of Asia Minor, and gave his support to Brutus after the death of Julius Cæsar.

**APPULEIUS, SEXTUS**, a Roman consul in 29 B.C., and subsequently proconsul in Spain, for a victory in which country he had a triumph in 26 B.C.

**APPULEIUS, SEXTUS**, a Roman, who was elevated to the consulship in A.D. 14, the year of the death of Augustus, and who, with Sextus Pompeius, was among the first who took the oath of allegiance to Tiberius.

**APPULEIUS**, a native of Madaura in Africa, flourished in the reign of the Antonines, and is reckoned by some as the most original philosopher of the second century. He received the rudiments of his education in Carthage, removed afterwards to

Athens, where he became enamoured of the Platonic philosophy, and he seems likewise to have studied at Rome. His delight in observing the various characters of men, led him to spend a great deal of time in adventures and travels; and after thus visiting many parts of Italy, Greece, and Asia, he settled in his native country, where, especially at Carthage, he received many public honours, and became illustrious as a philosopher and litterateur. Several of the works of Appuleius have come down to us, some of them on philosophical subjects. The work by which he is best known, and which was most probably his latest, is his "Metamorphoses," often styled the Golden Ass. This strange book is a humorous romance, picturing in very strong and vivid colours the prevalent magical delusions, and the utter licentiousness of the times. Some have absurdly supposed an allegorical meaning to underlie the work; but there can be little doubt that Appuleius simply describes what he had seen or heard of during the course of his adventures. Appuleius shows extraordinary mastery over the Latin language. His descriptions are most precise, while they are given with great spirit and vividness. The book abounds in wit and humour, is always lively and sparkling, never wearies, and has some passages of great force, eloquence, and thoughtfulness.—J. D.

**APRAXIN**, a distinguished Russian family bore this name:—**THEODOR MATVAYEVICH APRAXIN** was born in 1671, and in 1710 was elevated to the dignity of count of the Russian empire, and privy councillor. After the death, in 1682, of the Czar Theodor, he became the favourite of Peter the Great, and co-operated with that celebrated monarch in all his great projects, and especially in those relating to the Russian navy. In 1692 he was appointed governor of Archangel; in 1700 he became governor of Azov; and in 1717 he held the dignity of president of the college of the admiralty, with the titles of general, admiral, and senator. During his life, which terminated in 1728, he distinguished himself in the naval and military service of his country, retaining at once the favour of the czar, and great popularity among his contemporaries. His brother, **PETER MATVAYEVICH APRAXIN**, served in the Russian army under Peter the Great, and died in 1720. **COUNT STEPAN THEODOROVICH APRAXIN** was born in 1702, entered the army at the age of seventeen, and advanced rapidly through the various stages of military rank, to that of field-marshal in 1756. In the campaign of 1737 he served against the Turks, and was present at the storming of Oczkawk; at the conclusion of the war he had the command of the Russian army in Astrakhan; in 1742 he was ambassador to the Persian court; and in 1757 he had the chief command of the Russian army intended to act against Frederick the Great. Died in 1758.—F.

**APREECE, AP RHYS or RHESE, JOHN**, a Welsh antiquarian, born early in the 16th century. In 1574 he graduated in civil law at Oxford. His works are all connected with the antiquities of his native country; perhaps the most interesting of them is his "Defensio Regis Arthuri," in which he attempts to prove the historical verity of the life and exploits of King Arthur.—J. B.

**APRES DE MANNEVILLETTE, JEAN BAPTISTE NICOLAS DENIS D'**, was an eminent French hydrographer, born at Havre in 1707, who devoted himself during several voyages to the improvement of the charts necessary to navigation, in which, by the accuracy of his scientific surveys and observations, he did vast service to mercantile and naval enterprise. His great work, consisting of numerous charts and memoirs, and styled "Le Neptune Oriental," appeared in 1745. He is said to have been the first navigator who carried into effect Halley's suggestion of determining the longitude by the observation of lunar distances; and to have been the first French seaman who explored the route pursued by Boscawen in 1748, through the Archipelago north-east of Madagascar. He died in 1780.—F.

**APRIES**, a king of Egypt, son of Psammuthis, who is apparently the Pharaoh-Hophra of the scriptures, in whose reign Jerusalem was taken by Nebuchadnezzar, 586 B.C.

**APRONIUS, LUCIUS**, a Roman eques, who in A.D. 8 was consul suffectus. In A.D. 14 he served under Drusus in Pannonia, on occasion of his mission to the revolted legions; subsequently he was a general of the army of Germanicus, and obtained a triumph for his military services. In A.D. 20 he succeeded Furius Camillus as proconsul of Africa; and in A.D. 28 was proprætor of Lower Germany, where he is supposed to have fallen in a battle with Frisians. His son, **LUCIUS APRONIUS CÆSIANUS**, was elected consul with Caligula, A.D. 39.—F.

**APROSIO, LUIGI** or **ANGELICO**, a learned monk of the order of St. Augustine, born at Ventimiglia, in Liguria, in 1607. After inhabiting in succession many different monasteries, he established himself at his native place, where he became vicar-general of the Inquisition, and founded a library celebrated as the *Bibliotheca Aprosiana*. He wrote a great variety of works, but under an assumed name; and died in 1681.—F.

**APSHOVEN** or **ABTSHOVEN**, **THEODOSIUS**, a Flemish painter of landscape, interiors, and still life, of the seventeenth century. He was pupil of David Teniers.

**APSINES**, a rhetorician, a native of Gadara in Phœnicia, who flourished during the reign of Maximin. He enjoyed a high reputation at Athens as a teacher of eloquence. There are extant two treatises on rhetoric, which are ascribed to him, and are published in the "*Rhetores Græci, Venet.*," 1508.

**APSLEY**, **SIR ALLEN**, born about the year 1615, acted a distinguished part on the Royalist side during the civil wars, but is better known for his connection with his brother-in-law, the famous Colonel Hutchison, who protected him during the ascendancy of the Commonwealth. He died in 1683, leaving a poem entitled "Order and Disorder, or the world made and undone, being meditations upon the creation and the fall, as it is recorded in the beginning of Genesis," London, 1679.—J. B.

**APSYRTUS** or **ABSYRTUS**, a celebrated veterinary surgeon, born at Prusa or Nicomedia, in Bithynia. He wrote several works, of which, however, only a few extracts remain, preserved in the Greek collection of writers on veterinary surgery, made by order of the Emperor Constantine Porphyrogenitus, A.D. 945-59. It is interesting to know, that among the diseases mentioned by this ancient writer, is that of glanders, which Lafosse and others have supposed to be a comparatively modern disease, but which Apsyrtus clearly describes.—F.

**APTHORP**, **EUSTACE**, a native of New England, but educated at Cambridge. He spent some time as a missionary at Massachusetts, but returned to England, and became vicar of Croydon in 1765, rector of St. Mary-le-Bow in 1778, and, in 1793, prebend of Finsbury in St. Paul's cathedral. He died in 1816. He published several sermons.—J. B., O.

**APULEIUS, L. CÆCILIUS MINUTIANUS**, a Latin grammarian, author of a work, "*De Orthographia*," first published by A. Mai, Rome, 1823.

**APULEIUS**, a Latin naturalist, known as Apuleius Platonicus, and also as Lucius Apuleius Barbarus, is the author of a work on plants, entitled "*Herbarium*" or "*De Medicaminibus Herbarum*." It consists of 128 chapters, each descriptive of a single plant. The first edition of this work, which is supposed to belong to the fourth century, was printed at Rome about the year 1480.—J. S., G.

**AQUÆUS, STEPHANUS**, the Latin name of **ETIENNE DE L'AIGUE**, a French writer, born either at Beauvais or Bruges. His principal performance, a worthless commentary on Pliny, was published at Paris in 1530.

**AQUAPONTANUS (BRIDGEWATER), JOHANNES**, an English jesuit, born at York at the end of the sixteenth century, was rector of a college at Lincoln; then betook himself to Rheims, and wrote some tracts against the Anglican church.

**AQUARIUS, MATTHIAS**, a writer on the Aristotelian and scholastic philosophy, belonged to the order of St. Dominic, was professor of theology at Turin, Venice, Milan, Naples, and Rome, and died at Naples in 1591.

**AQUAVIVA, ANDREA MATTEO.** See **ACQUAVIVA**.

**AQUAVIVA, BELIZARIUS.** See **ACQUAVIVA**.

**AQUAVIVA, CLAUDIUS**, a famous general of the order of the jesuits, promoted to that rank in 1581; took part in the strife about the heresy of Molina, and died in 1615.

**AQUAVIVA, OCTAVIUS**, made a cardinal in 1591, and afterwards archbishop of Naples, was devoted to the study of Aquinas, and made an abridgment of his *Summa*. Died in 1612.

**AQUILA (Ἀκύλας)**, a celebrated Jewish proselyte, author of a Greek version of the Old Testament, was, according to Epiphanius, a native of Sinope, and a relative of the Emperor Hadrian, who employed him to superintend the erection of the city *Elia Capitolina*, on the site of Jerusalem. Here he was brought under the influence of Christianity and converted from paganism; but continuing to practise astrology, he was cut off from the communion of the Christian church, and went over to the Jews as a proselyte. To recommend himself to the Hellenist churches, he translated the Old Testament into Greek, avoiding,

as he pretended, the errors of the Septuagint, and rendering with the most literal fidelity the Hebrew text. His version, of which only a few specimens are extant, was adopted in all the synagogues.—J. S. G.

**AQUILA**, a Roman rhetorician of the fourth century.

**AQUILA, CASPAR**, a distinguished disciple and coadjutor of Luther. He was born at Augsburg in 1488, of the family of Adler (eagle), and after studying in that city in the Gymnasium of Ulm, and in Italy, he was, first a preacher in Bern, and then, in 1515, military chaplain to the Imperial General Francis von Sickingen. When Luther commenced his great movement, Aquila threw himself into it with much ardour, and preached so warmly in support of it in the neighbourhood of Augsburg, that he was apprehended by order of Stadion, bishop of that city, and cast into prison, from which he was only released by the intercession of Queen Isabella of Denmark, the emperor's sister. In 1520 he visited Luther at Wittenberg, and soon after re-entered the service of Francis von Sickingen, in the capacity of tutor to his sons. When in the castle of Ebernburg with his charge, he narrowly escaped death at the hands of the garrison. For refusing to comply with the foolish request of the soldiers to baptize one of their cannon, they seized the conscientious tutor, tumbling him into the mouth of a mortar, and made repeated attempts to fire him off like a bullet from the top of the walls. Providentially the powder was damp, and he was at length rescued from his strange and perilous position by one of the officers. Having returned to Wittenberg in 1524, he was one of Luther's assistants in his great work of Bible translation. In 1527 he was recommended to the pastorate of Saalfeld, where he was advanced to be superintendent in the following year, and signalized himself by his zeal and prudence in the diffusion of the resuscitated gospel. When the troubles of the *Interim* broke out, he wrote against it so warmly that the Emperor Charles V. set a price of 4000 or 5000 gulden upon his head. He found refuge at Rudolstadt, in the hospitable castle of the duchess of Schwarzburg. In 1550, when the danger was over, he was made dean of Schmalkald; and in 1552 returned to his former office at Saalfeld, where he died 12th November, 1560. He was zealous in opposing what he considered to be the dangerous corruptions of Lutheran doctrine, which crept in under the influence of Melancthon after the death of Luther. He was one of forty-six theologians who supplicated the elector, John Frederick II., and the other evangelical princes and states, in 1560, to call a free and lawful synod for the purpose of restraining and purging out these alleged corruptions. The best known of his writings, which were all in German, were his "*Christliche Erklärung des Kleiner Katechismus*," Augsburg, 1538: and "*Fragstücke der ganzen Christlichen Lehre*," 1547.—P. L.

**AQUILA, JOHN DELL'**, an Italian physician, died in 1510.

**AQUILA, JULIUS**, a Roman jurist of the fifth century.

**AQUILA, SERAFINO DELL'**, an Italian poet, so called from his having been born at Aquila, a city in the province of Abruzzo, enjoyed a great reputation as a sonneteer, and also as an improvisatore, in the second half of the fifteenth century. He died at Rome on the 10th August, 1500.

**AQUILANUS, SEBASTIANUS** or **SEBASTIANO DELL'AQUILA**, an Italian physician, born at Aquila, was a Galenist, and professed medicine at Ferrara in 1495. In his treatise, "*De Morbo Gallico*," he recommends the use of mercury. Died in 1513.

**AQUILIUS, GALLUS**, a Roman jurist, tribune of the people under the consulship of Pompey, and afterwards quaestor along with Cicero, lived in the last half of the century before Christ. He is the author of a famous statute, "*De dolo malo*."

**AQUILIUS, HENRICUS**, a Belgian writer, author of a valuable work on the history of the duchy of Gelders, lived about the middle of the sixteenth century.

**AQUILIUS, MANIUS**, a Roman consul, concluded the war with Aristonicus, son of Eumenes, king of Pergamus, in 129 B.C. Three years later, he was accused of malversation by P. Lentulus, but escaped condemnation by bribing his judges.

**AQUILIUS, MANIUS**, consul with Marius in A.D. 101, repressed a revolt of the slaves of Sicily, and was honoured on his return with an ovation; but, two years later, he was charged with malversation, and it required all the eloquence of Marcus Antonius to procure his acquittal. Afterwards proconsul in Asia Minor, he was taken prisoner by Mithridates V., and put to death by having molten gold poured down his throat.—J. S., G.

**AQUILIUS, SABINUS**, a Roman jurist of the third century,

called the CATO of his age, was consul in 214 and again in 216. He was banished by Heliogabalus.

AQUIN, LOUIS CLAUDE D', was born at Paris in 1694. His playing on the harpsichord, when he was but six years old, was so remarkable, as to attract the attention and patronage of the king, Louis XIV. When he was still a child, while only in his twelfth year, he played the organ in the Sainte Chapelle in Paris. In 1727 he was appointed organist of the church of St. Paul in that city. He was almost equally precocious as a composer and as an executant, and his productions, though but extremely few of them were printed, are very voluminous; they consist of motets, cantatas, portions of operas, sinfonias for the organ, and an extensive variety of trios, fugues, and other instrumental pieces, the majority of which are preserved in the libraries of his native city. Manpurg includes his name in the list of thirty-three musicians of different countries, who were, in 1755, eminent performers on the organ and harpsichord, and able writers for those instruments. Handel visited Paris expressly for the purpose of hearing him play, and said of him, "He is the only one whom the fashionable mania has not corrupted, and who preserves the true majesty of the organ." He died at the age of seventy-eight, in the year 1772.—G. A. M.

AQUIN, PHILLIPE D', or AQUINAS, PHILLIPUS D', a Jewish rabbi, converted to Christianity at Aquino in Naples, taught Hebrew at Paris, and was appointed professor at the college of France by Louis XIII. His works are numerous. Died at Paris in 1650.

AQUIN DE CHATEAU-LION, PIERRE LOUIS, a French poet and critic, son of Louis Claude d'Aquin, died in 1797.

AQUINAS or D'AQUINS, THOMAS, called "The Angelic Doctor," was the most eminent scholastic of his age. He was descended from the noble and powerful family of Aquins. The year of his birth is not ascertained, but it was either in 1224, 1227, or the two intervening years. His father, Randulf or Rodelf, had several children, of whom he was the youngest. At the age of five he was sent to the monastery of Monte Cassino, whence he repaired in his eleventh year to the new university of Naples, founded by Frederick II. in 1224. Here he continued, engaged in acts of religious devotion and in philosophical studies, till he was seventeen, when he became a Dominican. But his family were averse to his entering the monastic profession, and endeavoured to rescue him from its grasp. Hence the Dominicans removed him from Italy, and were conducting him to France, when his two brothers, who were serving in the armies of Tuscany, brought him back as a prisoner to the paternal castle of Aquins. Here he spent two years in confinement, exposed to the solicitations of his mother and sisters, and to the stronger importunities of his military brothers, who also introduced a beautiful courtesan into his chamber to tempt him. It is related, that when on the point of yielding to the solicitations of the female, he suddenly resolved to expel her from his presence, and, for this purpose, snatched a burning brand. Falling down before the mark of the cross which the brand had impressed on the floor, he repeated his vows of chastity and prayers for grace. After this trial, his mother yielded to his strong determination, and favoured his escape from durance. But the command of Frederick II. caused his release. He was placed under the care of Albert the Great of Cologne, the most renowned of the Dominicans at that time, and soon made great progress under his tuition. It is said that his taciturnity, together with his large fame, procured him among his fellow-students the appellation of the "Dumb Ox of Sicily." When his preceptor was appointed to occupy the chair of theology for three years in the college of St. James at Paris, Aquinas accompanied him, returning with him to Cologne, where he remained till 1253 and was ordained priest. Having returned to Paris in that year, he began lectures on "The Book of Sentences" of Peter Lombard, and gradually attracted the notice of the great and learned. In 1261 he was summoned to Rome by Urban IV., and lectured there for several years. Nor were his lectures confined to Rome; for he visited the principal cities of Italy, such as Bologna, Pisa, Viterbo, &c., where his fame attracted multitudes of hearers. In 1265, Clement IV. offered him the archbishopric of Naples, which he declined. He also refused the abbacy of Monte Cassino, though better suited to his tastes and studies. In 1269 he again lectured in Paris, under the royal patronage, returning to Naples in 1272. Here he was summoned by Gregory X. to attend the second council of Lyons in 1274, which was convened for the

purpose of reconciling the Greek and Latin churches. Though feeble and worn with long sickness, he set out on the journey; but finding himself at last too ill to proceed, he requested to be carried to the Cistercian abbey of Fossa Nuova in the diocese of Terracina, where he lingered nearly a month, having felt from the first that it was to be the place of his rest. The time was spent in prayer and holy conversation. It is said that he dictated his "Exposition of Canticles" at the request of the monks in this abbey, and expired, with every demonstration of profound devotion, on the 7th March, 1274, at the age of forty-eight. Several miracles are related to have occurred at the time of his death: and credulous authors describe prodigies which he performed in his lifetime. He was canonized by John XXII.

Great as was the reputation of St. Thomas Aquinas in his lifetime among his contemporaries, it increased after his death. Even his body was eagerly claimed by various cities; by none with more importunity than Paris. The monks of Fossa Nuova, however, refused to part with his mortal remains. Urban V. afterwards presented them to the city of Toulouse, where they were finally deposited with great solemnity in the church of the Dominicans.

Thomas Aquinas was gifted with great mental powers, which he consecrated to the study of theology and the service of the church. He is the most renowned of all the schoolmen. His intellect was acute, clear, logical, passionless. He looked at every subject through the understanding, and reduced it with minute precision and accuracy to the syllogistic form. He had great perspicacity of thought and perspicuity of expression, and carried the penetration of his intellect into all theological subjects with the boldest and calmest confidence. His definitions and distinctions are minute as well as numerous, often inappreciable to the common intellect. Aquinas may be said to have carried the Aristotelian logic, as applied to theology, to its utmost limit. In him the scholastic system of theology reached its highest point. In philosophy he was more a Realist than a Conceptualist or Nominalist, though he was not absolutely so; for, like his great master Albert, he was somewhat of an Eclectic.

His theological works are very numerous; but by far his greatest is the "Sum of Theology." This is divided into three parts—the natural, moral, and sacramental. The first treats of God—his existence, attributes, providence, &c. The second refers to man as a moral and intellectual agent, the principles of human action, and the virtues in which they are embodied. The third is on the incarnation, and the sacraments of the church. Angels and demons are treated under the first part. "In his works," says Milman, "or rather in his one great work, is the final result of all which has been decided by pope or council, taught by the fathers, accepted by tradition, argued by the schools, inculcated in the confessional. The 'Sum of Theology' is the authentic, authoritative, acknowledged code of Latin Christianity." There are various editions of this "Summa Theologiæ." An edition of all his works was published by order of Pope Pius V. at Rome, 1570–71, folio, 17 volumes in 18mo. This is often considered the best. Other editions were published at Venice, 1593, 18 vols. folio; at Antwerp, 1612, 19 vols. folio; at Paris, 1636–41, 23 vols. folio. The second Venice edition appeared in 28 vols. 4to. in 1775. A full life was published by Morelles in the Antwerp edition of 1612, carefully compiled from preceding writers.—S. D.

AQUINO, CARLO D', an Italian writer, professor of rhetoric in the college of jesuits at Rome, was a son of Bartolommeo, prince of Caramanico. Among his numerous works, which embrace a wide variety of subjects, is a Latin translation of Dante. Died in 1737.

ARABIUS, SCHOLASTICUS, a Greek epigrammatic poet, supposed to have lived about the year 550.

ARABSCHAH, a Mahometan writer, born at Damascus, author of two works—"The wonderful effects of the Divine Decrees in the affairs of Tamerlane," and a theological treatise "On the Unity of God." He died at his native city in 1460.

ARACHIE'LUS, CACCIATURO, an Armenian theologian, educated at Rome, died at Venice in 1740.

ARADON, JEROME, a French general of the second half of the sixteenth century, employed against Henry IV. in the war of the League.

ARAGO, DOMINIC-FRANÇOIS, born at Estagel, near Perpignan, early in the year 1786; died in Paris on the 2d October, 1852. The life of this remarkable *savant* partook very little of

the evenness and quietude of the course through which our modern votaries of science usually pass from the cradle to the tomb. Disturbed, on the contrary, in its earliest epoch, by shipwrecks and captivity, closing amidst political storms still more disastrous and disheartening, one cannot but marvel at the buoyancy, the resolution, and self-dependence, which, amid all distractions, could yet command at will the calmness requisite for scientific thought; and—in years when no passion was quenched, nor one human sympathy enfeebled—establish for the name of the wayfarer an honourable and permanent place in the annals of physical discovery. The autobiography of this singular person extends, unfortunately, only to the year 1830; but although imperfect, and written too much on the plan of chiefly noticing *epigrammatic* incidents—incidents somewhat belonging to the melodrama of life—it is, nevertheless, beyond question one of the most interesting of all existing productions of this interesting class. The youth of Arago, as indicated in that autobiography, suffices to explain the nature of the career and conduct of the man. We find him, in the first place, contending successfully against all influences of home, rejecting the course of life which his father had designed for him, and adhering, without the hesitation of a moment, to his own determination to become a soldier. At that time—more emphatically than even at present—France abode by her declaration, that no man should obtain responsibility in her armies who had not passed with credit through the scientific and military courses of the Ecole Polytechnique. Admission to this famous school, however, was not open. The knowledge and ability of the candidate must stand the test of a severe and scrutinizing examination. With characteristic impetuosity, young Arago threw himself on the study of mathematics; and it may astonish aspirants after honours far higher than those primarily sought for by the French student, that, in preparation for this initial examination, he might have been found occupied with such books as Euler's "Analysis Infinitorum;" Lagrange's "Theorie des Fonctions" and "Mecanique Analytique;" and the "Mecanique Celeste" of Laplace. At the age of seventeen, Arago received the approbation of his examiner, the illustrious Monge; and soon after entering the school, he underwent another examination by Legendre. The incidents of both examinations are given very graphically in the autobiography:—the meeting with Legendre being described as follows:—*Dramatis personæ*: first, an obscure youth of seventeen; second, Legendre, one of the greatest of that galaxy of geometers who illumined scientific Europe during part of the last century and the first thirty years of the present one,—Legendre, who, although somewhat abrupt in manners, was no less famous for his integrity than for his acquirements: "I entered his apartment at the moment when M. T., who had fainted under examination, was being carried out by the servants. I thought that this incident would have moved and softened M. Legendre. Nothing of the sort! 'Your name?' said he. 'Arago.' 'Then you are not a Frenchman?' 'If I had not been a Frenchman I should not have been in your presence, for I have never heard of the reception of any one into the school, until he had given proof of his nationality.' 'I insist, however, that there is no Frenchman of the name of Arago.' 'And, on my part, I insist that I am a Frenchman, and a good Frenchman, however odd my name may sound to you.' 'Be it so; let the discussion cease. Go now to the board!' I had scarcely prepared the chalk," continues Arago, "when Legendre returned to his first impression, saying to me, 'You were born in one of the departments recently annexed to France?' 'No, Monsieur; I was born in the department of the Pyrenees-Orientales, at the foot of the Pyrenees.' 'Ha! why did you not tell me so at once? I see it all now. You are of Spanish extraction? Is it not so?' 'Possibly, but in my humble family no archives are preserved that might enable me to ascertain the civil condition of my ancestors: every one there is the child of his own labour. I again say that I am a Frenchman, and that ought to be enough!' Assuredly the brusqueness of the examiner had its match in the self-confidence—to call it by the mildest name—of the unabashed student! The singular narrative proceeds: "The vivacity of my last reply did not strike Legendre favourably, as I had immediate occasion to know. Having prepared a problem requiring the use of double integrals, he stopped me as I proceeded, saying, 'The method you are employing was not given you by your professor,—where have you found it?' 'In one of your own memoirs.' 'Why have you made choice of it now? With the

hope of bribing my judgment?' 'Certainly not; I adopted it because I think it preferable to the other.' 'If you do not succeed in showing me the reasons of your preference, I declare that you shall have a bad mark, at least as to character!' I then," continues Arago, "entered into explanations establishing the superiority of the method of double integrals, in every point of view, over the method taught by Lacroix. From that moment Legendre appeared satisfied and soothed." The recital concludes thus: "Legendre asked me to determine the centre of gravity of a spherical section. 'That is an easy matter,' I said. 'Well, if it seems so easy I shall make it more complex. Suppose the density of the section not uniform, but varying according to a given function of the distance from the centre.' Happily I got well through the solution, and from that moment I had obtained by conquest the goodwill of my examiner. He addressed me as I retired in words which, coming from him, seemed to my fellow-students a very favourable augury of my rank and promotion:—'I see you have employed your time well; go on in the same manner during your second year, and we shall part very good friends!'" The scene was essentially and eminently characteristic. It may induce us, not unreasonably, to question the amiability of Arago; one thing, however, is clear—the raw Youth, who thus ventured to contend with one of the strongest men in France, could not issue in a Man likely to quail before any difficulty, or be found wanting in applicable resources in times of trial. It is needless to add, that Arago passed through the Polytechnic School with the greatest distinction. Within eighteen months from the date of his admission, he had gained the friendship of the most eminent men in Paris, and reached the high office of secretary of the Observatory.—The subsequent life of this extraordinary person divides itself into three epochs:—I. Soon after his occupancy of the honourable position just named, he became closely associated with Biot, now the veteran of the French Institute, in attempts to determine the refracting powers of the different gases; out of which a much more important association sprung, one that issued in an enterprise of high value to science, but to one of its fellow-labourers fraught with adventure and danger, as well as productive of glory. The measurement of an arc of the meridian between the parallels of Dunkirk and Barcelona had, about the close of last century, been determined on by France—never behind in scientific ardour and enterprise, any more than in arms. The execution of this great work was intrusted to Delambre and Mechain, than whom none more capable or more accurate could have been selected. Mechain had the charge of the southern portion of the survey; but, notwithstanding the carefulness and ability of this excellent and conscientious observer, his results were not satisfactory—a discrepancy of upwards of 3° turning up on the completion of his calculations. Mechain afterwards discovered the source of the error; but it broke his heart. He left, however, a strong recommendation, that while certain measurements should be revised, government should not stop at Barcelona, but direct the prolongation of the work as far south as the Balearic Islands. This completion of the enterprise was undertaken by Biot and Arago, in conjunction with two Spanish commissioners, Chaix and Rodriguez. In 1806, the Spaniards encamped on Mount Campecey, in Iviça; while Biot and Arago occupied the summit of one of the loftiest of the Catalonian Pyrenees. In April, 1807, Biot returned to Paris with the results then attained, leaving the task of uniting Majorca with Iviça and Formentera to Rodriguez and Arago. Now began the extraordinary hardships of the observers. We speak not of material hardships—such as arise from exposure, from annoyances belonging to those wild regions, from banditti, &c.—but of hardships springing mainly out of the unsettled state of Europe: alliances among kingdoms then shifting as the sand; friendships passing into enmity with the suddenness and apparent caprice of the oscillation of a wind wave. While Arago was in Majorca, the French armies entered Spain: the ignorant populace imagined that the Geodetic signals of the Frenchmen right over their port, were telegraphic signals to the hostile generals; and Arago had to take refuge in the Castle of Belver. Narrowly avoiding death by poison, planned for him by a furious and rascally priest, he escaped to Algiers. Embarking for France in an Algerine vessel, he had just reached the gulf of Lyons when a Spanish corsair captured the vessel, and carried the crew to Rosas. Brought back to Spain, he was confined at first in a windmill, and afterwards transferred to the hulks on Palamos, where his sufferings, even from hunger, were very great. Reclaimed successfully by

the friendly Dey, he again set sail, and had once more approached within sight of the French coast, when a storm hurried the vessel southward, and landed him once more in Africa. Misfortune on the heels of misfortune! The old Dey had been beheaded; his brutal and sanguinary successor would have thrown Arago into the slave prison, had he not quickly and most opportunely been hung himself. After a detention of more than six months our philosopher again embarked, and with all his instruments, charts, and manuscripts, complete and uninjured, he attained the harbour of Marseilles on the 2nd of July, 1809. How perfectly must these three years of fatigue, privation, and every danger, have transformed the petulant confidence of the student into the endurance of the man! Arago returned to Paris amid the acclamations of the whole scientific societies of France; and—a thing previously unheard of—he took his seat in the Academy of Sciences at the early age of twenty-three.—II. The second great epoch of Arago's life is comparatively tranquil, extending from his election as academician, to the year 1848. During greater part of that time he presided over the management of the Observatory; and subsequently to the death of Fourier in 1830, he was Perpetual Secretary of the French Academy. The tranquillity here spoken of was indeed quite other than repose: nay, if we were asked for analogous cases—cases in which more astonishing, more unresting mental activity has been manifested, than that which characterized this long period of Arago's tranquil life, we must revert to such men as a Leibnitz, or an Alexander Humboldt, and a very few others who have taken rank in scientific history. No extensive reader can now be uncognizant of those exquisite, those generous, just, and, in the main, discriminating *Eloges*, or sketches of the characters and labours of great men, with which Arago continued to adorn the volumes of the Academy from 1830, almost until the year of his death. A translation of them is one of the many favours recently bestowed on the English literature, by the pen of Mrs. Sabine. "Zealous defender," says Humboldt, "of the interests of Reason, Arago often makes us feel how much nobility and gravity elevation of character can impress on every work of the intellect. When exposing the principles of science, on which he threw an admirable and persuasive clearness, the style of the orator becomes yet more expressive, inasmuch as it is distinguished by additional simplicity and precision. He then reaches what Buffon has designated 'the truth of style.'" Akin to these short but comprehensive biographies, are the multitude of treatises inserted in the "Annuaire,"—treatises on almost every department of physical science—on meteorology, magnetism, astronomy, and various special subjects,—the essays on the labours of Sir William Herschel, on the Steam-Engine, on the claims of James Watt to the discovery of the composition of water, and many others that have a permanent place in the literature of our time. Less perfect perhaps, but still extremely interesting, Arago's "Popular Lectures on Astronomy"—now published for the first time:—less perfect probably, because no lecture can be what it was, bereft of the impressiveness and the charm belonging to the presence and individuality of the speaker. In quite another sphere, Arago's activity was also incessant—we mean within the Observatory at Paris. It is no secret that the astronomical department of this institution had not kept pace, in its instrumental furnishings, with other great observatories of Europe; and, probably, the only work it could do well, was not much suited to the tastes and ambition of Arago. That its available instruments were not idle, however, is amply testified by its published records. But in this observatory, under Arago's supervision, was inaugurated a vast and regulated scheme of magnetic investigations. The labour bestowed on these was enormous, and the results of corresponding importance. First of all, the connection between the Auroras and magnetic storms was established there; and of much more consequence, the laws of the diurnal magnetic variations were distinctly laid down. But we have no space to enumerate the various successes of our philosopher in Geodesy, Climatology, improvements in instruments, &c., &c. It is essential, however, to explain some of his more remarkable positive and enduring contributions to science.—Humboldt says truly, that the years 1811, 1820, and 1824, were the proudest years of his career. It is delightful to know, and the revelation must have delighted both discoverers, that after the discord of European war had ceased, and the intercourse and interests of nations were again cemented by peace, our own Brewster had, without hint or possibility of concert, been working in the same path, and that

he had discovered many of the most important of the truths that will ever illustrate the Frenchman's name. But let us specify: in the first place, Arago's name is indissolubly associated with what is technically termed *rotatory magnetism*, meaning the discovery of a singular sympathy between a rotatory disc of an unmagnetic metal rotated underneath a magnet, and the position of the magnet itself. The discovery was sufficiently singular to attract the attention of our best men of science:—it long occupied Herschel and Babbage: it is due, however, to our unequalled Faraday to state, that to him belongs the undivided honour of giving the true explanation of the phenomena, and of co-ordinating them with other critical facts of magnetism. Passing with the merest notice Arago's experimental deductions from Oersted's cardinal discovery of the relation between the magnetic and electric forces, such as his process of magnetization by an electric helix, we feel it needful to speak somewhat fully of his relations to the discovery of the phenomena and the confirmation of the wave theory of light. In reference to the facts and empirical laws of Polarization, we have already said, that when the long-suspended intercourse of Nations was renewed, Arago found himself in happy agreement with Sir David Brewster. Justice, however—not what the French call "patriotism"—requires us to state, that in this special line, his fertility had been largely surpassed by that of the Scottish philosopher. The great distinction of the Frenchman in optics (except, perhaps, his unquestionable right to the brilliant discovery of *chromatic polarization*), consists in the success which attended his efforts to elucidate those questions by which alone the relative merits of the conflicting theories of Emission and Undulation could be decided. The theories alluded to, occupy an extensive common territory; *i.e.*, they explain equally satisfactorily a large class of optical phenomena. But there are points in which they are discrepant. For instance, according to the Newtonian theory, a ray of light ought, on passing from a rare medium into a denser one, to move more swiftly; the contrary, according to the hypothesis of Undulations. So early as 1818, Arago hit upon a method of testing this subject experimentally. His method rested on the theory of the phenomena of *Interference*. If one of the two rays which interfere—producing, through such interference, the system of alternately dark and bright bands,—is made to pass through a thin plate of glass, *the shift in the position of these bands* ought at once to indicate whether that ray has been accelerated or retarded. It is difficult now to understand why evidence of this nature was ever refused, clear as its ground appeared, and decisive as the result was on the side of the doctrine of propagation by waves. But the French philosopher did not stop, at least he did not desire to stop, with an argument resting in the least upon theory. Stirred anew, in 1835, by Wheatstone's ingenious method of measuring directly the velocity of electricity, he leaped to the idea of employing similar means of measuring directly the velocity of light. Aided by Breguet, he had almost completed a suitable apparatus, when failing health compelled him to relinquish the pursuit. But he lived to enjoy the satisfaction of knowing that the labours of MM. Foucault and Fizeau, resting on his suggestions, issued in the absolute demonstration of the truth which he had previously deduced from the phenomena of Interference. Few experimental results of recent times have had a larger influence in settling a question of theory.—It is impossible to describe here the important results deduced by experiment by Arago concerning the laws of the interference of polarized light; neither can we do more than refer to his many practical applications of such researches to the discovery of evanescent, and until then, apparently unapproachable facts connected with celestial physics.—In fine, this may justly be said:—The place of Arago in science is not the place due to discoverers of large or fundamental laws. He cannot, for instance, rank with a Fresnel. He cannot take rank with a Faraday: and there are a few much younger inquirers amongst us whose permanent place will be found higher than his. But if we estimate him by his activity, by his ingenuity and enthusiasm, by the life which his energy stirred everywhere around him, and by the importance of the theoretical consequences of his remarkable disclosures of the empirical laws of various classes of phenomena, it must be acknowledged by every impartial inquirer, that neither in previous nor in recent times, has he had many equals, certainly only few superiors.—III. It remains that we briefly sketch what may be termed the public or political life of Arago. It may be accepted,

on the average, as an axiom, that every Frenchman of ability and uprightness is by nature a republican. Exceptions arise—for instance, in the case of Guizot, whose temper of mind, however, brings him rather within the type of the new Genevan Puritans, than of Frenchmen as they are. But this republicanism is much more the expression of a thirst after *equality*, than a thirst after *liberty*. The Celtic race does not appear to object in the main to rigorous central despotism, provided, under that despotism, all citizens are treated alike—although it cannot be questioned that these forms and possessors of central power, have ever been obeyed most loyally, when they knew to mingle with the claim to allegiance, the gratification they offered to a sense of national glory, or some other of those sentiments that bear so large a sway over the judgments of our gallant, but restless and impulsive neighbours. Legendre, we have seen, doubted the citizenship of Arago; assuredly the academician turned out as strong a Frenchman in all things as Legendre, or any one else, could in conscience desire. As pupil of the Polytechnic School, Arago was the first on the list of the protesters against the assumption by the first Consul, of the Imperial Purple. Napoleon, although the reverse of generous to those disposed to thwart his will, was swayed on this occasion by one of the contradictions that made up his extraordinary nature; he respected the courage of young Arago, probably because he had recognized his genius. A very expressive anecdote, narrated in the "Autobiography," relating to the period now spoken of, merits repetition. A large number of the pupils of the famous school, refused to concur in the vapid adulations of other constituted bodies. General Lacuee, governor of the Polytechnic, stated the case as it stood to the emperor. "Monsieur Lacuee," exclaimed Napoleon, in the midst of a group of courtiers, who applauded by word and gesture—"Monsieur Lacuee, you must not permit these wild republicans to continue in the Ecole Polytechnique—you must expel them! Bring me, to-morrow, a list of their names, and their rank as to promotion." On receiving the list next day, he did not pass farther than the name of the pupil at the top, whose rank was "FIRST in the Artillery." "I cannot expel those who are first in merit: would that these republicans had been at the bottom (à la queue). M. Lacuee, let the affair remain as it is!" Napoleon, we have said, was a mass of contradictions. Despot or not, he had a distinctive idolatry—the worship of the *head*. There are countries where the fetichism is different,—where the sacred order is the group around the *tail*. Arago did not enter much into active political life until during the latter years of the reign of Louis Philippe. It were not easy to measure the calamities to France arising from sad defects in the character of this monarch. Correct as to all minor matters, unimpeachable as to private decorum, and with a certain inclination towards liberalism, he never touched one sentiment in the hearts of Frenchmen; and his liberalism stopped quite short at the very moment when larger views might have saved his throne. Private virtues are not always public benefits. Louis was thrifty (all praise to him therefore!), but in France there is little hope for a huxter-king. He was not fortunate in his counsellors. Possessed of more generosity and of a larger nature, he might have obtained good counsellors. As it was, his choice lay between two men—the Genevan Guizot, more, with all his great ability, of a Puritanic schoolmaster than a Statesman, and another—a Frenchman in the worst sense, as well as in a few good senses—of brilliant talents, exciting as an orator, rapid and flashy as a writer, quick to seize the impulse of occasion, but in principle very loose, and nothing as to character. We refer of course to Thiers, author of "History of the Republic, Consulate, and Empire." An agitation that ultimately overthrew Louis Philippe—a simple, constitutional, and safe agitation for an extension of the suffrage—began in France. Arago joined in the movement. He, as well as others, was tired of a huxter-sovereignty, and a huxter-constituency: he longed for the infusion into that constituency of a portion of a class not subject to the influences in presence of which Louis Philippe's favourite shopkeepers were always ready to bow. He spoke with great effect, first, we believe, in 1840; and his decision and ability drew the public attention strongly towards him, as one whose resolution and firmness gave ground for good hope. It is not needful to recapitulate the events of 1848, nor to re-survey the sad disasters that have followed them. Arago was Minister of Marine and War under the revolutionary regime; and he necessarily accepted the responsibility of the fearful and most

fatal blunders of that government. It may not become *us*, who have been led by gradual steps—by the long process and teaching of experiment—to the precious practical securities we enjoy, to criticise over-severely the mistakes of men, who, untaught by sure experience, came to confound the desirable with the practicable. It is well that a writer should urge his countrymen onward, and prepare in so far as in him lies for the advent of republicanism. For the statesman on the contrary the question is, has republicanism become possible? We cannot establish social, and therefore political equality, by edicts! The United States of America stand securely on their republicanism, just because of this; inequality of wealth even, does not destroy the personal independence of the workman; no man there, however rich, but has as much need of a workman as a workman has of him. Give us an opposite state of things: give us a social condition, in which wealth can *command* the workman, or in which a powerful priesthood has fixed the allegiance of the mass,—then mental subservience *in all things* comes through force of habit; political independence is impracticable, and a republic is the sheerest of chimeras.—Let us pass, however, from a subject which is very painful. In his personal relations Arago was most estimable—impetuous certainly, but always kind. The fact that a discoverer was a Frenchman, certainly did, not unfrequently, influence his first impressions as to the merit of the discovery, but he generally repaired the wrong. The few affecting sentences pronounced by M. Barral over the grave of his teacher, will not improperly conclude this notice:—"Illustrious Master, Much-loved Master, Noble Citizen,—It is a duty, and, at the same time, a very sad honour, for me to express a sentiment which now fills every heart. Thy constant solicitude for the progress of human knowledge has always induced thee to take the young by the hand, and to inspire them with thy passion for science. On the eve of thy death the last word which thou spoked to us was 'Work, work diligently!' This sublime lesson will remain engraven on the heart of every young philosopher. They will feel compelled to follow the path which thy genius has opened. In falling asleep into immortality, thou hast desired to teach them, that work is the only means of rendering service to their country and to humanity. Thanks on their behalf—Adieu in the name of youth, in the name of its admiration of thee—of its love for thy memory. I tell it thee, and thou mayest count upon it. Adieu!"—J. P. N.

\* ARAGO, EMMANUEL, son of the preceding, was born in 1812, adopted the profession of advocate, and began his career at the age of twenty-four. He early displayed a political enthusiasm of the most democratic character, and, previously to the revolution of 1848, frequently signalized himself in political processes as much by his sympathy for the accused as by his vigorous rhetoric. On the 24th February, 1848, along with Sarrans the younger, Chaix, and Dumeril, he entered the chamber of deputies and protested against the regency named by Louis Philippe. Lamartine, Ledru Rollin, and other representatives, supported the protest, and the provisional government was forthwith constituted. Four days after, Arago repaired to Lyons with the powers of commissary-general. His next employment was a mission to the court of Berlin, previously to which he had been elected representative of a department. Since the election of Louis Napoleon, he has offered an uncompromising opposition to the measures of government.—J. S., G.

\* ARAGO, ETIENNE, a French dramatist, born at Perpignan in 1803, while director of the Theatre du Vaudeville took an active part in the revolution of 1830, and in the insurrections of June, 1832, and April, 1834; but losing his license in 1840 in consequence of his hostility to the government, he supported himself by writing for various journals till 1848, when he became postmaster-general under the republic. He was exiled in 1849 for his share in the insurrection of 13th June, headed by Ledru Rollin. His dramatic pieces, chiefly vaudevilles, number a hundred and twenty, of which "Les Aristocrates," his last and only unassisted effort, is the most popular.—J. S., G.

\* ARAGO, JACQUES ETIENNE VICTOR, a French traveller and litterateur, brother of the preceding, born at Estagel in 1790, has published, besides several theatrical pieces, 1. "Promenade autour du monde pendant les années, 1817-1820;" 2. "Voyage autour du monde," 1838.—J. S., G.

ARAGO, JEAN, a French general, distinguished under Santa Anna in the war of Mexican independence, was born at Estagel in 1788; died in 1836.—J. S., G.

ARAGON, ALPHONSUS D', a Spanish jesuit and philologist, travelled as a missionary in Paraguay two years from the beginning of 1616. Having resumed his labours in 1629, he died about the middle of that year from overexertion.

ARAGON, FERDINAND D', a Spanish historian, archbishop of Saragossa, was a grandson of Ferdinand, king of Castile and Aragon. Died in 1575.

ARAGON, FERDINAND-XIMENES, a Portuguese theologian of the first half of the seventeenth century.

ARAGON, ISABELLA OF. See ISABELLA OF ARAGON.

ARAGON, MARTINUS D', duke of Hermola, a Spanish antiquarian of the sixteenth century.

ARAGON, MARY OF. See MARY OF ARAGON.

ARAGONA GIOVANNA D' or JOAN OF ARAGON, princess of Tagliacozzo, and wife of Ascanius Colonna, was born at Naples, and descended from the kings of Aragon. She was distinguished for her extraordinary beauty, to which all the wits of the time paid tribute. The poems written in her praise were collected by Jerom Ruscelli, and published at Venice under the extraordinary title of "A Temple to the Divine Lady Donna Joanna of Aragon, erected by the greatest wits, and in all the principal languages in the world." But she is celebrated as well for the qualities of courage and prudence, which were displayed in the active share she took in the disputes between the Colonnas and Pope Paul IV. Died in 1577.—J. B.

ARAGONA, TULLIA D', a celebrated Italian poetess, born about 1510, was the illegitimate daughter of a Ferrarese lady and of Tagliavia, cardinal-archbishop of Palermo. Her beauty, as well as her talents, surrounded her with admirers, among whom were reckoned the most celebrated men of her time. She resided some years at Venice, then at Ferrara, and afterwards at Rome, where she married. The last years of her life were passed under the protection of Leonora Toledo, duchess of Florence, to whom she dedicated a volume of her poetry, "Rime della Signora Tullia di Aragona e di diversi a lei," 1547. We mention two of her romantic poems, "Dell' Infinita d'Amor," and "Il Meshino, or The Unfortunate." Her death occurred about the year 1565.—J. S., G.

ARAGONA, SIMON TAGLIAVIA D', a Sicilian cardinal, author of some works on ecclesiastical subjects. Died at Rome in 1604.

ARAGONESE, LUCA SEBASTIANO, an Italian artist, a native of Brescia, who flourished about 1567. He was celebrated rather as a fine designer than as a painter.—(Lanzi's *History of Painting in Italy*.)

ARAJA, FRANCESCO, was born at Naples in the year 1700. The success of his operas of "Berenice," produced at Florence, and "Amor per regnante," at Rome, led to his engagement as chapel-master at St. Petersburg to the Empress Catherine. Here he produced his "Abiatare," "Semiramide," "Scipione," "Arsace," and "Seleuco," and wrote the first opera that ever was composed in the Russian language, "Cephalo-et Procrès," for which the empress, in expression of her national spirit, presented him with a magnificent sable skin. He returned to Italy in 1759, and is said to have died at Bologna.—G. A. M.

ARAKCEJEFF, COUNT ALEXIS, chiefly famous from his having established the system of military colonies in Russia. Born in 1769 of a noble but poor family in Novogorod, he obtained a cadetship in the corps of artillery and engineers, and in very early youth manifested the qualities for which he was distinguished in later life of extraordinary exactitude and fidelity in the execution of the orders of his superiors, and firmness, amounting to cruelty, in the maintenance of discipline among his inferiors. He frequently declared that all the actions of men might be classified under two heads—*actions commanded, and actions prohibited*. He was raised by the Emperor Paul from the command of the miniature army allowed him when grand duke by the Empress Catharine, to the post of general and commander of St. Petersburg, where his despotic brutality occasioned the suicide of Colonel Lehn. Held in universal detestation, he was unwillingly dismissed by Paul, recalled, and again dismissed, until shortly before the emperor's violent death. Paul, instinctively aware that he was surrounded by enemies, was desirous of the protection and support of the iron will and tried fidelity of Arakcejeff, and dispatched a courier to recall him. Count Pahlen, the chief of the conspirators, delayed the courier, and hastened the execution of the plot, so that Arakcejeff arrived too late to save the emperor. Received into favour by Alexander,

he was nominated minister of war in 1802, and in 1812 we find him at the emperor's head-quarters and assisting in his councils of war during that critical period. He persuaded Alexander to adopt the system of military colonies, an innovation specially odious to the Russian peasantry, as interfering with the cherished privileges of their rural communes, which may emphatically be termed the *national* institution of Russia. Constant bloody revolts took place, and great numbers of officers, landed proprietors, and government employés were killed by the exasperated peasants. The firmness and cruelty of Arakcejeff, however, prevailed; the rural populations were decimated, and their resistance literally drowned in blood, but the military colonies were established. The institution was so utterly antagonistic to the nature of the Russian people that it never prospered. On the death of Alexander, Arakcejeff was neglected, and his system, though maintained by Nicholas I., remained undeveloped, and was abandoned shortly after the accession of Alexander II. Arakcejeff, though capable of ordering and witnessing with composure the most terrible punishments and executions, was personally a notorious coward, and never took part in any engagement. He attributed this defect to an excess of nervous irritability. He died forgotten at Wologda in 1834. He may be regarded as the type of zealous servility.—M. Q.

ARALDI, ALESSANDRO, an Italian painter of the school of Parma. He was a pupil of Bellini. There remain an Annunciation by Araldi, and altarpieces in several churches. Lanzi pronounces him an indisputably good artist in the mixed style, called "antico moderno." Died about 1528.—(Lanzi's *History of Painting in Italy*.)

ARAM, EUGENE, a man of considerable erudition, was born at Ramsgil, a village in Netherdale, Yorkshire, in 1704. Though almost entirely self-educated, he acquired a very extensive acquaintance with languages, and knew something of heraldry and botany as well. He passed as usher from one school to another, and was employed in this capacity at Lynn in Norfolk, when he was arrested on a charge of murder. The circumstances which led to his arrest were these:—A skeleton was found near a limekiln at Thistlehill, in the neighbourhood of Knaresborough, and was supposed to be that of a man named Clark, whose sudden disappearance some years before had attracted attention. A man named Houseman, who proved to have been an associate of Eugene Aram, trembled violently when questioned; and, taking up one of the bones, said, "This is no more Clark's bone than it is mine; Clark never was buried here." Further examination brought out the statement that Aram had murdered Clark, and the body was found buried in St. Robert's Cave, near Knaresborough. On the 3rd of August, 1759, Aram, Houseman, and a man of the name of Terry, an innkeeper at Knaresborough, were arraigned for the murder before Justice Noel. No evidence was offered against Houseman. On his testimony Aram was convicted; Terry was acquitted.

When Aram left Knaresborough some fourteen years before, it was under suspicious circumstances. Clark, a shoemaker at Knaresborough, had lately married, and was in some degree of credit in his neighbourhood. In concert with Aram and Houseman he planned and executed a fraud, by which several persons were swindled. On pretence of giving a wedding party, he borrowed several pieces of plate; at the same time he contrived to get into his possession cloth, leather, and other things, from shops in the town, and soon after disappeared. Aram's wife overheard her husband and Houseman speak of murdering her, as knowing more of their secrets than they wished. From that moment she believed that Clark was murdered by them. Within a few days, some of the property was found in Aram's garden; some was also traced to Houseman. No plate was found, and it was supposed that Clark had fled with it.

These incidents, occurring some fourteen years before, had gradually faded from memory; but when Aram was accused, they were at once revived, and suggested a motive for the act. No witnesses were called for him at the trial. He read an elaborate but unavailing defence, relying exclusively on the improbability of the accusation being true. After his conviction, he is said to have confessed the murder to two clergymen appointed by the judge to visit him; but the fact of such confession is not sufficiently authenticated. On the morning of the day of his execution, he made an attempt on his own life; and a paper was found in his cell, in which he justified his intended suicide. "To die is natural and necessary. Perfectly sensible of this, I

fear no more to die than I did to be born. Though I am now stained by malevolence, and suffer by prejudice, I hope to rise fair and unblemished. My life was not polluted, my morals were irreproachable, and my opinions orthodox."

Aram's defence is no doubt a very striking document. A much more remarkable paper, however, is a letter from him to a clergyman, written in York castle during his imprisonment. The perfect self-possession with which it is written, the way in which questions of language and ethnology are discussed by a man whose days were already numbered, is a thing of which we know no other example.—(*Biog. Britannica*, second edition. *Annual Reg.*, 1759. *London Magazine*, 1759.)—J. A., D.

ARAMA, MEIR-BEN-ISAAC, a Spanish rabbi of the seventeenth century.

ARAMONT, GABRIEL DE LUETZ, Baron d', ambassador from Henry II. of France to the Turkish court, died 1553.

ARANAS, HYACINTHO D', a Spanish carmelite of the early part of the last century, who was commissary-general of his order.

ARANDA, FRANCISCO and his brother JUAN, Spanish sculptors of the beginning of the sixteenth century. Their names are recorded amongst those of artists that worked for the celebrated tabernacle of the cathedral of Toledo. Their style retains much of the stiffness of the Gothic school.

ARANDA, D', a monk, a native of Sessa, who published some madrigals and other music at Venice, about the year 1571.

ARANDA, EMMANUEL D', a Spanish traveller of the sixteenth century. He was captured by Moorish pirates, and has left a very interesting account of the miseries endured by the slaves in Algiers. On his escape, he was appointed to an important office in Bruges, and enjoyed the favour of the Spanish king. Several editions of his works have appeared.

ARANDA, JUAN, an author of Jaen in Spain, who lived in the sixteenth century.

ARANDA DE DUERO, ANTONIO, a Spanish traveller, a monk of the Franciscan order, who lived in the sixteenth century, and became prefect of his order in Castile.

ARANDA, PEDRO PABLO ABARACA Y BOLEA, Count d', a Spanish statesman of the last century. After serving for a short time in the army, he was appointed ambassador to the Polish court, and subsequently president of the council of Castile. In this position he proved the most able and upright statesman his country had ever possessed; reforms innumerable were effected, and had not priestly influence and court intrigue ultimately effected his downfall, Spain would have again become powerful, prosperous, and happy. He retired into private life, and died in 1799.—J. W. S.

ARANDO, MATHEO D', a Spanish musician of whom little is known.

ARANJO, PEDRO D', a Spanish sculptor, living in the early part of the eighteenth century. He was attached to the court of Madrid, for which he executed a great number of busts, remarkable for resemblance and spirit.

ARANTIUS, ARANZIO, or ARANZI, JULIUS CÆSAR, a physician of Bologna, who flourished in the 16th century. He studied anatomy under the great Vesalius, and occupied the chair of anatomy and medicine in Bologna, from 1556 to the time of his death. He is the first who discovered the true structure of the fœtus and the placenta. Certain fibrous masses on the valves of the aorta are also called from him "Corpora Arantii."

ARATORE, an Italian poet of Liguria, who lived about the year 510 A.D.

ARATUS, a physician, was a native of Soli, in Cilicia. He devoted himself very much to the study of natural phenomena. Two of his scientific poems have come down to us—one, called "Phenomena," on the stars, and the other discussing Meteorology, or the prognostics of the weather as they can be gathered from the stars. In the former poem occurs the part of a line quoted by Paul in his address to the Athenians on Mars' Hill, "For we are his offspring," Acts xvii. 28. He flourished in the third century before Christ.—J. D.

ARATUS OF SICYON, the head of the Achæan confederacy, lived from 271 to 213 B.C. He delivered his native town from its tyrant Nicocles, obtained the assistance of Ptolemy and of Antigonus Gonatas, by whose aid the power of Sparta was entirely broken, and had almost secured the union and independence of Greece. He was poisoned by Philip II.

ARATUS, a son of the former, assisted his father in the management of Achæan affairs. Also poisoned by Philip II.

ARAUJO, ANTONIO, a Portuguese jesuit, who was born in 1566, in the Azores, and passed most of his life as a missionary among the Tupinambi Indians of Brazil. He died 1632.

ARAUJO or ARAUXO, FRANCISCO, a Spanish musician, a native of Corea. He published a treatise on the organ, and other musical works. He died in 1663.

ARAUJO, JOZÉ BOREAS D', a Portuguese nobleman, philosopher, and amateur artist, born at Lisbon 1677; died 1743.

ARAUJO DI AZEVEDA, ANTONIO DE, COUNT DA BARCA, a Portuguese statesman, was born in 1784. He studied at Oporto and Coimbra, where he acquired an extensive knowledge of mathematics, natural history, and modern languages. He entered into the diplomatic career, and represented Portugal at the courts of the Hague, Berlin, and Petersburg. He followed the Portuguese court in its flight to Brazil. He devoted his time to literature and science, and endeavoured to improve the agriculture and manufactures of Brazil. An attempt to introduce the cultivation of tea engaged much of his attention. In 1816 he founded a school of the fine arts at Rio Janeiro, and the year after, he died of a lingering fever.—J. W. S.

ARAUXO, SALGADO, a Portuguese ecclesiastic, papal protonotary, and author of several works, chiefly historical, flourished about the beginning of the seventeenth century.

ARBACES, a governor of Media, who, in concert with the governor of Babylonia, overthrew Sardanapalus, and founded the Median empire.

ARBASIA, CESARE, an Italian painter, a native of Saluzzo. He was an able artist, an imitator of Leonardo da Vinci, and excelled chiefly in fresco. Arbasia flourished about the close of the sixteenth century, and exercised his art for the most part in Spain, where he painted the ceiling of the cathedral of Cordova. He was one of the founders of the academy of St. Luke at Rome.—(*Lanzi's History of Painting in Italy*).—A. M.

ARBAUD DE PORCHÈRES, FRANÇOIS D', a French poet of some distinction, born in Provence about the end of the sixteenth century. An ode addressed to Louis XIII., and another addressed to Cardinal Richelieu, are his two most successful productions. After a long residence at court, he retired from it in disgust, and died in Burgundy in 1640.—E. M.

ARBAUD DE PORCHÈRES JEAN D', brother of the preceding, was author of a poetic version of the Psalms.

ARBEAU, THOINET, a canon of the cathedral of Lengres, whose real name appears to have been Jean Tabourot, was the author of a curious and now very rare book on dancing, which claims to be the first work of its kind. Its title is "Orchesographie, Methode, et Theorie en forme de discours et Tablature pour apprendre à Dancer," &c., 4to Lengres, 1588 and 1596. No particulars of the author seem to be known.—E. F. R.

ARBETIO, a Roman general, who served successively under Constantine the great, Constans, Julian, and Valens.

ARBIE, ANTOINE DE L', a French botanist, who lived in the eighteenth century. He is principally known for his "Flora of Auvergne," which was published in 1795, in one volume. A second edition was published in two volumes in 1800.—(*Bischoff, Lehrbuch der Botanik*).—E. L.

ARBLAY, MADAME D', better known as Miss Frances Burney, was born at Lynn-Regis, in the county of Norfolk, on the 13th of June, 1752, and was the second daughter of Dr. Burney, author of the "History of Music," then organist in that town. When she reached her eighth year her father removed to London, and lived on terms of familiarity with the distinguished artistic and literary society of that day. In the memoirs of her father, she gives an interesting account of her childhood. At the age of eight, her education was so defective that she did not know her letters; her improvement must have been rapid, however, for two years afterwards she was busily engaged in composition, writing fairy tales, elegies, odes, farces, and tragedies, which were carefully concealed from her father, but read and admired by her younger sister Susannah. Within a few years her taste had advanced so much, that the whole of these early essays were consigned by her own hand to the flames. Although destroyed, it appears they were not forgotten; one of the sketches, the "History of Caroline Evelyn," still haunted her imagination, and she finally determined to write the adventures of "Evelina," the daughter of her former heroine. Two volumes were composed, written out in a feigned hand, and her brother was commissioned to procure a publisher; at that time without success. The manuscript was offered to Dodsley, who declined looking at

an anonymous work; and Lownes, to whom it was afterwards offered, declined to look at an unfinished one. Afterwards, she dictated a third volume to her brother, and on its completion, the last-named publisher gave her twenty pounds for the manuscript. "Evelina" appeared in 1778, and after a little while it began to be the talk of the town. It was criticised favourably by the monthly reviewers; it passed into the hands of Burke, Reynolds, Johnson, and Mrs. Thrale, all of whom accorded to it the highest praise. Dr. Johnson, in particular, declared to Mrs. Thrale that there were passages in it worthy of the pen of Richardson. Miss Burney, in her diary, states that for some time after its publication, no one—with the exception of her sister and her two brothers—suspected her of the authorship, and that she heard it read and criticised at a friend's house, and enjoyed, in silence, the ignorance of her relatives, and their guesses and speculations as to who could have written it. It was not till six months afterwards that the secret was made known to her father. She passed at one step from obscurity to celebrity; wherever she went—to Tunbridge, to Bath, to Brighton—she was the observed of all observers. In 1782 "Cecilia," her second book, appeared, which, although wanting in freshness and comic breadth and spirit, when compared with her former production, exhibits deeper knowledge of life and character, and is written with greater purity and grace of style. The proof sheets were read by Dr. Johnson, and several passages bear the impress of his massive hand. Its success was ample and immediate, the reading public received it with acclamation, her publisher paid her two thousand pounds, and, by universal consent, it was placed among the classics of her country.

After the publication of "Cecilia," Miss Burney resided some time with Mrs. Delaney, a widow lady, who lived at Windsor. The king and queen were frequent visitors at her house, and on one occasion the authoress of "Evelina" was introduced to George III. She has described the interview at considerable length in her diary; the king asked many questions relative to the writing and publication of "Evelina," to which the flattered and somewhat excited authoress rendered the most coherent replies her agitation would permit. If the condescension of the king fascinated Miss Burney, Miss Burney's simplicity and natural manners seem to have pleased the king. In 1786 she was appointed one of the dressers or keepers of the robes to Queen Charlotte, with a yearly salary of £200, apartments in the palace, a footman, and a carriage for the use of herself and her colleague, Mrs. Schwelkenberg, a hideous German virago and disciplinarian. During her attendance on royalty she was expected to lay aside her pen, which had already brought her fame, and, in other circumstances, would have brought her fortune. Her duties were so severe that her health began to fail; her friends were alarmed, and urgent representations were made to her father to have his daughter removed from court. Dr. Burney, prouder of his daughter as keeper of her majesty's robes, than as the first novelist of the day, was, for a while, unwilling to comply; till, finally, her state of health became a matter of such grave import, that he was forced to yield, and she returned home after an absence of five years. In 1793 she married a French refugee officer, the Count D'Arblay, and shortly after resumed her pen. In 1795 her tragedy of "Edwy and Elgiva" was brought out at Drury Lane, and was "laughed to Lethe" by the whole house. So complete and final was its failure that it was never printed. The next year she produced "Camilla, a Picture of Youth;" it was published by subscription, and realized above three thousand pounds. Its success, however, was not remarkable. In 1802 she accompanied her husband to France, and in 1812 returned to England, and purchased a handsome villa, called Camilla cottage. In 1814 she produced her last and dullest fiction, entitled "The Wanderer, or Female Difficulties;" it found few admirers, obtained little praise, and has long since sunk into oblivion. For the "Wanderer" she is said to have received the large sum of £1500. Four years afterwards, her husband died at Bath. The only other literary work which Madame D'Arblay lived to give to the world, was the "Memoirs of her Father," which appeared in three octavo volumes in 1832. The portentous diction of the book took the public by surprise. The style of her novels is graceful and flowing; in the "Memoirs," every sentence is lumbering and involved; there is no ease, no gaiety, no naturalness; and the whole reads like an elaborate caricature of Johnson and Gibbon. There are few worse-written books in the language. In 1837 the Rev. Alexander Charles Louis D'Arblay, her only son and the sole issue

of her marriage, died. For two years before this melancholy event, Madame D'Arblay was in feeble health, and affected with a disease in the eyes, which rendered reading or writing almost an impossibility. Her death took place at Bath, on the 6th of January, 1840, in her eighty-eighth year. Her diary, edited by her niece, was completed in seven volumes, in 1846; though it contains a good deal of trivial matter, and is full of small gossip, it is eminently readable. All the writer's amusing egotism and self-admiration are reflected in its pages. In spite of length, it is an invaluable supplement to the history of that time; and, after "Evelina" and "Cecilia," will be the most enduring monument of its author's genius.—A. S.

ARBOGAST, a native of Ireland, who became bishop of Strasburg A.D. 674. After leaving his native land he settled in Alsace, where he built an oratory, living in privacy and "serving God diligently in fasting and prayer." From time to time he went forth amongst the people, "instructing them in the knowledge and fear of God, and in the true invocation of that omnipotent power by his son Christ, reprehending their idolatrous worship, and confuting their fanatical opinions." He attracted the notice of Dagobert II., who, upon the death of St. Arnaud, promoted Arbogast to the see of Strasburg, which he governed for five years. He died in 679, and was buried near the common place of execution, called St. Michael's Mount, at his own request, "in imitation of Christ, who suffered without the walls of Jerusalem, in the place of the wicked." Many years afterwards, a monastery dedicated to his name was built over his tomb. Some homilies and a commentary on St. Paul's epistles are attributed to him.—(Bruschius.)—J. F. W.

ARBOGAST, LOUIS-FREDERIC-ANTOINE, a distinguished French mathematician, successively member of the legislative assembly and of the national convention, and professor of mathematics at Strasburg:—born in Alsace in 1759; died at Strasburg in 1803. Arbogast's great scientific work is the "Calcul des Derivations;" a book of which it is not too much to say, that it is one of the most fertile and suggestive of any of the great analytical treatises belonging to this remarkably fertile period. There is no doubt that Arbogast anticipated many of the conclusions and methods of the "Calcul des Fonctions" of Lagrange. The largeness of his views, and the extreme generalizing of his expressions, give his work indeed an aspect of cumbrousness which does not really belong to it; nor will any one wonder at this, when informed that Taylor's theorem and many other of our highest formulæ, are only particular cases of the theorem of Arbogast. To this mathematician belongs the honour of having first used and widely illustrated that separation of the symbols of operation from symbols of quantity, which marks a new and signal era in modern Analysis.—J. P. N.

ARBOGASTES, a Gaul who served in the Roman armies, in the latter part of the fourth century. Left in Italy by Theodosius as minister to Valentinian II., he virtually exercised sovereign power, while Valentinian retained merely the name of emperor. He at length secretly murdered Valentinian, and raised Eugenius to the purple in his stead. In 394, Theodosius marching against Eugenius and Arbogastes, entirely defeated them. Eugenius was taken and put to death. Arbogastes escaped, but soon after committed suicide.—E. M.

ARBOGASTES, SAINT, bishop of Strasburg from 669, till his death in 687.

ARBOREUS, JEAN, a doctor of the Sorbonne, and author of ingenious commentaries on difficult passages of Scripture, was born at Laon, about the beginning of the 16th century.

ARBORIO DI GATTINARA, MERCURINO, a celebrated legist and diplomatist, of Italian extraction, was born at Verceil in 1465. In 1507 he was appointed first president of the parliament of Burgundy. Deprived of this position in 1518, through the envy of the nobility, he retired to the court of the Emperor Maximilian, after whose death he repaired to Spain, where he was made chancellor to Charles. In this capacity he drew up the treaty of Cambray, and the concordat between Charles and Clement VII. In 1529 he was made a cardinal. The treaty he negotiated the same year at Bologna, for the defence of Italy, was thought a masterpiece of diplomacy. Died at Inchspruck in 1530.—E. M.

ARBORIO DI GATTINARA, ANGELO-ANTONIO, a kinsman of the preceding, archbishop of Turin, and an eloquent pulpit orator, was born at Pavia in 1658, and died in 1743.

ARBORIO DI GATTINARA, GIOVANNI-MERCURINO, a

brother of the preceding, bishop of Alexandria in Piedmont, and author of sermons and funeral orations, was born at Lucca in 1685, and died at Alexandria in 1743.

ARBORIUS, CÆCILIUS ARGICIUS, maternal grandfather of the poet Ausonius. Having lost his ample property in his native district Augustodunum (now Autun), in consequence of the civil wars, he settled, in 264, near the spot where Bayonne was afterwards built. Here he again attained opulence, and lived to the age of ninety, generally esteemed and beloved for his virtues, as well as admired for his pre-eminence in mathematics and astronomy.—E. M.

ARBORIUS, ÆMILIUS MAGNUS, a learned and eloquent lawyer and professor of jurisprudence and rhetoric, son of the preceding, was born about 270, near Bayonne. About 331 Constantine the Great invited him to Constantinople, to instruct one of that emperor's sons in eloquence. Arborius, like his father, was a distinguished mathematician and astronomer. He died at Constantinople in 335.—E. M.

ARBRISSEL or ARBRISSELLES, ROBERT D', founder of the order of Fontevrault, was born at Arbrissel, a village in the diocese of Rennes, 1047. Repairing to Paris in 1074 to study theology, he subsequently took orders, and in 1085 became vicar-general to the bishop of Rennes. In this position he evinced indefatigable ardour in promoting church discipline, and in combating clerical abuses of every kind. His zeal as a reformer procured him numerous enemies, and, on the death of the bishop, he removed to Angers, where he began to give lectures in theology. Soon afterwards he resolved to live as a hermit in the forest of Craon. His austerity and eloquence speedily attracted crowds of followers, and, in a few years, the forests of Brittany and Normandy contained thousands of his devoted disciples. The first monastic establishment he founded was in the forest of Angers, on ground bestowed on him by the lord of Craon. He was appointed its prior in 1096 at the council of Tours, where he preached before Pope Urban II., who, struck with his eloquence and zeal, conferred on him the rank of papal preacher. Quitting his retirement near Angers, he began to travel barefooted through towns and villages, preaching repentance. He soon formed a numerous body of ardent missionaries, whose preaching had immense success among all classes of the community. Numerous monasteries were founded, the principal of which was that of Fontevrault, near Poitiers. The extravagant austerities of Robert d'Arbrissel gave occasion to various attacks on him, which formed the subject of keen controversies among the theologians of his age. He died at Orsan, a monastery of his order, at the age of seventy, in 1117.—E. M.

ARBUCKLE, JAMES, a Scottish poet of considerable genius, author of "Snuff," and other poems, mostly humorous and satirical, flourished about the beginning of the 18th century.

ARBUTHNOT, ALEXANDER, one of the earliest Scottish printers. In 1597 he printed and published the first Scottish Bible, and in 1582, Buchanan's "Rerum Scoticarum Historia."

ARBUTHNOT, ALEXANDER, a celebrated Scottish lawyer, divine, and poet, and an ardent adherent of the Reformation, was born in Kincardineshire in 1538. His principal works are: "History of Scotland;" "Orationes de origine et dignitate juris;" "The Praises of Women;" "The Miseries of a Poor Scholar." Died in 1583.

ARBUTHNOT, JOHN, an eminent physician, and one of the distinguished writers who adorned what has been called the Augustan age of English literature. He was born at Arbuthnot, in Kincardineshire. The precise year of his birth is not known, but is believed to have been 1675. He was son of a clergyman of the episcopal church of Scotland, and was educated at the university of Aberdeen, where he took the degree of M.D. Young Arbuthnot sought his fortunes in London, where he at first supported himself by teaching mathematics. His first publication, in 1692, was a translation, with very considerable additions, of Huygens' "Treatise on the Laws of Chance," a method of calculating the chances in games of hazard. In 1697 he published an "Examination of Dr. Woodward's Account of the Deluge," and within a year or two, "An Essay on the Usefulness of Mathematical Learning." He also published a tract, in which he brought forward the regular proportion of male and female births as a proof of providential design. These tracts brought their author into immediate notice, and aided him in obtaining practice as a physician. In 1704 he was elected fellow of the Royal Society, and in the year fol-

lowing was appointed physician extraordinary to Queen Anne, by her especial command. Prince George had been taken suddenly ill, and through some accidental circumstance was attended by Arbuthnot, who was ever after employed as his physician. This led to court honours and rewards. In 1709 he became physician in ordinary to the queen, and in the same year was elected fellow of the College of Physicians. His acquaintance with Swift, which afterwards ripened into the truest friendship, commenced in or about the year 1701, and arose very much from the habits of life of the period. The persons who made any claims to literature, passed half their days and nights in the clubs. At one of these clubs Arbuthnot met Swift,—the "mad parson," as he was at first designated,—and their first acquaintance arose from a practical joke. Some years, however, seem to have passed without their having again met, as, in the journal to Stella, Swift speaks of him as a stranger. In the year 1705, Arbuthnot published "Tables of the Grecian, Roman, and Jewish Measures, Weights, and Coins," a book translated into German in 1756, and still referred to occasionally. In the year 1706, while the act of union between the kingdoms was in debate before the parliament of Scotland, Arbuthnot published a tract of very considerable power, under the name of "A Sermon Preached at the Market Cross of Edinburgh on the Subject of the Union." In the year 1708, Swift came to London on some commission from the clergy of Ireland. The immediate object of his journey was soon successfully accomplished, but he was found too useful to the ministry to be allowed to return. He remained, assisting Oxford and Bolingbroke by every weapon which a literary man could wield. Among the most effective of a hundred satires issued by him and his associates, was that known by the title of "Law is a Bottomless Pit, or the History of John Bull." This was, for a while, attributed to Swift; but in his journal to Stella, it is mentioned as Arbuthnot's; and Spence tells us that Pope spoke of it, saying Arbuthnot was the sole author. The effect was at the time prodigious, and even yet, when the colours have faded with time, cannot be read without amusement. The movements of nations and of armies are described under the familiar metaphors of a suit at law, conducted with all the dishonest chicanery of an attorney who has no other object than to prolong litigation. It is usually published with Swift's works, with which are also published several other of Arbuthnot's political squibs. Among them, the "St. Albans Ghost," in which Sarah, duchess of Marlborough, is held up to ridicule. Whiston and Garth are abused in this pamphlet, which almost fixes it as Arbuthnot's. Burnett—but he was quite as likely to be attacked by Swift—figures as Dry-bones.

The dissensions between Oxford and Bolingbroke were in vain sought to be appeased by Arbuthnot and Swift. Bolingbroke's successful intrigues broke up the ministry. Then came the queen's death, which was attended with loss of place and power to Arbuthnot, who for a while regarded it as not improbable that he might be allowed to remain as physician to the new sovereign. The hope does not appear to have been a very reasonable one, considering all the circumstances of the case, and particularly the extent to which he might, however unjustly, be regarded as a party to the objects of those who meditated bringing in the Pretender on the queen's death. He was not unlikely to have been a Jacobite, and was certain of being called so. Arbuthnot, since his appointment, had chiefly resided in the palace at St. James's; he now moved to a small house in Dover Street, "where," as he says in a letter to Pope, "he would be glad to see Dr. Parnell, Mr. Pope, and his old friends, to whom he can still afford a half-pint of claret. As our friendship," he adds, "was not begun upon the relation of a courtier, so I hope it will not end with it." He now went on a visit to Paris, where, however, he did not long remain, for we have him, in November, 1714, writing to Swift from London, in his own peculiar vein of humour, mentioning a consolation which the dean had, and which no layman could share with him, or deprive him of:—"I cannot but think there is one thing in your circumstances that must make any man happy, which is a liberty to *preach*, . . . for my part, I never imagine any man can be uneasy that has his opportunity of venting himself to a whole congregation once a week." The Scriblerus Club, as it was called, had been formed by Pope, Gay, Parnell, Swift, and Arbuthnot, in the year 1713 or 1714—Harley, Atterbury, and Congreve were members. With which of them the plan originated is not known—most probably, we think,

with Pope—but in the execution of the works which this fraternity of humorists contemplated, Arbuthnot's learning was relied on as that without which little or nothing could be done. The abuses of learning were to be the subject of a satire in the manner of Cervantes. In a letter to Swift, Arbuthnot says—"Mankind presents an inexhaustible source of invention in the way of folly and madness;" and in another, he gives an amusing map of diseases, to illustrate a portion of the work which was to describe medicine. "The Great Diseases, like capital cities, with their Symptoms, all like streets and suburbs, with the Roads that lead to other diseases. It is thicker set with towns than any Flanders map you ever saw. Ratchliffe is painted at the corner of the map, contending for the universal empire of this world, and the rest of the physicians opposing his ambitious designs with a project of a treaty of partition to settle peace." Another of his whimsical fancies is thus communicated to the same correspondent:—"Whiston has at last published his project of the longitude; the most ridiculous thing that ever was thought of: but he has spoiled one of my papers of Scriblerus, which was a proposal for the longitude not very unlike his, to this purpose—that, since there was no pole for east and west, all the princes of Europe should join and build two prodigious poles upon high mountains, with a vast lighthouse to serve for a pole-star. I was thinking of a calculation of the time, charges, and dimensions. Now, you must understand his project is by lighthouses, and the explosion of bombs at certain hours." The queen's death broke up the design, by separating from each other the members of the partnership; but in this club originated "The Memoirs of Martinus Scriblerus," published, after Arbuthnot's death, in Pope's works, but, most probably, altogether of Arbuthnot's composition. The "Essay on the Origin of the Sciences," ascribed to Scriblerus, was the joint work of Arbuthnot, Pope, and Parnell.

Arbuthnot continued to exercise his profession as a physician, and published a few medical and scientific tracts, and seems to have had his full share of the honours and profits of successful practice. Among Swift's letters we find him repeatedly mentioned with that earnestness of regard which Swift, in all his real or assumed misanthropy, felt for those whom he called his friends. "Arbuthnot's illness," he says in one letter, "is a very sensible affliction to me, who, by living so long out of the world, have lost that hardness of heart contracted by years in general conversation. I am daily losing friends, and neither seeking nor getting others. Oh, if the world had a dozen Arbuthnots in it, I would burn my Travels [Gulliver's]; but, however, he is not without fault. There is a passage in Bede commending the piety and learning of the Irish in that age, when, after abundance of praises, he overthrows them all by lamenting that, alas! they keep Easter at a wrong time of the year; so our doctor has every quality that can make a man sensible or useful, but, alas! he hath a sort of slouch in his walk." Years of doubtful health followed, borne with serene cheerfulness. In his last illness he wrote an affecting letter, which is preserved in Pope's correspondence. It is fortunate that Arbuthnot's letters to Pope and Swift are preserved. Johnson, comparing Pope's correspondents with each other, says—"Swift writes like a man who remembered he was writing to Pope, but Arbuthnot like one who lets thoughts drop from his pen as they rise into his mind."

In the parts of the Memoirs of Scriblerus ascribed to Arbuthnot, there are passages which might lead us to think some other hand must have been at work upon it; but it must be remembered that extravagance and absurdity of all kinds was the subject of the caricature, and we cannot always determine which of the triumvirate—Swift, Arbuthnot, or Pope—was for the moment sitting in "Rabelais' easy-chair." Whatever be the excesses into which exuberant mirth may have led the Doctor, as his friends were fond of calling Arbuthnot, there can be no doubt of his habitual feeling of piety. This he probably owed to his Scottish education, as to it he certainly owed the accurate learning which so remarkably distinguished him. When one of his sons, "whose life," he says, "if it had so pleased God, he would have redeemed with his own," died, the language of his letter communicating the fact is, "I thank God for a new lesson of submission to his will, and also for what he hath left me." Swift, speaking of him, said, "He has more wit than we all have, and his humanity is equal to his wit." In the summer of 1734, Arbuthnot retired to Hampstead, suffering from asthma. His letters show that he had not then wholly

given up his medical practice, for he speaks of the necessity of his return to London in the winter, when he reckoned a return of the symptoms. "I am not in circumstances to lead an idle country life, and no man at my age ever recovered of such a disease, except by the abatement of the symptoms." We regret that the plan of our work does not admit of extracts from these letters, which will be found in many editions of Pope and Swift. He returned to London, and died on the 27th of February, 1734-5.

Two volumes, entitled "The Miscellaneous Works of Dr. Arbuthnot," were published at Glasgow in 1750, and again, with some additional pieces, in 1751. Arbuthnot's family were impatient at the publication, and denied the genuineness of its contents in language stronger than was warranted. Most of the papers are Arbuthnot's. The book is now not easily procured. In 1770 it was reprinted, with a life of Arbuthnot, the facts of which Arbuthnot's son, we are told by Dr. Kippis, admitted to be truly stated. In the kind of way in which Swift and Arbuthnot published trifles on broadsides and flying sheets for the political purposes of the hour, it is not surprising that mistakes should be made as to the authorship, and papers written, which the author himself would as entirely forget when they had answered their momentary purpose, as the barrister the names of his clients and his cases, though remaining on old briefs to testify for or against him. Arbuthnot's habits of writing, and carelessness of what he had written, rendered mistakes even more likely than in the case of almost any other man. "No adventure of any consequence ever occurred, on which the doctor did not write a pleasant essay in a great folio book which used to lie in his parlour. Of these, however, he was so negligent, that while he was writing them at one end, he suffered his children to tear them out at the other for their paper kites." Of Arbuthnot's works, there is no collected edition. The Glasgow book which we have mentioned, professes only to supply such as had not been printed in Swift's Miscellanies.—(*Biographia Britannica, Swift's and Pope's Letters.*)—J. A., D.

ARC, PHILIPPE-AUGUSTE DE SAINTE-FOIX, Chevalier d', a distinguished French historian and miscellaneous writer, natural son of the count of Toulouse; died at Tulle in 1779.

ARCADELT, JACQUES, a musician of great eminence, who was born in the Low Countries at the end of the fifteenth or beginning of the sixteenth century. He is stated by some writers to have been a pupil of Josquin de Prés; but as this master had no school of music at the time when he can have been studying, these authorities must confound his name with another. In 1536 he went to Rome; here, from January till November, 1539, he held the office, founded by Pope Julius II., of *maestro de Putti*, in St. Peter's. On the 30th of December in the following year, he was appointed one of the singers in the pope's chapel, which he continued to be for nine years, if not longer. In 1544 he was created an abbé. He became chapel-master to Cardinal Charles of Lorraine, duke of Guise, who visited Rome on an embassy from the court of France in 1555. In his suite he went to Paris, where he probably died. He wrote many masses and motets, madrigals and songs, and was esteemed one of the best masters of the madrigal style. The greatest favourite of all his compositions appears to have been "Il bianco e dolce cigno," one in his first book of madrigals (printed by Burney in his history), which is remarkable for the smoothness of its melody, and the purity of its counterpoint, but still more for the beauty of its expression. His madrigals were so popular in his time, that, according to Adami, the compositions of others were not unfrequently printed under his name. The melodiousness of his songs is extolled by several authors. Much of his sacred music is preserved in manuscript in the library of the Vatican, and he printed the following works:—Three books of masses for three, four, five, and seven voices; five books of madrigals, "L'Excellence des Chansons Musicales" (a collection of songs), "Chansons Françaises à plusieurs parties," and many single songs in French and Italian collections, full particulars of which are given in Fétis' *Biographie Universelle des Musiciens.*—(Burney, Fétis, Schilling.)—G. A. M.

ARCADIO, ALESSANDRO, a Piedmontese physician of the seventeenth century, author of numerous works on medical and miscellaneous subjects.

ARCADIO, GIAN-FRANCESCO, a Piedmontese physician of some distinction, author of various works, mostly medical, was born at Bistagno about the middle of the sixteenth century, and died in 1620.

**ARCADIUS**, the elder son of the Emperor Theodosius the Great, was born in Spain in A.D. 383. Theodosius superintended his education with great solicitude, intrusting to Themistius his literary, and to Arsenius his religious training. Though by no means depraved, Arcadius was strikingly dissimilar to his father. Feeble and deformed in person, he was destitute of mental vigour, and incapable of independence either of thought or action. Theodosius, before his death, divided the empire into Eastern and Western, leaving the former to Arcadius, and the latter to Honorius, and appointing Rufinus guardian of Arcadius, and Stilico of Honorius. The very day appointed for the marriage of Arcadius to the daughter of Rufinus, the young emperor was, by a daring arrangement of the eunuch Eutropius, wedded to Eudoxia, the daughter of Bauto, a Roman general, but by birth a Frank. Rufinus having been soon afterwards assassinated by Stilico's emissaries, Eutropius became prime minister, but, in 399, was banished to Cyprus, and beheaded, to satisfy the envy of the empress, and the hostility of Tribigildus, leader of the Goths settled in Phrygia. The influence of the same vindictive empress accomplished the exile of the good and great John Chrysostom. Arcadius died in 408.—E. M.

**ARCADIUS**, a native of Antioch, author of various works on grammar, the only one of which now extant is a treatise on accentuation, being an abridgment of Herodian's work entitled *Κατάλογος Προσῳδίας*.

**ARCÆUS** or **D'ARCE**, **FRANCISCUS**, a celebrated surgeon, member of the Inquisition, and author of medical dissertations, was born at Fresno in 1494, and died about 1575.

**ARCANO**, **MAURO**, or **GIOVANNI D'**, an Italian satirical and burlesque poet, born in 1490; died in consequence of a fall from his horse in hunting, in 1536. His poems have been printed with those of Berni.

**ARCASIO**, **GIAN-FRANCESCO**, a celebrated Italian jurist and scholar, professor of Roman law in the university of Turin, and author of "Commentaria Juris Civilis," was born at Bisagno in 1712, and died in 1791.

**ARCE**, the name of a Spanish glass-stainer, who executed several windows for the cathedral of Burgos. He flourished towards the end of the sixteenth century.

**ARCE**, **DON CALEDONIO D'**, a Spanish sculptor of the eighteenth century, attached to the court and academy of Madrid. He continued the style of the Barambio school, as best shown in his equestrian statue of the Spanish king, Charles IV., which is considered the masterpiece of this artist. He read before the academy several good essays on sculpture, some of which were published. Died in 1795.—R. M.

**ARCE**, **DON JOSE**, a Spanish sculptor of the seventeenth century, a pupil of Montanes. His colossal statues for the cathedral of Seville are amongst his best works.

**ARCERE**, **LOUIS-ETIENNE**, a French priest of the oratory, professor of literature, and author of various historical works and miscellaneous dissertations, was born at Marseilles in 1698, and died in 1782.

**ARCESILAUS**, the name of four kings of Cyrene:—

**ARCESILAUS I.**, king of Cyrene, son and successor of Battus, founder of the kingdom, flourished about the beginning of the sixth century before Christ.

**ARCESILAUS II.**, succeeded his father probably about 555 or 560 B.C.; defeated the Lybians, and was finally cut off by domestic treason.

**ARCESILAUS III.**, succeeded his father Battus III., and attempting to abolish the restrictions imposed on the royal authority, was driven into exile. Returning from Samos at the head of an army, he recovered his throne. Driven a second time into exile, he was assassinated about 514 B.C.

**ARCESILAUS IV.**, the eighth and last king of Cyrene, and founder of the colony afterwards called Berenice, died about 431 B.C., murdered, it would appear, for persisting in his attempts to make himself absolute. He has been immortalized by Pindar's testimony to his eminent qualities.—E. M.

**ARCESILAUS**, the name of four Greek artists:—

**ARCESILAUS**, son of Aristodicon, a Grecian sculptor of the early Argivo-Syconic school, living about 500 B.C. Simonides celebrated a "Diana" by Arcesilaus in some of his verses.

**ARCESILAUS OF PAROS**, a Greek painter in encaustic, who flourished about 420 B.C. He decorated several temples.

**ARCESILAUS**, son of Tisicrates, a painter of the Ionic school, flourished about 300 B.C.

**ARCESILAUS**, one of the first Greek sculptors that established themselves in Rome, lived about 170 B.C. Pliny, on the authority of Varro, states that so great was the demand for the works of this sculptor, that they were often taken away from his studio before they were actually finished. This was the case with the "Venus Genetrix," in the forum of Cæsar. Very high prices were given for his productions, not only by the public and by the patrons, but also by the other artists of the time, who were anxious to have sketches and models by Arcesilaus.—R. M.

**ARCESILAUS**, a Greek philosopher, disciple of Theophrastus, and founder of what is sometimes called the New, and sometimes the Middle Academy, was born at Pitane, in Æolia, 316 B.C. Combating the dogmatism of the Stoics, he denied the possibility of attaining certainty in the pursuit of knowledge, and held that the wise man is to regulate his conduct by the greatest attainable probability. He revived the Socratic method of discussion. He was an elegant and persuasive speaker, possessing great logical skill and pre-eminent power of expression. He died, unmarried, 241 B.C. Affluent in circumstances, he was in character honourable, generous, and genial.—E. M.

**ARCHAGATHUS**, a Greek physician, born in the Peloponnesus in the third century before Christ, settled at Rome in the consulship of L. Æmilius Paulus and Livius Salinator, and was allowed, at the public expense, to establish a shop for surgery in one of the most populous quarters of the city. His numerous operations procured for him the name of **CARNIFEX**.

**ARCHAIMBAUD**, **BENEDICTUS**, born at Lyons in 1643, and died in 1688, obtained high honour in the papal church, was a member of the congregation of the oratory, and composed a brief history of the canon law, "Abregé Historique du Droit Canon."

**ARCHANGE DE CLERMONT**, a French historian of the seventeenth century, author of a "Traité du calvaire de Hierusalem et de Dauphiné," 1638.

**ARCHANGE DE ROUEN**, a French theologian of the commencement of the eighteenth century, author of two lives of saints, and of a work entitled, "Paroles du Nouveau Testament pour éclairer les gens du monde sur l'importance du salut," 1691.

**ARCHANGELUS DE BURGONOVO**, an Italian theologian of the order of the Minorites, distinguished as a Hebraist, published in the second half of the sixteenth century the following works:—1. "Trattato ossia dichiarazione della virtù e dignità del nome di Gesù," 1557; 2. "Apologia pro defensione doctrinæ Cabalæ contra P. Garziam," 1564; 3. "Cabalarum Selectiora," 1569.

**ARCHANGELUS** or **DE ARCHANGELO**, **OTTAVIO**, an Italian poet, born at Catania in Sicily, published in 1646 at Palermo, "Canzoni Siciliane," and afterwards a history of his native city, and some poems.

**ARCHDALE**, **JOHN**, English governor of Carolina, appointed in 1695, suppressed the disorders of the colony, and published, on his return, "A new description of that fertile and pleasant province of Carolina, with a brief account of its Discovery, Settling, and the Government thereof, to this time," 1707.

**ARCHDALL**, **REV. MERVYN**, A.M., a learned antiquarian and genealogist, and a member of the Royal Irish Academy, was born in Dublin in 1723. He laboured industriously for many years in the collection of materials for an Irish Monasteriology, in which he was assisted by Dr. Pococke, and in the year 1786, published a large quarto volume, entitled "Monasticon Hibernicum, or a history of the abbeys, priories, and other religious houses in Ireland." In 1789 he published a revised edition of Lodge's Peerage of Ireland, in 7 vols. 8vo. He died on the 6th August, 1791.—(*Gent's Mag.*)—J. F. W.

**ARCHDEKIN**, **RICHARD**, or **ARSDEKIN**, also called **MACGILLACUDY**, an Irish jesuit and controversial writer, was born in Kilkenny in 1619. He filled successively the chairs of classical literature, moral philosophy, and scriptural theology, partly at Louvain, and partly at Antwerp, and died in the latter city on the 3rd August, 1693. His principal works are—"Of Miracles: and new Miracles done by the reliques of St. Francis Xavier," a very scarce book, and said to be the first ever printed in English and Irish conjointly; "Præcipiæ Controversiæ fides ad facilem Methodum redacta;" and a life of St. Patrick.—(*Ware, O'Reilly.*)—J. F. W.

**ARCHEDICUS**, an Athenian poet, lived about the year 302 B.C. Only the titles of two of his comedies have reached us, *Διαπραγμάτων* and *Θησαυρός*.

**ARCHELAUS**, son of Apollonius, a sculptor of Priene in Ionia, the author of the celebrated Apotheosis of Homer.

ARCHELAUS, a Spartan king of the race of the Agides, began his reign of sixty years about 884 B.C. His throne was shared by Charilaus, with whom he took Ægys, a town of Laconia.

ARCHELAUS, a Greek philosopher, surnamed PHYSICUS, from his having been the first to introduce the physical philosophy of Ionia into Athens, was the son of Apollodorus, or, according to some accounts, of Mydon, and flourished towards the middle of the fifth century before Christ. He was probably a native of Miletus, although by some authors called an Athenian. What is known of his life rests on the authority of Diogenes Laertius, and amounts to this—that he was a pupil of Anaxagoras, and one of the teachers of Socrates. Porphyry adds, that the last-mentioned philosopher, in his youth, visited Samos in company with Archelaus. His philosophy, if we may judge from the scanty notices of it which have reached us from antiquity, formed a sort of link between the Ionian physical and the Athenian ethical schools, and partook of the characteristics of both. None of his works have been preserved, and only a very few of his opinions can be collected from ancient authors. He is said to have maintained that men and animals were formed from the earth by heat—that the sea was supplied by waters oozing through the earth—that the earth was not a plain, but rounded—and in ethics, that the just and the bad are not so by nature, but by law.—J. S., G.

ARCHELAUS, king of Macedonia, son of Perdiccas II., famous for his efforts to introduce into his kingdom the arts and literature of Greece, was at first only distinguished for his cruelty in ridding himself of his rivals. On the death of his father he assassinated his cousin Alexander, and also his half-brother, the son of Perdiccas and Cleopatra, rightful heir to the throne. His reign extended from 413 B.C. to 399 B.C., and was illustrated, according to Thucydides, by a great number of public works, as well as by an unexampled patronage of arts and letters. He was assassinated by Crataus.—J. S., G.

ARCHELAUS, one of the generals of the army of Alexander the Great, was left at Susa in command of a force of 3000 men; and after the death of that prince obtained the government of Mesopotamia.

ARCHELAUS, a Greek poet of the fourth century B.C., supposed to have been a native of Chersonesus, in Egypt.

ARCHELAUS, a Greek geographer of the 4th century B.C.

ARCHELAUS, son of Herod the Great by Malthace of Samaria, reigned over Judea, Samaria, and Idumea for a period of nine years from the death of his father. Herod, by a will made a few days before his death, conferred the kingdom on Archelaus, and rescinded a former will in which it had been assigned to Herod Antipas. Antipas appealed to Augustus to confirm the original testament; but the emperor, after hearing both parties at Rome, decided in favour of Archelaus, whom he sent back to Judea with the title of ethnarch. His reign was one of oppression and bloodshed. He massacred three thousand persons during a feast of the passover, their only crime being that they had remonstrated against his attempt to profane the temple by introducing into it the Roman military emblem—a golden eagle. Irritated by his cruelty, and also by his marriage with Glaphyra, widow of his brother Alexander, the Jews, in the ninth or tenth year of his ethnarchate, 6 or 7 B.C., petitioned the emperor to deliver them from their oppressor; and Archelaus having been cited to Rome, was banished to Vienne, in Dauphiny. Judea and Samaria were annexed to the province of Syria.—J. S., G.

ARCHELAUS, chief general of Mithridates VI. of Pontus, a Cappadocian by birth, commanded the forces of that prince in his first triumphant war against the Romans, and was also successfully employed to negotiate an alliance with the principal states of Greece; but defeated at Chæronea and at Orchomenus by the Roman general Sulla, he brought himself into suspicion with his master by the terms of a treaty of peace to which he consented, and was banished. He repaired to Rome about 81 B.C. Nothing further is known of him. His son

ARCHELAUS I., high priest of the goddess of Comana (in Pontus), was appointed in 63 B.C. to the office of priest in the temple of Artemis Taurica, and to the lordship of the town and territory of Comana, by Pompèy the Great. He espoused Berenice, queen of Egypt, daughter of Ptolemy Auletes, and for six months, during the banishment of that prince, occupied the throne; but was defeated in 55 B.C. by the Roman general Gabinius, and put to death.

ARCHELAUS II., son and successor of the preceding, was

concerned in some disturbances in Cappadocia, and driven out of that province in 51 B.C. by Cicero, then proconsul of Cilicia, and in 47 B.C. deprived of his office by Julius Cæsar.

ARCHELAUS III., son of the preceding, obtained from Antony the sovereignty of Cappadocia, was confirmed in his dominions by Octavius after the battle of Actium; but falling under the suspicion of Tiberius, he was brought to Rome and detained prisoner till his death in 17 A.D.—J. S., G.

ARCHELAUS, bishop of Cashara or Carrha, in Mesopotamia, lived about 278 A.D. He convened an assembly of heathens to hear a dispute between him and the heretic Manes, who had just escaped from prison. The bishop was victorious, and had his opponent again imprisoned. Archelaus left an account in Syriac of the controversy, which was translated into Greek and Latin.

ARCHELAUS, the author of a Greek poem on alchemy, is supposed to have lived in the fifth century. His work is entitled, *Ἀρχελαίου Φιλοσόφου περὶ τῆς ἱερᾶς Τέχνης διὰ Στίχων Ἰαμβῶν*, (an Iambic poem on the sacred art, by Archelaus the philosopher), and exists in MS. in several European libraries.

ARCHEMACHIUS or EUBŒA wrote a book on the history of his native island, and is generally identified with the Archemachus of Eubœa, who is author of a work named *Μετωνυμίας*, of which we have a fragment in Plutarch.

ARCHENHOLZ, JOHANN WILHELM, Baron von, a German author, was born at Langenfurt, a suburb of Dantzic, in 1745, and died at Hamburg in 1812. He entered the Prussian army in 1760, and served till the close of the seven-years' war, when he had attained the rank of captain, and received his discharge, as some say, on account of his wounds; according to others, for disreputable conduct. He now travelled over Europe for sixteen years, after which he returned to Germany, and devoted himself to literary work, living principally at Hamburg. His most valuable book is his "Geschichte des Siebenjährigen Krieges" (History of the seven-years' war), 2 vols.; Berlin, 1793. He also wrote a history of Queen Elizabeth, and a history of Gustavus Vasa, with other works.—(*Conversations-Lexicon, Zehnte Auflage.*)—A. M.

ARCHENNUS or ANTHERMOS, one of the earliest Greek sculptors. He is supposed to have been the first to represent Victory with wings. Probably living 560 B.C.

ARCHER, JOHN, physician to Charles II., published a work entitled "Every Man his Own Doctor," in which he gives a compendious herbal. It was printed in London in 1673.

ARCHER, SIR SIMON, born in 1581, was the friend and correspondent of the antiquary Dugdale, and associated with him in the preparation of his *Antiquities of Warwickshire*.

ARCHER, THOMAS, an English architect of the school of Vanbrugh, whose chief erections—St. Philip's church at Birmingham, and St. John's in Westminster—were savagely ridiculed by Walpole, but have since found more favourable and even laudatory critics; died in 1743.

ARCHESTRATUS, a Greek poet, born either at Syracuse or at Gela, in Sicily, lived about the year 350 B.C. He is the author of a famous poem, called variously *Γαστρολογία*, *Γαστρονομία*, and *Ἠδυπάθεια*, a manual of good living, in which he embodied vast gastronomical researches.

ARCHESTRATUS, an Athenian general in 407 B.C., after the battle of Notium superseded Alcibiades in the command of the Athenian fleet. He died at Mitylene.

ARCHEVESQUE, HUE, a French poet of the 13th century, author of three poems, called ditties—"Dit de la Dent," "Dit de la mort Largesse," and "Dit de la puissance d'Amour."

\* ARCHIAC, ETIENNE-JULES-ADOLPHE DESMIER DE SAINT SIMON, Viscount d', a French geologist, born at Rheims in 1802, was an officer of cavalry from 1821 till the revolution of 1830, when he quitted the service. Since the termination of his military career, he has honourably distinguished himself in science by the following works, the last not yet completed:—  
1. "Memoires sur les sables et grès moyens tertiaires," 1837;  
2. "Description géologique du département de l'Aisne," 1843;  
3. "Etudes sur la formation crétacée des versants sud-ouest, nord, et nord-ouest du plateau central de la France," 1843 and 1846;  
4. "Histoires des progrès de la géologie de 1834 à 1851."—J. S., G.

ARCHIADAS or ARCHIADES, a Greek philosopher of the first half of the fifth century, distinguished for his virtues by the epithet of *Ὁ Εὐσεβέστατος*, was the son-in-law of Plutarch the Athenian, who revived the Platonic philosophy.

**ARCHIAS OF CORINTH**, the founder of Syracuse, lived in the eighth century before Christ. He was directed by the oracle of Delphi to repair to Sicily. There, by the help of a colony of Dorians, he founded Syracuse, 733 B.C.

**ARCHIAS**, the Fugitive-Hunter (*Αρχίας Φυγαθοδότης*), so called from his having been the agent of Antipater in his bloody proscription of the Athenian chiefs, 322 B.C., was an Italian Greek, and originally an actor.

**ARCHIAS OF CORINTH**, a celebrated naval architect, who designed and constructed the famous three-decker that Archimedes launched for Hieron the second of Syracuse. He was flourishing about 250 B.C.

**ARCHIAS, AULUS LICINIUS**, a Greek poet, the friend and client of Cicero, was born at Antioch about the year 118 B.C. His poems have been lost, with the exception of a number of epigrams, and these are of doubtful authenticity, as well as questionable merit. His fame with posterity he owes to Cicero, who defended the poet's right to be a citizen of Rome in the splendid oration, "Pro Archia poeta."—J. S., G.

**ARCHIAS OF ATHENS**, a sculptor and tereutes of the time and school of Phidias.

**ARCHIBIUS**, the name of three Greek grammarians—one, the father of Apollonius, author of the Homeric Lexicon; another, a son of this Apollonius; a third, a son of Ptolemæus. The last taught grammar at Rome in the reign of Trajan.

**ARCHIDAMIA**, a Spartan woman, who successfully opposed the proposal to remove the women of Lacedæmon to Crete, when King Pyrrhus was about to take the town.

**ARCHIDAMUS**, a Greek physician, a contemporary of Hippocrates, in the fifth and fourth centuries B.C. He is quoted by Galen, and mentioned by Pliny.

**ARCHIDAMUS**, the name of five Spartan kings:—

**ARCHIDAMUS I.**, son of Anaxidamus, thirteenth of the Proclid dynasty, ascended the throne probably about 630 B.C.

**ARCHIDAMUS II.** reigned 42 years, from about 469 B.C. He led an army into Attica in 431, and again in 430—on the second occasion laying waste the Athenian territory ten miles round the capital. His death occurred in the following year.

**ARCHIDAMUS III.**, son of Agesilaus the Great, ascended the throne in 361 B.C. Ten years before his accession he invaded and ravaged Arcadia, and in 362 successfully resisted Epaminondas in his attack on Sparta. In 338 he went to aid the Tarentines against the Lucanians in Italy, and there perished in a battle.

**ARCHIDAMUS IV.**, son of Eudamidas I., was defeated and taken prisoner by Demetrius Poliorcetes in a battle fought near Mantinea, 296 B.C.

**ARCHIDAMUS V.**, on the death of his brother Agis IV., in 240 B.C., fled into Messenia, was recalled by the general of the Achæan league, Aratus, but was shortly after put to death by the murderers of Agis.—J. S., G.

**ARCHIDEMUS** or **ARCHEDAMUS**, a Stoic philosopher of Tarsus in Cilicia, author of two works:—*Περί φωνής* and *Περί στοιχείων*; lived about the year 160 B.C.

**ARCHIGENES**, a celebrated Greek physician, son of Philippus, a native of Apamea, and pupil of Agathinus, founder of the sect of the Episythetics, settled at Rome in the reign of Domitian, and enjoyed a great reputation under that emperor and his successors, Nerva and Trajan. (81–117 A.D.)

**ARCHILOCHUS OF PAROS**, one of the most famous Greek lyric poets, was the son of Telesicles and Enipo. The poet's mother, according to his own statement, was a slave. When a young man, he was compelled by poverty to leave Paros to colonize Thasos, and one writer states that he was chosen to be the leader of the colony. Here, however, he soon became disagreeable to the majority of the people, in consequence of his sarcastic poetry, and he seems to have left the place. He fell, during a war which the Parians carried on with the Naxians, by the hands of one Charondas, whom the Delphic priestess would not admit to the temple till he had appeased the soul of the poet. An epigram informs us that his grave was by the sea-shore. Archilochus is represented by the ancients as one of the greatest poets that ever lived. His name is often associated with that of Homer. He appears to have been a man of extraordinary powers of mind, extremely versatile, and always successful in whatever he attempted. The rhythmical inventions ascribed to him are very numerous. His life, however, was embittered by poverty and misfortune, and he spent his great powers in lashing indiscrimi-

nately all that came in his way. He spoke ill of friends and foes. His ire was poured out especially on Lycambes, who had refused to give him his daughter Neobule in marriage; and so stinging was the satire, that a story was current in ancient times, that both Lycambes and Neobule had hanged themselves out of vexation. His poems were also blamed for their impurity; so much so, that the Spartans interdicted them, and the Emperor Julian forbade any priest to read them. The few fragments of Archilochus that have come down to us fail to give us a complete notion of the man, or to justify to us the extravagant praises lavished on him by most ancient critics. Neither do they reveal the depth of wretchedness and bitterness which some have ascribed to the poet. They are pervaded by a theistic fatalism; but, at the same time, they are manly and vigorous, urging patience in the endurance of suffering. Archilochus flourished about the beginning of the seventh century B.C.—J. D.

**ARCHIMBAULD, JAC.**, a Dominican of Vermont, born in 1583, and died in 1667; taught philosophy in various places, and composed several devotional pieces.

**ARCHIMEDES** (*Αρχιμήδης*) OF SYRACUSE, the greatest mathematician and engineer of antiquity, was born about the year 287 B.C. According to Plutarch ("Life of Marcellus"), Hiero, king of Syracuse, was related to Archimedes; and it is certain that to that sovereign Archimedes was a friend and counsellor, and was by him induced to apply his scientific knowledge to practical purposes,—circumstances which, during the lifetime of Archimedes, might increase his consequence amongst his countrymen, by connecting his name with the dignity of his royal patron; but which, in after ages, have served chiefly to perpetuate the memory of the monarch, by associating it with the imperishable glory of the sage. The nature and extent of the scientific labours of Archimedes will be best understood from a brief notice of those fragments of his works which have been handed down to our times. The best edition is the Oxford folio, edited by Torelli, in 1793. "*Περί τῆς σφαίρας και του κυλινδρου*," (on the sphere and the cylinder.) In this work occurs the celebrated theorem, considered by Archimedes himself as the greatest of his discoveries, that the volume of a sphere is two-thirds of that of its circumscribing cylinder. "*Κύκλου μέτρησις*," (the measurement of the circle.) This work contains the demonstration, that the area of a circle is equal to that of a triangle, having the circumference of the circle for base, and the radius for height; and also a closer approximation than had been previously attained, to the ratio of the circumference of a circle to its diameter, viz., less than  $3\frac{1}{7}$ , and greater than  $3\frac{10}{71}$ . Its investigations are founded on the principle, that the circumference of a circle is less than that of any circumscribed polygon, and greater than that of any inscribed polygon; and that a series of successive approximations to the circumference of a circle, may be obtained by determining successively the circumferences of two series of polygons, circumscribed and inscribed respectively; each polygon in each series having double the number of sides of that which precedes it. "*Περί κωνοειδίων και σφαιροειδίων*," (on conoids and spheroids,) a treatise on the geometry of solids generated by the revolution of conic sections about their axes. "*Περί ἐλίκων*," (on spirals.) This treatise relates to that spiral which has since been called "the spiral of Archimedes," and which is traced by a radius-vector whose length is proportional to the angle through which it has swept from the commencement of the curve. "*Τετραγωνισμος παραβολης*," (the quadrature of the parabola.) This, like the treatise on the sphere and the cylinder, is an example of that "method of exhaustions" of the ancient geometers, which led the way to the modern calculus of fluxions or infinitesimals. "*Ψαμμίτης*," called in Latin "Arenarius," which may be translated "the sand-counter," (an essay on the powers of arithmetical notation.) "*Περί ἐπιπέδων ἰσορροπιτικῶν ἢ κέντρα βαρῶν ἐπιπέδων*," (on balanced planes, or, on the centres of gravity of planes;) a work in which are demonstrated the fundamental principles of the balance of parallel forces, by a method which is followed by the first mechanical writers of the present time. "*Περί τῶν ὑδατι ἐρισταμένων*," (on bodies floating in water;) containing the true principles of the equilibrium between the weight of a floating body, and the hydrostatic pressure of the liquid in which it floats.

These immortal works, to this day the delight of every one whose knowledge of mechanics and geometry is sufficient to enable him to understand them, bear, unfortunately but a small

proportion to those possibly even greater works of Archimedes which are lost to the world for ever; and which may be supposed to have contained many truths, whose re-discovery has employed and will employ the labours of scientific men of modern times. Not less than the scientific knowledge of Archimedes, was his practical skill; a subject of wonder to his contemporaries, of incredulity to many subsequent ages, and of admiration to more recent times, since the marvels reported to have been achieved by him, which once seemed incredible, have been realized by the re-discoveries of modern science. Thus the burning of the Roman fleet, by concentrating within a small space the sunbeams reflected from a vast number of suitably placed plane mirrors, was long regarded as fabulous, until the experiment was successfully repeated by Buffon. This achievement took place during the siege of Syracuse, by the army of the Roman republic under Marcellus, in the year 212 B.C.; when Archimedes, at the age of seventy-five, employed his extraordinary skill in contriving machines for the defence of his native city, with such success, that the Roman soldiers, inspired with a fear, unparalleled before or afterwards, used to fly on the appearance of any object above the ramparts, believing it to be some new engine of destruction.

When Syracuse was at length taken by surprise, Archimedes was slain amidst the general massacre of its defenders. Marcellus, who had desired to preserve his life, lamented his death, and fulfilled his wishes by causing the representation of his famous theorem of the sphere and the cylinder to be carved on his tomb. With Archimedes fell the Greek science and philosophy in Sicily; and in like manner did all arts and learning fall, in every region conquered by the Romans.—W. J. M. R.

ARCHIMELUS, a poet of Greece, who flourished about 220 B.C. An epigram bearing his name is found in Athenæus; it is the only well-authenticated writing of his now extant.

ARCHINTO, a noble family of Milan, which claimed descent from the royal house of Lombardy. Several of its members greatly distinguished themselves at different periods, of whom the following, arranged in alphabetical order, are the most celebrated:—

ALBERICO, born in 1698, died in 1758. He was archbishop of Nicæa, and afterwards was created a cardinal. In 1753 we find him acting as governor of Rome.

ALESSANDRO, created a count by Charles V., died at Milan, 1567. He was the author of many theological works, the whole of which are preserved in manuscript in the Ambrosian library.

ALESSANDRO, born 1577; died 1645. He belonged to the order of Jesus; and besides two works on rhetoric, has left several eulogistic writings upon the members of that society, which are preserved in its library at Milan.

AMBROGIO GIOVANNI, who in 1518 held the office of decurion, or chief of ten, in Milan. He was the author of several literary works, and editor of those of Pius II.

ANSELMO and MANFREDO, who, in 1135, founded the monastery of Chiaravalle.

CARLO ANTONIO, who lived in the first half of the 17th century, and became an abbot of the Canons Regular of the Lateran, was author of several works in praise of the fathers of his order.

CARLO, Count, son of Count Filippo, born at Milan in 1669; died 1732; was reputed one of the most learned men of his age. He was founder of an academy for sciences and mechanics in his native city, which he enriched with a valuable library, and the best mathematical instruments then known. He was also the founder of the press, known as the *Ædes Palatinæ*, from which so many great works have been issued. He wrote on various subjects, both in Italian and Latin; and three monarchs conferred titles upon him as marks of their esteem.

FILIPPO, born 3d July, 1500; died 1558. The only ecclesiastic, of lesser dignity than a cardinal, who was ever appointed vicar of the pope. He was held in much esteem both by Paul IV. and the Emperor Charles V., who confided to him the settlement of many affairs of great importance, and by the former of whom he was created archbishop of Milan. Besides many published works, he has left a great number of MSS., which are still to be found in the family library in his native city.

FILIPPO, Count, was born at Milan in 1649; died 1720. He was a member of the college of Nobili Giuriconsulti in Milan, and successively filled various important offices of great trust. He was the author of several works,—his letters alone, in the possession of the family, occupying twelve folio volumes of MS.

GIROLAMO, born about 1671, died in 1721; began life as a

jurisconsult, and ended as a dignitary of the church. He was created titular archbishop of Tarsus, and was sent as nuncio to the grand-duke of Tuscany, and afterwards as *legate a latere* to Germany. There still exists an unpublished work of his upon the Council of Trent.

GIUSEPPE, born in 1651, died in 1712; first studied law in Paris, but forsook it to follow the ecclesiastical career, in which he attained to high honours, being appointed by Innocent XI. vice-legate of Bologna, and afterwards, by the same pontiff and his successors, apostolic nuncio to various states. By Innocent XII. he was made archbishop of Milan, and in the same year cardinal, by the title of Santa Prisca. He is the author of several works, some of which have been published.

ARCHINUS, a citizen of Athens, who, in 401–3 B.C., aided Thrasybulus in the expulsion of the thirty tyrants and the re-establishment of democracy in that city. Some writers ascribe to him the honour of originating that patriotic scheme which others carried to a successful issue.

ARCHIPPUS, an Athenian comic poet, of whom little is now known, flourished in the early part of the fifth century B.C. His writings are characterized by coarseness of expression.

ARCHON, LOUIS, a writer of French ecclesiastical history, born in 1645 at Riom in Auvergne; died in 1717. He obtained a canonry in his native town, was made chaplain to Louis XIV., and in 1678 appointed to an abbey in the diocese of Clermont. He wrote "*Histoire ecclesiastique de la chapelle des rois de France sous les trois races de nos rois jusqu'au regne de Louis XIV.*"

ARCHYTAS (*Ἀρχύτας*) OF TARENTUM, mathematician, general, statesman, and philosopher, flourished about the middle of the fifth century before the Christian era, and was the son either of Mnesagoras, or (according to Aristoxenus) of Hestiasus (*Ἑστιάσιος*). Archytas was one of the most renowned of the renowned Pythagoreans, lawgivers and governors of the ancient Greek colonies in southern Italy, and founders of the experimental and inductive method in science. Seven times did he command in war the armed force of his fellow-citizens, and was never defeated. He was the friend and instructor of Plato, whom, by his intercession, he saved from the cruelty of Dionysius the younger. A letter of Archytas to Plato, and Plato's answer, are extant in the works of Diogenes Laertius. According to this author, Archytas was the first who reduced mechanics to scientific principles, and the first who applied mechanism to descriptive geometry. He is said to have constructed various marvellous machines, such as automatic flying birds. In logic and ethics, he was not less eminent than in mathematics and mechanics, as is well attested by the fragments of his works (unfortunately small and few) which have been handed down to our times, and of which the following are the titles:— "*Διατριβαὶ περὶ μαθηματικῆς ἐπιστήμης*," (discourses on mathematical science); "*Δέκα λόγοι καθολικοὶ*," (the ten categories,) otherwise called "*Περὶ παντὸς φυσικῆς*;" "*Περὶ Σοφίας*," (on wisdom); "*Περὶ Ἀρχῶν*," (on principles); "*Περὶ τοῦ Νοῦ καὶ Ἀισθήσεως*," (on the understanding and the emotions); "*Περὶ τοῦ ὄντος*," (on being); "*Περὶ Εὐδαιμονίας*," (on happiness); "*Περὶ τοῦ ἀγαθοῦ Ἀνθρώπου καὶ εὐδαιμονίας*," (of a good and happy man); "*Περὶ τῆς ἡθικῆς παιδείας*," (on moral instruction); "*Περὶ Νόμου καὶ Δικαιοσύνης*," (on law and justice.) The latest complete edition of the fragments of Archytas is that published by Oreilli at Leipzig, 1821. On the authority of Horace, (Book I., Ode 28,) Archytas is believed to have lost his life by shipwreck on the coast of Apulia.—(Diogenes Laertius, *Libri*; *Histoire des Sciences Mathématiques en Italie*.)—W. J. M. R.

ARCHYTAS OF MITYLENE, a musician, mentioned by Diogenes Laertius.

ARCHYTAS, a writer on agriculture, mentioned by Diogenes Laertius.

ARCHYTAS, an epigrammatic poet, mentioned by Diogenes Laertius.

ARCHYTAS, an architect and mechanical author, mentioned with doubt by Diogenes Laertius.

ARCIMBOLDI. A noble family of Milan, of which the most distinguished members were—

ANTONELLO, the son of Giovanni A., was born before his father entered into orders. A good Hellenist, he translated many works from the Greek, amongst which were several of the writings of St. Chrysostom. Philip II. of Spain, in 1557, created him a senator of Milan. Died in 1578.

**GIOVANNI**, born at the beginning of the fifteenth century. He embraced the ecclesiastical profession, and in 1484 was created archbishop of his native city, a dignity he resigned in favour of his brother Guido in 1488. Died at Rome in 1491.

**GIOVANNI ANGELO**, the natural son of Luigi, born at Milan in 1485, like several other members of his family attained the archepiscopal dignity. His treachery and cupidity are said to have had a great effect in forwarding the cause of the Reformation in the north of Europe. He is the author, among other works, of the now rare "Catalogus Hæreticorum," published at Milan in 1554.

**GUIDO ANTONIO**, the brother and successor in office of the foregoing, was the companion of the famous Gian Giacomo Trivulzio during his travels in Palestine. He died in 1497.

**OTTAVIANO**, born at Milan in 1471; a great linguist, and a man of much varied accomplishment. At the early age of thirty-two he was nominated archbishop of his native city, but died before his installation took place.—(Argellati, *Bibliotheca Scriptorum Mediolanensium*; Morigi, *La Nobilità di Milano*; Münter, *Danske Reformations Historie*).—S.

**ARCIMBOLDI, GIUSEPPE**, an Italian painter, a native of Milan, born in 1533, died at Prague in 1593. This artist, who was skilful in portraits, was court-painter to Maximilian II. and the Emperor Rodolph. He was fond of painting "capricci" or fancy pieces, in which the figures of men and women were resolved on close inspection into flowers and leaves; or, as in the case of a representation of agriculture, into spades, ploughs, and similar implements.—(Lanzi, Bryan).—A. M.

**ARCIONI, DANIELE**, a goldsmith of Milan, and skilful worker in *Niello*, or inlaying. He belongs to the fifteenth century.—(Lanzi's *History of Painting in Italy*.)

**ARCISZEWSKI, CHRISTOPHER**, a Polish noble, born in the latter half of the 16th century at Schmiegel, a town in the grand duchy of Posen, of which his father, ELIAS ARCISZEWSKI, was owner, and in which he officiated as a Unitarian minister. Being a man of indomitable courage, great military skill, and extraordinary scientific attainments, he was nominated governor-general of Brazil by the Dutch government, and during his tenure of that office, constructed fortresses at Pernambuco and other towns, of which he himself acted as directing engineer. The Dutch recognised his merits by striking a medal in his honour, an impression of which is now much prized by numismatists. He died at Lissa, in his native province, 1656.—S.

**ARCKENHOLTZ, JOHANN**, a native of Swedish Finland, was born in the year 1695, and died at Stockholm (where he held the office of historiographer to the king) in 1777. His works, which were all written in French, comprise "Mémoires concernant Christine Reine de Suède," in 4 vols. 4to; "Lettres sur les Lapons et les Finnois," published at Frankfort and Leipzig; "Memoires de Rusdorf, Ministre de l'Electeur Palatin," &c. &c.; "Recueil des sentiments et des propos de Gustave Adolphe," published at Stockholm. The memoirs of Christina were severely criticised by Voltaire, D'Alembert, and Holberg; to the last of whom the author replied, and is said to have silenced his objections. In his latter years Arckenholtz was much addicted to the study of the mystical views of his countryman, Swedenborg.—S.

**ARCO, ALONZO DEL**, a Spanish painter, was born at Madrid in 1625, died 1700, and was commonly known by the name of el Sordillo de Pereda, on account of his deafness, and from his being a pupil of Pereda. The most noted of his works is the Baptism of St. John, in the church of that saint at Toledo. He is reputed a good colorist, but defective as a draughtsman.

**ARCO**. Several members of an Italian family of this name have played no unimportant part in history, amongst the most remarkable of whom we mention:—

**FILIPPO**, who, as general of the imperial troops, surrendered the fortress of Neuf-Brisach to the duke of Burgundy in 1703, was accused of high treason, and beheaded in 1704.

**FILIPPO**, an active and able financier, who was born at Munich in 1757, and died at Ulm in 1805, after having filled the office of commissary-general of Suabia, in the name of Bavaria.

**FRANCESCO** reigned as duke of Sienna.

**GIAMBATTISTA GHERARDO**, born at Arco in the Tyrol in 1739, who, in political science, was very far in advance of his time. A mere enumeration of the titles of his published works will suffice to bear out this statement. The first of which mention is made, is a dissertation, entitled "Dell' Armonia politico-economica trà la città e il suo territorio," in

which is suggested the abolition of the law of primogeniture, and of the "Fidei-Commissa;" written in reply to a question proposed by the Academy of Sciences, Literature, and Arts, founded by Maria Theresa at Mantua. This dissertation was followed by others, in which the doctrines of free-trade (including that in corn) were warmly advocated, the right of free transit for goods through all states clearly set forth, and the all-important subject of religious toleration holdly discussed. The various titles of these writings will sufficiently indicate the manner in which their different subjects were treated. 1st. "Del Diritto ai Transiti;" 2d. "Dell' Influenza del Commercio Sopra i Talenti e sù i Costumi;" 3d. "Dell' Influenza dello Spirito di Commercio sull' Economia Interna dei Popoli e sulla Prosperità degli Stati;" 4th. "Dell' Annona;" 5th. "Dell' Influenza del Ghetto Nello Stato." Besides these works, Arco is the author of a treatise, entitled "Del Fondamento del Diritto di punire," and another, "De' Fondamenti e Limiti della Paterna Autorità," in which these subjects are treated with his usual lucidity. To reward his many services, Joseph II. appointed Arco governor of the duchy of Mantua, an office which he filled with equal dignity and usefulness; and during his tenure of which, he became the founder of what are now called "model-training farms," at which poor orphan children were instructed in agriculture, and fitted to become useful members of the community. Failing health obliging him to relinquish his public duties, he retired to Goito, near Mantua, where he died in 1791.—(Tipaldo, *Biografia degli Italiani illustri del secolo xviii.*; Peechio, *Storia dell' Economia Publica in Italia*).—S.

**ARCO** or **ARCHUS, NICCOLO D'**, a very elegant writer of Latin verse, was born in the year 1479, in that part of the Tyrol which at the time constituted a part of the republic of Venice. Died in 1546.

**ARCOLEO, ANTONIO**, an Italian poet, and author of several very meritorious dramas, was born in the isle of Candy in the seventeenth century.

**ARCON, JEAN-CLAUDE-ELEONORE LE MICHAUD D'**, a celebrated French engineer, born at Pontarlier, 1733; died at Auteuil, 1800. He has left several works upon military tactics and fortification.

**ARCONATUS, JEROME**, a native of Silesia, born in the year 1553; died, 1599. He embraced the profession of arms, but is more distinguished as a poet than as a soldier.

**ARCONI, CESAR D'**, a native of Gascony, lived during the middle of the 17th century. A physician by profession, he yet devoted himself much less to medicine than to the study of theological subjects, upon which he has left numerous works.

**ARCONVILLE, MARIE GENEVIEVE CHARLOTTE**, whose maiden name was d'Arlus, was one of the most learned women of whom there is any record. Besides poems, romances, and biographies, she published, anonymously, many works upon science; comprising treatises upon physics, agriculture, chemistry, botany, anatomy, &c., &c.; and left no less than seventy manuscript volumes, filled with anecdotes and observations on the society amidst which she lived. Born 1720; died 1805.—S.

**ARCOS, DON RODRIGO PONZ DE LEON**, Duke of, the incapable viceroy of Philip IV. of Spain, in Naples, was born of an old Spanish family towards the close of the sixteenth century. He held the vice-regal dignity at the time of the insurrection under the famous Massaniello, whom, it is by some writers asserted, he treacherously betrayed to death. A second insurrection breaking out shortly afterwards, a fleet under Don Juan of Austria was sent from Spain to quell the insurgents, who, however, refused to lay down their arms. Hoping thereby to appease them, Don Juan removed Arcos from office. The ex-viceroy left Naples in the month of January, 1648, after a short and disgraceful administration of the affairs of that kingdom.—(Parrino, *Teatro eroico e politico dei vicere di Napoli*; Orloff, *Memoires historiques sur le royaume de Naples*).—S.

**ARCTINUS OF MILETUS**, author of two epic poems, of which only some fragments remain. One of them recorded the exploits and fate of Meinnon, ally of the Trojans; the other was entitled "The Destruction of Troy." Flourished about 770 B.C.

**ARCUDI, ALESSANDRO TOMMASO**, an Italian Dominican, author of various satirical works, more remarkable for bitterness of censure than taste or genius, was born at Galatina, in the kingdom of Naples, in 1655, and died in 1718.

**ARCUDIUS, PETRUS**, a Roman catholic writer, born at

Corfu about 1570, was sent to Rome when ten years of age, where he was educated, and became a priest and doctor in philosophy and theology. He was sent into Poland by Pope Gregory XIV., for the purpose of trying to induce the members of the Eastern church there to submit to the papal see. He afterwards published various dissertations in Greek and Latin, to promote a reconciliation between the Eastern and Western churches. Died about 1636.—E. M.

ARCULARIUS. There have been several persons of this name, the most distinguished of whom are—DANIEL, professor of theology at Marburg, born at Hesse-Cassel, and died in 1596, author of a commentary on Isaiah and the Acts.—JOHN DANIEL, a Lutheran divine, born in 1650, grandson of the preceding, held various academic offices, and died at Frankfort-on-the-Maine in 1710. His works are little known at the present time.

ARCULF, a French bishop of the seventh century, who visited Constantinople, Egypt, and Palestine.

ARCUSSIA, CHARLES D', a French nobleman, author of an interesting work on "Falconry," was born at Provence about 1545, and died in 1617.

ARCY, PATRICK D'. See DARCY.

ARDABURIUS, two generals of the Eastern empire, the one the father and the other the son of Aspar. They lived in the fifth century.

ARDÉE, JACQUES D', a professor of theology and author of a history of the bishops of Liege, and various other works, in Latin verse, amongst which was a translation of the book of Ecclesiastes, was born at Liege, and lived during the first half of the seventeenth century.

ARDEMANS, DON TEODORO, a Spanish painter, sculptor, and architect, as well as writer on architecture and physical science, was born at Madrid in 1664, and died in 1726.

ARDEN, EDWARD, a gentleman of Warwickshire, born in 1531, executed under the reign of Elizabeth, on the charge of being concerned in a Roman catholic conspiracy against the queen.

ARDEN, RICHARD PEPPER, BARON ALVANLEY, was born at Stockport in 1745. He was called to the bar in 1769. He became solicitor-general and a member of parliament in 1782. He retired from office in April, 1783, and strenuously supported Pitt in his opposition to the coalition of North and Fox. In December he again became solicitor-general, and, in 1784, attorney-general. In 1788 he was knighted and made master of the Rolls, and, in 1801, chief justice of the Court of Common Pleas, and created a peer, with the title of Baron Alvanley. He died in 1804. He was an upright and amiable man, and a sensible and agreeable speaker.—E. M.

ARDENE, ESPRIT-JEAN DE ROME, a French poet and miscellaneous writer, born at Marseilles in 1684. After studying at Nancy, he removed to Paris in 1711, where he obtained the friendship of Racine, Fontenelle, la Fontaine, &c. Died in 1748.

ARDENE, JEAN PAUL DE ROME D', brother of the preceding, born at Marseilles in 1689, was author of several works on the management of plants.

ARDENNE, REMACLUS D', or REMACLUS ARDUENNA, author of numerous Latin poems, and secretary to the privy council of Margaret of Burgundy, born at Florennes about 1480.

ARDENTE, ALESSANDRO, an Italian painter at the court of Savoy, who died 1599. His sacred subjects and portraits, executed in the Gaudenzio Ferrari's style, are highly estimated in the histories of painting. He was a native of Faenza.

ARDERN or ARDEN, JOHN, or JOHANNES D'ARDERNE, the earliest English surgeon of great distinction, author of an interesting work on medicine and surgery, and inventor of various surgical instruments, was born at Newark in 1349, and settled in London in 1370. The date of his death is uncertain.

ARDERNE, JAMES, D.D., an English divine, chaplain in ordinary to Charles II., and dean of Chester; died 1691. He wrote "Directions concerning the Matter or Style of Sermons," and some other works.

ARDERON, W., an English writer on natural history, who contributed several papers on miscellaneous subjects to the "Philosophical Transactions," in the middle of last century.—(See *Phil. Trans.*, 1747.)

ARDICES OF CORINTH, one of the earliest Greek painters. He is reported by Pliny as having been the first to introduce shading in the monochromatic pictures then in use, by means of lines.

ARDINGELLI, NICHOLAS, a Florentine cardinal, sent by

Pope Paul III. to France, to effect a reconciliation between Charles V. and Francis I. Besides political dissertations, he published an account of his negotiations in France. Died in 1547 at the age of forty.

ARDIZZON, ANTONIO, a learned Italian, who visited Goa, and wrote various works, some in Italian and others in Portuguese. Died at Naples in 1699.

ARDIZZON, JACOBUS, a learned Veronese jurist of the fourteenth century, author of an able work on feudal law.

ARDIZZONI, FABRIZIO, a Genoese physician and medical writer of the seventeenth century.

ARDOINA, ANNA MARIA, a learned and gifted Italian poetess, daughter of the prince of Pallizo, and wife of the prince of Piombino, was born in 1672, and died in 1700.

ARDSHIR, BABEGAN, a wise and heroic sovereign of Persia, who, after a beneficent and glorious reign of forty years, died about the middle of the third century.

ARDUIN or ARDOIN, elected king of Italy on the death of the Emperor Otho III. in 1002. In 1004 he was defeated by Henry II. of Germany, who, as successor to Otho, claimed the sovereignty of Italy. Arduin was deserted by most of his adherents, and Henry was crowned king of Italy. A reaction soon took place in favour of Arduin, but part of the country continued to acknowledge the rights of Henry. In 1015 Arduin, forsaken by most of his followers, entered the monastery of Fructuaria, in the diocese of Ivrea, and assumed the habit of a monk. Here he soon afterwards died.—E. M.

ARDUINI, an Italian physician of the fifteenth century, author of a treatise on poisons.

ARDUINO, LUIGI, was born at Padua, February, 1759; died 3rd February, 1833. He became professor of rural economy in the university of Padua, and devoted his attention chiefly to agriculture. He published an Italian translation of several works on agriculture, and in the Memoirs of the Academy of Padua there are memoirs by him on the cultivation of economical plants. In 1810, when Napoleon offered a prize for the means of replacing cane sugar by some indigenous production, Arduino published a work on the extraction of sugar from *Holcus Caffier*, a kind of Guinea corn.—J. H. B.

ARDUINO, MAESTRO, a Venetian sculptor and architect of the fifteenth century. He made the design and laid the first stone of the church of San Petronio of Bologna.

ARDYS, king of Lydia, succeeded his father Gyges in 680 B.C., or, according to others, 631 B.C. He was succeeded by his son Sadyattes. He made himself master of Priene, and invaded the Milesian territory. During his reign the Cimmerians entered Lydia and took the city, but not the Acropolis, of Sardis.

AREGIO, PABLO DE, a celebrated Spanish painter, who flourished in the early part of the sixteenth century.

ARELLANO, JUAN DE, a Spanish painter, famous for his exquisite skill in painting flowers, was born at Torcaz in 1614, and died in 1676.

ARELLANO, GILLES, or ÆGIDIUS RAMIREZ DE, member of the council of Castile, president of the Inquisition, professor of law, and author of able works on antiquities and jurisprudence, lived in the early part of the seventeenth century.

ARELLIUS, a Roman painter of the time of Augustus, or immediately after. He used to give in his goddesses the portraits of living models, a practice, according to Pliny, objected to and interfered with by an act of the Roman Senatus.

AREMBERG, a noble German family, deriving its title from a town and castle near Cologne. The countship of Aremberg, in 1547, fell by marriage to the house of Ligne, and in 1576 was raised to a principality.

AREMBERG, LEOPOLD-PHILIP-KARL-JOSEPH VON LIGNE, Duke of, was born at Mons in 1690. Entering the Austrian army, he was wounded at the battle of Malplaquet when nineteen. Serving in Hungary, he received another wound at Temeswar. At the battle of Belgrade he commanded the right wing, and, by his genius and energy, contributed to the victory. In 1737 he was made a field-marshal and commander-in-chief of the army of the Netherlands. He afterwards greatly distinguished himself at Dettingen. He was an ardent cultivator of literature, and zealously patronised men of letters. Voltaire and Rousseau were his intimate friends. Died in 1754.

AREMBERG, KARL LEOPOLD VON LIGNE, Duke of, son of the preceding, became a field-marshal, and distinguished himself during the seven years' war.

AREMBERG, LUDVIC ENGELBERT VON LIGNE, Duke of, son and successor of the preceding, died at Brussels 1820.—E. M.

ARENA, ANTOINE D', a French jurist and Macaronic poet, was born near Toulon, and died in 1544.

ARENA, BARTHÉLEMY, a French republican statesman, was born in Corsica in 1775, and died at Leghorn in 1829.

ARENA, GIUSEPPE, brother of the preceding, was made commander of one of the Corsican battalions at the age of twenty-one, and became adjutant-general during the campaign in Italy. Apprehended in 1800 for participation in a plot against Napoleon, he was condemned and executed at Paris in 1802.

ARENA, GIUSEPPE, a musician, born in Naples about the beginning of the eighteenth century, who composed "Tigrane," "Achille in Sciro," "Alessandro in Persia," "Farnace," operas which were performed at Rome.

ARENA or HARENA, JACOBUS, an Italian professor of law, judge, and author of various able works on jurisprudence, flourished in the first half of the fourteenth century.

ARENALES, JOZÉ DE, a South American officer, who, after traversing a large portion of South America, published at Buenos Ayres, in 1833, an interesting account of his travels.

AREND or ARENTS, BALTHASAR, a German theologian. Died in 1687. He is author, among other works, of "Geistlicher Krieg das Himmelreich mit Gewalt zu Stürmen" (Spiritual war to storm the Kingdom of Heaven with violence), Glückstadt, 1671; and "Des Leibes und der Seelen Zustand nach dem Tode," (State of Body and Soul after Death), Glückstadt, 1776.

AREND or ARENTS, CAIUS, a German theologian, born in 1614; died in 1691. He is author of "Goldhaus Christlicher und von Gott gesegneter Ehefrauen," Glückstadt, 1666; and "Drei Schöne Amaranthen auf den Sarg, Dr. Christiani von Stöcken," Glückstadt, 1685. Caius Arend suffered considerable hardships during the troubles of the thirty years' war, and used to fortify himself with the pithy maxim:—"Geduld frisst den Teufel," (Patience eats up the devil.)

ARENDS, JAN, a Dutch painter of distinction, whose productions are mostly sea-pieces, was born at Dodrecht in 1738, and died in 1805.

ARENDS, THOMAS, a Dutch dramatic poet of some merit, who would have attained greater eminence had he trusted more to his own genius, instead of imitating French models; was born at Amsterdam in 1652, and died in 1700.

ARENDR, MARTIN FREDERIC, a Danish antiquary, celebrated for his researches in various parts of Europe, was born at Altona in 1769. Having been sent by government on a botanic mission, he visited the unexplored parts of Norway, and returned with antiquarian observations instead of plants and seeds. This lost him his public situation. Devoting himself to the study of languages and antiquities, he visited various countries, endured great hardships, and died near Venice in 1824.

ARENSBÉCK, PEDER DIERK, a distinguished Swedish classical and oriental linguist, successively professor at Strengnäs, and pastor at Stockholm. He took part in a new translation of the Bible into Swedish. Died in 1673.

ARESAS, a Pythagorean of Magna Græcia, successor to Tydas in the Pythagorean school of philosophy, and author of a work on the nature of man, of which some fragments remain.

ARESI, PAOLO, a celebrated Italian preacher and theological writer, was born at Cremona in 1574, and died in 1644.

ARESON, HANS, a native of Iceland, distinguished as a poet, was born in 1484. Having early taken holy orders, he was appointed bishop of Holum. He was forcibly ejected from his see by a neighbouring prelate, but reinstated in 1524. In 1540 he opposed the Protestant reformation, which was then spreading into Iceland, under the sanction of Frederick III. of Denmark; and finding himself unsupported by the rest of the clergy, broke out into open rebellion. After some partial successes, he was defeated at Sandafell, taken prisoner, and put to death along with his illegitimate sons, in 1550. Areson introduced the art of printing into his native country.—J. W. S.

ARESTI, FLORIANO, a musician, who was born in Bologna in the latter part of the seventeenth century, where he held the office of organist in the metropolitan church, and was a member of the Philharmonic Academy. In 1712 he went to Venice, where he died in or before 1719. He was much esteemed as a dramatic composer for the excellence of the following operas:—"Crisippo," Ferrara, 1710; "Enigma disciolto," Bologna, 1710; "La costanza in cimento con la crudeltà," Venice, 1712; "Il

trionfo di Pallade in Arcadia," Bologna, 1716.—(Fétis, Schilling.)—G. A. M.

ARETÆUS, a physician of Cappadocia, of Greek origin, who appears to have lived about A.D. 100, but of whom little is known. He belonged to the eclectic school, and was a careful observer in anatomy and physiology. He is often alleged to have distinguished the nerves of motion from those of sensation. But the nerves of motion of Aretæus were most probably the sinews or tendons, which were by the ancients in general confounded under one name with the nerves. He wrote upon leprosy, upon fevers, and the diseases of females. An edition of his works, by Ermerins, was published at Utrecht in 1847.—J. W. S.

ARETAPHILA, a woman of Cyrene, whose beauty, virtue, and patriotism are extolled by Plutarch in his book "De Mulierum Virtutibus."

ARETAS, a name common to several kings of Arabia Petraea, who lived in the 1st and 2nd centuries B.C. Of these we mention:—ARETAS I., of whom nothing is known.—ARETAS II. engaged in war with the kings of Syria, and was made tributary to the Roman empire by Pompey.—ARETAS III. (ENEAS) was confirmed in his sovereignty by Augustus, and appears to have possessed Damascus.

ARETE, a female philosopher of Cyrene, flourished towards the end of the fourth century B.C.

ARETHAS, an archbishop of Cæsarea (Cappadocia), who lived towards the end of the tenth century, and wrote a commentary on the Apocalypse.

ARETIN, CHRISTOPH, Baron von, was born in 1773 at Ingoldstadt, and died in 1834 at Munich. Devoting himself to the legal profession, he filled several important posts up till 1809, about which time his publication of a work in favour of Napoleon, entitled "Die Plane Napoleon's und seiner Gegner in Deutschland" (the Plans of Napoleon and of his Opponents in Germany), led to the loss of all the offices that he held, the principal of which was the chief librarianship in the central library of Munich. By the year 1819, however, he had attained the position of president of the appeal court of the Regenkreis. He had, in the meantime, written a variety of political works applicable to the times, and characterised by a liberal and popular spirit. His plays, "Ludwig der Baiier," and "Das Mädchen aus Zante" (Lewis the Bavarian, and the Maiden of Zante), published respectively in 1821 and 1822, have also a political tendency. His last work, completed by Rotteck, was—"Staatsrecht der Constitutionellen Monarchie," a new edition of which was published at Leipsic in 1838-39.—(*Conversations-Lex. 10ter Aufl.*)—A. M.

ARETIN, JOHANN ADAM CHRISTOPH JOSEPH, Baron von, brother of the preceding, a Bavarian diplomatist and writer, was born at Ingoldstadt on the 24th August, 1769. He was early employed in the diplomatic and administrative services, but held no very important posts in either till 1816, when he was appointed chamberlain to the king. Next year he took his seat at the Diet of Frankfort as representative of Bavaria. He died of apoplexy on the 24th August, 1822. His works are:—1. "Magazin der Bildenden Künste," 1791; 2. "Handbuch der Philosophie des Lebens," 1793; 3. "Catalogue des Estampes gravées par D. Chodowiecky," 1796; 4. "Sammlung der Baierischen Staatsverträge," 1801.—J. S., G.

ARETIN, JOHANN GEORG, Baron von, was born on the 28th April, 1771. He published a great number of works, chiefly on agricultural science.

ARETINE, FLORIANE, a composer of Bologna, who lived in the latter part of the seventeenth century.

ARETINO, ANGELO, an Italian jurist, who lived in the fifteenth century at Rome and Ferrara, and wrote a commentary on the "Institutes" of Justinian, and on the Pandects.

ARETINO or ARRETIO, BUONAGUIDA, an Italian writer on canon law, of the thirteenth century.

ARETINO, CARLO, a distinguished scholar of the noble family of Marsuppini of Arezzo, was born about 1399. His father, Gregorio, was secretary to Charles VI. of France, and governor of Genoa. Carlo received his education in Latin from the celebrated Giovanni da Ravenna, and his Greek from Emanoello Gresolora. He became intimate with Cosimo and Lorenzo di Medici. He gave public lectures in Florence, which attracted the attention of the learned, and, amongst others, of Eugenius IV. He was appointed to the chair of rhetoric in Florence, which he filled for many years; having, amongst his pupils

Benedetto Collucio, Jacopo Piccolomini, and other distinguished men. From 1441 to 1444 he became secretary to Pope Eugenius IV., on the recommendation of Lorenzo di Medici. He subsequently was made secretary to the Florentine republic, which office he filled till his death, on the 24th April, 1453, in his fifty-fourth year. Carlo Aretino is described by one of his biographers as "modest, temperate, a man of few words, of a handsome presence, thoughtful, and somewhat melancholy." Besides many orations, he translated the *Batrachomyomachia* into Latin hexameters, a performance that is highly spoken of. He also translated the "Odessey" and part of the "Iliad" into Latin, and composed several original poems in that language.—J. F. W.

ARETINO, GIOVANNI, flourished in the fifteenth century. He was surnamed TORTELLIUS. He was chamberlain to Pope Nicholas V. He wrote a book "De Potestate Literarum." It is affirmed that his learning was insignificant, and that he would never have been heard of, if he had not held an office so near the person of the pope.

ARETINO, GIOVANNI APPOLONI, a distinguished musician of the sixteenth century. Many of his madrigals have been published.

ARETINO, LEONARDO, so called because he was of Arezzo, and better known under this designation than that of his family name, Brunus or Bruni, was born about 1370. He was an able Greek scholar, and contributed much to the restoration of classical literature in Italy. He translated into Latin some of the lives of Plutarch, and the ethics of Aristotle. He composed three books of the Punic war, as a supplement to those which are wanting in Livy. He is blamed for having appropriated to himself some writings which he had only translated from the Greek of Procopius. He died at Florence in the year 1443. Gesner, in his *Bibliotheca*, gives a catalogue of his works; and it is confidently affirmed that a large collection of his MS. letters is extant in the library of the university of Oxford. In the year 1434, he was secretary to Pope Innocent VII. He had previously been appointed (in the year 1413) secretary to Pope John XXIII., and accompanied him to the council of Constance. He was frugal and conscientious in his habits; and though mixed up with the fierce schism of the popedom, he maintained his integrity to the last.—T. J.

ARETINO, PIETRO, one of the many celebrities who owe their birth and cognomen to the town of Arezzo in Italy was the natural son of Luigi Bacci, a gentleman of that town. He was born on the 20th of April, 1492. Of the earlier part of his life there is little to be commemorated, having followed the trade of a bookbinder, in which occupation he seems to have gained a knowledge of letters. Before he had attained his twentieth year he commenced writing, and amongst other publications he wrote a sonnet against indulgences, which was received with such disfavour that he was forced to fly from Arezzo to Perugia. He subsequently wandered throughout Italy for some years, and at length settled at Rome, where he attached himself first to Pope Leo X. and afterwards to Clement VII. Here he formed the acquaintance of some of the greatest men of his age; and it is said that, at a subsequent period, he was recommended for a cardinal's hat, and was very near obtaining that high distinction. During his stay at Rome, he occupied himself in the production of many of his works, the greatest portion of which are characterized by their gross licentiousness and impudent and slanderous attacks on men of rank. At length he composed sixteen sonnets upon the sixteen obscene pictures of Giulio Romano, but their grossness was so intolerable that he was obliged to fly from Rome; and placing himself under the protection of the celebrated captain of "the black band," Giovanni di Medici, he accompanied him to Milan, where he succeeded in ingratiating himself with Francis I., who gave him a costly gold chain as a mark of his regard. Pietro attempted to regain the favour of his Roman patrons, but failed by reason of an amour with one of the domestics of a high official of the pope. In 1527 he went to Venice, in which city he remained till his death. During this period he occupied himself in writing, not only licentious and satirical pieces, but also works on morality and divinity. The production of these last cannot be attributed to any sentiment of real piety: this his disgraceful life and morals, which he never abandoned, show to be impossible. He was actuated solely by the love of money, upon the acquisition of which he was mainly intent; and, indeed, one of his literary pursuits was the composition of fulsome and mean letters to great and wealthy

men soliciting pecuniary aid. In this he was singularly successful, and there were few potentates of Europe from whom he did not receive gifts or pensions. In this course of life Aretino lived to his sixty-fifth year, when, in 1555, death surprised him in the very indulgence of his libertine thoughts. He was buried in the church of St. Luca in Venice.

Time has done ample justice to the memory of this man by stripping him of the high reputation which he had unduly acquired as a man of letters, and exhibiting him to the world in his disgusting moral deformity, as impudent, sensual, gross, and profligate; one who abused and prostituted his genius to the worst purposes. That he was possessed of excellent natural abilities and of some learning is not to be denied, but he was in this last respect greatly inferior to many of his contemporaries; and the titles of "Divino" and "Flagello de' principi," by which he was known, appear to us now as if conferred rather in derision than in honour. Whether the former title was originally assumed by himself (to which his impudence was quite equal) or conferred upon him by his admirers, certain it is that he used it on all occasions, and invariably affixed it to his signature. The latter title was a piece of empty braggadocio. He had not the courage, though he had the will, to assail princes, save when they were powerless to avenge themselves, as in the case of Clement VII. He was content to satisfy his malignant nature by attacking men of genius and distinction, whose rank was not sufficiently elevated to make them formidable, or likely to mar his worldly prospects. Yet such an arrant poltroon was he, that he constantly skulked and concealed himself in dread of chastisement from those he libelled. In this he was not always successful.

The works of Aretino are enumerated and described very fully by Mazzuchelli; they are difficult to be procured, and not worth procuring. Those in prose amount to thirteen in number, his poetical compositions are sixteen; besides these, four other works are attributed to him, but without sufficient authority. His dramatic pieces alone can be considered to have much merit. Of Aretino's "Dialogues," we hesitate not to say, that but for their licentiousness and immorality, they would excite no feeling but contempt. His theological pieces exhibit gross ignorance. His poetical compositions are of unequal merit; many of them are extremely gross, others are satirical—the fit expression of his malevolent nature; and one, a tragedy in blank verse, "L'Orazia," the Abbé Ginguené speaks of in terms of very high commendation.—J. F. W.

ARETINO, RANUCCIO, lived in the fifteenth century, was apostolic secretary to Nicholas V. He was a good classical scholar, and has left some translations of Greek works into Latin.

ARETINO. See GUIDO.

ARETINUS, FRANC., a learned lawyer, who flourished at Siena in 1443, and came to Rome in the time of Sextus IV.

ARETINUS, FRANC., an excellent Greek scholar of the fifteenth century, who translated some of Chrysostom's commentaries and sermons.

ARETINUS, PAULUS, an Italian physician of the latter part of the sixteenth century, published "Responsoria Hebdomadæ Sanctæ," &c., Venice, 1567, and "Sacra Responsoria," &c., Venice, 1574. Nothing is known of his life.

ARETIUS, BENEDICT, born at Berne about 1505, was celebrated as a Swiss preacher and botanist. He was appointed in 1548 professor of logic in the university of Marbourg, but he soon relinquished that office and returned to Berne. In 1563 he became professor of languages. He was an ardent Calvinist and an able theologian. He kept up a correspondence with Conrad Gesner and other scientific men, and he prosecuted botanical science. He made frequent trips to the Swiss mountains for the purpose of herborizing, and he published an account of the flora of Stockhorn and Niessen, two mountains in the canton of Berne. He published also theological works of merit, of which the best known are his Commentary on the New Testament and his "Problemata Theologica." He wrote also on medicine and astronomy. The name of Aretia is given to a genus of primulae plants. Aretius died on 22nd April, 1574.—J. H. B.

AREUS, the name of two kings of Sparta:—AREUS I., twenty-sixth king of Sparta, succeeded his grandfather Cleomenes II. in 309 B.C., and reigned till 265 B.C., when he fell in a battle against the Macedonians.—AREUS II., grandson of Areus I., reigned as a child for eight years under the tutelage of his uncle Leonidas II., 265–256 B.C.

AREZZO, BETRICO D', an Italian poet of the fourteenth century, born either at Arezzo or Reggio. Nothing is known of his life. His poems are:—1. Two "Ballate," with the "Canzoni di Dante," 1518; 2. "Rime," at the end of Giusto de' Conti's "Bella Mano," 1750.—J. S., G.

AREZZO, CLAUDIO MARIO, a Sicilian historian and poet, lived towards the middle of the sixteenth century. He was born at Syracuse of a noble family, and attracted by his learning the notice of Charles V., whom, in the character of historiographer, he accompanied in his Italian and German wars. Some time after his return to his native city, he became the object of a conspiracy which threatened his life, and he fled into Spain. An edition of his works was published at Basle in 1544, with the title "Cl. Marii Aretii Libri aliquot, lectu non minus jucundi quam ntilis: quorum seriem versa pagina videbis; omnia non ante visa."—J. S., G.

AREZZO, DOMENICO D', a poet who lived in the end of the fourteenth century, and wrote a voluminous work, entitled "Fons Memorabilium Universi," preserved in MS. in the Vatican library at Rome.

AREZZO, FRANCESCO D', a monk of the Franciscan order, confessor to Ferdinand I., duke of Tuscany, and author of several theological works, died in 1616. His principal performance is entitled, "Summa theologiæ speculativæ et moralis, ac commentaria scholastica in tertium et quartum sententiarum librum Joannis Duns Scoti," 1581.

AREZZO, FREDERIGO D', an Italian poet, contemporary with Petrarch, who wrote two letters to him. Crescimbeni says that his style was elegant and easy, and his thoughts poetical and graceful. Several of his poems are preserved in the Vatican library at Rome.

AREZZO, GAMBINO D', a poet, who flourished about 1471, in the time of Duke Borso da Este. Amongst other works he composed a poem in two books, the first treating of the private families of Arezzo; and the second, of the distinguished men of that city, and of Italy in general. This poem is preserved in MS. in Florence. He also wrote a poem in terza rima, which he called a comedia, after the great work of Dante.—J. F. W.

AREZZO, GORELLO D' or SER GORELLO DE' SINGARDI, was a native of Arezzo, lived in the fourteenth century, and wrote the "Cronaca di Ser Gorello," a metrical history of his native town, from 1310 to 1384. This curious work is preserved in the "Rerum Italicarum Scriptores," vol. xv.

AREZZO, GUITTONE D', one of the earliest of the Italian poets, having lived about the middle of the thirteenth century. Of his birth or early history we have not much information of a reliable character. Some assert he was born at Arezzo, from which he takes his cognomen, while Mazzuchelli, on the authority of a passage in a letter of Pietro Aretino, asserts that he was a native of the territory of Lubiano. The family from which he sprang is equally a matter of dispute, but upon all hands it is agreed to have been a respectable one. He is said to have served with distinction in the wars between the Florentine republic and the Pisans, in which he was severely wounded. He then, in 1267, entered into an association of gentlemen, known as the "Fratelli Guadenti," a sort of military order established by Loderingo d'Andolo, whence he acquired the title of Fra Guittone. He subsequently founded the monastery "degli Angeli" at Florence, but died in 1294 before its completion. As a poet, Guittone deservedly ranks amongst the founders of the art in Italy, as well as one of the early formers of the pure style of Italian prose. He is not indeed the author of the sonnet, as some have asserted, but he was assuredly the first who gave it polish and regularity. Both Dante and Petrarch make mention of Guittone; the former in the Purgatorio, as a writer of amatory poetry, and again in his work, "De Vulgari Eloquentia;" but he does not form a high estimate of him. Petrarch is more favourably disposed towards him, and speaks of him approvingly both in a sonnet and in his "Trionfo d'Amore." His works are enumerated by Mazzuchelli. Most of the poems have been published in the "Antichi Poeti," Venice, 1532, and elsewhere. His prose works were collected by Bottari; Rome, 1745.—(Ginguené, Tiraboschi.)—J. F. W.

AREZZO, PAOLO D' or SCIPIONE BURALI D'AREZZO, was born at Atri, near Gaeta, 1511. After some years' brilliant success as a lawyer, during which Charles V. made him a member of the collateral council of the kingdom of Naples, a disgust for the world taking possession of him, he retired into a monastery

of the Theatine order, and devoted himself entirely to devout meditation and the discharge of pious offices. His contempt for worldly distinction seems to have been very sincere, as he successively refused not only several bishoprics which were pressed upon his acceptance, but declined the honours of the archiepiscopal see of Brindisi, to which he was called by Philip II. in 1562. His talents, however, were of such service to the church, that the pope could not allow him to remain in obscurity. He was first nominated bishop of Piacenza in 1568; two years afterwards had a cardinal's hat conferred upon him; and finally, in 1576, was compelled by the sovereign pontiff to accept the archiepiscopate of Naples—a dignity, however, which he did not live to fill, having died a few days after his appointment to it. He is chiefly remembered for his bold and successful resistance to Philip's renewed attempts to introduce the inquisition into Italy.—(Ughelli, *Italia Sacra*.)—S.

AREZZO, TOMMASO, was born at Orbitello, in Tuscany, in 1756. Having taken orders, Pope Pius VI. placed such confidence in his ability and discretion as to send him as his delegate to Russia, for the purpose of endeavouring to effect a union between the Greek and Romish churches,—a mission, the object of which was frustrated by the death of Paul I. Arezzo was summoned by Napoleon to a conference at Berlin, at which the emperor strove to inoculate him with views inimical to the interests of Rome, but without success, for immediately on his arrival in the Holy City, Arezzo betrayed his confidence to the pope, who nominated him governor of Rome during its occupation by the French in 1808. On the return of Pius VII. to the Eternal City, Arezzo was immediately promoted, with the dignity of cardinal, to many high offices; the last to which he was raised being that of vice-chancellor of the church, bestowed on him by Pius VIII. He died at Rome in 1833. His memoirs, written by himself, but never published, contain matter of much interest regarding the stirring period in which he lived. He was founder of the celebrated academy Degli Ariostei, and the restorer of the college of Jesuits, founded at Ferrara, by Ignatius Loyola.—(Arnault, *Biographie des Contemporains*.)—S.

ARFE, HENRIQUE DE, a German silversmith and sculptor, established in Spain about 1500, where he executed the tabernacles of the cathedrals of Leon, Cordova, and Toledo, all works that still retain the German style. His son ANTONIO and grandson JUAN, the latter especially, continued the same career with great success, having, however, modified the old style of the father into one of more modern character. The tabernacle of Seville, by Juan, is considered a masterpiece of taste in design, and delicacy in execution. Juan wrote, besides, a treatise on die-sinking, a branch in which he was also very proficient. Another member of the same family, JOSE DE ARFE, having studied in Italy, further enlarged his style, and executed several colossal works for the cathedral of Seville, said to have been admirable, but unfortunately lost to us. Died in 1666.—R. M.

ARFIAN, ANTONIO DE, a pupil of Luis de Vargas, and a celebrated painter both in oil and in fresco, in the latter of which he more particularly excelled,—flourished at Seville, in Spain, about the middle of the sixteenth century. He was the first who in painting bas-reliefs, by giving them a background, gave them the appearance of standing out from the canvass. His son Alonzo was also celebrated as a painter.—S.

ARGAIZ, GREGORIO DE, a Spanish monk, who lived in the 17th century, and wrote a history of the Spanish church, which was discovered to have been compiled from forged documents.

ARGALL, JOHN, a student of Christchurch, Oxford, in the latter part of Queen Mary's reign. In Elizabeth's reign he took orders, and obtained the living of Halesworth, in Suffolk. He died suddenly in 1606. He published two tracts, "De vera Penitentia," and "Introductio ad artem Dialecticam."

ARGALL, RICHARD, an English poet of little repute, who lived in the reign of James I.

ARGAND, AIMÉ, a natural philosopher and chemist, was born at Geneva about the middle of last century. He was the inventor of the lamp called by his name, which was produced while he was resident in England in the year 1782. A person named Langé pretended to have perfected his discovery, by adding to the burner a glass chimney, which, confining the air around the flame, causes it to rise above the wick, and thereby to give a much greater amount of light than it could otherwise do: although the fact appears to be, that this improvement had already been made by Argand's brother.

Langé persisting in his claim as original discoverer of this method of concentrating the light, Argand compromised the matter with him, and they jointly took out a patent for the exclusive manufacture and sale of the lamps. This monopoly excited the jealousy of the whole trade engaged in the manufacture of lamps; and the outbreak of the Revolution, by sweeping away all privileges, effectually deprived poor Argand of any advantage he might have gained from his invention. Mortified and heart-broken, he withdrew from England to Geneva, where he betook himself to the visionary science of alchemy, and died in 1803, in great poverty.—S.

ARGATHONIUS, a king of Tartessus, in Spain, who lived in the sixth century B.C., and is said to have attained a great age. Herodotus relates that the Phœceans visited Tartessus in the reign of this prince, and were kindly entertained by him. He is said to have reigned eighty years.

\* ARGELANDER, FREDERICK-WILLIAM-AUGUSTUS, a Prussian astronomer, born at Memel in 1799. This distinguished person first occupied the presidency of the observatory at Abo; from which he was translated to the chair of Bonn, where he still resides. He is of the class of the men of whom Bessel was the type on the continent, and which are represented by Airy and Robinson in our own country,—men who join mechanical tact in observing to the fullest science. Argelander's memoirs are very numerous, and of great value. We may specify his work on the "Sun's Motion of Translation," and, although of a lighter kind, an "Essay on the Zodiacal Light." His greatest work, however, is undoubtedly the "Atlas of the Stars," on an extension of which his remarkable and steady energies are now employed.—J. P. N.

ARGELLATI, FILIPPO, one of the most celebrated bibliographers of Italy, was born at Bologna in 1685, and died at Milan in 1755. Entirely devoted to the interests of literature, little is known of his uneventful life, and that little reflects less his character as an author than as the editor and publisher of other men's works. It was solely owing to his disinterested representations, that his great patron, Count Carlo Archinto, formed that society of Milanese noblemen, from whose press, called "Ædes Palatinae," issued so many valuable works. The first of these was Muratori's celebrated collection, in twenty-five vols., entitled "Rerum Italicarum Scriptores;" on the appearance of which, the Emperor Charles VI. granted Argellati an annual pension of three hundred ducats, with an honorary title of imperial secretary, to which were added an additional three hundred ducats, on the republication, at the same press, of the works of Sigonius.—(Tipaldo, *Biog. degli Ital. Illust. del Sec.*)—S.

ARGELLATI, FRANCESCO, son of the preceding, was born at Bologna 1712; died 1754. He was appointed engineer to the emperor in 1740, and seems to have been a man of considerable science. He has left works on various subjects, particularly a Decameron in imitation of Boccaccio's.—S.

— ARGENS, JEAN BAPTISTE BOYER, Marquis d', one of the shallowest and most useless of that tribe of superficial freethinkers, whom Frederick the Great congregated around him, under the pleasant fancy that they were philosophers. Born in 1704 at Aix in Provence, he had scarcely reached the condition of manhood when he ran off with an actress, to Spain. His father took the trouble to send after him: he was captured and brought home. He found refuge in the army, at that time, or even later, no great hinderance to indulgence; but on account of an injury, caused by the fall of his horse, he was obliged to leave it in 1734:—while a soldier, D'Argens was of course gallant enough. Disinherited by his father, he set to write for food: it must have been his marquisate which, even at that flat period, enabled him to extract the shabbiest dinners from sheer flimsiness like those "Jewish Letters," "Chinese Letters," "Cabalistic Letters," &c. While prince-royal, Frederick sent for him, and afterwards attached him to his court, giving him a pension of £300 a year. D'Argens still wrote on, and produced his "Philosophy of Good Sense,"—dreariest of all dreary treatises! By-and-by he eloped with another actress, and lost the favour of Frederick. It were a prostitution of the name, to designate the writings of a set of persons like D'Argens, as Philosophy: he has left nothing worth opening but his rather clever correspondence with the King. D'Argens, of course, did not believe in a God; but he believed in the Devil. He was a prey to the absurdest superstitions, having firm faith in unlucky and lucky days, and trembling from head to foot on finding himself the thirteenth guest at a dinner-table.

He must, we presume, have been of some use: it is said that he exercised his official influence with special purity. D'Argens died in Provence on 11th January, 1771. *Requiescat*—we have no desire for his reappearance or the rehabilitation of the like of him on earth!—J. P. N.

ARGENS, LUC DE BOYER, Chevalier d', a brother of the preceding, who entered the Maltese order, and died in 1772.

ARGENSOLA, BARTHOLOME LEONARDO X, a brother of Lupercio L., was born in 1566, wrote a variety of historical works, and died in 1631.

ARGENSOLA, LUPERCIO LEONARDO X, a Spanish historian and tragedian, was born in 1563, at Barbastro; studied at Saragossa; became secretary of state to the viceroy of Naples; and died in that city in 1613.

ARGENSON, VOYER D', a family of Touraine in France.

RENÉ DE VOYER, COMTE D'ARGENSON, filled various important functions under Richelieu and Mazarin. He died in 1651.

MARC RENÉ D'ARGENSON, a grandson of the preceding, became lieutenant-general of police in Paris, an office which he filled in the most admirable manner. He was afterwards made president of the council of finance, but, becoming involved in the schemes of Law, he was obliged to resign, and died in 1721.

RENÉ LOUIS, MARQUIS D'ARGENSON, was born in 1696, and distinguished himself as a political writer. His views are more in accordance with those of the present day than of his own. His work on the government of France was reprinted in 1787.

MARC PIERRE, COMTE D'ARGENSON, was born in 1696, became minister to Louis XV., and rendered the greatest services to his country in the war which was terminated by the treaty of Aix-la-Chapelle. He enjoyed the friendship of D'Alembert, Diderot, and Voltaire; and the celebrated Encyclopedia was dedicated to him. He died in 1764.

MARC ANTOINE RENÉ DE PAULMY undertook the publication of a universal library of novels, of which forty volumes only appeared. He died in 1787, governor of the arsenal.

MARC RENÉ, MARQUIS DE VOYER, was born in 1772, distinguished himself at Fontenoy, and was created a field-marshal. He died in 1782.

MARC RENÉ DE VOYER D'ARGENSON, a politician of the Revolution era, was born in 1771, and died in 1842.—J. W. S.

ARGENTA, JACOPO, of Ferrara, became painter to the court of Turin in 1561. No work by this artist remains, and Lanzi thinks he must have been an illuminator rather than a painter.

ARGENTAL, CHARLES AUGUSTIN DE FERRIOL, Count, a French diplomatist, the intimate friend of Voltaire, died in 1788.

ARGENTELLE, LOUIS MARC ANTOINE ROBILLARD D', a French botanist, who resided for a long time in India and the Mauritius. He was born in 1777, and died in 1828.

ARGENTERIO, GIOVANNI, a Piedmontese physician of the sixteenth century, who taught the medical sciences at Turin, Naples and Pisa, and everywhere appeared as an opponent of Galen. Two of his brothers, BARTOLOMÉ and GIACOMO, were likewise distinguished physicians.

ARGENTI or ARIENTI, AGOSTINO, an Italian lawyer, who was one of the earliest pastoral dramatists in the modern Italian language. He published his "Lo Sfortunato" at Venice in 1568. Died in 1576.

ARGENTI or ARIENTI, BORSO, a lawyer, afterwards an ecclesiastic, brother of the preceding, and like him, known as one of the minor poets of Italy, died in 1594.

ARGENTI, GIOVANNI, a jesuit of Modena, who was born in 1564, and died in 1629, leaving works on the state of his order in the northern and eastern parts of Europe.

ARGENTINI, STEFANO, a musician of Rimini in Italy, who lived towards the beginning of the seventeenth century.

ARGENTO, GAETANO, a jurist of Naples, was born in 1662, was raised by the Emperor Charles VI. to the rank of vice-prothonotary in 1714, and died in 1730.

ARGENTRÉ, BERTRAND D', a jurist of Bretagne, noted for his strenuous exertions for the preservation of the privileges of the feudal nobility of his native province, and his opposition to the centralizing measures of the French government. He wrote a history of his native province. Born in 1519; died in 1590.

ARGENTRÉ, CHARLES DU PLESSIS D', bishop of Tulle, and author of numerous learned and able religious and ecclesiastical works, amongst them "Collecio judiciorum de novis erroribus," &c., was born near Vitré in 1673, and died in 1740.

ARGER, PIERRE, a native of Flanders, who repeatedly

repaired to Paris to assassinate Henry IV. Detected and convicted, he was put to death on the wheel, along with his accomplice Ricodivi, in 1589.

ARGHUN KHAN, the fourth Persian king of the race of Jenghis Khan, ascended the throne in the year 1284, and reigned for six years and a half. His uncle Nikudar, whom he succeeded, had been zealously attached to the Mahomedan faith, and a cruel persecutor of the Jews and Christians. Arghun changed this policy, tolerated all religions, and rather favoured the members of these persecuted sects, elevating them to the more important offices. His first measure was to avenge the death of his father, Abaka, whom he had reason to suspect had been put to death by his uncle's favourite, Shams-ud-din. Arghun raised to the office of prime minister, a Jew named Sa'd-ud-daula, who, skilled in various languages, and in the revenues of the provinces, succeeded in working numerous reforms, and in raising the empire to a state of unexampled prosperity. Arghun died in 1291, and was succeeded by his brother Kai Khátu.—J. B.

ARGILEONIS, the mother of Brasidas the Spartan general. When complimented by strangers on the matchless valour of her son, she modestly replied: "My son was brave, but Sparta has still many citizens as good as Brasidas."—E. M.

ARGILLATA or ARGELLATA, PIETRO D' an anatomist and surgeon, who occupied the chair of logic, astrology, and medicine at Bologna, early in the 15th century, and is said to have taught the doctrines of Avicenna. He died in 1423, and left a work entitled "Chirurgiæ Libri Sex," (Venice, 1480.)

ARGOLI, ANDREA, an astronomer, born in 1568 at Tagliocozzo, in the Neapolitan province of Abruzzo, died in 1657. His writings are chiefly on mathematical subjects. A brother of his was a noted polemic; and a son of his, GIOVANNI, was a jurist, and wrote annotations on several of the classics, some of which are preserved in the Thesaurus of Grævius.

ARGONNE, NOEL, or BONAVENTURE D', a French advocate, afterwards a Carthusian monk, author of numerous able works, theological and literary, was born at Paris in 1634, and died near Rouen in 1704.

ARGOTE, JERONIMO CONTADOR D', born in Collares 1676, was one of the earliest members of the Royal Academy of History at Lisbon, and was employed by John V. of Portugal to write a history of the archiepiscopal church at Braga. He has left a work entitled "De Antiquitatibus conventus Braacarugustani Libri Quatuor, Vernaculo Latinoque Sermone Conscripti," printed in 1728. Argote died in 1749.—J. B.

ARGOTE DE MOLINA, DON GONZALO, a Spanish soldier, born at Seville in 1549, was distinguished under Philip II. in his wars against the Moors, and also for his contributions to literature. He wrote on hunting, and an account of the noble families of Andalusia. Died in 1590.

ARGOU, GABRIEL, born at Vivarais, took his oath as an advocate in the parliament of Paris in 1664, and died some time before 1710. He has left several works, the best known of which is his "Institution au Droit Français," which some have ascribed to the Abbé Fleury, with whom he was on terms of great intimacy.—J. B.

\* ARGOUT, ANTOINE-MAURICE-APOLLINAIRE, an able, upright, and laborious French statesman and financier, was born in 1784. Entering at the age of twenty the administrative service, he successively held high preferments during the empire, and after the restoration. Faithful to Charles X. till his abdication, he served under Louis Philippe with equal zeal, and subsequently to 1848 has continued to devote his great powers and experience to the public service. In 1852 he was made a senator.—E. M.

ARGUELLES, AUGUSTINE, a Spanish patriot and statesman, was born at Ribadesella, a small town in the Asturias, in 1775. He played a conspicuous part as a liberal royalist, during the revolutionary movement in Spain, and for a time was tutor to the young queen and her sister. Died 1844.

ARGUJO, ARGUIXO, or ARGUISO, JUAN DE, was born at Seville in the latter half of the sixteenth century. He was a musician as well as a poet, but is remembered now only from Lope de Vega having dedicated some of his works to him.

\* ARGYLL, DUKE OF. See CAMPBELL.

ARGYRAMMOS, ALEXANDER, a passionate lover of the ancient glory of his native country, Greece. He devoted his energies to the compilation and publication of the great Greek Lexicon, called *Κλέριος*; the first volume of which appeared in the year 1819.

ARGYROPYLUS, JOHN, a man of great learning, born at Constantinople in the beginning of the fifteenth century, came into Italy as a teacher of Greek in the year 1434. He was so prejudiced in favour of the Grecian philosophy, as to deny all merit to the Latin writers. Under the protection of the Medici, he contributed much to the revival of Greek learning, and published a translation of many of the writings of Aristotle. Died at Rome in the seventieth year of his age, about 1489.—S.

ARGYRUS, ISAAC, a Greek monk of the fourteenth century, celebrated as an astronomer. Almost all the most important libraries of Europe contain some of his writings, which have not, however, been considered of sufficient importance to be collected.

ARI or ARA, surnamed HIN FRÓDI or "The Learned," was born in Iceland in 1068. He was educated under a learned layman, named Hall Thorarinsson, whose instructions he enjoyed till Hall died, at the age of ninety-four. It is supposed that from the conversation of this sage, he acquired much of the knowledge which fitted him for becoming the earliest historian of his native island. It is said that Ari afterwards visited Germany, but this is extremely doubtful. He entered into holy orders, and died in the year 1148. Ari began a book named "Landnamabok," or, a history of the colonization of Iceland, which was completed by subsequent writers. He also wrote the "Islendinga-Bok," which is of great interest to students of the early history of that island. Snorro Sturleson, in his "Heimskringla," speaks of a work by the same author on the kings of Norway, which has however perished.—J. B.

ARIADNE, the daughter of Leo I., and successively the wife of two emperors of Constantinople, Zeno and Anastasius I., lived in the early part of the fifth century. There are conflicting accounts of the incidents of her life among various writers, but all agree that she was a woman of much talent and energy.

ARIÆUS or ARIDÆUS, one of the generals of Cyrus the younger, to whom the Persians, after the battle of Cunaxa, offered the crown. Lived about 400 B.C.

ARIALDUS, a deacon of the Milanese church, took a prominent part in the controversy concerning the celibacy of the priesthood, during the pontificates of Stephen X., Nicholas II., and Alexander II. He was put to death by order of Oliva, a niece of the archbishop of Milan, in the year 1066. Pope Alexander II. caused his name to be added to the calendar.

ARIARATHES, the name of nine kings of Cappadocia, who flourished between 370 and 36 B.C.

ARIARATHES I. was the eldest son of Ariamnes, and so loved his brother Holophernes, that he not only exalted him to the highest dignities in the state, but adopted his children as his own. On the death of Alexander the Great, Eumenes went to take possession of Cappadocia, but met with a vigorous repulse from Ariarathes, whom, however, he finally defeated and put to death, with many of his followers, 322 B.C.

ARIARATHES II., son of Holophernes. After the death of his uncle, he took refuge, with a few of his friends, in Armenia, until the death of Eumenes, when, being assisted by Ardoates, king of the country, he returned into Cappadocia, and recovered the kingdom, which he left in peace to his eldest son.

ARIARATHES III., before he succeeded to the sole possession of the throne, reigned for some years along with his father, Ariarathes II. His wife was Stratonice, a daughter of the king of Syria. He died 220 B.C.

ARIARATHES IV., while still a child, succeeded his father, 220 B.C., died 166 B.C. His wife, Antiochis, daughter of Antiochus the Great, being disappointed in her hopes of giving an heir to the throne, imposed upon her husband two supposititious sons, whom she pretended she had borne to him during his absence. Some time afterwards, becoming pregnant herself, she disclosed to Ariarathes the artifice she had practised upon him, and made him send her the elder of her supposed sons to Rome, while the younger was despatched to Ionia, that they might not dispute the succession with her legitimate children.

ARIARATHES V., surnamed Philopator, on account of his extraordinary affection for his father, succeeded to the throne 163 B.C. It was during his reign that letters were first introduced into Cappadocia. He left six sons, five of whom were put to death by their mother, Laodice. For this unnatural deed, she in her turn was killed by the exasperated populace, and the youngest child, who had been saved from the fate of his brothers by a relative of his father, was placed on the throne under the title of

**ARIARATHES VI.** He married the sister of Mithridates, king of Pontus, who caused him to be assassinated, 96 B.C.

**ARIARATHES VII.** had no sooner assumed the purple than his uncle, Mithridates Eupator, made an attempt to seize upon the royal power. Ariarathes immediately assembled an army to oppose him, when Mithridates, inviting him to a conference, slew him in the sight of both armies.

**ARIARATHES VIII.,** a younger son of the sixth king of the same name, was driven from his throne by Mithridates, shortly after his accession, and survived but a very little while.

**ARIARATHES IX.,** was, after the battle of Philippi, deposed, and put to death by Antony, 36 B.C., after a reign of only six years.—S.

**ARIAS FERNANDEZ, ANTONIO,** a celebrated painter of Spain, flourished in the seventeenth century. So precocious were his talents, that at the very early age of fourteen he was appointed to decorate the high altar of the monastery of the Carmelites at Toledo.

**ARIAS, FRANCISCO,** a Spanish jesuit of great reputation for learning and piety, was born at Seville in 1533, and died in 1605. He was intimately allied in ecclesiastical matters with the apostle of Andalusia, Juan de Avila. Two devotional works of Arias have been translated into Latin and into various modern languages.

**ARIAS, FRANCISCO GABINO,** born at Satta, in Buenos Ayres, lived at the close of the eighteenth century. Originally a soldier, he forsook the profession of arms, to devote himself to the exploration of the unknown regions of the South American continent, which through his enterprise were opened up to his countrymen. He bequeathed to his son the task of giving publicity to the account of his travels, which he had written during his various expeditions, but unfortunately they have not yet been printed. Arias died 1808.—S.

**ARIAS MONTANUS, BENEDICTUS,** editor of the Antwerp Polyglott, a Spanish ecclesiastic, was born at Frexenell in Estramadura (some say at Seville), in 1527. He studied at the university of Alcalá, entered the order of the Benedictines, and accompanied the bishop of Segovia to the council of Trent in 1562. On his return to Spain, he led a life of entire seclusion, till Philip II. selected him as editor of the projected Bible. The book was printed by Plantin, at Antwerp, in eight folios, between the years 1568 and 1573. Only four hundred copies were thrown off, and the greater part of them were lost by the wreck of the vessel which was conveying them to Spain. Like many scholars who have laboured on the text of Scripture, Montanus was ignorantly accused to the inquisitors of Rome and Spain, for tampering with the words of the sacred volume. Leo de Castro, professor of Oriental languages at Salamanca was his great antagonist, but signally failed in his charges. When Montanus, after several voyages to Rome, had successfully vindicated himself, the king offered him a bishopric, which he declined, and accepted only 2000 ducats and a royal chaplaincy. He returned again to his hermitage at Aracona, but in a short time was induced to assume the office of librarian at the Escurial—ultimately retiring to Seville, where he died in 1598. Montanus also wrote commentaries in Latin on several books of scripture, and the barbarously literal Latin version which accompanies his Polyglott was adopted by Walton, and has been often reprinted.—J. E.

**ARIBERT,** duke of Aquitaine. See **CARIBERT.**

**ARIBERT I.,** king of the Lombards, elected in 653, enjoyed a peaceful reign of nine years, the most remarkable acts of which were the expulsion of the Arians from his dominions, and the settlement of the Nicenes. Died 661.

**ARIBERT II.** succeeded his father Ragimbert, king of the Lombards, 701 A.D. He was driven from his throne by Ansprand 712; and, in despair at his evil fortunes, drowned himself in the river Ticino. During his reign he bestowed certain possessions in the Cottian Alps on the see of Rome, the history of which is involved in much obscurity, and has given rise to a great deal of controversy.—S.

**ARICI, CESARE,** a native of Brescia in Italy, was appointed under Napoleon I. one of the judges of the department of Mella, of which his native city was the chief town. He is the author of several didactic poems, on such subjects as the cultivation of the olive and the rearing of sheep. Born 1782; died 1836.

\* **ARIENTI, CARLO,** born at Milan at the beginning of this century. Studied at the Milanese academy, and at Rome. He

is one of the best historical painters of the day in Italy. He has established himself at Turin.—R. M.

**ARIENTI, CECCO,** author of a work called "Libro d'Annotazioni sopra le virtù dell' Acque e dei Bagni della Porella." Died in the year 1508.

**ARIENTI, TOMMASO,** a Bolognese physician, and author of an unpublished work, entitled "Praxis omnium morborum cum medicinis cujusque generis," was professor of surgery at Bologna towards the end of the fourteenth century. He was murdered by one of his own servants.

**ARIENTI.** See **ARGENTI.**

**ARIF-AL-HARWI, MAULANA,** from what is related of him in Daulatshah's "Lives of the Persian Poets," seems to have flourished in the early part of the fifteenth century. Very little is known of his life, but such of his works as still exist prove him to have been a man of superior genius.

**ARIGISUS** or **ARECHIS I.,** a duke of Beneventum, who reigned for fifty years from A.D. 591.

**ARIGISUS** or **ARECHIS II.,** raised to the duchy of Beneventum A.D. 758. He was the first who held the dignity of prince of Beneventum, having in 774 successfully opposed the attempt of Charlemagne to seize his territory. He was a wise prince, and is remembered as the author of a "Capitulare," or series of laws, which show great wisdom and equity.—J. B.

**ARIGNOTE OF SAMOS,** a female philosopher of the school of Pythagoras. She was reputed to be his daughter, but the only foundation for this supposition seems to be, that they were both natives of Samos, and that she was a disciple of his school. Arignote left some writings on the mysteries of Bacchus.

**ARIGONI, GIOVANNI GIACOMO,** a musician of the end of the sixteenth and beginning of the following century. The publication of his madrigals in 1623, and his "Concerti di camera," in 1635, both at Venice, gives reason to suppose that he was a resident, if not a native, of that city. Besides these printed works, he wrote many more concerti di camera, and other pieces in the madrigal style, several of which were preserved in the royal library of Copenhagen, but lost in the great fire which destroyed that institution in 1794. He is said to have had great merit in the style of music he produced, and the surname of **L'AFFETUOSO,** by which he is commonly designated, bespeaks the generally prevailing character of his compositions. He was a member of a society named Fileutera, which seems to have been regarded as a high distinction.—(Fétis, Schilling.)—G. A. M.

**ARIGONI** or **ARRIGONI, HONORIUS,** a celebrated Italian numismatist, was born at Venice in 1668. His collection of medals is one of the most perfect known. He has left an account of it in a work entitled "Numismata quædam cujusunque formæ et metalli musæi Honorii Arigonii Veneti, ad usum juventutis rei nummarie studiosi," Venice, 1741-59.—(Moscchini.)

**ARIMINO, GREGORIO,** of Rimini, general of the Augustine order, died at Vienna in the year 1358. He taught the scholastic philosophy in the university of Paris about 1307, and in 1351 was principal professor in the Augustine convent at Rimini. He was named "Doctor Authenticus."

**ARINGHI, PAOLO,** a Romish theologian, died in 1676. His principal work, on the catacombs and monuments of Rome, is named "Roma Subterranea Novissima." It is little more than a Latin translation of the work of Bosio.

**ARIOALD,** or **ARIUALD,** or **CAROALD,** was the husband or Gundaberga, sister of Adaloald, king of the Lombards, and succeeded that monarch in the year 625-6.

**ARIOBARZANES,** three kings of this name, the descendants of one of the Persians who put Smerdis the magian to death, reigned in Pontus. The first was delivered up to the king of Persia by his own son Mithridates I., who was succeeded by **ARIOBARZANES II.** in 363 B.C., mentioned with his three sons by Demosthenes as Athenian citizens. According to Diodorus, he was satrap of Phrygia, while Nepos ascribes to him also the governorship of Lydia and Ionia. The fact appears to be, that having openly rebelled against Artaxerxes II., he established for himself an independent kingdom.—**ARIOBARZANES III.** was the son of Mithridates III., whom he succeeded 266 B.C. Having ratified an alliance with the Gauls, which had been contracted by his father, they aided him in repelling the Egyptians, sent against him by Ptolemy Philadelphus; but having afterwards incurred the displeasure of his allies, they made war upon his son Mithridates IV. Ariobarzanes died 240 B.C.—S.

ARIOBARZANES, the name of three kings of Cappadocia:—ARIOBARZANES I., surnamed Philoromæus from his attachment to the cause of Rome, lived in the early part of the first century B.C. He was four times driven from his kingdom by Mithridates, and four times reinstated by the Roman arms. He finally abdicated the crown in favour of his son, 63 B.C.—ARIOBARZANES II., son of the preceding, succeeded his father, 63 B.C., though some writers date his accession to the throne a few years earlier. It was he who at his own cost rebuilt the Odeon at Athens after its destruction by Sylla.—ARIOBARZANES III., the son and successor of the foregoing, died about 42 B.C. Julius Cæsar added to his possessions, and aided him in his wars with Pharnaces II., king of Pontus.—S.

ARION, a celebrated Greek bard, who flourished about 700 B.C. He was born in Methymna, a city of Lesbos, but spent most of his days with Periander, tyrant of Corinth. Almost nothing is known of this poet; but a beautiful story, illustrative of the protection which the gods afforded to poets, has been related by Herodotus. Arion had sailed to Italy and Sicily, and having made a considerable sum of money, he wished to return. Placing most confidence in the sailors of Corinth, he hired a Corinthian ship, and set sail. The sailors, however, cast greedy eyes upon the gold of the poet, and resolved to put him to death. They told Arion their intention, and he simply requested permission to sing. So, arraying himself in the robes worn by poet-singers, and standing on the benches of the ship, he sang an air then well known, and, having finished his melody, threw himself into the sea, robed as he was. A dolphin appeared, and carried him on its back to Tænarum. He then made his way to Periander, related to him what had happened, and, on the arrival of the ship at Corinth, confronted the sailors to their utter confusion. Herodotus says that it was he who discovered and named the dithyramb.—J. D.

ARIOSTI, ATTILIO, often called PADRE ARIOSTI, was born at Bologna in 1660. He became a monk of the Dominican order; but he had so ardent a love for music, that he obtained a dispensation from the pope to enable him to retire from his holy calling, and pursue his favourite art as a profession. He then devoted himself to the practice of the violoncello and the viol d'amore, on both of which instruments, especially the latter, he obtained great proficiency. In 1696 he produced, in his native city, his one-act opera of *Dafne*, which met with the greatest success. This led to his engagement as kapellmeister in 1698 by the electress of Brandenburg, in whose suite he went to Berlin. Here he met with Handel, then a boy, to whom he gave some lessons on the harpsichord, and with whom he formed an intimate friendship. On the occasion of the marriage of his patroness, in the year 1700, he produced an opera, called "*La Festa d'Imenei*," which is said to have been a close imitation of the style of Lulli; it was coldly received. The year following he brought out another opera termed "*Atis*," in which a piece of music called the *Sinfonia Infernale*, representing the torments of the hero who is mad with love, created particular sensation; this work is said to have been as direct a copy of the style of Alessandro Scarlatti, as its predecessor was of that of Lulli, and its success was equally indifferent. Disgusted at his failure as a composer, which he attributed to the bad taste of the Germans, after a few years he threw up his appointment and returned to Italy. Here, though not more original, his music pleased better, and his operas of "*Erifile*," produced at Venice in 1706, and "*La più gloriosa fatica d'Ercole*," produced at Bologna in the same year, were received with the utmost favour. In 1708 he went to Vienna, where he wrote his opera of "*Amor tra nemici*," for the celebration of the birthday of the Emperor Joseph, but the German bad taste, as he esteemed it, was as rampant in Austria as it had been in Prussia, and the work was received accordingly. In eight years from this time he came to London, where he made the same powerful impression by his playing on the viol d'amore, that he had made in every place he had visited. After a short residence here, he returned again to Italy, to be recalled in 1721 by the invitation of the noble directors of the Royal Academy of Music. He was placed by them with Buononcini in opposition to his old friend Handel, and in the course of this contest, produced the operas of "*Ciro*," "*Muzio Scevola*," "*Coriolano*," and "*Lucio Vero*," the last two of which only were printed, and they were the only two that met with any success. He now became greatly embarrassed in his pecuniary

affairs, so, finding that Buononcini had gained the large sum of a thousand pounds by the subscription publication of some of his music, he printed a set of six cantatas, with a dedication to George I., in the hope that he might become a like gainer; but though he begged for subscribers in a most servile manner, his purpose so entirely miscarried, that he could barely pay the cost of his journey back to Bologna. The date and place of his death are not known. He wrote fifteen operas, an oratorio called "*Santa Radegonda Regina di Francia*," and many separate vocal pieces and compositions for his favourite instrument, the last of which are spoken of as possessing very superior merit. Upon the whole, it appears that his more ambitious works were deformed by a pedantic affectation, but that, when he wrote naturally, he always produced something of interest.—(Hawkins, Fétis, Schilling.)—G. A. M.

ARIOSTO, ALESSANDRO, a Bolognese monk of the order of St. Francis, who, in 1476, was sent on a mission to the Maronites of Mount Lebanon. He spent three years in Syria, and wrote a topographical description of Palestine, and his pilgrimage to Mount Sinai. Sixtus the fifth appears to have had a high opinion of him, and employed him upon ecclesiastical matters at Romagna. He wrote several other works, some only of which have been printed.—(Mazzuchelli, *Scrittori d'Italia*.)—J. F. W.

ARIOSTO, ALFONSO, a son of Gabriello, was a canon in the cathedral of Ferrara, apostolical prothonotary and chamberlain to Clement VIII. He wrote some poetical pieces, which are found in the "*Rime scelte de' Poeti Ferraresi*." He died about 1592.—(Mazzuchelli.)—J. F. W.

ARIOSTO, AZZONE, a native of Bologna, who wrote some odes, which he dedicated to Gregory XV. in 1621.—(Mazzuchelli.)

ARIOSTO, BATTISTA, the author of a work entitled "*Exhortatio ad juvenes*," the manuscript of which is preserved in the Vatican library at Rome.—(Mazzuchelli.)

ARIOSTO, FRANCESCO, was born in Ferrara early in the fifteenth century, and filled the chair of philosophy and civil law in that city. He was also employed diplomatically by dukes Borso and Ercole I. He wrote a work on the spring of Petroleum at Monte Gibbio. He died in 1492, and was buried in the church of St. Francesco, in Ferrara. His grand-nephew, the great poet, placed an inscription over his tomb.—(Mazzuchelli.)—J. F. W.

ARIOSTO, GABRIELLO, one of the brothers of Lodovico, and himself a man of considerable talent, especially in the composition of Latin poetry, a volume of which was published at Ferrara in 1582. After his death, Silio Giraldi wrote an excellent elegy upon him, in the second of his dialogues upon the poets of his time. He was a cripple from his birth, and lived in continual suffering. He died in his native town of Ferrara about the year 1552, according to Mazzuchelli. This date is probably a mistake for that of the death of his brother Galasso, and it would seem that Gabriello lived many years longer, as it is stated that his son Orazio was born in 1555. He completed the comedy of his brother, "*La Scolastica*," which the latter left unfinished.—J. F. W.

ARIOSTO, GALASSO, a brother of Lodovico, who was acquainted with most of the distinguished men of his times, his correspondence with whom is preserved. He was a man of some literary ability, and wrote a comedy. He went as ambassador of the duke of Ferrara to the court of Charles V., where he died.—(Mazzuchelli.)—J. F. W.

ARIOSTO, LODOVICO, a celebrated Italian poet, was born on the 8th September, 1474, at Reggio, near Modena, of which place his father Niccolo was governor for the duke of Ferrara. The family of Ariosto was ancient, and of respectable if not noble rank, and was connected by marriage with several princely families of Italy, amongst others with that of Este. In 1479 Niccolo left Reggio, and went to Ferrara, where he was subsequently chosen "judge of the twelve," or president of the council. Here Lodovico received his first education, and at a very early age exhibited his talents for poetry, and used to dramatise such stories as he could find for his brothers and sisters, and amongst others he composed a tragedy of "*Pyramus and Thisbe*," which they acted. His father destined him for the profession of the law, and he spent five years in the college of Ferrara, applying himself but little to the subject, but rather to general literature. His father at last abandoned the idea of the law for Lodovico, and suffered him to follow the bent of his own inclinations. Accordingly, at the age of twenty, he devoted himself

diligently to the study of the classical authors. Plautus and Terence were his first favourites, and after their example he wrote two comedies. A story is told of his father exhibiting considerable violence in some argument with him: the son was silent, but in discussion with his brother afterwards, he mentioned circumstances that showed the father's anger had arisen from his misconception of facts that could be at once explained. "And why did you not say so, and vindicate yourself?" said the brother. "The truth is," said Lodovico, "I was thinking only of a passage in my play of 'Cassaria,' in which an old man quarrels with his son; and I was watching my father for the purpose of learning how I might increase the effect of the scene." His father died when Lodovico was twenty-four years of age, and he had to struggle with the management of a small and encumbered property, being the eldest of ten children, whom, by great personal sacrifices, he maintained and portioned. Between this time and his thirty-fifth year, he wrote most of his smaller poems in Italian and Latin, and by means of them became known to the cardinal, Ippolito d'Este, who took him into his service, and employed him in several important affairs, particularly with Pope Giulio the second, all of which he conducted with skill and prudence. He now conceived the idea of writing his poem of "Orlando Furioso," by which he looked forward to surpass all those who had gone before him. This work occupied him over ten years, in the midst of all kinds of distractions and interruptions. He at length commenced the publication in 1515, and completed it the year following, in forty cantos. This poem was received with almost universal favour; one voice alone was heard in condemnation, that of the Cardinal Ippolito, who had never treated Ariosto according to his deserts. When Ariosto brought him a copy of the poem, the cardinal asked, "Where could you have found all those tomfooleries?" The cardinal, indeed, appears to have treated the poet with singular unkindness; and when going to Hungary, in 1517, whither the delicate health of Ariosto prevented his attending him, the cardinal left him in great distress. In this extremity he was fortunately relieved by Alfonso, duke of Ferrara, who made him one of his gentlemen, and, though he admitted him into terms of great familiarity, he does not appear to have done better for him than his former master. A pension was given him, charged on the produce of a certain impost; the impost was subsequently abolished, and with it went, of course, the pension, leaving the poet to struggle on as best he could. A cousin of the poet's, Count Rinaldo Ariosto, died in 1518, and Lodovico and his brothers claimed the inheritance as next of kin. He was opposed by a natural son of the deceased, and by the ducal chamber, which insisted that the property escheated to the duke. The case was decided against the poet; he appealed, and the litigation lasted for his life, and was still undetermined at the time of his death. While in office, Ariosto was sent once or twice to Florence and Urbino, and in 1522 he was appointed governor of the wild district of Garagnana, situated in the Apennines, and the scene of constant robberies and disturbances. Here he remained for three years, and seems, by his firmness, justice, and frank and kind demeanour, to have succeeded in restoring the country to a tolerable state of order; and romantic stories are told by his Italian biographers, of the respect in which he was held by the bandits of the place: one, in particular, details how he owed his life to the admiration of these lawless people for his poetry. In 1523 he declined the office of ducal ambassador to Pope Clement the seventh, and the following year resigned his government, returned to Ferrara, and resumed his attendance at court, where he became acquainted with Ercole Bentivoglio, the duke's nephew, and a poet of some consideration. The duke was fond of theatrical amusements, and appointed Ariosto director of the splendid theatre which he had built; Ariosto's were, if not the first, among the first Italian comedies in verse. The principal persons about the court acted them. Riccoboni, in his history of the Italian theatre, says that Ariosto's talent for the humorous is equally displayed in his dramatic works as in his great narrative poem. Previously to this, the poet had divided amongst his brothers the old ancestral mansion of the Ariosti, and purchased some ground and a small house, which he enlarged, and here, with his two unmarried sisters, he passed the remainder of his life. The house is still standing, having been purchased and repaired by the community of Ferrara. When asked how it was that he who had described such magnificent palaces in the Orlando, was contented to build

so simple a house for himself, he replied, "Because one can put words together with more speed and ease than stones." Alfonso took the poet with him to Bologna in 1530, on the occasion of his meeting the Emperor Charles the fifth, and also to their subsequent meeting at Mantua, two years afterwards. On this latter occasion, Ariosto presented to the emperor a last revised edition of the Orlando, in which a glowing panegyric upon Charles was introduced, and, in consequence, he received a diploma as laureate, signed by the emperor himself. The fact of his having been publicly crowned by the emperor at Mantua wants confirmation, and is discredited by the best authorities. In September, 1531, Ariosto was sent on a mission to Alfonso d'Avalos, who had entered Mantua at the head of an imperial force, with designs, as was supposed, unfriendly to the duke of Ferrara. In this the poet was successful. Alfonso being a friend of literature, was charmed with Ariosto, treated him with distinction and courtesy, and conferred a pension of one hundred golden ducats upon him. Ariosto now applied himself to the preparation of a new edition of the "Orlando Furioso," which was extended to forty-six cantos, completed in the latter end of 1532, and published by Francesco del Rosso. The labour which he bestowed on the correction of this work was so great, that it is believed to have accelerated the fatal malady with which he was shortly afterwards attacked. His health gradually declined, and at last recovery was hopeless. When death approached, he met it with fortitude and calmness, declaring to those who stood round his bed that he died contented, especially if it were true that human souls after death recognize and commune with each other in another world. He died on the 6th of June, 1553, in the fifty-ninth year of his age, and was buried without display in the church of St. Benedetto. Forty years afterwards, Agostino Mosti, who had been his pupil, erected a monument to his memory in the new church of St. Benedetto, to which he transferred the remains of the poet. The last years of Ariosto's life appear to have been happy. He was fond of gardening, and treated his trees much as he did his verses, but with less beneficial results, for while his constant pruning and care improved the latter, they generally destroyed the former. Whether Ariosto was married or not remains undetermined. The lady with whom he lived for many years, and whose name occurs in his poems, was, it may be presumed on good grounds, really his wife; but as he held a benefice which could not be filled by a married man, he may on that account have been withheld from acknowledging this relationship. He had two sons, Virginio and Gabriello. Ariosto's personal appearance is thus accurately described by Sir John Harrington:—"Tall of person, of complexion melancholy, given much to study and musing, and would therefore sometimes forget himself; he was of colour like an olive, somewhat tawny in his face, but fair-skinned otherwise; his hair was black, but he quickly grew bald; his forehead was large; his eyebrows thin; his eye a little hollow, but very full of life, and very black; his nose was large and hooked (as they say the kings of Persia were); his teeth were white; his cheeks wan; his beard thin; his neck well-proportioned; his shoulders square and well made, but stooping, as almost all that look much on books in their youth are inclined to be; his hand somewhat dry; and a little bow-legged. His counterfeit was taken by Titian, that excellent drawer, so well to the life, that a man would think it were alive." Lord Byron confirms this praise of Titian's picture by saying, "It is the portrait of poetry, and the poetry of portraits." It may safely be asserted that, in his peculiar walk, no poet has ever surpassed, if any has equalled, Ariosto. Comparisons have frequently been instituted between him and Tasso, but they present few points of similarity, and in all such Ariosto has the advantage. In one respect, too, Ariosto is superior to Tasso. The former is always easy and felicitous in his style, while the latter is often apparently laboured and difficult. This results from the fact that Ariosto's corrections were incessant, Tasso's, on the contrary, rare. No poet has blended with so much skill the serious and the amusing, the graceful and the terrific, the sublime and the familiar. No one has brought forward so great a number of personages and such a variety of diverse actions, which all, nevertheless, conduce harmoniously to the one end. No one is more poetical in his style, more varied in his tableaux, more rich in his descriptions, more faithful in his portraiture of characters and manners, more truthful, more animated, more lifelike. In addition to several satires which are equal to any in the lan-

guage, and to his dramatic pieces, he composed sonnets, canzones, &c., and several Latin poems which, though of considerable merit, are little known. The editions of the Orlando are numerous; the latest by Signor Panizzi, in 1834, is perhaps the best. It has been translated into English by many hands, the last being that of Mr. Rose.—(*Vita di Ar. Pizna—Garofalo Tiraboschio*).—J. F. W.

ARIOSTO, ORAZIO, a son of Gabriello Ariosto, was born at Ferrara in 1555. Like his uncle and father, he was possessed of poetic genius. He was a secular priest, and canon of the cathedral of Ferrara; and the intimate friend of Angelo Grillo, a poet of some celebrity. He was also a friend of Tasso, for whom he wrote the arguments prefixed to the several cantos of the "Jerusalem Delivered." On the dispute which arose between the admirers of Lodovico Ariosto and Tasso, Orazio wrote a work entitled a "Defence of the Orlando Furioso," but he exhibited in it nevertheless the greatest admiration for Tasso. He had undertaken a great poem, called "Alfio," of which he had composed sixteen cantos at the time of his death, which occurred 19th April, 1593, in his thirty-eighth year. He is said also to have written a comedy entitled "La Striga," but it was never printed.—(Mazzuchelli, *Biog. Universelle*).—J. F. W.

ARIOVISTUS or EHRENVEST, a chief of the Suevi or Swabians, who entered Gaul in the first century B.C., at the invitation of the Sequani and Averni. He soon afterwards defeated the Gauls, who had formed a league against him, and became so formidable as to alarm the Romans. He was at last defeated by Julius Cæsar, and compelled to evacuate Gaul.

ARIPHON, a Greek poet, who lived about B.C. 550, the author of a beautiful ode to Hygiea.

ARISI, FRANCESCO, a lawyer of Cremona, was born in 1657, and died in 1743, leaving a great number of works, legal, historical, and poetical.

ARISTÆNETUS, a Greek writer of the fourth century, who was a native of Nicæa in Bithynia, and a friend of the sophist Libanius. He perished in an earthquake at Nicomedia, A.D. 358. He left two books of elegant love epistles, the best edition of which is that of Boissonade, Paris, 1822.

ARISTÆNUS OF MEGALOPOLIS, was a Greek commander, who took a prominent part in the affairs of Achaia, in the time of Philopœmen, B.C. 198.

ARISTÆON, a Greek author who is known to have written a treatise on Harmony, of which a fragment only has been preserved by Stobæus.

ARISTÆUS, a sculptor of the second century before the Christian era, who executed two marble statues of the centaurs, found at Tivoli in 1746.

ARISTÆUS. Two ancient geometers were thus called. Of the first we know only the name; the second, on the other hand, stands out very boldly, and still enjoys a renown. According to Pappus, Aristæus contributed very greatly to the advancement of the higher Greek geometry. He wrote a treatise on the Conics in five books, comprehending nearly all that Apollonius subsequently included in his first four books: and, in another work, he discussed, also in five books, the difficult subject of solid Loci. Pappus places this book immediately after the Conics of Apollonius, in the course of study he recommends. Euclid seems to have cherished for Aristæus a special regard; nor are facts wanting which indicate that he had at one time been his pupil. The works of Aristæus were attempted to be restored by Viviani.—J. P. N.

ARISTAGORAS, a native of Miletus, son of Molpagoras, having been temporarily intrusted with the government of his native city, instigated the Persian satraps of Asia Minor to attempt the conquest of Naxos and the Cyclades. His advice was taken, but finding himself overlooked, he incited the Ionians to revolt, and obtained assistance from Athens. He was finally defeated, and died in Thrace about 498 B.C.—J. W. S.

ARISTAGORAS, a Greek, who lived about 350 B.C., and wrote on the geography of Egypt.

ARISTANDROS OF PAROS, a Greek brass-caster, flourishing about 410 B.C.

ARISTANDROS, a soothsayer of Lycia, who attended Alexander in his Persian expedition. He had previously been in the service of Philip, and it was he who interpreted his famous dream before Olympia gave birth to Alexander. He appears to have written a work on omens and portents; some books on agriculture have also been ascribed to him, but it is far more likely that these were written by another ARISTANDROS, whom Varro surnames "The Athenian."—J. B.

ARISTARCHUS, an Athenian, who flourished about the latter part of the Peloponnesian war, and was one of the most violent of the oligarchic party.

ARISTARCHUS, a Lacedæmonian of whom we read in the Anabasis. He succeeded Cleander as harmostes of Byzantium in 400 B.C.

ARISTARCHUS OF TEGEA, a writer of tragedy, who was cotemporary with Euripides. The whole of his seventy plays have perished, but we learn from Suidas that he was the first to introduce the cothurnus on the stage.

ARISTARCHUS OF SAMOS; a Greek astronomer with unusual claims to notice; lived about 280-264 B.C. Concerning the incidents of his life nothing of importance is known; but what we have learnt of his works establishes his title to lasting honour. He seems to have been an exact geometer, and deeply impressed with the idea that the study of the physical universe ought not to be mixed up with metaphysical speculation. The only work bearing his name that has reached us, is the one in which he determines the relative distances of the sun and moon from the earth. His method is geometrically correct, but he could not establish the requisite data with sufficient accuracy—his results were in error therefore. He had discerned also the cause of the *phases* of the moon. But undoubtedly his greatest achievement is this: first of all he discovered the true character of the system of the world, and alone really anticipated Copernicus. This memorable fact is placed beyond reach of question by Archimedes in his *Arenarius*. As the passage is a classical one in its relation to philosophical history, we think it right to reproduce the precise words of the Syracusan—*ταῦτα γὰρ ἐν ταῖς γραφομέναις παρὰ τῶν αστρολόγων διακρινόμενος Ἀρίσταρχος ὁ Σάμιος ὑποθεσίων ἐξεδωκεν γραφάς . . . ὑποτίθεται γὰρ τὰ μὲν ἀπλανῆ τῶν ἄστρον, καὶ τὸν ἄλιον μένειν ἀκίνητον τὴν δὲ γῆν περιφέρεισθαι περὶ τὸν ἄλιον κατὰ κυκλοῦ περιφέρειαν, ὅς ἐστιν ἐν μέσῳ τῷ δρόμῳ κείμενος.* Archimedes quotes from a work by Aristarchus in opposition to astrology or astrologers; but though the work is lost, there cannot be a doubt as to the meaning or authority of the latter part of the foregoing paragraph. "*He (Aristarchus) lays it down that the fixed stars and the sun are motionless; but that the earth is carried in a circular orbit around the sun, the sun being in the centre of that circle.*" Had Copernicus been acquainted with the *Arenarius* of Archimedes, which he was not, (the "Editio Princeps" not appearing until after his death), he could have claimed no originality in reference to the fundamental idea that led to the great reformation of astronomy; and it ought to be understood, that the honour of this clear geometrical anticipation, belongs to Aristarchus alone; as neither in any ancient philosophy, nor in the glosses of subsequent commentators, is there one shadow of evidence that the simple truth had ever before been suspected. Notions, indeed, did float among the ancient systems (see Plutarch's *Numa* and other such authorities), that FIRE is the centre of the universe; but this *fire* was some mythological person or substance, and had nothing to do with the sun. Take in evidence the following notices of the scheme of Philolaus. Plutarch writes as follows: "The general opinion is that the earth is at rest. Philolaus, the Pythagorean, on the contrary, assumed that it, *as well as the sun and moon*, revolve in an oblique circle around FIRE." So also Stobæus: "Philolaus admitted a double fire—one in the centre of the universe, which he named 'Host of Heaven,' 'Dwelling of Jupiter,' 'Mother of the Gods,' 'Altar,' 'Unity,' and 'Sun of all Nature;' and a second, surrounding the whole on the outside. 'The one in the midst,' he says, 'is, from its nature, the most excellent. Around it, in circular dance, move *ten* godlike bodies,—the starry sphere, and in transverse orbits the five planets, the sun, the moon, the earth, and the antipodal earth. After and within all follows FIRE, which, like a blazing star, is placed in the centre.'"—The scheme of Philolaus had reference to the supposed perfection of the Pythagorean *Δεκα* or *Ten*, and to the fancied purity and nobility of the element Fire. It partook, therefore, of the folly of all early Greek physics; while the conjecture of Aristarchus rested on the power it contained to explain actual phenomena.—J. P. N.

ARISTARCHUS, the greatest critic of antiquity, was born in Samothrace, and flourished in the reign of Ptolemy Philadelphus. He was a pupil of Aristophanes of Byzantium, a grammarian, to whom is due the credit of inventing the Greek accentual marks. He afterwards founded a grammatical or critical school, first at Alexandria, and then at Rome. He died in Cyprus, at an ad-

vanced age. It is said that he starved himself, to put an end to severe sufferings caused by dropsy. The ancient grammarians speak of Aristarchus in the highest terms of praise, and his own school worshipped him as a god. They preferred his opinion to that of any other, even though it might seem wrong. We are told by Suidas that it was said he had written upwards of eight hundred commentaries. Some modern critics have doubted whether he ever committed his criticisms to writing, basing their doubt on the following anecdote:—Some person seems to have asked the critic why, seeing that he found so much fault with Homer, he did not himself write a poem. To which question the critic replied, that he could neither write as he wished, nor wished to write as he could. He may have said this, however, and written many a critical work, provided only he wrote no work that claimed to be itself the subject of criticism. It is certain that he wrote some discussions on analogy, in opposition to Crates, his great antagonist in criticism. Aristarchus illustrated very many writers of antiquity; but his especial attention was devoted to the construction of a proper text of Homer. He seems to have made two recensions; and the notes of subsequent scholiasts appear always to refer to his text. Hence the Homer which we now have is substantially the Homer which was edited by Aristarchus. He was a man of great critical acumen, superior to most of his contemporaries in the intimate knowledge of all the niceties of the Homeric dialect; yet differing from modern critics, in exercising his own powers too freely on his author, and making his text square with what the author should have written, not with what he had written.—J. D.

ARISTARCHUS, a disciple and friend of the apostle Paul, a native of Thessalonica.

ARISTARETE, the daughter and pupil of Nearchus; according to Pliny, she painted a fine picture of Æsculapius.

ARISTEAS OF PROCONNESUS, and son of Caystrobius or Democharis, was said to be the author of an epic poem in three books, called "Arimaspeia." He is mentioned by Herodotus, from whose vague notice we may infer that Aristeas professed to have travelled as far as the Issedones, a barbarous northern nation, and to have heard among them the accounts of the one-eyed Arimaspi, and the other fabulous nations described in his epic. His history is wrapped up in myths. He was connected with the worship of Apollo, and is represented as having had power to make his soul go into and out of his body as he liked. Herodotus mentions two occasions on which he disappeared in Proconnesus; and he informs us, on the authority of the inhabitants of Metapontum, that the strange poet had turned up in that city, 340 years, according to his calculation, after his second disappearance in Proconnesus. On this occasion Aristeas informed his new friends, that he was in the habit of visiting them occasionally, but coming as he did in the company of the god Apollo, he always assumed the form of a raven. It is impossible to say at what time such a person flourished. Suidas says that, in addition to the epic, he wrote some things in prose, and that he also composed a theogony in a thousand lines. But there hangs a double uncertainty about this statement, for the text of Suidas is corrupt in this passage, and the most probable date of Aristeas assigns him to an age when prose was unknown.—J. D.

ARISTEAS, the alleged author of that ancient account of the origin of the Greek translation of the Old Testament, from which it derives its name of the Septuagint or the Seventy. He was an officer of the body-guard of Ptolemy Philadelphus, and was reputed by Philo, Josephus, and the Talmudists, to have been the author of a letter to his brother Philocrates, in which he narrated all the circumstances connected with the execution of that translation, and the effect of which was to attach a high degree of dignity, and even of supernatural authority to the work. Ludovicus de Vives was the first modern scholar who threw discredit upon the genuineness and historical authenticity of the letter. Humphrey Hody, in 1685, in his learned work, "De Bibliorum Textibus Originalibus," &c., discussed the question at full length, and is generally considered to have conclusively established the spuriousness of the work, and the fabulous character of its narrative. The letter is now universally regarded as the work of some Alexandrian Jew, who lived at a much later period.—P. L.

ARISTEAS OF CROTONA, the pupil of Pythagoras, afterwards his son-in-law, and subsequently his successor. For these facts, which contain all we know about him, we are indebted to Jamblicus.

ARISTEUS, the son of Adeimantus, was the general who

commanded the Corinthian forces at the siege of Potidæa, at the commencement of the Peloponnesian war, 432 B.C.

ARISTIDES, a Greek statuary of the fifth century B.C., much celebrated for his figures in bas-relief executed upon triumphal chariots. He is mentioned by Pausanias.

ARISTIDES, surnamed the Just, a distinguished statesman of ancient Athens, was the son of a certain Lysimachus, who appears to have been connected with some of the oldest families of the aristocracy, though he left his son no patrimony to speak of, as the latter was always remarkable for his poverty. The date of Aristides' birth cannot be assigned. He attached himself to the aristocratic party in his native state, and thus became the political antagonist of Themistocles, of whose unscrupulous schemes and bold innovations he was long the steady opponent. Aristides fought in the battle of Marathon, 490 B.C., at the head of his tribe, the Antiochis; and according to Plutarch (though Herodotus tells the story differently), it was owing to his persuasions that the tenfold command under which the army had originally been placed by the Athenians, was delegated into the hands of one individual, Miltiades,—a measure which mainly contributed to the success of the Greeks. Plutarch relates that the brunt of the engagement fell upon the tribes Leontis and Antiochis; and that, as the leader of the former was Themistocles, a favourable turn was given to the battle by the furious vigour with which the two great statesmen, warmed by a noble emulation, led on their men. The year after the battle of Marathon, Aristides was created archon, 489 B.C., and gained the honourable appellation of "The Just," by the unswerving integrity which characterised his conduct as chief magistrate. Gradually, however, the democratic policy of Themistocles, who was successfully developing the maritime power of Athens, gained the ascendancy; and about 483 B.C. Aristides was ostracised, or sent into honourable banishment for ten years. The story goes, that when the people were giving their votes on this occasion, a man who happened to be standing near Aristides, not knowing him by sight, and being himself unable to write, handed him his *ostrakon*, or earthenware voting-tablet, with the request that he would inscribe the name of Aristides on it, as that was the person he wished to see expelled from the state. "Has Aristides injured you?" asked the statesman. "No," answered this Athenian citizen, destined in all future time to serve as the type of ignorant malevolence, "I don't even know him; but I hate to hear him always called the 'The Just.'" Aristides retired to Ægina. Three years later, when the invasion of Xerxes made the presence of such an able citizen desirable, he was recalled; though it is not very clear whether the ostracism was formally reversed before or after the battle of Salamis, 480 B.C. Aristides had, at all events, a very important share in that great victory; and his conduct previously to the battle, in seeking, by a perilous night voyage from Ægina through the heart of the Persian fleet, an interview with Themistocles, in order that, by a friendly compact, they might sacrifice their private rivalries to the public good, forms one of the finest instances of political magnanimity on record. In the battle of Plataea, 479 B.C., which completed the destruction of the great invading armament of Xerxes, Aristides commanded the Athenian forces, and shared with the Spartan Pausanias, who was commander-in-chief, the honours of the victory.

Notwithstanding his conservative principles, Aristides appears to have found himself compelled, after the battle of Plataea, to put himself at the head of the reforming movement in Athens. He was the author of a decree by which all citizens were admitted to a share in the administration of public affairs, and which made any burgess, without regard to property or other qualification, eligible to the archonship.

Having been appointed colleague of Cimon, in conducting the Athenian share of the war which the confederate Greeks still continued to prosecute against Persia, Aristides recommended himself so strongly to the allies by his justice, candour, and affability, that, refusing any longer to submit to the "hegemony" of the Spartans, who had disgusted them by their arrogance and avarice, they requested him to assume the general command; thus recognizing Athens as the leading power in the confederation, 477 B.C. The Athenian statesman showed himself worthy of the confidence reposed in him. Intrusted with the delicate and difficult task of determining the contribution which each separate state was to furnish towards defraying the expenses of the war, he discharged his duties with such impartiality and

skill, that not a murmur of discontent was elicited. The locality fixed upon for the treasury of the confederacy was the island of Delos, the sacredness of which promised security; but the fund was subsequently removed to Athens itself, which became thenceforward the depository. This arbitrary act of transference was, we can have no doubt, rendered necessary by the pressure of the times, since Aristides deemed it advisable. It was the last public business of importance with which he was connected. Aristides died about 468 B.C., the third year after the ostracism of Themistocles. He had not grown wealthy in the service of the state; otherwise, though it may have been merely as a mark of respect that he was buried at the public expense, it would not have been thought necessary to portion his daughters from the public treasury, or to confer upon his son a grant of land.

Plutarch draws a parallel between Aristides and Cato the Censor; in modern history he has been not unaptly compared to George Washington. It was a high, but not an undeserved tribute of admiration which was paid to him, when once in the theatre at Athens, the entire audience turned towards him as those lines of Æschylus, in the "Seven against Thebes," were recited:—

"To be and not to seem, is this man's maxim;  
His mind reposes on its proper wisdom,  
And wants no other praise."

—A. M.

ARISTIDES or ARISTODEMUS OF THEBES, a painter of the Sicynic school, the father of Aristides and Nicomachus. He lived about 382 B.C.

ARISTIDES, the son and pupil of Aristides of Thebes, a Greek painter, living about 350 B.C. Like his father, he preferred to paint lively and passionate subjects.

ARISTIDES, a Greek painter of Thebes, scholar of Euxenidas—340 B.C. He was a contemporary of Apelles, and divided with him an admiration which assumes often the appearance of exaggeration. The most wonderful artistic powers have been attributed to him: and after making due allowance for the enthusiasm of hero-worship, enough remains to satisfy us that Aristides was a great master of his art, if not also the first who succeeded in portraying the affections of the mind. The appreciation of his works was extraordinary. His picture of an incident in the sacking of a city—the child at the breast of the bleeding mother—was sent by Alexander, when he conquered Thebes, to Pella. A battle scene between the Greeks and the Persians, containing 100 figures, was purchased by the king of Elateus, at the rate of about £27 of our money for each figure, and Attalus offered for his Bacchus 600,000 sesterces, or between four and five thousand pounds sterling. Aristides was the first foreign painter who lived at Rome. His fame is sullied by his licentiousness,—having been fully entitled to be placed among the *Πορνογράφοι* of Athenæus.—A. L.

ARISTIDES, QUINTILIANUS, a Greek writer on music, who has been elaborately proved by the internal evidence of his work, to have lived prior to Ptolemy, and to have been most likely a contemporary of Plutarch, in the reign of the Emperor Hadrian. Contrary to the general impression among learned men, that there is no direct testimony on this subject, but without giving any authority, Dr. Schilling definitely states that he was born at Adria, in Mysia, 130 B.C., and that he held an appointment as teacher of music in Smyrna. His treatise upon music, occupying twenty sheets of the collection of seven Greek musical authorities, printed by Meibomius, is esteemed the best and most complete account of the Greek system of music that exists. He states that the science of music comprises the knowledge of arithmetic, geometry, physics, and metaphysics, and that it involves not only a technical exercise, but the full comprehension of the entire nature of man. He defines the thirteen modes as reduced in number from the fifteen that were at one time in use, but he gives no account of the further reduction of the number to seven. He assigns a special character to each mode, appropriating each to the expression of a particular sentiment. He treats at great length upon rhythm, to the influence of which a large proportion of the effect of the Greek music is to be attributed. His system is said to be an attempt to combine those of Aristoxenes and Pythagoras.—(Burney, Schilling, Fétis).—G. A. M.

ARISTIDES, SAINT, OF ATHENS, lived in the beginning of the second century, and is noted as the author of the most ancient apology for Christianity. It was presented in the year 125 to the Emperor Hadrian, and is cited by Eusebius and Jerome.

ARISTIDES, ÆLIUS, a Greek sophist, flourished about the year 176. He enjoyed a great reputation in his day, and has left fifty-five discourses (including those discovered by Mai and Morelli), most of them marked with vigour, but deficient in grace; nor can it be said that they confirm the suffrages of the ancients, who compared the author to Demosthenes. Two of his discourses, the fifth and sixth, are curious, as affording us the first indications of animal magnetism. His account would pass for a mesmeric exhibition of the nineteenth century. He says he fell periodically into a state of spontaneous somnambulism, when, being under the inspiration of Æsculapius, he prescribed with a loud voice, before many witnesses, medicines to be administered to himself, different from those recommended by his physicians. First edition by Euprosinus Boninus, Florence, 1517; later, Leipzig, 1829, 3 vols.—A. L.

ARISTIDES OF MILETUS, a very early Greek author, the first writer of tales of fiction. His chief work is named "Milesian," and is noted for its licentiousness.—Another ARISTIDES of Miletus, wrongly confounded with this writer, is referred to by Plutarch. He wrote historical works on Sicilian and Italian affairs.

ARISTILLUS, two brothers, both good astronomers. The younger commented on Aratus; the former laboured at Alexandria, and seems to have been the first to refer the places of the fixed stars to the zodiac. Ptolemy has recorded a high opinion of Aristillus.

ARISTION, a Greek philosopher, of the century before Christ. Aristion was a citizen of Athens, though born of a slave-mother; and he studied philosophy with the view of aiding his political ambition. Having been sent on a deputation to Mithridates, he contrived, by resigning himself as an instrument into the hands of that monarch, to buy his support by the sale of the relics of his country's independence. On his return to Athens, he prevailed upon the citizens, by praises of his patron, to prefer the protection of the Eastern monarch to the domination of the Romans; and thus getting himself named prætor, he subjugated his countrymen to a yoke as odious as it was unjust. His tyranny was as usual accompanied by debauchery. To add to the misery of a situation sufficiently complicated by evils, Sylla appeared before the city, and a famine commenced its desolation within. In the end, the tyrant and his accomplices were slain by the Romans in the acropolis.—A. L.

ARISTIPPUS, a native of Cyrene, in Africa, where his father was rich and influential, rendered himself famous in Greece for having founded a new school of philosophy, remarkable for its paradoxes even among the most paradoxical people of the world. While yet young, he was sent by his father to Athens, where, having become one of the pupils of Socrates, he was bold enough to dissent from the opinions of his great master. He subsequently figured at the court of Dionysius of Syracuse, where his love of pleasure endeared him to the tyrant; and his fine raillery, directed against the aspiring and mystical philosophy of Plato and his other associates, brought out in relief the sensualism of his own. His life was that of a rich man courting the world and its pleasures, and yet sacrificing at the sacred shrine of philosophy. But this philosophy of his, if it deserves the name, was merely the handmaid of his sensualism; his love of the Corinthian Lais, and his devotion to all forms of luxury, being only a tenet of his creed. He believed in nothing but the intimations of the senses, declaring our notion of truth to be a delicate internal touch, which may be different in different individuals, and thus independent of any standard of a moral rule. The result of such a scheme was, and could only be, that the senses, under the guidance of a very indulgent reason, are of use to man just in so far as they are the ministers of his pleasure. The school was continued under his daughter Arete. He flourished about the year 370 B.C.—A. L.

ARISTIPPUS THE YOUNGER, a Greek philosopher, grandson of the preceding, lived about the year 364 B.C.

ARISTIPPUS, tyrant of Argos, lived about the middle of the third century B.C.

ARISTO, TITUS, a Roman lawyer of the first century, wrote notes on Cassius, who had been his master, on Sabinus, and on the "Libri Posteriores" of Labeo.

ARISTO. See ARISTON.

ARISTOBULUS OF CASSANDRIA, in Macedonia, a Greek historian of the fourth century B.C., was one of the generals of Alexander the Great, and took part in several expeditions, of

which he left an account. Only a few fragments of his work have reached us.

**ARISTOBULUS THE JEW**, a Greek peripatetic philosopher, flourished under Ptolemy VI., Philometor, about the year 150 B.C. A number of interpolations in ancient authors, intended to show that they were acquainted with the books of Moses, are attributed to Aristobulus.

**ARISTOBULUS I.**, king of the Jews 105 B.C., was the eldest son of John Hyrcanus, prince of that people. His mother having refused to relinquish the government which had been left to her, Aristobulus threw her into prison, where she died of hunger; and he not only took the reins into his own hands, but even assumed the regal title. Syria at this time being in a state of great distraction, he turned his arms against it, and subdued Iturea, giving to the inhabitants the option of either quitting their country, or of submitting to circumcision, and being incorporated with the Jewish nation. Being obliged by sickness to return to Jerusalem before the close of the campaign, he left the conquest to be completed by Antigonos, his brother. Through false representations made by the enemies of Antigonos, Aristobulus was led to believe that he aspired to the crown, and commanded him to be put to death. After this he suffered severely from remorse, which aggravated his bodily malady, and he died of hæmorrhage, after having reigned one year.—W. L.

**ARISTOBULUS II.**, son of Alexander Jannæus, king of the Jews, and of Alexandra, queen of the Jews, and grandson of John Hyrcanus, the prince, disputed the succession with his elder brother Hyrcanus, and, having vanquished him, became king in the year 69 B.C. He made every effort to induce the Romans to recognize his title; but as similar applications were made on the part of Hyrcanus, he was not successful. With considerable difficulty he maintained his position for several years, until, having provoked Pompey, by preparing for war while his case was under consideration, the Roman general marched against Jerusalem, and took it. Before the capture of the city, Aristobulus tendered his submission in person, and was detained. He was one of the captive princes who graced the triumph of Pompey; and although most of the others were, with unwonted clemency, sent home to their several countries, he was kept in custody, from a fear that he would excite disturbances in Judea. After a time, however, he made his escape, collected an army, marched to Machærus, and repaired its fortifications; but he was defeated by Lisenna, and, being taken captive, was sent a second time as a prisoner to Rome. At length he was set at liberty by Cæsar, with the view of being employed in Syria against Scipio, the friend of Pompey; but on his way thither he was poisoned by some of the adherents of Pompey.—W. L.

**ARISTOBULUS**, grandson of Hyrcanus II., and brother of Mariamne, Herod's wife, was advanced by Herod, at the age of seventeen, to the office of high-priest. This appointment was made in consequence of the earnest entreaties of Mariamne and her mother Alexandra to Cleopatra and Antony, who constrained the Jewish king, contrary to his own wishes, to depose Ananel, and to put Aristobulus in his place. But though he thus yielded to circumstances, he was determined to be avenged. Aware of her danger, Alexandra prepared one coffin for herself and another for her son, in which they were to be carried to the sea-coast by night, with the view of escaping to Egypt. The stratagem, however, was disclosed to Herod, and Aristobulus and his mother were seized. Afraid to proceed openly against them, yet jealous of the increasing popularity and Asmonean descent of the young high-priest, he proposed to Alexandra, while visiting her at Jericho, a pleasure excursion, and going into a lake with Aristobulus to bathe, he gave instructions to his servants to drown him. Under pretence of aiding him, they continued plunging him till life was extinct.—W. L.

**ARISTOBULUS**, a son of Herod the Great and of Mariamne, put to death at Sebaste by order of his father.

**ARISTOBULUS THE YOUNGER**, a grandson of Herod the Great.

**ARISTOBULUS**, son of Herod king of Chalcis, and great-grandson of Herod the Great, lived towards the end of the first century, and was made king of Armenia by Nero.

**ARISTOCLES**. Several Greek artists bore this name; we notice:—**ARISTOCLES** of Cydonia, one of the earliest Greek sculptors, probably lived before 500 B.C. Pausanias quotes a group of Hercules fighting an Amazon, as the work of this sculptor.—**ARISTOCLES** of Sicyon, the brother and pupil of

Canachus, was a Greek carver in wood, and a brass-caster, living about 490 B.C.—**ARISTOCLES**, a Greek painter, living about 429 B.C., who, according to Pliny, decorated the temple of Apollo at Delphi.—**ARISTOCLES**, the son and pupil of Nicomachus, a Greek painter of the Sicyonic school. He flourished about 326 B.C.—**ARISTOCLES**, the son and pupil of Cleætas, a Greek toreutic sculptor of the Athenian school of Phidias.—R. M.

**ARISTOCLES**, a name borne by several philosophers and literati of Greece, amongst whom may be mentioned, **ARISTOCLES** of Lampsacus, a stoic; **ARISTOCLES** of Rhodes, the contemporary of Strabo; **ARISTOCLES** of Pergamus, a peripatetic, who lived in the reign of Trajan; **ARISTOCLES** of Messene, of the same sect, who flourished under Septimius Severus; and **ARISTOCLES**, a Greek physician of the first century, whose writings have perished.

**ARISTOCRATES I.** and **II.**, two kings of Arcadia; the former of whom reigned in the eighth century B.C., and the latter led the Arcadians against the Spartans in the second Messenian war; but having been guilty of treachery to his country, was stoned to death about 668 B.C.

**ARISTOCRATES**: amongst others worthy of note who bore this name we mention—**ARISTOCRATES**, an Athenian, against whom Demosthenes delivered an oration.—**ARISTOCRATES**, the son of Scellias, one of the Athenian generals condemned to death after the battle of Arginusæ.—**ARISTOCRATES**, a Greek historian of the second century B.C., who wrote a history of Laconia.—**ARISTOCRATES**, a Greek physician of the first century.

**ARISTODEMUS**: of the famous men who bore this name we notice—**ARISTODEMUS**, the first Heraclid king of Sparta.—**ARISTODEMUS**, a king of Messenia, who died in 723 B.C., distinguished himself in the war against Sparta, and sacrificed his daughter to save the Messenian state.—**ARISTODEMUS, MALAKOS**, of Cumæ, was the contemporary and friend of Tarquinius Superbus, and died at his court 496 B.C.—**ARISTODEMUS**, one of the Spartan host who made Thermopylæ immortal. For some reason he was absent when the conflict took place, and was, therefore, branded as "the Coward"—till he fell at Plataea, fighting bravely to wipe away the stain, 479 B.C.—**ARISTODEMUS**, a tragic actor of Athens, lived about 340 B.C., and was a leading man amongst the Macedonian party.—**ARISTODEMUS** of Miletus, a general in the employ of Antigonos, lived about 315 B.C., and was employed in the war against Cassander.—**ARISTODEMUS** of Nysa lived about 50 B.C., and taught rhetoric at Rome.—Another **ARISTODEMUS** of Nysa, a Greek grammarian, flourished about B.C. 30.—**ARISTODEMUS** was the name of several Greek authors, one of whom wrote a collection of fables, another a history of inventions, and a third commented upon Plato.—J. W. S.

**ARISTODEMUS** was also the name of three Greek artists:—a painter of Thebes of the fourth century B.C. (see **ARISTIDES**), a sculptor of the age of Alexander the Great, and a painter of Caria, of the time of Nero.

**ARISTOGITON**, an Athenian orator, who lived about 340 B.C.; the rival of Demosthenes.

**ARISTOGITON OF THEBES**, a Greek brass-caster, who worked with Hypatodorns for the temple of Apollo at Delphi, about 420 B.C.

**ARISTOLAUS**, the son and pupil of Pausias, a celebrated Greek painter, who lived about 330 B.C.

**ARISTOMACHUS**, a peripatetic philosopher of Cilicia, of the third century B.C., who studied the natural history of bees.

**ARISTOMEDES OF THEBES**, one of the first Greek sculptors who worked in marble. He executed, with Socrates, about 490 B.C., a statue of Cybele in Pentelic marble, mentioned by Pausanias.

**ARISTOMEDON**, a brass-caster of Argos, about 490 B.C.

**ARISTOMENES**, the leader of the Messenians in their second war of independence against the Spartans, memorable for his valour, his military skill, and his wonderful adventures.

**ARISTOMENES**, a comic poet of Athens, lived about 425 B.C.

**ARISTON**. Under this name we notice—**ARISTON**, a king of Sparta, who came to the throne about 560 B.C., and reigned for fifty years.—**ARISTON**, a Greek physician of the fifth century B.C., supposed to be the author of a work on diet.—**ARISTON** of Megalopolis, an Achæan statesman of the second century B.C.—**ARISTON** of Corinth, a pilot in the Syracusan service, who suggested a stratagem by which the inhabitants of that city overcame the Athenian fleet, 414 B.C.—**ARISTON** of Cyrene, lived about 403 B.C., and headed the democratic party in a civil

war in his native state.—ARISTON of Chios, a stoic philosopher, who lived about 275 B.C.—ARISTON, a peripatetic philosopher of Ceos, lived about 230 B.C.—ARISTON of Tyre, a friend of Hannibal during his exile in Asia, lived about 200 B.C.—ARISTON of Alexandria, a peripatetic philosopher, who lived about 30 B.C.—ARISTON of Pella, a Greek author of the first century.—ARISTON, a Greek traveller, who explored the eastern coast of Africa at the command of the Ptolemies.

ARISTON, the son and pupil of Aristides of Thebes. His works were impressed with the same tendency towards exaggeration that characterized the school of his father. A "Satyr with a cup," by this artist, is recorded by Pliny. He was the master of Euphranor. Lived about 330 B.C.—R. M.

ARISTON OF SPARTA, a sculptor in metals, who, with his brother Teletas, executed the colossal statue of Jupiter, presented by the Cleitorians to the temple of Olympia.

ARISTONICUS. Under this name we notice—ARISTONICUS of Marathon, an Athenian orator of the anti-Macedonian party, put to death by Antipater in 322 B.C.—ARISTONICUS of Tarentum, an ancient writer on mythology.—ARISTONICUS, an illegitimate son of Eumenes II. of Pergamus, engaged in an unsuccessful war against the Romans, and put to death in 129 B.C.—ARISTONICUS, an Alexandrian grammarian, the contemporary of Strabo, who wrote pedantic notes on the Homeric poems.

ARISTONIDAS, a Greek sculptor, who excelled in the manipulation of castings. Pliny makes especial mention of a statue of Athamas at Thebes, in which this artist, by the mixture of the metals employed, succeeded in giving the appearance of blushing. No precise date is known about Aristonidas.—R. M.

ARISTONIMUS, a Greek poet who succeeded Apollonius as curator of the Alexandrian library.

ARISTONUS, a Greek sculptor of the Æginetan school, was the author of a statue of Jupiter presented by the Metapontians to the temple of Olympia. Date uncertain; probably 475 B.C.

ARISTOPHANES, a celebrated comic writer, and citizen of Athens, who was born about the year B.C. 444. He is the only author of the school of old Greek comedy, whose plays are extant. His father's name was Philip, and he belonged to the tribe Pandionis and the Cydathenæon demos. It is difficult to understand the relation in which he stood to the spirit of the age in which he lived, or to compare him with modern writers. If the best papers of the *Tatler* and *Spectator* may be justly compared to the "lost comedies of Menander," the plays of Aristophanes exhibit such a compound of caricature, farce, broad satire, and noble sentiments, served up with a condiment of fun, as reminds us, though presented in a different form, of the wittiest portions of the weekly serial "Punch," and the sketches of Gilray and Doyle. His writings have been called a continued political farce; and the expression is just, if we interpret the word *political* in the sense of including the caricature of the actual state of public affairs, with so much of private life as could not be separated from that which is public. A public tribunal of character is an actual necessity where a popular government exists; and in the times of Aristophanes, when the press had not been invented, no other tribunal could exist but the theatre. He is said to have been a pupil of Prodicus—a statement which some have doubted, as he speaks of him slightly. The distinguished merits of his comedies excited so much envy against him, that Cleon, an Athenian demagogue, whom he had lashed without mercy, contested his right to be accounted a citizen of Athens; and because he had an estate in Ægina, his enemies endeavoured to represent him as a stranger. Plato speaks of him as voluptuous in private life, and as spending whole nights in brilliant conviviality. The character given of him in Rymer's *Short View of Tragedy* is terse and forcible. He is described as "appearing in his function a man of wonderful zeal for virtue and the good of his country, laying about him with undaunted resolution for his faith and religion." In pursuance of this design he attacked the Peloponnesian war, attributing it to Pericles, and to the influence exercised over that statesman by the Hetaira Aspasia. In this fatal war he finds the source of the mischievous influence of such coarse demagogues as Cleon. Nor did the corruptions introduced into the system of public education at Athens by the teaching of the sophists escape the severity of his rebuke. He laughed to scorn their efforts to substitute opinion for truth, to make the arts of persuasion the object of conversation and mutual intercourse, and to introduce everywhere a dreary scepticism in matters of religion. He inveighed with equal vigour
