Edgerton, Alonzo J., jurist, born in Rome, N. Y., June 7, 1827; died in Sioux Falls, S. D., Aug. 9, 1896. He was graduated at Wesleyan University in 1850; studied law and was admitted to the bar; and removed to Dodge County, Minn., to practice in 1855. In 1858-'60 he was a member of the State Senate, and in 1862 entered the National army as a captain in the 10th Minnesota Infantry. He was promoted colonel of the 65th United States Colored Infantry in 1864, brevetted brigadier general in 1866, and was mustered out of the volunteer service in 1867. While serving with his last command at Baton Rouge, La., he was also provost marshal. In 1871-'74 he was State Railroad Commissioner; in 1876 a Republican presidential elector; in 1877-'78 a State Senator; and in 1878 was appointed a regent of the State University. When, in March, 1881, President Garfield appointed United States Senator William Windom Secretary of the Treasury, Gov. Pillsbury appointed Gen. Edgerton to succeed Mr. Windom till the Legislature elected a successor, Mr. Windom resigned the office of Secretary in November following, and was elected his own successor in the Senate. Gen. Edgerton withdrawing from the contest for the permanent seat in Mr. Windom's favor. In the following month President Arthur appointed Gen. Edgerton Chief Justice of the Territory of Dakota. He was president of both Constitutional Conventions of South Dakota, and an unsuccessful candidate for the United States Senate from the new State under the constitutions of 1885-'86 and 1889. In the last year President Harrison appointed him judge of the United States District Court for South Dakota. He was the author of "Railroad Laws of Minnesota" (1872).

English, William Hayden, capitalist, born in Lexington, Ind., Aug. 27, 1822; died in Indianapolis, Ind., Feb. 7, 1896. He received a collegiate education and studied law. In 1843 he was elected clerk of the Indiana House of Representatives; in 1850, clerk of the State Constitutional Convention; and in 1852, Speaker of the first Legislature under the new Constitution, and also a member of Congress. To the last body he was thrice re-elected, serving till 1861 and holding the chairmanship of the Committee on Post Offices and Post Roads. While in Congress he became a regent of the Smithsonian Institution. His most distinguished service in Congress was performed as a member of the Committee on Territories and in connection with the contention over the admission of Kansas, in which he opposed the policy of his own party. From the Committee of Conference Mr. English reported what was known as the "English bill," which provided that the question of admission under the Leecompton Constitution be referred back to the people of Kansas. This was adopted, and Kansas voted against admission under that Constitution. Mr. English, while willing to make concessions to the South, was staunchly opposed to secession, and

warned the Southern members that the North would never follow them in such a movement, and that he and his constituents would "keep step to the music of the Union." At the close of his fourth term in Congress, he retired to private life. In 1863 he organized the First National Bank in Indianapolis, and was its president from its organization till 1877. During this period he also became identified with numerous railroad interests, and acquired a large fortune. In 1880 he was nominated for Vice-President on the ticket with Gen. Hancock. Mr. English was President of the Indiana Historical Society for many years; published an historical and biographical work on the Constitution and lawmakers of his State (1887); and bequeathed funds to the society for the completion and publication of a "History of Indiana," which he had undertaken.

Eunson, Robert Groat, engineer, born in the Orkney Islands about 1806; died in New York city, May 30, 1896. He studied engineering in Edinburgh, Scotland, and about 1831 removed to New York city, where he resided almost continuously till his death. While in Edinburgh he acquired the training that fitted him for his later work as an expert in the construction of marine engines. He made the model of the "Monitor" from Capt. Ericsson's rough drawings, was consulting engineer in its construction, and with its engineer arranged the machinery in it. Mr. Eunson invented many devices and improvements that are now seen in marine engines, including improved surface condensers, cut-offs, couplings, and governor valves.

Ewing, Thomas, lawyer, born in Lancaster, Ohio, Aug. 7, 1829; died in New York city, Jan. 21, 1896. He was the second son of United States Senator Thomas Ewing, and was graduated at Brown University in 1854, and at the Cincinnati Law School in 1855. Prior to going to college he was private secretary to President Taylor for about a year. In 1856 he removed to Leavenworth, Kan., to practice, and there was successful in his profession and became a conspicuous Republican leader. He was a member of the Leavenworth Constitutional Convention in 1858, Kansas delegate to the Peace Conference in 1860, and Chief Justice of the State Supreme Court in 1861-'62. In September, 1862, he resigned the office of Chief Justice and organized the 11th Kansas infantry, of which he was commissioned colonel. He commanded his regiment in the battles of Fort Wayne and Kane Hill, and a brigade at Prairie Grove, and was promoted brigadier general for gallantry in the last battle, March 13, 1863. During 1863 and 1864 he was at various times in command of Kansas, western Missouri, and the St. Louis district. At Pilot Knob, Sept. 28, 1864, with only 1,000 men, he checked the invasion of Missouri by withstanding repeated assaults by the Confederates under Gen. Sterling Price. At the close of the war he was brevetted major general of volunteers for meritorious services. He practiced law in Washington, D. C., till 1871, then returned to Lancaster; was a member of the State Constitutional Convention in 1873 and 1874, and was elected to Congress in 1876 and 1878. In that body he prepared the bill for the establishment of a bureau of labor statistics, opposed the employment of Federal troops at the polls, and advocated the remonetization of silver and the retention of the greenbacks. He withdrew from the Republican party in 1868. He was defeated for United States Senator in 1878, and for Governor of Ohio in 1879, both times as the Democratic candidate. Since 1882 he had practiced law in New York city.

Fairchild, Lucius, military officer, born in Kent, Ohio, Dec. 27, 1831; died in Madison, Wis., May 23, 1896. He studied at Carroll College, Waukesha, Wis., and when fifteen years old he accompanied his

family to Wisconsin, settling in Madison. Three years afterward he joined a party bound for the newly discovered gold field in California, and with an ox team crossed the plains. He there spent six years working in and about the mines, and was elected a delegate to a convention to nominate a candidate for Governor. In 1855 he returned to Madison without having materially improved his financial condition, and studied law. He was elected clerk of the circuit court in 1858, and was admitted to the bar in 1860. At the beginning of the civil war he entered the National service as a captain in the 1st Wisconsin Regiment, and at the expiration of the three months' term he was, in August, 1861, commissioned a captain

in the 16th Regiment of the regular army, and major of the 2d Wisconsin Infantry. After accepting both appointments he was the first regular army officer who was given leave to serve in the volunteer army. His Wisconsin regiment was attached to the famous "Iron Brigade," and at the battle of Bull Run he commanded both the 2d and 7th Regiments. In August, 1862, he was promoted colonel of the 2d Regiment, and at the battle of Antietam in the following month he left a sick bed to take command, and lost more than half of his regiment. At Gettysburg he lost his left arm while leading a charge, and on Oct. 19, 1863, he was promoted brigadier general. In the following month he was elected Secretary of State of Wisconsin, and resigned his commission in the army. He was elected Governor of Wisconsin in 1865, 1867, and 1869, the only Governor of that State who served more than two terms. During his tenure of office he was a founder of the State Board of Charities and Reform. In 1872 he was appointed United States consul at Liverpool, whence he was transferred to the post of consul general at Paris in 1878. After two years' service in Paris he was made United States minister to Spain, resigning the office and returning to Madison in 1882. In 1883 he was President of the International Exposition of Railway Appliances in Chicago; in 1886 was elected commander in chief of the Grand Army of the Republic, and in 1894 commander-in-chief of the military Order of the Loyal Legion.

Felch, Alpheus, jurist, born in Limerick, Me., Sept. 28, 1806; died in Ann Arbor, Mich., June 13, 1896. He was graduated at Bowdoin College in 1827, and admitted to the bar in Bangor in 1830; removed to Monroe, Mich., in 1833, and had resided at Ann Arbor since 1843. In 1835-'37 he was a member of the Michigan Legislature; in 1838-'39 was one of the State bank commissioners, and was conspicuous in exposing frauds under the banking law; in 1842 was Auditor General of the State for a short time, and in 1842-'46 was a judge of the State Supreme Court. While on the bench he was elected Governor of the State, and before the expiration of his term of office he was elected United States Senator. He served in the Senate from 1847 till 1853, and during the greater part of that time he was chairman of the Committee on Public Lands. At the expiration of his term he was appointed a member of the commission to settle Spanish and Mexican claims under the treaty of Guadalupe Hidalgo, and of this body he was chosen president. The commission spent three years in the work, and its reports, which contained many novel and important deci-

sions, filled 40 large volumes. Judge Felch afterward engaged in private practice till 1873, and from 1879 till 1883 was Professor of Law in the University of Michigan.

Ferris, George W., engineer, born in Galesburg, Ill., Feb. 14, 1859; died in Pittsburg, Pa., Nov. 22, 1896. He passed his early life and was educated in Carson City, Nev., and San Francisco, Cal.; was graduated at Rensselaer Polytechnic Institute in 1881; and was first employed in locating mines and railroads in West Virginia. Subsequently he became an engineer in a bridge-building company in Louisville, Ky. In 1892 he was sent to Pittsburg, Pa., to inspect the structural work for the Louisville and Nashville Railroad bridge at Henderson, Ky. While on this duty he conceived the idea of the gigantic revolving wheel, which was one of the great mechanical attractions of the World's Columbian Exposition. On the completion of his bridge work he retired from the Louisville company, organized the mechanical engineering firm of G. W. Ferris & Co., and, despite the opposition of his partners, constructed the wheel in Pittsburg and superintended its erection in Chicago. The wheel had a capacity of over 1,000 passengers, and during the Exposition many thousands of persons made the revolution in it without accident.

Ferry, Thomas White, legislator, born in Mackinac, Mich., June 1, 1827; died in Grand Haven, Mich., Oct. 14, 1896. He acquired large wealth in lumbering, milling, and mercantile business. In 1850 he was elected to the State House of Representatives, where he served six years, and in 1856 to the State Senate. In 1864, 1866, 1868, and 1870 he was elected to Congress from the 4th Michigan District, but did not take his seat in the fourth term, having been subsequently elected to the United States Senate. He entered the Senate March 4, 1871, and served till March 3, 1883, being defeated for a third term by Thomas W. Palmer. While in the Senate, as chairman of the Committee on Rules, he reported a reclassification and revision of the rules of that body, which were adopted unanimously and without amendment; and he was a member of the special committee that framed the resumption act of Jan. 14, 1875. He was elected president *pro tem.* of the Senate on March 9 and 19 and Dec. 20, 1875; March 5, 1877; Feb. 26 and April 17, 1878; and March 3, 1879. On the death of Vice-President Wilson, Nov. 22, 1875, he became acting Vice-President. He presided at the impeachment trial of Gen. William W. Belknap, the Secretary of War, in 1876, and over the 16 joint meetings of Congress during the electoral count of 1876-'77. On the expiration of his last term he spent several years in travel.

Field, Kate, author and lecturer, born in St. Louis, Mo., about 1840; died in Honolulu, Hawaii, May 19, 1896. She was a daughter of Joseph M. Field, an Englishman, who became an actor, dramatist, critic, and theatrical manager in the United States. The daughter was educated in Massachusetts; was sent to Europe for a finishing course when sixteen years old; and while traveling in Sicily was seized by brigands and held till her family and friends paid a large ransom. Subsequently she made several trips abroad, and became a correspondent of the New York "Tribune," Philadelphia "Press," and Chicago "Tribune." She acquired a fine musical education in Europe, with a view of becoming a *cantatrice*, but was prevented by a sudden loss of her voice. She then applied herself to literature, and on the recovery of her voice to lecturing. With several friends she bought John Brown's farm in the Adirondacks to rescue his body, buried there, from oblivion, and this gave her material for her first lecture. In 1874

she appeared at Booth's Theater, New York, as "Peg Woffington"; then starred with John T. Raymond; and subsequently gave song, dance, and recitation entertainments. On her next visit to England she organized a benefit for the Shakespeare Memorial at Stratford, opened the Memorial Theater, and sang in a concert with Sir Julius Benedict, Charles Santley, and Antoinette Stirling. Returning to the United States, she brought out her successful musical monologue "Eyes and Ears." In 1882 she organized and became manager of the Co-operative Dress Association, which proved a failure. Afterward she lectured on Mormonism and other topics till 1890, when she established the periodical "Kate Field's Washington" at the national capital, which was discontinued a short time before her death. Her publications include "Planchette's Diary" (New York, 1868); "Adelaide Ristori" (1868): a comedy, "Mad on Purpose" (1868); "Pen Photographs from Charles Dickens's Readings" (Boston, 1868); "Haphazard" (1873); "Ten Days in Spain" (1875); and a "History of Bell's Telephone" (London, 1878).

Fitzgibbon, Mary Irene (known in religion as "Sister Irene"), philanthropist, born in London, England, May 12, 1823; died in New York city, Aug. 14, 1896. She accompanied her parents to New York city when young. On Jan. 15, 1850, she was received into the community of the Sisters of Charity at Mount St. Vincent, and in the following year was sent as a novice to work with the sisters having charge of St. Peter's School, in Barclay Street, and the benevolent activities of the parish. As a result of the executive ability here shown, she was appointed superior of this community in 1856, and held the place till called to inaugurate the distinctive work of her life. In those days it was customary for policemen to take charge of waifs and foundlings till they could be sent to Blackwell's Island, there to be cared for by the paupers, and few of such unfortunates survived their infancy. In the spring of 1869 Archbishop (afterward Cardinal) McCloskey urged the Mother Superior of the Sisters of Charity in the archdiocese, Mother Mary Jerome, to undertake the work of providing for foundlings. She selected 3 sisters for the new mission and placed the entire enterprise in charge of Sister Irene. With funds aggregating \$5, Sister Irene began her work. She made a study of the operations of such asylums in Europe and in the few cities in the United States in which they had been established; then organized a society of charitable women, who quickly raised sufficient money to rent and furnish a temporary home; and on Oct. 11 following the New York Foundling Asylum was formally opened. Within a month 45 children were being cared for, and within a year the asylum was removed to larger quarters. The Legislature in 1870 authorized the city to grant the asylum a site and to appropriate \$100,000 for a building, on condition that an equal amount should be raised by private subscription. This was soon accomplished through the energy of Sister Irene. A fair yielded \$71,500, two matinees by Augustin Daly \$15,000, and a lecture by Samuel S. Cox, \$10,000, and there were many gifts ranging from \$1,000 to \$10,000. Then the buildings were begun on the site given by the city, the block between Third and Lexington Avenues and Sixty-eighth and Sixty-ninth Streets, and these increased in number till they now cover the entire block and represent an outlay of over \$1,000,000. The asylum has given shelter to over 28,000 foundlings and provided for upward of 6,000 homeless mothers. Besides having full charge of this institution from its inception till her death, Sister Irene raised \$350,000 with which she established the Se-

ton Hospital for Incurables, at Spuyten Duyvil, which has accommodations for over 300 patients, and is free to the poor of New York city.

Fluders, Benjamin Franklin, lawyer, born in Bristol, N. H., Jan. 26, 1816; died near New Orleans, La., March 13, 1896. He was graduated at Dartmouth College in 1842, and in the following year removed to New Orleans, where he studied law and was admitted to the bar. In 1862 he was compelled to leave the city because of his strong Union sentiments, but on its capture he returned and was made city treasurer by the Federal authorities. While holding this office he was elected to Congress as a Unionist, and served through the few last days of the session that ended March 4, 1863. In that year he was appointed supervising agent of the United States Treasury Department for Louisiana, Mississippi, and Texas, and he held the office till 1866. For six months in 1867 he was military Governor of Louisiana. He was Mayor of New Orleans in 1870-'73, and Assistant Treasurer of the United States there in 1873-'85.

Ford, Austin E., journalist, born in Boston, Mass., Aug. 31, 1857; died in New York city, Sept. 17, 1896. He received a collegiate education, and in 1874 became associated with his uncle, Patrick Ford, publisher of "The Irish World," of New York city. During the ensuing twenty-one years he was employed as managing editor of "The Irish World," editor of "The New York Freeman's Journal," and contributor to encyclopedias, reviews, and syndicate publications, and also engaged in the publishing business. His political career began in 1882, when he was an unsuccessful Republican candidate for Congress. Two years afterward, at the request of James G. Blaine, he opened the Republican presidential campaign in New York by presiding at the Chickering Hall meeting of young men about to cast their first votes for President. In the same campaign he was a leader in the revolt of Irish voters from Mr. Cleveland to Mr. Blaine. He organized the public welcome to Mr. Blaine on his arrival at New York from Europe in 1888; was one of the speakers at the Congress of Religions in Chicago in 1893; was a second time defeated for Congress in 1894; and had been a Fire Commissioner of New York city since May, 1894.

Foster, John Young, journalist, born in Clinton, N. J., June 19, 1831; died in Newark, N. J., Nov. 13, 1896. He received a common-school education; removed to Somerville in 1846 and there learned the printer's trade, and since 1853 had lived in Newark. In the last year he secured a place on the "Daily Mercury," which he left to become a reporter on the New York "Evening Post," and subsequently was editor of the "New York Mail." He was editor of the "Drawer" in "Harper's Monthly" in the early part of the civil war, and resigned to become chief editorial writer on the Newark "Daily Advertiser." After the war he was editor for several years of the Newark "Evening Courier," and since 1879 he had been editor of "Frank Leslie's Illustrated Newspaper." For twenty-five years he was secretary of the Republican State Committee of New Jersey, and he had held the same office on the National Committee. He was a forcible writer, an effective public speaker, and a man of exceptional executive ability. From the outbreak of the civil war till his death he was widely noted as a speaker on patriotic, political, temperance, religious, and literary topics. He compiled, "New Jersey in the Rebellion" (1867).

Fowler, Edward B., military officer, born in New York city in 1827; died in Brooklyn, N. Y., Jan. 16, 1896. He received a public-school education, and when eighteen year old formed a military organization known as the "Union Blues," which

became a part of the 14th Regiment of New York Militia in 1847, when he was given a lieutenant's commission. When the regiment volunteered for the civil war he went with it as lieutenant colonel, and after the first battle of Bull Run he succeeded to the command. He was engaged in 22 battles and skirmishes, in all of which he was in command either of the regiment or the brigade to which it was attached. At the second Bull Run he was seriously wounded, and again at Gettysburg, where he rendered services for which he was brevetted brigadier general. He was mustered out of the service June 6, 1864. In boyhood Gen. Fowler showed a fondness for mathematics, and his whole business life was spent in work based thereon.

Fowler, Lorenzo Niles, phrenologist, born in Cohocton, Steuben County, N. Y., June 23, 1811; died in West Orange, N. J., Sept. 2, 1896. He was a younger brother of Orson Squire Fowler, the phrenologist; was educated at Amherst College, and in 1835 was associated with his brother in opening an office in New York city for the development of the new science, and, in the following year, in writing and publishing "Phrenology Proved, Illustrated, and Applied." In 1838 the brothers established the "American Phrenological Journal," published first in Philadelphia and afterward in New York city, from which they both retired in 1863. In the last year Lorenzo settled in London, England, where he resided till a month before his death, when he returned to the United States. Before going to London he had lectured extensively on phrenology. He was author of a "Synopsis of Phrenology and Physiology" (1844); "Marriage: Its History and Philosophy, with Directions for Happy Marriages" (1846); and "Lectures on Man."

Fraser, Robert, actor, born in New York city in 1842; died there Aug. 4, 1896. He was of Irish parentage, and from early boyhood exhibited traits that made him popular. His first theatrical experience was as a scenic artist. He first went on the stage as a minstrel end man, and subsequently was understudy for George Fox, the actor and pantomimist. For many years he arranged the Christmas pantomimes at Carnecross & Dixie's house in Philadelphia, and took the leading part in the performances. He was also popular as a stage manager, especially when large operas or unusual spectacular pieces were to be produced. Mr. Fraser was author of the plays "Heinrich Hudson," "Little Puck," and "Starlight," among others, and of many short stories in current periodicals.

Frazar, Douglas, military officer, born in Duxbury, Mass., in 1836; died in Somerville, Mass., Feb. 20, 1896. He received a private-school education in Boston; went on a four-years' voyage round the world before the mast, and when twenty-one years old, as captain, took the bark "Maryland," fitted out for him by his father, from Boston to China. On his arrival in 1859 he became junior partner in the house of Frazar & Company. He was present at the capture of Peking by the allied French and English forces in 1860. In the early part of the civil war he returned home. He went to New York, took part in suppressing the draft riots, and was commissioned major of the 13th New York Cavalry. Subsequently he was commissioned colonel of a South Carolina colored regiment, and at the close of the war he was brevetted brigadier general of volunteers. Soon afterward he was sent on a special mission to the freedmen in Virginia, where he spent two years in establishing schools and otherwise assisting the colored people. He was city auditor of Somerville in 1872-'86. Gen. Frazar contributed to periodicals, published in book form "The Log of the 'Maryland,'" "Perseverance Island," and "Practical Boat Sailing."

Fraze, Laurence Fisher, inventor, born in New Brunswick, N. J., May 22, 1813; died in Jersey City, N. J., Oct. 10, 1896. He learned the jewelry business, and was carrying it on for himself when the great tornado that struck New Brunswick on June 19, 1835, demolished his store and ruined him. Soon afterward he entered the employment of the New Brunswick Steamboat and Transportation Company, and remained with its successors, the Camden and Anbooy and the Pennsylvania Railroad Companies till his death, excepting during the civil war, when he commanded the Government transport "Massachusetts," which ran between Fort Monroe and points on James river. During his marine career he invented and perfected appliances of much value, including a stern paddle wheel for canal boats, a lifeboat, a life raft that was adopted by the United States Government, a safety gang-plank, the lifeboat davits now used on ocean steamships and on ferryboats, and the safety gates in use on ferryboats.

Fuller, Andrew S., horticulturist, born in Utica, N. Y., in 1828; died near Ridgewood, N. J., May 4, 1896. He unwillingly learned the carpenter's trade with his father, who declared that the boy was daft on bugs and plants, and when about nineteen years old he accompanied the family to Milwaukee, Wis. On the death of his father, five years afterward, Andrew married, built several small greenhouses, and, giving himself up to his favorite pursuit, soon became known as an authority on new varieties of plants. His reputation attracted the attention of William Prince, the nurseryman of Flushing, N. Y., who engaged him to take charge of his extensive greenhouses. In 1857 Mr. Fuller removed to Brooklyn, engaged in grape growing, and produced several new varieties and improved others, notably the Delaware. About this time he began to write on agricultural and horticultural subjects for "The Weekly Tribune," and subsequently he was the agricultural editor of the "New York Weekly Sun" for twenty-six years. He published "Strawberry Culture," "The Grape Culturist," "Small Fruits," "Forestry," "The Propagation of Plants," and had in the press "Nut Culture."

Fuller, Levi K., manufacturer, born in Westmoreland, N. H., Feb. 24, 1841; died in Brattleboro, Vt., Oct. 10, 1896. In 1855 he removed with his parents to Windham County, Vermont, where he learned telegraphy and the printer's trade. When sixteen years old he won a prize at a county fair for a steam engine of his own construction. Soon afterward he settled in Boston, where he served an apprenticeship as a machinist, working at night as a telegrapher, and also taking a course of study in science. In 1860 he returned to Brattleboro and entered the Estey Organ Works as machinist and mechanical engineer. Subsequently he established a plant of his own for the manufacture of wood-working and other machinery. In April, 1866, he became a member of the firm of J. Estey & Co., taking charge of the manufacturing department. He took out more than 100 patents. His achievement in securing the adoption of the international pitch for musical instruments was pronounced by William Steinway "one of the most important in the annals of musical history." He was elected a State Senator in 1880; Lieutenant Governor of Vermont in 1886; and Governor in 1892.

Furness, William Henry, clergyman, born in Boston, Mass., April 20, 1802; died in Philadelphia, Pa., Jan. 30, 1896. He was the oldest living graduate of Boston Latin School, of Harvard College (1820), and of the Harvard Divinity School (1823). At the time of his death he was pastor emeritus of the First Unitarian Church in Philadelphia, of which

he was the active pastor from 1825 till 1875. Harvard College gave him the degree of D. D. in 1847, and Columbia College that of Doctor of Letters in 1887. Among the most intimate friends of his childhood was Ralph Waldo Emerson, and in later years, especially during the abolition movement, of which he was a most intense advocate, were Lucretia Mott, Charles Sumner, and William Lloyd Garrison. He was a speaker at the great antislavery meeting in New York city in 1850, and witnessed the Rynders riot that resulted from it. On Dec. 2, 1859, the day of John Brown's execution, he took part in a public prayer meeting held in Philadelphia, and afterward went with several others to the railroad station when Brown's body was brought from the gallows by Gen. Tyndale and James M. McKim. Because of his outspoken sentiments during this period, his church was more than once in peril from mob violence. In a Fourth of July oration in 1860 he pointed out the benefits to be derived from the abolition of slavery, and anticipated the celebration of the nation's centennial over a free land. Among his publications were: "Remarks on the Four Gospels" (Philadelphia, 1835); "Jesus and his Biographers" (1838); "Domestic Worship," a volume of prayers (1842); "A History of Jesus" (1850); "Discourses" (1855); "Thoughts on the Life and Character of Jesus of Nazareth" (1859); "The Veil partly lifted and Jesus becoming Visible" (1864); "The Unconscious Truth of the Four Gospels" (1868); "Jesus" (1871); "The Power of Spirit manifest in Jesus of Nazareth" (1877); "The Story of the Resurrection told once more" (1885); and "Verses: Translations and Hymns" (1886). His translations from the German included Schubert's "Mirror of Nature" (1849), "Gems of German Verse" (1851), and "Julius and other Tales" (1856); Schenkel's "Characterbild Jesu" (1866); and Schiller's "Song of the Bell."

Fyffe, Joseph, naval officer, born in Ohio, July 26, 1832; died in Pierce, Neb., Feb. 25, 1896. He was appointed a midshipman in the United States navy Sept. 9, 1847; became passed midshipman June 15, 1854; master, Sept. 16, 1855; lieutenant on the following day; lieutenant commander, July 16, 1862; commander, Dec. 2, 1867; captain, Jan. 13, 1879; commodore, Feb. 28, 1890; and rear admiral, July 10, 1894; and was retired July 20 following. He was on sea service for eighteen years and eleven months, and on shore or other duty for sixteen years and one month. His first duty was on board the bomb vessel "Stromboli" of the home squadron, after which he served for two years on the sloop "Yorktown" off the coast of Africa against the slave traders. In 1853-'54 he was on duty at the United States Naval Academy; in 1856-'57 was with the Brazil squadron; in 1857-'59 was on the "Germantown" in the East India squadron; and in 1863-'65 served on the steam frigate "Minnesota," the flagship of the North Atlantic blockading squadron. Under this last assignment he took part in the destruction of the Confederate blockade runner "Hebe" and beach works near Fort Fisher, N. C., in August, 1863; in the destruction of the blockade runner "Ranger" and the engagement with infantry below Fort Caswell, N. C., in January, 1864; and in the engagement with Confederate batteries on James river in May and June, 1864, and January, 1865. After the war he was at the Boston Navy Yard, 1867; on the "Oneida," in the Asiatic squadron, 1868-'69; commanded the "Centaur," North Atlantic fleet, 1869-'70; in charge of the niter depot, Malden, Mass., 1871-'72; commanded the "Monocacy," Asiatic station, 1875-'78; the receiving ships "St. Louis," 1879-'80, and "Franklin," 1880-'82; and the "Pensacola," on the Pacific station, 1882-

'83; and was commandant of the Boston Navy Yard 1885-'88 and 1893-'94, and of the New London Naval Station, 1891-'93.

Gamevell, John N., inventor, born in Marlboro County, N. C., in 1822; died in Haekensack, N. J., July 19, 1896. In early life he was interested in the development of telegraphy. Before the civil war he went to Boston, and there perfected and patented the telegraphic fire-alarm system that bears his name and is now in general use. At the beginning of the war he was installing his fire-alarm system in Charleston, S. C. The Confederate Government confiscated his patents and sold them. He was then engaged in the manufacture of gunpowder in Columbia, S. C., till the occupation of the city by the National army. After the war he returned to the North, and after long litigation secured possession of his patents, which yielded him a large fortune.

Garrett, Robert, capitalist, born in Baltimore, Md., April 9, 1847; died in Deer Park, Md., July 29, 1896. He was the eldest son of John Wark Garrett, for nearly thirty years President of the Baltimore and Ohio Railroad Company, and was graduated at Princeton College in 1867. After leaving college he entered the banking house of Robert Garrett & Sons, and in 1871 became President of the Valley Railroad of Virginia. In 1875 his father placed him in the service of the Baltimore and Ohio Railroad, of which he became third vice-president in 1879, first vice-president in 1881, and president, on the death of his father, in 1884. Under his management the Baltimore and Ohio telegraph system was established; the railroad line was extended to Philadelphia at large cost and despite intense opposition; an express system covering all points on the railroad was put into operation; and the railroad secured an entrance into New York city and acquired the Staten Island Rapid Transit system. He also organized a company to manufacture and operate parlor cars in opposition to the two corporations then controlling that branch of the railroad business of the country. These enterprises made such a drain on the resources of the company that it soon found itself in financial difficulty. In the hope of saving the property, Mr. Garrett went to Europe to sell \$10,000,000 of securities, and while he was abroad his associates in the management sold the telegraph and express systems. He resigned the presidency of the railroad on Oct. 12, 1887, and set out on a tour of the world for his health, but was called home in July, 1888, by the drowning of his brother. His mental affliction is believed to have originated in the shock caused by the sudden death of William H. Vanderbilt on Dec. 8, 1885. Mr. Garrett was having a conference with Mr. Vanderbilt on railroad business in the home of the latter when Mr. Vanderbilt was attacked with apoplexy and died in Mr. Garrett's arms before aid could be summoned. Mr. Garrett was interested in numerous financial, educational, and charitable institutions.

Gast, John, lithographer, born in Berlin, Germany, in 1841; died in Brooklyn, N. Y., July 26, 1896. When he was but a few months old his parents removed to St. Louis, Mo., whence he returned to Berlin to complete his education. After taking a full course at the Royal Academy, he rejoined the family in St. Louis and organized a lithographic company. Three years afterward he sold out his interest and went to Paris, where he studied the chromo art with Thürwanger. On his return he settled in New York city. Subsequently he became one of the founders of "The Daily Graphic," one of the chief features of which was the series of illustrations produced by a special process of his invention. On the suspension of this journal he

organized a lithographic house, which is now one of the largest in the country. He remained with this company for five years; then sold out his interest; and founded a photo-chrome company, which used several processes of his invention. He held seven patents on processes for lithographing, the most important of which is known as the three-color process.

Gaunt, Percival, composer, born in Philadelphia, Pa., in 1852; died in Palenville, Catskills, N. Y., Sept. 5, 1896. He was employed for several years as a writer of topical songs by Frank McKee, and subsequently as musical director by the theatrical firm of Hoyt & Thomas, afterward Hoyt & McKee. His most notable composition was the music of "A Trip to Chinatown," in which was the original song, "The Bowery," which brought him a handsome sum of money. The words and music of "The Bowery," as well as of his "Push dem Clouds away" and "Love me Little, Love me Long," had a large sale. He was also associated with Charles Hoyt in composing the words and music of "Reuben and Cynthia," "The Widow," "Out for a Racket," and other popular songs. It was estimated that the three first songs mentioned yielded him \$35,000.

Gibbon, John, military officer, born near Holmesburg, Pa., April 20, 1827; died in Baltimore, Md., Feb. 6, 1896. He was graduated at West Point, and appointed a brevet 2d lieutenant in the 3d Artillery July 1, 1847; was promoted 2d lieutenant 4th Artillery Sept. 13 following; 1st lieutenant, Sept. 12, 1850; captain, Nov. 2, 1859; colonel 36th Infantry July 28, 1866; transferred to 7th Infantry March 15, 1869; and brigadier general July 10, 1885; and was retired April 20, 1891. In the volunteer service he was commissioned a brigadier general May 2, 1862, and promoted major general June 7, 1864. During the civil war he was brevetted major, United States army, Sept. 17, 1862, for services at Antietam; lieutenant colonel, Dec. 13 following for Fredericksburg; colonel, July 4, 1863, for Gettysburg; and brigadier general and major general, March 13, 1865, for Spottsylvania and the capture of Petersburg. In the Mexican War he served in the artillery at the city of Mexico and Toluca; in 1854-'57 was instructor in artillery at the Military Academy; and in 1856-'59 was quartermaster there. He was chief of artillery in Gen. McDowell's division from Oct. 29, 1861, till May 2, 1862; commanded a brigade through the campaigns in Maryland, Virginia, and Pennsylvania in 1862-'63; and was severely wounded at Gettysburg, where he commanded the 2d Army Corps. On his recovery in 1864 he took part in the battles of the Wilderness, Spottsylvania, and Cold Harbor, and in the siege and battles at Petersburg he commanded the 24th Army Corps, and distinguished himself in the assaults of the last two days. He was one of the commissioners to carry into effect the stipulations for Gen. Lee's surrender. After the war he was superintendent of the general recruiting service in New York city, 1873; commanded the Yellowstone expedition against Sitting Bull in 1876, and in the action at Big Hole Pass, Mont., with the Nez Percés Indians, 1877; and, by direction of the President, had charge of the measures to suppress the riots against the Chinese in Washington Territory in 1885. At the time of his retirement he was in command of the Department of California. Gen. Gibbon was author of "The Artillerist's Manual" (New York, 1859), of a prize essay on "Our Indian Question," and of articles on military and Indian affairs in periodicals.

Gibson, William Hamilton, artist and author, born in Sandy Hook, Conn., the country home of his parents, Oct. 5, 1850; died in Washington, Conn., July 16, 1896. The spirit of eager inquiry and the constant sympathy with Nature which gained for

Mr. Gibson in later life his wide popularity as an artist-naturalist, writer, and lecturer were shown in his boyhood. He was a pupil at the "Gunnery" school in Washington, Conn., directed by a master who wisely encouraged the individual bent of his scholars, and sought to turn childish curiosity into

beneficial channels instead of following a policy of insistence upon routine. As a child Mr. Gibson was keenly interested in the plant and insect life about him, and he also showed a talent for drawing. Later, he entered the Brooklyn Polytechnic Institute, where his taste for drawing was more systematically developed. His education, so far as schools were concerned, was interrupted by the

failure and sudden death of his father, a Wall Street broker, and the necessity for self-support. For a time he was employed by an insurance company, but the work was ungenial and he gave it up, contrary to the advice of his friends, in order that he might devote himself to the particular branch of art which interested him most. This was the drawing of flowers and insects. His predilection for Nature subjects was not that of the artist pure and simple. It was not a question of color and form alone with him, but rather the attraction of identifying and illustrating the various apt and beautiful phases of the anatomy and physiology of plant life. For a time his aims were not appreciated. He met with rebuffs and disappointments, and the earlier essays which were actually published were naturally of minor consequence. His first work for the public was a short illustrated article upon the interior construction of the butternut, published in 1870, and a little later he contributed articles to the "Youth's Companion," "St. Nicholas," and "Scribner's Magazine." He gained a temporary connection with the "American Agriculturist" and "Hearth and Home." He found it necessary to accompany his pictures with some lines of explanation. This was at the request of editors, who perceived the primarily analytic and informing quality of his pictorial work. It must not be understood that he was content with simply an external, accurate, general representation. Everything in Nature was to him an organism to be studied in all its minutest parts. The intense, healthy curiosity which led him as a boy to spend hours on the ground watching the habits of tiny insects became in later life a spirit of alert inquiry in which the scientist's close scrutiny of causes and effects, of the origin and purposes of habits or phenomena, existed conjointly with a vivid aesthetic appreciation of the beauty of the adaptation of special forms to special purposes, and the artistic value of Nature's work in miniature. The diffusion of seeds, methods of fertilization, the various stages in the growth of a fern, the habits of the bee—whatever the subject might be that engaged his immediate attention, it was followed up with an enthusiasm and a command of expression with both pen and pencil that imparted to his work a peculiar value. It is probably safe to say that the general public came to know Mr. Gibson's work through the medium of "Harper's Magazine," although his connection with the magazine

had been preceded by much miscellaneous work, not only for the periodicals which we have mentioned, but also for Appleton's "American Cyclopaedia" and "Picturesque America" and other publications. Meantime he studied art and literary expression and the influence of his application was seen in work which made itself felt in "Harper's Magazine" in the early eighties. His first book was "Camp Life in the Woods and the Tricks of Trapping and Trap-making" (1876). In 1882 he published his "Pastoral Days; or, Memories of a New England Year," an illustrated cycle of the seasons, which was followed in 1883 by his "Highways and Byways; or, Saunterings in New England." Like others, this book was made up of collected magazine articles, and their character is indicated by such titles as "Along the Road," "The Squirrel's Highway," and "Among our Footprints." His "Happy Hunting Grounds" was published in 1887; "Strolls by Starlight and Sunshine" (1890); "Sharp Eyes" (1891); "Our Edible Toadstools and Mushrooms" (1895). He also edited "The Master of the Gunnery" (1885). Among the more important books for which Mr. Gibson furnished illustrations only were Mr. Roe's "Nature's Serial Story," "The Heart of the White Mountains," an edition of Longfellow, and other collections of poems, and a work upon "The New South," by Mr. C. D. Warner and others associated with the Harper publications. In obtaining the material for this book Mr. Gibson traveled in Louisiana alone over 2,000 miles, exploring bayous and express swamps and studying Acadian and Creole life as well. From this trip he brought back some 600 negatives and many well-filled sketch and notebooks. His photographs and sketches, made at various times, must have mounted high into the thousands. They served as memoranda and material. The final pictures which the public saw were rarely drawn direct from Nature, in accordance with his belief that actual contact with the outdoor subject hampered the imagination in completing the picture. As a rule, Mr. Gibson made his drawings first in accordance with some special line of thought and then wrote his text to accompany them. In some respects Mr. Gibson was a happy example of American versatility. He was a popular lecturer, an excellent amateur photographer, a very apt illustrator, either of his own books or the writings of others, a painter of water colors, agreeable in theme and color, and a skillful maker of books. His ingenuity showed itself in apparatus which he devised for his lectures to show the cross fertilization of plants, and his tact in the arrangement of his illustrations commends itself to every one familiar with his books. In the broadest sense his paintings, charming as they usually were, are not to be regarded as peculiarly significant from the painter's point of view. His love of picturesqueness was sometimes too much in evidence. In his paintings, and often in his drawings also, there is a care for details and for "prettiness" which leaves a certain effect of littleness, but in another sense Mr. Gibson's work was far more valuable than that of many a greater artist. He was a most successful popularizer of Nature study. He was not an expositor of the Huxley school, as it is unnecessary to say, but, in a way like Gilbert White, of Selborne, he followed and noted the phenomena of the fauna and flora about him, and he made these phenomena interesting to his unobservant fellows. He constantly pointed the way to Nature study, by showing the interest, the surprises, the curious features awaiting those willing to give a little thought to familiar things. In the course of his career there came about certain changes in methods of education which were intended to utilize and direct youthful curiosity and to encourage habits of observation,

and undoubtedly Mr. Gibson's work has had an effect upon teachers and upon some pupils, and thus indirectly has had an educational influence. The work which he did was wholesome and stimulating. Not a scientist himself, in the exact meaning of the phrase, he did more to encourage certain branches of popular science than the majority of specialists. His earnestness, enthusiasm, and tireless energy, and his charm of expression with pen, pencil, and brush invested his life work with a personal distinction of an unusual kind. Mr. Gibson's winter home was in Brooklyn, and his summers were spent in Washington, Conn. He was a member of the American Water-color Society, the Century Association, and the Authors Club.

Gile, George Washington, military officer, born in Bethlehem, N. H., in 1829; died in Philadelphia, Pa., Feb. 26, 1896. He removed to Philadelphia in youth, and in the civil war entered the National service as a lieutenant in the 22d Pennsylvania Infantry. On July 28, 1866, he was commissioned first lieutenant in the 45th United States Infantry; on Feb. 4, 1868, was promoted captain; in 1869 was placed on the unassigned list on the reorganization of the army; and on Dec. 15, 1870, was retired on account of disability resulting from wounds received in the service. He was brevetted captain, major, and lieutenant colonel in the regular army, and colonel and brigadier general of volunteers on March 2, 1867, and was retired with the full rank of colonel in the regular army.

Gillam, Bernard, caricaturist, born in Banbury, England, in October, 1856; died in Canajoharie, N. Y., Jan 19, 1896. He came to the United States with his parents in 1866; was educated at Williamsburg, N. Y.; became a clerk in a lawyer's office; and began making drawings for illustrated periodicals in 1876. For two or three years he contributed drawings to "Frank Leslie's Illustrated Newspaper," "Harper's Weekly," and the "New York Graphic"; and then engaged in portrait painting, his first subject being Henry Ward Beecher. He was employed for several years as cartoonist on "Puck." On the establishment of "Judge" he joined its art staff, subsequently became a part owner of the paper, and remained with it till his death, applying himself chiefly to cartoons on political subjects.

Goddard, Farley Brewer, Egyptologist, born in Malden, Mass., in 1858; died in Eastman, Ga., March 18, 1896. He was graduated at Harvard College in 1881, distinguishing himself particularly in Latin and Greek studies, and was appointed a tutor there in those branches. Within a year his delicate constitution broke down, and he retired to the mountain region of Monadnock, where he applied himself to archaeological study. About ten years ago the managers of the Egyptian Exploration Fund in London offered to make a place among their agents in Egypt for an American scholar, and Mr. Goddard was selected. He went to Paris in 1887, and joined Prof. Flinders Petrie and the other English and Continental explorers in Egypt. He worked there for two years, and then returned to resume his place at Harvard. His health again gave way, and he sought his former Monadnock retreat, where he remained till January, 1896, when his physicians ordered him to the pine belt of Georgia. He received the degree of Ph. D. from Harvard in 1883; was co-author of several textbooks; and had gathered much material on the archaeology of the Rameses and Pharaohs.

Goode, George Brown, naturalist, born in New Albany, Ind., Feb. 13, 1851; died in Washington, D. C., Sept. 6, 1896. His parents settled near Amenia, N. Y., in 1857, where the boy grew to maturity and developed a fondness for natural history. He was

graduated at Wesleyan University in 1870, and then studied under the elder Agassiz. Early in 1871 he returned to Middletown to take charge of the natural-history collection of the museum. In 1873 he became an assistant in the United States Fish Commission, and thereafter, until 1880, he was regularly a member of one of the summer parties. During 1877-'78 he was statistical expert for the Department of State in the Fisheries Arbitration Commission of the United States and Great Britain held in Halifax, N. S., and in 1879 he was given charge of the investigation of the fisheries for the tenth census. In 1873 he also became regularly connected with the scientific staff of the United States National Museum, and for a time received as his only compensation specimens of natural history, which he in turn presented to the museum in Middletown, where he retained his connection until 1877. From assistant curator he advanced by steps to the office of assistant director, and in 1887 he was appointed assistant secretary of the Smithsonian Institution, in charge of the United States National Museum, which office he held until his death. His monographs "Museums of the Future" (1890) and "Principles of Museum Administration" (1895), together with his "Annual Reports" as director of the National Museum, are accepted as authorities. He was intrusted by Secretary Bayard with the installation of the Smithsonian exhibits at the Centennial Exhibition held in Philadelphia in 1876, and he served as United States commissioner to the fisheries exhibitions that were held in Berlin in 1880 and London in 1883. Dr. Goode represented the Smithsonian Institution and the National Museum on the Government boards at the minor exhibitions held in New Orleans (1884), in Cincinnati (1888), in Louisville (1888), and more recently in Atlanta (1895), and he was associated in the management of the Government exhibit at the World's Columbian Exposition held in Chicago during 1893, for which he prepared the plan of classification. He was also a commissioner to the Columbian Historical Exposition held in Madrid, Spain, during the winter months of 1892-'93, and after the death of the commissioner general he acted in that capacity. In recognition of his services at the various expositions he received a bronze medal in Berlin and a gold one in London, where his installation was recognized as "the only thing done in the true spirit of modern science." The Spanish Government conferred on him the decoration of the Order of Isabella the Catholic with the grade of commander. From his boyhood he was interested in genealogy and history. His fondness for the former subject is shown in his "Virginia Cousins" (Richmond, 1886). Of similar nature was his editorship of the "Alumni Record of Wesleyan University." His papers "The Beginnings of Natural History in America" (1886), "The Beginnings of American Science" (1889), "The Origin of the National, Scientific, and Educational Institutions of the United States" (1890), gained for him the reputation of being the historian of American science. He was one of the founders of the American Historical Society. His bibliography includes over 400 titles of scientific, historical, and museum papers, contributed to proceedings of societies and periodicals, and the following volumes: "Catalogue of the Fishes of the Bermudas" (Washington, 1876); "Classification of the Collection to illustrate the Animal Resources of the United States" (1876); "Catalogue of the Collection to illustrate the Animal Resources and Fisheries of the United States exhibited at Philadelphia in 1876 by the Smithsonian Institution and United States National Museum" (1879); "The Nature and Economic History of the American Menhaden" (1879); "American

Fisheries—History of the Menhaden" (New York, 1880); "The Fisheries and Fishery Industries of the United States" (7 volumes, Washington, 1884-'87); "American Fishes: A Popular Treatise upon the Game and Food Fishes of North America" (New York, 1888); "the text of "Game Fishes of the United States," with S. A. Kilbourne's plates (1879-'81); and with Tarleton H. Bean "Oceanic Ichthyology" (1896). The degree of Ph. D. was conferred on him by Indiana University, and that of LL. D. by Wesleyan University. Dr. Goode was chosen a member of the National Academy of Sciences in 1888.

Goodyear, Charles, inventor, born in Germantown, Pa., in 1832; died in New York city, May 22, 1896. He was the grandson of Amasa Goodyear, the inventor of spring-steel hayforks, and son of Charles Goodyear, inventor of the process for vulcanizing India rubber. He received a public-school education in New Haven, Conn., and spent his early life working with his father and selling rights to manufacture rubber goods under the patents secured by him. On the death of his father, in 1860, he took charge of the estate and business, and soon afterward patented a device for sewing soles on shoes by the lock stitch. The first company to manufacture machinery for shoemaking under this patent was organized in New York city. Now there are several in the United States, Canada, and in Europe, and the machines are in universal use.

Gould, Benjamin Apthorp, astronomer, born in Boston, Mass., Sept. 27, 1824; died in Cambridge, Mass., Nov. 26, 1896. He was able to read when he was three years of age, and when he was ten he delivered an entertaining lecture on electricity, written by himself and illustrated with a complete and

neatly constructed electrical machine of his own manufacture. He prepared for college in the Boston Latin School, where he took high rank, receiving at one time five prizes, among which was the Franklin gold medal. In 1844 he was graduated at Harvard, where among his classmates were Dr. John C. Dalton and Francis Parkman. For a year he taught in the Roxbury Latin School. From 1845 to 1848 he was in Europe,

studying at the observatories in Greenwich, Paris, Berlin, Göttingen, Altona, and Gotha, and he received in 1848 the degree of Ph. D. from Göttingen. On his return to the United States he established "The Astronomical Journal" in November, 1849, published it largely at his own expense until 1861, and resumed the publication in 1885. In 1852 he was appointed to the charge of the longitude determinations of the Coast Survey, which service he organized and developed until his retirement in 1867. In 1859 he published his discussion of the places and proper motions of circumpolar stars for use as standards in the Coast Survey. These as revised by him in 1861, together with his similar list of clock stars, were adopted as the standards for the "American Ephemeris." In 1866 he published his reduction of D'Angelet's observations. About the same time he performed a

similar service for the greater part of the observations made in the United States Naval Observatory since its establishment, and also for the expedition under Lieut. James M. Gilliss to Chili to determine the solar parallax. In 1866 he planned and executed the work of establishing by the Atlantic cable the relation in longitude between European and American stations. Meanwhile, in 1855, he was called to the directorship of the Dudley Observatory in Albany, and he remained in that capacity without remuneration and at his own expense until 1859. He organized the work in this observatory and first used there the normal clock compensated for barometric variations. The clock that gave the time signals was devised by him, as well as the meridian circle now generally used. As actuary of the United States Sanitary Commission he conducted extensive and important researches upon military and anthropological statistics and the distribution of population, the results of which he published as "Investigations in the Military and Anthropological Statistics of American Soldiers" (New York, 1869). About 1866 he undertook the reduction of Lewis M. Rutherford's photographs of the Pleiades, and in 1870 those of the Præsepe. Memoirs on both of these subjects were presented by him before the National Academy of Sciences. The great work of Dr. Gould's life was in connection with the National Observatory in Cordoba, Argentine Republic, which institution was organized by him in 1870, and there he undertook his "Uranometry of the Southern Heavens." The zone observations of the stars between 23° and 80° south declination, which were the original and always the dominant object of the enterprise, were begun in 1872, substantially completed in 1877, and revised in 1882-'83. This work was embodied in the Zone Catalogues containing 73,160 stars, which appeared in 1884. Parallel with this, and almost overshadowing it in importance, was carried on the independent series of meridian-circle observations for the General Catalogue of 32,448 stars, completed in 1885. Dr. Gould, in addition to the foregoing, completed in Cordoba the manuscript of his series of 15 volumes containing the observations and the annual catalogues, incorporated in the General Catalogue, ready for the printer. All these have been published. In 1872 he instituted, under the auspices of the Argentine Republic, a chain of meteorological stations from the tropics to Tierra del Fuego, and from the Andes to the Atlantic, which are still maintained. Soon after his return to Cambridge in 1885 he was given a public dinner, at which President Eliot, of Harvard, said: "When it comes to observing the passage of a star across 20 miles in the field of the telescope with the utmost accuracy and precision, and doing that many times over for each star, and doing it for 20,000 stars, the infinity of this minute and patient labor is impressed upon our minds." Dr. Holmes greeted him with a poem:

Fresh from the spangled vault's o'erarching splendor,
Thy lonely pillar; thy revolving dome,
In heartfelt accents, proud, rejoicing, tender,
We bid thee welcome to thine earthly home!

To this home, where in 1864 he had built an observatory which he equipped with an eight-foot transit instrument, he returned after leaving South America, and there he passed the last years of his life, devoting his attention chiefly to the publication of "The Astronomical Journal," for the continuation of which he made provision. The degree of LL.D. was conferred on him by Harvard in 1885, and by Columbia in 1887. He was one of the original members of the National Academy of Sciences, from which he received the Watson medal in 1886, and President of the American Association for the Advancement of Science in 1868.

Grant, William Harrison, civil engineer, born in Neversink, Sullivan County, N. Y., May 15, 1815; died in Sing Sing, N. Y., Oct. 10, 1896. He was educated at the New Paltz and Ithaca Academies; was first employed as a surveyor on the Erie Railway; and for nine years was assistant engineer on the enlargement of the Erie Canal. Subsequently he was an assistant engineer on the Hudson River Railroad, and surveyed the route for a railroad from Georgetown, D. C., to Hagerstown, Md., which was afterward occupied in part by the Baltimore and Ohio Railroad. On the completion of the last work he was appointed superintending engineer of Central Park, New York city, with which he was connected till its completion, and then became civil and topographical engineer of the Department of Public Works, his charge embracing the annexed district. Afterward he was appointed constructing engineer of the department. In 1876 he entered the employment of the Federal Government, and was engaged in superintending the widening and deepening of rivers and bays in Maryland and Virginia, and the erection of the new United States Naval Observatory. He retired from the Government service in 1893, and had since had a connection with the Hudson River and West Shore Railroads, and had designed and partly constructed the waterworks plant at Yonkers, N. Y.

Gray, John Burrill, military officer, born in Sheridan, N. Y., in 1831; died in Asheville, N. C., June 6, 1896. He removed to St. Louis, Mo., on attaining his majority, and was in business there at the outbreak of the civil war. He enlisted in the National army early in 1861; rendered important service in organizing the loyal men of Missouri; and in November of that year was appointed lieutenant colonel and aid on the staff of Gen. Halleck. In 1862 he was commissioned colonel of the 1st Missouri Regiment and brigadier general of volunteers; commanded the 1st brigade, Davidson's division, district of Missouri; and was employed in guarding and keeping open the St. Louis and Iron Mountain Railroad. He served in the spring of 1863 as post commandant at St. Louis, and was then adjutant general of the State till the close of the war. After the war he obtained from Congress \$7,000,000 in settlement of the claim by the State of Missouri for money expended in supporting United States troops during the war. Since 1885 he had been Vice-President of the American Brake Company of St. Louis, and since the merging of that and the Westinghouse Air Brake Company in 1888, he had been the general Eastern agent of this department of the Westinghouse Company.

Green, Edward T., jurist, born in Trenton, N. J., in 1837; died there Oct. 10, 1896. He was graduated at Princeton in 1854; was admitted to the bar in 1858; was attorney of the Camden and Amboy Railroad Company for several years; and was the general counsel of the Pennsylvania Railroad Company for twenty years prior to October, 1889, when he was appointed judge of the United States Court for New Jersey.

Greene, Albert S., naval engineer, born in Adams, Jefferson County, N. Y., Aug. 3, 1838; died in Washington, D. C., March 8, 1896. He was graduated as a civil engineer at the Rensselaer Polytechnic Institute in 1859; was appointed a third assistant engineer in the United States navy, Feb. 17, 1860; promoted second assistant, Nov. 17, 1862; first assistant, March 1, 1864; and chief engineer, March 5, 1871; and was retired Aug. 9, 1893. At the beginning of the civil war he was attached to the "Susquehanna," cruising in the Gulf of Mexico and the Mediterranean Sea, and was detached and ordered to duty in the office of the engineer in chief in July, 1861. He remained in this

office and in the bureau of steam engineering till December, 1867, and was employed in designing machinery, superintending the trial of machinery for war vessels, and conducting experiments in steam engineering at the Washington Navy Yard. In 1870 he accompanied the first Selfridge Darien surveying expedition; in 1873 was on special duty with the Government commission to investigate the causes of steam-boiler explosions; in 1889 was wrecked on the "Vandalia" at Apia, Samoa; and in 1891-'92 was engineer in charge of the construction of the waterworks at the United States reservation at Hot Springs, Ark.

Greenhalge, Frederick Thomas, lawyer, born in Clitheroe, England, July 19, 1842; died in Lowell, Mass., March 5, 1896. He removed with his parents to Lowell in 1850; worked in the mills there; and entered Harvard College in 1859, but was prevented by lack of money from completing the course. At the beginning of the civil war he tried to enlist in the army, but the surgeons refused to pass him. He secured an appointment in the commissary department at New Berne, N. C., where he served from Nov. 1, 1863, till April, 1864, a part of the time in command of a body of colored troops. On returning home, he resumed his law studies, and was admitted to the Middlesex bar in 1865. In 1868 and 1869 he was elected to the Common Council of Lowell; in 1871 to the school committee; in 1880 and 1881 mayor of the city; in 1884 delegate to the Republican National Convention; in 1885 member of the Legislature; in 1888 member of Congress; and in 1893, 1894, and 1895 Governor of Massachusetts. He was an excellent speaker, and was the representative of Massachusetts at the dedication of the Chickamauga and Chattanooga National Park in September, 1895, and at the Atlanta Exposition on Massachusetts Day, in November, following. He had delivered a political address before the Lincoln Club in New York city, and in 1894 made an address on John Winthrop before the New England Society of Brooklyn, N. Y. As Governor, he used the veto prerogative freely, and several measures were passed over his veto.

Greusel, Nicholas, military officer, born in Bavaria, Germany, July 4, 1817; died in Aurora, Ill., April 25, 1896. At the beginning of the Mexican War he recruited a company in Detroit, Mich., and joined the army in Vera Cruz. Under President Lincoln's first call for volunteers in 1861, he recruited one of the first companies that were raised in Illinois. Subsequently he was commissioned colonel of the 36th Illinois Regiment, commanded a brigade in Gen. Sheridan's division, and was promoted brigadier general of volunteers.

Gutmann, Edward, archaeologist, born in Halle, Germany, in 1828; died in New York city, July 21, 1896. He was educated at Halle and at the University of Berlin; began practicing medicine in New York city in 1854; founded a Russian-bath establishment, and conducted it till 1869; and passed the remainder of his life traveling in Europe, Asia, and Africa, studying ancient and mediæval art and collecting rare books, pictures, and statuary. In Africa he made a special study of Egyptian art. He spent several years in Rome, and there gathered a valuable collection of books on art, particularly representing the Renaissance period. On his return to New York he published a treatise on "The Sarcophagus and the Grave Monuments of Ancient Greece and Rome," a subscription work of which the only copies sold in the United States were to the Smithsonian Institution and the Johns Hopkins University.

Hagar, Daniel Barnard, educator, born in Newton, Mass., April 22, 1820; died in Sharon, Mass., Sept. 4, 1896. He was graduated at Union College

in 1843, and was uninterruptedly engaged in teaching from the middle of his college course till his death. Since 1865 he had been principal of the Normal School in Salem. Dr. Hagar was a member of the Salem School Board in 1866-'75; President of the Massachusetts State Teachers' Association in 1866-'68, the American Institute of Instruction in 1860-'61, the American Normal Association in 1858, the National Teachers' Association in 1871, and the National Council of Education in 1885 and 1886; and was a Republican presidential elector in 1884. He edited "The Massachusetts Teacher" in 1852-'56 and 1865-'70. He received the degree of Ph. D. from Union College in 1871, and was author of a series of mathematical text-books (Philadelphia, 1871) and of many educational addresses.

Hale, Horatio, ethnologist, born in Newport, N. H., May 3, 1817; died in Clinton, Ontario, Canada, Dec. 30, 1896. He was a son of Sarah Josepha Hale, and was graduated at Harvard in 1837. On leaving college he was appointed a philologist to the United States Exploring Expedition under Capt. Charles Wilkes, and while on that duty studied the languages of the Pacific islands, of North and South America, Australia, and Africa, and investigated the history of the peoples speaking them. He grouped the results of these observations in "Ethnography and Philology" (Philadelphia, 1846). Subsequently he settled in Chicago, where he studied law, and in 1855 was admitted to the bar. In the following year he removed to Clinton, Ontario, where he had since resided. Besides numerous memoirs on anthropology and ethnology, he published "Indian Migrations as evidenced by Language" (Chicago, 1883); "The Iroquois Book of Rites" (Philadelphia, 1883); and "A Report on the Blackfoot Tribes," presented to the British Association in 1885.

Hall, Isaac Hollister, Orientalist, born in Norwalk, Conn., Dec. 12, 1837; died in Mount Vernon, N. Y., July 2, 1896. He was graduated at Hamilton College in 1859; was tutor there till 1863; graduated at the Law School of Columbia College in 1865; and practiced in New York city till 1875. In 1875-'77 he was a professor in the Syrian Protestant College at Beirut, and on leaving that place spent some time in Cyprus with Gen. Cesnola, then United States consul, and assisted in arranging the Cypriote collection that is now in the Metropolitan Museum. On his return to the United States he became connected with the editorial department of "The Sunday-school Times," and established the department of "Biblical Research" in "The Independent." In 1884 he was appointed curator of sculpture and archæology in the Metropolitan Museum, and he held the office till his death. He was considered an authority on Greek, Phœnician, Himyaritic, and other Oriental inscriptions. In 1876 he discovered in Beirut a Syriac manuscript of the gospels, Acts, and most of the epistles dating from 700 and 900 A. D., and in 1884 found the Antilegomena in the Williams manuscript. He is said to have been the first person to read an entire inscription in Cypriote. He received the degree of B. Lit. from Columbia College in 1888, and from the University of Dublin in 1892. He published in 1884 facsimile pages of the Syriac manuscript, a series of articles on the Cypriote language and inscriptions, and "A Critical Bibliography of the Greek New Testament, as Published in America."

Hall, John Williams Dean, journalist, born in Raynham, Mass., in 1808; died in Taunton, Mass., Jan. 19, 1896. He was apprenticed to the printer's trade; became publisher of the "Literary Subaltern" of Providence, R. I.; was editor of the "Whig and Republican" of Taunton for over twenty years, retiring in 1861; and afterward was an editor of the "Gazette" there for many years.

In 1863 he was a member of the Legislature, and in the following two years was United States provost marshal of the 2d Massachusetts District. Mr. Hall compiled "The Taunton and Raynham Descendants of George and Mary Hall"; contributed largely to the "History of Bristol County"; and for many years was secretary of the Old Colony Historical Society.

Hamilton, Charles W., financier, born in German, Chenango County, N. Y., Jan. 1, 1831; died in Omaha, Neb., Nov. 19, 1896. He settled in Omaha in 1856. In 1862 he entered the banking house of Barrows, Millard & Co., which firm in 1868 was reorganized as Caldwell, Hamilton & Co. In 1883, when it was incorporated as the United States National Bank, Mr. Hamilton became its president, which office he held until his death. Aside from his banking business, Mr. Hamilton engaged in railroad, stockyard, waterworks, and other large enterprises, and actively participated in the work of making Omaha a great city.

Harper, Joseph Wesley, publisher, born in Brooklyn, N. Y., March 16, 1830; died in New York city, July 21, 1896. He was graduated at Columbia College in 1848; entered the publishing house of Messrs. Harper and Brothers, of which his father was a founder, in 1850; and was active there till 1894, when he retired. He learned the printer's trade, became a member of the firm in 1869, and in recent years had been the head of the literary department. Mr. Harper was a trustee of Columbia College for more than twenty years. He bequeathed \$5,000 to the endowment fund of St. Thomas's Church, and \$5,000 to Columbia College.

Harper, Philip Jacob Arenarius, publisher, born in New York city, Oct. 21, 1824; died in Hempstead, Long Island, N. Y., March 6, 1896. He was the eldest son of James Harper, one of the founders of the firm of Harper and Brothers; received a private-school education; and entered the house when eighteen years old. In 1869 he succeeded his father as a member of the firm, and in 1890 retired. About 1866 he took up his residence in Hempstead, of which village he was president and trustee for more than twenty years. He gave the village a fire-engine house, a bell, and a hook-and-ladder apparatus, and after his retirement he spent much time in improving the condition of the poor in Hempstead and vicinity, giving liberally.

Harris, Jonathan Newton, philanthropist, born in Salem, Conn., Nov. 18, 1815; died in New London, Conn., Oct. 18, 1896. For thirty years he conducted a general store in New London, and since 1845 he had acquired a large fortune in the manufacture and sale of patent medicines. He was a member of the Connecticut Legislature in 1855, and of the State Senate in 1864; was Mayor of New London in 1856 and 1862; and at the beginning of the civil war he equipped the entire garrison at Fort Trumbull. For many years he had been a director and generous promoter of the American Board of Commissioners of Foreign Missions and of the International Young Men's Christian Association. He founded the Harris School of Science in Kioto, Japan, at a cost of \$100,000; gave the Mount Hermon School for Boys at East Northfield, Mass., and the Moody School at Northfield, each \$50,000; and contributed from \$30,000 to \$50,000 annually to various churches and benevolent organizations. His bequests included: Northfield Seminary and the American Board of Foreign Missions, each \$10,000; American Home Missionary Society and Commissioners for Foreign Missions, each \$5,000; Bradley Street Mission, \$2,000; International Young Men's Christian Association, \$1,000; Mount Hermon School for Boys, \$2,000 annually; Memorial Hospital, \$1,000 annually; Cedar Grove

Cemetery, \$1,000 annually; Northfield Seminary for Girls, \$1,000; trustees' fund of the Congregational Church of Connecticut, \$5,500; and the Mount Hermon School and Northfield seniors, each a block of valuable stock.

Harris, Robert Lewis, civil engineer, born in Portsmouth, N. H., May 18, 1834; died in Kearsarge village, N. H., Sept. 29, 1896. He studied civil engineering, and in 1852 was appointed leveler and chief draughtsman on the Cincinnati and St. Louis Air-line Railway. In 1854-'57 he was an engineer on the Delaware, the Racine and Mississippi, and the Milwaukee and Beloit Railways, and in 1857-'58 had charge of one of three parties in Honduras that surveyed a route for the Inter-oceanic Railway. He was made resident engineer of the Minnesota and Pacific Railway, the first one extended west from St. Paul in 1858. From 1860 till 1871 he made his headquarters in San Francisco, and was chief engineer of the Napa Valley, San Francisco and Oakland, Alameda Valley, California Pacific, and several other roads, and also located about 45 miles of the Central Pacific Railroad east of the summit of the Sierra Nevada mountains in 1865. In 1871-'72 he was chief engineer of the construction company that built 225 miles of the Northern Pacific Railway across Minnesota; in 1872-'74 held the same office in the Chicago and Canada Southern road; in 1875-'76 was similarly employed on the Canadian Central extension; and in 1876-'83 was engaged in railroad construction in the Southern States. He was a consulting engineer in New York city in 1883-'91, and became chief engineer of the Wilkesbarre and Hudson River Improvement Company.

Haupt, William Ayers (known in public as **William A. Mestayer**), actor and playwright, born in Philadelphia, Pa., June 8, 1846; died in New York city, Nov. 21, 1896. He was a son of Mrs. Charles Haupt, who was most widely known by her maiden name of Emily Mestayer, and was for many years connected with the Boston Museum. He made his first appearance on the stage at a benefit performance for his mother on Feb. 18, 1862. Then he went to Niblo's Garden, New York, where he played under the tutorage of Edwin Forrest, and afterward played at Chestnut Street Theater, Philadelphia, and with the Wallack-Davenport combination in New York. During the civil war he served with his uncle, Hermann Haupt, in the engineering corps of the Army of the Potomac. Returning to the stage, he played in Troy, Boston, San Francisco, and New York, took a part in nearly all the Rice burlesques in the latter city, and also sang one season in "The Gondoliers" with the Stetson Opera Company. Among the plays that he wrote or assisted in writing were "The Tourist in a Pullman Car," "We, Us & Co.," "Tobogganing," "The Grab Bag," and "The Kitty."

Haygood, Atticus Greene, clergyman, born in Watkinsville, Ga., Nov. 19, 1839; died in Oxford, Ga., Jan. 19, 1896. He was graduated at Emory College and was licensed to preach in the Methodist Episcopal Church in 1859; was editor of the Sunday-school publications of the Southern branch of the Church in 1870-'75; and was President of Emory College, Macon, Ga., from 1876 till 1884. In 1872 he was elected a bishop of the Methodist Episcopal Church, South, but declined the office, and on May 19, 1890, he was again elected and accepted. For many years he was identified with the progressive work of his Church, and his rare executive abilities led George I. Seney, of Brooklyn, N. Y., to place in his hands over \$100,000 to promote various institutions under his charge. His most important service was as general agent of the fund of \$1,000,000 placed in the hands of trustees

by John F. Slater for the education of the colored race in the South, to which he was elected in 1883. He received the degree of D. D. from Emory College in 1870, and that of LL. D. from the Southwestern University of Texas in 1884. Bishop Haygood edited "Sermons by Bishop George Foster Peirce" (Nashville, 1886), and published "Go or Send: An Essay on Missions" (1873); "Our Children" (New York, 1876); "Our Brother in Black" (1881); "Close the Saloons" (Macon, 1882); and "Jackknife and Brambles" (Nashville, 1893).

Heckman, Charles Adam, military officer, born in Easton, Pa., Dec. 3, 1822; died in Philadelphia, Pa., Jan. 14, 1896. He was graduated at Minerva Seminary, Easton, in 1837, and served in the Mexican War in the 1st United States Voltigeurs. On April 20, 1861, he was commissioned a captain in the 1st Pennsylvania Regiment, with which he served through the three months' campaign. In October following he became major of the 9th New Jersey Regiment, on Dec. 3 lieutenant colonel, and February 10, 1862, colonel; and on Nov. 29 following he was commissioned a brigadier general of volunteers. Gen. Heckman accompanied Gen. Burnside's expedition to North Carolina; served with the Army of the James; and was in command of the defenses of Norfolk and Portsmouth, Va., during the winter of 1863-'64. At the battle of Drewry's Bluff, Va., May 16, 1864, he was captured after he had repelled a superior force five times. He was taken successively to Libby Prison, to Macon, Ga., and to Charleston, S. C., and while at the last city was placed under the fire of the National guns with 50 other Federal officers. On being exchanged, Aug. 25, he was attached to the 18th Army Corps, which he commanded at the capture of Fort Harrison, Chapin's Bluff. In January and February, 1865, he commanded the 25th Corps. He resigned May 25, 1865, and afterward was connected with the Central Railroad of New Jersey.

Herrmann, Alexander, magician, born in Paris, France, Feb. 10, 1844; died on the railroad near Great Valley, N. Y., Dec. 17, 1896. His father was a physician who practiced magic for amusement, and his brother Carl became a professional sleight-of-hand performer before he was twenty-one years old. When twelve years old, Alexander was kidnapped by his brother, who took him to Vienna and thence over Europe, the brothers giving performances together with much success. In 1861 Carl and Alexander came to the United States, and gave their first performance in the New York Academy of Music, their season running seventy-five nights. Subsequently Carl returned to Europe, and Alexander chose to remain in the United States, and became naturalized in Boston. Alexander had traveled all over the world, and had received decorations from many crowned heads. He was a man of large benevolence, and was as popular socially as he was professionally.

Hillebrandt, Hugo, military officer, born in Hungary in 1832; died in Brooklyn, N. Y., April 4, 1896. He was attending a military school when the revolution under Kossuth broke out, and left the school and was made a lieutenant in the revolutionary army. He followed Kossuth to the United States, and was employed in the Coast Survey till he received advance information of an intended Italian uprising under Garibaldi, when he joined that leader and took part in both movements into Sicily and the operations culminating in the occupation of Rome by the Army of Liberation. In 1860 he returned to the United States. After the firing on Sumter he was appointed 1st lieutenant and adjutant of the 39th New York Volunteers (the Garibaldi Guard), in which he successively became captain and major. He resigned

Dec. 10, 1863, on account of wounds received at Gettysburg and sickness contracted in the Mine Run campaign, and Feb. 2, 1864, was appointed captain in the Veteran Reserve Corps. During 1864 and part of 1865 he was on duty at Washington, D. C.; in 1866-'68 served in North Carolina in connection with the Freedmen's Bureau; and in 1869-'74 was United States consul at Canca, Crete.

Hinckley, Thomas Hewes, artist, born in Milton, Mass., in 1813; died there Feb. 15, 1896. He was apprenticed to a trade in Philadelphia when fifteen years old, but attended an evening school one winter and received instruction in perspective and in light and shade—his only instruction in art. In 1831 he went to Boston and worked for a sign painter, to learn the composition and use of colors, and made his first attempts at painting in portraiture and landscapes. In 1843 a successful painting of dogs led him to apply himself wholly to animal life, and two years afterward he opened a studio in Milton. He went to Europe in 1851 to study the works of the English and Flemish animal painters, especially those of Landseer, and in 1858 painted 2 pictures of dogs and game, which were exhibited at the Royal Academy that year.

Hoey, Josephine Shaw, actress, born in Liverpool, England, in June, 1824; died at Hollywood, Long Branch, N. J., July 21, 1896. She came to the United States with her father when a child, and made her first appearance on the stage at the Baltimore Museum in 1839, playing with her sister Charlotte in "Nature and Philosophy." During this engagement she frequently played with Joseph Jefferson, John E. Owens, Mary Taylor, and other notable actors. From Baltimore she went to Peale's Museum, in Philadelphia, and, after two seasons, to Purdy's National Theater in New York, where she made her first appearance in the "Naia Queen." Here she attracted the attention of William E. Burton, who secured her for his Chambers Street Theater. At this house she made her first appearance as Edith Dombey in Burton's own dramatization of "Dombey and Son." In 1849 she married John Hoey, subsequently for many years President of the Adams Express Company, and withdrew from the stage. About three years afterward, when James W. Wallack was managing Brougham's Lyceum on Broadway, Laura Keane, the leading lady of the company, suddenly withdrew, and in the emergency Mr. Wallack induced Mrs. Hoey to take the place of leading lady. This engagement lasted till 1865, when she retired permanently. During her connection with the Wallack house she played the Shakespearean parts of Portia, Desdemona, Viola, Ophelia, and Rosalind.

Holden, Martha Evarts, journalist, born in Hartford, Conn., in 1844; died in Chicago, Ill., Jan. 16, 1896. She was the daughter of a Baptist clergyman; was married early in life, and, removing to Chicago, became a telegrapher. While so employed she began to contribute to the Chicago newspapers. Her writings attracted the attention of ex-Gov. Andrew L. Shuman, who owned the "Evening Journal," and induced her to write a series of letters for that paper, he giving her the pen name "Amber." She published her newspaper letters under the title of "A String of Amber Beads."

Holt, Thomas Michael, manufacturer, born in Alamance County, N. C., July 15, 1831; died at Haw River, N. C., April 11, 1896. He was educated at the University of North Carolina; learned the general details of manufacturing in Philadelphia; and for forty-four years had been engaged in manufacturing cotton goods in his native State. In 1872 and 1874 he was elected a county commissioner; in 1876 a State Senator; in 1883, 1885, and 1887 a member of the Legislature; and in 1885 Speaker of the

House. Since 1874 he had been President of the North Carolina Railroad Company. In 1888 he was elected Lieutenant Governor of North Carolina, and on the death of Gov. Daniel G. Fowle, April 7, 1891, became chief executive of the State.

Hoppin, Augustus, artist, born in Providence, R. I., July 13, 1828; died in Flushing, N. Y., April 1, 1896. He was a brother of William J. Hoppin, the diplomatist, and of Thomas F. Hoppin, the artist; was graduated at Brown University in 1848; and engaged in the practice of law in his native city. In 1854-'55 he made a tour of the art galleries of Europe for study and observation, and on his return applied himself to drawing on wood. He became one of the most famous caricaturists and illustrators in the country, and also achieved success as an author. For several years he was a contributor of art work to periodicals, and furnished numerous illustrations for works in current literature. Among the latter were "The Potiphar Papers" (1853); "Nothing to Wear" (1857); "Life and Sayings of Mrs. Partington" (1859); "Knitting Work" (1859); "The Autocrat of the Breakfast Table" (1858); and "Jubilee Days" (1872). He wrote "Carrot Pomade" (1864); "On the Nile" and "Ups and Downs on Land and Water" (1871); "Crossing the Atlantic" (1872); "I-I-y Fever" (1873); "Recollections of Auton House" (1881); "A Fashionable Sufferer" (1883); "Two Compton Boys" (1885); and "Married for Fun" (1885).

Horr, Roswell G., journalist, born in Waitsville, Vt., Nov. 26, 1830; died in Plainfield, N. J., Dec. 18, 1896. In early youth he removed with his parents to Lorain County, Ohio. He was graduated at Antioch College in 1857, was appointed clerk of the Court of Common Pleas of the county, and six years later was admitted to the bar. After practicing about two years, he engaged in mining in Missouri, removed to Saginaw, Mich., and resumed practice in 1872, and was there elected to Congress in 1878, 1880, and 1882, and was defeated in 1884. He was active in politics from his college days; became a campaign orator of the Republican party; and while in Congress earned the reputation of being an exceptional debater. He made many speeches in the presidential campaigns of 1888, 1892, and 1896, and his fatal illness resulted from overwork in the last. Mr. Horr joined the staff of the "New York Tribune" in 1891, and contributed to it over his own signature special articles on the tariff and the money question. In 1893 he had a memorable debate on the silver question with Senator Stewart, of Nevada, and in the summer of 1895 one with William H. Harvey, author of "Coin's Financial School."

Houston, John Wallace, jurist, born in Concord, Del., May 4, 1814; died in Georgetown, Del., April 26, 1896. He was graduated at Yale in 1834; was admitted to the bar in Dover in 1837; and removed to Georgetown to practice in 1839. In 1841 he was appointed Secretary of State, and in 1844, before the expiration of his term of office, he was elected to Congress as a Whig. His services there secured him two successive re-elections. He resumed practice in 1851, and in May, 1855, was appointed an Associate Justice of the Superior Court of Delaware, an office he held till January, 1893, when he was retired. Through the civil war he was an earnest supporter of the Union. While on the bench he was *ex-officio* reporter of the decisions of the court, and compiled six volumes of reports.

Howard, Harry, fireman, born in New York city, Aug. 20, 1822; died there Feb. 6, 1896. He was abandoned by his parents when a few days old, and was adopted by Mrs. Sarah C. Howard, who gave him the name by which he was always known. Harry was apprenticed to the cabinetmaker's trade, and followed it for several years. His highest an-

bitation when a boy was to become the greatest fireman in New York. He became a member of Peterson Engine Company No. 15 in 1840; was elected foreman of the company and an assistant engineer of the department in 1850; and was chosen chief engineer in 1857. During the ensuing three years he did much to improve the condition of the department—had bunks placed in all the engine houses and details of firemen kept there day and night—and by the extraordinary vigilance he instituted caused the fire insurance rates to be greatly reduced. His reformatory work undermined his constitution, and after achieving the distinction of being the ideal fireman and saving over 100 lives at fires, he was stricken with paralysis while on his way to a fire in 1860, and was obliged to retire from active service. In 1853 he was elected to the Legislature; in 1854 and 1855 to the board of aldermen; in 1856 was receiver of taxes; and since 1866 had been inspector of vaults and areas in the Department of Public Works, an office created especially for him by the Legislature. He dragged himself about the city day after day till within a short time of his death. In the great Columbian parade in New York city, Oct. 12, 1892, he headed the division of the fire department, attired in his old chief's uniform, walked the entire distance, and was loudly cheered from one end of the route to the other. In 1866 he appeared before the Legislature and made an appeal that resulted in an increase of 20 per cent. in the salaries of members of the paid department; in 1890 he gave the first \$1,000 toward the fund for the erection of the Firemen's Home in Hudson, N. Y., and afterward laid the corner stone of the building and made the address at its dedication. He also gave \$1,000 to the Exempt Firemen's Burial fund.

Hunt, Sanford, clergyman, born in Eden, Erie County, N. Y., April 1, 1825; died in Cincinnati, Ohio, Feb. 10, 1896. He was graduated at Allegheny College, Meadville, Pa., in 1847; joined the old Genesee Conference of the Methodist Episcopal Church; and for several years held appointments and was presiding elder in the Buffalo and Niagara districts. While presiding elder at Buffalo he cleared every Methodist church in the district from debt. He was secretary of the United States Christian Commission for Western New York during two years of the civil war, and for nearly ten years afterward held the office of presiding elder in various districts. In 1879 he was elected junior agent of the Methodist Book Concern in New York city, and in 1889 became senior agent and also treasurer of the Missionary Society of the Church. He received the degree of D. D. from Allegheny College in 1871. Dr. Hunt was chiefly instrumental in securing the erection of the Methodist Book Concern's costly building on Fifth Avenue, New York, and in paying off the debt incurred thereby. He published "Handbook for Trustees of Religious Corporations in the State of New York" (New York, 1872), and "Laws relating to Religious Corporations in the United States" (rev. ed., 1882).

Hunter, Alexander S., physician, born in Conesville, N. Y., Sept. 23, 1839; died in New York city, Feb. 14, 1896. He was graduated at the Albany Normal School, studied civil engineering, became Professor of Mathematics at Sedgwick Institute, Great Barrington, Mass., and was graduated at the New York University Medical College in 1863. For six years he was chairman of the obstetric section of the Academy of Medicine, and in 1890 and 1891 was chairman of the Committee on Admission of the academy. He invented several surgical appliances, of which the speculum and the forceps bearing his name are the best known.

Hunter, Morton Craig, military officer, born in Versailles, Ind., Feb. 5, 1825; died in Bloomington,

Ind., Oct. 25, 1896. He was graduated at Indiana State University in 1849, was elected to the Legislature in 1858, and was a Republican presidential elector in 1860. In 1861 he was commissioned colonel of the 82d Indiana Infantry, with which he served till the fall of Atlanta, and was then given command of a brigade in Gen. Sherman's army, with which he made the march to the sea. On March 13, 1865, he was brevetted brigadier general of volunteers. In 1866, 1872, 1874, and 1876 he was elected to Congress as a Republican from the 8th Indiana District, and in 1878 he was defeated by his Democratic opponent.

Inman, John Hamilton, capitalist, born in Dandridge, Tenn., Oct. 23, 1844; died in Berkshire, Mass., Nov. 5, 1896. He received a common-school education, became a clerk in his uncle's bank in Georgia when fifteen years old, and served in the Confederate army from 1862 till the close of the war. The war left his family penniless, and in 1865 he removed to New York city and entered a cotton house as clerk. In 1868 he was admitted to partnership, and in 1870 organized the cotton firm of Inman, Swann & Co. Within five years he became a successful business man. He made a careful study of the resources and needs of the Southern States, and undertook the development of the former. In this work he and his friends invested heavily in coal and iron properties, and afterward in railroads, and it is believed that he was instrumental in placing \$100,000,000 of Northern capital in Southern industrial enterprises.

Jardine Brothers, organ builders, born in London, England; died in New York city. **EDWARD GEORGE** was born in 1830 and died March 16, 1896; **JOSEPH PHILIP** was born in 1832 and died March 13, 1896. They were sons of George Jardine, who came to the United States in 1836 and founded the George Jardine Organ Manufacturing Company in New York city. Edward was brought up in the business, but Joseph was placed in a banking house, where he remained till the death of his father, in 1882, when he became a member of the firm.

Jeffries, Noah L., lawyer, born in Pennsylvania, Dec. 3, 1828; died in Washington, D. C., April 22, 1896. In early youth he accompanied his parents to Wooster, Ohio, where he was educated and admitted to the bar in 1850. At the beginning of the civil war he raised four companies of volunteers in Mansfield, which were consolidated with others raised by his brother-in-law, Col. Tibball, which formed the 59th New York Volunteers. He was appointed adjutant of the regiment, and in November, 1861, was detailed as acting assistant adjutant general of his brigade. In the following year he was commissioned assistant adjutant general in Gen. Wessell's brigade, Casey's division, and was promoted major. Soon afterward he was detailed to be assistant provost marshal general for Maryland and Delaware, where he had charge of the draft and recruiting service. He was appointed assistant provost marshal general of the United States in July, 1864, and was promoted brigadier general. His field service included Williamsburg, Fair Oaks, and the seven days' fight around Richmond, and in the latter he was severely wounded. In 1865 he was appointed a commissioner to adjust the war claims of West Virginia, and on completing this work he became inspector general of the militia of Maryland, and completely reorganized it. From this employment he was called to become register of the United States Treasury. In March, 1869, he resumed practice in Washington, D. C., and became the representative there of the Alaska Commercial Company.

Jerome, David H., merchant, born in Detroit, Mich., Nov. 17, 1829; died in Watkins Glen, N. Y., April 24, 1896. He was educated in St. Clair County, Mich., engaged in mining in California, and since

1854 had been in mercantile business in Saginaw, Mich. In 1862 he raised and prepared for field service the regiment apportioned to the 6th Congressional District, and was elected to the State Senate, where he served for six years, holding the chairmanship of the Committee on State Affairs. From 1865 till 1873 he was President of the State Military Board; in the latter year was appointed a member of the Constitutional Commission; in 1875 became United States Commissioner of Indian Affairs; and in 1880 was elected Governor of Michigan as a Republican. He built the Saginaw Valley and St. Louis Railroad.

Jones, George Wallace, military officer, born in Vincennes, Ind., April 12, 1804; died in Dubuque, Iowa, July 22, 1896. He was graduated at Transylvania University, Kentucky, in 1825; studied law, and became clerk of the United States District Court for Missouri, and was admitted to the bar, but was prevented from practicing by failing health. Being ordered into the woods to recuperate, he took a dozen slaves and a number of hired men, went to Sinsinawa Mound (then in Michigan Territory, but now in Wisconsin), near Dubuque, and engaged in mining, smelting, farming, and trading till restored to health. On the outbreak of the Black Hawk war in 1832 he became an aid to Gen. Henry Dodge, and at its close the pioneers of Michigan Territory elected him colonel of militia, and later he was commissioned a major general. In 1835 he was elected Delegate to Congress from the Territory of Michigan. In 1839 President Van Buren appointed him surveyor general of the Northwest Territory. President Harrison removed him, and President Polk reappointed him. He was elected the first United States Senator from Iowa in 1848, and served till March, 1859. At the close of his term President Buchanan appointed him United States Minister to New Grenada (now the United States of Columbia). While there, and ignorant of the outbreak of the civil war, he wrote a friendly letter to Jefferson Davis. The letter fell into the hands of Secretary Seward, who at once recalled Gen. Jones, and on his return imprisoned him in Fort Warren for sixty-four days, when President Lincoln, believing him innocent, ordered his release.

Jones, John Edward, governor, born in North Wales, Pa., Dec. 5, 1840; died in San Francisco, Cal., April 10, 1896. He was educated at Iowa State University; spent several years teaching; and, after engaging in mining in Wyoming and Colorado, removed to Nevada in 1870, and pursued that industry there till 1883, when he was appointed United States deputy collector of revenue. In November, 1886, he was elected Surveyor General of Nevada, and in 1890 was re-elected. He was elected Governor of the State on the Silver ticket in 1894, and entered on the discharge of his duty Jan. 8, 1895.

Jones, Joseph Blackburn, military officer, born in Highland, Ill., Sept. 7, 1840; died near Yonkers, N. Y., April 28, 1896. He was educated at the Northwestern University of Illinois, studied law, and had begun practicing when the civil war broke out. He raised a company for the 15th Illinois Infantry, and went to the front for three years. He was commissioned colonel on June 27, 1864, was seriously wounded at Fort Blakely while commanding a brigade, and was brevetted brigadier general of volunteers on March 13, 1865. He resumed law practice at Sparta, Ill., won distinction as a criminal lawyer, and afterward had charge of large railroad, pine-lumbering, and iron-mining interests.

Keely, Patrick C., architect, born in Kilkenny, Ireland, Aug. 9, 1816; died in Brooklyn, N. Y., Aug. 12, 1896. He studied architecture with his father, and assisted in designing and building several churches before he left Ireland. He had lived in

Brooklyn since 1841. He was the pioneer Catholic architect of America, and had designed and built more than 600 churches in the United States, including the cathedrals in Chicago, Providence, Boston, and Hartford. Every Roman Catholic cathedral in New York State, excepting St. Patrick's, in New York city, the majority of those in New England, and many in Canada, were built by him. He also designed and built the Protestant Episcopal Church of the Redeemer, completed the spire of the Church of the Holy Trinity, and designed the Church of St. John the Baptist, with the seminary and college attachment, all in Brooklyn, and designed the Jesuit Church in Sixteenth Street, New York, which is considered the best type of Roman ecclesiastical architecture in America. Mr. Keely was the second man to receive the gold medal awarded annually by the University of Notre Dame, Indiana, to the most distinguished Roman Catholic in the United States.

Kennedy, Alfred L., scientist, born in Philadelphia, Pa., Oct. 25, 1818; died there Jan. 30, 1896. He was graduated at the University of Pennsylvania in 1848, studied in Paris and Leipsic, and began practicing medicine in Philadelphia in 1853. For several years he was connected with the Pennsylvania Medical College as Assistant Professor of Chemistry and lecturer on chemical physics, general and medical botany, and medical jurisprudence and toxicology; with the Philadelphia School of Medicine as lecturer and Professor of Medical Chemistry; and with the Franklin Institute as lecturer on industrial botany and agricultural chemistry. He was the founder of the Philadelphia School of Chemistry and its president from 1842 till 1853, when it was chartered as the Polytechnic College of Pennsylvania, and he remained at its head till 1895. During the civil war he was a volunteer surgeon in the 2d Army Corps, and in 1863 was commissioned colonel of engineers. He published "Practical Chemistry a Branch of Medical Education" (Philadelphia, 1852).

Kenrick, Peter Richard, archbishop, born in Dublin, Ireland, Aug. 17, 1806; died in St. Louis, Mo., Mar. 4, 1896. He was a brother of the late Archbishop Francis P. Kenrick, of Baltimore; was educated at Maynooth College, and ordained a priest in 1832; and removed to Philadelphia, of which his brother was then bishop, in 1833. He there became rector of the theological seminary of the diocese, rector of the cathedral, vicar general, and editor of "The Catholic Herald." In 1841 he was consecrated Coadjutor Bishop of St. Louis, in 1843 became full bishop, and in 1847 archbishop. He was an active supporter of the Union during the civil war, and was zealous in relieving the sick and wounded of both armies. On Nov. 30, 1891, his golden jubilee was celebrated with many manifestations of popular esteem. He was given a coadjutor in 1872, and was deposed in 1895 because of mental infirmities.

Kent, Mehetabel Young, philanthropist, born in New York city, May 23, 1818; died in Detroit, Mich., Sept. 20, 1896. She was a daughter of William Gerard, and when fifteen years old established the first mission Sunday school in New York city, by gathering poor children who would not be admitted into the regular Sunday schools and holding simple exercises for them in a room that she hired for the purpose. Later in life she worked zealously to promote many charitable institutions. In 1880 Mrs. Kent founded in Washington, D. C., the Woman's National Relief Association, and in the last fifteen years of her life she had been particularly interested in building up the Blue Anchor Society, or New York State auxiliary to the national association. The special aim of this branch is to furnish

aid to shipwrecked persons by keeping the 250 life-saving stations on the coast supplied with clothing, restorative food, and other comforts. Mrs. Kent was president of this branch from its organization till her death. She was also an active worker in the Chapin Home and in the New York Infant Asylum. She married Gabriel Kent in 1837, and was widowed in 1895.

King, Edward, author, born in Middlefield, Mass., July 31, 1848; died in Brooklyn, N. Y., March 28, 1896. He became a reporter on the Springfield (Mass.) "Union" when sixteen years old, and went thence to the "Republican," which he served as reporter, subeditor, and editorial writer till 1867, when he went to Paris to write up the Exposition. In 1873-'74, accompanied by J. Wells Champney, the artist, he made a protracted journey through the Southern States, and described their condition, resources, and prospects in a series of papers which was published in "Scribner's Monthly," with illustrations by Mr. Champney. These papers, largely rewritten, were published in book form in 1875, under the title of "The Great South." From 1875 till 1888 Mr. King made his headquarters in Paris as a correspondent. During this period he visited all parts of the Continent, went through the Carlist war in Spain, and served with the Russian army in the Russo-Turkish War. He also, while in Paris, served for several years as the secretary of the Société de Gens de Lettres of Europe. On his return to the United States he was employed as an editorial writer on the New York "Morning Journal" and "Once a Week." Among his publications were: "My Paris, or French Character Sketches" (Boston, 1868); "Kentucky's Love" (1873); "Echoes from the Orient" (London, 1879); "French Political Leaders" (New York, 1882); "The Gentle Savage" (Boston, 1883); "Europe in Storm and Calm" (Springfield, 1885); "The Golden Spike" (Boston, 1886); "A Venetian Lover" (London, 1887); and "Joseph Zalmolah" (Boston, 1893).

Kingsley, William Lathrop, editor, born in New Haven, Conn., April 1, 1824; died there Feb. 14, 1896. He was graduated at Yale in 1843, studied theology, and in 1849-'50 supplied Congregational pulpits in Ohio and Connecticut. Failing health prevented his continuance in the ministry, and after two trips to Europe he undertook the duties of editor and proprietor of the "New Englander" in 1857. He remained in active control of this magazine for thirty-five years, and distinguished himself as a critic, reviewer, and student of history. Besides his work on the "New Englander" and the "Yale Review," he edited the two volumes on the history of Yale College (1879) and founded and carried on for many years the mission and Sunday school which afterward became the Taylor Church. He received the degree of L. H. D. from Yale in 1891.

Knox, Thomas Wallace, author, born in Pembroke, N. H., June 26, 1835; died in New York city, Jan. 6, 1896. He was educated at the academies in Pembroke and Pittsfield, adopted teaching as a profession, and established an academy in Kingston, N. H. During the Pike's Peak gold excitement he went to Colorado, but soon gave up mining and became city editor of a Denver newspaper and a correspondent of several Eastern journals. In the first year of the civil war he served as a staff officer through two campaigns in the Southwest, and was also a correspondent of the "New York Herald." He was wounded in a skirmish, and then went to New York and became a journalist. In 1866 he went around the world as a newspaper correspondent. In Siberia, accompanying the telegraph expedition, he traveled 3,600 miles in sledges and 1,400 miles in wagons. In 1875 he went as a correspondent to Ireland, and telegraphed the score of the

international rifle match by means of a device invented by himself, indicating, by the use of Morse characters, the spot where each ball struck the target. He afterward developed this into a system of topographical telegraphy, and sold it to the United States Government for transmission of weather maps. In May, 1877, he began a second voyage round the world, and arrived in Paris in time to serve as a member of the international jury at the Exposition of 1878. He was a member of the Lotos Club and of the Authors' Club, in New York, and his last years were spent in that city. He never married. His books for boys were especially popular. The complete list of his publications in book form is as follows: "Camp Fire and Cotton Field" (1865); "Overland through Asia" (1870); "Underground Life" (1873); "Backsheesh" (1875); "John" (1879); the "Boy Travelers Series," as follows—"In China and Japan" (1880), "In Siam and Java" (1881), "In Ceylon and India" (1882), "In Egypt and the Holy Land" (1883), "In Central Africa" (1884), "In South America" (1885), "In the Russian Empire" (1886), "On the Congo" (1887), "In Australasia" (1888), "In Mexico" (1889), "In Great Britain and Ireland" (1890), "In Northern Europe" (1891), "In Central Europe" (1892), "In Southern Europe" (1893), and "In the Levant" (1894); "How to Travel" (1880); "The Young Nimrods in North America" (1881); "Pocket Guide for Europe" (1882); "The Young Nimrods in Europe, Asia, and Africa" (1883); "Pocket Guide around the World" (1883); "The Voyage of the Vivian to the North Pole and Beyond" (1884); "Lives of Blaine and Logan" (1884); "Marco Polo for Boys and Girls" (1885); "Robert Fulton and Steam Navigation" (1886); "Life of Henry Ward Beecher" (1887); "Decisive Battles since Waterloo" (1887); "Dog Stories and Dog Lore" (1887); "Horse Stories" (1889); "Teetotaler Dick" (1890); "A Close Shave" (1892); "Republican Party and its Leaders" (1892); "Darkness and Daylight" (1892); "The Siberian Exiles" (1893); "The Talking Handkerchief" (1893); "The Lost Army" (1894); "John Boyd's Adventures" (1894); "Captain Crane" (1895); "A Boy's Life of General Grant" (1895); "Hunters Three" (1895); "In Wild Africa" (1895).

Kraus, John, educator, born in Nassau, Germany, Feb. 2, 1815; died in New York city, March 4, 1896. He came to the United States in 1851, and in 1867 became connected with the newly established Bureau of Education at Washington, D. C., and remained there till 1873, when he resigned to establish a normal training school for kindergarten teachers in New York city. In 1872 he was a member of a committee of five chosen by the National Educational Association to investigate the value of kindergarten work in the United States. He contributed an elaborate monograph on "The Rise and Progress of the Kindergarten" to the report of the United States Commissioner of Education (1871) and published "Practical Guide to Kindergarten for Mothers and Kindergartners" (New York, 1873).

Lahey, Emily Jane, artist, born in Quincy, N. Y., June 22, 1837; died in Cranford, N. J., Oct. 24, 1896. She received a private education, evinced a fondness for art at an early age, spent several years in teaching, and exhibited her first painting in Chicago and her first at the National Academy of Design in 1873. In 1877 she went to Europe and studied with Émile van Marcke in Paris and at the great galleries in that city and in Florence and London. She married Charles D. Lahey in 1864, and after her return from Europe established a studio in New York city. Her first large canvas was entitled "Landscape with Cattle." While in England she painted "The Right of Way" and "Leader and Herd," both of which were exhibited

at Goupil's, London, the former measuring 9 by 14 feet. Her other notable paintings are "The Young Mother," a cow with her first calf; "Alone," a solitary tree on the edge of a pool; "Just in Bloom," a young heifer crossing a pool; and "From Pasture to Pool," which has been pronounced her best work, because it shows a most intimate knowledge of the habits of cattle and preserves a harmony between the subject and its landscape setting.

Latimer, George Washington, fugitive slave, born in Virginia, about 1821; died in Lynn, Mass., May 29, 1896. He and his wife were given their freedom by the will of their mistress, but the will was not probated, and the heirs refused to recognize this provision. George was sold to James B. Gray, of Norfolk, Va., in September, 1841. Soon afterward he escaped, and with his wife found a hiding place on a cotton steamer bound for Baltimore. From Baltimore they went to New York, and thence to Boston, where they were sheltered by people of their own color. One day George was recognized by a man from the South while at the post office, and two weeks afterward his master appeared and caused his arrest. He was placed in jail, and his master began proceedings to have him returned to Virginia as a fugitive. William Lloyd Garrison, Wendell Phillips, and other early abolitionists fought the case at every point, but Chief-Justice Shaw ruled that Gray had a right to take his chattel if he could prove property. Public indignation meetings were held in different parts of the State, and, pending a stay in the court proceedings, Gray offered to free Latimer for \$800. This was refused, and when Gray heard that the citizens intended to storm the jail and release the slave, he offered to free him for \$400, which was quickly raised by the Rev. Dr. Samuel L. Caldwell. Gray then attempted to secure Latimer's return to Virginia for trial on a charge of larceny, but extradition papers were refused.

Lawton, Alexander Robert, lawyer, born in Beaufort, S. C., in 1818; died in Clifton Springs, N. Y., July 2, 1896. He was graduated at the United States Military Academy and commissioned a 2d lieutenant in the 1st Artillery in 1839; served on the northern frontier till his resignation in 1841; studied law at Harvard; and was admitted to the bar at Savannah, Ga., in 1842. In 1849-'54 he was President of the Savannah and Augusta Railroad; and in 1854-'61 a State Senator. At the beginning of the civil war, as colonel of the 1st Georgia Regiment, he seized Fort Pulaski, under orders from Gov. Brown, and he held command at Savannah till April, 1861, when he was commissioned a brigadier general by the Confederate Provisional Government, and placed in command of the entire Georgia coast. In the following year he was transferred to Virginia. He took part in the battle of Chantilly, where his division was opposed by a national force under Gen. Isaac I. Stevens, who was his classmate at West Point. At Antietam he was severely wounded, and after his recovery he served till the close of the war as quartermaster general. After the war he resumed his law practice in Savannah. In 1875 he was elected to the Legislature, and in 1885 was appointed by President Cleveland United States minister to Russia. But attention was called to the fact that he was ineligible because he never had applied for pardon as a rebel, and the nomination was necessarily withdrawn. His disabilities were then removed by a pardon from the President, and he was made minister to Austria in 1887.

Leggett, Mortimer Dormer, military officer, born in Ithaca, N. Y., April 19, 1831; died in Cleveland, Ohio, Jan. 7, 1896. In youth he accompanied his parents to Willoughby, Ohio, where he

was educated; graduated in medicine, and organized the first system of union free schools in the State. He was admitted to the bar at Willoughby, Ohio; in 1855-'58 was Professor of Pleadings and practice in the Ohio Law College; and from 1858 till the beginning of the civil war was superintendent of public schools in Zanesville. He recruited the 78th Ohio Infantry, became its colonel in January, 1862, and commanded it in the battles at Fort Donelson, Shiloh (where he was wounded), and Corinth. In June following, while commanding a brigade, he captured Jackson, Tenn., defended Olivia, Tenn., against a superior force, and received another wound. He was promoted brigadier-general of volunteers in November following; was severely wounded at Champion Hills and at Vicksburg; and commanded the 3d division of the 7th Army Corps in Gen. Sherman's march to the sea. On Aug. 21, 1865, he was promoted major general of volunteers, and in the following month resigned. In 1871 he was appointed United States Commissioner of Pensions. Since 1881 he had been engaged in law practice in Cleveland.

Leoser, Charles McKnight, military officer, born in Reading, Pa., in 1839; died in Larchmont, N. Y., Feb. 23, 1896. He was graduated at the United States Military Academy and commissioned a 2d lieutenant in the 2d Cavalry in May, 1861, and with the other graduates was ordered to Washington, D. C., to drill the volunteer troops. There the drilling of the zouave regiment of New York firemen raised by Col. Ellsworth fell to him. He soon made himself popular with the men, who, on the regular organization of the regiment, elected him major. On Col. Ellsworth's death he became lieutenant colonel, and when Col. Farnham was killed at Bull Run he was unanimously elected colonel. Being informed that the regiment was not to be included in the Army of the Potomac, Col. Leoser resigned its command and returned to his own regiment in the regulars. He fought in all the battles of the Peninsular campaign, and at Brandy Station, June 9, 1863, was shot through the body. He rejoined his regiment in the autumn. In May, 1864, his regiment opened the battle of the Wilderness. He took part in Sheridan's famous raid. He was taken prisoner at Trevilian Station and spent several months in prison. During the war he took part in 40 battles, and in 1865 resigned with the brevet of colonel in the regular army.

Leslie, Edward, inventor, born near Toronto, Canada, in 1841; died in Paterson, N. J., March 26, 1896. He was the inventor of the rotary snow-plow, now used on all railroads that are obliged to fight snow drifts. He perfected his invention, organized a manufacturing company, and began building the plows in 1888. Subsequently improvements were made which led to tedious litigation and partnership quarrels, and Mr. Leslie lost his foreign patents in some unexplained manner, after completing arrangements in Russia to build plows for the Government railways. His troubles led to fatal despondency.

Lewis, James, actor, born in Troy, N. Y., about 1840; died in West Hampton, Long Island, N. Y., Sept. 10, 1896. He made his first appearance on the stage at the Troy Museum in 1858 in the small part of Farmer Gammon in "The Writing on the Wall." Soon afterward he was engaged as general utility man. From Troy he went to the Greene Street Theater in Albany, where he played second comedy parts. He then joined a company organized to play in the Georgia circuit, and was in Montgomery, Ala., when the Confederate Provisional Government was formed. He escaped to the North, played in Rochester, N. Y., and Cleveland and Cincinnati, Ohio, and made his first appearance

in New York city at the Olympic Theater in Mrs. John Wood's company as low comedian in "Your Life's in Danger" in 1866. In 1869 he was engaged by Augustin Daly as leading comedian, and he held this place till his death. His repertory was large and his acting showed remarkable versatility.

Lewis, Walter O., telegrapher, born in Suffield, Conn., in 1815; died in Philadelphia, Pa., July 16, 1896. He became a telegraph operator in Hartford, Conn., and in 1853 removed to New York city and leased the newly constructed telegraph line between New York and Sandy Hook. He then devised a speedy method for obtaining the foreign news brought over by steamships, and planned a system of telegraphy for reporting to the city the arrival of vessels in the lower bay. In 1867 the Sandy Hook line was absorbed by the Western Union Telegraph Company, and Mr. Lewis engaged in the collection of marine news and followed it till about two years before his death. He established a ship news office at the Battery and connected it with the hospital ship at Quarantine by a wire.

Littell, Robert, publisher, born in Philadelphia, Pa., May 5, 1831; died in Brookline, Mass., April 7, 1896. He was the son of Eliakim Littell, founder of "Littell's Living Age"; removed to Boston with his parents in 1844; was educated for the publishing business; and since the death of his father, in 1870, had had charge of the "Living Age."

Lyon, Irving Whitall, physician and author, born in Bedford, N. Y., Oct. 18, 1840; died in Hartford, Conn., March 4, 1896. He was educated at Lawrenceville, N. J., Academy, Vermont Medical College, and the College of Physicians and Surgeons of New York. He served on the staff of Bellevue Hospital for two years; removed to Hartford, Conn., in 1866; and besides engaging in general practice became medical director of a life insurance company and President of the Hartford County Medical Society. For thirty years he was a frequent contributor to medical journals, and he published numerous monographs on medical subjects. Dr. Lyon made a careful study of old furniture, and had become an expert on it. In 1891 he published "Colonial Furniture of New England," and at the time of his death he had nearly completed a work of similar scope on "The Domestic Architecture of New England during the Colonial Period."

McCullagh, Joseph Burbridge, journalist, born in Dublin, Ireland, in November, 1842; died in St. Louis, Mo., Dec. 31, 1896. When eleven years old he worked his passage to New York on a sailing ship, and soon afterward he was apprenticed to the printer's trade in the office of the "Freemen's Journal." In 1855 he went to St. Louis, and there served as a reporter on the "Christian Advocate" for four years, and afterward on the "Missouri Democrat," subsequently going to the "Cincinnati Commercial," on which he was employed at the beginning of the civil war. In 1861 he entered the National army as a lieutenant in the Benton Cadets under Gen. Frémont. When the regiment to which he was attached was assigned to duty with the army of the Potomac he resigned his commission, but remained in the field as a war correspondent. In this occupation he made a wide reputation by his letters to the Cincinnati "Commercial" over the signature of "Maek." After the war he was for some time Washington correspondent of the Cincinnati "Commercial," and was subsequently editor of the "Enquirer" of that city, the "Republican" of Chicago, and the "Times" and the "Democrat" of St. Louis. On the consolidation of the two last newspapers with the "Globe" he became editor-in-chief.

McGuffey, Alexander Holmes, educator, born in Youngstown, Ohio, in 1816; died in Cincinnati, June 4, 1896. He was a brother of William H.

McGuffey, a former president of Cincinnati College and of Ohio University, and was graduated at Miami University in 1833. Soon afterward he was appointed Professor of Belles-Lettres in Woodward College, Cincinnati. While there he is said to have prepared the series of school readers that was published under his brother's name, though the brother merely supervised the compilation. He also began studying law and was admitted to the bar. The McGuffey readers became so speedily and widely popular that he applied himself wholly to the compilation of schoolbooks, following the series of readers with one of spellers.

McKibbin, Joseph Chambers, military officer, born in Chambersburg, Pa., May 14, 1824; died near Mount Vernon, Va., July 1, 1896. He was educated for a lawyer, was for some time collector of customs for the District of Columbia, was one of the earliest pioneers of California, and after engaging in mining practiced law in San Francisco. In 1856 he was elected to Congress, and in 1861 was appointed by President Lincoln one of the first six officers selected for cavalry commands. He served through the war, principally on the staffs of Gens. Halleck and Thomas. Since the war he had lived in or near Washington. He was one of six brothers who served with distinction in the National army.

MacMullen, John, educator, born in New York city, March 2, 1818; died there Sept. 12, 1896. He was graduated at Columbia College in 1837; began to teach while a student; made a tour of Europe, chiefly on foot; and for some time after his return held a professorship in a Western college. In the early fifties he carried out his cherished design of opening a school for boys on entirely new lines, and he conducted it with success till 1893. During this period he educated or fitted for Columbia College many boys who subsequently became conspicuous in the life of New York city. He introduced in his school systems of self-government and arbitration, military and gymnastic drills, and manual and business training, and encouraged outdoor sports and excursions for study and practical research. After giving up his school he had charge of the work of compiling and arranging the old records of Columbia College.

McVicker, James Hubert, theatrical manager, born in New York city, Feb. 14, 1822; died in Chicago, Ill., March 7, 1896. In 1837 he removed to St. Louis, Mo., where he learned the printer's trade, which he abandoned in 1843, when he made his first appearance on the stage at New Orleans. From 1845 till 1852 he was the principal comedian in J. B. Rice's theater in Chicago, and while there had his first experience as a stage manager. At this period he excelled in the portrayal of Shakespearean comedy rôles, and was exceedingly popular in the West. On leaving this house he starred for a while in modern comedies, played a season at the American Theater in New York, and managed the People's Theater in St. Louis. In 1857 he erected his first theater in Chicago at a cost of \$100,000; in 1863 he remodeled it; in 1871, after the great fire, he entirely rebuilt it, making it the handsomest theater in the West; in 1890 he was again completely burned out; and immediately afterward he built the present house. In 1895 he associated with Henry C. Miner and Joseph Brooks in forming the American Theatrical Syndicate. His daughter Mary became the wife of Edwin Booth in 1869.

Main, Thomas, mechanical engineer, born in Borgue, Scotland, Jan. 30, 1828; died in Arlington, N. J., May 27, 1896. He served his apprenticeship and worked in the machine shops of Robert Napier, the Glasgow shipbuilder, and his successor, John Elder, and removed to New York city in 1854. His first employment was in designing. In 1861 he en-

tered the shipyard of John Roach, where he remained till Mr. Roach's failure in 1885. During this period he designed the engines of the steam ram "Dunderberg," a pioneer armored ship, which was sold to the French Government, and also the machinery for the cruiser "Iroquois" and other war ships, for the ocean steamships "City of Tokio," "City of Pekin," and others of the Pacific Mail line, and for the Sound steamers "Bristol" and "Providence." After the Roach failure Mr. Main engaged in designing on his own account. On the establishment of the Webb Academy of Shipbuilding, in New York city, he was appointed its Professor of Engineering. He was author of a "History of the Steam Engine."

Marty, Martin, clergyman, born in Schwyz, Switzerland, Jan. 12, 1834; died in St. Cloud, Minn., Sept. 19, 1896. He was educated for the priesthood in Switzerland and Austria; entered the Benedictine abbey of Einsiedeln in 1855; and was ordained in the following year.

In 1860 he came to the United States to assist a party of monks from Einsiedeln who had founded St. Meinrad's, in Indiana, in 1854. Five years afterward a priory was established there, of which he was appointed the first superior. In 1870 Pope Pius erected the priory into an abbey, constituted the clergy connected with it the Helveto-American Congregation, and appointed the superior a mitred abbot. On May 22, 1872, the abbot laid the corner stone of a new

monastery. He had previously been zealous in extending missions, building churches, and establishing educational and benevolent institutions, and had induced a large immigration of German Roman Catholics to Spencer and Dubois Counties. After presiding over the abbey and its institutions for several years, the abbot voluntarily relinquished the dignity and burdens of his office to undertake mission work among the Indians of Dakota. He made a study of their languages, particularly that of the Sioux; compiled a Sioux grammar and dictionary, with which he taught a number of priests and Sisters of Charity that language; and sent this company to engage in religious and educational work among the Sioux. He acquired great influence over the Indians, had unmolested range of their camp when no other white man was permitted there, and aided the Federal Government in its dealings with this troublesome tribe. In 1879 the Territory of Dakota was formed into a vicariate-apostolic and placed under charge of Father Marty, who was consecrated Bishop of Tiberias on Feb. 1, 1880, with the local title of First Bishop of Sioux Falls. In 1884 Bishop Marty reported to the Plenary Council of Baltimore that his vicariate contained nearly 90 churches, 50 priests, and 7 Indian missions, attended by the clergy, Benedictine, Ursuline, and Presentation nuns, besides the Sisters of the Holy Cross, and the Youville Sisters of Charity. In 1894 Bishop Marty was transferred to the diocese of St. Cloud, Minn.

Mason, Luther Whiting, educator, born in Turner, Maine, April 3, 1828; died in Buckfield, Maine, July 14, 1896. In 1853 he became superintendent of music in the public schools of Louisville, Ky., where he introduced singing by rote and then by note into all departments. From Louisville he went to Cincinnati, where he occupied a similar post for

several years. To promote his original methods of musical education, he invented type with which to print the special charts that he used. These charts and the text-books accompanying them ultimately became "The National System," since published in Boston. Prof. Mason served in the National army in the civil war as a drum major, and after the war settled in Boston, where he spent fourteen years in teaching music in the public schools. His exhibit at the Centennial Exposition attracted the attention of the representatives of Japan, and they invited him to visit their country professionally. He remained there three years, supplementing his school work with instruction in the families of the nobility, and took charge of a school where an orchestra of Japanese and European instruments was formed. On leaving Japan he received valuable presents from the Mikado, which he presented to the Boston Art Museum, and the public thanks of the Empress. He went to Germany and studied the method of training of the cathedral choirs. On May 25, 1895, his long service in the cause of musical education was commemorated by a public reception.

Maynard, Isaac Horton, jurist, born in Bovina, Delaware County, N. Y., April 9, 1838; died in Albany, N. Y., June 12, 1896. He was graduated at Amherst College in 1862; was admitted to the bar in 1863; and made his permanent home at Stanford, N. Y., in 1865. In 1875 and 1876 was elected to the Legislature as a Democrat, and in 1877 was elected county judge and surrogate of Delaware County. He was defeated as candidate for Secretary of State of New York in 1883, and was appointed second comptroller of the United States Treasury in 1885, and assistant secretary of the department in 1887. Two years afterward Gov. Hill appointed him one of the commissioners to revise the general laws of the State; in 1890 he became first deputy attorney-general; and on Jan. 19, 1892, Gov. Flower appointed him an associate justice of the Court of Appeals. While deputy attorney-general he was accused of abstracting from the State Comptroller's office the corrected election returns from Dutchess County, on Dec. 22, 1891. These returns would have decided the political complexion of the State Senate, and in their absence the State Board of Canvassers had to act on a single return, which made the Senate Democratic. Judge Maynard explained his connection with the case, but the State Bar Association was not satisfied, and after an investigation pronounced a severe censure on him. In the Legislature a hasty investigation was made and resulted in a report practically exonerating Judge Maynard. He was nominated for a full term in the Court of Appeals in 1893, but was defeated by the Republican candidate by 106,000, the Republican candidates for the other offices receiving from 23,000 to 35,000 plurality.

Mayo, Frank, actor, born in Boston, Mass., April 19, 1839; died on a railroad train near Grand Island, Neb., June 8, 1896. When sixteen years old he went to California to engage in mining, but instead became a supernumerary in the American Theater, San Francisco. The following year he began taking speaking parts. He spent seven years playing with different companies, and in 1863 was engaged as leading man at Maguire's Opera House. In 1865-'66 he was leading man at the Boston Theater. He made his first appearance in New York city in the Grand Opera House as Ferdinand in "The Tempest," March 31, 1869. This engagement was followed by a starring tour, in which he appeared in all the standard Shakespearean dramas, as well as "Virginius," "Richelieu," "The Robbers," "The Three Guardsmen," "The Marble Heart," "Damon and Pythias," "Jack Cade," and "The Streets of New York." In 1872 he first produced "Davy Crockett"

in Rochester, N. Y., and afterward he appeared in it more than 2,000 times in the United States and Great Britain. His last appearances were in an original dramatization of Samuel L. Clemens's "Pudd'n-head Wilson," which was first acted in New York city on April 15, 1895.

Mercur, James, military officer, born in Towanda, Pa., Nov. 25, 1842; died in West Point, N. Y., April 22, 1896. He was graduated at the United States Military Academy and commissioned a 2d lieutenant of engineers in 1866; was promoted 1st lieutenant March 7, 1867, and captain Dec. 9, 1875; and was Professor of Civil and Military Engineering at West Point from Sept. 29, 1884, till his death. In 1866-'67 he was assistant engineer on the survey of the northern and northwestern lakes; in 1867-'72 Assistant Professor of Natural and Experimental Philosophy at the Military Academy; in 1872-'76 adjutant and commander of the engineer battalion; and in 1876-'81 assistant engineer to Gen. John Newton in removing the obstructions in Hell Gate and on other river and harbor work. He spent the next three years on river and harbor improvement work and on surveys in the Southern States and in New York harbor and vicinity. Prof. Mercur revised and enlarged Mahan's "Permanent Fortification" (1887) and published "Elements of the Art of War" (1888) and "Military Mines, Blasting, and Demolitions" (1892).

Merrill, Lewis, military officer, born in New Berlin, Pa., Oct. 28, 1834; died in Philadelphia, Feb. 27, 1896. He was graduated at the United States Military Academy and commissioned a brevet 2d lieutenant in the 1st Dragoons, July 1, 1855; was promoted 2d lieutenant, 2d Dragoons, Dec. 13 following; 1st lieutenant, 2d Cavalry, April 24, 1861; captain, Oct. 1 following; major, 7th Cavalry, Nov. 27, 1868; retired May 21, 1886; appointed lieutenant colonel of cavalry by act of Congress, to rank from Jan. 9, 1886, Jan. 21, 1891; and was retired on the following day. In the volunteer army he was commissioned colonel of the 2d Missouri Cavalry, known as Merrill's Horse, Aug. 23, 1861, was brevetted brigadier general March 13, 1865, and was mustered out of the service Dec. 14 following. During the civil war he was brevetted major in the regular army, Sept. 10, 1862, for services against the Confederates in northern Missouri; lieutenant colonel, Sept. 10, 1863, for the capture of Little Rock; and colonel, March 5, 1865, for services in northwest Georgia. On Feb. 27, 1890, he received the brevet of brigadier general, United States army, for gallant services in action against the Indians at Cañon Creek, Montana, on Sept. 13, 1877. During his services in the West, he was chief of cavalry on Gen. Frémont's staff in 1861; operated against the guerrillas of western and northern Missouri in 1862; commanded the cavalry division in the Army of the Tennessee in 1863; was chief of the West Division Cavalry Bureau, and commanded a brigade of cavalry in the campaign to prevent Gen. Price's invasion of Missouri in 1864; and, as a commander of a brigade of cavalry in the Army of the Cumberland, conducted operations in northwest Georgia and northern Alabama, which resulted in the surrender of the Confederates under Gen. Wofford in 1865. After the war his most conspicuous service was the breaking up of the Kuklux Klan in South Carolina in 1868, for which he received the thanks of the War Department, of his department commander, and of the Legislature of South Carolina. In this work he incurred the wrath of the leaders of that conspiracy to such an extent that when he was first nominated for lieutenant colonel President Cleveland was obliged to withdraw the nomination, and afterward when he was again nominated by President Harrison his nomination was held up in the

Senate till it expired by constitutional limit, the minority in the Senate going so far as to break a quorum to prevent confirmation. In January, 1891, however, he received justice in the Senate, and the day following his confirmation he was retired, because of disabilities incurred in the service.

Miller, Homer Martin Virgil, physician, born in Pendleton County, South Carolina, April 29, 1814; died in Atlanta, Ga., May 31, 1896. He graduated at the South Carolina Medical College in 1835; completed his professional studies in Paris in 1838; and on his return settled in Casseville, Ga., and was licensed to preach by the Methodist Church. In the presidential campaigns of 1840 and 1844 he was conspicuous for his eloquence as a speaker. During 1846-'48 he was professor in the Medical College at Memphis, Tenn., and from 1849 till 1865 was similarly connected with the Medical College of Augusta, Ga., serving through the civil war as surgeon, division surgeon, and department medical inspector in the Confederate army. He was a member of the State Constitutional Convention after the war. Dr. Miller was Professor of the Principles and Practice of Medicine in the Atlanta Medical College from 1869, and was an associate editor of the "Atlanta Medical and Surgical Journal."

Miller, Madison, military officer, born in Merceer, Pa., Feb. 6, 1811; died in St. Louis, Mo., Feb. 27, 1896. He received a common-school education; served in the Mexican War as captain in the 2d Illinois Volunteers, and was wounded at Buena Vista; and was a judge in El Dorado County, California, in 1851-'52. Removing to Carondelet, Mo., he engaged in railroad work, and became president of the St. Louis and Iron Mountain line. In 1861 he entered the National army as a captain in the 1st Missouri Infantry, and in 1862 was commissioned a colonel of volunteers. He was captured at the battle of Shiloh, where he commanded a brigade, and while a prisoner was one of a commission sent by the Confederates to Washington to arrange for an exchange of prisoners. In March, 1865, he was brevetted general of volunteers for services at Wilson's creek and Shiloh, and the same year was elected a State Senator.

Morgan, James Dady, military officer, born in Boston, Mass., Aug. 1, 1810; died in Quincy, Ill., Sept. 12, 1896. In 1834 he removed to Quincy, Ill., where he engaged in mercantile business and became active in local military affairs. As captain of the "Quincy Riflemen" he was ordered with his company on duty in Hancock County during the Mormon excitement of 1844-'45. When the Mexican War broke out he joined the 1st Illinois Volunteers, in which he subsequently became a captain, and served till peace was declared. In 1861 he was commissioned lieutenant colonel of the 10th Illinois Volunteers, which took part in the New Madrid campaign and the siege of Corinth. He was promoted brigadier general of volunteers July 17, 1862; commanded a brigade at Nashville, Tenn., in November following; served with Gen. Sherman in the battle of Missionary Ridge, the Atlanta campaign, and the march to the sea; and for gallantry at the battle of Bentonville, N. C., was brevetted major general of volunteers, March 19, 1865.

Morison, John Hopkins, clergyman, born in Peterboro, N. H., July 25, 1808; died in Boston, Mass., April 26, 1896. He was graduated at Harvard in 1831; attended the Cambridge Divinity School; was first settled over a Unitarian Church at New Bedford; was pastor of the 1st Parish at Milton from 1846 till 1875; and was pastor emeritus at the time of his death. He received the degree of D. D. from Harvard in 1858. Dr. Morison had been editor of "The Christian Register" and of "The Religious Magazine," afterward known as

"The Unitarian Review," and had published a "Life of Hon. Jeremiah Smith, LL. D." (Boston, 1845); "Disquisitions and Notes on the Gospel of St. Matthew" (1860); and "The Great Poets as Religious Teachers" (New York, 1885).

Morrison, David, manufacturer, born in Glasgow, Scotland, Jan. 23, 1823; died in New York city, Feb. 25, 1896. He removed to New York in 1842, and was engaged in the manufacture of brass goods till the beginning of the civil war. He had been connected with the 79th Highlanders from its organization, and when the regiment volunteered its services to the Government he closed his factory and accompanied it to the front. During the war he commanded the regiment, a brigade, a division, and nine army corps, and was wounded several times. In all his commands he kept his own regiment with him. At one time he had under him, besides the Highlanders, the 36th Massachusetts, the 8th, 17th, 20th, and 27th Michigan, and the 40th, 45th, 50th, and 100th Pennsylvania Regiments. At the close of the war he resumed manufacturing in his former factory.

Morse, Cyrus Bullard, inventor, born in West Boylston, Mass., July 8, 1819; died in Tarrytown, N. Y., Feb. 22, 1896. He followed the profession of mechanical engineering for many years, and patented devices for wood-working machinery, cotton-spinning and wool-carding machinery, casting hollow-steel ingots, and drawing tubing.

Mott, Henry Augustus, chemist, born in Clifton, Staten Island, N. Y., Oct. 22, 1852; died in New York city, Nov. 8, 1896. He was a grandson of Valentine Mott, Sr., the distinguished surgeon, and was graduated at the Columbia College School of Mines in 1873. Two years afterward Columbia gave him the degree of Ph. D. After graduation he made a specialty of technical chemistry, and it has been claimed that by an original process he made the manufacture of artificial butter commercially successful. While acting as consulting chemist to several manufactories of food preparations he made a memorable exposure of the adulteration of baking powders with alum. For three years he was employed by the United States Government as chemist and examiner of the food purchased for the Indian Bureau, and he was frequently engaged in court proceedings as an expert witness, the most notable being the Fleming murder trial and the Shakespeare case, testifying for the defense in the latter trial, under instructions from the French Government. Dr. Mott was Professor of Chemistry in the New York Medical College and Hospital for Women in 1881-'86 and the official chemist of the Medico-Legal Society. During the past six years he had delivered an annual course of free lectures on chemistry in the public schools of New York. At the time of his death he was interested in developing a new motive power for steamships which he had invented. He was a frequent contributor to scientific periodicals, and published "The Chemist's Manual" (New York, 1878); "Was Man created?" (1880); "The Air we breathe and Ventilation" (1881); "The Fallacy of the Present Theory of Sound" (1885); "Matter, Ether, and Energy"; and "Yachts and Yachtsmen of America."

Munro, George, publisher, born in Pictou County, Nova Scotia, Nov. 12, 1825; died in Pine Hill, N. Y., April 23, 1896. He received the best education the province afforded, and from 1850 to 1856 was instructor in mathematics in the Free Church College, Halifax, completing a theological course in the meantime. In 1856 he removed to New York city, and for several years was employed by the American News Company. After a preliminary venture with a series of cheap novels he established, in 1867, "The Fireside Companion," and in 1877 a series of

reprints of popular English novels issued weekly under the title of "The Seaside Library." Both publications reached a large circulation, and made Mr. Munro wealthy. He endowed professorships of physics, literature, philosophy, history, and constitutional law in Dalhousie College, Halifax, and made gifts to that institution aggregating nearly \$500,000. He also gave liberally to the University of the City of New York, of whose council he was a member at the time of his death.

Murray, Eli Houston, military officer, born in Cloverport, Ky., Feb. 10, 1843; died in Bowling Green, Ky., Nov. 18, 1896. Soon after the attack on Fort Sumter he left school and organized a company of the 3d Kentucky Union Cavalry, of which he was commissioned major. On the death of Col. James Jackson, he was promoted colonel of the regiment, with which he served till the close of the war, receiving the brevet of brigadier general of volunteers in 1865, after having commanded a brigade in Sherman's march to the sea. He was United States marshal for Kentucky in 1866-'76; practiced law till 1879, when he purchased a controlling interest in the Louisville "Daily Commercial"; was appointed Governor of Utah Territory in 1880, was reappointed in 1884, and resigned before the end of his second term. He administered the office of Governor with a firm hand, and with an unrelenting opposition to polygamy.

Newton, Hubert Anson, astronomer and mathematician, born in Sherburne, N. Y., March 19, 1830; died in New Haven, Conn., Aug. 30, 1896. His father, William Newton, built the Buffalo section of the Erie Canal, and his mother, Lois Butler, had some local reputation for her mathematical powers. He was graduated at Yale in 1850, winning the first mathematical prize. He then studied the higher mathematics for two years and a half, and in 1853 became a tutor at Yale, where he took full charge of the mathematical department during the illness of the Professor of Mathematics, and in 1855 was given the full professorship. It is said that he was the youngest graduate of the college that was ever thus honored by the corporation. After a year's study abroad he entered on the duties of his chair, which he discharged till his death. His scientific work includes investigation in both pure mathematics and its application to astronomy. He is best known for his discoveries and researches regarding the laws of meteoroids and comets and their connection, which made his reputation among scientific men throughout the civilized world. In this field he was perhaps the highest living authority. He was practically the first to enter it. In 1833 Prof. Olmsted, his colleague, having witnessed the remarkable meteoric shower of that year, suggested the hypothesis that the meteors were part of a stream of bodies moving around the sun in a fixed orbit. Prof. Newton devoted the best part of his life to developing this theory; and the sum of modern knowledge on the subject, which is both extensive and accurate, is chiefly due to him, either directly or through the stimulus that his enthusiasm gave to other workers in the field, both in this country and abroad. His first important result was the mathematical computation of five orbits, that agreed with the observations of the November meteors, and the determination of the one of these that corresponded with their actual path. He thus

could identify the stream later with the comet of 1866. In 1864 he published a memoir on sporadic meteors, and of 36 recorded publications of his up to 1893, 29 relate to this or allied subjects. He supervised the issue by the Connecticut Academy of Arts and Sciences of a map of the heavens on which observers could mark the apparent paths of meteors, and thus a very large number of observations was obtained. Besides this—the chief labor of his life—Prof. Newton was the author of papers on life insurance and statistics on the metric system, which at his suggestion was first embodied in American arithmetics in 1864, and on transcendental curves, of the articles on meteors in the "Encyclopædia Britannica" and "Johnson's Cyclopædia," and of the definitions in astronomy and mathematics in the "International Dictionary." He was for many years an editor of "The American Journal of Science." Prof. Newton was active in the formation of the National Academy of Science, of which he remained a member till his death, and he served both the Connecticut Academy of Arts and Sciences and the American Association for the Advancement of Science as president. He received from the National Academy the Smith gold medal for his researches and discoveries regarding meteors. Personally, he was unassuming and genial, and those with whom he came in contact in the classroom could not help being impressed with his mathematical ability. His peculiar smile of triumph as he turned to his class after a long and intricate demonstration on the blackboard was traditional at Yale. He took much interest in the new development of the material side of the university that began about 1875, and many of the present features of the college quadrangle are due to his suggestions. Besides all this, he took a deep interest in the civic affairs of New Haven.

Nicholson, Eliza Jane, author and journalist, born on a plantation on Pearl river, Miss., in 1849; died in New Orleans, La., Feb. 15, 1896. She was the daughter of Capt. J. W. Poitevant, who was descended from an old Huguenot family. Under the pen name of Pearl Rivers she began writing songs and verse at an early age, her first efforts appearing in the "Home Journal," and her last, the beginning of a projected series of biblical lyrics, in the "Cosmopolitan." Her early compositions attracted the attention of Col. A. M. Holbrook, then the proprietor of the New Orleans "Picayune," who offered her a place on the staff of the paper, and soon afterward married her. She made a thorough study of the details of journalism, and, on her husband's death, assumed the management of the paper, paid off a debt of \$80,000, built new quarters, and brought the property to a successful condition. In this task she was aided by George Nicholson, for a long time the business manager, whom she married in 1878. She took sole control of the editorial department, and he of the financial. Mr. and Mrs. Nicholson died within a week of each other.

Nye, Edgar Wilson, author, born in Shirley, Me., Aug. 25, 1850; died near Asheville, N. C., Feb. 22, 1896. In youth he accompanied his parents to Wisconsin, where he was brought up on a farm, subsequently attending school and studying law at River Falls. He removed to Wyoming, and was admitted to the bar in 1876, but found little opportunity for practice. Turning to the newspaper press for a livelihood, he began writing humorous articles, under the pen name of Bill Nye for "The Cheyenne Sun." Soon afterward he became a reporter on the "Tribune," of Denver, Col., and thence went to Laramie, Wyo., where he established "The Boomerang." While editing the last-named paper he also acted as justice of the peace, superintendent of schools, postmaster, and United States commission-

er. His articles in "The Boomerang" were extensively copied, but the paper did not succeed financially. He then went to Hudson, Wis., where he engaged in writing weekly letters to various newspapers; afterward removed to New York city, continued his humorous writing, and became a popular lecturer; and during the last three years made his home in North Carolina. He published "Bill Nye and the Boomerang" (Chicago, 1881); "The Forty Liars" (1883); "Baled Hay" (1884); "Bill Nye's Blossom Rock" (1885); "Remarks" (1886); a series of articles which he named his "Autobiographies" ("The Century," 1892); "A Comic History of the United States"; and, posthumously, "A Comic History of England" (1896).

Paige, Lucius Robinson, clergyman, born in Hardwick, Mass., March 8, 1802; died in Cambridge, Mass., Sept. 2, 1896. He was educated at Hopkins Academy, Hadley, Mass., and was ordained as a Universalist minister in 1825. He filled successive pastorates in Massachusetts at Springfield, Gloucester, and Cambridge till 1839, when he resigned all pastoral care, though continuing to preach for thirty years longer. During his long residence in Cambridge he held many local offices, and was a member of the State Legislature in 1878-79. Besides single sermons and addresses, he published "Selections from Eminent Commentators" (1833); "Questions on Select Portions of the Gospels" (1838); "Commentary on the New Testament," in 5 volumes (1844-'67); "History of Cambridge" (1877); "History of Hardwick, with Genealogical Register" (1883).

Park, John Duane, jurist, born in Preston, Conn., in 1819; died in Norwich, Conn., Aug. 4, 1896. He was graduated at Wilbraham (Mass.) Academy; was admitted to the bar in 1847; was elected judge of the New London county court in 1854, and to the State Legislature in 1855; subsequently became Chief Justice of the Supreme Court of Connecticut; and at the time of his death was State referee.

Parker, Isaac Charles, jurist, born in Belmont County, Ohio, Oct. 15, 1838; died in Fort Smith, Ark., Nov. 17, 1896. In 1859 he removed to St. Joseph, Mo., where he became circuit attorney, provost marshal, circuit judge, Attorney-General of the State, and member of Congress. He was appointed judge of the United States Court for the Western District of Arkansas in 1875, and held the office till his death. His enforcement of the laws made his name a terror to the hordes of outlaws and fugitives from justice from other States who overran the Indian Territory and the adjoining States. The records show that up to March, 1896, 13,490 criminal cases were docketed in his court, and of this number 9,454 resulted in conviction. It is believed that Judge Parker had sentenced more men to be hanged than any other judge in the country, and he was probably the only subordinate judge that ever overruled a decision of the Supreme Court of the United States, which he did in November, 1894. In the official jurisdiction of Judge Parker, during his term, about 75 deputy marshals were killed in the discharge of their duty.

Parrott, Peter Pearse, manufacturer, born in Portsmouth, N. H., June 18, 1811; died in Arden, N. Y., July 30, 1896. He was the youngest son of John F. Parrott, a former United States Senator from New Hampshire, and a brother of Capt. Robert P. Parrott, U. S. A., the inventor of the rifled cannon bearing his name. On attaining manhood, Peter associated himself with his brother in the manufacture of iron in Orange County, New York. Their furnaces at the Greenwood Iron Works, now known as Arden, made most of the iron from which the Parrott guns and other ordnance were made at the

West Point foundry, of which Robert was appointed superintendent on his resignation from the army. Peter was one of the three largest landed proprietors in the eastern part of the State, and his property was noted for its iron wealth long before the Revolution. He took charge of it in 1837, enlarged it till it comprised over 10,000 acres, and established on it a settlement of his employees and their families, numbering over 1,500 persons. In conjunction with his brother he erected on the property a stone church, which the brothers presented to the diocese of New York. Mr. Parrott was a liberal supporter of schools, churches, and all charitable work.

Payne, Henry B., capitalist, born in Hamilton, N. Y., Nov. 30, 1810; died in Cleveland, Ohio, Sept. 9, 1896. He was graduated at Hamilton College in 1832; studied law; and removed to Cleveland and was admitted to the bar in 1834. After practicing in that city till 1846, he abandoned his profession because of failing health, and entered business and political life. He was elected a State Senator in 1849, and was defeated for the United States Senate by Benjamin F. Wade, the Free-soil candidate, after a memorable canvass in the State Legislature in 1851. In 1856 he was a delegate to the convention that nominated James Buchanan: in the following year was defeated for Governor of Ohio by Salmon P. Chase by a majority of 1,530; and in 1860 he headed the Ohio delegation to the Charleston convention, was selected by Senator Douglas to reply there to attacks made on him by Messrs. Yancey and Toombs, and reported the minority resolutions that were adopted. In this convention he warned the Southern members of the ills that would follow secession, and pleaded with them not to bring calamity on the country. During the civil war he remained a Democrat, but was a strong Union man. He opposed the doctrine of State rights, and encouraged enlistments for the National army. In 1872 he was chairman of the Ohio delegation to the Democratic National Convention in Baltimore, which nominated Horace Greeley, in whose behalf he made a stirring canvass, and in 1874 was elected to Congress from the 20th Ohio District. In Congress he was appointed chairman of the Committee on Banking and Currency; reported a bill for the gradual resumption of specie payments; was chairman of the conference committee on the silver bill; chairman of the committee on the electoral bill; chairman of the conference committee on the counting of the electoral votes for President and Vice-President; and a member of the Electoral Commission. He was a candidate for the Democratic presidential nomination in 1880 and 1884, and in the last year was elected United States Senator. Soon after Senator Payne's retirement from law practice he became connected with several railroad corporations, and subsequently was a heavy investor in Lake Superior mining, and local industrial stocks, through which he acquired a large fortune.

Peabody, Oliver White, banker, born in Springfield, Mass., May 9, 1834; died in Milton, Mass., Oct. 23, 1896. He was brought up with his brother Francis in the banking house of John E. Taylor & Brother, where he remained till September, 1862, when he enlisted in the National army, became lieutenant colonel of the 46th Massachusetts Infantry, and served through the war. In 1863, with Henry P. Kidder and his brother Francis, he formed the banking house of Kidder, Peabody & Co. He gave \$85,000 toward the erection of All Saints Protestant Episcopal Church in Ashmont, and also presented to the city a tract of 7,000 square feet in front of the church for a public park. For more than thirty years Dr. A. K. Teele acted as his almoner, and dispensed Mr. Peabody's benefactions,

after personal investigations. Mr. Peabody was President of the Children's Hospital in Boston, and an active promoter of church and charitable enterprises, and he bequeathed to the hospital \$10,000.

Perkins, Elmira Johnson, missionary, born in Winthrop, Me., in 1814; died in Malden, Mass., Feb. 26, 1896. In 1839 she married the Rev. Henry K. W. Perkins, and removed to Oregon, where during the most exciting Indian troubles she worked as a missionary, often at much personal peril. She was an intimate friend of Dr. Whitman, who was murdered by the Indians, and through her efforts the lives of many white settlers and their families were saved. After spending ten years in this work, she removed to Boston, where both she and her husband engaged in missionary service and literary work. She had mastered several languages, including Hebrew, and besides other works published a volume of poems "Harp of the Willows." Her husband died in 1886.

Perry, Nora, author, born in Dudley, Mass., in 1841; died there May 13, 1896. Her early life was passed in Providence, R. I. When eight years old she wrote her first story, "The Shipwreck," which never was published. Her first published work appeared in a religious magazine, and her first successful poem, "Tying her Bonnet under her Chin," was rejected by the "Atlantic Monthly" and subsequently brought out in a Washington, D. C., newspaper. This was followed by "After the Ball," which was published in the "Atlantic" and became very popular. In 1859-'60 her first serial story, "Rosalind Newcomb," was published in "Harper's Magazine." For several years she was the Boston correspondent of the Chicago "Tribune" and the Providence "Journal." In late years she had confined herself to writing stories for girls. Her publications include: "After the Ball and Other Poems" (Boston, 1874); "The Tragedy of the Unexpected and Other Stories" (1880); "Book of Love Stories" (1881); "For a Woman" (1885); "New Songs and Ballads" (1886); "A Flock of Girls" (1887); "Lyrics and Legends" (1890); "Hope Benham" (1894); "The Youngest Miss Lorton"; and, posthumously, "Three Little Daughters of the Revolution" (1896).

Pierce, Francis Edwin, military officer, born in New York, July 6, 1833; died in San Francisco, Cal., Nov. 5, 1896. His great-grandfather was in the Revolutionary War, his grandfather in that of 1812, and his father served in the civil war. He was graduated at the University of Rochester in 1859, and entered the volunteer army as captain in the 108th New York Infantry on Aug. 18, 1862. He was promoted major on Sept. 17 following; lieutenant colonel, March 2, 1863; mustered out May 28, 1865, and commissioned colonel of the 8th United States veteran infantry June 15 following; again mustered out March 22, 1866; commissioned 2d lieutenant 1st United States Infantry, May 8, 1866; and was promoted 1st lieutenant Sept. 9, 1867, and captain Jan. 8, 1880. During the civil war he served in the field with the Army of the Potomac from the campaign in Maryland till the surrender of Gen. Lee; took part in 8 battles and numerous minor operations; and was wounded at Chancellorsville, Gettysburg, Morton's Ford, and the Wilderness. On March 13, 1865, he was brevetted brigadier general of volunteers for gallant and meritorious services during the war. After the war he served with his regiment at Trenton, N. J., Hart's island, N. Y., Washington, D. C., Buffalo, N. Y., Detroit, Mich., Yankton, Dak., New Orleans, La., San Francisco, Cal., and elsewhere. For four years he acted as Indian agent at San Carlos, Arizona.

Pierce, Henry Lillie, manufacturer, born in Stoughton, Mass., Aug. 23, 1825; died in Boston,

Mass., Dec. 17, 1896. He was educated in the public schools and the Normal School at Bridgewater; removed to Dorchester in 1840; became connected with a chocolate manufactory in the following year, and took entire charge of the establishment in 1854. He was in active politics from 1848; took part in the organization of the Free-soil party in Massachusetts; was first elected to the Legislature in 1860; was Mayor of Boston in 1872; and was elected to Congress as a Republican in 1873 and 1875, declining a re-election in 1877, and accepting a re-election as mayor the same year. Since 1884 he had acted with the Democrats. Mr. Pierce acquired a large fortune, and his bequests to relatives, friends, and charitable institutions were very large. Among the latter were Harvard University, Massachusetts General Hospital, Massachusetts Institute of Technology, Boston Museum of Fine Arts, and Massachusetts Homœopathic Hospital, \$50,000 each; the town of Stoughton for books for a free library, \$25,000; the Massachusetts Charitable Eye and Ear Infirmary, Children's Hospital, Perkins Institute for the Blind, New England Hospital for Women and Children, Home for Aged Men, Home for Aged Women, Home for Aged Couples, Boston Home for Incurables, Society for the Collegiate Instruction of Women, Massachusetts Society for the Prevention of Cruelty to Children, and Boston Lying-in Hospital, \$20,000 each; Massachusetts Commandery, Military Order of the Loyal Legion, Home for Aged Colored Women, Channing Home, and Children's Aid Society, \$5,000 each; the Methodist, Baptist, Orthodox, Unitarian, and Roman Catholic Societies of Dorchester Lower Mills and the Episcopal Society of Ashmont, \$3,000 each. He bequeathed the residue of his estate to the Museum of Fine Arts, Harvard University, Massachusetts General Hospital, Institute of Technology, and the Homœopathic Hospital, in equal parts. He also provided for the transfer of his valuable farm adjoining the Blue Hills reservation to the Boston Park Commission, to be added to the park lands of the city.

Pomero, Marcus Mills, journalist, born in Elmira, N. Y., Dec. 25, 1833; died in Brooklyn, N. Y., May 30, 1896. He was apprenticed to the printer's trade in the office of the *Corning* (N. Y.) "*Journal*," and three years afterward established the *Corning Sun*, which he sold to good advantage in a year, and then established the "*Athens Gazette*." The last venture was unsuccessful. In 1857 he removed to Horicon, Wis., established the "*Argus*" there, and became deputy United States marshal for Wisconsin. While in Horicon he wrote for his paper a series of sketches of well-known men of Wisconsin, which he named "*Brick-dust Sketches*," whence he came to be best known as "*Brick*" Pomero. Through his strong support of Stephen A. Douglas he lost his Government office. Soon afterward he abandoned the "*Argus*"; then went to Milwaukee and became city editor of the "*Daily News*"; and subsequently secured an interest in the *La Crosse Union and Democrat*. On the last paper he was associated with George Swinford, a strong Breckinridge Democrat. Mr. Pomero's devotion to Douglas became more intensified than ever, and bitter dissensions arose between the two editors. Mr. Swinford controlled the inside pages of the paper and Mr. Pomero the outside ones, and week after week the rival partisans expressed their opinions and severely criticised each other in their respective pages of the same issue of the paper. Mr. Pomero succeeded in gaining entire control of the paper, and in 1868 he was one of the largest taxpayers in the county and his paper had a circulation of 100,000 copies. In the early part of the civil war he was a strong Union man, aided in fitting out several companies

of volunteers, and went to the front to observe the military operations. Suddenly he began denouncing the commanders of the National armies, charging that they paid more attention to the business of cotton brokerage than to their military duties, and for these publications he was ordered out of the lines and returned home. During the remainder of the war he continually denounced the policy of the Federal Government. For a long time the office of the paper was kept in readiness to repel invasions by indignant citizens, and Mr. Pomero hid in the woods 40 miles away, sending his manuscript to the office by messengers. After the war he removed to New York and founded the "*Daily Democrat*," which in time was succeeded by a weekly, "*Pomero's Democrat*." Within a short time his *La Crosse* and New York papers failed. In 1876 he began to edit a greenback organ in Chicago. He wrote much on greenback currency and personally organized 8,000 greenback clubs throughout the country. His last scheme was to tunnel the Rocky mountains. He formed a company with a capital of \$7,000,000, cut nearly a mile on each side of the mountains, and then, through failure to secure aid from the Government, abandoned the project.

Porter, Joseph Henri, military officer, born in Dublin, Ireland, in 1841; died in New York city, Jan. 27, 1896. He came to the United States in youth and settled in Virginia. At the beginning of the civil war he enlisted in a New York infantry regiment, though his father and friends clung to the Confederacy, and at the close he held the rank of colonel of volunteers and was badly shattered in health from wounds and disease. Subsequently he was a general in the army of Venezuela for two years, and in the Egyptian army for five years. On his return to the United States he opened a law office in New York. He was a keen sportsman and owned the yacht "*Ventura No. 1*."

Pratt, Calvin Edward, jurist, born in Princeton, Mass., Jan. 23, 1828; died in Rochester, Mass., Aug. 3, 1896. He was educated at Wilbraham Academy; taught at Uxbridge, Sutton, and Worcester; and studied law, and was admitted to the bar at Worcester in 1852. In the early part of his practice he made a study of medicine and anatomy in their relation to jurisprudence, and became an expert in those branches. He was a member of the Democratic State Central Committee. In 1859 he removed to Brooklyn, N. Y. While living in Worcester he had been interested in military matters, held offices in the Worcester Light Infantry, and became major of the 10th Massachusetts Infantry. In 1861 he organized the 31st New York Volunteers at his own expense and went with it to the front as its colonel. For his gallantry at Bull Run he was recommended for promotion; at the battle of Mechanicsville, Jan. 20, 1862, he was severely wounded in the face; and on Sept. 10 following he was commissioned a brigadier general of volunteers. He afterward served at Antietam, Fredericksburg, and Chancellorsville, and resigned his commission April 1, 1863. In 1865 he was appointed collector of internal revenue in Brooklyn; in 1869 was elected judge of the Supreme Court of the 2d District of New York on the nomination of both political parties; and in 1877 was re-elected as the candidate of both parties for the term of fourteen years. On the creation of the appellate division of the Supreme Court in 1895, he was appointed an associate justice, and he held the office till his death.

Pratt, Enoch, philanthropist, born in North Middleboro, Mass., Sept. 10, 1808; died in Tivoli, Md., Sept. 17, 1896. His education was acquired in the public schools and the Bridgewater Academy. He worked in a commercial house in Boston for six years, and in 1831 established himself in the com-

mission business in Baltimore. Subsequently he founded the wholesale iron house of Pratt & Keith and the house of Enoch Pratt & Brother. He also became President of the Farmers' and Planters' Bank and an official in several steamboat and railroad companies. His business enterprises yielded him large returns, and enabled him to acquire a fortune estimated from \$3,000,000 to \$5,000,000. Throughout his long life he took a deep interest in educational enterprises, and was noted for his discriminating benefactions. He founded the House of Reformation and Instruction for Colored Children at Cheltenham, Md., to which he gave 750 acres of his farm as a site; established the Maryland School for the Deaf and Dumb at Frederick; endowed an academy in his native town with \$30,000; presented the Academy of Sciences of Baltimore a new building; and made other liberal gifts to public institutions and to churches. His greatest gift was the free public library in Baltimore. On Jan. 21, 1882, he gave notice to the city government that he would establish such an institution under conditions that the city accepted. He offered to give the land and the principal building, valued at \$250,000; \$50,000 for four branch libraries; and \$333,333.33 in cash, the last to be invested and allowed to accumulate till the income amounted to \$50,000 per annum, providing the city would create an annuity of \$50,000 forever for the support of the institution. The five buildings were completed and conveyed to the city July 2, 1883, and all were formally opened Jan. 4, 1886. At the time of his death the endowment amounted to \$1,174,100. Mr. Pratt bequeathed the statues the "Shepherd Boy" and "Campaspe" to the Peabody Institute; the reversion of \$100,000 to Meadville (Pa.) Theological School; \$5,000 to the Congregational church at North Middleboro, Mass.; \$10,000 for the endowment of the public library in that town; \$10,000 to the Boys' Home in Baltimore; and the residue of his estate to the Sheppard Asylum, Baltimore, on conditions that the name of the institution be changed to the Sheppard and Enoch Pratt Hospital, that the income of the fund be used to complete the present buildings and grounds and erect a new building, and that the remaining fund be used for the care of indigent insane free of cost.

Pratt, Nathaniel William, engineer, born in Baltimore, Md., in 1852; died in Brooklyn, N. Y., March 10, 1896. The first successful dynamite gun was constructed from his designs and patents, and he became consulting engineer of the Dynamite Gun Company. He was President of the Babcock and Wilcox Company.

Prentiss, Albert Nelson, educator, born in Cazenovia, N. Y., May 22, 1836; died in Ithaca, N. Y., Aug. 14, 1896. He was graduated at Michigan Agricultural College in 1861, was appointed Professor of Botany there in 1865, and on the opening of Cornell University, in 1868, was called to the chair of Botany, Horticulture, and Arboriculture, which he occupied till his death. In 1870 he conducted the Cornell expedition to Brazil, and in 1872 studied in the Royal Botanic Gardens at Kew, England, and in the Jardin des Plantes at Paris. Prof. Prentiss was known throughout the scientific world as one of the foremost botanists, and in 1872 received the Walker prize of the Boston Society of Natural History for his essay on the mode of the natural distribution of plants.

Pulford, John, military officer, born in New York city, July 4, 1837; died in Detroit, Mich., July 11, 1896. When thirteen years old he removed with his parents to Detroit, where he was educated and admitted to the bar. He entered the National army as 1st lieutenant, 5th Michigan Infantry, Aug. 28, 1861; was promoted captain, May 15, 1862;

major, Jan. 1, 1863; lieutenant colonel, May 3 following; and colonel, July 12, 1864; and was mustered out of the volunteer service July 5, 1865. In the regular army he was commissioned both 2d and 1st lieutenant, 19th Infantry, Feb. 23, 1866; was transferred to the 37th Infantry Sept. 21 following; and was retired with the rank of colonel Dec. 15, 1870. On March 13, 1865, he was brevetted brigadier general of volunteers for "good conduct and meritorious services during the war." Gen. Pulford probably received and survived more serious wounds than any other officer during the war. At Malvern Hill a cannon ball fractured his temporal bone and broke his lower jaw and collar bone; at Chancellorsville he received a wound across the abdomen, but would not leave the field nor his command; at Gettysburg he was wounded in the right hand and thigh; in the battles in the Wilderness his back was broken and both arms were partially disabled from an injury to the brachial plexus and loss of part of the first and second dorsal vertebra; and at Boydton plank road, Oct. 27, 1864, he was severely wounded in the right knee. He is mentioned thirteen times in the "War of the Rebellion Records" in connection with important movements. His entire service during the war was with the Army of the Potomac, excepting a few days in New York city and Troy, N. Y., during the draft excitement in 1863. After the war and his appointment to the regular army, he was engaged in Gen. Hancock's expedition against hostile Indians, and with the troops assigned to guard the United States mail route from Fort Aubrey to Fort Lyon, Kansas, against the Indians in 1867, and thence till his retirement was on reconstruction and recruiting duty. His retirement was on a record of six wounds received in action.

Quint, Alonzo Hall, clergyman, born in Barnstead, N. H., March 22, 1828; died in Boston, Mass., Nov. 4, 1896. He was graduated at Dartmouth College in 1846; studied medicine; and afterward took a course in theology at Andover. In 1853 he was ordained pastor of the Central Congregational Church at Jamaica Plain, Mass.; in 1861 became chaplain of the 2d Massachusetts Volunteers; in 1864 went to the North Congregational Church in New Bedford, in 1881 to Somerville, Mass., and in 1886 became pastor of Alston Congregational Church. He received the degree of D. D. from Dartmouth College in 1866. Dr. Quint was editor and proprietor of the "Congregational Quarterly" in 1859-76; secretary of the Massachusetts General Association of Congregational Churches for twenty-five years; was foremost in organizing the National Council of the Congregational Churches of the United States, of which he was secretary from 1871; and was for many years editor of "The Congregational Yearbook." He was widely known as a genealogist and church statistician.

Randolph, Anson Davies Fitz, publisher, born in Woodbridge, N. J., Oct. 18, 1820; died in West Hampton, Long Island, N. Y., July 6, 1896. When ten years old he went to New York city, where he became an errand boy in the depository of the American Sunday-school Union, and remained there in various capacities for twenty-one years. In 1851 he established himself as a bookseller and publisher, and personally sold books from house to house in the country, carrying his stock on a canal boat, and made local deliveries with a wheelbarrow. From the first he made a specialty of religious publications, much against the judgment of his friends. One of his early ventures was the republication of a small book entitled "Hints to Christians" (originally published in Philadelphia about 1826). This book is still in print and commands a good sale. During the civil war Mr. Randolph did a large

business in the publication of sermons, addresses, and pamphlets bearing on that struggle, and also brought out Prince de Joinville's report on the operations of the Army of the Potomac. His business prospered and frequently necessitated removal to larger quarters. Early in 1896 he sold out his retail business to the Baptist Publication Society, retaining the wholesale part. In June he organized the A. D. F. Randolph Company, and the greatest trial of his business career came a few days afterward when the company was compelled to make an assignment. The creditors testified to their faith in the integrity of Mr. Randolph by voluntarily offering to wait one year or ten years, as might suit his convenience, for their money. He published several volumes of original poems.

Rankine, James, educator, born in Ayrshire, Scotland, Nov. 5, 1827; died in Geneva, N. Y., Dec. 16, 1896. He removed with his family to Canandaigua, N. Y.; was graduated at Union College in 1846; became Assistant Professor of Mathematics at Trinity College, Hartford; and subsequently was rector of St. Paul's Church, Oswego, N. Y., President of Hobart College, and rector of the Divinity School at Geneva for thirty years.

Read, John Meredith, diplomat, born in Philadelphia, Pa., Feb. 21, 1837; died in Paris, France, Dec. 27, 1896. He was a son of Judge John Meredith Read, a former Solicitor-General of the United States, and was graduated at the Albany Law School in 1859. After a period of international law study in Europe, he was admitted to the bar in Philadelphia and settled in Albany, N. Y. In 1860-'66 he was Adjutant General of the State of New York, and for his promptness and ability in organizing and forwarding troops received the thanks of the War Department. In 1869-'73 he was United States consul for France and Algeria, and during the Franco-German War was also acting consul general for the German Government. For his protection of German subjects and interests during the two sieges of Paris he was officially commended by the President of the United States, and received the thanks of the French and German governments and the official and personal thanks of Prince Bismarck. In 1873 he was appointed United States minister to Greece, where he remained to September, 1879, defraying the expenses of the legation personally for some time before his resignation, owing to the refusal of Congress to make the necessary appropriation. During his tenure of this office he received the thanks of his Government for the manner in which he had protected the persons and interests of Americans during the crisis of February, 1878. He had secured the revocation by the Greek Government of an order prohibiting the circulation and sale of the Bible in Greece, and also the release of the American ship "Armenia," and rendered an important service to his country in discovering and reporting to the Government that only one port in Russia was open during the Russo-Turkish War, and urging the advantage that would result to the commerce of the United States from the dispatch of a grain fleet from New York to that port. In 1881 he was created by the King of Greece a Knight Grand Cross of the Order of the Redeemer, the highest degree in the gift of that Government. After his resignation he devoted much of his time and means to promoting the interests of the Greek Government and to saving it from bankruptcy. He was a frequent contributor to current literature, and was the author of an "Historical Inquiry concerning Henry Hudson." Much of his time in recent years was given to archaeological, historical, and art studies, and his library and study in Paris contained many rare books, manuscripts, and art specimens.

Reilly, William Moffat, military officer, born in Philadelphia, Pa., March 13, 1822; died there Feb. 29, 1896. When fifteen years old he joined the Lafayette Light Infantry as a flag marker, and on the organization of the Wayne Artillery he was elected sergeant. During the riots of 1844 he distinguished himself, and from that time he rose in the State service. At the beginning of the civil war he was commander of the 3d Brigade of Pennsylvania militia, and made a prompt tender of his brigade to Gov. Curtin. Under the provisions of law Gen. Cadwallader was given the command, but subsequently, at the solicitation of the latter, Gen. Reilly was placed in command of the 1st Division of Pennsylvania Volunteers. He served through the war, and at its close declined President Johnson's offer of a commission as major general of volunteers. Since 1874 he had been an inspector of the county prison. Gen. Reilly bequeathed sufficient money for the erection in front of Independence Hall, Philadelphia, of bronze statues of Lafayette, Montgomery, Pulaski, and Steuben; for statues in Independence Square of Gens. Wayne, Greene, Sumter, and Morgan and Capt. Paul Jones; and for the endowment of a free eye and ear hospital.

Reinhart, Charles Stanley, artist, born in Pittsburgh, Pa., in 1844; died at the Players' Club, New York city, Aug. 30, 1896. Mr. Reinhart began his serious study of art comparatively late. As a youth he went to the front in the civil war, and although his services mainly were those of a telegraph operator and not of a combatant, they were none the less valuable, and they brought him into immediate contact with actual war. It was not until 1868, after three years in a steel manufactory in Pittsburgh, that Mr. Reinhart was enabled to go abroad and devote himself to the study of art. He went first to Paris, and later to Munich, where he entered the Royal Academy, studying drawing under Prof. Streyhüber and painting and etching under Prof. Otto. His professional life was divided between New York and Paris, where he had a studio from 1882 to 1886. For the last years of his life his home was in New York. Mr. Reinhart was one of the "young artists," so called, between 1870 and 1880 whose return from Paris and Munich opened a new period in American art. The foundation of "Scribner's," now the "Century Magazine," and the photography of drawings upon the wood-engraver's block in place of actual drawing upon the block attracted the home-coming artists, and a new school of illustrators began to be developed. Mr. Reinhart's work soon made itself felt. For several years he was closely identified with the publications of Messrs. Harper & Brothers. He illustrated several important serials, and his black-and-white studies of contemporary life showed a talent and spirit which gave him a high rank among American illustrators. This work he continued to the last. His drawings were reproduced in his later years for other magazines and the books of other firms, but his drawings for the Harper publications are those of which the public has had the widest knowledge. In the last months of his life he was engaged upon a series of war scenes, several of which, like his graphic study of ration-sharing after the surrender at Appomattox, were reproduced as double-page illustrations of "Harper's Weekly." It was Mr. Reinhart's ambition to continue in this line, and had there been sufficient encouragement he would doubtless have produced some notable paintings of the war. Although the demands of illustration encroached upon his work in oil, he painted many pictures of importance and sound merit. "Clearing Up" (1875), "Reconnoitering" (1876), and "Repulse" (1877) were among his earlier paintings. He found several subjects on the

French coast, in Normandy and elsewhere, and his "Cast Ashore," a body on the beach surrounded by French officials and fishermen, received a second-class medal at the Salon, where Mr. Reinhart frequently exhibited. This was one of several of his pictures shown at the Columbian Exposition. In water color also Mr. Reinhart did much excellent and effective work. While he was not a writer, his singular vividness as a story-teller so impressed his literary friends that he was induced to write one or two favorite stories, which were received by readers with a marked esteem that was quite independent of the influence of the author's strong personal popularity. He was a member of the National Academy of Design and of the Salmagundi Club, and also of the Century and Players' Clubs.

Richardson, William Adams, jurist, born in Tyngsboro, Mass., Nov. 2, 1821; died in Washington, D. C., Oct. 19, 1896. He was graduated at Harvard in 1843, and at its law school in 1846, and in the last year was admitted to the bar and appointed judge advocate of the Massachusetts militia. In 1853-'54 he was President of the Common Council of Lowell; in 1859 was elected President of the Wamesit Bank, and afterward was President of the Middlesex Mechanics' Association. He spent 1855-'59 in revising the General Statutes of the Commonwealth, in conjunction with Joel Parker and A. A. Richmond. In 1856 he was appointed judge of probate for Middlesex County, and in 1868, when the offices of judge of probate and judge of insolvency were consolidated, he was appointed to the new place, and held it till April, 1872. On the completion of the revision of the General Statutes, Judges Richardson and Sanger were appointed by the Legislature editors of the annual supplement to that work, and Judge Richardson discharged this duty for twenty-two years. In 1869 he was appointed Assistant Secretary of the Treasury. Two years afterward he was sent abroad by the Government as special financial agent, and negotiated the first contracts entered into in Europe for the sale of United States 4-per-cent. bonds. On March 17, 1873, Judge Richardson was appointed Secretary of the Treasury, to succeed George S. Boutwell, elected to the United States Senate. He held this office till June, 1874, and during its tenure made the notable transfer of the Geneva award money (\$10,500,000) from London to Washington. In June, 1874, he resigned from the Treasury Department to accept a seat on the bench of the United States Court of Claims, and from 1885 till his death he was chief justice of that court. He was a professor in the law departments of Georgetown (D. C.) College and Columbian University for many years, and received the degree of LL. D. from the last in 1873. Judge Richardson was the author of numerous publications dealing chiefly with financial subjects. These included: "The Banking Laws of Massachusetts" (Lowell, 1855); "Practical Information concerning the Debt of the United States" (Washington, 1872); "National Banking Laws" (1872); and a "History of the Court of Claims" (1882-'85). Besides the "Supplements" to the General Statutes of the Commonwealth of Massachusetts (Boston, 1860-'82), he prepared a "Supplement to the Revised Statutes of the United States" (1881).

Ripley, Philip, journalist, born in Hartford, Conn., in 1828; died in New York city, Jan. 25, 1896. He was educated at Trinity College, Hartford, and shortly after graduation engaged in journalism in Washington, D. C. During the civil war he was the correspondent in New Orleans of several newspapers. Several years after the war he removed to New York city, where he lived till his death, working at different times on the principal newspapers, writing editorials for "The Tribune,"

lecturing on war experiences, and contributing short stories to periodical literature and articles to cyclopedias.

Robinson, George Dexter, lawyer, born in Lexington, Mass., Jan. 20, 1834; died in Chicopee, Mass., Feb. 22, 1896. He was graduated at Harvard in 1856; taught in Chicopee for nine years; and was admitted to the bar in 1866. In 1873 he was elected to the lower house of the Legislature, and in 1875 to the State Senate. The following year he was elected to Congress as a Republican. He was re-elected for two successive terms, and after the reapportionment was elected from the new 12th District. Before taking his seat for this last term he was elected Governor of the State by a plurality of 9,864 votes over Gen. Butler. His most important service in Congress was in the Committee on the Judiciary. In 1884 he was re-elected Governor by 47,510 plurality, defeating William C. Endieott, and in 1865 was again re-elected, defeating Frederick O. Prince with a plurality of 21,897.

Robinson, John Mitchell, jurist, born in Caroline County, Maryland, in 1828; died in Annapolis, Md., Jan. 14, 1896. He was graduated at Dickinson College in 1847, and was admitted to the bar in 1849. In January, 1851, he was appointed deputy attorney-general for Queen Anne County, and in November following was elected State attorney. He was elected judge of the Circuit Court in 1864, and judge of the Court of Appeals in 1867. During the thirty years he was on the appellate bench he delivered upward of 400 opinions. In 1893, he was appointed chief judge of the Court of Appeals, and he held this place at the time of his death.

Robinson, Theodore, artist, born in Irasburg, Vt., in 1852; died in New York city, April 2, 1896. He studied painting with Carolus-Duran and Gérôme in Paris, and with Claude Monet, the impressionist, and after opening a studio in New York city, confined himself to figure and landscape work. In 1890 he took the Webb prize of \$300 for his "Winter Landscape" and the Shaw prize of \$1,000 for the best single-figure composition in oil by an American artist for a peasant-girl study entitled "In the Sun." In the 1896 spring exhibition of the Society of American artists he exhibited "Washing Day," "The Little Mill—Autumn," "West River Valley—Vermont," "Vermont Hillside—October Afternoon," and "Correspondence."

Roper, S. H., mechanical engineer, born in New Hampshire, in 1823; died in Cambridge, Mass., June 1, 1896. He was brought up on a farm, from which he went to a machine shop and made a thorough study of mechanics. His inventive skill was first shown in connection with fine guns and sewing machines, and it was said that it was his invention on which Elias Howe obtained his sewing-machine patent. Other of his inventions were the first practical knitting machine used in Massachusetts, hot-air furnaces and ranges, and, in co-operation with his son, the machines in the Hopedale Sew Works. In 1869 he applied steam power to an old-fashioned velocipede, but did not obtain the speed anticipated. Nevertheless he continued experimenting, and on the introduction of the modern bicycle applied himself almost wholly to the perfection of a steam cycle. On the day of his death he took his invention to the new Charles river bicycle track at Cambridge for a public trial. He arranged with expert wheelmen in training there to race with him, and the one chosen for the first run had all he could do to keep up with the steam bicycle. The inventor became excited over his victory, and set out to spin around the track alone to make a record. After making seven circuits and when within a few yards of the grand stand he fell dead. He had been going at the rate of a mile in two minutes.

Rowe, Nicholas, editor, born March 10, 1842; died in Chicago, Ill., March 10, 1896. He was noted in the United States and in Europe as an expert on dogs and their breeding; was a pioneer in importing the best English setters; and probably did more than any other man to raise field trial dogs in the United States to their present high standard. For many years he wrote kennel news for several periodicals under the pen name of Mohawk. In 1876 he settled in Chicago and became editor and manager of the "American Field." He inaugurated a system of correct kennel registration in 1876, and compiled and published "The National American Kennel Stud Book."

Rublee, Horace, journalist, born in Berkshire, Franklin County, Vt., Aug. 19, 1829; died in Milwaukee, Wis., Oct. 19, 1896. He accompanied his parents to Sheboygan, Wis., in 1840; became a legislative reporter for the Madison "Argus" in 1852, and editor of the Madison "Journal" in the following year; and was State Librarian in 1856-'58, and chairman of the Republican State Committee in 1859-'60. In 1868 he was a delegate at large to the National Republican Convention and a member of the Committee on Platform. He was appointed minister to Switzerland in 1869, and in October, 1876, he resigned and returned to Madison. Since 1882 he had been editor in chief of the "Milwaukee Sentinel."

Runyon, Theodore, diplomatist, born in Somerville, N. J., Oct. 25, 1822; died in Berlin, Germany, Jan. 27, 1896. He was graduated at Yale in 1842, and was admitted to the bar in Newark, N. J., in 1846. He soon acquired a wide reputation as a skillful advocate in cases involving business principles and practices,

and his successful handling of the Meeker will case is remembered as one of the historical events in legal procedure in New Jersey. In 1853 he became city attorney of Newark, and in 1856 city counselor. In 1856 Gov. Price appointed him a commissioner to revise and codify the militia laws of the State. The following year he was appointed brigadier general

of militia; soon afterward he became brigadier general of the State Rifle Corps; and subsequently major general of the National Guard of New Jersey. At the outbreak of the civil war he was given command of the 1st Brigade of New Jersey Volunteers, which left for the front on April 27, 1861. He reached Washington with 3,000 men on May 6, when the national capital was in a state of great alarm because of an expected invasion. On the following day he marched his brigade through the city and put the men through a drill exercise. As the city was then wholly unprotected by defensive works, the presence of the brigade quickly restored confidence. On May 10 a portion of the brigade went into camp on Meridian Hill, north of the city, and another portion was detailed to guard the railroad. On the 24th, in consequence of demonstrations by the enemy on the opposite side of the Potomac, Gen. Runyon was ordered to occupy and fortify the approaches to the city, especially the roads converging at the Long Bridge. Accordingly, he crossed

the bridge, and with daily details of 1,500 men constructed extensive works at the junction of the principal roads. The largest work inclosed about 10 acres in the southeast angle, a smaller one was thrown up on the northwest, a stockade was constructed across an intervening marsh nearly to the river, and a redoubt was built east of the main road. These were the first fortifications erected for the defense of the national capital, and to them the War Department gave the name of "Fort Runyon." When Gen. McDowell advanced his army toward Manassas, he left Gen. Runyon as acting major general in command of the 4th Division of the Army of Northeastern Virginia, which included all the troops not sent to the front. These troops, which numbered about 13,500, were stationed in and around Alexandria. While hastening re-enforcements to the front Gen. Runyon was informed on the 21st that the national army had been defeated and was fleeing panic-stricken toward Washington, with the Confederates in hot pursuit. Under orders from the War Department he closed all the approaches to the city by the Long and Chain Bridges, planted cannon on them, and assigned advantageous positions to various vessels at Alexandria. The enemy became informed of these preparations and abandoned the plan for marching on the city. On the 22d Thomas A. Scott, Assistant Secretary of War, informed Gen. Runyon that McDowell's army was returning to the Potomac, and suggested that he should man all the forts and prevent the retreating troops from passing over to the city, where their arrival would produce a panic. Gen. Runyon immediately telegraphed back, "Take the draw off the Long Bridge," a suggestion which was at once acted on. By these measures Gen. Runyon checked the retreat of the army, held it beyond the city till it was reorganized, and saved Washington from a panic. For these services Gen. Runyon received the thanks of President Lincoln and his Cabinet, and a joint resolution of congratulation from the New Jersey Legislature. Believing that he was restricted by superior officers, he retired from the army soon afterward and resumed the practice of law. In 1863 he was elected Mayor of Newark; in 1865 was defeated as Democratic candidate for Governor; and in 1873-'87 was Chancellor of the State. In March, 1893, he was appointed United States minister to Germany, and in September following was raised to the rank of ambassador. His death occurred from heart failure. Gen. Runyon received the degree of LL. D. from Wesleyan University 1867, Rutgers College 1875, and Yale College 1882.

Russell, William Channing, educator, born in Boston, Mass., Feb. 23, 1814; died in Yonkers, N. Y., Feb. 24, 1896. He was a great-grandson of William Ellery, one of the signers of the Declaration of Independence, and a nephew of the Rev. William Ellery Channing. In 1832 he was graduated at Columbia College, and in 1836, after studying at Harvard Law School, he was admitted to the bar in New York city. He was engaged in law practice in 1864, when the death in the army of a favorite son led him to abandon it. In 1865 he was elected Professor of History in Antioch College, and in 1868 he was called to the chair of South European Languages and also to the associate professorship of history in Cornell University. Subsequently he became vice-president of the university, remaining so till his retirement, in 1881, and acting as president for three years. During 1881-'83 he occupied the chair of History at Brown University. Prof. Russell's work lay in the field of Roman and mediæval history, and he was among the first educators in the United States to adopt the seminary method of historical instruction.

Russell, William Eustis, lawyer, born in Cambridge, Mass., Jan. 6, 1857; died in a fishing camp at Little Pabos, Quebec, Canada, July 15-16, 1896. He was as well as usual when he retired to his tent on the 15th, but was found dead early the next morning. He was graduated at Harvard in 1877,

entered the Boston University Law School, and was admitted to the Suffolk County bar in 1880. While at the law school he won the William Beach Lawrence prize for the best essay on "Foreign Judgments: Their Extra-Territorial Force and Effect." He began practicing as a member of his father's law firm and at the same time became active in politics. In 1881 he was

elected to the Common Council of Cambridge as a Democrat; in 1883 and 1884 was elected alderman; and in 1885, 1886, and 1887 was elected mayor, declining a fourth term in 1888. He had shown himself an effective political speaker in the presidential campaign of 1884, and in 1888 he was nominated by the Democrats for Governor. He made 55 speeches on the tariff issue, and was defeated by Oliver Ames by a majority of 28,069. In 1889 he was renominated and was defeated by John A. A. Brackett by a majority of 6,775. On a third nomination, in 1890, he was successful, defeating Gov. Brackett by a majority of 8,953, after one of the warmest campaigns ever known in the State. In 1891 and 1892 he was re-elected, defeating Charles H. Allen by 6,467, and William H. Haile by 2,534 votes respectively. His personal popularity was attested by the fact that he ran ahead of the Democratic ticket to such an extent that the other State officers elected in 1890 (with one exception), 1891, and 1892 were Republicans. At the close of his third term he resumed law practice, making a specialty of corporation law. In November, 1894, he was appointed a member of the Board of Indian Commissioners.

Ryan, Stephen Vincent, clergyman, born in Almonte, Ontario, Canada, Jan. 1, 1825; died in Buffalo, N. Y., April 10, 1896. He accompanied his parents to Pottsville, Pa., where he remained till 1840, when he was sent to St. Charles's Seminary, in Philadelphia. In 1844 he entered the order of the Lazarist Fathers at Cape Girardeau, Mo., and completed his studies for the Roman Catholic priesthood at St. Mary's of the Barrens. He was ordained in St. Louis, June 24, 1849, and from 1851 till 1857 was professor and prefect at St. Mary's, professor at Cape Girardeau, and president of St. Vincent's College. In the last year he was appointed visitor of the congregation of the Mission, or Vincentian Community, in the United States. He made his headquarters in St. Louis till the mother house of the community was removed to Philadelphia, and then lived in that city till his consecration as second bishop of the diocese of Buffalo, N. Y., in November, 1868. Bishop Ryan bequeathed all his property to the Church.

Samson, George Whitefield, educator, born in Havard, Mass., Sept. 29, 1819; died in New York city, Aug. 8, 1896. He was graduated at Brown University in 1839, and at Newton Theological Seminary in 1843. The same year he was ordained a

clergyman at the E Street Baptist Church, Washington, D. C., of which church he was the organizer and pastor for sixteen years. In September, 1859, he was chosen President of Columbian University, Washington, D. C., and he carried the institution successfully through many vicissitudes incident to the civil war. During his administration the law department was established and the medical school was reorganized. In 1870 he retired from Columbian University and became President of Rutgers Female College, New York city, from which office he retired in 1886. Since that time he had resided in New York. Among his publications are the "Divine Law as to Wines," "Guide to Bible Interpretation," "The Classic Test," "The Atonement," and "Art Criticism," the latter book being largely used as a text-book in colleges. He was a leader in the Baptist denomination, and was favorably known to men of other denominations as a scholar and clergyman. He was a life director of the American Colonization Society and a member of the Evangelical Alliance.

Sarony, Napoleon, artist, born in Quebec, Canada, in 1821; died in New York city, Nov. 9, 1896. His father had been an officer of the Black Hussars in the Austrian army, and after the battle of Waterloo removed to Quebec and became a lithographer. The son removed to New York city about 1833, and found employment in a lithographic house, where he began experimenting with a view to improving the art. In 1842 he formed a partnership with a young friend named Major, and opened a lithographic establishment under the firm name of Sarony & Major. In 1852 the firm was changed to Sarony, Major & Knapp, and in 1858 the success of the business enabled Mr. Sarony to retire from the firm. He then spent six years studying art in Europe, and on his return opened his first photograph gallery. He made a study of lights and poses, and the effects he obtained attracted to his gallery many famous persons. His successive galleries were filled with art curios, comprising presents received from distinguished people from various parts of the world, and a collection of over 40,000 photographs of actors and actresses. Besides the close personal attention he gave to his photographic work, Mr. Sarony made himself widely known as a black-and-white artist. He was a regular exhibitor at the National Academy of Design, as well as in the London art galleries, his charcoal drawings and drawings of the nude being particularly commended. He was the author of "Famous People whom I have photographed," and also of a series of photo-engravings in book form.

Schaeffer, Charles William, educator, born at Hagerstown, Md., May 5, 1813; died in Philadelphia, Pa., March 15, 1896. He belonged to a family of Lutheran clergymen, and was graduated at the University of Pennsylvania in 1832, and at Gettysburg Theological Seminary in 1835, and was ordained to the office of the ministry in 1836. He took charge of a parish in Montgomery County, Pennsylvania, which he served until 1841. He was pastor at Harrisburg, Pa., 1841-'49, and at Germantown, Pa., 1849-'75, when he retired from active duty, and was elected pastor emeritus. In 1864, when the Theological Seminary was established in Philadelphia, he was elected Professor of Ecclesiastical History, which chair he held to the end of his life—thirty-two years. In 1880 he became chairman of the faculty. Dr. Schaeffer took an active part in the establishment of the Theological Seminary at Philadelphia in 1864, and in the organization of the General Council in 1866 and 1867. He held many posts of honor and trust in the Church and its various boards and institutions, and was a member of the Board of Trustees of the Uni-

versity of Pennsylvania from 1859 until his death. He received from this institution in 1879 the honorary degree of D. D., and that of LL. D. from Thiel College, Greenville, Pa., in 1887. He was one of the leaders of the conservative and confessional party in the Church. He was an authority on American Lutheran history, and was a frequent contributor to the Church papers and theological reviews. He was for several years co-editor of the "Lutheran Home Journal" and the "Lutheran and Missionary," Philadelphia; editor in chief of "The Foreign Missionary" from 1879 until his death; and one of the editors of the "Lutheran Church Review," 1886-'96. He published "Mann's Explanation of Luther's Small Catechism," translated from the German (Philadelphia, 1855); "Early History of the Lutheran Church in America" (Philadelphia, 1857); "Golden Treasury for the Children of God," translated from the German (1860); "Family Prayer for Morning and Evening and the Festivals of the Church Year"; "Halle Reports," translated from the German (Reading, 1882); and "Church Book for the Use of Evangelical Lutheran Congregations" (Philadelphia, 1891). He translated numerous hymns, and wrote several original ones.

Schuyler, Montgomery, clergyman, born in New York city, Jan. 9, 1814; died in St. Louis, Mo., March 19, 1896. He was graduated at Union College in 1834, and began studying law. This he soon gave up for mercantile business, and after spending four years in that line he entered the ministry of the Protestant Episcopal Church. In 1841-'44 he was rector of Trinity Church, Marshall, Mich.; in 1845-'54, of St. John's Church, Buffalo, N. Y.; and since 1854 had been at Christ Church, St. Louis, Mo., first as rector and, after it was made the cathedral, as dean. He received the degree of D. D. from Hobart College in 1856. Dr. Schuyler was President of the Standing Committee of the Diocese of Missouri from 1858, president of the conventions that elected the second and third bishops of Missouri, and a frequent delegate to the General Conventions of his Church. In 1891 the jubilee of his ordination was celebrated by the Episcopals of St. Louis, and the Schuyler Memorial House, an adjunct of the cathedral, was founded. Among his publications are: "The Church: Its Ministry and Worship" (Buffalo, 1853); "The Pioneer Church" (Boston, 1867); and "Historical Discourse of Christ Church, St. Louis" (St. Louis, 1870).

Scott, John, lawyer, born in Alexandria, Huntingdon County, Pa., July 14, 1824; died in Philadelphia, Pa., Nov. 29, 1896. He received a common-school education; was admitted to the bar in 1846; was prosecuting attorney of the county in 1846-'49; was elected to the State Legislature in 1862; and was elected to the United States Senate as a Republican, serving from March 4, 1869, till March 4, 1875. Early in his legal career he became resident counsel of the Pennsylvania Railroad Company, in Cambria County, Pennsylvania, and having won a most important case for the company he was engaged as special counsel for a much wider district. In 1877 he took charge of the legal department of the company, and from that time till his resignation, about a year before his death, he was its general solicitor.

Sexton, Samuel, otologist, born in Xenia, Ohio, in 1833; died in New York city, July 11, 1896. He was graduated in medicine at the University of Louisville (Ky.) in 1856; served as a surgeon in the National army in the first year of the civil war; removed to New York city in 1869; and won reputation as an authority on diseases of the ear. In 1877 he became chief surgeon of the West Side Eye and Ear Infirmary, and subsequently was lecturer

at the New York Eye and Ear Infirmary. During his long practice he made careful clinical notes of over 60,000 cases which he had examined or treated, and these formed the basis of his numerous publications. At the annual meeting of the American Society of Otologists, of which he was then vice-president, in 1886, he called attention to his operation for the permanent cure of cataract by excision of the drumhead and ossicles. This operation and report attracted wide attention, and because of it he was invited to read a paper on the operation before the International Medical Congress at Berlin in 1890, and to perform the operation before a body of English specialists in London in 1892. Dr. Sexton devised special instruments for his operations, and invented the electric lantern for observations of the ear. His principal publication was "The Ear and its Diseases" (New York, 1888). A paper on "Causes of Deafness among Public-school Children" (1882) was widely circulated by the United States Bureau of Education, and an article in the "Medical Record" (Feb. 19, 1887), on "Injury to the Ear caused by the Blast of a Bursting Shell," was exceptionally interesting.

Seymour, Edward Coe, educator, born in New Hartford, N. Y., May 4, 1828; died in Brooklyn, N. Y., Sept. 17, 1896. He was graduated at the State Normal School in 1849, and subsequently was principal of Hobart Hall Academy, Oneida County, N. Y., and of a grammar school in Brooklyn. In 1855, on the organization of the Polytechnic Institute, of Brooklyn, he was appointed principal of the academic department, and he held the place till his death. He received the degree of Ph. D. in 1891.

Shaw, Elijah, manufacturer, born in Wales, Hampden County, Mass., May 29, 1819; died there Jan. 28, 1896. He received a limited education, and when a mere lad began to work in his father's blacksmith shop. Subsequently he engaged in the manufacture of shoes till 1848, when he and a brother bought a controlling interest in a small woolen mill in Wales. His success led him to buy another mill, and during his life he built and rebuilt five mills in that town. He remained in the woolen industry till his death. After the close of the civil war he was instrumental in founding Shaw University in Raleigh, N. C.—now one of the foremost institutions for the education of the colored race in the United States. In 1874 he built the Wales Baptist Church at a cost of \$20,000, and presented it to the congregation. Mr. Shaw was in other ways a liberal promoter of religious and educational interests.

Shellabarger, Samuel, lawyer, born in Clark County, Ohio, Dec. 10, 1817; died in Washington, D. C., Aug. 6, 1896. He was graduated at Miami University in 1842; was admitted to the bar in 1847; was a member of the first Legislature of Ohio under the present Constitution; and was elected to Congress as a Republican in 1860, 1864, 1866, and 1870. While a member of Congress he attended the special session called by President Lincoln on July 4, 1861, and served on the Committees on Commerce, Civil Service, and several special ones. Between his third and fourth terms he was United States minister to Portugal, and after his last term he was appointed a civil-service commissioner. He had since practiced law.

Sheridan, George A., politician, born in Millbury, Mass., Feb. 22, 1840; died in Hampton, Va., Oct. 8, 1896. He received a public-school education, and was about to enter Yale College when the civil war broke out, and while visiting in Chicago he enlisted in the 88th Illinois Infantry as a private. On the organization of the regiment he was elected a captain. He passed unharmed through

several battles, but was severely wounded at Chickamauga and was not in active service afterward. Soon after the war he went to Louisiana, where he identified himself with the leaders of the Republican party, became active in the reconstruction movement, and was appointed Adjutant General of the State. In 1872 he was elected to Congress as representative at large; but ex-Gov. Pinckbaek contested the election, and the seat was not awarded to Gen. Sheridan till the closing hours of the last day of the last session. He was wont to declare that his fame as a congressman was immortal in one respect—that he received more money for less actual service than any other man who had ever served his country in the same capacity, receiving in all about \$14,000 for a few minutes' actual service. For many years Gen. Sheridan was a noted political speaker as well as a brilliant orator. He served a term as recorder of deeds of the District of Columbia, but for several years passed the greater part of his time at the National Soldiers' Home, where he died. He was not related to Gen. Philip H. Sheridan.

Sherwood, Sarah Lounsbury, philanthropist, born in Ridgefield, Conn., in 1831; died in Ocean Grove, N. J., Oct. 1, 1896. She was a sister of ex-Gov. Phineas Lounsbury, of Connecticut; was left a widow soon after her marriage, and had since applied her income to works of charity in New York city. After working among the poor colored people of the Third Ward for five years, she volunteered her services to the Jerry McAuley Mission on Water Street in 1883. In this field she wrought many changes for the better in the lives and dwellings of the poor, aided released prisoners who had nowhere to go after leaving jail, and watched over the welfare of destitute women and children. She continued this work till within two months of her death.

Shoup, Francis Asbury, clergyman, born in Laurel, Ind.; died at Columbia, Tenn., Sept. 1, 1896. He was graduated at the United States Military Academy at West Point in 1852, and served for seven years in the artillery. At the outbreak of the civil war he entered the Confederate service. He rose to the rank of brigadier general, and served under Gen. Joseph E. Johnston in the Georgia campaign. After the war he became Professor of Mathematics in the University of Mississippi, and was called thence to a similar chair in the University of the South. He then took orders in the Protestant Episcopal Church, and from 1875 to 1883 held rectorships successively in Waterford, N. Y., Nashville, Jackson, Miss., and New Orleans. In the latter year he returned to the University of the South, at Sewanee, Tenn., as Professor of Metaphysics, and occupied that chair at the time of his death. His writings include "Infantry Tactics" (Little Rock, 1862); "Artillery Division Drill" (Atlanta, 1864); "Elements of Algebra" (New York, 1874); "Mechanism and Personality" (Boston, 1889).

Shurtleff, William Steele, jurist, born in Newbury, Vt., Feb. 17, 1830; died in Longmeadow, Mass., Jan. 14, 1896. He studied two years in Yale College, then studied at the Harvard Law School, and was admitted to the bar in 1856. In 1862 he was commissioned lieutenant colonel of the 46th Massachusetts Volunteers; on Feb. 8, 1863, was promoted colonel; and in July following was mustered out with his regiment. Almost immediately on his return Gov. Andrew appointed him judge of the Court of Probate and Insolvency, which office he held till his death.

Siegfried, Joshua K., military officer, born in Orwigsburg, Pa., in 1832; died in Pottsville, Pa., July 19, 1896. He entered the National army in 1861 as captain in the 6th Pennsylvania Volunteers;

was soon afterward commissioned major and colonel of the 48th Pennsylvania Infantry; and distinguished himself at Cedar Mountain, South Mountain, Antietam, and Fredericksburg. At the battle of Campbell's Station he commanded a brigade, and in 1864 he took part in the charge after the explosion of the mine at Petersburg. After the war he was commissioned a major general in the National Guard of Pennsylvania.

Silliman, Justus Mitchell, educator, born in New Canaan, Conn., Jan. 25, 1842; died in Easton, Pa., April 15, 1896. He received his early education at the New Canaan Academy; served three years in the National army, and was wounded at Gettysburg; and was graduated at the Rensselaer Polytechnic Institute in 1870. Within a few weeks he was appointed Professor of Mining Engineering and Graphics in Lafayette College, where he remained until his death. His special work included various investigations, of which his examination of the Bessemer flame with colored glasses and the spectroscope is the best known.

Sims, Clifford Stanley, jurist, born near Harrisburg, Pa., in 1839; died in Trenton, N. J., March 3, 1896. He was admitted to the bar in 1860; removed to Arkansas to practice; served in the United States navy in 1862-'64; and was afterward commissioned lieutenant colonel of the 4th Arkansas Infantry, United States Volunteers. In 1867-'68 he was a member of the Arkansas Constitutional Convention; in 1868, of the Legislature; and in the last year he was appointed Judge Advocate General of the State. From 1869 till 1878 he was United States consul at Ottawa, Canada, and was then engaged in corporation practice till 1894, when he was appointed a judge of the New Jersey Court of Errors and Appeals. He was author of "The Origin and Signification of Scottish Surnames" (1862); "The Institution of the Society of the Cincinnati in the State of New Jersey" (1866); and "Noye's Maxims of the Laws of England" (1870).

Skerrett, Joseph Salathiel, naval officer, born in Chillicothe, Ohio, Jan. 18, 1833; died in Washington, D. C., Dec. 31, 1896. He was appointed a midshipman in the United States navy Oct. 12, 1848; became passed midshipman June 15, 1854; master, Sept. 15, 1855; lieutenant on the following day; lieutenant commander, July 16, 1862; commander, Jan. 9, 1867; captain, June 5, 1878; commodore, Aug. 4, 1889; and rear admiral, April 16, 1894; and was retired July 9, 1894. During his naval career he was on sea service for twenty-two years and four months, and on shore or other duty twenty years and eleven months. When the civil war broke out he was on duty on the coast of Africa, engaged in the extermination of the slave trade, and was on the United States sloop "Saratoga" when she aided in the capture of the "Nightingale," one of the last of the American slavers, with over 1,000 slaves on board. His principal service during the civil war was on June 27, 1864, when, as commander of the gunboat "Aroostook" of the Western Gulf squadron, he successfully attacked the Confederate fortifications at the mouth of Brazos river, Texas. In 1867-'68 he commanded the apprentice ship "Portsmouth," and was efficient in building up the apprentice system in the navy. During 1868-'72 he was on duty at the Naval Academy, and commanded the "Macedonian" and the "Saratoga" on practice cruises. He commanded the "Portsmouth" in 1872-'75, and made an extensive surveying trip in the Pacific. On this trip he made his entrance in the harbor of Honolulu without the aid of a trained pilot, which surprised other naval officers because of its difficulty. As the result of the presence of the "Portsmouth" when the revolution of 1873 was threatening, peace was maintained and the late

King Kalakaua was placed on the throne. While commanding the "Richmond," the flag-ship of the Asiatic station in 1881-'84, he visited Apia, Samoa, to settle some trouble there in which the United States consul had become involved, and to negotiate for a coaling station at Pago-pago. In October, 1883, he succeeded to the command of the squadron on the Asiatic station; in 1884-'86 was at the naval asylum in Philadelphia; in 1889-'90 was commandant of the navy yard at Portsmouth, N. H.; in 1892 became commander of the Pacific station; and from November, 1893, till his retirement, was in command of the Asiatic station.

Smith, Alfred Baker, lawyer, born in Massena, N. Y., Nov. 17, 1825; died in Poughkeepsie, N. Y., Jan. 28, 1896. He was graduated at Union College in 1851; was admitted to the bar in Poughkeepsie, soon afterward was elected county judge; and with eleven other men formed the first Republican organization in Dutchess County, New York, the members of which were nicknamed "the twelve apostles," in 1864. In 1862 he organized the 15th Dutchess County Regiment, and accompanied it to the front as major. He fought in every engagement from Gettysburg to Bentonville, was with Sherman's army in the march to the sea; was commissioned colonel of the 150th New York Infantry; and at the close of the war was brevetted brigadier general of volunteers. Subsequently he was appointed collector and postmaster at Poughkeepsie.

Smith, Gustavus Woodson, military officer, born in Scott County, Kentucky, Jan. 1, 1822; died in New York city, June 23, 1896. He was graduated at the United States Military Academy, and commissioned a brevet 2d lieutenant in the Corps of Engineers in 1842; spent two years on the construction of fortifications in the harbor of New London, Conn., and the two following years at the Military Academy as Assistant Professor of Engineering. On Sept. 24, 1846, he was assigned to duty under Gen. Scott in Mexico as commander of the sappers, miners, and *pontoniers*, and for his services during that war, especially at Vera Cruz, Cerro Gordo, and Contreras, he was brevetted 1st lieutenant and captain. He was recalled to the Military Academy as Assistant Professor of Engineering in 1849, and remained there till his resignation from the army, in 1854. In 1855 he was appointed superintendent of the extension of the United States Treasury building, and afterward was engaged in engineering work in connection with the Branch Mint and the Marine Hospital at New Orleans, and with the Trenton Ironworks. He was appointed street commissioner of New York city in 1858, and a member of the board to revise the programme of instruction at the United States Military Academy in 1860; and in 1861 returned to Kentucky, and was commissioned a major general in the Confederate army. On May 31, 1862, Gen. Johnston having been severely wounded in the battle of Fair Oaks, Gen. Smith was appointed commander of the Army of Northern Virginia, but he held the post only one day, as on June 2d he reported himself sick. He was subsequently in command at Richmond. In 1863, just before the Gettysburg campaign, he resigned from the army and took charge of a Confederate gun foundry. He commanded the State troops of Georgia in 1864-'65, and surrendered at Macon, April 20, 1865. In 1866-'70 he was superintendent of the Southwest Iron Works, at Chattanooga, Tenn.; in 1870-'76 was Insurance Commissioner of Kentucky; and he had been in business in New York city since 1876. He published "Notes on Life Insurance" and "Confederate War Papers."

Smith, Joseph Edward Adams, author, born in Portsmouth, N. H., Feb. 4, 1822; died in Pittsfield, Mass., Oct. 29, 1896. He was educated at Gorham

Seminary and Bowdoin College, and for many years was engaged in journalism, having connections with the "New Englander" and the Berkshire County Eagle." He was employed for ten years in compiling a history of Pittsfield. He also prepared three other histories of the town, memoirs of the first Zenas Crane and Gov. George N. Briggs, a history of Pontoosuc lake, and other works.

Smith, Justin Almerin, clergyman, born in Ticonderoga, N. Y., Dec. 29, 1819; died in Chicago, Ill., Feb. 4, 1896. He was graduated at Union College in 1843; was pastor of the Baptist church at North Bennington, Vt., in 1845-'49, and of the First Church in Rochester, N. Y., in 1849-'53; and was editor of the Baptist periodical, first "The Christian Times," now "The Standard," from 1853 till his death. In 1858 he received the degree of D. D. from Shurtleiff College. Among his numerous publications are two books for children, "The Martyr of Vilvorde," a sketch of William Tyndale (New York, 1856), and "Uncle John upon his Travels" (1871). His other principal works are: "The Spirit of the Word" (1868); "Patmos: or, The Kingdom and the Patience" (1874); "Commentary on the Revelation" (Philadelphia, 1884); and "Modern Church History" (New Haven, 1887).

Smith, Russell, scenic artist, born in Glasgow, Scotland, in 1812; died in Glendale, Pa., Nov. 7, 1896. When seven years old he removed with his parents to Indiana County, Pennsylvania, where he became so impressed with the beauties of the scenery that he begged for an opportunity to study painting. Soon afterward the family removed to Pittsburg, where young Smith began his work as an artist, his first pieces being life-size portraits of Gens. Jackson and Lafayette, produced with house painter's paints and a worn-out brush. This led to an order for some scene painting for the old Thespian Society, with which he had played small parts. He also studied with James R. Lambdin, a portrait painter. In 1833, when Edwin Forrest was engaged to play "Metamora" in Pittsburg, a tent scene was wanted, and in the emergency young Smith was engaged to paint it. This work so pleased the great tragedian that he remained a friend of the artist till his death. The incident decided Mr. Smith's career, and for fully forty years he was one of the best known scenic artists in the United States. He painted almost the entire scenery when the Academy of Philadelphia was erected, and his drop curtains in the old Chestnut and Walnut Street Theaters were remarkable productions for their day. Mr. Smith spent 1850-'57 in Europe, and on his return produced a diorama of the Holy Land, a panorama of Mexico and California, and some notable operatic scenery. In recent years he painted the stock scenery for operatic presentations.

Smith, Walter Denton, educator, born in Jackson, Mich., in 1870; died in Ann Arbor, Mich., Sept. 20, 1896. He learned telegraphy, typesetting, stenography, and typewriting, and while working in the office of a law firm he was encouraged to study for the bar. He spent one year each in Kalamazoo College and the law department of the University of Michigan; was admitted to the bar in Detroit in 1891; was one of the organizers and the first secretary of the Detroit College of Law, and founded the "Critical Review," and was its editor till 1894. While in Detroit he also established and conducted "The Writ," a legal periodical published under the auspices of the College of Law. In 1894 he was appointed an instructor in the law department of the University of Michigan, where he remained until his death. He prepared for the press a selection of "Cases on Corporations," and he also published a text-book on "Elementary Law."

Smith, William Henry, journalist, born in Austerlitz, N. Y., Dec. 1, 1833; died in Lake Forest, Ill., July 27, 1896. When he was two years old his parents removed to Homer, Ohio, where he was educated and began teaching, and subsequently he was a tutor in a Western college. In 1854 he became a reporter on the "Cincinnati Times," of which he was afterward managing editor, in the meantime editing the monthly "Casket and Review." From the "Times" he went to the "Gazette" as an editorial writer at the beginning of the civil war, and during that period he rendered the Union cause effective service with his pen and was active in promoting enlistments and means of relief for the soldiers in the field. In 1864 and 1866 he was elected Secretary of State of Ohio on the Union ticket, and shortly before the expiration of his second term he resigned and became one of the founders and the editor of the "Cincinnati Chronicle." Failing health soon compelled him to retire from all active work. In 1870 he was appointed general manager of the Western Associated Press, with headquarters in Chicago. In 1883 he negotiated a union of the New York and the Western Associated Presses, and became general manager of the consolidated association, and in 1893 he retired from the office. While managing the Western Associated Press he introduced the use of the typewriter in telegraph work, developed the leased-wire system of news distribution, improved its methods of gathering and distributing news, and placed it on a sound financial basis. In 1877 he became collector of customs at Chicago. He was the author of historical works relating to Ohio and Western history and a frequent contributor to periodicals. He discovered in the British Museum many unpublished letters of Washington to Col. Henry Bouquet; demonstrated that the Washington letters published by Jared Sparks were not given correctly; and published "The St. Clair Papers" (2 vols., Cincinnati, 1882); a biography of Charles Hammond; and a "Political History of the United States." At the time of his death he had nearly completed a work on the "Life and Administration of President Rutherford B. Hayes," as the literary executor of that President.

Spaulding, John P., philanthropist, born in Madison, Me., July 10, 1832; died in Boston, Mass., Jan. 11, 1896. He removed to Boston in 1857; became a partner in the firm of Israel Nash & Co. in the following year; and since 1867 had been engaged in the manufacture of sugar under the firm name of Nash, Spaulding & Co. He was one of the principal organizers of the Sugar Trust, and the second largest holder of its stock. For nearly forty years he had lived in the United States Hotel in Boston, and one of his holiday diversions was to fill his pockets with \$5 gold pieces, and go around distributing them among the employees who had done him kindnesses. On Christmas day, 1893, he gave to each of 8 young women employed in the hotel a certificate of stock in his sugar refinery valued at \$5,000 par. He also provided means for the education and support of Helen Keller, the remarkable deaf, dumb, and blind girl. His acts of benevolence were performed quietly, and with the injunction that nothing should be said about them.

Stearns, Ozora Pierson, jurist, born in De Kalb, N. Y., Jan. 15, 1831; died in San Diego, Cal., June 3, 1896. He was graduated at Michigan University in 1858, and at its law school in 1860; began practicing in Rochester, Minn.; and became prosecuting attorney for Clinton County. In 1862 he recruited a company for the 9th Minnesota Infantry, of which he was commissioned 1st lieutenant, and in April, 1864, was commissioned colonel of the 39th United States Colored Infantry. With this regiment he took part in the operations before Peters-

burg in July, in the expeditions against Fort Fisher under Gens. Butler and Terry, and in the last campaign in North Carolina. After the war he served again as county attorney, and was appointed a register in bankruptcy. In 1871 he became a United States Senator; in 1872 removed to Duluth; and since 1874 had been judge of the 11th Judicial District of Minnesota.

Steers, James Riel, shipbuilder, born in Plymouth, England, Oct. 15, 1808; died in New York city, April 17, 1896. He was a son of Henry Steers, who removed his family to New York city in 1817. James learned the shipbuilding trade with his father; aided him in building the United States sloop of war "Peacock" in 1829; and became superintendent for the firm of Smith & Dimon in the following year. He built the yacht "Edwin Forrest" in 1841, and the "Martin Van Buren," the fastest boat of her size at the time, in 1842. Afterward he applied himself almost wholly to yacht building, and among other boats turned out the "Three Brothers," the "Miller's Damsel," and the "Inassar," all noted in their day. In 1850, with his brother, he formed the firm of George & James R. Steers, and the same year entered into a contract to build the famous yacht "America." The brothers personally sailed the yacht on her victorious contest around the Isle of Wight, England, in August, 1851. Mr. Steers had been retired from business since 1857.

Steinway, William, manufacturer, born in Seesen, Brunswick, Germany, March 5, 1836; died in New York city, Nov. 30, 1896. He was the fourth son of Henry Engelhard Steinway, a manufacturer of pianos in Brunswick. In his youth, besides the usual elementary branches common in Germany, he was taught French, English, and music. In 1850 the father and three of his sons removed to New York city. William, who had shown unusual proficiency in music as a boy, decided to follow his father's trade, and spent two years as an apprentice in a piano manufactory. In 1853 the father and the brothers, Charles, Henry, and William founded the house of Steinway & Sons. William became the head of the firm in 1859. While he, with the other members of the firm, gave close attention to their manufacturing interests and met with such success that an English syndicate offered \$4,000,000 for their business, William became one of the most conspicuous German citizens of New York by promoting important measures for the benefit of the city. He took a great personal interest in music, erected Steinway Hall as a center for the exposition of the highest musical culture, and was prompt and generous in efforts to foster musical education. In public life Mr. Steinway was best known by reason of his connection with the movement for providing rapid transit in the metropolis. On the creation of the original Rapid Transit Commission, in 1890, he was appointed one of its members, and with Commissioner John H. Starin was officially connected with the movement through the various changes in the composition of the commission. His benefactions in the cause of education and charity were large but unostentatious. In the line of philanthropic effort he will be remembered long for his creation of the industrial settlement named after him at Astoria, Long Island. He not only erected large factories, foundries, and mills for the manufacture of various parts of pianos, but practically built up an entire town, providing it with complete educational, religious, and other public establishments, and a railroad connecting the town with Long Island city.

Stetson, John, theatrical manager, born in Boston, Mass., about 1834; died there April 17, 1896. In early life he sold newspapers at the Statehouse;

subsequently was noted as an athlete and runner; and in 1866 became connected with a circus company. His first experience as a manager was at the Olympic Theater, Boston, whence he went to the Adelphi and, in 1870, to the Howard Athenaeum, where he remained till 1880. While managing the Howard he also took at various times the Waverley, Booth's, and the Fifth Avenue Theaters in New York city. He also managed traveling companies, including those of Salvini and Modjeska. At the time of his death he was proprietor of the new Savoy Hotel and the Park Theater, in Boston.

Stevens, Thomas Holdup, naval officer, born in Middletown, Conn., May 27, 1819; died in Rockville, Md., May 15, 1896. He was appointed a midshipman in the United States navy Dec. 14, 1836; was promoted passed midshipman July 1, 1842; master, July 25, 1848; lieutenant, May 10, 1849; commander, July 16, 1862; captain, July 25, 1866; commodore, Nov. 25, 1872; and rear-admiral, Oct. 27, 1879; and was retired May 27, 1881. In 1842 he served as aid to President Tyler; in 1843-'44 was on the steamer "Michigan" on the Great Lakes; and in 1845-'48 was naval storekeeper at Honolulu. While returning with his wife and eldest

child from the last duty he was shipwrecked, and the family remained for three months on a desert island. He was again on duty on the lakes in 1849-'51; was engaged in surveying the California and Oregon coasts in 1852-'55; and was assigned to the command of the steam gunboat "Ottawa" at the beginning of the civil war. In November, 1861, he took part in the action against the Confederate fleet at Port Royal and the engagement with Forts Beauregard and Walker. In January following he was in the battle of Port Royal Ferry. He had an engagement with Tatnall's fleet in February; took part in the capture of Fort Clinch, the towns of Fernandina and St. Mary's, and the steamer "Darlington" in March; and during March and April commanded the first expedition up the St. John's, which captured Forts Steele and Finnegan, the towns of Mayport, Jacksonville, Magnolia, and Pulaski, and the yacht "America." In May, 1862, he was given command of the steamer "Maratanza," of the North Atlantic blockading squadron, and was present at the battle of West Point. He then commanded the expedition to support Gen. McClellan's advance. After capturing the Confederate gunboat "Teazer," he was transferred to the command of the ironclad "Monitor," with which he covered the flank of the army on the James river and the rear on its withdrawal from the Peninsula. During the latter part of 1862 and the first part of 1863, as commander of the "Sonoma," of the West India squadron, he captured the schooner "Clyde," steamer "Victoria," brigantine "Atlantic," bark "Springbok," and steamer "Virginia," and chased the privateer "Florida" for thirty-six hours. In August, 1863, he took part in the defenses of Charleston harbor, and from Sept. 1 till Nov. 5 in the operations against Fort Sumter and the Sullivan island batteries and the capture of Forts Wagner and Gregg. From July 1 till Aug. 3, 1864, he was active in the operations before Mo-

bile, and he participated in the battle of Mobile Bay. He was frequently commended by his superior officers for the skill and daring with which he discharged his duty in these several operations. After the war he was a lighthouse inspector, commander of the frigate "Guerriere" of the European squadron, and commandant of the Norfolk Navy Yard.

Stone, Andros B., manufacturer, born in Charlton, Mass., June 18, 1826; died in New York city, Dec. 15, 1896. He received a limited education, became a clerk for a bridge-building firm, learned the details of the business, and when twenty-six years old was the head of the firm of Stone & Boomer, who built the first bridge across the Mississippi, a bridge across the Illinois with the longest draw at that time known, and the span of the Union passenger depot in Chicago, at that time unequalled in size. In 1858 he became a manufacturer of Ciron in Ireland, and an officer in several rolling-mill, sheet-iron, and boiler-plate companies. His interest in iron and steel work led him to make two trips to Europe to study the process of making Bessemer steel, and on his return he introduced the process into the United States, and at his mills in Cleveland made the first steel rails of American ore. In 1871 Mr. Stone removed to New York city and became interested in several railroad and construction companies. He was particularly liberal in his benefactions for destitute children. The spacious summer home for children at Bath, Long Island, was one of his gifts to the Children's Aid Society.

Talcott, Daniel Smith (originally **Daniel Talcott Smith**), theologian, born in Newburyport, Mass., March 7, 1813; died in Bangor, Me., Jan. 19, 1896. He was graduated at Amherst College in 1831, and at Andover Theological Seminary in 1834; was appointed an instructor of Hebrew at Andover in 1833; became a pastor at Sherborn, Mass., in 1836; and was Professor of Sacred Literature in the Bangor Theological Seminary from 1839 till 1881, when he was retired. He received the degree of D. D. from Waterville College in 1853 and Bowdoin College in 1858. Dr. Talcott contributed many articles to the American edition of Smith's "Dictionary of the Bible," and published theological works.

Tappeu, Abraham B., jurist, born in New Hamburg, Dutchess County, N. Y., in 1824; died in Fordham, N. Y., June 1, 1896. He received a public-school education; was admitted to the bar; and entered political life in 1848, when he took part in the struggle between George Lalor and Horace Greeley for Congress. In 1858 he was elected to the Legislature, and in 1861 was the successful Union war candidate for inspector of State prisons. He was a member of the State Constitutional Convention in 1867; was elected judge in the New York Supreme Court for the 2d Judicial District in 1868, and served without interruption till 1882. Mayor Grant appointed him a park commissioner in 1891, and he was elected president of the board in 1893, but with the other Tammany commissioners was removed by Mayor Strong in 1895.

Thompson, Wordsworth, historical and genre painter, born in Baltimore, Md., May 26, 1840; died in Summit, N. J., Aug. 28, 1896. In 1861 he took up the study of art in Paris, and in the following year he became a pupil of Charles Gleyre, studying later under Lambinet and Passini. The first picture he exhibited was "Moorlands of Au-Fargi," at the Salon of 1865. In 1868 he settled in New York, which became his home. In 1873 he sent to the National Academy a picture called "Desolation," which secured his election as an associate, and he was made an academician in 1875. In 1878 he became a member of the Society of American Artists, sending

to the first exhibition a picture called "The Road to the Sawmill." Mr. Thompson found his subjects in Spain, Algiers, and Morocco, as well as in this country. While his Oriental scenes are of interest, however, he will probably be best remembered as a painter of American historical themes. He painted Revolutionary subjects like "Annapolis in 1776" and "A Review at Philadelphia in 1777," and he also chose several themes from colonial times. The sympathy, knowledge, and merit of his historical *genres* gave them a lasting interest. He was a constant exhibitor at the National Academy throughout his professional life, and his pictures were agreeable features of many private collections.

Toner, Joseph Meredith, scientist, born in Pittsburg, Pa., April 30, 1825; died in Washington, D. C., Aug. 1, 1896. He studied at Western Pennsylvania University and Mount St. Mary's College; was graduated at Jefferson Medical College in 1853, and settled in Washington, D. C., to practice, in 1855. In the early part of his career as a physician he devised a scheme for collecting and preserving the early medical literature of the United States, which resulted in the establishment of the remarkable library of the American Medical Association, which was placed in the Smithsonian Institution. He was the founder of the Providence Hospital and of St. Ann's Infant Asylum in Washington, and in 1871, by a gift of \$3,000, founded the Toner course of lectures, designed to bring out new facts in medical science. A few years afterward he gave medals to Jefferson Medical College to be awarded annually for four years for the best thesis embodying the results of original investigation, and for several years he gave a similar medal to the University of Georgetown. Dr. Toner devised the system of symbols of geographical localities which was adopted by the United States Post-office Department for its official publications, comprising a small square indicating a central location and the same with small lines projected from the square to indicate the main and intermediate points of the compass. He published a large number of works relating to the medical profession. Probably his most enduring work was his research into early American medical literature and its results. He collected over 1,000 treatises published prior to 1800, and probably more than 4,000 sketches for an original "Biographical Dictionary of Deceased American Physicians." In 1882 he presented to Congress his collection, which comprised 26,000 books and 18,000 pamphlets. Dr. Toner had also spent many years in making a collection of copies of every original letter and paper written by George Washington, whether preserved in the United States or elsewhere, and it is believed that this collection forms the largest assemblage of Washington papers ever got together.

Trumbull, Lyman, jurist, born in Colechester, Conn., Oct. 12, 1813; died in Chicago, Ill., June 25, 1896. He was a grandson of the Rev. Benjamin Trumbull, D. D., theologian and historian, and was educated at Bacon Academy. While teaching in Georgia he studied law and was admitted to the bar in 1837. Soon afterward he removed to Belleville, Ill., to practice. In 1840 he was elected to the Legislature, where he had Abraham Lincoln for an associate; in 1841 was appointed Secretary of State; and in 1848 was elected one of the three justices of the Illinois Supreme Court. He was elected to Congress as an anti-Nebraska Democrat in 1854, but before the time arrived for him to take his seat the Legislature elected him United States Senator, his opponents being Abraham Lincoln, candidate of the Whigs, and Gen. James Shields, Democratic nominee for re-election. After several ballots had been taken, Mr. Lincoln withdrew and

asked his friends to vote for Judge Trumbull. In 1861 and 1867 he was re-elected, and he served continuously in that body for eighteen years. In the Senate he early opposed his party on the slavery question and his colleague, Stephen A. Douglas, on the popular sovereignty doctrine. His antagonism to the plans for the extension of slavery led him first to denounce and then to abandon his party and to ally himself with the anti-slavery workers. Through the whole period of the civil war he was a conspicuously staunch Union man. He urged timely and adequate measures for the prosecution of the war, supported the emancipation proclamation, defended the suspension of the *habeas corpus*, introduced a bill prohibiting the return of slaves to their owners and confiscating the property of all persons in rebellion, and drafted the thirteenth amendment to the Constitution, which abolished slavery forever in the United States. For many years he was chairman of the Committee on the Judiciary. His vote against the impeachment of President Johnson was condemned by many of his party associates, and he afterward acted with the Democratic party, and was its candidate for Governor of Illinois in 1880. He supported Horace Greeley for President in 1872, and joined the Populists in 1894. In the last year he defended the officers of the American Railway Union in the proceedings against them growing out of the great railway strike.

Tuckerman, Charles Keating, author, born in Boston, Mass., March 11, 1821; died in Florence, Italy, Feb. 26, 1896. He was a brother of Henry T. Tuckerman, and was appointed the first United States minister resident in Greece in 1868, serving till 1872. He edited Rangabe's "Greece: Her Progress and Present Position" (New York, 1867); and was author of "The Greeks of To-day" (1873); "Poems" (London, 1885); and "Personal Recollections of Notable People." (New York, 1895). For his services in behalf of the Greeks, King George conferred on him the decoration of the Order of the Saviour.

Tuttle, Isaac Henry, clergyman, born in New Haven, Conn., Feb. 5, 1811; died in New York city, Nov. 20, 1896. He was graduated at Trinity College, Hartford, in 1836; studied at the General Theological Seminary and was ordained a deacon in 1839 and a priest in the following year. In 1850 he accepted a call to St. Luke's Church in New York city, of which he remained the active rector till 1891, when he became rector emeritus. He founded St. Luke's Home for Indigent Christian Females and the Home for Old Men and Aged Couples, aided in the founding of the Protestant Episcopal Orphan Asylum and the Church of the Beloved Disciple, and secured the removal of his church from Hudson Street and the erection of a new edifice on Lexington avenue at a cost of over \$250,000. He was among the first of the Episcopal clergy in New York city to encourage the formation of sisterhoods. He bequeathed \$4,000 to St. Luke's Home for Indigent Females; \$5,000 to Trinity College, Hartford; and \$10,000 to the Church he had served so long.

Vanderbilt, Maria Louisa, benefactor, born in Coeymans, near Albany, N. Y., in 1821; died in Scarborough, N. Y., Nov. 6, 1896. She was a daughter of the Rev. Samuel Kissam, and widow of William

H. Vanderbilt, whom she married in 1841. She was noted for the simplicity of her home life and her quiet methods of disposing charity. For many years prior to her death she had been particularly interested in the work of St. Bartholomew's Church and its mission in New York city. She erected the new parish house as a joint gift from herself and her son Cornelius, and the greater part of the large amount of money she annually gave in charity passed through the hands of the Rev. Dr. David H. Greer, the rector. She bequeathed to St. Bartholomew's Church, \$250,000.

Wales, George W., art collector and benefactor, born in Randolph, Mass., in June, 1815; died in Newport, R. I., July 7, 1896. He accumulated a large fortune in mercantile business in Boston, and after his retirement spent money liberally in charity and the gratification of a taste for literature and art. He was the principal benefactor of the Boston Museum of Fine Arts and of the Channing Memorial Church in Newport. About thirty years ago, while visiting Florence, Italy, he became interested in collecting rare specimens of pottery and porcelain. This taste he continued to gratify till his death, when he had made two collections, at an expenditure of several hundred thousand dollars, that are now almost priceless. One collection he placed on exhibition in the Museum of Fine Arts, and presented it to the institution with sundry other articles, numbering in all over 700 pieces, in 1895. The other collection he retained in his Boston residence. Mr. Wales provided in his will that after the death of his widow the Museum of Fine Arts should receive \$30,000; the collection of pottery and glass in his residence; his books on pottery, engraving, glass making, lace, painting, architecture, and fine arts in general; and 12 paintings, including works of Marinari, Siliverti, Calvert, and Page.

Walke, Henry, naval officer, born near Portsmouth, Va., Dec. 24, 1808; died in Brooklyn, N. Y., March 8, 1896. He was appointed a midshipman in the United States navy Feb. 1, 1827; was promoted passed midshipman, June 10, 1833; lieutenant, Feb. 6, 1839; commander, Sept. 14, 1855;

captain, July 16, 1862; commodore, July 25, 1866; and rear admiral, July 13, 1870; and was retired April 26, 1881. His first important service was rendered during the Mexican War as executive officer of the bomb brig "Vesuvius," when he took part in the capture of Vera Cruz and the successful operations against Tabasco,

co, Tuspan, and Alvarado. Immediately prior to the beginning of the civil war he was on duty at the Pensacola Navy Yard, where he adopted measures that prevented the occupation of Fort Pickens by the Confederates. He also on his own responsibility, and contrary to the orders of his superior officers and the Secretary of the Navy, secured the safety of all loyal officers, sailors, marines, and Government employees at that station and removed them to New York on the seizure of the navy yard. For this disobedience of orders he was court-martialed and publicly reprimanded by Secretary Welles, though unofficially his action was commended. On

Sept. 6, 1868, he was ordered to duty with the Mississippi flotilla and was given command of the gunboat "Taylor." At the battle of Belmont he commanded the squadron that co-operated with Gen. Grant and prevented the Confederates from cutting off a part of the National army on its retreat to the transports, a service for which he was officially complimented by Gen. Grant. He was then given command of the gunboat "Carondelet," carrying 13 guns and partially ironclad. In this vessel he took a conspicuous part in the battle of Fort Henry, the first decisive National victory in Western waters, for which he received the thanks of the Secretary of the Navy, of Congress, and of the State of Ohio, On Feb. 13, 1862, he opened alone the battle of Fort Donelson, and on the 14th he was the last to retire from the front line of battle. With the same vessel he took part in the bombardment of Island No. 10 on March 17, and on April 4 voluntarily ran the gantlet of the Confederate batteries and principally captured the batteries below the island on the 6th and 7th. For this feat, the first that had been attempted on the Mississippi, he was commended by Flag-Officer Foote and the Secretary of the Navy. At the battle of Fort Pillow he led the fleet and rescued the gunboat "Cincinnati," and at Memphis, June 6, he was second in the line of battle and his gunboat was the principal one that engaged the ram "Arkansas." On July 16 he was given command of the partly protected ram "Lafayette," in which he passed the Vicksburg batteries on April 16. At the battle of Grand Gulf, April 29, 1863, he led the second division of the fleet, and unaided silenced the main fort on Point of Rocks. Subsequently he dispersed the Confederates under Gen. Taylor at Simmesport, La.; blockaded the mouth of Red river; commanded the "Sacramento" in search of the "Alabama"; blockaded the Confederate steamer "Rappahannock" at Calais, France, till the close of the war; and intercepted her when she escaped into British waters under the British flag. He retired voluntarily to hasten the promotion of junior officers.

Wallace, William A., lawyer, born in Clearfield, Pa., Nov. 28, 1827; died in New York city, May 22, 1896. He was admitted to the bar in 1847, and began his political career in 1862, when he was elected to the State Senate. By re-elections he served there till 1875, and was presiding officer in 1871. In 1874 he was a member of the commission to propose amendments to the State Constitution, and the same year was elected United States Senator to succeed John Scott, Republican. While in the Senate he served on the Committees on Finance, Appropriations, and Foreign Relations. In 1882 he was again elected to the State Senate, and in this term introduced the present arbitration statute and several amendments to the railroad laws of the State. He was a candidate for the Democratic nomination for Governor of Pennsylvania in 1890, but withdrew in favor of Robert E. Pattison.

Warner, Olin Levi, N. A., sculptor, born in Suffield, Conn., April 9, 1844; died in New York city, Aug. 14, 1896. On his father's side Mr. Warner was descended from the brother of Col. Seth Warner, who fought at Bennington and Hubbardston with Ethan Allen. His father, for a time an itinerant Methodist minister, was a man of great mechanical ingenuity, and one of his father's brothers possessed a certain uncultivated artistic feeling, but aside from this, students of heredity could find little to account for the very high order of artistic temperament which Mr. Warner displayed. In his early years his father removed to Amsterdam, Montgomery County, N. Y., to take charge of his grandfather's affairs, and this was young Warner's home until he was fifteen. He attended the district school, spent

one summer at work in a glove manufactory, and at fifteen entered the Seward Institute, in Orange County, a school kept by his uncle. His facility in drawing caricatures had already attracted his schoolmates. It is related that he once carved a head of Lincoln out of chalk, but the admiration of

the bystanders did not prevent him from destroying it because he knew he could do better. At the breaking out of the war he was restrained with difficulty from entering the service as a drummer boy, but he finally remained with his parents, then living in Pittsford, Vt., and he attended school in Brandon until he was nineteen. His natural and constant desire for

artistic expression was, of course, uncultivated. He had never seen a statue and he knew sculpture only through the engravings in his "Horace." He determined to test his capabilities according to his best knowledge, and, ignorant as he was, he applied himself to carving a bust of his father out of a block of plaster of Paris. The bust was pronounced a likeness. This trial, the young novice thought, justified him in adopting sculpture. With the same concentration of purpose he reasoned that art was a very serious thing, that the only instruction worth having was the best, and that there was no suitable training to be had in this country. Therefore he determined to put all thoughts of art behind him until he could earn enough money to enable him to study abroad. He learned telegraphing and was employed as an operator in Albion and Rochester, N. Y., and later, from 1866 to 1869, was under Gov. Bullock in the Southern Express Company's office at Atlanta, Ga. He managed to save \$1,500 and sailed for Paris, going first of all to the Louvre. An English artist whom he met by chance directed him to a sculptor's studio, where he studied for nine months, until, with the aid of Minister Washburne, he obtained a place at the Beaux Arts, where Jouffroy was then a conspicuous figure. He secured admission to Carpeaux's studio as a workman, where his modeling attracted the attention of the master and brought him an invitation—the first extended to an American—to remain in the atelier as a student. Mr. Warner was in Paris through the Franco-Prussian War and enlisted in the Foreign Legion. He remained also throughout the perilous days of the siege and the reign of the Commune, which brought him several narrow escapes. Returning to America in 1872, he opened a studio in New York, and speedily learned by bitter experience the difference in the estimates placed upon art in France and in this country at that time. There was little real interest in sculpture and commissions were often awarded through political or personal influence. Mr. Warner's modesty and his very seriousness of purpose told against him. After four years of privation he was forced to apply to the Southern Express Company for a place like that which he formerly held, but the president, Mr. Plant, encouraged him with a commission for a bust, which attracted favorable attention and led to another order. In 1877 he met Mr. Daniel Cottier, one of

the few art dealers who could be classed as genuine amateurs and art lovers, and, with a keen appreciation of Warner's quality, Mr. Cottier invited him to exhibit his work in his rooms. Mr. Clarence Cook and other critics gave the artist almost his first public recognition, although before this the chairman of the Republican Central Committee sent him to Columbus to model a bust of R. B. Hayes. This and a colossal alto-relief of Edwin Forrest, shown at the Centennial Exposition, were received with favor. Incidentally, about this time Mr. Warner wrote a lecture on communism, which was delivered in New York. In 1877-'78 he modeled a small statue of "Twilight" for Mr. J. L. Williams. He became one of the five original members of the Society of American Artists, founded as a protest against the ultra-conservatism of the Academy. With this society he exhibited in 1878 a bust of his father and some medallions; in 1879 the "Twilight"; in 1880 his virile bust of J. Alden Weir, which afterward excited profound admiration at the Paris Salon; in 1881 a small statue of "The Dancing Nymph" and his singularly beautiful bust of Miss Maud Morgan, a cast of which was purchased for the Boston Art Museum; and in 1882 a delightfully modeled alto-relief, "Cupid and Psyche." Busts of Mr. Cottier and his two young daughters, of Mrs. Cook, Mr. W. C. Brownell, and A. A. Low, and some remarkable busts of his wife and little daughter were among his notable work in portraiture. His decorative work included colossal heads for the building of the Long Island Historical Society in Brooklyn and the Pennsylvania Railroad station in Philadelphia. He modeled three heroic statues—a seated figure of Gov. Buckingham, which is in the Capitol at Hartford, Conn.; the statue of William Lloyd Garrison on Commonwealth Avenue, Boston; and a standing figure of Gen. Devens, of Massachusetts. He designed a fountain which is in Union Square, New York, some beautiful and dignified caryatids for a fountain, which it is the good fortune of Portland, Ore., to possess. In the course of his visits to Oregon Mr. Warner was attracted by the noble types presented by the Nez Percé and other Indians, and he modeled reliefs of Chief Joseph and other chiefs which represent the highest order of Indian sculpture that we have had. In the last year of his life he was engaged upon reliefs for the doors of the new Congressional Library. One of these doors was left unfinished, to be completed by another hand, but the other door and the noble reliefs of the spandrels which show one of the few American motifs seen in the decoration of the library, form an enduring memorial of the sculptor. His untimely death, due to an accident, was a most serious loss not only to the National Academy of Design and the Society of American Artists, but to all those who saw in his development the fruition of the purest and strongest talent which has found expression in our sculpture. Though this may seem high praise to those who were debarred by Warner's extreme modesty from an intimate acquaintance with his character and work, it is none the less deserved. He held a most serious, fairly reverential view of art. In all that he did he was absolutely sincere. His method of expression was entirely sculptural. He held to sculpture as an art primarily monumental rather than pictorial. His view of his subject was always a large one. He grasped the essential features, the necessities of construction, the relations of planes, the demands of truthfulness and balance. In modeling he showed a delicacy of touch, a caressing quality, and a subtlety of discrimination which became the more wonderful from its union with the almost classical severity of his general attitude. Of this charming *finesse* his "Cupid and Psyche" and his busts of

children are perhaps the best examples. His bust of Cottier has been likened to a Greek Bacchus and it might well be accepted as an antique. His sense of beauty was as pure as a Greek's. His work was never superficially decorative, nor conventional, nor tricky. His sincerity, his mastery of materials, his feeling for construction, his profound sensitiveness to the beautiful, and his rare tact in modeling imparted to all his work a rare and serious character. His death in his prime meant the loss of a great artist, whose work yet unfinished bears, nevertheless, the stamp of a rare and precious genius. Articles upon Mr. Warner were published by William C. Brownell in "Scribner's Magazine" for October, 1896, by "Henry Eckford" in the "Century Magazine" for January, 1889, and Ripley Hitchcock in the "Art Review" for March, 1887. A memorial address was delivered by Mr. Brownell before the National Sculpture Society a few months after Mr. Warner's death, and was printed privately.

Weeks, Joseph D., statistician, born in Massachusetts, in 1841; died in Pittsburg, Pa., Dec. 26, 1896. Prior to the civil war he was engaged for some time as a minister and missionary of the Methodist Episcopal Church in the South, and during the war was connected with the United States Sanitary Commission, and was also a hospital chaplain. After the war he was associated with the iron and steel industries of the country. He became a Government statistician and was employed in the compilation of the census reports of 1880 and 1890, having charge particularly of the returns on coke, glass, manganese, petroleum, and natural gas. About 1886 he became connected with the United States Geological Survey, and prepared the reports on coke, petroleum, natural gas, and manganese for the "Mineral Resources of the United States." In 1895 he went to Europe as agent of the United States Government, to investigate the process of coke making on the by-product system; and he also made a visit to Europe at the instance of Gov. Hartranft to study the practical results of conciliation and arbitration as means of settling labor disputes. At the time of his death he was editor of "The American Manufacturer."

Weidemeyer, John William, author, born in Fredericksburg, Va., April 26, 1819; died in Amityville, Long Island, Jan. 19, 1896. His father was an officer in the life guards of Jerome Bonaparte, King of Westphalia, with whom at an early age he came to New York city. Among the son's first teachers was Alexander T. Stewart, and he completed his education at the Columbia College Grammar School. For several years he taught at various seminaries in Ohio, but subsequently settled in New York city and entered upon business as a music dealer and publisher. He made collections of lepidoptera, and discovered several important species, among which was *Limenitis Weidemyerii*, of the Adirondaek mountains. His large collection was purchased by the museum in Ratisbon, Germany. In connection with the study of entomology he published a "Catalogue of North American Butterflies" (Philadelphia, 1864). He contributed to the "Christian Inquirer" and the "Atlantic Monthly," and prepared political articles for various journals. In 1841 he wrote a play entitled "The Vagabonds," which was produced at the Franklin Theater, in New York city, and the Arch Street Theater, in Philadelphia, and nearly half a century later he wrote "Cæsar and Cleopatra," an acting drama. Mr. Weidemeyer also published "Real and Ideal: A Collection of Metrical Compositions, by John W. Montclair" (Philadelphia, 1865); "Themes and Translations" (New York, 1867); "American Fish, and how to catch them" (1885); and "From Alpha to Omega" (1889).

Wentworth, William Pitt, architect, born in Bellows Falls, Vt., in 1839; died in Newton, Mass., April 12, 1896. He was educated in New York city, and removed to Boston about 1866. Among the buildings erected after his plans are churches in Norfolk, Va., in Jamestown, N. Y., and in several New England cities and towns, and hospitals in Newton, Lynn, and Boston. The great insane hospital now being erected by the State of Massachusetts at Medfield was planned by him.

Westervelt, Daniel D., shipbuilder, born in New York city, in 1828; died near Belmar, N. J., June 4, 1896. He was a son of Jacob A. Westervelt, shipbuilder and Mayor of New York city, and, on completing his education, entered his father's shipyard and served successively in each department. Many of the most famous California clippers, pilot boats, and steamers built before the civil war were designed by him and built under his supervision. He was the principal designer and one of the builders of the United States war ship "Brooklyn," and designed and built vessels for the Spanish navy, for which he received the decoration of the Order of Isabella Católica. During the civil war he was a special agent of the Federal Government at New York to procure from private owners vessels suitable for war ships, and he selected several hundred vessels of various kinds. His efforts in this line won the commendation of President Lincoln and Secretary Welles.

Wheeler, Crosby Howard, missionary, born in Hampden, Penobscot County, Me., Sept. 8, 1823; died in Auburndale, Mass., Oct. 11, 1896. He was graduated at Bowdoin College in 1847, and at Bangor Theological Seminary in 1851; was ordained in Warren, Me., in 1852, and after serving as pastor there for four years, went with his wife to Smyrna, to work in the North Armenian mission. The couple reached Harpoot on July 31, 1857, and labored there for thirty-nine years. In 1878 Dr. Wheeler raised funds in the United States for the buildings and the partial endowment of Euphrates College, in Harpoot, and from the organization of the institution till 1873 he was its president. On May 11, 1896, his home and all his household goods were destroyed in the great massacre of Armenians at Harpoot, and Dr. Wheeler and his wife were compelled to leave the city. They returned by slow stages to Auburndale, where Dr. Wheeler survived the effects of the terrible ordeal through which he had passed only about three months.

Whitney, Josiah Dwight, geologist, born in Northampton, Mass., Nov. 23, 1819; died at Lake Sunapee, N. H., Aug. 18, 1896. He was the eldest son of Josiah D. Whitney, a merchant in Northampton. He was graduated at Yale in 1839, and entered the chemical laboratory of Prof. Robert Hare, of Philadelphia, and in 1840 became associated with Charles T. Jackson as assistant in a geological survey of New Hampshire. After two years of this work he went to Europe, where he studied under Elie de Beaumont, Rammelsberg, Liebig, and other masters. In 1847 he returned to the United States, and was employed in the Geological Survey of the Lake Superior region. For a time he worked with John W. Foster, under the direction of Charles T. Jackson, but later the work was intrusted to Foster and Whitney alone, and they published "Synopsis of the Explorations of the Geological Corps in the Lake Superior Land District in the Northern Peninsula" (Washington, 1849) and "Report on the Geology and Topography of a Portion of the Lake Superior Land District in the State of Michigan" (Part I, Copper Lands, 1850; Part II, The Iron Region, 1851). On the completion of this work, Mr. Whitney traveled for two years through the States east of the Mississippi,

collecting information concerning mining interests, and the results of his studies were published under title of "The Metallic Wealth of the United States, described and compared with that of other Countries" (Philadelphia, 1854). In 1855 he was appointed to the Geological Survey of Iowa, being

also State chemist and a member of the faculty of the State University. The results of his work were published as "Reports on the Geological Survey of Iowa" (2 vols., Albany, 1858-'59). In 1858-'59 he was engaged in a geological survey of the lead region of the upper Missouri, in connection with the official surveys of Wisconsin and Illinois, publishing with James Hall a "Report on the Geological Survey

of Wisconsin" (Albany, 1862). The most important work of his life was in connection with the State of California, where from 1860 to 1874, as State geologist, he conducted an elaborate topographical, geological, and natural-history survey of that State. This survey was one of the most valuable enterprises ever undertaken by a State, but, as often happens, its real value was not appreciated by the politicians, as the results were not immediately apparent, and the appropriation was discontinued in 1874. The fruits of his labors appeared in 6 volumes, which were published at Cambridge between 1864 and 1870. In 1865 he was appointed Professor of Geology in Harvard University, with charge of its School of Mining and Practical Geology. This appointment he held until his death, when his name headed by seniority the long list of instructors in that institution. In company with William H. Brewer, an associate on the Geological Survey of California, and a number of students, he spent the summer of 1869 in Colorado, where he made the first accurate measurements of the chief peaks of the Rocky mountains, giving the names of Harvard and Yale to two of them. The highest peak in the United States, 14,900 feet, in Inyo County, California, is named Mount Whitney in his honor. The degree of LL. D. was conferred upon him by Yale, in 1870. He was one of the original members of the American Association for the Advancement of Science. In addition to contributing to periodicals and translating Berzelius's "Use of the Blowpipe" (Boston, 1845), he was the author of "The Yosemite Guidebook" (San Francisco, 1869); "Barometric Hypsometry" (Boston, 1874); "Contributions to American Geology" (Vol. I, 1880); and "Studies in Geographical and Topographical Nomenclature" (Cambridge, 1888).

Wiard, Norman, inventor, born in the present Normandale, Ontario, Canada, in 1826; died in Reading, Pa., Sept. 11, 1896. He showed a marked fondness for mechanics in early youth and became an apprentice in a foundry at Branford, Ontario. After working in the machine department for six months, he became foreman of the establishment, and began the experiments in ordnance that afterward gave him a world-wide distinction. During the civil war he was employed by the United States Government in the manufacture of ordnance and

projectiles, and was frequently called into consultation by President Lincoln and Secretary Stanton. After the war he applied his time principally to inventions and experiments in his special lines, and a few years ago he conducted a series of experiments in gunnery near Boston, which attracted the attention of artillery experts the world over. He patented a device for preventing the explosion of steam boilers, which the United States Government placed on each of its war vessels, and also sold the same patent to the Japanese Government. He spent two years in Japan in the employment of its Government, especially in the navy department, and was for some time a military engineer in that country. As a fabricator of iron, he ranked very high. Mr. Wiard was author of "The Solution of the Ordnance Problem," and at the time of his death was superintending the manufacture of guns at the Scott foundry.

Wigglesworth, Edward, dermatologist, born in Boston, Mass., in 1841; died there Jan. 23, 1896. He was graduated at Harvard, in 1861, and at its medical school in 1865. In June, 1862, he became a medical assistant in the United States Sanitary Commission before Richmond; on Sept. 26 following he enlisted as a private in the 45th Massachusetts Volunteers, and was soon made hospital steward; in 1863 was mustered out of the service; and in June, 1864, became a volunteer surgeon in the Army of the Potomac. After receiving his medical degree he was engaged in the practice of his profession and of his specialty till his death. He served for many years on the staff of the Boston City Hospital; was instructor in dermatology in Harvard Medical School; aided in founding the medical library there; and was author of many valuable papers on his specialty. For many years he gave away annually in professional services more than the amount he received in fees.

Wilbour, Charles Edwin, Egyptologist, born in Little Compton, R. I., March 17, 1833; died in Paris, France, Dec. 17, 1896. He took a partial course in Brown University, where he was noted for proficiency in Greek, became a reporter on the "New York Tribune" in 1854, and was admitted to the bar in 1859. An absorbing interest in the study of Egyptian antiquities led him to abandon the profession of law and to make a thorough study of Egyptology. After visiting the principal libraries of the United States and Canada, and familiarizing himself with their treasures on this subject, he went to Europe in 1874 and studied the archaeological collections in the British and the Continental museums. Subsequently he became associated with the late Heinrich Karl Brugsch and with Gaston Maspero in their explorations in Egypt, and for sixteen years he had spent his winters on the Nile. He discovered and published the famous "seven-years-famine *stèle*," and made a large collection of Egyptian antiquities and of books relating to Egyptology, which will ultimately be presented to some American college or museum. He published translations of Leon Beauvallet's "Rachel in the New World," of Renan's "Life of Christ," and of Hugo's "Les Misérables."

Willey, Austin, clergyman, born in Campton, N. H., June 24, 1806; died in Northfield, Minn., March 28, 1896. He was graduated at Bangor Theological Seminary in 1837, and soon afterward became active in the antislavery movement. In 1839 the Maine abolitionists established at Bangor the first pronounced antislavery organ, the "Advocate of Freedom," to the editorship of which they called Mr. Willey, and he continued in this relation till 1858. Removing to Northfield, Minn., he became editorially connected with the St. Paul "Pioneer Press." He was author of a "Family Memo-

rial" (San Francisco, 1865) and "A History of the Antislavery Cause in State and Nation" (Portland, 1886), which is in use as a text-book in the public schools of Maine.

Wilson, Anne Read, philanthropist, born in Belvidere, N. J.; died in Newark, N. J., Nov. 4, 1896. In early life she married the Rev. Dr. James P. Wilson, and removed to New York city in 1850, when her husband left the presidency of Delaware College to become Professor of Systematic Theology in Union Seminary. She at once entered into all the charitable and philanthropic movements of the day, and during her three years' residence in the city her work was ably seconded by the late Charles L. Brace. One of the most enduring memorials of her beneficent work in New York is the Wilson Industrial School for Girls, an institution planned by her. In 1853 Dr. Wilson was called to the South Park Presbyterian Church, Newark, N. J., where he labored till his death, in 1889. During this long period Mrs. Wilson continued her benevolent activities, and the Newark Home for Aged Women, the Newark Branch of the McAll Mission, the Woman's Work for Women, the Woman's Exchange, and other institutions owe their foundation and success to her zeal. For twenty-five years she was president of the Woman's Board of Foreign Missions of the Presbytery of Newark.

Wilson, Theodore Delevan, naval constructor, born in Brooklyn, N. Y., May 11, 1840; died in the navy yard, Boston, Mass., June 29, 1896. He served a full term of apprenticeship as a shipwright in the Brooklyn Navy Yard, under Naval-constructor B. F. Delano, and in the National army as a non-commissioned officer of the 13th Regiment, New York State militia, during the first three months of the civil war. On Aug. 3, 1861, he entered the construction department of the navy with the rating of carpenter, and till May 17, 1866, served on the steamer "Cambridge," of the North Atlantic blockading squadron, and with Rear-Admiral Francis H. Gregory, superintendent during the war of the construction of all vessels of war built outside of navy yards. On the last-named date he was commissioned an assistant naval constructor. He was promoted to the rank of naval constructor July 11, 1873; was appointed chief of the Bureau of Construction and Repair in 1882, 1886, and 1891; resigned because of failing health and was granted two years' leave of absence in 1893; and on reporting for duty was assigned to the Boston Navy Yard July 2, 1895. He was suddenly stricken while superintending the unloading of the monitor "Passaic," and died within a few minutes. Constructor Wilson was on duty at the Pensacola Navy Yard in 1866-'67 and at Philadelphia in 1867-'69, and during 1869-'73 was instructor in naval architecture and shipbuilding at the United States Naval Academy. During his tenure of the office of chief of construction he designed the second-class battle ship "Maine," the partially protected cruisers

is now in general use. He was the first American member of the Institute of Naval Architects of England, and was author of "Shipbuilding, Theoretical and Practical" (New York, 1873).

Winlock, William Crawford, scientist, born in Cambridge, Mass., March 27, 1859; died in Bay Head, N. J., Sept. 20, 1896. He was a son of Prof. Joseph Winlock, the astronomer, and was graduated at Harvard in 1879. Soon after graduation he was appointed to the scientific staff of the United States Naval Observatory, and later he became assistant in charge of the office, which gave him control of the vast correspondence of the institution. Subsequently he was also appointed curator of physical apparatus in the United States National Museum. While discharging these duties he continued his interest in astronomy, and prepared the annual reports on "Progress of Astronomy" from 1885 till 1892, contributed popular articles on astronomy to other periodicals, and wrote the astronomical article in the "Annual Cyclopaedia" for 1889. He also several times represented the secretary of the Smithsonian Institution at important scientific gatherings, and with him inspected the London, Leipzig, Paris, and other European exchange agencies of the institution in 1896.

Winsor, Henry Jacob, journalist, born on the island of Bermuda, Nov. 23, 1833; died in Newark, N. J., Aug. 23, 1896. He removed to New York city in 1851; became a proof reader in a printing house; and for some time prior to the civil war was a reporter on "The New York Times." At the beginning of the war he went to the front as military secretary of Col. Ephraim E. Ellsworth, and was with that officer when he was killed. He then became a war correspondent of the "Times," and accompanied the Army of the Potomac. After the war he served as city editor, night editor, and day manager of the editorial department of the "Times," which he represented at the Paris Exposition in 1867. In 1869 President Grant appointed him consul at Sonneberg, Germany, where he remained twelve years, and on his return he became chief of the bureau of information of the Northern Pacific Railway Company. Subsequently he was assistant editor of the New York "Commercial Advertiser" and managing editor of the Newark "Advertiser." His last literary work was a brochure on "Newark: The Seat of a Thousand Industries" (1896), and a sketch of Trinity Episcopal Church, Newark.

Woodson, Silas, jurist, born in Knox County, Kentucky, May 18, 1819; died in St. Joseph, Mo., Oct. 9, 1896. He was brought up on a farm, and became a clerk in a country store. While clerking he studied law, and in 1839 was admitted to the bar. In 1842 he was elected to the Legislature; in 1843-'48 was circuit attorney; and in 1849 was a member of the Kentucky Constitutional Convention. He was again elected to the Legislature in 1853, but removed to St. Joseph, Mo., in the following year. In 1860 he was elected judge of the circuit court of the 12th Judicial District. On the expiration of his term he engaged in private practice till 1872, when he was the successful Democratic candidate for Governor of Missouri. In 1882 he was appointed to the circuit-court bench to fill a vacancy, and from 1885 till 1895 was judge of the criminal court of Buchanan County.

Woodward, John B., banker, born in Brooklyn, N. Y., May 31, 1835; died there Feb. 6, 1896. He received a public-school education; became a clerk in a leather house in New York; and afterward was engaged till his death in the importation of hides and wool. For several years he was President of the Third National Bank in New York. Gen. Woodward began his military career in 1854, and rose to the command of the 13th Regiment of the

"Chicago," "Boston," and "Atlanta," the protected cruisers "Newark" and "San Francisco," and the gunboats "Bennington," "Concord," "Yorktown," and "Petrel," and patented a bolt extractor, which

old State Militia. He served with his regiment in the civil war; was appointed major general of the 2d Division N. G. S. N. Y., in 1868; inspector general in 1875; adjutant general in 1879; and retired from the service in 1880. In 1875 he became President of the Brooklyn Board of City Works; in 1888, President of the Board of Park Commissioners; in 1889 was legislated out of office; and shortly afterward was reappointed a park commissioner. He was defeated as candidate of the Independent Democrats and Republicans for mayor of Brooklyn in 1885. For several years prior to the autumn of 1895 Gen. Woodward was President of the Board of Trustees of the Brooklyn Institute of Arts and Sciences. He was largely instrumental in changing the old Brooklyn Institute into the new institution, and in securing in 1895 the appropriation of \$300,000, with which work on the new museum on Prospect Hill was begun.

Wright, George Groves, jurist, born in Bloomington, Ind., March 24, 1820; died in Des Moines, Iowa, Jan. 11, 1896. He was graduated at the State University in 1839; was admitted to the bar, and removed to Keosauqua, Iowa, to practice the following year; served as prosecuting attorney in 1847-'48; and was a State Senator in 1849-'54. In 1855 he was elected Chief Justice of the Iowa Supreme Court by the Legislature, and in 1860 and 1865 was returned to that court by popular vote, under a change in the State Constitution. During his last term he was also a professor in the law department of the State University. In 1868 he was elected United States Senator as a Republican. He served in the Senate on the Committees on Finance, Claims, and the Judiciary. Judge Wright was the founder of the first law school west of the Mississippi.

Yerkes, Stephen, theologian, born in Bucks County, Pennsylvania, June 27, 1827; died in Danville, Ky., March 28, 1896. He was graduated at Yale in 1837; studied theology in Baltimore, Md., where he also taught for nearly fifteen years; and held Presbyterian pastorates at Long Green and Bethel, Md. In 1852 he became Professor of Ancient Languages in Transylvania University, Lexington, Ky., and pastor of a local church, and in May, 1857, was elected by the Old School General Assembly of the Church, Professor of Biblical and Oriental Literature in Danville Theological Seminary. He resigned this chair in May, 1866, and was acting Professor of Greek in Center College, Danville, during the next three years, though resuming his former chair in the seminary in May, 1867. Dr. Yerkes was also president of the faculty.

Young, Pierce Manning Butler, military officer, born in Spartansburg, S. C., Nov. 15, 1839; died in New York city, July 6, 1896. When he was a year old the family removed to Georgia, where he was educated at the State Military Institute, and began studying law. He entered the United States Military Academy in 1857, but resigned before graduation to enter the Confederate army. At the bombardment of Fort Sumter he was a 2d lieutenant of artillery at Charleston, S. C. His next service was in Florida as aid to Gen. Wheeler. He obtained the post of adjutant of Cobb's Legion, then being organized from the Georgia troops, and of this body he subsequently became colonel. He took part in the invasion of Maryland and was wounded in the battle of Boonesborough; conducted many raids; and in 1864 captured Gen. Grant's corral of 2,500 head of cattle that had been brought together on the Chickahominy. He was promoted brigadier general in November, 1863, and major general, Dec. 12, 1864; and was the youngest officer of that rank in the Confederate service. After the war he settled in Cartersville, Ga. On July 25, 1868, he took his seat in Congress

as the first Democrat elected after the restoration of representation to the Southern States. He served through the three ensuing terms, and was appointed one of the United States commissioners to the Paris Exposition in 1877, consul general at St. Petersburg in 1885, and minister to Guatemala and Honduras in 1893.

Young, William Crittenden, educator, born in Danville, Ky., April 23, 1842; died there Sept. 16, 1896. He was a son of the Rev. Dr. John C. Young, for many years President of Center College in Danville, and his mother was a daughter of John J. Crittenden. He was graduated at Center College in 1859, and at Danville Theological Seminary in 1866; was licensed to preach, and held pastorates at Covington, Ky., Madison, Ind., Chicago, Ill., and Louisville, Ky. He was elected President of Center College in 1888, and retained the office till his death. He was Moderator of the General Assembly of the Presbyterian Church in 1892, and was also chairman of the committee having special charge of the relations between the seminaries and the Assembly.

OBITUARIES, FOREIGN. Aitchison, Sir Charles, a British Indian administrator, born in Edinburgh in 1832; died in Oxford, Feb. 18, 1896. He was educated at Edinburgh University, and returned from his studies in Germany to take advantage of the competitive examination for the Indian civil service introduced in 1855 through the efforts of Macaulay. After acquiring Hindi, Hindustani, and Persian, and studying Indian law and history at Calcutta, he went to his post as assistant magistrate in a desert district of the northwest that was afterward incorporated in the Punjab. During the mutiny he served under John Lawrence at Lahore as an assistant judicial commissioner, and there prepared a "Manual of the Criminal Law of the Punjab" and contributed articles to the "Calcutta Review." As the ablest of the competition *wallahs*, he was called to Calcutta by Lord Canning in November, 1859, to take the coveted post of foreign under secretary. He was permitted to reorganize the Foreign Office on the system still maintained, and accompanied the Viceroy on his progresses through northern, western, and central India, and was the judge of the application in each case of the *sanad* of adoption and of the rewards and rebukes to be administered to the feudatory sovereigns for their actions during the mutiny. The status of the vassal states was exactly defined in his "Treaties, Engagements, and Sanads relating to Indian and the Neighboring States." He was Commissioner of Lahore and secretary to the Punjab Government after Lord Canning left till Sir John Lawrence called him back to Calcutta to be his foreign secretary, in which office he was retained by Lord Mayo and Lord Northbrook to aid them in carrying out Lord Lawrence's policy toward the native states and especially toward Afghanistan while Shere Ali was Ameer. When Lord Lytton began to reverse that policy Aitchison was on furlough. In March, 1878, he was appointed Chief Commissioner of British Burmah. Subsequently he served as Lieutenant Governor of the Punjab, where his knowledge of the people and their natural rulers and his sympathetic regard for native rights rendered his administration one of the most beneficent in the annals of British rule in India. He founded the Punjab University to win the Brahman, Pundit, and Maulvi to loyalty and respect for the English rule through a knowledge of Western science, literature, and institutions communicated through the Oriental languages. He worked out with skill the principle of local self-government for the Punjab according to the reform policy of Lord Ripon. He left as memorials

of his solicitude for the Indian peoples and their welfare the Aitchison College for the sons of chiefs and the Lady Aitchison Hospital for women. After resigning from the civil service he went back to India at the solicitation of Lord Dufferin to serve as a member of the Viceroy's Council till 1888, when he retired to live in Oxford. He published in 1892 "Lord Lawrence," a biography, forming one of the series of "Rulers of India."

Aurène, Paul, a French journalist, novelist, and dramatist, born in Sisteron, Basses Alpes, June 26, 1843; died in Antibes, Dec. 16, 1896. While still a student at the Lyceum of Vanves, he wrote a play in verse, called "Pierrot Héritier," that achieved a success at the Odéon in 1865. He gave lessons for a living and contributed to literary reviews till his novel "Jean des Figues" established his literary reputation in 1870. He collaborated with Valéry Vernier in the successful drama "Comédiens Errants," wrote the successful "Duel aux Lanternes," and produced in collaboration with Charles Monselet "L'Ilote" in 1875. With his friend Alphonse Daudet he collaborated in the earlier "Lettres de mon Moulin" and wrote the libretto of the opera "Char," produced in 1878. He published in that year "La Prologue sans le Saviour," a one-act drama," in 1879 "La vraie Tentation de St. Antoine," "Paris ingénu" in 1882, and "Vingt ans en Tunisie" in 1884. He was a constant writer of graceful literary and critical articles for the newspapers, being connected at various times with the "Éclair," "Figaro," "Événement," and other Paris journals, latterly with the "Tribune" and "Gil Blas." He was also a prominent member of the Provençal School and author of two volumes of sketches and tales in the Provençal tongue, one of them, "Au bon Soleil," a famous work, published in 1881.

Bamberger, Isaac, a German rabbi, born in Angerod, Hesse, Nov. 5, 1834; died at Königsberg, Oct. 30, 1896. He was appointed rabbi of Königsberg in 1865, and was active in educational, religious, and benevolent movements. He originated the frontiers committees when the first Russian exodus occurred in the early eighties, which saved thousands from suffering and death.

Barnby, Sir Joseph, an English musician, born in York, Aug. 12, 1838; died Jan. 28, 1896. He became chorister in York Cathedral in 1846, continuing there until 1852. He was a student at the Royal Academy of Music from 1854 to 1857, and was successively organist of St. Andrew's, Well Street, 1863-'71, and of St. Anne's, Soho, 1871-'86. In 1865 he began conducting the oratorio concerts at St. James's and Exeter Halls, and in 1872 succeeded Gonnod as conductor of the Royal Albert Hall Choral Society. From 1875 to 1892 he was precentor and musical director at Eton College, becoming principal of the Guildhall School of Music in the latter year, in which year also he was knighted. Besides hundreds of services, anthems, chants, part songs, and other music, his compositions include the motet "King all Glorious" (1868); the cantata "Rebekah" (1870); "The Lord is King," a setting of the Ninety-seventh Psalm (1883). The last-named composition is a brilliant piece of work, but has not often been heard in the United States. His hymns are very widely known, and the service he rendered to Church music in freeing the hymn tune from conservatism has been generally recognized. In these compositions Barnby substituted modern for ancient notation, and discarded intermediate double bars. As a conductor he stood in the first rank, and not the least of his services to music was his enterprise in bringing forth at the Royal Albert Hall works new or unknown to the English public, becoming thus a powerful influence in the education of the national taste.

Battenberg, Prince Henry Maurice of, born Oct. 5, 1858; died at sea, Jan. 20, 1896. He was a son of Alexander of Battenberg, Prince of Hesse and the Rhine, and of Princess Julia, born Countess von Hauck, daughter of a former Polish Minister of War, who was raised to the princely dignity after hermorganatic marriage with Prince Alexander. Prince Henry, whose brother Alexander was elected and reigned as Prince of Bulgaria, married, on July 23, 1885, Queen Victoria's ninth and youngest child, Beatrice, Princess of Great Britain and Ireland, and had since lived in England, receiving the rank of royal highness and the appointment of Governor of the Isle of Wight. In November, 1895, he joined the Ashanti expedition as military secretary to Sir Francis Scott, the commander in chief, and at Myisa was attacked with swamp fever, of which he died while being brought back to Sierra Leone.

Barre, Jean Auguste, a French sculptor, born in Paris, Sept. 25, 1811; died Feb. 6, 1896. He was descended from a family famous for the fine engraving of coins and seals, his father being chief engraver for the French mint from 1842 till 1855, and his brother Désire from the father's death till 1878. His own work as a medalist was admirable, but his greatest achievements were in sculpture. It was he who designed the portrait bust of Louis Napoleon that was used on all the coins of the second empire. His first artistic success was an allegorical group representing "Liberty Triumphant," which he exhibited at the Salon in 1831. "Ulysses recognized by his Dog," in marble, and "David preparing to fight Goliath" followed, and next "The Angel and the Child." After obtaining a medal in 1840 for a statue of Francis of Lorraine, Duc de Guise, he was commissioned by the Government to execute a statue of Achille de Harlay for the Luxembourg in 1843, and one of Mathiu Molé in 1845; also a marble statue of the Duchess of Penthièvre. He designed a statue of Laplace in 1847 for the town of Caen, one of Mgr. Afire for the town of Rodez in 1864, and one of Admiral Protet for Shanghai in 1869. A marble bas-relief of "Liberty" was executed in 1850 at the order of the Ministry of the Interior, and a marble statue of "Baccha, daughter of Bacchus" was ordered by the Government in 1855. He was very successful in portrait busts, which he made of Leopold, King of the Belgians, in 1836, Alexandre Duval in 1845, Pius IX and Mlle. Mars in 1848, Napoleon III in 1853, Prince Napoleon in 1855, and the Empress Eugénie, Princess Clotilde, and Geoffroy St-Hilaire in 1861. He executed a statue of Mlle. Rachel in ivory, one of the Empress Eugénie in marble, and a bronze medallion of Mme. Jane Hading.

Benson, Edward White, Archbishop of Canterbury, born in Birmingham, July 14, 1829; died in Hawarden, Wales, Oct. 10, 1896. His father was the manager of lead works at Birmingham, where the son attended the grammar school of King Edward VI, whence he went to Trinity College, Cambridge, of which he was a scholar and subsequently a fellow, taking his degree with honors in mathematics and classics in 1852. From 1853 till 1859 he was assistant master at Rugby, then head master of Wellington College till 1872, when Bishop Wordsworth, to whom he was examining chaplain, made him a residentiary canon and chancellor of Lincoln Cathedral. In 1877, on the nomination of the Earl of Beaconsfield, he became bishop of the newly created see of Truro, and on the death of Archbishop Tait, in December, 1882, he was appointed, on the recommendation of Mr. Gladstone, to succeed to the primacy of England as Archbishop of Canterbury. Mr. Benson's first reputation was gained as master of Wellington College, which was

originally intended as a semi-military charitable school for the sons of poor officers, but which he built up into a fully equipped public school of high standard. While chancellor of Lincoln Cathedral he established a training college for the clergy with the idea of giving them the theological and professional education that the universities no longer supplied. As bishop of the revived Cornish see of Truro, he built the first new cathedral, save St. Paul's, that has been erected in England since the Reformation. His genius for organization was directed there to the revival of Christian activity in many directions. He became Primate of All England when the Church was torn asunder and not a little debased by the dissensions between the Ritualists and the preponderant Low Church party. He was acceptable to all parties, sympathizing with the historical and ecclesiastical High-Church attitude, imbued at the same time with the evangelical spirit of personal piety, and liberal enough in his theology to suit the Broad Church. Hence he was more successful as a peacemaker than Archbishop Tait had been. The controversy, after a brief truce, broke out again when Dr. King, the newly appointed Bishop of Lincoln, showed himself an extreme Ritualist. Moved by urgent petitions, the archbishop, having been assured of his jurisdiction in the case, cited the Bishop of Lincoln to answer allegations of offenses against the ecclesiastical law. The trial took place in 1890, and the conclusions reached by Dr. Benson, in which on almost every point the whole bench of assessors concurred, settled definitely the main questions of the Ritualistic controversy. The effect of the judgment was to legalize several practices that had been held to be unlawful, such as the mixed chalice, if the mixing of the wine was not made a part of the service, the cleansing of the sacramental vessels in a reverent way, and the singing of the "Agnus Dei" in the communion office. The court did not find ground for pronouncing it to be unlawful to place two lighted candles upon the table during service, but held that there was no justification for making the sign of the cross in giving the final benediction. Archbishop Benson resisted with energy every movement for curtailing the rights and powers of the Established Church, especially the proposition to disestablish the Church in Wales, and was a constant attendant in the House of Lords. He inaugurated a mission to the Assyrian Christians, and contended earnestly against the propagandism of Roman Catholicism in England—the "Italian mission," as he termed it. Archbishop Benson died suddenly while visiting Mr. Gladstone. His published works include: "Boy Life" (1874); "Single-heart" (1877); "Living Theology" (1878); "The Cathedral: Its Necessary Place in the Work and Life of the Church" (1879); "The Seven Gifts" (1885); "Christ and his Time" (1889); and "Fishers of Men" (1893). (See portrait in the "Annual Cyclopædia" for 1883, page 58.)

Blackburn, Colin, Lord, a British jurist, born in Killearn, Stirling, Scotland, in 1813; died in Alloway, Ayrshire, Jan. 8, 1896. He was educated at Eton and Cambridge, and was called to the bar in 1838. He made a reputation for legal learning by the publication in 1845 of a book on "Sales," and was engaged in reporting cases till he was appointed a puisne judge of the Queen's Bench in 1859 by Lord Campbell, whose act in selecting a fellow-countryman little known at the bar was the subject of severe criticisms. But his judgment was borne out by the judicial career of Judge Blackburn, who was made one of the judges of appeals when the appellate division was established in 1876. He presided at the Queen's Bench over several important criminal trials, the most famous of which was that of

Allen, Larkin, Gould, Maguire, and Shore, known afterward among the Irish as "the Manchester martyrs," whom he sentenced to death on the charge of murdering Sergeant James Brett in an attempt to rescue Col. Kelly and Capt. Deasy on Sept. 18, 1867. In 1868 he decided that an indictment would lie against Gov. Eyre for his acts of cruelty and oppression in Jamaica, especially the execution of rioters after summary military trials, but by his extenuating charge to the grand jury prevented an indictment. In the libel suit of Rigby Watson, a member of Parliament, against the "Times," and his action against Lord Russell and other political magnates for conspiracy, Justice Blackburn ruled that newspapers are privileged to comment in good faith on matters of public concern, and that members of Parliament are not liable civilly or criminally for any statements made in Parliament. In the case of Dawkins against Lord Rokeby, he decided that statements made before a military court of inquiry are privileged equally with those made before an ordinary tribunal. He became a life peer when created a Lord of Appeal in Ordinary under the act of 1876, and in his new capacity he took part in many important cases, both in the House of Lords and in the Privy Council. He retired in 1886.

Blind, Mathilde, an English poet, born in Mannheim, Germany, March 21, 1847; died in London, Nov. 26, 1896. Her stepfather, Karl Blind, having been involved in the Baden revolt of 1849, she went with her parents to England, and as a girl was much influenced by Mazzini, whom she knew well, and whose enthusiasm she shared. Her earliest writing of note was a critical article on Shelley in the "Westminster Review" in 1870, though she had published a volume of "Poems" in 1867, under the pseudonym of "Claude Lake." Her subsequent works include a notably good translation of Strauss's "The Old Faith and the New," with a life of the author (London, 1873); "The Prophecy of St. Oran and Other Poems" (1881); "Life of George Eliot" (1883); "Tarentella," a brilliant romance (1884); "Madame Roland" (1886); "The Heather on Fire: A Tale of the Highland Clearances" (1886); "The Ascent of Man," verse (1889); "Dramas in Miniature" (1892); and "Songs and Sonnets," a selection from her lyrics (1893).

Boyer, Jean Pierre, a French prelate, born in Paray-le-Monial, July 27, 1829; died in Bourges Dec. 16, 1896. He became in 1878 Coadjutor Bishop of Clermont, was made Archbishop of Bourges in 1893, and on Nov. 29, 1895, was created a cardinal.

Broome, Sir Frederick Napier, a British administrator, born in Canada, Nov. 18, 1842; died in London, Nov. 26, 1896. He was the son of an English clergyman, and was educated in England till 1857, when he went to New Zealand. There he became a pastoralist, and took in 1865 to his station in the Southern island as his wife the widow of Sir George Barker, known as an author already, and afterward as a writer on New Zealand life. He also published "Poems from New Zealand" and "Stranger of Seriphos," and in 1869 he went to London to embark in literary and journalistic occupations. He served also on several public commissions as secretary, and contributed largely to the "Times," which sent him out on several important occasions as special correspondent. In 1875 he entered the public service as Colonial Secretary to Natal, was transferred to Mauritius, and in 1880 was made Lieutenant Governor of that colony. In 1882 he was appointed Governor of Western Australia. He promoted railroads, telegraphs, and other public undertakings, and became an ardent champion of the claims of the colony for self-government. He received the order of St. Michael and St. George in 1884. Through his exertions the restrictions as to the dis-

posal of Crown lands were removed from the draft bill, and the coveted Constitution was conferred on Western Australia in 1890. Subsequently he was acting Governor of Barbadoes and Governor of Trinidad.

Bruckner, Anton, an Austrian musical composer, born in Ausfelden, upper Austria, Sept. 4, 1824; died in Vienna, Oct. 14, 1896. His father, a teacher, gave him lessons in music, and he pursued his musical studies when he became himself a village schoolmaster and violinist for country *fêtes*, till in 1851 he became organist at Kalksburg. He published a symphony in 1864, and in 1867 was appointed Professor of the Organ, Harmony, and Counterpoint in the Vienna Conservatorium. In the following year he succeeded Sechter as court organist. He gave organ recitals in France in 1869, and took part in the musical ceremonies of the London International Exhibition in 1871. He was appointed chief instructor in musical theory in the University of Vienna in 1875. He wrote a mass in F minor, some chamber music, and eight symphonies. His most remarkable work is the "Eighth Symphony" in C minor, and it is one of the longest ever written, requiring a whole evening for its performance.

Buckley, Sir Patrick Alphonsus, a New Zealand jurist, born in County Cork, Ireland, in 1841; died May 18, 1896. He studied in the Universities of Paris and Louvain, emigrated to Queensland, was admitted to the bar, settled subsequently in Wellington, New Zealand, entered the Provincial Council and was Provincial Solicitor, became a member of the Legislative Council of New Zealand in 1878, and in 1884 was appointed Colonial Secretary in the Stout-Vogel Cabinet, with which he retired in 1887. In 1891 he entered the Cabinet of Mr. Ballance as Attorney-General, and resumed the leadership of the Legislative Council. He was Colonial Secretary in 1892, and held both offices in the Seddon ministry, resigning in December, 1895, to accept a judgeship in the Supreme Court.

Camphausen, Otto von, a Prussian statesman, born Oct. 21, 1812; died in Berlin, May 17, 1896. He studied law and political economy at Bonn, Heidelberg, Munich, and Berlin, was appointed assessor in 1837, and in 1845 became a counselor in the Ministry of Finance at Berlin. In 1849 he entered the Prussian Diet as a Moderate Liberal, and was recognized as an authority on financial questions. In 1869 he became Prussian Minister of Finance, and this post he held nine years. He was confronted with a deficit on taking office, but this he wiped out, and afterward by means of the French war indemnity he was enabled to redeem a large part of the public debt of Prussia, and to remit some of the more burdensome taxes. His free-trade policy aroused later the opposition of both the agricultural and the manufacturing classes, which acquired influence over Prince Bismarck and the governing authorities, and dictated a new economic policy. Camphausen's opposition to the new Protectionist tendency, and especially to the Government monopoly of tobacco, led to his retirement in 1878. For a time he continued in the Prussian upper house to defend Liberal ideas and criticize the Chancellor's financial policy. The invective of Bismarck finally drove him to renounce all part in public affairs, and for over fifteen years he has lived in retirement.

Cernuschi, Henri, a French financier and political economist, born in Milan, Italy, in 1821; died in Mentone, May 12, 1896. His father was a man of wealth, who sent his son to the University of Pavia to study law, in which he was graduated in 1842. As an ardent Italian patriot, he took part in the rising in Milan in 1848, and in February, 1849, he was elected at Rome a member of the

Constituent Assembly that proclaimed a republic. After the capitulation of Rome to the French he was tried by a French court-martial, which acquitted him. Settling in Paris, he began business as a banker, and soon acquired a large fortune. He was a large stockholder in the "Siècle," the chief anti-Bonapartist newspaper, to which he was a frequent contributor. In 1870 he was expelled from France for giving 100,000 francs to distribute negative ballots in the *plébiscite*. After the fall of the empire he returned and endeavored to mediate between the Commune and Thiers. When the republic was established he became a naturalized French citizen. He was an active advocate and organizer of the bimetallic agitation and a strong polemical writer in favor of international bimetallicism. Among his numerous financial treatises are "Bimetallic Money," "M. Michel Chevallier et le Binétallisme," "Silver Vindicated," "Nomisma: or, Legal Tender," "The Bland Bill," "Monetary Diplomacy," "Bimetallicism in England and Abroad," "Bimetallicism at 154 a Necessity," and "The Monetary Conference." His work entitled "The Great Metallic Powers" was addressed to the Congress and people of the United States. Cernuschi was a staunch Opportunist under the republic, the friend of Ferry and Gambetta, and he might have had a life senatorship, but the currency interested him more than politics. He testified before the United States Monetary Commission in 1877, and in 1878 began the publication of his lively pamphlets in support of the bimetallic theory. He had the finest existing collection of Japanese bronzes, acquired in Japan after the revolution in that country, and this he bequeathed, with the house that he built to receive them, to the municipality of Paris.

Challemeil-Lacour, Paul Arnaud, a French statesman, born in Avanches, May 19, 1827; died in Paris, Oct. 26, 1896. He passed from the lyceum of St. Louis into the Ecole Normale in 1846, was graduated first in philosophy in 1849, and was professor in the lycées of Pau and Limoges. He was an ardent Republican before the revolution of 1848, and after the *coup d'état* he took up arms against Napoleon, and for this was arrested and thrown into prison, to be banished later. He lived first in Belgium and later in Switzerland, where he became Professor of French Literature in the Polytechnic of Zurich, until he was allowed to return to France in 1859. His writings on literature, art, and philosophy, published in the "Revue Nationale," the "Revue des deux Mondes," and the "Temps" newspaper and other journals, attracted much attention. As a sufferer from imperial proscription and a champion of republicanism he was marked out for political leadership and responsibility when the second empire fell. Under the Provisional Government he was prefect of the Rhône, but resigned because he was unable to cope successfully with disturbances at Lyons. He entered the Chamber, and by reason of his knowledge and eloquence and his earnest republicanism, based on a profound acquaintance with ancient and modern history, he became the guide and leader of the Radicals, who most aggressively opposed the monarchical, aristocratic, and clerical reaction. He was elected a Senator in 1876, and in 1879, on the demand of Gambetta, M. Waddington made him minister to Bern. In the following year he succeeded Léon Say as ambassador in London. His unbending attitude in defense of French views and interests caused considerable friction between the two governments. In 1883 he resigned in order to take the portfolio of Foreign Affairs in the Cabinet of Jules Ferry, and in this position showed the same uncompromising and defiant temper. On quitting office and returning to the free discussion of general poli-

ties he took a stand in the Senate against the socialistic and democratic principles of the new radicalism that caused his former associates to denounce him as a turncoat and his old Conservative opponents to welcome him as an ally. On questions of foreign policy he exercised great influence. As an advocate of moderate liberal ideas and political tolerance he was elected to succeed Jules Ferry as president of the Senate. In that capacity he displayed great firmness in resisting the assaults of the Radicals of the Chamber on the rights and privileges of the upper house. Challemeil-Lacour was one of the most powerful and polished of French orators and the profoundest scholar and philosopher in public life. He was without wife or family, and lived like an ascetic recluse among his books, which included the whole classic literature of Greece, for he was one of the most learned of French Hellenists. He was elected, while president of the Senate, a member of the French Academy.

Childers, Hugh Culling Eardley, an English statesman, born in York in 1827; died in London, Jan. 29, 1896. He was the son of a clergyman, and after being graduated with mathematical honors at Cambridge in 1850, he went with his newly wedded wife to Australia, where he entered at once upon a political career. He was elected member for Portland of the first Legislative Assembly of Victoria, and was appointed Commissioner of Trade and Customs in the Government. In 1857 he resigned this office to return to England as agent general of the colony. Two years later he offered himself as candidate for Parliament for the borough of Pontefract, and in 1860 the seat was awarded to him, his opponent who took it first having been disqualified by corrupt practices. He represented Pontefract in the Liberal interest till 1885, when he met with defeat. In 1864 he was appointed a Civil Lord of the Admiralty, and in the year following became Financial Secretary of the Treasury. Subsequently he filled the posts of First Lord of the Admiralty, Secretary of State for War, and Chancellor of the Exchequer, and for a short period was Home Secretary. He was also chairman of the select committee on transportation in 1861, a member of the commission on penal servitude in 1863, a commissioner to examine into the constitution of the law courts in 1867, and at the time of his death was chairman of a commission to inquire into the financial relations between Ireland and Great Britain. His practical ability and sterling qualities led Mr. Gladstone to bestow upon him an important place when forming his first Cabinet in 1868, and in this administration Mr. Childers was included during its long life of five years. He reduced the naval estimates in 1869, and effected important changes both in the economy and the efficiency of the naval administration. Some of the innovations that he introduced in the Admiralty were discarded by his successors. After an illness of two years, he returned to the Government in 1872 as Chancellor of the Duchy of Lancaster, retiring in 1873 when the Cabinet was remodeled. When Mr. Gladstone assumed the premiership in 1880 Mr. Childers took the office of Secretary of State for War, and during his brief term he not only had direction of the arrangements for the Egyptian campaign of 1882, but put into practice the scheme for reorganizing the British army on a territorial basis. At the end of 1882 he succeeded Mr. Gladstone as Chancellor of the Exchequer. A large surplus in 1883 enabled him to give cheap telegrams and reduce the income tax to 5*d.* Two years later the Government fell when he was obliged to cover a vote of credit of £11,000,000 and an ordinary deficit of £3,692,000 by raising the income tax to 8*d.*, increasing the beer and spirit duties, altering

the death duties, and suspending the sinking fund. His attempt to convert the 3-per-cent. consols into 2½ per cents. proved a failure, but it paved the way for Mr. Goschen's conversion of the debt in 1888. During Mr. Gladstone's short-lived ministry of 1886 Mr. Childers was Secretary of State for Home Affairs. His parliamentary career ended in 1892.

Crowe, Sir Joseph Archer, an English diplomatist and art writer, born in London, Oct. 20, 1825; died in Würzburg, Bavaria, Sept. 7, 1896. He began his career as a reporter for the "Morning Chronicle," and was subsequently foreign editor of the "Daily News" in Paris. During the Crimean War he was the war correspondent of the "Illustrated London News," and he acted in the same capacity for the "Times" during the Indian Mutiny, and again during the Franco-Austrian War. While in India he was a director of the Bombay School of Art, 1857-59. In 1860 he was appointed British consul general at Leipsic and consul general at Düsseldorf in 1878, going thence to Vienna as commercial *attaché* to the embassies at Berlin and Vienna. In 1882 he was made commercial *attaché* for Europe with residence at Paris, his abilities as a diplomatist of the first rank being frequently recognized by successive appointments as delegate to various diplomatic commissions. In conjunction with Giovanni Battista Cavaleaselle he wrote several works on the history of art which take rank among the best of their kind, their accuracy being unquestioned and their criticism enlightened and discriminating. They include: "The Early Flemish Painters" (London, 1857); "A New History of Painting in Italy" (1864-'66); "A History of Painting in North Italy" (1871); "Titian: His Life and Times" (1877); "Raphael: His Life and Works" (1883-'85). Sir Joseph was also the editor and reviser of Burekhardt's "Cicerone" (1873-'79) and of Kugler's "Handbook of Painting" (1874).

Deus, João de, a Portuguese poet, born in 1830; died in Lisbon, Jan. 12, 1896. He studied law at the University of Coimbra, and while there attracted notice by his poetry. He edited a newspaper in 1862, and was afterward elected a member of the Chamber of Deputies. His poems, each one a short ode remarkable for finish and delicacy of expression and elevation and purity of style, are contained in a few small volumes. He invented an ingenious method of teaching the illiterate, which is embodied in two books entitled "Cartilha Maternal" and "Cartilh Maternal e o Apostolado."

Drobisch, M. W., a German logician, born in 1802; died in Leipsic, Oct. 10, 1896. He became Extraordinary Professor of Philosophy and Ordinary Professor of Mathematics in Leipsic University at the age of twenty-four, and at forty became also Ordinary Professor of Philosophy. As a technical logician and profound mathematician he enjoyed a very high reputation. His principal work was "Nene Darstellung der Logik," which went through five editions.

Floquet, Charles Thomas, a French statesman, born in St. Jean de Luz in 1828; died in Paris, Jan. 18, 1896. He began life as a lawyer in Paris, where in the days of the empire he defended Republican journalists who were prosecuted for their writings. His cry of "Vive la Pologne, monsieur," addressed to the Czar Alexander II in the Palace of Justice in 1867, made him a political celebrity. On the fall of the empire he was appointed one of the deputy mayors of Paris, but was forced to resign on account of his complaisance toward the Red Republicans. He was arrested later at Biarritz for complicity in the acts of the Commune, and was held several months and then discharged. He was elected to the Paris Municipal Council in 1872, and in 1876 became one of the Deputies for Paris. He

sat in the Chamber, first as a Gambettist and then as one of the seceding Extreme Left, until in January, 1882, Gambetta silenced his opposition by appointing him Prefect of the Seine, in which capacity he took the side of the municipality in the struggle for autonomous government. Resigning in the fall of 1882, he re-entered the Chamber, was the earliest one to propose the banishment of pretenders to the throne, and was one of the sharpest assailants of Jules Ferry, though related to him by marriage. In 1885 he was elected president of the Chamber, which post he resigned in April, 1888, to become Prime Minister. It was the remonstrance of the Russian ambassador that impelled M. Grévy to recall the commission he had given to M. Floquet to form a ministry once before, but he was now eligible, having with the aid of the Russian ambassador, Baron Mohrenheim, persuaded the Russian Government to waive its objections to the man who had insulted the Czar. Floquet goaded Gen. Boulanger, who was aiming at a dictatorship, into such a passion by his sarcastic taunts that the popular hero challenged him to a duel. To the amusement of France, the man of arms was wounded by the civilian. In 1889 Floquet was elected president of the Chamber again. He made an excellent presiding officer, and aspired to the presidency of the republic, for which he was the Radical candidate in 1887. But his career was suddenly cut short by the Panama disclosures. He admitted having exerted influence over the newspaper subsidies of the canal company, and was charged with accepting money from the company for political purposes. The result was that he lost his seat in the elections of 1893. In the following January M. Goblet left the Senate, to accept a mandate for the lower house, and M. Floquet was elected a Senator from Paris. As a member of the Radical minority in that body and with the pall still unlifted from his private reputation, he cut no great figure there. Though one of the most active and combative of the Radical Republicans, a keen and ready debater, with gifts of wit and eloquence, and delightful and affable in social intercourse, Floquet left no lasting impress or marked achievement in French politics.

Fournier, Telesphore, a Canadian jurist, born in 1824; died May 10, 1896. He was called to the bar of Lower Canada in 1846, attained the dignity of Queen's counsel in 1863, sat in the House of Commons and in the Quebec Assembly for many years, was made a member of the Privy Council in 1873, and during that year and till July 8, 1874, was Minister of Inland Revenue, in the Mackenzie Cabinet, then Minister of Justice till May 19, 1875, and after that Postmaster-General till October of the same year, when he was appointed a puisne judge in the Supreme Court of the Dominion, which was created by the act he had carried as Minister of Justice, as also the insolvency act of 1875.

Frère-Orban, M., a Belgian statesman, born in Liège in 1812; died in Brussels, Jan. 2, 1896. He was educated in his native town and studied in Paris, was admitted to the bar, and practiced in Liège, where he took a prominent part in the controversy against the Catholic ministry, which led to his being elected by the Liberals to the Second Chamber in 1847, and to his being appointed Minister of Public Works. In the following year he became Minister of Finance, which post he resigned in 1852 on account of a difference with his colleagues. His controversial work "La Mainmorte et la Charité" was the signal for a contest with the Catholic Church for the secularization of public charities, which was made the issue of a political conflict in 1857 that resulted in the return of the Liberals to power. Frère-Orban again took the Finance portfolio, and he gained a high reputation

by bringing about a balance between revenue and expenditure, and organizing the finances on a sound basis notwithstanding the reduction made in the tariff and the increase in expenditure. He was also able to carry out important public works and to build fortifications at Antwerp. When the French Government in 1869 attempted through a private company to gain control of the Luxemburg railroads, Frère-Orban took a firm stand and displayed great diplomatic talent in safeguarding the interests of his country. He was the leading spirit in the Liberal Cabinet and in the nation till the election of 1870 brought back the Ultramontanes to power. When the Liberals had their turn again in 1878, he became Premier and Minister of Foreign Affairs. The secularization of the national schools was carried out with a firm and resolute spirit, and all difficulties thrown in the way were overcome by his skill and energy. When the conflict with the hierarchy over the school laws was at its height in 1879 he broke off diplomatic relations with the Vatican because the Pope declined to rebuke the recalcitrant and seditious attitude of the bishops. The Roman Catholics triumphed and the Liberal régime identified with Frère-Orban came to an end in 1884. He led the Opposition until he lost his seat in the elections of October, 1894. Among the achievements of his various administrations were the repeal of the salt tax, the abolition of *octrois*, many laws for the regulation of labor and the promoting of the welfare of workingmen, the creation of the National Bank and the Caisse d'Épargne, and the military defenses and armament of Belgium.

Galimberti, Luigi, an Italian prelate, born in Rome, April 25, 1836; died at Suchstein, near Düsseldorf, May 7, 1896. He was for many years Professor of Ecclesiastical History and of Theology in the College of the Propaganda and the Roman university. He founded and edited the "Moniteur de Rome" as the political organ of the Vatican. Pope Leo XIII appointed him Secretary of the Congregation of Extraordinary Ecclesiastical Affairs. When Prince Bismarck submitted the dispute with Spain over the possession of the Caroline Islands to the arbitration of the Pope Mgr. Galimberti drafted the award in favor of Spain. He afterward played an important part in the negotiations between Prussia and the Vatican for the termination of the Kulturkampf. As nuncio in Vienna he displayed the same genius for conciliation, and labored to promote good relations with Germany as well as with the Austrian court. The appointment of Cardinal Stablewski, a Polish prelate, to the see of Posen in 1891 was attributed to his exertions. He was created a cardinal on Jan. 16, 1893, and was one of the most influential in the college, and a prominent candidate for the succession to the papacy, the one on whom were chiefly centered the hopes for a reconciliation between the Vatican and the Quirinal.

Geffken, Friedrich H., a German diplomatist and jurist, born in Hamburg, Dec. 9, 1830; died in Munich, April 30, 1896. He studied law and history at Bonn and Göttingen, and in 1854 was appointed secretary to the legation of the Free Towns in Paris. In 1856 he was *chargé d'affaires* for Hamburg at Berlin, and in 1859 was raised to the rank of minister. He was Hanseatic minister in London after the formation of the North German Confederation. Returning to Hamburg in 1868, he was elected a member of the Senate. In 1872 he accepted the professorship of International Law and Political Economy at Strasburg. He retired and returned to Hamburg in 1881, and in 1889 removed to Munich. This migration was the result of a conflict with Prince Bismarck, who caused Prof. Geffken to be arrested on the charge of treason for having

published in the "Deutsche Rundschau" extracts from the diary of the Crown-Prince Friedrich written during the Franco-Prussian War. The object was to prove that the Emperor Friedrich was the real author and founder of German unity, but that Bismarck had thwarted his aims to make the empire liberal and democratic, while utilizing his ideas and labors. Prof. Geffeken was intimate with Friedrich before he succeeded to the throne, and is believed to have drawn up the rescripts to the nation and to Prince Bismarck that were published in 1888. He was a frequent writer on controversial political subjects, and a bitter opponent of Bismarck's ideas and policy. His latest work was "France, Russia, and the Triple Alliance" (1893).

Goncourt, Edmond Hnot de, a French author, born in Nancy, May 28, 1822; died in Paris, July 16, 1896. The brothers Jules and Edmond de Goncourt, grandsons of a member of the National Assembly of 1789, devoted themselves to literary pursuits and made a special study of the life and society of the eighteenth century. Their first essay was a *vaudeville* play, which was refused by the director of the Palais Royal, who stole the plot and had it more skillfully worked out by a practiced dramatist. Their first book, "In 18—," published in 1851, was a failure. They joined the staff of "L'Éclair," started by a cousin, and when it expired they all went over to the new literary review "Paris." The two brothers were arrested for reprinting a shocking poem by an old French poet, and this adventure first brought them into public notice. Their first literary success they won in 1860 with "Les Hommes des Lettres," republished in 1869 under the title of "Charles Demailly." It was the first of their novels of observation, the prototypes of the realistic school, and was followed in 1861 by "Sœur Philomène," a lugubrious picture of hospital life. In "Renée Maupérin" (1862) they gave a description of the young *bourgeoise*, and in "Germinie Lacerteux" (1863) they recount the sad life story of a servant who was dear to them. In 1865 they published a book about artists entitled "Manette Salomon." Their "Henriette Maréchal" was in that year hissed at the Comédie Française for the reason that the Princess Mathilde had used her influence to have it accepted. The story told in "Madame Gervaisais" (1869) of a free-thinking woman who was converted into a religious bigot through the influence of her environment, was conceived during a trip that the brothers took to Rome. "Le Pays en Danger" was rejected at the Comédie Française in 1869. After the death of Jules in 1870 Edmond worked out the notes accumulated from the studies and observations of the brothers with the same finished style and artistic expression that distinguishes the joint work of the two. He published "La Fille Elisa" (1878); "Les Frères Zenganno" (1882); "La Faustin" (1882); "Chérie" (1884); "Gavarni"; and "Pages Retrouvées." From the romances previously written by him and his brother he made three plays, entitled "Renée Maupérin," in which he had the assistance of Henri Cécard; "Germinie Lacerteux," an undramatic series of tableaux; and "Manette Salomon." The brothers noted down their judgments and observations and often the confidences of fellow-writers and others, and these memoranda Edmond published under the title of the "Journal Goncourt." The brothers aspired to be artists and made sketches in Algeria before they settled in Paris. Their water colors, made in Algeria, Italy, and Flanders, possess individual artistic qualities, and still more so their etchings. Their work on Watteau was illustrated by engravings in the style of that master. They published numerous studies on the minor French painters of the eighteenth

century, some of whom they first brought again into notice. Their writings on the society and court life of that period are voluminous. In the house that they built at Auteuil they gathered a great store of artistic curiosities, especially of the eighteenth century. To this Edmond added a precious collection of Japanese objects of art. He left the bulk of his fortune, estimated at 2,000,000 francs, to found an Académie des Goncourt, consisting of 10 persons, who shall award each year a prize of 5,000 francs for the best prose work, and each of them receive a pension of 6,000 francs. Eight of them he named in the will, with directions that they elect the other two. When one of them dies, the survivors are to choose a successor.

Grove, Sir William Robert, a British physicist, born in Swansea, Wales, July 11, 1811; died in London, Aug. 2, 1896. He gave his attention early to the study of electricity and experimental physics, and in 1839 invented the powerful voltaic battery that bears his name. He devised also the gas battery. From 1840 to 1847 he was Professor of Experimental Philosophy in the London Institution. As a member of the Council of the Royal Society, he had a large share in its reorganization. Devoting himself later to the profession of the law, he became Queen's counsel in 1853. He was a member of the Metropolitan Commission on Sewers and of the royal commissions on patent law and on Oxford University. He was elevated to the bench as a justice of common pleas in November, 1871, was knighted Feb. 21, 1872, and in November, 1875, through the operation of the judicature act, became a judge of the High Court of Justice. On his retirement from the bench, in 1887, he was made a member of the Privy Council. Sir William Grove made several important discoveries in electricity and optics. In a lecture before the London Institution in 1842 he first advanced the theory of the interconvertibility of the forces of heat, light, electricity, and mechanical energy, calling all of them modes of motion or forms of persistent force. This doctrine he developed in the essay on "The Correlation of Physical Forces." He received the medal of the Royal Society in 1847 for lectures on "Voltaic Ignition" and "Decomposition of Water into its Constituent Gases by Heat." He contributed many papers to "Transactions of the Royal Society" and to the "Philosophical Magazine."

Hamid bin Thwain bin Said, Seyyid, Sultan of Zanzibar, born in 1856; died Aug. 25, 1896. He was a nephew of the Sultan Ali Bin Said, and before he came to the throne was dependent on the produce of a small clove plantation and was always in debt. The English recognized him as the heir to the throne, and defended his rights against his cousin Said Khalid, the representative of the patriotic Arab element, when his uncle died, on March 6, 1893. Although Hamid was the subservient creature of the British rulers, he was a devout Mussulman, learned in the Koran and strict in ceremonial observances.

Harris, Sir Augustus, an English theatrical manager, born in Paris in 1852; died in Folkestone, Jan. 22, 1896. His father was a manager of London theaters, but he was trained for commercial business till he went upon the stage in 1873 and played light comedy parts till Mapleson made him assistant stage manager of the Italian Opera Company and afterward left the management entirely in his hands. He went to Paris in 1876 and brought over the Odéon Company to play "Les Danischeff" at St. James's Theater. He next composed a pantomime for the Crystal Palace, introducing novel stage effects. In 1879 he undertook the management of Drury Lane Theater, in which previous lessees had sunk fortunes. By studying the popu-

lar taste and catering to the demands of the multitudes, and by his thorough business methods, he made it successful. He was the originator of the magnificent modern staging of melodramas and pantomimes. In 1888 he acquired, in addition, Covent Garden, where he conducted opera with great success, anticipating and meeting the fashionable demand now for Wagner, now for a revival of Italian opera, now for the latest productions of Mascagni, Leoncavallo, and Massenet. He was the author of the "Sporting Duchess" and other spectacular plays, and of the most striking pantomimes. In 1891 he was a sheriff of London and was knighted.

Heine, Cécile Charlotte Furtado, a French philanthropist, born in Paris in 1821; died there Dec. 10, 1896. She was of distinguished Hebrew extraction. She married Charles Heine, nephew of Heinrich Heine and son of the Hamburg banker Solomon Heine. When she was left a widow without children, she followed the footsteps of her husband and her father by devoting her wealth to charitable objects. She founded at Croisic a hospital for children suffering from rickets and a children's dispensary in Paris, and was a constant and liberal donor to established charities. Her ambulance work and liberality to French prisoners in Germany during the war of 1870 secured her the cross of the Legion of Honor. During the Madagascar expedition she gave her villa at Nice and 60,000 francs a year for the benefit of invalid officers, and afterward she increased this sum. She made a large donation to the fund of the Pasteur Institute. She also founded charitable institutions at Bayonne, and recently she established a *crèche* in a poor quarter of Paris.

Hippolyte, Louis Mondestin Florvil, President of Hayti, born in Cape Haytien in 1827; died in Port au Prince, March 24, 1896. He was the son of one of the ministers of the Emperor Faustin I of Hayti. Although his mother was a Frenchwoman, his complexion was quite black. His father, who was an extensive traveler and master of many languages, educated his son in France for a military career. After he returned to Hayti he joined the army and proved himself a valiant soldier and a man of force and resolution. He distinguished himself especially in the defense of the fortress of Bellair in 1865. In 1889 he headed the insurrection that overthrew President Légitime, and in October of that year assumed the chief power. He was elected Constitutional President and entered upon the regular term of seven years in May, 1890.

Hirsch de Gereuth, Baron Maurice de, an Austrian financier, born in Munich, Bavaria, Dec. 9, 1831; died near Pressburg, Hungary, April 20, 1896. His father was a cattle dealer, who became court banker at Munich, was ennobled in 1869, and at his death left his son a large fortune. Maurice de Gereuth at the age of eighteen entered the banking house of Bisehoffsheim & Goldschmidt, in Brussels, rose to a confidential place, and married a daughter of the senior partner, who was a Belgian Senator. On the failure, in 1866, of the firm of Langrand Dumonceau, Hirsch acquired the assets, which included a concession from the Turkish Government for building railroads. He entered on the work of building railroads with the thoroughness and attention to details and with the single purpose of turning every accident to his pecuniary advantage that characterized all his business dealings and explained his success in gaining wealth. He drew lots with two others for the three sections that were to be built, and, though the most difficult one fell to him, by employing the best German engineering talent, by exercising a strict control over every minute expenditure, by fighting the Turkish officials pertinaciously or buy-

ing their favor when expedient, and seizing every legal advantage, he made \$4,000,000 out of this contract, while his colleagues lost money on the other sections. His subsequent dealings with the Turkish Government and his other undertakings were not less profitable, and his father's fortune and his wife's dowry of \$20,000,000 augmented his capital and means of money-making. When he had acquired a fortune estimated at \$200,000,000, and had an income of \$15,000,000 or \$20,000,000 a year, he arranged his affairs so that he could devote his whole mind to the expenditure of this income for the benefit of his fellowmen, for he believed that such was the only honorable way of spending money on a large scale. He had sought social distinction, but was shunned by the Austrian and French aristocrats, though he counted among his friends the Prince of Wales, to whom he was reputed to have loaned large sums, and other royal personages who had to thank him for similar favors. He was successful on the English turf, and gave his winnings to the London hospitals. He was fond of shooting also, and maintained some of the choicest preserves in Europe. The death of his only son, in 1888, impelled him to devote himself more and more to charitable projects. His greatest scheme was the Jewish Colonization Society, to which he gave \$10,000,000. Its object is to transplant Jews who formed indigent communities in Europe and Asia, especially those who suffered under political or social disabilities, as in Russia, Roumania, and Austria, to some new country where they can develop into independent farmers. The colonies established with this fund in the Argentine Republic and the United States have not fulfilled his expectations. He gave vast sums also to establish mechanical training schools for young Hebrews in all the great cities of Europe and in the United States, Turkey in Asia, and Egypt. He gave \$2,500,000 to form a fund in New York for educating and Americanizing Russian and Roumanian Jews. He gave \$3,000,000 to the Jews of Galicia for educational purposes. When the Russian Government declined to accept \$10,000,000 for popular education on condition that Jews should not be shut out from the advantages, he sent \$200,000 to be distributed in charity by the Emperor. His gifts aggregated \$50,000,000, and those of his wife, who devoted her life to charitable works before he began his benefactions, were as great in proportion. Since his death, his wife has continued his benefactions.

Hitrovo, M., a Russian diplomatist, born about 1835; died in St. Petersburg, July 13, 1896. He began his career in the consular service, and was too indolent, careless, and pleasure loving to gain promotion till he manifested diplomatic talent when connected with the army staff at San Stefano during the negotiation of the treaty of peace with Turkey in 1878. He watched the subsequent development of events in the Balkans as consul general at Salonica, and became an actor in them as

soon as he was appointed consul general and diplomatic agent at Sofia. He supported Alexander of Battenberg, under instructions from his Government, and when the *coup d'état* that resulted in the temporary suspension of the Constitution of the principality had been made successful through Russian influence he exacted the submission of Prince Alexander to Russian policy to such a degree that friction and estrangement followed. Though M. Hitrovo had been transferred to Bucharest when Alexander was kidnaped and afterward forced to abdicate, he was credited with directing and controlling all the agitations and intrigues that disturbed the tranquillity of Bulgaria. When the Russian Government changed its attitude toward Bulgaria he was transferred to Lisbon, and subsequently he was Russian minister to Japan.

Hohenlohe-Schillingsfürst, Prince Gustaf Adolf, a German prelate, born in Rotenburg, Feb. 26, 1823; died in Rome, Oct. 30, 1896. His ancestors were counts and later princes till 1806 of Hohenlohe, now incorporated partly in Bavaria and partly in Würtemberg. He attended the gymnasia of Ansbach and Erfurt, studied law at Bonn and theology at Breslau and Munich, went to Rome in 1846 to complete his studies in the *Academia Ecclesiastica*, took refuge with the papal court at Gaeta during the revolution of 1849, and was there ordained priest by Pius IX, who, after his return to Rome, appointed him chamberlain and subsequently almoner and Bishop of Edessa *in partibus*. He was created a cardinal on June 22, 1866, but encountered the hostility of the Jesuits, and, after the Vatican Council, although he did not openly oppose its decrees, he retired to Germany. He returned to Rome in 1876, and was made Bishop of Albano in 1879, but resigned in 1884, and contented himself with the post of archpriest of Santa Maria Maggiore.

Houssaye, Arsène, a French author, born in Bruyères, March 28, 1815; died in Paris, Feb. 26, 1896. He enlisted at the age of sixteen and fought in the Antwerp campaign, ran away from home with a troupe of singers to seek his fortune in Paris, and made his living at first by writing street ballads. Falling in with Théophile Gautier and Gérard de Nerval, he acquired his literary style from association with them and their companions. He wrote with great ease and rapidity in a florid manner and sentimental vein a great number of novels and historical biographies. His history of Flemish and Dutch painting won for him the ribbon of the Legion of Honor. In 1843 he purchased a magazine, "L'Artiste," and had Gautier, Murger, and Champfleury for contributors. He was an active Republican in the revolution of 1848, and after the *coup d'état* composed a famous song, "L'Empire c'est la Paix." As administrator of the *Comédie Française* from 1849 till 1856 he did good service by bringing out Hugo's plays. He made much money by speculation, entertained lavishly, and held the sinecure office of inspector of provincial museums, writing copiously at the same time for the reviews and producing new novels in rapid succession. He founded the "Gazette de Paris" in 1871, but it was unsuccessful. In 1875 he accepted the directorship of the *Théâtre National Lyrique*, which he soon resigned on account of the difficulties that he encountered. He was himself an unsuccessful applicant for election to the Academy in 1876, and subsequently his son was elected to a chair. His most valuable contribution to literature is his "Confessions," containing his recollections of the period from 1830 to 1880. In his "Fauteuil de l'Académie Française (1855) he satirized the Académie for excluding the most eminent Frenchmen from membership. Among his multitudinous works are

"Philosophes et Comédiennes," "Les Filles d'Eve," "Sous la Régence et sous la Terreur," "Blanche et Marguérite," "Nos Grandes Dames," "Le Roi Voltaire," and "Histoire de l'Art Française."

Hughes, Thomas, an English lawyer and author, born in Uffington, Berkshire, England, Oct. 23, 1823; died in Brighton, England, March 22, 1896. His grandfather, Thomas Wilkinson, had been vicar of the parish in which he was born. At the age of seven he was sent to Rugby, where he studied under Dr.

Arnold. In 1841 he entered Oriel College, Oxford, and in 1845 took his degree of A. B. there. Two years after leaving college he married Miss Anne Francis Ford, daughter of James Ford, prebendary of Exeter. One year later, in 1848, he was called to the bar at Lincoln's Inn, and he was made a member of the bar of Chancery. He was a member of Parliament for Lambeth from 1865 to 1868. In 1868 he was sent as representative from the borough of Frome, and he continued to hold the office for six years. He was nominated a candidate for Marylebone, and 294 votes were cast for him, but he had withdrawn on the day previous to the election. In 1869 Mr. Hughes was appointed a Queen's counsel, and in 1870 he traveled through the United States and assisted in founding a colony in Tennessee. In 1882 he was made judge of the county court circuit. Mr. Hughes took a special interest in the combinations of trades unions and legislation in regard to master and servant, and was prominent during his political life in debates upon these subjects. Even in his college days he was much absorbed with political problems, and held very advanced liberal views. He was associated with Kingsley and Maurice in their work among the poor of London, and, though zealous for the good of the workingman, he strongly censured the extreme views and measures of certain among the trades-union members. His writings are: "Tom Brown's School Days, by an Old Boy" (1857); "The Scouring of the White House" (1858); "Tom Brown at Oxford" and "Religio Laici" (1861); "The Cause of Freedom: Which is its Champion in America, the North or the South?" (1863); "Alfred the Great" (1869); "Memoir of a Brother" (1873); "Prefatory Memoir to Charles Kingsley's 'Alton Locke'" (1876); "The Old Church: What shall we do with it?" (1878); and "A Memoir of Daniel Macmillan" (1882). He edited James Russell Lowell's "Biglow Papers" in 1859; "The Trade Unions of England," by the Comte de Paris, in 1869; and F. D. Maurice's treatise on "The Friendship of Books" in 1874. His remaining books are: "Rugby, Tennessee" (1881); "Gone to Texas: Letters from Our Boys" (1885); "Life of Bishop Fraser" (1887); and "Livingstone" (1889). He wrote also a preface for "Whitmore's Poems." Mr. Hughes's first book has had several editions, and M. Levoisin translated it into French, and it was published in Paris in 1875. "Religio Laici" first appeared as one of a series called "Tracts for Priests and People," and was issued later under the title "A Layman's Faith." In his volume upon the Church he opposes its disestablishment.

Hulst, Maurice d', a French prelate and politician, born in Paris in 1841; died Nov. 6, 1896. His father, Comte d'Hauteroche, afterward styled Comte d'Hulst, was Deputy for Hérault from 1820 till 1827. Maurice d'Hulst was a playmate in his childhood of the Comte de Paris. He was ordained in 1865, was a parish priest in Paris till the Franco-German War, when he served as chaplain to the press ambulance, escaped from Sedan, and was in Paris during the siege. He was appointed vicar general of the diocese of Paris in 1875 and rector of the Catholic Institute when it was established in 1876. In 1890 he became special preacher at Notre Dame, and in 1892 he succeeded to Bishop Freppel's seat in the French Chamber. He defended Catholic principles with as much ardor and cultivated eloquence as his predecessor, and rather more emphatically and dogmatically. Mgr. d'Hulst was the author of numerous religious works.

Hunt, Alfred William, an English artist, born in Liverpool in 1830; died in London, May 3, 1896. He was the son of Andrew Hunt, a Liverpool artist, and was educated at Liverpool Collegiate School and Corpus Christi College, Oxford, taking his degree in 1852. He had been a pupil in drawing and painting of his father, and in 1854 he sent his first picture to the Royal Academy, "Styehead Pass, Cumberland." "Llyn Idwal," exhibited at the same place in 1856, was much admired by Mr. Ruskin, as were also his next year's pictures. About this time he became a member of the Hogarth Club, a preraphaelite association. In 1860 he exhibited "Just before Sunset," "Mist rising after Heavy Rain," and the well-known "Track of an Old World Glacier," works which made much impression and influenced his election in 1862 as an associate of the Society of Painters in Water Colors and a full member two years later. For some seven years he worked only in water colors, but in 1870 he again exhibited at the Academy, and after that date worked both in oil and water colors. He was never elected a member of the Academy, a neglect which was deeply felt by the artist, whose abilities richly deserved such acknowledgment. That he was generally looked upon as a water colorist simply, although he sent some 40 oils to the Academy, only partially explains the action of the academicians. Among his best-known pictures are: "Whitby Churchyard," "Whitby: Morning and Evening," "Goring Loek," and "Summer Days for me." In 1884 a large collection of his work in oils and water colors was shown at the Fine Art Society's rooms. Hunt was one of the most distinguished followers of Turner, but was not a mere copyist of the style of his great model. A recent critic has said of him: "No painter of our epoch had a truer sense of the gradations of light as it penetrates more or less transparent veils of vapor, taking, or as the case may be, creating lovely hues in its passage through them; no man measured the distance with greater art, immortalized more faithfully the fleeting beauty of English landscape, nor translated with more conspicuous skill into permanent forms the poetry of Nature."

Karl, Ludwig, Archduke, heir presumptive of the Austrian throne, born in Schönbrunn, July 30, 1833; died in Vienna, May 19, 1896. At the age of twenty he went to Galicia to be initiated into the administration of a province, and two years later he was made Governor of the Tyrol. He resigned when the Constitution of 1861 was granted, and after that took no interest in political affairs, but was an earnest and indefatigable promoter of works of philanthropy and public utility, interested especially in the development of technical education, a generous patron of struggling artists, and a dispenser of magnificent hospitalities. His first wife,

the Princess Margarethe, daughter of King Johann of Saxony, died within two years. In 1862 he married Princess Annonciade of Bourbon-Sicily, by whom he had four children, the Archdukes Franz Ferdinand of Este, Otto, and Ferdinand Karl, and the Archduchess Margarethe, married to the Duke of Württemberg. In 1871 he lost his second wife, and two years later he espoused the young Princess Maria Theresa of Braganza. After the tragic death of the Archduke Rudolph, the succession passed to him and his male heirs. He resigned it in favor of the Archduke Franz Ferdinand of Este, who is not likely to survive him long, and is unmarried. The Archduke Otto is next in succession.

Kekule, Friedrich August, a German chemist, born in 1829; died in Bonn, July 14, 1896. He devoted his life entirely to chemical investigations, was professor at Ghent from 1858 to 1865, and had since held a chair in the University of Bonn. Organic chemistry especially has been greatly advanced by his indefatigable experiments and discoveries, the most important of which was his demonstration of the quadruple character of the atoms of carbon.

Knight-Bruce, George Wyndham, an English missionary, born in 1853; died in Newton Abbot, Dec. 16, 1896. He was a grandson of Justice Knight-Bruce, and was educated at Eton and Oxford, took his bachelor's degree in 1876, and went into holy orders. He served as a missionary curate in Liverpool and the East End of London till 1886, when he was appointed Bishop of Bloemfontein. In South Africa Dr. Knight-Bruce, like all the earnest and energetic Christian missionaries, came into conflict continually with the secular pioneers of British civilization. He penetrated into Matabeleland and Mashonaland, and obtained permission from Lobengula for the establishment of missions before the charter of the South African Company was granted. In 1891 he became the first Bishop of Mashonaland, and succeeded in a remarkable degree in establishing the influence of the English Church among the natives. He condemned the Matabele war, as he did most of the operations of Cecil Rhodes, but when the war began he joined the expedition, refusing, however, to take the post and pay of chaplain, because he held that the Matabele no less than the company's troops were members of his diocese. Broken in health from constant trial and exposure, he resigned the bishopric in 1894, and returned to England, where he was nominated to a Crown living in Devon, and was afterward made Assistant Bishop of Exeter.

Kolpakovsky, Gen., a Russian soldier, born in Kherson in 1819; died in St. Petersburg, May 5, 1896. He was the son of an inferior officer, and joined the army as a private at the age of sixteen, winning a commission after six years by his gallantry in the Caucasus, and afterward taking part in the operations in Transylvania, when Russia interfered in the Hungarian civil war. After commanding the penal settlement of Berezof, in Siberia, he was appointed in 1858 commandant of the fort of Uzun Agatch, near Lake Issik Kul, which the Khan of Khokand attacked with 30,000 followers. Collecting his force in haste, he pursued and routed the Khan's army, for which he was rewarded with the post of Governor General of Semiretchia. When he befriended the Chinese of the Solon tribe, who were driven out of Kuldja by the Mohammedan rebels, he was made a mandarin of the first class by the Emperor of China. In 1871 he received permission to carry out his suggestion of a temporary occupation of Kuldja province in trust for China. After serving as Governor General of Turkestan and of Western Siberia he was called to St. Petersburg in 1889, and appointed a member of the Council of War.

Larsson, Olaf, a Swedish politician, born in 1838; died in Falun, Sept. 12, 1896. He was for many years the leader of the great Agrarian party, and at the time of his death was a member of the First Chamber of the Riksdag.

Laugée, Désirée, a French painter, born in 1823; died in Paris, Feb. 3, 1896. He was a pupil of Picot, and first exhibited in 1845. Some of his historical paintings are: "Mort de Guillaume la Conquérant," "Mort de Zurbaran," "Les Maraudeurs," and "Louis IX et ses Intimes." His "La Cierge à la Madonne," painted in 1877, is in the Luxembourg. He was a chevalier of the Legion of Honor.

Leighton, Frederick, Lord, an English painter, born in Scarborough, in December, 1830; died in London, Jan. 25, 1896. He was a grandson of Sir James B. Leighton, who was chief of the medical department of the Russian navy and physician to the Empress of Russia. His father also was a phy-

sician, but abandoned practice and traveled on the Continent on account of his wife's health. Frederick Leighton showed early his talent for drawing, which was developed by art lessons from George Lance in Paris in 1839, Filippo Meli in Rome, and other instructors in Dresden and Berlin, and in Frankfort, where he attended school. At his son's solicitation and by the advice of Hiram Powers, the father gave his consent, when in Florence in 1846, to his son's embracing the profession of art. After further and thorough training in Paris and Brussels, he attempted a serious picture, taking for his subject "Cimabue finding Giotto drawing in the Fields." He spent several years at Frankfort under the tuition of E. Steimle, producing several paintings, one of which is "The Death of Brunellesco." Next he painted during three winters at Rome, and there produced his first great work, "Cimabue and his Friends and Scholars at Florence accompanying his Picture of the Madonna to the Church of Santa Maria Novella," which was exhibited at the Royal Academy in 1855, and was purchased by the Queen. He exhibited at the Academy from that time forward, and had an unbroken series of successes. In the course of the next four years, spent mostly at Paris, he painted "The Triumph of Music," "The Fisherman and the Siren," "Romeo and Juliet," and other works. When visiting Capri in 1859 he painted his "Capri—Sunrise." "Paoli and Francesca" and "The Star of Bethlehem" were painted before 1864, when he was elected an associate member of the Academy. He made a long tour in Spain,

and then settled permanently in London. His versatile talents soon made him known, and the special gift that he had cultivated of treating classical subjects with the selective regard for line and form, the classic purity and vigor of a Greek artist, brought distinction upon British art as well upon the first artist who had attained so noble a style. "Venus Unrobing," "Dædalus and Icarus," "Electra," and "Clytemnestra" are some of his earlier classical paintings. The most forceful and statuesque is his "Eastern Slinger." He was made a full academician in 1868. "Hercules wrestling with Death for the Body of Alcestis" was one of the pictures of the year in 1871. The completest and grandest example of his style is the large canvas of "Daphnephora," showing a long and admirably grouped procession of youths and maidens before the temple of Apollo in Thebes, painted in 1876. His Biblical paintings of "Elisha raising the Son of the Shunamite" and "Elijah in the Wilderness" were drawn on a large scale. In subsequent years he painted "The Light of the Harem," "Phryne at Eleusis," "Antigone," "Cymon and Iphigenia," "The Last Watch of Hero," "The Captive Andromache," "Greek Girls playing at Ball," "The Vestal," "Whispers," "The Music Lesson," "The Bath of Psyche," "The Return of Persephone," "Perseus and Andromeda," "Hit," "Rizpah," and "The Spirit of the Summit." "And the Sea gave up its Dead" is an important work, painted in 1892. In 1895 he exhibited "Laehrymæ" and "Flaming June" at the Academy. In the Grosvenor Gallery he exhibited some of his smaller pictures, sketches of Damaseus taken during an Eastern tour, and some of his portraits. The portraits that he painted were not numerous. A full-face of himself was made for the collection in the Uffizzi Gallery. He painted one of Capt. Richard F. Burton in 1876, and other fine ones of Prof. Costa, Sir E. Ryan, the Countess Brownlow, and Lady Sybil Primrose. He was elected President of the Academy in 1879, to succeed Sir Francis Grant, the portrait painter, was knighted in consequence, received a baronetcy in 1886, and on Jan. 1, 1896, was raised to the peerage. Oxford, Cambridge, and Edinburgh made him D. C. L., in France he was a chevalier of the Legion of Honor, and in 1878 he was President of the International Jury of Painting at the Paris Exposition. He gave his attention to fresco painting, sculpture, and other departments of art outside of his proper field. "Romola" was the only book that he ever illustrated. His best-known frescoes are two large lunettes in the Kensington Museum, representing the "Arts of War" and "Arts of Peace." His "Wise and Foolish Virgins," in Lyndhurst church, was painted in a single day. His "Athlete struggling with a Python" (1876) and "Sluggard" (1886) are sculptures of a superior order. He took a keen interest in politics and social life, was a ready writer, an effective public speaker, and, though Italian and Greek in his art conceptions and sensibilities, was so thorough an Englishman that he gave some of his time and energy to promoting the volunteer movement, and was colonel of a rifle corps of artists.

Lobanoff-Rostofski, Prince Alexis Borisovich, a Russian statesman, born Dec. 30, 1824; died near Kieff, Aug. 30, 1896. After passing through the Alexandrofski lyceum, he entered the public service in 1843 in the economic department of the Foreign Office. Attracting the attention of his superiors by his readiness and ability, he was made second secretary in a few months, and in 1847 first secretary to Count Nesselrode. In 1850 he was attached to the Berlin embassy, where he remained during the Crimean War, at the close of which he was appointed counsel to the legation at Constantinople.

Three years later he was promoted to be minister plenipotentiary at the Porte. In 1863 his promising diplomatic career was checked suddenly by a misdeed that he committed. After three years of retirement he was permitted to re-enter the public service in the Department of the Interior, and served for ten years as *adlatus* to the minister after some months of preliminary experience as Governor of Orel. At the conclusion of the Turkish War his knowledge of the Eastern question and his training in the deliberate and cautious, but pertinacious and effective methods of Nesselrode were called into requisition. Hence he was accredited in 1878 as ambassador to the Sultan, succeeding the Count Ignatief. Lobanoff defended as tenaciously as his brilliant and enterprising predecessor the interests of his country, but he contrived to remain in cordial relations with the Turkish officials and with his European colleagues. Toward the end of 1879 he was appointed ambassador to London. When the relations with Austria grew strained and required firm yet conciliatory handling, he was transferred to Vienna, where he was ambassador from 1882 till 1895. He expected to direct the foreign policy of Russia after M. de Giers died, but the Czar chose to make M. de Staal Foreign Minister and transferred Prince Lobanoff to Berlin. M. de Staal was, however, unwilling to accept the responsibilities of the post of Minister of Foreign Affairs, and it was consequently offered to Prince Lobanoff and gratefully accepted. From the moment that he assumed office he displayed an amount of activity that surprised his friends, and with definite ideas of Russia's position and interests and of the entire critical and changing situation of international politics he accomplished results that surprised the world. Servia, Montenegro, and finally Bulgaria he drew again into the orbit of Russian influence. He isolated Japan, attracted Germany to co-operate with Russia and France, protected the integrity of the Chinese Empire, made Russian influence predominant at Peking and paramount at Seoul, effected a reconciliation with the Prince and people of Bulgaria on his own terms, strengthened the friendship with France, and secured full freedom of action and preponderant influence at Constantinople. Prince Lobanoff had a very high conception of the power and dignity of Russia, and he considered that his predecessor had often humiliated his country by his conciliatory and sometimes apologetic attitude toward England and the members of the triple alliance. He asserted the position and historical mission in a way to satisfy the most ardent Russian patriots without ruffling more than was necessary the sensibilities of Russia's rivals. This consummate diplomatist, even when filling the most responsible positions and dealing with the weightiest transactions, gave more of his time to historical research than to his official duties.

Maceo, Antonio. a Cuban patriot, born in Santiago de Cuba, July 14, 1848; died near Mariel, Dec. 2, 1896. His parents were highly respected mulattoes, all of whose sons fought bravely in the earlier Cuban war for independence, in which Antonio reached the rank of general and José that of colonel. Antonio was wounded 23 times by the Spanish troops, and his chest was pierced through. He was a farm hand when the war broke out, and joined the ranks as a private soldier, but his intrepid daring, his natural leadership among the colored people, and his strategic ability brought him to the front. After Gomez he was the most important leader in the ten years' war. At Demajagua and at La Galleta he defeated Gen. Martinez Campos. His campaign at Baracoa was brilliant, and in 1878, at San Ulpiano, he routed the column of San Quintin, commanded by Fidel San-

toildes, who met Maceo again in 1895 and was killed at Paralejo. When the peace of Zanjon was arranged in 1878, Maceo was the only general that refused to lay down his arms. He issued a protest and continued fighting two months, but finally desisted when he found he could not rekindle the revolutionary spirit among his disheartened countrymen. He did not sign the peace, but went to Jamaica, then to the United States, where he lived some time, and afterward to South America, and finally to Costa Rica, always preaching the cause of Cuban independence and conspiring against Spain. In 1890 he tried in vain to start a fresh revolution in Cuba. In 1894, as he was leaving a theater in Costa Rica, he was set upon by a party of Spaniards, one of whom he killed after receiving a severe wound himself. He was active in preparing the rebellion of 1895, and in March of that year he landed again in Cuba, followed some days after by Marti and Gomez. The blacks of Santiago, many of whom had fought under his lead in the former war, now flocked to his standard. His two invasions of Pinar del Rio, his campaigns in that province against picked troops led by the ablest of the Spanish generals, and his actions at Paralejo, Jobito, Mal Tiempo, Sao del Indio, and Candelaria are the most brilliant feats of arms in the Cuban war. He crossed the trocha between Mariel and Majana once again to join Gomez and pilot him in a new invasion of the western provinces. Having only his staff with him, he was surprised and surrounded by a large Spanish force and fell fighting, betrayed to his death, many believed, through the venal treachery of Dr. Zertucha, his chief medical officer. Gen. Weyler returned to Havana to celebrate with public rejoicing the death of the most brilliant and magnetic Cuban general.

Maceo, José, a Cuban patriot, born in Santiago de Cuba in 1846; died at La Lama del Gato, July 5, 1896. His father came from Central America when its independence of the Spanish Crown was declared, and when the Cuban insurrection of 1868 broke out he advised his sons to remain neutral; but the murder of one of them by a Spanish officer so exasperated him that he burned the buildings on his plantation and went over to the patriot ranks with his family. Antonio and José soon rendered themselves conspicuous. They fought through the war, and José signed his brother's protest of Baragua, in which they refused to join in the surrender of the patriot force. He planned to surprise and capture Gen. Martinez Campos, but gave up the project when he heard that Antonio had opened negotiations with the captain general. José did not follow his brother into exile, but remained in Santiago de Cuba, and was one of the leading spirits of the new insurrection of 1879. He was taken prisoner and deported to Spain, attempted to escape to Gibraltar, was recaptured by the police and sent to the fortress of La Mola, at Mahon, in the Balearic Isles, and finally made his escape from there on a passing schooner, which took him to Algiers. In 1885 he went to Costa Rica, where he lived till the rebellion broke out in Cuba. He immediately set out for Cuba, arriving on March 31, 1895. In a very short time he raised a large force, with which he defeated the Spaniards at Jobito in May, and in September won a signal victory over Col. Canellas at Sao del Indio. He was killed in a fierce engagement in which the Spaniards were finally compelled to retreat.

Macmillan, Alexander, an English publisher, born in Irvine, Ayrshire, Oct. 3, 1818; died in London, Jan. 25, 1896. He was the son of a poor farmer, and was brought up to be a schoolmaster. Through his brother Daniel he got employment in 1839 in the bookselling house of Seeley in London.

In 1843 the two established a business of their own, and soon afterward they acquired another in Cambridge and removed thither. After his brother's death, in 1857, Alexander returned with the growing business of Macmillan & Co. to London. His publications grew from 44 in 1858 to 102 in 1863, and after that in an increasing ratio, both in the direction of general literature and in that of educational works. An important branch was opened in New York, which was reorganized on an independent basis in 1890 under George Platt Brett as American partner. Alexander Macmillan's strong intellectual interest in literature, especially in philosophy and poetry, created an unwonted bond between the publisher and his particular group of authors, which included Archdeacon Hare, Thomas Hughes, Kingsley, Maurice, and later John Richard Green.

Macpherson, Sir David Lewis, a Canadian statesman, born in Inverness, Scotland, in 1818; died Aug. 16, 1896. He was educated at Inverness Academy, emigrated to Canada in 1835, engaged in railroad contracting, and became a director in the bank of John Molson, his father-in-law. He became President of the Intercolonial Railroad Company that undertook to build a railroad through to British Columbia. He was a member of the Legislative Council of Canada from 1864 till 1867, when he was called into the Dominion Senate. He was Speaker of this body and a member of the Cabinet without portfolio from February, 1880, till October, 1883, when he resigned the speakership to accept the appointment of Minister of the Interior. He was knighted in 1884. When the Cabinet of Sir John Macdonald was reorganized in 1887 Sir David Macpherson retired. He remained a member of the Senate till his death.

Meignan, Guillaume René, a French prelate, born in Denaze, April 11, 1817; died in Tours, Jan. 20, 1896. He was for a considerable period Archbishop of Tours, and was created a cardinal on Jan. 16, 1893.

Monaco la Valetta, Raffaele, an Italian prelate, born in Aquila, Feb. 23, 1827; died in Gerola, near Naples, July 14, 1896. He was the dean of the Sacred College, having been made a cardinal by Pius IX on March 13, 1868, and was at one time cardinal vicar. Becoming in later years incapacitated for strenuous labors by failing health, he was appointed Bishop of Ostia and Velletri in 1889. He was also prefect of the Congregation of Ceremonial, Grand Penitentiary, prior in Rome of the Sovereign Order of St. John of Jerusalem, and archpriest of the Lateran basilica.

Mores, Antoine Manca de Vallombrosa, Marquis de, a French explorer, born in Paris, June 14, 1858; died in Tripoli, June 8, 1896. He was a son of the Duc de Vallombrosa. He was graduated at St. Cyr in 1878 and commissioned a lieutenant of cuirassiers. In 1881 he married Miss Hoffmann, daughter of a New York banker, and, resigning from the army, purchased a tract of 15,000 acres in the Bad Lands of Dakota, on which he settled. The land proved valuable for stock raising, and he undertook to establish a slaughtering business in connection with it and agencies for distributing the meat at low prices directly to consumers in the principal cities. He was greatly annoyed by cattle thieves in Dakota, who made many attempts to assassinate him, one of which resulted in his killing one of his assailants, for which he was arrested, but was promptly acquitted. He abandoned in 1886 his ranch and the town that he planted there and named Medorah after his wife, his combination of business with philanthropy having resulted in losses. After visiting Tonquin, which he proposed to connect with China by a railroad, he returned in 1888

to France and threw himself into the Boulangist movement. Later he became a rabid anti-Semite, and in 1891 he underwent three months of imprisonment for articles and pamphlets attacking the Jews. This campaign involved him in four duels, in one of which he killed his adversary, Capt. Mayer. He took part also in socialist demonstrations. He conceived a scheme of gaining for France the friendship of the Tuaregs and other Mohammedan races of Africa, and through an alliance with them circumventing the expansion of English influence and making the continued British occupation of Egypt impossible. With this idea he went to Tunis and organized an expedition to the Tuareg country from Tripoli. Near Ghadames his Tuareg escort, tempted by the rich booty of the caravan, murdered him and some of his companions who took his part.

Mueller, Baron Sir Ferdinand von, an Australian botanist, born in Rostock, Germany, in June, 1825; died in Victoria, Oct. 9, 1896. He was trained as a pharmacist, devoting his leisure time to the study of botany and chemistry. He investigated thoroughly the botany of Schleswig-Holstein, studied at the University of Kiel, and obtained a doctor's degree in philosophy in 1847. Emigrating then to Australia in order to escape hereditary phthisis, he at once entered upon his life's labor of Australian exploration and researches into the resources and possibilities of the different parts of the continent. In four years he carried his botanical explorations over 4,000 miles. He was appointed in 1852 Government botanist to the colony of Victoria. In the Gregory expedition through northern and central Australia he was one of the four who reached Lake Termination in 1856, and he collected specimens of vegetation over a route of 6,000 miles through previously unexplored country. He was appointed director of the Melbourne Botanical Garden on his return. In this office he rendered services of economical and scientific value to Australia and to the world. He was the first to cultivate the *Victoria regia*. He was the means of introducing many useful plants into Australia, and of sending in exchange to other countries a large number of plants native to Australia. He suggested and took active steps to bring about the introduction of the eucalyptus into Algeria and other countries. His great knowledge as a botanist was directed wherever possible to furthering useful practical ends. Not a few Australian industries received their first inspiration from his suggestions. It was partly at his instance that the camel was introduced into Australia and first used in exploration in 1860. In recent years he took a great interest in antarctic exploration. He was made a hereditary baron by the King of Württemberg in 1871. Baron von Mueller was a voluminous writer on botanical subjects and printed over a hundred memoirs in scientific magazines. Most of his writings are strictly scientific in form. There are about a dozen volumes of his "Phytographia Australia." With Benthham he compiled "Flora Australiensis." He published a work on the "Plants of Victoria" and books on the eucalyptus and other special botanical subjects.

Nasreddin, Shah of Persia, born April 4, 1829; died April 30, 1896. He was the son of Mohammed Shah by a queen of the Kajar family, whose influence and ability, as well as her royal birth, prevailed with the Shah, and finally induced him to proclaim her son Valiah, or heir apparent, in preference to the older prince. He was accordingly appointed Governor of Azerbaijan, and when his father died he was proclaimed Shah in Shah, or King of Kings, Sept. 10, 1848. He was residing in Tabriz, and his accession to the throne was seriously disputed, especially by the followers of the reformer El Bab, upon whom he took a terrible vengeance when he finally

prevailed by force of arms. He proved the strongest and ablest ruler that Persia had had for a long period. From the moment he ascended the throne he studied the art of war, learned French and the Western sciences, and gave his whole attention to methods of government and administration. He had to subdue a revolt in every province, and in this he had the aid of his Grand Vizier, a statesman of genius; but this Grand Vizier he dismissed when he became master of the country, and after putting a stop to all intrigues of the harem he surrounded himself with ministers who were content to be his executive officers. He was so good a financier that he controlled in detail all the expenditures of the Government, revising the accounts and authorizing every payment. He was as absolute a despot as any in the world, delegating none of his powers to others, and able to master and confound all the Oriental intrigues with which he was surrounded. In 1873 he made a prolonged stay in Europe as the guest of different courts, in 1878 he visited Russia, and in 1889 he made a second tour in Europe. Nasreddin was an artist, a poet, and a voluminous writer. He possessed the largest and most valuable collection of jewels in the world, estimated to be worth from \$75,000,000 to three times that sum, and including the peacock throne that was carried away from Delhi by Nadir Shah and a globe of jewels made for the Shah at a cost of \$5,000,000. He had a considerable understanding and appreciation of Western civilization, but governed his own turbulent and fanatical people by purely Asiatic methods. After defeating numberless conspiracies and revolts, he was at length assassinated while entering a shrine by a fanatic of the Babi sect. He was disposed to lean upon Russia when he first ascended the throne, and, relying upon Russian support, he repeated his father's attempt to re-establish Persian dominion over Herat. An English army landed in the Persian Gulf and defeated his troops. From that time he adopted a more friendly attitude toward England, but after the Russians had annexed the khanates on his eastern borders and extended their possessions in Armenia, he shaped his policy under Russian influences once more.

Negri, Cristoforo, an Italian economist, born in Milan in 1809; died in Florence, Feb. 17, 1896. He studied jurisprudence at Pavia, Gratz, and Vienna, and became Professor of Constitutional Law at Padua in 1841. In consequence of his participation in the revolutionary movement of 1848 he lost his chair and was compelled to remove to Turin, where he became rector of the university, and subsequently head of the consular department of the Ministry of Foreign Affairs. In connection with this office he traveled in Germany, England, and Russia, and completely reorganized the consular service. He wrote much on matters of international trade, and endeavored to awaken commercial patriotism and enterprise among his compatriots. He founded the Italian Geographical Society at Florence, and for the first five years was its president. He lived a year at Hamburg, and after that devoted his attention to promoting explorations in Central Africa and the polar regions. He wrote a history of antarctic expeditions.

Nemours, Louis Charles Philippe Raphael d'Orleans, Duc de, second son of Louis Philippe, King of the French, born in Paris, Oct. 25, 1814; died in Versailles, June 25, 1896. He received his education in the college of Henri IV, was appointed a colonel by Charles X when only a child, and rode into Paris at the head of his regiment on Aug. 30, 1830. He was elected in February, 1831, King of the Belgians, but his father declined on his behalf this offer of the National Congress, as he did also a

similar offer of the throne of Greece at a later period. The Duc de Nemours served gallantly in Algeria, and was promoted lieutenant general in 1837. In 1840 he married the Princess Victoria of Saxe-Coburg. In 1841 he again served in Africa. On the death of the Duc d'Orleans, Louis Philippe submitted a bill appointing the Duc de Nemours Regent in case the throne devolved upon his brother's infant heir, and this was carried against the opposition of the Liberals, who objected to his clerical and absolutist leanings. Owing to this law the Duchesse d'Orleans, whom the Liberals had favored, could not be proclaimed as Regent in 1848, and thus the Duc de Nemours was a contributory cause of the revolution of February. He left France and joined the other members of the exiled family at Claremont. He was the first of the Orleanist princes to recognize the Comte de Chambord as the rightful King of France. In 1857 he was left a widower with two sons and two daughters. The elder son, the Comte d'Eu, married the only child of the Emperor of Brazil. The younger son is the Duc d'Aleçon. One daughter married Prince Czartoryski, and died in 1893, and the other, Princess Blanche d'Orleans, is unmarried. The Duc de Nemours returned to France in 1870, and lived quietly in Paris or Versailles, taking no part in politics. In 1886, when pretenders were banished, his name was struck off the army list.

Nobel, Alfred, a Swedish inventor, died in San Remo, Dec. 10, 1895. When nitroglycerin was almost abandoned as a practical explosive on account of the frequent accidents that attended its use, he conceived, in 1866, the idea of mixing it with siliceous earth to moderate its force. To this compound he gave the name of dynamite, and it quickly took the place of other explosive substances for mining, engineering, and warlike purposes throughout the world. M. Nobel left his immense fortune as a fund for the furtherance of scientific investigation and experimentation.

North, John Thomas, an English capitalist, born near Leeds, Jan. 30, 1842; died in London, May 5, 1896. He was apprenticed, after receiving a meager elementary education, to a firm of millwrights in Leeds, and after eight years obtained a responsible place with the firm of Fowler in the same town. He embraced an opportunity to go out to Peru with his young wife to set up some machinery, and remained in South America to make his fortune by his mechanical knowledge and speculative business faculties. He made money by condensing sea water for domestic use in a rainless Chilean town, and by various other ingenious enterprises, notably by working large guano deposits. He was one of the first to see the commercial value of the nitrate fields of Tarapaca, and for twenty years he kept purchasing nitrate deposits. He mastered every detail of the nitrate business, erected works, built railroads, and became the largest exporter of nitrate of soda. Before the Chilean war he had returned to England. He went back to look after his interests, and, foreseeing the results of the war, managed to preserve his rights by raising the British flag over his property and by speculative purchases in a time of depreciated values multiplied his property many times. Returning to England, he multiplied his fortune again by starting and controlling the speculation in the shares of nitrate works and nitrate railroads. Col. North was carelessly liberal with his money, and thus became a well-known and popular character in English society. He took great pleasure in horse racing and maintained a large stable. He took an interest in coursing also, and bred some famous dogs. In 1895 he presented himself as a Conservative candidate for Parliament in

West Leeds, and, after a novel and lively campaign, almost won this naturally Liberal seat from Herbert Gladstone.

Palmieri, Luigi, an Italian astronomer and meteorologist, born in Benevento, April 22, 1807; died in Naples, Sept. 9, 1896. He studied natural science and philosophy at Naples, opened a school of physical science, and was subsequently Professor of Mathematics in the lycæums of Salerno, Campobasso, and Avellino successively. In 1845 he was made Professor of Physics in the royal naval school at Naples, and in 1847 was appointed professor at the Naples University. In 1854 the meteorological observatory on Vesuvius was placed under his direction. He devoted much attention to the study of electricity and terrestrial magnetism, and invented several instruments for the observation of natural phenomena, especially an electrical seismograph that has been used in Japan as well as in his observatory, an electrometer for ascertaining the amount and the kind of electricity in the atmosphere, and a new rain gauge. For several years he has predicted every fresh eruption of Vesuvius.

Parkes, Sir Henry, an Australian statesman, born in Stoneleigh, Warwickshire, in 1815; died in Sydney, New South Wales, April 27, 1896. He was a son of a farm laborer, and was bound out to a trade in Birmingham. After serving his apprenticeship, he married, and in 1839 emigrated to New South Wales. He could scarcely earn enough to feed his little family, and struggled on for years in humble occupations—indeed was oppressed with poverty all his life—but very soon his penetrating grasp of public needs and political action impressed his fellows. Taking part in public discussions as an advocate of free labor in opposition to the demands of the pastoralists to revive transportation and the system of assigning convicts to them, he established the "Empire" newspaper in 1848, and was soon recognized as one of the foremost publicists and orators in Australia, and was honored as a champion of popular rights who had helped to save the liberties of the colony. In the new and democratic Australia that sprang up on the discovery of gold he advanced to the front. After taking a prominent part in the agitation for a new constitution, he was elected a representative of Sydney in the Legislative Council, fought the proposition to create a hereditary peerage and titles of nobility, and when the first true Parliament of New South Wales was constituted in 1856, secured a seat in the Legislative Assembly, which he held, with the exception of some brief intervals, up to the time of his death. He took a prominent part in all debates and was recognized and feared as a most consummate parliamentarian and formidable antagonist, but it was not till 1866 that he accepted office. He took the post of Colonial Secretary in the Cabinet of Sir James Martin, and in that year he carried the public-schools act. In 1872 he formed his first administration, which lasted till 1875. In 1877 he again became Premier, and in 1878 for the third time. In 1887 he formed a fourth Cabinet, and in 1889 a fifth, holding the position altogether about twelve years. Sir Henry Parkes received his title in 1877, and in 1888 the grand cross of the Colonial order. He was imbued with the principles of English liberalism of the old school, that of Cobden and Bright, but was much of an opportunist in his politics, seldom an initiator of legislation, but quick to adopt the new measures of other colonies and countries that were likely to prove popular in New South Wales. To him the colony owes its system of national education freed from all ecclesiastical control, efficient in its standards, and ingeniously adapted to sparsely populated districts. He was accustomed to boast that there were few great

measures on the statute book that did not owe their presence there to him. His public career came to an end toward the close of 1891, when his ministry resigned office rather than submit to the demands of the Labor party. He was an earnest advocate of Australian federation, and hoped to be called to the head of the Government again on this issue, but he had refused to lead the party in Opposition and other questions dominated the situation when he was passed by and Mr. Reid was made Premier.

Patmore, Coventry Kearsy Deighton, an English poet, born in Woodford, Essex, July 23, 1823; died in Lymington, Sussex, Nov. 26, 1896. He was the son of Peter George Patmore, a writer of some note in his day, who died in 1855. He wrote and printed early his first volume of poems, appearing in 1844 and not escaping a good deal of adverse criticism. The first number of the famous pre-raphaelite journal, "The Germ," contained some of his work. In 1846 he became an assistant librarian in the British Museum, holding his place until his retirement, in 1868. In 1847 he married Miss Emily Andrews, daughter of a Congregational minister. She died in 1862, having borne six children, four of whom survive. During this portion of his life Mr. Patmore lived in North London, well known in literary circles, and counting among his friends Monckton Milnes, Tennyson, Millais, Ruskin, Rossetti, and other famous men. It was in this period likewise that he published the work by which he is most widely known, "The Angel in the House," the first part of which ("The Betrothal") appeared in 1854, and the second ("The Spousal") in 1856. His wife was the heroine of the poem. It was widely popular, and in externals lent itself only too easily to parody. The meter was comfortably easy, the rhymes no less so, the scenery that of a deanery, and the people Church men and women of intense respectability. But it is more than probable that the larger number of Mr. Patmore's readers failed to perceive the mystical meaning of the whole. Human love here typified the heavenly love; the eternal bridegroom was symbolized by the earthly one; the birth of every child showing forth the Incarnation—all this the poet had in mind from the beginning, and these are the motives of his work as poet throughout his career. His next work, "Faithful forever," was cast in a similar mold, and was likewise popular. In "The Victories of Love" he still continued "to dwell on the borderland of insipidity," as some one has said of him, though it must be added that the insipidity refers rather to the form than to the substance. The serenity of Patmore's nature was too genuine to permit of annoyance when he saw his work burlesqued by Swinburne and others: but his later writings, and especially his odes, not even the most irreverent nature would parody. After many years of neglect "The Angel in the House" again finds appreciative readers, and its surpassing merits in some directions are generally recognized; while "The Victories of Love," not so well known to the present generation, must, in the possession of certain qualities, be placed even higher. At his best,

Patmore is surpassed by very few poets of his generation—a judgment with which not many persons who are familiar with such tender bits of verse of his as “It was not like your Great and Gracious Ways” and “Toys” will be disposed to quarrel. Not far from the time of his leaving the British Museum Patmore became a Roman Catholic, and he married the ward of Cardinal Manning in 1865. He was now wealthy, and, retiring with his wife to an estate in Sussex, passed the remainder of his life in quietness, though still writing both in verse and prose. After the death of the second Mrs. Patmore he married for the third time, leaving one son by this latest marriage. He was a fearless critic in art matters, and the quality of his thought both in philosophy and in art is shown in his able prose volumes “Principles in Art,” “Religio Poetae,” and “Rod, Root, and Flower.” His volumes of verse in the order of publication include “Poems” (1844); “Tamerton Church Tower” (1853); “The Angel in the House: The Betrothal” (1854); “The Angel in the House: The Espousal” (1856); “Faithful Forever” (1860); “The Victories of Love” (1862); “The Children’s Garland from the Best Poets” (1863); “The Unknown Eros and Other Odes” (1877); “Amelia, Tamerton Church Tower, with an Essay on Metrical Lore” (1878); “Florilegium Aurantis,” a selection edited by Richard Garnett (1879); “Poems: Second Collective Edition” (1880).

Pender, Sir John, a British merchant and promoter, born in Dumbartonshire in 1815; died in Kent, July 7, 1895. He was educated in the Glasgow High School, entered a countinghouse in that city, and built up one of the largest textile manufacturing businesses in Glasgow and Manchester. The firm of J. Pender & Co. were for thirty years the largest exporters of Scotch and Lancashire fabrics to China and India, North and South America, and the British colonies. After he had acquired a great fortune he joined Cyrus W. Field, in 1856, in the enterprise of laying a submarine Atlantic cable. He risked his all in this venture, and after several failures victory was finally secured in 1866. As soon as the Atlantic cables were in successful operation he organized companies to lay down in succession the Mediterranean, Eastern, Australian, South African, and direct African cables, and in 1882 there were 66,000 miles of ocean telegraphs, of which the chief share was owned in Great Britain. The Eastern Extension, Brazilian, West African, direct United States, Spanish, Azores, and Pacific and European cables were put down later. Sir John Pender, who was knighted in 1888, was chairman of these companies and of the Metropolitan Electric Supply Company. He was elected to Parliament as a Liberal in 1862, and sat till 1866, re-entered Parliament again in 1872, and held this seat till 1885. In 1892 and 1895 he was elected as a Liberal Unionist.

Prestwich, Sir Joseph, an English geologist, born in Clapham, March 12, 1812; died in Shoreham, June 23, 1896. He received his early education partly in London and partly in Paris, and finally in University College, where he studied chemistry and natural philosophy. He continued his geological studies while carrying on till 1872 the business of a wine merchant in London, and from the age of twenty he contributed papers to the “Transactions of the Geological Society.” His fame rests on a rearrangement and reclassification of the Tertiary deposits. He was one of the first to become convinced of the great antiquity of man upon the planet. His studies of the distribution of underground waters were directed to the practical question of their utilization in the water supply of towns. In 1874 Prestwich succeeded Phil-

lips in the chair of Geology at Oxford. He deduced from the records of deep-sea observations important facts relating to the flow of the lower currents and the position of isotherms and their bearing on geological phenomena. He was knighted in 1885. His principal published work is “Geology” (1886–88). In 1895 he published a volume of “Collected Papers on Some Controverted Questions in Geology.”

Reinkens, Joseph Hubert, a German theologian, born in Burtshied, near Aix-la-Chapelle, March 1, 1821; died Jan. 5, 1896. He studied theology in Bonn, was ordained priest in the Roman Catholic Church from the Seminary of Cologne in 1847, finished his theological studies in Munich in 1849, became a tutor, and subsequently a preacher in the cathedral, Extraordinary Professor in 1853, in 1857 Ordinary Professor of Church History, and in 1865 rector of the University of Breslau. As one of the professors who at Nuremberg in 1870 protested against the Vatican decrees, he was suspended from his clerical functions, and in 1872 he was excommunicated by Bishop Förster, of Breslau. Dr. Reinkens became one of the leaders of the Old Catholic movement, and was elected bishop of the new sect at Cologne on June 4, 1873, and consecrated by the Dutch Bishop Heycamp at Deventer on Aug. 11, 1873. He published many books bearing on the controversy.

Reynolds, Sir John Russell, an English physician, born in Romsey, Hampshire, May 22, 1828; died in London, May 29, 1896. After studying medicine at University College he began practice at Leeds, but soon removed to London, where in 1859 he became a fellow of the College of Physicians. In the same year he was appointed assistant physician to University College Hospital, an office which he held until his death. He had an extensive practice, his counsel being especially valued in nervous diseases by other physicians. He was appointed physician in ordinary to the Queen’s household in 1878, and in 1893, on the death of Sir Andrew Clark, succeeded to the office of President of the College of Physicians and Surgeons. On Jan. 1, 1895, he was knighted. His writings include: “Essays on Vertigo” (1854); “Diagnosis of Diseases of the Brain” (1855); “Epilepsy: Its Symptoms, Treatment,” etc. (1861); “Lectures on the Clinical Uses of Electricity” (1871); “The Scientific Value of the Legal Tests of Insanity” (1872); and edited “A System of Medicine” (1866–79).

Richards, Sir George Henry, a British naval officer, born in 1820; died in Bath, Nov. 14, 1896. He was a son of Capt. G. S. Richards, of the royal navy. He entered the navy when a boy of twelve years, served two years in the West Indies, and then for two as a midshipman in a voyage of exploration in the Pacific on the “Sulphur,” which for five more years was employed in surveying the western coasts of North and South America and the South Sea islands under the command of Sir Edward Belcher. As senior executive officer of the “Starling,” he took part in the taking of Canton and other actions of the first China war. As lieutenant, he was engaged in a survey of the Falkland Islands, in 1842 on board the “Philomel,” which was ordered to the Plate, where Lieut. Richards took part in the operations of 1845 and 1846 against President Rosas, of Buenos Ayres. For his gallantry in storming the forts of Obligado he was promoted commander. For the next four years he was employed on a survey of the New Zealand coasts. Returning home in 1852, he volunteered in the new Franklin search expedition, commanded the “Assistance,” and conducted sledging expeditions over the frozen sea more than 2,000 miles. He was promoted captain in 1854, and was appointed in 1856 to the command of the “Plumper,” detailed to sur-

vey Vancouver island and the coasts of British Columbia. He was nominated at the same time on a commission, with Capt. Prevost, for the settlement of the Oregon boundary question between Great Britain and the United States. He continued the surveys of these coasts on the "Plumper" and afterward on the "Ileate" till 1863, returning to England by way of the western Pacific and Torres Straits, making surveys and carrying chronometric distances on the voyage, which completed his third circumnavigation of the globe. On his arrival he was appointed hydrographer of the navy, in which post he continued for more than ten years. He was promoted to the rank of rear admiral in 1870, retired in 1874, and advanced to the grade of vice-admiral in 1877 and admiral in 1884. He was knighted in 1888.

Richmond, George, an English portrait painter, born in Brompton, March 28, 1809; died in London, March 19, 1896. He was a son of Thomas Richmond, a miniature painter, from whom he received his first lessons in art, becoming at fifteen a student at the Royal Academy. The next year he came under the influence of William Blake, the artist poet, and all his earlier work gives evidence of that influence. In 1828 he went to Paris to study art and anatomy, and on his return to England sent two pictures and three portraits to the Royal Academy in 1830. He married the next year, and definitely took up the profession of portrait painting. He was always fortunate in his friendships, adding Ruskin in 1840 to his already wide circle. Up to 1846 he had worked in water color and crayon almost entirely, but after that date he painted much in oil. Many of the eminent people of his generation sat to him for their portraits. A few among his many portraits are those of Newman, Liddon, Sir Gilbert Scott, Cardinal Manning, Gladstone, Mrs. Stowe, Darwin, and Tyndall. His latest portrait was that of Lord Salisbury, in 1887. He was not without skill as a sculptor, as the bust of Pusey, at Pusey Home, Oxford, and the recumbent statue of Bishop Blomfield, in St. Paul's Cathedral, afford evidence. He was very successful as a portrait painter, being surpassed by few in his ability to catch the best expression of his various sitters. In 1857 he was elected an associate of the Royal Academy, becoming a royal academician in 1866. His death occurred at his house, in York Street, Putnam Square, where he had lived more than fifty years.

Rohlf, Gerhard, a German explorer, born near Bremen in 1831; died in Goderberg, Rhenish Prussia, June 3, 1896. After he had received a medical education, he went to Algeria, and there enlisted in the foreign legion. He learned Arabic thoroughly, and in 1860 went to Morocco, adopted Moorish attire, passed for a Moslem, and was thus enabled to live for some time in Fez, and to travel freely about the country. He revealed the oasis of Taflet to the world in 1862, explored in 1863 the eastern part of the Greater Atlas, and penetrated into the desert to Taat. In 1865 he set out from Tripoli, crossed the Sahara to Lake Chad, traversed Bornu and Sokoto, and reached the Benue and descended to the mouth of the Niger. He accompanied the British expedition against Abyssinia in 1867. In 1868 he journeyed across the northern part of the great Libyan desert, discovering the depressions below sea level south of the coast plateau. In 1873 and 1874 he made further explorations in the Libyan desert at the expense of the Khedive. In 1880 he visited the court of the Negus Johannes, bearing a letter from the German Emperor. He was appointed consul general of Germany at Zanzibar in 1885, but soon resigned and returned to Germany, where he took up his residence at Weimar. He published many books descriptive of his adventures.

Roquette, Otto, a German poet, born in the province of Posen in 1824; died in Darmstadt in April, 1896. He taught for several years in Dresden and Berlin, wrote critical essays, and was appointed Professor of German Literature and History at the Polytechnicum of Darmstadt, where he remained till his death. His bright and cheerful poem of "Waldmeisters Brautfahrt," published in 1851, had an immense and lasting popularity. He was the author of novels and dramatic poems and of a "Geschichte der deutschen Literatur."

Rossi, Ernesto, an Italian actor, born in Leghorn in 1829; died in Rome, June 4, 1896. He studied law in the University of Pisa, but decided to go upon the stage, for which he prepared himself in the dramatic academy founded by Gustavo Modena. After playing in Milan, Turin, and other Italian cities, he went to Paris with Ristori in 1853 and was much admired for his masterly rendering of Goldoni and other Italian dramatists. In Vienna he was equally well received. On returning to Italy, he gathered a company, of which he was manager. He played an Italian version of the "Cid" at Corneille's anniversary in Paris in 1866, and next visited Spain and Portugal. After giving a remarkable series of Shakespearean impersonations in Paris in 1875, he went to London, where he was much appreciated. He retired from the stage in 1889, but appeared occasionally later, and at the time of his death had just returned from a tour in Russia. He was the author of plays and of a volume of reminiscences of his artistic life during forty years.

Rousseau, Armand, a French administrator, born in Treflez, Finisterre, in 1835; died in Hanoi, Tonquin, Dec. 10, 1896. He was educated at the Polytechnic School in Paris, and began life as a Government engineer at Brest. In 1871 he was elected a Republican Deputy from his native department. In 1876 he was appointed to a post in the Ministry of Public Works. He was Under Secretary of Public Works in the Freycinet Cabinet of 1882 and Under Secretary of Marine in the Brisson Cabinet in 1885. Losing his seat, he was appointed a member of the Council of State in 1886, and shortly afterward was sent to Panama to report on the canal, on which the Government wanted information before sanctioning a new lottery loan. His report set forth that a canal at the sea level would be far too costly, and that locks must be adopted, to which change of plan M. de Lesseps reluctantly agreed. When M. Lanessan was dismissed at the end of 1894, M. Rousseau was appointed to succeed him as Governor of French Indo-China. While still in Tonquin—where eventually he fell a victim to the climate—he was elected a Senator for Finisterre in October, 1895.

Ruggiero, Gaetano, an Italian prelate, born in Naples, Jan. 12, 1816; died in Rome, Oct. 9, 1896. He was a distinguished writer and exponent of the views in favor of the Vatican, and held the office of secretary of the Department of Apostolic Briefs and the Grand Chancellerie of Orders. He was created a cardinal on May 8, 1889.

Sassoon, Sir Albert Abdallah David, an Indian merchant and philanthropist, born in Bagdad, July 25, 1818; died in Brighton, England, Oct. 24, 1896. His father, who was a merchant and state treasurer of Bagdad and chief of the Mesopotamian Jews, known by the title of Nassi or Prince of the Captivity, left Bagdad in 1832 to settle in Bombay, where he became one of the richest of Indian merchants, leaving to his sons a fortune of £2,000,000. Albert, the eldest, who received a European education, succeeded his father as head of the banking and mercantile firm of David Sassoon & Co., and extended its reputation and operations. He suggested and contributed liberally to the Elphinstone

High School, and founded or endowed other benevolent institutions in India, including the Mechanic's Institute and a hospital in Bombay. The firm built at Bombay the first wet dock in western India. Their silk and cotton mills employ a large amount of native labor, and in their estates in Bengal 15,000 ryots are employed. Albert Sassoon became a member of the Legislative Council of Bombay in 1868, was knighted in 1872, was the first Anglo-Indian to receive the freedom of the city of London in 1873, and was created a baronet in 1890.

Say, Jean Baptiste Léon, a French statesman, born in Paris, June 6, 1826; died there April 21, 1896. As a grandson of Jean Baptiste Say he was drawn by tradition and natural bent to the study of political economy and to the doctrines of commercial freedom inculcated by the classical school of economists. His father, Horace Émile Say, at one time a resident of the United States, was also an expositor of the orthodox economy and the principles of individual liberty and noninterference. Léon became a frequent contributor, after receiving a university education, to the "Journal des Économistes" and the "Annuaire de l'Économie Politique," assisted his father in an inquiry into the industries of Paris undertaken at the instance of the Chamber of Commerce, developed into a political journalist, writing for the "Journal des Débats," became a part owner of that paper after marrying the daughter of Édouard Bertin, the director and manager, and in time came to be the chief owner and managing editor. In politics he was known as a member of the Opposition to the empire when he presented himself as a candidate for a seat in the Corps Législatif in 1869. In 1871 he was elected to the National Assembly, and in the same year M. Thiers appointed him prefect of the Seine. He introduced reforms in the administration of Paris such as his father when President of the Chamber of Commerce had endeavored to bring about. Notwithstanding Léon Say's free-trade doctrines, Thiers, on Dec. 7, 1872, called him into his Cabinet as Minister of Finance. Under his admirable management the five milliards of war indemnity were paid off with remarkable rapidity without any serious derangement of business, and thus he earned the lasting gratitude of the nation by helping to rid France of the presence of the conquerors. He quitted office with Thiers and the rest of the Cabinet on May 24, 1873, but resumed the portfolio of Finance in the Buffet ministry, formed in March, 1875. He retained this portfolio in the Dufaure Cabinet, formed on May 10, 1876, and when Jules Simon formed a Cabinet on Dec. 13, 1876, but retired with the latter on May 17, 1877. When M. Dufaure formed another ministry in December, 1877, he called on M. Say again to take charge of the Ministry of Finance. In August, 1878, he presided over the International Monetary Conference held in Paris. When President Grévy came in, and M. Waddington formed a Cabinet, the Finance portfolio was left in M. Say's hands. He finally retired with that Premier on Dec. 17, 1879, and resumed his place among the members of the Left Center. He labored in office and in Opposition to check extravagant expenditures. His tenure of office was each time the signal of fiscal prosperity, and the principles that he enunciated have guided the administration of those of his successors who have accomplished the best results. In April, 1880, M. Say was appointed ambassador at London with the special object of conducting negotiations for the renewal of the treaty of commerce. The questions at issue were connected chiefly with the English duty on French wines and the French duty on woollens. He soon despaired of being able to reach an acceptable arrangement, and resigned after

a few weeks, in order to become a candidate for the presidency of the Senate, to which he was elected on May 25. He was re-elected president of the Senate on Jan. 20, 1881, but resigned to take the portfolio of Finance in the Cabinet formed by M. de Freycinet on Jan. 30, 1882. This Cabinet passed out of office in a few months, and with it Léon Say's official career and political power came to an end. He had been a firm, though not enthusiastic supporter of the republic, rejecting the overtures made by some of his old friends in its early days to aid in bringing back a monarchical system. When the center of gravity shifted over to the Radical side he contended as vigorously and earnestly as ever for the principles that were no longer dominant. He was elected president of the reunion of the Left Center in the Senate in 1883 and was one of the founders of the Liberal Republican Union. In 1889 he was an active and influential opponent of Boulangism, and in order to fight it he resigned his seat in the Senate and secured an election to the Chamber of Deputies from Pau. In his newspaper and in his published works he contended against state socialism in all its forms. He published "Théorie des Changes Étrangers," "Les Finances de France: Une année de discussion" (1882); "Le Socialisme d'État" (1884); "Les Solutions démocratiques de la question des Impôts" (1886); and "Targot" (1887). He was elected to the Academy of Moral and Political Sciences in 1874 and to a chair in the French Academy in 1886 as successor to Edmond About.

Schumann, Clara, a German musician, born in Leipsic, Sept. 13, 1819; died in Frankfort-on-the-Main, May 20, 1896. She was taught by her father, Friedrich Wieck, began to play in public at the age of nine, and rapidly made her mark as a pianist of the first rank. After creating a sensation in her father's Gewandhaus concerts at Leipsic when only twelve years old, she traveled over Europe, and was a favorite of Berlin, Vienna, and Paris audiences, confining herself to the interpretation of Beethoven. Robert Schumann's romantic attachment to her inspired some of his loveliest and most characteristic compositions. After surmounting serious and violet opposition, they were married in 1840, and her husband developed her style and extended her repertory to Chopin and the newer schools. After his tragic death, in 1856, she devoted herself mainly to securing recognition for his creations. She taught in the conservatory of Frankfort and played in the principal European cities. In the expression of deep emotion and in dignity of style and breadth and variety of tone she was peerless. Her own compositions, extending only to Opus 23, are admirable in form and marked by poetic feeling and insight.

Scott-Siddons, Mrs. Mary Frances, an English actress, born in India in 1844; died in Paris, Nov. 19, 1896. Her father, a grandson of Sarah Siddons, was a captain in the military service of the East India Company. After his death her mother, who resided in Somersetshire, encouraged her daughter's genius for the stage. She married Lieut. Canter of the navy, who changed his name to Scott-Siddons because his father objected to the use of the family name on the stage. After a struggle Mrs. Scott-Siddons secured an engagement and made her professional *début* at Nottingham, in 1866, as Portia in the "Merchant of Venice." She was well received there and in Edinburgh, and in the following year attained a great success as a Shakespearean reader in London, where in 1868 she played the part of Rosalind in "As You Like It" at the Haymarket, and afterward appeared as Juliet, drawing immense audiences. Her beauty and grace of person contributed more to her suc-

cess than her histrionic talent, and though a spirited and thoroughly natural actress, she lacked the technical training and necessary vigor. In her readings she was more successful. She played in New York in 1868, and was not well received, nor were her subsequent appearances in London successful. In 1872 she starred in the United States and Australia with mediocre success. Her readings, however, marked by intelligence and clearness of interpretation, were always well liked. Since 1881 she has lived in retirement.

Sée, Germain, a French physician, born in Ribeauville, Alsace, in 1818; died in Paris, May 12, 1896. He studied first in Metz and then in Paris, obtained his doctor's degree in 1846, gained a reputation in the hospitals, and after 1852 became widely known through his brilliant lectures on pathology. In 1866 the Empress Eugénie urged his candidacy for the chair of Therapeutics, and he was elected in spite of the jealousy of the members of the profession aroused by the interference of the Empress. The students, however, refused to listen to him until by his display of pluck and physical prowess in fighting for his place he won their admiration and respect, after which they made just as violent demonstrations in his favor as they had made against him when he was the object of an attack in the Senate based upon his supposed materialistic tendencies. The diagnosis of calculus in the case of Napoleon III in July, 1870, in which eminent consultants joined, but which he alone signed, was kept from the Empress, presumably by the influence of politicians desiring war. Prof. Sée introduced in France the use of salicylate of soda, antipyrine, and others new drugs.

Simon, Jules François, a French statesman and philosopher, born in Lorient, Morbihan, Brittany, Dec. 27, 1814; died in Paris, June 8, 1896. His family name was Suisse, but he dropped it at the solicitation of Victor Cousin, whose favorite disciple he was, his coadjutor and successor in the exposition of the eclectic philosophy. He studied in his native town and in Vannes, became assistant teacher in the normal school at Rennes, and on being received as fellow of philosophy taught that science at Caen and Versailles. He had written admirable books on political economy and social questions when M. Cousin called him to Paris and got him a place in the normal school, where he was supplementary lecturer on philosophy for a year, and after that chief lecturer. When about twenty-five years of age he succeeded Cousin in the chair of Philosophy at the Sorbonne, and for the next twelve years was recognized as one of the leading minds in France in the department of philosophy. He was made a knight of the Legion of Honor in 1845. In the following year he was a candidate of the Constitutional Left for the Assembly, but was defeated. After the revolution of 1848, he was elected from the Côtes-du-Nord, taking a seat with the Moderate Left. In March, 1849, he was elected a member of the Council of State, and resigned his seat as Deputy in April. When the Council was reconstituted by the Legislative Assembly on June 29, 1849, his name was not included, and he returned to private life, devoting himself to his lectures and to the editing of a politico-philosophical review, called "La Liberté de Penser," that he had founded in 1847. After the *coup d'état* his lectures at the Sorbonne were discontinued, as he refused to take the oath of allegiance to the empire. He had already made a name in literature by his editions of Descartes and Bossuet and by his remarkable "Histoire de l'École d'Alexandrie," and for the next twelve years he continued with great industry and facility to write and publish books. His articles on philosophical subjects were the mainstay of

the "Revue des Deux Mondes" in that department. He also gave lectures in Belgium. In 1863 he secured a seat in the Corps Législatif, which he held till the fall of the empire. He ranked among the first orators and the most eminent of the Republican leaders. In 1869 he was proposed in several constituencies, sharing with Thiers the distinction of a leader of the Liberals. He spoke strongly in favor of free trade and against capital punishment. After the *plébiscite* he denounced the manipulation of the vote by the Government agents. When the Chamber was wrought up to a frenzy of war feeling, he and Thiers raised their voices in eloquent protest against the mad resolve of July, 1870. Then came the fall of the empire, and Thiers, Simon, and Gambetta were placed at the head of the Provisional Government, which became the Government of National Defense. While Thiers went abroad to win the protection and support of Europe and Gambetta tried to rouse the exhausted and crippled nation to the suicidal madness of resuming hostilities, Simon remained in Paris with Gen. Trochu's troops at his back and calmly administered the Government during the siege; and when the armistice was signed and the gates of the city were reopened, he went to Bordeaux and by his resolute courage and strength of will at last succeeded in curbing the mad impetuosity of Gambetta and saving France from the supreme folly of inviting the deathblow by renewing *la guerre à outrance* rather than surrendering an inch of French territory or a stone of French fortresses. Jules Simon was prominent in the Assembly at Bordeaux and at Versailles from the conclusion of peace in 1871 till the fall of Thiers. He resigned his position as Minister of Public Instruction in the Cabinet of reconciliation just before the crisis of May 24, 1873, and became chief of the Left in the Assembly, from the turbulent conflicts of which he took leave in December, 1875, when he was elected a life Senator. When Marshal MacMahon was forced to choose a Liberal ministry a year later, he gave the conduct of it, on Dec. 16, 1876, to Jules Simon, as being the Liberal whom the Clericals could best tolerate. The clergy forced a conflict upon the apostle of moderation and the *juste milieu* when they engaged in the *colportage* of circulars appealing to the French people to rally to the support of the Pope in his demand for the restoration of the temporal power. The minister forbade the *colportage*, and in consequence President MacMahon wrote him a letter, on May 16, 1877, amounting to a dismissal. Jules Simon braved the taunts of his enemies and the bitter reproaches of his friends by yielding when he had a majority of 361 to 121 in the Chamber, and perhaps thereby saved the republic from overthrow. By that act he ended his own political career. In 1890 he was sent as the senior representative of France to the Labor Congress of Berlin convoked by the Emperor Wilhelm II. He wrote much afterward on political questions. He was elected permanent secretary in 1882 to the Academy of Moral and Political Sciences. From 1875 he was a member of the French Academy.

Spuller, Eugène, a French statesman, born in Seurre, Côte d'Or, Dec. 1, 1835; died in Somberon, July 23, 1896. His father was a native of Baden. He was admitted to the Paris bar in 1862, and became intimate with Gambetta and a member of the party of Young Republicans. He helped to secure the election of Emile Ollivier in 1863, and in 1868 he joined Gambetta in establishing the "Revue Politique." At the time of the *plébiscite* he published as a political document a history of the empire that was widely read. Escaping from Paris in a balloon with Gambetta, he served under him till the end of hostilities. In November, 1871, he became editor of

the "République Française." He was elected from Paris to the Chamber in 1876, and interested himself especially in educational and religious questions. When Gambetta formed his short-lived ministry in November, 1881, he appointed M. Spuller his assistant in the Ministry of Foreign Affairs. M. Spuller was afterward a prominent member of the Budget Committee, then a member for a constituency of Côte d'Or, having been defeated in Paris by an Extreme Radical in 1885, and was called in 1887 into the Cabinet of M. Tirard as Minister of Education. In 1889 he became Minister of Foreign Affairs under Tirard, and was one of the keenest antagonists of Boulangism. He was elected a Senator for the Côte d'Or in 1892, and in 1894 became Minister of Education in the Cabinet of Casimir-Périer. He expounded the "new spirit" of Moderate Republicans toward the Church, the abandonment of the attitude expressed in Gambetta's formula, "*Le Cléricalisme, c'est l'ennemi.*" In 1893 he was commissioned by President Carnot to form a Cabinet, but he renounced the honor in favor of M. Casimir-Périer. M. Spuller was an able literary critic and the author of studies of Lamennais, Michelet, Loyola, and other subjects.

Tcherevin, Gen., a Russian soldier, born in Kostroma; died in St. Petersburg, March 2, 1896. He distinguished himself in the Polish campaign, commanded the Czar's Cossack bodyguard in the latter part of the Turkish war of 1877, having previously performed gallant services in the field, and from 1878 to 1880 was assistant chief of gendarmes and head of the third section of the Czar's Cabinet, or the secret political police. Alexander III gave him unlimited authority in all matters connected with his personal safety. When once attacked by a Nihilist, Gen. Tcherevin gave his assailant a horse-whipping. He became subsequently Assistant Minister of the Interior, and still retained charge of all the special guards and detective agents employed to secure the safety of the Czar.

Thomas, Charles Louis Ambroise, a French composer, born in Metz, Aug. 5, 1811; died Feb. 12, 1896. He was the son of a well-known Professor of Music, and gained numerous prizes in the Paris Conservatorium, which he entered in 1828, taking finally the Roman prize in 1832. After his return he lived in Paris, and soon became known as a prolific and versatile composer of operas and other music. He was elegant and correct and also popular and pleasing in his style. His first great success was attained with "Le Caïd," in 1848. He was elected successor of Spontini in the Academy of Fine Arts in 1851, was appointed an officer of public instruction in December, 1869, and in 1871 succeeded Auber as director of the Conservatorium. He was made a chevalier of the Legion of Honor in 1868, and a grand officer in 1881. Ambroise Thomas's musical compositions include: "La Double Échelle" (1837); "Le Perruquier de la Régence" (1838); "Le Panier Fleuri" (1839); "La Gipsy" (1839); "Carline" (1840); "Le Guerrillero" (1842); "Le Songe d'une Nuit d'Été" (1850); "Raymond" (1851); "La Cour de Célimène" (1855); "Psyche" (1856); "Le Carnaval de Venise" (1857); "Le Roman d'Elvire" (1860); "Mignon" (1866); "Hamlet" (1868); "Gilles et Gilletin"; and "Françoise de Rimini." He composed rondos, fantasies, and nocturnes, also a requiem mass.

Tilley, Sir Leonard B., a Canadian statesman, born in Gagetown, New Brunswick, May 8, 1818; died in St. John, June 25, 1896. He was active in Dominion politics from the beginning, and became Minister of Customs in 1867. In 1868 and 1869 he was Acting Minister of Public Works. From 1873 till 1878 he was Lieutenant Governor of New Brunswick. From 1878 till 1885 he was Minister of Fi-

nance in the Cabinet of Sir John Macdonald. When he retired he was again appointed Lieutenant Governor of New Brunswick, and he held this post till 1893. While he was Minister of Finance there was a scandal concerning his advance of \$300,000 to a disabled bank, which he justified on the ground that it averted a bank crisis.

Trikoupis, Charilaos, a Greek statesman, born in Nauplia in 1832; died in Cannes, April 11, 1896. He studied law and letters in Paris and Athens, entered the diplomatic service as an *attaché* of the Greek legation at London in 1850, and in 1863 became *chargé d'affaires*. He was ambitious to take a direct part in political affairs, and was elected in 1865 a representative in the Boule of Misolonghi. In the Chamber he soon attracted notice by his wide information and argumentative powers. In 1866 he was made Minister of Foreign Affairs. As he had not attached himself to the following of any one of the political leaders, he was selected to form a provisional Cabinet in 1875, when the forces of the

four recognized leaders were so evenly balanced that none of them could command a majority. He was compelled to resign after a few months, and then he resumed his independent position in the Chamber. In 1877, when the Eastern question was opened by the Russo-Turkish War and the partition of the Ottoman Empire seemed likely, Trikoupi, as the best acquainted with diplomacy and European politics, was called upon to take the portfolio of Foreign Affairs in the nonpartisan, patriotic Canaris ministry. The Greeks were sadly disappointed when the powers, to which they looked for support, secured for them no adequate compensation in the changes that were wrought in the Turkish Empire. They began to prepare for independent action, but before they were ready the war was over. The Canaris ministry went out, and Delyannis succeeded Trikoupi, and Coumoundouros, in 1880, attempted to reorganize the army and navy, but the Boule would not vote the necessary money. Trikoupi then succeeded Coumoundouros, but had to retire after four months because the Western powers failed to induce Turkey to cede territories to Greece. Two years later the powers intervened and gave Thessaly to Greece, but this failed to satisfy the Hellenes, who drove Coumoundouros from office. Trikoupi then came in again, and remained long enough to develop his policy for the realization of Greek aspirations. He knew that if Greece was to play a great part in southeastern Europe and command the support of the powers it was necessary to develop the financial resources of the country and augment the army and navy. He therefore made preparations for the construction of roads, railroads, and harbors and the building up of commerce, steamship companies, and all the requirements of a civilized power. He was defeated on a minor question before he had accomplished much, and though he resumed office at the request of the King, his place was insecure, and in April, 1885, he was beaten at the general election. In 1886 he re-

turned to office with a majority behind him, and again brought forward his schemes for the economic and financial regeneration of Greece, which were interrupted by the Bulgarian annexation of Eastern Roumelia, for which the Greeks demanded compensation. The Government prepared to act, and yielded only to the menaces of the Western powers, whose naval forces blockaded the Piræus. The military preparations had greatly increased the public debt and added to the financial difficulties that stood in the way of his projects, but Trikoupis, nevertheless, built roads and railroads, and, by incurring new risks and obligations on a large scale, hoped to rescue Greece from financial embarrassment by increasing the economic resources of the kingdom. All his calculations depended upon the value of the paper money rising to par. This assumption was not realized, and when the Government was unable longer to meet its obligations on a metallic basis he attempted to effect a compromise with the bondholders. He failed to make terms, and in the general election of 1895 met with a crushing defeat, even losing his own seat that he had held for thirty years. While on his deathbed he was returned in a by-election for the neighboring district of Valtos.

Treitschke, Heinrich von, a German historian, born in Dresden, Sept. 15, 1834; died in Berlin, April 28, 1896. He was the son of a lieutenant general in the Saxon army, and studied in Bonn, Leipsic, Tübingen, and Heidelberg. He identified himself early with the national party, looking to the unification of Germany under the Prussian headship, and in 1856 published a collection of patriotic lyrics entitled "Vaterlandslieder." Pursuing historical studies for his profession, he delivered to the students of Leipsic a course of lectures that gained for him in 1863 the chair of History at Freiburg. This he resigned in 1866, because Baden sided with Austria in the war with Prussia. Proceeding to Berlin, Treitschke undertook the editorship of the "Preussische Jahrbücher." He accepted the chair of History at Heidelberg in 1867, where he remained till he was invited to the same chair in Berlin in 1874. On the death of Leopold von Ranke he was appointed in addition historiographer to the Prussian state. From the first Reichstag in 1871 till 1888 he had a seat from Kreuznach, and acted with the National Liberal party. His chief work is the "History of Germany in the Nineteenth Century," which was not finished. In this and in his minor works, such as "Ten Years of German Struggles," "Socialism and its Patrons," and "Two Emperors," he glorified in brilliant style the achievements of German imperialism, and defended Bismarck's policy with trenchant dialectics.

Trochu, Louis Jules, a French soldier, born near Bellisle, March 12, 1815; died Oct. 7, 1896. He was educated for the army at St. Cyr, served with distinction in Algeria under Gen. Bugeaud, and during the Crimean War was aid-de-camp to Marshal St. Arnaud, and afterward commander of a brigade, having been made brigadier general in 1854. In the Italian campaign of 1859 he fought with distinction as a general of division. When the war with Prussia broke out he was called from retirement to organize and take command of the 12th Corps, formed at Chalons. On Aug. 17, 1870 the Emperor Napoleon appointed him Governor of Paris and commandant of the forces for the defense of the capital. He announced in his letter of acceptance that he would preserve order in Paris by moral force only. He ordered the expulsion of all Germans domiciled in Paris, and in consequence of this decree Gambetta proposed in the Assembly that all power be concentrated in the hands of the general. Thus constituted dictator, he signed a de-

cre declaring the Assembly dissolved and the Senate abolished, and henceforth till the surrender of the city to the Germans the principal decrees for the defense of the city emanated from him. In 1871 Gen. Trochu was elected to the Chamber by seven constituencies. He took his seat from Morbihan, and voted with Gambetta. He resigned his seat in 1872, and in 1875 retired from the army.

Tuke, James Hack, an English philanthropist, born in York in 1820; died Jan. 13, 1896. He came from a family identified with commerce, members of the Society of Friends, and founders of the York Retreat for the humane treatment of the insane. He first interested himself in the relief of sufferers from the Irish famine of 1846-'47. In 1871 he went to Paris to distribute food among the people famished during the siege just terminated. After the failure of the crops in the west of Ireland in 1880 he applied himself to the work of relieving the temporary distress, after which he studied the question of permanently improving the condition of the peasantry of the congested districts. After visiting America for the purpose of examining the prospects of assisted emigration, he established in 1882 the Tuke fund, by means of which nearly 10,000 Irish were transported in three years and settled in America by families, for which purpose £24,000 was raised by private subscription and £44,000 was added by the Government. After distributing seed potatoes in Mayo and the Island of Achill in 1886, he suggested the promotion of fisheries and local industries, and the building of light railways, for which the Government brought in bills.

Verlaine, Paul, a French poet, born in Paris in 1844; died there Jan. 8, 1896. His father was a captain of engineers. He obtained his bachelor degree at the Sorbonne, and entered the municipal service of Paris as a copyist. He had published in 1865 a volume of verse entitled "Poèmes Saturniens," singular in conception and highly finished in form, showing in a marked manner the influence of Gautier and Bandelaire. He married the daughter of a musical friend, M. de Sivry, courting her in the verses collected under the title "La Bonne Chanson." Verlaine served with noble courage as a national guard in 1870 during the siege of Paris, and under the Commune he was chief of the press bureau. He left his wife, who afterward obtained a divorce on account of his unfaithfulness, and he was sentenced to two years' imprisonment in Belgium for wounding the companion of his wanderings, a young poet named Rimbaud, with a pistol shot. While serving his sentence in Mons he was converted to the Catholic faith, and under the influence of religious emotion he wrote poetical masterpieces. When he returned from prison to Paris he found himself without a family and deserted by his former friends, except some sympathetic poets, who gave him money whenever he was in extremity. He lapsed into an absinthe drunkard, pauper, vagabond, and occasional criminal, and finally became a partial paralytic, spending his life between the hospital and the *café*, and oscillated between licentious self-indulgence and remorse, between criminal impulse and religious ecstasy. All his moods were reflected in his poetry, which is variable in substance and in the quality of its inspiration, but in point of artistic form is distinguished for flexibility and perfection of expression and for its melodious versification. "Sagesse," containing religious poems written in a monastic retreat, was published in 1881. It marked him out as the leader of the symbolist school of poetry, and a model for the decadents. His experience in penitentiaries he described in a book called "Mes Prisons," and his hospital days in "Mes Hôpitaux." In his later volumes of verse he sacrificed the force and clearness of the idea too

often to the melodic rhythm of the verse and ingenuity of phrase. These are: "Dédicéances," "Jadis et Naguère," "Parallelement," "Odes en son Honneur," "Élégies," "Dans le Limbes," and "Chansons pour Elle."

Wilde, Jane Francesca Elgee, Lady, an Irish author, born in Wexford in 1826; died in Chelsea, Feb. 3, 1896. She was the daughter of an Episcopalian clergyman, but was an ardent adherent of the Young Ireland party, and in 1845 wrote patriotic poems and prose articles for the "Nation," signing them John Fenshawe Ellis, and later "Speranza." When Gavan Duffy, the editor, was put on trial for an inflammatory article, she proclaimed herself its author. In 1851 she married William Wilde, afterward knighted, a celebrated Dublin oculist and the author of historical and antiquarian books about Ireland. After his death, in 1876, she took up her residence in London. Among her published works are "Ancient Legends, Mystic Charms, and Superstitions of Ireland," "Notes on Men, Women, and Books," "Social Studies," "Ugo Bassi" (1857); "The First Temptation" (1863); "Poems" (1864); "The Glacier Land," "The Wanderer and his Home," "Pictures from the First French Revolution," and "Driftwood from Scandinavia" (1884). Her pamphlet on "The Irish in America" attracted much attention. The erratic poet Oscar Wilde is her son.

Wolff, Emil von, a German agricultural economist, born in Flensburg in 1818; died in Stuttgart, Dec. 5, 1896. He took his doctor's degree at the University of Berlin in 1843, was appointed assistant in the chemical laboratory at Halle, and in 1847 became instructor of chemistry in the agricultural institute at Brösa. Subsequently he passed several years in the pioneer agricultural experiment station at Möckern, near Leipsic, and in 1854 was called to the chair of Chemistry in the Würtemberg Agricultural College, at Hohenheim, where he remained during the rest of his life. In 1868 he published a notable book on the different systems of manuring. In 1874 appeared the work that made him known throughout the world, his "Landwirthschaftliche Fütterungslehre," on whose conclusions in regard to animal nutrition and the value of different foods, developed by investigations of his students and followers, are based all the methods of the rational feeding of live stock.

Yrarrazaval, Manuel José, a Chilean statesman, born in 1836; died in New York, Feb. 14, 1896. He was educated in the University of Chili, in Georgetown University, and in European institutions. In 1860 he was recalled from his travels on the death of his father to assume charge of the immense estates, covering 150,000 acres, originally granted to his ancestor by Philip II. Six years later he was elected Governor of Santiago, and afterward he entered the Chilean Senate. He was a leader of the Congressional party and Minister of the Interior in the Provisional Government that overthrew Balmaceda in 1891.

OHIO, a Central Western State, admitted to the Union in 1803; population, according to last census (1890), 3,666,719, it being the fourth in rank of the States; area, according to the United States Geological Survey, 41,060 square miles, of which 40,760 is land surface and 300 water surface. Capital, Columbus.

Government.—The State officers during 1896 were: Governor, Asa S. Bushnell, Republican; Lieutenant Governor, Asahel W. Jones, Republican; Secretary of State, Samuel M. Taylor, Republican; Auditor of State, Ebenezer W. Poe, Republican; Treasurer of State, Samuel B. Campbell, Republican; Attorney-General, Frank S. Monett, Republican; Board of Public Works, Frank J.

McColloch, Charles E. Groce, Edwin L. Lybarger, Republicans; Commissioner of Common Schools, Oscar T. Corson, Republican; Judges of the Supreme Court, Marshall J. Williams, Jacob F. Burket, William T. Spear, Joseph P. Bradbury, John A. Shauck, Thaddeus A. Minshall, Republicans; Clerk of Supreme Court, Josiah B. Allen, Republican; Dairy and Food Commissioner, Frederick B. McNeal, Republican.

Finances.—The receipts for the fiscal year 1896, including balances from 1894, were: General revenue fund, \$4,387,763.34; sinking fund, \$793,607.26; common-school fund, \$1,837,738.17; Ohio State University fund, \$107,276.68; total, \$7,126,385.45. The total disbursements were \$6,601,260.36, leaving balance on hand \$525,125.09.

The public funded debt of the State, Nov. 15, 1895, was \$1,791,665. During the year \$750,000 was paid and two new loans added by refunding, one of \$250,000, payable July 1, 1901, and one of \$25,000, payable July 1, 1897. At the close of the fiscal year 1896 the public funded debt was \$1,541,665, at $\frac{3}{8}$ per cent. interest.

Valuation.—The property values returned for taxation by the assessors were: Lands, \$591,192,018; real estate in cities and villages, \$635,796,648; personal property, \$514,039,771; total, \$1,741,028,437.

Animals.—The assessors return the number and value of animals owned as follow: Horses, 759,482, \$27,051,938; cattle, 1,175,475, \$18,820,880; mules, 16,398, \$534,147; sheep, 2,293,686, \$3,898,448; hogs, 1,407,758, \$4,713,661.

Agricultural Statistics.—The returns of crops show the following: Wheat, 28,759,647 bushels; rye, 671,807 bushels; buckwheat, 258,024 bushels; oats, 34,013,739 bushels; barley, 676,383 bushels; corn, 102,447,445 bushels; grapes, 19,667,283 pounds; sorghum, 1,597 pounds of sugar, 357,977 gallons of sirup; maple, 1,055,766 pounds of sugar, 1,351,276 gallons of sirup; potatoes, 12,557,717 bushels; apples, 17,506,748 bushels; tobacco, 24,601,327 pounds; butter, 52,678,077 pounds; cheese, 13,666,334 pounds; wool, 14,671,104 pounds; acres of land cultivated, 10,412,356; acres in pasture, 5,799,831; acres of woodland, 3,178,638; acres lying waste, 458,026; total acres owned, 19,848,851.

Criminal Statistics.—The prisoners in jails numbered: Native born, 9,593; foreign born and unknown, 1,299; the prosecutions for crimes against the person numbered 909; convictions, 858; prosecutions for crimes against property, 3,683; convictions, 1,526; for crimes against public peace, etc., 2,331; convictions, 950.

Divorces.—The total number of divorce suits begun in the year was 4,069; number of divorces granted, 2,973; number refused, 1,021; suits pending at the close of the year, 3,163.

New Structures.—The total number of new structures in the State reported by the assessors was 25,362, with a returned value of \$17,020,146.

Benevolent and Penal Institutions.—The State maintains 7 hospitals, 2 institutions for juvenile delinquents, 1 for soldiers and sailors, 4 educational institutions (the latter including the deaf and dumb, blind, feeble-minded youth, and Soldiers and Sailors' Orphans' Home) and 2 penal institutions (the Ohio Penitentiary and the Mansfield Reformatory)—16 in all. The Working Home for the Blind was closed early in the year. The whole amount of money expended during the year for the support of these institutions, including permanent improvements, was \$2,320,046.12—\$1,829,973.62 was for current expenses, \$274,746.20 for salaries and expenses of trustees, and \$215,326.30 for repairs and improvements. Additional expenditures, not included in the above, were made as follow: For new buildings at the Hospital for Epi-

leptics at Gallipolis, \$41,172.78; for construction at the State Reformatory at Mansfield, \$89,438.71 for construction at the new State Hospital at Massillon, \$19,799.90. There are 8 workhouses in Ohio with a population at the close of the year of 1,164. There are 46 children's homes, in which 1,521 children were received during the year. These, with the 2,036 on hand at the beginning of the year, give a total for the year of 3,557 children, of whom 2,187 were on hand at the close of the year.

Canals.—The report of the Board of Public Works on the financial condition of canals shows that the income derived from the Miami and Erie Canal and the Ohio Canal during the year was: From rents, \$71,315.06; from tolls, \$26,360.57; from lands sold, \$25,262.73; total, \$122,938.36. The total expenditures for the canals and their management was \$190,965.88. The deficiency was made good by appropriations from the general fund. There are in the State 600 miles of canals, 32,800 acres of reservoirs, and 14 miles of artificial feeders, besides natural streams utilized.

Military.—At the close of the fiscal year the Ohio National Guard consisted of 8 regiments of infantry, 3 unattached companies of infantry, 1 regiment of light artillery, and 1 troop of cavalry, aggregating 431 officers and 5,688 enlisted men. Portions of the military forces of the State were called out for service three times within the year: 1 company and a battery of artillery, at Akron, March 30 and 31, to guard against a threatened lynching of a prisoner in the jail; 2 companies at the Berea stone quarries, July 1 to 29, on account of labor disturbances; 5 companies in whole or in part at Cleveland, from July 2 to Aug. 11, in consequence of labor troubles at the Brown hoisting and conveying works.

Legislative.—The seventy-second General Assembly opened Monday, Jan. 6, with a Senate composed of 30 Republicans, 6 Democrats, and 1 Populist, the House having 87 Republicans and 25 Democrats. On the 14th Joseph B. Foraker was elected to the United States Senate for the term beginning March 4, 1897, as successor to Calvin S. Brice. The session closed Monday, April 27, with an adjournment without day, this being the third time in the history of the State that the constitutional provision for biennial sessions only has been observed. During the session the General Assembly passed 316 general laws, 387 local laws, and 75 joint resolutions. Among the more important general laws were the following:

Increasing the yearly tax upon traffic in intoxicating liquors from \$250 to \$350.

Making changes in the congressional apportionment of the State.

Regulating the practice of medicine, and creating a State board of medical registration and qualification.

To prevent fraud in the manufacture and sale of imitations of cheese or substitutes for cheese, and to regulate the branding of cheese.

Providing for an excise tax on electric-light, gas, natural-gas, pipe-line, waterworks, street-railroad, railroad, and messenger or signal companies.

Providing for taxation of freight-line and equipment companies.

For the establishment and government of a State naval militia.

Amending the game laws.

To prohibit obstructing the view of persons in theaters, halls, or opera houses where theatrical performances are given by wearing view-obstructing headgear.

To prevent corrupt practices at elections, and regulating the permissible expenditures of candidates.

For suppression of mob violence.

Amending the supervisors of elections, board of elections, and ballot acts.

Amending the school laws so as to regulate the tenure of office of teachers, and providing for a teachers' pension fund in Cincinnati.

To provide for electrocution in execution of death sentences.

Amending the primary election law.

To prevent the spread of certain diseases among fruit trees, and to provide for their eradication.

Making Saturday afternoon a legal holiday in all cities or municipalities containing 50,000 or more inhabitants.

To provide for registration of land titles in Ohio, and to simplify and facilitate the transfer of real estate (Torrens system of land titles).

Requiring examination and licensing of plumbers, and regulating plumbing and sewerage.

To provide for supplying the schools of Ohio with good and sufficient schoolbooks at the lowest possible prices.

Amending the act providing for a State board of arbitration.

Amending the fishing law.

For regulation of the manufacture of flour and meal-food products.

To compel equipment of passenger trains with fire extinguishers.

To provide for regulation of ship-canal companies.

To prevent adulteration of and deception in the sale of flaxseed or linseed oil.

Court Decisions.—The Supreme Court, in two decisions delivered Feb. 25, upheld the pure-food law. In one case it held that the State does not have to prove that the seller knew he was selling adulterated food; also that it does not have to prove that the food was bought for human food and not for the purpose of making tests by the Dairy and Food Commissioner. In the other case it was decided that it is not a good defense that the Ohio vendor was selling goods manufactured outside of the State. A decision made April 28, in a road-improvement case, held that, though passed as a general law, the act authorizing the improvement was in reality special, and therefore unconstitutional. The court held that the constitutionality of an act is determined by the nature of its subject-matter and its operation and effect, and not alone by its form. The decision affects by implication a large number of laws that are special in their nature although general in form. Another decision invalidating important legislation was delivered Dec. 7. The court held that the act of April 13, 1894, known as the material men's lien law, in so far as it gives a lien on the property of the owner to sub-contractors, laborers, and those who furnish machinery, material, or tile to the contractor, is unconstitutional. All to whom the contractor becomes indebted in the performance of his contract are bound by the terms of the contract between him and the owner.

Political.—The Republican State Convention was held in Columbus, March 10 and 11. The platform congratulated the people of the country on the growth of Republican sentiment; denounced the Democratic administration as the most destructive and disastrous the history of the country has ever known; affirmed adherence to the principles of the Republican party as defined by the national convention in 1892; and followed with these, among other, declarations:

"We are faithfully wedded to the great principle of protection by every tie of party fealty and affection, and it is dearer to us now than ever before. It has more devoted supporters among the great

masses of the American people, irrespective of party, than at any previous period in our national history. It is everywhere recognized and indorsed as the great, masterful, triumphant American principle—the key to our prosperity in business, the safest prop to the Treasury of the United States, and the bulwark of our national independence and financial honor.

"We denounce the present tariff law as the sublimest product of Democratic ignorance and incompetency, bringing, as it has, to a prosperous and happy people, a period of unprecedented adversity and distress from which nothing but a return to the policy of protection can relieve it.

"We denounce the free-wool provision of the present tariff law as an unjust discrimination against an important industry and against a large part of our people, and demand such protection for sheep husbandry as will secure fair prices for American wool.

"The Republican party stands for a reciprocity that reciprocates, and which does not yield up to another country a single day's labor that belongs to the American workingman. It stands for international agreements which get as much as they give, upon terms of mutual advantage.

"It stands for a fiscal policy opposed to debts and deficits in time of peace and favors the return of the Government to a debt-paying policy and opposes the continuance of the debt-making policy.

"We contend for honest money: for a currency of gold, silver, and paper with which to measure our exchanges that shall be as sound as the Government and as untarnished as its honor; and to that end we favor bimetalism and demand the use of both gold and silver as standard money, either in accordance with a ratio to be fixed by an international agreement, if that can be obtained, or under such restrictions and such provisions, to be determined by legislation, as will secure the maintenance of the parities of values of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be at all times equal.

"We denounce the present administration of the Pension Bureau for its betrayal of the interests of the Union soldiers, and we pledge anew to the veterans of the republic a watchful care and recognition of their just claims upon a grateful people."

For Secretary of State Charles Kinney was nominated, for Judge of the Supreme Court Marshall J. Williams was renominated, Joseph E. Blackburn was nominated for Dairy and Food Commissioner, and Frank A. Huffman for member of Board of Public Works.

The Democratic State Convention was held in Columbus, June 23 and 24. The interest centered in the attitude to be taken on the money question, there having been sharp contests in the election of delegates in the several counties. Majority and minority reports were presented by the Committee on Resolutions. The majority report was as follows:

"We, the Democrats of Ohio, in convention assembled, hold that the money question is the vital and paramount issue now before the people of this country, and that its early and correct settlement is necessary to the revival of business and the return of prosperity; therefore

"Resolved, That we are unalterably opposed to the single gold standard, and demand an immediate return to the constitutional money of gold and silver by the restoration by this Government, independent of other nations, of the unrestricted coinage of both silver and gold into standard money at the ratio of 16 to 1, and upon the terms of exact equality existing prior to 1873; such silver coin to

be a full legal tender, equally with gold coin, for all debts and dues, public and private.

"Resolved, That the delegates at large, this day chosen by this convention, and the delegates to the national convention from the several congressional districts be and they are hereby instructed to use all honorable means to secure the adoption of the principles contained in the foregoing resolution by the National Democratic Convention, to be held at Chicago, July 7, and to vote only for candidates for President and Vice-President who are known to be in full accord therewith; and to accomplish these ends to cast the votes from the State of Ohio as a unit as a majority may determine."

This report was signed by 16 members of the committee. The minority report, signed by 4 members, was much longer, covering the Monroe doctrine, election of Senators by the people, the Cuban question, tariff reform, personal liberty, and all the usual declarations of Democratic conventions, including the reaffirmation of the national platform of 1892. The Republican Legislature and State administration were strongly denounced. No reference to the financial question was made, the member who presented the report explaining that it was omitted in the interests of harmony. The minority report was promptly defeated, as was a motion to strike out the unit-rule resolution of the majority report. The majority report was then adopted as the platform by a vote of 542 to 128.

The State ticket nominated was: For Secretary of State, Chilton A. White; E. J. Blandin for Judge of the Supreme Court; Patrick McKeown for Dairy and Food Commissioner; William Beaumont for Member of Board of Public Works.

Negotiations were subsequently had with the People's Party State Committee for a fusion on presidential and State tickets, resulting in the acceptance by the People's party of the Democratic tickets, after the withdrawal of E. J. Blandin as candidate for Judge of the Supreme Court and the substitution of Everett D. Stark, and the substitution of Thomas J. Creager for Patrick McKeown as candidate for Dairy and Food Commissioner.

The Prohibition party put a full ticket in nomination, the candidates for State offices being: For Secretary of State, Samuel H. Rockhill; for Judge of the Supreme Court, Gideon T. Stewart; for member of Board of Public Works, Charles E. Iliff; for Dairy and Food Commissioner, Arza Alderman.

The National party had a State ticket: For Secretary of State, Wesley C. Bates; for Judge of the Supreme Court, Marcus B. Chase; for Member of Board of Public Works, Winfield S. Maynard; for Dairy and Food Commissioner, Enos H. Brosius.

The Socialist-Labor party nominated a partial ticket: For Secretary of State, Daniel W. Wallace; for Member of Board of Public Works, John Schuch; for Dairy and Food Commissioner, James Rugg.

The National Democratic ticket (Gold Democrats) had a full list of presidential electors, but only two nominations for State offices: For Judge of the Supreme Court, Thomas Beer; for Dairy and Food Commissioner, Samuel D. Poland.

The official declaration of the result on presidential electors is as follows: McKinley, Republican, 525,991; Bryan, Democrat, 474,882; Levering, Prohibitionist, 5,068; Bently, National, 2,716; Matchett, Socialist-Labor, 1,167; Palmer, National Democrat, 1,857.

The vote on Secretary of State was: Charles Kinney, Republican, 525,920; Chilton A. White, Democrat, 473,471; Samuel H. Rockhill, Prohibitionist, 5,469; W. C. Bates, National, 3,382; D. W. Wallace, Socialist-Labor, 1,234.

The congressional elections resulted in the election of 15 Republicans and 6 Democrats.

OKLAHOMA, a Territory of the United States, organized in 1890. Population, according to the Auditor's census, Feb. 1, 1894, 212,635; according to the Governor's report, June 30, 1896, 275,587.

Government.—The following were the Territorial officers for the year: Governor, William C. Renfrow, Democrat; Secretary, Thomas J. Lowe, Democrat; Treasurer, Martin L. Turner; Attorney-General, C. A. Galbraith, Democrat; Auditor and Superintendent of Education, E. D. Cameron, who resigned in December and was succeeded by A. O. Nichols; Adjutant General, J. C. Jamison; Chief Justice of the Supreme Court, Francis Dale; Associate Justices, A. G. C. Bierer, John L. McAttee, J. H. Burford, succeeded in June by J. C. Tarsney and H. W. Scott, succeeded in October by J. R. Keaton. All are Democrats except Burford, whose term expired in March. Charges were made against Justice Scott, and an investigation by Special-Agent Sheibley was followed by his resignation.

Finances.—The valuation of property in the Territory for taxation, which was \$39,275,189 in 1895, was in 1896 only \$23,361,281.76, including \$2,552,450.21 of railroad and telegraph property. The explanation of this fall in valuation is as follows: The Board of Equalization in 1895 raised the valuation returns from the counties to bring them nearer the actual cash value, as required by law. The railroad and telegraph valuations remained as before and the Territorial tax levy was retained at the legal limit, but the tax levies in counties were correspondingly lowered. Complaints were made and suits were brought by taxpayers to restrain the collection. The decision was against them. It was contended that there was no power given the board by the statute by which it could raise the assessment on all the property in the counties. It was argued that this was not equalization. By the opinion the action of the Board of Equalization was sustained in every particular, the court holding that it had ample power to raise or lower the assessment of any or all counties. The township and school-district taxes were increased by the higher valuation, the levies having been made before the final equalization. In 1896 the board, in view of the complaints made in 1895, let the valuations stand as they came from the counties, and these are claimed to be only about one fourth of the actual values.

The railroad valuations were raised on an average about 33 per cent. in 1896. Suit was brought by the Atchison, Topeka and Santa Fé to compel a re-assessment. Evidence was adduced to show how far the assessments of other property fell below its actual value; that in many instances throughout the various counties of the Territory the assessors themselves had returned two sets of valuations covering the same property, one of which was for the census and the other the assessment of the property; and that the average valuation placed upon improvements upon undecided lands in the census returns of the assessors exceeded a thousand dollars per quarter section, and that the same property was assessed at an average of \$40 per quarter section.

Likewise, in real-estate valuations, comparisons from numerous localities in the Territory where the assessors had returned two sets of values showed that the assessment was only about 30 per cent. of the value of the same property as given in the census returns.

The court held that the Territorial Board of Railway Assessors could not arbitrarily fix any value to the property they saw fit, but must assess the property according to the evidence before them, and found that the board had assessed the property of the railroads of the Territory beyond its true value; and the case was remanded to the Territorial Board of Railway Assessors with the direction to reassess

the property and to hear evidence and to correct the errors of the previous assessment.

A compromise was agreed to by the companies and the assessors, by which the valuations were reduced.

The rate for the general Territorial tax is 3 mills on the dollar; in addition $\frac{1}{2}$ mill is levied for the Normal School and $\frac{1}{2}$ mill for the Territorial University.

The receipts and expenditures from the Territorial general fund for the year were very nearly equal. There were general-fund warrants outstanding June 30, 1896, to the amount of \$163,240. The only other charge upon the Territory is \$48,000 in thirty-year 6-per-cent. bonds, outstanding, the proceeds of which are to be used in erecting the Territorial college buildings.

Charities.—The insane of the Territory are provided for under contract with the Oklahoma Sanitarium Company, at Norman, the Territory paying \$25 a month and cost of transportation. The amount paid to the company during the year was \$30,253.24. Seventy-seven patients were received from the Jacksonville asylum and 108 from the various counties, a total of 185 during the year—116 men and 69 women. Of this number 37 were discharged, 3 escaped, and 19 died.

Convicts.—There is no penitentiary in Oklahoma, and the 128 convicts are confined in the Kansas Penitentiary, at Lansing, at a cost of 25 cents a day for each.

Education.—The Territory has 88,093 school children. The Normal School, at Edmond, which has about 100 students, is in a flourishing condition, as is also the Territorial University, at Norman, which enrolls nearly 200. The Agricultural and Mechanical College, at Stillwater, has 11 teachers and more than 100 students.

The corner stone of a building for the Congregational College at Kingfisher was laid in May. The college was opened in September, 1895, in temporary quarters, and has about 70 students.

An account of the Pawnee reservation school reports that it is doing good work, and is more willingly patronized by the Indians than formerly. It has 126 pupils and 20 employees.

Banks.—By the report of the condition of national banks at the close of business, July 14, it is shown that the five in Oklahoma had an average reserve of 26.53 per cent., against 27.30 per cent. on May 7; loans and discounts increased from \$6,430,314 to \$6,732,435; stocks and securities decreased from \$1,184,226 to \$1,144,113; gold coin increased from \$433,326 to \$436,077; total specie increased from \$742,324 to \$772,019; lawful money reserve increased from \$1,023,728 to \$1,024,399; individual deposits decreased from \$6,307,459 to \$5,839,084.

An important decision was given in the probate court of Kay County in March. It was to the effect that the directors of a bank in this Territory are liable for the payment of the bank's debts.

Railroads.—No new railroads were built in 1896. A charter was taken out in October for the Gulf Railroad Company. The road is to pass through 11 counties of the Territory, and also through the Choctaw and Chickasaw nations and Cherokee, Creek, and Graham Counties, Texas. It will run to Dennison, Texas.

In November a contract was signed for building the St. Louis, Oklahoma and Southern Railway, to run from Claremore, Indian Territory, to Shawnee, in Oklahoma.

The four lines in operation in the Territory have been prosperous; the increase of south-bound freight has been very marked.

Products.—The most profitable farming products of the Territory are cotton, castor beans, Kaffir corn, and broom corn; but Indian corn, oats, bar-

ley, saccharine, sorghum, and the great forage plants, alfalfa, clover, and timothy in the eastern and central portions of the Territory are profitably cultivated. The estimate of Indian corn for 1896 was 50,000,000 bushels.

Oklahoma has furnished one third of the product that it takes to run the east-oil mills of the United States. Fruit culture is a paying industry; 1,500,000 fruit trees have been planted and small fruits and melons are exported. One small station alone shipped 100 carloads of watermelons. Discoveries of gold, silver, and copper were reported in 1896. Oil has been found and a large territory leased to the Phoenix Oil Company.

No-Man's Land.—This district, bordering Oklahoma on the west, and once the refuge of criminals in the Southwest because none of the surrounding State or Territorial courts had jurisdiction over it, has been changed into a rich agricultural and stock country. The change "is due to 40 young women who are now in charge of the 38 public schools of Beaver County. Seven of them met in Beaver City and organized the Pan Handle Cattle Company, the intention being to invest their surplus earnings in the cattle business. Over 30 of the women have taken claims of 160 acres each on Beaver river, and will till the soil in summer and teach in winter. They receive \$30 a month for a six months' term. The teachers have pledged each other not to marry within five years."

Greer County.—On March 16 the United States Supreme Court decided the case of the United States *vs.* the State of Texas, involving the ownership of Greer County, in favor of the plaintiff. After the decision was announced the President issued a proclamation reserving Greer County from settlement until a decision shall be reached as to the merits of the Choctaws' claim. Greer County became disputed territory because a geographer named Melish, who made a map eighty years ago, did not clearly indicate whether the boundary between the United States and Spanish possessions ran up the North Fork or the South Fork of Red river. Melish further confused the situation by locating the one hundredth meridian about 100 miles too far east. So, when half a century had gone by, Texas set up the claim that the North Fork was the boundary and all south of it was in her domain. The United States did not accept this conclusion. Texas cattlemen moved across the South Fork of Red river into the disputed territory and named it Greer County. Texas settlers drifted in, formed a county government under the Texas laws, sent a representative to the Legislature, and were recognized by the State as a part of it.

It was rapidly establishing its Texas connection by common consent when a member of Congress from that State, being anxious to hasten the conclusion and settle title for all time to come, introduced a bill under which the question was taken to the Supreme Court and was settled as above stated, March 16.

In the decision, Justice Harlan said the case depended upon the construction of the treaty between this country and Spain made in 1819, which defined the northern and eastern lines of the Spanish possessions. The court held that the fact that commissioners and surveyors were provided for in the treaty was evidence that it was not intended that the lines as laid down in the map should be considered binding.

The people of Greer County will live under United States laws, so far as conduct and protection are concerned, but they will have no land titles. At the time of the decision the Oklahoma Homestead bill was before the House of Representatives, and an amendment was offered and accepted

in view of the decision of the court to prevent squatters from rushing into Greer County and entering lands under regular land laws, to the injury of *bona fide* residents who had purchased their lands on the supposition that they belonged to the State of Texas.

An item in the report of the Conference Committee on the general Indian bill, which was accepted by both houses, extended for one year all payments on claims in Oklahoma in order to give time for the homestead bill to be acted upon.

Political.—The Republicans held a Territorial convention in Oklahoma City, March 28, to elect delegates to the national convention, and one at Kingfisher, March 30, to choose a candidate for Representative in Congress. Dennis T. Flynn was nominated to succeed himself. The resolutions declared Republican principles and condemned the national administration; favored bimetallism under restrictions insuring the maintenance of parity in value and "the prohibition of foreign silver modified by financial reciprocity"; declared that the political patronage of the Territory should be confined to Oklahomans; favored the passage of the "Flynn Statehood bill"; condemned the board of equalization "for placing a raised and fictitious valuation on all property in 1895 except railroad property"; denounced the action of the majority of the Supreme Court in annulling the act of the Legislature limiting the fees of district courts, which, it was declared, "takes from the people \$40,000 a year of direct taxes for Territorial criminal fees, and \$40,000 more of civil fees paid by litigants which, under the Territorial law, were to be converted into the treasuries of the counties"; condemned the district judges "for their arbitrary ruling prohibiting any person unable to give a cash bond to file a petition as provided for by law, and demanding a cash deposit in all civil cases; and condemned the judges for requiring defendants in civil cases to make a cash deposit before filing any answer or other plea." Other resolutions of the platform were: "We commend the sound financial laws passed by the late Legislature, which lifted the counties of Oklahoma from degradation to solvency. We demand the prompt opening of all Indian reservations where treaty stipulations have been agreed upon. We denounce the Honorable Secretary of the Interior, Hoke Smith, for his refusal to open the Wichita reservation under the provisions already provided by Congress, instead of keeping this and other reservations for cattlemen under a contract represented by Seth Cobb, a cousin from Georgia, the cattlemen paying a royalty to the firm of Cobb & Smith to prevent thousands of homeless families from securing homes on these reservations; and we demand that all future openings be without that farce called a 'booth certificate.'"

Hon. Dennis T. Flynn was highly commended for his services to the Territory in Congress.

The Territorial Democratic Convention for nominating delegates to the national convention met in Oklahoma City, May 26. A resolution instructing the delegates for Richard P. Bland was carried by a vote of 125 to 124. A free-coinage 16-to-1 resolution was included in the platform, and also the following: "We favor the enactment of legislation by Congress at the earliest moment possible which gives to all the settlers upon public lands in this Territory the same rights to free homes that were accorded to the settlers of original Oklahoma. We favor more liberality and privileges in reference to Indians holding allotments in Oklahoma, and demand such legislation as will permit the Indians to conduct their business without interference on the part of the Indian Department or its agents, and that the Indians having one half or more white

blood be permitted to sell or dispose of their lands without interference by law."

At the second Democratic convention in September the nominee of the People's party for Delegate in Congress, Rev. J. Y. Callahan, was accepted, and a plan of fusion was made for State legislative candidates.

The convention of the People's party met in Guthrie, Aug. 4 and 5. A platform was adopted declaring for free coinage of silver; for liberal pensions, with no discrimination in favor of officers; for free homes for a free people; for reform in the school land department; for revision of revenue and school laws of the Territory; the fixing of official salaries in keeping with the prices of labor, and for immediate Statehood, with the addition of the lands of Indian Territory as soon as allotted. It denounced the Territorial Legislatures for the repeal of the usury laws, the infamous gerrymander of the Territory, and the passage of nefarious election laws, and condemned the national administration for its treatment of homestead settlers and lessees of Indian lands.

The Rev. J. Y. Callahan was made the candidate for Delegate in Congress. J. J. Merick and Harris B. Hainer were also candidates for Delegate in Congress. By the official canvass in November, Callahan was declared elected by a majority of 1,168. The Territorial Legislature will stand: Council—Fusion 10, Democrats 3; House—Fusion 20, Democrats 3, Republicans 3.

OLD CATHOLIC CHURCH. A summary of the progress of the Old Catholic movement on the European Continent published in the "Report of the Anglo-Continental Society," shows that in Austria, while the Church is still without a bishop and, the assent of the Government being still wanting, no meeting of the synod has yet been called for the purpose of electing one, its adherents continue to increase in numbers, and are as steadfast and hopeful as ever. In Germany the Church has passed through a great crisis in connection with the death of Bishop Reinkens, which involves important questions as to the future relations of his successor to the state. Bishop Weber, who had been consecrated coadjutor bishop in August, 1895, was elected bishop March 4, 1896, and afterward received the congratulations of the German Emperor. The fact that 128 electors took part in this election—43 clergy and 85 lay representatives—is quoted in evidence of the great progress made by the German Old Catholic Church during the episcopate of Bishop Reinkens, who had been elected in 1873 by 21 clergy and 56 lay representatives—in all, 77 electors. In Switzerland, the Old Catholics are making great progress. Many signs of activity are noted among the Dutch Old Catholics, and the French Congregation in Paris, which is under the jurisdiction of the Archbishop of Utrecht, is slowly and steadily gaining. In Italy the work is carried on in seven places, and a new congregation has been formed at San Vito, while an organization is asked for at a ninth place, but no great progress has been made in the collection of funds for an Italian bishop. In Spain Bishop Cabrera has held one visitation, and purposes to make his visitations annual, while two new centers of work have been opened. The community in Portugal comprises 5 clergy, 1 lay reader, 1 licensed preacher, 7 congregations, 12 schools, 4 schoolmasters, 10 schoolmistresses, and 700 school children.

ONTARIO, a province of the Dominion of Canada; area, about 222,000 square miles; population in 1891, 2,214,321.

Government.—After twenty-four years of service as Prime Minister, Sir Oliver Mowat retired in July, 1896, and accepted the office of Minister of

Justice in the Canadian Liberal Cabinet at Ottawa. His successor at Toronto was the Hon. A. S. Hardy, for many years Commissioner of Crown Lands in the province. On July 14 the new ministry was announced as follows: Premier and Attorney-General, A. S. Hardy; Commissioner of Crown Lands, J. M. Gibson; Provincial Secretary, W. D. Balfour; Provincial Treasurer, R. Harecourt; Minister of Agriculture, John Dryden; Minister of Education, G. W. Ross; Minister of Public Works, W. Hart; minister without office, E. H. Bronson.

Mr. Balfour has since died and been succeeded by Hon. E. J. Davis. Meanwhile a change had taken place in the leadership of the Conservative Opposition. Mr. G. F. Marter—who about a year before had replaced the present Chief Justice, Sir W. R. Meredith as leader—resigned and was succeeded by J. P. Whitney.

Finances.—Mr. Harecourt presented his budget on Feb. 19, 1896. He stated that from Crown lands the revenue had been \$123,000 larger than was expected, or a total of \$947,947; that the succession duties had brought in \$298,825, compared with \$758 in 1892, when first imposed; that \$272,883 had been received from liquor licenses; that \$171,520 had been obtained from the sale of annuities; and that the total receipts for 1895 would be \$3,364,955, compared with an estimate of \$3,149,372. In dealing with expenditures, he pointed out that \$418,476 had been spent upon the administration of justice, an increase of \$35,000, while more than usual had been expended upon agriculture, education, and mining. Public institutions cost within a trifle of \$800,000. He said the total expenditure had, however, decreased. In 1891 it was \$4,158,459; in 1893, \$3,907,145; in 1895, \$3,758,595.

The Opposition complaint against the Government in this connection is, and has been, that the revenue and expenditure do not meet. There was an apparent deficit, even in 1895, of \$400,000, and the charge is made that through manipulation of \$5,000,000 held since confederation as the assets of the province—largely in trust by the Dominion Government—the people are made to believe that there is a continual surplus, while in reality the capital of the province is being drawn upon to meet current payments. Immense timber limits are being sold for the same purpose, and money is being borrowed yearly upon annuities, and the provincial credit consequently pledged for years ahead.

Legislative Session.—The Legislative Assembly was opened by Lieut.-Gov. G. A. Kirkpatrick, on Feb. 11, 1896, with a "speech from the throne," of which the following were the significant passages:

"I am glad to notice that the action of the Government of the United States with respect to the territorial rights of Great Britain in South America which caused so much anxiety a few months ago is not likely to lead to a rupture of the peaceful relations which have so long existed between the two nations, and with so much advantage in every way to both. It is gratifying to know that in case of any trouble affecting the interests of the mother country, no sacrifice which the circumstances might demand would be considered too great by the people of Ontario should they be called upon to repel invasion or to defend the integrity of the British Empire.

"I am pleased to observe that, notwithstanding the depression from which the farmers of Ontario are suffering, they exhibit a growing interest and enthusiasm in every department of agriculture. The number attending meetings during the past year for the discussion of agricultural matters has greatly increased, and all the associations aided by

this Legislature which specially depend for success upon the support of the farming classes are flourishing.

"The pioneer farm established in western Algoma promises to prove highly successful. The new dairy schools established in eastern and western Ontario have greatly improved the equipment of the province for dairy instruction. Experiments in fruit growing and orchard spraying have been successfully conducted during the past year.

"The northwestern part of the province continues to receive the attention of prospectors and miners, and gold-bearing ores have been discovered in that region over an area of 2,000 square miles. Several stamp mills have been erected in the districts of the Lake of the Woods, Rainy Lake, and Seine river.

"There has been no marked improvement during the past year in the condition of the lumber trade. While the sales and prices in the English markets have been fairly satisfactory, the market for sawed lumber in the United States has been in a depressed condition.

"For several years the brewers and distillers of the province have disputed the right of the provincial Legislature to charge them with license fees. To settle the question of authority, a test case was at their instance submitted to the Court of Appeal, and judgment has been given in favor of the province. The brewers and distillers have appealed from this judgment to the Privy Council.

The House adjourned on April 7, after considerable legislation dealing with county and civil government, county courts, and the wages of workmen, public charities, the construction of electric and other railways, the protection of game, and the improvement of education and agriculture. The bills passed included the following:

To make further provision for the payment of succession duties in certain cases.

To amend the public lands act.

To authorize the Commissioners of the Queen Victoria Niagara Falls Park to grant certain lands to the Clifton Suspension Bridge Company.

To make further provision respecting mines and mining.

Revising and consolidating the acts respecting the registration of births, marriages, and deaths.

Respecting the estates of insolvent deceased persons.

Respecting the quieting of titles.

As to certain proceedings under the act respecting assignments and preferences by insolvent persons.

Respecting bills of sale and chattel mortgages.

Respecting liens of mechanics, wage earners, and others.

To extend the woodman's lien for wages act.

For better protection of certain classes of workmen.

To consolidate the acts respecting solemnization of marriage.

Relating to dower in certain cases.

To amend the act to facilitate the conveyance of real estate by married women.

Relating to the law of insurance.

Respecting building societies.

Relating to the Saulx Ste. Marie and Hudson Bay Railway.

To amend certain acts relating to the Georgian Bay Ship Canal and Power Aqueduct Company.

Respecting tax sales in the unorganized districts.

To improve the laws respecting public libraries.

Revising and consolidating the acts to encourage the planting and growing of trees.

Respecting the inspection of fruit trees.

To amend the act to prevent the profanation of the Lord's Day.

To provide for the inspection of meat and milk supplies of cities and towns.

To make further provisions for the protection of game.

Consolidating and revising the laws respecting the Education Department.

Revising certain matters in the separate-schools act.

During the session several important resolutions were passed. One dealing with the Manitoba school question, moved by Sir Oliver Mowat, declared that, as education under the act of federation was given into the control of the provinces, and that as the Judicial Committee of the Imperial Privy Council had declared the abolition of the separate schools to be within the jurisdiction of Manitoba, no remedial legislation in behalf of the Manitoba Catholics should be attempted by the Dominion Parliament until after the most thorough investigation. At the same time, it was admitted in the resolution that as the Judicial Committee had declared that the Manitoba Catholics really had ground for complaint, it might be ultimately the duty of the Federal power to take action. The discussion in the Legislature turned on the fact that this school question had already been examined and re-examined during five years of controversy, and that, as the Opposition claimed, it was now time for the Dominion to take action. The resolution passed by the usual party majority. Another motion, moved by Sir O. Mowat and seconded by Mr. Marter, who was then the Opposition leader, was carried unanimously by a standing vote, and amid the singing of 'God Save the Queen.' It was this:

"To the Queen's Most Excellent Majesty: Most gracious sovereign, we, your Majesty's dutiful and loyal subjects, the Legislative Assembly of the Province of Ontario, in Parliament assembled, desire, in view of the recent events in relation to the territorial rights of Great Britain in South America and elsewhere, to assure your Majesty of the unalterable loyalty and devotion of the people of Ontario to your Majesty's person and crown, and to the empire over which your Majesty presides; and that in case of any trouble affecting the interests of the empire, no sacrifice which the circumstances might demand would be considered too great for the people of this province should they be called upon to repel invasion or to defend the integrity of the British Empire."

A resolution proposed by Mr. Bronson and carried was as follows:

"That this House would view with approval, and as worthy of encouragement, any movement toward the organization of voluntary societies in the larger cities of the province, having for their object the giving of such assistance to the unemployed as would contribute toward making them self-supporting, by settling them upon the unoccupied lands of the province or other lands within the province."

Agriculture.—According to official reports, the crops of Ontario in 1896 were satisfactory. The production of spring wheat showed a decline in quantity, while apples formed a phenomenal crop, and the yield of honey was unusually great. There was a surplus of farm laborers, and wages were lower as a result of the farmers trying to do without help and relying upon improved machinery. Harvest hands received from 75 cents to \$1 a day, and from \$13 to \$20 a month. The following are the figures of crop production in 1896: Fall wheat, 14,516,088 bushels; spring wheat, 3,677,757 bushels; barley, 12,303,091 bushels; oats, 84,974,508 bushels; rye, 2,353,091 bushels; peas, 18,591,932 bushels;

beans, 1,292,098 bushels; hay and clover, 2,280,240 tons.

The live stock on the farms, July 1, 1896, included 624,749 horses, a decrease of over 20,000. There were 2,181,958 cattle and 1,849,349 sheep. The hogs numbered 1,269,631. The yield of fall wheat per acre was 17 bushels, and that of spring wheat 13 bushels. Barley gave 27 bushels to the acre, oats 34, rye 15, peas 21, and beans 17. During the year ending June 30, 1896, there was a membership in the Ontario farmers' institutes of 12,384, against 10,819 in the preceding year. The Government grant to these institutes varied from \$50 to \$75. There is a Dairy Commissioner, and in 1895 a dairy school was erected in Kingston as a branch of the local School of Mining and Agriculture. Ontario still makes the bulk of the \$15,000,000 worth of cheese sent to England. Three years ago only about \$600,000 worth went from the whole Dominion.

Mining.—During 1896 Ontario as well as British Columbia rejoiced in wide discoveries and a considerable development of gold. At the end of 1895 there were 8 gold mines in operation, with 237 men employed, a total production valued at \$50,281, and wages paid amounting to \$56,234. Other minerals showed a much larger value and product. Building stone was valued at \$438,000, cement at \$159,477, lime at \$280,000, drain tiles and brick at \$862,000, sewer pipe at \$133,159, poultry at \$108,000, salt at \$188,101, nickel at \$404,861, copper at \$160,913, natural gas at \$282,986, and petroleum in various forms at \$2,177,324. There was a total mineral product valued at \$5,170,138, employing 5,383 laborers and paying \$1,571,651 in wages. The gold fields exist in the County of Hastings in eastern Ontario; in Algoma and not far from the great Huronian belt of copper and nickel; on the north shore of Lake Superior and throughout a vast stretch of territory along the Lake of the Woods and Rainy Lake on the Minnesota boundary, to the far Keewatin boundary—a tract of at least 2,000 square miles. Into this latter section prospectors and speculators and miners are crowding. Iron is found in large quantities in northern Ontario, platinum has lately been discovered on the north shore of Lake Huron, and corundum in Hastings County.

Education.—The Ontario school system is under the control of a Minister of Education, instead of the superintendents, who have the nonpartisan management of other provincial systems. The public schools are undenominational, but separate Roman Catholic schools are allowed by law and are given a certain proportion of the taxes. In 1894 there were 5,977 public schools and 328 separate schools, with an average attendance of 268,364 pupils in the one case and of 23,328 in the other. There were 2,795 male teachers and 6,029 female in the public schools, and 133 males and 581 females in the separate schools. The former had receipts amounting to \$4,972,507 and expenditures of \$4,248,131, and the latter receipts of \$392,393 and expenses amounting to \$337,307.

Toronto University, which is at the head of the higher educational system of the province, shows an estimated revenue for 1895-'96 of \$120,452, which will leave a deficit in meeting the estimated expenditure of \$125,000. During the year a careful revision was made in the legislation connected with the schools, and changes made in various details connected with the high and public schools. One provision defines more explicitly the moral supervision and duties of teachers. They are required to "inculcate, by precept and example, respect for religion and the principles of Christian morality, and the highest regard for truth, justice, love of country, humanity, benevolence, sobriety, industry, frugality, purity, temperance, and all other virtues."

Miscellaneous.—During the year, 2,735 yearly tavern licenses were issued, against 2,841 in 1894, and the total of all licenses was 3,205, against 3,317 the year before. The revenue was \$10,000 less, while the total collection for fines as well as licenses was \$623,717, against \$649,173 in the previous year.

The private subscriptions for asylums, orphans' homes, etc., exceeded those of 1894 by \$24,000. There were 4,484 inmates, against 3,639 in the preceding year.

The area of Crown lands sold during 1895 was 35,209 acres, valued at \$37,213. Mineral lands were leased to the extent of 13,969 acres, and a total of \$26,106 was collected therefrom.

The Society for the Protection of Neglected and Dependent Children did good work during the year, and was mainly supported by the local government, 115 such children being placed in homes under the action of this society.

OREGON, a Pacific coast State, admitted to the Union Feb. 14, 1859; area, 96,030 square miles. The population was 13,294 in 1850; 52,465 in 1860; 90,923 in 1870; 174,768 in 1880; 313,767 in 1890. By the State census of 1895 it was 362,762. Capital, Salem.

Government.—The following were the State officers in 1896: Governor, William P. Lord; Secretary of State, Harrison R. Kincaid; Treasurer, Philip Metschau; Attorney-General, C. M. Idleman; Adjutant-General, B. B. Tuttle; Superintendent of Instruction, George M. Irwin—all Republicans; Fish and Game Protector, H. D. McGuire; Chief Justice of the Supreme Court, Robert S. Bean; Associate Justices, Frank A. Moore, Charles E. Wolverton—all Republicans.

Finances.—The total valuation in 1896, upon which the levy for 1897 is based, was \$142,449,821, as returned by the county boards. The State board raised it to \$152,033,666. When the exemptions were deducted the net total of taxable property was estimated to be \$143,345,967. Many of the county valuations were largely increased. In Marion County, personal property was raised 30 per cent., including money, notes, and accounts. The question was raised whether the board had power to raise the valuation of money. This was explained by the fact that the county assessors made no separate classification; hence the only thing to do was to raise all personal property together. Notice has been given that the county will not pay the levy on the increased valuation except by mandate of court.

Education.—The biennial report of the State Superintendent shows the following summaries for the two years:

ITEMS.	1895.	1896.
Number of districts.....	1,953	1,891
School population.....	126,926	129,623
Enrollment.....	83,895	87,212
Teachers.....	3,230	3,317
Teachers' salaries.....	\$787,176	\$784,967
Private schools.....	189	125

The value of school property is \$2,988,312. In 1896 \$123,428 was paid for schoolhouses. The amount of State funds apportioned in August was \$136,104, making a *per capita* of \$1.05.

The appropriations for the Weston Normal School by the last Legislature were \$1,200 for maintenance and \$4,000 for improvements; at the end of the year a deficiency of \$1,754 was reported.

The Monmouth Normal School graduated a class of 44 in June. The appropriation for this school was \$18,000, and the deficit from the preceding biennium \$8,526.

There were about 16 graduates of the normal school at Ellensburg in June, besides about 20 in a short teacher's course.

The Ashland Normal School graduated 23 in the regular course and 7 in special courses.

The class at Drain Normal School numbered 16.

The Agricultural College, at Corvallis, had an enrollment of 397, reaching the limit of its capacity. The total amount received during the year, including the amount on hand July 1, 1895, was \$46,984.42. The estimated funds available for the ensuing year amount to \$45,500.

The enrollment at the State University, at Eugene, for the year ending June 18, was 503, of which 190 men and 143 women were in the school of letters, 83 men and 3 women in the school of law, and 65 men and 19 women in the school of medicine.

The degree of bachelor of arts was conferred on 20 students, of bachelor of laws on 41, doctor of medicine on 22.

The receipts for the year, including balances of \$6,871, were \$59,250, and the balance left was \$2,955. The land fund amounts to \$99,396.

Willamette University had 2 graduates in the course of liberal arts, 6 in the law department, 4 in the school of expression, and 18 in the preparatory department.

The attendance at the Chautauqua Assembly at Gladstone Park at the opening in July was estimated at 3,500.

State Institutions.—The maintenance of State institutions absorbs a large proportion of the State income. The appropriations on account of penal and eleemosynary institutions two years ago, exclusive of appropriations for homes throughout the State, were \$631,946.87. This means an annual expenditure of \$315,973.43.

The Soldiers' Home, at Roseburg, has been improved by the addition of a new building for a hospital.

There were 365 prisoners in the Penitentiary, at Salem, in December. It has 27 officers and employees.

The Reform School, at Salem, had 126 inmates in April.

The Supreme Court handed down its third opinion in the branch asylum case, Nov. 9 (see "Annual Cyclopædia" for 1895, page 631). It affirmed the judgment of the lower court in restraining the State Treasurer from honoring the \$25,000 warrant issued in payment of a site purchased for the location of the proposed asylum building in eastern Oregon. The decision says: "The expenditure of public money at a place prohibited by the Constitution is a misapplication thereof, for the simple and very satisfactory reason that it is against the declared will of the people, and the location of a public institution, within the meaning of the term as used in the Constitution, is not in any sense a legislative question, but has been determined by the people themselves."

The present asylum at Salem is crowded. Its inmates include, besides the insane, inebriates, morphine patients, idiots and feeble-minded, and those overtaken by poverty and physical debility. The number in the asylum in November was 1,108, and the population is constantly increasing. The monthly *per capita* expense was \$8.58.

Militia.—The persons liable to military duty in the State numbered 57,928 in 1895. In answer to a telegram in January, asking the strength of the Oregon National Guard, and how soon the militia forces could be mobilized, the Governor said that about 1,600 men, including two batteries, could be rendezvoused in Portland within forty-eight hours.

The expense to the State of ordering out the militia to suppress the disturbance caused by striking fishermen on the Columbia, was about \$8,000. The strikers themselves aided materially in minimizing the expense by supplying fish; it is reported that

the soldiers had all the salmon they wished furnished as a voluntary contribution.

The troops were called to Roseburg in June to prevent the threatened lynching of a prisoner charged with murder.

Railroads.—The report of the Railroad Commission says that not a road in the State has paid a dividend to a stockholder in four years, or been able to pay the agreed rate of interest on its bonds. During that time four of the roads have been in the hands of receivers, namely, the Northern Pacific, the Oregon Railway and Navigation Company, the Washington and Columbia River, and the Oregon Pacific, now the Oregon Central and Eastern. Of these, the first two have recently been sold under the hammer, the result of foreclosure suits, and reorganized, and are now being operated by the owners instead of under the direction of the courts. The Washington and Columbia River succeeded in getting out of the hands of a receiver after short experience. The Oregon Pacific was sold at sheriff's sale in December, 1894, reorganized as the Oregon Central and Eastern, and is now being operated by the purchasers. The properties of the Oregon and California are operated by the Southern Pacific Company, under a thirty-four-year lease from 1893. Its interest under taxes amount to about \$1,000,000 a year, but its earnings, over and above operating expenses, were less than \$400,000 in 1895, and less than \$300,000 in 1896.

The aggregate earnings of all the railroads within the State amount to about \$5,000,000 annually. Of this sum, about \$4,000,000 is returned to the people for labor, material, taxes, etc., leaving generally less than \$1,000,000 to pay interest on an invested capital of \$70,000,000.

On Aug. 18, 1896, the Oregon Railway and Navigation Company was reorganized, with E. McNeill, formerly receiver, as president and manager, under the name of the Oregon Railroad and Navigation Company. The reorganization was effected by foreclosure of the collateral trust mortgage, the conversion of back interest waived, and 50 per cent. of the principal on the collateral trust mortgage waived into preferred stock, and the reduction of the 5-per-cent. mortgage bonds to 4 per cents.

Telegraphs and Telephones.—In 1895 there were 2,207.35 miles of telegraph and telephone lines assessed in Oregon. The aggregate valuation, as equalized by the State board, was \$150,374.

The Cascade Locks.—This great work was finished and formally opened Nov. 5. The canal and locks are intended to enable boats to pass the cascades of the Columbia. The first obstruction to navigation in that river, the Cascades, includes a reach of about 4½ miles, where the river rushes through a narrow gorge in the Cascade mountains at a point 150 miles from the mouth. The fall between the upper Cascades and the lower Cascades is about 45 feet at high water, and 36 feet at low water. A canal, 3,000 feet long and 70 feet wide, has been cut across a low projecting spur around which the river is forced at the entrance to the gorge, with 3 locks. The upper gates are claimed by engineers to be the largest lock gates in the world. All the gates are operated by hydraulic machinery, the water coming from a spring on the mountain side. The work was begun eighteen years ago. The canal opens the river to The Dalles, 50 miles above. There is another obstruction, which it is proposed to overcome by a boat railway. The cost of the locks and canal to the Government was over \$2,500,000.

Other Water-Ways.—Congress made appropriations for Oregon waters as follow: Boat railway at The Dalles, \$100,000, and authorizing contract for \$2,064,000; Coquille river, \$20,000; upper Coquille.

\$12,000; Umpqua river, \$6,000; Coos river, \$5,000; Alsea river, \$3,000; Nestucca river, \$6,000; Willamette and Yamhill, \$40,000, also authorizing contract aggregating \$200,000 for improvement of Willamette and construction of locks in the Yamhill; Sislaw, \$27,000; entrance Coos Bay, \$95,000; harbor, Coos Bay, \$14,390; Yaquina Bay, \$25,000, also authorizing contract for \$1,000,000 additional; Tillamook Bay and bar, \$17,000; upper Columbia, \$5,000; total for Oregon, including amounts authorized to be contracted for and the appropriations for the Cascades, over \$4,000,000.

The Fisheries.—The report of the State Fish and Game Protector for 1895-'96 says that the great fish industry in the past thirty years has provided the people of Oregon with \$70,000,000, and declares that during the past year, notwithstanding the strike, it proved Oregon's second greatest resource, providing the people of the State with \$2,534,240, exclusive of the north shore of the Columbia. The future prosperity of the salmon fishery of the Columbia depends largely upon artificial propagation, and in this work Oregon is largely behind California and Washington. The number of cases of salmon packed on the Columbia in 1896 was 463,777, and the value \$2,261,826; and 87,760 cases, worth \$263,380, were packed from the coast streams and bays. The number of persons employed in the salmon fisheries and allied industries on the Oregon side of Columbia river for 1896 was 4,323, and the amount earned \$895,476. On the coast streams and bays 1,012 employees earned \$96,335. The apparatus used on the Oregon side of the Columbia is valued at \$679,035, and that on the coast streams and bays at \$62,980. The lands, buildings, and machinery employed in all these are valued at \$1,184,750, and the cash capital employed at \$1,429,500.

Shad and oysters have been successfully transplanted to the waters of the State.

The almost total extinction of the sturgeon fisheries of the Columbia within the past five years is presented as an illustration of the need of protective laws. Nine years ago this fishery produced nearly \$40,000 annually.

The commissioner shows the need of concurrent laws in Oregon and Washington for protection of fish in the Columbia. By a recent decision of the United States court for the district of Oregon, the officials of neither State have jurisdiction for the enforcement of its fish laws beyond the middle of the channel, except when the laws are concurrent.

Mining.—A great mining canal, said to be larger than any yet made, is in course of construction in southern Oregon. Ground was broken for it in May, about 3 miles south of Gold Hill. It is for developing the gravel mines along Rogue river. There are many mines there, but the surface of the gravel bars and banks has just been touched, for the reason that water could not be secured to work the hydraulic plants to advantage. The mines, so far as they have been developed, have been supplied with water from the tributaries of the river, and, at times of high water, from the river itself.

A thorough exploration of the country along the course of Rogue river has disclosed not only the fact that it is rich in minerals, but that a wholesale mining project might be extended to include the supply of water for irrigating as well as its sale to other miners. The plan was divided into three parts, so as to include the construction of three canals—one known as the high-line canal, the second as the middle canal, and the third as the lower canal. If this project is successful, it means the general development not only of the company's properties, but of adjacent mines.

The mint officers estimate the production of gold

in 1896 in Oregon at \$1,300,000, an increase of \$410,000 over that of 1895. The product of silver was estimated at 75,000 ounces, an increase of 23,000 ounces.

The coal product in 1895 was 73,685 short tons, the largest, except that of 1888, in the history of the State. The value at the mines was \$247,901. The increased output was due in part to the opening of two new mines on Coquille river. This industry employed 414 men an average of sixty-nine days. The Coos Bay field is the most important in the State. The greatest hindrance to the development of the Oregon coal fields is in the way of transportation. All the navigable rivers and bays of the Oregon coast are obstructed by bars.

Farm Products.—The sugar-beet industry has received a considerable impetus in the last year from the efforts of Richard Kuehne, a German-American expert, who has a ranch near Tigardville, on which he has raised sugar beets of a high quality. He says it will cost a farmer \$35 an acre to raise his crop, and, if he succeeds in raising the percentage of sugar and purity in his crop, he can safely figure on about \$40 profit to an acre, provided there are factories to use the product.

Oregon has 2,486,247 sheep, from which were secured in 1896 19,889,976 pounds of washed and unwashed wool, with 69 per cent. of shrinkage. The scoured wool amounted to 6,165,892 pounds.

Immigration.—The Pacific Northwestern Immigration Board, an association for advertising Oregon throughout the East and turning the tide of desirable immigration in this direction, has been organized by business men of Portland. It will continue the work of the old Oregon Immigration Board, but on a more extensive scale. Good land can be obtained in the Willamette valley and elsewhere for \$15 to \$25 an acre, and immigrants can be suitably located. When the old board was in operation farm lands in western Oregon were held as high as \$200 an acre.

The citizens of Portland began the fund for the new board with \$30,000. In March a small party of tradesmen and mechanics, the advance guard of 50 families from Columbus, Ohio, who intend to live in Oregon, passed through Portland on their way to Roseburg, to take possession of the Tipton tract, comprising 2,200 acres, bought by the Columbus colonists, intending to clear the land and put in a general crop, and in the autumn to set a great part of it with fruit trees. The colony was formed by a few residents of Columbus, and other members were added by election, only families of skilled mechanics being admitted. This tract will be subdivided; half will be turned into 50 small farms of 22 acres each, which will be made over to each family. The other 1,100 acres will be used for the joint benefit of the colony as regards pasturage and timber.

Trouble among Fishermen.—A controversy between fishermen on the lower Columbia and a strike for higher prices caused some rioting and the calling out of State troops in the spring. The controversy was between trapmen and gill-net fishermen, between whom trouble has existed in former years. It is thus explained on the side of the gill-net fishermen:

"Year after year the trapmen have been encroaching farther and farther upon the drifting grounds of the gill-netters, each advance being inevitably followed by a shoaling of the water at the trap locations. The gill-netter condemns the trap on account of its real or fancied wholesale destruction of young salmon, but no trap that did not obstruct navigation or endanger life was ever interfered with. The present objection of the fishermen to the construction of traps near the scene of the

wreck of the 'Great Republic' is due to the fact that hundreds of lives would be endangered if traps were placed in that vicinity. As the water shoaled east of Peacock spit, the channel steadily changed, until now it runs through Great Republic spit, farther east. Meanwhile, the trappers continued putting in new traps, until now there is only a narrow channel, called 'Cut-off' channel, between Peacock spit and Sand island. This is north and west of the 'Great Republic' wreck, and through it the fishermen sail when caught in a sudden storm. With Cut-off channel closed by traps, the fishermen would find no shelter, as it would be almost impossible for boats to sail round the south side of Sand island and reach Baker's Bay. It is not an uncommon occurrence during the fishing season to see 600 to 800 boats near Peacock spit, and when storms arise the men let their nets go and make for Cut-off channel. Another objection to the establishment of traps at this point is the almost impossibility of fishermen reaching shore when their boats are upset.

On the other hand, the Board of Trade and Chamber of Commerce of Ilwaco, Wash., have passed resolutions declaring that gill nets are placed across the channel directly in the steamers' track, and all boats using a propeller are compelled to stop their engines or foul their wheel and shaft with the net, and asking the War Department and chief engineer to prohibit such risk to human life and property.

Washington troops were sent to Sand island, but were ordered away by the national authorities, as that island belongs to the Government.

In June, during the strike, some of the cannery buildings were burned and nonunion workmen were fired upon. Oregon troops were sent to the place.

Reservations.—A law went into effect in April providing for settlement by homestead of the Fort Klamath hay reserve. The reserve contains about 10,000 acres of fine hay land, nearly all of which was located within three days. The fort reserve, 1 mile square, is withheld from settlement. Settlers are limited to 80 acres. The reservation contains about 1,500,000 acres. When the work of allotting lands to the Indians in severalty is completed, which will probably not be within two years, there will be left about 1,000,000 acres for the Government to buy from the Indians and throw open to settlement.

Semicentennial.—The fiftieth anniversary of the date when Oregon passed under the dominion of the United States was celebrated at Portland in June by the veterans of the Indian wars and the Association of Pioneers. The earliest pioneers present were two of 1837. The special exercises included a procession of the school children of Portland, followed by the pioneers and their grandchildren and great-grandchildren; addresses by John F. Caples, George H. Williams, ex-Gov. Pennoyer, and Mrs. W. J. Plymale; and a poem by Joaquin Miller. Steps were taken toward the organization of an association of the native sons and daughters of the State.

Important Decisions.—Women were nominated in 15 counties for county superintendents of schools; but, by a decision in a suit brought to test the eligibility of one already in office, decision was rendered in May that they were ineligible on account of that provision of the Constitution which says that only electors may be elected or appointed to county offices, an elector being defined in another place as a male citizen.

A decision was given in July involving the question of the marriage of a divorced person before the expiration of six months from the grant of the decree. The court held that marriage within six

months, if it takes place in Oregon, is illegal, but is binding if it occurs in another State; that such marriages in the State are not merely voidable, but absolutely void.

The charter of Oregon City contained a provision that 60 per cent. of the county road tax collected from the city should be turned over by the county to the city, to be expended in the city; and that the remaining 40 per cent. should be expended by the county court upon main roads leading to the city. This was attacked as unconstitutional, and the Supreme Court so decided, the Constitution giving the right to expend such taxes to the county courts, although the justice said the provision seemed to him entirely equitable and just.

Political.—The State election was held on June 1. A justice of the Supreme Court, the two members of Congress, and the State Legislature, which will have to elect a successor to Senator Mitchell, were elected at that time. The Republican party was divided on the question of free coinage, and the primaries were stormy. In the Multnomah County convention, in Portland, blows were exchanged. The State convention met on April 9 in Portland. There were contesting delegations from Multnomah County, and the convention, by a vote of 126 to 62, gave each one half representation. On the question of declaring against free coinage in the platform the vote was against such declaration by 120 to 108. The financial plank of the Republican National Convention of 1892 was adopted. Four sound-money delegates were elected to the national convention, making the entire 8 from the State of Oregon favorable to the single standard and against the free coinage of silver.

The resolutions declared for direct election of United States Senators, restricted immigration, the construction of the Nicaragua Canal, reduction of excessive salaries, and abolishment of the fee system and of all useless commissions; and opposed the appropriation of money to any school or charitable institution not under the control of the State.

Robert S. Bean was renominated for Justice of the Supreme Court.

The delegates to the national convention were instructed to support McKinley.

The Democratic State Convention was held in Portland, April 9. The Committee on Platform submitted majority and minority reports. The minority report approved the national Democratic platform of 1892 and the interpretation placed thereon by the President, and declared "for the bi-metallic money as standard mintage, the bullion and mint values of which have approximately the same purchasing power." The majority report, which was adopted by a vote of 152 to 91, declared for free and unlimited coinage of silver at 16 to 1. Further, the platform denounced political movements for religious proscription and called for the repeal of all specific contract laws, State and national; the construction of the Nicaragua Canal, and its control by the General Government; a tariff for revenue only; rigid enforcement of the Monroe doctrine; reduction of all salaries, Federal and State, commensurate with the depressed condition of the country; repeal of the laws creating the Railroad Commission and all other useless commissions; re-enactment of the mortgage-tax law and the amendment of assessment laws so that all recorded indebtedness of the taxpayer shall be deducted from his assessment; preservation of the salmon industry of the State by abolishing all fish traps, fish wheels, and small-mesh gear; and a survival pension of the Indian war veterans of the United States.

John Burnett was nominated for Justice of the Supreme Court.

In the Second District H. H. Northup was an independent sound-money candidate for Congress. Party lines were obliterated in many of the counties, both the old parties being divided on the currency question.

At the June election the vote for justice stood: Bean, Republican, 40,451; Burnett, Democrat, 18,623; Gaston, Populist, 26,135. The Republican Congressional candidates were elected by small pluralities over the Populists. In the Legislature there will be on joint ballot 63 Republican, 7 Democrat, and 20 Populist and Free-silver members.

A Free silver party was organized and held a convention at McMinville, July 9. Delegates to the national bimetallic convention were chosen, and the course of Senator Teller in leaving the Republican convention was approved.

A gold-standard Democratic convention was held in Portland, Aug. 22.

The Free-coinage Democrats united with the Populists on the national ticket.

The result of the November election was as follows: McKinley, 48,779; Bryan, 46,662; Palmer, 977; Levering, 919.

P

PARAGUAY, a republic in South America. The legislative power is vested in a Senate of 13 members and a Chamber of 26. The President for the four years ending Nov. 25, 1898, is Gen. Juan B. Egusquiza.

Area and Population.—The area is estimated at 98,000 square miles. The population was reduced by war from 1,337,439 in 1857 to 221,079 in 1873, of whom only 28,746 were men. In 1887 it was 330,000. Immigration has increased the population considerably. In 1895 it was estimated at 432,000. The number of immigrants in 1890 was 1,419; in 1891, 448; in 1892, 539; in 1893, 431; in 1894, 270; in 1895, 243. The number of foreigners living in Paraguay is estimated at 17,000, of whom 5,000 are Argentinians, 2,500 Italians, 1,500 Spaniards, 1,250 Germans, 800 French, 600 Brazilians, 600 Swiss, 450 Austrians and Hungarians, and 200 British.

Finances.—The revenue in 1895 was 5,120,248 pesos (1 paper peso = 15 cents), of which 81,891 pesos were derived from sales and leases of land, 4,227,701 pesos from customs, and 810,656 pesos from various taxes. The expenses of the Government were 3,179,873 pesos for general administration, 108,728 pesos for repayment of debt, and 1,703,406 pesos for extraordinary purposes; total, 4,992,007 pesos.

The internal debt in 1896 amounted to 5,441,643 pesos; the external debt to 34,598,213 pesos, including 9,876,466 pesos due to Brazil, 12,393,656 pesos due to the Argentine Republic, an English debt of 4,172,500 pesos, and 8,151,591 pesos of temporary obligations. The English gold debt was contracted in 1886. In 1892 the Government ceased to pay the coupons. When Gen. Egusquiza became President in 1894 the bondholders' representatives made an arrangement for funding the arrears of interest into new bonds and setting aside the export duties on *yerba mate* for the payment of interest and a sinking fund of 1½ per cent. per annum to begin in 1900. The rate of interest was to be 1 per cent. for 1895, 1½ per cent. for the next five years, 2 per cent. for the next three years, 2½ per cent. then for three years, and thenceforward till extinction 3 per cent. per annum. The arrears amounted on Jan. 1, 1896, to £100,000. This arrangement was approved by the Legislature on Nov. 15, 1895.

Currency.—The National Bank, the Hypothecary Bank, and the Bank of Paraguay and the Plate River all suspended payments after the Argentine collapse of 1890. The Agricultural Bank, a state institution employing public funds for the encouragement of agriculture, was embarrassed. The Territorial Bank and the Mercantile Bank are the only ones in operation. The chief circulating medium is the paper currency. The value of the paper peso fell from 70 cents in 1890 to 15 cents in 1895.

Commerce and Communications.—The imports in 1895 were valued at 2,460,000 pesos in gold, and exports at 12,729,000 paper pesos (1 gold peso = 6 paper pesos). In 1895 there were entered at Asuncion from foreign ports 311 steamers and 63 sailing vessels, having an aggregate burden of 124,674 tons, and cleared 311 steamers and 15 sailing vessels, of 114,164 tons. The railroad mileage completed in 1895 was 156 miles. The post office forwarded 664,028 letters, etc., in 1895. The number of telegraphic dispatches in 1894 was 13,207 in the internal and 26,316 in the international service. There were 360 miles of telegraph wire.

PENNSYLVANIA, a Middle State, one of the original thirteen, ratified the Constitution Dec. 12, 1787; area, 45,215 square miles. The population, according to each decennial census, was 434,373 in 1790; 602,365 in 1800; 810,091 in 1810; 1,047,507 in 1820; 1,348,233 in 1830; 1,724,033 in 1840; 2,311,786 in 1850; 2,906,215 in 1860; 3,521,951 in 1870; 4,282,891 in 1880; and 5,255,014 in 1890. Capital, Harrisburg.

Government.—The State officers for the year were: Governor, Daniel H. Hastings; Lieutenant Governor, Walter Lyon; Secretary of the Commonwealth, Frank Reeder; Secretary of Internal Affairs, James W. Latta; Treasurer, Samuel M. Jackson, succeeded in May by Benjamin J. Hayward; Auditor General, Amos H. Mylin; Attorney-General, Henry C. McCormick; Adjutant-General, Thomas J. Stewart; Insurance Commissioner, James H. Lambert; Bank Commissioner, B. F. Gilkeson; Secretary of Agriculture, Thomas J. Edge; Superintendent of Public Instruction, Nathan C. Schaeffer; Superintendent of Public Buildings and Grounds, John C. Delaney; State Librarian, W. H. Egle; Dairy and Food Commissioner, Levi S. Wells; Forestry Commissioner, J. H. Rothrock; Chief Justice of the Supreme Court, James P. Sterrett; Associate Justices, Henry Green, Henry W. Williams, James T. Mitchell, J. B. McCollum, John Dean, D. Newlin Fell; Justices of the Superior Court, E. N. Willard, Charles E. Rice, James A. Beaver, John J. Wickham, Howard J. Reeder, George B. Orlandy, Peter P. Smith. All the above-named are Republicans, except Judges McCollum and Smith, who are Democrats.

Finances.—The cost of running the State government during the fiscal year ending with November was \$11,004,517.07. The revenues for the same period were \$12,265,756.09. The balance in the general fund at the close of the year was \$4,251,257. The expenses of the State government for the previous year aggregated \$13,402,962.90, while the receipts were \$11,746,411.10. The difference in the expenses of the two years is due largely to the cost of the Legislature.

Under different acts of Assembly certain moneys

are required to be paid into the State treasury and again returned. The total receipts, if taken as a basis for making appropriations, are therefore misleading. The largest of these sums is the return of three fourths of the State tax to the counties.

There have been no new sources of revenue. On the other hand, there were new charitable and other institutions to be provided for, as well as an increase to some of those already receiving aid.

A summary of the payments at the State treasury during the year shows that \$194,860.59 went to the Department of Public Buildings and Grounds. The cost of the alterations to the Executive Mansion, the Lieutenant Governor's room, and the addition to the Capitol Park Conservatory is included in this account. The cost of public printing was \$278,071.82, against \$243,046.17 the previous year.

Education.—The appropriations to the public schools rose from \$2,000,000 in 1890 to \$5,000,000 in 1891 and \$5,500,000 since 1893. At the end of the year \$3,000,000 remained unpaid.

The superintendent has appointed a committee for every county in the State, except Philadelphia, to examine applicants for teachers' permanent certificates. These committees serve without compensation, and are appointed for three years, although they may be removed at the pleasure of the superintendent.

Several townships in the State have adopted a new plan—closing the small district schools, and establishing large ones in central localities which are graded like city schools. Pupils from a distance are taken to and from school in omnibuses or other conveyances at the expense of their district. It has worked to the satisfaction of the school patrons in most of the townships where it has been tried. The school authorities wish to have it adopted through the State.

The question of the jurisdiction of the State superintendent in the matter of investigating the eligibility of persons elected as county superintendents before issuing their commissions came up this year in connection with two who were elected in Dauphin County and at Shenandoah. Numerous protests were sent to him, especially in reference to the superintendent-elect in Dauphin County, who was alleged to be ineligible on several grounds. The superintendent applied to the Attorney-General, who decided that a fair interpretation of the law gives to the State superintendent power only to inquire into the competency of the elected county superintendent as to the various matters laid down in the act. He must follow the act of 1865, which gives him no authority to investigate the moral qualifications of the superintendent. "I am of the opinion, therefore," he said, "that the question of the lack of moral qualifications of this elected county superintendent, as set forth in the protest, is one that the directors of the county of Dauphin have passed upon, and they constitute the only tribunal to which it can be submitted." The Attorney-General also decided that evidence in regard to alleged bribery of the directors to secure the election was inadmissible. It was supposed that the commission of the county superintendent-elect after these decisions in his favor would be issued; but the State superintendent refused it on the ground that he had not had the required experience in teaching.

State Institutions.—The amounts paid for these in 1895 were: Hospitals and asylums for the insane, \$600,729; penitentiaries, \$21,531; reformatories, \$240,261; soldiers' orphans' schools, \$225,668; Soldiers' and Sailors' Home, at Erie, \$100,860; charitable institutions, \$1,010,253; miscellaneous institutions, \$203,783. Increased accommodations are also called for in both the charitable and the

correctional institutions. The Eastern Penitentiary has 600 more prisoners than can be kept in accordance with law, and the Western Penitentiary is in much the same condition.

Militia.—The amount paid for the National Guard in 1895 was \$378,171. A board appointed to consider the advisability of increasing the force of the National Guard of the State, and to give special consideration to the application of the Gray Invincibles, of Philadelphia, to be increased to a battalion by the addition of three companies, reported in June, recommending that if any increase be made in the Guard it be in the cavalry and artillery arm of the service, and that no increase of infantry companies be authorized. The three companies proposed for the Gray Invincibles were colored troops. The Governor approved the report.

Railroads.—The fiftieth anniversary of the incorporation of the Pennsylvania Railroad Company was celebrated in Philadelphia, April 13. The most important feature in connection with the celebration was the exercises at the Academy of Music in the afternoon, when the hall was filled with stockholders and other guests, and the president made an address giving the history of the company from its incorporation, in 1846, until the present time. Other addresses were made by Gov. Hastings, Mayor Warwick, Frederick Fraley, Vice-President Brooks, and Joseph H. Choate. A reception was held in the evening.

The annual report of the Pennsylvania Railroad Company for the year ending June 30 shows: Gross earnings, \$65,084,819; operating expenses, \$45,064,873; income from operations, \$20,019,945; dividend on stocks owned, \$2,269,746; interest on bonds owned, \$1,427,865; miscellaneous income, \$845,002; total income from all other sources, \$4,551,614; total net income, \$8,170,221; total gross income, \$24,571,560; surplus, June 30, \$23,253,147. The company's passenger revenue amounted to \$14,866,280; including mail and express revenue, \$17,782,227; total freight revenue, \$46,402,675. The report treats of 53 companies, the capital stock of which aggregates \$200,088,000, while the funded debt is \$166,650,213, making a total capitalization of \$366,738,213, covering a mileage of 2,696 miles. The cost of construction, equipment, etc., to June 30 was \$115,567,004, the cost per mile being \$218,149. The balance sheet showed assets of \$276,989,809, an increase of \$4,686,725 over the previous year. Included in the liabilities is the profit-and-loss account of \$23,253,147, an increase over last year of \$49,915.

It was announced in March that the Lehigh Valley had restored the 10 per cent. of salaries taken off in 1893.

An old proceeding against the Lehigh Valley road was settled in May. A complaint was filed in 1888 with the Interstate Commission for alleged discrimination in freight rates. The proceedings resulted in a finding by the commission that the rates and charges established by the defendant and then in force over its lines for transportation of coal from the Lehigh anthracite coal region to Perth Amboy were unreasonable and unjust. An injunction to restrain the railroad from violating the commission's order and a decree compelling its enforcement were applied for. The decision in the circuit court in May was in favor of the company.

All the assets of the Philadelphia and Reading Company and the Philadelphia and Reading Coal and Iron Company, which are in the hands of the receivers of the Reading Company, were sold at auction, Sept. 23, to C. H. Coster, a member of the firm of J. P. Morgan & Co., of New York.

Building and Loan Associations.—The Bank Commissioner, in a report on these associations,

says the financial condition of the domestic associations is sound, and as a rule they are well managed at comparatively small cost.

The total assets of the 1,131 associations chartered under the laws of the State are \$99,519,917.50; receipts and disbursements, \$44,505,361.93; borrowing members, 79,144; nonborrowing members, 174,716; number of shares in force at end of the year, 1,796,311; admission fees received during the year, \$110,203.71; number of foreclosures during the year, 857.

The following shows the condition of foreign building and loan associations doing business in Pennsylvania: Number of shares in force in Pennsylvania, 262,185; loans on real estate, \$3,367,555.25; loans on the stock of such associations, \$67,348.69; value of real estate owned, \$67,487.65.

Banks.—Eight new national banks were organized in the State during the year, with an aggregate capital of \$520,000.

The First National Bank of Lebanon suffered a loss of about \$185,000 by the dishonesty of the cashier. The defalcation was discovered in November, but had extended over a period of six years.

The private banking house of Gardner, Morrow & Co., at Holidaysburg, the oldest in central Pennsylvania, closed its doors Sept. 18.

Silk Manufacture.—The Bureau of Industrial Statistics rendered a report which shows that there are 65 silk manufacturing plants in Pennsylvania, with a total of 557,412 spindles and 305 hand looms. These establishments give employment to 13,815 persons, who were employed a total number of forty-eight weeks during the year. The aggregate amount of wages paid out in the manufacture of silk in the State in 1896 was \$4,082,292.08, a *per capita* of \$295.50. This is exclusive of salaries of clerks, salesmen, and officers or members of the firm. The gross value of the product for the year is placed at \$24,184,583.84.

Coal.—The output of anthracite coal in Pennsylvania increased from 46,358,144 long tons in 1894 to 51,783,122 long tons in 1895. The value increased only about \$3,500,000—from \$78,488,063 to \$82,019,272, showing that anthracite coal was cheaper in 1895 than in 1894. The product of bituminous coal increased from 39,912,463 to 50,617,446 short tons, valued at \$35,902,678.

Land Warrants.—The Board of Property has decided that where a warrant for vacant land has been granted by the Commonwealth and a return of survey made in pursuance of such grant there can be no forfeiture of the rights of the warrantee, even though a patent has been granted, unless it shall appear that fraud has been committed to secure the warrant. The board also decides that where a warrant has been granted for vacant land, a return of survey made, and only a portion of the purchase money paid, there can be no forfeiture to the State by reason of failure of the warrantee to pay the remainder of the purchase money.

Historic Building.—On the anniversary of Washington's second inauguration, the apartments where it took place were opened by the Pennsylvania Society of Colonial Dames, restored to what they were at that time. The room was originally the Senate chamber of the United States. The building, which the city has turned over to the society, is at the southeast corner of Sixth and Chestnut streets and adjoins Independence Hall.

Statues Unveiled.—An immense crowd of veterans of the late war and others gathered on the battlefield of Gettysburg, June 5, to see the unveiling of the equestrian statues erected by the State of Pennsylvania in honor of Gens. George G. Meade and Winfield S. Hancock. The work was begun about two years ago, under the direction of a com-

mission, of which Gen. J. F. Taylor was president, and has cost over \$100,000. The Hancock statue stands on a hill nearly opposite the National Cemetery gateway. It is ten feet high, and stands on a pedestal of blocks of granite, the whole 17 feet long, 10 wide, and 12 feet high. The horse and rider face the southwest, and Gen. Hancock appears to be directing the movement of the troops in that line. The statue to Gen. Meade stands on an elevation west of his headquarters and near the "bloody angle." It is almost 15 feet long, 8 feet wide, and 10 feet high.

Delaware River.—A conference was held in July of representatives of the Government, the city of Philadelphia, and commercial bodies in reference to the expenditure of the municipal appropriation of \$500,000 for the improvement of the Delaware river channel. The recently authorized city loan of \$2,000,000 sets aside half a million for work on the river. It was practically decided to begin work on the channel as soon as possible, and the general opinion was that as soon as the extensive operations planned are completed Delaware river will be adequate for all the commercial necessities of the port.

Political.—The Republican State Convention met, April 23, in Harrisburg, with 289 delegates. Those from some of the counties had been instructed for McKinley, but the majority were for Quay. In the only case of contesting delegations the Committee on Credentials reported in favor of the Quay delegates, and the report was adopted by a vote of 200 to 72. Auditor-General Mylin was made permanent chairman. The platform began as follows:

"For fidelity to the principles of Republicanism Pennsylvania holds the first rank among all the States. Year after year it has returned great majorities for the candidates of that party, with no selfish demands for recognition of any of its own citizens as a national candidate. The time has come when the State, which has so long and faithfully led the Republican column, may justly and properly submit its own preference for the Republican nomination for the presidency. In the presentation of the Hon. Matthew Stanley Quay, the Republicans, not alone of Pennsylvania, but of the entire Union, will recognize one of their foremost leaders, wise in counsel and brilliant and able in action, at once the type of the American citizen, scholar, soldier, and statesman."

After declaring for protection and reciprocity, it said on the currency question:

"The Republican party has always maintained the national honor and credit. It enforced the resumption of specie payments. It kept faith as to every debt created for the preservation of the Union, and has paid the greater part of it in accordance with the spirit and the letter of the laws under which it had been contracted. It largely reduced the interest charges upon the balance of the debt by refunding at lower rates. It substituted for the fluctuating and inadequately secured notes of State banks a uniform national currency of stable value, and of equal purchasing and debt-paying power. Faithful to its record, believing that the people are entitled to the use of the best money, and anxious to restore and preserve the industrial and commercial prosperity of the Union, the Republican party favors international bimetallicism, and until that can be established upon a secure basis opposes the coinage of silver, except upon Government account, and demands the maintenance of the existing gold standard of value."

It called for liberal pensions and restricted immigration, and on State issues said:

"We reaffirm the declarations contained in the State platform of 1895, looking to needed reform

in State and municipal government, and to the purification of elections and the exercise of the elective franchise. We earnestly recommend to the consideration of the next Legislature the several reform bills promulgated by the Republican State Committee."

An amendment instructing the delegates to support McKinley "in the event of the retirement of the Pennsylvania candidate for President indorsed this day, Hon. Matthew Stanley Quay, after all honorable means have been exhausted to promote his nomination," was defeated by a vote of 178 to 65.

Senator Quay was re-elected State chairman.

The candidates chosen for Congressmen at Large were Galusha A. Grow and Samuel A. Davenport.

The State Democratic Convention was held at Allentown, April 29. A large proportion of the county conventions had declared against the unit rule, but it was put into the platform and retained against considerable opposition. The platform says:

"We call the attention of the country to the fact that the present Congress, with its Republican majority of more than two thirds in the House of Representatives and its control of the organization of the Senate, has utterly failed to legislate for relieving the people from the distressing effects of the money panic brought on chiefly by the loss of confidence in the ability of the Government to maintain its credit under the terrible financial burdens imposed by vicious Republican laws, and has designedly neglected to fulfill its pledges to the people. We demand a repeal of all laws allowing the issue or reissue of greenbacks and Treasury notes of doubtful constitutionality, originally issued under the plea of military necessity and under a pledge of early withdrawal. We believe that the Federal Government should be entirely divorced from the business of banking, and that Congress should enact such legislation as will give to the country a banking currency ample in volume for the needs of business, absolutely secure under every contingency, and at all times redeemable in gold. We are in favor of a firm, unvarying maintenance of the gold standard. We are absolutely opposed to the free coinage of silver.

"We heartily indorse the administration of President Cleveland, and congratulate the country upon the firmness, wisdom, and ability shown by him in all matters affecting the interests of the country.

"The Democracy of Pennsylvania presents to the national convention, as its unanimous choice for the presidency, the name of Robert E. Pattison. Knowing him to be honest, able, unassuming, fearless, a consistent Democrat, and in harmony with the highest purposes of his party, we present him for this nomination to the Democracy of the nation."

Robert E. Wright succeeded himself as chairman of the State committee.

The nominees for Congressmen at Large were John M. Braden and Benjamin C. Potts.

After the Chicago convention, the party in the State was divided on the subject of abiding by the platform and the candidates. There was a demand for the reassembling of the State convention, in order that an electoral ticket in harmony with the action of the national convention might be chosen. The candidates for Congressmen at Large resigned, as did also a number of the electors and the chairman of the State committee. John M. Garman was chosen chairman by the State committee, Aug. 13, and it was agreed that the State convention held at Allentown should be reconvened in Harrisburg, Sept. 10. At that convention the Chicago platform and ticket were approved, and a combination was

made with the People's party, giving them four places on the electoral ticket and one candidate for Congressman at Large—Jerome T. Ailman—already chosen by the People's party. D. C. DeWitt was the other candidate.

Before the vote was taken on the adoption of the platform, Delegate James presented a protest signed by a committee of the Gold Democrats, headed by State Chairman Wright. He was not allowed to read the protest, but he filed it with the secretary. It said, in part:

"We speak for those members of the Allentown convention, constituting a large proportion of that body, who refuse to surrender Democratic principles or to accept the substituted heresies of Populism. We deny the right of this convention to change a line of the body of the Democratic doctrine unanimously proclaimed at Allentown by the authorized convention of our party. We conceive the declarations of the Chicago convention to be unpatriotic, vicious, and undemocratic. On all the pressing questions of the hour they violate Democratic doctrine, falsify Democratic history, and trample on Democratic purposes and aims. If, disregarding our protests and the rights of the Democracy of Pennsylvania, this convention insists upon engrafting these undemocratic doctrines in your platform, we reluctantly, but unalterably, declare that we can not follow it in this dishonorable and disastrous venture."

The Gold-standard Democrats held a conference at Philadelphia, July 17, and appointed a committee to prepare an address to the Democrats of the State. The address said, in part:

"The Chicago convention having thus departed from the Democratic faith and promulgated new and strange doctrines, and having erected within the temple of Democracy a shrine for the worship of false gods, all Democrats are absolved from every obligation to respect or support its revolutionary methods; and as the doctrines announced are dishonest, destructive of national honor and private obligation, and tend to create sectional and class distinction, and engender divisions and hatred and strife among the people, we are bound as true citizens of the republic to repudiate it, and exert every lawful means to insure the defeat of Bryan and Sewall, who have both given their adhesion to its false doctrines."

A State convention was recommended, and one was afterward called and met at Philadelphia, Aug. 25, when delegates to the Indianapolis convention and presidential electors were chosen. After condemning the action of the Chicago convention and declaring allegiance to the Allentown platform, the resolutions said:

"When we observe that this betrayal of the Democratic party has been supplemented by an alliance largely brought about by the solicitation of the Chicago nominee for President and the party organization created by the convention with organizations openly avowing the purpose to destroy the Democratic party, to revolutionize the Government, to confiscate the property of its citizens and to arbitrarily divide it among the thrifty and unthrifty, and when we find a majority of our constituted State organizations deserting Democratic principles for the selfish purposes of success, we declare there is no alternative for the preservation of Democracy other than the nomination by the national Democratic party in convention assembled in Indianapolis of Democratic statesmen for President and Vice-President on a sound-money Democratic platform."

The candidates for Congressmen at Large were B. C. Potts and H. Walker, Jr.

At the convention of the People's party, held at

Pittsburg, Aug. 5, resolutions were adopted approving the Omaha and St. Louis platforms and the action of the St. Louis convention in nominating Bryan and Watson. The platform also denounced the Pennsylvania State Legislature for passing alleged bills against independent pipe lines and in the interest of traction-line monopolies. It condemned the issuing of interest-bearing bonds and the repeal of the Sherman law. It advocated fusion with silver Democrats, and closed with a resolution threatening repudiation of the State Democracy unless it got rid of its traitors. J. T. Ailman and J. P. Correll were nominated for Congressmen at Large. J. E. Leslie was unanimously elected State chairman.

The State Prohibition Convention met in Philadelphia, May 6, with 400 delegates present, of whom 60 were women. A. A. Barker and J. S. Kent were nominated for Congressmen at Large.

The platform favored equal suffrage; the election of the President, Vice-President, and United States Senators by direct vote of the people; the control and, if necessary, the ownership by the Government of railroads and telegraphs and telephone lines; opposed trusts and combinations of capital and the granting of public money for sectarian schools; favored arbitration as a remedy for the differences between capital and labor; said that the tariff on imports should be limited to the difference in the cost of labor in this and competing countries; demanded stricter immigration laws and that "the currency of the nation should be issued by the General Government without the intervention of individuals or corporations, and should consist of legal-tender Treasury notes."

Later, J. S. Kent's place on the ticket was taken by G. Alcora. Mr. Kent was nominated by the Free-silver Prohibitionists, who held a convention in Harrisburg, Aug. 5. I. G. Pollard was their other candidate for Congressman at Large. The platform reaffirmed the principles adopted by the national convention at Pittsburg in May. It favored amendments to the State laws "governing the distribution of real and personal property of persons dying intestate, so that the wife's interest in the estate of her deceased husband shall be the same as he would have in her estate were she deceased."

The vote of the State in November stood: McKinley, 728,300; Bryan and Sewall, 427,127; Bryan and Watson, 6,103; Palmer, 10,921; Levering, 19,374; Matchett, 1,683; Bentley, 870.

The Republicans elected their candidates for Members of Congress at Large, and those in all the districts except three.

In the Legislature there will be on joint ballot 275 Republicans and 39 Democrats.

PERSIA, an absolute monarchy in Asia. The throne is hereditary in the Shiite dynasty of the Kajars, a family of Turkish origin, descended from Agha Mohammed, who established himself on the throne in 1794 after a long civil war. The family now has several thousand members. The Emperor, whose title is Shah in Shah, or King of Kings, was at the beginning of 1896 Nasreddin Pasha, the fourth of the Kajar dynasty, who came to the throne in 1848 at the age of seventeen. The Shah has power to select his heir from among his sons irrespective of the Mohammedan law of succession. Muzaffereddin, who was named Valiahd or heir apparent by Nasreddin, was born March 25, 1853, of his Kajar wife. Nasreddin in 1893 revived the office of Sadrazam or Grand Vizier, appointing Mirza Ali Ashgar Khan, Amin-es-Sultan, who directed the departments of finance, the treasury, and customs. Previously the Shah had acted as his own Vizier, and had disposed of the public revenues at his pleasure. He had instituted a Cabinet

divided into departments after the model of European governments, but exercised personal supervision and control over each of them. The revenue in 1894 was 68,420,000 krans, equal to \$6,842,000. There is a foreign debt of £500,000, raised in England in 1892 and guaranteed by the customs re-

THE LATE SHAH.

ceipts of the province of Fars and the ports of the Persian Gulf, bearing 6 per cent. interest, and payable in forty years. Military service has been obligatory since 1875, but the irregular cavalry troops commanded by the chiefs of tribes are the only forces of any value, except the Shah's bodyguard of picked men, trained and commanded by Russian officers. There are 60,000 Wernld rifles in the arsenals and 74 Uchatius cannon.

Area and Population.—The country is estimated to have an area of 628,000 square miles, much of it desert. The population is estimated at 9,000,000, including 1,909,700 nomads. Teheran, the capital, has about 210,000 inhabitants, and Tabriz 180,000. About 8,000,000 of the Persians are Shiite Mohammedans, 800,000 are Sunnites, and there are 45,000 Armenian Christians, 25,000 Nestorians, 25,000 Jews, and 9,000 Guebres or Parsees. Of the nomads 720,000 are Turks, 675,000 Kurds and Leks, 260,000 Arabs, 234,000 Lurs, and 20,700 gypsies and Beluchis.

Commerce and Production.—Persia produces wheat, barley, rice, fruits, and gums. The chief exports are dates, opium, raw cotton, silk, wool, carpets, sheepskins, pearls, turquoises, gums, cereals, rice, and tobacco. The foreign trade was formerly controlled largely by the merchants of Bombay and London. Since the establishment of steam communication between northern Persia and Moscow and the development of Russian manufacturing industries the trade has been diverted in a great measure to Russia. The Russian Government grants a bounty on exports of cotton goods to Persia when Khorassan raw cotton is purchased with the proceeds. The total value of Persian foreign commerce for 1895 was estimated at 390,000,000 krans, the present gold value of the kran being under 10 cents. The chief imports are cotton goods, paper, iron and copper wares, sugar, kerosene, candles, and China tea. The green teas of India are no longer imported. The estimated values of the principal exports in 1894 were: Opium, £578,000; pearls and pearl shells, £219,000; carpets and woolen fabrics, £148,000; fruits and plants, £73,000; cotton fabrics, £68,000; cereals and legumes, £64,000; wool, £63,000; skins, £39,000; tobacco, £36,000; dates, £34,000; arms, £30,000; gum, £25,000; cotton, £21,000; drugs, £20,000.

The New Shah.—On May 1 the Shah was shot dead when entering a shrine near Teheran by an assassin disguised as a woman. The murderer was a *mollah* named Mohammed Reza, an adherent of Jemaledin, whose seditious teachings caused him to be banished from Persia in 1891, both members of the Babi sect of religious and political reformers. Nasreddin had seriously impaired his authority and alienated his subjects by his sale in 1891 of the tobacco monopoly to English speculators. Although this concession was revoked, the revolutionary spirit was not allayed, and popular discontent has been aggravated by dearth of provisions in different provinces. Recently the excessive issue of copper coins operated to make food dear. The Sadrazam obtained advances of money from the banks to pay the troops and thus insure their loyalty. Russia posted corps of observation on the frontiers and offered military assistance in case of disorder. There were disturbances in some of the cities that were quickly suppressed. The most serious trouble was created by the turbulent nomadic tribes of the south, with its center in Shiraz, where Zil-es-Sultan, who loyally recognized, his younger brother as the legitimate Shah, restored order in a few days. Muzaffereddin was proclaimed Shah in Shah at once, and was recognized by Great Britain, Russia, and Turkey. Amin-es-Sultan was confirmed as Sadrazam, with full power over the civil and military authorities. The new Shah was enthroned at Teheran on June 8. He announced that henceforth public posts, dignities, and military titles, as well as decorations, would be granted solely on the merits of the candidates, that no money consideration would be allowed to have any weight, and that he himself would accept no pecuniary presents. One of his first acts was to lighten the taxation on food, which had caused the only disturbances that occurred in connection with his accession. The Shah Nasreddin's murderer was hanged on Aug. 12. The new Shah proclaimed as Valiahd his eldest son, Mohammed Ali Mirza, born in 1875, his mother being a

THE SHAH OF PERSIA.

Kajar princess. The heir apparent, who bears the title Ittehad-es-Sultaneh, was according to precedent appointed Governor of Azerbaijan. On Nov. 24, the Sadrazam retired, and the new Shah announced that he would govern without a Grand Vizier and himself preside over a Cabinet of 12 ministers.

Prince Hussein Mirza Farman Farma was appointed Minister of War; Ali Ghuli Khan, Mukhber ed Dowleh, Minister of the Interior; Abbas Mirza Mulkara, the Shah's uncle, Minister of Justice and of Commerce; Mushir ed Dowleh, Minister of Foreign Affairs; and Abdul Wahab Khan, Nizam ul Mulk, Minister of Finance.

PERU, a republic in South America. The legislative power is vested in a Congress constituted like that of the United States. The provinces are entitled to elect 1 member to the House of Representatives for every 30,000 inhabitants or fraction exceeding 15,000. A department elects 2 Senators if it consists of 2 provinces and 1 Senator for every additional 2 provinces. Members of both houses are elected indirectly for six years and renewable by a third every two years. Every male Peruvian who is married, or is master of a trade, or owns real property, or pays taxes, or can read and write, has a vote. The Senate has 48 and the House 108 members. The President, who must be a Peruvian by birth, resident in the country for ten years before his election, is elected for four years by popular suffrage. The President for the term ending Sept. 10, 1899, is Nicolas de Pierola. The Vice-Presidents are Señor Billinghurst and A. Seminario y Vascones. The Council of Ministers in the beginning of 1896 was composed of the following members: President and Minister of the Interior, Antonio Bentin; Minister of Foreign Affairs, M. Porras; Minister of Finance and Commerce, F. Bresani; Minister of Justice and Worship, A. Albaracin; Minister of War and Marine, Col. Ybarra.

Area and Population.—The area of Peru is 463,747 square miles, and the population was 2,629,663 at the last enumeration, made in 1876. The aboriginal Indians make 57 per cent. of the total, cholos and zambos 23 per cent., and descendants of Spaniards, together with 18,082 Europeans and 50,032 Chinamen and other Asiatics, 20 per cent. Lima, the capital, had 103,956 inhabitants in 1896.

Finances.—The budget for the period from March 1 to the end of 1896 makes the revenue 8,405,921 sols, of which 5,220,933 sols are customs duties, 1,611,425 sols taxes, 500,000 sols proceeds of the salt monopoly, and the rest departmental taxes, post-office receipts, etc. The expenditure is reckoned at 9,293,433 sols. A 6-per-cent. loan of £11,141,380 raised in England in 1870, and a 5-per-cent. loan of £20,437,500 contracted in 1872, make up the foreign debt of £31,579,080. They were secured on the guano deposits, now in the possession of Chili, and on the general resources of the Government. The arrears of interest accumulated since 1876 amounted to £22,998,651 in the beginning of 1890, when by the Grace-Donoughmore agreement the bondholders released the Government in consideration of a cession of the railroads, mines, guano deposits, and lands of the state for the period of sixty-six years. The bonds were exchanged for new certificates of the Peruvian Corporation, limited, with headquarters in London. This company being unable to pay the coupon due on April 1, 1896, the debenture holders met and agreed to accept 2 per cent. per annum for that coupon, 3 per cent. for succeeding ones up to 1901, and then 4 per cent., on the understanding that the company shall pay no dividend in any year without making up the interest on the debentures to 5 per cent., and not more than $\frac{1}{4}$ of one per cent. on the preference stock only, unless 6 per cent. is paid on the coupons.

The internal debt, on which the interest was reduced to 1 per cent., amounts to 26,606,450 sols. The bonds were quoted in 1896 at 78 per cent. of

the par value. The old paper money is no longer legal tender, but is exchangeable for internal bonds at the rate of 1 sol for 15 sols of notes and 8 sols for 1 inca. The paper money, when its forced circulation was repealed in 1888, was declared receivable for 5 per cent. of the customs duties at the rate of 35 paper sols for 1 of silver.

Commerce and Communications.—The total value of the imports in 1893 was 10,877,000 sols, and of the exports 17,138,000 sols (1 sol = 53-1 cents). The principal exports are sugar, silver bars and ore, cotton, and wool. In 1895 there arrived at the port of Callao 491 vessels, of 553,403 tons, and departed 481, of 548,797 tons. The state railroads have a total length of 800 miles, and there are 120 miles of private railroads.

The post office handled 4,218,450 letters, etc., during 1894 in the internal and 1,567,083 in the international service; receipts were 973,068 and expenses 1,033,657 francs. The telegraphs have 1,473 miles of lines and 1,675 miles of wire.

Attempted Revolution.—After collecting arms and ammunition from the beginning of the year, obtained from European traders on the Amazon, Col. Teodoro Seminario, one of the leaders in the revolution that upset the dictator Caeceres and placed Pierola in power, issued on May 5 a proclamation declaring the independence of the department of Loreto, near the boundary of Ecuador. He organized a provisional government at Iquitos, raised a military force of 7,000 men, and erected fortifications at Iquitos. His avowed purpose was to establish a new system of federation in Peru. If that failed, the new state might unite with Brazil. The rebels advanced upon Moyabamba, the capital of the department, and captured it on June 2 after a fight with the Government troops. The authorities in Lima did not regard the movement as formidable, except as a symptom of the general dissatisfaction and disorganization of the country; but the seat of the revolt was most difficult of access. The troops of Col. Seminario, a great part of them raised by impressment, were armed with old-fashioned weapons. He fitted out a small steamer for service on the Amazon, where the sympathy of the people was with the revolutionists. The rebels were thus able to obtain a supply of Mauser rifles and some machine guns before the Brazilian Government interfered to stop the passage of arms up the Amazon river. President Pierola, obtaining a credit of 200,000 sols, sent two overland expeditions to the revolted province. They had to make a march of nearly 1,000 miles over difficult mountain routes and to carry with them Gatlings and parts of steamboats, to be put together on the streams beyond the mountains. The Brazilian Government gave loyal support to the Peruvian authorities by ordering all officials on the upper Amazon to suspend commercial and other relations with the revolutionists, and by granting permission to the Peruvian troops to traverse Brazilian territory, without which they would scarcely be able to reach their objective point. The Minister of War, Col. Ybarra, set out on the transport "Constitucion" with 500 men and superior munitions of war to sail round by the Straits of Magellan and ascend the Amazon to the seat of the rebellion, which Peru was authorized to do by a treaty with Brazil. Before any of the Peruvian forces arrived Seminario sent Burgo Cisneros, one of his ministers, to Lima to make terms with President Pierola. The revolutionary leader sent a message to the President saying that he did not want bloodshed, though he was prepared to resist attacks; he wanted reforms in Loreto, and appealed to the patriotism of the President to grant them, but would refrain from waging a fratricidal war. President Pierola sent a reply on July 7, informing

Seminario that he must hand over the government of Loreto to the Peruvian consul at Pará, who was dispatched at once to take over provisionally the administration of the department until the arrival of the Minister of War. Pierola promised to ask Congress to grant amnesty if Seminario obeyed his orders immediately. Seminario, announcing that he abandoned his idea of federation and desisted from the purpose of resistance because he found that the Peruvian people were not with him, fled into Brazil, leaving an empty treasury for the Government commissary. Brazil had sent a force to the frontier to disarm any revolutionists who entered Brazilian territory. Consul Lopez arrived in Iquitos and assumed control before the end of July.

Political and Financial Affairs.—To meet the expenses of the expeditions for the suppression of the revolt in Loreto the Peruvian Government farmed out to a joint-stock company for one year the taxes on tobacco, opium, spirits, and stamps, the company agreeing to pay the Government 135,000 sols a month and half the receipts above that sum. A more formidable and general conspiracy for the overthrow of Pierola was going on at the time of the separatist movement in the northern province. The impotence of the Pierola administration, financial difficulties and political anarchy, the inability of the Government to control corrupt officials and an unruly soldiery, and its helplessness in relation to foreign creditors and *concessionnaires* and to the Chilean Government, which still retained possession of the provinces of Tacna and Arica, and would offer no satisfactory proposal for determining their future ownership, which should have been done by a *plébiscite* in 1894, according to the treaty—all these conditions were favorable to an attempt of Caeceres, who was in exile in Buenos Ayres, to start a revolution with the aid of his powerful friends and the wealth that he acquired while President. The Government was aware that a conspiracy was on foot for a long time before the police on July 11 arrested Dr. la Mar and captured documents implicating well known citizens, army officials, and ex-officials. Shortly afterward an Indian uprising was threatened in Chanchamayo and Perene, but order was quickly restored by the troops.

Congress was opened on July 28. President Pierola declared that Peru would exact from Chili the fulfillment of the terms of the treaty of Ancon, concluded in 1883, respecting Tacna and Arica. Congress passed a vote of censure upon the Cabinet, which therefore resigned. A new ministry was formed on Aug. 8, as follows: Premier and Minister of Justice, Manuel Olacchia; Minister of Foreign Affairs, Enrique Riva Agüero; Minister of Finance, Ignacio Rey; Minister of War, Juan Ybarra; Minister of the Interior, José María la Puente; Minister of Industry, Manuel J. Cuadros. The budget, as revised by the new Minister of Finance, showed a deficit of 719,264 sols. He promised a plan to cover it that involved neither a loan nor an increase of taxation. A law was passed holding every minister directly and personally responsible for all expenditures that he orders, and directing that a strict account be kept of all money received and paid out in each department. To work the valuable petroleum deposits that have been discovered near Zorritos important concessions have been granted to a French company. Gold discoveries were made in the region where Seminario's revolutionary uprising took place. Still more promising mines were opened in Sandia and Carabaya, in the extreme southeastern part of the republic. Several railroad concessions have been granted, including one for opening up and colonizing the country between Iquitos and Chanchamayo, at the head waters of the Amazon.

American missionaries have raised a complaint that the authorities of Peru refused to register and legalize marriages between Protestants in Peru, as also those of Ecuador and Bolivia. A bill was promised that will legalize such marriages. In September a mob threatened the American missions in Cuzco, and soldiers were ordered out to protect them.

PHILIPPINE ISLANDS, a colony of Spain in the East Indies. The Philippine Islands are over 400 in number, all of small extent except Luzon, 40,024 square miles, and Mindanao. Manila, the capital city, has 154,062 inhabitants. There is a considerable Spanish population and a large population of Chinese. The native inhabitants are of the Malay race, with some tribes of Negritos. One seventh of the population consists of unconquered tribes. The revenue was estimated for 1895 at £2,715,980, and expenditures at £2,656,026. There is a duty on tobacco exported, and heavy import duties are levied on all imports, as high as 100 per cent. *ad valorem* on petroleum and cotton cloth. The value of the imports in 1894 was \$28,529,777, and of exports \$33,149,984. The values exported of the principal commercial products were: Ma-

ried on as flourishing a trade as has ever existed under Spanish rule. The planters are mostly mestizos, some of whom are very wealthy. The half-castes furnish also the educated and professional class, and the minor offices are filled by them. The superior officials are Spaniards, whose eagerness to amass wealth and return to Spain is the cause of much corruption and oppression. The actual rulers in the interior are the Spanish monks, who have often stood between the people and extortionate officials, but have often proved harsh and exacting masters and avaricious for the sake of the Church. The Spaniards are mostly found in the citadel called Old Manila, whose 12,000 inhabitants are either Spaniards or persons in the employ of the Spanish Government. In the other towns a Spanish governor and his staff, with a garrison of a few hundred native soldiers under Spanish officers, have been sufficient to keep the people in subjection. The soldiers of the Philippines are mestizos. The military forces have consisted of about 3,000 Spanish and 18,000 native troops. The captain general in the beginning of 1896 was Marshal R. Blanco y Arenas, Marquis of Peña-Plata. The natives rose in 1872 against the Spaniards, but the rebellion

THE HARBOR OF MANILA, PHILLIPPINE ISLANDS.

nila hemp, \$14,517,000; sugar, \$10,975,000; tobacco, \$3,159,000; cocoanuts, \$2,349,000; coffee, \$356,000; coal, \$350,000. There were 97,787 tons of Manila hemp, 261,686 tons of sugar, 307 tons of coffee, and 11,525 tons of copra produced in 1893. In that year 230,616 quintals of leaf tobacco and 138,438,000 cigars were exported.

The Philippines have been subject to Spain since 1660, but Spanish rule was not generally acknowledged till 1829, and to this day the Negrito tribes in Mindanao and in the wooded and mountainous parts of the other islands have no communications with the Spaniards. There are many wealthy Chinese who monopolize the trade of the islands, buying from the planters and sugar-makers to sell to Europeans and Americans. Chinese merchants were established there many centuries before the islands were discovered by Magellan, and they car-

ried on as flourishing a trade as has ever existed under Spanish rule. The planters are mostly mestizos, some of whom are very wealthy. The half-castes furnish also the educated and professional class, and the minor offices are filled by them. The superior officials are Spaniards, whose eagerness to amass wealth and return to Spain is the cause of much corruption and oppression. The actual rulers in the interior are the Spanish monks, who have often stood between the people and extortionate officials, but have often proved harsh and exacting masters and avaricious for the sake of the Church. The Spaniards are mostly found in the citadel called Old Manila, whose 12,000 inhabitants are either Spaniards or persons in the employ of the Spanish Government. In the other towns a Spanish governor and his staff, with a garrison of a few hundred native soldiers under Spanish officers, have been sufficient to keep the people in subjection. The soldiers of the Philippines are mestizos. The military forces have consisted of about 3,000 Spanish and 18,000 native troops. The captain general in the beginning of 1896 was Marshal R. Blanco y Arenas, Marquis of Peña-Plata. The natives rose in 1872 against the Spaniards, but the rebellion

and especially the penalty of confiscation that the authorities enforce frequently and arbitrarily, suddenly stripping of all their possessions active and prosperous men who have fallen under their ban or perhaps excited their cupidity. The Cuban insurrection seemed to offer to the natives an opportunity to throw off the Spanish yoke. The spirit of rebellion was everywhere rife, and the friends of revolution were sure of the sympathy or support of the whole Malay and mestizo population, of the native army, and of the Chinese and Japanese and most of the European mercantile community.

A secret revolutionary society was formed, denoted by the Spanish officials as Free Masons. The object was to drive the Spaniards from the country and set up a republic. The movement was directed from Hong-Kong, where the headquarters of the society were established. There were other leaders in Japan and in Spain, and a connection was formed with some of the Cuban revolutionists. One of the features of the conspiracy was the signing of blood brotherhood between the members, done by making an incision in the left arm or left knee with a penknife and signing a compact with the mingled blood. The plot was as secret, deep-laid, widely ramified, and bloody as any of the characteristic Malay conspiracies. The plan was to fall suddenly upon the Spanish posts and convents and massacre all the officials and priests, and then invest the fortress at Manila and reduce it before the Spanish Government could send relief. The secret was revealed by the wife of Pedro Roxas, the most liberal financial supporter and the most ambitious leader of the revolution, who aspired to be president or emperor of the new nation. The woman disclosed the plot to a priest in the confessional, and he communicated it to the Governor, Marshal Blanco, who sent a request to Madrid for re-enforcements, ostensibly to cope with the Malays of Mindanao, who had been in rebellion for months and held the whole country outside of the Spanish lines. The authorities proceeded to make wholesale arrests among the ablest, richest, and best educated people of the islands. Pedro Roxas and his cousin, F. L. Roxas, two of the wealthiest planters of the Philippines, were arrested and their property was confiscated. Among the 300 persons arrested was an American, Thomas T. Collins, who had an old claim against the Spanish Government for arbitrarily destroying his business and confiscating his assets in 1874. In Spain members of the Philippine Club, of Madrid, and other persons connected with the islands were placed under arrest. The Government dispatched at once 2,000 re-enforcements. The existence of a vast organization of secret revolutionary societies to secure liberty for the Philippines, having newspaper organs in Hong-Kong and Yokohama, branches in Manila, Iloilo, and Cebir, and agents in Madrid, New York, and San Francisco, was asserted in a newspaper of Saragossa just before the outbreak. The plan of the Manila conspirators was to murder Capt.-Gen. Blanco on Sept. 15, and to massacre the officials and seize the town, and, if possible, the citadel on the occasion of his funeral.

The arrest of the leaders precipitated the insurrection, which broke out on Aug. 20 in the suburbs of Manila, Calcoan, Santa Mesa, Pandacan, and Maytubig. The insurgents planned to seize the electric-light works, and to massacre the Spaniards after throwing the city into darkness. The Spanish Governor enrolled volunteers, and English and other foreigners formed a corps to assist the troops in defending the city. The Government forces were stronger and better armed, and after three days of fighting, in which many fell on both sides, the rebels retired into the provinces. Fresh arrests

were made every day among the citizens of Manila, and under martial law prisoners were brought out and shot in sight of the people on the public plaza. The prisons of Manila were crowded, and between 300 and 400 prisoners were deported to the Caroline Islands. About 4,000 poorly armed rebels were driven into the mountains, where fresh recruits joined their ranks daily. They took possession of Cavite, the Spanish naval station, 8 miles from Manila, where they obtained a supply of Mauser rifles, and of Matabon on the other side, and held all the provinces beyond. The immediate vicinity of Manila was held by the Spaniards, who concentrated all their forces there that were not shut up by the rebels in the citadels of the provinces. In their attacks on the suburbs of Manila, the last one of which was made on Aug. 30 by 2,000 men, who were repelled with a loss of 60 killed, the rebels discriminated between foreigners, whom they had no desire to injure, and the Spaniards, whom they treated everywhere with indescribable cruelty. The Spaniards, who were instructed from home to show no mercy, committed atrocities as horrible and malignant as the ingenious cruelties of the Malays. They confined 169 prisoners in a dungeon under the bastions of the fort of San Sebastian, where the rising of the tide stopped the small ventilating aperture, with the result that 54 were smothered to death during the night and 16 succumbed later. Other prisoners were packed so closely on steamers that many perished of suffocation. The tortures of the Spanish Inquisition, such as the thumbscrew, the dripping of water drop by drop on the head, driving nails through the fingers, etc., were practiced on prisoners to extort confessions. On both sides such Oriental horrors as mutilation and disemboweling alive were common. The Spanish troops cut down a native band that had surrendered, in retaliation for which a Spanish lieutenant was seized by a mob of Indians and, his native bodyguard deserting, was pinned to a tree and tortured to death and his wife and daughter were maltreated. The Spaniards disabled their native foes by shooting them in the legs in order to subject them later to torture. The most shocking barbarities were committed on the friars who fell into the hands of the revolutionists, who dismembered some, a limb each day, and hung others to trees, saturated their clothing, and set them on fire. Such was the fate of nearly 100 Dominican monks and others. After a while the Spaniards took no prisoners in their skirmishes with the rebel forces, killing all who surrendered. The arrests were continued in the capital, and every other day prisoners were shot in public in order to spread terror among the native population. On one morning 30 were shot. The Chinese merchants departed for Singapore and Hong-Kong as fast as the steamers could carry them. On Sept. 11 were shot 13 native Government officials, rich proprietors, professional men, and merchants.

Although the regular garrison was strengthened by 1,700 Spanish volunteers, Gen. Blanco would not venture to attack the rebels who concentrated in Cavite, for fear that the native troops would revolt in a body. These troops were not taken into action, because they were reluctant to fire upon their own people, and escaped when they got a chance to join the insurrection. Weapons were supplied to the rebels by merchants of Hong-Kong, Amoy, and Singapore after the insurrection started, until they had about 8,000 Mauser rifles, besides old ones and the long knives called *bolos* in abundance. There were 25,000 or more insurgents under arms in the provinces of Cavite, Bulacan, Pampanga, Nueva Ecija, Tarlac, Laguna, Batangas, and Manila. The Spanish gunboats bombarded Imus and other places where movements of the rebel forces could be de-

tected. After the beginning of September the troops began to make reconnaissances in Cavite. When re-enforcements came from Mindanao the garrison at San Indro, in Nueva Ecija, was relieved. The rebels led by Santallano captured the town of San Isidor and made the governor a prisoner. An attempt to capture a Spanish gunboat in the harbor of Cavite was frustrated by the firing of artillery, which killed some of the attacking party and sank shipping. On Sept. 21 Gen. Blanco issued a decree directing that all the property of persons implicated in the rebellion be forfeited for the benefit of the Government. The Madrid Government made preparations to send 8,000 additional troops to the Philippine Islands. In October, after the arrival of re-enforcements from Spain, Gen. Blanco set out with 3,000 European troops and several thousand natives to clear the inland districts of rebels, preparatory to attacking the focus of the rebellion in Cavite, where the insurgents numbered 12,000. The rebels seized Talisay, defeating a body of troops sent to its relief, and compelled Gen. Blanco to alter his route to meet their advance. Numerous engagements were fought in the province of Nueva Ecija, where about 1,000 rebels were killed. Gen. Echaluce and other commanders made prisoners of all persons suspected of sympathizing with the rebellion, but the prisoners were all killed instead of being sent to Manila. A large force of Spanish troops made an attack on Novaleta on Nov. 8, but could not carry the fortifications, although they killed 400 rebels. They repeated the assault on Nov. 11, and were repelled with a loss of 200 men. At Santa Cruz de Laguna, Gen. Aguirre defeated a force of 4,000 rebels, killing a large number, including Francisco Abad, the commander. The town of San Juan was captured from the rebels at the point of the bayonet. Another victory was won at Angrat. These slight successes did not prevent the rebellion from spreading and the rebel army in Cavite from growing until it numbered 50,000, though the revolutionists had no strategic leaders capable of organizing and uniting this force for effective action and were weakened by internal rivalries and dissensions. On Dec. 9 the 150 prisoners confined in Cavite castle made their escape. Gen. Blanco failed in his advance upon the rebel positions in Cavite province. One column, 3,000 strong, was checked and had to retire with a loss of 194. Another column carried one of the enemy's intrenchments, and on the next day it was driven out with a loss of 400 men. As the insurgents occupied impregnable positions with an army of 10,000 men, the operations were suspended. The Spanish troops were withdrawn from this ineffectual campaign in December, as the country was

full of sedition and the situation too precarious to have them away from the central stronghold. In Mindanao some of the Spanish troops revolted. A European committee of protection was formed at Manila. The native priests began to preach war against Spain. The Madrid Government recalled Gen. Blanco and sent out Gen. Polivieja to take command, and he arrived in the middle of Decem-

AN IFUGAO INDIAN, PHILIPPINE ISLANDS.

ber. He formed a plan to hem in the insurgents in Buluyan, Batangas, and Laguna, and finally to surround and destroy the main body in Cavite. Re-enforcements numbering 15,000 men were sent out from Spain. The Cavite insurgents had then completed formidable intrenchments at Alfonso Doce, Amadeo, and Narigondon. The new Spanish commander initiated vigorous measures for dealing with suspects, ordering that only prominent leaders should be brought to Manila for trial, while all others should be tried by court-martial and summarily executed where they were captured. He sent out columns that carried on a vigorous campaign. The brigade of Gen. Rios attacked Balinag, on the borders of Bulacan and Nueva Ecija, which was held by a strong rebel force, which was driven out with a loss of 350 killed. Later he attacked the fortified position of Santa Maria, in Bulacan, and after cannonading it drove out the defenders at the point of the bayonet, killing 1,200 rebels, but losing very heavily himself. Among the rebels were a great number of deserters from the army. Another

victory was won by hard fighting at the heights of Caearon, where a rebel cartridge factory was found and a large quantity of munitions was taken. After losing 600 men in the bombardment and assault, the rebels formed an ambuscade in the bush for the pursuing Spaniards, whose commander suspected such a design and set the woods on fire before attacking, causing 200 deaths from fire. The fleeing insurgents were outflanked by another column and were utterly routed, losing 500 more. These victories severed communications between the rebels in Nueva Ecija and Bulacan and those of Cavite and prevented rebels of Manila from joining the armed force in Bulacan. Aguinaldo, who intended to form a junction with the army raised in Bulacan, was compelled to retire from Pasig into Cavite, and was afterward superseded as commander-in-chief of the rebels by Andres Bonifacio. Many rebels of Bulacan embraced the offer of amnesty.

Dr. José Rizal, who escaped at the beginning of the rebellion on a Spanish steamer, on board of which he was arrested at Barcelona on Oct. 4, was brought to Manila for trial, sentenced to death, and shot on Dec. 29. He was the author of the constitution of the Philippine League. Pedro Roxas was also shot, not publicly in Manila, but at Agana, the capital of the Mariana Islands, where 83 exiled political prisoners were killed by their guards, who reported that they had attempted to escape. At the end of the year 80 prominent suspects of Luzon, including several priests, were sentenced to death. At the same time Gen. Polivieja issued a proclamation offering amnesty to all who surrendered within eleven days.

PHYSICS, PROGRESS OF, IN 1896. Constitution of Matter, etc. *Matter and Energy.*—Ostwald, in an address on "Scientific Materialism," delivered at Lübeck in September, 1895, and published in the "Zeitschrift für physikalische Chemie" (XVIII, p. 305), states his belief that the explanation of natural phenomena by describing the motion of atoms must be given up and a better one substituted. He would represent all phenomena by conceptions of energy alone, matter being, according to his view, nothing but a group of different energies arranged in space. He regards the identification of different energies with the mechanical form as a step in the wrong direction, and would make no hypothesis regarding their connection except that which is specified in the law of conservation.

Absorptive Force.—Müller-Erbach (Wiedemann's "Annalen," August) says that he has proved that absorptive force—for instance, that which is exerted by a solid on a vapor—may act across a thin layer of a perfectly neutral substance, such as water. It therefore differs from other forms of molecular attraction in being able to act at an appreciable distance (not exceeding 0.0025 millimetre) across intervening bodies.

Metallic Structure.—Charpy (Paris Academy of Sciences, July 27) has tested the suggestion of Hartmann that metals, in spite of their heterogeneous structure, behave under stress as homogeneous bodies, and finds that, on the contrary, displacements vary from point to point according to the microscopic structure.

Mechanics. Pendulums.—Lippmann (Paris Academy of Sciences, Jan. 20) has studied the conditions necessary for keeping up the motion of a pendulum without interfering with its time of oscillation. That a given instantaneous impulse, as in a clock, should not disturb the period, it is necessary and sufficient that it should occur exactly at the instant when the pendulum passes through its equilibrium position. Lippmann has succeeded in devising an electrical arrangement that fulfills this con-

dition. Horace Darwin exhibited recently to the London Royal Society ("Nature," May 14) a bifilar pendulum made after a design suggested originally by Lord Kelvin for observing slow tilts and pulsations of the earth's crust. It will show a tilt of less than $\frac{1}{300}$ of a second—an angle less than that subtended by an inch at a distance of 1,000 miles. Tisserand (Paris Academy of Sciences, March 6) reports that the variations in the rate of oscillation of the underground pendulum at the Paris Observatory follow the variations in atmospheric pressure, although an attempt is made to keep the pressure constant around it.

Torsion.—Peddie (Edinburgh Royal Society, March 2) finds that for every wire there is a critical angle such that when the range of oscillation is equal to it the loss of energy per oscillation is totally independent of the magnitude of the initial range and of fatigue. When the range is greater than this angle, the loss of energy is increased by fatigue; when less, it is decreased.

Pressure on a Spherical Shell.—Chree (Cambridge [England] Philosophical Society, Jan. 27) has proved mathematically that in the case of a thin spherical shell that is exposed to uniform but different normal pressures over its two surfaces, the effect of external pressure is to increase any original departure from sphericity, while that of internal pressure is to decrease it.

Motion of Projectiles.—Tait (Edinburgh Royal Society, Jan. 6) has further investigated the path of a rotating spherical projectile, and has deduced mathematically some remarkable paths, some of which are even concave upward. He has succeeded in reproducing some of these experimentally, using a teetotum.

Liquids. Solution.—Donnau ("Nature," May 21) suggests that the dependence of the color of a solution on the nature of the solvent may be due to the fact that absorption of light is a case of electrical resonance, and he deduces mathematically a formula for expressing the fact that, as the index of refraction of the solvent increases, the principal absorption band travels toward the red—a result identical with the law that was deduced experimentally by Kundt. Nicoll (Edinburgh Royal Society, Feb. 3) has determined the molecular volume of iodine in different solutions, and finds that it is constant at about 85°, whether the molecule is of the form I_2 or I_4 . He concludes that the molecules in the gaseous form and in dilute solution are truly comparable. Loomis ("Physical Review," January-February) has studied, by improved methods, the lowering of the freezing point of a liquid by the presence of a dissolved salt, and finds in general that his results agree with the theory of electrolytic dissociation. Guntz (Paris Academy of Sciences) accounts for the energetic properties of the residues of metals extracted from their amalgams at a low temperature by supposing that the residue actually consists, for the most part, of the element in the atomic state. This hypothesis is supported by thermo-chemical data.

Density.—Macé de Lépinay (Paris Academy of Sciences, March 9), after weighing a quartz cube in water, finds, as the final result, that the mass of a cubic decimetre of pure water at 4° C. is 0.999954, with a possible error of 6 units in the last figure.

Viscosity.—Thorpe and Rodger (London Royal Society, June 11) have established a relationship between the viscosity of liquids and their chemical constitution. One of the most striking points of connection is the influence exerted by oxygen according to the mode of its association with other atoms in the molecule, hydroxyl-oxygen differing markedly in this respect from carbonyl-oxygen and ether-oxygen from either. In homologous series

the viscosity is found to increase with the molecular weight, and the more symmetrical the molecule of an isomeric compound, the lower the viscosity.

Diffusion of Metals.—Roberts-Austen, in his Bakerian Lecture before the London Royal Society ("Science," June 5), describes his experiments on the diffusion of one metal in another. For molten metals the "diffusivity" measured in square centimetres a day is as follows:

Gold in lead.....	3.19 at 500°.
" " bismuth.....	4.52 " "
" " tin.....	4.65 " "
Silver in tin.....	4.14 " "
Lead in tin.....	3.18 " "
Rhodium in lead.....	3.04 " "
Platinum in lead.....	1.69 " 490°
Gold in lead.....	3.03 " "
Gold in mercury.....	0.72 " 11°

For solid metals the results are as follows:

Diffusivity of gold in fluid lead at 550°.....	3.19
" " solid " 251°.....	0.03
" " " 200°.....	0.007
" " " 165°.....	0.004
" " " 100°.....	0.0002

Fluid Friction.—Umami ("Nuovo Cimento") concludes from experiments on mercury and nickel that finite slipping takes place, in this case at least, at the surface of a solid in contact with a liquid—a vexed question in the theory of fluid friction.

Capillarity.—Linebarger ("American Journal of Science," August) has devised an apparatus for the rapid determination of the surface tensions of liquids, based on Jäger's method of immersing two capillary tubes of different bore and measuring the difference of the depths to which they are plunged when the forcing out of air bubbles at the bottom requires the same pressure in both.

Condensation.—Palmer ("American Journal of Science," October) finds that in a vertical steam jet the surface that separates the invisible from the visible part is sharply marked and oscillates up and down. The demarcation seems to be due to the fact that the instantaneous heat of condensation can superheat the supersaturated steam as it arrives at the surface. The velocity of condensation increases with the pressure, and the amplitude of the oscillations decreases with it.

Critical State.—Barus ("American Journal of Science," July) regards his experiments as proving that there is no "real continuity between CO₂ gas and CO₂ liquid at the critical temperature. There is continuity between the liquid and a gas which preserves the same molecule, the same molecular structure as the liquid from which it issues. Doubtless at still higher temperature the gas with the liquid molecule will break up into the true gas with the gaseous molecule."

Impact with a Liquid Surface.—Worthington and Cole (London Royal Society, Dec. 12, 1895) have studied this phenomenon by means of instantaneous photography, and have thereby added much to the accuracy and fullness of detail of our knowledge of what takes place during a "splash."

Flotation of Metals.—Mayer ("Science," Sept. 4) finds that rings of metal wire, highly polished and chemically clean, will float on water. He regards the phenomenon as dependent on the condensation of a film of air on the metallic surface, for if one of the rings be heated and placed on the water as soon as it is cool it sinks at once.

Gases. Kinetic Theory.—Bertrand (Paris Academy of Sciences, May 4), after a critical examination of Maxwell's formula for the relation between the velocities of the gaseous molecules and their components in any arbitrarily chosen direction, concludes that it is absurd, since it gives an apparent solution of a problem that is, from its nature, insoluble. M.

Bertrand points out that Maxwell, in finding the law of distribution of speed in a system of molecules, assumed that the velocity in any direction was independent of that in any perpendicular direction. This assumption M. Bertrand regards as unjustifiable. Boltzmann (Wiedemann's "Annalen," May) regards the Boltzmann-Maxwell law as a theorem in probability rather than a principle of abstract dynamics, there being nothing to preclude the possibility of the molecules behaving at any instant in a manner quite different from that indicated by the law, although the greater the number of molecules the more improbable does such a departure become. Tait (Edinburgh Royal Society, June 15), in a defense of Maxwell's proof against Bertrand's attack, asserts that the proof involves none of the absurdities charged against it. The gist of the matter, in his words, is this: "There is a *unique* solution of the problem; Maxwell's is *one* solution, therefore it is *the* solution. Del Lungo (Atti dei Lincei) asserts that the independence of distribution of velocities assumed by Maxwell in his proof is a necessary consequence of the conservation of momentum and of energy. The distribution in question, he says, satisfies many conditions that are not satisfied by any other, and that represent closely the phenomena of gases.

Viscosity.—Noyes and Goodwin ("Physical Review," November-December) conclude, from experiments on the viscosity of mercury vapor, that the space occupied by a molecule is of the same order of magnitude as that occupied by an atom, so that viscosity can not be used to determine molecular complexity.

Velocity in Tubes.—Bazin (Paris Academy of Sciences, June 1) finds from experiments that no single expression can be found that will accurately represent the velocity of an air current at any given point between center and circumference of a tube. At a distance from the center equal to three fourths of the radius, the velocity is equal to the mean for the whole tube.

Barometry.—Hefner-Alteneck (Berlin Physical Society, Dec. 13, 1895) has devised an instrument for demonstrating minute changes in atmospheric pressure, which is said to be 150 times more sensitive than a mercury barometer. It consists of a flask whose neck communicates with a horizontal glass tube. The central part of the tube, which bends slightly downward, contains an index of colored petroleum, which moves at the slightest change of external pressure.

Acoustics. Variation of Intensity with Distance.—Shaefer (Wiedemann's "Annalen," April) has proved, by attaching a telephone to a clock and bringing it to different degrees of sensitiveness, that sound does not diminish in intensity strictly with the square of the distance, but at first more slowly and then more rapidly.

Sensitive Flames.—Bouty (Paris Academy of Sciences, Feb. 17) has shown that the nature of the gas that is used affects the sensibility of a sensitive flame to sound. For instance, that of a pure hydrogen flame, which is small, can be increased by addition of an inert gas, such as nitrogen or carbon dioxide. Jastrow ("Science," April 10) uses for the study of sound intensities in his psychological laboratory a singing flame whose intensity can be regulated very delicately by means of a supply valve bearing an index that magnifies the change in the height of the flame 100 times. Hallock, by photographing sensitive flames that are set in vibration by resonators, has been able to obtain a very perfect registration of compound tones, with all their characteristics. He believes that he has proved by this means that the human voice is analogous to a stringed rather than to a reed instru-

ment. His device may be used in tone analysis, and may become a useful adjunct in voice culture.

Resultant Tones.—Everett (London Physical Society, Jan. 24) has propounded a new theory of resultant tones, depending on the fact that while by an analysis of a periodic curve compounded of two simple harmonic motions, only two terms of a Fourier series are obtained, if some error has been made originally in adding the motions, which error is repeated for each wave, then a third term appears, having a frequency that is the greatest common measure of the original two. The "error" in the acoustical case, Prof. Everett supposes to occur during the transmission of the sound by the ossicles of the ear. The theory is supported by the fact that in the violin, where the sound post transmits the sound in some respects like the ossicles, it is easy, by sounding two strings, to obtain tones that agree with the hypothesis.

Heat. Thermometry.—Fessenden ("Nature," Jan. 16) describes a new method of measuring temperature, which he has used for several years. He uses two thermo-junctions, one in the substance whose temperature is to be measured, the other in the bulb of an air thermometer, which contains also a coil of platinum wire connected in series with a carbon resistance and a storage battery. The coil is heated by means of the current from the battery, and its temperature is adjusted by varying the resistance, till the galvanometer shows that the two thermo-junctions are at the same temperature, which is read off on the air thermometer. Some of the advantages are that no assumption is made about variation of thermo-effect with temperature or about variation of voltage with temperature, or with regard to temperature or temperature-coefficient of wires. The apparatus is extremely simple. Parenty and Bricard (Paris Academy of Sciences, April 27) have devised a self-registering thermometer balance, in which the two arms carry respectively a barometer and an air thermometer, both dipping into the same mercury trough. At constant temperature and varying atmospheric pressure the equilibrium is undisturbed, the alterations in the weight of the arms caused by movement of the mercury being the same for each, but with change of temperature the equilibrium is destroyed, and the beam moves. The apparatus can be used also as a thermostat. Harker (London Royal Society, June 18) has determined the freezing point of mercurial thermometers by a new method, in which distilled water is cooled below the freezing point, the thermometer is inserted, and then freezing is brought on by dropping in a crystal of ice. It was found easy to keep the temperature in the freezing vessel constant to one or two ten thousandths of a degree for an hour at a time.

Temperature.—Wäggenner (Berlin Physical Society, Nov. 15, 1895) has measured the temperature of a Bunsen flame with carefully tested thermo-electric elements. He finds that the results are influenced by the thickness of the wires that he uses, the thinnest wire giving the highest values in the outer edge of the flame and in the zone of active combustion, but not in the inner cone. By calculating from the highest results given by four wires of different thicknesses, the value $1,750^{\circ}\text{C}$. was obtained for a wire of zero thickness, and this was taken as the temperature sought.

Specific Heat.—Lindau (Berlin Physical Society, March 13) holds that the specific heat of gases may be determined from their cooling during adiabatic expansion. In opposition to this view, Planck (*ibid.*) points out that the cooling does not depend solely on specific heat, but also on the extent to which the gas differs from a perfect gas. Amagat

(Paris Academy of Sciences, Jan. 13) shows that Joly's determinations of specific heats at constant volume, and those at constant pressure by Lussana, give widely different results when used as bases for computing the ratio of the specific heats of air at 50° under pressures of 1 to 50 atmospheres. He shows that Joly's figures are the more probable.

Fusion.—Demerliac (Paris Academy of Sciences, May 18) has studied experimentally the lowering of the melting point of benzene by pressure. The alteration in melting point for an additional pressure of one atmosphere was found to be 0.0294 , which agrees, within errors of observation, with the alteration that can be deduced from the formula of Clapeyron. Ramsay and Eumorfopoulos (London Physical Society, Feb. 14) have measured the melting points of various substances by means of Joly's meldometer, an instrument that consists essentially of a strip of platinum heated electrically. Small fragments of the substance are placed on the strip and the temperature at which they melt is deduced from the length of the strip. For calibration, gold was used, and Violle's value of $1,045^{\circ}\text{C}$. for its fusing point was taken. The zero point of the instrument was found to be constant to within a quarter of a degree.

Conductivity.—Peirce and Wilson ("American Journal of Science," January) find that the temperature variation of the thermal conductivity of marble and slate is practically null, these substances conducting heat equally well at temperatures from 350°C . to zero. This result was reached by slicing slabs into layers between every pair of which thermometers were introduced. Villari (Paris Academy of Sciences, Oct. 19) finds that gases that are subjected to the action of a series of electric sparks acquire increased conductivity for heat. Von Bezold (Berlin Physical Society, Nov. 22, 1895) explains the so-called "thermic after effect" in thermal expansion by the assumption of minute nonconducting particles scattered through the conducting substance.

Thermodynamics.—Onnes (Amsterdam Royal Academy of Sciences, Jan. 25), starting from the theorem that Van der Waals's "corresponding states" are dynamically similar, infers that the cooling of the gas in Thomson and Joule's porous plug will become zero and turn into heating, with all gases, at sufficiently high temperatures.

Light. Photometry.—Whitman ("Physical Review," January—February) has devised a new form of photometer for colored lights, based on the "flicker" principle discovered by Prof. Rood. The observer's eye receives light alternately from a colored surface and a rotating white disk that hides the surface during half of each revolution. At high speeds the flickering sensation that is noticed at first disappears, and with it practically the sensation of color, so that the instrument can then be used as an ordinary photometer and different-colored luminosities can be compared. Violle (Paris Academy of Sciences, Jan. 13) finds that a flat flame of acetylene burning under a pressure of 30 centimetres of water, and used with a screen, gives perfectly satisfactory results as a secondary photometric standard.

Absorption.—Spring ("Bulletin of the Belgian Royal Academy"), in experiments on the transparency of liquids, finds that the absorbent powers of different liquids for light form a decreasing scale, the simplest substance, water, offering the greatest resistance. The influence of temperature is considerable; with a mass of liquid 26 metres thick, a difference of temperature of half a degree centigrade will produce opacity by means of the currents to which it gives rise.

Spectroscopy.—Donath (Wiedemann's "Annalen," August) has investigated bolometrically the absorp-

tion spectra of fluorescent substances and ethereal oils, making his measurements with a quartz prism and replacing all lenses by mirrors. He finds that uranin, eosin, fluorescein, esculin, and chlorophyll show no thermal absorption down to wave length 2.7μ . Aymonnet (Paris Academy of Sciences, Dec. 30, 1895), from a comparison of the results of various investigators, concludes that the position of the heat maximum in the solar spectrum depends not only on the composition of the prism, but also on other parts of the spectroscopic, and that another source of error is the continual variation in the intensity of solar radiation. Jewell ("Astrophysical Journal," February) considers that he has established that the vibration period of an atom depends to some extent upon its environment, an increase of the density of the material (and presumably an increase of pressure) seeming to produce a damping effect. He has done this by study of the Rowland photographs of solar and metallic spectra, and his results have important bearings on solar physics. Ramsay (London Physical Society, Feb. 14) has devised a direct-vision spectroscopic in which the eyepiece can be moved in a plane perpendicular to the axis. He reports that it is of great utility in verifying the position of spectrum lines.

Color.—Carey Lea ("American Journal of Science," June), in investigations on the color relations of atoms, ions, and molecules, has shown that if two colorless substances unite to form a colored one, the color belongs to the molecule, and hence a solvent that separates the ions gives a colorless solution. Mayer ("American Journal of Science," January) analyzes contrast colors by viewing through a reflecting tube a graded series of gray disks or rings on colored surfaces. The method is based on the fact, discovered by Rood, that black when mixed with some colors darkens them, and with others changes the hues.

Polarization.—Sohncke (Wiedemann's "Annalen," July) finds that, as theory requires, all doubly refracting crystals emit polarized fluorescence. Wyruboff ("Journal de Physique" (3), 3, 1894) has discovered a new substance which, like quartz, possesses double rotatory power. It is the neutral anhydrous tartrate of rubidium, and it is unique in that its rotatory power in the crystalline state is reversed in solution. "This wholly new phenomenon," says Le Conte Stevens (address on "Recent Progress in Optics," American Association, 1895), "introduces some perplexity in connection with certain molecular theories that have been formulated to account for double rotatory power."

Longitudinal Vibration.—Jaumann (Wiedemann's "Annalen," February) argues that since both light and electric waves that strike a cathode surface at right angles favor the dissipation of its charge, they must have a component in the direction of propagation. He reconciles this with Maxwell's equations, which admit of no longitudinal component, by supposing that the inductive capacity and permeability of the medium are affected by the oscillations themselves. Maxwell's constants then become variables and the resulting equations correspond to pencils of light that vibrate transversely along their axes and more and more longitudinally toward the edges (see RÖNTGEN RAYS).

Phosphorescence.—Becquerel (Paris Academy) finds that the salts of uranium emit invisible phosphorescent rays, some of whose properties are similar to those of the Röntgen rays. They are emitted not only after the salts have been illuminated, but even when they have been kept in darkness for months. They are reflected and refracted like light, affect a sensitive plate, discharge electrified bodies, and traverse substances that are opaque to visible light. The

invisible rays emitted by potassium uranyl sulphate that has been kept several days in the dark can discharge an electroscope even after passing through a plate of aluminium two millimetres thick. Powdered metallic uranium possesses the property in an even stronger degree. In discussing these phenomena, S. P. Thompson ("Philosophical Magazine," July) says: "The phenomenon of persistent emission of these invisible rays by the uranium compounds long after any electrical or luminous stimulus has ceased to be applied would seem, therefore, to bear the same relation to the transient emission of them in the Crookes tube as the persistent emission of visible light by phosphorescent bodies does to the transient emission of light by fluorescent bodies. Hence the writer ventures to give to the new phenomenon thus independently observed by M. Becquerel and by himself the name of *hyperphosphorescence*. A hyperphosphorescent body is one which, after due stimulus, exhibits a persistent emission of invisible rays not included in the hitherto recognized spectrum." Henry and Seguy (Paris Academy of Sciences, May 26) find that at a fixed pressure the brightness of zinc sulphate, phosphorescing under the action of cathode rays in a Crookes tube, decreases with time. There is a certain pressure at which the maximum brightness is obtained; a reversal of the current reduces this to about one twenty-seventh of its original value. Charles Henry (Paris Academy of Sciences, summarized in "Cosmos," March 28) suggests what he calls the "storage of light," based on the recent discovery ("Annual Cyclopædia," 1895, page 651) that intense cold retards or prevents phosphorescence, thus, as it were, preserving in a latent condition the light to which the phosphorescent substance has been exposed. The light can be regained by raising the temperature.

Fluorescence.—Wiedemann and Schmidt (Wiedemann's "Annalen," March) find that the vapors of potassium and sodium show brilliant fluorescence when illuminated with bright sunlight. They show also electro-luminescence. These results are of importance in solar physics. Schmidt (Wiedemann's "Annalen," May) maintains that all bodies are capable of fluorescence if dissolved in suitable solvents, the most favorable form being a "solid solution," as in sugar or gelatin. The color of fluorescence is often nearly independent of the solvent.

Dispersion.—Guye and Jordan (Paris Academy of Sciences, April 20) conclude from an experimental study that active liquid bodies, not polymerized, present only normal rotatory dispersion, and that there is no simple relation between the refrangibility of the radiations and the rotatory dispersion.

So-called "Dark Light."—Le Bon, in several papers read before the Paris Academy of Sciences, describes experiments on what he calls "dark" or "black" light (*lumière noire*), an invisible form of radiation arising from the passage of ordinary light through apparently opaque metal plates, and capable of producing shadow pictures like those made by Röntgen rays. His results have not been generally accepted by physicists, it being generally assumed that they are due to filtration of ordinary light. Le Bon, however, asserts (May 11) that he has taken all possible precautions against this. He reports (Paris Academy of Sciences, Jan. 27) that when an ordinary photographic dry plate is placed under a negative in a printing frame, and the negative is closely covered with a thin iron plate, if the whole be exposed to the light of a paraffin lamp for three hours, a faint but well-defined image may be brought out by prolonged development. If lead is used to cover the plate instead of iron the image is nearly as good as if no obstacle at all had intervened. In another experiment (*ibid.*, May 11), after

exposing two plates of metal (copper and lead) to an electric arc for an hour, he placed between them a photographic negative and a sensitive plate, the unexposed faces of the plates being inward. An image resulted which M. Le Bon attributes to "dark light" stored on the surface of the metal plates. Without preliminary exposure to the light of the arc no image was obtained. He believes that there are four forms of invisible radiation—the "X-rays" of Röntgen, the invisible fluorescence of Becquerel (see *Phosphorescence* above), the new form of radiation just described, and a similar radiation which he asserts is emitted by organized beings in darkness. David E. Packer, an English astronomer, has also asserted that he has photographed the solar corona in broad daylight, apparently by rays similar to "dark light," by allowing the sunlight to filter through metal foil. Other experimenters, however, have been unable to repeat his work. Aschenholz (Berlin Physical Society, March 27) concludes from experiments that Le Bon's "dark light" has no existence. He calls attention to the fact that it is very difficult to exclude lateral light, even with metal screens, and he exhibited photographs to support his view.

Lenses.—Barton ("Philosophical Magazine," January) describes a graphic method for determining the focal lengths of lenses and mirrors. For a concave mirror the distance of object and image respectively are laid off on two co-ordinate axes, and the extreme points are joined. Two separate observations thus give two lines that intersect in a point equidistant from the two axes, whose co-ordinates are both equal to the focal length sought. Hastings (National Academy of Sciences) has discovered by mathematical calculation a form of lens for telescopes by using which the secondary chromatic aberration can be very nearly done away with. He estimates that his discovery will increase the power of any telescope by 10 per cent.

Monochromatic Projection.—Abney exhibited at a *conversazione* of the Royal Society ("Nature," May 14) an apparatus for throwing on a screen or on a photographic plate the image of a luminous object in monochromatic light. An image is first thrown on the face of a prism or a grating, and the spectrum is formed as usual, the color desired being allowed to pass through a slit placed directly in the spectrum. A second lens close to this slit forms the desired image.

Heliostat.—Mayer (New York Academy of Sciences, May 4) has devised a heliostat that uses lenses and total-reflection prisms, the advantage being that it can give a powerful beam of light that practically emanates from a point.

Electricity. Velocity.—Blondlot ("Annales de Chemie et de Physique," April) has measured the velocity of an electro-magnetic disturbance along a wire by discharging Leyden jars that are connected with the same spark gap by two wires, a short one and a very long one. The time interval between the resulting two sparks was measured by throwing their images on a photographic plate by means of a rotating mirror whose speed was deduced from the musical note produced by the vibrations of its axle. The mean of five sets of measurements gave 296,400 kilometres a second, while three others in which the distance traversed was 1,821 metres—nearly twice as great as at first—gave 298,000.

Resistance and Conductivity.—Appleyard (London Physical Society, May 23) has investigated the effect of temperature on dielectric resistance, and finds that the capacity of a paraffin condenser varies irregularly with the temperature, but that the capacity of a mica condenser is constant between 33° F. and 110° F., at least within one per cent. With paraffin, when the temperature reaches a point with-

in about 20° of the melting point, the resistance falls rapidly; when melting begins there is a rapid drop, but while it is in progress the resistance remains constant. Dewar and Fleming have recently shown that with pure metals the electrical resistance shows every sign of disappearing as the absolute zero of temperature is approached, but in the case of alloys, even when the second metal is present only as a slight impurity, this is by no means the case. Lord Rayleigh ("Nature," June 18) suggests that the apparent resistance of an alloy may be made up of thermoelectric effects, the reverse electro-motive forces due to an infinite number of internal metallic junctions simulating a true resistance, which of course would have no relation to the real resistances of the metals that compose the alloy. Fleming, in a lecture at the Royal Institution ("Science," Aug. 7), has shown that the conductivity of pure metals is increased enormously by the cold of liquid air, while that of alloys is only slightly increased. Dewar and Fleming are of opinion that pure metals would become perfect conductors at the absolute zero of temperature, and hence also absolutely opaque to electric radiation. These experiments furnish additional proof that the passage of an electric current depends on something that goes on outside of what we call the conductor. They furnish also a means of testing the purity of metals, that almost rivals the spectroscope in delicacy. Ayrton (London Physical Society, March 13) states that the conductivity of copper has been steadily increasing, the result being specially noticeable in the process where the metal is continually burnished while depositing electrolytically. It has been supposed that the effect was due to increased density, but Prof. Ayrton says this has now been proved untrue. This change invalidates such resistance standards as are based on the specific resistance of copper. Griffiths (Manchester Literary and Philosophical Society, Oct. 20) finds that the resistance of a salt solution that contains gelatin, and is allowed to "set" slowly at a constant temperature, does not alter appreciably even when the viscosity becomes very great. Strowd and Henderson (London Physical Society, Oct. 30) measure electrolytic conductivity by means of continuous currents, by using a balancing electrolytic cell with the principal cell so that the electro-motive force of polarization in each balances the other's effect on the galvanometer. Reeves (London Physical Society, March 13) has described an addition to the Wheatstone bridge for the purpose of measuring low resistances. He does not balance by varying the length of standard wire between the two contacts, but instead the distance between these contacts, and also the length of wire that is being measured, are kept constant, balance being obtained by altering other resistances in the network. By this means the resistance of metre lengths of heavy copper wire can be obtained with an accuracy of one tenth of 1 per cent. One advantage of the method is that it is independent of the resistances at the contact.

The Question of "Negative Resistance."—Frith and Rogers (London Physical Society, May 8) find that there is a critical frequency of alternation above which the resistance of an alternating-current arc has a positive value that is independent of the frequency and below which it has a negative value. This critical frequency lies between 7.5 and 0. S. P. Thompson (London Physical Society, June 26) asserts that the observations of Frith and Rogers only prove that that part of the resistance of an arc that is not constant is positive and varies inversely as the current. The rate of increase of resistance compared with current will therefore be negative. Discussion showed that there were diverse opinions

among physicists regarding what is properly to be termed the "resistance" in such a case, and the necessity for a modification of definitions was acknowledged. "The Electrician" (London, July 3), in an editorial on the subject, concludes that "negative resistance" and "adjuvant distributed electro-motive force" are one and the same thing, and since the latter is possible and actually occurs, so may the former. Pitz Gerald (*ibid.*, July 17) thinks that the whole question is simply one of convenience of definition. He prefers the term "adjuvant Thompson effect" for any distributed thermal action that helps the current.

Electro-motive Force.—Bancroft ("Physical Review," January-February) concludes from a discussion of various experiments that the potential difference between a metal and an electrolyte does not depend, except in special cases, on the concentration of the solution nor on the nature of the positive ion, but on the electrode, the negative ion, and the solvent. Campbell (London Physical Society, June 12) advocates the use of air-coil transformers for measuring alternating voltages and currents that are either above or below the range of available instruments. Since the readings depend on the frequency, when the voltage is observed on an open-circuit secondary, in attempting to measure the current in the primary of such a transformer, Mr. Campbell uses a closed secondary with very high inductance, in which case the primary current is proportional to the secondary, which may be measured with an ammeter.

Specific Inductive Capacity.—Silberstein (Wiedemann's "Annalen," December, 1895) has shown that the specific inductive capacity of a mixture of two perfectly insulating liquids which mix in all proportions and do not contract in the process may be found by taking the sum of the products of the respective separate volumes by their specific inductive capacities and dividing by the total volume.

Condensers.—Carpenter ("Physical Review," November-December) finds that the so-called "soaking in" of a condenser charge varies greatly in rapidity with different condensers, and seems also to depend somewhat on the potential of charge, but not on the potential difference.

Dielectrics.—Duff ("Physical Review," July-August) finds that the viscosity of glycerin, castor oil, and other nonconducting liquids is increased by less than 1 per cent. when the liquid is subjected to considerable electrostatic stress. The phenomenon seems related to the electrostatic Kerr effect.

Cells.—Jacques ("Boston Herald," May 11; "Electrical Review," May 20, etc.) has devised what he calls a "carbo-electric battery," consisting of a carbon anode and an iron cathode in a bath of fused caustic soda or potash through which air is continually blown. He asserts that the resulting current is due to true combustion of the carbon, and that he has therefore succeeded in obtaining electricity direct from coal. Some of his critics regard the device as a thermoelectric battery that owes its power to the heat energy used to keep the soda fused. Stockbridge ("Engineering Magazine," July) describes the cell as consisting of an iron pot of fused caustic soda in which hangs a carbon rod. When the cell is in action the soda must be at a temperature of 400° to 500° C., and air is pumped through it. The carbon is attacked and gradually consumed, with the generation of a current. The cell is said to have an efficiency of 85 per cent., but this does not take into account the expenditure of heat for keeping the soda fused or the power that runs the air pump. Reed ("Electrical World," Aug. 8) regards the cell as neither galvanic nor thermoelectric, and thinks that its action is what

he calls "thermotropic," depending on the principle that if between two similar pieces of metal there is an oxide of the metal or any other connecting oxide or salt not decomposed by the flame, upon heating either of the wires while keeping the other cool, a strong electric current flows through the circuit. On transferring the heat from one piece to the other the direction of the current is reversed. The electro-motive force from two copper wires with their junction is at least 100 times that of an ordinary thermoelectric couple. Koehne, in Germany, has carried on similar investigations, and concludes that a solution of carbon may be obtained electrolytically, that carbon can be separated from it at the cathode, and that a cell may be made having carbon as its soluble electrode. He describes (Berlin Physical Society, Feb. 14) his success in obtaining such a solution by using pure carbon as anode, platinum as cathode, and hot sulphuric acid as the electrolyte. The fluid became successively yellow, brown, and black, and graphite was deposited on the cathode.

The Electric Arc.—Fleming and Petavel (London Physical Society, Feb. 28) find, from an analytical study of the alternating-current arc, that the purple light of the true arc varies periodically, being completely extinguished for a certain interval during the phase. It has equal maximum values during the period, lagging slightly behind the maximum expenditures of power in the arc. The illuminating power of the carbon crater varies between a minimum and two unequal maxima, one when the carbon is positive and the other just behind the instant of greatest power expenditure. The total mean spherical candle power is less for equal expenditure of power than in the continuous-current arc, and lowering the frequency decreases the efficiency. Frith (London Physical Society, April 24) finds that an arc has the power of modifying the wave form in an alternating circuit in which it is included. The difference between the efficiency of such arcs in the laboratory and that which is claimed for them in practice may thus be explained. Arons (Wiedemann's "Annalen," January) suggests that the difficulty of producing an alternate-current arc between metallic electrodes may be due to the lower thermal conductivity of carbon, which enables it to retain its heat, or to the volatile gases given off by carbon, or to the oxidation of metals during the passage of the current.

Electrolysis.—Zelinsky and Krapivin ("Zeitschrift für physikalische Chemie," October) have investigated the electrolytic conductivity of solutions of salt in methyl alcohol and find that in many cases these have conductivities of the same order of magnitude as aqueous solutions. In all cases the molecular conductivity increases with dilution. The substitution of a little alcohol for water in the aqueous solutions has precisely the same effect as the substitution of a little water for alcohol in the others, namely, a diminution of conductivity. No explanation of this has yet been suggested. Tommasi (Paris Academy of Sciences, May 18) has devised a new apparatus for electrolysis in which polarization is suppressed, the deposited metal is removed from the oxidizing action of the bath, and the resistance is reduced.

Thermoelectricity.—Hagenbach (Wiedemann's "Annalen," May) finds that a thermo-couple of cadmium or lead amalgams or salts shows a diminution as dilution is increased, contrary to the general rule and to theory.

Contact Electricity.—Nernst (Wiedemann's "Annalen," August) has put forth a theory of contact electricity based on ionic velocities. An accumulation of electricity can be prevented only by the equally rapid diffusion of both ions of an electro-

lyte, and the unequal velocities due to unequal mobility of different ions must be made up by a difference of potential.

Frictional Electricity.—Christiansen (Wiedemann's "Annalen," December, 1895) has investigated contact differences of potential between metals by means of so-called "drop electrodes," the terminals of the electrometer being connected respectively with the upper and lower mercury reservoirs, in the latter of which plates of a different metal were immersed. He finds that the gas through which the drops fall has considerable influence, platinum becoming more positive in hydrogen and more negative in oxygen, while other metals are more negative in hydrogen.

Photo-electricity.—Warburg (Berlin Physical Society, May 15) conjectures that gases, unlike electrolytes and metals, whose conductivity is independent of strength of current, do not become conductors till the current has reached a certain intensity. Hence the retardation observed in the effect of light in producing the spark discharge may be due to the fact that the gas takes time to become a conductor and the action of light may consist in the removal of some obstruction to the establishment of conduction. Elster and Geitel (Wiedemann's "Annalen," January and March) find that the apparent dissipation of charge when an anode is illuminated in a vacuum is due to the effect of the light on the platinum cathode or on the interior of the tube when it has acquired a slight coating of alkali-metal vapor. They also find that the brushes and sparks from a Holtz machine passing between a cathode plate of zinc and an anode sphere of any metal are replaced by a glow discharge when short-wave light illuminates the cathode. The quantity of electricity that passes is also smaller. Lodge ("Science Progress," August) has experimented to test the presence of metallic particles or vapor near an electrified metal that is rapidly discharging under the action of light. He concludes that the discharge of electricity from illuminated surfaces is not effected by evaporation of those surfaces, but that the molecules which convey the charge belong to something in the gas and not to the illuminated body. The conviction deepens everywhere that photo-electric phenomena are due to convection, but its mechanism remains undiscovered.

Low-pressure Phenomena in Gases.—Gossart and Chevalier (Paris Academy of Sciences, Feb. 10) describe a new mechanical action proceeding from a Crookes tube. In attempting to show the heating effect of such a tube by means of a radiometer they found that the latter did not rotate, but took up a fixed position under control of the tube. If the radiometer arms were set in motion, there were oscillations about this position, more rapid the nearer the radiometer was to the tube. Nipher (St. Louis Academy of Science, May 4) has observed a rotational movement of the cathode disk in a Crookes tube. The motion was not affected by magnets and appears to be due to reaction between the disk and the radiant matter. If so, the latter must start from the disk in a vortex whose axis passes through the dark spots opposite to it. Paalzou and Neesen (Wiedemann's "Annalen," December, 1895) find that the medium in which discharge tubes are immersed has a decided influence on them, water and alcohol extinguishing the glow. The effect is not due to condensation, for the total current was lessened and the effect required time. Any motion of electricity near by, such as electrification or discharge of the outer surface of the tube, or the approach of a charged body, favored the internal discharge. Elster and Geitel (Wiedemann's "Annalen," December, 1895) find that electric oscillations may cause peculiar movable light phenomena in rarefied gases.

In a discharge tube that is surrounded by a conducting ring in connection with the earth, and that touches another conductor connected with a strong induction coil, a pencil of bluish light is formed at a vacuum of 0.01 to 0.001 millimetres of mercury. The approach of a conductor or a magnet causes this light to assume various shapes and positions. Wood (Wiedemann's "Annalen," October) has measured temperatures within a vacuum tube by using a platinum spiral as a bolometer. At an internal pressure of 3 millimetres the rise of temperature varied from 13° to 25.7° C. as the current varied from 0.0015 to 0.0036 ampère. The bright spaces were always a few degrees hotter than the dark ones. In a later article ("Physical Review," November–December) the author states that in no case does the temperature within the tube exceed that of the outer air by more than 20 or 30 degrees, and that it varies definitely from point to point. In passing from a bright to a dark stratum there is sometimes a change of 5°. Pupin ("Electrical Age," March 28–April 25) has made special experiments on the behavior of electrical discharges through poor vacua, when such discharges are produced by means of the condenser effect of tin-foil coatings or other conductors placed on the outside of a vacuum jar. When one electrode is such a coating on a glass bulb, and the other is a brass sphere, the discharges bear striking resemblance to the phenomena of the solar corona. Moore (American Institute of Electrical Engineers, April 22) has achieved noteworthy results in vacuum-tube lighting by means of an invention that he calls a "vacuum vibrator," which is practically the interruptor of an induction coil working in a vacuum, the actuating magnet being without. The breaks can thus be made very suddenly without danger of sparking, and the resulting intensity of illumination is great.

Cathode Rays.—Jaumann (Wiedemann's "Annalen," October) finds that cathode rays may be temporarily deflected by moving electrified bodies, the effect differing totally from the permanent deflection due to neighboring conductors. De Heen ("Bulletin de l'Académie Royale de Belgique") advances the theory that cathodic and anticathodic rays result from encounters between molecules projected from the cathode and anode respectively. When adjacent parallel laminae are used as anode and cathode no anticathodic rays are observed, whereas, according to the ordinary theory, there should be great numbers of them. De Heen supposes, on his theory, that the intervening space is too small to allow of frequent collisions. (For other phenomena, see RÖNTGEN RAYS.)

Electric Waves and Radiation: Detection and Measurement.—Rutherford (British Association) detects electro-magnetic waves by a group of fine steel wires, insulated from each other by shellac, which are first magnetized and are then inserted in a coil that is provided with a suspended magnet and mirror. The passage of the waves alters the magnetism of the group and moves the mirror. The detector will respond to long waves at a distance of half a mile; for short ones it is less sensitive. Lang (Wiedemann's "Annalen," March) has measured the wave length of electric waves by a method similar to that of Quincke for measuring the wave length of a musical tone. Quincke's method depends on the arrangement of the lengths of two tubes which, starting from near the source of sound, are brought together at their other end, so that the sound that has traveled through one tube interferes with that through the other. The tubes in the electric measurement are of paper lined with tin foil.

Electric Waves: Absorption.—Planck (Wiedemann's "Annalen," January) divides the absorption of electric waves by resonance into three stages:

first, that when the circuit absorbs energy from the external wave system till it has acquired a maximum of oscillation; second, the stationary stage, when the circuit absorbs only as much energy as is necessary to compensate for that which it gives off; and, third, the stage when the oscillation is dying out, after the cessation of the primary wave. The distribution of energy in each stage can be calculated. Zeeman (Amsterdam Royal Academy of Sciences, Sept. 26, 1895) has investigated the variation of absorption of electric waves by electrolytes, with the wave length and the concentration. He finds that the coefficient of absorption changes as the square root of the conductivity of the solution, and does not change if the conductivity and the wave length vary in the same ratio. In another paper (*ibid.*, Oct. 26, 1895) he finds (1) that the energy diminishes in the logarithmic ratio; (2) that if the wave length is 6.5 metres, the energy has decreased to one third of its original value when the wave has passed through 6.5 centimetres of a solution of common salt, whose resistance is $3,200 \cdot 10^{-10}$ that of mercury. Drude (Wiedemann's "Annalen," May) finds that short electric waves are more strongly damped in alcohol and glycerin than in water or aqueous solutions. Theoretically the damping should increase with the conductivity, yet these badly conducting bodies damp as effectually as a 5-per-cent. solution of copper sulphate, which is 6,000 times more conducting. Alcohol and glycerin also show anomalous dispersion for rapid electric oscillations.

Electric Waves: Refraction and Dispersion.—Cole ("Physical Review," July–August) finds that for waves 260 centimetres long the index of refraction of alcohol is 5.24 and that of water is 8.95. For waves 5 centimetres long the indices are 3.2 and 8.85 respectively, showing that the dispersion by alcohol between these limits is considerable. Lampa (Vienna "Sitzungsberichte") has determined the refractive indices of several substances for electric waves 8 millimetres in length as follow: Paraffin, 1.524; ebonite, 1.739; crown glass, 2.381; flint glass, 2.899; sulphur, 1.802; benzole, 1.767; glycerin, 1.843; oil of turpentine, 1.782; oil of vaseline, 1.626; oil of almonds, 1.734; absolute alcohol, 2.568; distilled water, 8.972. Cohn and Zeeman (Wiedemann's "Annalen," January) find that when electric waves are propagated in water no dispersion is observed for frequencies ranging from 27 to 97 millions, and that the index of refraction for such vibration equals the square root of the dielectric constant.

Electric Waves: Effect on Resistance.—Aschkinass (Wiedemann's "Annalen," March) finds that tin-foil gratings have their resistance lowered by electric rays, but the original resistance is restored by shock or heat. Von Lang (Wiedemann's "Annalen," January) finds that when a rod of carbon stands lightly on a carbon block there is a degree of contact whose resistance is abruptly diminished by electric waves in the neighborhood, even those produced by an electrophorus. The resistance is restored by a slight concussion. Zinc and aluminium give similar results. Gulik (Amsterdam Royal Academy of Sciences, Jan. 25), in investigating the cause of the variation of resistance in microphonic contacts brought about by electric vibrations, has ascertained that the ends of a current chain, when brought very close together, attract each other if the wires are exposed to Hertz waves. If the air gap is longer than 4 microns, small sparks result.

Electrographs.—Robinet and Perret ("La Nature," May 9) have made electrographs by placing a sensitive plate beneath a negative, sheltered from ordinary light, in a sort of condenser formed of air films. An exposure of thirteen minutes gave an excellent result. The plate is more rapidly acted

upon when the frequency of the alternating current that is used is greater, and the impression depends also on the nature of the condenser plates (copper and lead giving the best results) and on their distance. The experiments differ from those performed several years ago by Niewenglowski and Lamoureux in the shortness of exposure and in the fact that phosphorescence plays no part in the action.

Hall Effect.—Bagard (Paris Academy of Sciences, Jan. 13) finds, contrary to conclusions already reached by Roiti, that Hall's effect occurs with liquids. He has proved this experimentally for saline solutions, and finds that the results for zinc sulphate are of the same order of magnitude as those for metallic bismuth.

Edison Effect.—Fleming (London Physical Society, March 27) has experimented on the Edison effect in an incandescent lamp—that is, on the passage of a current between a metal plate inside the loop and the positive (not the negative) lead of the lamp. He finds that after a certain time, depending on the position of the plate, its potential falls to that of the negative plate. This time is longer if the loop is outside the filament. The space between the plate and the negative lead has a kind of unilateral conductivity, a low-voltage battery being able to send a current from plate to lead, but not in the opposite direction. If the voltage of the lamp current be raised, a current can be passed from the plate to the negative lead, while a galvanometer properly connected will show that a current is passing from the positive lead to the plate. In this condition the lamp is very sensitive to the influence of a transverse magnetic field. Prof. Fleming thinks that his experiments show that the resistance of a vacuum tube to the passage of a discharge would be greatly reduced if the cathode were made incandescent. Salomons (London Physical Society, Feb. 28) shows that if an incandescent lamp through which an alternating current passes is brought near a continuous-current electro-magnet the filament vibrates, and may be broken. The number and position of the nodes are independent of the natural period of the filament, but depend on the frequency of the current.

Electrification of Vapors.—Schwalbe (Wiedemann's "Annalen," July) finds that the vapors rising from electrified liquids can not bear away with them any of the electricity. This goes to disprove Exner's theory of atmospheric electricity.

Electric Measurements.—Campbell (London Physical Society, May 22) employs for the direct measurement of the frequency of alternating or pulsating currents a steel wire or a steel spring acted upon by an electro-magnet through which the current passes. The tension of the wire or the length of the spring is varied till maximum resonance is obtained, which point is found by a small contact piece. The instrument will measure frequencies of 40 to 150 double vibrations a second. Starke (Berlin Physical Society, Feb. 28) has devised a simple method of determining the electrical constants of solid bodies, based on introducing into one arm of a Wheatstone bridge a condenser between whose plates fluid mixtures of dielectrics with varying electrical constants may be placed. A mixture is sought, such that the immersion in it of the given solid does not alter the constants of the mixture. Leake, Leventhorpe, and Whitehead (London Royal Society, Dec. 5, 1895), by using a method adopted by Ayrton and Mather for accurate calibration of electrostatic voltmeters, find that measurements of steady potential differences of about 2,000 volts made in the ordinary way with the Kelvin absolute electrometer are, on the average, 1.5 per cent. too large—an error due to imperfect action of the

springs, which could be remedied by heating them. Holman ("Philosophical Magazine," December, 1895), in an article on galvanometer designs, concludes that it is practically useless to wind turns within a distance of about one quarter of the needle length of the coil center, and that to increase sensitiveness the needle must be as short as is consistent with torsion of the suspending fiber.

Magnetism. Magnetization.—Grotrian (Wiedemann's "Annalen," April) has shown by induction experiments made with coils of wire laid over an iron sphere so as to cut off segments of various sizes that the sphere is evenly magnetized throughout, as theory requires. The direction of the grain in wrought iron does not affect this result. Nagoka (Wiedemann's "Annalen," September) finds that in fields of less than 20 C. G. S. units the magnetization of iron and amalgams shows a discontinuity at the melting point.

New Effect in a Field.—Dnane (Wiedemann's "Annalen," July) finds that cylinders and disks of glass, sulphur, paraffin, ebonite, or quartz, oscillating between the poles of a magnet with their axes vertical and at right angles to the lines of force, are damped proportionally to the intensity of the field and to the speed of rotation. He regards this as a hitherto unobserved magnetic effect, for his experiments show that it is not due to action on the suspending threads, to viscosity of the air, to electrostatic effect from the coils, or to induction currents in the substance.

Hysteresis.—Du Bois and Jones (Berlin Physical Society, April 14) have found by experiment that hardening iron generally increases its hysteresis and coercitive intensity, but decreases its residual magnetism. Krupp's cast iron is distinguished by low hysteresis and small coercitive intensity.

Torsion due to a Solenoid.—Moreau (Paris Academy of Sciences, May 26) finds that the increase of torsion due to the action of a solenoid on a twisted wire is proportional to the square of the magnetizing current, is independent of the wire's diameter when this is small, and is always in the same sense as the original torsion.

Changes in Length.—Chree ("Nature," Jan. 23) calls attention to the fact that some recent authorities assume that the "tractative force" of a magnet acts continually within its mass as a force tending to shorten it, while others, following older writers, treat the same force as a tendency to lengthen the bar. This has introduced confusion.

Miscellany. Device for illustrating Laws of Motion.—Hrabowski (Wiedemann's "Annalen," January) has devised a simple apparatus for illustrating all the laws of falling bodies. It consists of a carriage that moves on a single rail and that is pulled by a weight connected with it by a spring moving in a vertical tube. The upper end of this spring carries a pencil that marks on a vertical plate as the carriage moves. When the carriage is held still the spring is extended and the pencil stops at a point that indicates the pull of the weight. When the carriage is released the spring contracts and the pencil traces a curve from which can be seen the force that is acting at any moment. By inclining the rail the phenomena of acceleration and retardation may easily be studied.

Cathetometer.—Wadsworth ("American Journal of Science," January) has invented a new form of cathetometer in which the object to be measured is compared with the standard scale by means of a silvered mirror on a vertical axis just in front of the objective. High accuracy and cheapness are claimed for the instrument.

Disturbance of Laboratories by Electric Roads.—Frölich (Berlin Physical Society, Jan. 17) finds advantageous for the protection of physical labora-

tories from the effect of electric railways the arrangement of Siemens and Halske, consisting of two coils of wire netting at right angles to each other, stretched on a wire frame and surrounding the instrument to be protected. By putting this in contact with the conducting rail of the car line the disturbance due to the passage of a car is compensated and the effect on a magnetized needle is much reduced.

Odors.—Gerardin and Nieloux (Paris Academy of Sciences, April 27) suggest that the variation in volume of air after treatment with a glowing platinum wire may be used to give a measure of bad odors in air.

PHYSIOLOGY. Respiration.—The subject of the respiratory exchange of the lower marine animals, observes H. A. Vernon, has an interest quite apart from the mere measurement of the exchange of material taking place in particular individual animals, because of the comparatively slight differentiation the tissues have in many of them undergone. In the higher animals the respiratory exchange is the sum of the changes taking place in various tissues which differ considerably from one another in structure and chemical nature. The respiration is also, as a rule, largely influenced and governed by stimulation and inhibition from nervous centers. In animals such as *Beroe* and *Cestus*, however, the nervous system is exceedingly primitive, so that we are probably justified in looking upon the respiratory exchange as almost entirely a pure tissue metabolism phenomenon, unaccompanied by nervous influence. Now in the transparent pelagic animals, such as *Medusa*, *Ctenophora*, and *Salpæ*, there appears to external observation but slight differentiation of the viscid protoplasmic tissue, and so it seemed to the author of interest to determine whether, within the limits of experimental error, the unit weight of such animals has at the same temperature the same respiratory exchange, and whether the relation of the respiratory activity to temperature is in the different animals constant. The chief conclusions drawn by the author from his experiments are that the respiratory activity of lower marine animals, such as the pelagic *Cœlenterata*, *Tunicata*, and *Mollusca*, is very small compared with that of the higher animals, such as the teleost fish; that the respiratory activity of different animals is very differently affected by temperature—as a rule, the less differentiated and more slowly the animal, the greater is the effect produced; that the respiratory activity is very largely influenced by the size of the animal, there being no valid exception to the general rule that it varies inversely with the size. On keeping animals in captivity the respiratory activity of certain of them, as of the *Medusa*, *Mollusca*, and *Vertebrata* examined, either kept constant or slowly diminished on certain days, while that of others of them, such as *Beroe*, *Cestus*, and the *Salpæ*, very rapidly increased from day to day, although the condition of the animals obviously deteriorated. In pelagic animals the respiratory quotients as a rule increase on successive days, but in the *Vertebrata* examined they remained constant. Most of the quotients are somewhat higher than those usually observed in warm-blooded animals. The transparent pelagic animals contain a very small amount of solid organic matter in their tissues. As a general rule, for animals of the same class, it appears that the respiratory activity depends on the mass of the animal and on the amount of solid constituents in its tissues. When kept in captivity pelagic animals diminish in size very rapidly.

From observations to determine whether the quantity of carbonic acid exhaled in breathing is affected by the rarefaction of the air, made upon

soldiers on the slopes of Monte Rosa and upon himself in Turin, Prof. Ugolino Mosso finds that the quantity of that substance expired by a man at an altitude of 4,600 metres differs but little from that expired at 276 metres above the sea level. The author subjected himself to pressures as low as 34 centimetres of mercury without feeling any ill effects, the oxygen present being still sufficient for purposes of respiration; but when the pressure was reduced to 30 centimetres he began to find his faculties impaired, and in one case felt a great want of breath. After eleven or twelve minutes, he became incapable of making accurate observations, and the experiments had to be discontinued.

The study of the hibernation of the marmot, by M. R. Dubois, has shown that besides being marked uniformly by a diminution of the chemical exchanges, as has been observed by all authors, the exchanges consist in accumulation of carbonic acid in the blood and a smaller expiration of that gas. The respiratory quotient, or the relation between the oxygen absorbed and the carbonic acid produced, goes on diminishing and approaches 0.5, while in the animal awake the relation is near unity. The inference that the fats especially are consumed in hibernal torpor is confirmed by microscopic examination of the animals made after a long period of sleep. M. Dubois has confirmed, further, the fact already vaguely mentioned, that it is not necessary to cool the ambient medium to the freezing point to put a marmot to sleep. Indeed, if a sleeping marmot is placed in a temperature below the freezing point it will awake. The reason of this seeming anomaly affords another illustration of the theory of the natural defenses of the organism. If the animal continued motionless and torpid at a temperature below the freezing point it would not be able to defend itself against the cold, and would perish. The awakening is brought about partly by the irritation caused by an accumulation of urine and partly by the action of the ganglions of the great abdominal sympathetie.

In relation to mountain sickness, Prof. Zuntz has given an account of experiments on respiration carried on by him in conjunction with Dr. Schumburg at great altitudes on Monte Rosa. He found that when resting the consumption of oxygen was greater than at lower levels, but not in a very marked degree, and differed with different individuals. During work, which consisted in climbing a steep incline, the amount of oxygen consumed was, per kilogramme of work, nearly three times as great, indicating a correspondingly increased expenditure of energy. In accordance with these facts, what is called mountain sickness can not be due chiefly, if at all, to the diminished partial pressure of oxygen at the higher level. The author considered that it was rather the outcome of a lessened cardiac activity, brought about by the powerful stimuli of insolation acting on the eyes and skin, by the action of cold, of increased air currents, and of psychical excitement united to the antecedent fatigue. The deleterious effects of these abnormal stimulations can be lessened, or even done away with, by practice, and the effect of the diminished partial pressure of oxygen, which is observed in the case of some persons, may be prevented by mixing a little (about 2 per cent.) of carbon dioxide with the inspired air, that gas inducing deeper inspirations.

The most generally accepted explanation of the benefit which persons of weak lungs are supposed to derive from mountain air is that in the rarer atmosphere of high altitudes a much more complete expansion of the lungs is necessary to obtain the same quantity of oxygen that would be required in the denser atmosphere of the plains. Consequently sojourners on mountains unconsciously acquire the

habit of full breathing. Another source of benefit suggested by a writer in the *London Hospital*, is, that, as he says has recently been shown, "the blood itself becomes altered in response to the lessened amount of the more rarefied oxygen which each blood corpuscle can carry. The effect of this process of adaptation is that the red corpuscles multiply considerably, while, as some believe, the hæmoglobin is also increased. This accords with the well-known effect of mountain air in the treatment of anæmia and with the sense of well-being felt by visitors to high altitudes. Other salutary factors in the qualities of mountain air are its purity, dryness, and comparatively low temperature, combined with the intense solar radiation at high altitudes.

The anæsthetic properties of nitrous oxide have sometimes been ascribed to its asphyxiating power. Careful comparisons of its physiological action with that of a neutral gas, such as nitrogen, G. T. Kemp says, show that separate anæsthetizing and asphyxiating powers may be demonstrated in nitrous oxide. To supplement this, a series of analyses of the blood gases of animals asphyxiated by nitrous oxide show that anæsthesia may be obtained with this gas while the blood is still carrying sufficient oxygen to meet the demands of the system.

Circulation.—Experiments made heretofore have shown that absorption by the blood vessels takes place in cases where substances not occurring normally in the blood are introduced into some connective-tissue space; but the processes by which this occurs do not serve to explain the absorption by the blood vessels of fluids having the same tonicity and the same approximate constitution as the circulating plasma. Ernest H. Starling has studied this subject with reference to the question whether the blood vessels do absorb such isotonic fluids, and that of the manner in which the absorption takes place. As the result of his experiments he concludes that isotonic solutions can be and are absorbed directly by the blood vessels; that a backward filtration into the vessels is mechanically impossible in the connective tissue of the limbs, the muscles, and the glands similar in structure to the submaxillary; that the absorption is determined by the osmotic pressure of the serum of the proteids (from 30 to 40 millimetres mercury). The same factor is probably responsible for the absorption from the tissues that ensues on any general lowering of capillary pressure, as in general anæmia; and that the proteids of the tissue fluids, when not used up in the tissues themselves, are probably absorbed mainly, if not exclusively, by the lymphatic system.

The results of the researches of R. M. Horne on the action of certain salts in preventing coagulation of the blood show that the salts of calcium, strontium, and barium retard or prevent coagulation when present in the proportion of 0.5 per cent. and upward; that barium salts have a more powerful preventive action upon coagulation than strontium, and strontium than calcium salts. Barium chloride materially retards coagulation in the proportion of 0.25 per cent. Calcium hydrate in saturated watery solutions does not retard, and strontium hydrate retards only slightly, while barium hydrate is highly effective in retarding coagulation of the blood. The delaying influence of calcium, strontium, and barium chlorides upon coagulation is overcome by dilution with distilled water and by the addition of a suitable quantity of potassium oxalate. Coagulation of blood treated with calcium, strontium, or barium chloride is accelerated by a temperature of from 30° to 40° C. Sodium chloride and potassium chloride, added to the extent of 0.07 per cent. and upward, do not accelerate, but still further retard the coagulation of the blood which has been treated with calcium or strontium chloride.

Speaking in the Berlin Physiological Society on the regeneration of the blood corpuscles in man, and on the structure of the organs therein concerned, as based on serial sections through lymphatic nodules, the spleen, and the marrow of bones, Dr. Benda said that he had come to the conclusion that in the nodules the germinal center, the germinal layer, and the more peripherally placed leucocytes form part of a developmental series. He had found similar structures in the spleen and in the red corpuscles of the marrow bones.

With an apparatus for registering the changes of volume of the hand and wrist during the period of normal sleep, Prof. W. H. Howell has found that a gradual increase in volume takes place from the beginning of the attempt to go to sleep, the unconsciousness of sleep appearing at some time during the increase. The volume reached its maximum within one or two hours after the beginning of sleep, and then remained for an hour or two practically constant. Following upon this appeared a gradual constriction, which at first was moderate, but increased more rapidly during the first half or three quarters of an hour of sleep, and brought the volume curve at the time of awakening nearly or quite to the point shown at the beginning of sleep. The curves throughout the sleeping period exhibited also long periodic waves of constriction and expansion, lasting for an hour or more, and numerous shorter rapid constrictions and expansions, which were connected with the movements of the sleeping subject or with external stimuli, such as noises in the street. Upon the assumption that the increased volume was owing to a vascular dilatation, particularly in the skin, the author points out that, upon the accepted view of the regulation of blood supply in the brain, the volume of the circulation and the pressure within this organ during sleep must stand in reciprocal relations to the volume changes exhibited by the limbs—that is, during the period of sleep the blood supply to the brain and the intracerebral pressure gradually diminish to a minimum, which is reached within the first one or two hours; this condition remains practically constant for the following hour or two, and is then succeeded by a gradual increase in blood flow and intracerebral pressure, which may be said to reach the normal condition at the time of awakening. The vascular changes are explained by a fatigue and subsequent resumption of tone in the vasomotor center, especially in that part controlling the skin circulation.

Haldane and J. L. Smith find that the oxygen tension of arterial blood is about 26.2 per cent. of an atmosphere, or 200 millimetres of mercury, and that the process of diffusion alone does not explain the passage of oxygen from the air of the pulmonary alveoli to the blood.

In his studies of the mammalian heart, W. T. Porter found that a fall in the volume of the coronary circulation—of 73 per cent., for example—caused a fall in the force of the heart of 49 per cent., while the frequency of the beat was altered only 9 per cent. Restoring the volume of the coronary circulation restored the frequency of the heart beat. The change in force followed the change in blood supply immediately.

Miss Hyde reports to the American Physiological Society that she has found that distention of the left ventricle diminishes *per se* the volume of the coronary circulation. It acts further as a stimulus to the cardiac muscle, causing the ventricle to beat more strongly. Strong contractions of the ventricle cause an increase in the volume of the coronary circulation. If the ventricle, having been distended, is placed again at atmospheric pressure, the force of contraction is much diminished.

W. T. Porter finds that stimulation of the pe-

ripheral end of the vagus nerve occasions diminution in coronary flow. Increase in coronary circulation follows stimulation of the cervical sympathetic. These results are held to indicate vasoconstrictor fibers in the vagus and vasodilator fibers in the sympathetic.

The nuclein-therapy theory of leucocytosis and immunity is criticised by Dr. W. A. Wells, of Washington, who summarizes his conclusions on the subject by predicating that, notwithstanding the long-continued conflict as to the importance of the cell and of the lymph, respectively, as the protecting agency of the body, it is probable that the claims on each side will be found reconcilable; that there is no reason for regarding the leucocytosis which appears after the introduction of nuclein into the system as produced differently from that which follows from a great number of other agents, many of which are poisons; and that the most rational explanation of leucocytosis is according to the principle of chemotaxis. The predominance of polynuclear cells is therefore accounted for in the greater sensitiveness of these forms to chemotactic influences. We must regard, therefore, a leucocytosis as only a local condition—that is, only a determination of the white cells into the peripheral circulation, without any real, significant, absolute increase of the whole number of these cells. The leucocytosis produced by nuclein is of this kind. The uric acid found in increased amount in the urine after administration of nuclein may be formed from the nuclein direct and not from the white blood corpuscles. There is, moreover, no constant correspondence in the number of leucocytes and the amount of uric acid excreted, for there may be often an increase of uric acid without leucocytosis. There is some reason for believing that, of all leucocytes, those possessed of the eosinophilic granules perform the most essential part in protecting the organism against infectious diseases. A suggestive correspondence exists between those diseases which are distinguished by an augmentation of eosinophiles and diseases antagonistic to tuberculosis.

A paper read in the British Association by Dr. Durham showed that a gradual, though rapid, disappearance of certain leucocytes from the peritoneal cavity takes place, due first to their aggregation, and secondly to their adhesion to the omentum. Another factor is the rapid passage of the cells along the lymphatics, and this is a strong argument against too rigid a theory of cœlomic and hæmal white corpuscles. There would appear to be a definite peritoneal circulation of cells and fluid from the mesenteric blood vessels to the mediastinal lymph vessels almost from the moment after intraperitoneal injection until the normal condition has been re-established.

Digestion.—Since the discovery by Bernard, in 1835, that the liver, in its sugar-producing function, is connected with the general metabolism of the body, confirmed as it has been by subsequent researches, the view that it is simply a bile-forming gland has steadily lost ground. The liver is on the direct channel of absorption of carbohydrates and proteids, but it is not on the route of the absorption of fats, which, according to Munk, are all absorbed by the lymphatics, and reach the liver only through the hepatic artery. Yet a connection with the metabolism of fats is suggested by the enormous accumulation of fats in some animals at certain seasons, and under conditions not pathological. The question whether this is so has been investigated by D. Noel Paton, who after two years of patient analyses has found that a uniform distribution of the substances soluble in ether, called fats, exists throughout the various parts of the liver; that the ether extract, while it varies greatly

in amount, is on an average about 5 per cent. of the liver substance; that after extraction with ether, a certain amount of fatty acids remains in combination with bases as soaps or under other conditions; that the fatty acids constitute roughly about 3 per cent. of the liver; that fats may be transported and accumulated, and also produced, in the liver; that they do not undergo the same simple transformation when accumulated in it that glycogen does; that when accumulated in the liver they disappear either by being carried from the organ or by being metabolized in the organ; and that some of the fatty acids are linked with phosphorus and cholin to form lecithin, and this lecithin is a forerunner of the nucleo-compounds of the body. The liver thus seems to have the function of utilizing and economizing the phosphorus in the body by combining it with fatty acids as a stage in its reconversion to nuclein compounds. Other facts point to the formation of the fatty acids from the glycogen. The addition of an excess of a proteid to the food does not lead to an accumulation of fat in the liver.

Experiments described by Dr. Pavy as having been made with reference to the formation of sugar in the liver after death bear upon the two opposite views—Dr. Pavy's own, that the process is the converse of what takes place during life, when the vital activity of the liver protoplasm produces a dehydration of carbohydrate matter by transforming sugar into glycogen, and the view held by some physiologists that the transformation of glycogen into sugar is yet an act of vitality due to a continuance for a time of molecular life. The conversion being readily effected by ferment action, the author holds it superfluous to invoke such action to account for the process continuing after death. The experiments of Dr. Pavy with the livers of animals recently killed appear to support his views, and he has formulated his conclusions by saying that the amount of sugar in a liver taken without any special precautions to insure rapidity of manipulation is considerable; that which is present in a liver removed with rapidity immediately after death and at once plunged into a freezing mixture, and thus exposed to a temperature which would suspend both vital and ferment actions, is small. The saccharine condition of the liver taken after death by ordinary methods is thus seen to be due to a post-mortem change. The fact that in liver substance treated with alcohol, dried, and powdered, a considerable production of sugar can take place under suitable conditions of moisture and temperature is a proof that the change is not due to vital but to ferment action, a conclusion which considerations drawn from the nature of the chemical change rendered probable *a priori*.

The experiments of Wroblewski in his investigation of the influence of various acids and pepsin in promoting the digestion of proteids, especially casein, were made with 12 acids, all reduced to the same strength. The author found that the pepsin of the child, dog, and pig differ in their behavior with different acids, and are therefore not identical: that oxalic acid is the most active, and is followed by hydrochloric acid; and that some alkaloïds, especially caffeine, materially assist the digestion of proteids.

Experiments by W. D. Halliburton and T. Gregor Brodie show that the pancreatic juice obtained through temporary pancreatic fistulae from dogs produces a change in the caseinogen of milk which differs from the action of rennet in that the precipitate of casein occurs in the warm bath (from 35° to 40° C.) in the form of a fine granular precipitate, the milk, to the naked eye, undergoing no change in its fluidity. On cooling this to the tem-

perature of the air, it sets in a coherent curd, which contracts to only a small extent, and is again broken up into fine granules by warming to 35° C., the milk, to the naked eye, becoming again fluid. This may be repeated a great number of times. The phenomenon of pancreatic precipitation is, moreover, not prevented but only slightly hindered by such an addition of potassium oxalate as completely inhibits the activity of rennet. The experiments performed with extracts of the gland lead to similar results, which may be marked if the action of the tryptic ferment is very energetic. The precipitate produced, provisionally termed "pancreatic casein," can by the action of rennet be converted into true casein. Its solubilities are partly like those of caseinogen, partly like those of casein.

The results of experiments by Arthur Emunds on rennet and the coagulation of milk indicates that a small quantity of milk-curdling ferment can be obtained from other tissues and organs than the stomach as the testis, liver, lung, muscle, kidney, spleen, thymus, thyroid, brain, blood, small intestine, and ovary. No evidence was found that casein can be converted into caseinogen and re-coagulated by rennin. The apparent re-coagulation obtained by Peters is supposed to be due to calcium salts present in the rennet extract; so also the coagula of alkali albumin by rennin obtained by Peters is referred by the author to the presence of calcium salts in the rennet essence. Peptone has a marked retarding effect on coagulation, which may be partly, at least, neutralized by the addition of calcium chloride. Casein is soluble in ammonium oxalate without being reconverted into caseinogen. Grimaux's *collôïde aspartique* was found to have no action on milk coagulation.

In experiments upon the influence of alcoholic drinks on the chemical processes of digestion, Drs. Chittenden and Mendel found that alcohol and liquors in very small quantities stimulated digestion or did not retard, but checked its activity when given in larger proportions; from which they conclude that "whisky can be considered to impede the solvent action of the gastric juice only when taken immoderately and in intoxicating quantities."

Speaking, in the Berlin Physiological Society, on reported cases of presumed regeneration of the bile duct some twenty days after its extirpation, Dr. Rosenberg mentioned a case of a lateral branch from the duct, recently observed in a dog and leading to the intestine, and urged that the possible existence of a branch should in every case be disproved before concluding that a regeneration of the duct has taken place.

Glandular System.—As indications of the importance of the suprarenal capsules Pettit dwells on their derivation at a very early period from the germinal epithelium of the coelum and their intimate relation with the great vascular trunks of the abdomen. In the amphibia there is a suprarenal portal system. It is, the author thinks, probably to be ranked with the thyroid body; and its secretion is internal and demonstrable by histological processes. Gourfein shows the great influence of these capsules on the general nutrition of the body, and says that the retention of one is sufficient to preserve life, while, like the thyroid gland, they act chemically upon the organism. Szymonowicz has found that extracts of the adrenals cause strong contraction of the arteries with corresponding rise in the blood pressure, which is augmented after section of the vagus.

Two proteids have been found by Hutchison in the thyroid gland, one of which, small in quantity, is a nucleo-albumin, while the other is a colloïd, contains phosphorous and iodine, and is in large

quantity. By gastric digestion the colloid is split up into a nonproteid and a proteid substance, of which the former is the active agent in the gland. Notkin, of Kiev, has obtained a substance from the gland which he has named thyro-proteid, and which possesses poisonous qualities, producing, in toxic doses, tetanic symptoms. Dennig finds that the administration of thyroid extract greatly augments for a time the excretion of nitrogen, when a diminished excretion follows; and an increased excretion of nitrogen under the use of the extract has also been observed by Bleibtreu and Wendelstadt. Roos has recognized the presence in the gland of an active principle which is of stable composition. Roos's analysis of the thyroid gland and Baumann's of the thymus gland show the constant presence of iodine as a normal constituent of these glands. The quantity present in the thymus varies from 2.5 to more than 6 milligrammes in the whole gland.

In their investigation of conditions influencing the secretion and composition of bile, Dr. Fr. Pfaff and Mr. A. Balch had the advantage of a patient with a fistula, resulting from an operation, through which all the bile secreted was discharged. The jaundice, which had existed before, disappeared in the course of a few weeks, and the patient felt perfectly well at the time the investigation was begun. Human bile, ox bile, and the mixture of the pure bile salts, dried and made into pills, increased the daily secretion and the amount of solids. Salol had hardly any effect. Sublimate and calomel, if anything, slightly decreased the daily secretion. During the time of observation—ninety-seven days—the patient remained perfectly well and gained in weight.

Experiments made by E. A. Schäfer and B. Moore to determine whether the parotid, submaxillary, and sublingual glands possess an internal secretion necessary to the life of the animal or having any important action on any of the metabolic processes go to show that the salivary glands do not exert any great metabolic influence apart from their external secretion, as does the pancreas.

In contrast to the statements of Max Neisser that lymph coming from the thoracic duct does not contain bactericidal properties, S. J. Meltzer and Charles Norris find the lymph coming from that duct in dogs to be distinctly germicidal for the typhoid bacillus. The bactericidal power of the lymph differs from that of the blood in not becoming exhausted, even after days.

Muscular System.—The questions whether the heart muscle can or can not continue working at the expense of its own substance, concerning which former results have been contradictory, and whether an exhausted heart—defined as one from whose capillary clefts all remnants of blood (or nutrient material) have been washed away—have been investigated by Arthur H. White, by methods designed to avoid the faults of the methods of previous students. The author concludes that "beyond doubt" the heart is incapable of contracting unless it possesses nutrient material in its capillary clefts. "In the absence of certain salts (the most important of which are sodium carbonate and calcium and potassium chlorides) this nutrient material can not be utilized, so that the heart often seems to be exhausted long before such is actually the case. In order to enable it to continue working until the last remnant of blood has been washed out of its substance, it is essential that the fluid which is used for perfusion purposes should contain the necessary saline substances. A stage is finally reached when the heart is so fully exhausted that no stimulus or no amount of feeding with saline fluids will cause it to contract—that is to say, it can not contract at the expense of its own substance." When a heart

is in this fully exhausted condition, it can be restored only by feeding it with a true nutrient fluid containing both serum albumin and salts, the former being most essential, while the latter play a secondary but necessary part in hastening the chemical changes which occur during contraction, as well as neutralizing the effect of such products of metabolism as tend to paralyze the heart's action. No fluid can be pronounced nutrient unless it is capable of revitalizing such an exhausted heart.

The experiments of veterinary Capt. F. Smith upon the maximum muscular effort of the horse were directed toward ascertaining the greatest amount of force the animal is capable of exerting at a given moment, or determining the limit of its power. The method of the experiments was so arranged as, so far as possible, to prevent the pull being a jerk. The 80 horses experimented upon were classified in 4 groups; the highest or "excellent" ones being those which met the gradually increasing resistance by a gradual increase in force, eventually straining their utmost. Such horses, exerting themselves to the greatest possible extent, were able to reach as an extreme a dead pull of 78.5 per cent. of their body weight. The next group in the descending scale "good" could pull 77.6; the third group, "fair," 70.6; and the fourth group, "bad" or "indifferent," 65.6 per cent. of their body weight. The inquiry tells us the greatest force a horse may exert at a given moment, but does not deal with useful effective force in draught. That is liable to variations according to somewhat complicated conditions.

Investigating the influence of temperature on the working power of unstriated muscle, Dr. Schulz studied the isotonic and isometric contractions of strips from the muscular layer of a frog's stomach in response to maximal electrical stimuli at temperatures between 6° C. and +45° C. From the temperature of the room onward the height of circulation increased up to 35°, the tension up to 32°, while at the same time and up to the same temperatures the latent period and duration of the contractions diminished. Above these maxima all the phenomena were exactly reversed. At 45° the muscles gave no further reaction, and a temperature of from 60° to 65° caused a permanent shortening. On cooling below the temperature of the room, both the height of contraction and the tension diminished progressively, whereas the latent period and duration of contraction increased down to a lower limit of -5° to -6° C., at which temperature there was no further reaction. When slowly rewarmed contractions again made their appearance. Between -8° and -10° the muscle contracted suddenly and permanently; but this contraction disappeared on slow warming, the muscle now being inert even at higher temperatures. Comparing the striated with the unstriated muscles, Dr. Schulz laid stress on the fact that with a rise of temperature the latter exhibit a gradually increasing efficiency up to the maximal, whereas the former, according to Gad and Heymans, show a secondary minimum at 19° C.

It has been observed by Dr. David Hepburn that the shaft of each metacarpal bone, with the exception of the first, presents 2 triangular areas, a larger in the dorsal aspect and a smaller in the palmar aspect, neither of which affords origin to muscular fibers. It follows, therefore, that the palmar aspects of the various metacarpal bones are more fully occupied by muscles than the dorsal aspects. The dorsal interosseous muscles, which are abductor in function, are smaller than current descriptions lead us to believe. This is quite in accordance with the comparatively feeble nature of the abductor movements. Each digit is provided with a short

flexor muscle, presenting radial and other heads, which are capable of acting independently, and thereby producing a certain amount of abduction and adduction according to their position with regard to the middle line of the hand. Every muscle of the dorsal or abductor series is inserted in common with one of the heads of a short flexor muscle, and in consequence of their close fusion the line of separation between them is somewhat obscured and has been overlooked. The members of the palmar or true adductor stratum have all disappeared from the human hand with the exception of the adductor *pollicis obliquus et transversus*; hence the action has been thrown upon certain heads of the short flexors, and in consequence these heads stand out more distinctly, especially as their presence is not marked by fusion with any other muscle. Wherever true adductor muscles are found, as in certain of the apes, they are inserted in conjunction with those heads of the short flexors which are capable of supplementing this action. In the case of the human pollex, which possesses the one true adductor muscle, not only is this muscle inserted in common with one head (the ulnar) of the *flexor brevis pollicis*, but in consequence that head is always obscured, and in many cases extinguished.

A study of a new method of walking and running called *en flexion*, on account of a sudden bend of the knee at a particular point in the stride, has been made by MM. Comte and Regnault. It is shown that in this method, which has proved to be of great practical advantage in the movement of troops the vertical oscillations of the body are rendered more gradual, besides being reduced in magnitude. The same point is brought out in a dynamographic study of the variations of the pressure on the feet. The sudden variations of pressure disappear from the curve.

The results of an experimental study by M. A. Chauveau of the question as to whether albuminoids take part in the production of external work, seem to show that the amount of nitrogen secreted is practically the same, whether the animal is doing external work or not; they thus confirm the conclusion drawn by the author from previous experiments that the energy necessary for external work is produced by the combination in the muscle of hydrocarbons.

In experiments on the relation between the expenditure of energy in a muscle and the amount of shortening it undergoes, M. A. Chauveau finds that for a given amount of external work done by the muscle, the energy used up is smaller as the muscle is nearer to its maximum length. The determination was made by means of the method of the respiratory interchanges.

Nervous System.—The "Lancet" observes in its review of Huxley in 1896 that the result of the researches of numerous observers has been to support the views of the Spanish microscopist Ramon y Cajal in regard to the intercommunication of cells and the mode of termination of their processes, showing that in many cases where direct continuity of substance between more or less remote cells was believed to exist an interspace is really present over or through which the nerve impulse must leap in order to be transferred from the axis cylinder of one cell to the substance of another cell. Abundant evidence has been obtained that the axis cylinder of one cell breaks up into ramifications which partially surround or embrace the cell body with which they are in association. Finding that the neuroglial cells are sometimes small with greatly ramified processes, and sometimes large with simplified processes, Ramon y Cajal has suggested that there are only two states or forms of the same cells, and has constructed a hypothesis to explain

sleep. In repose the cells are expanded, extended, or spread out with numerous ramifying dendrites which interpose themselves between the axis-cylinder digitations of one cell and the protoplasmic processes of another, and no nerve current passes. In active states of the nervous system, on the other hand, the neuroglial cellules contract, their processes are withdrawn, and the axis-cylinder processes and the protoplasmic processes come in contact, with consequent passage of the nerve current. These statements are in the main supported by Kolliker, the second volume of a new edition of whose "Histology" has just been completed.

The assumption by Longet, which has been generally accepted as a fact, that after division of the facial, hypoglossal, and sciatic nerves (in the dog) the most remote branches of the distal part cease to respond to stimuli after the lapse of four days is criticised by Prof. Arloing, who adduces evidence to show that the irritability of the divided nerves is not always uniform in the date of departure, and that considerable variations may be observed in different genera and even in different animals of the same species. Ranvier's observations are cited showing differences in the dog, rabbit, guinea pig, and rat, and in young animals and adult, in vigorous animals and ailing ones; and Prof. Arloing himself adds his own observations that in the horse, ass, and mule the persistence of irritability in the branches of the facial nerve after section of the trunk was remarkable, being prolonged in some cases till the thirteenth day. Different nerves seem to vary in their faculty of retaining their irritability, for while in one case the peripheric extremity of the divided facial nerve retained its excitability for five days, the corresponding portion of the divided median and of the moderator of the heart had both lost their excitability between the fourth and fifth day.

Experiments have been carried on by Dr. Risien Russell to test the explanation offered by Dr. Hinsdale and Dr. Madison Taylor of crossed knee jerk as the result of a centripetal impulse producing activity of one motor area which in turn stimulates the corresponding portion of the other hemisphere and produces a contraction of the adductors of the thigh opposite the one originally struck. In one set of experiments the author divided the *corpus callosum*, but even after this, when an active state of the knee jerks was induced by a certain degree of asphyxia, it became possible to elicit the crossed knee jerk. Further, in order to test whether the cerebrum was concerned in the production of the phenomenon, the spinal cord was divided transversely in the dorsal region. In the course of a week well-marked exaggeration of the knee jerks ensued, and it was always possible to evoke a crossed knee jerk and even a greatly exaggerated cross jerk. It was also sometimes observed that a blow on the distal end of the femur or the proximal end of the tibia was followed by contraction of the opposite adductors of the thigh and extensors of the knee, while there was no response in the extensors of the side on which the blow was delivered. The phenomenon is not explained, but the fact is merely recorded. Drs. Hinsdale and Taylor regard the phenomenon which has been named re-enforcement as resulting from irradiation of motor impulses from the active centers to other similar centers, so that they and their related muscles acquire a heightened responsiveness to external stimuli. But Dr. Russell points out that any voluntary motor impulse directed to the muscles on the contraction of which the knee jerk depends diminishes the possibility of eliciting the phenomenon. He mentions that in using the Jendrassik method the extensors of the knee are sometimes brought into action, and

this, instead of increasing the knee jerk, renders it difficult or impossible to obtain it. Dr. Russell believes with others that the spinal centers are normally under a certain degree of restraint by cerebral centers, and that what is called re-enforcement is really removal in some degree of this inhibition, a removal which may be effected by diverting the patient's attention to some other act. Removal also of one hemisphere in an animal causes increased activity of the opposite knee jerk. Further, the return of the knee jerk in Kramer's case of progressive paresis is accounted for by supposing the inhibition lessened as the result of progressive cerebral degeneration, so that there comes a time when the spinal centers are so far freed from inhibition that the few remaining fibers in the posterior columns are sufficient for the purpose of carrying a stimulus which was formerly ineffective because of the inhibition from above.

The experiments of Gotch and Macdonald on the relation between temperature and excitability in nerve and muscle indicate that the rule that increased excitability occurs with increased temperature is not invariable, since such tissues do not become more excitable to all forms of stimulus as the result of an elevation of temperature. In each case the nature of the tissue and the nature of the stimulus require to be investigated.

The results of the researches of Hills (Research Scholarship of the Grocer's Company) on the physiology and pathology of the cerebral circulation go to sustain Kellie's view that the volume of blood in the brain under physiological conditions varies but little; and, further, the author has satisfied himself that there are no, or few vasomotor nerves distributed to the cerebral vessel—a view which the "Lancet" regards as requiring confirmation.

Experiments by R. Hunt, contradicting the commonly accepted opinion of Baxt, go to show that the inhibitory and accelerator nerves are to be regarded as purely antagonistic, and that the result of stimulating the two together is approximately the algebraic sum of the effects produced by stimulating them separately. In no case did one nerve completely overcome the effect of the other, though the two were stimulated for periods as long as twelve minutes.

T. Hough has observed that when the inhibitory impulses attained by stimulation of the vagus nerve are just strong enough to bring the heart of the dog to rest the duration of the standstill is not so long as with stronger stimuli; but that a very slight increase of stimulus above this point produces a standstill which is not lengthened by any further strengthening of the inhibitory impulses.

In the case of a patient who died in convulsions with which he had been suddenly seized no significant abnormality was found by Dr. Munro, of Glasgow, in any organ but the brain. When the dura mater was removed it was found to be lined on the left side by an adventitious membrane about as thick as itself, firm and adherent, although it could be stripped off. The membrane was reddish and was not adherent to the pia-arachnoid except in the region of the left olfactory bulb. There was no evidence of hæmorrhage to the naked eye, and the membrane appeared to be of recent development.

In the course of a description of the effects of the division of one inferior peduncle of the cerebellum J. S. Risien Russell has shown that in the disorders of equilibration that result the direction of rotation is always toward the side of the lesion.

The ciliary ganglion has been regarded sometimes as a spinal, at other times as a sympathetic structure. The results of experiments by Dr. Apolant, of Berlin, upon cats seem to place it in the sympathetic system.

Special Senses.—The number of visual units existing in the human retina is discussed in a paper by Prof. König before the Physical Society of Berlin. The acuteness of vision was measured by the distance at which a grating made of regular rectilinear wires begins to appear wavy. Starting at the fovea, it diminishes toward the periphery, and in such a way that the curves of equal visual acuteness form concentric ellipses. The area of each retinal field by which two wires are seen as two increases toward the periphery. If such a field be called a visual unit, then their total number for the whole retina is 50,000. If it be assumed that each unit can perceive 3 kinds of color, of which the resulting impulse is conveyed to the brain by a separate nerve fiber, then there must be 150,000 fibers in the optic nerve. As a matter of fact, histologists estimate the number at from 400,000 to 500,000. The author further discussed the experiments he had made in connection with Dr. Zumpf, which showed that objects of different color must be observed at different depths in the retina. The difference of these depths for red and blue rays proved so great that one lay in the pigment layer, which is hence regarded as a sensory organ. An English anatomist has described the existence of spherules in this layer united to a nerve plexus from the rod and cones. Prof. König finally gave an historical retrospect of Purkinje's phenomenon, in which two colored (red and blue) fields of equal luminosity as seen by daylight appear unequally luminous at twilight, the red disappearing much sooner than the blue. After this phenomenon had been studied by a whole series of observers and its importance insisted upon, Prof. Hering had recently found that it is an exceptional phenomenon. It can only be observed in dark surroundings; in daylight and bright surroundings the differently colored fields remain equally luminous, while the intensity of their illumination is reduced down to a point at which color perception ceases. Prof. König had satisfied himself of the truth of this observation, and thus Purkinje's phenomenon has now lost all its supposed significance.

An experiment made by M. Charles Henry with a new pupilometer upon the action of light on the iris proves that there is almost always a dilatation of the pupil when the iris is withdrawn from the light. The variations of the dimensions of the iris are much less when it is the iris alone that is subjected to light than when the iris and the retina are influenced together. Another experiment indicates that this action of light upon the iris is due, in part at least, to a reflex of cerebral origin; but, on the other hand, we do not yet possess sufficient knowledge of the anatomy of the iris to enable us to say whether these variations are due to the direct action of light on muscular elements, as supposed by Brown-Séquard, or to the action of nervous centers as yet unknown belonging to the iris.

The visual purple of fishes is described by Dr. Abelsdorff, of Berlin, as showing a maximum in its absorption spectrum differing from that in the similar spectrum obtained from amphibia, birds, and mammals. A solution of visual purple obtained from fish exhibited by the author, which was at first of an obvious violet color, became speedily yellow under the action of light, and then finally and very slowly colorless. By treating fish eyes with alcohol and formalin the author had obtained preparations which showed the retina of a brilliant purple color as looked at anteriorly.

Miscellaneous.—It is pointed out by Dr. Lazarus Butler that before the laws of osmosis, deduced from the final osmotic pressure, freezing point, etc., can be applied to the explanation of biological problems, it is necessary to determine whether the initial

rates of osmosis of substances bear constant ratios to their final osmotic pressures, and whether the presence of proteid substances in the solutions affects the initial rate of osmosis. The author has found that the initial rates of osmosis can not be determined from observations of the freezing powers of solutions, and that proteid substances, even when present only in minute quantities, diminish the rate of osmosis to a marked degree. Dr. Barlow further applies these conclusions to the consideration of lymph formation, and describes observations of the specific gravity of the blood, of voluntary muscle, and of lymph, which have an important bearing on the question. In his conclusion he summarizes the evidence in favor of the occurrence of osmosis and increased infiltration as the effective factors in causing the increased outflow of lymph that is seen after the injection of a crystalloid into the blood, as well as the evidence against the view that osmosis and increased filtration alone account for the observed phenomena.

A study of rowing has been applied by Dr. F. Ahlhorn to explain the use and meaning of the asymmetrical types of tail fin often met with among fishes, such as the upturned tail of the shark and sturgeon and the downwardly extended tail of the flying fish. All rowers are acquainted with the results of holding their oars too obliquely in the water. If the upper edge is turned too much toward the stem of the boat, a brisk pull brings the blade out of the water and the oarsman is thrown backward from his seat; but if the blade is inclined in the opposite direction, it digs into the water and the oarsman "catches a crab." The skeletal support of the asymmetrical fins of fishes is generally such that either the upper or the lower border of the fin offers more resistance to the pressure of the water than the opposite border, whereby the fin is caused to assume an oblique instead of a vertical position. Then, where the upper part of the tail is stiffer than the lower—as in the heterocercal tail of the shark and sturgeon—the tail in locomotion is driven upward; while if the lower part of the tail is firmer than the upper—as in the flying fish—the tail tends, in action, to assume a lower position than the rest of the body. "The body of the animal, in fact, is made to swing vertically about a horizontal axis running through the center of gravity." In the first group the tail becomes elevated above the head, and the bottom-haunting fish composing it are enabled to give free play to their tails while scouring the sea bottom in search of food. In the second group the head becomes raised above the tail. It consists of surface-swimming forms, which are thus enabled, by the adaptation of their structure, to swim swiftly beneath the surface of the water without danger of their tails emerging, and so causing inconvenience and waste of force. The tails of many air-breathing aquatic animals, such as the crocodile, water snake, and the extinct ichthyosaurus, are constructed on this principle.

In his examination of the opposition of the thumb Dr. René du Bois-Reymond studied in detail the theory of saddle joints, and on the assumption that the movements take place about two axes at right angles to each other and passing through the point of contact of the two bones, he arrived by construction at a mathematical formula corresponding to the ideal saddle joint. The formula shows that a certain amount of rotation is possible in this joint. The author further investigated, by the horopter and photographically, the actual movements of the thumb, the hand being fixed.

In a paper on the formation and structure of dental enamel Dr. J. Leon Williams discusses: 1. The existence of a very thin membrane, or a structure of membranelike appearance, lying be-

tween the ameloblasts and the forming enamel, and also between these cells and those of the *stratum intermedium*. A similar membrane was seen in many specimens covering the odontoblasts. 2. The formation of enamel by deposit, and not by cell calcification. This deposit probably consists of two distinct cell products—a granular plasma and spherules of calcoglobulin. 3. The relation of the cells of the *stratum intermedium* to true secreting tissue, the relation being especially marked in the enamel organs of the rat and mouse. 4. An intricate vascular network in the *stratum intermedium*. A free distribution of blood vessels was observed in the chloroblastic layer of cells in the mouse, rat, and calf, as well as in the human embryo. 5. The fibrous character of enamel in many of the lower animals and the change of the fibers into more or less regularly arranged granules in the monkey and man. 6. The author affirms that the varicosities of the enamel rods are not caused by acids (though often rendered more clear to view by acid treatment), but represent a true structural peculiarity of this tissue; and that these varicosities, which often continue in an uninterrupted line across large fields of view, correspond with the course of one set of fibers. 7. The Retzius bands are often as distinctly marked in forming as in mature teeth and in teeth which have been kept constantly moist as they are in dried specimens. The enamel rods are often seen to pass without break across several of these bands. The bands are principally due to a deposit of pigment, and not to imprisoned air or gas, as is claimed by von Ebner.

In view of the great discrepancies in the published results of the analysis of enamel Charles S. Tomes endeavored to estimate the organic matter directly, and was surprised to find that it did not exist in weighable quantity. Other results of his studies of the composition and nature of this substance are that there is at least one equivalent of water in combination with the calcic phosphate, and this, unmentioned in the analysis, has generally figured as organic matter. Further, that there is more water than this in the enamel; "it may be that from its physical structure it is very hard to dry, though longer drying and a somewhat higher temperature make little difference to it; or it may be that there are two equivalents in composition, and that the salt is exceedingly hard to decompose absolutely at the temperatures obtained. The enamel of the elephant's molar (on which the experiments were mostly made) must then be considered as an almost inorganic crystalline structure, and, so far as my investigations have gone, there is no reason to suppose that the enamel of man, the horse, and the ox, differ materially from it."

In his investigations of the physiological influence of alcohol, C. F. Hodge has regarded the influence upon growth, including reproduction, upon psychic development and upon animal activity and ability. With fresh cultures of yeast an addition of 10% of 1 per cent. of pure alcohol retarded growth materially, proportionately much more than larger amounts. Two pairs of puppies were experimented with, to one of which alcohol was given in non-intoxicant doses, which were increased as the puppies grew. Growth in both pairs continued practically normal, the alcoholic pair even growing a little faster than their controls at first. Each normal puppy was, however, about 5 per cent. heavier than its alcoholic brother or sister. On the side of the reproductive faculties, too, the alcoholic pair proved not inferior to the normals. The chief difference was on the psychic side. Both the alcoholic animals were much quieter than their controls, and both were abnormally timid.

Interesting experiments in the synthesization

of proteidlike substances have been described by Dr. John W. Pickering. From them it appears that if certain derivatives of proteids and other substances of allied chemical constitution are heated together in sealed tubes with an excess of either phosphorus pentachloride or pentoxide a series of colloidal substances are formed which, when freed from the contaminating phosphoric acid and dissolved in concentrated ammonia, give opalescent solutions that, on evaporation down in a vacuum, yield substances closely resembling in physical, chemical, and physiological properties certain proteids. These colloidal substances, although they differ from one another in minor details, are usually distinguished by the following characteristics: they are soluble in warm water, forming opalescent levorotatory solutions; the resulting solutions yield the principal color reactions hitherto deemed diagnostic of proteids; in the absence of salts, solutions of these colloids do not coagulate on heating, but in the presence of a trace of a neutral salt they coagulate at temperatures very similar to proteid solutions; fractional heat coagulation shows that the colloidal solutions are mixtures of different substances; the different constituents of the colloidal solution exhibit different physiological actions; in the presence of an excess of neutral salts, or of salts of the heavy metal, the colloidal solutions behave in a manner similar to proteid solutions; when introduced into the circulation of pigmented rabbits, dogs, and cats certain of these substances produce intravascular coagulation of the blood in a manner similar to a nucleo-proteid. They also hasten the coagulability of the blood withdrawn from the carotid, and will, when slowly injected intravenously in minute quantities into dogs, produce a retardation of the coagulability of the intravascular blood, e. g., a "negative phase." Apparently these colloidal substances are, owing to both their physical and chemical properties and their physiological behavior, the synthesized bodies nearest to proteids at present known.

Dr. A. B. Macallum has found that the greater part, and sometimes the whole of the assimilated iron in the cells of the higher forms of animal life is held in the nucleus, in the chromatin of which it is chiefly found; and the same is true of the nuclei of all the higher vegetable organisms; it is rarely found in the cytoplasm of the cells. An important section of the author's paper is given to the occurrence of assimilated iron in special forms of life, such as in protozoa, fungi, bacteria, and the *Cyanophyce*. Chlorophyll yielded no evidence that it contains iron, and it is mentioned incidentally that species of *Monotropa* remain colorless when fixed in solutions of corrosive sublimate.

Concerning the bacteriology of oysters, Profs. Herdman and Boyce said, in the British Association, that it had been shown that sea water is very deadly to the typhoid bacillus, so that an infected oyster would probably soon be free from infection. It has been found, as an experimental result, that artificially infected oysters soon get rid of their typhoid bacilli. Moreover, there is normally in the oyster a bacillus resembling that of enteric fever, by which an inexperienced investigator might easily be misled. In the discussion Dr. Kohn showed that the pigment causing the green color in the gills of certain oysters is not due to iron or copper, as has been supposed, since the body contains even larger quantities and is not colored. Dr. Grünbaum spoke on the action of human serum on typhoid bacilli as tending to show the normal presence of certain protective substances, varying in quantity in different individuals, more particularly in mother and child.

The nature and causes of immunity to disease,

natural and acquired, are discussed by Dr. W. B. Ransom in the light of a large number of facts cited and reviewed. The author concludes that immunity can not be due to "exhaustion of the soil" or the using up by the bacteria of certain constituents of the animal body necessary for their food; for it may be produced without bacteria entering the body at all, and it has been shown that the fluids of animals naturally or artificially immune may form good culture media. The last fact also disproves the theory that it is due to the retention in the body of bacterial products harmful to themselves. Dr. Ransom's conclusion is that immunity, whether caused by gradually accustoming the body to the action of a microbe or its toxine, or by injecting into another the serum of an animal thus protected, is in each case due to a vital reaction of the cells of the body, and that in each case the injected substance stimulates to that reaction. Such reaction is shared in by all the cells of the organism. They all become less sensitive to the microbial toxine, while the special defensive mechanisms are stimulated to the more active exercise of their special functions. Immunity then depends on the action of living cells. In resisting the invasion of living bacteria, there is a defensive mechanism in the army of phagocytes, but this alone can not suffice. Changes in the fluids of the body, rendering them a less suitable pabulum, or even actually bactericidal, are produced by changes in all the cells by virtue of which they become comparatively insensitive, though they do not, so far as we know, secrete a chemical antidote.

In comparative experiments made by Prof. Charteris and Dr. MacLennan regarding the lethal dose of hydrochlorate of eucaine and hydrochlorate of cocaine injected into guinea pigs, it was found that the toxic dose of the eucaine was 0.09 gramme, and that of cocaine 0.068 gramme, per kilogramme body weight. The mode of death from the two substances varied. With the cocaine salt there were more rotatory movements of the head, more salivation, more opisthotones, and more respirations than with the eucaine salt. It was also noticed that the physiological action produced by a given dose of eucaine did not follow nearly so rapidly as that which ensued with a similar dose of cocaine under identical conditions. Hence it was concluded that the action of eucaine was slower in onset and less in intensity.

Toxines are defined by M. Armand Gauthier as poisons secreted by microbes or formed by the animal economy which, if introduced into our organs or not completely eliminated, bring on a pathological state and involve profound and often permanent modifications of the nutrition and of the vitality of the cellulæ. Those toxines are of 3 kinds: the *ptomaines*, definite alkaloidal poisons formed by the microbes; *leucomaines*, basic substances, definite, like the ptomaines, but formed in our organs in the regular course of life; and *toxines*, properly so called, poisons either albuminoid or of an indeterminate chemical nature, playing in general the part of ferments of surprising activity. They are secreted by pathogenous microbes as well as by venomous animals and certain plants. They form an essentially injurious portion of venom and virus. Along with the microbial toxines the author in his work on "Animal and Microbial Toxines" describes the soluble ferments, animal and vegetable, and the specific glandular secretions as well as those curious *antitoxines* which the living organism produces when it reacts and defends itself against the attacks of those dangerous agents. There are other antitoxines now used in *seropathy*.

The observations of Prof. H. B. Bowditch on Boston school children and those of Dr. Porter on St. Louis children go to show that the relation be-

tween height and weight varies with age in such a way that older children are heavier in proportion to their height than younger children.

Recent experiments by M. de Candolle at Geneva go to show that seeds continue for a long time to preserve the power of germinating when they are placed under circumstances in which life can not exhibit any of its activity. Seeds of corn, oats, fennel, mimosa, and other plants were exposed to a temperature of -40° F. for four months, yet when placed under favorable circumstances produced normal seedlings. The observations of Robert Brown long ago showed that seeds of *Nelumbium* more than a hundred years old were capable of germinating. Hence M. de Candolle concludes that protoplasm in resting seeds is analogous to a smoldering fire, but is endowed with potential life, with its constituents able to develop active powers when placed under favorable conditions.

In explaining the perfumes of flowers, M. Eugène Mesnard assumes that it is light and not oxygen which is the principal cause of the transformation and destruction of odorous substances; but in many cases the two agents seem to act in concert. The action of light makes itself felt in two different ways: On the one hand it acts as a chemical power, capable of furnishing energy to all the transformations through which the odorous products pass from their elaboration to their total resinification; and it exerts a mechanical action which plays an important part in the general life history of plants. This property explains the mode of the periodical liberation of the perfumes of flowers. The intensity of the perfume depends on the equilibrium which is established every day between the water in the cellulose of the flowers, which tends to drive outward the perfumes already elaborated contained in the epidermis, and the action of light, which combats this turgescence. It is thus explained why in countries of the East the flowers are less odoriferous than in Europe; why the trees, the fruits, and even the vegetables are filled with odoriferous products more or less resinified. It is also explained why in those countries the vegetation is thorny. It has too much light and too little water there.

PORTUGAL, a monarchy in southwestern Europe. The throne is hereditary in the family of Saxe-Coburg-Braganza. The legislative power is vested in a Cortes, consisting of a Chamber of Peers and a Chamber of Deputies. There are 52 hereditary peers, 13 spiritual peers, and 90 life peers. The Chamber of Deputies has 120 members, elected for three years by direct vote of citizens having an elementary education or a revenue of 500 milreis per annum. The reigning king is Carlos I, born Sept. 28, 1863. The ministry at the beginning of 1896 consisted of the following members: President of the Counsel and Minister of Finance, E. R. Hintze-Ribeiro; Minister of Foreign Affairs, Luiz Pinto de Soveral; Minister of the Interior, J. F. Franco Pinto Castello Branco; Minister of Justice and Worship, A. d'Azevedo Castello Branco; Minister of War, Col. L. A. Pimentel Pinto; Minister of Marine and the Colonies, Jacinto Candido da Silva; Minister of Public Works, Industry, and Commerce, Campos Henriques.

Area and Population.—Portugal has an area of 34,038 square miles, and had at the census of 1890 a population of 5,049,729. There were 35,769 marriages, 164,627 births, and 127,237 deaths in 1890. The number of emigrants in 1895 was 44,746, against 26,911 in 1894, 30,383 in 1893, 21,074 in 1892, and 35,585 in 1891. Lisbon, the capital, has a population of 307,661; Oporto has 139,856.

Finances.—The revenue for the fiscal year 1895 was 43,905,093 milreis, and the expenditure 41,264,-

947 milreis (1 milreis = \$1.08). For 1897 the receipts are estimated at 49,700,960 milreis; 11,953,239 from direct taxes on land, industry, houses, incomes, etc., 2,755,000 from registration, 2,119,200 from stamped paper, 336,000 from lotteries, 24,688,583 from indirect taxes, 717,000 from additional imposts, 4,450,274 from railroads, telegraphs, posts, etc., and 2,681,673 *recettes d'ordre*. The expenditures are estimated at 49,430,068 milreis: 525,000 for civil list and appanages, 96,494 for the Cortes, 5,885,199 for interest and amortization, 1,637,600 for other expenses, 16,472,058 for the consolidated and terminable public debt, 400,000 for loss by exchange, 3,593,444 for the Ministry of Finance, 2,564,423 for the Ministry of the Interior, 1,010,480 for the Ministry of Justice and Worship, 5,221,676 for the Ministry of War, 3,739,078 for the Ministry of Marine and the Colonies, 386,454 for the Ministry of Foreign Affairs, 5,321,780 for the Ministry of Public Works, Commerce, and Industry, 59,877 for the savings bank, and 2,516,500 for extraordinary purposes.

The consolidated debt on Oct. 30, 1893, amounted to 529,993,076 milreis, bearing 3 per cent. interest, comprising 342,198,736 milreis of internal and 187,794,340 milreis of external obligations. The law of Feb. 26, 1892, reduced by 30 per cent. the interest on the internal or currency debt, and the law of April 20, 1893, reduced the interest on the external or gold debt by $6\frac{2}{3}$ per cent. The redeemable debt on June 1, 1894, was stated to be 138,212,392 milreis, consisting of 28,082,902 milreis of internal, and 66,844,890 milreis of external obligations, on which also the interest was reduced by these laws, and 43,284,600 milreis of tobacco debt. The annual charge, including loss by exchange, is 15,395,742 milreis.

Commerce.—The value of the imports of merchandise in 1895 was 39,853,010 milreis, and of the exports 26,971,826 milreis. The imports of specie were 1,143,030, and exports 2,309,287 milreis. The imports of cereals were 5,576,000 milreis; of cotton, 2,530,000 milreis; of animals, 2,017,000 milreis; of codfish, 1,960,000 milreis; of sugar, 1,955,000 milreis; of coal, 1,771,000 milreis; of cotton cloth, 1,750,000 milreis; of iron, 1,656,000 milreis; of wool, 1,188,000 milreis. The export of wine was 11,292,000 milreis in value. Next in importance were cork for 3,524,000 milreis, animals for 2,519,000 milreis, copper for 1,707,000 milreis, fish for 1,445,000 milreis, cotton cloth for 880,000 milreis, and fruits for 701,000 milreis.

There were 1,788 ocean sailing vessels, of 319,000 tons, 4,202 ocean steamers, of 5,939,000 tons, 3,264 coasting sailing vessels, of 191,000 tons, and 976 coasting steamers, of 969,000 tons, entered at all the ports in 1896. The merchant navy numbered 51 steamers, of 41,161 tons, and 207 sailing vessels, of 47,724 tons.

Communications.—The railroads on Jan. 1, 1896, had a length of 1,453 miles, of which 914 miles belong to the state. The others received subscriptions.

The post office in 1894 forwarded 21,017,000 letters, 5,466 postal cards, 19,507,000 newspapers and circulars, and 250,000 postal orders and letters of declared value, transmitting 30,050,000 francs. The telegraphs had 3,985 miles of line, and 8,839 miles of wire.

Currency.—The legal standard of value is gold, but the money in circulation is for the main part depreciated paper notes of the Bank of Portugal, the issues of which on Sept. 30, 1895, amounted to 54,139,000 milreis, protected by a metallic reserve of 12,102,000 milreis.

Political Affairs.—The financial crisis that began in 1890 had not passed away in 1896. New taxation and a reform in the system of collection were proposed to meet the demands of the creditors

of the Government, and also provide means for reorganizing the navy and developing the colonial administrations. The projects of the Minister of Finance included a partial revision of the tariff, the conversion of the public debt into a uniform stock paying 4-per-cent, interest, and a loan of £2,000,000, to be realized from the bonds of the tobacco company owned by the Government. The protective character of the tariff is to be maintained. New excise duties are raised from soap and sugar. For the conversion of the foreign debt the consent of the bondholders was necessary. It was proposed to them to exchange their 3-per-cent. consols for new ones of 52½ per cent. of their nominal value, the 4-per-cent. for 77-738 per cent. of the face, and 4½-per-cent. for 85.06 per cent. of their nominal value in new 4-per-cent. The converted debt would have a nominal capital of 90,000,000 milreis, redeemable in seventy-five years at par. Interest and sinking fund would be paid in Portuguese money, not in gold, holders having the option of demanding payment in London, Paris, or Berlin, in pounds, francs, or marks, at current exchange rates. The Cortes authorized the sale of 9,000 contos of reis of bonds guaranteed by the tobacco duties, consequent upon the contract concluded between the Government and the Portuguese Tobacco Company. The proceeds of this new loan were to be employed exclusively in the purchase of war vessels. In January Senhor Elduayen succeeded the Duke of Tetuan as Minister of Foreign Affairs. Col. Pimintel Pinto resigned the Ministry of War, and Col. José Estevao de Moraes Sarmiento was appointed to the post on April 8. A reform of the army has been determined upon, as well as the reform of the colonial administration. After the King had been stoned by an anarchist while out driving, the perpetrator of the deed was sent to a lunatic asylum. On Feb. 4 a bomb was exploded in the house in which resided one of the doctors who certified to his insanity. On the following day the police arrested 60 notorious anarchists, who have made Lisbon their principal resort, because the laws were very lenient to them in Portugal. The Government, which has always given employment at a sacrifice to the state to men in need of work, determined to adopt severe measures to prevent future attempts of the sort. Accordingly, a bill for the repression of anarchy was voted by the Cortes on Feb. 12. The anarchists concerned in the bomb outrage were workmen employed in the lunatic asylum to which the King's assailant was sent. A law was passed prohibiting publication by the press of the particulars of anarchistic outrages. On April 18 a wealthy manufacturer named Domingor was killed by a bomb exploded in his carriage near Lisbon.

Colonies.—The colonial possessions of Portugal comprise the Cape Verde Islands, off the west coast of Africa, with an area of 1,650 square miles and 110,926 inhabitants; Portuguese Guinea, having an area of 14,000 square miles and 800,000 inhabitants; Prince's island and St. Thomas, with an area of 454 square miles and 21,040 inhabitants; Angola, with an area of 457,500 square miles and 19,400,000 inhabitants, including Ambriz, Benguela, Mossamedes, and the Portuguese Congo; Portuguese East Africa, with an area of 261,700 square miles, and 1,500,000 inhabitants; Goa, Damão, and Diu, in East India, with an area of 1,615 square miles and 514,169 inhabitants; Macao, with an area of 8 square miles and 67,036 inhabitants; and Timor and Kambing, with an area of 6,290 square miles and 300,000 inhabitants. The total area of the colonial empire is about 823,000 square miles, and the total population 14,213,000. The revenue receipts of all the colonies in 1895 were estimated at 4,929,314 milreis, and the expenditures at 5,162,862 milreis. Their total im-

ports amount to 3,939,000, and exports to 5,121,000 milreis. There are 161 miles of railroad in Angola, 57 miles in East Africa, and 50 miles in the East Indies. The telegraphs have an extent of 268 miles in Angola, 230 miles in East Africa, and 33 miles in India. The colonial forces consisted in the beginning of 1896 in East Africa of 50 European officers and 1,143 European troops, afterward reinforced by 24 officers and 603 men, and 8 battalions of African rifles, and 2 companies of rifles in Timor, mostly natives, making the native forces 488 officers and 7,797 men. In Goa also the garrison was strengthened, in consequence of an uprising of the natives. The Government had to deal with simultaneous rebellions in East Africa, Goa, and Timor. The rebellion in Lourenço Marques was ended by the capture of Gungunhama, the African chief, who defied the Government and attacked the settlements, and in February, 1896, the troops sent out to Africa began to return to Portugal. But fresh forces were required to be sent out to Goa. The revolt there began in a mutiny of the troops ordered to be sent thence to East Africa. The Duke of Oporto, brother of the King, went out to Goa with the new Governor General, R. de Andrade. They made a strong effort to suppress the rebellion, and restored order in the neighborhood of the settlements, but in the wooded hills, the *ranes*, or native chiefs, still defied the royal troops. Several prominent officials were discovered to be implicated in the insurrection. Influential men in Portuguese India fled into British territory, where the British Indian authorities gave them asylum, but did not allow them to remain in the districts bordering on Portuguese India. In Timor the Chief of Balibo surrendered, rebels of Catubaba were reported as beaten, their villages having been captured, in August, 1896, and operations were begun against those of the Hamir.

PRESBYTERIANS. The statistical reports made to the Council of the Presbyterian Alliance at Glasgow show that in twelve years, 1884 to 1896, the number of presbyteries in all the Presbyterian and Reformed churches has increased from 1,208 to 1,426; of ministers, from 21,251 to 27,043; of ruling elders, from 101,130 to 130,083; of deacons, from 58,610 to 93,018; of Sunday schools, from 21,657 to 32,271; of teachers, from 223,313 to 318,665; and of pupils, from 1,901,184 to 3,335,654. The number of congregations is reported in the statistics for 1895 at 31,925, as against 23,821 "pastoral charges" and 13,384 "separate congregations" in 1884.

1. Presbyterian Church in the United States of America.—The following is a summary of the statistics of this Church as presented to the General Assembly in May: Number of synods, 31; of presbyteries, 224; of candidates, 1,508; of local evangelists, 170; of licentiates, 455; of ministers, 6,842; of elders, 27,025; of deacons, 9,174; of churches, 7,573; of communicants, 944,716; of members of Sabbath schools, 1,096,391; of licensees during the year, 321; of ordinations, 286; of installations, 558; of churches organized, 149; of churches dissolved, 84; of members added on examination, 64,826; of baptisms, 24,484 of adults and 28,459 of infants; amount of contributions for home missions, \$980,506; for foreign missions, \$739,103; for education, \$102,367; for Sabbath-school work, \$130,598; for church erection, \$155,177; for the relief fund, \$94,352; for the freedmen, \$109,205; for synodical aid, \$73,152; for aid for colleges, \$148,651; for the anniversary reunion fund, \$352,350; for the General Assembly, etc., \$92,462; for congregational purposes, \$10,413,785; miscellaneous, \$778,728; total, as footed up in the tables, \$14,150,497. Besides these amounts, about

\$135,000 were received from interest on permanent funds of the boards, and about \$300,000 as income of the theological seminaries.

The Boards.—The table of statistics of benevolence for the past ten years presented to the General Assembly shows a steady decrease since 1891 in the ratio of gifts from the churches to the total income of the boards—from 38 per cent. to 31 per cent.; a steady decrease in the total gifts to the boards since 1893—from \$979,821 to \$862,844; and a steady decrease since 1892 in the average contributions per member through the boards—from \$1.20 to 90 cents.

The past year's receipts of the Board of Church Erection were \$118,093, and the expenditures \$165,582. With the aid thus given, churches and manse were erected valued at \$573,280. The board had a loan fund of \$245,000, out of which 11 churches were aided to the amount of \$38,000; and a manse fund of \$85,000, by which 41 churches were aided with \$16,813. Besides these, 175 churches were aided to the amount of \$80,699. About \$40,000 are available annually from the loan fund.

The Board of Publication returned in a business capital of \$332,833, with receipts for the year of \$317,848, and expenditures of \$362,745. The net profits amounted to \$31,146 (a decrease of \$5,653), two thirds of which went to the missionary department. The available funds of the missionary department aggregated \$145,130, and the expenditures reached \$124,962. The board had maintained 107 missionaries, organized 1,030 new schools, and had under its care 51,890 pupils and teachers.

The available receipts of the Board of Ministerial Relief had been \$171,557, showing a slight decrease, and the expenditures \$166,735, giving an average to each of the 795 beneficiaries of \$210, with a maximum of \$300. A debt of \$9,673 was covered by a gift of \$10,000 previously, though not necessarily, applied to the Endowment fund.

The total receipts, including loans, etc., of the Board of Education, had been \$103,442, and the expenditures \$103,158. Of the 1,037 candidates for the ministry under the care of the board 248 were new.

The Board of Aid for Colleges had received \$89,138, against \$119,627 in 1894-'95, and had expended \$98,787. It had a balance of \$11,149. During an operation of thirteen years 56 institutions had been aided. The board held mortgages amounting to \$173,388 on property valued at \$942,429. During the period of thirteen years the receipts had aggregated \$1,143,361.

The receipts of the Board of Home Missions had been \$729,433, and the expenditures \$858,985, while the debt had grown to \$299,062. The board had sustained 1,544 ministers, a decrease of 287, with 1,830 churches having 99,454 members, and returning 9,179 additions on profession of faith. Sixty-five new churches had been organized.

The receipts of the Freedmen's Board had been \$146,992, and the expenditures \$149,763. The debt had increased to \$16,371. The freedmen had contributed \$35,577 to their churches and ministers and \$32,521 to schools. One hundred and eighty-one ministers were in the field, and 314 churches or missions and the same number of Sunday schools were sustained, with 19,624 pupils in the latter. The churches and missions returned 18,761 communicants, and 2,083 added on examination. The 75 secular schools returned 230 teachers and 9,511 pupils.

The funds available for the prosecution of the work of the Board of Foreign Missions amounted to \$959,774, and the expenditures were \$929,239, of which \$54,310 were charged to administration. Appropriations had been cut down more than \$100,000, and the present deficit was \$76,770.

The one hundred and eighth General Assembly met in Saratoga, N. Y., May 21. The Rev. J. L. Withrow was chosen moderator. Upon the recommendation of the Committee on the Constitution of the Church the Assembly reaffirmed the action of the Assembly of 1894 in directing the insertion in the title of the constitution of the words "subordinate standards," as setting forth the true relation of the Confession of Faith and the other standards of the Church to the Word of God as their sole source and sanction, and called the attention of the judicatories and members of the Church to the declaration of the standards, which set forth in explicit terms the belief of the Church that all the standards rest upon and are in accordance with the Holy Scriptures. The term "subordinate standards" on the title page of the constitution of the Church was changed so as to read, "being its standards, subordinate to the Word of God, containing," etc. The report on Young People's Societies of Christian Endeavor recognized the great good that had attended the formation of the societies, and advised that the Assembly should so direct their future that they might be "of the greatest service to the cause of Christ and the furtherance of the influence of the Church." It further included a statement of the relations between the individual societies and the Church, in which all young people's religious organizations of every name were recognized as under the jurisdiction of the Church "which are to be found within its churches or composed of members of its churches. Variety of form can not affect this relation, which involves mutual obligations. Such being the case, the Assembly deems it unnecessary to prescribe any specific form of organization for individual societies, while it expects them to conform to certain acknowledged principles, both general and particular, as follow: In general, those societies are to be organized and to work in conformity with the historic position of the Church, as expressed by her standards and interpreted by her courts. The particular relations of all societies to the Church are sustained, in the first instance, to the session of a particular church, and thence through the session to the Church at large. Each society is under the immediate direction, control, and oversight of the session of that church in which it is formed, and that oversight is not merely general, but applies to the constitution of the society, the schedule of its services, the election of its officers, and the distribution of its funds." This statement was adopted as "setting forth the sense in which the Church expects the young people to be loyal," and was ordered sent to the presbyteries to be read to individual societies. The use was advised, in journals, reports, etc., within the Church, of the simple designation "Young People's Societies." The Assembly further resolved on this subject that it reaffirmed the deliverances of former years wherein confidence had been expressed in these societies and encouragement given to their work; exhorted them not only to increased loyalty and devotion to the pastors and sessions to which they are subordinate, but to careful study of the doctrine and polity of the Presbyterian Church; and urgently recommended them, as far as practicable, to make the appointed boards of the Church the channels of their beneficence, and to maintain steadfastly their adherence to Presbyterianism, in harmony with the principles and practices of interdenominational fellowship.

A memorial was received from the Synod of India requesting the General Assembly, "in view of the exceedingly difficult complications which often occur in cases of polygamists who desire to be received into the Church, to leave the ultimate decision in all such cases in India to the Synod of India." The committee to whom the application was referred re-

ported as their unanimous opinion that, as it contemplated a matter of doctrine, it could not, in view of the mandatory provisions of the Form of Government giving the ultimate determination of all doctrinal questions to the General Assembly, be granted, and the Assembly so decided.

The plan of co-operation in home missionary work among the Presbyterian and Reformed Churches of North America, reported by the Committee on the Presbyterian Alliance and already adopted by many Presbyterian and Reformed Church boards, was approved; and the high esteem and fraternal regard of the Assembly for all the churches of the Presbyterian Alliance was expressed, together with its desire for closer relations with the Presbyterian and Reformed Churches on the North American Continent.

The report on Church unity dealt with the correspondence which the committee had had with the Protestant Episcopal Commission during the past nine years concluded with an expression of kindly feeling toward the Episcopal brethren and advised that the correspondence be closed for the present. It also included the proposed constitution of the Federal Union of Presbyterian and Reformed Churches, concerning which the Assembly resolved, in adopting the report, "that, while declining to adopt the plan of federation submitted by the majority of the committee, the General Assembly hereby records its fraternal regard and affection for the Churches comprehended by the proposed plan."

The report on the Sabbath entreated the members and all other persons conscientiously to discontinue whatever tends to break down the distinction between this and other days, making a number of specifications; commended the efforts that were being made through Sabbath schools and Young People's Societies to educate the rising generation as to the claims, sanctities, and obligations of the Sabbath; advised the devotion of the last Sunday in October by pastors and churches and in the Sunday schools to the special consideration of the subject of the Sabbath; declared that "those Sabbath associations of our land having a Christian basis, and being in sympathy with Sunday laws passed with a view to protect the day of rest and worship, should have a claim upon the co-operation and practical support of the Christian public"; and gave special approval to the American Sabbath Union and the Woman's National Sabbath Alliance auxiliary, recommending them especially to Christian men and women in all our communities."

The erection of a large business building in the city of New York by the Board of Home Missions, on which a heavy debt was placed, having been much criticised, a proposition was made by Mr. John S. Kennedy to buy the building for what it had cost, less Mr. Kennedy's own subscription, together with another proposition from Miss Rachel Lenox Kennedy to enlarge and improve the Lenox Building, from which the board had moved, and make it adequate to all their needs. The subject was referred to a special committee of 11. It is understood that this committee found the transactions connected with this building correct, and decided to recommend that it be retained and occupied as intended.

The report of the special Committee on Theological Seminaries related the proceedings of the committee during the year and its correspondence with the trustees of the seminaries concerning changes which the Assembly desired to have made in their charters in order to bring them more fully under its control. Princeton, Omaha, and Dubuque Seminaries and Lincoln University had either modified their charter provisions in compli-

ance with the wishes of the Assembly or had declared their readiness to take steps to secure such legislation as would enable them to do so. McCormick Seminary had declined to consider the question of a closer union with the General Assembly. The trustees of Western Seminary had resolved to adhere to their former action in the premises, which was to endeavor to secure legislation permitting an arrangement with the Assembly. The commissioners of Auburn Seminary had prepared an historical sketch of the administration of the institution for the seventy-six years of its existence, and had adopted a resolution declaring that, having once expressed and already once reaffirmed their views on the subject of the proposed change, they did not feel called upon to reiterate or modify them. The report was disposed of by the adoption of a resolution that "the General Assembly highly appreciates the readiness of the boards of control in some of our theological seminaries, shown during the past year, to carry out the plan approved by the General Assembly of 1895; and while others of the boards of control have not seen their way clear as yet to adopt the general provisions of that plan and carry them into legal effect, the General Assembly can not but hope that upon further consideration they may come to the conclusion that all the funds and property in their hands and the teaching in the said seminaries may be so completely safeguarded to the Church that benevolent persons contemplating making gifts or bequests to these institutions may have the fullest confidence in the future security of such gifts or bequests. With entire confidence in the integrity and wisdom of the beloved brethren in control of our theological seminaries, we urge them to take such measures as will secure the most desirable result, and also that these several boards be requested to report to the next General Assembly what progress they have made in this direction." The committee was discharged.

In view of the instructions given by the previous General Assembly concerning the acceptance of candidates for licensure, the Presbytery of New York had declared its intention to assure itself of the fidelity of candidates and ministers received by it, and of their acceptance of the standards of the Church; and further, "that it desired on one side to hold fast the truth as embodied in our standards, and at the same time, in the interest of peace and mutual good will, did not exclude from application for license students who gave evident assurance of their loyalty to the standards of the Church." The Long Island Presbytery had declared that in its action in the matter the General Assembly had exceeded its power. The Assembly reaffirmed the action of the General Assembly of 1895 concerning the reception by presbyteries of students as candidates who are pursuing their theological studies in seminaries for whose instruction it disavowed responsibility, and added: "In doing this, we call attention to the facts that the Presbytery of New York, last year, asked the General Assembly to instruct it in relation to its duty toward students applying to be taken under its care, and that the Assembly, in response, instructed it, using substantially its own words. The action of the Assembly did not relate to the licensure of candidates, but to the reception of students asking to be taken under care. It fully recognized the right of the presbytery to determine the qualification of candidates for licensure. We also express our understanding of the words 'instruct and enjoin' in our last year's action to be simply an emphatic expression of its response to the Presbytery of New York touching the specific question overtured. 2. We call attention to the difference in status between transfers from other denominations,

on the one hand, and students seeking to enter the ministry of the Church, on the other hand, in the relation they sustain, or seek to sustain, to the Church. As to ministers from other denominations, the General Assembly, having had no care or supervision of their theological instruction, requires an examination as to their changes and reasons therefor, of conviction in doctrinal belief and in the form of church government, and of their approval and sincere acceptance of the standards of the Church. On the other hand, students seeking to come under the care of presbyteries as candidates for the Gospel ministry have no presbyterial or ecclesiastical status save what is implied in Church membership; but, having a purpose to qualify themselves in doctrinal belief for the Gospel ministry, it is indispensable for the purity of the Church in doctrine and polity that presbyteries in receiving them under their care so direct them in all cases when necessary, and, if need be, require them to pursue their theological studies under some approved divine, or in institutions or seminaries which have not been disapproved by the Church, that their instruction may be in all respects in accord with the doctrine and polity of the Church into whose ministry they are seeking to enter. 3. While fully recognizing the constitutional rights of presbyteries in the matter of licensing candidates for the ministry (see Form of Gov., chap. xvi), we are nevertheless urgent that presbyteries have special care of their examinations in subjects required by the Form of Government, chapter xiv and section 4, and that due respect be given to the deliverances of the General Assembly in the matter of the education of students for the Gospel ministry. 4. We are equally urgent that the same care be taken by presbyteries in their examinations of ministers coming from foreign bodies that is urged upon them in the licensure of candidates already under the care of presbyteries." A special committee was appointed to prepare a "constitution, rule, or such other action as may seem best to them," regulative of the power of the General Assembly and of the presbyteries to superintend the education and care of candidates for the ministry, which should report to the next General Assembly.

The Board of Home Missions was advised to make certain changes in its method of doing business, intended to secure a stricter accountability and promote a stronger sense of responsibility in the presbyteries and churches asking aid; and a committee of three ministers and six laymen was appointed to confer with the board regarding its methods of general administration and suggest such changes therein as may seem advisable; to examine the office expenditures and the books and accounts of the board, with the view of ascertaining what reductions are practicable and changes desirable; to ascertain the cause of the present indebtedness and seek means for removing it and of preventing the recurrence of deficits; and to advise the churches and the General Assembly of the results of their investigation and of their conclusions. The moderator was authorized also to issue a pastoral letter on the subject. Resolutions were adopted concerning protection to American citizens (particularly missionaries and teachers) in Turkey; approving international arbitration, and suggesting an arrangement between the United States and Great Britain to be made as the beginning of a uniform system. The judgment of the Assembly was expressed that while the Church should use every agency in its power, moral, educational, and legal, to accomplish the suppression of intemperance, the mightiest weapon that could be employed is the Gospel. The sessions of the churches were therefore advised each to appoint a

permanent committee on temperance to devise ways and means for uniting and directing the energy of the Church against intemperance; and appeals to conscience were suggested as affording the best method of operation.

II. Presbyterian Church in the United States.—The following is the summary of the statistics of this Church as they were reported to the General Assembly in May: Number of synods, 13; of presbyteries, 76; of churches, 2,788; of ministers, 1,349; of licentiates, 85; of candidates, 402; of ruling elders, 8,656; of deacons, 7,072; of communicants, 210,539; of licensures during the year, 79; of ordinations, 61; of churches organized, 55; of members added on examination, 11,874; of baptisms, 4,857 of adults and 5,304 of infants; of baptized noncommunicants, 37,031; of teachers in Sunday schools, 19,223; of pupils in the same, 138,735. Amounts of contributions: For Assembly's home missions, \$26,648; for local evangelistic purposes, \$104,461; for the Invalid fund, \$13,096; for foreign missions, \$110,737; for education, \$48,764; for publication, \$7,748; for colored evangelization, \$10,468; for the Bible cause, \$4,221; for presbyterial purposes, \$15,935; for pastors' salaries, \$798,106; for congregational purposes, \$607,393; miscellaneous contributions, \$108,938; total contributions, \$1,856,515.

The sales of the publication house—\$28,190—had been about \$5,000 less than those of the previous year, and the donations granted from the book department—\$4,242—were also less. The whole amount appropriated to benevolent work was \$7,894, or \$1,267 more than the collections for the cause. Among the donations were 817 Bibles given as prizes for perfect recitation of the Shorter Catechism and 901 Testaments for the perfect recitation of the Introduction to the Shorter Catechism. Twenty-two new books had been published. A volume of "Practical Sermons" by ministers of the Church was about to be published.

The receipts of the Executive Committee of Home Missions for the fiscal year 1895-'96 were in the several departments respectively: For home missions, \$33,779; for the Invalid fund, \$15,175; for the William A. Moore Loan fund, \$2,504. From the regular Loan fund, \$6,730 had been loaned to 48 white congregations and \$255 to 5 colored congregations. The entire gross receipts of the committee were \$4,026 more than in the previous year, and the clear gain in receipts was \$3,151. Eighty missionaries had been employed, besides whom 11 teachers had served in 8 schools in the Indian Territory. Thirty-eight aged or infirm ministers, 108 widows of ministers, and 4 cases of orphan children of ministers had been aided to the total amount of \$10,086 from the Invalid fund.

The report of the General Assembly's Home and School at Fredericksburg, Va., represents that the property is valued at \$42,850—\$25,250 above the indebtedness. It consists of a home for the beneficiary orphan girls and the building of the Collegiate Institute, accommodating 250 pupils. Forty beneficiaries—orphans of deceased ministers and children of missionaries—are maintained in the home and taught in the Collegiate Institute. The latter institution is chiefly maintained by the tuition fees of the pay pupils.

The Louisville Theological Seminary returned 60 students, among whom much activity prevailed in mission work through the city. Columbia Theological Seminary had 27 students, an endowment of \$237,445, and an income of \$11,500 a year, which was, however, \$200 short of the expenditure. The Southwestern Presbyterian University had 33 students in the divinity school, 13 of whom were ready to enter upon active missionary work.

The Executive Committee of Foreign Missions returned its receipts for the year as having been \$142,100, or \$9,667 more than the receipts for the previous year. Its expenditures had been \$127,690. In accordance with instructions of the General Assembly, the Congo Boat fund, amounting to \$10,393, had been mostly invested, and the interest was used for the support of the African work. In view of the uncertainties of the financial situation, the appropriations for the missions for other purposes than the salaries of missionaries had been reduced considerably below the amounts asked for in the estimates. A charter of incorporation had been obtained in the State of Tennessee. Nineteen new missionaries had been sent out, and not less than 29 others were needed; the missions in northern and southern Brazil, in China, on the Congo, and in Italy, Japan, Korea, and Mexico returned 35 stations, 55 ordained missionaries, 86 unordained missionaries, 29 native preachers, 117 other native helpers, 35 churches, 2,004 communicants, 379 church members added during the year, 13 theological students, 63 Sabbath schools, with 1,350 pupils, 861 pupils in boarding and day schools, 19,622 persons aided by medicine, and \$3,590 contributed by the mission churches.

The thirty-sixth General Assembly met in Memphis, Tenn., May 21. The Rev. R. Q. Mallard, D. D., was chosen moderator. The report on colored evangelization mentioned the address of letters to the General Synod of the Reformed Church inviting a conference respecting co-operation in work for the negroes. The only answer received was the expression of regret that the press of work in other fields forbade "that financial assistance to which our hearts and sympathies prompt us." An effort had been made to purchase the Ferguson Williamson College, at Abbeville, S. C., where 152 students were enrolled under the care of 4 teachers. The Stillman Institute had enrolled 10 students. Several Sabbath schools had been established by members of the institution. The movement for the organization of a synod of an independent African Presbyterian church had not been successful, only \$154 having been contributed for the purpose. At present there were 4 separate presbyteries for the colored people—2 (those of North and South Carolina and of Texas) independent, and 2 (those of Central Alabama and Ethel) under the jurisdiction of the General Assembly. Outside of these presbyteries about 36 churches were scattered over a large area. The Presbytery of Zion had lost its quorum, and was practically disbanded. Though the time did not yet seem to have come for the organization of an independent synod, great progress in that direction had been made in the past five years. A case involving a question of the relations of the Church and its colored members came up in an appeal from the Presbytery of Charleston, S. C. This presbytery had declined, on the ground of his color, to take under its care a colored candidate for the ministry who had been approved as qualified and suitable by the Committee of Examination. In the review of the records of the presbytery the synod gave its approval to all except the minute of this action, which action it directed the presbytery to review and correct. The presbytery appealed from this. The Assembly refused to sustain the complaint, thus approving the action of the synod. A minute was entered in reference to this action declaring that in refusing to sustain the complaint of the presbytery, the General Assembly, "without expressing any opinion as to the extent of the general discretionary power of a presbytery in receiving candidates, confirms the action of the synod solely on the ground that the reason given by the presbytery for not receiving the applicant as a candidate,

viz., that he was colored, is contrary to the law and constitution of the Church." The plan of co-operation of Presbyterian and Reformed Churches in reference to missionary work, suggested by the western section of the Presbyterian Alliance, was approved. The report of the committee respecting the Presbyterian Alliance included a proposition for reducing the number of delegates from this Church to the Council of the Alliance from 32 to 10, as a means of reducing the expenses connected with the association. The proposition was not adopted, but instead of it the Assembly instructed its delegates to the meeting of the General Council about to be held in Glasgow, Scotland, "to bring to the attention of the Council the matter of the representation of the churches upon the floor of the Council and the matter of the expenses assessed with a view to reducing the expenses of the Alliance and making an equitable distribution of the expenses among the churches." A contract was brought up for discussion which had been made between the Assembly's Home and School, at Fredericksburg, Va., and the city of Fredericksburg, by which the city of Fredericksburg, paying the school \$10,000, was entitled to send 10 pupils from its public schools to the collegiate department of the institution. An overture from the Presbytery of St. Louis objected to the contract as constituting in effect an alliance between the Church and the civil authorities, and asked that it be revised. The report adopted by the Assembly reaffirmed as a cardinal doctrine of the Church its condemnation of all alliances of Church and civil power, and all dependence of the Church upon gifts from the State, but showed that the \$10,000 paid by the city of Fredericksburg was not a gift, but a legitimate payment for specific tuition to be given; that it was authorized by a law of the State of Virginia; that it was not the "repudiation of a distinctive principle," as the overture described it, "unless such distinctive principle denies to the Church the right of contracting with the civil authorities, under any and all circumstances, when a *quid pro quo* is received"; and that it did not commit the Church to secular education in any sense other than that which obtained when the contract was made. A protest was filed against this action, expressing the belief that it was an "indirect violation of our time-honored principles, and a departure from an unbroken custom of refusing to accept State aid in support of denominational and religious work." Preliminary arrangements were made for observing the two hundred and fiftieth anniversary of the formulation of the Westminster symbols of doctrine, and a committee was appointed on the subject. In response to an overture of inquiry concerning the powers of one ruling elder, the Assembly replied that "one ruling elder does not constitute a session, a pastor does not constitute a session, and in the circumstances the orderly procedure would call for the interposition of the presbytery." A proposition was approved to petition Congress and the State legislatures for laws forbidding the running of railroad trains on the Sabbath.

III. United Presbyterian Church in North America.—The following is a summary of the statistics of this Church presented to the General Assembly in May: Number of synods, 12; of presbyteries, 65; of ministers, 869; of licentiates, 76; of students of theology, 115; of ruling elders, 3,763; of congregations, 948; of pastoral charges, 801; of mission stations, 385; of members in America, 109,408; of members in the whole Church (including the missions in India and Egypt), 120,799; of Sabbath schools, 1,123, with 11,589 officers and teachers and 107,121 pupils; of Young People's societies, 805, with 35,146 members. During the year 36 ministers

were ordained, 35 licensures were issued, 17 congregations were organized, 32 new mission stations were received, 25 houses of worship were erected at a total cost of \$233,094. 15 parsonages were erected at a cost of \$26,737. 8,023 members were received on profession (in the whole Church), and 4,292 infants and 2,072 adults were baptized. Amount of contributions (in America): For salaries of ministers, \$586,948; for congregational purposes, \$473,048; for the boards, \$255,366; for general purposes, \$102,736; total contributions in America, \$1,404,090; total contributions of the whole Church, \$1,418,098; average contribution per member in America, \$13.13; average salary of pastors in America, \$1,054; amount of contributions of Sunday schools, \$84,888. The number of members in America is 2,012, and in the whole Church 3,093 larger than in 1894.

The Board of Education reported that there had been 143 students in the theological seminaries, 1,142 in the colleges, and 723 in the academies—an increase of 130 over the attendance in the previous year. The productive endowments of the seminaries amounted to \$291,800, and those of the colleges to \$352,600. The board was able to pay only about 60 per cent. of the allowance to the students.

The receipts from the presbyteries for ministerial relief had been a little more than 40 per cent. of the appropriation of the previous General Assembly.

The Board of Church Extension reported that its receipts from contributions—\$30,639—for the year were \$5,493 greater than in the year preceding, and returned a balance in the treasury of \$2,003, a little less than in the preceding year. The payments to congregations and for expenses of all kinds had been \$30,717. The appropriations amounted to \$20,800 donations and \$3,350 loans, making a total of \$24,150—\$8,103 less than in the previous year. An appropriation of \$50,000 was asked for the ensuing year.

At the thirty-seventh annual meeting of the Executive Committee of Home Missions applications for aid were presented amounting to \$87,821, of which \$9,125 were for new work proposed or actually begun. It was found that the \$20,000 revenue fund of the board had not been in any measure restored during the year, and that the debt additional to this had grown to \$13,018, although the direct contributions of the Church for home missions had increased, and were the largest on record. The receipts from direct contributions had been \$60,272, and from legacies \$2,860, which, with the proceeds of investments of permanent funds, made a total income of \$64,016.

The year's receipts of the Freedmen's Board were \$43,909. The board had employed 9 ordained ministers and a total of 73 missionaries, and returned 11 stations occupied, 6 congregations with 575 communicant members, 12 Sabbath schools with a total enrollment of 3,079, and an enrollment of 3,037 in the day schools. Prominence is given in the report to the religious work, which is represented as being in an encouraging condition.

The entire receipts of the Board of Foreign Missions were \$122,938, of which \$14,582 were from the Woman's Board. Notwithstanding the continuous financial depression, the re-enforcement of the missions, and their increased expenditures, the board closed the year without indebtedness, and with a balance in the treasury. For the ensuing year, it asked for \$108,575, in addition to the \$25,000 pledged by the Woman's Board, congregations, and individuals. Sixteen new missionaries had been sent out, 5 more were under appointment. Forty-two missionaries were employed in the Egyptian mission, with 22 native ministers pastors, 19 licentiates, and 11 theological students, while the

whole number of native workers was 401. The whole number of stations was 190, with 37 organized congregations (2 of which were wholly self-supporting), and 5,004 members, and 125 Sabbath schools with 6,222 pupils. Five hundred and seventy-seven members had been added by profession during the year. The contributions of the natives for distinctively religious purposes amounted to \$13,552, and their total contributions for all purposes were \$47,244, an average of \$9.44 per member. For every dollar sent from the United States about \$1 had been contributed by the natives in Egypt.

The mission in India returned 11 mission stations, while work had been done in nearly 600 villages. Fifty-one American missionaries, men and women, were engaged in the work, with 9 native ordained missionaries, 12 licentiates and theological students, and 198 native helpers. One of the 14 congregations was self-supporting. The churches, with the stations and villages, returned 6,582 communicants and baptized adults, of whom 564 had been received on profession during the past year. The 125 Sabbath schools returned 3,022 pupils, and 170 village schools 6,261 pupils. The native Christians had contributed \$5,697 in tuition fees and \$562 for religious purposes. There were also connected with the mission 1 theological seminary, 1 college, 4 high schools, and 3 middle schools, and the medical work was a considerable feature.

The receipts for the year of the Women's General Missionary Society, with balances from the previous year, made a fund of \$81,523, and the disbursements were \$70,832. The literary department of the society's work had paid its way and left a small balance. The sum of \$24,275 had been contributed for foreign work, and \$12,038 had been spent on the salaries of woman missionaries. Four new missionaries had been sent out during the year. In the medical work much interest had been manifested in endowment of beds in the new hospital at Belun, India (\$600 endowing a bed in perpetuity). In the home-mission department, 18 missionaries had been engaged, in California, Washington, Missouri, Illinois, Kansas, and Pennsylvania. An important work was carried on at 2 stations among the Warm Springs Indians. Twelve industrial teachers had been employed in the freedmen's department, a new branch of agricultural training had been added, and improvements in school buildings were mentioned.

The thirty-eighth General Assembly met in Xenia, Ohio, May 27. The Rev. James White, D. D., of Kansas City, Mo., was chosen moderator. The permanent Committee on Reform reported, noticing progress in the temperance reform in the direction of a demand for the suppression of the whole liquor traffic; an awakening of the young people to the necessity of a radical reform as to Christian citizenship; the growth of a feeling of alarm over the increase of the desecration of the Sabbath; and the continued pressing of the effort to secure the acknowledgment of God, the moral law, and Jesus Christ in the preamble to the Constitution of the United States. The Committee on a Union Metric-al Version of the Psalms reported that a meeting had been held at which several denominations were represented. Only preliminary work could be done. Another meeting was to be held. Stated reports were made by the theological seminaries direct to the Assembly for the first time. Allegheny Seminary had had the largest attendance of students in its history, and had adopted all the amendments to its constitution recommended by the Assembly's committee. Newburg Seminary reported concerning summer schools. The seminary at Xenia, Ohio, had adopted an amended constitution, responding

to the Assembly's demand. The directors of the seminaries were instructed to report to the General Assembly concerning the giving of instruction in the English Bible and the training of students in evangelistic work. The overture defining the rights of the Assembly over the theological seminaries, sent down by the previous General Assembly, had been passed upon favorably in the voting of the presbyteries, and was adopted by an almost unanimous vote. A plan of co-operation with the Associate Reformed Synod of the South in the work of home missions and Church extension was adopted. Co-operation had already been of practical effect in the erection of a church at Atlanta, Ga. The report on Young People's work showed that the membership of the societies had increased by 2,303, and that the whole amount of their contributions had been \$35,310. The average contribution of each society was \$55.78. The number of junior societies had increased from 211 to 238, and of their members from 5,451 to 8,902, with an increase of \$1,007 in the contributions. Concerning the affiliation of these societies with the United Societies of Christian Endeavor, a committee was appointed to confer with the officers of the latter organization and ascertain what relation, if any, can be established between the two organizations. Appropriations were made for the ensuing year: To foreign missions, \$108,000; to home missions, \$100,000; to freedmen's missions, \$50,000; for Church extension, \$50,000; for ministerial relief, \$8,000; for education, regular work, \$10,000; for colleges and seminaries, \$20,000; and to the Assembly's fund, \$3,000. The Board of Home Missions was directed to set apart 5 per cent. of the contributions for the restoration of the reserve fund. A report was adopted embodying a number of petitions and recommendations for the promotion of temperance and moral reforms.

IV. Reformed Presbyterian Church in North America. Synod.—The statistics of this body, as reported to the synod in June, give it 13 presbyteries (the Syrian Presbytery having been added during the year), 115 congregations, 115 ministers, 67 pastors, 42 unsettled pastors, 11 licentiates, 17 students, and 9,910 members. The total contributions for the year were \$163,447.

The synod met in Cincinnati in May. The Rev. J. C. Smith was chosen moderator. The case of an appeal from the action of the Presbytery of Pittsburg, which had been a source of division in the Pittsburg Presbytery and the synod, was brought to a final decision. All the collateral questions of the case were set aside, and the action of the synod was based on the simple principle that a body of 45 church members not attached to any specific society, who were willing to provide themselves a house of worship and support the ordinances, were entitled to recognition and organization. The organization was granted. The position of the synod as supporting national reform and as to testimony bearing was reaffirmed. The national reform movement is defined as being intended to unite all those who believe that the Government of the United States should be made distinctively Christian, whatever may be their Church relations or their views with reference to the exercise of the right of suffrage. Its strongest supporters are among the members of this Church. Testimony bearing relates to the duty insisted upon by this Church of refusing to take the oath to support the Constitution of the United States or to participate in any political or other action under that statute while it contains no direct recognition of God. The explicit testimony of the Church against secret societies of all kinds was reiterated, and the action of the synod on the subject was ordered published in tract form

for general distribution. A committee was appointed to prepare and publish a book of selections from the Psalms with appropriate music for Sabbath and mission schools.

V. Cumberland Presbyterian Church.—The statistical reports of this Church for 1896 give it 1,617 ministers, 2,867 churches, 165,847 communicants, 15 synods, and 127 presbyteries. The tables show an apparent decrease in the principal items, which, however, is only apparent, being occasioned wholly by dropping from the rolls churches which have not reported, estimates of the numbers of which have been included in the tabulations of previous years.

The total contributions for the year for the work of the Board of Education were \$12,560, a gain of \$2,168 over those of the previous year; the expenditures were \$12,908. The whole number of probationers was 600. The fact that only 30 young men had been ordained during the year was regarded as indicating that the presbyteries were demanding better preparation before they consented to the laying on of hands. The total amount of permanent funds invested for the education of young ministers was \$26,743, having increased \$8,302 during the past twelve months. Eighteen seminaries and colleges returned 168 instructors, 3,254 students, \$621,500 of college property, \$333,793 of productive and \$130,000 of nonproductive endowment, and 200 probationers for the ministry. It was mentioned in the report of the board as a subject for congratulation that the motto "Education before ordination" had been accepted throughout the denomination. Two years' experience under the policy of combining education and ministerial relief was represented as having been satisfactory.

The receipts of the Board of Ministerial Relief, \$11,303, were slightly in excess of those of the previous year. Twenty new names had been added to the list of beneficiaries, and the present number was 107—45 of whom were ministers and 62 widows or families, or orphan children of ministers—the whole number of dependents being about 300. The success of Thornton Home had been demonstrated, and it had now a permanent fund of \$16,628 for its support, all safely invested.

The Board of Publication reported that the sales of books for the year amounted to \$12,716; that the net profits of the concern were \$7,650; and that reductions had been made in both the bonded and the bank indebtedness.

Nine hundred and twenty-five Christian Endeavor societies returned 25,600 members. Eighty new societies had been formed. The societies had undertaken to build a church in Portland, Ore., and were enjoying an encouraging prospect of success.

The Board of Missions reported that it had received during the year \$44,256, viz.: \$14,825 for foreign missions, increased by the contributions through the Woman's Board to \$24,763; \$13,894 for home missions; and \$4,593 for other objects. Adding to these amounts church-erection loans returned, the cash balance at the beginning of the year, and contributions received and applied without being sent to the office of the board, the whole amount available for missionary work and church erection was \$85,574. The home missions included 23 churches, 16 of which were supplied with pastors whose salaries were in part paid by the board. The foreign mission, in Japan, returned 15 preaching stations, with 624 communicants, an average attendance of 215, \$4,599 contributions from the mission stations, and church property valued at \$4,517.

The receipts of the Woman's Board for the year ending April 15, 1896, were \$16,546, or more than \$1,000 above the receipts of the preceding year.

The General Assembly met in Birmingham, Ala.,

May 21. The Rev. A. W. Hawkins was chosen moderator. The subject that attracted the most attention and gave occasion for the largest discussion was the course of the Board of Trustees of Cumberland University in electing a professor to a new professorship in the theological seminary without consulting the Board of Visitors and without any of the members of the faculty being present, as they claimed they had a right to be, under the charter of the institution. At a subsequent meeting of the trustees, when the visitors and the faculty were present, this action was modified; the resolution creating the new professorship was repealed, and the name of the Rev. B. G. Mitchell, the proposed professor, was recommended to the General Assembly as an additional member of the faculty, whose specific duties were to be determined by the faculty on consultation with the Board of Trustees. The Board of Visitors reported to the General Assembly concerning the earlier action of the trustees, which was related, and recommended that the election of Mr. Mitchell as professor, while no reflection was intended upon his ability or denominational views, be not confirmed. The Assembly's Committee on Theological Seminaries also reviewed the case, and regarded the whole action of the Board of Trustees as irregular, and something the consequences of which the General Assembly should not be made to suffer; and assumed that the Assembly could not take cognizance of anything that was done at their meetings, or that grew out of it. Hence their elections could not be confirmed, and the situation of the theological seminary remained precisely as it was one year before. The Assembly therefore should reaffirm its deliverance of one year before on the subject, and distinctly declare that no proposition of the Board of Trustees regarding the faculty of the theological school could be entertained by it unless it carried with it the evidence of the concurrence of the faculty and the Board of Visitors, as the law required. This report and the action it contemplated were adopted. Subsequently a resolution was passed, declaring it to be the sense of the body that "if it should be the pleasure of the Board of Trustees of Cumberland University to hold a joint meeting of the board and the theological faculty and the Assembly's Board of Visitors, or the latter's consent be obtained by correspondence, and an agreement be reached, and the board shall see fit to transfer Dr. R. V. Foster to the chair of Systematic Theology, and shall elect the Rev. B. G. Mitchell to a chair in the seminary, such action will be in full accord with the views and purposes of this body." The result of the whole proceeding is regarded as being a demonstration of the authority of the General Assembly over the theological seminary. In a case brought up on appeal where a synod had censured a presbytery for ordaining a minister who fell short of the required standard of educational qualification, the minority report of the judiciary committee was adopted, to the effect that, the presbytery being the sole authority in such cases, the minister was constitutionally ordained, and the action of the synod was irregular and unconstitutional. In the case of Mrs. Bixby, who had taken the full course of the theological seminary with her husband, and had been refused a degree, the Assembly decided, adopting the minority report of the committee, that since the lady had been allowed to take the course, she should not be denied her degree, and added, "but the adoption of this report does not commit the Assembly for or against the ordination of women, or authorize the same on the part of any presbytery." The secretary of the Educational Society was authorized to confer with the Colored Cumberland Presbyterian Church and seek

to make arrangements for the establishment of a school for the education of young men preparing for the ministry in that Church. The subject of purchasing a site for an orphans' home, concerning which conflicting questions of location had arisen, was referred to a committee, who were authorized to advertise and receive bids, and report to the next General Assembly. Overtures asking for a declaration on the doctrine of sanctification were referred to a committee to report to the next General Assembly. The question of rotation in the eldership and a memorial asking that on questions not affecting doctrine or the constitution of the Church the synod be the highest court of appeal, were referred to the next General Assembly. The resolutions on temperance declared that while charity should prevail among brethren as to party methods, every Christian man should regard his ballot as a sacred trust, and cast it for the prohibition of the liquor traffic. The report on Sabbath observance included a reference to the bicycle as "becoming a foe to church attendance," and deprecated such use of it as tended in that direction.

The Colored Cumberland Presbyterian Church returned in the census of 1890 400 ministers, 250 churches, and 13,250 members.

VI. Presbyterian Church in Canada.—The statistical reports of this Church, made to the General Assembly in June, gave the numbers of churches and stations constituting charges as 2,412, with sitting accommodation for 510,722 persons; of families, 96,581; of single persons, 27,209; of communicants, 188,180; whole number under pastoral oversight, 224,806; number of baptisms during the year, 10,653 of infants and 1,306 of adults; number received on profession of faith, 12,102; number in Sabbath schools and Bible classes, 153,064.

Amount of contributions: For home missions, \$65,152; for augmentation, \$30,929; for French evangelization, \$23,202; for foreign missions, \$5,493 from congregations and \$50,546 from the Woman's Foreign Mission Society; payments to the Aged and Infirm Ministers' fund, \$8,718; to the Aged and Infirm Ministers' Endowment fund, \$3,585; to the Widows' and Orphans' fund, \$5,759; to the Assembly Expense fund, \$3,950. The total of contributions to the schemes of the Church for the year was \$279,494, or \$15,945 less than in the previous year. Sabbath schools and Bible classes and Christian Endeavor societies raised \$13,720 toward one or more schemes of the Church, or \$10,865 less than in 1894. Amount received from stipends from all sources, \$906,781; expenditures on Church or manse, \$424,820; on other strictly congregational objects, \$484,304; amount of income for colleges, \$32,283. The tables show an increase from the previous year of 73 charges and 8,601 communicants. In the financial reports the item of congregational expenditure, stipends, and contributions for home missions show increase, the others decrease.

The entire revenue of the Widows' and Orphans' fund was \$30,082, while the contributions from congregations were \$1,224 less than in 1894.

The Board of the Church and Manse Building fund for Manitoba and the Northwest Territories had helped erect 21 new churches and 2 manses. Seventeen grants had been made, amounting to \$1,655, on buildings valued at \$11,660, and 9 loans, amounting to \$4,250, on buildings valued at \$17,500. The advances, therefore, were \$5,905 on buildings valued at \$28,100. Since 1882 the board had helped erect 269 churches and 56 manses, or 325 buildings in all, valued at \$459,000. The rent saved by manses on which only about one fifth of the money entrusted to the board had been expended would pay interest at 9 per cent. on all the capital that had come into its hands.

The Board of Home Missions reported that services had been conducted during the year in 6 different languages at 670 points by 174 missionaries. These missions represented 6,109 families, 3,003 single persons, 7,148 communicants, and an average Sabbath-school attendance of about 7,000. In the department of the mission to lumbermen good literature in French, English, and Gaelic had been distributed to the men in the lumbering shanties. The Home Mission fund of the eastern section had increased its debt by about \$1,000 to \$3,691.

The total receipts of the Board of French Evangelization were \$30,521. The 3 sections of the work returned 36 mission fields, 92 preaching stations, 788 families, 1,106 church members, an attendance on Sunday services of 2,300, 176 French and 51 English church members added during the year, 1,040 pupils in Sunday schools, 25 mission schools with 423 Protestant and 345 Roman Catholic pupils and an average attendance of 448, and 8 students in the theological college. Two colporteurs employed during the whole year and 4 for six months visited 10,750 families and distributed 985 copies and portions of Scriptures, and about 12,000 religious tracts and illustrated papers, etc.

The twenty-second General Assembly met in Toronto, June 10. The Rev. Principal Gordon, of Halifax, was chosen moderator.

The Committee on Union with other Churches reported upon its proceedings with reference to the proposition of the General Conference of the Methodist Church of Canada for the establishment of a federal court composed of representatives of the negotiating churches, whose function it should be to promote co-operation and economy in respect to mission work and "dependent charges," but which should not have power to deal with questions of creed or discipline, or with any question vitally affecting the independence of the negotiating churches. It being impracticable to bring all the committee together, letters have been addressed to the several members asking them if they concurred in this proposition. All of the 14 members who answered the letters responded affirmatively. To a second question—"Whether, in the event of the proposal being approved, the function of such federal court might in any direction be properly extended? Might such federal body be intrusted, for example, with the duty of giving public expression to the opinion of the churches represented on moral or religious questions affecting the welfare of the community or of other lands, and of taking public action to promote the well-known views of the churches represented in relation to such questions?"—11 answered "Yes," 2 "No," and 1 indefinitely. The Assembly, proposing a proviso that a satisfactory definition of the duties of the contemplated court could be agreed upon, gave its approval to the formation of the body as proposed by the Methodist General Conference, and reappointed the Committee on Union with instructions "to confer with the committee of the Methodist Church, with the view of giving further consideration to the functions of such body as it is proposed to form, and to report to the General Assembly." It was suggested that the body be called a council instead of a court. As to the question concerning the schools in Manitoba, the resolutions of the Assembly recognized the importance of the religious character of public education, but expressed opposition to the application of public funds to sectarian purposes; disapproved of the Government favoring one section of the country more than another, and especially deprecated such remedial legislation as had been proposed for Manitoba; declared that separate schools did not afford a satisfactory solution of the educational problem occasioned by difference in religious be-

lief; and pronounced opposition to the confusion of temporal and spiritual authority by any attempt to place the Church above the state in the management of a public trust. A committee was appointed to consider the question of too numerous applications of ministers of other denominations for admission into the Presbyterian Church. The experiment of summer sessions of schools of theology had resulted so successfully that they were continued. The schools have proved valuable by facilitating the supply of services to the mission fields of the Northwest throughout the winter. Propositions concerning the appointment of a committee to consider a way of giving greater unity and consistency to the development of the various enterprises of the Church; for the reduction of the number of commissioners to the Assembly, for the provision of a fund for paying its expenses, and for fixing a permanent place of meeting; and concerning an order of service for general use, were passed to another General Assembly. The question of the eligibility of ruling elders to be moderators of presbyteries was referred to the presbyteries. The Assembly expressed its hope that the Christian nations would take positive action in behalf of the Armenians.

VII. Church of Scotland.—This Church, according to its "Yearbook" for 1896, has 84 presbyteries, 16 provincial synods, and 620,376 communicants. The increase in communicants during the past twenty years has been 7,600 per annum. The incomes for home and for foreign missions have fully doubled during the past twenty years.

The General Assembly met in Edinburgh, May 21. The Rev. Dr. Scott, of Edinburgh, was chosen moderator. A report having been presented recommending the adoption of the new hymnal compiled for the use of the three largest Presbyterian churches of the country, objections were made to it, a motion authorizing its use throughout the Church was lost, and a motion rejecting it was carried, the votes on the two motions being, respectively, 118 and 159. In the case of the Rev. Mr. Robinson, of Kilmun, charged with the enunciation of heresy in a book recently published by him and dealing with questions of the study of the Scriptures, the Assembly rejected his appeal from the Presbytery of Dunoon, and voted to depose him for a year, to enjoin him to withdraw the book, and instruct him to appear before the next Assembly and state whether he is prepared wholly to repudiate the condemned teaching, in order that the Assembly may consider further procedure. The report of the Committee on Probationers showed that ten years previously the whole number of students of theology in the 4 universities was 233, while in 1895 it was only 148. If the decrease continued they would three years hence have to face the condition of not having a sufficient supply of probationers for their needs, as the number of parishes and places to be occupied was steadily increasing. An overture avowing sympathy with the Armenians was adopted, to be expressed in the form of a letter from the moderator to the Patriarch of the Armenian Church.

VIII. Free Church of Scotland.—The reports from the foreign mission fields gave the following total results: Number of Scottish agents, 178; of native agents, 1,045; of baptisms during the year, 892 of adults and 1,114 of children, with 3,964 candidates for baptism or full communion. Of the revenue, £66,533 were collected in Scotland, £41,638 abroad, and £14,102 through the Woman's Society.

The General Assembly met in Edinburgh, May 21. The Rev. Principal William Miller was chosen moderator, and spoke in his opening address on mission work in India. The Finance Committee reported that its income had been £650,323, show-

ing an increase of £47,233 over the previous year. The report of the Committee on the Conversion of the Jews complained of a lack of interest in that subject. In its birthday address to the Queen the Assembly expressed its deep concern "about our sorely afflicted Armenian fellow-Christians." A new hymnal, compiled by a special committee for the use of the three churches—Free Church, Established Church, and United Presbyterian—was sanctioned for use, with the consent of kirk sessions, in public worship. The Committee on Union, particularly with the United Presbyterian Church, was reappointed, and the Assembly, in its resolution on the subject, called upon the ministers and people to consider prayerfully the serious stage the question had now reached. A resolution of sympathy with the Armenians was adopted. In connection with the report on Church and state, the Assembly declared that it regarded the termination of the present connection of Church and state in Scotland as demanded by justice and the interests of religion. Overtures were presented from several Highland churches asking for a repeal of the Declaratory act (see "Annual Cyclopædia" for 1891). The Assembly resolved to pass from them. A bust of John Knox, by John Hutchinson, R. S. A., which has been placed in the quadrangle of the New College, Edinburgh, was formally presented to the Assembly and accepted by it.

IX. United Presbyterian Church of Scotland.—Returns from 577 congregations of this Church give it 191,881 members and a total income of £410,848, an increase in income of £19,241 as compared with 1894, while the whole amount is larger than the income of any of the ten preceding years.

The income from foreign missions had been £31,378, and the expenditure £34,639. One hundred congregations were connected with the missions, having 19,949 members, an increase of 712. The formation of a union for the purpose of interesting the young people of the Church in missions was recommended in the report.

The Synod met in Edinburgh, May 4. The Rev. James Rennie was chosen moderator. A deliverance was unanimously adopted in favor of the appointment of a committee to consider the subject of reunion of Presbyterian churches, with power to confer with the Assembly of the Free Church. A motion was offered that the Established Church be included in the scheme, but the Synod decided that, as that subject had not been before the Church, it was inexpedient to adopt a resolution upon it. A report was adopted in favor of disestablishment. A case brought to the Synod on appeal, involving the question of discipline for marriage with a deceased wife's sister, was referred to a committee for report at the next meeting of the Synod. The questions of the education bills, raffling at fairs (concerning which previous condemnations were reiterated), arbitration, and the Armenian massacres were considered. An overture intended to discourage applications for admission to the Church from ministers and preachers of other denominations was rejected by a large majority. The Young Men and Women's Guild was represented to be making steady progress. The 123 affiliated societies returned about 8,500 members.

X. Reformed Presbyterian Church.—A great convention of the Reformed Presbyterian churches of different countries was held in Glasgow, Scotland, June 30 to July 3. Resolutions were adopted declaring the principles of the churches represented; the supreme authority of the Holy Scriptures as the standard of moral law; the mediatorial character and headship of Christ as the rightful ruler of men in every relation of life; the duty of

bearing the Gospel abroad; the moral accountability of the family, the Church, and the state, as well as of the individual; the duty of family worship; the exclusive use of the book of Psalms, and the exclusion of instruments in the service of praise; the obligation of the Church to base its creeds, confessions, system of government, order of worship, and administration of discipline expressly upon the authoritative foundation of the Holy Scriptures; God's revealed Word as the state's ultimate rule of moral conduct; the application of the scriptural law of qualification for the "high trust of civil office" and the exclusion of irreligious men therefrom; condemnation of the traffic in intoxicating drinks and of legalization of it in any form; the scrupulous observance of the Sabbath in home and social relations, faithful attendance "on the duties of the sanctuary," and denunciation of all complicity of Christians "with the dishonor done the Lord's Day by any department of governmental administration, or by partnership or the holding of stock in Sabbath-breaking organizations"; protest against opening museums, etc., on the Sabbath on any pretext whatsoever; testimony against immoral marriage and divorce laws, impurity in literature and art, and social amusements and personal indulgences which "gratify the flesh against the leanings of the spirit."

XI. Presbyterian Church in Ireland.—The General Assembly met in Belfast, June 1. The Rev. Dr. Williamson was chosen moderator. The statistical reports showed that there were in connection with the Church more than 22,000 families, with about 330,000 people. The congregational subscriptions to the Sustentation fund amounted to £22,900, an increase of £200 over the contributions of the previous year. The total amount of congregational debts was returned as being £75,000. A uniform hymnal was authorized, and a protest was entered against the action. The Government was urged, in the interest of the farmers, to push forward and strengthen the land bill. The name of the "Young Men's Guild" was changed to "Young People's Guild," a measure the effect of which is to make young women eligible to membership in the society.

XII. Presbyterian Church in England.—The reports of this Church, presented to the Synod in April, showed that the number of congregations had risen from 297 to 301, and the number of members had increased from 68,997 to 69,632. The number of available sittings was 156,815, an increase for the year of 2,329. The total revenue for the year had been £230,543, or £4,000 less than the amount in the previous year. The number of teachers in Sunday schools had fallen from 7,532 to 7,452, and the number of pupils from 82,596 to 80,969. The Church property was valued at £1,702,357.

The income for missionary purposes amounted to £23,224, or more than £1,000 in excess of the income of the previous year. The following statistics were given of the mission in China: Number of European ordained missionaries, 19; of medical missionaries, 11; of women's association missionaries (ladies), 21; of native pastors supported by their own congregations, 13; of native evangelists, 117; of theological students, 48; of organized congregations, 46; of preaching stations, 110; of communicants, 4,640. In nineteen years the agents have nearly trebled, and the congregations and stations more than doubled. The first native presbytery had been formed in Formosa, and it sent a letter to the Synod. The Synod determined to celebrate the jubilee of the Chinese mission in 1897. The Woman's Missionary Association supported about 20 missionaries in China.

Missions to the Jews had been carried on in East London with zeal and efficiency, but the mission to the Jews at Aleppo, Syria, had been hindered by the disturbed condition of the Turkish Empire.

The home-mission report represented that an encouraging degree of success had attended the effort to raise £50,000 for a Church building fund.

The Synod met in London, April 27. The Rev. J. Thoburn McGaw was chosen moderator. Recognizing with satisfaction the rapid spread of Christian Endeavor societies in connection with the Church, the Synod authorized the Committee on the Instruction of Youth to regard these societies as a department of the work under their oversight. The ordination, under certain conditions, of assistant ministers was sanctioned. A colonial committee was appointed to grant certificates to licentiates or ministers proceeding to the colonies.

XIII. Welsh Calvinistic Methodist Church.

—The statistics of this Church, presented to the General Assembly in May, showed an increase of 9 congregations, 28 chapels, and 2,203 communicants. The present numbers were: Of churches, 1,317; of chapels, 1,514; of ministers, 742; of preachers, 399; of deacons, 5,291; of communicants, 147,297; of children in the churches, 67,000; of probationers, 2,954; the whole forming a total membership in the churches of 217,341, showing an increase of 2,885. The adherents, including members, numbered 305,890. The collections toward the ministry amounted to £88,754, an increase of £1,151. The total amount of collections for the year was £221,672.

A report made to the General Assembly concerning the "Welsh from Ilome" showed that more than 100,000 Welsh people born in Wales were living in America, 50,000 in Liverpool, 47,000 in London, and about 80,000 in other English towns. A band of 25 Welshmen who had settled at the foot of the Andes in South America had formed a church and applied for membership. The 500 Welsh people resident in Johannesburg, South Africa, have Welsh services every Sunday.

The receipts in aid of missions during the year amounted to £13,851. The mission churches in Khasia, Jaintia, Sylhet, etc., in India, returned 9,303 members and collections of £11,246, with 6,409 children in day schools. The preaching stations numbered 271, showing an increase of 21 during the year.

The General Assembly met in Liverpool in May. The Rev. Griffith Ellis was moderator, and the Rev. J. M. Jones was chosen moderator for the next year. The Education Committee presented a report bearing upon the education bill pending in Parliament, criticising its provisions generally and opposing it. Besides adopting this report the Assembly resolved to petition Parliament against the bill, and ask, at any rate, that it should not be passed without such amendments as would promote the highest efficiency of education and prevent religious discord in schools. Inasmuch as the General Assembly is not mentioned in the Constitutional Deed of the connection, a committee was appointed several years ago to take measures for securing the legal standing of the body and to prepare the corresponding amendments to the Constitutional Deed. The amendments reported by this committee were received, and were referred by the Assembly to the associations of north and of south Wales for further consideration.

XIV. Presbyterians in Anstralia.—The Australian Presbyterian Federal Assembly met at Melbourne, Sept. 11. The Rev. Dr. David Paton, of Adelaide, was chosen moderator. The question of union was discussed in the debate on a committee report on the subject, and the Assembly resolved, by a vote of 57 to 3, to perfect a union on the basis

of a scheme which had been before the churches for a considerable time. The discussion of the report on foreign missions brought out statements concerning the condition of the work in New Hebrides among the aborigines at the north end of the continent, among the Chinese in New South Wales, where there had been 30 baptisms, and among the Kanakas in Queensland, where 2 missionaries were laboring, between 300 and 400 persons were attending school, 163 had signed the pledge, 82 had communed, 26 persons had been baptized during the year, and the contributions amounted to more than £101.

PRESIDENTIAL CANVASS OF 1896. The political canvass of 1896 began in 1895. Early in that year the names of William McKinley, of Ohio, Thomas B. Reed, of Maine, and William B. Allison, of Iowa, began to be talked of in connection with the Republican nomination. On the Democratic side there were few candidates, as it was believed that on the issue that has often divided the great parties, the tariff question, the drift of sentiment was so strongly with the Republicans that in this instance the Democratic candidacy would be an empty honor. Other issues, which came rapidly to the front later, were then formulating, but had not become so prominent as to indicate the interest they would awaken in the canvass.

The first definite steps relative to the canvass were the meetings of the national committees of the parties to determine the time and place for holding their nominating conventions. The Republican National Committee met in Washington early in December, 1895, and after several ballots selected St. Louis as the place for holding the convention and fixed the date June 16, 1896. The Democratic National Committee met in Washington a few weeks later, and selected Chicago as the place for their convention, fixing the date for its meeting July 7, 1896. This was unusual, the custom having been for many years that the party in power should give to its opponents whatever advantage there might be in the later convention. Since the first years of the Republican party there has been but one occasion on which the party in control of the Government held its nominating convention later than that of its chief political opponent.

The selection of delegates to the nominating conventions began in the spring of 1896. The conventions were to be composed of delegates from all of the political divisions of the United States, each State and Territory being entitled to double the number of its representation in Congress, 2 delegates being chosen from each congressional district by conventions held for that purpose and 4 being elected "at large" from each State by State conventions. Levi P. Morton, of New York, had been meantime announced as a candidate for the Republican presidential nomination, and in the selection of delegates from Southern States the honors were divided between the 4 candidates thus in the field. In New England the delegates were generally favorable to Mr. Reed, in New York nearly all were for Mr. Morton, and a large proportion of those elected from Pennsylvania were pledged to Matthew S. Quay, of that State. When the election of delegates from the agricultural States of the Mississippi valley, the Pacific coast, and from the mining States of the West took place it became apparent that the drift of sentiment was overwhelmingly for Major McKinley, and before the Republican convention met at St. Louis his nomination was assured.

Meantime new issues were brought to the front within the Democratic party. Agitation in favor of a return to the free and unlimited coinage of silver at the ratio of 16 to 1 had been in progress in the United States for several years, but had been

chiefly advocated by the Populist party and by individual members of the Democratic party, especially those from the South and the West. Democratic State conventions in several of the Mississippi valley States had declared for free coinage of silver in 1895; but until the spring of 1896 it was not supposed that that sentiment would control the Democratic organization or the framing of the declaration of principles at its national convention. A free-silver organization had, however, been formed within the Democratic party late in 1895, and through its work and that of an organization calling itself the Silver party a sentiment rapidly developed throughout the South and the West in behalf of silver, and before the election of delegates to the Democratic National Convention had been completed it was apparent that the silver sentiment would control that convention. The fact that State delegations to the national convention of the Democratic party vote as a unit, casting the entire vote in the State in such manner as the majority of the delegation may dictate, made it practicable, wherever the silver sentiment was strong, to send solid State delegations to the convention instructed to vote for a free-coinage plank.

The Republican Convention.—The Republican National Convention met in St. Louis, June 16, 1896. Most of the delegates had arrived several days in advance, and, as the nomination of Major McKinley was practically assured, attention was turned to the wording of the platform. The fact that the election of delegates to the Democratic convention had made it probable that that party would declare for the free and unlimited coinage of silver added interest to the exact terms in which the Republican party would express its sentiments, which were clearly against free coinage of silver without international co-operation, and in favor of maintaining the standard of the national currency at par with gold. Many of the conventions of the Eastern States had declared explicitly for the single gold standard, while those of the Mississippi valley generally declared in favor of the use of silver as currency, but to such extent only that its parity with gold could be maintained. The discussion prior to and during the early days of the national convention resulted in the production of a plank by the Committee on Platform which contained the following words: "We are opposed to the free coinage of silver except by national agreement with the leading commercial nations of the world, which we pledge ourselves to promote; and until such agreement can be obtained the existing gold standard must be preserved." This plank was discussed with great earnestness in the convention, being vigorously opposed by members from the mining States of the West, and its adoption was followed by the withdrawal from the convention of delegates from several of these States, headed by the Hon. Henry M. Teller, United States Senator from Colorado, whose farewell speech to the convention of the party with which he had acted since its organization made an intensely dramatic scene, and at once suggested Mr. Teller as the possible candidate of the silver element of the Democratic party.

The platform of the Republican convention, in addition to the explicit declaration on the currency question quoted above, declared in favor of a policy of protection for home industries, which proved so popular in the campaign that followed as to bring the party success in several States where the sentiment in favor of silver was such as to make the financial plank unsatisfactory to many Republicans. The adoption of the platform was followed by the nomination on the first ballot of Hon. William McKinley, of Ohio, for President, and Hon. Garret A. Hobart, of New Jersey, for Vice-President. Twelve

thousand people in the great convention hall witnessed the scenes attending the adoption of the platform and the nomination of the candidates. Members of the National Committee were chosen by the State delegations, each delegation electing one member. The members of the National Committee met and elected as chairman Marcus A. Hanna, of Cleveland, Ohio, who had been manager of Major McKinley's canvass for the nomination and for many years his personal friend.

The Democratic Convention.—The Democratic National Convention met in Chicago, July 7, 1896. From the first it was apparent that those favoring the free and unlimited coinage of silver at a ratio of 16 to 1 would be largely in the ascendency. The delegates from States east of the Alleghanies were generally opposed to this, many of them favoring a declaration making gold the single standard of value in the national currency. While they recognized the fact that they were in the minority, the fact that the Democratic national conventions since the nomination of Polk, in 1844, had invariably required a two-third vote to nominate, led them to the hope that they might prevent the nomination of an extreme advocate of free coinage. Strong speeches were made in the convention against the adoption of the free-coinage plank, but without avail, the majority in its favor being overwhelming. The closing speech on the question of platform was delivered by William Jennings Bryan, of Nebraska, a man of remarkable oratorical and dramatic powers, who, as was afterward learned, had deliberately planned this *coup* for the purpose of turning the convention to himself for the presidential nomination. Up to that time the names of Richard P. Bland, of Missouri, Horace Boies, of Iowa, and Henry M. Teller, of Colorado, had been chiefly discussed for the nomination. Mr. Bryan's plan for capturing the convention by his oratorical effort was successful, and on the following day he was nominated for President, while Arthur Sewall, of Maine, also an advocate of free coinage of silver, was nominated for Vice-President. Great dissatisfaction was expressed by the Eastern delegates, who insisted that they were unfairly treated by the rejection of delegates from Michigan and elsewhere who favored the gold standard. Not only was the silver plank of the platform objectionable to them, but other declarations which denounced President Cleveland's policy of issuing bonds to maintain the gold reserve in the Treasury, the use of Federal troops and injunctions by Federal courts to suppress riots and interference with interstate traffic, and an attack on the Supreme Court because of its reversal of the action of Congress in favor of a tax on incomes. The scenes in the convention were full of excitement, and many delegations from Eastern States, as well as a small portion of those from the Mississippi valley, refused to participate in the balloting. The platform which was adopted declared explicitly in favor of free and unlimited coinage of silver at the ratio of 16 to 1 without waiting for the co-operation of any other nation; denounced the Supreme Court because of its decision against the income tax, and hinted at a reorganization of that court; declared for a revenue tariff "so adjusted as to operate equally throughout the country, and not to discriminate between classes or sections"; and denounced interference by Federal authorities in local affairs, and especially a "government by injunction." The National Committee organized by electing as its chairman the Hon. James K. Jones, Senator from Arkansas.

The Populist Convention.—The National Convention of the Populist party met in St. Louis, July 22, 1896. That party, which had been in existence about six years, had polled more than a

million votes in the last presidential election. The fact that the Democratic convention had not only placed in its platform many of the principles advocated by the Populists, especially free coinage of silver and denunciation of Federal action in suppression of disorder, and had nominated a man who had been in close touch and sympathy with them, led the convention to nominate William Jennings Bryan as its candidate. But Mr. Sewall, the Democratic candidate for Vice-President, was rejected, and Thomas E. Watson, of Alabama, was selected as the vice-presidential candidate of the party. A convention of men who had declined to co-operate with either of the three parties above named, met in St. Louis the same date, styling themselves the Silver party, and also nominated Mr. Bryan, thus making him the nominee of three parties. The Populist National Committee organized by electing as chairman the Hon. Marion Butler, United States Senator from North Carolina.

Revolt of the Democratic Press.—The action of the Democratic National Convention on the silver question, as well as that relating to the suppression of disorder by the Federal judiciary and executive, was at once denounced by a large share of the Democratic press, in which they were joined by most of the independent papers, many of which in recent national campaigns had supported the Democratic nominees. Within ten days after the adoption of the platform at Chicago, more than 100 daily papers that had been accustomed to support the nominees of the Democratic party announced their opposition to the ticket and the platform. This was especially the case in the large cities east of the Mississippi and north of the Ohio, while several of the Democratic newspapers of the South, especially in the border States, took similar ground. In New York city every Democratic and independent newspaper, with a single exception, refused to support the Democratic candidates, and most of them declared openly in favor of the election of McKinley, although in many cases they did not agree with his views on the tariff. Similar action was taken by Democratic papers of Boston, Philadelphia, Baltimore, Louisville, Detroit, St. Paul, Milwaukee, and Chicago, and was followed by numerous others in the smaller cities. This action was not so strongly marked with the country press, free coinage being apparently more popular with the agricultural population and the residents of villages and towns. The fact that the most important Democratic and independent newspapers of the country refused to support the Democratic candidates and platform proved extremely disadvantageous to that party, since it deprived it both of the direct influence of the press upon its readers and of the most convenient method of placing before the public the arguments and statements that its leaders might desire to present.

Revolt of Sound-money Democrats.—Meantime, great dissatisfaction with the platform of the Democratic convention was developing among eminent Democrats in all the States between the Mississippi and the Atlantic and north of the extreme Southern States. Democrats of the Northern States by hundreds openly denounced the free-coinage plank as a proposition to dishonor the currency and obligations of the Government, and one which, if carried out, would not only put a stain upon the honor of the nation, but destroy the business interests and standing of the country. The friends and supporters of President Cleveland were indignant at the attack made in the convention upon his administration. This sentiment was generally expressed in vigorous tones by those holding places of trust and honor under his administration in all sections of the country. In addition to this,

influential business men of nearly all communities, aside from those of the mining States, without reference to party affiliations, openly opposed the principles of the Democratic platform, and especially those relating to the currency question. President Cleveland remained silent, but several of his Cabinet officers openly announced their hostility to the platform of the party.

The National Democratic Nominating Convention.—The result of the growth of sentiment among Democrats who were opposed to the principles of the Democratic platform was that a convention was held in Indianapolis, Sept. 2, 1896, which was attended by delegates from 44 States, and which, after due deliberation, adopted a platform denouncing the principles of the Chicago convention relative to currency and Federal action in governmental matters, and nominated John M. Palmer, of Illinois, for President, and Simon B. Buckner, of Kentucky, for Vice-President, adopting the name of "the National Democratic party." A national committee was formed, with the Hon. William D. Bynum, of Indianapolis, as its chairman.

The Battle for the Agricultural States.—From the time that it became apparent that the currency question, and especially the free coinage of silver, was to be a prominent issue between the great parties, attention was turned to the great agricultural States of the Mississippi valley as the probable battle ground of the campaign. In New England and the Middle States the sentiment against free coinage was so strong that little doubt was felt as to Republican success in all of them. The advocates of silver, however, claimed for their cause great strength in the agricultural States, while it was conceded that the South and the mining States would support the platform and candidates of the Chicago convention.

As a result of the belief that the battle would be fought in the Middle West, the Republican National Committee decided to locate its working headquarters at Chicago, having also a headquarters in New York, and this was followed by similar action by the other parties. This was a new development in presidential campaigns, the headquarters of national committees having been located in New York on former occasions.

The Republicans were earliest in the field with the location of headquarters and the opening of their work. They rented apartments occupying several floors of the Auditorium Hotel in Chicago, where Chairman Hanna was joined by the Hon. Henry C. Payne, of Wisconsin, Hon. Charles G. Dawes, of Illinois, and the Hon. W. T. Durbin, of Indiana, members of the National Committee. Gen. William M. Osborne was made secretary of the committee, and located at the New York headquarters, the Hon. Cornelius N. Bliss, treasurer, with the Hon. Matthew S. Quay, of Pennsylvania, Hon. Joseph Manley, of Maine, Gen. Powell Clayton, of Arkansas, and the Hon. N. B. Scott, of West Virginia, members of the National Committee, in charge of the work especially relating to the Eastern and Southern sections of the country. Col. Perry S. Heath, former proprietor and editor of the Cincinnati "Commercial-Gazette," was placed in charge of the literary work at the Chicago headquarters, and Hon. William M. Hahn, of Ohio, was assigned to the management of the speakers for the campaign. Major Charles Dick, of Ohio, was made assistant secretary and assigned to duty at the Chicago headquarters. Chairman Hanna divided his time between New York and Chicago headquarters, giving the larger portion, however, to that at Chicago.

The Democratic National Committee opened its headquarters in the Auditorium Annex, immediately opposite the building in which were the head-

quarters of the Republican National Committee. Chairman Jones took personal charge of the work, and was assisted by the Hon. Daniel J. Caupan, of Michigan, the Hon. James Richardson, Member of Congress from Tennessee, who was placed in charge of the literary bureau, with E. W. Barrett, of Atlanta, as assistant, the Hon. Daniel McConville, of Ohio, in charge of the speakers' bureau, and Frank H. Hosford, of Michigan, secretary of the National Committee.

The Populist National Committee located in rooms adjoining those occupied by the Democratic National Committee, and co-operated with Chairman Jones constantly, attempting little in the way of separate work.

The National Democratic party established its headquarters in the Palmer House, and during the closing weeks of the campaign carried on a vigorous work in the distribution of literature and assignment of speakers to various parts of the country.

A Campaign of Education.—From the beginning it was apparent that the campaign was to be more thoroughly educational than any ever before known. Even before the opening of headquarters Chairman Hanna had begun to receive appeals for literature that would give people information regarding the merits of the currency question, and from the day that the headquarters opened there were urgent demands for documents covering every phase of the issues of the canvass. It was soon found that the voters of the West and South had been for two years quietly and abundantly supplied with documents favoring free and unlimited coinage of silver at the ratio of 16 to 1 and attributing the low prices of grain and other farm products solely to the demonetization of silver. This distribution of documents, which had been carried on by the Bimetallic League and other organizations supported by the adherents of the silver cause, had been very effective in creating a sentiment throughout the South and West in favor of free coinage of silver, and the Republican party thus found itself compelled to meet in a three months' campaign a sentiment that had been industriously created through an educational campaign of nearly three years by the advocates of silver. Mr. Heath immediately surrounded himself with a staff of writers and editors. The Hon. Robert P. Porter, of Ohio, late Superintendent of the Census, Dr. Fred H. Wines, of Illinois, and also of the Census Bureau, Mr. Eugene V. Smalley, of Minnesota an experienced writer and editor, and Mr. B. W. Snow, late of the Statistical Bureau of the Department of Agriculture, were employed in the preparation of literature to be distributed both in the form of documents and through such newspapers as were inclined to support the doctrines enunciated in the platform of the Republican party. To Mr. Oscar P. Austin, of Washington, D. C., an experienced newspaper correspondent, was intrusted the editing of the documents and especially the determination of the accuracy of the statistical and financial statements they contained. The literature issued by the committee—both the documents and that prepared for journals—was devoted especially to the tariff and currency, and covered not only the history of these subjects with reference to the United States, but incidentally the experience of other nations in financial matters. The material prepared for newspaper use was distributed in the form of supplements and plates ready for insertion in the columns of newspapers, and was frequently accompanied by cartoons, which have become so important a factor in political contests. This class of matter was distributed by Mr. H. H. Rand, of Wisconsin, who also had charge of the printing contracts for the documentary service. The material

for newspaper use was furnished free of charge to all newspapers that were willing to publish it.

The literature of the Democratic National Committee was confined almost exclusively to the currency question, especially to arguments in favor of free and unlimited coinage of silver at the ratio of 16 to 1. It was distributed through the medium of newspapers in a manner similar to that described above, while documents were also prepared for distribution. The literary work of the Democratic committee was in charge of the Hon. James D. Richardson, Member of Congress from Tennessee, assisted by a corps of editors.

The Populist National Committee distributed little literature aside from the speeches of its members of Congress, which were sent out from Washington, choosing rather to co-operate with the Democrats.

The National Democratic party, through its National Committee also prepared and distributed large quantities of literature after entering the field in September.

One specially notable feature of the literature of the canvass was the large quantity prepared and distributed by private individuals. Thousands of business men, merchants, manufacturers, grain dealers, railroad officials, building associations, insurance companies, newspapers, and others, published at their own expense brief and pointed documents on the currency question, distributing them through their daily correspondence and by other methods. The Protective Tariff League also distributed from its headquarters in New York literature aggregating many million copies, relating especially to the tariff and labor questions.

Distribution of Literature.—The earliest supply of literature distributed was that furnished by the congressional committees of each party, which had opened headquarters in Washington before the national canvass had begun, and had distributed millions of copies of speeches delivered in the House and in the Senate, many of which were prepared with this object in view. These documents were sent through the mails under the frank of members of Congress as "part of the Congressional Record," that publication being entitled under the law to free transportation in the mails. A large share of the documents thus distributed were sent direct to voters, whose names were furnished by members of Congress or those who were candidates for election to Congress. The number of documents thus sent out from the Washington headquarters of the three parties, added to those distributed by the Silver party and the Bimetallic League and silver organizations, aggregated 50,000,000 copies, of which number the Republicans distributed about half.

The preparation for printing and distributing documents discussing the tariff and currency questions was the first work of the Republican National Committee after it opened its headquarters in Chicago. It became evident to the managers of the campaign of that party that the demand for information on the currency question was very great and should be met promptly. The same mails that brought appeals for this literature, however, brought articles prepared by students of the financial question from every part of the country, and the pens of the editors employed by the National Committee were busy with the preparation of others. A quantity of valuable material for documents and newspaper publications was thus quickly available, and representatives of the great printing houses of Chicago and adjacent cities were summoned, the material was placed in their hands, and the presses were soon running day and night. "One million copies" was the usual order for each document placed in the hands of the printer, and

this order was frequently duplicated as the stock was exhausted, until the second and third, and even the fourth million was printed and distributed to the public, who still seemed to be hungering for information on every phase of the currency question. Some of these documents were mere leaflets of convenient size for pocket and letter use, while others were more elaborate discussions, covering a dozen or a score of pages. Nearly 200 different documents were prepared and sent to press by the Republican National Committee, and the total number of copies printed, including those sent out from the New York headquarters and from Washington, aggregated nearly 200,000,000, which was fully ten times as many as had ever been distributed by any national committee that had preceded it. The number distributed by the Democratic National Committee, including those sent out by its Congressional Committee at Washington, probably aggregated about 50,000,000. The silver organizations named above also distributed during and prior to the canvass a very large number of documents, probably aggregating 50,000,000 copies. The Republican National Committee, through its system of supplying the newspapers, sent out about 20,000,000 supplements for the use of daily and weekly papers, and distributed many millions of columns of matter in plates and by other processes. A brief "leaflet" prepared and sent from the Republican headquarters to daily papers for use in their columns obtained a circulation of over 1,000,000 a day.

The Machinery of Distribution.—The system by which the thousands of tons of literature thus printed by the national committees was distributed to voters in all parts of the country was very elaborate and satisfactory in its workings. All the documents as fast as printed, were sent to the distribution rooms near the headquarters, that of the Republican National Committee being under the direction of Capt. Thomas H. McKee, of Washington, D. C. The workings of the machinery of the distribution department of the Republican Committee are selected for this description by reason of the fact that this committee distributed a larger quantity of literature than did any of the other national committees. A hundred men were employed at the distribution rooms, handling the great mass of documents which came from the presses at the rate of 10,000,000 or 20,000,000 in a day. On the arrival of a consignment of documents, the superintendent of distribution, after conferring with the head of the literary department and members of the committee as to the sections of the country for which it was especially suited, assigned a given number to each State, determining this by the number of voters in each State and the interest felt in the subject discussed. As soon as this was determined the designated number was quickly boxed and addressed to the chairman of the Republican State Committee in each of the States to which they were consigned, so that a few hours was sufficient to send the million documents by fast express in every direction. These allotments, on arrival at the headquarters of the State committees, were distributed by similar methods to the county committees, whence they were distributed, either by mail or some more convenient process, to the voters. The literature of the other national committees was distributed in a similar way. The work of preparing and distributing literature continued until within three weeks of the election, when the demand ceased and the attention of the people turned to the discussions from the platform, which were now being made at all hours in all communities. One especially interesting feature of the publication bureaus was that by which millions of large posters bearing striking cartoons and brief argu-

ments on the currency question were furnished for use in cities and villages. These posters proved an effective method of reaching with terse and striking arguments many voters who could not be induced to read elaborate documents or newspaper articles.

Furnishing Speakers for the Campaign.—The speakers' bureau was an extremely important feature of the headquarters of each of the national committees. This bureau at the Republican headquarters was managed by the Hon. William M. Hahn, of Ohio; that of the Democrats by Hon. Daniel McConville, of Ohio. The business of the speakers' bureau was to assign such speakers as offered their services to the national committee to a given territory or line of cities and towns, and also obtain the services of others whose work was likely to be useful. Hundreds of men were sent out by each of these bureaus, being directed originally by orders given to them on their departure, and later by telegraph or letter. Their expenses were paid by the national committee, and in some instances they were paid for their time, though a large portion of them gave their services freely for the benefit of their party. One of the most attractive and unique features of the oratorical campaign was what was known as "the Generals' Train," operated under the direction of the Republican National Committee. This was a special train carrying Gens. Sickles, Howard, Sigel, and Alger and Corporal Tanner, who addressed gatherings of old soldiers in nearly every city and in many of the smaller towns of the Mississippi valley, which was constantly the great battle ground. At the rear of the train was a platform car, on which was mounted a cannon, which was fired at intervals while crossing the country and just before reaching the town where addresses were to be delivered. This unique programme called together at every point enormous numbers of people, and the addresses of these distinguished officers in the late war, some of whom in former political contests had co-operated with the Democratic party, but were now urging the election of McKinley, proved very effective. Another special train, which was confined to Illinois, a State most hotly contested by both parties, and was designated "the Governors' Train," carried 4 ex-Governors of Illinois. The speakers' bureaus of the Republican and Democratic parties sent their speakers into the various States in which the contest was most closely fought. The Republican committee sent men to the Pacific coast, this being the first time in which a national committee had attempted to supply speakers to that section of the country. In addition to the work performed by the speakers' bureau of the national committees, the State and county committees assigned thousands of their local speakers, so that the closing weeks of the canvass were marked by discussions from the platform in every community, which were attended by millions of voters.

Selecting Electors.—Meantime the heads of the respective national committees had been attentively watching the selection of electors throughout the country. The most important duty in this line, from the standpoint of the Republican and National Democratic parties, was to see that the men selected for this duty had the qualifications named by law, and that none were disqualified by reason of holding any official or business relation with the Government. Not only were all holders of offices under the National Government excluded from the list of electors, but also the directors and officers of national banks, and it was found necessary to revise carefully many lists of electors, in order to make it certain that no man not fully qualified had been named. Chairman Jones, of the Democratic National Committee, also found an arduous task in

arranging fusion tickets of Democrats and Populists in the various States which would command the full vote of both of those parties, this difficulty being increased by the fact that the Populist party had declined to nominate on their ticket the vice-presidential candidate of the Democrats, though nominating the presidential candidate of the Democracy, Mr. Bryan. Chairman Jones was finally successful in nearly every State, thus assuring to Bryan and Sewall the practically unanimous vote of the Populists as well as that of the Democrats who favored free coinage of silver or who were willing to support the nominee of the party whatever their conviction regarding the platform.

Mr. Bryan's Speech-making Tour.—One of the remarkable features of the campaign was the speech-making tour of Mr. Bryan, the Democratic and Populist candidate for the presidency. From the day of his nomination at Chicago he was called upon for speeches wherever he went, and willingly complied. It was arranged that the official notification of the nomination should be made in Madison Square Garden, New York, in order to give him an opportunity to make his speech of acceptance in that city. On his trip from Nebraska to New York for that purpose he made many speeches from the rear platform of the car on which he traveled. After his speech in New York accepting the nomination he planned a tour through what he termed "the enemy's country," by this meaning the New England and Middle States, which in their platforms and through their delegates had indicated hostility to the silver cause. His tour attracted much attention, phenomenal crowds gathering to listen to him, and the people, especially in the rural districts, apparently indicating strong sympathy with the free-coinage proposition. It was found also that speeches delivered in this unusual manner attracted the attention of the press and the public, and were printed even in the most hostile papers as a matter of news. This suggested to him and his managers the practicability, by continuing this process, of utilizing the press of the country to spread their arguments despite its hostility to their views. Accordingly, Mr. Bryan remained in the field during the entire canvass. He visited 28 States and made about 500 speeches, traveling first in an ordinary passenger coach, then in the Pullman parlor car or sleeper, then by special car, and finally by special train, accompanied by a corps of secretaries and correspondents of newspapers and press associations. But his speeches, while they attracted much attention and were listened to by enormous numbers of people, did not have the effect expected. Of the 28 States that he thus visited he carried but 6, and most of these were States that had been accustomed to give a Democratic or Populist plurality. All the large cities in which he spoke gave an increased Republican vote, and nearly all of them were carried by the Republicans. His speeches were listened to by more than 2,000,000 people, and there was no complaint that they lacked in interest or in their presentation of all the arguments that could be produced for the cause of silver, to which he devoted most of his attention; but, while awakening much enthusiasm at the moment, they apparently failed to convince, since the Democratic percentage of the total vote was much reduced in practically all the cities and most of the States that he visited.

Major McKinley's Speeches.—Major McKinley, the Republican candidate, although remaining constantly at his home in Canton, Ohio, did not lack opportunity to express himself on the issues of the canvass. From the time of his nomination until the close of the campaign scarcely a day passed in which he was not visited by delegations

who expected and insisted upon an address on the issues of the day. As the campaign increased in interest and intensity the number of delegations increased, until on many days they numbered more than a score, coming from different States and representing all classes. It was estimated that in the busiest season of the campaign no fewer than 30,000 people visited him in a single day, arriving in special trains with flags and banners and bands and orators and all the paraphernalia of a political campaign. One of the most remarkable features of these pilgrimages to Canton was found in the fact that organizations wholly made up from the Democratic party called on the Republican candidate to pay their respects and pledge their support, and in some instances these organizations were composed entirely of men who had served in the Confederate army and had fought against Major McKinley on the battlefield. In the hundreds of speeches that he delivered to these visiting delegations he discussed all the features of the contest—the tariff, the currency question, the free coinage of silver, and the attitude of the Democratic platform relative to the enforcement of law and order. His speeches, like those of Mr. Bryan, were telegraphed to all parts of the country by newspaper correspondents and press associations, so that each of the candidates was able thus to address the entire reading population of the country more frequently, and to discuss the issues more thoroughly, than had been the case in any presidential campaign of former years.

Rallying the Voters.—The closing weeks of the campaign were filled with activity and excitement. Enormous parades were planned in the great cities; special trains filled with men shouting for McKinley or Bryan rolled across the country bearing streamers with the names of their candidates; flags and banners were everywhere seen and millions of campaign buttons and badges bearing the names and portraits of the candidates were distributed by national and State committees. Chairman Hanna, of the Republican National Committee, in an address to the public, recommended that on the Saturday preceding the election the national flag should be displayed by all friends of sound finance and good government; and the chairman of the Democratic National Committee, unwilling to have it appear that his party or followers were less patriotic than the Republicans or National Democrats, issued a similar recommendation. "Flag Day," as this occasion was denominated, was generally observed by Republicans in all cities and in rural communities also, and monster parades numbering from 50,000 to 100,000 men marched through the streets of the great cities, testifying the adherence of those participating in them to the candidates of the Republican party. In all parts of the country clubs and political organizations had been formed, grouping various classes of people and rallying them in favor of the respective candidates. An organization composed exclusively of graduates of colleges was formed, and rallied large numbers of young men in behalf of the Republican candidates; clubs composed of commercial travelers were formed in all parts of the United States under the auspices of the Republican National Committee; while bicycle clubs, railroad clubs, workmen's clubs, and other organizations of this kind gathered the voters into groups for the purpose of arousing their enthusiasm and securing their active support for the respective candidates. The women of the country were also enlisted and organizations among them were established, meetings held, and literature distributed, this work being carried on under the direction of Mrs. J. Ellen Foster, of Iowa, under the auspices of the Republican National Committee.

this order was frequently duplicated as the stock was exhausted, until the second and third, and even the fourth million was printed and distributed to the public, who still seemed to be hungering for information on every phase of the currency question. Some of these documents were mere leaflets of convenient size for pocket and letter use, while others were more elaborate discussions, covering a dozen or a score of pages. Nearly 200 different documents were prepared and sent to press by the Republican National Committee, and the total number of copies printed, including those sent out from the New York headquarters and from Washington, aggregated nearly 200,000,000, which was fully ten times as many as had ever been distributed by any national committee that had preceded it. The number distributed by the Democratic National Committee, including those sent out by its Congressional Committee at Washington, probably aggregated about 50,000,000. The silver organizations named above also distributed during and prior to the canvass a very large number of documents, probably aggregating 50,000,000 copies. The Republican National Committee, through its system of supplying the newspapers, sent out about 20,000,000 supplements for the use of daily and weekly papers, and distributed many millions of columns of matter in plates and by other processes. A brief "leaflet" prepared and sent from the Republican headquarters to daily papers for use in their columns obtained a circulation of over 1,000,000 a day.

The Machinery of Distribution.—The system by which the thousands of tons of literature thus printed by the national committees was distributed to voters in all parts of the country was very elaborate and satisfactory in its workings. All the documents as fast as printed, were sent to the distribution rooms near the headquarters, that of the Republican National Committee being under the direction of Capt. Thomas H. McKee, of Washington, D. C. The workings of the machinery of the distribution department of the Republican Committee are selected for this description by reason of the fact that this committee distributed a larger quantity of literature than did any of the other national committees. A hundred men were employed at the distribution rooms, handling the great mass of documents which came from the presses at the rate of 10,000,000 or 20,000,000 in a day. On the arrival of a consignment of documents, the superintendent of distribution, after conferring with the head of the literary department and members of the committee as to the sections of the country for which it was especially suited, assigned a given number to each State, determining this by the number of voters in each State and the interest felt in the subject discussed. As soon as this was determined the designated number was quickly boxed and addressed to the chairman of the Republican State Committee in each of the States to which they were consigned, so that a few hours was sufficient to send the million documents by fast express in every direction. These allotments, on arrival at the headquarters of the State committees, were distributed by similar methods to the county committees, whence they were distributed, either by mail or some more convenient process, to the voters. The literature of the other national committees was distributed in a similar way. The work of preparing and distributing literature continued until within three weeks of the election, when the demand ceased and the attention of the people turned to the discussions from the platform, which were now being made at all hours in all communities. One especially interesting feature of the publication bureaus was that by which millions of large posters bearing striking cartoons and brief argu-

ments on the currency question were furnished for use in cities and villages. These posters proved an effective method of reaching with terse and striking arguments many voters who could not be induced to read elaborate documents or newspaper articles.

Furnishing Speakers for the Campaign.—The speakers' bureau was an extremely important feature of the headquarters of each of the national committees. This bureau at the Republican headquarters was managed by the Hon. William M. Flahn, of Ohio; that of the Democrats by Hon. Daniel McConville, of Ohio. The business of the speakers' bureau was to assign such speakers as offered their services to the national committee to a given territory or line of cities and towns, and also obtain the services of others whose work was likely to be useful. Hundreds of men were sent out by each of these bureaus, being directed originally by orders given to them on their departure, and later by telegraph or letter. Their expenses were paid by the national committee, and in some instances they were paid for their time, though a large portion of them gave their services freely for the benefit of their party. One of the most attractive and unique features of the oratorical campaign was what was known as "the Generals' Train," operated under the direction of the Republican National Committee. This was a special train carrying Gens. Sickles, Howard, Sigel, and Alger and Corporal Tanner, who addressed gatherings of old soldiers in nearly every city and in many of the smaller towns of the Mississippi valley, which was constantly the great battle ground. At the rear of the train was a platform car, on which was mounted a cannon, which was fired at intervals while crossing the country and just before reaching the town where addresses were to be delivered. This unique programme called together at every point enormous numbers of people, and the addresses of these distinguished officers in the late war, some of whom in former political contests had co-operated with the Democratic party, but were now urging the election of McKinley, proved very effective. Another special train, which was confined to Illinois, a State most hotly contested by both parties, and was designated "the Governors' Train," carried 4 ex-Governors of Illinois. The speakers' bureaus of the Republican and Democratic parties sent their speakers into the various States in which the contest was most closely fought. The Republican committee sent men to the Pacific coast, this being the first time in which a national committee had attempted to supply speakers to that section of the country. In addition to the work performed by the speakers' bureau of the national committees, the State and county committees assigned thousands of their local speakers, so that the closing weeks of the canvass were marked by discussions from the platform in every community, which were attended by millions of voters.

Selecting Electors.—Meantime the heads of the respective national committees had been attentively watching the selection of electors throughout the country. The most important duty in this line, from the standpoint of the Republican and National Democratic parties, was to see that the men selected for this duty had the qualifications named by law, and that none were disqualified by reason of holding any official or business relation with the Government. Not only were all holders of offices under the National Government excluded from the list of electors, but also the directors and officers of national banks, and it was found necessary to revise carefully many lists of electors, in order to make it certain that no man not fully qualified had been named. Chairman Jones, of the Democratic National Committee, also found an arduous task in

arranging fusion tickets of Democrats and Populists in the various States which would command the full vote of both of those parties, this difficulty being increased by the fact that the Populist party had declined to nominate on their ticket the vice-presidential candidate of the Democrats, though nominating the presidential candidate of the Democracy, Mr. Bryan. Chairman Jones was finally successful in nearly every State, thus assuring to Bryan and Sewall the practically unanimous vote of the Populists as well as that of the Democrats who favored free coinage of silver or who were willing to support the nominee of the party whatever their conviction regarding the platform.

Mr. Bryan's Speech-making Tour.—One of the remarkable features of the campaign was the speech-making tour of Mr. Bryan, the Democratic and Populist candidate for the presidency. From the day of his nomination at Chicago he was called upon for speeches wherever he went, and willingly complied. It was arranged that the official notification of the nomination should be made in Madison Square Garden, New York, in order to give him an opportunity to make his speech of acceptance in that city. On his trip from Nebraska to New York for that purpose he made many speeches from the rear platform of the car on which he traveled. After his speech in New York accepting the nomination he planned a tour through what he termed "the enemy's country," by this meaning the New England and Middle States, which in their platforms and through their delegates had indicated hostility to the silver cause. His tour attracted much attention, phenomenal crowds gathering to listen to him, and the people, especially in the rural districts, apparently indicating strong sympathy with the free-coinage proposition. It was found also that speeches delivered in this unusual manner attracted the attention of the press and the public, and were printed even in the most hostile papers as a matter of news. This suggested to him and his managers the practicability, by continuing this process, of utilizing the press of the country to spread their arguments despite its hostility to their views. Accordingly, Mr. Bryan remained in the field during the entire canvass. He visited 28 States and made about 500 speeches, traveling first in an ordinary passenger coach, then in the Pullman parlor car or sleeper, then by special car, and finally by special train, accompanied by a corps of secretaries and correspondents of newspapers and press associations. But his speeches, while they attracted much attention and were listened to by enormous numbers of people, did not have the effect expected. Of the 28 States that he thus visited he carried but 6, and most of these were States that had been accustomed to give a Democratic or Populist plurality. All the large cities in which he spoke gave an increased Republican vote, and nearly all of them were carried by the Republicans. His speeches were listened to by more than 2,000,000 people, and there was no complaint that they lacked in interest or in their presentation of all the arguments that could be produced for the cause of silver, to which he devoted most of his attention; but, while awakening much enthusiasm at the moment, they apparently failed to convince, since the Democratic percentage of the total vote was much reduced in practically all the cities and most of the States that he visited.

Major McKinley's Speeches.—Major McKinley, the Republican candidate, although remaining constantly at his home in Canton, Ohio, did not lack opportunity to express himself on the issues of the canvass. From the time of his nomination until the close of the campaign scarcely a day passed in which he was not visited by delegations

who expected and insisted upon an address on the issues of the day. As the campaign increased in interest and intensity the number of delegations increased, until on many days they numbered more than a score, coming from different States and representing all classes. It was estimated that in the busiest season of the campaign no fewer than 30,000 people visited him in a single day, arriving in special trains with flags and banners and bands and orators and all the paraphernalia of a political campaign. One of the most remarkable features of these pilgrimages to Canton was found in the fact that organizations wholly made up from the Democratic party called on the Republican candidate to pay their respects and pledge their support, and in some instances these organizations were composed entirely of men who had served in the Confederate army and had fought against Major McKinley on the battlefield. In the hundreds of speeches that he delivered to these visiting delegations he discussed all the features of the contest—the tariff, the currency question, the free coinage of silver, and the attitude of the Democratic platform relative to the enforcement of law and order. His speeches, like those of Mr. Bryan, were telegraphed to all parts of the country by newspaper correspondents and press associations, so that each of the candidates was able thus to address the entire reading population of the country more frequently, and to discuss the issues more thoroughly, than had been the case in any presidential campaign of former years.

Rallying the Voters.—The closing weeks of the campaign were filled with activity and excitement. Enormous parades were planned in the great cities; special trains filled with men shouting for McKinley or Bryan rolled across the country bearing streamers with the names of their candidates; flags and banners were everywhere seen and millions of campaign buttons and badges bearing the names and portraits of the candidates were distributed by national and State committees. Chairman Hanna, of the Republican National Committee, in an address to the public, recommended that on the Saturday preceding the election the national flag should be displayed by all friends of sound finance and good government; and the chairman of the Democratic National Committee, unwilling to have it appear that his party or followers were less patriotic than the Republicans or National Democrats, issued a similar recommendation. "Flag Day," as this occasion was denominated, was generally observed by Republicans in all cities and in rural communities also, and monster parades numbering from 50,000 to 100,000 men marched through the streets of the great cities, testifying the adherence of those participating in them to the candidates of the Republican party. In all parts of the country clubs and political organizations had been formed, grouping various classes of people and rallying them in favor of the respective candidates. An organization composed exclusively of graduates of colleges was formed, and rallied large numbers of young men in behalf of the Republican candidates; clubs composed of commercial travelers were formed in all parts of the United States under the auspices of the Republican National Committee; while bicycle clubs, railroad clubs, workmen's clubs, and other organizations of this kind gathered the voters into groups for the purpose of arousing their enthusiasm and securing their active support for the respective candidates. The women of the country were also enlisted and organizations among them were established, meetings held, and literature distributed, this work being carried on under the direction of Mrs. J. Ellen Foster, of Iowa, under the auspices of the Republican National Committee.

Charges of Coercion.—One of the marked features of the canvass was the charge made by Mr. Bryan and his supporters that employers were attempting to coerce their employees into voting for McKinley. A very large share of the business men of the community were opposed to free coinage of silver, on the ground that it would disturb values, disarrange business, depreciate the market value of stocks and bonds, and especially those in the hands of foreign holders or offered to foreign capitalists. The fact that so large a proportion of the employing class was, without regard to former political views, actively opposed to the silver proposition led to the belief on the part of some Democrats that undue pressure would be brought by them upon their employees to influence their votes in favor of the Republican or the National Democratic candidate. As a result, the charge was made that coercion was being practiced. Workingmen were counseled to conceal their real views in order that they might, through the secret ballot, register their vote without danger of losing their places as the result. Mr. Bryan himself frequently alluded to this in his speeches, advising the workingmen to join Republican clubs and wear McKinley badges, if they thought it advisable, but to vote the Democratic ticket. During the weeks prior to the election the claim was constantly made by the managers of the Democratic campaign that all polls made by the Republicans were misleading by reason of the intention on the part of the workingmen in the cities to conceal their real views and to vote for the Democratic candidate. In this calculation they were mistaken. An examination of the votes of the cities and towns showed great Democratic losses in nearly all of them, and corresponding Republican gains. In 85 principal cities and towns of the manufacturing and agricultural States, in which the Democratic plurality in 1892 was 162,000, the Republican plurality in 1896 was 464,000. In all these some form of secret ballot was in use, so that workingmen and employees generally would have found it practicable to follow the advices of Democratic leaders had they desired. It was believed by many during the canvass that the claim by the Democrats that workingmen were preparing to assume the rôle of deception in the use of their elective franchise was resented by them, and that this fact added to the Republican strength in many instances.

The Preliminary Polls.—Careful and elaborate polls of the electors of the country, made during several weeks preceding the election, convinced those managing the campaign that the Republican candidates would be elected, and this was true not only with Republicans, but with many supporters of the Democratic candidates. These polls, which have been a feature of State and national campaigns for years, were made more elaborate and thorough in 1896 than on preceding occasions. In most of the close and important States 2, and in some instances 3, polls were taken with a view of ascertaining the political status. This was an enormous task. In Illinois, Ohio, New York, and Pennsylvania there were more than 1,000,000 voters each, yet they were so thoroughly canvassed by these preliminary polls that the managers of the parties knew within a few thousand how the votes would be cast. In other States which were considered important to the final result the polls were equally careful and accurate. The first of these was made sixty days before the election, the second thirty days before, and the last was completed but a week before. These polls were made in each State under the direction of the State committee. The chairman of each county committee was directed to begin his poll in time to report by a given date. He in turn notified the chairman

of his ward and township committees, and they appointed men for this duty. Each man was given a section of his city or town, with whose inhabitants he was well acquainted, the territory given to each being not more than the block upon which he resided or the building in which he did business. The reports of these canvassers were made to the local committee, by them transmitted to the county committee, and in turn reported to the State committee, where the figures were tabulated and reports forwarded to the national headquarters. The result was that the generals of the two great armies, if they had their forces well in hand, were able to know constantly what the conditions were in each State and section, and where speakers and literature were most needed, and to learn from time to time what change in sentiment was going on. The result of these State canvasses became known to the public soon after they were made, and in the closing weeks of the campaign they were sufficient to convince those watching the condition closely that the tide was setting strongly in favor of the Republican candidates. While the reports from the farming districts did not show as great gains for the Republicans as in the cities, Chairman Hanna, on the conclusion of the final poll, expressed publicly his absolute confidence in the election of the Republican candidates; and Chairman Jones, although refusing to concede defeat, only claimed success on the belief that the "silent vote" of the States would be cast in favor of the Democratic candidates. This hope proved delusive.

The Cost of the Canvass.—On the question of the cost of presidential campaigns, especially that of 1896, much has been written, but comparatively little is known. Naturally, the expenditures of a campaign must be very large, but the men who collect and distribute campaign funds are usually men of trained business habits and unaccustomed to discuss details of their transactions, and as much of the work of a campaign is necessarily secret during its progress, the figures that speculative writers on this subject have placed before the public are vague estimates. The usual cost of such a campaign is set down by men familiar with work of this kind at probably about \$4,000,000. This estimate covers not only the expenses of the national committees in their own work, but that of the State and local committees. This money is generally subscribed by members of each party to the chairman or treasurer of the county, State, or national organization, or to officers and members of the national committees. The State committees are usually expected to raise sufficient funds for their own canvasses, but to rely upon the national committee for most of their literature, a portion of their speakers, and in extreme cases for funds to add to their local collections. In the campaign of 1896 the contributions were not confined so strictly to party lines as is generally the case. Silver-mine owners, without regard to their past affiliations, contributed to the fund for the election of Mr. Bryan, as did members of the Populist and Democratic parties who felt able to do so. Chairman Jones issued an appeal to the public early in the campaign inviting not only business men, but workingmen, farmers, and all persons able to contribute a single dollar, to give according to their ability. The funds contributed to the Republican campaign came also in part from men who had been accustomed to contribute money and labor to the opposite party. The intense desire on the part of most business men to prevent the adoption of a financial system which they believed would both dishonor the nation and disturb business, made contributions to the Republican campaign fund and to that of the National Democratic party comparatively numerous and easily obtained. Men of all

classes, and women also, contributed to the fund of the Republican party, the offerings ranging from a single dollar upward. Workingmen, farmers, merchants, manufacturers, and business men of all classes and from all sections of the country contributed.

The cost of a campaign, in which thousands of speakers, tens of thousands of canvassers, millions of columns of newspaper literature, and hundreds of millions of documents enter into the machinery of education, is necessarily very great. Thousands of halls had to be rented for holding meetings; thousands of speakers were kept in the field, with their expenses paid; special trains were employed to transport Mr. Bryan and his party, and also for the convenience and necessary movement of other distinguished speakers; the telegraph wires were constantly and freely used, and the sums paid for the thousands of messages conveying instructions to speakers and to committees were very large.

The Result.—The election was held Nov. 3. Good weather in nearly all parts of the United States made it possible to bring out an unusually full vote. This was especially so in the agricultural States, on whose vote the result was expected to depend. All parties made strenuous efforts to get their voters to the polls. "Rallying committees" were appointed in each voting precinct by both parties, to see that every voter cast his ballot, carriages were provided for the aged and infirm, and no effort was spared to bring to the polls all those who were entitled to vote. Officers of election, appointed from each party, sat at the polling places with registration lists in hand, to prevent the polling of any vote that had not been previously registered and the right of the voter to cast his ballot established.

Elaborate preparations had been made for gathering the returns from the polls and announcing the result. Telegraph companies and press associations authorized their representatives to receive as fast as possible the reports from polling places and transmit them to the points where they would be tabulated and the result given to the public. Each person reporting a vote of a political division was directed to compare it with the vote of that section in 1892. These figures were reported to the headquarters of the county committees, and by them to the State committees. Members of these committees, through their familiarity with the former votes and with the existing condition of each section of the State, were able, after receiving a report from a few hundred polling places in various sections of the State, to make accurate estimates as to the result in that State. These figures and their estimates were telegraphed to the headquarters of the committees in Chicago, and were given to newspaper offices in all parts of the country and supplied to places of amusements, clubs, and such other organizations as chose to arrange for them with the telegraph companies. Immense throngs of people gathered in the streets of the cities and villages before bulletin boards and transparencies on which the returns were displayed. The consequence was that before midnight a large portion of the 70,000,000 people of the United States were cognizant of the fact that McKinley and Hobart had been elected. The total vote polled in the United States numbered 13,924,653, an increase of 15.6 per cent. over that of 1892. The percentage of gain was especially large by reason of the fact that the vote of 1892 was unusually light, the gain on that occasion being but 5.9 per cent., while the average gain in the elections during the past quarter of a century has been about 12.5 per cent. McKinley's plurality over Bryan was 600,799, which was the greatest plurality ever given to any President except Grant in 1872. Of the 447

electors, 271 were given to McKinley, a majority of 95 in the electoral college.

The extremely vigorous contest made by both parties in the agricultural States, which it was believed would determine the result of the contest, brought out an unusually full vote and showed large gains over the preceding election. The total number of votes cast in these States was, however, in only three or four cases at all, in excess of the number of persons twenty-one years of age and over in these States in 1890, as shown by the census of that year. The four States constituting the northern border of that section which had been termed "the Solid South"—Delaware, Maryland, West Virginia, and Kentucky—were, for the first time in many years, carried by the Republicans, and large gains were made in Virginia and Tennessee by that party, the claim being made by its members that a proper count of the votes in these States would have also given their electors to McKinley. In the extreme South and the mining States the Democrats were successful, making large gains in many of them, especially in the mining States, where the strong silver sentiment resulted in giving to the Democrats the electoral votes of many States that formerly had stood steadfastly in the Republican column. The Democrats carried South Dakota, Nebraska (the home of their candidate), Kansas, and Missouri, in all which the Populist party had cast heavy votes in the preceding presidential and congressional elections, the entire vote of that party being in 1896 cast for Mr. Bryan.

The result of the election, in which more than 6,500,000 voters found their candidate unsuccessful, was accepted by them peaceably, although a large share of them had felt absolutely confident of success. While this acceptance of the result of an election is characteristic of American voters, the fact was especially noticeable on this occasion because of the feeling that had been aroused during the campaign in the effort to convince the employed that the success of the cause advocated by the employers would be to their permanent disadvantage. Any feeling of that character which may have existed, however, was lost in the general expressions of loyalty and good government, and the days which succeeded the election were marked by renewed attention to business and united support of the principles of the republic.

PROTESTANT EPISCOPAL CHURCH IN THE UNITED STATES. A summary of the statistics of Church progress during the year shows a gratifying gain in most respects. The number of dioceses is 58; missionary jurisdictions in the United States, 21; missionary jurisdictions in foreign lands, 7; clergy (bishops, 83; priests and deacons, 4,640), 4,723; parishes and missions, 6,286; candidates for holy orders, 563; ordinations, deacons, 189; priests, 165; baptisms, 64,168; confirmations, 45,154; communicants, 641,145; marriages, 17,779; burials, 33,300; Sunday-school teachers, 45,236; Sunday-school pupils, 421,523; total of contributions, \$12,685,880.01.

The most noteworthy progress of the year was the important step taken by the missionary jurisdiction of northern Texas in organizing as a diocese.

Missions.—The Missionary Council met in Cincinnati, Oct. 27, and continued in session during three days, taking all necessary action in regard to the missionary work of the Church. The number of parishes and missions that contributed to the work of the society during the fiscal year was 3,705, 199 more than in the year preceding. The Lenten offering from Sunday schools, amounting to \$70,333.05, was an increase of \$2,861.14, and was made by 2,747 schools, the largest number that ever participated.

The trust funds of the society amount to \$993,118.92 at par value, or \$995,987.92 at market value. The income collected from these was \$41,754.57. The Missionary Enrollment fund amounts to \$167,829.03.

The gross receipts of the society for the fiscal year, including those for specials and for miscellaneous purposes, amounted to \$756,905.83. The contributions for the work of the society were \$424,771.55; the amount received from legacies, exclusive of items for investment (\$7,817.47), was \$40,207.75, making the total amount at the discretion of the board toward making its appropriations \$464,979.30. Compared with the previous year, there was an increase of contributions for foreign missions of \$606.40, and a decrease for domestic missions of \$8,139.29, and for general missions of \$27,787.37.

The receipts for domestic missions were: Balance in the treasury Sept. 1, 1895, \$32,008.12; cash received during the year (including \$27,026.57 for Indian missions and \$12,513.46 for colored missions), \$159,181.98; general offerings to the society, \$87,634.91; legacies, \$26,963.86; legacies for investment, \$7,658.73; specials, \$113,860.02; temporarily withdrawn from trust funds, \$19,000; personal loan (half), \$20,000; total, \$466,307.02.

The expenditures on account of domestic-mission work (including \$48,784.59 for Indian missions and \$56,474.65 for colored missions) were \$244,780.47; specials, \$104,436.01; interest (half), \$216.02; half cost of administration and collection, \$12,835.85; half cost of printing "Spirit of Missions," reports, etc., \$9,543.59; legacies deposited for investment, \$7,658.73; paid to annuitant (half), \$150; returned to trust funds, \$19,000; return of personal loan (half), \$20,000; transfers, \$447.41; balance for domestic missions and specials, Sept. 1, 1896, \$47,239.54.

The number of domestic missionaries, clerical and lay, male and female, receiving salaries or stipends during the year was 860, and the amount appropriated for the whole work was \$279,520. Assistance was given to 42 dioceses in addition to the 19 jurisdictions which are exclusively missionary.

The contributions for foreign missions during the year were \$109,090.06; legacies, \$13,691.80; legacies for investment, \$158.74; specials, \$30,895.29. The gross amount received was \$222,700.49, and the balance of appropriations unpaid Sept. 1, 1895, was \$42,304.63. The number of parishes and missions that contributed to foreign missions during the year was 3,449, being 199 more than last year.

The Commission on Church Work among the Colored People reports the number of clergy as 65, of whom 61 are actively engaged in the Southern dioceses. During the twelve months the baptisms numbered 1,168; confirmations, 838; average attendance at Sunday school, 5,669; at other schools, 4,346; the total number of communicants appears to be 7,116; the number of colored churches, chapels, and schools approximates 146; the value of church property is placed at \$459,000. The collections amounted to \$21,205, and the expenditures were \$57,920.

The resolution adopted by the Convention in 1895 directing that a part of the Enrollment fund should be used for the establishment of a school for the education and evangelization of the colored people was found to be ineffective, the Board of Managers deciding that the resolution of the Board of Missions of October, 1892—"that all sums appertaining to the Enrollment fund now in the hands of the treasurer of the Domestic and Foreign Missionary Society, and all sums that may hereafter be contributed to said fund, shall be securely invested and held intact as principal only until said fund

shall amount to \$1,000,000"—established an absolute moral and legal agreement with all subscribers.

The statistics of the Church in Mexico show: Priests, 6; deacons, 2; candidates for orders, 6; other readers, 5; congregations, 24; day schools in same, 10; teachers, 10; scholars, 300.

The Missionary Bishop of Cape Palmas reports that work is greatly hampered on account of the ceaseless warfare caused by the rebellion of the Half Cavalla tribe. Every man from sixteen to sixty years of age being required to do military duty, the larger male pupils and teachers are liable to be called away at any time. The number of baptisms during the year was 238, and of confirmations 69, and \$560.80 was sent to the Board of Missions.

The second conference of the China mission, lasting four days, met at Shanghai, Feb. 24, where resolutions looking toward a practical scheme of union between the different branches of the Anglican communion in China for the purpose of founding a national church were unanimously adopted. The revised Prayer Book is completed and already in use in China. The report from the China mission calls especial attention to the "active hostility of the high officials, the lesser mandarins, and the educated classes toward the Christian faith and foreign teachers of that religion," and to the persecution the heathen converts must face.

The report from Japan shows that the fifth general synod of the Church was held in Osaka, in April, that the new Prayer Book compiled for the Japan Church is well received, and that the hospital building at Tokio has been completed. The report says: "The condition of the Empire of Japan for the past year marks a new era in its history. Politically, it has been one of peace and commercial prosperity. From a religious point of view, retrogression and decadence are painfully apparent everywhere. A Japanese eclecticism is asserting itself, to the detriment of Buddhism, Shintoism, and Christianity. Nationalism is the all-prevailing cry. Christianity, to be acceptable, must assimilate some of the tenets of Buddhism and Shintoism. Respect for national institutions and for the integrity of the imperial dynasty constitute the *summum bonum* of the Japanese."

In Hayti the bishop reports that the mission at the capital has entered upon a new career of spiritual prosperity. The elementary parish school has reopened its doors, the English services, suspended since 1888, have been resumed, and the Sunday school revived. The statistics of the European jurisdiction show: Clergy, 8; churches, 6; rectories, 2; 1 house for nurses and for the sick; baptisms, 34; confirmations, 57; communicants, about 1,000; marriages, 30; burials, 38; value of church property, \$626,000.

The American Church Missionary Society during the fiscal year disbursed \$24,754.20, and the balance, Sept. 1, 1896, was \$2,394.33. Owing to the civil war in Cuba, all mission work there, except at one chapel in Havana, was suspended. In Brazil the increase in the number of communicants was 82; of Sunday-school teachers, 12; of Sunday-school pupils, 317. The contributions toward expenses and church building made by the 274 communicants amounted to \$3,188.40.

The Society for promoting Christianity among the Jews reports good work, and in some quarters great reason for thankfulness and encouragement. Its cash receipts during the year amounted to \$7,454.88; balance on hand Sept. 1, 1895, was \$604.69. The disbursements were \$7,530.02, and the balance on hand Sept. 1, 1896, was \$529.57.

The Woman's Auxiliary.—A summary of the work accomplished by the Auxiliary and its junior department in 58 dioceses and 22 missionary

districts, Sept. 1, 1895, to Sept. 1, 1896, shows contributions: Under appropriation for domestic missions, \$75,485.63; for foreign missions, \$22,179.75; for diocesan missions, \$39,107.16; boxes, 3,967, valued at \$174,591.05; total value of contributions, \$365,011.87, of which amount the junior department contributed \$26,310.51. In addition to this must be noted the united offering of \$56,198.35, made in October, 1895, for the endowment of an episcopate in a missionary jurisdiction. October, 1896, being the twenty-fifth anniversary of the creation of the Auxiliary, was marked by a special offering amounting to \$5,458.95. The value of the money and boxes contributed by the Auxiliary from 1871 to 1896 is \$5,153,379.51. During the year the Auxiliary provided for the sending of a deaconess to China, continued its gifts toward the Ladies' House and Training School in Shanghai, and furnished the money required to rebuild the Cape Palmas orphan asylum.

Building Fund Commission.—The contributions to the American Church Building fund during the year were \$12,199.63; the money loaned to churches amounted to \$31,060.79, distributed among 21 parishes or missionary stations in 17 dioceses and jurisdictions; the gifts from the fund were \$3,725, made to 25 churches; and the amount of loans returned was \$22,138.16. On Sept. 1 the fund amounted to \$287,277.33, and the amount outstanding on loan to 202 churches was \$184,132.80.

Miscellaneous.—The death of Arthur Cleveland Cox, second Bishop of Western New York, occurred on July 20. The Church also lost by death 80 priests and 2 deacons. Five bishops were consecrated during the Church year: Peter Trimble Rowe, first Missionary Bishop of Alaska; Lewis William Burton, first Bishop of the Diocese of Lexington; Joseph Horsfall Johnson, first Bishop of the Diocese of Los Angeles; Henry Yates Satterlee, first Bishop of the Diocese of Washington; and Gershom Mott Williams, first Bishop of the Diocese of Marquette. The Missionary Bishop of North Dakota, William David Walker, was elected third Bishop of Western New York; the Missionary Bishop of Northern Texas, Alexander Charles Garrett, was elected first Bishop of Dallas; and John D. Morrison was elected first Missionary Bishop of Duluth.

PSYCHOLOGY, EXPERIMENTAL. The United States Bureau of Education, in the Interior Department, is conducting a series of novel investigations: a complete study of man in relation to education and conduct, his form, proportions, circulation, breathing, sentiment, passion, emotion, susceptibility to pain, fatigue, and suggestion—in short, his entire personal equation. These tests, which have been applied to thousands of persons of all ages and conditions, are made with ingenious instruments, some of them the invention of Dr. Arthur MacDonal, who is conducting the experiments, and some of them the products of the laboratories of Europe, in which he has studied and labored for several years.

Experimental psychology is of recent origin. On its practical side it is allied to the study of criminology, and indicates a growing interest in the investigation of human characteristics and tendencies. Civilized man has studied savage life, plants, rocks, stars, and animals, but he has studied himself very superficially. Investigations of civilized man have been mostly on the abnormal side, the defective and the criminal classes; but Dr. MacDonal is prosecuting the study of normal as well as patho-social man. It is held that ascertaining the causes of abnormal and diseased conditions is a necessary preliminary to their amelioration. Education here is social therapeutics.

With these devices thousands of experiments have been made with school children and adults, normal and abnormal. The *plethysmograph* of Mosso, the Italian physiologist, shows the effect of emotions upon the circulation of the arterial blood. This instrument consists of a cylindrical vessel, G, adapted to admit the human arm. The opening through which the arm is introduced is closed and the vessel filled with water. Any movement of the water in the vessel G causes the weight N to rise or fall. To this weight is attached a small bar to register the movements on a scale. As the arm enlarges from an increased supply of blood the curve registered is

THE PLETHYSMOGRAPH.

Since the flow of venous blood is regarded as uniform in the passive arm, an increase in the volume shows an increased flow of arterial blood. When an arm is inserted into the cylinder some of the effects of ideas on the emotional nature of the subject are registered. Thus, in the case of a criminal to whom the sentence of a judge was read, a decrease in the flow of blood was indicated by the lowering of the curve; but the sight of a cigar or a glass of wine raised the curve, indicating an increase in the flow of arterial blood. In the case of a brutal murderer the flow was little affected by the sight of his victim, whereas the anticipation of pleasures produced a decided effect. The influence of mental states on the circulatory system is made very obvious on the scale in the case of a pupil who, while his arm is in the vessel G, is given abstruse mathematical problems to solve.

Among the objects in the laboratory of the Bureau of Education is a brass implement about three feet high, standing on a desk. It consists of a clock mechanism which rotates a vertical cylinder upon which is wrapped a roll of smoked paper. Near this instrument is an adjustable arm carrying a perfectly poised bamboo splinter, which rests against the cylinder. This instrument is called the *kymographion*, and by its use the most delicate measurements of breathing and speech are attained. To measure breathing, the *pneumograph* is used. A tape line is passed round the chest of the subject, the ends of which are attached to the flexible heads of a small cylinder in front, connected by a rubber tubing with the delicate bamboo needle. As the chest is expanded the heads of this instrument are pulled out, and when the air is exhaled they resume their normal positions. This causes a series of puffs of rarefied air to pass through the tubes and actuate the trembling needle, which moves up and down, responsive to the length of breaths. The revolution of the smoked cylinder causes a line to be plotted, and thus the breathing curves of each person are accurately recorded.

A comparison of the curves produced by different people gives significant results. It is found that, under the influence of various emotions, the breathing is accelerated or impeded—often entirely repressed—and after a person has been subjected to various experiments and caused to think on diverse subjects (disagreeable, pleasurable, rational, or horrible) much knowledge is revealed concerning his nervous organization. Deep study and concentra-

tion of mind on composition or arithmetical calculation diminishes the rapidity of breathing. Thinking upon a beloved or desired object results in

peculiar lines. Under the influence of hate, the bamboo needle moves rapidly and irregularly. The reading of an abstruse passage in Schopenhauer or Browning has led to an almost total suspension of the breath for a long period. An amusing remark by a spectator causes a laugh to be recorded, the bamboo pointer vibrating with great rapidity. Remarkable analogies are shown where high-school children are submitted to exactly the same test, and the results are compared with the standing of the subjects in school. Certain averages have been made, and Dr. MacDonald says the practical value of the statistics, as far as positive conclusions have been arrived at, is that any pupil 20 per cent. above or below the average should be reported to the family physician.

Measurements of Speech.—There are other implements whose findings are registered on the smoked paper of the *kymographion*—the *laryngograph*, which reproduces and records the movements of the larynx in speech, and correspondingly sensitive implements to chronicle the movements of the lips, the palate, and the tongue by resting against those organs while they are in use. The *laryngograph* is so formed as to fit snugly over the external protuberance of the larynx ("Adam's apple") and press closely against the throat. As the larynx of the speaker is agitated this small padded clasp moves up and down correspondingly, and its movement is pneumatically conveyed to the bamboo finger resting against the smoked paper on the *kymographion*. As the subject speaks the cylinder revolves and the bamboo pencil traces a zigzag white line on the smoked paper. The tracing is a series of curves and angles of various sizes, indicating that the larynx has made a characteristic movement with the utterance of each letter. The *laryngograph* is also found adapted to the measurement of song, illustrating the changes of pitch and the compass of the voice.

The *labiograph* is for noting and recording the movement of the lips during utterance. Here we pass from the mechanics of vocalization to the mechanics of articulation. The lips denote the character of speech more definitely than any other organ—more definitely than even the tongue, which has been credited with the chief function in conversation. The deaf learn to understand speech entirely by the motion of the lips, and the record of the *labiograph* should therefore become legible to them.

To ascertain sensitiveness to pain the temple *algometer* is used. This is a small rod fitting closely into a hollow handle having a buttonlike end covered with flannel, so as to give the sensation of least pain. This is pressed steadily against the temple till the subject winces, when it registers the pressure by a spring and a scale.

The palm *algometer* works on the same principle, but is pressed against the palm instead of the temple.

The *palatometer* measures the height of the palate, and the significance of its results lies in the fact that 60 per cent. of the feeble-minded children have a high palate. The use of this implement indicates that probably three fourths of the school children that have a high palate are dull.

The *dynamometer* registers the strength of the hand grasp.

The *craniometer* is for making measurements of the head. These are the most important measurements of the human body, because the cranium incloses the brain.

The *thermæsthesiometer* measures the least sensibility to heat. It consists of two thermometers fastened together. One is heated more than the other, so that the subject can tell which is the warmer. They are placed on the wrist and kept there until the subject says they feel the same. At this point the real difference between the two thermometers is registered.

The *æsthesiometer* is an instrument to measure the sense of the least distance on the skin of the subject. It consists of two movable points on a scale.

There is an elaborate machine called the *ergo-*

THE KYMOGRAPHION RECORD OF A CRIMINAL.

graph, invented by Prof. Mosso, of Italy, which is for the purpose of ascertaining the effect of fatigue on different organizations. It consists of a frame

in which the arm and all the hand but the middle finger are fastened securely. To the free finger is attached a 4-pound weight. The experimenter asks the subject to pull the weight up and down until he can no longer move the finger. The subject is induced to make renewed effort, and the result is a

THE TEMPLE ALGOMETER.

measurement of the recuperative power of the muscular system.

The Bertillon system of measurements is in use here, and there is a complete set of appliances to measure human beings; but years of experimentation are essential to the formation of important conclusions. Dr. MacDonald has examined people of every class and of many occupations, from the rich unemployed to the poor unemployed. He presents as the result certain facts and statistics as follow: Middle-aged women of the educated classes are much less acute in the sense of locality on the wrist,

but much more acute to the influence of heat, than young women of the wealthy classes. Young men of the wealthy classes are much more sensitive to locality and pain than workmen or men of the army of unemployed. Young women of the wealthy classes are much less sensitive to locality and heat, but much more sensitive to pain, than young men of the wealthy classes. As to pain, it is true in general that women are more sensitive than men, but it does not necessarily follow that women can not endure more pain than men. Colored boys are more sensitive to locality and heat than white boys. Colored girls are less sensitive to locality, but more sensitive to heat, than white girls. Colored boys are more sensitive to locality and heat than colored girls. The left wrist is more sensitive to locality, heat, and pain than the right wrist (there was only one exception). These results were obtained from an examination of several thousand people.

The lines on the preceding page are transcribed from the surface of the kymographon, as indicating the movement of the larynx and the lips respectively.

Q

QUEBEC, a province of the Dominion of Canada: area, 228,900 square miles; population in 1891, 1,488,535.

Government.—Owing to changes in the Dominion Government and the acceptance of a place in it by the Hon. L. O. Taillon, Premier of Quebec, Mr. E. J. Flynn, Commissioner of Crown Lands, was summoned by Lieut.-Gov. Chapleau on May 8, to form a new ministry, which he did as follows: Premier and Commissioner of Public Works, E. J. Flynn; Commissioner of Agriculture and Colonization, Louis Beaubien; Commissioner of Crown Lands, G. A. Nantel; Attorney-General, L. P. Pelletier; President of Council, T. C. Chapais; Provincial Secretary, M. F. Hackett; Provincial Treasurer, A. W. Atwater. This was a continuation of the previous Conservative ministry in policy, and mainly in its *personnel*. Meanwhile the Legislature had opened in Quebec, on April 10, with a speech from the throne, of which the significant passages are:

“My Government has endeavored as far as possible to direct dairy operations, and, in order to prevent overstocking of the cheese market, has specially favored butter making and awarded bounties for winter dairying. The quantity of butter manufactured in winter has more than doubled during the three years that these bounties have been granted.

“This question of equilibrium in production having been placed on a sound basis, my Government has striven to restore the reputation of butter from the province of Quebec in England, a reputation which has greatly suffered from shipments made under unsuitable circumstances. The results hitherto obtained have been most satisfactory; butter from the province is now classed in England among the best products of a similar nature of the whole world. The exports of this article, which fell off in 1894, have again increased. Last year they were double those of the previous year. The total production of our dairies, which did not amount to \$3,000,000 in 1890, exceeded \$7,000,000 in 1894.

“New regions are being opened to agricultural settlement. The fertile lands of the Metapedia, of Lake St. John, Temiscamingue, and the section

north of Montreal are being colonized by hardy settlers from the old parishes and some of the cities of Canada and the United States. This colonization movement, which my Government has fostered as much as possible, is chiefly explained by the success of agriculture throughout the province and by the attention and solicitude manifested for farming by the leading classes of our community.

“The state of our finances will enable my Government to propose to you the abolition of the manufacturing and trading licenses and the direct taxes on certain persons. But the financial situation can not be definitely settled until the railway enterprises now being carried out have been completed or abandoned, nor until the commission appointed to arbitrate upon the disputed accounts between the Government of Canada and the governments of Quebec and Ontario has completed its task.

“The laws adopted by the Legislature of this province twenty years ago for preserving purity in elections certainly produced excellent results in the first elections following their coming into force; but the ardor of party strife, the facility with which controverted elections are settled by compromise, certain amendments adopted by the Legislature, and perhaps also a less rigorous application of these laws by the courts, have already lessened their efficiency. You will therefore be called upon to consider amendments to the election act and to the controverted elections act.”

The most important legislation passed was embodied in the following acts:

Respecting taxes on commercial corporations and companies.

Respecting election of members of the Legislative Assembly.

Respecting the tenure of lands in the Magdalen Islands.

Respecting benevolent and mutual-benefit associations and mutual insurance companies.

Respecting colonization in certain parts of the province, and for promoting the mining industry therein.

To amend the game laws.

To amend the law respecting agriculture, with reference to the Good Roads Association.

To amend the act respecting the pensions of public officers.

To amend the law respecting agriculture and colonization, with reference to farmers' clubs.

To incorporate the town of St. Louis.

To incorporate the Canada Protective Benefit Association.

To amend the law concerning exemptions from taxation.

To amend the license law.

To amend the law respecting duties on successions.

To amend the act respecting vital statistics.

The House was prorogued on Dec. 21, with the following speech from the Lieutenant Governor:

"Your election legislation, based on the laws now in force in the United Kingdom, will assure more independence on the part of the electors in voting and give the courts more efficient means for the suppression of corrupt practices.

"Agricultural progress, which has attained such development through the encouragement you have given it, has again been the object of your consideration. I trust that it will continue to receive the attention of the Legislature and be the most prominent feature of the policy of my Government.

"I regret that the present resources of the province did not permit my Government to grant the applications for railway subsidies which were submitted to it. I hope, however, that it will find means to protect those undertakings which, if abandoned, would cause a serious loss to the province.

"Through its policy of economy my Government has been enabled to do away with certain taxes, and I have no doubt that if the same policy be prudently carried out other taxes will before long be removed.

"The financial situation of the province is improving in a marked manner, and I am convinced that, with renewed vigilance, my Government will succeed in maintaining the credit of the province."

Political.—Like all the other provinces, Quebec was stirred up during the year by the Manitoba school question. The great majority of the people, being Roman Catholics, were more interested than the others, though, as was shown in the Dominion elections, they did not believe the Conservatives would do more for their coreligionists in Manitoba than the Liberals. The hierarchy of the Church, however, did their utmost to arouse public opinion in favor of the remedial bill by which Sir Charles Tupper proposed to restore separate schools in the northern province, and Cardinal Taschereau headed a memorial signed by the Catholic bishops of Quebec and Canada, which demanded a redress of the grievances of the Manitoba minority, supported religious control of the schools, and by implication urged Parliament to pass the remedial legislation it was then considering. During the ensuing elections in 1896 the clergy strongly aided the Conservative party; but, to the surprise of the politicians, the people of Quebec supported by a large majority the present Premier of Canada, Mr. Laurier. Local politics were very quiet, and the only ripple on the surface was a financial dispute between Mr. Taillon and his Treasurer, Mr. Hall, which resulted in the resignation of the latter.

Finances.—Mr. Taillon delivered his budget speech on Nov. 20, 1895. The general statement for the year ending June 30 showed receipts amounting to \$11,459,818.44, and expenditures aggregating \$11,126,281.03. The ordinary receipts, including loans, etc., amounted to \$4,343,971; and the ordinary expenditure to \$4,506,633, leaving a deficit of \$162,661. The direct taxes in Quebec are rather heavy upon certain interests, because of the inability of the average inhabitant, the French Canadian peasant to stand taxation of any kind apart from the

taxes connected with the maintenance of his Church. During 1895 the tax on commercial corporations was \$22,000 more than in the previous year, and that on successions or property left by will was \$12,000 more. There was a decrease in the tax on law stamps and transfers of real estate. These four impositions on commerce and banking, and property held almost entirely by the English-speaking population, and including the taxes on manufacturing and trading licenses, amounted to \$817,000. For 1896-'97 Mr. Taillon estimated the revenue at \$4,107,699, and announced the nonlevy of the manufactures and business licenses, which had proved so unpopular. The estimated expenditure was \$4,235.15; but this calculation excluded the large and important item of railway subsidies, aggregating \$700,290. There was consequently an expected deficit of over \$800,000.

The attention of the House was then drawn to the fact that the Mercier administration had left in 1892 a consolidated debt of \$25,000,000, a floating debt of \$8,000,000, and a chronic deficit between ordinary revenue and expenditure of \$1,700,000. Hence the necessary imposition of some very unpopular taxes and a *régime* of rigid economy. The deficits, Mr. Taillon pointed out, in the three following years amounted only to \$414,000, all told, while the debt had been consolidated and put into a form involving the payment of lower interest, a gradual reduction of the total, and increased financial credit for the province.

Provincial Arbitration.—When the old province of Canada—including Ontario and Quebec—joined the maritime provinces in 1867 and formed themselves into the federated Dominion of Canada, some complicated questions arose out of the assumption of provincial liabilities by the new central authority. Arbitrators were appointed, and an award was made in 1870, against which Quebec protested, and which finally went to the imperial Privy Council. Under the terms of a partial settlement in 1878, Quebec got \$500,000, and another sum of \$125,000 in 1879. Then came an adjustment of the yearly subsidies paid by the Dominion to the province. Further complications arose, and interminable discussions and correspondence, until in 1890 fresh arbitrators of high judicial standing were appointed, and awards were made in 1893-'94 on various important points. Others still remain unsettled, notably that of the Dominion claims against the provinces on account of large annuities paid to certain Indian tribes which it was alleged that the provinces should have paid. Ontario refused to accept the final award, and appealed to the Supreme Court and thence to the imperial Privy Council. Other Indian claims in which Quebec is interested have still to be dealt with.

Agriculture.—The agricultural interests of Quebec are not advancing rapidly, although the successive governments of the province have done all that is possible, the main difficulty being a minute subdivision of the land among the people, which may be good for market gardening, but is unsuited to farming on any large scale. Farmers' clubs and agricultural societies and papers are doing good in the remedying of old-fashioned methods, while the encouragement given to dairying is producing good results. In 1891 there were 114 creameries and 568 cheeseries. In 1895 there were 302 creameries and 1,417 cheeseries. In 1890 the production of butter and cheese was about \$3,000,000, and in 1894 it amounted to \$7,500,000. During 1895 the production of butter was trebled. Farm schools for boys and girls have been established in some places; a commission was sent to Denmark to study butter making, with good results; and some money has been spent on road improvement, and a consider-

able amount on colonization and the removal of people from crowded districts to the more sparsely populated country.

Education.—The Roman Catholic schools of Quebec numbered 4,879 in 1895, and the Protestant schools 1,040. The former had an average attendance of 200,389 and a total of 257,052; the latter an average of 28,040 and a total attendance of 36,902. The expenditure by the Quebec Government upon elementary schools was \$170,000, and upon all others \$134,410, while the popular expenditure through municipalities, etc., was \$1,303,731—a total of \$1,608,141. There are 9 schools of arts and manufactures, and 6 of agriculture. The total number of teachers was 9,799; but, exclusive of universities, special schools, and religious orders, the number was 5,960, of whom 6,452 were Roman Catholic and 1,308 Protestant, and the total amount paid to these for salaries was \$848,283, the average salary being \$143. The teachers in religious orders

numbered 3,527. There was an increase of 238 in the number of educational institutions in the province during the year.

Postal Service.—The miles of annual travel on the post routes were 12,637. The number of transient newspapers and periodicals, books, circulars, samples, patterns, etc., was 4,300,000. The number of packets of printer's copy, photographs, deeds, and insurance policies was 425,000. The number of packets of fifth-class matter and ordinary merchandise open to examination was 170,000. The number of parcels sent by parcel post was 61,500.

Miscellaneous.—The registered seagoing tonnage of Quebec in 1895 was 1,103,771 coming inward, and 1,153,581 outward, or a total of 2,257,352—a decrease of 330,000 tons. The gross debt of the province was \$32,057,554, as compared with \$18,871,593 in 1885. The assets are to-day estimated at \$13,850,017, leaving a net indebtedness of some \$18,000,000.

R

REFORMED CHURCHES. I. Reformed Church in America.—The report to the General Synod on the state of religion showed that there had been a gain to this denomination of 11 churches, making the whole present number 629; 11 ministers, making a total of 652; and 1,771 families, making the whole number of families 57,705. The whole number of members in communion was 104,704, a gain of 1,356. The additions to the Church on confession for the year numbered 5,888. The total contributions were: For denominational purposes, \$228,357; for other objects, \$111,886; and for congregational purposes, \$1,005,503.

The whole number of Sunday schools was 886, and the total enrollment in them 118,070; number of catechumens, 34,688, or 29 per cent. of the total enrollment. The schools had given during the year \$10,457 to foreign missions and \$5,204 to domestic missions. Of the 510 Christian Endeavor societies, 348 had contributed \$5,237 to foreign missions and \$2,926 to domestic missions, while the Board of Education had received \$4,232 from this source.

On account of a shrinkage in the receipts, the invested funds of the Disabled Ministers' fund had increased only \$500, making the total of invested funds \$62,973.

The resources of the Widows' fund for the year had been \$11,787, out of which \$8,340 had been paid to annuitants. The principal at interest amounted to more than \$88,000.

The contributions of the churches to the work of the Board of Education had been not quite \$7,000, a sum which would have been totally inadequate had it not been for the invested funds. Of these funds the Board of Education held in trust \$73,165, and the General Synod \$149,607, making a total of \$222,772, the interest of which was available.

The Board of Publication reported that all its expenses had been met by the profits of the business conducted, and that the gifts of the churches, aggregating \$1,600 had enabled it to answer favorably every properly indorsed application for its donations, amounting through the year to 47,000 copies of 23 new publications and several reprints.

The receipts of the Board of Domestic Missions had been \$71,917. The appropriations from the Missionary fund had all been met, and \$400 had been restored to the balance in the Contingent

fund, making the board's present debt to that fund \$7,343. The board returned 214 churches and missions, 153 missionary pastors, 8,587 families, 18,153 members, 964 added on confession during the year, and 17,304 members of Sunday schools. Nine churches had been organized during the year, 10 church buildings erected, 2 completed, 7 homes for missionaries purchased or built, and appropriations made for 2 more parsonages. The mission among the American Indians of the Woman's Executive Committee was prospering.

The Board of Foreign Missions had received \$154,139 during the year, of which \$37,738 were for the debt and \$6,983 for the Arabian mission. The entire debt had been paid, with the exception of \$8,000. Special recognition was given in the report of the work of the Woman's Board. Had it not been for the prompt interposition of the women, the retrenchment ordered by the Foreign Board in its appropriations for 1896 would have caused the extinction of the 16 Hindu girls' schools, where 1,600 pupils were taught. The special committee appointed by the previous General Synod to effect the payment of the debt of the board (\$46,097 in May, 1895) reported that its net receipts had been \$37,644, leaving a balance of debt of \$8,453.

Seventy-five missionaries were employed, 63 of whom were in the field—19 in the Amoy mission, China; 23 in the Arcot mission, India; 19 in the north Japan mission; 11 in the south Japan mission; and 4 in the Arabian mission. The statistics further mention, in all the missions, 23 stations, 236 out stations, 27 ordained missionaries, 3 unordained, 45 assistant missionaries, 33 native ordained ministers, 331 native helpers, 47 churches, 6,040 communicants, 404 received on confession, 8 seminaries for boys and young men, with 423 pupils; 11 seminaries for girls and young women, with 482 pupils; 4 theological schools, with 65 students; 155 Sunday schools, with 5,627 pupils; 142 day schools, with 5,155 pupils; 3 hospitals, at which 725 patients were treated; and native contributions of \$9,911. The figures show a general gain of 50 per cent. since 1886, or in ten years.

The thirteenth annual meeting of the Woman's Executive Committee of Domestic Missions was held in New York, May 12. The Rev. Alfred H. Brush presided. The treasurer reported that the receipts for the year had been \$17,486, of which \$2,221 were for the mission to the Indians.

The twenty-first annual meeting of the Woman's Board of Foreign Missions was held in New York, May 12. Mrs. P. D. Van Cleef presided. The total receipts for the year had been \$28,198. A special emergency appeal for contributions to avoid closing the year in debt had brought \$1,527 into the treasury. Reports were made of 4 stations and 37 preaching places in the Amoy mission, China, with 1,206 communicants, who had contributed \$4,628. Ferris Seminary, Japan, returned 82 pupils. A Gospel Extension Society had been organized in India.

The General Synod met at Catskill, N. Y., June 3. The Rev. John B. Thompson, D. D., was chosen president. A report concerning the "Amsterdam Correspondence" related that the Assembly had had in its possession for more than fifty years about 1,200 valuable letters and documents pertaining to the early history of the Church, which had been obtained by the Hon. J. Romeyn Brodhead in 1841-'43. Most of them had been translated, and about 100 of them had been printed in volumes or periodicals. They constitute an invaluable mine of material for the early general ecclesiastical history of New York and New Jersey as well as of all the older local Reformed Churches. The Reformed Church occupied this territory for half a century alone, and these documents cover that period as well as the subsequent periods down to the Revolution. Several hundred additional documents have come to light in recent years. To the application of the Synod for these documents in 1888 the Classis of Amsterdam had replied that it could not part with them, but would furnish every facility for their transcription. A reasonable prospect having arisen that the papers, if the additional material in Holland is secured, might be published in the volumes of the Archives of the State of New Jersey, the committee suggested, and the General Synod decided that arrangements be made for securing the transcription of the documents in question. Most of the business of the Synod was of a routine character and concerned the condition of the benevolent funds and enterprises. To an overture for the suspension of the reading of the "Van Benschoten bequest," a formal proceeding which under the condition of the gift has to be observed at stated periods, the Synod, after hearing the committee's report reviewing the history of the bequest, unanimously resolved that its ecclesiastical bodies adhere to the rule that has been continuously observed for the last eighty-three years. The plan of denominational co-operation in home missions proposed by the Alliance of Reformed Churches was approved. A committee was appointed to consider an invitation from Orangeburg, S. C., to open work among the colored people in the South, and was authorized, if it should so decide, to begin work in such a way and after such a plan as in their judgment shall seem best. In its resolutions on Sabbath observance, the Synod reaffirmed its loyalty to the Decalogue and recognized each one of the Ten Commandments as an essential part of the moral law which is binding upon the heart and conscience of man; urged a careful and prayerful discrimination "between harmless and necessary recreation (*re-creation*) and careless, worldly Sunday amusements"; disapproved the purchase and patronage of Sunday newspapers; and declared the Sabbath question "one of greatest importance connected with public morals in these closing years of the nineteenth century." The Board of Education was authorized to include students of medicine approved by the Board of Foreign Missions as intending to become medical missionaries, as entitled to the benefit of the educational funds. A rule was passed to regulate the licensure by classes of

graduates of theological seminaries other than those of this Church. Gospel temperance was recommended to the Sunday schools as a proper subject for a quarterly lesson. A resolution was passed in favor of the settlement by arbitration of all disputes with Great Britain. The classes were invited to nominate suitable persons from whom the Synod could choose a professor in the Arcot Theological Seminary, India.

II. Reformed Church in the United States.—The statistical reports of this Church, made to the General Synod in May, give the following numbers: Of classes, 56; of ministers, 961; of congregations, 1,639; of members, 226,572; of infant baptisms, 45,075; of adult baptisms, 5,480; of confirmations, 33,646; of persons taking the communion, 182,435; of Sunday schools, 1,644, with 20,096 officers and teachers and 172,458 pupils; of students for the ministry, 304; amount of benevolent contributions, \$676,271; of contributions for congregational purposes, \$3,067,780. These figures show an increase in three years of 76 ministers, 56 congregations, 13,742 members, 6,777 officers and teachers in Sunday schools, 23,435 pupils in Sunday schools, \$26,435 in benevolent contributions, and \$45,608 in contributions for congregational purposes.

The report of the Sunday-school Board showed the net gain per year to the Sunday schools for the past three years had been 4,480 pupils. It dwelt especially upon the co-operation of the board with the Board of Missions in missionary work by means of its Sunday-school missionary; upon its efforts to increase the attendance at Sunday schools; upon the development of the home department; and upon the need of improvement in the Sunday-school helps.

The Board of Home Missions of the General Synod reported that 101 missions were sustained by it and 34 by the boards of the German synods. The value of lots, mortgages, and titles held by the General Board amounted to \$39,564, which, less \$11,550 indebtedness, gives the amount of net assets as \$28,014. Seventeen missions of the General Board and 6 missions of the German boards had become self-sustaining during the past three years, and 31 new missions had been enrolled by the General Board and 10 by the German boards. The missions returned in the aggregate 199 congregations with 13,762 communicants; 156 Sunday schools, with 17,889 teachers, officers, and pupils; and \$13,767 raised for benevolence (in three years) and \$144,323 for congregational use. The whole amount contributed by the Church during the past three years for home missions and church building had been \$154,671. The home-mission work of the German part of the Church was confined largely to large cities. Their church-erection work was in a peculiarly flourishing condition. The harbor mission (in the city of New York) had continued to be of efficient service to immigrants landing upon our shores, and had also been of assistance to the Reformed Church in America and the Presbyterian Church in caring for immigrants affiliated with them. Four additional Hungarian missions had been constituted, making the whole number of such missions in the United States now 6. It had been necessary to call from Austria-Hungary 4 young men who would be able to minister to these people in their own language. The work of Church extension was greatly facilitated by the existence of about 50 church-building funds of \$500 each in the possession of this and the affiliated bi-synodic boards.

The Board of Foreign Missions of the General Synod reported itself free from debt except \$5,000 on permanent loan. Its estimates for the ensuing three years called for the appropriation of \$35,000 a year. The statistical report of the missions (in

Japan) for 1893-'94, the last received, gave the following footings: Number of organized churches, 12; of self-supporting and independent churches, 5; of preaching stations, 41; of members, 1,960; of baptisms during the year, 235; of Sunday schools, 27, with 1,063 pupils; of native ministers, 9; of unordained preachers, 18; of colporteurs, 2; of Bible women, 5; amount of contributions, \$2,528. One girls' school returned 58 pupils; 1 boys' school, 134; and 1 theological school, 26. Applications had been received for appointment to China, but the establishment of a mission there has not yet been determined upon.

The General Synod met in its twelfth triennial session at Dayton, Ohio, May 27. The Rev. Dr. J. A. Peters was chosen moderator. In the discussion of the report of the Board of Home Missions stress was laid upon the importance of that work in the West and South; the board was authorized to do all in its power to extend the missionary work in those fields, and graduates from the institutions of the Church were urged to consider the claims of the South and West. The board was instructed to invite the co-operation of the Reformed Church in America and the Presbyterian Churches in support of the harbor mission in New York. It was also authorized to raise a permanent fund of \$100,000 for Church extension apart from and in addition to the regular apportionment for Church building. It was also requested to co-operate with the German boards in carrying on work among the Germans in the larger cities. The Board of Foreign Missions was authorized, if it judged it expedient to do so, to open a mission in China or such other field as may seem to be most needy and promising. The Committee on Correspondence with the Reformed Church in Germany was continued, and small annual appropriations were made for the support of the work in that country and in Switzerland. On canvassing the votes of the classes upon the proposed new constitution, doubts were raised, upon technical grounds, as to whether it had been approved by the requisite two thirds of the number. It was decided, therefore, to resubmit the statute. Sesquicentennial services were ordered held throughout the Church in 1897 in commemoration of the early labors of Michael Schlatter and of the formation of the *coetus* of the Church in Philadelphia.

III. Reformed Church in France.—The General Synod of the *Église Réformée*, or Reformed Church of France, met at Sedan in June. Its principal act was the approval of a scheme for a fraternal conference to be held periodically between the delegates of the evangelical party and those of the liberal party who withdrew in 1872 on the question of the Confession of Faith. The Synod expressed the view that "a common assembly of this kind would be of advantage for Protestants of all varieties of opinion, both for the safeguarding of common interests, for defense against the attacks of which they are the object, and for resisting the efforts being made to corrupt the Reformation spirit." The functions of the new assembly were further defined in a declaration of the "Conciliation Commission," or committee to which the subject was specially referred, which said:

"It has become for us all, in the present troubled times, a heartfelt necessity to manifest our Protestant fraternity, despite religious and ecclesiastical differences. It is important, therefore, instead of rendering these differences irremediable, to soften them and, if possible, secure their disappearance, by the avoidance of everything tending to provoke or to separate. What is wanted is, in fact, a sense of patriotic duty, felt in common by all the children of the Reformation, in opposing the attacks of which

Protestantism is the object, and, above all, in the fight against unbelief and immorality. The Fraternal Conference will then, while avoiding divisive questions, seek to manifest the unity of the Reformed family in constituting, by a series of periodical meetings, a kind of family council, a committee of rights and interests common to Protestants."

REFORMED CHURCHES, ALLIANCE OF.
The sixth triennial Council of the Alliance of Reformed Churches throughout the world holding the Presbyterian system was opened in Glasgow, Scotland, June 17. The five previous meetings of this body were held in Edinburgh, Philadelphia, Belfast, London, and Toronto. The meeting began with a service in the cathedral, at which the sermon was preached by the Rev. J. Marshall Lang, D. D. The Rev. William H. Roberts, D. D., stated clerk of the General Assembly of the Presbyterian Church in the United States of America, presiding at the regular sessions, delivered the opening address, on the subject of "Protestantism as a Distinctive Religious and Political Force." A summary of the statistics of the Churches associated with the Alliance, presented by the General Secretary, the Rev. Dr. Matthews, showed that the council represented 89 denominational organizations, 31,925 congregations, 27,043 ministers, and 4,795,216 communicants, the last being distributed as follows: On the European Continent, 856,872; in Great Britain, 1,488,339; in Asia, 21,655; in Africa, 178,296; in North America, 2,170,517; in South America, 3,425; in the West Indies, 11,781; in Australia, 42,127; in New Zealand, 22,204. Special remark was made of the fact that 5 presbyteries in Palestine were represented. A protest was entered in behalf of the Reformed Presbyterian Churches against the use of instrumental music and hymns of human composition in the religious services, and in courtesy to the protestants the musical exercises were limited to the singing of the Psalms. Papers were read on "The Church of God" ("The Reformed View," by David O. Waters, D. D., of New Jersey; "The Roman Catholic View," by Prof. Henri Bois, of Montauban; and "The Anglican Church View," by the Rev. Oswald Dykes, D. D.); "The Church as a Witness to Revealed Truth," by the Rev. Prof. Orr, of Edinburgh; "The Mission of the Church as a Teacher of Holy Living," by the Rev. W. H. Black; "The Church as a Promoter of Social and Public Worship," by the Rev. Prof. Hemphill; "Catechisms and Confessions," by Prof. Lucien Gautier, Prof. Salmond, Dr. W. W. Harsha, Prof. Wood, and the Rev. John Hall, D. D.; "The Educative Influence of the Church," by Dr. A. R. MacEwen and the Rev. J. M. Robertson; "Social Life," by Dr. James Stalker; "Our Church Services" ("The Reading of the Scriptures," by Dr. David Steele; "Prayer," by Prof. Dick, of Belfast; "Preaching," by Principal Stewart, of St. Andrews; "Praise," by the Rev. T. J. Whelton; "Sacraments," by Prof. Blaikie; and "Christian Giving," by Gen. Prime); "Presbyterianism," by Lord Overton, J. A. Campbell, M. P., Judge Vanderburgh, of St. Paul, Minn., and President Scovell, of Wooster University, Ohio; "Foreign Missions," concerning which reports were submitted from the Eastern section and from the Western section; "Modern Apologetical Criticism" ("Relations between Philosophy and Religion," by Prof. MacVicar, of Montreal; "Methods of Biblical Criticism," by Dr. Kidd, of Glasgow; "The Right Attitude of the Church toward Biblical Criticism," by Prof. A. C. Zenos, of Chicago; and "The Apologetic Bearing of Evolution on Revealed Truth," by Dr. Todd Martin, of Belfast). Other papers related to "Great Cities and how to deal with them," by Donald McLeod, D. D., for Scotland; William James, for England; J. H. Prugh, D. D., for the United States;

and the Rev. C. H. Irwin, for the British colonies. Reports on Church work in Europe included the treatment of the special topics "Protestantism in Italy," by the Rev. Prof. Em. Comba; "The Stundists in Russia," by Herr Consistorialrath Dalton, of Berlin; "The Greek Evangelical Church," by Dr. M. D. Kalopothakes; "Evangelistic Work in Belgium," by M. le Baron Prisse; "France and Protestantism," by the Rev. H. Hallard; "The Gospel in Germany To-day," by the Rev. C. Correvon; "The Reformed Church in Germany," by Court-Precacher Brandes; "The New Austrian Marriage Laws," by the Rev. Vincenz Dusek; and "The Gospel in Eastern Europe," by the Rev. Ferdinand Cizar. In the discussion of the work of the churches in America, Dr. William Cochran spoke of their work of home evangelization, Dr. W. H. Hubbard of the work among the freedmen, and Dr. R. M. Russell of their foreign missionary enterprises. The last speaker showed that there were 57 missionary societies in the United States and Canada, employing 17,306 workers in the foreign fields. Concerning the colonial aspects of Church work, papers relating to the churches in Australia, New Zealand, South Africa, Canada, and the West Indies were presented. The Rev. Dr. J. Marshall Lang, of Glasgow, was chosen president for the next council, which is to be held in Washington, D. C., in 1899. Resolutions were adopted concerning the barbarities in Armenia, and in favor of international arbitration. It was shown in the discussion on foreign missions that the Presbyterian churches are doing more than one fourth of the whole Protestant mission work among the heathen.

RHODE ISLAND, a New England State, one of the original thirteen, ratified the Constitution May 29, 1790; area, 1,250 square miles. The population, according to each decennial census, was 68,825 in 1790; 69,122 in 1800; 76,931 in 1810; 83,015 in 1820; 97,199 in 1830; 108,830 in 1840; 147,545 in 1850; 174,620 in 1860; 217,353 in 1870; 276,531 in 1880; and 345,506 in 1890. By the State census of 1895 it was 384,758. Capitals, Providence and Newport.

Government.—The State officers in 1896 were: Governor, Charles W. Lippitt; Lieutenant Governor, Edwin R. Allen; Secretary of State, Charles P. Bennett; Treasurer, Samuel Clark; Attorney-General, Edward C. Dubois; Adjutant General, Frederick M. Sackett; Auditor, A. C. Landers; Superintendent of Education, T. B. Stockwell; Commissioner of Roads, Charles F. Chase; Railroad Commissioner, E. G. Freeman; Chief Justice of the Supreme Court, Charles Matteson; Associate Justices, John H. Stiness, Pardon E. Tillinghast, George A. Wilbur, Horatio Rogers, W. W. Douglas—all Republicans.

Finances.—A deficiency of \$90,761.75 was left from 1895. The receipts for the first eight months of 1896 were \$1,162,086.43, and the expenditures during the same time were \$868,257.30. Other details concerning the finances may be found under the head "The Legislature" in this article.

Valuations.—The valuation this year was \$359,549,451, and the tax was 18 cents on the \$100. The valuation of real estate in Providence was \$133,438,060 and of personal property \$40,936,300.

Banks.—The national banks in Providence, at the close of business July 14, made reports showing that the individual deposits amounted to \$14,935,370.74, an increase of \$1,117,912.62 compared with the statements dated May 7, when the last previous call was issued. The loans and discounts were \$28,381,348.44, an increase of \$584,031.36; surplus and profits, \$4,683,580.54, a decrease of \$26,280.83 (mainly due to July dividend disbursements); due from reserve agents, \$2,710,940.03, an

increase of \$315,024.68; money reserve, \$1,288,202.28, a decrease of \$47,907.69.

The voluntary liquidation step of the Traders' Bank since the last call reduced the number of active banks to 24.

Education.—The Legislature made the following appropriations for education: For public schools, \$120,000; support of State Normal School, \$200,000, and for traveling expenses of normal pupils, \$1,500; teachers' institutes, \$500; lectures and addresses to be given under direction of the Board of Education, \$300; evening schools, \$5,000; the School of Design, \$3,000; for purchase of school apparatus, \$3,000; for the education of blind and of imbecile children, \$10,000; for free public libraries, \$6,000; for the State and law libraries, \$2,250; for the support and maintenance of the College of Agriculture and Mechanic Arts, \$10,000; for the support and maintenance of the Institute for the Deaf, \$15,000, in addition to the moneys received by them which shall have been paid into the treasury; for the Rhode Island Historical Society, \$1,500; for the Newport Historical Society, \$500.

The College of Agriculture and Mechanic Arts, at Kingston, graduated a class of 6 in June.

At the one hundred and twenty-eighth commencement of Brown University, in June, about 110 were graduated.

In February, 1895, a committee of women was organized for the purpose of raising funds to erect and furnish a building for the Woman's College in connection with Brown University. It was desired to raise \$75,000, and during the first year \$22,000 was secured. In one of his reports the dean says: "So far, the Woman's College has maintained itself without endowment. It is no longer an experiment. It affords the best solution to the problem of admitting women to Brown, including all the advantages of co-ordinate education and coeducation with few of the disadvantages of either." The first steps toward the formation of a woman's college in connection with Brown University were taken in September, 1891, when the university opened all its examinations to women. Since the vote of the corporation, in June, 1892, opening all its degrees to women, the growth has been very rapid.

Charities and Correctional Institutions.—The Legislature made an appropriation to the board of \$225,000, in addition to the moneys provided by law. Other appropriations for these purposes were: For the Society for the Prevention of Cruelty to Children, \$2,500; for the Prisoners' Aid Association, \$500; for the Society for the Prevention of Cruelty to Animals, \$1,000; for the relief of Union soldiers, sailors, and marines, etc., \$12,000; for the support and maintenance of the soldiers' home and the inmates thereof, \$20,000; for necessary expenses of secretary of the State Board of Soldiers' Relief, \$1,200; for jailers' fees and for board of persons confined in jail, except in Providence County, \$2,500; for State Home and School, \$20,000, in addition to such sums as may be received from the sale of products from its farm; for the support of the indigent insane, \$8,000.

At the Rhode Island Hospital there was an average of 146 patients. The whole number admitted was 2,283. Of these 1,676 were treated gratuitously. For the year the expenditures were \$74,390.57, and the receipts \$70,092.10, leaving the deficiency \$4,298.47.

On the State Farm, at Howard, about 300 are provided for. In the State institutions at Cranston the number of inmates March 30 was: House of Corrections, 236; Asylum for the Insane, 632; State Almshouse, 329; State Prison, 141; Providence County jail, 253; Soekanosset School for Boys, 262; Oaklawn School for Girls, 30. April 14 the total

number of inmates at the different institutions was: Men, 999; women, 541; boys, 272; girls, 51; total, 1,883.

Twenty-five of the cities and towns maintain farms or asylums for their poor. Others board them in families. The sums expended or appropriated for dependent persons by the cities and towns amounted during the year to about \$118,797.

Militia.—The Legislature appropriated for militia and military affairs \$37,500; for armory rents of the militia, \$6,000; and for heating and lighting armories, \$2,450.

A special order was issued in January as follows:

"It is the intention of the department during the coming season to afford to a limited number of the commissioned officers of the naval militia the privilege of taking the prescribed course at either the Naval War College or the torpedo station, both at Newport, R. I. The Naval War College course is from June 1 to Oct. 1, and consists of lectures and practical exercises in the art of naval warfare, together with the study and preparation of war maps and plans of different sections of the coast. The torpedo course is for fourteen working days, and consists in practical construction in the manipulation of automobile torpedoes. Only six officers can go through this course at a time, and it is the intention of the Navy Department to allow one, or at most two, naval militia officers to take this course at any one time. Officers of the naval militia will have to bear all their own expenses."

The naval militia in the State consists of two torpedo companies, at Bristol and Newport, and an artillery company recently formed in Providence.

The State House.—The report of the commissioners in April showed that \$77,545 had been expended for the new building, including the amount paid on the site. By the end of the year the amount had reached \$676,691. According to present estimates the whole cost will be from \$3,000,000 to \$3,500,000. The corner stone was laid Oct. 15, and military, civic, and Masonic organizations took part in a parade; ex-Gov. Ladd, president of the Board of Commissioners, and Gov. Lippitt, made addresses; Hon. Rowland Hazard delivered the oration, and Rev. W. C. Selleck pronounced a eulogy on Masonry. The stone was laid by the grand master of Masons of the State.

Rivers and Harbors.—Among the appropriations by Congress for work in Rhode Island were: For further improvement of Block Island harbor, \$5,000; for continuing improvement at Newport harbor, \$15,000; for the improvement of the harbor at Great Salt pond, Block Island, \$40,000; for improving the harbor at Wickford, \$6,300; for continuing the improvement of Providence river and Narragansett Bay, \$25,000, and in addition to this appropriation the Secretary of War is authorized to place the projected improvement under contract at a total cost of \$707,000, to be provided for in future appropriation bills; for continuing improvement at Green Jacket Shoal, \$7,500; for widening and deepening the passage at the draw of the Stone Bridge over the Seaconnet river, \$20,000; for continuing the improvement of Pawcatuck river, \$20,500.

A preliminary examination for a channel through Conanicut island, a survey of Seaconnet Point, a survey for an easterly breakwater to the shore at Point Judith Harbor of Refuge, and one for an inner harbor at Point Judith pond have been ordered.

The Narragansetts.—These Indians petitioned the Legislature in April to remove the commission appointed a few years ago to consider their claims to certain shore lands in the State, and for the appointment of a new commission, which should take their claim into consideration. Their spokesman

referred to the covenant of 1790, whereby the State became guardian of the Indians, but that covenant, he said, had been violated.

Senator Freeman called attention to the act of the Legislature in 1880, whereby the State purchased all the public lands of the tribe for \$5,000 and the money was paid to the representatives of the tribe, each member receiving an equal amount. It was argued by some of the Indians present that the shore claim was not reckoned, and that the State had taken more land than was really sold to it under the deed conveyed, and that the deed had been interlined.

It was thought best to continue the commission. In May it was announced that the tribe had engaged an attorney to conduct a suit for \$4,000,000 damages for land taken by the State.

The Legislature.—The January session began on the 21st, a week earlier than usual, the adjournment of the May session of 1895 having been taken to the third Tuesday instead of the last. This enabled the Legislature to adopt the revised laws in time for them to go into effect Feb. 1. The report was received and the general statutes passed the first day.

The May session was held from the 26th to the 28th, and then adjourned to the last Tuesday of September, in Providence.

The Governor's message dealt chiefly with the condition of the treasury. He recommended issuing bonds to raise money for expenses. The matter was referred to a joint special committee, which reported Jan. 29. The report calls attention to the fact that the revenue of the State has been anticipated by the unusually large appropriations of the past three years, and says: "These appropriations embrace a new normal-school building, armories at Pawtucket, Bristol, Newport, Westerly, and Providence, a jail for Providence County, a bridge across the Seekonk river, the breachway at Block Island, a new dormitory at the State Agricultural College, courthouses at Woonsocket and at Kingston, the taking of the census of the State, and a score of others, which must be classed as extraordinary expenditures, and yet which are undoubtedly needed. The Constitution prohibits the General Assembly from creating a debt in excess of \$50,000 without the consent of the people."

A bill was passed giving the Treasurer authority to make and sell for cash tax assignment orders, payable to order or bearer, which should be negotiable, of the whole or any part of the semiannual installment of the State tax then next to become due and payable from any town or city, the proceeds of such sales to be deposited with the general funds of the State, and available in payment of any appropriation lawfully made. They were to become due at the date named in them by the town or city at the office of the General Treasurer in Providence; and in case of failure to pay by the town or city at the specified date, to bear interest from that time until payment should be made.

At the opening of the September session, the Governor sent in a message giving additional information on the finances, showing that the income already received in 1896 and that which would be due before the end of the year amounted to but \$1,410,179.32, while the expenditures already made, the estimated expenditures for the remaining four months, and the deficiency from 1895 amounted to \$1,497,565.82, leaving expenses amounting to \$87,386.50 unprovided for. On the subject of appropriations not included in these estimates, the message said:

"The appropriation for the use of the State Board of Agriculture will not be sufficient to pay the bills of the present month, as an unusual number of dis-

eased animals have been killed. The very important work of this department in endeavoring to eliminate disease arising from tuberculosis in cattle will have to be discontinued if an additional appropriation is not provided.

"The appropriation for the militia, made at the January session, has already been exhausted. A large number of unpaid bills are outstanding and a portion of the troops are still unpaid for duty rendered at the State camp.

"The State Auditor reports that further appropriations will be required for the use of the courts and for various purposes connected with printing, the courthouses, Board of Health, etc.

"The United States contributes annually over \$40,000 toward the maintenance of the College of Agriculture and Mechanic Arts and the education of its undergraduates. It has also furnished arms for the use of the students and an officer of the regular army as an instructor. No shelter has been provided for these arms. Two members of the Board of Managers have been obliged to give bonds for them to the extent of \$8,600. The omission on the part of the State seemingly to appreciate the money and facilities placed at the disposal of the college by the United States Government, if it should be continued, may lead to the recommendation on the part of the resident military instructor for discontinuance of the military department.

"The appropriation made at the May session for the State Normal School will be exhausted before the end of the year. Work upon this building should be pushed as rapidly as possible to enable the State at the earliest day to secure a proper return from the large sums that have been expended. Up to the first of September, 1896, \$162,628 had been spent upon this building, leaving of its estimated cost \$184,033."

Further, the Governor said, about \$160,000 would be needed to pay for 7 sample half miles of road which had been applied for, to be done early in 1897, and rebuilding 16 miles of main highway, as the appropriation would be only sufficient to pay for 11 half miles that had been completed. Moreover, to continue the work upon the State Normal School during the coming year will require a further appropriation of \$144,000.

The message continued:

"By vote of the General Assembly at its May session the General Treasurer was authorized to hire for a time not exceeding one year the sum of \$50,000, which is the limit of indebtedness in time of peace that the General Assembly can authorize in behalf of the State without the consent of the people. This sum will not be sufficient to meet the emergency that will arise during the next three months. I renew the recommendation made in the message presented at the May session to submit to the people the right to issue Normal-school bonds, to an amount not exceeding \$500,000, containing the right to repay into the general treasury of the State the money that may have been already advanced for this enterprise at the time the proceeds of the bonds are received, and also any surplus that may remain after the Normal School is completed."

The loan proposition was submitted at the November election and was carried by a vote of 23,523 to 15,594. It authorized the General Assembly to provide for borrowing from time to time such sums of money as may be necessary to pay the authorized expenditures of the State, not to exceed the amount of \$250,000.

A new insolvency law went into effect with the revised statutes Feb. 1. Under the old law a debtor might make an assignment to any one he chose, and the creditors had no security against dishonesty, except to file a bill in equity in the Supreme Court,

asking for a complete accounting before the court. By the new law the debtor may still assign in the old way, if his creditors consent; otherwise the assignment is under the jurisdiction of the Supreme Court. During the five years previous to Feb. 1, 1896, there was an average of 100 cases a year in which inventories and schedules were filed by assignees in the Supreme Court; but during the first ten months in which the new law was in effect, a period of extreme financial depression, but 18 petitions in insolvency were filed.

Among the acts passed were several relating to the city of Providence, including acts authorizing the city to hire \$100,000 for the purpose of improving Davis Park; authorizing the City Council to appropriate annually money to provide for firemen and policemen disabled in the discharge of their duties; making the board of canvassers and registration a returning board; authorizing the city to borrow \$300,000 for providing school lands and buildings, and to expend \$1,000 for a pedestal for the statue of Admiral Hopkins; an act in regard to the inspector of buildings; and to enlarge, straighten, and otherwise alter streets.

At the May session the date of the municipal election in Providence was changed to the first Tuesday in November.

Other acts were:

Amending the law in regard to the close time for lobster fishing.

Imposing \$20 fine or three months' imprisonment for throwing anything on highways or bridges injurious to the feet of persons or animals or to the tires of bicycles or other vehicles.

Regulating the sale of goods marked "sterling" or "sterling silver" or "coin" or "coin silver."

Providing that a married woman may make any contract the same as if she were unmarried, with the same rights and liabilities.

Providing that habitual criminals—those convicted a third time—shall be punished by twenty-five years' imprisonment in addition to the sentence imposed for the last offense; but the Governor, with the consent of the Senate, may give any such convict a permit to be at liberty, which permit may be revoked at any time at the discretion of the Governor; and in case it is revoked, the time the convict has been at liberty shall not be deducted from the sentence.

Imposing a fine for using any other explosive than gunpowder in firecrackers.

Enacting that the State shall pay half of the appraised value of any animal killed on account of tuberculosis, and full value if it be found that the animal was not so affected; but the animal must have been owned by some one in the State, and found in the State three months previous to the time it was killed; also providing for tests for animals to be shipped through the State.

Enacting that bicycles be regarded as baggage, and be included in the 80 pounds that the railroads are required to carry free for each passenger.

Providing penalties for adulteration of candies.

To establish a board of commissioners for promotion of uniformity of legislation in the United States, to confer with boards of other States in order to draft laws to be submitted for approval and adoption to the several States on the subjects of marriage and divorce, insolvency, the form of notarial certificates, the descent and distribution of property, the acknowledgment of deeds, the execution and probate of wills, and other subjects.

Imposing a fine of \$5 for taking or killing any hare, rabbit, or gray squirrel between Jan. 1 and Oct. 1.

Amending the laws on insurance.

Making it obligatory on parents and guardians of

deaf-mute children, not otherwise incapable, to send such children to the Institute for the Deaf, unless they are otherwise provided with suitable education and allowing legal residents between the ages of three-and-twenty to go to the institute without charge.

Making prize fighting punishable by a fine not exceeding \$1,000 and imprisonment not exceeding ten years.

Among the appropriations were: For State printing, \$30,000; State binding, \$6,000; advertising and publishing laws, \$10,000; rewards or bounties for the destruction of wild foxes, \$1,000; for care of soldiers' and sailors' monument in Providence, \$50; for payment of medical examiners and coroners, \$5,000; for expenses of enforcing laws of the State relating to fisheries, \$1,200; for the Board of Health, \$3,500; for care of Statehouses, \$2,200; for care of Providence courthouse, \$5,720.

Political.—The election for State officers took place April 1. The State convention of the Prohibition party was held in Providence, March 2. Henry B. Metcalf was chairman. The platform adopted was in favor of economy in State expenditures; suffrage without distinction of race, color, or sex, and with distinctions of age and intelligence only; Sunday observance; public schools; municipal ownership of water, light, and transportation plants; and of the no-license movement. It condemned the license tax, mulct, dispensary, and permit systems of dealing with the liquor traffic, and declared that the Prohibition party offers the only reasonable and comprehensive plan for the suppression of the traffic; favored placing all legitimate manufacture and sale under the direct control of the State or National Government. A resolution favoring the initiative and referendum and proportional representation was also adopted.

Ten delegates to the national convention at Pittsburg were chosen and were pledged to the "dominant issue." The ticket follows: For Governor, Thomas H. Peabody; Lieutenant Governor, John J. Babcock; Secretary of State, George F. Varney; Attorney-General, James A. Williams; Treasurer, Pierce Tuckerman.

The Republican State Convention met, March 10, in Providence. Elisha Dyer was chairman. The resolutions declared in favor of protection and "a financial policy that recognizes every dollar to be of equal value"; for recognition of services of survivors of the civil war; and for restriction of immigration. It also approved "the recent acts of a Republican Congress to increase the strength and efficiency of the naval and military forces of the country; opposed appropriations for sectarian schools; favored generous appropriations for needed public improvements, for educational and charitable institutions, and for the militia; and called for revision of the Constitution, recommending "that the General Assembly, upon reassembling, appoint a bipartisan commission to revise the Constitution, such revision to be reported to the General Assembly that the same may be submitted as an amendment to the electors in the manner provided in the Constitution," and denounced the Democratic policy "which, for partisan purposes, demands a constitutional convention in open defiance of the provisions of the Constitution and in utter disregard of the solemn opinion of the justices of our Supreme Court that the Constitution can be lawfully amended or changed only in the mode itself prescribes."

The State officers were all renominated.

The Democratic State Central Committee decided to hold a separate convention for choosing delegates to the national convention, and this was ratified by the convention called to meet in Providence, March 11, to nominate State officers. The resolutions de-

clared the State to be on the verge of bankruptcy in consequence of Republican management, and called for revision of the tax laws. In reference to a revision of the Constitution, the following resolution was adopted:

"The Democratic party congratulates the people of this State that, owing to our continued and incessant demand for a revision of the Constitution, the party in power has been driven to see the imperative need of a change in our fundamental law. The Democratic party, however, demands a revision of the Constitution by the representatives of the people, duly chosen for that purpose, and not by commissions appointed by the party in power. The scheme of the party now in power is only to retain power and more surely fasten upon the State corporation rule."

The candidates of 1895 were renominated, with the exception of the nominee for Secretary of State. The ticket was: For Governor, George L. Littlefield; Lieutenant Governor, Augustus S. Miller; Secretary of State, George L. Church; Attorney-General, George T. Brown; Treasurer, John G. Perry.

Candidates were placed in the field by the People's and Socialist-Labor parties.

A larger number of voters qualified than ever before, owing to the naturalization of foreign-born residents under the Bourn amendment.

At the election, April 1, the total vote was 50,592, against 44,110 in 1895, and the Republican candidates were elected by large pluralities. Following is the vote for Governor: Lippitt, Republican, 28,448; Littlefield, Democrat, 17,170; Peabody, Prohibitionist, 3,032; Thienert, Socialist, 1,224; Burlingame, People's, 718. Lippitt's plurality, 11,278. The number of Democrats in the State Legislature was reduced from 9 to 6, with 103 Republicans. On the question of liquor licenses, which was submitted in many of the towns, all but North Kingstown voted in favor of license.

A Democratic State convention was held at Providence, April 21. Delegates to the national convention were chosen. William E. Russell was named as the preferred candidate for the presidential nomination. The platform approved the existing national administration, especially its management of the finances; favored the maintenance of the Monroe doctrine; approved the Wilson bill; opposed reciprocity as impracticable and unnecessary; and on the financial question said:

"It is vital to the interests of our people that there should be no departure from the gold standard, to which all money, whether gold, silver, or paper, should conform, and we are opposed to the free coinage of silver until at least four of the great powers of the Western World shall come to an international agreement establishing the ratio at which gold and silver shall be admitted to mintage."

After the Chicago convention, the State Central Committee, by a vote of 15 to 3, adopted resolutions approving the platform of that convention and ratifying its nominations.

The Gold-standard Democrats bolted and held a convention, Aug. 26. Delegates to the Indianapolis convention and candidates for presidential electors were chosen, and the resolutions declared in favor of Democratic principles and sound money.

A convention of Silver Democrats was held the same day, and electors were nominated.

The Republicans held a convention in Providence, April 10, declared for the gold standard, and chose delegates to the national convention, leaving them uninstructed.

The vote at the November election stood: McKinley, 37,437; Bryan, 14,459; Palmer, 1,166; Levering, 1,160; Matchett, 558; Bentley, 5.

Melville Bull and A. B. Capron, Republicans, were elected members of Congress.

The State Legislature will have on joint ballot 104 Republicans and 5 Democrats.

ROMAN CATHOLIC CHURCH. The year 1896 was marked by a renewal of Pope Leo XIII's agitation of the question of the reunion of Christendom. The Holy Father's encyclical of the preceding year was supplemented by a second letter on the subject, which was made public in America by Cardinal Gibbons on June 30. Mr. Gladstone having earnestly and sympathetically replied to the letter of 1895 through Cardinal Rampolla, this second encyclical was generally regarded as in some degree an answer to Mr. Gladstone, and as paving the way for a decision adverse to the validity of Anglican orders. The letter clearly defines the position of the Catholic Church on the question of the reunion of Christendom, and sets forth in detail the authority that belongs to the Church. It opens with a reiteration of the love of the Mother Church for "all sheep that have gone astray," and describes the exemplar nature and the lineaments of the Church, the most worthy of consideration of these being set down as that of unity. In short, the encyclical gives amplified reasons why all the Christians of the world should be united, and points out what the Holy Father believes to be the only true path to Church unity. The gist of its argument may be gathered from this quotation:

"It is the nature and object of a foundation to support the unity of the whole edifice and to give stability to it, rather than to each component part; and in the present case this is much more applicable, since Christ the Lord wished that by the strength and solidity of the foundation the gates of hell should be prevented from prevailing against the Church. . . . Surely jurisdiction and authority belong to him in whose power have been placed the keys of the kingdom of heaven, not alone in all provinces taken singly, but in all taken collectively. And as the bishops, each in his own district, command with real power not only individuals, but the whole community, so the Roman pontiffs, whose jurisdiction extends to the whole Christian commonwealth, must have all its parts, even taken collectively, subject and obedient to their authority. Christ the Lord, as we have quite sufficiently shown, made Peter and his successors his vicars, to exercise forever in the Church the power which he exercised during his mortal life."

On Sept. 20 the Pope issued a brief encyclical urgently recommending the constant use of the rosary as a "means of safeguarding the happiness and peace which God has most mercifully granted to mankind in his august mother," and explaining that the form of prayer recommended obtained the special name of rosary because "it represented by its arrangements the sweetness of roses and the charm of a garland." The rosary is recommended as "most fitting for a method of venerating the Virgin, who is rightly styled the Mystical Rose of Paradise," its chief efficacy being the formation of perseverance in prayer.

In the same month, September, the most important papal bull of the year was issued. It settles the question of the validity of Anglican orders so far as the Catholic Church is concerned. In his prefatorial remarks, the Pope reverts to the question of Church unity, and acknowledges the generous way in which his zeal and plainness of speech on that subject have been met by the English people. The letter then sets forth the reasons why the questions concerning the validity of Anglican orders was opened for re-examination:

"In these last years especially a controversy has sprung up as to whether the sacred orders con-

ferred according to the Edwardine ordinal possessed the nature and effect of a sacrament; those in favor of the absolute validity, or of a doubtful validity, being not only certain Anglican writers, but some few Catholics, chiefly non-English."

Both Anglican and Catholic writers urged that in view of recently discovered testimony the question ought to have a re-examination. Yielding to this desire, the Holy Father appointed a commission of learned theologians, one of whom was known to favor the validity of Anglican orders. They met in Rome, and after months of research they came to the conclusions that are set forth in the apostolic letter. They agreed that the question laid before them had been already adjudicated upon with full knowledge of the apostolic see, and that this renewed discussion and examination of the issues had only served to bring out more clearly the wisdom and accuracy with which that decision had been made. Their judgment was summed up by the Pope in the following words:

"Wherefore, strictly adhering in this matter to the decrees of the pontiffs, our predecessors, and confirming them most fully, and, as it were, renewing them by our authority, of our own motion and certain knowledge we pronounce and declare that ordinations carried out according to the Anglican rite have been and are absolutely null and utterly void."

It was held that: 1. The form prescribed by the ordinal of Edward VI was defective, and therefore null. 2. "With this inherent defect of form is joined the defect of intention, which is equally essential to the sacrament." It is shown that the Church has always held these propositions, both in practice and in theory; that Cardinal Pole, as far back as 1554, who was appointed by Pope Julius III, and confirmed a year later by Paul IV, to examine into the validity of orders conferred according to the Edwardine ordinal, declared all such orders invalid.

The following quotation from the closing part of the letter gives evidence that the Pope has real faith in the possibility of accomplishing the Roman scheme of Church unity. He is firmly convinced that there is gravitation of Protestantism, at least on the part of the Anglican Church, toward the bosom of the Catholic Church:

"We wish to direct our exhortation and our desires in a special way to those who are ministers of religion in their respective communities. They are men who from their very office take precedence in learning and authority, and who have at heart the glory of God and the salvation of souls. Let them be the first in joyfully submitting to the divine call, and obey it and furnish a glorious example to others. Assuredly with an exceeding great joy their Mother, the Church, will welcome them, and will cherish with all her love and care those whom the strength of their generous souls has amid many trials and difficulties led back to her bosom. Nor could words express the recognition which this devoted courage will win for them from the assemblies of the brethren throughout the Catholic world, or what hope of confidence it will merit for them before Christ as their judge, or what reward it will obtain from Him in the heavenly kingdom!"

This encyclical gave rise to prolonged discussion in the press, the editor of a leading Catholic journal expressing the belief that "Pope Leo's letter on Anglican orders will bring many High Churchmen into the true Church."

That Leo XIII does not regard the reunion of Christendom as a dream, may be inferred from the announcement that early in 1896 he established a new congregation in Rome, whose duty it will be to treat all questions having reference to this re-

union. The congregation is a fixed one. Its membership includes cardinals and patriarchs of both the Eastern and Western Churches. The Pope has thus in a manner made permanent the policy outlined in his encyclicals to the Orient and to England.

On Dec. 29 the Pope gave audience to a body representing the old Pontifical Army. He made an address to the representatives, in which, after speaking of the services rendered by the army, he declared that the papacy would finally triumph. He added that he had received offers from Canada, Ireland, and elsewhere, from people who were ready to hasten to the defense of the papacy. He hoped the time would soon come when he could see himself surrounded anew by sons as faithful and as well beloved as those who had comprised the Pontifical Army.

Statistics.—The Sacred College sustained only four losses by death during the year 1896. These were Cardinal Louis Galimberti, aged fifty-eight, died at Rome, May 7; Cardinal Giuseppe Maria Graniello, aged sixty-two, died at Rome, Jan. 8; Cardinal Gustavus Adolphus Hohenlohe, aged seventy-three, died at Rome, Oct. 30; Cardinal Raphael Monaco La Valletta, aged sixty-nine, died at Castellamaro, Italy, July 14.

The "Gerachia Cattolica" states that during the pontificate of Leo XIII 109 cardinals have died. Of the cardinals created by Pius IX only 7 survive. During the eighteen years that Leo XIII has been at the head of the Church he has filled the college of cardinals almost one and a half times. The number of patriarchs of both rites—that is, Latin and Oriental—is 10; the archbishops and bishops of the Latin rite, with residential sees, 815; those of the Oriental rite, 51. There are 343 titular archbishops and bishops and 13 archbishops and bishops no longer possessing sees. There are 7 prelates of the Oriental rite with episcopal character, and 6 prelates have no diocese. This makes, including the cardinals, a total of 1,300 dignitaries, speaking all tongues, to whom is intrusted the government of the Church.

From the "Catholic Directory" for 1896, published in London, under the sanction of Cardinal Vaughan and his suffragan bishops, some interesting particulars as to the present condition of the Church in Great Britain are learned. In England and Wales there are 17 bishops, including the Vicar Apostolic of Wales, and in Scotland 7 more; the total of priests in Great Britain is 3,014, and they serve 1,789 churches, chapels, and missions. Of these priests 2,090 are of the secular and 924 of the regular clergy. Besides the above there are resident in England 1 archbishop and 2 bishops of titular sees (*in partibus*). The Catholic faith is professed by 41 peers of England, Scotland, and Ireland, by 53 baronets, by 15 privy councilors, and by 3 English and 67 Irish members of Parliament. The estimated Catholic population of the United Kingdom is nearly 5,500,000—namely, England and Wales, 1,500,000; Scotland, 365,000; Ireland (according to the census of 1891), 3,550,000. Inclusive of British North America, Australia, India, and the colonies and other possessions, the total Catholic population of the British Empire is estimated at 10,250,000.

The Rt. Rev. A. E. Medlycott, Bishop of Tricomania and Vicar Apostolic of Trichur, Malabar, India, has given some interesting facts concerning the condition of the Church in India, which are here summarized: The Church occupies a prominent position in British India. The Catholic missions in India were governed by a vicar apostolic until they passed from a state of mission into a settled condition of Church government. Pope Leo XIII, in 1887, established the hierarchy in India. That

hierarchy consists of 8 metropolitan and 22 suffragan sees. The total Catholic population of India is about 2,000,000. Throughout the country there are about 800 European missionaries, assisted by about 1,000 native priests. About 100,000 children are in attendance at 2,000 schools. India has 2 vicariates apostolic and 4 apostolic prefectures, making in all 36 centers of Church government.

Cardinal Gibbons, in a widely published communication, recently drew attention to the history of the Catholic Church in the United States as "a remarkable demonstration of her undying vitality." A hundred years ago the outlook for her was anything but encouraging. There were a few thousand Catholics scattered over the country, whose spiritual wants were attended to by 30 priests, who frequently had to travel hundreds of miles in the performance of their duties. Speaking of the change that has taken place, the cardinal said: "A century ago her adherents were but a few thousand. To-day her priests number more than 8,000, and she rejoices in the possession of 10,000,000 children. Her churches, schools, and asylums of charity are increasing everywhere in the land. She stands today full of youthful vigor, one of the most potent factors in American civilization."

The Catholic population of the world is estimated by the Propaganda press to be more than 300,000,000.

Italy and the Papacy.—Catholic authorities claim that since the fall of the Pope's temporal power Italy has steadily declined in material prosperity. Basing its facts on figures furnished by the Commissioner of Immigration for the United States, the "Catholic News" (New York) of May 10 remarked:

"Oppression and poverty have more to do with emigration than any other cause. Now let us see how many Italians have fled from their own sunny land since the Pope has been despoiled of his own. Since the beginning of this year about 16,000 immigrants from Italy have been landed in the port of New York. March alone showed 9,320 Italian immigrants against 2,665 the previous March and 3,505 the year before. Among them were found many Italians who had quitted this country, but were disgusted with the conditions of Italy under Humbert. Italian immigration has shown an extraordinary growth of late. From 1821 to 1895 the total immigration from Italy was 680,568, and, what is significant, three sevenths of it fell within the last five years and six sevenths within the last fifteen years."

The same journal quotes the following from the New York "Tribune":

"At no time has the Italian monarchy been so unpopular as now, the people at large holding King Humbert responsible for the Abyssinian disasters and for the terrible economic situation of the country. They identify him with the abhorred triple alliance, which has been the bane of Italy, politically, financially, industrially, and commercially. And should one of these days the ruined, starving, and overtaxed population rise up in its despair to overthrow a dynasty that has transformed Italy from the fairest and gladdest country in Europe into the saddest, it will be found that the papacy will have weathered this, as so many previous storms, and that with all sail set to the democratic wind it is riding safely on the stormy waves of the revolution."

The above extracts are given as reflecting in a degree the expressions of the Pope himself, who has publicly reiterated the charge that since he was robbed of his temporal possessions Italy has retrograded, and who has given renewed expression of opposition to any sort of alliance of the Church

with King Humbert, notwithstanding the great pressure brought to bear upon him by partisans of compromise between the Vatican and the Quirinal. In July he said of himself:

"I am here in imprisonment, a noble imprisonment, if you like, but still a real imprisonment. For eighteen years I have not been able to get a glimpse of the streets of Rome or of its holy basilicas. I have had a new apse constructed in St. John Lateran's, and yet it has been impossible for me to see it. If I wish to name bishops, I have the difficulties and delays that the formality of the *placet* and the *exequatur* imposes. Bishops in their own dioceses can not appoint their own parish priests without submitting to the *visto* and to the exigencies of the fiscal authorities. . . . On the slope of the very Vatican Hill, quite close to my abode, they have raised a statue to Garibaldi, to him who called the papacy 'the cancer of Italy.'"

The United States.—The year 1896 opened with the elevation of Mgr. Satolli, the first American apostolic delegate, to the rank of cardinal, and this investiture of distinction was followed by a recall of the delegate to Rome, there, in a higher capacity, to serve the Church; and in due time his place in the United States was filled by the appointment as apostolic delegate of Archbishop Sebastian Martinelli, who arrived on Oct. 3.

The work of Cardinal Satolli as delegate having been completed, it became a subject of review by many eminent minds, and especially by Catholics solicitous for the advancement of their Church in America. The consensus of Catholic opinion is that the work accomplished by the first apostolic delegate vastly exceeds in importance all that the most hopeful expected. In the more than three years of his service here he fully justified the Pope's judgment that such a delegation would do much to remedy the evils that existed, and to cause the Catholic Church in America to make a distinct advance. It is admitted that time and again he has lifted oppressive burdens from clergy and people, righted wrongs, compelled the tempering of justice with mercy, made judicial hearings accessible and easy, and, by the interposition of his authority and by his tact and good offices, brought about reconciliations and compromises extra-judicially. "The mere presence in the country of such a man," says a high authority, "has prevented much discord and litigation. It has made cautious some prelates who, in their inexperience or excessive estimate of their own authority, would otherwise have been more ready to lay undue burdens upon clergy or people, and to stretch their authority beyond due limits. He has restored priests who had been condemned by their bishops; in some cases because he found that they were innocent, and in others because he found that they had already been too severely punished." The same authority here quoted from has publicly noted that until recent years the Catholic Church in America was governed by "what may be called, without invidiousness, a benevolent paternal despotism. While the bishop was reasonably sure of a fixity of life tenure, everything else depended upon his will, subject only to very general laws of the Church, and with little or no regard to the body of jurisprudence and procedure known as the canon law. There was frequent neglect of duty, remissness in remedying evils; and for many grievances there was little or no redress. Remonstrances were readily construed into disrespect, and individuals felt that they could complain only at their peril. The only chances of redress for these evils lay in a recourse to Rome; and, in view of the distance, the difference of language, the long delays, the great expense and difficulty in producing witnesses and documents, there was, for the great majority of the

aggrieved, no redress at all." It is also particularly noted that the Italian apostolic delegate showed himself more truly in touch with American views than many American priests and prelates, native and foreign born, and that he has done a vast work of good in dispelling prejudices against the Church largely fostered by intemperate denunciation of the public schools. Although Mgr. Satolli was met at the outset of his mission with coldness and opposition in certain Church quarters, he soon conquered it with patience, firmness, and tact.

The Rev. David S. Phelan has said: "Impregnable in the plenitude of papal appointment, and with a courage born of conscious rectitude, Mgr. Satolli started out to bring low the mountains and to fill up the valleys; to make the crooked ways straight and the rough ways smooth. The shock of the first encounter shook the whole American Church. When the smoke of the conflict was lifted and we could see the result, Satolli was found in possession of the field, and his opponents fled over a thousand leagues of seas. . . . The results are before us. All things considered, the irresponsible bishops of 1892 became the constitutional bishops of 1896, without much of that stubborn resistance that precedes the loss of privilege. Never was there in the history of the world so powerful a class as the Catholic hierarchy from its institution till the coming of the first apostolic delegate; and never did class surrender dearest privileges with such lofty, if reluctant, magnanimity."

It is generally conceded that the Pope has chosen as Cardinal Satolli's successor one with special fitness for the place. Cardinal Satolli bade farewell to America and sailed for Rome on Oct. 17.

Another event that marked the year 1896 was the removal of Bishop Keane from the rectorship of the Catholic University at Washington. Perhaps no occurrence since Leo XIII ascended to the chair of St. Peter aroused so much commotion in the American Church until the action of the Pope was clearly understood. On Sept. 28 Bishop Keane received, through Cardinal Gibbons, a letter from the Pope inviting his resignation. This letter begins by defining the Pope's uniform adherence to the principle of rotation in office. "This custom," says the Pope, "has grown up through wise reasons, and the Roman pontiffs have ever been careful that it should be adhered to." The letter continues: "Being solicitous for your future welfare, we leave it to your own free choice either to remain in your own country, or, if you prefer it, to come to Rome. If you choose the former, we will destine for you some archiepiscopal see by vote of the bishops of the United States. If you prefer the latter, we shall welcome you most lovingly, and will place you among the consulters of the Congregation of Studies and the Congregation of the Propaganda, in both of which you could do much for the interests of religion in the United States. In this latter case we would also assign you a suitable revenue for your honorable maintenance."

In his reply to the Holy Father, Bishop Keane expressed gratitude for his release from the office of rector of the university, saying that the labors of the position had grown to be far beyond his strength and abilities, and that deliverance from the burden was a response to many prayers. He had served nine years. A letter of tribute from Cardinal Gibbons to Bishop Keane, expressing the sentiments of the Board of Directors of the university, closed by saying: "You have proved the efficiency of the university to train young men to generous self-forgetfulness for the welfare of others in your sublime resignation to the will of the Holy Father. You are the masterpiece of your own training. When in future we shall have occasion to point to an exemplar for the imitation of the young men who

will reap the fruit of your labors, we shall feel an honest pride in setting before them the first rector of the university, the generous, high-minded, much-beloved Bishop Keane."

The Rev. Dr. Thomas J. Conaty, pastor of the Church of the Sacred Heart, Worcester, Mass., was chosen by the Pope to succeed Bishop Keane. Dr. Conaty had won a national reputation for his effective work in connection with the Catholic Summer School of America, of which he was president.

On Jan. 17, in Albany, N. Y., occurred the somewhat rare event of the ordination of a Hebrew as a priest in the Catholic Church, when Charles William Oppenheim was so honored. At the conclusion of the ceremony Bishop Burke alluded to the fact that in olden times the priests of God were chosen from the descendants of Aaron.

Early in the year the Rev. Thomas O'Gorman, Professor of Church History at the Catholic University in Washington, was appointed bishop of the diocese of Sioux Falls.

On Feb. 10 the Rev. Michael Callaghan, director of the Mission of Our Lady of the Rosary, for the Protection of Immigrant Girls, in New York, died. His life was devoted to the befriending of immigrant girls.

One of the greatest prelates of the American Church, the Rt. Rev. Peter Richard Kenrick, Archbishop of St. Louis, died on March 5. He was also the oldest American prelate, and the only one who, up to that date, had lived to complete his golden jubilee as bishop. He was ninety years of age.

The Rev. Michael J. Hoban was consecrated Bishop of Alalis in Scranton, Pa., on March 23.

The Rt. Rev. Stephen Vincent Ryan, Bishop of Buffalo, died on April 10, at the age of seventy-one.

On May 11 Archbishop Kain, of St. Louis, was vested with the pallium.

In July the Rev. Edward J. O'Dea, up to that time pastor of St. Patrick's Church, Portland, Ore., was appointed the third Bishop of the Diocese of Nesqually.

The Rt. Rev. Martin Marty, Bishop of the Diocese of St. Cloud, died Sept. 19.

Canada.—The Manitoba school question was settled by the adoption of provisions whose terms were made known in November, 1896. The settlement provides that religious teaching shall be conducted in public schools where a majority of the trustees authorize it or a certain number of parents petition for it. Such religious teaching shall take place between half past three and four o'clock in the afternoon, and may be conducted by any Christian clergyman whose charge includes any portion of the school district, or by a person duly authorized by such clergyman. In any school where the average attendance of Catholic children is a certain number the trustees, if the parents of such children so petition, shall employ at least one duly certified non-Catholic teacher. Under the same circumstances, regarding non-Catholic children, the trustees are required to employ at least one duly certified non-Catholic teacher. Where the schoolroom accommodation does not permit of Catholic and non-Catholic pupils being placed in separate rooms for the purpose of religious teaching, such teaching of Catholic children shall be carried on during the prescribed period of one half of the month and that of the non-Catholic children during the other half of the month. Where 10 pupils in any school speak French "or any language other than English" as their native language the teaching of such pupils shall be conducted in French (or such other language) and English. No pupil is to be permitted to be present at any religious teaching unless the parents or guardian of such pupil desire it.

Archbishop Fabre, of Montreal, died on Dec. 30.

Russia.—So far the new Czar has shown disposition to lay a restraining hand on the aggressiveness of the schismatic Russian Church, and to meet halfway the conciliatory spirit of Leo XIII. Events have occurred which, though comparatively obscure, must, considering the prevailing system and what has hitherto taken place in Russia, be looked upon as unusual. 1. The Metchur of Kroze and famous destroyer of crucifixes in Samogita received a serious warning concerning his attitude toward Catholicism. 2. At Krakovie, in Samogita, the parishioners had been striving for twelve years to get permission to erect a new brick church in place of their old wooden one. At length they got orders from Gov-Gen. Orzewski, of Wilna, to build a new church, but of wood. Once more they appealed to the Minister of the Interior, Goremykin, and then it transpired that he had already signed a permit for the erection of a monastery church, but Orzewski had destroyed the order and issued his own decree. It is said that Orzewski received a reprimand which nearly caused him to resign. 3. Goremykin, at the request of the Czarina, granted permission for rebuilding at Ostrog a church which had, as far back as 1880, been confiscated and dismantled. 4. The Catholic bishops had endeavored to persuade the metropolitan archbishop, Kozlowski, to present a memorial to the Czar on the sad condition of the Church and the ameliorations desired. The archbishop, fearing banishment to Siberia, refused the request. Later came a sudden command from the Imperial Chancery to the archbishop to submit the memorial to the throne. Such events are looked upon by the Catholics of Russia as opening bright prospects for the Church.

France.—The shrine at Lourdes was visited by more invalids in 1896 than in any previous year, the national Catholic faith in the miraculous power of its saint having spread abroad. The most wonderful cures have been related, embracing supposed incurable maladies, deformities, etc., and even afflicted infants, too young to exercise faith, have, it is said, on presentation at the shrine, been made whole.

The national jubilee granted to France by the Holy Father on the occasion of the fourteen hundredth anniversary of the baptism of Clovis, the first Catholic King of France, began on the first Friday of December, 1896, in Paris, and closed on Christmas Day. Some of the details are interesting: At nine o'clock of the first day of celebration Cardinal Richard, Archbishop of Paris, sang pontifical high mass in the Basilica of the Sacred Heart, on the heights of Montmartre, and at sundown the bells of all the churches in the city proclaimed the beginning of the jubilee. Next day the cardinal addressed instruction to the audience on the motive of the great jubilee, which was "to obtain from God that he preserve France in the faith of her forefathers, a complete, active, strong faith, so that Catholics should prove to be the sons of light." He ended his allocution by repeating the old cry of France: "Long live Christ, who loved the Franks!" After mass the cardinal solemnly renewed the vow consecrating France to the Sacred Heart and to the Blessed Virgin.

In October the Cardinal Archbishop of Paris appointed Père Ollivier, the famous Dominican preacher, to the post of Lenten preacher at Notre Dame, thereby continuing the tradition which connects the great order of "Preaching Friars" with the cathedral pulpit.

Denmark.—A retired Lutheran minister of Denmark, the Rev. Henning Jensen, predicts that the Lutheran Church of that country will probably soon return to Catholicity. The "New World" has printed a translation of Mr. Jensen's writing

on the subject, This minister gives as one reason for his belief that "the Bible and the creeds are so severely attacked—not only by freethinkers, but especially by the scientific Lutheran theologians themselves—that the Lutheran Church, in order to be able to defend herself, will be forced to place herself under an authority that has the lawful power to put all these attacks to naught. But such an authority is only to be found with the Pope in Rome, where therefore all those will find a refuge who either feel the need of a 'revealed' religion or look out for a safe retreat from the increasing power of socialism."

When Mr. Jenssen came to the conclusion that Catholicity was to become the faith of Denmark he set out to get reliable information about the present condition of the Catholic Church in that country, which he has presented in formidable array. After reviewing the whole ground, giving the number of Catholic churches and other institutions, the increasing number of priests, and the growing congregations, he says that on an average 200 persons a year abandon the established Church in Denmark and become Catholics. The majority of those are poor. A comparatively great number, though, belong to the nobility. The best known among these are the late member of the House of Representatives, Count Holstein-Ledreborg, and the Danish ambassador in Paris, Count Moltke-Huitfeld. Especially the ladies of the nobility seem to feel attracted toward Catholicism. The mother-in-law of the Konsetz-President, Reedtz-Thotts, and the sister of Minister Bardenfleth are Catholics. The sister-in-law of the late Secretary of Church Scaevinius is mother superior of a convent in Copenhagen, and a baroness is superior of St. Joseph's Convent in Randers. It can almost be considered a question of time when the whole aristocracy will become Catholic, Mr. Jenssen says. Several Lutheran ministers have embraced Catholicism.

The Armenian Outrages.—While it is true that Roman Catholics have not suffered as much at the hands of the Turks as schismatic Catholics and Protestant Christians, their flocks have not been spared. One instance will suffice to illustrate Turkish barbarity. Father Salvatore, an Italian Franciscan of Aintab, with a number of his parishioners, appealed to the Mohammedan troops for protection. The officer promised it to him, and the priest and his people were given an escort of soldiers. Outside the village the troops were halted, and the Catholics were commanded to renounce their faith and become Mohammedans. On their refusal to do so they were all shot. To this cruelty the Turks added contempt and mockery, especially toward the priest. The sacred vessels were dishonored and defiled, and the priest, with these in his hand, was led around, his vestments being danced upon.

RÖNTGEN, WILHELM CONRAD, a German physicist, born in Holland in 1845. He was graduated at the University of Zurich, where he took his doctor's degree in 1870. He was a favorite pupil of Prof. Kundt, with whom he went to Würzburg, and in 1873 to Strasburg, where he was assistant under his old professor. In 1875 he left Strasburg University to accept the chair of Mathematics and Physics at the Agricultural Academy of Hohenheim, about 4 miles from Stuttgart, but a year later he returned to Strasburg, and in 1879 he became director of the University Institute of Physics at Giessen. In 1888 he returned to Würzburg, where he has since remained. Prof. Röntgen has been an industrious worker in experimental physics, and has published many papers on his specialty, chiefly in Wiedemann's "Annalen," the "Zeitschrift für Kristallographie," and the proceedings of the Vienna

and Göttingen Academies of Science and of the Physico-Medical Society of Würzburg. It was before the last-named society that he described, in December, 1895, his discovery of the form of radiation now known by his name, which is described elsewhere at length (see RÖNTGEN RAYS). Among other subjects of his investigations have been the isothermal surfaces of crystals, solar calorimetry,

WILHELM CONRAD RÖNTGEN.

dust figures, aneroid barometry, the absorption of heat by vapors and gases, and telephony. Of late he has been specially interested in the phenomena of the cathode and anode in exhausted tubes, and this led directly to his discovery of the X rays. This discovery has brought him great fame, and he has been the recipient of numerous honors, including the title of baron, bestowed on him by the Austrian Government.

RÖNTGEN RAYS, or X RAYS, a newly discovered form of energy that is radiated from a highly exhausted discharge tube, actuated by an induction coil or other suitable apparatus. The rays are so called for their discoverer, Wilhelm Conrad Röntgen (*q. v.*), who gave them the name "X rays" because he was ignorant of their precise nature, the letter x being the usual algebraic symbol for an unknown quantity. The Röntgen rays resemble ordinary light in being propagated in straight lines in being capable (although in a slight degree) of reflection, in causing phosphorescence, and in affecting a sensitized plate. They differ from it in being invisible, in not being capable of refraction or polarization, and in being able to traverse many substances that are opaque to ordinary light.

History.—The phenomena caused by the passage of electricity through exhausted tubes have long attracted attention. In 1837 Faraday compared the appearances of the anode and cathode brushes in different gases at different pressures, and found that the discharge glow was most easily obtained in rarefied air. Plücker, in 1858, was the first to cause apparatus to be made whereby a practically permanent vacuum could be maintained in a glass bulb. Crookes, by using means of exhaustion superior to anything that had been obtained before his time, showed that when

the pressure reaches one millionth of an atmosphere no proper discharge takes place any longer. The purple glow around the negative terminal recedes as the exhaustion proceeds, leaving a dark space, which finally fills the whole tube. The residual gas in the tube now has curious properties, and was considered by Crookes to be in what he called "the fourth state of matter." Rays, now generally known as "cathode rays," arise from the cathode, and proceed from it in straight lines, causing phosphorescence in the glass where they strike, and on any phosphorescent substances that may be placed in their path. These rays, which are capable of reflection, exert mechanical effects on objects that they encounter, and can thus be made to drive small mills, etc., that are introduced into the tube before its exhaustion. These phenomena were explained by their discoverer as due to streams of electrified gaseous molecules, and he has generally been followed by English and American physicists. The Germans, on the contrary, who claim Hittorf as the discoverer of the rays, have been inclined to see in them a phenomenon of the luminiferous ether. Crookes concluded that with increasing exhaustion of the tube the "mean free path" of the molecules—that is, the average distance that they move between collisions with other molecules—increases until it

FIG. 1.—SHADOW CAST BY CATHODE RAYS.

becomes so great that the molecules can move without hindrance in straight lines from the cathode to the sides of the tube; and that in the "dark space," which with decreasing pressure expands to fill the whole tube, the molecules do not bombard each other, and hence do not produce the effect of light. His experiments, all of which supported this theory, showed that the cathode rays are rectilinear, radiate normally from the surface of the cathode, cast shadows, or their analogues (Fig. 1), when objects interposed in their path interfere with the phosphorescent action on the opposite glass, exert mechanical force as noted above, mutually repel each other when rays from two cathodes are brought together, and are deflected by magnets (Fig. 2). In support of the contention that the rays are merely a form of ultra-violet light, Hertz found in 1892 that they pass through thin metal plates within the discharge tube, but support was given to the other side by the experiments of Perrin, who found that the cathode rays are charged with negative electricity, corresponding positive charges being propagated in the reverse direction and precipitated on the cathode. J. J. Thomson, too, measured the velocity of the rays, and found that it corresponded more closely to that of a stream of minute electrified bodies than to that of light.

Up to this time the English school seemed to have the best of the argument, but in 1894 Lenard, acting on a hint from Hertz, found that the rays would apparently pass through an aluminium disk in the side of the tube, into the open air (Fig. 3). The properties of the rays outside the tube were practically the same as within it, but they vanished at about 5 centimetres from the tube. Within this distance

they produced phosphorescence, could pass through metals, cast "shadows" with glass and mica, and exerted photographic action. They appeared to be scattered by the aluminium "window" in all directions. The answer of the English physicists to this demonstration was that the rays observed outside the tube were probably not transmitted from within, but were a new phenomenon, generated in open air at the outside surface of the "window." The rays certainly had different properties without and within the tube, but that there was no fresh generation of rays was shown, as claimed by Lenard, by using a tube with two compartments, in one of which the rays are generated, while they are observed in the other. The rays passed through the metal partition into the observing tube when the vacuum in the latter was too high to admit of their generation. Lenard also showed that there seemed to be several kinds of cathode rays, having different properties. For instance, rays generated at high pressures are diffused more easily than those that arise at low pressures. This is analogous to the fact that light of short wave-length is diffused more easily in certain turbid media. He also proved that charged bodies are discharged by a disturbance in the ether, and are similar to light, if not identical with it, have not converted the English physicists, and the two opposed opinions are still held by the rival parties, and have had a marked effect on the interest that is taken in experimentation on this subject and the closely related one of Röntgen rays.

FIG. 3.—LENARD'S EXPERIMENT: PASSAGE OF CATHODE RAYS THROUGH AN ALUMINIUM WINDOW.

In January, 1896, Prof. Wilhelm Conrad Röntgen (see RÖNTGEN), of the University of Würzburg, Austria, announced at a meeting of the local scientific society that he had discovered a new form of radiation. The discovery was accidental, and was made by observing that a highly fluorescent substance with which he was experimenting gave out light whenever a neighboring Crookes tube was excited, though this tube was covered with an opaque cloth. The effect was not due to cathode rays, because cathode rays can not pass through the glass walls of the tube, but the rays that caused the fluorescence appeared to take their rise at the point where the cathode rays impinged against these walls. Further investigation showed that the new rays, like cathode rays, passed easily through many substances that are opaque to light, and appeared to be capable neither of reflection nor of refraction, but that they could not be deflected by a magnet, and that they passed easily through the atmosphere at the ordinary pressure. This similarity to the cathode rays in action on a sensitive plate and in transmission through opaque substances made it possible to repeat on a large scale in open air photographic experiments that could before have been possible only within the exhausted tube. In particular it was found that when the human hand was interposed between the tube and a photographic plate the difference in opacity of the flesh and bones to the new rays caused a marked shadow picture of the skeleton to appear on the plate. Nothing but a shadow picture was possible, owing to the fact that the rays are not reflected; and the

FIG. 2.—DEFLECTION OF CATHODE RAYS BY A MAGNET.

nothing but a shadow picture was possible, owing to the fact that the rays are not reflected; and the

use of lenses was not possible, for the rays were not refrangible, so that in all cases the object to be photographed was necessarily held as close as possible to the sensitive plate, and the resulting picture was exactly of the same size as the original. To this application of the new discovery it undoubtedly owed the extraordinary and widespread interest that it at once aroused throughout the civilized world. Important as it was as a link in the long chain of experiments on cathode phenomena that had been diligently prosecuted for years, especially in Germany and England, this purely scientific interest was completely overshadowed in the public mind by the sensational features of the announcement that a means of "seeing through" the human body had been devised. Misstatements and exaggerations were inevitable, but experimenters in all countries at once verified Prof. Röntgen's own announcement. His statement still remains accurate, except that the rays have been found capable of reflection in a very slight degree. They are incapable of polarization (Mayer, "Science," March 27), discharge electrified bodies, and electrify neutral bodies (Righi, "Comptes Rendus," Feb. 17), some positively and others negatively (Minchin, "Electrician," London, March 27). Negative charges are dissipated faster than positive, the rate depending on absorption (Benoist and Hermuzesen, "Comptes Rendus," Feb. 3, March 17, and April 27). Many more substances are opalescent to X rays than to light, owing to internal diffusion (Pupin, "Science," April 10; Thomson, "Electrical World," April 25), hence the shadow pictures taken with the rays are never absolutely clear cut.

The precise source of the rays was at first a subject of some controversy. Röntgen, as stated above, announced that they arise from the part of the glass wall of the vacuum tube on which the cathode rays impinge. Elihu Thomson showed that the rays did not proceed directly from the anode or the cathode. Rice ("Electrical Engineering," April 22) confirmed the opinion of Röntgen, and others have been able to show that they arise at a spot directly opposite the cathode. When the cathode is in the center of the tube ("Electrical World," March 14) there are two such spots. Stine (*ibid.*, April 11) obtained similar results, and also showed that effects that might be supposed to indicate diffraction of the rays were really due to penumbral shadows. Scribner and M'Berty ("Electrical Engineering," April 8) proved that the source of the rays was on the inner surface of the glass. On the other hand, De Heen ("Comptes Rendus," Feb. 17) believed the anode to be the source of the rays, but possibly the anode in his experiment was struck by the cathode rays. Lodge ("Electrician," April 10) showed that it emits the rays powerfully when so struck, and he concluded that X rays "start from a surface on which the cathode rays strike, whether it be an actual anode or only an anticathodic surface." In the cases first observed the glass was such a surface. Lodge believes that the glass emits X rays just as a red-hot surface emits light, each point radiating them independently of the others, and he showed that glass that became "fatigued" in its power to emit luminous phosphorescence did not become fatigued in emission of X rays, these remaining of the same power, while the phosphorescent spot from which they proceeded grew dimmer. Rowland ("Electricity," April 22) believes that the spot from which the rays arise on the glass is "an induced anode," and that the necessary condition for the production of X rays is the bombardment of an anode by the cathode discharge. Salvioni and others found that the phosphorescent spot could be shifted by a conductor brought near it outside. Roiti ("Atti dei Lincei," July) finds

that cathode rays do not give rise to X rays when they impinge on gases. Piltchikoff ("Comptes Rendus," Feb. 24) showed that a tube containing an easily fluorescent substance emits a larger quantity of X rays than the common tube. Edison showed that the penetrating power of the rays is increased by reduction of temperature. Tesla succeeded in obtaining evidence of the rays at a distance of 60 feet from the source.

The question of reflection was taken up by several experimenters, and it soon appeared that the rays could be reflected, although very slightly. Rood ("Science," March 27) concluded that the percentage of reflected rays was about 0.005. The reflection was generally thought to be irregular or diffusive, but Mayer (*ibid.*, May 8) is of opinion that there is a slight regular or specular reflection. Tesla arranged a device by which seagrasses were taken with reflected as well as transmitted rays, and the results were compared. This shows roughly that the best reflectors of the rays are zinc, lead, tin, and mica, which reflect about 3 per cent. of the incident rays.

From the fact that the rays discharge both negatively and positively charged bodies, as stated above, it was inferred by some that the conductivity of the bodies is increased by X rays. Tesla, however ("Electrical Review," June 24), believes that he has proved the contrary. Murray (London Royal Society, March 19) showed that the rays lower the contact potential of metals.

From the first it was surmised that the rays might have some peculiar effect on living bodies, but none has been directly proved. Exposure to the rays in certain instances has, it is true, resulted in the loss of hair and in painful symptoms resembling those of powerful sunburn, but it is believed by many that these are due not to the X rays, but to ultra-violet light that accompanies

FIG. 4.—TYPICAL FOCUS TUBE.

them. Tesla reports an anesthetic effect, but it has been noticed by no one else. Experiments to determine their action on micro-organisms have been conflicting, and in most cases negative.

No mechanical action of the rays similar to that exerted by the cathode rays within the tube has been noticed, although experimenters have looked for it. Gossart ("Comptes Rendus," Feb. 10) thought that the radiations caused radiometer vanes to cease their rotation, but the action was shown later by Fontana (*ibid.*, April 13) to be electrostatic. Porter ("Nature," June 18) found the radiometer entirely inert to Röntgen rays.

Diligent search has also been made for X rays in other radiations, but they have been obtained nowhere except from discharge tubes, reports to the contrary being generally discredited by scientific men. Special efforts have been made to discover the rays in sunlight, but with negative results.

Applications and Apparatus.—Applications of the Röntgen rays in science and the arts have so far depended entirely on their property of passing through objects that are opaque to ordinary light, together with the fact that different substances in-

cept them in different degrees and with their property of affecting a photographic plate like light and of causing certain salts to fluoresce brilliantly. To obtain a permanent shadow picture by their means the same method as that used by the discoverer is still employed, although it has been somewhat perfected. The object to be examined is placed as close as possible to a sensitive plate, covered to shut out ordinary light, and both are exposed to a discharge tube. The "focus tube" used by Röntgen in his later experiments, and also at King's College, London, is shown in the illustration (Fig. 4). The cathode (K) is concave and the anode (A) is formed of platinum and is plain. The anode is inclined at such an angle that the X rays generated on its surface by impact of the cathode rays are thrown out through the side walls of the bulb. The X rays emanate nearly from a point and the shadow pictures are therefore clearer. The apparatus employed by Shallenberger ("Electrical World," March 7) is shown in another illustration (Fig. 5). A later tube, first proposed by Elihu Thomson, with double anode and two cathodes, is also shown (Fig. 6). Tesla also used a tube with a single internal electrode. The tube was of very thick glass except just opposite the electrode, which was an aluminium disk having nearly the diameter of the tube. An electric screen was provided, consisting of bronze paint applied to the glass between the electrode and the neck. This form of tube produced the same effect on a sensitive plate in about one quarter the time required by a spherical one. He also immersed his tube in oil to overcome difficulties connected with sparking and with breaking of the tube. To excite his tube Röntgen and his immediate followers used the induction coil. The Holtz and Wimshurst machines were probably first used independently by Prof. Pupin and Dr. Morton, both of New York ("Electricity," Feb. 19). In the apparatus used by E. W. Rice ("Electrical Engineering," April 22) the cathode is flat and the source of the X rays is the opposite glass, in front of which a pierced lead diaphragm is used as a "stop." Successful operators have employed apparatus of the following description and dimensions: Edison used the usual incandescent lamp continuous current at 110 to 120 volts, and a coil having an interrupter operated by an electric motor and making 400 interruptions a second. Pupin ("Science," April 10) finds a powerful coil indispensable, and regards the ordinary vibrating interrupter as too slow. He uses a rotary one, operated by an electric motor and giving 60 breaks a second. Tesla ("Electrical Review," March 11 and 18, April 1 and 8) has obtained noteworthy results by using his well-known system for producing high potential and frequency, the primary generator being either for direct or alternating currents. Shallenberger ("Electrical World," March 17) employed the Tesla system, the current being

taken from an alternator of a frequency of 133 per second and passed through the primary coil of a transformer for raising the voltage from 100 to 16,000 or even 25,000. The secondary current was then passed through condensers and a double cascade of brass cylinders. Being thus changed into an oscillatory high-frequency current, it was then passed through a second coil, and thus a current of

FIG. 5.—SHALLENBERGER'S APPARATUS FOR THE PRODUCTION OF RÖNTGEN RAYS.

250,000 volts was obtained, which was used to energize the discharged tubes. The time of exposure is dependent upon the distance from the source. Edison states that "roughly the duration of exposure may be reckoned as proportional to the square of the distance." Frost ("Science," March 27) found that the most rapid plate for light did not give the deepest image for X rays, and that the mean rapid plate is preferable. Georges Meslin ("Comptes Rendus," March 23-30) reduced the time of exposure by magnetically deflecting the cathode rays, thus condensing the active fluorescent spot on the tube and increasing the intensity of the rays. The time may be lessened by the use of fluorescent salts on the sensitive film, which Salvioni in Italy, Swinton in England, and Pupin in this country were among the first to use. Swin-

ton was able in this way to obtain a sciagraph of the bones in less than ten seconds, whereas without the fluorescent material two minutes were required. The salt used was calcic tungstate. Henry and others preferred phosphor-sulphide of zinc; others used barium platinocyanide; and Gifford ("Nature," May 21), after a series of experiments with

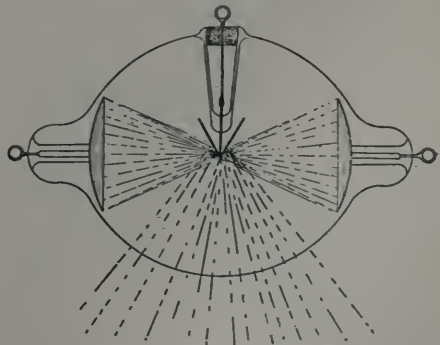

FIG. 6.—X-RAY TUBE WITH TWO CATHODES AND DOUBLE ANODE.

various substances, concluded that potassium platino-cyanide was the best.

The first attempt to make the shadow picture visible by using a screen covered with fluorescent material without impressing it permanently upon a sensitive plate was that of Prof. Salvioni, of Perugia, Italy, who was followed by others, notably by Edison in the United States, who calls his device the fluoroscope. All the devices replace the photographic plate by a screen covered with one of the fluorescent substances mentioned above, and provided on the opposite side from the source of X rays with an arrangement for keeping side light from the observer's eye. When used on a large scale, however, the screen has been placed in a darkened room so that this last may be dispensed with and the shadow picture may be viewed by a large number of persons at once. Arrangements of the kind were tried also independently about the same time as by Salvioni by Prof. A. W. Wright, of Yale, Mr. E. P. Thompson, of New York, and Prof. Magie, of Princeton. By experiment substances were found that respond so quickly to the radiation that shadow pictures of moving objects can be seen, and the effect is practically that of an actual shadow cast by light that has the property of penetrating opaque bodies, though in reality, of course, the light is generated at the surface of the screen, which is a source, not a reflector, of the visible radiation. Instead of causing the rays to impress the sensitive plate directly, a combination of fluoroscope and camera has also been used, probably first by Dr. I. Mount Bleyer, of Naples, Italy ("Electrical Engineering," July 1). In such an arrangement the photograph is taken not by X rays, but by ordinary light generated at the fluoroscope.

The shadow pictures, whether permanent or temporary, have been used for a great variety of purposes. They have largely served merely to gratify curiosity, as by enabling coins to be seen within a purse, etc., but they have also been put to a practical use, especially in the domain of surgery, in which malformation of bones has been made visible and foreign objects located in the flesh or viscera. To mention a few examples: As early as March 28 a needle was located and removed from a girl's finger in Nottingham, England, when other means of location had failed, and on April 4 Drs. Renton and Somerville, in London, discovered with the rays an unsuspected case of unreduced dislocation of the phalanx. On March 21 bullets were clearly located in the hands of two men by Prof. D. C. Miller, of Cleveland, Ohio, who has also examined many hands that had been injured in accidents, and determined in each case the exact nature of the injuries. Dr. W. I. Morton, of New York, has demonstrated the use of the rays in dental surgery, showing with them "errant fangs," making teeth visible before their eruption, revealing exostosis, necrosis, or tuberculosis, and showing clearly the extent, area, and location of metallic fillings. The rays have also been used to guide the operator in removing foreign bodies from the throat, the position of the body and of the forceps used to extract it being clearly visible, and the operator hence enabled to grasp the body at once. The rays also detect calcareous infiltrations in the arteries, etc.

In demonstrative anatomy the position of the bones is shown, and with the fluoroscope their movements as well as the successive stages of ossification in a growing infant.

Elihu Thomson ("Electrical World," Oct. 10) has given considerable attention to taking stereoscopic radiographs of the human bones, and is of opinion that this method will prove of great value in allowing the parts to be seen in their proper rela-

tions. When viewed by means of a stereoscope, the bones in such a picture stand out in high relief, while appearing semitransparent.

Among other actual or proposed applications of the rays are the detection of false from true gems (Fig. 11) and of adulterations generally, and their use for illuminating purposes, the rays causing an extended surface covered with a fluorescent salt to give light. Experiments have also been made with a view to discovering whether the rays can be perceived by the human eye, and it has been satisfactorily shown that they do stimulate the retina in some cases, including a few where the subject was unable to see objects by ordinary light, owing to cataract or some similar obstruction. These experiments were regarded by some as showing that blind persons might some day be made to see by means of the rays, but so far there have been no grounds for such an expectation. The rays have also been utilized in France for the study of fossils, which, it has been found, they assist by giving clear indications of interior structure, thus enabling the palæontologists to tell at once, for instance, whether a given bone is that of a bird, a reptile, or a mammal, and affording him an opportunity of studying the cerebral cavity of an intact skull.

It has been suggested also that the rays be used to examine the contents of a suspicious package which it is feared may contain an infernal machine, and experiments with packages made up for the purpose indicate that a machine of this kind may be very easily detected.

Nomenclature.—A very large number of names have been proposed for the rays, for the various phenomena connected with them, and for the mechanical devices for producing and recording them. Of these none are yet used exclusively, although many have found no favor at all. The rays themselves are known indifferently as X rays or Röntgen rays. If there is any distinction in use, the former may be described as the popular, the latter as the scientific name. The permanent pictures produced by the rays on a sensitive plate have been most frequently called sciagraphs or skiagraphs (Greek *σκιη*, shadow), radiographs, and sometimes shadowgraphs, and the fluorescent screen with its attachments for direct observation has been called the fluoroscope, the sciascope or skiascope, and the radioscope. All of these names have been objected to, save perhaps that of Röntgen rays. The use of the element *skia* might refer to any shadow picture, that of *radio* implies that the rays are typical of all radiation, whereas they are only a special and almost abnormal case, and fluoroscope is more properly applied to a device for detecting fluorescence.

Theory of the Rays.—Thus far the theories of Röntgen rays have been of two types: first, that which regards them as an undulatory phenomenon of the ether, and, second, that which looks on them as streams of particles or fluid. Of the first type there are two divisions, one of which supposes the rays to be simply ultra-violet light of wave length far shorter than any that has been observed hitherto, and that which supposes them to differ from ordinary light in the direction of their vibration, which, instead of being transverse to the ray, is longitudinal, as in the case of sound.

This last-named theory was from the first very attractive to physicists. Unless the luminiferous ether were differently constituted from any known elastic body, a vibratory disturbance in it should consist in part of longitudinal vibrations, and yet no evidence of such vibrations had ever been obtained. The theory that the rays were simply light of very small wave length appealed to those who laid special stress on the likenesses between the Röntgen rays and ultra-violet light. The emanation the-

ory has been held by few, but it is maintained by Nikola Tesla, who regards his own experiments as upholding it. It can not be said that any one theory is yet generally accepted by scientific men, but possibly that which regards the waves as ultra-violet light comes nearest to general acceptance. The objections to it are many, and depend chiefly on the differences of behavior between the Röntgen rays and hitherto observed radiant energy, even that which is invisible. The rays are reflected with difficulty, they are not refracted at all, and they can not be polarized. It was for some time thought that they could not be caused to interfere—the crucial test of a vibratory phenomenon—but Calumette and Huillier ("Electrical Engineering," July 22) announce that they have obtained evidence of diffraction and interference. These results are confirmed by those of Dr. Fomm, who has measured the wave lengths of the rays by interference methods, and finds it 0.000014 millimetre, about $\frac{1}{15}$ of the smallest wave of ultra-violet light yet recorded. Rowland had already announced his belief ("Electrical World," April 25) that it did not exceed 0.00007 millimetre, and Sagnac had announced that it was not greater than 0.0004. It is thought by many experimenters that the rays are nonhomogeneous, and that they are a mixture of several different kinds of rays, and this evidently complicates the matter, making any attempt at measuring their wave length especially difficult.

Lodge ("Electrician," London, July 17) thinks that the rays may be due to electrical vibration of the atom, while ordinary light is due to its mechanical vibrations. The absence of refraction may be explained by supposing the wave length to be very small compared to the molecular structure of the transmitting substances. The absence of polarization points to transverse vibrations, but it is difficult to show why these should be limited to very short waves. These difficulties have made some take refuge with Mr. Tesla in a theory of emitted particles "in some primary state" of matter, but this has peculiar difficulties of its own, and the question must still be regarded as unsettled.

It is believed by T. C. Porter ("Nature": see also "Electrical World," Dec. 5) that he has demonstrated the lack of homogeneity of the rays by producing three modifications of them, which he calls, respectively, X₁, X₂, X₃ rays. The first readily penetrate flesh, but bone is opaque to them; the second penetrate wood, but not flesh; and the third penetrate bone and flesh with almost equal ease. These three stages may be obtained by varying the frequency of oscillation by inserting a variable resistance in the discharge circuit. The Tesla coil, with its very high frequency, thus furnishes rays with a great penetrative power. C. L. Leonard (*ibid.*) has obtained similar results, separating what he regards as the true Röntgen rays from the outside cathode rays discovered by Lenard—a separation that he believes to be essential for obtaining the best X-ray effects.

Light may be thrown on the subject by the discovery of Becquerel and others (see PHYSICS, under *Light*) of phosphorescent radiations that are similar to X rays in many respects, including their ability to traverse some substances that are opaque to ordinary light.

See "Röntgen Rays and Phenomena of the Anode and Cathode," by Edward P. Thompson (New York, 1896); "Something about X Rays for Everybody," by E. Trevert (Lynn, Mass., 1896); "What is Electricity?" by John Trowbridge (New York, 1896); and "The X Ray, or Photography of the Invisible and its Value in Surgery," by Dr. W. J. Morton and E. W. Hammer (New York, 1896).

ROUMANIA, a monarchy in eastern Europe. The legislative power is vested in a Senate, containing 120 members, elected for eight years by property-holders divided into two classes, and a Chamber of Deputies, numbering 183 members, elected for four years by the people, divided into three electoral colleges. The reigning sovereign is Carol I, a prince of Hohenzollern-Sigmaringen, who was elected Domn of Roumania on April 20, 1866, and proclaimed King on March 26, 1881. The Cabinet in the beginning of 1896 was made up as follows: President of the Council and Minister of Foreign Affairs, Demeter Sturdza; Minister of Justice, E. Statesco; Minister of Instruction and Worship, P. Poni; Minister of War, Gen. C. Budisteano; Minister of Finance, G. C. Cantacuzeno; Minister of Agriculture, Industry, Commerce, and Domains, G. D. Pallade; Minister of Public Works, C. J. Stoicesco.

Area and Population.—The area of the kingdom is 48,307 square miles. The population is estimated to be 5,038,342. The number of marriages in 1895 was 43,237; of births, 238,920; of deaths, 156,791; excess of births, 82,129. The population of Bucharest, the capital, in 1892 was 196,372.

Finances.—The revenue for the financial year 1895 was 196,620,405 lei, or francs, and the expenditure 209,985,905 lei. The budget for 1896-'97 makes the revenue 209,928,000 lei, of which direct taxes produce 32,710,000 lei, indirect taxes 50,350,000 lei, state monopolies 48,350,000 lei, domains 25,000,000 lei, public works 15,300,000 lei, and the rest comes from the other departments and miscellaneous sources. The total expenditures are estimated likewise at 209,928,000 lei, of which 74,477,137 lei are required for the public debt, 42,409,100 lei for the army, 26,522,111 lei for public instruction, 24,493,049 lei for financial administration, 18,474,567 lei for the interior, 6,027,084 lei for the domains, 5,630,376 lei for public works, 6,904,556 lei for justice, 1,621,741 lei for foreign affairs, 66,500 lei for the Council of Ministers, and 1,301,725 lei as a fund for supplementary credits and extraordinary expenses.

The public debt on April 1, 1896, amounted to 1,164,531,036 lei. The charge for 1897 is 68,926,922 lei. A new loan of 90,000,000 lei was raised in Germany in April, 1896, on the same terms as the 4-per-cent. loan of 1894, for the construction of railroads and other public works.

Commerce.—The importations in 1895 amounted to 304,574,517 lei, and exportations to 265,048,411 lei. The exports of cereals were 194,900,000 lei; of fruits and vegetables, 34,500,000 lei; of animals and animal food products, 12,700,000 lei.

The commerce was divided between the different foreign nations as follows:

COUNTRIES.	Imports.	Exports.
Great Britain.....	58,984,000	75,363,000
Austria-Hungary.....	86,298,000	42,066,000
Germany.....	80,812,000	26,154,000
France.....	25,509,000	5,682,000
Turkey and Bulgaria.....	14,671,000	14,168,000
Russia.....	9,505,000	9,245,000
Belgium.....	14,720,000	75,579,000
Italy.....	6,089,000	10,631,000
Greece.....	1,846,000	507,000
Switzerland.....	4,788,000	844,000
Other countries.....	1,262,000	4,809,000
Total.....	304,574,000	265,048,000

During 1895 the number of vessels entered at the Roumanian ports on the Danube was 32,421, of 8,917,219 tons, and the number cleared was 32,219, of 8,978,219 tons. The merchant marine in 1896 comprised 28 steamers, of 1,054 tons, and 271 sailing vessels, of 60,024 tons.

Communications.—The railroads, all of which are state property, had in 1896 a length of 1,830 miles, not including 164 under construction, besides which surveys were made for 614 miles.

The telegraph lines of the state in 1895 had a length of 4,242 miles, with 10,067 miles of wire. There were sent during that year 1,710,524 internal, 485,124 foreign, 4,416 official, and 81,535 transit messages; total, 2,281,599. The receipts were 3,081,224 lei. The expenses of the telegraph and postal services together were 8,090,383 lei. The receipts from the post office were 5,544,903 lei. The number of letters carried was 12,169,815; of postal cards, 7,744,215; of newspapers and circulars, 23,438,805.

European Commission of the Danube.—Austria-Hungary, France, Germany, Great Britain, Italy, Roumania, Russia, and Turkey are represented on an International Commission exercising police and other sovereign rights on the Danube river below Braila and authorized to collect tolls from vessels to meet its expenses. It was created by the Treaty of Paris, signed March 30, 1856, and endowed with fuller powers by the Treaty of Berlin in 1878. The receipts in 1895 amounted to 3,083,121 francs, and expenses to 2,271,578 francs. The reserve funds at the close of that year amounted to 2,448,389 francs. The number of vessels that entered the Sulina mouth during 1895 was 1,619, of 1,554,698 tons, including 1,152 steamers, of 1,460,983 tons, and 467 sailing vessels, of 93,715 tons. Of the total number, 604, of 906,043 tons, were English vessels; 280, of 258,693 tons, were Greek; 377, of 93,385 tons, were Turkish; 83, of 91,009 tons, were Austrian; 55, of 56,146 tons, were Italian; 121, of 51,933 tons, were Russian; 26, of 30,561 tons, were French; 22, of 26,820 tons, were German; 14, of 16,376 tons, were Norwegian; 26, of 8,005 tons, were Roumanian; 3, of 6,041 tons, were Belgian; 3, of 4,704 tons, were Spanish; and 5, of 4,982 tons, were of other nationalities. The export of wheat in 1895 was 5,686,000 quarters; of rye, 1,388,000 quarters; of maize, 1,613,000 quarters; of barley, 1,529,000 quarters.

The international character of the Danube was first recognized by Austria and Bavaria in 1852, and afterward by Würtemberg, and confirmed by the Treaty of Paris. The Berlin Treaty extended the jurisdiction of the International Commission as far as Galatz. By the decision of a conference held in London in 1871 the execution of projected works for the removal of obstructions at the Iron Gates was intrusted to Austria-Hungary. The powers of the European commission were further extended and confirmed by a subsequent act signed in May, 1881, which prolonged its rights till 1904. The Iron Gates were opened on Sept. 27, 1896, rendering the whole river navigable for vessels of 2,000 tons burden up to the town of Passan, on the Austro-Hungarian frontier.

Political Affairs.—In April the Senate passed a bill suppressing two judgeships of the Court of Cassation, an act that the Opposition regarded as an infringement of the Constitution. Strong feelings were evoked by the deposition on June 1 of the Roumanian Metropolitan by the Holy Synod, and his condemnation was ascribed to political pressure. Diplomatic relations with Greece, broken off in 1892 because the Roumanian Government raised a claim to a legacy of 5,000,000 lei that the merchant Zappa bequeathed to the Greek nation, were resumed in July, 1896, the Roumanian courts having disallowed the claims of both governments and recognized the rights of Zappa's next of kin to the inheritance. The Roumanian Chamber met on Nov. 27. On Dec. 3 a new Cabinet was constituted as follows: Premier and Minister of Lands, M. Aurelian; Minister of the Interior, M. Lascar;

Minister of Justice, M. Pheudre; Minister of Public works, M. Porumbaro; Minister of Public Instruction and Worship, M. Mazerco; Minister of Finance, M. Cantacuzene; Minister of Foreign Affairs, M. Stoicesco. The ministerial crisis was brought about by popular dissatisfaction aroused by the manner in which the Government had dealt with Mgr. Gennadius, the metropolitan primate, who, after his condemnation by the Holy Synod on charges of grave infraction of the prescriptions of the Orthodox Church and of financial irregularities, was confined in a monastery. The people believed the charges to be fictitious or exaggerated. The Cabinet was forced to retire by popular indignation, but the change involved no change of policy or system, for the new ministers belonged to the same party as M. Sturdza and his colleagues. In accordance with an agreement concluded between the leaders of the Liberal and Conservative parties, the Holy Synod, on Dec. 17, annulled the sentence passed upon Mgr. Gennadius, who thereupon resigned his office, according to the arrangement.

RUSSIA, an empire in northern Europe and Asia. The throne is hereditary in the order of primogeniture in the dynasty of Romanoff-Holstein-Gottorp. The Emperor, otherwise called the Czar, is assisted by a Cabinet of ministers, each having charge of an executive department; by a Council of State that examines and passes upon projects of law submitted by the ministers; by a Ruling Senate that watches over the general administration and superintends the judiciary; and by a Holy Synod that directs religious affairs. The Czar is the head of the Russian national Church, which follows the Orthodox Greek Catholic rite and maintains the relations of a sister Church with the Patriarchates of Constantinople, Jerusalem, Antioch, and Alexandria. The Government of Russia is an absolute monarchy, in which the legislative, judicial, and executive powers are united in the Emperor. The reigning Emperor of All the Russias is Nicholas II, born May 18, 1868, who succeeded his father, Alexander III, on Nov. 1, 1894. The Committee of Ministers in the beginning of 1896 was as follows: Minister of the Imperial House and of the Imperial Domains, Count Vorontzoff-Dashkoff; Minister of Foreign Affairs, Prince Lobanoff-Rostovsky; Minister of War, Gen. P. S. Vannovsky; Minister of Marine, Admiral Tehikhatcheff; Minister of the Interior, J. L. Goremykin; Minister of Public Instruction, Count J. D. Delianoff; Minister of Finance, S. J. Witte; Minister of Justice, N. V. Muravieff; Minister of Agriculture and State Domain, A. S. Yermoloff; Minister of Public Works and Railroads, Prince Hilkooff; Minister and Secretary of State for Finland, Gen. von Daehn; Controller General, T. J. Filipoff; Procurator General of the Holy Synod, K. P. Pobedonostseff. After the death of Prince Lobanoff Secretary N. J. Stoyanovsky acted as Minister of Foreign Affairs until Count Muravieff was appointed in January, 1897.

Area and Population.—The area of European Russia is 1,902,092 square miles, and the population was estimated at 91,212,888 in the beginning of 1893; Poland, with an area of 49,157 square miles, had 8,982,253 inhabitants; the Grand Duchy of Finland, area 144,255 square miles, had 2,431,953; Northern Caucasia, comprising the provinces of Kuban, Stavropol, and Terek, with an area of 89,497 square miles, had 3,081,762; Transcaucasia, area 91,346 square miles, had 5,074,614; the Caucasus, area 180,843 square miles, had 8,156,376; the Kirghiz Steppe, comprising Akmolinsk, Semipalatinsk, Turgai, and Uralsk, area 755,793 square miles, had 2,059,535; Russian Turkestan, comprising Samarcand, Ferganah, Semirechensk, and Syr Daria, area 409,414 square miles, had 3,777,866; the Transcas-

pian territory, area 214,237 square miles, had 337,629, making the total population of the central Asian dominions, with an area of 1,548,825 square miles, including 169,381 covered by the Caspian Sea, 6,175,930; Western Siberia, comprising the provinces of Tomsk and Tobolsk, area 870,818 square miles, had 2,834,456; Eastern Siberia, comprising Irkutsk, Transbaikalia, Yakutsk, and Yeneiseisk, area 3,044,512 square miles, had 1,832,707; the Amur province and Primorskaya, area 888,830 square miles, had 209,528; Saghalien, area 29,336 square miles, had 26,590, making the total for Siberia 4,903,281 on an area of 4,833,496 square miles and the total for Russia in Asia, with an area of 6,564,778 square miles, 19,234,687; total population of the Russian Empire, with an area of 8,660,282 square miles, 121,861,781.

There were 4,365,542 births and 3,825,281 deaths in European Russia and Poland during 1892, showing an excess of 540,261 births; 78,537 births and 59,590 deaths in Finland, excess of births 18,947; 307,007 births and 309,999 deaths in the Caucasus, showing an excess of 2,992 deaths; 225,852 births and 209,128 deaths in Siberia, excess of births 16,724; and 77,985 births and 59,493 deaths in central Asia, an excess of 18,492 births. For the whole empire the births numbered 5,054,932 and the deaths 4,463,491, giving an excess of 591,432 births.

The population of the largest cities in 1893 was: St. Petersburg, 1,035,939; Moscow, 826,444; Warsaw, 490,417; Odessa, 328,014; Kharkof, 197,210; Kieff, 187,245; Riga, 183,071.

Finances.—The budget estimate of ordinary receipts for 1896 was 1,239,471,695 rubles, and of the total receipts, inclusive of 2,200,000 rubles from extraordinary sources and 119,876,299 rubles from the loan of 1891, was 1,361,547,994 rubles. (The exchange value of the ruble on April 1, 1896, was 36.4 cents.) Of the ordinary receipts, 48,023,965 rubles came from land and personal taxes, 43,352,800 rubles from trade licenses, and 13,159,000 rubles from a tax of 5 per cent. on incomes from capital, making the total receipts from direct taxation 104,535,765 rubles; 153,876,000 rubles came from customs, 284,252,000 rubles from the tax on drink, 32,461,000 rubles from the tobacco tax, 19,059,800 rubles from naphtha oils, 42,295,000 rubles from beet-root sugar, 7,518,000 rubles from matches, 28,919,232 rubles from stamps, 15,411,000 rubles from registration, 3,500,000 rubles from passports, 8,000,000 rubles from the tax on railroad and express passengers, 2,250,000 rubles from a tax on fire insurance, and 7,194,690 rubles from various duties, making the total receipts from indirect taxation 604,736,722 rubles; 3,828,761 rubles came from the mines, 953,750 rubles from the mint, 25,546,700 rubles from the post office, and 14,450,000 rubles from the telegraphs, making the total from state monopolies 44,779,211 rubles; the receipts from rent of domains were 14,073,131 rubles, from sales of domain lands 821,704 rubles, from the produce of state movable property 8,021,408 rubles, from forests 27,570,539 rubles, from mines, factories, technical institutions, and stores of the state 41,703,108 rubles, from state railroads 232,328,461 rubles, and from the Government share in private railroads 1,631,000 rubles, making the total from state domains and property 326,149,351 rubles; the payments for the redemption of land by peasants amounted to 89,000,000 rubles, and various receipts to 70,270,646 rubles, including 27,984,791 rubles from the recovery of loans, 14,822,014 rubles repaid by railroad companies, 17,951,527 rubles of interest on various funds, and 3,137,943 rubles of war indemnity. Of the total expenditures, amounting to 1,361,547,994 rubles, 1,231,088,414 rubles were ordinary disbursements and 130,459,580 rubles extraordinary outlay for the construction of railroads. Of

the ordinary expenditures, 269,228,063 rubles were for the debt, 2,434,087 rubles for the superior Government bodies, 17,487,903 rubles for the Holy Synod, 12,964,653 rubles for the Ministry of the Czar's Household, 4,693,280 rubles for the Ministry of Foreign Affairs, 288,521,969 rubles for the Ministry of War, 57,966,000 rubles for the Ministry of Marine, 186,811,134 rubles for the Ministry of Finance, 32,180,197 rubles for the Ministry of Domains, 90,024,643 rubles for the Ministry of the Interior, 24,863,061 rubles for the Ministry of Public Instruction, 196,411,583 rubles for the Ministry of Roads and Communications, 28,009,858 rubles for the Ministry of Justice, 5,936,395 rubles for the Controller General's office, 1,535,588 rubles for the imperial stud, and 12,000,000 rubles for unforeseen expenses.

The public debt on Jan. 1, 1896, amounted to 2,038,284,210 rubles of gold obligations (1 gold ruble = 77.2 cents) and 2,820,069,317 rubles payable in currency, making the total, reduced to credit rubles, 6,081,324,053 rubles. A new 3-per-cent. gold loan of 100,000,000 rubles was taken by German and French bankers in July, 1896, at 89½. In July the Government established a spirit monopoly for south Russia, taking over the sale of all liquors, partly with a fiscal object and partly in the interest of public health and morals.

The Army.—Military service is obligatory, beginning at the age of twenty-one and lasting in European Russia five years in the active army, in Russian Turkestan and the Amur and Pacific coast regions seven years, and in the Kouban and Terek provinces and the Transcaspian territory three years. The men who are not recruited in the permanent army and those who have served their time in the army and reserve make up the first ban of the territorial army. The field army on the war footing numbers 18,367 infantry officers and 1,053,349 men, 3,476 cavalry officers and 102,153 men, 2,608 artillery officers and 89,726 men, and 828 engineer officers and 39,350 men; total, 25,279 officers and 1,284,578 men. The reserve troops number 11,200 infantry officers and 673,480 men, 2,250 cavalry officers and 85,224 men, 810 artillery officers and 24,348 men, and 187 engineer officers and 8,970 men; total, 14,447 officers and 792,022 men. The fortress troops number 2,460 infantry officers and 167,348 men, 1,334 artillery officers and 77,554 men, and 260 engineer officers and 8,544 men; total, 4,054 officers and 253,446 men. The troops of replacement number 3,896 infantry officers, and 228,082 men, 794 cavalry officers and 38,920 men; 542 artillery officers and 29,414 men, and 112 engineer officers and 6,174 men; total, 5,344 officers and 302,590 men. The troops of national defense number 9,184 infantry officers and 627,792 men, 330 cavalry officers and 12,400 men, 420 artillery officers and 27,000 men, and 100 engineer officers and 4,740 men; total, 10,034 officers and 671,932 men. The frontier guards number 884 officers and 30,000 men. The army of Finland numbers 236 officers and 6,020 men on the peace footing. The army stationed in the far East, which was raised in 1895 to upward of 90,000 men, was further re-enforced in the spring of 1896 by the transport of troops from Russia to Vladivostok.

The Navy.—The Baltic fleet in 1896 comprised 9 armored battle ships, 3 modern armored coast guards, 4 of older construction, 3 ironclad floating batteries, 12 monitors, 13 cruisers of the first class, 10 of the second class, 5 torpedo cruisers, 4 armored gunboats, 10 coast-defense gunboats, 3 school ships, 6 steam yachts, 30 first-class torpedo boats, 82 torpedo boats of the second class, and 7 transports; total, 202 vessels, of 288,272 tons displacement and 335,874 indicated horse power, carrying 1,571 guns and 317 torpedo-launching tubes.

The fleet in the North Sea numbered 7 armor-clad battle ships, 3 circular monitors, 1 cruiser, 6 gunboats, 3 torpedo cruisers, 20 first-class and 8 second-class torpedo boats, 3 school ships, 3 unarmored steamers and 8 transports; total, 61 vessels, of 118,351 tons displacement and 138,426 indicated horse power, carrying 480 guns and 118 torpedo tubes.

The Siberian flotilla consisted of 1 first-class cruiser, 4 gunboats, 2 torpedo cruisers, 7 first-class and 8 second-class torpedo boats, 2 steamers, and 4 transports; total, 28 vessels, of 13,044 tons displacement and 29,555 indicated horse power, carrying an aggregate armament of 129 guns and 30 torpedo tubes.

The naval force on the Caspian Sea consisted of 2 gunboats and 5 steamers, carrying 20 guns in all.

The *personnel* of the navy in 1896 comprised 1,250 navy officers, 100 naval architects, 298 mechanics, 280 surgeons, 45 officers of maritime engineers, 422 officers and 560 employees in the central administration, and 34,500 under officers and sailors.

The Czar has approved estimates prepared by the Minister of Marine for seven years in advance. The total sum to be expended up to 1902 is 403,000,000 rubles, beginning with 57,500,000 for 1896, and increasing by 500,000 rubles annually till in 1902 it reaches 60,500,000 rubles. These annual sums are to be expended largely in the construction of new vessels, and will depend upon the development of the war fleets of foreign countries. The Russian war ships in foreign waters in 1896 were divided into two squadrons, a Pacific and a Mediterranean squadron. In the Pacific were stationed 1 armored battle ship, 6 first-class and 2 second-class cruisers, 2 torpedo cruisers, and 5 first-class gunboats; in the Mediterranean, 1 armored battle ship, and 2 first-class gunboats. The new war ships "Russia" and "Apraxin" were launched on May 12, 1896, on the Neva. The cruiser "Russia" is the largest ship in the navy and more powerful than the "Rurik," having a displacement of 12,195 tons, with engines of 17,000 horse power, expected to give a speed of 19 knots. The armor plates and belt are Harveyized steel made in Pittsburg, Pa. The armament will consist of 8-inch, 6-inch, 75-millimetre, 47-millimetre, and 37-millimetre guns, besides torpedo apparatus. This vessel will be followed by one of 14,000 tons that is intended to be the most powerful cruiser in the world. The "Apraxin" has a displacement of 4,126 tons, with armor plates 10 inches thick, and will carry an armament of 4 9-inch guns in revolving turrets and 22 rapid-fire guns, besides torpedoes, for which there are 4 dischargers.

Commerce.—The total value of the imports of merchandise in 1894 was 559,500,000 rubles, against 463,500,000 rubles in 1893 and 403,900,000 rubles in 1892; the total value of the exports was 684,500,000 rubles, against 613,700,000 rubles in 1893 and 489,400,000 rubles in 1892. Of the imports in 1894

and of the exports 488,400,000 and 596,100,000 rubles respectively passed the European frontiers, 18,900,000 and 15,300,000 rubles represented the trade with Finland, and 52,200,000 and 73,100,000 rubles the dealings by way of the Asiatic frontiers. The trade with the different foreign countries in 1894, exclusive of the movement of precious metals, was, in rubles, as in the preceding table:

The imports of Russia in Europe in 1895, comprising all that passed the European frontiers, including those of Finland and the Caucasus and Black Sea, amounted to 489,401,000 rubles, of which 67,652,000 rubles represent articles of alimentation, 2,883,000 rubles live animals, 282,373,000 rubles raw or partly manufactured materials, and 136,493,000 rubles manufactured articles; the exports amounted to 691,030,000 rubles, of which 385,647,000 rubles represent alimentary products, 15,138,000 rubles live animals, 260,044,000 rubles raw and partly manufactured materials, and 30,201,000 rubles manufactured products. The principal articles of importation were: Cotton, 59,439,000 rubles; machinery and agricultural implements, 58,632,000 rubles; iron, 38,422,000 rubles; wool, 31,825,000 rubles; tea, 19,163,000 rubles; colors, 16,133,000 rubles; coal, 15,553,000 rubles; chemicals and drugs, 12,430,000 rubles; fish, 12,177,000 rubles; iron manufactures, 10,908,000 rubles; skins, 10,065,000 rubles; fruits, 9,069,000 rubles; wine, 7,027,000 rubles; oils, 6,909,000 rubles; writing materials, 6,804,000 rubles; raw silk, 6,804,000 rubles; aluminium bronze, 6,275,000 rubles; watches, 5,710,000 rubles; coffee, 5,604,000 rubles; sheet metal, 5,484,000 rubles; indigo, 5,110,000 rubles; woollens, 4,625,000 rubles; lead, 4,551,000 rubles. The principal exports from European Russia to Europe in 1895 were: Cereals, 323,177,000 rubles; flax, 72,364,000 rubles; seeds, 41,627,000 rubles; timber, 37,660,000 rubles; petroleum, 26,740,000 rubles; eggs, 19,775,000 rubles; hemp, 19,212,000 rubles; animals, 15,138,000 rubles; sugar, 11,850,000 rubles; legumes, 11,172,000 rubles; skins, 8,295,000 rubles; hair and bristles, 8,132,000 rubles. The goods imported into Russia from European countries in 1894 exceeded by 92,000,000 rubles the similar imports of 1893, and of this increase 45 per cent. was due to the extension of German trade, which now has the leading position formerly occupied by British imports. The imports into Germany from Russia increased at the same time 11 per cent. The exports of breadstuffs from European Russia in 1895 were less in quantity than in the previous year, 184,000,000 hundredweight against 205,000,000 hundredweight, due to a decline in the exports of barley, oats, and corn.

The total trade in 1895 was less in value than that of 1894, but the decrease is due to the cessation of the heavy importations by the Government in 1894 of gold and silver bullion. The merchandise trade exceeded that of the former year. The satisfactory results are attributed in great measure to the fixity of the value of the ruble, which the Minister of Finance has maintained at considerable cost to the country at large.

Navigation.—There were 282 Russian vessels, of 31,000 tons, and 401 foreign vessels, of 234,000 tons, entered in the ports of the White Sea in 1894; 734 Russian vessels, of 255,000 tons, and 4,844 foreign vessels, of 3,088,000 tons, entered at Baltic ports; and 410 Russian vessels, of 405,000 tons, and 5,361 foreign vessels, of 5,830,000 tons, entered in the ports of the Black Sea and the Sea of Azof; total in all the ports, 12,032 vessels, of 9,843,000 tons. The total clearances were 11,926, of 9,789,000 tons. The merchant marine in 1895 comprised 322 steamers, of 153,923 tons, and 1,733 sailing vessels, of 359,740 tons.

Railroads.—During 1894 and 1895 the Russian Government acquired the principal railroads from the companies. There were in operation on Sept. 1, 1895, in Russia, Siberia, and Caucasia 13,506 miles of state railroads and 7,427 miles of private lines; in Finland, 1,397 miles; in the Transcaspiian territory and Turkestan, 890 miles; making a total of 23,220 miles. There were under construction 7,844 miles in Russia, Siberia, and the Caucasus, 166 miles in Finland, and 96 in Turkestan; total, 8,106 miles. The Trans-Siberian railway is expected to be completed before 1905, a length of 4,950 miles, costing 150,000,000 rubles. The section of 493 miles from Chelyabinsk to Omsk was completed before the end of 1895, the section of 384 miles from Omsk to the Ob river was nearly ready, on the section of 476 miles from the Ob to Krasnoyarsk the rails were down, and work was proceeding on the next section of 672 miles to Irkutsk and the one from Mysovaya to the head of navigation on the Amur river, which was 701 miles. The section from Vladivostok, the terminus on the Pacific coast, to Graftskaya, on the Usuri, 250 miles, was also nearly completed, and the next one of 225 miles to Khabarovsk, on the Amur, was partly built. The parts completed had a length of 1,086 miles. There were 24,080 miles altogether in operation in the empire on Jan. 1, 1896. During 1896 there were 918 miles of rail laid on the Trans-Siberian Railroad, making a total length of 1,728 miles completed by Dec. 31, 1896, including the branch of 150 miles from Chelyabinsk to Ekaterinburg. The section between the Ob and the Yenisei was in operation and more than one third of the total distance of 4,547 miles from Chelyabinsk to Vladivostok was laid down, more than half the distance in direct Trans-Siberian communication, and direct communication was established by the completion of the Ekaterinburg branch between St. Petersburg and the Yenisei.

A line 619 miles long is projected to be built from Perm to Kotlas, on the Dvina, at a cost of 35,000,000 rubles. A new railroad in Caucasia will connect Kars with Tiflis, a distance of 188 miles. In central Asia a line will run from Samarcand to Andijan, in Fergana, 342 miles, including a branch to Tashkend, the estimated cost being 27,000,000 rubles.

Posts and Telegraphs.—The postal traffic in 1894 was 207,441,000 internal and 26,977,000 foreign letters, 36,629,000 internal and 5,053,000 foreign postal cards, 52,026,000 internal and 19,300,000 newspapers and pamphlets, and 15,785,000 internal money letters and 544 foreign ones, transmitting 20,273,179,000 and 481,497,000 francs. The receipts of the post office were 151,490,312 francs. The expenses of the postal and telegraph services were 110,123,836 francs.

The state telegraphs in 1894 had a total length of 76,623 miles, with 152,540 miles of wire. The length of the Anglo-Indian line in Russian territory is 2,256 miles, with 5,829 miles of wire. There were 385 miles of private telegraphs, with 470 miles of wire. The number of internal dispatches sent in 1894 was 11,132,794; the number of foreign dispatches received 908,505, and sent 931,234; of transit dispatches, 173,278; of official dispatches, 825,746; total, 13,971,647; receipts, 50,524,572 francs.

Currency.—The legal monetary unit is the silver ruble, containing in the new coinage 19.9957 grammes of silver 0.900 fine, or 17.994 grammes of fine silver. The money in circulation has been paper for a long period. The value of the paper ruble fluctuated formerly, not only in relation to gold, but in relation to the silver ruble. In 1890 the rate adopted in the budget was 1.60 of paper to 1 silver ruble. By placing in circulation new silver currency, coined in France, withdrawing a large part of the paper notes issued by the Bank of Rus-

sia on account of the Government, requiring the bank to strengthen its coin reserve for the protection of its own notes, and accumulating an immense gold reserve, the Government has succeeded in raising the exchange value of the paper ruble, making it identical with the silver ruble, and in raising that of the silver ruble also in the foreign exchange markets. There were 1,046,281,634 paper rubles in circulation in December, 1895, covered by a metallic reserve of 375,000,000 gold rubles, besides 75,000,000 rubles of temporary emissions that were fully covered. The gold coins of Russia are the imperial and half imperial, the latter containing 5.9957 grammes of fine gold. The imperial, or 10-ruble piece, of the new coinage, contains 11.6118 grammes of fine gold. The Ministry of Finance fixed the value of the gold imperial for 1896 at 15 paper rubles, thus establishing a ratio of 1.50 to 1 between the gold ruble and the paper and silver rubles. The gold ruble is worth 77.2 cents. The bullion value of the silver ruble on Oct. 1, 1896, was 39.2 cents. In 1891 the silver ruble was taken by the Government at 60 per cent. premium above the paper ruble, but since 1894 they have stood at par. The addition of 75,000,000 gold rubles to the exchange fund in March, 1896, brought the metallic reserve up to 500,000,000 gold rubles. The debt contracted by the Government through the issue of credit rubles amounted at that date to one third of the entire paper circulation. A further redemption of credit rubles was proposed, and a complete reform of the currency was contemplated. M. Witte's plan was to issue a new gold currency, in which the coins would correspond to the silver and paper ruble in value. The new pieces would thus contain two thirds as much gold as the existing gold coins of the same denominations, which until their withdrawal and recoinage would still continue to circulate at the fixed legal premium of 50 per cent. Having begun by the compulsory circulation of the silver ruble at a par with its paper equivalent and of the old gold pieces of 5 and 10 rubles at a premium fixed by him for twelve months in advance, the minister expected to complete the restoration of a metallic currency by coining and issuing the gold fund accumulated in the Imperial Bank, which was large enough to give 750,000,000 rubles of the proposed new gold coins, with which 1,000,000,000 rubles of paper could be kept in concurrent circulation. The credit rubles of the Government would all be called in and the Bank of Russia would be compelled to hold a metallic reserve to cover 50 per cent. of its emissions up to 1,000,000,000 rubles and to cover fully all issues over and above that amount. M. Witte compelled the bankers to accept gold certificates by threats of retaliation through the state bank. The new silver currency was greatly augmented in 1896 and a new copper coinage was struck at the mint in Birmingham. All Russian officials were paid partly in gold and partly in silver, and the public, which in some remote districts refused to take the new currency, was compelled to accept the metal.

Coronation of the Emperor.—The Emperor Nicholas II and Empress Alexandra Feodorovna, who was Princess Alix of Hesse, went through the ceremony of coronation in the Grand Kremlin at Moscow on May 26, 1896. The ceremonial and the accompanying festivities, which lasted nearly three weeks, were of unexampled splendor. Besides representatives of all the reigning houses of Europe, the chief dignitaries of the Russian Empire were present and several of the potentates of Asia who acknowledged the sovereignty of the Czar. The Czar made his formal entry into the ancient capital of the empire from the adjacent Petrowsky palace on May 21, on May 26 he placed upon his head the

imperial crown and was anointed with the holy oil, and on May 30 took place the great popular celebration, when the dwellers in Moscow and in the surrounding country, many of whom came hundreds of miles on foot, were feasted on the Khodinsky plain, and each one received as a memento an inscribed and decorated mug. This feature of the prolonged pageant was marred by a terrible disaster. The barriers that were placed to regulate the flow of the crowds that had begun to assemble upon the spot the day before proved to be too weak. The people pressed forward until the barriers gave way, and the throng could no longer be checked. The result was that above 2,000 persons were crushed to death and a great number seriously injured. The disaster caused general sorrow in Moscow and throughout Russia. The Czar issued a proclamation on the day of the coronation remitting all arrears of taxation in European Russia and Poland; remitting or reducing all fines; lowering the land tax one half for the period of ten years; canceling sentences for crimes, except robbery, embezzlement, misappropriation, usury, extortion, fraudulent bankruptcy, and offenses against honor; directing that all exiles to Siberia and Saghalien shall, after serv-

ing ten or twelve years of their sentences, have the privilege of selecting their place of residence, and remitting one third of the sentences of criminals imprisoned in Siberia; authorizing the Minister of the Interior, in conjunction with the Minister of Justice, to grant further remissions and to restore their civil rights to political offenders; and granting full amnesty to refugees who took part in the Polish rebellion, with exemption from police supervision, as well as immunity to other political offenders whose offenses are more than fifteen years old. From Moscow the Czar and his court proceeded to Nijni Novgorod, where, on June 9, an Exhibition of All the Russias was opened. This great Pan-Russian exhibition of industry and art was directed to be held at this time by the Emperor Alexander III, on July 4, 1893, and the work of organization was intrusted to M. Witte, the Minister of Finance, who made it his aim to collect such objects as would best show to Russia and to the world at large the moral and economic growth of the country and the strides that had been made since the last exhibition at Moscow in nearly all branches of trade and industry, in engineering and mechanics, in national sanitation and education, and in art and taste.

S

SALVADOR, a republic in Central America. The legislative body is a single Chamber of 42 members, elected for each annual session by direct universal male suffrage. The President, who is elected by the vote of the nation for four years, is Gen. Rafael Antonio Gutierrez, inaugurated on March 1, 1895. The Vice-President is Dr. Prudencio Alfaro, who is also Minister of the Interior. Dr. Jacinto Castellanos is Minister of Foreign Affairs, Dr. Cornelio Lemus Minister of Finance and Public Works, and Estanislao Perez Minister of War and Marine.

The area of Salvador is 8,100 square miles. The population was 803,354 at the end of 1894. The revenue is derived mainly from customs and excise duties. Nearly half the revenue is required for financial administration and the debt, which amounts to over \$13,500,000, and more than a third for the army, numbering 4,000 men. A railroad connects the port of Acajutla with Santa Anna, and one runs between San Tecla and Ateos, the total length being 62 miles. Others are being built.

Political Affairs.—The diet of the new confederation called the Greater Republic of Central America was installed in San Salvador on Sept. 15, 1896. Though outwardly quiet, Salvador was disturbed throughout the year by fears of new attempts of the Ezetes to overthrow the Government of President Gutierrez, possibly with the aid of President Barrios of Guatemala, who was jealous of the newly constituted Greater Republic of Central America, which was an obstacle to the assertion by Guatemala of predominance over the lesser Central American states. There was a revolutionary outbreak at Santa Anna in November, which was suppressed without serious consequences, the plans of the conspirators having been discovered and their purposes foiled by the watchfulness of the Government.

SANTO DOMINGO, a republic in the West Indies, occupying the eastern part of the island of Hayti. The Congress is a single Chamber of 24 members elected by indirect suffrage for four years. The President is Gen. Ulisses Heureaux, first elected in 1885 and re-elected for the second time on

Feb. 27, 1893. The Vice-President is Gen. Wenceslao Figuereo. The area of the republic is estimated at 18,045 square miles, and the population has been officially estimated at 610,000. The people are a mixed race of Spanish, Indian, and negro extraction, speaking mostly Spanish. There are 117 miles of railroad and 266 of telegraphs. The receipts of the Government in 1895 were \$1,382,704, of which \$1,329,522 came from customs. The public debt on Jan. 1, 1895, was £1,905,035 sterling, besides \$2,058,415 in gold, and \$4,790,520 in currency. The value of the imports in 1895 was \$1,731,669, and of the exports \$1,764,064 in gold. The chief exports are logwood, mahogany, coffee, fustic, rum, tobacco, cacao, and honey. The heavy customs duties impede the expansion of the foreign trade. During 1893 there were 192 vessels, of 102,532 tons, entered at the port of Santo Domingo, and 129, of 147,347 tons, at Puerto Plata in 1893.

Political Affairs.—President Heureaux had to deal with a fresh conspiracy against his power in the spring of 1896. This he nipped in the bud by the vigorous and relentless methods that he is accustomed to apply to his enemies. Gen. Ramon Castillo, the Minister of War, had asked him some months before for 1,000 rifles and ammunition to suppress, as he said, an outbreak against the President that was planned in the province of San Pedro Macori. He received the arms and was authorized to go to that province and assume command of the Government forces. The President heard no more of the revolutionary movement that his minister had described, but he heard later that Gen. Castillo had distributed the rifles among disloyal persons in the province of Macori, and that the minister was himself conspiring against him with the aim of asserting by means of arms his own candidature for the presidency of the republic. Immediately after this intelligence reached the capital, orders were sent to Gen. José Estay, Governor of Macori, to kill Gen. Castillo before he could make any attempt to raise a rebellion. The son of Gov. Estay attempted to execute this order, but the shot that he fired at Gen. Castillo missed him and killed his son, who was walking by his side. Suspecting

that the attempt on his life was made by the President's orders, he refused to return to the capital when a summons came shortly afterward ordering him to come at once to take charge of important affairs in the War Department, replying frankly that he was mindful of the fate of a former Minister of War and of the Governor of San Pedro Macori, whom he had himself shot in 1893, obeying secret orders of the President. President Heuraux, seeing that Castillo was strong enough to resist an attack of Government troops, is supposed to have disarmed suspicion by intimating in his reply that Gov. Estay was the sole author of the attempt on the life of the minister. He directed Castillo to arrest Estay and bring him to the capital to be tried for the crime. The minister was caught in the trap that was laid for him. As soon as he arrived with his prisoner, the latter was set free, and he was himself placed under arrest, deprived of his office two days later by the Congress, and taken on a war ship back to San Pedro Macori by the President, who ordered that he be shot as soon as they landed at La Caleta, and immediately afterward had Gen. José Estay also shot for failing to have Castillo killed as directed. At the general election, held on Nov. 1, Gen. Ulisses Heuraux was re-elected to serve his fourth term as President.

SERVIA, a monarchy in southeastern Europe. The legislative body is the Skupshtina, a single Chamber of 134 members, elected by the direct suffrage of male adult citizens who pay 15 dinars, or francs, in direct taxes. The King, Alexander I, born Aug. 14, 1876, suspended the Constitution in 1894 and revived the earlier one of 1869 pending the adoption of a new Constitution, to be drawn up by a commission of the leading members of all political parties. The Prime Minister in 1896 was Stoyan Novakovich; Minister of the Interior, D. Marinkovich; Minister of Justice, A. Nintshich; Minister of War, Gen. D. Franassovich; Minister of Finance, H. Popovich; Minister of Public Instruction and Worship, L. Kovachevich; Minister of Commerce, Agriculture, and Industry, W. Stoyanovich. Capital, Belgrade.

Area and Population.—The area of the kingdom is 19,050 square miles. The population present at the census of Dec. 31, 1895, was 2,314,153, divided into 1,188,909 males and 1,125,244 females. The number of marriages in 1895 was 20,599; of births, 101,676; of deaths, 62,184; excess of births, 39,492. The city of Belgrade has 58,992 inhabitants.

Finances.—The budget for 1896 makes the total revenue 63,659,720 dinars, of which 20,803,720 dinars come from direct taxes, 5,000,000 dinars from customs, 2,927,000 dinars from excise, 2,500,000 dinars from courts of law, 17,159,000 dinars from monopolies, 3,428,000 dinars from domains, posts, etc., 5,700,000 dinars from railroads, 852,000 dinars from educational and sanitary funds, and 5,290,000 dinars from various sources. The total expenses are estimated at 63,355,607 dinars, of which 1,200,000 dinars are for the civil list, 360,000 dinars for allowance to ex-King Milan, 28,640 dinars for court officials, 17,747,506 dinars for service of the debt, 120,000 dinars for the Skupshtina, 156,310 dinars for the Council of State, 234,000 dinars for general expenses, 2,251,858 dinars for pensions and subventions, 1,616,128 dinars for the Ministry of Justice, 4,822,180 dinars for the Ministry of Education and Worship, 1,231,985 dinars for the Ministry of Foreign Affairs, 2,765,765 dinars for the Ministry of the Interior, 8,202,475 dinars for the Ministry of Finance, 14,115,393 dinars for the Ministry of War, 3,948,633 dinars for the Ministry of Public Works, 3,001,229 dinars for the Ministry of Agriculture and Commerce, 348,453 dinars for miscellaneous expenses, and 1,205,032 dinars for the Board of Control. The

debt on Jan. 1, 1896, amounted to 413,607,500 dinars, of which 355,692,000 dinars represent the 4-per-cent. conversion loan.

The Army.—By virtue of the law of Nov. 13, 1886, and the supplementary law of Jan. 6, 1896, military service is obligatory, beginning at the age of twenty-one and lasting ten years in the active army, two with the colors and eight in the reserve, ten years longer in the first ban, and ten in the second ban of the national militia. The budgetary effective of the army in 1896 was 600 officers and 14,000 men in the infantry, 80 officers and 1,400 men in the cavalry, 220 officers and 4,000 men in the artillery, 50 officers and 1,000 men in the engineers, 10 officers and 300 men in the train, and 10 officers and 500 men in the sanitary troops; total, 970 officers, exclusive of staff and superior authorities, and 21,200 men with 4,846 horses and 184 guns. The war strength of the regular army is 148,022; of the first ban, 125,516; and of the second ban, 63,785; total, 337,323 men.

Commerce.—The total value of the imports in 1895 was 28,240,000 dinars, of which 16,624,000 dinars came from Austria-Hungary, 2,435,000 dinars from Great Britain, 2,087,000 dinars from Turkey, 1,929,000 dinars from Germany, 1,341,000 dinars from Russia, 1,213 dinars from Roumania, and 1,163,000 dinars from America. The total value of the exports was 43,390,000 dinars, of which 38,746,000 dinars went to Austria-Hungary, 1,617,000 dinars to Germany, and 1,421,000 dinars to Turkey. Of the exports 16,046,000 dinars represented horticultural and agricultural products, mostly dried prunes, and 18,984,000 dinars animals and animal products, mostly hogs.

Communications.—There are 335 miles of railroad. The telegraphs have a length of 1,971 miles, with 4,128 miles of wire. The number of dispatches in 1895 was 900,692, of which 770,956 were internal, 119,112, international, and 10,624 transit dispatches. The post office in 1894 carried 10,316,000 internal and 7,356,000 international letters and newspapers. The receipts of the postal and telegraph services were 1,009,364 and expenses 1,269,480 dinars.

Political Affairs.—The Radicals announced in January their intention to resume political activity. On Aug. 9 a mass meeting was held outside Belgrade at which 20,000 Radicals demanded the restoration of a constitutional régime and petitioned the King to put an end to the present intolerable situation. King Alexander received the deputation of the Radicals, and informed them that he was occupying himself with the constitutional question, and that a solution would be reached at the beginning of next year. The Radicals asserted that the *coup d'état* of 1894 had thrown the country into confusion and disorder, raised a barrier between the King and his people, and lowered the prestige of Serbia abroad. The question of chief political interest in 1896 was the treatment of Servian swine by the Austro-Hungarian customs officials, which has been the ground of a standing feud and has contributed as much as anything else to the estrangement between Serbia and its former protector and ally and the *rapprochement* with Russia. The Servians accuse the Hungarians of infringing the existing treaty of commerce by periodically prohibiting the importation of Servian hogs on alleged sanitary grounds, whereas their hogs are free from disease and the real object of the sanitary regulations is to protect the Hungarian hog-raising industry. The Servians refused to be officially represented at the millennial celebration in Buda-Pesth, on the ground that the old Servian flag would figure there among the trophies of Hungarian victories. On May 2 a party of students burned a Hungarian flag in one of the public squares of Belgrade, and in the evening an angry

mob carrying Servian, Russian, and French flags made a demonstration in front of the King's palace, and was only prevented by a strong force of gendarmes from attacking the Hungarian industrial museum. This alarmed the Servian Government, which made many arrests, and afterward dismissed the prefect of Belgrade and the commandant of the gendarmerie. Explanations were made to the Austrian legation that were accepted as satisfactory. The experiment of granting large remissions of taxes and other privileges and bounties to a company that undertook to slaughter from 10,000 to 30,000 Servian hogs for export to other countries besides Austria-Hungary was not successful. A solution of the difference respecting the admission of Servian hogs into Hungary was agreed to in principle at Vienna on July 15.

SIAM, an absolute monarchy in southeastern Asia. The reigning King is Klulalongkorn, born Sept. 21, 1853, who succeeded his father, Maha Mongkut, on Oct. 1, 1868. The boundaries of the kingdom never have been well defined, as the border lands are occupied by tribes more or less independent, which have at times acknowledged allegiance to the King of Siam and at other times to Burmah, China, Cambodia, or Annam. The states of Kedah, Patani, Kelantan, and Tringganu, in the Malay peninsula, and Chiengmai, Lakon, Lamponchi, Nan, Pree, and other Laos states acknowledge the sovereignty of Siam and send tribute to Bangkok. The Shan States, in the north, were claimed and conquered by Great Britain after the annexation of upper Burmah to British India, and in 1891 the frontier between Burmah and Siam was delimited by a commission, which gave these territories to Burmah as far as the Mekong river. Other territories on the east bank of the Mekong were also claimed as Burmese by historical right, and of these Great Britain conceded Kiang-Kheng to Siam and ceded Kiang-Hung in the north to China in 1894. The object was to create a buffer territory between the French and British possessions. To all these territories east of the Mekong the French republic asserted a claim as successor to the rights of the King of Annam. Between the Mekong and the Annam hills Siam formerly claimed a large territory that is now acknowledged to belong to France. On Oct. 3, 1893, at the conclusion of hostilities between France and Siam, a treaty was made constituting the river Mekong the boundary between Siam and the French possessions, but granting to France a sphere of interest, within which the French have the right to erect stations, comprising a strip 25 kilometres broad on the west bank of Mekong river through the whole length of the Kingdom of Siam. The territory formerly claimed by Siam over which the French established claims of sovereignty between 1893 and 1896 has an area of 110,000 square miles. The territory remaining to Siam after the appropriations of France and Great Britain has an extent of about 300,000 square miles. The population was formerly estimated at 8,000,000, comprising 2,500,000 Siamese, 2,000,000 Laotians, 1,000,000 Chinese, 1,000,000 Malays, and 1,500,000 Burmese, Indian, and Cambodian immigrants. The people are mostly Buddhists. Their economical condition is very low, owing to the state of serfdom in which they are kept by the official class, who exact forced labor from one to four months in the year, taking the laborers from the rice fields often when they need the most attention. Domestic slavery is disappearing, but slavery for debt is common. The main part of the work in the mines and mills of the south is done by Chinese coolies. In the teak forests of the north Burmese and Karens are employed.

Besides rice, of which 485,255 tons were exported from the short crop of 1894, the chief products for

export are pepper, salt and dried fish, and sesame. The teak-cutting industry is in British hands. Mining for sapphires and rubies is carried on in some of the eastern districts. In the Malay peninsula are valuable tin mines. French and English companies are engaged in gold mining. The trade with other countries is in the hands of foreigners, and Chinese are acquiring an increasing share of it. The trade is mainly with Singapore and Hong-Kong. The total value of the imports in 1894 was £1,708,345, and of the exports £2,466,895. The chief imports are cotton cloth, opium, silks, sugar, kerosene, hardware, and jewelry. The values of the leading exports in 1894 were: Rice, £1,689,527; fish, £180,969; teak, £140,020; other woods, £35,681; birds' nests, £44,340; cattle, £46,539; pepper, £31,552; hides, £18,974; lac, £14,890. Telegraphs have been built for a length of 1,780 miles, but since the dismissal of foreign employees the wires are seldom in working order. A railroad from Bangkok to Paknam, a distance of 14 miles, was opened in April, 1893. The survey of a line to Chiengmai and the northern and eastern parts of Siam was begun in 1888, and one has been sanctioned from Bangkok to Banmai, on the Petriou river. A concession has been granted for a line across the Malay peninsula, from Singora to Kota Star, and thence to Kulim, a total distance of 135 miles. These enterprises have been proposed by Englishmen, a company of whom has undertaken and begun the construction of a line, 165 miles in length, from Bangkok to the rice-growing district of Korat. In July, 1896, the Siamese Government proceeded to take possession of the works because the contract was not being executed with the stipulated celerity. The King of Siam has a revenue of about £2,000,000 a year, derived from land taxes, a tax on fruit trees, customs, tin mines, edible birds' nests, fisheries, and licenses for gambling-houses and the sale of opium. He maintains an army of the nominal strength of 12,000 men, of whom 5,000 are kept under arms and are partly instructed by European officers. There are 80,000 modern rifles and numerous cannon in the royal arsenals. The naval force consists of 11 armed vessels of over 500 tons and 11 smaller ones. During the warlike operations of 1893 France took possession of the port of Chantabun, which the French have since occupied.

In 1895 the Chinese Government made a treaty conceding the French right to the territories on the upper Mekong that Great Britain had transferred to China. Subsequently the English Government abandoned the idea of preserving buffer states between the French and British possessions, over which question the relations between the two governments had been strained and came to an amicable agreement conceding these territories to France. On Jan. 15, 1896, the English Minister of Foreign Affairs, Lord Salisbury, and the French ambassador to England, Baron de Courcel, signed a declaration mutually guaranteeing the neutrality and inviolability of the basin of the Menam and the coast streams and recognizing the French claims to the Mongsin district of Keng-Cheng, on the east bank of the upper Mekong. The district into which France and Great Britain agreed not to advance their armed forces without the consent of the other party, and within which they engaged not to acquire any special privilege or advantage that shall not be enjoyed in common and be equally open to both Great Britain and France and their nationals and dependents, was defined as comprised in the basins of the Pechaburi, Mekong, Menam, and Bangpakong, or Petriou, rivers and their tributaries, together with the extent of coast from Muong-Bang-Tapan to Muong-Pase, the basins of the rivers on which those two places are situated, and the basins

of the other rivers the estuaries of which are included in that coast, and including also the territory lying to the north of the basin of the Menam situated between the Anglo-Siamese frontier, the Mekong river, and the eastern watershed of the Meng. The two powers engaged not to enter into any separate agreement permitting a third power to take any action from which they were bound by their declaration to abstain. From the mouth of the Nam-Ihuok northward as far as the Chinese frontier the *thalweg* of the Mekong was declared to form the limit of the possessions or spheres of influence of France and Great Britain. The two governments agreed further that all commercial and other privileges and advantages conceded in the Chinese provinces of Yunnan and Szechuen either to Great Britain or France, in virtue of their respective conventions of March 1, 1894, and June 20, 1895, as well as all privileges and advantages of any nature that may in future be conceded in those two provinces, shall, as far as rests with them, be extended and made common to both powers and to their nationals and dependents, and they engaged to use their influence and good offices with the Chinese Government for this purpose.

The disputed area conceded to France in this agreement covers 1,292 square miles and has a population estimated at 4,000 Shans and 5,000 hillmen. Mongsin, which had been occupied by the British, was evacuated on May 11. The French on taking possession reinstated the Myosa or chief whom the English had deposed. The part of Siam of which the two powers guaranteed the integrity is less in extent than the Mekong watershed, which is left out of the agreement, but is the most populous and productive part of the kingdom, having 5,000,000 inhabitants and producing the bulk of the rice crop and containing the most valuable teak forests. An area in the southwest, bordering on Burmah, is excluded from the guarantee, as well as the eastern parts of Siam. In the southeast the French include in their zone of influence and protection the provinces of Battambang and Angkor, over which they claim rights of sovereignty by a title derived from the kings of Cambodia, but this right is not acknowledged by Siam or by Great Britain.

SOUTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution May 29, 1788: area, 3,750 square miles. The population, according to each decennial census, was 249,073 in 1790: 345,591 in 1800: 415,115 in 1810: 502,741 in 1820: 581,185 in 1830: 594,398 in 1840: 668,507 in 1850: 703,708 in 1860: 705,606 in 1870: 995,577 in 1880; and 1,151,149 in 1890. Capital, Columbia.

Government.—The State officers in 1896 were: Governor, J. Gary Evans; Lieutenant Governor, W. H. Timmerman; Secretary of State, D. H. Tompkins; Treasurer, W. T. C. Bates; Attorney-General, William A. Barber; Comptroller, James Norton; Superintendent of Education, W. D. Mayfield; Adjutant General, J. Gary Watts; Railroad Commissioners, W. D. Evans, J. C. Wilborn, H. R. Thomas; Dispensary Commissioner, F. M. Mixson—all Reform Democrats; Chief Justice of the Supreme Court, Henry McIVER; Associate Justices, Eugene B. Gary, Ira B. Jones, and Y. J. Pope—Democrats.

Finances.—The Governor says in his message that the State finances have never before been in as good condition as now. The State debt is smaller, having decreased from \$11 *per capita* to \$4. The following figures are given for 1896: Acres of land returned, 18,105,122; value of real estate, \$100,976,705; of personal property, \$45,838,607; of railroad property, \$23,940,162; total taxable property, \$170,755,474; number of polls assessed, 158,824; total

taxes, \$2,317,889. The dispensary has paid into the State treasury \$100,000, and to towns and counties \$122,000. The interest on the public debt has been decreased \$78,500.

Education.—The enrollment in the public schools in 1896 was 232,337, of whom 109,159 were white and 123,178 colored. The increase this year consists of 3,886 colored and 5,430 whites. The value of school buildings is \$821,329, an increase of nearly 100 per cent. since 1890. The amount available for school purposes in 1890 was \$527,846; in 1896 it was more than \$800,000. This includes the 1-mill tax imposed by the Constitution, which also provides for the collection of a supplementary tax by the Comptroller General and for the application of escheated estates and the dispensary profits to this fund. The length of the school term has been gradually increased.

The total enrollment at the Military Academy was 127, fewer by 19 than in 1895. Of these 67 are beneficiaries. The estimate of maintenance for a year is \$20,000.

The Institute for the Deaf and Dumb and the Blind requires \$19,000 for a year's support and \$13,520 for improvements.

During the two years it has been in operation the Winthrop Normal and Industrial College has given instruction to 335 college students and 72 children in the practice school. The normal department graduated 22 this year, and certificates of proficiency were given to 11 in stenography and typewriting and to 3 in dressmaking. The estimate for maintenance one year is \$33,303. To finish the new dormitory \$29,613 is required.

The Colored Normal and Industrial College was opened in October and 960 students were enrolled. The accommodations are hardly sufficient for 600. The buildings have cost about \$11,000. The faculty consists entirely of colored teachers, with Thomas E. Miller as president.

The number at the South Carolina College enrolled in 1896 was 161, of whom 157 were from 29 counties in the State, 2 from Virginia, and 2 from North Carolina. There were 17 special students and 14 law students. The number of young women enrolled as students was 14; last year there were 13.

At Clemson Agricultural College 350 students were enrolled, a smaller number than in 1895. The total amount received from the privilege tax this year is \$49,872.37. The expense charged against this department is \$4,533.82, leaving for the college from net proceeds of the privilege tax \$45,340.55. The other revenues are: Interest from Land Scrip fund, \$5,754; interest from Clemson bequest, \$3,512.36; from incidentals, \$554.95; total, \$55,161.86.

The fund received from the Government is devoted to the use of the experiment station.

State Institutions.—At the Hospital for the Insane the number of patients under treatment during the year was 1,247; the daily average was 853, and 856 remained at the close of the year. The Legislature authorized the purchase of about 110 acres adjoining the hospital property, on which were 4 dwellings, at a cost of \$27,000. Some smaller purchases also were made; to meet the expense \$20,000 of bonds were sold and a part of the purchase money was drawn from the maintenance fund. The total expenses of the institution were \$157,100.07, which exceeds the income by \$1,058.23.

The cost *per capita* was \$107.80, lower than at any other time during the past seven years; the highest, in 1891, was \$133.42. The managers ask \$10,000 for a building for colored insane men and \$100,000 for maintenance.

Prisoners.—There were in the State Penitentiary at the close of 1896 818 convicts, 172 fewer than at the beginning of the year. The financial statement

for the year was: Receipts, \$62,125.17; cash value of crop on hand, \$52,925.46; due for convict hire, etc., \$5,108.46; disbursements, \$63,570.83; account overdrawn, \$1,445.66; leaving, \$56,578.26.

The county chain gangs are employed in road-making, but the law allows only those to be so employed whose terms do not exceed two years. In Richland County alone over 50 miles of road have been made.

Militia.—There are in the State the following commands: Cavalry, 31 companies; light infantry, 2; infantry, 61; naval reserve, 3; reserve militia, 6 companies; making a total of 103. The reserves are not counted in the aggregates. The number of men in the 3 arms of the service is: Privates in the cavalry, 748; battery, 47; infantry, 1,479. Commissioned officers in the cavalry, 154; in the light infantry, 12; in the infantry, 316. Noncommissioned officers in the cavalry, 310; in the light infantry, 18; in the infantry, 603. Making the totals for the State: General and staff officers, 47; cavalry, 1,212; light infantry, 77; infantry, 2,398; total 3,734.

The Adjutant General reports that there are 20,000 men unorganized, who may be counted upon for the militia service.

The troops were ordered out once during the year to suppress a threatened uprising of negroes near St. Matthews, in Orangeburg County; quiet was restored in a few hours.

Railroads.—The railroads pay annually more than \$300,000 in taxes. The total income of the roads for the year ending June 30 was \$8,303,487.57; total expenses, \$5,952,770.58; income, less expenses, \$2,307,758.52. Only 2 roads show deficits—the Florida Central and Peninsular and the Cheraw and Chester. The deficit of the latter was only \$1,316.89, and that of the former road \$27,724.64. What is reported by the Florida Central and Peninsular road to be a deficit, as far as their line in South Carolina is concerned, is to be considered in the light of heavy improvements that have been made along the line. Over \$200,000 expended on improvements is charged against the earnings. This road has 103 miles of track in the State. All the roads are now in the hands of their owners and managers, with one exception. The passenger earnings in 1896 were \$2,756,321.70, against \$2,393,674.24 in 1895, an increase of \$362,647.46. The tonnage for 1896 was 4,729,537; for 1895 it was 4,155,957, an increase of 573,580 tons.

The Railroad Commission was divided on the subject of reducing the rates on fertilizers, and a lively war was carried on between Commissioner Thomas and the other two. Mr. Thomas charged that the proposed rates were grossly unfair to Charleston. The majority were in favor of reducing the rates, and this was done. Passenger rates also were lowered.

Lawlessness.—Several cases of lynching occurred during the year. Four men were tried for a horrible crime committed in November, 1895, and on the second trial, in October, 1896, were acquitted. The crime and trial are described briefly: "Three negroes, against whom there was a suspicion of having entered a country church in Barnwell County and stolen a Bible, were taken from their homes at midnight by a body of armed white men. They were stripped naked and beaten with buggy traces. Two of the unfortunates died—a man and an old woman. The third victim escaped. She was the seventeen-year-old wife of the man and the mother of a child a few months old. The bodies of the negroes who were beaten to death were found after the tragedy, and the young colored woman who survived told the fearful story. The press and people cried out against this crime, and the Governor promptly took steps to ferret out its authors. Sev-

eral men well connected and most respected before this were accused, and at the February term in Colleton County four were charged with causing the death of Hannah Walker. The trial lasted six days. The surviving victim of the brutal affair swore to the identity of one or more of the defendants. A dozen witnesses testified as to the taking of the negroes from their homes and seeing them dragged toward Broxton Bridge. The defense did not attempt to prove an alibi, gave no account of the doings of the accused on the night of the killing, and tried to bring doubt upon the State's witnesses. Their arguments were merely appeals for sympathy and attempts to arouse hatred for the State officers who had done their duty. The jury brought in a verdict of 'Not guilty.'

Banks.—The aggregate banking capital of the State is \$5,368,201, with a surplus of \$4,845,730, making a total of \$10,213,931. This is distributed among 91 banks.

Industries.—The annual statement of the Secretary of State shows that the following charters were issued: Twelve cotton mills, capital stock \$1,050,000; 6 cotton-oil mills, \$97,000; general charters, \$4,746,710; total, \$5,893,710.

The cotton crop, according to the statements furnished to the Department of Agriculture by the transportation companies, mills, etc., for the five months ending Feb. 1, 1896, shows the number of bales moved to have been 494,562; the purchases by the State mills, 214,270 bales; and the number left on the plantations, 80,133 bales; total crop, 788,965 bales.

The corn crop of 1895 amounted to 19,860,908 bushels, showing a considerable increase over that of 1894, which was 18,723,819, and a large advance from that of 1893, which was 12,501,036.

The phosphate-mining industry, which has been a great source of wealth and has paid large amounts to the State, has still further declined. The royalty for the year ending Aug. 31, 1896, was \$60,853.76, while that for 1895 was \$87,200.13. Of the rock shipped or sent to market, there has been shipped to foreign ports 93,527 tons; coastwise (outside of the State), 11,257 tons; taken at Charleston, 5,017½ tons; taken at Beaufort or Port Royal, 11,801 tons; total shipment, 121,602½ tons. The cause of the decline is the competition of Algerian, Florida, and Tennessee rock which has entered the market. The royalty has been reduced from time to time, until it is about 50 cents a ton.

The Dispensary.—The Governor gives the following statement of the operations of the dispensary: "The net profit that has accrued to the State for the past year is, in round numbers, \$200,000. The net amount accrued to the towns and counties for the same period is \$122,000, making the total accrued profit to the State, towns, and counties \$322,000; adding \$57,652.65, unearned profits on goods in the hands of local dispensers due Jan. 1, 1897, swells the total of earned and unearned profits to the State and towns and counties for the preceding year to \$379,652.65. The net profit accruing to the past administration for eighteen months was \$110,348.80. Net profits for 1895, \$133,467.79. Net profits for 1896, \$200,000, making a total net accrued profit to the State to date, \$443,816.57. Add to this net accrued profit the outstanding unearned profit, \$57,652.65, makes a total earned and unearned profit to date of \$501,469.22. If to this sum we add the amount of the net accrued profits to the towns and counties for 1895 and 1896 of \$223,131.28, we have a grand total of earned and unearned profits to State, towns, and counties to date of \$729,600.50."

Seven constables are in jail for being implicated in killing men while seizing contraband liquors.

Legislative Session.—The new Constitution changed the time of the opening of the legislative session to the second Tuesday in January. The time limit of forty days does not apply to the first four sessions. Accordingly, the General Assembly was in session from Jan. 14 to March 7. The organization from the former session held over, with Ira B. Jones as Speaker of the House. After the election of Mr. Jones as Associate Justice of the Supreme Court, Frank B. Gary was chosen to succeed him as Speaker.

About 250 bills were passed. The new Constitution, which went into effect Jan. 1, provides that the Supreme Court shall consist of a chief justice and three associates instead of two. When the court met, on Jan. 2, the question was raised whether its action would be legally binding, since it could not be constituted according to the new order until the Legislature should have elected a fourth member. The court held that it could legally hold over until its successor should be duly qualified. The reorganization of the court was one of the first subjects that came before the General Assembly, and a bill was passed providing for the election of the third Associate Justice of the Supreme Court, whose term of office will expire on Aug. 1, 1902; that the successor of Associate-Justice Pope shall be elected by the General Assembly, whose term of office begins on Aug. 1, 1896, and continues for eight years; that the successor of Chief-Justice Melver shall be elected by the General Assembly at its session in 1899 for eight years, and the successor of Associate-Justice Gary shall be elected by the General Assembly in 1900 for eight years. Jan. 30 Associate-Justice Pope was re-elected for eight years, and Ira B. Jones, Speaker of the House, was chosen third Associate Justice.

A registration law was enacted adapted to the requirements of the Constitution. Certificates are to be granted to voters able to read the Constitution and to those unable to read it who are yet able to understand it when it is read to them. The provision as to appeals gives to the voter who is denied a certificate two hearings, one before any circuit judge, and the other before the Supreme Court. No costs are to be charged to the applicant upon such appeals. The election law, as regards balloting, shows some changes from the old law; commissioners and managers are not now removable at will; the ballot box must be placed in sight of the people outside the polls; and frauds by refusal to hold polls are made impossible, since voters can hold a poll without the managers. A bill for the introduction of the Australian ballot failed, and the old eight-box system is retained. It is made a crime to issue election certificates at any other time than that required by law or to receive certificates so issued.

A law was made providing for examination of banking and fiscal corporations, and the office of bank examiner was created.

General laws were made for the incorporation of cities and towns, and a general law for the formation of corporations, defining their powers.

An act was passed providing for the appointment of a commissioner to codify the laws, and another act to regulate the formation of new counties; also one providing for a uniform assessment of property for municipal and State taxation.

The appropriation for pensions was double the amount heretofore devoted to that purpose, and the benefits were extended to classes not previously included.

A valued-policy law was made for the regulation of insurance.

In the laws governing the dispensary few material changes were made except those required by

the Constitution, but the whole management was taken out of the hands of the Governor and given to a State board of control, and the State Treasurer is made the receiving and disbursing officer of all moneys received and expended through the local dispensers.

The State tax levy was placed at $4\frac{1}{2}$ mills, exclusive of the school tax.

The sum of \$25,000 was appropriated to South Carolina College, and \$21,000 to the Citadel, the military school.

A joint resolution authorized the Governor to extend an invitation to the other Southern States to unite in erecting a monument to the late George Peabody, and to appropriate funds therefor. Another required the printing and distribution of the Confederate rolls.

Other acts were the following:

For arbitration in civil cases.

For the establishment of waterworks and electric-light systems by cities and towns.

Permitting towns and cities to issue bonds to take up their past indebtedness.

To establish local boards of health.

Providing for the working of chain gangs by cities, towns, and counties.

Incorporating Converse College.

Establishing Saluda County.

Regulating the care of infants suffering with diseases of the eye.

To prevent lynching; providing that in all cases of lynching where death ensues the county where the lynching takes place shall be liable in exemplary damages in a sum not less than \$2,000.

Limiting the amount of land that aliens may hold in the State.

Making May 10, the anniversary of Gen. Thomas J. Jackson's death, a legal holiday, to be known as Memorial Day.

Limiting the time during which coupon bonds of the State payable to bearer, and their coupons, may be consolidated, converted, funded, or paid.

Requiring contractors for the erection, alteration, or repairing of buildings to pay laborers, subcontractors, and merchants for their services and material furnished.

Relating to the severance of Claflin College from Claflin University, and the establishment of a normal, industrial, agricultural, and mechanical college for the colored race.

Imposing penalties for the adulteration of candy and the sale of impure milk, butter, and cheese.

Amending the law relating to prize fighting.

Amending the game laws.

Political.—There are two factions in the Republican party in the State. Both held State conventions—one April 7 and the other April 14. At the first, a resolution was adopted instructing the delegates for McKinley. The platform called for the enforcement of the law against lynching, and on the currency said:

"We stand with our party in the reiteration of its demand for both gold and silver as standard money. We believe that legislation should secure and maintain the parity of values of the two metals to the end that the purchasing and debt-paying power of the American dollar—silver, gold, and paper—shall be the same any and everywhere."

At the convention of the Independent or "Lily White," or "Reorganized" Republicans, April 14, a resolution favoring McKinley was overwhelmingly defeated, but resolutions were adopted saying that either McKinley, Allison, Morton, Reed, or Quay would be acceptable. The financial plank was as follows:

"We are in favor of maintaining the present monetary standard until some satisfactory ratio

between the hard-money metals shall have been reached by international agreement, such an agreement with the leading commercial nations as will keep it so."

In reference to the new Constitution and other State matters, the resolutions said:

"We are in favor of a government service based on merit and character and capacity, and not on the corrupt and debasing Jacksonian system of 'to the victors belong the spoils'; but while as Republicans, we heartily indorse the above principles as highly important from a national point of view, what is of vastly more importance to us, and to all good citizens here in South Carolina, is to secure fair and honest elections, and to get rid of our present arbitrary and despotic factional State government with all its accompanying evils. We therefore reaffirm our purpose to use every proper and legitimate means to have our new Constitution set aside as in conflict with the Constitution and laws of the United States. We admit that it has certain good points in it, notably its improved educational facilities. But it is tainted with fraud in its origin; it is fraudulent in its character, and fraudulent in that it was foisted upon the State without ratification by a popular vote. We therefore hold that neither Congress nor the Federal courts ought to recognize its validity. We also declare our most emphatic opposition to the entire brood of iniquities imposed on the State by the dominant element, and pledge the Republican party to remove them as rapidly as possible if put in a position to do so."

Both wings of the party held conventions for nominating State officers at Columbia, Sept. 17. Both adopted platforms and nominated candidates. The first, or "old-line" wing, which was the one recognized at the national convention, put forward the following ticket: For Governor, R. M. Wallace; Lieutenant Governor, J. P. Latimer; Secretary of State, B. O. Duncan; Treasurer, George I. Cunningham; Comptroller General, E. F. Cochran; Attorney-General, L. D. Melton; Adjutant General, E. Brooks Sligh; Superintendent of Education, E. B. Burroughs.

The other ticket was: For Governor, Sampson Pope; Lieutenant Governor, W. W. Russell; Secretary of State, B. R. King; Comptroller General, V. P. Clayton; Attorney-General, L. D. Melton; Treasurer, D. J. Knotts; Superintendent of Education, M. A. Dawson; Adjutant General, A. T. Jennings.

The Democratic convention met in Columbia, May 20. Resolutions presenting Senator Tillman as a presidential candidate were adopted with but 4 dissenting votes. Delegates were instructed to vote as a unit. The platform was prepared by a committee, of which Senator Tillman was chairman. It denounced the administration of President Cleveland as un-Democratic and tyrannical; repudiated the construction placed on the financial plank of the last Democratic National Convention by the President and Secretary Carlisle; denounced the issue of the bonds; expressed the belief that "the power and usurpations of the Federal courts as now organized are dangerous to the public; demanded the calling of a constitutional convention to form an organic law suitable to the changed conditions and the growth of the country; called for a more economical administration of national affairs; demanded the free and unlimited coinage of silver at the ratio of 16 to 1, regardless of the action of any and all other nations, and the enlargement of the powers of the Interstate Commerce Commission.

A minority report signed by two members was presented, asking the elimination of the condemnation of President Cleveland, and demanding a pledge to abide by the action of the national convention.

Senator Irby supported the antibolting declaration, charging that Tillman's ambition to be President, which could not be gratified in the Democracy, was at the bottom of the bolting proposition. Senator Tillman replied in a bitter speech, and the platform reported by him was then adopted.

A new Constitution was adopted for the party in the State, of which the following were the main points: Candidates for United States Senator still to be chosen by primary; chairmen of county executive committees to be chosen by the county conventions; each club to have a separate voting place in primaries; each candidate to pledge himself before the first campaign meeting; a majority required to elect; State executive committee to have final decision of all contests.

W. H. Ellerbe received an overwhelming majority of the votes for the gubernatorial nomination at the primaries. Following is the Democratic ticket: For Governor, W. H. Ellerbe; Lieutenant Governor, M. B. McSweeney; Secretary of State, D. H. Tompkins; Treasurer, W. H. Timmerman; Comptroller, James Norton; Attorney-General, W. A. Barber; Adjutant General, J. G. Watts; Superintendent of Education, W. D. Mayfield.

The vote taken at the primaries for United States Senator to succeed Senator Irby, showed Joseph H. Earle to be the choice of the people. He received 42,915 out of a total vote of 82,482, Gov. Evans receiving 39,567.

The vote for President stood: Bryan, 58,798; McKinley, 9,281; Palmer, 828. For Governor, Ellerbe, Democrat, received 59,424; Wallace, Regular Republican, 2,780; Pope, Reorganized Republican, 4,432. The other Democratic candidates were elected by similar majorities. All the members of Congress elected are Democrats. There are no Republicans in the State Senate, and there is but one in the House.

SOUTH DAKOTA, a Western State, admitted to the Union Nov. 3, 1889; area, 77,650 square miles; population, according to the census of 1890, 328,808. Capital, Pierre.

Government.—The following were the State officers during the year: Governor, Charles H. Sheldon, Republican; Lieutenant Governor, Charles N. Herried; Secretary of State, Thomas Thorson; Treasurer, Kirk G. Phillips; Auditor, J. E. Hipple; Attorney-General, Coe I. Crawford; Adjutant General, George A. Silsby; Superintendent of Public Instruction, Frank Crane; Commissioner of Labor Statistics, S. A. Wheeler; Commissioner of School and Public Lands, John L. Lockhart; Railroad Commissioners, John R. Brennan, George A. Johnston, E. F. Conklin; Chief Justice of the Supreme Court, Dighton Corson; Associate Justices, Alphonso G. Kellam, who resigned Jan. 30, after which Dick Haney was appointed, and Howard G. Fuller; Clerk of the Supreme Court, Ivan W. Goodner.

Finances.—The balance in the treasury July 1, 1895, was \$320,489.91; the receipts during the fiscal year were \$1,352,333.49; the disbursements, \$940,173.50; and the balance remaining July 1, 1896, was \$412,159.99.

The expenditures from the general fund amounted to \$352,820.98. The collections (aside from cash on hand July 1, 1895, \$180,011.07, sale of revenue warrants \$150,000, and transfer of funds received from W. W. Taylor, \$115,400.57) amounted to \$380,891.94, being \$28,070.96 in excess of warrants issued on the general fund. The warrants issued during the preceding year were \$126,118.30 in excess of the collections.

In August the State Board of Equalization made provision for reducing the bonded indebtedness, \$106,000, by a levy of 1-8 mill bond and interest

tax. This will reduce the interest indebtedness \$6,146 per annum. The outstanding revenue warrants will all be taken up by April, 1897.

The assessment of the 2,762 miles of railroad property in 1896, as equalized by the State board, was \$9,133,583; of sleeping-cars companies, \$11,000; of telegraphs, \$127,202; of telephones, \$39,376; of express companies, \$54,500. The assessment of lands as equalized was \$73,684,037; of town lots, \$15,906,621; of personal property, \$20,434,837; the total valuation being \$119,391,156, which is \$2,359,995 less than in 1895.

The amount of tax paid by railroads in 1895 was \$250,430.06. The tax extensions for 1896 amounted to \$570,231.20, and the amount of delinquencies, on June 30, was \$446,754.80, of which amount it was expected that over \$200,000 would be paid before 1897. The Auditor urges the necessity of a constitutional revenue law. The receipts for the next fiscal year are estimated at \$586,000, and the expenditures at \$643,000. The sale for \$57,666 of realty taken upon execution from the bondsmen of W. W. Taylor brings the total credit upon his shortage to \$270,000.

Insurance.—Statistics to Jan. 1, 1896, show that during the preceding year the risks written by foreign companies amounted to \$132,502,623.82; premiums, \$2,701,157.21; losses paid, \$1,227,424.66. The foreign life insurance companies show risks written \$47,304,725.07; premiums received, \$2,150,409.16; losses incurred, \$641,367.50; losses paid, \$661,119.12. The amount turned into the treasury funds from the insurance department in 1896 was \$24,692.86, a slight increase over last year.

Banks.—The abstract of the condition of the 31 national banks on July 14 shows total resources of \$7,238,497; loans and discounts, \$3,360,477; value of stock securities, etc., \$1,261,110; reserve, \$1,417,607, of which \$313,567 was gold. Principal liabilities: Capital stock, \$1,935,000; surplus funds and undivided profits, \$478,811; deposits, \$4,064,025. The average reserve held was 35.71 per cent. During the year 7 State banks were organized, 5 banks reduced their stock, 3 increased it, and 1 was dissolved.

Education.—The number of children of school age Jan. 1, 1896, was 104,029; the number of schoolhouses provided for them was 3,633. The total permanent school fund bearing interest amounted to \$2,044,833.49, though \$1,388,902 are deferred payments. From the interest and income fund \$140,439.15 was collected during the fiscal year and apportioned to the common schools: \$1,753.28 was paid for endowment, and \$2,041.50 was paid into the general fund.

The Springfield Normal-school building has been put up, and the school was opened in the fall. The enrollment at the Madison Normal School was 353, of whom 153 were in the model school.

The capacity of the Reform School was taxed to the utmost during 1896, the number of inmates being 88.

For various State institutions the amounts paid out were as follow: For the Agricultural College, \$6,952.94; School of Mines, \$9,960.96; Madison Normal, \$12,500; Spearfish Normal, \$13,932.26. For the maintenance and tuition of the blind \$1,296 was expended; for deaf-mutes, \$12,250; for the insane, \$81,600. The Reform School cost the State \$17,475, and the Penitentiary expenses were \$32,750.

Soldiers' Home.—The number of inmates of the home on April 4 was 145, and 20 members were on furlough. Of the present membership, 140 receive pensions amounting to \$17,085 a year. The State paid to the home during the year \$26,801.41, of which \$17,100 was for maintenance.

Corporations.—The number of corporations organized was 263 for profit and 72 for religious, charitable, or benevolent purposes. The foreign corporations authorized to transact business in the State numbered 311.

Immigration.—An Immigration Congress, held in January, formed a permanent association and arranged for issuing a pamphlet setting forth the advantages of the four districts of the State—the irrigation, the natural rainfall, the grazing, and the mineral.

Corn.—In 1896 South Dakota led in the production of Indian corn, the amount being 38,557,000 bushels.

Live Stock.—The assessment of horses showed their number to be 311,615, valued at \$4,697,799; of milch cows, 234,499, value \$2,657,061; of oxen and other cattle, 280,020, value \$2,388,158; of mules and asses, 4,758, value \$69,959; of sheep, 340,751, value \$374,495; and of swine; 212,572, valued at \$1 each.

Political.—A Republican State convention met in Huron, March 25, selected delegates to the national convention, and adopted resolutions declaring for protection, instructing the delegates for McKinley, and, until the national convention should provide another, adopting the platform of the national convention of 1892.

A second Republican State convention met in Aberdeen, July 8, when representatives to Congress and a full State ticket, headed by Amund O. Ringsrud for Governor, was nominated. Candidates for presidential electors were nominated, and a platform was adopted which heartily accepted the Republican national platform adopted at St. Louis, and commended the present administration of the affairs of the State, and demanded "the passage of an act providing adequate punishment for defalcation committed by public officers"; favored the settlement of all questions of dispute arising between capital and labor by legally constituted arbitration; opposed harsh or unjust legislation concerning railroads, but demanded "such legislation as will clothe the Board of Railroad Commissioners with full power and authority to prevent unjust discrimination, and to provide by legislative enactment a reasonable maximum tariff of passenger and freight rates"; and recommended that each county convention take such action as will require all legislative candidates to commit themselves to carry out the meaning and purpose of this resolution: pledged the party to the destruction of trusts and combines; and favored investigation of the management of the grain elevators.

As soon as this platform was adopted 21 delegates who favored free silver left the convention, and, with other silver Republicans, prepared an address urging the Republicans of the State to aid "in the restoration of silver to its position as standard money." Committees on ticket and on platform were appointed to co-operate with the People's State Convention, which recommended to that convention the adoption of the nomination of Bryan for President. On July 15 the bimetalists chose delegates to the national bimetallic convention.

The Democratic State Convention that met in Aberdeen, May 20, chose delegates to the national convention at Chicago, and on the money question declared as follows: "The Democratic party of South Dakota is in favor of the present standard of value in our money system and the use of full legal-tender silver, coins, and paper, convertible into coin on demand, in such quantities as can be maintained without impairing or endangering the credit of the Government or diminishing the purchasing or debt-paying power of the money in the hands of the people; and it is not in favor of the

free and unlimited coinage of silver at the ratio of 16 to 1."

Later a convention was called to meet in Deadwood, Aug. 27, to nominate a State and an electoral ticket; but on Aug. 18 the State Central Committee directed that no convention should be held, and adopted the State and electoral ticket nominated by the Populists. It also passed this resolution: "We hereby assert our unflinching allegiance to the nominees of the Democratic National Convention, held at Chicago; and we hereby ratify each and every plank in the platform there adopted; and we hereby pledge to the nominees of that convention our hearty and cordial support."

The State Prohibition Convention was held in Huron, July 13, when candidates for presidential electors and Congressmen were named, and John F. Hanson was nominated for Governor.

On July 14 the Populists met in State convention, in Huron, and continued two days in session, many Democrats being in attendance trying to secure united action on the tickets. Concessions were made on both sides, and the platform that was adopted instructed delegates to unite with free-silverites; declared for the prohibition of private monopoly of public necessities; that all land owned by railroads not in actual use should be reclaimed by the Government and sold to actual settlers; favored Government ownership of sufficient railroad mileage to control transportation; declared for free-silver coinage at 16 to 1, postal savings banks, direct legislation, and the election of Senators by direct vote; for more money to increase prices, and legislation to maintain them; and that prohibition should be voted upon regardless of party affiliations. Andrew E. Lee was nominated for Governor.

At the election in November the Populist candidates for Governor and Attorney-General, three Railroad Commissioners, and two representatives in Congress were elected, all the other successful candidates being Republicans. The vote for Governor was: Lee, 41,187; Ringsrud, 40,869; Hanson, 722. The vote for presidential electors was: Bryan, 41,225; McKinley, 41,042; Levering, 683. The composition of the next Legislature is: Fusionists—Senate 26, House 46; Republicans—Senate 18, House 38.

At the election four amendments to the Constitution were voted upon, all receiving large affirmative majorities; but through official mistake in the printing of the ballots these votes were made null. One of these amendments repealed the prohibitory clause of the Constitution, and the friends of prohibition claimed that the steps taken by the Legislature of 1895 in submitting the amendment were not in accordance with law, and applied to the Supreme Court for an order directing the Secretary of State to omit it from the ballot. This was denied, the decision being rendered on the theory that the court has no authority to interfere until the full act of legislation has been completed by the action of the people at the polls; that the Legislature has power to submit any question to the people, whether it is a constitutional question or not, and the people have the right to pass upon the question thus submitted.

SPAIN, a constitutional monarchy in southwestern Europe. The legislative power is vested in the Cortes, consisting of two Chambers. The Senate has 360 members, of whom 123 are appointed for life, 53 are hereditary or official members, and 180 elected by corporations and the highest taxpayers. The Congress consists of 432 members, elected by indirect suffrage for five years. The reigning King is Alfonso XIII, born May 17, 1886, who succeeded to his father, Alfonso XII. The King's

mother, Maria Christina, an archduchess of the Hapsburg family, acts as Regent during his minority. The ministry in the beginning of 1896, constituted on March 24, 1895, was composed as follows: President of the Council, A. Canovas; Minister of Foreign Affairs, the Duke of Tetuan; Minister of Justice, F. Romero Robledo; Minister of Finance, J. Navarro Reverter; Minister of War, Gen. Azcarraga; Minister of Marine, Admiral J. Beranger; Minister of the Interior, F. Cos Gayon; Minister of Public Works, Agriculture, and Commerce, A. Bosch; Minister of the Colonies, T. Castellano.

Area and Population.—The area of Spain is 197,670 square miles. The population was estimated in 1892 at 17,974,323. There were 151,416 marriages, 647,808 births, and 554,274 deaths in 1892; excess of births, 93,534. The population of Madrid in 1890 was 499,270. Barcelona at the census of 1887 had 272,481, Valencia 170,763, Sevilla 143,182, and Malaga 134,016 inhabitants.

Finances.—The budget estimate of revenue for the year 1896-'97 was 773,766,261 pesetas, or francs, of which 295,940,810 pesetas come from direct taxes, 302,135,000 pesetas from indirect internal taxes, 136,105,000 pesetas from customs, 22,000,000 pesetas from stamps and monopolies, 22,385,451 pesetas from national property, and 17,200,000 pesetas from the public treasury. The expenditures are estimated at 757,765,658 pesetas, of which 9,500,000 pesetas are for the civil list, 1,638,085 pesetas for the legislative bodies, 314,991,533 pesetas for the public debt, 1,463,859 pesetas for judicial expenses, 56,214,730 pesetas for indemnities and pensions, 964,300 pesetas for the presidency of the Council, 4,714,512 pesetas for foreign affairs, 53,853,240 pesetas for justice, 140,225,381 pesetas for the army, 23,433,941 pesetas for the navy, 27,249,868 pesetas for the interior, 77,960,225 pesetas for public works and education, 16,187,418 pesetas for financial administration, 28,708,566 pesetas for collection of revenue, and 655,000 pesetas for Fernando Po. The revenue in 1895-'96 was 766,231,751 pesetas, and the disbursements were 788,200,758 pesetas, leaving a deficit of 21,969,007 pesetas. The deficit in the year previous was 25,249,340 pesetas. In six years ending in 1896 there have been paid out 236,344,883 pesetas of extraordinary receipts, 44,920,966 pesetas for repayments, 58,000,000 pesetas for the army, 71,175,678 pesetas for the navy, and 62,248,239 pesetas for railroads. The public debt in 1896 amounted to 5,941,459,300 pesetas, of which 1,971,151,000 pesetas were included in foreign loans, 1,619,500,000 pesetas were extinguishable internal loans, and 2,350,803,300 pesetas were the permanent internal debt.

The Army.—By virtue of the law of July 1, 1885, military service is obligatory in Spain from the age of nineteen, and lasts twelve years, of which three are spent in the active army, three in the first reserve, and six in the second reserve. Exemption may be purchased for 1,500 pesetas, and substitution is allowed between brothers. The annual recruit, which was before 49,000 men, was increased by the law of Dec. 16, 1891, to 80,000 men. The continental army of Spain is divided into 8 corps, comprising 15 divisions of infantry, 1 division of artillery, and 4 brigades of cavalry. The peace effective for 1896 was as follows: General officers, 240; general staff, 232 officers; infantry, 6,088 officers and 45,679 men; cavalry, 1,360 officers and 13,139 men; artillery, 963 officers and 8,386 men; engineers, 425 officers and 3,399 men; telegraph brigade, 7 officers and 226 men; total, 9,315 officers and 70,829 noncommissioned officers and men, with 14,655 horses and mules and 396 field guns. The budget of 1896 fixed the strength of the active army

at 82,000 men in Spain, 14,000 in Cuba, 13,291 in the Philippine Islands, and 3,031 in Puerto Rico, exclusive of 15,412 gendarmes and 14,156 frontier guards. According to the budget of 1897, the second battalions of the 56 regiments in garrison in Spain, all the first battalions of which are in Cuba, are increased from 652 to 804 men, the 20 battalions of rifles from 652 to 964, the 20 second battalions from 350 to 964, the same as the 10 battalions that are in garrison in Cuba, the line regiments of cavalry are augmented to 450 horse, the 6 regiments forming an independent division to 510, and the 4 artillery regiments armed with cannon of 9 centimetres caliber are augmented by 48 gunners and the others by 44. The fortress artillery is also increased by 80 or 100 men to each battalion, the 4 regiments of sappers by 163 men each, the pontonier regiment by 116, the railroad battalion by 103, and the telegraph battalion by 152. The total effective is thus increased to about 100,000 men.

The Navy.—The Spanish armor-clad navy in 1896 consisted of 1 turret ship (the "Pelayo"), of 9,900 tons and 8,000 horse power, armed with 35 guns and 7 torpedo tubes; 3 armored cruisers of modern type ("Almirante Oquendo," "Infanta Maria Teresa," and "Viscaya"), of 7,000 tons each, protected by 12-inch belts, of 13,000 horse power, giving a speed of 20 knots, and armed with 2 11-inch guns in barbettes and 5 5½-inch guns on each broadside; 1 belted cruiser, of 9,235 tons, with engines of 15,000 horse power (the "Emperador Carlos V"), carrying a larger light armament than the others; 2 frigates ("Numancia" and "Victoria"); and 1 monitor ("Puigcerda"). There were building 2 armored battle ships ("Cristoforo Colomb" and "Pedro d'Arragon") of 6,840 tons and 18,000 horse power; and 3 armored cruisers ("Cardenal Cisneros," "Cataluña," and "Princesa de Asturias"), each of 6,648 tons and 15,000 horse power, carrying 22 cannon and 18 torpedo tubes. English shipbuilders were commissioned in 1886 to construct a battle ship of 10,500 tons, a cruiser of 6,500 tons, 1 of 1,500 tons, and 2 torpedo catchers. Two new deck-protected cruisers ("Alfonso XIII" and "Lepanto"), of 4,800 tons, are designed to steam 20 knots and have a strong and effectively arranged armament. The unarmored vessels include 19 cruisers, 10 torpedo gunboats, 3 first-class gunboats, and 52 third-class cruisers. Spain has 14 first-class and 2 second-class torpedo boats. The navy is manned by 528 officers, 400 mechanics and other employees, 9,000 marines, and 7,715 sailors. The "Princesa de Asturias" was launched in October, 1896, after several unsuccessful attempts. The "Cardenal Cisneros" was launched later. In the summer and autumn extraordinary activity was displayed in all the Spanish shipyards. Three gunboats of 600 tons were hurried to completion at Ferrol, where the "Alfonso XIII" was rapidly got ready for sea. Abandoning the policy of constructing all war vessels at home, the Government, as if to prepare for imminent war with a great power, sought all over the world for cruisers ready built, or builders who would provide large war ships quickly. Proposals were made for the purchase of 2 cruisers in Genoa, and for 1 in Trieste, which the Austrian Government refused to sell. Orders were placed in Scotland for the construction of an ironclad of 10,500 tons, to cost \$3,750,000; a cruiser of 6,500 tons, to cost \$1,575,000; and 2 torpedo-boat destroyers. Another cruiser, of 1,500 tons, was ordered in England.

The naval power of Spain was insignificant when the programme of 1887 was adopted, according to which the Government was to expend in the course of nine years the sum of 225,000,000 pesetas in providing a modern fleet, to consist of 11 cruisers, 10

torpedo vessels, 140 torpedo boats, 20 gunboats, and 20 harbor gunboats. A plan of organization for the defense of Spanish ports and the protection of the colonies involved the construction of very fast cruisers with great coal endurance. The fleet was to be organized in 3 divisions, with headquarters at Cadiz, Ferrol, and Cartagena, each division to consist of 1 battle ship, 2 armored cruisers, 1 protected cruiser, 2 third-class cruisers, 2 torpedo vessels, and 3 torpedo boats. Instead of the 8 cruisers in the original programme, 6 belted cruisers of the "Maria Teresa" type were decided upon. Of these, 3 have been completed, which, like all the new Spanish ships, have won the admiration of naval experts. The torpedo vessels are designed to serve as ordinary gunboats as well as fast torpedo boats. The same plans have been followed in the improved type of 800 tons as in the earlier ones of 570 tons. The submarine boat "Peral," shaped like a Whitehead torpedo, proved a failure. About 20 of the steamers of the Compania Transatlantica are fitted to be used as armed cruisers in time of war. This company is under contract to transport all official passengers, troops, and stores.

Commerce.—The total value of imports in 1894 was 804,791,000 pesetas, and of exports 672,887,000 pesetas. The imports of cotton were 81,830,000 pesetas; of grain, 67,972,000 pesetas; of coal, 49,700,000 pesetas; of timber, 40,686,000 pesetas; of tobacco, 37,944,000 pesetas; of machinery, 24,816,000 pesetas; of codfish, 23,690,000 pesetas; of sugar, 21,487,000 pesetas; of chemicals, 20,859,000 pesetas; of iron, 18,722,000 pesetas; of skins, 17,585,000 pesetas; of woolens, 15,607,000 pesetas; of animals, 15,267,000 pesetas; of cacao, 15,162,000 pesetas; of coffee, 14,420,000 pesetas; of wool, 13,975,000 pesetas; of silks, 11,604,000 pesetas; of linen thread, 11,229,000 pesetas; of ships, 8,867,000 pesetas; of cotton goods, 8,235,000 pesetas. The exports of wine were 83,887,000 pesetas; of cotton manufactures, 47,027,000 pesetas; of lead, 44,791,000 pesetas; of iron, 44,782,000 pesetas; of copper, 43,743,000 pesetas; of oranges, 25,665,000 pesetas; of shoes, 25,289,000 pesetas; of cork, 21,516,000 pesetas; of raisins, 19,455,000 pesetas; of animals, 14,797,000 pesetas; of olive oil, 14,380,000 pesetas; of grapes, 9,882,000 pesetas; of almonds, 8,907,000 pesetas; of wool, 8,389,000 pesetas; of paper, 8,237,000 pesetas; of skins, 7,688,000 pesetas. The value of the commerce with different countries and colonies is shown in the following table, giving the imports and exports for 1894 in pesetas:

COUNTRIES.	Imports.	Exports.
France.....	206,300,000	174,700,000
Great Britain.....	158,200,000	183,100,000
Germany.....	22,200,000	8,600,000
Portugal.....	30,200,000	29,200,000
Sweden and Norway.....	26,000,000	1,400,000
Russia.....	47,000,000
Roumania.....	10,500,000
Italy.....	16,900,000	7,400,000
Turkey.....	8,000,000
Netherlands.....	6,400,000	14,500,000

Navigation.—During 1894 there were 8,989 Spanish vessels, of 6,095,350 tons, entered and 8,565, of 6,238,336 tons, cleared, and 8,687 foreign vessels, of 6,632,872 tons, entered and 8,703 of 6,725,464 tons, cleared at Spanish ports. The merchant navy in 1895 numbered 1,041 sailing vessels, of 172,729 tons, and 427 steamers, of 313,178 tons.

Communications.—The railroads in operation at the beginning of 1895 had a total length of 7,543 miles. The post office forwarded in 1894: In the interior service, 81,322,000 letters, 668,000 post cards, 47,400,000 journals, circulars, and parcels, and 117,000 money letters of the declared value of 137,277,000 francs; in the exterior service, 19,244,000 letters, besides 184,000 in transit, 408,000 post cards, 19,637,000 journals, circulars, and parcels, besides 48,000 in transit, and 39,000 letters of the declared value of 31,825,000 francs. The receipts were 23,979,681, and expenses 11,656,873 francs. The Government telegraph lines in 1893 had a length of 18,248 miles, with 41,141 miles of wire. The number of dispatches was 2,886,800 in the internal and 1,279,459 in the international service; receipts were 7,671,092 and expenses 5,613,033 pesetas.

Political Affairs.—Politics and legislation hinged in 1896 on the military and financial questions involved in the subjugation of the Cuban people, complicated later by the insurrection in the Philippine Islands. When Gen. Martinez Campos returned at the beginning of February he was hooted by the populace for his failure to put down the rebellion, and his view that the granting of reforms, even autonomy, was the only way of ending the Cuban troubles found little support. On sending out Gen. Weyler to carry on a vigorous campaign against the rebels the Government cast about for means to carry on the war. The Cuban bonds in the possession of the treasury found a sale in Paris and other places only at a continually falling price, and this resource was nearly exhausted. It was resolved to amend the tariff so as to produce more revenue. The municipal scandals in Madrid, where 21 councilors were criminally indicted for corrupt malpractices, contributed to the difficulties of the Canovas Government. On Feb. 19 a bomb was exploded by anarchists in the garden of the royal palace. On Feb. 26 the ministry decided, in view of the grave political and military situation and the feverish state of public feeling, to dissolve the Cortes. The election of Deputies was appointed for April 12 and for Senators a fortnight later, and May 11 was the date fixed for the new Cortes to meet. The resolution of the United States Senate in favor of recognizing the belligerent rights of the Cuban revolutionists caused an outburst of popular passion and war feeling against the United States in the principal cities of Spain. In Madrid 20,000 men attempted a street demonstration, but the troops and police prevented the crowd from congregating and guarded the American legation. In Barcelona a mob of 10,000 men on March 1 tore American flags to shreds and stoned the United States consulate in spite of the efforts of the police and soldiers to protect it. The Republicans, who had favored Cuban autonomy, took a prominent part in the anti-American demonstrations. The Government answered the resolution of the United States Senate by ordering the preparation of 6 war ships for dispatch to the West Indies and the fitting out of 50 merchant steamers with armaments. The War Department made preparations to send to Cuba 20,000 additional infantry and 5,000 cavalry. The Spanish Government promptly expressed regret for the insults offered by the Barcelona mob to the United States consulate. Further riotous demonstrations of students, with burning of American flags, led to the closing of the universities. There were fresh demonstrations in Valencia, Barcelona, and other towns against the United States. The one in Valencia, which was organized by Republicans, necessitated the proclamation of martial law. At Bilbao a mob attacked the American consulate. Señor Elduayen resigned as Minister of Foreign Affairs in order that the Duke of Tetuan, who had

begun the negotiations with the United States, might return to complete them.

The elections to the Cortes resulted in an increased Conservative majority. The manipulation of the returns in Madrid caused a general protest, and led to the suspension and prosecution of the election officers. The composition of the new Chamber was as follows: Conservatives, 301; Liberals, 102; Carlists, 10; Independents, 8; Dissident Conservatives, 8; Republicans, 3. The speech from the throne read by the Queen Regent on the assembling of the Cortes declared that the reforms embodied in the law of March 15, 1895, would not be applied in Cuba or in Puerto Rico until the rebellion was entirely suppressed and peace restored, after which it would be necessary to give to both islands an economical and administrative personality of an exclusively local character. The correct conduct of the American republic in the presence of the Cuban insurrection was alluded to as a proof of the loyal friendship that has existed unbroken between the two countries during the whole national existence of the United States.

June 7 a bomb explosion that killed 15 persons and severely injured 50 in a religious procession at Barcelona drew attention once more to the anarchists, who on the same day exploded dynamite cartridges outside of a priest's house in Madrid. On June 10 a man was arrested with a bomb in his hands. In connection with the Barcelona outrage 47 arrests were made. The judicial investigation brought out the fact that the crime had been decided upon at a meeting of 60 anarchists. The actual perpetrator was a native of Marseilles, a well-educated man. A very stringent bill for the better prevention and repression of anarchist outrages was immediately introduced into the Cortes and eventually became law. The bill provides that such crimes shall be tried by court-martial and that guilty persons, including accomplices, shall be punished with death. The Barcelona anarchists were tried by court-martial and eight of them were sentenced to be shot.

The Senate rejected the proposition of Prof. Comas to abrogate the protocol of 1877 with the United States. The Cortes granted without debate the request of the Colonial Minister for permission to raise money as needed on Cuban credit for the prosecution of the war. The Cuban bonds of 1890, which the Government had sold to raise funds thus far, at prices ranging from 90 down to 55, are guaranteed by the Spanish nation according to the royal decree of September, 1890. French investors had bought a large number in order to protect themselves as holders both of Cuban and Spanish securities. Cuban certificates had been taken as collateral for advances of the Bank of Spain, the Bank of Paris, the Transatlantic Company, and other houses, to the amount of 675,000,000 pesetas. To raise the money for sending 40,000 or 50,000 additional troops and carrying on another winter's campaign in Cuba, Minister Castellano proposed to pledge the Spanish tobacco monopoly. The cost of the Cuban war, already \$7,500,000 a month, with the proposed increase in the army would amount to \$10,000,000. The Cuban treasury was empty, and the troops remained unpaid. Spanish production was curtailed through the drafting of reserves to take the place in the Peninsular army of the 125,000 men who had already been sent out to Cuba. About 40,000 young men fled to France to escape conscription. The Minister of Finance, in his budget presented on June 20, estimated the deficit for 1895 at 25,000,000 pesetas, and for 1896 at 22,000,000 pesetas. The extraordinary estimates amounted to 236,000,000 pesetas, to be raised partly on the tobacco monopoly and by a navigation tax and partly borrowed from an English

New York. D. Appleton & Co.

Herbert Spencer

bank. English, as well as French, Dutch, and Belgian bankers, refused to lend. A salt monopoly and a reform of the *octroi* were among the expedients proposed for raising money without borrowing. This latter, it was feared, would lead to disturbances. The imposition of new municipal taxes led to serious riots in Alicante in the beginning of July, and the collection of the taxes was suspended.

The tariff war that had been waged with Germany for two years came to an end when a *modus vivendi* was arranged between the two governments and went into operation on July 25. When the old treaty of commerce terminated in 1894, after various attempts to bring about a new understanding, Spain imposed upon German imports an exceptionally high scale of duties, whereupon Germany increased by 50 per cent. the tariff on Spanish goods. Spain was the heavier loser by the tariff war, which closed a large market to Spanish wines and fruits. By the *modus vivendi*, which was preliminary to the arrangement of a new commercial treaty, the extra 50-per-cent. duty on Spanish goods was revoked and they were admitted on the same terms as those of other countries possessing no special agreement, in return for which Spain conceded the most-favored-nation treatment to Germany.

The imposition of the new *octroi* duties gave rise to rioting in Valencia, where a band of men armed with rifles, led by Bernard Alvarez, a retired colonel, on Aug. 4 attempted to shoot the *octroi* officials. Similar disturbances took place in other towns. Dr. Toledo, a Cuban, was another leader. Violent demonstrations were made against the departure of fresh reinforcements to Cuba. Radical Republicans joined in the movement. Several Republican ex-Deputies were arrested in Barcelona and imprisoned in a fortress. Anarchistic circulars were spread abroad in great numbers urging the soldiers not to fight. The Liberals resisted the proposals of the Minister of Finance to lease the Almaden quicksilver mines to the Rothschilds and to prolong till 1980 the privileges of the railroad companies without any apparent equivalent consideration, and also the revival of the tobacco monopoly. On receiving assurances that the concessions were based on promises of loans from the French companies receiving them for the speedy termination of the Cuban war the Liberals withdrew their opposition except to insist on a proviso that the renewal of the railroad subsidies should be made conditional on obtaining at par a loan of 1,000,000,000 pesetas bearing 4 per cent. interest. The Carlist members of the Senate and Congress withdrew on Sept. 7 as a mark of their disapproval of the railroad subvention bill. The efforts to raise the loan in France finally failed, and the arrangement with the Rothschilds and the railroad companies fell through. The Government then proposed to raise an internal loan of 400,000,000 pesetas, specially guaranteed by the customs revenue, for 250,000,000 pesetas of which, bearing 6 per cent. interest, subscriptions were invited at the price of 93. Motives of patriotism were appealed to rather than commercial self-interest, with the result that the loan was largely oversubscribed when offered to the public on Nov. 16. On Dec. 31 the Queen Regent signed a decree by which it was ordered that the administrative reforms be carried out in Puerto Rico, and was promised similar reforms should begin in Cuba as soon as the insurgents should return to their allegiance.

Colonies.—The colonial possessions of Spain have a total area of 405,338 square miles, with 9,695,567 inhabitants: 45,205 square miles and 2,438,395 population in the West Indies, 116,256 square miles and 7,121,172 population in Asia, and 243,877 square miles and 136,000 estimated population in Africa. (See CUBA and PHILIPPINE ISLANDS.)

SPENCER, HERBERT, an English philosopher, born in Derby, April 27, 1820. In a famous passage in his autobiography, Edward Gibbon has told us of the mingled emotions with which, on a memorable night in June, 1787, he penned the last lines of the last page of his "History," and thus closed the undertaking of many laborious years. In a somewhat similar, though at once more dignified and more touching strain, Mr. Spencer, in the preface to his recently published third volume of the "Principles of Sociology," has set on record his feelings on reviewing his finished life-work. "Doubtless in earlier years some exultation would have resulted," he says, "but as age creeps on feelings weaken, and now my chief pleasure is in my emancipation. Still, there is satisfaction in the consciousness that losses, discouragements, and shattered health have not prevented me from fulfilling the purpose of my life."

When Mr. Spenser entered upon his work, he estimated that it would require at least twenty years of regular and persistent toil, allowing two years to each of the ten stout volumes called for by his plan. Reckoning from the publication of the initial installment of "First Principles" in October, 1860, it has occupied thirty-six years. Begun with little encouragement from the cultured world, and even against the more cautious judgment of immediate advisers, at a time when its author was already broken down in health, with an uncertain financial outlook and narrowly limited working powers, it has been pushed slowly and painfully toward completion. For a time the practical support yielded him by the reading public was so slight that he seriously contemplated the abandonment of his labors. After this, interruptions occurred with increasing frequency in various unexpected ways. He was forced to pause in the methodical unfolding of his plan, to explain, restate, clear up misconceptions, and reply to criticisms. On several occasions his energies were drawn off into other, though in most cases directly subsidiary, lines of work. The supervision of the compilation of the "Descriptive Sociology," the writing for the "International Scientific Series" of his "Study of Sociology," the publication of timely essays rendered necessary, as he felt, by the conditions and tendencies of public affairs—all delayed the prosecution of the larger design. And, worse than all, his physical powers, in spite of temporary improvements, continued, on the whole, to decline. He had reckoned on a regular working day of three hours; but this calculation, moderate as it appeared to be, was presently proved extravagant. Absolute inaction has often been forced upon him as the sole means of recuperating his strength, while through many a long period of sleeplessness and prostration the dictation of a paragraph or two each morning has represented his productive capacity.

Of the importance of this finished work in the intellectual annals of the nineteenth century much might be said. That it is in itself the largest, most comprehensive, and most ambitious plan conceived and wrought out by any single thinker of our time, is obvious; nor will it be less obvious to those who concern themselves in any way with the progress of thought that, measured alike by the constructive genius manifested in it and its far-reaching influence, the "Synthetic Philosophy" towers above all other philosophic achievements of the age. There is no field of mental activity that Mr. Spencer has not to some extent made his own; no line of inquiry in which his power has not been felt. Even those who differ the most radically from him are at the same time compelled to define their positions in relation to his arguments and conclusions, while his speculations constitute a common point of departure

for the most curiously divergent developments of thought.

Herbert Spencer was born in Derby, England, April 27, 1820. He came of a stock in which intellectual integrity, fearlessness, and independence were strongly pronounced characteristics. His father was a teacher, whose views of the aims and methods of education were greatly in advance of the average scholastic theories of his time. He had a dread of overtaxing the immature mind by the ordinary forcing system, and accordingly young Spencer was kept at home till he was fourteen years old, thus reaping the advantage of his father's personal training and attention, and breathing an intellectual atmosphere unusually clear and stimulating. He was then placed in charge of his uncle, the Rev. Thomas Spencer, at that time perpetual curate of the parish of Hinton Charterhouse, near Bath. With this relative, who was a vigorous thinker and an energetic social reformer, he spent three years, manifesting extraordinary originality in mathematical and mechanical studies. The design of sending him to Cambridge was gradually relinquished as impracticable, and on leaving Hinton the boy returned to his father's house, where he spent apparently an idle and profitless year. Then, after a brief experiment in teaching, he made his real start in life as a civil engineer. This was in the autumn of 1837, in the early days of the railroad excitement. But presently the tide of activity ebbed away, and after eight or ten years of intermittent work Spencer finally abandoned a calling in which he now saw little chance of success.

Meanwhile, the expansion of his thought had already begun. At the age of twenty, while engaged on the Birmingham and Gloucester Railway, he had read Lyell's "Principles of Geology," and had espoused what was then known as the Development Hypothesis; accepting the Lamarckian view (combated by Lyell) so far as to believe in the evolution of species, but rejecting all the great Frenchman's theories save that of the adaptation of the organism to its environment by the inheritance of acquired characters. In 1842 he had contributed to a paper called "The Nonconformist" a series of letters, subsequently revised and reissued in pamphlet form, on "The Proper Sphere of Government." In this early discussion of a question on which he was to have so much to say by and by, Spencer vigorously insisted on "the limitation of state action to the maintenance of equitable relations among citizens."

Spencer presently removed to London, where he secured an appointment on "The Examiner" newspaper, of which in 1848 he became subeditor. This place he held till 1853. Meantime, in the intervals of comparative leisure afforded by the routine of his office work, he had written his first important book, "Social Statics" (1850). Shortly after this began his connection with the "Westminster Review," to the pages of which, during the next few years, he contributed essays, valuable in themselves, and now particularly interesting as marking the development and consolidation of many of the fundamental elements of his later thought. In 1855 appeared a large volume on "The Principles of Psychology" (afterward incorporated into his more extended treatise on the same subject in the regular system); and in this book (four years before the publication of "The Origin of Species") the problems of mind were throughout approached and discussed from the evolutionary point of view.

Almost simultaneously with the publication of this volume, and mainly as the direct result of over-exertion in the writing of it, Mr. Spencer had a serious nervous breakdown, which for eighteen months incapacitated him for work, and left him in

a condition of semi-invalidism. When, on partial restoration to health, he returned to his dropped undertakings, his first concern was to finish the essay on "Progress," in which he expounded in detail that conception of evolution as a universal process which he had already reached in the "Psychology." A year later (1858), he published a long defense of the Nebular Hypothesis; and during the preparation of this article the scheme of the "Synthetic Philosophy" took shape in his mind. Hitherto, he had dealt with the phenomena of life and society in a fragmentary manner; now he realized the possibility of taking the doctrine of evolution as the basis of a system of thought, and of thus unifying knowledge by the affiliation of its various branches upon the ultimate laws underlying them all. The prospectus of the proposed enterprise was drawn up in 1859, and distributed in the March of the following year.

The history of the man from this time is almost entirely merged in the history of his work; the dates of importance for the outside world being those marked by the publication of the various portions and volumes of the promised series. Of Mr. Spencer himself, through all this long period during which the rare qualities of his genius have been more fully recognized, and the power of his thought has shown a steady growth, the public at large has known less perhaps than of any of his notable contemporaries. He has lived, rather by necessity than by choice, a very quiet and secluded life, saving all his available strength for the task he had set himself, while he has not only never courted notoriety, but has firmly resisted frequent attempts to thrust notoriety upon him. Himself a delightful conversationalist and capital story-teller, fond of his joke, and with a ready laugh for the good sayings of others, he certainly does not remind those who are privileged to know him well of the dry, abstracted, unemotional philosopher of vulgar tradition, though doubtless a stranger would pronounce him cold and reserved. Before his nervous trouble assumed its more serious form a few years since, he took much pleasure in fishing, quoits, and especially billiards, and was a regular *habitué* of the Athenæum Club. But for a long time past these and similar amusements have been out of the question, and, being a rather impatient reader of general literature, he has derived his greatest solace from music, of which he has always been passionately fond. His standard of individual conduct is extremely high, and, unlike many theorists, he applies it to his own life as severely as he does to the lives of other people.

It is important, in the first place, to make clear the meaning that Mr. Spencer attaches to the word philosophy. By philosophy he does not mean an effort to solve the ultimate problem of the universe. He recognizes two categories—the Unknowable and the Knowable; and to the former of these, the proper domain of religion, he relegates all those final questions concerning Absolute Being, and the why and wherefore of the cosmos, which have largely absorbed the attention of the metaphysicians—questions that are forever beyond the scope of human intelligence. The true subject-matter of philosophy, therefore, is not the problem of absolute cause and end, but of secondary causes and ends. What, then, do we demand from philosophy? Not an explanation of the universe in terms of Being as distinguished from Appearance; but a complete co-ordination or systematic organization of those cosmical laws by which we symbolize the processes of the universe, and the interrelations of the various phenomena of which the universe, as revealed to us, is actually composed. The old antithesis between common knowledge and what we

call science, on the one hand, and philosophy on the other, forthwith disappears. They are not essentially unlike; their differences are differences of degree in generality and unification. "As each widest generalization of science comprehends and consolidates the narrower generalizations of its own division, so the generalizations of philosophy comprehend and consolidate the widest generalizations of science." Philosophy is thus presented as "the final product of that process which begins with a mere colligation of crude observations, goes on establishing propositions that are broader and more separated from particular cases, and ends in universal propositions. Or, to bring the definition to its simplest and clearest form: knowledge of the lowest kind is ununified knowledge; science is partially unified knowledge; philosophy is completely unified knowledge."

If philosophy is to undertake this complete unification of knowledge, it must establish some ultimate proposition which includes and consolidates all the results of experience. Assuming, as we must ever continue to assume, that in the manifestations of the Unknowable in and through the phenomenal universe, congruities and incongruities exist and are cognizable by us, Mr. Spencer shows that in the last analysis all classes of likeness and unlikeness merge in one great difference—the difference between object and subject. His postulates, therefore, are "an Unknowable Power; the existence of knowable likenesses and differences among the manifestations of that Power; and a resulting segregation of those manifestations into those of subject and object." From these postulates philosophy has to proceed to the achievement of its purpose as above set forth.

Pushing the argument through a consideration of space, time, matter, motion, force, the indestructibility of matter, and the continuity of force, Mr. Spencer at length reaches his ultimate dictum—the persistence of force; a dictum that possesses the highest kind of axiomatic certitude for two reasons: it constitutes the required foundation for all other general truths, and it remains stable and unresolvable—the one inexpugnable yet inexplicable element of consciousness. Force is thus, for Mr. Spencer, the ultimate conception, and the persistence of force furnishes the universal criterion of his system of thought. Of such persistence of force under the forms of matter and motion, all phenomena are necessary results. Eliminate this conception, and consciousness collapses. "The sole truth which transcends experience by underlying it is thus the Persistence of Force. This, being the basis of experience, must be the basis of any scientific organization of experiences. To this an ultimate analysis brings us down, and on this a rational synthesis must build up."

The first deduction drawn from this ultimate universal truth is that of the persistence of relations among forces—otherwise, the uniformity of law; whence we pass to the necessary corollaries, the doctrines of the transformation and equivalence of forces, and of the rhythm of motion. Both these principles are shown to hold good throughout the whole range of phenomena, from the physical and chemical to the psychical and social. These truths, then, have the character of universality which constitutes them parts of philosophy, properly so called. "They are truths which unify concrete phenomena belonging to all divisions of Nature, and so must be components of that complete coherent conception of things which Philosophy seeks. . . . Having seen that matter is indestructible, motion continuous, and force persistent—having seen that forces are everywhere undergoing transformation, and that motion, always

following the line of least resistance, is invariably rhythmic, it remains to discover the similarly invariable formula expressing the combined consequences of the actions thus separately formulated."

From this point Mr. Spencer proceeds to reduce to systematic and comprehensive expression the laws of that continuous redistribution of matter and motion which is going on throughout the universe in general and in detail. All sensible existences, and the aggregates which they compose, have their history, and this history covers the entire period between their emergence from the imperceptible and their final disappearance again into the imperceptible. The redistribution of matter and motion which brings about this passage from the imperceptible, through the various stages of the perceptible, and back to the imperceptible, comprises two antagonistic processes: one characterized by the integration of matter and the dissipation of motion; the other by the absorption of motion and the disintegration of matter. The former produces consolidation and definiteness; the latter, diffusion and incoherence. These two universal antagonistic processes are evolution and dissolution. The entire universe is in a state of continual change, and in terms of these processes all changes, small or great, inorganic, organic, physical, vital, psychical, social, have to be interpreted. To deprive the law of evolution, hereupon formulated, of any merely empirical character, Mr. Spencer shows at length that there are all-pervading principles underlying the all-pervading process. Evolution means always an integration of matter and concomitant dissipation of motion, or, in other words, increasing coherence to definiteness; but it commonly implies much more than this, and we must recognize the secondary changes by which this primary change is habitually complicated before the formula of evolution can be set down as complete. These secondary changes are indeed the most conspicuous characteristics of the evolutionary process; and it is not surprising, therefore, that it was from these that Mr. Spencer started, that it was with these that he remained for a long time preoccupied, that it was these which he first defined in philosophic terminology. He found himself confronted at the outset by the special fact of the development of man individually and in society—that is, the fact of progress. What, then, is progress? This was the specific question to which, for a number of years, he was slowly feeling his way to an answer. In his earliest publication, the "Letters on the Proper Sphere of Government," was implied the belief that societies are not manufactured, but grow; and from the side of natural law, therefore, this question of progress was approached. In the pages of "Social Statics" he elaborated his first reply. There, borrowing from Coleridge the theory that Coleridge in turn had derived from German speculation—that life is "a tendency toward individuation"—he undertook to show that it is in the fulfillment of this tendency that all progress will be found to consist. But this tendency resolves itself into two closely related processes: one making for more and more sharply defined separateness; the other for increasing unity of organization.

Taking the principle of differentiation by itself he attempted in "Progress: Its Law and Cause," to expand it into a complete theory of universal evolution. In this he was helped by von Baer's law, "that the series of changes gone through during the development of a seed into a tree, or an ovum into an animal, constitute an advance from homogeneity of structure to heterogeneity of structure." Overlooking the principle of integration, Mr. Spencer announces this generalization as his text. "We propose," he writes, in the early part of his essay,

“to show that this law of organic progress is the law of all progress.”

Satisfied that he had now reached not only a law of evolution, but also the law of evolution, Mr. Spencer, when he began work on the “Synthetic Philosophy,” proceeded to elaborate his thesis in “First Principles.” Further thought convinced him that he had fallen into error—that the transformation of the homogeneous into the heterogeneous does not sum up the whole of evolution, but only the most conspicuous part of the secondary redistribution of matter and motion constituting it. When, then, does increase in complexity mean evolution? The answer to this question is, when increase of complexity is accompanied by more and more complete interdependence among the specialized parts—by increase in organic unification. Evolution, therefore, in Mr. Spencer’s world-famous formula, is “an integration of matter and concomitant dissipation of motion; during which the matter passes from an indefinite incoherent homogeneity to a definite coherent heterogeneity, and during which the retained motion undergoes a parallel transformation.”

While the Spencerian system presents us with a history of the knowable universe in empirical generalizations, it also affiliates these all-embracing generalizations upon ultimate principles, derives them from its final dictum, and thus furnishes a rational history of the knowable universe as well. Undertaking, therefore, the task of presenting the phenomena of evolution in synthetic order, Mr. Spencer arrives at the law of the instability of any finite homogeneous aggregate owing to the unequal exposure of its parts to incident forces.

The simple nucleus of his philosophic system first made its appearance in “Social Statics,” where, in the chapter entitled “General Considerations,” mention is made of the biological truth that low types of animals are composed of many like parts not mutually dependent, while higher animals are composed of parts that are unlike and are mutually dependent. The essays that followed “Social Statics” were marked by the establishment of various separate inductions in which other groups of phenomena were brought under this large principle, while in the first edition of the “Psychology” not only was this same principle shown to comprehend mental phenomena, but there was also recognized the primary law of evolution—integration and increase of definiteness. What followed may best be given in Mr. Spencer’s own words: “Then it was that there suddenly arose in me the conception that the law which I had separately recognized in various groups of phenomena was a universal law applying to the whole Cosmos: the many small inductions were merged in the large inductions. And only after this largest induction had been formed did there arise the question—Why? Only then did I see that the universal cause for the universal transformations was the multiplication of effects, and that they might be deduced from the law of the multiplication of effects. The same thing happened at later stages. The generalization which immediately preceded the publication of the essay on ‘Progress: Its Law and Cause’—the instability of the homogeneous—was also an induction. So was the direction of motion and the rhythm of motion. Then having arrived at these derivative causes of the universal transformation, it presently dawned upon me (in consequence of the recent promulgation of the doctrine of conservation of force) that all these derivative causes were sequences from that universal cause. The question had, I believe, arisen, Why these several derivative laws? and that came as the answer. Only then did there arise the idea of developing the whole of the universal transformation from the persistence of force. The process began by being inductive, and

ended by being deductive; and this is the peculiarity of the method followed.

To the exposition and elaboration in their broadest aspects of the truths above epitomized, Mr. Spencer devotes the initial volume of his series—“First Principles.” Such a presentation of arguments and results constitutes what he defines as “General Philosophy.” The nine following volumes of the system are devoted to “Special Philosophy”—that is, to the task of carrying these universal truths into the particular phenomena which form the subject-matter of biology, psychology, sociology, and ethics, and of interpreting such particular phenomena by them.

The application of the fundamental principles already established should first of all be made to inorganic Nature. But this great division is passed over entirely, “partly because, even without it, the scheme is too extensive; and partly because the interpretation of organic Nature after the proposed method is of more immediate importance.” We thus enter at once, in ‘The Principles of Biology,’ the field of organic life; the purpose of the two volumes composing this work being, as stated in the preface, “to set forth the general truths of biology as illustrative of and as interpreted by the laws of evolution.”

From the historical point of view no part of this masterly work is of greater interest than the closing division of the first volume, in which Mr. Spencer, after dismissing the special-creation theory of things as untenable, displays at length the *a priori* and *a posteriori* evidences of organic evolution. To appreciate the full significance of his arguments, it is necessary to remember that at the time when the chapters containing them were written, the doctrine of development was currently regarded, even by the large body of naturalists, as a fantastic hypothesis. While thus presenting the case for evolution in its inductive and deductive aspects, Mr. Spencer showed that the processes observable in the world of organic life are but phases of the universal cosmical processes formulated in “First Principles”; and that thus the deepest laws of morphological and physiological development are, deductively viewed, necessary corollaries from the doctrines already established. Even the Darwinian principle of natural selection (or, as Mr. Spencer called it, the survival of the fittest in the struggle for existence) is exhibited as falling into its place as a single manifestation of a far wider law—the law of equilibration.

Life is defined by Mr. Spencer as “the continuous adjustment of internal relations to external relations”; and he shows that the degree of life varies as the correspondence varies between organism and environment; the highest point being reached where the correspondence exhibits a maximum of complexity, rapidity, and length.

In “The Principles of Psychology,” the massive superstructure is reared on the general foundations already laid. Life at large is the genus; what we distinguish as bodily life and mental life respectively are species; and though if, after the ordinary fashion, we insist on contemplating only the extreme forms of the two, it would appear that the hardest line of demarcation is to be drawn between them, such line necessarily vanishes the moment the evolutionary point of view is assumed.

As in the “Principles of Biology” the general truths of life were interpreted through the fundamental laws of evolution so in the “Principles of Psychology” the general facts and problems of mind are elucidated in the same way. The “Principles of Sociology” as actually completed exhibit the only important departure of the author from the prospectus issued thirty-six years ago; for the

volume in which linguistic, intellectual, moral, and æsthetic progress was to have been traced out, is left unwritten. Sundry of the more momentous questions connected with these phases of human development, however, are touched upon in other parts of the system, and the hiatus is, therefore, by no means serious. On the other hand, the remaining divisions of the work have, in the writing, undergone unlooked-for expansion.

One large aspect of universal evolution remains to be considered, before the organization of knowledge demanded by philosophy can be taken as complete; and this aspect—of such importance as to lead Mr. Spencer to describe all other parts of his work as subsidiary to its interpretation—we reach in the concluding two volumes of the series, comprising the "Principles of Ethics." In his work of reconstructing ethical theory in harmony with the fundamental doctrines of his philosophy, Mr. Spencer takes a most important step in advance of the results reached by the various schools of scientific moralists in the past. His system is, of course, hedonistic or utilitarian—that is, the final criterion and ultimate end of conduct is for him happiness, pleasure, or well-being. He has sought to convert the laws of conduct from truths of the empirical into truths of the rational order. As he wrote to Mill: "I conceive it to be the business of moral science to deduce from the laws of life and the conditions of existence what kinds of action necessarily tend to produce happiness, and what kinds to produce unhappiness. Having done this, its deductions are to be recognized as laws of conduct, and are to be conformed to, irrespective of a direct estimation of happiness or misery."

If it is asked toward what general conclusions regarding the moral prospects of the race the Spencerian ethics may be said to point, the broadest answer will be found in the statement of the universal law, already frequently referred to—the law of equilibration. We bring with us into life instincts and impulses which we derive from our long line of animal and barbarous ancestry; our natures are very imperfectly adjusted to the demands of social life. But the influences of advancing civilization have throughout human evolution been gradually molding character into more complete harmony with the sum total of the conditions under which we live. Hence we may anticipate a time, far distant though it must needs be, when the internal forces which we know as feelings will be in fairly perfect balance with the external forces they encounter; when, in other words, the nature of man will have become fully adapted to the associated state. Mr. Spencer has, indeed, within recent years spoken less optimistically about this consummation than he did when, in "Social Statics," he asserted the evanescence of evil. But he still looks forward to an "approximately complete adjustment" of constitution to conditions as the goal of moral evolution, toward which we are actually, if slowly, moving.

What are the bearings of the Spencerian philosophy upon the ultimate questions of religion? Briefly thus. The chemist can not explain the ultimate nature of matter, nor the physicist the ultimate nature of motion, nor the psychologist the ultimate nature of mind. Matter, motion, mind are but symbols, expressing for us the manifestations of an unknown power, and, pushed to the utmost limits of simplification, the symbols remain symbols still. The question at issue between spiritualists and materialists, therefore, viewed from the Spencerian standpoint, resolves itself into a question of these symbols, and any answer that can conceivably be given leaves us as completely outside the reality as we were at first. Spirit and matter must

thus be regarded simply as signs of the ultimate existence that underlies both. The absolute and unconditioned existence that transcends human intelligence, in which the subject, object, spirit, matter of our finite consciousness merge and are united, is not for Mr. Spencer mere zero—a negation of thought. It is a positive fact of the profoundest certitude; or rather it is *the* final fact sustaining all others—the fact which science finds at the back of its widest generalizations and beneath its deepest truths. And this final fact of science, this ultimate datum of consciousness, upon which all knowledge depends, this cause of all causes in the universe as it is revealed to us, is the permanent foundation of all religion as well. Here the ancient foes meet in complete reconciliation. Science must necessarily end in the mystery with which religion begins. "That which persists unchanging in quantity but ever changing in form," under the sensible appearances "which the universe presents to us," is an "unknown and unknowable power which we are obliged to recognize as without limit in space and without beginning or end in time," and this nomenclature of philosophy, of which all phenomena are but manifestations, is the God of religion—"the infinite and eternal energy from which all things proceed."

STOWE, HARRIET BEECHER, author, born in Litchfield, Conn., June 14, 1811; died in Hartford, Conn., July 1, 1896. Her father, the Rev. Lyman Beecher, was pastor of a Congregational church in Litchfield. Her mother, Roxana Foote Beecher, a woman of strong character, died when Harriet was but four years old, and the daughter afterward wrote: "Although my mother's bodily presence disappeared from our circle, I think that her memory and example had more influence in molding her family than the living presence of many mothers." Catherine, her sister, was eleven years old when their mother died, and from that time much of the care of Harriet devolved upon her. Mrs. Stowe was educated at Litchfield Academy, under the charge of Sarah Pierce and John Brace. Of the latter she wrote: "Mr. Brace exceeded all teachers I ever knew in the faculty of teaching composition. Much of the inspiration and training of my early days consisted not in the things I was supposed to be studying, but in the hearing, while seated unnoticed at my desk, the conversation of Mr. Brace with the older classes." But the strongest and most lasting educational influences of her early life were found in the homes in which she lived. In the family of an aunt in Guilford, Conn., she was introduced to Walter Scott's novels and poems, to Burns, to the "Arabian Nights," and to a host of charming and wholesome books in which her imagination revelled so eagerly that it was her delight to repeat great numbers of poems, hymns, and prose extracts. In her father's library she found literature that gave to the inherited trend of her mind the deeply enthusiastic religious power that pervaded so much of her writing, notably the story of Uncle Tom. Cotton Mather's "Magnolia Christi Americana" and similar works vied with the "Arabian Nights" in holding her interest, and when she was twelve years old she wrote an essay entitled "Can the Immortality of the Soul be proved by the Light of Nature?" She took the ground that it can not. Mr. Brace, her teacher, read the essay in her father's presence without telling him its origin, and at its close Dr. Beecher asked with emphasis "Who wrote that?" Mrs. Stowe, in recording the incident, says: "It was the proudest moment of my life. There was no mistaking my father's face when he was pleased, and to have interested him was past all juvenile triumphs."

The death of Lord Byron, in 1824, was felt by this sensitive child as a personal loss. She knew his finest poem by heart, and mourned over his departure from moral rectitude with intense sorrow. Although she was brought up amid the furnace heat of theological discussion that marked the Unitarian movement in the Congregational churches where Lyman Beecher was set as a beacon of the ancient faith, there were sweet and steady influences in her life that served her well in the stormy periods of trial. She gives an account of her religious experience. At the close of one of his sermons setting forth the love of Christ, her father said: "Come ye and trust your souls to this faithful friend." Harriet, who was thoughtfully listening, says that a feeling of perfect trust came into her mind, and she adds: "My whole soul was illumined with joy, and on leaving the church to walk home it seemed as if Nature herself were hushing her breath to hear the music of heaven. As soon as father came home and was seated in his study, I went up to him and fell in his arms, saying, 'Father, I have given myself to Jesus, and he has taken me.' 'Is it so?' he said, folding her in his arms, while the tears fell hot on her forehead. 'Then has a new flower blossomed in the kingdom this day.'" The religious impulse gained in that hour of consecration was the motive power of Mrs. Stowe's life and work.

She was placed in school at Hartford, where her sister Catherine was teacher. She began the study of Latin by herself, and at the end of the first year made a metrical translation from Ovid. It was her ambition to be a poet, and she began a drama entitled "Cleon." The scene is laid in the court of Nero, and Cleon, who is a noble in the emperor's suite, becomes a Christian after long study and much tribulation. She was so absorbed in this work that her sister Catherine expostulated with her, and gave her a class in Butler's "Analogy" to turn her mind into a different channel and discipline her exuberant fancy. "I instructed girls as old as myself," writes Mrs. Stowe, "and was compelled to master each chapter just ahead of the class I was teaching." She read Baxter's "Saints' Rest" at this time, and she says: "As I walked the pavements I used to wish that they might sink beneath me if only I might find myself in heaven."

Harriet Beecher had few companions of her own age. There were two girls, older than herself—Catherine Cogswell and Georgiana May—with whom she formed an intimacy, but her position in the school was early that of pupil teacher, which shut her off from the wholesome and natural interchange of girlish feeling. The evil effect of this Harriet realized later. When she was twenty-one years old she made an effort to rid herself of the habit of introspection that had become second nature. She wrote to Georgiana May at this time: "As this inner world of mine has become worn out and untenable, I have at last concluded to come out of it and live in the external one, and, as F. S—once advised me, give up the pernicious habit of meditation. . . . Instead of shrinking into a corner to notice how other people behave, I am holding out my hand to the right and to the left, and forming casual or incidental acquaintances with all who will be acquainted with me. When I used to meet persons the first inquiry was, 'Have they such and such a character, or have they anything that might possibly be of use or harm to me?' The greater part that I see can not move me deeply. But those that I *love*—oh, how much that word means! They may change, they must die, they are separated from me, and I ask myself why I should wish to love with all the pains and penalties of such conditions? I check myself when expressing feelings like this, so much has been said of it by the sentimental, who

talk what they could not have felt. But it is so deeply, sincerely so in me, that sometimes it will overflow. Well, there is a heaven, a heaven, a world of love; and love, after all, is the life blood, the existence, the all in all of mind."

In 1826 Dr. Beecher became pastor of a church in Boston, where he remained for six years, when he became President of Lane Theological Seminary, at Cincinnati. Catherine Beecher, with Harriet as assistant, established a school, which they dreamed might one day become a college for women. At this time Harriet made her first literary venture, a school geography, which was published in Cincinnati. In the winter of 1833 she won a \$50 prize that was offered by a Western magazine for the best story. Her story was entitled "Uncle Lot." She became a member of a literary society, and wrote for its meetings, but most of her time was absorbed by the extensive scheme that the sisters formed for a system of schools in Cincinnati. In 1836 Harriet married Calvin E. Stowe, professor in Lane Seminary.

The privations that arose from the cramped financial condition of a struggling seminary and school taxed the willing strength and ingenuity of Mrs. Stowe to the utmost. During the twelve years from 1836 to 1848 she gave birth to six children. Amid the cares and anxieties of their upbringing she prosecuted her literary work, both for the delight it gave her and for the addition to the slender family purse. Her husband was very proud of her work in that direction, and had great faith in her ability. At one time he wrote to her, "You must make all your calculations to spend the rest of your life with your pen." Happily, leisure and rest and physical strength seem never to have been necessary to the production of the best literature. The absorbing power of concentration, which is one of the compensations of woman's nervous organization, was given in full measure to Mrs. Stowe. When this is associated with rich spiritual endowments and insight the conditions are present in which a trained mind may find lasting expression in literature. Mrs. Stowe was not the author of a single book. While "Uncle Tom's Cabin" was the first fruit of her perfected powers, "Dred" was in some respects its superior in the same field. This field was opened to Mrs. Stowe during her residence in Cincinnati. Only the Ohio river, which played so dramatic a part in the setting of the novel of Uncle Tom, rolled between her home and homes that were built upon the slave system. In 1832, when Dr. Beecher removed to Cincinnati, the border States were beginning to feel the pressure of conflicting sentiment that had been gaining in volume since the time when freedom and slavery stood face to face in the minds and circumstances that produced the Declaration of Independence. The Beechers were always ardent antislavery advocates, although not belonging to any party or faction of avowed abolitionists. Mrs. Stowe was about eight years old when the agitation over the question of admitting Missouri to the Union took place, with the contention Shall it be free or slave territory? She records that one of the deepest impressions ever made upon her mind was produced at that time by the prayers and sermons of her father and his anguish for the slave. She says: "I remember his preaching drawing tears down the hardest faces of the old farmers in his congregation. I well remember his prayers morning and evening in the family for poor, oppressed bleeding Africa, that the time of her deliverance might come: prayers offered with strong crying and tears, and which indelibly impressed my heart, and made me what I am from my very soul—the enemy of all slavery." She further says: "Every brother I have has been, in his sphere, a

New York, D. Appleton & Co.

Harriet Beecher Stowe

leading antislavery man. As for myself and husband, we have for the last seventeen years lived on the border of a slave State, and we have never shrunk from the fugitives, and we have helped them with all we had to give. I have received the children of liberated slaves into a family school, and taught them with my own children, and it has been the influence that we found in the Church and by the altar that has made us do all this." During these years some of the incidents which she related in "Uncle Tom" took place under her own eye. Uncle Tom himself had his prototype in a slave who was known to her—Josiah Henson—who was permitted to come and go freely from Kentucky to Ohio on his master's business, but who refused to avail himself of his extraordinary opportunities for escape because his word was pledged against such attempt. The master's word was also pledged to give him his freedom in due time; but this pledge was not kept, and when death overtook him the faithful servant was sold "down river."

The Hon. James G. Birney was a representative of that fine class of men who, born and reared in slave States, had yet always abhorred the institution of slavery, and had looked with hopeful longing for its overthrow by constitutional means. Mr. Birney in 1835 removed to Cincinnati, and there opened the printing office for an antislavery publication which he had not been able to establish in Kentucky. Mrs. Stowe immediately became his friend and helper in various ways. His journal was entitled "The Philanthropist," and the associate editor was Dr. Gamaliel Bailey, who afterward removed to Washington and established an antislavery journal in which Mrs. Stowe's great story first appeared. During the riots in which Mr. Birney's press was destroyed Lane Seminary was threatened. Many of its students were from the South, and the debates between them and the distinctly antislavery element attracted by Dr. Beecher's natural clientele, became so angry and continuous that little work could be done in regular study. The Board of Trustees, in the absence of Dr. Beecher, forbade all discussion of the subject of slavery, and the antislavery students immediately withdrew in a body. This broke up the seminary organization for the time, although it revived somewhat in the following seventeen years, during which Dr. Beecher and Prof. Stowe labored for it. These were years of great privation to their families. In 1849 Mrs. Stowe lost a child from cholera.

In 1850 Prof. Stowe accepted the professorship of Natural and Revealed Religion in Bowdoin College, Brunswick, Me. He remained at Lane Seminary until a successor could be obtained, while Mrs. Stowe, with the family, went to Brunswick to prepare the new home. Of this experience she wrote to her sister: "From the time that I left Cincinnati with my children to come forth to a country that I knew not of, almost to the present time it has seemed as if I could scarcely breathe, I was so pressed with care. My head dizzy with the whirl of railroads and steamboats, then ten days' sojourn in Boston, and a constant toil and hurry in buying my furniture and equipments, and then landing in Brunswick in the midst of a drizzly, inexorable northeast storm, and beginning the work of getting in order a deserted, dreary, damp old

home. Then came Mr. Stowe; and then came July 8 and my little Charlie. During this time I have employed my leisure hours in making up engagements with newspaper editors. I have written more than anybody or I myself would have thought. I have taught an hour a day in our school, and I have read two hours every evening to the children."

In this year, 1850, the compromise measures that included the fugitive-slave law and the admission of California as a free State were passed by Congress and signed by President Fillmore. The compromises really satisfied nobody. The fugitive-slave law stirred the Northern mind to its depths. Especially in Boston were people wrought to the highest pitch of excitement, and colored residents fled to Canada. Up to this time Mrs. Stowe had written nothing on the subject of slavery. She said there "was a sort of general impression upon her mind that the subject was so dark and painful, so involved in difficulty and obscurity, so utterly beyond human hope or help, that it was of no use to read, or think, or distress one's self about it." Slavery seemed to be advancing from a tolerated institution to a protected one. All Mrs. Stowe's memories of what she had seen and known rose to haunt her mind, and at

THE HOUSE IN WHICH "UNCLE TOM'S CABIN" WAS WRITTEN, BRUNSWICK, MAINE.

this time she received a letter from a sister-in-law which contained this passage: "If I could use the pen as you can I would write something that would make this whole nation feel what an accursed thing slavery is." She read the letter aloud to the family, and when she came to the passage just quoted she exclaimed in a tone that her children never forgot: "I will write something. I will if I live." From this moment the purpose burned in her soul and blended itself with her devotions. She was one day reading an account of the crossing of the Ohio river on an ice floe by a slave woman and her child, when the "something" that was to be written began to take the form of a novel. The first portion written was the scene in which Uncle Tom died. She was attending communion service when the incidents rose so vividly to her imagination that she was compelled to leave the church lest her sobbing should attract attention. She sat down at once and wrote with a torrent of feeling and expression. As her husband was away from home, when she had finished she called her two little sons and read the manuscript to them. They cried as if their hearts would break,

and one of them said: "O mamma, slavery is the most cursed thing in the world!" From that time the book seemed to take its own way in her mind and heart. Scene after scene, incident after incident, seemed ready for her pen. The writing was done during the morning, at a little desk in the dining room of the Brunswick house. No distractions—and they were serious and constant—were powerful enough to call her mind away from her creation. At evening the day's installment was read to the family, and the intense feeling it called forth proved to be a precursor of the fortune that awaited the most dramatic and fervent presentation that ever has been made of a great moral cause and purpose. When the first chapters were written Mrs. Stowe wrote to Dr. Bailey, and offered it to him as a serial for "The National Era." He at once accepted it, and for nine months it ran in the paper, rousing but little interest beyond the small circle of the journal's subscribers. Before it was concluded John P. Jewett, of Boston, a young and unknown publisher (who was a member of the Anti-slavery Society and had written newspaper articles on the subject), applied for the opportunity to produce it in book form. The request was complied with; but as the story ran on he became alarmed at its length, and wrote to Mrs. Stowe that it should be shaped to proper proportions for a one-volume novel. She replied that she was not making the story, it was making itself, and she seemed to have no power to curtail or enlarge. Mr. Jewett hesitated, but he gave the manuscript to a man in whom he had great confidence, and on his report that he had sat up all night because he was unable to lay the book aside, he concluded to risk the length. Mrs. Stowe had written much with a view to eking out the slender family income, but of "Uncle Tom" as a business venture she had not thought at all. It was her contribution to the moral and religious life and progress of her beloved land and its inhabitants. It was a "strong crying" to the God of nations to release a race from bondage. When it was ended the reaction and revulsion of feeling was in proportion to the height and strain of the achievement. She sank into a despondent mood, in which she believed herself to have failed of her purpose, and fancied that nothing could stay the tide. Indeed, this feeling overtook her when the essential moral work was done, and the closing scenes of the novel bear witness to the mental fatigue in which the perfunctory work of "winding up" the tale was done. The story of Uncle Tom was to have its real completion in seas of the blood of her own countrymen and friends.

Great surprises awaited her. The first was in the immediate and tremendous success of the novel in book form. It was published on March 20, 1852, and 3,000 copies were sold the first day. Within a few days 10,000 had been called for, and on April 1 a second edition went to press. From that time eight presses, running day and night, could not keep pace with the demand. Within a year, 300,000 copies had been sold. The friends of the slave system immediately recognized its danger, and there was bitter denunciation of the book. Mrs. Stowe had pictured the slaveholder as capable of the highest virtue and loveliness of character, as the victim of circumstances that long preceded his birth; she had shown the pleasant side of slavery, and also that it had another and terrible side. The second great surprise for Mrs. Stowe was in the matter of money. Four months after the appearance of the book Prof. Stowe went into the publisher's office. "How much does Mrs. Stowe expect?" asked Mr. Jewett. "She hopes for enough to buy a new silk dress," was the answer. He was given a check for \$10,000.

The success of the book in England was as great

as in the United States. In the first week of its appearance there, in April, 7,000 copies were sold. By July it was being called for at the rate of 1,000 a week, and at the end of August the demand was so great that 400 people were busy preparing it, 17 printing machines, besides hand presses, being in use. Within a year 18 different London houses were publishing it, at all manner of prices. From April to December, 1852, 12 different editions—not reissues—were published. Mr. Sampson Low, the London publisher, said: "I am able pretty confidently to say that the aggregate number of copies circulated in Great Britain and the colonies exceeds 1,500,000."

Mrs. Stowe sent copies, accompanied by personal letters that pleaded the slave's cause, to Macaulay, Dickens, the Earl of Carlisle, Prince Albert, Charles Kingsley, and the Earl of Shaftesbury. Macaulay's brief letter of acknowledgment suggests what had been shown before, that the great writer who knew English history so well had no interest in American affairs. He said: "I sincerely thank you for the volumes which you have done me the honor to send me. I have read them—I can not say with pleasure, but with high respect for the talents and for the benevolence of the writer." Dickens wrote: "I have read your book with the deepest interest and sympathy, and admire, more than I can express to you both the generous feeling which inspired it and the admirable power with which it is executed. If I might suggest a fault in what has so charmed me, it would be that you go too far and seek to prove too much. The wrongs and atrocities of slavery are, God knows! ease enough. I doubt there being any warrant for making out the African race to be a great race, or for supposing the future destinies of the world to lie in that direction; and I think this extreme championship likely to repel some useful sympathy and support." Lord Carlisle wrote: "I have allowed some time to elapse before I thanked you for the great honor and kindness you did me in sending to me from yourself a copy of 'Uncle Tom's Cabin.' I thought it due to the subject of which I perceived that it treated not to send a mere acknowledgment. It is not in the stiff and conventional form of compliment, still less in the technical language of criticism, that I am about to speak of your work. I return my deep and solemn thanks to Almighty God, who has led and enabled you to write such a book. I do feel, indeed, the most thorough assurance that, in his good providence, such a book can not have been written in vain. I have long felt that slavery is by far the *topping* question of the world and age we live in, including all that is most thrilling in heroism and most touching in distress—in short, the real epic of the universe. The self-interest of the parties most nearly concerned on the one hand, the apathy and ignorance of unconcerned observers on the other, have left these august pretensions to drop very much out of sight, and hence my rejoicing that a writer has appeared who will be read and must be felt, and that, happen what may to the transactions of slavery, they will no longer be suppressed. No one can know so well as you how much the external appearance of the negro detracts from the romance and sentiment which undoubtedly might attach to his position and to his wrongs; and on this account it does seem to me proportionately important that you should have brought to your portraiture great grace of style, great power of language, a play of humor which relieves and lightens even the dark depth of the background which you were called upon to reveal, a force of pathos which, to give it the highest praise, does not lag behind all the dread reality, and, above all, a variety, a discrimination, and a truth in the delineation of

character which, even to my own scanty and limited experience of the society you describe, accredits itself instantaneously and irresistibly." Charles Kingsley wrote: "I can not tell you how pleased I am to see coming from across the Atlantic a really healthy indigenous growth—'autochthones,' free from all second- and third-hand Germanisms and Italianisms, and all other unrealisms. I pay you a compliment in saying that I have actually not read it through. It is too painful. I can not bear the sight of misery and wrong that I can do nothing to alleviate. I can not resist transcribing a few lines which I received this morning from an excellent critic: 'To my mind, it is the greatest novel ever written, and though it will seem strange, it reminded me in a lower sphere more of Shakespeare than anything modern I have ever read; not in the style, nor in the humor, nor in the pathos, though Eva set me crying worse than Cordelia did at sixteen, but in the many-sidedness, and, above all, in that marvelous clearness of insight and out-sight which makes it seemingly impossible for her to see any one of her characters without showing him or her at once as a distinct man or woman different from all others.'" Lord Shaftesbury wrote: "It would be out of place here to enumerate the various beauties, singular, original, and lasting, which shine throughout the work. One conviction, however, is constantly present to my mind the conviction that the Gospel alone can elevate the intellect even, to the highest point. None but a Christian believer could have produced such a book as yours, which has absolutely startled the whole world."

This exposition of vital religion through a picture of its power to influence the life in the deepest sorrow and humiliation is the truest source of its immortality. Among the multitude of testimonies to the book's religious effect is the following extract from the writings of Heinrich Heine: "Astounding! that after I have whirled about all my life over all the dance floors of philosophy, and yielded myself to all the orgies of the intellect, and paid my addresses to all possible systems without satisfaction, I now find myself on the same standpoint where poor Uncle Tom stands, on that of the Bible. I kneel down by my black brother in the same prayer! What a humiliation! With all my science, I have come no farther than the poor, ignorant negro, who has scarce learned to spell. Poor Tom, indeed, seems to have seen deeper things in the holy book than I." It is a result-producing volume. The evidences are many that it was a mighty lever in the pressure of events that culminated in the emancipation proclamation. President Lincoln, who had an inborn hatred of slavery, was yet as anxious as Henry Clay to put nothing before the preservation of the Union. Mrs. Stowe was present when, in delivering his second inaugural address, he uttered the memorable words: "Fondly do we hope, fervently do we pray, that this mighty scourge of war may speedily pass away. Yet if God wills that it continue until all the wealth piled by the bondman's two hundred and fifty years of unrequited toil shall be sunk, and until every drop of blood drawn with the lash shall be paid by another drawn with the sword, as was said three thousand years ago, so still it must be said 'the judgments of the Lord are true and righteous altogether.'"

The bibliography of "Uncle Tom's Cabin" is remarkable. In the British Museum may be found all the English editions, including their abridgments, extracts, and adaptations either poetical or dramatic, and all the translations into 19 languages—namely, Armenian, Bohemian, Danish, Dutch, Finnish, Flemish, French, German, Hungarian or Magyar, Illyrian, Italian, Polish, Portuguese, Romaic or

modern Greek, Russian, Spanish, Swedish, Wallachian, and Welsh—with their abridgments, extracts, and adaptations. There is also an appendix to the Uncle Tom Library there, which contains critical notices that appeared separately or in reviews, magazines, and newspapers.

Of the original two-volume edition (Boston, 1852) 110,000 copies were issued in 1852. Twenty-one English editions appeared in 1852 and 15 English and Scotch editions in 1853. There was no international copyright, and anybody that pleased could print and sell the book in Great Britain. Many of these editions were illustrated, and a few were abridgments or adaptations. Two editions were published in Paris in 1852 and six in 1853, besides a dramatization. An edition and a drama were issued in Paris in 1859. There was one German edition in 1852, six in 1853, one in 1854, and one in 1856, besides dramas and abridgments. Most of the editions in the other countries mentioned in the British Museum list appeared within one year of the original appearance of the book. The first Russian edition was issued in 1858, and a second in 1865. The Greek edition appeared in 1860, the Swedish in 1868. The book was translated into dialects as well as languages, some of the latter being Oriental. When it appeared in Siamese a noble lady freed her 125 slaves after reading it.

The *furor* caused by the appearance of "Uncle Tom's Cabin" naturally caused adverse as well as favorable criticism. Mrs. Stowe was called upon by friends and foes to substantiate her story. If the book was not true to real life it was a mockery; and if it was, the grounds for such a picture must be set forth. This demand set her pen at work again, and the "Key to Uncle Tom's Cabin" was published in about a year.

In the meantime great changes had come to the domestic life of the family. Prof. Stowe accepted a call to the chair of Sacred Literature in Andover Theological Seminary, and Mrs. Stowe took possession of the new home under more favorable auspices than formerly. She had become possessed of comparative wealth, so that the strain of poverty was gone. She had an enormous correspondence, a large portion of which consisted of appeals from emancipation societies for pecuniary and moral help. The new home in Andover was an old stone building which had served as a workshop and a gymnasium, and Mrs. Stowe found great pleasure in turning it into a cheerful home. She wrote to her husband: "It seems almost too good to be true that we are going to have such a house in such a beautiful place, and to live here among all these agreeable people, where everybody seems to love you so much and think so much of you. I am almost afraid to accept it, and should not if I did not see the Hand that gives it all, and know that it is both firm and true. He knows if it is best for us, and his blessing addeth no sorrow therewith. I can not describe the constant undercurrent of love and joy and peace ever flowing through my soul. I am so happy—so blessed!" While working upon the "Key," she wrote: "I am now [February, 1853] writing a work which will contain, perhaps, an equal amount of matter with 'Uncle Tom's Cabin.' It will contain all the facts and documents on which that story was founded, and an immense body of facts, reports and trials, legal documents, and testimony of people now living South, which will more than confirm every statement of 'Uncle Tom's Cabin.'"

When this book was completed, in the spring, Mrs. Stowe took a greatly needed rest, accompanied by her husband and her brother Charles. She visited Europe, where she made multitudes of friends.

The years 1855-'56 were devoted largely to the

writing of her novel "Dred: A Tale of the Great Dismal Swamp." It is a powerful story, and, like its predecessor, was aimed at the slave system. It is a more artistic novel than "Uncle Tom's Cabin," and as its scenes are not so excruciating in the portrayal of misery, it is in some respects more effective. Its special object was to reveal the social deterioration produced by slavery. When the book was finished Mrs. Stowe sought change and rest again in Europe, this time being accompanied by her husband, her two eldest daughters, her son Henry, and her sister Mary (Mrs. Thomas Perkins, of Hartford). Prof. Stowe and Henry returned home, the daughters were placed at school in Paris, and Mrs. Stowe and her sister spent the winter in Italy. They returned to Andover in June, 1857. Mrs. Stowe came back laden with honors and happy in the continued evidence of the good results of her work. But a terrible shock awaited her, produced by the drowning of her son Henry, a blow from which she was long in recovering. The "Atlantic Monthly" was established in 1857, and its editor, James Russell Lowell, asked Mrs. Stowe for a serial. The result was "The Minister's Wooing," which began in December, 1858. It was published in book form a year later, and gave testimony to the versatility of its author's genius. In 1859 the family again went to England. This and the previous journey were partly planned for the sake of securing copyright abroad in the only way it could then be secured—that of actual residence. The winter was again passed in Italy, and "Agnes of Sorrento" bore evidence to the interest and value of the visits. This tale was published serially, and as a book in 1862. "The Pearl of Orr's Island: A Story of the Coast of Maine," was published the same year. In 1863 Prof. Stowe resigned his professorship, and the family removed to Hartford, Conn., where Mrs. Stowe had associations of girlhood, and where two of her sisters were then living. Her "House-and-Home Papers" appeared in the "Atlantic" in 1864, and "Old-Town Folks" in 1869.

Frederick Beecher Stowe, her son, had been so seriously wounded during his service in the civil war that it was deemed advisable that he should spend the winters in a warmer climate. The Stowes accordingly purchased an orange plantation in Mandarin, Fla., and thenceforth spent their winters on it.

When the "Christian Union" was founded by her brother, Henry Ward Beecher, Mrs. Stowe became a frequent contributor to it. Prof. Stowe was an invalid for several years before his death, in August, 1886, and his wife was his constant companion. After he was taken from her she continued to live in the seclusion that had been necessary for him, and that soon became equally necessary to her own waning powers. She had a gentle failing, long continued after active interest in the life that had found in her an intense and eager lover had almost ceased. She passed away quietly in her Hartford home, full of years and honors. Her life is not only indissolubly connected with the greatest crisis this land has ever known, but that crisis was probably hastened and was given something of its definiteness and purpose by her wonderful ability to feel and to portray her feeling. The list of her books, omitting those already mentioned, is as follows: "Geography for my Children" (Boston, 1855); "Our Charley, and what to do with him" (1858); "Reply in Behalf of the Women of America to the Christian Address of many Thousand Women of Great Britain" (1863); "The Ravages of a Carpet" (1864); "Religious Poems" (1865); "Stories about our Dogs" (1865); "Little Foxes" (1865); "Queer Little People" (1867); "Daisy's First Winter, and Other Stories" (1867); "The Chimney Corner, by Christopher Crowfield" (1868); "Men of our Times"

(Hartford, 1868); "The American Woman's Home," with her sister Catherine (Philadelphia, 1869); "Little Pussy Willow" (Boston, 1870); "Pink and White Tyranny" (1871); "Sam Lawson's Fireside Stories" (1871); "My Wife and I" (1872); "Palmetto Leaves" (1873); "Betty's Bright Idea, and Other Tales" (1875); "We and Our Neighbors" (1875); "Footsteps of the Master" (1876); "Bible Heroines" (1878); "Pogonue People" (1878); and "A Dog's Mission" (1881).

SUNDAY-SCHOOL CONVENTION, INTERNATIONAL. The thirteenth National and eighth International Sunday-school Convention met in Boston, Mass, June 23. The Hon. S. B. Capen presided. The statistical report of Sunday schools of all denominations in the United States showed a gain during the past three years of 10,171 Sunday schools, 98,634 teachers, and 1,239,334 pupils, the whole number being now 142,089 Sunday schools and 11,536,806 pupils. Including the United States, Canada, Newfoundland, and Salvador, the whole number of members of Sunday schools was 13,033,175. The Executive Committee reported concerning the results of the four meetings which it had held during the past three years, among the results of which were the adoption of the home-class department as a department of International Sunday-school work; a recommendation to States, etc., to increase the amount pledged by them to a total sum of nearly \$12,000 a year; the appointment of a special finance committee, of a field superintendent for work among colored people, and of a committee to superintend the work; and the adoption of a resolution expressing preference for one lesson only for the whole Sunday school, with a suggestion to the lesson committee concerning an optional course for primary classes, if the committee should conclude to try that plan. The work of organization might now be considered thorough in 15 States. Two States and 2 Territories were unorganized. Field workers, missionaries, and secretaries were employed in 23 States. The primary department of the Sunday schools had the first place in consideration. In 6 States and 1 province qualified primary teachers were employed as State workers, and primary unions were forming in the cities and larger towns. Increased interest was reported in the training of teachers and in normal classes. The report of the Lesson Committee referred to the criticism which had been made concerning the systems of selections for biblical study which it had adopted, and added: "Unless there had been great vitality in the system, it would have collapsed under the assaults, but it still survives. A few hundred have left us, but what are these compared with the millions that remain? The 'Sunday-school Journal' says that the uniform International Lessons are taught under the Methodist Episcopal Church in nearly 20 languages throughout the world, while the American Baptist Publication Society has announced that the circulation of the lesson helps has increased 192,000 copies during the current quarter. It does not seem necessary to enter more into a discussion of our work. Scarcely an objection has been raised which was not anticipated and answered when the system was adopted in 1872." The convention directed the present system of International Lessons to be continued, stipulating that one temperance lesson should be given every quarter. A Lesson Committee was appointed for the ensuing three years.

SWEDEN AND NORWAY, two kingdoms in northern Europe, united, in accordance with the treaty of Kiel, made Jan. 14, 1814, in the person of the sovereign. The throne in both monarchies descends to the heirs of the house of Bernadotte. Affairs common to the two monarchies are referred to

a mixed Council of State. The reigning King is Oscar II, born Jan. 21, 1829, who succeeded Carl XV, his brother, Sept. 18, 1872.

Sweden.—The legislative power is vested in the Riksdag, consisting of two houses. The First Chamber has 150 members, elected by the provincial and municipal bodies for nine years. The Second Chamber has 230 members, of whom 80 are elected for three years in the towns and 130 in the rural districts by natives of Sweden possessing or farming land of a certain value or paying an income tax on 800 kronor a year. The qualified electors constitute only 6·2 per cent. of the population, and fewer than half of them voted in 1893. The Council of State in the beginning of 1896 was composed of the following members: Minister of State, Erik Gustaf Boström; Minister of Foreign Affairs, Count L. Douglas; Minister of Justice, August Östergren; Minister of the Interior, Victor Lennart Gröll; Minister of Finance, C. R. Wersäll; Minister of Education and Ecclesiastical Affairs, Gustaf Fredrik Gilljam; Minister of War, Baron A. E. Rappe; Minister of Marine, Jarl Casimir Eugène Christerson; Councilors of State, Baron Albert Lars Evert Akerhielm and Sven Herman Wikblad.

Area and Population.—Sweden has an area of 172,876 square miles. The population on Dec. 31, 1895, was estimated at 4,919,260, of whom 2,389,260 are males and 2,530,000 females. The number of marriages in 1894 was 27,851; of births, 134,866; of deaths, 82,901; excess of births, 51,965. The number of emigrants in 1894 was 13,358, against 40,869 in 1893, 45,504 in 1892, 42,776 in 1891, and 34,212 in 1890. Stockholm, the capital, had 271,638 inhabitants at the end of 1895.

Finances.—The revenue is estimated in the budget for 1897 at 111,731,000 kronor (1 krona = 26·8 cents), of which 20,655,000 kronor are ordinary receipts, 8,296,000 kronor are carried over from the preceding budget, 2,700,000 kronor are profits made by the state bank in 1895, and 80,080,000 kronor are called extraordinary receipts. Of the ordinary receipts 2,155,000 kronor are proceeds of the land tax, 1,400,000 tonnage dues, 2,300,000 rent of domains, 665,000 poll tax, 8,500,000 net receipts of railroads, 1,410,000 telegraph receipts, 3,000,000 produce of forests, and 1,225,000 miscellaneous receipts. Of the extraordinary receipts 37,000,000 kronor come from customs, 8,580,000 from the post office, 5,000,000 from stamped paper, 15,000,000 from the tax on spirits, 8,500,000 from the duty on sugar made from beets, 5,200,000 from the tax on incomes, and 800,000 from miscellaneous sources. The total expenditures balance the estimated receipts. Of the ordinary expenditure, estimated at 79,214,710 kronor, 1,320,000 kronor are for the King's household, 3,815,250 for justice, 606,750 for foreign affairs, 25,987,920 for the army, 7,046,300 for the navy, 5,700,560 for the interior, 13,500,440 for education and worship, 3,286,090 for pensions, and 17,951,400 for financial administration. Of this last sum 2,628,000 kronor are the cost of collecting customs duties, 450,000 are for the control of the excise, 8,310,000 the cost of the postal service, 1,410,000 expenses of telegraphs, 1,143,200 the expense of the forests, and 4,010,200 other expenses. The extraordinary expenditures are 18,871,190 kronor, of which 10,205,840 are for the army and navy and 8,665,350 for various purposes. The interest and amortization of the debt require 11,445,100 kronor, the reserve for the insurance of workmen against disability is 1,400,000 kronor, and 800,100 kronor are carried over.

The public debt on Jan. 1, 1896, amounted to 287,503,967 kronor, of which 250,192,467 kronor represent foreign loans raised at various periods between 1880 and 1894 at 3½ and 3 per cent. and 37,

313,500 kronor are the outstanding portion of an internal loan raised in 1887 3·6 per cent. The loans were expended almost exclusively for the construction of railroads.

The Army and Navy.—The principal part of the active army is formed of the *indelta* or cantoned troops and the *värfvade* or enlisted troops. The royal guards, chasseurs, hussars, artillery, and engineers are enlisted for two years or more, up to eight years. The organization was modified on Dec. 2, 1892, by putting into operation the law of 1885 introducing universal liability to serve eight years in the *beväring* and eight in the *landstorn*. In time of peace the length of service with the colors is ninety days. The *beväring* troops are distributed among the *värfvade* and the *indelta*. In the new organization the infantry is formed into 26 regiments and 2 battalions. The line is armed with Remingtons of 8·8 millimetres caliber. There are 8 regiments of cavalry and 6 regiments and 6 batteries of field artillery, or 40 batteries in all, with 240 guns. The effective of the active army in 1896 was 1,953 officers, 571 employees, 1,779 noncommissioned officers, 1,641 musicians, and 38,802 men, with 6,852 horses. The war effective is 272,994 men, besides 180,000 in the *landstorn*.

The navy comprises 4 turret ships, with 10-inch armor, armed each with 2 10-inch and 4 5·9-inch guns, and having a total displacement of 12,450 tons, 4 armor-clad monitors, 9 armored gunboats, 3 corvettes, 9 first-class and 5 second-class gunboats, 2 torpedo cruisers, 7 first-class and 9 second-class torpedo boats, 5 torpedo launches, and 1 school ship. The navy is manned by 267 officers and 2,624 sailors, besides 1,957 sailors of the *indelta*.

Commerce.—The total value of the imports in 1894, inclusive of specie, was 351,173,000 kronor, and of exports 298,625,000 kronor. The principal imports and their values were: Coal, 33,969,000 kronor; rye and wheat, 31,354,000 kronor; coffee, 26,999,000 kronor; woolen goods, 17,558,000 kronor; machinery, 10,962,000 kronor; iron goods, 9,690,000 kronor; hides and skins, 8,396,000 kronor; woolen yarns, 7,338,000 kronor; tobacco, 7,246,000 kronor; cotton goods, 7,009,000 kronor; fish, 6,882,000 kronor; petroleum, 6,255,000 kronor; sugar, 5,535,000 kronor; vegetable oils, 5,447,000 kronor; wood manufactures, 4,890,000 kronor; wool, 4,747,000 kronor; pork products, 4,455,000 kronor; paper, 3,599,000 kronor. The principal exports were: Timber, 113,962,000 kronor; butter, 40,122,000 kronor; iron, 31,313,000 kronor; oats, 12,584,000 kronor; wood pulp, 9,309,000 kronor; fish, 8,846,000 kronor; matches, 7,352,000 kronor; paper, 6,011,000 kronor; machinery, 4,507,000 kronor; iron manufactures, 4,458,000 kronor; glass, 4,507,000 kronor; animals, 4,046,000 kronor; cotton goods, 2,909,000 kronor. Of late years Sweden has been compelled to import cereals, and the imports of wheat and rye now exceed in value the grain exports, which are mostly oats. The change has arisen from the increased demand for improved breadstuffs for home use and the increased use of grain in feeding cattle. The exports of oats, chiefly to England, have fallen off one half, and now amount to about 10,000,000 bushels per annum. Of the 7,000,000 bushels of wheat consumed annually half is imported from Germany, Denmark, and Russia. About 6,000,000 bushels of rye are imported from Russia and, in the form of flour, from Germany. The dairy interest of Sweden is steadily expanding. Owing to the use of improved methods and appliances, dairy produce, chiefly butter, now ranks second in the export trade. American pork used to meet with a free sale in Sweden, but the demand has declined since the duty was increased, and since Swedish farmers have begun to raise pigs on a large

scale Sweden is becoming a competitor of the United States. The chief source of national income is the lumber export trade. The forest area in 1894 was 46,663,404 acres, of which 14,300,000 acres, valued at about \$1 an acre, belong to the Crown and yield a net income of about \$335,000 a year. The Crown preserves are managed with scrupulous care on the principle that the increase alone may be cut and that the forest shall stand forever on all Crown lands unsuitable for cultivation. The Government has, moreover, entered upon an extensive and practical system of planting forests upon desolate and uncultivated areas. These measures have influenced the owners of private forests, especially the large proprietors, to manage their timber lands also as permanent sources of income. It is probable, therefore, that the vast forests of Sweden, on which considerable inroads have been made heretofore, will be henceforth preserved and maintained substantially as they stand to-day.

The commerce with the different countries in 1894 is shown in the following table, giving the values in kronor:

COUNTRIES.	Imports.	Exports.
Norway.....	26,949,000	15,269,000
Russia and Finland.....	19,954,000	10,725,000
Denmark.....	39,891,000	38,346,000
Germany.....	119,759,000	39,153,000
Netherlands.....	8,666,000	17,765,000
Belgium.....	9,782,000	9,541,000
Great Britain.....	97,782,000	124,070,000
France.....	8,515,000	32,341,000
Portugal.....	1,384,000	932,000
Spain.....	578,000	3,446,000
Italy.....	947,000	441,000
Africa.....	5,659,000
United States.....	11,568,000	8,000
West Indies.....	959,000
Australia.....	231,000
Asia.....	387,000
Other countries.....	4,112,000	778,000
Total.....	351,173,000	298,625,000

Navigation.—There were 30,092 vessels, of 6,339,000 tons, entered at Swedish ports during 1894, of which 12,014, of 2,890,000 tons, were with cargoes; the number cleared was 30,019, of 6,351,000 tons, of which 19,943, of 4,854,000 tons, were with cargoes. The number entered included 13,509 steamers, of 4,909,000 tons; of those cleared 13,497, of 4,917,000 tons, were steamers. Of the total number entered, 14,510, of 2,156,000 tons, sailed under the Swedish flag, 2,383, of 735,000 tons, under the flag of Norway, and 13,199, of 3,448,000 tons, under foreign flags.

The merchant navy in 1894 consisted of 2,914 sailing vessels, of 371,097 tons, and 1,248 steamers, of 179,253 tons.

Communications.—The railroads in operation at the end of 1895 had a total length of 6,057 miles, of which 2,030 miles belonged to the Government and 4,027 miles to companies.

The post office in 1894 carried 51,398,000 internal, 13,534,000 foreign, and 263,000 transit letters, 6,236,000 internal, 914,000 foreign, and 23,000 transit postal cards, 12,669,000 internal, 6,354,000 foreign, and 72,000 transit newspapers and pamphlets, and 2,623,000 internal, 294,000 foreign, and 2,000 transit money letters of the respective values of 710,719,000 55,157,000, and 392,000 francs. The receipts were 8,273,600 kronor; expenses, 7,620,583 kronor.

The state telegraphs had a length of 5,434 miles in 1894, with 15,430 miles of wire. The railroads had 2,623 miles of line, with 9,550 miles of wire. The number of internal dispatches sent was 1,017,360; of international dispatches, 699,264; dispatches in transit, 232,127; official dispatches, 102,161. The receipts were 2,100,203 and expenses 1,933,074 francs.

Political Affairs.—The Riksdag was opened on Jan. 18. The matter most urgently presented to the Legislature was the improvement of the national defenses, to which the Government proposed to devote the surplus in the treasury. For armaments and defenses for the maintenance of the country's neutrality in the event of warlike developments an extraordinary grant of 16,800,000 kronor was asked; 11,800,000 kronor to be expended in two years on the construction of 2 ironclads, 4 torpedo cruisers, and 6 torpedo boats; 3,000,000 kronor on the fortresses of Waxholm, Oskar Frederiksborg, and Gothland; and 2,000,000 kronor for commissariat purposes. The King, in his speech from the throne, said that his anxiety respecting the union between Sweden and Norway had diminished, and expressed the hope that the causes which provoked discord would be permanently set aside, for, as things stood on every side, it had become more necessary than ever for the maintenance of the security, the liberty, and the independence of the Scandinavian peninsula that both nations should hold fast together.

In the elections for the Second Chamber, which terminated on Oct. 1, the Free-trade majority was cut down from 42 to 26, the strength of the parties remaining about the same as before on all questions except the tariff. The Country party secured 127 seats; the New Center, 25; the Free-trade Center, 20; the People's party, 32; and Independents, 26.

Norway.—The legislative power is exercised by the Storting, containing 114 members elected for three years, 38 by the towns and 76 by the rural districts. The Storting elects one fourth of its members annually to form the Lagthing, which sits and votes separately from the Odelsting, composed of the remaining three fourths, and exercises a veto power over the acts passed by the Odelsting. The Council of State in the beginning of 1896 was composed as follows: Minister of State, Dr. George Francis Hagerup; Minister of Public Worship and Education, Jacob Liv Rosted Sverdrup; Minister of Justice, Dr. G. F. Hagerup; Minister of the Interior, Thomas von Westen Engelhart; Minister of Public Works, Peder Nilsen; Minister of Finance and Customs, Birger Kildal; Minister of National Defense, Lieut.-Col. Christian Wilhelm Engel Bredal Olssön; Secretary of the Department of Revision of Accounts, Fredrik Stang-Lund; delegation to Stockholm, Gregers Winther Wulfsberg Gram, Minister of State, and Bard Madsen Hangland and Harald Smedal.

Area and Population.—The area of Norway is 124,445 square miles. The population present on Jan. 1, 1891, when the last census was taken, was 1,988,674; the domiciled population was 2,000,917, comprising 965,911 males and 1,035,006 females. The number of marriages in 1894 was 12,966; of births, 60,450; of deaths, 34,355; excess of births, 26,095. The number of emigrants in 1895 was 6,207, compared with 5,642 in 1894, 18,778 in 1893, 17,094 in 1892, and 13,341 in 1891. Christiania, the capital, had 148,213 inhabitants in 1891.

Finances.—The revenue for the financial year 1895 was 57,384,600 kronor, including 190,800 kronor of local subscriptions for the construction of railroads and a loan of 2,581,500 kronor. The ordinary receipts were 54,612,300 kronor, of which 2,782,700 came from direct taxation, 21,796,600 from customs, 3,947,100 from the tax on spirits, 2,741,300 from the malt tax, 695,000 from stamps on playing cards, 989,400 from legal fees, 560,100 from the succession duty, 398,100 from domains and forests, 458,600 from mines, 1,803,200 from active capital, 3,432,600 from the post office, 1,311,700 from telegraphs, 8,107,300 from railroads, 1,607,900 from educational fees, 283,300 from products of prisons, 958,400 from

hospitals and insane asylums, and 2,478,400 from miscellaneous sources. The ordinary expenditures amounted to 55,271,500 kroner, and extraordinary expenditures to 1,384,600 kroner. Of the ordinary expenditures 352,900 kroner went to the civil list, 667,600 for the Storting, 1,281,700 for the State Council and ministries, 5,983,400 for education and worship, 5,915,800 for justice, police, and sanitary service, 8,414,600 for the interior (including posts, telegraphs, subventions for communications, forests, and agriculture, stock breeding, fisheries, commerce, and industry), 10,618,200 for public works, 8,787,400 for finance, 8,779,000 for the army, 3,754,200 for the navy, 623,400 for foreign affairs, and 93,300 for accidental expenses. The public debt on June 30, 1895, amounted to 144,313,400 kroner, paying mostly 3 and 3½ per cent. The interest charge for 1895 was 4,438,500 kroner, and amortization 498,800 kroner. The railroads were valued at 102,060,100 kroner; the active capital at 154,740,300 kroner.

The Army and Navy.—Under the law of June 16, 1885, military service is obligatory, and lasts five years from the age of twenty-three in the active army, four years in the Landwehr, and four years in the Landsturm. Actual service with the colors is required only for a period of instruction lasting forty-two days for the infantry, fifty days for the engineers, and seventy days for the cavalry and field artillery, followed by twelve days of exercises, and in each of the two or three succeeding years twenty-four days of exercises are required. The effective strength of the army is 1,700 officers and instructors and 18,000 men, which can be doubled in case of war.

The war fleet consists of 2 new armor clads, of 3,500 tons each, with an armament of 20 guns; 4 ironclad monitors; 1 corvette; 4 first-class, 12 second-class, and 16 third-class gunboats; 1 torpedo dispatch boat; and 3 first-class and 12 second-class torpedo boats. The navy is manned by 97 officers, 30 aspirants, 34 employees, and 420 under officers and sailors.

Navigation.—There were 6,458 Norwegian vessels, of 1,825,319 tons, and 5,675 foreign vessels, of 937,278 tons, entered at the ports of Norway during 1894; and cleared 6,248 Norwegian vessels, of 1,786,843 tons, and 5,553 foreign vessels, of 929,572 tons. Of 12,133 vessels, the total number entered, of 2,762,597 tons, 5,944, of 1,720,392 tons, were with cargoes, and 6,189, of 1,042,205 tons, in ballast. Of 11,801 cleared, of 2,716,415 tons, 10,486, of 2,146,109 tons, were with cargoes and 1,315, of 570,306 tons, in ballast.

The mercantile marine on Jan. 1, 1895, comprised 6,453 sailing vessels, of 1,335,275 tons, and 850 steamers, of 263,042 tons.

Communications.—The railroads in 1895 had a total length of 1,115 miles.

The post office in 1895 carried 26,579,800 internal letters, including 1,894,200 money letters containing 288,700,000 kroner; 9,322,700 international letters, including 72,000 money letters, containing 22,100,000 kroner; and 38,699,600 internal and 5,007,200 international printed inclosures. The receipts were 3,575,678 kroner, and expenses 3,628,550 kroner.

The telegraphs belonging to the Government had in 1895 a total length of 5,195 miles, with 11,164 miles of wire. The number of internal messages forwarded was 1,179,184; of international messages, 619,935; of service dispatches, 13,036. The receipts were 1,431,757 kroner; expenses, 1,711,516 kroner.

Commerce.—The imports of merchandise in 1895 were valued at 222,310,000 kroner, and exports at 137,300,000 kroner. Of the imports 32,200,000 kroner were cereals, 4,700,000 fermented liquors, 26,000,000 colonial goods, 3,300,000 fruits and vege-

tables, 15,000,000 animals and animal food products, 14,000,000 coal, 8,000,000 metals, 6,700,000 hides and leather, 5,200,000 timber, 6,100,000 textile yarns, 4,200,000 minerals, 11,400,000 metal goods, 32,600,000 tissues, 2,000,000 paper manufactures, 1,900,000 leather manufactures, 3,600,000 wood manufactures, 1,100,000 drugs and dyes, 10,700,000 oils, and 33,600,000 miscellaneous articles. Of the exports 2,100,000 kroner were cereals, liquors, vegetables, etc., 48,500,000 animals and animal produce, 1,500,000 metals, 7,200,000 hides and leather, 27,800,000 timber, 2,800,000 minerals, 3,300,000 metal goods, 6,300,000 tissues, 6,100,000 paper, 17,000,000 wood manufactures, 7,000,000 oils, and 6,800,000 miscellaneous merchandise. The commerce was divided between the different countries as follows, values being given in kroner (1 krona = 26·8 cents):

COUNTRIES.	Imports.	Exports.
Great Britain	64,277,000	47,882,000
Germany.....	58,500,000	17,421,000
Sweden.....	33,535,000	23,141,000
Russia and Finland.....	21,201,000	3,567,000
Denmark.....	9,364,000	4,809,000
France.....	4,431,000	6,054,000
Holland.....	8,491,000	6,715,000
Belgium.....	8,999,000	4,739,000
Spain.....	767,000	12,900,000
Portugal.....	511,000	1,091,000
Italy.....	1,311,000	3,796,000
United States.....	7,798,000	699,000
Other countries.....	3,035,000	4,466,000
Total.....	222,310,000	137,280,000

Political Affairs.—The Odelsting on March 13 passed by a vote of 44 to 40 a bill for the recognition of a separate Norwegian flag after rejecting an amendment made by the Premier with the object of postponing the discussion. The whole Left voted for the proposition, while the minority consisted of the members of the Right and the Moderates. Alterations in the customs tariff were adopted on June 30, and a commission was appointed to draft a complete revision of the tariff in the direction of the protection of native industries.

SWITZERLAND, a federal republic in central Europe, consisting of 27 cantons and independent half cantons. The Federal Assembly is composed of the Nationalrath, containing 147 members, elected by direct universal adult male suffrage for three years, and the Ständerath, containing 2 members from each canton or half canton. The executive authority is vested in the Bundesrath, consisting of 7 members chosen by the Federal Assembly, one of whom is elected annually in December to serve as President of the Federation for the coming year, and another to serve as Vice-President. The Federal Council in 1896 was composed as follows: President and Chief of the Political Department, Adrien Lachenal, of Geneva; Vice-President and Chief of the Department of Industry and Agriculture, Adolphe Deucher, of Thurgau; Chief of the Department of Military Affairs, Emil Frey, of Basel-Land; Chief of the Department of Justice and Police, Lieut.-Col. A. von Wattenswyl, of Bern; Chief of the Department of Finance and Customs, W. Hauser, of Zurich; Chief of the Department of Posts and Railroads, J. Zemp, of Lucerne. On Dec. 17, 1894, the Federal Assembly elected Adolphe Deucher President and M. Ruffy, of Lausanne, Vice-President for 1897. The Assembly also re-elected the members of the Federal Council for a new triennial term.

Area and Population.—Switzerland has an area of 15,976 square miles. The estimated population in 1894 was 2,986,848. The number of marriages in 1895 was 22,681; of births, 88,184; of deaths, 62,958; excess of births, 25,226. The number of emigrants over the sea in 1895 was 4,266, of whom 3,708

went to the United States. In 1894 the emigration was 3,849; in 1893, 6,177; in 1892, 7,835; in 1891, 7,516. The population of Zurich in 1896 was 149,081; of Basel, 88,853; of Geneva, 80,782; of Bern, the seat of Government, 48,678. Popular education in Switzerland is encouraged and developed in a remarkable degree. There were in 1893 679 infant schools, with 816 teachers and 29,432 pupils; 8,391 primary schools, with 9,478 teachers and 469,820 pupils; 485 secondary schools, with 1,465 teachers and 31,871 pupils; 30 preparatory schools, with 717 teachers and 8,531 pupils; 38 normal schools, with 362 teachers and 7,049 pupils. Food and clothing are provided gratuitously for children in elementary schools who live at a distance. In cantons where the population is mixed Protestant and Roman Catholic, religious instruction is given at stated hours, and children whose parents desire them to receive only a secular education may absent themselves. In Protestant cantons Roman Catholic children receive instruction in the elements of Christianity with their Protestant schoolmates until they reach the age when their own pastors prepare them for confirmation. The professional and industrial schools number 174, with 7,049 students, and in the 7 universities there were 431 professors and 3,108 students in 1895, exclusive of 634 attendants at lectures who are not candidates for degrees. These latter are for the most part women. Of the regular students 1,334 were foreigners.

Finances.—The Federal revenue for 1895 was 81,005,586 francs, of which 43,279,276 francs came from customs, 25,791,435 francs from posts, 6,093,447 francs from telegraphs and telephones, 429,035 francs from railroads, 185,834 francs from bank notes, 175,202 francs from industry and agriculture, 2,338,178 francs from military arsenals, 6,834 francs from justice and police, 367,542 francs from the political department, 51,881 francs from the general administration, 519,261 francs from real property, and 1,712,219 francs from invested capital. The total expenditures were 76,402,631 francs, of which 4,276,596 francs were for interest and sinking fund of the debt, 1,071,080 francs for general administration, 1,003,900 francs for the political department, 9,372,716 francs for the interior, 183,140 francs for justice and police, 23,012,361 francs for military affairs, 4,008,962 francs for finance and customs, 3,228,358 francs for industry and agriculture, 30,210,161 francs for posts and railroads, and 35,357 for unforeseen expenses. The Federal debt on Jan. 1, 1896, amounted to 80,963,467 francs and the productive capital of the Government to 164,852,906 francs, including 20,052,722 francs of special funds.

Commerce.—The imports of merchandise in 1895 were valued at 915,856,000 francs, and exports at 663,260,000 francs. The imports of specie were 64,264,000 francs; exports, 41,068,000 francs. The principal imports were: Silk, 130,600,000 francs; cereals and flour, 88,900,000 francs; animals, 76,300,000 francs; woollens, 44,600,000 francs; coal, 41,300,000 francs; wine, 32,500,000 francs; cotton, 32,400,000 francs; chemicals, 30,300,000 francs; cotton goods, 29,300,000 francs; iron, 26,200,000 francs; machines and carriages, 23,800,000 francs; timber, 17,800,000 francs; iron goods, 17,600,000 francs; sugar, 17,000,000 francs; coffee, 16,900,000 francs; leather, 13,500,000 francs; barley, malt, and hops, 13,100,000 francs; wool, 11,300,000 francs; books, 9,600,000 francs; silks, 9,100,000 francs. The values of the chief exports were: Silks, 135,100,000 francs; cottons, 111,800,000 francs; watches, 90,000,000 francs; raw silk, 40,300,000 francs; cheese, 37,700,000 francs; silk yarn, 34,900,000 francs; machinery and carriages, 26,200,000 francs; chemical products, 22,100,000 francs; milk, 18,900,000 francs; cotton yarn, 18,200,000 francs; animals, 14,400,000 francs;

straw goods, 10,600,000 francs; woollen yarn, 9,700,000 francs; hides, 8,500,000 francs.

Articles of food and drink constituted 22.8 per cent. of the imports and 9.7 per cent. of the exports in 1895; animals, 10.3 per cent. of the imports and 2.4 per cent. of the exports; raw materials, 40.2 per cent. of the imports and 9.6 per cent. of the exports; manufactured products, 26.7 per cent. of the imports and 78.3 per cent. of the exports.

The commerce in 1895 is shown in the following table, giving the values in francs:

COUNTRIES.	Imports.	Exports.
Germany.....	273,891,000	164,411,000
France.....	138,459,000	74,524,000
Italy.....	157,559,000	39,210,000
Austria-Hungary.....	67,816,000	39,225,000
Great Britain.....	47,372,000	130,016,000
Netherlands.....	3,621,000	3,999,000
Belgium.....	29,965,000	10,958,000
Spain.....	15,464,000	11,818,000
Russia.....	61,784,000	21,866,000
Rest of Europe.....	7,930,000	19,690,000
United States.....	38,825,000	90,975,000
Rest of America.....	23,885,000	22,308,000
Asia.....	35,567,000	23,815,000
Africa.....	15,464,000	5,217,000
Australasia.....	4,964,000	1,900,000
Other countries.....	3,328,000
Total merchandise.....	915,856,000	663,260,000

Communications.—The railroads on Jan. 1, 1895, had a length of 2,218 miles. The post office in 1895 carried 83,351,000 internal and 35,603,000 international letters, 21,352,000 internal and 9,745,000 international postal cards, 26,744,000 internal and 19,914,000 international newspapers and circulars, and 4,169,000 internal and 847,000 international money orders of the values of 457,501,000 and 38,311,000 francs. The length of the Government telegraph lines in 1895 was 4,442 miles, with 12,502 miles of wire. The number of dispatches was 3,949,904, of which 1,810,338 were internal, 1,442,117 international, 554,957 in transit, and 140,492 official.

Public Affairs.—A National Exhibition illustrating all branches of Swiss trade and industry was opened at Geneva on May 1 and remained open till Oct. 15. In connection with it a number of congresses were held, and there was a series of international games. Toward the end of July riotous labor disturbances directed against the employment of Italians occurred at Zurich, in consequence of which several thousand Italian workmen were constrained to return to Italy. The eighteenth International Congress on Literary and Artistic Copyright was opened in Bern on Aug. 22, in the same building where the first Congress was convened on the initiative of the Swiss Federal Council. The congress resolved to take steps to secure the speedy ratification of the results of the Paris conference of 1896 and obtain in the different states, particularly in Germany and Great Britain, a reform of the existing copyright laws. The congress adopted a resolution in favor of giving the same protection to newspaper articles as to other literature. In the Swiss National Council irritation was manifested in a debate held in June in regard to the treatment the Swiss Confederation had received from the United States Government in the matter of the Swiss proposal that the two governments should enter into a covenant to refer to arbitration all disputes arising between them. The United States Government when the proposal was first made, in 1882, had received it with expressions of satisfaction, but in the course of the years that had since elapsed the Federal Council has endeavored without result to induce the Washington Government to move in the matter and Swiss ministers have repeatedly urged the United States authorities to enter into negotiations for an arbitration treaty, with no better success.

T

TEMPLE, FREDERICK, D. D., ninety-fifth Archbishop of Canterbury, Primate of All England and Metropolitan, born Nov. 30, 1821. He was educated at Blundell's School, in Tiverton, Devonshire, and Balliol College, Oxford. He distinguished himself as a scholar during his course at the university, and after taking his degree was made fellow and tutor at Balliol. He subsequently became principal of the Training College at Kneller Hall, Twickenham, and in 1858 was made head master of Rugby, which place he held until 1860. His administration of affairs at Rugby was as able as it was successful, and his sermons in the college chapel give him a place among the foremost of English preachers. During the greater part of the period of his headmastership, however, he was considered a heretic by the mass of Churchmen, and was made the target for unlimited theological rancor, the immediate cause of which was the publication, in 1860, of "Essays and Reviews," the authors of which were Anglican clergymen and heads of colleges. Dr. Temple's contribution to the volume was an essay entitled "The Education of the World," in which it would puzzle most Churchmen of the present day to find anything heretical. It is a speculation based upon history and the process of spiritual growth, and embodies the substance of world-wide philosophy, its tone being at once reverent and scientific. In the minds of many people Dr. Temple, although the author of but a single essay, was held in a certain sense responsible for the whole volume, and he was more than once declared to be guilty of "complicity in disseminating infidel opinions." In 1864 the Synod of Canterbury condemned the book, and two of its authors were summoned before the Court of Arches. When, in 1869, Dr. Temple was nominated to the see of Exeter violent opposition to him broke forth. Indignation meetings were held all over the United Kingdom, and among the many clerical protests against his confirmation were those of eight bishops. Mr. Gladstone, then Prime Minister, had

nominated Dr. Temple to the Exeter bishopric, and Dr. Tait, then Archbishop of Canterbury, earnestly besought the chapter to elect the so-called heretic. In time opposition to Bishop Temple subsided, and in 1873 he was select preacher at Oxford, and in 1884 was chosen Bampton lecturer. In the opinion of competent critics, these

FREDERICK TEMPLE, ARCHBISHOP OF CANTERBURY.

"Bampton Lectures are the greatest of all the lecture delivered at Oxford within the past half century." Their motive, briefly stated, "is to help the scientific man to find religion in science, and the religious man to find science in God." In 1886 Bishop Temple was translated from Exeter to London, and his advancement aroused some echoes of the old-time opposition to his name. But they were comparatively faint, and when he was advanced by Lord Salisbury to the Canterbury archbishopric, at the close of 1896, the opposition was confined to a few persons, one of whom publicly protested against the consecration during the prog-

ress of the ceremony at St. Paul's Cathedral, Dec. 22, and another made a similar ineffective protest on the occasion of the enthronement of the new archbishop at Canterbury, Jan. 9, 1897.

Regarding the fitness of Dr. Temple for the high office that he now holds, there have not been many dissenting voices. He is eminently fair-minded, and during his long episcopal career he never has strenuously opposed High Churchmen nor snubbed the evangelicals. An untiring worker, a rigid teetotaler active in the temperance movement, and deeply interested in the success of foreign missions as well, he seems destined to be a strong force in English life for the remainder of his career, while on the necessity for immediate Church reforms in certain directions, he has more than once expressed himself strongly. In private life his tastes are simple, and his hatred of insincerity and pretense occasionally imparts a brusqueness to his manners that may prevent his winning so general an esteem as did the late Archbishop Benson, who was by nature more tolerant of human imperfections. But as a scholar and a thinker, Dr. Temple has been surpassed by very few of his predecessors in the chair of St. Augustine.

TENNESSEE, a Southern State, admitted to the Union June 1, 1796; area, 42,050 square miles. The population, according to each decennial census since admission, was 105,602 in 1800; 261,727 in 1810; 422,771 in 1820; 681,904 in 1830; 829,210 in 1840; 1,002,717 in 1850; 1,109,801 in 1860; 1,258,520 in 1870; 1,542,369 in 1880; and 1,767,518 in 1890. Capital, Nashville.

Government.—The State officers in 1896 were: Governor, Peter Turney, Democrat; Secretary of State, William S. Morgan; Treasurer, Edward B. Craig; Comptroller, James A. Harris; Attorney-General, G. W. Pickle; Adjutant General, Charles Sykes; Superintendent of Instruction, S. G. Gilbreath; Commissioner of Agriculture, Statistics, and Mines, T. F. P. Allison; Commissioner of Labor, F. P. Clute; Land Register, Richard Harwood; State Assessors, George C. Porter, John C. New, and W. C. Fulcher; Superintendent of Prisons, John H. Trice; Prison Commissioners, S. R. Simpson, W. M. Nixon, and D. O. Thomas; Oil Inspector, John H. Reeves; State Geologist, J. M. Safford; Chief Justice of the Supreme Court, D. L. Snodgrass; Associate Justices, W. C. Caldwell, John S. Wilkes, W. K. McAllister, and W. D. Beard; Justices of the Court of Chancery Appeals, M. M. Neil, S. F. Wilson, R. M. Barton, Jr.—all Democrats.

Finances.—The statement of the Treasurer for the two years ending Dec. 19 has the following items: Balance in treasury Dec. 19, 1894, \$753,217.61; receipts from Dec. 20, 1894, to Dec. 19, 1896, \$3,214,863.97; total, \$3,968,081.61; disbursements from Dec. 20, 1894, to Dec. 19, 1896, inclusive, \$3,696,830.07; balance in treasury Dec. 19, 1896, \$271,251.54. This includes the balances and disbursements from the United States direct-tax account and the new Penitentiary account. Dealing alone with the funds that can be used for the purpose of defraying the expenses of the State government, the account stands: Balance on hand Dec. 19, 1894, \$306,079.05; receipts from Dec. 20, 1894, to Dec. 19, 1896, inclusive, \$3,214,603.97; total, \$3,520,683.02; disbursements from Dec. 20, 1894, to Dec. 19, 1896, inclusive, \$3,331,864.02; net balance for general purposes Dec. 19, 1896, \$188,819.

The disbursements were divided among the five principal accounts as follow: Interest payments, \$1,365,854.09; charities and educational, \$733,688.33; court costs, \$658,189.86; legislative, \$163,216.31; maintenance of convicts, \$101,862.21; total net disbursements, \$3,332,124.02; all other expenses, \$309,313.22.

The Treasurer received from the prison commissioners from Jan. 1, 1896, to Dec. 20, 1896, the sum of \$92,184.21; and the amount disbursed on account of maintaining the convicts was \$101,862.21. Adding to this \$34,632, the cost of maintaining convicts at Brushy mountain mines, which the commissioners charged to the new Penitentiary account, the whole cost of maintenance was \$136,494.21, leaving the net cost \$44,310.

The tax collected from insurance companies for the fiscal year ending Dec. 19, 1895, was \$92,033.40, and for the fiscal year ending Dec. 19, 1896, \$98,671.22, making the total collections from this source for the two years \$190,704.62.

The State tax collected from building and loan associations for the year ending Dec. 19, 1895, was \$8,285, and for the year ending Dec. 19, 1896, \$8,360.

The deficiency in the revenue is explained by an inadequate tax levy and unexpectedly small returns from the back-tax collectors. The Legislature of 1895 lowered the tax rate and created the Board of Equalization.

Convicts and Criminal Prosecutions.—The total number of convicts in the Penitentiary and at the branch prisons Dec. 1, 1896, was 1,492. The cost of maintaining the Penitentiary is given under "Finances," in this article. A large number of the prisoners are employed in the State's coal mines, others on the building of the new Penitentiary, and others on the prison farm, while some are leased to contractors. The Governor says in his message:

"The most considerable obstacle to the success of the mines is that set forth in the report of the manager, to wit: The combined opposition of (coal) operators in this and adjacent States and their influence in inducing railroads to refuse to the State fair and equitable rates of freights, and confining our trade to a few competitive points, like Chattanooga, Atlanta, etc. The mine owners and operators of Tennessee and Kentucky have for a long time been making plans to defeat the State in its efforts to employ its convicts in coal mining. Another point of objection is the great bargain the State made in the purchase of mines; they affirm that 'the money paid for farm and mines was at low prices then prevailing by reason of the financial troubles then existing all over the country.' The gravamen of the complaint of these mine owners and operators is that the State, by its fortunate purchase, is in condition to prevent a monopoly by this combine of millionaires at home and abroad."

The Superintendent of Prisons says in his report that a great evil is the "sentencing of so many men to the Penitentiary for minor offenses. Out of 1,590 criminals received within the past two years, 571, or over one third, were sentenced for one year only for some trivial offense." Another evil is the lack of a reformatory for young offenders. Within the past two years 50 boys under sixteen years of age have been received in the Penitentiary, 48 of whom were colored and 2 white. The majority of these were convicted of trivial offenses.

In reference to the cost of criminal proceedings, the Comptroller says: "Much has been said and written of late about the grievous burden laid upon the treasuries of the State and the counties by the large and yearly increasing expenditures for criminal prosecutions. Public sentiment has been aroused, and there is now a well-nigh universal demand for reforms that will effect a very large reduction in expenditures on that account." After giving figures and estimates showing that in 1893 and 1894 the total cost of such prosecutions to the State and the counties was something like \$2,250,000, he says, further: "A comparison of the expense of

prosecuting crime under our law with the expense in other States of the Union reveals the fact that Tennessee is the only State in the Union that expends a large proportion of her revenues for that purpose. Alabama in 1894 paid \$32,087 on account of criminal prosecutions, and Georgia, for the same year, paid about \$10,000. Tennessee paid for 1894 \$265,084.

Chief-Justice D. L. Snodgrass was indicted in January on the charge of assault with a pistol, with intent to commit murder in the first degree. The bill also charged pistol carrying. This action was the result of the shooting of Col. John R. Beasley by the Chief Justice on Dec. 16. The case was tried in May. The defendant said on the stand that Beasley was the author of an article printed in the "Morning Times" reflecting on his integrity as a judge; that he had decided to go to the "Times" office to ask for a correction, and, as a number of men were connected with the paper and he did not know but they might "pitch him out a window," he had armed himself; that he called at Spurlock's office (the "Times's" attorney) to confer with him; that in Spurlock's office he accidentally met Beasley; that he denounced him as a liar and a slanderer; and that Beasley made demonstration as though to draw his pistol, and he shot him. The jury returned a verdict of "Not guilty."

Several cases of lynching occurred during the year. Jan. 8 two negroes, charged with criminal assault, were taken to Lexington for trial; they were met at the train by a mob of 400 men, hanged to a railroad trestle, and shot by several hundred of the mob. One confessed guilt, the other maintained his innocence.

At Huntsville, March 22, a man awaiting trial for a murder committed at Pioneer was taken from the jail and hanged by a mob of about 25 armed men. A meeting was held to give expression to the indignation felt in Scott County, strong resolutions were adopted, and committees were formed bound to use every effort to effect the capture and conviction of the lynchers.

In April a man of bad character who was suspected of firing a barn belonging to his brother was found hanging to a tree on Lone mountain.

Two men who were awaiting their third trial on a charge of murdering an old man for the purpose of robbery were taken from jail at McMinnville in April and hanged. Their first trial resulted in a hung jury, the second in conviction and a sentence of death. The Supreme Court reversed the decision on a technicality, and remanded the case.

Loan Associations.—The Treasurer's report says: "The business of building and loan associations shows a decline in volume during the year. There is a feeling that the premium and interest charged for borrowed money is excessive. The associations are, as a whole, in fairly good condition."

Militia.—The National Guard numbers 1,850 enlisted men. They are still armed with the old regulation 45-70 caliber Springfield rifles, but in other respects are on an even footing with the regular army. The equipments are furnished by the Government. The last General Assembly appropriated \$8,000 a year to the militia. The number of men in the State subject to military duty is estimated at 180,000.

Industries and Products.—The report of the Commissioner of Agriculture gives the number of families coming into the State to make their homes as 3,962, and the number of individuals 17,880. The amount of capital invested is estimated at \$3,257,200, of which about \$500,000 was for mineral, timber, and oil lands. A large number have bought and paid for farms, while many have rented land. Those making homes in eastern Tennessee are

mainly from Virginia, North Carolina, and Kentucky, with some from the Western States. Of those settling in middle and western Tennessee, the majority came from Ohio, Indiana, Illinois, Michigan, Iowa, and the far Northwestern States.

The Commissioner of Labor gives statistics of the phosphate industry. The production during 1896 was 42,911 tons, compared with 45,078 in 1895. The decline is due principally to the change in the base of operations from the Blue Rock region, in Hickman County, to the Mount Pleasant region, in Maury County. The discovery of rich deposits in the Mount Pleasant district last summer started the development in a rush, causing for the time a demoralization and desertion from the Blue Rock region. The rush was due to the richness of the rock and the low cost of production at Mount Pleasant. There has been a reaction in the former field, in which two large companies are operating.

Much of the six months in which operations were conducted in the Mount Pleasant district was spent in erecting equipments for larger, more permanent, and economical operations, though much rock was mined and handled by improvised and expensive methods.

The wheat yield of the State is given at 6,238,552 bushels; the crop of tobacco in 1895 was 43,220,000 pounds; that of cotton, 172,500 bales.

The report of the Commissioner of Labor shows that 200,635 cubic feet of marble were quarried in 1896. This is the largest production in the history of the industry, with the exception of that of 1894, when 241,956 cubic feet were produced. Formerly the entire product came from Hawkins County and was of the dark variegated variety. Now the rival centers of the industry are Blount and Knox Counties. The stone is almost entirely of the lighter tints.

The Centennial.—The stockholders of the Tennessee Centennial Exposition Company met in February and by unanimous vote agreed to celebrate the Centennial June 1, 1896, hold the inaugural exercises of the Exposition, and then adjourn to May 1, 1897, when the Exposition will be opened.

The exercises at Nashville, June 1, were marred by inclement weather. The procession ended at the auditorium, where George Washington's proclamation admitting Tennessee into the Union was read. The orator of the day was John Dickinson, Assistant Attorney-General of the United States, who read an elaborate historical address. A prize centennial ode by Mrs. Virginia Frazier Boyle, of Memphis, was read.

The construction of the main buildings of the Exposition began in January, 1896. Those that were under roof and finished in December were the Parthenon, for the fine arts; the Commerce Building, 560 x 315 feet; the Minerals and Forestry Building, 400 x 125 feet; the Transportation Building, 400 x 120 feet; the Agricultural Building, 525 x 175 feet; the Auditorium, seating capacity 6,000; the Woman's Building, 160 x 85 feet, and the Administration Building, where are the executive offices. All these buildings are white, the exterior finish being staff, and the construction heavy frame, except in the case of the Parthenon, the walls of which are brick, and the roof of glass and steel.

Court Decisions.—In a case involving the general assignment law of 1895, which was before the Supreme Court in November, that law was declared unconstitutional, partly on account of its defective title, which was found to be not broad enough to cover its purposes; moreover, because the act embraces more than one subject, contrary to the constitutional provision.

The Supreme Court, in March, passed upon the poll-tax requirement of the election laws of the State, and held that the law requiring voters to pre-

sent their poll-tax receipts before being allowed to vote, or satisfactory evidence as required by the law that they had paid their poll tax, is constitutional.

The State brought action to recover from Davidson County certain fines, taxes, and costs. The demurrer filed by the county was sustained and the State prayed an appeal. One Gillem was indicted for a felonious assault and convicted and sentenced to six months in the county workhouse. The costs in the case amounted to \$31.65, and were paid by the State. The county received from the labor of Gillem largely more than the amount of the cost in the cause and the State demanded repayment of the costs. The decision of the Supreme Court said: "It is not claimed that any money was collected by the county from Gillem, but the claim is based upon the theory that the county, having received the benefit of his labor, must refund the cost which the State was required to pay. We can not concur in this contention. The prisoner having been convicted of a felony and being insolvent, the State became liable for the cost, and this liability is not affected by his being committed to a workhouse sentence."

Legislative Session.—The Governor called an extraordinary session of the Legislature, to begin Sept. 7, for the purpose of providing against the threatened treasury deficit.

In his message the Governor reviewed the history of the treasury from the time of the controversy over the "railroad debt." The rate of taxation from 1833 to 1887 was 40 cents on the \$100. In the latter year it was raised to 45, of which 30 cents was for State and 15 for school purposes. This rate was maintained till 1894. In June, 1895, a revenue bill was enacted (see "Annual Cyclopædia" for 1895, page 717), which reduced the rate of levy, abolished many privilege taxes, and while it increased some reduced many others. It was believed that the income would be sufficient, especially as it was expected that the new assessment law would add to the valuations of property. But this expectation was disappointed; the total valuation for 1896 was less by some millions of dollars.

The Treasurer and the Comptroller, being called upon for statements as to the probable condition the finances would be in by Jan. 1, 1897, differed widely in their estimates, the Treasurer seeing a prospect of a deficit of \$269,000 unless the Tennessee Coal and Iron Company should pay, in which case it would be \$214,000, while the Comptroller made a written statement, April 3, showing a probable surplus on Jan. 1, 1897, of \$110,008.71; and on Aug. 11, 1896, he made a statement showing a probable surplus on Jan. 1, 1897, of \$73,371, making a difference in his estimates in a period of four months and eight days of \$36,637.71.

The Legislature was in session till Sept. 26. Several bills looking to increase of revenues were introduced; but the majority appears to have decided that the danger of deficit was not so great as had been feared; at any rate, they failed to make any important changes in the revenue laws. The only revenue-producing measure was a bill taxing merchandise brokers and cigarette dealers, special-privilege taxes being imposed. In order, however, to provide for the interest on the bonded debt, the Funding Board was authorized to borrow money.

An act was passed providing for submitting to the people the question of calling a constitutional convention. The date fixed for the vote was the first Thursday in April, 1897.

Political.—The State Democratic Executive Committee issued in March a call for two conventions: the first to meet in Nashville, May 6, for the purpose of nominating 3 candidates for the Court of Chancery Appeals, to be voted for at the election

on the first Thursday in August; the second to meet at the same place, May 7, for the purpose of selecting delegates to the national convention, to appoint candidates for presidential electors, and to nominate a candidate for Governor, the same delegates to compose both conventions. On May 6 the 3 judges of the Court of Appeals—R. M. Barton, S. F. Wilson, and M. M. Neil—were renominated.

At the second convention there was some friction between administration and free-coinage delegates; but the great majority were in favor of free coinage, and the following was among the resolutions:

"We demand a restoration of the money of the Constitution by a law providing for the free and unlimited coinage of both gold and silver as full legal-tender money at the ratio of 16 to 1, regardless of the action of any other nation."

The platform also demanded laws, State and national, making gold and silver legal tender for all debts and prohibiting contracts discriminating against either, the repeal of the 10-per-cent. tax on issues of State banks, tariff for revenue only, and an income tax.

The delegates were instructed to vote as a unit.

Ex-Gov. Robert L. Taylor was made the candidate for the governorship.

The Republicans held two State conventions. At Nashville, April 22, they instructed delegates to the national convention to support William McKinley as candidate for the presidency, and H. Clay Evans for the vice-presidency. The resolutions opposed free coinage, condemned the national administration, favored a tariff to meet the requirements of the Government and protect American industries; declared also in favor of reciprocity, the control of the Nicaragua Canal by the Government and its speedy completion, and favored such action toward Cuba as would bring the war to an end as soon as possible. The seating of Peter Turney as Governor was condemned in severe terms, the Centennial Exposition was favored, and an appropriation from Congress was recommended.

For judges of the Court of Appeals W. R. Turner, P. C. Smithson, and W. F. Poston were named.

At the second Republican convention, Aug. 12, in Nashville, George N. Tillman was chosen candidate for the governorship, and resolutions were adopted approving the action of the national convention, condemning the Chicago platform, favoring honest and rigid economy in the conduct of State affairs and the abolition of the fee system, denouncing the election laws enacted by Democratic Legislatures, condemning the gubernatorial outrage of two years ago, and opposing the bringing of convict labor into competition with free labor.

The People's party met in State convention in Nashville, July 28, with about 150 delegates. A. L. Mims was nominated for Governor on a platform condemning Democrats for seating Turney over H. Clay Evans.

The action of the national convention was approved, though there was a determined effort on the part of a small minority against accepting a Democratic nominee for President. A full electoral ticket was named with the understanding that if the Democrats would agree to withdraw 3 Democratic electors 3 Populist electors would be withdrawn, and a committee was appointed to confer with one of Democrats. The movement for fusion finally failed in October, the People's party demanding 4 electors and also demanding that the Democratic nominee for Governor should meet the Populist nominee in joint debate. In reply the Democrats stated their willingness to unite with the Populists on the one great question of finance, and fuse on electors. They offered to give 4 electors as demanded, the only condition being that they should

all vote for Bryan, each voting as he pleased for Watson or Sewall, but they refused to permit Taylor to meet Mims in joint debate. In some districts Republicans and Populists united on candidates for the Legislature.

About 100 delegates attended the Prohibition convention in Nashville, April 29. The resolutions declared against the liquor power, for national organization of Prohibitionists, for woman suffrage, more money for schools, a graduated income tax, local option for cities, and a State constitutional convention. Josephus Hopwood was nominated for Governor.

At the August election the Democratic candidates for judges of the Court of Appeals were elected. The highest Democratic vote was 141,328; the highest Republican vote, 115,056.

At the November election the vote for President stood: Bryan, 166,268, of which about 4,525 were for Watson electors; McKinley, 148,773; Palmer, 1,951; Levering, 3,098. For Governor it was: Taylor, Democrat, 156,228; Tillman, Republican, 149,374; Mims, Populist, 11,976; Hopwood, Prohibitionist, 2,831. The vote was the largest ever polled in this State by 19,000.

Of the 10 Representatives in Congress elected, 2 are Republicans and 8 Democrats.

The Legislature will stand on joint ballot: 88 Democrats, 40 Republicans, and 4 Populists.

The Republicans denied that Mr. Taylor had been fairly elected, claiming that Mr. Tillman was elected by more than 5,000 majority, and that he had been counted out by extensive frauds. Soon after the assembling of the Legislature in January Mr. Tillman filed a notice of contest. Thereupon a bill to require a contestant for the office of Governor to give a bond of \$25,000 for the costs of the contest was passed.

Mr. Tillman, in an address to the public, spoke of the bond bill passed after his notice of contest was filed. The bond is conditioned upon the faithful, *bona fide*, and successful prosecution of the contest. The \$25,000 is to be paid as a penalty should the joint assembly determine the contest unwarranted, or not in good faith, or malicious, or made for political effect, or without reasonable cause. Mr. Tillman said he had determined not to assume so large a liability as a bond for the amount named, enforceable at the will of the joint assembly of the Legislature; that the heavy expenses and the labor involved in such a contest, "and the probability, in the case of a Republican contestant in this State, of a decision adverse to him, would seem to be sufficient discouragement to a man of even more than ordinary public spirit and of moderate fortune, and when the Legislature in addition threatens him with a penalty of \$25,000 for presuming to make the contest, the discouragement reaches a point amounting almost to a prohibition."

TEXAS, a Southern State, admitted to the Union Dec. 29, 1845; area, 265,780 square miles. The population, according to each decennial census since admission, was 212,592 in 1850; 604,215 in 1860; 818,759 in 1870; 1,591,749 in 1880; and 2,235,523 in 1890. Capital, Austin.

Government.—The State officers in 1896 were: Governor, Charles A. Culberson; Lieutenant Governor, George T. Jester; Secretary of State, Allison Mayfield; Treasurer, W. B. Wortham; Comptroller, R. W. Finley; Superintendent of Public Instruction, James M. Carlisle; Commissioner of the Land Office, A. J. Baker; Commissioner of Agriculture, Insurance, Statistics, and History, A. J. Rose; Attorney-General, Martin M. Crane; Adjutant General, W. H. Mabry; Chief Justice of the Supreme Court, Reuben R. Gaines; Associate Jus-

tices, Leroy G. Denman and Thomas J. Brown. All the State officers are Democrats.

Finances.—The Comptroller's report for the two years ending Aug. 31, 1896, gives the following summary: On Aug. 31, 1894, there was a balance to the credit of the general account amounting to \$38,443.85; receipts during the year ending Aug. 31, 1895, \$2,086,578.20; total, \$2,125,022.05; disbursed during the same period, \$2,021,606.56; transfers adjusting accounts, \$75,342.78; balance on hand Aug. 31, 1895, \$28,072.71. At the beginning of the fiscal year Sept. 1, 1895, there was a cash balance in the treasury to the credit of general revenue of \$28,072.71; receipts of general revenue during the year ending Aug. 31, 1896, \$3,023,725.98; total, \$3,051,798.69; disbursements during the same period, \$2,884,700.03; transfers adjusting accounts, \$7,345.14; total credit, \$2,942,045.17; balance to the credit of general revenue Aug. 31, 1896, \$109,753.52; warrants drawn against this account aggregating \$69,637.94 had not at that time been presented for payment.

The receipts and disbursements of available school fund for the year ending Aug. 31, 1896, were as follow: Balance on hand Aug. 31, 1895, \$133,479.38; receipts during the year, \$2,843,433.86; total, \$2,976,913.24; disbursements, \$2,901,982.89; transfers and amount refunded, \$1,870; balance Aug. 31, 1896, \$73,060.35. On Sept. 1, 1895, there was unpaid \$547,690.52 of the school fund apportioned for the scholastic year of 1894-'95. The Board of Education apportioned \$2,519,271.50 for the scholastic year of 1895-'96. The receipts and disbursements of the permanent school fund during the year, and the amount of securities held by the State in trust for that fund were: Cash on hand Aug. 31, 1895, \$173,938.05; received during the year ending Aug. 31, 1896, \$759,207.40; total, \$933,145.45; disbursements, \$555,399.48; transferred to available school fund, \$160,902.42; balance Aug. 31, 1896, \$216,843.55; bonds on hand Aug. 31, 1895, \$7,579,144.52; bonds purchased, \$526,164; total, \$8,105,308.52; bonds redeemed, \$529,023; balance Aug. 31, 1896, \$7,576,285.52.

The amount of occupation taxes collected in the counties for the two years ending April 30 was \$1,631,686.94, while the amounts payable to the Comptroller by law were: Collected from nonresidents in organized counties, \$110,652.95; from nonresidents in unorganized counties, \$59,268.18; railroad, stagecoach, steamboat, passenger tax, etc., \$56,257.63; total, \$226,176.76. The assessed value of all property in the State for 1896 is \$850,309,246, against \$860,910,567 for 1895. The cost of State educational, charitable, and penal institutions for 1893 and 1894 was \$1,403,472.12; for 1895 and 1896 it was \$1,399,441.79. The average number in all these institutions in the former period was 7,712; in the latter, 8,864.

The total value of State property, including the Capitol and educational and charitable institutions, is \$10,917,879.

The total bonded debt of the counties, as nearly as can be obtained from reports and records on file Aug. 31, 1896, was \$10,845,206.

Education.—During the biennium the scholastic population increased from 693,752 in 1894 to 751,335 in 1896, yet the schools were conducted for four and a half months on an apportionment of \$3.50 *per capita*, the same as the preceding year, and an apportionment of \$4 *per capita* has been declared for 1897. Under an act of the Legislature of 1856 part of the school fund was loaned, prior to the war, to the Houston and Texas Central Railway Company and the Galveston, Harrisburg and San Antonio Railway Company. For many years a controversy has existed between these companies

and the State as to the amount due on these loans. The State claiming an indebtedness of more than \$1,000,000, and the companies insisting that it has been fully satisfied by payment in State warrants issued during the war. Final default in payment was made by the companies in 1894, and in December of that year suits were begun which resulted in judgment in favor of the State in the district court for \$1,200,000, from which appeals have been taken. The attendance at the university and the medical branch has increased. Of the educational institutions, only the Prairie View Normal School shows a decrease in the number of students. The expenditures for the university during the two years amounted to \$130,617.20; for the Sam Houston Normal Institute, \$53,717.27; for the Prairie View Normal Institute, \$26,753.87; and for the Agricultural and Mechanical College, \$58,234.06. The State University opened in September with 126 students. It has recently received a gift of \$30,000 from G. W. Brackenridge, of San Antonio. At the nineteenth annual commencement of the Agricultural and Mechanical College, in June, 4 were graduated in the agricultural course, 9 in the civil engineering, 3 in horticulture, and 6 in mechanical engineering. The State School of Methods opened its third annual session at the university in June with an attendance of 150.

Charities.—Following are the amounts expended for charitable institutions for the two years: State Lunatic Asylum, \$244,969.92; North Texas Lunatic Asylum, \$272,547.30; Southwest Texas Lunatic Asylum, \$104,603.45; Blind Asylum, \$88,872.69; Deaf and Dumb Asylum, 97,641.19; Colored Deaf and Dumb Asylum, \$33,505.73; Orphans' Home, \$44,908.44; Confederate Soldiers' Home, \$50,835.38.

At the Veterans' Home during the year ending Dec. 1 50 were admitted, 25 died, 1 deserted, 6 were out on furlough, 16 were honorably discharged, of whom 4 were readmitted, and there were at the close of the year, 175 inmates. Improvements have been made, the principal one being a hospital building.

At the Asylum for the Blind 153 were enrolled during the session and 112 were in attendance in November.

At the State Lunatic Asylum there were 696 patients.

Prisons.—There was an increase in prison population during the past two years, as follows; Nov. 1, 1894, convicts on hand, 4,125; Oct. 31, 1896, convicts on hand, 4,421. The greatest number ever on hand at one time was on July 18 and 19, 1896—4,523. There were 339 pardons, 217 deaths, and 164 escaped.

Crimes were classified as follow: Against lives and persons of individuals, 2,007; against property, including forgery and counterfeiting, 2,026; against morality and public justice, 388; total, 4,421. The men were in 39 different camps, prisons, farms, and railroad gangs; 317 were employed on railroads and 2,463 on farms. The earnings of the force amounted to \$1,540,825.40, and the expenses to \$1,445,524.16. Permanent improvements cost \$157,674.81. Penitentiary property of all descriptions is valued at \$2,440,088.90. Cost of maintaining convict population averages \$9.80 a month. The net profits of contract farms for the two years was \$249,255.05, or about \$81.75 *per capita* per annum. The prisons proper were largely supported by the contract, share, and State farms, and the railroad gangs.

The number of persons in the House of Correction and Reformatory, which is for offenders under sixteen years of age, was reduced one half in 1896. The cost for the two years was \$69,569.42.

Railroads.—During the past two years the Railroad Commission has established or amended tariffs on almost every species of freight except lumber.

The general merchandise tariff was put into operation Aug. 6, 1895. Railway bonds on completed road aggregating \$1,609,000 were examined and registered under the act to prevent fraudulent and fictitious issues. More than 3,000 miles of railroad have been inspected and valued as a basis for the issue of bonds. The total amount saved to the people for the two years by the reduction of rates, as estimated by the commission, is \$2,231,000.

The amount of assessed value of rolling stock of railroads in the State, as given by the Comptroller, is \$7,962,905. The Texas Western renders no rolling stock, and the International and Great Northern only that portion subject to taxation and not belonging to the exempt line.

Banks.—In 1896 12 banks in the State went into liquidation or failed, and 21 new banks were organized.

Insurance.—In a paragraph on insurance, in his message to the Legislature, the Governor says: "Life insurance companies principally chartered by and domiciled in the State of New York have for years done a large business in this State. The excess of premiums over losses paid these companies by the people of Texas for the year 1895 was \$2,471,192. The premiums which our people paid 3 New York companies for the past ten years amounted to \$18,644,124.85, and the policies which they paid aggregated only \$4,947,569.51. The excess in premiums, the sum taken out of the State in that time, was \$13,696,555.34, less inappreciable commissions paid the agents." The receipts in fees of the State Insurance Department for 1895 were \$12,310.

Industries and Products.—The cotton crop of 1895 was reported at 1,905,337 bales, larger than that of any other State, but much smaller than that of the preceding year. The corn crop amounted to 107,906,000 bushels, and the wheat crop to 2,082,000 bushels.

The elevator service of Galveston was found to be inadequate for handling the grain sent to the port after the harvest. Over 3,500 cars were reported Sept. 13 to be on the railroads awaiting the raising of the grain blockade at the port. This was attributed in part to the lack of ocean tonnage.

The recent deflection of trade to the Gulf ports and the ability of Galveston, owing to her now acquired deep water, to take advantage of this change in methods resulted during the year in an immense increase in the export business.

The principal exports in British vessels from Galveston during 1896 were: Cotton, bales, 987,389; cotton-seed meal, sacks, 1,964,010; cotton-seed-oil cake, sacks, 186,962; wheat, bushels, 2,886,159; corn, bushels, 4,897,472; cotton-seed oil, gallons, 1,097,983; walnut lumber, pieces, 29,370; walnut logs, 484; spelter, plates, 2,097,386; borax, sacks, 23,364; copper matte, sacks, 28,261; lead, bars, 35,987; lumber, feet, 203,621; lumber, pieces, 138,972; cedar logs, 2,602; staves, 101,015.

The improvement of the Sabine pass has stimulated the trade in lumber from southeastern Texas. The coastwise shipments for the year amounted to 8,368,072 feet, of which 5,331,296 feet went to New York. The total amount shipped to foreign ports was \$23,185,656, and its value \$262,911. This was sent to Mexican, South American, and West Indian ports, to Port Natal, to London, and to Greenock.

The channel of Galveston harbor has been deepened. At the end of the year the depth at mean low tide was 25½ feet. Ultimately a depth of 30 feet is to be reached.

The Rangers.—The Adjutant-General said in his report in December: "In every train robbery which has occurred in Texas, the robbers have been captured or killed wherever it was possible to carry

the rangers to the scene so that they could take the trail. By the annual report of the rangers for 1895 it is shown that in that year they traveled 107,000 miles, and arrested 417 criminals, who were turned over to the civil authorities, and pursued 120 more who made their escape into Mexico. They recovered 486 head of horses and cattle that were stolen from Texas ranches, and assisted the civil authorities eighty-eight times during the year in guarding jails and prisoners and keeping down mob law. This statement does not include the services rendered by 71 "special" rangers, who are enlisted mostly in frontier and border counties on the recommendation, usually, of sheriffs and district officers, but are not paid by the State.

Recent Laws.—In reviewing the history of the State in 1895 and 1896 the Governor says: "Among the laws enacted during the past two years which have substantially benefited the public, the statute of limitations was made applicable to married women and land titles quieted; contested elections were regulated; the laws were revised and codified; occupation taxes were made uniform; primary elections were legalized and regulated; the colored people were given control of their schools; *ad valorem* taxation was equalized; railway land titles were validated; connecting lines of common carriers were made responsible for freight losses; the Confederate Home was made a permanent State institution, supported by taxation; the strongest antitrust law in the Union was passed; the interests of labor were guarded by an arbitration act; and extravagant and unconscionable fees of office were largely reduced. Though the act appears to need amendment in order to be more effectually enforced, the protective features of the fish and oyster law have proved a decided benefit along the entire coast. Oysters have been more abundant and there have been more fish in the bays since Oct. 1, when the reserved bays were opened, than at any time for two years. The act regulating the collection of delinquent taxes has done much toward correcting existing injustice. In 1894 the total State and school delinquent tax collected was \$29,475.27, while in 1895 and 1896, under this act, it was \$45,433.59 and \$78,966.46, respectively. The delinquent county taxes collected have increased in the same proportion.

The change in the school law reducing the price of school lands to \$1 per acre, leases to 3 cents per acre, and interest to 3 per cent., is fully justified by the operation of the present law. Previous to this purchasers and lessees of public lands were forfeiting their claims and defaulting in the payment of interest in unprecedented numbers, while since then forfeitures and defaults have lessened and both sales and leases have rapidly multiplied. For the year ending Aug. 1, 1895, the sale of school lands amounted to 209,948 acres and leases to 1,712,301 acres. For the year ending Aug. 1, 1896, with the new law in force, the sales amounted to 1,179,647 acres and the leases to 5,126,967 acres.

Political.—The Democratic State Committee decided in February to hold two State conventions with only one primary, the conventions to be June 23 and Aug. 18, and the primaries June 6, at which time voters should have the opportunity of expressing their preference for or against free coinage; and the majority should determine the action of the State convention and the kind of delegation to be sent to the national convention. This decision was understood to settle the question in favor of free coinage; and the leaders on that side issued an address to the people saying: "It is conceded that an overwhelming majority of the Democrats of Texas earnestly favor a return to the currency system adopted by the framers of the Government and

the restoration of silver to its former position of equality with gold at the public mints at the present coinage ratio of 16 to 1. We appeal to every member of the party and to every citizen who is willing to accept the liberal invitation of the National and State Democratic Executive Committees in joining to make the verdict of the Democracy in Texas in favor of bimetalism so complete and emphatic that the advancing cause of financial reform may receive an impetus that will further its general success."

The Gold-standard Democrats held a conference, Feb. 15, in Galveston, with about 175 in attendance. A division in the party seemed imminent; but it was decided not to repudiate the action of the State Committee, and to make the struggle in the primaries. In May ex-Gov. Roberts announced himself as a candidate for the office of Governor, charging that the present Governor and other silver leaders were trying to lead the Democratic party of the State into the National Silver party at its meeting at St. Louis in July. The ballots used at the primaries were marked "For bimetalism" and "Against bimetalism and for the single gold standard," and the vote was overwhelmingly in favor of bimetalism, meaning free coinage.

The "Sound-money Democrats met in Dallas, April 21. The resolutions adopted proposed to reorganize the party, call a nominating convention to place a straight ticket in the field for State offices, and name Sound-money candidates for Congress. Accordingly, they held a separate convention in June at the time and place named in the call of the State Committee. Therefore two conventions were in session in Austin, June 23.

The Gold-standard wing numbered 300 to 400 in their convention. They declared their intention of reorganizing the party on sound Democratic principles, chose a delegation to the national convention, and adopted a platform commending the administration, opposing free coinage, and demanding "the immediate retirement of this Government from the banking business, and that the law authorizing the issuance of the Treasury note should be repealed and such promises be retired and canceled, and favoring the "establishment of a safe system of banking under rigid governmental supervision in order that the people may have at all times a safe, sound, and elastic currency, amply sufficient for the transaction of their business."

In reference to the action of the silver wing of the party, the resolutions said:

"Having heretofore formally repudiated the methods and actions of the fraudulently constituted so-called Democratic Executive Committee, we hereby reaffirm such denunciation and announce our purpose not to vote for or in any manner give political countenance to any candidate for political office who either approves such action or who proposes in any manner to profit thereby. The action of this so-called committee was deliberately conceived and executed for the purpose of effecting a complete disfranchisement of brother Democrats, and it has resulted in the destruction of Democratic methods and procedure, consecrated by party use for more than half a century, the preservation of which are essential to the purity of action and the stability of party ascendancy. This destructive action has necessitated the reorganization of the Democratic party in Texas, and we announce that our separation from those who would destroy the party for the sake of gaining a temporary advantage for their peculiar financial heresy is final and irreconcilable until they return to the advocacy of true Democratic principles."

A convention was called to meet at Waco, on August 25.

The regular Democratic convention, in session at the same time in another hall, with about 1,000 delegates, also elected a delegation to the national convention. The resolutions were strongly in favor of free coinage, a strict construction of the Constitution, the political equality of citizens, freedom of conscience, separation of Church and state, freedom of the press, and tariff for revenue only, "sufficient, with other taxation, to meet the expenses of the Government economically administered, so as to render it unnecessary to increase the public debt in any form whatever"; they condemned the extraordinary expenditure by Congress of over \$515,000,000 and the alleged unnecessary employment of Federal officers and employees; demanded the "submission of constitutional amendments to the several States which will authorize Congress to pass an income-tax law (unless such course should become unnecessary by the overruling of the decision of the Supreme Court of the United States), to the end that the wealth of the nation may be compelled to bear its just share of the expenses of the Government"; opposed monopolies and trusts and all class legislation, demanding equal rights to all and exclusive privileges to none; opposed the issuing of interest-bearing bonds in time of peace, national bank issues, and excessive pensions; and demanded that the national debt be paid.

Delegates to the national convention were instructed to favor the nomination of Richard P. Bland.

The second regular Democratic convention met in Fort Worth, Aug. 18, with comparatively a small representation. The resolutions approved the action of the national convention, and on State affairs approved the existing administration, promised economy in State Government, demanded reapportionment of judicial districts, a law requiring express companies to maintain general officers within the State, a new lien law, reform of criminal laws, and especially revision of jury laws; favored reforms in the fee system, amendments to the "fellow-servant" law, and sale of public-school lands; opposed the leasing of convicts to corporations, and promised equal rights to all. The nominations were: For Governor, Charles A. Culberson; Lieutenant Governor, George T. Jester; Attorney-General, Martin M. Crane; Treasurer, William B. Wortham; Comptroller, R. Wat Finley; Commissioner of General Land Office, James M. Carlisle; Superintendent of Public Instruction, Andrew J. Baker; Chairman Railway Commission, John H. Reagan; Railway Commissioners, Allison Mayfield and L. J. Story; Justices, W. L. Davidson and Leroy G. Denman. A proposition from the People's party for a division of electors was rejected.

At the convention of the Gold-standard Democrats in Waco, Aug. 25, resolutions were adopted condemning the action of the national convention, and repudiating the national and State nominations. Of the action of the State convention, they said: "We condemn the methods adopted by those who have been interested with the management of the affairs of the Democratic party in Texas, they having used the same solely for the purpose of retaining the present administration in this State, by which the Democracy of this State was in a manner disfranchised at the primaries, and therefore the so-called Democratic nominations at Fort Worth have no binding force upon any true Democrat in this State."

Delegates to the Indianapolis convention, candidates for presidential electors, and a State Executive Committee were chosen. No State ticket was formed.

The first Republican State Convention met in Austin, March 24. There was a contest between

the partisans of McKinley on the one side and those of Reed and Allison on the other. A chairman in favor of Allison was chosen by a vote of 407 to 205. The Committee on Credentials did not report until the 26th, when a platform was adopted which said, in relation to the currency:

"We reaffirm the historic adherence of the Republican party to sound finance. We demand an honest dollar of greatest purchasing power for every class alike, the largest issue of gold, silver, and paper compatible with security and the requirements of trade, all of equal value, interchangeable one for the other, every dollar resting on gold coin as the only money of final redemption. The Republicans of Texas declare this to be in their deliberate judgment the only basis for a large and liberal circulation of money and for the maintenance of universal confidence."

The delegates selected for the national convention were all for Reed or Allison; and therefore after the adjournment, the McKinley wing organized with a large number of delegates and chose representatives for the national convention, instructing them to support him.

The Reform Republicans, the so-called "Lily Whites," held a State convention at Houston, April 20. Delegates favorable to McKinley were chosen for the national convention, but no instructions were given. Following are the main features of the platform:

"We favor bimetalism, the use of gold and silver coin as money of ultimate redemption. We favor the immediate calling of an international monetary and reciprocity conference for the adoption of an international agreement. We believe in a protective tariff that will renew a market for American wages for American workmen."

This made 3 delegations to claim seats in the national convention. The McKinley delegation, chosen March 24, headed by Dr. John Grant, was seated. At the Republican convention, held in Fort Worth, Sept. 9, no State ticket was named. The Chairman of the State Executive Committee, E. H. R. Green, was authorized to appoint a committee with full power to direct the campaign. It was understood that the special purpose of this committee was to effect fusion with the Populists and "Sound-money" Democrats. The national platform and candidates were approved with great enthusiasm. In reference to State affairs the resolutions said:

"We unqualifiedly condemn the present administration of affairs in the State government of Texas through its various agencies, and unite in calling unto all good citizens of the State, irrespective of party, to join together in a determined effort to drive the present so-called Democratic party from power in our beloved State, and give to our people a wise, honest, economical, and pure government.

"We recommend the enactment of appropriate laws for the development of a system of irrigation in the semi-arid regions of the State.

"We insist that laws should be speedily enacted extending to our colored youths the opportunities of university education.

"We favor a vigorous enforcement of the criminal laws of this State, irrespective of persons, and demand that the procedure governing appeals in such cases be reformed with a view to the speedy determination of the correctness of convictions without regard to technicalities, and in this connection we denounce in unmeasured terms the resort to mob violence against persons charged with, but not convicted of crimes."

The delegates to the national convention of the People's party held a caucus July 18 with the party leaders, and agreed to support for President Paul

Vanderwort, of Nebraska, and for Vice-President Frank Burkett, of Mississippi.

The People's party met in convention, Aug. 5, in Galveston, with about 1,000 delegates. The "middle-of-the-road" sentiment was strong, but the convention seems not to have committed itself to any action that would hamper plans for fusion that might thereafter be made. The following ticket was named: For Governor, Jerome C. Kearby; for Lieutenant Governor, H. S. P. Asbby; for Attorney-General, W. M. Walton; for Comptroller, E. O. Meitzen; for Land Commissioner, S. C. Granbury; for Treasurer, S. O. Dawes; for Superintendent of Education, A. B. Francisco; for Railroad Commissioners, W. W. Nelms, Evan Jones, E. P. Alsbury; for Justice Supreme Court, T. J. M'Minn; for Justice Criminal Court, R. V. Bell.

On State issues the resolutions said, in part:

"We demand a change of administration in Texas, for the reasons that during the twenty-three years in which the Democratic party has had control of this State it has squandered our magnificent public domain in donations to corporations and sales at nominal prices to syndicates and land grabbers, and has thrown every impediment in the way of the actual settler. It has multiplied officers, wasted the public revenues, increased our State debts, and raised our taxes to the point approaching confiscation. It has increased the expenses of the State government from \$1,000,000 per annum to more than \$4,000,000 per annum. By its maladministration of the public-school funds it has in open violation of the Constitution reduced our public free schools from six to three months' session per annum, and at the same time it has invaded our permanent school fund so that the same will be ultimately extinguished, instead of remaining as a perpetual benefit to posterity, as designed by our fathers.

"Though needlessly multiplying courts, it has failed to enforce the laws by refusing to repeal senseless technicalities in our criminal procedure; it has rendered necessary reversals of the judgments of convictions against notorious criminals to such an extent that our courts of final resort have been subjected to gross abuse and the administration of our laws has been brought into such contempt as to incite mobs to deeds of violence to the shame and disgrace of our State.

"We denounce the present administration in this State as being purely personal and dominated by ring rule, as is evidenced by such acts as the payment of extravagant and unnecessary fees to its henchmen and its refusal to buy bonds except through favorite brokers. This administration, like its predecessor, claims the right of being its own successor, and, like them, will claim the right to pass the office of Governor to "the next in line," unless the citizens of Texas show by their votes that the office of Governor belongs to the people, and not to the official family. A long lease of power tends to corruption and is subversive of economy and efficient government, and we believe that the best interests of Texas demand a change of administration and an inspection of the books."

W. M. Walton, candidate for Attorney-General, withdrew from the ticket, and W. O. Hutchison was nominated in his stead.

The Prohibitionists convened at Dallas, July 29, chose presidential electors, ratified the proceedings of the national convention, and named the following State ticket: For Governor, Randolph Clark; Lieutenant Governor, Rev. H. Bradford; Attorney-General, James B. Goff; Comptroller, W. T. Clayton; Treasurer, Jerome W. Henderson; Land Commissioner, W. Manning; Superintendent of Public Instruction, Dr. R. C. Burleson.

The declaration of principles denounced the liquor

traffic, favored Government control of railroads, regulation of immigration, prohibition of speculation in futures and of using public money for sectarian schools, and favored direct vote for President and the initiative and referendum.

The official returns of the election showed the following vote: Bryan and Sewall, 290,862; Bryan and Watson, 79,572; McKinley, 167,520; Palmer, 5,046; Levering, 1,786.

All the Democratic candidates for State offices were elected.

Of the 13 representatives in Congress all are Democrats except 1, who is a Republican.

The Legislature has a large majority of Democrats in both houses.

An amendment to the Constitution making the requirement that aliens shall declare their intention to become citizens of the United States at least six months before any election at which they may offer to vote was submitted at this election, and seems to have been carried, though the total figures are not at hand. By the article sought to be amended aliens might declare their intention to become citizens up to the very hour they offered to vote and became legal voters at that election.

TURKEY. an empire in eastern Europe and western Asia. The Sultan, who rules absolutely under the moral limitations contained in the Mohammedan sacred books, is the eldest prince of the house of Osman. Abdul Hamid II, the thirty-fourth sovereign of the line, born Sept. 21, 1842, succeeded his brother Murad V, who was deposed on the ground of lunacy on Aug. 31, 1876. The Sultan is recognized as Khalif, or spiritual head of Islam, not only within the bounds of the Ottoman Empire, but by most of the Sunnite Mohammedans everywhere, being guided in his ecclesiastical policy by the Sheikh-ul-Islam and the Ulema, a body of eminent doctors of the law. In temporal matters the Sadrazam, or Grand Vizier, is the chief executive officer under the Sultan. These two functionaries, together with ministers of departments, form the Privy Council or Cabinet of the Sultan, which was composed in the beginning of 1896 as follows: Grand Vizier, Halil Rifat Pasha; Sheikh-ul-Islam, Mehmed Djemal Eddin Pasha; Minister of War, Riza Pasha; Minister of Justice and Ecclesiastical Affairs, Abdurrahman Pasha; Minister of Marine, Hassan Pasha; Minister of Foreign Affairs, Tefvik Effendi; Minister of the Interior, Mahmud Jella-leddin Pasha; Minister without portfolio, Aarifi Pasha; Grand Master of Artillery, Zeki Pasha; Minister of Finance, Sabri Bey; Intendant of Evkafs, Galib Pasha; Minister of Public Instruction, Zuhdi Pasha; Minister of Commerce and Public Works, Mahmoud Pasha; President of the Council of State, Said Pasha.

Area and Population.—The area of the immediate possessions of Turkey and their population according to the still incomplete census of 1885 are shown in the following table:

GEOGRAPHICAL DIVISIONS.	Square miles.	Population.
Turkey in Europe.....	65,909	4,786,545
Asia Minor.....	204,618	9,123,432
Armenia and Kurdistan.....	89,264	2,457,400
Mesopotamia.....	100,205	1,350,280
Syria.....	115,144	2,676,943
Arabia.....	173,700	6,000,000
Tripoli and Benghazi.....	398,738	1,300,000
Total.....	1,147,578	27,694,600

The following territories are nominally subject to Turkey, but are now under autonomous or foreign administration: Bosnia, Herzegovina, and Novi Bazar, occupied and administered by Austria-Hungary; Bulgaria and the autonomous province of

Eastern Roumelia, now united and in possession of full autonomy; the tributary principality of Samos; and Egypt, now occupied by Great Britain. Their aggregate area is 461,662 square miles, and their population is 11,524,131, making the total area of the Ottoman Empire 1,609,240 square miles and the total population 39,212,131. In European Turkey the Turks, the Greeks, and the Albanians are about equal in numbers and make up the bulk of the population; Bulgars and Serbs are numerous, and there is a considerable sprinkling of Wallachians, Armenians, Magyars, gypsies, Jews, and Circassians. The population is almost equally divided between Mohammedans and Christians. In Constantinople the census classified the total population of 873,565 into 384,910 Mohammedans, 152,741 Greeks, 149,590 Armenians, 6,442 native Roman Catholics, 4,377 Bulgarians, 1,082 Greek Latins, 819 native Protestants, 44,361 Jews, and 129,243 foreigners. In Asia the Turks are the predominant element in many districts, and there are about 4,000,000 Arabs. The population is everywhere mixed, and the variety of races is extraordinary. The Greek element is large. In some districts Kurds predominate, in some Armenians, and in some Syrians form the main element. Circassians have their separate communities, and are scattered among the population elsewhere. Jews are numerous in many places. The Lebanon, where four fifths of the 49,800 inhabitants are Christians, has a Christian metessarif and special institutions. In Crete there are 88,487 Mohammedans, 205,059 Christians, and 646 Jews and foreigners. In the archipelago 91 per cent. of the people are Christians. Except in these vilayets the Mohammedans preponderate everywhere. In Asia Minor a recent estimate gives 7,179,900 Mohammedans, 576,200 Armenians, 972,300 other Christians, and 184,600 Israelites and foreigners; in Armenia, 1,795,800 Mohammedans, 480,700 Armenians, 165,200 other Christians, and 30,700 Israelites and foreigners; in the vilayet of Aleppo, 792,500 Mohammedans, 49,000 Armenians, 134,300 other Christians, and 20,000 Israelites and foreigners; in the vilayet of Beirut, 230,200 Mohammedans, 6,100 Armenians, 160,400 other Christians, and 49,800 Israelites and other foreigners.

Finances.—The chief revenues of the Government from duties and tributes are sequestered for the payment of the debt, and since 1881 the Council of Administration of the foreign bondholders has collected and disbursed the Eastern Roumelian and Cyprus tributes, the duties on liquors, salt, stamped paper, fisheries, and silk, the tobacco *régie* and tobacco tithes, and the import duties on Persian tobacco. The net receipts in the year 1894-'95, after deducting £91,790 of expenses, was £1,976,687 sterling. Of the conversion loan of 1881 the sum of £ T. 90,533,968 was outstanding on Aug. 13, 1895; of the lottery bonds, £ T. 14,789,690; of the priority obligations of 1890, £ T. 8,139,164. Other loans bring the total up to £ T. 128,901,509 (1 Turkish lira or pound = \$4.40). Of the Turkish securities about 70 per cent. are held in France, 14 per cent. in England, 13 per cent. in Germany, and 3 per cent. in Austria.

Disorganization of the civil and military administration in various parts of the empire was aggravated by the financial straits of the Government. The payment of the troops and of the civil officials fell far in arrears, and only at long intervals were small partial payments made out of loans and advances obtained with difficulty. At one time the troops in Constantinople received no meat because the contractors were not paid. The Porte treated for a loan of 30,000,000 francs secured on the lighthouse receipts, and extended the concession of the lighthouse company, a French corporation, from

1899 to 1924, on condition that the Government's share of the gross receipts should be increased from 33 to 50 per cent. To this arrangement the British Government objected, with the view of obtaining a reduction of the lighthouse dues for the benefit of British shipping. Negotiations for a loan with German bankers having failed, the Porte obtained £ T. 1,000,000 from the Ottoman Bank by mortgaging the sheep tax and tithes in certain provinces and the receipts of the European railroads.

On Oct. 21 an *irade* was issued ordaining an increase of $\frac{1}{4}$ of 1 per cent. in the tithes, 1 per cent. in the sheep tax, and the imposition of a poll tax on Mohammedans to meet the cost of military defense. Retrenchments in the expenditures of the public departments were ordered to meet the deficit in the budget, amounting to £ T. 3,000,000. A proposal of the French Government to turn the debt commission into an international control was not only repugnant to the Turkish Government, but was condemned by Russia. The plan was to raise a loan of £ T. 10,000,000 or £ T. 12,000,000 to relieve the Turkish Government of all its immediate embarrassments, pay up the arrears of pay in the army and civil establishments, and provide means for the carrying out of the promised reforms in Armenia, Syria, and European Turkey. Russia would receive the whole of the promised war contribution of 3,000,000 rubles yearly, instead of 2,000,000 rubles, and would appoint a representative on the commission of the Ottoman debt. The Russian Government, however, has not recognized this commission as possessing any political authority, and is opposed to every form of European interference in the internal affairs of Turkey.

The Army and Navy.—The military forces under arms in the beginning of 1896 comprised the regular peace effective of 220,000 men, 15,000 reserves called out for exercises, 50,000 conscripts of the year 1894, and 116 battalions of Redif numbering 75,000 men; total, 360,000 men. The war effective exceeds 800,000 men. All Mussulmans come under the recruiting law at the age of twenty, and remain in the service until forty years old. Nomad Kurds and Arabs, however, are not recruited in the regular army, but may form part of the Hamidieh, or irregular cavalry. Christians pay a military tax in lieu of service. About 140,000 Mussulmans become liable to service annually, and of these about 50,000 pass into the Nizam, or regular army, and serve four years with the colors, then remain in the reserve two years, at the end of which they are enrolled in the Redif, or Landwehr, eight years, and in the Mustahfiz, or Landsturm, six years. In May, 1896, a decree was issued reducing the term of service with the colors to three years. The infantry are armed with Mauser rifles of 0.3012-inch bore. The artillery has been reorganized, and has 900 new Krupp guns and 500 older Krupps and Whitworths. The effective fleet in 1896 consisted of 3 casemated ironclads, 2 turret ships, 2 barquette ironclads, 1 ironclad monitor, 1 armored gunboat, 2 coast guards, 1 torpedo cruiser, 15 torpedo boats of the first class, 7 of the second class, and 1 torpedo-boat destroyer.

Communications.—The railroads in operation in September, 1896, had a total length of 2,633 miles, of which 1,237 miles were in European Turkey, 1,182 miles in Asia Minor, and 214 miles in Syria.

The telegraphs have a total length of 20,380 miles, with 31,890 miles of wire. There were 1,824,662 internal, 422,186 international, 44,769 transit, and 219,416 official messages in 1891. The receipts were 13,102,154 francs; expenses, 5,664,292 francs.

The post office in 1891 carried 7,999,000 internal, 2,321,000 foreign, and 1,713,000 transit letters, 170,-

000 postal cards, and 2,134,000 internal, 1,202,000 foreign, and 1,276,000 transit journals, etc.

Commerce.—The trade with different countries in 1893 is shown in the following table, values being given in piasters (1 piaster = 44 cents):

COUNTRIES.	Imports.	Exports.
Great Britain.....	978,151,000	701,929,000
France.....	296,291,000	380,036,000
Belgium.....	66,790,000	3,882,000
Netherlands.....	12,283,000	42,943,000
Germany.....	27,978,000	31,677,000
Austria-Hungary.....	509,920,000	151,180,000
Italy.....	58,005,000	78,447,000
Greece.....	37,280,000	41,371,000
Bulgaria.....	124,484,000	42,965,000
Serbia.....	7,651,000	4,763,000
Roumania.....	57,703,000	23,625,000
Russia.....	128,935,000	32,176,000
Persia.....	55,864,000	2,025,000
Egypt.....	66,426,000	
Tunis.....	6,172,000	72,000
United States.....	877,000	16,348,000
Other countries.....	12,289,000	4,053,000
Total.....	2,446,690,000	1,557,522,000

The principal imports were cotton cloths for 206,500,000 piasters, sugar for 164,500,000, piñón for 146,900,000, woolen and cotton dress goods for 134,000,000, cotton yarn for 112,600,000, drugs and dyes for 96,500,000, rice for 95,400,000, coffee for 85,000,000, cereals for 81,200,000, hides, skins, and leather for 79,700,000, animals for 62,400,000, madapolam for 60,500,000, iron for 48,100,000, broadcloth for 47,400,000, iron wares for 42,000,000, cassimeres for 40,500,000, timber for 34,700,000, paper for 30,100,000, clothing for 26,700,000, coal for 25,300,000, and silks for 25,000,000. The principal exports were raisins for 204,400,000 piasters, raw silk for 202,000,000, cereals for 183,600,000, cotton for 82,500,000, mohair for 73,300,000, opium for 69,800,000, coffee for 61,000,000, valonia for 57,500,000, wool for 48,900,000, figs for 48,300,000, skins and leather for 41,000,000, olive oil for 40,300,000, minerals for 38,000,000, drugs and colors for 32,600,000, legumes for 31,700,000, dates for 26,400,000, animals for 26,300,000, seeds for 21,600,000, carpets for 21,500,000, nuts for 18,900,000, millet for 29,900,000.

Navigation.—The number of vessels entered and cleared at Turkish ports during 1894 was 190,274, of 34,137,321 tons. There were 151,377 sailing vessels and 38,897 steamers. The merchant navy in 1895 comprised 78 steamers, of 37,843 tons, and 786 sailing vessels, of 189,643 tons.

Armenia.—On Sept. 23, 1895, Lord Salisbury proposed that the powers take coercive measures to enforce their proposals for Armenian reforms stipulated in the Treaty of Berlin, and that, in the event of unwillingness on the part of any power to assume its share in the coercive action, that power should not oppose the action of any other. Austria gave assent to the proposition without any qualification. Later Germany assented with the proviso that any coercive action of the powers against Turkey must be unanimous and that the integrity of the Ottoman Empire must be maintained. Italy gave absolute assent to the proposal. Russia objected to any scheme that involved coercion, which, M. Shishkin declared, was repugnant to the Czar. In reply, Lord Salisbury expostulated with the Russian minister, saying that it would be useless for the powers to make further concerted representations to the Porte in regard to reforms unless they were prepared to enforce their proposals. On Nov. 24 M. Shishkin wrote to Lord Salisbury, saying that the Czar agreed to consider the question of coercion if the Sultan should prove recalcitrant and the other powers were unanimously in favor of resorting to coercion. Toward the end of December, 1895, France gave a similar assent to measures

of coercion, and the governments of Austria, Russia, and Italy reaffirmed their adhesion to that plan of action. The renewal of disturbances in Asia Minor seemed to the Sultan a reason for not promulgating the reforms. The ravages of the Kurds continued unchecked, and, while the perpetrators of the massacres remained unpunished, innocent Armenians were committed to prison on frivolous charges. The Redifs who had been called out were undisciplined, and as the treasury was unable to provide means for their pay, they were likely to swell the ranks of robbers who preyed upon the unfortunate population. The massacre at Orfah, where, on Dec. 28, 1895, the Gregorian archpriest and four other clergy were slain in front of the altar of their church and thousands of Armenians were butchered, impelled the Marquis of Salisbury to renew his suggestion of joint action in a note dated Jan. 7, 1896. Sir Philip Currie, the British ambassador at the Porte, expressed the conviction that the disorder and discontent that reigned in all parts of the empire and in all departments of the Ottoman administration must, unless some remedy be found, lead inevitably before long to a general breakdown of the machinery of government, all the more that the Sultan appeared to be powerless to bring about any improvement, and that the men who surrounded him were too corrupt and incapable to contribute to the task. Prince Lobanoff, who regarded it as a hopeless and impossible task to try to impose a new system of government on Turkey or establish parliamentary or representative government and responsibility of ministers in Constantinople, saw nothing in the situation to destroy his confidence in the good will of the Sultan, who was, he felt assured, doing his best. In a communication to Prince Lobanoff the British minister at St. Petersburg on Jan. 15 conveyed the Marquis of Salisbury's opinion of the grave responsibilities incurred by the powers if they did not make some effort to amend the calamitous state of things prevailing in the Ottoman Empire, under which circumstances he considered it of the highest importance that the ambassadors of all the treaty powers at Constantinople should consult together, not only as regards the protection of foreigners in Turkey, to which their discussion in concert had hitherto been limited, but also as regards the general state of the empire, with a view of devising some remedy, to be submitted to the consideration of their governments, for the evils which undoubtedly existed, and which, if unchecked might possibly become a source of common danger to Europe. Prince Lobanoff in his reply said that an exchange of views between the representatives of the powers at Constantinople was possible without special instructions, but that Lord Salisbury's idea evidently went further, proposing apparently a direct interference in the internal affairs of Turkey, an interference that was distinctly forbidden by the Treaty of Paris and forbidden by implication in the Treaty of Berlin. The practical results of such an infringement of European public law would be that the conferences of the ambassadors would be looked upon as evidence of the imposition of a kind of guardianship on the Sultan, and would certainly lead to fresh disturbances and prepare the way for a series of surprises, each succeeding one more dangerous than the others. In the view of the Russian minister it was desirable to assist the Sultan in the arduous task of introducing the reforms obtained from him by the powers, which could only be done by giving him the necessary time and by increasing his authority and prestige in the eyes of the different rival populations that are subject to his rule. Lord Salisbury, recognizing that Russia did not stand alone in refusing to sanction a course of conduct that would lead to European interference in the internal

affairs of Turkey and in trusting in the good will of the Sultan to bring about an amelioration in the condition of his subjects and preferring to exercise no pressure beyond addressing friendly and well-meaning advice to the Sultan, decided to proceed no further, although hoping little from the negative and expectant attitude on which the Russian Government relied, being convinced that the evils that would result from the interruption of the harmonious relations of the powers would outweigh any advantage that could possibly be expected from isolated action. Facts collected and tabulated by delegates of the six embassies in Constantinople showed that the total loss of lives in the massacres in Armenia and Asia Minor respecting which accurate information was obtainable was about 25,000, not including estimates concerning massacres of which there were no official or accurate details, as was the case of the villages in Van, Kharput, and Diarbekir, respecting whose fate it was only known that the whole country in which they were situated had been devastated. The starving inhabitants of the devastated Armenian districts embraced Islam in great numbers to escape further persecution and obtain a share of the succor extended by the authorities. The Sultan refused permission to representatives of the Red Cross Society to enter his dominions and distribute aid contributed in the United States. The consular representatives of the powers made an arrangement with the rebellious Armenian town of Zeitun, whose inhabitants gave up their arms, retaining their hunting weapons. The town was crowded with 8,000 refugees from the villages, who, though perishing from hunger, cold, and smallpox, refused to return to their fields for fear of their Moslem neighbors, notwithstanding these were disarmed by the Turkish soldiery. The spread of the anti-Christian disturbances to Orfah, Biredjik, and the neighboring districts was followed by wholesale conversions to Islam. When the Armenian Protestants at Abastan were reported to have embraced Islam in a body, the Armenian Patriarch raised a protest against the enforced conversion of Armenians. The Grand Vizier had already sent orders forbidding the use of force or intimidation in procuring conversions, and when the converted Protestants were reported to be unwilling to return to their former faith, he had instructed the Turkish authorities in Asia Minor to repel all Armenians desiring to embrace Mohammedanism. The British minister complained about the forcible conversion of Armenians, to the Sultan, who declared that he had documentary evidence that the Armenians had adopted the Moslem religion of their own free will, and said that it was difficult for him to discourage persons sincerely desirous of embracing his faith. He proposed to inquire into the matter, and suggested that Sir Philip Currie nominate some trustworthy person to act with his commissioners. The investigation showed that about 6,000 persons had embraced Islam, not because the Mussulmans actually invited them to choose between the Koran and the sword, but yet under fear and danger of massacre. At Biredjik the Christian quarter was pillaged on Jan. 1 and 150 Christians were slain. Those who escaped took refuge with friendly Mussulmans, whose house was assaulted by the mob until finally a woman mounted to the roof with a white flag and announced that all within had joined the faith of Islam. The local authorities refused to recognize conversions, following instructions from Constantinople, and this exasperated the Mussulman fanatics and prompted them to more murderous deeds. The Moslems of Asia Minor believed that the whole Armenian nation desired to set up a Christian government in which they would change places with their Mussulman lords, and that they

were intriguing with the Christian powers to secure this political autonomy by their aid and had actually risen in insurrection and attempted to storm the Porte at Constantinople. As the Sheri law, which the Sultan had done his utmost to uphold and inculcate, declares that the lives and property of Christian *rayahs* who attempt to enlarge their privileges are forfeited to their Mussulman lords, the Turkish masses, believing that the Armenians had committed this offense, considered it their religious duty and a righteous thing to destroy the lives and seize the property of such dangerous traitors. The local authorities often connived at the massacres, and it was an exceptional thing when the Mussulman notables, as at Behensi, took a firm stand to save the Armenian Christians from injury and wrong. The massacres all occurred posterior to the granting of the scheme of reforms suggested by Great Britain, and the system and organization evident in their direction pointed to political and official inspiration. In only comparatively few cases were the Armenians the aggressors. The massacres occurred almost simultaneously in widely scattered parts of Asia Minor, begun in most cases by the Turks, openly participated in by Turkish soldiers, and ended only when the survivors embraced Mohammedanism. The number of Turks killed was insignificant, and the Armenians were almost the only Christians who were molested. With one exception, the massacres were confined within the limits of the districts in which the promised reforms were to be put in operation, as though the Mussulman element sought to reduce or annihilate the Christian population in order that there might be no Armenians in the local executive when the reforms were carried out and Christians and Mussulmans represented in the local government in proportion to their numbers.

In February fresh massacres were reported from Sivas and Harput and from Marsovan, where the Mohammedan mob were said to have forced the Armenians to change their faith, killing all who refused. A riot occurred on Feb. 23 at Adana, where 15 Armenians were killed. Chakir Pasha, Imperial Commissioner for Armenia, reported that the Armenians, reduced to the last extremity and decimated by hunger and cold, were committing various revolutionary acts. In Guendu, Bitlis, 15 Armenian families were murdered by Kurds because, after embracing Islamism, they returned to Christianity on the advice of the authorities, who declined to register them as Moslems.

To Miss Clara Barton and other agents of the American Red Cross permission was eventually granted to proceed to certain desolated districts to dispense aid to the sufferers under the supervision of Turkish officials. George P. Knapp, an American missionary, was expelled from Bitlis in March on charges of sedition. The claim of \$100,000 brought by the United States Government in behalf of missionaries for compensation for buildings destroyed at Harput and Marash was allowed by the Porte. The demands of the British, French, and Russian governments for £ T. 24,000 damages for an attack upon their consular representatives at Jiddah were also granted. The United States requested to be allowed to send the war vessel "Baneroff" through the Dardanelles to be at the disposal of the legation at Constantinople. This request was refused on Jan. 16 in a note from Mavroyeni Bey, Turkish minister at Washington, on the ground that the signatory powers of the Treaty of Paris alone had the right to station guard ships at Constantinople. The Armenian Patriarch Izmirlian steadily refused to present an address to the Sultan laying the blame for the disturbances in Asia Minor on his compatriots, and resisted the pressure brought to force him to

resign, being upheld by repeated votes of confidence from the Council of the Armenian nation. Throughout the spring and summer agents of the Hunchak were arrested in Constantinople, some in the act of smuggling arms into the country. Numbers of other Armenians were arrested and sent into exile or deported often in chains to Asia Minor. The United States minister raised the question of the rights of naturalized American Armenians in the case of nine such who were arrested, but the Turkish Government held firmly to the doctrine of natural allegiance, and denied that the capitulations applied to persons of Turkish birth unless their naturalization in another country had been formally recognized. The right of Armenians in the United States to have their families sent out was also denied. The Armenian revolutionary committees made demands for money upon rich

to repress disorders. In August the villages of the districts of Bashkale, in the vilayet of Van, were destroyed by the Kurds wherever the inhabitants, Armenians or Assyrian Christians, refused to change their religion. Matthias Izmirlian, the Armenian Patriarch, at last resigned on Aug. 5, and Monsignor Bartolomeos was appointed to fill the office as *locum tenens* until the election of a successor by the National Council. The new Council of the Patriarchate prayed the Sultan to grant amnesty to all Armenians not accused of acts of violence, and also that the whole Armenian nation might be forgiven the arrears of the military tax and exempted from payment of the tax for the next three years. The Sultan granted this petition and promised amnesty to all excepting active revolutionists.

Revolutionary Outbreak at Van.—The Kurds committed so many outrages between Antioch and

CONSTANTINOPLE, FROM THE HEIGHTS OF EYUB.

Armenians of Constantinople, which some paid, while others left the country to escape the threatened penalties. In the arrangement secured through the mediation of the foreign consuls the Turkish Government promised to appoint a Christian governor at Zeitun. Instead of doing so the Sultan named a Turk as temporary administrator, and for many months he refused, in spite of the protests of the ambassadors, to appoint a Christian for fear of arousing the passions of the Mussulman inhabitants of the district. Massacres occurred in Ordu on July 20. Serious disturbances took place at Niksar, in the vilayet of Sivas, during which 340 Armenians and 60 Turks were killed. These were attributed to the revolutionary Armenians, whose leaders were arrested. The Sultan issued an order to hold the members of the Council of the Armenian Patriarchate personally responsible for any disorders that might be provoked by Armenians either in the capital or in the provinces. The councilors repudiated the responsibility, which, they said, devolved upon those who had the power

Lake Van that troops were sent to that part of Asia Minor to hold them in check and also to guard against the revolutionary designs furthered by foreign emissaries in Van. The revolutionists of that city, who had murdered the bishop some time before, circulated rumors in the middle of June of an intended Kurdish raid on the city. On June 14 the pretext for a riot arose from the arrest of an Armenian girl upon whom seditious documents were found. Immediately afterward several agitators attacked by surprise a squad of soldiers who were patrolling the town, seriously wounding the officer. The next day a mob of Turks and Kurds burned and pillaged several houses, and street fights took place in which 50 were killed on both sides. The Armenian shopkeepers barricaded, and with the magazine rifles that the revolutionists had supplied fired upon the Mohammedans and the imperial troops. The disturbances were renewed the next day, and the Kurdish tribes from the neighboring districts began to come in, and surrounded the town to the number of 11,000, mad

with the desire to revenge themselves on the Armenian revolutionists. The Armenians of the town and neighboring villages who escaped the fury of the Mohammedan mobs, flocked to the American mission, where the English vice-consul, Major Williams, raised the British flag and defended them with a strong guard placed under his command by the Turkish Vali. All the respectable Moslems of the towns harbored fugitive Christians in their houses. The Turkish troops were engaged in keeping the Kurdish horde from entering and sacking the town. They refrained from attacking the Armenian revolutionists, who were strongly posted in the center of the town, for fear that, if they drove them out by force, this would lead to a general massacre of Christians and the irretrievable ruin of the town. The authorities appealed in their perplexity to Major Williams, who proposed a series of conditions which, though they were exceedingly lenient to the revolutionists, were accepted by both the Turks and the Kurds. The Armenian leaders, instead of grasping this opportunity to escape from their hopeless position, delayed accepting the proffered terms, promising an answer on the following morning. In the night a Turkish official, Hamdi Bey, was shot, sharp firing broke out all over the town, and it was with the greatest difficulty that the authorities could restrain the Turks and the soldiers. The Turkish officials then held a conference with the English, Russian, and Persian consular representatives, and fresh terms were drawn up, severer than the first, yet still offering amnesty to all Armenians except the revolutionary agitators, of whom the foreigners, about 40 in number that had come in from Persia, would be handed over to their own governments for trial, while the others would be tried by Turkish law. Major Williams and Dr. Reynolds, of the American mission, laid these conditions before the revolutionary leaders, pointing out that by their acceptance of these they could save the Armenian population from wholesale massacre. They again promised to give their answer the following morning, and again firing broke out in the night, each party accusing the other of being the aggressor. The Turkish commander then fired upon the position held by the revolutionists with mountain guns, and the Armenians replied with a rifle fire till they were driven back to their central position. At night they offered to surrender, but hesitated to accept the terms that were offered, and while the leaders asked for a further parley all the revolutionists secretly left the town with their arms during the night. The authorities ordered the Kurdish irregulars to pursue the fleeing band, which numbered 1,500 Armenians. The troops overtook and dispersed them, but they escaped into Persia. The Turks believed that they were still hiding in the town, and the Moslem fanaticism and predatory passions of the lower classes broke loose. Burning and pillaging continued for two days. The 15,000 refugees in the American mission were saved by the bravery of the Turkish soldiers guarding them. All the monasteries were destroyed, including Varrak, with its libraries of priceless manuscripts. The town was wrecked and the prosperity of the vilayet was injured beyond repair. The official report to the Porte gave the number of persons killed and wounded in the fighting as 257 Mohammedans and 99 Armenians. The affair was followed by frontier disturbances between Turkish and Persian Kurds and by the massacre and pillaging of villages in the vilayet by Turks, Persians, and Armenians until the Turkish troops were able to restore order after thousands of persons had been slain.

Campaign against the Druses.—When the Druses of Hauran revolted in December, 1895, after

some preliminary successes, the Turks lost a body of troops that fell into an ambuscade near the camp at Busra el Harir, which the army had removed after 3,000 of the 38,000 men had died of fever and dysentery at Sheikh Meskin. The Turks were victorious in a battle with 10,000 Druses on the following day, but in the night the enemy returned to the attack, and in the confusion one Turkish division fired upon another. When the Druses were finally put to flight, the dilatory tactics of the aged Turkish commander, Edhem Pasha, gave them time to block the roads, so that the army, composed in part of brave Albanian soldiers, were virtually besieged in Suedeh, and suffered from famine until a more efficient general was sent to take charge of the operations. The Druses were finally compelled to sue for peace, and bribery played a part in the settlement. One of the conditions of peace was that the Druses should be liable for military service. When the Turkish authorities attempted to enforce this condition a serious engagement took place, with heavy losses on both sides. Finally the soldiers captured about 1,500 men of all ages, and shipped them off to Europe. In June, 1896, some bands of Druses caused fresh trouble, and an expedition of 600 soldiers was sent out from the garrison town of Busra el Harir. These were overwhelmed by Druses south of Suedeh, who killed three fourths of the Turkish battalion and captured the rest and two pieces of artillery, losing 350 of their own men. It being evident that the Druses had not been disarmed at the end of the former revolt, the Governor of Damascus, Osman Nouri Pasha, was removed from his post. The Druses were now more united than before, and had the Arabs with them. The Syrian Redifs were called out, and re-enforcements were sent out from Smyrna and Salonica. On July 18 the Turkish troops gained a victory near Suedeh, after several engagements in which the Druses were dispersed only to assemble again. On July 23 they were routed again at Sobba, the troops being aided by Arabs and Circassians, who got the cattle captured from the Druses. The troops suffered heavy losses in battle, and they were incapacitated by lack of supplies and the ravages of disease. The Druse women fought with their husbands, and the Druses often inflicted severe losses on the Turkish troops when armed only with swords and axes. At one point a detachment of 300 Redifs entrenched behind a wall was annihilated. Some of the Redifs of the Hauran refused to fight the Druses. The leaders of the Druses asked the intervention of the French and Russian consuls general, and the Ottoman authorities authorized their mediation, and at the same time undertook an inquiry into the state of affairs in the Hauran. Hostilities were therefore suspended in the beginning of August. Conditions of peace were offered by the Turkish authorities, which some of the Druse leaders accepted. Others refused because they feared that they would be left at the mercy of the Kurds and Circassians if they laid down their arms.

Riots in Constantinople.—The Armenian revolutionary societies aimed at the overthrow of the Turkish Government through the intervention of the European powers. They were said to be organized on the system of the Italian Carbonari in committees, named the Huntchak, Froehak, and Abdag, to which later Gaizag and Votshintchak were added, whose members had no knowledge or communication with any except their fellows on the same committee. The committees acted on orders received from a mysterious central committee. The Huntchak organized the demonstration and attack on the police that provoked the disorders in Constantinople on Sept. 30, 1895. When the uprising at Van and the fresh disturbances in Anatolia left the powers still

apathetic, the Frochak undertook to plunge the capital into anarchy and force the intervention of Europe. Large bombs filled with dynamite were smuggled in from abroad and placed in the hands of Armenians in various parts of the city. Rude grenades charged with gunpowder were made in secret workshops and distributed in like manner. On Aug. 26 men carrying sacks apparently holding coin entered the Ottoman Bank in Galata by twos and threes. When 26 had thus assembled unobserved they suddenly began firing revolvers, killing a kavass and three *zaptiehs* who came to his assistance and exploding hand grenades in the vestibule. Sir Edgar Vincent, the manager, fled with the other officials to the upper chambers and into the Tobacco Régie building, where several of them were captured. Gendarmes and soldiers quickly gathered outside, but they were kept at bay by the Armenians, who fired revolvers from the balconies and the roof for an hour and a half, and when their cartridges were spent hurled bombs among them, causing them to run away.

Meanwhile the holders of the Ottoman Bank remained in possession. They placed 15 pounds of dynamite in the cellar, and threatened to blow up the bank with all the money and securities in the vaults, sacrificing their own lives and those of the European, Turkish, and Armenian bank officers and clerks that they held as hostages unless their lives were promised them and a safe exit from the country. They demanded also that the powers secure the rights of the Armenian people. The Russian dragoman Maximoff and Sir Edgar Vincent came at night, having gained the Sultan's reluctant consent for the men to leave the country. They were conducted secretly to Sir Edgar Vincent's yacht, and on the following evening were transferred to a French steamer bound for Marseilles. They did not appropriate a single piece of the £1,500,000 lying in the bank, but helped the bank officials to store the gold and silver away, using only some bags of dollars to barricade the doors.

Almost instantly after the first explosions bands of the lower order of Mussulmans arose, apparently organized and prepared as well as the Armenian revolutionists, for they all wore similar dress and were armed with clubs and iron bars in a twinkling, the weapons being distributed in some cases by Turkish officials and police agents. These bands went through the streets, beating to death every male Armenian that they encountered and breaking into houses to kill the men. The handicraftsmen and tradesmen were sought out by their Turkish competitors and murdered. Those who fled to the quays were struck down in sight of the crews and passengers of ships, and even those who succeeded in getting away in boats were followed and murdered on the water. Bodies lay in heaps in the streets, 50 in one place. No grown Armenian escaped in this part of Constantinople unless he was sheltered in the house of a Moslem or a European. One group of 45 women and children was slaughtered on a roof. Low-caste Kurds, Lazes, Circassians, Albanians, and Turks came into Constantinople from the Asiatic side to join in pillaging Armenians and looting shops. There were disturbances in Pera also, and in Kassim Pasha. The military and the police, instead of stopping the riot, joined sometimes in the murderous work. The Armenians continued at intervals to fire dynamite bombs on the heads of the troops or pedestrians.

At the same hour that the bank was captured the revolutionary committee forwarded to each of the six embassies at Pera a petition recounting the grievances of the Armenian nation, and formulating 12 proposals of reform based upon those that the powers, at the instance of England, had induced the Sultan

to accept a year previously. The leaders of the conspiracy, Gorabian, Arzene Garo, and Hratch, were men of education and members of the revolutionary committee. The others were of the porter class.

When the fact of the escape of the bank raiders became known on the following day the massacre of Armenians in Stamboul and the suburbs was renewed, though in those parts where no explosions had taken place the Armenian quarters were not attacked. The guard ships landed marines to guard the embassies. A squad from the English ship "Imogene" while marching through the streets attacked some Turks that were beating Armenians. The Porte subsequently complained of this interference, and the British *chargé d'affaires*, Mr. Herbert, replied that he could not prevent British sailors from protecting Armenians who were being murdered by Turks. Simultaneously with the attack on the bank the revolutionaries began to explode dynamite bombs in four different quarters of the city in the vicinity of police stations. In Stamboul a band of revolutionists seized a khan, or business block, and poured a rain of bombs into the streets on either side of the building. At Haskoi a bomb was exploded at the guardhouse, killing the officer in command and several soldiers. In the Samatia quarter the revolutionists threw bombs from the Sulu monastery and the school at the Mohammedans and the police, killing a great number of persons before the troops forced the barricades and arrested the rioters. A bomb was exploded near the Galata Serai guardhouse in Pera, killing and maiming several soldiers. At Voivoda and Taxim similar demonstrations were made. At the customhouse of Stamboul 250 Armenian hamals, the harbor porters of Constantinople, created a disturbance by killing a policeman and firing revolvers, causing a Mussulman crowd to gather. A fight ensued in which many Armenians were killed. At Millethan shots were fired upon the quarantine guard. There, as elsewhere, Greeks and Jews joined the Mussulmans in taking vengeance on the Armenian disturbers, of whom 60 were killed. In the Kassim Pasha and Haskoi quarters scarcely a single male Armenian escaped the fury of the mob. In the Psamatia quarter the destruction of Armenian property was enormous.

On Aug. 28 there were numerous arrests of Armenians, which led to further sporadic outbreaks. During the day the police collected a large number of bombs in the barricaded houses, monasteries, and schools. A store of these was found in the Armenian church of Baluk Bazar in Pera. On the 29th the Turks were wrought up to frenzy again by Armenians who threw bombs among the soldiers near the Ottoman Bank and fired on the patrols from shops.

On Aug. 31 some Armenians tried to start the riots afresh by discharging a bomb and firing revolvers in Galata, but the troops were in possession of all the streets and maintained perfect order. A demonstration of softas that was attempted in the Sulimanieh quarter had been suppressed and many of the participants arrested on Aug. 29, with the result of quelling the inflammable fanaticism of the Mussulmans, whose excesses were indeed checked, unless fresh provocation was given, by the Sultan's *irade* issued in response to representations of the powers on Aug. 27 in the evening. The searching of the khans for concealed Armenians and for explosives was conducted under the superintendence of the foreign consuls. Some of the Armenians arrested were disguised as mollahs and soldiers. The police found several hundred priests' dresses. It was inferred that the killing of some Greeks during the riots by men habited as softas was the work of Armenian revolutionaries. A part of the revo-

lutionary plot was to break into the Greek churches on the festival of the Assumption in the guise of Turkish soldiers and softas and begin an indiscriminate slaughter. The finding of thousands of these disguises and of bombs and weapons in a great variety of places showed that the plot was prepared long beforehand and that the circle of complicity embraced a considerable proportion of the Armenian population of Constantinople. Monsignor Bartolomeos launched a bull of excommunication against all the leaders and perpetrators of the revolutionary acts and plots. The ambassadors estimated the number of Armenians massacred during the riots at 4,000, besides 1,000 missing. Other estimates made the number of victims 8,000 to 10,000. The Turkish officials estimated the number at 1,100 and stated that 500 Mohammedans were missing. There were about 240 soldiers and other Mussulmans reported killed and an equal number wounded. The police found 118 bombs and dynamite cartridges, which were for a long time exposed to public view in the artillery arsenal.

A special commission was instituted by the Ministry of Police, composed of eight members, Christian and Mohammedan, under the presidency of Lebib Effendi, of the Court of Cassation, for the purpose of examining the revolutionaries arrested and the Mohammedans charged with resorting to reprisals. The Austrian Government refused to surrender to the police Armenians who had sought refuge in the houses of Austrian subjects. The Russian and other embassies protected thousands to whom they had given asylum or sent them out of the country. The Turkish authorities discharged all who were arrested unless weapons or incriminating materials were found, but those whose home was in Anatolia were sent back by the shipload, about 20,000 in all. Bulgaria was the only country that welcomed the refugees; there about 12,000 were received and assisted by the people and eventually found employment. Others got away to Marseilles, where in a few weeks 1,000 gathered, most of them dependent on French charity and waiting for funds to be subscribed to send them to the United States. Several hundred reached Alexandria in a like peniless plight. Those who attempted to enter Roumania were turned back by the authorities of that kingdom. The male Armenian population of the capital was reduced to less than half what it had been, and the loss of the commercial middlemen dislocated the entire financial and industrial system.

The representatives of Austria-Hungary, France, Germany, Great Britain, Italy, and Russia addressed a collective note to the Porte on Aug. 31 directing attention to the connivance of some of the authorities in the massacre and pillage of Armenians, as evidenced by the facts that the savage bands, armed and dressed alike, rose simultaneously at different points, led or accompanied by softas, soldiers, and police officers, and that detectives were seen distributing cudgels and knives among the bashi-bazouks, who were allowed to accomplish their crimes with impunity under the eyes of the troops and their officers. The ambassadors demanded that the origin of this organization be sought out and the instigators and principal actors discovered and punished with the utmost rigor. The Porte repelled the accusation that agents of the Government directed or connived in the acts of the bands that committed the misdeeds, which collected instantly when the Ottoman Bank was seized because rumors were current of a renewal of the Armenian attacks; the members dressed alike because they belonged to the same trade guilds, having for their weapons only knives and cudgels, which could be procured anywhere. The imperial troops and police had displayed a high order of discipline and efficiency in

restoring order within two days, and Mohammedans guilty of criminal acts would be punished. The number of Mohammedans arrested was 200.

On Sept. 11 the ambassadors received a circular from the Huntchak revolutionary committee declaring that unless the reforms demanded at the time of the raid on the Ottoman Bank were granted there would be a fresh demonstration more serious and of greater extent than the last. In consequence of this about 3,000 Armenians were arrested. A bomb factory was discovered in Scutari and an Armenian prisoner led them to a large depot of rifles and explosives in a house in Pera, including monster bombs to be fired by electricity, infernal machines with clockwork mechanism, and dynamite and nitroglycerin enough to destroy a good part of the city.

While the English were clamoring anew for a joint occupation of Constantinople by the powers or the deposition of Abdul Hamid, they desisted when the Russian Gen. Tchikhatsheff was called in by the Porte to inspect the forts of the Dardanelles and advise as to strengthening them. In the latter part of September 30 wealthy Armenians were arrested for complicity in the revolutionary conspiracy, one of whom, Apik Effendi Oundjian, the chief army contractor, confessed that he contributed a large sum of money, but said that he was intimidated by the revolutionary committee. The levying of contributions by means of threatening letters was still continued wherever there were rich Armenians, and announcements of fresh revolutionary outbreaks spread terror through Constantinople every few weeks.

The representatives of the great powers addressed another collective note to the Porte on Sept. 15 to point out the danger arising from the impunity enjoyed by the Mohammedans who fomented or took part in the massacres, and saying that the trade guilds that, by the admission of the Porte, marched out in a body to massacre were emboldened by the impunity with which their coreligionists had committed bloody deeds in Anatolia, and that the troops and police had indeed shown discipline and efficiency by stopping the massacres instantly, but it was after these had been permitted to rage for two whole days. The Government on Sept. 29 appointed an international commission to report upon the causes of the massacres. On the same day the special tribunal convicted for the first time some Mussulmans who were accused of taking part in the massacres, sentencing them to fifteen years' imprisonment. Many Armenians had already been sentenced to death or imprisonment for life. The Sultan promised the French ambassador that he would seek a reconciliation with the Armenians, convoke the Armenian National Assembly for the election of a Patriarch, and put into execution the promised reforms, not only in Armenian provinces, but throughout the empire. Artin Pasha, himself an Armenian, was intrusted with the mission of finding a basis of reconciliation. He sent his son, Diran Dadian, to treat with the Armenian committee of London and ascertain what concessions would be necessary to induce it to suspend its hostile agitation. Ex-Patriarch Izmirlian after the riots was exiled to Jerusalem.

The Grand Vizier warned the authorities in Asia that they would be held accountable for outrages that occurred in their provinces. Several attempts to create alarm were made without result. In the vilayet of Sivas the inhabitants of Tiukan burned their own village. In Angora Armenian incendiaries tried to provoke a massacre, but the troops intervened. More serious disturbances occurred in districts round Harput and Casarea. On Sept. 15 and 16 the Kurds destroyed the town of Egin and

massacred every male above the age of twelve, nearly 1,000 altogether.

On Oct. 10 the Sultan issued an *irade* extending to the whole Ottoman Empire the reforms granted for the six Anatolian vilayets in October, 1895. On Oct. 18 a Turkish policeman detailed to protect an Armenian official from blackmailers demanding money for the revolutionary committee was assassinated. This new crime rendered more difficult the negotiations for a reconciliation. On Oct. 24 Armenian revolutionists were arrested who had 15 kiles of dynamite and a quantity of bombs in their possession. On Oct. 26 an attempt was made to murder Monsignor Bartolomeos as he was driv-

ing to the Armenian community, was elected and Mulachias Ormanian, an able and popular prelate, was chosen Patriarch. The extraordinary tribunal was dissolved. Of 1,900 persons, Christian and Mussulman, arrested in connection with the riots over 1,800 were acquitted. Of those convicted all except 25 who were sentenced for murder were eventually pardoned, and a general amnesty was granted to all Armenians.

Crete.—The Armenian difficulty led to a revival of the Cretan agitation. Karatheodory, the Governor General, sought to check it by dissolving the General Assembly five days before the date fixed for the prorogation. The Opposition, which num-

THE GORGE OF HAGIO RUMELI, IN CRETE.

ing through the streets of Constantinople. On the same day more dynamite was found in Scutari. Nazim Bey was removed from the Ministry of Police and Ahmed Shefik Effendi appointed in his place. A plot to start a revolutionary rising in Erzerum was revealed by the confession of an emissary of the London committee named Arotioum Kiragotian. The rifles were found stored in a monastery. The Sultan in deference to the suggestions of the French Cabinet announced in the beginning of November that he was ready to introduce the promised reforms. The Armenian National Assembly was convoked on Nov. 12. A new council, satis-

bered only five members, announced that the questions that had not been settled in the bosom of the Assembly would be disposed of with arms upon the mountains. A Christian Reform Committee was organized, though its actions were at first disapproved by the whole of Crete except the districts of Apokorona and Sphakia. The movement, however, became more general daily. The Moslem element was more bitterly angered by this agitation than it has been on former occasions, because the Christians, owing to the modern education that they acquire and the favor of Christian officials, are rapidly ousting their former masters from all profitable em-

ployments. The hostility and jealousy between the 70,000 Mussulmans and 270,000 Christians is stronger than like passions in other parts of the Turkish Empire because the adherents of both creeds are of the Greek race. The organic law of 1867, granted at the instance of the powers, endowed the island with nominal autonomy. In 1878 the Halepa pact, which was the outcome of recommendations made at the Berlin Congress, bestowed on the Cretans a liberal measure of self-government. The General Assembly, in which Christians and Mussulmans were represented in the proportion of 49 to 31, was elected by universal suffrage and by ballot, and the administrative offices were divided between the two creeds. The island soon fell a prey to party politics and intrigues. When the Conservative party was defeated in 1888 it fomented a revolution. The result was the dispatch of Shakir Pasha with 20,000 men, the proclamation of a state of siege, and the withdrawal of most of the privileges conferred by the pact of Halepa. Chronic discontent, fostered by the advocates of annexation to Greece, has prevailed ever since. The Porte has spent £14,000,000 since 1867 in putting down disturbances in the island. The renewal of the Cretan movement led to the dispatch of re-enforcements to the island at the beginning of 1896. Karatheodory Pasha, the Governor General, resigned and Turkhan Pasha, a Moslem, was appointed to the place on March 7. A general amnesty was proclaimed in the island. The agitation for the restoration of the charter revoked in 1889 increased. The new Vali endeavored to curb the turbulent element which his predecessor could not master. The Mohammedans began to assume an arrogant demeanor, and the hostile bearing of both sections of the population led to conflicts. Turkhan Pasha had 100 persons arrested and banished the most active agitators, 10 Mohammedans and 4 Christians. Outward quiet was restored, but the revolutionary Christians continued their preparations, and a counter-movement for reviving the old Mussulman ascendancy was secretly encouraged by Turkish officers and notables. Delegates were elected by the Christians in all the districts of Crete to form a General Assembly, representing the body that was dissolved by the firman of 1889. The Christian Reform Committee sent out a circular appealing to the Greek race everywhere for moral and material assistance. The elected delegates from the western half of the island met at Kurna, near Apokorona, on April 12. On the same day their armed followers became involved in a fight with the Turkish garrison near Episkopi. The Reform Committee and an armed force took up a strategic position in the district of Hagion Vasileon. They refused to disband when Turkhan Pasha summoned them to do so, offering amnesty, and, when a military expedition was sent against them, they withdrew to the mountainous district of Sphakia after a fight at Selia, in which 10 Turks were killed. The Vali postponed the meeting of the regular General Assembly till August in consequence of the refusal of the Reform Committee to accept the proffered amnesty. The committee demanded the restoration of the Constitution on May 6, the date for the regular meeting of the Assembly. The Greek Government entered into negotiations with the Porte for the restitution of the privileges of the island and requested the leaders to lay down their arms, but they refused. The Russian and French and afterward the Austrian and English ambassadors made representations to the Porte on the subject of the disturbed state of Crete. The Christian deputies met at Canea and drew up a formal protest against the postponement of the convocation of the Assembly, which all signed except four friends of the Reform Committee, who

avored more radical measures. The Christian population of Vamos rose on May 17 against the garrison of 1,300 men, blockaded it in its quarters, and fired on re-enforcements sent by steamer, preventing them from landing. The Reform Committee issued a general appeal to the peasantry to join the movement, which they did. The Cretan committee at Athens furnished money and arms. The insurgents, whose ranks were swelled by annexed malefactors and constant accessions from the agricultural population, held a Turkish garrison beleaguered at Yoxaris after killing 18 soldiers, and fought a detachment at Dramia, killing 10. The Turkish force in Apokorona was beleaguered likewise. The insurrection extended to the eastern part of the island. The Turkish rural population fled to Retimo, Candia, and other towns. Turkhan Pasha, who had offended the Mussulmans by his harsh measures against disturbers among them as well as the Christians by his refusal to convoke the Assembly, was recalled and Abdullah Pasha, an Albanian acquainted with the Greeks and their language, was appointed Vali on May 21. The Porte yielding to representations of the Hellenic Government, supported by the powers, summoned the General Assembly to meet at Candia on May 28. Hassan Tahsin Pasha, the military governor, who was compromised by his relations with the Mohammedan committees, was also relieved. On May 21 the insurgents defeated the strongest force that could be sent to the relief of the Vamos garrison. On May 24 a conflict broke out in Canea between the Mohammedans and Christians in which 6 of the former and 10 of the latter were killed, including the kavassas of the Russian and Greek consulates. The murder of Mohammedan women in the neighboring village of Semprona exasperated the Mohammedans and led to the riot. Some of the soldiery joined in pillaging shops. The disturbance was renewed on the two following days. Foreign men-of-war then arrived in the harbor. The Turkish Government resolved to dispatch 16 battalions to reduce the Cretans to submission. Abdullah Pasha arrived with fresh troops on May 29. Learning that the insurgents had rejected an offer of the surrender of the arms and stores at Vamos if they would allow the starving garrison to withdraw, the new Governor General sent 3,000 men, who succeeded in dislodging the force that blocked the road at Tsvivara after a stubborn fight in which 75 Turks were killed, and then raised the siege on May 30. At various places Mohammedans held Christians and insurgents Turkish troops besieged. Murder and pillage were committed by both parties in all parts of the island. At Retimo the Mohammedan refugees seized the houses of Christian citizens and committed depredations. A detachment of 85 men was annihilated by insurgents while removing war material from Vamos. The troops relieved Mohammedan villagers beleaguered at Semprona and Bukolies after encounters with the insurgents at Polemarki and Amygdalo. Another detachment rescued Christians beleaguered at Perivolia. An expedition was sent to the western district, where all the Mohammedans had been expelled by the Christians. The troops burned villages and added to the devastation already widespread, for where Christians expelled Mohammedans houses and olive groves were destroyed. The insurgents, who were well supplied with Martini rifles but lacked ammunition, retired to the mountains of Apokorona. The Reform Committee demanded the economic independence of the island, half the customs duties, and the nomination for five years under the guarantee of the powers of a Governor General chosen by the Cretans, he alone to have the entire civil and military administration and the right of veto over the acts of the Assembly.

The military operations were suspended pending negotiations with the powers and an effort to conciliate the Cretans. A proclamation was issued on June 14, offering a free pardon to the rebels if they made their submission, and summoning the Assembly to Canea to examine all questions relating to the interests of the island and submit them to the Imperial Government. This proclamation having no effect, the Porte acceded conditionally to the proposals of Austria, France, and Russia, supported by the other powers, which were the immediate suspension of hostilities, the convocation of the Assembly, a general amnesty, and the restoration of the Halepa Constitution, including the appointment of a Christian Governor General. Abdullah Pasha summoned the National Assembly. A general amnesty was proclaimed on June 28. The Sultan appointed the Prince of Samos, Georgi Pasha Berovitch Governor General, and made Abdullah Pasha commander of the troops in Crete. The Athens committee, which had sent several cargoes of arms to the insurgents, issued a circular calling upon the people to form a revolutionary provisional government and declare for union with Greece. The Porte equivocated in its answer about the restoration of the Halepa charter, hence the ambassadors called for an explicit promise to reinstate it with such amendments as the Cretan Assembly should propose. Meanwhile the insurgents continued to devastate the Mohammedan villages and the Mohammedans to pillage the Christian villages within Abdullah Pasha's military cordon, their inhabitants having fled to the mountains. These fugitives, numbering 12,000, a great many of them women and children, suffered severe privations. The insurgents defeated the Turkish force, killed 200 men, and captured 4 cannon on July 2, when the Turks tried to occupy certain strategic points between Selinon and Kisamo with the object of turning the positions of the insurgents and relieving Kandano, where 1,600 imperial troops were besieged. The garden district of Selinon was laid waste by the Christians. The Reform Committee issued an announcement that the public security in the various districts would remain in the care of the military chiefs. The Assembly did not meet, none but a few of the Mohammedan Deputies being willing. The Christian Deputies began to join the insurgents in the mountains. Kisamo and other provinces elected delegates to the projected revolutionary assembly. Georgi Pasha, an Albanian Christian long and favorably known in Crete, arrived on June 30. On July 3 he issued a proclamation restoring the Constitution of Halepa. The immediate cessation of hostilities was ordered, provided the insurgents did not force the Turkish troops to take the offensive. The foreign consuls were instructed to warn the insurgents that, since the Porte had accepted the recommendations of the ambassadors unconditionally, they would forfeit the sympathy of the powers if they rejected this settlement. The concert of the powers and the concessions of the Sultan did not shake the determination of the Cretan leaders, who had now a formidable armed force, had set Greece aflame, and compelled the Government of that kingdom, which at first frowned on the movement, to increase its armaments and prepare for active intervention, and received influential support and pecuniary assistance from European sympathizers. The Assembly consisted of 40 Christians and 25 Mohammedans. Of the Christian Deputies some had gone to Athens and resigned their seats; others were taking an active part in the rebellion in Crete. The Mohammedan Deputies took a stand against making any concessions, and addressed a petition to the Sultan asking that provision be made for allowing the whole Mohammedan

population to emigrate before the privileges of the Christians were enlarged. The agreement of the Sultan to allow the Assembly to elaborate a Constitution on the basis of the pact of Halepa caused the Christian Deputies to pause and the majority of the Reform Committee and the Cretan committee in Athens even to pay respect to the mediation of the great powers and offer to give their solution a trial, though the extremists proposed to continue the struggle with the object of obtaining union with Greece. There was an assembly at Phree, in Apokorona, on July 5, at which it was resolved to intrust to the Christian Deputies the task of proposing a programme of reforms, to be drawn up by a convention composed of 3 delegates from each district, whereupon the Reform Committee would be dissolved. The Greek Government, instancing the result of this assembly as a proof of the conciliatory disposition of the Cretans, replied to the powers that the responsibility for recent events in Crete rested with the Porte, and that the pacification of the island depended upon the action of Turkey. The Vali consented to let Mr. Biliotti, the British consul, and the senior officer of the English naval force take charge of the distribution of relief to the suffering fugitives in the mountains, but the representatives of other powers at Constantinople objected to such a mission being intrusted to the English consul.

The rebel chiefs, with some Deputies and the revolutionary delegates, met in Kampos, a village of Apokorona, on July 5, and organized a revolutionary provisional government, taking oath not to cease the struggle until they had obtained either complete political autonomy or annexation to Greece. The importation of munitions of war and of armed bands from Greece went on. The representatives of the six powers on July 6 warned the Greek Minister of Foreign Affairs that, the Porte having accepted the salient points of the joint demand of the powers, the pacification of Crete must be hastened and the revolutionary movement arrested, and therefore the serious attention of the Greek Government should be directed to the task of using all its weight and influence with the Cretans to induce them to desist from a further policy of defiance and to accept the concessions made by the Porte. The Greek Government was exhorted to prevent by every means in its power the sending of arms and supplies to the revolutionary center. The Assembly met at Canea on July 13. The 31 Christian members present raised an outcry against the reading of the Vali's address in Turkish, and consequently it was read again in the Greek language, as provided in the pact of Halepa. The Christian Deputies and their Mohammedan colleagues did not seek to arrive at a basis of common action, but engaged in violent discussions, their passions inflamed with stories of massacre, rapine, and incendiarism with which each side truthfully charged the other. The Christians declined to discuss practical matters and staved off all deliberation on the constitutional question, arguing that the opposition of the Mohammedans would be used by the Porte as a pretext for refusing concessions. The Mohammedans called for the restoration of the charter of Halepa as it was. The modifications that the Christians proposed, instead of being offered in the Assembly for discussion, were embodied in a petition to the Porte and the powers. The following were the principal demands: Appointment of a Christian Governor General with the assent of Greece and under the special guarantee of the powers for a term of five years, giving him supreme command of the army and the right of veto, but reserving to the Sultan the power of negating any proposed changes in the Constitution of Halepa;

public offices to be bestowed upon Christians and Mohammedans in proportion to their numbers, duplicate appointments being abolished as far as possible; the Assembly to meet every second year, frame a budget for two years, and decide on any proposals made by the Governor General by an absolute majority instead of a two-third majority; no increase in the expenditure to be proposed by the Governor General; the Administrative Council to have the right of nominating commissions for special purposes, and its members to have seats in the Assembly without the right to vote; a sum equal to half the net produce of the customs, calculated on the returns for the last five years, to be paid to the Porte, the other half and all the taxes, direct and indirect, to revert to the local administration; the gendarmerie to be recruited from the population of the island, but all the superior officers to be Europeans; the army to be confined to the fortified towns on the coast, but to be employed, if necessary, in the event of disturbances by the Governor General with the advice of the Administrative Council; the judicial system to be simplified, the jurisdiction of the Constantinople Court of Cassation abolished, and European jurists placed at the head of the Cretan Court of Appeals; all laws not voted by the Assembly to be annulled and the deficits incurred since 1889 to be made good by the imperial treasury, the budgets not having been voted by the Assembly; the Governor General to exercise the right of sanctioning the publication of books and newspapers and the formation of literary and scientific societies: the Benghazis, African immigrants from among whom bashi-bazouks had enrolled that committed depredations and outrages on the Christians, to be banished from the island; and, finally, the application of the organic statute of the Halepa Convention and the reforms now proposed to be guaranteed by the Sultan and the signatory powers of the Berlin Treaty. The Mohammedan Deputies protested against the alteration of the Constitution at the desire of the Christian Deputies, insisting that the pact of Halepa prescribed the constitutional method, which was by a two-third majority after a free discussion in the Assembly. They denounced the specific proposals as tending to subvert the imperial authority, extinguish the rights of the Mohammedan minority, and bring about fresh troubles on the island.

Notwithstanding the armistice, the insurgents and the Turkish commanders endeavored to improve their strategic positions. A boat's crew were killed at Plaka while attempting to intercept the landing of a Greek boat supposed to contain ammunition, and a Turkish war vessel consequently fired on the armed Christians on shore who did the shooting. A Turkish force advanced from Kalyves on hearing the cannonade, and this was attacked by the insurgents. Compelled to retreat, the Turkish force resumed the advance with artillery and shelled inhabited places. The powers made representations to the Porte, demanding a cessation of military operations, and at the same time the consuls admonished the Christian Deputies to resume their deliberations. The Turkish troops were withdrawn from Apokorona. The breach of the armistice called out a fresh note from the Hellenic Government. When the consuls invited the Christian Deputies to continue their work in the Assembly these answered that nothing would be done until they received a reply from the Porte to their demands. After a brief intermission the fighting was resumed in the western district. The object of the Turkish commander was to capture the heights on the road between Kissamo and Selinon, and thus cut off western Crete from the rest of the island. The losses of the Turks were already 200 killed and

600 wounded, while the Cretans, who fought in guerrilla fashion from behind boulders and from crags, lost only 26 killed and 60 wounded. Riots and murders occurred in Candia (Herakleion) and other places. At the suggestion of the powers, Abdullah Pasha, who had been raised to the rank of marshal and in whose military ability the Turks had great confidence, was removed from his command. The Cretan Assembly, yielding to the representations of the consuls, resumed its deliberations on July 21. A committee of Christians and Mohammedans was appointed to draw up a programme of discussion consisting of practical reforms not of a contentious nature. On the next day and the one following the insurgent forces made a determined but unsuccessful attack at Armenus, on the Turkish line of communication established between Retimo and the garrison at Koxaris, near the southern coast. At this time preparations were made for organizing a revolt in the eastern end of the island, and arms were landed on the Candia coast. On July 25 a force of 1,500 insurgents attacked the Turkish troops in the province of Apokorona, and the latter merely defended themselves. In view of the interruption of business caused by the political situation, the Assembly passed a law staying for three months the collection of debts and foreclosure of mortgages. On the discussion of reforms the two parties could not agree. The Turkish Foreign Minister informed the ambassador that the Porte looked to the powers to secure the acceptance by the Cretans of the conditions obtained by the powers in their behalf. To the Greek Government the Porte addressed a note, approved by the ambassadors, complaining of shipments of arms, declaring that the Porte could not go beyond the concessions offered, and pointing out that the continuance of such a state of affairs might lead to serious complications, endangering the peace of Europe, for which Greece would be held responsible.

The landing of filibusters and arms in the eastern district rendered the situation more grave. The Mohammedan inhabitants of Abadia, on hearing that volunteers from Greece had landed on the northern coast, abandoned their homes and proceeded toward Myres, being joined by the Mohammedans who dwelt in the villages on the route after they had set fire to their property to prevent it from falling into the hands of the Christians. The landing of 250 armed men from Greece on the southern coast spread terror through the whole region and quickened the flight of the Mohammedans, who did not stop till they reached Candia, where thousands were crowded at the gates. Butchery of Mohammedans was reported from the country districts. The population here was mixed. There were 18,000 hungry and shelterless Mohammedan refugees at Candia. They finally were admitted to the city to sleep in the mosques and public buildings. Excited at times by hearing of the murder of their coreligionists in the country, they frightened the Christians, half of whom emigrated, leaving only 3,000 among 40,000 Mohammedans. In the entire province at least 30,000 Mohammedan peasants were driven from their homes. Hassan Pasha finally lost control of the starving multitude in Candia, and could not prevent armed bands from sacking the villages of Anopoles and Garnes, where 32 Christians were murdered. The Greek Government, yielding to the admonitions of the powers, took measures to prevent the sailing of fresh expeditions that were so stringent as to rouse the indignation of the Greek people, whose wrath against the Turks was inflamed by the arrival at the Piræus of refugees from Crete in a pitiable condition. The patrolling of the coasts with cavalry and the

MAP OF CRETE.

searching of departing vessels were not, however, perfectly effective. Austria, seconded by Russia and Germany and supported by France and Italy, proposed a blockade of Crete by the powers; but Great Britain objected to such action, suggesting that the Porte should first grant the demands of the Christian Deputies. The Sultan objected to a blockade as contrary to his sovereign rights. The Imperial Government sent Zihni Pasha, accompanied by Ikiades Effendi, to Crete to confer with the consuls and treat with the Reform Committee, with a view to the adoption of measures required for the restoration of tranquillity. The Reform Committee was dissolved, and its members entered the new revolutionary Assembly, the president of which was the aged Gero Kostá Voludakis, known as Kostaros, who bore a conspicuous part in the revolution of 1868. The new body recognized the Deputies in Canea as the legal representatives of the people, and expressed willingness to await the result of the action of the powers in behalf of Crete. The departure of a party of prominent young Greek officers for Crete led to a further re-entrance of the representatives of the powers at Athens. Ibrahim Pasha, the new military Governor, on Aug. 13, relieved Abdullah, to whom the powers objected because his rank was higher than that of the Christian governor generals. The appointment of Abdullah Bey to the command at Candia in the place of Hassan Pasha did not conduce to the restoration of order in that part of the island, which by outrages and reprisals was fast rendered as desolate as the western end, where all the Christian villages inside of the military cordon were pillaged and burned by Mohammedan marauders, and all the Mohammedan villages beyond the cordon were destroyed by the insurgents. The attack on Anopolis, where the Mohammedans sacked a monastery and killed 3 monks and some women and children, provoked the Christians to retaliate by burning 25 villages. The assistance extended to the insurgents by the Greeks had assumed formidable dimensions since the spread of the revolution to the eastern district. Large quantities of rifles and ammunition and some mountain guns had been landed, and a considerable body of Greek officers in uniform were present among the revolutionists.

Zihni Pasha, in his conferences with the Chris-

tian Deputies, asked them to withdraw such of their demands as affected the sovereign rights of the Sultan—such as the right of veto, the sanction of the powers to the appointment of a Vali, and the appointment of foreign officers to command the gendarmerie. The Deputies refused to formulate other demands, but the consuls, whose earnest intercession had alone dissuaded many of the Deputies from breaking up the Assembly and joining the insurgents weeks before, prevailed upon them on Aug. 20 to prolong the session two weeks and enter into negotiations with the Sultan's commissioner. The Austrian Government—which, after Great Britain refused to join in a blockade, had proposed a closing of the ports, which project also encountered the firm resistance of the British Cabinet—now took the lead again, and formulated a project of Cretan reforms based on modified proposals of the Christian Deputies, including the appointment of a Christian Governor General for five years, subject to the approval of the powers, the reorganization of the gendarmerie, and financial autonomy, with the payment of a fixed proportion of the revenue to the Imperial Government, the Governor General to possess the sole power of vetoing measures passed by the Assembly unless the sovereign right of the Sultan were affected. Appeals were to be limited to the highest Cretan court, and military as well as civil power concentrated in the hands of the Governor General.

While the imperial commissioner was negotiating with the Deputies the insurgents renewed their activity. A band of 500 landed at Tigani as an advance guard, and forces hastened to the eastern districts. Hostilities were renewed in the Apokorona district at Tenedos. The revolutionary committee called upon the Cretans to fight under the Hellenic flag. In the neighborhood of Candia about 2,000 Christians marched through a Mohammedan district, killing villagers, setting fire to 29 villages, and driving off cattle. In the province of Selino a force of insurgents laid siege to Kasteli, shutting up 120 Turkish troops, to whose relief a battalion was sent. The Turks withdrew their outposts to the fortified towns of Canea, Retimo, and Candia; in consequence the Christians ravaged a large extent of country that had before been protected, and Mohammedan marauders as well had freer license. On Aug. 23 the Christians of Ar-

chans asked protection from refugees and bashibazouks from Canea who threatened them. On Aug. 25 a body of Turks attacked Malevezi, but were repelled, losing 40 killed and 20 wounded. At Bukolies the insurgents set fire to the houses of the Mohammedans as soon as the troops left. In the province of Pediaa armed bodies of insurgents entered when the garrisons departed and devastated the homes of the Mussulman inhabitants. These actions caused the Mohammedan fugitives, who were maddened with famine in Candia and Retimo, to assume a threatening and aggressive attitude. In the latter place a bread riot occurred on Aug. 26. A band issued from Canea and pillaged Platania, murdering 8 Christians.

The Porte accepted, subject to slight amendments, this draft scheme after it had received the unanimous approbation of the powers. The consuls at Canea were constituted a permanent body for overseeing the execution of the reforms. On Sept. 1 the consuls communicated to the Christian Deputies the programme of reforms upon which the ambassadors had decided and to which the Sultan had agreed, informing them that the preliminary acceptance of the scheme by the Cretan Christians was indispensable, and that the powers expected a complete cessation of hostilities. The scheme embraced most of the minor points as well as the main principles of the demands made by the Christian deputies. The Vali was to appoint all "officials of secondary rank, two thirds of them from among the Christians and one third from among the Mohammedans of the island. The Assembly would be elected and meet and vote the budget biennially and pass laws by a majority vote, except amendments to the Constitution, which would require a two-third majority. No proposal to increase the expenditure could be considered unless introduced by the Vali, or the Administrative Council, or by a special committee. The customs revenue was to be divided between the Imperial Government and the island, the tax on imported tobacco to belong to the island altogether. The Porte undertook to cover deficits resulting from budgets not voted by the Assembly. The reorganization of the judiciary was to be undertaken with the aid of European juriconsults, and that of the gendarmerie under the supervision of European military officers. Books and newspapers could be published freely. The troops were to be confined to the garrison towns. Further immigration of Africans was interdicted. The Assembly was to be convoked within six months, and in the mean time the Vali would superintend the introduction of the reforms and the powers see to their execution. The imposition of an additional duty of 3 per cent. was authorized for the rebuilding of houses that had been destroyed during the disturbances. The Christian Deputies accepted the promised reforms unreservedly on Sept. 4. They urged the insurgents to abide by the decision of the powers and desist from hostilities. The consuls informed them that no further exactions could be expected from the Porte. The Mohammedans were greatly agitated at the compliance of the Sultan with all the Christian demands. A manifesto was circulated urging true believers to resist the reforms. The consular body insisted on measures being taken to insure public safety, but the military Governor was reluctant to employ force against the Mohammedans. A telegram was sent to the Sultan begging him to compensate the Mohammedans for their property, which they were determined to abandon, not being able to live safely in Crete longer. The insurgent chiefs signified their acceptance of the scheme. The Cretan committee in Athens, in accepting the scheme of settlement put forward by the powers, declared that the only definitive solution of

the Cretan question lay in union with Greece. On Sept. 11 the firman containing the new reform was sent to Georgi Pasha, who was appointed Vali under the new Constitution for the term of five years. Peace reigned throughout the island, and the peasants, Mohammedans and Christians alike, rejoiced at the prospect of its continuance. The Mohammedans were anxious to save their olive crop. The revolutionary Provisional Government in Apokorona, of which Manousos R. Kontourakis was president, still urged the people to resist the troops. The Christian population in the interior did not realize the change, and were easily excited by rumors circulated for the purpose of protracting the state of tension. Funds were lacking for restoring the refugees to their homes and for the execution of the new reforms and the organization of the administration. An order from Constantinople continuing the existing law courts raised a storm, but it was recalled at the instance of the ambassadors. The revolutionary Assembly, on Nov. 15, protested against the delay in the introduction of the reforms. The military *attachés* of the embassies at Constantinople undertook the reorganization of the gendarmerie. The Porte refused to admit foreigners to this body. The ambassadors, on Nov. 27, presented a collective note to the Porte declaring that the foreign commissioners in Crete would proceed with the organization of the gendarmerie and the judiciary without the co-operation of the Porte, unless the Porte was prepared to act in the true spirit of the ambassadors' project that had been sanctioned by the Sultan. The Turkish representatives on the gendarmerie commission agreed provisionally to the employment of foreign officers in the gendarmerie. Disputes having arisen between the Vali and the military Governor, Saadeddin Pasha was sent as a special commissioner to mediate, but Georgi Pasha refused to recognize an imperial commissioner under the new Constitution, and at the instance of the ambassadors he was recalled.

Macedonian Agitation.—The Bulgarian Government, having reached a cordial understanding with the Porte, and with Russia as well, discouraged the revolutionary movement among the Macedonian Bulgarians, for whom it obtained valuable concessions from the Porte. This tended to stir up a ferment among the other Christian elements. Early in the year there was trouble in northern Albania, the population of which had refused to give up their weapons while menaced with encroachments from Bulgaria, and now opposed armed resistance to the military measures of the Imperial Government. A scheme of reforms for European Turkey was concocted with the Bulgarian Premier, who proposed Christian governors, or at least Christian deputies, to the valis and mutessarifs in districts where Christians formed the main part of the population, also a Christian gendarmerie. These reforms the Porte hesitated to carry out while disloyalty was rife in the peninsula. A commission was appointed in January, 1896, under the presidency of Mahmud Djellaleddin Pasha to study the question of the introduction of administrative reforms in the European provinces of Turkey. The scheme of reforms, approved by the Sultan on April 28, applied to the provinces of Adrianople, Salonic, Monastir, and Kossova. Agriculturists were relieved from the income tax and required to pay only tithes of their produce. The Bulgarian Macedonian committee rejected the idea of peaceful reform, but it received no support from governing circles in Bulgaria. The Servian Government, in view of the revival of Hellenic aspirations in the Balkans, requested the Porte to inscribe the Serbs of the Turkish dominions under their national name and not as Greeks. The Œcumenical Patriarch

asked if the Servians wished to sever themselves from the Greek Orthodox Church, set up their own exarchate, and be excommunicated as schismatics. This formed no part of their plans, but they finally gained their point with the Porte, which was not as subservient to the patriarchate as formerly, being offended at the political actions of the Greeks, and promised therefore that Serbs should be known in Turkey as Serbo-Greeks. The Serbs resented the appointment of a Greek prelate as Metropolitan of Uskub, having demanded one of their own nationality. The Wallachs obtained the nomination of a Metropolitan of their nationality, and set up churches in which their language was used in opposition to the decrees of the ecclesiastical authorities.

The Greeks in connection with the Cretan rebellion started a movement in Macedonia that gave as much anxiety to the Turkish rulers as the Bulgarian movement in former years. A revolutionary committee was set up in Larissa in communication with the Macedonian committee at Athens, and an armed rebellion was set on foot, which was factitious and contemptible as a military movement, but as a political demonstration was pregnant with danger. The ample pecuniary means that the committees disposed of and the ambitious hopes avowed by the Greeks and the military preparations of their governments pointed to future trouble on the Thessalian frontier. Gangs of harvesters who went to Thessaly in the summer returned with weapons in their hands and encamped in the mountains, proclaiming a rebellion against Turkey. They were followed by armed bands of Greek freebooters. This was the first irruption of the frontier that had occurred in many years. All were armed with good Lebel rifles. The Turkish military authorities at once began to concentrate troops on the frontier, to call out the reserves, and to send re-enforcements

to Salonica. The invaders surprised and cut to pieces the Turkish garrison at Moussa and repelled a stronger force that was sent from Salonica to aid the threatened post. The rebels retired before the Turkish forces into the Perim mountains. Before the end of July 7,000 Turkish troops were in the field, but they could not catch the elusive guerrilla bands, which preyed upon the country and inflicted heavier losses on the Turkish regulars than they themselves sustained. Meanwhile other bands crossed over from Thessaly into the Salonica and Monastir vilayets. At Niausta one of these bands annihilated a force of 82 Turkish troops. Macedonian and Albanian outlaws took an active part in the movement. The Turkish forces succeeded early in August in shutting in several of the larger bands. The support given to the rebels by the Christians of Macedonia alarmed the Turkish authorities, who arrested many prominent citizens. Takris, one of the chief insurgent leaders, was arrested when he sought to escape with the broken remnant of his band into Greece. In the middle of August other bands returned defeated to Thessaly. The band of Papademos was entirely destroyed by the Turks; that of Brufas was routed and the chief killed. In September some fresh bands crossed the frontier and joined the insurgents who still held out. The armed rebellion was crushed a few weeks later, but the military precautions on the Greek frontier, and on the Bulgarian frontier as well, were not remitted, because the revolutionary society known as the National Heteria was raising a large fund and making energetic preparations for the coming struggle, and the Macedonian committees in Bulgaria were renewing their activity. The Greek agitators declared that their movement was not caused by any acts of the Turks, but was against the pretensions of the Bulgarians.

U

UNITARIAN CHURCHES. The statistical returns of the Unitarian churches in the United States for 1896 give them 525 ministers, 458 churches, and 70,000 members. It is the habit of the ministers of the churches to hold a ministers' institute in the year intervening between the sessions of the National Conference. Such an institute was held for 1896 at Concord, Mass., for three days, when subjects were discussed: for the first day, relating to religious philosophy; for the second, to theology; and for the third, to the practical work of the Church. The Unitarians forming a considerable element in the religious life of Hungary, the American churches were represented at Buda-Pesth at the celebration of the thousandth anniversary of the establishment of that kingdom.

The official returns of the Unitarian churches in England for 1896 give the names of 365 pastors and preachers, of whom 277 are engaged in pastoral work, and of the remainder 26 are open to accept ministerial work. In the United Kingdom there are 354 churches and mission stations; of these 276 are in England, 33 in Ireland, 8 in Scotland, and 32 in Wales. Among the year's additions to the list of recognized ministers are the names of 3 former Episcopal clergymen, 2 Congregational ministers, and 1 Roman Catholic priest.

In a discussion concerning the progress of Unitarianism in England it was observed by one speaker that in the beginning of the century the denomination had 170 churches; the number had increased later to 378, but now there were only 354 churches. The

speaker believed, however, that if Unitarians bestirred themselves they could raise the number to 410. He was answered that many of the churches formerly reckoned as Unitarian were not really so; and the actual losses had for the most part been in rural districts, from which the more enterprising people had migrated. In fifty years the denomination had spent £10,000 on the Home Missionary College, £27,000 on Essex Hall, £46,000 on the stipend augmentation fund, £20,000 on the Sustentation fund, and £40,000 on Manchester College, Oxford. In the Lancashire and Cheshire Province £412,000 had been spent on buildings since 1844, and the average minister's stipend had risen from £180 to £212.

The annual meetings of the British and Foreign Unitarian Association were begun May 26. The Rev. H. Enfield Dawser presided. The Rev. J. T. Sunderland, who had returned from a journey to India as the envoy of the association, said that he had been able to dispel some of the misapprehensions which kept the Unitarians apart from the Brahma Somaj, and to show that the two bodies were essentially one in thought, spirit, and aims. He suggested that the association should bear the expense of 3 students for the Brahma Somaj ministry in Manchester College, Oxford. It was not only in the Brahma Somaj, however, that he had been welcomed, but there were thousands of educated natives who could not be reached by orthodox Christianity, and found Unitarian views more conformable to their modes of thought. He urged continued prosecution

of mission work in India—in Calcutta, Madras, and among the Khasis—under the supervision of an able Unitarian minister, and co-operation with the Brahma Somaj. The establishment was resolved upon of a special fund for the objects suggested by Mr. Sunderland, including the education of a Hindu student at Oxford.

The annual report showed that 59 of the 308 churches and missions in England and Wales were aided by the association. A "wonderful development" of religious liberality was spoken of as having taken place in Scotland. The controversy over the London School Board had led to an increased inquiry into Unitarian principles, and public libraries, which a few years ago would not have allowed Unitarian books on their shelves, were now constantly applying for them. The income of the association had been £5,692, and its expenditure £22 less, while 208,197 books had been issued during the year. A resolution was passed expressing sympathy with those in all lands who were striving for the emancipation of man from the thralldom of creeds and priests. While recognizing that the education bill then before Parliament contained a few provisions which, if carried out, would tend to the improvement of national education, the association protested against certain other provisions which were described as "reactionary and unjust."

Free grants of books had been made by the Sunday-school Association by means of the Special Gift fund to ministers, students, teachers, and poor Sunday schools. The receipts of the association had been £1,368, and the expenditures £1,341. A resolution was adopted disapproving the introduction into board schools of the dogmatic teaching of various sects.

UNITED BRETHREN CHURCH. The following are the statistics of this Church for 1895-'96, as published in the "Religious Telescope" in June, 1896: Number of appointments, 1,130; of organized churches, 1,062; of members, 55,970; showing an increase during the year of 2,645; of Sunday schools, 919, with 10,173 teachers and officers and 71,377 pupils; of Young People's societies, 312, with 14,524 members; of junior societies, 53, with 2,207 members; of church houses, 920, valued at \$1,421,603; of new churches, 24, valued at \$23,079; of parsonages, 136, valued at \$164,365; of new parsonages, 5, valued at \$5,725; amount of contributions for all purposes, \$318,064; of which, for pastors salaries, \$127,406; for parsonage and local society expenses, \$107,937; for presiding elders' salaries, \$12,835; for the bishop's fund, \$2,120; for preachers' aid, \$1,940; for local Sunday schools, \$21,973; total, for missions, \$22,611; Sunday schools for missions, \$2,592; contributions to colleges, academies, and seminary, \$5,365, etc.

The total receipts for the year of the Board of Missions were \$55,895, and the expenditures \$56,487. The debt of the society increased \$1,571, and is now \$26,375. The permanent fund was increased \$8,000, making it now \$92,048. The missions are in Germany, Africa, China, and Japan. In the course of an episcopal visitation the corner stone of a sanitarium and house of rest for invalid missionaries was laid by Bishop Mills at Bethany, near Freetown, West Africa. Seven missionaries are employed in Japan—all natives, and four of them educated in the United States. They return more than 100 converts. In the home-missionary department, in connection with the extension of the Church in the Southern States, now prosecuted with increased vigor, a new conference has been organized, to embrace Middle and Western Tennessee, and to be called the Tennessee River Conference. A "quarter-centennial fund" of \$60,000 for the Union Biblical Seminary, started in 1895, has been completed.

The year's receipts of the Woman's Missionary Association were \$18,877. The association supports or aids missionary work among the Chinese in Portland, Ore., and Canton, China, and in the Bombers district, Africa. Two missionaries were sent to Africa during the year, and 1 to China. The following return is made of the work and results of the missions of the Church: Number of American foreign missionaries in the field, 10; at home for rest, 5; home missionaries, 2—1 American and 1 Chinese; pastor of home-mission church, 1; ordained preachers, 7; medical missionaries, 3; organized church appointments in foreign field, 123; members and seekers, 1,415; number of foreign Sunday schools, 4; attendance, 289; home Sunday schools, 2; attendants, 147; foreign day schools, 14; attendance, 458; home day schools, 1; attendance, 45; total valuation of foreign-mission property, \$16,400; total valuation of all property, \$17,000; total valuation of all property, \$33,400.

UNITED STATES OF AMERICA, a federal republic in North America. The legislative power is vested in the Congress, consisting of the Senate and the House of Representatives. There are 90 Senators, 2 from each State, elected by the State Legislatures for the term of six years, one third being renewed every two years. The House of Representatives has 357 members, elected for two years by the ballots of the adult male citizens in separate districts. The executive power is exercised by the President, who is commander in chief of the army and navy, and has a suspensive veto over acts of the Congress, which can be passed over his veto by a two-thirds majority. The Vice-President is *ex-officio* president of the Senate, and the successor of the President for the remainder of the term in case of the death, removal, or resignation of the latter. The Senate can try and remove the President or other executive officers for unconstitutional actions on articles of impeachment voted by the House of Representatives. In case of the death or disability of both the President and the Vice-President the Secretary of State becomes acting President, and after him other members of the cabinet in their order. The members of the cabinet, who are the heads of the eight administrative departments, and other officials of the Government, are nominated by the President and require the confirmation of the Senate. All treaties made by the President with foreign powers must be ratified by a two-thirds majority of the Senate. The President and Vice-President are elected by the majority of a college of electors chosen in each State as the Legislature prescribes, and equal in each State to the number of its Senators and Representatives in Congress. It is the practice for each political party that names electors to be voted for to select beforehand in a national convention its candidates for President and Vice-President. The electors are now chosen in every State on a collective ticket by popular suffrage, with the understanding that their votes shall be cast solidly for the candidates of their party, so that the election of the President and Vice-President has come to be in fact, though not in form, by direct universal male suffrage. The presidential term of office is four years, and elections are held every leap year on the first Tuesday following the first Monday in November. The President elect is sworn into office on the 4th of March following.

The President for the term ending March 4, 1897, was Grover Cleveland, of New York, and the Vice-President Adlai Ewing Stevenson, of Illinois. The following were members of the Cabinet at the beginning of 1896: Secretary of State, Richard Olney, of Massachusetts; Secretary of the Treasury, John G. Carlisle, of Kentucky; Secretary of War,

Daniel S. Lamont, of New York; Secretary of the Navy, Hilary A. Herbert, of Alabama; Secretary of the Interior, Hoke Smith, of Georgia; Postmaster General, William L. Wilson, of West Virginia; Attorney General, Judson Harmon, of Ohio; Secretary of Agriculture, Julius S. Morton, of Nebraska.

Area and Population.—The total area of the United States, including three Territories represented in Congress, the Indian Territory, and the District of Columbia, but excluding Alaska, is 3,025,600 square miles, of which 55,600 square miles are covered with water. The population in 1890 was 62,622,250, of which number 45,862,023 were native born whites, 9,290,187 foreign born, and 7,470,040 colored. The colored consist of Afro-Americans only. The total population belonging to colored races was 7,638,360, comprising 6,337,980 negroes, 1,132,060 mulattoes, 107,475 Chinese, 2,039 Japanese, and 58,806 civilized Indians. The Indian Territory contained 188,490 inhabitants, and there were 141,709 Indians on other reservations and 31,795 in Alaska, making the total population of the United States and Territories 62,982,244. The total Indian population on reservations was 248,354 in 1896, against 243,524 in 1890.

The estimated population of the United States on June 30, 1896, was 71,263,000. There were 18,820,950 males and 3,914,711 females engaged in productive occupations in 1890, a total of 22,735,661. In agriculture, fisheries, and mining, 9,013,201 persons were employed, 8,333,692 males and 679,509 females; in professional services, 944,323 persons, 632,641 males and 311,682 females; in domestic and personal service, 4,360,506 persons, 2,692,820 males and 1,667,686 females; in trade and transportation, 3,325,962 persons, 3,097,653 males and 228,309 females; in manufacturing and mechanical industries, 5,091,669 persons, 4,064,144 males and 1,027,525 females.

The number of immigrants arriving in the United States during the year ending June 30, 1896, was 343,267, of whom 68,060 came from Italy, 65,103 from Austria-Hungary, 64,827 from the United Kingdom, 45,137 from Russia, 31,885 from Germany, 21,177 from Sweden, 8,885 from Norway, 6,828 from the West Indies, 6,764 from Asia, 6,308 from Finland, 3,167 from Denmark, 2,766 from Portugal, 2,463 from France, 2,304 from Switzerland, 2,175 from Greece, 1,583 from the Netherlands, 1,261 from Belgium, 785 from Roumania, 691 from Poland, 351 from Spain, 273 from British America, 169 from Turkey in Europe, 150 from Mexico, and 185 from other countries. Of the immigrants from Austria-Hungary, 31,496 were Austrians, other than Poles and Bohemians, 30,898 came from Hungary, and 2,709 from Bohemia. Of the immigrants from the United Kingdom, 40,262 were from Ireland, 19,492 from England, 3,483 from Scotland, and 1,590 from Wales. The number of Chinese immigrants was 1,441. Immigration from British North America and from Mexico is imperfectly reported.

The Executive.—On Jan. 1 President Cleveland announced the appointment of members of the Venezuelan Boundary Commission: David J. Brewer, of Kansas, chairman; Richard H. Alvey, of Maryland; Andrew D. White, of New York; Frederic R. Conder, of New York, and Daniel C. Gilman, of Maryland. On Jan. 6 Secretary Carlisle announced a call for bids for \$100,000,000 of bonds.

The President on July 30 issued a proclamation of warning to Cuban filibusters.

In consequence of differences with his colleagues and the President on the money question and party policy, Hoke Smith, who supported the Democratic platform and candidates, resigned on Aug. 22, and David R. Francis was appointed to succeed him as Secretary of the Interior. (See sketch on page 774.)

The Army.—The strength of the regular army is fixed by law at 25,000 men. The force in 1895 was made up as follows: General staff, signal corps, hospital and ambulance corps, cadet corps, etc., 549 officers and 2,688 men; cavalry, 438 officers and 5,868 men; artillery, 284 officers and 3,874 men; infantry, 883 officers and 12,588 men; total, 2,154 officers and 25,018 men.

The aggregate strength of the State militia organizations was in 1895 as follows: Staff and auxiliary services, 1,225 officers and 1,200 men; cavalry, 461 officers and 4,507 men; artillery, 399 officers and 4,572 men; infantry, 7,142 officers and 92,373 men; total, 9,227 officers and 103,652 men.

Alaska Seal-Fisheries.—By the international arrangement arrived at as a result of the decision of the tribunal of arbitration under the convention of Feb. 29, 1892, the killing of seals is prohibited at all times within a radius of 60 miles around the Pribilof Islands and during the months of May, June, and July of each year in that part of the Pacific Ocean, inclusive of Bering Sea that lies north of 55° of north latitude and east of 180° of east longitude. On April 14, 1896, President Cleveland issued a proclamation declaring operative the act of Congress containing such prohibition, and declaring that the section of the revised statutes forbidding the killing of fur-bearing animals in Alaska and the waters of Bering Sea in the dominion of the United States applies to this area. A treaty between the United States and Great Britain, providing for the settlement of claims presented by the British Government for damages arising out of the illegal seizure of Canadian sealing vessels by United States Government vessels, was promulgated on June 11, 1896. This treaty prescribes that all such claims shall be referred to two commissioners learned in the law, appointed by the British and American Governments respectively, who should sit at Victoria, British Columbia, and at San Francisco, Cal., also, should either commissioner so request, and examine each claim and determine the liability of the United States, if any. Their decision shall be binding on both governments in each case so far as they agree. If in any case they fail to agree, they shall transmit to each Government a joint report stating the points on which they differ and the grounds of their several opinions, and such differences shall be submitted for final arbitration to an umpire to be appointed by the two governments jointly, or, in the event of their failing to agree on a selection, by the President of the Swiss Confederation.

Pensions.—The number of invalid ex-soldiers drawing pensions for wounds or disability incurred in the service under the general pension law was 344,803 on June 30, 1896; the number of nurses on the pension roll was 540; the number of widows, etc., 97,131; the number of invalid pensioners of the navy was 4,821, and of widows, 2,389. The number of invalid pensioners under the act of June 27, 1890, was 370,487 ex-soldiers and 101,639 widows and dependent children, and in the navy 13,331 invalids and 5,464 widows, etc., making the total number of invalids on the roll 750,951, and of widows, etc., 219,567; in all, 970,678 pensioners, compared with 970,524 on June 30, 1895. There was an increase during the year of 5,269 invalid soldiers, 5,943 soldiers' widows, 334 invalids of the navy, and 360 widows drawing naval pensions under the act of 1890; and under the general law the army invalids decreased 7,650, the army widows decreased 3,101, the nurses increased 41, the navy invalids increased 51, and the navy widows decreased 42. The widows of Revolutionary soldiers still on the rolls at the end of 1896 numbered 7. There were 14 survivors and 3,827 widows drawing pensions for services in the War of 1812, 11,800 survivors and 8,017

widows of the war with Mexico, and 2,718 survivors and 4,237 widow pensioners of the Indian wars.

The number of applications filed during the year ending June 30, 1896, was 1,862 for invalids of the army, 6,101 for army widows, 420 for naval invalids, and 264 for widows of the navy. The number of claims allowed for both army and navy during the year was 3,864 for invalids and 3,912 for widows, etc. There were 8 claims allowed to widows of the War of 1812, and 64 to survivors and 522 to widows of the Mexican War. The total number of applications filed was 33,749, and the total of claims allowed 40,374. The disbursements during the year were \$139,280,078, making the total disbursements for pensions from 1861 to 1896, inclusive, \$1,997,515,154. The pensioners were distributed among the States and Territories as follow: Alabama, 3,925; Alaska, 28; Arizona, 559; Arkansas, 10,014; California, 15,308; Colorado, 6,247; Connecticut, 11,837; Delaware, 2,709; District of Columbia, 8,236; Florida, 3,145; Georgia, 3,854; Idaho, 1,070; Illinois, 68,688; Indiana, 68,836; Indian Territory, 2,488; Iowa, 37,798; Kansas, 42,433; Kentucky, 28,457; Louisiana, 4,431; Maine, 20,717; Maryland, 12,683; Massachusetts, 38,340; Michigan, 45,335; Minnesota, 16,194; Mississippi, 3,796; Missouri, 53,812; Montana, 1,213; Nebraska, 16,625; Nevada, 273; New Hampshire, 9,169; New Jersey, 20,017; New Mexico, 1,200; New York, 87,006; North Carolina, 3,954; North Dakota, 1,677; Ohio, 103,921; Oklahoma, 4,959; Oregon, 4,577; Pennsylvania, 98,837; Rhode Island, 4,402; South Carolina, 2,669; South Dakota, 4,702; Tennessee, 17,918; Texas, 7,863; Utah, 766; Vermont, 9,734; Virginia, 8,139; Washington, 4,963; West Virginia, 12,932; Wisconsin, 27,775; Wyoming, 666; foreign countries, 3,781; total, 970,678.

Public Lands.—During the year ending June 30, 1896, the homestead entries embraced 4,830,915 acres, and entries under the timber-culture act 1,226 acres. The area of surveyed land vacant and subject to entry on June 30, 1896, was 316,651,861 acres, and of unsurveyed land 283,388,810 acres; total, 600,040,671 acres. This is exclusive of Alaska, which has an area of 369,529,600 acres, and of military and Indian reservations, reservoir sites, and timber reservations, and tracts covered by selections, filed claims, claims under adjudication, and railroad grants. The total area surveyed in all the States and Territories prior to June 30, 1895, was 1,042,844,034 acres, and the estimated area of unsurveyed public lands, inclusive of Indian and other public reservations, private claims, unsurveyed railroad, swamp, and other grants, arid, mountain, and lake areas not yet surveyed, and the whole of Alaska, was 763,671,546 acres. Under the act of March 3, 1891, authorizing the President to make public forest reservations, 17 such areas were set apart, embracing 17,500,000 acres in Colorado, New Mexico, California, Arizona, Wyoming, Oregon, and Washington.

Patent Office.—The number of applications filed during the calendar year 1895 was 45,513, including 39,145 applications for patents, 1,463 for design patents, 72 for reissues, 2,112 for registration of trade marks, 293 for registration of labels, 13 for registration of prints, and 2,415 caveats. The number of patents granted in 1895 was 22,057; trade marks registered, 1,829; prints registered, 3; total, 23,889. The receipts during the year were \$1,245,247, and expenses \$1,084,497; surplus of receipts over expenditures, \$160,750. The total number of applications filed since 1837 was 993,953, the number of caveats filed was 105,144, and the number of patents issued was 566,013.

Commerce.—The total value of the imports and exports of merchandise for the year ending June

30, 1896, was \$1,662,331,612. The values of the merchandise imports and exports for the last ten years were as follow:

YEAR.	Imports.	Domestic exports.	Foreign exports.
1887.....	\$692,319,768	\$703,022,923	\$13,160,288
1888.....	723,957,114	683,862,104	12,092,403
1889.....	745,131,652	730,282,609	12,118,761
1890.....	789,310,409	845,293,828	12,534,856
1891.....	844,916,196	872,370,283	12,310,527
1892.....	827,402,462	1,015,732,011	14,546,137
1893.....	866,400,922	831,020,785	16,634,409
1894.....	654,994,622	869,204,937	22,935,635
1895.....	731,969,965	793,302,599	14,145,566
1896.....	779,724,674	863,200,487	19,406,451

There was an excess of exports of \$102,882,264 in 1896, compared with \$75,568,200 in 1895, \$237,145,950 in 1894, and an excess of imports of \$18,735,728 in 1893.

The values of the articles or classes of articles imported in 1896 are given in the following table:

IMPORTS.	Value.
Agricultural implements.....	\$5,922
Animals, free of duty.....	426,107
Animals, dutiable.....	2,826,370
Antimony.....	214,290
Articles, the produce of the United States, returned.....	3,434,790
Articles for the use of religious and educational institutions.....	423,091
Articles specially imported.....	185,098
Art works.....	4,819,840
Asbestos.....	219,518
Asphaltum.....	242,714
Bark, hemlock.....	214,952

Total value of merchandise.....	\$770,724,674

Of the total value of imports, \$369,757,470 represent articles free of duty, and \$409,967,204 dutiable articles. Of the total imports entered for consumption, 30.13 per cent. in value were articles of food and animals, 26.57 per cent. articles in a crude condition entering into the various processes of domestic industry, 10.46 per cent. articles wholly or partially manufactured to be used as materials in manufactures and mechanic arts, 21.09 per cent. articles manufactured and ready for consumption, and 11.75 per cent. articles of voluntary use, luxuries, etc. The total value of imports entered for consumption was \$750,694,084, of which \$368,897,523, or 48.56 per cent., were free articles, and \$390,796,561 dutiable. The duties collected amounted to \$157,013,506, being 40.18 per cent. of the value of the dutiable merchandise, and 20.67 per cent. of both free and dutiable. The imports were \$10.66 *per capita* of the population, and the duties \$2.20 *per capita*. The average rates of duty were 23 per cent. *ad valorem* on breadstuffs; 28.78 per cent. on chemicals, drugs, dyes, and medicines; 45.82 per cent. on cotton manufactures; 33.81 per cent. on earthen, stone, and china ware; 7.03 per cent. on flax, hemp, and jute; 34.64 per cent. on manufactures of the same; 19.72 per cent. on fruits and nuts; 46.07 per cent. on glass, and manufactures of; 38.80 per cent. on iron and steel, and manufactures of; 16.40 per cent. on jewelry and precious stones; 25.47 per cent. on leather and leather manufactures; 38.65 per cent. on malt liquors; 125.10 per cent. on distilled liquors; 47.73 per cent. on wines; 61.35 per cent. on all liquors; 46.96 per cent. on silk manufactures; 40.95 per cent. on sugar; 109.06 per cent. on tobacco, and manufactures of; and 47.84 per cent. on manufactures of wool.

The imports of live animals free of duty for breeding purposes consisted of 734 cattle, 1,070 horses, and 3,950 sheep. The live animals paying duty were 217,092 head of cattle, 8,921 horses, and 318,742 sheep. There were imported 837,384 bushels of barley, which used before 1891 to be imported to the amount of more than 10,000,000 bushels a year. The imports of alizarin have increased from 2,095,212 pounds in 1887 to 6,152,776 pounds in 1896, and

those of coal-tar colors and dyes have doubled, while cochineal and other natural dyes have declined, except logwood, used in the silk manufacture, and latterly indigo for dyeing woolens. Imports of asphaltum have grown from 24,600 tons in 1887 to 93,165 tons. Imports of glycerin have nearly doubled; those of shellac have increased by half. Quinia sulphate and alkaloids have increased from 2,753,962 ounces in 1887 to 3,359,818 ounces, while cinchona bark has decreased. Soda nitrate has increased from 96,864 to 127,557 tons; crude sulphur from 97,383 to 150,487 tons. The imports of chocolate have increased from 288,963 to 1,145,467 pounds, those of prepared cocoa nearly threefold, and those of crude cocoa from 12,271,558 to 23,276,597 pounds. The imports of coffee in 1896 were 580,597,915 pounds; of tea, 93,998,372 pounds; of tobacco, 5,211,852 pounds for cigar wrappers, 27,713,114 pounds of other leaf, and 500,945 pounds of cigars, etc. The sugar imports were 604,686,985 pounds of beet sugar, 352,175,269 pounds of cane sugar admitted free, 2,752,012,512 pounds of cane and other sugar paying duty, and 187,463,791 pounds above No. 16; total, 3,896,338,557 pounds. The average cost in foreign countries was 2-29 cents a pound. The duty collected amounted to \$29,808,140. The quantity of cane sugar produced in the United States in 1896 was 543,633,726 pounds.

The imports of unbleached cotton cloth were 2,136,657 square yards; of bleached, dyed, and printed fabrics, 41,161,822 yards. The imports of woolen and worsted cloths were 36,781,572 pounds in 1896, and 23,917,011 pounds in 1895, compared with 7,456,417 pounds in 1894; imports of woolen dress goods in 1896, 26,356,835 pounds. The imports of shoddy, which were 8,662,209 pounds in 1889, have ceased. Of yarns, 2,023,009 pounds were imported in 1896. The imports of raw wool, including camel's hair, mohair, alpaca, etc., were 230,911,473 pounds, and 191,226,243 pounds in 1895, against 55,152,585 pounds in 1894, 172,433,838 pounds in 1893, 148,670,832 pounds in 1892, and 129,303,648 pounds in 1891. Of the imports of 1896, 117,233,440 pounds were clothing wools, 15,756,318 pounds combing wools, and 97,921,715 pounds carpet wools. The imports of silk consisted of 279,067 pounds of cocoons, 8,000,621 pounds of raw silk, as reeled from the cocoon, and 1,084,299 pounds of waste, compared with 82,053 pounds of cocoons, 4,917,688 pounds of raw silk, and 1,266,888 pounds of waste in 1891.

The values of the principal articles of domestic merchandise exported in the year ending June 30, 1896, are given in the following table:

DOMESTIC EXPORTS.	
	Value.
Agricultural implements:	
Mowers and reapers.....	\$3,212,423
Plows and cultivators.....	746,604
All other.....	1,217,748
Animals:

All other articles.....	1,238,750
Total.....	\$863,200,487

Manufactured articles made up 26·48 per cent. of the domestic exports in 1896, and 73·52 per cent. consisted of crude products or articles slightly enhanced in value by manufacture, 66·02 per cent.

being agricultural, 2.32 per cent. mining, 3.91 per cent. forest, 0.79 per cent. fishery, and 0.52 per cent. miscellaneous products. In 1860 manufactured articles constituted only 12.76 per cent. of the total value, in 1870 they were 15 per cent., in 1880 still only 12.92 per cent., and in 1886 20.50 per cent. The export of agricultural implements has grown from \$2,138,398 in 1887 to \$5,176,775 in 1896; that of railroad cars was \$653,298 in the former year. The great trade in copper has sprung up recently, the total copper exports being only \$4,525,573 in value in 1893. The exports of cotton manufactures are not greater than ten years ago except in wearing apparel and miscellaneous. The export of bicycles is a new development. The export of fertilizers has grown to three times the dimensions of ten years ago. The export of canned salmon has doubled, while that of codfish and mackerel has declined. Flax and hemp manufactures have grown from \$1,402,118 to \$1,868,601, though cordage has declined in value; not in quantity, however. The exports of cartridges, gunpowder, and explosives have increased from \$559,085 to \$1,381,102; India-rubber manufactures from \$834,304 to \$1,858,556. The growth of the iron and steel exports during the ten years from \$15,958,502 to \$41,160,877 is largely due to the trade that has sprung up in some of the finer manufactures, such as locomotive engines, printing presses, nails, and wire, and the expansion of the trade already established in locks, firearms, sewing machines, scales, saws and tools, and the like. The leather exports amounted in 1896 to \$20,242,756, about double what they were in 1887. The exports of malt liquors have increased in quantity, but not in value. The export of musical instruments has increased 50 per cent. since 1887. Naval stores have increased in value from \$5,860,573 to \$8,843,564. The exports of animal oils have declined from \$1,282,051 in 1887 to \$673,941, while those of mineral oils have increased from \$46,824,915 to \$62,383,403 in value, and those of vegetable oils from \$2,011,220 to \$6,097,022. Paper exports have increased from \$1,118,538 to \$2,713,875. The exports of soap have increased 50 per cent. in ten years. Those of distilled spirits, amounting to \$1,730,804, have more than doubled. More than four times the quantity of starch is now exported. The exports of sugar have declined. The export of cigarettes is a new thing. The wine exports have increased threefold. The exports of lumber and manufactured wood have increased gradually, amounting in 1896 to \$31,947,108. The trade in flannels and blankets and in woolen clothing has not grown, but that in carpets and some other manufactures of wool and the export of silk manufactures are of recent growth. The export of raw wool increased from 91,858 pounds in 1893 to 6,945,981 pounds in 1896. The domestic production of wool in 1895 was 309,748,000 pounds, and the total consumption 509,159,716 pounds.

The exports of cotton in 1896 were 4,659,765 bales, or 2,335,226,385 pounds, against 6,965,358 bales, or 3,517,433,109 pounds, in 1895. The crop was 5,036,964,409 pounds in 1895, and the domestic consumption was 1,567,991,708 pounds, including 48,560,408 pounds of imported cotton. In 1896 the crop was 3,592,416,851 pounds, of which 1,257,190,466 pounds were retained for consumption, and of foreign cotton 54,162,164 pounds. The production of wheat in the United States in 1896 was 467,102,947 bushels, the exports were 126,443,968 bushels, valued at \$39,709,868, a great falling off since 1892, when the wheat exports came to \$161,399,132, and the domestic consumption was 340,658,979 bushels. The exports of wheat flour were 14,620,864 barrels, somewhat less than in previous years, having a value of \$52,025,217. The corn crop in 1896 was 1,151,138,580 bushels. The exports were 101,100,375 bushels, against

28,585,405 bushels in 1895. The export of corn meal in 1896 was 276,885 barrels, worth \$654,121. The other breadstuffs were 13,012,500 bushels of oats, worth \$3,497,611; oatmeal valued at \$930,502; bread and biscuit valued at \$694,333; 7,680,331 bushels of barley, of the value of \$3,100,311; 988,466 bushels of rye, worth \$445,075; 3,777 barrels of rye flour, worth \$11,163; and other cereals and food preparations worth \$2,442,940.

The total export of provisions grew in value from \$92,783,296 in 1887 to \$145,270,643 in 1894, and then declined in two years to \$131,605,869. Protective measures in Europe and competition have reduced the exports of canned beef in five years from 109,585,727 to 63,698,180 pounds; of pickled pork, from 26,260,558 to 14,318,216 pounds; of bacon, from 514,675,557 to 425,952,187 pounds; of cheese, from 82,133,876 to 36,777,291 pounds. The trade in butter, fresh beef, and other products has not declined, and the trade in live cattle holds its own. There were 372,461 head of cattle shipped in 1896. The export of horses has increased from 2,967 in 1893 to 25,126 in 1896.

The export of leaf tobacco in 1896 was 287,700,301 pounds. The total product in 1895 was 491,544,000 pounds. The production of crude petroleum in 1896 was 2,431,279,032 gallons, and the exports of mineral oils of all kinds were 890,458,994 gallons, valued at \$62,383,403. The exports of chemicals, drugs, and dyes have increased in value from \$6,754,068 in 1893 to \$9,063,358 in 1896. Of the exports of foreign merchandise, amounting to \$19,406,451, \$9,799,076 went to Europe, \$8,599,627 to North American countries, \$779,784 to South America, \$67,951 to Asia, \$141,186 to Oceanica, and \$18,827 to Africa.

The distribution of the foreign trade of the United States is revealed in the following table, giving the value of the imports of merchandise from, and the total merchandise exports, domestic and foreign, to each foreign country and colony in 1896:

COUNTRIES.	Imports.	Exports.
Austria-Hungary.....	\$7,644,154	\$2,439,651

Total Africa.....	\$11,172,979	\$13,870,760
Grand total.....	\$779,724,674	\$882,606,938

Of the total imports, 53.69 per cent. came from Europe, 16.27 per cent. from North American countries, 13.96 per cent. from South America, 11.49 per cent. from Asia, 3.16 per cent. from Oceania, and 1.43 per cent. from Africa; of the exports, 76.26 per cent. went to Europe, 13.26 per cent. to North American countries, 4.11 per cent. to South America, 2.90 per cent. to Asia, 1.95 per cent. to Oceania, and 1.57 per cent. to Africa.

The imports of gold coin and bullion during the year ending June 30, 1896, amounted to \$33,525,065. The domestic exports of gold were \$106,934,336, and the foreign exports \$5,475,611, making a total of \$112,409,947—an excess of \$78,884,882 of exports over imports, against an excess of \$30,984,449 in 1895, \$4,528,942 in 1894, \$87,506,463 in 1893, and \$495,873 in 1892. The imports of silver coin and bullion were \$28,777,186 in 1896, and the total exports were \$60,541,670, of which \$53,196,559 were domestic and \$7,345,111 foreign. The excess of exports over imports of silver was \$31,764,484, against \$37,674,797 in 1895, \$37,164,713 in 1894, \$17,544,067 in 1893, and \$12,855,473 in 1892. There was, besides, silver imported in the ore amounting to \$15,859,228 in 1896, and \$10,658,659 in 1885—a movement recently developed.

Navigation.—The United States merchant marine in 1896 comprised 22,908 vessels of all kinds, having an aggregate burden of 4,703,880 tons. Of these, 16,313, of 2,396,672 tons, were sailing vessels, including canal boats and barges, and 6,595, of 2,307,208 tons, were steam vessels. Of the total tonnage, 2,667,314 tons were owned on the Atlantic

and Gulf coasts, 437,972 tons on the Pacific coast, 1,324,067 tons on the northern lakes, and 274,527 on Western rivers. There were 829,833 tons employed in the foreign trade, 3,790,296 tons in the coastwise trade, 15,121 tons in the whale fisheries, and 68,630 tons in the cod and mackerel fisheries. There were built during the year 437 sailing vessels, of 89,068 tons, and 286 steam vessels, of 138,028 tons.

The tonnage of American sailing vessels entered at all the ports from foreign countries during the year ending June 30, 1896, was 1,068,495; of American steam vessels, 2,604,992; of foreign sailing vessels, 2,531,529; of foreign steam vessels, 11,247,952; total American tonnage, 3,673,487; total foreign tonnage, 13,779,481; total sailing vessels, 3,600,024 tons; total steam vessels, 13,852,944 tons. The tonnage of American sailing vessels cleared was 1,126,958; of American steam vessels, 2,614,111; of foreign sailing vessels, 2,507,038; of foreign steam vessels, 11,570,683; total American tonnage, 3,741,069; total foreign tonnage, 14,077,721; total sailing tonnage, 3,633,996; total steam tonnage, 14,184,794.

The tonnage entered from and cleared for the various foreign countries in 1896 is given in the following table:

COUNTRIES.	Entered.	Cleared.
Belgium.....	579,320	534,755
Brazil.....	512,879	310,516
China and Hong-Kong.....	204,873	369,894
France.....	435,777	749,120
Germany.....	1,567,497	1,670,748
Italy.....	511,935	353,258
United Kingdom.....	5,392,373	5,930,392
Maritime Provinces.....	965,295	1,172,109
British West Indies.....	596,196	538,172
British Columbia.....	1,456,163	1,465,163
Australasia.....	238,554	207,295
Mexico.....	374,382	218,800
Netherlands.....	485,979	825,052
Spain.....	199,604	161,407
Cuba.....	1,278,643	887,410
Colombia.....	312,717	24,380
All other countries.....	2,367,166	2,198,313
Total.....	17,452,986	17,818,790

The tonnage entered and cleared at the various seaports during 1896 is given below:

PORTS.	Entered.	Cleared.
Portland, Me.....	140,354	185,569
Boston.....	1,757,281	1,523,096
New York.....	6,911,782	6,552,614
Philadelphia.....	1,416,081	1,214,688
Baltimore.....	895,093	1,067,543
Charleston.....	49,323	60,264
Savannah.....	214,156	287,992
Mobile.....	306,928	308,035
New Orleans.....	1,071,475	1,077,331
Galveston.....	292,726	312,231
San Francisco.....	1,221,136	1,165,779
All other ports.....	3,176,623	4,063,653
Total.....	17,252,968	17,818,790

The nationality of the tonnage entered and cleared during 1896 is seen in the following table:

NATIONALITY.	Entered.	Cleared.
American.....	3,673,487	3,741,069
Austrian.....	37,669	53,627
Belgian.....	380,189	373,577
British.....	9,153,763	9,325,141
Danish.....	91,476	95,417
Dutch.....	402,825	397,921
French.....	345,616	347,557
German.....	1,626,825	1,684,810
Italian.....	195,447	196,736
Norwegian and Swedish.....	985,935	1,000,028
Portuguese.....	43,547	42,841
Russian.....	61,617	63,746
Spanish.....	320,365	332,160
All other.....	121,908	92,684
Total.....	17,452,968	17,818,790

Of the total imports of 1896, American vessels carried 15.7 per cent., \$117,299,074 in value, while foreign vessels carried \$626,890,521, and \$35,535,079 went by land in vehicles. Of the exports, American vessels carried \$70,392,813, or 8.5 per cent., foreign vessels \$751,083,000, and land vehicles \$61,131,125.

Railroads.—There were 181,621 miles of railroads in operation at the end of 1895, an increase during the year of 1,628 miles. The capital stock of all lines was \$5,182,121,999; the funded debt, \$5,640,942,567; the total share and loan capital, including unfunded debt, \$11,241,569,658; the cost of railroad and equipment, \$9,861,102,973. The gross earnings in 1895 were \$261,640,598 from passengers and \$743,784,451 from freight; from all sources, \$1,093,139,605. The net earnings were \$323,196,454, out of which \$239,944,229 interest was paid on bonds and \$81,375,774 in dividends on stock. There were 597,421,362 passengers carried, and 696,761,171 tons of freight, the average haul being 122 miles, and the average journey per passenger 24 miles.

Judiciary.—The result of the work of the United States Supreme Court for the year is given below. There is but one term of the court each year, beginning on the second Monday of October. The total number of cases on the docket for the term beginning in October, 1895, was 1,033, and of this number 494 were disposed of during the term. The number actually considered by the court was 374, of which 196 were argued orally and 178 submitted on printed arguments. The establishment of the Circuit Court of Appeals, whose decisions are final in a large class of cases, will probably have the effect in a short time to reduce the number of cases that may of right be carried to the Supreme Court; so that that court will have no more on its docket at the beginning of each session than can be disposed of during the term. Among the cases of general interest decided were the following:

Stanford.—In *United States vs. Stanford*, decided March 2, 1896, the United States sought to establish a claim against the estate of Leland Stanford, of California, for \$15,237,000. It was claimed that by the Constitution and laws of California, which provided that a stockholder in a railroad corporation was liable for its debts in proportion to the stock owned, the estate of Stanford was liable to the United States in proportion to the stock owned and held by him in the Central Pacific Railroad Company for its debts to the United States on account of bonds issued in aid of its construction. The court decided against the United States, holding that it was not a part of the contract between the United States and the corporation receiving the subsidy bonds that the stockholders should be personally liable for the principal and interest of these bonds.

Bounty on Sugar.—*United States vs. Realty Company, and United States vs. Gay*, were decided May 25, 1896. These suits were originally brought in the Circuit Court of Louisiana, where judgments were rendered against the United States. The tariff act of Oct. 1, 1890, authorized the payment of a bounty on sugar, and bounties were paid in accordance therewith until Aug. 28, 1894, when the Wilson bill, repealing the bounty and prohibiting any further payments, went into effect. The case of the Realty Company was a test case under the appropriation made in the Sundry Civil Appropriation act of March 2, 1895, in behalf of those who had fully complied with the provisions of the McKinley act and were by its terms entitled to receive their money on Aug. 28, 1894, but whose warrants were stopped by the statutory prohibition that went into effect on that day. The case of Gay was a test case under another provision granting a bounty of $\frac{1}{16}$ of a cent per pound on sugar made between Aug.

28, 1894, and June 30, 1895, by those producers who had complied with the provisions of the bounty act, of 1890, by taking the preliminary steps to obtain a license, and would have been entitled to receive one if the law had not been repealed. The sum of \$5,000,000 was appropriated for the payment of claims of this description. Comptroller Bowler, of the Treasury Department, refused to allow claims of either class, holding that the bounty acts were unconstitutional, basing his action on the decision of the Court of Appeals of the District of Columbia in the case of *United States ex rel. Miles Planting and Manufacturing Company vs. Carlisle*. The cases were fully argued before the Supreme Court, April 22–24, 1896, by Assistant Attorney-General Whitney and Solicitor-General Conrad for the Government, and Joseph H. Choate, of New York, ex-Senator Manderson, of Nebraska, and Hon. Thomas J. Semmes, of Louisiana, for the claimants. The court held that the acts of Congress making provision for the payment of such claims were valid, without reference to the question of the validity of the original act providing for the payment of bounties to manufacturers of sugar. It is within the constitutional power of Congress to determine whether claims on the public Treasury are founded upon moral and honorable obligations and upon principles of right and justice; and when it has decided such questions in the affirmative and appropriated money for the payment of such claims, its decision can rarely, if ever, be the subject of review by the judicial branch of the Government. There was some disappointment that the court did not decide the direct question whether bounties were allowable under the Constitution. It is impossible, from the opinion delivered, to know what the decision would be upon that point.

Interstate Commerce.—*Brown vs. Walker*, decided March 23, 1896, involved the question whether Brown, a railroad official, who had been subpoenaed as a witness before the grand jury in a matter of a charge of violation of the Interstate Commerce act, was compelled to testify. Brown, who was auditor of the road, refused to answer interrogatories, on the ground that the answers might tend to criminate him. The Constitution (Fifth Amendment) declares that no person shall be compelled in any criminal case to be a witness against himself, but the act of Feb. 11, 1893, affords immunity against prosecution for the offense to which the question related. It was held that the witness was compellable to answer. Justices Shiras, Gray, White, and Field dissented. This decision is of great importance, as it gives the Interstate Commerce Commission power to get testimony without which the law could not be enforced.

Long and Short Haul.—*Cincinnati, New Orleans and Texas Pacific Railway Company, et al. vs. Interstate Commerce Commission*, was decided March 30, 1896. The effect of this decision was to fortify the law and the authority of the commission. A very important feature of the decision was the opinion that a railroad wholly within a State is amenable to the Interstate Commerce act when such road becomes a party to an arrangement for the continuous carriage of interstate traffic, and carries goods under through bills of lading issued by another common carrier, and participates in through rates and charges. It thereby becomes part of a continuous line, and consequently subject to the authority of the commission. This makes practically almost every line of railroad amenable to the law.

Rates.—*Texas and Pacific Railroad Company vs. Interstate Commerce Commission* involved the question whether, under the Interstate Commerce act, freight shipped from a foreign country on a through bill of lading can be shipped from the sea-

board to the interior under a joint ocean and railroad tariff at less rates than domestic goods. The railway company declined to obey the order of the Interstate Commerce Commission commanding it to desist from distinguishing in its charges between foreign and inland traffic. The commission was sustained by the circuit court, but the Supreme Court reversed that decision and held that the commission erred in making the order. It follows that a railroad company can charge more for the transportation of domestic freight between two given places in this country than it charges for foreign freight between the same points. Chief-Justice Fuller and Justices Harlan and Brown dissented.

Aid for Cuba.—The decision in *Wiborg vs. United States*, May 25, 1896, construed the neutrality laws of the United States. Wiborg was captain of the "Horsa," a Danish steamer, sailing under the Danish flag, and was indicted under Sec. 5286 of the United States Revised Statutes for providing means for a military expedition to be carried on from this country to aid the Cuban insurgents. A body of men went on board a tug in a port of the United States, loaded with arms, were taken by it 30 or 40 miles out to sea, met the steamer outside the 3-mile limit by prior arrangement, boarded her with the arms, opened the boxes and distributed the arms among themselves, drilled to some extent, were apparently officered and then, as preconcerted, attempted to effect an armed landing on the coast of Cuba. It was held that this constituted a military expedition within the provisions of the Revised Statutes.

French Spoliation.—*Blagge vs. Balch*; *Brooks vs. Codman*; and *Footo vs. Women's Board of Missions*, turned upon the construction of the act of Congress of March 3, 1891, making appropriations to pay certain enumerated claims. The French Spoliation claims arose from the depredations of French cruisers upon our commerce and from the judgments of French prize courts, and could have been enforced against France only by our Government. The sufferers from the French spoliations contended that, by the treaty of Sept. 30, 1800, all claims for indemnity were renounced, and that therefore an obligation to indemnify them rested upon our Government. Under the act of Congress of Jan. 20, 1885, the claims were allowed to be brought before the court of claims; but that court was not to give judgment, and any committal of the United States to their payment was guarded against. It was held that the payments thus to be made were within the category of payments by way of gratuity and grace, and not as of right against the Government.

Alien Labor Contracts.—In *United States vs. Laws*, it was decided that a contract made with an alien in a foreign country to come to this country as a chemist on a sugar plantation in Louisiana, in pursuance of which contract such alien comes to this country and is so employed and his expenses paid, is not such a contract to perform labor or service as is prohibited by the act of Congress of Feb. 26, 1885, entitled "An Act to prohibit the importation and migration of foreigners and aliens under contract or agreement to perform labor in the United States, its territories, and the District of Columbia."

Sunday Trains.—The case of *Hennington vs. Georgia* involved the constitutionality of a law of Georgia forbidding the running of freight trains in that State on Sunday. The court sustained the validity of the law. The decision was based on the right of a State to legislate for the benefit of the public health, morals, peace, and order. The statute was held to be a police regulation, and not an interference with interstate commerce. Chief-Justice Fuller and Justice White dissented, holding

that the statute requiring the suspension of interstate commerce for one day in the week amounted to a regulation of that commerce, and was invalid because the power of Congress in that regard was exclusive.

Claims.—*United States vs. New York* was appealed from the court of claims. The decision involved the construction of statutes regulating the jurisdiction of the court of claims, including those known as the Bowman act of March 3, 1883, and the Tucker act of March 3, 1887. It sustained the claim of the State of New York for \$131,188.02, interest on money borrowed and expended in arming troops for the suppression of the rebellion of 1861.

Civil Rights.—The case of *Plessis vs. Ferguson* turned upon the constitutionality of an act of the State of Louisiana requiring railways to provide separate cars or compartments for colored persons. Plessis was a citizen of the United States, of mixed descent in the proportion of seven eighths Caucasian and one eighth African blood, and, having paid for a first-class passage on the East Louisiana Railway from New Orleans to Covington, entered a coach provided for persons of the white race, and, on his refusal to vacate and occupy a seat in a coach assigned to colored people, was forcibly ejected and taken to prison to answer a criminal charge. He claimed that the mixture of colored blood was not discernible, and that he was entitled to the same privileges and immunities as white citizens. The statute in question did not apply to interstate passengers, but was confined in its application to passengers traveling exclusively within the borders of the State, and was held not to be in conflict with the provisions of the 13th and 14th amendments to the Constitution. The question of the proportion of colored blood necessary to constitute a colored person was not in issue, that being a question to be determined under State laws. Justice Harlan dissented, and stated that, in his opinion, this decision would prove in time as pernicious as that of the court in the *Dred Scott* case.

Irrigation.—The decision in *Fall Brook Irrigation District vs. Maria King Bradley* sustained the constitutionality of the California statute known as the Wright Irrigation law. It attracted interest throughout the Rocky Mountain and Pacific Coast regions because of its importance to the material interests of the arid belt, and gained prominence from the fact that ex-President Harrison was of counsel who argued the case before the Supreme Court. The validity of millions of dollars of bonds issued by the irrigation district commissioners depended upon the decision. The act was attacked on the ground that it deprived persons of property without due process of law. Chief-Justice Fuller and Justice Field dissented.

Interruption of Mails.—The decision in *United States vs. Clune* affirmed a conviction for interrupting the mails during the riots of 1894.

Battlefield Parks.—The decision in *United States vs. Gettysburg Railroad Company* established the power of the Government to condemn land within the boundaries of a State for public parks to preserve battlefields of the civil war.

Fraudulent Use of the Mails.—The decision in *Durland vs. United States* settled the meaning of section 5480 of the Revised Statutes, which punishes as criminal "any scheme or artifice to defraud" to be effected through the mails. This will doubtless prove of great value in preventing the fraudulent use of the mails.

Telephones.—Among the important cases that have been argued and are awaiting a decision are *The United States vs. The American Bell Telephone Company*, a suit to cancel the patent issued to Emil Berliner for a transmitter, upon the result of which

depends the continuance of the telephone monopoly in the United States; the South Carolina dispensary cases, involving the validity of some features of the South Carolina liquor law; and *France vs. United States*, involving the constitutionality and construction of the anti-lottery act of March 2, 1895.

Presidential Election.—The presidential canvass of 1896 began with eight nominees for each of the two highest offices within the gift of the people. The several political conventions assembled on various dates, the earliest being those of the Prohibition party. Then followed, in the order named, the Republican, Democratic, Socialist-Labor, Populist, Silver Party and National Democratic conventions. To accord with the general plan of the "Annual," the proceedings and platforms will be dealt with in this article according to the dates on which they occurred or were promulgated. The following is a complete list of the nominees:

Prohibition (Regular).—Joshua Levering, of Maryland; Hale Johnson, of Illinois.

Prohibition (National Party).—Charles E. Bentley, of Nebraska; James Haywood Southgate, of North Carolina.

Republican.—William McKinley, of Ohio; Garret Augustus Hobart, of New Jersey.

Democratic (Free Silver).—William Jennings Bryan, of Nebraska; Arthur Sewall, of Maine.

Socialist-Labor.—Charles H. Matchett, of New York; Matthew Maguire, of New Jersey.

Populist.—William Jennings Bryan, of Nebraska; Thomas E. Watson, of Georgia.

Silver Party.—William Jennings Bryan, of Nebraska; Arthur Sewall, of Maine.

Democratic (National).—John McAuley Palmer, of Illinois; Simon Bolivar Buckner, of Kentucky.

Prohibition Convention.—Nearly three weeks before the opening of the Republican Convention the leaders and State delegates of the Prohibition party met at Pittsburg, Pa., on May 28, 1896. From their camp were fired the first shots of the presidential campaign.

Shortly after the convention assembled differences of opinion arose as to the nature of the platform to be adopted. The majority or "narrow-gauge" report, as amended, declared for prohibition as the sole party issue. On this platform Joshua Levering, of Baltimore, Md., was nominated for President, and Hale Johnson, of Illinois, for Vice-President. The following is the platform:

The Prohibition party, in national convention assembled, declares its conviction that the manufacture, exportation, importation, and sale of alcoholic beverages has produced such social, commercial, industrial, and political wrongs, and is now so threatening the perpetuity of all our social and political institutions that the suppression of the same by a national party, organized thereto, is the greatest object to be accomplished by the voters of our country, and is of such importance as that it, of right, ought to control the political action of all our patriotic citizens until such suppression is accomplished.

The urgency of this cause demands the union without further delay of all citizens who desire the prohibition of the liquor traffic: therefore,

Resolved, That we favor the legal prohibition by State and national legislation of the manufacture, importation, exportation, and interstate transportation and sale of alcoholic beverages; that we declare our purpose to organize and unite all the friends of prohibition into one party; and in order to accomplish this end we deem it but right to leave every Prohibitionist the freedom of his own convictions upon all other political questions, and trust our representatives to take such action upon other political questions as the change occasioned by prohibition and the welfare of the whole people shall demand.

The signers of the minority report, headed by ex-Gov. St. John, called for planks in the platform in favor of free coinage, government control of railroads and telegraphs, an income tax, etc.

The vote in favor of the majority report was 492 to 310. After the nomination of Bentley and Johnson, the minority report signers and their adherents; about 200 in number, including all active advocates of woman suffrage, free silver, and populism, withdrew from the convention. They then held a meeting in a separate hall and organized the "National Party," with "Home Rule" as a motto. They took as a basis for their platform the minority or "broad gauge" reports to the regular convention.

National Party.—The platform of this party was as follows:

Prohibition.—The suppression of the manufacture and sale, importation, exportation, and transportation of intoxicating liquors for beverage purposes. We utterly reject all plans for regulating or compromising with this traffic, whether such plans be called local option, taxation, license, or public control. The sale of liquors for medicinal and other legitimate uses should be conducted by the State, without profit, and with such regulations as will prevent fraud or evasion.

Woman Suffrage.—No citizen should be denied the right to vote on account of sex.

Silver Coinage.—All money should be issued by the General Government only, and without the intervention of any private citizen, corporation, or banking institution. It should be based upon the wealth, stability, and integrity of the nation. It should be a full legal tender for all debts, public and private, and should be of full volume to meet the demands of the legitimate business interests of the country. For the purpose of honestly liquidating our outstanding coin obligations, we favor the free and unlimited coinage of both silver and gold, at a ratio of 16 to 1, without consulting any other nation.

Public Lands.—Land is the common heritage of the people and should be preserved from monopoly and speculation. All unearned grants of land, subject to forfeiture, should be reclaimed by the Government, and no portion of the public domain should hereafter be granted except to actual settlers, continuous use being essential to tenure.

Control of Railroads.—Railroads, telegraphs, and other natural monopolies should be owned and operated by the Government, giving to the people the benefit of the service at actual cost.

Income Tax.—The National Constitution should be so amended as to allow the National revenues to be raised by equitable adjustment of taxation on the properties and incomes of the people; and import duties should be levied as a means of securing equitable commercial relations with other nations.

Convict Labor.—The contract convict labor system, through which speculators are enriched at the expense of the State, should be abolished.

Sunday.—All citizens should be protected by law in their right to one day of rest in seven, without oppressing any who conscientiously observe any other than the first day of the week.

Public Schools.—The American public schools, taught in the English language, should be maintained, and no public funds should be appropriated for sectarian institutions.

Election of President and Senators by the People.—The President, Vice-President, and United States Senators should be elected by direct vote of the people.

Pensions.—Ex-soldiers and sailors of the United States Army and Navy, their widows and minor children, should receive liberal pensions, graded on disability and term of service, not merely as a debt of gratitude, but for service rendered in the preservation of the Union.

Immigration and Alien Suffrage.—Our immigration laws should be so revised as to exclude paupers and criminals. None but citizens of the United States should be allowed to vote in any State, and naturalized citizens should not vote until one year after naturalization papers have been issued.

The Referendum.—The initiative and referendum, and proportional representation, should be adopted.

Having herein presented our principles and purposes, we invite the co-operation and support of all citizens who are with us substantially agreed.

On this platform, Charles E. Bentley, of Nebraska, and James Haywood Southgate, of North Carolina, were nominated for President and Vice-President.

Republican Convention.—The Republican National Convention assembled at St. Louis, Mo., on June 16, 1896, and continued for three days. The proceedings were opened by Thomas H. Carter, chairman of the Republican National Committee. Prayer was offered by Rabbi Samuel Sale. Secretary Manley read the call for the convention. The choice of the committee for temporary chairman was Charles W. Fairbanks, of Indiana. This selection was approved. Senator Thurston, of Nebraska, was chosen permanent chairman. The platform, containing a gold plank, was read by ex-Gov. Foraker, in charge of the majority report. It was as follows:

The Republicans of the United States, assembled by their representatives in National Convention, appealing for the popular and historical justification of their claims to the matchless achievements of thirty years of Republican rule, earnestly and confidently address themselves to the awakened intelligence, experience, and conscience of their countrymen in the following declaration of facts and principles:

Administration.—For the first time since the civil war the American people have witnessed the calamitous consequences of full and unrestricted Democratic control of the Government. It has been a record of unparalleled incapacity, dishonor, and disaster. In administrative management it has ruthlessly sacrificed indispensable revenue, entailed an unceasing deficit, eked out ordinary current expenses with borrowed money, piled up the public debt by \$262,000,000 in time of peace, forced an adverse balance of trade, kept a perpetual menace hanging over the redemption fund, pawned American credit to alien syndicates, and reversed all the measures and results of successful Republican rule. In the broad effect of its policy it has precipitated panic, blighted industry and trade with prolonged depression, closed factories, reduced work and wages, halted enterprise, and crippled American production while stimulating foreign production for the American market. Every consideration of public safety and individual interest demands that the Government shall be rescued from the hands of those who have shown themselves incapable to conduct it without disaster at home and dishonor abroad, and shall be restored to the party which for thirty years administered it with unequalled success and prosperity. And in this connection we heartily indorse the wisdom, patriotism, and the success of the administration of President Harrison.

Tariff.—We renew and emphasize our allegiance to the policy of Protection as the bulwark of American industrial independence and the foundation of American development and prosperity. This true American policy taxes foreign products and encourages home industry; it puts the burden of revenue on foreign goods; it secures the American market for the American producer; it upholds the American standard of wages for the American workingman; it puts the factory by the side of the farm, and makes the American farmer less dependent on foreign demand and price; it diffuses general thrift, and founds the strength of all on the strength of each. In its reasonable application it is just, fair, and impartial, equally opposed to foreign control and domestic monopoly, to sectional discrimination and individual favoritism.

We denounce the present Democratic tariff as sectional, injurious to the public credit, and destructive to business enterprise. We demand such an equitable tariff on foreign imports which come into competition with American products as will not only furnish adequate revenue for the necessary expenses of the Government, but will protect American labor from degradation to the wage level of other lands. We are not pledged to any particular schedules. The question of rates is a practical question, to be governed by the conditions of the time and of production; the ruling and uncompromising principle is the protection and development of American labor and industry. The country demands a right settlement, and then it wants rest.

Reciprocity and Protection.—We believe the repeal of the reciprocity arrangements negotiated by the last Republican administration was a national calamity, and we demand their renewal and extension on such terms as will equalize our trade with other nations, remove the restrictions which now obstruct the sale of American

products in the ports of other countries, and secure enlarged markets for the products of our farms, forests, and factories.

Protection and reciprocity are twin measures of Republican policy, and go hand in hand. Democratic rule has recklessly struck down both, and both must be re-established. Protection for what we produce; free admission for the necessaries of life which we do not produce; reciprocal agreements of mutual interests which gain open markets for us in return for our open market to others. Protection builds up domestic industry and trade and secures our own market for ourselves; reciprocity builds up foreign trade and finds an outlet for our surplus.

Protection for Sugar Growers.—We condemn the present administration for not keeping faith with the sugar producers of this country. The Republican party favors such protection as will lead to the production on American soil of all the sugar which the American people use, and for which they pay other countries more than \$100,000,000 annually.

Wool and Woolens.—To all our products—to those of the mine and the field as well as those of the shop and the factory—to hemp, to wool, the product of the great industry of sheep husbandry, as well as to the finished woolens of the mills, we promise the most ample protection.

Merchant Marine.—We favor restoring the early American policy of discriminating duties for the up-building of our merchant marine and the protection of our shipping in the foreign carrying trade, so that American ships—the product of American labor employed in American shipyards, sailing under the stars and stripes, and manned, officered, and owned by Americans—may regain the carrying of our foreign commerce.

Currency.—The Republican party is unreservedly for sound money. It caused the enactment of the law providing for the resumption of specie payments in 1875; since then every dollar has been as good as gold. We are unalterably opposed to every measure calculated to debase our currency or impair the credit of our country. We are therefore opposed to the free coinage of silver except by international agreement with the leading commercial nations of the world, which we pledge ourselves to promote, and until such agreement can be obtained the existing gold standard must be preserved. All our silver and paper currency must be maintained at parity with gold, and we favor all measures designed to maintain inviolably the obligations of the United States, and all our money, whether coin or paper, at the present standard, the standard of the most enlightened nations of the earth.

Pensions.—The veterans of the Union armies deserve and should receive fair treatment and generous recognition. Whenever practicable, they should be given the preference in the matter of employment, and they are entitled to the enactment of such laws as are best calculated to secure the fulfillment of the pledges made to them in the dark days of the country's peril. We denounce the practice in the Pension Bureau, so recklessly and unjustly carried on by the present Administration, of reducing pensions and arbitrarily dropping names from the rolls, as deserving the severest condemnation of the American people.

Foreign Relations.—Our foreign policy should be at all times firm, vigorous, and dignified, and all our interests in the Western hemisphere carefully watched and guarded. The Hawaiian Islands should be controlled by the United States, and no foreign power should be permitted to interfere with them; the Nicaraguan Canal should be built, owned, and operated by the United States, and by the purchase of the Danish Islands we would secure a proper and much-needed naval station in the West Indies.

Armenian Massacres.—The massacres in Armenia have aroused the deep sympathy and just indignation of the American people, and we believe that the United States should exercise all the influence it can properly exert to bring these atrocities to an end. In Turkey, American residents have been exposed to the gravest dangers and American property destroyed. There and everywhere American citizens and American property must be absolutely protected at all hazards and at any cost.

Monroe Doctrine.—We reassert the Monroe Doctrine in its full extent, and we reaffirm the right of the United States to give the doctrine effect by responding to the appeal of any American States for friendly intervention

in case of European encroachment. We have not interfered, and shall not interfere, with the existing possessions of any European power in this hemisphere, but these possessions must not on any pretext be extended. We hopefully look forward to the eventual withdrawal of the European powers from this hemisphere, and to the ultimate union of all of the English-speaking part of the continent by the free consent of its inhabitants.

Cuba.—From the hour of achieving their own independence the people of the United States have regarded with sympathy the struggles of other American peoples to free themselves from European domination. We watch with deep and abiding interest the heroic battle of the Cuban patriots against cruelty and oppression, and our best hopes go out for the full success of their determined contest for liberty.

The Government of Spain having lost control of Cuba, and being unable to protect the property or lives of resident American citizens or to comply with its treaty obligations, we believe that the Government of the United States should actively use its influence and good offices to restore peace and give independence to the island.

The Navy.—The peace and security of the republic and the maintenance of its rightful influence among the nations of the earth demand a naval power commensurate with its position and responsibility. We therefore favor the continued enlargement of the navy, and a complete system of harbor and seacoast defenses.

Immigration.—For the protection of the quality of our American citizenship, and of the wages of our workmen against the fatal competition of low-priced labor, we demand that the immigration laws be thoroughly enforced and so extended as to exclude from entrance to the United States those who can neither read nor write.

Civil Service.—The civil-service law was placed on the statute book by the Republican party, which has always sustained it, and we renew our repeated declarations that it shall be thoroughly and honestly enforced and extended wherever practicable.

The Ballot.—We demand that every citizen of the United States shall be allowed to cast one free and unrestricted ballot, and that such ballot shall be counted and returned as cast.

Lawlessness.—We proclaim our unqualified condemnation of the uncivilized and barbarous practice, well known as lynching or killing of human beings suspected or charged with crime, without process of law.

Labor Arbitration.—We favor the creation of a National Board of Arbitration to settle and adjust differences which may arise between employers and employed engaged in interstate commerce.

Homesteads.—We believe in an immediate return to the free-homestead policy of the Republican party, and urge the passage by Congress of a satisfactory free-homestead measure such as has already passed the House and is now pending in the Senate.

Territories.—We favor the admission of the remaining Territories at the earliest practicable date, having due regard to the interests of the people of the Territories and of the United States. All the Federal officers appointed for the Territories should be selected from *bona fide* residents thereof, and the right of self-government should be accorded as far as practicable.

Alaska.—We believe the citizens of Alaska should have representation in the Congress of the United States, to the end that needful legislation may be intelligently enacted.

Liquor Traffic.—We sympathize with all wise and legitimate efforts to lessen and prevent the evils of intemperance and promote morality.

Woman's Rights.—The Republican party is mindful of the rights and interests of women. Protection of American industries includes equal opportunities, equal pay for equal work, and protection to the home. We favor the admission of women to wider spheres of usefulness, and welcome their co-operation in rescuing the country from Democratic and Populist mismanagement and misuse.

Such are the principles and policies of the Republican party. By these principles we will abide, and these policies we will put into execution. We ask for them the considerate judgment of the American people. Confident alike in the history of our great party and in the justice of our cause, we present our platform and our candidates in the full assurance that the election will bring victory to the Republican party and prosperity to the people of the United States.

At the conclusion of the reading, Senator Teller,

of Colorado, caused to be read by the secretary a minority report, worded as follows:

"We, the undersigned members of the Committee on Resolutions, being unable to agree with that part of the majority report which treats of the subjects of coinage and finance, respectfully submit the following paragraph as a substitute therefor:

"The Republican party favors the use of both gold and silver as equal standard money, and pledges its power to secure the free, unrestricted, and independent coinage of gold and silver at our mints at the ratio of 16 parts of silver to 1 of gold."

The reading of this minority substitute was followed by a lengthy address by the Colorado Senator in defense of his opinions. His concluding remark was, "I can not, before my country and my God, agree to this provision that will put this country upon a gold basis, and I will not."

Ex-Gov. Foraker moved to lay the substitute on the table, and the motion was seconded by Senator Lodge, of Massachusetts. The Colorado delegation demanded a roll call, Montana seconding the request. The vote to table the silver substitute was as follows:

STATES AND TERRITORIES.	Yea.	Nay.	STATES AND TERRITORIES.	Yea.	Nay.
Alabama	15	7	New York	72	..
Arkansas	15	1	North Carolina	74	14½
California	3	15	North Dakota	6	..
Colorado	8	Ohio	46	..

Nebraska	16	..	Alaska	4	..
Nevada	6			
New Hampshire	8	..	Total	518½	105½
New Jersey	20	..			

In response to a call from Senator Dubois, of Idaho, a separate roll call was taken on the financial plank of the platform. This produced the following result: Gold, 812½; silver, 110½.

As soon as the vote was made known, Senator Cannon, of Utah, read a formal declaration of withdrawal from the Convention of the delegates from the Silver States. In the course of his remarks he said that "while the minority must bow to the will of the majority, it must not be asked to abandon its principles." This part of the proceedings included a formal written protest from the silver delegations, signed by Senators Teller, Dubois, and Cannon, and Representative Hartman, of Montana. "When Senator Cannon had ceased talking," wrote an interested spectator of the proceedings, "Teller and Cannon shook hands with the chairman and walked down the main aisle. Teller was weeping. Tears stood in Cannon's eyes. One by one Dubois, Pettigrew, Hartman, and the other bolters joined the procession, which was led by the Colorado Senator." The silver delegates who retired from the hall were:

Congressman Hartman, of Montana.
 Senator Cannon, Congressman Allen, and Delegate Thomas Kearns, of Utah.

Senator Pettigrew, of South Dakota.
Delegates Cleveland and Strother, of Nevada.
Senator Dubois, and the entire delegation from Utah.
Senator Teller, and the entire delegation from Colorado.

They carried with them the standard marking their position in the hall. The total number of those who retired from the Convention was 21, including 4 Senators and 2 Representatives. As they marched out the band played "Columbia," and the remaining delegates sang, all standing, spectators joining in.

After order had been restored, Senator Mantle, a nonbolting delegate from Montana, spoke from his place in the hall. He announced that although he and his delegation intended to remain, they, in the name of the Republicans of Montana, must protest against the financial plank adopted, which they could not accept, indorse, or support, and the delegation would reserve the right to accept or reject the platform and the candidates. Senator Brown, of Utah, 3 of whose delegates had withdrawn, explained their reasons for withdrawal and secured permission to seat 3 alternates. His speech also contained a protest against the adopted financial plank, but added a declaration that if he could not support the platform on the "sound money" issue, he could at any rate aid in securing protection for home industries.

Then came the nominations of presidential candidates, John L. Baldwin, of Council Bluffs, Ia., named William B. Allison. Senator Henry Cabot Lodge, of Massachusetts, placed Thomas B. Reed, of Maine, in nomination. Chauncey M. Depew, of New York, named Gov. Levi P. Morton, of that State. Ex-Gov. Foraker, of Ohio, named William McKinley, of Ohio, and Chairman Thurston seconded the nomination.

Gov. Hastings, of Pennsylvania, named Senator Quay, of that State. The voting on the nomination for President was as in the preceding table.

The motion to proceed with the nomination of Vice-President was made by Senator Lodge. Garret Augustus Hobart, of New Jersey, received 533½ votes; H. Clay Evans, of Tennessee, 277½; Morgan G. Bulkeley, of Connecticut, 39; James A. Walker, of Virginia, 24; Gov. Lippitts, of Rhode Island, 8; Chauncey M. Depew, of New York, 3; Thomas B. Reed, of Maine, 3; Senator Thurston, of Nebraska, 2; Frederick D. Grant, of New York, 2; Levi P. Morton, of New York, 1.

Democratic Convention.—The Democratic National Convention was held at Chicago, Ill., on July 7, 8, 9, and 10. The proceedings were opened by Chairman Harry, of the Democratic National Committee. Prayer was offered by Rev. E. M. Stires, of Grace Episcopal Church. The Chairman announced Senator David B. Hill, of New York, as the selection of the National Committee for temporary chairman. Committeeman Clayton, of Alabama, promptly presented a minority report from the advocates of silver, naming J. W. Daniel, of Virginia, for the post of temporary chairman. On the vote of States, Daniel was accorded the chair, thus placing the convention under the control of the Silver and Populist delegates. Carrying out their programme, Senator White, of California, was made permanent chairman. The platform, containing a silver plank, was read by Senator J. K. Jones, of Arkansas. It was as follows:

We, the Democrats of the United States in National Convention assembled, do reaffirm our allegiance to those great essential principles of justice and liberty upon which our institutions are founded, and which the Democratic party has advocated from Jefferson's time to our own—freedom of speech, freedom of the press, freedom of conscience, the preservation of personal rights, the equality of all citizens before the law, and the faithful observance of constitutional limitations.

During all these years the Democratic party has resisted the tendency of selfish interests to the centralization of governmental power, and steadfastly maintained the integrity of the dual scheme of government established by the founders of this republic of republics. Under its guidance and teachings the great principle of local self-government has found its best expression in the maintenance of the rights of the States, and in its assertion of the necessity of confining the General Government to the exercise of powers granted by the Constitution of the United States.

The Constitution of the United States guarantees to every citizen the rights of civil and religious liberty. The Democratic party has always been the exponent of political liberty and religious freedom, and it renews its obligations and reaffirms its devotion to these fundamental principles of the Constitution.

Finance.—Recognizing that the money question is paramount to all others at this time, we invite attention to the fact that the Constitution names silver and gold together as the money metals of the United States, and that the first coinage law passed by Congress under the Constitution made the silver dollar the money unit of value, and admitted gold to free coinage at a ratio based upon the silver-dollar unit.

We declare that the act of 1873 demonetizing silver without the knowledge or approval of the American people has resulted in the appreciation of gold, and a corresponding fall in the prices of commodities produced by the people; a heavy increase in the burden of taxation and of all debts public and private; the enrichment of

a One vote for J. D. Cameron. b 24 delegates absent.
Total vote of the convention, 922; necessary to a choice, 462.

the money-lending class at home and abroad; the prostration of industry and impoverishment of the people.

We are unalterably opposed to monometallism, which has locked fast the prosperity of an industrial people in the paralysis of hard times. Gold monometallism is a British policy, and its adoption has brought other nations into financial servitude to London. It is not only un-American, but anti-American, and it can be fastened on the United States only by the stifling of that indomitable spirit and love of liberty which proclaimed our political independence in 1776, and won it in the Revolution.

We demand the free and unlimited coinage of both silver and gold at the present legal ratio, of 16 to 1, without waiting for the aid or consent of any other nation. We demand that the standard silver dollar shall be a full legal tender equally with gold for all debts, public and private, and we favor such legislation as will prevent for the future the demonetization of any kind of legal tender money by private contract.

We are opposed to the policy and practice of surrendering to the holders of the obligations of the United States the option reserved by law to the Government of redeeming such obligations in either silver coin or gold coin.

We are opposed to the issuing of interest-bearing bonds of the United States in time of peace, and condemn the trafficking with banking syndicates which, in exchange for bonds and at an enormous profit to themselves, supply the Federal Treasury with gold to maintain the policy of gold monometallism.

Congress alone has the power to coin and issue money, and President Jackson declared that this power could not be delegated to corporations or individuals. We therefore denounce the issuance of notes intended to circulate as money by National banks as in derogation of the Constitution, and we demand that all paper which is made a legal tender for public and private debts, or which is receivable for duties to the United States, shall be issued by the Government of the United States, and shall be redeemable in coin.

Tariff.—We hold that tariff duties should be levied for purposes of revenue, such duties to be so adjusted as to operate equally throughout the country and not discriminate between class or section, and that taxation should be limited by the needs of the Government, honestly and economically administered. We denounce as disturbing to business the Republican threat to restore the McKinley law, which has twice been condemned by the people in National elections, and which, enacted under the false plea of protection to home industry, proved a prolific breeder of trusts and monopolies, enriched the few at the expense of the many, restricted trade, and deprived the producers of the great American staples of access to their natural markets.

Income Tax.—Until the money question is settled we are opposed to any agitation for further changes in our tariff laws, except such as are necessary to meet the deficit in revenue caused by the adverse decision of the Supreme Court on the income tax. But for this decision by the Supreme Court, there would be no deficit in the revenue under the law passed by a Democratic Congress in strict pursuance of the uniform decisions of that court for nearly one hundred years, that court having in that decision sustained Constitutional objections to its enactment which had previously been overruled by the ablest judges who have ever sat on that bench. We declare that it is the duty of Congress to use all the Constitutional power which remains after that decision, or which may come from its reversal by the court as it may hereafter be constituted, so that the burdens of taxation may be equally and impartially laid, to the end that wealth may bear its due proportion of the expenses of the Government.

Immigration.—We hold that the most efficient way of protecting American labor is to prevent the importation of foreign pauper labor to compete with it in the home market, and that the value of the home market to our American farmers and artisans is greatly reduced by a vicious monetary system which depresses the prices of their products below the cost of production, and thus deprives them of the means of purchasing the products of our home manufactures; and as labor creates the wealth of the country, we demand the passage of such laws as may be necessary to protect it in all its rights.

Labor Arbitration.—We are in favor of the arbitration of differences between employers engaged in interstate commerce and their employees, and recommend such legislation as is necessary to carry out this principle.

Trusts.—The absorption of wealth by the few, the consolidation of our leading railroad systems, and the formation of trusts and pools, require a stricter control by the Federal Government of those arteries of commerce. We demand the enlargement of the powers of the Interstate Commerce Commission, and such restrictions and guarantees in the control of railroads as will protect the people from robbery and oppression.

Expenditures.—We denounce the profligate waste of money wrung from the people by oppressive taxation and the lavish appropriations of recent Republican Congresses, which have kept taxes high, while the labor that pays them is unemployed and the products of the people's toil are depressed in price till they no longer repay the cost of production. We demand a return to that simplicity and economy which befit a democratic government, and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

State Rights.—We denounce arbitrary interference by Federal authorities in local affairs as a violation of the Constitution of the United States and a crime against free institutions; and we especially object to government by injunction as a new and highly dangerous form of oppression, by which Federal judges, in contempt of the laws of the States and rights of citizens, become at once legislators, judges, and executioners; and we approve the bill passed at the last session of the United States Senate, and now pending in the House of Representatives, relative to contempts in Federal courts and providing for trials by jury in certain cases of contempt.

Pacific Railroad.—No discrimination should be indulged by the Government of the United States in favor of any of its debtors. We approve of the refusal of the Fifty-third Congress to pass the Pacific Railroad funding bill, and denounce the efforts of the present Republican Congress to enact a similar measure.

Pensions.—Recognizing the just claims of deserving Union soldiers, we heartily indorse the rule of the present Commissioner of Pensions that no names shall be arbitrarily dropped from the pension roll; and the fact of enlistment and service should be deemed conclusive evidence against disease and disability before enlistment.

Territories.—We favor the admission of the Territories of New Mexico, Oklahoma, and Arizona into the Union as States, and we favor the early admission of all the Territories having the necessary population and resources to entitle them to statehood; and, while they remain Territories, we hold that the officials appointed to administer the government of any Territory, together with the District of Columbia and Alaska, should be *bona fide* residents of the Territory or District in which the duties are to be performed. The Democratic party believes in home rule, and that all public lands of the United States should be appropriated to the establishment of free homes for American citizens.

We recommend that the Territory of Alaska be granted a delegate in Congress, and that the general land and timber laws of the United States be extended to said Territory.

Monroe Doctrine.—The Monroe Doctrine, as originally declared and as interpreted by succeeding Presidents, is a permanent part of the foreign policy of the United States, and must at all times be maintained.

Cuba.—We extend our sympathy to the people of Cuba in their heroic struggle for liberty and independence.

Civil Service.—We are opposed to life tenure in the public service. We favor appointments based upon merit, fixed terms of office, and such an administration of the civil-service laws as will afford equal opportunities to all citizens of ascertained fitness.

Third Term.—We declare it to be the unwritten law of this republic, established by custom and usage of one hundred years and sanctioned by the examples of the greatest and wisest of those who founded and have maintained our Government, that no man should be eligible for a third term of the presidential office.

Waterways.—The Federal Government should care for and improve the Mississippi river and other great waterways of the republic, so as to secure for the interior States easy and cheap transportation to tidewater. When any waterway of the republic is of sufficient importance to demand aid of the Government, such aid should be expended upon a definite plan of continuous work until permanent improvement is secured.

Confiding in the justice of our cause and the necessity

of its success at the polls, we submit the foregoing declarations of principles and purposes to the considerate judgment of the American people. We invite the support of all citizens who approve them and who desire to have them made effective through legislation for the relief of the people and the restoration of the country's prosperity.

Following the reading of the platform, speeches were made by Senators Tillman, of North Carolina, Hill, of New York, and Vilas, of Wisconsin, also ex-Gov. Russell, of Massachusetts, and W. J. Bryan, of Nebraska. The peroration of the last-named speaker's address contained this sentence: "We shall answer their demand for the gold standard by saying to them, 'You shall not press down upon the brow of labor this crown of thorns. You shall not crucify mankind upon a cross of gold.'" The silver delegates expressed their entire approbation of the sentiments therein expressed.

The importance of the issues involved, and also the bearing of the report on the subsequent proceedings of the convention, render it necessary to publish the minority report in full:

To the Democratic National Convention.—Sixteen delegates, constituting the minority of the Committee on Resolutions, find many declarations in the report of the majority to which they can not give their assent. Some of these are wholly unnecessary: some are ill-considered and ambiguously phrased; while others are extreme, and revolutionary of the well-recognized principles of the party. The minority content themselves with this general expression of their dissent, without going into a specific statement of these objectionable features of the report of the majority.

But upon the financial question, which engages at this time the chief share of public attention, the views of the majority differ so fundamentally from what the minority regard as vital Democratic doctrine as to demand a distinct statement of what they hold to as the only just and true expression of Democratic faith upon this important issue, as follows, which is offered as a substitute for the financial report of the majority:

"We declare our belief that the experiment on the part of the United States alone of free-silver coinage and a change in the existing standard of value independently of the action of other great nations would not only imperil our finances, but would retard or entirely prevent the establishment of international bimetalism, to which the efforts of the Government should be steadily directed. It would place this country at once upon a silver basis, impair contracts, disturb business, diminish the purchasing power of the wages of labor, and inflict irreparable evils upon our nation's commerce and industry.

"Until international co-operation among leading nations for the coinage of silver can be secured, we favor the rigid maintenance of the existing gold standard as essential to the preservation of our national credit, the redemption of our public pledges, and the keeping inviolate of our country's honor. We insist that all our paper currency shall be kept at a parity with gold. The Democratic party is the party of hard money, and is opposed to legal-tender paper money as a part of our permanent financial system, and we therefore favor the gradual retirement and cancellation of all United States notes and Treasury notes, under such legislative provisions as will prevent undue contraction. We demand that the national credit shall be resolutely maintained at all times and under all circumstances."

The minority also feel that the report of the majority is defective in failing to make any recognition of the honesty, economy, courage, and fidelity of the present Democratic Administration, and they therefore offer the following declaration as an amendment to the majority report:

"We commend the honesty, economy, courage, and fidelity of the present Democratic National Administration."

The signers were: David B. Hill, New York; William F. Vilas, Wisconsin; George Gray, Delaware; J. P. Poe, Maryland; I. W. Drew, New Hampshire; P. J. Farrell, Vermont; Lynde Harrison, Connecticut; D. S. Baker, Rhode Island; C. O. Holman, Maine; T. A. C. Weadock, Michigan; J. E. O'Brien, Minnesota; J. E. Russell, Massa-

chusetts; R. E. Wright, Pennsylvania; W. R. Steele, South Dakota; A. L. McDermott, New Jersey; and C. D. Rogers, Alaska.

The question of accepting the minority report was put to the vote, with this result: Yeas, 301; nays, 628. The statement, as below, shows the vote in support of the majority or "Free-Silver" platform:

STATES AND TERRITORIES.	Yeas.		Nays.

New Jersey	20	..		301

Absent, 1.

On the minority resolution indorsing the Administration, the vote demanded by Senator Hill was: Yeas, 357; nays, 564; not voting, 9.

On the evening of July 10 the roll of States was called for nomination of presidential and vice-presidential candidates. Senator Vest, of Missouri, named Richard P. Bland, of Arkansas. II. T. Lewis, of Georgia, named William Jennings Bryan, of Nebraska. This was seconded by George Fred. Williams, of Massachusetts. Senator Turpie, of Indiana, presented the name of Gov. Claude Williams of that State. Mr. Fred. White, of Iowa, urged the nomination of ex-Gov. Horace Boies. J. S. Rhea, of Kentucky, named Senator J. C. S. Blackburn. Mr. A. W. Patrick, of Ohio, spoke in behalf of John R. McLean, of Cincinnati.

When voting for the candidates was in progress on the first ballot, ten Michigan delegates refused to vote. New Jersey declined to take any further part in the proceedings. For New York, ex-Gov. Flower said: "In view of the platform adopted by this convention, I am instructed, as a delegate from the State of New York, to say that the delegates have agreed not to participate in the selection of candidates for President and Vice-President, and therefore they decline to vote." Gen. Bragg announced that Wisconsin declined to vote. His assertion caused a dispute in the delegation, ending in 4 out of 24 voting.

The first ballot showed the following result: Bland, 235; Bryan, 119; Boies, 85; Blackburn, 83; McLean, 54; Matthews, 37; Campbell, 1; Pattison, 95; Pennoyer, 8; Russell, 2; Stevenson, 2; Tillman, 17; Teller, 8; Hill, 1; absent and not voting, 178. On the second ballot, Bland stood 283; Boies, 41; Matthews, 33; McLean, 53; Blackburn, 41; Pattison, 100; Bryan, 190; Pennoyer, 8; Stevenson, 10; Hill, 1; Teller, 8; not voting, 162. On the third ballot Bland had 291 and Bryan 219. The number not voting was still 162. The fourth ballot found Bryan with 280 and Bland with 241, 162 delegates not voting. The total number of votes cast on the fourth ballot, 768; necessary to a choice, 512. The chairman then declared the two-

third rule in operation. The fifth ballot gave the following result:

STATES AND TERRITORIES.	Bland.	Boies.	Mathews.	Bryan.	Pattison.	Stevenson.	Not Voting.

Ohio changed from McLean to Bryan during the ballot. Oklahoma changed from Bland to Bryan. Hill received 1 vote from Massachusetts, and Thrpie 1 vote from Wisconsin. Changes were made after the ballot was announced, giving Bryan more than the 512 necessary votes.

There were 5 ballots for a candidate for Vice-President. On the fourth ballot McLean, Ohio, received 296; Sewall, Maine, 292; Daniel, Virginia, 54; Clark, North Carolina, 46; Williams, Massachusetts, 19; Harrity, Pennsylvania, 11; Pattison, Pennsylvania, 1; not voting, 252. No record was kept of the fifth ballot, but the nomination was made unanimously.

From the table it may be noted that the States not voting (wholly or in part) were: Connecticut, Delaware, Maine, Maryland, Massachusetts, Minnesota, New Hampshire, New Jersey, New York, Rhode Island, Vermont, Wisconsin. Of these, New York was the only State retaining a solid delegation against platform and candidates.

William Jennings Bryan was born in Salem, Marion County, Ill., March 19, 1860. His father was Silas L. Bryan, a lawyer of high standing, who had served eight years in the Illinois Senate and was afterward a circuit judge. The family came originally from Virginia. The son spent his early life on his father's farm, on the outskirts of Salem. He went to the public schools, prepared for college in the Whipple Academy, at Jacksonville, Ill., and at the age of seventeen entered Illinois College, in that town. He was a good student, and graduated with honors in 1881, appearing at commencement as the orator of his class, a position that he had earned by gaining the second prize in an intercollegiate ora-

torical contest held at Galesburg while he was a senior. He immediately began the study of the law, entering Judge Lyman Trumbull's office in Chicago, and at the same time pursuing the course of the Union Law College. He began his professional career in Jacksonville, and a year later married Mary E. Baird, the only daughter of a prosperous merchant of Perry, Ill. The marriage was the result of an attachment that had sprung up when he was a student in college and the young woman a student also in the seminary at Jacksonville. In 1887 the young couple removed to Lincoln, Neb., where he formed a partnership with a lawyer named Talbot and opened a law office in the autumn of that year. Mrs. Bryan took up the study of the law after the birth of the first of her three children, was admitted to the bar, and gave efficient aid to her husband in his law practice. In May, 1888, Bryan was elected a delegate to the Democratic

WILLIAM JENNINGS BRYAN.

State Convention that met at Omaha to elect delegates for the national convention at St. Louis. Being invited to make a speech at the convention, he electrified his colleagues with a brilliant exposition of the doctrine of tariff for revenue only, gaining thereby a reputation throughout the State for oratorical ability and political knowledge. In the following year the Democratic leaders of the State offered to the young and hitherto unknown lawyer the nomination for Lieutenant Governor, which he declined. He took an active part, however, in the campaign, making speeches in all parts of Nebraska. A year later, in 1890, the younger element of the Democrats of his district, which had elected a Democratic candidate by 7,000 majority in 1886, and in 1888 had suffered a severe reverse, J. Sterling Morton being defeated by his Republican opponent by a majority of 3,000, made Bryan the party candidate for Congress. Mr. Bryan accepted the nomination, and though ridiculed as an inexperienced boy by the Democrats of the rival city of Omaha and neglected by the party managers, who took no interest in the contest, regarding it as hopeless, and supplied no funds, he made a vigorous

campaign on the issue of the McKinley tariff, and was elected by 32,376 votes to 25,663 for his Republican opponent, the actual Republican Representative Connell. Mr. Bryan took his seat in December, 1891, and after laboring hard in support of the candidacy of William M. Springer for the speakership, was placed on the Committee of Ways and Means, of which Springer was chairman. His speeches in Congress in support of the Democratic views of the tariff were so eloquent and effective that he was retained as a member of the Ways and Means Committee when it was reconstituted in the Forty-third Congress, to which he was elected in 1892 by a plurality of only 140. In this Congress he was the most conspicuous advocate of the free coinage of silver after Richard P. Bland, whom he aided in the manoeuvres in behalf of silver with all his skill and readiness in debate and mastery of parliamentary tactics. In opposing the repeal of the silver-purchase law he held the attention for three hours of the House with a brilliant speech. When his second term drew to a close Bryan declined to be renominated, pleading the necessity of looking after his private affairs. He accepted the editorship of the Omaha "World-Herald" for the purpose of promoting the silver cause, beginning his duties on Sept. 1, 1894. He was a candidate for the United States Senate, but was defeated by the Republican John M. Thurston. He retired from the editorship and resumed his law practice, but continued to take an active part in the party management, and was the principal author of the fusion of the Democrats and the People's party in Nebraska. In the Chicago convention Bryan was not a prominent candidate for the presidential nomination. He was not thought of, indeed, by the leaders and the party at large until he captivated the convention by an impassioned speech in reply to Senator David B. Hill and other advocates of the gold standard, ending with the apostrophe: "You shall not press down upon the brow of labor this crown of thorns! You shall not crucify mankind upon a cross of gold!"

Socialist Labor Convention.—The national convention of the Socialist Labor party was held in New York city on July 9, 1896. The platform was as follows:

The Socialist Labor party of the United States, in convention assembled, reasserts the inalienable right of all men to life, liberty, and the pursuit of happiness.

With the founders of the American republic, we hold that the purpose of government is to secure every citizen in the enjoyment of this right; but in the light of our social conditions, we hold, furthermore, that no such right can be exercised under a system of economic inequality, essentially destructive of life, of liberty, and of happiness.

With the founders of this republic, we hold that the true theory of politics is that the machinery of government must be owned and controlled by the whole people; but in the light of our industrial development we hold, furthermore, that the true theory of economics is that the machinery of production must likewise belong to the people in common.

To the obvious fact that our despotic system of economics is the direct opposite of our democratic system of politics, can plainly be traced the existence of a privileged class, the corruption of government by that class, the alienation of public property, public franchises, and public functions to that class, and the abject dependence of the mightiest nations upon that class.

Again, through the perversion of democracy to the ends of plutocracy, labor is robbed of the wealth which it alone produces, is denied the means of self-employment, and, by compulsory idleness in wage slavery, is even deprived of the necessities of life.

Human power and natural forces are thus wasted that the plutocracy may rule.

Ignorance and misery, with all their concomitant evils, are perpetuated, that the people may be kept in bondage.

Science and invention are diverted from their humane purpose to the enslavement of women and children.

Against such a system the Socialist Labor party once more enters its protest. Once more it reiterates its fundamental declaration, that private property in the natural sources of production and in the instruments of labor is the obvious cause of all economic servitude and political dependence.

The time is fast coming when, in the natural course of social evolution, this system, through the destructive action of its failures and crises on the one hand, and the constructive tendencies of its trusts and other capitalistic combinations on the other hand, shall have worked out its own downfall.

We therefore call upon the wage workers of the United States, and upon all other honest citizens, to organize under the banner of the Socialist Labor party into a class-conscious body, aware of its rights and determined to conquer them by taking possession of the public powers; so that, held together by an indomitable spirit of solidarity under the most trying conditions of the present class struggle, we may put a summary end to that barbarous struggle by the abolition of classes, the restoration of the land, and of all the means of production, transportation, and distribution, to the people as a collective body, and the substitution of the Co-operative Commonwealth for the present state of planless production, industrial war, and social disorder; a commonwealth in which every worker shall have the free exercise and full benefit of his faculties, multiplied by all the modern factors of civilization.

With a view to immediate improvement in the condition of labor we present the following demands:

1. Reduction of the hours of labor in proportion to the progress of production.

2. The United States to obtain possession of the mines, railroads, canals, telegraphs, telephones, and all other means of public transportation and communication; the employees to operate the same co-operatively under control of the Federal Government and to elect their own superior officers, but no employee shall be discharged for political reasons.

3. The municipalities to obtain possession of the local railroads, ferries, waterworks, gas works, electric plants, and all industries requiring municipal franchises; the employees to operate the same co-operatively under control of the municipal administration and to elect their own superior officers, but no employee shall be discharged for political reasons.

4. The public lands to be declared inalienable. Revocation of all land grants to corporations or individuals, the conditions of which have not been complied with.

5. The United States to have the exclusive right to issue money.

6. Congressional legislation providing for the scientific management of forests and waterways, and prohibiting the waste of the natural resources of the country.

7. Inventions to be free to all; the inventors to be remunerated by the nation.

8. Progressive income tax and tax on inheritances; the smaller incomes to be exempt.

9. School education of all children under fourteen years of age to be compulsory, gratuitous, and accessible to all by public assistance in meals, clothing, books, etc., where necessary.

10. Repeal of all pauper, tramp, conspiracy, and sumptuary laws. Unabridged right of combination.

11. Prohibition of the employment of children of school age, and the employment of female labor in occupations detrimental to health or morality. Abolition of the convict labor contract system.

12. Employment of the unemployed by the public authorities (county, city, State, and nation).

13. All wages to be paid in lawful money of the United States. Equalization of woman's wages with those of men where equal service is performed.

14. Laws for the protection of life and limb in all occupations, and an efficient employers' liability law.

15. The people to have the right to propose laws and to vote upon all measures of importance, according to the referendum principle.

16. Abolition of the veto power of the Executive (National, State, and Municipal) wherever it exists.

17. Abolition of the United States Senate and all upper legislative chambers.

18. Municipal self-government.

19. Direct vote and secret ballots in all elections. Universal and equal right of suffrage without regard to color, creed, or sex. Election days to be legal holidays. The

principle of proportional representation to be introduced.

20. All public officers to be subject to recall by their respective constituencies.

21. Uniform civil and criminal law throughout the United States. Administration of justice to be free of charge. Abolition of capital punishment.

Charles H. Matchett, of New York, was nominated for President, and Matthew Maguire, of New Jersey, for Vice-President.

Populist Convention.—The Populist Convention was held at St. Louis, Mo., on July 22, 23, and 24, 1896. It was called to order by Mr. Taubeneck, Chairman of the Populist National Committee. Gov. W. J. Stone, of Missouri, delivered an address of welcome. Senator Marion Butler, of North Carolina, was made temporary chairman. Senator Allen, of Nebraska, was chosen as permanent chairman, after a vote had been taken on the adoption of a minority report recommending James A. Campion, of Maine. The vote yielded 758 for Allen and 564 for Campion. This was a victory for those who approved of W. J. Bryan as head of the ticket. The platform was as follows:

The People's party, assembled in national convention, reaffirms its allegiance to the principles declared by the founders of the republic, and also to the fundamental principles of just government as enunciated in the platform of the party in 1892.

We recognize that through the connivance of the present and preceding administrations the country has reached a crisis in its national life, as predicted in our declaration four years ago, and that prompt and patriotic action is the supreme duty of the hour.

We realize that, while we have political independence, our financial and industrial independence is yet to be attained by restoring to our country the constitutional control and exercise of the functions necessary to a people's government, which functions have been basely surrendered by our public servants to corporate monopolies. The influence of European money-changers has been more potent in shaping legislation than the voice of the American people. Executive power and patronage have been used to corrupt our legislatures and defeat the will of the people, and plutocracy has thereby been enthroned upon the ruins of democracy. To restore the government intended by the fathers, and for the welfare and prosperity of this and future generations, we demand the establishment of an economic and financial system which shall make us masters of our own affairs and independent of European control, by the adoption of the following declaration of principles:

Finance.—1. We demand a national money, safe and sound, issued by the General Government only, without the intervention of banks of issue, to be a full legal tender for all debts, public and private; a just, equitable, and efficient means of distribution, direct to the people, and through the lawful disbursements of the Government.

2. We demand the free and unrestricted coinage of silver and gold at the present legal ratio of 16 to 1, without waiting for the consent of foreign nations.

3. We demand that the volume of circulating medium be speedily increased to an amount sufficient to meet the demands of the business and population, and to restore the just level of prices of labor and production.

4. We denounce the sale of bonds and the increase of the public interest-bearing debt made by the present Administration as unnecessary and without authority of law, and demand that no more bonds be issued except by specific act of Congress.

5. We demand such legislation as will prevent the demonetization of the lawful money of the United States by private contract.

6. We demand that the Government, in payment of its obligations, shall use its option as to the kind of lawful money in which they are to be paid, and we denounce the present and preceding administrations for surrendering this option to the holders of Government obligations.

7. We demand a graduated income tax, to the end that aggregated wealth shall bear its just proportion of taxation, and we regard the recent decision of the Supreme Court relative to the income-tax law as a misinterpretation of the Constitution and an invasion of the rightful powers of Congress over the subject of taxation.

8. We demand that postal savings banks be established by the Government for the safe deposit of the savings of the people and to facilitate exchange.

Government Control of Railroads and Telegraphs.—1. Transportation being a means of exchange and a public necessity, the Government should own and operate the railroads in the interest of the people and on a non-partisan basis, to the end that all may be accorded the same treatment in transportation, and that the tyranny and political power now exercised by the great railroad corporations, which result in the impairment, if not the destruction, of the political rights and personal liberties of the citizen, may be destroyed. Such ownership is to be accomplished gradually, in a manner consistent with sound public policy.

2. The interest of the United States in the public highways built with public moneys, and the proceeds of grants of land to the Pacific railroads, should never be alienated, mortgaged, or sold, but guarded and protected for the general welfare, as provided by the laws organizing such railroads. The foreclosure of existing liens of the United States on these roads should at once follow default in the payment thereof by the debtor companies; and at the foreclosure sale of said roads the Government shall purchase the same, if it becomes necessary to protect its interests therein, or if they can be purchased at a reasonable price; and the Government shall operate said railroads as public highways for the benefit of the whole people, and not in the interest of the few, under suitable provisions for protection of life and property, giving to all transportation interests equal privileges and equal rates for fares and freights.

3. We denounce the present infamous schemes for refunding these debts, and demand that the laws now applicable thereto be executed and administered according to their intent and spirit.

4. The telegraph, like the post-office system, being a necessity for the transmission of news, should be owned and operated by the Government in the interest of the people.

Public Lands.—1. True policy demands that the national and State legislation shall be such as will ultimately enable every prudent and industrious citizen to secure a home, and therefore the land should not be monopolized for speculative purposes. All lands now held by railroads and other corporations in excess of their actual needs should by lawful means be reclaimed by the Government and held for actual settlers only, and private land monopoly, as well as alien ownership, should be prohibited.

2. We condemn the land-grant frauds by which the Pacific railroad companies have, through the connivance of the Interior Department, robbed multitudes of *bona fide* settlers of their homes and miners of their claims, and we demand legislation by Congress which will enforce the exception of mineral land from such grants after as well as before the patent.

3. We demand that *bona fide* settlers on all public lands be granted free homes, as provided in the National Homestead Law, and that no exception be made in the case of Indian reservations when opened for settlement, and that all lands not now patented come under this demand.

Referendum.—We favor a system of direct legislation through the initiative and referendum, under proper constitutional safeguards.

Election of President and Senators.—We demand the election of President, Vice-President, and United States Senators by a direct vote of the people.

Cuba.—We tender to the patriotic people of Cuba our deepest sympathy in their heroic struggle for political freedom and independence, and we believe the time has come when the United States, the great republic of the world, should recognize that Cuba is, and of right ought to be, a free and independent state.

Territories.—We favor home rule in the Territories and the District of Columbia, and the early admission of the Territories as States.

Official Salaries.—All public salaries should be made to correspond to the price of labor and its products.

Paternalism.—In times of great industrial depression idle labor should be employed on public works as far as practicable.

Judicial Action.—The arbitrary course of the courts in assuming to imprison citizens for indirect contempt and ruling by injunction should be prevented by proper legislation.

Pensions.—We favor just pensions for our disabled Union soldiers.

The Ballot.—Believing that the elective franchise and untrammelled ballot are essential to a government of, for, and by the people, the People's party condemn the wholesale system of disfranchisement adopted in some States as unrepresentative and undemocratic, and we declare it to be the duty of the several State legislatures to take such action as will secure a full, free, and fair ballot and an honest count.

Finance.—While the foregoing propositions constitute the platform upon which our party stands, and for the vindication of which its organization will be maintained, we recognize that the great and pressing issue of the pending campaign, upon which the present election will turn, is the financial question, and upon this great and specific issue between the parties we cordially invite the aid and co-operation of all organizations and citizens agreeing with us upon this vital question.

A minority submitted a substitute platform denouncing "the methods and policies of the Democratic and Republican parties" for their "mutual co-operation with the money power"; also their policies of tariff and the issuance of interest-bearing United States bonds in time of peace; demanded a national currency; the free and unlimited coinage of silver and gold at a ratio of 16 to 1; that the circulating medium shall consist of gold, silver, and paper currency; a graduated income tax; economy in Federal administration; Government ownership of the telegraph and telephone; the prohibition of alien ownership of land and pauper immigration, and legislation by means of the initiative and referendum. The minority platform was defeated by a large majority.

By a vote of 785 to 615 it was resolved to nominate the candidate for Vice-President first.

The names presented were Congressman Harry Skinner, of North Carolina; Thomas E. Watson, of Georgia; Frank Burkitt, of Mississippi; A. L. Mimms, of Tennessee; Mann Page, of Virginia; and Arthur Sewall, of Maine. The balloting began after midnight, July 24, and the result of the first ballot gave Watson 469½; Sewall, 257½, and the others ranging lower. A motion to declare Watson the nominee was carried.

On the following day William J. Bryan, nominee of the Democratic Convention, was made the head of the Populist ticket. He had telegraphed to Senator Jones to withdraw his name if Sewall, Democratic nominee for Vice-President, was not indorsed for Vice-President, but it was allowed to stand. James B. Weaver nominated Mr. Bryan; Henry W. Call nominated S. F. Norton, of Chicago; Mr. Livingston nominated J. S. Coxey, but withdrew the name later. The ballot showed the following result: Bryan, 1,042; Norton, 321; Eugene V. Debs, 8; Ignatius Donnelly, 3; J. S. Coxey, 1.

Silver Party Convention.—The convention of the National Silver party was also held at St. Louis, on July 22, 1896. It was called to order by Dr. J. J. Mott, of North Carolina. Representative F. G. Newlands, of Nevada, was made temporary chairman. William P. St. John, of New York, was selected as permanent chairman. The platform was as follows:

First, the paramount issue at this time in the United States is indisputably the money question. It is between the British gold standard, gold bonds, and bank currency on the one side, and the bimetallic standard, no bonds, Government currency (and an American policy), on the other.

Silver.—On this issue we declare ourselves to be in favor of a distinctively American financial system. We are unalterably opposed to the single gold standard, and demand the immediate return to the constitutional standard of gold and silver, by the restoration by this Government, independently of any foreign power, of the unrestricted coinage of both gold and silver into standard money at the ratio of 16 to 1, and upon terms of exact

equality, as they existed prior to 1873; the silver coin to be of full legal tender, equally with gold, for all debts and dues, public and private; and we demand such legislation as will prevent for the future the destruction of the legal-tender quality of any kind of money by private contract.

We hold that the power to control and regulate a paper currency is inseparable from the power to coin money, and hence that all currency intended to circulate as money should be issued and its volume controlled by the General Government only, and should be a legal tender.

Bond Issues.—We are unalterably opposed to the issue by the United States of interest-bearing bonds in time of peace; and we denounce as a blunder, worse than a crime, the present Treasury policy, concurred in by a Republican House, of plunging the country into debt by hundreds of millions in the vain attempt to maintain the gold standard by borrowing gold; and we demand the payment of all coin obligations of the United States, as provided by existing laws, in either gold or silver coin, at the option of the Government and not at the option of the creditor.

Production.—The advocates of the gold standard persistently claim that the real cause of our distress is overproduction—that we have produced so much that it made us poor; which implies that the true remedy is to close the factory, abandon the farm, and throw a multitude of people out of employment—a doctrine that leaves us unnerved and disheartened, and absolutely without hope for the future. We affirm it to be unquestioned that there can be no such economic paradox as overproduction and at the same time tens of thousands of our fellow-citizens remaining half clothed and half fed, and who are piteously clamoring for the common necessities of life.

Bimetallism.—Over and above all other questions of policy we are in favor of restoring to the people of the United States the time-honored money of the Constitution—gold and silver, not one, but both—the money of Washington and Hamilton, and Jefferson and Monroe, and Jackson and Lincoln, to the end that the American people may receive honest pay for an honest product; that the American debtor may pay his just obligations in an honest standard, and not in a dishonest and unsound standard, appreciated 100 per cent. in purchasing power and no appreciation in debt-paying power, and to the end, further, that silver-standard countries may be deprived of the unjust advantage they now enjoy in the difference in exchange between gold and silver—an advantage which tariff legislation can not overcome.

Candidates.—Inasmuch as the patriotic majority of the Chicago convention embodied in the financial plank of its platform the principles enunciated in the platform of the American bimetallic party, promulgated at Washington, D. C. Jan. 22, 1896, and herein reiterated, which is not only the paramount but the only real issue in the pending campaign, therefore, recognizing that their nominees embody these patriotic principles, we recommend that this convention nominate William J. Bryan, of Nebraska, for President, and Arthur Sewall, of Maine, for Vice-President.

The nominees recommended in the platform were indorsed by acclamation.

National Democratic Convention.—The convention of the National Democratic party was held at Indianapolis on Sept. 2 and 3, 1896. It was opened by Senator Palmer, chairman of the National Committee. Prayer was offered by Bishop Hagen White, of Indiana. Forty-one States, with 888 delegates, responded to the first roll call. Alaska, Arizona, and New Mexico were represented in the above total. Ex-Gov. Roswell P. Flower, of New York, was chosen as temporary chairman; Senator Donelson Caffery, of Louisiana, was selected as permanent chairman. The platform was as follows:

This convention has assembled to uphold the principles upon which depend the honor and welfare of the American people, in order that Democrats throughout the Union may unite their patriotic efforts to avert disaster from their country and ruin from their party.

Democratic Principles.—The Democratic party is pledged to equal and exact justice to all men of every creed and condition; to the largest freedom of the indi-

vidual consistent with good government; to the preservation of the Federal Government in its constitutional vigor, and to the support of the States in all their just rights; to economy in the public expenditures; and to the maintenance of the public faith and sound money; and it is opposed to paternalism and all class legislation.

Chicago Convention.—The declarations of the Chicago convention attack individual freedom, the right of private contract, the independence of the judiciary, and the authority of the President to enforce Federal laws. They advocate a reckless attempt to increase the price of silver by legislation to the debasement of our monetary standard, and threaten unlimited issues of paper money by the Government. They abandon for Republican allies the Democratic cause of tariff reform to court the favor of protectionists to their fiscal heresy.

In view of these and other grave departures from Democratic principles we can not support the candidates of that convention nor be bound by its acts. The Democratic party has survived many defeats, but could not survive a victory won in behalf of the doctrine and policy it proclaimed in its name at Chicago.

The Republican Party.—The conditions, however, which make possible such utterances from a national convention are the direct result of class legislation by the Republican party. It still proclaims, as it has for years, the power and duty of Government to raise and maintain prices by law, and it proposes no remedy for existing evils except oppressive and unjust taxation.

Tariff.—The National Democracy here convened therefore renews its declaration of faith in Democratic principles, especially as applicable to the conditions of the times. Taxation, tariff, excise or direct, is rightfully imposed only for public purposes and not for private gain. Its amount is justly measured by public expenditures, which should be limited by scrupulous economy. The sum derived by the Treasury from tariff and excise levies is affected by the state of trade and volume of consumption. The amount required by the Treasury is determined by the appropriations made by Congress.

The demand of the Republican party for an increase in tariff taxation has its pretext in the deficiency of revenue, which has its causes in the stagnation of trade and reduced consumption, due entirely to the loss of confidence that has followed the Populist threat of free coinage and depreciation of our money and the Republican practice of extravagant appropriations beyond the needs of good government. We arraign and condemn the Populistic conventions of Chicago and St. Louis for their co-operation with the Republican party in creating these conditions which are pleaded in justification of a heavy increase of the burdens of the people by a further resort to protection.

Protection.—We therefore denounce protection and its ally, free coinage of silver, as schemes for the personal profit of a few at the expense of the masses, and oppose the two parties which stand for these schemes as hostile to the people of the republic, whose food and shelter, comfort and prosperity, are attacked by higher taxes and depreciated money; in fine, we reaffirm the historic Democratic doctrine of tariff for revenue only.

Shipping.—We demand that henceforth modern and liberal policies toward American shipping shall take the place of our imitation of the restricted statutes of the eighteenth century, which have been abandoned by every maritime power but the United States, and which, to the nation's humiliation, have driven American capital and enterprise to the use of alien flags and alien crews, have made the stars and stripes an almost unknown emblem in foreign ports, and have virtually extinguished the race of American seamen.

We oppose the pretense that discriminating duties will promote shipping. That scheme is an invitation to commercial warfare upon the United States, un-American in the light of our great commercial treaties, offering no gain whatever to American shipping, while greatly increasing ocean freights on our agricultural and manufactured products.

Currency.—The experience of mankind has shown that, by reason of their natural qualities, gold is the necessary money of the large affairs of commerce and business, while silver is conveniently adapted to minor transactions, and the most beneficial use of both together can be insured on it by the adoption of the former as a standard of monetary measure, and the maintenance of silver at a parity with gold by its limited coinage under suitable safeguards of law.

Thus the largest possible enjoyment of both metals is gained with a value universally accepted throughout the world, which constitutes the only practicable bimetallic currency, assuring the most stable standard, and especially the best and safest money for all who earn their livelihood by labor or the produce of husbandry. They can not suffer when paid in the best money known to man, but are the peculiar and most defenseless victims of a debased and fluctuating currency, which offers continual profits to the money changer at their cost.

Realizing the truths demonstrated by long and public inconvenience and loss, the Democratic party, in the interests of the masses and of equal justice to all, practically established by the legislation of 1834 and 1853 the gold standard of monetary measurement, and likewise entirely divorced the Government from banking and currency issues.

Gold.—To this long-established Democratic policy we adhere, and insist upon the maintenance of the gold standard and of the parity therewith of every dollar issued by the Government, and are firmly opposed to the free and unlimited coinage of silver and to the compulsory purchase of silver bullion.

Banking.—But we denounce also the further maintenance of the present patchwork system of national paper currency as a constant source of injury and peril. We assert the necessity of such intelligent currency reform as will confine the Government to its legitimate functions, completely separated from the banking business, and afford to all sections of our country a uniform, safe, and elastic bank currency under governmental supervision, measured in volume by the needs of business.

The Administration.—The fidelity, patriotism, and courage with which President Cleveland has fulfilled his great public trust, the high character of his Administration, its wisdom and energy in the maintenance of civil order and the enforcement of the laws, its equal regard for the rights of every class and every section, its firm and dignified conduct of foreign affairs, and its sturdy persistence in upholding the credit and honor of the nation, are fully recognized by the Democratic party, and will secure to him a place in history beside the fathers of the republic.

Civil Service Reform.—We also commend the Administration for the great progress made in the reform of the public service, and we indorse its effort to extend the merit system still further. We demand that no backward step be taken, but that the reform be supported and advanced until the undemocratic spoils system of appointments shall be eradicated.

Expenditures.—We demand strict economy in the appropriations and in the administration of the Government.

Arbitration.—We favor arbitration for the settlement of international disputes.

Pensions.—We favor a liberal policy of pensions to deserving soldiers and sailors of the United States.

Supreme Court.—The Supreme Court of the United States was wisely established by the framers of our Constitution as one of the three co-ordinate branches of the Government. Its independence and authority to interpret the law of the land without fear or favor must be maintained.

We condemn all efforts to degrade that tribunal or impair the confidence and respect which it has deservedly held.

Public Order.—The Democratic party ever has maintained, and ever will maintain, the supremacy of law, the independence of its judicial administration, the inviolability of contract, and the obligations of all good citizens to resist every illegal trust, combination, or attempt against the just rights of property and the good order of society, in which are bound up the peace and happiness of our people.

Believing these principles to be essential to the well-being of the republic, we submit them to the consideration of the American people.

Mr. Lemuel L. Kilburn, of Michigan, presented the name of Gen. John M. Palmer, of Illinois, as presidential nominee. Mr. Barr W. Jones named Gen. Edward S. Bragg, of Wisconsin. The official vote announced 769½ for Palmer, 118½ for Bragg. On motion of the latter the vote for Palmer was made unanimous. Gen. Buckner, of Kentucky, was enthusiastically nominated for second place.

Election Results. Popular Vote.—The popular vote, by parties, for each State, will be found under the heading "Political" in each of the State articles in this volume. According to the latest revised returns, the total vote for President, 1896, was 13,926,757. The Republican vote reached 7,104,244. That of the Democrats, including Populists and Silver party, each having Bryan at the head of its ticket, was 6,506,835. The National Democratic vote is recorded as 134,652. The ticket of this party was headed by Palmer, and represented "sound money." The vote of the two Prohibition parties aggregated 144,606. The Socialist-Labor candidate polled 36,416. That portion of the Democratic vote supported by Populists, and having Watson substituted for Sewall as vice-presidential candidate, contributed, in round numbers, 217,000 toward the Democratic total given above. This number was cast in 17 States. That portion of the Prohibition vote supported by the Bentley candidates amounted to nearly 14,000. In 28 States a Democratic-Populist fusion for division of electors was consummated, as below:

* The Democratic ticket was indorsed by the Populists, the electors to vote as they please for Vice-President.
 † Populists indorsed the Democratic electors in return for State officers.
 ‡ One Silver Republican elector.

Pluralities.—Twenty-three States gave an aggregate of Republican pluralities amounting to 1,565,903. Twenty-two States showed a Democratic aggregated plurality of 968,494. The actual Republican plurality was therefore 597,409.

Electoral College.—The following exhibit shows the distribution of electoral votes, 1896:

Analysis of Election Results by States. Rank of States in Total and Party Vote and in Pluralities.—The five States casting the largest

total vote at the last presidential election were New York, Pennsylvania, Illinois, Ohio, and Missouri. Of these, the first four named also cast the highest Republican vote, Indiana being fifth. New York, Ohio, Illinois, Pennsylvania, and Missouri stand at the head of the Democratic column in the matter of total vote. The National Democratic or sound-money party proved to be strongest in New York, Massachusetts, Pennsylvania, Michigan, and Illinois. The Prohibitionists made the best showing for their party, in actual numbers, in Pennsylvania, New York, Illinois, Wisconsin, and Ohio. The Socialist-Labor party, as such, was numerically superior to other States in New York, New Jersey, Massachusetts, Pennsylvania, and California. In the matter of pluralities, the greatest pluralities for McKinley were given in Pennsylvania, New York, Massachusetts, Illinois, and Wisconsin; the greatest for Bryan were given in Texas, Colorado, Alabama, Arkansas, and Missouri.

The rank of States in percentages of party votes to total vote of State, taking the twenty highest of each leading party—Republican and Democratic—was as follows:

REPUBLICAN VOTE.	1896.	1892.	1888.
	Per cent.	Per cent.	Per cent.
Vermont.....	80	68	71

From the figures immediately preceding, it will readily be noted that in each of the 20 States giving the highest Republican percentages in 1896 there is a remarkable increase over the Republican percentages of 1892 and 1888. In 4 States the increase is over 15 per cent., in 9 States it is 10 to 15 per cent. more than in 1892, and in 5 other States the increase is between 5 and 10 per cent. Considering for a moment the 25 States not given in the preceding list, it may be mentioned that of these the increase in the Republican vote of 1896 over that of 1892 was 10 per cent. or more in 6 instances, and between 5 and 10 per cent. in 5 instances. Briefly, 29 States had an increase of 5 per cent. or more in the Republican vote, and the increase in 19 States was 10 per cent. or over.

The following list of 20 States giving the highest percentages of Democratic vote to total State vote, with comparisons, 1892 and 1888, shows that out of the States given the decrease below that of 1892 was 10 per cent. or over in 5 States, and a decrease less than 10 per cent. in 7 States. In the 25 States not mentioned, 11 had a decreased percentage of 10 per cent. or over, and 9 showed a decrease of between 5 and 10 per cent. Summarized, the results for the 45 States show that, compared with the last preceding presidential election, 16 States had a decreased Democratic percentage of 10 per cent. or over, and 20 showed a decrease below 10 per cent. The number of States showing a decreased Democratic percentage is therefore 36. Of the remaining 9, 5 are silver-producing to the extent of 1,000,000 ounces or more (1893).

* Populist vote included.

A number of interesting facts have been brought to light by a close examination of the State returns of 1896 and a comparison with the returns from previous elections. The simplest method, and at the same time the plainest method, of noting these facts for general information is to devote a brief paragraph to each State. The figures given are the result of a vast number of calculations and computations, embracing the popular vote as recorded by officials of each county at presidential and other elections held in each State during the past quarter of a century.

Alabama.—The decrease in the total vote of 1896, as compared with 1892, was 40,000. The D-P* vote, 1896, was about 40,000 less than the added D and P votes of 1892. The straight R† vote, 1896, was 45,000 more than in 1892. In that year P and R voters fused. Had not this happened, the R vote would have been between 50,000 and 60,000. Blount County, D at the 6 preceding elections, gave McKinley 197 plurality in 1896. Three other D counties voted for McKinley.

Arkansas.—Increased total vote, 1896 over 1892, 1,400. The net gain in the Democratic-Populist vote, 1896, over a corresponding vote for Governor cast two months before the presidential election, was 3,000. Crittenden, Lincoln, and Phillips Counties, Republican from 1872 until last fall, gave nearly 1,500 in pluralities for Bryan.

California.—The increased total vote, 1896 over 1892, was 26,000. The D-P vote of 1896 was about 20,000 less than the added D and P vote for Governor in 1894; R vote, 35,000 more in 1896 than in 1894. California is a McKinley State by a small plurality. The silver-mining industry, however, is important. There is what may be termed a full Populist vote. Referring again to the election of 1894, it may be noted that the added D and P vote exceeded the R vote on that occasion by more than 50,000. Thirty-two counties gave D pluralities aggregating 10,000 in 1896, and 25 counties gave R pluralities aggregating 13,000. Four D counties (Del Norte, San Francisco, Sonoma, and Yuba) gave pluralities for McKinley at the last election.

Colorado.—Increased total vote, 1896 over 1892, 95,000. Every county, except Kit Carson and Washington, gave Bryan a plurality. The previous record is in keeping. In 1892 Populists and Silver Democrats fused and defeated the Republicans by nearly 15,000. The silver product of the State, 1893, was over 25,000,000 ounces. For statistical purposes, Idaho is classed as a Silver and Populist State.

Connecticut.—Increased total vote, 1896 over 1892, 9,000. D-P vote, 1896, 25,000 less than D and P

votes in 1892; R vote, 33,000 more. Fairfield and New Haven Counties, having a D record extending over twenty years, voted R in 1896. New London County, D in 1892, voted R in 1896, giving a plurality exceeding 4,000. The Sound-money-D plurality, 1896, exceeded, with Palmer vote, 26,000. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 29,000.

Delaware.—As the Kent County vote is in dispute, an analysis of the State vote can not be given.

Florida.—Increased total vote, 1896 over 1892, 11,000. D-P vote of 1896, 2,000 less than added D and P votes in 1892; R vote, 11,000 more. Every county gave Bryan a plurality.

Georgia.—Decreased total vote, 1896, as compared with 1892, 60,000. D-P vote, 1896, 78,000 less than added D and P votes in 1892; R vote, 11,000 more. Of the 20 counties changing sides in 1896, 19 changed from D to R. Coffee, Douglas, Elbert, Johnson, Lumpkin, Marion, Rockdale, Schley, Tatnall, Taylor, Warren, and Washington, Clay, Haralson, Oconee, Polk, and Thomas Counties changed to R in 1896, after voting D for twenty years or more; Morgan and Taliaferro, after voting D since 1884. The county changing in 1896 from R to D was Lee. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 2,500. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 2,000.

Idaho.—Increased total vote, 1896 over 1892, 7,000. Every county gave Bryan a plurality in 1896. The D-P vote of 1896 exceeded the P vote of 1892 by 13,000 (no D vote in 1892). The R vote was 2,000 less in 1896 than in 1892, and 4,000 less than the R vote for Congress and for Governor in 1894. The P plurality in 1892 was nearly 2,000. The silver product exceeded 3,500,000 ounces in 1893. For statistical purposes Idaho is classed as a silver State.

Illinois.—Increased total vote, 1896 over 1892, 217,000. Increase in R vote, 1896 over 1892, 208,000 votes. Of 15 counties changing sides in 1896, 14 were from D to R. Adams, Fulton, Peoria and Sangamon, and St. Clair, voted R in 1896 after voting D for twenty years or more. La Salle and Logan changed to R after holding a D record since 1884. Cook, De Witt, Jo Daviess, Lawrence, Madison, and Stephenson Counties, voting D in 1892, voted R in 1896. Clay, R in 1892, voted D in 1896. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 83,000. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 77,000.

Indiana.—Increased total vote, 1896 over 1892, 83,000. Increase in R vote, 1896 over 1892, 68,000. Of 22 counties changing sides in 1896, 15 changed from D to R. Bartholomew, Clark, Madison and Starke, Laporte, and Perry voted R in 1896, after voting D for twenty years or more. St. Joseph and Marion had shorter D records. Huntington, Lake, Montgomery, Noble, Spencer, and Vigo voted D in 1892 and R in 1896. The counties changing from R to D in 1896 included Gibson, Jay, Boone, Clinton, Daviess, Fountain, and Pike. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 12,000. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 30,000.

Iowa.—Increased total vote, 1896 over 1892, 78,000. Increase in R vote, 1896 over 1892, 69,000. Of 23 counties changing sides in 1896, 17 changed from D to R. Allamakee, Clayton, Clinton, Des Moines, Iowa, Muscatine, Plymouth, Pottawattamie, and Scott voted D in 1884, 1888, and 1892, but voted R in 1896. Bremer had a shorter record. Audubon, Benton, Cedar, Jones, Keokuk, Lyon, and Tama voted D in 1892 and R in 1896. The counties with previous R records voting D in 1896 were Decatur, Harrison, Monona, Union, Monroe, and Wayne. The Sound-money-D plurality, 1896, with Palmer vote

* Democratic-Populist.

† Republican.

exceeded 13,000. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 61,000.

Kansas.—Increased total vote, 1896 over 1892, 12,000. Increase in D-P vote, 1896, over P vote of 1892, 9,000. (No D vote in 1892.) Increase in R vote, 1896 over 1892, 2,000. In 68 counties D pluralities aggregating 20,000 were given in 1896, and in 37 counties the R pluralities aggregated 8,000. In 1892 the P plurality was more than 4,500. In 1895, for Chief Justice, a straight "Free-silver" ticket polled nearly 43,000 votes. Three D counties (Atchison, Marshall, and Wabauensee) gave pluralities for McKinley at the last election. Kansas is classed for statistical purposes as a Populist State.

Kentucky.—Increased total vote, 1896 over 1892, 105,000. Increase in R vote, 1896 over 1892, 82,000. Of 18 counties changing sides in 1896, 17 changed from D to R. Jefferson, Lincoln and Mercer, Allen, Boyle, Breckinridge, Hart, Madison, Todd, and Woodford voted R in 1896, having previously voted D for twenty years or more. Campbell and Fayette had shorter records. Bourbon, Boyd, Lawrence, Pike, and Washington voted D in 1892, but R in 1896. Crittenden County, in R pluralities in 1884, 1888, and 1892, voted D in 1896. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 19,000. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 12,000.

Louisiana.—Decreased total vote, 1896 compared with 1892, 13,000. The D-P vote of 1896 was 9,000 less than the D vote of 1892; the R vote 5,000 less (counting in P vote on a fusion P and R ticket). Six parishes changed sides in 1896, 3 from D to R and 3 from R to D. Baton Rouge, D in 1884, 1888, and 1892, voted R in 1896; also, with shorter records, Assumption and Iberville, Plaquemines, Grant, and Winn parishes, with R records, voted D in 1896. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 1,000. The aggregated plurality of parishes voting R in 1892 and 1896 was over 1,700.

Maine.—Increased total vote, 1896 over 1892, 2,000. The D-P vote, 1896, was 16,000 less than the added D and P votes in 1892; the R vote, 17,000 more. No counties changed sides in 1896. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 45,000.

Maryland.—Increased total vote, 1896 over 1892, 37,000. The D-P vote, 1896, was 10,000 less than the added D and P votes in 1892; the R vote, 44,000 more. Of 13 counties changing sides in 1896, 12 changed from D to R. Baltimore city and Baltimore County, Carroll, Cecil, Harford, Howard, Kent, and Prince George's, voting D for twenty years or more, voted R in 1896. Anne Arundel, Caroline, Frederick, and Washington voted D in 1892, but R in 1896. Somerset County, R since 1880, voted D in 1896. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 30,000. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 4,800.

Massachusetts.—Increased total vote, 1896 over 1892, 10,000. The D-P vote of 1896 was 73,000 less than the added D and P votes in 1892; the R vote, 76,000 more. One county changed sides in 1896—Suffolk County, D since 1876, voted R in 1896. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 25,000. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 151,000.

Michigan.—Increased total vote, 1896 over 1892, 84,000. Increase in R vote, 1896 over 1892, 70,000. Of 26 counties changing sides in 1896, 16 changed from D to R. Mackinac, Macomb, and Washtenaw, with D records of twenty years or over, voted R in 1896. Alpena, Emmet, Huron, Manistee, Montmo-

rency, Oakland, and Wayne, D since 1884, voted R in 1896. Baraga, Ontonagon, and Presque Isle, D in 1888 and 1892, voted R in 1896. Otsego, Roscommon, and Schoolcraft, voting for Cleveland four years ago, gave pluralities for McKinley in November. The counties with previous R records voting for Bryan in 1896 were Branch, Eaton, Isabella, St. Joseph, Calhoun, Livingston, Gratiot, Ionia, Jackson, and Ingham. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 16,000. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 47,000.

Minnesota.—Increased total vote, 1896 over 1892, 74,000. Increase in R vote, 1896 over 1892, 70,000. Of 18 counties changing sides in 1896, 9 changed from D to R. Le Sueur and Morrison and Sibley, voting D from 1872 or 1876 to 1892, voted R at the last election. Brown, Carver, Wabash and Winona, Itasca, and Ramsey had shorter D records. The counties having previous R records but voting for Bryan in 1896 were Clay, Otter Tail and Wilkin, Kittson, Marshall, Pipestone and Traverse, Beltrami, and Cook. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 9,000. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 50,000.

Mississippi.—Increased total vote, 1896 over 1892, 17,000. Increase in R vote, 1896 over 1892, 3,500. The D-P vote, 1896, was 1,000 less than the added D and P votes at the election for Governor in 1895. No counties changed sides in 1896. Every county gave Bryan a plurality in 1896.

Missouri.—Increased total vote, 1896 over 1892, 133,000. Increase in R vote, 1896 over 1892, 78,000. Of 16 counties changing sides in 1896, 9 changed from D to R. Jefferson and Washington and Perry, voting D from 1872 or 1876, voted R in 1896. The counties with previous R records voting for Bryan in 1896 were Dade, Dallas, Greene, Jasper, Lawrence, Polk, Wright, Douglas, Laclede, Sullivan and Webster, Barry, and Cedar. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 27,000.

Montana.—Increased total vote, 1896 over 1892, 8,000. Increase in D-P vote of 1896 over D and P vote of 1892, 17,000. Decrease in R vote, 1896 as compared with 1892, 8,000; as compared with vote for Congress, 1894, 12,000. Every county except Custer and Dawson voted in favor of Bryan. The aggregated pluralities of 20 D counties, 1896, exceeded 32,000. At the congressional election above referred to the P vote was nearly 50 per cent. in excess of the regular D vote. For statistical purposes Montana is classed as a silver State. The product of silver in 1893 reached nearly 17,000,000 ounces.

Nebraska.—Increased total vote, 1896 over 1892, 23,000. Increase in R vote, 1896 over 1892, 15,000. The recent record of Nebraska shows strong Populist tendencies. The R vote of 1892 was only a trifle in excess of 4,000 ahead of the P vote. At an election for Supreme Court judge in 1895, a split Democratic-Silver-Populist vote aggregated 99,000, being nearly 20,000 more than the straight R vote. Out of 90 counties voting in 1896, 67 gave D-P pluralities aggregating 18,000. The remainder, 23 counties, voting in favor of McKinley, reached an aggregated plurality of nearly 5,000. Two of the counties (Blaine and Greeley) gave Republican pluralities in 1896.

Nevada.—Increased total vote, 1896 over 1892, 500. Increase in D-P vote of 1896 over P vote of 1892, 1,000. (No D vote in 1892.) Decrease in R vote, 1896 as compared with 1892, 800. Every county voted in favor of Bryan in 1896, the aggregate of pluralities exceeding 6,000. Nevada is a silver State, the product, 1893, exceeding 4,500,000 ounces.

New Hampshire.—Decreased total vote, 1896 compared with 1892, 5,000. Decreased D-P vote, 1896, compared with added D and P votes in 1892, 20,000; increased R vote, 1896 over that of 1892, 11,000. Two counties, Coos and Carroll, changed sides in 1896, both from D to R. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 3,500. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 32,000.

New Jersey.—Increased total vote, 1896 over 1892, 33,000. The D-P vote of 1896 was 39,000 less than the added D and P votes in 1892; the R vote, 65,000 more. Ten counties changed sides in 1896, all from D to R. Bergen, Hudson, Monmouth and Sussex, Middlesex, and Union, voting D for twenty years or over, gave R pluralities in 1896. Somerset voted D in 1884, 1888, and 1892, but R in 1896. Essex, Morris, and Salem voted D in 1892 and R in 1896. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 52,000. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 39,000.

New York.—Increased total vote, 1896 over 1892, 57,000. The D-P vote, 1896, was 120,000 less than the added D and P votes of 1892; the R vote, 1896, was 210,000 more than in 1892. Fourteen counties changed sides in 1896, all from D to R. Kings, New York, Rockland and Westchester, Albany, Queens, Richmond and Seneca, voting D for twenty years or over, gave R pluralities in 1896. Columbia, Erie, Niagara, Rensselaer, Schenectady, and Ulster voted in favor of Cleveland in 1892, but gave pluralities for McKinley in 1896. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 116,000. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 162,000.

North Carolina.—Increased total vote, 1896 over 1892, 49,000. The D-P vote of 1896 was 3,000 less than the added D and P votes in 1892; the R vote, 55,000 more. Of 20 counties changing sides in 1896, 15 changed from D to R. Buncombe, voting D for over twenty years, voted R in 1896. Alamance, Bertie, and Surry had shorter records. Davidson, Edgecombe, Forsyth, Halifax, Montgomery, New Hanover, Northampton, Randolph, Richmond, Transylvania, and Watauga voted D in 1892, but R in 1896. The counties changing from R in 1892 to D in 1896 were Pender, Granville, Person, Rockingham, and Sampson. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 8,000. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 10,000.

North Dakota.—Increased total vote, 1896 over 1892, 11,000. Increased R vote, 1896 over 1892, 9,000. Seven counties changed sides, from D in 1892 to R in 1896, i. e., Barnes, Dickey, La Moure, Mercer, Oliver, Richland, and Williams. Out of 39 counties in the State, 31 gave pluralities for McKinley, aggregating nearly 7,000, the aggregated pluralities of the 8 Bryan counties exceeding 1,000. In 1892 the Populists had a plurality. In 1894, for Governor, the total D and P vote was over 17,000.

Ohio.—Increased total vote, 1896 over 1892, 158,000. Increased R vote, 1896 over 1892, 120,000. Out of 13 counties changing sides in 1896, 11 changed from D to R. Franklin, Pike and Vinton, and Erie, voting D for twenty years or over, gave R pluralities in 1896. Montgomery and Stark voted D in 1888 and 1892, but R in 1896. Cuyahoga, Hancock, Mahoning, Muskingum, and Summit voted in favor of Cleveland in 1892, but for McKinley last November. The counties changing from R to D in 1896 were Morrow and Williams. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 15,000. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 75,000.

Oregon.—Increased total vote, 1896 over 1892, 19,000. Increased R vote, 1896 over 1892, 13,000. Out of 16 counties changing sides in 1896, 2 changed from D to R. Crook, voting D in 1884, 1888, and 1892, and Gilliam, voting D in 1892, both voted R in 1896. The counties changing from R to D in 1896 were Douglas and Polk, Coos, Jackson, Josephine, Klamath, Lake, Umatilla, Union, Lane, Baker, Grant, Linn, and Wallowa. The aggregate of pluralities given by counties voting R in 1892 and 1896 exceeded 8,000. The Populistic tendency in Oregon is strong. In 1892 and in 1894, for Governor, it represented 33 per cent. of the entire State vote.

Pennsylvania.—Increased total vote, 1896 over 1892, 190,000. The D-P vote, 1896, was 27,000 less than the added D and P votes in 1892; the R vote, 212,000 more in 1896 than in 1892. Of 19 counties changing sides in 1896, 18 changed from D to R. Clearfield, Elk and Lehigh, Adams, Bucks, Cambria, Carbon, Center, Clinton, Cumberland, Juniata, Lycoming, and Wayne, voting D for twenty years or over, gave R pluralities in 1896. Schuylkill had a shorter record. Fayette, Luzerne, Montgomery, and Northumberland voted in favor of Cleveland in 1892, but for McKinley in 1896. Crawford County, with a R record, voted D in 1896. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 31,000. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 278,000.

Rhode Island.—Increased total vote, 1896 over 1892, 1,500. The D-P vote, 1896, was 10,000 less than the added D and P votes in 1892; the R vote, 10,000 more in 1896 than in 1892. No counties changed sides in 1896. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 22,000.

South Carolina.—Decreased total vote, 1896 compared with 1892, 1,400. Increased D-P vote of 1896 over D and P votes of 1892, 1,700. Every county voted for Bryan in 1896, including Berkeley, which voted R in 1892. Only the one county just mentioned, out of 36 counties voting, changed sides.

South Dakota.—Increased total vote, 1896 over 1892, 12,000. Increased R vote, 1896 over 1892, 6,000. The strength of D counties was large in 1896, but not unusual. In 1890, the added P and D votes exceeded the R vote by 9,000. In 1892 also the added D and P votes exceeded the R vote by nearly 1,000. The Populistic tendency of the State is strong, representing, in 1892, nearly three sevenths of the whole vote. In 1894, for Governor, the P vote was over 26,000 out of a total vote of less than 76,000. In 1896, 30 counties gave 4,500 in D pluralities; 23 counties gave 4,300 in R pluralities. South Dakota is a silver State, the product in 1893 exceeding 140,000 ounces.

Tennessee.—Increased total vote, 1896 over 1892, 52,000. Increased R vote, 1896 over 1892, 48,000. Of 4 counties changing sides in 1896, 3 changed from D to R. DeKalb and Montgomery voted D for twenty years or over, but R in 1896; Hamilton voted in favor of Cleveland in 1892, but for McKinley in 1896. McNairy County changed from R to D. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 1,000. The aggregated plurality of counties voting R in 1892 and 1896 exceeded 32,000.

Texas.—Increased total vote, 1896 over 1892, 122,000. Increased R vote, 1896 over 1892, 90,000. Eighteen counties changed from D to R in 1896, 5 of these, Guadalupe, Travis, Duval, Lee, and Webb, after voting D for twenty years or over. The others were Fayette, Galveston, Austin, Colorado, Comal, Gillespie, Gregg, Washington, Brazos, Hansford, Kinney, La Salle, and Victoria. Of 225 counties voting in 1896, 195 gave over 14,000 in D pluralities,

and 30 gave over 11,000 in R pluralities. The Populistic tendency in Texas is strong, representing in 1892 nearly 24 per cent. of the whole vote of 422,000. In 1894, for Comptroller, the P vote equaled nearly 35 per cent. of the total vote. For Governor, in 1895, the P vote exceeded 33 per cent. The silver product of Texas, 1893, was nearly 350,000 ounces.

Utah.—This State voted at a presidential election for the first time in 1896. Every county voted in favor of Bryan, according to the most reliable available statistics, with aggregated D pluralities exceeding 50,000. The silver product of 1893 exceeded 7,000,000 ounces.

Vermont.—Increased total vote, 1896 over 1892, 8,000. The D-P vote of 1896 was 5,000 less than the D vote in 1892; the R vote, 13,000 more. No counties changed sides in 1896. The aggregated pluralities of counties voting R in 1892 and 1896 exceeded 40,000.

Virginia.—Increased total vote, 1896 over 1892, 102,000. The D-P vote of 1896 was 20,000 less than the added D and P votes of 1892; the R vote, 22,000 more. Of 37 counties changing sides in 1896, 23 changed from D to R. Botetourt, Buchanan, Carroll, Grayson, Greene, Pulaski, Shenandoah, Smyth and Washington, and Patrick, voting D for twenty years or over, gave R pluralities in 1896. King George, Montgomery, Norfolk, Page, Roanoke, Rockbridge, Rockingham, Scott, Spottsylvania, Stafford, Warwick, Wise, and Wythe changed from D in 1892 to R in 1896. The counties changing from R in 1892 to D in 1896 were Dinwiddie, Essex, Middlesex, Prince Edward, Prince George, Southampton, Sussex and York, Gloucester, Northampton and Surry, Norfolk City County, Clarke, and King and Queen. The Sound-money-D plurality, with Palmer vote, exceeded 7,000. The aggregated plurality of counties voting R in 1892 and 1896 exceeded 5,000. The Populistic element in Virginia is considerable, representing, in 1893, for Governor, over 28 per cent. of the whole vote. This, however, was an exceptional case, there being no R vote. The Weaver vote in 1892 was over 12,000.

Washington.—Increased total vote, 1896 over 1892, 5,000. Increased R vote, 1896 over 1892, 3,000. Of 34 counties voting, 26 gave over 13,000 in D pluralities; 8 gave over 1,000 in R pluralities. Jefferson County changed from D in 1892 to R in 1896. The Populistic tendency in this State is strong, representing in 1892 over 20 per cent. of the total vote, and in 1894, for Congress, over 33 per cent. of the whole vote cast. The silver product of Washington, 1893, exceeded 150,000 ounces.

West Virginia.—Increased total vote, 1896 over 1892, 28,000. Increased R vote, 1896 over 1892, 24,000. Ten counties changed sides in 1896, all from D to R. Cabell, Calhoun, Pleasants, Raleigh and Tucker, Brooke, Lewis, and Ohio, voting D for twenty years or over, gave R pluralities in 1896. Clay and Mercer voted in favor of Cleveland in 1892, but for McKinley in 1896. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 3,000. The aggregated plurality of counties voting R in 1892 and 1896 exceeded 19,000.

Wisconsin.—Increased total vote, 1896 over 1892, 75,000. The D-P vote of 1896 was 21,000 less than the D and P votes in 1892; the R vote, 97,000 more in 1896 than in 1892. Thirty-one counties changed sides in 1896, all from D to R. Dodge, Fond du Lac, Jefferson, Kewaunee, Manitowoc, Marathon, Outagamie and Washington, and Brown, voting D for twenty years or more, gave R pluralities in 1896. Langlade, Sheboygan, Wood, and Oneida had shorter D records. Ashland, Chippewa, Dane, Forest, Green Lake, Iowa, Juneau, Kenosha, La Crosse, Marinette, Marquette, Milwaukee, Oconto, Portage, Shawano, Taylor, Waukesha, and Winne-

bago voted in favor of Cleveland in 1892, but for McKinley in 1896. The Sound-money-D plurality, 1896, with Palmer vote, exceeded 49,000. The aggregated plurality of counties voting R in 1892 and 1896 exceeded 46,000.

Wyoming.—Increased total vote, 1896 over 1892, 4,000. Increased R vote, 1896 over 1892, 1,600. No counties changed sides in 1896. Of the 13 counties in the State, 7 voted in favor of McKinley, 1896, and 6 for Bryan. The aggregated plurality of counties voting R in 1892 and 1896 exceeded 800.

Some Interesting Totals.—Totals or aggregates for some of the details shown or referred to in the preceding text reveal, among other facts, that in 33 nonsilver-producing States, 274 counties in 1896 changed from D to R, giving a total Sound-money-D plurality of more than 490,000, without the Palmer vote. Of this 490,000, over 215,000 were cast by 121 counties whose previous D record extended back twenty years or over. In 18 of these 33 States 94 counties changed from R to D in 1896. In 15 States all changes, if any, were from D to R. The aggregated pluralities of counties voting R in 1892 and 1896 in the 33 States exceeded 1,318,000.

In the 12 silver-producing and Populist States 562 counties gave D pluralities aggregating more than 324,000, and 180 counties gave R pluralities exceeding 50,000. In these 12 States 36 counties with previous D records gave R pluralities in 1896. The silver product in the "silver States" in 1893 exceeded 54,000,000 ounces.

In 35 out of the 45 States voting in 1896 the percentage of the D-P vote to the total State vote of 1896 was less than the added D and P votes of 1892. In 34 States the percentage of the R vote to the total vote in 1896 was greater than in 1892. In 18 States the added actual D and P votes of 1896 was less than in 1892. In 17 States the added D and P vote of 1896 was less than at the last preceding election for Governor. In 10 States the added D and P votes of 1896 was less than at the last preceding election for Congress.

David Rowland Francis was born in Richmond, Ky., Oct. 1, 1850. He was of Scotch-Irish

DAVID ROWLAND FRANCIS.

descent. After attending the public schools in Kentucky he entered Washington University in St.

Louis, Mo., from which he was graduated in 1870. Embracing a mercantile career, he organized after three years of training the commission company of D. R. Francis & Bro. in St. Louis, which was from the outset one of the leading firms operating at the Merchants' Exchange in that city. In 1883 he was elected vice-president of the Exchange, and in the following year was chosen its president. In 1884 he was a delegate to the National Democratic Convention that nominated Grover Cleveland for the first time. In the following year he was elected Mayor of St. Louis, overcoming a Republican majority at the previous election of 14,000, and as mayor he promoted needed municipal reforms. In 1888 he was elected by a large majority Governor of Missouri, and his administration was much praised. He was a sound-money advocate during the agitation for free coinage that ended in the triumph of the silver party at the Democratic National Convention in Chicago. In August, 1896, he became Secretary of the Interior.

For a sketch of Mr. McKinley, see page 428; for portrait, see frontpiece.

UNITED STATES CENSUS. Official reports of results obtained during the eleventh census investigation are now practically complete. Numerous volumes have been issued, and the remainder—making, in all, 25 quartos, a compendium in 3 volumes, an abstract, and a statistical atlas—are being issued from the press as rapidly as present printing and binding facilities will permit.

In previous issues of the "Annual Cyclopædia" such of the important facts as were made available before going to press found a place, chiefly under the heading UNITED STATES CENSUS. In the volume for 1890 appeared: *General Plan and Scope of the Eleventh Census.*—Official staff. *Area of States and Territories.*—Gross, water, land. *Population, States and Territories.*—1890-'80-'70-'60-'50; 306 cities of 10,000 and over, 1890-'70-'50; review of enumeration results, with comparisons; grouping of States, with reasons; rank of States and Territories, 1890-'80-'70-'60-'50; results of State census in 14 States, 1885; Alaska; Indian Territory and reservations; in cities, at each census, 1790-1890; rank of cities, 100,000 and over, 1890-'80-'70; colored, of the South, by States, also comparison with whites, Chinese, Japanese, and Indians; increase and decrease; center of, location at each census; distribution in accordance with rainfall; distribution in accordance with humidity; distribution, by drainage basins. *Transportation.*—Urban rapid transit, totals; length of line, 1880-'90, and motive power, 58 cities. *Education.*—Teachers and pupils, male and female, public schools, 1880-'90, 20 States and Territories; teachers and pupils, white and colored, 1890, 182 cities. *Pauperism and Crime.*—Convicts, by States and Territories. *Finance.*—Bonded debt, floating debt, and cash and funds in hand, 1889-'90, by States; bonded debt, floating debt, and available resources, 1889-'90, 858 cities, by States and Territories. *Manufactures.*—Product of pig iron and steel, with furnace stacks and steel works, 1880-'90, by States and Territories. *Mines and Mining.*—Coal product, with total in tons, value at mines, number of employees and wages paid, Alabama, Maryland, Pennsylvania, and States west of Mississippi river, 1889.

In the "Annual Cyclopædia" for 1891 the article UNITED STATES CENSUS included the following official data: *Population.*—Total, places of 1,000 and more, also totals, by classes, for places of 1,000 and under 2,500; 2,500 and under 4,000; 4,000 and under 8,000; 8,000 and under 25,000; 25,000 and over; official count for Alaska. *Special Classes.*—Totals of insane, public and private institutions; schools for deaf; schools for blind. *Pauperism and Crime.*—Totals of prisoners in penitentiaries and in county jails; inmates of juvenile reformatories and paupers in almshouses. *Education.*—Teachers and pupils, male and female, public schools, 1890, 28 additional States and Territories; teachers and pupils, white and colored, 1890, 147 additional cities. *Social Statistics of Cities.*—Totals, miles of paving, cost of lighting, strength and cost of fire and police force, 1890, 309 cities. *Religion.*—Names, membership, and property of 89 sects and denominations, 1890. *Finance.*—Aggregate, bonded debt, floating debt, and sinking fund, also assessed valuation, with *per capita* in each political division, 1880-'90 for United States, States, counties, and municipalities. *Agriculture.*—Aggregates of quantity and value, product of hops, truck farms, floriculture, viticulture, nurseries, seed farms, tropic and semitropic fruits and nuts, also aggregates of horses, mules, and asses on farms, and live stock on ranges. The aggregate of acres irrigated, with details of States and Territories is also given. Some classes are for 1889, others for 1890. *Manufactures.*—Aggregates in proof gallons for alcohol, Cologne spirit, high wines, whisky, brandy, rum, and gin as distilled spirit consumed in the arts, manufactures, and medicines, 1889. *Mines and Mining.*—Product, in value, of metallic, non-metallic, and unspecified minerals, 1880-'89, with percentage of increase. The product of bituminous and anthracite coals, quantity and value, by years, 1882-'89. Aggregates, in quantities, or values, or both, 1880-'89, of pig iron, iron ore, aluminium, copper, lead, zinc, quicksilver, nickel, gold and silver, mineral waters, petroleum, natural gas, and minor minerals. *Fish and Fisheries.*—Details, with aggregates in value, 1880-'89 of the whale, fur-seal, and sea-otter fisheries, including vessels and men. Details, with aggregates in value, of the Pacific States fisheries, 1889, including salmon canning. *Transportation.*—Aggregates of passengers carried, earnings and income, expenditures, and miles operated, in each of the ten railroad groups, 1880-'89, with names of States comprising each group. The traffic on the Lakes, in classes, tons, and value, 1889.

The next issue of the "Annual Cyclopædia" (1892), under the same heading, contained the latest available official data as detailed below: *Population.*—Aggregates of color, sex, and general nativity, with actual increase, under headings of males, females, native, foreign, white, and colored, for each decade, 1850-'90. Percentages, United States, male and female, native and foreign, white and colored, each decade, 1850-'90. Aggregates and totals by States, 1890, of males, females, native born, foreign born. Aggregates and largest totals, with analysis of dwellings and families, 1890, in States and largest cities. *Pauperism and Crime.*—Totals, by sex and age, of juvenile reformatory inmates, with brief analysis; totals by age, sex, color, nationality, etc., of prisoners convicted of homicide, with totals for terms of imprisonment and death penalty. *Education.*—Apparent total enrollment, public schools, 1880-'90, each State and Territory, with totals also for private schools and parochial schools; brief analysis, including special reports concerning the Southern States, and details of parochial schools by creeds. *Religion.*—Membership and property of 27 additional sects and denominations. *Finance.*—Revised aggregates of United States debt, as a unit, 1890; State debt, county debt, municipal debt, and school-district debt, with notes on increases and decreases, and *per capita* statement. *Agriculture.*—Totals by States, 1890, of acres and farms irrigated, with average size of farms, cost of water, value of products, etc.; totals of artesian wells on farms; aggregate and totals, tobacco product, by States, 1889, with value of crop and percentages; area, product, and

value, flax and hemp, 1889; area, product, and value, cotton, 1889-90, with analysis by States, including percentages, increase and decrease; product, by States and Territories, 1889, of barley, buckwheat, Indian corn, oats, rye, and wheat. *Manufactures.*—Establishments, capital, cost of materials, value and tons of product, iron and steel, Southern States, 1880-90; product and value of coke, Virginia and West Virginia, 1889; establishments, capital, employees, wages, expenses, cost of materials, value of work done or product, etc., in dyeing and finishing textiles, combined textile industries, the silk industry and the cotton industry. *Transportation.*—Number, tonnage, value, tons of freight carried, crews, wages, etc., 1890, of American vessels, by divisions and classes. *Farms, Homes, and Mortgages.*—Number and value of mortgages, acres, lots, and interest rates, in Alabama, Illinois, Iowa, Kansas, and Tennessee. *Telephones.*—Number of companies and telephone earnings, expenses, employees, miles of wire, subscribers, and conversations, 1890.

In the "Annual Cyclopædia" for 1893, under the heading UNITED STATES OF AMERICA, official census statistics are given covering part of the inquiry in one branch:

Manufactures.—Total number of establishments reporting, capital, persons employed, wages paid, cost of material, and value of goods manufactured, 1880-90, in each of 165 cities, representing all places over 20,000 population in 1890, with analysis and comparisons.

The "Annual Cyclopædia" for 1895, under the heading MANUFACTURES IN THE UNITED STATES, gives the following information:

Manufactures.—Alphabetically, by industries, the capital invested, cost of material used, and value of products, 1890, including receipts from custom work and repairing, in the 165 cities treated of in the volume for 1894, whenever the amount used in any city for any given industry exceeded \$200,000.

The present article includes in tables or in text such other important facts and figures from the official census reports of 1890 as are not detailed in the statements above referred to. Some of the most useful aggregates, totals, and percentages are inserted in tabular form. These tables, both large and small, are self-explanatory. For census purposes, they are classed under the general headings of Population, Wealth, Debt and Taxation, Education, Religion, Insane, Feeble-minded, Deaf and Dumb, and Blind, Crime, Panperism, and Benevolence.

In the following text each census topic will be dealt with in its proper order as arranged in the Census Abstract. Occasionally, important aggregates already published in previous articles will be repeated to facilitate reference. If any present group of figures or series differs from one quoted in a preceding year's paper on the subject, then the latest group must be accepted as being the result of a Census Office revision.

Population.—The population of the United States on June 1, 1890, as shown by the general enumeration for all the States and organized Territories, was 62,622,250. Including 325,464 Indians and other persons in the Indian Territory and on Indian reservations and 32,052 persons in Alaska, specially enumerated under the law, the entire population of the country was 62,979,766.

Urban.—The officially recognized definition of the term "urban population" considers it to mean "that element living in cities, or other closely aggregated bodies of population, containing 8,000 inhabitants or more." Based on this definition, the urban population of the country in 1890 was 18,284,385, and constituted 29.20 per cent. of the total population. In 1790 the urban population consti-

tuted but 3.35 per cent. of the total population. The number of cities having a population of 8,000 or more increased from 6 in 1790 to 448 in 1890, 162 of this latter number being added between the taking of the tenth and the eleventh census.

Aggregate.—The following table shows the aggregate population of the United States at each census from 1790 to 1890, together with the percentage of increase during each decade:

CENSUS YEARS.	Aggregate.	Increase. per cent.
1790.....	3,929,214
1800.....	5,308,483	35.10
1810.....	7,239,881	36.38
1820.....	9,633,822	33.07
1830.....	12,866,020	33.55
1840.....	17,069,453	32.67
1850.....	23,191,876	35.87
1860.....	31,443,321	35.58
1870.....	38,558,371	22.63
1880.....	50,155,783	30.08
1890.....	62,622,250	24.86

Sex, Color, and Nativity.—Of the total population in 1890, 32,067,880 were males and 30,554,370 were females.

"The excess of males," says the commissioner in charge of census, "shows very clearly the effects of immigration. Where natural increase is not interfered with by immigration or emigration, wars or pestilence, the proportion of the sexes is nearly equal, females being slightly in excess of males."

To insure accuracy as well as to save as much as possible in the matter of space, the wording of the text in this paper will follow closely that of the official summaries. When necessary, the phrases used will be identical. In any case it may be taken for granted that the results given under every heading are supported in black and white by official census exhibits and explanations.

For further details concerning sex, color, and general nativity attention is directed to the text and tables in the "Annual" for 1892, pages 759-761.

The commissioner's general summary on the results, 1880-'90, contains many useful comparisons, covering a vast number of tabular exhibits under the heading of "Population" in the census quarto volumes. Its great value of the summary for permanent record and reference, justifies its reproduction in part, subheadings being given to expedite research:

Conjugal Condition.—Statistics regarding the conjugal condition of the people of the United States are presented for the first time as a part of the United States census. Of the entire population in June, 1890, 37,129,564, or 59.29 per cent., were single; 22,331,424, or 35.66 per cent., were married; 2,970,052, or 4.74 per cent., were widowed; 120,996, or 0.20 per cent., were divorced, and for 70,214, or 0.11 per cent., the conjugal condition was not reported. Of the males, 62.20 per cent. were single, 34.94 per cent. were married, 2.54 per cent. were widowed, 0.15 per cent. were divorced, and 0.17 per cent. unknown. Of the females, 56.24 per cent. were single, 36.41 per cent. were married, 7.05 per cent. were widowed, 0.24 per cent. were divorced, and 0.06 per cent. unknown.

Age Percentages.—The distribution of population by percentages of age for each quinquennial period to seventy years and upward was as follows: Under five years, 12.19 per cent.; five to nine years, 12.09 per cent.; ten to fourteen years, 11.23 per cent.; fifteen to nineteen years, 10.47 per cent.; twenty to twenty-four years, 9.90 per cent.; twenty-five to twenty-nine years, 8.35 per cent.; thirty to thirty-four years, 7.31 per cent.; thirty-five to thirty-nine years, 6.17 per cent.; forty to forty-four years, 5.09 per cent.; forty-five to forty-nine years, 4.36 per

cent.; fifty to fifty-four years, 3.71 per cent.; fifty-five to fifty-nine years, 2.67 per cent.; sixty to sixty-four years, 2.33 per cent.; sixty-five to sixty-nine years, 1.61 per cent.; seventy years and over, 2.26 per cent.; and age unknown, 0.26 per cent. The average age of the population in 1890 was 25.11 years as compared with 24.13 years in 1880. The average age of the males in 1890 was 25.31 years as against 24.27 years in 1880, while that of females in 1890 was 24.91 years as against 23.98 years in 1880.

Persons of School, Militia, and Voting Age.—Persons of "school age" in 1890 numbered 22,447,392, comprising 18,543,201 persons from five to seventeen years and 3,904,191 persons from eighteen to twenty years. In 1880 there were 18,319,830 persons from five to twenty years of age, showing an increase since 1880 of 4,127,562, or 22.53 per cent.

The potential militia, that is, males from eighteen to forty-four years of age, inclusive, in 1890 numbered 13,230,168 as against 10,231,239 in 1880, an increase in ten years of 29.31 per cent. as compared with an increase in aggregate population of 24.86 per cent. Of the males of militia age in 1890, 10,424,086, or 78.79 per cent., were native born and 2,806,082, or 21.21 per cent., were foreign born.

The potential voters in 1890, comprehending all males twenty-one years of age and upward, numbered 16,940,311 as compared with 12,830,349 in 1880, showing an increase during the decade of 4,109,962, or 32.03 per cent., being far in excess of that of population, and being due, as in the case of the potential militia, to the excessive immigration of the decade, which consisted largely of adult males. Of the males of voting age in 1890, 12,591,852, or 74.33 per cent., were native born and 4,348,459, or 25.67 per cent., were foreign born.

Illiteracy.—The whole number of persons ten years of age and over in the United States in 1890 was 47,413,559, of whom 6,324,702, or 13.34 per cent., were returned as illiterate. In 1880 there were 36,761,607 persons ten years of age and over, and of that number 6,239,958, or 16.97 per cent., were returned as illiterate. Of the illiterate persons in 1890, 1,167,853, or 18.46 per cent., could read but could not write, and 5,156,849, or 81.54 per cent., could neither read nor write. In 1880 illiterate persons who could read but could not write numbered 1,316,507, or 21.10 per cent., and those who could neither read nor write 4,923,451, or 78.90 per cent.

Of the native white population ten years of age and upward in 1890, 6.23 per cent. were illiterate as against 8.75 per cent. in 1880. Among the foreign whites the percentages of illiterates were 13.06 in 1890, and 11.98 in 1880, while for the colored the percentage of illiterates in 1890 was only 56.76 as compared with 70 in 1880, showing a very marked improvement in this respect. The whole number of persons ten years of age and over in 1890 who could not speak English was 1,718,496, of whom 1,371,044, or 79.78 per cent., were foreign white; 238,035, or 13.85 per cent., native white; and 109,427, or 6.37 per cent., colored, principally Chinese and Indians.

The whole number of persons attending school during any portion of the census year ending May 31, 1890, was 11,674,878, of whom 5,954,142 were males and 5,720,736 were females. Of the total number attending school, 8,330, or 0.07 per cent., were under five years of age; 3,726,044, or 31.92 per cent., were from five to nine years; 5,607,358, or 48.03 per cent., were from ten to fourteen years; 2,155,141, or 18.46 per cent., were from fifteen to nineteen years, and 178,005, or 1.52 per cent., were twenty years of age and over. Persons attending school one month or less during the census year

constituted 5.65 per cent. of the whole number; those attending from two to three months, 14.90 per cent.; those attending from four to five months, 17.38 per cent., and those attending six months or more, 62.07 per cent.

Gainful Occupations.—The whole number of persons engaged in gainful occupations in 1890 was 22,735,661, or 47.95 per cent. of all persons ten years of age and over. In 1880 there were 17,392,099 persons ten years of age and over engaged in gainful occupations, constituting 47.31 per cent. of the whole number of persons of that age.

Of the 22,735,661 persons in 1890 engaged in gainful occupations, 18,821,090 were males and 3,914,571 were females, constituting 77.29 and 16.97 per cent., respectively, of all males and females ten years of age and over. In 1880 there were 14,744,942 males and 2,647,157 females engaged in gainful occupations, constituting 78.70 and 14.69 per cent., respectively, of the whole number of each sex ten years of age and over.

The numerical increase of persons engaged in gainful occupations since 1880 was 5,343,562 and the percentage of increase 30.72; the increase in males was 4,076,148, or 27.64 per cent., and in females 1,267,414, or 47.88 per cent.

The whole number of persons engaged in agriculture, fisheries, and mining in the United States in 1890 was 9,013,336, or 39.64 per cent. of all persons engaged in gainful occupations; the number engaged in professional service was 944,333, or 4.15 per cent.; in domestic and personal service, 4,360,577, or 19.18 per cent.; in trade and transportation, 3,326,122, or 14.63 per cent.; and in manufacturing and mechanical industries, 5,091,293, or 22.39 per cent.

Occupations by Classes.—These totals by classes of occupations in 1890 can not be compared directly with similar results for 1880, as given in the printed report for that census, as several changes have been made in the classification of occupations in 1890 as compared with that of 1880. The corrected totals by classes of occupations for 1880, on the basis of the census of 1890, are as follow: Agriculture, fisheries, and mining, 8,004,624 (7,409,970 males and 594,654 females); professional service, 603,202 (425,947 males and 177,255 females); domestic and personal service, 3,503,443 (2,321,937 males and 1,181,506 females); trade and transportation, 1,866,481 (1,803,629 males and 62,852 females); manufacturing and mechanical industries, 3,414,349 (2,783,459 males and 630,890 females). Comparing these figures with those for 1890, there has been an increase of persons engaged in agriculture, fisheries, and mining since 1880 of 1,008,712, or 12.60 per cent. Persons engaged in professional service have increased 341,131, or 56.55 per cent., since 1880, and those in domestic and personal service 857,134, or 24.47 per cent. Persons engaged in trade and transportation have increased 1,459,641, or 78.20 per cent., since 1880, and persons engaged in manufacturing and mechanical industries 1,676,944, or 49.11 per cent.

Veterans of the Civil War and their Widows.—On June 1, 1890, there were, approximately, 1,034,073 surviving United States soldiers, sailors, and marines, who served during the civil war, and 145,359 surviving widows of United States soldiers, sailors, and marines. There were also on the same date, approximately, 432,020 surviving Confederate veterans of the civil war and 60,564 surviving widows of Confederate veterans.

Aliens.—The total number of foreign-born males twenty-one years of age and over in 1890 was 4,348,459, or 47.01 per cent. of the entire foreign-born element. Of this number, 2,545,753, or 58.54 per cent., are naturalized; 236,061, or 5.43 per cent., have taken

out their first naturalization papers; 1,189,452, or 27.35 per cent., are aliens, while for 377,193, or 8.63 per cent., no information as to their citizenship was obtained. The comparatively large proportion of aliens is probably due in part at least to the excessive immigration in the years immediately preceding the census year.

More than one half of all the aliens in 1890 had been in this country five years or more, and, so far as length of residence is concerned, are eligible to citizenship. That is to say, 316,600, or 26.62 per cent. of all the aliens, had been in this country from five to nine years; 121,599, or 10.22 per cent., from ten to fourteen years, and 209,148, or 17.58 per cent., fifteen years or more. The whole number of aliens who had been in this country five years and upward is 647,347, or 54.42 per cent., of all the aliens.

Of the whole number of aliens in 1890, 388,192, or 32.64 per cent., were reported as not able to speak English.

Dwellings and Families.—The total number of occupied dwellings in the United States in June, 1890, was 11,483,318, the average number of persons to a dwelling being 5.45. In 1880 there were 8,955,812 occupied dwellings, containing, on the average, 5.60 persons.

The total number of families living in the United States in June, 1890, was 12,690,152, there being 4.93 persons, on the average, to each family. In 1880 there were returned 9,945,916 families, the average size of family at that census being 5.04 persons.

Agriculture.—The agricultural statistics do not include any farm of less than 3 acres, unless at least \$500 worth of product had been actually sold from the same during the calendar year preceding the census year.

Number of Farms.—The number of farms in the United States has increased from 1,440,073 in 1850 to 4,564,641 in 1890, or 215 per cent. The last census shows an average size in farms of 137 acres, being 3 acres more than in 1880 and 66 acres less than in 1850.

Ownership of Farms.—There has been an increase in the past decade of 285,422, or 9.56 per cent., in farms cultivated by owners; of 132,302, or 41.04 per cent., in farms rented for money; and of 138,010, or 19.65 per cent., in farms rented for share of products. There has been an increase in the percentage of improved acreage of total farm acreage from 38.50 in 1850 to 57.38 in 1890.

Valuation of Farm Lands.—The valuation of farm lands has increased from \$3,271,575,426 in 1850 to \$13,279,252,649 in 1890, or 305.90 per cent. Between 1880 and 1890 the increase was \$3,082,155,873, or 30.23 per cent.

Neat Cattle, Swine, and Sheep.—The number of working oxen on farms, 1890, was 1,117,494; milch

cows, 16,511,950; other cattle, 33,734,128. The figures for 1880 were, respectively, 993,841, 12,443,120, and 22,488,550. The swine on farms, 1890, numbered 57,409,583, being an increase of 9,827,883 over 1880. The aggregate of sheep, 1890, not including spring lambs, was 35,935,364—743,290 over 1880.

Live-stock Products—Wool.—The number of fleeces shorn in the fall and spring preceding the eleventh census was 32,126,868. The product of wool from these shearings was 165,449,239 pounds.

Dairy Products.—Official census figures show, as the total quantity of milk produced on farms, 5,210,125,567 gallons. The total of butter is given as 1,024,223,468 pounds, and of cheese 18,726,818 pounds. Accurate or useful comparisons can not be made under either of the last two headings.

Poultry and Eggs.—According to the census reports, the number of domestic fowl (chickens) on farms in 1890 was 258,871,125, being an increase of 156,598,990 over 1880. The total of "all other fowl" reached 26,738,315 in 1890, as against 23,235,187 in 1880. The product of eggs on farms, 1890, is reported as 819,722,916—362,812,000 more than at the taking of the tenth census.

Sugar and Molasses.—In 1890 301,284,395 pounds of cane sugar and 25,409,228 gallons of cane molasses were produced, and in 1880 214,646,400 pounds and 16,573,273 gallons, an increase of 40.36 per cent. in sugar and 53.31 per cent. in molasses. Of sorghum, 24,235,219 gallons were produced in 1890 and 28,444,202 in 1880. Of maple sugar and molasses, 32,952,927 pounds and 2,258,376 gallons were produced in 1890, and 36,576,061 pounds and 1,796,048 gallons in 1880.

Hay.—The number of acres mown for hay and the number of tons of hay harvested for 1880 and 1890 are as follow: In 1890, 52,948,797 acres and 66,831,480 tons; in 1880, 30,631,054 acres and 35,150,711 tons; increase in acreage, 72.86 per cent.; increase in production, 90.13 per cent.

Rice.—The amount of rice produced in 1890 was 128,590,934 pounds, and in 1880 the amount was 110,131,373 pounds, an increase of 16.76 per cent.

Irish and Sweet Potatoes.—In 1890 217,546,362 bushels of Irish potatoes were produced, and in 1880 the production was 169,458,539 bushels, an increase of 28.38 per cent.; of sweet potatoes, 43,950,261 bushels were produced in 1890 and 33,378,693 bushels in 1880, an increase of 31.67 per cent.

Manufactures.—Full statistics concerning selected industries in the largest manufacturing centers, 1890, may be found in the last two issues of the "Annual." Details of facts given in those volumes are noted at the beginning of this article. The comparative summary of totals entered here for the United States as a whole, embracing, of course, the details of cities just referred to, will be found both instructive and useful, showing, as it

SUMMARY OF CENSUS RESULTS—MANUFACTURES.

ITEMS.	1880. (a)	1890.	Per cent. of increase.

a The difference between the totals stated in this table and those published in the reports of the tenth census is caused by the elimination of data duplicated under the head of "Mixed textiles," such data having been included in the totals for the different branches of the textile industry; also by the inclusion of "Petroleum refining."

b This item was not reported at the census of 1880.

c Not reported separately at the census of 1880.

does, the vast progressive strides taken in the manufacturing industries of the country between the taking of the last two Federal enumerations.

Owing to the changes in both the form and the scope of the inquiry at the census of 1890 compared with that of 1880, the totals as reported at the two census periods should not be used to compute the percentages of increase. In the following comparative statement, showing the percentage of increase, the statistics for 1890 do not include the data for the industries previously enumerated as not being included in the reports of the tenth census. The employees and wages are shown under the two classes of "Officers, firm members, and clerks," and "All other employees."

Fisheries.—Aggregates.—The aggregate of persons employed in fisheries in the United States, 1890, was 163,348; 1880, 131,426. The whole amount of capital invested in this industry, 1890, is recorded as \$43,602,123; 1880, \$37,955,349. A statement of the value of fishery products, 1890, gives \$44,277,514; 1880, \$42,740,163.

Persons employed.—Of the aggregate employed, 1890, 136,665 are classified as fishermen and 26,683 as shoremen.

Apparatus and Capital invested.—The total number of vessels (not boats) engaged in the fishing industries of the country, 1890, was 7,257; 1880, 6,605. Their net tonnage, 1890, was 174,021, with a value of \$11,133,265; 1880, net tonnage, 208,298; value, \$9,357,282. The total number of boats, as distinct from vessels, 1890, is reported as 80,261, valued at \$4,826,150; 1880, 44,804 boats, valued at \$2,465,393. The value of minor apparatus, 1890, was \$8,363,462, other capital, including shore property, being stated as \$19,279,246; 1880, minor apparatus, \$8,145,261, and other capital \$17,987,413.

Value of Fishery Products.—One of the most interesting tables in the census volumes gives in detail the value of products of the several fisheries, in addition to the aggregate. Under this heading it is shown that the product of the "general fisheries," 1890, was \$26,747,440; 1880, \$22,405,018. The whale fishery products, 1890, were valued at \$1,697,875; 1880, \$2,323,943. Concerning the seal fisheries, it is stated that the product, 1890, was valued at \$438,228, as against \$2,289,813 in 1880.

Not only do the whale and seal fisheries exhibit a much reduced value of product, but even the menhaden industry is reported as behind its showing of the previous decade. In 1890 the value of the menhaden product was \$1,817,878; 1880, \$2,116,787. The oyster fisheries, too, show a slight decrease. The value of products, 1890, was \$13,294,339; 1880, \$13,403,852. Quite an advance is noted in connection with the sponge fisheries. The product of 1880 was only valued at \$200,750, whereas that of 1890 is quoted as \$281,754.

Carp Culture.—The number of carp culturists in the United States, 1890, is reported to be 29,456. The number of ponds and other bodies of water in which carp have been planted, 1890, is given as 36,558; number of carp originally planted, 4,574,588; number of successes reported, 12,712; number of failures reported, 14,142; amount of expense, \$1,043,841; total value of carp sold or used, \$284,650.

Mines and Mining.—A useful summary of results, mostly in quantities, will be found in the "Annual" for 1891, pages 846-847. It is not so complete, however, as the latest census reports. It may be noted here that the total value of mineral products of the United States, 1889, was \$587,230,662. The products are divided into "metallic" and "nonmetallic." The first includes iron ore, gold and silver, copper, quicksilver, nickel, and cobalt.

Iron Ore.—The value of the production, iron ore,

1889, was \$33,351,978; operating expenses, \$24,781,658; capital invested, \$109,766,199.

Gold and Silver.—The value of the combined gold and silver products, 1889, was \$99,283,732; operating expenses, \$63,451,136; capital invested, \$486,323,338.

Copper.—It is stated that the value of the copper product, 1889, was \$26,907,809; operating expenses, \$12,062,180; capital invested, \$62,623,228.

Quicksilver.—According to the census report on quicksilver, 1889, the value of product of that metal was \$1,190,500; operating expenses, \$881,401.

Nickel and Cobalt.—The value of the 1889 product at the mines was \$40,000; operating expenses, \$126,187; capital invested, \$279,000.

Nonmetallic Products.—The nonmetallic division includes all minerals not included in the metallic list, and embraces manganese ore, bituminous and anthracite coal, petroleum, natural gas, asphaltum, stone for building, phosphate rock, gypsum, and 15 other varieties, including mineral waters. Space will not permit an extended statement of values and capital for each. The 5 most important only can be taken.

In value of product, bituminous coal, anthracite coal, building stones (including stone used for lime, \$8,217,015; for iron flux, \$1,569,312; for grindstones, \$439,587), petroleum, and natural gas take the lead. The value of products in each, respectively, 1889, was \$94,346,809, \$65,879,514, \$53,035,620, \$26,963,340, and \$11,044,858. In the matter of capital invested, 1889, bituminous coal stands first among non-metallic minerals, with \$180,722,319. Next comes anthracite coal, \$162,035,610. Third is petroleum, representing \$114,157,370. The building-stone industry takes fourth place with \$90,212,433, and last of the 5 is natural gas, \$59,682,154.

Transportation.—Steam Railroad Mileage, Single Track.—The steam railroad mileage, single track, in the United States, 1890, was 163,562, an increase of 75,761 over that of 1880.

Freight Traffic.—In a report covering 153,183 miles, single track, the total tons of freight carried, 1890, was 640,452,548, of which 292,088,560 tons were local. Under a heading "Total number of tons carried 1 mile" the figures 79,172,464,796 are given.

State and Corporation Canals.—The tabular exhibit on canals and their uses in this article will throw much light on a subject concerning which but little is generally known. Few are aware of the importance, from a commercial standpoint, of these artificial water ways.

Express Companies.—Seventeen express companies, 1890, operated on 174,535 miles of route, 160,598 being rail, 10,882 water, and 3,055 stage. Fifteen of these corporations carried 98,118,430 packages, or 44,475,528 waybills. The packages gave an aggregate weight of 1,646,273 tons. The number of money waybills issued was 11,614,676, and the number of packages carried on money waybills was 17,258,682. Money orders were issued by the companies to the number of 4,598,567.

Street Railways.—In the Annual for 1890, page 835, will be found a statement of motive power used on surface roads in many of the larger cities. The length of lines (street length), 1890, for the United States was 5,783 miles; length of all tracks, including sidings, 8,123 miles; number of passenger cars, 32,505; number of employees, 70,764; number of passengers, 2,023,010,202; total cost, \$389,357,289.

In a statement of results for cities having 50,000 inhabitants and over, 1890, it is reported that the aggregate length of lines in such cities was 3,206 miles; length of tracks, including sidings, 5,149 miles; number of passenger cars, 26,363; number

of employees, 61,018; number of passengers carried, 1,823,646,686; total cost, \$335,663,915.

Receipts and Expenditures, Street Railways.—It is reported, in a special census statement, that the aggregate receipts from street railways, 1890, amounted to \$91,721,845; expenditures, \$87,388,007.

Insurance.—Risks.—In a table grouping fire, ocean marine, and inland navigation and transportation insurance, the number of companies, 1889, is given as 1,926—an increase of 279 over 1879. The amount of risks in force, 1889, is shown as \$18,691,434,190, being \$8,406,781,334 greater than the sum stated for the census year of the previous decade, the per cent. of increase being 81.74.

Assets.—For the same group and the same year (1889) the cash and available assets reached \$328,538,080, an increase of 32.96 per cent. over 1879.

Cash Liabilities.—These amounted to \$128,234,104, or 460.36 per cent. of increase during the decade.

Receipts in Cash.—The receipts in cash of the same group, 1889, aggregated \$157,780,514, showing a percentage of increase over 1879 of 65.06.

Disbursements in Cash.—These amounted to \$152,708,612 in 1889, being 68.37 per cent. greater than in 1879.

Life Insurance, Class A.—The number of companies, 1889, is reported as 60, only one more than in 1879.

Assets.—The total assets, "as per books of companies," exhibit \$741,426,453 in 1889, being 68.43 per cent. more than was reported for the preceding census period of 1879.

Liabilities.—The total liabilities, including capital, of life insurance companies, Class A, 1889, is reported to be \$649,997,234, or 74.33 per cent. greater than in 1879.

Income and Receipts.—The percentage of increase under this heading (1889 compared with

1879) was 118.93, the amount in the former year being \$181,767,097.

Disbursements.—The total disbursements of the life insurance companies, Class A, 1889, amounted to \$122,228,204, as against \$76,089,138 in 1879, the increase being equivalent to 61.61 per cent.

Risks.—The companies referred to in the last 5 paragraphs showed for 1889 (Dec. 31) the value of risks in force to be \$3,591,686,504. Their value in 1879 (Dec. 31) aggregated \$1,560,756,437. This would make the increase \$2,030,930,067, or 130.12 per cent.

Wealth, Debt, and Taxation.—In a statement concerning the true valuation—what would be deemed a fair selling price for the property at the date of the census—of real and personal property in the United States, 1890, exclusive of Alaska, the following aggregates are given under each sub-heading:

Real estate with improvements thereon	\$39,544,544,333.
Live stock on farms, farm implements, and machinery	2,703,015,040
Mines and quarries, including product on hand	1,291,291,579
Gold and silver coin and bullion	1,158,774,948.
Machinery of mills and product on hand, raw and manufactured	3,058,593,441
Railroads and equipments, including street railroads	8,635,407,333
Telegraphs, telephones, shipping, and canals	701,755,712
Miscellaneous	7,893,708,821
Total	\$65,037,091,197

Receipts and Expenditures in Cities.—An important exhibit in the census reports is that showing the receipts and expenditures, schools included, for cities having 50,000 inhabitants or more, 1890. So valuable are the facts given likely to be for future reference that it is deemed advisable to include in this article the groups of figures for the 25 largest cities. An immense amount of correspond-

once and other clerical labor was involved in the preparation, completion, and publication of the data herein presented. It is noted for information that the cities of St. Louis and Baltimore are wholly independent of any county organization. New York, Philadelphia, and San Francisco are contemporaneous with counties of the same name; New Orleans is contemporaneous with Orleans Parish; and Boston practically assumes the expenditures of Suffolk County, in which it is situated, and which comprises in addition one other city and two towns.

Of the families occupying homes in the 420 cities and towns having from 8,000 to 100,000 inhabitants, 64.04 per cent. are tenants and 35.96 per cent. are owners. Of the families occupying homes in the 28 cities having 100,000 inhabitants or more, 77.17 per cent. are tenants and 22.83 per cent. are owners, while of the families occupying homes outside of cities and towns having 8,000 inhabitants or more, 56.22 per cent. are tenants and 43.78 per cent. are owners.

Incumbered Farms and Homes.—The number of

Real Estate Mortgages.—As the result of a special investigation conducted in connection with and as part of the eleventh census, it was ascertained that the total number and amount of real-estate mortgages made and number of acres and lots covered, 1880 to 1889, were as follow:

Total of mortgages.....	9,517,747
Amount.....	\$12,094,877,793
Mortgages on acres.....	4,747,078
Amount.....	\$4,896,771,112
Mortgages on lots.....	4,770,669
Amount.....	\$7,198,106,681
Acres covered by acre mortgages.....	622,855,091
Lots covered by lot mortgages.....	8,037,031

Farms and Homes, Proprietorship and Indebtedness.—By act of Congress this was the subject of a special census investigation. The report made includes an exhaustive series of statements in tabular form. The principal facts are as follow:

Farms and Homes, owned and hired.—Of the 12,690,152 families living in the United States June 1, 1890, 6,066,417, or 47.80 per cent., occupy farms and homes that are owned by them, and 6,623,735, or 52.20 per cent., occupy hired farms and homes. The whole number of families occupying farms was 4,767,179, of which 3,142,746, or 65.92 per cent., own their farms, and 1,624,433, or 34.08 per cent., hire them. The whole number of families occupying homes was 7,922,973, or more than three fifths of all the families in the United States in 1890. Of this number of families, 2,923,671, or 36.90 per cent., own their homes, and 4,999,302, or 63.10 per cent., hire them. Of the 6,066,417 farms and homes that were owned by the families occupying them, 4,369,527, or 72.03 per cent., are free of incumbrance, and 1,696,890, or 27.97 per cent., are subject to incumbrance.

families owning incumbered farms is 886,957, the value of such farms being \$3,054,923,165, the amount of the incumbrance \$1,085,995,960, and the percentage of the incumbrance of the total value 35.55. The number of families owning and occupying incumbered homes is 809,933, the value of these incumbered homes is \$2,632,374,904, and the amount of the incumbrance thereon is \$1,046,953,603, the incumbrance constituting 39.77 per cent. of the total value.

Value of all Farms.—The total value of all farms in 1890 was \$13,279,252,649, and of this amount \$3,054,923,165 was the value of owned and incumbered farms, leaving \$10,224,329,484 as the combined value of hired farms and farms owned free of incumbrance. The average value of all farms, based on number of farm families, is \$2,786, that of owned and incumbered farms \$3,444, and that of farms hired and owned free \$2,635.

Average Value and Interest Charges.—The average incumbrance on the incumbered farms occupied by owners is \$1,224, the average value of such farms being \$3,444, while the average incumbrance on incumbered homes occupied by owners is \$1,293, such homes having an average value of \$3,250. There is an annual interest charge of \$76,728,077 on owned and incumbered farms, the average annual interest charge being \$87, and the average annual rate of interest 7.07 per cent. The total annual interest charge on owned and incumbered homes is \$65,182,029, the average annual interest charge being \$80, and the average annual rate of interest 6.23 per cent.

Education.—The totals of teachers and pupils by States appear in previous issues of the "Annual," as noted at the beginning of this article.

* Decrease.

† North and South Dakota combined.

‡ Includes all persons of negro descent.

Teachers and Pupils.—Of the teachers, 1890, 397,715 were white and 25,214 colored. The pupils included 12,957,468 white and 1,416,202 colored. The above figures are given under the heading "Enrollment in public, private, and parochial schools, as derived from the reports of schools." The reports of public common schools show 337,896 white and 24,112 colored teachers, with 11,358,515 white and 1,346,871 colored pupils.

Finances of Public Common Schools.—The ordinary receipts, 1890, amounted to \$139,770,063; ordinary expenditures, \$138,888,053. Of the last-named amount, \$88,772,816 was paid as teachers' wages.

Religion.—Details concerning numerous denominations were given in previous articles. The latest revised census statistics show that there are in all 143 denominations specified in the returns, and 231 independent Lutheran congregations and 156 mis-

cellaneous independent congregations, with 111,036 ministers, 165,177 organizations, and 20,612,806 communicants or members. The number of edifices is 142,521, with a seating capacity of 43,564,863. This last includes an approximate duplication of 2,800,000, because of the use of the same place of worship by more than one congregation. The value of church property is given as \$679,630,139. In addition to the churches reported, 23,334 halls, schoolhouses, and private houses, with a seating capacity of 2,450,858 for halls and schoolhouses, are occupied by organizations that have no edifices.

Mortality.—Statistics under this heading are only of service for purposes of comparison. The total number of deaths reported as having occurred in the United States during the census year ending May 31, 1890, is 875,521, giving a death rate of 13.98 per 1,000 of population. Although the stated death rate of 1880 (15.09) was higher and that for 1870 (12.77) lower, the actual death rate for the whole country was probably about the same in 1890 as in 1880.

Age, Sex, and Color.—Of the 875,521 deaths reported for the entire country, including those of

* Includes all persons of negro descent.

unknown age, 307,562 occurred under five years of age. The number of males given is 464,330; females, 411,191. The total of whites shown is 758,660. Of that number, 264,793 were under five years of age. The colored total, including persons of negro descent, Chinese, Japanese, and Indians, is 116,861, the number under five years of age being 42,769.

Specified Causes.—As a matter of record, it will be useful to note the principal causes of death. Of the total given, deaths from consumption numbered 102,199; pneumonia, 76,496; diarrhæal diseases,

74,711; diphtheria and croup, 41,677; enteric fever, 27,058; cancer and tumor, 20,984; malarial fever, 18,594; childbirth and puerperal diseases, 11,257; measles, 9,256; whooping cough, 8,432.

Insane, Feeble-minded, Deaf and Dumb, and Blind.—The tabular exhibits in this article include State totals and aggregates under the above headings. For purposes of comparison and future reference, the following details under each heading are inserted:

Insane by Sex, Nativity, and Color.—The total number of insane whites June 1, 1890, was 99,719;

* Includes all persons of negro descent.

negroes, 6,535; Chinese, Japanese, and civilized Indians, 231. The number of insane males was 53,473, and of insane females 53,012. According to general nativity and color, the sexes are divided as follow: Native whites, 32,946 males and 31,473 females; foreign whites, 17,305 males and 17,995 females; negroes, 3,013 males and 3,522 females; Chinese, Japanese, and civilized Indians, 209 males and 22 females. The total number of insane reported in 1880 was 91,959.

The number of insane in each 100,000 of popula-

tion in 1890 was 387 for the foreign whites, 140.5 for the native whites, and 88.6 for the colored. In 1880 the corresponding figures were 398.8, 161.9, 91.2. The proportion of insanity is much greater among the whites than among the negroes, and very much greater among the foreign born than among the native born.

In Asylums and other Institutions.—The number of insane in asylums in 1890 was 74,028; whites, 69,729; negroes, 4,299. The number of insane in asylums in each 1,000 of insane was: Whites, 699;

* Exclusive of prisons, almshouses, hospitals for the insane, and schools for the deaf, the blind, and the feeble-minded.

† Includes all persons of negro descent.

negroes, 658. The number of insane admitted to public institutions from 1881 to 1889, inclusive, was 190,458; males, 104,748; females, 84,485. The number treated was 227,461. The total expenditures for the same time were \$100,258,606; current, \$76,599,259; building, \$18,520,547; unspecified, \$5,138,800. The number of insane admitted to private institutions from 1881 to 1889, inclusive, was 13,833; males, 6,894; females, 6,939. Of the 74,028 insane

in institutions on June 1, 1890, the information as to whether they could read or write was not given for 8,963. Of the remaining 65,065, 51,362, or 789 per 1,000, could both read and write; 1,684, or 26 per 1,000, could read but could not write; and 11,833, or 182 per 1,000, could neither read nor write.

Feeble-minded.—The total number of feeble-minded whites, 1890, was 84,997; negroes, 10,574; Chinese, Japanese, and civilized Indians, 38. The

* Includes all public, private, parochial, and other denominational schools.

number of feeble-minded males was 52,962, and of feeble-minded females 42,647. According to general nativity and color, the sexes are divided as follows: Native whites, 42,277 males and 33,633 females; foreign whites, 4,875 males and 4,212 females; negroes, 5,788 males and 4,786 females; Chinese, Japanese, and civilized Indians, 22 males and 16 females. The total number of feeble-minded reported in 1880 was 76,895.

Idiots.—The number of idiots reported in 1880 was 76,895, but of this number over 29 per cent. was obtained from special returns made by physicians. In 1890 the physicians did not make any special reports for this class of the population, so that the proportion of feeble-minded to total population returned by the enumerators is greater than it was in 1880. In both the tenth and eleventh censuses a certain number of persons were reported as

* Public and private.

† Per cent. of population is represented by the number of communicants in each State.

idiots or as feeble-minded who should properly be reported among the insane, being cases of terminal or of senile dementia. It should also be noted that in 1880 every case of insanity reported as having begun under the age of twelve was reported as an idiot, while in 1890 the age limit is lowered to ten.

Deaf and Dumb.—The total number of deaf-and-dumb whites, 1890, was 37,447; negroes, 3,115; Chinese, Japanese, and civilized Indians, 30. The

number of deaf-and-dumb males was 22,429, and of deaf-and-dumb females 18,163. According to general nativity and color, the sexes are divided as follows: Native whites, 18,281 males and 14,997 females; foreign whites, 2,358 males and 1,811 females; negroes, 1,772 males and 1,343 females; Chinese, Japanese, and civilized Indians, 18 males and 12 females. The total number of deaf and dumb reported in 1880 was 33,878.

Deaf.—In accordance with the recommendations of a special committee of American instructors of the deaf, it was decided to collect information for the eleventh census with regard to all persons in the United States, excluding Chinese, Japanese, and civilized Indians, reported as being so deaf as to be unable to hear loud conversation, whether they were able to speak or not. The number of such persons on June 1, 1890, was 121,178, of whom 80,616 were able to speak but were so deaf as to be unable to hear loud conversation: Males, 49,278;

females, 31,338; whites, 77,308; negroes, 3,308. Of the 80,616, 521 were from five to ten years of age, 3,142 were from ten to twenty years of age, 28,008 were between twenty and fifty years of age, and 48,227 were fifty years of age and over. Those not able to speak numbered 40,562: Males, 22,411; females, 18,151; native whites, 18,281 males and 14,997 females; foreign whites, 2,358 males and 1,811 females; negroes, 1,772 males and 1,343 females.

Blind.—The total number of blind in the United States on June 1, 1890, was 50,568: Whites, 43,351;

negroes, 7,060; Chinese, Japanese, and civilized Indians, 157. The number of blind males was 28,080, and of blind females 22,488. According to general nativity and color, the sexes are divided as follow: Native whites, 18,803 males and 15,402 females; foreign whites, 5,471 males and 3,675 females; negroes, 3,709 males and 3,351 females; Chinese, Japanese, and civilized Indians, 97 males and 60 females. The total number of blind reported in 1880 was 48,928. The number of blind in one eye only reported in 1890 was 93,988: Males, 68,605; females, 25,383; native whites, 50,333 males and 18,284 females; foreign whites, 12,004 males and 3,757 females; negroes, 6,268 males and 3,342 females.

Crime, Pauperism, and Benevolence.—Under this heading much valuable information will be found in the tabular exhibits. The following additional details are among the most important results of the general census investigation:

Prisoners.—The total number of white prisoners in the United States on June 1, 1890, was 57,310; negroes, 24,277; Chinese, 407; Japanese, 13; civilized Indians, 322. According to general nativity and color, the sexes are divided as follow: Native whites, 38,156 males and 2,315 females; foreign whites, 13,860 males and 2,063 females; negroes, 22,305 males and 1,972 females; Chinese, 406 males and 1 female; Japanese, 12 males and 1 female; civilized Indians, 307 males and 15 females. Of the number reported as of unknown nativity, 869 were males and 38 were females. The total number of prisoners reported in 1880 was 58,609.

In Juvenile Reformatories.—The total number of white inmates of juvenile reformatories in the United States on June 1, 1890, was 12,903; negroes, 1,930; Chinese, 1; civilized Indians, 12. According to general nativity and color, the sexes are divided as follow: Native whites, 8,635 males and 2,443 females; foreign whites, 1,129 males and 276 females; negroes, 1,525 males and 405 females; Chinese, 1 male; civilized Indians, 11 males and 1 female. Of the number reported as of unknown nativity, 234 were males and 186 were females. The total number of inmates of juvenile reformatories reported in 1880 was 11,468.

Paupers in Almshouses.—The total number of white almshouse paupers in the United States on June 1, 1890, was 66,578; negroes, 6,418; Chinese, 13; civilized Indians, 36. According to general nativity and color, the sexes are divided as follow: Native whites, 19,375 males and 17,281 females; foreign whites, 16,938 males and 10,710 females; negroes, 3,326 males and 3,092 females; Chinese, 12 males and 1 female; civilized Indians, 16 males and 20 females. Of the number reported as of unknown nativity, 1,074 were males and 1,200 were females. The total number of almshouse paupers reported in 1880 was 66,203.

Inmates of Benevolent Institutions.—The total number of white inmates of benevolent institutions in the United States on June 1, 1890, was 106,836; negroes, 4,102; Chinese, 41; Japanese, 8; civilized Indians, 923. According to general nativity and color, the sexes are divided as follow: Native whites, 37,314 males and 38,956 females; foreign whites, 13,076 males and 13,246 females; negroes, 2,135 males and 1,967 females; Chinese, 33 males and 8 females; Japanese, 8 males; civilized Indians, 512 males and 411 females. Of the number reported as of unknown nativity, 2,167 were males and 2,077 were females. In the census of 1880 attention was confined to homeless children in institutions.

Indians.—The census of the Indian population, 1890, brought out some very interesting facts concerning these aboriginal inhabitants of the United

States and Territories. As the figures given in the preliminary reports of the census were afterward changed to accord with more complete data, it may be well to give here a few of the leading facts:

Population.—The total enumerated Indian population of the United States (exclusive of Alaska) June 1, 1890, was 248,253. Indians taxed (civilized Indians), 58,806; Indians not taxed, 189,447. The total enumerated Indian population of the United States (exclusive of Alaska) reported at the census of 1880 was 306,543. Civilized Indians, 66,407; reservation or agency Indians, 240,136. The census of Indian Territory, Indian reservations, etc., for 1890, not included in the general enumeration of the population of the United States (62,622,250), is as follows:

The Five Civilized Tribes, Indian Territory *.....	178,097
Cherokee nation (Indians, whites, and negroes).....	56,300
Chickasaw nation (Indians, whites, and negroes).....	57,320
Choctaw nation (Indians, whites, and negroes).....	43,808
Creek nation (Indians, whites, and negroes).....	17,912
Seminole nation (Indians, whites, and negroes).....	2,739
Indians on reservations.....	133,417
Six Nations of New York (including 98 living in Pennsylvania).....	5,407
Indian agents and employees (whites and Indians not otherwise enumerated).....	2,466
Whites and negroes at military posts in Oklahoma and Indian Territory.....	3,197
Whites on Indian lands (by permission or otherwise).....	2,312
Apache Indians in Alabama (Geronimo's band)....	384
Indians in prisons (not otherwise enumerated).....	184
Total.....	325,464

Location.—The Indians in the United States are either upon reservations or locations owned by themselves or have abandoned their tribal relations and become citizens. No Indian bands are now roamers except Dull Knife's band, of Gros Ventres, in North Dakota, numbering 168, and this band is, in fact, attached to Fort Berthold agency. Some Papagos and Navajos also roam, but return to their reservations from time to time. (See article RESERVATIONS, INDIAN.)

Alaska.—The latest revised census statistics, 1890, for the Territory of Alaska, give a total population of 32,052, including 19,248 males and 12,804 females. Of the total, 15,381 are native and 16,671 foreign born.

Race and Color.—Concerning the race and color of the inhabitants, the returns show 4,298 whites, 1,823 mixed, 23,531 Indians, 2,288 Mongolians, and 112 of all others. The term mixed is applied to the descendants of intermarriage of Russians with native women in former times.

Localities.—There were 309 distinct localities enumerated in 1890, such as villages, settlements, stations, etc., showing 4,744 houses and 6,943 families.

Conjugal Condition.—The conjugal condition of the population is as follows: Single, 17,548 (11,845 males and 5,703 females); married, 12,129 (6,579 males and 5,550 females); widowed, 2,325 (788 males and 1,537 females); divorced, 45 (31 males and 14 females); unknown, 5 (males).

Sex, Nationality, etc.—Of the 4,298 whites enumerated, 3,853 are males and 445 are females; 2,021 are permanent inhabitants and 2,277 are temporary inhabitants, employed in summer only; 2,531 are

* To the 178,097 persons of the Five Civilized Tribes, Indian Territory, should be added 1,281, for the Indians and other persons connected with the Quapaw agency, in the northeast corner of Indian Territory, counted as reservation Indians, and 804 persons on military reservations, partly estimated, making a total population for Indian Territory of 180,182.

* Exclusive of Alaska.

+ In computing these per capita the true valuation of Indian Territory is excluded.

male citizens and 1,002 are male aliens; 320 males are under twenty-one years of age.

Education.—The educational statistics give 19 private schools and 16 public schools. The number of teachers in private schools is 74 (35 males and 19 females), and in public schools 23 (9 males and 14 females). The number of pupils attending private schools is 878 (473 males and 405 females), and attending public schools 899 (466 males and 433 females).

Illiteracy.—The population ten years of age and over, classified by race, is subdivided according to illiteracy as follows: Of the 4,045 whites, 269, or 6.65 per cent., are illiterate; of 1,287 "mixed" class,

731, or 56.80 per cent., are illiterate; of the 17,753 Indians, 16,504, or 93.45 per cent., are illiterate; of the 2,287 Mongolians (chiefly Chinese), 606, or 26.50 per cent., are illiterate, but nearly all of the remaining 73.50 per cent. can read and write Chinese only; of the 112 negroes, Malays, Hawaiians, etc., 62, or 55.36 per cent., are illiterate.

Religion.—The religious statistics are shown in the following table:

DENOMINATIONS.	COMMUNICANTS.		
	White.	Creele.	Native.
Russian Orthodox.....	30	1,891	8,414
Protestant.....	71	3	1,390
Roman Catholic.....	337	30	131
Total.....	438	1,924	9,805

Commerce.—The value of the principal articles of export, products of Alaska, from 1868 to 1890, was \$75,213,929, divided as follows: Furs, \$48,518,929; canned salmon, \$9,008,497; salted salmon, \$603,548; codfish, \$1,246,650; products of the whaling industry, \$11,204,465 (whale oil, \$2,853,351; whalebone, \$8,204,067; and ivory, \$147,047); gold and silver, \$4,631,840.

Of minerals, there are found coal, copper, gold, silver, iron, limestone, marble, sandstone, soapstone, and diamonds.

The value of merchandise shipped from the Pacific coast ports to Alaska from 1868 to 1890 amounted to \$15,594,086.

Analysis by States.—To facilitate comparison, a brief analysis will be given, by States and Territories, of the results detailed in the text, with occasional mention of such other important facts as are published in the census volumes. Limit of space will only permit reference to States and other political divisions most prominent under the principal headings. Topics not treated of in this section of the present article are dealt with elsewhere—if not in the preceding text then in previous census articles published from time to time in the "Annual."

Population.—*Sex.*—In New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Maryland, District of Columbia, Virginia, North Carolina, and South Carolina the total of females (1890) exceeded that of males. This was also true in 1880 and 1870. Among the negro population females predominated (1890) in 14 States, including Kentucky, Tennessee, Alabama, and Louisiana. In cities having 50,000 or more population, the female sex predominated numerically (1890) in New York, Philadelphia, Brooklyn, N. Y., Boston, Baltimore, Cincinnati, New Orleans, Washington, D. C., Detroit, Milwaukee, Newark, N. J., Louisville, Ky., Rochester, N. Y., Providence, R. I., Indianapolis, and Allegheny, Pa.

Age.—Of the total population (1890), the following analysis gives classes in age, with totals for each class:

Under 5 years of age.....	7,634,693
From 5-9 years.....	7,573,998
" 10-14	7,033,509
" 15-19	6,557,563
" 20-24	6,196,676
" 25-29	5,227,777
" 30-34	4,578,630
" 35-39	3,866,161
" 40-44	3,185,518
" 45-49	2,731,640
" 50-54	2,326,262
" 55-59	1,672,396
" 60-64	1,458,034
" 65-69	1,010,110
" 70-74	701,751
" 75-79	393,062
" 80-84	203,551
" 85-90	75,340
" 90 years and over.....	33,274
Age unknown.....	162,165

In each of the above classes, males exceed females, except in the following:

From 15-19 years	3,308,852	females
" 80-84	105,989	"
" 85-89	41,177	"
" 90 years and over.....	19,842	"

Among the colored population females exceed males in the following classes: Fifteen to nineteen, twenty to twenty-four, forty to forty-four, eighty to eighty-four, eighty-five to ninety, ninety years and over.

Color.—In cities of 25,000 and over (1890) the colored population exceeded that of the whites in Charleston, S. C., only. The colored population exceeds 50 per cent. of the whole in Richmond, Va., Nashville and Memphis, Tenn., and Atlanta, Ga. More than 25 per cent. of the inhabitants of New Orleans and Washington, D. C. (1890), were colored.

Conjugal Condition.—According to the census of 1890, the only political division in which spinsters exceed bachelors in numbers is the District of Columbia. In every State and Territory the single males exceed the married males. In 18 States the excess is over 50 per cent. Married females are less in number than spinsters in every State and Territory.

Native and Foreign Born.—The five States having the largest number of foreign-born inhabitants (1890) were New York, Pennsylvania, Illinois, Massachusetts, and Michigan. **Foreign Whites.**—The foreign whites, in point of members, were stronger (1890) in New York, Pennsylvania, Illinois, Massachusetts, and Michigan. Canadians are most numerous in Massachusetts and Michigan; Mexicans are found principally in Texas and Arizona; Cubans and South Americans congregate chiefly in Florida and New York; English, Scotch, and Irish prefer New York, Pennsylvania, Massachusetts, and Illinois; Welsh find their homes mostly in Pennsylvania and Ohio; Germans are found largely in New York, Illinois, Wisconsin, and Ohio; Dutch reside in Michigan, Illinois, New York, and Iowa. Belgians choose Wisconsin, New York, Illinois, and Michigan; Swiss, in the order stated, are most populous in New York, Ohio, California, and Illinois; the Norwegian portion of the population is thickest in Minnesota, Wisconsin, Illinois, and Iowa; Swedes also favor these States, with Nebraska included; Danes cluster most in Iowa, Nebraska, and Minnesota; there are many Russians in South Dakota and Michigan; the largest number of Hungarians (1890) were in Pennsylvania; Bohemians and Poles in Illinois. Italians are plentiful in California and New Jersey; Spaniards have a strong liking for Texas, California, and Florida; Portuguese seem to prefer California and Massachusetts; Greeks, Chinese, and Japanese eling to the Pacific coast.

Native and Foreign Born in Cities.—In no city over 50,000 (1890) did the foreign-born inhabitants predominate. The cities having over 50 per cent. of foreign-born population were New York, Chicago, Boston, San Francisco, Cleveland, Ohio, Buffalo, N. Y., Detroit, Milwaukee, Minneapolis, and St. Paul.

Illiteracy.—Of the total illiterates, ten years of age and over (1890), the largest percentages were in New Mexico (65 per cent.); South Carolina (55 per cent.); Alabama (50 per cent.); Georgia (49 per cent.); and Mississippi (49 per cent.). Of native white illiterates, ten years and over, the greatest numbers were in New Mexico (64 per cent.); North Carolina (32 per cent.); Tennessee (27 per cent.); Arkansas (25 per cent.); and Alabama (25 per cent.). Of foreign white illiterates ten years and over, the largest total were in New Mexico (43 per cent.); Rhode Island (27 per cent.); New Hamp-

shire (27 per cent.); Arizona (27 per cent.); and Vermont (27 per cent.). Of colored illiterates, including persons of negro descent, Chinese, Japanese, and civilized Indians, the largest numbers (1890) were in New Mexico (92 per cent.); Georgia (82 per cent.); Alabama (80 per cent.); Louisiana (79 per cent.); and South Carolina (78 per cent.).

Gainful Occupations.—Proportion of Females.—Of the total of persons ten years of age and over employed in gainful occupations, the number of females exceeded 25 per cent. of the whole in New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, Maryland, District of Columbia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, and Louisiana. In agricultural, fishing, and mining pursuits more than 25 per cent. are females in South Carolina, Alabama, Mississippi, and Louisiana. In professional service the percentage of females exceeds 50 per cent. in New York, Illinois, Michigan, Wisconsin, Minnesota, Iowa, North Dakota, South Dakota, Nebraska, and Kansas. In domestic and personal service (1890) females exceeded males in the District of Columbia, Virginia, North Carolina, South Carolina, and Georgia. In mechanical and manufacturing industries the number of females to the whole engaged, ten years and over (1890), exceeded 25 per cent. in 11 States.

Leading Occupations of Females.—The 10 leading occupations of women, exclusive of those classed as servants and laborers are, with the number of women employed (1890), as follows:

Dressmakers.....	288,328
Teachers, school and college.....	245,371
With, or as farmers, planters, and overseers.....	226,427
Laundresses.....	216,631
Seamstresses.....	146,043
Cotton-mill operatives.....	92,965
Clerks and copyists.....	64,219
Tailoresses.....	63,809
Milliners.....	60,087
Saleswomen.....	58,451

The professions and industries in which more women than men were employed (1890) are:

CALLING.	Women.	Men.
Music.....	34,519	27,636
Teachers, school and college.....	245,371	96,581
Boarding- and lodging-house keepers..	32,593	11,756
Housekeepers and stewards.....	86,080	5,947
In laundries.....	216,631	31,881
Nurses; midwifery.....	41,396	6,190
Servants.....	1,216,630	228,152
Stenographers and typewriters.....	21,270	12,148
Paper-box makers.....	13,043	4,714
Button makers.....	1,590	1,011
Corset makers.....	5,800	733
Cotton-mill operatives.....	92,965	80,177
Dressmakers.....	288,328	836
Glove makers.....	3,675	2,741
Hosiery and knitting-mill operatives...	20,810	8,745
Milliners.....	60,087	395
Seamstresses.....	146,043	4,001
Sewing-machine operatives.....	6,022	1,104
Shirt, collar, and cuff makers.....	15,975	5,132
Silk-mill operatives.....	20,663	14,192
Straw workers.....	2,423	1,243
Umbrella and parasol makers.....	1,938	1,465

Survivors of the Civil War.—The States containing (1890) the largest number of Federal survivors (soldiers, sailors, and marines) were: Pennsylvania, 110,780; Ohio, 101,602; New York, 86,041; Illinois, 71,158; Missouri, 63,747. Of the Confederate survivors, Texas, in 1890, held the largest number, 66,791; the next in order being Virginia, 48,713; Georgia, 47,080; North Carolina, 43,947; and Alabama, 34,004.

Agriculture.—Unimproved Land.—The States having the largest percentage of acreage in unimproved land (1890) were: Arizona (92 per cent.); Florida (68 per cent.); New Mexico (67 per cent.); North Carolina (65 per cent.); and Arkansas (63

per cent.). Those having the smallest unimproved area were the District of Columbia (16 per cent.); Illinois (16 per cent.); Iowa (17 per cent.); Ohio (21 per cent.); and Indiana (26 per cent.).

Acreage of Farms.—Texas (1890) had the largest number of farms of 1,000 acres each or over (5,415). Next in rank, with as large an area, are: California, 3,672 farms; Georgia, 2,758; Mississippi, 1,654; Alabama, 1,576; and North Carolina, 1,468. Of farms occupying from 50 to 100 acres, Ohio, in 1890, had 82,380; Illinois, 68,746; New York, 67,835; Pennsylvania, 66,743; and Indiana, 65,198.

Fisheries.—*Capital and Value of Products.*—The leading States in amount of capital invested (1890) were: Massachusetts, \$7,483,193; New York, \$5,125,361; Maryland, \$5,118,843; Connecticut, \$5,072,274; Virginia, \$3,429,469. Their rank in value of products is as follows: Massachusetts, \$6,367,033; Maryland, \$5,654,024; Virginia, \$4,816,225; New York, \$3,798,815; and New Jersey, \$3,130,893. Maryland and Virginia lead in number of men, vessels, and boats employed (1890).

Minerals.—The five leading States (1889) in value of mineral products, include Pennsylvania, \$150,876,649; Michigan, \$70,880,524; Colorado, \$41,126,610; Montana, \$33,737,775; New York, \$24,165,206.

Religion.—According to the census reports, the greatest numerical strength of the leading denominations is in the following States, in the order named:

Protestant Episcopal—New York, Pennsylvania, New Jersey, Massachusetts, and Connecticut.

Roman Catholic—New York, Massachusetts, Pennsylvania, Illinois, and Ohio.

Methodist—North Carolina, Georgia, Ohio, New York, and Pennsylvania.

Baptist—Georgia, North Carolina, Virginia, Alabama, and Texas.

Presbyterian—Pennsylvania, New York, Ohio, Illinois, and Tennessee.

Lutheran—Pennsylvania, Wisconsin, Minnesota, Illinois, and Ohio.

Congregational—Massachusetts, Connecticut, New York, Illinois, and Ohio.

Conclusion.—This article concludes the statements in the "Annual Cyclopædia"—beginning with the 1890 issue—concerning the results of the eleventh census. It is believed that, with the aid of the reference list inserted at the beginning of the article, any aggregate or total of importance published under any census heading can be found within the series.

UNITED STATES, FINANCES OF THE. The public finances for the fiscal year ending June 30, 1896, were far from satisfactory, and still show the necessity for additional taxation. The expenditures were \$25,203,245 in excess of the revenues, leaving that amount to be supplied from the cash in the Treasury. For the previous year the deficit was \$42,805,223. The deficit was lessened by a gain in receipts of \$19,102,206, with an increase of expenditures of only \$1,961,228. Of the receipts, there was a gain in internal revenue of \$3,341,193, in the postal service of \$5,516,080, in customs of \$7,863,135, and in profit on coinage of \$1,256,512, and no decrease in any important item.

Of the expenditures there was an increase in the postal service of \$5,516,080, but owing to increased receipts there was a reduction in the deficiency of the service of \$1,716,542. There was an increase of \$4,406,999 in payments on account of interest on the public debt, of \$2,925,774 on account of Indians, and a falling off of \$3,729,131 in the construction of new war vessels. Exclusive of the postal service, there was a net decrease in ordinary expenditures of \$4,015,852.

The following tables show the principal items of receipts and expenditures for 1896, compared with like items for 1895, postal service included:

SOURCE OF RECEIPTS.	YEAR ENDING JUNE 30,	
	1896.	1895.
Internal revenue.....	\$146,762,865	\$143,421,672
Postal service.....	82,499,208	76,983,128
Customs.....	160,021,752	152,158,617
Sales of public lands.....	1,005,523	1,103,347
Tax on circulation of national banks.....	1,763,497	1,712,551
Repayment of interest on Pacific railways.....	955,500	982,411
Sinking fund for Pacific railways.....	1,889,078	1,725,887
Customs fees, fines, penalties, and forfeitures.....	622,003	640,966
Fees, consular, letters patent, and lands.....	2,815,250	2,655,299
Sales of property except lands.....	890,759	178,124
Profit on coinage.....	2,807,092	1,640,580
Revenues, District of Columbia.....	3,846,435	3,658,048
Immigrant fees.....	445,670	305,225
Miscellaneous.....	3,051,777	3,197,348
Total ordinary.....	\$409,475,409	\$390,373,303
Premium on public debt.....	11,166,246	11,339,345
Principal of public debt.....	482,710,369	365,787,206
Grand total.....	\$903,352,018	\$797,499,754

ITEMS OF EXPENDITURES.	YEAR ENDING JUNE 30,	
	1896.	1895.
Congress.....	\$7,736,610	\$7,639,167
Executive.....	11,268,877	11,716,602
Judiciary.....	7,873,000	8,277,029

Engraving and printing.....	1,116,373	1,146,552
Lighthouse establishment.....	3,114,855	2,763,243
Collecting customs revenue.....	7,304,790	6,808,269
Assessing and collecting internal revenue.....	3,769,643	3,769,682
Miscellaneous.....	21,162,882	24,437,204
Total ordinary.....	\$484,678,654	\$433,178,426
Public debt principal.....	396,190,023	354,276,859
Grand total.....	\$880,868,677	\$787,455,285

In addition to the ordinary receipts, the cash in the Treasury was increased during the last fiscal year by the sale of \$100,000,000 of 4-per-cent. bonds issued under the Resumption Act of Jan. 14, 1875, yielding \$111,166,246.

In addition to the cash belonging to the Treasury, and subject to its official check, there are held under control of the Treasury Department large deposits belonging to public disbursing officers, and also reserves of coin and paper as a basis of the monetary circulation. The table on next page shows in detail the character of the assets thus held, and the liabilities against such assets, for the years ending Dec. 31, 1895 and 1896.

It will be seen that at the end of the year the general Treasury balance was \$50,293,179 greater than at the beginning of that period, which result was obtained by the proceeds of sale of the 4-per-cent. bonds as stated, less the amount taken from the cash to meet current expenditures in excess of

current receipts. In the aggregate, there was an increase of \$65,885,105 of assets, of which the increased holding of gold alone was \$62,005,275, large importations of that metal having occurred in the last few months of the calendar year. Of the amount of gold held Dec. 31, 1896, \$100,000,000 is elsewhere reported as the reserve accumulated under the Redemption Act to meet the redemption of the United States notes, and as a liability is included as a part of the general Treasury balance.

ITEMS.	YEAR ENDING DEC. 31,	
	1896.	1895.
<i>Assets:</i>

Total.....	\$853,463,552	\$787,578,447

The debt of the United States is of two kinds, one with reserve and one without. To the extent that a reserve is maintained the aggregate is necessarily reduced. Of the debt without reserve, there was an increase during the calendar year of \$59,186,767. In this class of debt is included the amount of United States notes outstanding, of which the coin reserve held for their redemption on Dec. 31, 1896, was reported as \$100,000,000; also the national bank redemption account, being the balance due from the Government to national banks on account of legal tenders furnished the Government by the banks for redemption of their notes, the amount of such legal tenders being included in the general Treasury balance subject to the official check of the department. The details of this class of debt are set forth in the following table:

DEBT WITHOUT RESERVE.	OUTSTANDING DEC. 31,	
	1896.	1895.
Funded loan (1891), 4½ per cent., continued at 2 per cent.....	\$25,264,500	\$25,264,500
Funded loan of 1907, 4 per cent.	559,638,900	559,631,750
Refunding certificates, 4 per cent.....	45,890	50,310
Loan of 1904, 5 per cent.....	100,000,000	100,000,000
Loan of 1925, 4 per cent.....	162,315,400	62,315,400
Old loans matured.....	1,383,070	1,674,510
Old demand notes.....	54,347	54,847
United States notes (greenbacks).....	246,681,016	283,418,748
National bank redemption account.....	18,876,323	22,659,734
Fractional notes.....	6,890,504	6,893,394
Total.....	\$1,121,249,960	\$1,062,063,193

The debt with reserve is represented entirely by obligations employed as a part of the monetary circulation of the country against which the public Treasury holds an equivalent of cash. This class of debt increased during the last year \$49,523,632, causing, of course, an equivalent increase in the cash of the Treasury. Included in this class of

debt is \$100,000,000 of the United States notes, being the portion of such notes for which a reserve is held. The details of such debt are set forth in the following table:

DEBT WITH RESERVE.	OUTSTANDING DEC. 31,	
	1896.	1895.
United States notes (greenbacks).....	\$100,000,000	\$63,262,268
Treasury notes (1890).....	119,816,280	137,771,280
Currency certificates.....	50,830,000	34,450,000
Gold certificates.....	39,279,789	50,099,889
Silver certificates.....	370,883,504	345,702,504
Total.....	\$680,809,573	\$631,285,941

The monetary circulation of the country consists of gold, silver, and minor coins, United States notes, gold, silver, and currency certificates, Treasury and national bank notes. A large proportion of these issues is held in the Treasury, as has already been shown. The amount in circulation outside of the Treasury on Dec. 31, 1895 and 1896, is set forth in the accompanying table:

CIRCULATION OUTSIDE OF THE TREASURY.	IN CIRCULATION DEC. 31,	
	1896.	1895.
Gold coin.....	\$517,743,229	\$484,728,547
Standard silver dollars.....	58,581,819	59,205,927
Subsidiary silver.....	62,101,986	64,417,685
Gold certificates.....	37,887,439	49,936,439
Silver certificates.....	356,655,800	336,076,648
Treasury notes (1890).....	84,171,321	115,726,769
United States notes.....	261,367,758	230,855,873
Currency certificates (1872).....	50,830,000	31,605,000
National bank notes.....	221,384,148	206,653,836
Total.....	\$1,650,323,400	\$1,579,206,724

It will be seen that there has been in the aggregate an increase during the period of \$71,016,676. The only significant change in the circulation is the persistent increase in the amount of the silver certificates and the decrease in that of the Treasury notes of 1890, not wholly evidenced by the table. At the time of the repeal of the act authorizing the issue of Treasury notes, Nov. 1, 1893, there had been issued of such notes in payment of silver bullion \$155,931,002. On Dec. 31, 1896, there was outstanding of these notes only \$119,816,280, a reduction of \$36,114,722. This reduction was brought about by retiring the notes and issuing in their place silver certificates authorized by the act of 1878. Under the authority given the Secretary to coin such portion of the silver bullion purchased under the act of 1890 as he might deem necessary, there has been coined to Nov. 1, 1896, 56,306,876 silver dollars, yielding a seigniorage or profit of \$13,304,635; on all of which dollars silver certificates could be issued, thus easily enabling the change from notes to certificates to be made.

The coinage of the mints, which are at Philadelphia, San Francisco, and New Orleans, for the fiscal year 1896 consisted of 3,584,760 pieces of gold, of the value of \$58,878,490; of 20,424,529 pieces of silver of a face value of \$11,440,641; and of minor coins 54,321,484 pieces of a face value of \$869,337. The law restricts the minor coinage to the Philadelphia mint. The character and value of the coinage for 1895 and 1896 is shown by the preceding table.

UNIVERSALIST CHURCHES. The following is a summary of the statistics of the Universalist Churches of the United States for 1896: Number of parishes, 1,006; of families, 45,405; of members, 40,441; of members of Sunday schools, 59,370; value of parish property above indebtedness, \$9,260,321; amount raised for parish expenses, \$1,369,202; for church edifices, \$357,257; amount of debts canceled, \$96,966; of parish contributions to missions, \$69,300. These numbers show gain in every item, the increase in the year's number of members having been 1,641. The invested funds of the General Convention amount to \$271,014, and those of the various State conventions for women's societies and other auxiliary societies to \$443,702, making a total of \$714,716. The missionary enterprises, besides those of the several State conventions, include the Pacific Coast Home Mission, maintained by the Woman's Centenary Association; the mission in the South, with headquarters at Atlanta, Ga.; a southwestern mission with offices at St. Louis, Mo.; a mission among the colored people in Virginia; and a mission in Japan. Two new missionaries were sent during the year to Japan.

The Young People's Christian Union of this Church held its seventh annual national convention in Jersey City, N. J., July 8 to 15. Nearly half of the churches in the denomination have unions, which were represented in the convention by delegates from 20 States. A gain of more than 30 per cent. in membership was reported. The mission work assumed several years previously had become self-supporting. Propositions were submitted for revision of financial and missionary methods, the purpose of which was to bring them into closer affiliation with those of the General Convention.

URUGUAY, a republic in South America. The Senate is composed of 19 members, representing the 19 departments, elected indirectly for two years. The Chamber of Deputies has 69 members (1 to every 3,000 inhabitants), elected by direct suffrage for three years. The presidential term is four years. The President for the term ending March 1, 1898, is J. Idiarte Borda. The Ministers in 1896 were: War and Marine, Gen. J. J. Diaz; Interior and Justice, Miguel Herrera y Obes; Agriculture, Industry, Instruction, and Public Works, J. J. Castro; Finance, Federigo Vidiella; Foreign Affairs and Worship, Dr. J. Estraznlas.

Area and Population.—The republic has an estimated area of 72,110 square miles, and a population estimated in 1895 at 830,980. Of this number nearly a third are of foreign birth, consisting of Spaniards, Italians, Brazilians, Argentinians, French, and, in smaller numbers, English, Germans, and others. Montevideo, the capital, has a population of 175,000. The number of marriages in 1895 was 4,154; of births, 31,158; of deaths, 12,874; excess of births, 18,284. The immigration was 9,158.

Finances.—The expenditures for the year ending June 30, 1896, were 13,647,924 pesos, of which 505,490 pesos were for legislation, 62,042 pesos for the presidency, 117,407 pesos for foreign affairs and worship, 2,213,694 pesos for the interior, 832,026 pesos for finance, 953,346 pesos for public works, 1,730,507 pesos for war and marine, 5,721,735 pesos for the public debt, and 1,511,674 pesos for other

expenses. The revenue for the year ending June 30, 1897, was estimated in the budget at 15,581,299 pesos, and the expenditure at 14,634,785 pesos. The consolidated debt amounted on June 30, 1896, to 101,476,102 pesos; international debt, 4,693,425 pesos; unified internal debt, 6,877,950 pesos; guarantee debt, 3,830,208 pesos; liquidation debt, 1,507,570 pesos; railroad debt, 94,478 pesos; total public debt, 118,479,733 pesos.

The Army and Navy.—The permanent military force consists of 4 battalions of rifles, 4 regiments of cavalry, and 1 regiment of artillery, having a total strength of 233 officers and 3,222 men. The police number 3,200, and the national guard about 20,000 men. The regular troops are armed with Remington rifles and carbines, and have 67 cannon and mitrailleuses.

The fleet consists of 3 gunboats and an armed steamer, and is manned by 22 officers and 162 sailors.

Commerce and Navigation.—The special commerce for the financial year 1894 amounted to 23,800,000 pesos for imports and 33,500,000 pesos for exports. The imports and exports for 1895 and their distribution among different countries are shown in the following table, giving values in pesos (1 peso = \$1.05):

COUNTRIES.	Imports.	Exports.
England.....	7,890,000	4,950,000
France.....	2,882,000	5,830,000
Belgium.....	1,366,000	4,363,000
Germany.....	2,968,000	1,670,000
Spain.....	2,031,000	298,000
Italy.....	2,179,000	695,000
Portugal.....	15,000	116,000
Brazil.....	2,218,000	6,882,000
United States.....	1,760,000	3,658,000
Argentine Republic.....	2,240,000	4,076,000
Cuba.....	214,000	203,000
Paraguay.....	61,000	
Other countries.....	4,000	119,000
Total.....	25,386,000	32,544,000

The values of the principal exports in 1895 were: Wool, 10,252,000 pesos; hides, skins, and leather, 7,300,000 pesos; meat, 4,923,000 pesos; cereals, 3,510,000 pesos; extract of meat, 2,029,000 pesos; tallow, 1,844,000 pesos; live animals, 1,004,000 pesos.

The number of sailing vessels in the ocean trade entered at Montevideo in 1895 was 351, of 218,448 tons, and of steamers, 927, of 1,640,141 tons; the number of sailing vessels cleared was 196, of 119,763 tons, and of steamers, 753, of 1,388,101 tons. In the coasting trade, 1,652 sailing vessels, of 59,544 tons, were entered, and 1,683, of 56,782 tons, were cleared, and 824 steamers, of 474,122 tons, were entered, and 828, of 471,209 tons, cleared. The mercantile navy in 1895 consisted of 19 steam vessels, of 4,608 tons, and 45 sailing vessels, of 17,779 tons.

Communications.—The railroads in operation in 1894 had a length of 995 miles, and 190 miles were building.

The telegraphs on Jan. 1, 1895, had a total length of 3,904 miles, of which the railroads owned 974 miles. The number of dispatches in 1894 was 283,150.

The postal traffic in 1894 was 7,368,791 internal and 6,880,495 foreign letters, newspapers, etc. The receipts were 1,231,490, and expenses 1,506,610 francs.

Legislation.—The Chamber in May approved bills for extending railroads and one for establishing a Government bank, the old bank having collapsed in the crisis of 1890. For the new bank London capitalists interested in railroad concessions promised to loan the required capital on condition that compensation be paid for certain railroad contracts. The old national bank cost the Government

\$32,000,000. A new gold loan of £1,667,000, bearing 5 per cent. interest, was placed in London at 71½. It was made a first charge on 53 per cent. of the customs receipts, of which 45 per cent. were already pledged to pay the interest and sinking fund of the consolidated debt. The proceeds of this loan were employed to found the new Banco de la Republica. The bank has a monopoly of the emission of paper currency and of judicial deposits. It will loan money on rural credit and also on personal property as a *mont de piété*. The government denounced on Aug. 1 the commercial treaty with Germany, concluded for three years in 1892 and afterward continued from year to year. In September public feeling among the Liberals and the foreign element was aroused, and meetings were called to protest against the establishment of another archbishopric and two new dioceses.

Revolutionary Uprising.—A plot to overthrow the government was concocted by influential men in Uruguay in conjunction with friends in the Brazilian State of Rio Grande do Sul. Munitions of war were collected and stored away during two or three years. It was intended to invade Uruguay from three points on the Brazilian frontier and attack the capital on Nov. 29. The Brazilian Gen. Gumercindo Saraiva, one of the leaders, encountered a government force under Gen. Muniz, and hence the plan was changed. Being forewarned, the government seized a large quantity of arms and ammunition in Montevideo and arrested many of the leading revolutionists on Nov. 27. Gen. Muniz, who pursued Saraiva and overtook him near the Brazilian line at Cerro Largo, was defeated and taken prisoner in the battle that followed. Other bodies of rebels were turned back by the government troops, but at Durazno and Aparicio the revolutionists gained numerous and important adherents.

UTAH, a Western State, admitted to the Union Jan. 4, 1896; area, 84,970 square miles. The population, according to the census of 1890, was 207,905; the estimated population in 1895 was 247,324. Capital, Salt Lake City.

Government.—The first State officers were the following: Governor, Heber M. Wells; Secretary of State, James T. Hammond; Treasurer, James Chipman; Auditor, Morgan Richards, Jr.; Attorney-General, A. C. Bishop; Superintendent of Public Instruction, John R. Park—all Republicans; Adjutant General, John Q. Cannon; Coal Mine Inspector, Thomas Lloyd; Fish and Game Warden, John Sharp; Chief Justice of the Supreme Court, C. S. Zane; Associate Justices, George W. Bartch and J. A. Miner—all Republicans; United States District Judge, John A. Marshall; United States District Attorney, John W. Judd; United States Marshal, N. M. Brigham.

Inauguration of the State Government.—The new Constitution having been submitted, examined, and found to comply with the conditions of the enabling act, the proclamation admitting Utah as the forty-fifth State of the Union was signed by the President on Jan. 4. Monday, Jan. 6, the day on which the Territorial government terminated and the State government was inaugurated, was observed as a day of general rejoicing. The formal exercises at the capital were preceded by a great street parade of militia, soldiers of the United States, fire and police departments, State and city officials, secret orders, fraternal societies, local organizations of various kinds, and other citizens, and was followed in the evening by an inaugural ball. The inauguration was held at the Tabernacle. After the proclamation of Statehood had been read, Mr. Rawlins gave to the Governor, to be preserved among the public archives, the pen used by the

President in signing the bill under which Utah became a State. The Governor, after taking the oath of office, issued a proclamation convening the Legislature in special session at 2 o'clock the same day, for the purpose of fixing a time for the opening of the first regular session. In his inaugural address he reviewed the history of Utah, beginning with the organization of the temporary State of Deseret in 1849, eighteen months after the arrival of the pioneers. This was designed to provide for the interval before action was taken by Congress, and was followed by the establishment of the Territory, Sept. 9, 1850, by the organic act, under which the government was administered up to the present year. Attempts to secure Statehood were made in 1856, 1861, 1867, 1872, 1882, and 1887, when constitutions were framed and memorials sent to Congress asking for admission, but without result. The name Deseret was given to the proposed State each time until 1882, when that of Utah was adopted.

Finances.—The report of the auditor for 1896 shows that the year's receipts from all sources were \$997,537.45. The amount turned over by the Territory was \$23,935.46, making a total of \$1,021,472.91. The disbursements for the year amounted to \$600,522.53, of which \$576,054.83 was toward redeeming warrants, \$22,000 to the Agricultural College, the amount received from the General Government, and \$2,467.70 on court certificates, making a balance in the treasury at the close of the year of \$420,950.38. The floating indebtedness represented in outstanding warrants was reduced nearly half. On Dec. 31, 1895, it amounted to \$201,434.70; at the close of 1896 there were only \$102,829.25 in warrants outstanding. The auditor's statement of resources and liabilities shows an excess of resources available on Dec. 31, 1896, of \$142,895.63.

The total value of property assessed for taxes in the State is \$107,292,083. The tax levy for the year was fixed at 8 mills on the dollar. The valuation of property of railway and street-car companies is \$13,336,775.

The Legislature at its last session provided for the collection of a fee of 25 cents per \$1,000 on the capital stock of each corporation incorporated after the passage of the law, and the same fee for each company filing with the Secretary of State amended articles increasing its capital stock. These fees yielded \$6,888.90 in nine months. Another law authorized the collection of a tax on the gross annual premiums of foreign insurance companies doing business in the State. This tax yielded \$8,645.25.

The sale of \$200,000 of State bonds, drawing 4 per cent. per annum interest, and running twenty years, was made by the State Board of Loan Commissioners June 1, at a premium of \$3,212.50.

Congress appropriated \$42,356 for carrying out the provisions of the enabling act.

Education.—The State University had 539 students enrolled in 1895-96, and graduated 44 in June.

In January articles of incorporation were filed for Sheldon Jackson College, a Presbyterian institution to be established at Salt Lake City. A beautiful site of 80 acres just outside the city has been given for the buildings.

By act of the Legislature the school for the deaf and dumb, theretofore conducted in connection with the University at Salt Lake City, was established as an independent school on the campus of the old reform school at Ogden, with the added functions of educating the blind. There are 10 pupils in the department for the blind and about 60 in that for the deaf. The estimate *per capita* is \$250 for deaf-mutes and \$300 for the blind.

The Industrial School.—The institution formerly known as the Reform School was, by act of

the Legislature, ordered to be removed from its original location, and its name was changed to State Industrial School. This was done to make room for the School for the Deaf and Dumb and Blind, for which the elaborate buildings were better adapted, and authority was given the trustees of the Industrial School to procure another location in Ogden City. The buildings and grounds known as Ogden Military Academy, consisting of 10 acres and a brick building, were accordingly purchased.

The State Prison.—The amount appropriated for the support of the prison, \$30,000, is \$10,000 less than its cost in 1895; but a balance of \$2,650 remained in the treasury at the close of the year.

Industries.—Of these, the Governor says in his message: "Although few of the silver mines and prospects have been able to survive the battle waged against the white metal by the allied money powers of two worlds, the yield of the old and well-equipped silver mines of the State has materially increased, and gold mining, which meantime has taken on new life, has nearly doubled its product. The crops have never been more prolific and prices, though still ruinous because of the demonetization of silver, ranged toward the end of the year slightly higher, enabling many of the farmers to market their products. The yield of the sugar factory was the greatest in its history, being above 9,000,000 pounds. The Rio Grande Western Railway has extended its line 40 miles farther to the south. Two of our great mountain streams have been harnessed during the year, and the electrical power generated by these enormous and costly plants is available at minimum cost. The silk industry, to which Utah is so well adapted, under the encouragement of a small bounty provided by the last Legislature, began to breathe during the year, and, if the present policy is continued, there is no doubt that the 1,000 pounds of cocoons produced last year will soon be followed by the manufacture of raw silk.

"The mineral production for the year was estimated at \$15,897,266."

Shipments were given as follows: Silver-lead ores, 115,170,760; silver-lead bullion, 43,395,733; copper matte, 3,690,048; copper bullion, 717,228; copper ore, 199,400; copper buttons, 35,335; carbonates, 27,676; total, 163,236,180.

Semicentennial Celebration.—The Legislature provided for a commission of 10 persons to conduct a semicentennial celebration, in 1897, of the fiftieth anniversary of the arrival of the Utah pioneers, and appropriated \$5,000. The commission has resolved to hold a celebration in July of 1897, lasting five days, to cost not less than \$50,000.

Militia.—The organized forces of the State are made up of 16 companies of infantry, 2 troops of cavalry, 2 light batteries, and a signal corps—in all, 93 officers and 837 enlisted men.

Legislative Session.—The Legislature convened Jan. 6 and adjourned April 8 (5 by legislative fiction). The Senate stood—Republicans, 12; Democrats, 6; the House—Republicans, 33; Democrats, 12. Charges of fraud having been made in regard to the election in Utah County, a committee was appointed to investigate. The majority report was in favor of seating 1 of the 3 contestants, Republicans; but the minority report was adopted and the 3 Democrats retained their seats. Presley Denny was Speaker of the House, and George M. Cannon President of the Senate.

The election of 2 United States Senators took place Jan. 22. The names of Frank J. Cannon, Arthur Brown, C. W. Bennett, and C. C. Goodwin were before the Republican caucus; the first 2 were made the candidates. Moses Thatcher and Joseph L. Rawlins were the Democratic candidates. In the Senate Cannon and Brown received each 12

votes, and Thatcher and Rawlins each 5. In the House the vote stood: Cannon, 31; Brown, 29; Rawlins, 14; Thatcher, 14; Bennett, 1; Goodwin, 1. The new Senators took their seats Jan. 27. Mr. Cannon drawing the term ending in 1899, and Mr. Brown that ending in 1897.

Measures to the number of 125 were passed, many of them defining the duties of State officers and departments, others the methods of court procedure. Many laws in the interest of labor were passed, among them acts prohibiting blacklisting, child labor, and payment of wages in saloons; an eight-hour law; one providing for payment of attorney's fees when a mechanic or laborer sues for wages; and one defining who are and who are not fellow-servants. A State board of labor was provided for, and a State mine inspector, whose duty it shall be to inspect all mines at least once a year, and make reports in regard to their working, timbering, machinery, and ventilation; and investigate accidents.

A board of horticulture was created, to consist of 6 members. Its principal duty will be the supervision of all imported and exported trees, fruits, and plants, in order that all in any way infected may be destroyed, and so prevent the spread of disease and aid in producing better fruit.

The trustees of the Agricultural College are authorized and required to hold institutes for the instruction of citizens of the State in the various branches of agriculture. Such institutes are to be held annually at least once in each county, and they may employ an agent or agents to perform such work in connection with the faculty of the college as they deem best.

An act for the establishment of sericulture provides that "for the term of ten years after the passage of this act there shall be paid out of the State treasury to any corporation, firm, or person engaged in the production of cocoons of the silkworm, a bounty of 25 cents for each pound of cocoon produced in the State. No bounty shall be paid for cocoons not produced by worms fed entirely upon the leaves of the mulberry tree, nor shall more than \$2,000 be paid for bounties under the provisions of this act in any one year. The Governor shall appoint the Utah Silk Commission, to consist of 5 persons, to serve without compensation. It shall be the duty of said commission to examine all cocoons for which bounty is claimed, and certify to the Secretary of State the quantity, grade, and quality upon which bounty shall be paid, and the name of the party entitled thereto. It shall also be the duty of said commission to publish in book or pamphlet form explicit instructions in all the practical branches of sericulture, for free distribution to the people of the State; also to provide instruction in reeling in each county raising 100 pounds of cocoons; to provide reliable eggs, and in every way encourage those engaging in this industry; and provide the best possible market for reeled silk and cocoons until it can be consumed by manufacturers in our own State."

Bounties were provided for the cultivation of canaigre root, and it was made mandatory on counties to offer bounties for the killing of wild animals on petition of 100 citizens.

A registration bill was passed, and the Australian ballot law was adopted.

Provision was made for a uniform system of public schools, and for the instruction of the deaf and dumb and the blind.

Women were made ineligible to serve as jurors. A bill was passed to provide deserted wives with maintenance and property from their husbands' estates. Women employed as teachers in public schools are to receive the same compensation as men for the same class of work.

In returning with his approval "An act relative to the heritable rights of the issue of polygamous marriages," the Governor sent the following message:

"I understand that the purpose of this act is to re-enact and make clear the laws already in operation, and that it entitles the issue of polygamous marriages, born previous to March 3, 1888, to inherit or to be entitled to any distributive share in the estate of the father of such issue. I believe that this legislation is proper and right, and it appears to me, in view of the fact that conditions which called forth congressional legislation on this subject are settled, and that the past has been condoned, that it would be in the interest of public policy and for the welfare of the State to remove whatever ban may exist against the issue of polygamous marriages, up to one year succeeding the date of the amnesty proclamation of the President, or (what would be better, in my judgment) up to the date of the admission of the State. I am convinced that such legislation would not only be in the interest of the State, but the children themselves affected thereby would be better citizens in the knowledge that they are entitled to all the legal rights and privileges of their fellows. Legislators will not forget that while the manifesto was final with the great majority of the people, it signaled the immediate surrender of what had for a lifetime been held as a vital religious sacrament, and some hearts can not change in a day."

Accordingly, another act was passed, legitimizing the children of polygamous marriages to Jan. 4, 1896.

The statute controlling the incorporation of cities was so amended that the great mining camp of Mercur can be incorporated. A board of Land Commissioners will have charge of the State lands.

The Governor vetoed a bill providing for court stenographers and one concerning the penitentiary, both of which were again passed.

An issue of State bonds to the amount of \$200,000 was voted, in order to fund the outstanding indebtedness. The tax-levy bill fixed the amount to be raised for general State purposes at not more than \$515,000, and for school purposes at not more than \$300,000. County commissioners may levy a 5-mill tax for general county purposes and a 3-mill tax for schools. A revenue bill was passed fixing the date of assessment on the first day of March. Mortgages are not taxed. Bankers are to make statements of the aggregate amount of deposits on hand, and this, being subject to check, will not be taxable. Railroads, telegraph and telephone companies, car companies, and railway depot companies will have their property assessed by the State Board of Equalization. Mines are assessed on their net proceeds. The State board is to consist of 4 members appointed by the Governor, and not more than 2 may belong to the same political party.

Salaries of State officers were fixed as follows: Governor, \$2,000; Secretary of State, \$2,000; Auditor, \$1,500; Treasurer, \$1,000; Attorney General, \$1,500; Superintendent of Public Instruction, \$1,500; Fish and Game Commissioner, \$500; Justices of the Supreme Court, each, \$3,000; Clerk of the Supreme Court and *ex-officio* Librarian and Statistician, \$1,800; District Judges, each, \$3,000; Adjutant General, \$500; 2 Land Commissioners, each, \$1,200; Coal Mine Inspector, \$1,000. To these are added allowances for clerical assistance, traveling expenses, etc. For necessary expenses the Land Commissioners may use \$28,000 in 1896, and the Governor is allowed \$10,000 for procuring surveys.

The appropriations for State institutions were as follows: University, for 1896, \$25,000; deficit for

1894-'95, \$13,500; school for the deaf and dumb and the blind, \$10,750; industrial school, for 1896, \$6,000; deficit for 1894-'95, \$6,157; insane asylum, for the care and maintenance of 235 patients for the year 1896, at \$3.50 a week, \$42,770; for special purposes at the asylum, \$7,095; for the Agricultural College, general maintenance, 1896, \$10,000; for deficit, \$8,930, and for special purposes, \$3,070; for the prison, \$24,000; library, for 1896, \$3,000, and for deficit, \$3,014; for the militia, \$3,000; for the Board of Equalization, \$2,000.

Counties were divided into four classes, according to assessed valuation, and the salaries of officers of the first three classes were fixed, those of the fourth class being left to be determined by the boards of county commissioners, though the maximum salary was prescribed in each case. The sheriff, who receives the largest salary among county officers, has \$2,400 in counties of the first class (those showing a valuation of \$20,000,000 or over), \$1,800 in counties of the second class, and \$1,500 in those of the third class.

The State University was made a body corporate, and it is provided that its courses of study shall be so arranged as to supplement the courses of the public schools. It is to be under control of a board of nine regents. One hundred free scholarships may be maintained.

The act says further: "The Normal School shall be continued for both sexes, and its course may extend to a period of four years, or until graduation, and shall include practice in teaching and pedagogy. No partisan political, sectarian, or religious doctrine shall be taught, and no political or religious test required."

A libel law was made which provides that before bringing suit against a newspaper the aggrieved party shall serve notice on the publisher at least three days in advance of serving the complaint, and if it shall appear that the statements were made in good faith and that a full and fair retraction was made and printed as conspicuously as the libel, within three days after the matter was brought to the notice of the publisher, then the plaintiff in such case shall recover only actual damages; provided, however, that the provisions of the act shall not apply to the case of any libel against any candidate for a political office in the State unless the retraction of the charge is made editorially in a conspicuous manner at least three days before the election, in case such libelous article was published in a daily paper; if published in a weekly paper, at least ten days before the election.

Among the other more important measures were:

An irrigation act.

For the codification of the laws.

Regulating insurance, and imposing a tax of 1½ of 1 per cent. on the gross premium of each company collected from policyholders in the State, subject to some deductions, and requiring annual reports to the Secretary of State.

A fish and game bill.

Providing for a State board of examiners.

For the release of one joint debtor without releasing others.

Amending the law in regard to civil actions so as to make a contractor liable at the place where the contract is to be fulfilled.

Providing that mayors of cities may disapprove of parts of an appropriation without vetoing all.

Furnishing a design for a great seal for the State.

Providing the manner of establishing public libraries.

For the prevention of disease among sheep.

To prevent sale of stock under fraudulent pedigrees.

Regulating the sale of oleomargarine.

Providing for the management of herds.

To prevent pooling by corporations, combinations, etc., for the purpose of keeping up the price of commodities.

Prohibiting the sale of liquor to Indians.

A bill to abolish capital punishment was defeated. Memorials to Congress were adopted, one asking for the annexation of parts of Coconino and Mohave Counties in Arizona to Utah, one censuring Ambassador Bayard and demanding his recall, and others asking for silver and tariff legislation; another petitioned for the gift by the Government to the State, for educational purposes, of the land that was formerly occupied at Fort Cameron, Beaver County. It is desired to establish a normal school at that place.

The Mormon Church.—A resolution to restore the real property of the Church was passed by Congress in March, and the cases involved were sent to the Supreme Court of the State for final disposal. This property is valued at \$285,000. The personal property, which was also confiscated under the Edmunds act, and was valued at \$450,000, had been previously returned.

Great surprise and indignation were created by the publication in April of a manifesto issued at the general conference of the Church and signed by leaders of the Church, including the first presidency, ten of the apostles, and others. After saying that the authorities of the Church were misrepresented and misunderstood during the election contest of 1895 (see "Annual Cyclopaedia" for 1895, page 739) and charged with using Church influence in political matters, the document goes on to say that the leading authorities never have attempted or desired to have the Church in any manner encroach upon the rights of the State, or to unite in any degree the functions of the one with those of the other. The part of the manifesto which has been the subject of discussion is the following:

"We unanimously agree to and promulgate as a rule that should always be observed in the Church, and by every leading official thereof, that before accepting any position, political or otherwise, which would interfere with the proper and complete discharge of his ecclesiastical duties, and before accepting a nomination or entering into engagements to perform new duties, said official should apply to the proper authorities and learn from them whether he can, consistently with the obligations already entered into with the Church, upon assuming his office, take upon himself the added duties and labors and responsibilities of the new position. To maintain proper discipline and order in the Church, we deem this absolutely necessary, and in asserting this rule we do not consider that we are infringing in the least degree upon the individual rights of a citizen. We declare that in making these requirements of ourselves and our brethren in the ministry, we do not in the least desire to dictate to them concerning their duties as American citizens, or to interfere with the affairs of the State."

The discipline and order of the Church were the subject of an address by Joseph F. Smith, a member of the first presidency, at Provo, shortly after the general conference. He said that the Church authorities had the right to dictate both spiritually and temporally. The two were inseparable. If a man has a million dollars or a 160-acre farm, and should be called on a mission, and by going would lose all he possessed, it would be his duty to go on the mission. President Smith dwelt at great length on the discipline of the Church, and in closing told the Saints that the manifesto lately read and adopted at the general conference in Salt Lake City would be read to them for their approval or

disapproval, as they saw proper to vote. "But," the speaker said, "all who vote against it have not got the spirit of the Gospel at heart."

In connection with these declarations, the depositing of Moses Thatcher from his position as one of the apostles was regarded as significant.

Political.—The Republicans held a convention at Salt Lake City, April 7, and adopted resolutions in favor of free coinage of silver. The delegates chosen to the national convention were not instructed for any candidate. The party was divided after the national convention, and 2 conventions were held Sept. 24. The regular Republicans met in Mount Pleasant, and the Independent (silver) Republicans at Salt Lake City. The latter accepted the candidates for presidential electors named the same day by the Democratic convention at Provo, and nominated Lafayette Holbrook for member of Congress.

At the Mount Pleasant convention the following resolution was adopted:

"We indorse the platform of the Republican convention held at St. Louis, and make it a part of this platform, with the exception of the financial question. We renew the promises which have been made in former platforms of the Republican party of Utah. We believe in bimetalism, and thereby we mean the use of both gold and silver as standard money and free and unlimited coinage of both metals at the ratio of 16 to 1.

Candidates for presidential electors were named at this convention, but the candidate of the Independent Republicans for member of Congress, Lafayette Holbrook, was nominated at another convention held in Ogden the 26th.

Two Democratic conventions were held; at the first, held June 6, in Salt Lake City, six delegates were chosen to the national convention. Of the alternates named, three were women. Delegates were instructed to vote in favor of a free-coinage platform and candidates pledged to that principle. At Provo, Sept. 24, W. H. King was named for member of Congress.

Warren Foster was the candidate of the People's party for member of Congress.

The legality of the election, Nov. 3, was disputed on account of alleged irregularity in the passing of the election law. A rule of the House provides that no bill or joint resolution shall be amended after its third reading, and the records showed that the House accepted amendments proposed by the Senate, and after that the bill was then sent back to the Senate and regularly engrossed and signed by the presiding officer. It was also alleged that the ballot had not been secret as required by law. But the Supreme Court held that the points of the contestants were not well taken, and the election was declared valid. The grounds for the decision were that the election bills were signed by the presidents of both houses, and the Governor was the best judge as to whether they had been properly enacted; that the ballot system was secret, the method providing for tracing ballots being only applicable to fraudulent ballots, and that the use of party emblems on the ballots was proper.

The result of the election was an overwhelming victory for the Democratic party. The presidential vote (unofficial) was 64,851 for Bryan and 13,461 for McKinley. Of the 3 electors, 1 was for Watson for Vice-President and 2 were for Sewall. For member of Congress, W. H. King received 47,217, Lafayette Holbrook 27,503, and Warren Foster 2,202. The State Senate is entirely Democratic, including 2 Populists elected on a fusion ticket. In the House the Republicans have 3 members out of 45. One woman was elected to the Senate and 1 to the House.

V

VENEZUELA, a federal republic in South America. The Senate consists of 3 members from each State, 27 in all, elected for four years. The House of Representatives has 63 members, 1 to 35,000 of population, elected also for four years by the direct suffrage of the male citizens of the age of twenty-one years and upward. The President and the Council of Government are elected for four years. The President for the term ending March 5, 1898, is Gen. Joaquin Crespo. The Council of Government consists of Manuel Guzman Alvarez, President; Dr. F. Acevedo, Vice-President; and Dr. H. Rivero, Gen. Custodio Milano, Luis Zagarzazu, José G. Riera, Tomás José Guillén, and Manuel M. Gallegos, members. The President's Cabinet at the beginning of 1896 was composed as follows; Interior, Dr. J. F. Castillo; Foreign Affairs, Dr. Ezequiel Rojas; War and Marine, Gen. Ramon Guerra; Public Instruction, Dr. Federico R. Chirinos; Fomento, Dr. Manuel A. Diez, *ad interim*; Public Works, H. Pérez, *ad interim*.

Area and Population.—The area of Venezuela is estimated at 593,943 square miles, including a large area claimed by Great Britain. The population according to the census of 1891 was 2,323,527, consisting of 1,137,139 males and 1,186,388 females. The number of foreigners was 42,898. There were 6,705 marriages in 1889, and the number of births was 76,187 and of deaths 55,218. The number of immigrants in 1890 was 1,555.

Finances.—The budget of 1896-'97 makes the total revenue 40,300,000 bolivars (1 bolivar = 19 3/4 cents), of which import duties give 27,000,000, other customs duties 162,000, taxes 7,300,000, and state property 6,000,000 bolivars. The expenditures are 9,721,179 bolivars for the Interior, 1,950,570 for Foreign Affairs, 1,994,970 for Fomento, 3,068,221 for Public Instruction, 2,668,424 for Public Works, 15,558,130 for Finance, and 5,338,506 for War and Marine; total, 40,300,000 bolivars.

The public debt in 1896 consisted of 15,794,305 bolivars of consolidated debt paying 5 per cent. interest; 1,119,291 bolivars of 6-per-cent. internal bonds issued in 1894; the internal consolidated debt of April 14, 1896, amounting to 42,277,205 bolivars, paying 6 per cent.; 3,663,490 bolivars of warrants, paying 1 per cent. a month; the Spanish, French, and German 3-per-cent. debt, amounting to 4,266,338 bolivars; and 10,792,190 bolivars raised to construct the Caracas aqueduct; total, 141,744,528 bolivars.

Commerce.—The trade of Venezuela is mainly carried on with Great Britain, the West Indies, the United States, Germany, France, and Colombia. The exports in 1894 amounted to 107,655,694 bolivars. The principal articles of export were: Coffee, 84,769,000 bolivars; cacao, 9,651,000 bolivars; gold, 2,884,000 bolivars; hides, 2,849,000 bolivars; animals, 1,142,000 bolivars. Rubber, timber, coconuts, cinchona bark, copaiba, and tonca beans are also exported.

During 1894 there were 1,480 steamers and 7,620 sailing ships entered and cleared.

Communications.—The railroads have a total length of 394 miles. The length of the state telegraph lines is 3,882 miles.

Defenses.—The army as reorganized under the law of July 30, 1895, consists of 11 battalions, each formed of 6 companies of 60 men each. Every able-bodied citizen between eighteen and forty-five

years of age is enrolled in the militia, which numbers about 250,000 men.

The fleet consists of 3 steamers, to each of which is attached a company of marines.

The Boundary Commission.—The commission appointed by President Cleveland to report upon the true divisional line between British Guiana and Venezuela for the information of the President and Congress was organized under the presidency of Justice David J. Brewer early in January, 1896. President Cleveland had declared that "when such report is made and accepted it will, in my opinion, be the duty of the United States to resist by every means in its power, as a willful aggression upon its rights and interests, the appropriation by Great Britain of any lands or the exercise of governmental jurisdiction over any territory which, after investigation, we have determined of right belongs to Venezuela." The Secretary of State at the request of the commission called the attention of the governments of Great Britain and Venezuela to its appointment, and explained its object, which was to inform the Executive upon certain facts touching a large extent of territory in which the United States have an indirect interest, not one of territorial aggrandizement or material gain in any form, their sole concern being the peaceful solution of a controversy between two friendly powers for a just and honorable settlement of the title to the disputed territory and the protection of the United States against any fresh acquisition in our hemisphere on the part of any European state. The note suggested to each Government that it might see a way consistent with its sense of international propriety to give the commission the aid it could furnish in the way of documentary proof, historical narrative, unpublished archives, or the like. An act of either Government in this direction might, it was added, be accompanied by an express reservation as to its claims, and should not be deemed to be an abandonment or impairment of any position heretofore expressed, and by designating an agent or attorney whose duty it would be to see that no proofs were omitted or overlooked, it would, by acting the part of *amicus curiæ*, throw light upon difficult and complex questions of fact. The British as well as the Venezuelan Government welcomed the friendly co-operation of the United States, and both engaged jurists to prepare their cases, the British case being ostensibly prepared as a parliamentary document. The Government assurance of title on which the holders of land and mining claims in the contested regions did not antedate March 19, 1889, when Viscount Gormanston, then Governor, declared that, so far as the territory included in the line known as Schomburgk's was concerned, no doubt need exist. Two years before the Secretary for the Colonies had instructed Lieut.-Gov. Bruce to caution all persons interested in mining licenses that they were issued and must be accepted subject to the possibility that in the event of a settlement they might become part of Venezuelan territory, in which case no claim for compensation could be recognized. When the gold discoveries were made the zealous British Governor, according to the report of a Venezuelan commission appointed to make an investigation on the spot, used the influence of the colonial Government to promote emigration to the gold fields, while the Venezuelan settlers there were attracted to the coast settlements of the colony, and the Indians

were treated so generously that they offered no opposition to the mining operations. The success of these efforts was reflected in the returns of the gold exports, which rose from 939 ounces in 1885 to 6,518 ounces in 1886, 11,906 ounces in 1887, 14,510 ounces in 1888, and 14,624 ounces in the first half of 1889.

In 1895 Mr. Chamberlain contemplated the granting of all the northwest district, extending from the Cuyuni river to the western boundary of the colony, to a chartered company, with absolute right to the minerals and precious stones, timber, railroad, and township rights, as well as leave to sell the concessions to public companies. After the appointment of the Boundary Commission the Government of British Guiana ceased granting mining licenses, and the companies already organized for quartz mining suspended operations.

The Boundary Commission sent Prof. George L. Burr to Holland to examine Dutch records bearing upon the boundary dispute. The archives of the Vatican were likewise explored, and certified copies of Spanish and Venezuelan documents relating to the subject were obtained.

The Venezuelan case was presented to the United States Commission by James S. Storrow, counsel for Venezuela, and approved by William L. Scruggs, legal adviser of the Venezuelan Government and special counsel before the Boundary Commission. It was pointed out that the proposal made in 1890 by Venezuela for arbitration did not involve the surrender of a province, inhabited by 40,000 British subjects, which had been in the uninterrupted possession of Holland and of Great Britain successively for two centuries, which was the objection that Lord Salisbury had raised in 1880 in reference to the claim of Venezuela that the Essequibo river was the boundary, because Venezuela, in asking for arbitration, offered to recognize in Great Britain a right to its settlements on both banks of the Essequibo, reserving for itself the banks of the Orinoco, which the treaty of Aranjuez had recognized as Spanish, and every English ministry, except Lord Salisbury's, had offered so to recognize. The proposal was to arbitrate the rest, consisting of territory where England even then had no settlements; but the offer was refused. The settlement of the Dutch and the English had never extended beyond the rich alluvial land of the seacoast and the river estuaries. Assuming, for the sake of argument, that England might have a right by occupation wherever its people had their settled homes but for a single generation, the contention of the Venezuelan brief was that there was no title by occupation to 40,000 square miles in which neither the Dutch nor the English ever had a settlement. The Spanish discovered Guiana in 1500, and soon established themselves so strongly that no other power was ever able to penetrate inland beyond the reach of its ship's guns, not even the formidable Raleigh expeditions of 1595 and 1616. The earliest Dutch attempt at settlement occurred not before 1621, previous to which ships only touched for trade near the mouth of the Essequibo, where the Spaniards already had a fort. Neither the Dutch nor the English later attempted to have any settlement in the basin of the Cuyuni and Mazaruni above their lower cataracts, nor on the Essequibo above its lowest cataracts, nor in the coast region west of the Pomeroun, but confined their occupation to the fertile alluvial tide-water districts. The temporary Dutch post alleged to have existed in the Cuyuni basin and the more doubtful one at Barima Point were at most mere shops for friendly trade with the older settlements of the Spaniards. When two posts established in the same regions between 1755 and 1770, temporary huts chiefly, if not

entirely, for slave raids on the Spanish Indians, the Spaniards sent expeditions against each as soon as it was discovered and destroyed both, carrying away the occupants of one as prisoners, while the occupants of the other escaped. The Spaniards asserted their right to do this on the ground of territorial sovereignty. The States General complained to the King of Spain, but they got no redress and never afterward renewed their claim. It is upon these acts of attempted occupation, if they can be dignified by that name, that the English have based their claim to the gold regions of the southern part of the Cuyuni basin and of the Barama and Barima rivers, and the still more monstrous claim to hold the mouth of the Orinoco, whose entire basin has always been held by Spain and its successors. The actual settlements of the Dutch and the Spaniards were separated by 150 miles of forest, in which no white man lived. The whole of the basin of the Cuyuni and Mazaruni is claimed as Venezuelan territory on the principle that first occupation of a part is in law an entry upon and possession of the whole, which the entry of a second claimant can not displace beyond the actual occupation of that second. The British claim is therefore limited to their settled districts and can not reach the ultra-settlement region. After the first discovery of the northeastern coast of South America by the Spanish, their explorers coasted the whole of Guiana and sailed up the Orinoco, and in consequence of their stories of gold more than a score of Spanish expeditions penetrated Guiana in search of it.

The Spaniards settled on the lower Orinoco at San Thomé because it was the entrance to the interior, and by holding it they kept all other comers out. Freebooters of other nations attacked the Spanish settlements with the design of effecting a lodgment and gaining access to the gold region, but Spain possessed the land so strongly as to hold it against them all. The Spaniards reached toward the interior not merely with their expeditions, but with their civil settlements and their extensive mission villages. This was done so thoroughly, and by Spaniards alone, that these vast regions are to-day pervaded with the Spanish language, names, religion, and habits, having received no European civilization from any nation except from Spain. The Dutch who settled on the estuary of the Essequibo were barely strong enough to live. Their colony consisted in 1735 of only 150 whites and 3,000 negroes, and all their cultivation and use of the soil and all their houses west of the Essequibo were within 3 miles of the coast, not reaching to the Pomeroun river, and 5 or 10 miles up the banks of the Essequibo, the Cuyuni, and the Mazaruni, above their confluence, but below their lowest cataracts and on tide water. The English extended substantially no farther. They now assert a right 150 miles beyond any actual Dutch occupation. The main basin of the Cuyuni and Mazaruni is a true interior basin, shaped like a tray with a rim, and tipped so as to throw all its waters to the eastern corner, where they escape through what is virtually a single breach in its rim, and pour as one stream into the Essequibo estuary by a series of rapids and cataracts, with a drop of 200 feet in 40 miles. The difficulty of penetrating this basin is such that a single blockhouse placed in the gorge was sufficient to protect the settlements against incursions from the interior and to prevent the escape of runaway slaves from the plantations. The mountainous ridge forming the rim of the basin constituted for two hundred and fifty years an absolute barrier to the spread of the Dutch and English settlements and forms a natural boundary, such as is recognized in international law. The natural entrance to the basin has always been from the

ancient Spanish settlements on the Orinoco, over the easy slopes of that part of the water-parting, and into the northern part of the Cuyuni basin. The Spanish, now the Venezuelan, settlements cover a large part of this basin, and the Spaniards also exercised dominion over the unsettled part by excluding other nations from it. When the demand sprang up in the Dutch settlements for red slaves, or Indians, *poytos*, as they were called (Carib slave-raiders), directed by Dutchmen, captured Indians on Spanish territory, preferably the domesticated Indians of the mission.

From the time of the early use of Indian slaves in the eighteenth century it was forbidden to capture slaves in the river Essequibo and its districts, because the Dutch authorities wished to avoid retaliatory attacks from Indians and to diminish the risk of runaways; but the planters were allowed to buy slaves from the Caribs of the lower Orinoco. The Spaniards in 1758 discovered that the slave-raiders had formed an establishment on an island in the Cuyuni river, whereupon the Spanish commander sent a strong force which swept down the principal affluent and then the main river, found only one post, destroyed it, and made prisoners of its occupants, refusing to release them at the demand of the Dutch Governor. The Barima region was between 1760 and 1770 the scene of similar incidents. There were no Dutch settlements beyond the Maruca, where a small armed outpost was maintained, but Dutch slave traders stayed with the Caribs in the delta district, and Dutchmen engaged there in contraband trade. As soon as the Spaniards discovered this they stopped it; the States General again complained, and, getting no redress, desisted from complaint. The Spaniards first occupied and have ever since occupied the great basin of the Orinoco, used the lower reaches of the river for ingress to their empire within and egress to the sea, and exercised sovereign rights over the mouth of the river by an armed pilot-station on the lowest convenient island, by coast-guard launches, etc. The delta lands, though uninhabited and unfit for habitation, are not vacant territory which another nation can appropriate and thus establish a hostile military occupation, for it is settled law that those who possess the watershed and the firm banks own the delta islands and the shores below. The English allegation is that the Dutch established about 1666 a post for trade or to watch the Spaniards at Barima Sand, on the delta pass known as Brazo Barima, which they soon abandoned, either voluntarily or for fear of the Spaniards. Between 1760 and 1770 a few Dutch slave-traders lived with the Caribs on one of the tributary creeks. About that time the Dutch were apprehensive that the Spaniards intended to come through the delta bayous to attack the settlements, and the Dutch Governor is said to have put a watchman or two on the Barima. But all these places were destroyed by the Spaniards before 1768. Neither Dutch nor English attempted to reoccupy till the armed invasion in 1884 of the Demerara magistrate Michael McTurk.

When the new Dutch West India Company was organized, in 1764, the grant in the charter covered only the places of Essequibo and Pomeroon, evidently excluding the Orinoco, 100 miles from these rivers. In the treaty of Aranjuez, made between Spain and Holland in 1791 for the mutual restitution of runaways, the places in South America between which such restitution was to take place were all the Spanish settlements on the Orinoco on the one hand and Essequibo and Demerara, Berbice, and Surinam on the other. In 1794 the Dutch Secretary of State recognized that Dutch territory began at Maruca, which was described in 1796 by the British officer Pinckard as the remotest point of the

colony of Essequibo, and was stated to be the limit of British territory by the British Governor in 1839. In that year Schomburgk, taking the line drawn in the sketch map of Bouchenroeder from the mouth of the Barima or the Amacuro and accepting Hart-sinek's statement in his history of 1770 that the Dutch once had a post at Point Barima, adapted the arbitrary straight line of the Dutch surveyor, who was utterly ignorant of the country beyond the Pomeroon, to the natural lines, mountain ranges, and rivers, and submitted it to the British Government, pointing out in his memoir that the Venezuelan boundary merits the greatest attention "on account of the political importance of the mouth of the Orinoco." He was directed by Lord Palmerston to survey the line and set some posts on it, which Lord Aberdeen in 1842, on receiving a vigorous remonstrance from Venezuela, ordered to be removed, declaring that they were not indications of dominion and empire, but a preliminary measure open to discussion. In the subsequent discussions Lord Aberdeen, Lord Granville, and Lord Rosebery offered to secure to Venezuela the undisturbed possession of the months of the Orinoco, recognizing that it was diplomatically inadmissible to claim on such flimsy pretenses what were described as the Dardanelles of the Orinoco. Lord Salisbury is the only minister who has insisted upon a different view, and his claims grew every time he recurred to the subject.

The Schomburgk line, put forward at the outset merely as a basis for discussion, became the irreducible minimum, and all that Great Britain was willing to submit to arbitration was newly claimed territory extending far outside of that line. Even the Schomburgk has been altered and expanded from one running approximately north and south, cutting across the Cuyuni and its southern basin, as laid down on all the maps published prior to 1886, in which year the Colonial Office discovered that it went around by the great bend of the Cuyuni. The line on all the maps made before the discoveries of gold gave a new speculative value to the land outside as well as inside of it, strikes the Cuyuni, not at the Acarabisei river, but at the Otomong river, 20 miles below. The two nations having in 1850 mutually agreed that there should be no occupation of the disputed territory by either, Venezuela severed diplomatic relations with Great Britain on Feb. 23, 1887, after British armed forces had in 1884 and subsequent years invaded the disputed territory and taken possession up to the expanded Schomburgk line. Venezuela, for the sake of a settlement, offered in 1890 to exempt the settled districts from arbitration. The region which it did then require to be arbitrated, and in which the recent gold diggings are found, contains no settlements even to-day. They are worked exclusively by negroes, who are hired on the coast and go up for three months at a time. There are no houses there, for they live in huts built in the Indian fashion, or mere shanties, and no families or permanent residents, with the exception of a few foremen or officials whose duties keep them there and some negroes who have kitchen gardens. Nor have the English spent any money in permanent improvements in those regions. With scarcely an exception the gold is got by simple washing, by hand labor. The highest estimate of the total capital is \$2,000,000, and that is chiefly to pay wages and current expenses until the product can be marketed. The total output of gold, by official returns, has been \$10,500,000 up to 1896. The Guiana Government gets a royalty of 90 cents an ounce, which has amounted to upward of \$500,000. In 1895 the sum collected was \$119,000. The total expenses of clearing streams, making roads, etc., have been less than that, so that if every British subject were required

to quit those regions with nothing but what he could carry with him the colony would still be at least \$8,000,000 richer for its invasion of the territory claimed by Venezuela.

The English case was prepared by Sir Frederiek Polloek, Professor of International Law at Oxford University, and was first presented to Parliament in the form of blue books. The historical argument, drawn from evidence in the Spanish and Dutch archives, was that from 1648 to 1796 the Dutch were in uninterrupted possession of the entire coast line from the river Corentin to Barima, and during this period explored the upper portions of nearly all the rivers, and to a considerable extent made settlements in the adjacent districts; that prior to 1723 there was no Spanish settlement in the territory in question except San Thomé de la Guayana, which was twice removed to higher points on the Orinoco; that between 1724 and 1796 the Capuchin missions were established south of the Orinoco, and gradually extended southward and eastward toward the Dutch territory, the farthest point occupied being the village of Tumeremo, founded about 1788; that before 1796 Dutch settlements had existed far up the Cuyuni, while a Dutch fort was established near the river Yuruari, and that the Dutch had full control of the basin of the Cuyuni; and that with the exception of the settlement of San Thomé de la Guayana and the missions the Spaniards had exercised no authority or dominion whatever over the territory now in dispute. From reports of English and Spanish officials to their respective governments, the conclusion was drawn that Great Britain, on succeeding to all the rights of the Dutch, extended its settlements and continuously exercised over the territory originally claimed by the Dutch all those rights by which nations usually indicate their claim to territorial possessions, while neither Spain nor, after the declaration of independence, Venezuela had either possession or dominion over the territory in question. Since 1846, while maintaining her just rights and insisting that its just claims would embrace practically the whole watershed of the Essequibo, Cuyuni, Yuruari, Pomercon, Waini, and Barima, it is represented as having consistently shown a desire to make a fair arrangement with Venezuela as to the boundary; and it is further argued that the claim of Venezuela that its boundary extends to the river Essequibo has been based upon contentions that are in no way supported by the facts and can not be justified upon any reasonable grounds—namely, upon the original discovery and first exploration of the South American Continent by Spain, which are clearly irrelevant; upon the bull of Pope Alexander VI, which can not be considered as having any real bearing on the question; upon an allegation that the occupation by the Dutch was in violation of the treaty of Münster, which allegation is shown to be unfounded; upon the possession by the Spaniards of the territory south of the Orinoco, including the rivers Barima, Maruca, and Pomercon, whereas the only Spanish settlements at any time were San Thomé de Guayana, situated on the south bank of the Orinoco, which was moved farther up the river as it was destroyed by the British and the Dutch successively, and the Capuchin settlements, between the Orinoco and Tumeremo; and upon the assumption that the Dutch never had any possessions north of the Essequibo, which is shown to be equally erroneous.

A parliamentary paper was issued in consequence of the finding of discrepancies and mistranslations in the blue book, one of which made a secret report to the Spanish Government before the treaty of Münster say that the Dutch settlements extended from close to the Amazon as far as the Orinoco,

whereas in the original they were said to reach at least as far as the Pomercon. A supplementary blue book gave documents relating to the Dutch and Spanish settlements prior to 1796, the post holders and the jurisdiction exercised by them, trade relations with the Indian tribes, and boundaries purporting to show that the Dutch explored the main streams and tributaries of all the principal rivers that flow into the Atlantic Ocean between the Amazon and the Orinoco, made settlements at various places in the interior, instituted a regular system of trading with the Indian tribes and with their Spanish neighbors, their post holders having special functions in controlling such trade; that they issued passports, and in other ways established their control over the district, and entered into relations with the native tribes, many of which owned allegiance to them; and that subsequently to 1745 the boundaries were on various occasions the subject of discussion, and both Dutch and Spaniards considered the territory embraced in the watersheds of the Essequibo, Mazaruni, and Cuyuni and of the other rivers flowing into the Atlantic between the Corentin and the Orinoco belonged to the Dutch. The conclusions drawn from the documents were that for a period of upward of two hundred years the Dutch had control of the whole coast extending from the Corentin to the Orinoco and of all the rivers flowing direct into the Atlantic; that they established settlements at various points on the coast and in the watersheds of the rivers—notably, far up the Cuyuni, in close proximity to the territory afterward occupied by the Capuchin missions; that they controlled the trade of the whole district between Barima and the Corentin, and established local officers to protect that trade; that the native tribes throughout substantially the whole district entered into friendly relations with the Dutch, regarded them as their protectors, were to a large extent under their control, and combined with them to resist the Spaniards; that at a very early date the Dutch had a post at Barima, which district and its trade and inhabitants remained throughout under the control of the Dutch; that the Spaniards recognized the authority of the Dutch as extending to the right bank of the Barima; that ultimately the Spanish authorities recognized the junctions of the rivers Uruan and Corumo with the Cuyuni as being on the frontiers of the Spanish possessions, and the Dutch colony of Essequibo as extending to those points; and that beyond San Thomé de Guayana and the Capuchin missions the Spaniards had no settlement of any kind in the territory in question, had no control over the trade, were opposed by and were hostile to the Indians, and exercised no dominion or authority whatever.

British Activity in the Disputed Territory.—The richest of the gold fields, and the one in which the most capital has been expended in development work is the Barima district. A regular service of steamers has connected it with Georgetown, and two railroads have been begun, running from the landing to the site of the mining operations. Morawhana, near the mouth of the Barima river, was made the seat of government, and from this place roads were built in various directions into the interior. By this route the gold fields on the Cuyuni are most easily reached. In the Barima district crushing machinery has been erected for treating rich quartz deposits. Several companies were floated in the colony, and London capitalists subscribed money for the development of some of the claims. In March Sir Augustus W. L. Hemming succeeded Sir Charles Cameron Lees as Governor of British Guiana.

A road from Bartica to the British frontier post at Uruan was begun in March, 1896. Another road was built from Cartabo Point between the Mazaruni

and Cuyuni rivers. A road from the Barima river joined it with the Barama, and a survey was made to continue it along the left bank of the Cuyuni as far as Acarabisci, and thence to Uruan. Dr. P. Rojas had warned the Guiana authorities two years before that the construction of such a road from the source of the Barima to the Cuyuni on the Uruan would produce a collision with the authorities of Venezuela in that zone. When the English surveyor, William Alfred Harrison, had almost completed his task, he was arrested on June 15 by the Venezuelan police, being on the left side of the Cuyuni, the provisional boundary agreed to by Mr. Chamberlain, the British Colonial Secretary, and was taken to the Venezuelan station at El Dorado. The local Venezuelan authorities had warned the surveying party that they were trespassing a week earlier. The Caracas authorities, upon receiving the report of Harrison's arrest, ordered his immediate release. Meanwhile a force of colonial police had been sent to the spot from Georgetown. The British claimed that Harrison was arrested on their side of the Schomburgk line, the agreed provisional boundary, the place being below the junction of the Acarabisci with the Cuyuni, but Venezuela asserted that the Schomburgk line followed the Cuyuni at this point. A railroad has been built from Wismar, on the Demerara river, to a point on the Essequibo above the dangerous falls that impede the lower reaches of the water way.

The cost of the Government agency, magistrates, police, gold officers, commissaries, and other machinery of government in the gold districts from the first discovery of gold down to March 31, 1896, was \$376,470. The population in the mining districts was estimated at 13,000. The total output of gold up to that date had been 775,590 ounces, valued at \$13,185,000, derived entirely from placer working, as the valuable quartz reefs that had been discovered were still waiting for capital to develop them. English and foreign capital could not be expected in considerable amounts so long as the boundary question remained unsettled. At the suggestion of Mr. Chamberlain the combined court of British Guiana in April voted to augment the police force of the colony. A militia force was organized, and Maxim guns were imported for the ostensible purpose of defending the Cuyuni frontier. The gold output, in spite of the encouragement of the Government, has diminished from 142,788 ounces in 1893, valued at \$2,542,995, to 129,670 ounces, valued at \$2,310,091, in 1894, and 122,023 ounces, valued at \$2,165,712, in 1895. The British Guiana Legislature before its adjournment passed on Sept. 4, 1896, a bill granting rights of way for a railroad to the Barima gold fields along the Kaituma river, which flows north into the Barima river, 55 miles above the mouth of the latter. It was provided by an amendment that the Colonial Government can purchase the railroad at the end of fifteen years. The Venezuelan minister to the United States protested against the building of the railroad as in violation of an engagement that Great Britain had entered into to preserve existing conditions until the whole territorial dispute should be settled.

Political Events.—The Venezuelan message of President Cleveland called forth enthusiastic patriotic manifestations in Venezuela, and such popular indignation was shown at the demand of Great Britain for reparation and apology for the arrest of British officials who encroached upon the Venezuelan side of the provisional boundary at Uruan, although the prisoners had been promptly released and compensated, that the United States minister warned President Crespo, who had ordered the militia to be embodied to repel a possible English invasion, against the risk of a collision on the Gui-

ana frontier. Early in January, 1896, the Venezuelan Government appointed a commission to examine, classify, and study all documents available for throwing light on the boundary question. Dr. Rafael Seijas was made president, and his associates were Dr. Laureano Villanueva, Dr. Julian Viso, and Dr. Marco Saluzzo. Congress met on Feb. 20. In his message President Crespo expressed gratitude for the powerful aid of the United States Government in bringing about a pacific solution of the frontier dispute with British Guiana, describing the intervention of the great republic of the north as a noble act of justice performed in the endeavor to smooth over a dispute the dangerous effects of which, if they extended, would constitute a serious menace to the integrity of the American nations. Disputes with a German company and three English companies over the payment of guarantees were settled by compromise, and a loan of 50,000,000 bolivars was obtained in Berlin in April for the purpose of paying these claims. Of this sum the German company that built the Grand Venezuela Railroad received 36,000,000 bolivars in discharge of its claims on the Government. The railroads of Venezuela have been very expensively constructed by European engineers, 200 miles having cost \$20,000,000. The new loan, which bears 5 per cent. interest and was issued at 80, is guaranteed on the customs receipts. Congress has passed a law forbidding the granting of any new guarantees to railroad companies. The Yaracuy Navigation Company is constructing an American railroad to tap one of the most fertile sections of the country. President Cleveland's message had the effect of removing the danger of a renewal of the political disturbances of November, 1895. Gen. Domingo Monagas was at Trinidad with a large filibustering expedition supplied with 3,600 rifles, cannon, and torpedoes when the message was published. He at once called the revolutionary committee together, and resolutions were passed and orders issued to officers of the revolutionary army that no attempt should be made against Crespo's Government until the boundary question had been settled. Many political prisoners in Caracas were released, and many officers in exile were welcomed home when they expressed a desire to support the Government in its difficulties with England. Gen. José Maria Quesada headed an uprising against the State government of Lara, but peace was arranged through the intervention of the Federal Government. On June 15 President Crespo issued a proclamation granting amnesty to all voluntary exiles who had taken part in or sympathized with rebellion at any former time. A large number of political refugees returned to Venezuela.

Diplomatic Correspondence.—On Feb. 27, 1896, the American ambassador in London suggested that the British ambassador in Washington, Sir Julian Pauncefote, be empowered to discuss with Secretary Olney in order to reach a well-defined agreement for a basis of negotiation to constitute a tribunal for the arbitration of the boundary between British Guiana and Venezuela. This request was at once complied with. Mr. Olney proposed a joint commission to be created by agreement between Great Britain and the United States, consisting of two Englishmen and two Americans, probably two members of the existing American Venezuelan commission, judges of the United States Supreme Court, and two judges of the High Court of Justice of England. The four members would complete the inquiry, if unanimous, or if a majority of the whole concurred, but if they failed to agree a fifth member, a neutral, was to be appointed by the President of the Swiss Federation or some other acceptable personage. This commission

would take up the inquiry, not in order to determine the boundary or draw a divisional line, but to ascertain the facts, and report them to both governments, the findings upon matters of fact to be binding upon both governments and to serve as a basis for future direct negotiations between all parties concerned, with a view to agreeing upon the boundary line. Should these direct negotiations fail, the question would be remitted to a tribunal composed, for instance, of the Chief Justices of the United States and England, with, if necessary, a third, neutral member, the award of this tribunal, subject to certain rules to be agreed on with respect to settled districts, to be final. Lord Salisbury's view was that he was "not prepared in matters of high political import to admit unrestricted arbitration," because it was doubtful whether an impartial arbiter could be found, and because it would be extremely difficult to lay down the law which should govern all the arbiter's decisions. With a view, however, to meeting in some degree the wishes of the United States Government, he proposed that an authoritative statement of the facts should be obtained by two commissions or by a joint commission, leaving to subsequent discussion the question of building a decision on these facts. Proposals and counter-proposals followed regarding the composition of the joint commission, and before the discussion could result in any definite proposals Lord Salisbury led it into another channel, taking up the question of establishing a general arbitral tribunal to settle all differences between the United States and Great Britain, which he assumed would cover the Venezuelan question. Hence after the proposals of Secretary Olney made in the note of Feb. 27 were declared inadmissible, the United States Government waited in vain for counter-proposals from the British Foreign Office. Lord Salisbury ignored the Venezuela dispute entirely, and took up the suggestion of a general arbitrary treaty between the United States and Great Britain. Finally the intimation from the United States Government that a direct settlement of the controversy by the British and Venezuelan governments would be the most acceptable termination of the dispute prompted Lord Salisbury to instruct Sir Julian Pauncefote, the British ambassador at Washington, to negotiate with Gen. Andrade, the Venezuelan minister to the United States, for a settlement of the Uruan incident as a preliminary to the opening of negotiations upon the boundary question. Gen. Andrade had nothing to propose in this question except arbitration, and looked to the English diplomatist for definite proposals if there were any to be made of another character. The Venezuelan Government refused at first to entertain the British demand for a further indemnity and an apology for the arrest and detention of Barnes, the Uruan official, declaring that the issue must await the result of arbitration, for to make reparation would be equivalent to admitting British territorial rights over the district where he was arrested. The English Government requested the good offices of the United States to settle this question, and finally Venezuela agreed to separate the two questions, and to pay an indemnity of £1,600 on the understanding that no recognition of British territorial claims was involved.

In a note dated April 11 Mr. Olney suggested that the Venezuelan boundary dispute could be brought within the general treaty by special words of inclusion. The Marquis of Salisbury in his answer, dated May 18, dwelt upon the objections to a reference of territorial claims to a tribunal of arbitration, especially the rudimentary condition of international law in respect to territorial rights, the absence of any accepted doctrine of international

prescription or definition of effective control, saying that territorial property does not depend solely on occupation or the exercise of any clearly defined acts, for "the great nations in both hemispheres claim and are prepared to defend their rights to vast tracts of territory which they have in no sense occupied and often have not fully explored." He also referred to the modern doctrine of *Hinterland* as indicating the unstable and unformed condition of international law as applied to territorial claims resting on constructive occupation or control. In a dispatch dated May 22 Lord Salisbury submitted for the consideration of the Government of the United States, acting as the friend of Venezuela, proposals for the settlement of the Venezuelan dispute, premising that the British Government had from the first objected to subjecting to the decision of a foreigner the rights of British colonists who have settled in territory that they had every ground to believe to be British, and whose careers would be broken and their fortunes possibly ruined by a decision that the territory in which they have settled was subject to the Venezuelan Republic. Since, however, the territorial dispute affects a large portion of land not under settlement, which could be disposed of without injustice to any portion of the colonial population, the British Government was willing that the territory comprised within this definition should be subjected to the results of an arbitration, even though some portion of it should fall within the Schomburgk line. He proposed as the basis of a settlement that a commission be created by agreement between Great Britain and the United States, composed of two subjects of Great Britain and two citizens of the United States, this commission to investigate and to report upon the facts which affect the rights of the United Netherlands and of Spain, respectively, at the date of the acquisition of British Guiana by Great Britain, examining into questions of fact without reference to the inferences that may be founded upon them. Both governments should be bound by the findings of the majority of the commission, and upon its report being issued the two governments of Great Britain and Venezuela should endeavor to agree to a boundary line upon the basis of such report. Failing an agreement, the whole matter should be referred to a tribunal of three, one nominated by Great Britain, one by Venezuela, and the third by the other two, which tribunal should draw the boundary line on the basis of the report, provided that it should not have power to transfer territory *bona fide* occupied by British or by Venezuelans prior to Jan. 1, 1887, but only to submit to the two powers any recommendations that seemed calculated to satisfy the equitable rights of the parties. Mr. Olney, before answering in detail Lord Salisbury's proposals, called his attention, in a brief note dated June 12, to the fact that, as far as Venezuela was concerned, the position of the United States had been plainly defined, not only by the Executive, but by the unanimous concurring action of both branches of Congress. A genuine arbitration, issuing in an award, and finally disposing of the controversy, would be entirely consistent with that position. In his note of June 12 Mr. Olney adduced cogent objections to Lord Salisbury's scheme of partial arbitration. The proposed commission might be evenly divided in opinion, and thus reach no result as to the subjects submitted to it, and in respect to such subjects it was unfortunately limited, for all *bona fide* settlements prior to Jan. 1, 1887, were excluded from its inquiry without its having the authority to determine the existence or the *bona fides* of such settlements. It is a rule certainly without support in any principle of international law, or in any recognized interna-

tional usage, and one apparently limited in its application to the period between October, 1886, when the Schomburgk line was first proclaimed, and June, 1887, when the Governor of British Guiana, by express instruction of the home Government, cautioned all persons applying for mining licenses and concessions that the land might become a part of the Venezuelan territory. In the opinion of the United States Government the *bona fides* of the British settler was quite immaterial; it is the *bona fides* of either government that is important, not that of individuals. If British subjects had settled on Venezuelan territory having every ground to believe it British, such grounds must have emanated from the British Government, not from Venezuela, whose claims were notorious, and it is a matter between them and their own Government. Mr. Olney proposed to add one or more members to the commission, so that it must reach a result; to empower it to report upon all the facts necessary to the decision of the boundary controversy; and strike out altogether the proviso by which the boundary line as drawn by the arbitral tribunal was not to include territory *bona fide* occupied by British subjects or Venezuelan citizens prior to Jan. 1, 1887, or substitute for it the following: "Provided, however, that in fixing such line, if territory of one party be found in the occupation of subjects or citizens of the other party, such weight and effect shall be given to such occupation as reason, justice, the rules of international law, and the equities of the particular case may appear to require." On July 3 Lord Salisbury wrote to Sir Julian Pauncefote that it appeared to him to be a fundamental condition that the boundary line should not operate upon territory *bona fide* occupied by a British subject, and therefore he still insisted on withholding from the scope of the suggested arbitration all those portions of the disputed territory that are in effective British occupation, and considered that the line should be deflected in every such case so as to make such territory a part of British Guiana. He pointed out that the Venezuelan claim extended as far as the Essequibo; that it covered two thirds of the territory of British Guiana; and that it impeached titles that had been unquestioned for many generations. In the view of the British Government, where the matter was of great importance and involved rights that belong to a considerable population, special precautions were necessary to prevent a miscarriage of justice, which were not required where the title of unoccupied territory alone was at issue. He therefore proposed to except these districts from the jurisdiction of the arbitration tribunal, though it could deal adequately with disputed claims to territory that was unoccupied, but he did not intend by that to ask the United States to prejudge any questions which had been raised or might be raised in respect to the ownership of settled districts. On July 13 Mr. Olney wrote to Sir Julian Pauncefote that Lord Salisbury's proposals seemed to contemplate not a complete boundary line, but a part or parts of such line, namely, such part or parts, as might divide uninhabited districts. Mr. Olney did not regard the Venezuelan claims as an insuperable obstacle to unrestricted arbitration, but he considered Lord Salisbury's objection that the Venezuelan claim impeached titles that had been unquestioned for many generations as undoubtedly of a most weighty character, and with reference to this he asked: "Can it be assumed that her Majesty's Government would submit to unrestricted arbitration the whole of the territory in dispute, provided it be a rule of the arbitration, embodied in the arbitral agreement, that territory which has been in the exclusive, notorious, and actual use and occupation of either party for

even two generations, or say for sixty years, shall be held by the arbitrators to be the territory of such party? In other words, will her Majesty's Government consent to the unrestricted arbitration of all the territory in controversy with a period for the acquisition of a title by prescription fixed by agreement of the parties in advance at sixty years?" Lord Salisbury would not agree to such a definition of settled districts or to unrestricted arbitration until Mr. Olney made it clear that the United States Government regarded it as a condition *sine qua non*, and that unless England agreed to arbitrate on all the territory in dispute there would be no settlement. Then Lord Salisbury accepted Mr. Olney's proposal, but sought to shorten the term of prescription, suggesting fourteen years, next twenty-one, and then forty. Mr. Olney finally accepted fifty years as a compromise.

After diplomacy had arranged a basis for settling the Venezuelan dispute by arbitration the American Boundary Commission decided to formulate no report while such a mode of settlement was in prospect, but to continue meanwhile its deliberations and the preparation and orderly arrangement of the many valuable maps, reports, and documents that had been procured and used in the course of its labors.

Arbitration Treaty.—The heads of an arbitration treaty between Great Britain and Venezuela were formulated, and the agreement was signed in Washington on Nov. 12, 1896, by Secretary Olney and Sir Julian Pauncefote. On the basis of the rules and conditions of the arbitration thus agreed upon a treaty was concluded between Great Britain and Venezuela and signed by Sir Julian Pauncefote and José Andrade. The treaty provided that an arbitral tribunal shall be immediately appointed to determine the boundary line between the colony of British Guiana and the United States of Venezuela, to consist of 5 members, of whom 2 on the part of Great Britain were nominated by the Judicial Committee of the British Privy Council, namely, Baron Herschell and Sir Richard Henn Collins; 2 on the part of Venezuela, of whom 1 was nominated by the President of Venezuela, namely, Melville Weston Fuller, Chief Justice of the United States Supreme Court; 1 by the justices of the Supreme Court of the United States, namely, Justice David Josiah Brewer; and a fifth jurist to be selected by the 4 so nominated, or in the event of their failure to agree within three months from the date of the exchange of ratifications, then by the King of Sweden and Norway, the jurist so selected to be the president of the tribunal. The tribunal shall investigate and ascertain the extent of the territories belonging to or that might lawfully be claimed by the United Netherlands or by the Kingdom of Spain respectively at the time of the acquisition by Great Britain of the colony of British Guiana, and shall determine the boundary line between the colony of British Guiana and the United States of Venezuela. In deciding the matters submitted, the arbitrators shall ascertain all facts which they deem necessary to a decision of the controversy, and shall be governed by certain rules agreed upon by the high contracting parties, and such principles of international law as are deemed applicable and are not inconsistent with these rules. The agreed rules are: (1) Adverse holding or prescription during a period of fifty years shall make a good title. The arbitrators may deem exclusive political control of a district as well as actual settlement thereof sufficient to constitute adverse holding or to make a title by prescription. (2) The arbitrators may recognize and give effect to rights and claims resting on any other ground whatever, valid according to international law, and on any principles of international law which the

arbitrators may deem to be applicable to the case and which are not in contravention of the foregoing rules. (3) In determining the boundary line, if territory of one party found by the tribunal to have been at the date of this treaty in the occupation of the subjects or citizens of the other party, such effect shall be given to such occupation as reason, justice, the principles of international law, and the equities of the case shall, in the opinion of the tribunal, require. It was provided that within sixty days after the delivery of printed arguments the tribunal should meet in Paris and proceed impartially and carefully to examine and decide the questions laid before them. The meetings may be held in any other place, if the arbitrators prefer. They shall decide all questions, including the final decision, by a majority vote. Each of the high contracting parties will name one person as its agent to attend the tribunal and to represent it generally in all matters connected with the tribunal. The printed case of each of the two parties, accompanied by the documents, official correspondence, and other evidence on which each relies, shall be delivered in duplicate to each of the arbitrators and to the agent of the other party as soon as may be, but not later than eight months after the exchange of ratifications, and within four months after the delivery of the printed cases each party may in like manner present a counter-case and additional documents, correspondence, and evidence in reply to the case, documents, and evidence presented by the other party. It shall be the duty of the agent of each party, within three months of the time limited for the delivery of the counter-case on each side, to deliver in duplicate to the arbitrators and to the agent of the other party a printed argument showing the points and referring to the evidence upon which his Government relies, and either party may also support the same before the tribunal by oral argument of counsel, and the arbitrators may, if they desire further elucidation with regard to any point, require a printed or written statement or argument or oral argument by counsel upon it, in which case the other party will be entitled to reply. The time limit for presenting the case, counter-case, and argument may be extended thirty days for any cause deemed sufficient by the arbitrators. The decision of the tribunal shall be made, if possible, within three months from the close of the argument on both sides. This decision shall be made in writing and signed by the arbitrators who assent to it. Each Government shall pay its own agent and provide for the proper remuneration of its counsel and the arbitrators appointed by it, and for the expense of preparing and submitting its case to the tribunal. All other expenses shall be shared by the two governments. The high contracting parties engage to consider the result of the proceedings of the tribunal of arbitration as a full, perfect, and final settlement of all the questions referred to the arbitrators.

For a map of the disputed territory, see "Annual Cyclopaedia" for 1895, page 740.

VERMONT, a New England State, admitted to the Union March 4, 1791; area, 9,565 square miles. The population, according to each decennial census, was 154,465 in 1800; 217,895 in 1810; 235,966 in 1820; 280,652 in 1830; 281,948 in 1840; 314,120 in 1850; 315,098 in 1860; 350,551 in 1870; 332,286 in 1880; and 332,422 in 1890. Capital, Montpelier.

Government.—Governor, Urban A. Woodbury, succeeded in September by Josiah Grout; Lieutenant Governor, Zophar M. Mansur, succeeded by Nelson W. Fisk; Secretary of State, Chauncey W. Brownell; Treasurer, Henry F. Field; Auditor, Franklin D. Hale; Adjutant General, T. S. Peck; Superintendent of Education, Mason S. Stone; Bank Inspector, Frederick E. Smith; Railroad

Commissioners, Olin Merrill, Orion M. Barber, Charles J. Bell; Secretary of the Board of Agriculture, Victor I. Spear; Chief Justice of the Supreme Court, Jonathan Ross; Associate Justices, Loveland Munson, John W. Rowell, Russell S. Taft, Henry R. Start, L. H. Thompson, and James M. Tyler. All are Republicans except M. S. Stone, who is an Independent.

Finances.—The expenses of the State for the last biennial term were \$1,179,135.42; for the preceding term, \$920,397.48; excess over preceding term, \$258,737.94. Among the expenses of the last term, \$212,000 was for permanent investments in the State Asylum, House of Correction, etc. Other unusual expenses were: Cost of printing and editing Vermont Statutes, about \$14,000; books for town free libraries, under act of 1894, \$4,500; expenses on account of tuberculosis, about \$20,000. The excess, according to the statement of the Governor, was largely made up of three items: The court expenses exceeded those of the preceding term \$27,757.70; debentures of the General Assembly exceeded \$9,128.20; salaries exceeded \$15,296.87; total, \$52,182.77. The increase of salaries is very largely those of judges of probate and State's attorneys.

The assessed valuation in 1895 was \$173,798,855. The amount received from corporations in taxes exceeded the amount for the preceding term by \$40,648.76, which excess was contributed by savings banks and trust companies. The total amount paid by corporations during the last biennial term was \$732,799.94, which is 62.1 per cent. of the total expenses, or 75.7 per cent. of the ordinary expenses of the State. Of this amount, savings banks and trust companies paid \$390,434.95. The railroads paid \$209,162.46; life and fire insurance companies and other corporations paid \$127,192.63. The railroads paid \$20,599.52 less than in the preceding term, the savings banks and trust companies \$41,881.33 more.

State Institutions.—The Legislature appointed a joint special committee to investigate charges against the management of the State Asylum for the Insane. The report was extremely unfavorable to the management so far as treatment of patients was concerned. The committee found that the food furnished was sufficient in quantity but deficient in variety and not always of good quality; and that the heating was inadequate, though this was due in part to defects in the apparatus. The total number of patients June 30, 1896, was 498.

The membership of the State Soldiers' Home in October was 90, and there were 10 applicants for admission.

At the House of Correction 1,159 persons have been confined within the past two years, of whom 2 died. There were 130 inmates in October, 20 of whom were women.

The State Prison is now self-supporting. The labor of convicts is leased at 72 cents a day.

Militia.—A permanent camp ground has been bought for the militia, near Fort Ethan Allen. The property adjoins the United States reservation, and the rifle range belonging to the Government is offered for the use of the National Guard.

Vermont Central Railroad.—This railroad was placed in the hands of receivers in March. The receivers were asked for in a suit in equity brought by the Grand Trunk road, which sought to obtain \$415,712.45, alleged to be due on traffic charges. According to a report on file, the corporation had in use in 1895 192 locomotives, 121 passenger cars, 48 baggage cars, 3,870 freight cars, 1,079 stock cars, 1,001 flat cars, and 293 coal cars. Its earnings for that year were \$5,574,398.02. The total expenses were \$3,985,607.31. The net earn-

ings were \$1,588,790.71, and the surplus was \$16,261.69.

S. L. Little, an expert appointed to examine the accounts of the road, reported in October. He finds an average annual loss of about \$250,000, and places the operating expenses at about 70 per cent. of gross earnings, with everything charged to expenses. He admits that it is customary for many roads to charge improvements, etc., to accounts other than operating expenses, but claims it is not proper railroad bookkeeping. He finds the floating debt and fixed charges just as represented by the company, floating debt amounting to about \$2,500,000, which is largely held by the Grand Trunk Railway. He shows that the misfortunes of the road were largely due to the leases of the Rutland and the Ogdensburg roads, which have been given up.

Insurance.—The loss by fire in Vermont during 1895 aggregated \$918,000, and during 1894 \$932,000. The sixty-ninth annual report of the Vermont Mutual Fire Insurance Company, for the year ending Aug. 1, shows a very successful year's business. It has been necessary to levy an assessment of $4\frac{1}{2}$ per cent. only, which provides for all indebtedness of the company and leaves a balance in the treasury of \$46,285.08. The members of the company now number about 40,000.

Industries.—In May Hon. Victor I. Spear, Secretary of the Board of Agriculture, published his annual report of farm sales, new industries, and summer travel in Vermont for 1895. He finds, from the reports received, that 1,677 farms were sold during the year, of which 133 were previously unoccupied. To the question as to the value of farms as compared with other years, 129 town clerks report no change; 23 that it is higher, and 29 that it is lower, in their respective towns. The advance is in the towns favorably situated, usually near some large manufacturing interest, the decrease in towns remote from such interests or from the railways. An improvement in the methods of farming has been noticeable. The work of putting in creameries has gone forward. During the year \$1,091,500 was invested in new manufacturing enterprises in the State, and these enterprises are furnishing employment to 1,010 persons. During the five years covered by the reports over \$4,000,000 has been invested in the various industries of the State, giving employment to over 6,000 persons. The secretary says: "No single industry has called for the investment of so much capital as the development of electric light and power. Of the many large unused water powers in the State reported in 1891, there are but few that have not been utilized, and the most common use made of them is the production of electricity."

The statistics of the summer-boarder industry are very incomplete. Estimating from the returns received, the secretary judges that the amount of business was about \$500,000 for the season of 1895.

Monument to the First Governor.—A fine granite monument to the memory of Thomas Chittenden, one of the founders of Vermont and Governor of the State for nearly a decade, was dedicated at Williston, Aug. 19, in the presence of a large gathering. The exercises consisted of a parade participated in by State and national troops and Knights Templars, an historical address by ex-Gov. John W. Stewart, and short addresses by Gov. Woodbury and the Hon. Lucius E. Chittenden, a descendant of the first Governor.

Boatable Waters.—The legal definition of this term was fixed by a decision rendered in November. Waters that are not boatable may be held for private preserves; and the question came before the court in a case relating to Marlboro South pond, near Newfane. Hundreds of acres of wild

land completely surrounding this pond were bought by the New England Trout and Salmon Club. They fenced it and posted notices forbidding trespassing. Over a year ago several old citizens of the locality determined to test the question of rights and fished upon the pond as in former years. The result was that suits were brought, and one was tried as a test case. A judgment for the defendant was given in 1895 under an agreed statement of fact, in order to bring it to the Supreme Court for definition of the word "boatable" in the statutes that describe public waters. The case came back to the county under certain rulings of the higher court, and seven days were consumed in its trial, resulting again in a verdict for the defendant. The court held that "boatable waters" were those capable of transportation or commerce, adding significantly that the easement extends to purposes of pleasure as well as business, the same as a highway, it being for the jury to say if these were such in fact. The jury did so find, and that in passing over the plaintiff's land to reach such waters the defendant passed over a public right of way, although it was owned by the plaintiff.

Legislative Session.—The Legislature was in session from Oct. 7 to Nov. 25. William A. Lord was Speaker of the House, and John E. Weeks was President *pro tempore* of the Senate.

Justin S. Morrill was elected to succeed himself in the United States Senate by unanimous vote of the upper house and 213 votes in the lower, against 17 for Herbert F. Brigham. The justices of the Supreme Court, the Adjutant General, and the Superintendent of Education were all re-elected.

A measure granting municipal suffrage to women with property qualification was passed by the Senate, but was lost in the House. Among the laws enacted was one providing for a 5-per-cent. tax on collateral inheritances, and one making changes in the dower law. The wife has the same rights in the estate of a deceased husband that a husband has in that of a deceased wife.

Several amendments to the election laws were passed, the most important of which allows a voter to cast his vote in a town or city other than his own, if he is provided with a certificate from the clerk of his own town or city stating that his name is on the check list.

A tax of 15 cents on the dollar was assessed on polls and ratable estate. Other acts relating to taxes provided for listing buildings on leased lands, fixed details of collection, and placed the tax on savings banks at the rate of $\frac{7}{10}$ of 1 per cent. annually upon the average amount of deposits and accumulations, deducting therefrom the average amount, not exceeding 10 per cent., of assets invested in United States Government bonds, and the average amount of the assessed valuation of the real estate owned by such corporation, and also the amount of individual deposits in excess of \$1,500 each listed to the depositors in towns of the State where such depositors reside, and a like tax upon trust companies.

Several measures were passed for the betterment of highways, and several regulating investments of savings banks and trust companies, payment of dividends, and other matters connected with them.

The fish and game laws were amended by various provisions relating to seines and set lines, snaring of game, exportation of game birds, etc., prohibiting the killing of moose and caribou, and the killing of more than two deer in one season by one person.

A board of normal-school examiners was created. Laws were also passed in regard to examinations of public-school teachers and school attendance.

Appropriations were made as follow: \$65,000

for paying the debentures of the Lieutenant Governor, Senate, and House of Representatives, and contingent expenses of the General Assembly; \$425,000 for 1896-'97 and \$400,000 for 1897-'98 for payment of such demands on the State as may be allowed by the State Auditor; \$30,000 for each year for paying interest on bonds and other debts of the State; \$160,000 for each year for expenses of the penal institutions and the care of the insane; \$5,000 for each normal school; \$5,500 for maintenance and further equipment of the fish hatchery; \$5,500 for land and warden's house at the State Prison; a sum not to exceed \$20,000 for the Soldiers' Home; and for improvements at the Insane Asylum a sum not to exceed \$22,000. Other acts were:

Requiring the State geologist to inspect the mines and quarries and unopened deposits of economic value in the State, also unused water power, and report as to their value and workings.

Constituting statements made under the sanctity of the religious confessional privileged communications.

Prescribing a fine for removal, sale, or incumbrance of property mortgaged or having a lien upon it.

Allowing a lien for labor or material amounting to \$15 or more.

Empowering a married woman to convey her real estate by her separate deed.

Requiring a residence of two years in the State and six months in the county to allow of divorce for any cause that shall have accrued in any other State or county.

To prevent cruelty to children and other dependent persons.

Providing that the marriage of a female minor shall discharge her guardian from all right in her custody and education, but not in her property.

Authorizing towns and cities to vote money for chartered hospitals, and cities and incorporated villages to provide for open-air musical entertainments.

Forbidding the appointment as town liquor agent of any person who shall have been convicted in the State for illegally selling liquor within five years.

Repealing the provision for bounties on noxious animals.

Allowing owners and renters of land to sell the produce of their land without license.

Making a tramp punishable by imprisonment for not more than six months or a fine of not more than \$100, and giving justices of the peace concurrent jurisdiction in such cases.

Imposing a fine not exceeding \$50 for selling or otherwise furnishing firearms or explosives to a child under twelve years of age, and \$20 on a child for having such in his possession.

Political.—The election of State officers was held Sept. 1.

A Republican League convention for the reorganization of the league was held April 28 in Montpelier, and the following day the first Republican convention at the same place. Four delegates at large and four alternates were chosen for the national convention. The following resolution was adopted by acclamation, but subsequently a motion to table it was carried:

Resolved, That in the great apostle of protection, William McKinley, of Ohio, we recognize the first choice of the Republicans of Vermont for presidential candidate."

The resolutions declared in favor of a protective tariff, reciprocity, the maintenance of the Monroe doctrine, just and liberal pensions, adequate coast defenses, and restricted immigration. The money resolution declared unequivocally against free silver

except by international agreement. Continuing, the platform says:

"We believe that the credit of the Government should be sustained not by the issue of bonds and the increase of the national debt, but by a return to a system of duties which shall replenish the public Treasury, put in motion the now silent wheels of business, and insure living prices to American farms and workshops."

The Republican convention for nomination of State officers met in Burlington, June 17. Two candidates for the governorship had been before the people for some time—Josiah Grout and W. W. Stickney. On the ballot Grout received 339, and Stickney 336. The entire ticket was: For Governor, Josiah Grout; for Lieutenant Governor, Nelson W. Fisk; for State Treasurer, Henry F. Field; for Secretary of State, Chauncey W. Brownell; for State Auditor, Franklin D. Hale.

The only resolutions adopted were in condemnation of the demand for free coinage.

The Prohibitionists held a convention in Montpelier, May 7, and adopted resolutions declaring for prohibition only, two that were offered on free coinage and other national issues having been voted down. The ticket follows: For Governor, Rodney C. Whittemore; Lieutenant Governor, C. W. Wyman; Secretary of State, Rev. A. N. Woodruff; Treasurer, Wilson Davidson; Auditor, F. W. Wheeler.

Delegates to the national convention and candidates for presidential electors were also chosen.

The Democratic State Convention, held in Montpelier, May 27, adopted a platform declaring: "We demand the maintenance of the gold standard of value as being for the true interests of all our people and especially for those who are obliged to labor for what they receive, and we are opposed to the free coinage of silver, except under international agreement"; commending the able, patriotic, and statesmanlike administration of Grover Cleveland; thanking Secretary Carlisle for his conscientious and efficient management of the Treasury Department; expressing sympathy with the Cubans; denouncing the Republican protection theory; denouncing the Republican party for fostering "the un-American, cowardly, and despicable A. P. A. organization."

Nominations for State officers were made as follows: For Governor, J. H. Jackson; Lieutenant Governor, Ralph Sherwood; Treasurer, James H. Williams; Secretary of State, William W. Rider; Auditor, E. F. Seaver.

In response to a call written by one of the delegates to the national convention, a conference of Sound-money Democrats was held Aug. 4, and it was decided to hold a convention, Aug. 18, at Belows Falls. At that time delegates were chosen to the Indianapolis convention, and resolutions were adopted which, after asserting the firm adherence of the convention to "the time-honored traditions and principles of genuine Democrats, with renewed assurances of abiding regard for the welfare, prosperity, and business of the people," proclaim unswerving loyalty to convictions of public and individual duty, and reaffirms undaunted fidelity to the platform of the Democratic party of Vermont, adopted in State convention, at Montpelier, on May 27, 1896, urgently commending that portion of the platform which declares: "We demand the maintenance of a gold standard of value as being in the true interests of all people, especially those obliged to labor for what they receive, and are ever opposed to the free coinage of silver, except by international agreement."

The People's party nominated candidates for presidential electors and State officers in a conven-

tion at Montpelier, July 28. The resolutions approved the platform of the national convention and declared that bribe giving and bribe taking should be made felonies by national law, and that the levying of taxes upon property not actually owned should be prohibited. The State ticket was: For Governor, Joseph Battell; Lieutenant Governor, William Dexter; Treasurer, Daniel Sallies; Secretary of State, Abel T. May; Auditor, Columbus L. Clough.

At the September election the entire State ticket of the Republicans was successful by a large majority. The vote for Governor stood: Grout, 53,426; Jackson, 14,855; Battell, 831; Whittemore, 755. At the November election, the vote for McKinley electors was 50,991; Bryan and Sewall, 10,146; Bryan and Watson, 461; Palmer, 1,329; Levering, 728. The two Representatives in Congress are Republican, as are also all the members of the State Senate. The Democrats have 18 members in the House, and the Republicans 225. One member is an Independent, and one a Populist.

VIRGINIA, a Southern State, one of the original thirteen, ratified the Constitution June 25, 1788; area, 42,450 square miles. The population, according to each decennial census, was 747,610 in 1790; 880,200 in 1800; 974,600 in 1810; 1,065,116 in 1820; 1,211,405 in 1830; 1,239,797 in 1840; 1,421,661 in 1850; 1,596,318 in 1860; 1,225,163 in 1870; 1,512,565 in 1880; and 1,655,980 in 1890. Capital, Richmond.

Government.—The following were the State officers during the year: Governor, Charles T. O'Ferrall, Democrat; Lieutenant Governor, Robert C. Kent; Secretary of the Commonwealth, James T. Lawless; Attorney-General, R. Taylor Scott; First Auditor, Morton Marye; Second Auditor, Josiah Ryland, Jr.; Treasurer, A. W. Harman; Adjutant General, Charles J. Anderson; Superintendent of Public Instruction, John E. Massie; Commissioner of Agriculture, Thomas Whitehead; President of the Court of Appeals, James Keith; Justices, John W. Riely, John A. Buehanan, George M. Harrison, and Richard H. Cardwell; Clerk of the Court, G. K. Taylor.

Finances.—The receipts and disbursements for the fiscal year ending Sept. 30, 1896, were: Amount on hand Oct. 1, 1895, \$61,395.64; receipts from all sources during the year, \$3,499,301.58; total, \$3,560,697.22. Disbursements during the year, \$3,347,399.17. Balance on hand Oct. 1, 1896, \$213,298.05. In addition to these receipts paid into the treasury, there were received from sureties of county and city treasurers during the year, under acts for their relief, bonds of the State to the amount of \$2,027.24, which were turned over to the commissioners of the sinking fund and canceled. Of the \$3,499,301.58, there were received from the United States Government, for agricultural and mechanical colleges, \$22,000; from fees for registration of fertilizers by the Agricultural Department, \$8,892.67; arrears of taxes, \$33,702.81; from banks for governmental and school support, \$39,374.93; fees on charters, \$1,235.56; capitation tax, \$246,685.36; from clerks of courts, tax on process, etc., \$96,848.52; collateral-inheritance tax, \$2,765.50; from collection of costs in Commonwealth's cases, \$9,839.47; delinquent lands, \$57,273.44; from express companies, \$1,448.16; fines, \$27,221.93; commissions for funding public debt, \$8,486.27; from income tax, \$41,747.02; from insurance companies, in licenses, tax on premiums, and for publishing their reports, \$62,997.52; interest from State depositories, \$8,017.16; licenses of all other kinds, \$694,927.50, including \$700 from attorneys for legislative committees; notary seal tax, \$5,752.41; oyster tax, \$31,980.59; hire of convicts, \$137,203.18; from personal property, \$315,

012.09; from railroads for support of government, \$158,918.47, and for support of schools, \$51,962.16; fees from Land Office, \$1,069.35; revenue from 5-per-cent. penalty, \$42,807.16; real-estate tax for support of both government and schools, including some delinquent taxes, \$1,149,299.83; sale of bonds by sinking-fund commissioners, \$201,064.46; from steamboat companies, \$2,939.64; from telephone and telegraph companies, \$7,118.04. Among the disbursements for the year were: To public schools, \$959,351; to the University of Virginia, \$49,999.99, the annuity being \$40,000 and the special appropriation \$9,999.99; to the Military Institute, \$37,500, \$2,500 of which was a special appropriation; to the Agricultural and Mechanical College, \$15,000; to William and Mary College, \$15,000; to the Medical College, \$5,000; to the Colored Normal School, \$15,000; to the Deaf, Dumb, and Blind Institution, \$34,999; to the Female Normal School, \$17,500. The sum of \$146,331 was paid as interest on bonds held by institutions of learning, under a special provision of law. The cost of the last session of the Legislature was \$77,135.49. The total of interest paid upon the public debt was \$714,165. The expenses of the oyster fleet, etc., were \$27,884; pensions, \$110,800; public printing, \$35,096. The following sums were collected for school-fund purposes: From capitation tax, \$359,628; from personal-property tax, \$89,386.07; from real-estate tax, \$303,529.06; from bank tax, \$12,339.08; from tax on railroads and canals, \$53,380.57; from tax on steamboats, etc., \$742.39; from tax on telegraph and telephone companies, \$385.10; total, \$819,399.27, 90 per cent. of which is applicable to public free schools. The total amount of criminal charges throughout the State was \$378,291.37.

Taxation.—There are 126 banks in the State, carrying 196,791 shares, with a market value of \$12,338,685, and a total assessed taxation of \$49,356.18, of which \$39,122.63 was paid during the last fiscal year.

The State received from railroad companies the sum of \$4,244.26 to defray the salaries of the Railroad Commissioner and his clerk. The assessed valuation of railroad property was \$53,386,040.89, upon which the total tax paid was \$210,880.63.

The assessed value of all steamboat property was \$705,352, upon which a tax of \$2,939.64 was paid.

The Public Debt.—Under the provisions of an act approved Jan. 31, 1894, holders of a portion of the unfunded debt, who were barred from the provisions of the act approved Feb. 20, 1892, by their failure to accept within the time prescribed, were permitted to accept the terms of the last-named act, and the commissioners of the sinking fund were authorized and empowered to place these holders on the same footing as if they had actually accepted the terms of the last-named act within the prescribed time. The commissioners of the sinking fund advertised for the reception of the outstanding bonds for exchange, and bonds to the amount of \$1,474,017.94 have been surrendered and funded, and in lieu thereof new bonds for the aggregate sum of \$1,015,184.89 have been issued.

In relation to the question of the adjustment of the State debt with West Virginia, the Governor says, in his message to the Legislature: "So far as I can see, Virginia is no nearer a consummation of her desire to effect a settlement and adjustment with West Virginia than she was twenty years or more ago."

Education.—The number of public schools in operation for the year was 8,400—6,124 white and 2,276 colored—in which 8,405 teachers were employed. The whole number of pupils enrolled was 361,559, an increase of more than 5,000 over the previous year. The number of schoolhouses used

was 6,900. The gross expenses of the system amounted to \$1,825,000. About half of this sum was contributed by the State, and the remainder was raised by taxation in the counties and cities. Four fifths of the whole amount expended was applied to the pay of teachers and the remainder to miscellaneous expenses, such as school buildings, furniture, repairs, fuel, insurance, pay of superintendents, treasurers, etc. The approximate value of school property owned by the public schools is \$3,000,000, including grounds, buildings, furniture, and apparatus. During the year several school buildings were erected, and the State Superintendent has observed a decided improvement in the character of the houses built. He is satisfied that there has been marked advancement on the part of teachers, and hence more efficient work in the schoolroom, and he attributes these results largely to the work of the summer normal schools. During the year 1,690 teachers attended these schools. The Superintendent notes a growing tendency to organize high schools and thus extend the system to meet the wants of pupils who desire a college course. All the cities have complete systems, including well-organized high schools, but only a few counties maintain high schools. He favors the organization of county high schools, whereby the rural schools may be brought in closer touch with the higher institutions.

In his message to the Legislature the Governor says: "Every year shows a slight advance in the revenues applied to the support of the system, but there is urgent need of more money. The term is too short in country schools, teachers' salaries are insufficient, and there are other demands which must be met to bring our system abreast with the schools of other States, where the revenues are much larger."

Real Estate.—The total valuation of real estate in Virginia is \$304,204,590, of which \$293,276,748 is owned by white, and \$10,927,842 by colored citizens. One tenth in value of the whole amount of this property is in the city of Richmond. The colored people's next largest holdings in cities are in Petersburg, \$468,835; in Lynchburg, \$407,420; in Alexandria, \$230,660; in Norfolk, \$223,950; and in Danville, \$203,605. In the counties, Norfolk shows \$535,915; Elizabeth City, \$470,926; Henrico, \$459,421; and Nansemond, \$204,295. Buchanan is the only county that reports no colored owners of real estate.

Penitentiary.—The profit realized during the year at the penitentiary was \$51,984. After deducting the deficit at the farm—\$2,987.63—there remains a net profit of \$48,997.12. The institution is greatly overcrowded. More than 1,200 male convicts are kept in 190 cells. In several of the larger cells 20 to 30, and in the smaller cells (not over 6 feet wide) as many as 6 are confined.

Pardons.—During the year the Governor extended clemency to 134 lawbreakers who were serving terms in the various penal institutions of the State. In many instances where absolute pardons were granted conditions were made and promises exacted that the offender would either leave the State, never to return, or refrain in future from violations of the law. But the greater number of pardons to Penitentiary convicts were granted on the recommendation of the surgeon of that institution, who certified that longer imprisonment would result in death.

Insurance Companies.—Foreign insurance companies, life and fire, are required to deposit with the Treasurer of the State bonds of the State, of the United States, or of certain cities, to an amount equal to 5 per cent. of their capital stock, not to exceed \$50,000 nor to be less than \$10,000. These

bonds are held for the security of the insured, and, in case of the default of a company to pay any of its liabilities, the bonds are directed to be sold to satisfy the claims. The Governor recommends that home companies be required to make deposits on the same basis.

Prize Fighting.—The Governor urges that prize fighting and glove contests—whether in private or public, in a park, club, or other place, for admission fees, a purse, or any other thing, directly or indirectly—be made a felony. He says: "Prize fighting has repeatedly occurred in the State within the last two years. It has been impossible to convict the participants, because the spectators have been in sympathy with the disgraceful affairs; and, however brutal the contest, in the opinion of these sympathizers, when introduced as witnesses, it was not a prize fight, but an innocent glove contest. Men in the ring have assaulted each other in a manner which, if done elsewhere, would have made them amenable to severe punishment; but, as the assaults were made in the 'manly-art' ring, it was regarded as harmless amusement. These exhibitions are neither innocent, harmless, nor manly, but brutal as a bull or dog fight. They are degrading in the extreme, and tend to inculcate in the minds of the young that it is better to become a champion prize fighter than to excel in the mechanic arts, trades, or professions."

Live Stock.—The number and value of farm animals in the State in 1896 were: Horses, 246,046, value \$9,808,229; mules, 38,248, value \$2,134,133; milch cows, 265,635, value \$4,818,619; other cattle, 386,670, value \$6,138,896; sheep, 426,889, value \$894,760; swine, 985,748, value \$3,514,687; total value, \$27,563,151.

Decision.—The case of the New York, Philadelphia and Norfolk Railroad Company against the Board of Supervisors of the county of Northampton was decided in the Supreme Court of Appeals in March. The question involved was the power of the appellee, the Board of Supervisors, to tax the appellant company for district-school purposes. The effect of the court's decision is to declare that the county supervisors can not lay such a tax upon railroad, canal, telegraph, and telephone companies for school purposes, under the existing statutory laws. The judge delivering the opinion of the court holds that the remedy necessary to do this lies only in the Legislature. The decision does not affect the State and county taxes for school purposes levied against railroads and similar corporations. It is estimated that the total loss of revenue to the school districts of Virginia by this decision will be between \$50,000 and \$75,000 a year.

Union Theological Seminary.—The question of removing Union Theological Seminary from Prince Edward County, where it was established in 1824, has been decided. It is to go to Richmond. The Richmond "Dispatch" says: "The project of removing the seminary became a practical question nearly two years ago, when the Board of Trustees appointed a committee to receive and consider offers of sites and of money looking to the establishment of the seminary in some more eligible locality. The seminary being an historic, well-endowed, and influential institution of learning, with alumni occupying pulpits all over the Southern States, many of them being men of national and world-wide reputations, a number of cities began to make offers for the establishment of the institution within their bounds. Lynchburg, Charlottesville, Danville, Norfolk, and Richmond all had offers to make, but the capital of the Old Dominion was able to offer the strongest inducements. A splendid site of 11½ acres proffered by Major Lewis Ginter, and a sub-

scription of \$50,000 added for the building fund in Richmond, was the basis of Richmond's offer, but gentlemen who live away from our city, and who were interested in the best growth of the seminary—Mr. George W. Watts, of Durham, N. C., and Mr. William Wallace Spence, of Baltimore—subscribed, the former \$50,000 and the latter \$25,000, on condition that the seminary be located at Richmond and on the Ginter site. With this addition to their already strong inducements, the Richmond claimants won the victory from all others before the Board of Trustees and before the Synods of Virginia and North Carolina, which control the institution."

Political.—The Legislature convened Dec. 2, 1895, and adjourned March 5, 1896. Among the more important bills passed at this session were the following:

To take the sense of the people upon the call of a convention to revise and amend the Constitution.

To appropriate \$5,000 in addition to appropriation already made to Lee Camp Soldiers' Home.

Relating to prohibition of marriage within certain degrees. "No man shall marry his mother, grandmother, stepmother, sister, daughter, granddaughter, half-sister, aunt, son's widow, wife's daughter, or her granddaughter or stepdaughter, brother's daughter, or sister's daughter. But this section shall not be construed as prohibiting a man from marrying an aunt of his former wife. If any man have heretofore married his brother's widow, or the widow of his brother's or sister's son, or his uncle's widow, such marriage is hereby declared to be legal and valid, and exempt from the penalties prescribed by existing laws."

To reinstate and amend the charter of the Atlantic, Staunton and West Virginia Railroad Company. To incorporate, severally, the Alberene Railroad Company; the Virginia Mineral Railway Company; the Wythe County Railroad Company; the Chesterfield Railroad Company; the American Central Trunk Line Railroad Company; the Danville and Riverside Railway Company; the Lexington and Goshen Railroad Company; the Interstate Railroad Company; the Virginia and Northwestern Railroad Company; the Falls Church and Potomac Railway Company; the Blacksburg Railway Company; the Potomac River Railroad Company; the Eastern Midland Railway Company; the Falls Church, Fairfax and Manassas Railway Company; the Southeastern and Atlantic Railroad Company; and the Blue Ridge Railroad Company.

To impose a tax on collateral inheritances.

To incorporate the city of Newport News.

To incorporate the Society of Colonial Wars in the State of Virginia.

To incorporate the Society of the Sons of the Revolution in the State of Virginia.

To recharter the city of Lynchburg.

To protect fish in Roanoke river.

To protect certain fish in Potomac river.

To incorporate the Virginia Union University, in Richmond.

To authorize the president and faculty of Luray College to confer certificates of distinction and to award diplomas.

To amend and re-enact section 3693, code of Virginia, as to prize fighters, how punished, and to prohibit prize fighting and pugilism and fights between men and animals.

To prevent gambling and selling or making books, pools, or mutuals.

To protect all payments made to the holder of any policy in any accident company, sick-benefit company, or any company of like kind, from levy or distress for any debt due by the insured.

To incorporate the Stonewall Jackson Institute.

To prohibit winter racing.

To punish as for a misdemeanor a person using abusive language to another.

The State Republican Convention for sending delegates to the national convention met in Staunton on April 23. The platform adopted contained no allusion to the money question. It reaffirmed the allegiance of the Republican party of Virginia to the principles of the national party, and expressed pride in being "part of an organization which faithfully adhered to their great principles of protection, under which no furnace fires have ever been put out, no factories have been closed, and no army of workers has been put upon the streets and highways in enforced idleness." It denounced the Democratic administration as "the author of unexampled and infinite distress, as responsible for unprecedented corporation and individual insolvency and ruin, and for losses and sorrow beyond all compute, and as unworthy of the confidence and good will of any people." It denounced "the proposition coming from the Democratic party of the State, through the last Legislature, to call a convention to revise the Constitution, as being 'the first movement of the enemies of our free public schools,'" and continued as follows concerning the State Democratic party's call for such State convention:

"Its manifest purpose is to stem the swelling tide of Republican progress in our State by an effort to disfranchise our illiterate voters, both white and colored; to set up a fraudulent and pretended educational qualification, and so to amend the present free-school provision as to place it in the power of future Legislatures practically to destroy the beneficent system of education ingrafted in the present Constitution of the State by the Republican party. The call for such a convention means that its members are to be elected under our present obnoxious and detestable laws, and that to them is to be given the power also to amend or destroy the homestead clause of the Constitution, the clause to exempt our religious noncombatants from compulsory military service, and other and acceptable provisions of that instrument, and, judging from recent legislation, to put also beyond the power of legislative repeal a law for a higher rate of interest upon money."

In conclusion, the Republican delegates were instructed to vote for McKinley.

The Democratic State Convention for sending delegates to the national convention met in Staunton on June 4. The first plank of the platform adopted pledged adherence "to the principles of Democracy as announced by Jefferson, Madison, Monroe, and Mason, and the patriots of their day, that this is a Government of and for the people," and deprecated "the growing influence of trusts and great combinations of capital as dangerous to the welfare of our people and fraught with disaster to our institutions." The second plank expressed opposition to "McKinleyism," which "proposed to tax the poor man for the benefit of trusts and capitalists," and favored "a tariff tax for revenue limited to the necessities of an economically administered Government and adjusted so as to throw its burden most lightly upon the great producing classes of our country." The third plank charged that the Republican party, "while professing to protect laboring men and mechanics," was in practice filling Virginia mines and factories with European pauper labor, and that that party was "the author of all the acts of financial legislation which stimulated the panic and brought on hard times to the country, and that it has utterly failed to suggest any scheme of relief." The fourth plank opposed the eligibility of a President of the United States to a third term of office. The fifth plank denounced as

"false and slanderous" the charges made by the Republican State Convention against the Democrats of Virginia as to the reasons which actuated the General Assembly of the State in submitting to the people the question of holding a constitutional convention, and pointed "to the public-school system, to the settlement of the public debt, and to the good will that exists among all the different races and sections of the Commonwealth as evidence of the wisdom of Democratic rule." Following are the planks concerning the money question:

"We are for sound money—the soundest that the world has ever had or can have—the money of our Constitution, the money of the people, the money of civilization through the ages past and destined to be such, as we believe, for ages to come. This sound money should consist of silver and gold, and of paper redeemable in silver or gold, at the option of the payer, the units of the whole mass to be kept at parity by coinage rights and equal legal-tender functions, the only method by which the parity of the two metals has been continuously and successfully maintained.

"We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver, without discriminating against either metal or charge for mintage. The immediate and complete restoration of the bimetalism of money which existed in the United States from 1793 to 1873 is, in our opinion, demanded by the interests of commerce, manufactures, and agriculture, which are alike suffering from the continuous fall of prices, and the consequent embarrassment or bankruptcy of those engaged therein. And, in order to restore it, we demand the full and unlimited coinage of both silver and gold, at the ratio of 16 to 1, without waiting for the assent or concurrence of any other nation."

In conclusion, the delegates were instructed "to vote for the platform declaring for the free and unlimited coinage of silver and gold at the ratio of 16 to 1, and for candidates for President and Vice-President who openly advocate that principle."

A protest against the foregoing platform was entered in the form of a minority report from the Committee on Resolutions. It asserted the "unflinching adherence" of the Democratic party of Virginia to "the cause of sound money," and declared that "the present business depression is due in large measure to the continued agitation of the question of our national currency and the threatened change in our standard of value." It stated that "every consideration of party policy and regard for the public weal requires an unequivocal declaration of our party's position" with reference to the money question, and that "the Democratic party of Virginia stands ready to abide by the declarations of the national Democracy as set forth by its convention soon to assemble in the city of Chicago," but, as indicative of the views of Virginia Democrats, it declared the following:

"We demand that the volume of our currency shall be commensurate with the growing population and business development of the country; that every dollar of gold and silver put in circulation shall be of equal intrinsic and exchangeable value; and that the present gold standard of value shall be maintained, neither depreciated by legislation, because thereby the earnings of labor and the producer would be lowered and creditors defrauded; nor so appreciated, because thereby debtors would have their burdens augmented and the value of all forms of wealth except money be greatly lessened. We hold to the use of gold and silver, and the coinage of every dollar of both metals as long as their parity can be maintained. We are unalterably opposed to the free, independent, and unlimited coinage of silver by this Government at the ratio of 16 to 1, or at any other arbitrary ratio, without an agreement with the leading nations of the world in regard to the same."

The returns of the election gave the result: Bryan, 154,709; McKinley, 135,368; Palmer, 2,129; Levering, 2,350. Bryan's plurality over McKinley, 19,341. The Democrats will have a majority of 64 on joint ballot in the Legislature.

W

WASHINGTON, a Pacific coast State, admitted to the Union Nov. 11, 1889; area, 69,180 square miles. Population, according to the census of 1890, 349,390. Capital, Olympia.

Government.—The State officers for the year were: Governor, John H. McGraw; Lieutenant Governor, Frank H. Luce; Secretary of State, James H. Price; Treasurer, Ozro A. Bowen; Auditor, J. E. Frost, succeeding L. R. Grimes, deceased; Attorney-General, William C. Jones; Superintendent of Public Instruction, Charles W. Bean; Land Commissioner, William T. Forrest; Acting Adjutant General, E. C. MacDonald; State Printer, Oliver C. White; Secretary of the Board of Health, Dr. George S. Armstrong; State Librarian, G. A. Kennedy, succeeding F. T. Gilbert, deceased; Chief Justice, John P. Hoyt; Associates, Elmore Scott, R. O. Dunbar, M. J. Gordon, T. J. Anders; Clerk, C. S. Reinhart; Superior Judge, Mason Irwin; United States Senators, John L. Wilson, Watson C. Squire—all Republicans.

Finances.—As the legislative sessions are biennial, there was no Treasurer's report for 1896. That for the preceding fiscal year showed a cash balance of \$213,517.28 in the treasury. The total value of real and personal property in the State was \$204,190,377.

Immigration.—In January a State immigration convention was held in Seattle, attended by 200 delegates, to formulate a plan for settling the unoccupied lands. A central organization, composed of one member from each county, was provided for, whose duty it is to select from their number 7 persons to form an executive committee that will practically have charge of the work to be done in promoting immigration. They must provide ways and means and devise methods for attracting the attention of Eastern people to the advantages of the State, and must secure cheap transportation by means of ample rebates if the home-seeker settles permanently in the State. This executive committee decided to raise \$20,000 a year. The amount was apportioned as follows: King County, \$400 a month; Pierce, \$350; Spokane, \$300; Snohomish, Whatcom, and Walla Walla, \$100 each; Thurston, Chehalis, Clark, Skagit, Kittitas, Pacific, Whitman, and Yakima, \$50 each; Island County, \$25.

Harbor Improvements.—The sum of \$32,000 was appropriated by Congress for improvement of Olympia harbor, this provision being included in the River and Harbor bill, which was passed over President Cleveland's veto. The bill also provides for a survey of Des Chutes river at the entrance of Olympia harbor, with a view to its improvement.

Timber Interests.—In December the loggers of Puget Sound met in Seattle and formed an organization under the name of the Puget Sound Timbermen's Association for the purpose of uniting all persons in the lumber business in an effort to secure uniform classification and scale of logs, spars, etc., and the establishment from time to time of a uniform schedule of prices. Articles of incorporation were adopted, and an advisory board of ten members was elected. The board was given power to regulate the production of logs so as to keep within the demand, and also to make agreements with lumbermen as to prices, classification, and scaling.

State Capitol.—The contract for building the State Capitol was awarded in February for \$822,951, the amount to be paid in cash.

Decisions.—The Supreme Court decided that Puget Sound includes the Gulf of Georgia. This decision arose through the refusal of the State Fish Commissioner to issue licenses to fishermen who desire to operate in the Gulf of Georgia.

An important opinion on the liability of a corporation for neglect of its agent, whereby an employee of the company is injured, was handed down by the Supreme Court. The plaintiff was in the employ of the Great Northern Railroad Company, and with a number of men was engaged in getting out rock from the side of a hill. He was injured by the explosion of a blast of giant powder, which resulted in the loss of one eye. The explosion was caused by his drilling into an unexploded charge that had missed fire at a previous setting. It appeared that the company's foreman in charge of the work knew of the existence of this unexploded charge, but gave no warning to the man, and that plaintiff did not know of it. Judgment for \$5,000 was given against the company in the lower court, and was affirmed by the Supreme Court.

The question of the eligibility of women to hold school offices was decided in the affirmative by the Supreme Court. Ella L. Guptill was elected county school superintendent of Clellan County, and a citizen of that county brought proceedings through which the Superior Court annulled and set aside her election. She appealed to the Supreme Court, which reversed the action of the Superior Court with directions to dismiss the proceeding. The respondent contended that prior to the election of the appellant there was no law in the State conferring upon her the right to hold the office. The Legislature had not prescribed the qualifications of county superintendent, but it was claimed by the respondent that section 3,050 of the Code of 1881 expressly precludes women from holding any office whatever. This section provides that "All American males above the age of twenty-one years, . . . and none other, shall be entitled to hold office or vote at any election in this Territory." This section, however, was partly superseded by the provisions of the State Constitution. The first Legislature of the State passed an act establishing a general uniform system of common schools. This act provides for the election in each county of a superintendent of schools and prescribes his duties. In this section the Legislature used the pronouns "he" and "his" in speaking of the term of office, etc., of the county superintendent. It is nowhere in the act provided expressly that women may hold this office. That they may do so, however, is implied in section 78 of the act, which provides that "whenever the word 'he' or 'his' occurs in this act, referring to either the members of the Board of Education, county superintendents, city superintendents, teachers, or other school officers, it shall be understood to mean also 'she' or 'her.'" The court held that if the Legislature, when they

enacted this section, did not contemplate that women could be elected to the office of County Superintendent, the provision made is clearly without force or meaning. "It is the duty of the courts ordinarily to give full force and effect to every word of a statute, rather than to attribute to the Legislature either folly or ignorance." The opinion concludes: "There being in this State, therefore, no constitutional or statutory disqualification of females to hold the office of County Superintendent of Schools, and the Legislature having, by clear implication, recognized the right, our conclusion is that the office may be legally held by a woman who is competent to discharge the duties pertaining thereto."

The Supreme Court affirmed the decision of the Superior Court of King County in a suit that arose out of a petition from the city of Seattle to the Board of Land Commissioners to have a review and readjustment of the plat of tide lands in front of the city, which was made and filed with the board by the local board of tide-land appraisers for King County, and especially a change of direction and location of certain streets that were laid out by the local board. The State board refused to consider the petition, for the reason that, in its opinion, it had no right or authority to review the acts of the board of tide-land appraisers concerning streets. The city applied to the Superior Court of King County for a writ of mandate to compel the State board to proceed to hear and determine the matters set forth in its petition. The issuance of the alternative writ was waived, a general demurrer was interposed, which was sustained, and, the city declining to plead further, the case was dismissed at its cost. From this judgment the city appealed. The Supreme Court held that the streets as located and platted are public highways, and the board has no power to relocate or change them; that the State board is given power by the law to review its own acts and, under certain circumstances, to reappraise tide lands which were appraised by local boards, but that nothing is found in the law conferring upon it the authority to change established streets.

Arbor Day.—The Governor designated the 24th of April as Arbor Day, saying in his proclamation: "It is urgently recommended that the day be observed by the people of this State by planting of trees, shrubs, and vines in public and private grounds; and that in all institutions of learning such appropriate exercises, teachings, and practical illustrations may be indulged in as will best emphasize the advantages to be derived from tree culture and the care and preservation of our forests."

Horticulture.—At the meeting of the State Board of Horticulture in April the secretary reported that the fruit crop for the last year was the largest ever grown in the State. Prices ruled steady in all kinds of fruit, and there was a steady demand. The prune-plum crop for the year amounted to 16,000,000 pounds, of which more than 3,000,000 pounds were dried. Berry-growers on the Sound found a new market for their product. More than 20,000 crates were shipped to Idaho, Montana, and other eastern points by express, the price averaging 70 cents a crate, or 3 cents a pound. Walla Walla County shipped 450 car loads of fruits and vegetables; Whitman an equal amount; Yakima 36 car loads of fruit and 76 of vegetables; Wenatchee, 25 car loads of fruit alone. All this was sent to points outside the State. Prices for winter apples ranged from \$1 to \$1.50 a box. Shipments of cherries were satisfactory, orchardists receiving 4 cents a pound for them. All the orchards in the State were reported to be in excellent condition. Since the planting season began, 10,000 acres have been

planted in fruit trees. The annual fruit production reached the value of \$2,000,000. Shipments of apples were made from Tacoma to Japan direct, and, as a new venture, to Russia.

Farm Animals.—According to information furnished by the United States Department of Agriculture, the number and value of farm animals in the State in 1896 were: Horses, number, 192,055, value, \$5,574,956; mules, 1,420, \$56,064; milch cows, 117,381, \$2,591,772; other cattle, 381,550, \$5,803,002; sheep, 756,346, \$1,318,462; swine, 239,413, \$1,041,160; total value, \$16,385,416.

Political.—The State Democratic Convention met in Tacoma on April 14 and chose delegates to the National Democratic Convention. The delegation were uninstructed, but in the State convention a resolution was passed demanding free coinage of silver at the ratio of 16 to 1. The platform contained a plank differing with President Cleveland in his financial policy, but otherwise approving his administration.

The Republican convention of the State, to send delegates to the national convention, met in Everett on May 14. The money question was the principal topic of discussion. By a vote of 290 to 112 the convention refused to adopt a free-silver plank, and later, by a vote of 213 to 178, it declined to accept a platform compromise, in preference to a straight declaration for gold. The platform adopted demanded a restoration of the Republican policy of protection to American industries and labor, and of the doctrine of reciprocity. It favored the maintenance of the gold standard, and opposed the free, unlimited coinage of silver at the ratio of 16 to 1. It advocated, however, an international agreement looking to the general use of both metals as money at a fixed ratio, and commended the efforts in that behalf of the last Republican administration. It declared emphatically in favor of the nomination of McKinley; expressed the opinion that Congress should enact strict laws to prevent immigration of paupers, criminals, and other undesirable classes; favored protection to American shipbuilders, believing "the time has come to return to the policy of Washington and Hamilton, which, by discriminating duties in favor of American bottoms, secured 90 per cent. of our carrying trade to American ships, and which, if again restored, would revive our shipping and cause American freights to be paid to Americans"; demanded a constitutional amendment providing for the election of United States Senators by popular vote; and, finally, opposed any union of church and State, favoring the recognition of loyalty, intelligence, and honesty as the main requirements of good citizenship, and denouncing any attempt to create a religious qualification for office as un-American, unjust, and unconstitutional.

The Free-Coinage Republican party was formally organized on June 30 at Tacoma. It declared that they were still true Republicans, but that on the great question affecting the interests of the nation and the State the old party had misrepresented the people and betrayed their trusts. This revolt was at first regarded with indifference by Republicans; but finally it became a matter of serious concern.

The returns of the election gave Bryan 51,646; McKinley, 39,153; Palmer, 1,668; Levering, 968. Bryan's plurality over McKinley, 12,493. The Populists will have on joint ballot in the next Legislature, 56; Republicans, 26; Democrats, 15; Silver Republicans, 14.

The following State fusion ticket was elected: Congressmen, James H. Lewis, Democrat, and W. C. Jones, Silverite; Governor, John R. Rogers, Populist; Lieutenant Governor, Thurston Daniels, Populist; Secretary of State, W. D. Jenkins, Popu-

list; Attorney-General, P. H. Winston, Silverite; Auditor, Neal Cheatham, Populist; Treasurer, C. W. Young, Populist; Commissioner of Public Lands, Robert Bridges, Populist; Supreme Judge, John B. Reavis, Democrat; State Printer, Gwin Hicks, Democrat; Superintendent of Public Instruction, F. J. Browne, Silverite.

WEST AFRICA. France claims the coast line and *Hinterland* of West Africa from Cape Blanco to Togoland, with the exception of the *enclaves* forming the British colonies of Gambia, Sierra Leone, and the Gold Coast, Portuguese Guinea, and the republic of Liberia. Beyond the German protectorate of Togoland, on the Slave Coast, the British protectorates of the Niger and the Oil Rivers, broken by the German stations of Little Popo and Porto Seguro, extend to the German protectorate of Cameroons, south of which the Gabun and French Congo have a continuous coast line reaching to the mouth of the Congo. An arrangement was made between France and Germany in 1894 whereby the *Hinterland* of Cameroons was conceded to France, whose sphere extends northward behind the boundary fixed for the Cameroons and along the eastern bank of the Shari to Lake Chad. The treaties with the Congo Free State made on Feb. 5, 1885, and Aug. 4, 1894, give to France the right bank of the Congo as far as the Mobangi, and the north bank of the Mobangi, and all territories north of the Welle. In the Niger region the English and French spheres have not been delimited except by the line fixed in the Anglo-French agreement of Aug. 5, 1890. This line is to be drawn from Say, on the Niger, to Barra, on Lake Chad, in such a manner as to comprise in the sphere of the Niger Company all that fairly belongs to the kingdom of Sokoto. The agreement provided for the appointment of commissioners to determine the line. The Anglo-German agreement of August, 1886, defined the limit between the German sphere in Cameroons and the territory of the Niger Company as a line drawn from the rapids on the Cross river, about 9° 8' east of Greenwich, to such a point on the River Benue to the east of Yola as may be found on examination to be practically suited for the demarcation of a boundary. This point was fixed by the supplementary agreement of Nov. 15, 1893, about 30 miles east of Yola and 3 miles below the confluence of the Faro and the Benue, from which point a line of demarcation has been drawn to a point on the southern shore of Lake Chad about 40 miles east of Kuka, the capital of Bornu. Thus Germany has reserved a strip of territory between this line and the Shari for a trade route to Lake Chad.

The British Niger Company's Territory.—The Niger Company, prior to the Anglo-French agreement, claimed to have acquired Sokoto by a treaty concluded with the Emperor of that country, called the Great Fulah, who was stated to be suzerain over the King of Gando and all the other Fulah chiefs in the middle Niger valley. His dominions were said to cover an area of 219,500 square miles, with a population of 15,000,000, extending from Bornu, on the east, to the Borgu and Mossi countries on the west, and from the Sahara beyond Adamawa on the south. The character of the treaty, which was said to confer sovereign powers on the Niger Company through a large part of this region and jurisdiction over foreigners in the other part, was afterward questioned by the French and Germans, and the power of the King of Sokoto over a large portion of the territory claimed was denied. Germany has made a treaty with the King of Gando, whose power they believe to be greater than that of the King of Sokoto, and one with the King of Gurma. The ruler of Boussa, on the middle Niger, has made treaties successively with the French and

with the English. After the French abandoned their post at Arenberg, below the Boussa rapids, this place, otherwise called Bajibo, was occupied by the Niger Company. The Niger region is exceedingly fertile, producing rice and cereal grains for export, besides dates, honey, the fruit of the butter tree, and doria seeds. Cotton is grown and made into native cloth, which is dyed with indigo and other colors produced in the country. Leather is tanned and manufactured into pouches, sandals, and saddlery, which are exchanged for salt from the Sahara. The Niger Company claims sovereignty over the pagan kingdom of Borgu by virtue of a treaty similar to that made with the King of Sokoto. This territory lies south of Gando and north of Ilorin, which is claimed by the British as a province of Ilorin. In this region the British touches on the south the French conquests in Dahomey. On the strength of the Anglo-German agreement the British sphere is made to include the western half of the kingdom of Bornu. The Fulahs are Mohammedans, but the subject peoples in the Niger valley are in great part pagans.

The President of the Council of the Royal Niger Company, which has its seat in London, is Sir George Taubman Goldie. The company grew out of the National African Company, Limited, founded in 1882 with the object of acquiring for Great Britain the regions of the middle Niger, to which France was reaching by building a railroad connecting the Senegal with the head of navigation on the Niger and developing its military power on the upper Niger. Between 1884 and 1886 the agents of the British company made about 300 treaties with tribes and native states, including Sokoto and Borgu, and on July 10, 1886, it received a royal charter as the Royal Niger Company, conferring dominion and jurisdiction in the name of Great Britain over the territories acquired. The company has a paid-up capital of £1,000,000, which it has authority to increase indefinitely.

The total area of the territories of the Royal Niger Company is estimated at 500,000 square miles, and the population is variously estimated between 20,000,000 and 35,000,000. The capital is Asaba, but the military headquarters are at Lokoja. The exports, consisting of gums, hides, India rubber, ivory, palm kernels, palm oil, and vegetable butter, were valued in 1893 at £406,000, having increased from £230,000 in 1888. The imports are cottons, silks, woollens, earthenware, hardware, beads, tobacco, and salt. Very heavy duties are imposed on spirits, the importation of which in regions north of 7° of north latitude is totally prohibited. Tobacco and salt are also taxed, and heavy duties are imposed on exports, producing most of the revenue of the company. The tax on imported gunpowder is almost prohibitory, and the importation of firearms is likewise discouraged, those of improved modern mechanism being prohibited entirely. Nevertheless large quantities of gunpowder, breech-loading rifles, percussion caps, and spirits are smuggled into the country from the neighboring territories of the British Niger Coast Protectorate, where the merchants accumulated large stocks in anticipation of the going into force of the prohibitive and restrictive clauses of the Brussels Convention which were not brought into operation in the protectorate till August, 1894. The smuggling trade that is carried on from the Brass district and other parts of the Niger Coast Protectorate is enough in the estimation of Sir John Kirk to deprive the Niger Company of £30,000 of revenue, which is more than the amount of its annual dividend of 6 per cent. on the capital. The coast guard of the Niger Company endeavor to keep this contraband traffic in check by firing on the smugglers, confiscating their canoes and cargoes,

and the killing or wounding of Brass natives has given rise to retaliatory acts and to complaints to the British Government, which appointed Sir John Kirk a commissioner to inquire into the matter. The report that he made justified the authorities of the chartered company in every case.

The British possessions on the Gulf of Guinea have a frontage of nearly 500 miles, and the British sphere extends inland to the Say-Barrua line arranged with France and to Lake Chad, spreading out like a fan. The Niger and its Benue branch form a natural water-way that gives access to the entire region. In the coast district small rivers, intersected by bayous that afford intercommunication, run parallel to the Niger into the sea. These streams are known collectively as the Oil Rivers, and the territory through which they run forms the Niger Coast Protectorate. The Royal Niger Company obtained a charter in 1886 that gave it the command of a strip of territory on either side of the main outlet of the Niger. The native traders of the Oil Rivers districts have been accustomed for many generations to make use of the creeks connecting the lesser rivers with each other and with the Niger for the purpose of ascending the Niger and trading with the interior. The Niger Company has made an end to this traffic, establishing an elaborate chain of customhouses along the frontier on either side of the Niger and levying heavy duties on merchandise passing the border to the great prejudice of traders, both European and native, established in the Oil Rivers territory. The most important of the native traders are those of the Brass district, who formed a guild that used to possess exclusive privileges in the Niger trade. These they renounced in 1884, signing under compulsion a treaty accepting the British system of free trade. Shortly after they had done this the treaty was granted to the Royal Niger Company that cut them off from their old markets because such duties and licenses were exacted along the frontiers that open trade was rendered impossible. Under these circumstances they resorted to smuggling. The conflict between them and the Niger authorities led in 1895 to their attacking the open town of Akassa. King Koko, of Brass, refused the terms offered on April 1, 1896, by the Niger Company for the admission of Brass traders to the markets on the Niger, and consequently he was deposed and proclaimed an outlaw.

In the Anglo-French agreement of Jan. 15, 1896, dealing principally with Siam, a clause was inserted providing for the appointment of a joint commission charged with fixing by mutual agreement the most equitable delimitation between the British and French possessions in the region west of the lower Niger after examination of the titles produced on each side. Mr. Howard and Sir Augustus Hemming, the commissioners appointed in behalf of England, met their French colleagues, M. Larrouy and M. Roume, at Paris on Feb. 9. At the proposal of the British Government France agreed to widen the ground of discussion so that the Niger Commission may settle the boundary questions in regard to territories on both sides of the Niger and all the claims in those regions, and also continue the negotiations from the points reached by the convention of 1894. Toward the close of 1896 the Niger Company made preparations for military operations on a larger scale than they had yet undertaken, sending out 19 English officers and 2 light-draught river gunboats. The Niger Company has not attempted to suppress slave-raiding, which is carried on by all the chiefs, who pay in slaves the tribute to their paramount rulers. At times the company has intervened to defend a tribe from raiders and has thus gained as allies the

protected peoples. In May, 1896, 200 of the company's force of Haussas with mountain and machine guns put to flight 7,000 Igarras who attacked Gende, the chief town of the Basabonu tribe, and afterward overran the Igarra country, destroying the towns of the chiefs who would not submit. In August the stronghold of the brigand slaver Katchella, on the middle Benue, was captured and destroyed by the Niger Company's forces.

The Niger Coast Protectorate.—The Niger Coast Protectorate occupies the entire coast from the British colony of Lagos to the Cameroons with the exception of the stretch between the Forcados and Brass rivers, which falls within the territories of the Niger Company. In 1891 an imperial commissioner and consul general was placed over the protectorate. The majority of the merchants combined in 1889 into the African Association, Limited, of Liverpool, with a nominal capital of £2,000,000, of which £425,000 were subscribed. The imports in 1894 were £739,864 and exports £825,098 in value. The duties collected amounted to £117,423. The chief exports are palm oil, palm kernels, India rubber, ivory, ebony, camwood, barwood, hides, and some cacao. The imports are cotton goods, woollens, hardware, spirits, tobacco, gunpowder, guns, rice, pickled meat, salt, soap, pottery, hardware, and fancy articles.

The King of Benin, notwithstanding the fact that he has entered into treaty obligations with the British, has for some time shown a hostile spirit. At the end of 1896 a pacific expedition set out from Bonny for the city of Benin with the object of inducing the King of Benin to remove the obstacles he places in the way of trade. It was thought that this could more readily be attained without a display of force, and therefore neither the officers of the expedition nor the 250 Kromen porters carried firearms. When within a few miles of its destination the expedition was attacked by natives. Acting-Consul-General Phillips, Major Copland-Crawford, and 5 other officers were killed, only 2 escaping, and of the Kromen all but 7 were massacred. An expedition was at once formed for the purpose of punishing the King of Benin. Several expeditions against other recalcitrant chiefs had resulted in their submitting without fighting. The King of Okrika, the head of the party addicted to human sacrifices, was driven out of his country, and when his *juju* house was destroyed by the consul general his people forsook the fetich worship and would not receive back their former chief.

British Colonies.—The colonies of Great Britain on the west coast of Africa are the Gold Coast, Lagos, Gambia, and Sierra Leone. The Gold Coast has a coast line of 350 miles on the Gulf of Guinea. The area of the colony is estimated at 15,000 square miles and that of the Gold Coast Protectorate at 31,600 square miles. The estimated population is 1,473,882. The number of European residents is about 150. There are Government schools at Accra and Cape Coast Castle, but the education of the people is chiefly furnished by the Wesleyan, Roman Catholic, and German missionaries, who have 7,689 pupils under their tuition. Gold was formerly obtained by washing, and recently mines have been opened. The chief exports are palm oil and kernels, India rubber, and cabinet woods. There are 391 miles of telegraph. The revenue in 1894 was £218,261; expenditure, £226,932. The imports were £688,467 and the exports £850,343. A joint commission to delimit the boundary between the Gold Coast colony and Togoland began its labors in March, 1896. Sir William E. Maxwell is Governor of the Gold Coast. The export of gold has fallen off greatly since the abolition of slavery, for the free negroes will not work to amass wealth.

Lagos is an island on the Slave Coast, and attached to it is a protectorate extending 275 miles along the coast and a short distance inland. The area of the whole is 1,071 square miles, with a population estimated at 100,000. Yoruba, which is included in the British sphere in this region, is nearly 20,000 square miles in extent, with 3,000,000 inhabitants. Trade is carried on with Germany and Brazil, as well as Great Britain. The principal exports are palm oil and kernels, ivory, gum copal, cotton, India rubber, cacao, and coffee. The Governor is Sir Gilbert Thomas Carter. The local revenue was £137,017 in 1894; expenditure, £124,829. The value of the imports was £744,561, and of the exports £821,682. The Ilorins, though tributary to the Niger Company, come into conflict with the Lagos Government. The trouble is the old one between the European merchants and the tribes of the forest belt who have always acted as middlemen between the coast traders and the tribes of the interior, and will not allow the traders free passage through their territory. The Governor established a blockade to prevent the Ilorins from trading with Lagos, and built a fort at Odo Otin to prevent their invasion of the Yoruba country. The Ilorins are said to be addicted to slave-raiding. On March 31, 1896, the fort was attacked by 2,000 Ilorins, who were put to flight by artillery.

Gambia, situated at the mouth of the river of the same name, was constituted into an independent colony in 1888. The area is estimated at 2,700 square miles, and the population at 50,000. The settlement proper has an area of only 69 square miles, with 14,978 inhabitants in 1894, of whom 62 were Europeans. There are 861 pupils in the missionary schools, and the number of native Christians, both Protestants and Roman Catholics, is 2,385. Bathurst, the capital, has 6,000 inhabitants. The Administrator is R. B. Llewellyn. The chief exports are groundnuts, hides, beeswax, rice, cotton, corn, and India rubber. The revenue of the colony in 1894 was £23,798; expenditure, £31,640. The imports amounted to £130,349; exports, £149,143.

Sierra Leone, including the island of Sherbro and the adjacent coast extending to the Scares river, on the border of Liberia, has an area estimated at 15,000 square miles and about 180,000 inhabitants. The colony proper, 4,000 square miles in extent, had in 1891 a population of 74,835, of whom 224 were whites. There were 40,790 Protestants and 571 Catholics. In 85 elementary and 6 high schools there were 10,500 pupils taught in 1893. Freetown, the finest port in West Africa, has a population of 30,633. Here is the headquarters of the British military forces in West Africa, consisting in 1895 of the West India regiment, composed of 800 black troops from Jamaica, and European engineers and artillery. There is besides an armed constabulary of 570 men for frontier defense. The port is an imperial coaling station, and is fortified and has several batteries of heavy guns. The trade, formerly large, has been diverted to the neighboring French colonies. The chief exports are palm oil and kernels, benne seed, kola nuts, groundnuts, India rubber, gum copal, and hides. The native artisans are skilled in working gold and silver. The revenue of the colony in 1894 amounted to £98,838; expenditure, £93,100. There is a public debt of £50,000, which was contracted in 1894. The imports were valued at £478,025; exports, £426,499. The tonnage entered and cleared in all four colonies in 1894 was 2,983,374 tons, of which 2,207,534 tons were British ships. For the individual colonies the total tonnage was: Lagos, 685,573; Gold Coast, 1,006,053; Sierra Leone, 962,046; Gambia, 229,702.

Boundary commissioners have been engaged for years in delimiting the frontier between Sierra

Leone and the French possessions. Their task, which was frequently intermitted when difficulties arose, was finally completed early in May, 1896. Tembi Kunda, the extreme point of the line, at the beginning of Liberian territory, was found to be farther south than its location on the maps. The line runs northwestward to 10° of north latitude, then due westward to the Little Searcies river, and thence by the route agreed upon in January, 1895, down to the Atlantic coast. Several populous towns that have paid allegiance to France were found to be on the British side of the line. The Governor of Sierra Leone, Col. Cardew, has been actively engaged in the *Hinterland* in consolidating a British protectorate over the district within the British sphere. A railroad is being built into the *Hinterland*. The Congo State has been accustomed to recruit laborers in Sierra Leone, but now the colonial Government has put a stop to this by imposing a fine of £5 for each person so engaged.

The Ashanti War.—The Governor of the Gold Coast sent a mission to King Prempeh of Ashanti in February, 1894, to complain of the interruption of trade caused by the wars that he waged against his vassals and neighbors, of his allowing the road that he had promised to keep open to become filled with forest growths, of the continuance of human sacrifices in violation of the treaty that was made in 1874, and other derelictions. The young King made no direct reply, and in consequence Sir W. B. Griffith recommended that steps be taken to acquire complete control over Ashanti. King Prempeh, warned of the consequences of contumacy, declared his intention of sending envoys direct to England. Sir W. B. Griffith gave notice that they would not be received by the Queen. Nevertheless they left for London on April 3, 1895. Sir W. B. Griffith reported for Lord Ripon, then Minister for the Colonies, that Ashanti was no longer a compact state, and that Prempeh was not King of Ashanti, but only King of Kumassi. Mr. Maxwell, who succeeded Sir W. B. Griffith as Governor of the Gold Coast, requested on June 13, 1895, to be allowed to go to Kumassi with a force of Haussas and secure acceptance by Kumassi and by all Ashanti tribes of British protection, free trade between Ashanti and the coast, free passage through Ashanti of goods to and from the interior, protection for missionaries, abolition of human sacrifices, a guarantee by Kumassi that no more wars would be waged against neighboring tribes, the acceptance of a British resident with a guard, and a promise to refer all disputes to the Governor. Mr. Chamberlain, the Minister for the Colonies, instructed Mr. Maxwell to send an ultimatum to King Prempeh demanding that he should keep his treaty engagements and receive an English resident. The King made no reply to this message before Oct. 31, the date fixed as a limit, and consequently a military expedition was planned. Thus it was resolved to establish British rule over Ashanti. Punitive expeditions led by Gen. Wolseley, who found that the Ashanti force had vanished when he reached Kumassi, the capital, and by Sir Henry Braekenburg, were not followed by annexation because of the difficulty of maintaining a British administration in that deadly climate amid a hostile population. The extension of French influence in this region now prompted the British to extend their borders and consolidate their power. A conflict between the Ashanti traders and the European merchants of the coast and reports of human sacrifices in Ashanti furnished the pretext, John and Albert Anshah, who had been sent as envoys to England, were allowed by the English authorities to proceed to England, but were put off by the officials when they arrived in London, and finally they returned to their own country without having an audience.

Meanwhile Prempeh sent other envoys to Cape Coast Castle to inform Gov. Maxwell that he accepted the ultimatum. But Mr. Chamberlain decided that the expedition must go to Kumassi at all events. Preparations were made for a rapid advance upon Kumassi, with the intention of surprising and capturing Prempeh with his court and treasure before he could either mobilize his forces or retreat farther into the interior. Half of the West India regiment of Sierra Leone, the Gold Coast Haussas, a Haussa force specially recruited by Major R. S. S. Baden-Powell, British engineers and artillerymen, and detachments of the line from England made up the expeditionary force, which was placed under the command of Col. Sir Francis Scott. The troops comprised 786 white soldiers, 400 West Indians, 600 Gold Coast Haussas, 100 Lagos Haussas, and 300 Kromen under Major Baden-Powell, accompanied by about 12,000 carriers and laborers. While it was being prepared the colonial authorities cleared a broad road through the forest to Prahsu, and built huts for the soldiers to sleep in at the different stages of the march and a commodious hospital for the sick. The Ashantis made no preparations for war, expecting that their envoys would arrange a settlement in England. When these envoys were allowed to return to their King the expedition was already on the march, crossing the Prahs river at the same time that they did. The Ashantis had sent an armed force to reduce the rebellious Bekwais to submission, and the day before they were to attack it the British advance column occupied the Bekwai capital and prepared it for defense. The King of Bekwai, who had been won over by the English to rebel against Prempeh and throw in his lot with them after long secret negotiations, was required to furnish 1,000 men, ostensibly engaged as soldiers, but they were compelled to make roads and carry baggage. When the Anshahs returned to Kumassi they reported that British columns were at the borders, advancing against the capital from the west, the southwest, and the north. The Ashanti leaders were thrown into a state of panic, giving contradictory orders and deciding one day for war and the next for peace. Envoys were sent out to meet the troops and make efforts to delay their advance. Capt. Donald Stewart, the political officer, telling Kokofuku and the other envoys that Sir Francis Scott would treat nowhere but at Kumassi. The invading forces would not stop. Nothing remained for the Ashantis to do but to distribute all the treasure and valuables for concealment in different parts of the country till the British should depart again. The march of the British force from Cape Coast Castle to Prahsu, 75 miles, was made in seven days. The Haussa detachment, which had advanced to Koranza, raising native levies on the way, was ordered to advance upon Kumassi on Jan. 1, 1896, at the same time that the main body left Prahsu. The plan was for both to reach King Prempeh's capital on Jan. 18. Another native levy was raised in the Denkerka country, with a view of creating a diversion on the left, and preventing hostile enterprises being undertaken against the British from the west. The King of Denkerka promised to furnish 4,000 men at Yamfuri. The progress of the British column that entered Kumassi on Jan. 17 was absolutely unopposed. King Prempeh and his people were celebrating a native festival at the time. Gov. Maxwell of Cape Coast Castle made his official entry into Kumassi on Jan. 18. The King and his officers were kept under guard till Jan. 20, when a palaver was held in the public square. Prempeh was first required to make his submission in the Ashanti manner, by prostrating himself and embracing the knees of the Governor. The second condition was the payment of a war indemnity of 50,000 ounces of gold. On his protest-

ing his inability to raise any such sum the palaver was broken off, and he was placed under arrest, together with his relatives and chief officials. The contents of the palace were confiscated by the military authorities, who had the fetich groves destroyed by dynamite. The troops had a brief opportunity to loot the town, but this was stopped. On Jan. 22 the British column set out on their return march to the sea. Notwithstanding the most careful sanitary precautions 50 per cent. of the men and more than 80 per cent. of the officers were attacked by fever. Major Pigott was appointed resident at Kumassi. Premph and his mother and 11 other relatives and chiefs were deported as prisoners to Elmina, and there confined in the fortress. A large Haussa force was stationed at Kumassi. The Kings of Manpon, Bekwai, and Koranza had accepted British protection before the fall of Premph. Mr. Maxwell traveled through Ashanti and received the submission of other chiefs.

French Possessions.—The French possessions of Senegal and Rivières du Sud, the French Soudan and Niger, and Gabon and the Guinea coast have an area estimated at 386,000 square miles, with 5,048,000 inhabitants, and the French Congo has an area estimated at 300,000 square miles, with 6,900,000 inhabitants. There were 27 stations in 1895 on the Gabon coast and in the Congo, Ogowe, and other rivers. The French territories are to a great extent covered with forests. The exports are India rubber, cacao, coffee, ivory, sandalwood, palm oil, and gum copal. The value of the imports of the Gabon and French Congo in 1893 was 2,677,000 francs, and of the exports 2,559,000 francs. There are 25 schools, with 800 pupils. The expenditure in 1895 was 3,090,546 francs, of which 1,690,400 francs were contributed from the French treasury. In 1896 the expenditure of France was 1,888,061 francs. The possessions of France were extended from Senegal to the upper and middle Niger before the English were active in these regions except as traders. The French annexations embrace considerable areas to the east of the Niger, including the kingdom of Kong and neighboring territories. By the Anglo-French convention of 1890 England recognized as a French sphere of influence all the region between the Say-Barrua line and the French possessions on the Mediterranean coast of Africa. In the bend of the Niger the French and British spheres have not yet been delimited. The total area ascribed to France in this part of West Africa is 550,000 square miles. The French Sahara, on the north, has an area of about 1,000,000 square miles. Various projects for railroad routes from Algeria or Tunis to Lake Chad or the Niger have been discussed. The French possessions are divided administratively into Senegal, the French Soudan, and French Guinea and dependencies, including Rivières du Sud. Senegal and Rivières du Sud are made to include occupied, annexed, and protected countries. The occupied or settled districts are St. Louis, Dakar, and Rufisque, and the island of Gorée. Various ports on the coast and districts on the Senegal river are classed as annexed territories. Among the protectorates are Walo, Cayor, Toro, Dimar, and Danga. Senegal proper includes several stations on the river as far as Matam and the coast district between Cape Verde and Gambia, which, with the settled parts of Rivières du Sud, embrace an area of 14,700 square miles and a population estimated at 1,100,000. The population of St. Louis, the capital, is 20,000. The colony is represented by one Deputy in the French Chamber, and is administered by a Governor General assisted by a Colonial Council. The Governor General is M. Chaudié. The commander-in-chief of the forces in West Africa is Gen. Boilève. There were 82 officers

and 2,168 French and native troops in 1895. There were 246 miles of railroad and 574 miles of telegraphs, with 1,022 miles of wire, completed in 1892. The imports of Senegal in 1893 were valued at 18,138,000 francs, and exports at 12,280,000 francs. The chief articles of export are groundnuts, fruits, oils, gums, India rubber, woods, and skins. The local revenue in 1895 was 3,951,400 francs. The expenditure of France for 1896 was 6,256,276 francs. There is a debt of 517,657 francs. The people of Senegal are Yollofs, a race of pure negro type. Fetichism is declining, being rapidly supplanted by Mohammedanism. The French Soudan embraces the countries on the upper Senegal and on the upper and middle Niger, and those that lie in the interior from the Rivières du Sud. On the upper Senegal are annexed districts covering 54,000 square miles, with a population of 360,000. The others are classed as protectorates, and have an area of 230,000 square miles and perhaps 2,500,000 inhabitants. The states ruled by Samory have an estimated area of 50,000 square miles and about 280,000 inhabitants. The extent and populousness of the states of Tiéba are not known. The Lieutenant Governor of the French Soudan, Col. de Trentinian, has his residence at Kayes, on the upper Senegal. A railroad runs from Kayes as far in the direction of the Niger as Bafoulabe, 94 miles. The local revenue of 1895 was 1,442,827 francs. The expenditure of France for 1896 was 8,900,000 francs. The trade of the Soudan is mostly with the countries on the other side of the Sahara. Caravans bring across the desert English and German manufactures from Mogador, the leathers of Tuat, sugar, tea, pepper, and, above all, blocks of salt from Tadeni. The commerce in salt is in the hands of the Berabish tribe of Morocco. Timbuctoo, on the Niger, is the emporium where these imports are exchanged for cereals, rice, *shia*, butter, cotton, honey, wax, gold, and ivory, brought in canoes from the south. Since the occupation of this great mart by the French, silver money has replaced to a considerable extent the cowrie shells that were the only medium of exchange. Large quantities of French silver, mostly five-franc pieces, have been imported from Tripoli. The commerce of Timbuctoo amounts to 4,000,000 francs a year. The Timbuctoo region is of great agricultural value. Wild rice covers the country, and in the neighborhood of the villages the natives cultivate large fields of millet, cotton, and beans, and have recently taken up the culture of wheat. They possess great numbers of horses, camels, and asses and a small breed of cattle.

Rivières du Sud is the official name of the territory comprising 135 miles of the coast of Guinea north of Fouta Djalon, which was formed into a separate colony in 1890. The capital is Conakry, on the island of Tombo. The population of the coast settlements in 1895 was 47,541. The stations of Grand Bassam, Assinie, Jackeville, and Grand Lahou on the Gold Coast and the Benin settlements of Porto Novo, Kotonu, Grand Popo, and Agoué are under the same administration. In 1891 the Ivory Coast for 100 miles as far as the border of Liberia was annexed. The area of the Gold Coast and Benin settlements and protected territories connected with them is estimated at 25,000 square miles. Dahomey was brought under French domination as the result of hostilities that ended in the surrender of King Behanzin on Jan. 25, 1894. The chiefs chose Guthili to be their king, and he was recognized and installed by the French authorities. Dahomey has an area of 4,000 square miles and a population of 150,000, not including the parts that before and after the war were included in the French colony, of which Grand Popo has 100,000

inhabitants; Mahis and Ajouda, 150,000; Porto Novo, 150,000; Abeokuta, 120,000; and Ogomochi, 60,000. The exports of palm oil, the best produced in Guinea, have risen to 10,000 tons a year, besides 20,000 tons of palm kernels. The Dahomeyans, who belong to the Fon branch of the Ewe family, are industrious agriculturists. Corn, cattle, ivory, and India rubber are exported from Whydah and Kotonu. The river Volta separates Dahomey from Ashanti. The expenditure of France for French Guinea in 1895 was 547,500 francs; for the Ivory Coast, 1,100,000 francs. The local revenue of Dahomey in 1895 was 1,600,000 francs; the expenditure of France in 1896 was 892,500 francs.

The Central Soudan.—Beyond the spheres of influence claimed as yet by the European powers are the independent Mohammedan states of the Soudan. Bornu is already counted by Great Britain as falling within its sphere, and Wadai as in the sphere of France. East of the French Sahara, intervening between it and Egypt, lies the country called Fezzan. South of this is the mountainous region of Tibesti, bordering on the Central Soudan, which includes Wadai and the tributary states of Bagirmi and Kanem, reaching from Lake Chad to Darfur, the westernmost province of the Egyptian Soudan. West and south of Lake Chad is the sultanate of Bornu, lying between Bagirmi on the east and Sokoto on the west. The area is estimated at 50,000 square miles and the population at over 5,000,000. The people are of mixed negro and Tibu blood, mingled with Tuaregs in the north and Arabs in the southeast, Makari and Marghi negroes in the south, and in the east the Wangas, Beddes, and other pagan tribes. The Magomi, who constitute the dominant race, are skillful artificers in textiles, pottery, and metals. The army of the Sultan, or Sheikh, numbers 30,000 men, armed partly with rifles. The cavalry, clad in armor made in the Soudan, are numerous, and there is a small force of artillery, in part uniformed like European soldiers. The capital is Kuka, on the west shore of Lake Chad. It is a busy center of trade and has over 50,000 inhabitants. Goods of European manufacture and the wares of Turkey and Egypt are brought by caravans from Tripoli, and on the return journey through Fezzan the merchants take huge convoys of slaves, sometimes as many as 4,000, carrying ivory, ostrich feathers, and other products of the country.

Wadai, with the tributary states, covers an area of 172,000 square miles, and has a population estimated at 2,600,000. The Maba negroes are the dominant military caste, and the Arabs, who have been settled in this region for hundreds of years, form the commercial element. Their caravans take the salt and the manufactured produce of the country to Bornu on the west and to Bagirmi and Dar Banda in the south, and exchange them for slaves, ivory, ostrich feathers, and copper. Many of the Mabas have become adherents of the Mohammedan prophet Senoussi. The capital of the country is Abasheh. The Sultan rules directly the northeastern district, and through viceroys, called *kamekels*, the four other provinces. His army is about 7,000 strong. The soldiers are sent into the vassal states and through the provinces of Wadai to gather the tribute of slaves, horses and cattle, honey, and corn. Kanem, which lies between Wadai and Lake Chad, has an extent of about 30,000 square miles. The Tibu population, numbering about 100,000, is oppressed by the predatory Aulad-Sliman Arabs, though these number not more than 1,000 fighting men.

Bagirmi occupies the marshy region south of Lake Chad and east of the Shari river. The people, who are of pure negro race, formerly numbered

1,500,000, but wars with Wadai and epidemics have reduced the population. The area of Bagirmi proper is about 20,000 square miles. The pagan tribes on the south over an area of 50,000 square miles are held in subjection, and in the countries of the Kinre, Sokoro, and other tribes beyond periodical slave raids are made. The Sultan, who resides at Massenia, on the Shari, receives his investiture from the ruler of Wadai and pays tribute to him.

Over a great part of the Central Soudan a conqueror from the Egyptian Soudan and champion of the dervishes, Rabah, formerly a slave of Zobeir Pasha, has in recent times imposed his military rule. Rabah separated from Zobeir Pasha in Darfur, went in 1891 to the south of Wadai to Cuti, where the Sultan Senussi submitted and became his vassal. Rabah married this Sultan's daughter, organized and disciplined in European fashion a military force, which was armed in part with Martini rifles that Senussi had taken from the ill-fated Crampel expedition, and after two years went to Bagirmi, which he subjugated in five months, compelling Gawranga, the Sultan, to flee the country. A party in Bornu, discontented with the rule of the Sultan Ahsem, invited Rabah to invade their country. He crossed the frontier with nearly 9,000 men, of whom 370 were armed with Martini and Winchester rifles, 2,500 with double-barreled shotguns, and the rest with lances and swords or bows and arrows. When he arrived at Logun Rabah asked the Sultan Salah to a conference, and then treacherously seized him and put him in irons, after which he entered the walled town without resistance. Making Logun his headquarters, he advanced upon Kuka with 2,000 men. Ahsem, on hearing of his approach, sent out his general, Mohammed Taher, with 12,000 men against him. They fought a battle at Jillay, where Taher's army was defeated with heavy loss of life. Ahsem then collected an army of 50,000 men, and met Rabah at a place nearer Kuka, where he was attacked by the invaders, who routed his horde and drove them back upon Kuka. Rabah halted at Ngurnu and challenged Ahsem to meet him in battle on the following day, at which Ahsem fled into the west with his followers. Rabah entered Kuka and established himself as the ruler of the country, transferring his capital to Dekwa. Meanwhile Ahsem had been deposed at Gaidem, and his nephew, Kiari, proclaimed Sultan in his stead. Ahsem appealed secretly to Rabah to reinstate him, on hearing of which Kiari had his uncle killed. In the following season Kiari advanced with another army of 50,000 men against Rabah. They met at Duchi, and at the end of the first day's fighting Rabah's force was badly beaten, but Kiari was wounded, and while he delayed pressing the advantage gained Rabah rallied his men and won a victory after a stubborn conflict. Kiari was captured and beheaded. Rabah and his dervishes thus became the undisputed masters of Bornu. His cavalry, numbering 2,000, plunder the country. All ivory, ostrich feathers, and gold dust belong to Rabah, who has made preparations to conquer Kanu and Kinder. Since he left Bagirmi Gawranga has returned to his kingdom, Rabah having relinquished his dominion there. Rabah has no relations with the Sultan of Wadai nor any connection with the Sheikh el Senussi at Kuira.

German Possessions.—The German possessions are Togoland and Cameroons. Togoland, with Little Popo and Porto Seguro, situated on the Slave Coast, have an area of 23,160 square miles and about 800,000 population. The administration is conducted by an imperial commissioner. A military force of natives has been organized. The inhabitants are negroes of the Ewe family. They cultivate yams, corn, bananas, tapioca, and ginger, and

gather in the forests palm oil, rubber, and dyewoods. Palm oil, kernels, gum, and ivory are the chief exports. The revenue in 1894 amounted to 225,109 marks, and the expenditure was 185,224 marks. The imports were valued at 2,240,642 marks, and exports at 2,894,393 marks.

Trouble broke out in the Cameroons in the autumn of 1896 owing to 6 chiefs being sentenced to imprisonment for maltreating a native who had broken an agreement to trade only on certain terms with the whites. This combination of the natives was made after the white traders had combined and agreed among themselves to pay only certain prices for produce. Behind Togoland Germany has created a sphere of influence embracing Gurma and extending to the Niger.

Cameroons has a coast line of 120 miles on the Bight of Biafra, extending from Campo river to Rio del Rey. The territory extends inland to about 15° of east longitude. The area is something under 200,000 square miles, and the population is estimated at 4,570,000. There were 231 white residents in 1894. The protectorate is administered by an imperial governor. The country is very fertile, and besides the natural products, which are valuable and abundant, the German Plantation Company has begun the cultivation of cacao and tobacco. There is a considerable trade in ivory, palm oil, palm kernels, rubber, and ebony. The imports in 1893 were valued at 4,161,627 and exports at 4,633,363 marks. The imports are cotton cloth, spirits, powder, firearms, salt, tobacco, and hardware. The revenue in 1895 was 1,230,000 marks.

Liberia.—Liberia is a republic founded by emancipated slaves from the United States, with a constitution modeled after that of the American Union. The President, who is elected for two years, is Joseph James Cheeseman. The members of the House of Representatives have a term of two years and the Senators four years. The country has a coast line of 500 miles. The total area is 14,360 square miles, and the population numbers about 1,068,000, of whom 18,000 are American negroes and their descendants. Monrovia, the capital, has about 5,000 inhabitants. A loan of £100,000 was contracted in 1871, on which the interest is unpaid since 1874, amounting in 1895 to £147,000. The chief articles of export are coffee, which is of high grade, palm oil, palm nuts, cacao, sugar, arrowroot, hides, and ivory. There were 1,000,000 pounds of coffee exported in 1889, one half of it to Germany. The foreign trade amounts to about \$2,500,000 a year. An English gunboat was sent to Monrovia in November, 1896, to demand an indemnity for some injury committed upon British subjects from Sierra Leone by Liberians at Grand Bassa. The Governor of Sierra Leone summoned President Cheeseman to a conference and, when the latter demurred about paying an indemnity, threatened to land blue-jackets and seize the customhouse. The money demanded was then paid under protest.

Portuguese Possessions.—The Portuguese possessions in West Africa are the Cape Verde Islands, having an area of 1,650 square miles and 110,930 inhabitants, and Portuguese Guinea, the area of which is estimated at 14,000 square miles and the population at 800,000. The revenue of Cape Verde in 1895 was 259,170 milreis and the expenditure 265,757 milreis. The imports were 252,000 and the exports 240,000 milreis. The revenue of Portuguese Guinea was 67,990 milreis: the expenditure, 174,708 milreis: imports, 95,000 milreis; exports, 43,000 milreis.

Spanish Possessions.—Between the French protectorate on the Atlantic coast of the Sahara and the southern confines of Morocco Spain has the protectorates of Rio de Oro and Adrar, 243,000 square

miles of desert supporting a population not supposed to exceed 100,000. They are administered as a dependency of the Canary Islands by a lieutenant governor residing at Rio de Oro. Spain also claims 69,000 square miles on the Muni and Campo rivers, with a population of 500,000; but France also claims, and has effectively asserted a protectorate over the same region.

WEST INDIES. The West Indian islands form colonies of European powers with the exception of the island of Hayti, which is divided between two independent republics (see HAYTI and SANTO DOMINGO). Cuba and Puerto Rico are the only remaining Spanish colonies in America (see CUBA). The majority of the inhabitants on the other islands are descendants of enfranchised negro slaves, who constitute on some islands almost the entire population.

British Colonies.—Each of the six groups of British possessions is administered by a Governor. The exports of Great Britain to the West Indies in 1894 amounted £2,194,528, of which £531,107 was the value of the cotton goods, £247,276 of wearing apparel, £141,136 of leather manufactures, £137,388 of iron, £91,629 of machinery, and £88,505 of fertilizers. The total imports into Great Britain from the British West Indies were valued at £1,938,022 in 1894, of which £643,102 was for sugar, an increase from £508,107 in 1893, £471,449 was for cacao, £223,243 was for logwood and other dye materials, and £183,238 for rum. Of the total tonnage entered and cleared in 1893 British shipping furnished 6,375,268 tons.

The Bahamas have an area of 5,450 square miles and had a population in 1894 of 50,695, nearly a third of whom are white. The number of births in 1894 was 1,978; of deaths, 1,114; excess of births, 864. Nassau, the capital, is on the island of New Providence, which has a population of 11,000. There were 41 Government schools in 1894, having an average attendance of 3,259 pupils. Besides sponge fishing, the cultivation of fiber and that of fruit are the principal industries, these having been introduced in recent times and rapidly extended. Shells, pearls, and ambergris are also found and exported. The product of the sponge fisheries in 1894 was valued at £59,155. The export of fresh pineapples was valued at £42,568. Preserved pineapples are also exported. Oranges are raised in smaller quantities. Cotton is raised in small but increasing quantities. Sisal plants covered 20,000 acres in 1893. The Governor is Sir W. F. Haynes Smith. He is assisted by an Executive Council of 9 members, a Legislative Council of the same number, and a Legislative Assembly of 29 members, elected by the people under a property qualification for voters. The revenue of the Government in 1894 was £57,956, and the expenditure £57,645. Of the revenue, £39,268 came from customs duties. The chief expenditures were £15,267 for salaries, £6,233 for police, and £4,110 for public works. The public debt amounts to £119,626.

Barbadoes, with an area of 166 square miles, had in 1894 a population of about 186,000. Bridgetown, the capital, has 21,000 inhabitants. The number of births in 1894 was 7,489; of deaths, 6,367; excess of births, 1,122. There were 194 elementary schools in 1894, with an average attendance of 15,962 pupils. Barbadoes is the headquarters for European troops in the West Indies, the garrison consisting in 1895 of 30 officers and 747 men. There is a railroad 24 miles long, to which the Government pays a subsidy of £6,000 a year. The earnings in 1894 were £9,432, and expenses £11,028. The telegraph line is 58 miles long, and telephone lines have a length of 35 miles. The staple product is sugar, which covers 30,000 acres. The yield in 1894 was 66,262 hogs-

heads. The yield of the fisheries, which give employment to 370 boats and 900 persons, is about £17,000 a year. The shipping of the island consists of 47 sailing vessels and 2 steamers, having a total capacity of 8,876 tons. The total value of the imports in 1894 was £1,279,335, and of the exports £984,512. The chief imports were cottons for £121,161, rice for £89,305, and flour for £81,887. The principal exports were raw sugar for £625,872, molasses for £141,563, and flour for £23,212. The Government revenue in 1894 was £160,624, and the expenditure £161,279. Of the revenue, £94,243 came from customs. Of the expenditure, £73,562 went for salaries. The Governor is Sir James Shaw Hay. There is a House of Assembly of 24 members elected annually by popular suffrage, the number of electors registered in 1894 being 2,167. The Legislative Council of 9 members is appointed by the Governor.

Jamaica has an area of 4,193 square miles, with a population of 681,085 in 1894. The dependent Turks and Caicos islands are 223 square miles in extent, with 5,089 inhabitants. The Cayman Islands have an area of 225 square miles and 4,322 inhabitants. The population of Jamaica at the census of 1891 consisted of 14,692 whites, 121,955 colored and half-breeds, 488,624 blacks, 10,166 East Indians, 481 Chinese, and 3,623 unclassified. Kingston, the capital, had 46,542 inhabitants. The number of marriages in 1894 was 3,734; of births, 27,365; of deaths, 14,885; excess of births, 12,480. Coolie immigration was suspended in 1886, but resumed in 1891. The number of East Indian immigrants in 1894 was 13,823, of whom 2,615 were indentured laborers. There were 962 Government schools in 1895, with an average attendance of 62,587. The strength of the West India regiments in Jamaica was 1,570 officers and men in 1896. Fortifications and batteries have been erected at Port Royal, Rocky Point, and five other places. There are 12 ships of the British navy on the North American and West India stations. There are 119 miles of railroad and 1,420 miles of telegraph. The number of dispatches in 1894 was 111,812; receipts, £6,253; expenses, £6,904. The post office forwarded 3,292,029 letters and post cards. The railroads carried 290,415 passengers; their receipts were £73,823, and expenses £53,776. The revenue of the Government for the year ending March 31, 1894, was £803,075, and expenditure £810,867. The largest expenditures were £83,710 for public works, £77,650 for the debt, and £51,474 for police. Of the revenue, £315,892 came from customs. The public debt, including guarantees, amounted to £2,151,882. The imports for 1894 amounted to £2,191,745, and exports to £1,921,422. The leading imports were cotton goods for £303,159, fish for £184,867, flour for £147,492, and rice for £38,697. The principal exports were fruit for £428,886, coffee for £356,734, raw sugar for £239,210, and rum for £147,478. The merchant shipping of the colony consisted in 1894 of 116 sailing vessels, of 5,810 tons, and 2 steamers, of 879 tons. The total tonnage entered and cleared during that year was 1,564,340. The Governor of Jamaica is Sir Henry Arthur Blake. The Governor is assisted by a Privy Council and by a Legislative Assembly, part of which is elected by the people and part nominated by the Government.

The *Leeward Islands* have an area of 706 square miles, and in 1893 had a population of 131,333. The population in 1891 was composed of 5,070 whites, 23,320 colored, and 99,333 blacks. The Governor is Sir Francis Fleming. The group is divided into five presidencies: Antigua, with Barbuda and Redonda; St. Kitts, with Nevis and Anguilla; Dominica; Montserrat, and the Virgin Islands. The Federal Executive Council is nominated by the British

Crown, and the Federal Legislative Council consists of 10 members nominated by the Crown and 10 elected by the Legislative Councils of the several colonies. The chief imports in 1894 were textile manufactures for £69,690, flour for £62,407, and dried fish for £25,403. The chief exports were sugar for £426,345, molasses for £33,708, limes and lime juice for £24,005, and rum for £5,238. Antigua, with an area of 108 square miles, and its dependencies, with an area of 62 square miles, have 36,819 inhabitants. St. John, the chief town, has 9,738. The products are sugar and pineapples. The imports in 1894 were £178,931 in value, and exports £199,870. The revenue was £50,881 in 1893, of which £28,214 came from customs. The expenditure was £50,870. The colony has a debt of £27,871. Montserrat, with an area of 32 square miles and a population of 11,672, besides sugar exports large quantities of lime juice. There are 1,000 acres planted to lime trees. The imports in 1893 were £29,325 and exports £32,715 in value. The revenue was £8,371, of which customs produced £3,579; the expenditure amounted to £7,882. There is a debt of £8,200. St. Kitts, or St. Christopher, has an area of 65 square miles and a population of 30,876; Nevis, an area of 50 square miles and 13,087 inhabitants; Anguilla, an area of 35 square miles and 3,699 inhabitants. St. Kitts and Nevis have one Executive Council and a Legislative Council composed of 10 elective and 10 nominated members. The chief products are sugar and rum. Anguilla produces cattle, pineapples, vegetables, and salt. The imports of St. Kitts and Nevis in 1893 amounted to £184,192; exports, £273,799. The revenue in 1893 was £58,859 and expenditure £51,975. Of the revenue, £24,178 came from customs. The Virgin Islands, with an area of 58 square miles, are settled by a colored population of 4,639 persons, cultivating sugar and cotton on small parcels of land owned by themselves. From the small, barren island of Sombro, which is not administratively connected with the colony, phosphate of lime is obtained. The imports of the Virgin Islands were £3,885 in 1893, and the exports £4,153. The revenue was £1,552, and expenditure £1,715. Dominica has an area of 291 square miles and 26,841 inhabitants. It produces sugar, fruit, cacao, and woods. The imports amounted to £64,552 in 1893; exports, £53,752. The revenue was £22,347, of which £7,334 came from customs; expenditure, £25,815.

The finances of the Leeward Islands have been mismanaged for many years, and especially those of Dominica, which has incurred £62,000 of debt and has only £10,000 worth of work to show for it. In 1896 the British Parliament voted a grant of £15,000 to relieve the island of its financial embarrassments. A strike of the negro laborers on the island of St. Kitts, who thought that with a large sugar crop to dispose of at higher prices they ought to have better wages, culminated in a riot on Feb. 17. They submitted their grievance to the administrator, and when at the date when he promised an answer he still put them off, a mob of men and women collected at night, set buildings on fire, and looted the stores of the Portuguese merchants. A force was landed from the British ship "Cordelia," and after a fight in which three rioters were killed and many wounded, order was partially restored.

Trinidad has an area of 1,754 square miles. The population in 1894 was 222,689. Tobago, administratively connected with it, has an area of 114 square miles and about 20,000 inhabitants. Port of Spain, the capital of Trinidad, has 38,000 population. The number of births in 1894 was 7,608; of deaths, 5,593; excess of births, 2,015. About 58,500 acres are planted to sugar cane, 95,000 to cacao and coffee, and 14,000 to coconuts. From

the pitch lake in the center of the island the American company that leases it exported 99,191 tons of asphalt in 1894. There is a railroad 54 miles long. In Tobago tobacco and cotton are cultivated. The Governor is Sir F. Napier Brooine. The Legislative Council has 20 members, nominated by the Government. The revenue in 1894 was £540,374, of which £270,812 came from customs. The expenditures were £486,110, of which public works absorbed £62,948, and police £41,022. Tobago's separate revenue was £8,843, and expenditure £8,135. The imports of Trinidad in 1894 amounted to £2,152,883, the chief ones being cotton and other cloths, worth £347,466, flour, worth £135,783, rice for £38,697, and pickled and salted meat for £72,025. The export of sugar was £598,010 in value; of molasses, £42,088; of cacao, £587,564. Vessels of 1,233,947 tons were entered and cleared during 1894. Tobago's imports amounted to £15,403, and the exports to £15,872.

The Windward Islands are Grenada, St. Vincent, the Grenadines, half of which are administered from Grenada and half from St. Vincent, and St. Lucia. The Governor is Sir Charles Bruce. Grenada has an area of 133 square miles, with a population in 1894 of 57,692. The number of marriages was 414 in 1894; of births, 2,471; of deaths, 1,192. There are 34 elementary schools, with 6,723 pupils. Cacao and cotton are taking the place of sugar cane. The imports in 1894 amounted to £196,998; the exports to £316,063, of which £168,498 represent cacao and £9,584 spices. The revenue was £63,022 in 1894, and the expenditure £59,594. Of the revenue £30,122 came from customs. Of the expenditure £10,407 were for public works. There is a debt of £96,100. St. Vincent has an area of 132 square miles, and a population, according to the census of 1891, of 41,054, of whom 2,445 are whites. Most of the cultivated land belongs to three firms. Only a sixth of the surface, or 13,000 acres, is under cultivation. The forests produce logwood and excellent timber. The chief cultivated products are sugar, rum, cacao, cotton, arrowroot, and spices. The imports in 1894 were valued at £91,009, and exports at £87,374. Of the exports the chief were sugar for £27,270, and arrowroot for £38,278. The public revenue in 1894 was £28,574, and the expenditure £30,545. Of the revenue the customs yielded £14,486. The chief heads of expenditure were £10,197 for salaries, and £3,086 for public works. The public debt is £19,380. St. Lucia has an area of 233 square miles, and a population in 1894 of 45,095. Castries, the chief town, has 6,688 inhabitants. The number of births in 1894 was 1,817; of deaths, 922. The commercial products are sugar, cacao, rum, and logwood. The imports in 1894 amounted to £187,542. The exports were £191,622 in value, of which £66,161 represent sugar, £37,359 logwood, and £28,513 cacao. The revenue was £56,590, of which £24,416 came from customs. The expenditure was £54,400, of which £17,909 were for salaries and £9,823 for public works. The public debt amounts to £179,279.

An imperial commission was appointed to go to the West Indies and study the conditions of the sugar industry on the spot, with a view of discovering whether any effective means can be devised for its development and relief. In Barbadoes sugar and its accompanying products contribute 94 per cent. of the total exports; in St. Kitts, St. Lucia, and St. Vincent, a like proportion; in British Guiana, 92 per cent.; in Trinidad, the main part; and in Jamaica, notwithstanding the development of other industries, sugar still forms over 60 per cent. of the total exports. The depression in the West Indian sugar trade has reached a point at which estates are going out of cultivation. The

planters have repeatedly petitioned the British Government to grant preferential treatment to their product over the bounty-fed beet sugar of the Continent of Europe, either by imposing a countervailing duty on the latter or by paying bounties to the West India producers. Their representatives appeared before the imperial commission to urge anew the necessity of countervailing duties. While the population of the British West Indies increases at the rate of 14,000 per annum, the sugar exports have fallen off 25 per cent. in fourteen years. The French planters of Martinique and Guadeloupe, who are in as bad a plight, have petitioned for a bounty of 5 francs per 100 kilogrammes to offset the home bounty.

Danish Colony.—The islands of Santa Cruz, or St. Croix, St. Thomas, and St. John, constitute the Danish Antilles. Their area is 118 square miles, and the population, consisting almost entirely of negroes engaged in raising sugar, is 32,786 in Santa Cruz, 12,019 in St. Thomas, and 984 in St. John. The trade with Denmark has largely fallen off, and the islands have suffered much from the depression in the sugar trade. The exports to Denmark in 1894 were 388,000 kroner in value, and the imports from Denmark 336,000 kroner. The Governor is Col. C. E. von Hedemann.

The proposition that the United States should acquire the Danish islands by purchase has been revived. In 1867 a treaty was made with the Government at Copenhagen by which the islands of St. Thomas and St. John were to be transferred to the United States, subject to the sanction of the inhabitants, for the sum of \$7,500,000. The inhabitants voted almost unanimously in favor of annexation to the United States, but the United States Senate neglected to ratify the treaty, the original term of which was twice extended, until finally, in April, 1870, no further action having been taken by the Senate, the treaty was abandoned.

Dutch Colony.—The island of Curaçao and the dependent islands of Bonaire, Aruba, St. Eustache, Saba, and the Dutch part of St. Martin have an area of 403 square miles, with a population in 1894 of 47,889, of whom 21,212 were males and 26,677 females. The area of Curaçao alone is 210 square miles. The Governor is assisted by a council of administration, composed of 4 nominated members. The European garrison in 1894 numbered 9 officers and 252 men, besides which there was a militia consisting of 30 officers and 362 men. The chief products are corn, beans, pulse, cattle, salt, and lime. The free port of Curaçao carries on a considerable commerce with the other West India islands. There were entered during 1893 2,992 vessels, of 475,776 tons. The imports of Curaçao amounted in 1893 to 4,115,595 guilders, the main part being re-exported. The exports of domestic produce were 309,584 guilders in value. In 1894 the imports of Curaçao were valued at 3,165,000 guilders. The receipts of the Government for 1896 were estimated at 729,000 guilders, balanced by the expenditures. The Governor is C. A. H. Barge.

French Colonies.—The two islands forming *Guadeloupe* have an area of 583 square miles, with a population in 1894 of 167,099. Attached to the colony are the islands of Marie Galante, Les Saintes, the French part of St. Martin, La Désirade, and St. Barthélemy, having an area of 103 square miles and 23,605 population. Of the inhabitants of Guadeloupe about 15,000 are coolie immigrants. The births in 1894 numbered 4,158; deaths, 3,248; marriages, 463. The elementary schools have 11,000 pupils. The revenue raised in the colony was 6,496,862 francs in 1895. The expenditure of France for 1896 was 1,695,752 francs.

The principal products are sugar, cacao, and

coffee for export, and sweet potatoes, corn, manioc, bananas, and tobacco for native consumption. The value of the imports in 1893 was 19,546,000 francs, of which 7,829,000 francs came from France; and of the exports 14,481,000 francs, of which 14,133,000 francs went to France. The Governor is D. Moracechini.

Martinique has an area of 381 square miles, and had a population in 1895 of 189,599, including a floating population of 1,907. Of the resident population 90,373 were males and 97,319 females. The chief town is St. Pierre, with 25,382 inhabitants. Of the population of the island only 1,307 were born in France. There are 12 miles of railroad. Martinique is represented by 1 Senator and 2 Deputies in the French Assembly. The imports in 1893 amounted to 32,747,000 francs, and exports to 22,631,000 francs. Of the imports 10,741,000 francs came from France, and of the exports France received 21,253,000 francs. There were 34,681,024 kilogrammes of sugar shipped to France. The chief products are sugar, manioc, sweet potatoes, bananas, coffee, cacao, indigo, and tobacco. The budget for 1895 amounted to 5,323,182 francs, not including the expenditure of France, amounting in 1896 to 2,772,192 francs. There is a debt of 435,000 francs. The Governor is N. Pardon.

WEST VIRGINIA, a Southern State, admitted to the Union June 19, 1863; area, 24,780 square miles. The population, according to each decennial census since admission, was 442,014 in 1870; 618,457 in 1880; and 762,749 in 1890. Capital, Charleston.

Government.—The following were the State officers during the year: Governor, William A. MacCorkle, Democrat; Secretary of State, William E. Chilton; Treasurer, John M. Rowan; Auditor, Isaac V. Johnson; Attorney-General, Thomas S. Riley; Adjutant General, J. A. Holley; Commissioner of Labor, J. M. Sydenstricker; Superintendent of Public Schools, Virgil A. Lewis; Bank Examiner, C. A. Wever; State Librarian, E. L. Wood; Secretary of the Agricultural Board, C. C. Brown; Meteorologist, W. W. Dent; Secretary of the Board of Health, N. D. Baker, M. D.; State Veterinarian, E. E. Terry; Secretary of the Fish Commission, C. I. White; Commissioner of Immigration, Thomas Popp.

Finances.—The State owes no debt of any kind. At the beginning of the fiscal year 1895-'96 there was \$883,683.74 in the treasury, and the receipts from all sources during the fiscal year ending Sept. 30, 1896, were \$1,524,879.45. The amount disbursed during the year was \$1,581,233.76, leaving a balance in the treasury Oct. 1, 1896, of \$827,329.43. This balance was made up of the State fund, \$238,980.63; the general school fund, \$327,076.98; the school fund, \$261,271.82. Giving the amounts in round numbers, the State fund was increased from \$36,000 in 1892 to \$238,000 in 1896. The general school fund was swelled from \$291,000 in 1892 to \$327,000 in 1896; the school fund from \$154,000 in 1892 to \$261,000 in 1896. From a total of \$482,000 in 1892 there was in 1896 the sum of \$827,000 to the credit of the State.

State Institutions.—All the State institutions are reported as in good order. Nonpartisan boards have been tried, and the system has been found to work well. In no case has there been a division on party lines within any board. The Hospital for the Insane, at Weston, reported an increased percentage of cures. In the second Hospital for the Insane, at Spencer, 292 patients were treated during 1896. In the Penitentiary reforms have been instituted: the price of feeding the convicts has been reduced, and they have been given larger privileges; the institution has been placed in the line of a re-

formatory. The average daily cost of maintaining the convicts for the two years ending in September, 1892, was 34 cents; for 1894 it was 32½ cents; and for the year ending in September, 1896, a little over 26 cents. The number of convicts on Sept. 30, 1896, was 580.

Education.—The irreducible school fund was increased from \$732,000 in 1892 to \$834,000, round numbers, in 1896, an increase of \$102,000 in four years. Within this time there were constructed the Normal School building, at Shepherdstown at a cost of \$14,963.85; the building at Marshall College at a cost of \$24,961.90; at West Liberty at a cost of \$5,983.20; the addition to the Fairmont school at a cost of \$11,983.85; and to the colored school at Farm at a cost of \$30,000. During the four years 1892-'96 there were expended \$5,000 for the preparatory branch of the university at Montgomery and \$8,000 for the Colored Institute, at Bluefield; for the Reform School, at Pruntytown, \$53,700; for the Schools for the Deaf and Blind, at Romney, \$116,200; for the university at Morgantown, \$117,581; and for the State Normal School and its branches, more than \$250,000. In all \$558,472 were expended for higher education. For the year ending June 30, 1896, the enrollment in the State normal schools had increased to 1,202; 27 teachers were employed, and salaries amounted to \$19,900. In that period the total general State fund aggregated \$1,527,427.71; add to this the teachers' fund from all other sources, \$3,555,202.57, the building fund, \$2,847,215.70, and to this the total appropriation for the four years, and the result is \$8,488,317.98 expended within that time for education. The total value of schoolhouses in 1896 was \$2,462,176—a gain in four years of \$150,000. The number of schoolhouses was 5,475.

The State has a school population of 296,517, but of that number only 215,665 were enrolled in 1896, leaving more than 80,000 children not enrolled. Of the number of children enrolled there was an average daily attendance of only 141,000, showing a daily average absence of more than 74,000. Of the 296,517 children of school age, 219,000, in round numbers, were between the ages of six and sixteen years, and 77,000 between sixteen and twenty-one. Of those between six and sixteen years, 185,000 were enrolled and 33,000 not enrolled; therefore of the children between six and sixteen years of age, 85 per cent. were enrolled. Of the whole number between sixteen and twenty-one there were 30,000 enrolled and 47,000 not enrolled, or 39 per cent. enrolled.

Oil.—From all indications, it seems that there is a greater field of oil under the State than under any equal amount of territory in the United States. In 1892 the State produced 3,810,086 barrels of petroleum, which was a gain of 102,000 barrels in 1886; but in 1896 the production of 1892 was increased to 8,216,500 barrels, an increase of over 4,000,000 barrels.

Coal.—New methods were reported in the mining of coal, and many new fields were opened. Throughout the State the price of coal lands had increased. The production for the year was about 1,500,000 tons.

Railways.—The railway mileage of the State is considerably over 2,000 miles, the last reported valuation being \$22,447,495.

A charter was granted in February for a railroad from St. Albans to the forks of the Coal, thence to Peytona on Big Coal river, thence to the junction of Marsh and Norfolk Forks, thence by way of Marsh Fork to the Norfolk and Western Railroad in Mercer County, with a branch road 50 miles in length extending from the Forks of Coal to Boone, thence to the junction of Pond and Spruce Forks, thence to the head waters of Pond Fork and to the Wyo-

ming County line. The length of this road will be about 120 miles. Boone County and parts of Kanawha, Raleigh, Lincoln, and Logan Counties are drained by the waters of Coal river and its tributaries. This area embraces about 1,000 square miles of land, well timbered, and containing above water level workable veins of superior black band, cannel, coking, splint, and bituminous coal. These veins range in different localities from 3 feet to 14 feet in thickness. On Marsh Fork of Big Coal river a vein of coking coal 9 feet thick has been found 270 feet below water level by boring.

An important enterprise in the New river section of the State is the building of the Glenjean, Lower Loup Creek and Deepwater Railroad. This road is to begin on Upper Loup creek, about 6 miles from Thurmond station, where the present Loup Creek division of the Chesapeake and Ohio Railway intersects with that road, and then to run up White Oak branch 6 miles, thence down Lower Loup creek 16 miles to Deepwater, a small town at the head of navigation on the Kanawha river. At Deepwater the company proposes to build a bridge across the Kanawha to intersect with the Kanawha and Michigan Railroad, so that they will have facilities for shipping coal by rail over that road as well as by the Chesapeake and Ohio.

Road System.—The Governor, in his message, notes that "there are but few decent roads in the State." There are good roads in only about 5 counties. The system of having the labor of the county do the work of repairing roads is condemned as inconvenient and expensive. The Legislature is advised to provide that the road-making in the counties be under the control of one central body.

Building and Loan Associations.—The Governor renews former recommendations concerning building and loan associations and fraternal societies. "They are," he says, "virtually operating in this State without inspection. Thousands of dollars of our money is placed in these societies every year, and there is absolutely no supervision of them."

Political.—The Republicans met in State convention in Clarksburg on May 14. A platform was adopted demanding a return to the policy of protection and reciprocity; denouncing "as unbusiness-like and unpatriotic that mad revel of party perfidy and dishonor which has taken bread out of American mouths and money out of the American Treasury, and has created in the public revenue a deficiency of \$136,000,000"; rejoicing that "the aroused self-interest of the country is about to hurl from power the party which has written in our nation's history this most shameful chapter of imbecility"; denouncing the issue of Government bonds in times of peace; demanding a sound-money policy "which will maintain at an equality of purchasing power every dollar of American money"; declaring that "every American dollar must be worth 100 cents, and the monetary system must be the soundest and safest in the world"; approving liberal appropriations for internal improvements; indorsing "the principle of protection to American industries as taught and maintained for thirty years by the Republican party"; favoring "such legislation as will protect and restore American shipping and compel the foreign commerce of the United States to be carried in American ships"; advocating "a return to the policy of Washington, Jefferson, and Madison, of discriminating duties in favor of American ships, which secured 90 per cent. of our carrying trade to American bottoms"; demanding the rigid enforcement of existing immigration laws, and favoring "such further legislation as shall reduce the volume and improve the quality of the human tide that pours into our ports"; favoring a liberal

pension policy; and extending to Cuba "the warm hand of fellowship."

The returns of the election gave the result; McKinley, 104,414; Bryan, 92,927; Palmer, 677; Levering, 1,203. McKinley's plurality over Bryan, 11,487. The Republicans will have a majority of 21 on joint ballot in the Legislature.

WISCONSIN, a Western State, admitted to the Union May 29, 1848; area, 56,040 square miles. The population, according to each decennial census since admission, was 305,391 in 1850; 775,881 in 1860; 1,054,670 in 1870; 1,315,497 in 1880; and 1,686,880 in 1890. By the State census of 1895 it was 1,937,915. Capital, Madison.

Government.—The following were the State officers during the year: Governor, William H. Upham, Republican; Lieutenant Governor, Emil Baensch; Secretary of State (who also acts as Auditor), Henry Casson; Treasurer, Sewell A. Peterson; Attorney-General, William H. Mylrea; Adjutant General, Charles King; Superintendent of Public Instruction, John O. Emery; Commissioner of Insurance, William A. Fricke; Railroad Commissioner, D. J. McKenzie; Chief Justice of the Supreme Court, John B. Cassoday; Associate Justices, Silas U. Pinney, John B. Winslow, and A. W. Newman; Clerk of the Supreme Court, Roujet D. Marshall.

Finances.—The general fund embraces all the revenues of the State applicable to the payment of the ordinary expenses of the State government, the sources from which it is derived being a tax on civil actions, license of railroad companies, log-driving and booming companies, telegraph and telephone companies, insurance companies, hawkers and peddlers, fees received from notaries public, from various State offices, and from the sale of books and reports. The expenditures from this fund are authorized by permanent and temporary appropriations, and by the several laws requiring the Secretary of State to audit accounts. The general fund receipts for 1896 exceeded those for 1895 by \$335,758.05, being for 1896 \$2,124,567.57, and for 1895 \$1,788,809.52, a total for the two years of \$4,890,692.80. The disbursements were \$518,136.22 less in 1896 than in 1895, the figures being, for 1896, \$2,111,370.51; for 1895, \$2,729,506.73, a total of \$4,840,877.24, or \$49,815.56 less than the receipts. The balance in the trust funds has grown from \$79,511.19 in 1894 to \$305,025.18 in 1896. The receipts for 1895-'96 were \$3,837,320.40; disbursements, \$3,532,295.31. The actual receipts of the general fund for the same term were \$3,913,377.09, of which the largest item was from the railroads, \$2,348,546.14. The disbursements, aggregating \$4,840,877.24, were: Salaries and expenses, \$367,985.53; permanent appropriations, \$92,925.94; State census, \$90,825.45; legislative expenses, \$67,828.74; charitable and penal institutions, \$1,108,971.64; clerk hire, \$133,483.33; labor about Capitol, \$100,163.69; for sundry purposes, \$2,778,692.92. The legislative expenditures include \$6,404.76 for the special session of 1896. Under sundry expenditures are included the maintenance of the National Guard, \$225,793.51; the transfer in lieu of taxes, \$732,570; the payment of trust-fund loans, amounting with interest to \$260,877.19; maintaining insane in county asylums, \$617,516.44; free high schools, \$95,490.38; printing, \$67,040.06; payments to county agricultural societies, \$71,157.01; special appropriations, \$256,545.85; bounty on wild animals, \$20,978; and several smaller expenditures. The receipts and disbursements for the two years included: School fund—receipts, \$428,781.87; disbursements, \$407,342.07. School fund income—receipts, \$1,637,991.23; disbursements, \$1,629,259.90. University fund—receipts, \$40,368.82; disbursements, \$413,997. Uni-

iversity fund income—receipts, \$652,061.44; disbursements, the same. Agricultural College fund—receipts, \$110,099.96; disbursements, \$45,100. Agricultural College fund income—receipts, \$52,784.15; disbursements, the same. Normal School fund—receipts, \$347,326.25; disbursements, \$263,481.88. Normal school fund income—receipts, \$387,703.59; disbursements, the same.

The bonded debt of the State, created in 1861-'63 for carrying on the war for the maintenance of the Union, has all been paid or converted into certificates of indebtedness to the trust funds.

Education.—The total disbursements for common schools during the year ending June 30, 1896, were \$5,318,106.16; the total number of persons of school age reported, 684,890; the total number of scholars, 412,687; the number of teachers employed, 12,334. There were 192 free high schools in the State, employing 672 principals and teachers, at an annual compensation of \$314,209.97. The Governor says that "no educational factor has been more potent in making school life attractive to the children and enlarging the scope of their intellectual training than the excellent books to which access is furnished through the medium of the township library." He also congratulates the State on the fact that its university has reached the front rank of the higher educational institutions of the country, and that it has been enabled, through the liberal provision made by the Legislature, to keep pace in its progress with the rapid development and improvement in educational methods; that each succeeding year has shown a larger attendance in the various departments, and that the percentage of attendants from the State shows a marked increase; that the agricultural college of the university has progressed with the other departments, the effect of its work being seen in improved farming methods, greater diversification of crops, and relatively larger profits in the agricultural pursuits of the State. The completion of the building and the opening of the new normal school at Superior gives the State 7 normal schools.

Historical Library.—The Legislature of 1895 made an appropriation of \$180,000 for the erection of an historical library building, and work has been begun. The building will have an extreme length of 200 feet, with a width of 152 feet.

Railroads.—The greater part of the State's income for general expenditures is derived from the railways. For the fiscal year ending Dec. 30, 1896, the receipts from the 4-per-cent. tax on the gross earnings of the railways, which is laid in lieu of other taxation, amounted to \$1,172,742.12.

A new railroad company, the Wisconsin Northern, filed articles of organization with the Secretary of State in February, 1896, and surveys have been made. The line, which runs through a section that contains a large body of State lands, is to be 100 miles long, starting from a point of connection with the Chicago and Northwestern at or near Big Snamico, in Brown County, northwest through or into the counties of Brown, Shawano, Oconto, Langlade, Florence, and Forest, to a point on the boundary line between Wisconsin and Michigan.

Penal Institutions.—The Governor reports urgent need for more prison room, and calls the attention of the Legislature to the necessity for the establishment of an intermediate prison to which first offenders may be sent.

Insurance Companies.—Assessment life insurance companies that issue limited-payment policies are not to be allowed to do business in the State hereafter unless they show that they have sufficient accumulated reserve to meet the policies under all conditions. During 1896 the receipts of the Insurance Commissioner's office exceeded those of the

previous year by \$8,000. The commissioner refused license to 20 companies, and placed one in the hands of a receiver. More fire-insurance companies entered the State during the year than for five years previous. The Guaranty Fund Life Association and the United States Masonic Benevolent Association, both of Council Bluffs, Iowa, withdrew from the State pending a hearing appointed to show cause why a renewal of their licenses should not be refused. The application of the National Accident Society of New York City for license to do business in the State was refused, the Insurance Commissioner finding that the directors of the National Accident Company have organized another association, called the Guarantee Agency Company, for the purpose of managing the affairs of the National Accident Company, and have entered into a contract with themselves, for twenty years, to pay the expenses of the National Accident Company, except the payment of accident claims, cost of collection, and expenses of adjusting claims; the consideration to be paid by the National Accident Society to the Guaranty Agency Company to be the full amount of the membership fees and five twelfths of all assessments paid by the members. The president and secretary of both companies are the same.

Semiceptennial Celebration.—Early in January, 1896, a conference, attended by about 400 delegates from all parts of the State, met at Milwaukee and initiated proceedings for celebrating in 1898 the fiftieth anniversary of the admission of the State into the Union. A committee of 100 citizens, 10 from each congressional district, was selected to arrange a plan, and this general committee delegated to an executive committee of 19 the duty of working out the details for the organization of a corporation to be known as the Wisconsin Semiceptennial Exposition Company. The proposed celebration will be an exposition illustrating the progress of the past fifty years in all things that have contributed to the development of the State.

Reapportionment.—An extra session of the Legislature was called to meet, Feb. 18, for the single purpose of redistricting the State. At its regular session of the preceding year the Legislature passed a joint resolution providing for the appointment of a committee made up of members of both houses and from both political parties to prepare, within sixty days from the date of promulgation of the new census, a bill "apportioning and districting anew the members of the Senate and Assembly, and deposit the same with the Governor." This resolution made it the duty of the Governor to submit to the next session of the Legislature, "whether the same be a regular or extraordinary session," the work of that committee, and in compliance with those directions the Governor submitted the bill prepared, together with the majority and minority reports. After various amendments, the bill was passed. In approval of the act the Governor said, in part: "There has been presented a spectacle such as is rarely seen during the sessions of legislative bodies—that of a majority of the members totally disregarding questions of personal advantage, and ignoring entirely the spirit of partisanship, working earnestly to produce a constitutional apportionment. That you have done what you have thus conscientiously attempted to do I have not the slightest doubt."

Political.—The Republican convention for nominating a State ticket met in Milwaukee on Aug. 6. Edward Scofield was nominated for Governor in place of William H. Upham, and after renominating the entire old ticket below Governor, the convention adjourned.

The Republican State Convention for choosing delegates to the national convention convened in

Milwaukee on March 18. The platform adopted pledged renewed devotion to the doctrine of protection, expressing belief in "the adjustment of tariff duties for the twofold purpose of providing sufficient revenue to meet the requirements of the Government and to furnish reasonable and adequate protection to American industries—a tariff both for revenue and protection." It also pledged renewed allegiance "to the doctrine of reciprocity and favored, as a logical and beneficial result of the protective tariff laws, mutual arrangements with foreign countries that will provide our manufacturers and producers a market for their surplus product, and at the same time enable us to buy from them." The closing sentences of the platform read: "The Republicans of Wisconsin are unyielding in their demand for honest money. We are unalterably opposed to any scheme that will give this country a depreciated or debased currency. We favor the use of silver as currency, but only under such restrictions that its parity with gold can be maintained."

The Democratic State Convention for sending delegates to the national convention was held in Milwaukee June 23. The Committee on Resolutions first submitted a minority report, as follows:

"Resolved, That we reaffirm the platform of the late National Democratic Convention, and particularly upon the subject of coinage, believing that a fair interpretation of the same favors free and unlimited coinage of both gold and silver as legal-tender money of this country."

This was rejected by a vote of 128 to 217, and by a vote of 217 to 128 the majority report was adopted. The platform, after commending "the wise and patriotic administration of President Cleveland," contained the following:

"We believe a tariff for revenue only would extend American commerce to the utmost parts of the earth, and that untrammelled industry would advance our country to the foremost place among other nations. We are therefore firm in our adherence to the doctrine enunciated by the last National Democratic Convention, that this Government should impose no tariff taxes except for revenue. We believe the demands of commerce built upon the broad and enlightened doctrine of free trade require a currency that can not be discredited in any civilized country. Realizing this logical demand for the best money for international trade, and realizing also the dangers of a currency for domestic use, and aware that the present condition of commercial distress calls for patriotic and sturdy maintenance of national honor and financial integrity, we declare ourselves opposed to free and unlimited coinage of silver, and in favor of gold as the highest monetary standard of the world."

Among the Wisconsin Democrats who went as delegates to the Chicago convention and then refrained from taking part in the proceedings were some who soon afterward issued a public protest against the action of that convention, in behalf of themselves and other Gold-standard Democrats. The protest declared, among other things, that the State Democratic platform unequivocally spoke for "honest money"; that upon the assembling of the Chicago convention it immediately became manifest that a new force and undemocratic element had seized upon and was in control of that convention; that the platform adopted by the national convention was "directly at variance with those doctrines which, since its creation, have been a part of the creed of the Democratic party; that while Democracy has for nearly a century been the advocate of honest money and at all times opposed to its debasement, the Chicago convention declared in favor of compelling the citizens of the United

States to receive as a dollar one half its value in the product of a single industry"; that "the principles enunciated in the Chicago platform other than those in favor of the free coinage of silver are socialistic in character and commend themselves to the communists of the country"; that "the Democratic principles are the foundation upon which a free government rests; they are firmly established in the hearts of the American people; they can not be destroyed so long as the love of liberty and a belief in a republican form of government exists; and no set of men seizing forcibly upon the machinery of the party can control the votes of Democrats believing in those principles."

The returns of the election gave the result: McKinley, 268,135; Bryan, 165,523; Palmer, 4,584; Levering, 7,509. McKinley's plurality over Bryan, 102,612. The Republicans will have a majority of 97 on joint ballot in the Legislature.

WOMEN'S COLLEGES IN THE UNITED STATES. The first woman's college in the United States, incorporated as such under the laws of the State, was Elmira College, chartered as Auburn Female University in 1852, transferred to Elmira in 1853, and rechartered as Elmira Female College in 1855. Vassar College, Poughkeepsie, N. Y., comes next. It was founded in 1861 and opened in 1865, and ranks as the first amply endowed and adequately organized college for women. Both these colleges were founded by men. Others have followed in rapid succession—some founded by men and some by women, but all established to give young women opportunities for a collegiate education equal to those provided for young men.

The total number of institutions for the education of women that are nominally colleges in the United States is 165; but the admission requirements, standards of instruction, and general organization of only 14 accord with those that have long been characteristic of colleges of liberal arts for men. They are: Radcliffe, Smith, Mount Holyoke, and Wellesley, in Massachusetts; Wells, Elmira, Barnard, and Vassar, in New York; Bryn Mawr, in Pennsylvania; Woman's College of Baltimore, in Maryland; Randolph-Macon Woman's College, in Virginia; Cleveland College for Women, in Ohio; Rockford College, in Illinois; and Mills College, in California.

The work of these institutions is essentially collegiate, in which respect they differ from the older seminaries for women, which, while making some provision for the distinctive studies of the college curriculum, are schools for general instruction. Little preparatory work is done, and most of the students are candidates for the degree of bachelor of arts. The two general methods of admission to the freshman class of colleges are by examination and by certificate. Nearly all these colleges accept the certificates of accredited schools, but Bryn Mawr, to which belongs the distinction of having organized its work with special reference to the needs of graduate students, recognizes no school certificate, only that of the Harvard examinations for women being taken. The standard of requirements in English has been raised, and a uniform examination, in place of which no certificate is received, has been adopted by nearly all the colleges. This examination consists in part of paragraphs written by the candidate on topics chosen from certain prescribed books, in the preparing of which the ability to write English is considered more important than knowledge of the books. In the second part of the examination a certain number of books are prescribed for careful study, upon the subject-matter, literary form, and logical structure of which the candidate's knowledge is tested. A remarkable increase in sociological instruction has

been noted within the past few years, and some of the best work in the country has been done in the colleges for women. Ten of the institutions described below have courses in sociology—Barnard, Bryn Mawr, Cleveland College for Women, Elmira, Radcliffe, Smith, Vassar, Wellesley, Wells College, and the Woman's College of Baltimore; and five of them have courses in charities and corrections—Cleveland College for Women, Elmira, Smith, Vassar, and the Woman's College of Baltimore. Fifteen hours of recitation a week is the rule in these institutions, but some allow more, even twenty hours a week being taken.

In nearly all the colleges the young women in attendance live for the most part or wholly in buildings provided by the college corporations, and are constantly under the supervision of the college authorities. Opportunities for gymnastic training are as generously provided as in colleges for men, and the health of the students is said to be generally higher at the time of graduation than at the time of entering college. The entire number of professors and instructors reported by the 14 institutions is 561, and of this number 315 are women. The total number of students enrolled in 1896 was 4,342.

Barnard College, in New York city, was founded in 1889 by 22 residents of New York, including both men and women, who appealed to the regents of the university for a temporary charter. Funds were solicited for five years, until the first class should be graduated and the experiment be proved. The college is undenominational, and as yet has no endowment. It occupies quarters in a private house at 343 Madison Avenue, and a floor at 518 Fifth Avenue, but a piece of land is owned on the Boulevard, between 119th and 120th Streets, where two buildings are in process of erection, and they will be the future home of the college. The plans call for a reading room and a gymnasium. The college library numbers 724 volumes, and the students have full privilege in the use of the Columbia University library. To meet the requirements of Columbia University, which in offering its degrees to women specifies that the preparation of candidates for such degrees shall be identical with its own and under its supervision, Barnard College duplicates for women the curriculum of the university, and also registers for graduate work under the university faculties women who hold baccalaureate degrees from institutions of good standing. The examinations for entrance to the college are conducted by Columbia University, and the instructors are also instructors in Columbia University or such as are approved by its president. Seniors and graduate students attend lectures at the university under the faculty of philosophy, and graduate instruction, under the faculties of political science and pure science, is given at Barnard College. Students are received either as candidates for the degrees of bachelor of arts, master of arts, or doctor of philosophy, or to pursue special or partial courses. Examinations for entrance to the college may be taken in June or in September. The present admission requirements include examinations in English, Latin, Greek, ancient history and geography, mathematics (including arithmetic, algebra, and geometry), and French or German; but under the new requirements for admission, which go into effect July 1, 1897, the privilege of substituting for Greek either advanced mathematics or an elementary science with French and German is given. Under this change in requirements, the curriculum will contemplate, in effect, two classes of students—those who enter with Greek and those who enter upon a substitute for Greek. All students who wish to pursue the former curriculum of the college, of

which Greek is an essential part, can do so under the new curriculum as well as under the old; but if they wish to make a thorough study of English, or of modern languages, or of mathematics, or of history, or of philosophy, they can do so under the new curriculum, as could not have been done under the old. To obtain the degree of bachelor of arts it is required that something be known of at least one ancient language, something of history, philosophy, and political economy, a good deal of English, something of mathematics, something of at least one natural science, and a reading knowledge of both French and German. This is the requirement for every student. Within the same general range of subjects emphasis may be placed upon one group of subjects or another. The faculty of the college numbers 35 members, of whom 1 is a woman. The total number of graduates is 42, and in 1896 the number of students enrolled was 205. Miss Emily James Smith is dean of the college. The total necessary expenses of a student for the academic year are estimated at \$13 a week. The annual tuition fee is \$150.

Bryn Mawr College, at Bryn Mawr, Pa., opened to students in 1885, was founded by Dr. Joseph W. Taylor, of New Jersey. The site was purchased and the buildings were begun during the lifetime of the founder, who died in 1880, leaving the greater part of his fortune to 13 trustees appointed under his will. In the same year the college was incorporated by the State of Pennsylvania, and invested with power to confer degrees. The first president, Dr. James E. Rhoads, and a dean of the faculty, Miss M. Carey Thomas, who succeeded Dr. Rhoads as president in 1894, were elected in the spring of 1884. The college was opened for instruction with 44 students in the autumn of 1885. The buildings are in the suburbs of Philadelphia, on the Pennsylvania Railroad, a quarter of a mile from Bryn Mawr station. The grounds cover 50 acres. Taylor Hall contains the library, lecture rooms, seminary rooms and reading rooms for graduate students, the chapel, and the offices of administration. The library contains 25,000 volumes and 7,000 doctors' dissertations and pamphlets, while 190 scientific, literary, and philological periodicals and reviews in English, German, French, Italian, Norse, and Swedish are provided for the reading rooms. The scientific departments, including the special scientific libraries and the private rooms of the professors of science, are in Dalton Hall. Around Taylor Hall are grouped five halls of residence for students—Merion, Radnor, Denbigh, Pembroke East, and Pembroke West. Each hall, with the exception of Pembroke East and West, which have a common dining hall, has its separate kitchen and dining hall, and has accommodation for about 60 students. Music rooms with sound-proof walls and ceilings are provided in Pembroke East. The gymnasium, which is open to the students at all times, contains a large hall for gymnastic exercises, a room for the director (with an adjoining room for examination and record of the physical development of the students), and bath rooms. In the basement is a swimming tank, 74 feet long, 20 feet wide, and from 4 to 7½ feet deep, supplied with springboards, life preservers, and other apparatus for the teaching of swimming. The gymnasium, built in accordance with the system of Dr. Sargent, is furnished with his complete apparatus, and is under the charge of a director who has completed his course of instruction. In connection with the work of the gymnasium a large athletic ground, planned by Frederick W. Olmsted, is used for basket ball and tennis in spring and autumn, and is flooded in winter for skating. On the grounds, separated from the other buildings, is a cottage hospital, with accommoda-

tion for patients and nurses and its own kitchen and bath rooms.

Three classes of persons are admitted to the lectures and class work of the college: graduate students, undergraduate students, and hearers. Graduate students presenting a diploma from some college of acknowledged standing may pursue any courses offered by the college for which their previous training has fitted them. The most distinguished place among graduate students is held by the fellows, who must reside in the college during the academic year. The college awards annually to competing graduate students from Bryn Mawr and other colleges and universities 11 resident fellowships, of the value of \$525 each: 1 in Greek, 1 in Latin, 1 in English, 1 in German and Teutonic philology, 1 in Romance languages, 1 in history or political science, 1 in philosophy, 1 in mathematics, 1 in physics, 1 in chemistry, and 1 in biology.

In addition to these resident fellowships, 3 competitive traveling European fellowships, of the value of \$500 each, are awarded annually: 1 to stu-

of the examination being laid on the candidate's power to solve original problems; plain geometry, original problems constituting the important part of the examination; history, outlines of the history of Greece and Rome or outlines of the history of England and the United States; science, the elements of physics, or chemistry, or botany, or physiology, or physical geography; and, in addition to English and Latin, 2 languages chosen from Greek, German, and French. The examinations for admission are held at the beginning and end of each academic year, and candidates that intend to enter at the half year may take their examinations during the last week of the first semester of the year. All courses of undergraduate study at Bryn Mawr lead to the one degree of bachelor of arts. In all departments thus far organized there is a course of five hours weekly for two years, called a major course. Whenever one year of this course is of such a nature that it can be taken separately it is marked as a minor course. It is required of every candidate for the bachelor's degree to elect two

PEMBROKE HALL, BRYN MAWR.

dents in their first year of graduate study, 1 to students in their second year of graduate study, and 1 among the members of each graduating class. From the first the college has emphasized its graduate department; all the members of the faculty have been chosen with reference to their ability to direct graduate students, and more than one sixth of the total number of students studying in the college have received the bachelor's degree. The entrance examination must be taken by all who wish to enter the undergraduate department of the college, either as candidates for a degree or as special students, with the exception of such applicants as present a certificate of honorable dismissal from some college or university of acknowledged standing. No other certificates of any kind are accepted; but women of at least twenty-five years of age are admitted as hearers, provided they can furnish satisfactory proof that they have at some time pursued the studies included in the matriculation examination, and are able to profit by the courses they desire to follow. All candidates for admission must be examined in algebra, the weight

such major courses as shall be homogeneous or shall complete each other, and major courses that fulfill this condition are designated as groups. The permitted groups are: Any language with any language; history with political science; philosophy with political science; philosophy with Greek or English, or with mathematics or physics; mathematics with Greek, or physics, or chemistry; any science with any science. In addition to the major studies, candidates for the degree of bachelor of arts must pursue courses in English five hours weekly for two years; in science, or science and history, five hours weekly for two years; in philosophy, five hours weekly for a year; free electives, eight hours weekly for one year; and Greek, or French, or German, five hours weekly for one year, and trigonometry and solid geometry two hours weekly for one year, when these subjects have not been included in the examination for matriculation. Students who omit Greek in their matriculation examination may substitute for the required course in Greek the college minor course in Latin; no student will be graduated without a reading knowl-

edge of French and German and some acquaintance with Latin. The courses leading to the degree of bachelor of arts may, as a rule, be taken in any order preferred by the student, provided they can be completed in accordance with the schedule of lecture hours. The students are not divided into the traditional college classes, and there is no fixed date for graduation, but the requirements constitute strictly a four years' course. The degree of doctor of philosophy is conferred upon those graduates of the college, or of other colleges in which a course of study has been pursued equivalent to that for which the degree of bachelor of arts is given at Bryn Mawr, who have pursued for at least three years, after receiving the first degree, a course of liberal study at some college or university approved by the Academic Council, and have spent at least two of these years at Bryn Mawr. The degree of doctor of philosophy is in no case conferred by the college as an honorary degree. The separate degree of master of arts is open only to graduates of the college, by whom at least one year of study must be spent at the college.

In 1896 the college enrolled 278 students, with a faculty of 40 professors and instructors, 15 of whom are women. The total number of graduates of the college is 184, and of these 18 are masters of arts and 6 are doctors of philosophy.

The fee for tuition is \$100 a year; the lowest charge for tuition, board, and residence in one of the college halls is \$375 a year. The additional charges are \$20 for every laboratory course of five hours weekly, not more than one course being required of candidates for a degree.

CLARK HALL, CLEVELAND COLLEGE FOR WOMEN.

College for Women, in Cleveland, Ohio, was founded in 1888 by the trustees of Western Reserve University as a part of that institution. Its proximity to Adelbert College, of the same university, necessitates a common standard, and each college, having a full faculty, receives the benefit of the instruction and of association with the professors of the other. The method is not the annex system, since the degrees are conferred by the university of which the college is an integral part. While the college is not denominational, it is in every purpose and aim Christian. In September, 1892, the college, which had been opened in temporary quarters, was installed in its new buildings in the east end of

the city, near Wade Park. The grounds comprise about three acres. The recitation hall—known from its donor, Mrs. Eliza Clark, as Clark Hall—was designed by Richard M. Hunt. It contains the chapel, library, gymnasium, and offices, in addition to recitation and study rooms. The gymnasium is fitted up with apparatus for general use, and is in charge of a graduate of the Anderson Normal School of Gymnastics. Exercise under the personal supervision of the instructor is required, and prizes are awarded to the students who, through their gymnastic work, make the greatest progress toward symmetrical development. The university library, which is especially full in German, French, and historical literature, contains 50,000 volumes, and the reading room is supplied with the best magazines and literary papers of this country and several from France, Germany, and England. Guilford House, the gift of Mrs. Samuel Mather, offers an excellent home for students. Its plan provides suites of 3 rooms for 2 students, suites of 2 rooms for 1 student, or single rooms for a single occupant. Certain teachers reside in the house, and, without subjecting the students to unnecessary restraint, give them such supervision as young women absent from home should receive. The facilities for the study of physics have been increased by the completion of a new physical laboratory, a 3-story brick building containing large lecture and laboratory rooms for the elementary courses and smaller apartments for advanced work. The department is equipped with a large variety of apparatus bearing on the courses offered, and additional apparatus is being added continually.

The collections of geology and mineralogy at the service of the department are growing rapidly.

The requirements for admission comprise examination in English, mathematics (including arithmetic, algebra, and geometry), Latin, and Greek, with the substitution of either French or German in place of Greek, for admission to the modern-language course; and for the Latin-English course chemistry, physics, or history may be offered in place of a second language. The entrance examinations may be taken in June, and a second opportunity is given immediately before the opening of the fall term. Certificates of preparation are received from accredited schools in place of examination. The degree of bachelor of arts is conferred on those who have completed the regular course, which includes the study of the Greek language and literature; the degree of

bachelor of letters on those who have completed the course in which modern languages are substituted for Greek; and the degree of bachelor of philosophy on those who have completed that course in which an entrance requirement of science is substituted for French or German. Students must take at least one course in either the department of economics or the department of philosophy. Instruction in music and art is provided. In the admission of students to partial courses it is required that the same conditions be fulfilled that govern regular students; but in the case of students who desire to pursue special lines of work for which they are unusually well fitted,

some part of the requirement is waived. In the graduate department of the university opportunity is given to graduates of this and other colleges to pursue courses of study leading to the degrees of master of arts and doctor of philosophy.

The faculty numbers 16 members, 6 of whom are women. Additional instruction is given by 11 members of the Adelbert College faculty, 3 of whom have full charge of the science work. In 1896 the college enrolled 128 students, and the total number graduated is 56. The charge for tuition and incidentals is \$75 a year, and the price of board and room in Guilford House for the college year varies from \$200 to \$400. The laboratory courses call for small fees in addition. Certain annual scholarships are awarded to students of high rank, by which they are relieved of a portion of the tuition fee.

Elmira College, in Elmira, N. Y., was chartered in 1852 as Auburn Female University; it was transferred to Elmira in 1853, and was opened for students in 1855. In 1851 a meeting was called in Albany to consider the founding of a college for women which should hold rank with colleges for men. It was resolved unanimously that the effort should be made, and at a subsequent meeting a charter was secured for Auburn Female University. In 1853 it was considered expedient to transfer the institution to Elmira, where, under the financial management of Simeon Benjamin—who, as the most generous donor to the college, is entitled to be called its founder—the main building was erected and opened to students in 1855. For ten years it was the only college established exclusively for women that demanded the same advanced course of study for the degree of bachelor of arts prevailing in colleges in New York and in New England. By the terms of the charter five of the principal denominations must be represented in the board of trustees, with the Presbyterian denomination in the majority. The institution was opened with no endowment, but moderate gifts have been received, and by careful financial management a small, well-invested endowment of about \$100,000 is maintained, and about \$200,000 more in fixed or unproductive property.

The grounds are well laid out, and furnish ample accommodations for outdoor sports, while the lake affords safe opportunity for boating and skating. The main building, a large edifice of brick, occupies a commanding site facing a campus of about ten acres. The main front of the building measures 275 feet, and it is 5 stories high; it is commodious and well arranged, offering more than 75 rooms for students, besides ample space for chapel, parlors, infirmary, recitation rooms, laboratory, art studios, and gallery. The astronomical observatory, formerly belonging to the Elmira Academy of Science, is equipped with a refracting telescope of 8½ inches aperture, a transit telescope, a sidereal clock, an electric chronograph, and star charts. In an enlargement of the observatory on the north side is a museum containing mineralogical, geological, and zoölogical collections and a lecture hall for microscopic and spectroscopic work, for lantern exhibitions, and popular scientific addresses. Directly east of the main building in the campus is the Gillett Memorial, given by Solomon L. Gillett, of Elmira, for the use of the music school. This is a 2-story-and-attic brick structure, containing 22 rooms, isolated from one another by padded walls and floors, and equipped with pianos. The gymnasium is in the main college building, as is also the library, which contains about 6,000 volumes.

The college curriculum presents two courses, the classical and the scientific. The admission requirements, beginning with June, 1897, are alike for both courses, and include examinations in English, geog-

raphy, history, mathematics, physical sciences, Latin, and Greek. Preparation in French or German, representing two years of successful study, is accepted in place of Greek, and candidates presenting satisfactory certificates are admitted without examination. Admission to higher classes is granted to students bringing certificates from other colleges covering the ground already traversed by the class elected, or upon passing a satisfactory examination in the studies by the class it is desired to enter. The college has graduated 37 classes, and 410 students have taken their first degree. The first president, Rev. A. W. Cowles, D. D., LL. D. (1856-1889), is still in the faculty as president emeritus. The present president is Rev. A. C. Mackenzie, D. D. The faculty numbers 14 members, 9 of whom are women. In 1896 the college enrolled 98 students in its classes, including specials, with 60 students in the music and art schools. The regular college charges, including tuition and board, are \$300 a year.

Mount Holyoke College, South Hadley, Mass., is the outgrowth of Mount Holyoke Seminary, which was founded in 1836 by Mary Lyon, a pioneer in woman's education, through whose efforts men and women of New England were interested in establishing a school that should give to girls greater advantages than those offered at any existing institution. To give permanence to her enterprise, she placed the institution in the care of a board of trustees, who should manage the finances and to whom she could go for counsel and aid. This board was formed in 1834, the charter was granted in 1836, and in November, 1837, one large building was finished and the school was opened with 80 students. In 1841 a large addition was made to the building, and in 1853 it was again enlarged, making accommodations for more than 200 students. The south wing was extended in 1865, and an addition containing a gymnasium and a laundry connected the two wings and completed the quadrangle. In 1870 a library building was erected, connected with the main building by an inclosed corridor, which, with an addition ten years later, furnished accommodations for 40,000 volumes. While larger buildings and better appliances were being introduced, the curriculum had been enlarged from time to time, until in 1888 the charter was amended and the name changed to Mount Holyoke Seminary and College. In 1893 a full college course was adopted, a college charter was granted, and the institution was given power to confer any degrees conferred by any college in the State.

The grounds comprise about 100 acres, on the east and west sides of the main street in the village. A broad lawn in front of the buildings is partly given up to tennis. In the rear of the buildings open fields descend to a brook that widens into Lake Nonotuck on the south, where opportunity is offered for boating and skating. The main dormitory, including the gymnasium and reading room, was destroyed by fire in September, 1896, but the loss is to be replaced by 5 new cottage dormitories and a main administration building, containing chapel, offices, and music rooms. On the east side of the street stands Lyman Williston Hall, erected in 1876. It contains recitation rooms for various departments, laboratories for botany and zoölogy, cabinets of geology, mineralogy, and zoölogy, and the art gallery, which contains paintings by many well-known American artists, copies from the old masters, and collections of casts, ancient coins, bronzes, photographs, and engravings. The botanic garden, covering about an acre, occupies the slope toward the lake, east of Williston Hall, and is easily accessible to the laboratories. North of Williston Hall a fine building for chemistry and physics has been erected recently. The physical laboratory,

on the ground floor, has a spacious lecture room and well-equipped laboratories; the second and third stories are devoted to chemistry, and, besides a laboratory for advanced work, 3 large laboratories, with their equipment, afford opportunity for work in general chemistry, qualitative and quantitative analysis, and organic chemistry. In 1881 the John Payson Williston Observatory, furnished with appliances for the study of astronomy, was presented to the college.

The curriculum offers 3 courses of study: the classical leading to the degree of bachelor of arts, the scientific to the degree of bachelor of science, and the literary leading to the degree of bachelor of literature. The subjects for examination for the classical course include mathematics, Latin, Greek, history of the United States and ancient history, and English. The requirements for entrance to the scientific course include, in addition, elementary botany, elementary physics, and French or German, and for the literary course English history is required, and French or German. While Greek is not required for the scientific and literary courses, it may be offered in place of one of the modern languages. The entrance examinations are held at the college in June and September, and the June examinations, upon application to the president, may be taken within reach of students residing at a distance from the college. Certificates of scholarship from certified schools are accepted in place of examination, but students thus admitted are on probation during the first year.

The work in the 3 courses leading to a degree, under the group system, which has been adopted by the college recently, falls into 3 divisions: required work, a group of related subjects, and free electives. The required work in each course embraces English, mathematics, science, philosophy, and Bible, with Greek and Latin in the classical course, French and German in the scientific course, and French and German, with additional literature and rhetoric, in the literary course. Forty hours of related work may be taken, twenty being given to a major subject and twenty more to two minors, or, in place of the major, a student may choose one of three groups—language, science, or English—arranged to meet the need of those who expect to teach in high schools and academies. Candidates for the master's degrees are required to have completed the bachelor's course, to have spent at least one year of resident study at the college under the direction of a special committee of the faculty appointed for supervising and directing that work, and to present a satisfactory thesis upon a subject approved by the head of the department in which the principal part of the candidate's work has been done.

The college is under the control of no religious denomination. The president is Mrs. Elizabeth Storrs Mead, and associated with her are 44 specialists, all women, with 6 lecturers and nonresident instructors. The students enrolled in 1896 numbered 331, and 2,434 students have been graduated. The price of tuition for all students, regular and special, is \$75 for the year, and board \$175. A limited number of annual scholarships have been established, to assist needy and deserving students in regular courses, on certain conditions.

Mills College, Seminary Park, Alameda County, Cal., was established first in 1852 as a young ladies' seminary at Benicia, Cal., by the Rev. Cyrus T. Mills and his wife, Mrs. Susan Mills, now president of the college. In 1871 the institution was removed to Seminary Park, and in 1877 it was decided by its founders to a board of trustees who should forever maintain a permanent institution of the highest order for the specific purpose of educating young women. Dr. Mills died in 1884, and in

the following year the college charter was granted. At present the seminary course is continued in addition to the college curriculum, but as far as possible it has been made preparatory to the college classes.

The grounds comprise 120 acres, 5 miles east of Oakland, and accessible by railroad lines. A large portion of the campus is laid out with gravel walks, tennis courts, and amusement grounds. Six commodious buildings afford facilities for study and furnish accommodations for 200 pupils with the teachers. The main building of the college presents a front of 218 feet, with a wing of 136 feet, is 3 stories high, including the French roof, and is built in a tasteful and substantial style. Connected with the main building by a covered walk is a well-equipped gymnasium under the charge of an instructor. A fine science building, the gift of Nathaniel Gray, of San Francisco, whose name it bears, has been completed recently, the upper floor of which is devoted to the museum. The astronomical observatory, on Prospect Hill, consists of a class room, a transit room, and a tower containing an equatorially mounted telescope with a 5-inch object glass. The library building, presented to the college by Miss Susan Gage, of Massachusetts, was erected in 1884; it contains over 5,000 volumes, and is furnished with reference books and a selection of standard current periodicals. The art room of the college contains numerous photographs, engravings, and paintings selected with care, and is well equipped with casts. In August, 1888, a new building was completed, known as College Hall; it is designed especially for advanced students, and contains reception, reading, and recitation rooms, and has accommodations for 50 students and their teachers.

The curriculum presents two courses—the classical, leading to the degree of bachelor of arts, and the literary, leading to the degree of bachelor of letters, each extending through four years. The admission requirements embrace examinations in mathematics, including algebra and geometry, English, ancient history, physics, United States government, and Latin, with Greek for candidates for the classical course and French or German and mediæval and modern history for candidates for the literary course. Students are received at any time during the year, and certificates of scholarship are received from schools of accredited standing. All candidates for a degree must take, in addition to the required studies, a proper number of electives. In the classical course both Latin and Greek are required through the freshmen and sophomore years, and in the junior and senior years elective courses are offered; in the literary course Latin is required, and French or German takes the place of Greek. The maximum number of recitations a week is 20; the minimum, 15.

The faculty, including instructors in music and art, numbers 25, of whom 21 are women. The number of students enrolled in 1896 was 122, and the total number of graduates from the college is 478. The tuition in all branches of the regular course, including board, is \$175 a term, with extra expenses for laboratory work. Fifteen scholarships have been established, the interest of which is used for worthy pupils whose means are limited.

Radeliffe College, Cambridge, Mass., was founded in 1878 by the Society for Collegiate Instruction of Women, and offers systematic collegiate instruction to women under the instructors of Harvard University. The principal building of the college, Fay House, on the corner of Garden and Mason Streets, contains the recitation rooms and offices and a select working library. The college has 4 laboratories—of physics, chemistry, botany, and

biology—and a small gymnasium, in which the Swedish system of gymnastics is taught. The collections of the Agassiz Museum of Comparative Zoölogy, the Peabody Museum of American Archaeology, the university museums of geology, botany, and mineralogy, and the Semitic museum are open to the students; and, by a vote of the president and fellows of Harvard College, the students have the use of the university library, containing 400,000 volumes. Opportunities for study in the astronomical observatory, the botanic garden, and the herbarium are also afforded.

The requirements for admission to the college for candidates for the degree of bachelor of arts are identical with those for admission to Harvard University, and embrace examination in English, Greek, Latin, German, French, history (that of Greece and Rome, or of the United States and of England), mathematics, and physical science. The subjects for examination are divided into elementary and advanced studies by certain combinations, in which one of the languages may be omitted. The candidate for admission may pass the entire examination at one time, or it may be divided between two years or between June and September of the same year. Applicants who pass a satisfactory examination on a smaller number of subjects than are called for in the full requirements are admitted, at the discretion of the Academic Board, to such special courses as they appear to be qualified to pursue, and students of mature age who wish to pursue chiefly higher courses of study may be admitted, at the discretion of the Academic Board, without passing the examination for admission, provided they satisfy the instructors in the courses which they elect of their fitness to pursue them. Bachelors of arts of Radcliffe College and graduates of other colleges of good standing are admitted without examination as

bachelor of arts or master of arts. During the present year, 1896-'97, the instruction actually given amounts to 76 courses and 52 half courses. Candidates for the degree of bachelor of arts must in the freshman year take English and either German or French, besides 3 other full courses, unless both French and German have been presented for admission, in which case English and 4 other full courses must be taken; and in addition to the prescribed work 4 full elective courses must be taken in the sophomore, junior, and senior years. Any course in the list is open to graduate students who present sufficient evidence of qualification for that course. A complete year's work for a graduate student regularly consists of 4 full courses of instruction of advanced grade, or of their equivalent in courses and half courses, pursued with high credit throughout an academic year. Among the higher courses of instruction in nearly every department of study are courses of research and seminars for students who wish to do special advanced work. These courses are carried on under various plans of administration in the several departments, but always with the object of affording opportunity for regular independent study.

The annual tuition fee for a student doing full work is \$200, and, in addition to books and minor expenses, the price of board averages \$8.50 a week. All arrangements for boarding and lodging are subject to approval by the dean of the college. The president of the college is Mrs. Louis Agassiz. The whole number of teachers is 94, of whom 23 are professors, 16 assistant professors, and 53 instructors, tutors, or assistants in Harvard University; 2 are instructors especially appointed for Radcliffe College. The total number of students enrolled in 1895-'96 was 358, and 141 students have been graduated.

RANDOLPH-MACON WOMAN'S COLLEGE.

graduate students. The instruction open to students of the college is arranged in one list, consisting of full courses and half courses. These are distributed into 3 groups in the several branches of study: courses designed primarily for undergraduates, courses for graduates and undergraduates, and courses primarily for graduates. Elective studies are classed as courses or half courses, according to the estimated amount of work in each and its value in fulfilling the requirements for the degree of

Randolph-Macon Woman's College, Lynchburg, Va., was founded in 1891 by the trustees of the Randolph-Macon College for men, at Ashland, Va., and was opened to students in 1893. This institution is a part of the Randolph-Macon system of colleges and schools, whose Board of Trustees, chartered by the State of Virginia, has been intrusted with nearly \$750,000 for the purpose of providing the best facilities for the education of young men and women. It is not sought or desired to influence

the denominational preferences of students, but the officers in charge consider themselves under obligations to conform to the moral standards and religious usages of the Methodist Church, under whose auspices the institutions were established. Although the college was founded only four years ago, it has had to enlarge its accommodations year by year to meet the growing demand. The endowment is \$102,500. The college grounds embrace 20 acres adjacent to the city of Lynchburg, reached by a line of electric cars. Facilities are provided on the campus for tennis, croquet, and basket ball. The site chosen for the main college building is a commanding elevation on Rivermont Avenue, surrounded by beautiful mountain scenery. The main building has a frontage of 364 feet, with large extensions in the rear. It was designed after careful consideration of the needs of a completely equipped college, and examination of the best college plants for women in the North. Lecture rooms are provided for the languages, the natural sciences, mathematics, philosophy, music, and art; laboratories for chemistry, biology, physics, and psychology; a gymnasium and appliances for physical culture: an astronomical observatory, a chapel, a dining hall, and dormitories, all heated, lighted, and ventilated after approved modern plans. The library hall is named from its donors The Jones' Memorial Library.

The requirements for admission for students one year below the freshman grade include preparation in English through grammar and elementary rhetoric; in Latin through an elementary grammar, and the first four books of Caesar's "Gallic War," or its equivalent; in mathematics through equations of the second degree, with as much geometry as is contained in the first three books of Euclid.

The subjects in which instruction is given in the college are English, Latin, Greek, German, French, mathematics, chemistry, geology and mineralogy, physics, biology, philosophy, pedagogy, music, art, elocution, and physical culture. The courses of

can not remain long enough to complete the full course required for a degree. Each student is enrolled in her appropriate classes after conference with the president and the professors, and, as the work of each class is satisfactorily completed, she receives a certificate therefor. When the entire course of instruction in any subject is completed, a graduate diploma in that subject is issued, and when all the courses leading to any one degree are satisfactorily completed the student receives the degree, whether she has attended one year or six. The usual time is four years.

The faculty—including professors of music, art, and elocution, and the director of physical culture—numbers 18, and of this number 8 are women. The president is William W. Smith. The expenses of the college for one year are \$250, exclusive of books and laboratory material. The number of students enrolled in 1896 was 159, and the first 2 students were graduated in that year.

Rockford College, Rockford, Ill., was incorporated in February, 1847, as Rockford Seminary, under a charter that granted full collegiate power. In 1882 students completing the college course received the degree A. B. In 1891 the seminary course was discontinued, and in 1892 the trustees decided to have the name of the institution legally changed to Rockford College, that it might properly describe the work of the school. This change was accordingly made. It was founded by Congregationalists and Presbyterians, but is now nonsectarian. Miss Phebe T. Sutliff is president of the college, and the various departments are under the supervision of women trained in English and American colleges. The grounds are extensive. The main building, consisting of 3 large halls and their connections, contains single and double rooms for teachers and students, the dining room, recitation rooms, the general library, the reading room, and the chapel. Memorial Hall, a smaller dwelling house, is similarly equipped, and is for the use of students who

wish to reduce their expenses. Adams Hall, for science, contains the laboratories (biological, physical, chemical, and mineralogical), a cabinet with geological, mineralogical, botanical, and zoological specimens, and a studio with a fine collection of casts from the antique and modern. The college has also a collection of several thousand photographs, engravings, and illustrations in the study of sculpture, painting, and architecture, and a fine-art library. The laboratories are well supplied with all apparatus necessary for both individual and class work. The library contains about 8,000 volumes, and the students have access also to the public library, which contains more than 30,000 volumes, and the college reading room is supplied with newspapers and periodicals. The gymnasium, in Sill Hall, is 40 by 80 feet, and is complete in all its appointments. The Sargent system of work is followed, based on the principle of individual development, under the constant supervision of a teacher trained by Dr. Sargent.

ADAMS HALL OF SCIENCE, ROCKFORD COLLEGE.

study lead to the degrees of bachelor of letters, bachelor of arts, and master of arts. An elective system has been deemed preferable to the curriculum, as it affords an advanced student having special aims the privilege of pursuing a desired course, and it enables the faculty to assign suitable work to those who are without uniform preparation, or who

can not remain long enough to complete the full course required for a degree. Each student is enrolled in her appropriate classes after conference with the president and the professors, and, as the work of each class is satisfactorily completed, she receives a certificate therefor. When the entire course of instruction in any subject is completed, a graduate diploma in that subject is issued, and when all the courses leading to any one degree are satisfactorily completed the student receives the degree, whether she has attended one year or six. The usual time is four years.

The requirements for entrance embrace examination in the common branches, Latin, history, mathematics (including algebra and geometry), physical geography, or zoology with laboratory work, or

SMITH COLLEGE, NORTHAMPTON, MASSACHUSETTS.

physics with laboratory work, a second language (Greek, German, or French), and English. The regular college examinations are held in September. Certificates from properly qualified schools are received from candidates for the freshman or third preparatory class, and from special students and teachers; but candidates for advanced standing must pass the required examinations. The college offers a classical course and a course in science, each extending over four years and leading to the degree of bachelor of arts, and a preparatory course of three years. The course of study is prescribed for the freshman year, and after that is so arranged as to allow for some elective work. It is expected that sophomores, and juniors will elect an amount sufficient to give them, with the required work, fifteen or sixteen hours of recitations each week. Instruction is offered by the college in music and art.

The faculty for 1895-'96, including instructors in art and music, numbered 24, of whom 21 were women. In the college and preparatory departments 149 students were enrolled; in the department of music, 86; and in the art department, 44. The regular cost of board and tuition is \$300, but students may reduce expenses to \$225 a year by doing light domestic work for an hour and a half a day. Music and art are extras. All graduates of the college may pursue any study of the course free of tuition.

Smith College, at Northampton, Mass., was founded by Miss Sophia Smith, of Hatfield, Mass., who bequeathed funds for that purpose, defined the object and general plan of the institution, appointed the trustees, and selected the site. The object of the institution, as stated by the founder, is the establishment and maintenance of an institution

for the higher education of young women, which shall afford them facilities for education equal to those afforded in colleges for young men. Through a charter from the State, granted in 1871, the college has full power to confer such honors, degrees, and diplomas as are granted or conferred by any university, college, or seminary in the United States. While the college was not founded in the interest of any one religious denomination, and is unsectarian in its management and instruction, its aims and sympathies are Christian, and study of the Bible is a part of the course. The college was opened for students in 1875. During this time the Rev. L. Clark Seelye has been the only president.

The grounds of the college cover about 30 acres. The college buildings, 18 in number, are grouped toward the front of the grounds, with ample space in the rear for outdoor exercise and recreation. College Hall, the main building, contains lecture and recitation rooms, the assembly hall, offices for instructors, and the reading room and library, which contains 7,000 volumes. The Forbes Library, with an endowment of \$300,000 for books alone, is directly opposite the college grounds, and affords excellent opportunities for scientific and literary research. The Lilly Hall of Science, named from its donor, Alfred Theodore Lilly, provides accommodation for the scientific work and collections. The first floor and basement contain the lecture room and laboratories for chemistry and physics and the scientific library; on the second floor are the laboratories and class rooms for geology, zoölogy, and botany; on the third floor are the scientific collections. The observatory is furnished with an equatorial telescope, aperture 11 inches; a spectroscope with diffraction grating; a sidereal clock;

a chronograph; a portable telescope; and a meridian circle, aperture 4 inches. Music Hall, a separate building, furnishes the best modern appliances and facilities for work in vocal and instrumental music, and the Hillyer Art Gallery, the gift of Winthrop Hillyer, is provided with studios and exhibition rooms, in which are extensive collections of casts, engravings, and paintings. The Alumnae Gymnasium contains a swimming bath and a large hall for gymnastic exercise and indoor sports. Accommodations are provided for students in 10 dormitories, near the academic buildings, each having its own dining room, parlors, and kitchen, and presided over by a lady who directs its social and domestic life. The rooms, which are well heated and ventilated, are arranged some for 2 persons and some to be occupied singly. A plant house and botanical garden furnish material for laboratory work in botany.

Three courses of study are offered by the college: the classical course, leading to the degree of bachelor of arts; the scientific, to that of bachelor of science; and the literary, to that of bachelor of letters. There is no preparatory department. The examination requirements for candidates for the classical course include Latin, Greek, mathematics, ancient history, and English; for entrance to the literary course, Latin and Roman history or Greek and Greek history, mathematics, rhetoric, French or German; for entrance to the scientific course examination is required in Latin and Roman history, English, French or German, mathematics, botany, physiology, physics. Certificates from accredited schools and instructors are accepted in place of the examinations, which may be taken in the latter part of June or the first part of September. The prescribed studies of each course are such as are necessary to give it a distinctive character. The design is to require of the student a sufficient amount of prescribed work to insure a high grade of scholarly culture, and also to leave room for the exercise of individual tastes by the introduction of elective studies, increasing in number as the course advances. The maximum of work allowed to any student in a regular course is sixteen hours of recitations a week. Two hours and a half of laboratory work in any science are considered the equivalent of one hour of recitation a week. Graduates of the college, or of other colleges of equal rank, are admitted to advanced courses, with or without reference to the attainment of a degree. The degree of master of arts is conferred on graduates of Smith College, or of other colleges of like standing, who have given evidence of satisfactory progress in liberal studies since graduation. The degree of doctor of philosophy is conferred only in recognition of high scholarly attainment and of ability to carry on original research. The course in the school of music requires three years for completion, and that in the school of art four years.

The faculty numbers 55 members, 34 of whom are women. In 1896 the students enrolled numbered 932, and the total number of graduates is 1,160. The price of tuition for all students is \$100 a year, and the charge for board and a furnished room in the college is \$300 a year. Those who prefer may obtain board in private families, at an expense varying from \$4 to \$9 a week, and students can also adapt their expenses to their means by co-operative housekeeping.

Vassar College, at Poughkeepsie, N. Y., was founded by Matthew Vassar in 1861, and opened to students in 1865. In the strict sense of the word, it is the oldest college for women in the United States, and was established as an institution that should accomplish for young women what the colleges were accomplishing for young men. The in-

stitution was incorporated as Vassar Female College, but this name was changed in 1867 to the present corporate name. The main buildings were erected and the doors opened at a time when the resources of the country were taxed to their utmost, but the enrollment of nearly 350 students the first year established the conviction of the founder that a need for such an institution existed. The total endowment fund of the college is \$1,020,000, of which sum \$428,000 was given by the founder during his lifetime, and expended for buildings and other equipments. Matthew Vassar, Jr., bequeathed to the college \$130,000, and from the estate of John Guy Vassar \$444,000 was received. The college is nonsectarian in its management, but is distinctly Christian, as its founder willed it to be.

The grounds of the college comprise 400 acres, with several miles of gravel walks, tennis courts, a lake available for boating and skating, a rink for ice skating, and an athletic field. The buildings are 2 miles from Poughkeepsie, and are reached by an electric railway. The main building, which is 500 feet long, and is modeled after the Tuileries, contains students' rooms, apartments for officers of the college, recitation rooms, the chapel, the library, the dining room, parlors, and offices. The students' apartments are ordinarily in groups, with 3 sleeping rooms opening into one study, but there are also many single rooms. Strong Hall, erected in 1893 for the accommodation of 100 students, is a model building for residence. It is arranged in single rooms, and in suites of three rooms for two students, with a large dining room and elevator service. The library of the college, which is connected with the main edifice, was completed in 1893. It contains about 25,000 volumes, selected with special reference to the needs of the departments. The reading room receives, in addition to the daily and weekly papers, many scientific, literary, and philological periodicals, American, English, German, and French. The Vassar Brothers' Laboratory of Physics and Chemistry is a commodious building in which the department of physics occupies seven rooms, and the second and third floors of the building, comprising an area of about 5,000 feet, are devoted to chemistry. The biological laboratory consists of a large laboratory for work in general biology and a small one for more advanced work in zoölogy, anatomy, and embryology. The mineralogical and geological laboratories contain cases of representative specimens, constantly accessible to the students of these courses, and the museum of natural history contains an extensive cabinet of minerals, rocks, and fossils, and a cabinet of zoölogy illustrating all the subkingdoms. A collection of oil and water-color paintings by American and foreign artists is owned by the college, and the hall of casts is furnished with specimens of all the great periods of sculpture. The astronomical observatory, which was established and equipped at the opening of the college, contains a meridian circle with collimating telescope, a clock and chronograph, an equatorial telescope, and 2 portable telescopes. The object glass of the meridian instrument is of 34 inches diameter; that of the equatorial of 12½ inches. A spectroscope and a universal instrument have been added recently. In 1889 the Alumnae Gymnasium was erected, the main part of which is 100 feet long by 45 feet wide; the upper story is used as a tennis court and as a hall for entertainments; the lower story contains, besides loggia and entrance hall, a room in which are 24 bath rooms, with each of which two dressing rooms are connected, and at the rear of the room is a large swimming tank. The gymnasium proper is 67 feet long,

STRONG HALL, VASSAR COLLEGE.

41 feet wide, and 35 feet high. The Sargent system of training is used, and all needed apparatus is supplied. The college buildings include also the professors' residences and a conservatory. Two new buildings are being erected on the campus, one of which is a lecture hall to be devoted entirely to the educational work of the college, and furnished with rooms suitable for classes of various sizes, and also with two large lecture rooms. The other building is a residence hall, similar in its construction to Strong Hall, which will accommodate 100 students.

The requirements of admission to the college comprise examination in the following subjects: Latin, mathematics, including algebra and plane geometry; history, Greek and Roman, with either English or American; English, the New England requirements; Greek, German, or French offered as a second language; and French or German as a third. But after March 24, 1897, in place of the third language a year's work in physics or chemistry may be offered, or an additional year of work, above the regular entrance requirement, in the second language. Examinations for entrance are held in June and September at the college, or, upon application to the president, during the last week in May or the first week in June in any one of certain designated cities. The requirements for admission to special courses are the same as those for entrance to the freshman class. Teachers who desire to pursue special courses, on the presentation of satisfactory testimonials, are received without examination. The college offers one course of study, which leads to the baccalaureate degree, and extends over four years. The aim is to give the student the opportunity to follow lines of study continuously through both the required and the elective portions of the course. Through the first year and a half of the course each student must have fifteen hours of class-room work a week; during the last two years and a half fourteen or fifteen hours. All elections

are subject to the approval of the faculty. The study of psychology is required of all candidates for a degree, and also a course in ethics. Instruction in Latin extends through the four years of the undergraduate course, and is required for the first and elective for the last three years. English is required in both the freshman and sophomore years. In mathematics the prescribed courses comprise a year of solid geometry, algebra, and trigonometry, and all sophomores are required to take a course in physics or a corresponding course in chemistry. The required work in history in the sophomore year is designed to give a thorough study of the historical forces and institutions that were developed previous to the modern era, and such a brief survey of modern European history as will prepare the student for the special courses offered in the following years. In the freshman year the second language offered at entrance is required, and also a course in hygiene running through the first semester. The degree of master of arts is conferred upon bachelors of arts of Vassar or any other approved college who have pursued a course of advanced nonprofessional study. The required period of residence is one year, while nonresidents must employ at least two years to complete the same amount of work, and all candidates must pass examinations in the course of study arranged, and present an acceptable thesis. Instruction in the history, theory, and practice of the arts is offered among the courses of the college, and the degree of bachelor of music is conferred on examination after the candidate has completed approved courses of graduate study.

The president of the college is James M. Taylor, and the faculty, including instructors in music and art, numbers 55 members, 43 of whom are women. In 1896 the college enrolled 538 students, and the number of graduates is 1,301. The charge to all students who reside in the college is \$400, and this includes tuition in all college studies and board. A

reasonable charge is made for breakages and for chemicals used in the laboratories. The college has at its disposal various aid funds, which are used for candidates who present evidence of their need and of their ability to maintain good rank as students.

Wellesley College, at Wellesley, Norfolk County, Mass., founded by Henry F. Durant, was incorporated in 1870, and opened to students in 1875. It is authorized to grant such honorary testimonials and confer such honors, degrees, and diplomas as are granted or conferred by any university, college, or seminary of learning in the State. The college is undenominational, but distinctively and positively Christian in its influence, discipline, and instruction. Systematic study of the Bible and attendance upon morning prayers are required; the Sunday service is conducted by clergymen of different denominations, and students are expected to attend this or some other public religious service. The grounds of the college comprise about 350 acres, on Lake Waban, 15 miles from Boston. The buildings are on natural elevations, surrounded by lawns and fragments of the original forest, and the drive from the college gate to the main building is over a smooth shaded avenue three fourths of a mile long. The lake affords a most attractive place for boating and skating, and the Playstead, or out-of-door gymnasium, furnishes opportunity for organized sports and pastimes, and in suitable weather is used also by the gymnastic classes. College Hall, the main building, is 475 feet in length, and 150 feet wide at the wings; it is in the form of a double Latin cross, designed in the Renaissance style, with mansard roof, and is constructed of brick laid in black mortar, with plain trimmings of brown stone. Since the opening of the college, 3 buildings for instruction have been added: the school of music in 1881, the Farnsworth School of Art in 1889, and the chemistry building in 1894; also Stone Hall and 7 cottages for dormitories. The Art Building contains a lecture room, working studios, and galleries in which are 2,000 photographs, engravings, and drawings, a collection of paintings in oil and water colors, and a small collection of casts from the antique. The new chemistry building contains a laboratory for general work, separate rooms for analytical work in qualitative and quantitative branches, a room specially arranged for making organic preparations, a reading room, and a large lecture room for experimental illustrations. The other laboratories are all well equipped, and are adapted to a wide range of work. The general library of the college, endowed by Eben Norton Horsford, contains 47,200 volumes. Students have free access to it, and a special effort is made by the librarians to train them in thorough methods of research. About 37 daily, weekly, and monthly journals are taken for the reading room, and 175 American, English, French, and German periodicals for the general library. The gymnasium, in College Hall, is equipped with apparatus for Swedish educational gymnastics, and is in charge of a trained instructor. Two systems of lodging are in use at the college—the cottage system and the hall system. College Hall furnishes accommodations for 277 persons, and Stone Hall for more than 100. The 7 cottages accommodate from 11 to 50 persons. Each building contains single rooms as well as suites for 2 students.

The college offers 209 courses of study. On recommendation of the Academic Council, the degrees of bachelor of arts and master of arts are conferred by the trustees. Unless a certificate of scholarship can be presented from a school whose equipment and curriculum enable it to prepare students for the freshman class, any candidate for a degree must pass

examination in the following subjects: English, geography, history, mathematics, Latin, and the maximum requirement in either Greek, French, or German; and, in addition, either the minimum requirement in a third language or one of the following sciences: physics, chemistry, zoölogy. Entrance examinations are offered at the college in June and September of each year. Every candidate for the degree of bachelor of arts must complete before graduation the equivalent of 59 one-hour courses, of which a certain number are required, the rest elective. The following subjects are required: Mathematics, 1 full course; philosophy, 1 full course; physiology and hygiene, 1 one-hour course; Bible study, 4 one-hour courses; English, 3 one-hour courses; language, 1 full course; natural sciences, 2 full courses. A full course is one given three or four times a week for one year. The candidate for the degree is also required to show before graduation that the equivalent of 18 one-hour courses has been taken as follows: (a) Nine in each of 2 subjects, related or unrelated; (b) 9 in 1 subject, with 9 divided between 2 tributary subjects; (c) 12 in 1 subject, with 6 in a tributary subject; (d) 12 in 1 subject, with 6 divided between 2 tributary subjects. Except by special permission, a student may not take fewer than ten nor more than fifteen hours of work in any one year. The college recognizes 2 classes of graduate students—those who are candidates for the degree of master of arts and those who are not. Graduate students who are not candidates for the master's degree must have taken the bachelor's degree, and must submit for approval the plan of study they wish to pursue. The amount of work required of candidates for the degree of master of arts consists of the equivalent of 15 one-hour courses chosen from prescribed courses. One year is the shortest time in which a candidate can complete the work required. On completion of the work for a degree, either an examination or a thesis or both will be required.

The president of the college is Julia J. Irvine. From the opening of the college it has had for its president a woman; and of the 90 officers of government and instruction 83 are women. In 1896 the students enrolled numbered 721, and the total number of graduates is 1,304. The cost to the student for tuition and board is \$400 a year. The charge for tuition alone is \$175 a year, with an additional charge for materials in certain laboratory courses.

Wells College, at Aurora, Cayuga County, N. Y., was incorporated in 1868 as Wells Seminary for the Higher Education of Young Women, but in 1870, on application of the Board of Trustees to the regents of the University of the State of New York, its name was changed to Wells College. The institution takes its name from its founder, Henry Wells, through whose generosity the first building, thoroughly equipped, together with about 20 acres of land, was given to the Board of Trustees. In 1873 a permanent endowment fund of \$100,000 was established by Edwin B. Morgan, Esq., for the benefit of the college, and this was increased subsequently, by the provisions of his will, to \$200,000. Other valuable gifts were made also by Mr. Morgan to the college during his lifetime, and in 1875 Mr. Wells increased his benefactions by the gift of a building, together with 12 acres of land, for the residence of the president of the college. From 1875 until 1894, the college, which had begun with a large proportion of preparatory and special instruction, showed a steady increase in the average annual enrollment of strictly college classes, together with a constant elevation of the standard of admission, and in 1894 all preparatory work was abolished. While the college, in accordance with

the terms of its foundation, is a Christian institution, it is in no sense sectarian.

The buildings are well located on the eastern bank of Cayuga lake. In 1879 Morgan Hall was erected and presented to the college by Mrs. Edwin B. Morgan. The department of music occupies the entire ground floor, and the upper floors of the buildings are occupied by the departments of physics, chemistry, biology, and allied sciences. In 1888 the building erected by Mr. Wells was destroyed by fire, with all its contents. In its place a new structure presents to the lake a west front of 140 feet, with north and south wings, each extending 160 feet. From the center of the building rises a square tower, terminating in a graceful spire 160 feet high. The building contains rooms for the women instructors and for the students, class rooms, a library containing about 6,000 volumes, a chapel, music hall, offices, and reception and reading rooms, all on the ground floor. In the basement is a gymnasium fitted with Sargent apparatus. The dining hall is on the second floor, and on the upper floor are a well-lighted studio, society halls, and a suite of rooms reserved for cases of illness. The material of the building is pressed brick, with terra-cotta trimmings, and its exterior is characterized by such simplicity as is consistent with good architectural effect, good ventilation, and good light.

The regular examinations for admission of students are held in June and September; for examinations on other than the appointed days a fee is charged. Applicants for admission to the freshman class are examined in the following subjects: Mathematics (including algebra and plane geometry), English, history (American and ancient), Latin and Greek or German or French. In Greek the requirement is uniform; in French and German the applicant must satisfy either a maximum or a minimum requirement. In case one language only is offered, the maximum requirement must be satisfied, but if both languages are offered, it will be sufficient to satisfy the minimum. Certificates of the regents of the University of the State of New York are accepted instead of examination. In English, however, certificates are accepted only in so far as they cover the amount of reading prescribed. The right is given also to the principals of such preparatory schools as are known by the faculty to certify to the adequate preparation of candidates. Candidates for admission to advanced standing are examined in the studies previously pursued by the class they desire to enter, and applicants for special work must pass the entrance examinations in English and history and two of the following subjects: Mathematics, Latin, Greek, and the maximum in a modern language. Equivalent work in science may be accepted. Teachers who can give satisfactory evidence of success in their profession are received without examination. One course with a large and liberal system of electives is offered to all candidates for the freshman class leading to the degree of bachelor of arts. The number of studies prescribed for regular undergraduates amounts to about nine full courses between entrance and graduation, a full course being one that extends through the year and requires in preparation and in recitation about nine hours a week of the student's time. The prescribed studies are mathematics, Latin, English, French or German or Greek, hygiene, biblical literature, chemistry, history, physics, psychology, and ethics. The degree of master of arts is conferred upon such bachelors of arts of Wells College and of other colleges as give evidence of progress in liberal studies after receiving their first degree. This evidence may be furnished by one year of graduate study at the college, followed by the presentation of a thesis and an examination. In addi-

tion to the academic work of the college, instruction is offered in music, drawing, and painting.

Dr. William Everett Waters is president of the college, and the faculty, including the instructors in music and art, numbers 21, of whom 16 are women. Besides the instruction given by the faculty, lectures are delivered by nonresident specialists. The total number of graduates of the college is 140, and in 1896 the number of students enrolled was 88. The charge for tuition in any or all the studies of the academic course and for board is \$400.

Woman's College of Baltimore, Maryland, was incorporated Jan. 26, 1885, and its doors were opened to students in September, 1888. The charter was amended and the powers of the corporation were enlarged by a special act of the Legislature, April 3, 1890. The aggregate sum invested in its property and endowment is \$1,200,000. It was founded by the Baltimore Conference of the Methodist Episcopal Church, and its discipline is in harmony with the views of that branch of the Protestant Church, but it is sectarian in no other sense. The buildings of the college are not grouped together, and its six acres of grounds are somewhat scattered over a space extending three blocks north and south and three east and west. Its central group of buildings, in Romanesque style, flanked on the south by a tower 160 feet high, constitutes an imposing architectural center. The main instruction and administration building, known, after its donor, as Goucher Hall, occupies the center of this group, which stretches along St. Paul Street from Twenty-second to Twenty-fourth Street. Goucher Hall is 4 stories high, 165 feet long, and 90 feet deep, and contains 40 rooms. Next to it, named also for the donor, is Bennett Hall, the college gymnasium, to which an annex is connected at the second stories by an arched stone bridge. The upper floors of both buildings are devoted to physical training, the whole floor space appropriated to the purpose amounting to 5,000 square feet, exclusive of offices, dressing rooms, bath rooms, and galleries. On the opposite side of St. Paul Street, a block north, stands Katharine Hooper Hall, another massive stone building for instruction only. In addition to these five buildings are four "homes," designed for residence only, and fitted with every device that can promote comfort, cheerfulness, safety, and health. The homes, which are of brick, contain accommodations for 60 to 80 residents, and are east and west of the main line of buildings. Three other buildings have been purchased and temporarily adapted to college uses.

The requirements for admission to the freshman class are essentially those of the Eastern colleges. In English the requirement of the Association of the Middle States and Maryland, identical with that of the New England Association, has been adopted: in mathematics, preparation must cover arithmetic, algebra, and plane geometry; in history, that of Greece and Rome or that of England and the United States may be offered; and the elements of some one science are demanded. Two foreign languages must be offered for entrance, one of which must be Latin, and the other may be either Greek, French, or German; but no student will be graduated without a reading knowledge of both French and German. Examinations may be taken in June or in September, and arrangements may be made, upon adequate notice, to have them given within reach of students who may live at great distances. There is but one course of study, as the term is commonly used, and only the one first degree is conferred—bachelor of arts. This course is made up of required and elective work in nearly equal proportions. By various combinations of the electives, it may be made to preponder-

ate in the direction of the ancient languages or of the modern, or of mathematics, or science, or history, or economics and sociology. These combinations are known as "groups." Every student is required to pursue at least one elected subject through two successive years, in courses of four hours a week, and in most subjects opportunity is afforded to add still another year's work. Graduation with the degree of bachelor of arts requires that the equivalent of about sixty hours a week of class work for one year, or fifteen hours a week for four years, shall have been accomplished. Laboratory work in the sciences is added to this.

The college is in its ninth year, and during this time 91 students have been graduated. In 1896 235 students were enrolled in the college classes, over 90 being freshmen. The faculty, including the instructors in art and physical training, numbers 30, of whom 14 are women. The heads of departments are all specialists, most of them having received the degree of Ph. D. from European or American universities of rank. The total of necessary expenses is, for the day student, \$125 a year; for the resident student, \$375.

WYOMING, a Northwestern State, admitted to the Union July 10, 1890; area, 97,890 square miles. Population in 1896, 60,705. Capital, Cheyenne.

Government.—The following were the State officers during the year: Governor, W. A. Richards, Republican; Secretary of State, Charles W. Burdick; Treasurer, Henry G. Hay; Auditor, William O. Owen; Attorney-General, B. F. Fowler; Adjutant General, Frank A. Stitzer; Superintendent of Instruction, Estelle Reel; Chief Justice of the Supreme Court, H. V. S. Groesbeck; Associate Justices, A. B. Conway, C. N. Potter; Clerk of the Supreme Court, R. H. Redpath.

The report of the State Treasurer for the two years ending Sept. 30, 1896, shows: Balance on hand Sept. 30, 1894, \$148,333.16; receipts for the two years ending Sept. 30, 1896, \$461,371.54; making a total of \$609,704.70. Disbursements for the two years ending Sept. 30, 1896, \$544,628.48, leaving a balance Sept. 30, 1896, of \$65,076.22. The decrease in the cash balance was principally made in 1895, the Treasurer's report for that year showing balance on hand Sept. 30, 1894, \$148,333.16; balance on hand Sept. 30, 1895, \$58,532.89; decrease, \$89,800.27. This large decrease in the cash balance was caused by charging against it the amount of State funds that were on deposit in the bank of T. A. Kent when it suspended in 1893 and were not turned over to his successor by the ex-Treasurer, together with the fact that there was received from the State tax for 1895 the sum of \$38,518.93 less than was received from that source in 1894, with no corresponding decrease in appropriations. There was on deposit in the Kent bank at the time of its suspension \$56,454.70 of State money, of which sum there has been paid into the treasury \$12,307.39, leaving a deficiency upon that account of \$44,147.31, for which amount suit has been brought against ex-Treasurer Gramm. This amount was deducted from the cash balance and was apportioned to the several funds. The general fund arises mainly from the State tax levied for general purposes, and is augmented by certain fees of State officers and sales of revised statutes, session laws, condemned property, etc. Most of the general appropriations are made from this fund. The Treasurer's report shows that the general fund on Sept. 30, 1896, was not only entirely exhausted, but warrants payable from that fund were at that time outstanding for \$6,600.30 in excess of the amount in the treasury with which to pay the same. It is estimated that the general fund will have a deficiency of about \$70,000 in 1898.

Valuations.—The report of the State Board of Equalization shows the total valuation of all classes of property in the State in 1896 to be \$30,029,704.65—a gain of \$190,765.86 over the valuation for 1895, and a gain over 1894 of \$831,663.45. The valuation for 1894 is the lowest between the years 1886 and 1896. The highest valuation was in 1888, when the total State valuation was \$33,338,541. The State has therefore to increase its property \$3,308,836.35 before it is again as rich as it was eight years ago.

In 1886 there were in the State 898,121 cattle, valued at \$14,651,125. In 1896 the report shows 297,250 cattle, valued at \$3,682,558. This shows a falling off from 1886, the year of greatest prosperity in the cattle business, of 600,871 head of cattle, and in valuation a decrease of \$10,968,567. Falling prices, losses from severe winters, overcrowded ranges, and the removal from the State of herds on account of depredations of cattle thieves, are said to have contributed to the depression and decrease in what was once the State's most promising industry.

In 1886 the value of all property in the State exclusive of cattle was \$16,369,586. In 1896 the valuation of all property exclusive of cattle is reported to be \$26,347,146.65, showing a gain in general values, excepting cattle, in 1896 over 1886 of \$9,977,557.65, and a gain in 1896 over 1888, when the valuation exclusive of cattle was \$25,184,829, of \$1,152,317.65.

A noticeable increase is in the sheep-raising business. In 1886 the State had 308,997 sheep valued at \$1.52 per head, making a total value of \$469,825.75. In 1896 they had increased to 1,308,063, valued at \$1.77 per head, making a total value of \$2,317,048.50.

Railroad and telegraph valuations have increased steadily since 1886. In that year the total assessed valuation of the railroads of the State was \$5,395,990.74. In 1896 the valuation increased to \$7,102,200.25.

The tax levy made by the Board of Equalization for State purposes is 6-15 mills. This will yield about \$185,000. The amount required to meet the ordinary expenditures of the State Government is about \$160,000 per annum, and the interest charges on bonded indebtedness will approximate \$19,200. The bonded indebtedness of the State is \$320,000, and reaches the limit fixed by the Constitution, which is 1 per cent. of the valuation except where it is necessary to suppress insurrection.

Education.—The State University, at Laramie, is in a flourishing condition. In addition to the main building constructed at an outlay of \$81,142, which includes the premiums on the bonds, the State has contributed to the support of the university, from 1887 to 1896, \$161,896.

The total amount expended for the support of the common schools in 1896 was \$253,419.25, an increase of \$13,396.07 above 1895. The number of pupils enrolled was 11,582, requiring the services of 465 teachers. The average monthly salary paid to teachers is slightly over \$50. The number of new school buildings erected in 1896 was 306. A uniform course of study has been adopted in many of the counties, with a view to preparing pupils for the high schools, and later for the courses in the university.

The amount of land granted to the common schools aggregates 3,600,000 acres. Of this acreage, one twentieth has been leased, yielding an annual rental of \$8,500. There has been distributed among the various counties of the State \$24,888.24, the amount of rental derived from school lands, on the basis of the enrollment of school children in each county. The permanent fund derived from school

lands can now be invested in interest-bearing bonds of the school districts of the State.

State Institutions.—Marked improvement is claimed for the management and efficiency of the State institutions; that the provision of the Constitution which requires that all charitable, reformatory, and penal institutions shall be under the general supervision of a State Board of Charities, whose duties and powers shall be prescribed by law, has been instrumental in bringing the institutions of the State to a high degree of development.

Irrigation.—Irrigation in the State is through small ditches. In 1895 33 ditches were surveyed having a total length of 40 miles; 482 ditches with a total length of 480 miles were surveyed in 1896. A greater number of streams have been gauged than ever before in the same length of time, and their character and discharge ascertained. During the past two years 891 applications for permits to divert water have been recorded; 61 reservoir permits have been received and recorded and the plans for their construction approved. During the past two years 1,002 rights to water have been adjudicated. The total volume of water thus turned to beneficial uses is 3,304,025 cubic feet per second, and water rights have become attached to 92,393 acres of land. Touching this matter, the Governor says: "Our rivers are untouched. More water runs to waste in the Big Horn river in one month than is used in irrigation in the entire State during the year. The best land is along our large streams; and the best conditions for profitable farming here prevail."

Mines.—During the past two years there has been greater activity in prospecting for the precious metals than ever, and many valuable discoveries have been made which are likely to develop into paying mines. These discoveries are scattered through the State. The total production of coal for 1896 is reported as 2,163,187 tons, the output being divided among the following counties in the quantities named: Sweetwater, 1,048,413; Weston, 348,768; Carbon, 322,613; Uinta, 330,403; Sheridan, 65,000; Converse, 48,000.

Fish and Game.—During the past six years there have been distributed in the waters of the State 3,823,000 young trout, of which 1,316,000 have been supplied by the hatchery at Laramie. Branch hatcheries have been established at Sheridan and Sundance. Many private hatcheries have also been located by ranchmen. No instance is known where fish have died after being placed in the waters of the State. It has been found that Eastern brook trout of all varieties introduced are the best for populating the streams and lakes. Several years ago the North Platte river above Fort Steele was stocked with rainbow trout intended for smaller streams, but for which proper transportation had not been provided from the above-named point. Their growth has been remarkable. Individual trout weighing more than 10 pounds have been taken during the past season in the vicinity of Saratoga. Very large specimens of this fish are also found in Laramie river.

The State is celebrated for its large game, such as moose, elk, deer, and antelope. It is said that nearly half of the area of the State, or 40,000 square miles, is the natural home of the large game found within her borders. A serious controversy recently arose between the settlers of Uinta County and the Bannock tribe of Indians, growing out of the refusal on the part of the Indians to recognize the application of the game laws of the State. The matter was finally settled by a decision of the Supreme Court of the United States, May 25, 1896, compelling the Indians to observe the game laws.

Indians.—The Indians of the State are reported as rapidly becoming civilized. They are taking land in severalty, and are raising good crops. They have erected flouring mills, sawmills, shingle mills, and other manufactories. Under the policy pursued by the agents of giving the Indians preference in the purchase of farm products; they are beginning to accumulate money. They gladly send their children to the agency schools.

Natural Soap.—The "Newcastle Democrat," in describing "one of the greatest natural-soap beds in the world," which is said to extend for 20 miles northwest from the town of Newcastle, says: "This soap makes a good suds in hard water, and when used in washing the hands and face leaves the skin smooth and soft. It is used with good success in washing clothing. A very peculiar feature of it is that it can be entirely dissolved in clear water and its presence can not be detected. Assays show that it is 13 per cent. in weight pure aluminium, which would make it more than half of that metal in bulk. It shows a greater percentage of aluminium than any clay that is being worked for that popular metal in the United States."

Political.—The State Republican convention for sending delegates to the national convention met in Sheridan, May 14. The platform adopted embraced the following:

"We denounce the present administration, whose vicious and vacillating course has brought us distress at home and humiliation abroad; we denounce the free-trade policy inaugurated by the Democratic party, which has deranged our business, crippled our industries, and compelled an increase in the national indebtedness. We believe that the paramount issue before the American people is protection to American industries and American labor.

"We denounce the free-wool provision of the Wilson tariff act as an unjust discrimination against an important industry, and demand such protection for sheep husbandry as will secure fair prices for American wool.

"We reaffirm our allegiance to the principles of bimetallism as enunciated in the Republican State platform adopted at Casper in 1894, and we commend the record of our Senators and Representatives in Congress in maintaining these principles, and we instruct our delegates to the St. Louis convention to take like action, especially when the financial plank of the platform of that convention is being made. . . .

"We recognize in the Hon. William McKinley, of Ohio, an able and honest embodiment of the principles of the great Republican party, and the choice of the people of Wyoming for President; and our delegates to the St. Louis convention are instructed to work and vote for his nomination so long as there is any reasonable possibility of his securing such nomination."

The Democratic State Convention met in Laramie on May 28. The Committee on Resolutions reported the following, which comprises the entire platform and was unanimously adopted by a rising vote:

"Whereas, The paramount issue before the American people is the currency question, therefore be it Resolved, That we, the Democracy of Wyoming, in convention assembled, demand the free and unlimited coinage of silver and gold into primary redemption money at the ratio of 16 to 1, without waiting for the action or approval of any other government."

The returns of the election gave the result: Bryan, 10,655; McKinley, 10,072; Levering, 136. Bryan's plurality over McKinley, 583. Bryan's Populist vote was 286. The Republicans will have a majority of 15 on joint ballot in the Legislature.

Y

YACHTING IN 1896. Early in the year the attention not only of yachtsmen but of the world at large was centered upon the investigation of Lord Dunraven's charges of fraud against the American managers of the international races. These contests, or attempted contests, with the outcome of the investigation and the expulsion of Lord Dunraven from the New York Yacht Club, were described in the last volume of the "Annual Cyclo-pædia."

During the winter a plan was matured by members of the Larchmont Yacht Club to develop a "one-design" class of boats, so as to encourage individual seamanship among amateurs. This brought out the "thirty-foot class," but the promoters were somewhat disappointed in the practical outcome. A remarkable fleet of small yachts was created, the Herreshoff Brothers constructing about a dozen so nearly alike in rig and model that the owners drew lots for choice; but, instead of a fleet of seaworthy craft, behold there was an undeniable squadron of racing machines. The Herreshoff boats were supplemented by designs from William Gardner and H. C. Wintringham; but the Herreshoff boats easily carried off most of the prizes. They are an undoubted success so far as concerns speed, having a water line of 29 to 30 feet and sail area of 950 to 1,000 square feet. No time allowance is granted between the boats of this class. The crew is limited to four, three of whom may be paid men; "a lady, however, may also be carried." This last provision has been generally accepted as a jest, because the boats are so notoriously wet in a sea way that few ladies find pleasure in sailing on them except in very smooth weather.

The "Asahi," owned by Bayard Thayer, the "Mai," by O. G. Jennings, and the "Musme," by J. M. McDonough, carried off most of the prizes in this class.

Apart from the construction of such racing machines as the large cutter or sloop-rigged racers, there has been a pronounced movement in the direction of smaller craft that are swift and handy but do not sacrifice seaworthiness to speed. All attempts, however, to formulate rules that shall operate for the exclusion of what are called "freaks" have thus far proved in vain.

Much attention has been directed to the alleged superiority of the English as builders of steam yachts by the passage in Congress of a measure proposed by Representative Payne, of New York, taxing foreign-built yachts. The measure as finally passed was in the form of an amendment to the existing statute, and amounts simply to protection for American builders through a tonnage tax, a comparatively trifling matter to the owners of large yachts. As a matter of courtesy to the owners of pleasure craft, the laws of all maritime nations exempt such vessels from tonnage dues ordinarily charged against merchantmen, for the good and sufficient reason that they are not voyaging for profit and are at the same time desirable visitors so far as concerns local markets. The Payne law, therefore, discriminates against the American citizen in his own home waters when he is owner or lessee of a foreign-built craft. The law no doubt commended itself to such legislators as have a leaning toward protection partly because Americans had recently placed about \$1,000,000 worth of orders for large steam yachts in British shipyards. At present it appears to be generally admitted that British yards

do actually produce better vessels at a less cost than we can do on this side the ocean. It is to be noted, however, that the steam fleet of American-built boats is steadily growing, and many fine seagoing craft are in service. Among the newest and largest of these may be mentioned the "Eleanora," of 776 gross tons, designed by Charles Bigley Hanscom, and built at the Bath Iron Works. She measures 231 feet over all, with 32 feet beam, and 13 $\frac{1}{4}$ feet draught. She has just returned from a voyage round the world, including the passage of Cape Horn. Her owner, William A. Slater, of Norwich, Conn., accompanied her most of the way.

One interesting feature in the regattas of the year was the resumption of activity among seagoing schooner yachts, a class of vessels that is distinctively American and eminently deserving of favor. The first of these was sailed on June 11, and was interesting because it was the first meeting between the "Emerald," owned by J. Rogers Maxwell, and "Colonia," by Clarence A. Postley. The first-named vessel has been for two or three seasons the acknowledged champion of her class, and she might have retained her place but for the "Colonia," which was changed from a sloop to a schooner after playing her part as an unsuccessful candidate for international honors. The alterations were made under the directions of A. Carey Smith, and, although fitted with new sails and manned by officers and a crew not wholly familiar with her sailing qualities, she gave an excellent account of herself and won several races. This renewal of interest in seagoing sailing schooners is for the advantage of yachting in its seamanlike and most attractive form. The large single-stickers that are constructed for special races are rarely good for anything as such after they have served their turn, and are usually, as in the case of the "Colonia," changed into schooners, which can be handled by much smaller crews and used for cruising in any part of the world at a far less expense than if rigged as sloops or cutters.

In international sailing contests American craft made but a poor record during the year, the only notable victory being in canoes, the smallest class of all, which are not ordinarily counted as yachts. This one victory was gained by William Willard Howard, of the New York Canoe Club, with his sailing canoe "Yankee," in English waters. He won the challenge cup of the Royal British Canoe Club—the first time that it has ever been taken by a foreigner. The affair, however, was shorn of its international character by the fact that Mr. Howard did not represent any club, but entered his boat simply as an American visiting England, an honorary member of the Royal Canoe Club.

As a direct result of the race between the half-raters "Ethelwyn" and "Spruce IV" (England) of 1895, a race was arranged by the Sewanhaka-Corinthian Club, of New York, for a fifteen-foot class to be sailed in July, 1896, between boats representing the Canadian clubs and some of those in our own vicinity. The Canadians have of late been devoting much study to the improvement of this class of boats, and G. H. Duggan has designed and built a large number of them. It is understood, indeed, that the "Glencairn" was selected for this contest after protracted trials with 15 of her own class, half of them designed by Mr. Duggan himself. Her rival, the "El Heirie," was selected from a fleet of 27. Three trial races were sailed during the last week of June, and an additional race

ordered by the committee was sailed a month later. The "El Heirie" showed herself distinctly better than any of her competitors, but she was no match for the "Glencairn," which easily won as follows: The first race by forty-seven minutes eleven seconds, the second by six minutes twenty-two seconds, and the third by five minutes fifty seconds. Each race was on a 12-mile course. Before the concluding race was finished a challenge was sent to the representatives of the Canadian Club, and another race between boats of this class is arranged for 1897.

The dimensions of the "Glencairn" are 23½ feet over all; 12½ feet on the water line; 6½ feet beam; draught with board down, about 5 feet; and sail area, 300 square feet. Her opponent, "El Heirie," was 23½ feet over all; 14 feet 4 inches on the water line; 5½ feet beam; draught with board down, about 5 feet. Her sail area was 240 square feet. Both were scarcely better than scows as concerns model; that is to say, their floors were extremely flat, and their designers and owners can hardly take offense if they are characterized as "freaks" and "racing machines." Of the actual races there is nothing to be said except that the Canadian boat completely outclassed the American.

The other international race took place on Lake Erie, off Toledo, Aug. 24-27. The contestants were the "Canada," representing the Royal Canadian Yacht Club, of Toronto, and the "Vencedor," from the Lincoln Park Yacht Club, of Chicago. In the preliminary arrangements extraordinary agreements were admitted by the owners of the "Vencedor," who agreed to certain time allowances under conditions that would not have been accepted by any practical yachtsman. It was foreseen by every one who knew the characteristics of the two boats that, given a light wind, which was to be expected at that season, the Canadian boat must certainly win; while in the remote contingency of a high wind lay the chances of the American. These anticipations were realized in every particular, and the Canadian easily carried away the cup. Another feature, which may be regarded as a most undesirable innovation on this side of the ocean, was a purse of \$1,500 put up between the contestants. Racing for purses is common among English yachtsmen, and for that reason, no doubt, it seemed unobjectionable to the Canadians; but at best it savors of professionalism, and ought to be discouraged among amateurs.

From the yachtsman's point of view, the great value of this international race must be its stimulating effect upon yachting on the Great Lakes. Yacht clubs have existed there since the early part of the century, but so general a comparison never has been possible between the Canadian and American fleets as at Toledo during August. The Canadians are wise in limiting their classes to boats not exceeding 40 feet in length and devoting themselves to the improvement of model and rig in these classes rather than to introducing a different size of craft every year after the extravagant American fashion.

The owners of "Vencedor" immediately challenged again, and another international race, or perhaps more than one, is promised for 1897.

Among the new and popular classes that have come into existence of late is the so-called "Knock-about" class, very popular in Boston, and gaining in favor all along the coast. These boats are intended to be very nearly alike in model and sail power, and are planned to be good seaboats, capable of being handled effectively by one or two men and

good for any kind of service that they can reasonably be called upon to perform. The most successful have been built by Lawley & Sons, of East Boston; but in spite of their general similarity, and for some inexplicable reason, the "Cock Robin" has carried off nearly all the prizes for which she was entered. Much study has been given during the year by the mathematicians of yacht clubs to the discovery of a formula of measurement for sailing yachts which shall, upon the whole, be fair for all concerned and at the same time render it impossible for "enterprising designers" to devise craft that will technically comply with the rule but practically gain some unforeseen individual advantage for themselves. Complicated mathematical formulas appear to have a certain fascination for some minds, but to the average yachtsman they are an undoubted bugbear. The Yacht-Racing Union of Long Island Sound adopted the following, which worked so well during the season of 1896 that it is to enter unchanged upon its second season:

$$\frac{L W L + \sqrt{\text{of sail area}}}{2} = \text{racing length.}$$

In foreign waters the usual series of sailing races began early in the Mediterranean, and followed the English coast as the season advanced, after the system that has been so completely and advantageously organized in those waters. Upon the whole, the "Britannia" has maintained her supremacy, though her rivals won some races from her and were able, under favorable conditions, to press her so closely that their owners did not altogether lose courage. Her record goes distinctly to the credit of seamanship as against models and rig. The only American representative that distinguished herself was Mr. Gould's "Niagara," which won many races on different parts of the coast, although she was badly beaten by F. B. Jameson's "Saint." Her record is brilliant for all the races in which she was entered, and it is greatly to be regretted that the English Yacht-Racing Association, in inspecting her without permission of her owner, should have so blundered as to give just grounds for offense. The "Niagara" was fitted with 2 water tanks, 1 on each side of her little cabin, and these were connected by a pipe so that water could be drawn from both tanks by a single faucet. In this innocent device the regatta committeemen, with Dixon Kemp at their head, thought they had discovered a "Yankee trick," and, visiting the "Niagara" during her owner's absence, wrote to him after their investigation to the effect that he must have the tanks disconnected. The absurdity of the suspicion, implied or otherwise, must be apparent to every yachtsman; for the water could not, save by the aid of machinery, be carried up to windward, where alone it could be of advantage in a race.

The only serious yachting disaster occurred during the Royal Albert Regatta at Southsea, England, on Aug. 18. All the large cutters were in the race, as were also some of the smaller class, which were started separately; but, owing to the greater speed of the larger craft, the small ones were overtaken, and in manœvering to keep clear the "Meteor," the large racing yacht belonging to the Emperor of Germany, ran at full speed directly against the "Isolde," sweeping part of her crew into the water, killing her owner, Baron von Zedtwitz, and utterly wrecking the yacht. The "Isolde" was built by the Henschhoff Manufacturing Company for Prince Leopold, of Hohenzollern, by whom she was sold to the baron. She was a sister boat to Mr. Gould's "Niagara."
