PREFACE.

THE most important topic of the year 1896 was the political contest in the United States, in which the great tariff issue was overshadowed by the newer and more exciting subject of free coinage of silver, with which were closely associated questions of Federal power in interstate matters and popular dissent from decisions of the Supreme Court. The reader will get full information of this great crisis if he consults the articles "United States," "Presidential Canvass of 1896," and "McKinley, William," together with the sketches of William Jennings Bryan and Garret Augustus Hobart. A good many side lights, also, are thrown upon this subject in the paragraph entitled "Political" in the various State articles. In the article "United States" there is a more thorough analysis of the vote than has been published before, and it brings out some curious and significant facts.

The last of a series of articles on the United States census of 1890, which have appeared as early as the slow work of compilation in the Census Office could furnish the material, is published in this volume. Taken together, they form probably the most convenient compendium of the census that can be obtained.

In other lands the most interesting movements of the year were the bloody insurrections in Cuba and the Philippine Islands, with Spain's determined attempt to retain those colonies by force of arms, and the massacres in Armenia and the Greek war in Crete. All these are fully recorded, with maps of Cuba and Crete.

In the realm of science that which has excited the greatest popular interest is the development of the X-ray process of photographing through opaque substances, and this is described under the title "Röntgen Rays," with illustrations, and with it are a sketch and portrait of Röntgen, the discoverer of the process. Another important event in science was the completion of Herbert Spencer's great life work, his "Synthetic Philosophy." When we think how many great works in science and literature have been left unfinished because their projectors found them too vast for a single lifetime, it is a matter for special congratulation that Mr. Spencer has lived to write the final page of his. To this volume Prof. Hudson, of Stanford University, contributes a critical and descriptive sketch of Mr. Spencer and his books, which we illustrate with a fine photogravure portrait. Other scientific subjects are treated in the articles "Astronomy," "Chemistry," "Metallurgy," "Meteorology," "Physics," "Physiology," and Associations for the Advancement of Science.

One who completed her great literary work much earlier in life, and saw it translated into a score of languages and more widely circulated than any other novel that ever came from the press, passed away in 1896. "Uncle Tom's Cabin" still stands first among books called for at the various circulating libraries, and still sells largely every year. We present a sketch of Mrs. Stowe's life, with a photogravure portrait and a view of the house in which she wrote the famous book. Other eminent authors who passed away during the year were William Morris, the poet and artistic designer, and George Du Maurier, the author of "Trilby," who was also an artist. Of both of these we give portraits and views of their dwellings.

The numerous recent discoveries in archæology give a special interest to that subject, and the important finds are here recorded, with illustrations.

The religious articles embrace, besides those on the great denominations, minor but interesting ones on "Christian Endeavor Societies," "Evangelical Alliance," "Congress of Evangelical Free Churches," "Old Catholic Church," and "Sunday-school Convention."

Readers who are interested in the subject of higher education for women will turn with interest to the article that describes the fourteen institutions in our country that have the rank of colleges and are devoted exclusively to the education of young women. It is illustrated with views of six of these colleges.

Of the summaries, perhaps the most interesting is "Gifts and Bequests," which shows a distribution of more than \$27,000,000 for educational and benevolent purposes during the year, with the names of the individual donors. The literature articles—American, British, and Continental—present a rapid survey of the production of books of all kinds, with comments that are necessarily sparing, and the "Disasters" and "Events" serve as reminders of many happenings.

The article on "Geographical Progress and Discovery" is enriched this year with an account of Dr. Nansen's work in the arctic regions, where he got nearer to the pole than any previous explorer. A facsimile of his own rude map of his route is given, and also an accurate map of the polar region.

Among the special and curious articles are: "Bird Day," "Cheese, Filled," "Confederate Veterans," "Farms, Abandoned," "Game Preserves," "Manufacturers' Association," "Marine Hospital Service," and "Psychology, Experimental."

The necrology list includes, beside those already mentioned, Miss Dodge (Gail Hamilton), Lord Leighton and Sir John Everett Millais (two presidents of the Royal Academy), Baron Hirsch; the statesmen James M. Ashley, Benjamin H. Bristow, Charles F. Crisp, Columbus Delano, J. Meredith Read, and Theodore Runyon; the authors Charles Carleton Coffin, Edward King, Thomas W. Knox, Edgar W. Nye, and Nora Perry; the inventors Charles Goodyear, Norman Wiard, Laurence F. Frazee, and Nehemiah S. Beal; the publishers Alfred E. Beach, Henry C. Bowen, Robert Littell, George Munro, A. D. F. Randolph, and two members of the Harper family; the soldiers Francis C. Barlow, John G. Bourke, Thomas L. Casey, Robert E. Colston, Thomas Ewing, Lucius Fairchild, John Gibbon, Alexander R. Lawton, and G. W. Smith; the naval officers Joseph S. Skerrett, Thomas Holdup Stevens, and Henry Walke; the clergymen Thomas Armitage, Talbot W. Chambers, Arthur Cleveland Coxe, Daniel C. Eddy, William H. Furness, Peter R. Kenrick, and Martin Marty; the artists Wyatt Eaton, William H. Gibson, Augustus Hoppin, Charles S. Reinhart, and Olin Warner; the engineers George W. Ferris, William H. Grant, and Albert S. Greene; the jurists Charles Doe, Isaac C. Parker, and Calvin E. Pratt; the scientists Benjamin A. Gould, Horatio Hale, Henry A. Mott, Hubert A. Newton, and Josiah D. Whitney; the actors James Lewis and Frank Mayo; the financiers Austin Corbin, William H. English, Robert Garrett, Henry B. Payne, and John H. Inman; the magician Alexander Herrmann; and the photographers Matthew B. Brady and Napoleon Sarony. Of all these and many more there are sketches, with numerous portraits.

Three full-page portraits (one on steel and two photogravures) and three colored maps adorn the volume. A list of the contributors will be found at the front of the book and an index at the end. This volume begins a new series.

NEW YORK, April 14, 1897.

CONTRIBUTORS.

Among the Contributors to this Volume of the "Annual Cyclopaedia" are the following :

- Oscar Fay Adams,**
Author of "Handbooks of American and British Authors."
- BLIND, MATHILDE,
COXE, ARTHUR CLEVELAND,
MORRIS, WILLIAM,
PATMORE, COVENTRY,
TEMPLE, FREDERICK,
and other articles.
- Oscar P. Austin,**
Author of "Uncle Sam's Secrets."
PRESIDENTIAL CANVASS OF 1896.
- Marcus Benjamin, Ph. D.,**
Editor of department of chemistry in the "Standard Dictionary."
ASSOCIATIONS FOR THE ADVANCEMENT OF SCIENCE,
GOULD, BENJAMIN APTHORP,
NATIONAL ACADEMY OF SCIENCES,
WHITNEY, JOSIAH DWIGHT,
and other articles.
- J. H. A. Bone,**
Of the "Cleveland Plain-Dealer."
OHIO.
- John H. Boner,**
Formerly of the "Literary Digest."
ROMAN CATHOLIC CHURCH,
VIRGINIA,
WISCONSIN,
and other articles.
- Arthur E. Bostwick, Ph. D.,**
Superintendent of New York Free Libraries.
PHYSICS,
RÜNTGEN RAYS,
and other articles.
- Thomas Campbell-Copeland,**
Formerly of United States Census Bureau.
UNITED STATES CENSUS,
and other articles.
- James P. Carey,**
Formerly Financial Editor of the "Journal of Commerce."
FINANCIAL REVIEW OF 1896.
- John Denison Champlin,**
Editor of "Cyclopedia of Painters and Paintings."
FINE ARTS IN 1896.
- Hon. Benjamin F. Clayton,**
President of the Farmers' Congress.
FARMERS' CONGRESS.
- Mrs. Bessie Nicholls Croffut,**
LITERATURE, AMERICAN,
LITERATURE, BRITISH.
- William A. Croffut, LL. D.,**
Formerly Secretary of the Geological Survey.
PSYCHOLOGY, EXPERIMENTAL.
- George T. Ferris,**
Author of "Great Composers" and "Great Singers."
FARMS, ABANDONED,
GAME PRESERVES.
- William Robertson Garrett, Ph. D.,**
Editor of the "American Historical Magazine."
CONFEDERATE VETERANS, UNITED.
- Mrs. Fredericka B. Gilchrist,**
Author of "The True Story of Hamlet and Ophelia."
CONNECTICUT,
IDAHO,
MARYLAND,
NEW JERSEY,
NEW MEXICO,
PROTESTANT EPISCOPAL CHURCH,
SOUTH DAKOTA,
and other articles.
- Rev. William E. Griffis, D. D.,**
Formerly Professor of Physics in the University of Tokio.
JAPAN,
KOREA.
- George J. Hagar,**
Associate Editor of the "Columbian Cyclopaedia."
ARIZONA,
GIFTS AND BEQUESTS,
OBITUARIES, AMERICAN.
- Miss Leslie Holmes Hall,**
Of the "Standard Dictionary" staff.
WOMEN, COLLEGES FOR. IN THE UNITED STATES.
- Rev. Moses Harvey,**
Author of "Text-book of Newfoundland History."
NEWFOUNDLAND.
- Ripley Hitchcock,**
Author of "The Madonna in Art" and Editor of "The Art of the World" and "The Story of the West Series."
GIBSON, WILLIAM HAMILTON,
MILLAIS, JOHN EVERETT,
REINHART, CHARLES STANLEY,
WARNER, OLIN LEVI.
- J. Castell Hopkins,**
Author of "Life and Work of Mr. Gladstone" and Editor of "Golden Canada."
BRITISH COLUMBIA,
CANADA, DOMINION OF,
MANITOBA,
ONTARIO,
and other Canadian articles.

- William Henry Hudson,**
Professor of English Literature in Stanford University.
SPENCER, HERBERT.
- Frank Huntington, Ph. D.,**
Of the "Standard Dictionary" staff.
AFGHANISTAN,
ARGENTINE REPUBLIC,
AUSTRIA-HUNGARY,
BELGIUM,
BOLIVIA,
BRAZIL,
CUBA,
EGYPT,
GERMANY,
GREECE,
and other articles.
- Abram S. Isaacs, Ph. D.,**
Editor of the "Jewish Messenger."
JEWS.
- Miss Florence K. Johnson.**
DU MAURIER, GEORGE,
DODGE, MARY ABBY,
HOBART, GARRET A.
- Mrs. Helen Kendrick Johnson,**
Author of "Woman and the Republic."
STOWE, HARRIET BEECHER.
- William H. Larrabee.**
ANGLICAN CHURCHES,
ARCHAEOLOGY,
CONGREGATIONALISTS,
EVANGELICAL ASSOCIATION,
METHODISTS,
PRESBYTERIANS,
and other articles.
- Frederic G. Mather.**
BIRD DAY,
MANUFACTURERS, ASSOCIATION OF,
and other articles.
- Miss Joanna R. Nicholls.**
MARINE HOSPITAL SERVICE.
- Col. Charles Ledyard Norton,**
Author of "Political Americanisms."
DISASTERS IN 1896,
EVENTS OF 1896.
- Rev. Solomon E. Ochsenford, D. D.**
LUTHERANS,
SCHAEFFER, CHARLES WILLIAM.
- Mrs. Evangeline M. O'Connor,**
Author of "Index to Shakespeare."
CALIFORNIA,
DELAWARE,
FLORIDA,
GEOGRAPHICAL PROGRESS AND DISCOVERY,
INDIANA,
KANSAS,
MASSACHUSETTS,
NEW HAMPSHIRE,
OREGON,
TENNESSEE,
and other articles.
- Joseph P. Smith,**
Formerly State Librarian of Ohio.
MCKINLEY, WILLIAM.
- Lewis Swift, LL. D.,**
Director of Lowe Observatory.
ASTRONOMICAL PROGRESS IN 1896.
- James B. T. Tupper,**
Formerly of Internal Revenue Office.
CHEESE, FILLED,
and other articles.
- J. Kendrick Upton,**
Of the Life-saving Service.
UNITED STATES, FINANCES OF THE.
- Frank Weitenkampff,**
Of the Astor Library.
LITERATURE, CONTINENTAL.
- William J. Youmans, M. D.,**
Editor of "Appletons' Popular Science Monthly."

THE ANNUAL CYCLOPÆDIA.

A

ABYSSINIA, an empire in eastern Africa, including the kingdoms of Tigre, Amhara, and Shoa, with Gojam, Lasta, the Galla and Kaffa countries, and other outlying dependencies. The Emperor, who bears the title of Negus Negusti ("king of kings"), is Menelek II, who subdued his rivals in 1889 after the death of Johannes II, having been assisted with arms by the Italians, with whom he made a treaty on May 2 of that year, which was confirmed in October by a convention concluded by his plenipotentiary in Italy. By virtue of this treaty the Italian Government declared a protectorate over the whole empire, and the British and German governments subsequently recognized the claim, whereas Menelek asserted that the treaty was one of mutual protection between independent sovereigns. The line of demarcation between the Italian and the British spheres as fixed by the agreements of 1891 and 1894 runs up the Juba river to 6° of north latitude, follows that parallel to 35° of east longitude, and thence runs north to the Blue Nile. The territory thus conceded to Italy embraces all Abyssinia and adjacent parts of Somaliland and the Sondan—648,000 square miles.

The territories under the dominion of the Negus have an area of 244,000 square miles and a population of 7,500,000. The inhabitants are of Coptic, Jewish, Arabian, and negro extraction. They practice a degenerate form of Christianity derived from the ancient Alexandrian Church, and on this account the Russian Government has manifested a sentimental and political interest in the independence of the Abyssinian or Ethiopian Empire, which is one of the oldest of existing governments of feudal type, similar to the European systems of the Middle Ages. The ruling class are the Ethiopians, who are of Arabian descent. Formerly the Jewish people, called Falashas, were predominant, and they are still numerous. Besides Christians there are many Mohammedans in the country. The *abuna*, or head of the Ethiopian Church, is a Copt, appointed by the Patriarch of Alexandria. Many ancient Jewish forms and practices are a part of the religious observances. There are numerous monasteries, and there are no teachers except the monks and the secular clergy, who instruct a limited number of children in grammar, poetry, choral singing, and the recitation of passages from the Bible. The Abyssinians have been well schooled in warfare by their constant intestine conflicts and wars with Egyptians and other invaders, latterly the dervishes. When the British force of Sir Robert Napier marched through the country in 1867 and 1868 and stormed Magdala, King Theodore was only a nominal sovereign, disposing of 10,000 troops, while the warriors of Tigre and Lasta and Menelek's army of

50,000 Shoans remained neutral. The Abyssinians gave proof of their fighting qualities in their former battles with the Egyptians. In the last Egyptian war, King Johannes captured 30 Krupp guns and 18,000 Remington rifles, and after King Menelek made his treaty with Italy he imported many consignments of arms through Massowah. Even since that port was closed to him he has been able to obtain additional supplies of European arms and munitions through the French port of Obok.

Far from being a savage, undisciplined host, the hardy mountaineers who compose the Abyssinian army have long been used to modern weapons of precision and in possession of artillery, which they are able to handle with some skill, while their cavalry has always been remarkably efficient and swift in manœuvring. Capt. Cecchi estimated in 1895 that King Menelek could put 145,000 effective troops in the field. His forces are organized on a strict feudal system. He communicates his call to arms to his head vassals, each of whom transmits it to his *ras*, or generals of division, who in turn communicate it to the smaller territorial chiefs. The entire male population responds to the call. In the field the forces subsist off the country, whether the land of friends or of foes. The wants of these soldiers are very few, and they require only a quarter of the ordinary rations of Europeans. On the march the advanced guard keeps about two days in advance of the main body, in order to prepare the camp and provide for subsistence. The main force marches in two divisions, forming the right and the left wings, each composed of regular infantry, armed with breechloaders, and cavalry marching behind in columns. The march is enlivened by the music of a trumpet and drum corps and a chorus and by the performances of acrobats and jugglers. Mountaineers armed with native spears and long knives form the rear guard, while the slaves of the country go along in their escort, carrying the supplies and camp equipments. On the march and in action the formations of the Abyssinian are as regular and compact as those of European troops. Europeans who have accompanied them on the march have seen a camp of 40,000 broken and the entire body got in motion without the least disorder in less than six hours. As regards tactics, the Abyssinians are skillful in taking advantage of natural surroundings and always endeavor to crush the enemy by numerical superiority and by an energetic onslaught. In the open field they at once come to close quarters, with the object of ending the campaign with a single blow.

The territory occupied by the Italians and organized as the colony of Eritrea lies on the northern border of Tigre, the northernmost of the Abyssin-

ian kingdoms, and extends for 670 miles along the coast of the Red Sea. It has an area of 48,700 square miles, and in 1893 had a population of 191,127 natives and 3,452 Europeans. The natives belong mostly to wandering tribes of Arab extraction and customs. Of the 7,775 inhabitants of Massowah, the seaport and seat of government, 600 were Europeans and 480 were Banian traders and other Asiatics. The Italians first occupied Massowah in 1885, ostensibly to aid England in policing the Egyptian Soudan, but really to acquire a sphere of influence in Abyssinia and lay the foundations for a colonial empire in Africa. Before then the Government had acquired from the Rubattino Naviga-

assist Menelek in subjugating that province. The new Negus recognized the right of the Italians to the portion of the Abyssinian highlands already occupied by them. This did not include the strong position of Asmara, which they seized in August, 1888, and rendered impregnable by modern fortifications. By the terms of the treaty of Ucciali and the convention concluded in October, 1889, by the Negus Menelek's ambassador in Italy both governments promised to combine for mutual defense against a common enemy, the Negus obtained the right to import arms through Massowah to the exclusion of his enemies, and Italy was to be represented at the capital of Abyssinia by a consul general. In the Italian text was a provision for an Italian protectorate, but this Menelek declared to be a mistranslation of the original document. Count Antonelli, the negotiator of the treaty of Ucciali, went to Ankobar to insist on the acceptance of the Italian version, but he failed in his mission, and it ended in a diplomatic rupture between Menelek and his former ally, the Russian and the French governments sustaining him in the position that he had taken. By the terms of a protocol between England, acting for Egypt, and Italy, signed on April 15, 1891, the Italians obtained leave to occupy Kassala, which had been in the possession of the dervishes since 1885, with the understanding that it was to be restored to Egypt whenever Egyptian rule should be re-established in the Soudan. After a long campaign Gen. Baratieri captured Kassala in July, 1894. Since then the Italians have not been threatened by the followers of the Khalifa, whose power was already waning fast. In 1895 they began again to extend their conquests in Tigre, whose ruler, Ras Mangascia, had assumed an attitude of hostility, apparently without the support of the Negus Menelek, though that monarch had never ceased to object to the occupation of Asmara, from which point the Italian occupation was pushed farther southward upon the Abyssinian plateau to Godofelassi, which was likewise fortified and connected with Massowah by telegraph. Adigrat was occupied on March 25, 1895, and made the headquarters of an army of invasion. Ras Mangascia and his Tigrins fell back before the invaders, who occupied one post after another, aiming to annex the whole of Tigre and Amhara. Gen. Baratieri justified his advance in the beginning on the ground that he must have more strategic posts to protect Italian territory from the raids of the Abyssinians. The Italians met with little opposition when they advanced southward from Asmara and Godofelassi, for the force that Ras Mangascia was able to muster in haste was small. He was twice overtaken and defeated by the flying column of the Italians as he fled through Tigre and Amhara into Shoa. The Italians pushed clear across Tigre and entered the province of Amhara. The ambition for conquest grew when they found the resistance so slight. Late in 1895, when Major Toselli's command was surrounded and cut to pieces by a large army of Abyssinians at Ambaalagi, the dream of an easy conquest of Abyssinia vanished. When Menelek's legions began to pour into the country the Italians retired to the strong places, which were too scattered for easy communications.

The Italian Defeat.—When he found himself confronted with an army of over 100,000 men under Ras Micael, Ras Mangascia, and Ras Makonen, Gen.

ASMARA, ABYSSINIA.

tion Company a strip of coast on the Bay of Assab, and thus acquired the first foothold on the Red Sea littoral, though the land was found unsuitable for colonization. Massowah, the natural seaport of Abyssinia, had been in dispute between the Khedive of Egypt and the Negus Johannes, who had defeated three Egyptian expeditions. The British Government, in behalf of Egypt, acquiesced in the Italian occupation of Massowah, and the Negus raised no objections after being assured that no export duties would be levied on Abyssinian traders. The Italians landed on Feb. 6, 1885, with 2,500 men, and at once constructed land and sea defenses and established fortified camps in the interior. This locality is one of the hottest in the world, totally unfit for the residence of Europeans. An Italian envoy went to the Negus and to King Menelek of Shoa in 1886 to negotiate for the cession of the mountain district of Keren, on the border of the Abyssinian plateau. The Negus, offended because the Italian government recognized Menelek as an independent sovereign, and distrusting designs upon the integrity of Abyssinia, refused to receive the mission. Ras Alula, Governor of Tigre, then began a series of attacks on the Italian outposts, and at Dogali destroyed an Italian force of 500 men. Re-enforcements of 3,000 men were sent, and Gen. Saletta superseded Gen. Gené. Dr. Ragazzi was sent to seek an alliance with Menelek, who was in rebellion against the Negus Johannes and already aspired to the throne. While Johannes was occupied in suppressing revolts of his vassals and protecting his frontiers from the invading Mahdists, the Italians took possession of Zulla, Adulis, and Disse, and subsequently of Keren. After Johannes was killed by the Mahdists, on March 10, 1888, and Menelek was crowned Emperor of Ethiopia at Adua, the Italians, who had an army of 8,000 Europeans and 4,000 Bashi-bazouks, sent 6,000 troops into Tigre to

Baratieri remained on the defensive, awaiting the arrival of re-enforcements from Italy and expecting that meanwhile the Abyssinian host would have to retire from want of food. Instead of that, the Abyssinian troops preserved their front and became more and more aggressive. They laid siege to Makalle. After practically reducing this post, the Abyssinians suffered the garrison to evacuate with their arms and baggage. The soldiers of the Negus were amply supplied with food because Menelek had for three years hoarded, in preparation for the conflict with the Italians, the percentage of the grain grown that is paid in taxes to the Negus. The Italians retreated early in January from Adua, the capital of Tigre, to Adigrat. Ras Makonen, in behalf of the Negus, offered peace on condition that the Italians should withdraw altogether from Tigre, evacuating Asmara and keeping within the frontier of Eritrea defined in their treaty with Menelek. For some weeks the Italian garrison under Major Galliano, consisting of 200 Europeans and 1,000 native allies, held out bravely against sixty times their number, making numerous sorties and inflicting loss on the enemy. When no longer able to obtain water for his men, the commandant accepted the generous terms offered by Ras Makonen, who, as a mark of homage to the bravery of the defense and an earnest of his desire for peace, furnished mules for the transport of the wounded and baggage. He also escorted them with 10,000 men to protect them from the vengeance of the Amhara, who, in fact, attacked them and were fired upon by the troops of Makonen. Some officers and soldiers of Major Galliano's command were kept as hostages by King Menelek. When Ras Makonen opened negotiations for peace Gen. Baratieri sent Major Salsa to the Shoan camp in accordance with the Negus Menelek's proposal. Major Salsa was received with all honors by Menelek, who made it a condition of peace that the Italians should retire from the territories lately occupied by them and consent to a radical modification of the treaty of Ucciali. Gen. Baratieri replied to the Negus that the Italian Government could not accept such proposals nor admit them as a basis for discussion.

The Italians in retreating had devastated the country and burned the grass to deprive the horses and camels of the Shoan army of fodder. Nevertheless the Abyssinians encamped permanently in the vicinity of Adua, occupied the passes of the road to Adigrat, and advanced up to the Italian lines at Adigrat and Maimarat. In the country still held by the Italians Ras Sebat and Ras Agostafari deserted with a part of their followers and attacked the Italian outposts. Major Valli captured from these new enemies Alequa and the pass of Seeta, south of Adigrat, after a fierce conflict, in which 97 Italians were killed, 30 wounded, and 40 taken prisoners. The revolt of the black troops disarranged the first lines of the Italian advance, Ras Sebat reappeared north of Adigrat, and in two days the revolt spread over the whole of Agame.

About Feb. 20 the Shoans began to retire to their former position at Adowah. Even the rebel chiefs ceased to harry the allies of the Italians and formed a junction with Menelek's forces. Menelek, as he fell back, left the pass of Murian Sciaivitu, opposite the Italian front line, and the pass of Gascorchi, toward Mareb, strongly occupied.

While the Italian Government continued to dispatch troops to Adowah there were not enough transport animals to move the baggage and batteries to the front. The equipment of the troops was very incomplete when they left Naples, and when they arrived in Africa they found that necessary supplies that were supposed to be there were wanting. Camp utensils and ambulance implements were

lacking, there was no cavalry to pursue the enemy in the event of a victory over the Abyssinians, and even food and ammunition were running short.

With the troops that were dispatched in haste from Naples, Gen. Baratieri had, in the beginning of March, 44,700 men and 78 guns, besides the garrison of Kassala, composed of 2,000 men with a few cannon. This field army comprised 30 battalions of line infantry, 5 of Bersaglieri, 1 of Alpine troops and 1 of chasseurs, 9 batteries of mountain artillery, 2 quick-firing batteries, 1 mortar battery, 6 companies of engineers, and 2 baggage trains, with 6 battalions of native infantry and 2 African batteries. The force concentrated at Adigrat did not exceed 28,000 men of all arms. Food supplies were running short when the Abyssinian army at Adua, at least 100,000 strong, began to move to the northwest, with the evident intention of getting to the north of the Italian position. Gen. Baratieri dared not retreat for fear that the retreating column would be separately destroyed. He determined, therefore, to risk a pitched battle with the Abyssinians before his line of communications was cut off. He consulted his generals, and they were unanimously also in favor of taking the offensive. Spies had falsely informed him that Menelek and his generals had gone to Axum to hold a coronation ceremony. Choosing this opportunity, the Italians advanced in 3 columns: Gen. Dabormida's on the right, consisting of 6 white battalions, 4 batteries, and a battalion of light militia; Gen. Arimondi's in the center, composed of 5 white battalions, 2 batteries, and a detachment of Askaris, or native troops; and Gen. Albertone's on the left, composed of 4 native battalions and 4 batteries. All the columns were kept in communication with each other, while Gen. Ellena followed with the reserves, composing 4 white battalions, 1 native battalion, and 2 batteries of quick-firing guns. Marching in the moonlight night of Feb. 29, they found the passes of the mountains unguarded, and by break of day the two wings occupied the Rebbi Arienne ridge on the right and the Chidane Meret ridge on the left. Fighting began on the left, and Gen. Dabormida's column was pushed forward toward the Murian Sciaivitu road, where it could co-operate with Gen. Albertone's brigade, while Gen. Arimondi's column moved to the right on to the Rebbi Arienne ridge, whence Gen. Baratieri directed operations. Gen. Albertone's column had advanced far beyond the position prescribed for it, and when the Turitto battalion, which had descended the ridge toward Adua, was seen to be in danger of annihilation, the entire brigade advanced to extricate it. Gen. Baratieri then ordered Gen. Arimondi to occupy with Bersaglieri a projecting spur of the Chidane Meret ridge and to plant quick-firing batteries there for the purpose of supporting Gen. Albertone. The enemy debouched in great masses on the crest to the right and left of Gen. Albertone, who was forced to fall back. The white troops of the brigade failed to resist the impetuous onslaught of the Abyssinians, and in their disorderly retreat hindered the artillery from taking position. The black troops were braver and fought with more vigor. A momentary impression was created by the fire of the quick-firing guns, and the Askaris began to advance when the Shoans were arrested by this diversion. But soon the fighting was hot along the whole ridge, and the Abyssinians advanced in overwhelming numbers over the crest and fell upon Gen. Albertone's retreating soldiers, throwing them into confusion. They fell back upon the position occupied by Gen. Arimondi on a precipitous and broken side of the ridge. While Col. Galliano's battalion moved up to reinforce this position, large bodies of the Abyssinians, taking advantage of the broken ground, en-

FORT MAKALLE, ABYSSINIA.

veloped the Italian force by a swift movement. At the same time another party gained a lodgment on the mountain and forced the Bersaglieri to beat a retreat, while Col. Brusati's regiment was also compelled to abandon its position and the Alpine battalion of the reserve to give way. The Shoans, who had climbed the slope with great boldness, reached the position held by Gen. Arimondi and plunged into the ranks, firing point-blank at the officers and throwing the Italians into such utter confusion that they could not return the fire, not knowing friend from enemy. Later the officers were able to order a retreat, which took place in disorder. In the winding and difficult paths the column divided, one part, with Col. Brusati and Col. Stevani, going toward Mai Hafima, while the other, with Gen. Baratieri, Gen. Ellena, and Col. Valenzano, fell back upon Addicaie.

Gen. Dabormida's brigade held the position assigned to it, in front of the Rebbi Arienne ridge, until, after the battalion that had been moved in the direction of the Chidane Meret ridge had been driven back with heavy losses, the entire force advanced to the right in the direction of the Shell of Muriam Seiavatu, where were the camps of Ras Makonen and Ras Mangascia. For a moment the Italian forces seemed to be victorious, but soon the Shoans descended in dense masses on the Italian right, and Gen. Dabormida was compelled to beat a retreat, which, protected by the artillery, was carried out in an orderly manner till the guns had spent their ammunition, after which the infantry made repeated bayonet charges to check the Shoans. Near Sauria Col. Ragni, who commanded the retreat, had to abandon the guns, owing to a simultaneous attack on the front and flank. Later the column divided into two parts, one of which Col. Ragni brought safely to Addicaie.

The whole of the artillery and the transport column fell into the hands of the Abyssinians. In the battle the Italian artillery, consisting of 52 guns,

was practically useless because the rush of the Abyssinians overwhelmed the Italian forces before the artillery had time to come properly into action.

The main body of the retreating army concentrated at Asmara, while a rear guard of 5,000 men remained at Addicaie to cover the line of retreat. The army of the Negus did not pursue the fleeing columns, but advanced slowly to Entiscio, halfway to Adigrat. For a week or more straggling bodies of fugitives continued to arrive at Asmara. The fate of 7,000 men was still unknown. Scouts estimated the loss of the Abyssinians at 4,000 dead and 6,000 wounded. The Negus and his generals held over 2,000 Italians as prisoners of war.

Gen. Baldissera, who had been appointed commander-in-chief of the forces in Africa on Feb. 22, with full civil and military powers, arrived at Massowah and assumed command on March 4. He reached Asmara two days later, when Gen. Baratieri proceeded under arrest to Massowah, where in the beginning of June he was tried by a military tribunal on the charge of having inexcusably ordered an attack upon the enemy's force in circumstances which, as the result unhappily proved, rendered inevitable the defeat of his command. He was charged further with abandoning his post in action, in that he left the field while the columns of Gen. Albertone and Gen. Dabormida were still fighting, and retreated 60 miles on March 2 without knowing their fate. Gen. Dabormida was killed and Gen. Albertone wounded and captured while bravely fighting at the head of their brigades. Half the other officers and a third of the troops engaged perished on the field of battle. Crispi was held largely responsible not only for the attempt to conquer Abyssinia, but for the rash attack upon the Abyssinian position which resulted in disaster. Only a few days before Gen. Baratieri marched upon Adua he received a petulant telegram from the Premier complaining of the lack of plan in the campaign, the small skirmishes and waste of heroism without results, seeming a case of

military phthisis rather than a war, and saying that the Government was ready for any sacrifice necessary to save the honor of the army and the prestige of the monarchy. Gen. Baratieri was tried by a military court composed of 6 generals, who acquitted him of criminal intention or penal responsibility, but deplored in their verdict the fact that the command of the Italian troops should have been confided to an incompetent leader.

Proposed Harrar Expedition.—The military authorities, at the time when Gen. Baratieri's troops invaded Tigre, formed a plan of landing an expedition at the English port of Zeila and marching into Shoa through Harrar in order to create a diversion that would draw off a part of the Abyssinian forces from the front. The British Government was anxious to give the Italians aid, but hesitated to grant permission to land at Zeila for fear of giving offense to France, since Harrar, which Great Britain was willing to concede to Italy as a part of the Abyssinian Empire, and hence of the Italian sphere of interest, had once been an object of dispute between England and France, who had composed their quarrel by entering into an agreement to regard it as neutral and inviolable territory. Lord Salisbury actually encouraged Gen. Ferrero, the Italian ambassador at London, to make a formal application for the permissive right of way through Zeila, but afterward, when the need seemed urgent, owing to the precarious position of Gen. Baratieri's army when confronted by the whole of the Shoa forces, the British Prime Minister hesitated to fulfill his promise, on the plea that the Indian Government feared an invasion of the British possessions in Somaliland in case of an Italian defeat. At length, on Jan. 2, 1896, Lord Salisbury announced the consent of the British Government to the passage of Italian troops through Zeila, coupled with certain reservations that were intended to disarm the susceptibilities of France. In consequence the Italian Government was only half satisfied, and in view of the objections entertained to the construction placed upon the Anglo-French Convention of 1888, Gen. Ferrero suggested that Baron Blanc, the Italian Minister of Foreign Affairs, address a note to England and to France, setting forth the drawbacks arising from the actual condition of affairs that those powers had created in Harrar, and demanding speedy relief therefrom in the name of international law and morality and of the natural and indispensable solidarity between civilized nations as against barbarism. On Feb 5 Baron Blanc, in a communication to Gen. Ferrero, expressed regret that, whereas Lord Rosebery's Government had succeeded in being just toward Italy as well as toward France, he was unable to gather the same impression from the attitude of Lord Salisbury, "who has adopted altogether the French contention which makes the self-denying agreement entered into between France and England in 1881, when Harrar, evacuated by Egypt, became, as it were, a sort of *res nullius*, a pretext for opposing the realization of our rights of protectorate successively acquired and recognized by Europe. Such is the position assumed by Lord Salisbury regarding our determination to render effectual the protectorate recognized to us *de jure* as constituting a change in the *status* of Harrar. I regard such an assertion as contrary, not only to the agreement and declaration of May 5, 1894, but to the acts of Berlin and Brussels." The intended expedition to Harrar and Shoa was not sent.

Siege of Kassala.—After the Italian army in Tigre had been routed by superior Shoa forces the dervishes appeared, 30,000 strong, and laid siege to Kassala. Gen. Baldissera had discretionary authority to evacuate Kassala as well as Adigrat,

and on his advice the Italian Government had about decided on that course, but it suddenly reversed the decision because the English Government had meanwhile ordered the Dongola expedition with the ostensible object of aiding the Italians as well as of forestalling a predicted dervish invasion of Egypt, also because the English authorities in Egypt considered that the evacuation of Kassala would have a deplorable effect upon the situation in the Soudan and in Egypt. On learning the desires and plans of the British Government, the Marquis of Rudini lost no time in sending instructions to Massowah that Kassala should be held at least till the autumn, except under pressure of extreme military necessities. The Italian Government expressed gratitude to Great Britain for the proposed co-operation of Egyptian forces against the dervishes, but only as signifying the alliance and community of interests between the two governments in the Mediterranean, for the Dongola expedition was described in the dispatches as "of little military value to Italy."

Early in March two large dervish forces, one of them under Osman Digna, were reported to be advancing upon Kassala. On March 8 the dervishes attacked the friendly chief who held the defiles at Zablerat, near Kassala, but were repelled. On March 18 a larger body renewed the attack and put his men to flight, but with the aid of Italian troops they recovered the position. On April 2 a battalion that was guarding the road over which a caravan was to pass was vigorously attacked by 5,000 dervishes. Col. Stevani set out in haste from Kassala with his whole available force and surprised the enemy and drove them back after a sharp fusillade. The dervishes returned to the attack with large re-enforcements, and were again repelled and driven in headlong retreat toward Tueruf, whence they came. They suffered heavy losses, while the Italians lost 100 killed and wounded. On the following day Col. Stevani made an attack with 2,500 men on the fortifications at Tueruf, capturing a part of them, but losing 10 Italian officers and 300 Askari soldiers. Confident that his force was strong enough to carry the works, he proposed to renew the attack in the morning, but Gen. Baldissera refused to sanction the undertaking, and ordered the commandant, on the contrary, to evacuate Kassala and fall back upon Agordat. Col. Stevani had begun to act upon these instructions and had withdrawn a large part of the garrison, and posted the troops in echelon along the route, when the order to evacuate was countermanded for the political reasons mentioned. The dervishes meanwhile had retired from Tueruf beyond the Atbara to Osobri, demoralized by the losses sustained in the attacks to which they had been subjected by the Kassala garrison, abandoning in their flight many cattle and mules and a large quantity of grain. After the fight of April 3 they buried 800 dead. The camps of the dervishes at Tueruf and Gulusit were protected by palisades and regular siege trenches in three rows.

Peace Negotiations with Menelek.—The Rudini Cabinet that succeeded the fallen Crispi ministry obtained on March 25 a vote of credit of 140,000,000 lire for Africa, including 20,000,000 lire previously voted. The sum was raised by the sale of bonds negotiable only in Italy. While one party in Italy, with which King Umberto was believed to sympathize, called for a forward policy and a triumphant vindication of Italian arms, and while the Radicals and Socialists cried out still more loudly for complete withdrawal from Africa, Gen. Baldissera, with the approval of the Rudini-Ricotti Cabinet, sent Major Salsa to the Negus to begin *pourparlers* for the negotiation of an honorable

peace. Having made up his mind that the Adigrat-Adua line would not be conceded by Menelek unless he was thoroughly beaten in battle, and could not even then be defended without a very large military force, Gen. Baldissera favored the restriction of Italian colonial operations to the triangle lying between Asmara, Keren, and Massowah. Gen. Ricotti, the Minister of War, calculated that to conduct a war would require the employment of an army of 150,000 men for two years at a cost of 1,000,000,000 lire, and that if conquest were to be effected by degrees it would require five years and an expenditure of 1,500,000,000 lire, and even then success would not be certain. Hence it was decided to restrict the Italian possessions to Eritrea. Gen. Baldissera therefore anticipated the Negus Menelek's demands by proposing that the boundary of the Italian possessions should be drawn at the

Kassala. Menelek demanded a war indemnity of 12,000,000 lire to be paid before the Italian prisoners were returned. This the Italian negotiators refused to pay. While negotiations were pending, at the beginning of the rainy season, the Negus retired with his Shoaan army to his own country, taking with him about 2,000 Italian prisoners. By the middle of April the Negus's army had returned to Shoa. King Menelek refused to give up immediately the prisoners that were in his hands, and declined to accept the condition excluding him from admitting any other European protectorate which Italy proposed as an exchange for the abrogation of the treaty of Ucciali, under which Italy claimed that an Italian protectorate was established.

While Menelek's forces were retreating Gen. Baldissera advanced to Addiccia with the object of relieving Adigrat, which was closely invested by

ABYSSINIAN PRIESTS DANCING BEFORE A CHURCH.

Mareb and Belesa rivers, while Tigre would be placed under a ruler acceptable both to Menelek and the Italians, preferably Makonen, but neither Mangascia nor Sebat. The garrisons were withdrawn from Addiccia and Maihaine, forts that were not strong enough to resist attack, and concentrated at Adigrat, which was held by 2,000 men, with provisions to last two months. The Negus was willing to conclude peace, and promised to permit the evacuation of Adigrat with military honors, and to give up all his prisoners if his terms were accepted. The Italian boundary on the southeast he fixed at Senafe. One of the conditions was that the Italians should construct no new fortifications in Eritrea, but Gen. Baldissera informed him that his Government would not consider such a proposition. King Menelek offered to aid the Italians in fighting the dervishes, who were then investing

20,000 Abyssinians under Ras Sebat and Ras Mangascia. By arrangement with Mangascia the Italians were permitted to enter Adigrat and bring relief to the suffering garrison, on condition that they should subsequently evacuate the place and destroy the armament and fortifications. Gen. Baldissera as soon as he arrived at the front called upon the three Tigrin generals to give up all their Italian prisoners. Ras Agostafari promised to give up immediately those that he had. Ras Mangascia, who wrote that he was commissioned by the Negus to conclude a definite treaty of peace, gave an assurance that he was prepared to surrender his prisoners as soon as Adigrat was evacuated by the Italians. Ras Sebat returned an evasive and truculent answer, in consequence of which Col. Stevani was sent out on a punitive expedition. He overtook Sebat's force at Amba and killed 12 men be-

sides devastating several villages. Lieut. Sapelli, with a force of Serai Askaris, captured by surprise the fastness of Amba Debra with a loss of 14 killed. This ended the fighting against Ras Sebat. The Italians evacuated Adigrat before the middle of May, and before the end of that month all the Italian prisoners in Tigre and Lasta were delivered up. The expeditionary force returned to Eritrea and the Italian troops rapidly re-embarked for home, leaving only the normal peace complement to protect the colony. The plan adopted by the Government with regard to Eritrea was to have two ports, Massowah and Zula, and two entrenched camps, Asmara and Senafe, which serve as outlets to the plateau. Between these different points communication will be made easy by means of good roads or railroads. The resources of Eritrea are to be developed by agricultural colonization and by a large immigration. A colony of settlers that had been established by Government aid on the plateau near Godofelassi had been broken up by the war. These colonists were glad to return to Italy, for they had suffered many privations from alternate droughts and floods, locust plagues, and the death of their farm animals.

Major Salsa, when he went in April to reopen negotiations with the Negus, was detained as a hostage for the return of the letters in which the preliminary proposals of Menelek had been made. Gen. Baldissera returned the letters and made no further overtures at the time, considering the peace negotiations to have been broken off by Menelek. Pope Leo XIII dispatched Monsignor Macaire in May with a letter beseeching Menelek to liberate the Italian prisoners. Out of respect for the Pope some of them were sent back. The prisoners were treated by the Negus and the Abyssinian people with kindness, even with hospitality. They were suffered to go at large and to earn their living. Nevertheless hundreds of them died, owing to the climate and the privations that they underwent. Menelek continued to receive arms from Europe so as to be ready for a renewal of hostilities. A cargo of 30,000 rifles was captured by an Italian cruiser on the Dutch steamer "Doelwyk." Caravans with arms and ammunition were accustomed to pass secretly from the French port of Jibuti into Shea. The Russians manifested their sympathy with Abyssinia by sending a party of 80 Red Cross nurses, physicians, and others, including a number of military officers, who landed at Obok after being denied permission to enter Abyssinia from Massowah. Russian agents used their influence to persuade Menelek to accept the terms of peace that were offered by Italy.

In August Gen. Baldissera sent Gen. Valles to treat for the relief of the prisoners and for a peace advantageous to both Italy and Ethiopia. A month later a peace was arranged on the basis of a definite delimitation of the colony of Eritrea, within the limits of which the Italians must confine their operations. The Italian Government agreed to pay 2,000,000 lire as compensation for the sustenance of the prisoners.

AFGHANISTAN, a monarchy in central Asia, separating British India from Russian Turkestan. The reigning Ameer is Abdurrahman Khan, who was placed on the throne by the British in July,

THE MAIN STREET OF OBOK, SOMALILAND.

1880, when they occupied Cabul, the capital. The throne is hereditary in the Durani dynasty, founded by Ahmad Shah in 1747. The population is about 4,000,000, composed of Ghilzais and Duranis, who are of Afghan blood; Tajiks, who are descendants of the Persians who were dominant under the former dynasty of Nadir Shah; Hazaras and Aimaks, sprung from the Tartar conquerors who followed Gengis Khan and Timur; Uzbeks, of more distinct Turcoman race; and the Pathan tribes in the south, with remnants of other races, some supposed to be of Jewish origin and some the descendants of colonies left by Alexander the Great.

The country is divided into the four provinces of Cabul, Turkestan, Herat, and Candahar, each of which has its *hakim* or governor. The loose feudal system that formerly prevailed has given place, under the strong rule of Abdurrahman, to a better centralized and organized government. The Ameer has revived the regular army of Shere Ali, and established an arsenal at Cabul, where cannon, rifles, and ammunition are manufactured under the superintendence of an English engineer, Sir T. Salter Pyne, at the rate of 10,000 Snider and 10,000 Martini cartridges and 15 rifles a day, and 2 field guns, with all equipments, and 2 quick-firing guns a week. Various peaceful industries are carried on with modern machinery in the Ameer's workshops, where 3,000 persons are employed. There is a mint that turns out 120,000 coins a day.

Finances.—The Ameer's revenue, formerly estimated at 7,129,000 rupees, but now of variable amount, is derived from a land tax, paid in kind, ranging from a tenth to a third of the produce, according to the amount of irrigation. He receives a subsidy from the Indian Government, which in 1893 was increased from 1,200,000 rupees to 1,800,000 rupees a year.

Trade.—The exportable products are silks, wool, sheepskin garments, felts, rugs, preserved fruits, asafoetida, horses, spices, and nuts. The imports from India consist of cotton goods, sugar, indigo, and China tea. Their value declined from 4,598,000 rupees in 1891 to 2,705,000 in 1895, and the value of the exports to India from 2,086,000 to 1,527,000 rupees. The trade with Russian central Asia and Bokhara during the same period has grown rapidly.

Subjugation of the Kafirs.—In the delimitation of boundaries between Afghanistan and British India, which followed the Cabul agreement of Nov. 12, 1893, the limit of the British sphere of influence was drawn to include many tribes that had paid intermittent allegiance to Afghanistan, which once included the Punjab and Cashmere, and in recent times many of the hill tribes that since have been subjected to British rule. Kafiristan, however, was placed by this agreement on the Afghan side of the frontier. The Kafirs have always lived at enmity with the Afghans, whose ameer has vainly tried to conquer them. Living in isolation and holding no commercial intercourse with their Afghan neighbors, with whom they are constantly at feud, they have remained poor and wretched in their fertile and well-watered valleys, which have always been coveted by the Afghans cultivating the sterile and rocky soil of the neighboring mountains. The Kafirs have been supposed by some to be of Greek race, descended from the soldiers of Alexander of Macedon. Russian ethnologists have claimed for them a Russian origin, while British ethnologists believe that they are allied to the Hindus, and trace analogies between the Hindu religion and theirs. They are physically a fine race, as fair-skinned as Europeans, often blue-eyed, and hence probably of Western origin. The boundary agreement gave to Abdurrahman the license that he desired to test his army—which had successively subjugated to his iron rule the Shinwaris, the rebellious people of Turkestan, and the powerful Hazaras—upon these indomitable infidels, whose country would well repay the cost of conquest. Preparations for the conquest of Kafiristan took two years, as the troops could not move with their artillery until military roads were built. Gholam Haider Khan, the Afghan commander in chief, marched into Kafiristan with a considerable army in the autumn of 1895. Abdurrahman justified the movement on the ground that, as the new Russian boundary was not many miles from Kafiristan, the Kafirs, if they were not reduced to his rule, would be likely to fall under Russian influence and eventually be absorbed by Russia. The number of the Kafirs has been variously estimated—by some as high as 1,000,000, by others as low as 100,000. Reports from the seat of war represented Gholam Haider's troops as slaughtering the Kafirs wholesale and reducing the survivors to slavery. This was denied by the Ameer's officials, who said that his policy was one of conciliation, and that the fighting was not resumed after the winter campaign, but that Gholam Haider's forces were engaged in making roads with a view to opening the whole province and providing lines of communication with Cabul and Badakshan. The Kafirs are active and athletic shepherds and herdsmen, living on meat and wine, not cultivators of the ground. Their women are described as very beautiful and the men as exceedingly courageous in their own savage mode of warfare, defending themselves and carrying out raids in the country of their inveterate enemies with such reckless bravery and crafty cunning that nearly every man has slain a Mohammedan. But when they are confronted with quick-firing guns and breech-loading rifles their courage fails, for they have a superstitious dread of these modern weapons. Hence Gholam Haider's winter campaign, which ended on Jan. 24, 1896, when the Afghan troops were withdrawn from Kafiristan, was quite successful. The Afghans carried the Kafir outworks in the Bashgal valley and on the side of the Hindu Kush, and were prepared to follow up their success in the early spring by pursuing the Kafirs into their last places of retreat. The Ameer's troops captured 25 forts, not without some serious fight-

ing—so severe, indeed, that the Afghan losses in killed and wounded amounted, by their own admission, to 1,500. Some of the Kafirs the Ameer attracted to his own service, for he was eager to enlist such good fighting men under his banner. He announced that it was not his intention to extirpate them or reduce them to slavery, and chose to regard them not as in fact Kafirs or unbelievers, but as misguided, heretical Mohammedans. He gave orders that the enemy were not to be needlessly slain, but to be taken alive. The population of the country that was overrun and devastated by his troops was transported wholesale from its ancient homes, to be planted again, the Ameer said, in a country adapted to its tastes and habits. Those who escaped took refuge in the mountain fastness from which Timur in his day was not able to dislodge them. The doom of this isolated white race, who appealed to the Feringhis, or English, as brothers, awakened strong sympathy in England; but as the Ameer took firm ground in the matter on his rights under the Durand treaty, the British Government declined to interfere. The Government of India offered to fugitive Kafirs an asylum in Chitral. Many of the Kafirs who were carried off were sold as slaves, especially the women, who are sought after by wealthy Afghans for their harems as Circassian girls are by the Turks. This traffic the Ameer discountenanced, if he did not suppress it, by a decree ordering it to cease. He gave orders to his officials not to oppress submissive Kafirs or seek to convert them to Mohammedanism by force. Those Kafirs who fled to Chitral were assisted and settled on small grants of land by the Mehtar, on condition of their observing the terms attached to the offer of asylum.

The British and Foreign Antislavery Society memorialized the British Government, calling attention to the precarious condition of the Kafirs and entreating the Government to use its influence with the Ameer, who has become better armed by means of large grants that he receives annually from the Indian Government, not only for the prevention of the exterminating raids upon the Kafirs and other tribes of the Hindu Kush, but also for the abolition of slavery throughout Afghanistan itself, which alone can put a stop to the continued capture of slaves that has for centuries been the motive of predatory attacks upon neighboring and weaker tribes. The troops occupied in the spring the southern and eastern portions, and held the strategic positions that insured the domination of Kafiristan. Thence they moved into the northwestern district in the summer, in order to complete the subjugation of the people, who were promised that they would be well treated if they submitted peacefully. The operations of Gholam Haider in the winter had extended into the Arnawai valley, inhabited by 40,000 Kafirs, 16,000 of whom were carried off into Afghanistan. In the course of the fighting several hundred Kafirs burned themselves to death rather than fall into Mohammedan hands. This valley was expressly reserved in the Durand treaty to the British sphere of influence, and therefore the Ameer was called upon to restore to their homes all those whom he had deported.

The Pamir Boundary.—The mountain systems of Asia diverge, striking northward, eastward, and westward from the tract in which the Pamir Boundary Commission in 1895 marked out the limits between India, China, Russia, and Afghanistan. The lines correspond closely with the ranges that start in the neighborhood of the Wakhir and Kilik passes, to extend to the farthest limits of the continent. At this point, where the three empires meet, a wedge of Chinese and one of Afghan territory are interposed to separate by many miles the Indian from

actual contact with the Russian empire. The Hindu Kush, with numerous practicable passes, but none available for an army, divides India from Afghanistan, and the Murtagh range forms an impassable boundary between India and the new dominion of China, while China is separated from the new Russian possessions by the Sarikol mountains. Direct access to the passes leading into British India by way of Chitral from the Great Pamir, in which is Lake Victoria, can only be obtained by passing through the Little Pamir and its extension westward to Bozai Gumbaz. So long as there was a Russian post at Bozai Gumbaz there was a domination of the passes that caused apprehension on the part of the Anglo-Indian authorities and exercised a disturbing influence on the neighboring hill tribes. The retirement of the Russians, under the treaty, to a point many miles from Bozai Gumbaz, with an impracticable mountain range intervening, changes the situation in this respect. The narrow strip of Afghan territory will form but a slight obstacle in the event of war, but nothing short of war will justify a violation of the boundary. Hence no fresh Pamir incident is likely to arise to cause alarm in India and Great Britain. To complete the arrangement between England and Russia there remained only the surrender of the Darwaz district of Bokhara to the Afghans up to the Amu Daria. Owing to the reputation of the Afghans for cruelty, the Russian Government wished to give the inhabitants plenty of opportunity to retire across the river into Bokhara before the Afghans entered, and hence the transfer was not completed till October, 1896, after the people had gathered in their harvest.

Russian Railroads.—While the English are impeded in the race to Herat by the refusal of the Ameer to permit the extension of the British military railroad from its present terminus at Charman into Afghan territory as far as Candahar, the Russians have it in their power to extend their railroad on their own territory from Merv up the Murghab and Kushk valleys to the frontier post at Kushk, within 94 miles of Herat. The Indian Government has collected a great quantity of railroad material at the end of the Northwestern Railroad of India, ready to lay down the line at once as soon as the Ameer will grant the coveted permission, or as soon as an outbreak of hostilities with Russia shall necessitate the occupation of Afghanistan and a race for Herat in earnest. These preparations on the British side have prompted the Russian Government to make the long-deferred railroad extension, which the prospect of trade with the rich province of Herat renders desirable in commercial regard also. No sooner was the Pamir scare removed by the new boundary treaty than British fears were excited by the report that the Russian authorities had decided to build a broad-gauge line 220 miles long, from Merv to the Kushk, and also to collect at the Kushk terminus the material for laying down rapidly 200 miles of Décauville railroad between that point and Herat. The Kushk Railroad is expected to be completed in two years. Another contemplated branch of the Transcaspian trunk line is planned to run 140 miles along the Oxus from Charjui to Kerki, which will bring Russia within striking distance of Balkh, the ancient capital city of Afghan Turkestan, and thus will greatly improve the strategic position in the direction of Mazari-Sherif, along the line of advance to Cabul.

ALABAMA, a Southern State, admitted to the Union Dec. 14, 1819; area, 52,250 square miles. The population, according to each decennial census since admission, was 127,901 in 1820; 309,527 in 1830; 590,756 in 1840; 771,623 in 1850; 964,201 in 1860; 996,992 in 1870; 1,262,505 in 1880; and 1,513,017 in 1890. Capital, Montgomery.

Government.—The following were the State officers during the year: Governor, William C. Oates; Secretary of State, James K. Jackson; Treasurer, J. Craig Smith; Auditor, John Purifoy; Attorney-General, William C. Fitts; Commissioner of Agriculture, H. D. Lane; Superintendent of Education, John O. Turner; Adjutant General, H. E. Jones; Chief Justice of the Supreme Court, Robert C. Brickell; Associate Justices, Thomas N. McClellan, Thomas W. Coleman, James B. Head, and Jonathan Harlson; Clerk, Sterling A. Wood—all Democrats.

Finances.—The reports of the Treasurer and the Auditor for the fiscal year ending Sept. 30, 1895, show the following: Cash in the treasury at the beginning of the year, \$19,816.76; receipts during the year, \$2,038,648.95; disbursements, \$2,047,966.41. The total bonded debt of the State on Oct. 1, 1895, was \$9,354,600, on which the interest charge is \$379,964. The amount of bonds yet to be issued is \$188,400.

Valuations.—The total assessed valuation in the State in 1895 was \$241,338,024.99, divided as follows: Real estate, \$145,516,138.49, on which the tax was \$800,330.50; personal property, \$95,821,886.50, on which the tax was \$528,486.89. The tax rate was 5½ mills, the Legislature of 1894 having increased the tax rate half a mill on the dollar. The total of tax assessed was \$1,328,817.39. The valuation in 1895 was less than in 1894 by \$1,833,652.01, and the tax levied amounted to \$111,536.39 more than in 1894. The shrinkage in tax values during the past four years has been about \$36,000,000.

Railroads and Telegraphs.—The State Board of Assessment, in April, fixed the valuation of the railroads in the State at \$42,186,809.58 and the tax value of the telegraph companies at \$415,694.31, the tax value of both amounting to \$42,602,503.89. The fifth annual report of the Alabama Car Service Association states that during 1895 the total number of cars handled by the roads belonging to the association was 242,273 against 182,129 in 1894. The expenses were \$10,684.83. The following-named roads are interested in the association: Queen and Crescent, Louisville and Nashville, Southern, Central of Georgia, Kansas City, Memphis and Birmingham, Western of Alabama, Plant System (Third Division), Mobile and Birmingham, Birmingham and Atlantic, Georgia and Alabama, Mobile and Ohio.

Banks.—According to the last published report of the United States Comptroller of the Currency, Alabama, on Sept. 28, 1895, had 26 national banks, whose combined capital was \$3,485,000, and the total resources of which amounted to \$12,195,875.51. The amount of United States bonds held to secure circulation was \$1,142,000; excess of such bonds beyond requirement, \$702,500; amount of coin and coin certificates held, \$628,448.40; notes issued for circulation, \$7,328,440; redeemed, \$6,121,617; outstanding, \$1,206,823; and loans and discounts, \$6,319,975.37. The number of State banks was 17, with a combined capital of \$858,500, resources of \$1,981,889, deposits of \$817,022, and surplus and other undivided profits of \$253,227. On June 29, 1895, there were 7 private banks, with a total capital of \$435,050, resources of \$1,085,596, deposits of \$512,609, and surplus and profits of \$109,509. The savings banks did not report.

Education.—The public-school teachers of the State did not receive payment on Oct. 1 for the last scholastic quarter. In a letter dated Oct. 9, 1896, Gov. Oates stated that he had been unable to borrow from Northern banks the money needed to meet these and other State obligations, the ground of refusal being that the Democratic party in Ala-

bama in the spring convention had declared in favor of the free and unlimited coinage of silver. Several of the State banks were willing to loan \$100,000 at 8 per cent., but that sum could not be applied to the payment of salaries. The collection of taxes seemed to him the only means to secure the money needed for that purpose. In an interview, in February, the Governor said the deficiency in the revenues had been caused by reducing the tax rate about six years previously, and at the same time increasing the public-school appropriation by \$100,000 per annum. During the fiscal year ending Sept. 30, 1895, the disbursements from the educational fund amounted to \$571,383.61, and an unexpended balance remained of \$167,193.37.

The Industrial School for white girls, at Montevallo, was opened Oct. 12, with 164 pupils, 130 of whom were boarders. The plans made were for buildings to cost not less than \$50,000, but, as the funds in hand were not sufficient for such expenditure, only the main building has been completed. Tuition is free, and, in addition to literary studies, music, art, stenography, typewriting, telegraphy, dressmaking, millinery, and scientific cooking will be taught. The State appropriation is \$15,000. This is the first industrial school for whites established in the State. There are 3 for negroes.

Prisons.—The report of the convict inspectors shows that on Feb. 29 the number of State convicts in confinement was 1,659, and of county convicts 835. During the winter the most comfortable prison buildings in the State were erected on the convict farm of 1,800 acres on the Tallapoosa river, known as "Prison No. 4," and at the end of March they were occupied by 194 negro prisoners. Work is in progress on the plans and specifications of a cotton mill to be put up at Spiegner—Prison No. 2—and arrangements on a larger scale have been completed for brickmaking there. The convict system is now self-supporting. The report states that the cash balance to the credit of the Convict Bureau was \$14,797.25, and available resources made the surplus amount to \$39,967.07. The mortality, especially among convicts at the mines, was still too great, and there was much fighting among the prisoners. During the three months ending with February one convict had killed another in a fight, and one officer had been killed while trying to stop a fight. The receipts into the convict fund during the fiscal year ending Sept. 3, 1895, were \$163,235.76.

Exports.—The total exports from the port of Mobile for the fiscal year ending Aug. 31 were valued at \$6,996,079, an increase over the previous year of \$1,800,000. The greater part of this increase was in cotton exports. The exports are divided as follow: General merchandise, \$1,330,023; cotton, \$4,183,339; lumber and timber, \$1,482,717. The lumber and timber exports were as follow, the measurements being in superficial feet: Hewn timber, 15,176,604; sawed timber, 51,896,160; lumber, foreign, 36,947,544; coastwise, 3,458,422; total, 107,478,730 feet, against 111,368,461 feet exported last year. The decrease is accounted for by the condition of affairs in Cuba, one of Mobile's best customers. The shipments to Cuba this year, in round numbers, were only 4,000,000 feet, against 9,000,000 feet last year, and 19,000,000 the year before. The shingle trade of Mobile is steadily decreasing. The export of corn amounted to 842,725 bushels, an increase over last year of 767,640 bushels.

Products.—The report of the Secretary of the New Orleans Cotton Exchange states that the cotton crop to Aug. 31 was 830,000 bales. Last year it was about 1,000,000 bales.

During 1895 there were manufactured in Alabama 6,450,595 cigars and 2,800 cigarettes. There

were also manufactured 9,367 pounds of plug tobacco and 280 pounds of smoking tobacco. There are 51 cigar manufactories in the State.

The corn crop of 1895 was 44,376,847 bushels.

The State Commissioner of Agriculture reports that the number of fertilizer tags sold from Oct. 1, 1895, to May 1, 1896, was 1,038,622, against 612,185 during the preceding twelve months.

Legal Holidays.—In 1895 Alabama made the birthdays of Robert E. Lee (Jan. 19) and Jefferson Davis (June 3) legal holidays.

Political.—The State Democratic Convention met at Montgomery on April 21. The platform adopted contained the following declarations:

"We declare our continued faith in the old time-honored principles of the Democratic party, and among these principles are the following:

"The free and unlimited coinage of silver and gold at 16 to 1 as the standard money of the country, without any discrimination against either metal, and without the consent of foreign nations, as the United States coined silver and gold before the Republican party obtained control of the Government and changed the coinage laws of the country for the benefit of a class and to the injury of a great mass of the people.

"The unconstitutional penalty of 10 per cent. on each issue of State bank notes by any State or national bank ought to be repealed.

"It is our purpose to maintain a government in this State fair and just to all, under control of the white men of Alabama.

"We are in favor of honest and fair elections, and we recommend that laws be enacted under which primary elections and other party proceedings for the selection of candidates may be conducted."

On the first ballot, Joseph F. Johnston received the nomination for Governor. The remainder of the ticket was completed as follows: For Secretary of State, James Kirkman Jackson; Treasurer, George W. Ellis; Auditor, Walter S. White; Attorney-General, William C. Fitts; Superintendent of Education, John O. Turner; Commissioner of Agriculture, I. F. Culver.

On April 28 the Republicans met at Montgomery. A strong minority was opposed to fusion with the Populists, which had been agreed upon in November, 1894. Two conventions, therefore, were held. One—over which Dr. R. A. Mosely, chairman of the Republican State Committee, presided—agreed to adopt the Populist ticket. The other convention, with no opposition, adopted a platform that declared for a tariff for revenue and protection; for allegiance to the doctrine of reciprocity; for a 100-cent. dollar, whether gold, silver, or paper; and for the construction of the Nicaragua Canal and the permanent vesting of its control in the United States. The nomination of William McKinley for President was urged, and delegates were instructed to vote for him so long as his name should be before the National Convention. Among the declarations of the platform were the following:

"We believe that the long lease of power granted the Democratic party of this State has resulted in the machinery and offices falling into the hands of a corrupt element of the party, and that it is asking too much of human nature to believe that corruption will purify itself. We are in favor of the abolition of the Railroad Commission of Alabama.

"We have always given protection to our shipbuilders. In late years we have neglected to protect our shipowners. We believe the time has come to return to the policy of Washington and Hamilton, which, by discriminating duties in favor of American bottoms, secured 90 per cent. of our carrying trade to American ships.

"We are opposed to a constitutional State conven-

tion, under any pretext, as the main object will be to disfranchise the illiterate and poor, as set forth in the Joseph F. Johnston thirteenth plank in the State platform in 1892."

As soon as action on the platform had been taken it was announced that a committee of the People's party was in attendance to receive any communication the convention might wish to make. A committee to confer with the Populist committee was appointed, which reported that the Republicans were invited to name the candidates for Secretary of State and Attorney-General, and this proposition was accepted by a vote of 163 to 143; James A. Grimmett was nominated for Secretary of State, and William H. Smith, Jr., for Attorney-General, and the convention adjourned.

The convention of the People's party assembled in Montgomery, on April 29, while the conventions of the two wings of the Republican party were still in session. Strong opposition to fusion with the Republicans agitated the Populist ranks, but finally it was determined that, if fusion should be effected, the nominations for Secretary of State and Attorney-General should be given to the Republicans. A. T. Goodwyn was unanimously nominated for Governor. A platform was adopted which declared:

"We demand a free ballot and a fair count.

"We demand the free, unlimited, and independent coinage of silver and gold at the ratio of 16 to 1, and the abolition of national banks, the expansion of the currency to meet the needs of the people and the demands of commerce, free from the control of corporate influences, and we condemn the issue of interest-bearing bonds in times of peace.

"We demand that miners and other like corporate labor be paid in lawful money of the United States semi-monthly.

"We favor a tariff for revenue, so adjusted as to protect, as far as practicable, the farmers and the labor in our shops, mines, factories, and mills, and their products, against foreign pauper labor."

The joint Populist-Republican nominations were as follows: For Governor, A. T. Goodwyn; Secretary of State, James A. Grimmett; Treasurer, J. A. Bingham; Auditor, W. S. Forman; Attorney-General, William H. Smith, Jr.; Superintendent of Education, W. M. Wood; Commissioner of Agriculture, J. H. Harris. At the election in August the Democratic ticket was successful, Johnston receiving 128,541 votes for Governor, and Goodwyn 89,290.

In April, by a practically unanimous Republican vote, after investigation by Congress, the seats of G. A. Robbins and James E. Cobb, Democrats, who claimed to have been elected to Congress in 1894, were given to William T. Aldrich, Republican, and A. T. Goodwyn, Populist, who contested the election on the ground of fraud.

The presidential vote in November gave a Democratic plurality of 76,489. The fusion of regular Democrats and Populists resulted in a combined vote of 131,226. Of these, Bryan and Sewall received 107,137; Bryan and Watson, 24,089. The Republican vote was 54,737. The national or "gold" Democrats had 6,462 votes cast in their favor; Prohibitionists, 2,147. The total presidential vote was 194,572, being 23,259 less than the vote for Governor in August, and from 38,000 to 40,000 less than the presidential vote of 1892.

Nine Democrats were chosen at the November election for Congress—Messrs. Taylor, Stallings, Clayton, Plowman, Brewer, Bankhead, Bullock, Wheeler, and Underwood. Messrs. Taylor, Plowman, and Bullock are free-silver advocates.

The State Senate in 1897 will include 22 Democrats, 9 Populists, and 2 Republicans; House, 73 Democrats, 23 Populists, and 4 Republicans.

ANGLICAN CHURCHES. Contributions.—

The following is a summary of voluntary contributions in the Church of England during 1894 (or from Easter, 1894, to Easter, 1895) for the following branches of Church work: For assistant clergy, £596,450; Church collections and Easter offerings, £117,954; salaries of lay helpers and Church expenses, £1,120,015; for the maintenance of day and Sunday schools, £802,940; home missions, £129,988; foreign missions, £251,102; diocesan, £83,172; general, £60,610; for the support of the poor, £549,155; for any other purpose (religious or secular), £193,469; for church building, £1,140,257; burial grounds, £29,457; endowment of benefices, £137,665; parsonage houses, £113,954; school buildings, £525,798. Total, £5,851,986. These figures represent the result of a careful tabulation of the details furnished by 97 per cent. of the clergy making their annual return in compliance with the request of the archbishops and bishops and in conformity with the methods suggested by the Convocations of Canterbury and York. The statement is confined to moneys raised parochially, and does not therefore include the offerings of Churchmen made direct to central societies and independently of the parochial clergy (or for the general maintenance of hospitals and similar institutions). In these circumstances the total sum represented above can not be regarded as by any means a complete record. It should further be recollected that all grants from the ecclesiastical commissioners, Queen Anne's bounty, and similar sources have been consistently excluded in making the calculation. The following are the diocesan details of the summary: Canterbury, £243,450; York, £235,418; London, £637,956; Durham, £112,846; Winchester, £270,584; Bangor, £30,653; Bath and Wells, £109,977; Carlisle, £81,009; Chester, £172,029; Chichester, £201,198; Ely, £109,722; Exeter, £161,091; Gloucester and Bristol, £188,681; Hereford, £71,082; Lichfield, £231,412; Lincoln, £80,256; Liverpool, £196,376; Llandaff, £123,791; Manchester, £359,128; Newcastle, £64,772; Norwich, £133,662; Oxford, £201,513; Peterborough, £153,275; Ripon, £176,039; Rochester, £451,429; St. Albans, £241,638; St. Asaph, £61,714; St. Davids, £64,975; Salisbury, £117,400; Sodor and Man, £8,383; Southwell, £181,669; Truro, £72,443; Wakefield, £110,448; Worcester, £195,951.

The total net income of the Episcopal Church in Wales from endowments and the Ecclesiastical Commission was £186,000, while the voluntary contributions amounted to £281,000. The fact has been used by the Archbishop of Canterbury to prove that the Episcopal Church in Wales is not idle or indifferent.

The Propagation Society.—The annual meeting of the Society for the Propagation of the Gospel in Foreign Parts was held in London, May 7th, the Archbishop of Canterbury presiding. The report showed that the income of the society for 1895 was £118,258, including £11,600 from legacies and £15,648 received for special funds. The society had now 11 bishops and 758 other ordained clergy on its list, distributed thus: In Asia, 250; Africa, 178; Australia and the Pacific, 30; North America, 226; West Indies, 45; and 40 chaplains in Continental Europe. Of all these, 133 in Asia and 46 in Africa were natives. There were also 2,900 lay teachers and 3,200 students in the colleges. The society was working in 55 dioceses, and in 5 localities was supporting community missions. The increase of £2,500 in voluntary contributions (the decrease of legacies being £6,000) was far behind the legitimate needs of the society. An appeal was made for £4,000 to repair damage done in Madagascar.

Church Missionary Society.—The ninety-seventh annual meeting of the Church Missionary Society was held in London, May 5. Sir John Kenna-way presided. The total income of the society for the year had been £264,085, while the expenditure had been £279,732, and the deficit was brought up to £17,069. Three marked events were referred to as likely to distinguish the year's history of the society: the massacre in Ku-Cheng, China, the development of the Uganda mission, and the beginning of the three years' enterprise which was to lead up to the celebration of the one hundredth anniversary of the society in 1899. Twenty-one hundred and forty-six adult converts—the largest number on record—had been baptized in the India and Ceylon mission. Among these were converted Brahmans, Mohammedans, and Parsees. A Parsee Christian association had been formed at Bombay. The missions in western Asia—in Palestine—had met with difficulties that showed no tendency to diminish. The condition of the missions in Africa was very encouraging, especially in Uganda, where 2,921 adults had been baptized, besides 600 children of Christian parents. The demand for the Scriptures was greater than ever before, and 40,000 printed books had been sold during the year. Progress in Japan had been slower than had at one time been anticipated. The outbreak in China had been a serious check to the work of the society there; but in the Fuh-Kien province 503 adults converts had been admitted by baptism to the Church. The "Three Years' Enterprise" was commended in addresses made at the meeting. The Bishop of Exeter hoped that £400,000 would be raised in the first year, £500,000 the second, and that at least a million pounds would be contributed in the three years to intervene before the centenary of the society.

The report of the Medical Mission Auxiliary of the Church Missionary Society, which is responsible for all the medical work of that society, made at its annual meeting, June 4, showed that it had 7 missions in India, 7 in China, 2 in Persia, 5 in Palestine, 3 in East Africa, 1 in Egypt, and 1 at Metlakatla, among the Indians of the Pacific slope. There were 830 beds in their hospitals, and last year 6,432 in-patients had been treated, the visits of out-patients numbering 417,000. The income had risen from £2,200 to over £3,000, besides £1,000 for a new hospital at Cairo; but the expenses had been £4,635, in addition to £1,200 raised at the mission stations, and a balance of £1,500 had become a deficit of £525. At least £5,000 would be needed this year, without any extension of work. It was hoped this year to start new medical missions in Uganda, Hok-Chiang, Szu-Chuan, and Peshawur, besides a women's mission at Cairo, and to send 2 new doctors to Persia. Mr. James Monro, C. B., described the medical work in lower Bengal, and claimed that such work was as integral a part of evangelization as were teaching and preaching.

Missions in Africa.—In a statement regarding the missions in Africa, issued by this society, it is calculated that there are in Africa 1,000,000 Protestant native adherents, of whom 100,000 are communicants, more than 1,200 European missionaries, and about 1,000 mission stations. The following table is given showing the present position of the work of this society in particular as compared with its condition in 1888:

CLASSIFICATION.	1888.	1895.
Native clergy	2	3
" lay teachers	19	332
" Christians	2,691	6,374
" communicants	402	1,046
" pupils	548	1,078
Contributions	R456	R3,633.67

It is further stated that during the seven years 1888 to 1895 the number of converts and communicants in Uganda practically doubled year by year. The number of adult baptisms in Uganda in 1894 was more than 1,000. During the great persecution of 1886 in Uganda, the native Christians exhorted one another with the words, "Be willing to die rather than deny." More than 200 Protestants and Roman Catholics lost their lives because of their faith. The Christians of Uganda have sent 21 missionaries to foreign lands—that is, to tribes outside of Uganda. In regard to West Africa it is pointed out that seventy-five years ago the darkest heathenism prevailed in Sierra Leone, whereas now there is a self-supporting church with its own native missionary society. At Bonny, on the west coast, a church, to build which the natives gave £2,000, now stands close to the spot where formerly was a heathen temple, a part of the walls of which consisted of human skulls. Two native clergymen were consecrated in June, 1893, as assistant bishops in western Equatorial Africa.

An appeal issued by this society in respect to the observance of the day of intercession for foreign missions points out that the twenty-four years since the day was designated have been a period of continuous increase. The number of missionaries has risen from 225 in 1872 to 671, viz.: From 20 to 114 in Africa, from 8 to 73 in the Mohammedan lands of the East, from 137 to 267 in India and Ceylon, from 19 to 89 in China, from 2 to 60 in Japan, and from 12 to 49 in northwest Canada. A gratifying feature is the increasing number of university graduates and qualified medical men coming forward, "while the awakening among Christian women of all classes, particularly of refined and educated ladies, is one of the brightest signs of the times." The Christian adherents have increased in the period under review from 100,000 to 217,000, or have more than doubled: the communicants from 20,000 to 58,000, or nearly threefold; and the adult baptisms during the year from 1,791 to 6,725.

The financial statement of the Zululand Mission showed receipts of £2,162, and expenditures of £1,842, for the general fund; while £358 had been received for the bishopric endowment fund, and £374 for other special purposes. The Christian character of the Zulu converts was represented by speakers at the annual meeting, May 5, as being of a very high order.

The Church of England has 8 clergy, 5 nurses, and 3 catechists in Mashonaland, but more are required. Churches have been built at Balawayo, Salisbury, and Umtali; and additional clergy and missionaries are wanted, with funds to send them out and support them. The diocese of the bishop contains 500,000 natives and 5,000 Europeans, and £3,000 a year are spent on the mission.

Other Missions.—The report of the Woman's Mission Association for the Promotion of Female Education in the East, in the missions of the Society for the Propagation of the Gospel, presented June 8, showed that there were in connection with the association 72 woman missionaries and 82 native teachers in India, Burmah, Japan, Madagascar, and South Africa. The receipts had been £57,341 in the general fund and £890 in special funds, and the expenditure, £5,145 for the former and £1,098 for the latter funds. The schools of the association had been affected disadvantageously by the changed conditions under which the Indian Government made its school grants.

The income of the Church of England Zenana Missionary Society for the year ending March 31, 1896, was £32,105, and the expenditure was £33,683. The society had 53 stations in India, 8 in China, and 1 in Ceylon; and its staff numbered 276 mis-

sionaries and assistant missionaries and 637 native Bible women teachers and other workers.

The report of the Colonial and Continental Church Society showed that the home income for the year had been £20,876, or £2,000 less than in the previous year; adding the sums raised and spent in the colonies and on the Continent, the income was £42,276. The debt had been reduced to £2,000. The amount of legacies to the society was £7,000 less than in the previous year. Representatives of Anglican Church interests abroad testified in the annual meeting, May 6, to the value of the aid given by the society. In parts of Quebec, the bishop of that diocese said, where the Protestant minority was not large enough to claim the establishment of a dissentient school board, the society's grants made a Protestant school possible.

At the meeting of the Anglican Church Conference for Northern and Central Europe, held in the British embassy at Vienna, June 3, Bishop Wilkinson, presiding, gave an account of his work during the past year among the chaplaincies under his jurisdiction. He regarded the work as one of steady, peaceful progress.

Missionary Literature Committee.—At the annual meeting of the Board of Missions of the Provinces of Canterbury and York, June 25, the Missionary Literature Committee were requested to consider the whole subject of religious literature in the non-European languages in the mission field; to add to their number representatives of each region of the mission field; and to invite others to assist them in their deliberations. A committee was instituted to collect information as to the work of the Church abroad, and present it in a concise form. The subject was considered of what practical steps should be taken to promote a general advance in missionary work in connection with the approaching centenary celebrations of the Society for the Propagation of Christian Knowledge, the Society for the Propagation of the Gospel, and the conference of the bishops of the Anglican communion to be held in 1897.

Church Benevolences.—The Church Pastoral Aid Society returned an income in its sixty-first year of £68,182, a decrease from the previous year of £1,784, but considerably above the average for the past five years. Forty-nine new grants had been made during the year to 48 parishes. The whole number of grants that are now on the society's books was 867, which is 14 more than in the previous year. These grants, if all in operation, represented a liability of £63,299. The actual expenditure of the year amounted to £60,678. The average population of the 48 parishes to which new grants were made was 8,751.

The receipts from subscriptions for the year of the Poor Clergy Relief fund, as reported at the annual meeting, July 2, were £2,934, while the amount of donations was £4,334. Eight hundred and thirty-eight cases had been assisted with grants amounting to £9,911.

The income of the Bishop of London's fund for 1895 was £22,243, against £24,541 in 1894. The falling off was due to a reduction in the amount received from legacies from £5,136 in 1894 to £655 in 1895. The amount received from subscriptions, gifts, etc., showed an increase of £1,209. The fund had been just able to keep the work going and no more.

The revenue of the Church Army for 1895 was £71,000, against £54,000 in 1894.

The Church House.—The Church House at Westminster was opened Feb. 11, by the Duke and Duchess of York, for the special use of the Church of England and its societies and of the Church in the colonies and dependencies of the British Empire,

as well as of affiliated churches. The scheme for the erection of such a building was first suggested in a practicable shape by the late Bishop of Carlisle, Dr. Harvey Goodwin, who proposed, in the Convocation of York, that such a building should be erected as the Church's memorial of the Jubilee of the reign of Queen Victoria. The building contains on the ground floor rooms for the 2 houses of Convocation, the chamber of the upper house being large enough to accommodate the bishops of both the Convocations of York and Canterbury, if they should ever sit together. In view of the intention to erect other quarters for convocation, these rooms are so arranged that when they shall cease to be occupied for that purpose they can be conveniently divided into sets of offices. Above these rooms is a great hall, capable of accommodating 1,200 or 1,300 persons, where large meetings may be held. It is intended to extend the building from time to time till they shall surround the whole quadrangle of which the present one occupies a part, and provide offices for the numerous societies, etc., which now occupy the buildings already standing on the premises. A provision is incorporated in the by-laws of the institution admitting to association in its privileges any Church house situated out of England; and the bishops of the missionary and colonial Churches and of the Protestant Episcopal Church in the United States have appointed honorary secretaries in connection with it. An essential part of the work to be performed through its instrumentality are the collection, dissemination, and exchange of information about the work of the Church everywhere, and the promotion of union and co-operation throughout the Anglican communion.

The premises appertaining to the Church House had been occupied for Church purposes since 1887, and had already become the headquarters of 20 societies connected with the Church of England, while 450 meetings were held there in 1895. The Church was represented by local secretaries in 120 dioceses of the Anglican communion outside of the British Isles.

Council of Diocesan Conferences.—The annual meeting of the Central Council of Diocesan Conferences was held in Westminster April 23 and 24. Lord Egerton of Talton presided. Resolutions were passed recommending the adoption of a general clergy sustentation scheme; approving the formation of diocesan trusts for Church objects; approving the general provisions of the Benefices bill, which was then before the Houses of Parliament; and giving support and suggesting amendments to the Government Education bill.

Clergy Sustentation Fund.—A committee appointed by a letter of the archbishops, March 16, 1896, to consider the subject of clergy sustentation published in June a definite scheme of the Clergy Sustentation fund, to embrace in its operations the two provinces of Canterbury and York. The objects of the fund are defined to be "to impress upon all the members of the Church of England the clearly defined Christian duty of contributing toward the support of the clergy, and to supplement and extend the diocesan organizations for the support of the clergy, to elicit contributions in this respect from the richer toward the poorer dioceses, and generally to promote the further sustentation of the clergy." The methods by which it was proposed to advance these objects included the affiliation of the existing diocesan organizations for the sustentation of the clergy, and the formation of such organizations in dioceses where they do not now exist; the establishment of a central fund, to consist of contributions from affiliated diocesan organizations and the general contributions to the fund itself and to be applied in making annual

grants in augmentation of the income of needy benefices; the acceptance and administration of special funds for the clergy, whether by way of permanent endowment or in any other manner, according to the wishes of the donor; and co-operation with other institutions having similar objects. The governing body of the fund will be a board of laymen, consisting of 3 members elected by each diocese. Subject to the control of this board, the fund will be managed by an executive committee of 42 laymen, of whom 6 will be nominated by each of the 2 archbishops, and the remaining 30 will be elected by the board, 10 in each year, to hold office for three years.

Declarations against Unlawful Marriages.—At a meeting of the English Church Union, held Dec. 19, 1895, the Duke of Newcastle presiding, it was resolved, on motion of Canon Knox Little, "that a petition, to be signed by members of the Union and other Church people, be presented to the bishops of the provinces of Canterbury and York, praying them to take immediate and effectual steps to put a stop to the scandal resulting from the blessing of the Church being given by individual clergymen to the marriage of divorced persons contrary to the law of the Church of England, to the contempt of all ecclesiastical discipline, and to the grievous injury of Christian morality." Resolutions have been passed in the two Convocations condemning such marriages and disapproving the sanction of them by clergymen.

The Australian Anglican Synod has passed a resolution disapproving of the use of the Church service and Church buildings for the marriage of divorced persons, except for the party wronged in a case of adultery.

The Home Reunion Society.—The report of the Home Reunion Society, presented at its annual meeting, June 25, stated that at the beginning of the year the council had decided to organize two conferences—one with the Church of Scotland and one with the Wesleyans. Several courteous letters were exchanged, but circumstances pointed to the necessity of postponing the conferences to a more suitable time. The address of the Rev. Mr. Shakespeare, Baptist, at the Norwich Church Congress in 1895, had resulted in an interchange of courtesies between the nonconformist ministers and a clerical society in that city. The impossibilities of union seemed as great as ever, but the very fact of such a meeting being held in such a spirit must have a healing effect.

The Liberation Society.—The annual meeting of the Society for the Liberation of Religion from the Patronage and Control of the State was held in London in May. The report dwelt upon the advance that had been made for Welsh disestablishment since 1892, commended as a whole the bill before Parliament, while criticising some of its details, and advised the friends of Scottish disestablishment to adopt means to quicken the action of the Government and to counteract the strenuous efforts that would be made at the next election to defeat candidates in favor of disestablishment. Other measures of "piecemeal disestablishment" were touched upon, and in the educational work of the campaign the friends of the society were urged to seize the present golden opportunity for new efforts to instruct the public mind and appeal to the public conscience. The report maintained that profound dissatisfaction existed within the Established Church at the growth of sacerdotalism within its pale, as well as at the impossibility of obtaining from Parliament reforms required to secure the liberty which is "as breath and life" to a progressive Church. Besides enforcing the expressions of the report on these subjects, the resolutions passed at

the annual meeting of the society urged determined resistance to all attempts to sectarianize the board schools, and called upon the advocates of religious equality to take steps for such educational work in the constituencies, in view of the next general election, as would secure the return of a House of Commons pledged to the policy of disestablishment.

Church Defense and Church Reform.—Two methods have been adopted by the friends of the Church of England to meet the attacks that are made upon the Establishment, and to commend the Church to the continued regard of the people to whom the Liberationists address their arguments—Church defense and Church reform. The methods of the Church Defense Societies are sanctioned by the bishops, and branches have been formed in the parishes. Their purpose is to organize committees in every diocese, archdeaconry, rural deanery, and parish for the purpose of disseminating information about the history and work of the Church, and its claims to the endowments which it possesses. The chief means employed for accomplishing this object are lectures and the distribution of literature and leaflets.

It is, however, recognized even by the warmest friends of the Church that there are certain features in its organization and its relations to the Government and the people that need to be modified. The pursuit of this object has resulted in the movement for Church reform and the formation of the Church Reform League, an association non-political in character, and intended to embrace Churchmen of all schools, which was organized in November, 1895. This body issued a pamphlet in August, 1896, which opens with the observation that no one is entirely satisfied with the condition of the Church as it is, and that the league appeals to Churchmen with the view of uniting as many as possible in formulating a wide and reasonable scheme of reforms and arousing public interest in them. It is maintained in the pamphlet that a change is needed in the election of bishops, and that it is time to do away with the income limit of £3,000 per annum that seriously thwarts the founding of new sees. The work of the Church, it says, calls for a large episcopate; it in no way demands a rich episcopate. It also declares that "our houses of laymen should be the crown of an organized representation that begins with the parish." After reciting the terms of the first clause of Magna Charta, "that the English Church be free and have its rights whole and its liberties unimpaired," the address sets forth the principles of the reform to be advocated by the league under the following heads:

I. Self-government of the Church: That, saving the supremacy of the Crown according to law, and, in respect to legislation, subject to the veto of Parliament, the Church have freedom for self-government, by means of reformed Houses of Convocation (which shall be thoroughly representative, with power for the Canterbury and York Convocations to sit together if desired), together with a representative body or bodies of the laity. *II. Position of the Laity:* That the laity have the principal share in the administration of finance, and, within the fixed limits of Church order, a real control in the appointing of their pastors, and in all matters of ecclesiastical organization and administration a concurrent voice with the clergy. That the communicants of every parish have a recognized power to prevent the arbitrary alteration of lawful customs in ritual. *N. B.*—This is not to be understood as encroaching upon the province of the spirituality in relation to matters of faith, worship, and discipline. *III. Discipline:* That all ministers and Church officers be removable by disciplinary process, benefices being made tenable only during the

adequate performance of the duties, and that a 'godly discipline' for the laity be established. *IV. Patronage:* That all transfers by sale of next presentations and advowsons be made illegal, but that where patronage is transferred to a diocesan trust (as defined in V) reasonable compensation may be given. *V. Finance:* That in each diocese a diocesan trust be formed to receive and administer diocesan and parochial endowments on lines similar to those on which the ecclesiastical commissioners administer their trust."

The Validity of Anglican Orders.—It had been understood for several months in the Church of England and in the world at large that the papal court was engaged in an investigation of the title of Anglican orders to recognition by the pontiff and the Roman Catholic Church. The bull announcing the result of this investigation was determined upon July 16, then withheld two months for further and more mature deliberation, and was published in the middle of September. It represents concerning the occasion for instituting the inquiry, that, while the opinion and practice of the Church had maintained the view that the true sacrament of orders as instituted by Christ had lapsed in England when the new rite for conferring orders was instituted under Edward VI, yet a controversy had recently sprung up in which "not only certain Anglican writers, but some few Catholics, chiefly non-English," had spoken in favor of the validity of English orders. It therefore became "not inopportune" to re-examine the question. Twelve men noted for their learning and ability, "whose opinions in this matter were known to be divergent," were appointed to discuss the matter, and given access to all the accessible documents, under the presidency of one of the cardinals; their acts and evidences to be reviewed by the cardinals of the council. The bull embodying the result of these proceedings begins with a review of the policy of the Church in regard to Anglican orders, showing that Popes Julius III and Paul IV had refused to recognize the Edwardine rite at the time of its institution, and that the invariable practice of the Holy See had been in conformity with the position they thereby assumed. Hence the question should have been considered already settled, and Catholic writers could only in ignorance have regarded it as still open. Examining the Anglican rite, the Pope marks the distinction between the matter and the form, or that which is ceremonial and that which is essential, and finds that "the words which until recently were commonly held by Anglicans to constitute the proper form of priestly ordination, namely, 'Receive the Holy Ghost,' certainly do not in the least express the sacred order of priesthood, or its grace and power, which is chiefly the power 'of consecrating and offering the true body and blood of the Lord' in the service of the mass. This form had, indeed, afterward added to it the words 'for the office and work of a priest,' etc., but this rather shows that the Anglicans themselves perceived that the first form was defective and inadequate. But even if this addition could give to the form its due signification, it was introduced too late, as a century had elapsed since the adoption of the Edwardine ordinal; for as the hierarchy had become extinct, there remained no power of ordaining. In vain has help been recently sought for the plea of validity from the other prayers of the same ordinal. For, to put aside other reasons which show this to be insufficient for the purpose in the Anglican rite, let this argument suffice for all, that from them has been deliberately removed whatever set forth the dignity and office of the priesthood in the Catholic rite. That form consequently ought not to be considered apt or sufficient for the sacrament which omits what

it ought essentially to signify. . . . So it comes to pass that as the sacrament of orders and true priesthood of Christ were utterly eliminated from the Anglican rite, and hence the priesthood is in no wise confirmed truly and validly in the episcopal consecration of the same rite, for the like reason, therefore, the episcopate can in no way be truly and validly conferred by it, and this the more so because among the duties of the episcopate is that of ordaining ministers for the holy eucharistic sacrifice." The bull further discusses more at length the intention with which the changes referred to were made in the Anglican ordinal, as being deliberately to remove and strike out all clear mention of the sacrifice, of consecration to the priesthood, and of the power of consecrating and offering sacrifices, and pronounces vain all attempts to remedy this removal by amendment or by offering interpretations of the ritual agreeable to the Catholic doctrine. "It is clear," it says, that not only is the necessary "intention wanting to the sacrament, but that the intention is adverse to and destructive of the sacrament. Wherefore," the decree concludes, "strictly adhering in this matter to the decrees of the pontiffs our predecessors, and confirming them more fully and, as it were, renewing them by our authority, of our own motion and certain knowledge, we pronounce and declare that ordinations carried out according to the Anglican rites have been and are absolutely null and utterly void." An invitation follows to Anglicans to seek salvation in the Roman Catholic Church.

Several months before this bull was issued, but while the subject was supposed to be under consideration in the papal court, the Archbishop of York took the occasion of an address to the clergy of his diocese to pronounce the talk of any overtures having been made on the part of the Church of England to the see of Rome "the merest newspaper gossip." Whatever overtures had been made, he said, had come from Rome itself in the form of encyclical letters promoted by a motive with which all might sympathize, and written in a spirit which all must admire, but burdened with conditions impossible of acceptance by those who are blessed with the spirit of freedom and have been brought out of the darkness of error into the clear light and knowledge of the truth. It was not true, either, that there had been any application to the Pope from the side of the Church of England with a view to obtain the recognition of the Church of England's position in the Church of Christ. The inquiry now being held respecting Anglican orders owed its first impulse to the writings of Roman Catholics themselves. On the part of the Church of England there was not, and had not been a shadow of doubt, nor would they be one whit the better or worse as regards their holy orders, whatever the opinion of the Church of Rome might be. It was true that this might greatly affect the prospect of Christian reunion, but it was that and that alone which gave the question its interest and importance.

Church Congress.—The thirty-sixth Church Congress met at Shrewsbury, Oct. 6, under the presidency of the Bishop of Lichfield. The president in his opening address presented a review of the history of the diocese of Lichfield from the installation of the first Archbishop of Mercia by King Offa, in A.D. 787, described the progress of the Church in the diocese during the past sixty years, and discussed the subjects of the unity of Christendom and the position of the English Church. The discussions, by the reading of appointed papers and the impromptu addresses of voluntary speakers, which occupied the succeeding sessions of the Congress concerned the subjects of "The Idea of a National Church, both as the Expression of the Nation

and as an Integral Part of the Church Catholic" (introduced by the Bishop of Peterborough); "The Causes of Intemperance and Possible Remedies"; "The Supplementary Ministries of the Church of England for Home-Mission Work"; "The Bearing of the Theory of Evolution on Christian Doctrine" (discussed by Archdeacon Wilson, Prof. T. G. Bonney, Canon Gore, and the Rev. C. L. Engström); "Elementary Education," treated under the three aspects of "Proposed Relief to Voluntary Schools," "Decentralization," and "Parental Rights and Responsibilities"; "Church Reform"—in its practical and its constitutional aspect, and including "The Part of the Laity in the Government and Administration of the Affairs of the Church in the Province, in the Diocese, and in the Parish" and "The Concession of Legislative Powers by Means of a Reformed Convocation"; "Missions"—considered under the heads of "The Necessity of stirring the Heart and Conscience of the Church to Greater Earnestness in Foreign Missionary Work" and "The Need of a 'Foreign Service Order' for Insuring an Adequate Supply of Men for the Colonies and Mission Field"; "The Duty of the Church in regard to the Industrial Problems of the Day"; "The Disciplinary Powers of the Anglican Church over Clergy and Laity respectively; their Origin and Excuse; and the need of their Adaptation to Present Requirements"; "The Continuity of the Church of England—(1) a Historical Fact; (2) not broken by any Political Action under Henry VIII, Edward VI, or Elizabeth, or by any Doctrinal or Disciplinary Changes"; "Art in its Relation to the Church" (Mr. Holman Hunt); "Different Aspects of the Office for the Holy Communion—(a) Communion, (b) Worship, (c) Intercession"; "International Relations in the Light of the Gospel"; "Tendencies of Modern Society which need to be considered in the Light of Christian Teaching—(a) Social Extravagance, (b) Current Literature, Society Papers, Novels, etc., (c) Amusements and Recreations"; and "Impoverishment of the Clergy and the Central Sustentation Fund."

After the close of the Church Congress the Church Reform League met and decided to follow up the strong feeling that had been expressed in favor of Church reform in the first session devoted to that subject by organizing a series of public meetings in behalf of it in various centers during the ensuing winter months. Besides the local meetings, 4 public conferences were contemplated, to be held in London, on (1) the self-government of the Church; (2) the position of the laity; (3) discipline; (4) patronage and finance.

ARCHÆOLOGY. In speaking at the annual meeting of the Egypt Exploration Fund, Nov. 13, of the great progress that had been made during the last ten years in the study of archæology, Prof. W. M. Flinders Petrie presented the scientific value and importance of the subject. Egyptology in particular, he said, had made great advances, one indication of which was the unexpectedly large circulation of books relating to it. There had, too, been a more scientific spirit shown in its treatment, and problems were approached simply with the desire to learn the truth, and not with the object of proving something. The time had indeed come when archæology was regarded as one of the elements of a liberal education. It was now fully recognized that it was not a mere fad or dilettant amusement, but had thrown great light on the history of the human mind. Egyptology had, for example, laid down a reasonable chronology, which might be accepted as accurate, within two or three centuries, of the early historic civilizations. It pointed out the date of the introduction of the use of metals in Europe. Egyptology had brought us to more ac-

curate methods of research into the twilight of the historical dawn.

American.—Recent work in American archæology has been directed largely to the continued exploration and more careful examination of sites previously entered upon and of the objects derived from them, and has resulted in more accurate knowledge rather than startling discoveries. Prof. W. H. Holmes has published an account of his observations during a voyage to the Gulf coast of Mexico, in which he made several visits to the ruined cities of the interior, the descriptions of which, with views, constitute the mass of the work. He has reached the general conclusion that the people who built these cities were of tribes represented in the country to-day by 500,000 Indians of more or less pure blood. They were well advanced in many branches of culture, and stood at the head of American nations in the march toward civilization. They were recent comers to the peninsula (of Yucatan), and must have had their origin in the West or Northwest. They are best represented by their architectural remains, which exhibit many unique and interesting features, all probably of native development, though in some cases strongly suggesting foreign models. The author reviews critically some of the more striking features of this architecture. The greatest marvel of the monuments is, perhaps, the system of mural decoration, a large part of the wall space being covered with sculptures. A multitude of symbolic devices and designs have been worked out in high relief by setting separate sculptured blocks into the face of the wall and forming a rich mosaic. We discover in the nonessential elaborations of these ancient buildings numerous elements surely traceable to constructive sources, but we further perceive that most of the motives employed in embellishments have their origin in religion; that their use in art was first significant, and second æsthetic. It is pretty certain that even in the latest periods of Maya history the various motives employed in decoration were not only significant, but that they were not used out of their traditional or appropriate associations. The sculptor's work is crude when compared with civilized art, but virile and apparently full of promise of high achievements. Portrait sculpture was probably not practiced, or if attempted the form of expression was so conventional as to rob the representation of marked individuality. Sculpture found its subjects almost wholly within the animal kingdom, and though we observe that species were portrayed with some degree of truth, it is apparent that with creatures as with human beings, mythic characters were of more importance to the sculptor than the realistic. Graphic art seems to have covered the whole field of Nature generally with rude vigor. Extensive subjects in bright colors covering the walls of some of the chambers of Chichen include village scenes and battle pieces strongly suggesting the work in some of the ancient manuscripts. There is a lack of perspective and a mixing up of sizes, and the general style of presentation is suggestive of that of the ancient Egyptians.

Wall Paintings of Mitla.—The paintings that once decorated the walls of the ruins of Mitla have been copied, and are published in colors at Berlin with a memoir on the subject by Dr. E. Selser, who has attempted to identify the figures. The largest number of the frescoes are found to represent Quetzalcoatl, a divinity whose story is familiar to students of ancient Mexican history. The pictures are shown by Dr. Selser to resemble those of the *Codex Borgia*, whence the conclusion is drawn that they and the *codex* had a kindred origin. Representations of other mythical personages,

among which are the sun god and the god of death, are found in the paintings.

The Hill Caves of Yucatan.—The results of only partly completed explorations of the hill caves of Yucatan by Henry C. Merceer, as summarized by him at the close of his published volume on the subject, point to the conclusions "that no earlier inhabitant had preceded the building of the ruined cities" there; "that the people in the caves had reached the country in geologically recent times"; and that "these people, substantially the ancestors of the present Maya Indians, had not developed their culture in Yucatan, but had brought it with them from somewhere else."

Survey of Copan.—A preliminary account of the ruins of Copan, Honduras, from the field notes of Marshall H. Saville, John S. Owens, and George Byron Gordon, has been published by the Peabody Museum of American Archaeology and Ethnology. The work has been carried on in co-operation with Mr. Alfred P. Maudsley, of London, who had already made extensive explorations at Copan and begun the publication of his results, and his nomenclature has been adopted. The present publication is intended to give only a general description of the ruins and a summary of the work of the several museum expeditions to Honduras from 1891 to 1895. It is to be followed by special papers relating to discoveries made during the explorations. The heavy forest which covered the Copan valley when Stevens visited it in 1839 has been removed, a colony of Germans having occupied the district for

outline map of all the ruins. Each group of structures is in this way assigned to its proper place on the map, which will therefore represent with abso-

a time about thirty years ago. The museum is seeking means to preserve the works from further injury, and for this purpose a stone wall has been built around the principal group. In carrying on the operations in the field, the plan is pursued of

lute exactness the whole site of the city, with the shape and character of its structures as well as the natural topography of the valley. If the group consists of buildings, they are entirely cleared of debris and then carefully measured and drawn upon an enlarged plan of its corresponding section. Wherever sculptured monuments or hieroglyphic inscriptions are found they are both photographed and molded in paper or plaster, to be reproduced in the museum at Cambridge for further investigation and study. Various evidences were found in some of the ruins which seem to point to several successive periods of occupation. Scattered remains were found for 8 or 9 miles up the Copan river, many of which are stone foundations without any trace of superstructure. It is supposed that wooden houses that have disappeared formerly stood upon these. No regular burial places were found, but a number of isolated tombs were explored. Some

dividing the area on which any remains are found into square sections. Before a detailed examination is begun on any particular group of ruins or locality it is carefully surveyed and traced on an

of these were found under the steps of what seemed to be ruined houses. Skeletons, generally much decayed, pieces of pottery, articles of jadeite, etc., were found in some of these tombs. In one several teeth of a skeleton had been inlaid with little circular bits of jadeite slightly rounded and highly polished. In this tomb were found also 12 earthen vessels of different shapes and sizes, most of them decorated with figures in different colors. One vase represented the head of a wolf, modeled with great accuracy and "exhibiting an extraordinary degree of artistic merit." With these were found a number of shell ornaments and jadeite heads, a pottery whistle, bone needles, the upper jawbone of a peccary, the radius of a deer, and the upper portions of 2 skulls of peccaries, one of which, very well preserved, "is beautifully carved on the outside with figures of men and animals and symbolical characters." The ruins have been given

their principal fame and their distinctive character by the sculptured columns or tall monolithic monuments to which the name of *stela* has been applied. Twenty-three of these are known. Their average height from the ground is not more than 12 feet, their average breadth 3 feet, and their thickness slightly less. They are elaborately carved with decorated human figures on one or two sides. Monoliths of another class, called altars or tables, are square or oblong blocks of stone with flat tops, seldom exceeding 2 feet in height, and usually carved on the 4 sides, and sometimes on the top, with an inscription or some other design.

The Ruins of Quirigua.—A short account of the ruins of Quirigua, near Izabal, in Guatemala, has been published in "Science" by Mr. John R. Chandler. They are situated on the Motagua river, with a dense forest all around. An artificial mound built of small stones stands near a small lake called the Lake of the Idols. Near this mound are 3 obelisks from 16 to 18 feet high, each of which has a human face sculptured on its south side in a peculiar style, with hieroglyphics inclosed in squares on the other sides. The largest of the 6 obelisks of the ruins is 26 feet high, 5 feet wide, and 4 feet thick, and is inclined $12\frac{1}{2}$ feet out of the perpendicular. Its sculptured parts are finer than those of the others and the features are more regular. Not far away from this lies another obelisk which is said to have been standing a few years ago, the face on which is quite different from the faces on the others. The sixth obelisk is in a more dilapidated condition than these. The idols of Quirigua have no altars like those of Copan, but 2 immense stones situated among them probably served as such. One of these, the back of which is covered with a line of finely sculptured glyphs, is marked by grooves which seem to indicate that it was used as a sacrificial altar. The other is covered with figures in semirelief in a comparatively good state of preservation. One of the figures represents a woman without hands or legs, but with the arms extending to the floor and with narrow forehead. Another represents a turtle with very large eyes. Representations of fruits and flowers that now grow in the surrounding mountains indicate that no change of climate has occurred since the monuments were built. Although the monuments of Quirigua are larger than those of Copan, they are inferior in sculpture, and their weathered and ruined condition indicates that they are also older.

A Dated Ruin.—The ruins of the Temple of Teopoztlan, Mexico, important for many reasons, are especially so because they are the only American ruins to which a definite date can be set. On one of two slabs in one of the walls is engraved the sign of Ahuizotl, the immediate predecessor of Montezuma, and on the other the date "ten Tochtli," which corresponds to 1502.

Symbolical Inscriptions of the Mound Builders.—Prof. F. W. Putnam called attention in the American Association of 1895 to the symbolic carvings upon certain objects of the mound builders, among which are the one known as the Cincinnati tablet, objects from the Turner group, near Cincinnati, and specimens from the Hopewell group, Paint creek, Ohio. The strange figures on the Cincinnati tablet were shown to be both conventionalized and symbolic. The authenticity of this work has been questioned, but seems now to be fully proved. Several of the figures are of the conventional serpent form, identical with that of others found in Ohio, and agreeing essentially with the representation of the serpent's head in the sculptures of Central America. A human femur from the Hopewell group is carved with figures made up of elaborate masks and combined headdresses. Nu-

merous designs from that group—including the serpent and sun symbols—are cut out of thin sheets of copper, made by hammering nuggets of native copper. Another copper object represents the deer's antler. A copper headdress on a skeleton was marked by a pair of antlers. All these designs appear in the carvings on the femur. Similar carvings were traced upon a human arm bone from the altar of the great mound of the Turner group. Conventional animal heads, interwoven and combined in a curious manner, with symbolic designs, circles and ovals, common to nearly all the carvings, are represented over each head. "Here the lines were cut with such skill and ingenuity that parts of one head form portions of another above and below; and on reversing this combination figure still other heads are visible. The many combinations here shown could only have been made by carefully preparing the distinct figures and combining them in the way here shown, which must have required a vast amount of ingenuity as well as mechanical execution."

The Iron Age in Aboriginal Art.—In his studies of aboriginal American art, Prof. Otis T. Mason has been led to attach great importance to the influence of the iron age, and he has published a paper on its history in the "American Anthropologist." Although this history is post-Columbian, the author finds it an important item in American archæological studies. The use of iron extended rapidly after it gained a footing on the continent, and often reached tribes long before the first white men wandered to their abodes. The influence of the new material was immediate, and was felt in ways not always artistically advantageous. Prof. Mason concludes that—1. "The iron age that modified America was the conservative folk age, the Middle Age as distinguished from the Renaissance, which modified the old in progressive Europe. It is almost impossible, therefore, as one looks over a collection of Americana, to decide positively whether he is regarding the unadulterated western hemisphere, or mediæval Europe, or native Africa, or some happy combination of these. II. In the New World during four centuries, as in the Old World, the activities, the whole life of the native people, were (1) partly such as belong to a common humanity; (2) such as arise through a past worship and co-operation between any group of human beings and their environment; and (3) such as came to them from foreign teachers living in the iron age in Europe. This contact has been in certain particulars universal, overpowering, and efficient. . . . There is scarcely a tribe on this continent that never heard of iron; there are tribes of Americans that preserve only a vestige of native life. Even the archæologist is often in doubt regarding buried specimens. Shell heaps, mounds, caves, and cemeteries often hide iron-made products among the goodly stuff, exciting a reasonable doubt concerning the probable authorship of the works themselves. To-day it is regarded certain that a cemetery is pre-Columbian, but to-morrow the mummy pack reveals a page from a Spanish printed book. . . . I desire to insist with some emphasis upon the statement that the study of these transitions is the precious portion of American history, that the adulterated aboriginal product reveals to our gaze the living processes by which men have always progressed to higher life."

Evidences of Glacial Man in America.—A new evidence of the presence of man in the glacial epoch in Ohio is cited by Prof. G. Frederick Wright in the discovery of a chipped ebert implement—a knife—which was found by Mr. Sam Houston, county surveyor of Jefferson County, Ohio, in a high-level river terrace on the Ohio river, a mile and a half below

Brilliant Station, near Steubenville, Ohio. The implement is an inch and three quarters long and three quarters of an inch wide in its broadest part, and has a projecting shoulder on one edge. The evidences of the glacial age of the gravel, of the undisturbed condition of the spot, and of the genuineness of the implement as an article of human workmanship as presented by Prof. Wright seem very convincing, and have been accepted as satisfactory by experts to whom they have been submitted. That so few evidences of this kind have been found is accounted for by Prof. Wright in the observation that, "when we reflect upon the completeness with which the habitations of the modern Indians have disappeared, we need not be surprised at the total disappearance of the habitations of glacial men. Nor is it strange that well-accredited discoveries of his implements have so rarely been made in the undisturbed gravel, which gives us the surest evidence of his great antiquity. Naturally, the cautious inhabitant of that time would have been somewhat careful about venturing down into the river valleys, whose terrific and periodical floods were depositing the terrace gravel, and even though the imbedded implements were much more numerous than they are, they would be really so few in proportion to the great mass of material that the chances of finding one in place would be extremely small. I have looked in vain for implements in the extensive gravel pits on the Chelles and the Somme in France, and so have the majority of archaeologists who have visited those famous localities."

In a special examination of the glacial drift of the "Lalor farm," near Trenton, N. J., by Prof. G. F. Wright and Mr. Ernest Volk, a situation was chosen on the bluff, about 50 feet above the level of the Delaware river, in which there could not have been any modification of the deposit by surface wash. A trench was dug, 3 feet deep and 3 feet wide, about 40 feet backward from the face of the bluff. The upper 12 inches of the trench consisted of sand discolored with vegetable decomposition, which had evidently been disturbed. In this strip were found 2 flint arrowheads or spear heads, 1 argillite chip, and 1 flint chip, together with a broken pebble, 4 pieces of pottery, and a piece of charred bone. The lower 2 feet of the excavation, except where interrupted by a pit, consisted of compact sand distinctly stratified, which had clearly been undisturbed. In this were found at varying depths 1 imperfect argillite implement about 3 inches long, an inch and a half wide, and a quarter of an inch thick, with fine unrolled and angular fragments of argillite, 2 of which bore tolerably clear evidence of having been chipped by human hands. These were the only fragments. There were no chippings or fragments of flint or jasper in the lower 2 feet of the excavation. Prof. F. W. Putnam remarked, after the reading of Prof. Wright's paper in the American Association for the Advancement of Science, that during the two years of Mr. Volk's archaeological work on the Lalor farm flint and jasper implements had been found abundant throughout the upper 12 inches of the soil, while no flint or jasper had occurred in the lower 2 feet of undisturbed sand and gravel; but Mr. Volk had described between 30 and 40 argillite implements and fragments that had been subsequently found in the lower 2 feet. The artificial character of these pieces was undoubted. The bearing of these discoveries, together with other observations of the authors and Dr. C. C. Abbott in the same region, is regarded by them as being clearly to show that there was a distinct succession in the human occupation of the Delaware valley, indicated first by the sole use of argillite for implements, followed by a gradual and almost complete transition to the use of

flint and jasper in later times. It is claimed, too, that they sweep away the ingenious theories that would account for the occurrence of implements in the lower sand and gravel by invoking the agency of dry-weather cracks in the surface, the overturning of trees, the decay of tap roots, and the activity of burrowing animals, for none of these agencies would select the argillite and leave the flint and jasper on the surface. A number of neolithic axes were described in the American Association by Prof. E. W. Claypole, which were found at New London, Huron County, Ohio, by an intelligent workman while digging a well 20 feet below the surface. The features of the formation were those characteristic of the glacial deposits of northern Ohio. This is regarded as one of the most satisfactory instances of the discovery of implements in the glacial till yet recorded.

Architecture of the Cliff Dwellers.—Two previously unexamined cliff houses in the "Red Rock" country, Verde valley, Arizona, have been explored by J. Walter Fewkes, who, describing them in the "American Anthropologist," names them Palatki (Red House) and Honanki (Bear House). Palatki lies in a well-wooded cañon, near a prominent butte a few miles west of Indian Garden. Its foundations rest on the top of a talus of fallen *débris*, and the whole building is "plastered to the side of the cliff, and when seen from the plain reminds one of a swallow's nest placed above the trees." Entrance from the outside is easy. A marked architectural feature is a series of bow-shaped curves in the front wall. About 4 miles west of Palatki is a small house, Honanki, which, while it differs somewhat from Palatki, so nearly resembles it that it is referred to a related people. Palatki seems to have been the home of related clans of small size, while Honanki was a large pueblo—the largest cliff house yet reported from the Verde valley. It was not, however, a compact village, but stretched along the face of the precipitous cliff for more than an eighth of a mile. It is easy of access. The ruin had a high round tower at its eastern end, which was provided with windows and small peepholes. The building may have contained 200 rooms and have accommodated, by a conservative estimate, between 300 and 400 people. High above the extreme west end of the houses was perched a walled-up crypt, which was without external opening and inaccessible. Directly beneath it was an ash heap from which charred bones and fragments of pottery were taken. The ruin is protected by an overhanging cliff, and is mounted on a shelf of rock 10 feet high. Utensils for kindling fire, sandals of yucca-fiber basketry; a fireplace, grinding box, corn cobs, and corn at Palatki; and a stone implement cemented with pitch into a wooden handle at Honanki—so far unique in the cliff-house finds—were recovered from the ruins. A lesson of wide application is drawn by the author from the character of these and other cliff dwellers' ruins, illustrated by the wideness of the variation exhibited in the outward appearance of the houses and the objects found in them, evidently all the work of people in comparatively the same stage of culture. These differences are, in the author's opinion, "simply the result of surroundings, and can be directly traced to the geological formations with which the builders had to deal in different parts of the valley. The makers of these houses not only were obliged to use the material at hand, since transportation of building stone was beyond their powers, but they also adapted the style of their buildings to the possibilities of their surroundings. In the tuffaceous rocks the builder abandoned masonry and burrowed cavate chambers. This habit he combined with walls in the well-known Casa Montezuma, on Beaver

creek. When, however, he found himself surrounded by the harder rocks of the Red Cliffs, he relied wholly on masonry, building to the face of the cliffs to produce the characteristic buildings of the Verde region. In the Verde valley he likewise built stone houses in the plain and on the *mesa* tops, using the stone at hand. . . . From these statements it would appear unsound to rely upon the character of buildings as a criterion of the culture of their inhabitants, and absurd to separate the habitants of cave dwellings from those of cliff houses. . . . One result to which my conclusions point is that an older view often entertained that cliff houses antedate other prehistoric dwellings in our Southwest is not necessarily true."

Greece.—The excavations of the American School of Classical Studies were begun at Corinth in the spring of 1896 under the direction of Prof. Rufus B. Richardson, and prosecuted until the theater was discovered. This structure, the first positively identified in the city, will serve as a base, starting from which and following the descriptions of Pausanias, the other sites may be recovered and identified. Previous to this discovery the excavators had no certain landmark. Up at the top of the eaves of this theater were found a number of terra-cotta figures of human shapes, mostly female, and many in animals, mostly horses. Continued excavations brought to light a huge drum and the broad pavement, with a water channel on each side—discoveries which are supposed to indicate the old agora or a broad passageway into it. The chief find in sculpture was a group representing the youthful Dionysus between Pan and a nymph. Two graves, with nineteen vases grouped around the skeletons, are spoken of as worthy of special mention. The vases are unbroken, of interesting shape, and very primitive in appearance.

The chief discovery made in the excavations at Eretria by the American school under the direction of Prof. Rufus B. Richardson is that of a building which is identified from the inscriptions as a gymnasium. Of three fragments of sculpture found in the course of excavating this building, one is a head of the type known as the Indian Dionysos, exceptionally well preserved; another is of interest because it fits and completes a fragment of a portrait head of the Roman type which had long been lying in the local museum. The inscriptions include a decree in honor of a gymnasiarch named Elpinikos, nearly fifty lines in length. From its mention of "resident Romans" it helps assign other similar inscriptions to the first century before Christ. Two or three brief inscriptions on gravestones may be as early as the third or fourth century.

The inscription which once stood in bronze upon the eastern architrave of the Parthenon has been deciphered by an American student from a close examination of the nail points. It records a dedication to Nero, dated in the eighth term of the generalship of Novius, or A. D. 61, and is supposed to have accompanied the erection of a statue of the emperor, possibly just in front of the Parthenon.

An enumeration in the report of the British Museum of the new papyrus finds in Egypt acquired by that institution includes three speeches of Demosthenes; some philosophical writings of Plato and other known and unknown Greek writers of the third century before Christ; a private letter of the Emperor Hadrian; a rescript of Diocletian, which is the oldest papyrus in the Greek language; a fragment of a lost Greek drama; a number of fragments of Homer's poems; and a second papyrus containing 700 lines from the thirteenth and fourteenth books of the "Iliad." Only a small proportion of the papyri in the mound whence these were recovered have yet been removed.

Among magnificent examples of Greek art recently acquired by the Louvre, Paris, is a golden tiara, hammered out and chased in an admirable state of preservation. Its weight is 443 grammes, its height 20 centimetres, and its diameter across the base 18 centimetres. It was found in a tomb near the ancient town of Olbia, in the Crimea, and it bears an inscription in Greek recording its presentation to the great (*αυεικτρον*) King Saitapharnes. Saitapharnes was a barbarian king, who frequently made incursions into the territory of Olbia, and levied tribute from the inhabitants. On one occasion when he appeared before the place he refused an offer of 900 pieces of gold as insufficient, but was afterward bought off with magnificent presents. The tiara is equally interesting for its ornamentation. It is in the form of a sugar loaf divided into seven cones. One of these contains a series of bas-reliefs representing two incidents in the history of Achilles—his wrath and the pyre of Patroclus, with elaborate details from the "Iliad." In a zone above are various scenes of Scythian life: a man breaking in a wild horse, a leopard fighting with a lion, a running bull, sheep and goats, a flying heron, etc. The top of the tiara is formed of the head of a serpent coiled around itself. In another tomb close by was found at the same time a beautiful necklace of gold and colored glass. The genuineness of this object has been disputed by N. Vesselovsky, of St. Petersburg, who affirms that it is the work of the Otchskoff factory of false antiquities, and refers to another crown of the same kind at Kherson. He is answered by M. Héron de Villefosse, conservator of Grecian and Roman antiquities at the Louvre, who has compared the tiara with the Kherson crown, and declares that the difference between the two is so obvious as to strike any unprejudiced person at the first sight.

Evidence has been found by Mr. Arthur J. Evans of the existence of two systems of script in prehistoric Crete, one hieroglyphic and the other linear, which seem to be of native origin. He has suggested a derivation of the linear characters from the pictographs, and has compared them with the signs found on the pottery of Tel-el-Amarna, Gurob, and Kahûn in Egypt, and of Tel-el-Hesi in Palestine. The pictographs seem to have been of native growth. Some of them resemble the Hittite characters, while others remind us of the hieroglyphics associated with Hittite characters on the seals of Gurgât; but as a whole they are regarded as forming a peculiar and isolated group. They are supposed in all probability to go back to a considerable antiquity. Mr. Evans shows that the designs on certain early seals are derived, with but little change, from Egyptian scarabs of the twelfth dynasty. So far, then, as we can see at present, says Prof. A. H. Sayce, reviewing Mr. Evans's book describing his discoveries, it would seem that in days earlier even than what is called the Mycenaean period "an independent culture and system of writing grew up in the eastern basin of the Mediterranean and Asia Minor, including also, perhaps, northern Syria. But the real cylinders with which this culture is associated show that it was subsequent to the introduction of Babylonian influence; indeed, it was probably the introduction of Babylonian influence which first called it into existence. The seal cylinder made its way to Egypt during the same age, and is characteristic of the old empire. . . . We are no longer obliged to confine the introduction of Babylonian culture into the Mediterranean, even to the remote age of Sargon of Akkad. The recent American excavations have shown that there was a still older empire which extended from the Persian Gulf to the Mediterranean, and which Prof. Hilprecht places in the

fifth millennium before Christ. Our chronological horizon has thus been considerably widened."

Cyprus.—Following up their excavations at Amathus in 1894, the trustees of the British Museum conducted their operations in 1895 on the site of Curium, a place made famous by General di Cesnola's discoveries. The tomb area here is very extensive, and includes tombs of all ages. A special feature of the season's excavations was the discovery of a necropolis, dating from what is called the Mycenaean period. In it was found a considerable quantity of rude and primitive pottery of local make, such as is found in Cypriote tombs of the pre-Phoenician period—Mycenaean vases, of a character made familiar by Dr. Schliemann's discoveries, with a few specimens of remarkable rarity; a sand scarab with Egyptian hieroglyphics, of comparatively late date; a Phoenician cylinder of not earlier than 600 B. C.; scarabs and scaraboids bearing various designs. In the later or sixth-century Curium one particular site was rich in gold ornaments. On the site of a temple (probably to Demeter and Kore) was found a Greek inscription written first in ordinary Greek letters, and next in the Cypriote syllabery or local alphabet, in which each sign represents a syllable.

Palestine.—In the tenth report of his excavations in Jerusalem, Dr. F. J. Bliss describes his discovery of a stone stairway which forms part of a road leading down to the city from the pool of Siloam. The steps, 34 in number, are made of well-jointed stones, polished by the wearing of feet. The discovery is of interest in connection with the statement in Nehemiah iii, 15, that Shallun repaired the gate of the fountain, the wall of the pool of Siloam, by the king's garden, "and unto the stairs that go down from the city of David."

The manner of the destruction of the cities of Sodom, Gomorrah, Admah, and Zeborim, among the earliest seats of civilization in the Jordan valley—an event which is one of the fixed facts of the earliest tradition—is discussed in the "Journal of the German Palestine Society," by Dr. Max Blanckenhorn, in the light of the results of special researches. The author's theory is that the destruction was caused by the sudden break of a valley basin in the southern part of the Dead Sea, resulting in the sinking of the soil, a phenomenon which was doubtless connected with a catastrophe in nature or an earthquake accompanied by such sinking of the soil along one or more rents in the earth. The occupation of the territory by the Dead Sea naturally followed. The view that the Dead Sea did not exist at all before this catastrophe, or that the Jordan before this period flowed into the Mediterranean Sea, contradicts all the scientific teachings concerning the formation of the whole region. There is no reason for supposing a volcanic eruption or a volcanic outbreak of the soil under the feet of the Sodomites, or for believing that a stream of burning lava destroyed the cities. Having presented his evidence the author concludes his paper by saying that "in this way many of the riddles that are offered by the peculiar character of the Dead Sea and its surroundings are satisfactorily solved. Then, too, all the phenomena of nature which the book of Genesis describes as taking place in connection with the catastrophe of Sodom, the last and only one of the kind experienced by man in the historical period, I think, has been explained satisfactorily in the preceding disquisition."

Babylonia.—Mr. Pinches's discovery of the names of Chedorlaomor (Kudur Laghamar) and Tid'al (Tudghula) in the Babylonian texts (see "Annual Cyclopædia" for 1895) has been supplemented by a further discovery made by Dr. Scheil, who has found among the early Babylonian tablets

at Constantinople some letters of Khammurabi (the Amraphel of Genesis xiv, 1, to his vassal Sin-idinnam of Larsa. Sin-idinnam, it appears, had been dethroned by the Elamites Kurur-Mabug and his son, Eri-Aku (Arioch), and had fled to the court of Khammurabi at Babylon. For several years Babylonia remained subject to Elamite suzerainty, the Elamite princes of Larsa being, like Khammurabi himself, vassals of the King of Elam, where the war of independence eventually broke out, which resulted in the overthrow of Elamite supremacy. Sin-idinnam rendered effective aid to the King of Babylon. In return for this, when the foreign yoke was finally shaken off, Sin-idinnam was restored to his principality, and Khammurabi rewarded him with statues and other presents as a "recompense for his valor on the day of the defeat of Kurur-Laghamar," the Elamite king.

The excavations carried on for the past eight years under the direction of the University of Pennsylvania at Niffer, in northern Babylonia, have resulted in the discovery of relics of dynasties several hundred years older than that of Sargon and Naramsin, whose date is fixed at about 3800 B. C. The principal excavations were in the sanctuary of E-Kur, the old temple of Bel. A platform had been laid bare which was supposed to represent the ground level of the ancient city, 36 feet below the surface. It was then determined to continue the work until bed rock or virgin soil should be reached. The excavations were accordingly carried 30 feet deeper. At 23 feet below the platform the most ancient keystone arch known was found. The foundations of the wall of the ancient city were reached by Mr. Haines, who directed the work, 16 feet below the level of the desert. The wall itself was 17 feet high and 45 feet wide. Upon the top of this wall was another of unknown height. These walls were built of bricks 20 inches square. Numerous inscriptions were found upon the broken vases, bricks, tablets, and other objects recovered, from which Prof. Hilprecht, who has prepared the account and collated the results of the work, believes it will be possible to write the history of the empire. These objects include between 9,000 and 10,000 cuneiform tablets and about 21,000 other inscriptions, partly completely preserved and partly consisting of fragments. The inscriptions embrace syllabaries, letters, astronomical and hieratic texts, chronological lists, reports and lists of sacrificial gifts to the gods and to sacred shrines, votive tablets, business agreements, etc., dating from the reigns of many kings before Sargon and constituting a record earlier than any we have heretofore had of Oriental history.

An inscription by Nabonidus discovered by Dr. Scheil in the Munjelbeh mound, within the walls of Babylon, and deciphered by him, engraved in 11 columns of writing on a small diorite *stela*, records among other events the sack of Babylon by Sennacherib, B. C. 698, and the subsequent war made by the Babylonians in league with the King of the Medes and the devastation of their land. Further facts are the establishment of the date of the Scythian invasion; the murder of Sennacherib by his son, B. C. 681; the destruction of the temple of the moon god at Kharran by the barbarians, B. C. 609, and its subsequent restoration; and the coronation of Nabonidus, B. C. 555.

A collection recently presented to the Royal Museum of Berlin includes about 500 clay tablets covered with Babylonian inscriptions which were obtained at Tello. The bulk of the find was recovered from the temple archives of Tello, and the inscriptions date from the reigns of the south Babylonian kings Ine-Sin, Gamil-Sin, and Bur-Sin, who were the sovereigns, about 2500 B. C., of the city of

Ur of the Chaldees. The tablets are of various form and size. The writing is in some microscopically small and in others large and very old. In some cases the seals are impressed upon the tablets, and in other cases they are found on a clay covering placed around the tablet and containing an index of its contents. The dates are marked by mentioning notable events of the year. One tablet, for instance, is dated "from the year in which King Bur-Sin destroyed the city of Úrlulium." Another date is "the year when King Ine-Sin destroyed the cities of Simuru and Lulubu for the ninth time,"

originally stood in the temple of Amenhotep III, where it bore an inscription of that sovereign. After this inscription had been partly erased by Akhenaten and re-engraved by Seti I, it had been taken by Mernepthah, reused for his own temple, and engraved on the back with a long inscription, making 1,400 words in the translation, which recites the deliverance of Egypt from the Libyans, with the flight of their king alone and on foot by night, leaving all his women behind, without food or drink; the security and tranquillity that followed in Egypt; and closes with an account of the rela-

TOP OF STELA OF MERNEPTHAH, ON WHICH OCCURS THE WORD "ISRAEL."

and another "from the year when the god of the moon, the Lord, delivered the oracle," etc. In case a certain year was not marked by a particularly prominent event, the year or years preceding are mentioned. For example, "in the year after the year when King Ine-Sin destroyed Anshan" is found on one tablet. Sometimes the year is not mentioned at all. The city at Tello, whence the inscriptions have come, was in ancient times called Lagash and possessed a large number of richly endowed shrines, the management of which is often mentioned in the tablets. In some cases the writer gave short reports of separate transactions, as of the income of a number of sacks of corn which a farmer brought in from his field and of the payment of a certain amount of grain for his work. In other cases the writers gave summaries of such individual transactions on a single tablet to cover the business of a whole day as these had been reported by the several persons in charge. Summaries of receipts and expenditures occur which cover the period of half or the whole of a year. On one of the tablets is the account of the grain sown on a certain field and the amount reaped, from which it appears that the Babylonian farmer expected a return of from 15 to 50 times what he sowed.

Egypt.—The most important of Prof. Petrie's discoveries at Thebes is that of a *stela* or tablet of Mernepthah, in which the name of Israel occurs—the first instance in which the appearance of that name in Egyptian records has been brought to attention. It was found in the foundations of this temple, a block of black syenite—the largest known of that material—being 10 feet 3 inches high and 5 feet 4 inches wide and 13 inches thick, and had

tions existing after this event between Egypt and a number of other nations. These lines read, in a version by Prof. A. H. Sayce—

"For the Sun of Egypt has wrought this change—

"He was born as the destined means of avenging it, the King Mernepthah.

"Chiefs bow down, saying, 'Peace to thee.'

"Not one of the nine nations raises its head.

"Vanquished is the land of the Libyans.

"The land of the Hittites is tranquillized.

"Ravaged is the land of Paganana (near Tyre) for all its wickedness.

"Carried away is the land of Ashkelon.

"Overpowered is the land of Gezer.

"The land of Innam (Yanuh) is brought to nought.

"The people of Israel are minished, they have no seed.

"The land of Kharu has become like the widows of Egypt.

"All lands together are in peace.

"Every one that was a marauder has been subdued by the King Mernepthah, who gives life like the sun every day."

In Prof. Petrie's version we read: "The Hittites are quieted; ravaged is Kanah (near Tyre) with all violence; taken is Askalon; seized is Chessuloth; Yanoah of the Syrians (by Tyre) is made as though it had not existed; the people of Israel is spoiled, it hath no seed; Syria is widowed." Verbal differences, not of great importance, appear in other versions. Thus, the line in reference to Israel is translated by Prof. W. Max Müller, of Philadelphia, "Israel has been torn out without offshoot, Pales-

tine has become a widow for Egypt"; by Mr. Griffith, "The people of Israel is spoiled, it hath no seed; Syria is become as the widows of Egypt"; Dr. William Spiegelberg, "Israel is a barren land without fear; Hor (Palestine) has become the widow of Egypt."

Various opinions have been expressed as to the precise meaning and application of these lines; chiefly as to whether they refer to the Israelites while still in Egypt, or to some attack upon them in Palestine; and with these questions are connected other questions of chronology and the exact identification of the Pharaohs of the oppression and the exodus.

Another mention of the Israelites in an inscription of Mernephthah has been found by Dr. William Spiegelberg. It had not been noticed before, because only the first part of the name is preserved. The name is written I-s-l-r-a-e-l-n, with the determinations of "man" and "woman."

THE WORD "ISRAEL." IN HIEROGLYPHICS,

Among other discoveries made in these excavations are those of a fine tomb of a priest, *Sehotepabra*, of the twelfth dynasty, underlying the galleries of the Ramesseum, plundered and reused, but with paintings in good condition in the brick passage leading to it, which have been copied: the funeral temple of Amenhotep II, north of the Ramesseum, with other tombs, a headless statue of the king, and a wine jar bearing his name and the date of his twenty-sixth year, thus confirming Manetho's assignment of twenty-six years to his reign, whereas no later date than the fifth year of his reign had been found before; the funeral temple of Thothmes IV, south of the Ramesseum, destroyed by Rameses II; the foundation deposits of the Ramesseum, *ostraka*, and other relics of the nineteenth and later dynasties.

Percy E. Newberry, during a residence of more than a year in Thebes, made a more thorough exploration of the necropolis than had been accomplished before. He catalogued and classified nearly 200 inscribed tombs, of which perhaps only 80 had been previously recorded, including in the number only those which were accessible to the public at the beginning of 1895. Many of these had escaped exploration because they were inhabited by fellahin and others. Among his finds, representing the eighteenth dynasty, he enumerates a tomb of a steward of Amenhotep I, others of important personages of the reigns of Queen Hatshepsut, Thothmes III, and succeeding reigns of the dynasty. He also made a complete copy of the great tomb of Rekhmara. An inscription copied in a tomb at Assiout enabled the author to connect the Herakleopolite family of princes with that of the Ilpezfes of the twelfth dynasty.

The temple of Deir-el-Bahari is now completely cleared of rubbish, and may be seen in full view. It appears unlike any other Egyptian temple in plan and details of style. It was built on a rising succession of three platforms, of which the lowest was treated as the garden or orchard of the temple, the plants in which were artificially watered. The uses of the other platforms and of certain unfinished chambers opening upon the colonnade of one of them are unknown. A similarity of its architecture to that of Greek temples is suggested by several of its features.

In the course of the year's work at this temple, M. Edouard Naville found many fragments of the famous Punt sculptures, all emphasizing the African character of the country in which the expedition landed, but testifying also to the fact that the population of that country was not homogeneous. In addition to the genuine Puntites, with aquiline features, pointed beards, and long hair, there are also represented negroes of two different shades of color—brown and black. The native huts were apparently made of wickerwork, and in front of one of them sits a big white dog with pendent ears. Another dog of the same kind and led by a string is being brought to the Egyptians. Birds with long bills are seen flying out of the trees, from which men are gathering the incense, while the nests which they have forsaken are robbed of their eggs. Unfortunately these precious fragments do not complete the missing scenes, "of which the destruction must not be attributed wholly to tourists and antiquity dealers; this work of havoc was begun in ancient times." The discovery by Mariette that the temple was built on the site of a necropolis of the eleventh dynasty was confirmed in a part of the excavations. Several tombs were found in the immediate vicinity of the temple which had been all anciently rifled, and some reused in the twenty-first dynasty for priests of Amen. The tombs are all on the same plan—rectangular pits dug in the soft and flaky rock to a depth of 10 or 12 feet. On one side, generally on the west, opens a small chamber, originally closed by a brick wall, which contained one coffin only. The interments of the eleventh dynasty were apparently made with a certain amount of luxury, and the tombs originally contained valuables. The original character of the necropolis may be judged from a tomb which had been only partly plundered. In emptying the pit two pieces of the gilt case of the inner coffin and the blue glassware bead necklace of the mummy were found. The chamber contained a coffin in the style of the eleventh dynasty, made of sycamore wood, very thick and heavy, and in a perfect state of preservation. Outside, on box and lid, are lines of blue hieroglyphs giving the name of the deceased, and two glass eyes, a decoration characteristic of the coffins of that period. The angles are lined with gilding. The inside is entirely covered with paintings and inscriptions. Above are horizontal lines of large hieroglyphs "most exquisitely painted," as well as representations of the objects supposed to be placed near the deceased—mirrors, necklaces, bracelets, etc. Below and on the bottom are funerary texts in a script intermediate between hieratic and hieroglyphic. In the coffin had been left pieces of a very thick cartonnage, entirely gilt, except the necklace, which was painted in colors, and the hair. The mummy probably had jewels, which had been stolen, but the plunderers seem to have done their work hastily. The sandals and the pillow, both gilt, had been left, as well as many objects that had been deposited near the coffin. These objects are similar to those discovered at Meir in tombs of the sixth dynasty, but they are of less artistic value. Two wooden boats were found, with their crews, in one of which the figure of the deceased is seen sitting under an awning; two models of houses containing numerous figures, one of them emptying bags of corn into a granary, and in the other model a bull lying on the ground with his legs tied, while a man cuts his throat with a knife; and statuettes of men and women carrying jars, loaves, and various provisions in baskets—objects recalling some adjuncts of the earthly life of the deceased, and presumed to be intended to answer the same purpose as the pictures on the walls of the tombs of Gizeh and Sakkara.

The coffin does not bear the same name inside and outside. Inside the deceased is called *Buan*. He was a man of high rank with numerous titles, among which are those of Head of the Treasury and Head of the Granaries, showing that his position was one of considerable powers. On the outside he is called *Mentuhotep*, a name probably assumed to associate him with his king.

By clearing away the rubbish from the great temple of Karnak the walls and pillars in the Hall of Columns have been nearly doubled in height, and an avenue of sphinxes has been found, leading westward to a stone quay, on the walls of which are inscriptions of historical value. The buildings at Medinet Abu have also been cleared, so as to show their true proportions. In excavating the temple of Mut at Karnak, Miss Benson has found a fine marble statue of Sen-Mut, the architect of this temple and of that of Deir-el-Bahari, who also, according to his inscriptions, superintended the construction of certain buildings in the temples of Karnak and Luxor and was overseer of the granary of Amen. Another statue of this architect is in the museum at Berlin, and the German consul at Luxor has his walking stick with his name engraved upon it. A scarab has been found at Koin Ombo, in the style of the thirteenth dynasty, which is inscribed with the words "Sutekh Apopi," confirming the statements of Manetho and the Sallier papyrus that the rule of this Hyksos king extended over Upper Egypt.

The missing cap of the sphinx was found in February by Col. G. E. Raun, while excavating at

THE CAP OF THE SPHINX.

Gizeh, at a depth of 14 or 15 feet below the surface. It measures 4 feet 3 inches in extreme length, 2 feet 9 inches in width, and 2 feet 2 inches on the top. It is marked with the 3 lotos columns, under which is a figure, probably of a snake. The cap was found in the temple between the forepaws of the sphinx, was painted red, and bears an inscription.

In the course of clearing the island of Philæ of rubbish in order to permit a thorough examination of the ancient monuments, the discovery has been made that the foundations of the main temple of Isis are laid upon the granite rock, being in some places more than 21 feet in depth, and that the temple has nearly as much masonry below ground as above ground. The southeastern colonnade has also its foundations upon the granite, and these are curious if not unique in design. They consist of parallel cross walls several metres high, but varying according to the slope of the rock surface, with large stone slabs placed horizontally upon their tops, and the pillars forming the colonnade are erected upon the slabs. The nilometer is marked in three characters—Demotic, Coptic, and another much older. A *stela* was found bearing a trilingual inscription in hieroglyph. No traces were discovered of any buildings anterior to the Ptolemaic period.

ARGENTINE REPUBLIC, a federal republic in South America. The President is elected for six years by electors chosen in the several provinces. The National Congress consists of a Senate, composed of 30 members, 2 from each province, and 2 from the capital district, and a House of Deputies, composed of 86 members elected in as many districts by direct popular suffrage, whereas the provincial Senators are elected by the legislatures, and those representing the capital by an electoral college. The President of the republic for the term ending Oct. 12, 1898, is Z. S. Uriburu, who was elected Vice-President under Dr. Saenz Peña and succeeded to the presidency upon the resignation of the latter on Jan. 22, 1895. The Cabinet in the beginning of 1896 consisted of the following: Secretary of the Interior, Dr. B. Zorilla; Secretary of Foreign Affairs, Dr. Amancio Alcorta; Finance, Dr. J. J. Romero; Justice, Worship, and Public Instruction, Dr. A. Bermejo; Army and Navy, Gen. Villanueva.

Area and Population.—The republic has an area of 1,125,086 square miles, containing a resident population of 3,973,626 souls when the last census was taken, May 10, 1895. The population has been rapidly augmented by immigration from Europe. The arrivals in 1885 numbered 108,722; in 1886, 93,116; in 1887, 120,842; in 1888, 155,632; in 1889, 260,909; in 1890, 138,407; in 1891, 73,597; in 1892, 73,294; in 1893, 84,420; in 1894, 80,671. Among the immigrants who came in 1894 were 37,699 Italians, 8,122 Spaniards, 3,132 Russians, 2,890 Russian Jews, 2,107 French, 971 Germans, and 440 Austrians. About 25 per cent. of the present population of the republic are of Italian parentage. The Spanish and French immigrants are mostly Basques. Buenos Ayres, the capital of the republic, had 615,226 inhabitants in 1895. Of these about 170,000 were foreigners. The population of the neighboring city of La Plata was 60,982; of Cordoba, 54,400; of Rosario, 124,305; of Santa Fé, 35,288. Primary education is secular, free, and compulsory. The sum devoted to elementary education in 1890 was \$10,415,789, raised by provincial school taxes supplemented by liberal contributions from the General Government, which maintains the lyceums for secondary education, one in each province and the capital, and the Universities of Cordoba and Buenos Ayres, agricultural colleges, normal schools, etc. In 1892 there were 2,731 elementary schools, with 6,864 teachers and 228,439 pupils; 450 professors and 3,169 students in the lyceums; and 900 university students.

Finances.—The revenue for the year ending March 31, 1894, was \$27,790,500 in gold and \$24,861,412 in paper. In the year ending March 31, 1895, was \$19,271,941 in gold and \$72,065,221 in paper, of which amount \$17,793,570 in gold and \$58,578,898 in paper were the cost of administration and expenses of the debt. For 1896 the gold revenue, derived from customs and port dues, is estimated at \$31,048,000, and the revenue collected in paper currency at \$49,560,000, of which \$5,610,000 is derived from railroads, \$3,100,000 from land and general taxes, \$5,200,000 from stamps, \$3,540,000 from posts and telegraphs, \$22,010,000 from revenue taxes, and \$10,000,000 from miscellaneous sources. The total expenditure is estimated at \$20,491,483 in gold and \$85,600,000 in paper. The expenditure for the debt is \$13,646,203 in gold and \$9,943,000 in paper; for war, \$5,000,000 in gold and \$20,327,000 in paper; for the Interior and Congress, \$1,500,000 in gold and \$21,841,000 in paper; for Foreign Affairs, \$345,280 in gold and \$585,000 in paper; for Finance, \$6,292,000 in paper; for Justice, Instruction, and Worship, \$11,974,000 in

paper; for lands, etc., \$657,000 in paper; for the navy, \$13,981,000 in paper.

The external debt amounts to £52,555,700 sterling. The internal national debts in the beginning of 1895 amounted to \$161,259,031 of gold obligations, of which \$108,174,829 were in possession of the Government, and \$83,421,350 in paper. There was a floating debt of \$87,517,732. The provinces, whose budgets of expenditure in 1894 amounted to \$30,312,519, had debts amounting, with arrears of interest, to \$137,261,866 in gold, most of it owed abroad. The municipal debts made a sum of \$24,596,422 in gold. In 1895 the Secretary of Finance offered a plan for the unification of the national and provincial debts and railroad guarantees, proposing to issue \$380,000,000 of gold bonds bearing 4 per cent. interest, with 1 per cent. annual sinking fund, of which \$230,000,000 would redeem the existing national debts, \$85,000,000 the provincial debts, and \$35,000,000 the railroad guarantees. Although the General Government was not responsible for the provincial debts, the project was approved by the Congress in the session of 1896.

The new national bank established in December, 1891, after the failure of the old bank, has 62 branches, with an aggregated capital of \$30,865,000. The notes of the old bank, now in liquidation, that were in circulation in 1894 amounted to \$96,000,000, while the new bank had emitted \$36,875,684, guaranteed by the Government, the Banco Hipotecario had \$30,000,000 out, the Banco Nacion Argentina \$56,500,000, and there were \$77,738,466 of Government notes and \$3,627,340 issued by the municipality of Buenos Ayres, making a paper circulation of \$300,743,023, besides over \$41,000,000 of provincial notes. Gold fell from a premium of 220 per cent. to 180 in the first half of 1896.

The Army and Navy.—According to the military budget for 1895, the standing army is to be increased from 6,498 men to 14,194. The National Guard numbers 480,000, but not more than 1 in 8 is trained in military tactics.

The Argentine navy consists of 2 coast-guard armorelads, 3 armored cruisers, 3 second-class cruisers, 5 smaller cruisers, and 14 torpedo boats, while 6 torpedo destroyers of English build are to be added. Toward the close of 1895 the Argentine Congress voted \$10,000,000 for new war ships and war materials, orders for which were placed in England.

Commerce and Production.—Of a total cultivable area of 240,000,000 acres, not over 15,000,000 acres are tilled, but the cultivated area is rapidly extending. The wheat crop in 1894 was 2,044,957 tons, or over 70,000,000 bushels; the maize crop, 608,000 tons; the flax crop, 260,000 tons. The production of wine is 1,000,000 hectolitres a year; of alcohol, 18,000 hectolitres. The sugar crop of Tucuman in 1895 was about 100,000 tons. Enormous herds and flocks thrive on the rich herbage of the pampas. Besides hides, jerked beef, and the extract of meat, there is a large and increasing export of fresh meat to England. In 1893 there were 22,000,000 head of cattle, 80,000,000 sheep, and 5,200,000 horses. There were 623,000 cattle slaughtered in 1894, and 733,600 in 1895. Argentine butter was first shipped to England, to compete with the Danish, Swedish, French, Canadian, and Australasian supplies, in 1895, and as the result of the first year's operations the export has become a commercial success. The native gauchos, herdsmen by nature, move their camps from place to place, as the state of the pasturage requires, simply corralling the cattle at night, and at no time driving them far from the railroads. The milking and dairy work is performed by Italian and Basque laborers. The milk is sent by train to one of a

score or more butter factories, which have been fitted up with machinery and modern dairy appliances, imported mainly from England and admitted duty free. The milk is poorer in fat than that given by the cows of Denmark, for instance, but the butter is as good as the colonial product, and can be sold with a profit at lower rates.

The gold value of the merchandise imports in 1894 was \$92,724,000, and of exports \$101,249,000. The imports of gold coin and bullion were \$2,843,036, and exports \$140,677; imports of silver coin and bullion were \$345,359, and exports \$125,866. The principal classes of imports were textiles for \$29,514,258; iron and iron manufactures, \$14,251,133; articles of food, \$9,812,078; drink, \$6,953,564; timber and wood manufactures, \$5,387,532; coal, coke, and petroleum, \$8,784,051; chemicals, \$4,234,414; paper, \$3,194,506; pottery and glass, \$2,542,710; railroad materials, \$1,913,730; various metal manufactures, \$1,653,721.

The exports of 1894 were classified as follows: Animals and animal products, \$60,519,801; agricultural produce, \$32,520,256; manufactures, \$4,394,394; forest products, \$1,511,145; mineral products, \$311,653; various products, \$1,991,575. The exports of wool were 161,908 tons; of sheep skins, 36,756 tons; of wheat, 1,608,000 tons; of maize, 54,876 tons; of meat, 80,000 tons. The value in gold of the trade with each of the principal foreign countries in 1894 is given in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain.....	\$33,118,014	\$20,410,884
France.....	10,156,320	18,843,903
Germany.....	10,689,487	11,544,515
Belgium.....	8,958,561	12,769,341
United States.....	10,149,018	5,285,210
Italy.....	8,873,377	3,066,767
Brazil.....	2,079,429	13,860,404

Communications.—There were 8,156 miles of railroads in operation in 1894. The gross receipts in 1894 were \$75,023,000, and the expenses of operation \$42,411,000. Of the total capital, amounting to \$439,078,236 in gold, \$42,107,501 was invested in the state railroads, \$83,259,321 in lines guaranteed by the National Government, \$49,373,300 in lines subsidized by the provincial governments, and \$224,717,783 in private companies' lines. There is about £62,500,000 of European capital invested in Argentine railroads.

There were in 1894 in the republic 20,415 miles of telegraph lines, of which 11,250 miles belonged to the General Government, 1,115 miles to cable companies, and 8,050 miles to railroad companies. The number of dispatches in 1893 was 2,500,000.

The postal traffic in 1893 was 123,618,580 internal and 18,500,000 foreign letters and packets. The post-office earned a net revenue of \$2,085,860, and the telegraph department \$1,005,280.

Boundary Dispute.—A treaty was made with Chili in 1881 whereby Chili recognized the right of the Argentine Republic to all the territory east of the crest of the Andes throughout Patagonia, and to the eastern part of the island of Tierra del Fuego. Disputes having arisen later, this arrangement was confirmed by a protocol signed on May 2, 1893, and commissioners were appointed to survey and delimit the boundary. The boundary commissioners could not agree as to the interpretation of the treaty. Dr. Barras Arano, the Chilean commissioner, claimed that a curved line carried over Andean ridges and following the water-parting should constitute the boundary, while the Argentine representative insisted upon drawing the line straight, taking the highest peaks as guiding points.

The conflict over Patagonian territory dates from

the occupation by Chili on April 21, 1843, of Port Famine, where Sarmiento's colony starved to death, and the proclamation of Chilian sovereignty over the Straits of Magellan. Chili maintained a penal settlement there till Nov. 10, 1877, when the convicts and their guards mutinied and fled across the desert to the Argentine settlements, half of them perishing on the way. Although the penitentiary was not re-established, the colony of Punta Arenas was revived and became a port of call for steamers running between Europe and the western coast of South America and the headquarters for the antarctic whaling and sealing fleets. After placer gold was discovered in the stream on which the town stood, and after the land of Patagonia proved to be suitable for the support of cattle and sheep, especially the latter, the place prospered still more. The Argentine people from the first resented sorely this occupation of territory in Patagonia, although it was on the western side of the main range of the Andes. They argued from old documents that in Spanish colony times the Argentine viceregal government had included all Patagonia down to the strait and all the islands to the south, while Chili was entitled only to the narrow strip of soil between the mountains and the sea down to the strait and no farther. Chili meanwhile enlarged the territory occupied by sending troops up the eastern Patagonian coast as far as Santa Cruz river. The station established there was described in the beginning as a mere guardhouse to prevent the escape of convicts from the penal colony. Later it figured as a definite settlement, and Chili formally took possession of all Patagonia east of the Andes up to the old Argentine settlement near the mouth of the Rio Negro. In 1876 the Argentine Government began to assert its claims. Under a concession obtained in Buenos Ayres, a Frenchman established a fish-oil factory on an island in Santa Cruz river, but before long a Chilian war ship arrived and drove him away. An American shipmaster next obtained a concession to a guano island near Rio Santa Cruz. As soon as he had loaded his vessel it was seized and carried off as a prize to Chili. The feeling excited in the Argentine Republic became so intense that war seemed inevitable, when the treaty of 1881 was made to avert such a catastrophe. This was a compromise, fully satisfactory to neither party. The line was to follow the Andes down to the last peak, and thence was to run across to the crest of a hill on Cape Virgin. Tierra del Fuego was to be divided by a line running south from the termination of the boundary on Cape Virgin to a monument planted on the shore of Ushnala Bay, in Beagle channel. Besides getting all that lay west of this line, Chili was to have all the islands south of Tierra del Fuego, while Staten island, off the east coast of the island, went to the Argentine Republic. The Chilians were disappointed when they found out that the boundary line crossed one of the bays on the strait, giving to the Argentine Republic an excellent harbor, and depriving them of the entire control of the strait, which they looked upon as theirs by right of possession. The treaty they interpreted to mean that the Andean boundary line was not to follow the crests of the highest peaks, but the springs where the water of the rivers flowing east took their source, while the Argentinians insisted from the beginning that the main divide, not the water-parting, was intended. The new treaty of 1893 was made to put a stop to the bitter controversy. By this the Argentinians were deprived of the port on the straits, but they believed that in return for this concession the Andean line was definitely located on the crest of the continental divide, not at the sources of the Argen-

tine rivers. When commissioners were appointed to set up monuments in the passes of the Andes to mark the boundary line, the Chilians raised a clamor against the Argentine interpretation and still insisted on claiming the whole watershed. In February, 1896, a special envoy was sent by Chili to the Argentine capital to arrange for a settlement of the dispute, the boundary commissioners having separated after setting up a few of the pillars. An agreement was finally reached and a new protocol was signed on April 17, whereby all difficulties arising in the course of the delimitation that could not be adjusted by the two governments concerned are to be submitted for arbitration to Queen Victoria of England. The British Government accepted the office of arbitrator.

ARIZONA, a Territory of the United States, organized Feb. 14, 1863; area, 113,020 square miles. The population, according to each decennial census, was 9,658 in 1870; 40,440 in 1880; and 59,620 in 1890. Capital, Phenix.

Government.—The following were the Territorial officers during the year: Governor, Louis C. Hughes, Democrat, removed by the President April 1, succeeded temporarily by Secretary Bruce, and for the remainder of the term by Benjamin J. Franklin, inaugurated April 23; Secretary, C. M. Bruce; Treasurer, P. J. Cole, succeeded by F. E. Farish; Auditor, C. P. Leitch; Adjutant General, Edward Schwartz; Attorney-General, F. J. Heney, Superintendent of Instruction, F. J. Netherton; Chief Justice of the Supreme Court, Albert C. Baker; Associate Justices, John J. Hawkins, Owen T. Rouse, and James D. Bethune.

Finances.—The assessed valuation of all taxable property in 1896 was \$28,047,176; estimated actual valuation, excluding mining property, \$64,000,000; and tax rate, \$7.20 per \$1,000. The total debt on July 1, 1896, was \$2,414,000, including a floating debt of \$300,000; county, city, and school-district debt, \$1,374,899; net Territorial debt, \$1,039,101; cash in treasury, \$115,000.

Banks.—On Oct. 31, 1895, Arizona had 5 national banks in operation and 3 in liquidation. The active banks had a total capital of \$400,000; amount of United States bonds held to secure circulation, \$100,500; coin and coin certificates, \$134,106.10; notes issued for circulation, \$266,090—redeemed \$172,380, outstanding \$93,710; loans and discounts, \$667,097; deposits, \$886,527; reserve, \$287,623; and ratio of reserve, 34.38 per cent. The Territorial banks numbered 2, and had aggregate capital of \$40,200; resources, \$838,039; deposits, \$737,241; and surplus and profits, \$65,598. The combined capital, surplus, undivided profits, and individual deposits aggregated \$2,328,940, or \$34.76 *per capita*.

Agriculture.—The United States Department of Agriculture reported (1896) as follows on the principal crops of 1895: Corn, 5,105 acres, 132,730 bushels, value \$99,548; wheat, 12,227 acres, 250,654 bushels, value \$162,925; potatoes, 422 acres, 29,118 bushels, value \$17,471; and hay, 34,408 acres, 63,655 tons, value \$572,895; total value, \$852,839.

Live Stock.—In January, 1896, the United States Department of Agriculture estimated the number and value of farm animals in the Territory as follows: Horses, 55,449, value \$1,164,770; mules, 1,221, value \$33,605; milch cows, 15,622, value \$390,550; other cattle, 636,512, value \$6,457,164; sheep, 746,546, value \$930,196; and swine, 20,695, value \$152,980; total value, \$9,129,265. The wool clip of the year was 6,678,603 pounds of washed and unwashed, and 1,803,223 pounds of scoured.

Mining.—During 1896 renewed activity was reported in the old mining sections, and new and valuable finds were opened. An examination of the sand bars on Colorado river as far down as the

Needles showed an abundance of gold that only required a cheap method of working. In November one company began operations. New finds or enlarged operations were reported in the Golden Dream group, Grand Prize, Jersey Lily, La Fortuna, Noonday, Pierce, Vulture, Adler Springs, Last Chance, and Addie mines.

School Lands.—A bill providing for the leasing of all the lands in the Territory reserved for university and public-school purposes, the proceeds to be used to promote public education, introduced into the House, Dec. 26, 1895, was passed in the Senate on Feb. 14; vetoed by the President a few days afterward; and was again passed in the House on the 29th, by a vote of 200 yeas to 38 nays. The original bill was amended so as to limit leases to five years, and the operation of the law to the time that Arizona remained a Territory. Action on this bill created excitement in the Territory, many asserting that every one excepting those expecting to be benefited by the bill was opposed to it, and Delegate Murphy, on the other hand, declared that the protests received by the President were from persons being benefited by the occupation of these lands rent and taxes free.

Outlawry.—On Aug. 12 an attack was made on the customhouse of Nogales, on both sides of the international line, by a body of Yaqui and Temochi Indians and a number of Santa Teresa fanatics. They failed in their purpose of plunder, and several persons were killed and wounded on each side. The Yaquis then started for Tucson, but Lieut. Bullock, commanding Troop E of the 7th United States Cavalry, overtook them in the mountains 20 miles south of the city, on the 17th, and after a three-hours' fight killed 3 of the Indians and captured the remaining 30. Later in the year portions of Arizona and New Mexico were terrorized by a gang of bandits, all cowboys familiar with the country, who robbed post offices, mail stages, and stockmen, and attempted to rob several banks and railroad trains. Post-office Inspector Waterbury was sent to the scene with a posse in November, but he reported that it would be impossible to make any arrests without re-enforcements.

Sunday Schools.—The third annual convention of the Territorial Sunday School Association was held at Flagstaff, Aug. 14. Reports showed: Sunday schools, 70; officers and teachers, 515; pupils, 3,880; total numbers, 4,395—an increase in three years of 1,347.

Irrigation.—The annual report of the Rio Verde Canal Company, issued Feb. 1, 1896, showed total value of water-right sales, \$1,200,000; an advance in price of storage water rights to \$17 an acre; and length of main canal completed over 15 miles. The company will control more than 6,500 net horse power from the falls in the canal, which is to be converted into electric power at an early date. The fifth annual session of the National Irrigation Congress was held in Phenix, Dec. 15-17.

Statehood.—The attempts to secure Statehood for the Territory were again retarded by congressional action. On Feb. 12 the House Committee on Territories decided by a vote of 6 to 5 against reporting the bill for the admission of the Territory, and on the 19th the committee reconsidered this vote. The Senate committee reported favorably on the bill March 26. Then the House committee, by a vote of 5 to 2, ordered a favorable report on April 14. These bills remained on the calendar when Congress adjourned. Further local excitement on this measure was developed in February, when the Senate Committee on Territories heard argument on a bill to add to the State of Utah all that part of Arizona lying north of Colorado river and west of the eastern boundary of Utah 3,000 square miles.

Political.—The Populist Territorial Convention was held at Phenix, Aug. 27, and nominated W. O. O'Neill for Delegate to Congress; the Democratic convention, at Williams, Sept. 17, nominated Marcus A. Smith; and the Republican convention, at Phenix, Sept. 22, approved the single gold standard and the St. Louis platform, and nominated A. J. Doran. The elections, Nov. 3, showed a plurality of 1,975 for Smith, as Democratic nominee for Congress. The total vote cast was 14,050: Democratic vote, 6,065; Republican, 4,090; Populist, 3,895. Doran was the Republican nominee and O'Neill ran as representative of the Populists.

The increase in the Democratic vote over 1894 was 1,292; decrease in the Republican vote, 1,558; increase in the Populist vote, 889; increase in the total vote over 1894, 623; over 1892, 1,727. Among the twelve counties, Maricopa, Yavapai, and Graham cast the largest Democratic vote in 1896. The largest Populist vote was given in Yavapai, which in 1894 had a Republican plurality of 290. The percentage of the congressional vote in 1896 was: Democratic, 43.16; Republican, 29.11; Populist, 27.73. In 1894 it was as follows: Democratic, 35.81; Republican, 42.40; Populist, 21.78.

In the Territorial Legislature, the Council or upper house, 1897, consists of 9 Democrats and 3 Republicans; the House, of 23 Democrats and 1 Republican.

ARKANSAS, a Southern State, admitted to the Union June 15, 1836; area, 53,850 square miles. The population, according to each decennial census since admission, was 97,574 in 1840; 209,897 in 1850; 435,450 in 1860; 484,471 in 1870; 802,525 in 1880; and 1,128,179 in 1890. By estimates based on the school census of 1895, it was 1,248,056 in that year. Capital, Little Rock.

Government.—The following were the State officers during the year: Governor, James P. Clarke, Democrat; Secretary of State, H. B. Armistead; Auditor and Insurance Commissioner, C. B. Mills; Treasurer, Ransom Gully; Attorney-General, E. B. Kinsworthy; Superintendent of Public Instruction, Junius Jordan; Commissioner of State Lands and State Timber Agent, J. F. Ritchie; Commissioner of Mines, Manufactures, and Agriculture, W. G. Vincenheller; Adjutant General, M. L. Davis; Chief Justice of the Supreme Court, Henry G. Bunn; Associate Justices, Simon P. Hughes, C. D. Wood, Burrill B. Battle, and James E. Riddick; Chancellors, T. B. Martin, James F. Robinson, and Leland Leatherman, all Democrats.

Finances.—The total of balances in the State treasury, Oct. 1, 1894, was \$1,182,670.20. The bonded indebtedness amounted to \$4,823,022.50, from which should be deducted the amount admitted as a credit on bonds held by the United States, \$202,293.33, leaving the net indebtedness, \$4,621,729.17. On Dec. 3, 1895, the cash on hand amounted to \$416,118.13, and the aggregate of all funds in the treasury to \$1,218,529.10, of which \$206,784.29 was credited to the general fund, \$62,240.92 to the common-school fund, and \$70,241.71 to the sinking fund.

In July was filed, in the case of the State against the Western Union Telegraph Company, a mandate of the United States Supreme Court. A perpetual injunction had been granted restraining the Arkansas State Assessment Board from taking any steps to enforce the collection of taxes assessed against the property of the company by the board, and certified to the county collectors. The Supreme Court dismissed the suit because the amounts involved in the separate county cases did not aggregate \$2,000, and therefore did not come within the jurisdiction of a Federal court. Judge Williams granted another injunction restraining the State board from assessing the telegraph company pend-

ing a new suit filed to test the validity of the act of April, 1893, under which the assessments are made.

Education.—By the enumeration of 1895, the total school population amounts to 448,941, of which 123,645 are colored. The males number 230,823, and the females 218,118. The amount distributed in August from the State treasury, according to this enumeration, was \$323,237.52, an average of 72 cents for each pupil.

It appears that, in violation of an act passed in 1875, the 10 per cent. of the net proceeds of the sales of State lands never has been passed into the common-school fund. All this source of revenue has been lost to this fund for more than two decades. The reason for this appears to be that the Commissioners of State Lands and the State Treasurers have maintained that the act does not specify it as the duty of either to set aside this *pro rata* for the school fund when a sale of land is made.

It appears also that the permanent school fund, or a part of it, has been invested in State bonds upon which interest has not been paid for several years, so that about \$300,000 is now due.

The State expends \$10,000 yearly on summer normal schools for teachers in the counties, which are held for twenty days. About 80 per cent. of the teachers were enrolled in them in 1895.

State Institutions.—A fire in the laundry building of the State Insane Asylum, Jan. 11, entailed a loss of about \$7,000, covered by insurance. The State has a suit seeking to hold the trustees and the German National Bank responsible for the shortage of the ex-treasurer, Buchanan. From the time of his re-election as treasurer, in 1891, the board did not require him to execute a bond, yet permitted him to act as treasurer from April 4 to October of that year and delivered to him warrants on the Auditor to the amount of \$29,350, which said warrants were by him delivered to the German National Bank, which bank collected the money from the State Treasurer, and afterward Buchanan drew the sum of \$23,806.72, which he applied to the purposes designed by law and also the balance, \$5,543.28, which he embezzled.

The Confederate Home, near Little Rock, which has been under the care of the Legislature since 1891, having recently been enlarged, now has accommodations for 50 inmates. In July there were 48. The appropriation allows \$180 for each veteran.

The record of the Penitentiary for 1895 shows that the present system of working the convicts makes the institution self-sustaining. The inmates, of whom there are more than 700, are mostly employed on the crop-share system.

The Deaf-Mute Institute has nearly doubled its numbers within the past five years. The last Legislature provided additional accommodations, so that the school is in condition to receive all entitled to its benefits.

Banks.—The Savings Bank and Trust Company of Hot Springs failed on May 1. The assets to offset liabilities, amounting to nearly \$300,000, consisted principally of the personal notes of the president, E. Hogaboom, for amounts ranging from \$10,000 to \$50,000. The president and the cashier, W. W. Wright, were indicted in October for embezzlement.

Railroads.—The demand for a railroad commission seems to be general throughout the State, caused by alleged discrimination in freight charges by the Missouri Pacific system, which is made possible by the lack of competition. The State Constitution seems to forbid the creation of any permanent State office not expressly provided for.

Meantime, there are various projects for extending railroad facilities by new roads and extensions. A road 50 miles long was building this year from Hamburg to the Mississippi. Congress, in Febru-

ary, passed a bill granting the Arkansas and Choctaw Railroad Company the right of way through the Choctaw Nation grounds in the Indian Territory. The Kansas City, Pittsburg and Gulf Railway also received an amendment to its charter, granting it the right to build into the city of Fort Smith without the consent of the Indian tribe, through whose territory it passes. The same road has been granted the right to construct a branch to Hot Springs. A new line, called the Hoxie, Pocahontas and Northern road, starting at Hoxie, in Lawrence County, and running, via Walnut Ridge, in the northwesterly direction to Pocahontas, the seat of Randolph County, 17 miles was completed in the autumn. The Little Rock, Hot Springs and Texas, an unfinished road, was placed in the hands of a receiver in February. The mileage of railroads in 1894 was 2,343.91, and the assessed valuation \$19,931,840.

In the suit against the Little Rock and Fort Smith Railroad, the Governor appointed L. H. McGill a special Associate Justice of the Supreme Court to act in lieu of Judge S. P. Hughes, who was Attorney-General of the State when the suit was instituted. The present suit has been in the courts about eight years. The bonds at stake in the current litigation involve about \$1,000,000. The purpose is to compel the railroad company to pay the interest on the bonds and to appoint a receiver to take charge of the income and revenue of the road to that end. In the decision of the United States Supreme Court the case was that of the State on one hand and the railroad company on the other, while this is a suit between the bondholders of the railroad company.

The State also had a suit against the Little Rock and Fort Smith Railroad, seeking to recover \$80,000 alleged to be due for taxes in 1878-'83.

Crops.—The report of Dun & Co.'s Commercial Agency in September is summarized as below: "The cotton crop last year was only 600,000 bales, whereas the year prior to that it was 900,000. This year it will not exceed 400,000 bales. Crops on the hill lands have suffered most. In many cases it will require 10 acres to make one bale. The southern and southwestern counties are the greatest sufferers. The corn crop is at least 45 per cent. short of last year's production. Enough corn will not be raised for home consumption. Hay and potatoes are 50 per cent. short, while fruit is almost a failure. Sorghum is 80 per cent. short."

The State received the award of the grand prize for its exhibit of apples at the Atlanta Exposition, and also gold medals for its horticultural and agricultural exhibits in general.

At the State convention of cotton-planters, in February, it was agreed that less cotton and greater diversity of crops would be advantageous.

Minerals and Lumber.—The report of the State Inspector of Coal Mines, rendered in November, 1895, says: "The coal industry in the State is increasing, but the increase is with the large companies, the small companies going out of business, as they can not compete with the large companies in the market. The number of mines in the State is 44. The coal mined during the year was 900,671 tons, an increase of 156,811 tons over 1894, employing 2,360 men. There has been an increase in the production in every coal-mining county in the State."

Steps are taking for the development of the bauxite lands in Pulaski County, and of the chalk deposits in Little River County. It is claimed that Arkansas ocher can be made into "wagon red" of a deeper color than that from any other ocher known, and a large ocher plant is to be erected.

Gold and silver in paying quantities have been found on King's river near Eureka.

Michigan and Minnesota lumbermen are investing largely in Ashley County timber.

Good Roads.—In response to a circular letter sent all over the State, asking opinions as to what the State most needs, nearly all the correspondents mentioned good roads as of the first importance, and a good-roads convention was held, pursuant to the call of the Governor, at Little Rock, Feb. 25 and 26. A standing committee of 10 was appointed to have charge of all matters connected with the movement, and resolutions were adopted recommending legislation establishing a State central commission, with power to employ a civil engineer as State Director of Highways, and granting \$100,000 annually to aid in road construction.

Little Rock.—The project for building a free bridge across the Arkansas at Little Rock has been agitated for years, but nothing was determined until recently. The contract for a bridge to cost \$353,022 was let in September. The cost is payable in county script in installments of \$25,000 annually, and the work is to be finished in fifteen months. The traffic across the river at that city now yields about \$30,000 a year in tolls.

Hot Springs.—The superintendent of the Hot Springs reservation made his annual report in October for the year ending June 30. The Hot Springs Mountain Reservation has to this time received practically all the improvement made here by the Government. The total amount of money becoming available for the Hot Springs improvements during the fiscal year is \$47,900.88. Total disbursements, \$19,241.87. Four of the total number of hot springs remain open, showing the natural flow of the hot water as it issues from its source. Two of these only have been properly improved.

Judicial Decisions.—The right of the Governor to fill vacancies in the State Legislature was decided in October by the Supreme Court. One of the Representatives elected in September died, and the Governor issued a writ of election to the sheriff of the county, commanding him to issue a proclamation for an election to fill the vacancy. The sheriff refused to hold the election, and thereupon a writ of mandamus was prayed to compel him to do so. The circuit court held that this section had been superseded by a subsequent amendment which empowers the Governor to fill such vacancies by appointment, and refused the writ, which judgment was affirmed by the Supreme Court.

The right of the Governor to attach a condition to a pardon came up in the case of a man who had been pardoned from the Penitentiary on the condition that he should leave the State and stay out of it. He came back, and was rearrested. It was claimed that the condition imposed was in conflict with the Constitution, which says that under no circumstances shall any person be exiled from the State. But the court decided that the section forbids only compulsory banishment, and does not say that the citizen or other person may not of his own volition and accord leave the State to escape punishment; nor that the Governor may not, by his pardon, permit him to do so. The Chief Justice dissented from this opinion, but concurred in the affirming of the decree upon the ground that if the condition was void the pardon was also void.

In a case involving the liability of a married woman on a contract for money borrowed by her, it was held that such a contract is one in reference to her separate property, and creates a personal obligation, valid in law and in equity, and this without regard to the question whether she owns any additional property.

The question came up whether a chattel mortgage—placed upon some insured property, but discharged before its loss—would invalidate the in-

urance, the terms of the policy providing that it should be void in case the property should be incumbered with a chattel mortgage. The policyholder claimed that the mortgage merely suspended the policy, which became good again when the mortgage was canceled; but the court held that the policy was extinct from the time the mortgage was given.

An important decision was recorded in July by Chancellor Martin in reference to building and loan associations—viz.: (1) That the sum of money received by a shareholder from the association, which is usually called a loan, is in fact not a loan, but an anticipatory payment of the sum that would be paid to the stockholders upon the winding up of the series; and it not being a loan of money, the taking or reserving the bonus or premium can not make the contract usurious; (2) that if the entire transaction could be regarded as a loan of money, it is uncertain when the stock will mature at the time the contract is made; therefore, it can not be a contract for the loan of money at a greater rate of interest than 10 per cent. per annum, nor for the forbearance of money at such rate, and consequently is not usurious.

In January, Chancellor Martin overruled the demurrer to the jurisdiction of the Pulaski Chancery Court, which granted the injunction in the noted case of the attempted prize fight at Hot Springs in October, 1895. By an examination of the statute books it had been found that the supposed law of 1891 making prize fighting a felony was never passed. The two houses could not agree on the bill, and it was sent to a conference committee, and when the report was presented to the House it was adopted simply by a *viva voce* vote. As the law of 1893 sought to amend this act, it would seem that there is no law on the subject of prize fighting in this State.

Political.—The Republicans held a convention March 3, at Little Rock, chose 4 delegates to the St. Louis convention, who were instructed to vote for McKinley, and adopted a platform which declared as follows on the currency question:

"We favor true bimetalism, with such restrictions and under such provisions, to be determined by legislation, as will secure the maintenance of the parity of values of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be at all times equal."

Favoring protection, it said further:

"We condemn the action of the Democratic party in Congress, and especially the Arkansas Senators and Representatives, in voting to place and placing the products of our forests on the free list, whereby the lumber industry of this State has been greatly crippled, and the price of labor employed in said industry greatly reduced."

The adjourned meeting of the convention for naming a State ticket and nominating presidential electors was held July 1. The St. Louis platform was adopted. On State affairs, the resolutions demanded reform in many particulars, emphasizing the following:

"We favor an amendment of our road laws. The present system falls heaviest upon the poorest citizens.

"We favor an amendment to the election law, so framed that one member of each of the election boards may be of a political party other than that composing the State administration.

"We favor the establishment of a reform school for the reformation of youthful criminals.

"We favor an amendment to the Constitution permitting counties and municipalities, by vote of the people, to exempt manufacturing enterprises from taxation for a specified term.

"The action of the Legislature in refusing to appropriate the interest on the general school fund, amounting to about \$250,000, for the maintenance and improvement of our public schools is a wrong to the people."

The ticket follows: For Governor, H. L. Remmel; Secretary of State, H. A. Reynolds; Auditor, J. F. Mayes; Attorney-General, E. H. Vance; State Treasurer, A. A. Tufts; State Land Commissioner, Mark A. Sanders; Superintendent of Public Instruction, Charles F. Cole; Commissioner of Mines, Manufactures, and Agriculture, Charles T. Duke; Chief Justice, Jacob Trieber; Associate Justice, O. D. Scott.

A resolution was adopted expressing confidence in Gen. Powell Clayton, and satisfaction with his leadership of the party in the State.

The Prohibition State Convention was held May 7. Delegates to the national convention at Pittsburg were chosen, also a candidate for Governor, J. W. Miller, and one for presidential elector, but neither the State nor the electoral ticket was completed. After reaffirming the distinctive principle of the party, the resolutions declared for free coinage of silver and Government ownership of railroads and telegraphs. The platform also declared in favor of restricted immigration, woman suffrage, election of President, Vice-President, and Senators by direct vote, reduced salaries to public officials, abolition of official fees, taxation of property at its actual value, a better State road law, and amendments to the election laws. Recent Legislatures were condemned for not providing for school instruction on the effects of alcohol on the human system.

The Democratic State Convention was held at Little Rock, June 17. Three aspirants had been before the people as candidates for the nomination for Governor—A. H. Sevier, who was not in favor of free silver; J. H. Harrod, a silver man who proposed to abide by the action of the national convention whatever it might be; and Daniel W. Jones, who was for free silver at all hazards. The first withdrew; and as a large majority of the county conventions instructed for Daniel W. Jones, he was made the candidate of the convention. The remainder of the State ticket was: For Secretary of State, Alexander C. Hull; Attorney-General, E. B. Kinsworthy; Auditor, Clay Sloan; Treasurer, Ransom Gulley; State Land Commissioner, J. F. Ritchie; Superintendent of Education, Junius Jordan; Commissioner of Agriculture, W. G. Vincenheller; Chief Justice, H. G. Bunn; Associate Justice, S. P. Hughes. Delegates to the national convention were instructed to vote for Richard P. Bland for presidential nominee by a vote of 420 to 327. An electoral ticket was also chosen. The platform said, in part:

"We favor bimetallicism, and to that end we insist upon the free and unlimited coinage of both silver and gold, at the ratio of 16 to 1, as money of final redemption, with equal legal-tender powers, independent of the action of any other nation.

"We are opposed to the issue of interest-bearing bonds for any purpose in time of peace.

"We demand the repeal of the present laws discrediting the silver money of the nation and legalizing private contracts payable in gold alone.

"We are opposed to the national banking system."

It also declared in favor of an income tax, a tariff for revenue only, the improvement of State highways, the immediate creation of a railroad commission, and the submission to the people of such an amendment to the Constitution as may be necessary to remove all restrictions on legislation on this subject.

The State Convention of the People's party, held

at Little Rock, July 15, named candidates for presidential electors, and placed A. W. Files in nomination for Governor.

The State election took place Sept. 7, and the entire Democratic ticket was successful. The total vote polled for Governor was 141,801, of which Daniel W. Jones, Democrat, received 91,124; H. L. Remmel, Republican, 35,836; A. W. Files, Populist, 13,990; and Miller, Prohibitionist, 851. The number entitled to vote was 201,105. The Senate will have 30 Democrats and 1 Republican. The House of Representatives will contain 87 Democrats, 11 Populists, and 2 Republicans. The question of liquor license was submitted to vote at this election with this result: In favor, 68,088; opposed, 61,862.

After the State election, the question of fusion between the Democratic and People's parties on the presidential ticket was decided upon at a meeting of the State central committees of the two parties Oct. 10. It was agreed that the Democrats should have 5 electors and the People's party 3, and accordingly 3 of the candidates on the Democratic ticket resigned and their places were filled by Populists.

These electors were chosen Nov. 3, the vote standing as follows: Democratic and Populist, 110,103; Republican, 37,512; Regular Prohibition (Levering), 839; National Prohibition (Bentley), 893. The total vote cast was 149,347, the Democratic plurality being 72,591. There were no Palmer electors. The increase in the total vote for presidential electors over 1892 was 1,418. The increase in the Democratic plurality over 1892 was 31,641.

The election for congressional representatives resulted in the return of Messrs. McCulloch, Little, McRae, Terry, Dinsmore and Brundridge, all Democrats. Their majorities in their respective districts were 14,236, 12,626, 11,077, 9,419, 8,479, and 12,066. The first five named were re-elected, having previously served in two or more Congresses.

ASSOCIATIONS FOR THE ADVANCEMENT OF SCIENCE. *American.*—The forty-fifth meeting of the American Association for the Advancement of Science was held in Buffalo, N. Y., Aug. 22-29, 1896. The officers of the meeting were: President, Edward D. Cope, Philadelphia, Pa. Vice-presidents of sections: A, Alexander Macfarlane, South Bethlehem, Pa.; B, Carl Leo Mees, Terre Haute, Ind.; C, William A. Noyes, Terre Haute, Ind.; D, Frank O. Marvin, Lawrence, Kan.; E, Benjamin K. Emerson, Amherst, Mass.; F, Theodore N. Gill, Washington city; G, Nathaniel L. Britton, New York city; H, Alice C. Fletheer, Washington city; I, William R. Lazenby, Columbus, Ohio. Permanent Secretary, Frederick W. Putnam, Cambridge (office, Salem) Mass. General Secretary, Charles R. Barnes, Madison, Wis. Secretary of the Council, Asaph Hall, Jr., Ann Arbor, Mich. Secretaries of the sections: A, Edwin B. Frost, Hanover, N. H.; B, Frank P. Whitman, Cleveland, Ohio; C, Frank P. Venable, Chapel Hill, N. C.; D, John Galbraith, Toronto, Canada; E, William N. Rice, Middletown, Conn.; F, David S. Kellicott, Columbus, Ohio; G, George F. Atkinson, Ithaca, N. Y.; H, George H. Perkins, Burlington, Vt.; and I, Richard T. Colburn, Elizabeth, N. J. Treasurer, Robert S. Woodward, New York.

Opening Proceedings.—The usual regular preliminary meeting of the council with which the association begins its sessions was held in the Iroquois Hotel, which was the headquarters of the association, on Aug. 22, at noon. At this session the final details pertaining to the arrangements of the meetings were settled, and the reports of the local committees acted on. The names of 54 applicants for membership were favorably considered. The general session with which the public meetings began was held in the chapel of the High School at

10 A. M., Aug. 24. The meeting was called to order by Edward W. Morley, the retiring president, who introduced the new president, Edward Drinker Cope, who then took charge of the meeting, the exercises of which began with prayer by the Rev. Dr. Charles H. Fowler, Methodist Episcopal Bishop of

EDWARD D. COPE.

Buffalo. Mayor Edgar B. Jewett, chairman of the local committee, was introduced and welcomed the scientists to Buffalo, extending to them the freedom of the city and calling attention to the various points of interest in and about Buffalo. Dr. Roswell Park then delivered an address of welcome in behalf of the Buffalo Society of Natural Sciences, in which he said: "Not the least of our pleasant recollections in seeing you now is the remembrance that after the period of your inactivity during the civil war your first meeting for reorganization was held in Buffalo. Twice since then your association has honored us by selecting Buffalo as a meeting place, and now we again extend to you a welcome bounded only by the city's limits and the hospitality of its citizens." He spoke of the Buffalo Society of Natural Sciences, outlining its work in the promotion and study of natural sciences, and calling particular attention to its working library and the museum with its valuable collections. President Cope responded to this address, and spoke of original research as promoting mainly the advancement of science, saying: "Love of research makes a man devote himself to the study of science, and it means endless advantages both to the investigator and to those who profit by his research. The scientific career is one which offers great advantages in this country, rich in the elements that make the calling a source of delight. It is a life of happiness, for in congenial labor is found happiness. In the line of intellectual progress the scientific career offers the very best." Permanent-Secretary Putnam announced the names of 17 members of the association who had died during the year, including 3 founders of the association (Thomas T. Bonvè, Bela Hubbard, and Josiah D. Whitney) and a past president (Prof. Hubert A. Newton, of New Haven, Conn).

Address of the Retiring President.—The association met in the chapel of the High School at 8 P. M., Aug. 24, to hear the retiring address of Edward W. Morley, who during the past ten years has devoted his leisure to study of the atomic weight of oxygen, a research that has gained for him the reputation of having finally settled that question upon which the atomic values of all the other elements so largely depend. The title of his address was "A Complete Chapter in the History of the Atomic Theory." He said: "The history of the atomic theory for ninety years would fall into several distinct chapters. One of these would tell of a large amount of work, some of it of consummate accuracy, of which the object was to attain some knowledge of the nature or construction of atoms. Since the last meeting of our association in this city work has been accomplished which, if I rightly judge, has ended this particular chapter. Dalton's theory was founded on three facts. One of these is the law of definite proportions: in any chemical compound the ratio of the components is constant, is invariable, is definite. A second of these laws of Dalton is the law of equivalent proportions: if two elements which combine with each other combine also with a third, then the ratio in which they combine with each other (or a simple multiple of it) is also the ratio of the quantities of those which combine with the same quantity of the third. The third law is the law of multiple proportions: if two bodies combine in more than one ratio, those ratios are simple multiples of each other. These three laws are statements of *facts*. Careful and multiplied experiments have convinced us that, if these statements are not rigorously exact, their deviation from accuracy is less than the accidental errors of the best experiments used to test them. The determination of atomic weights is the chemical process in which the highest degree of precision is demanded. If we denote the precision of such determination by the words 'good,' 'excellent,' 'admirable,' 'consummate,' then we may say that in a good series of determinations the average difference from the mean of all will be less than one-one-thousandth part of the ratio sought; in an excellent series, less than one-three-thousandth part; in an admirable series, less than one-ten-thousandth part; and in a consummate series, less than one-fifty-thousandth part. Dalton inferred that chemical elements consist of very small units or individuals: that all the units or individuals of any given element are equal in weight; and that combination takes place by the grouping together of different units or individuals. This is Dalton's atomic theory. In Dalton's time there was no fact opposed to this novel conclusion; but there was no second set of facts to support it. A few years after Dalton had formed the atomic theory, and had obtained the first experimental evidence on a matter which had enlisted attention for more than two thousand years, Davy showed that certain bodies were compounds, although they had resisted all previous attempts to decompose them. Trusting to experiments of not much accuracy, Prout suggested in 1815 that probably the atomic weights of other elements were divisible, without remainder, by the atomic weights of hydrogen; or, in other words, that they are whole numbers, if the atomic weight of hydrogen be taken as unity. Dumas, than whom none in France stood higher, whose opinion had great weight on account of the excellence of his many determinations of atomic weights, accepted Prout's hypothesis with a slight modification, and believed that his experiments had established its truth. Stas, the distinguished pupil of Dumas, began his work with a bias in favor of the hypothesis; but when his first series of admirable deter-

minations of atomic weights was published, he pronounced the hypothesis a pure illusion, irreconcilable with the numerical results of experiment. But Mallet, who has made several excellent determinations of atomic weights, and Clarke, who has recomputed and reduced to order all the published determinations, declared themselves forced to give Prout's hypothesis a most respectful consideration.

"Since our last meeting in this city results have been attained which show that further effort in this direction is not justified by the hope of any theoretic advantage. Prout's hypothesis can not be proved by experiment. In the first place, we can more readily test the correctness of Prout's hypothesis by determinations of the smaller atomic weights. Among the smaller atomic weights some can be more accurately determined than others. Accordingly, a second condition imposed on us by the limitations of our knowledge is that we must determine with what precision we can those small atomic weights which admit of the maximum of precision. The third condition imposed on us, in attempting to learn the truth about Prout's hypothesis, is that the atomic weight of oxygen must be well determined.

"Since that time [1876] 11 independent determinations of the atomic weights of oxygen have been successfully concluded. One of these differs much from the mean of all the others. The other 10 are concordant. They differ on the average only 1 part in 2,200 from their mean, and the greatest difference from the mean is about 1 part in 1,000. We may then fairly assume that the systematic error of the mean is less than 1 part in 1,000. It has been found possible to weigh some hydrogen, to weigh the requisite oxygen, and to weigh the water they produce. If there were some undetected systematic error in weighing either one of these 3 substances, occasioned, for instance, by some undetected impurity, the sum of the weights of the hydrogen and oxygen would differ from the weight of the water produced. The net results of the experiments made in Denmark, France, Great Britain, and the United States is that the atomic weight of oxygen is between 15.87 and 15.89, and that probably it is between 15.875 and 15.885. By no stretch can we imagine that the truth lies in the whole number 16 or in the even fraction 15.50.

"I have argued that Prout's hypothesis is not true as heretofore enunciated, and that if some further modification of it is true we can not know it. This conclusion has been sustained by the evidence of the chemist's balance. A conclusion supported by a single kind of evidence may command the confidence of one who has been long familiar with the evidence and who has become capable of weighing it; but for others the concurrence of evidence of different kinds adds greatly to the cogency. In this case there is such concurrent evidence. Since Prout's hypothesis has rendered us its final service new hypotheses must be devised."

Proceedings of the Sections.—The association is divided into 9 sections, each of which is presided over by an officer having the rank of vice-president of the association. Subsequent to the opening proceedings each section meets by itself and effects its organization by electing a fellow to represent it in the council, a sectional committee of 3 fellows, a fellow or member to the nominating committee, and a committee of 3 members or fellows to nominate officers of the section for the next meeting. As soon as this organization is effected, the secretary of the section reports to the general secretary, who then provides him with a list of papers that, having been considered suitable by the council, may be read and discussed before the section. On

the first day the proceedings are usually confined to organization and the delivery of the inaugural or vice-presidential addresses.

A. Mathematics.—At the meeting held last year, William E. Story, of Worcester, Mass., was chosen vice-president for this section, but he was unable to attend the meeting, and therefore no address was delivered. The vacancy was filled by Alexander Macfarlane, of South Bethlehem, Pa.

The following-named papers were read and discussed before the section: "An Analogue to DeMoivre's Theorem in a Plane Point System," by Edward W. Hyde; "Rational Scalene Triangles," by Artemas Martin; "New Elements of the Variable R Come, resulting from Observations in July and August, 1896," and "Photometric Observations of Colored Stars," by Henry M. Parkhurst; "Motion of the Great Red Spot and Equatorial Belt of the Planet Jupiter from 1879 to 1896," by George W. Hough; "On the Direct Application of a Rational Differential Equation to a Series of Points whose Co-ordinates represent Observed Physical Properties," by Robert B. Warder; "A Proposed Fundamental Integral-Transcendent," by James McMahon; "On the Level of Sun Spots," by Edwin B. Frost; "Sedonians," by James B. Shaw; "On the Distribution and the Secular Variation of Terrestrial Magnetism, No. IV: On the Component Fields of the Earth's Magnetism," by Louis A. Bauer; "Determination of Weights of Observations," by John R. Eastman; and "On the Composition of Simultaneous and Successive Vectors," by Alexander Macfarlane.

B. Physics.—The presiding officer of this section was Carl L. Mees, President of Rose Polytechnic Institute, in Terre Haute, Ind. He chose as the subject of his address "Electrolysis and some Outstanding Problems in Molecular Dynamics."

This address was a historical review from the beginning of the observation of electrolytic action, about the middle of the eighteenth century, through its development to the present day. The several theories explaining the action within the electrolyte when chemical decomposition occurs, from Grothuss's hypothesis to Arrhenius's theory, were critically discussed and analyzed. The relations between osmotic pressure, solution modification of vapor tension, and the freezing point were traced and discussed, showing that the evidence in favor of similarity of dynamical action was very great. Nernst and Ostwald's applications of these principles to the cause of electro-motive force in batteries were examined and briefly discussed, together with the application of thermodynamic principles to the problem. The difficulty of obtaining reliable experimental data for the final testing of these theories was pointed out, together with the suggestion of lines of investigation to be pursued in their further development. Attention was called to the fact that these studies had been neglected to a great extent by physicists, having been mainly carried on by chemists, and thus many fruitful essentially physical concepts of molecular actions and relations have been neglected. Especially is this true of American physicists, by whom, with the exception of Willard Gibbs, scarcely a contribution has been made until within the past year. American workers were urged to attack some of the important problems suggested. The necessary modification of conceptions as to atomic and molecular relations now held if this theory were accepted was referred to, as well as some necessary modifications of these theories in case electrolytic action may take place in solids and gases, such as alloy and glasses, the probability of such action being shown by a brief discussion of some of their electrical properties. The address closed with a brief sum-

many of the influence of these theories in general upon the study of molecular dynamics.

The following-named papers were read and discussed before the section: "Polarization and Internal Resistance of a Galvanic Cell," "The Lead Storage Cell," and "Visible Electric Waves," by Burton E. Moore; "Electrical Waves in Long Parallel Wires," by Alfred D. Cole; "The Influence of a Static Charge of Electricity on the Surface Tension of Water," by Edward L. Nichols and John A. Clark; "Determination of the Specific Heats of Nitrogen by Adiabatic Expansion" and "A Theory of Galvanic Polarization," by William S. Franklin and L. B. Rosa; "Mechanical Models of the Electric Circuit," by Brown Ayres; and "Graphical Treatment of Alternating Currents in Branching Circuits," by H. T. Eddy.

C. *Chemistry*.—William A. Noyes, Professor of Chemistry in Rose Polytechnic Institute, Terre Haute, Ind., was the presiding officer of this section. His address treated of "The Achievements of Physical Chemistry." He said: "The most important recent advances in physical chemistry have been in the subject of solutions. Eleven years ago the knowledge of this subject was almost entirely empirical. In 1885 J. H. Van't Hoff proposed his theory of osmotic pressure. According to this

theory, osmotic pressure is directly proportional to the concentration and to the absolute temperature. It is also the same as if the dissolved substance existed as a gas within the same space. By pointing out that the concentration of a solution by evaporation or freezing of the solvent, or by other means, is a reversible process, and hence subject to the second law of thermodynamics, he connected the lowering of the vapor pressure and the lowering of the freezing point of solutions with their osmotic pressure; and, as a result, many indirect means of determining the latter have been developed. In 1887 Arrhenius proposed his theory of electrolytic dissociation. On the chemical side this theory has led to a clearer understanding of the distinction between ionic and nonionic reactions, and it is especially valuable in its bearing on the problems of analytical chemistry. It has given for the first time a satisfactory theoretical explanation of the conduct of the various indicators used in acidimetry. On the physical side it formed the basis for the theory developed by Nernst, which accounts for the electro-motive force of batteries as due largely to the solution pressure of the metals used, and enables the physicist to calculate the electro-motive force that will be developed by various combinations. It seems to be almost certain that physical chemistry has already made clear the principles by which a transformation of the chemical energy of coal into electrical energy may be secured. It is at least possible that a practical method of securing such a transformation will be discovered in the near future."

The following-named papers were read and discussed before the section: *Physical Chemistry*, Dr. Arthur A. Noyes, leader. "Determination of Osmotic Pressure from Vapor-Pressure Measurements," by Arthur A. Noyes and G. C. Abbott; "Distillation with Vapor," by W. D. Bancroft; "A Physico-Chemical Study of Water Solutions of Some of the Alums," by H. C. Jones; "The Hydrolysis of the Sulphonic Ethers," by J. H. Kastle; "On the Nature of Isomorphous Mixtures," by C. E. Linebarger; "The Hydrolysis of Ferric Chloride," by H. M. Goodwin; "The Viscosity of Mercury Vapor," by Arthur A. Noyes and H. M. Goodwin; "A Modified Form of the Ebullioscope," by Harvey W. Wiley; and "A Discussion of Liehty's Experiments on the Speed of Esterification," by Robert B. Warder. *Inorganic Chemistry*, Prof. Frank W. Clarke, leader. "Some Points in Nomenclature with Regard to Analysis of Mineral Water," by Frank W. Clarke; "The Alkali Trihalides," by Charles H. Herty and H. V. Black; "The Metamorphosis of Fossil Bone into a Mineral," by E. Goldsmith; "A Bibliography of the Metals of the Platinum Group" and "Examination of Water and Deposits from a Lake in Yucatan," by James L. Howe; "A Revision of the Atomic Weight of Magnesium," by T. W. Richards and H. G. Parker. *Organic Chemistry*, Prof. Paul C. Freer, leader. "Hydrazones of Quinones," by William McPherson; "Synthesis of Diethyl-Hexamethylene Ether and other Ethers from Trimethylene Glycol," by Arthur A. Noyes; "Formation of Diacetylenyl (Butadiene) from Copper Acetylene," by Arthur A. Noyes and C. W. Tucker; 1, "A Complete Mineral Analysis of Phytolacca Decandra," 2, "The Crystallized Salts of Phytolacca Decandra," and 3, "The By-products formed in the Conversion of Narcotine into Narceine," by George B. Frankforter; "Camphoric Acid," by William A. Noyes; "Introduction of Alkyl Iodides into Phosphines by means of Ethers," by Peter Fireman; "Dipyridine Methylene Iodide and the Nonformation of Corresponding Monopyridine Products" and "Alkyl Ammonium Iodides in Reaction with Bismuth

Salts," by S. H. Baer and Albert B. Prescott; "On the Behavior of Trichlorodinitrobenzol with Various Reagents," "On the Action of Nitric Acid on Potassic Cobaltcyanide," and "On the Action of Sodid Ethylate on Dinitranissic Acid," by C. Loring Jackson and W. R. Lamar. *Didactic Chemistry*, Prof. James L. Howe, leader. "Points in teaching Technical Chemistry," by Thomas H. Norton; "The Aim of Qualitative Analysis," by George C. Caldwell; "The Aim and Methods of the College Course in Qualitative Analysis," by H. P. Talbot; "The Teaching of Qualitative Analysis," by Arthur L. Green; "The Use of the Periodic Law in teaching General Chemistry," by Frank P. Venable; "Chemistry at the Reusselaer Polytechnic Institute," by William P. Mason; "Laboratory Instruction in Organic Chemistry," by Paul C. Freer; "Laboratory Instruction in Organic Chemistry" and "The Teaching of Physical Chemistry," by Arthur A. Noyes; "Instruction in Sanitary Chemistry at the Massachusetts Institute of Technology," by Ellen H. Richards. *Analytical Chemistry*, Prof. Edward D. Campbell, leader. "Notes on Reinsch's Test for Arsenic and Antimony," by James L. Howe; "The Limits of Accuracy in Analytical Work," by Edward D. Campbell; "Some Points in the Use of Depths of Color as a Measure of Chemical Contents," by Ellen H. Richards; "A New Form of Laboratory Condenser" and "A Method of Manipulation for the Colorimetric Determination of Ammoniacal Nitrous and Nitric Nitrogen in Bacterial Culture," by Erwin E. Ewell. *Technical Chemistry*, Dr. William McMurtrie, leader. "Some Applications of Chemistry to Railroads," by Charles B. Dudley; "Recent Developments in the Purification and Filtration of Water," by Albert R. Leeds; 1, "Some Properties and Uses of Natural Gas" and 2, "A New Method for the Determination of Sulphur in White Iron," by Francis C. Phillips; "The Action of Organic Acids upon the Mineral Constituents of Soils, or Some Compounds of Iron with Organic Acids," "Corrosion of Metals by Water," and "The Meaning of the Term 'Oxygen consumed' in the Report of a Water Analysis," by Ellen H. Richards; "On Recent Improvements in the Manufacture of Sulphuric Acid," by Charles L. Reese; "The Chemical Problems of the Pottery Industry," by Karl Langenbeck; "Sugar Making at the Present Day," by W. C. Stubbs; "Some By-products of the Sugar Industry," by H. H. Nicholson; "Composition of American Petroleum," by Charles F. Mabery; "Use of Coal-Tar Colors in Foods," by H. A. Weber; "Some Points in the Composition of California Wines," by Eugene W. Hilgard; "The Alkaloids of Anhelonium Lewinii (Mescal Buttons)," by Erwin E. Ewell. *Sanitary Chemistry*, William P. Mason, leader. "Well Water," by William P. Mason; "Value and Use of Formaldehyde as a Disinfectant," by E. A. de Schweinitz; "Should the Practice of Embalming the Dead be restricted by Law?" by L. W. Andrews; "Observations on the Sanitary Nature of the Mississippi River Water at Different Seasons," by E. G. Smith. *Agricultural Chemistry*, Dr. L. L. Van Slyke, leader. "The Work of the Agricultural Chemists of America," by L. L. Van Slyke; "Conditions affecting the Normal Viscosity of Milk" and "On the Restoration of the Viscosity of Pasteurized Milk and Cream," by S. M. Babcock and H. L. Russell; "A Method of measuring the ripening of Cheese," by S. M. Babcock. *Biological Chemistry*, Dr. E. A. de Schweinitz, leader. "The Necessity of Animal Experimentation in the Study of Bio-Chemistry," by E. A. de Schweinitz; "Andromedotoxin, the Poisonous Constituent of the Erica-ec and its Relation to Some Food Products," by V. K. Chestnut; and "The Toxic Action of Dis-

solved Salts and their Electrolytic Dissociation," by Louis Kahlenberg and R. H. True.

D. *Mechanical Science and Engineering*.—The presiding officer of this section was Frank O. Marvin, who occupies the chair of engineering in the University of Kansas. He delivered a vice-presidential address on "The Artistic Element in Engineering." The argument of this paper is contained in the following summary with which Prof. Marvin brought his address to a close: "The writer firmly believes that there is a latent aesthetic quality in American life that is now struggling to find both means for its gratification and methods of expression. Before there can be knowledge of its meaning and power, there must be many attempts and many failures. The whole process is one of education, and that largely in the school of experience. This applies to the industrial and constructive arts as well as to the fine arts. The engineer will share in the general movement, but this is not enough. As a designer of so much that the world needs for daily use, he must do more than keep up; he must keep in advance. He must not only have a capacity to enjoy, but also the power to originate and apply. To this end he must give preliminary study and thought to the principles of aesthetic design, so gaining an intellectual knowledge of them. American engineering schools are doing little or nothing to help the young engineer to this. A course of study in engineering aesthetics near the close of college life would be a great help and stimulus to a young graduate, at least opening his eyes to the fact that there was such a thing. After knowledge comes the application of principles as tests to an engineer's own work and to that of other men. And, finally, with theoretical and practical knowledge well in hand and a love of what is beautiful, comes the impulse to work artistically. With such engineers and an appreciative *clientèle* American engineering would be artistic. To this end let us work."

The following-named papers were read and discussed before the section: "The Most Economical Points of Cut-off for Steam," by Henry T. Eddy; "On a Continuous Indicator for Engine Tests" and "On the Yield Point of Steel," by Thomas Gray; "The Performance of Small Steam Pumps," by Mortimer E. Cooley; "National Endowment of Engineering Research," by William S. Aldrich; "The Cycle of the Plunger Jig," by Robert H. Richards; "Some Notes, Physical and Commercial, upon the Delta of the Mississippi River (with lantern illustrations), by Elmer L. Corthell; "New Water Prony Brake for testing Steam Turbines without Reduction Gearing," by James E. Denton; "An Apparatus for accurately measuring Pressures of 2,000 Pounds per Square Inch and over," "Apparatus for exhibiting the Distribution of Moisture in a Steam Main," "Apparatus for tracing a Curve representing the Force required to overcome the Inertia of the Reciprocating Parts of a Steam Engine," and "Values of Heat of Combustion of Various Gases per Cubic Foot for use in calculating the Heating Power from the Analysis of a Gas," by David S. Jacobus; "Seepage from Colorado Canals," by Louis G. Carpenter; "The Friction of the Water in the Pipes of a Hot-Water Heating System," by John H. Kinealy; "Some Results of the United States Timber Tests," by John B. Johnson; "A New Testing Machine for Beams and Framed Structures (Capacity 50 Tons)," by Malvered A. Howe; "Irrigation for the Eastern United States," by Olin H. Landreth; "Soaring Flight," by Octave Chanute; "On the Conversion of an Ordinary Planer into an Apparatus for Precise Graduations" and "On the Molecular Stability of Metals," by William A. Rogers; "An Arrangement using Storage Batteries

for the Automatic Regulation of Engine Loads in Power Plants of Variable Output," by William S. Franklin; and "The Hydrographic Survey," by Frank H. Newell.

E. Geology and Geography.—The presiding officer of this section was Prof. Benjamin K. Emerson, of Amherst College, who delivered a vice-presidential address on "Geological Myths." His purpose was to trace "the history of several myths which have their origin in remarkable geological phenomena, for I hardly need to say that I do not use the word 'myth' in the modern fashion of newspaper English, as a false report, a canard—in short, a newspaper story; but as meaning a history, treasured and hallowed in the literary and religious archives of an ancient folk, of some startling or impressive event, that, in the stimulating environment of poetry and personification, has completed a long evolution, which disguises entirely its original—

'Has suffered a sea change
Into something new and strange.'

so that, in fact, its study is palæontological. I propose to speak of the Chimæra, or the poetry of petroleum; of the Niobe, or of the tragic side of calcareous tufa; of Lot's wife, or the indirect religious effect of cliff erosion; and of Noah's flood, or the possibilities of the cyclone and the earthquake wave working in harmony."

The first of these he found in its earliest form in a quaint old translation of Hesiod, who, according to the marbles of Paros, lived almost nine centuries before the Christian era. Prof. Emerson found the origin of the myth in a strange mountain called Chimæra, from which portentous flames escaped. Like the Chimæra, the Niobe is an episode in Greek mythology, and may be traced to a colossal bust of a woman cut out of the living rock, which is still standing, and may be seen in the valley of Nif, or Nymphio, between Mount Tmolus and Sipylus. Lot's wife was indeed a pillar of salt, and the myth simply is the tradition that has associated the name of that unfortunate woman with the salt formation that was exposed by the catastrophe that destroyed the cities of Sodom and Gomorrah.

He traced the history of the flood through the various authorities, including Haupt and Jensen's recent translation of the "Gilgames Epic," and pointed out the possibilities of its origin and similarity to modern seismic phenomena.

The following-named papers were read and discussed before the section: "Notes on the Artesian Well sunk at Key West, Florida, in 1895," by Edmund O. Hovey; "A Revision of the Moraines of Minnesota" and "The Hydraulic Gradient of the Main Artesian Basin of the Northwest," by James E. Todd; "The True Tuff Beds of the Trias, and the Mud Inclosures, the Underrolling, and the Basic Pitchstone of the Triassic Traps" and "The Tyringham (Mass.) 'Mortise Rock' and Pseudomorphs of Quartz after Albite," by Benjamin K. Emerson; "The Succession of the Fossil Faunas in the Hamilton Group at Eighteen Mile Creek, N. Y.," by Amadeus W. Grabau; "Volcanic Ash from the North Shore of Lake Superior," by Nathaniel H. Winchell and Ulysses S. Grant; "The 'Augen-gneiss,' Pegmatite Veins, and Diorite Dikes at Bedford, Westchester County, N. Y.," by Lea McL. Langer and Heinrich Ries; "Development of the Physiography of California" (with lantern pictures) and "Synopsis of California Stratigraphy," by James P. Smith; "Ancient and Modern Sharks, and the Evolution of the Class," by Edward W. Claypole; "Observations on the Dorsal Shields in the Dinichthyids," by Charles R. Eastman; "The

Geology of the Buffalo Region," by Frederick K. Mixer; "Interglacial Change of Course, with Gorge Erosion, of the St. Croix River, in Minnesota and Wisconsin" and "The Cuyahoga Preglacial Gorge in Cleveland, Ohio," by Warren Upham; "Notes on Certain Fossil Plants from the Carboniferous of Iowa," by Thomas H. Macbride; "Origin of the High-Terrace Deposits of the Monongahela River," by Israel C. White; "The Making of Mammoth Cave" and "The Colossal Cavern," by Horace C. Hovey; "James Hall, Founder of American Stratigraphic Geology" and "Sheet-flood Erosion," by W. J. McGee; "Glacial Flood Deposits in the Chenango Valley," by Albert P. Brigham; "Origin of Conglomerates," by Thomas C. Hopkins; "Origin of Topographic Features in North Carolina," by Collier Cobb; "The Cretaceous Clay Marl Exposure at Clifford, N. J.," by Arthur Hollick; "Post-Cretaceous Grade Plains in Southern New England," by F. P. Gulliver; "Prof. Hall and the Survey of the Fourth District," by John M. Clarke; "The Algonquin River," "The Whirlpool, Saint Davids Channel," and "Profile of the Bed of the Niagara in its Gorge," by Grove K. Gilbert; "The Niagara Falls Gorge," by George W. Holley; "Origin and Age of the Laurentian Lakes and of Niagara Falls," by Warren Upham; "Correlation of Warren Beaches with Moraines and Outlets in Southeastern Michigan" and "Notes on the Glacial Succession in Eastern Michigan," by Frank B. Taylor; "Geomorphic Notes on Norway" and "The Slopes of the Drowned Antillean Valleys," by John W. Spencer; "Notes on Kansan Drift in Pennsylvania," by Edward H. Williams; "Preliminary Notes on the Columbian Deposits of the Susquehanna," by Harvey B. Bashore; "The Eocene Stages of Georgia," by Gilbert D. Harris; and "The Origin and Age of the Gypsum Deposits of Kansas," by G. P. Grimsley.

F. Zoology.—This section was presided over by Dr. Theodore N. Gill, of the Smithsonian Institution, whose address was on "Some Questions in Nomenclature." At the outset he said: "Nomenclature, in the modern sense of the word, did not trouble naturalists till near the middle of the last century. The animals and plants of the ancient world were mostly treated of under the names which the Greeks or Romans had used, or were supposed to have used. The forms that became first known after the discovery of America were introduced into the literature under names more or less like those which they bore among the aboriginal inhabitants of the countries from which those forms had been obtained." And then he told how a census of animals and plants taken by Ray shortly before Linnæus began his career, enumerated less than 4,000 animals, exclusive of insects; and of those it was estimated that there were about "20,000 in the whole world," whereas about 400,000 species of animals are now known, and of insects we still know the smaller portion. As knowledge of species of animals and plants increased, the necessity of system in registering them became apparent. Linnæus and Artdi especially appreciated this necessity, and early applied themselves to the correction of existing evils and the reformation of the classification and nomenclature of all the kingdoms of Nature. Then, taking up the binomial nomenclature, he said: "The question that has been most agitated of late is, What time shall we recognize as the starting point for the binomial nomenclature? Almost all the naturalists of the United States accept 1758 as the starting time for nomenclature, and now most of the naturalists of Europe take the same view. But the English generally accept 1766 as the beginning of this orisimology."

Misapplied names were considered as well as the

"making of names," and then he passed to a discussion of "the amount of subdivision of the animal kingdom which is expedient, and the nomenclature of such subdivisions. Linnæus only admitted 4 categories—class, order, genus, and species. These sufficed for most naturalists during the entire past century." One naturalist, Gottlieb Conrad Christian Storr, went into much greater detail; he admitted as many as 11 categories, and others have gone so far as to show "a total of 31 categories intermediate between the kingdom and the individual of an animal form. The tools have become too numerous, and some were rarely used by the authors themselves." This part of this address was a plea for a less number of subdivisions.

The following named papers were read and discussed before the section: "On the Entomological Results of the Exploration of the British West India Islands by the British Association for the Advancement of Science" and "A Case of Excessive Parasitism," by Leland O. Howard; "On the Variations of Certain Species of North American Odonata" and "Notes on the Occurrence of Dragon Flies in Ohio in 1896," by David S. Kellcott; "The Bone Fissure at Port Kennedy, Pennsylvania" and "The Penial Structures of the Saurians," by Edward D. Cope; "Experiments upon Regeneration and Heteromorphosis," "Some Abnormal Chick Embryos," and "Notes upon Cordylophora," by Charles W. Hargitt; "Modification of the Brain during Growth," by Susanna Phelps Gage; "The Peritoneal Epithelium in Amphibia," by Isabella M. Green (presented by Simon H. Gage); "Structure and Morphology of the Oblongata of Fishes" and "A Note on the Membranous Roof of the Proencephalon and Dienecephalon of Ganoids," by Benjamin F. Kingsbury; "The Heart of the Lungless Salamanders of Cayuga Lake," by Grant S. Hopkins; "Observations on the Chameleon, *Anolis principalis*," by George V. Reichel; "Energy in Animal Nutrition. Relative Efficiency of Animals as Machines," by Manly Miles; "Warning Colors, Protective Coloration, and Protective Mimicry," by F. M. Webster; "On Life Zones in West Virginia," by A. D. Hopkins; "The Relationships of the North American Fauna," by Theodore Gill; "Scyllarus and Anemonia—A Case of Semi-commensalism," and "On a Peculiar Fusion of the Gill Filaments in Certain Lamellibranchs," by Edward L. Rice; "The Discovery of a New Fish Fauna, from the Devonian Rocks of Western New York," by Frederick K. Mixer; "Differentiation of Work in Zoölogy—in Secondary Schools," by William Orr, Jr.; "Field Work and its Utility," by James G. Needman; and "Appendages of an Insect Embryo," by Agnes M. Clapole.

G. Botany.—Dr. Nathaniel L. Britton, Superintendent of the Botanical Gardens in New York city, and late Professor of Botany in Columbia University, presided over this section. He spoke on "Botanical Gardens." Under the heading of "origin and development" he said: "The cultivation of plants within small areas for their healing qualities by the monks of the Middle Ages appears to have been the beginning of the modern botanical gardening, although these medical gardens doubtless took their origin from others of greater antiquity. The four main elements of the modern botanical garden have thus been brought into it successively: 1, The utilitarian, or economic; 2, the æsthetic; 3, the scientific, or biologic; 4, the philanthropic. These four elements have been given different degrees of prominence, depending mainly upon local conditions, some gardens being essentially æsthetic, some mainly scientific, while in our public parks we find the philanthropic function as the underlying feature, usually accompanied by

more or less of the æsthetic or scientific." After discussing these four elements somewhat at length Dr. Britton said there were 209 institutions denominated "botanical parks," distributed as follows: Algeria, 1; Australia, 5; Austria-Hungary, 13; Belgium, 5; Brazil, 2; Canada, 1; Canary Islands, 1; Cape of Good Hope, 3; Ceylon, 1; Chili, 1; China, 1; Cochin China, 1; Denmark, 2; Ecuador, 1; Egypt, 1; France, 22; Germany, 36; Great Britain and Ireland, 12; Greece, 1; Guatemala, 1; Guiana, 1; Holland, 4; India, 7; Italy, 23; Japan, 1; Java, 1; Malta, 1; Mauritius, 1; Natal, 1; New Zealand, 1; Norway, 1; Peru, 1; Philippine Islands, 1; Portugal, 3; Reunion, 1; Roumania, 2; Russia, 16; Servia, 1; Siberia, 1; Spain, 2; Straits Settlements, 1; Sweden, 6; Switzerland, 4; Tasmania, 1; United States, 10; West Indies, 6.

The final portion of his address was devoted to a discussion of the character of the more important of these botanical gardens, such as the Royal Botanic Gardens, in Kew, England, the Jardin des Plantes, in Paris, and in greater detail the Botanic Garden of Harvard University, the Arnold Arboretum of Harvard University, the Botanic Gardens of the United States Department of Agriculture in Washington, the Missouri Botanic Garden, in St. Louis, the Botanical Garden of the Michigan Agricultural College, the Botanical Garden of the University of California, the Botanical Garden of the University of Pennsylvania, the Botanical Garden of Smith College, the Buffalo Botanical Garden, and the New York Botanical Garden.

The following-named papers were read and discussed before the section: "Influence of Rainfall upon Leaf Forms," "The Mechanism of Curvature in Tendrils," "The Relation of the Growth of Leaves to the CO₂ of the Air," and "Reaction of Leaves to Continual Rainfall," by Daniel T. MacDougal; "Parthenogenesis in *Thalictrum Fendleri*," by David F. Day; "Notes on the Family Pezizaceæ of Schröter," by Elias H. Durand; "What should constitute a Type Specimen," by Samuel M. Tracy; "Rheotropism and the Relation of Response to Stimulus," by Frederick C. Newcombe; "Some Adaptation of Shore Plants to Respiration," by Hermann von Schrenk; "Studies in Nuclear Phenomena, and the Development of the Ascospores in Certain Pyrenomycetes," by Mary A. Nichols; "The Stigma and Pollen of *Arisema*," by W. W. Rowlee; "Directive Forces Operative in Leaf Rosettes," by R. N. Day; "Notes on the Pine Inhabiting Species of *Peridermium*" and "The Distribution of the Species of *Gymnosporangium* in the South," by Lucien M. Underwood and F. S. Earle; "On *Cragtagus Coccinea* and its Segregates," "On the Caradames of the *C. Hirsuta* Group," "Notes on the Genus *Amelanchier*," and "Some Cyperaceæ new to North America, with Remarks on Other Species," by Nathaniel L. Britton; "Morphology of the *Canna* Flower" and "Remarks on the Northern Species of *Vitis*," by Liberty H. Bailey; "The Relation between the Genera, *Polygonella*, and *Thysanella*, as shown by a hitherto Unobserved Character," "An apparently Undescribed Species of *Prunus* from Connecticut," and "The Flora of the Summits of King's Mountain and Crowder's Mountain, North Carolina," by John K. Small; "Grasses of Iowa," by L. H. Pammel; "Ceres-Pulver: Jensen's New Fungicide for the Treatment of Smut," by William A. Kellerman; "On an apparently Undescribed *Cassia* from Mississippi," by Charles L. Pollard; "A Bacterial Disease of the Squash Bug (*Anasa tristis*)," by Benjamin M. Duggar; "What is the Bark?" by Charles R. Barnes; "Embryo-Sac Structures" and "Some Remarks on Chalazogamy," by John M. Coulter; "The Habits of the Rarer Ferns of Alabama" and "Notes on the Allies of the Ses-

sile Trillium." by Lucien M. Underwood; "On the Stem Anatomy of Certain Onagraceae," by Francis Ramaley; "The Significance of Simple and Compound Ovaries" and "The Point of Divergence of Monocotyledons and Dicotyledons," by Charles E. Bessey; "On the Bacterial Flora of Cheddar Cheese," by H. L. Russell; "The Terminology of Reproductive Organs," by Charles R. Barnes; "A Comparative Study of the Development of Some Anthracnoses in Artificial Cultures," by Bertha Stoneman; "The Development of the Vascular Elements in Indian Corn," by W. W. Rowlee; "A Comparison of the Flora of Erie County, Ohio, with that of Erie County, New York," by Edwin L. Moseley; "On the Formation and Distribution of Abnormal Resin Ducts in Conifers," by Alexander P. Anderson; and "The Development of the Cystocarp of *Griffithsia Bornetiana*," by Arma A. Smith.

H. *Anthropology*.—Over this section Miss Alice C. Fletcher, of Washington, D. C., was called to preside. Her address was entitled, "Emblematic Use of the Tree in the Dakotan Group." She said: "In this paper is offered a slight contribution to the early history of social and religious development, inasmuch as in tracing the emblematic use of the tree in the Siouan linguistic group we follow a people from a comparatively primitive condition, living in isolated bands, independently of each other, to their organization within the tribal structure, compacted by the force of common religious beliefs. Indian religions seem to have been subject to the same laws that governed the development and growth of religions on the Eastern continent. There we know the several systems to have been begun with the simple utterances of a seer, which, as they were passed from mouth to mouth, became more and more clouded with interpretations, gradually expanded in detail, and finally formulated into ceremonials with attendant explanatory and dramatic rites. As time rolled into centuries, these ceremonies, with their accessory priests, came to be regarded as of supernatural origin, endowed with superhuman power and authorized to exercise control over the affairs of the tribe or nation; but the one living germ within the ponderous incrustation of doctrine and ceremony that had accumulated throughout the ages was still the surviving, vitalizing thought of the seer." After a full analysis of many of their legends, Miss Fletcher closed with: "In the Sacred Pole ceremonies the constructive idea was still further developed, until not only unity of *gentes* was required, but unity of authority among the chiefs was enforced. This unity, whether as demanded in the enunciations of the chiefs or as necessary to the formation of the tribe, to the instituting of the religious societies or to the development of the clan, depending upon the conception of Wa-kan-da, as manifested in concrete form through the medium of the vision. The ancient thinkers among the Siouan people, in the long centuries of an unknown past, came gradually to realize the helpfulness and power that lay in social unity. Out of this realization these ceremonies were slowly evolved, wherein the Pole, bearing the topmost branches of the living tree, stood in the midst of the assembled people as an emblem of the presence and authority of Thunder—the universally accepted manifestations of Wa-kan-da, and also in its life and growth as typical of tribal unity and strength."

The following-named papers were read and discussed before the section: Resolution on the death of Captain John G. Bourke, secretary of the section, followed by a memorial by Washington Matthews; "A Ceremonial Flint Implement and its Use among the Ancient Tribes of Tennessee," by Gates P. Thruston; "Symbolic Rocks of Byfield and New-

bury, Mass.," by Horace C. Hovey; "Some Indian Rock and Body Painting in Southern California," by David P. Barrows; "An Analysis of the Decoration upon Pottery from the Mississippi Valley," by Charles C. Willoughby; "Brief Description of the Prehistoric Ruins of Tzac Pokoma, Guatemala," by John R. Chandler; "Recent Explorations in Honduras by the Peabody Museum," by Frederick W. Putnam; "Human Relics from the Drift of Ohio," by Edward W. Claypole; "Fresh Geological Evidence of Glacial Man at Trenton, N. J.," by G. Frederick Wright; "Result of Recent Cave Exploration in the Eastern United States," by Henry C. Mercer; "Indian Wampum Records," by Horatio Hale; "Seri Stone Art" and "The Beginning of Zoöculture," by W. J. McGee; "Resolution upon the Appointment of a Committee to Report on 'The Ethnography of the White Race in the United States,'" by Daniel G. Brinton; "Aboriginal Occupation of New York" and "Onondago Games," by William M. Beauchamp; "Meaning of the Name Manhattan," by William W. Tooker; "Kootenay Indian Place Names" and "Kootenay Indian Names of Implements and Instruments," by Alexander F. Chamberlain; "Clan System of the Pueblos," by Frederick W. Hodge; "The Psychic Source of Myths," by Daniel G. Brinton; "The Limitations of the Comparative Method in Anthropology," by Franz Boas; "Physical and Mental Measurements of Students of Columbia University," by J. McKeen Cattell; "Anthropometry of the Shoshone Indians," by Franz Boas; "Finger Prints of American Indians," by Frederick Starr; "Recent Discoveries and Discussions as to Pygmy Races," by R. G. Haliburton; "The Papago Time Concept," by W. J. McGee; "Notes on the Theological Development of One Child," by Fanny D. Bergen; "Certain Shamanistic Ceremonies among the Ojibways" and "The Preservation of Local Archaeological Evidence," by Harlan I. Smith; "Notes on Certain Beliefs concerning Will Power among the Siouan Tribes," by Alice C. Fletcher; "The Temple of Tezozilan, Mexico," by Marshall H. Saville; "Character and Food," by George V. Reichel; "Shell Gorges and Ceremonial Implements," by Gates P. Thruston; "Finland Vapor Baths," by Herbert W. Smith; "Cupped Stones," by Franz Boas; "Pueblo Indian Clans," by Frederick W. Hodge; and "Mescal Plant and Rite," by James Mooney.

1. *Economic Science and Statistics*.—William R. Lazenby, of the Ohio State University, delivered the vice-presidential address, choosing as his subject "Horticulture and Health." In opening, he gave a somewhat exhaustive treatment of the value of fruit as a diet, showing, by means of chemical analysis and percentage tables, what parts of different fruits go to build up the various compounds of the human body. He gave the results from the pecuniary side of many years' experience at the Ohio State University and elsewhere to show the practicability of a family's getting a good living from a small area of well-located ground devoted to the raising of small fruits, flowers, and forced vegetables. From the aesthetic side, also, work in this direction is to be highly recommended, because the resulting close association with Nature in her most beautiful forms develops the best side of character.

His closing remarks were: "I sincerely hope that the obvious advantages of forming horticultural colonies will be widely and rapidly improved. It would correct the unhealthy congestion of our towns and cities. In no other way can so many be provided with homes, regular employment, and good living. By a horticultural colony, I mean the association of 100 to 500 families in the purchase of a suitably located tract of land, embracing about 1 acre for each individual. The location, which

should be reasonably near some large commercial center, and the purchase of this land, should be entrusted to the most capable and honest members of the association. It should be carefully surveyed and divided into a few small lots centrally located for the necessary mechanics and merchants, but mainly into areas of 1 to 10 acres for horticulture. Ample reservations of the best sites should be made for a schoolhouse, town hall, and public park. The streets should be embowered with shade trees, and every owner of a lot or garden should be encouraged to beautify and adorn it."

The following-named papers were read and discussed before the section: "The Monetary Standard," by William H. Hale; "The Competition of the Sexes and Its Results," by Lawrence Irwell; "Fashion—A Study," by S. Edward Warren; "Citizenship: Its Privileges and Duties," "Practical Studies in Horticulture, Art, and Music," and "Relics of Ancient Barbarism," by Stillman F. Kneeland; "Suicide Legislation," by W. Lane O'Neill; "An Inheritance for the Waifs," by C. F. Taylor; "The Proposed Sociological Institution," by James A. Skilton; "Crime against Labor" and "What is True Money?" by Edward Atkinson; "The Value of Social Settlement" and "The Wages Fund Theory," by Aaron B. Keeler; "Better Distribution of Forecasts," by John A. Miller; and "The Tin Plate Experiment," by A. P. Winston.

Popular Features of the Proceedings.—Subsequent to the delivery of the presidential address on the evening of Aug. 24 an informal reception was held in the rooms of the Society of Natural Sciences in the library building. On the evening of Aug. 25, the usual reception by the Ladies' Reception Committee was given in the rooms of the Twentieth Century Club. Two public lectures complimentary to the citizens of Buffalo were given, the first on "Niagara as a Timepiece," with lantern illustrations, on Aug. 26, by John W. Spencer, in the High-School chapel, and the second on "The Results of Cave Explorations in the United States, and their Bearing on the Antiquity of Man," with lantern illustrations, in the same place, by Henry C. Mercer and Prof. Edward D. Cope. The grand excursion of the session was a general complimentary trip for the association to Niagara Falls, on Saturday, Aug. 29. Special excursions were provided as follows: The geologists of Section "E" were entertained at the Idlewood Club, at the mouth of Eighteen Mile Creek, a noted fossil-collecting ground, on Aug. 27. On Aug. 28 the botanists were taken 10 miles up the Canadian lake shore to Point Abino, where the section was the guests of the Point Abino Association. Under the charge of Ottomar Reinecke, the entomologists visited Ridgeway, Ontario, on Aug. 26. The Buffalo Engineers' Society took all visiting engineers to Niagara Falls on Aug. 22, the day the chemists also visited the falls.

Affiliated Organizations.—Various other scientific associations, taking advantage of the gathering of so many members at the meeting of the American Association, have adopted the practice in recent years of holding meetings at the same place, and contemporaneous with the American Association, but at such hours as not to interfere with the regular sessions of the larger body. The Society for the Promotion of Agricultural Science met in the library building on Aug. 21 and 22. Its president was William R. Lazenby, of Columbus, Ohio, and its secretary was Charles S. Plumb, of Lafayette, Ind. The Botanical Society of America held meetings in the Buffalo High School on Aug. 21 and 22, under the presidency of John M. Coulter, of Chicago, Ill., and with Charles R. Barnes, of Madison, Wis., as secretary. Likewise on Aug. 21 and

22 the American Chemical Society met, with Charles B. Dudley, of Altoona, Pa., as president, and Albert C. Hale, of Brooklyn, as secretary. On the same dates the Association of Economic Entomologists convened, with Charles H. Fernald as president, and Charles L. Marlatt, of Washington, D. C., as secretary. The Geological Society of America held its eighth summer meeting, on Aug. 22, with Joseph Le Conte, of Berkeley, Cal., as president, and Herman L. Fairchild, of Rochester, N. Y., as secretary. During the six days preceding (Aug. 17 to 22) excursions were conducted under the auspices of the Geological Society throughout the territory adjacent to Buffalo. Parties were organized in the departments of stratigraphy, palaeontology, petrography, economic geology, and Pleistocene geology. The American Mathematical Society held meetings on Aug. 31 to Sept. 1. The president was Dr. George W. Hill, of West Nyack, N. J.; its secretary was F. N. Cole, of New York city. The Society for the Promotion of Engineering Education met in the rooms of the Engineers' Society of Western New York, on Aug. 21 and 22, with Mansfield Merriman, of South Bethlehem, Pa., as president, and C. Frank Allen, of Boston, Mass., as treasurer. As usual, during the meeting regular sessions of the Botanical Club, with Frederick V. Coville, of Washington city, as president, and John F. Cowell, of Buffalo, N. Y., as secretary, were held.

Final Sessions.—The final sessions of the association were held on Aug. 28, at which the officers for the ensuing year were elected. Four foreign associates were elected: Victor Gutza, of Bucharest, Roumania, who was sent by his Government to investigate petroleum products; Seiryō Mine, of Japan, who was sent by his Government to investigate long-distance transmission of electrical power; Miss Mary Foster, member of the Geological Society of London; and J. Bishop Tingle, of Aberdeen, Scotland. Eighty-three members, in consideration of their contributions to science, were advanced to the grade of fellows. The Committee on Standards of Measurements reported upon "the desirability of further legislation, looking to the early adoption of the metric system." A communication from the Joint Commission of the Scientific Societies of Washington regarding the creation of the office of director in chief of the scientific divisions of the United States Department of Agriculture was referred to a committee which made a report that was adopted unanimously, approving the proposition to make such an office. A communication on the proposed vivisection law was referred to a committee which presented a report which was unanimously adopted, in which the association presented to the Congress of the United States its protest against legislation on the subject of vivisection. A communication asking that some steps be taken by the association to secure the study of the white race in America was referred to Section II, with a request that a committee be nominated to consider the matter. The section reported the following names, and the committee was so constituted: Daniel G. Brinton, J. McK. Cattell, W. W. Newell, W. J. McGee, and Franz Boas. At the request of the National Educational Association a committee was appointed to co-operate with committees from that body, with a view to unifying the requirements in science in secondary schools. The committee named consists of Ralph S. Tarr, Henry S. Carhart, Alpheus S. Packard, Charles F. Mabery, and Charles E. Bessey. On recommendation of Section F. Alpheus S. Packard was appointed a member of the American Advisory Board on Zoological Names.

The Committee on Grants recommended the following which were authorized by the council: To the Marine Biological Laboratory, Wood's Holl,

Mass., for a table (appointment to be made by the vice-presidents of Sections F and G and the director of the laboratory), \$100; to Francis E. Phillips for investigations on the properties of natural gas, \$50; to Louis A. Bauer for investigations on terrestrial magnetism in connection with the magnetic survey of Maryland, \$50.

The attendance at the meeting was 333 members: 112 new members were elected, and the death during the year of 35 members was reported. The Buffalo meeting was one of the smallest in the recent history of the association, but it was of unusual interest and importance.

The Next Meeting.—The association decided to meet in Detroit, Mich., on Aug. 9, 1897. This early date was chosen, so that at the close of the meeting such members as desired could attend the meeting of the British Association, which would then be in session in Toronto, Canada.

The following officers were chosen: President, Wolcott Gibbs, Newport, R. I. Vice-presidents of sections: A, Wooster W. Beman, Ann Arbor, Mich.; B, Carl Barns, Providence, R. I.; C, William P. Mason, Troy, N. Y.; D, John Galbraith, Toronto, Canada; E, Israel C. White, Morgantown, W. Va.; F, G. Brown Goode, Washington city; G, George F. Atkinson, Ithaca, N. Y.; H, W. J. McGee, Washington city; I, Richard T. Colburn, Elizabeth, N. J. Permanent Secretary, Frederick W. Putnam, Cambridge, Mass. (office, Salem) Mass. General Secretary, Asaph Hall, Jr., Ann Arbor, Mich. Secretary of the Council, David S. Kellicott, Columbus, Ohio. Secretaries of the sections: A, James McMahon, Ithaca, N. Y.; B, Frederick Bedell, Ithaca, N. Y.; C, Paul C. Freer, of Ann Arbor, Mich.; D, John J. Flather, Lafayette, Ind.; E, C. H. Smyth, Jr., Clinton, N. Y.; F, Charles C. Nutting, Iowa City, Iowa; G, Frederick C. Newcombe, Ann Arbor, Mich.; H, Harlan I. Smith, New York city; I, Archibald Blue, Toronto, Canada. Treasurer, R. S. Woodward, New York city.

British.—The sixty-sixth annual meeting of the British Association for the Advancement of Science was held in Liverpool, Sept. 16–23. The officers of the association were: President, Sir Joseph Lister. Section Presidents: A, Mathematics and Physics, Joseph J. Thomson; B, Chemistry, Ludwig Mond; C, Geology, John E. Marr; D, Zoölogy, Edward B. Poulton; E, Geography, Leonard Darwin; F, Economic Science and Statistics, Leonard Courtney; G, Mechanical Science, Sir Douglas Fox; H, Anthropology, Arthur J. Evans; K, Botany, Dunkinfield H. Scott; I, Physiology, Walter J. Gaskell. General Secretaries, Augustus G. Vernon Harcourt and George Griffiths. General Treasurer, Arthur W. Rücker.

General Meeting.—The association began its proceedings with a meeting of the general committee on Sept. 16, when the report of the council was presented by A. G. Vernon Harcourt, and other business was transacted. The meeting was presided over by Sir Douglas Galton, the retiring president. The business included the appointment of Sir Douglas Galton and Prof. Arthur W. Rücker as representatives in the celebration of the jubilee of the appointment of Lord Kelvin as Professor of Natural Philosophy in the University of Glasgow. The following-named men of science were elected corresponding members: Prof. Dr. Emil C. Hansen, Copenhagen, Denmark; Prof. F. Paschen, Hanover, Germany; Prof. Ira Remsen, Johns Hopkins University, Baltimore, Md.; and Prof. C. Runge, Hanover, Germany. Invitations to meet in Bristol and in Glasgow in 1898 were received, also one from Dover for 1899, which was the result of a proposal by the French Association for the Advancement of Science, as that organization would meet in 1898 or

1899 in Boulogne, that the British Association should meet at some place on the opposite coast, so that an interchange of visits between the two associations might be held. It was recommended that,

SIR JOSEPH LISTER.

on the occasion of the meeting of the association at Toronto, the president, vice-presidents, and officers of the American Association be invited to attend as honorary members for the year, and, further, that all fellows and members of the American Association be admitted members of the British Association on the same terms as old annual members—namely, on payment of £1, without the payment of an admission fee.

Various resolutions that had been referred to the council were considered, and several new members were chosen to fill vacancies in that body. The treasurer reported that the receipts for 1894–95 were £3,773, and the payments £3,714. The investment amount remained unchanged as follows: £7,537 consols and £3,600 India 3 per cents. On motion of Sir Frederick Bramwell, seconded by Dr. William Anderson, a vote of thanks was adopted for the retiring president, Sir Douglas Galton.

In the evening the association met in Philharmonic Hall to hear the inaugural address. Sir Douglas Galton said, in presenting his successor: "This duty has a more special significance than is usual, because my election as president marked the termination of my services as general secretary, and therefore, in giving up my office to-night, I am terminating services to the association which have extended over a period of more than a quarter of a century. . . . I now beg to introduce to you a president, Sir Joseph Lister, whose high scientific attainments have been mainly directed to mitigate human suffering and have revolutionized the surgeon's art."

Inaugural Address of the President.—Sir Joseph Lister, famous as the Father of Antiseptic Surgery, and successor of Lord Kelvin as President of the Royal Society of London, said: "I propose on the present occasion to bring before you some illustrations of the interdependence of science and the healing art; and the first that I will take is perhaps the most astonishing of all results of purely physical inquiry, the discovery of the Rönt-

gen rays." A case that occurred in the practice of Howard Marsh was cited. "He was called to see a severe injury of the elbow, in which the swelling was so great as to make it impossible for him, by ordinary means of examination, to decide whether he had to deal with a fracture or a dislocation. If it were the latter a cure could be effected by the exercise of violence, which would be not only useless but most injurious if a bone was broken. By the aid of the Röntgen rays a photograph was taken, in which the bone of the upper arm was clearly seen displaced forward on those of the forearm. The diagnosis being thus established, Mr. Marsh proceeded to reduce the dislocation; and his success was proved by another photograph, which showed the bones in their natural relative position." The discovery of the exact position of a half-penny in a boy's gullet by Dr. Macintyre was referred to. "This is the jubilee of anaesthesia in surgery. That priceless blessing to mankind came from America." Sir Joseph then gave the date of Sept. 30, 1846, with credit to Dr. W. T. G. Morton, as the time when the successful inhalation of the vapor of sulphuric ether was fully established. The first operation under ether in England was by Robert Liston, in University College Hospital, and on that occasion the speaker was present. The use of chloroform and its introduction by Sir James Y. Simpson was alluded to. Concerning their relative safety, he said: "For my own part I believe that chloroform, if carefully administered on right principles, is on the average the safer agent of the two." His next illustration was from the work on fermentation by Pasteur. He said: "Pasteur's labors on fermentation have had an important influence upon surgery. If a wound could be treated with some substance that would, without doing too serious mischief to the human tissues, kill the microbes already contained in it, and prevent the access of others in the living state, putrefaction might be prevented, however freely the air with its oxygen might enter." He described his early use of carbolic acid for this purpose, and expressed his belief "as a matter of long experience that carbolic acid, by virtue of its powerful affinity for the epidermis and oily matters associated with it, and also its great penetrating power, is still the best agent at our disposal for purifying the skin around the wound." The antiseptic method was then discussed, and he showed how that system had led to the great suppression of gangrene, pyæmia, and erysipelas in hospitals. But it was not only in removing the unhealthfulness of hospitals that the antiseptic system showed its benefits. Inflammation being suppressed, with attendant pain, fever, and wasting discharge, the sufferings of the patient were of course immensely diminished; rapid primary union being now the rule, convalescence was correspondingly curtailed; while as regards safety and the essential nature of the mode of repair, it became a matter of indifference whether the wound had clean-cut surfaces which could be closely approximated or the injury had been such as to cause destruction of tissue. And operations that had been regarded from time immemorial as unjustifiable were adopted with complete safety.

The striking results of the application of the germ theory to surgery acted as a powerful stimulus to the investigation of the nature of the microorganisms concerned; and it soon appeared that putrefaction was by no means the only evil of microbial origin to which wounds are liable. The bacillus of influenza is the latest discovery in this direction. The work of Robert Koch was mentioned as "the most important discovery ever made in pathology, because it revealed the true nature of the disease that causes more sickness and death in the human race than any other. It was he who dis-

covered the bacillus of tubercle, and later the microbe of cholera. Bacteriologists are now universally agreed that, although various other conditions are necessary to the production of an attack of cholera, besides the mere presence of vibrio, yet it is the essential *materies morbi*; and it is by the aid of the diagnosis which its presence in any case of true cholera enables the bacteriologist to make that threatened invasions of this awful disease have of late years been so successfully repelled from our shores."

Some earlier work of Pasteur's was then considered, and his application of preventive inoculations in fowl cholera was described. Other diseases that could be cured by inoculation were referred to, including Pasteur's crowning triumph of his treatment by this method of hydrophobia.

Koch's work on tuberculin was then considered, and the still more recent discovery of antitoxine. In conclusion he discussed the more recent discoveries made by pathologists in regard to white corpuscles, and especially referred to the brilliant work of the Russian Metchnikoff, who has shown that the microbes of infective diseases when taken into the blood are subject to the process of devouring and digestion that is carried on both by the white corpuscles and by cells that line the blood vessels.

Proceedings of the Sections. A. *Mathematics and Physics.*—This section was presided over by Prof. Joseph J. Thomson, Professor of Experimental Physics at Cambridge. In opening, Prof. Thomson recalled the fact that when the British Association last met in Liverpool, a quarter of a century ago, the presiding officer of Section A had been Clerk-Maxwell. Of the important advances made since then in that branch of science, those in the electromagnetic field were the most conspicuous. Maxwell's theory in the hands of Hertz and others has led to the discovery of whole regions of phenomena previously undreamed of. During the past year the jubilee of Lord Kelvin's tenure of the chair of Natural Philosophy in the University of Glasgow occurred, and the speaker referred to the event and also spoke of the losses caused by the deaths of Sir W. R. Grove and of Prof. Stoletow, of Moscow. Concerning the teaching of physics at our universities, there is perhaps a tendency to make the course too complex and too complete. Any investigation in experimental physics requires a large expenditure of both time and patience, hence the preservation of youthful enthusiasms is one of the most important for consideration in the training of physicists. The discovery by Röntgen of a new kind of radiation from a highly exhausted tube, through which an electric discharge is passing, was discussed, and then Röntgen's later discovery that the region around the discharge tube is traversed by rays that can affect a photographic plate after passing through substances that are opaque to ordinary light was treated at length, and he concluded with the opinion that if the Röntgen rays are light rays their wave lengths are of an entirely different order from those of visible light. The final portion of the address had to do with the question of the movement of the ether and the recent experimental work of Prof. Lodge and of Prof. Threlfall, undertaken for the purpose of detecting a movement of ether in the neighborhood of a vacuum tube entering Röntgen rays. The results of the experiments were negative, and the opinion was expressed that "unless the ether is immovable under the mechanical forces in a varying electro-magnetic field, there are a multitude of phenomena awaiting discovery."

This section, owing to the large number of papers presented before it, divided itself at times into subsections, as follows: On mathematics, on meteorology, and on optics.

Among the more important papers presented before the section were: "The Evolution of Stellar Systems," by Isaac Roberts; "On Periodic Orbits," by George H. Darwin; "Researches on Cathode Rays," by P. Leonard; "The Laws of Conduction of Electricity through Gases exposed to the Röntgen Rays," by Joseph J. Thomson and E. Rutherford; "The Transparency of Glass and Porcelain to the Röntgen Rays," by Arthur W. Rücker and W. Watson; "On Measurements of Electric Currents in Air at Different Densities," by Lord Kelvin, James T. Bottomley, and Magnus Maclean; "On the Duration of the X-Radiation at Each Spark," by F. T. Trouton; "On the Relation between Cathode Rays and X-Rays and Becquerel's Rays," by Sylvanus P. Thompson; "On the Plotting out of Great Circles on a Chart," by H. M. Taylor; "Experiments of M. Birkeland on the Cathode Rays," by V. Bjerknes; "On Hyperphorescence," by S. P. Thompson; "Some Observations on the X-Rays," by H. H. F. Haysman; "On the Component Fields of the Earth's Magnetism," by Louis A. Bauer; "A One-Volt Standard Cell with Small Temperature Coefficient," by W. Hibbert; "Reostine: A New Resistance Metal," by J. A. Harker; "The Communication of Electricity from Electrified Steam to Air," by Lord Kelvin and Magnus Maclean; "On the Molecular Dynamics of Hydrogen Gas, Oxygen Gas, Ozone, Hydrogen Peroxide, Vapor of Water, Water, Ice, and Quartz Crystals," by Lord Kelvin; "A Method of detecting Electro-magnetic Waves," by E. Rutherford; "The Effect of Refraction on the Diurnal Movement of Stars and a Method of allowing for it in Astronomical Photography," by A. A. Rambaut; "On the Sailing Flight of Birds," by G. H. Bryan; "The Stanhope Arithmetical Machine of 1780," by Robert Harley; "Exploration of the Upper Air by Means of Kites," by A. Lawrence Rotch; "Some Experiments on the Diffusion of Electrolytes," by W. C. D. Whetham; "The Total Heat of Water," by William N. Shaw; "An Apparatus for the Measurement of Electrical Resistance," by E. H. Griffiths; "Researches in Absolute Mercurial Thermometry," by S. A. Sworn; "On the Division of an Alternating Current in Parallel Circuits with Mutual Induction," by Frederick Bedell, of Cornell University, Ithaca, N. Y.; "Carbon Megohms for High Voltages," by W. M. Mordley; "Measurements of the Velocity of Rotation of the Planets by the Spectroscopic Methods," by James E. Keeler, of Alleghany Observatory, Pa.; "The Photo-electric Sensitization of Salts by Cathode Rays," by J. Elster and H. Geitel; "On Change of Absorption accompanying Fluorescence," by John Burke; "Homogeneous Structures and the Symmetrical Partitioning of them," by William H. Barlow; and "On Electrical Disturbances in Submarine Cables," by William H. Prece.

Also the following reports were presented: "On the Establishment of a National Physical Laboratory," by Sir Douglas Galton; "On Magnetic Standards," by Arthur W. Rücker; "On the Comparison and Reduction of Magnetic Observations," by W. Ellis; "On Electrolysis," by William N. Shaw; "On Electrical Standards," by Richard T. Glazebrook; and "On Meteorological Observations on Ben Nevis," "On Solar Radiation," "On Seismological Observations," "On Meteorological Photographs," and "On the Sizes and Pages of Periodicals."

B. *Chemical Science*.—The opening address before this section was by Dr. Ludwig Mond, F. R. S., a past president of the Society of Chemical Industry and a member of the firm of Brunner, Mond & Co., the great chemical manufacturers of Cheshire. The subject of his address was the "History of the Manufacture of Chlorine." Dr. Mond began with the Arabian alchemist Geber, and traced the

history of chlorine in *aqua regia* until 1774, when the Swedish chemist Scheele separated it from *aqua regia* as a gas that could not be decomposed, and called it dephlogisticated muriatic acid. The researches of Lavoisier, Berthollet, and others were discussed, and especially Berthollet's application of its color-destroying properties to bleaching. Dr. Mond then followed with a description of the early work of Charles Tennant in its manufacture, and quoted from Higgins, who, in 1799, described "the means of bleaching with the oxygenated muriatic acid and the methods of preparing it." Davy's researches were considered in detail, and Dr. Mond then took up the various methods used in the manufacture of chlorine at the works at St. Rollox since 1845. Weldon's process, patented in 1866, was then considered, after which the Solvay process and the Deacon process were described, both of which, the speaker said, were shown in actual operation at the last meeting of the association that was held in Liverpool. The Deacon process has supplanted the Weldon process in nearly all the largest chlorine works in France and Germany, and is now making very rapid progress in England.

The later processes, notably that of Pechiney in France and that of Pick in Austria, were described, and finally he gave an account of the electrolytic process invented by Hamilton Y. Castner, of New York, whose process has been at work for some time in Oldbury, near Birmingham, and works for carrying it out on a large scale are being erected on the banks of the Mersey, and also in Germany and in America. In conclusion, he said: "I can not leave my subject without stating the remarkable fact that every one of these processes which I have described to you is still at work to this day, even those of Scheele and Berthollet, all finding a sphere of usefulness under the widely varying conditions under which the manufacture of chlorine is carried on in different parts of the world."

Among the more important papers presented before this section were: "On Reflected Waves in the Explosion of Gases," by Harold B. Dixon; "The Action of Metals and their Salts on the Ordinary and Röntgen Rays—a Contrast," by Dr. John H. Gladstone and Dr. W. Hibbert; "On the Limiting Explosive Proportions of Acetylene and the Detection and Measurement of the Gas in the Air" and "On the Accurate Determination of Oxygen by Absorption with Alkaline Pyrogallol Solution," by Frank Clowes; "Amides of the Alkaline Metals and some of their Derivatives," by A. W. Titherly; "Nitrates: Their Occurrence and Manufacture," by William Newton; "On Helium," by William Ramsey; "The Discovery of Argon in the Gas of an Australian Well," by Prof. Bamberger; "The Processes proposed for the Manufacture of Chlorine by Means of Nitric Acid," by F. Hurter; "Chemical Results obtained at exceedingly Low Temperature," by James Dewar; "Two New Forms of Apparatus," by C. A. Kohn; "Detection and Estimation of Carbon Monoxide in the Air," by Dr. Haldane; "The Detection and Estimation of Carbon Monoxide by the Flame-Cap Method," by Frank Clowes; "Chemical Education in Germany and England," by Sir Henry E. Roscoe; "The Teaching of Science in Girls' Schools," by Miss L. Edna Walter.

A series of interesting philosophical experiments, with a view of proving the diminution of chemical action resulting from limitations of space, were presented by Prof. Liebrich, of Berlin. Also the following reports were presented: "On the Constituents of Barley Straw," by C. F. Cross; "On the Constituents of Coal," by Prof. Bedson; "On Quantitative Methods of Electrolyses," by Dr. C. A. Kohn; and "On the Teaching of Science in Elementary Schools," by John H. Gladstone.

C. Geology.—This section was presided over by John E. Marr, Secretary of the Geological Society and lecturer on geology at Cambridge University. His subject was "Stratigraphical Geology," and he discussed the effect that the work done on the subject in recent years has had upon our knowledge of geology considered as a whole. In opening, he referred to the death of Sir Joseph Prestwich "as the last link between the pioneers of the science and the geologists of the present day." "Of the four great divisions of geology," he said, "stratigraphical geology is essentially British as regards origin, its scientific principles having been established by William Smith, who was not only the father of English geology, but of stratigraphical geology in general. . . . The object of the stratigraphical geologist is to obtain information concerning all physical, climatic, and biological events which have occurred during each period of the past, and to arrange them in chronological order, so as to write a connected history of the earth. . . . It is specially desirable that the ancient faunas and floras of tropical regions should be more fully made known, as a study of these will probably throw considerable light upon the influence of climate upon the geographical distribution of organisms in past times. Large collections of varieties of species should be made, and local observers should devote themselves to the study of particular groups of organisms, for work of this character would greatly reduce the imperfection of the record from the biologists' point of view."

The recent advances in geological knowledge were discussed, as well as the glacial problem. He made reference to the work of Charles D. Walcott, G. F. Matthews, C. E. Beecher, and R. T. Jackson, concerning which he said: "These are four striking instances which especially illustrate the great advances that are being made in the study of the paleontology of the invertebrates by our American brethren."

Among the more important papers presented before this section were: "The Geology of the Isle of Man," by W. Boyd Dawkins; "Observations on some of the Footprints from the Trias in the Neighborhood of Liverpool," by H. C. Beasley; "Recent Borings in the Red Marl near Liverpool," "On the Range of Species in the Carboniferous Limestone of North Wales," and "An Account of the Erosion of the Seacoast of Wirral," by G. H. Morton; "On Tertiary Deposits in North Manxland," by A. Bell; "On Pre-Cambrian Fossils," by Sir William Dawson; "On the Depths of the Sea in Past Epochs," by E. B. Wethered; "On the Cause of the Bathymetric Limit of Pteropod Ooze," and "The Conditions under which the Upper Chalk was deposited," by P. F. Kendall; "On the Source of Lava" and "On the Post-Cambrian Shrinkage of the Globe," by J. Logan Lobley; "Notes on the Rippling of Sand by Water and by Wind," by Vaughan Cornish; "The Geology of Skomer Island," by F. T. Howard and E. W. Small; "Notes on Sections along the London Extension of the Manchester, Sheffield and Lincoln Railway between Rugby and Aylesbury," by Horace B. Woodward; "The Discovery of Marine Shells in the Drift Series at High Levels in Ayrshire," by John Smith; "Notes on the Superficial Deposits of North Shropshire," by C. Callaway; "Some Post-Pliocene Changes of Physical Geography in Yorkshire," by Percy F. Kendall; "Another Possible Cause of the Glacial Epoch," by Edward Hull; "Fifth Contribution to Rhaetic Literature," by Montague Browne; "Notes on Some Fossil Plants from a Place a Short Distance South of Johannesburg," by A. C. Seward; "On the Action of Currents in the Deposition of Purple Clays," by Harry G. Seeley; and "A New

Theiodont Skull from Wonder Bonn, Cape Colony," by Harry Govier.

D. Zoölogy.—Edward B. Poulton, Professor of Zoölogy at Oxford, presided over this section, and in his address he discussed the difficulties arising both from the physical and the biological points of view in considering the question whether the present state of palæontological and zoölogical knowledge increases or diminished these difficulties. He said: "Our object to-day is, first, to consider the objections raised by physicists against the time demanded by the geologist, and still more against its multiplication by the student of organic evolution; secondly, to inquire whether the present state of palæontological and zoölogical knowledge increases or diminishes the weight of the opinion of Darwin, Huxley, and Herbert Spencer, that the time during which the geologists concluded that the fossiliferous rocks had been formed was utterly insufficient to account for organic evolution." His conclusion was: "In this matter of physical arguments we are at one with the geologists, for we rely on them for an estimate of the time occupied by the deposition of the stratified rocks, while they rely on us for a conclusion as to how far this period is sufficient for the whole of organic evolution." Concerning the geological argument, he said that the stratified rocks would have been laid down in about four hundred million years. The biological evidence was considered chiefly from a palæontological point of view, and the speaker contended that "the consideration of the higher Phyla which occur fossil, except the vertebrata, leads to the irresistible conclusion that the whole period in which the fossiliferous rocks were laid down must be multiplied several times for this later history alone. Moreover, the period that is thus obtained requires to be again increased, and perhaps even doubled, for the earlier history."

Among the more important papers presented before this section were: "On the Cultivation of Oysters as practiced by the Romans," by R. T. Gunster; "Some Recent Investigations on the Utility of Specific Characters in Crustaceans," by Walter Garstang; "The Present Position of Morphology in Zoölogical Science," by E. W. MacBride; "On the Morphology of the Olfactory Lobe," by Charles S. Minot; "On the Habits of Wasps," by Prof. Edgeworth; "On the Genyornis Newtoni, an Extinct Australian Bird," by Dr. Stirling; "Phoronis, the Earliest Ancestor of the Vertebrates" and "Some Effects of Pelagic Spawning and the Life Histories of Marine Fishes," by A. T. Masterman; "On the Structure of the Male Apus," by W. B. Benham; "On the Life History of the Haddock," by William C. McIntosh; "The Index Generum et Specierum," by F. A. Barter; "On the Development of the Tiger Beetle," by F. Enoch; "On the Eozoön Canadense," by Sir William Dawson; and "An Account of Herr Dannevig's Sea-Fish Hatchery in Norway," by J. W. Woodall. An important discussion on "Neo-Lamarckism" occurred, in which many of the members took part, including Prof. Charles S. Minot, of Boston, Mass. On Sept. 2 a joint session of the sections on zoölogy and botany was held for the purpose of discussing the "Cell Theory," over which Dunkinfield H. Scott at first, but later Edward P. Poulton presided. Profs. Farmer, Hartog, Minot, and Zacharias participated in the discussion. Also the following reports were presented: "On Bird Migration in Great Britain and Ireland," by John Cordeaux; "On the Fauna of African Lakes," by J. E. Moore; "On the Zoölogy, Botany, and Geology of the Irish Sea," by William A. Herdman; and "On the Work of the Marine Biological Laboratory in Plymouth," "On the Zoölogy and Botany of the West India Islands,"

"On the Zoölogy of the Sandwich Islands," and "On the Biology of the Oceanic Islands."

E. Geography.—The presiding officer of this section was Major Leonard Darwin, honorary secretary of the Royal Geographical Society, who chose as the subject of his address "The Development of Africa by Means of Railways." In opening, he reviewed the record of geographical work during the past year, and said, "All other performances pale in comparison with the feat accomplished by Nansen." Then, passing to his subject proper, he said: "As far as the immediate future is concerned, the points to which our attention should be mainly directed are the courses of the navigable parts of the rivers and the routes most suitable for the construction of railways in order to connect the navigable rivers and lakes with the coast. Two routes for railways from the coast to the Victoria Nyanza have been proposed, one running through the British and the other through the German sphere of influence. The German route, as originally proposed, would be the shorter of the two; but there is some reason to think that the British line will open up more country east of the lake which will be suitable for prolonged residence by white men. On the west coast of Africa, the Congo presents a grand opportunity of opening up the interior of the continent."

Among the more important papers presented before this section were the following: "An Account of a Short Journey in Tripoli," by H. S. Cowper; "On the Land of the Hausa," by Rev. J. C. Robinson; "On Photographic Surveying," by John Coles; "On Marine Research in the North Atlantic," by H. N. Dickson; "A Proposed Scheme for a Geographical Description of the British Isles," by H. R. Mill; "Canada and its Gold Discoveries," by Sir James Grant; "World Maps of Mean Monthly Rain-fall," by Andrew J. Herbertson; "On Practical Geography in Manchester," by J. Howard Reed; "The Southern Alps of New Zealand," by A. E. Fitzgerald; "The Egyptian Sudan," by Sir Charles Wilson; "On the Teaching of Geography in Relation to History," by A. W. Andrews; "On the Boundary between British Columbia and Alaska," by E. Odum; "On Dr. Nansen and the Results of his Recent Arctic Expedition," by J. Scott Keltie; "An Apparatus to illustrate Map Projections," by A. J. Herbertson; "A New Population Map of South Wales," by R. V. Darbishire; "Description of a Journey through Tibet," by W. A. L. Fletcher; "On the Relativity of Geographical Advantages," by George C. Chisholm; "Exploration in Northern Iceland," by F. W. Howell; "Notes on the Interior of Iceland," by K. Groosman; "The Various Boundary Lines between British Guiana and Venezuela attributed to Sir Robert H. Schomburgk," by Ralph Richardson; "A Journey to Spitzbergen," by Sir W. Martin Conway; "The Present Condition of the Ruined Cities of Ceylon," by H. W. Cave; "Earthquakes and Sea Waves," by John Milne; "Old Tapestry Maps of England," by Rev. W. K. R. Bedford; "The Altels Avalanche of September, 1895," by Dr. Tempest Anderson; "A Journey from Uganda down the Nile into Emin Pasha's Old Province," by Lieut. G. Vandeland; "The Coast Farms of Romney Marsh," by F. P. Gulliver; "Last Year's Work of the Jackson Harmsworth Expedition," by A. Montefiore Bree; and "The Influence of Climate and Vegetation on African Civilization," by G. F. Scott-Elliott.

Also the following reports were presented: "On African Climate," by Ernest G. Ravenstein, and "On Geographical Teaching."

F. Economic Science and Statistics.—This section was to be presided over by Leonard Courtney, M. P. who was prevented by illness from being present, and the reading of his address devolved upon Mr. L. L.

Price. It was essentially a qualified defense of wide individualism as opposed to the principles of collectivism. He said: "However much we may contemplate the reconstruction of an industrial system, it must, if it is to be a living social organism, be constantly responsive to the ever-changing conditions of growth; some parts must wax while others wane, extending here and contracting there, and manifesting at every moment those phenomena of vigor and decline which characterize life. In the development of industry new and easier ways are constantly being invented of doing old things; places are being discovered better suited for old industries than those to which resort had been made; there is a continuous supersession of the worth of known processes and of the utility of old forms of work involving a supersession, or at least a transfer, of the labor hitherto devoted to them. All these things compel a perpetual shifting of seats of industry and of the settlements of man, and no organization can be entertained as practicable which does not lend itself to those necessities. They are the prerequisites of a diminution of the toil of humanity. As I have said before, the theory of individual liberty, however guarded, afforded a working plan; society could and did march under it. The scheme of collective action gives no such promise of practicability; it seems to lack the provision of the forces which should bring about that movement upon which growth depends. The economist of the past generation still holds his ground, and our best hope lies in the fuller acceptance of his ideas. The economist, however, must feel, if he is to animate multitudes and inspire legislatures, that he, too, has a religion. Beneath the calmness of his analysis must be felt the throb of humanity. Slow in any case must be the secular progress of any branch of the human family; but if we take our stand upon facts, if our eyes are open to distinguish illusions from truth, if we are animated by the single purpose of subordinating our investigations and our actions to the lifting up of the standard of living, we may possess our souls in patience, waiting upon the promise of the future."

Among the more important papers presented before this section were: "Some Economic Issues in regard to Charitable or Philanthropic Trading," by C. S. Loeh; "Trade Combinations and Prices," by H. J. Falk; "Commercial Crises," by C. Juglar; "That Ability is not the Proper Basis of Local Taxation," by Edwin Camman; "Some Observations on the Distribution and Incidence of Rates and Taxes, with Special Reference to the Transfer of Charges from the Former to the Latter," by G. H. Blunden; "Proposed Modification of the Rating System," by W. H. Smith; "Farm Labor Colonies and Poor-Law Guardians," by Harold Prince; "The Decay of British Agriculture: Its Cause and its Cure," by Charles Rintoul; "Metric Measure and our Old System," by Frederick Toms; "A Comparison of the Age Distribution of Town and County Populations on Different Lands," by A. W. Flux; "Mercantile Markets for Futures," by Elijah Helm; "Grain Futures: Their Effects and Tendencies," by H. R. Rathbone; "Cotton Futures: What they are, and how they operate in Practice," by Charles Stewart; "The Influence of Business in Futures on Trade and Agriculture," by J. Silverberg; "The Fluctuation of Prices," by H. Binns; "The Currency Question in the United States and its Bearing on British Interests," by Arthur Lee; "The Standard of Value and Price," by William Fowler; "An International Standard," by George Peel; and "The Monetary Standard," by Leonard Darwin.

G. Mechanical Science.—Sir Douglas Fox, Vice-President of the Institution of Civil Engineers, was the presiding officer of this section. In his address

he sketched the progress that had been made, generally and locally, during the quarter of a century since the association last met in Liverpool in several branches of knowledge and of practical application covered by civil and mechanical engineering. In particular he stated the results of experience with regard to electric and other mechanical traction and tunnel construction, touching also upon light railways, motor cars, the metric system, the scientific bases of foreign engineering, and the problems to be solved in the future. Concerning the metric system, he said: "The question of the early adoption in England of the metric system is of importance not only to the engineering profession, but also to the country at large. The recommendation of the recent royal commission appointed for the consideration of the subject was that it should be taught at once in all schools, and that in two years' time its adoption should be compulsory; but it is much to be regretted that up to the present time nothing has been done. The slight and temporary inconvenience of having to learn the system is of no moment compared to the great assistance it would prove to the commercial and trading world; the simplification of calculations and of accounts would be hailed with delight by all so soon as they realized the advantages. England is suffering in her trade with the Continent for want of it."

Among the more important papers presented before this section were: "The Physical and Engineering Features of the River Mersey and Port of Liverpool," by G. F. Lyster; "The Cause of Fracture of Railway Rails," by W. Worby Beaumont; "The Tower Bridge, the London Bridge, and other Thames Bridges," by Wolfe Barry; "The Liverpool Waterworks," by J. Parry; "The Present Position of the British North Atlantic Mail Service," by A. J. Maginnis; "Testing of Electric Glow Lamps," by William H. Preece; "Description of Two Electric Traveling Cranes in the Erith Iron Works," by E. W. Anderson; "Armor and Heavy Ordnance—Recent Developments and Standards," by Capt. W. H. Jaques, U. S. N.; "A New Spherical Balanced Valve for all Pressures," by J. Casey; "Engineering Laboratory Apparatus," by Prof. Hele Shaw; "An Account of the Art of Printing in Colors," by T. Cond; "The New Expanded Metal: Its Production and Uses," by H. B. Tarry; "Concerning Wreck Raising," by J. Bele; "On Horseless Road Locomotion," by A. B. Sennett. Also the following report was presented: "On the Effect of Wind and Atmospheric Pressure on the Tides," by Augustus G. Vernon Harcourt.

H. *Anthropology*.—This section was presided over by Arthur J. Evans, keeper of the Asmolean Museum in Oxford, who delivered an address on "The Eastern Question on Anthropology." At the outset he said: "Anthropology, among other things, has its 'eternal Eastern question.' Till within quite recent years the glamor of the Orient pervaded all inquiries as to the genesis of European civilization. The biblical training of the northern nations prepared the ground. The imperfect realization of the antiquity of European arts; on the other hand, the imposing chronology of Egypt and Babylonia; the abiding force of classical tradition, which found in the Phœnician a *deus ex machinâ* for exotic importations; finally, the 'Aryan hypothesis,' which brought in the dominant European races as immigrant wanderers from central Asia, with a ready-made stock of culture in their wallets—these and other causes combined to create an exaggerated estimate of the part played by the East as the illuminator of the benighted West. More recent investigations have resulted in a natural reaction." He discussed the "early Ægean culture," and then Crete and its influence was considered. His closing

paragraph was: "In Crete, far earlier than elsewhere, we can trace the vestiges of primeval intercourse with the valley of the Nile. There more clearly than in any other area we can watch the continuous development of the germs which gave birth to the higher Ægean culture. There before the days of Phœnician contact a system of writing had already been worked out which the Semite only carried one step further. To Crete the earliest Greek tradition looks back as the home of divinely inspired legislation and the first center of maritime dominion."

Among the more important papers presented before this section were: "The Palæolithic Stone Implements of Somaliland," by H. W. Seton Kerr; "An Account of the Older Flint Implements of Ireland," by W. J. Knowles; "The Dolmens of Brittany," by William A. Herdman; "On Palæolithic Spearheads and Arrowheads from the Thames Gravels" and "On Reworked Derived Flints," by H. Stopes; "The Sculptured Stones of Scotland" and "The Brooches of Scotland," by Miss MacLagan; "Physical Anthropology of the Isle of Man," by A. W. Moore and John Beddoe; "The Trinil Femur (Pithecanthropus erectus) contrasted with the Femora of Various Savage and Civilized Races," by David Hepburn; "Proportions of the Human Body," by Dr. Garson; "Some Pagan Survivals," by F. T. Elworthy; "Anthropological Opportunities in British New Guiana," by S. H. Ray; "A Method of determining the Value of Folklore as Ethnological Data illustrated by Survivals of Fire Worship in the British Isles," by G. L. Gomme; "The Coast Indians of British Columbia and Alaska, including the Flatheads of the South, the Kwakwiltz and Tsimpbians of the West Coast, the Haidahs of Queen Charlotte's Island, the Klinghts of Alaska, and the Sticks of the Interior," by E. Adlum; "Cyprus and the Trade Routes of South-eastern Europe," by J. L. Myres; "The Transition from Pure Copper to Bronze-made Tin," by John H. Gladstone; "The Starting Point of the Iron Age in Europe," by W. Ridgway; "Tyrrenians in Greece and Italy," by Dr. O. Montelius; "Who produced the Objects called Mycenaean?" by W. Ridgway; "On Preclassical Chronology in Greece and Italy," by O. Montelius; "Recent Evidence in relation to Pillar and Tree Worship in Mycenaean Greece," by Arthur Evans; "The Ornament of Northwest Europe," by G. Coffey; "Celtic and Scandinavian Ornament illustrated on the Monuments of the Isle of Man," by P. M. C. Kermodé; "Sergi's Theory of a Mediterranean Race," by J. L. Myres; "A Prehistoric Settlement in County Kerry," by R. A. S. McAlister; "Boat Graves in Sweden," by H. Stolpe; "On an Ethnological Storehouse," by W. M. Flinders Petrie; "On the Duk-Duk Organization of the Kanakas of the Bismarck Archipelago in the Pacific Ocean," by Graf von Pfeil; "On Ancient British Interment," by F. T. Elworthy; "Points of Resemblance between Irish Ogams of the Past and the Australian Aborigines' Stick Writing of the Present," by Dr. Harley.

Also the following reports were presented: "The Mental and Physical Deviations from the Normal among Children in Public Elementary and other Schools," by Sir Douglas Galton; "On the Ethnological Survey of Great Britain and Ireland," by E. W. Brabrook; "On the Physical Characters, Languages, and Industrial and Social Conditions of the Northwestern Tribes of the Dominion of Canada," and "On the Linguistic and Anthropological Characteristics of the Northern Dravidian and Kolatuvian Races—the Uranws.

A resolution offered by C. H. Read, proposing the establishment of an imperial bureau of ethnology in London for information relating to the manners

and customs, religious beliefs, and laws of all the primitive races inhabiting the British colonies or upon the borders of the empire, was adopted.

On Sept. 18 this section devoted a portion of its proceedings to commemorating the centenary of the birth of Dr. Andreas Retzius, the Swedish craniologist. Various addresses were made.

I. *Physiology*.—This section was presided over by Dr. Walter H. Gaskell, Lecturer on Physiology at Cambridge, who delivered his address on Sept. 21, and presented as his subject a new theory on the ancestry of the vertebrata: The characteristic of the vertebrate central nervous system is its tubular character. Dr. Gaskell's hypothesis is that it is composed of two parts, an internal epithelial tube, surrounded by a segmented nervous system, and that the internal epithelial tube was originally the alimentary canal of an arthropod animal, which has become surrounded by the nervous system. Any hypothesis dealing with the origin of one group of animals from another must satisfy three conditions: 1. It must be in accordance with the phylogenetic history of each group. It must therefore give a consistent explanation of all the organs and tissues of the higher group which can be clearly shown not to have originated within the group itself. At the same time, the variations which have occurred on the hypothesis must be in harmony with the direction of variation in the lower group, if not actually foreshadowed in that group. 2. The anatomical relation of parts must be the same in the two groups, not only with respect to coincidence of topographical arrangement, but also with respect to similarity of structure, and, to a large extent, also of function. 3. The peculiarities of the ontogeny or embryological development of the higher group must receive an adequate explanation by means of the hypothesis, while at the same time they must help to illustrate the truth of the hypothesis. All these three conditions, he said, are satisfied by the hypothesis stated as far as the head region of the vertebrate is concerned, and he spoke only of the head region for the present.

Among the more important papers presented before this section were: "On the Genesis of Vowels," by J. R. Lloyd; "On Further Researches with the Phonograph," by Prof. McKendrick; "A New Method of distinguishing between Organic and Inorganic Compounds of Iron in the Tissues," by Prof. McCallum; "On Types of Human Respiration," by W. Maret; "On the Occurrence of Fever in Mice," by Loraine Smith and Prof. Westbrook; "The Physiological Effects of Peptone when injected into the Circulation," by W. H. Thompson; "On the Nerves of the Intestine and the Effects of Small Doses of Nicotine upon them," by J. L. Bunch; "Peristalsis and Paralysis of the Intestine," by A. S. Grünbaum; "The Glucoside Constitution of Proteid," by Frederick W. Pavy; "The Discharge of a Single Nerve Cell," by Francis Gotch; "The Relation between the Eye and Ear," by E. Stevenson; "Fragments from the Autobiography of a Nerve," by A. W. Waller; "The Principles of Microtome Construction," by Charles S. Minot, of Boston, Mass.; "The Structure of Nerve Cells," by G. Mann; "Cell Granulation under Normal and Abnormal Conditions, with Special Reference to the Leucocytes," by R. Buchanan; "Points illustrating Dental Histology," by Prof. Paul; "Photometry and Purkinje's Phenomena," by Prof. Hayercroft; "The Physical Basis of Life," by Prof. Allen; "The Rôle of Osmosis in Physiological Processes," by Lazarus Barlow; "Bacteria in Food," by Dr. Kanthack; "Organization of Bacteriological Research in Connection with Public Health," by Dr. Woodhead; "On the Mechanism of Peritoneal Infection," by Dr. Durham; "On the Minute Structure of the Cerebel-

lum," by Dr. Hill; "Some of the Observations on the Basis of Bacteriological Theory," by A. P. Fokker; "The Action of Glycerin on the Growth of Bacteria," by Dr. Copeinan; "On the Bacteriology of Oysters," by William A. Herdman and Dr. Boyce; "The Action of Human Serum on Typhoid Bacilli," by Dr. Grünbaum; and "On the Detection of Lead in Organic Fluids by the Immersion of a Strip of Pure Magnesium in the Suspected Liquid," by Dr. Abram and Mr. Marsden.

K. *Botany*.—The presiding officer of this section was Dr. Dunkinfield H. Scott, honorary keeper of the Jodrell Laboratory at the Royal Gardens in Kew.

He limited the scope of his address to modern morphological botany, which he described as the accurate comparison of plants, both living and extinct, with the object of tracing their real relationships with one another, and thus of ultimately constructing a genealogical tree of the vegetable kingdom. In conclusion, Dr. Scott remarked on the wonderful fascination of the records of the far-distant past in which our own origin, like that of our distant cousins the plants, lies hidden. If any fact is brought home to us by the investigations of modern biology, it is the conviction that all life is one; that, as Nägeli said, the distance from man to the lowest bacterium is less than the distance from the lowest bacterium to nonliving matter. The problems of descent, though, strictly speaking, they may often prove insoluble, will never lose their attraction for the scientifically guided imagination.

Among the more important papers presented before this section were: "On Some Species of the Chytridiaceous Genus *Urophlyctis*," by P. Magnus; "A Parasitic Disease of *Pellia Epiphylla*," by W. G. Ellis; "An Account of *Corrallorhiza Innata* and its Associated Fungi," by Vaughan Jennings; "The Arrangement of the Vascular Bundles in Certain Nymphaeacæ," by D. T. Gwynne-Vaughan; "On the Ascent of Water in Trees," by Francis Darwin; "On the Changes in the Tentacle of *Drosera Rotundifolia*," by Gustav Mann; "The Singular Effect produced on Certain Animals in the West Indies by feeding on the Young Shoots, Leaves, Pods, and Seeds of the Wild Tamarind or Jumbai Plant (*Leucaena Glauca*, Benth.)," by D. Morris; "On the So-called Tubercle Bacillus," by Vaughan Jennings; "Some Floral Diagrams of the Polygonacæ," by James W. H. Trail; "The Number of Spores contained in the Sporangia of Various Types of Filicinea," by Frederick O. Bower; "The Relationship of the Various Groups of Green Algae," by Prof. Chordat; "Some Peculiar Cases of Apogamous Reproduction in Ferns," by W. H. Lang; "The Geographical Distribution of Plants," by Thistleton Dyer; "On the Cells of the Cyanopycæ," by Prof. Zacharius; "On Some Points in the Morphology of the Orchidacæ," by Prof. Pfizer; "A New Hybrid Passion Flower," by J. Wilson; "Observations on the Doranthacæ of Ceylon," by F. W. Keeble; "An Account of Experiments Dealing with Latent Life in Seeds," by Casimir de Candolle; "A New Cycad from the Purbeck Beds of Portland," and "A Note on a Large Specimen of *Lyginodendron*" by A. C. Seward; "Some Carboniferous Fossils referred to *Lepidostrobus*," by D. H. Scott; and "A New Species of *Albuea*," by J. Wilson.

Popular Features.—On Sept. 17 a conference of delegates representing local scientific societies was held in Crown Court in the afternoon, over which Dr. Carson presided and at which papers were read. A symposium in honor of Sir Joseph Lister was held in Adelphi Hall on Sept. 18, at which 300 members were present and over which Prof. Mithell Banks presided. In the evening a discourse on "Safety in Ships" was given by Dr.

Francis Elgar. The half holiday on Saturday, the 19th, was devoted to local excursions, seeing Liverpool itself or taking trips on the Mersey, a large number visiting New Brighton. One local attraction was the Liverpool overhead railway. A party visited the Prescott mine, and were able after inspecting the machinery and the mechanical contrivances to descend the shaft to witness the actual working of the coal; also on invitation a number of gentlemen attending the British Association were invited to Howarden, where they were entertained by Mr. and Mrs. Gladstone. In the evening Sir Joseph Lister was entertained at a banquet given by the medical profession of Liverpool. The presiding officer was Richard Caton, President of the Medical Institution, and 350 persons were present. On the evening of Sept. 23 a banquet was given in the Adelphi Hotel to the association by the American Chamber of Commerce of Liverpool. Besides the American ambassador, Prof. W. H. Goodyear, of Brooklyn, and Prof. Charles S. Minot, of Boston, were among the guests. At the close of the meeting the usual excursions provided for were enjoyed, of which that to the Isle of Man was the most popular. There were exhibitions of physical apparatus, and in connection with the anthropological section there was an important and valuable loan collection of anthropological exhibits.

Attendance and Grants.—At the concluding meeting of the association, held on Sept. 23, the secretary reported an attendance of 3,181 members, of whom 31 were new life members, 139 new annual members, and 41 foreign members. The receipts were £1,355, which amount was distributed among the sections in grants for research as follow: Mathematics and physics, £320; chemistry, £80; geology, £135; zoology, £325; geography, £20; economic science and statistics, £25; anthropology, £180; mechanical science, £10; physiology, £235; botany, £20; and corresponding societies, £25.

Next Meeting.—The association will meet in 1897 in Toronto, Canada, beginning on Aug. 18. Bristol was decided upon as the place of meeting in 1898, and for 1899 Dover was selected. Sir John Evans, treasurer and a vice-president of the Royal Society, an authority on archaeology and numismatics, was named as president for the Toronto meeting.

ASTRONOMICAL PROGRESS IN 1896.

During the year astronomy made satisfactory progress, especially in some departments, the discovery and investigation of variable stars taking first rank. Save the asteroids, no new members have been added to the solar system. Photographers of the heavens find these tiny planets, now so numerous, so often depicted on the sensitive plates of their camera that the list grows apace.

The Sun.—In solar physics but little advance has been made. It was hoped that observations of the total solar eclipse of Aug. 9 would largely increase our knowledge of the nature, cause, and extent of the corona; but clouds and storm at the selected stations rendered well-nigh futile the attempts of astronomers to observe it. Of his spots, we know simply that, as to their number, there has been a very slight decrease during the past two years, though on no day was the great luminary free of them, as last happened on March 28, 1831. The decline in number and area has been much more marked in the southern than in the northern hemisphere, the opposite having been true in 1894. The latitude of the spots, however, remains nearly constant. Prof. Tacchini says: "No spots and few facule attain a higher latitude than 30°." The spots are often of immense size and easily visible to the naked eye, and equal in extent five times the diameter of the Earth, and a few times they have been

observed with a diameter eight times that of the Earth. Whether they are depressions or elevations of the Sun's limb is a disputed question. It has been asserted that, rounding the Sun's limb by his rotation, they have been seen as notches; but, from the boiling or tremors of the atmosphere, such observations are unreliable, and can have but little value in deciding so important a matter.

Metallic prominences seem to have been proportionately numerous, about 5 per cent. of them reversing the sodium and magnesium lines, while in 1894 only 1.3 per cent. were so found. Mr. Evershed, who annually observes about 1,000 prominences, says the corona line, wave length 5,316, has been relatively more frequent in the chromosphere.

Few eruptive prominences have been lately seen. Prof. George E. Hale records one on March 25, 9^h 50^m to 11^h 6^m, Chicago mean time, which was the only one seen in 1895. By means of his large spectrograph, with moving slits adjusted to the K line, he obtained some very fine photographs of the phenomenon. From measurements of his plates, he deduced the maximum height of the prominence to be 624" × 450 = 280,800 miles, which is more than 40,000 miles greater than the Moon's distance from the Earth. Only one prominence surpassing this in height is on record.

While the spots are confined to two zones, one on each side of, and near the equator, the prominences or solar eruptions are seen entirely around the Sun, showing the two to be in no wise associated. They are dull scarlet in color, and are composed of hydrogen gas heated to redness. With the spectroscope they can be seen and carefully studied without an eclipse.

Rotation of Venus.—No consensus of opinion has yet been arrived at by astronomers regarding the announcement by Schiaparelli that the planet Venus, like our Moon, makes a revolution synchronously with her axial rotation. Prof. Tacchini, from observations during 1895, makes the period of rotation 224.7 days. Owing to her dense and cloud-laden atmosphere, which renders her markings changeable and uncertain, it is a question whether her surface has ever been seen. The halo of light extending over the unilluminated portion of her disk, similar to that on the dark part of the Moon three or four days after passing the Sun, claimed to have been seen by some astronomers, is another perplexing matter. Other astronomers, with equal optical appliances and with eager quest, have been unable to detect any trace of this phosphorescent light. The writer is of the opinion that this phosphorescent illumination is illusory, as is also that of the ring encircling the dark portion of the planet, and the existence of a star in the center, each, of Venus and of Mercury during their transits across the Sun. These appearances are due, probably, to some peculiarity in the retina of the observer's eye—as some people see, or seem to see, wave motions in the zodiacal light, and in the tails of comets, suggesting the undulations in a field of grain, which trained and skillful observers fail to find.

The Moon.—During the total eclipses of the Moon on March 10 and Sept. 3, 1895, Dr. Barnard, then at the Lick Observatory, made a series of photographs of the eclipsed Moon and the surrounding sky as a study of the question, Has our Moon a satellite? If there is a satellite of our satellite, it must be very small and not to be caught visually nor photographically, unless during totality the satellite should be outside the Earth's shadow. Without an eclipse the Moon's brightness must of course overpower that of her satellite. At the September eclipse six fine photographs were secured. As the Moon's motion is quite rapid, it was necessary to guide the telescope by hand, moving

it at the same rate as that of the orbital motion of the Moon. This was somewhat difficult, because no small, brilliant point could be found on her surface for a guide. He, however, succeeded admirably, his beautiful pictures showing many details, and the Moon standing out as a globe instead of a disk; but neither he nor any one else was disappointed that no satellite was revealed. His exposures were from 5^m to 6^m in duration. These experiments prove that if the Moon has a satellite it is not brighter than a star of the eleventh magnitude.

On the evening of July 21, 1896, Prof. Brooks, of Smith Observatory, Geneva, N. Y., while observing the Moon with the 10-inch telescope, saw a dark, round object pass slowly across the Moon from east to west. He thinks it was a meteor too far beyond our atmosphere to become luminous by friction with it. This assumption, if at the same time it was within the Earth's shadow, would account for its lack of luminosity. It could not have been an ordinary shooting star, which is very small. Its flight across the Moon occupied between 3^s and 4^s, which slowness of motion indicates both great distance from the Earth and great magnitude.

Mars.—Dr. Barnard, from an extended series of observations of this planet with the 36-inch telescope of the Lick Observatory during the last opposition, found that the so-called "seas," though particularly rich in markings, bore no resemblance to seas, but looked like a mountainous country as seen from a high elevation. The continental shadings were observed, but no straight, sharp lines were visible to him. On the other hand, Prof. Percival Lowell, at Flagstaff, Arizona, with a much smaller telescope, claims to have seen several lines of this character. The reputed observations of this planet are so diverse and antagonistic that it is not easy to arrive at conclusions. At the coming opposition some definite knowledge may be attained. The mysterious white spot seen at the last three oppositions on the terminator of Mars, which elicited so much discussion, has reappeared, and was seen at the Lick Observatory on Aug. 27, 1896, by Prof. W. J. Hussey. The inference is that it is an illuminated mountain peak, and therefore a prominent and permanent object, and not at all a signaling device to the Earth by the Martian inhabitants, as has been popularly proclaimed.

Asteroids.—Fewer of these tiny worlds were discovered during the year than in any year since 1891. Curiously, too, not one has been found visually, but, rather, by the trails on the photographic plates, caused by their orbital motion while the telescope is steadfastly and accurately held for hours upon a star. All since the last report are the findings of M. M. Wolf and Charlois. Palisa, who claims 81, seems to have abandoned the quest for these bodies, as his last record is No. 226 (Tamara), found in February, 1892. Charlois, with his list of 87, has distanced all competitors. It is highly improbable that all these planetoids have a magnitude sufficient to be seen by our telescopes, and it is very likely that they may number many thousands. To keep the record of so great a number is laborious indeed, and it is not surprising that astronomers frown upon their further quest. To re-find lost ones is as hard a task as to find comets. A systematic search for the lost *Æthra* (132) during the past two years has proved unavailing. Some of these worlds, in their orbital journeys, must pass each other at saluting nearness, if, indeed, they do not occasionally collide. The period of *Ottilia* (401) is almost exactly half that of Jupiter, rendering the theory of its elements interesting.

Mr. B. M. Roszel has recently computed the total mass of the first 311 members of the group, assuming for them the same *albedo* as Vesta and the

mean density of Mars. His conclusion is that it equals 0.003 that of Mars. The three smallest mean distances are: (330) = 2.09; *Brucia* (323) = 2.16; and (149) *Medusa* = 2.17. The three greatest are: (279) *Thule* = 4.26; (361) = 3.96; and (153) *Hilda* = 3.96. The greatest density of the group is at distance 2.80, precisely that indicated by Bode's law. The following is the record of discoveries since the last report:

Saturn's Rings.—The last "Annual Cyclopædia" gave a brief description of the process used by Prof. Keeler in the determination of his theory that countless millions of discrete particles make up the rings of Saturn. Prof. Campbell, of the Lick Observatory, who has constructed a new spectrograph for the express purpose of testing the validity of the conclusion arrived at by Prof. Keeler, has secured photographs entirely confirmatory, and the scale of the negatives is sufficiently large to show the excess of velocity of the inner edge of the ring over that of its outer edge. As illustrative of the accuracy of Mr. Campbell's photographs, the sub-joined means of three measures may be cited: Velocity due to the planet's rotation = 9.77 kilometres, differing by 0.52 kilometres from the computed value; velocity of the middle of the ring system = 17.37 kilometres, differing by 1.41 from the computed value; and excess of velocity for the inner edge of the ring = 3.13 kilometres, differing by 0.74 kilometres from computation. These confirmatory studies would warrant belief in the meteoric composition of the rings; and that the innermost of the three principal rings is translucent, allowing the planet to be seen through it, also corroborates its truth. Lately the astronomical journals have discussed the reported observation on April 18, 1896, by M. Antoniadi, a French astronomer, of three new divisions on Saturn's middle ring. One or two other astronomers claim to have seen, at a later date, something similar. As the outer ring is frequently seen thus divided, and if, as Prof. Keeler has shown, the rings are made up of disjunct components, Antoniadi's observation may be correct, yet the question arises, why have not the users of greater telescopes observed this same phenomenon?

Ellipticity of Uranus.—By an elaborate series of measures of the equatorial and polar diameters of Uranus, Dr. Barnard has fully proved that the two are unequal, and that, consequently, this planet,

like the others, rotates on an axis. Considering the difficulties of the undertaking, the close agreement of the observations made by Prof. C. A. Young, of Princeton, with the 23-inch refractor with those of Dr. Barnard is somewhat remarkable. Following are the comparisons:

Polar.	Equatorial.	Young.
3°46''	4°273''	Barnard.
3°30''	4°150''	

As is true of Jupiter and Saturn, the rotational period of Uranus, computed from his spheroidity, must be short.

Double Stars.—Few new double stars have been discovered since the last writing; but still this work goes bravely on, and sets of measures have been made, at different observatories, of over 1,500 of these interesting stars, the orbits of 50 binaries have been computed, and the distances apart of their components calculated, as well as their periodic times. That of shortest period, Kappa Pegasi = Burnham 989, is 11·4 years, with distance 0·42". Next is Delta Equulei = 11·5 years, while the period of Mu Bootes is 219, and that of Castor one thousand years. Several photo-spectroscopic doubles have periods a thousand times shorter than that of Kappa Pegasi. Dr. T. J. J. See has computed new elements of the orbit of Burnham 416, the place of which for 1900·0 is right ascension $17^{\text{h}} 12^{\text{m}} 12^{\text{s}}$; declination south, $34^{\circ} 52'$. It is a rapid binary whose period he gives as 33·0 years. Between the years 1896·5 and 1900·5 the orbital motion will have amounted to 29° . Their distance at the first epoch was 1·43", and at the last it will be 1·72". Dr. See, in his study of 70 Ophiuchi, has found, to his great surprise, that the angle of position was 4° in advance of the theoretical place, as compared with Schur's ephemeris, which, though it was made with extreme care, he (Dr. See) deemed necessary to revise. After rigid comparison with the observations of others, he found irregularity not only in angular motion but also in distance, and, moreover, that these irregularities were periodic, and so demanded special investigation. The duplicity of this star was ascertained by Sir William Herschel in 1779, since which time the companion has achieved one complete revolution and made considerable advance on a second one. Much study has been bestowed on this star, and many orbits have been computed for it, which, in turn, have needed revision. The companion has departed from every orbit heretofore obtained. Dr. See's opinion is that this star, 70 Ophiuchi—like Beta Auriga, and Zeta Ursa Majoris—is a triple star, the nearer component being either too close to its primary to be optically visible or, like the companion of Algol, a dark though massive star. He finds unmistakable evidence of retardation of motion of the companion near *apastron*, though recently this has changed to acceleration, and until this disturbing element is ascertained no satisfactory orbit is possible. Prof. Schur, in 1868, from 400 mean observations of position angle, naturally concluded that the orbit deduced by him would give for many years, if not indefinitely, good places of the visible companion; yet the error in position angle already amounts to 5 degrees. Dr. See thinks that the unseen body moves retrograde, in a sinuous curve about the common center of gravity of the system, in nearly forty years. The period of the visible components seems to be between ninety and one hundred years. He assumes the present position angle of the dark star to be about 330° . His interesting paper on this binary may be found in the "Astronomical Journal" of Jan. 9, 1896. In the same publication of June 29, 1896, Dr. See gives the results of his researches on the orbits of 40 binary stars.

Variable Stars.—The interest in the quest for variable stars shows no abatement, though but few astronomers make a specialty of their discovery. The number of stars now known to vary in brightness is more than 8,500, and the list has so extended as to suggest the idea that all the stars may, within small limits, vary in brightness. The tabulation and revision, the ascertainment of their periods and their inequalities, has been a laborious task. A very remarkable feature of these changeful stars is the frequency with which they are found in star clusters.

In the Harvard College Circular, No. 2, Prof. Pickering announces that Prof. Solon J. Bailey has discovered, from examination of photographs obtained by him of certain globular clusters, an extraordinary number of variable stars. In the cluster in the Hunting Dogs, Messier 3 (General Catalogue, 3636), 87 stars, from an examination of 15 photographic plates, were found variable. Attention is called to the fact that a few of these variables have short periods, of a half day or less.

In No. 3 Prof. Bailey omits 14 suspected variability which is not yet proved. For more particular information on this subject, the reader is referred to "Astronomische Nachrichten," Nos. 2986, 3223, 3321 and 3354.

The Harvard College Circular, No. 7, contains a list of 10 new variables confirmed at that observatory by study of photographic plates. Changes in the light of Col. Markwicz's star in Sagittarius is shown by 89 plates. A large number of observations have been made with the meridian photometer to determine the light curve of stars of the Algol type. S. Antliae has been regarded hitherto as belonging to this class, and is of interest from the shortness of its period = $7^{\text{h}} 46^{\text{m}} 8^{\text{s}}$, and, since it retains its full brightness for less than half its time, it is difficult to accept the hypothesis that the variation is caused by a dark eclipsing body. After much study and many observations, it is thought that this star is not of the Algol class, but, rather, like Delta Cephei and Eta Aquila, belongs to the family of variables of short period. Observations of Beta Lyrae show that two or more bodies are revolving about each other.

At this maximum much attention has been given to Omicron Ceti (Mira) to ascertain, if possible, the cause of the fitful fluctuations observed at the last maximum of this wonderful variable. While its light has alternately steadily increased and decreased, yet its maximum seemed not to have been attained until sixty days after it was due, and its brightness was 1·5 to 2 magnitudes less than usual. These changes of light not only in many of the variables, but also in their periods, raises a doubt as to the correctness of our accepted theories regarding them, and leads us to wonder if radical change is not necessary.

That the periodic mutations of the light of Algol are due to being eclipsed by a dark star, is doubtless true; but this theory seems hardly adequate to account for all the fluctuations of the majority of variables. As a single instance of many that might be cited, let us take Eta of the southern constellation Argo. In 1677 it was of the fourth magnitude; in 1751 it was of the second; in 1811 it was again of the fourth; and in 1837 and the seven years subsequent it ranked as of first magnitude, outshining every star in the heavens save the dog star. In 1859 it had faded to the third magnitude, and, decreasing almost uniformly, in 1867 it had shrunk to the sixth, while three years later it was invisible to the naked eye. Its minimum was reached in 1886, when it was of the 7·6 magnitude. It is now very slowly growing brighter. In thirty years this wonderful star assumed seven different magnitudes;

its light diminishing 600 times. Such long-continued change must be caused by some chemical phenomenon in the star itself. Our own Sun shows variations of light, but they are vastly less than those observed in the stars classed as variables.

The following are the shortest-period variables known:

S. Antliæ	= 7h. 46m. 48s.
Lacaille 5861	= 7h. 16m. 0s.
U. Pegasi	= 5h. 32m. 24s.

Dr. Chandler gives, in "Gould's Astronomical Journal" of July 8, 1896, his third catalogue of variable stars—the most extensive and complete one extant. It comprises a list of 8,622 stars, arranged in the order of right ascension, and contains all that were known at the date of publication. The different columns denote right ascension and declination for 1900-0, the annual variation, color, magnitudes—both at maximum and minimum—periods, date of discovery, etc. Five pages are devoted to names of discoverers, the types into which the stars have been classified, light curves, and much of interest and instruction regarding these bodies. The author says, prefatorially, that very few stars of the northern hemisphere have been seriously neglected by the astronomers there, and this harmonious collaboration without preconceived scheme is very gratifying; but he adds that there is ample room for more participants, and that in the southern hemisphere volunteers for this work are much needed.

New Stars.—By photography the discovery of new stars is so frequent occurrence as to elicit comparatively little interest among astronomers. A few of the most notable only can be alluded to here. On Dec. 12, 1895, a new star was found by Mrs. Fleming, from examination of the Draper Memorial photographs at Harvard College Observatory, in the constellation Centaurus. Its place for 1900-0 is: Right ascension $13^h 34^m$; declination south $31^{\circ} 8'$. Its spectrum resembles that of the nebula surrounding 30 Doradus, and also that of 20937 of the Argentina General Catalogue, but is unlike that of the ordinary nebula or those of the new stars in Auriga, Norma, and Carina. It is nearly in contact with 5253, Dreyer's New General Catalogue of Nebula, following it $1^{\circ} 28'$, and is north of it $23'$. No trace of this star is visible on 55 photographic plates taken from May 21 to June 14, 1895. Its magnitude was 7.2. On Dec. 16 it was of the eleventh magnitude, with spectrum closely resembling that of the adjacent nebula. Like the new stars in Cygnus, Auriga, and Norma, this one appears to have diffused itself into a nebula.

In the "Cordoba Durchmusterung"—(31-10536) is a star of 9.5 magnitude, having very nearly the position of nebula, New General Catalogue, 5253. The *nova's* position differs from that of the nebula only $1^{\circ} 4'$ in right ascension, and $18'$ in declination, and so it is rendered uncertain whether the star referred to was the nebula or the *nova*. In a small telescope with low power the appearance of the nebula is such that it might easily be mistaken for a 9.5 magnitude star, though careful observation shows it to be hazy. From estimates of Prof. W. J. Hussey, of the Lick Observatory, the *nova* declined in brightness from the 11.2 magnitude on Dec. 22, 1895, to 14.4 magnitude on June 11, 1896, and was surrounded by a faint, irregular nebula, which extended continuously to the bright nebula, New General Catalogue 5253. On June 26 its brightness was reckoned at 15.25, and on July 9 at nearly the sixteenth magnitude. On the latter date it was difficult to detect the star in the midst of the nebula, which appeared to be continuous with the brighter nebula referred to. When the star was

brighter the nebula about it was invisible, just as, no doubt, a comet can not be seen when superimposed on a star. The letter name of this *nova* is Z Centauri.

The subjoined is a list of new stars as given by Prof. E. C. Pickering in Harvard College Observatory Circular, No. 4. He regards their positions as reliable:

CONSTELLATION.	Year.	Discoverer.
Cassiopeia	1572	Tycho Brahe.
Cygnus.....	1600	Jansou.
Ophiuchus.....	1604	Kepler.
Vulpecula.....	1670	Anheim.
Ophiuchus.....	1848	Wind.
Scorpius.....	1860	Auwers.
Corona Borealis.....	1866	Birmingham.
Cygnus.....	1876	Schmidt.
Andromeda.....	1885	Hartwig.
Perseus.....	1887	Mrs. Fleming.
Auriga.....	1891	Anderson.
Norma.....	1893	Mrs. Fleming.
Carina.....	1895	" "
Centaurus.....	1895	" "

The first star in this table was visible in daylight, and, though it was generally observed, its discovery was accredited to Tycho Brahe, who first published an account of it and followed it as long as it was visible. He found an approximate place for it, but, as it was in a region rich with stars and as the telescope had not then been invented, it is doubtful whether it can now be identified.

The new star found in Carina by Mrs. Fleming shows a spectrum so closely resembling those of *Nova Auriga* and *Nova Normæ* as to indicate identity of composition. On 62 photographic negatives, secured between May, 1889, and March, 1895, no trace of a star was found, although stars of the fourteenth magnitude are clearly depicted; but on a plate taken on April 8, 1895, the star had registered itself, as of eighth magnitude, and on July 1 of eleventh magnitude. The place of this star for 1900-0 is: Right ascension $11^h 3^m$; declination south $61^{\circ} 24'$.

Stars with Peculiar Spectra.—Rev. T. E. Espin, in "Astronomische Nachrichten," No. 3352, of May 11, 1896, has a catalogue of 210 stars of unusual spectra, which, added to his previous lists, swells the number to 1,179 stars. He appends descriptive notes regarding the peculiarities of the different types, I, II, III, and IV. This self-imposed and well-performed though arduous task in stellar spectroscopy is a valuable accession to our scanty knowledge of the stars.

Another table of new stars of this character is contained in the "English Mechanic," of Aug. 7, 1896, but most of them are of the types IV and V. Save four, all are southern stars.

The writer, Prof. E. C. Pickering, asserts that the spectra of the two faint stars announced as peculiar in the "Astronomische Nachrichten," Vol. CXXXV, page 195, have been shown by recent and better photographs, and one of them, whose position for 1900-0 is right ascension $17^h 38^m$; declination $46^{\circ} 3'$ —announced as a stellar object having the spectrum of a gaseous nebula—proves to have a continuous spectrum in which the hydrogen lines H β , H γ , H δ , H ϵ , and H ζ are bright, and the bright line, 5007, absent, like that of Eta Carinæ. The second object (right ascension $18^h 39^m$; declination $33^{\circ} 27'$), given as of the fifth type, shows the spectrum of a gaseous nebula.

Stars having Dark Companions.—The spectroscope has confirmed the theory held now for many years, that Algol is a binary, and its companion a dark star, which is, of course, invisible. A notable addition to this class of heavenly bodies has lately been made by Dr. Belopolsky, of the Imperial

Observatory at Pulkowa, Russia, whose observations tend to show that in addition to the two visible components of Castor (Alpha¹ and Alpha², Geminorum) Alpha¹ must have a dark companion akin to that of Algol (Beta Persei), save that, while the latter is periodically occulted by its companion, no such phenomenon happens in the case of Alpha¹ Geminorum. Photo-spectrographic observations indicate that the effect of the companion is to change the velocity of the star's motion at regular intervals in the line of sight rather than to vary its brilliancy by eclipse. Dr. Belopolsky concludes that the relative orbital velocity of the system is about 21 miles a second.

Prof. Bailey, of the Harvard College Observatory at Arequipa, Peru, finds that Mu¹ Scorpii, like Beta Auriga, Zeta Ursa Majoris, and others, is a spectroscopic binary. Its period of revolution is thirty-five hours—the shortest known.

Spectrum of Alpha Aquilæ.—In a memoir presented to the Paris Academy of Sciences, M. Deslandres makes the interesting statement that in the spectrum of Alpha Aquilæ he has often seen fine, double, bright lines running through the middle of the dark lines of hydrogen, and sometimes even through those of iron and the K line of calcium. He attributes them to the star's chromosphere, and regards them as proof of the orbital motion of the star, and also of an atmosphere surrounding it, as in the case of our Sun.

Rediscovery of the Companion to Sirius.—This difficult object, which, owing both to its minuteness and to the overpowering brilliance of the primary, has been invisible for a few years during its periastron, was refound at Lowell Observatory, Flagstaff, Arizona, on Aug. 31, by Dr. Sec. Angle of position, 219°; distance, 5.9". This companion star was originally discovered, visually, by Alvan G. Clark, of Cambridge, Mass.

Photographing the Nebulæ and Clusters.—This work is still zealously carried on by Isaac Roberts at his observatory in Sussex, England. In "Monthly Notices," Vol. LVI, No. 5, is a list of 82 of these objects, with exposures of from three minutes to four hours, which revealed conditions in each not visible in any telescope. Among these is the new star in Auriga, to which he gave an exposure of three hours, with the result that it confirms the suspicion of Dr. Barnard that it is no longer a star but a nebula.

During the year much time was spent in determining the relative efficiency of his 20-inch reflector in the delineation of celestial objects as compared with portrait lenses, and his conclusions are published in "Monthly Notices," Vol. LVI, No. 7. He decides that the reflector form is much superior to that of the refractor portrait lens. His experiments point also to a practical limit of aperture to focus in the construction of instruments for celestial photography, which limit he deems not far from 1 to 5. He finds a deterioration in the stellar images if the ratio be 1 to 4, and if it be 1 to 6 the photographic effect is slower and, consequently, inadmissible. One trial was made close to Gamma Cassiopeia with 4 telescopes: First, 3½-inch portrait lens; aperture to focus, 2.74; exposure one hundred and thirty-two minutes; and on 2° × 2' 1,680 stars were counted. The two nebulæ were visible, but without structural details. In the second experiment a 5-inch portrait lens was used; focus, 4.8; exposure one hundred and thirty-two minutes; giving 2,610 stars on 2° × 2'. Nebula well shown, and some of the involved stars. In the third, by Barnard, a 6-inch Willard lens was used; focus, 5.4; exposure one hundred and eighty minutes; result, 1,300 stars on 2° × 2'. The two nebulæ were present, and some of the involved stars, but with less density and clear-

ness than with the 5-inch. In the fourth experiment a 20-inch reflector was used; focus, 4.9; exposure one hundred and thirty-two minutes; 17,100 stars on 2° × 2'. Nebulæ brilliantly shown with many stars, both bright and faint, involved in the nebulosity. The importance of these studies warrants the mention of two other trials in the cluster of the Pleiades: First, with a Willard lens; exposure four hours; shows Merope nebula, but without structural particulars, also a part of the Electra nebula, but all the rest of the nebulosity in the cluster is lost by the large halation circles surrounding the bright stars. On 2° × 2' 825 stars are visible, against 953 on the 5-inch-lens plate and 3,470 stars on the reflector plate. The exposure of the last two being two hours fifty minutes, against four hours with the Willard lens. Mr. Roberts thinks these facts tend to raise doubt as to the existence of the large nebular field outside the Pleiades, depicted on some of Dr. Barnard's plates. While, no doubt, much is yet to be learned regarding the best form of instrument for celestial photography, yet the light-grasping power of the 6-inch Willard lens used by Dr. Barnard is very small compared with the 20 inch reflector, which latter, to have given only an equal amount of light, should have been contracted to about 7 inches.

Photographing the Nebula near χ Persei.—This nebula was discovered by Barnard in 1885, and is No. 1499 of the New General Catalogue. An enlarged photograph of this remarkable nebula and the surrounding sky was shown in the "Astrophysical Journal" for December, 1895. An exposure of six hours was given to the negative plate. The nebula is large and very elongated, its extreme length being 1.2". Though it is not resolved, yet many stars are shown in it, and many thousands surrounding it. It shows many condensations of light and one dark spot, evidently a hole through it.

The Pleiades.—The astronomer at Tashkend, M. Stratonoff, announces three photographs of the Pleiades, each plate having a long exposure, viz.: No. 1, 9^h 45^m on three nights; No. 2, twenty-five hours on nine nights; and No. 3, 17^h 30^m on nine nights. These were taken with the great Repsold-Henry refractor, which since 1894 has been the possession of the observatory at Tashkend. Of the three pictures, the third is the most interesting. In 4 square degrees, 2° × 2', the Pleiades in the center, 6,614 stars are depicted, with many fresh details of those already known, as well as several nebulae unseen before. One of these has the form of a right-line streak and is nearly parallel to the similar nebula discovered by Henry. Another is made up of streaks crossing each other in various directions.

The Photographic Chart of the Sky.—This gigantic and unprecedented astronomical task nears completion, and to decide on the final arrangements for its close was the object of the International Photographic Congress lately convened in Paris. The plan outlined, which has been followed, was to photograph every star in the heavens down to the fourteenth magnitude (nearly 50,000,000 stars) with mathematical exactness both as to magnitude and position. The work was divided among eighteen European observatories, each with its section of the heavens, from which it has seenred 3,000 photographs. Unfortunately, no observatory in the United States felt that it could give the necessary time to this work. Of the stars, at least 2,500,000, including those from magnitudes 1 to 11, will be catalogued and numbered. The complete map will consist of 27,000 parts, and, if spread out and adjoined, will cover an area of nearly two acres. Its cost has been \$2,000,000. For the covering of the entire heavens 11,027 plates,

each one 16 centimetres in size and covering four square degrees of space, will have been used. To catalogue this celestial host by visual means would, were it a possibility, have required thousands of years; but could all the plates have been simultaneously exposed, one hour would have served to depicture them all. An average first-magnitude star will give an image on the modern sensitive plate in one five thousandth of a second: a sixth-magnitude, the smallest visible to the unaided eye, in one second; but a star of the fourteenth magnitude requires an hour for its registration.

Unfavorable weather, imperfect plates, and faulty impressions—all have conspired to delay the final work on both the astrographic catalogues and charts. At the Greenwich Observatory, during the past year the astrographic equatorial has been devoted to the taking of catalogue plates, and it is gratifying to record that during this period forty negatives, with 7,856 stars, have been measured by Miss Turner, who is assigned to this important and delicate work.

As this century nears its close, we rejoice that it has this valuable legacy to bequeath to its successor, rendered possible in this age only by the penetrative power of the photographic eye, whose ken so far exceeds the possibilities of our greatest telescopes.

A New Ring Nebula.—Annular nebulae are the rarest of the various classes into which they have been divided. Until recently only six were known, and but one of these is at all conspicuous, viz., the ring nebula of Lyra, and it is therefore a pleasure to record the discovery of another by Walter F. Gale, of Australia, on June 4, 1894, but only lately announced to the world. Of it he says: "While sweeping in the constellation Grus with the 8½-inch reflector at Paddington, New South Wales, I observed a faint elliptical nebula not down in Dreyer's New General Catalogue, which I therefore suspected to be a comet. No motion was detected on the following night, and it proved a nebula not of the ordinary kind, but a nebulous ring with the interior filled with very much fainter matter, like the celebrated one in Lyra." He made its approximate position as $21^{\text{h}} 52^{\text{m}}$; declination south $39^{\circ} 59'$.

Dr. Swift, of Lowe Observatory, Echo Mountain, California, has examined this object and confirms the description given by its discoverer, and pronounces it second only to that of Lyra, which it resembles.

Astrophysical Standards.—At their first annual meeting in New York, November, 1894, the editorial staff of the "Astrophysical Journal," Profs. Young, Pickering, Rowland, Michaelson, Hastings, Keeler, and Hale being present, it was resolved almost unanimously that the following rules be adopted:

- "1. That the Rowland scale of wave lengths be chosen.
- "2. That the 10^{-10} metre or 10^{-7} millimetre be adopted as the unit of wave length.
- "3. That the kilometre be the unit of motion in the line of sight.
- "4. That the hydrogen lines be designated H_{α} , H_{β} , H_{γ} , H_{δ} , etc., beginning at the red end of the spectrum.
- "5. That the maps of the spectra be printed with the red end on the right.
- "6. That tables of wave lengths have the shortest placed at the top."

To those members unable to be present at this convention full reports were sent and voting ballots containing the six propositions. The absentees were Profs. Cornu, Dunér, Huggins, Tachini, Vogel, Ames, Campbell, Crew, Frost, and Wadsworth. All save Vogel voted for proposition 2, he preferring the millionth of a millimetre.

The Great Spanish Aërolite.—This meteor, which exploded over the city of Madrid on Feb. 10, 1896, is probably the largest that has fallen during historic times in any civilized country, and raises anew the question of origin. From calculations based on comparison of various observations from many points it could have been but 14 or 15 miles above the town at the instant of explosion. Its tremors and reports extended over a radius exceeding 50 miles. The detonations were tremendous, as if thousands of tons of modern explosives had gone off at that height. As the atmosphere at that level is exceedingly rare, its force must have been tremendous to shake the Earth over so large an area. It came in daylight, but its brilliancy surpassed that of the sunshine. It was seen at Gibraltar and heard at places far from the point of explosion.

The Next Great Meteoric Shower.—The great Leonid star shower of the years 1799, 1833, and 1866 will doubtless repeat itself in 1899 on the morning of Nov. 15. Then the Earth will again pass through the center of the swarm of meteoroids, as they are called before combustion. As this aggregation is immense in length, one end will encounter the Earth in 1898 and the other in 1900, making considerable showers in those years also. And as there are many meteoroids considerably in advance of the main cluster, forerunners of the great shower will probably come within the Earth's atmosphere on Nov. 14, 1897, so that it is not too early to call attention to the expected phenomena. The thickness of this meteoroidal stream is about 100,000 miles, and the duration of the shower is equal to the time of diagonal passage of the Earth through it, usually from midnight to dawn. This, the most wonderful of all the star showers, may be traced back to A. D. 126, when the meteor comet (Tempel's) was captured by Uranus, as calculated by Leverrier.

As there is a light shower of Leonids every November, we know that there is a vast ring formed by the comet's tail, and that the immense shoal in one portion is the product of the exploded comet itself, through which we pass once every thirty-three years and a day, as the following shows: In 1799 the great shower occurred on Nov. 12; in 1833 on the 13th; in 1866 on the 14th; and it is therefore looked for in 1899 on the morning of the 15th. The meteoroids that compose this stream make a revolution around the Sun in about thirty-three and a quarter years, and, by consequence, the Earth passes through it in a new place each year. At aphelion the ring crosses the orbit of Uranus, and at perihelion that of the Earth. The inclination of the plane of its orbit to the ecliptic being $16^{\circ} 46'$, it can not intersect the orbits of Saturn, Jupiter, and Mars. The length of the swarm is so enormous that, although at perihelion it moves at the rate of nearly 25 miles a second, yet it takes it two years to pass the Earth, so that when its hinder part is still with us its advancing side will have reached the orbits of Jupiter and Saturn. Notwithstanding this extent, it is but a fraction of the entire orbit. This great cluster will reach the Earth's orbit about June 1, 1899, but the Earth will not have arrived there then, but will be due nearly six months later, when our planet will plunge into the swarming mass, and for at least five hours we shall experience a literal rain of fire.

These meteoroids are dark bodies, and it is only when they pass into our atmosphere and are ignited by friction with it that they become visible for one or two seconds. In whatever part of the sky they may appear, their paths may be traced backward to the radiant, now and for years to come, near the sickle of Leo.

Yerkes Observatory.—This mammoth observatory, just completed, was founded in 1892 by Charles

T. Yerkes, a wealthy citizen of Chicago. In furtherance of his scheme, Alvan G. Clark secured from France 2 perfect disks of optical glass, crown and flint, 40 inches in diameter, which after great labor he has converted into the giant lenses. The finished objective has been tested recently by an expert, Prof. James E. Keeler, Director of the Allegheny Observatory, Pennsylvania, and Prof. George E. Hale, of the Yerkes Observatory. They found the definition to equal that of the telescope at the Lick Observatory, Mount Hamilton, California, which also is the work of Mr. Clark. The light-gathering power of the two objectives is as 5 to 4. The number of square inches in the Lick glass is, approximately, 1,618, and in the Yerkes 1,257.

The form of the observatory is that of a Roman cross, with three domes and a meridian room at the end of each. The principal axis of the building is 330 feet long, lying east and west. The great dome, 90 feet in diameter, is at the west end. This, the largest ever constructed, was designed and built by Messrs. Warner and Swasey, of Cleveland, Ohio. The sole plate and ribs are of steel. It is revolved by an electric motor. As the telescope is but 75 feet in length, the dome affords ample room for the spectroscope attachment and for manipulation of the chair. A high chair is not needed, as the floor is elevated and depressed through a range of 22 feet by a special electric motor. Similar motors are made to do service in many ways. Of the 2 smaller ones, constructed by the same firm, that to the northwest will house Prof. Hale's telescope, which for several years has done duty in Kenwood Observatory, Chicago, while the other will contain a 24-inch reflector. Between these two domes is the heliostat room, 100 feet long and 12 feet wide. The heliostat, with plain mirror 24 inches in diameter, stands on a pier at the north end of this room under an iron roof, which is rolled off to the south. The main building has a hall through its center, on each side of which lie the necessary anterooms. These rooms and those in the basement are as follow: Computing room, library, museum, lecture room, two spectroscopic laboratories, chemical laboratory, galvanometer room, instrument room, photographic dark room, developing room, enlarging room, emulsion room, constant-temperature room, physical laboratory, optician's room, and workshop. The building containing the engines, dynamos, and boilers for the generation of power and heat is several hundred feet from the observatory, for avoidance of danger from fire and possible boiler explosions. A novel feature of this institution will be its instrument shop, where, in due time, it is hoped, it will be possible to construct such instruments and laboratory apparatus as shall be needed for advanced investigation under the immediate supervision of those who are to use them.

The site of the observatory, consisting of 50 acres of wooded land fronting on Lake Geneva, is one mile from the village of William's Bay, Lake Geneva, Wis., about 75 miles from Chicago, in an ideal rural region free from the dust and smoke of the city, and, what is still more advantageous, away from its electric street lights, which are ruinous to astronomical observatories. In extent and convenience, no observatory in the world can equal the equipment of the Yerkes. Its principal instruments will include three telescopes, the main one being the greatest refractor the world has ever produced, sidereal and mean-time clocks, a position micrometer, a solar spectrograph, a stellar spectrograph, a photoheliograph, a transit instrument, and a meridian circle.

Its publications will consist of irregularly issued bulletins with announcements of discoveries

and results, contributions, annals of the observatory in quarto-volume form, and the "Astrophysical Journal." Its director is Prof. George E. Hale; the astronomers, Dr. E. E. Barnard and Prof. S. W. Burnham, eminent specialists; the astrophysicist, Prof. I. L. O. Wadsworth; while Dr. T. J. J. See has the chair of Astronomy in the University of Chicago, of which the Yerkes Observatory is a branch.

The construction of the objective in the mammoth telescope is similar to that of the Lick telescope, the crown and the flint lenses being in this instance separated 7 inches. Their weight, including the cast-iron cell in which they are mounted, is 1,000 pounds. At the test of the instrument on different objects in October, at Mr. Clark's optical works, Cambridgeport, Mass., on four nights, good images at the focus were obtained of stars at widely different altitudes, the definition being equal to that of the Lick telescope, while the brightness of the images was considerably greater. With a low power the Orion nebula was a wonderful object. But Prof. Keeler thinks he has evidence that we are approaching the limit of size in the construction of great objectives. The conclusions arrived at regarding this most excellent glass were shared by both the astronomers testing it, Profs. Keeler and Hale, the former gentleman having been a user of the Lick telescope, and therefore called as an expert to this trial of merit, which, by the terms of the contract, was necessary to insure its acceptance by the observatory.

Comets.—Since last year's report nine comets have been discovered, though two were expected returns to perihelion, and can therefore hardly be called discoveries.

Comet *b* 1896 (Faye's) was first detected at the Nice Observatory, France, on Sept. 26. It was exceedingly faint and was seen at but few observatories. Its period is nearly 7.5 years. It is never visible to the naked eye, as is also the case with nearly all the periodicity, that belong to the Jupiter family of comets. It arrived at perigee (nearest the Earth) in October, 1895, but was not in perihelion (nearest the Sun) until March 19, 1896. It has appeared with unvarying regularity since its discovery by Faye, on Nov. 22, 1843.

Comet *a* 1895 (Swift) was discovered by Dr. Lewis Swift at Lowe Observatory, Echo Mountain, California, Aug. 21, 1895. It was noticed in the last volume of this publication, but the elements of its orbit, for lack of accurate observations and computations, were given erroneously. It proves to have a short period, and is with good reason thought to be identical with the long-lost comet of Lexell discovered by Messier, June 14, 1770, with a computed period of 5.5 years. It must therefore have made about twenty unobserved returns to perihelion. The elements of its orbit are often changed by near approaches to Jupiter, another of which will occur in 1922, but not to the extent of those of 1886. Based on observations extending over two months, M. Schulhof has computed the following elliptic elements: Perihelion passage, 1895, Aug. 20-8272, Paris mean time—longitude of perihelion = $338^{\circ} 4' 16''$; longitude of node = $170^{\circ} 18' 8''$; inclination = $3^{\circ} 15'$; eccentricity = 0.65155; mean daily motion = $493.743''$; period = seven years one hundred and eighty-six days. The computer thinks it will not again be visible until its fifth return in 1931.

Comet 1895 *c* (Perrine) was discovered on the morning of Nov. 17 in Virgo, right ascension $13^{\text{h}} 44^{\text{m}}$; declination north $1^{\circ} 40'$. It was visible with an opera glass when discovered, and soon became conspicuously visible to the naked eye. On Nov. 26 its tail was 5° long. The following parabolic elements have been computed for it by Prof. Camp-

bell: Perihelion passage, Dec. 18-33570, Greenwich mean time—longitude of perihelion = $233^{\circ} 1' 57''$; longitude of node = $320^{\circ} 26' 19''$; inclination = $141^{\circ} 39' 22''$; perihelion distance = 0.192253. Earth's = 1.

Comet *d* 1895 (Brooks) a fairly bright, but rapidly moving comet, was discovered by Brooks, of Smith Observatory, Geneva, N. Y., Nov. 21, in Hydra. Its motion was nearly north, soon becoming circumpolar, and so remained till it became invisible. The following elements, unlike those of any other comet, were computed by Prof. Leuschner: Perihelion passage, 1895, Oct. 21-2183, Greenwich mean time—longitude of perihelion = 22° ; longitude of node = $83^{\circ} 1'$; inclination = $76^{\circ} 43'$; perihelion distance = 0.84594.

Comet *a* 1896 (Perrine-Lamp) was discovered at the Lick Observatory, Feb. 15, 1896, by Perrine, and a few hours later by Dr. Lamp, of Kiel, Germany. The story of its discovery is interesting, but too long to be embodied here. They (the Perrine and Perrine-Lamp comets) passed each other, moving in opposite directions, within three or four degrees, on Feb. 20. The history of astronomy furnishes but one previous instance of two comets having passed each other so closely that both were almost included in the same field of the telescope. This near approach, however, was only apparent; for one was four times as far from the Earth as was the other. The following elements are by Dr. Chandler, and are almost identical with those computed by Dr. Lamp: Time of perihelion passage, 1896, Jan. 31-76287, Greenwich mean time—longitude of perihelion = $206^{\circ} 18' 10.6''$; longitude of node = $208^{\circ} 55' 51.7''$; inclination = $155^{\circ} 47' 38.1''$; perihelion distance = 0.5872.

Comet *b* 1896 (Swift) was discovered on April 13, though it was seen a few days before and considered a nebula. It came up from the southern hemisphere, passing between the Earth and the Sun, crossing the ecliptic almost exactly at its perihelion point. It was easily visible with an opera glass, was nearly round, with a bright though very small nucleus and a tail a few minutes in length. The following elements, which somewhat resemble those of Comet II 1786, are by Atkin, of Lick Observatory: Perihelion passage April 17-64655 Greenwich mean time—longitude of node = $178^{\circ} 15' 58.1''$; longitude of perihelion = $180^{\circ} 5.7''$; inclination = $55^{\circ} 34' 16''$; perihelion distance = 0.56639.

Periodic Comet V 1889 (Brooks) was detected at the Observatory of Nice, June 20, 1896—in right ascension $22^{\text{h}} 25^{\text{m}} 38^{\text{s}}$, declination south $18^{\circ} 38' 59''$ —very nearly at the computed place given several months previously by Charles Lane Poor, who calculated the elements from observations made at its first recorded appearance in 1889.

Comet *d* 1896 was discovered by M. Giacobini at Nice, Sept. 5. The following elements were computed by Seares and Crawford, of the University of California: Longitude of node = $195^{\circ} 34'$; longitude of perihelion = $350^{\circ} 22'$; inclination = $9^{\circ} 6'$; perihelion distance = 1.1127.

Comet *e* 1896 (Sperra) was first seen by Sperra, of Randolph, Ohio, Aug. 31. In the absence of a telegraph office the announcement had to be made by mail, thus causing a delay of several days. Following are the elements of its orbit as calculated by Seares and Crawford: Time of perihelion passage, July 10.64, Greenwich mean time—longitude of node = $151^{\circ} 2'$; longitude of perihelion = $191^{\circ} 41'$; inclination = $88^{\circ} 25'$; perihelion distance = 1.1399.

On Sept. 20, 1896, when one third of the Sun had set below a mountain, Dr. Swift, at Echo Mountain, California, saw a bright naked-eye comet about one degree above the Sun's upper limb, which on exami-

nation with an opera glass revealed the presence of another about $30'$ north, the latter not visible to the unassisted eye. The usual discovery notification was telegraphed to the Lick and Harvard College Observatories, and by Prof. Pickering, of the latter, was cabled to Europe. Neither of these bodies was seen elsewhere.

Astronomical Prizes.—The gold medal of the Royal Astronomical Society of England has been awarded to Dr. S. C. Chandler, of Boston, for his work on variable stars and for his investigation of the fluctuations of latitude in certain places, which he ascribes to motions of the earth's axis, causing both poles, in a period of about fourteen months, to describe small circles of about $30'$ radius. The evidence of this hypothesis is so convincing, as presented by him, that it meets with general acceptance by astronomers.

The Valz astronomical prize, bestowed by the Academy of Sciences of Paris, has been received by William F. Denning, of Bristol, England, for his observations of shooting stars, the discovery of comets, and other astronomical work.

E. T. Whitaker is the recipient of the Tyson medal awarded by Cambridge University, England.

The bronze comet medal of the Astronomical Society of the Pacific has been twice bestowed on Dr. Lewis Swift, Director of Lowe Observatory, Echo Mountain, California, for Comet IV 1895, Nov. 17, and for Comet II 1896, on April 13. Also to Prof. W. R. Brooks, Director of Smith Observatory, Geneva, N. Y., for the discovery of Comet III 1895, on Nov. 21. Also to Prof. C. D. Perrine for Comet IV 1895, on Nov. 17.

AUSTRALASIA, one of the grand divisions of the globe, consisting of the continent of Australia and the island colonies of Great Britain in the Pacific, with intervening islands. With the exception of the Dutch and German parts of New Guinea, the German protectorates of Bismarek Archipelago and the northern Solomon Islands, the French colony of New Caledonia, and smaller groups still under native rule, all the islands of Australasia are British colonies or dependencies. The five colonies of Australia and the colonies of Tasmania and New Zealand are self-governing, each having its representative legislature and its responsible ministry, disposing of its own revenues, and making all its laws, under charters granted by the British Parliament, subject to a certain reserved veto power of the Imperial Government and to the appellate jurisdiction of the Judicial Committee of the British House of Lords in matters of imperial concern. The Crown is represented by a governor in each colony, who, as the executive head of the colonial government, acts on the advice of ministers chosen from the party or combination that forms the majority of the Legislative Assembly. Fiji is a Crown colony in which the natives are governed partly by their own chiefs according to traditional custom.

Area and Population.—The area of the British Australasian colonies, computed from the latest surveys, and their estimated population on Dec. 31, 1894, were as follow:

COLONIES.	Square miles.	Population.
New South Wales.....	310,700	1,268,150
Victoria.....	87,884	1,179,039
Queensland.....	668,497	445,155
South Australia.....	903,690	847,720
Western Australia.....	975,876	82,072
Tasmania.....	26,385	146,667
New Zealand.....	104,471	626,058
Fiji and Rotuma.....	8,045	121,867
Total.....	3,085,548	4,217,318

The total population of the 7 Australasian colonies at the end of 1895 was estimated at 4,238,000,

an increase of 11·25 per cent. since the census of 1891. Queensland is gaining rapidly in population, and Western Australia expands at a phenomenal rate, having, on June 30, 1896, a population of 122,420.

In the Australasian colonies the male population, consisting largely of emigrants from the British Islands, predominates in a marked degree.

Sydney, the capital of New South Wales, had an estimated population of 423,600 at the close of 1894, while Melbourne, the capital of Victoria, had 438,955, nearly 40 per cent. of the total population of the colony. In Brisbane, the capital of Queensland, lived a population of 93,657, including the suburbs, when the census was taken on April 5, 1891. The population of Adelaide, the capital of South Australia, was 141,606 in 1894, including the suburbs; while the whole northern territory had only 4,682 inhabitants, of whom 357 were females. Tasmania's capital, Hobart, had a population of 24,905 in 1891. The estimated population of Perth, the capital of Western Australia, was 15,703 in 1894.

The vital statistics for the several colonies in 1894 were as follow:

COLONIES.	Marriages.	Births.	Deaths.	Natural increment.	Net immigration.
New South Wales.....	7,876	38,964	14,217	24,747	9,612
Victoria.....	7,033	34,258	15,430	18,828	*5,849
Queensland.....	2,502	13,977	5,298	8,679	4,177
South Australia.....	2,094	10,476	4,001	6,475	*4,436
Western Australia.....	2,123	1,081	1,042	15,966
Tasmania.....	847	4,852	1,938	2,914	1,223
New Zealand.....	4,178	18,528	6,918	11,610	2,253
Fiji.....	4,253	4,945	7687

* Net emigration.

† Decrease.

The black population of New South Wales in 1891 was 5,097, of whom 2,896 were males and 2,201 females, and there were 3,183 half-castes. Victoria had only 565 aborigines surviving. In Queensland the aborigines are estimated to number 12,000. In South Australia there were 3,134 aborigines in 1891, of whom 1,661 were males and 1,473 females. In Western Australia there is still a large black population in the unsettled regions. There were 5,670 blacks in the service of colonists in 1891. South Australia also is to a great extent unexplored. There were 3,134 blacks enumerated in the settled districts in 1891.

The aborigines of Tasmania are extinct. Chinese immigration was restricted by the imposition of a poll tax of £10 in New Zealand in 1881, and the adoption in the same year of the practically prohibitive poll tax of £100 in all the Australian colonies excepting Western Australia and the northern territory of South Australia. Since then the Chinese population has diminished rapidly. Between 1890 and 1895, 3,158 Chinese left New South Wales, while only 160 arrived. In Queensland, where the Chinese are principally engaged in gold mining, 429 arrived in 1894, and 467 departed. The Chinese population of that colony in 1891 was 8,574, of whom 47 were females. In Victoria there were 8,772 Chinese, of whom 605 were females. New South Wales had 13,133 Chinese; South Australia, 3,848; Tasmania, 943; New Zealand, 4,444. There were 9,428 Polynesian laborers in Queensland in 1891, and 1,844 of other alien races. The arrivals of Polynesians in 1894 numbered 1,869, and the departures 837. Fiji—where the white population at the end of 1894 numbered 2,666, the half-castes 1,167, the native Fijians 103,750, and the Rotumans 2,113—had 2,233 Polynesian laborers on the plantations and 9,130 Indian coolies.

Finances.—The budgets of the several colonies for 1894, and the state of their debts for the fiscal year ending June 30, 1895, in New South Wales,

Victoria, Queensland, and South Australia; March 31, 1894, in Western Australia and Tasmania; and Dec. 31, 1894, in New Zealand and Fiji—are shown in the following table:

COLONIES.	Revenue.	Expenditure.	Debt.
New South Wales....	£9,300,711	£9,178,706	£58,204,253
Victoria.....	6,559,601	7,087,674	46,939,328
Queensland.....	3,413,172	3,308,434	30,639,534
South Australia.....	2,433,689	2,533,245	22,306,500
Western Australia.....	863,680	755,564	3,417,339
Tasmania.....	696,735	789,805	7,779,145
New Zealand.....	4,330,099	4,234,385	39,563,661
Fiji.....	80,054	72,204	224,677

The revenues of the Australian colonies, which a few years ago were insufficient, have lately shown a remarkable improvement. The governments have so reorganized their finances that the deficits accumulated during the period of stagnation are nearly or quite extinguished. Several of them have a surplus revenue to devote to reproductive works without recourse to loans. Such loans as are raised are obtained among the colonists, not in Great Britain, as formerly. The capital sum of the colonial Government loans that are repayable in London amounted, at the close of 1894, to £194,507,000, on which the interest is £7,589,000 per annum. The average rate is 3·9 per cent.

Of the revenue of New South Wales, £2,688,693 in 1894 came from taxation, viz., £2,015,695 from customs, £256,664 from excise, £294,221 from stamp duties, and £122,113 from licenses; £2,078,719 from land revenue; £4,246,610 from services—that is, railroads, tramways, the post office, telegraphs, and waterworks; and £286,689 from miscellaneous sources. Of the expenditure, £1,712,221 went for railways and tramways, £733,042 for posts and telegraphs, £2,384,578 for interest on debt and extinction of loans, £2,109 for immigration, £738,410 for instruction, and £3,608,346 for other public works and services. Of the total debt, 83 per cent. had been expended on railways, tramways, telegraphs, water supply, and sewerage, which paid a net return of 3·11 per cent. of the cost of their construction. The value of these revenue-yielding works at the close of 1892 was £46,752,900; of works and buildings yielding no revenue, £23,493,400; of public lands leased but not sold, £93,008,000; amount due on lands purchased from the state, £13,671,200; value of municipal property, £7,213,000; total public wealth, £189,138,500. Value of private lands, £179,043,000; of houses and improvements, £126,896,000; other forms of wealth, £98,209,000; total private wealth, £404,148,000. Total wealth of the colony, £593,286,500. The revenue of the Government for the year ending June 30, 1896, was £9,283,803, which wiped out the preceding year's deficit and left a surplus of £333,296. The revenue for the year 1896-'97 was estimated at £9,274,803, and expenditure at £9,400,000. The Government had taken off £750,000 of customs duties and put on £500,000 of direct taxation. It was proposed to obtain £120,000 a year by increasing the probate duties and, if necessary, amending the stamp duties. The Government proposed to amalgamate the savings banks, and eventually to give these united banks the character of a state bank, with control of the note circulation.

Of the revenue of Victoria for 1894, amounting to £6,716,814, taxation yielded £2,497,567, of which £1,716,703 came from customs, £308,927 from excise, £123,457 from the land tax, £144,771 from duties on the estates of deceased persons, £24,694 from a duty on bank notes, £145,000 from the stamp duty, £18,022 from business licenses, and £15,993 from tonnage dues, etc.; £2,709,575 came from railroads; £536,731 from posts and telegraphs; £500,768

from Crown lands; and £472,173 from other sources. Of the expenditures for 1894, amounting to £7,310,246, interest and expenses of the debt accounted for £1,905,928; working expenses of railroads, £1,539,822; other public works, £593,076; posts and telegraphs, £687,377; Crown lands, £182,094; public instruction, £665,394; charitable institutions, £263,809; judicial and legal expenses, £181,899; police and jails, £309,336; customs, harbors, etc., £101,088; mining, £81,776; defenses, £207,577; other expenditures, £591,070. Of the total sum raised by loans £36,443,476 was expended on railroad construction, \$7,197,706 for waterworks, £1,005,557 for state school buildings, and £1,900,939 for other public works. The average rate of interest on the debt is 3.93 per cent., net local debt amounts to £8,234,000. The total value of the taxable property in the colony is £175,000,000. During the year that ended on June 30, 1896, the revenue amounted to £6,461,142 and the expenditure to £6,678,795. For the coming year the revenue was estimated at £6,678,795, and the expenditure at £6,507,944. The revenue of Queensland for 1896 was £3,642,000, surpassing that of any previous year, and exceeding the estimates by £172,000. The expenditure amounted to £3,568,000. The total indebtedness of the colony on June 30, 1896, was £31,945,000. Of the Queensland revenue for 1895, customs yielded £1,144,661; export and export duties, £61,015; stamp duties, £101,886; licenses, £52,832; dividend duty, £57,096; rent for pastoral lands, £353,480; other rents and sales, £218,930; railroads, £977,289; posts and telegraphs, £217,078. The principal expenditures were £1,256,582 for interest on the public debt, £62,947 for endowments to municipalities, £211,605 for public instruction, £140,144 for expenses of the colonial Treasurer, £92,873 for the public lands, £581,973 for the working expenses of railways, and £298,467 for posts and telegraphs. The private lands of the colony are valued for taxation purposes at \$42,683,687, including pastoral lands leased from the state, the lessees' interest in which is assessed at £6,618,737.

The revenue of South Australia is derived chiefly from customs, inland revenue, railways, posts and telegraphs, and territorial receipts, and two thirds of it is spent for public works and interest on the debt. Of the debt, 75 per cent, was expended on railroads, waterworks, and telegraphs. The railroads yield a net revenue over working expenses of 3.65 per cent. The real property of the colony is valued at £51,056,380, and the personal property at £33,319,294. In the year ending June 30, 1896, the revenue was £2,612,038.

In Western Australia £415,083 of the public revenue of 1894 was derived from customs duties and £448,597 from railroads, the post office, and leases of public lands. The revenue of the colony for the fiscal year 1896 amounted to £1,858,694, exceeding the estimate by £547,544, and showing an increase of 70 per cent. over the preceding year.

In Tasmania the customs receipts for 1894 amounted to £281,945. The whole debt was obtained for the construction of public works. The revenue of the colony has produced surpluses for three consecutive years, reducing the deficiency of former years to less than £400,000. For 1896-'97 a revenue of £786,610 is expected, and the expenditure is estimated at £751,862.

Of the total revenue of New Zealand for 1894, direct taxes yielded £662,483; indirect taxes, £1,633,249; railroads, £1,150,787; posts and telegraphs, £369,126; other ordinary sources, £176,240; territorial revenue, £338,213. Of the total expenditure, £1,664,783 went for debt charges, £735,090 for railroad expenses, £430,967 for public instruction, £301,551 for constabulary, militia, and volunteers,

£698,502 for other ordinary expenses, and £235,889 for territorial expenditures. The new system of land taxation introduced in 1891 places the assessment on the actual value of the land, deducting the value of improvements and mortgages, which latter are subject to the same land tax, to be paid by the mortgagee. The rate for 1895 was 1*d.* to the pound. In addition to the ordinary land tax a graduated tax is assessed on large properties, rising from ¼*d.* on estates above £5,000 and below £10,000 in value up to 2*d.* to the pound on those valued at £210,000 or over. The same law established an income tax for incomes above £300, which amount is exempted from all incomes. Persons having less than £1,000 of yearly income above that limit pay 6*d.* in the pound, and persons having over £1,000 of taxable income pay 1*s.* in the pound. For the year ending March 31, 1895, the total ordinary revenue, exclusive of £316,167 from sales of land and rents, was £3,965,829, of which £1,569,784 came from customs duties, £280,188 from the land tax, £89,891 from the income tax, and £1,152,748 from railroads. The chief items of expenditure were £1,716,889 for interest and sinking fund, £727,656 for railroads, £403,234 for education, £298,766 for the postal and telegraph service, and £177,188 for defense and constabulary. The total ordinary expenditure was £4,266,712, and the extraordinary expenditure for reproductive works and other purposes was £250,018. The surplus carried over from the preceding year was £290,238, and the cash surplus left on March 31, 1895, was £180,024. The receipts from land sales for the year were £121,467. The total value of the land and improvements in the colony was assessed in 1891 at £122,225,029, of which £85,818,167 represented land in counties and £36,406,862 land in the boroughs. The value of the improvements was £27,922,735 in the counties and £18,442,526 in boroughs. The revenue for 1895-'96 amounted to £4,556,000 and expenditure to £4,370,000. The ordinary revenue for 1896-'97 was estimated at £4,484,000, and the expenditure at £4,452,000. The public debt was increased to £2,500,000 in 1896, and a further loan of £1,000,000 was asked for. The proposed extraordinary expenditure for 1897 included £250,000 for railroad extension, £250,000 for the acquisition of native lands, and £500,000 for improving roads and Crown lands.

Commerce and Production.—The following table shows the foreign and intercolonial trade of the several colonies in 1894:

COLONIES.	Imports.	Exports.
New South Wales.....	£15,801,941	£20,577,673
Victoria.....	12,470,599	14,026,546
Queensland.....	4,397,400	8,795,559
South Australia.....	6,226,690	7,301,774
Western Australia.....	2,114,414	1,251,406
Tasmania.....	979,676	1,489,041
New Zealand.....	6,788,020	9,231,047
Fiji.....	285,981	581,632

The exports of wool from New South Wales have increased in almost constant but latterly diminishing progression from 173,373,425 pounds in 1885 to 354,165,446 pounds in 1894, but the total value has grown smaller each successive year since 1891, when £11,312,980 was received for an export of 340,691,382 pounds, whereas the value of the larger export in 1894 was £9,628,123. Victoria in 1894 imported wool of the value of £2,517,437 and exported £4,742,522 worth. Queensland's export of wool was £2,923,281 in value. South Australia exported £1,275,611 worth; Tasmania, £263,422; Western Australia, £232,201. The wool export of New Zealand was 144,295,154 pounds, valued at £4,827,016. The exports of chilled and preserved meats, of leather and hides, and of cheese and but-

VIEW IN THE TASMAN PENINSULA.

ter, have become considerable in several of the Australasian colonies. The exports of frozen meat from New Zealand were much larger in 1895 than in previous years owing to the demand in England for lamb. The cattle-raising industry has made most progress in Queensland. In 1896 a plague appeared among the herds and spread from that colony to others. This was the tick insect, which eats its way into the vital parts of the animal, causing the destruction of entire herds. It even lives and lays its eggs in salted meats and hides, and is thus spread from one district to another.

Western Australia exported £115,182 of gold in 1891; in 1892, £226,284; in 1893, £421,385; in 1894, £787,099. Victoria's exports of gold, mostly specie, were £2,641,443 in 1891; £1,848,948 in 1892; £2,851,179 in 1893; and £3,718,675 in 1894. New South Wales in 1894 exported £1,975,573 of gold coin. The export of gold from Queensland in 1894 was £2,381,916. Tasmania exported £212,929 of gold. New Zealand's gold exports fell off from £1,007,488 in 1891 to £887,865 in 1894. The 7 Australasian colonies produced 2,350,562 ounces of gold in 1895, compared with 2,239,764 ounces in 1894.

Besides wool and gold, the principal exports from New South Wales in 1894 were: Tallow, £1,146,528; coal, £815,435; hides and skins, £565,331; leather, £241,848; preserved and frozen meat, £413,448. In addition to these, New South Wales tin was imported by Great Britain to the amount of £259,134; silver ore, £854,210; and copper, £129,526.

Victoria's exports consist largely of manufactured articles and re-exports. Live stock was ex-

ported in 1894 to the amount of £282,045; leather and leathern cloth, £223,749; tallow, £281,979; apparel, £85,622; breadstuffs, £961,032; sugar, principally refined in Victoria, £138,070; miscellaneous articles, £3,321,506.

The export of wheat from South Australia in 1890 was £1,382,418 in value, and the flour export £613,823. In the next two years the value of the wheat exported fell off to £326,613, while flour was exported to the amount of £599,022. In the two years succeeding, the value of wheat exports rose again to £741,912 in 1894, when the flour export was valued at £327,638.

Queensland produces other valuable minerals besides gold. In 1894 there were 2,871 tons of tin mined, valued at £102,277; 183,158 ounces of silver, of the value of £22,077; besides copper, lead, bismuth, antimony, and £12,000 worth of gems. The export of copper in that year was £18,134; of silver, £96,492; of pearl shell, £95,355. The export of sugar was valued at £886,834. There is a large trade with England in meat products. The export of frozen meat in 1894 was £498,652; of preserved and salted meat, £259,416; of meat extract, £40,886; of hides and skins, £270,207; of tallow, £468,320. The export of green fruit amounted to £32,682.

Western Australia exported in 1894, in addition to gold and wool, pearls of the value of £25,000; pearl shell, £37,805; timber, £74,804; and skins, £14,775. There is a species of eucalyptus the wood of which is greatly valued in Europe for paving blocks. The total imports into Western Australia in 1895 amounted to £3,774,951, and exports to £1,334,432.

Tasmania exported silver and silver ore in 1894 of the value of £217,844. This export has risen by rapid bounds from £16,872 in 1890. The export of tin, on the other hand, decreased from £296,761 in 1890 to £202,454 in 1894. The export of timber and bark was £52,386, having fallen from £125,439 in 1890. The exports of green fruits were £202,455 in value, against £122,183. The apples of Tasmania, cultivated with the utmost care, are sent to the other colonies and lately to England. The export of hops in 1894 was £22,215.

Fiji in 1894 exported 27,265 tons of sugar, valued at £436,245; 5,833 tons of copra, value £57,361; bananas of the value of £49,115; and distilled spirit of the value of £16,746.

New Zealand in 1894 exported 1,025,243 hundredweight of frozen meat, valued at £1,194,545; 60,771 hundredweight of butter and 55,655 hundredweight of cheese, valued together at £366,483; 8,338 tons of Kauri gum, valued at £404,567; grain, pulse, and flour for £232,634; tallow, £204,499; timber, £116,116; hides, skins, and leather, £347,041; live animals, £53,078; preserved meat, £57,325; bacon and hams, £6,736; grass seed, £47,323; phormium, or New Zealand hemp, £66,256.

Navigation.—The number of vessels and the tonnage entered and cleared at the ports of the several colonies during 1894 are shown in the following table:

COLONIES.	ENTERED.		CLEARED.	
	No.	Tonnage.	No.	Tonnage.
New South Wales	3,272	2,859,968	3,201	2,878,586
Victoria	2,083	2,163,716	2,045	2,127,743
Queensland	623	459,647	635	468,373
South Australia	1,113	1,375,252	1,112	1,383,061
Western Australia	372	675,775	349	653,303
Tasmania	682	459,050	741	459,317
New Zealand	609	631,100	614	631,250

Communications.—The length of the Government railways in New South Wales on June 30, 1895, was 2,531, on which £36,611,336 had been expended. The gross earnings for the preceding year amounted to £2,878,204. The working expenses were £1,567,589, being 54.56 per cent. of the gross earnings. There are 85 miles of private railroads. The tramways, 61 miles in length, were built by the Government at a cost of £1,428,518.

Victoria had 3,020 miles of railroads at the close of 1894, in the construction of which the Government had expended £37,558,563. The gross receipts for the year ending June 30, 1894, were £2,726,159, and the working expenses were £1,635,419. The net profit was 2.90 per cent. of the capital expenditure, all but about £3,000,000 of which was borrowed money bearing interest at the average rate of 3.93 per cent.

The railroads open for traffic in Queensland at the close of 1894 had an aggregate length of 2,379 miles, built by the Government at a cost of £16,469,721. Including the cost of floating loans, losses on sales of stock, etc., the total cost was £18,292,909. The receipts during the year were £931,903, and the working expenses £580,477.

There were 1,867 miles of railroad open for traffic in South Australia in the beginning of 1895, of which 146 miles were in the northern territory. This Government derives 5 per cent. profit from its railroads.

Tasmania has 475 miles of railroads. Western Australia at the end of 1894 had 1,150 miles open and 392 miles not yet completed.

There were open for traffic in New Zealand on March 31, 1895, on the North Island 760 miles and on the Middle Island 1,233 miles of Government railroads. Including 175 miles of private lines, the

total length was 2,168 miles. The receipts from Government railways for the preceding year was £1,150,852, and the working expenses were £732,160. The total expenditure on construction up to that date was £16,142,667.

At the end of 1894 New South Wales had 12,201 miles of telegraph lines, with 28,085 miles of wire, constructed at a cost of £831,471. The number of telegrams sent during that year was 2,464,074. The New South Wales postal traffic for 1894 included 67,993,400 letters, 963,400 postal cards, 41,667,300 newspapers, 13,573,600 packets and book parcels, 367,890 parcels, and 431,417 money orders for £1,315,635. The revenue of the department was £626,864, and the expenditure £750,196. Of the total receipts, £269,217 came from telegrams, which yielded a net revenue of £147,903.

Victoria had 7,141 miles of telegraphs, with 14,420 miles of wire, at the close of 1894. There were 9,679 miles of telephone wires. The number of telegrams sent during the year was 2,366,365, yielding a net revenue of £93,655. The total postal revenue was £536,700, while the expenditure was £687,377.

The telegraphs of Queensland had a total length of 9,986 miles, with 17,801 miles of wire. The number of messages dispatched was 803,076; received from places outside, 102,833; official messages, 85,864. The post office carried 17,794,692 letters, 10,906,618 newspapers, 4,387,069 packets, and 81,531 parcels. The revenue from the post office was £143,455 and from telegraphs £72,160; joint expenses, £297,144.

The length of telegraph and telephone lines of South Australia at the close of 1894 was 5,580 miles, with 13,170 miles of wire. This includes the overland line of 2,000 miles that connects with the British Australian cable. The South Australian lines yield a net profit to the Government after paying the interest charges. The post office in 1894 carried 16,445,556 letters, 1,420,660 packets, and 8,016,400 newspapers.

There were 4,403 miles of telegraph lines in Western Australia, with 5,010 miles of wire. The number of messages in 1894 was 446,780, yielding a net revenue of £25,665. The post office forwarded 11,368,906 ordinary letters and postal cards, 195,791 registered letters, 9,375,589 newspapers, and 3,143,008 packets. Expenditure for postal and telegraph services was £77,449.

The Government telegraphs of Tasmania have a length of 2,155 miles, including 366 miles of cable, with 3,004 miles of wire. There were 260,423 messages sent in 1894. The revenue of the Government telegraphs and telephones was £14,230, and the expenses were £27,486. The postal traffic was 5,536,902 letters, 1,286,784 packets, 166,323 post cards, and 4,447,619 newspapers. Post-office receipts were £48,381, and expenses £46,974.

The New Zealand post office in 1894 carried 53,168,336 letters, 2,546,713 postal cards, 13,906,399 books and parcels, 19,271,590 newspapers, and 222,678 money orders. The length of telegraphs on Dec. 31, 1894, was 5,823 miles, with 14,647 miles of wire. The receipts of the post-office department were £247,498, and the working expenses £299,971.

Australasian Federation.—At the suggestion of Mr. Reid, Premier of New South Wales, a conference of representatives of most of the colonies met at Hobart in January, 1895, and framed a measure known as the Federal Enabling act, which was intended to be submitted to the several colonial parliaments. The outcome of the bill, if adopted by the parliaments, was to be a federal convention, which should frame a constitution for the Australasian states, or for as many of them as would consent to enter the confederation. The Enabling bill was first introduced into the New

South Wales Parliament, and passed both houses in January, 1896. It also became law in Victoria, South Australia, and Tasmania. New Zealand, on the other hand, although that colony had taken part in the Melbourne conference of 1890, held aloof from the new movement for unification inaugurated by Mr. Reid. Western Australia also withheld its consent. The bill was not brought before the Queensland Parliament till after the elections. The Enabling bill provided that the premiers of the concurring colonies should summon a constitutional convention in which each colony would be represented by 10 delegates, elected by those persons who possess the right to vote for the Legislative Assemblies of the respective colonies. This convention was empowered to formulate a constitution for the confederation, which was to be submitted for ratification not to state conventions, but to a direct vote of the people in each colony. The convention was to assemble as soon as the delegates were elected in three or more of the colonies. In framing the draft constitution, it was expected that the convention would base its provisions on the draft constitution of the Sydney conference of 1891. When the constitution has been passed there will be a long adjournment for the purpose of allowing the draft to be discussed and any amendments that are suggested to be sent to the convention. The delegates will then reassemble and make a final revision of the constitution, which will then be sent to the governor of each colony, who shall submit it to a referendum of the whole body of voters.

The Queensland Premier, Sir Hugh Nelson, having vanquished the Labor party at the polls, did not think it necessary or expedient to adhere strictly to the democratic procedure of the bill to which he had assented in the conference of premiers at Hobart. For the purposes of the election, it was deemed necessary to assign a proportion of the 10 representatives to each of the electoral divisions of Queensland. Southern Queensland was to have 5, Central Queensland 2, and Northern Queensland 3. The bill submitted to the Parliament, instead of providing for the direct election of the delegates by the people of each district, proposed that the parliamentary representatives of the divisions should choose the delegates from among the number placed in nomination by the voters of the respective division, each candidate requiring the names at least of 20 voters to support his nomination. New South Wales, South Australia, Victoria, and Tasmania protested to the Queensland Government against the transfer of the election of delegates from the people to Parliament. Nevertheless, the Enabling bill was passed in the beginning of October in the form proposed.

Sir John Forrest, Premier of Western Australia, who had objected chiefly to the democratic tendencies of the federation movement, and announced at Hobart that he would not countenance a proposal to send popularly elected representatives to the convention, forthwith introduced into the Western Australian Assembly an enabling bill similar to the one before the Queensland Parliament. It was expected that the elections to the federal convention would be held in March, 1897, if the colonies were allowed to follow each its chosen principles of representation and methods of election. But there was strong opposition to Queensland's action, especially in South Australia, whose Premier had proposed at Hobart that, for purposes of federation, universal suffrage should be insisted upon in all the colonies, and in New South Wales, where a motion was made in the Assembly that delegates to the convention from that colony should refuse to sit with delegates not elected by the people.

A conference of Australian premiers was held in

Sydney early in March, 1896, to consider certain federal questions. A month before the complications of the Imperial Government in China, Turkey, Venezuela, and especially South Africa, had brought the question of defense into the foreground, a military conference of commandants had met in the same city at the invitation of the Government of New South Wales. This conference recommended the immediate general adoption by the Australian troops of a rifle of similar pattern to that used by the imperial troops. The draft of a federal-defense agreement, on the lines recommended by a military conference in October, 1894, was revised and recommended for adoption, and other details in connection with the creation of a federal-defense force were adopted. It was proposed to form, in addition to the existing local forces, a special force 5,000 strong on a peace footing and 12,000 strong on a war footing. At the conference of the premiers the creation of this special force before federation was not approved, nor was the adoption of the Lee-Metford rifle, which was regarded as too expensive and not suitable for colonial troops. It was virtually decided to retain the Martini with the Metford barrel. The establishment of a cordite factory in Australia was declared urgent. The conference considered federation to be essential to any complete system of Australian defense, and that meanwhile it was desirable to amend the military laws of the colonies so as to allow the local forces to serve in any part of Australia or Tasmania for defense against foreign aggression; also that uniformity in matters of control, discipline, equipment, and pay during active service should be secured as soon as possible. It was resolved that it was desirable to extend without delay the provisions of the Chinese exclusion act to all colored races. The Queensland delegates supported the resolution with the proviso that their colony should have the right to continue for the present the provisions of its Pacific-island laborers act. The members agreed to the establishment of a federal quarantine on the lines recommended by a recent intercolonial conference of the boards of health. The main features of the plan are the establishment of quarantine stations at Albany, Thursday island, and Adelaide, with federal medical officers and uniform regulations. On the general question of federation, it was resolved that the deliberations of the conference had made the urgent necessity of the federation of the colonies more than ever apparent.

Pacific Cable Project.—A conference was held in May to deliberate further on the project of a submarine telegraph to connect the Australian colonies with Canada. A company was formed for this object in 1886. At the colonial conference of 1887 a resolution was passed in favor of a thorough and exhaustive survey to determine the practicability of the scheme. In consequence of this resolution the British naval vessels in the Pacific made an examination of the southern part of the route. In 1890 the realization of the project seemed so remote that the Australian colonies, with the exception of Queensland, agreed to subscribe to a subsidy for ten years to the Eastern cable, on condition that the rate should be decreased from 9s. 4d. to 4s. a word. After a year's trial, the colonial governments found the expense that they had undertaken too heavy and agreed to raise the rate to 4s. 9d. a word. The project of a British Pacific cable was revived again when a French company undertook, in 1893, to construct a cable from Queensland to Honolulu, which was to form one link of a line connecting Australia with Honolulu and San Francisco. The Queensland Government, to the dismay of the other colonies, agreed to subsidize this foreign company, which in a short time laid the sec-

tion from Queensland to New Caledonia. Sanford Fleming, a Canadian engineer, whose name has been associated from the beginning with the project of an all-British cable, presented estimates in October, 1893, according to which the cost of such a cable would be £1,600,000 and the returns sufficient to meet the interest and other charges after the third year and accumulate a surplus amounting in ten years to £250,000. Still, no practical step was taken. Meanwhile the French company, in June, 1895, entered into negotiations in Honolulu for landing privileges and for a subsidy for laying a cable between the Hawaiian capital and San Francisco. Orders were given for the manufacture of such a cable. In September, 1895, the Hawaiian Government entered into a contract under which a company could be formed for laying a cable from San Francisco to the Hawaiian Islands. This company, chartered by the United States Government, and subsidized by the Government of Hawaii, has the exclusive right to lay cables within the Hawaiian republic for twenty years. The cable is to be begun not later than May, 1897, and completed in November, 1898. The advocates of a purely British line for military and commercial purposes were stimulated to fresh endeavors, fearing that if the Franco-American cable were laid first no British line would ever be undertaken, and that consequently all Canadian messages would have to go through the American office. When the Canadian Government called for tenders for the construction of a cable in 1894, the lowest one received was £1,517,000, including maintenance for three years.

New South Wales.—The Governor of the colony is Viscount Hampden, appointed in 1895. The legislative power is vested in a Parliament, consisting of a Legislative Council of 69 members, appointed by the Government for life, and a Legislative Assembly containing 125 members, elected by the suffrage of adult male British subjects who have resided one year in the colony and three months in their electoral district.

In the general election of 1895 there were 257,558 electors enrolled, of whom 153,121 voted. The Cabinet consisted, in the beginning of 1896, of the following-named ministers: Premier and Treasurer, George Houston Reid; Chief Secretary, James Nixon Brunker; Attorney-General, John Henry Want; Secretary of Lands, Joseph Hector Caruthers; Secretary for Public Works, James Henry Young; Minister for Public Instruction and of Labor and Industry, Jacob Garrard; Postmaster-General, Joseph Cook; Secretary for Mines and Agriculture, Sydney Smith; Minister of Justice, John Gould; Vice-President of the Council and Representative of the Government in the Legislative Council, Andrew Garran.

The ministry of Mr. Reid has relied for its support on a coalition of the Free Traders, the most conservative political element in the colony, and the Labor party, to whose collectivist theories the Premier is strongly opposed. He calls himself a Progressive, and has enlisted Radical sympathies by his programme of reform in the upper house and by the scale on which exemptions under the land and income tax were proposed. His free-trade budget involved the substitution of a land and income tax for the customs duties, which were to be removed from all imports with the exception of narcotics and intoxicating liquors. The exemption of incomes below £300 and lands up to about £1,000 in actual value was condemned by the Legislative Council. The constitutional crisis that arose ended in a compromise. For the session of 1896 Mr. Reid promised to introduce a bill providing for a modified form of referendum; also various measures of

upper-house reform, to be completed in the succeeding session. Other measures dealt with irrigation, amalgamation of the savings banks, law and electoral reform, alien immigration, etc. When the Parliament opened, in the middle of May, Mr. Reid's position was not regarded as secure; for Mr. Lyne, the leader of the Protectionist party, was more in sympathy with the Socialists in advocating the doctrine of state help, and was disposed to offer many concessions to the Labor section, though he had antagonized the Socialists in opposing the scheme of direct taxation which the Government had substituted for the tariff. The success of Mr. Reid's financial legislation and the new land laws told powerfully in his favor. The treasury statement showed a considerable surplus, but its genuineness was disputed. Under the land act 3,360,000 acres had been settled upon in nine months by over 2,000 persons. There were fewer unemployed in Sydney than there had ever been. The fiscal changes wrought by Mr. Reid were, in the opinion of many moderate Free Traders, too great and too sudden, especially when carried out in a time of deep depression. But the results seemed to justify the revival of free trade. No manufactory closed its works or reduced its output, and instead of the land going out of tillage because the protective duty on wheat was abolished, farmers immigrated from protectionist Victoria, and 156,000 more acres were under wheat than there were the year before. The yield of the income tax was £168,000 paid by 16,321 persons, of whom 11,000 paid less than £5 and fewer than 800 paid over £30. With a favorable showing for its financial policy, and a programme embracing upper-house reform and increased exemptions from the land and income taxes, the Government held its ground, and defeated the Opposition on a vote of censure by a majority of 61 to 34. The reform of the Legislative Council proposed by Mr. Reid was the direct outcome of the parliamentary struggle of 1895. The New South Wales upper house is, with the exception of the Queensland Council, the most conservative in its Constitution of all the governing bodies of Australia, being composed of 66 nominated members who are unpaid and whose tenure is for life. Its critics accused it of having resolutely opposed progressive legislation sanctioned by the lower house, and even of straining the Constitution so far as to interfere indirectly with the taxing powers of the popular Assembly. Its defenders, on the other hand, asserted that it had merely fulfilled the purpose for which it was created by delaying the passage of legislation not demanded by the country and only carried by an unreal combination in the lower house. Mr. Reid's scheme of reform was very sweeping, including the abolition of life tenure and substitution of a term of six years, the payment of members, and the reduction of their number. This was supplemented further by the proposed popular referendum, under which all important bills upon which the houses of Parliament fail to agree in the course of two consecutive sessions shall be submitted to a direct vote of the electors. The bill of old-age pensions devised by the committee of the Assembly provided for a pension of 10s. a week for unmarried persons and one of 18s. for married couples. On the occasion of a miners' strike at Newcastle the Socialists urged Mr. Reid to sanction a measure for the nationalization of the coal mines. Some of the collieries had not paid dividends for years. Mr. Reid interceded for the men, who struck for 3s. 6d. a ton, instead of 3s. 2d. that they were receiving, and after ten weeks of suffering went back to work for 2s. 11d. A bill was carried authorizing the Government to acquire private lands in suitable localities for the purposes

of closer settlement, issuing debentures for such lands not to exceed £30,000 a year.

Victoria.—The Legislative Council is composed of 48 members, elected by owners of property worth £10 a year or leasehold valued at £25 a year, occupants of rented property, and members of the professions or graduates of universities. The Legislative Assembly has 95 members, elected by universal manhood suffrage. In 1895 there were 145,629 electors for the Legislative Council in the registers, and 249,576 electors for the Assembly.

The Governor is Lord Brassey, appointed in 1895. The Cabinet in the beginning of 1896 was composed of the following-named members: Premier and Treasurer, George Turner; Chief Secretary and Minister of Public Instruction, A. J. Peacock; Attorney-General, Isaac Isaacs; Solicitor-General, H. Cuthbert; Commissioner of Trade and Customs, President of the Board of Land and Works, and Commissioner of Crown Lands and Survey, R. W. Best; Postmaster-General, J. G. Duffy; Minister of Defense, W. McCulloch; Minister of Mines and Water Supply, H. Foster; Minister of Agriculture and Commissioner of Public Works, J. W. Taverner; Minister of Railways, H. R. Williams; without office, A. McLean, R. T. Vale, and Joseph Major Pratt.

The party in power in Victoria is the Radical party, which entered office to defend the system of protection, though afterward Mr. Turner conciliated the Opposition by consenting to a general reduction of the tariff. The Premier has been criticised by his opponents for taking his orders from the Labor party, which in this colony holds the balance of power; but Mr. Turner, in regarding the Labor representatives as his natural allies, is entirely consistent with the traditions of his party.

With the population stationary and trade languishing, the deficiency in the revenue continued, compelling the Government to devote the session chiefly to measures of economy. The estimates showed a deficit of £150,000 for the year, caused by the drought and reduced railway income. The chief proposal was a reformed railroad administration. Under the pressure of the Radicals and Socialists the railroads have been managed with the aim of giving the people accommodation at the lowest possible rates, and they continued to be run at a loss until the financial exigencies of the Government compelled the majority to consent to a reform of their administration that will make both ends meet. The railroad bill, as passed in February after a contention between the two houses, placed the management of the railroads in the hands of a single commissioner, who receives a salary of £3,500. He will consult with an advisory board composed of the heads of departments, but is not bound to accept their advice. Political influence is abolished, and the power of the Minister of Railways reduced to a minimum. Mr. Matheson, Commissioner of Railways in Queensland, was appointed to the post of commissioner.

The Parliament reassembled on June 22. The measures promised by the Government comprised bills for advances to agricultural producers; to minimize sweating in shops and factories; to amend the companies act and the insolvency act; to reorganize the management of charities; to regulate the export of live stock, meat, dairy produce, and fruit, and to provide thorough and efficient inspection before exportation; to regulate undesirable immigration, especially of destitute Asiatics; to establish a tribunal for the settlement of industrial disputes; and a bill for the suppression of usury. Propositions for amending the Constitution and the electoral laws were also promised. Following the suggestion of the Sydney conference, the Govern-

ment brought in a bill to enable Victorian troops to be employed in case of necessity for the defense of any portion of Australia. Mr. Turner introduced a bill establishing a state bank to absorb the savings banks, with authority to issue notes and to make advances on the basis of the Credit Foncier system to farmers, graziers, and vine growers up to two thirds of the value of the property. A commission appointed to inquire into the position and prospects of the irrigation trusts condemned the ministry that had expended the loans on these works, some of which had been undertaken in places where water was not obtainable, while in other instances advances had been made recklessly under political pressure to private trusts, the result of the whole mismanagement being an annual loss to the state of £60,000 in interest. The constitutional amendment, introduced in September, provided for female suffrage and abolition of plural voting.

Queensland.—The legislative power is vested in a Parliament of 2 houses. The Legislative Council consists of 41 members, who are nominated for life by the Crown. The Legislative Assembly has 72 members, elected by the suffrage of all male adults who have resided six months in the colony. Possessors of freehold or leasehold lands worth £10 a year have additional votes. There were 79,660 registered voters in 1894. The Governor is Lord Lamington, appointed in 1895. The members of the ministry in the beginning of 1895 were: Premier, Vice-President of the Executive Council, Chief Secretary, and Colonial Treasurer, Hugh Muir Nelson; Minister for Lands and Agriculture, A. H. Barlow; Postmaster-General, A. J. Thynne; Secretary for Mines, Secretary for Public Works, and Secretary for Railways, Robert Philp; Secretary for Public Instruction, D. H. Dalrymple; Colonial Secretary, H. Tozer; Attorney-General, T. J. Byrne; without portfolios, W. H. Wilson and Sir Thomas Mellwraith.

Labor and socialistic legislation has tended of late years in Australia to break up the old parties, which, while calling themselves Liberals and Conservatives, were often divided only on the question as to which party should control the administration and the offices. In all the colonies the Labor party has for some years past held the position of a third party, aspiring, often with success, to turn the voting balance at critical moments and exact new labor legislation as the price for sustaining or upsetting the ministry. Now a division is beginning to manifest itself throughout Australia between those electors who are disposed to support and those who have a disposition to oppose the socialistic legislation that figures prominently in the programme of the Labor party. The parliamentary leaders who are wholly opposed to the socialistic tendencies have insisted that their opponents should frankly declare their position on these questions, and hence the lines between the parties have begun to follow the cleavage between the element opposed to state socialism, whether the party name be Conservatives, Liberals, or Progressives, and that which sympathizes strongly with the Labor party and harbors socialistic ideas. In the Queensland elections, which were concluded on April 11, 1896, Mr. Nelson succeeded in putting the issue plainly before the electors, and received a decided answer in support of his Conservative views. The Labor leaders, on their part, made an open appeal for the acceptance of the most advanced socialistic principles of Government, even proposing the division among all the citizens of the state of all the wealth produced, less the amount retained for public and common purposes. As the outcome of the contest, the strength of the parties in the new Assembly

PORT MORESBY, NEW GUINEA.

was: Ministerialists, 42; Opposition, 6; Labor, 24; and Independents, 4. The former Liberals and Conservatives were united in support of the Government and individualistic theories of society, while the Labor members form the regular opposition. The history of the Labor movement in Queensland is interesting, because of the peculiar socialistic conditions of that colony and the extreme socialistic tendencies of the party. With an area equal to that of France, Germany, and Austria, the colony has one fourth of its population concentrated at Brisbane, in the southeastern corner, while on the vast pastoral lands of the west, not more than a dozen persons are permanently employed on a sheep run covering hundreds of square miles. It is only at shearing time that labor is employed, when large numbers of men are engaged for a few weeks and paid by contract. When the price of wool fell, and many of the sheep-raising squatters, or pastoralists, as they call themselves, were put to straits to pay interest on advances and rent to the nonresident land owners (in many cases financial institutions), conflicts over wages arose between them and the shearers, who had formed a compact labor union. For self-preservation the pastoralists organized in their turn, and as they were firmly supported by the Government, and an inexhaustible supply of free labor could be imported, the strikes of 1891 and 1894 ended in disaster to the laborers. The action of the Government turned the attention of the labor unions to politics and led them to form the Labor party, now led by Mr. Clusey. The original founder and leader of the party, William Lane, who was a Utopian socialist, caused a diversion by taking hundreds of his most enthusiastic followers in July, 1893, to found a communistic settlement in Paraguay, having persuaded them that workingmen had no chance of happiness in Australia, where the capitalists possessed the money, the power, and the intelligence. The experiment was a failure, and after a few months

many of the colonists, their money spent, made their way back to Australia as best they could. The colony in Paraguay divided on the question of discipline, Lane seceding with 100 of the stricter members to found a new settlement, which has prospered tolerably, while those who remained on the original lands ceded to them by the Paraguayan Government suffered wretched poverty. In the first election after the great strike, which occurred a few weeks from the time when Lane and his followers departed from Australia, the newly founded Labor party returned 17 members to the Assembly. The declared aim of this party is to attain socialism in our time. Mr. Nelson promised to promote facilities for the development of individual enterprise, especially the extension of railroads and the construction of harbors, the establishment of cold-storage accommodation for perishable produce, Government aid in extending markets and preparing produce for home consumption, and aid to miners in prospecting new fields and sinking deep shafts on old fields. He was in favor of expending public funds in an attempt to attract men of small means, who are driven from the United Kingdom by the agricultural depression and enable them to settle profitably in Queensland. A revision of the land laws with a view to facilitating the settlement of small holdings was promised, as well as the expenditure of moderate sums upon the extension of existing systems of communication. Although European labor was gradually superseding alien labor in northern Queensland, the sugar industry was steadily expanding.

The Cabinet was reconstructed in the beginning of May, in accordance with the results of the general election and the new combination of parties. A. J. Thynne, Postmaster-General, became also Secretary for Agriculture. Robert Philp resigned the portfolio of Public Works, remaining Secretary for Mines and Railways; while D. H. Dalrymple became Secretary for Public Works and Secretary of

Public Instruction. A. H. Barlow was succeeded as Secretary for Public Lands by J. F. G. Foxton, but remained a member of the Executive Council. The principal task for the Legislature was the revision of the customs tariff in the direction of free trade, which was done by adding many articles to the free list, especially farming, mining, and other machinery and implements.

South Australia.—The legislative power is vested in a Parliament elected by the people, which the Executive has no authority to dissolve. To be an elector to the House of Assembly, one must be a British subject, twenty-one years of age, and a resident of the district registered on the election roll for six months. To vote for a member of the Legislative Council, one must be the owner of a freehold property, or lease lands worth £20 a year, or occupy a dwelling worth £25 a year. By the Constitution amendment act of 1894, the voting franchise was conferred upon women. There were 71,986 registered voters in 1894.

The Governor is Sir Thomas Fowell Buxton, appointed in 1895. The ministry in the beginning of 1896 contained the following members: Premier and Attorney-General, C. C. Kingston; Chief Secretary, J. H. Gordon; Treasurer, F. W. Holder; Commissioner of Lands, P. P. Gillen; Commissioner of Public Works, J. G. Jenkins; Minister of Education and Agriculture, J. A. Cockburn.

Mr. Kingston presented the same alternative to the electorate of South Australia that Mr. Nelson presented in Queensland—that of the responsible control of legislation by the Socialistic Labor element or by the Conservative upholders of individualism. The answer was contrary to the one given in Queensland, and, as a consequence of the elections, the Labor members, who in the preceding Parliament had been the casual allies of Mr. Kingston, left the cross benches, not to sit in Opposition, but to join the ministerial majority and dominate the Government. The admission, for the first time under the female suffrage act, of 60,000 women voters did not operate, any more than in New Zealand, to alter the balance of the parties in a Conservative direction, but rather accelerated the movement for novel social legislation. In his electoral manifesto Mr. Kingston defended the whole of the legislation of his previous term of office, and promised more of the same character. The attempt to establish village settlements on a communistic basis with public money was not to be abandoned. Land reform, law reform, social reform, and industrial reform were to be proceeded with. A system of state life insurance was proposed. The Constitution was to be made thoroughly democratic by lowering the franchise for the Legislative Council, introducing the popular referendum, and making ministries elective. In financial matters economies were to begin at the top, where the first step had been taken by reducing the Governor's salary 20 per cent., while at the bottom the hope was held out of raising the exemption from the income tax 25 per cent. While rejecting the theory of the single tax, Mr. Kingston approves the principle of progressive land taxation. The continuity of parliamentary action and the avoidance of the commotion and disturbance incident to the triennial general election are to be secured by a measure requiring half the members of Parliament to retire every two years.

In the general election, which took place in April, the ministerial party proper returned 16 members to the Legislative Assembly, the Labor party 12, having gained 2 seats, the Opposition 21, and 5 Independents were elected. The Government had thus a substantial majority to carry the constitutional amendments. Parliament was opened on

June 11. With a large accession of trade with Western Australia, good prices for agricultural produce, and increased exports of wool, minerals, and wine, the economic condition of the country was improving, and the revenue was buoyant, while expenses had been cut down, allowing the exemption from income tax to be raised to £150. Revenue from public works had largely increased, railways, waterworks, telegraphs, jetties, and lighthouses all returned more than 3 per cent. on their capital cost, besides the cost of maintenance and renewals. The new 3-per-cent. loan had been a complete success, and it was intended that the whole of the existing loans should be consolidated and converted into interminable stock, thereby effecting a large saving of interest.

Western Australia.—The legislative power was vested in 1890 in the Governor, a Legislative Council, and a Legislative Assembly. It was provided that the members of the Legislative Council should be elected by the people instead of being appointed by the Governor as soon as the population of the colony should reach 60,000. This condition occurred in 1893. The Council consists of 21 members elected by property owners having land valued at £100, lessees of Crown lands, and renters or leaseholders of property valued at £25 a year. The Legislative Assembly is composed of 33 members. Electors must be British subjects resident in the district for six months, or owners or occupiers of land, or householders and ratepayers.

The Governor is Col. Sir Gerard Smith. The Cabinet in the beginning of 1896 consisted of the following members: Premier, Treasurer, and Colonial Secretary, Sir John Forrest; Attorney-General, Septimus Burt; Commissioner of Lands, A. R. Richardson; Minister of Public Works, H. W. Venn; Minister for Mines and Education, E. H. Wittenoom.

While the population of Western Australia trebled in five years, the revenue increased nearly fivefold. The policy of the Government in this rapidly expanding colony has chiefly to do with public works. Sir John Forrest, whose administrative success has been such that not even the Opposition is desirous of a change of Government, laid before Parliament a large scheme of public works, including water supply for the coast towns and the gold fields, extension of the railroads, improvement of docks and harbors, and measures for the further development of the gold fields. At the same time he promised a revision of the customs duties with a view to reducing the cost of articles of common and necessary consumption. Among the smaller matters brought before the Parliament was a bill establishing an agricultural bank. The question of water supply is pressing in the principal towns and a vital one for the gold fields. While some geologists still believe in the existence of large bodies of artesian water, such as have been tapped in the sandstone plains of Queensland and New South Wales, giving at an inappreciable cost a daily flow of 105,000,000 and 40,000,000 gallons respectively, the few wells that have been sunk produce so small a supply that the Government has abandoned the theory for practical purposes and proposed to raise a loan of £2,500,000 to carry water from the Darling range for a distance of hundreds of miles 5,000,000 gallons daily to be delivered to the gold fields of Coolgardie, Kalgoorlie, and other places at a cost to the consumer of 3s. 6d. per 1,000 gallons.

Many mining engineers expect for the Western Australian gold fields a development equal to that of the Transvaal, where the production has risen in six years from 230,000 to 2,000,000 ounces. The output of gold in Western Australia for the first two years

from the first influx of miners into the Coolgardie district in the early months of 1894 has kept pace with the production in the Transvaal in the two years that succeeded the first rush of gold seekers in 1886. In the two years that followed the rich finds in Coolgardie the population more than doubled. The Newcomers, as the mining adventurers are called, numbered 40,000 in the beginning of 1896, and were increasing at the rate of 20,000 a year, nearly all adult males, clamoring for political rights and control of the public funds as in the South African Republic, for through their enterprise the revenue had much more than doubled and all industries were greatly stimulated. A difference between the Minister of Mines and the Newcomers, who in March, 1896, had increased to 30,000 in Coolgardie alone, arose regarding the rules for the transfer of mining claims. This was temporarily adjusted by a compromise. Under the increased demand for the transport of mining machinery the railway department broke down and a block of traffic occurred early in 1896. At the same time there was a block of the telegraph lines owing to a rush of business beyond their capacity. When Mr. Venn, the Minister of Railways, was called upon to explain the failure of his department, he attributed it to the failure of the Premier to sanction estimates for rolling stock. He was thereupon requested to resign, and on his refusal was dismissed by the Governor in March, 1896, and Mr. Piessé was appointed Minister of Railways and Public Works. The railroad from Southern Cross to Coolgardie was extended with the utmost rapidity, and was opened on March 23. An extension to Kalgoorlie was begun, and before June an extension to Hannans was completed. A railroad line to Menzies and Kanoona was authorized by Parliament, which assembled on July 7. A line from Mullewa to Cue was rapidly constructed and an extension of it to Nannine was authorized.

A scheme for enlarged representation in the House of Assembly of the new mining centers was approved by Parliament, increasing the number of members to 43. Of this number 13 represent the gold fields. The same constitutional amendment added 3 members to the Legislative Council, making the total number 24.

Tasmania.—The Parliament consists of a Legislative Council of 18 members, elected by citizens possessing a freehold worth £20 a year or a leasehold worth £80 a year, or belonging to the legal or medical profession, or having an academic degree. The members of the House of Assembly are elected in 37 districts by all who have resided over a year in the colony and own or occupy some property or have £60 income.

The Governor is the Earl of Gormanston, appointed in 1893. The Cabinet in the beginning of 1896 consisted of the following members: Premier,

Sir E. N. C. Braddon; Chief Secretary, W. Moore; Treasurer, P. O. Fysh; Attorney-General, A. J. Clark; Minister without portfolio, Thomas Reibey; Minister of Lands and Works, A. T. Pillinger.

New Zealand.—The legislative power is vested in the Governor and the General Assembly. The latter consists of the Legislative Council, which has 45 members, formerly appointed for life, but since 1891 for seven years, and the House of Representatives, which is composed of 74 members, including 4 Maoris. Women vote on the same footing as men, but can not become members of either

A KOYARI DWELLING, NEAR PORT MORESBY, NEW GUINEA.

house. Qualifications for electors are a residence of at least one year in the colony and three months in the district, or the possession of a freehold property worth £25. For Maoris of either sex the property qualification is required. At the general election of 1893 there were 302,997 electors enrolled, of whom 193,536 were men and 109,461 women.

The Governor is the Earl of Glasgow, appointed in 1892. The ministry at the beginning of 1896 was composed of the following members: Premier,

Minister of Public Works, and Minister of Native Affairs and Defense, R. J. Seddon; Attorney-General and Colonial Secretary, Sir P. A. Buckley; Minister of Lands and Immigration, Minister of Agriculture, and Commissioner of Forests, J. MacKenzie; Colonial Treasurer, Postmaster-General, Electric Telegraph Commissioner, Commissioner of Customs, and Minister of Marine and Industries and Commerce, J. G. Ward; member of the Executive Council representing the native race, J. Carroll; Minister of Railways and of Mines, A. J. Cadman; member of the Executive Council without portfolio, W. Montgomery. The post of Minister of Justice, of Education, and of Labor and Commissioner of Stamp Duties was then vacant. Sir P. A. Buckley resigned his office to take a judgeship. In February the Premier assumed the portfolio of Labor, W. Hall-Jones was appointed Minister of Justice, and J. Carroll became Commissioner of Customs. W. C. Walker joined the ministry without a portfolio. In March Mr. Ward resigned at the request of his party, because of his relations as debtor to one of the embarrassed banks. Mr. Seddon then assumed the functions of Colonial Treasurer.

The Liberal party, then led by Sir George Grey, formed a fusion with the Labor party and unexpectedly came into power in 1891. This coalition, by which the Labor party exercises great legislative and administrative influence, still continues. The state was already a large landowner, besides owning all the telegraphs and nearly all the railroads. The work of education was almost entirely carried on by the state. The present Government has avowedly aimed to use the collective forces of the community to better the lot of the masses of the people. Undoubted good has been done by what is known as the public-trustee department. The land tenure under the new law is known as the eternal lease, the state leasing it to tenants for nine hundred and ninety-nine years at rents calculated at 4 per cent. of the prairie value. An attempt has been made to cut up the large estates, some of which are enormous. The factory act of 1894 covers nearly every kind of workshop. The legal hours of labor are forty-eight a week, and overtime must be paid for at a minimum of 6*d.* an hour for any worker, man, woman, or child. The conspiracy law amendment act puts trade unions on exactly the same footing with regard to the laws of conspiracy as any other organization of members of the community. One of the important labor laws is the conciliation and arbitration act, the object of which is to do away entirely with strikes and lockouts, and substitute for them decisions of conciliation boards or, these failing, arbitration of the state Arbitration Court. In the session of 1896, opened on June 11, the Premier introduced a bill to pension every person who is over sixty-five years of age and has resided twenty years in New Zealand, the maximum amount to be 10*s.* and the minimum 5*s.* a week. Legislation for the preservation of the purity of race, excluding lower types and types of lower morality, is contemplated. A measure for exclusion of consumptive persons on the same lines as that dealing with small-pox was prepared, making masters of ships liable. The Government has proposed a system of state fire insurance. The Legislature gave special attention to colonial defense. Extensive fortifications have been begun in the seacoast towns. Recent legislation affecting native land and courts has not disturbed the satisfactory relations between the two races. Though none of the colonies was more eager in professions of loyalty to the mother country at the time of the war scare regarding the Transvaal, a quarrel arose between the Premier and the Governor over the appointment of addi-

tional members to the upper house, which the Earl of Glasgow decided to limit to four. Mr. Seddon angrily accused him of supporting the upper against the lower house, and warned him that if he remained obdurate the ties between the colony and England would be weakened.

When the governor of the Bank of New Zealand refused to give evidence before a committee of the house he was summoned to the bar and fined for breach of privilege, but still refused to reveal the accounts of the bank's customers. The Legislative Council came into conflict with the Premier over the banking investigation and various other questions. It rejected a universal eight-hours bill. A bill to exclude all Asiatic immigrants was passed by both houses.

New Guinea.—The British territory in New Guinea, including the D'Entrecasteaux and Lousiade groups and other islands, has an area of 88,460 square miles, with 350,000 inhabitants. The Europeans number 250. Land is offered to settlers for 2*s.* 6*d.* an acre, and cocoanut groves are being planted and trade with Europeans extended. The imports in 1895 amounted to £28,367 and exports to £16,215, not counting over £8,000 worth of pearls. The other exports are copra, trepang, mother-of-pearl, and gold. Sandalwood is also exported, and there are other forest products available, as ebony, gums, sago, and rattan. About 60 whites and many natives are engaged in digging gold in the Lousiade Islands and on the mainland and Woodlark island. The imports consist of food stuffs, cloths, tobacco, and metal utensils. The revenue collected in 1895, chiefly from customs, was £5,109. Queensland, Victoria, and New South Wales contribute each £5,000 a year to the cost of administration.

AUSTRIA-HUNGARY, a dual monarchy in central Europe, composed, under the fundamental law of Dec. 21, 1867, of the Empire of Austria and the Kingdom of Hungary, two inseparable constitutional monarchies, declared to be hereditary in the male line of the house of Hapsburg-Lorraine, and, in case of its extinction, in the female line. The legislative power in regard to affairs common to both monarchies, which are limited to diplomatic relations, the army, common finances, and the administration of Bosnia and Herzegovina, is exercised by the Delegations, committees of the legislative bodies of the two halves of the empire. The Delegations, which meet alternately at Vienna and Budapest, are composed of 20 members of the upper and 40 of the lower chamber of the Austrian Reichsrath and the Hungarian Parliament. Each Delegation deliberates and acts alone, and when they reach different decisions on any matter they come together and decide it by a joint ballot.

The Emperor of Austria and King of Hungary is Franz Josef I, born Aug. 18, 1830, and proclaimed Emperor on Dec. 2, 1848, upon the abdication of his uncle, Ferdinand I. Upon the restoration of the Hungarian Constitution he assumed the crown of St. Stephen on June 8, 1867. The heir presumptive is Archduke Franz Ferdinand, nephew of the Emperor and son of the late Archduke Karl Ludwig.

The common ministers, heads of the three executive departments for common affairs, are individually responsible to the Delegations and to the Emperor. The ministers in office in 1896 were: Minister of War and of the Imperial House for the Whole Monarchy, Count Agenor Maria Adam Sulochowski; Minister of War for the Whole Monarchy, Gen. Edmund Edler von Kriehammer; Minister of Finance for the Monarchy, Benjamin de Kallay.

The Common Budget.—The budget for common affairs for the year 1896 makes the total expenditure 156,291,463 florins. The Ausgleich, or

financial arrangement between the two halves of the monarchy, adopted for the ten years ending with 1897, provides that, of the sum voted by the Delegations in excess of the net proceeds of the common customs and the receipts from the various departments, Hungary pays 2 per cent., representing the proportion of the former military frontier, which has been incorporated in the Hungarian kingdom, and the remainder is to be borne by the two monarchies in the proportion of 70 per cent. from the Austrian Treasury and 30 per cent. from the Hungarian. The surplus of customs for 1896 was estimated at 49,047,140 florins, the receipts from the war and naval departments at 2,569,873 florins, and those of the other departments at 122,302 florins. Of the sum needed in addition, Hungary's 2 per cent. makes 2,091,043 florins, Austria's quota 71,722,774 florins, and Hungary's quota 30,738,331 florins. Of the total expenditures, 198,699,204 florins are classed as ordinary, of which 3,858,300 florins are for the Ministry of Foreign Affairs, 122,215,042 florins for the army, 10,464,060 florins for the navy, 2,035,250 florins for the Ministry of Finance, and 126,552 florins for the Board of Control. Of the extraordinary expenditure, amounting to 17,592,259 florins, 14,389,659 florins are required for the army and 3,117,200 florins for the navy. The revenue collected in Bosnia and Herzegovina for 1895 was estimated at 14,010,720 florins, and the expenditure at 14,084,990 florins, not including 3,559,000 florins of extraordinary expenditure representing the expenses of the army of occupation. The revenue collected and expended in the occupied provinces is constantly increasing. In 1897 it is expected to amount to 18,160,000 florins. Their economic and intellectual progress is such that Herr von Kallay predicts that Bosnia will soon become the attractive force among the Balkan states. The increase in population, in the number of cattle, and in the extent of land under tillage testify to prosperity.

The budget for 1897 makes the common expenditures amount to 160,500,000 florins, of which the two halves of the monarchy have to provide 107,200,000 florins. The military expenditure is estimated at 125,300,000 florins, an increased amount being needed for additional officers, ammunition for rifle practice, and mounts for infantry captains. There is an extraordinary military budget of 14,800,000 florins, including the annual installment for the introduction of smokeless powder and large sums for the improvement of fortifications and fortress artillery. The naval expenditures are estimated at 14,000,000 florins, a large part of which will be devoted to the construction of armored cruisers and torpedo boats.

The Public Debt.—The general debt amounted on Jan. 1, 1895, to 2,757,672,783 florins. Austria's special debt amounted to 1,274,074,670 florins. The consolidated debt amounted to 3,975,893,267 florins, of which 1,926,399,844 florins bear interest in paper currency, 1,442,531,352 florins in silver, 503,373,560 florins in gold, and 103,588,511 florins bear no interest. The interest on the public debt for 1895 amounted to 116,613,997 florins and the sinking fund to 12,638,930. Of the interest, 86,452,790 florins were chargeable to Austria and 30,161,207 florins to Hungary. The separate debt of Hungary, contracted mainly for the purchase of railroads, lands for the peasantry, etc., amounted in 1894 to 2,302,342,506 florins, while the railroads, mines, forests, sums due, and other real and movable property of the state were valued at 2,295,900,000 florins.

A Bosnian national loan of 12,000,000 florins, bearing interest at 4 per cent., was raised in the early part of 1896 at the price of 97 $\frac{3}{4}$ per cent. The proceeds were applied in part to repay advances made from the Austrian and Hungarian govern-

ments for the construction of railroads and in part for the extension of the system, which, as far as constructed, returns a considerable profit on the investment. Out of the future profits the annual sum of 530,000 florins will be reserved for the extinction of the loan in sixty years. This is the first loan raised on the credit of the occupied provinces. Neither Austria nor Hungary undertakes any guarantee or responsibility in connection with it. The favorable conditions prevailing in the two provinces appear to justify the operation. The Bosnian budget showed a surplus of 67,000 florins in 1894, and in 1895 one of 74,000 florins, while in 1896 there was one of more than 45,000 florins.

Foreign Affairs.—The diplomatic relations of the Hapsburg Monarchy were reviewed in a remarkably frank speech of Count Goluchowski to the Delegations. The declaration made by the powers on the initiative of Austria-Hungary had put an end to the agitation in Bulgaria. The action of the powers was equally effective in Asia Minor, and Austria-Hungary had left nothing undone to promote peace. The dual monarchy had originally adopted an attitude of great reserve in the Armenian question, taking no part in the action of England, France, and Russia. Afterward, however, when there was danger of a one-sided intervention that would have been the signal for a conflagration and the opening up of the whole Eastern question, the Austro-Hungarian Cabinet took an initiative which, furthered by the love of peace of the other powers, soon deprived the question of its acute character. The Government had not only served the interest of peace by its firm determination to preserve the *status quo* in the Balkans, but was entitled to the gratitude of Turkey, and the Government of the Porte ought, in its own interest and in consideration to the friends of Turkey, of which Austria-Hungary was one of the best, to take such measures both in the Asiatic and the European territories as would justify Europe in believing in the vitality of Turkey, preventing further massacre and violence and the outrage and persecution of Christians. Otherwise the Ottoman power would more and more approach its fall until its best friends would no longer be able to prevent it. The *entente* between Austria and Germany had in no way been weakened, and the relations with Italy were exceedingly intimate. Russia, having declared the maintenance of the *status quo* and the strict observance of treaties to be the goal of its policy, could count on the unconditional and loyal support of Austria-Hungary so long as it continued on that path. The objects pursued by Austria-Hungary had been the consolidation of the state of things established in the East by international agreement, the preservation of Turkey, the independence, strengthening, and free development of the different Balkan states, the cultivation of friendly relations with them, and, finally, the exclusion of the predominant influence of any one power in particular to the disadvantage of the others. After alluding in favorable terms to Russia's reconciliation with Bulgaria, Count Goluchowski said that the neighbors of Austria-Hungary were well aware that the monarchy would raise its voice against any attempt to do them violence, and that it would itself demand nothing calculated to infringe their national existence. Alluding in flattering terms to Roumania, the Minister of Foreign Affairs made the important statement that, thanks to the wisdom of the King and the sagacity of the statesmen of that country, it had attained political maturity and was now a weighty factor in the grouping of the European states. Serbia, which was counted in the sixties as an exemplary state, had latterly been so distracted by party strife that its friends viewed recent

developments in that kingdom with regret. Bulgaria, though the domestic situation in the principality left much to be desired, had always been an element of order in the Balkan peninsula, and would endeavor in the future to justify the sympathy that it had received from Austria-Hungary.

The Ausgleich.—In negotiations for the renewal of the decennial Ausgleich, the financial arrangement between the Cisleithan and Transleithan monarchies, the matter of proportionate contributions to common expenses was complicated with the questions relating to the commercial and customs duty and the adjustment of railroad tariffs. Some extreme Hungarian Nationalists wished to terminate the customs union, deeming the high protective tariff a benefit to Austrian manufacturers, for which Hungarian consumers had to pay a great part of the cost while deriving no adequate compensating advantages from the arrangement. Austrian and Bohemian industrialists, on their part, complained of unfair competition from the rapidly expanding industry of Hungary, which the Government fosters by granting privileges and immunities, and they wanted to have an agreement restraining the Hungarian Government from giving advantages to their rivals—such as total or partial exemption from taxation, and low freight charges—which their own Government refused to allow to themselves. To all Austrians it seemed unjust that Hungary—which was growing and prospering in many ways, while their own industries were much depressed—should continue to bear no more than 30 per cent. of the joint expenses of the dual monarchy. In the course of the negotiations the Austrian Delegates proposed that Hungary should pay 42 per cent. of the general annual expenditure, and Austria 58 per cent. This calculation was based upon a new principle—that of combining the number of inhabitants with the total amount annually accruing to the state from taxation. Many Hungarians were willing to have their Government assume a somewhat greater share of the imperial expenses; but none would consent to have the new customs and commercial treaty altered in any way likely to handicap the commerce or industry of their country, and they were equally disposed to resist all attempts to encumber the development of Hungarian railroad traffic with harassing provisions. In the final conferences held between the Austrian and Hungarian ministers in July, many of the points on which differences existed were settled by concessions on both sides. They agreed to establish identical railway tariffs in Austria and Hungary. The Hungarian Government promised to withdraw all the privileges that gave Hungarian industrial establishments an advantage over their Austrian competitors. Grounds of complaint in respect of provisions regulating the internal traffic in live stock were removed. It was agreed that hereafter Government contracts will be awarded in each country to the most suitable applicants, whether Austrians or Hungarians. The Austrian Government promises to permit Hungarian insurance companies in the future to engage in business in Austria on equal terms with domestic corporations; also to introduce the Hungarian law, passed two years before, which forbids altogether the manufacture of artificial wines.

Currency Reform.—Hopes for a speedy introduction of a gold standard were originally entertained when monetary reform was undertaken in 1892. After the lapse of four years, although the greater part of the gold necessary to redeem the Austro-Hungarian state notes had been procured—Hungary having her whole amount, and Austria all but 39,500,000 florins—yet the operation was far from completed, and the public suffered much in-

convenience from the delay. Notes to the amount of 200,000,000 florins had been redeemed previous to July 1, 1896, when 112,000,000 florins still remained to be gradually withdrawn from circulation and replaced by the new currency. Scarcely any gold coin, however, had as yet been issued. The currency consisted chiefly of bank and state notes of comparatively large denominations, together with bulky 1-florin silver pieces and minor silver, nickel, and bronze coins of the new crown system. The withdrawal of the small bank notes, and the substitution for these of heavy coin, impeded the transaction of commercial business. Until the financial questions connected with the Ausgleich and the conditions of the renewal of the charter of the Austro-Hungarian Bank could be arranged, the Government hesitated about proceeding with the monetary reform. Then the state of trade gave cause for apprehension that, should the gold be put into circulation, it could not be retained in the country for any length of time in consequence of the amount owed abroad. The excess of imports in 1895 was only 26,000,000 florins, lower than any recorded since 1876. It was the intention to replace the 112,000,000 florins of notes of forced currency, which would be redeemed by the two governments in the proportion of 30 to 70, with 80,000,000 florins of 5-florin bank notes and 37,000,000 florins of 5-crown silver pieces, against which the Government would deposit 20-crown gold pieces with the bank. The governments pledged themselves to take legislative steps for the inauguration of specie payments as soon as the forced currency was out of the way.

The charter of the Austro-Hungarian Bank expires Dec. 31, 1897. To secure a loan of 80,000,000 florins to the state, it received the exclusive right to issue bank notes. Two fifths of the total issue must be covered by a metal reserve, gold or silver, coin or bullion. Of the profits of the bank, after a 5-per-cent. dividend on their stock has been distributed among the shareholders, if there is any remainder, 8 per cent. of it must be transferred to the reserve fund and 2 per cent. to the Pension fund, and an additional dividend of 2 per cent. on the capital paid to the stockholders, while all in excess is divided into two parts, one of which goes to the stockholders, and the other is credited to the state—70 per cent. to Austria and 30 per cent. to Hungary—being applied to the reduction of the loan of 80,000,000 florins, which must be cleared off by the time that the privilege of the bank expires at the end of 1897. The bank notes in circulation at the close of 1894 amounted to 507,803,160 florins. There were at that time 303,305,866 florins of state notes in circulation. The coinage of 20-crown and 10-crown gold pieces amounted to 24,322,360 florins in 1892, 135,042,480 florins in 1893, and 97,323,530 florins in 1894, while of silver crowns 57,420,000 florins' worth were issued during the three years. The law to reform the monetary system on a gold basis was enacted on Aug. 2, 1892. The silver crown, of the value of half a gulden, or florin, of the old coinage, is not legal tender in sums over 50 crowns, but the notes of the Austro-Hungarian Bank are legal tender in any amount. The principal gold coin is the 20-crown piece, containing 6.775 grammes, nine tenths fine, worth \$4.05. The representatives of the Austro-Hungarian Bank asked for a renewal of the charter for a period of fifteen years. Should it be granted, they were prepared to make several minor concessions to the Government. In the proposals for the renewal of the charter for twelve years, it was suggested that the two halves of the monarchy should participate in the management of the bank in equal proportions, the Imperial Government to nominate the governor; while of

the 2 vice-governors, 1 should be an Austrian and 1 a Hungarian. Each Government would appoint 3 directors, whose salary was fixed at 6,000 florins; and the remainder of the board, to consist of 3 Austrians and 3 Hungarians, were to be elected by the shareholders. After 5 per cent. has been earned on the share capital it will be divided among the shareholders. Earnings above that will be divided equally between the shareholders and the governments until 6 per cent. has been distributed among the former. Of the surplus above 7 per cent., three quarters goes to the governments.

The profits earned by the bank in 1895 amounted to more than 7,000,000 florins, out of which, under the existing arrangement, a total dividend of about 7½ per cent. was paid to stockholders, leaving a surplus of above 330,000 florins to be divided between the Austrian and Hungarian governments after 103,000 florins had been set aside for the pension fund. The total business of the bank for the twelve months amounted to 2,532,000,000 florins, 221,000,000 florins more than in the preceding year.

Under the new charter the bank will have to give guarantees regarding its ability to fulfill the obligations devolving upon it, and regarding the financial support to be given by it to the governments in return for the privileges granted. The powers of the Government commissioner are to be enlarged.

The Army.—The Austro-Hungarian army consists of 15 army corps, containing as a rule 2 divisions of 2 brigades each. The term of service in the line is three years from the age of twenty-one, after which the men belong to the reserve for seven years. The Ersatz reserve is made up of those who are not drawn for active service. Another class is enrolled in the Austrian Landwehr or the Hungarian Honved, in which the term of service is twelve years, except for such as are transferred from the regular army, who serve two years. The Landwehr in time of peace is only called out for instruction and drill, and in time of war the command of the Emperor-King is necessary for its mobilization. It has its Ersatz reserve, from which in time of war its ranks are filled when depleted, as those of the standing army are from its own supplementary reserve. The peace strength of the whole army in 1895 is shown in the following table:

PEACE FOOTING.	Officers.	Men.	Total.
Army:			
Staff.....	2,606	4,301	6,907
Sanitary troops.....	81	6,838	6,919
Establishments.....	2,332	7,512	9,844
Infantry.....	9,153	181,937	191,090
Cavalry.....	1,982	46,864	48,846
Artillery:			
Field.....	1,323	26,011	27,334
Fortress.....	420	7,746	8,166
Pioneers, etc.....	584	10,049	10,633
Train.....	388	3,486	3,874
Austrian Landwehr:			
Infantry.....	1,770	16,773	18,543
Cavalry.....	236	1,882	2,118
Hungarian Honved:			
Infantry.....	2,340	14,094	16,434
Cavalry.....	230	3,314	3,544
Total.....	23,445	330,807	354,252

The total number of horses is 63,323, of which 42,840 belong to the regular cavalry and 12,112 to the field artillery. The annual recruit of the army is 103,100; of the Austrian Landwehr, 10,500; of the Honved, 12,500. The strength of the army on a war footing is 45,238 officers and 1,826,940 men, with 281,886 horses. The field artillery has 1,048 guns in peace and 1,864 for war.

The Navy.—The Austro-Hungarian navy is designed for the defense of the small seacoast and the Danube, where a fleet of monitors is maintained.

There are 2 first-class, 1 second-class, and 2 third-class battle ships; 8 monitors; 3 first-class, 2 second-class, and 33 small cruisers; and 24 first-class, 5 second-class, and 26 third-class torpedo boats. Three new battle ships of the first class, with 10½-inch armor, a speed of 17½ knots, and 4 24-centimetre guns in the main battery, are now building. The *personnel* of the navy consists of 628 officers, 7,946 sailors, and 4,500 marines. Conscripts assigned to the marine corps serve four years and afterward five years in the reserve and three in the Seewehr, which corresponds to the Landwehr.

Commerce and Production.—Austria is mainly an agricultural country, though there are important mining interests also and highly developed industries, some of which have felt German competition in recent times. In Hungary what manufacturing industries there are have been a short time in existence. The coal product of Austria is valued at 67,000,000 florins, in Hungary at 14,000,000 florins; the iron output in Austria at 24,000,000 florins, in Hungary at 12,000,000 florins. Silver, lead, and copper are mined in both countries; in Austria quicksilver and zinc also, and in Hungary gold. Half the textile workers of Austria and more than half of those employed in making glassware and pottery are in Bohemia. The tilled lands in Austria make about 37 per cent. of the whole surface, in Hungary 43 per cent.: pasture and meadow 24 per cent. in each; and woods 33 per cent. in Austria and 27 per cent. in Hungary. Austria in 1894 produced 29,938,000 hectolitres of rye, 38,659,000 of oats, 21,321,000 of barley, 16,982,000 of wheat, 67,255,000 of sugar beets, and 96,074,000 of potatoes. Hungary in 1893 raised 58,726,000 hectolitres of wheat, 25,282,000 of oats, 22,537,000 of barley, 20,740,000 of rye, and 52,983,000 of maize. Horses, cattle, and sheep are exported from both countries. There is a considerable export of wheat when the crop is abundant, a steady export of barley, and a large export of wine, especially from Hungary. Silk culture has been introduced by the Government in both Austria and Hungary. There are 4,000 pupils in the agricultural schools of Austria and 2,000 in Hungary. Practical forestry is taught in schools of various grades. A large staff is employed in the administration of the forests, which cover 9,775,000 hectares in Austria, mainly pine forest, and 7,582,000 hectares in Hungary, for the most part beech and oak. The value of the exports of timber from Hungary is 24,000,000 florins a year.

The total value of imports of merchandise into the Austro-Hungarian customs union in 1894 was 700,000,000 florins, an increase of 30,000,000 florins over the preceding year, and of 280,000,000 florins since 1890. The value of the merchandise exported was 795,500,000 florins, which was 10,000,000 less than in 1893, but greater than in any other year. The principal imports were: Cotton, 52,000,000 florins; coffee, 37,200,000 florins; wool, 36,000,000 florins; coal, 30,700,000 florins; grain, 24,300,000 florins; machinery, 22,800,000 florins; woolen yarn, 21,300,000 florins; hides and furs, 20,700,000 florins; silk, 19,400,000 florins; leather, 18,200,000 florins; books and newspapers, 16,700,000 florins; cotton yarn, 16,500,000 florins; leaf tobacco, 15,000,000 florins; cattle, 13,300,000 florins; woolen manufactures, 13,100,000 florins; silk manufactures, 12,500,000 florins; hardware and clocks, 11,200,000 florins; colors and tans, 9,300,000 florins; manufactured tobacco, 8,100,000 florins. The values of the chief exports were: Cattle, 83,100,000 florins; sugar, 73,400,000 florins; timber, 61,800,000 florins; grain, 61,500,000 florins; eggs, 37,900,000 florins; coal, 29,800,000 florins; hardware, 21,900,000 florins; gloves, 19,800,000 florins; glass and glassware, 19,300,000 florins; wood manufactures, 18,300,000

florins; woolen goods, 17,900,000 florins; paper and paper manufactures, 17,400,000 florins; iron manufactures and iron, 12,500,000 florins; leather goods, 11,700,000 florins; minerals, 10,100,000 florins; feathers, 9,900,000 florins; wool, 9,400,000 florins; linen yarn, 7,300,000 florins; silk goods, 6,500,000 florins; wine, 5,400,000 florins; flour, 3,400,000 florins. The imports of gold and silver coin and bullion in 1894 were 37,639,940 florins, compared with 150,391,714 florins in 1893, and the exports were 27,361,456 florins, compared with 20,307,275 florins. Hungary's exports of cereals in 1894 were 171,041,000 florins, and of cattle 140,050,000 florins out of a total merchandise export of 562,564,000 florins, and out of imports amounting to 546,278,000 florins textiles came to 190,000,000 florins. Of the total imports, 81 per cent. came from Austria, 5 per cent. from Germany, and the rest from Servia, France, Switzerland, and Italy. Of the exports from Hungary, 72 per cent. went to Austria, 13 per cent. to Germany, and 2 per cent., consisting of flour and barley, direct to Great Britain.

Navigation.—The Austro-Hungarian merchant navy in 1893 comprised 203 steamers, of 129,567 tons, and 11,320 sailing vessels of all kinds, of 125,919 tons. Of the total of 11,523 vessels, 249, of 194,657 tons, were engaged in ocean commerce; 1,722, of 38,686 tons, in the coasting trade; and 9,552, of 22,143 tons, were fishing craft.

The number of vessels entered at Austrian ports during 1893 was 82,295, of 9,517,265 tons, while 82,146, of 9,514,087 tons were cleared. At Hungary's port of Fiume 7,170 vessels, of 1,070,625 tons, were entered and 7,196, of 1,072,176 tons, were cleared. Of the vessels visiting the Austrian ports 85 per cent., of the tonnage 89 per cent., belonged to Austria, and of the other 15 per cent. of the vessels the greater number were Italian, British coming next.

Communications.—The mileage of railroads in Austria in 1895 was 10,100 miles, and in Hungary 8,217 miles, a total of 18,317 miles. Of the Austrian lines, 4,950 miles belonged to the Government, which administered in addition 589 miles of privately owned roads, while 4,561 miles were still managed by the companies owning the lines. In Hungary 6,725 miles belonged to the state and 1,492 miles were owned and operated by companies. The capital expended in building the Austrian railroads amounted in 1893 to 2,974,905,000 florins. There were 97,305,000 passengers and 90,904,000 tons of freight carried in Austria in 1893, when the gross receipts were 242,072,000 florins and operating expenses 137,142,000 florins. In Hungary 95,582,000 persons and 124,460,000 tons of freight were transported, yielding a gross revenue of 102,591,000 florins, while the working expenses amounted to 53,702,000 florins. The railroads built in Bosnia and Herzegovina have a length of 429 miles.

The Austrian telegraph lines have a length of 28,957 miles, with 82,780 miles of wire; the Hungarian lines a length of 12,473 miles, with 35,320 miles of wire; the Bosnian lines a length of 117 miles, with 4,262 miles of wire. There were 12,602,632 messages sent over the Austrian, 9,969,844 over the Hungarian, and 531,269 over the Bosnian wires in 1893.

The Austrian post office carried 681,158,720 letters and postal cards, 98,376,430 samples and printed inclosures, and 76,173,400 newspapers in 1894, when the receipts were 37,977,711 florins, and expenses 34,514,115 florins. The Hungarian postal traffic in 1893 was 155,433,600 stamped letters and cards, 24,518,980 samples and printed packets, and 74,739,772 newspapers; receipts, 15,253,052 florins; expenses, 10,756,326 florins.

Austria.—The Austrian Empire is composed of 16 provinces, each of which has its own diet to leg-

islate upon matters connected with local taxation, agriculture, education, charity, religion, and public works. The national legislative body is the Reichsrath, which consists of a House of Lords, made up of 21 archdukes, 67 feudal lords, 17 prince bishops, archbishops, and cardinals, and 120 life members, and a House of Deputies, of 353 members, elected for six years by rural communes, towns, chambers of commerce, and landed proprietors.

The Council of Ministers, as constituted on Sept. 29, 1895, is as follows: Minister-President and Minister of the Interior, Count Casimir Badeni; Minister of Finance, Ritter von Belinski; Minister of Public Instruction and Ecclesiastical Affairs, Baron Gautsch von Frankenthurn; Minister of National Defense, Field-Marshal Count Zeno von Welsersheimb; Minister of Justice, Count Johann Gleispach; Minister of Agriculture, Count Ledebur Wicheln; Minister of Commerce and National Economy, Baron Hugo Glanz von Eicha.

Finances.—The revenue of the Austrian Government in 1895 was estimated at 638,985,577 florins, and the expenditure at 636,527,870 florins. The estimate of ordinary revenue is 621,592,945 florins, of which direct taxes produce 111,478,000 florins; indirect taxes, 301,611,540 florins; customs, 45,324,880 florins; railroads, 89,074,560 florins; posts and telegraphs, 38,473,000 florins; forests and domains, 5,301,700 florins; mines, 7,103,470 florins; law courts, 1,056,680 florins; education and worship, 6,214,533 florins; state properties, 4,834,462 florins; and various receipts, 11,120,000 florins. Of the direct taxes the land tax amounts to 35,690,000 florins, the house tax to 33,439,000 florins, the industry tax to 11,858,000 florins, the income tax to 29,395,000 florins, and other taxes to 1,096,000 florins. Of the sum expected from indirect taxes, excise gives 111,994,870 florins; salt, 21,575,110 florins; tobacco, 89,353,550 florins; stamps, 21,289,500 florins; judicial fees, 38,376,000 florins; the lottery, 16,440,000 florins; and other taxes, 2,582,510 florins.

The ordinary expenditures amount to 604,495,485 florins, of which 4,650,000 florins are for the imperial household, 77,065 florins for the imperial Cabinet chancery, 731,352 for the Reichsrath, 22,600 florins for the Supreme Court, 1,187,753 florins for the Council of Ministers, 18,913,139 florins for the Ministry of the Interior, 20,690,416 florins for the Ministry of National Defense, 1,889,885 florins for the direction of the Ministry of Education and Worship, 14,821,621 florins for educational establishments, 7,413,510 florins for religious worship, 14,376,762 florins for the Ministry of Agriculture, 90,171,638 florins for the Ministry of Finance, 21,612,200 florins for the Ministry of Justice, 108,652,470 florins for the Ministry of Commerce, 178,150 florins for the Board of Control, 162,720,732 florins for interest and amortization of the public debt, 615,360 florins for management of the debt, 19,315,050 florins for pensions and grants, 5,952,790 florins for subventions, and 110,502,992 florins for Austria's share of the common expenditure of the empire. The extraordinary receipts amount to 17,392,632, and extraordinary expenditures to 32,032,385 florins.

The Austrian revenue for 1897 is estimated at 692,703,000 florins, and expenditure at 692,160,000 florins. In presenting the budget on Oct. 1, 1896, Dr. von Belinski astonished the Reichsrath by declaring that the estimates of former years were unreal and calculated to deceive Parliament; that not only had the annual expenditures exceeded receipts more than 22,000,000 florins on an average for five years back, but the budget was in other particulars illusory. He proposed to establish a separate investment budget, covered by special *rentes*.

Vienna Municipal Election.—In the latter part of 1895 the repeated re-election of Dr. Lüger, the Anti-Semite agitator, as burgomaster of Vienna caused much excitement, for the Emperor refused to sanction the election, and finally dissolved the municipal council. The elections took place on Feb. 27, 1896, resulting in the return of a stronger Anti-Semite majority, 96 to 42. The new council elected Dr. Lüger burgomaster for the fourth time on April 17. A few days later the Emperor summoned him to his presence. In his audience with the Emperor Dr. Lüger announced his readiness to renounce the post of burgomaster, to which some other member of his party would be chosen while he himself would be elected first deputy burgomaster, an office that can be held without imperial ratification. Dr. Lüger had become even more obnoxious than when first elected, as he represented the clerical and national antagonism to Hungary and its Government, which he and his followers declared to be in the hands of Jews and Free Masons. When, later, the Emperor opened the Millennial Exposition in Buda-Pesth, and a large delegation of Austrian Liberals went there, the Anti-Semites denounced as traitors all Austrians who attended the Magyar festival. A Vienna merchant named Strobaeh, who was elected burgomaster on May 6, took pains to state in his speech of acceptance that he acted on the advice of Dr. Lüger, to whom he would give up the place when the right time comes. He declared that he considered it his duty to assist the Christian population to recover the position that they never ought to have lost.

When Dr. Lüger was elected for the first time, in May, 1895, he was unable to control a working majority in the council, and for that reason refused to take office. The Windischgrätz ministry dissolved the municipal council and placed the capital under an imperial commissary, with nominated councilors, in order to give the electors an opportunity for reconsidering their opinions. The intervention of the Government aroused resentment, and in the election of September, 1895, the German Liberals were completely routed. In October, Dr. Lüger was again chosen burgomaster, this time by 93 votes out of 137. Count Badeni, who had succeeded Prince Windischgrätz as Premier, having from the beginning revealed unmistakably his hostility to the Anti-Semitic agitation, refused to Dr. Lüger the necessary imperial sanction, but a fortnight later the municipality re-elected him by practically the same number of votes. The municipality was immediately dissolved, but the inhabitants stubbornly refused to modify their opinions. Consequently the newly elected council was more ardently devoted to Dr. Lüger and his programme than the preceding one. The retreat of the Government, marked by the intercession of the Emperor, greatly strengthened the position of Dr. Lüger and the Anti-Semites, who were henceforth openly countenanced by the leaders of parties supporting the Government, feudal Conservatives and Ultramontane clericals, from which the Anti-Semites were recruited, as well as from the Christian Socialists and the Social Democrats.

Electoral Reform.—The long-expected franchise bill that was introduced by the Badeni ministry in 1896 and carried by a good majority in the Reichsrath is a compromise between universal suffrage and the defense of property interests. The extreme Socialists were far from satisfied with it, and looked forward with confidence to a further extension of the franchise. They condemned it notwithstanding the fact that it would give to the Labor party a dozen seats in the Reichsrath, in which it had as yet no representation at all. The

problem of framing an electoral bill that would pass the Reichsrath was not easy, for Count Taaffe's fall was brought about by the same question, and the project of electoral reform worked out by the coalition ministry that came after him never came to a vote. Count Badeni's bill was not intended to promote the special interests of any of the parties actually represented in the Reichsrath, and it went just far enough to save these parties from the stigma of persistently ignoring the legitimate demands of the working class. The existing class representation by which the 353 seats were filled was maintained in its integrity. The bill created 72 new seats, making a total of 425. The large landed proprietors still have 85, the towns 118, the chambers of commerce and industry 21, and the rural communes 129. The new seats are given to representatives of the general body of electors, a new category, comprising all male citizens twenty-four years of age who have an independent residence in the district extending over six months. The controlling commissioners of election created by the bill receive no pay, and yet are compelled to accept the duty. Numerous amendments offered by the various parties were rejected, and the bill went through in its original form, supported by the Liberal, the Conservative, the Young Czech, and the Italian parties, while it was opposed by the Democrats, a part of the German Nationalist party, and a minority of the Socialists.

Hungary.—The kingdom of Hungary includes politically Transylvania, united with it in legislative and administrative union, and Croatia-Slavonia, which possesses autonomy in internal religious, educational, and police affairs. The Hungarian Parliament consists of a House of Magnates, in which 181 hereditary peers, who pay 3,000 florins a year land taxes, 84 life peers, 41 archbishops, bishops, and other dignitaries of the Roman and Greek churches, 11 clerical and lay representatives of the Protestant communions, 17 official members, 3 delegates from Croatia-Slavonia, and 19 archdukes have seats, and the House of Representatives, containing 453 members, elected by all male citizens above the age of twenty who pay a certain small direct tax or have a certain moderate income. Of the members, 413 represent Hungarian towns and districts, and 40 are from Croatia and Slavonia.

The Cabinet, which is collectively responsible to Parliament, consisted in the beginning of 1896 of the following members: President of the Council, Baron Desiderius Banffy, who formed the ministry on Jan. 15, 1895; Minister of Finance, Dr. Ladislans de Lucaes; Minister of National Defense, Baron Geza Fejervary, who has held office since Oct. 28, 1884; Minister at the Royal Court, Baron Samuel Josika; Minister of the Interior, Desiderius de Perezel; Minister of Education and Ecclesiastical Affairs, Dr. Julius de Wlassics; Minister of Justice, Dr. Alexander Erdlye; Minister of Industry and Commerce, Ernest de Daniel; Minister of Agriculture, D. Ignatius de Daranyi; Minister for Croatia and Slavonia, Emerich de Jospovich.

Finances.—The Hungarian budget for 1896 makes the total revenue 473,064,398 florins, including 10,420,298 florins of transitory revenue. Of ordinary revenue 308,984,881 florins come from the Ministry of Finance, 129,141,969 florins from the Ministry of Commerce, 16,142,193 florins from the Ministry of Agriculture, 1,532,961 florins from the Ministry of Education, 1,313,083 florins from the Ministry of the Interior, 778,469 florins from the Ministry of Justice, 358,784 florins from the Ministry of National Defense, and 800 florins from ministry *ad latus*. The land tax in 1895 was estimated at 34,306,000 florins: building tax, 10,960,000 florins; industrial tax, 20,960,000 florins; tax on

corporations, 2,712,600 florins; tax on capital and interest, 4,684,000 florins; income tax, 16,200,000 florins; mining tax, 100,000 florins; tax on railroads, 5,760,000 florins; military tax, 2,400,000 florins. Among the indirect taxes, estimated to yield 172,713,011 florins, the tobacco monopoly was expected to give 52,090,391 florins; the liquor tax, 40,034,000 florins; the beer duty, 6,090,000 florins; the duty on wines, 7,500,000 florins; the sugar duty, 7,250,000 florins; the duty on petroleum, 6,130,000 florins; the tax on cattle, 3,300,000 florins; the salt monopoly, 15,395,982 florins; stamp duties, 12,782,000 florins; court fees, 19,030,000 florins; a lottery, 2,511,200 florins; and other taxes, 539,438 florins. The revenue from the property and establishments of the Government was estimated at 59,486,180 florins, of which sum 35,241,570 florins represent the net receipts from railroads, 14,838,075 florins earnings of mines and the mint, 8,209,606 florins revenue from forests, 775,000 florins earnings of the public printing office, and 421,929 florins receipts

219 florins are required for transitory expenditure, 19,620,271 for investments, and 6,628,307 florins for extraordinary common expenditure.

In the budget for 1897 the ordinary receipts are estimated at 465,191,881 florins and the nonrecurring receipts at 10,134,424 florins, making a total of 475,326,305 florins. The ordinary expenditure for 1897 is reckoned to be 441,275,181 florins; the nonrecurring expenditure, 8,013,952 florins; and the reproductive expenditure, 19,051,651 florins.

Millennial Exposition.—An exposition commemorating the one-thousandth year of the nation's birth was opened amid gorgeous pageantry by the King at Buda-Pesth on May 2, 1896, and was continued till Oct. 31. The most interesting part of the exhibition was the historical section, consisting of buildings of all centuries filled with historic treasures. One structure was a reproduction of the fortress of Buda in the time of the Turkish conquest. Hungarian and Transylvanian industrial products, the wares produced in Croatia and Slavonia, and all the agricultural resources of the country were fully exhibited. There was an ethnographical village illustrating the composite racial character of the thoroughly nationalized Hungarian population.

The earliest records of the Hungarian nation there preserved are in the works of a Byzantine and an Arab writer. According to them, the Magyars were a tribe of Turkish nomads who were driven from their own territory by their more powerful countrymen, and wandered westward until they reached Hungary by way of the lower Danube, being invited to settle there by King Arnulph of Bavaria, who desired their military assistance in his war against the Slavic King of Moravia. They continued to live in Hungary according to their primitive customs as nomadic warriors for nearly a century, making periodical raids in all parts of Europe and capturing numerous prisoners, whom they employed in agricultural labor while they remained the warrior caste and dominant race. It was toward the close of the tenth century that they embraced Christianity and blended together the various ethnical elements that had become resident in Hungary, thus constituting the Hungarian nation. It was this political evolution that was commemorated in the millennial festival. During the centuries that followed, the Magyar minority still continued to rule over the non-Magyar majority by force of their warlike character and genius for government, and by the aid of their free institutions and the hospitality that they extended to foreigners they succeeded in maintaining their power through many vicissitudes. The Christian armies stood as the sentinels of Western civilization, offering stubborn resistance to the inroads of Turkish hordes. If they had not borne the brunt and formed an effective bulwark against the barbarism of the East the progress and civilization of central

from domains. The expenditure is estimated for 1896 at 472,987,244 florins, of which 437,366,347 florins represent ordinary expenditures. Among these the sum of 128,983,143 florins is for expenses of the national debt, 13,679,305 florins for debts of guaranteed railroads acquired by the state, 558,008 florins for other guaranteed railroad debts, 8,145,999 florins for pensions, 40,535 florins for courts of law, 145,249 florins for the accountant general's office, 437,060 florins for the minister presidency, 8,167,539 florins for the administration of Croatia, 78,185 florins for the Cabinet chancery, 1,734,019 florins for the Parliament, 4,650,000 florins for the civil list, 71,592 florins for the ministry *ad latus*, 42,840 florins for the Ministry for Croatia, 15,870,734 florins for the Ministry of the Interior, 78,619,990 florins for the Ministry of Finance, 91,002,116 florins for the Ministry of Commerce, 16,828,693 florins for the Ministry of Agriculture, 10,957,694 florins for the Ministry of Instruction and Worship, 15,558,075 florins for the Ministry of Justice, 14,469,537 florins for the Ministry of National Defense, and 27,306,034 florins for the Hungarian quota of common expenditure. Besides the ordinary expenditure 9,372,-

continued to live in Hungary according to their primitive customs as nomadic warriors for nearly a century, making periodical raids in all parts of Europe and capturing numerous prisoners, whom they employed in agricultural labor while they remained the warrior caste and dominant race. It was toward the close of the tenth century that they embraced Christianity and blended together the various ethnical elements that had become resident in Hungary, thus constituting the Hungarian nation. It was this political evolution that was commemorated in the millennial festival. During the centuries that followed, the Magyar minority still continued to rule over the non-Magyar majority by force of their warlike character and genius for government, and by the aid of their free institutions and the hospitality that they extended to foreigners they succeeded in maintaining their power through many vicissitudes. If they had not borne the brunt and formed an effective bulwark against the barbarism of the East the progress and civilization of central

THE IRON GATE OF THE DANUBE, BELOW ORSOVA.

and western Europe would undoubtedly have been retarded for hundreds of years. But in consequence of being in perpetual readiness for war the intellectual condition of the nation remained backward until the wars ceased. During the last two centuries the people have developed in a remarkable degree. At the beginning of the nineteenth century the Magyar population of Hungary numbered only about 3,000,000, while to-day it exceeds 8,000,000. There is scarcely any trace left in the modern Magyar of his Asiatic origin, though he still retains those chivalrous and generous traits which assisted him in conquering and subordinating the various non-Magyar elements of the country, and which gave him that extraordinary power of absorption by means of which a handful of Asiatic wanderers has grown into a powerful nation.

Agricultural Congress.—The International Agricultural Congress held its sessions in Buda-Pesth from Sept. 17 to Sept. 20. The congress was arranged by the Hungarian Minister of Agriculture, who was president of the Executive Committee, and presided at the opening meeting. The object of the congress was, "considering the present depression of agriculture to be owing to the general decline in the prices of grain, to inquire into the causes of this decline, endeavoring at the same time to advise remedies for it." Its scope was amplified by the Executive Committee, which was composed of high Hungarian officials and members of public bodies, in a series of questions dealing with production, commerce and transport, customs, and currency. Twelve nations were officially represented, including Austria-Hungary, Belgium, Denmark, France, Germany, Italy, Netherlands, and Russia. There were delegates from the British Royal Agricultural Society and the Central Chamber of Agriculture, but no official representatives from Great Britain. The members of the congress numbered nearly 300, of whom a large proportion were Hungarians. The agricultural crisis was regarded as a

general crisis that had spared no country. Gambling in produce was generally condemned. Divergent views were expressed as to whether there is overproduction or not. The exports of wheat from the chief exporting countries were shown to have greatly increased in recent years. The English experts who contributed papers, Sir John Lawes and Sir Henry Gilbert, were of the opinion that in the case of some of the larger exporting countries the continuance of low prices and other adverse circumstances would probably retard extension in the near future, while in others extension seems more probable, even in spite of low prices; at any rate, there remained throughout the world great inherent capabilities for increased production that would be rapidly developed with rising prices. Louis Strauss enumerated among the various causes that have conspired to increase the world's production and to reduce prices: The abundance of capital and the reduction of the rate of interest; the application of the discoveries of science; agricultural progress and more intensive farming in the old countries; the multiplication of implements; the diffusion of highly productive seeds; the use of phosphates, permitting the cultivation of land formerly waste; the multiplication of the means of communication; the opening of new and shorter commercial routes; the use of the telegraph, economizing time, and intermediary agencies; the perfecting of navigation and the reduction of freights; the reduction of premiums for insurance; the construction of grain elevators; and the various facilities that enable capital to make three or four operations where formerly only one could be made, and so be content with less remuneration on each operation. High hopes were entertained by many members of the congress of the value of the law in Germany forbidding dealing in options and futures in the grain markets, which goes into effect in 1897. The advocates of the movement to suppress speculation in wheat, realizing that the passing of a law in one country,

however effectively it may act, will have comparatively little influence on the world's markets unless other countries follow suit, spoke very earnestly in favor of extending the legislation to all countries. Some extremists held the view that all speculation in commodities is immoral, and should be swept away, while a more numerous class suggested that the state should regulate the produce exchanges, with the view of reducing the evils existing in connection with them, but without interfering with ordinary trade. Some of the Austro-Hungarian and German members were in favor of a central European protective tariff union. The section that discussed currency was absorbed in bimetallism from

of the most-favored-nation clause in commercial treaties. The congress was precluded by its rules from taking any votes, or adopting a decision or resolution on any of the questions discussed, because it was from the intrinsic value of the arguments adduced, not the number of votes, that the solution of the vital questions under discussion was expected.

Peace Congress.—An International Peace Congress was opened at Buda-Pesth on Sept. 21. One of the resolutions was to exclude from all school-books anything calculated to foster a warlike spirit. Peace associations were requested by another resolution to endeavor to secure as members candidates for political offices. Another favored the establish-

ment of special bureaus for the exchange of children between various peoples, with the view of promoting closer union between nations. A committee was appointed to study the best means of transforming armies, and also the establishment of a universal language.

The Iron Gate of the Danube.—The task of regulating the Iron Gate of the Danube was intrusted to Austria-Hungary by the Treaty of Berlin.

MAP SHOWING LOCATION OF THE IRON GATE.

first to last. A number of the leading agrarian bimetallists joined in a message to the candidate of the silverite party for the presidency of the United States, promising that if he was successful they would use their influence to the utmost to bring about an international agreement to restore bimetallism in Europe. A letter from Lord Aldenham, President of the British Bimetallic League, regretting that he could not be present to impress "the importance to the end in view of the remonetization of silver, and its free coinage in the mints of the principal nations of the world at one and the same fixed ratio," was countered by a communication from the secretary of the Gold Defense Association, condemning bimetallism as "unsound in principle and financially wrong," and averring that the Brussels Monetary Conference proved that "Europe is opposed to international bimetallism." In the section that discussed customs, the idea of a Mid-European customs union, which has found individual advocates for several years past, was first formally presented. The idea is that the customs union shall comprise Austria-Hungary, France, Germany, Italy, and eventually Belgium and Holland. These countries are to have a common customs frontier for agricultural produce, and also a common settling place, Frankfort being suggested. This customs union might gradually develop, it was thought, into a political union, which would secure and enforce peace. Its friends were disappointed at the coldness with which their idea was received, especially on the part of the German agrarians, from whom they expected support. There appeared to be, however, a general feeling in favor of the abolition

The obstruction known as the Iron Gate lay between Alt-Orsova, in Hungary, and Gladova, in Servia. The work of removing the rocks and regulating the channel, which took several years to accomplish, was done successfully, and the river was opened to navigation with elaborate ceremonies by the Emperor Franz Josef on Sept. 27, 1896. The Emperor was accompanied by King Carol of Roumania, and King Alexander of Servia. The passage of the river at this point has always been difficult and dangerous for any craft, and altogether impracticable, during more than half the season, for boats drawing 5 feet. At no time has the river been navigable for boats drawing more than 6 feet between Bazias, where the river leaves the Hungarian plain, and the Iron Gate, 80 miles farther down. In this long stretch the river bed is cut transversely by beds of crystallized schists and granite, which cause dangerous rapids and shoals. Finally, the channel was barred by the Prigada reef, a wall 350 yards wide, emerging above the surface at low water, running near the left bank for a distance of nearly a mile, and then crossing diagonally to the right bank, just above Sibb. It is this wall, with smaller reefs, that constituted the Iron Gate proper, forming a dangerous cataract throughout its length. The improvements consisted in removing the obstructions between Bazias and the Iron Gate, and excavating a canal through the Prigada and other reefs, 2 miles long, 260 feet broad, and 10 feet deep, along the Servian bank, making the river navigable for the largest river steamers the whole way from the Black Sea up to Vienna. The entire work cost about \$10,000,000.

B

BAPTISTS. Statistics of the regular Baptist churches in the United States are published in the American Baptist Yearbook for 1896, of which the summary gives: Number of associations, 1,551; of ordained ministers, 27,774; of churches, 40,064; of members, 3,720,235; of Sunday schools, 23,302, with 163,570 officers and teachers and 1,779,886 pupils; increase by baptism during the year, 176,058; value of church property, \$81,648,246. Amount of contributions reported: For salaries and expenses, \$8,202,985; for missions, \$1,172,909; for education, \$141,719; miscellaneous contributions, \$2,337,504; aggregate of contributions, as footed up in the tables, \$11,755,119. Seven theological seminaries return 67 instructors and 1,002 pupils, of whom 990 are preparing for the ministry, with \$2,665,091 of endowments and \$3,774,850 of property; 36 universities and colleges, 807 instructors, 11,523 pupils, 1,180 of whom are preparing for the ministry, \$8,022,812 of endowments and \$22,722,163 of property; 29 seminaries for female education exclusively, 370 instructors, 3,824 pupils, \$1,248,855 of endowments, and \$4,063,297 of property; 64 seminaries and academies for young men and "coeducational," 530 instructors, 14,341 pupils, 350 of whom are preparing for the ministry, \$1,344,700 of endowments, and \$4,167,730 of property; and 33 institutions for negroes and Indians, 293 instructors, 5,326 pupils, 381 of whom are preparing for the ministry, \$117,500 of endowments, and \$1,398,830 of property; in all, 169 institutions, 2,067 instructors, 36,016 pupils, 2,910 of whom are preparing for the ministry, \$18,614,695 of endowments, and \$36,126,870 of property.

The statistical table of Baptists in the world gives: In North America (Canada, Mexico, the United States, Cuba, Hayti, Jamaica, and other islands and Central America), 41,227 churches, 28,475 ordained ministers, 184,539 baptisms reported, and 3,856,584 members; South America (Argentine Republic, Brazil, and Patagonia), 18 churches, 14 ministers, 133 baptisms, and 729 members; Europe (Austria-Hungary, Belgium, Denmark, Finland, France, Germany, Great Britain and Ireland, Holland, Italy, Norway, Roumania and Bulgaria, Russia and Poland, Spain, Sweden, and Switzerland), 3,965 churches, 3,121 ministers, 24,317 baptisms, and 454,520 members; Asia (Assam, Burmah, Ceylon, China, India, Japan, Orissa, and Palestine), 1,017 churches, 593 ministers, 4,997 baptisms, and 111,177 members; Africa (Central and Congo, South, and West, including Cameroons, St. Helena, and Cape Verde), 63 churches, 91 ministers, 379 baptisms, and 5,975 members; Australasia, New Zealand, and Tasmania, 230 churches, 153 ministers, 1,107 baptisms, and 18,089 members. Total for the world in 1895, 46,520 churches, 32,447 ministers, 215,472 baptisms, and 4,447,074 members; showing an increase during the year of 1,484 churches, 747 ministers, and 128,220 members, and a decrease of baptisms reported.

American Baptist Publication Society.—The seventy-second annual meeting of the American Baptist Publication Society was held at Asbury Park, N. J., beginning May 20. The Hon. Samuel A. Crozer presided. The receipts in the publishing department from rents, interest, etc., had been \$13,783; in the missionary department, \$121,455; and in the Bible department, \$11,558; making a total of \$146,796. The total amount of sales had been \$558,590, against \$532,763 in the previous year. The receipts in the missionary department were \$5,161 more than in the previous year. Seventy-four new publications had been issued. The so-

ciety had suffered a great loss by the burning of its principal business house in Philadelphia, Feb. 2, 1896, by which an immense amount of stock, books, plates, manuscripts, etc., was destroyed, including much that can never be replaced. The total of work in the missionary department showed that 86 missionaries and workers had been employed, under whose labors 50 churches had been constituted, 180 Sunday schools organized, and 442 persons baptized. Four "chapel cars" were in operation, in Minnesota, Texas, and Arkansas, and on the Pacific coast; through the work connected with which more than 4,000 conversions had taken place. A system of co-operation of this work had been entered upon with the State convention of Arkansas. An overture made to the Southern Baptist Convention that it put the publication of all its Sunday-school literature into the hands of the society had been declined. The Bible department had sent out a very large number of the Scriptures in various languages. The revision of some of the books of the Old Testament was completed. Others were nearly completed, and the society was expecting to print all these revisions as soon as they are finished.

Home Mission Society.—The seventy-fourth annual meeting of the American Baptist Home Mission Society was held at Asbury Park, N. J., May 25. The Hon. H. K. Porter presided. The total receipts for the year had been \$505,949; the expenditures had been \$488,189. The society had supported wholly or in part 1,147 missionaries and teachers, 13 of whom were in the Dominion of Canada, 26 in Mexico, 246 among the foreign populations, 43 among colored people, 23 among Indians, 20 among Mexicans, and the rest among Americans. It had aided in the maintenance of 35 established schools for the colored people, Indians, and Mexicans, and 15 day schools for the Chinese. The missionaries represented 17 nationalities or peoples, and had supplied 2,015 churches and out stations, and returned 54,509 church members, 6,258 received by baptism, 187 churches organized, 1,195 Sunday schools under their care, with 75,534 attendants, and \$92,719 of benevolent contributions. Special attention had been given to the plan of co-operation with Southern Baptists, white and colored; to work for the French Canadians in New England; and to the missions in Mexico. The plan of co-operation provided for the united action of the Home Mission Society, the Home Mission Board of the Southern Baptist Convention, and the white and colored conventions of every Southern State. The State conventions not having been parties to the original agreement had been treated with by correspondence, and the attendance of the field secretary upon meetings representing them. With the conventions that had adopted the plan and those which were preparing to do so, it was expected that within a year from the adoption of the plan by the society and the Southern Baptist Convention five white State conventions and four colored conventions would have entered into the arrangement; while several other State conventions, white and colored, had formally or informally indicated their desire for co-operation. The mission to the French Canadians in New England (now in its twenty-seventh year) had never before had so large and efficient corps of workers. This was due partly to the facilities afforded for the training of missionaries in the Newton Theological Institution. The interest of the New England Baptists in the evangelization of these foreign populations had greatly in-

creased during the past year. Steady advance was reported in Mexico. Several men were desirous of going there as missionaries, but the financial condition did not permit an enlargement of the work at present. The church-edifice department had aided in the erection of 93 meeting houses, and had aided other churches in embarrassed conditions. Its receipts had been \$22,926; the aggregate amount of its gifts to 54 churches was \$23,890, an average of \$442.41 to each church. The management of the eight higher schools and colleges had been directed first to providing the colored people with a suitably trained ministry. Besides the society's schools others had been established through the South, controlled by negro boards of trustees and taught almost exclusively by negro teachers; these had been assisted by the aid of a special contribution in such sums as were necessary to supplement the income received from the colored people, so as to maintain them in a fair degree of efficiency.

Missionary Union.—The American Baptist Missionary Union held its eighty-second annual meeting at Asbury Park, N. J., beginning May 22. Dr. H. F. Colby, of Ohio, presided. The treasurer of the society had received from all sources \$666,569, and had expended \$606,825, adding \$35,615 to the permanent funds. Despite all difficulties the appropriations for the year had been met, and the debt reduced \$26,129. Twenty-five new missionaries had been sent into the field. Four hundred and fifty-nine missionaries had been in service in the heathen field, with 1,543 native helpers. The missions returned 820 churches, with 98,030 members, 4,657 persons baptized during the year, and 1,136 schools with 27,628 pupils. The European missions returned 1,149 native preachers and helpers, 903 churches, 97,787 members, and 6,895 baptisms during the year. A committee appointed to confer with representatives of the women's societies concerning the election of women to the Executive Committee of the Union, reported that they found no general desire on the part of the women's societies for such representation, but rather a conviction that it would be unwise, and recommended that no further action be taken in the matter. A special report on finance related that it was of the utmost importance to the conduct of missionary affairs that the sum of \$600,000 should be received in the coming year from the gifts of the living, which would require an increase of 50 per cent. in contributions, and the increase could not be obtained unless better methods were adopted; that in view of this circumstance, it was not expedient to make a special effort at this time to liquidate the debt; that all moneys received from legacies and gifts designated for that special purpose be applied to that object; that in case the debt was increased it would be necessary to curtail the work, and recommended that steps be immediately taken toward the formation of a general commission, for the denomination, on the whole subject of Christian beneficence, to be known as the Commission on Systematic Christian Beneficence; that it be composed of three representatives, each one of whom shall be a general secretary of each of the three societies named, from each of the following organizations: the American Baptist Missionary Union, the American Baptist Home Mission Society, the American Baptist Publication Society, and the Baptist Young People's Union, together with the corresponding secretaries of the women's societies, both American and foreign; that the commission, serving three consecutive years, devote itself to the investigation of the whole question of denominational beneficence and the maturing of plans for a more systematic method of giving by the denomination as a whole for the denominational causes, and report progress

from time to time. This report, with further provisions for carrying out the plan outlined in it, was unanimously adopted.

Education Society.—The eighth annual meeting of the American Baptist Education Society was held at Asbury Park, N. J., May 25. Vice-President D. B. Purinton presided. The report showed that of \$62,602 added to the endowment of 14 colleges and seminaries the society had furnished \$15,257, while the institutions themselves had collected \$47,345. Including certain special grants made to Des Moines College, Iowa, the total appropriations of the society had been \$18,545. Apart from the society's work, several institutions of learning had been financially strengthened during the year. The resources of the University of Chicago had been increased more than \$2,000,000; and \$1,500,000 more were promised contingent upon the raising of an equal amount by the institution. The total of subscriptions and contributions received since 1889 was \$11,500,000. Columbian University, Washington, D. C., had nearly completed the effort to raise a guarantee fund of \$15,000 per year for five years for additional instructors and equipment. This was equivalent, for the time, to the income of \$300,000.

Women's Home Mission Society.—The nineteenth annual meeting of the Woman's Baptist Home Mission Society was held at Asbury Park, N. J., May 18. Mrs. J. N. Crouse presided. The total amount of receipts for the year had been \$66,275, or \$2,145 more than in the preceding year. The expenditures had been (including amounts unpaid) \$70,480. The value of the contents of boxes and barrels of clothing for missionaries' families, for distribution among the poor, and as material for industrial schools, was estimated at \$14,677. The Baptist Missionary Training School had graduated a class of 24 young women, two thirds of whom were under appointment before graduation. One hundred and thirty missionaries had been employed as follows: On the frontier, 19; to the Chinese, 7; to the Jews, 1; to Germans, 21; to Danes and Norwegians, 3; to Swedes, 10; to Indians, 13; to Mexicans, 6; to negroes, 52.

Historical Society.—The forty-third annual meeting of the American Baptist Historical Society was held in Asbury Park, N. J., May 21. The Rev. Lemuel Moss, D. D., presided. The principal event in the year's history of the society was the total destruction of its library and archives by the burning of the American Baptist Publication House in Philadelphia, Pa., Feb. 2. The society had for its new beginning \$2,500 insurance money and other funds sufficient to give it \$4,500 available for use. A committee was appointed to arrange for the publication of a series of studies of Baptist history.

Young People's Union.—The Baptist Young People's Union of America met in its sixth annual convention at Milwaukee, Wis., July 16. Mr. John H. Chapman presided. The report of the Board of Managers represented that the year had been one of growth in local organization, particularly in the Southern States. A corresponding interest was manifested in the formation of junior societies. It had been impossible as yet to secure a satisfactory enrollment of local organizations, but there was reason to believe that there were in the United States and Canada not less than 8,000 societies, with a total membership of more than 400,000; of which about 1,500 were junior societies with about 40,000 members. Forty-two State and provincial unions had been formed. The Christian Culture Courses which the Union prescribes to its members had met with great favor, and the board had thought it advisable to project three advanced courses, which would introduce those graduating from the existing

courses to the literature lying outside of their lines of popular reading. The examinations held in May had brought in 4,950 examination papers in the senior, and 6,495 in the junior department. For the first time examination papers had been received from missionary lands. The total receipts of the treasurer for the year had been \$62,611; that sum included \$2,892 for the Founding fund and \$45,702 for the "Baptist Union," a weekly journal which had been bought by the Union. The expenditures had equaled the receipts. The assets aggregated \$33,953, and were regarded as exactly equaling the liabilities. The proceedings of the meetings consisted mainly of conferences and addresses. The conferences included workers' conferences—on Temperance, on State and Provincial Unions, on Social Work, on Tracts and Publications, on Junior Work, on Instruction, and on Missions.

The educational plans of the Union contemplate eight years of training in three lines known as the Christian Culture Course, four years in the junior and four years in the senior departments. The courses are known as the Bible Readers' Course, the Conquest Missionary Course, and the Sacred Literature Course. The object of these courses is training for Christian service. It is contemplated that twenty minutes a day devoted to them will compass their requirements, which are a chapter a day in the Bible and the reading of about 1,200 words per week in missionary, and the same amount in sacred literature. Accessory readings in general literature are suggested, but not required. Examinations are held every year, open to all, and certificates are given to the successful candidates.

Southern Baptist Convention.—The fifty-first meeting of the Southern Baptist Convention was held in Chattanooga, Tenn., beginning May 8. The Hon. Jonathan Haralson, of Alabama, was re-elected president. The Foreign Mission Board reported that its receipts for the year had been \$102,056 and its expenditures \$105,118. Notwithstanding the expenditures had been reduced by \$5,000, the indebtedness amounted to \$26,093. The board for several years had given no money for buildings in foreign lands except what had been contributed for that purpose. Reports were made from missions in Italy, where, with 3 missionaries, there were 14 ordained Italian preachers, 21 churches, 56 out stations, and 79 baptisms during the year; Brazil, 5 missionaries and their wives, 6 ordained native preachers, and 273 baptisms during the year; Mexico, 19 missionaries, 6 ordained Mexican preachers, and schools for boys and for girls; Africa, 7 missionaries and their wives, some native assistants, and 51 baptisms; China (3 missions), 15 missionaries, 12 native ministers; and Japan, 3 missionaries and their wives, and 1 church with 40 members.

The Home Mission Board returned its year's receipts as \$75,927, as against \$76,771 in 1894. The debt of \$1,100 with which it began the year had been increased to \$7,950. The present estimated value of the board's property was \$104,580, it having increased \$5,150 during the year. Four hundred and eleven missionaries had been employed, serving 1,626 churches and stations, 5,617 persons had been baptized, 207 churches constituted, 92 houses of worship built, and 372 Sunday schools organized, with 12,635 teachers and pupils. The sum of \$86,209 had been expended on houses of worship. The Women's Mission societies had contributed \$33,542 to the funds of the board. The mission in Cuba had suffered in consequence of the disturbances on that island, and all the male missionaries had come away. The principal of the school, Rev. Dr. Diaz, had been arrested and imprisoned, but was afterward released and sent out of the country. The Sunday-school Board returned

as the result of its fifth year's work contributions to Sunday-school missions of \$1,715 in Bibles and literature and \$3,887 in cash. This made its gifts in four years to that object \$5,498 in Bibles and literature and \$14,297 in cash. This expenditure had touched every State within the constituency of the convention. During four years since the board first had an income it had received and applied for purposes of its work \$44,925. The efficient aid given it by the Woman's Missionary Union was acknowledged in the report. Reports were made concerning foreign populations in the United States, work among the Indians, work among the native whites of the South, and the mission in Cuba. A committee appointed to inquire into the relations existing between the Southern Baptist Theological Seminary and the convention reported that the convention had the power of making not less than 3 nominations for each professorship to be filled, from which the Board of Trustees should choose the professor; and, if it failed to act, at the next session after a vacancy took place the board could proceed to election without such nominations; in other respects the two bodies were independent of each other; and that the convention had no legal power to remove, for any cause, any trustee or professor of the seminary. As a matter of fact, the convention had never exercised the right of nomination. The trustees of the seminary had, however, at a recent meeting provided for giving notice to the convention's committee of the occurrence of any vacancies to which the convention had the right of nomination. A resolution was passed reiterating the "truceless and uncompromising hostility" of the body "to the manufacture, sale, and importation and transportation of alcoholic beverages in all their forms"; condemning as sinful and dishonorable the policy of issuing Government licenses to the traffic; advising opposition to the traffic by all legitimate means; and declaring it the sense of the body that all persons using liquors as a beverage or concerned in any way in the traffic are unworthy of Baptist fellowship.

German Baptists.—The German Baptists in the United States have five conferences—the Eastern, Central, Northwestern, Southwestern, and Texas—and a general conference. The last has a large publishing establishment at Cleveland, Ohio, which publishes books and tracts in the German language, and has had a satisfactory business, notwithstanding the financial depression. A co-operative relation with the American Baptist Publication Society has been determined upon. A weekly general newspaper is published in Cleveland, and a Young People's Journal in New York.

Colored Baptists.—The following are the statistics of the colored Baptist churches in America at the close of 1895, as reported by the statistical secretary to the National Convention in September: Number of State organizations, 18; of associations, 443; of ordained ministers, 12,833; of ordained ministers without charge, 1,640; of ordained ministers unable to read or write intelligibly, 1,488; of churches, 13,593; of members, 1,687,526, showing a gain over 1894 of 37,900; of baptisms during the year, 88,275; of Sunday schools, 10,485, with 545,849 pupils; of high schools and colleges, 55; of schools controlled by home-mission societies, 11; of schools controlled by colored Baptists, 44; of teachers, 273; of students, 6,484; of theological students, 422; amount of money expended for education, \$41,897; expended for missions, \$35,320; expended for miscellaneous purposes, \$210,794; value of church property, \$9,794,342; amount of endowments of educational institutions, \$254,000; value of school property, \$1,774,650; number of periodicals, 32.

The National Baptist Convention met in St. Louis in September. Among its most important acts was the adoption of a measure for establishing a publishing house, which was put in charge of the Home Mission Board, with power to perfect and carry out plans for raising the necessary funds for building. An appeal was addressed to Christians of all denominations to unite in efforts to have the Bible used in every public school. The convention decided that no minister should be recognized who divorced his wife for any other than a scriptural cause. A position of decided opposition to the liquor traffic was assumed; ministers were requested to preach against it persistently; and delegates were appointed to a convention of the Antisaloon League to meet in Washington in December.

Baptist Congress.—The fourteenth annual meeting of the Baptist Congress was held at Nashville, Tenn., Nov. 10-12. Prof. J. T. Henderson, of Tennessee, presided. The subjects were discussed of "How far has New Testament Precedent the Authority of Divine Command?" in papers by the Rev. C. L. Frost, D. D., Prof. H. H. Harris, D. D., Rev. T. D. Anderson, D. D., Rev. W. T. Stott, D. D., Rev. G. A. Lofton, D. D., and Rev. Norman Fox, D. D.; "Christianity and War," in which papers were read on "The Dangers of Militarism," by the Hon. J. L. M. Curry; "Is War ever Justifiable?" by Gen. T. J. Morgan (read in his absence); "International Arbitration," by the Hon. Morton B. Howell, T. A. K. Gessler, D. D., and Prof. H. H. Harris; "The Country Church," with papers and discussions by the Rev. W. L. Munger ("Pastoral Leadership"), Rev. J. H. Baldrige, Dr. J. T. Christian, Rev. J. O. Rust, Rev. A. J. Holt, Capt. M. B. Pilcher, and Dr. G. A. Lofton; "Is God the Father of all Men?" discussed by F. H. Rowley, D. D., Rev. George C. Baldwin, Jr., Dr. W. P. Leaman, George E. Horr, Jr., D. D., Dr. C. S. Gardner, and Rev. T. D. Anderson, D. D.; "The Relation of Baptists to other Denominations," by the Rev. L. A. Crandall, D. D., Rev. J. O. Rust, and the Rev. Norman Fox, D. D.; and "The Pastor as a Soul Winner," by the Rev. P. T. Hale, D. D., and the Rev. S. H. Greene, D. D.

Baptists in Canada.—The Baptist Convention of Ontario and Quebec met in its eighth annual session in Montreal, May 26. The Rev. T. S. Johnson was chosen president. The Church Edifice fund, with a capital of \$8,000, had received \$1,069 during the year, and had expended \$1,007. Several churches had reduced their loans, and others had paid off their indebtedness. The report on home missions showed that while in 1889 the convention, with 32,189 members, raised \$18,103 for this object, it now, with 40,965 members, raised \$25,158. The Church had grown at the rate of 1,500 members a year, and had added to its contributions at the rate of \$1,200 a year. Since 1889 41 churches had been organized, while 30 churches had become self-supporting. During the past year 95 missionaries and 50 students had been at work, 11 chapels had been built, 3 churches organized, 7 churches attained self-support, and 875 persons were baptized. The year's receipts for foreign missions had been \$30,252, and the expenditures \$35,459. Four hundred and fifty-five candidates had been baptized in the mission field. Self-support among the native Christians was rapidly increasing, and the aim was to make it universal. The income for the colleges had been \$15,504. The whole number of students was 405. The French mission school of the Grande Ligne Mission, 33 miles east of Montreal, had 120 boarders and 12 day pupils, and the graduating class numbered 5 boys and 2 girls. The convention visited the institute, which now occupies a five-story building, while the old hut in which Madame Feller lived for many years while doing the work of evangelization is still

standing. A collection was taken to help pay for the moving of this building to the grounds of the institute, where it will be preserved. Fifty Baptist churches were scattered over Manitoba, some of which were 180 miles apart. The working staff consisted of 33 pastors and 8 students, and services were held in 100 neighborhoods for 3,500 people. The income for the year had been \$8,400. A special mission had been established among the Indians near Portage la Prairie. Two strong churches had been established among the Germans in Manitoba, among whom the Baptists were the only evangelical body working. A Scandinavian Baptist Church had been formed in Winnipeg. The Sunday schools connected with the convention returned 4,086 teachers and officers, an enrollment of 37,256, and an average attendance of 25,398 pupils, and had raised \$17,891 including \$4,412 for missions.

The Baptists of the maritime provinces returned for 1895-96, 404 churches with 236 ordained ministers and 47,180 communicants. In 1895 the number of Sunday schools was 600, with 30,000 members. In the same year were reported 2,511 baptisms and \$140,000 of contributions from the churches for home work and \$22,000 for missionary purposes. Seventy-one churches, in which 456 persons were baptized, were served by home missionaries. Ten missionaries and 17 native helpers were employed in the foreign mission in India, where 17 converts were baptized in 1895. The convention met at Berwick, Nova Scotia, Aug. 26, with the Rev. G. O. Gates as president. The meetings of the Ministers' Institute, the Baptist Young People's Union, and the Women's Missionary Aid Society were held in connection with it. The latter society raises \$10,000 a year, which is appropriated to foreign and home missions. The affairs of Acadia College, which had 300 students, and of missions were considered. A special appeal was made in behalf of the missions among the Indians in the northwestern part of the Dominion, where, it was said, Henry Prince, a converted Indian, had during the past year baptized 112 persons of his race.

British Baptists.—The Baptist Union of Great Britain and Ireland met in London, April 27. The Rev. T. Vincent Tymms, President of Rawdon College, presided. The annual report of the council showed that £18,117 had been received during the year, including £8,415 for the Annuity fund (the capital of which was now £134,718), £2,699 for the Augmentation fund, £3,071 for home missions, and £2,190 for Church extension. The 87 mission churches themselves had raised £8,559 for their own denominational funds. Altogether £59,604 had been spent during the year on new chapels, £25,658 on improvements and school improvements, and £57,392 on the reduction of building debts. The number of members had risen from 349,688 to 353,967; of pastors in charge, from 1,913 to 1,935; of chapels, from 3,793 to 3,809; of pupils in Sunday schools, from 506,094 to 513,638; and of local preachers, from 4,643 to 4,645, while the number of baptisms had fallen from 17,626 to 15,795.

The report on home missions showed a deficit of £311, the subscriptions, collections, and donations of the year amounting to only £1,261. The expenditure on general account had been £3,382, including what associations and churches had contributed toward the payment of mission pastors' stipends. There were now 87 mission churches on the council's list, of which 48 were formed into 22 groups of 2 or 3 churches each; and 30 mission stations, with 54 mission pastors over the whole work. In the aided churches and missions were 4,532 communicants, 8,012 young people in the Sunday schools, and 793 in Bible classes. The mission churches had contributed £3,559 for various purposes. The

contributions to the Annuity fund were represented as being insufficient, in view of the increasing number of claimants upon it, to maintain the present annuities of £45 to retired ministers and £33 to widows; and the assembly recommended that an effort be made at the earliest possible moment to increase the Voluntary fund to £100,000. The Executive Board, having been commissioned a year previously to consider how to secure a closer fellowship between the churches and to guard against the admission of ministers weak in doctrine, reported, affirming the necessity of safeguarding the right of the churches to appoint their own pastors, and of not discouraging young men marked out by special gifts; but also pointing it out as desirable that any man seeking entrance to the ministry should receive thorough and effectual training at some proper college; and recommended the appointment of a special committee charged with the duty of ascertaining the qualifications of candidates for recognition as Baptist ministers, with other provisions for carrying out the purpose in view. The report was adopted. Concerted opposition by the congregations and appeals to Parliament against the pending Education bill were advised. An appeal was directed to be made to the Emperor of Russia to use his influence to prevent the continued massacre of Armenian fellow-Christians. The loans granted during the year by the Baptist Building fund had amounted to £12,730, the largest sum ever advanced. The assistance given had been shared by 40 churches.

The seventy-first annual report of the Baptist Building fund showed that 40 loans had been granted, in amounts varying from £60 to £500, and that the total amount, £12,730, largely exceeded the grants voted in any previous year. The capital of the fund was now £51,514, showing an increase of £71, which the committee considered unsatisfactory in view of the continual falling off in receipts. This decrease was evident under all heads except that of congregational collections. The aggregate amount of loans since the foundation of the fund now exceeded £250,000, but the need was still great, and they had before them 25 cases desiring assistance to the extent of £9,200.

The ordinary income for the year of the Bible Translation Society had been £1,483, besides which £589 had been received from legacies. After a grant of £1,000 to the Baptist Missionary Society and other payments, a balance of £61 remained.

At the annual meeting of the Baptist Book and Tract Society the changes made in the previous year in the constitution of the body in order that it might secure the support and confidence of the whole denomination were represented to have been justified by the result. An arrangement by which the society was made an agent of the American Baptist Publication Society had been successful.

The autumnal meeting of the Union was held in Bristol, and was mainly devoted to addresses relating to the condition, prospects, and various interests of the churches. In a resolution rejoicing at defeat of the Education bill, the "emphatic protest" of the Union "was renewed against any further subsidies to sectarian schools under private management, and its demand that all schools supported by public moneys shall be subject to local and effective public control"; and recording "its solemn determination to accept no settlement of the educational controversy as final until a school under public control is placed within the reach of every child in the kingdom and the teaching profession in state-aided schools is as open to nonconformists as to the adherents of the Established Church." A committee was appointed to co-operate with similar committees of other denominations in ascertaining the number of noncon-

formist children in sectarian schools. A resolution was passed urging such reconsideration by the Government of its recent policy in Egypt and Cyprus, which had "naturally awakened the distrust and dislike of Europe," and assuring the ministers that any well-advised effort to terminate the misrule in Turkey would be supported. Another resolution favored the introduction into the next Parliament of a Sunday-closing bill and a bill for the earlier closing of public houses on Saturday nights.

The annual report of the Baptist Missionary Society showed that its year's income had been £74,816, the highest ever recorded. The deficit of the previous year—amounting to £22,593—had been met by special contributions, the proceeds of a legacy and £15,803 from the Centenary fund. Of this fund, £36,731 remained in hand, most of which had been allotted as follows: £26,000 to the Additional Missionaries' fund; £7,249 for buildings at various stations; and £3,390 for the training and equipment of native agents and for Scripture translation. The society sustained 74 missionaries and 121 native evangelists in India, 4 missionaries and 26 native evangelists in Ceylon, 21 missionaries and 40 native evangelists in China, 1 missionary in Palestine, 32 missionaries on the Congo, 6 missionaries and 155 native evangelists in the West Indies, 1 missionary and 4 evangelists in Brittany, and 6 missionaries and 14 evangelists in Italy.

The balance sheet of the zenana mission showed that the general subscriptions and donations for the year had amounted to £7,579, the highest figure yet reached, which had been sufficient, with the exception of a balance of £35 due the treasurer, to meet the expenditure and remove the previous deficiency. In India the work had been carried on at 25 stations, besides a group of villages south of Calcutta, with a staff of 52 missionaries and 200 Bible women and school-teachers, in about 80 schools having more than 2,000 children in attendance. Twelve hundred zenanas had been visited and Bible lessons given in hundreds of houses. In China 4 missionaries had carried on steady work at Tsing-Chou-Fu and Chou-king, but chiefly in the study of the language.

Baptists in Russia.—The Baptist churches in Russia have been formed into a union, comprising the old associations of the Baltic, Poland, west Russia, and south Russia, and the unattached churches of St. Petersburg and 4 other cities. In all they number 94 churches, with 96 ministers, 380 preaching stations, 18,098 members, including 1,136 received during the year, 126 Sunday schools, with 363 teachers and 4,634 pupils. The gifts of the churches in the past year amounted to 52,312 rubles.

BELGIUM, a constitutional monarchy in western Europe. The Senate has half as many members as the House of Representatives, and a term twice as long. The senatorial electorate is a select class, consisting only of citizens who have real property worth 12,000 francs a year or pay 1,200 francs of direct taxes, while 26 Senators are chosen by the provincial councils. The house contains 1 member to every 40,000 of population, elected for four years under the revised Constitution of 1893 by a plural system of voting. Every male citizen twenty-five years of age resident in the district has one vote, and those who have families or possess a certain small amount of real estate or have received an academic diploma or held office have the right to additional votes for these qualifications.

The reigning King is Leopold II, born April 9, 1835, son of Leopold I, the first King of the Belgians, previously the Prince of Saxe-Coburg and Gotha, who died on Dec. 10, 1865. The heir presumptive is Prince Albert, born April 8, 1875, son of Philippe, Count of Flanders, the King's brother.

The Cabinet, which is collectively and individ-

ually responsible to the Chambers, consisted in the beginning of 1896 of the following members: President of the Council and Minister of Foreign Affairs, J. de Burlet; Minister of Finance, P. de Smet de Nayer; Minister of Justice, V. Begerem; Minister of War, Gen. J. J. Brassine; Minister of Railroads, Posts, and Telegraphs, J. H. P. Vandennepereboom; Minister of the Interior and Public Instruction, M. Schollaert; Minister of Agriculture and Public Works, L. de Bruyn; Minister of Industry and Labor, M. Nyssens. This ministry was constituted on Oct. 26, 1884, after the electoral defeat of the Cabinet of M. Frère-Orban, which organized secular education. On May 25, 1895, M. de Burlet assumed the portfolio of Foreign Affairs, previously held by the Count de Mérode-Westerloo, giving up the portfolio of the Interior and Education to M. Schollaert, while M. Nyssens entered the Cabinet in the newly created post of Minister of Industry and Labor. M. de Burlet resigned the premiership and M. de Smet de Nayer was appointed President of the Council on Feb. 26, 1896, retaining the Finance portfolio, that of Foreign Affairs being given to Baron Favereau.

Area and Population.—In proportion to its area, which is now 11,373 square miles, Belgium has the largest population of any country in Europe except Saxony, numbering 6,341,958 on Dec. 31, 1894. The two sexes were almost equal, 3,163,997 males to 3,177,961 females. The number of marriages in 1894 was 47,735; births, 181,466; deaths, 118,213; surplus of births, 63,253. Immigration exceeded emigration in that year by 6,333. Brussels, the capital, had a population of 507,985, inclusive of suburbs; Antwerp, 256,620; Liège, 160,848; Ghent, 155,746.

Finances.—The revised budget for 1896 makes the total ordinary revenue 355,609,678 francs, of which 25,111,000 francs are derived from property taxes, 19,480,000 francs from personal taxes, 7,000,000 francs from trade licenses, 800,000 francs from mining royalties, 26,172,133 francs from customs, 42,317,296 francs from excise, 20,525,000 francs from succession duties, 19,850,000 francs from registration duties, 6,000,000 francs from stamps, 5,758,000 francs from various other indirect taxes, 144,000,000 francs from railroads, 6,200,000 francs from telegraphs, 13,272,300 francs from the post office, 1,565,000 francs from navigation dues, 3,215,500 francs from domains and forests, 10,195,400 francs from funds and securities, 3,818,049 francs from repayments, and 330,000 francs from exceptional sources. The total ordinary expenditure is estimated at 354,309,122 francs, of which 104,562,885 francs are for interest and sinking fund of the public debt, 4,830,760 francs for the civil list and dotations, 20,007,090 francs for the Ministry of Justice, 2,552,610 francs for the Ministry of Foreign Affairs, 24,738,458 francs for the Ministry of the Interior and Public Instruction, 19,737,033 francs for the Ministry of Public Works, 106,733,614 francs for the Ministry of Railroads, Posts, and Telegraphs, 47,282,702 francs for the Ministry of War, 17,496,220 francs for the Ministry of Finance, 4,680,750 francs for the gendarmerie, and 1,687,000 francs for repayments.

The public debt amounts to 2,215,376,147 francs, bearing $3\frac{1}{2}$ and 3 per cent., except 219,959,632 francs, which is the Belgian share of the debt of the old kingdom of the United Netherlands, from which Belgium separated in 1830. On this part $2\frac{1}{2}$ per cent. interest is paid, and the interest and sinking fund of the main debt are more than covered by the earnings of the railroads for which the principal loans were contracted.

Commerce.—In the general commerce of 1894 the imports were valued at 2,703,080,783 francs, and

the exports at 2,424,560,429 francs. The imports by sea were 1,303,816,413 francs, and by the land frontiers 1,399,264,370 francs in value; the exports by sea 1,051,239,594, and by land 1,373,320,835 francs. The imports for home consumption in 1894 amounted to 1,574,500,000 francs; exports of Belgian products, 1,303,700,000 francs; transit trade, 1,120,900,000 francs. The values of the principal special imports were as follow; Cereals, 258,225,000 francs; textile materials, 140,561,000 francs; chemicals and drugs, 88,957,000 francs; minerals, 71,965,000 francs; timber, 68,594,000 francs; gums and resins, 67,280,000 francs; woolen, cotton, and silk fabrics, 57,687,000 francs; oil seeds, 55,423,000 francs; coffee, 54,522,000 francs; hides, 52,174,000 francs; metals, 44,340,000 francs; animal products, 39,787,000 francs; live animals, 35,557,000 francs; meat, 27,035,000 francs; wine, 26,173,000 francs; coal and coke, 21,206,000 francs; flour, 20,166,000 francs; linen, cotton, and woolen yarns, 19,723,000 francs; fertilizers, 18,522,000 francs; machinery, 17,181,000 francs; butter, 15,378,000 francs; tobacco, 11,111,000 francs. The principal exports of Belgian produce and manufactures and their values were as follow: Yarns, 87,937,000 francs; coal and coke, 76,245,000 francs; cereals, 73,690,000 francs; machinery and carriages, 68,446,000 francs; chemicals and drugs, 61,437,000 francs; raw textiles, 59,388,000 francs; textile fabrics, 57,074,000 francs; steel, 56,624,000 francs; leather, 55,712,000 francs; iron, 50,761,000 francs; glass, 50,324,000 francs; meat, 44,649,000 francs; sugar, 39,785,000 francs; animal products, 34,678,000 francs; zinc, 30,062,000 francs; fertilizers, 27,856,000 francs; oil seeds, 26,223,000 francs; horses, 23,579,000 francs; minerals, 22,601,000 francs; bitumen, 19,092,000 francs; colors and dyes, 17,997,000 francs. The values of the special imports from and exports to the principal commercial nations were in 1894, in francs, as follows:

COUNTRIES.	Imports.	Exports.
France.....	282,009,000	285,481,000
Germany.....	184,687,000	294,201,000
Great Britain.....	177,702,000	235,452,000
Netherlands.....	174,353,000	154,518,000
United States.....	125,945,000	42,252,000
Russia.....	105,408,000	21,608,000
Argentine Republic.....	89,514,000	13,550,000
British India.....	76,312,000	15,851,000
Roumania.....	68,656,000	11,552,000
Sweden and Norway.....	47,163,000	14,180,000
Brazil.....	43,243,000	11,446,000
Italy.....	23,995,000	23,313,000
Spain.....	16,173,000	22,626,000
Peru.....	32,640,000	1,089,000
Chili.....	22,120,000	6,469,000
Switzerland.....	5,400,000	27,748,000
Australia.....	17,188,000	4,069,000
Egypt.....	3,642,000	11,508,000

Navigation.—During 1894 there were 7,727 vessels, of 6,513,730 tons, entered and 7,273, of 6,542,962 tons, cleared at Belgian ports. Of the total tonnage entered, 2,434,663 tons represent 3,834 vessels arriving from British ports, and 538,486 tons 244 vessels from American ports; of the clearances, 4,266 vessels, of 3,860,998 tons, were bound for England and 225, of 502,329 tons, for the United States.

The commercial marine of Belgium in 1894 consisted of 5 sailing vessels, of 917 tons, and 50 steamers, of 78,272 tons; total, 55 vessels, of 79,189 tons.

The Army.—Every Belgian is liable to be drawn for military service at the age of twenty years, but he may pay for a substitute a price not in excess of 1,800 francs. By conscription and voluntary enlistment the strength of the active army is constantly kept up to about 13,300 men with the colors.

The nominal period of active service is eight years, but after serving from twenty-eight to thirty-six months the men are allowed to take indefinite leave of absence on condition that they report for exercise once a month if they belong to the infantry, Cavalrymen, however, must serve four years. The strength of the army on the peace footing was in 1895 as follows: General staff, 79 officers; provincial staff and fortress commands, 39 officers; infantry, 1,927 officers and 27,885 men; cavalry, 376 officers and 5,820 men; artillery, 469 officers and 8,501 men; engineers, 95 officers and 1,637 men; administrative, sanitary troops, instructors, and train, 460 officers and 2,343 men; gendarmerie, 60 officers and 2,462 men; total, 3,505 officers and 48,648 men. There are 7,200 horses for the troops and 1,636 for the gendarmerie. The number of guns is 200 in peace and 40 more for war. The army on a war footing has the same number of officers and 163,000 rank and file, exclusive of the civic guard, which numbers 42,732 men.

Communications.—The railroads in operation at the beginning of 1895 had a total length of 2,820 miles, of which 2,025 miles were state railroads and 795 were operated by companies. The state railroads carried 74,773,172 passengers, who paid 51,539,763 francs. Their gross earnings were 152,974,889 francs, and expenses 86,537,469 francs. Their total cost was 1,392,564,484 francs, and their net earnings from 1835 amounted to 1,441,156,021 francs and the financial charges to 1,380,589,648 francs. The receipts of the companies' lines in 1894 were 41,591,780 francs, and expenses 20,086,984 francs.

The telegraph lines have a total length of 3,982 miles, with 19,564 miles of wires. There were 8,307,193 messages sent in 1894, including official and service dispatches. The receipts were 3,584,446 francs, and expenses 4,764,776 francs.

The postal traffic in 1894 was 105,197,611 private and 20,578,796 official letters, 42,502,135 postal cards, 82,263,614 printed packets, and 103,449,177 newspapers. The receipts were 19,223,437 francs, and expenses 10,330,850 francs.

Currency.—From 1832 to 1894 the Belgian mint coined 598,642,745 francs of gold, 556,342,745 francs of silver, and 17,671,784 francs of copper and nickel. No money has been coined recently. The national bank, with a capital of 550,000,000 francs, established in 1850, acts as the cashier of the state in addition to carrying on the usual banking business, and has the privilege of emitting notes, of which 469,662,000 francs were in circulation in 1894, with a metallic reserve covering all but about 54,000,000 francs. The gold coin in actual circulation was estimated at 54,000,000 francs and silver coin at 54,900,000 francs. Of the silver fractional coins circulating in 1893 (coins below 5-franc pieces), 43½ per cent. were of Belgian mintage, 34 per cent. French, 18 per cent. Italian, and 4½ per cent. Swiss, with a few Greek pieces. The Premier and Minister of Finance, M. de Smet de Nayer, in the course of a debate raised by Deputy de Borchgrave, of Brussels, on March 15, 1896, with reference to the evils alleged to have been engendered by the depreciation of the silver currency in 1873, declared that he recognized the gravity of the evils set forth, and, while considering that it was not incumbent on Belgium to take the initiative in the organization of an international conference upon bimetalism, he could promise that the Belgian Government would willingly co-operate in any measures having for their object the establishment of a stable ratio between gold and silver. M. Montefiore-Levi subsequently interpellated the Premier on his speech as denoting a ministerial pledge in favor of bimetalism. The minister ex-

plained that he had only meant to affirm his belief that the depreciation of silver, favorable to agricultural countries across the ocean, but prejudicial to industrial nations in Europe, exercised a disturbing influence upon prices, in relation to which, whatever might be said to the contrary, wages had not risen in proportion; and furthermore to express his opinion, without implicating the Government, that Belgium, while not in a position to take the initiative, might adhere to an international agreement on the subject.

Elections.—In the elections held in July, 1896, the Catholics retained their majority in 7 provinces out of 9, but lost the province of Brabant. The Socialists kept their majority in the province of Liège and gained 2 seats at Soignies, in the province of Hainaut; while they lost 3 seats at Seraing and 5 at Mons, which had been centers of political and industrial strikes. The elections at Malines were canceled by the Government, upon the ground of bribery and corruption resorted to by the Liberals. The Socialist leader Anseele declared in the Chamber that the Labor party was resolved to have a voice in all the political assemblies of the country with the object of accomplishing the triumph of the cause of the working classes by legal means and without resort to violence; but he complained of the obligation imposed upon labor representatives of recognizing a monarchy which they did not acknowledge, their aim being to establish a republican form of government in place of the monarchy. For this speech he was reproved by M. Beernaert, president of the Chamber, who observed that, whatever might be the changes foreseen in the Constitution, the existing one must be respected as long as it endured, and while the monarchy existed it was not permissible to plead the cause of a republic in the councils of the nation. The elections in Brussels and Antwerp were only completed by rebalots on account of the triangular contests between Liberals, Catholics, and Socialists. English trades-unionists and labor members of Parliament who went to Belgium during the summer for the purpose of fomenting an international strike of dock laborers and organizing a union among sailors and firemen were expelled from the country by the police.

BIRD DAY, a holiday or festival established in certain localities in the United States for the preservation of birds. It follows, in many respects, the precedent of Arbor Day, established for the planting and protection of trees. The first observance of Bird Day was in Oil City, Pa., May 8, 1894; since that date the observance has become general throughout the United States, and legislation is preparing in several of the States to give the day official recognition. It is probable that the day will soon be very generally observed, because the same influences that made Arbor Day what it is are now enlisted in the cause of a Bird Day. Among the influences noted perhaps the most prominent name is that of the Hon. J. Sterling Morton, United States Secretary of Agriculture, who first suggested Arbor Day, twenty-five years ago. In July, 1896, he distributed very widely a circular approving the plan and suggesting how it can best be carried out. The following is a brief extract from the circular: "From all sides come reports of a decrease in native birds, due to the clearing of the forests, draining of swamps, and cultivation of land, but especially to the increasing slaughter of birds for game, the demand for feathers to supply the millinery trade, and the breaking up of nests to gratify the egg-collecting proclivities of small boys. An attempt has been made to restrict these latter causes by legislation. Nearly every State and Territory has passed game laws,

and several States have statutes protecting insectivorous birds. Such laws are frequently changed, and can not be expected to accomplish much unless supported by popular sentiment in favor of bird protection. This object can only be attained by demonstrating to the people the value of birds, and how can it be accomplished better than through the medium of the schools? . . . It is believed that Bird Day can be adopted with profit by schools of all grades, and the subject is recommended to the thoughtful attention of teachers and school superintendents throughout the country, in the hope that they will co-operate with other agencies now at work to prevent the destruction of our native birds."

So far as observed, the exercises for Bird Day in the schools have consisted of original compositions on birds, of talks by pupils and teachers on the haunts of birds, of drawings on the blackboards, and of appropriate recitations. Many of the schools have also closed the exercises of the day with a trip to the woods for a study of the life and the songs of the birds.

BOLIVIA, a republic in South America. The legislative power is vested in a Congress composed of a Senate of 16 members and a House of Representatives containing 64 members, elected by all male Bolivian citizens who are able to read and write. Moriano Baptista was elected President for the four years ending in August, 1896. His Cabinet in the beginning of the year was: Foreign Affairs, E. Cano; Finance, T. Schazon; Interior, M. D. Medina; Justice, J. V. Ochoa; War, L. Paz.

Area and Population.—The area of the several departments and their population, according to the official enumeration made between 1890 and 1894, are given in the following table, not including the savage aborigines:

DEPARTMENTS.	Square miles.	Population.
La Paz.....	171,200	593,779
Oruro.....	21,331	189,840
Potosi.....	52,084	360,400
Santa Cruz.....	126,305	112,300
Tarja.....	84,599	89,650
Beni.....	100,551	26,750
Chuquisaca.....	89,871	286,710
Cochabamba.....	21,417	360,320
Total.....	567,360	2,019,549

The number of uncivilized Indians is estimated at 250,000. Of the civil population about one half is of pure Indian blood, one quarter of mixed race, and one quarter pure Spanish. The littoral department, 29,910 square miles in extent, containing the port of Antofagasta, was retained by Chili as a pledge after the war of 1879-'80, in which Bolivia sided with Peru.

Finances.—The revenue for the fiscal year 1894-'95 was estimated at 5,670,790 bolivianos, and the expenditure at 6,077,264 bolivianos. The external debt consists mainly of claims made by mining companies for losses incurred during the war with Chili. Of such claims the Government in 1879 allowed 6,550,829 bolivianos, the payment of which is secured by the share of the customs duties of the port of Arica that Chili agreed to pay to Bolivia after occupying that territory, formerly a part of Peru. This share is 40 per cent. Railroad companies have raised claims against the Bolivian Government amounting to 3,065,000 bolivianos on account of obligations undertaken toward them and never fulfilled. The foreign debt outstanding at the end of 1894 was stated to be 2,000,000 bolivianos, not including these disputed claims. The internal debts amounted to 4,428,705 bolivianos. The boliviano, equivalent to the 5-franc piece, has not been coined of late at the Potosi mint, which

only issues subsidiary coins containing 8 per cent. less than the standard amount of silver. No gold pieces have been struck for many years.

Commerce and Production.—The foreign trade of Bolivia passes through the ports now occupied by Chili and to a small extent through the Argentine Republic by way of Salta. Hence there are no official reports of the exports and imports. The total value of imports in 1894 was estimated at 6,800,000 bolivianos. The import trade is largely in the hands of Germans, who deal in both German and British goods. The chief articles of import are provisions, hardware, wines and spirits, ready-made clothing, and cotton, woolen, linen, and silk fabrics. The chief exportable product is silver, of which was shipped abroad in 1894 the value of 39,062,500 bolivianos out of total exports valued at 49,562,500 bolivianos. The quantity of silver exported was 15,000,000 ounces; of tin and tin ore, 4,000 tons; of copper, 3,000 tons; of rubber, 800 tons. The rubber goes down the Amazon and is exported as Pará rubber. Other exports are wool, hides and skins, gold, coffee, cacao, and cinchona.

Communications.—The railroad from the port of Antofagasta to Uyuni, with a branch to Huanacabo, now extended to Oruro, is the only completed line, of which nearly 500 miles are built on Bolivian soil. It is proposed to extend this line from Oruro to Cochabamba, to build a branch from Challapata to Potosi, and carry a line from Uyuni to the Argentine frontier. Concessions have been granted also for railroads connecting Mollendo with Puno, on Lake Titicaca, Santa Cruz with the river Paraguay, and La Paz with the Peruvian frontier. The total length of telegraphs is 2,000 miles. The postal traffic in 1893 comprised 1,532,458 domestic letters, newspapers, etc., and 420,579 foreign ones.

Presidential Election.—The President in Bolivia is elected by popular vote. The voting population, however, is not large. Only a small proportion of the Indians and mestizos possess the simple educational qualifications, although elementary education is free and nominally obligatory. The election of President Baptista's successor took place in May, 1896. Fernandez Alonzo was the candidate approved by the Government. The opposite party set up Gen. Pando. When Alonzo was declared elected complaints were made that the Administration had tampered with the returns in such a way as to change the actual result of the voting at the polls. At the beginning of July an outbreak occurred in Sucre in the interest of Gen. Pando, but this movement was suppressed forthwith, as the chiefs of the army sided with the Government. President Alonzo was duly inducted on Aug. 20. He appointed the following Cabinet: Foreign Affairs, Gomez; Interior, Sanguinez; War, Oblitas; Justice, Pinilla; Finance, Gutierrez. The new President had explanations to make concerning the killing of the Chilean minister, Juan Gonzalo Matta, who was shot by José Cuellar in a private quarrel. A controversy with the Argentine Republic over boundaries was brought to an issue by the occupation of the territory of San Antonio. The Argentine Government in November demanded that Bolivia evacuate this territory.

BRAZIL, a federal republic in South America, established after the fall of the Emperor Dom Pedro II, who abdicated on Nov. 15, 1889, and proclaimed by the Constitutional Assembly on Feb. 25, 1891, at the end of a civil war. The Senators, 3 from each State and 3 from the capital, are elected for nine years, one third retiring every third year. The Chamber of Deputies has 205 members (1 to every 70,000 of population), elected for three years. The President and Vice-President, who hold office for four years, are elected, as well as the members

of both houses of Congress, by the direct suffrage of all male Brazilian citizens over twenty-one years of age who are able to read and write or pay taxes or exercise a trade or profession.

Dr. Prudente José de Moraes was elected President by popular suffrage, and succeeded Marshal Floriano Peixoto on Nov. 15, 1894. Manoel Victorino Pereira was elected Vice-President. The Cabinet at the beginning of 1896 consisted of the following members: Foreign Affairs, Dr. Carlos A. de Carvalho; Finance, Dr. F. de P. Rodriguez Alves; Industry, A. Olyntho dos Santos Pires; Interior and Justice, Dr. A. G. Ferreira; War, Gen. Bernardo Vasques; Marine, Admiral Elisario J. Barbosa.

Area and Population.—The estimated area of Brazil is 3,209,878 square miles. The results of the census of 1890, as far as they are completed, are given in the following table:

STATES.	Square miles.	Population.
Amazonas.....	732,460	147,915
Pará.....	443,653	351,096
Maranhão.....	177,556	490,854
Piauhý.....	116,218	267,609
Ceará.....	40,253	501,657
Rio Grande do Norte.....	23,195	268,373
Parahýba.....	28,854	457,232
Pernambuco.....	49,025	1,030,324
Alagoas.....	32,553	511,440
Sergipe.....	7,370	310,926
Bahia.....	164,649	1,821,089
Espirito Santo.....	17,312	135,997
Rio de Janeiro.....	26,634	876,884
Federal District.....	538	522,651
Santa Catarina.....	27,436	283,769
Rio Grande do Sul.....	91,325	890,647
Minas Gerães.....	222,160	3,018,807
Matto Grosso.....	532,708	92,827
Goyaz.....	288,546	237,572
Paraná.....	85,453	249,491
Sao Paulo.....	112,330	1,371,278
Total.....	3,209,878	14,068,268

The figures given for Bahia and Minas Gerães are estimates made in 1888. The number of tribal Indians is estimated at 600,000 for the whole of Brazil. At the census of 1872, when the total settled population was returned as 10,042,458, though this was an imperfect enumeration, it was divided into 3,787,289 whites, 3,801,787 mestizos, 1,954,452 negroes, and 386,955 Indians. The population of Rio de Janeiro in 1890 was 522,651; of Bahia, or San Salvador, 200,000; of Pernambuco, 192,000; of Sao Paulo, 100,000; of Belem, 65,000; of Porto Alegre, 55,000.

From 1871 to 1889 the immigration into Brazil was 491,719. Since then the annual influx has been: 65,161 in 1889, 85,172 in 1890, 218,939 in 1891, 86,513 in 1892, 84,143 in 1893, 63,294 in 1894. In 1890 emigrants returning to Europe numbered 8,862; in 1891, 993; in 1892, 16,776; in 1893, 17,525. Disappointment and distress caused the heavy reflux movement in the latter years; yet, in spite of the miseries undergone by many of their compatriots, the constant stream of Italians and recently of Austrians also continues to flow toward Brazil, where land may be acquired at a nominal price, and the possibilities of remunerative agriculture are greater than in Europe. Among the immigrants in 1894 Italians numbered 37,266; Portuguese, 17,251; Spaniards, 6,497; Germans, 812; Austrians, 754; French, 310; English, 91. Fifteen foreign colonies, numbering 108,000 persons, have been settled by the colonization department of the Federal Government in Rio Grande do Sul on 562,400 hectares of land, of which 220,050 hectares are cultivated. Immigrants from Portuguese and Spanish islands and colonies, as well as from European countries, are brought by a company which undertook in 1893 to import 1,000,000 such colonists within ten years. Chinese and Japa-

nese immigration was sanctioned by the law of September, 1893. The oldest and most prosperous of the foreign settlements in Rio Grande do Sul are those of the Germans. But these have not grown like the Italian colonies because since 1859 emigration from Prussia to southern Brazil has been forbidden. In August, 1896, the prohibitory rescript was abrogated, and immediately three large Hamburg companies acquired a large tract of land in Santa Catarina with the object of founding a German colony that is intended to form a center of attraction for the overflow population of the fatherland, where German customs and traditions will be preserved, and in time a fresh market for German goods developed. Agents for a Brazilian vessel canvassed in the summer of 1896 to secure emigrants in Canada for Brazil. About 1,000 people engaged passage; but the representations made by Government officials, the clergy, and the press of the dangers into which they ran by going to Brazil deterred many from carrying out their intentions, so that when the vessel sailed from Montreal she carried only 400 emigrants—married adults with their children, mostly French Canadians, with a sprinkling of other nationalities.

Finances.—The revenue for 1895 was 280,974,579 milreis, including only actual receipts, not collectable dues that were expected to bring the amount up to 291,000,000 milreis. The expenditure in 1895 amounted to 275,396,545 milreis. The budget for 1896 makes the total receipts 300,884,000 milreis, of which import duties produce 225,100,000 milreis; navigation dues, 750,000 milreis; railroads, 38,000,000 milreis; posts and telegraphs, 7,100,000 milreis; stamps, 8,250,000 milreis; Rio waterworks, 1,200,000 milreis; lottery tax, 1,000,000 milreis; various national properties, 5,079,000 milreis; tobacco duty, 1,200,000 milreis; extraordinary sources, 8,205,000 milreis; and deposits, 5,000,000 milreis. The total expenditure for 1896 was estimated at 296,028,078 milreis, apportioned among the departments of the administration as follows: Interior and Justice, 16,325,507 milreis; Foreign Affairs, 1,866,222 milreis; Marine, 25,177,153 milreis; War, 48,122,402 milreis; Industry, 97,617,086 milreis; Finance, 106,919,708 milreis. There was a deficit of 50,189,000 milreis in 1892, another of 39,936,856 milreis in 1893, and one of 20,821,402 milreis in 1894. A deficit of 35,000,000 was expected in 1895, but an improvement in the situation was looked for as the result of the large coffee crop. The commercial situation was not improved, but rather became critical during the year, because of fluctuations in exchange and the low price of coffee, causing a large number of failures. The question was debated in Congress in October whether a *moratorium* of six months should not be proclaimed. The price of coffee sank so low that merchants combined in July to suspend exports until the market should recover. A bill to increase taxation, presented to Congress in the autumn, was opposed by the commercial community. The contraction of credit and general distrust produced a situation so serious that the Government appointed a financial commission, with the Minister of Finance as chairman, to study measures of relief. A proposed treaty of commerce with Argentina was not approved in commercial circles, and one that the Uruguayan minister sought to negotiate was rejected. A proposition was made to increase the duties on all productions of the River Plate republics, which was strongly opposed by the Minister of Foreign Affairs, Senhor Cerqueira, who hopes to see a great South American customs union formed on the model of the German Zollverein, embracing at least Brazil, Chili, Argentina, and Uruguay. When a party of representative merchants and industrialists of the United States

visiting South American countries to study the question of extending commercial intercourse with the sister republics came to Rio de Janeiro they were warmly welcomed by delegates of the National Republican party, who declared that one of the highest aspirations of their party was the union of the nations of the new continent as an absolutely necessary barrier against the usurpation of European tyranny, in the economical point of view as well as the political. They expressed the hope that the visiting commissioners would help to bring about, in a political way, the approximation of the two greatest peoples of America by the realization of mutual ideas and feelings, and, in an economical point of view, the strengthening and aggrandizement of the industries of the New World by the opening up within our own continent of new markets, enlarging reciprocally and increasing the riches of both countries, and emancipating them from vexatious dependence on European markets and capital. The purely Brazilian merchants are strongly in favor of a renewal and development of reciprocity with the United States. When President Moraes retired on Nov. 11 from the active duties of his post on account of illness, Vice-President Pereira, who became acting President, announced that he would pursue a truly American policy, not, however, forgetting the duty of the republic to all foreigners within its borders, or who have any connection with the country. His chief desire, he declared, was to discover a solution of the financial crisis, and to settle all diplomatic claims. The debts of the Federal Government are stated to amount to 1,781,820,140 milreis, or £89,091,007 sterling. The foreign loans foot up £34,656,800, not including £4,000,000 of obligations for the western mines taken over by the Government. The internal debt in 1895 amounted to 754,042,399 milreis, including a loan of 105,000,000 milreis issued in that year. There were besides 215,111,964 milreis of treasury notes outstanding and 355,173,310 of bank notes. The internal loans pay from 4 to 6 per cent. interest in paper, except 125,000,000 milreis bearing 4 per cent. interest in gold. The rate of interest on the foreign loans is 4 or 4½ per cent. in gold. Their redemption is gradually accomplished by means of a sinking fund of 1 per cent. per annum, which is applied to purchases of bonds in the open market when they are quoted below par, and otherwise to paying off bonds drawn by lot. Interest and amortization of the internal bonds are provided for by an annual vote of Congress, the funds being intrusted to a sinking-fund commission. The annual payments of interest on foreign and internal loans, railroad guarantees, and pensions amount to more than 120,000,000 milreis. The provinces had debts in 1888 amounting to 53,000,000 milreis.

The two chief banks of issue, Banco de Brazil and Banco do Republica, were consolidated in 1892 into the Banco da Republica do Brazil, which became responsible for the outstanding circulation, the Government also guaranteeing the ultimate redemption of the notes. The capital of the new bank is 190,000,000 milreis. The bank notes in circulation in March, 1895, amounted to 340,714,000 milreis. The issues of Government paper money increased from 215,111,964 milreis in 1892 to 285,744,750 milreis in 1893 and 367,359,000 milreis in March, 1895, including 83,000,000 milreis issued in consequence of the recent naval revolt and 125,000,000 milreis advanced to the banks. There was scarcely any money but paper in the country, and the value of the paper milreis was only 20½ cents in United States currency, whereas the gold milreis is worth 54½ cents. It was stipulated when the new internal loan of 100,000,000 milreis was authorized in 1895 that half the proceeds should be devoted to

the gradual redemption of paper money, which should begin on April 30, 1895. The decree of March 14, 1895, announced that 20,000,000 milreis would be withdrawn at once.

The Army and Navy.—A law of universal liability to military service has existed since 1875. The active army in 1895 numbered about 4,000 officers and 25,000 men. There is a gendarmerie of 20,000 men.

The Brazilian navy contains the seagoing turret ship "Riachuelo" of 5,700 tons; the "24 de Maio," formerly called the "Aquidaban"; the coast guard "Bahia"; 5 river monitors; the cruiser "Almirante Tamandare," of 4,465 tons, built in Brazil in 1890 and provided with a strong quick-firing armament; the new cruiser "Benjamin Constant," of 2,750 tons; the torpedo cruiser "Aurora," capable of making 18 knots; 15 small gunboats; and a torpedo flotilla consisting of 8 first-class and 6 third-class boats, besides small craft. Congress voted 18,000,000 milreis for additional vessels to be furnished during the three years ending with 1897. Accordingly, 3 powerful cruisers have been ordered from the Armstrongs of Elswick, 2 ironclad coast guards to be built in France, and 3 torpedo-catchers in Germany.

Commerce and Production.—Though only a minute part of the fertile land in Brazil is cultivated, that country supplies a large share of the world's requirements of coffee and considerable quantities of sugar, cotton, and tobacco. The coffee crop of Santos in 1895 was 4,010,249 bags and of the Rio de Janeiro district 2,750,000 bags, while in other districts over 2,000,000 bags were marketed. The sugar crop of Pernambuco in 1894 was 185,000,000 kilos. An important cattle-raising interest has been developed in Rio Grande do Sul, where 280,000 head were slaughtered in 1895. Foreign settlers have established in the same State large fruit canneries, tanneries, and breweries. The production of rum and alcohol is now considerable. The immense iron deposits of Brazil can not be worked for lack of coal. Gold mines are operated in Minas Gerães by English companies. Diamonds are mined still. In the Amazon district great quantities of rubber are obtained, but other forest resources remain undeveloped as yet. The total value of the imports in 1890 was 260,100,000 milreis, and of the exports 317,822,000 milreis. In 1894 the exports amounted to 601,046,000 milreis, of which 218,098,000 milreis represent shipments from the port of Santos, 50,976,000 milreis exports from the ports of Rio Grande do Sul, 148,921,000 milreis shipments from Rio de Janeiro, 44,836,000 milreis exports from Manaus, and 41,629,000 milreis the products sent from Belem. The coffee shipments from Rio de Janeiro were valued at 103,666,000 milreis, consisting of 2,662,520 bags of 60 kilos, while from Santos 1,772,679 bags were sent, only half as much as in the preceding year. From Pará 19,472,010 kilos of rubber were sent, against 19,144,157 kilos in 1893. The export of cacao from the same State was 3,434,656 kilos, against 4,597,189 kilos in 1893. Manaus exported 4,377,566 kilos of rubber in 1894. The exports of sugar from Pernambuco in 1894 were valued at 39,052,780 milreis: of cotton, 11,469,115 milreis. The chief exports from Rio Grande do Sul in 1894 were 20,831,226 kilos of dried beef, 3,552,375 kilos of tallow, and 496,011 hides.

Navigation.—During 1893 there were entered at the port of Rio de Janeiro 1,397 vessels, of 2,062,294 tons, and cleared 1,218 vessels, of 1,924,449 tons, counting only vessels engaged in ocean commerce. Of these nearly half were British. The mercantile marine in 1894 comprised 164 steamers, of 110,068 tons, and 126 sailing vessels, of 35,908 tons, not

counting vessels under 100 tons. The Federal Government pays 2,855,000 milreis in subsidies to companies engaged in the coasting trade and river navigation, from which all vessels not Brazilian are excluded by law.

Communications.—The length of railroads in operation in 1895 was 7,492 miles, besides which 4,321 miles were being built, 6,064 miles were traced, and 8,091 miles were yet to be surveyed. Of the completed mileage, 1,750 miles belonged to the Federal Government, 880 miles to State governments, 1,993 miles to subsidized companies, and 921 miles received no subventions. The interest guaranteed by the Government on the capital of the subventioned companies is 6 or 7 per cent. in most cases. The cost of the Federal railroads was 257,674,937 milreis. The amount of guaranteed interest paid up to 1895 had been 11,118,481 milreis.

The Government owns the telegraphs. The lines had a total length in 1893 of 9,884 miles, with 21,130 miles of wire. The number of dispatches in that year was 1,132,432. The receipts were 3,257,000 milreis and the expenditures, including the cost of constructing additional lines, were 6,088,000 milreis.

The post office in 1893 carried 33,441,000 letters and postal cards and 37,674,000 newspapers and circulars.

Anti-Italian Demonstrations.—The presentation of claims by the Italian Government in behalf of Italians injured in person or property during the revolution and civil war and the consideration of these claims by the Brazilian Government led to outbreaks of the populace in several towns and acts of mob violence against Italians. The rioters, incited by Jacobin agitators, were partly inflamed by national vanity and incensed at the suspected weak submission of their Government to the demands of a European power, and partly moved by race feeling and economic jealousy toward their competitors in the labor market during a period of industrial depression and distress. A protocol was signed by Dr. Carvalho, Minister of Foreign Affairs, and the Italian minister in January, 1896, in accordance with which the majority of the claims of Italy for wrongs alleged to have been committed upon Italian subjects would be submitted to the arbitration of the President of the United States, while others would be settled at once by the payment of the indemnity demanded. This agreement was similar to one concluded by the former Italian minister, Signor de Martino, but contained additional clauses believed to be more favorable to Italy. While the arbitration bill was under discussion in the House of Representatives popular sentiment was roused against it and the Government, and when it came to a final vote on Aug. 24 it was unanimously rejected. Popular tumults apparently influenced the Chamber, which had passed the bill on its second reading. On Aug. 22 a serious outbreak occurred in São Paulo, and conflicts between the large Italian population and the natives continued for three days, during which 6 persons were killed and more than 50 wounded. As the Italian consul upheld and led the Italians in fights against the police as well as the mob, Brazilians called for his removal, but the Italian legation upheld his actions. In Rio also Italians were attacked and insulted, and the troops were called out when the police found themselves powerless, and charged the rioters, wounding six persons. The trouble spread to Pernambuco, where the Italian consulate was threatened, and to Sergipe and other places. The escutcheon was torn down from the consulate in Bahia. The Italian Government demanded full satisfaction for outrages committed upon Italians, the prompt punishment of their authors, and reparation for the in-

sults that had been offered to the Italian flag, threatening to recall the Italian legation at once unless the Brazilian Government displayed the proper energy. Emigration to Brazil, which had grown to a volume never before known during the Abyssinian difficulty, was prohibited entirely. The suspension of emigration to Brazilian ports, as long as it lasted, had the effect of diverting the stream to other parts of South America, especially Uruguay and the Argentine Republic.

The Minister of the Interior was dismissed for his failure to preserve order, and a day or two afterward Senhor Carvalho, the author of the obnoxious protocol, was in turn forced to resign. The disturbances spread into country districts where Italians lived, and conflicts took place in which many were killed and wounded. The Brazilian minister to the Quirinal offered assurances that his Government would take active steps to punish those responsible for insults to the Italian flag, and would not permit any attack upon Italians to go unpunished. President Moraes, on Aug. 31, appointed Dionysio Cerqueira to be Minister of Foreign Affairs and Alberto Torres to succeed Dr. Ferreira as Minister of the Interior and Justice. The Italian Government dispatched Signor de Martino in the cruiser "Piemonte" on a special mission with formal instructions to obtain from Brazil such satisfaction as the dignity of the country and the safety of Italian subjects demanded. It was decided to re-establish an Italian squadron in South American waters for the protection of the interests of Italian subjects. By the beginning of September the rioting had ceased. The authorities took energetic measures to prevent the renewal of the anti-Italian agitation. Signor de Martino investigated the disturbances in São Paulo and other places, and obtained various reports from the Italian residents according to their monarchist or republican, socialistic, or anarchistic leanings. In his conferences with the Brazilian minister he showed a conciliatory disposition, confining his demands to an apology for the acts of Brazilians offensive to Italy, and proposing to submit claims for damages to the arbitration of the ministers of the United States and Germany, which seemed acceptable to Brazil.

Restoration of Trinidad.—Brazil at once raised a protest when the British flag was raised in the spring of 1895 over the rocky island of Trinidad, in the Atlantic Ocean, off the coast of Brazil. Sir John Pender, president of the telegraph company that has a cable connecting Argentina, Uruguay, and Brazil with Europe, desired the island for a telegraph station. The Rosebery Government denied the Brazilian title to the island, although after it had been occupied by Great Britain in 1781 it was evacuated in the following year, and when subsequently reoccupied it was finally relinquished in deference to Portuguese claims and definitely ceded to Portugal. An offer was made to acknowledge the political right of Brazil to the island provided the latter would lease it to the telegraph company. Later the British minister endeavored to obtain a declaration that, when once the island had been given up, there would be no doubt, provided fiscal rights and obligations resulting from contracts were protected, about the Brazilian Government's consent being given to its use for the telegraph service. When Lord Salisbury became British Minister for Foreign Affairs he was inclined to maintain England's title to the island, not on the ground of its former occupation and settlement by Englishmen, but because it had lain derelict for a hundred years, and therefore was held to belong to nobody. When the Brazilian Government renewed its protests he proposed to submit the question to arbitration. Seeing that the British

representatives had already proposed leasing the island and offered to give it up conditionally, actions which amounted to an acknowledgment of the sovereign rights of Brazil, the Brazilian Government could not accept the proposal of arbitration, which contradicted this acknowledgment, and so replied, setting forth the reasons at length in a note dated Jan. 7, 1896. A later proposal for mediation was in like manner rejected. Finally the offer to accept the good offices of Portugal, which, as the traditional ally of Great Britain, and as kin in blood to Brazil, was naturally anxious to see good relations preserved between these two countries, was made and found acceptable. Senhor Severul, the Portuguese Foreign Minister, after an historical investigation, reported that Trinidad was by right a Brazilian possession. The British Government acknowledged the justice of the decision, and on Aug. 25 sent a vessel to haul down the British flag. This was followed a few days later by the Brazilian cruiser "Tiradentes," which took possession of the island in the name of Brazil. The Brazilian Government contemplates building a lighthouse on one of the adjacent islets. Previous to surrendering the island the British had discovered that it was unsuitable for the landing place of a cable, having no harbor and being liable to seismic disturbances.

Boundary Questions.—The Brazilian authorities have taken measures with a view of regulating the undefined boundaries in Guiana. Maps have been prepared outlining the boundary between Brazil and the British possessions in Guiana at the point of divergence formed by the Oyapack river. Cabral, the self-constituted chief of the disputed territory of Amapa, on the borders of French Guiana, went to Rio de Janeiro in the spring of 1896 for a conference with the Government officials. It has been proposed to have the President of the Swiss Republic act as arbitrator in the dispute with France over Amapa. When the commander of the forces at Yquitos, in the Peruvian province of Loreto, revolted in May and declared for federation with Brazil, President Moraes assured the Peruvian minister that Brazil would act as international law directs. He refused to allow war material to be transported on the Amazon river, and posted a strong body of Brazilian troops in the frontier town of Tabatinga, to prevent any violation of the neutrality laws by the revolutionists.

BRETHREN OR TUNKERS. The National Conference.—Imperfect—but the most perfect that have yet been gathered—statistics of the Brethren Church, collected by J. A. Miller, of the Theological Department of Ashland University, in 1895, give the following results: Number of congregations reported, 138; of places where regular services are held, 206; of houses owned, 116, with 14 houses owned in part; of parsonages owned, 7; of members, 10,031; of accessions during the year by baptism, 1,259; of Young People's Societies, 47, with 1,504 senior and 549 junior members; of Sisters' Societies and Sisters' Societies of Christian Endeavor, 116, with 1,301 members; of Sunday schools, 146, with 1,439 officers and teachers and 8,013 pupils—108 of the schools using Brethren literature; total value of church property, \$256,180; amount paid pastors, \$20,248, with 1,600 paid for "other services" and \$5,326 for current expenses; amount collected by Sunday schools, Young People's Societies, and Sisters' Societies, \$4,653; 79 pastors were serving 117 congregations; 123 places were reported where successful mission work could be done; and 77 preachers were reported not active in the ministry.

The National Conference of the Brethren Church (Progressive Tunkers) was held at Eagle Lake, Ind., at the end of August and beginning of September.

J. C. Mackay was chosen moderator. The Book and Tract Committee reported its total assets as \$2,131, and its liabilities as \$1,591, with \$5,105 of business done. On its own recommendation it was succeeded by the Brethren Publication Board of 5 members, of which the editors of the denominational literature were constituted members *ex officio*—one member to give way to a successor each year in alternation. This board is directed to publish annual reports. A convention of the King's Children and Young People's Societies was instituted, to be held separate from the General National Convention, but at the same time with it. A plan of co-operation of the mission boards with the National Board was decided upon. A board was appointed to be the legal custodian of all funds raised or to be raised for the purpose of establishing a children's and an old folks' home. The Conference committed itself unequivocally to the principles of temperance, and to opposition to the liquor traffic, and abstinence from narcotic weeds, which it declared to be godly duties of every Christian. The district conferences were urged to take the necessary steps to a better supervision of the weak churches within their districts, and the question was submitted to them whether they favor district or national supervision. A national Sunday-school secretary was appointed whose duty it is to collect statistics and in every way further the Sunday-school cause. Steps were taken to begin a mission in Chicago. A course of missionary reading and the organization of circles to promote it were provided for. Further measures were adopted in the interest of the payment of the indebtedness of Ashland College.

The Society of the King's Children, then only two years' old, as a national organization formally recognized by the Church, had in 1895 doubled its membership within a year, and had made a substantial contribution from its treasury to the Book and Financial Committee. The Sisters' Society of Christian Endeavor had also in 1895 given substantial aid to college and missionary works, and had promised more. It was represented to the National Conference of 1895 that the Sunday-school literature and the Tract Department were a little more than self-sustaining.

Old-Order Brethren.—At the council of the "Old Order," held at Covington, Ohio, the questions were discussed: "Is it advisable to own and use a bicycle?" decided in the negative; "Is it contrary to the Gospel to hold communion with a member who is on his deathbed after he has been anointed with oil?" decided in the negative; and "Is it right to have the teeth filled with gold?" in answer to which the convention decided that tinfoil should be used.

BRITISH COLUMBIA, the extreme western province of Canada. This was an important year for the province; and if the strong evidences of gold are borne out by the production of the future it will have begun a great period in its history.

Political.—The new administration, formed toward the close of 1895, was as follows: Premier, Minister of Finance and Agriculture, Hon. J. H. Turner; President of the Cabinet, Hon. C. E. Pooley; Attorney-General, Hon. D. M. Eberts; Provincial Secretary and Minister of Mines, Hon. James Baker; Chief Commissioner of Lands and Works, Hon. G. B. Martin. The second session of the seventh Legislature of the province was opened on Jan. 23, 1896, by Lieut.-Gov. Edgar Dewdney, whose "speech from the throne" contained the following passages:

"In consequence of the appointment of the Hon. Theodore Davie to the distinguished position of Chief Justice of this province, I called upon the Hon. J. H. Turner, Minister of Finance, to form a new administration, which he has done to my satis-

faction. Although the financial depression which has been bearing so heavily upon the commerce of the nations continued during the past year, and as a consequence the revenue to June 30 last in this province fell short of the estimate, owing largely to arrears not having been paid, I am nevertheless happy to say there are favorable indications of a revival. Arrears are coming into the treasury, and I have confidence in stating that the revenue to June 30 next will be equal to the estimate. In view of the large imports of dairy produce, and the adaptability of many parts of the province for dairy farming, it is proposed to submit for your consideration a measure to assist in the establishment of creameries. The successful efforts to establish colonies both on the mainland and on the island of Vancouver have induced my Government to continue the work of settlement by providing for a system of small holdings. During the past year the yield of crops was much larger than usual, but I regret that, owing to the low prices of produce coming into competition with that of our own farmers, the season's operations have not been as profitable as I would desire to see. Coal mining is being extensively operated, and arrangements are being made for carrying on coking on a large scale. Sealing and fishing operations have been much more successful than was anticipated. The output of the salmon canneries has been one of the largest on record. I am pleased to state that increased attention has been given to deep-sea fishing, with prospects of that industry becoming a permanent and profitable one. The timber industry continues to be affected by the depression, but there are indications of an improvement in the near future. Shipping, both local and foreign, has increased, and a more general activity is noticeable, and particularly in the trade of the west coast and the islands. You will be pleased to know that my Government has completed a settlement of the railway-land question, for some time in dispute between this province and the Dominion of Canada. During the past summer my Minister of Finance issued in London, England, the loan for which your authority was obtained last session in 3-per-cent. inscribed stock at 95, that being an advance of 9 per cent. over the loan of 1891. I have much pleasure in calling attention to the very important mining developments of the past year, and the present promising outlook in Alberni as well as in other parts of the province. The large output of ore and the establishment of smelters in the Kootenay district affords practical proof of the value of the mining industry. It is the intention of the Government to foster this industry as much as possible by opening up the interior communications of the country; and with a view to afford reliable information on our mining resources, the act of last session providing for the establishment of a Bureau of Mines has been put into operation. During recess I have caused a proclamation to be issued bringing into force the provisions of the health act of 1893. The Provincial Board of Health created thereunder has been constituted. Important exploratory and other surveys have been carried on and have led to the location of large areas of available arable and timber lands. Acting under authority of the statute passed by you at your last session, I caused a commission under the Great Seal to issue to the Chief Justice of British Columbia for the consolidation and revision of the statute law in force in this province, and the first progress report of the commissioner has been received."

The Hon. D. W. Higgins remained Speaker, and after considerable legislation, of which the following list of measures includes the most important, the House adjourned on April 16:

- To preserve the forests from destruction by fire.
- Respecting co-operative associations.
- Incorporating the Royal Inland Hospital.
- To amend the homestead act.
- To amend the cattle act.
- To repeal An Act to aid the development of quartz mines.
- To incorporate the Columbia and Western Railway Company.
- To incorporate the Ashcroft and Cariboo Railway Company.
- To amend the assessment act.
- Relating to gold and other minerals, excepting coal.
- To amend the placer mining act of 1891.
- For the extermination of wild horses.
- To amend the Bureau of Mines act.
- To amend the investment and loan societies act.
- To make further provision respecting the drainage, diking, and irrigation of lands.
- To authorize the granting of a certain land subsidy for and in aid of the Columbia and Western Railway.

To encourage dairying.

Mining.—This was the chief topic of interest during the year, and it has attracted the attention of British and American capitalists. The presence of gold in great paying quantities has long been suspected, and on March 14, 1893, Dr. G. M. Dawson, C. M. G., the well-known Canadian geologist, told an English audience that "the gold thus found in the gravels and river beds is merely that collected in these places by the untiring action of the streams and rivers, and it must in all cases be accepted as an indication of the gold-bearing veins which traverse the rocky substructure of the country, and which await merely the necessary skill and capital to yield to the miner still more abundantly. Since 1850 the province has mined gold to the value of about \$50,000,000."

The two chief mining localities of the province are the Cariboo and Kootenay districts. The former, where much gold has been found in the beds and banks of streams, and in the old channels of rivers, lies between 200 and 300 miles north of the Canadian Pacific Railway, and is served by stagecoaches for passengers and by oxen for goods. The Kootenay district, which is the center of the present operations, lies south of the railroad and extends to the international boundary line. It is reached by train and steamer from Revelstoke, and here and there are short lines of rail affording access to particular groups of mines. The population of this district is now about 20,000. The most important are Kaslo (an incorporated city), Nelson, Rossland, Trail, New Denver, Nakusp, and Sandow. Around Trail creek and the rapidly growing Rossland lies the great bulk of the gold discoveries and mines. Thousands of mining claims have been staked out within a few months, and much machinery has been sent to Rossland. Work is carried on in at least 50 mines, while Rossland itself has sprung up almost in a night, and now has more than 5,000 people, where a year ago there was nothing but wilderness and the "Red mountain," which is now said to be yellow with gold.

The Trail creek district began shipping ores in 1895, and produced \$1,500,000 in gold. This year the production is said to be between \$4,000,000 and \$5,000,000. The actual production of Rossland itself is given by W. A. Carlyle, the provincial mineralogist, as follows: Tons smelted to July 1, 1896, 27,085; ounces of gold, 45,234; ounces of silver, 67,793; pounds of copper, 1,265,362; gross value, \$1,007,007. Since this report was presented to the local government much development work has been done, and very rich veins of gold discovered. The

trade of Rossland and the surrounding country is now mainly with San Francisco, Spokane, and Seattle, and much of the smelting is being done over the American border. But the projected Crow's Nest Pass Railway, connecting the district with the Canadian Pacific Railroad, will make a difference in this connection.

Agriculture.—This interest is not as flourishing as it should be. The climate is admirably adapted to fruit raising, however, and the Dominion experimental farm at Agassiz has done good work in this direction. Large experimental orchards have been planted, and a great variety of fruit has been tried, with a success which is followed up in fruit farms at other points. Of these, Lord Aberdeen's is the chief in production as well as the largest in extent. A traveling dairy was sent through the province last year to instruct the farmers in butter making, while the cultivation of hops is a new industry which has met with much success.

Education.—The statistics show an expenditure in 1894-'95 of \$189,037 upon teachers' salaries and incidentals, the building of 11 new schoolhouses, and the attendance of 13,482 pupils, an increase of 869. There were 202 schools in operation, with 319 teachers, and an average cost to the province of \$14.02 for each pupil. The average monthly salary of the city teachers was \$66.62, and of the rural teachers \$55.46. The provincial system is free and undenominational, and is entirely supported by the Government. There is a superintendent of education, but each school is locally controlled by trustees elected by the ratepayers of the district. There are 4 high schools, with 515 pupils and 12 teachers.

Finances.—The ordinary revenue for the year ending June 30, 1895, shows an increase from \$798,570 to \$896,025, while the ordinary expenditure shows an increase of \$370,000 over that of the preceding year. The total revenue, including the consolidated fund account, was \$1,906,924.99.

The chief items of expenditure were as follow: Net payment on public debt, \$357,497.38; civil government, \$145,590.19; administration of justice, \$127,558.49; legislation, \$39,419.72; maintenance of public institutions, \$29,536.39; hospitals and charities, \$48,630.47; administration of justice (additional), \$74,861.09; education, \$189,037.25; public works, \$749,217.35; miscellaneous, \$145,576.66; total, \$1,906,924.99.

Coal and Railways.—The gold development has naturally enhanced the value of the coal deposits. There is undoubtedly a very large quantity of coal in the different areas. The Nanaimo basin is understood to have about 200 square miles, and that of Comox about 700 miles, while in the Rocky mountains proper there are very large and undefined areas. The Crow's Nest pass has abundant coal suitable for smelting. The Kaslo and Slovan Railway, running through the mining districts, was opened in November, 1895. The Nakusp and Slovan line was extended, as well as the Nelson and Fort Sheppard Railway. The Revelstoke branch was built to the head of Arrow lake, where it connects by boats with these lines and with points on Columbia river. The Columbia and Western line, connecting Rossland and Trail, complete.

Fisheries.—The total export in 1895 was valued at \$3,264,500, a decrease of \$270,000 from that of the previous year. The low prices were a cause of regret, but otherwise the industry is brisk, especially in the export of halibut to Boston and New York and in salmon canning. Of this latter fishing interest—a pack of 525,516 cases in 1895, compared with 494,371 cases in 1894—the Dominion inspector says in a recent report that "it is gratifying to note that the rivers of the province, especially the Fraser, show no signs of depletion or of being

overfished, being in this respect unique among the great salmon rivers of the Pacific coast." Prof. Prince, however, who is acting on an international fisheries commission, deprecates the wasteful slaughter of fish at Point Roberts, in United States territory, as being likely to affect the salmon runs of the Fraser.

The fur-seal industry is yearly becoming more important to the province. In 1894, 53 vessels, averaging 66 tons each and giving employment to 867 whites and 518 Indians, sailed from the port of Victoria. The total value of the vessels and boats engaged in the provincial sealing was \$419,675, while the sealing catch in this first year after imposing the restrictions of the Paris Tribunal was 94,474 seals. The summary for 1895 was only 72,414, but changing values make a difference in the final estimate. The provisional agreement recently made with Russia provides a joint Russian and British protective zone of 30 miles around the Komandorsky Islands in the north Pacific, as well as one of 10 miles along the shores of the Russian mainland.

Trade.—The exports in 1895 were valued at \$9,114,058, and the imports at \$4,368,425. The duty collected upon the latter was \$1,137,727. The trade with China and Japan showed fair expansion, and the steamships of the Canadian Pacific Company were kept busy with full freights and passenger lists. So with the direct Australian trade and that of the northern Pacific steamships. A service has recently been established by the Oregon Company between the Orient, Puget Sound, and Portland, the vessels calling at Vancouver on their inward and outward voyages. Of the exports the products of the mine amounted to \$4,615,452, and those of the fisheries to \$3,264,461. They were valued at \$1,300,000 in excess of the previous year, while the imports were valued at \$1,000,000 less.

The tonnage of the shipping shows an increase of foreign—presumably American—over British and Canadian. The British tonnage of the vessels at ports in 1895 was 353,133; that of Canada, 6,258; while the foreign tonnage was 1,868,656, an increase in the latter of nearly 300,000 tons.

Manufactures.—The capital invested in manufactures in 1891 was only \$191,547, but it has since been extending greatly. In 1893 paint works were established in Vancouver, and they now have the bulk of the provincial trade. Chemical works started at the same time are kept busy in filling orders from the United States as well as at home. Cold-storage plants are also operating successfully, while the impetus to mining has started many smelting works into operation. Lumber mills, sash and door factories, sugar refineries, iron works, pork-packing establishments, and some creameries have also been placed upon a paying basis.

Signs of Growth.—The lumber business has shown a distinct improvement during the year—45,000,000 feet having been shipped. Several strong Canadian banks have opened branches in Vancouver, as well as mortgage investment companies. The population is increasing rapidly—in Rossland at the rate of 200 a day. The Parliament buildings at Victoria have made fair progress, and are to cost \$600,000. A provincial home has been erected at Kamloops. A cylinder pier bridge over Thompson river is under way. A courthouse at Nanaimo is being built, and the Dominion Government is erecting a handsome post office and a customhouse in Victoria.

BULGARIA, a principality in eastern Europe, created in 1878 out of a former province of Turkey by the decision of the great powers at the Congress of Berlin, giving effect to the independence of Bulgaria achieved by the armed intervention of Russia.

Eastern Roumelia, which was made an autonomous province of Turkey at the same time, revolted with the aid of Bulgarians of the principality and was annexed to Bulgaria in 1885. The legislative power is vested in the Sobranje, a single Chamber in which, under the constitutional amendment of May, 1893, there is 1 representative for every 20,000 of the population, elected by universal male suffrage.

The reigning prince is Ferdinand, born Feb. 26, 1861, the youngest son of the late Prince August of Saxe-Coburg-Gotha and Princess Clementine of Bourbon-Orleans. He was elected by the vote of the Great Sobranje in 1887 after the abdication of Prince Alexander of Battenberg, but his election was not sanctioned by the Porte on the advice of the powers, as stipulated in the Treaty of Berlin.

The Cabinet of ministers in the beginning of 1896 consisted of the following members: President of the Council and Minister of the Interior, Dr. C. Stoiloff; Minister of Foreign Affairs and of Public Worship, G. D. Nachevich; Minister of Finance, Ivan E. Gueshoff; Minister of Public Instruction, C. Veliekhoff; Minister of War, Col. R. Petroff; Minister of Roads and Communications, J. Madgaroff. The Ministries of Justice and of Commerce and Agriculture were then vacant.

Area and Population.—The area of Bulgaria proper is 24,360 square miles, and that of Eastern Roumelia 13,500 square miles. The total population at the census of Jan. 1, 1893, was 3,309,816, of which number 992,386 lived in Eastern Roumelia. Of the total, 2,504,336 were Bulgars, 569,728 Turks, 60,018 Greeks, 51,754 gypsies, 27,531 Jews, 3,620 Germans, and 1,379 Russians. The adherents of the Orthodox Greek Church numbered 2,605,905; Mohammedans, 643,242; Roman Catholics, 22,617. The number of marriages in 1893 was 31,640; births, 141,320; deaths, 92,100; excess of births, 49,220. Out of 275,756 boys of school age, 129,777 were in school in 1893, and out of 261,968 girls, 42,206 were receiving instruction. Only 19 per cent. of the population can read and write. Elementary instruction is free and by law compulsory. Sofia, the capital, has 47,000 inhabitants.

Finances.—The revenue for 1895 was estimated at 89,849,425 lei, or francs, of which sum 35,471,000 lei came from direct, 35,032,000 lei from customs and internal taxes, 7,293,400 lei from railroads, 3,958,000 lei from tolls, 4,613,375 lei from investments, 546,750 lei from fines, and 2,934,800 lei from other sources. The budget estimate of expenditure was 89,830,969 lei, of which 19,220,272 lei are for the expenses of the debt, 5,260,255 lei for finance administration, 7,960,208 lei for interior administration, 9,349,842 lei for public instruction, 22,474,708 lei for war, 3,198,347 lei for foreign affairs, 4,584,476 lei for justice, 3,896,704 lei for commerce and agriculture, 11,907,581 lei for public works and ways of communication, and 217,776 lei for other expenses.

The debts of Bulgaria, not reckoning the tribute due as its share of the Turkish debt, which has never been appraised, nor has anything been paid on account of it, consists of a first loan of 10,000,000 francs, one of 46,000,000 francs raised in 1886 to pay for the Varna-Rustchuk Railroad, one of 30,000,000 francs raised in 1889, and 72,000,000 francs received of the loan of 142,000,000 authorized in 1892.

The Army.—The military force consists of 39,320 officers and men. Every Bulgarian is liable to conscription. The war strength is 175,000 men. The army is organized in 3 divisions of 2 brigades. There are 288 field guns and 36 mountain guns. The infantry is armed with the Mannlicher rifle.

Commerce.—The Bulgarians are agriculturists, raising wheat for export and considerable quantities of wine, tobacco, and silk. They export also wool,

tallow, butter, cheese, hides, live stock, flax, timber, and attar of roses. The total value of the imports in 1894 was 99,229,193 lei, and of exports 72,550,675 lei. Textile goods were imported to the value of 30,339,975 lei; groceries, 10,423,800 lei; metals, 8,322,625 lei; machinery, 5,831,800 lei; leather, 5,562,100 lei; wood manufactures, 5,244,100 lei. The exports of grain were 55,871,300 lei in value; sheep and pigs, 6,127,450 lei. Of the imports 35,105,785 lei came from Austria, 20,173,236 lei from Great Britain, 12,785,907 lei from Turkey, 12,096,553 lei from Germany, 4,946,722 lei from Russia, 3,740,464 lei from France, 2,828,296 lei from Roumania, 2,694,645 lei from Italy, and the rest from Belgium, Servia, Switzerland, Greece, the United States, and other countries. Of the exports, 26,794,851 lei went to Turkey, 12,302,795 lei to Great Britain, 11,951,960 lei to Germany, 8,720,453 lei to France, and the rest to Belgium, Roumania, Italy, Greece, Servia, and other countries.

Communications.—There were 520 miles of railroad in Bulgaria and Eastern Roumelia in 1895, connecting Sofia with the Turkish railway system and with the Servian line that joins the Austro-Hungarian system. The telegraphs belonging to the state had a total length of 2,953 miles. The mails carried 15,219,773 letters, newspapers, etc., in 1893, in which year the receipts from posts and telegraphs were 2,448,950 francs, and expenses 2,577,575 francs.

Conversion of Prince Boris.—The heir to the throne is Boris, the elder of the two sons born to Prince Ferdinand by Princess Marie Louise de Bourbon, eldest daughter of the Duke of Parma. Before the birth of the Prince Stambuloff had induced the subservient Sobranje to alter the Constitution so as to allow the heir apparent, as well as the reigning Prince, to belong to the Roman Catholic Church, into which communion Boris was duly baptized. Since the fall of Stambuloff Ferdinand and his Government have cut loose from the Austrian and English influences that controlled his policy, and have made various advances toward a reconciliation with the Czar. The chief obstacle in the way of his recognition by the Emperor of Russia and the consequent regularization of his status by the Porte, to which all the treaty powers except Russia had given tacit assent, was that act severing the dynasty for two generations from the Orthodox Church. Prince Ferdinand therefore decided to make a sacrifice of his religious and family feelings and have his son received into the Greek Orthodox communion in order to pave the way to a better understanding with the Czar and at the same time gratify the national pride of the Bulgarian people. After having sought unavailingly the permission of the Pope of Rome, he issued a manifesto on Jan. 29 announcing that the rite of confirmation would be administered to the heir apparent according to the usages of the National Orthodox Church on Feb. 14. On that date the Bulgarian exarch performed the ceremony, the Czar standing by proxy as sponsor for the child. French, German, and Russian representatives were present, while the Austro-Hungarian, British, and Italian representatives, who heretofore have invariably attended official ceremonies in the Bulgarian capital, when their colleagues stayed away, were now the absent ones.

Recognition of Prince Ferdinand.—The powers of Europe have ever been willing to accord to Prince Ferdinand since his election by the Sobranje on July 7, 1887, the recognition that he has sought as vainly as his predecessor, Prince Alexander. If none of the signatory powers of the Treaty of Berlin has volunteered to sanction the Prince's election, it has been solely because it was known beforehand that Russia would refuse to join them. It was fully

understood that the Czar would never accept accomplished facts in Bulgaria until the situation should turn to the advantage of Russia, and Russian influence should be restored in Sofia. If Austria and Great Britain were disposed at any time to use their influence with the Porte during the Stambuloff régime to propose the recognition of Prince Ferdinand, it was because Russian influence was in the ascendancy at Constantinople. The *rapprochement* between Bulgaria and Russia was accomplished when Stambuloff was dismissed in 1894, but the conversion of Prince Boris was needed before the Czar would alter his attitude toward the Prince, whom Russia had treated as an alien usurper in Bulgaria. On Feb. 11 the Porte, acting, as in all Oriental matters, at the instigation of Russia, sent out a communication to the signatory powers requesting their assent to the recognition of Ferdinand as Prince of Bulgaria. The Austro-Hungarian Government replied that it had never refused its assent to the Prince's election. The Italian Government stated in its reply that it considered the election of the Prince as an expression of the will of the people, and that it now noted that it was accepted by all the powers. To show clearly that the Prince's recognition was solely due to Russia, the Government of St. Petersburg requested the Porte to postpone the application for the Prince's recognition until after the conversion of Prince Boris, and in compliance with that recommendation instructions to that effect were dispatched to Turkish representatives abroad, although the step was one exclusively appertaining to the suzerain rights of the Sultan. The other powers gave their assent also. As soon as the unanimous assent of the six powers was obtained the Sultan granted the firman of investiture in accordance with the stipulations of the Treaty of Berlin, under the provisions of which Prince Ferdinand proceeded to Constantinople and was formally invested on March 26. The Russian Government appointed one of its most promising young diplomatists, who had fought bravely as a volunteer of hussars in the Russo-Turkish war for the liberation of Bulgaria, M. Teharykoff, to be diplomatic agent at Sofia, where there had been no official representative of Russia since 1886. Russian consuls were appointed in all the chief towns, and plans were made to compete for the trade in textiles, arms, and metal goods that had gone to Austria and England, and also to start Bulgarian manufactories with Russian capital. The subsidized Russian steamship company that formerly navigated between Odessa and Varna and Burghas, connecting them also with Constantinople, resumed its trips to those two and other Bulgarian towns. In connection with the formal recognition of Prince Ferdinand the Sultan gave his sanction to the decorations that the Prince already bestows, but he will not be at liberty to found any new order without the Sultan's permission. In April Ferdinand visited the Czar.

The Macedonian Question.—The plan to start an insurrection in Macedonia in the summer of 1895, when the Turkish Government was involved in the Armenian difficulty, originated in Bulgaria. A committee in Sofia directed the movement. The object of the leaders was to attract the attention of Europe to the Macedonian cause by provoking the Turks to commit atrocities on the Christian population. They hoped in this way to obtain for the Macedonian Christians the autonomous institutions stipulated for them by the Berlin treaty. The method that they took was to attack and kill some of the Turks, in order that the Turks might fall upon the Christians and kill a great number, necessitating the intervention of Europe. Bands of the Bulgarian revolutionists, who were described in the

dispatches as insurgents, entered Macedonia in June, 1895, but they found the Macedonians in no mood for rising, while the Turkish military authorities were exceedingly alert, and the latter took such efficient measures that the bands were compelled, after a few weeks, to take refuge in Bulgaria. There they still attempted to carry out their programme of provoking Turkish atrocities by murdering and decapitating Mussulman citizens of Bulgaria, which had the effect of spreading terror among the latter and causing many to desert their homes, but provoked no acts of revenge or reprisal on either side of the border. The Austrian and other European cabinets took cognizance of the recrudescence of the Macedonian agitation only to warn the Bulgarian Government against permitting its citizens to foment disorder. The Russian influences that were formerly active in fostering agitation in Macedonia were nowhere evident; on the contrary, there were indications that the policy of the Russian Government, both before and after the open reconciliation with Bulgaria, was opposed not only to the momentary disturbance of tranquillity in the Balkan peninsula, but to the idea of Bulgarian expansion and to the ambition indeed of Serbia or Montenegro as well under the existing state of affairs. The preservation of the *status quo* was a condition, no doubt, of the confidence of the Sultan's Government in the Czar and the continuance of the incontestable predominance of Russia in Turkey. The Slavonic societies responded to the requirements of Russian policy by ceasing to give any encouragement to Macedonian agitation, thus depriving the great Bulgarian movement of its chief inspiration and support. In the summer the report of a federation or alliance between Bulgaria, Montenegro, and Serbia, the three *protégés* of Russia in the Balkans, awakened the suspicions of Greece and Austrophile Roumania. The new Balkan alliance, it was stated, reserved to itself the right to instigate at the fitting moment a peaceful solution of the Macedonian question. Premier Stoiloff, who had remained blind to the misdeeds of Bulgarian agitators the previous year, before the Sobranje separated uttered a plain warning against co-operation with Macedonian insurgents.

The Bulgarian Church.—Almost simultaneously with the conversion of Prince Boris and the recognition of Prince Ferdinand negotiations were opened in Constantinople for a reconciliation between the national Church of Bulgaria and the parent Greek Church over which the Patriarch of Constantinople presides. Like the other Orthodox countries formerly subject to the patriarchal see of Constantinople, Bulgaria, upon throwing off the temporal yoke of the Sultan, also renounced spiritual allegiance to the patriarch, who has jurisdiction over the Sultan's Orthodox subjects. The national movement in Bulgaria, instead of assuming in the first instance a political form, as in Greece, Roumania, and Serbia, first appeared in the sphere of religious government. Resistance to the political views and actions of the bishops appointed by the œcumenical patriarch prepared the way for the subsequent national agitation. The Church having been turned into an instrument for the promulgation of the Panhellenic idea, the national susceptibilities of the Bulgarians were awakened, and the agitation was begun that resulted in the establishment of a national Bulgarian Church, presided over by an exarch who resides in Constantinople and has from the first exercised authority over Eastern Roumelia as well as over Bulgaria proper. In Macedonia, whose inhabitants when the movement for independence was confined to Greece had been imbued with the Hellenic spirit, a desire to join the new Bulgarian Church manifested itself in the

Slav communities bordering on Eastern Roumelia. After some discussion it was decided that wherever the Bulgarian inhabitants of a Macedonian see constituted two thirds of its Christian population they should have a Bulgarian bishop, subject to the authority of the exarch, and not to that of the œumenical patriarch. The Sultan, giving no heed to the remonstrances of the Greeks, began to issue *berats* to Bulgarian bishops; but before he had appointed the full number the Bulgarian revolution broke out. For a long time after the war he refused to grant any more *berats*. The Bulgarian Christians in Turkey have always been devoted adherents to the dignitaries of their Church because the latter protect them in their civil and political rights. The Greek bishops afford assistance to their fellow-countrymen in Macedonia, but toward the Bulgarian Christians, during the long contest for Hellenic ascendancy, they have often adopted a positively hostile attitude, closing the Bulgarian schools and churches and denouncing the members of the Bulgarian community to the Turkish authorities as rebels. The proposed termination of the Bulgarian schism offered religious unity, the blessing of the patriarch, and the return to the true Church, but these spiritual advantages were no compensation for the real and important benefits that they enjoyed under their autonomic Church and hoped to see extended. The form of the proposed reconciliation, which met with the Sultan's ready approval and the hearty acquiescence of the Patriarch Anthimos, and was strongly supported by Russian diplomacy, if indeed it had not its inception and impulse in the Russian Foreign Office, was that the exarch should be recognized as the head of an autocephalic Church of the Orthodox rite, having his residence in Sofia, and his ecclesiastical jurisdiction restricted to Bulgaria and Eastern Roumelia, relinquishing his authority over the Bulgarian bishops in Macedonia, who would come under the authority of the patriarch, the latter being bound to make new consecrations of Bulgarian bishops in dioceses where two thirds of the population are Bulgarians. Russian influence was brought to bear upon Prince Ferdinand to induce him to make application to the patriarch for the recognition of a Bulgarian autocephalic Church on the basis of this proposal. If the Prince was tempted at first to fall in with this suggestion he was deterred by the earnest protests of the Exarch Joseph and sufficiently warned by the storm of disapprobation roused by the divulgation of the project, not only among the Macedonian churches, but among his own subjects, who saw in it only a renunciation in favor of Greece of Bulgarian political interests and warmly cherished aspirations in Bulgaria. In the Greek Church a large party looked askance at the proposition, fearing lest the Bulgarian prelates to be appointed by the patriarch may in the end outnumber the Greek members of the Holy Synod, and the Church lose its Hellenic character, become Slav, and eventually amalgamate with that of Russia. In August the Bulgarian exarch renewed his request to the Porte for the appointment of 5 bishops in Macedonia in addition to the 4 already existing.

Disputes with Turkey.—Collisions between Turkish and Bulgarian forces on the frontier were reported as taking place early in August. A detachment of Turkish troops retired when fired upon by Bulgarian frontier guards in the district of Khaskoi. A similar occurrence took place in the

department of Tartar Bazardjik. The Turkish and Bulgarian garrisons were increased after these incidents, and the Porte first appointed a military commission to ascertain whether the positions that Turkish soldiers had occupied are situated on Bulgarian territory as the Government at Sofia claimed, and afterward acceded to a proposal for the delimitation of the frontier by a mixed commission.

The Bulgarian Government allowed the Eastern Roumelian contribution that it undertakes to pay into the Turkish treasury to fall in arrears from the beginning of 1896. When it was on the point of paying up a part of the amount overdue, the Turkish Government unexpectedly reopened the question of the Bulgarian tribute, dispatching a special commission to Sofia in August to negotiate with Prince Ferdinand the settlement of the amount of the Bulgarian tribute under the ninth clause of the Treaty of Berlin and the payment of the arrears from 1879 up to date.

Internal Politics.—In the Sobranje which closed its sessions on Feb. 17, 1896, a new penal code was enacted. The Minister of War obtained an extraordinary credit of 5,000,000 lei to complete the armaments of the army and the flotilla on the Danube.

The Cabinet was reconstructed on Feb. 22 as follows: Minister President, Minister of the Interior, and Minister of Foreign Affairs *ad interim*, C. Stoiloff; Minister of Commerce and Agriculture, G. D. Nachevich; Minister of Justice, Dr. T. Theodoroff, previously President of the Sobranje; Minister of Public Instruction, C. Velichkoff; Minister of Public Works, J. Madjaroff.

Elections for the Chamber occurred on March 1. They were conducted without governmental interference, to judge from demonstrations of public gratitude given to Stoiloff for freedom of election, and passed off in perfect order, resulting in the return of a large Conservative majority. The National Liberal party, formerly led by Stambuloff, which is distinguished by its attitude of distrust toward the policy of Russia, accepted M. Grecoff for its head, and presented a programme promising a liberal and progressive administration.

As a sequel to the reconciliation of Bulgaria and Russia, the Minister of War and the Minister of Commerce and Agriculture tendered their resignations on Aug. 13. Col. Petroff firmly opposed the reinstatement in the army of the principality of the Bulgarian officers who were in Russian service, many of whom had been involved in subversive plots and military insurrections against the Bulgarian Government. In the end Prince Ferdinand accepted this view and renounced the purpose of restoring the emigrant officers for the present. Col. Petroff then resumed the portfolio of War, but M. Nachevich was relieved of his office definitively, M. Gueshoff assuming temporarily the direction of the Ministry of Commerce. His retirement marked the close of the negotiations that had been going on for many months for a commercial treaty with Austria-Hungary. M. Stoiloff visited Vienna in the spring of 1895 to make preliminary arrangements for the conclusion of a definite treaty of commerce to take the place of the provisional commercial convention that would expire at the end of 1896. Such provisional conventions were the only kind as yet existing between Bulgaria and foreign nations. The Bulgarian Government presented proposals that the Austrian representatives declared to be unacceptable. A commercial treaty with Servia was concluded in July, 1896.

C

CALIFORNIA, a Pacific coast State, admitted to the Union Sept. 9, 1850; area, 158,360 square miles. The population, according to each decennial census since admission, was 92,597 in 1850; 379,994 in 1860; 560,247 in 1870; 864,694 in 1880; and 1,208,130 in 1890. Capital, San Francisco.

Government.—The following were the State officers during the year: Governor, James H. Budd, Democrat; Lieutenant Governor, William T. Jeter, Democrat, appointed by the Governor to succeed Spencer G. Millard, Republican, who died Oct. 24, 1895; Secretary of State, Lewis H. Brown, Republican; Treasurer, Levi Radcliffe, Republican; Attorney-General, William F. Fitzgerald, Republican; Comptroller, E. P. Colgan, Republican; Superintendent of Public Instruction, Samuel T. Black, Republican; Surveyor General, Martin J. Wright, Republican; Superintendent of State Printing, A. J. Johnson, Republican; Chief Justice of the Supreme Court, W. H. Beatty; Associate Justices, T. B. McFarland, C. H. Garoutte, R. C. Harrison, W. C. Van Fleet, F. W. Henshaw, and Jackson Temple—all Republicans, except the last named.

Finances.—For the year 1894 the total amount of State taxes charged was \$5,722,926, and the amount paid into the treasury on the first installment was \$3,822,378. For 1895 the total amount charged is \$7,462,623, and of this \$4,917,154 was paid in on the first installment. For county purposes the further amount of \$12,572,335 was necessary. On the basis of a population of 1,250,000 in the State, this is a taxation of about \$16 *per capita* for State and county purposes alone, and to this must still be added the city taxes.

The total receipts of the State treasury during December were \$5,344,185.68. Of this amount \$1,809,722.84 was credited to the school fund, and on the first Monday in January was apportioned among the counties; \$95,992.72 went to the State University, and \$99,498.42 to the payment of principal and interest on the State funded debt, all of which is held in trust for the university and common schools. Apportioned to the general fund was \$3,263,211.34, and the remainder was credited to special funds.

San Francisco pays for State and county purposes \$7,376,520.19 annually. Comparison with preceding years shows that the charges against the city for government purposes has been increasing at an enormous ratio.

Valuations.—The Board of Equalization, at its meeting in September, 1896, raised the assessments of several counties, making the greatest increase in that of San Francisco, which was raised 20 per cent. Alameda, Sacramento, San Bernardino, and Santa Clara were each raised 5 per cent., while Monterey was reduced 5 per cent. and San Diego 10 per cent. The Auditor's figures, as returned by the counties, showed a total of \$1,149,548,346, and the board increased this to \$1,220,575,343. To this must be added the railroad assessments, amounting to \$43,223,344, and from the total 5 per cent. is taken for delinquencies. The tax levy was fixed at 42-9. It is apportioned among the funds as follows: General fund, 22-4; school fund, 18-3; interest and sinking fund, 1-2; university fund, 0-01. The total amount to be raised for 1896 was \$5,018,265.

The assessors' figures for the city of San Francisco were \$360,326,031, of which \$83,406,790 were on personal property. The increase over 1895 is \$32,520,881. California's city, county, State, and

school debts combined are equal to \$13 per head of its population.

Education.—The amount of school money apportioned to the counties in January was \$1,987,249. The regents have chosen San Francisco as the site for the Wilmerding Trades School, for which \$400,000 has been given.

The Granges of San José and Tulare are advocating the removal of the State Agricultural College from Berkeley, the reason given being that "the value of agricultural instruction at Berkeley had been greatly lessened because results at the experiment station there did not correspond with results in other parts of the State, climatic and other conditions being so much at variance." In its published statement Tulare Grange says: "There appears to be surrounding a classical university an atmosphere inimical to and holding in contempt the calling of agriculture. We believe this is the experience of every State where the college of agriculture has been combined with the classical university, and we believe it is, without exception, the rule also that where the college of agriculture has been removed from university influences in practical as well as theoretical instruction in the number of students it instructs and graduates it is a success."

Announcement has been made that \$4,000,000 has been promised by private citizens for the State University, to be given when the State will give \$500,000. Mrs. Phoebe A. Hearst is a large subscriber.

In April the President signed a bill providing for the establishment of a naval training station on Goat island, in San Francisco Bay. This island has been unoccupied, and is described as a dreary desert. Pending the erection of the station a training ship will accommodate such boys as are enlisted.

Banks.—The total number of banks in 1895 was 279. The resources of savings banks amounted to \$144,990,729, and the deposits to \$126,830,512. The total assets of commercial banks amounted to \$130,514,624, and those of national banks to \$31,157,277. The assets of private commercial banks amounted to \$2,516,943.

Railroads.—The Chief Justice of the United States Supreme Court handed down a decision, March 16, in the cases of the people of California against the Central Pacific and Southern Pacific Railway companies, involving the right of the State to tax the franchises of those roads. The railroad companies resisted taxation on the ground that their franchises were derived from the National Government as well as from State authorities and were inseparable. The court decided against this view, holding that the railroad companies owe their existence as corporations to the State and are subject to State laws in respect to taxation. Justice Field read a dissenting opinion.

A like decision was given in a suit against the Southern Pacific for recovery of taxes assessed in 13 counties of the State.

Suits were brought in the Superior Court at Sacramento, in July, to recover State taxes from the Atlantic and Pacific and the California and Nevada Railroads. In the case of taxes assessed in 1894, the Atlantic and Pacific paid under protest, and then brought suit to recover. This suit being still pending, the road refused to pay the 1895 taxes, and therefore the Comptroller brought suit.

The entire tax is levied on rolling stock assessed at \$125,000. The road owns no track in the State,

but operates 242 miles of track across the Mojave Desert, leased from the Southern Pacific Company. Their contention is that all their rolling stock is properly assessable at their headquarters in Albuquerque, and that the State of California has no right to assess them.

The California and Nevada Railroad, which is sued for \$1,447,57, has been sold several times, and is tied up in litigation, so much so that there is apparently no known person whose duty it is to pay the taxes. Two or three years ago a part of the road was sold for taxes in Contra Costa county.

The Railroad Commission fixed a new tariff for freight rates, Sept. 13, 1895, leading to temporary injunction granted on application of the Southern Pacific of Kentucky to prevent the Commission from enforcing it. The petition of the company said that the provisions of the State Constitution and the act of the Legislature prescribing the methods to be adopted by the Railroad Commission are repugnant to the provisions of the fourteenth amendment of the Federal Constitution, thereby attacking the constitutionality of the Commission. The State Constitution says that the rates of freight and fare authorized to be fixed and established by the board "shall in all controversies, civil or criminal, be deemed conclusively just and reasonable." The corporation alleged that by this provision it could be deprived of its property without due process of law. The case was decided in the United States circuit court by Judge McKenna; the constitutionality of the Railroad Commission was upheld, but the injunction staying the execution of its order reducing freight rates on grain 8 per cent. was continued, on the ground that the earning power of the company has been reduced by the business depression.

In January the Mayor of San Francisco, as president of the Committee of Fifty, issued an appeal to the State of Kentucky, invoking the aid of the public, the Governor, and the Legislature in the struggle of the people of California against the Southern Pacific Company of Kentucky. The pamphlet was entitled "The People of Kentucky disgraced," and made allegations regarding the methods by which a charter was procured granting the right to incorporate the company, designated—for deceptive designs—"of Kentucky," the express purpose being to bring it into the State of California, and to compel all the railroad corporations controlled by the incorporators in the States and Territories named in the charter to lease their roads to the new corporation for ninety-nine years, "and thereby to defy, set at naught, evade, and trample upon the laws of the State of California and the other States and Territories named," and that they have defied the laws for ten years.

The new San Joaquin Valley Railroad reached Fresno in October, and the arrival of the first train was celebrated there Oct. 5.

Articles of incorporation of the Yosemite Valley and Merced Railway Company were filed in March. The road is to run from Merced easterly and northerly through Merced and into Mariposa County to a point in the vicinity of the Yosemite valley, at or near a point known as the Cascades, and is to have intermediate branch lines to the villages of Coulterville, Hornitos, Mariposa, and Bear Valley. The route follows the cañon of Merced river the greater part of the distance, and the scenery in some places is so grand that the promoters of the enterprise expect it to become the scenic route of California. It will not only make the Yosemite accessible to general travel, but will open a district rich in timber, mines, and quarries of marble, lime, and granite.

Strong opposition was shown in the State to the bill for refunding the secured indebtedness of the

Central Pacific Railroad Company. An antifunding convention was held in San Francisco Jan. 18. Resolutions protesting against the passage of the bill were adopted, and a committee was appointed to prepare a memorial to go with them to Washington. The resolutions adopted included this:

"That the President of the United States be requested to promptly do his executive duty under the Constitution and statutes, and to instruct the Attorney-General to commence foreclosure proceedings without delay, in such form as to enforce the trust and rehabilitate the security itself."

Products.—A value of \$22,844,664.29 was placed by the State mineralogist on the mineral production during 1895. The figures for 1894 were \$20,203,294.44. The gold produced amounted to \$15,334,317.69; silver, \$599,789.70; quicksilver, \$1,337,131. The value of all metallic substances produced amounted to \$17,378,308.29; of nonmetallic, such as asbestos, gypsum, magnesite, and soda, to \$116,514; of hydrocarbons and gases, \$1,404,321, including petroleum of the value of \$1,000,235. The value of structural materials was \$2,713,755, of which the granite amounted to \$224,329, the lime to \$386,094, the macadam to \$700,987, the rubble to \$394,952, and bricks to \$672,360.

The crops for 1895 were reported: Oranges, 10,600 car loads; hops, 48,000 bales; wool, 32,000,000 pounds; dried fruit, 162,700,000 pounds; prunes, 49,000,000 pounds; raisins, 92,500,000 pounds; beans, 74,000,000 pounds; barley, 12,200,000 bushels; wheat, 26,218,000 bushels; beet sugar, estimated, 40,000,000 pounds. The total orange crop of 1896 amounted, according to close estimates, to 3,200,000 boxes.

The value of San Francisco manufactures in 1895 is given as \$88,500,000. The quantity of powder made in the State was estimated at more than 13,000,000 pounds. The amount of brandy distilled from grapes was 1,100,000 gallons. The canned fruit packed amounted to 1,280,000 cases; and the total value of provisions packed during the year is given as \$5,000,000. The cheese made in the State amounted to 9,000,000 pounds.

The report of the Internal Revenue Office in July, 1896, on the output of sweet wines showed an increase of more than 750,000 gallons.

By the report of the wool clip for 1896 it appears that the State has 2,739,967 sheep, which clipped 19,179,765 pounds of washed and unwashed wool, with a 65 per cent. shrinkage; of scoured wool the output was 6,712,919 pounds.

Mining.—Great excitement was caused in July by the reported discovery of gold in the Mojave Desert by two prospectors, S. Drouillard and E. M. Pyle. They staked out 4 claims, making 6,000 feet on the ledge which they found, and then the discovery was free for any one. Miners rushed in, and in an incredibly short time had the country staked out for miles. The original discoverers traced the cropping for a little over a mile and located it; but one man has already found similar croppings 9 miles away, and the intervening country has been nearly all taken up. Ore from several points on the ledge shows assays of \$250 to \$2,500 a ton, mostly in gold, but with a fair amount of silver. The ledge is 3 feet in width on the surface. These mines are 10 or 12 miles nearer Mojave than Randsburg. Rogers Station, on the Sante Fé road, is the nearest railroad point, 18 miles. Mining in the northern counties was unusually profitable this year.

The Irrigation Law.—The constitutionality of the Wright law, permitting the State to be divided into irrigation districts and the property in the districts taxed for construction of irrigation works, was attacked in two suits, one of which was tried in the State Supreme Court and decided in favor of

the law; the other was tried in the Federal circuit court and the decision was against the law. Both were appealed, and a decision of the United States Supreme Court, Nov. 16, sustained the constitutionality of the law. The decision affects other States where similar laws have been made.

Celebration at Sonoma.—The semicentennial of the raising of the bear flag at Sonoma was celebrated June 13. Of the 32 Americans who raised the flag in 1846, but 3 are living, and only 2 were able to attend the celebration. A facsimile of the old flag was raised by these 2 as part of the exercises, which were followed by a barbecue.

State Waters.—A river convention, held in January, appointed a committee to go to Washington to urge Congress to take immediate steps for the preservation and improvement of the great water ways of the State, the Sacramento and San Joaquin rivers. A plan has been submitted for the drainage of the lower Colusa basin.

The citizens of Santa Barbara have asked the National Government to reserve from settlement two sections of wild mountain land, embracing Zaca lake, for a national park. The National Government has already reserved from settlement the summit of the San Bernardino range overlooking the wide valley of Los Angeles.

Land Frauds.—The British consul general at San Francisco, Mr. Warburton, has prepared a special report on the subject of frauds on persons in England who have purchased land in California on the representations of agents of land companies and syndicates. It is found that the price charged is many times the real value of the land, and most valuations are based on the fiction that the beautiful small properties of Santa Clara and Riverside are the standards of value. Settlers are duped by being required to pay a third of the selling price in cash, which in almost every instance is more than the property is worth, and then to give mortgages for the remainder, which insures reversion to the vender.

In conclusion the consul general says: "In calling attention to the frauds committed on colonists, and in giving this advice, it is far from being my wish to deprecate the advantages of the soil, climate, etc., possessed by this State. My object is solely to protect my too-confiding fellow-countrymen against the schemes of dishonest men."

Judicial Decisions.—In a suit against certain stockholders of the Pacific Bank, the Supreme Court of the State decided that the stockholders are personally and individually liable for the debts of the corporation. In so doing the court has done nothing more than give a judicial interpretation to certain clauses in the two Constitutions of California.

A decision of importance to benevolent societies was rendered in June in a case against the board of directors of a French benevolent society by a member who sought to annul the election of the trustees of the corporation, on the ground that certain persons who voted were not members of the society. The evidence showed that 7 members who voted had some time previous to the election suffered their monthly dues to become more than two months in arrears, but that at the time of the election each had paid all arrears. The plaintiff claimed that the failure to pay dues for more than two months at a time forfeited all their rights as members, and that they could not again become members without admission in the regular way. Judge Shaw held that the acceptance of the dues by a society of this kind after such dues had been in arrears long enough to operate as a forfeiture of membership under the by-laws, the society having knowledge of such arrears and the right of forfeiture at the time of such acceptance, operated as

a waiver of such forfeiture and prevented the society from afterward declaring or claiming that such forfeiture had occurred.

The Supreme Court decided in the case of a trust clause in a will that what may be called an indefinite trust is null and void; and in a case decided in February the same decision substantially was rendered, in favor of the natural heirs.

By a reversal of the decision of Solano County Superior Court the Supreme Court has virtually recognized the right of the owner or lessee of tide-marsh lands to the full and exclusive use of the lands for hunting.

Political.—The Legislature of 1895 passed a primary election law applying to counties of the first and second classes, providing that all political parties should hold their primaries at the same time and place and with the same election board, which should be nonpartisan. This has been declared contrary to the new Constitution, which prohibits special legislation. The opinion said in effect that the purpose of the act being to prevent frauds at primary elections, and thereby to purify elections, every consideration dictates that such beneficial legislation should apply to the whole State, and not be limited to the counties of the first and second classes—that is, San Francisco and Los Angeles.

Under the Election Commission act the Mayor of San Francisco appointed a commission of 2 Republicans and 2 Democrats, but very soon afterward the question of the constitutionality of the law was raised. The Auditor refused to approve the bills for the first month's salary of the board, and the matter came before the Supreme Court in the form of an application for a writ of mandate to compel the Auditor to approve the demands for salary. The court refused the writ and dismissed the proceeding. It was declared that the act on its face bore evidence of having been passed by a Legislature ignorant of or at least blind to the plain requirements of the Constitution.

The amendment to the Constitution providing that all persons not previously registered, on applying for registration as electors, must be able to write their own names and read the Constitution in the English language went into effect this year.

The Republicans met in State convention at Sacramento May 5. A platform was adopted favoring a woman's suffrage amendment to the Constitution; approving the efforts of United States Senator Perkins in the Senate for the benefit of Californian interests; approving the action of the National League; favoring the free and unlimited coinage of silver at the ratio of 16 to 1, and the making of silver as well as gold a legal tender in payment of all debts, both public and private; pledging the party to good-roads legislation; demanding national legislation against undesirable foreign immigration, and favoring such treaties and conventions with other nations as shall provide for a reciprocal deportation of demented and criminal classes, so as in time to give each nation its own to provide for; demanding that only nonsectarian free public schools shall receive public aid; declaring that, for the protection of the farmer, the Government shall reduce the transportation rates on staples to foreign ports, and favoring the use of a limited part of the customs received for such purpose; pledging the party to legislation in favor of the dairy interests; favoring "such aid and protection as will relieve the miner from unnecessary burdens, enable him to obtain and develop his mining property, and will promote and encourage the business of all kinds of mining, including that known as 'hydraulic mining,' whenever and wherever the same can be carried on without injury to the other interests in the State"; affirming that tariff laws should be revised on the basis of the

American protective system, and condemning the policy of the Democratic party as carried out within the past four years; commending the course of the State representatives in Congress in opposing the proposed funding schemes of the Pacific Railroad companies; and declaring "that those companies should be compelled to settle their indebtedness in some reasonable and businesslike way, or that the Government should foreclose its liens upon and take possession of the properties." The delegates to the national convention were instructed to work and vote for the nomination of William McKinley.

John C. Lynch was nominated for the office of Lieutenant Governor, left vacant by the death of Spencer G. Millard and temporarily filled by the Governor's appointee, William T. Jeter.

The People's party began its convention May 12 at Sacramento. The resolutions reaffirmed the principles of the Omaha platform, and demanded direct legislation by the initiative and referendum and proportional representation; demanded the free and unlimited coinage of silver at the ratio of 16 to 1, and that it be made a full legal tender without reference to the attitude of any other nation; denounced the issue of bonds, in reference to which they said: "We condemn the hypocrisy of the Republican party for denouncing Grover Cleveland for so issuing bonds, while it has, by its representatives in Congress, upheld that policy and has refused to vote for bills presented by Populist Senators to restrain the issue of such bonds without the consent of Congress"; demanding the creation of a national, nonpartisan, tariff tribunal of experts for the purpose of having tariff schedules so adjusted that the benefit should fall to labor and not to trusts; condemning the failure of Congress to restrict properly the immigration of foreign labor; demanding "that whenever a monopoly becomes oppressive it shall be taken possession of and owned and operated in the interests of the people, just remuneration being first made for the property taken"; favoring woman suffrage and good roads; opposing the funding of the Pacific Railroad debts, and demanding that, unless these debts are paid in full at maturity, the Government take possession of the roads by virtue of its mortgage and operate them as national enterprises; condemning the action of the Federal Judiciary in the recent contempt and income-tax cases, and favoring an amendment to the national Constitution "prohibiting those tribunals or any other courts from annulling any congressional acts without the concurrence of the people by a referendum vote"; condemning assessors for habitually and corruptly underestimating the property of the banks, corporations, and wealthy classes, and protesting against the collection of the taxes on personal property in the State by force, levy, and sale without process of court; declaring the poll tax to be a wrong; opposing the use of public money for sectarian schools; demanding "that all public work shall be carried on under skilled superintendents without the intervention of contractors, and that preference be given in all such work to our unemployed citizens"; favoring an amendment to the Constitution exempting from taxation all property of each head of a family in the State to the extent of \$500, and "a graduated tax upon land, whereby the ratio of tax shall increase as the value of the land becomes greater, to the end that great estates in land may be broken up, and that land monopoly may be destroyed"; demanding a reduction of expenses, and promising, if placed in power, to conduct the State government efficiently upon a tax of 50 cents on the \$100; and, finally, favoring a union of reform forces, provided it could be effected without sacrifice of principle. J. L. Gilbert was nominated for Lieutenant Governor.

The convention of the Prohibition party met at Stockton May 13. There was a difference of opinion as to whether the platform should be limited to declarations in favor of prohibition and woman suffrage or should include planks on other issues. The report of the Committee on Resolutions presented a platform declaring on all the main issues mentioned by other parties, and was adopted by a vote of 45 to 34. Two national committeemen, a State central committee, and delegates to the national convention were chosen, and presidential electors were nominated. J. E. McComas was made the candidate for the office of Lieutenant Governor.

The Democrats met in State convention at Sacramento June 16. They approved all the official acts of the President except those connected with finance, and declared in favor of free coinage of gold and silver at the rate of 16 to 1, demanding the use of silver as well as of gold as full legal tender. The resolutions also opposed the funding bill, praised the action of the two United States Senators, called for the construction of the Nicaragua Canal, denounced the A. P. A., praised Senator Morgan for his opposition to the funding bill and the State Railroad Commissioners for their efforts to equalize and reduce fares and freights, denounced the Republican party for having raised the "false issue of the possibility of State aid being granted to sectarian schools," declared in favor of the mineral-land bill passed by the last Congress, and denounced the conduct of those whose action prevented it from becoming a law; declared in favor of the tariff platform of the Democratic Convention of 1892, reduction of public expenditures, an income tax, a system of good roads, and measures to prevent adulterations of food; condemned the amendment to the law of contempt enacted by the Legislature of 1895 and the poll tax; and called for the "rehabilitation of hydraulic mining" where other industries would not be injured by it; urged the importance of securing government aid for river and harbor improvements; pledged itself to advance the interests of labor; and declared that "the Democratic party of the State of California resents the interference in the politics of this State of the Southern Pacific Company of Kentucky."

A resolution in favor of woman suffrage was presented, but was lost by a vote of 420 to 149.

Delegates to the national convention were instructed "to present the name of Hon. Stephen M. White, should a favorable opportunity arise, as the choice of the people of the State for the office of President of the United States." They were also instructed to vote as a unit upon all questions.

Proposed amendments to the Constitution were before the people for decision at the November election—one granting the suffrage to women; one repealing section 5, Article XIII, of the Constitution, which reads as follows: "Every contract hereafter made by which a debtor is obligated to pay any tax or assessment on money loaned, or on any mortgage, deed of trust, or other lien, shall, as to any interest specified therein, and as to such tax or assessment, be null and void"; one to permit the use of voting machines at all elections; and one limiting the liability of stockholders of corporations or joint-stock associations, and making directors or trustees liable to stockholders and creditors for all money embezzled and misappropriated by officers of the corporation. Two other amendments related to putting the proposed new charter of San Francisco into effect.

The only one of these amendments that was carried was that relating to voting-machines.

The vote on the suffrage amendment to the Constitution in 24 counties, including San Francisco, was 82,080 against, and 57,542 for the amendment.

San Francisco and Alameda Counties cast the largest vote against the amendment. Los Angeles and several other counties gave majorities in favor of the amendment.

The returns of the election gave the result: McKinley, 146,688; Bryan, 144,766; Levering, 2,573; Palmer, 2,006; Matchett, 1,611. The Populist vote for Bryan was 21,734. Bentley, the "national" Prohibition candidate, received 1,047 votes. One of the Bryan electors received 144,766 votes, and as one of the McKinley electors received only 144,618 votes, McKinley secured 8 electors and Bryan 1. Only 2 scattering votes are recorded. The election for members of the Fifty-fifth Congress resulted in the return of 3 Republicans, 2 Democrats, and 2 Populists. The Republicans will have a majority of about 28 on joint ballot in the Legislature.

CANADA, DOMINION OF. Government and Legislation.—The year opened with various internal troubles and personal differences in the Conservative Cabinet of Sir Mackenzie Bowell. As a result seven of the ministers resigned, and after a prolonged crisis, during which Sir Charles Tupper, the High Commissioner in London, came out, the Government was reorganized under Sir M. Bowell, with Sir C. Tupper as a member. In May came another crisis, and out of it arose a new ministry composed as follows: Premier and Secretary of State, Sir Charles Tupper; Minister of Finance, Hon. G. E. Foster; Minister of Railways and Canals, Hon. J. G. Haggart; Minister of Justice, Hon. A. R. Dickey; Minister of Marine and Fisheries, Hon. John Costigan; Minister of Agriculture, Hon. W. H. Montague; Minister of Public Works, Hon. A. Desjardins; Minister of Trade and Commerce, Hon. W. B. Ives; Minister of the Interior, Hon. H. J. Macdonald; Minister of Militia and Defense, Hon. D. Tisdale; President of Council, Hon. A. R. Angers; Postmaster-General, Hon. L. O. Taillon; Comptroller of Customs, Hon. J. F. Wood; Comptroller of Inland Revenue, Hon. E. G. Prior. Members without portfolio were Sir Frank Smith, Senator Ross, and Sir Hibbert Tupper. Sir Donald Smith became High Commissioner in England. The policy of the Bowell and Tupper governments was practically identical, and may be gathered from the "speech from the throne" read by the Governor General at the opening of Parliament on Jan. 2, 1896, the significant passages of which were:

"Immediately after the prorogation of Parliament my Government communicated, through the Lieutenant Governor of Manitoba, with the Government of that province, in order to ascertain upon what lines the local authorities of Manitoba would be prepared to promote amendments to the acts respecting education in schools in that province, and whether any arrangement was possible with the Manitoba Government which would render action by the Federal Parliament in this connection unnecessary. I regret to say that the advisers of the Lieutenant Governor have declined to entertain favorably these suggestions, thereby rendering it necessary for my Government to introduce legislation in regard to this subject.

"The representations of my Government and the suggestions of the Ottawa conference respecting steamship communication have resulted in an announcement by the imperial authorities of their willingness to grant a substantial subvention toward the Atlantic portion of the scheme. This will, I trust, insure the successful establishment of a line of steamers between the United Kingdom and Canada, which, in point of speed and equipment, shall fully meet all requirements.

"My Government have also learned with satisfaction that it is the intention of the Secretary of State for the Colonies to appoint a committee to consider

a proposed Pacific cable to connect Canada with Australasia. . . .

"Your attention will be asked to measures intended to provide for the better arming of our militia and the strengthening of Canadian defenses."

Besides many acts relating to railways, the following were passed:

To incorporate the Imperial Life Assurance Company of Canada.

To incorporate the Canadian Peat Fuel Company.

Further to amend the act respecting the adulteration of food, drugs, and agricultural fertilizers.

To revive and amend the act to incorporate the Alberta Irrigation Company.

Respecting the Bering Sea Claims Convention.

To amend the animal contagious disease act.

Further to amend the customs tariff of 1894.

To incorporate the Yukon and British Columbia Trading and Development Company of Canada (Limited).

To incorporate the Manitoba and Northwest Millers' Association.

From Parliament Sir Charles Tupper appealed to the country. He was defeated at the polls by a majority of about 30, and Wilfred Laurier, leader of the Liberal Opposition, was called by the Governor General to form an administration. This event was preceded, however, by a constitutional difference of some importance between Lord Aberdeen and his Premier. Sir Charles Tupper, instead of immediately resigning office, when it was seen that the new House of Commons would have a Liberal majority—as is the custom in England—postponed his retirement and passed several orders in Council filling up various vacant offices, and making more than a hundred appointments. A portion of these the Governor General refused to sanction, on the ground that his Premier had the confidence of neither Parliament nor the country, and should do nothing until his successor took office except the simplest routine business of government. Sir Charles at once resigned, and claimed that the Governor General had practically dismissed him, and thus exceeded his powers. The precedent stands, however, and strengthens the prerogative of the Queen's representative. The first Liberal ministry since 1878 was then formed, as follows: Premier and President of the Privy Council, Hon. Wilfred Laurier; Minister of Finance, Hon. W. S. Fielding; Minister of Railways and Canals, Hon. A. G. Blair; Minister of Justice, Sir Oliver Mowat; Minister of Marine, Hon. L. H. Davies; Minister of Agriculture, Hon. S. Fisher; Minister of Public Works, Hon. J. Israel Tarte; Minister of Trade and Commerce, Sir Richard Cartwright; Minister of Interior, Hon. Charles Sifton; Minister of Militia and Defense, Hon. W. S. Borden; Postmaster-General, Hon. William Mulock; Comptroller of Customs, Sir Henri Joly; Minister of Inland Revenue, Hon. William Paterson. Mr. Blair, Mr. Fielding, and Sir Oliver Mowat had been for years Prime Ministers of the provinces of New Brunswick, Nova Scotia, and Ontario, respectively. Sir H. Joly has been Premier of Quebec, Sir R. Cartwright was Finance Minister in the last Liberal Government, Mr. Davies was once Premier of Prince Edward Island, and Mr. Tarte, though at one time a Conservative, had been largely instrumental in carrying Quebec at the elections. The new Parliament met on Aug. 20, and the session was opened by the Governor General with a brief speech. Mr. J. D. Edgar was elected Speaker, and the House adjourned early in September without doing much more than vote supplies and test the strength of parties. The Manitoba school question has been settled by compromise between the two governments.

Political.—Intimately connected with these changes in Government were the political issues of the year. The cause of Conservative differences and weakness in the House of Commons, where the Conservatives had a large majority at the beginning of the year, was bad management, individual ambitions, and a carelessness born of seventeen years of power. Mixed up with these difficulties was the Manitoba school question, which had assumed the form of a problem acutely unpleasant to both Catholics and Protestants. Mr. Greenway, the Liberal Premier of Manitoba, had abolished Catholic separate schools in 1890. After a long process of constitutional and legal controversy, Sir M. Bowell, a Protestant and an Orangeman, Conservative Premier of Canada, introduced in 1896 a bill that practically proposed to restore these schools. Mr. Laurier, the Liberal leader at Ottawa—a French Canadian and a Catholic—opposed the measure as an interference with provincial rights, and declared that if he were in office it could be arranged without coercion. The bill was blocked, and in the end Sir C. Tupper found himself at the polls responsible for a measure which the more fiery Protestants utterly repudiated and the Roman Catholics of Quebec did not want.

Tupper's announced policy was protection to native industries, preferential duties in favor of Great Britain, a 20-knot Atlantic service, a Pacific cable to Australia, the admission of Newfoundland to the Dominion, and justice to the Manitoba Catholic minority. Mr. Laurier's policy was conciliation of Manitoba rather than coercion, gradual abolition of protection, economy in administration and restriction of expenditure, denunciation of alleged scandals and corruption, development of Manitoba and the Northwest, and a fair reciprocity treaty with the United States. The result of the election was, by provinces, as follows:

PROVINCES.	Conservative.	Liberal.	Independent.
Ontario.....	42	42	7
Quebec.....	17	46	2
Nova Scotia.....	10	10	0
Manitoba.....	5	1	1
New Brunswick.....	8	5	1
British Columbia.....	2	4	0
Prince Edward Island.....	3	2	0
Northwest Territories.....	2	1	1
Total.....	89	111	12

As most of those called Independent were to all intents Liberals, this gives the present Government a normal majority of about 30, the first division showing 34.

Finances.—Referring to the public debt, the minister announced that it had increased by \$6,861,897 in the preceding year, the average increase between 1890 and 1895 being \$2,290,214 per annum. "During that period," he continued, "there had been spent on capital account, on canals, the Intercolonial Railway, and the Canadian Pacific \$16,992,301, and adding to that the railway subsidies, amounting to \$5,865,748, he thought the addition to the debt was fully justified. In 1894-'95 the *per capita* amount of interest paid on the debt was \$1.83, and in 1887-'88 it was \$1.90, so that, despite the increase in the debt, the burden was less heavy than five years before." For the current fiscal year, 1895-'96, he estimated an equality between revenue and expenditure. There had been a falling off in the revenue of \$2,396,000, due in part to the unusual fact of the exports exceeding the imports by \$2,857,000 for the second time since confederation in 1867. The chief items upon which the duties had decreased were iron and steel, spirits and wines, wool, and wood and manufac-

tures thereof. An increased revenue had been derived from sugars, cotton manufactures, arrowroot, biscuits, and grain. The excise duties showed a general decrease, with the exception of cigarettes.

The total revenue was the smallest since 1886, and the customs revenue the smallest since 1879, when protection was introduced. The *per capita* customs rate was \$3.52, compared with \$3.95 in 1874. The excise rate, on the other hand, was nearly double, indicating a large taxation of a practically voluntary nature. The total revenue was \$33,978,129, and the total expenditure was \$38,132,005, leaving a deficit of over \$4,000,000 in 1895, compared with an income of \$36,374,693, and an expenditure of \$37,585,026 in 1894. The deficit of over \$5,000,000 in two years had its natural effect in the ensuing elections. The chief items of revenue for 1895 were: Customs, \$17,585,000; excise, \$7,805,000; railways, \$3,127,000; and post office, \$2,792,000. The expenditure showed increases under the heads of legislation, militia, post office, canals, and debt charges.

Agriculture.—During 1895 low prices for farm products made Canada share the depression of other agricultural communities, but there was an increase of \$700,000 in the total export of agricultural products, the bulk of which go to Great Britain. The chief items sent the mother country in the year were: Bacon, valued at \$3,544,015; beef, \$418,440; canned meats, \$314,841; cheese, \$14,220,505; wheat, \$5,339,085; peas, \$1,184,883; flour, \$420,983; hay, \$492,683; clover and grass seeds, \$625,996; ripe apples, \$1,169,441. The total was \$39,282,481, against \$7,011,256 sent the United States, including the chief items of hides, \$945,699; wool, \$1,046,726; barley, \$706,586; hay, \$979,914; peas, \$357,937; and beans, \$422,521. Two processes are noticeable in the recent development of Canadian agriculture. One is the decrease in exports of farm produce, such as eggs and barley, to the United States since the McKinley bill of 1890, and the other is the steady increase of export in various lines to England. The experimental farms did valuable service during the year, and the export of stock, chiefly to Great Britain, was \$1,547,867 in horses, \$7,121,148 in cattle, and \$1,627,089 in sheep. Efforts were continued, not very successfully, to send Canadian barley to England, and also turkeys, geese, and other poultry. Farmers had during the year to accept the final exclusion of their live cattle from British ports, and a movement has been begun for the consequent removal of restrictions upon the import of live American cattle into Canada.

Indian Affairs.—Canada prides itself upon the treatment of its Indians, and during 1895 there was a slight increase in their population. In round numbers there are now 18,000 in Ontario, 12,000 in Quebec, 42,000 in Manitoba and the Northwest, and 25,000 in British Columbia. They had 291 schools, with 8,175 pupils, on the rolls in 1895, and a better average daily attendance than the white schools. The efforts of the Government have been unremitting, and civilization as well as the inclination to work is progressing favorably among these wards of the nation. Last year they cultivated 120,000 acres, broke in 2,663 acres of new land, owned 53,073 implements and 65,746 cattle, horses, sheep, etc., raised 539,228 bushels of grain, 57,271 tons of hay, 232,852 bushels of potatoes and roots, and obtained \$1,621,388 worth of fish, furs, game, etc. There is now \$3,539,943 to the credit of the Indian fund, of which only the interest, amounting to \$284,000, is expended, the remainder of the money required, \$968,563, being appropriated by Parliament from current revenue. To this fund is yearly added the proceeds of sales of Indian surplus lands.

Religious Statistics.—During 1895 a table was prepared by the Dominion statistician showing the religious classification of the people of Canada. Based upon the most recent figures and estimates, it shows 646,050 adherents of the Church of England, 847,765 Methodists, 755,326 Presbyterians, 303,839 Baptists, 1,992,017 Roman Catholics, and 288,233 of other beliefs. By provinces these figures indicate a Roman Catholic percentage of 20 in British Columbia, 13 in Manitoba, 36 in New Brunswick, 27 in Nova Scotia, 43 in Prince Edward Island, 18 in the Territories, and 87 in Quebec.

Prohibition.—During the parliamentary session of February, 1896, Mr. Flint introduced a motion "that in the opinion of this house the manufacture, importation, and sale of intoxicating liquors, except for medicinal, sacramental, and mechanical purposes, should be prohibited by law." After debate, the motion was indirectly voted down by 56 to 47 in a very small house and upon a resolution to adjourn. More important than this perfunctory discussion was the decision by the Judicial Committee of the Imperial Privy Council, announced on May 10 following, to the effect that the province of Ontario had the right to enact local prohibition under the Federal Constitution, but that the province can neither stop the manufacture of liquor for sale outside of its boundaries nor trench on the right of the Federal Government to govern the importation of liquor into the several provinces of the Dominion. Consequently, to all intents and purposes, it throws the responsibility of legislation in this matter directly upon the latter Government. The new Premier has promised a plebiscite vote upon the subject.

Criminal Statistics.—For the year ending June 30, 1895, there were 7,730 charges for indictable offenses—an increase of 129 over 1894—and out of that number 2,154 were acquitted and 20 detained for lunacy. The number convicted was 5,474, or 10.86 per 10,000 inhabitants, against 10.50 in the previous year. There were 740 offenders under sixteen years of age, and 14 per cent. were unable to read or write. In the use of liquors 53 per cent. were moderate and 33 per cent. immoderate. There were 11,558 cases of drunkenness recorded.

Trade and Commerce.—The exports of Canada for the year ending June 30, 1896, show an increase of \$7,000,000 over the preceding year, and include the produce of the mine, \$8,401,860; produce of the fisheries, \$11,275,732; produce of the forest, \$27,355,420; animals and their produce and agricultural products generally, \$37,586,635; and manufactures, \$10,038,735. Miscellaneous items amount to \$553,790, and with an export of \$4,695,029 worth of coin and bullion the total of \$118,140,504 is reached. Of the total imports of \$110,587,713 the dutiable goods amounted to \$67,250,775, or nearly \$9,000,000 more than in 1895, and the free goods to \$38,111,743, or \$4,000,000 less than in the preceding year. Coin and bullion importations showed an increase and amounted to \$5,225,195. The trade of Canada therefore as a whole increased over 1895 by \$11,386,334. Great Britain and the United States were the chief contributors to this trade, and while the exports of minerals, fish, and lumber went largely to the republic, those of agriculture went almost entirely to England. Of the imports the following were the chief dutiable articles, and in many lines an increased trade with the States is noticeable: Breadstuffs, \$1,955,546; bituminous coal, \$3,333,961; cotton and manufactures of, \$4,646,873; fancy goods, \$1,606,222; glassware, \$1,095,930; iron and steel and manufactures of, \$8,422,733; leather and manufactures of, \$1,255,862; oils, etc., \$1,433,012; silk and manufactures of,

\$2,551,247; sugar, \$4,752,303; woolens and manufactures of, \$8,721,289. Some of these imports, such as iron and steel, are about equally divided between the two countries mentioned, while others, like silk and woolens, come almost entirely from England.

Militia and Defense.—Immediately following the Venezuelan scare arrangements were made for rearming the Canadian militia, and \$3,000,000 was voted by Parliament for that purpose. Col. Lake, an officer experienced in both the imperial and Canadian services, was sent to England to discuss with experts and the commander in chief the best means of carrying out this purpose. At the close of 1896 the new arms were being distributed and increased efficiency is indicated in many directions. The parliamentary vote for 1896-'97 was also increased in its current amounts for militia purposes, while Major-Gen. Gascoigne, the new commander of the militia, announced that "the platform of my programme is going to be musketry." This is being carried out in the drills as well as in the rearming of the troops. The Royal Military College at Kingston is also being reorganized.

Railways.—The whole business of the Grand Trunk system has been revolutionized under the management of Sir Charles Rivers-Wilson, the new president. In 1895 the passenger traffic showed a decrease of 105,748 in numbers and of \$138,000 in amount, while the mail and express earnings showed a decrease and the working expenses were 70.84 per cent. of the receipts. Upon the whole the report indicated a better condition in the Canadian line than upon its American branches. During 1896 the returns showed a decided improvement in many ways.

The Canadian Pacific Railway, which controls 6,174 miles in Canada, compared with the Grand Trunk's 3,161 miles, reported for 1895 gross earnings of \$18,941,036 and working expenses of \$11,460,085. Its annual statement shows the cost of the road to have been \$174,281,173; the value of its equipment to be \$18,386,933; the value of its Pacific steamers, etc., to be \$3,504,403; acquired securities amount to nearly \$23,000,000; and with miscellaneous securities and \$3,956,000 cash in banks the total assets are \$235,812,286, excluding the value of 17,347,000 acres of land. The liabilities consist of \$42,353,000 in stock, \$48,088,000 in mortgage bonds, \$18,424,000 in land-grant bonds, and various smaller sums. The railway statistics of Canada as a whole show \$894,640,559 invested in railways at the close of the fiscal year 1895 and 15,977 miles in operation. During the year 13,987,580 passengers were carried and 21,524,421 tons of freight, while the total earnings amounted to \$46,785,487 and the working expenses to \$32,749,669—a general reduction from the figures of 1894. During the session of 1895 several subsidies were granted and many others were paid as part of previous annual grants to small railways in different parts of the country, the total being \$1,123,949, or slightly more than in the succeeding year.

Canals.—The Canadian canal system and waterway from the head of Lake Superior to the Atlantic Ocean was completed in 1895 by the opening of the Sault-Ste.-Marie Canal on the Canadian side. The system has cost between sixty and seventy millions, but is not yet deepened sufficiently to admit very large vessels through the whole course. The traffic is not heavy, amounting in 1894 to 2,942,715 tons of freight, 142,124 passengers, and \$288,129 in tolls. The tonnage of the Canadian vessels was 3,048,904 and of the United States vessels 1,012,027. The total revenue collected in 1894 was \$387,421 and in 1895 \$340,861, while the expenditure on construction, repairs, and maintenance was \$3,198,048 in

the latter year. The aim of the Government is to a uniform depth that will enable vessels drawing 14 feet of water to pass through all the canals.

Minerals.—In 1891 there were 13,412 miners in the Dominion. The chief items of production in 1895 were as follows: Copper, \$949,229; gold, \$1,910,921; iron ore, \$238,070; lead, \$749,966; nickel, \$1,360,984; bricks, \$1,800,000; silver, \$1,158,633; asbestos, \$368,175; coal, \$7,774,178; gypsum, \$202,608; petroleum, \$1,201,184; building stone, \$1,200,000. The total was \$22,500,000, compared with \$20,900,000 in 1894. During 1896 new discoveries were made of various minerals, notably anthracite coal, or a substance so like it as to be equally useful, and gold in large quantities.

Fisheries and Shipping.—The total number of vessels registered in the Dominion on Dec. 31, 1895, was 7,262, with a tonnage of 825,836. The steamers were 1,718 in number, with a tonnage of 247,007. The value of this registered tonnage was estimated at \$24,775,080, while the new vessels built during the year were 250, at a cost or valuation of \$732,150. The men engaged in fishing numbered 70,000, and in 1895 the Government expended \$420,165 on the fisheries. The value of the fisheries in 1894 was \$20,719,573, the chief items being the salmon of British Columbia, the herring, whitefish, and salmon trout of the Great Lakes, and cod, lobsters, pickerel, and fur seals in other localities.

The shipping cleared at Canadian ports in 1895 was 10,976,829 tons, compared with 11,280,000 tons in 1894, and the number of men employed was 429,963, showing also a slight decrease. This tonnage was divided as follows: British, 3,206 vessels, of 3,944,224 tons; Canadian, 12,918 vessels, of 2,054,024 tons; foreign, 11,752 vessels, of 4,928,581 tons. The increase was mainly in the foreign or American; the decrease was divided between the British and the Canadian. The tonnage of the vessels trading between Canada and the United States in the inland waters amounted to 8,124,134 in 1895. It comprised 16,866 Canadian vessels with a tonnage of 5,196,811, and 15,547 American vessels with a tonnage of 2,927,323. The coasting trade of Canada, always very large, showed a total tonnage last year of 25,473,434, a reduction of about 1,000,000 tons.

Postal Service.—Canada is in the Postal Union, and during 1895 107,565,000 letters went through its mails, 24,025,000 post cards, and 96,176,206 newspapers, books, and parcels. In its Postal Savings Bank \$7,448,028 was kept on deposit, and \$13,187,322 worth of money orders were issued. The revenue was \$3,815,456, and the cost of carrying the mails was \$2,164,589. The total expenditure was \$4,616,313. The registered letters numbered 3,183,200.

Insurance.—The cash received for fire insurance premiums in 1895 by Canadian companies was \$5,986,925, and the amount paid for losses was \$5,019,516. The division of business among other companies was as follows: British companies, losses paid, \$3,439,223; premiums received, \$4,808,971; American companies, losses paid, \$771,132; premiums received, \$1,024,051. Since these figures were compiled a difference has been caused in the business by fears of "free silver," and through it, for a time, American companies lost considerable business, especially in the life department. The total Canadian fire insurance in force in 1895 was \$27,184,368; the total life insurance, \$319,781,939, divided as follows: British companies, \$34,589,584; American companies, \$96,731,278; Canadian companies, \$188,461,077. The new insurance effected was \$44,781,584, and the yearly increase realized from the sum total was \$10,312,499.

Banks and Banking.—By act of the Dominion Parliament in 1871 a uniform currency was established, with a single gold standard. The British sovereign was made legal tender at \$4.86 $\frac{2}{3}$, as was the American gold eagle at a fixed weight. Silver coin was to be legal tender up to \$10 in amount. Dominion notes are issued, the greater part being held by the banks as security for their reserves, and the remainder is in circulation as \$1 and \$2 bills to the extent, in 1895, of \$21,397,000. The banks of Canada had last year a paid-up capital of \$61,800,700; notes in circulation, \$30,807,041; deposits, \$190,916,939. Their reserve fund amounted to \$27,000,000, and the rate of discount was 5 $\frac{1}{2}$ to 7 per cent. In the savings banks—postal, special, and Government—\$57,578,951 were on deposit in 1895.

Business.—The failures of the year aggregated over \$15,000,000. They numbered nearly 1,900, and were about \$2,000,000 less than in 1894. The assets were \$6,054,127. The business of the loan companies was very dull during the year.

International Affairs.—The Canal Commission has been referred to elsewhere. The following resolution was unanimously adopted by Parliament on Feb. 5, 1896, in connection with the Venezuelan trouble:

"That in view of the threatening aspect of foreign affairs this house desires to assure her Majesty's Government and the people of the United Kingdom of its unalterable loyalty and devotion to the British throne and Constitution, and of its conviction that, should occasion unhappily arise, in no other part of the empire than the Dominion of Canada would more substantial sacrifices attest the determination of her Majesty's subjects to maintain unimpaired the integrity and inviolate the honor of her Majesty's empire; and this house reiterates the oft-expressed desire of the people of Canada to maintain the most friendly relations with their kinsmen of the United States."

The Alaskan Boundary Commission concluded their report, and in January, 1896, it was submitted to the governments concerned. The surveys had been carried on since 1892 by Dr. F. C. Mendenhall, and then by Gen. Duffield for the United States and by W. F. King for Canada. Later, differences developed as to the boundary between British Columbia and the State of Washington, involving the ownership of great tracts of mining country. The Bering Sea regulations do not seem to have checked pelagic sealing to any extent, and the United States Government demanded a modification of the Paris award, without success, while the same award of damages to Canadian sealers was being finally settled by a commission sitting at Victoria, B. C., in November, 1896. Another international point raised was the execution of the American alien-labor law against Canada. During the Canadian elections the Conservative party favored retaliation along similar lines, and the Liberal leader, Mr. Laurier, has intimated his intention of taking action unless some modification is effected in the American regulations.

CAPE COLONY AND SOUTH AFRICA. The British colony of the Cape of Good Hope and the neighboring colony of Natal, together with the independent Boer republics—the South African Republic and the Orange Free State—occupy the temperate part of South Africa south of the Limpopo and Orange rivers. Between this region and the Zambesi are the British protectorates of Bechuanaland and British South Africa, or Rhodesia, occupying the elevated central region, generally fertile, salubrious, and rich in minerals. The southern half of Portuguese East Africa takes up the coast region in the east, from the mouth of the Zambesi to the Zululand Reserve. In the west the

vast undeveloped German protectorates of Namaqualand and Damaraland extend from the Orange river to the confines of the Portuguese colony of Angola.

Cape Colony.—The Legislative Council, of 22 members, elected for seven years, is presided over by the Chief Justice. The House of Assembly has 76 members, elected by urban and rural districts for five years. Any adult male citizen has a vote who occupies a house or lodging or has a salary of £50 a year, if he can register his name, occupation, and address with his own hand. Voting has been done by ballot since 1894.

The Governor of the Cape of Good Hope and High Commissioner for South Africa is Sir Hercules George Robert Robinson, appointed in 1895. The ministry in the beginning of 1896 consisted of the following members: Prime Minister and Secretary for Native Affairs, Cecil J. Rhodes; Colonial Secretary, P. H. Faure; Colonial Treasurer, Sir J. Gordon Sprigg; Attorney-General, W. Z. Schreiner; Secretary for Agriculture, John Frost; Commissioner of Public Works, John Laing. The Chief Justice is Sir J. H. de Villiers. On Jan. 6 Mr. Rhodes resigned and a new ministry was constituted as follows: Prime Minister and Treasurer, Sir J. Gordon Sprigg; Attorney-General, Sir Thomas Upington; Commissioner of Public Works, Sir James Sivewright; Secretary for Agriculture, P. H. Faure; Colonial Secretary, Dr. T. N. G. Te Water.

Area and Population.—The area of Cape Colony, including the former Crown colony of British Bechuanaland, incorporated in the colony in August, 1895, is 282,081 square miles. Cape Colony proper, with an area of 191,416 square miles, had in 1891, the year of the last census, a population of 336,938 Europeans and 619,547 native and colored, showing an annual increase during a period of sixteen years of 2.04 per cent., the rate for the white population alone being 2.64 per cent. Griqualand West, now politically incorporated in the colony, has an area of 15,197 square miles, with a population of 29,670 whites and 53,705 native and colored. The dependencies are: East Griqualand, 7,504 square miles in area, with 4,150 European and 148,468 colored and native inhabitants in 1891; Tembuland, area, 4,122 square miles, with 5,179 whites and 175,236 colored and natives; the Transkeian territory, with an area of 1,019 square miles and a population of 1,019 whites and 152,544 natives and colored; Walvisch Bay, area 430 square miles, with 31 whites and 737 natives; Pondoland, annexed on Sept. 25, 1894, with a native population estimated at 200,000; and British Bechuanaland, area 60,770 square miles, with a population of 5,254 whites and 55,122 natives. The total population in 1891 was 1,787,600, of whom 382,241 were whites and 1,405,359 natives or of other colored or mixed races. The native inhabitants are Hottentots, Fingoes, Kaffirs, and Bechuanas. East Indians, Malays, and other races constitute the colored population. The adults who landed in 1894 exceeded those who sailed away by 7,845. Cape Town, the capital, had 83,718 inhabitants in 1891, inclusive of suburbs.

Finances.—The revenue for the year ending June 30, 1894, was £5,621,352, of which £1,951,652 came from taxation, £2,894,577 from services, £353,772 from the colonial estate, £121,351 from fines, stores issued, etc., and £300,000 from loans. The total expenditure was £5,823,449, of which £1,551,938 went for the public debt, £1,565,261 for railways, £161,231 for defense, £290,819 for police and jails, £135,557 for the civil establishment, and £526,465 under loan acts. For 1896 the expenditure was estimated at £5,183,260.

The debt of the colony on Jan. 1, 1895, amounted

to £27,675,178, of which £18,250,000 had been expended on railways alone, and a large amount for other public works. The total includes £2,675,417 raised by harbor boards and corporations, but guaranteed by the Government.

Commerce.—The total value of all imports in 1894 was £11,588,096 and of exports £13,812,062. The value of merchandise imports was £10,887,787; of exports of colonial produce, £13,503,044. The gold export increased from £1,445,039 in 1890 to £2,781,576 in 1891, £4,095,512 in 1892, £5,259,120 in 1893, and £7,147,308 in 1894. The export of diamonds has declined from £4,174,208 in 1891 to £3,906,992 in 1892, £3,821,443 in 1893, and £3,013,578 in 1894. The value of the wool export has fallen off gradually from £2,264,498 in 1891 to £1,599,632 in 1894. The values of the other chief exports in 1894 were: Angora hair, £421,284; ostrich feathers, £477,414; hides and skins, £419,211; copper ore, £284,800; wine, £18,908; grain and flour, £6,154.

Navigation.—The number of vessels entered at the ports during 1894 was 802, of 1,723,528 tons, in the foreign trade and 1,309, of 2,895,082 tons, in the coasting trade; cleared, 793, of 1,715,806 tons, in the foreign trade and 1,319, of 2,893,522 tons, in the coasting trade. Of the vessels entered from abroad, 577, of 1,547,280 tons, were British. The colony possessed 21 steamers, of 2,659 tons, and 8 sailing vessels, of 3,431 tons, in 1895.

Communications.—The Government railways had at the end of 1894 a total length of 2,253 miles. There were 188 miles of private railroads. The Government lines cost under £45,000 a mile, the total capital expenditure being £20,296,943. The gross receipts for 1894 were £2,713,753, and the expenses £1,483,771.

The telegraph lines had at the close of 1894 a total length of 5,973 miles. The number of dispatches sent during that year was 1,537,434. The revenue in 1894 was £75,507, and expenditure £82,900.

The number of letters sent through the post-offices in 1894 was 16,448,512; of newspapers, 7,484,160; of postal cards, 474,810; of books and samples, 1,504,680; of parcels, 358,048.

Bechuanaland.—After the annexation of British Bechuanaland to Cape Colony, on Nov. 15, 1895, the part of the country that was not ceded to the British South Africa Company remained under the imperial protectorate. The Bechuanaland protectorate has an area of about 217,000 square miles, with 100,000 inhabitants. Montsioa's country and the neighboring district of the chief Ikaning were ceded to the chartered company on Oct. 18, 1895. A strip along the Transvaal frontier through which the railroad is to be carried was also to be given to the company.

Natal.—Under the Constitution that went into force on July 20, 1893, the power of making laws is vested in a Legislative Council of 11 members, appointed for ten years by the Governor, with the advice of the ministers, and a Legislative Assembly of 37 members, elected by all adult male citizens possessing real property of the value of £50, or occupying premises worth £10 a year, or having an income of £96. No money can be voted, except on the proposal of the Government, in the session in which the bill is first brought.

The Governor is Sir Walter Francis Hely-Hutchinson, appointed in 1893. He is also Governor of Zululand. The first ministry under the new Constitution was formed on Oct. 10, 1893, as follows: Premier and Colonial Secretary and Minister of Education, Sir John Robinson; Attorney-General, Harry Escombe; Colonial Treasurer, G. M. Sutton; Minister of Native Affairs, F. R. Moor; Minister of Lands and Works, T. K. Murray.

Area and Population.—The area of the colony is estimated at 20,460 square miles. The population in 1891 was 543,913, consisting of 46,788 Europeans, 41,142 East Indians, and 455,983 Kaffirs. Durban, the capital, had 25,512 inhabitants in 1894.

Finances.—The revenue for the year ending June 30, 1894, was £1,011,017, of which £446,989 came from railways, £191,235 from customs, £20,199 from excise, £36,315 from land sales, £37,426 from posts, £12,954 from telegraphs, £22,849 from stamps and licenses, and £82,366 from the native hut tax. The expenditure was £1,082,373; the principal items being £294,801 for railways, £63,378 for public works, and £65,688 for defense. The expenditure from loans was £79,692. The debt of the colony on Dec. 31, 1894, was £8,060,354.

Commerce.—The total value of imports in 1894 was £2,316,596; of exports, £1,197,611. The values of the principal exports were: Angora hair, £16,311; sugar, £75,629; hides and skins, £49,125; coal, £62,291; wool, £460,388; gold, £222,750; bark, £13,114; spirits, £2,240. The sugar crop in 1894 was 20,401 tons. The yield of tea for 1895 was 737,000 pounds. The output of the coal mines, which are now connected by railroad with the port of Durban, was 151,520 tons in 1894.

Navigation.—There were 520 vessels, of 693,253 tons, entered, and 524, of 692,906 tons, cleared in 1894. The merchant fleet of the colony consisted of 24 vessels, of 1,443 tons, of which 12, of 820 tons, were steamers.

Railroads.—The railroads, which belong to the Government, have a total length of 402 miles. The main line, running from Durban to Pietermaritzburg and Charlestown, 304 miles, connects with the line of the South African Republic, which runs from Charlestown to Johannesburg and Pretoria. A branch runs to Harrismith, in the Orange Free State. The cost of construction was £6,078,489. The net earnings in 1894 were £171,809.

Orange Free State.—The colony founded beyond the Orange river by emigrants from Cape Colony who were unwilling to accept British rule was declared an independent republic in 1854. The legislative power is vested in the Volksraad, a single chamber of 58 members, elected for four years by the votes of all burghers. The President, who is elected for five years by universal suffrage, was, in the beginning of 1896, F. W. Reitz, who succeeded President Brand, deceased, in 1889, and was re-elected on Nov. 22, 1893. On Feb. 19 Judge Steyn was elected, after the death of President Reitz, to succeed him, and on March 4 he was inaugurated.

Area and Population.—The Orange Free State has an area of 48,326 square miles and a population of 207,503, of whom 77,716 are whites and 129,787 natives. Of the whites, 51,910 were born in the Free State and 21,116 in Cape Colony. Education is not compulsory, and is free only for the indigent, but the Government maintains schools, in which 5,178 pupils were taught in 1894, and also aids private and denominational schools, spending about £40,000 a year for education.

Commerce.—The value of the imports in 1891 was estimated at £1,620,660. The chief export article is wool. Other exports are diamonds, exported to the amount of £415,262 in 1894, hides, goat hair, and ostrich feathers.

Communications.—A railroad connecting the Transvaal with the Cape Colony system was built by the Cape Government, 121 miles from Norvalspoor to Bloemfontein, and 209 miles farther to the Vaal river. A railroad connects Harrismith with Natal, and a branch, 60 miles in length, is being built to the coal mines of Vierfontein. In 1896 the Volksraad decided to take over the railroad at a cost of £2,780,000, which will be met partly from revenue

and partly by a loan, probably £2,000,000 at 3½ per cent. There are 1,500 miles of telegraph lines.

Finances.—The revenue for the fiscal year 1894-95 was £306,653, and the expenditure £319,221. Of the revenue, £98,000 came from customs, £47,000 from stamps, £23,650 from posts and telegraphs, £13,000 from the native poll tax, £15,500 from quit rents, and £20,000 from transfer dues. The principal items of expenditure were £48,155 for salaries, £43,800 for education, £28,315 for posts and telegraphs, £11,890 for police, £97,842 for public works, and £4,900 for the artillery. The debt is only £55,000.

South African Republic.—The Transvaal Republic was founded in 1849 by Boers who left Cape Colony in 1835 for Natal to escape British rule, and when Natal was annexed by the British abandoned their possessions there and established an independent government in the wild interior, subduing the Kaffir tribes of the country. The republic was recognized by Great Britain in 1852. It was formally annexed by Great Britain on April 12, 1877, but in December, 1880, the Boers rose in arms, and, after the victorious battles of Laing's Nek and Majuba Hill, peace was signed on March 21, 1881, and a convention was ratified by the Volksraad on Oct. 26 of that year, by which self-government was restored to the Transvaal as far as regards domestic affairs, while the control of foreign policy was reserved to Great Britain as the suzerain power. A second convention was signed in London on Feb. 27, 1884, and ratified by the Volksraad on Aug. 8 of the same year, in accordance with which the Transvaal assumed the name of the South African Republic. The suzerainty of Great Britain was abandoned, and the British resident was replaced by a diplomatic agent, but the South African Republic agreed to submit any treaty or engagement concluded with any state or nation other than the Orange Free State or with any native tribe eastward or westward of the Transvaal to the British Government, which has the right of veto if it exercises such right within a period of six months. The same convention contains a prohibition of laws imposing disabilities as to trade or establishing differential duties or taxes to the prejudice of Uitlanders, or resident foreigners.

According to the *Grundwet*, or Constitution, as amended at various times, last in September, 1895, the legislative power is vested in the Volksraad, consisting of two Chambers, each of 24 members. First-class burghers, comprising male whites who were residents previous to May 29, 1876, or who fought in the war of independence, or in the Malaboch war of 1894, and their sons above the age of sixteen elect the members of the First Chamber, the President, and the Commandant General. Second-class burghers, comprising naturalized aliens and their sons, have an equal right with these to vote for members of the Second Chamber. Any white foreigner professing the Protestant religion can become naturalized after a residence of two years by taking the oath of allegiance and paying a fee of £2. By special vote of the First Chamber, naturalized citizens can become first-class burghers after a residence of twelve years; their sons can at the age of forty. The Second Chamber can only legislate on the following questions: Mines and postal, telegraphic, and telephonic departments; the making and maintenance of wagon and postal roads; the protection of inventions, patterns, trade-marks, and authors' rights; the working and maintenance of forests and salt pans; company and insolvency laws; civil and criminal procedure; and such other matters as the First Chamber may intrust it with. All laws emanating from the Second Chamber may be approved of, amended, or rejected by the First

Chamber, as it sees fit; but any laws passed by the First Chamber, so long as they do not trench on the subjects specially reserved for the Second Chamber, have force, and can not be vetoed by the Second Chamber. The number of burghers possessing the full voting franchise in 1895 was 22,628.

The President is S. J. Paul Krüger, elected for the third term of five years on May 12, 1893. The Executive Council is composed of the Commandant General, P. J. Joubert; State Secretary, W. J. Leyds; J. H. M. Kock, Keeper of the Minutes; and N. J. Smit and M. A. Wolmarans, unofficial members.

Area and Population.—The Republic has an estimated area of 119,139 square miles. The census of 1890, which was very imperfect, made the white population 119,125, consisting of 66,498 males and 52,630 females. The native population was estimated in April, 1895, at 653,662. Pretoria, the capital, has a white population of about 8,000. The population of Johannesburg, the center of the Witwatersrand gold fields, was estimated to have a population of 60,000 at the close of 1895, and other camps had a floating population of about 45,000. Of the total white population in 1895, the Uitlanders numbered 75,720, of whom 41,445 were British subjects and 34,275 were other foreigners, including 439 Americans.

Finance.—The ordinary revenue for 1894 was £2,247,728, and for the first six months of 1895 £1,472,953. The expenditure was £1,734,728 for 1894 and £971,488 for six months in 1895. The balance on June 30, 1895, was £882,919. The provisional estimates make the revenue for the whole year 1895 £1,859,582 and the expenditure £1,595,757. The fees and licenses from the gold fields provide the bulk of the revenue, other sources being sales of land, quit rents, customs duties, stamps, transport dues, and the native hut tax. The revenue from the gold fields was £492,830 in 1890, £405,397 in 1891, £636,313 in 1892, £581,977 in 1893, and £972,311 in 1894. The import duties amounted to £812,173 in 1894. The estimates for 1896 make the total revenue £4,462,193, of which \$1,200,000 come from customs, £482,000 from mining licenses, £162,925 from the hut tax and native poll tax, £212,000 from fines, £110,000 from the post office, £86,000 from telegraphs, £322,327 from railways, £200,000 from stamp duties, £275,000 from transfer dues, £58,872 from diggers' licenses, £54,200 from stand, or building-plot, licenses, and £35,000 from the dynamite monopoly. The chief items of expenditure are £943,510 for war, £898,041 for salaries, £242,421 for police, £80,909 for telegraphs, £44,374 for the post office, £730,000 for public works, £19,241 for the judicial department, £38,850 for the administration of justice, £585,350 for special expenditure, and £103,000 for education.

The obligations of the Government consist of a debt of £165,767 due to the British Government, a loan of £2,500,000 obtained from the Rothschilds, and other liabilities, which bring the total up to £2,704,351. The expenditures are mostly for civil administration and public works. For education, £33,407 was expended in 1894 on 6,691 pupils. The military expenditures are slight, as the republic maintains no standing force except a small body of horse artillery. In case of war, the whole body of burghers can be called out. The rolls contained in 1894 the names of 26,299 able-bodied citizens between the ages of eighteen and fifty.

Commerce and Production.—Stock-raising is the principal occupation of the burghers. The agricultural production is scarcely sufficient to supply the population. There are excellent coal mines in the Witwatersrand and in the eastern districts, which produced 812,882 tons in 1894, valued at

£359,694. The Rand, Barberton, and other gold fields produced 2,239,865 ounces of gold in 1894, valued at £7,667,152. In 1895 the product was £8,577,550—about one fifth of the world's production and about the same amount as the United States or Australia produced. Since 1890 the yield has increased at the rate of £1,200,000 a year. In 1895 the dividends paid by 32 companies amounted to £2,258,441. It has been calculated that by the end of the century the annual production will reach £26,000,000, and that within fifty years £700,000,000 will have been taken out of the Rand mines alone, of which £200,000,000 will be clear profit. Silver, copper, lead, and other minerals are found in various parts of the country. There are also vast quantities of superior iron ore, and immediately adjoining are beds of good coking coal. These resources have not been developed. The coal beds lying between Pretoria and Delagoa Bay are of enormous extent. A bed of magnetite-iron ore, from 20 to 40 feet wide, yielding 70 per cent. of metal, extends for several miles alongside the recently discovered seams of coking coal.

Besides gold, the principal exports are wool, cattle, hides, ostrich feathers, grain, ivory, spirits, and minerals. The value of imports recorded in 1894 was £6,440,215, of which £3,938,214 came from Europe, £1,135,409 from Cape Colony, £676,197 from Natal, £454,051 from the Orange Free State, and £67,609 from America. Timber and mining machinery have been imported largely from the United States.

Communications.—The railroad from Pretoria to the Vaal river, 78 miles, joins the extension of the Cape Railroad built through the Orange Free State, connecting the Transvaal capital with Cape Town by 1,040 miles of railroad. By the continuation of the Natal line from Charlestown Pretoria is connected by 511 miles of rail with Durban, 207 miles being on Transvaal territory. The same line passes through Johannesburg. A line from the Portuguese boundary to Pretoria, 295 miles, connects with the Delagoa Bay Railroad. A line to Selatie, 191 miles, is not yet completed. There were altogether 424 miles of railroads open to traffic in September, 1895, and 384 miles more were under construction. The telegraphs in the Republic have a length of 1,952 miles.

Dr. Jameson's Raid.—Plans for an expedition against Johannesburg and a simultaneous revolutionary uprising of the Uitlanders of the Rand were laid early in the autumn of 1895 or before. During the month of November active preparations were carried on for Kimberley by Dr. Jameson and the aiders and promoters of the enterprise. Lee-Metford rifles, Maxim guns, and field pieces were sent up to Pitsani, where a military camp was established. The British South African volunteer force gathered there, augmented by freshly enlisted men from the territory and 100 or more recruits from Cape Colony, was trained and drilled during the months of November and December. The troops of the Chartered Company marched from Buluwayo on Oct. 29, and arrived at Pitsani at the beginning of December. Sir John Willoughby and Major Robert White were the most active organizers of the military force. Hundreds of horses were purchased. Another camp was established at Mafeking, where the members of the Bechnanaland border police force were collected to be paid off and mustered out. The disbandment of this force and their re-enlistment in the British South Africa Company's service was made a cloak to hide effectually all the military preparations that were going on, and when public suspicion was at last excited the story was circulated that a campaign was in preparation against Linchwe, the chief who pos-

sessed the territory through which the railroad along the border of Bechuanaland would run. Thus the plans and preparations were matured in the greatest secrecy. The offer was made to the members of the Bechuanaland border police of higher pay if they would join the forces of the South Africa Company, and first and last 160 of the 200 men enlisted. On pretense of establishing a new stagecoach line, stores of provisions and fodder and relays of 250 horses were placed by Dr. Wolff at five stages of the route through the wild northern part of the Transvaal toward Johannesburg. The Rhodesian horse at Buluwayo was held in readiness to act as a support to the expedition, if necessary. The routes were surveyed, and maps were made marking the road to be taken and the dangerous places. The strength of the expedition was early fixed at 600 men, as was shown by a letter from Sir John Willoughby dated Nov. 18.

The men and some of the officers of the expedition were not informed of its purpose and objective till the day set for starting. Those of the Bechuanaland border police who had joined the forces of the Chartered Company, handed in their Martini-Henry rifles, and received Lee-Metford magazine rifles. The new recruits also were armed with Lee-Metford rifles and carbines, and the volunteers in Pitsani had been provided with the same weapon. The Bechuanaland police who had not volunteered for the expected expedition were formed into a separate troop. On the evening of Dec. 29 there was a parade at Mafeking. Major Coventry addressed the men on parade and appealed to the men of this troop to join. He told them that they were not going to march against any native chief, but that they were going to march straight to Johannesburg. A dozen of the reluctant men thereupon volunteered. Col. Grey, who was present when Major Coventry told the men that he could no longer keep it from them that they were going to Johannesburg, on being asked by some of the soldiers why they had been kept in the dark, replied that some things must be left to the officers. His men then wanted to know whether they were going under the Queen's orders or under the orders of the Chartered Company, and he said: "I can not tell you that you are going by the Queen's orders; but you are going to fight for the supremacy of the British flag in South Africa." At Pitsani there was a parade in the afternoon of Dec. 29, at which Dr. Jameson addressed the men. He said he had received a letter, signed by 5 people in Johannesburg, requesting him to come to Johannesburg to assist the inhabitants to get a better form of government. He told the men that there would be no bloodshed, not a shot would be fired, the preparations having been made with such secrecy that they would probably get through without fighting at all; that it would be a surprise party; but they were prepared to fight, if necessary, for women and children were in danger. The Bechuanaland border police, he promised, would join them, and they would have the assistance of the Cape mounted rifles and police, if necessary.

Dr. Jameson and his associates relied on an uprising in Johannesburg and the armed assistance of the miners who were provided with Lee-Metford rifles. He counted on a force of 2,000 men to support him, and had not decided whether to proceed to Johannesburg or to strike at Pretoria, expecting to determine on the destination after consulting with Dr. Wolff, and learning the views and intentions of the people in Johannesburg. He had received warning that there was hesitation in Johannesburg, for on Dec. 27 Hammond telegraphed: "Expert's report decidedly adverse: I absolutely condemn further development at present." On the

day preceding his brother, S. Jameson, had sent this message: "It is absolutely necessary to postpone flotation through unforeseen circumstances here altogether unexpected and until we have C. J. Rhodes's absolute pledge that authority of the Imperial Government will not be insisted on. Charles Leonard left last night to interview C. J. Rhodes. We will endeavor to meet your wishes as regards December, but you must not move until you have received instructions to." Dr. Jameson evidently supposed that if he went ahead the people of Johannesburg would not or could not recede. He telegraphed his brother on Dec. 27: "British Bechuanaland police have already moved forward; guarantee already given; therefore let J. H. Hammond wire at once all right." To Dr. Wolff he telegraphed just as he started: "Meet me as arranged before you left on Tuesday, which will enable us to decide which is best destination; make advocate Leonard speak. Have great faith in J. H. Hammond, A. Lawley, and miners with Lee-Metford rifles." Sir John Willoughby, who was commander of the Chartered Company's forces and in military command of the expedition, left directions to have the Rhodesia horse, either one or both regiments, as he might order, called up for a camp of exercise on his sending word by telegraph, stating that it would merely be for a demonstration at first, but might lead to their coming down a little later.

The expedition set out on Sunday night, Dec. 29, 1895, from both Pitsani Pitlogo and Mafeking. The party from Pitsani, 350 men of the Matabeleland police and 60 blacks, with 512 horses, was led by Dr. Jameson; the other, 170 strong, by Col. Grey. The two forces united at Malmani, in the Transvaal, and proceeded together toward Johannesburg. They had 8 Maxims, 1 12½-pounder, 4 7-pounders, and a number of carts carrying spare ammunition. The men carried one day's rations and 100 rounds of ammunition, or 110 rounds with what they had in their accouterments. They marched in military order, with an advance guard, a rear guard, and scouts.

Before they left Mafeking and Pitsani they cut the telegraph wire a few miles south of both places, taking down a considerable part of the wire and some of the posts, so that it could not be quickly repaired. One wire, however, which Dr. Wolff had been expected to cut, was left. John W. Fuller, who had been inspector of the Bechuanaland border police and was appointed to the same office in the Cape mounted police, told Major Robert White, as the latter bade him good-by, that he would have to report the affair. Major White answered: "You can do as you like; the wires are cut." Reports were sent by messenger to Kimberley. Rumor reached Cape Town that Dr. Jameson had entered the Transvaal with an armed force. Sir Hercules Robinson telegraphed on Dec. 30 to have a special messenger sent after him directing him to return at once, and to send a copy of the telegram to the officers with him, telling them that "Her Majesty's Government repudiates this violation of the territory of a friendly State, and they are rendering themselves liable to severe penalties." F. J. Newton, Resident Commissioner of Bechuanaland, sent Sergeant White, who overtook Dr. Jameson after he had traveled nearly 80 miles, about half the distance to Johannesburg. The messenger came up with the expedition before noon on Dec. 31 and delivered letters inclosing copies of the telegram to Dr. Jameson, Major Coventry, Capt. Munro, Capt. Gosling, and Sir John Willoughby. Dr. Jameson returned no reply beyond telling the messenger that the matter would be attended to. On the same day Lieut. Carl Johannes Eloff, of the Transvaal police, a grandson

of President Krüger, encountered the invading force, having left Krugersdorp on hearing of its approach. He was placed under arrest, and then allowed to go without receiving the demanded explanation of the hostile movement when no war was declared. Sir Jacobus de Wet, diplomatic agent of Great Britain, sent a communication from Pretoria, delivered to Dr. Jameson on the morning of Jan. 1, containing a second message from Sir Hercules Robinson ordering him to return.

Dr. Jameson sent back by Daniel Bouwer, the messenger, this answer: "I am in receipt of the message you send from his Excellency the High Commissioner, and beg to reply for his Excellency's information, that I should, of course, desire to obey his instructions, but as I have a very large force of both men and horses to feed, and, having finished all my supplies in the rear, must perforce proceed to Krugersdorp or Johannesburg this morning for this purpose. At the same time I must acknowledge I am anxious to fulfill my promise, on the petition of the principal residents of the Rand, to come to the aid of my fellow-men in their extremity. I have molested no one, and have explained to all Dutchmen and others whom I have met that the above is my sole object, and that then I shall desire to at once return to the protectorate."

On the same day Arthur Maynard Rowland brought dispatches from Johannesburg to Dr. Jameson from Col. Rhodes and George Farrar, saying that there had been no fighting there, and warning him of a probable ambushade at Queen Kopje. These dispatches told Dr. Jameson that the rumor of a massacre at Johannesburg that was assumed to have been the cause of the expedition was not true, and that all was quiet in the city, but men were being armed by the Reform Committee. This messenger also told Jameson that the Boers were massing at the Queen mine, near Krugersdorp, and that all was quiet at Johannesburg, but that arms were given out. He brought a dispatch and a verbal message that 2,000 men could come out from Johannesburg, and Dr. Jameson said that it would be well—more for the show of the thing than for the likelihood of their being needed. The message that he sent to the Reform Committee was not delivered, because Rowland was made a prisoner by the Boers.

Jameson's Surrender.—As soon as Dr. Jameson's party crossed the border the Boer Government posted notices in all the towns, ordering the burghers to assemble at their respective centers on Jan. 1, each with his horse and rifle, to defend his country. Lieut. Eloff, after being released by the English, fell in with Commandant Malan, who had 300 men. They fell back on Krugersdorp and took up a position in the deserted mine called the Queen's Battery. The Boer forces had thus far retreated before the English, and there had been no fighting, except an interchange of shots in the night of Dec. 31. When Jameson's column came up to the Queen's Battery in the afternoon of Jan 1, a message was sent to the Boer commandant, saying that Dr. Jameson wanted to pass Krugersdorp, and that if he met with resistance he would shell the town; therefore he requested that all the women and children be sent away. The British opened fire and continued to shell the Queen's Battery an hour and a half, until dark. The Boers had no guns. They numbered 300 men with rifles, who did not fire at the Englishmen, because they were too far off. But when the column charged one of the outposts they fired with telling effect. Each Boer rifleman took deliberate aim, and several Englishmen were killed or wounded, and the charge was quickly repelled. The English, despairing of carrying the position, decided to make a *détour*. A part of the column

moved toward Bloemfontein that night. On Jan. 2 the whole column marched on toward Doornkop after making another ineffectual attempt to carry the Boer position. When the English drew off the Boers followed them, firing upon them from the rear. The English intended to make a dash for Johannesburg by the road that passes Vlakfontein. After keeping up a running fight from Krugersdorp, they dislodged the Boers from one kopje, and then the column was brought to a stop by another well-posted body of Boers, who picked off the tired troopers unerringly at a thousand yards. They could not get round to the right, but were forced into a hollow in front of a narrow ford. The guns became so hot that they could not be worked. The Boers in front were behind ridges of rock, with long, open slopes in front of them. Jameson's men fired briskly but ineffectually, but soon gave up the fight, retiring to Doornkop farm, where they raised a white flag. They had expended in thirty-six hours of almost constant fighting three quarters of the ammunition that they had brought with them. The British losses were 17 killed and 49 wounded. Of the Boers, only 3 were killed by the English; 2 others were shot accidentally. At the beginning of the fight there were fewer than 400 burghers assembled. Gradually these were joined by detachments of 10 to 20. Jameson's movements compelled the burghers to take up positions in every direction; many of them could therefore take no part in the actual fighting, so that fewer than 400 forced Jameson to surrender, though at the conclusion of the fight there were 800 in the neighborhood, and others were constantly hurrying up. The state artillery arrived when the fighting was over. The President had given strict orders to insist on unconditional surrender. Commandant Kronje, however, whose force had compelled the English to surrender, promised Willoughby that if the latter would pay damages done to the Republic and give up his flag and arms he would spare the lives of the British commander and his people. Commandant Potgieter, to whom Sir John Willoughby's offer to surrender had been forwarded, replied that he would call his officers together to decide; but Willoughby meanwhile grasped at Kronje's offer, and wrote at once that he accepted those terms. The Boer commandants, after consultation, rode together to the place where the British officers were assembled, and after Kronje explained that he had not proposed terms of capitulation, Commandant Malan said to Jameson: "I wish you to understand distinctly that no terms can be made here; I have no right to make terms here; terms will be made by the Government; I can only secure your lives to Pretoria, until you are handed to the Commandant General." Jameson accepted these terms, and then the English surrendered their arms.

The whole British force and the commanders were marched as prisoners to Pretoria. President Krüger communicated to the British Government his intention of handing over the raiders to be dealt with by British justice. They were detained until terms were arranged for the surrender of the Johannesburg insurgents and the conditions executed. Then Dr. Jameson and all the members of his band were delivered into the custody of the Natal authorities, and were placed on a British steamer and taken under arrest to England.

The Johannesburg Rising.—The National Union was founded in 1894 for the purpose of securing by peaceful and constitutional means reforms in the administration for the protection and benefit of the Uitlanders. Foremost among the demands was the franchise, though this was put forward more for political effect than because any considerable proportion of the British Uitlanders, who were

the active and aggressive element in the National Union, really were willing to renounce their British allegiance to become full burghers of the South African Republic. It has been the practice to grant full citizenship by special act to all who were commanded and served in any native war. Very few English residents have ever availed themselves of the privilege when it was offered; they objected to being commanded, and only recently had secured through their Government exemption from military service. Few Englishmen intended to become permanent residents of the Transvaal. They expected, when their fortune was made, to return to their own country. Many Germans, on the other hand, had done military service, and been admitted in consequence to full citizenship. The Germans, a large proportion of the Americans, and many of the Australians also held aloof from the agitation of the National Union. The disregard shown by the President and the Volksraad to their claims and complaints exasperated the members of the National Union and impelled the young and hot-headed ones to revolutionary projects. Many of them obtained rifles and talked loudly of obtaining their rights by force. The young Englishmen regarded the fighting qualities of the sober and religious Boers with contempt, declaring that they had not the pluck to face men of their courage and determination. They looked for aid and encouragement to the persons identified with the British South African Company, the representative of British imperialism and supremacy. Some of the leaders of the National Union were long in communication with the chiefs of the Chartered Company and imperialists in Kimberley. The question of taking up arms in earnest caused serious dissensions in the Uitlander community. A great majority were opposed to violence, for the reason that it would disturb business, endanger property, and perhaps impel the Transvaal authorities to put in force the law ordering the confiscation of the property of mine proprietors who rebel against the Government. The monopolies of which the miners complained were a more tangible grievance than the denial of political rights. The liquor trust gave the complete control of all the liquor sold in the Rand to a single firm, which manufactured a poisonous quality of whisky and had the right to open canteens and sell it to the Kaffir laborers anywhere among the mines, for the land belongs to the Government. The consequence was that the Kaffir boys were constantly drinking and were unfit for work a third of the time. To this cause many fearful accidents in the mines were due. Another monopoly under the protection of the Government was the sale of dynamite, which was given to a single firm on the condition that it should be manufactured in the country. The *concessionnaire* did not manufacture it in the Transvaal, but bought inferior German dynamite, which was sold to the mine operators for four times the price for which they could import a better quality from Europe. The Netherlands Railroad Company was the cause of the worst complaints, and the target for the hardest abuse. The company charged very heavy rates, from 3*d.* to 1*s.* per ton per mile, for carrying coal. The English mine owners demanded that the Government should cancel the charter and allow them to build railroads for themselves. President Krüger stood loyally by the company, which had built the line before the discoveries of gold. When the railroad that reaches Johannesburg in a direct line from the Cape was unable to handle the accumulated freight, and it became necessary to ship it by the longer route, the Uitlanders organized a service of ox-carts, and to prevent their depriving the railroad of its monopoly of traffic and the Government of its revenue from the railroad the authorities closed the drifts, or

fords, but opened them again in compliance with a peremptory demand from the British Government.

A Reform Committee was organized, which formed a definite plan for bringing matters to a focus, and extracting the desired reforms from the Transvaal Government by force, or a show of force, if peaceful means should fail. They spent £70,000 for provisions, enough to outlast a two months' siege, ordered rifles and Maxim guns, which were gradually smuggled across the border, and made arrangements for overpowering the small Boer garrisons and seizing the forts. Communication was constantly held with Dr. Jameson, who was a personal friend of the members of the Reform Committee. It was prearranged that, in case they were driven to rise in arms, he was to come to their aid with 1,600 trained men, bringing 1,500 extra rifles that they should send to Mafeking. A letter conveying their appeal was sent to him by way of Cape Town, which would furnish the ostensible motive for the invasion of the Matabeleland forces, and might be produced whenever the fitting moment arrived, for the date was purposely omitted; but it was clearly understood that they were not to move until a telegraphic summons was sent to Jameson.

The letter, signed by five members of the Reform Committee—Charles Leonard, Francis Rhodes, Lionel Phillips, John Hays Hammond, and George Farrar—ran as follows:

“The position of matters in this state has become so critical that we are assured that at no distant period there will be conflict between the Government and the Uitlander population. It is scarcely necessary for us to recapitulate what is now matter of history. Suffice it to say that the position of thousands of Englishmen and others is rapidly becoming intolerable. Not satisfied with making the Uitlander population pay virtually the whole of the revenue of the country while denying them representation, the policy of the Government has been steadily to encroach upon the liberty of the subject and to undermine the security for property to such an extent as to cause a very deep-seated sense of discontent and danger. A foreign corporation of Hollanders is to a considerable extent controlling our destinies, and in conjunction with the Boer leaders endeavoring to cast them in a mold which is wholly foreign to the genius of the people. Every public act betrays the most positive hostility, not only to everything English, but to the neighboring states as well. In short, the internal policy of the Government is such as to have roused into antagonism to it not only practically the whole body of Uitlanders but a large number of the Boers, while its external policy has exasperated the neighboring states, causing the possibility of great danger to the peace and independence of this Republic.

“Public feeling is in a condition of smoldering discontent. All the petitions of the people have been refused with a greater or less degree of contempt, and in the debate on the franchise petitions signed by nearly 40,000 people one member challenged the Uitlanders to fight for the rights they asked for, and not a single member spoke against him. Not to go into detail, we may say that the Government has called into existence all the elements necessary for armed conflict. The one desire of the people here is for fair play, the maintenance of their independence, and the preservation of those public liberties without which life is not worth having. The Government denies these things, and violates the national sense of Englishmen at every turn. What we have to consider is, what will be the condition of things here in the event of conflict? Thousands of unarmed men, women, and children of our race will be at the mercy of well-

armed Boers, while property of enormous value will be in the greatest peril; we can not contemplate the future without the gravest apprehension, and feel that we are justified in taking any steps to prevent the shedding of blood and to insure the protection of our rights. It is under these circumstances that we feel constrained to call upon you to come to our aid should a disturbance arise.

"The circumstances are so extreme that we can not avoid this step, and we can not believe that you and the men under you will fail to come to the rescue of people who will be so situated.

"We guarantee any expense that may reasonably be incurred by you in helping us, and ask you to believe that nothing but the sternest necessity has prompted this appeal."

The Premier of Cape Colony, Cecil Rhodes, and the directors and managers of the Chartered Company, the De Beers Company, of Kimberley, and the Gold Fields Company, of Johannesburg, formed a plan to utilize the discontent of the Johannesburg population for the overthrow of the Transvaal Government by an armed insurrection and an incursion of the forces of the British South Africa Company. It was made clear later by the publication of telegrams from the officers of these companies in Cape Town, Kimberley, and Johannesburg that Jameson was acting under the orders of his superior when he prepared the invasion; that Cecil Rhodes was expected to direct in person the revolution in Johannesburg; and that the money and arms were furnished by those great companies. The movement of Dr. Jameson was premature not only for the purposes of the Uitlanders in Johannesburg who were ripe for insurrection but not for revolution, but also for the purposes of the conspirators in Cape Town and Kimberley, whose associates in Johannesburg could not control the developments there as they expected. The capitalists financing the movement had made the hoisting of the British flag a condition *sine qua non*, but this the National Union rejected, and issued a manifesto declaring for a republic. The chief conspirators in Johannesburg, who were in constant communication with the leaders in Kimberley and Rhodesia, were Dr. Wolff; Col. Rhodes, brother of Cecil Rhodes, the Cape Premier and head of the South Africa Company; Lionel Phillips; and Charles Leonard. On Dec. 7 Dr. Wolff went to Mafeking to consult with Dr. Jameson and examine all the preparations for the invasion. Arms were smuggled into Johannesburg in large quantities, concealed in coal cars and in merchandise packages. In the latter part of December rumors were circulated regarding an intended Boer attack upon Johannesburg. Great anxiety was expressed as to the safety of the women and children. A manifesto was published on Dec. 26, 1895, by Dr. Charles Leonard, chairman of the Transvaal National Union, in which the grievances of the Uitlanders were summarized. The objects of the Union were defined to be the maintenance of the independence of the Republic, the securing of equal rights, and the redress of grievances. Two successive petitions, one signed by 13,000 and the other by 32,500 persons, were presented to the Volksraad, praying that the franchise might be granted, had been rejected, and so the vast majority of the people of the State, a majority owning more than half the land and at least nine tenths of the property, were left in all matters affecting their lives, their liberties, and their properties with absolutely no voice. Taxation was imposed without representation, and it was inequitable and unduly burdensome on the necessities of life. There was no control over the expenditure of the revenues of the State, nine tenths of which were derived from the Uitlanders. The administration of justice gave grave unrest. Gross corruption

prevailed in the Government service. The restrictions placed upon the natives stopped the sources of labor supply for the mines. State aid in education was practically denied to the people who subscribed the bulk of the revenue. Proper municipal government was refused. The railways were mismanaged. Monopolies on necessities were granted, and the development of the country in every way was retarded. The general policy of the Government was based on intense hostility to the English-speaking population. A set purpose existed to prevent the working classes from settling. Instead of trying to unite the people by a broad policy of justice and the granting of equal rights, the Government tried to keep the Uitlanders in subjection by the power of the sword; and large sums of money, raised from the Uitlanders, were to be used for building forts at Pretoria and Johannesburg for the express purpose of overawing the Uitlanders. What was desired was an independent republic that should be a true republic, in which every man who is prepared to take the oath of allegiance shall have equal rights. The demands of the Uitlanders were summarized as follows: (1) The establishment of the Republic as a true republic. (2) A *Grundwet* or Constitution which shall be framed by competent persons selected by representatives of the whole people, and framed on lines laid down by them, a Constitution which shall be safeguarded from hasty alteration. (3) An equitable franchise law and fair representation. (4) Equality of the Dutch and English languages. (5) Responsibility of the heads of the great departments to the Legislature. (6) Removal of religious disabilities. (7) Independence of the courts of justice, with adequate and sure remuneration for the judges. (8) Liberal and comprehensive education. (9) An efficient civil service, with adequate provision for pay and pension. (10) Free trade in South African products.

H. Jennings and H. C. Perkins went to Pretoria to convey to President Krüger the sentiments of the Americans on the Rand. They assured him that Americans recognized the rights of the Boers as well as of the Uitlanders, but that, unless he could meet the demands of the unfranchised people of the Transvaal, he could not expect their support if a revolution came. They pointed out that outside forces would come in if war was precipitated, and that meant the overthrow of the Republic, which the Americans wanted to see preserved, but reconstructed on a truer basis. President Krüger replied that it was not a time for discussion but a time for the people to obey the law.

The leaders in Johannesburg expected, in case of an uprising, to have 20,000 men under arms. About 3,000 were recruited, armed, and drilled. When it came to the point of invoking the armed intervention of the South Africa Company's forces dissensions arose among the members of the Reform Committee. Some of the English members were in favor of raising the British flag, but others, especially the American Hammond, were loyal to the professions of the National Union and desired to preserve the republican government. Their views prevailed, and hence telegrams were sent forbidding the projected raid of Jameson. To make sure that Jameson would not persist in his rash purpose and thus upset all their plans, the Johannesburg leaders dispatched two messengers to warn him not to move from the place where he was. These messengers, Major Heany, an American, and Edward Holden, arrived at Mafeking before the departure of the expedition, but their warnings and expostulations failed to deter Dr. Jameson from his projected invasion.

Johannesburg remained in its normal condition till Dec. 30, though a revolution was momentarily

expected, and the mining people who had subscribed to the manifesto were believed to have made complete preparations for war and to have 30,000 rifles. On that day the English miners and mechanics began to congregate in the streets and talk of revolution. The English mines were suddenly closed down on the pretext that with the price of breadstuffs so high the owners could not afford to keep them open. The miners who were laid off each received a rifle, and each went home and sent his wife and children out of town. Before Dec. 30 few arms had been given out except by the managers of the gold mines about 7 miles east of Johannesburg, who armed all the miners in their district. The miners who would not join the revolutionary movement were treated with contumely. A body of Cornish miners, who preferred to return to England rather than fight in a cause in which they were not interested, to promote schemes of ambition and avarice with which they had no sympathy, were hooted and stoned when they boarded the train for Durban.

Many different corps were formed in Johannesburg for the preservation of order, such as the Australian, the Cumberland, the Westmoreland, the Scotch, and the American societies, as well as a local police organized by the Mercantile Association. More arms and ammunition poured into Johannesburg on Dec. 30. At noon on Dec. 31 the Transvaal flag was hoisted at the office of the Consolidated Gold Fields, where the Reform Committee publicly distributed rifles and cartridges to all men who offered themselves in response to advertisements in the papers. In the night of Dec. 30 the Boer police were withdrawn for the reason that many of the rabble of the city, who had a natural antipathy for the police, were arming, and it was wished to avoid all chances of a collision between the police and the English-speaking inhabitants. When it became known in Johannesburg on Dec. 31 that Jameson was approaching the city, while many condemned the move as fatal to the demands of the Uitlanders, they were greatly outnumbered by the war party. All business was suspended, and the place took on the appearance of a beleaguered city. The Reform Committee made a public declaration that it had nothing to do with the invasion of the Republic. In the evening the committee declared a provisional government for the city, and announced that there were 10,000 armed men to support it, half of them mounted and nearly all armed with magazine rifles. Pickets were posted, and scouts were sent out on bicycles to watch for the Boers, who were expected to come, 8,000 strong, to besiege the city. Cannon were wheeled out to guard all the roads. The Reform Committee were afraid to detail any of their men to meet Dr. Jameson for fear of leaving the city insufficiently protected. The war party were indignant at this, but none expected that Jameson would be stopped when he was known to be a short distance outside, at Krugersdorp, where there were only 500 Boers to oppose him. The Germans in Johannesburg took an oath of loyalty to the South African Republic, and organized a volunteer force of 300 men on Dec. 31 to defend the Government and fight the rebels. In Pretoria also a corps of Germans was organized, which offered its assistance to the Government.

The Reform Committee had taken possession of Johannesburg on Dec. 31 under the Transvaal flag. President Krüger invited a deputation to meet him and the Executive Council to discuss terms. An armistice for three days was arranged on Jan. 1 by Gen. Joubert, who agreed to make no aggressive move against Johannesburg if the people there committed no hostile act. On the same morning a proclamation of the High Commissioner was read,

forbidding all British subjects in the Transvaal to render assistance to Dr. Jameson. A committee went to Pretoria, and there Lionel Phillips, as its chairman, offered himself and the rest of the deputation as hostages for Jameson and his force, if the Boers would allow them a safe conduct out of the Transvaal. The joint deputations came to an

GEN. P. J. JOUBERT.
Commander of the Boer forces.

agreement to invite Sir Hercules Robinson to act as mediator on the question of grievances. President Krüger assured the British agent that if the Johannesburgers remained quiet and committed no hostile acts, the town would not be molested nor surrounded by the Boer forces.

The High Commissioner told the Johannesburg insurgents that further resistance would only endanger the safety of Dr. Jameson and render a satisfactory settlement impossible. The leaders sought to make the concession of items in the manifesto, as well as the safety of Jameson, conditions precedent to disarmament; but finally, in submission to an *ultimatum* of the Government of the South African Republic to the effect that Johannesburg must lay down its arms as a condition precedent to the discussion and consideration of grievances, on Jan. 7, the Reform Committee telegraphed Sir Hercules Robinson that the Uitlanders had resolved to comply with the demand of the Transvaal Government—that they relinquish their arms; the people would place themselves in the hands of the High Commissioner, being confident that he would see that justice was done them. Sir Jacobus de Wet communicated to President Krüger the formal resolution of the Reform Committee, declaring that the committee had instructed its followers to lay down their arms, relying on the Transvaal Government to maintain order and protect life. A large force of Boers had taken up a position near Johannesburg.

Mr. Hofmeyr telegraphed to Mr. Chamberlain, demanding a searching inquiry into Dr. Jameson's raid and a radical change in the position of the British South Africa Company. The British minister replied that the first object of the Government was to prevent the further embitterment of the relations between the British and the Dutch.

On Jan. 9 the Transvaal Government proclaimed a general amnesty to all insurgents with the exception of leaders, if they laid down their arms within twenty-four hours. Col. Rhodes, Lionel Phillips, Sir Drummond Dunbar, Dr. Sauer, and 18 other

leaders were arrested on the charge of high treason and taken to Pretoria. Subsequent arrests raised the number to nearly 60. The disarmament of Johannesburg was accomplished by Jan. 8, when all the Boer commandos met and marched into the city. The quantity of arms handed over, 2,000 rifles and 3 Maxims, was much smaller than had been brought into the gold fields; hence for weeks afterward the Boer police searched the houses and the mines.

President Krüger issued two proclamations. In one he promised that the Government would continue to guarantee adequate protection to the peaceful development of the mining industry, and threatened with the penalty of the laws of confiscation any one who should attempt to disturb the peaceful development. In the other, dated Jan. 30, he held out a hope of concessions at the next session of the Volksraad in redress of grievances, specifically in relation to the education of English children and a municipality for Johannesburg.

The Government, after the suppression of the Johannesburg rising, began to guard against any further revolts or foreign invasion by increasing the armaments and military forces on an extraordinary scale. Four strong forts were begun on the hills above Pretoria, and two batteries of Krupp guns were imported; also Maxim and quick-firing guns, and rifles enough for an army of 100,000 men. The civil servants and railroad employees were armed and formed into military companies. The state artillery was raised from 100 to 500 men, and 500 well-armed men were added to the Johannesburg police. A volunteer force of 1,000 men was recruited from Hollanders and Germans. The immigration of large numbers of artisans and farmers from Germany and Holland, encouraged as it was by the Government, excited the suspicions of the British party. The Afrikanders of the Orange Free State and of the Cape and Natal were no less stirred up by the attempt to subvert the Transvaal Government than the Boers of the Transvaal. The Afrikander Bond let it be understood that any act of interference by the British Government in the Transvaal would precipitate an uprising in South Africa that an army of 150,000 men could not suppress. A revolt of the natives in the Lydenburg district, who thought that the English were coming to their assistance and refused to believe in Jameson's defeat, was promptly reduced by the Boers. The Orange Free State, which had mobilized its troops and massed them on the frontier on the occasion of Jameson's raid, entered into a defensive alliance with the South African Republic, by which each state pledged itself to help the other by military force either to resist invasion or to suppress disturbance. Both the Orange Free State and the Transvaal made extraordinary military preparations, and even the Boers of Cape Colony and Natal armed themselves for the purpose of assisting their brethren against any attempt of the British Government to destroy their independence.

German Sympathy.—Eleven months before the outbreak of the crisis, on the occasion of President Krüger's toast on the Emperor's birthday, Lord Kimberley commented in a letter to Sir Edward Malet, British ambassador to Berlin, on the attitude of Germany toward the Transvaal, which the British Minister of Foreign Affairs believed was calculated to foster in the Transvaal a spirit contrary to the international position of the Republic. The German Foreign Minister, Baron von Marschall, replied that the German policy aimed simply at protecting against every attack those material interests that Germany has created by building railways and by forming commercial ties in the Transvaal, interests that demanded the maintenance of the Transvaal as a self-dependent state in accord-

ance with the convention of 1884 and the preservation of the *status quo* as regards railroads and the harbor at Delagoa Bay. He asked why Lord Kimberley, if he desired the maintenance of the *status quo*, did not restrain the people who abused Germany and proclaimed the absorption of the Transvaal by Cape Colony as their programme. In a conversation held with Count Hatzfeldt in October, 1895, Lord Salisbury said that he did not consider the Transvaal question a black spot between England and Germany and that he was at one with Germany in desiring to uphold the *status quo*.

On Dec. 24 the German consul in Pretoria telegraphed that news from Johannesburg points to the preparation of disturbances by the English party there. Baron von Marschall communicated this to Sir Frank Lascelles, the English ambassador, and emphasized once again the necessity of preserving the *status quo*. After publication of the manifesto of the Reform Committee, which the German consul believed from trustworthy accounts to have been prompted by Mr. Rhodes and supported by his friends, the German Minister of Foreign Affairs directed the German representative in Pretoria to impress upon the Transvaal Government that it must scrupulously avoid any provocation if it wishes to retain German sympathy. The German consul said that the manifesto was looked upon universally as a threat to employ violence against the Government in order to bring the Boer state under the influence of the Cape; that at the same time the overwhelming majority of the subjects of other states condemned most emphatically the revolutionary action of the English party. After Dr. Jameson had crossed the frontier Baron von Marschall authorized the consul in case of need to summon German troops from the cruiser *See-Adler*, but only after consultation with President Krüger and solely for the protection of the consulate and of life and property of German subjects. At the same time he telegraphed to the German minister in Lisbon to request permission for the passage of 50 German troops through Portuguese territory, as no other way of protecting German subjects was open. The Portuguese gave no answer to the request till Jan. 3, 1896, when the German minister was told that Jameson had been defeated and all danger to foreigners was removed.

President Krüger requested the German consul to report that he had done everything to avoid provocation, but that his Government was compelled to drive out the freebooters forcibly. When Lord Salisbury, on Jan. 3, expressed the hope that the Transvaal crisis was at an end, Count Hatzfeldt remarked that the English Government would do well to use any influence that it might possess over the English elements in Johannesburg in order to prevent any subsequent attempts at revolution. On Jan. 3 the German Emperor telegraphed to the President of the South African Republic, congratulating him on the fact that, "without appealing to the help of friendly powers, he and his people have succeeded in repelling with their own forces the armed bands which have broken into their country, and in maintaining the independence of their country against foreign aggression." This telegram caused tremendous excitement in England. On Jan. 6, in a conversation with Sir Frank Lascelles, Baron von Marschall protested against the view of the English press that it was an act of hostility against England and an encroachment on English rights for the German Emperor to congratulate the head of a friendly state on his victory over an armed band that had invaded his land in defiance of international law, and had been declared to be outside of the pale of the law by the English Government itself.

Controversy with Mr. Chamberlain.—As soon as he learned of the infraction of the frontier by the British South Africa Company's forces President Krüger telegraphed to inquire whether Dr. Jameson's advance had the approval of the British Government, and Sir Hercules Robinson and Mr. Chamberlain repudiated the act, as did afterward the directors of the South Africa Company. On Dec. 29 Mr. Chamberlain sent a dispatch telling Sir Hercules Robinson to warn Rhodes that the charter of the British South Africa Company might be canceled if the forces of the company broke into the Transvaal. When he knew more definitely of the raid Mr. Chamberlain telegraphed to have Dr. Jameson called back. Again, when confirmation of the raid came from President Krüger, who told Sir Jacobus de Wet on Dec. 30 that he had taken immediate steps to stop the progress of the raiders, Mr. Chamberlain telegraphed to Sir Hercules Robinson: "You should represent to Mr. Rhodes the true character of Dr. Jameson's action in breaking into a foreign state which is in friendly treaty relations with her Majesty in time of peace. It is an act of war, or, rather, of filibustering. If the Government of the South African Republic had been overthrown, or had there been anarchy at Johannesburg, there might have been some shadow of excuse for this unprecedented act. If it can be proved that the British South Africa Company set Dr. Jameson in motion, or were privy to his action, her Majesty's Government would at once have to face a demand that the charter should be revoked." In a direct telegram to President Krüger the British Colonial Minister asked: "Can I co-operate with you further in this emergency in endeavoring to bring about a peaceful arrangement which is essential to all interests in South Africa and which would be promoted by the concessions that I am assured you are ready to make?"

Instructions issued to Sir Hercules Robinson on Jan. 4 included urgent representations to be made on the subject of the grievances of the Uitlanders, including the question of granting full municipal privileges to Johannesburg. The Secretary for the Colonies stated that the large interests with which the British Government was charged in South Africa justified friendly representations in regard to matters outside of the convention in which persons of British nationality who have for some time cast in their lot with the South African Republic are deeply concerned. If those who are now a majority of the inhabitants of the Transvaal, but are excluded from all participation in its government, were, of their own initiative and without any interference from without, to attempt to reverse the state of things of which they complained, Mr. Chamberlain was of the opinion that they would attract much sympathy from all civilized communities who themselves live under a free government. On Jan. 13 Mr. Chamberlain sent a dispatch in which he referred to the complete exclusion of the Uitlanders as "an admitted grievance, which is publicly recognized as such by the friends of the Republic as well as by the opinion of civilized Europe," and which would always, as long as the grievance exists, be a danger of internal disturbance. In view of the possibility that the President might be induced to rely on the support of some foreign power in resisting the grant of reform or in making demands upon the British Government, Mr. Chamberlain let it be known that Great Britain would resist at all cost the interference of any foreign power in the affairs of the South African Republic, and drew attention to the flying squadron of powerful men-of-war, with 12 torpedo ships. In another telegram of the same date Mr. Cham-

berlain said that there could be no settlement until the questions he had raised were disposed of; that the people of Johannesburg had laid down their arms in the belief that reasonable concessions would be arranged by Sir Hercules Robinson's intervention. Hence the High Commissioner was instructed to use firm language and to tell the President that neglect to meet the admitted grievances of the Uitlanders by giving a promise to propose reasonable concessions would have a disastrous effect upon the prospects of a lasting and satisfactory settlement. The High Commissioner was assured in these dispatches that Great Britain would not tolerate any change in her relations with the Republic, and while loyally respecting its internal independence, subject to the conventions, was resolved to maintain her position as the paramount power in South Africa.

The United States Government requested that the British Government watch over the interests of the imprisoned Americans—John Hays Hammond, J. S. Curtis, T. H. King, Charles Butters, and Capt. Mein. The Belgian Government made a similar request. In consequence of the representations of these governments Mr. Chamberlain cabled to Sir Hercules Robinson deprecating the arrests, inquiring into their grounds, whether bail would be allowed, and what the penalties might be.

On Jan. 27 Mr. Chamberlain invited President Krüger to come to England to discuss the grievances of the Uitlanders and a policy outlined in the dispatch for their removal. A long dispatch, dated Feb. 4 and summarized in a telegraphic message, recited all the grievances of the Uitlanders and prescribed immediate measures which appeared to the British minister necessary for the President of the Transvaal to take in view of the grave issues raised by the incursion of an armed force under Dr. Jameson. These dispatches were published in England as soon as they were sent. The publication of these communications was resented by the Boer Government. Their peremptory and dictatorial tone drew from the Transvaal State Secretary the reply that the Government was compelled to observe "that it can not suffer any interference and intermingling, however well intended, with the internal affairs of the country." The endeavors that the Government was making to obtain, through a moderate and pacific course, "the ultimate establishment of a good understanding between the Republic and England" would be, in its opinion, "very much involved in difficulty, to the great danger of the peace and quiet not only of the Republic, but of all South Africa, by again exciting and bringing to a state of unrest the minds of the inhabitants." On Feb. 25 President Krüger telegraphed that he was prepared to accept the British minister's invitation, provided a basis for discussion could be settled upon that would prove satisfactory to the Volksraad, without whose permission he could not go to England. The points that he proposed to discuss were not the grievances of the Uitlanders, which were a matter of internal politics, to be settled by the Volksraad, but the question of an indemnity for the Jameson raid, the incorporation of Swaziland with the Transvaal, the superseding of the convention of 1884, because it has in several respects ceased to exist and because "it is injurious to the dignity of an independent republic," by a treaty of amity and commerce that would enable the Republic to grant the most-favored-nation clause, the revocation of the charter of the British South Africa Company, and necessary guarantees against a repetition of the violation of territory of the Republic by armed forces coming out of the territory of the Chartered Company or the Cape Colony, and of disturbing military operations and unlawful mili-

tary or police or even private movements on the borders of the Republic. As Mr. Chamberlain in the beginning of the correspondence had precluded from the discussion any modification of the clause in the London convention requiring all treaties of the South African Republic to be submitted to Great Britain for approval, President Krüger expressed his willingness to incorporate that clause in a protocol to the new treaty. Mr. Chamberlain rejected the proposals and, insisting that the British Government as the paramount power in South Africa is specially interested in the peace and prosperity of the Republic and can not be blind to the danger that threatens its existence if legitimate cause of discontent continue to be ignored, repeated his invitation on March 26, and endeavored to extract from President Krüger a promise that he would seek permission from the Volksraad to go to England, saying that, if he failed to do that, the invitation would be reluctantly withdrawn. On April 20 President Krüger replied that his Government, sensible of the necessity of allaying the excited feeling in South Africa and promoting a friendly relation between the white races, was prepared to postpone the question of the reconsideration of the convention of 1884, and would rest satisfied with insisting on its right to a pecuniary compensation for the violation of its territory and an assurance from the British Government that no such violation of territory shall be repeated out of any of her Majesty's possessions. He suggested that it would be wiser not to press the invitation, and on April 27 Mr. Chamberlain withdrew it. A dispatch, in which the President asked for assurances, in order to allay excitement among the Boers, that British troops massed at Mafeking were not intended as a menace to the Transvaal, was answered with an indignant denial by Mr. Chamberlain and a statement from Sir Hercules Robinson that the total force proceeding northward was 1,490 men. In spite of the protests of the High Commissioner, the military authorities in England persisted in sending troops to South Africa. In July, when there were already 5,230 imperial troops there, an additional battalion was forwarded from Malta, although Sir Frederick Carrington had declined to receive re-enforcements in Rhodesia because he could not feed them.

Mr. Leyds, the State Secretary who during all the troubles had been in Europe, after he returned to Pretoria called upon the British Government with a view to the welfare and peace of South Africa, to bring to trial Cecil Rhodes, Alfred Beit, and Dr. Rutherford Harris, and to expedite the promised inquiry with respect to the complicity and responsibility of the Chartered Company in connection with Dr. Jameson's raid, urging further that the entire control and administration, civil as well as military, should be taken out of the hands of the Chartered Company and transferred to the Imperial Government. Mr. Chamberlain at length moved in the House of Commons for a select committee to inquire into the administration of the British South Africa Company and into the origin and circumstances of the incursion into the South African Republic, and further to report what alterations are desirable in the government of the territories under the control of the company. Sir Jacobus de Wet, the aged British agent in Pretoria, was forced to resign, and an experienced English diplomatist, William Conyngham Green, was appointed to the place early in September.

Trial of the Reform Committee.—The arrested members of the Reform Committee, all business men of Johannesburg, were examined in February. All were released on bail in £10,000, with the exception of Col. Rhodes, Hammond, Phillips,

Farrar, and Fitzpatrick, who were committed for trial. In Kimberley Gardner Williams, an American, general manager of the De Beers mines, was arrested and tried under the gunpowder ordinance of Cape Colony for removing arms and ammunition into a neighboring state without authority. The discovery of cipher telegrams proving the existence of a revolutionary plot engineered by C. J. Rhodes and Alfred Beit, the principal directors of the British South Africa Company, and Rutherford Harris, the secretary of the company in South Africa, who furnished the money and arms, left the leaders, Phillips, Col. Rhodes, and Farrar without a defense. Hammond, who had stood out for the preservation of the republican form of government and against the raising of the British flag, pleaded not guilty, while the other three pleaded guilty of the charge of high treason. They were sentenced on April 28 under the Roman-Dutch law to death. Monster petitions were signed in the Transvaal, praying that the sentence would be commuted. Mr. Chamberlain took upon himself to promise in the British House of Commons that the death sentence would not be executed. The other prisoners, 59 in number, many of whom pleaded guilty of *lèse-majesté*, but without hostile intent against the independence of the Republic, were sentenced to minor penalties. Among those sentenced to two years' imprisonment, three years' banishment, and £2,000 fine were F. L. Lingham, J. S. Curtis, Capt. Mein, Victor B. Clement, J. W. Leonard, H. J. King, and Charles Butters, American citizens. The justice before whom the prisoners were tried was not one of the judges of the Transvaal, but Judge R. Gregorowski of the Orange Free State Supreme Court. On April 29 the President and Executive Council commuted the death sentence to one of fifteen years' imprisonment. On June 11 the sentence was further reduced to a fine of £25,000 each. Phillips, Farrar, and Hammond signed a document pledging themselves to abstain from interference in Transvaal politics. Col. Rhodes, who refused to sign, was banished for life. The sentence of imprisonment imposed upon the others was remitted or reduced to three or five months or a year, and the sentence of banishment also, on their undertaking never again to interfere in the politics of the Republic. Later all who petitioned for clemency were released, the sentence of banishment being suspended on their giving their word of honor to take no part, directly or indirectly, in the politics of the Republic.

Trial of Dr. Jameson.—Dr. Jameson and his associates were tried in London under a section of the foreign enlistment act of 1870, which states that "if any person within the limits of her Majesty's dominion, without the license of her Majesty, prepares or fits out a naval or military expedition to proceed against the friendly dominion of any friendly state," he shall be liable to a fine and to imprisonment not exceeding two years. Any person engaged or assisting or employed in such an expedition is liable to the same penalties, and any person who aids, abets, counsels, or procures the commission of any offense against the statute may be tried and punished as a principal offender. The subordinate officers, who had no principal part in planning and organizing the expedition, but had simply obeyed the commands and followed the lead of their superiors, were not included in the indictment. Major J. B. Stracey, Capt. C. H. Villiers, Lieut. Kenneth Kincaid-Smith, Lieut. Harold M. Grenfell, Capt. C. F. Lindsell, Lieut. C. L. D. Monro, Capt. A. V. Gosling, Capt. C. P. Foley, and Capt. E. C. S. Holden thus escaped. A true bill was found against Leander Starr Jameson, who was administrator of the British South

Africa Company in Matabeleland; Major Sir John Christopher Willoughby, who had served in the Matabele war and had received leave to continue in the British South Africa Company's service for two years further, from May 26, 1895, in order that he might organize the volunteer forces in British South Africa: Col. Henry Frederick White, who was magistrate for the Salisbury district; Major Robert White, who was magistrate for the territories of Montsioa and Ikaning; Col. Raleigh Grey, who had been commandant of the Bechuanaland border police; and Major C. J. Coventry, who had served in the Matabele war and acted as magistrate for the Bechuanaland protectorate. At the conclusion of a trial lasting seven days all the defendants were found guilty on July 22, and were sentenced by the Chief Justice, Lord Russell, of Killowen, Dr. Jameson to fifteen, Sir John Willoughby to ten, Major Robert White to seven, and Col. Grey, Col. Henry White, and Major Coventry to five months' imprisonment without hard labor. Major Coventry, who suffered from a severe wound received in the battle of Krugersdorp, was released after a few weeks. Later, the Government alleviated the punishment of Dr. Jameson and his fellow-prisoners, ordering that they should be treated as first-class misdemeanants.

The Volksraad.—The Volksraad adjourned near the end of 1895 until early in January, 1896. The Raad met in January, and decided, at the request of the President and the Executive Council, not to proceed with the session, but to separate until the ordinary session in May.

The specific reform measures promised by the President before the outbreak were submitted to the Volksraad when it met in May. The bill for a Johannesburg municipal government established a Stado Raad or municipal council, whose chairman is appointed by the President, while the members are elected by enfranchised burghers and other persons possessing fixed property of the value of £200 or paying a yearly rental of half that amount. The municipality will deal with the economic arrangements of the town and make regulations in the interest of public safety, morality, and health, and will decide all matters respecting the sale and exchange of town property, the maintenance of streets, etc. The Government has the right of vetoing any alteration in the regulations.

The revenue of the town is derived from taxes on stands, private vehicles, theater licenses, etc. An education bill for the gold fields makes the use of either Dutch or English optional as a medium of instruction in the public schools up to the final standard, in which examinations are conducted in both languages. The Government took active measures to insure a plentiful supply of labor in the gold fields. Other new laws created a department of agriculture, established a model farm and schools for artisans, regulated native marriages, amended the acts regulating the licenses of hired laborers, forbade excavations endangering railways, provided for boiler inspection, established standard weights and measures, regulated the leasing of public lands, and defined undermining rights. A new press law provided for the punishment of persons guilty of libel, slander, or instigation to a punishable offense through the press. The draft law, published soon after the disturbances, empowered the President to suppress foreign publications that in his opinion are dangerous to peace and order. A later enactment requires all newspaper articles of a political or personal nature to bear the full name and address of the writer. An old law disqualifying Roman Catholics from being appointed officials of the Republic was rescinded. The mine owners were disappointed in a decision of the Volksraad,

which decreed that the mining rights in the dumping grounds next to the mines should be sold to the highest bidder and the proceeds divided between the owner of the land and the state. A bill was passed in September, providing for the expulsion from the Republic of any alien deemed dangerous to public peace and order. A bill totally prohibiting the sale of liquor to blacks from Jan. 1, 1897, was passed by a two-third majority of the First Volksraad in compliance with the wishes of the miners of the Rand, who employ 47,000 natives. A convention was made with Portugal permitting the importation of native laborers under contract from Portuguese Africa, with provisions for the supervision of Transvaal officials charged with guarding their interests. A scheme for supplying the Rand with unlimited water was approved, the Government guaranteeing the interest of the bonds and paying a subvention of £20,000 a year. A reduction of native wages in the mines went into force on Oct. 1. The high price of food and the outbreak of the rinderpest operated to depress the mining and commercial interests of the Transvaal after they had begun to recover from the shock of the political disturbances.

British South Africa.—Matabeleland and Mashonaland, lying north of the South African Republic, were declared to be within the sphere of British influence in 1888, and on Oct. 29, 1889, the British South Africa Company obtained a royal charter granting powers of administration over these territories and others for the purpose of carrying out its objects, which were to encourage immigration and colonization, to promote trade and commerce, to develop and work mineral and other concessions, and to extend northward the railroad and telegraph systems of Cape Colony and Bechuanaland. By the Anglo-German agreement of 1890 and the Anglo-Portuguese agreement of 1891 the sphere of British influence was acknowledged to embrace all territories from the Transvaal border up to the southern boundary of the Congo Free State, lying between the eastern boundaries of the German possessions in Southwest Africa, 20° and 21° of east longitude, and the Portuguese possessions on the east coast, which have 30° 30' of east longitude for their extreme western limits. The company was authorized to undertake the administration and development of the whole region, north and south of the Zambesi, except the Nvassaland protectorate. The total area of this British sphere of influence, known as Zambesia or Rhodesia, and divided by the Zambesi river into Northern and Southern Zambesia, or British Central Africa and British South Africa, is estimated at 750,000 square miles. This company has devoted its attention chiefly to the development of the gold fields of Mashonaland, estimated to have an area of 5,250 square miles, and, since the subjugation and occupation of Matabeleland in 1893, the extensive gold ledges of that country also. A railroad from Kimberley, through Bechuanaland to Vryburg, 126 miles, was built, and, after this section was transferred to the Cape Government, an extension to Mafeking, 100 miles, was completed in November, 1894, and preparations were made for carrying it through to Gaborones and Palapye. Another railroad has been built, through Portuguese territory and Mashonaland, from Beira, on the east coast, and it has been opened as far as Chimoio, 118 miles. The capital of the British South Africa Company, originally £1,000,000, has been increased to £2,500,000. The telegraph has been extended by the company from Mafeking to Salisbury, 800 miles, and thence to the coast and northward to the Zambesi. The total length in the beginning of 1896 was 1,354 miles. For the support of the natives in the company's

territories 2 reserves were set apart by a land commission, one of 3,500 square miles on the Shangani river, and one of 3,000 square miles on the Guay river. A *modus vivendi* arranged with Portugal in regard to the boundary in Barotseland has been prolonged to July, 1898. The controversy in respect to the boundary south of the Zambesi was submitted to the arbitration of the Italian jurist Vigiiani.

Lord Grey, who was one of the founders of the South Africa Company, was appointed to succeed Dr. Jameson as Administrator of Rhodesia. Before entering on his office in the summer of 1896 he disposed of all his pecuniary interests, and an ordinance was adopted prohibiting any employee of the company from holding shares of stock in the enterprises of the country. The police and military administration was transferred from the company to imperial officers. Mr. Rhodes, who boasted before the Jameson raid took place that his political career in South Africa was just beginning, placed his resignation in the hands of the directors on May 3, 1896. He went to Rhodesia to aid in suppressing the revolt of the natives, with the intention of devoting himself henceforward to developing the country that bears his name. He requested the directors, after the Transvaal Government revealed his connection with the revolutionary plot, to let the resignation wait, as he was going to fight the Matabeles; but they accepted his resignation on June 26, and that of Alfred Beit, a German subject who was as active as Rhodes in the financial enterprises of the company, and in the conspiracy to overthrow Boer rule in Johannesburg.

In March, 1896, the Zambesian cattle plague appeared in Matabeleland and Bechuanaland, decimating the herds so rapidly as to paralyze the whole transport service of the country and destroy the only form of wealth possessed by the natives, which is also their actual circulating medium, and one of their principal sources of food supply. This scourge, supposed to have been originally introduced into northern Africa from Asia, is a malignant type of the rinderpest, a disease that is endemic in northern India, and is due to a vegetable parasite. The proportion of deaths is between 80 and 90 per cent. It first appeared in the coast region opposite Aden in 1889, destroyed the herds of the Wasoga and the Masai, and gradually spread eastward through the Soudan, into the Sahara, and as far as the Niger, and southward through Somaliland and the Lake region to the Zambesi, and thence into Matabeleland. The Transvaal, the Orange Free State, Natal, and Cape Colony took precautions against the importation of cattle from the north, whilst the Chartered Company adopted the stamping-out process, killing all cattle known to have been exposed to infection. At first compensation was given to the natives, though not the full value of the cattle. When the disease became more prevalent the company revoked the decree, and paid nothing. The epidemic exterminated not only the cattle, but the game animals.

Matabele Revolt.—The Matabeles were not thoroughly subjugated in the war in which the Chartered Company's forces overthrew the empire of Lobengula. Some of the strongest *impis* never came into action, and after the war hid their arms and ammunition. The Chartered Company declared that all the cattle belonged to the Government, but they were considered to be held in trust for the natives. It was made a penal offense to purchase cattle from the natives without the written permission of the district magistrate. Later the courts decided that 55 per cent. of the cattle were to be retained by the natives, and 45 per cent. handed over to the company. A short mealy crop

and a disastrous plague of locusts had already reduced the people to desperate want when the rinderpest appeared in the early part of 1896. It was then that the authorities proceeded to carry out the cattle decrees and to kill some of the herds in order to stamp out the pest. Labor was exacted from the natives in return for the cattle received, and the Matabeles, inclined to rebel against being forced to do any manual labor, which they thought only fit for women, were compelled to dig in the gold mines, though they had a special dread of going underground. They believed that all their cattle were to be taken away from them, and that they would be reduced to slavery. The native priests inflamed their discontent. They lost their superstitious dread of Maxim guns, which had created havoc in their ranks in the late war, when they learned that Boer riflemen had beaten a superior British force and compelled it to surrender its Maxims. The native police had obtained some hundreds of Winchester rifles from the company's stores fraudulently, and laid them by for use against their masters. The natives rose in the In-seze and Filibus districts in the third week in March, murdered 20 whites, and captured cattle. The miners and farmers flocked into Buluwayo. Col. Napier with 75 of the Rhodesian horse, and a few days later F. C. Selous, whose own cattle were stolen, with a body of volunteers, went out to check the rebels and protect the people still on the farms. In a few days all the settlers in the disturbed districts, except 50 or more who had been massacred, were gathered in the towns, which were rapidly fortified. All the cattle were carried off by the Matabeles. The native police, 350 in number, deserted and joined the rebels, taking 700 rifles and a large quantity of ammunition. This force had been recruited from the finest regiments in Lobengula's army. Aside from their action there was no evidence that the revolt was a concerted movement. It was rather a spontaneous outbreak, produced by the fanatical preaching of the witch doctors, who told the people that all the ills from which they suffered were due to the English. Lord Grey discovered that the ill treatment of natives by white settlers was a potent cause of the rebellion. All the Kaffir servants in the towns left to join the rebellion, which spread until it embraced the whole Matabele nation. The Mashonas of Matabeleland carried the revolt into their own country, and soon all the Mashonas were up in arms against the whites. The white miners and farmers volunteered, and as many as could be provided with horses and arms were enrolled in the volunteer corps. Except the pay of 10s. a day, there was no money to be earned in the country, while food went up to four times the normal price. Detachments of 30 or 40 rode out from the towns, but they did not awe the rebels in the least, who looted and burned outlying stores and defeated some of these flying detachments, killing 7 men in one encounter.

The President of the Transvaal telegraphed to Mr. Chamberlain as soon as the trouble broke out that the forces of the Republic were at his disposal to put down the insurrection. The Boers, for whom the Matabeles have a great dread, could have reached the scene within two days; but Mr. Chamberlain, unwilling to accept their assistance, replied that the English forces in Africa were competent to deal with the Kaffirs. The first re-enforcements to arrive were volunteers brought from Salisbury to Gwelo by Cecil Rhodes, 500 Kimberley horse under Col. Plumer, and detachments of Bechuanaland and Cape mounted police. Ammunition for rifles and Maxims, which was needed greatly, was forwarded as soon as possible. British troops were ordered up from Cape Town and Natal, while

large re-enforcements were sent out to Africa from Europe. The first detachments of imperial troops took over two weeks to reach the scene of the conflict. When they arrived the rebels retired into the Matoppo hills. There the commissioner Armstrong and the American scout Burnham penetrated the cave of the Matabele priest Mlimo, who had great influence over the people, and shot him while he was saying his incantations. The Matabeles began to mass on the Shangani river, north of Buluwayo and on the Kami river, in the west. Some of the most active of the volunteers, and some of the first to fall were American prospectors, such as Thomas Maddocks, A. R. Hammond, and Robert White. The British Government, in consequence of the raid of Dr. Jameson into the Transvaal, had not only transferred back to the Crown the administration of Montsioa's country and other districts of Bechuanaland, but had taken away the command of the Matabeleland and Mashonaland police and military forces from the Chartered Company. The Rhodesian horse volunteers were disbanded in the beginning of April and replaced by the Buluwayo field force, 400 strong. There were about 1,000 volunteers enrolled. Sir Richard E. R. Martin was appointed administrator of the police in Bechuanaland, Matabeleland, and Mashonaland. When Col. Plumer arrived and reorganized the volunteer forces, reducing the pay to 5s. a day, only 300 rejoined, while 600 left the country. Volunteer forces were raised in Cape Town, Kimberley, and Johannesburg. The natives then closely invested Gwelo, and held the whole country except a space of a few miles about Buluwayo. The party of Mr. Selous was repelled by the natives, and later Gifford's horse suffered a defeat and Capt. Brand and his troop of 130 men were surrounded by 1,500 Matabeles, but cut their way out. Mangwe pass, south of Buluwayo, was occupied and fortified to hold open the road to Mafeking. Lord Grey, who was appointed administrator of Rhodesia to succeed Dr. Jameson, arrived at Mafeking on April 13. Major-Gen. Sir Frederick Carrington was appointed to the supreme command of all the forces. The Portuguese Government granted permission to transport war supplies by way of Beira. Buluwayo was seriously threatened by 4,000 rebels encamped on both sides of the Ungusa river, not 3 miles from the town, when Capt. Napier on April 23 occupied good artillery positions and drove the enemy up the river with a loss of 150 killed. Capt. Macfarlane's column on April 25, with the aid of friendly Matabeles, successfully resisted an attack of the rebels, who advanced in force with both wings thrown forward in Zulu fashion for an enveloping movement. The British troops retired at first to draw the rebels within range of the machine guns, which when they opened fire created havoc in their ranks. The Matabeles continued their attacks, advancing sometimes within half a mile of the town and facing the sorties with unabated courage. On April 27 they were scattered in all directions, but later returned to their positions. Lord Grey arrived and took control of affairs. Mr. Rhodes relieved Gwelo, and Sir Richard Martin and Col. Plumer arrived with re-enforcements at Buluwayo before the middle of May. The Matabeles retired and raided the western and northern country, burning kraals and grain. Mr. Rhodes won a decided victory at Moveve. The Martini-Henry rifle, which at first had been discarded for the Lee-Metford regulation pattern, was adopted again for the use of the Chartered Company's troops, owing to the latter being deficient in stopping power. Arms and ammunition reached Buluwayo in large quantities. The difficulty of transport, owing to the deaths of trek oxen from rinderpest, was almost as serious a mat-

ter as the native revolt. The Chartered Company tried to get natives to take the place of oxen. When Gen. Sir Frederick Carrington arrived to take command of the field operations the rebels had abandoned the siege of Buluwayo. It was estimated that 50,000 people, a third of the Matabele nation, were in open rebellion, with a force of between 10,000 and 12,000 fighting men, many armed with firearms, and all possessing the long assegai for throwing and the short stabbing assegai, which is used with deadly effect at close quarters. There were five *impi*s and numerous small bodies that acted as scouts and took part in cattle raids. The *impi* that threatened Buluwayo had retired 60 miles to Ntaba Zikambo. Another of 2,000 men guarded the Tuli road toward the Matoppo hills; a third, about 800 strong, was southeast of Buluwayo; a fourth, 2,000 strong, was on the northwest; and a fifth, having 2,500 men, was near the Shangani river. The uprising was general throughout a district extending 250 miles from east to west and 200 miles north and south. The number of white settlers murdered, not counting those killed in action, was nearly 300. The regular troops having been stopped at Mafeking, the work of hunting out and punishing the rebels had to be performed by the English and Boer forces that had been raised in the colonies, men inured to the climate and familiar with savage warfare. Of such troops Sir Frederick Carrington had under his command about 3,500 men, consisting of the Buluwayo field force, Cecil Rhodes's Gwelo regiment from Salisbury, and the relief column brought by Col. Plumer. Col. Plumer's men on May 26 drove the *impi* that was encamped within 15 miles of Buluwayo back into the Matoppo hills, and later engaged the *impi* in the southeast, and after three sharp fights compelled them to retreat with heavy losses. Col. Napier's column and the force of Mr. Rhodes joined on the Pongo river and attacked the rebels on the Shangani and sent flying columns into the hills, one of which was hard pressed by the Ingobo *impi*. On June 6, after Sir Frederick Carrington had assumed command Col. Spreckley and Lieut.-Col. Beal defeated an *impi* near Buluwayo, killing 150 men, and capturing some Martini and repeating rifles. The Mashonas between Untali and Salisbury began to rise after a meeting of chiefs on June 9. Police were overpowered and white settlers murdered. Matabele chiefs and Makalakas supposed to be friendly also joined the revolt. The Portuguese authorities, who at length had suppressed the protracted rebellion in their own dominion and captured the chief Gungunhana, loaned weapons and ammunition. Imperial troops were moved up from Mafeking, and the forces recruited in Mashonaland were sent back to defend their own homes. The Cape Government offered re-enforcements, but Lord Grey thought that the 769 whites in Mashonaland, with 800 re-enforcements on the road, were sufficient to meet all emergencies. Sir Frederick Carrington would like more men, but they would increase the difficulty of transport and food supply. All the Mazoe district rose. Patrols brought in women and children with frequent losses, and Salisbury began to *laager* as Buluwayo previously had done. At least 150 persons were murdered. Some of the Mashona native police joined the rebellion, killing their officers. In Matabeleland the campaign relaxed, as the rebels, lacking supplies, retired into the forests. Capt. Laing routed a large body of rebels in the Beltgwe mountains, killing the chief Salemba and 250 of his followers. On July 5 Col. Plumer delivered a severe blow to the Matabele rebels, who recently had chosen Lobengula's son Nyamanda to be their king. With 740 men he surprised in the night a large camp at Tabas Amamba,

killed 150 men, and captured 500 women and children, 1,000 cattle, and a great quantity of provisions and loot stored near the entrance of Mlimo's cave. A proclamation was issued on July 7 offering amnesty to all rebels, except ringleaders and those guilty of murder or outrage, who surrendered themselves before Aug. 10; others would be treated as outlaws and suffer the punishment of death. The white residents feared that the offer of amnesty would be construed by the natives as a sign of weakness. The people of Rhodesia were disturbed also because Mr. Rhodes had been forced to resign, with Alfred Beit, from the directorate of the Chartered Company on account of the incriminating telegrams produced in the Pretoria trial.

Gen. Carrington determined to end the Matabele revolt, if possible, by striking a decisive blow at the chief *impi* in the Matoppos hills. A column of 1,150 men reached the ground on July 20 by a forced night march, and Col. Baden-Powell carried several kopjes. Suddenly his force was surrounded and he was forced to retreat, pursued by the enemy. Capt. Laing's column attacked another position on the same day, with as little success. Gen. Carrington, who had 1,900 white and 1,600 native troops, then decided not to enter the hills, but to build forts around them and starve out the rebels. Parties were sent through the country to seize all the grain, the greater part of which they destroyed notwithstanding the great dearth. The plan was to patrol the country and prevent natives from planting corn and herding cattle until the hostile bodies that could not be dislodged from the kopjes and caves made their submission. In Mashonaland, after the arrival of imperial troops and Cape and Natal volunteers, the same tactics of destroying grain and burning kraals were adopted. Upon reconsideration Sir Frederick Carrington accepted the offer of assistance from Cape Colony, especially of a transport train, with the stipulation that the Chartered Company should ultimately refund the pecuniary outlay. After the forts were built the lines were drawn closer around the rebel positions in the Matoppos hills. Col. Plumer's column on Aug. 5 attacked Secombo's stronghold and scattered his *impi*, killing 300. Other strongholds were captured with less difficulty. When the Kaffirs found that the English could bring their mountain and machine guns up to attack their mountain fastnesses they became discouraged. They tried every savage stratagem to rush the batteries and come to close quarters, where they could use their stabbing assegais, but did not once succeed. Five of their chiefs and many of their most noted warriors were dead, and Huntwani, their best general, was badly wounded. In Mashonaland, Col. Alderson surprised and captured the kraal of the chief rebel, Makoni, on Aug. 8, killing 200. When Aug. 12 arrived, the rebels were given four more days in which to surrender. After several days of preliminary negotiations, during which Secombo, Babyan, Inyanda, and the other chiefs at one time expressed defiance and at another said they were willing to surrender, Cecil Rhodes, J. W. Colenbrander, and Dr. Sauer went into the heart of the Matoppos and held an *indaba*, or conference, with Somabulana, Umluzulu, Secombo, Inyanda, Gumu, Secota, and other *indunas* who tendered their submission to Mr. Rhodes, complained of some of the Government officials and native police, declaring that neither he nor Dr. Jameson knew what had been done in Matabeleland, and promised that if Mr. Rhodes stayed and cared for them they would not fight. About 100 kraals surrendered, but at another conference, held with Dhliso, Babyan, Oshete, and Karl Kumalo, some of the young men came armed and carried themselves insolently. These chiefs recounted also

the wrongs from which they had suffered, the injustice and exactions of the commissioners, the stealing of their women by the police, the seizure of half their cattle, and, as it seemed to them, the wanton destruction of those that were left to them. Mr. Rhodes would not promise that they should be allowed to carry arms, even for hunting. He warned them that if they continued fighting they would be hemmed in by forts, and in the end all must perish. The Matabele chiefs continued the negotiations till the middle of September, and then did not deliver up their arms, but gradually they returned and occupied their former kraals. In Mashonaland, Makoni and other leaders were captured and shot, and the people returned to peaceful pursuits without a formal surrender. Fighting had almost ceased before the rainy season began.

One result of the war was to hasten the completion of the railroads projected for Rhodesia. Work on the Beira line was interrupted by the revolt, but was afterward pushed forward much faster toward Salisbury. The other line was ordered to be extended from Mafeking so as to reach Palapye, Khama's capital, by April, 1897, the Tati gold fields in the following September, and Buluwayo before the end of the year.

German Southwest Africa.—The disturbances in the Transvaal and a fresh rising of the natives in Hereroland prompted the German Government to increase the strength of the military forces under the command of Major Leutwein in Southwest Africa from 540 to 1,000 men. The German possessions have an area of 320,000 square miles. About 200 Germans had settled there before the fresh accession to the colony of about 300 of the colonial troops who received grants of land when their time expired in 1896. The Hereros became insolent and insubordinate early in 1896. On April 5 two engagements were fought near Gobabis with a strong force of Khanas Hottentots, who were aided by Damaras. The Germans were finally victorious in a hand-to-hand fight, but they lost 8 men. The rebels were armed with modern rifles. These they were supposed to have obtained from Bechuanaland. Major Leutwein, on May 7, stormed the stronghold of the rebel chieftain Kahimema with the help of loyal Hottentots and Hereros and made him and his whole tribe prisoners, putting an end to the revolt. Fresh discoveries of guano drew the attention of German and English capitalists to German Southwest Africa.

CHEESE, FILLED. The annual cheese production of this country is about 260,000,000 pounds, requiring the milk of about 1,000,000 cows. The value of the product is about \$25,000,000. The States of New York and Wisconsin together produce two thirds of this amount. The consumption of cheese is about 3 pounds *per capita* per annum.

The manufacture of filled cheese is an industry that has sprung up in recent years. Filled cheese is made by extracting the butter fat from milk, and substituting neutral lard, or lard manufactured from the leaf lard of the hog. It is called "margarine cheese" in England, and is designated as "imitation cheese" in the laws of several States. Its most appropriate designation would be "lard cheese." A valuable constituent of cheese is casein, which is the same in filled cheese as in cream cheese. The only essential difference between the two articles is the substitution of the fat of the hog for that of the cow. The neutral lard used is tasteless and odorless, and usually sells for about 1 cent a pound more than the best family lard. The skimmed milk and lard reduced to an oil are sprayed together at a temperature of 130° to 140°, in the proportion of about 4 parts of milk to 1 of oil. The emulsion resulting is then run into cheese vats and mixed

with more skimmed milk. When this is properly cooled, rennet is added, which coagulates the mass, and the usual process of cheese making is proceeded with. The cost of manufacture depends mainly upon the market price of neutral lard. At the present rates, filled cheese can be made and placed upon the market at about 5 cents a pound. It was quoted at wholesale at 5 and 5½ cents, while full-cream Wisconsin cheese stood at 8 to 9 cents.

The reputation of American cheese has been affected injuriously by the manufacture and sale of filled cheese falsely branded as the genuine article. It has been shipped to the South and to manufacturing and mining centers branded as "Extra New York Cream Cheese" or "Extra Wisconsin Cream Cheese," and sold as such. This element of fraud was the principal motive for restrictive legislation on the subject. In Canada and several States of the Union its manufacture and sale have been prohibited.

The law enacted by Congress, approved June 6, 1896, imposing a tax upon and regulating the manufacture, sale, importation, and exportation of filled cheese, went into effect Sept. 4, 1896. It imposes an internal-revenue tax of 1 cent a pound on the domestic article, to be paid by stamps affixed to the packages. Manufacturers are required to pay a special tax, or, as it is popularly called, a license, of \$400 per annum; wholesale dealers, \$250; and retail dealers, \$12. Manufacturers must file with the Collectors of Internal Revenue such notices, inventories, and bonds; keep such books, and render such returns, and conduct their business under such surveillance of officers and agents as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may require. The article must be packed by manufacturers in wooden packages marked and branded with the words "Filled Cheese"; manufacturers and wholesale dealers must sell only in original stamped packages, and retail dealers in wooden or paper packages marked and branded in accordance with prescribed regulations. Filled cheese imported from foreign countries must pay an internal-revenue tax of 8 cents a pound in addition to the import duty.

The law was patterned after the oleomargarine law, with some modifications. These consist principally in the reduction of the taxes, fines, and penalties. The raising of revenue was a secondary object. A nominal tax was placed on the article so as to give Congress jurisdiction of the subject, and thus secure the accomplishment of the main object, which was to identify the cheese and give the purchaser notice of what it really is, as in the case of oleomargarine. The opponents of the law claimed that it sought to build up one industry at the expense of another, and was a perversion of the taxing power of the Government, and was unconstitutional. It is claimed by some that filled cheese is an unwholesome article of food. They allege that the lard used in place of the butter fat is indigestible, and that it is not heated sufficiently in the process of manufacture to destroy the animal germs that may exist therein. The weight of testimony taken before the Committee on Ways and Means, when the bill was pending in the House of Representatives, was to the effect that it was a wholesome food product—at least not unwholesome. The materials used in its manufacture are all products of the farm, and are recognized, separately and combined, as wholesome articles of food. Authorities differ as to the relative digestibility of different fats, such as butter fat and pork fat or lard; but immense quantities of pork fat, in all forms, are consumed by various classes of people without detriment to health. The Secretary of Agriculture is authority for the statement that the liability to use raw materials containing the germs of disease

is about the same in making genuine cheese as in making filled cheese. It is possible thus to convey the germs of disease from cows and hogs to the human family, but the danger can not be regarded as serious in either case.

Before the passage of the law there were about 100 filled-cheese factories in the country, producing about 12,000,000 pounds annually. Illinois was the center of the industry, and Chicago the principal market and distributing point. The effect of the law has been to reduce the production of the article greatly and improve the market for full-cream cheese. For the fiscal year ended June 30, 1897, there were qualified under the law 2 manufacturers in Illinois, 18 wholesale dealers (15 in Louisiana, 2 in Missouri, and 1 in Illinois), and 1 retail dealer in Illinois. The annual revenue anticipated from this source is small. The internal-revenue receipts to Nov. 1, 1896, from all sources relating to filled cheese were \$1,215.68.

CHEMISTRY. Chemical Theory.—In the Bakerian lecture for 1894 Dr. T. S. Thorpe and J. W. Roger gave an account of their studies of the viscosity of about 70 liquids, and discussed the interdependence of viscosity and chemical composition. In order to render their investigation more complete they have now made measurements of the viscosity of (1) a number of ethereal salts and (2) of ethers, simple and compound. The physico-chemical relationships previously established made such determinations of special interest, for it was shown that one of the most striking of the various connections traced between chemical constitution and viscosity was the influence exerted by oxygen, according to the different modes in which it was assumed to be connected with the other atoms in the molecule. The influence which could be ascribed to hydroxyl-oxygen differs to a most marked extent from that of carbonyl-oxygen, and it appeared that ether-oxygen, or oxygen linked to two carbon atoms, had also a value which differed considerably from that of oxygen in other conditions. The authors conclude that both ethers and esters give no evidence of molecular aggregation, and conform to the rules that in homologous series, the viscosity is greater the greater the molecular weight; that an iso-compound has a smaller viscosity than a normal isomer; and that the more symmetrical the molecule of an isomeric compound the lower is the viscosity. The authors add notes regarding the characteristics of the esters themselves, the algebraical representation of the results, and the relationships existing between the various viscosity magnitudes.

Observations by Dr. J. H. Gladstone on the relation between the refraction of the elements and their chemical equivalents show that the metals which have the same valency have the same, or nearly the same, constant of refraction for equivalent weights; that the constant of the bivalent, trivalent, quadrivalent, and apparently quinquivalent groups are practically the same, ranging about 1.01; and that when the metal combines in a proportion that indicates a lower valency than that ordinarily assigned to it its constant is somewhat elevated. The relation involved is not between the optical property and the atomic weight, but between it and the electro-chemical equivalent. It is proposed to give this product the descriptive name "refractive constant of equivalent weights." It may be represented by $S.E^2$ constant or by S^2E constant when S is the specific refraction and E the chemical equivalent of the metal. This is suggested as a first approximation to a law, which holds good, however, only for the metallic elements, and that when they are electro-positive radicals.

Repeating before the British Association some

experiments that seemed to prove a diminution of chemical action resulting from limitations of space, Prof. Liebrich, of Berlin, advanced as a deduction the general proposition that liquids in proportion as they are placed in confined spaces acquire, by equilibric reactions, the properties of solids; and that friction in such fluids has a bearing of considerable importance on chemical reaction. One of the experiments was that of sinking a piece of nickel, attached to a float, in water, and drawing it down to the bottom of the vessel by magnetic attraction. The float did not again rise quite to the surface, and this was attributed to friction in the fluid. In a kindred experiment with two kinds of glycerin, of different specific gravities, it was shown by means of a specially constructed apparatus that the lighter liquid did not rise quite to the surface of the heavier if permitted to percolate through it.

Laws of the relations of the ions and the colors of substances are deduced from experiments made with reference to that subject by H. Carey Lea, as follows: When highly colored inorganic substances are composed of colorless ions, then if those substances can be brought into solution, the color wholly disappears. No exceptions to this rule were met with. It is thus proved that the ions have become so far separated that they no longer influence each other's vibrations. The union of ions, colored and colorless, gives rise to the most surprising changes of color. Two similarly colored ions may unite to form a colorless substance. Two similar colorless ions may unite to form a strongly colored substance. There is absolutely no relation traceable between the color of an ion and that of the substance which it forms. The change of color of an acid indicator placed in contact with an alkali in no way depends upon dissociation. Dissociation may result, but the change of color is independent of it. Selective absorption of the visual rays by a substance can never constitute a basis for classification, but the relation of ions to the visual rays leads to a classification which is in absolute harmony with the chemical characteristics of the elements. While there is good reason for believing that in solution the ions are separated so as no longer to affect each other's vibrations, it is also certain that they remain within each other's range of influence, so that they can not be considered as free.

The investigations of Runge and Paschen on the spectrum of cleveite gas make the existence of another new element besides helium seem to J. R. Rydberg very probable. For this supposed new element the name parhelium is suggested. In connection with this subject Mr. Rydberg observes that the supposed two elements of cleveite gas, as well as argon, seem to suggest a regularity regarding the atomic weights, the law of which may be expressed: "If the atomic weights of the elements which form the first rows of the periodic system be reduced to the nearest uneven numbers, the elements of uneven valency will have the form $4n-1$, and the elements of even valency the form $4n$ ". On account of the uncertainty of the determinations of atomic weights and their increasing differences from integral numbers, the rule could be traced with some certainty only for the first 22 elements (to iron inclusive). It shows here 3 exceptions, viz.: Be (9 instead of 8), N (14 instead of 15), and Se (44 instead of 43); but it gives place for He (helium, 4) and A (argon, 20), as well as for an element with the atomic weight 20, which would possibly answer to Pa (or parhelium). Spaces remain for elements with the reduced atomic weights 36, 44, and 47. Of the 6 places formerly vacant in the present division 2, Mr. Rydberg thinks, are probably permanently taken up by the new elements

helium and argon. It seems possible that the present exceptions may yet submit to the rule, when we consider the imperfection of our knowledge of the rare earths and keep in view the surprising discoveries of the impurities of nitrogen.

An investigation of the slow combustion of oxygen and hydrogen, or the action of prolonged moderate heating upon detonating gas, made by Victor Meyer and Wilhelm Raum, bore reference to the view advanced by the representatives of physical chemistry, that a substance having a catalytic action can not produce a reaction that is not already existent, and that it merely increases the rapidity of such a reaction. On this assumption hydrogen and oxygen, which combine rather rapidly at 500° C., must combine to some extent at ordinary temperature, even though this action may be so slow that it would require hundreds or thousands of years for the production of an amount of water that could be detected, and that it is this slow action that is increased to great rapidity by the presence of a catalytic agent, such as finely divided platinum. The authors attacked the problem by finding a temperature just so low that the gases did not act appreciably for several days, then prolonging the time of action at that temperature. It was discovered that at 300° C. no water could be detected after ten days' heating, but after heating uninterruptedly for sixty-five days, water was found to have been formed. The authors conclude from their results that the reaction under consideration is retarded but not stopped by lowering the temperature, and that the assumption of action at ordinary temperatures is justified.

New light has been found upon the origin of Dalton's conception of the atomic theory by the discovery at the rooms of the Literary and Philosophical Society of Manchester of his laboratory and lecture notebooks contained in a number of manuscript volumes. It has hitherto been supposed that it was the experimental discovery of the law of atomic proportions which led Dalton, seeking for an explanation of this fact, to the idea that chemical combination consists in the approximation of atoms of definite and characteristic weight—the atomic theory having, it is supposed, been thus adopted to explain the facts ascertained by chemical analysis. It now appears, as the matter is presented by Sir Henry Roscoe and Arthur Harden, from the examination of Dalton's notes, that he was probably led to his theory by an attempt to apply the Newtonian doctrine of the atomic constitution of matter to the explanation of the physical properties of gases, and more especially to the case of the gases present in atmospheric air.

A severe criticism of the periodic classification of the elements as assuming to be a system or to represent a law has been made by Dr. Wyrnboff. If, he says, the classification had remained what it was at the outset—that is, a very interesting and highly ingenious table of the analogies and the dissimilarities of the simple bodies—he would not have questioned it. "But M. Mendeleef has aimed at producing something more than a mere *catalogue raisonné* of the elements. He converted his classification into the periodic system. . . . He formulated as the fundamental law of the physico-chemical sciences the dictum that all the properties of bodies are periodic functions of their atomic weights. It would seem that, in view of a question so distinctly put, the first duty of the *savant* must be to intervene, as has been done with particular laws, to check and verify them down to the utmost details. This has not been done, not even dreamt of, and we find, not merely in special researches, but even in works of elementary instruction, the periodic law accepted as a reality beyond all dispute. . . . On

reaching this point of its development the conception of Prof. Mendeleef becomes essentially injurious. Under pretext of a law which has still to be demonstrated, it forbids us to throw light on pure matters of observation, and forces us to remain in a vicious circle from which there is no escape." The author then undertakes to show that there is nothing in the periodic classification which merits the name of law or system.

Chemical Physies.—In M. Moissan's experiments on the volatilization of refractory substances in the electric furnace, the sublimates were condensed on the outside of a curved copper tube placed 2 centimetres below the arc and just above the substances under examination. A rapid current of water was passed through the tube and kept it cool during the experiments, which usually lasted for about five minutes. The volatilized metals were copper, silver, aluminium, tin, gold, manganese, iron, and uranium. Quantitative experiments were not made in every case, but it appeared that manganese was sublimed more rapidly than the other metals, and that the rate of volatilization of copper was about five times as rapid as that of gold. The condensed metal was usually, or in great part, in the form of little spheres. Silicon and carbon were also volatilized and condensed on the tube, though the amount collected of the last-named element was very small, and lime, magnesia, zirconia, and silica were sublimed without difficulty. The author draws the conclusion that the most stable compounds hitherto known disappear in the electric furnace, being either decomposed or volatilized. Nothing resists these high temperatures except the series of perfectly crystallized compounds discovered by him, consisting of borides, silicides, and carbides of the metals. He regards these substances as being probably among the original constituents of the globe, and as still existing in some of the stars.

F. W. Clarke remarks that although many papers have been written upon relations between boiling point and critical temperature, the melting points of substances seem to have been little considered. Yet the subject is important. For any substance the limits of the solid state are the absolute zero and the melting point, while the extreme limits of the liquid condition are the melting point and the critical temperature. A comparison of the values, therefore, will give for such substance the relative thermometric lengths of the two states of matter, and the results obtained, although empirical, have very decided interest. The available data, however, are very meager, for many of the compounds of which the critical temperature is known have never had their melting points determined. Nine substances—nitrogen, carbonic oxide, argon, methane, hydrochloric acid, hydrogen sulphide, ammonia, benzene, and acetic acid—give a ratio of nearly 2; or their absolute melting points are very nearly, if not exactly, half of their critical temperature, and the thermometric lengths of their solid and liquid states are approximately equal. This simple ratio, however, is not general. In 30 substances examined no uniform rule has appeared. There are nevertheless other regularities apparent which connect certain allied substances with one another. Thus 4 gaseous compounds of nitrogen exhibit ratios of between 1.64 and 1.77, and 5 aromatic bodies from 2.75 to 2.94. In these appear an essential identity of ratio with related constitution, which suggests that the method of discussion applied to larger masses of data may give information of considerable theoretical value. For most of the other substances considered the ratio ranges between 2.2 and 3. A few bodies only give ratios higher than 3, and in these therefore

the thermometric lengths of the solid and liquid states are as 1 to 2 and more.

A series of experiments on the transparency of liquids is described by M. W. Spring in the "Bulletin" of the Royal Academy of Belgium. In a comparison of the colors of the alcohols with that of water, none of the alcohols were colorless when the thickness of fluid was 20 metres; methyl alcohol appeared greenish blue, ethyl alcohol of a less warm hue of the same color, and amyl alcohol greenish yellow. The pure blue color observed in water becomes thus modified by the admixture of more and more yellow as we pass from one term of the homogeneous series of compounds to the next. The absorbing powers of the various liquids for ordinary light were also observed, and it was found that these formed a descending scale, the simplest substance, water, offering the greatest resistance to the passage of light seen by the eye. M. Spring also discusses the temperature at which the convection currents begin to produce opacity in a column of water of given length. When the length is 26 metres the smallest difference of temperature that will suffice is about 0.57° , and is comparable with that which doubtless exists in lakes and rivers. The author concludes that we have here an explanation of the varied colors often seen in water. They result from differences of temperature caused by sunshine on the one hand, and the cooling action of wind blowing on the surface on the other hand.

Subjecting the diamond to molecular bombardment in a vacuum tube, Prof. Crookes has found that it becomes discolored, and in the course of time black on the surface. Some diamonds blacken in a few minutes, while others require an hour or more to discolor. The blackening is only superficial, and although no ordinary means of cleaning will remove it, it goes away when the stone is polished with diamond powder. Ordinary oxidizing reagents have little or no effect in restoring the color. The author attributes the phenomenon to the conversion of the outer layer of carbon molecules of the stone into graphite. A diamond thus discolored was digested in a mixture of potassium chlorate and strong nitric acid at a temperature of about 50° C., when after three days the superficial blackening was entirely removed, and the gem was even more brilliant than before. This was held to prove that the blackening arose from the formation of graphite. Microscopic examination under high powers failed to show any alteration of the smooth crystalline surface either before or after the blackened diamonds had been treated with the chemical reagents.

During a preparation of mercurous nitrate by the action of dilute nitric acid in the cold on mercury, Dr. P. C. Rây, of the Presidency College, Calcutta, observed that minute yellow crystals were deposited which, upon examination, proved to be mercurous nitrite. The analysis proved somewhat difficult, as the substance decomposes in solution into metallic mercury and mercuric nitrite. The fact that this nitrite is stable in strongly acid solutions is an additional proof, says "Nature," of the views advanced by Dr. Divers as to the "nitronic" constitution of the nitrites of copper, silver, mercury, and bismuth. The stability of silver nitrite toward nitric acid has already been noticed by Acworth and Armstrong, and by Russell, and the behavior of mercurous nitrite is closely analogous.

In experimenting with deliquescent salts, H. Wilson Hake found, several years ago, that such bodies exercise a desiccating action on other deliquescent salts, indicating differences in the degree of attraction for moisture. He has recently made experiments for measuring, if possible, the relative degree of deliquescence, or specific deliquescence, of

various salts. He concludes that the phenomenon of deliquescence in certain salts, and possibly in other substances, is due to a tendency on their part to form definite hydrates.

M. Henri Moissan has proved that a great number of metals, such as aluminium, platinum, chromium, uranium, vanadium, etc., can dissolve carbon when the temperature is sufficiently high, and abandon it again in the nature of graphite. On studying the conditions under which graphite is formed in one and the same metal, iron, and by varying the temperature and the pressure, he has reached the following results: 1. At the ordinary pressure graphite is the purer the higher the temperature at which it is formed. 2. It is more stable in presence of nitric acid and potassium chlorate, as the temperature at which it has been produced is higher. 3. Under the influence of pressure the crystals and the masses of graphite take the aspect of a fused matter. 4. The small quantity of hydrogen which graphites always contain decreases distinctly as their purity increases. 5. On attacking cast iron with acids there are produced hydrogenous and oxygenous compounds which resist a dull-red temperature, and which, like graphite, are destroyed on combustion.

II. B. Dixon and H. B. Baker have investigated, with negative results, the question whether Röntgen rays are able to influence chemical change, either by starting it or by accelerating or diminishing it after it has been started by ordinary light.

Discussing the subject of "Low-Temperature Research," Prof. Dewar observes that, owing to the relative pressures of oxygen and nitrogen in the air, these two gases, although possessing different boiling points, condense at almost exactly the same temperature when air is cooled. The method employed for measuring low temperatures consists in using a system of five thermo-junctions so arranged that three of them are kept at 0°, while the other two are of the same metals in inverse order, so that when one of them is cooled the other must be heated in order to preserve equilibrium. The low temperature to be observed is thus balanced by a high temperature which can easily be read off. Helium appears to be less easily condensable than hydrogen, and, moreover, possesses an abnormally low refractivity and real molecular volume. It is a remarkable fact that fluorine, the most active of all the chemical elements, in this respect resembles helium, the least active of all. The ratio of the refractivity of hydrogen to that of chlorine is almost the same as that of helium to argon, and it is quite possible that a substance may yet be discovered which will be intermediate between these two elements, just as fluorine is intermediate between hydrogen and chlorine.

In the Helmholtz memorial lecture, delivered before the Chemical Society, London, Jan. 23, Prof. G. F. Fitzgerald contended that the fundamental conceptions underlying many of the physico-chemical theories, such as those of osmotic pressure and electrolytic dissociation, are dynamically unsound, so that all attempts to gain an insight into what occurs in solution by their aid are necessarily unsuccessful. His language suggested that he considered that an unyielding adhesion to these theories had led to an illogical habit of thought upon such matters.

New Substances. Helium and Argon.—A description of the remarkable physical properties possessed by helium, which, besides its great chemical apathy, distinguish it from all other gases, was given by Prof. Ramsay in the British Association. When the gas is allowed to diffuse through a porous tube it is divided into two portions, one of which is lighter than the other. Both give the same spectrum. These

two portions, moreover, diffuse much more rapidly than would be expected from their density, and have refractive indexes which are proportional to their densities, a relation which does not hold for other gases. These facts are difficult to explain by the assumption that what is called helium is a mixture of two gases. The author suggested that the abnormal behavior of the gas may be best explained by supposing that all its molecules are not of exactly the same weight, and that in the two portions of the gas which he has obtained by diffusion a partial separation of the lighter from the heavier molecules has been effected.

Prof. Ramsay and Dr. J. Norman Callie have given a list of experiments on the power of helium and argon to combine with other substances, all of which were attended with negative results. Assuming that any compound of helium capable of existence will be endothermic, the authors tried two methods of producing endothermic compounds where no extraneous exothermic reaction was possible—exposure to a high temperature and the influence of the silent induction coil. The experiments included treatment of the gas with caustic soda and a solution of ammoniacal cuprous chloride, from the result of which it seemed clear that argon does not combine with carbon; treatment of a product rich in barium cyanide in such a way as to recover all the nitrogen, when, no residue being left, it was concluded that no argon entered into the combination; and treatment with the vapor of carbon tetrachloride under exposure to the discharge from the induction coil when the argon did not enter into the reaction, and was recovered without loss of volume. A larger number of experiments related to attempts to produce compounds of helium. The plan of operation was to circulate helium over the reagent at a bright heat, and to observe whether any alteration in volume occurred or whether any marked change was produced in the reagent employed. Experiments with sodium, silicon, beryllium, zinc, cadmium, boron, yttrium, thallium, titanium, thorium, tin, lead, phosphorus, arsenic, antimony, bismuth, sulphur, selenium, uranium, chlorine, cobalt, platinum, soda lime and potassium nitrate, and benzene vapor, all give negative results. The authors conclude from the whole that there is every reason to believe that the elements helium and argon are nonvalent—that is, are incapable of forming compounds.

It has, however, been found by M. P. Villard that argon combines with water to form a dissociable crystalline hydrate similar to the hydrates of gas already known, and originating under the same conditions as the others. Compressing argon with about 150 atmospheres in the presence of water near the freezing point, if the tube be cooled so as to congeal the water on its walls, a crystallization will be seen to take place, which propagates itself from the cooled point; the layer of water adhering to the tube becomes transformed into colorless crystals, visible in the lens and probably constituted of a hydrate of argon. The reaction may also be brought about by the presence of a crystal of the hydrate obtained in a preceding experiment; but the crystals are not formed when argon is simply compressed with cold water. The phenomena are precisely the same as those observed with all gases susceptible of yielding a hydrate.

Experiments made by Dr. Callie and Prof. Ramsay on the behavior of argon and helium when submitted to the electrical discharge indicate that at high pressures a discharge passes much more readily through helium than through other gases; but at a low pressure, if passage of current can be inferred from luminosity of spectrum, all other gases convey current more readily than helium does, and

nitrogen conveys current more readily than argon. This is supposed to be connected with the known fact that decrease of pressure promotes dissociation.

The result obtained in a new determination of the specific gravity of argon by Lord Rayleigh, using a large quantity of the gas separated from atmospheric nitrogen by sparking with oxygen, gives—referred to O_2 as 16—19.940. Prof. Ramsay had previously obtained a density of 19.941 for the gas obtained by the magnesium method. Hence the products obtained by the two methods are identical. The author has also determined the refractivity of argon and helium, with the results: argon 0.961 and helium 0.146, compared with air as unity. The result in the case of argon is very unfavorable to the view that this gas is an allotropic form of nitrogen. The refractivity of helium is remarkably low, the lowest previously known being that of hydrogen, which is nearly 0.5 that of air. The results of the determination of viscosity were 0.96 for helium and 1.21 for argon, referred to dry air. The number for argon is somewhat higher than that for oxygen. The gas from the Bath Springs was found by the author to contain both argon and helium, and that from Buxton Springs 2 per cent. of argon and probably helium in very small quantity. The author's experiments have led him to the conclusion that if helium is present in the atmosphere it must be in very small quantity, probably much less than a ten-thousandth part.

Bobuslav Branner insists upon the view which he expressed very early in the history of those substances, that argon and helium are allotropic states of nitrogen and hydrogen of a peculiar, entirely novel character. The density of helium, $d=2$, would correspond to a molecular weight = 4, and there would not be a complete analogy between helium and argon, the latter being regarded as N_2 . But the recent research of Ramsay and Callie on the separation of the constituents of helium by diffusion makes it highly probable that the molecular weights of the two constituents in a pure state are 3 and 5. The author expresses his "modest opinion" that Nature has effected the synthesis of three substances which behave like elements, or like simple substances, the molecular weights, and, with a certain restriction, the "atomic" weights of which equal 3, 5, and 40. "The original protyptic matter (in the sense used by Crookes) of the first two elementlike substances is hydrogen, and the enormously important bearing of Dr. Ramsay's discovery seems to me to lie in the point that the constituents of helium were formed from hydrogen in accordance with Prout's law."

What he supposes to be a new elementary body and which he names *lucium* has been detected by M. P. Barrière in the course of researches on monazite sand. Careful investigation has shown that it differs from cerium, lanthanum, and didymium by not forming insoluble double salts with sodium sulphate; from thorium and zirconium in not forming insoluble double salts with potassium sulphate; from yttrium, ytterbium, and erbium in being precipitable from its chloride by sodium thio-sulphate; and from glucinum in that its salts are precipitable by oxalic acid. Its lines in the spectrum are special, and only slightly approach those of erbium; and certain color differences are mentioned. This supposed new substance has since been submitted to vigorous radiant-matter tests by Mr. William Crookes, who draws from the results that the claim of lucium to form one of the chemical elements is not justified, but that it is an impure yttrium. An identical conclusion is drawn from the chemical examinations that were made by M. Schützenberger.

In their continued researches on free hydrazine,

NH_2-NH_2 , MM. Lobry de Bruyn and A. Van Ehenstein obtain the anhydrous base in two ways, viz., by the action of barium oxide on hydrazine hydrate and by the reaction between sodium methylate and hydrazine hydrochloride in absolute methyl alcohol. In either case the hydrazine is separated by fractional distillation under reduced pressure. The authors find free hydrazine a liquid which at $23^\circ C.$ has a density of 1.003, and on cooling with ice solidifies to a crystalline mass melting at $1.4^\circ C.$ It is a very stable body, which boils unchanged under ordinary atmospheric pressure at $113.5^\circ C.$, and does not decompose at $300^\circ C.$ In its chemical behavior the free base resembles the hydrate, being oxidized to nitrogen by oxygen or air, and converting solid sulphur, on warming, into hydrogen sulphide. In an improved method for preparing hydrazine hydrate given by M. Lobry de Bruyn, advantage is taken of the fact that glass is not attacked by this substance at temperatures under $50^\circ C.$ Since the hydrate boils at $47^\circ C.$ under a pressure of 26 millimetres, the fractional distillation, if conducted at pressures below this, may be carried out in glass vessels.

The sodium and barium salts of a new acid, $H_2N_2O_3$, which fills the gap between hyponitrous and nitrous acids, have been prepared by Dr. A. Angeli. To obtain this acid, an alcoholic solution of free hydroxylamine was prepared in the usual manner from hydroxylamine hydrochloride and sodium ethylate, an excess of the latter being taken, and to the solution, after filtering off the precipitated salt, was continuously added the theoretical quantity of ethyl nitrate. The reaction proceeds according to the equation $C_2H_5.ONO_2 + NH_2OH = C_2H_5.OH + H_2N_2O_3$, the white sodium salt of the new acid beginning to separate at once. From this salt, which on analysis proved to be $Na_2N_2O_3$, the barium salt is readily obtained in a pure state by adding barium chloride to the dilute aqueous solution. The salts are both moderately stable in the dry state, but are easily decomposed on boiling the solution into the hydrate of the metal and nitric oxide. The same gas is given off quantitatively on acidifying the aqueous solution, and hence all attempts to isolate the free acid have failed.

Prosecuting experiments with rare earths contiguous to samarium, M. Eugène Demarcay has detected a peculiar nitrate, more soluble in strong nitric acid than that of gadolinium, and less so than that of samarium. The earth obtained from this nitrate differs from the rare earths already known by its colorless salts without an absorption spectrum; in being colorless, by which it is distinguished from terbium; and by its spectrum, which is different from those of the oxides of lanthanum, cerium, gadolinium, ytterbium, and terbium, the only rare earths yet known with colorless salts. It is, further, very distinct from the oxides of lanthanum and cerium by its relatively feeble basicity and the relative solubility of its double sulphate; but it approximates much to gadolinia and samaria, from which it is distinguished by its spectrum. The author designates, provisionally, until he has succeeded in isolating it in a greater state of purity, the radicle of this earth as Σ , and the earth itself as Σ_2O_3 .

Messrs. Wood and Easterfield, of Cambridge, have found that charas, the exuded resin of *Cannabis indica* or Indian hemp, contains a compound, $C_{18}H_{24}O_2$, having its boiling point at between 265° and $270^\circ C.$ at 15 millimetres pressure (31 per cent.), to which they attribute the physiological action of the plant. This active compound, which the authors name *Cannabinol*, is a red semisolid substance at ordinary temperatures, but is quite liquid at $60^\circ C.$; it yields monacetyl and monobenzoyl

derivative, and can be nitrated. The same compound has been isolated by the authors from the usual medicinal preparations of *Cannabis indica*.

MM. H. Moissan and Ch. Mouren find that if acetylene is allowed suddenly to impinge upon pyrophoric iron that has been reduced by hydrogen at the lowest possible temperature, the gas is decomposed with incandescence into its constituents. At the same time, owing to the high temperature, condensation takes place, and a liquid hydrocarbon, rich in benzene, is produced. The same phenomenon is produced by pyrophoric nickel and by platinum black. No compound containing metal can be isolated, and the decomposition appears to be due to physical causes.

Cerium carbide, CeC_2 , produced by M. Moissan in the electric furnace from charcoal and CeO_2 , gives, with water, a gas containing ethylene, 4 per cent.; methane, 24 per cent.; and acetylene, 75 per cent. A small proportion of the carbon is obtained in the form of liquid and solid hydrocarbons.

Carbide of lithium, LiC_2 , also obtained by M. Moissan, forms a transparent crystalline mass, which, on account of its high percentage of carbon (69 per cent.), acts as a powerful reducing agent. It is volatile at the temperature of the electric furnace, with partial decomposition into its elements, and on treatment with water yields acetylene.

Lanthanum carbide, obtained from the oxide and carbon in the usual manner by M. Moissan, forms a transparent, yellowish, crystalline mass, of the composition LaC_2 . Water rapidly decomposes it at the ordinary temperature, giving acetylene, ethylene, and methane with traces of solid and liquid hydrocarbons.

Yttrium carbide, as prepared in the electrical furnace, is found to be attacked readily by the halogens, with difficulty by acids. With water it yields a mixture of acetylene (72 per cent.), methane, ethylene, and hydrogen, together with a small quantity of liquid hydrocarbons. Thorium carbide, similarly produced, forms a crystalline, transparent mass, and gives a mixture of hydrocarbon on treatment with water of the same qualitative composition as that obtained from yttrium carbide.

Among the products of the reaction between $400^\circ C.$ and $500^\circ C.$ of hydrobromic acid upon phosphoryl trichloride, M. Besson has isolated the phosphoryl chlorobromide, $POCl_2Br$, hitherto not obtained. It is solid at the ordinary temperature, melts at $30^\circ C.$, and distills under normal pressure at 165° . Its boiling point is, however, not fixed, as it decomposes into the chlorobromide, $POCl_2Br$, of Menschutkin and phosphoryl tribromide. This property renders its isolation by fractional distillation difficult. Besides these two chlorobromides and the tribromide, M. Besson obtained considerable quantities of phosphorus pentabromide from the product of the original reaction. A remarkable feature in the formation of this substance is that it involves the replacement of the oxygen of the phosphoryl group by bromine with elimination of water, whereas at ordinary temperatures the inverse change takes place with great vigor.

A new soluble oxidizing ferment, an oxydase, has been identified by M. G. Bertrand as the agent under the influence of which the cut surfaces of certain vegetables, such as the dahlia and apple, are browned through the oxidation of the tyrosine. It can be isolated from the roots of the dahlia.

Wishing to heat some lithium in a current of an inert gas, M. Guntz, under the necessity of excluding nitrogen, used hydrogen. The whole caught fire and burned with a flame in the tube, depositing a white powder and leaving no trace of unburned lithium. On analysis, this powder proved to have the

composition LiH , and it is noteworthy as giving the maximum weight of hydrogen on treatment with water for the minimum weight of that substance. It is not deliquescent, alters very slowly in the air, and is stable at a full red heat, in this differing from the previously known hydrides of the alkali metals. Heated in a current of nitrogen, LiH is converted into Li_3N .

New Processes.—In a new method for the preparation of aromatic aldehydes by M. L. Bouveault, the hydrocarbons are converted into glyoxylic acids by means of ethoxalyl chloride in presence of aluminium chloride, and these heated with aniline give nearly quantitative yield of phenylimides, the condensation to the phenylimido-acid and elimination of CO_2 from the latter proceeding simultaneously. A good yield of the corresponding aldehyde is obtained on hydrolyzing the phenylimide by boiling with dilute sulphuric acid. The aldehyde group has in this way been introduced into toluenes, m-xylene, cymene, anisol, dimethyl ether of resorcinol, and of dimethyl-hydroquinol.

In a process by H. N. Warren for the manufacture of peroxide of lead offering a pure and theoretical yield, free from secondary products, either litharge or sulphate of lead from vitriol tanks, etc., is introduced into canvas bags, through which is inserted a lead sheet. These bags are immersed in dilute vitriol, and connected respectively to sheets of iron; the sulphate or other lead compound contained therein is thus speedily and completely reduced to the spongy metal. The bags are afterward connected alternatively by thin lead plates and exposed to an electric current, whereby the positives are wholly converted into peroxide, while the temporary accumulator thus produced is again emptied of its current into further quantities of spongy metal, with the result of manufacturing more peroxide.

The method of M. Henriet for the rapid determination of carbonic acid in the air and in confined places depends upon the fact that on adding sulphuric acid to a solution of neutral potassium carbonate, colored red by means of phenolphthalein, the coloration disappears at the moment when half the carbonic acid of the carbonate is fixed upon the undecomposed carbonate, converting it into bicarbonate. This decoloration is very sharp if we take care, toward the end of the operation, to add the acid only drop by drop. If we absorb in potassa the carbonic acid contained in a known volume of air, it is sufficient to titrate an equal volume of the potassa liquid employed, when double the difference of the readings corresponds exactly to the carbonic acid retained. The result is independent of the carbonate which potassa liquid always contains, since in the liquid and in the carbonated liquid the pre-existing carbonate is decomposed by the same acid volume, and we take account merely of the difference of the readings.

The paraffin manufactured at Linlithgow, Scotland, is derived, according to a lecture delivered by Mr. Kerr before the Edinburgh University Chemical Society, from the bituminous shale lying under the coal formation. From these shales are obtained directly the crude oil, ammonia water, and gases containing volatile hydrocarbons. The yield of crude oil depends on the form and nature of the shale used, and varies from 17 to 35 gallons per ton of shale. The ammoniacal liquor yields from 17 to 80 pounds of ammonium sulphate, and the retort gases, when scrubbed, about $1\frac{1}{2}$ gallon of naphtha per ton of shale. After being settled and separated from the ammonia liquor, the crude oil is put through a series of washings with acid and soda and fractional distillation, producing naphtha, which is washed and redistilled, burning

oil, and heavy oil and paraffin. The heavy oil and paraffin are frozen and pressed. Solid paraffin (known as "scale" when in the crude state) is left in the filter presses, while blue oil passes through. The latter undergoes further treatment with acid and soda, and is fractionated into gas and lubricating oils. The lubricating oils are displacing vegetable oils for machinery, since they do not clog and are not liable to spontaneous combustion. The paraffin scale, after further pressing, is purified by "sweating" out the oil and coloring matters, and is then washed with bone black, filtered, and run into cakes. It was pointed out in the discussion of Mr. Kerr's paper that when stearine is added to the wax in candle making, although the wax is made harder, the melting point is lowered.

In a process by M. Piloty to obtain anhydrous hyponitrous acid, silver hyponitrite, suspended in ether and treated with hydrogen chloride, gives silver chloride and a solution of $H_2N_2O_2$ in ether. Rapid evaporation of the ether causes the deposition of the acid as an oil, which solidifies in a freezing mixture to a crystalline mass. Both the oil and the solid possess explosive qualities. Of the numerous isomerides of the formula $H_2N_2O_2$ theoretically possible, this is the second to be isolated, the nitramide NH_2NO_2 of Thiele and Lachman being the first.

In the same author's method of preparing the salts of hyponitrous acid, hydroxylamine hydrochloride, by treatment in alcoholic solution with sodium ethylate and benzene-sulphonic chloride, is cultivated into benzene sulphone-hydroxylamine, $C_6H_5SO_2.NH.OH$, and this on treatment with concentrated-potash solution, gives the potassium salts of benzene-sulphonic and hyponitrous acids, which can be separated without difficulty. The mechanism of the reaction is analogous to the production of hyponitrite from potassium hydroxylamine monosulphate.

The process for the electrolytic production of chlorate of potash, recently instituted by a manufacturing company at Niagara Falls, consists in dissolving nitrate of potash (or chloride of potassium) in tanks and filtering; then running the solution into porcelain-lined pots, where it is decomposed, forming the chlorate. This is allowed to run down into crystallizing pans, after which it is freed from moisture in centrifugal driers, dried in drying rooms, and then packed. The operation, from the time the muriate solution enters the hot room to the time the chlorate is ready for shipment, consumes about twenty-four hours.

H. N. Warren has successfully used the principle of electro-dissolution in the separation of boron, silicon, and phosphorus from iron, the results seeming to be most satisfactory with the boron. He has also separated copper from its impurities of iron, zinc, arsenic, etc., using hydrochloric acid as a solvent instead of sulphuric acid. He has used this method with excellent results in the analysis of commercial copper, and has been able to detect arsenic in it when all other methods failed. Electro-dissolution may also be employed in the preparation of unstable compounds, such as stannic nitrate, potassic ferrate, ferric acetate, which are decomposed on the application of heat.

Many properties of tellurium are described by Cabell Whitehead in a paper on its separation from copper residues. In the electrical refining of copper ores, the washings from the gold residue contain it as tellurous oxide or sulphate. It may be obtained from these either by precipitation with copper or by passing sulphurous anhydride through the solution, and may be finally purified by distillation in hydrogen. When a solution of sodium tellurite is added to a solution of an ammonium salt, a

white precipitate of tellurous anhydride is thrown down, which becomes granular on boiling. A small amount of tellurium or of some metal which can be precipitated by sulphurous anhydride remains in solution. Potassium ferrocyanide does not react with tellurium chloride at once, but after a few hours Prussian blue is formed. When tellurium is heated with aluminium, the two combine with explosive violence, forming a chocolate-colored compound difficult of fusion, which has the composition Al_2Te_3 . It is hard and brittle, and can be readily ground to powder: when exposed to moist air it is decomposed, and hydrogen telluride is slowly evolved; when thrown into water it is rapidly decomposed. Tellurium is readily deposited by an electric current from either an acid or an alkaline solution. It has been found possible to separate tellurium from copper by adding an excess of sodium hydroxide and about 3 grammes of potassium cyanide for each gramme of copper present, and passing an electric current through the solution, when the tellurium is thrown down as a black, nonadherent precipitate which can be readily filtered off. The solution can then be slightly acidified with sulphuric acid, and the copper estimated in the usual way by electrolysis.

M. P. Pietet's method for the rapid determination of nitric nitrogen in vegetable products depends on the coloration taken by brucine on contact with nitric acid, free or liberated from a nitrate by the action of concentrated sulphuric acid. A drop of the liquid containing the nitrate is placed on a plate of porcelain, and a drop of pure concentrated sulphuric acid is mixed with it. Some fragments of brucine are allowed to fall into the liquid, which is successively diluted with distilled water, the dilution being increased until the coloration ceases to be produced. The method permits the determination of one part of nitric nitrogen in 50,000 parts of water. A nitrite in solution gives the same coloration with brucine and sulphuric acid. Besides other means for detecting nitric acid is the use in the same manner as sulphuric acid of hydrochloric acid not containing free chlorine. It decomposes the nitrites without attacking the nitrates, and enables us to detect with brucine a nitrite in presence of a nitrate.

In the new process for producing chlorine gas for the manufacture of bleaching powder, which is said to have been placed upon a practical basis by a manufacturing house in Glasgow, gaseous hydrochloric acid is brought in contact with gaseous nitric acid in an apparatus through which a constant stream of heated sulphuric acid is flowing. The sulphuric acid absorbs all the water formed by the interaction of the two gases, and is concentrated to be used over again. The gaseous hydrochloric and nitric acids form by their interaction chlorine and a compound of chlorine and nitrous oxide, which are carried forward to a series of towers, in which the nitrous oxide and some hydrochloric acid are removed from the gases, and from which the chlorine in a pure state passes on, either to be absorbed by lime in the usual way with the formation of bleaching powder of high strength, or it may be condensed in suitable apparatus into liquid chlorine. The nitrous gas recovered in the towers is reconverted into nitric acid, and returns to begin the cycle of operations again. An apparatus for the recovery of the nitric acid has also been erected, and works well. It is claimed that by this process all the chlorine in salt can be converted into bleaching powder.

In the Capitaine and Herlings process for making oxalic acid from sawdust, 40 parts of soda lye of 1.33 density, 20 parts of sawdust, and 1.5 part of some substance containing a hydrocarbon (machine oil, vaseline, etc.) are heated at a temperature

of 200° C. (392° F.) till the disengagement of carburetted hydrogen ceases, even when water or vapor is added. The mass soon solidifies. It is treated several times again with water or vapor at 200 C. till it becomes clear. The mass then contains from 43 to 52 per cent. of oxalic acid, or 140 parts of oxalic acid for 100 parts of sawdust. The oxalate of soda which is obtained by the process is pure white. Adding sulphuric acid to it, we obtain oxalic acid, which separates by crystallization. The soda lye can be utilized directly after concentration for another operation.

For the detection of small proportions of acetylene in the air Prof. Frank Clowes uses a small hydrogen flame set at such height as may be necessary, which shows a pale but well-defined "cap" in air containing any proportion of the gas less than the lowest explosive proportion. When the hydrogen flame is exposed to the air to be tested for acetylene in a darkened space it is at once tinged yellowish green. In determining the limits of explosibility when acetylene is mixed in gradually increasing proportion with air and kindled it was found that air must contain at least 3 per cent. of acetylene before it can be fired by a flame and the mixture caused to burn throughout. As the proportion of acetylene is increased, the explosive character is augmented; when 22 per cent. of acetylene is present, carbon begins to separate during the burning. The amount of carbon that separates increases until the explosive character of the mixture disappears. This point is reached when 82 per cent. of acetylene is present in the air. The limiting percentages in air which are explosive of the several gases named are as follow: Acetylene, 3 to 82; hydrogen, 5 to 72; carbon monoxide, 13 to 75; ethylene, 4 to 22; methane, 5 to 13. Acetylene thus gives a wider range of explosive proportions than any other of these gases. Prof. Clowes also recommends the flame-cap test for carbonic oxide as being at once quick of execution, sufficiently delicate, and wide in its range of indications. The only drawback to the method is that all combustible gases give flame caps, and these are indistinguishable from that furnished by carbonic oxide. Hence the flame-cap test is suitable only when other combustible bodies are known to be absent.

Boron is now made commercially for use in the preparation of boronized graphite for electric batteries. In the process as described by H. N. Warren, boric acid, after calcination to deprive it of its water of crystallization and thus convert it into boron trioxide, is ground to a fine powder and intimately mixed with a suitable proportion of magnesium sodium chloride; the mixture is rapidly heated to fusion, and metallic sodium is introduced from time to time in large pieces, the mass being well stirred after the introduction of each piece. By a moderate reaction, but with the evolution of intense heat, metallic magnesium is set free and attacks the boron trioxide, with formation of magnesia and free boron. The mass is thrown into an excess of hydrochloric acid, which dissolves out all except the boron. The boron procured by this process is peculiarly active; and the carbons formed with it have been found very effective, and are in active demand.

As a nitrogen absorbent for the liberation of argon, H. N. Warren suggests that either quicklime or barium be saturated with a strong solution of lithia, ignited, and mixed with a sufficient quantity of magnesium powder, and the mixture be allowed to reduce in an atmosphere of hydrogen at as low a temperature as possible. The resulting mass contains metallic lithium in an extremely divided state, and also small quantities of barium or calcium, and has the power of absorbing nitrogen with

the utmost facility, so that the mixture often becomes incandescent during the reaction.

Atomic Weights.—Additional light is thrown upon the constitution of tellurium by the redetermination by Masumi Chikashigé of the atomic weight of specimens derived from Japanese minerals. The determination was made by means of tetrabromide, by the advice of Dr. Divers, in order to ascertain whether this metal, found under mineralogical conditions quite unlike those pertaining to the tellurium employed by others who have investigated the subject, has the same atomic weight as the other. Brauner's method was closely followed, and the results of the three experiments—127.57, 127.61, and 127.58—agree with his in making the atomic weight 127.6. The tellurium of previous experimenters occurred in union with bismuth, gold, silver, etc., while that employed in this research was obtained from the red native sulphur, or telluro-sulphur, of Japan. It is extremely improbable that if the substance known as tellurium is compound, as Brauner supposed, its composition should be identical when occurring in association with sulphur as a sulphurlike body in Japan and when occurring in metallic combination in Europe and America. As the result of these and of other experiments in which the conditions were dissimilar has been constantly the same, the point may be regarded as settled that its atomic weight exceeds that of iodine. Its occurrence with sulphur and selenium in the Japanese mineral at the same time furnishes additional proof that it belongs to the sulphur group. Dr. Divers adds to Mr. Chikashigé's paper a note implying that the case of tellurium and iodine with atomic weights in the reverse order of their places in the periodic scale is not the only one. Cobalt belongs undoubtedly to the second division of Group VIII, and nickel to the third division, according to both Mendeleeff and Lothar Meyer; yet all the elaborate work done on the subject has left cobalt with an atomic weight slightly higher than that of nickel, or at least equal to it.

The name "twin elements" is applied by Richard Lorenz to simple bodies, whose atomic weights approach each other very closely. The properties of such elements display manifold mutual relations. As a type of such twins, cobalt and nickel are mentioned. Their atomic weights are nearly equal, their chemical behavior and occurrence show great similarity, and their separation presents difficulties. But while this couple have often been viewed as intimately connected, less attention has been paid to the fact that many other elements also form twin pairs in a similar manner—the differences between their atomic weights being not greater than 1.4 units, and in many cases smaller than 1. The author's list of "twins" includes boron and carbon, sodium and magnesium, aluminium and silicon, phosphorus and sulphur, potassium and calcium, vanadium and chromium, manganese and iron, nickel and cobalt, selenium and bromine, palladium and silver, tin and antimony, iodine and tellurium, tantalum and tungsten, and lead and bismuth. The author further finds that in his scheme the atomic weights of each pair of twins differs from those of the foregoing and succeeding pairs (in round numbers) by 4 or a multiple of 4, and that the single elements situate between the pairs of twins are found in the places required by the rule. This holds good for almost all the known elements, and most decidedly when the atomic weights are most certainly known, and does not hold good (with few exceptions) when the atomic weights are less accurately known.

It has already been shown, remarks M. Carey Lea, in a paper on numerical relations existing between the atomic weights of the elements, that elements

whose ions are always colorless can be arranged in vertical lines, so that the horizontal lines contain each a natural group; also that the elements whose ions are always colored form series with the atomic weights immediately following one another. If the atomic weights in the first vertical column are subtracted from those in the second, those in the second from those in the third, and so on, certain standard differences are found to recur. One of these is about 16, the other about 46, and the third about 88. The elements with ions always colored are outside of this rule. Their behavior is altogether anomalous. The colorless elements, beginning with hydrogen, fall into four series of nine each, interrupted by four colored groups, and followed by an alternate series, Hg, Ti, Pb, Bi, Th, and C.

In long-continued studies of the atomic weight of oxygen, Dr. E. W. Morley used two methods for determining the ratio between it and hydrogen: those of actually weighing the gases and of synthesizing water. He also dealt with much larger volumes of purer gases than previous experimenters had used. His experiments all bear the marks of extreme accuracy. Collating all the results of his experiments, he gives the following values: Weight of 1 litre of oxygen, 1.42900; weight of 1 litre of hydrogen, 0.089873; atomic weight of oxygen (chemical method), 15.879; molecular weight of oxygen (chemical method), 15.879; atomic weight of oxygen (physical method), 15.879.

In a new determination of the relative atomic weights of oxygen and hydrogen, by Julius Thomsen, the hydrogen was evolved by means of strong potash and metallic aluminium, and the amount of the element used was determined from the decrease in weight of the apparatus. The result given by a series of experiments was H : O :: 1 : 15.8690 ± 0.0022. It agrees with remarkable closeness with the results obtained by Cooke and Richards, Rayleigh and Scott, Morley, Noyes, Dittmar and Henderson, and Leduc. The author believes that the ratio is now settled within very close limits.

Chemical Analysis.—A volumetric method for lead analysis, by Alfred C. Beebe, of Chicago, depends upon titrating a solution of acetate of lead free from alkali salts by means of ferrocyanide of potassium, using a saturated solution of uranium acetate as an indicator. The end reaction, which is formed by adding a drop of the solution, being titrated to the uranium solution on a porcelain plate, is a delicate pink, changing, after standing some time, to brown. The ferrocyanide solution can be standardized with either lead sulphate or lead acetate. The uranium-acetate solution should have a little free acetic acid in it, or the sharpness of the end reaction is affected.

As an extremely delicate test for the detection of minute quantities of mercury in cases of poisoning, D. Vitali puts the supposed solution of mercury into a minute porcelain capsule, in which are immersed small pieces of sheet gold and small iron tacks. The mercury present in the solution deposits itself upon the gold, and partly upon the tacks. After about an hour the fragments of the two metals are withdrawn from the liquid, washed, dried, and heated to faint redness. The mercury forms a gray coating near the heated part of the glass. The fragments of iron and gold are then taken out and a crystal of iodine is put in and heated, when the iodine vapors in contact with the mercurial coating form a yellow ring, which passes into the red of mercuric iodide. If the iodine is in excess a brown ring is formed. By this process, 0.00001 gramme of mercury can be recognized. The mercury deposited on the metals may also be shown by placing the washed and dried portions of gold and iron in a porcelain capsule, mois-

tened with a solution of gold chloride, and heating. However minute a quantity of mercury has been attached to the metals, the inner surface of the copper capsule displays a violet-blue color, arising from the reduction of gold occasioned by the mercurial vapors.

The rapid process of R. Engel and J. Bernard for the determination of arsenic depends on the principle that the oxygen compounds of arsenic in solution in concentrated hydrochloric acid are entirely reduced by hypophosphorous acid to the state of nonmetallic arsenical compound; and that the nonmetallic arsenic (that is, arsenic in combination with a nonmetallic element) is transformed by iodine in solution into arsenious acid, with the formation of merely small quantities of arsenic acid. In a liquid rendered alkaline by bicarbonates the transformation into arsenic acid is total.

While tartaric acid is easily distinguished by the insolubility of its potassium salt in a mixture of alcohol and ether, the other acids, especially citric and malic, often present in vegetable tissues, are more difficult to recognize. M. L. Lindot, in studying the compounds of these acids with quinine and cinchonine, has found that the resulting salts, especially the acid salts, present differences in solubility in methylic alcohol, by means of which malic and citric acids may be easily distinguished and separated from vegetable juices. Quinine dissolved in methylic acid precipitates citric acid, and the like solution of cinchonine precipitates malic acid under identical conditions.

A contribution to the discussion as to the relative merits of the chemical and the bacteriological methods of water analysis is made by W. P. Mason. A case is cited in which water, otherwise pure, which had been purposely inoculated with typhoid germs was pronounced pure by a famous chemist. Such a sample of water, Mr. Mason says, could not be found in practice, and the very conditions under which it was prepared eliminated the chemical items indicating pollution, "while it increased tremendously the signs governing the bacteriological side of the case. The chemist looked in the water for sewage, which, as it means in practice, contains an immense amount of material other than that productive of disease, and it is upon just this comparatively harmless, but constantly present material that the chemist relies for the indication on which he bases his opinion. He is unable to say whether or not the sewage-laden water is disease-bearing at any particular date, for to him all sewage is alike; but he condemns the water, for the reason that, although it may be harmless to-day, it is impossible to predict what may be its condition to-morrow. In the matter of determining the suitability of a stream for city supply, the services of a bacteriologist should be unquestionably secured, but it is doubtful if his report can be considered of more importance than that of the chemist. Chemistry anticipates what may happen in the future, and by timely advice may prevent an outbreak of disease, while the discovery of disease germs in the water is possible only after the water has become infected. Bacteriology is of especial value and greatly superior to chemistry for the testing of filters and watching any variation in their efficiency.

The gray matter which is left after repeated reactions of cuprous oxide on silver nitrite has been found by Paul Sabatier to contain a cuprous nitrite, and when treated with an excess of concentrated sulphuric acid, dissolves in it, developing magnificent violet-blue coloration, which is immediately destructible by water, and which disappears spontaneously after the lapse of a few days. A close examination of the reaction has led the author to conclude that the condition for its production is

the simultaneous presence of concentrated sulphuric acid, a nitrite, and a cuprous compound. The author suggests that it may serve for the recognition of the nitrites.

For the detection of vegetable oils in lard, Ferdinand Jean finds that these oils, if added to lard, etc., increase the density, raise the iodine figure, lower the melting point, the standard of fatty acids, and Koerstorfer's number, and diminish the optical deviation. With the oleo-refractometer all the vegetable oils reflect to the right hand of zero; hence lards mixed with vegetable oil show a deviation less than -12.5 , the normal deviation of pure lard. The animal fats change the density little, but lower the iodine figure, raise the melting point and the standard of the fatty acid, increase Koerstorfer's number and the optical deviation of the oleo-refractometer beyond -12.5 .

The principle of the variation of the velocity of sound in a gas with its density is utilized in new apparatus by Mr. E. Hardy for the detection and estimation of small amounts of marsh gas in the air of mines, etc. The air under examination is forced through a small organ pipe, and the note thus produced is compared with that given out by a second pipe fed under parallel conditions with pure air. The apparatus being so arranged that the moisture, carbonic acid, and possible variations of temperature exert no influence on the result, the number of beats per second produced gives a measure of the methane present.

E. Merck has found, on experiment, that even minimum traces of alcohol can be detected in aqueous solutions by his special molybdic acid (pure). The sensitiveness of the test extends for ethylic alcohol to 0.02 per cent., and for methyl alcohol to 0.2 per cent.

Agricultural Chemistry.—Although it is at temperatures exceeding 100° C. that the oxygen of the air burns rapidly the organic matter of the soil, oxidation is fairly active between 40° and 60° C. We can thus understand, say P. P. Dehérain and E. Demoussy, how in hot regions lands plowed but left without manure become barren by the disappearance of the humus which the spontaneous vegetation had accumulated. In our cool regions this disappearance is slower. Still the fields of the experimental farm of Grignon, France, bearing various crops and left without manure, lose in ten years half of their organic matter. If the soil is plentifully manured the oxidation is, in the opinion of the authors, too slow, whence the incessant work the farmers have to undertake to allow the oxygen to enter into the soil and bring the humus into such a state that nitrification can be effected. The ancient practice of allowing ground to lie a year fallow after three years' cultivation is shown, according to Dehérain, to have rested upon a sound basis, for the land gains considerably in nitric nitrogen during the fallow year. With modern manures the necessity for this no longer exists, although the practice still survives in many places.

The results obtained by the investigations of a committee of the British Association on the constituents of barley straw make it appear probable that the furfuroid constituents of the cereals are not, as has hitherto been supposed, secondary products of assimilation, but are directly built up by the plant. The furfuroids appear to form a very large group, comprising a number of substances which differ in their susceptibility to yeast, and yield ozonones of different melting points. The cereal plants are distinguished by the amount of grain which they produce, the amount being no less than 40 per cent. of the weight of the entire plant. It seems probable that during the period of production of seed part of the necessary mate-

rial is derived from the tissues of the stem and leaves.

The chemical relations of the soil to surface washing are discussed in a bulletin of the United States Department of Agriculture on "Washed Soils: How to Prevent and Reclaim them." It has been repeatedly shown, the bulletin says, "by experiments and by the experiences of farmers that a soil, as a rule, absorbs water more readily as the content of organic matter and humus increases. Surface erosion can therefore be largely prevented by such a system of cultivation and cropping as will introduce as large a quantity of organic matter into the soil as possible." Straw, leaves, and other vegetable refuse, when used to stop washing of the soil, act in a double capacity: first, in a mechanical way, and ultimately by supplying, through their decomposition, organic matter. "The most important thing in the recovery of waste fields is the incorporation of organic matter of some kind in the soil: pea vines, stubble, osiers, or leaves from the forest may be used as a source of the organic matter. The straw from one acre of land which has been recovered . . . will be sufficient to start the recovery of another acre, even if this be furrowed with gullies. When enough organic matter can be used as a surface dressing, this layer helps greatly to retain water and to make the underlying soil more absorbent. As soon as a sufficient supply of humus has been accumulated and the lands are brought up to an adequate degree of fertility, clover or grass should be seeded . . . or rye, oats, or field peas should be sown to help hold the surfaces. Little by little, but more rapidly than would be expected from the forbidding aspect of the field, the land can be reclaimed again and made productive through the accumulation of humus and organic matter." A soil which contains a fair supply of lime is also much less liable to wash than one similarly situated and exposed which is deficient in lime. This is because clays deficient in lime when brought into suspension by moving waters, will remain in suspension and keep the water turbid for a long time; while if they are heavily impregnated with lime salts, they form flocculent masses which soon settle. This fact has been established by the investigations of Schulze, Schloesing, and Hilgard. A change in the physical condition of the soil is also brought about by the incorporation of lime, whereby it is made more permeable. A number of the ordinary fertilizing materials have an important effect upon the texture of soils, but few systematic investigations of the subject are recorded.

In studying the effect of acidity on the development of the nitrifying organisms of soils, E. E. Fowell and H. W. Wiley used as an acid medium a solution containing ammonium sulphate, dipotassium hydrogen phosphate, magnesium sulphate, and calcium chloride, with which 22 virgin and 22 cultivated soils, coming from 22 States and Territories, were tested for two months. One hundred cubic centimetres of this solution were used for each test. The average result of the 44 tests was 28 parts per million of nitrogen were nitrified, or, excluding 5 cases in which no nitrification occurred and 5 cases in which it was 40 parts per million or more, of 34 tests, 20 parts per million. It appeared that nitrification stopped after the formation of an acidity equal to from 3 to 4 cubic centimetres normal alkali, or when the reaction reached $5\frac{1}{2}$ to $6\frac{1}{4}$ of Mr. Fuller's scale. In the case of 2 peaty soils from the muck lands of Florida, the results were 20 and 22 parts of nitrogen nitrified per million, which are very close approximations to the mean result of all the tests. The soils giving the most excessive results (130 and 170 parts per million) were from Alabama, and examination

showed that they were both very rich in calcium carbonate. The organisms coming from various parts of the country seemed to be very uniform in regard to their ability to endure acidity. "If these results are again obtained when the tests are repeated with the pure organisms isolated from the different soils, the interpretation to be given them is a very important one; these results are to be looked upon as evidence that we are to seek practical results in the study of the nitrifying organisms, not from a search for a peculiarly active species, but from a search for those conditions that are most favorable to the activity of these organisms in any given set of soil and climatic conditions.

E. H. Farrington has noticed in the course of his experiments with milk preservatives that the acidity of milk is increased by boracic acid (or preservaline). Milk treated with it required an abnormally large quantity of one tenth normal alkali to neutralize it, and much more than water in which the same amount of "preservaline" was dissolved.

Miscellaneous.—Although, say A. A. Bennett and E. E. Pannmel, the study of the products of chemical decomposition formed by micro-organisms has not been very extensive or very thorough, yet much has been learned in a qualitative way. The substances produced by bacteria are fairly numerous, and include solids, liquids, and gases. The same substances are often produced by micro-organisms in varying proportions. Among the solids produced are the ptomaines, indol, skatol, leucine, tyrosine, succinic and malic acids, etc. The liquids include alcohol and acetic and lactic acids. Numerous gases are formed, among which are hydrogen sulphide, ammonia, carbon dioxide, hydrogen, and methane. When in some cases ammonia and hydrogen sulphide are produced simultaneously, they unite and form ammonium sulphide. The importance of the study of these products is evident when the character of the ptomaines and leucamines, tuberculin, antitoxine, etc., is considered. A knowledge of the gaseous products and the conditions under which they are formed is often of great value to the biologist in identifying different species. In a study of them by the authors an attempt was made to estimate accurately the constituents of the mixed gaseous products by a variety of bacteria. The results of their investigations are given with considerable minuteness of detail, but no general conclusions are stated. The results of similar studies by Dr. Theobald Smith are, however, cited, as showing that the media conditions under which development took place modified the proportion of the gaseous products and the rapidity of their formation. They also show that these facts may be used to a marked extent to determine species.

A new apparatus for the liquefaction of air and other gases, patented by Dr. William Hampon, consists of three coils of narrow copper tubing, arranged concentrically in a metal case, and connected successively. The gas—say oxygen—enters the outer coil under a pressure of 120 atmospheres, passes from this into the second, and from this into the central coil, which is surrounded by a cylindrical glass vacuum-jacketed vessel. The two outer coils are separated from each other by vertical divisions of the case, and the spiral of the central coil is followed by a flat spiral of sheet copper. When the gas reaches the end of the central coil, it escapes through a fine orifice of peculiar construction, the size of which can be regulated by means of an ebonite rod adjusted for the purpose. After its escape the whole of the gas cooled by expansion passes through the space surrounding the pipe through which the compressed gas is pressing to the point of expansion, and so makes this gas, still under pressure, cooler than it

was itself while under compression. The compressed gas consequently becomes at the point of expansion cooler than that which preceded it, and in its turn follows backward the course of the still compressed gas, and so makes the latter cooler than before expansion, and therefore also cooler than even after expansion. This intensification of cooling (always assuming sufficient protection against access of heat from the outside) is limited only by the liquefaction of the gas, which, in the case of oxygen, takes place at -180°C .

In his presidential address before the chemical section of the British Association, Dr. Ludwig Mond presented the history of the manufacture of chlorine as a process which has been influenced and perfected in an extraordinary degree by the rapid assimilation and application of the results of purely scientific investigations and scientific theories, and as offering a very remarkable example of the incalculable value to commercial interests of the progress of true science.

A comparison, made in Wolny's "Forschungen," of the proportions of carbonic-acid gas in samples of air obtained near the earth's surface with that of samples collected by S. A. Andréé at various altitudes, failed to prove any diminution of carbonic dioxide with altitude up to the highest point, 4,300 metres, reached in the balloon ascensions. On the other hand, the percentages of the gas by volume throughout the different strata of air are very much the same as those observed at the surface of the earth. An apparent dependence on the wind was, however, suggested by the results, and when the percentages were discussed from that point of view, the general conclusion arrived at was that a descending mass of air brings with it a higher percentage of carbonic-acid gas, which is subsequently diminished by absorption near the earth's surface, so that the descending current has a smaller percentage. A very important question is raised here in the theory of the interaction of the atmosphere and the earth.

Zinc has been observed by R. Colson to exert an energetic action upon platino-bromide. If we clean with sandpaper a portion of leaf zinc which has been left to itself for some time, and bring it into contact with a gelatino-bromide plate for about twenty-four hours, development causes a gray tint to appear opposite the cleaned part, and a lighter gray opposite the parts still bright, though not recently cleaned, while hardly anything appears opposite the oxidized parts. This action appears also at a distance and through certain bodies. The cause seems to be vapor of zinc. Magnesium and calcium give the same effect, but nothing is obtained with lead, tin, copper, iron, and aluminium. M. H. Pillat mentions that he has obtained similar results with steel. He ascribes them to the influence of a metal upon the nature of the surface of another metal placed at a little distance.

Since its introduction into surgery by Sir Benjamin Richardson peroxide of hydrogen, says Mr. C. A. Fawcett, has not become so popular as was anticipated. It possesses undeniable advantages, as, for example, when its oxygen is given off only water remains. On the other hand, it has the disadvantages of irritability and instability. The former is due to the presence of acids, usually hydrochloric acid, and solid matter. This may be avoided by exercising great care in the preparation. The instability of the peroxide of hydrogen varies with the method of preparation adopted; whenever it is practicable the substance should be diluted to the strength required in practice and kept in a dark place.

Herr Ed. Spaeth sums up the results of his experiments on the rancidification of fats as follow: 1. In the rancidification of fats (hog's lard), which must

be regarded as a process of oxidation, chiefly occasioned by the action of light and of atmospheric oxygen, the unsaturated body acids (oleic acid) are chiefly attacked with the formation of acids having a low per cent. of carbon. There is also a formation of aldehydic bodies and of oxy-fatty acids. 2. With the progress of oxidation and the formation of free acids, the volatile acids undergo a very great increment. 3. All the acids partcipate in the formation of the free fatty acids. 4. With the increasing oxidation of the fats, their absorptive power, as well as the iodine number, undergoes a corresponding decrease, which diminution is effected by an oxidation and decomposition of the nonsaturated fatty acids and by their polymerization. Such oxidized fats exhibit in the refractometer a decidedly higher deflection than do normal fats. The increase in the deflection is due to polymerization of the nonsaturated fatty acids. 5. Fats which have become rancid have in general a higher melting point than recent fats.

In experiments by Edward H. Keiser, metallic magnesium at a low red heat was found to act energetically upon the vapors of the alcohols. The metal glows and is converted into a black coherent mass. This black residue when put into water evolves a gas which consists chiefly of hydrogen and allylene. The evolution of gas becomes very rapid if a few drops of ammonium-chloride solution are added to the water. The hydrogen and allylene can be readily separated from one another by conducting the mixed gases through a series of wash bottles containing an ammoniacal solution of silver nitrate; the allylene is thereby converted into the insoluble silver allylide, AgC_2H_3 , while the hydrogen passes through unchanged. The best yield of allylene in the earlier experiments was obtained from the magnesium that had been heated in the vapors of propyl or of allyl alcohols. A more advantageous method has been found of preparing the hydrocarbon by heating magnesium in the vapor of acetone and decomposing the black mass thus obtained in the vapor of water. Further experiments with the allylene are in progress.

There are found in nature, in Brazil, and at the Cape, transparent diamonds containing inclosures of various forms. These inclosures may be of different nature, but the most numerous are black, and when abundant afford the variety of crystallized carbon of a fatty aspect which is known by the name of "black diamond." Reducing this black diamond to a powder, and heating it in a current of oxygen to a temperature $200^{\circ}C$. lower than the temperature of combustion of the diamond, M. Moissan observed very distinctly a slight escape of carbonic acid, which soon ceased. After cooling, the diamond had lost its gray tint and become white. The black matter which was contained in this diamond therefore burns in oxygen, yielding carbonic acid, and the diamond resumes its transparency.

CHILI, a republic in South America. The national Congress consists of two branches, a Senate and a House of Deputies, both elected by universal adult male suffrage. Deputies are elected for three years in the proportion of 1 to every 30,000 and remaining fraction over 15,000 inhabitants in the department. The House now consists of 94 members. The Senators, 32 in number, are elected by the provinces for six years, half of them retiring every third year. The President is elected for five years by the indirect vote of the nation.

Jorge Montt was elected President for the term ending Sept. 18, 1896. The Cabinet of ministers, who are individually and collectively responsible to the Congress, consisted in the beginning of 1896 of the following members: Premier and Minister

of the Interior, M. Recabarren; Minister of Foreign Affairs and of Worship, C. Matte; Minister of Justice and of Public Instruction, S. Fontecilla; Minister of Finance, Dr. Melver; Minister of War and Marine, Ismael Valdes; Minister of Industry and Public Works, M. Davila Baeza.

Area and Population.—Chili has an area of 293,970 square miles, according to the official estimate; according to a more recent calculation it is about 300,000 square miles. The population in the beginning of 1895 was estimated at 3,413,576, assuming that the omissions in the census of 1885 amounted to 15 per cent. and taking the number of uncivilized Indians to be 50,000. The foreign population in 1885 numbered 80,077, of whom 34,901 were Peruvians, 13,146 Bolivians, 9,835 Argentians, 6,808 Germans, 5,303 English, 4,198 French, 4,114 Italians, 2,508 Spaniards, 1,275 Swiss, 924 Americans, 674 Austrians, 434 Swedes and Norwegians, and 1,164 Chinese. The number of Germans in Chili now far exceeds that of the British. Foreign colonization south of Concepcion is almost entirely German, and these immigrants, in whatever occupation they are engaged, seem to assimilate with the people in habits, laws, and language, and become patriotic Chilean citizens. A contract has been made with a firm in Bordeaux to introduce within eight years 5,000 families from the north of Europe to form a colony in southern Chili. Santiago has 250,000 and Valparaiso 150,000 inhabitants. The number of marriages registered in 1894 was 14,726; of births, 108,724; of deaths, 90,399; excess of births, 18,325, compared with 3,694 in 1892 and an excess of 10,187 deaths in 1891. Education is free and supported by the General Government. There were 1,222 primary schools in 1893, with 113,247 pupils and an average attendance of 72,899 out of more than 600,000 children of school age. The private schools had 29,812 pupils. In 1885 out of an enumeration of 2,527,320 persons 634,627 could read and write and 96,636 more could read. The number of students in the National Institute at Santiago and in the provincial colleges was 7,666 in 1894.

Finances.—The revenue increased from 62,400,000 pesos in 1892 to 73,443,000 in 1893 and 83,436,000 in 1894, the expenditure from 60,900,000 pesos in 1892 to 62,692,500 in 1893 and 78,482,000 in 1894. The revenue for 1895 was estimated at 77,354,000 pesos. The principal sources of revenue are import and export duties, the agricultural tax, stamps, railroads, postal and telegraph receipts, and storage and wharfage fees. The expenditure for 1896 was estimated at 73,168,144 pesos, of which 5,609,316 pesos were allotted to the Ministry of the Interior, 2,550,484 pesos to the Ministry of Foreign Affairs and Worship and Colonization, 9,290,941 pesos to the Ministry of Justice and Public Instruction, 14,023,871 pesos to the Ministry of Finance, 9,284,357 pesos to the Ministry of War, 7,263,611 pesos to the Ministry of Marine, and 24,785,564 pesos to the Ministry of Industry and Public Works. The ordinary receipts for 1895 were 83,720,000 pesos, which added to the surplus from 1894 amounted to 101,350,350 pesos. The total expenditure was 93,360,000 pesos, leaving a surplus of 7,990,000 pesos. The estimate of expenditure for 1896 was 86,976,325 pesos, to meet which there was the ordinary revenue estimated at 78,000,000 pesos, the surplus of 7,990,000 pesos, and 4,000,000 pesos of extraordinary revenue. For 1897 the estimated expenditure is 79,000,000 pesos, and revenue 80,000,000 pesos. The extraordinary revenue for 1895, destined exclusively for the redemption of the paper money and the payment of municipal debts, amounted to 42,989,000 pesos, of which 24,343,000 pesos corresponded to the loan of £2,000,000 and the remaining 18,656,000

pesos to the sale of nitrate properties. During the five years ending with 1895 the cost of the civil war, amounting to 104,628,402 pesos, was paid; the internal consolidated debt, which in 1892 amounted to 77,772,370 pesos, was reduced by 45,559,100 pesos; the floating debt of 25,000,000 pesos in favor of certain banks was paid and 21,000,000 pesos lent to the banks; 8,400,000 pesos were paid for liquidation of guano accounts under the treaty with Peru; foreign claims for upward of 2,000,000 pesos were paid off; 47,000,000 pesos was expended on railroads; and 7,136,000 pesos expended on the Talcahuano dock and port improvement.

The public debt owing in Europe amounted at the end of 1894 to £11,626,300 sterling. In 1895 a new loan of £2,000,000 was obtained. The amount of the internal debt is 60,721,963 pesos. The interest on the external debt is 4 and $\frac{1}{2}$ per cent., requiring the annual payment of £665,000. The service of the internal debt requires 1,100,000 silver pesos a year. In the beginning of 1896 a bill was passed authorizing a new foreign loan of £4,000,000, the proceeds to be applied to the purchase of the Coquimbo Railroad from the English stockholders, and used on public works and for Government expenses. Minister Melver had asked for £6,500,000, but this was subsequently reduced by £2,500,000. Already £2,000,000 had been advanced by the English house of Rothschild, which eventually took the loan, paying 5 per cent., and the price of 95 $\frac{1}{2}$.

Currency Reform.—There were in 1895 banks of issue to the number of 24, having an aggregate capital of 47,000,000 pesos and authorized to issue 24,000,000 pesos of bank notes, of which amount 19,196,807 pesos had been taken out. The banks were required by a new law to deposit as security for their notes either gold, Government notes, or Government bonds. The conversion law of 1892 provided for the redemption of the forced paper currency at the rate of 24*d.* English for the peso. The law of Feb. 11, 1895, provided that the redemption should begin on June 1 of that year, and changed the rate to 18*d.* English, and Australian sovereigns were declared legal tender for two years at this rate, i. e., 13 $\frac{1}{2}$ pesos to the pound sterling. The currency act provided for a gold coinage and established a bimetallic standard, the monetary unit being the uncoined gold peso. The gold coins are the 5-peso piece, called the escudo; the doblon, worth 10 pesos; and the colon, or condor, of the value of 20 pesos. The doblon contains 5.99103 grammes of gold 0.916 fine, or 5.49178 grammes of pure gold. The silver coins authorized are the peso, weighing 20 grammes 0.835 fine, and fractional coins worth a fifth, a tenth, and a twentieth of a peso. The law prescribed, however, that these token pesos should be withdrawn from Dec. 31, 1895, and replaced by pesos of full legal tender weighing 25 grammes 0.900 fine, or by gold coins. The proceeds of the sales of nitrate lands were devoted to the establishment of a metallic currency.

The Government paper money, which in May, 1895, amounted to 41,000,000 pesos, was reduced within twelve months to 7,037,279 pesos and 7,658,190 pesos of bank notes were exchanged for gold. During the year 39,120,881 pesos of metallic currency was substituted for Government and bank notes. Of the funds accumulated for conversion the sum of 27,000,000 pesos remained, while the paper money, Government and bank, still to be redeemed was only 18,000,000 pesos on June 1, 1896.

The Army and Navy.—The law of Nov. 6, 1894, restricted the strength of the regular army to 6,000 men, organized in 3 artillery, 7 infantry, and 4 cavalry regiments, with an engineer corps. There are 10 generals, 58 colonels and lieutenant colonels, and 555 minor officers. The National Guard num-

bered 8,970 artillery and 42,120 infantry in 1894. It has been decided that this force shall be reorganized and augmented by requiring every able-bodied Chilean citizen between the ages of twenty-one and forty years to be a member. By this tentative introduction of the system of universal military service about 25,000 new men will receive instruction every year. In the event of war the National Guard will be merged into the regular army. The Government in 1895 spent 40,000,000 pesos on armaments and ships. The forts at Valparaiso have been armed with 43 10-inch Krupp guns. Prussian military officers have been engaged for some years in instructing the Chilean troops in German tactics with considerable success. The formation of the new National Guard was accomplished in the spring of 1896, and nearly 100,000 were called out for parade, workmen and members of the wealthier classes marching side by side.

The Chilean navy comprises 3 armored vessels, the battle ship "Capitan Prat," the coast-defense ironclad "Huascar," and the armored cruiser "Almirante Cochrane"; 4 second-class and 10 third-class cruisers; and 1 first-class and 8 third-class torpedo boats. The "Capitan Prat," built at La Seyne, while having only a displacement of 6,900 tons, has a very powerful armament, consisting of 4 9 $\frac{1}{2}$ -inch Canet guns in armored barbets, 8 4 $\frac{3}{4}$ -inch quick-firing guns in closed turrets, and a large number of smaller quick-firing and machine guns; moreover, she is engined to make 18 $\frac{1}{2}$ knots. The new "Blanco Encalada," of 4,500 tons, built recently in Elswick, has made 21 $\frac{1}{4}$ knots with natural draught. Four of the Chilean cruisers made 20 knots or better on trial, and 2 made 19 knots. A new ironclad, said to have been built for the Japanese navy, was bought in England and christened the "O'Higgins." The vessels built in England for Chili were all delivered before the close of 1896, with the exception of 1. These vessels were an ironclad, an armored cruiser, a protected cruiser, a torpedo catcher, 4 destroyers, and 6 torpedo boats.

Commerce and Production.—About half the population is employed in agriculture. The wheat crop amounts to 27,500,000 bushels a year and other grains to 8,250,000 bushels. Great numbers of cattle and sheep are reared, and wine is made and exported. The annual product of copper is about 40,000 metric tons; of silver, 160,000 kilos; of gold, 500 kilos; of coal, 10,000,000 tons. Manganese and other minerals are mined also. The nitrate fields cover 89,177 hectares, and are estimated to contain 231,600,000 tons of commercial nitrate. The product was 773,000 tons in 1888, 903,000 in 1889, 1,009,000 in 1890, 877,000 in 1891, 804,842 in 1892, 938,871 in 1893, and 1,082,285 in 1894. In this industry a large amount of English capital has recently been invested. An output exceeding by 25 per cent. the active demand and the consequent competitive lowering of the price led early in 1896 to a combination among the nitrate companies to resist the production and export of nitrates, thereby reducing the revenue of the Government from this important source and throwing many thousand men out of employment.

The value of the imports in 1894 was 54,483,716 pesos (1 peso = 92.6 cents), and the value of exports 72,040,420 pesos. The minerals exported amounted to 61,326,280 pesos; agricultural products, 9,100,046 pesos. In a total of 68,235,874 pesos, the value of all imports in 1893, food substances stood for 14,127,106 pesos; textile goods, 12,636,915 pesos; raw materials, 10,066,388 pesos; clothing and ornaments, 3,529,265 pesos; machinery, 10,822,185 pesos; domestic supplies, 4,568,040 pesos; railroad materials, 2,798,967 pesos; wines and liquors, 1,257,485 pesos; objects of art, etc., 1,261,593 pesos; drugs and chem-

icals, 1,009,297 pesos; miscellaneous merchandise, 5,731,089 pesos; specie, 427,546 pesos. Of 72,245,114 pesos, the total value of exports in 1893, the value of nitrate made 39,211,913 pesos; iodine, 5,953,420 pesos; other minerals, 13,692,823 pesos, about half of this sum representing bar silver and the other half silver ore; wheat, 6,082,001 pesos; other agricultural products, 5,543,773 pesos; manufactured goods, 40,408 pesos; miscellaneous products, 164,455 pesos; specie, 896,205 pesos; re-exports, 660,116 pesos. Of the exports of nitrate, about 39 per cent. goes to Germany, 17 per cent. or more to France, 13 per cent. to the United States, 11 per cent. to Great Britain, 11 per cent. to Belgium, and 9 per cent. to other countries. The trade with the principal foreign countries in 1893 is shown in the following table, giving, in pesos, the values of the imports from and the exports to the same:

COUNTRIES.	Imports.	Exports.
Great Britain	30,794,833	55,050,621
Germany.....	16,959,008	6,230,002
United States.....	4,489,088	2,860,885
France.....	4,174,137	2,599,601
Argentine Republic.....	5,366,756	166,823
Peru.....	3,402,459	1,470,450
Brazil.....	334,135	159,185
Italy.....	441,999	39,173

In 1884 Great Britain furnished 38 per cent., in 1889 nearly 43 per cent., in 1894 about 46 per cent. of the imports. Germany furnished in 1884 about 19 per cent., and the share of France was nearly as great; in 1889 German imports constituted 23 per cent. of the total, while those of France were less than half as much; in 1894 22 per cent. of the imports came from Germany, and only a sixth as much from France. For the whole ten years 42 per cent. of the total imports came from Great Britain, and over 22 per cent. from Germany. The large proportion that Great Britain has in the trade is due greatly to large imports of coal, aided by heavy shipments of iron, steel, and a few articles of small manufacturing importance. There is a variety of manufactured articles in which the Germans have beaten the English by lower prices and adaptation of the goods to the requirements of the markets, though at equal prices British goods are still generally preferred. While Great Britain has gained in machinery and a few manufactured articles, Germany has made great progress also in machinery, and in furniture, earthenware, chinaware, hardware, and in textile goods, mainly at the expense of France, which has lost ground all round, and in some articles has almost disappeared from the trade of Chili.

The foreign trade in 1895 amounted to 142,126,434, an increase of 15,602,398 over 1894. The value of the imports was 69,206,552 pesos, showing an increase of 14,722,396 pesos. The value of the exports was 69,206,552 pesos, an increase of 713,462 pesos.

Navigation.—During 1893 there were entered at Chilean ports 1,791 vessels in the ocean trade, of 2,682,542 tons, and cleared 1,662, of 2,509,279 tons. The vessels were mostly German, English, and French steamers trading with Europe by way of Cape Horn, and English and Chilean steamers trading between Chilean ports and Peru and Panama. The coasting vessels entered in 1893 had a total tonnage of 6,257,463 tons.

The Chilean merchant navy comprised 137 vessels in 1894, of which number, having an aggregate burden of 102,199 tons, 39 were steamers, of 43,741 tons.

Communications.—The total length of railroads in operation in 1893 was 1,782 miles, of which 686 miles belonged to the Government, which had ex-

pended in the construction of these lines 64,459,179 pesos. Of the Trans-Andean Railroad, from Santa Rosa to Mendoza, already 18 miles had been built on the Chilean and 88 on the Argentine side, requiring 46 miles more to join the two sections. There were 400 miles of railroad building in 1894.

The length of the Government telegraph lines at the beginning of 1895 was 6,965 miles, with 8,330 miles of wire. During 1893 there were 894,280 telegrams sent. The Government had 22 telephone systems in operation. The railroad and private telegraphs had a length of over 4,500 miles.

The post office carried in 1893 the number of 25,419,553 letters, besides 1,893,032 circulars and 30,839,684 newspapers and books. The revenue in 1893 was 937,420 pesos, and expenses were 812,235 pesos.

International Relations.—Chili and Argentina seemed to be on the verge of war in the early months of 1896 over the dispute in regard to the boundary line in Patagonia. In both countries financial measures were taken and military preparations made for such an eventuality. The jealousy and hostility existing between the peoples of the two republics was very apparent, but the governments handled the question at issue with calmness and discretion. Finally they agreed on April 17 upon a protocol referring the question to the arbitration of Queen Victoria. Negotiations for the determination of the definite ownership of Tacna and Arica were continued between Chili and Peru during 1896 without coming to a complete agreement. According to the treaty of Ancon, concluded in 1883, the provinces were to be held by Chili till 1895, and then the citizens were to hold a *plébiscite* to decide whether they would return to Peru or remain with Chili. According to all indications they would vote overwhelmingly to return to Peruvian allegiance. The date passed without any steps being taken to put the question to a popular vote, and subsequently the negotiations were begun, which hinged on the immediate payment by Peru of the indemnity of 10,000,000 pesos, and on other conditions and guarantees demanded by Chili.

A treaty has been negotiated with Brazil providing for free trade between the two countries. A treaty of amity and commerce with Bolivia proved at once advantageous to both countries. An extradition treaty with Spain was submitted to Congress in August.

An agreement was reached in January, 1896, by which all claims of citizens of France against the Chilean Government for wrongs committed upon them will be canceled by the payment of £5,000. The total value of the claims presented to the Anglo-Chilian tribunal amounted to 4,050,354 pesos, of which only 295,297 pesos were allowed. The claims presented to the Washington arbitration tribunal amounted to \$28,555,715, while the awards against Chili amounted to only \$240,564. Sixteen claims for \$9,135,699 were undecided when the day came for closing the tribunal. In this amount figured the claim of the North and South America Construction Company for \$6,334,203, which was settled in 1896 for \$150,000. For the settlement of the remaining 15 claims, amounting to \$2,801,496, the Chilean Government agreed to the reorganization of the Washington tribunal, subject to the approval of the Congress.

Legislation.—Congress met in extraordinary session on April 27. President Montt announced that the Government was working for the betterment of its finances, the completion of necessary public works, the advancement of popular education, the extension of useful industries, and the enlargement of commerce. Among the measures introduced by the Executive was an amendment of

the Constitution providing that Congress shall have no power to vote any sum of money in excess of the amount designated in the budget. The budgets for the last few years, after going through Congress, show an ever-increasing amount of money voted by Congress in excess of the sum asked for by the Executive, the consequence being that all the calculations of the Government are upset, and a presumptive surplus running into millions is swallowed up in appropriations for local schemes concocted by crafty politicians to strengthen their hold on their constituencies. In this way 7,000,000 pesos was voted away by the preceding Congress, and the Government asked to have this vote annulled. Another bill forbade any foreign bank to be established with a less capital than 2,000,000 pesos, and required insurance companies doing business in Chili to deposit with the Government a guarantee for a reserve fund of 1,000,000 pesos. The Government further proposed to limit the expenses of the state railroads to the amount of their earnings, and accordingly framed a bill which will not in future allow them to fall back upon the national treasury for large deficits as they have done in the past. The railroad department will fix the estimates for each year, and the total expenditure will have to be paid out of the income, and will no longer figure in the budget. Another bill provides that no municipality shall have power to contract loans without the authorization of the Senate. Till now the municipalities have raised loans indiscriminately on their own responsibility, and in the end, to save confiding investors from losses, the Government has saddled itself with obligations contracted without its leave by local authorities all over the country.

The regular session of Congress was opened on June 1. The chief subject of legislation brought forward was the reform of the customs tariff for the protection of national industry. The new protective tariff took effect on July 1. With wool produced in the country and cotton in Peru, and with abundant deposits of iron, copper, tin, and other minerals, and wheat and wine, more than sufficient for their annual consumption, the Chilians look forward to economic independence and industrial development.

Presidential Election.—The election of a new President to succeed Admiral Montt took place on June 25. A coalition convention, in which Clericals and Conservatives joined with the section of the Liberals allied with the aristocratic class and moneyed interests, nominated Federico Errazuriz on a platform calling for the faithful execution of the plan for the conversion of the paper currency. The candidate of the Advanced Liberals was Gen. Vicente Reyes. No contest for the presidency was ever attended with such excitement and tension of public feeling. When the day drew near, fights occurred between partisans of the two candidates in Santiago and Valparaiso. The Government announced that it would preserve the peace with the utmost strictness, but would abstain from all interference or pressure and allow the people to decide the issue with perfect freedom. The sincerity of this declaration was proved by the removal of officials who too actively supported Errazuriz, the candidate approved by the Administration. The election passed off, indeed, without any executive interference, the first perfectly fair and free election that has been held in Chili. Peace and quiet reigned generally throughout the republic, and this also was a novel phenomenon in the country's history. The election was so close that the public were held in suspense as to the result even after the colleges of electors gave their vote on July 25, showing a majority of 4 for Errazuriz. The question of the nullity of certain electors was considered by the

united houses of Congress after they met on Aug. 30. On Sept. 3 Señor Errazuriz was proclaimed President by Congress, having obtained a majority of 2 votes. The supporters of the unsuccessful candidate behaved with exemplary moderation.

The President-elect had much difficulty in selecting his Cabinet, which he desired to have composed of Liberals who had supported him, excluding on the one hand the Reyesta section of the Liberal party and on the other his Conservative allies. It was considered inexpedient, moreover, to take members of Congress into the Cabinet, because that would weaken the President's party. A ministry constituted under these conditions was not likely to last or to accomplish anything in the face of the Reyesta majority in the House of Representatives. Anibal Zanartu accepted the task of forming the new Cabinet, which was announced on Sept. 14, as follows: Premier and Minister of the Interior, Anibal Zanartu; Minister of Foreign Affairs, Enrique de Putron; Minister of Justice, Adolfo Ibanez; Minister of Finance, José Francisco Fabres; Minister of Public Works, Francisco Baeza; Minister of War and Marine, Gen. Manuel Bulnes. The President was inaugurated on Sept. 18. Admiral Montt, the retiring President, was appointed the head of a naval commission to visit Europe for the purpose of examining ships and armaments. The new Government was confronted with a monetary and commercial crisis and a shrinkage of revenues indicating a deficit of 10,000,000 pesos. While many Chilians clamored for the reissue of paper money, foreign bank managers declared that the only means of solving the crisis was an announcement by the Government that it would maintain the gold-conversion law at all hazards. When Congress convened on Nov. 2 its first act was to censure the ministry. The ministers resigned, and Sanchez Fontecilla, having given up the task of forming a new Cabinet of the President's adherents because the majority insisted that all shades of Liberal opinion should be represented, E. F. Albano was commissioned to form a ministry, which was completed on Nov. 17, as follows: Minister of the Interior, Carlos Antunez; Minister of Justice, Luis Claro Solar; Minister of Finance, Justiniano Sotomayor; Minister of Public Works, Elias Fernandez Albano; Minister of Foreign Affairs, Carlos Morla Vicuña; Minister of War and the Navy, Gen. Amunategui.

CHINA. an absolute monarchy in eastern Asia. The Government is regulated by historical precedents and the Confucian principles of morality. The throne is hereditary in the Manchu or Tsing dynasty, established by the Tartar conquest in 1644. The Emperor chooses his heir from among his sons by his first three wives. The present Emperor, who reigns under the style of Kwangsu, which means continuation of splendor, was proclaimed irregularly, his uncle and predecessor having died a minor without leaving a legal successor. He was born Aug. 2, 1872, being the son of Prince Chun, seventh son of the Emperor Trokwang, and came to the throne after the death of the Emperor Tsai-hun, Jan. 12, 1875, under the direction of his aunt and adopted mother, the Empress Dowager Tsu-Hsi, mother of the late Emperor, who as co-Regent and, after the death in 1881 of the Eastern Empress, sole Regent, continued to direct the affairs of the empire until the young Emperor became of age and married, and on March 4, 1889, assumed the Government. Only the *literati*, men who have passed the literary examinations, of which there are many grades, are eligible to public office. There is a Tsung-Tu, or governor-general, over the capital province of Pechili, and others have charge of the Liang-Kiang, Min-Che, Liang-Hu, Chan-Kan,

Liang-Kwang, and Yun-Kwe groups of provinces and over Szechuen, while each province has its Sun-Fu, or governor. These officers and the subordinate local officials are almost independent of the Imperial Government, which has little to do with the people in general, but the local administrators are held accountable by the imperial authorities for their manner of administration, and may be removed at any time and degraded in official rank or punished even with decapitation for wrongdoing, while on the other hand a virtuous and successful administration brings rewards.

Area and Population.—The area of the 18 provinces of China proper is estimated at 1,336,841 square miles and their total population at 386,000,000. The dependencies are: Manchuria, with an area of 362,310 square miles and about 7,500,000 inhabitants; Mongolia, with an area of 1,288,000 square miles and 2,000,000 inhabitants; Tibet, with an area of 651,500 square miles and 6,000,000 inhabitants; Jungaria, with an area of 147,950 square miles and 600,000 inhabitants; and Eastern Turkestan, with an area of 431,800 square miles and 580,000 inhabitants. The island of Formosa, having an area of 14,980 square miles, and a population of 3,600,000, was ceded to Japan by the terms of the treaty of peace ratified on May 8, 1895, and was formally transferred on June 2, 1895. The population of Peking, the seat of the Imperial Government, is variously estimated between 500,000 and 1,650,000. Canton is supposed to have 2,000,000 inhabitants; Fuchow, 1,000,000; Tientsin, 950,000; Hangchow, 800,000; Shanghai, 400,000; and Ningpo, 255,000. These are the most important of the treaty ports. There are cities in the interior that have an enormous population. The foreign population of the treaty ports at the end of 1894 was 9,350, of whom 3,989 were British, 1,294 Americans, 807 French, 780 Portuguese, 767 Germans, 380 Spaniards, 356 Swedes and Norwegians, 253 Japanese, 206 Italians, 123 Danes, 106 Russians, and 289 of other nationalities. In 1895 the foreign residents increased to 10,091, of whom 4,084 were British, 1,325 Americans, 875 French, 812 Germans, 805 Portuguese, and 2,190 of other nationalities.

Finances.—The revenues of the Imperial Government are not published, except those derived from the customs, which are collected under European supervision. Herr von Brandt estimates the total normal revenue at 100,000,000 haikwan taels, equivalent before 1874 to \$161,000,000 in gold, but in July, 1896, to \$81,900,000 only, owing to the depreciation of silver. The receipts from the various sources, according to this estimate, are as follow: Maritime customs, including inland duty on foreign opium, 23,000,000 taels; land tax, 35,000,000 taels; inland transit duties, 12,000,000 taels; native customs and duty on native opium, 10,000,000 taels; salt monopoly, 10,000,000 taels; sale of titles and brevet rank, 5,000,000 taels; rice tribute, 3,000,000 taels; licenses and other items, 2,000,000 taels. The expenses of the Manchu Government at Peking are about 7,000,000 taels a year; expenses of the court, 1,000,000 taels; cost of the frontier armies, 5,000,000 taels. About 2,000,000 taels a year are paid for the regulation of the Yellow river. The land and salt tax and other revenues, except the maritime customs revenue, are collected by the provincial authorities, and the bulk of the revenues are applied to their own expenses. The Imperial Government receives no fixed proportion of these taxes, but makes a requisition each year upon the more prosperous provinces for about the same amount in normal times, while from some of the poor provinces it demands no contributions. The cost of the troops, except the frontier garrisons, is defrayed by the provinces, as well as the salaries of the civil service, the main-

tenance of the river and canal flotillas, and whatever is spent on public works. The land tax was fixed once for all by a fundamental law about a century and a half old. The salt tax is practically unalterable. The *likin*, or transit duty, is determined by the local authorities, and is capriciously and arbitrarily changed to suit their exigencies. The Government agreed in the Chefoo convention to exempt imports from *likin* on which 2½ per cent. duty is paid on entry in addition to the 5-per-cent. customs duty. But some of the governors refuse to be bound by this agreement, and still levy *likin* on goods that have paid the commutation, as well as on all the products that pass through the *likin* barriers, which are often not more than ten miles apart. The receipts of the maritime customs amounted in 1894 to 22,523,605 taels, of which 6,546,299 taels were collected on imports, 8,820,012 taels on exports, 5,050,303 taels on foreign opium, 1,203,458 taels from lighterage, 479,635 taels for tonnage, and 423,898 taels from transit dues. The customs revenue for 1895 was 21,385,000 taels, the decrease being due to the port of Niuchuang yielding no revenue during the Japanese occupation, and the cessation of the revenue from the treaty ports of Formosa upon the cession of that island to Japan. Making allowance for these losses, the revenue exceeded that of any previous year. The opium duty, which amounted to 6,197,906 taels in 1891, was only 4,104,145 taels in 1895.

The expenses of the Japanese war and the war indemnity of 200,000,000 kuping taels, about \$161,000,000, with the indemnity of 30,000,000 kuping taels for the evacuation of the Liaotang peninsula, burdened the Chinese Government for the first time with a large debt. Before the war the only debts outstanding were a German loan contracted in 1888 at 5½ per cent., of which 3,500,000 marks remained unpaid; a loan of 10,000,000 taels obtained from the Hong-Kong Bank in 1879 at 7 per cent.; and £5,000,000 advanced by different banks between 1892 and 1895. All these debts are secured on the customs revenue. After the war the Imperial Government obtained the Russo-French loan, amounting to about \$77,000,000, on which 4 per cent. interest is paid. In 1896 the Anglo-German loan of £16,000,000, or \$77,866,000 was contracted at 5 per cent. This makes the total present indebtedness \$187,900,000, on which \$8,388,000 interest must be paid annually. The Russo-French loan was guaranteed by the Russian Government. The Anglo-German loan, which was taken by the syndicate on March 12, 1896, at the contract price of 94, was not guaranteed by any government, but was made a charge on the customs revenue that was not already pledged, and protected by a stipulation that the present administration of the maritime customs shall remain unchanged.

The only official coin is the copper cash, of which 11 are equal to a cent in United States money. The ordinary medium of exchange is *sycee*—i. e., silver of a certain fineness that is weighed, not counted. A silver dollar of the same size as the United States dollar or the Japanese yen has been coined at the new mint in Canton since 1890, and is current everywhere by imperial decree, but it has not come into general use. Payments are actually made in bullion by weight. The liang or tael, which is the standard, varies in different parts of the empire. The haikwan or customs tael is 1½ ounce of pure silver. The Government in July, 1896, announced the intention of reforming the national currency by introducing a uniform coin and unit of value equivalent to the Mexican dollar. The copper cash has not been coined extensively for many years, owing to the fact that it costs now a tael and a third in silver to coin a tael's worth at

the rate of exchange that has been established from ancient times, about 1,500 cash to the tael. The available stock of cash consequently diminished, until in 1895 they began to go to a premium and rose till only 1,150 would be given for a tael. The decline in the price of silver has caused a shrinkage in the quantity of foreign goods imported, with an increase in their total value. Exports, owing to the same cause, have increased in quantity as well as in value. The imperial customs receipts have fallen off a full third in gold value in the last few years. For this, among other reasons, Li-Hung-Chang went to Europe in 1896 to endeavor to get the consent of Great Britain and other countries to an increased rate of customs duties, unless there was a prospect of the restoration of silver to the mints. The prices of domestic commodities and services in China have changed very little in consequence of the depreciation of silver. More revenue than was formerly required is necessary in order to pay interest on the heavy imperial debt incurred on account of the war. The proposition was to raise the import tariff from 5 per cent. to 10 per cent., the same concession that was granted to Japan in 1895. The 5-per-cent. tariff was established in 1860 by the Peking convention supplementary to the treaty of Tientsin. It was forced upon China when European troops held the capital. When it was signed China was paid in taels of an exchange value of 3 to the pound sterling, enabling the Chinese to make extensive purchase in the Western markets. In the last twenty years the exchange value of the tael has fallen to such an extent that the Chinese are now obliged to remit 7 for each sovereign. A doubling of the import and export duties would consequently only place China in the original position she occupied when the conventional tariff went into force. France, Russia, and Germany gave their consent to the proposition to increase the duties; England held out for large compensating concessions, such as the abolition of all *likin* duties.

The Viceroy Chang-Chih-Tung established a mint at Hangkow for the coinage of Chinese dollars, but could not keep them in circulation because he attempted to hold their exchange value at 1,000 cash by making them receivable for taxes at that rate, while the people would accept them only for 860 cash. He had a quantity of cash minted, weighing 5 instead of 8 candarins each, and Viceroy Lieu, of Nankin, took steps in the same direction, but the Emperor refused to sanction the issue of debased cash, though the people were willing to take them.

The Army.—The central army, stationed at Kalgan, near Peking, has a strength of 50,000 men in time of peace, capable of being doubled in war, consisting of strong and well-trained men, armed with Remington rifles. The army of Manchuria numbers about 70,000 men, equipped with Mauser rifles and Krupp field pieces. The force garrisoned in Turkestan is also well armed and drilled. The provincial troops, constituting the bulk of the forces that were often beaten easily by the Japanese in the late war, are badly armed, not efficiently trained, and not apt to fight. Of these braves a force of 200,000 is kept up in peace time, which is capable of being raised to a strength of 600,000 in case of war. The Chinese arsenals, under foreign supervision, turn out large quantities of modern arms and ammunition. The official military statistics represent the efficient troops mentioned above, classed as the Eight Banners, or Imperial Army of Manchus, Mongols, and Chinese, to have a strength of 323,800 men, of whom 100,000 are supposed to be reviewed by the Emperor every year, while the national or Chinese army is reported to consist of 6,459 officers and 650,000 men. A scheme of military reform and reorganization has been

adopted, in the execution of which European officers will be employed. Li-Hung-Chang made contracts when in Europe in the summer of 1896 for rifles in France and artillery in Germany.

The Navy.—The Chinese navy was strong in ships and guns before the war, and was not badly manned, but it broke down completely because the administration was inefficient and corrupt and because the principal fleet was prevented from effective manœuvring by the order of the Government to remain in Chinese waters, while the other forces were kept from co-operating with it by the provincial authorities. The northern squadron, containing the effective fighting ships, was captured or destroyed by the Japanese in the battles of Yalu and Wei-Hai-Wei. After the war China had no battle ships left. The present force consists of 3 coast guards, 7 second-class cruisers, 9 third-class cruisers, 33 other steamers, and 30 first-class and 13 second-class torpedo boats. There were at the beginning of 1896 in course of construction 1 cruiser, 1 dispatch boat, 4 gunboats, and 4 torpedo boats. The creation of a new navy is one of the first objects to be attained as soon as Chinese finances can be reorganized. The plans adopted are for a fleet of the English fashion, with English naval officers.

Commerce and Production.—The chief commercial products of China are tea, cultivated in the western and southern provinces, and silk, which is raised in all the provinces, but best in Kwangtung, Szechuen, and Che-Kiang. Opium for home consumption is largely produced in the west. In the north cereals, such as wheat, barley, millet, and corn, are cultivated, and in the southern provinces rice and sugar are important crops. The coal mines at Kaiping are worked under the direction of foreign engineers. Mines have been opened also at Hang-Kow. Thick beds of coal underlie nearly the whole of China. Iron and copper are mined in a primitive manner. In the copper mines of Yunnan Japanese engineers have lately been employed to introduce modern methods. The total value of imports in 1894 was 162,102,911 haikwan taels, taking the market values in the ports of China, including duties paid and costs of landing, storing, and selling. The value of exports, not including the export duty and cost of packing and shipping, was 128,104,522 taels. Deducting the extraneous charges in the one case and adding the cost of exporting in the other, the corrected values are 139,569,201 taels for imports and 144,690,042 taels for exports. The direct trade with foreign countries in 1894 was distributed as follows:

COUNTRIES.	Imports.	Exports.
Hong-Kong.....	82,424,351	50,793,504
Great Britain.....	29,943,379	11,500,254
India.....	19,920,092	2,542,611
United States.....	9,363,082	16,442,788
Japan.....	9,130,173	9,256,632
Continent of Europe.....	5,770,594	19,119,081
Russia in Europe and Asia.....	1,058,728	11,023,184

The imports of opium in 1894 were valued at 33,336,067 taels; of cotton cloth, 32,405,000 taels; of cotton yarn, 19,700,000 taels; of raw cotton, 556,203 taels; of woolen goods, 3,540,195 taels; of coal, 3,221,343 taels; of kerosene oil, 8,005,314 taels; of sea products, 5,157,616 taels; of rice, 9,743,000 taels; of sugar, 9,507,000 taels; of iron, 2,584,000 taels; of tin, 2,047,000 taels; of timber, 1,690,000 taels; of matches, 1,639,000 taels; of aniline, 1,169,000 taels. The value of the exports of tea was 31,854,575 taels; of raw silk, 33,004,000 taels; of silk goods, 7,980,000 taels; of cotton, 7,361,000 taels; of straw braid, 2,531,219 taels; of sugar, 2,436,625 taels; of wool, 2,355,000 taels; of clothing and foot

wear, 1,850,635 taels; of paper, 1,784,366 taels; of cow and buffalo hides, 1,089,919 taels; of chinaware and pottery, 1,231,136 taels; of tobacco, 1,231,000 taels. The quantity of tea exported was 1,862,312 piculs (1 picul = 133½ pounds), of which 757,287 piculs went to Russia, 403,197 to the United States, 307,504 to Great Britain, 165,504 to Hong-Kong, and 80,323 to Australia.

Neither the war with Japan nor the riots and disturbances in certain provinces seriously interfered with trade, which was remarkably active and prosperous during 1895. The right to import machinery, conceded by the treaty of peace, gave an extraordinary impetus to industry, especially cotton spinning and weaving, in which Chinamen and foreigners have now invested much capital. Cheap labor and abundant raw material, with the continuance of the advantage that the East enjoys by the fall in the gold price of silver, hold out every prospect of China becoming a most important manufacturing country, which will lead to a keen and formidable competition in textiles between the East and the West. The total volume of trade in 1895 was 314,989,926 taels, surpassing the previous year by 24,000,000 taels. The total trade of China has more than doubled in ten years, the figure for 1885 being 153,205,729 taels. In this period the imports have increased from 88,200,018 to 171,695,715 taels, and exports from 65,005,611 to 143,293,211 taels, showing that there has been no change in the relative position of imports and exports as in Japan. The imports in 1895 amounted to 171,695,715 taels. The increase of 9,593,000 taels was in part illusory, owing to the inclusion of what was coastwise traffic in former years by reason of the acquisition of Chinese territory by Japan. The great decline in the opium trade observed in 1894 continued in an accelerated ratio, owing to restricted production in India, higher prices, and increased production and improved quality of the native drug. The import of foreign opium has fallen from 67,800 piculs in 1886 to 51,306 piculs in 1895. There was a large increase in the imports of morphine, showing an alarming increase of the morphine habit through a greater use of the so-called antiopium pills. An increased importation of staple cotton fabrics, notwithstanding the fall of silver, causing an advance of over 27 per cent. in prices since 1886, is an encouraging symptom of improving economic conditions. The yearly importation of over a million piculs of Indian yarn affords evidence of the great increase of the native hand-weaving industry throughout the empire, stimulated by the high price of foreign cotton fabrics. Besides native cotton mills already established, 4 new ones, with capacity for 143,000 spindles, were started and a score of others were projected by European, Chinese, and Japanese capitalists.

The fall in silver has enhanced the price of woolen goods to such a degree that ordinary silk and satin cost little more. Metals have likewise suffered from this cause. The importation of machinery was nevertheless in 1895 twice as much as in 1894. The exports in 1895 amounted to 143,293,211 taels, showing an apparent increase of over 15,000,000 taels, which was partly due, as in the case of imports, to including for the first time the trade with Formosa, but there was a positive gain of over 9,000,000 taels in exports of silk, tea, cotton, and other staples. Silk is now the chief export, tea having receded to second place. The export of white, yellow, and wild silk and China filatures in 1895 was 110,620 piculs, 11,100 piculs more than in 1894. Moreover, the sale of cocoons exceeded that of all previous years, while the shipments of silk goods were nearly 3,000,000 taels more than in 1894. In ten years the export of silk and satin goods has more than doubled.

The Pasteur system of detecting and eradicating the silkworm disease has been successfully employed in Canton province. The Russian demand for black tea is increasing, and the purchases, at exceptionally high prices, both for the Black Sea and the Kiakhta overland route, were in 1895 the highest yet recorded. This trade has grown from 287,900 piculs in 1891 to 384,300 piculs in 1895; but this increase does not make up for the decline in the black tea trade with Great Britain, which has fallen from 409,300 piculs in 1891 to 250,400 piculs in 1895, when it was 94,000 less than in the previous year. Raw cotton is an export that is increasing very rapidly, owing to the demand of the Japanese mills. The export amounted in 1895 to 896,000 piculs, of which Japan took 744,000. The export of skins of dogs, goats, and sheep, both tanned and untanned, for clothing and rugs has grown from 881,000 taels in 1891 to 2,649,000 taels in 1895. Another remarkable development is the export of nankeens for Chinese abroad, who find this durable homespun cheaper than the more flimsy European fabrics since these have been enhanced in price by the appreciation of gold. Of the total trade of nearly 315,000,000 taels in 1895, the share of the British Empire was over 215,000,000 taels; of Japan, 32,000,000 taels; of the Continent of Europe, outside of Russia, 29,000,000 taels; of the United States, 20,500,000 taels; of the Russian Empire, 17,000,000 taels. The share of the port of Shanghai in the total trade was nearly 219,000,000 taels.

Navigation.—During 1894 there were 38,663 vessels, of 29,622,001 tons, entered and cleared at the ports of China, of which 20,527, of 20,496,347 tons, were British; 13,123, of 5,539,246 tons, Chinese; 2,429, of 1,983,605 tons, German; 420, of 379,044 tons, Japanese; 107, of 129,127 tons, American; and 293, of 348,291 tons, French. Of the total number, 30,027, of 28,506,074 tons, were steamers.

Communications.—The means of internal communication are innumerable roads and paths, much traveled, but badly kept, and numerous canals and navigable rivers. The railroad that brings coal from the Kaiping mines to deep water on the Petang has been extended to Tientsin and northeastward to Shan-Hai-Kwan, a total length of 167 miles, while surveys have been made for 200 miles beyond the Great Wall to Kirin, the capital of Manchuria. The Emperor in 1889 ordered a railroad to be built from Peking to Han-Kow, but this has not yet been begun. A line from Tientsin to the capital, 80 miles, has been actually begun. The cost is estimated at 2,400,000 taels. A survey has been made for a line from Shanghai to Soochow, which will be extended to Hangehow. In a recent edict, in reply to a memorial of the Minister of War recommending the appointment of a high officer to take charge of the construction of railroads, the Emperor observed that these are most important for the maintenance of trade as well as for the employment of the masses of the people; hence he has decided to encourage railroads in every way. He appointed Hu, who first suggested and has charge of the construction of the Tientsin-Peking line, to be director general of railroad construction. The grand trunk line from Peking to Han-Kow is being built as a commercial undertaking, with which Government officials may not interfere, by wealthy men of the provinces who can raise a capital of 10,000,000 taels. Permission has been granted to run a branch of the Russian Trans-Siberian Railroad from Stratensk through Chinese Manchuria to some open port. A Russian bank undertook to finance the enterprise and French engineers obtained the contract.

A Russian steamship company, through its agent, an American named J. Smith, obtained a concession and undertook to build wharves at the treaty port

of Chefoo. The Governor of Kwangsi was ordered to construct a railroad from Lanchow to the Tonquin border to meet the French line from Haiphong. French engineers were engaged to carry out the work. Great Britain, in order to prevent the French from gaining a start in the competition for the trade of western China, demanded that West river be opened up at once, but the Chinese Government demanded as a condition that China be allowed to retain the territory ceded under the Burmah-China convention of 1894.

Telegraphs connect the capital with all the principal cities of the empire and with the frontiers. A junction was made with the Siberian overland line to Europe in 1892, and more recently with the Burmese line to Yunnan.

The postal service is carried on by the Military department. Private messengers are also employed. For commercial purposes the Department of Foreign Customs has maintained during the winter months a service between Peking and the maritime ports. On March 27, 1896, an imperial edict was issued expanding this latter service into a natural postal department, of which Sir Robert Hart was continued as chief, with the title of Customs and Post Inspector General.

New Treaty Ports.—Of the treaty ports that have been declared open to the residence and trade of foreign merchants, three are on the island of Formosa, which is now a Japanese possession. Under the treaty of peace with China four new ones were opened in China, making the total number now 25, not counting Nankin, which the Chinese Government consented in 1858 in the treaty with France to throw open, but has not yet opened. Of the new treaty ports Hangchow, capital of Chekiang province, is the most important, being the richest city in China, the center of its greatest silk and tea districts, the general emporium for all articles that pass between the northern and southern provinces, already one of the chief manufacturing cities of the empire, employing hundreds of thousands of people in silk weaving, fan making, straw plaiting, cotton and hemp industries, the making of wine and soy, and the preparation of tea for the market. Of equal manufacturing possibilities is the enormous city of Soochow, reputed to contain a population of 7,000,000, situated on the Grand Canal, in the province of Kiangsu, and famous for its fine silk. Chungking, in Szechuen, on the Yangtze river, opens to foreign commerce the richest province of China. By the treaty of Chefoo, made in 1877, it was to have been opened soon after Ichang was, but the Chinese Government failed to keep its promise to Great Britain. Shashi is the busiest center of trade on the Yangtze above Hang-Kow, with a population of 600,000, about the same as Chungking. In accordance with the terms of the treaty of Shimonoseki, the ports of Foochow and Hangchow were opened as treaty ports on Sept. 26, 1896, and assurances were given that the two new Yangtze ports would be thrown open at an early day.

Treaty with Japan.—A commercial treaty between China and Japan, drawn in accordance with the treaty of Shimonoseki, was signed at Peking on July 21, 1896. China grants to Japan the most-favored-nation treatment, though no similar right is given in return. Japanese factories are permitted to be established in China, but the duties the products are to pay remain to be fixed. The *likin* and export duties remain unchanged.

The Mohammedan Rebellion.—Although Gen. Tung had been commended and rewarded for suppressing the rebellion in northwestern China, the Dungans were by no means crushed. They emerged from their winter quarters and became active in

April, capturing the town of Kiayru-Kwan, in Kansu, and advancing westward. The war was cruelly waged on both sides. Whole districts were ravaged and laid waste, and a large population was reduced to starvation.

Attacks on Missionaries.—On May 12 an anti-missionary riot occurred at Kiangyin, where the American Protestant mission was looted and burned, and the missionaries escaped with difficulty. The trouble was started by the usual slander about missionaries using the hearts and eyes of Chinese children for medicine, which in this case was put in circulation by a Chinese physician from motives of revenge. The instigator of the riot was duly punished, and the indemnity demanded by the United States Government was paid. Hatred of Christians was especially rife in Honan and northern China. In Yunnan the missionaries had a quarrel with the authorities regarding the acquisition of building sites, and were compelled by the mandarins to relinquish property that they had bought. In June the members of secret societies in a turbulent district of Kiangsu rebelled against the authorities, and, after capturing several villages, attacked ruthlessly the communities surrounding the Jesuit missions at Sinchow, Tangshatsien, and Sutsien, burning down the houses of the native Christians and maltreating them so that several persons died. In the adjacent part of Shan-Tung the German Catholic mission was demolished, one of the priests was killed before he could flee, and the native Christians were driven out of their homes. The mandarin sent soldiers to protect the buildings, but the rebels compelled them to retreat.

Shortly after the Kucheng massacre of 1895 some of the senior Protestant missionaries drew up a memorial to the Chinese Government praying that literature slandering Christian missions should be suppressed really; that mandarins, as well as the common people, should be free to adopt Christianity; and that the local mandarins should be ordered to treat missionaries without suspicion and regard them as friends, since they desired nothing but the good of China. They were introduced to the Tsungli-Yamen by the American and British ministers, with whom, however, the German minister declined to co-operate. The majority of the Yamen seemed disposed to grant their prayer, when suddenly their chief supporter, Wang, was unexpectedly degraded, and, further, the French minister intervened with objections against any reply being made to the memorial, as this raised anew the question of the right of missionaries to deal directly with the Chinese Government, a right which the French had induced the Pope to withdraw in the case of Roman Catholic missionaries a few years before. Subsequently the deputation requested the British and United States representatives to aid them in obtaining the three points asked for in the memorial, as well as an agreement that whatever privileges were granted to Roman Catholics might also be extended to Protestants. This was considered important, because the French minister had been indefatigable in the interest of Roman Catholics, and had succeeded, after the riots of 1895, in securing a convention by which Roman Catholics could secure land without the consent of the local mandarins, and also a promise that statute law shall henceforth be published in accordance with the treaties granting religions liberty, and not with the old law forbidding Chinese to become Christians.

CHRISTIAN CHURCH. The General Convention of the Christian Church, South, met in Burlington, N. C., June 5. The Rev. W. W. Staley was re-elected president. The president's biennial address called attention to Elon College and its indebtedness of \$12,000; the nomination of candi-

dates for the vacant trusteeships in the institution, from whom the Board of Trustees should elect half the number; the provision of a dormitory for girls at the college; assistance in home mission work; the foreign mission in Japan; the publication of a hymnary; the establishment of an orphanage; aid to the colored people; and the Young People's Society of Christian Endeavor as subjects inviting action. An amendment to the articles of "Principles and Government" was adopted, to read: "The Lord Jesus Christ is the only Head of the Church, and any other pretending to be the head thereof should be regarded as that man of sin and son of perdition who exalteth himself above all that is called God." The establishment of an orphanage was approved and a committee was appointed to further it, with power to raise funds, purchase a site, and do whatever else they may think advisable. In connection with this subject the convention directed that the funds already collected for the Children's fund go to the education of young ministers as hitherto ordered, but that whatever may be collected hereafter shall go to the sustenance of the orphanage after it is built. Should the orphanage not be built, it was provided that the funds should go to the biblical library at Elon College. The trustees of the college were asked to provide for biblical instruction at as early a date as possible. For the education of the colored people the convention decided to arrange for co-operation with the brethren of the Christian Convention, North. The North Carolina and Virginia Conference was granted the privilege of co-operating with the Methodist Protestant Church in works not in conflict with the general work of the connection. An arrangement with the Christian Convention, North, for the publication of a word edition of the Christian Hymnary was left in the hands of the Publication Committee. Ministers were advised to inform themselves respecting the work of the Christian Endeavor Societies for the purpose of introducing them in their churches.

CHRISTIAN ENDEAVOR, SOCIETIES OF.

The whole number of societies is given in the report made to the International Convention at Washington as 46,125, and the number of members as 2,750,000. Of these societies Canada has 3,292; the United Kingdom, 3,000; Australia, more than 2,000; France, 66; the West Indies, 63; India, 128; Mexico, 62; Turkey, 41; Africa, 38; China, 40; Germany, 18; Japan, 66; Madagascar, 93; and all foreign and mission lands, 6,399.

Two new branches of the Christian Endeavor work, the Mother's and the Senior, had been organized during the year covered by the report, the former with 50, and the latter with 20 societies. Eight thousand societies had asked to be placed on the missionary roll of honor. They included 5,869 Young People's Societies and 2,331 Junior Societies, and had given \$154,022 through their respective denominational boards to the causes of home and foreign missions, and \$206,150 for religious work in other ways.

COLOMBIA, a republic in South America. The Senate has 27 members, 3 for each department, elected for six years by indirect suffrage. The House of Representatives has 68 members, 1 to every 50,000 of population, elected by direct suffrage for four years, every citizen having a vote who can read and write or owns real estate or has an income of 500 pesos. The President is elected for six years by an electoral college. Miguel A. Caro, Vice-President, became President on Sept. 18, 1894, after the death of President Nuñez, for the remainder of the term ending July 20, 1896. The following ministers were in office at the beginning of 1896: Interior, C. D. Ospina; Foreign Affairs,

M. F. Suarez; Commerce and Communications, Carlos Uribe; War, Edmundo Cervantes; Instruction, L. Zerda; Finance, M. Abadia Mendez.

Area and Population.—The area of the republic is officially estimated at 513,938 square miles. A more recent calculation makes it 464,400 square miles. The population was estimated in 1881 at 3,878,600, including 220,000 uncivilized Indians. Bogotá, the capital, situated at an elevation of 9,000 feet above the sea, has 120,000 inhabitants. Education is free, but not compulsory. There are 1,817 primary schools, with 89,000 pupils. The universities, technical institutes, and normal schools have about 3,200 students in attendance. The Roman Catholic is the state religion. Other forms are tolerated so far as they are judged to be not contrary to Christian morals nor the law.

Finances.—The revenue is mainly derived from customs. For the biennial period 1895-'96 the revenue was estimated at 26,226,300 pesos and expenditure at 26,233,191 pesos.

The internal debt on June 30, 1894, was stated to be 9,413,060 pesos, of which 5,466,896 pesos represented the consolidated debt and 3,946,164 pesos the floating debt, which latter should be paid off by a sinking fund established in 1888, amounting to 604,000 pesos per annum; but these funds have not been so applied since the insurrection of 1895. The interest on the consolidated debt is 262,196 pesos per annum. Besides these debts there is a forced paper currency amounting to 26,135,060 pesos. The old Bolivian silver peso was of equal value with the 5-franc piece, but the fineness was reduced from 0.835 to 0.500, and now these debased coins have been driven out by paper money. A law was passed in 1894 that provided for the redemption of the paper currency and the free coinage of gold, with subsidiary silver to be coined for the Government in Europe. No gold, however, was brought to be coined. Silver coins, 0.835 fine, were minted in Birmingham to the amount of 8,251 pesos only. On the Isthmus of Panama Peruvian silver circulates; in other parts of the republic the money is depreciated paper. A new law prohibiting the importation of foreign silver was enacted by the Congress and went into effect in July, 1896. The effect was a serious derangement of the trade with neighboring countries.

Commerce and Navigation.—The chief imports are articles of food and drink, textiles, and iron and steel manufactures. The chief exports are coffee, peanuts, silver ore, cacao, cotton, dyestuffs, live stock, hides, tobacco, rubber, and woods. Some of the minor exports to the United States are straw hats, coconuts, balsam copaiba, bananas, ivory nuts, heron feathers, pearls, gold dust, manganese ore, mother-of-pearl, and tortoise shell. The transit trade across the Isthmus of Panama is more important than the direct commerce. The transit traffic between San Francisco and Europe fell away to almost nothing until, in 1895, it suddenly revived and became important. The vessels of the Pacific Mail and Panama Railroad companies (both American), the Chilean South American Steamship Company, and the English Pacific Steam Navigation Company call at Panama. Of 863 steamers that were cleared during the four years ending June 30, 1895, 356 were American, 384 English, 115 Chilean, and 8 were German tramp steamers. The American steamers have steadily increased, and they now carry twice as much freight as all the rest. In all the ports of Colombia 1,510 vessels, of 806,397 tons, were entered, and 1,475, of 1,436,854 tons, cleared during 1895. Of the total tonnage, 55 per cent. was British, 19 per cent. French, and 10 per cent. German. The Colombian merchant fleet consists of 2 steamers, of 341 tons, and 5 sailing

vessels, of 2,179 tons. An extensive trade in cattle with Cuba that sprang up in 1876 has ceased. Nevertheless the commerce of Colombia has grown more and more important every year. Coffee has been grown in the interior departments of Santander, Cundinamarca, and Tolima, and the export has steadily increased for fifteen years, notwithstanding the difficulty of transporting the crop to the coast or the navigable streams. Within three or four years an important new coffee country has been opened in the Sierra Nevada mountains, near the port of Santa Marta, and large tracts of land have been secured for plantations by Americans and others.

Communications.—The length of railroads in Colombia was 218 miles in 1892, when there were 3 completed lines and 5 in operation over a part of their intended routes.

The post office during 1893 carried 302,410 domestic letters and postal cards, 615,844 printed inclosures and samples, and 70,038 registered letters and packets, and forwarded to foreign countries 342,440 letters and 206,171 papers and packets.

There were 6,835 miles of telegraphs in 1894. From June 30, 1892, to March 31, 1894, the number of telegrams dispatched was 317,507; received, 372,630; cable messages sent, 2,509; received, 3,322.

The Panama Canal.—The company founded in 1881 by the late Ferdinand de Lesseps to construct a ship canal across the Isthmus of Panama, 46 miles in length, nearly parallel to the line of the existing railroad, received up to June 30, 1886, 772,545,412 francs. It was found on the examination of engineers that nearly as much more would be required before the canal could be completed, and even then only with locks, not at the sea level. An attempt to raise a loan of 600,000,000 francs failed in 1888, and the company went into liquidation. Operations were suspended after March 15, 1889. An extension having been granted in March, 1893, a second attempt to form a new company was made in 1894, and work on the canal was partially resumed.

Steps are being taken to make a harbor in Panama at the mouth of the canal, where vessels of all sizes will be enabled to come alongside the wharves and have their cargoes unloaded direct on the cars of the Panama Railroad, instead of being discharged into lighters 4 miles away from the railroad. This harbor, which will be completed by the end of 1897, and other improvements at Colon will greatly facilitate the traffic of the railroad, which belongs to the canal company. The business of this railroad is now growing rapidly, owing to the revival of the trans-Isthmian traffic and the development of some of the richest agricultural lands in the world. Besides these extensive dredging operations work is being prosecuted on the canal at the Culebra cut with laborers imported from the West Indies and West Africa.

Politics and Legislation.—The administration of President Caro has been unpopular because of his dictatorial policy and arbitrary character. In 1896 there was widespread apprehension of a renewal of troubles such as distracted the country in 1895. The President dispatched troops to several places where there was a probability of revolt, pretending that there was danger of a foreign invasion. A force was hastily despatched from Bogotá to the coast in January on the rumor that two vessels had sailed from New York with arms for the revolutionists. President Caro in March formally resigned his office into the hands of the Vice-President, Quintero Calderon, but soon he resumed office and on April 11 appointed the following new Cabinet: Interior, Manuel Casabianca; War, Pedro A. Molina; Foreign Affairs, Jorge Holguin; Finance, Ruperto Ferreira; Treasury, Manuel Ponce de

Leon; Education, Dr. Rafael Carrasquilla. The army was mobilized shortly afterward. The force on the peace footing is limited by act of Congress to 5,500 men. In case of war the President can raise its strength to whatever the circumstances seem to require, every able-bodied Colombian being liable to serve. Congress met on July 20. Heated discussions took place over the repeal of the export tax on coffee that was imposed during the civil war of 1895. A bill was introduced to annul the extraordinary powers that were conferred upon the President, virtually making him a dictator.

Foreign Relations.—The Government agreed in January, 1896, to refer the claims of English and American contractors and the right of the Government to cancel the railroad concessions granted to them to commissions of arbitration. In the early part of March the English minister, G. F. B. Jenner, was notified that owing to his roughness in diplomatic correspondence he would no longer be recognized as the representative of his Government. Negotiations for the settlement of the boundary dispute with Venezuela were reopened by the Colombian envoy in Caracas in April. On March 31 a Colombian gunboat overhauled an American schooner, the "George Whitford," which had left Porto Bello and was more than 6 miles out at sea, and compelled the master, under threat of sinking his vessel, to put back to Colon, where a guard was placed on board, and was not removed till April 2, after the American consul had notified the governor that he would send for a United States man-of-war unless the vessel was released. The American Government made an immediate demand for an apology for this affront to the American flag, and after an investigation the Colombian Government disavowed the act and apologized. Three jurists were appointed in August by the President of the Swiss Federation to arbitrate the differences between Great Britain and the United States of Colombia arising out of the disputed railroad concession. The Government ordered the Carthagena and Magdalena Railroad, belonging to an American company, to transport all freight by weight, and when the manager refused offered to have this quarrel adjusted by arbitration. A treaty was concluded at Bogotá in November by which Colombia and Costa Rica agreed to have their long-standing dispute regarding their territorial division line settled by the adjudication of the President of the French Republic. The controversy, which involves a large and valuable tract of the American isthmus, was once before near a settlement through the friendly intervention of the United States. On the advice of Secretary Bayard it was referred to Spain for delimitation when that monarchy was already engaged in drawing the boundary line between Colombia and Venezuela. The Spanish Government, while acceding to the request, deferred taking up the Costa Rican case until the other boundary was delimited. During the delay Colombia made grants to a New Jersey company, which undertook to build a road from Bocas del Toro into the interior, and also ceded over a million acres that were situated within the disputed area to the Panama Canal Company. On protests being raised, the Colombian Government declared that the time within which Spain should have acted on the boundary question had expired, and in 1891 it withdrew from the treaty. Secretary Gresham again offered the friendly offices of the United States in 1894, and the outcome of this intervention is the new treaty of arbitration.

COLORADO, a Western State, admitted to the Union Aug. 1, 1876, and hence called the Centennial State; area, 103,925 square miles. The population was 194,327 according to the census of 1880; in 1890 it was 412,198. Capital, Denver.

Government.—The following were the State officers during the year: Governor, Albert W. McIntyre; Lieutenant Governor, Jared L. Brush; Secretary of State, Albert B. McGaffey; Treasurer, Harry E. Mulnix; Auditor, C. C. Parks; Superintendent of Education, Mrs. A. J. Peavey; Attorney-General, Byron L. Carr—all Republicans; Superintendent of Insurance, C. C. Parks; Chief Justice of the Supreme Court, Charles D. Hoyt; Associate Justices, Luther M. Goddard, John Campbell—Republicans, except Goddard, who is a Democrat.

Education.—The seventeenth annual catalogue of the State Agricultural College, issued in May, shows a registry of 232, of whom 161 were young men and 12 were in the graduating class. The four-years' course included botany and horticulture, zoölogy and entomology, chemistry and geology, civil, mechanical, and irrigation engineering, mathematics, history, literature and German, English and sociology. In the department of domestic economy instruction is given in home hygiene, cooking, sewing, nursing, and the chemistry of foods. Military science is also taught. For students who intend to follow a business career there is a commercial course. Oratory, physical culture, vocal music, and the modern languages form supplementary studies.

Banks.—The condition of banks, as published in January, was as follows: With one less bank in the field and one bank just recovering from several months' suspension, the total clearings of Denver banks for 1895 were \$138,371,173.36, while for 1894 they were \$138,347,784.27. Notwithstanding the slight change in the clearings, the condition of the individual banks, especially in regard to deposits, specie, and reserve, shows a great improvement.

Indictments were found May 19 against bank officials and others accused of conspiring to defraud depositors in Denver banks that had closed their doors within the preceding three years. Officers of the German National Bank were charged with falsifying figures in the report to the Comptroller in May, 1893. O. E. Miller, of Chicago, was charged with embezzling \$125,000 from the Commercial National Bank, whose president, C. H. Dow, was accused of conspiring with him.

Mining.—From estimates received by the director of the Mint it appears that the value of gold produced in Colorado in 1895 was about \$15,000,000, and the quantity of silver was 22,000,000 fine ounces. Estimates of other mineral products in 1895 were as follow: Lead, 97,644,688 pounds; copper, 8,031,247 pounds; coal, 3,570,518 tons, value \$6,665,136; iron, value \$1,586,200; steel rails, value \$1,348,500. The State has an area of 127,305 acres of coal land assessed.

Statistics of 1895 showed that 15 per cent. more men were employed in the mines than in 1893 before the panic.

In an article on gold mining in the State, T. A. Riekard, the State geologist, says there is no ground for the impression that Colorado has but one mining district, that of Cripple Creek, upon which attention is now riveted for the reason that its output rose from \$3,900,000 in 1894 to \$7,000,000 in 1895. According to this geologist the gold deposits of Colorado are distributed over a region 280 miles long, from Hahn's peak in the north to Mount Hesperus in the south. The mining industry is now attacking the lodes whose degradation formed the shallow alluvial beds.

An estimate of the money invested at Cripple Creek, compared with its output shows as follows: 4,000 patented claims, costing an average of \$50 each, \$2,000,000; 5,000 unpatented locations, costing an average of \$100 each, \$500,000; cost of the claims, \$2,500,000; work of lessee, \$3,000,000; capi-

tal invested in second purchase, \$1,500,000; total, \$7,000,000. Against this the output of the camp stands as follows: 1892, \$600,000; 1893, \$2,100,000; 1894, \$8,000,000; 1895, \$8,000,000; 1896, estimate, \$10,000,000; total, \$23,700,000. The actual cash value of the gold belt is placed at about \$100,000,000.

There is great activity also in San Juan County, of which Silverton is the county seat, as also at Telluride; and new workings are reported at Victor, Leadville, Ouray, Gunnison, Boulder, Pinos Altos, Aspen, Pine Creek, Clear Creek, Arkins, Cottonwood, Creede, and other points. West Creek, in Douglas County, a new mining camp which grew to a town of nearly 10,000 within ninety days, was incorporated in March.

Manufactures.—Estimates of the value of manufactures in 1894 placed the total at \$40,238,730; the indications were that figures for 1895 would show an increase of at least 5 per cent. At the close of 1894 nearly 10,000 men were employed. Several factories opening up in 1895 increased the number of men employed to 1,200. The most material increase in the factory business during the year was in textile industries, where the number of yards of cloth manufactured was 8,113,724, compared with 6,698,122, in the preceding year. Sewing manufacture and the making of men's clothing increased 25 per cent. The output of the tanneries nearly doubled. The floral industry assumed new importance, increasing its output for the year to \$140,000 and requiring the establishment of new and enlarged conservatories. All lines furnishing building material experienced satisfactory improvement.

Irrigation.—The report of F. H. Newell, specialist on irrigation of the Geological Survey, gives an account of the present state of irrigation in Colorado. "The ordinary flow of the streams is utilized to its fullest capacity, and, especially on the South Platte drainage, large numbers of reservoirs have been built in or near the foothills for the purpose of holding flood waters. This method of increasing the available supply can be utilized to a greater extent, as there are still many localities where water might be held at moderate expense. The examinations have shown the existence of good reservoir sites, especially in the basin of the Arkansas, the most notable of these being that at Twin Lakes. By holding the greater part of the flood waters, it will be possible to extend the area under cultivation, but the amount of land which has already passed into private ownership is so great that there is little probability of sufficient supply being obtained for any considerable part of the public lands of the eastern half of the State." Mr. Newell also says that the water supply from artesian wells is an important feature, especially on the great plains, where there are no surface streams, but where it is possible to obtain an amount sufficient for the irrigation of small patches of land, besides water for cattle. "In the vicinity of Denver, Pueblo, La Junta, Lamar, and in the San Luis valley are areas where artesian conditions are known to exist, and where flowing wells are used for domestic purposes and to a small extent in agriculture."

Of the land now vacant in the State, it is estimated that 6,000,000 acres are forested or have growing upon them trees (though often sparsely located) of size sufficient to furnish merchantable timber. Besides this there are probably 7,000,000 acres of woodland.

Strike at Leadville.—A long-continued and serious strike began in Leadville, June 19. Silver miners who had been working for \$2.50 a day, had been asking for \$3, which was paid at some of the

mines; the managers refused on the ground that they could not afford it; and after months of fruitless efforts to come to an adjustment, these miners, to the number of 800 or more, were ordered out by the union. The strike extended to 10 or 12 properties.

On June 23, 5 mines, which had been paying \$3 to their men, were closed by the managers for an indefinite period, swelling the number of idle miners to about 1,600, and ultimately as many as 3,000 were involved. Some nonunion men were employed in the course of the summer, but the strikers kept a close watch to prevent any such from entering the town. Sept. 21 the trouble culminated in a riot in which the attacking miners used dynamite, and hundreds of shots were fired. Six men were killed and as many more were wounded, and the works at the Coronado mine, which was working with nonunion men, were laid in ashes. More than 1,000 of the State militia were in Leadville the next day, and troops were kept there for months. Martial law was proclaimed Sept. 23. There were frequent skirmishes between the militia and the strikers, but without serious results.

According to the muster roll, Nov. 22, the guard consisted of 735 uniformed soldiers, including officers, and about 300 ununiformed emergency men. The Cloud City Miners' Union issued an address to Gov. McIntyre and the people of Denver, in which they said: "The miners of the union are anxious for an amicable settlement of this trouble. They opened the field of this immensely productive district. The made it possible for millionaires to arise from it. They have in it the interest of their day's pay, bread and meat, shelter and clothing for themselves and their humble dependents. Others have in it the interest of rapidly accumulating fortunes. The miners are ready and willing to entertain and consider any reasonable proposition looking toward a settlement. They will meet the operators in a spirit of fairness and justice. They can not, of course, consent to the destruction of the union, for that is the bulwark of their safety. Neither can they consent to perform their hard and exhaustive labor, undergo its constant hardships, and face its manifold dangers for less wages than will supply them with the necessities of life."

Disasters.—A terrible explosion of gas took place Feb. 18 in the Vulcan coal mine, near Newcastle, probably the greatest mine disaster that has ever occurred in the State. The number of lives lost was about 50. The buildings and trestle at the mouth of the slope were completely wrecked, a hole 100 feet square was carved out of the hillside at the mouth of the incline, while timbers 2 feet square were blown into the Grand river 100 feet away. The mine was examined by the State inspector, Feb. 8, and pronounced in better condition than it had ever been before.

A wind storm swept over some parts of the State, April 12, accompanied by snowfall. The damage was especially severe at Cripple Creek, where many buildings were blown down, trees broken, bent, and carried long distances, and tents and loose lumber carried away.

Cripple Creek was visited, April 25, by a disastrous fire, which destroyed the main portion of the business section—4 entire blocks, including the post office, 2 banks, the stock exchange, the opera house, 2 theaters, 2 hotels, the Gold Mining Exchange, and 2 churches. Estimates by insurance adjusters place the loss at \$950,000, with insurance of about \$250,000. On April 29 another fire destroyed nearly all that was left from the first. Three persons were killed by explosions of dynamite used in the attempt to prevent the spread of the fire, and nearly a score were injured. The loss was greater than that by the first fire, being placed

at \$1,320,000, but the buildings were more heavily insured.

Great loss of life and property resulted from a cloudburst and floods in Bear Creek cañon, July 24. Many cottagers and campers from Denver and other places were spending the summer in the valley. As many as 30 lives were lost; among these were 3 families of children, who with their mothers were spending the summer together at a cottage on the bank of the creek near Morrison.

Decision.—The Supreme Court of the United States, on April 27, gave a construction of the act of June 8, 1872, relating to what is known as "Chippewa half-breed scrip," confirming the policy of the general land office, which construed the law to permit the location of the scrip upon land either in the limits of the reservation made to the Chippewas or upon land within the public domain.

Political.—A convention of Democrats for the purpose of choosing delegates to the national convention was held in Denver, April 15. The resolutions dealt only with the silver question, declaring as follows:

"Believing that the evils that now oppress the people are the direct result of a departure from the true principles of Democracy; that the policy inaugurated by the Republican party for the contraction of the currency, and for many years continued by it to the gradual and certain impoverishment of the people, in the face of a steadfast opposition from the Democratic party, but adopted and approved by the political administration, has resulted in the creation of an enormous bonded debt in a period of profound peace, visiting a deadly blight on every industry and carrying discouragement and dismay into the household of every wealth producer in the land; that there never can be a condition of general welfare until the volume of a sound and stable currency is equal to the demand of industrial and commercial pursuits; that the first step in this direction should be the immediate restoration of silver to the place it occupied in the currency of the world for centuries previous to 1873—

"We therefore favor the immediate restoration of the free and unlimited coinage of gold and silver at the present legal ratio of 16 to 1, as such coinage existed prior to 1873, without waiting for the aid or consent of any other nation, such gold and silver to be a full legal tender for all debts, public and private."

Delegates were chosen with the understanding that they were to bolt the national convention unless it should declare for free silver.

The convention for nomination of State officers prepared the following ticket, Aug. 20: For Governor, Alva Adams; Lieutenant Governor, James M. Ellis; Secretary of State, C. H. S. Whipple; Treasurer, Olney Newell; Auditor, W. W. Rowan; Attorney-General, A. L. Moses; Superintendent of Public Instruction, Miss Grace E. Patton; Regents of the University, Oliver J. Pfeiffer and M. J. Hogarty.

Early in the year it was proposed by Republicans to delay the State convention until after the national convention, allowing the State committee to select the delegates to the national convention, since it was felt that the State could not be held for the party without a silver plank in the national platform, and that the ticket would be defeated, as it was in 1892, when the People's party candidate was elected by reason of the silver agitation; while, if the State convention should be delayed, it could then declare for the nominees of the party favoring free coinage, and thus leave the State ticket to go on its own merits. A convention was, however, held at Pueblo, May 14, though the State ticket was not then nominated. A letter was received from

Senator Wolcott, declining to permit his name to be considered by the convention in selecting delegates. The resolutions made Senator Teller leader of the delegation, and the only instructions given were to the delegation to follow his lead, with the understanding that free silver was to be regarded as the paramount issue. It was declared in the resolutions that bimetalism and protection are vital to the prosperity of the country; that Oriental competition would render protection futile with the gold standard. Democratic free trade and the gold standard were declared to be the cause of a destruction of values one half. Bond issues were denounced, and the blame for financial conditions was put upon the Democracy. The money plank reads:

"We therefore declare that the free coinage of silver and gold at a ratio of 16 to 1 is, for the time now being, of paramount and controlling importance, and the most pressing question connected with our political duty and action."

The Republican State Central Committee held a stormy meeting July 29, in Denver. The majority was in favor of the Republican national ticket: a resolution commending it was followed by a bitter debate, in which charges were made that money influence had been used with the majority and that proxies had been bought. The minority also attributed much of the McKinley sentiment to Senator Wolcott and National-Committeeman Ganders. The resolution was carried by a vote of 48 to 38. The chairman resigned, but said that he did not take the step in view of the present difficulties, but because he would be absent in Europe during the campaign. The new chairman announced, on taking the chair, that members of the committee who were in sympathy with the national Democratic ticket and who proposed to work for it would better resign, and that his rulings would be against them. The Bryan and Sewall men refused to leave, and the committee adjourned in great confusion.

The Silver Republican Convention for the nomination of State officers met in Denver, Sept. 9. A conference was held with committees from the Democratic, People's, and silver parties, with a view to fusion. All were ready to unite on Bryan electors, but no agreement on State officers was reached. The silver Republicans named the following ticket Sept. 10: For Governor, Jared L. Brush; Lieutenant Governor, Simon Guggenheim; Secretary of State, Harry E. Mulnix; Treasurer, George W. Kephart; Auditor, John W. Lowell; Attorney-General, Byron L. Carr; Superintendent of Public Instruction, Mrs. Mayne Marble; Regents of the State University, W. J. Orange and E. C. Lobengier.

A resolution was adopted requiring all the nominees to place their resignations in the hands of the Committee on Fusion. The platform declared for bimetalism and protection.

The McKinley Republicans held a State Convention in Colorado Springs, Sept. 30, with several hundred delegates. The platform included the following resolution: "That our people, irrespective of party affiliations, favor the free coinage of silver and believe that our mints could be safely opened to free coinage under an administration in which the people of the country had confidence. We regret that the national convention at St. Louis did not view this question as we view it. We accept, however, the assurance of the party that its efforts will be devoted to the securing of an international agreement for the unlimited coinage of silver as a sacred pledge. We believe that the pledge will be fulfilled, and we are firmly of the faith that the re-monetization of silver, so essential to the welfare of this and all other civilized countries, will be accom-

plished through the efforts and under the direction of the Republican party and through no other."

The ticket follows: For Governor, George W. Allen; Lieutenant Governor, Hosea Townsend; Secretary of State, Edwin Price; Treasurer, James H. Barlow; Auditor, George S. Adams; Attorney-General, Alexander Gnnnison; Superintendent of Public Instruction, Mrs. Ione Hanna.

A State silver convention of delegates of all political parties was held at Denver, June 25, and delegates were chosen to the national silver party convention at St. Louis, July 22. The Committee on Resolutions reported a platform arguing at length in favor of free coinage, and attacking its opponents. This was rejected, and a shorter declaration of principles was adopted, calling for the double standard, and including a resolution recommending Senator Teller as candidate for the presidency, but promising to support any other silver candidate who should be nominated.

A State convention of Prohibitionists held at Pueblo, July 30, declared in favor of free coinage.

The "Middle-of-the-road" Populists nominated Davis H. Waite for Governor, and John McAndrew for Attorney-General at their convention Sept. 8, and appointed a conference committee empowered to fill the remainder of the ticket.

Efforts were made, at a meeting held Sept. 12, to unite all the silver forces of the State on one ticket, but they were not successful. The Democrats and silver Republicans united on a ticket chosen from those of the two parties, as follows: For Governor, Alva Adams, Democrat; Lieutenant Governor, Simon Guggenheim, Republican; Secretary of State, C. H. S. Whipple, Democrat; Treasurer, George W. Kephart, Republican; Auditor, John W. Lowell, Republican; Attorney-General, Byron L. Carr, Republican; Superintendent of Public Instruction, Miss G. E. Patton, Democrat; Regents of the University, O. J. Pfeiffer, Democrat, and W. J. Orange, Republican.

Fusion was effected between the Populists and the national silver party, by which the Populists were to name the candidates for Governor, Attorney-General, State Treasurer, and Regents. The union ticket was: For Governor, Morton S. Bailey; Lieutenant Governor, B. Clark Wheeler; Secretary, William S. Lee; Treasurer, Horace G. Clark; Auditor, George Seaver; Superintendent of Instruction, L. S. Corning; Attorney-General, N. C. Miller; Regents, Miss E. Ada McElroy, John M. Cochrane.

The result of the election gave the Bryan electors 161,269; the McKinley electors 26,271; the Levering electors, 1,717; the Matchett electors, 160.

The fusion silver Republican and Democratic State ticket was successful throughout by large majorities. The vote for Governor was as follows: Adams, Silver Republican-Democrat, 84,340; Bailey, National Silver Populist, 61,683; Allen, Republican, 21,823; Waite, Populist, 3,004.

It appears from the election reports that the majority voted against the proposition to validate the \$1,200,000 of public debt incurred by legislative appropriations in excess of the estimated revenues made in violation of the Constitution.

CONFEDERATE VETERANS, ORGANIZATION OF. The association entitled "United Confederate Veterans" was organized at New Orleans, La., June 10, 1889. Previous to this date there had been no general organization of ex-Confederate soldiers or sailors. Local associations, however, had been formed in various localities. There were also a few organizations composed of the survivors of particular companies, regiments, or brigades, while in two of the States progress had been made in establishing State associations. In Tennessee, in addition to several independent local societies, such

as Forrest Camp at Chattanooga, a charter had been obtained for a general association. On Dec. 3, 1887, R. G. Rothrock, John P. Hickman, George F. Hager, E. R. Richardson, Frank Anderson, T. F. Sevier, George B. Guild, Jesse Ely, W. J. McMurray, John W. Morton, T. P. P. Allison, and F. S. Harris were "constituted a body politic and corporate by the name and style of the Association of Confederate Soldiers, Tennessee Division." Under this charter ten local associations were formed, called "bivouacs," the first of which was Frank Cheatham Bivouac, at Nashville. The several bivouacs constituted the State division, and were governed by the State association, composed of representatives from the several bivouacs. The plan of organization was somewhat similar to the secret social orders, with grips, passwords, and secret meetings.

In Louisiana there were three State associations: The Louisiana Division of the Army of Northern Virginia, the Louisiana Division of the Army of Tennessee, and the Veteran Confederate States Cavalry Association.

In 1889 the first step was taken for the union of the various Confederate bodies into one general association. This movement came from Louisiana. A circular was issued by a joint committee of the three associations of Louisiana, inviting all Confederate organizations to send delegates to a convention, to be held at New Orleans June 10, 1889, to establish a general association of all surviving Confederate soldiers and sailors. This convention adopted a constitution and organized a general association under the name of United Confederate Veterans. The objects are succinctly stated in the following extracts from the constitution:

"The objects and purposes of this organization will be strictly social, literary, historical, and benevolent. It will endeavor to unite in a general federation all associations of Confederate veterans, soldiers and sailors, now in existence or hereafter to be formed; to gather authentic data for an impartial history of the war between the States; to preserve relics or mementoes of the same; to cherish the ties of friendship that should exist among men who have shared common dangers, common sufferings, and privations; to care for the disabled, and extend a helping hand to the needy; to protect the widows and the orphans; and to make and preserve a record of the services of every member, and as far as possible of those of our comrades who have preceded us in eternity. . . .

"No discussion of political or religious subjects, nor any political action, shall be permitted within the organization of the United Confederate Veterans; and any camp, bivouac, or association that will have acted in violation of this article shall be declared to have forfeited its membership in this association."

The association has discarded all secret meetings, grips, and passwords. Its reunions and discussions are as open as day. Speaking as the exponents of the Confederate soldiers, its utterances have been broad, liberal, and national.

The first constitution established a plan of organization and government, which, though somewhat amended, has never been materially changed. Gen. John B. Gordon, of Atlanta, Ga., was elected commander in chief at the New Orleans meeting in 1889, and has been re-elected by acclamation at each subsequent annual reunion. He appointed Gen. George Moorman as adjutant general, who has continued in office to the present time. At the first reunion, at Chattanooga, the organization consisted of 33 camps. Since that time the association has grown rapidly, and it now has a membership of 865 camps, which have about 40,000 com-

rades enrolled. Nearly all of the Confederate associations and societies in the South have surrendered their separate organizations and have become united under the constitution of the United Confederate Veterans, popularly called the "U. C. V's."

As now organized, under the constitution adopted at Houston, Texas, in 1895, the unit of the association is the "camp." The camps are numbered numerically in the order of their incorporation into the association. The distribution of camps is shown in the following list: Texas Division, 215; Alabama Division, 88; South Carolina Division, 76; Missouri Division, 71; Mississippi Division, 60; Arkansas Division, 57; Georgia Division, 55; Louisiana Division, 51; Kentucky Division, 37; Florida Division, 30; Virginia Division, 30; Tennessee Division, 29; North Carolina Division, 29; Indian Territory Division, 11; Maryland Division, 6; Oklahoma Division, 5; West Virginia Division, 5; New Mexico Division, 3; Illinois Division, 2; Montana Division, 2; Indiana Division, 1; District of Columbia Division, 1; California Division, 1; total, 865. In addition to this list about 200 camps are in process of formation. Each camp is composed of members, called comrades, who have given satisfactory proof of honorable service in the Confederate army or navy, and honorable discharge or release therefrom. The officer commanding a camp has the rank of captain. The following article of the constitution explains the organization:

"The camps shall be organized by departments, divisions, and brigades.

"The federation shall have as its executive head a general. There shall be three departments, to be called Army of Northern Virginia Department, Army of Tennessee Department, Trans-Mississippi Department. The Army of Northern Virginia Department shall include and be formed of the States of Virginia, Maryland, North and South Carolina, Kentucky, and all the camps and divisions not enumerated as belonging to the Army of Tennessee or Trans-Mississippi Departments. The Army of Tennessee Department shall include and be formed of the States of Georgia, Alabama, Tennessee, Mississippi, Louisiana, and Florida. The Trans-Mississippi Department shall include and be formed of the States and Territories west of the Mississippi, excepting Louisiana.

"Each and every State and Territory having within its boundaries ten or more camps, regularly organized and accepted, shall constitute a division, and no State or Territory shall have more than one division within its boundaries.

"Camps in States or Territories where there are less than ten camps shall report directly to the department commander, upon whose recommendation such camps in contiguous States or Territories may be formed into a division by the commander in chief, until such States or Territories attain the required number of camps to entitle them to become separate divisions.

"Divisions upon recommendation of department commanders may be subdivided into brigades, by the commander in chief, provided each brigade shall have at least five camps, and that a majority of the camps of the division shall demand the subdivision."

Each of the three departments is commanded by a lieutenant general; each State or division by a major general, and each brigade by a brigadier general. These officers are elected for one year—the general and the three lieutenant generals at the annual reunions of the association, the major generals and brigadier generals at their respective State or division reunions. Each general officer appoints his own staff, with the appropriate rank, as prescribed by the constitution.

There are four standing committees, each consisting of one delegate from each division, viz.: The Historical Committee, the Relief Committee, the Monumental Committee, and the Finance Committee. The association is supported by membership fees, each camp by annual dues from its members, the several divisions, departments, and general association by an annual *per capita* tax upon the camps. There is no general "charity fund," yet much has been done for the relief of comrades in distress, and for other charitable purposes, by private subscription. The association has taken an active part in promoting the erection of monuments to deceased comrades, and is now raising a subscription to complete the establishment of the Confederate Memorial Association on the plan suggested by Charles Broadway Rous, of New York, aided by his munificent donation. The publications consist of the official orders and addresses of the commanding general, the reports of the department and staff officers, the reports of the several committees, the proceedings of the annual reunions, and the constitution and by-laws. Among the most important of these reports are: The report of Surg.-Gen. Joseph Jones, concerning the medical department of the Confederate army and navy, giving statistics of the number of troops and the losses of the individual Southern States during the civil war; the report of Adjt.-Gen. Moorman, made at the reunion at Richmond, Va., in 1896, showing the growth and condition of the association, its membership, the distribution of camps, etc.; the three reports of the Committee on History, submitted by the chairman, Lieut.-Gen. Stephen D. Lee, at Birmingham in 1894, at Houston in 1895, and at Richmond in 1896. These reports of the Committee on History, being unanimously adopted by the association, may be regarded as expressing the sentiments of the surviving Confederate soldiers, which is concisely stated in the following extract from the report made at Richmond in 1896, referring to the Confederate soldier: "He returned to the Union as an equal, and he has remained in the Union as a friend. With no humble apologies, no unmanly servility, no petty spite, no sullen treachery, he is a cheerful, frank citizen of the United States, accepting the present, trusting the future, and proud of the past." In the language of Adjt.-Gen. Moorman, "The U. C. V's have adopted no flag. Our halls and reunion wigwags are decorated with our old tattered and worn battle flags, retained simply as mementoes of a glorious history and of all connected with the past, with the flag of our country, and the shields of all the States." The regulation badge or button, adopted at Jackson, Miss., June 2, 1891, is a square of red, crossed by two diagonal bands in blue, on which are thirteen white stars.

Connected with the United Confederate Veterans are two auxiliary associations, known respectively as "Sons of Confederate Veterans" and "Daughters of the Confederacy." Each of these associations is organized on a plan similar to the United Confederate Veterans, and is permitted to wear the association badge. The general headquarters are permanently fixed at New Orleans, and the Memorial Hall of that city is the depository of all records, papers, and relics of the association. The annual reunion is the feature that gives the association its chief interest and influence. This is a great mass meeting of old comrades, who, with their families and friends, assemble annually for social intercourse, and to renew old ties of friendship. The general mass meeting is entertained by popular addresses and exercises, and usually closes with a parade. The reunion generally remains in session about three days, a portion of the time being de-

voted to business meetings, in which only delegates from the various camps and divisions participate. These reunions have been held as follows: At Chattanooga, Tenn., July 3, 1890; at Jackson, Miss., June 2, 1891; at New Orleans, La., April 8, 9, 1892; at Birmingham, Ala., April 25, 26, 1894; at Houston, Texas, May 22, 23, 24, 1895; at Richmond, Va., June 30, July 1, 2, 1896. The next will be held at Nashville, Tenn., in 1897. At the reunion at Richmond, the association took part in laying the corner stone of the Jefferson Davis monument, July 2, 1896.

CONGO, INDEPENDENT STATE OF THE, a sovereign monarchical state in Central Africa, created with the consent of the European powers and declared perpetually neutral in conformity with the general act of the Congo, signed at Berlin on Feb. 26, 1885. The International African Association, of which Leopold II, King of the Belgians, was the head and patron, sent Henry M. Stanley to the Congo in 1879 to establish a government, build stations, and distribute his officers and men throughout Central Africa in such manner as to have the best effect upon the savage tribes who had never been brought in contact with the whites. Leopold II was named sovereign of the Congo Free State when this was recognized as an independent government. By his will, made on Aug. 2, 1889, he ceded his sovereign rights to Belgium. By a convention made on July 3, 1890, Belgium acquired the right to annex the State after a period of ten years. A codicil of the will, dated July 21, 1890, declares the territories of the State to be inalienable. The convention was ratified by the Belgian Chambers on July 25, 1890. The Central Government, with its seat at Brussels, is under the direction of a Secretary of State. This chief of the Government is at present Edmond von Etvelde. The Governor General, who is the head of the local government at Boma, is Theodore Wahis.

Area and Population.—Conventions made by the International Association of the Congo with Germany, Great Britain, and the Netherlands in 1894, and with France and Portugal in 1885, defined the boundaries of the Free State, which were described also in the declaration of neutrality made in August of that year and precisely indicated in treaties concluded by the Free State with Great Britain on May 12, 1894, and France on Aug. 4, 1894. The area is estimated at 870,000 square miles. Estimates of population vary between 14,000,000 and 30,000,000. There were 1,096 Europeans in 1895, of whom 691 were Belgians, 75 Englishmen, 75 Portuguese, 75 Swedes and Norwegians, 50 Frenchmen, 28 Americans, 21 Italians, 14 Danes, 16 Dutchmen, 12 Germans, 4 Spaniards, and 1 Austrian.

Finances.—The revenue is derived from an annual donation of 1,100,000 francs given by the King of the Belgians, an advance of 2,000,000 francs a year voted for ten years by the Belgian Chamber in 1890, and duties, taxes, and the sale and leasing of public lands. The revenue of 1896 was estimated at 7,002,735 francs and the expenditure at 8,236,000 francs. In the budget of 1895 the local receipts are estimated at 3,004,764 francs, of which 1,195,304 francs are derived from customs duties, 30,353 francs from sales and leases of land, 1,250,000 from domains, tribute, and taxes paid in kind, and 529,107 francs from various sources. The expenditures for 1895 footed up 7,370,939 francs. The chief item was 3,556,672 francs for the public forces. The armed force of native Africans, divided into 16 companies, with 4 camps of instruction, is commanded by 143 European commissioned officers with 146 sergeants. The strength for 1895 was fixed at 6,120 men, of whom 4,000 are recruited

in the State. The strength for 1896 was increased to 8,500 men, requiring an expenditure of 4,820,793 francs. The naval expenditure for 1895 was 397,273 francs. This is to maintain a flotilla of 7 steamers on the lower and 12 on the upper Congo, besides sailing and row boats. The other expenditures were 219,000 francs for the central administration in Europe, 901,433 francs for the administration in Africa, 547,136 francs for public works, 730,838 francs for caravans, and 1,018,588 francs for divers expenses.

Commerce.—The general imports in 1894 were valued at 11,854,021 francs and the exports at 11,031,704 francs. This commerce was divided among the trading nations as follows:

COUNTRIES.	Imports.	Exports.
Belgium.....	6,240,000	6,398,000
Netherlands.....	1,083,000	2,614,000
Great Britain.....	2,669,000	493,000
Germany.....	991,000	149,000
French Congo.....	2,000	335,000
Portuguese possessions.....	301,000	1,042,000
Other countries.....	574,000
Total.....	11,854,000	11,031,000

The values of the leading exports were: Ivory, 5,210,000 francs; caoutchouc, 2,727,000 francs; palm nuts, 1,484,000 francs; palm oil, 1,044,000 francs; coffee, 290,000 francs. Other exports are peanuts, gum copal, sesame, and eudbear. An export duty of 25 per cent. is levied on all ivory from the upper Congo and 10 per cent. on that bought below Stanley Pool. Rubber pays a duty of 10 per cent. and all other exports 5 per cent. Natives brought within the jurisdiction of the Congo State pay taxes in goats, fowls, or yams, or in rubber or ivory, so much being levied on each district.

The value of the special imports in 1895 was 10,685,847 francs; of the special exports, 10,943,019 francs. The rubber exports in 1895 amounted to 2,500,000 francs; the export of ivory to 6,000,000 francs. The native stock of ivory is becoming scarcer and consequently more difficult to obtain.

A marked improvement has taken place in the trade of Belgium with the Congo. Belgian cotton goods have largely supplanted the English. More than half the imports in 1895 were of Belgian origin. Besides cotton cloth, the principal imports are old guns, pistols, and cartridges. Locomotives and materials for the construction of the railroad figure for a good sum. The imports consumed within the territories of the Free State in 1894 were 11,195,000 francs in value, and the exports of products of those territories 8,761,622 francs. The chief imports are cotton goods, firearms, powder, spirits, and tobacco. Under the Brussels convention alcohol is permitted to be sold only in a small portion of the territory. The royal decree of July 16, 1890, forbade all traffic in spirituous liquor, in the upper Congo region. Recently this prohibition has been extended to the transport zone beyond the river Kwilu. There was a slight decrease in the imports of spirits in 1895. It is intended to increase the rate of duty considerably, as the act of Brussels allows to be done. During 1893 the number of vessels that visited the ports of Banana and Boma was 677, of 217,996 tons. There is regular steamship communication with Europe. The Free State has a postal service and is a member of the postal union. During 1893 the post office carried 49,544 internal and 119,784 international letters and packets.

The Congo Railroad.—The Congo is navigable for 100 miles from its mouth, as far as Vivi. Numerous rapids above this point render the river unnavigable for 200 miles, as far as Leopold-

ville, on Stanley Pool, above which there are over 1,000 miles of navigation. A route for a railroad parallel to the river and 30 miles south of it was surveyed in 1888. Of the 250 miles 100 were completed and open for traffic in February, 1896, when the railroad had reached Kimpesse, where the caravans for Stanley Pool have been accustomed to recruit fresh carriers. The expenditure on the railroad during the year 1895 was 6,033,287 francs. A convention was made in May, 1894, in accordance with which the Belgian State, by an immediate advance of 5,000,000 francs, can acquire a controlling interest, 20,000,000 francs out of a total capital of 35,000,000 francs. A new agreement was made on April 10, 1896, by which Belgium's interest will be 15,000,000 francs, the Government guaranteeing an immediate loan of 5,000,000 francs, to take up one that was due, and 10,000,000 francs of additional obligations, without making a fresh advance. This guarantee the Belgian Chamber, on May 15, voted to grant. A further guaranteed loan of 15,000,000 francs at 3 per cent. is to follow unless, as was expected, the improved traffic receipts from the road after being opened to Tumba will enable the company to raise 20,000,000 francs more for the completion of the line to Leopoldville without further recourse to State assistance. The line was completed to Tumba, 116 miles from Matadi, the starting point, and officially inaugurated on July 22.

Policy toward the Natives.—When the Congo State first resorted to the imposition of taxes and tributes for the purpose of reducing its annual deficits notice was given to all the young white men that they would receive a certain premium, from 10 to 25 per cent., or even 50 per cent., on all the rubber and ivory they collected. With the chance of amassing wealth thus opened to them, the agents took the most rigorous means to bring in the full quota of every village along the Congo and its tributaries. If any settlement fell short the State soldiery were sent to burn the village and murder and mutilate its inhabitants. The liberated slaves, as they are called, who are employed on the coffee plantations or impressed in the public force are essentially slaves still, and often they have been obtained by raids such as the Arabs once organized. In different districts of Ubangi, Welle, Aruwimi, and Stanley Falls the native chiefs were formerly required to furnish so many slaves a month. They therefore raided neighboring villages weaker than themselves and brought the captives taken to the Free State officials, who formerly received a bounty of 5 francs a head for every slave delivered at Kinshassa. This premium led the captains to cram as many as possible into their boats, so overcrowding them that many died on the passage. The result of the heartless tyranny and greed of young officers remote from the eyes of their superiors was that scores of large and once prosperous villages on the middle Congo were deserted, the natives taking refuge in the French Congo, where such crimes are not committed. The rapacity and cruelty of the white agents of the Congo State was the chief cause of the late revolt of the natives that extended from the upper Mobangi and the Aruwimi to the neighborhood of Stanley Pool. The uprising was repressed with a heavy hand, but disorders continued and the wholesale migration of the people living near the white settlements and highways. The officials represented that only in the localities where the slave trade was formerly carried on was it necessary to punish the natives for refusing to work and bring in rubber, and denied that any were killed except when they rose against the officials. Canoes laden with ivory were fired upon, they admitted, but only when the natives were smuggling it over to the French side to sell. Circumstantial reports of mis-

sionaries, who told of individual natives being slain by the white officers themselves for neglecting to gather rubber, impelled the Congo State Government to order an investigation. It appointed a commission of three Baptist and three Roman Catholic missionaries to see that the natives have protection, and to report all acts of violence to the Government, and declared that it would pay no more premiums for rubber and ivory. Disinterested observers have concluded that nothing but harm has come in this part of Africa of the contact between the European and the native races; that the wide and enlightened views of the King of the Belgians have not been developed; and that the indigenous growth of civilization, witnessed by the handicrafts of the people, is being stamped out. The tide of Arab influence, which the Belgians have checked by the development of superior military force, had a civilizing tendency notwithstanding the horrors of slave raiding that attended it. The United States commercial agent, R. Dorsey Mohun, was struck by the high state of cultivation on the upper Congo, the exceeding abundance and cheapness of food, the herds of cattle, the busy commerce, the clean and comfortable houses, the industry, thrift, and neatness of the people, and their skill as blacksmiths, gunsmiths, locksmiths, carpenters, masons, and brickmakers, taught them by their former masters, all contrasting with the sloth and filth characterizing the sickly, fetish-worshipping, drunken savages of the lower Congo. The Congo officials claim that the State has made extraordinary progress. Tracts of land have been cleared in different districts, and in the place of the wild bush are flourishing coffee, cacao, and kola plantations and rice and maize fields, giving employment to large numbers of natives. Very effective State schools are maintained in Boma, in which the teachers are monks and nuns who instruct liberated slaves and children in Christianity and the rudiments of education, and teach the boys to be carpenters, masons, tilemakers, and blacksmiths, and to carry on agriculture in its various branches, while the girls are taught cooking, sewing, and laundry work. In all the stations there are handicraftsmen from Europe or the west coast who teach Congo boys various trades.

In the new regulations promulgated in September, 1896, the European agents of the Congo State are held responsible for any ill treatment their subordinates inflict upon the natives. Some new statutes have been inserted in the penal code for the suppression of cannibalism, the mutilation of corpses, and ordeal by poison. The permanent commission for the protection of the natives is composed of the Vicar Apostolic, Bishop van Ronste, Fathers van Henexthoven and de Cleene, William Holman Bentley and George Grenfell, of the Baptist Missionary Society, and Dr. A. Sims, of the American Baptist Union. The members of the commission will inform the judicial authorities of any acts of violence of which natives may have been victims, and each member, individually, will exercise the right of protection and will communicate directly with the Governor General. The commission will also advise the Government of measures to be adopted to prevent slave trading; to render more effective the prohibition or restriction of the sale of spirituous liquors; and to bring about gradually the disappearance of barbarous customs, such as cannibalism, human sacrifices, trial by poison, etc. Hereafter no agent may undertake hostilities against the natives unless authorized by the commissioner of the district or the commander of the expedition to which he is attached. Troops taking part in war operations, whether regulars or auxiliaries, must always be commanded by a European.

The property of natives must not be destroyed, and on no pretext must villages be burnt as a means of repression. European leaders of war parties will be held responsible if they permit cruelties or mutilation of bodies. In punishing servants of the State for breaches of discipline agents must not depart from legal forms or pass other sentences than the ones prescribed.

Trial of Major Lothaire.—Major Hubert Joseph Lothaire, as president of a council of war, on Jan. 14, 1895, at Lindi, passed the sentence of death upon the English trader Charles Stokes for supplying arms to the rebellious natives and inciting to civil war by allying himself with the chief Kibonge. Stokes was hanged on the following morning. The English and German governments complained that the council of war which executed summary justice on Stokes was not legally constituted, and that the prisoner had been denied the opportunity of appealing to the civil court at Boma, a right conferred by the statutes of the Free State. In November, 1895, Secretary van Eetvelde acknowledged these errors and agreed to pay 150,000 francs to the British Government as indemnity to the family of Stokes for the seizure of his ivory, and 100,000 francs to the German Government as compensation to the native porters that Stokes had brought from German East Africa. The Congo Government undertook further to bring Major Lothaire before a competent court for trial. Accordingly a warrant was issued on Jan. 9, 1896, by the Boma Court of Appeals for the arrest of Lothaire. At the trial it appeared that Major Lothaire had given orders for the arrest of Stokes after discovering proofs of his alliance with Kibonge and that Stokes's caravan had pillaged the country and slain many people. The guns and ammunition of Stokes were found buried. At the end of a trial lasting two days Major Lothaire was acquitted on April 27 both of murder and of homicide by imprudence. The British vice-consul, who interfered in the trial in a way to draw blame upon himself, lodged an appeal. The second trial, held before the Court of Appeals in Brussels, was begun on Aug. 3 and ended in his honorable acquittal on the third day, on the ground that whatever the technical irregularities of Stokes's execution, the Belgian officer had acted in legitimate self-defense. The judges declared in their verdict that murder did not exist without criminal intent; that judicial errors, which in fact were not proved, did not affect the legality of the decision, which was guided by motives of conscience and probity; that Stokes did not deny the crimes laid to his charge, but begged for mercy, and that in carrying out the judgment within twenty-four hours Major Lothaire acted from motives of necessity and the safety of his own troops. It came out during the trial that the authorities of German East Africa permit the highly lucrative traffic in firearms with the Arabs, and derive their principal revenues from it. Accusations have been brought against the officials of the Free State that they actually engage in illicit traffic in arms. The native chiefs of the Aruwimi and Welle districts who recently revolted are supposed to have obtained their guns and powder from the Belgian officers.

Military Operations.—In the summer of 1895 a revolt that was started on the Itimberi affluent of the Congo spread into the Welle district, where the posts of Djabbir and Semio were in danger, and the Aruwimi and Bangala districts, where the natives held out for many months against the forces of the Free State. The Belgian force that penetrated into the Nile region to Lado and beyond, after being checked by a superior force of dervishes, had to fall back to protect its base on the Welle. Baron Dhanis drew about 500 troops from the lower Congo and

recruited a fresh force of 200 Haussas in Lagos, notwithstanding the edict of the British Government against engaging even laborers in the Gold Coast and other colonies, issued in consequence of complaints that men hired as railroad laborers had been compelled to serve in the Congo public force and attached to expeditions, being shot if they attempted to escape and flogged for every infraction of discipline. On the Congo the Batatela soldiers in the Luluaberg district mutinied and killed 10 whites, while 5 were murdered on the upper Welle. Missions and commercial posts were plundered and destroyed. Major Lothaire proceeded against the Batatelas with 300 soldiers, and pursued the rebels to the upper Lomami, where a revolt had been fomented by the Arabs. Though wounded, he continued in command, and was finally victorious in October, 1895. The Itimber revolt, which paralyzed trade for nine months, was finally suppressed by the concentration of the Congo forces. The district of the Welle was still in a disturbed and dangerous condition in the beginning of 1896, powerful chiefs, such as Semio and Bungasso, being well provided with arms. The natives on the Aruwimi were in open revolt. In April, 1896, Capt. Chaltin conducted a brilliant campaign in the upper Welle, inflicting crushing defeats upon the formidable Arab chiefs Nbili and Nduruma, the latter of whom confronted him with several thousand men and quick-firing guns. This chief was the instigator of the assassination a year before of Capt. Janssens and the sergeant and 38 soldiers who accompanied him. In the delimitation between French and Free State territory on the Mobangi Bungasso and his numerous tribe, formerly firm friends of the Congo State, and afterward infected with the spirit of rebellious discontent, were handed over to France. The Congo State still maintained its advanced post of Dongu, on the upper Welle, a fortified camp, where there were 65 Europeans. When the British advance was made up the Nile to Dongola, Baron Dhanis strengthened his forces in this district and on the upper Congo, and was said to be preparing an expedition against the dervishes, or for the occupation of the district on the upper Nile that was leased to the Congo State by agreement with Great Britain. Large supplies of ammunition and cannon, including a battery of Maxims and 6 Krupp guns, were collected at Stanley Falls, whence 1,000 men marched in June to Kilongalanga in the direction of Lake Albert Edward and the Nile.

CONGREGATIONALISTS. The summary of the statistics of the Congregational churches in the United States as given in the "Congregational Yearbook" for 1896 is as follows: Number of churches, 5,482, of which 4,186 are supplied and 1,296 "vacant"; of ministers, 5,347, of whom 3,588 are in pastoral work and 1,759 "without charge"; of church members, 602,557; of additions during the year on confession, 35,327; of baptisms during the year, 15,943 of adults and 12,047 of infants; of members of Sunday schools, 682,580, representing 413,167 families, and giving an average attendance of \$418,146; of Young People's Societies of Christian Endeavor, 3,825, with 219,112 members. Amount of benevolent contributions (4,510 churches reporting): For foreign missions, \$444,643; for education, \$191,299; for church building, \$75,131; for home missions, \$581,316; for the American Missionary Association, \$142,624; for Sunday schools, \$57,319; for ministerial aid, \$25,557; other contributions, \$669,261; making a total, as footed up in the tables, of \$2,187,050. Contributions for home expenditures (4,715 churches reporting), \$6,707,613.

The 7 theological seminaries (Andover, Bangor, Chicago, Hartford, Oberlin, Pacific, and Yale) return 63 professors, 20 instructors or lecturers, 19

resident licentiates or fellows, 24 members of advanced or graduate classes, and 460 undergraduate students. Among the undergraduates are 108 special students, of whom 7 are in German, 12 in Dano-Norwegian, 34 in Swedish, and 9 in Slavic departments.

The Congregational Education Society (organized in 1816) purposes to aid, to the maximum amount of \$75 each per year, needy and worthy students. Many of these afterward refund the sums that have been advanced to them. More than 8,000 students have been its beneficiaries. About 330 regular students were aided in 1895, together with about 50 of foreign birth who were preparing to be home missionaries to their own people in the United States. The Slavic department of Oberlin Seminary, which has been receiving \$3,000 a year from this society, has furnished 15 graduates who are pastors and missionaries. The society also assists in the support of teachers in 9 home missionary colleges and 17 academies in the West and South, appropriating to each college from \$1,500 to \$5,000 and to each academy from \$500 to \$1,500 a year. The institutions are required to raise the rest of their current expenses in their home fields. Aid has been given to 27 colleges that are now strong and prosperous: Salt Lake College in Utah, a training school at El Paso, Texas, in 1895 4 academies, and 10 mission schools were supported with total appropriations of \$22,000 in the New West Education department. The year's receipts of the society were \$142,100, and the expenditures \$138,354.

The American Congregational Association added in 1895 898 books, 603 pamphlets, and 1,229 unbound numbers of periodicals to its library in the Congregational House, Boston, making the total numbers in the collection 38,567 books, 34,459 pamphlets, and 47,004 periodicals, not including unbound newspapers. The Congregational House is valued at \$501,000, with indebtedness of \$142,000, the debt having been reduced \$4,000 during the year.

The Congregational Church Building Society received in 1895 \$141,567, of which \$36,808 were from grants and loans refunded. It paid \$113,560 on account of houses of worship (129 churches), and \$18,500 on account of 42 parsonages.

The available increase of the Congregational Sunday-school and Publishing Society for 1895 was \$67,836. It aided during the same year in the organization of 565 Sunday schools; and 50 Congregational churches grew out of schools organized by its missionaries.

The Ministerial Relief fund of the National Congregational Council was started by a bequest of \$10,000, and has grown to be more than \$90,000.

Home Missionary Society.—The seventieth annual meeting of the Congregational Home Missionary Society was held in New Haven, Conn., in June. The total income of the society for the year had been \$788,818, and the expenditures \$708,378, while the debt had been reduced from \$132,140 to \$51,700. Missions were sustained in all the States and Territories of the United States except Delaware, Virginia, South Carolina, Mississippi, and Kentucky. Two thousand and sixty-three laborers had been employed, of whom 1,125 were pastors of stated supplies of single congregations, 645 had charge of two or more congregations, and 293 carried on still more extended work; and under their care 4,110 congregations and districts had been supplied with regular preaching. Sixty-four of these missionaries had preached to German congregations, 94 to Scandinavians, 24 to Bohemians, 11 to French, 4 to Polish congregations, 1 to Mexican, 2 to Italian, 3 to Spanish, 3 to Finnish, 2 to Danish, 3 to Armenian, 1 to Greek, and 6 to Welsh. Twenty-four

hundred and eighty-three Sunday schools were under the special care of the missionaries, with a total membership of about 186,343. One hundred and twenty-three churches had been organized, 24 had become entirely self-supporting, 96 houses of worship had been completed, and 162 had been materially repaired or improved.

American Missionary Associations.—The fiftieth annual meeting of the American Missionary Association was held at Boston, Mass., Oct. 20, 21, and 22, and was marked by services and addresses appropriate to the jubilee of the society. The treasurer reported that the total receipts of the society had been \$340,798, and the expenditures \$311,223. The debt, which was \$96,148 at the beginning of the year, had been reduced to \$66,572. Two hundred and fifty dollars had been received for the endowment fund. The executor of the Daniel Hand estate had paid over to the association during the year securities having the face value of \$305,025, the income of which only is to be used for the education of colored youth. Of the income of this fund, \$74,769 had been available for use, of which \$70,567 had been used. Adding these special receipts for the endowment fund and from the income of the Daniel Hand fund, the aggregate income of the society for the year had been \$409,879. The sum of \$29,021 had been received from women's societies, the largest amount contributed in any year. Since its organization in 1833, the Bureau of Women's Work, representing these societies, had paid into the treasury of the association the sum of \$229,000. The expenditures of the association for the past year had been, in consequence of the necessity of retrenching, \$75,000 less than those of 1893. The six chartered institutions, 43 normal and graded schools, and 27 common schools in the South returned 413 instructors and 12,449 pupils. Of these, 81 were theological, 66 collegiate, 254 collegiate preparatory, and 1,428 normal students. Included in these schools were 19 mountain schools, with 2,405 pupils. Thousands of negroes in these Southern schools, the report says, "have established their capacity to take on a generous education, and of these a fair proportion have risen to positions where they are proving their right to teachership and leadership, often under most adverse conditions." Two of the institutions planted by the association—Hampton Institute and Atlanta University—have become independent, and are now wholly under the care of their own trustees. The Church work of the association in the South is represented by 218 churches, served by 127 ministers and missionaries, with 10,708 members. Fifty-six of these churches are "mountain churches," with 1,601 members. Six had been added to the list of mountain churches. The work among the Indians comprises 15 churches, with 929 members, 82 missionaries and teachers, 21 schools, with 520 pupils, and 26 missionary out stations. The progress of the work in the out stations had been remarkable. Indians, young men and women, trained in the schools of the association, had entered with devotion and heroism upon the mission work in many Indian villages. Alaska mission, Cape Prince of Wales, Alaska, which had been temporarily closed, had been reopened. Nineteen schools were maintained among the Chinese, with 32 teachers (including 11 Chinese) and 893 pupils. The number of Christian Chinese was 337; 166 had given evidence of conversion, and 42 had made profession of faith during the year. The Chinese Missionary Society, composed of persons who had been converted in Christian missions, which was organized in 1886 and began work in China in 1890, had already contributed \$15,000 to missions in that country. It has church property at Hong-Kong valued at \$9,250, head-

quarters at Canton valued at \$4,000, and leased property at Ci-Ning City. Through its missionaries, the Gospel had been preached to more than 300,000 people in China.

Under a State law prohibiting the teaching of white and colored pupils in the same classes and the residence of white and colored teachers and pupils in the same houses, six teachers and the pastor of the church, who taught Bible classes, and two patrons of the school of the association, at Orange Park, Fla., were arrested April 10, and held for trial. The school was necessarily closed. A telegram was received from Orange Park during the meeting of the association, announcing that the law under which these persons were prosecuted had been declared unconstitutional by the local court. Preparations were at once made for reopening the school.

American Board.—The eighty-seventh annual meeting of the American Board of Commissioners for Foreign Missions was held in Toledo, Ohio, beginning Oct. 6. The Rev. Richard S. Storrs, D. D., presided. The financial report showed that the total receipts for the year ending Aug. 31 had been \$743,104, and the expenditures, besides what had been applied to the payment of the debt, \$627,069. The committee appointed at the previous meeting of the board to obtain contributions and pay the debt, which amounted in 1895 to \$114,623, reported concerning the method it had adopted of apportioning definite parts of the amounts to be raised to different sections of the country, and reducing expenses to the lowest possible figures, by means of which, with the aid of certain individual contributions, \$131,246 had been obtained. In this effort the salaries of all men missionaries, except in Asiatic Turkey, had been reduced 10 per cent., and \$50,000 had been saved by cutting down native work. While the debt was extinguished, the amount obtained was not enough to restore the appropriations. The general summary of the missions gives the following aggregates: Number of missions, 20; of stations, 102; of out stations, 1,190; of places for stated preaching, 1,420; average congregations, 71,449; number of ordained missionaries (16 of whom are physicians), 178; of men physicians not ordained, 13; of other men assistants, 6; of women, 6 of whom are physicians (wives, 179; unmarried, 177), 356; whole number of laborers sent from the United States, 553; number of native pastors, 227; of native preachers and catechists, 561; of native school-teachers, 1,667; of other native laborers, 496; total of native laborers, 2,951; total of American and native laborers, 3,504; of churches, 471; of church members, 43,043; added during the year, 2,957; whole number from the first, as nearly as can be learned, 134,871; number of theological seminaries and station classes, 18, with 260 pupils; of colleges and high schools for young men, 59, with 4,171 pupils; of boarding schools for girls, 61; with 3,579 pupils; of common schools, 922, with 42,152 pupils; whole number under instruction, 52,619; amount of native contributions, so far as reported, \$107,509. Owing to the incomplete returns from the missions in Asiatic Turkey, the items from those missions in reference to churches and native agencies were given in the tables as reported in the previous year. In the "Annual Survey of the Work of the Board" reference was made to the importance of the work of training a native ministry for the Hawaiian and Micronesian Islands carried on at the North Pacific Institute, Hawaii. The political difficulties at Ponape had not crushed out the power of the churches and schools there. A strong reaction toward heathenism was mentioned in the Gilbert Islands, but there were "happy exceptions." A marked development of the pastorate

and of the principle of self-support and other encouraging features were observed in the Zulu mission. The work in central and western Turkey was contemplated with mingled fear and hope. The report as to eastern Turkey referred specially to the large number of pastors, teachers, preachers, and believers who had suffered martyrdom and to other features resulting from the persecutions there. In Japan the property of the Doshisha, though paid for by the mission, being vested by law in the Japanese trustees, had had to be given up. Otherwise the reports showed an advance. The Kumi-ai churches were revising their rolls, dropping the names of many who had ceased to be interested in Christianity; but the sale of 250,000 copies of the Scriptures, or of parts of them, showed that the nation was earnest in the study of the Bible. The features of the missions in West and Central Africa, China, and India, were generally favorable. A special address was made to the meeting by the Hon. Everett P. Wheeler on "The Duty of the United States to American Citizens in Turkey." Resolutions were adopted describing the situation of the missions of the board in Turkey and their suffering from persecution, and urging the President of the United States to take immediate measures for the security of American consuls in that empire, and at once and peremptorily demand indemnity for the wrongs that had been inflicted upon Americans. Other resolutions approved of the withdrawal of the missionaries in Japan from the Doshisha, asserted the moral claim of the mission upon its property, lamented the attitude which its trustees had adopted toward the Christian religion, and advised the continuance of the working force of the mission, to be increased rather than diminished, and earnest co-operation with the Kumi-ai churches.

British Congregationalists.—The statistical summary prepared for the "Congregational Year-book" for 1896 showed that there were in England, Wales, and the Channel Islands Union 4,428 churches, branch churches, and mission stations, with 1,625,865 sittings, an increase from the previous year of 13,143. The addition of 166 stations, known to be supported by individual churches, would make the number 4,594, a number to be still further increased to 4,816 by additions from Scotland, Ireland, and the British Isles. Of the 2,816 ministers in England and Wales, 127 were temporarily without pastoral charge, 74 were engaged in collegiate and tutorial duties, 42 were occupied in the work of secretaries, and 327 were retired. The vacant churches in England and Wales numbered 265. The colleges and institutions for ministerial training in England and Wales were attended by 386 students.

Statistical returns made to the Congregational Union of Wales at its meeting in July show that the number of churches in the principality is 1,030; of communicants, 136,736; of pupils in Sunday schools, 135,461; and of members of congregations, 267,949; value of denominational property, £1,284,408; seating capacity of chapels, 353,569; total amount of collections, £146,854.

The sixty-fourth annual spring assembly of the Congregational Union of England and Wales was held in London, May 11. The Rev. J. Morgan Jones presided. The annual report of the committee recorded votes passed against further endowment of sectarian schools out of taxes or rates, and in favor of peace with the United States; a correspondence with a representative of the Congregational churches of the United States with reference to the proposed second International Council of Congregationalists to be held at Boston, Mass., in 1899; and mentioned a visit made by a deputation of the Union to Jamaica, by which an

important service was rendered. A revision of the constitution was acted upon, and many important amendments were adopted. Among them was a provision for accepting two or more invitations for the holding of the autumnal assembly, under the operation of which the meeting would be split up into two or more sectional assemblies. A resolution was adopted affirming numerous objections to the education bill proposed in Parliament, and pledging the assembly "not only to resist the measure by every legitimate means, but also to maintain the struggle until the national educational system ceases to be made a means of promoting sectarian interests." Another resolution favored the creation of a permanent court of arbitration for settling difficulties between Great Britain and the United States, and deplored the raid of Dr. Jamieson into the Transvaal and the march into the Sudan.

The report of the Congregational Church Aid Society showed a greatly improved financial condition. The deficit of £1,500 of the previous year had been removed, and applications for £3,181 had been granted, the country unions asking aid themselves proposing to raise in addition £5,487. Stipulations were required that the minimum stipend of pastors of aided churches should be £80 in England and £70 in Wales.

The Union met in its autumnal session at Leicester, Sept. 29. A resolution was passed in reference to the completion of a term in the reign of Queen Victoria exceeding in duration the longest reign of any British sovereign, congratulating her Majesty upon the event; expressing the conviction that the reign would also rank as the most brilliant in English history; making "grateful acknowledgment that its blessings have largely been the direct consequences of the Queen's own personal character and conduct"; and assuring her Majesty of continued Congregational devoted loyalty. A letter of greeting was received from the Bishop of Peterborough, to which the Union replied, acknowledging the courtesy, and adding: "In heartily reciprocating its (the letter's) generous sentiments, we have no fear that our mutual attitudes may be mistaken. We are separated by convictions which neither of us can compromise; but underneath them all is the spirit of unity, which is the bond of peace. We regard it as of supreme importance in an age when the Gospel has to face the ordeal of such fierce criticism that the essential unity of the Christian Church should be manifest. We feel that the interchange of courtesies is one of the best signs of true catholicity; and we are grateful to your lordship for affording us an opportunity to express the feelings with which we regard you and the Church of which you are so distinguished a representative." The resolution also embodied a recognition of the scholarship, zeal, and broad-mindedness of the bishop and of the activity of his Church in Christian work. The resolution on education expressed gratification over the withdrawal of the education bill from Parliament; recognized the services of men of all parties who had united in exposing its "obnoxious features and injurious proposals"; renewed the protest of the Union against "the state endowment of sectarianism by grants to denominational schools, either from taxes or rates without any adequate popular control"; urged all members "to use the utmost vigilance in resisting any renewed attempts to destroy or even discourage the school-board system, to lower the standard of education, or interfere with the freedom and *status* of the teachers, or to introduce sacerdotalism or any other form of sectarianism into the state-aided schools; and pledged the Union to put forth every effort to secure a truly efficient national system of education by which a

free and unsectarian school, under popular control, may be, as far as practicable, placed within reasonable distance of every child in the kingdom."

The John Robinson Memorial Church, at Gainesborough, for which about £4,000 were still needed, was commended to the sympathy and liberality of the Congregational churches of England and the United States. The subjects were discussed of "Responsibility with regard to Church Aid," "Congregational Intercommunion," "Worship," and, in special meetings, questions with regard to missions, woman's work, and Sunday schools. It was represented that the Church Aid Society had, to a large extent, accomplished its purpose of securing a minimum stipend for ministers of £80 in England and £70 in Wales. Three hundred and twenty-one churches were receiving aid in the aided unions. The society had this year appropriated £3,600 to its work. The reports of the Congregational Total Abstinence Society showed that it was extending its operations, and that of 2,950 Congregational ministers, 2,312 were total abstainers; 95 per cent. of the Congregational Unionists in Scotland, every minister in Ireland, and every theological student in Scotland and Ireland and 95 per cent. of those in England had adopted the principles of the society.

London Missionary Society.—The one hundred and first annual meeting of the London Missionary Society was held May 1. The year's receipts from all sources and for all purposes were reported as having been £190,906. Of this amount £49,202 had been received in contributions toward the special Centenary fund, leaving as the income of the society for ordinary purposes £141,704, against £139,822 in the previous year. These sums include the amounts raised and expended upon the mission field. Deducting these amounts, the actual free home contributions for the society's missionary work were £123,087, against £111,368 in the previous year. The expenditure had been £10,610 less than in 1894—chiefly because the society's expenditures for various reasons had been unusually large in several directions in that year. It had, however, been thought wise to decline every request for enlarged help to current work, however reasonable, and to defer every grant for buildings, except such as was absolutely necessary to keep property in repair. The gross amount promised in subscriptions to the Centenary fund was £102,190, of which £88,091 had been received. The directors had determined to apply £42,555 of the fund to the account of the accumulated debt of the past three years; £25,000 for the provision of a fund for the erection of missionary buildings—of which £5,000 were to be immediately used; and hoped that a further sum of not less than £30,000 would be available for the augmentation of the working capital of the society. Acting upon the recommendations made by the special committee appointed to consider what diminutions could be made in the society's expenditure to bring it into closer approximation with the income, a fixed scale of reductions had been applied in the allowances for 1896 on all grants for mission work in India and south China, resulting in a present saving to the society of about £2,000 a year.

Union with the Scottish Evangelical Union.—The proposed terms of union with the Evangelical Union of Scotland were vigorously debated at the meeting of the Scottish Congregational Union, the opponents of the measure basing their attitude on the ground of the doctrinal statement embodied in the articles. This was regarded as implying a creed and being in violation of the Congregational principle, or of the principle of independency, that every man should think for himself, with the Bible as his only text-book. Finally, the resolution—that

in view of the judgment of the churches of the Congregational Union and of the motions adopted by the last conference of the Evangelical Union, the meeting agree to unite with the latter body—was adopted, 144 voting in favor of it, 33 in favor of the alternative motion—that no further proceedings be taken in the matter—and 20 maintaining a neutral position. A protest was lodged on behalf of the minority, declaring that the carrying out of the resolution would involve a secession from the Congregational Union, in which case the seceding churches would claim a right to all the assets and estates, powers, and privileges of the Congregational Union of Scotland.

The conference of the Evangelical Union, meeting in Glasgow, Oct. 28, decided by a vote of 140 to 14 that in view of the judgment of the two churches in favor of union, it thereby decide to unite with the churches of the Congregational Union under the name of "the Congregational Union of Scotland, comprising the Evangelical Union and the Congregational Union existing in 1896."

CONGRESS OF THE UNITED STATES. The first session of the Fifty-fourth Congress began Dec. 2, 1895.

The Senate was composed as follows, the date preceding each name marking the year in which the term expires, and the letter following indicating the Senator's politics:

<i>Alabama.</i>		<i>Maine.</i>	
1897. James L. Pugh, D.		1899. Eugene Hale, R.	
1901. John T. Morgan, D.		1901. William P. Frye, R.	
<i>Arkansas.</i>		<i>Maryland.</i>	
1897. James K. Jones, D.		1897. Charles H. Gibson, D.	
1901. James H. Berry, D.		1899. Arthur P. Gorman, D.	
<i>California.</i>		<i>Massachusetts.</i>	
1897. George C. Perkins, R.		1899. Henry C. Lodge, R.	
1899. Stephen M. White, D.		1901. George F. Hoar, R.	
<i>Colorado.</i>		<i>Michigan.</i>	
1897. Henry M. Teller, R.		1899. Julius C. Burrows, R.	
1901. Edward O. Wolcott, R.		1901. James McMillan, R.	
<i>Connecticut.</i>		<i>Minnesota.</i>	
1897. Orville H. Platt, R.		1899. Cushman K. Davis, R.	
1899. Joseph R. Hawley, R.		1901. Knute Nelson, R.

Frank W. Mondell, R.

The Territorial Delegates were as follow:

Arizona—Nathan O. Murphy, R.
New Mexico—Thomas B. Catron, R.
Oklahoma—Dennis T. Flynn, R.
Utah—Frank J. Cannon, R.

Of the members originally elected to the Fifty-fourth Congress, Myron B. Wright (Fifteenth Pennsylvania District), Andrew J. Campbell (Tenth New York), Philip S. Post (Tenth Illinois), William Cogswell (Sixth Massachusetts), F. Remann (Eighteenth Illinois), died before the first session began; and Julius C. Burrows, of the Third Michigan, and James C. C. Black, of the Tenth Georgia, resigned; the former to become Senator, and the latter to stand a second election.

Charles L. Boatner (Louisiana), James E. Cobb (Alabama), E. Finis Downing (Illinois), William Elliott (South Carolina), James A. Lockhart (North Carolina), Lawrence E. McGann (Illinois), William R. McKenney (Virginia), Gaston A. Robbins (Alabama), William J. Stokes (South Carolina), John C. Tarsney (Missouri), O. W. Underwood (Alabama), and James J. Walsh (New York) were unseated.

Seats were conceded to Truman H. Aldrich (Alabama), William F. Aldrick (Alabama), Hugh R. Belknap (Illinois), Albert F. Goodwyn (Alabama), Charles H. Martin (North Carolina), Mitchell J. Murray (New York), George W. Murray (South Carolina), John I. Rinaker (Illinois), R. T. Thorp (Virginia), Robert T. Van Horn (Missouri).

William H. Crain, of Texas, died and was succeeded by Rudolph Kleberg. Frank J. Cannon was elected Senator.

After the roll call the House proceeded to the election of a Speaker, and Thomas B. Reed, of Maine, was chosen, receiving 240 votes to 95 for Mr. Crisp, of Georgia, 6 for John C. Bell, of Colorado, and 1 for D. B. Culbertson, of Texas.

On taking the oath of office as Speaker, Mr. Reed said:

"Gentlemen of the House of Representatives: It will not be unbecoming in me, I hope, if I acknowledge to this assembly that it is very agreeable to me to stand once more in the place which I left four years ago. Of the past, however, I shall not speak, for the past speaks for itself in terms more fitting and appropriate than any words which could come from my lips. Nor shall I speak of the future, for we are not now putting off the harness, but putting it on. Yet I think I may venture to say of the future, in the light of the past, that if we do some things which for the moment seem inadequate, it may be that time, which has justified itself of us on many occasions, may do so again. Those who have acted with wisdom heretofore may be fairly expected to act with wisdom hereafter.

"I am sorry to say that the pleasure associated with the honor you have bestowed on me, an honor which no American citizen can fail to appreciate, and for which I give thanks, is but for the moment, while the cares and responsibilities extend over many days.

"So far as the performance of my duties affects the whole people of the United States, I invoke their considerate judgment. So far as it affects the members of this House, I ask from both sides of the Chamber that cordial co-operation without which I can not hope to succeed, assuring them that no effort on my part will be spared to aid them

in the performance of their duties by that entire impartiality which is their just due."

The following other officers were chosen to complete the organization: Alexander McDowell, of Pennsylvania, Clerk; Benjamin F. Russell, of Missouri, Sergeant-at-Arms; William J. Glenn, of New York, Doorkeeper; Joseph C. McElroy, of Ohio, Postmaster; Henry M. Couden, of Michigan, Chaplain.

The President's Message.—Dec. 3, the President sent in his annual message as follows:

To the Congress of the United States:

The present assemblage of the legislative branch of our Government occurs at a time when the interests of our people and the needs of the country give especial prominence to the condition of our foreign relations and the exigencies of our national finances. The reports of the heads of the several administrative departments of the Government fully and plainly exhibit what has been accomplished within the scope of their respective duties and present such recommendations for the betterment of our country's condition as patriotic and intelligent labor and observation suggest.

I therefore deem my executive duty adequately performed at this time by presenting to the Congress the important phases of our situation as related to our intercourse with foreign nations, and a statement of the financial problems which confront us, omitting, except as they are related to these topics, any reference to departmental operations.

I earnestly invite, however, not only the careful consideration, but the severely critical scrutiny of the Congress and my fellow-countrymen to the reports concerning these departmental operations. If justly and fairly examined they will furnish proof of assiduous and painstaking care for the public welfare. I press the recommendations they contain upon the respectful attention of those charged with the duty of legislation, because I believe their adoption would promote the people's good.

By amendatory tariff legislation in January last, the Argentine Republic, recognizing the value of the large market opened to the free importation of its wools under our last tariff act, has admitted certain products of the United States to entry at reduced duties. It is pleasing to note that the efforts we have made to enlarge the exchanges of trade on a sound basis of mutual benefit are in this instance appreciated by the country from which our woolen factories draw their needful supply of raw material.

The missions boundary dispute between the Argentine Republic and Brazil, referred to the President of the United States as arbitrator during the term of my predecessor, and which was submitted to me for determination, resulted in an award in favor of Brazil upon the historical and documentary evidence presented, thus ending a long-protracted controversy, and again demonstrating the wisdom and desirability of settling international boundary disputes by recourse to friendly arbitration.

Negotiations are progressing for a revival of the United States and Chilean Claims Commission, whose work was abruptly terminated last year by the expiration of the stipulated time within which awards could be made.

The resumption of specie payments by Chili is a step of great interest and importance both in its direct consequences upon her own welfare and as evincing the ascendancy of sound financial principles in one of the most influential of the South American Republics.

The close of the momentous struggle between China and Japan, while relieving the diplomatic

agents of this Government from the delicate duty they undertook at the request of both countries of rendering such service to the subjects of either belligerent within the territorial limits of the other as our neutral position permitted, developed a domestic condition in the Chinese Empire which has caused much anxiety and called for prompt and careful attention. Either as a result of a weak control by the Central Government over the provincial administrations, following a diminution of traditional governmental authority under the stress of an overwhelming national disaster, or as a manifestation upon good opportunity of the aversion of the Chinese population to all foreign ways and undertakings, there have occurred in widely separated provinces of China serious outbreaks of the old fanatical spirit against foreigners, which, unchecked by the local authorities, if not actually connived at by them, have culminated in mob attacks on foreign missionary stations, causing much destruction of property and attended with personal injuries as well as loss of life.

Although but one American citizen was reported to have been actually wounded, and although the destruction of property may have fallen more heavily upon the missionaries of other nationalities than our own, it plainly behooved this Government to take the most prompt and decided action to guard against similar or perhaps more dreadful calamities befalling the hundreds of American mission stations which have grown up throughout the interior of China under the temperate rule of toleration, custom, and imperial edict. The demands of the United States and other powers for the degradation and punishment of the responsible officials of the respective cities and provinces who by neglect or otherwise had permitted uprisings, and for the adoption of stern measures by the Emperor's Government for the protection of the life and property of foreigners, were followed by the disgrace and dismissal of certain provincial officials found derelict in duty and the punishment by death of a number of those adjudged guilty of actual participation in the outrages.

This Government also insisted that a special American commission should visit the province where the first disturbances occurred, for the purpose of investigation. This latter commission, formed after much opposition, has gone overland from Tientsin, accompanied by a suitable Chinese escort, and by its demonstration of the readiness and ability of our Government to protect its citizens, will act, it is believed, as a most influential deterrent of any similar outbreaks.

The energetic steps we have thus taken are all the more likely to result in future safety to our citizens in China, because the Imperial Government is, I am persuaded, entirely convinced that we desire only the liberty and protection of our own citizens and redress for any wrongs they may have suffered, and that we have no ulterior designs or objects, political or otherwise. China will not forget either our kindly service to her citizens during her late war nor the further fact that, while furnishing all the facilities at our command to further the negotiations of peace between her and Japan, we sought no advantages and interposed no counsel.

The governments of both China and Japan have in special dispatches transmitted through their respective diplomatic representatives expressed in a most pleasing manner their grateful appreciation of our assistance to their citizens during the unhappy struggle, and of the value of our aid in paving the way to their resumption of peaceful relations.

The customary cordial relations between this country and France have been undisturbed, with the exception that a full explanation of the treat-

ment of John L. Waller by the expeditionary military authorities of France still remains to be given. Mr. Waller, formerly United States consul at Tamatave, remained in Madagascar after his term of office expired, and was apparently successful in procuring business concessions from the Hovas of greater or less value. After the occupation of Tamatave and the declaration of martial law by the French he was arrested upon various charges, among them that of communicating military information to the enemies of France, was tried and convicted by a military tribunal, and sentenced to twenty years' imprisonment.

Following the course justified by abundant precedents, this Government requested from that of France the record of the proceedings of the French tribunal which resulted in Mr. Waller's condemnation. This request has been complied with to the extent of supplying a copy of the official record, from which appear the constitution and organization of the court, the charges as formulated, and the general course and result of the trial, and by which it is shown that the accused was tried in open court and was defended by counsel. But the evidence adduced in support of the charges—which was not received by the French Minister for Foreign Affairs till the first week in October—has thus far been withheld, the French Government taking the ground that its production in response to our demand would establish a bad precedent. The efforts of our ambassador to procure it, however, though impeded by recent changes in the French ministry, have not been relaxed, and it is confidently expected that some satisfactory solution of the matter will shortly be reached. Meanwhile it appears that Mr. Waller's confinement has every alleviation which the state of his health and all the other circumstances of the case demand or permit.

In agreeable contrast to the difference above noted respecting a matter of common concern where nothing is sought except such a mutually satisfactory outcome as the true merits of the case require, is the recent resolution of the French Chambers favoring the conclusion of a permanent treaty of arbitration between the two countries.

An invitation has been extended by France to the Government and people of the United States to participate in a great international exposition at Paris in 1900, as a suitable commemoration of the close of this the world's marvelous century of progress. I heartily recommend its acceptance, together with such legislation as will adequately provide for a due representation of this Government and its people on the occasion.

Our relation with the states of the German Empire are, in some aspects, typical of a condition of things elsewhere found in countries whose productions and trade are similar to our own. The close rivalries of competing industries; the influence of the delusive doctrine that the internal development of a nation is promoted and its wealth increased by a policy which, in undertaking to reserve its home markets for the exclusive use of its own producers, necessarily obstructs their sales in foreign markets and prevents free access to the products of the world; the desire to retain trade in time-worn ruts, regardless of the inexorable laws of new needs and changed conditions of demand and supply, and our own halting tardiness in inviting a freer exchange of commodities and by this means imperiling our footing in the external markets naturally open to us, have created a situation somewhat injurious to American export interests, not only in Germany, where they are perhaps most noticeable, but in adjacent countries. The exports affected are largely American cattle and other food products, the reason assigned for unfavorable discrimination

being that their consumption is deleterious to the public health. This is all the more irritating in view of the fact that no European state is as jealous of the excellence and wholesomeness of its exported food supplies as the United States, nor so easily able, on account of inherent soundness, to guarantee those qualities.

Nor are these difficulties confined to our food products designed for exportation. Our great insurance companies, for example, having built up a vast business abroad and invested a large share of their gains in foreign countries in compliance with the local laws and regulations then existing, now find themselves within a narrowing circle of onerous and unforeseen conditions, and are confronted by the necessity of retirement from a field thus made unprofitable, if indeed they are not summarily expelled, as some of them have lately been from Prussia.

It is not to be forgotten that international trade can not be one-sided. Its currents are alternating and its movements should be honestly reciprocal. Without this it almost necessarily degenerates into a device to gain advantage or a contrivance to secure benefits with only the semblance of a return. In our dealings with other nations we ought to be open-handed and scrupulously fair. This should be our policy as a producing nation, and it plainly becomes us as a people who love generosity and the moral aspects of national good faith and reciprocal forbearance.

These considerations should not, however, constrain us to submit to unfair discrimination nor to silently acquiesce in vexatious hindrances to the enjoyment of our share of the legitimate advantages of proper trade relations. If an examination of the situation suggests such measures on our part as would involve restrictions similar to those from which we suffer, the way to such a course is easy. It should, however, by no means be lightly entered upon, since the necessity for the inauguration of such a policy would be regretted by the best sentiment of our people, and because it naturally and logically might lead to consequences of the gravest character.

I take pleasure in calling to your attention the encomiums bestowed on those vessels of our new navy which took part in the notable ceremony of the opening of the Kiel Canal. It was fitting that this extraordinary achievement of the newer German nationality should be celebrated in the presence of America's exposition of the latest developments of the world's naval energy.

Our relations with Great Britain, always intimate and important, have demanded during the past year even a greater share of consideration than is usual.

Several vexatious questions were left undetermined by the decision of the Bering Sea Arbitration Tribunal. The application of the principles laid down by that august body has not been followed by the results they were intended to accomplish, either because the principles themselves lacked in breadth and definiteness, or because their execution has been more or less imperfect. Much correspondence has been exchanged between the two governments on the subject of preventing the exterminating slaughter of seals. The insufficiency of the British patrol of Bering Sea, under the regulations agreed on by the two governments, has been pointed out, and yet only two British ships have been on police duty during this season in those waters.

The need of a more effective enforcement of existing regulations, as well as the adoption of such additional regulations as experience has shown to be absolutely necessary to carry out the intent of the

award, have been earnestly urged upon the British Government, but thus far without effective results. In the meantime the depletion of the seal herds by means of pelagic hunting has so alarmingly progressed that unless their slaughter is at once effectively checked their extinction within a few years seems to be a matter of absolute certainty.

The understanding by which the United States was to pay, and Great Britain to receive, a lump sum of \$425,000 in full settlement of all British claims for damages arising from our seizure of British sealing vessels unauthorized under the award of the Paris Tribunal of Arbitration, was not confirmed by the last Congress, which declined to make the necessary appropriation. I am still of the opinion that this arrangement was a judicious and advantageous one for the Government, and I earnestly recommend that it be again considered and sanctioned. If, however, this does not meet with the favor of Congress, it certainly will hardly dissent from the proposition that the Government is bound by every consideration of honor and good faith to provide for the speedy adjustment of these claims by arbitration as the only other alternative. A treaty of arbitration has therefore been agreed upon, and will be immediately laid before the Senate, so that in one of the modes suggested a final settlement may be reached.

Notwithstanding that Great Britain originated the proposal to enforce international rules for the prevention of collisions at sea, based on the recommendations of the Maritime Conference of Washington, and concurred in suggesting March 1, 1895, as the date to be set by proclamation for carrying these rules into general effect, her Majesty's Government, having encountered opposition on the part of British shipping interests, announced its inability to accept that date, which was consequently canceled. The entire matter is still in abeyance, without prospect of a better condition in the near future.

The commissioners appointed to mark the international boundary in Passamaquoddy Bay according to the description of the Treaty of Ghent, have not yet fully agreed.

The completion of the preliminary survey of that Alaskan boundary which follows the contour of the coast from the southernmost point of Prince of Wales island until it strikes the one hundred and forty-first meridian at or near the summit of Mount St. Elias awaits further necessary appropriation, which is urgently recommended. This survey was undertaken under the provisions of the convention entered into by this country and Great Britain July 22, 1892, and the supplementary convention of Feb. 3, 1894.

As to the remaining section of the Alaskan boundary, which follows the one hundred and forty-first meridian northwardly from Mount St. Elias to the Frozen Ocean, the settlement of which involves the physical location of the meridian mentioned, no conventional agreement has yet been made. The ascertainment of a given meridian at a particular point is a work requiring much time and careful observations and surveys. Such observations and surveys were undertaken by the United States Coast and Geodetic Survey in 1890 and 1891, while similar work in the same quarters under British auspices are believed to given early coincident results; but these surveys have been independently conducted, and no international agreement to mark those or any other parts of the one hundred and forty-first meridian by permanent monuments has yet been made. In the meantime the Valley of the Yukon is becoming a highway through the hitherto unexplored wilds of Alaska, and abundant mineral wealth has been discovered in that region, especially

at or near the junction of the boundary meridian with the Yukon and its tributaries. In these circumstances it is expedient, and, indeed, imperative, that the jurisdictional limits of the respective governments in this new region be speedily determined. Her Britannic Majesty's Government has proposed a joint delimitation of the one hundred and forty-first meridian by an international commission of experts, which, if Congress will authorize it and make due provision therefor, can be accomplished with no unreasonable delay. It is impossible to overlook the vital importance of continuing the work already entered upon, and supplementing it by further effective measures looking to the exact location of this entire boundary line.

I call attention to the unsatisfactory delimitation of the respective jurisdictions of the United States and the Dominion of Canada in the Great Lakes at the approaches to the narrow waters that connect them. The waters in question are frequented by fishermen of both nationalities and their nets are there used. Owing to the uncertainty and ignorance as to the true boundary, vexatious disputes and injurious seizures of boats and nets by Canadian cruisers often occur, while any positive settlement thereof by an accepted standard is not easily to be reached. A joint commission to determine the line in those quarters, on a practical basis, by measured courses following range marks on shore, is a necessity for which immediate provision should be made.

It being apparent that the boundary dispute between Great Britain and the Republic of Venezuela concerning the limits of British Guiana was approaching an acute stage, a definite statement of the interest and policy of the United States as regards the controversy seemed to be required both on its own account and in view of its relations with the friendly powers directly concerned. In July last, therefore, a dispatch was addressed to our ambassador at London for communication to the British Government, in which the attitude of the United States was fully and distinctly set forth. The general conclusions therein reached and formulated are in substance that the traditional and established policy of this Government is firmly opposed to a forcible increase by any European power of its territorial possessions on this continent; that this policy is as well founded in principle as it is strongly supported by numerous precedents; that as a consequence the United States is bound to protest against the enlargement of the area of British Guiana in derogation of the rights and against the will of Venezuela; that considering the disparity in strength of Great Britain and Venezuela, the territorial dispute between them can be reasonably settled only by friendly and impartial arbitration, and that the resort to such arbitration should include the whole controversy, and is not satisfied if one of the powers concerned is permitted to draw an arbitrary line through the territory in debate, and declare that it will submit to arbitration only the portion lying on one side of it. In view of these conclusions, the dispatch in question called upon the British Government for a definite answer to the question whether it would or would not submit the territorial controversy between itself and Venezuela in its entirety to impartial arbitration. The answer of the British Government has not yet been received, but is expected shortly, when further communication on the subject will probably be made to the Congress.

Early in January last an uprising against the Government of Hawaii was promptly suppressed. Martial law was forthwith proclaimed and numerous arrests were made of persons suspected of being in sympathy with the Royalist party. Among these

were several citizens of the United States, who were either convicted by a military court and sentenced to death, imprisonment, or fine, or were deported without trial. The United States, while denying protection to such as had taken the Hawaiian oath of allegiance, insisted that martial law, though altering the forms of justice, could not supersede justice itself, and demanded stay of execution until the proceedings had been submitted to this Government and knowledge obtained therefrom that our citizens had received fair trial. The death sentences were subsequently commuted or were remitted on condition of leaving the islands. The cases of certain Americans arrested and expelled by arbitrary order without formal charge or trial have had attention, and in some instances have been found to justify remonstrance and a claim for indemnity, which Hawaii has not thus far conceded.

Mr. Thurston, the Hawaiian minister, having furnished this Government abundant reason for asking that he be recalled, that course was pursued, and his successor has lately been received.

The deplorable lynching of several Italian laborers in Colorado was naturally followed by international representations, and I am happy to say that the best efforts of the State in which the outrages occurred have been put forth to discover and punish the authors of this atrocious crime. The dependent families of some of the unfortunate victims invite by their deplorable condition gracious provision for their needs.

These manifestations against helpless aliens may be traced through successive stages to the vicious *padroni* system, which, unchecked by our immigration and contract-labor statutes, controls these workers from the moment of landing on our shores, and farms them out in distant and often rude regions, where their cheapening competition in the fields of bread-winning toil brings them into collision with other labor interests. While welcoming, as we should, those who seek our shores to merge themselves in our body politic and win personal competence by honest effort, we can not regard such assemblages of distinctively alien laborers, hired out in the mass to the profit of alien speculators and shipped hither and thither as the prospect of gain may dictate, as otherwise than repugnant to the spirit of our civilization, deterrent to individual advancement, and hindrances to the building up of stable communities resting upon the wholesome ambitions of the citizen and constituting the prime factor in the prosperity and progress of our nation. If legislation can reach this growing evil, it certainly should be attempted.

Japan has furnished abundant evidence of her vast gain in every trait and characteristic that constitutes a nation's greatness. We have reason for congratulation in the fact that the Government of the United States, by the exchange of liberal treaty stipulations with the new Japan, was the first to recognize her wonderful advance and to extend to her the consideration and confidence due to her national enlightenment and progressive character.

The boundary dispute which lately threatened to embroil Guatemala and Mexico has happily yielded to pacific counsels, and its determination has, by the joint agreement of the parties, been submitted to the sole arbitration of the United States minister to Mexico.

The commission appointed under the convention of Feb. 18, 1889, to set new monuments along the boundary between the United States and Mexico has completed its task.

As a sequel to the failure of a scheme for the colonization in Mexico of negroes, mostly emigrants from Alabama under contract, a great number of

these helpless and suffering people, starving and smitten with contagious disease, made their way or were assisted to the frontier, where, in wretched plight, they were quarantined by the Texas authorities. Learning of their destitute condition, I directed rations to be temporarily furnished them through the War Department. At the expiration of their quarantine they were conveyed by the railway companies at comparatively nominal rates to their homes in Alabama, upon my assurance, in the absence of any fund available for the cost of their transportation, that I would recommend to Congress an appropriation for its payment. I now strongly urge upon Congress the propriety of making such an appropriation. It should be remembered that the measures taken were dictated not only by sympathy and humanity, but by a conviction that it was not compatible with the dignity of this Government that so large a body of our dependent citizens should be thrown for relief upon the charity of a neighboring State.

In last year's message I narrated at some length the jurisdictional questions then freshly arisen in the Mosquito Indian strip of Nicaragua. Since that time, by the voluntary act of the Mosquito nation, the territory reserved to them has been incorporated with Nicaragua, the Indians formally subjecting themselves to be governed by the general laws and regulations of the republic instead of by their own customs and regulations, and thus availing themselves of a privilege secured to them by the treaty between Nicaragua and Great Britain of Jan. 28, 1860.

After this extension of uniform Nicaraguan administration to the Mosquito strip, the case of the British vice consul, Hatch, and of several of his countrymen who had been summarily expelled from Nicaragua and treated with considerable indignity, provoked a claim by Great Britain upon Nicaragua for pecuniary indemnity, which, upon Nicaragua's refusal to admit liability, was enforced by Great Britain. While the sovereignty and jurisdiction of Nicaragua was in no way questioned by Great Britain, the former's arbitrary conduct in regard to British subjects furnished the ground for this proceeding.

A British naval force occupied without resistance the Pacific seaport of Corinto, but was soon after withdrawn upon the promise that the sum demanded would be paid. Throughout this incident the kindly offices of the United States were invoked and were employed in favor of a peaceful settlement and as much consideration and indulgence toward Nicaragua as were consistent with the nature of the case. Our efforts have since been made the subject of appreciative and grateful recognition by Nicaragua.

The coronation of the Czar of Russia at Moscow in May next invites the ceremonial participation of the United States, and in accordance with usage and diplomatic propriety our minister to the imperial court has been directed to represent our Government on the occasion.

Correspondence is on foot touching the practice of Russian consuls within the jurisdiction of the United States to interrogate citizens as to their race and religious faith, and upon ascertainment thereof to deny to Jews authentication of passports or legal documents for use in Russia. Inasmuch as such a proceeding imposes a disability, which in the case of succession to property in Russia may be found to infringe the treaty rights of our citizens, and which is an obnoxious invasion of our territorial jurisdiction, it has elicited fitting remonstrance, the result of which it is hoped will remove the cause of complaint.

The pending claims of sealing vessels of the

United States seized in Russian waters remain unadjusted. Our recent convention with Russia establishing a *modus vivendi* as to imperial jurisdiction in such cases has prevented further difficulty of this nature.

The Russian Government has welcomed in principle our suggestion for a *modus vivendi*, to embrace Great Britain and Japan, looking to the better preservation of seal life in the north Pacific and Bering Sea, and the extension of the protected area defined by the Paris Tribunal to all Pacific waters north of the thirty-fifth parallel. It is especially noticeable that Russia favors prohibition of the use of firearms in seal hunting throughout the proposed area and a longer closed season for pelagic sealing.

In my last two annual messages I called the attention of the Congress to the position we occupied as one of the parties to a treaty or agreement by which we became jointly bound with England and Germany to so interfere with the government and control of Samoa as in effect to assume the management of its affairs. On the 9th day of May, 1894, I transmitted to the Senate a special message with accompanying documents giving information on the subject and emphasizing the opinion I have at all times entertained, that our situation in this matter was inconsistent with the mission and traditions of our Government, in violation of the principles we profess, and in all its phases mischievous and vexatious.

I again press this subject upon the attention of the Congress and ask for such legislative action or expression as will lead the way to our relief from obligations both irksome and unnatural.

Cuba is again gravely disturbed. An insurrection, in some respects more active than the last preceding revolt, which continued from 1868 to 1878, now exists in a large part of the eastern interior of the island, menacing even some populations on the coast. Besides deranging the commercial exchanges of the island, of which our country takes the predominant share, this flagrant condition of hostilities, by arousing sentimental sympathy and inciting adventurous support among our people, has entailed earnest effort on the part of this Government to enforce obedience to our neutrality laws and to prevent the territory of the United States from being abused as a vantage ground from which to aid those in arms against Spanish sovereignty.

Whatever may be the traditional sympathy of our countrymen as individuals with a people who seem to be struggling for larger autonomy and greater freedom, deepened as such sympathy naturally must be in behalf of our neighbors, yet the plain duty of their Government is to observe in good faith the recognized obligations of international relationship. The performance of this duty should not be made more difficult by a disregard on the part of our citizens of the obligations growing out of their allegiance to their country, which should restrain them from violating as individuals the neutrality which the nation of which they are members is bound to observe in its relations to friendly sovereign states. Though neither the warmth of our people's sympathy with the Cuban insurgents, nor our loss and material damage consequent upon the futile endeavors thus far made to restore peace and order, nor any shock our humane sensibilities may have received from the cruelties which appear to especially characterize this sanguinary and fiercely conducted war, have in the least shaken the determination of the Government to honestly fulfill every international obligation, yet it is to be earnestly hoped, on every ground, that the devastation of armed conflict may speedily be stayed and order and quiet restored to the distracted island, bringing

in their train the activity and thrift of peaceful pursuits.

One notable instance of interference by Spain with passing ships has occurred. On March 8 last the "Alliança," while bound from Colon to New York, and following the customary track for vessels near the Cuban shore, but outside the 3-mile limit, was fired upon by a Spanish gunboat. Protest was promptly made by the United States against this act as not being justified by a state of war, nor permissible in respect of vessels on the usual paths of commerce, nor tolerable in view of the wanton peril occasioned to innocent life and property. The act was disavowed, with full expression of regret, and assurance of nonrecurrence of such just cause of complaint, while the offending officer was relieved of his command.

Military arrests of citizens of the United States in Cuba have occasioned frequent reclamations. Where held on criminal charges their delivery to the ordinary civil jurisdiction for trial has been demanded and obtained in conformity with treaty provisions, and where merely detained by way of military precaution under a proclaimed state of siege, without formulated accusation, their release or trial has been insisted upon. The right of American consular officers in the island to prefer protests and demands in such cases having been questioned by the insular authority, their enjoyment of the privilege stipulated by treaty for the consuls of Germany was claimed under the most-favored-nation provision of our own convention and was promptly recognized.

The long-standing demand of Antonio Maximo Mora against Spain has at last been settled by the payment, on Sept. 14 last, of the sum originally agreed upon in liquidation of the claim. Its distribution among the parties entitled to receive it has proceeded as rapidly as the rights of those claiming the fund could be safely determined.

The enforcement of the differential duties against products of this country exported to Cuba and Puerto Rico prompted the immediate claim on our part to the benefit of the minimum tariff of Spain in return for the most favorable treatment permitted by our laws as regards the production of Spanish territories. A commercial arrangement was concluded in January last securing the treatment so claimed.

Vigorous protests against excessive fines imposed on our ships and merchandise by the customs officers of these islands for trivial errors have resulted in the remission of such fines in instances where the equity of the complaint was apparent, though the vexatious practice has not been wholly discontinued.

Occurrences in Turkey have continued to excite concern. The reported massacres of Christians in Armenia and the development there and in other districts of a spirit of fanatic hostility to Christian influences naturally excited apprehension for the safety of the devoted men and women who, as dependents of the foreign missionary societies in the United States, reside in Turkey under the guarantee of law and usage and in the legitimate performance of their educational and religious mission. No efforts have been spared in their behalf, and their protection in person and property has been earnestly and vigorously enforced by every means within our power.

I regret, however, that an attempt on our part to obtain better information concerning the true condition of affairs in the disturbed quarter of the Ottoman Empire, by sending thither the United States consul at Sivas to make investigation and report, was thwarted by the objections of the Turkish Government. This movement on our part was in no sense meant as a gratuitous entanglement of the

United States in the so-called Eastern question, nor as an officious interference with the right and duty which belong by treaty to certain great European powers, calling for their intervention in political matters affecting the good government and religious freedom of the non-Mussulman subjects of the Sultan, but it arose solely from our desire to have an accurate knowledge of the conditions in our efforts to care for those entitled to our protection.

The presence of our naval vessels which are now in the vicinity of the disturbed localities affords opportunities to acquire a measure of familiarity with the condition of affairs, and will enable us to take suitable steps for the protection of any interests of our countrymen within reach of our ships that might be found imperiled.

The Ottoman Government has lately issued an imperial *iradé* exempting forever from taxation an American college for girls at Scutari. Repeated assurances have also been obtained by our envoy at Constantinople that similar institutions maintained and administered by our countrymen shall be secured in the enjoyment of all rights, and that our citizens throughout the empire shall be protected.

The Government, however, in view of existing facts, is far from relying upon such assurances as the limit of its duty. Our minister has been vigilant and alert in affording all possible protection in individual cases where danger threatened or safety was imperiled. We have sent ships as far toward the points of actual disturbance as it is possible for them to go, where they offer refuge to those obliged to flee, and we have the promise of other powers which have ships in the neighborhood that our citizens, as well as theirs, will be received and protected on board those ships. On the demand of our minister, orders have been issued by the Sultan that Turkish soldiers shall guard and escort to the coast American refugees.

These orders have been carried out, and our latest intelligence gives assurance of the present personal safety of our citizens and missionaries. Though thus far no lives of American citizens have been sacrificed, there can be no doubt that serious loss and destruction of mission property have resulted from riotous conflicts and outrageous attacks.

By treaty several of the most powerful European powers have secured a right and have assumed a duty not only in behalf of their own citizens and in furtherance of their own interests, but as agents of the Christian world. Their right is to enforce such conduct of Turkish government as will restrain fanatical brutality, and if this fails, their duty is to so interfere as to insure against such dreadful occurrences in Turkey as have lately shocked civilization. The powers declare this right and this duty to be theirs alone, and it is earnestly hoped that prompt and effective action on their part will not be delayed.

The new consulates at Erzerum and Harpoot, for which appropriation was made last session, have been provisionally filled by trusted employees of the Department of State. These appointees, though now in Turkey, have not yet received their *exequaturs*.

The arbitration of the claim of the Venezuela Steam Transportation Company, under the treaty of Jan. 19, 1892, between the United States and Venezuela, resulted in an award in favor of the claimant.

The Government has used its good offices toward composing the differences between Venezuela on the one hand and France and Belgium on the other, growing out of the dismissal of the representatives of those powers on the ground of a publication deemed offensive to Venezuela. Although that dismissal was coupled with a cordial request that other

more personally agreeable envoys be sent in their stead, a rupture of intercourse ensued, and still continues.

In view of the growth of our interests in foreign countries and the encouraging prospects for a general expansion of our commerce, the question of an improvement in the consular service has increased in importance and urgency. Though there is no doubt that the great body of consular officers are rendering valuable services to the trade and industries of the country, the need of some plan of appointment and control which would tend to secure a higher average of efficiency can not be denied.

The importance of the subject has led the Executive to consider what steps might properly be taken without additional legislation to answer the need of a better system of consular appointments. The matter having been committed to the consideration of the Secretary of State, in pursuance of his recommendations an executive order was issued on the 20th of September, 1895, by the terms of which it is provided that after that date any vacancy in a consulate or commercial agency with an annual salary or compensation from official fees of not more than \$2,500 or less than \$1,000 should be filled either by transfer or promotion from some other position under the Department of State of a character tending to qualify the incumbent for the position to be filled, or by the appointment of a person not under the Department of State, but having previously served thereunder and shown his capacity and fitness for consular duty, or by the appointment of a person who, having been selected by the President and sent to a board for examination, is found, upon such examination, to be qualified for the position. Posts which pay less than \$1,000 being usually, on account of their small compensation, filled by selection from residents of the locality, it was not deemed practicable to put them under the new system.

The compensation of \$2,500 was adopted as the maximum limit in the classification, for the reason that consular officers receiving more than that sum are often charged with functions and duties scarcely inferior in dignity and importance to those of diplomatic agents, and it was therefore thought best to continue their selection in the discretion of the Executive without subjecting them to examination before a board. Excluding 71 places with compensation at present less than \$1,000, and 53 places above the maximum in compensation, the number of positions remaining within the scope of the order is 196. This number will undoubtedly be increased by the inclusion of consular officers whose remuneration in fees, now less than \$1,000, will be augmented with the growth of our foreign commerce and a return to more favorable business conditions.

In execution of the executive order referred to, the Secretary of State has designated as a board to conduct the prescribed examinations the Third Assistant Secretary of State, the solicitor of the Department of State, and the chief of the consular bureau, and has specified the subjects to which such examinations shall relate.

It is not assumed that this system will prove a full measure of consular reform. It is quite probable that actual experience will show particulars in which the order already issued may be amended, and demonstrate that, for the best results, appropriate legislation by Congress is imperatively required.

In any event these efforts to improve the consular service ought to be immediately supplemented by legislation providing for consular inspection. This has frequently been a subject of executive recommendation, and I again urge such action by Congress as will permit the frequent and thorough

inspection of consulates by officers appointed for that purpose or by persons already in the diplomatic or consular service. The expense attending such a plan would be insignificant compared with its usefulness, and I hope the legislation necessary to set it on foot will be speedily forthcoming.

I am thoroughly convinced that in addition to their salaries our ambassadors and ministers at foreign courts should be provided by the Government with official residences. The salaries of these officers are comparatively small, and in most cases insufficient to pay, with other necessary expenses, the cost of maintaining household establishments in keeping with their important and delicate functions. The usefulness of a nation's diplomatic representative undeniably depends much upon the appropriateness of his surroundings, and a country like ours, while avoiding unnecessary glitter and show, should be certain that it does not suffer in its relations with foreign nations through parsimony and shabbiness in its diplomatic outfit. These considerations and the other advantages of having fixed and somewhat permanent locations for our embassies would abundantly justify the moderate expenditure necessary to carry out this suggestion.

As we turn from a review of our foreign relations to the contemplation of our national financial situation we are immediately aware that we approach a subject of domestic concern more important than any other that can engage our attention, and one at present in such a perplexing and delicate predicament as to require prompt and wise treatment.

We may well be encouraged to earnest effort in this direction when we recall the steps already taken toward improving our economic and financial situation, and when we appreciate how well the way has been prepared for further progress by an aroused and intelligent popular interest in these subjects.

By command of the people a customs-revenue system, designed for the protection and benefit of favored classes at the expense of the great mass of our countrymen, and which, while inefficient for the purpose of revenue, curtailed our trade relations and impeded our entrance to the markets of the world, has been superseded by a tariff policy which in principle is based upon a denial of the right of the Government to obstruct the avenues to our people's cheap living, or lessen their comfort and contentment, for the sake of according especial advantages to favorites, and which, while encouraging our intercourse and trade with other nations, recognizes the fact that American self-reliance, thrift, and ingenuity can build up our country's industries and develop its resources more surely than enervating paternalism.

The compulsory purchase and coinage of silver by the Government, unchecked and unregulated by business conditions and heedless of our currency needs, which for more than fifteen years diluted our circulating medium, undermined confidence abroad in our financial ability, and at last culminated in distress and panic at home, has been recently stopped by the repeal of the laws which forced this reckless scheme upon the country.

The things thus accomplished, notwithstanding their extreme importance and beneficent effects, fall far short of curing the monetary evils from which we suffer as a result of long indulgence in ill-advised financial expedients.

The currency denominated United States notes and commonly known as greenbacks was issued in large volume during the late civil war, and was intended originally to meet the exigencies of that period. It will be seen by a reference to the debates in Congress at the time the laws were passed authoriz-

ing the issue of these notes that their advocates declared they were intended for only temporary use and to meet the emergency of war. In almost if not all the laws relating to them some provision was made contemplating their voluntary or compulsory retirement. A large quantity of them, however, were kept on foot and mingled with the currency of the country, so that at the close of the year 1874 they amounted to \$381,999,073.

Immediately after that date, and in January, 1875, a law was passed providing for the resumption of specie payments, by which the Secretary of the Treasury was required, whenever additional circulation was issued to national banks, to retire United States notes equal in amount to 80 per cent. of such additional national bank circulation until such notes were reduced to \$300,000,000. This law further provided that on and after the 1st day of January, 1879, the United States notes then outstanding should be redeemed in coin, and in order to provide and prepare for such redemption, the Secretary of the Treasury was authorized not only to use any surplus revenues of the Government, but to issue bonds of the United States and dispose of them for coin, and to use the proceeds for the purposes contemplated by the statute.

In May, 1878, and before the date thus appointed for the redemption and retirement of these notes, another statute was passed forbidding their further cancellation and retirement. Some of them had, however, been previously redeemed and canceled upon the issue of additional national bank circulation, as permitted by the law of 1875, so that the amount outstanding at the time of the passage of the act forbidding their further retirement was \$346,681,016.

The law of 1878 did not stop at distinct prohibition, but contained, in addition, the following express provision:

"And when any of said notes may be redeemed or be received into the Treasury, under any law, from any source whatever, and shall belong to the United States, they shall not be retired, canceled, or destroyed, but they shall be reissued and paid out again and kept in circulation."

This was the condition of affairs on the 1st day of January, 1879, which had been fixed upon four years before as the date for entering upon the redemption and retirement of all these notes, and for which such abundant means had been provided.

The Government was put in the anomalous situation of owing to the holders of its notes debts payable in gold on demand which could neither be retired by receiving such notes in discharge of obligations due the Government nor canceled by actual payment in gold. It was forced to redeem without redemption and to pay without acquittance.

There had been issued and sold \$95,500,000 of the bonds authorized by the resumption act of 1875, the proceeds of which, together with other gold in the Treasury, created a gold fund deemed sufficient to meet the demands which might be made upon it for the redemption of the outstanding United States notes. This fund, together with such other gold as might be from time to time in the Treasury available for the same purpose, has been since called our gold reserve, and \$100,000,000 has been regarded as an adequate amount to accomplish its object. This fund amounted on the 1st day of January, 1879, to \$114,193,360, and, though thereafter constantly fluctuating, it did not fall below that sum until July, 1892. In April, 1893, for the first time since its establishment, this reserve amounted to less than \$100,000,000, containing at that date only \$97,011,330.

In the meantime, and in July, 1890, an act had been passed directing larger governmental monthly

purchases of silver than had been required under previous laws, and providing that in payment for such silver Treasury notes of the United States should be issued payable on demand in gold or silver coin at the discretion of the Secretary of the Treasury. It was, however, declared in the act to be "the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law." In view of this declaration, it was not deemed permissible for the Secretary of the Treasury to exercise the discretion in terms conferred on him by refusing to pay gold on these notes when demanded, because by such discrimination in favor of the gold dollar the so-called parity of the two metals would be destroyed, and grave and dangerous consequences would be precipitated by affirming or accentuating the constantly widening disparity between their actual values under the existing ratio.

It thus resulted that the Treasury notes issued in payment of silver purchases under the law of 1890 were necessarily treated as gold obligations, at the option of the holder. These notes on the 1st day of November, 1893, when the law compelling the monthly purchase of silver was repealed, amounted to more than \$155,000,000. The notes of this description now outstanding, added to the United States notes still undiminished by redemption or cancellation, constitute a volume of gold obligations amounting to nearly \$500,000,000. These obligations are the instruments which, ever since we have had a gold reserve, have been used to deplete it.

This reserve, as has been stated, had fallen in April, 1893, to \$97,011,330. It has from that time to the present, with very few and unimportant upward movements, steadily decreased, except as it has been temporarily replenished by the sale of bonds.

Among the causes for this constant and uniform shrinkage in this fund may be mentioned the great falling off of exports under the operation of the tariff law until recently in force, which crippled our exchange of commodities with foreign nations and necessitated to some extent the payment of our balances in gold; the unnatural infusion of silver into our currency, and the increasing agitation for its free and unlimited coinage, which have created apprehension as to our disposition or ability to continue gold payments; the consequent hoarding of gold at home and the stoppage of investments of foreign capital, as well as the return of our securities already sold abroad; and the high rate of foreign exchange, which induced the shipment of our gold to be drawn against, as a matter of speculation.

In consequence of these conditions, the gold reserve on the 1st day of February, 1894, was reduced to \$65,438,377, having lost more than \$31,000,000 during the preceding nine months, or since April, 1893. Its replenishment being necessary, and no other manner of accomplishing it being possible, resort was had to the issue and sale of bonds provided for by the resumption act of 1875. Fifty millions of these bonds were sold, yielding \$58,633,295.71, which was added to the reserve fund of gold then on hand. As a result of this operation, this reserve, which had suffered constant and large withdrawals in the meantime, stood, on the 6th day of March, 1894, at the sum of \$107,446,802. Its depletion was, however, immediately thereafter so accelerated that on the 30th day of June, 1894, it had fallen to \$64,873,025, thus losing by withdrawals more than \$42,000,000 in five months, and dropping slightly below its situation when the sale of \$50,000,000 in bonds was effected for its replenishment.

This depressed condition grew worse, and on the 24th day of November, 1894, our gold reserve being reduced to \$57,669,701, it became necessary to again strengthen it. This was done by another sale of bonds amounting to \$50,000,000, from which there was realized \$58,538,500, with which the fund was increased to \$111,142,021 on the 4th day of December, 1894.

Again disappointment awaited the anxious hope for relief. There was not even a lull in the exasperating withdrawals of gold. On the contrary, they grew larger and more persistent than ever. Between the 4th day of December, 1894, and early in February, 1895, a period of scarcely more than two months after the second re-enforcement of our gold reserve by the sale of bonds, it had lost by such withdrawals more than \$69,000,000, and had fallen to \$41,340,181. Nearly \$43,000,000 had been withdrawn within the month immediately preceding this situation.

In anticipation of impending trouble, I had, on the 28th day of January, 1895, addressed a communication to the Congress, fully setting forth our difficulties and dangerous position, and earnestly recommending that authority be given the Secretary of the Treasury to issue bonds bearing a low rate of interest, payable by their terms in gold, for the purpose of maintaining a sufficient gold reserve, and also for the redemption and cancellation of outstanding United States notes and the Treasury notes issued for the purchase of silver under the law of 1890. This recommendation did not, however, meet with legislative approval.

In February, 1895, therefore, the situation was exceedingly critical. With a reserve perilously low and a refusal of congressional aid, everything indicated that the end of gold payments by the Government was imminent. The results of prior bond issues had been exceedingly unsatisfactory, and the large withdrawals of gold immediately succeeding their public sale in open market gave rise to a reasonable suspicion that a large part of the gold paid into the Treasury upon such sales was promptly drawn out again by the presentation of United States notes or Treasury notes and found its way to the hands of those who had only temporarily parted with it in the purchase of bonds.

In this emergency, and in view of its surrounding perplexities, it became entirely apparent to those upon whom the struggle for safety was devolved not only that our gold reserve must, for the third time in less than thirteen months, be restored by another issue and sale of bonds bearing a high rate of interest and badly suited to the purpose, but that a plan must be adopted for their disposition promising better results than those realized on previous sales. An agreement was therefore made with a number of financiers and bankers whereby it was stipulated that bonds described in the resumption act of 1875, payable in coin thirty years after their date, bearing interest at the rate of 4 per cent. per annum, and amounting to about \$62,000,000, should be exchanged for gold, receivable by weight, amounting to a little more than \$65,000,000.

This gold was to be delivered in such installments as would complete its delivery within about six months from the date of the contract, and at least one half of the amount was to be furnished from abroad. It was also agreed by those supplying this gold that during the continuance of the contract they would by every means in their power protect the Government against gold withdrawals. The contract also provided that if Congress would authorize their issue, bonds payable by their terms in gold and bearing interest at the rate of 3 per cent. per annum might within ten days be substi-

tuted at par for the 4-per-cent. bonds described in the agreement.

On the day this contract was made its terms were communicated to Congress by a special executive message, in which it was stated that more than \$16,000,000 would be saved to the Government if gold bonds bearing 3 per cent. interest were authorized to be substituted for those mentioned in the contract.

The Congress having declined to grant the necessary authority to secure this saving, the contract, unmodified, was carried out, resulting in a gold reserve amounting to \$107,571,230 on the 8th day of July, 1895. The performance of this contract not only restored the reserve, but checked for a time the withdrawals of gold and brought on a period of restored confidence and such peace and quiet in business circles as were of the greatest possible value to every interest that affects our people. I have never had the slightest misgiving concerning the wisdom or propriety of this arrangement, and am quite willing to answer for my full share of responsibility for its promotion. I believe it averted a disaster the imminence of which was, fortunately, not at the time generally understood by our people.

Though the contract mentioned stayed for a time the tide of gold withdrawal, its good results could not be permanent. Recent withdrawals have reduced the reserve from \$107,571,230 on the 8th day of July, 1895, to \$79,333,966. How long it will remain large enough to render its increase unnecessary is only matter of conjecture, though quite large withdrawals for shipment in the immediate future are predicted in well-informed quarters. About \$16,000,000 has been withdrawn during the month of November.

The foregoing statement of events and conditions develops the fact that after increasing our interest-bearing bonded indebtedness more than \$162,000,000 to save our gold reserve we are nearly where we started, having now in such reserve \$79,333,966, as against \$65,438,377 in February, 1894, when the first bonds were issued.

Though the amount of gold drawn from the Treasury appears to be very large, as gathered from the facts and figures herein presented, it actually was much larger, considerable sums having been acquired by the Treasury within the several periods stated without the issue of bonds. On Jan. 28, 1895, it was reported by the Secretary of the Treasury that more than \$172,000,000 of gold had been withdrawn for hoarding or shipment during the year preceding. He now reports that from Jan. 1, 1879, to July 14, 1899, a period of more than eleven years, only a little over \$28,000,000 was withdrawn, and that between July 14, 1890, the date of the passage of the law for an increased purchase of silver, and the 1st day of December, 1895, or within less than five and a half years, there was withdrawn nearly \$375,000,000, making a total of more than \$403,000,000 drawn from the Treasury in gold since Jan. 1, 1879, the date fixed in 1875 for the retirement of the United States notes.

Nearly 327,000,000 of the gold thus withdrawn has been paid out on these United States notes; and yet every one of the \$346,000,000 is still uncanceled and ready to do service in future gold depletion.

More than \$76,000,000 in gold has, since their creation in 1890, been paid out from the Treasury upon the notes given on the purchase of silver by the Government; and yet the whole, amounting to \$155,000,000, except a little more than \$16,000,000, which have been retired by exchanges for silver at the request of the holders, remains outstanding and prepared to join their older and more experienced

allies in future raids upon the Treasury's gold reserve.

In other words, the Government has paid in gold more than nine tenths of its United States notes and still owes them all. It has paid in gold about one half of its notes given for silver purchases without extinguishing by such payment one dollar of these notes.

When added to all this we are reminded that to carry on this astounding financial scheme the Government has incurred a bonded indebtedness of \$95,500,000 in establishing a gold reserve, and of \$162,315,400 in efforts to maintain it; that the annual interest charged on such bonded indebtedness is more than \$11,000,000; that a continuance in our present course may result in further bond issues, and that we have suffered or are threatened with all this for the sake of supplying gold for foreign shipment or facilitating its hoarding at home, a situation is exhibited which certainly ought to arrest attention and provoke immediate legislative relief.

I am convinced the only thorough and practicable remedy for our troubles is found in the retirement and cancellation of our United States notes, commonly called greenbacks, and the outstanding Treasury notes issued by the Government in payment of silver purchases under the act of 1890.

I believe this could be quite readily accomplished by the exchange of these notes for United States bonds of small as well as large denominations, bearing a low rate of interest. They should be long-term bonds, thus increasing their desirability as investments, and because their payment could be well postponed to a period far removed from present financial burdens and perplexities, when with increased prosperity and resources they would be more easily met.

To further insure the cancellation of these notes and also provide a way by which gold may be added to our currency in lieu of them, a feature in the plan should be an authority given to the Secretary of the Treasury to dispose of the bonds abroad for gold if necessary to complete the contemplated redemption and cancellation, permitting him to use the proceeds of such bonds to take up and cancel any of the notes that may be in the Treasury or that may be received by the Government on any account.

The increase of our bonded debt involved in this plan would be amply compensated by renewed activity and enterprise in all business circles, the restored confidence at home, the reinstated faith in our monetary strength abroad, and the stimulation of every interest and industry that would follow the cancellation of the gold-demand obligations now afflicting us. In any event the bonds proposed would stand for the extinguishment of a troublesome indebtedness, while in the path we now follow there lurks the menace of unending bonds, with our indebtedness still undischarged and aggravated in every feature. The obligations necessary to fund this indebtedness would not equal in amount those from which we have been relieved since 1884 by anticipation and payment, beyond the requirements of the sinking fund, out of our surplus revenues.

The currency withdrawn by the retirement of the United States notes and Treasury notes, amounting to probably less than \$486,000,000, might be supplied by such gold as would be used on their retirement or by an increase in the circulation of our national banks. Though the aggregate capital of those now in existence amounts to more than \$664,000,000, their outstanding circulation based on bond security amounts to only about \$190,000,000. They are authorized to issue notes amounting to 90 per

cent. of the bonds deposited to secure their circulation, but in no event beyond the amount of their capital stock, and they are obliged to pay 1 per cent. tax on the circulation they issue.

I think they should be allowed to issue circulation equal to the par value of the bonds they deposit to secure it, and that the tax on their circulation should be reduced to one fourth of 1 per cent., which would undoubtedly meet all the expense the Government incurs on their account. In addition they should be allowed to substitute or deposit in lieu of the bonds now required as security for their circulation those which would be issued for the purpose of retiring the United States notes and Treasury notes.

The banks already existing, if they desired to avail themselves of the provisions of law thus modified, could issue circulation in addition to that already outstanding, amounting to \$478,000,000, which would nearly or quite equal the currency proposed to be canceled. At any rate, I should confidently expect to see the existing national banks or others to be organized avail themselves of the proposed encouragements to issue circulation and promptly fill any vacuum and supply every currency need.

It has always seemed to me that the provisions of law regarding the capital of national banks which operate as a limitation to their location fails to make proper compensation for the suppression of State banks, which came near to the people in all sections of the country and readily furnished them with banking accommodations and facilities. Any inconvenience or embarrassment arising from these restrictions on the location of national banks might well be remedied by better adapting the present system to the creation of banks in smaller communities or by permitting banks of large capital to establish branches in such localities as would serve the people—so regulated and restrained as to secure their safe and conservative control and management.

But there might not be the necessity for such an addition to the currency by new issues of bank circulation as at first glance is indicated. If we should be relieved from maintaining a gold reserve under conditions that constitute it the barometer of our solvency, and if our Treasury should no longer be the foolish purveyor of gold for nations abroad or for speculation and hoarding by our citizens at home, I should expect to see gold resume its natural and normal functions in the business affairs of the country and cease to be an object attracting the timid watch of our people and exciting their sensitive imaginations.

I do not overlook the fact that the cancellation of the Treasury notes issued under the silver-purchasing act of 1890 would leave the Treasury in the actual ownership of sufficient silver, including seigniorage, to coin nearly \$178,000,000 in standard dollars. It is worthy of consideration whether this might not, from time to time, be converted into dollars or fractional coin and slowly put into circulation, as in the judgment of the Secretary of the Treasury the necessities of the country should require.

Whatever is attempted should be entered upon fully appreciating the fact that by careless, easy descent we have reached a dangerous depth, and that our ascent will not be accomplished without laborious toil and struggle. We shall be wise if we realize that we are financially ill and that our restoration to health may require heroic treatment and unpleasant remedies.

In the present stage of our difficulty it is not easy to understand how the amount of our revenue receipts directly affects it. The important question

is not the quantity of money received in revenue payments, but the kind of money we maintain and our ability to continue in sound financial condition. We are considering the Government's holdings of gold as related to the soundness of our money and as affecting our national credit and monetary strength.

If our gold reserve had never been impaired; if no bonds had ever been issued to replenish it; if there had been no fear and timidity concerning our ability to continue gold payments; if any part of our revenues were now paid in gold, and if we could look to our gold receipts as a means of maintaining a safe reserve, the amount of our revenues would be an influential factor in the problem. But unfortunately all the circumstances that might lend weight to this consideration are entirely lacking.

In our present predicament no gold is received by the Government in payment of revenue charges, nor would there be if the revenues were increased. The receipts of the Treasury, when not in silver certificates, consist of United States notes and Treasury notes issued for silver purchases. These forms of money are only useful to the Government in paying its current ordinary expenses, and its quantity in Government possession does not in the least contribute toward giving us that kind of safe financial standing or condition which is built on gold alone.

If it is said that these notes if held by the Government can be used to obtain gold for our reserve, the answer is easy. The people draw gold from the Treasury on demand upon United States notes and Treasury notes, but the proposition that the Treasury can on demand draw gold from the people upon them would be regarded in these days with wonder and amusement. And even if this could be done, there is nothing to prevent those thus parting with their gold from regaining it the next day or the next hour by the presentation of the notes they received in exchange for it.

The Secretary of the Treasury might use such notes taken from a surplus revenue to buy gold in the market. Of course he could not do this without paying a premium. Private holders of gold, unlike the Government, having no parity to maintain, would not be restrained from making the best bargain possible when they furnished gold to the Treasury; but the moment the Secretary of the Treasury bought gold on any terms above par he would establish a general and universal premium upon it, thus breaking down the parity between gold and silver, which the Government is pledged to maintain, and opening the way to new and serious complications. In the meantime the premium would not remain stationary, and the absurd spectacle might be presented of a dealer selling gold to the Government, and with United States notes or Treasury notes in his hand immediately clamoring for its return and a resale at a higher premium.

It may be claimed that a large revenue and redundant receipts might favorably affect the situation under discussion by affording an opportunity of retaining these notes in the Treasury when received, and thus preventing their presentation for gold. Such retention to be useful ought to be at least measurably permanent; and this is precisely what is prohibited, so far as United States notes are concerned, by the law of 1878 forbidding their further retirement. That statute in so many words provides that these notes when received into the Treasury and belonging to the United States shall be "paid out again and kept in circulation."

It will, moreover, be readily seen that the Government could not refuse to pay out United States notes and Treasury notes in current transactions when demanded and insist on paying out silver

alone and still maintain the parity between that metal and the currency representing gold. Besides, the accumulation in the Treasury of currency of any kind exacted from the people through taxation is justly regarded as an evil, and it can not proceed far without vigorous protest against an unjustifiable retention of money from the business of the country and a denunciation of a scheme of taxation which proves itself to be unjust when it takes from the earnings and income of the citizen money so much in excess of the needs of Government support that large sums can be gathered and kept in the Treasury. Such a condition has heretofore in times of surplus revenue led the Government to restore currency to the people by the purchase of its unmatured bonds at a large premium and by a large increase of its deposits in national banks, and we easily remember that the abuse of Treasury accumulation has furnished a most persuasive argument in favor of legislation radically reducing our tariff taxation.

Perhaps it is supposed that sufficient revenue receipts would in a sentimental way improve the situation, by inspiring confidence in our solvency and allaying the fear of pecuniary exhaustion. And yet through all our struggles to maintain our gold reserve there never has been any apprehension as to our ready ability to pay our way with such money as we had; and the question whether or not our current receipts met our current expenses has not entered into the estimate of our solvency. Of course the general state of our funds, exclusive of gold, was entirely immaterial to the foreign creditor and investor. His debt could only be paid in gold, and his only concern was our ability to keep on hand that kind of money.

On July 1, 1892, more than a year and a half before the first bonds were issued to replenish the gold reserve, there was a net balance in the Treasury, exclusive of such reserve, of less than \$13,000,000; but the gold reserve amounted to more than \$114,000,000, which was the quieting feature of the situation. It was when the stock of gold began rapidly to fall that fright supervened and our securities held abroad were returned for sale and debts owed abroad were pressed for payment. In the meantime extensive shipments of gold and other unfavorable indications caused restlessness and fright among our people at home. Thereupon the general state of our funds, exclusive of gold, became also immaterial to them, and they, too, drew gold from the Treasury for hoarding against all contingencies. This is plainly shown by the large increase in the proportion of gold withdrawn which was retained by our own people as time and threatening incidents progressed. During the fiscal year ending June 30, 1894, nearly \$85,000,000 in gold was withdrawn from the Treasury and about \$77,000,000 was sent abroad, while during the fiscal year ending June 30, 1895, over \$117,000,000 was drawn out, of which only about \$66,000,000 was shipped, leaving the large balance of such withdrawals to be accounted for by domestic hoarding.

Inasmuch as the withdrawal of our gold has resulted largely from fright, there is nothing apparent that will prevent its continuance or recurrence, with its natural consequences, except such a change in our financial methods as will reassure the frightened and make the desire for gold less intense. It is not clear how an increase in revenue, unless it be in gold, can satisfy those whose only anxiety is to gain gold from the Government's store.

It can not therefore be safe to rely upon increased revenues as a cure for our present troubles.

It is possible that the suggestion of increased revenue as a remedy for the difficulties we are considering may have originated in an intimation or

distinct allegation that the bonds which have been issued ostensibly to replenish our gold reserve were really issued to supply insufficient revenue. Nothing can be further from the truth. Bonds were issued to obtain gold for the maintenance of our national credit. As has been shown, the gold thus obtained has been drawn again from the Treasury upon United States notes and Treasury notes. This operation would have been promptly prevented if possible, but these notes having thus been passed to the Treasury, they became the money of the Government, like any other ordinary Government funds, and there was nothing to do but to use them in paying Government expenses when needed.

At no time when bonds have been issued has there been any consideration of the question of paying the expenses of Government with their proceeds. There was no necessity to consider that question. At the time of each bond issue we had a safe surplus in the Treasury for ordinary operations, exclusive of the gold in our reserve. In February, 1894, when the first issue of bonds was made, such surplus amounted to over \$18,000,000; in November, when the second issue was made, it amounted to more than \$42,000,000, and in February, 1895, when bonds for the third time were issued, such surplus amounted to more than \$100,000,000. It now amounts to \$98,072,420.30.

Besides all this, the Secretary of the Treasury had no authority whatever to issue bonds to increase the ordinary revenues or pay current expenses.

I can not but think there has been some confusion of ideas regarding the effects of the issue of bonds and the results of the withdrawal of gold. It was the latter process and not the former that by substituting in the Treasury United States notes and Treasury notes for gold increased by their amount the money which was in the first instance subject to ordinary Government expenditure.

Although the law compelling an increased purchase of silver by the Government was passed on the 14th day of July, 1890, withdrawals of gold from the Treasury upon the notes given in payment on such purchases did not begin until October, 1891. Immediately following that date the withdrawals upon both these notes and United States notes increased very largely, and have continued to such an extent that since the passage of that law there has been more than thirteen times as much gold taken out of the Treasury upon United States notes and Treasury notes issued for silver purchases as was thus withdrawn during the eleven and a half years immediately prior thereto and after the 1st day of January, 1879, when specie payments were resumed.

It is neither unfair nor unjust to charge a large share of our present financial perplexities and dangers to the operation of the laws of 1878 and 1890 compelling the purchase of silver by the Government, which not only furnished a new Treasury obligation upon which its gold could be withdrawn, but so increased the fear of an overwhelming flood of silver and a forced descent to silver payments that even the repeal of these laws did not entirely cure the evils of their existence.

While I have endeavored to make a plain statement of the disordered condition of our currency and the present dangers menacing our prosperity, and to suggest a way which leads to a safer financial system, I have constantly had in mind the fact that many of my countrymen, whose sincerity I do not doubt, insist that the cure for the ills now threatening us may be found in the single and simple remedy of the free coinage of silver. They contend that our mints shall be at once thrown open to the free, unlimited, and independent coin-

age of both gold and silver dollars of full legal-tender quality, regardless of the action of any other Government, and in full view of the fact that the ratio between the metals which they suggest calls for 100 cents' worth of gold in the gold dollar at the present standard and only 50 cents in intrinsic worth of silver in the silver dollar.

Were there infinitely stronger reasons than can be adduced for hoping that such action would secure for us a bimetallic currency moving on lines of parity, an experiment so novel and hazardous as that proposed might well stagger those who believe that stability is an imperative condition of sound money.

No Government, no human contrivance or act of legislation, has ever been able to hold the two metals together in free coinage at a ratio appreciably different from that which is established in the markets of the world.

Those who believe that our independent free coinage of silver at an artificial ratio with gold of 16 to 1 would restore the parity between the metals, and consequently between the coins, oppose an unsupported and improbable theory to the general belief and practice of other nations, and to the teaching of the wisest statesmen and economists of the world, both in the past and present, and, what is far more conclusive, they run counter to our own actual experiences.

Twice in our earlier history our lawmakers in attempting to establish a bimetallic currency undertook free coinage upon a ratio which accidentally varied from the actual relative values of the two metals not more than 3 per cent. In both cases, notwithstanding greater difficulties and cost of transportation than now exists, the coins whose intrinsic worth was undervalued in the ratio gradually and surely disappeared from our circulation and went to other countries where their real value was better recognized.

Acts of Congress were impotent to create equality where natural causes decreed even a slight inequality.

Twice in our recent history we have signally failed to raise by legislation the value of silver. Under an act of Congress passed in 1878 the Government was required for more than twelve years to expend annually at least \$24,000,000 in the purchase of silver bullion for coinage. The act of July 14, 1890, in a still bolder effort increased the amount of silver the Government was compelled to purchase, and forced it to become the buyer annually of 54,000,000 ounces, or practically the entire product of our mines. Under both laws silver rapidly and steadily declined in value. The prophecy and the expressed hope and expectation of those in the Congress who led in the passage of the last-mentioned act, that it would re-establish and maintain the former parity between the two metals, are still fresh in our memory.

In the light of these experiences, which accord with the experiences of other nations, there is certainly no secure ground for the belief that an act of Congress could now bridge an inequality of 50 per cent. between gold and silver at our present ratio, nor is there the least possibility that our country, which has less than one seventh of the silver money in the world, could by its action alone raise not only our own, but all silver to its lost ratio with gold. Our attempt to accomplish this by the free coinage of silver at a ratio differing widely from actual relative values would be the signal for the complete departure of gold from our circulation, the immediate and large contraction of our circulating medium, and a shrinkage in the real value and monetary efficiency of all other forms of currency as they settled to the level of silver mono-

metallism. Every one who receives a fixed salary and every worker for wages would find the dollar in his hand ruthlessly sealed down to the point of bitter disappointment if not to pinching privation.

A change in our standard to silver monometallism would also bring on a collapse of the entire system of credit which, when based on a standard which is recognized and adopted by the world of business, is many times more potent and useful than the entire volume of currency and is safely capable of almost indefinite expansion to meet the growth of trade and enterprise. In a self-invited struggle through darkness and uncertainty our humiliation would be increased by the consciousness that we had parted company with all the enlightened and progressive nations of the world, and were desperately and hopelessly striving to meet the stress of modern commerce and competition with a debased and unsuitable currency, and in association with the few weak and laggard nations which have silver alone as their standard of value.

All history warns us against rash experiments which threaten violent changes in our monetary standard and the degradation of our currency. The past is full of lessons teaching not only the economic dangers, but the national immorality that follows in the train of such experiments. I will not believe that the American people can be persuaded after sober deliberation to jeopardize their nation's prestige and proud standing by encouraging financial nostrums, nor that they will yield to the false allurements of cheap money, when they realize that it must result in the weakening of that financial integrity and rectitude which thus far in our history has been so devotedly cherished as one of the traits of true Americanism.

Our country's indebtedness, whether owing by the Government or existing between individuals, has been contracted with reference to our present standard. To decree by act of Congress that these debts shall be payable in less valuable dollars than those within the contemplation and intention of the parties when contracted would operate to transfer, by the fiat of law and without compensation, an amount of property and a volume of rights and interests almost incalculable.

Those who advocate a blind and headlong plunge to free coinage in the name of bimetalism and professing the belief, contrary to all experience, that we could thus establish a double standard and a concurrent circulation of both metals in our coinage, are certainly reckoning from a cloudy standpoint. Our present standard of value is the standard of the civilized world and permits the only bimetalism now possible, or at least that is within the independent reach of any single nation, however powerful that nation may be. While the value of gold as a standard is steadied by almost universal commercial and business use, it does not despise silver nor seek its banishment. Wherever this standard is maintained there is at its side in free and unquestioned circulation a volume of silver currency sometimes equaling and sometimes even exceeding it in amount, both maintained at a parity notwithstanding a depreciation or fluctuation in the intrinsic value of silver.

There is a vast difference between a standard of value and a currency for monetary use. The standard must necessarily be fixed and certain. The currency may be in divers forms and of various kinds. No silver-standard country has a gold currency in circulation; but an enlightened and wise system of finance secures the benefits of both gold and silver as currency and circulating medium by keeping the standard stable and all other currency at par with it. Such a system and such a standard also gives free scope for the use and expansion of

safe and conservative credit, so indispensable to broad and growing commercial transactions and so well substituted for the actual use of money. If a fixed and stable standard is maintained such as the magnitude and safety of our commercial transactions and business require, the use of money itself is conveniently minimized.

Every dollar of fixed and stable value has through the agency of confident credit an astonishing capacity of multiplying itself in financial work. Every unstable and fluctuating dollar fails as a basis of credit, and in its use begets gambling speculation and undermines the foundations of honest enterprise.

I have ventured to express myself on this subject with earnestness and plainness of speech because I can not rid myself of the belief that there lurks in the proposition for the free coinage of silver, so strongly approved and so enthusiastically advocated by a multitude of my countrymen, a serious menace to our prosperity and an insidious temptation of our people to wander from the allegiance they owe to public and private integrity. It is because I do not distrust the good faith and sincerity of those who press this scheme that I have imperfectly, but with zeal submitted my thoughts upon this momentous subject. I can not refrain from begging them to re-examine their views and beliefs in the light of patriotic reason and familiar experience, and to weigh again and again the consequences of such legislation as their efforts have invited. Even the continued agitation of the subject adds greatly to the difficulties of a dangerous financial situation already forced upon us.

In conclusion, I especially entreat the people's representatives in the Congress, who are charged with the responsibility of inaugurating measures for the safety and prosperity of our common country, to promptly and effectively consider the ills of our critical financial plight. I have suggested a remedy which my judgment approves. I desire, however, to assure the Congress that I am prepared to co-operate with them in perfecting any other measure promising thorough and practical relief, and that I will gladly labor with them in every patriotic endeavor to further the interests and guard the welfare of our countrymen whom in our respective places of duty we have undertaken to serve.

GROVER CLEVELAND.

EXECUTIVE MANSION, Dec. 2, 1895.

The Venezuelan Boundary Controversy.—

The first action taken upon this subject was the passage of a resolution in the House, Dec. 16, to the effect that Senate document No. 226, first session Fiftieth Congress, should be reprinted for the use of members of the House. The document was described as containing all the correspondence up to 1887 upon the Venezuelan question, giving the statement of the English Government and that of the Venezuelan Government, and the correspondence of Mr. Baker and other officials representing the United States in Venezuela, and purporting to give the history of the entire transaction, including the original claims of Venezuela, of Spain, of Holland, and of England—the official claims. A similar resolution was passed the next day by the Senate.

On Dec. 17 a message on the subject from the President was laid before the Senate, as follows:

To the Congress:

In my annual message addressed to the Congress on the 3d instant I called attention to the pending boundary controversy between Great Britain and the Republic of Venezuela, and recited the substance of a representation made by this Government to her Britannic Majesty's Government

suggesting reasons why such dispute should be submitted to arbitration for settlement and inquiring whether it would be so submitted.

The answer of the British Government, which was then awaited, has since been received, and, together with the dispatch to which it is a reply, is hereto appended.

Such reply is embodied in two communications addressed by the British Prime Minister to Sir Julian Pauncefote, the British ambassador at this capital. It will be seen that one of these communications is devoted exclusively to observations upon the Monroe doctrine, and claims that in the present instance a new and strange extension and development of this doctrine is insisted on by the United States, that the reasons justifying an appeal to the doctrine enunciated by President Monroe are generally inapplicable "to the state of things in which we live at the present day," and especially inapplicable to a controversy involving the boundary line between Great Britain and Venezuela.

Without attempting extended argument in reply to these positions, it may not be amiss to suggest that the doctrine upon which we stand is strong and sound because its enforcement is important to our peace and safety as a nation, and is essential to the integrity of our free institutions and the tranquil maintenance of our distinctive form of government. It was intended to apply to every stage of our national life, and can not become obsolete while our republic endures. If the balance of power is justly a cause for jealous anxiety among the governments of the Old World and a subject for our absolute noninterference, none the less is an observance of the Monroe doctrine of vital concern to our people and their Government.

Assuming, therefore, that we may properly insist upon this doctrine without regard to "the state of things in which we live," or any changed conditions here or elsewhere, it is not apparent why its application may not be invoked in the present controversy.

If a European power, by an extension of its boundaries, takes possession of the territory of one of our neighboring republics against its will and in derogation of its rights, it is difficult to see why, to that extent, such European power does not thereby attempt to extend its system of government to that portion of this continent which is thus taken. This is the precise action which President Monroe declared to be "dangerous to our peace and safety," and it can make no difference whether the European system is extended by an advance of frontier or otherwise.

It is also suggested in the British reply that we should not seek to apply the Monroe doctrine to the pending dispute because it does not embody any principle of international law which "is founded on the general consent of nations," and that "no statesman, however eminent, and no nation, however powerful, are competent to insert into the code of international law a novel principle which was never recognized before, and which has not since been accepted by the government of any other country."

Practically, the principle for which we contend has peculiar, if not exclusive, relation to the United States. It may not have been admitted in so many words to the code of international law, but since in international councils every nation is entitled to the rights belonging to it, if the enforcement of the Monroe doctrine is something we may justly claim, it has its place in the code of international law as certainly and as securely as if it were specifically mentioned, and when the United States is a suitor before the high tribunal that administers international law the question to be determined is whether

or not we present claims which the justice of that code of law can find to be right and valid.

The Monroe doctrine finds its recognition in those principles of international law which are based upon the theory that every nation shall have its rights protected and its just claims enforced.

Of course this Government is entirely confident that under the sanction of this doctrine we have clear rights and undoubted claims. Nor is this ignored in the British reply. The Prime Minister, while not admitting that the Monroe doctrine is applicable to present conditions, states: "In declaring that the United States would resist any such enterprise if it was contemplated President Monroe adopted a policy which received the entire sympathy of the English Government of that date." He further declares: "Though the language of President Monroe is directed to the attainment of objects which most Englishmen would agree to be salutary, it is impossible to admit that they have been inscribed by any adequate authority in the code of international law."

Again he says: "They (her Majesty's Government) fully concur with the view which President Monroe apparently entertained, that any disturbance of the existing territorial distribution in that hemisphere by any fresh acquisitions on the part of any European state would be a highly inexpedient change."

In the belief that the doctrine for which we contend was clear and definite, that it was founded upon substantial considerations and involved our safety and welfare, that it was fully applicable to our present conditions and to the state of the world's progress, and that it was directly related to the pending controversy, and without any conviction as to the final merits of the dispute, but anxious to learn in a satisfactory and conclusive manner whether Great Britain sought under a claim of boundary, to extend her possessions on this continent without right, or whether she merely sought possession of territory fairly included within her lines of ownership, this Government proposed to the Government of Great Britain a resort to arbitration as the proper means of settling the question, to the end that a vexatious boundary dispute between the two contestants might be determined and our exact standing and relation in respect to the controversy might be made clear.

It will be seen from the correspondence herewith submitted that this proposition has been declined by the British Government, upon grounds which, in the circumstances, seem to me to be far from satisfactory. It is deeply disappointing that such an appeal, actuated by the most friendly feelings toward both nations directly concerned, addressed to the sense of justice and to the magnanimity of one of the great powers of the world and touching its relations to one comparatively weak and small, should have produced no better results.

The course to be pursued by this Government, in view of the present condition, does not appear to admit of serious doubt. Having labored faithfully for many years to induce Great Britain to submit this dispute to impartial arbitration, and having been now finally apprised of her refusal to do so, nothing remains but to accept the situation, to recognize its plain requirements, and deal with it accordingly. Great Britain's present proposition has never thus far been regarded as admissible by Venezuela, though any adjustment of the boundary which that country may deem for her advantage and may enter into of her own free will can not of course be objected to by the United States.

Assuming, however, that the attitude of Venezuela will remain unchanged, the dispute has reached such a stage as to make it now incumbent

upon the United States to take measures to determine with sufficient certainty for its justification what is the true divisional line between the Republic of Venezuela and British Guiana. The inquiry to that end should of course be conducted carefully and judicially, and due weight should be given to all available evidence, records, and facts in support of the claims of both parties.

In order that such an examination should be prosecuted in a thorough and satisfactory manner, I suggest that the Congress make an adequate appropriation for the expenses of a commission, to be appointed by the Executive, who shall make the necessary investigation and report upon the matter with the least possible delay. When such report is made and accepted it will, in my opinion, be the duty of the United States to resist, by every means in its power, as a willful aggression upon its rights and interests, the appropriation by Great Britain of any lands or the exercise of governmental jurisdiction over any territory which, after investigation, we have determined of right belongs to Venezuela.

In making these recommendations I am fully alive to the responsibility incurred, and keenly realize all the consequences that may follow.

I am, nevertheless, firm in my conviction that while it is a grievous thing to contemplate the two great English-speaking peoples of the world as being otherwise than friendly competitors in the onward march of civilization and strenuous and worthy rivals in all the arts of peace, there is no calamity which a great nation can invite which follows a supine submission to wrong and injustice and the consequent loss of national self-respect and honor, beneath which are shielded and defended a people's safety and greatness.

GROVER CLEVELAND.

EXECUTIVE MANSION, Dec. 17, 1895.

Accompanying the message were documents—the correspondence on the subject, including Mr. Olney's letter to Mr. Bayard, dated July 20, 1895, reviewing the efforts of the United States to have the controversy settled by arbitration, and explaining the position of the Administration in reference to the application of the Monroe doctrine to the subject and the consequences to be apprehended if any European power should be allowed to establish a precedent for the appropriation of the territory of the weak South American states. Following Mr. Olney's letter was a short communication to Mr. Bayard from A. A. Adee, acting secretary, dated July 24, giving the authority for a reference in the letter of the Secretary of War, as follows:

"In Mr. Olney's instruction No. 804, of the 20th instant, in relation to the Anglo-Venezuelan boundary dispute, you will note a reference to the sudden increase of the area claimed for British Guiana, amounting to 33,000 square miles, between 1884 and 1886. This statement is made on the authority of the British publication entitled the 'Statesman's Yearbook.'

"I add for your better information that the same statement is found in the 'British Colonial Office List,' a Government publication.

In the issue for 1885 the following passage occurs, on page 24, under the head of British Guiana:

"It is impossible to specify the exact area of the colony, as its precise boundaries between Venezuela and Brazil, respectively, are undetermined, but it has been computed to be 76,000 square miles."

"In the issue of the same list for 1886 the same statement occurs, on page 33, with the change of area to 'about 109,000 square miles.'

"The official maps in the two volumes mentioned are identical, so that the increase of 33,000 square miles claimed for British Guiana is not thereby ex-

plained, but later 'Colonial Office List' maps show a varying sweep of the boundary westward into what previously figured as Venezuelan territory, while no change is noted on the Brazilian frontier."

The other accompanying documents were two dispatches of Nov. 26 from Lord Salisbury to Sir Julian Pauncefote, the first giving a general reply to Mr. Olney's construction of the Monroe doctrine, and denying that the British Government admits that doctrine to be sound or that it has any sanction in international law; the second giving the history of the controversy from the point of view of Great Britain, and concluding as follows:

"It will be seen from the preceding statement that the Government of Great Britain have from the first held the same view as to the extent of territory which they are entitled to claim as a matter of right. It comprised the coast line up to the river Amacura and the whole basin of the Essequibo river and its tributaries. A portion of that claim, however, they have always been willing to waive altogether; in regard to another portion, they have been and continue to be perfectly ready to submit the question of their title to arbitration. As regards the rest, that which lies within the so-called Schomburgk line, they do not consider that the rights of Great Britain are open to question. Even within that line they have, on various occasions, offered to Venezuela considerable concessions as a matter of friendship and conciliation, and for the purpose of securing an amicable settlement of the dispute. If as time has gone on the concessions thus offered diminished in extent, and have now been withdrawn, this has been the necessary consequence of the gradual spread over the country of British settlements, which her Majesty's Government can not in justice to the inhabitants offer to surrender to foreign rule, and the justice of such withdrawal is amply borne out by the researches in the national archives of Holland and Spain, which have furnished further and more convincing evidence in support of the British claims.

"The discrepancies in the frontiers assigned to the British colony in various maps published in England, and erroneously assumed to be founded on official information, are easily accounted for by the circumstances which I have mentioned. Her Majesty's Government can not, of course, be responsible for such publications made without their authority.

"Although the negotiations in 1890, 1891, and 1893 did not lead to any result, her Majesty's Government have not abandoned the hope that they may be resumed with better success, and that when the internal politics of Venezuela are settled on a more durable basis than has lately appeared to be the case her Government may be enabled to adopt a more moderate and conciliatory course in regard to this question than that of their predecessors. Her Majesty's Government are sincerely desirous of being on friendly relations with Venezuela, and certainly have no design to seize territory that properly belongs to her, or forcibly to extend sovereignty over any portion of her population.

"They have, on the contrary, repeatedly expressed their readiness to submit to arbitration the conflicting claims of Great Britain and Venezuela to large tracts of territory which from their auriferous nature are known to be of almost untold value. But they can not consent to entertain, or to submit to arbitration of another power or of foreign jurists, however eminent, claims based on the extravagant pretensions of Spanish officials in the last century, and involving the transfer of large numbers of British subjects, who have for many years enjoyed the settled rule of a British colony, to a nation of different race and language, whose political system

is subject to frequent disturbance, and whose institutions as yet too often afford very inadequate protection to life and property. No issue of this description has ever been involved in the questions which Great Britain and the United States have consented to submit to arbitration, and her Majesty's Government are convinced that in similar circumstances the Government of the United States would be equally firm in declining to entertain proposals of such a nature."

The message and documents were referred to the Committee on Foreign Relations.

In accordance with the suggestion in the President's message, Mr. Hitt, of Illinois, introduced in the House Dec. 18 the following:

"A bill making appropriation for the expenses of a commission to investigate and report on the true divisional line between the Republic of Venezuela and British Guiana.

"*Be it enacted, etc.,* That the sum of \$100,000 be, and the same is hereby appropriated for the expenses of a commission, to be appointed by the President, to investigate and report upon the true divisional line between the Republic of Venezuela and British Guiana."

He asked the unanimous consent of the House for its immediate consideration.

In opposition to the immediate consideration of the resolution and suggesting that it would better go to the Committee on Foreign Affairs, Mr. Boutelle, of Maine, said, in part:

"It seems to me that this subject is one of such vast importance and such serious gravity that the House of Representatives ought to proceed in a decorous and deliberate manner in its consideration. Late on yesterday the President's message was read to us. I presume most of us have read it more or less carefully in the newspapers. Very little time has been given to the consideration of that very remarkable document, and it seems to me that possibly all the members of this House may not be at this time fully advised as to the scope of responsibility which may attach to the adoption of this resolution. Gentlemen about me say that they are ready. That may be; but at the same time I feel convinced that I am doing service to the dignity and interests of my country when I ask those ready gentlemen, on this side or the other, to use in a matter of this momentous importance the cool deliberation and judicious procedure that are due to a matter that may vitally affect the interests of the two great English-speaking nations of the world.

"But, Mr. Speaker, the public press of this morning brings us abundant evidence of the feverish excitement precipitated in this country by the message that ought to cause us to take counsel of our wisdom. The eyes of the civilized world are directed to-day to this House of Representatives and to the Senate of the United States, and, without abating one jot or one tittle of my desire that every right we have and every right we intend to maintain in the future shall be upheld, I do think we had better give to a matter of this extreme gravity at least as much appearance of deliberate consideration as we insist upon giving to any trivial matter of an appropriation of a few thousand dollars."

Mr. Hitt, of Illinois, supported his proposal for immediate consideration mainly on the ground that delay in granting the request of the President would give the impression of dissent and disagreement on the part of America, whereas, in a matter involving the honor of the nation it should present an united front. Mr. Crisp spoke on the same side of the question, and the bill was passed, having been amended by the insertion, after "sum of \$100,000," of the words "or so much thereof as may be necessary."

The resolution was introduced in the Senate for concurrence Dec. 19. Mr. Morgan, of Alabama, spoke on the motion of Mr. Sherman, of Ohio, to refer it to the Committee on Foreign Affairs, saying that while he would prefer that the bill should be so referred, he should object to any reference unless the Senate should agree to take no holiday recess until the committee should make its report. He said further, in part:

"But, Mr. President, I do not wish to have, if I can avoid it, and I do not think the country would like to see, any possible controversy or division of opinion between a high commission organized by Congress and the President upon any question presented in his message. Suppose that after this declaration and after this careful examination by Mr. Olney into the title of Venezuela, which he affirms upon the evidence now in reach, the high commission should find that Mr. Olney was mistaken in some of his conclusions, or that, after all, in their opinion or in the opinion of a majority of the commission, there was such doubt about the title of Venezuela that we could not afford to treat it as a subject that might possibly result in hostile collision with Great Britain, the President, if he did not concur in their report, might be antagonized by this commission, and the Congress of the United States having organized it, would, as a matter of course, have a right to their report, and would be guided, to a degree at least, in their action by its recommendations.

"We might find ourselves in a state of serious embarrassment in regard to the question of enforcing this American doctrine if we are guided by the report of a high commission, which, in its resultant effects, might uproot the doctrine itself, or might expose it to another half century or century of debate and discussion. I should like to avoid the possibility of such a result as that, and I would prefer that the Congress of the United States in this case, as it has in all other cases where we have had to conduct belligerent operations against foreign governments, should take upon itself, in connection with the President of the United States, the solution of this question in an authentic form, and not leave its action to depend, in any degree, upon the judgment of a commission, who may not be wiser or better informed, after all, than the Congress itself or the President. It is the faithful research of the commission rather than its recommendations that we shall need, and that the President requests us to provide for.

"I should dislike very much to be now compelled, after the firm advance we have made upon this occasion, to reverse our action so far as to leave this question in the hands of a commission to be organized by Congress for final decision. I prefer to leave it where the Constitution leaves it, in the hands of the President of the United States and upon his executive responsibility."

Senator Sherman, of Ohio, spoke in support of his motion to refer and in favor of proceeding with deliberation. In the course of his speech he said, in part:

"The controversy between Venezuela and Great Britain will not be settled in a day or in months. In my judgment it will be settled peaceably by the action of those two powers. Great Britain has too great a stake in the history of the world to attempt under the circumstances an act of injustice to a small country like Venezuela. The public sentiment of that country will be aroused against it.

"But the assertion of our right to prevent European powers from seizing any part of the American continents, from treating America as an Africa, to be conquered and divided among the various nations of Europe, can not be questioned. Under the

circumstances I do not expect that war will arise. I do not contemplate or wish to contemplate the possibility of such an event. I have seen enough of war in my time to dread its progress and its consequences. I do not wish in the slightest degree to say a word which would even indicate that a war is likely to ensue about this small matter; but at the same time I think the President of the United States is right, under the circumstances, in announcing what we understand to be our duty as the most powerful of American nations, and in saying to the countries of Europe: 'These two continents are already occupied by Christian nations of Europe, and we, with our sixty-odd millions of people, are willing to say that the rights of those nations shall not be trampled upon by force and violence by European powers.'

"As a matter of course, it is proper to say that we could not interfere in any agreement made between Venezuela and Great Britain as to the boundary between British Guiana and Venezuela. I have a map here which shows better than any I have seen before the rapid encroachments made by Great Britain upon what is considered to be the territory of Venezuela. It shows that, beginning with a little colony derived from the Dutch, Great Britain added to it a large region of country lying to the west of it, and then gradually by encroachments has finally reached up almost to the Orinoco river. This is a serious controversy. Great Britain has taken ground that she will not even submit to arbitration as to anything on the south side of a particular line. Now, I think that the British people, when they understand this matter, when they see that it is attracting the attention of the civilized world, will not press their contention, especially when they remember that the Monroe doctrine was perhaps not so much the doctrine of Monroe as it was the doctrine of Canning, of England, then Prime Minister, which was agreed to by the United States and Great Britain, and that the power to prevent encroachment by European powers upon American territory or upon American states was asserted not only by the United States, but by the co-operation and consent of England."

Senator Lodge, of Massachusetts, spoke in favor of referring with instructions to the committee to report without delay, and offered an amendment adding the following sentence to the resolution:

"And said commission shall report with the least possible delay, not later than April 1, 1896."

In the course of his speech Mr. Lodge said:

"Mr. President, for my own part I do not desire to put the slightest opposition in the way of the Executive or of the Senator who no doubt has represented the wishes of the Executive upon this floor. I cordially agree with the President's message. It is the right, the sound, the American position for the United States to take. But that which is of the utmost importance is that we should show to the world that we are united, without distinction of party or section, in support of the policy which the message outlines. We should be able to say, as Webster said in the House of Representatives, that our politics stop at the water's edge, and that when we come to dealing with a foreign question we deal with it simply as Americans.

"It has been freely charged in the English newspapers published in London, and also in that small part of the British press which is published in the city of New York, that this is a matter of politics; that it is being used by the President for electioneering purposes, and that it has been used by the Republicans with that view. That is the most mistaken view ever uttered. The American people, without distinction of party, believe in the main-

tenance of the Monroe doctrine and are prepared to uphold it at any cost. They desire the appointment of a commission, not to act as a board of arbitration between one country and another, but to inform the United States on what line they ought to stand when they prepare to resist further English aggressions on American soil. The action of the commission is to be for our own information.

"I have given some attention to the Venezuelan question; I have studied it during the past year with a good deal of care; I have examined every map and document, I think, that is accessible here, and I think I know enough about it to say that there is nothing in the case that can not be considered within the period specified in my amendment, and that if there are papers to be brought from Madrid or from the Hague they can be brought within that time and laid before the commission. I think fixing the date will strengthen the hands of the Executive, and will give notice to the world that while we are proceeding deliberately and temperately we are also proceeding with absolute firmness; that we mean exactly what we say; that we propose to sustain the President in the position which he has taken, and that at a given time we shall be prepared for action in defense of the line reported as the true boundary by the commission. We want nothing indefinite about the commission. We want them to report as soon as possible, and then we will sustain the Monroe doctrine with all the strength of the Republic."

Senator Voorhees, of Indiana, spoke in favor of immediate action on the bill. He spoke in part as follows:

"The Senator from Ohio is a little more magnanimous, possibly, or more generous than I am this morning. He says he has no idea that the great power, England, would attempt to put forth an unjust claim to territorial boundaries, or claim what did not belong to her. There is not a degree of latitude or longitude on the earth's surface on which she has not attempted to do exactly that thing. All around the globe she has been the oppressor of weaker nations and weaker peoples, and the very map which the Senator from Ohio held up from his desk refuted what he said. The very map shows that she has gradually been encroaching from one line to another, hoping to be unseen in it until from some 70,000 square miles, her original claim, she has over 100,000 square miles. She has by silent encroachment, and without any show of right or pretense, gone on and on from her original claim of the Schomburgk line, until now she has absorbed beyond her original claim more territory than there is in the great State which the Senator from Ohio in part represents, and much more than there is in the State which I in part represent.

"Mr. President, I do not wish to talk on this subject any more than is necessary, but I do intend to go to the line of what I believe to be right. I have no fear of war. I look upon war as a horror, as other Christian men do. I hope; but there will be no war here. There is a hostage lying on this continent north of us. England will not fight on an issue of this kind. She does not dare to. The commerce of the world is carried in English bottoms, and I remember that in reading Mr. Canning only last year he stated an instance where, in the War of 1812, insurance was paid for at the rate of 13 guineas for £100 of commerce to cross the Irish Channel. And it was not six months after the War of 1812 broke out until armed privateers swarmed the ocean and insurance shops were shut up in London. They would not insure the commerce.

"No, Mr. President, there will be an adjustment and settlement, but it might as well be known now on both sides of the ocean that England's great col-

onizing career has to have some definite limits, some boundaries."

Mr. Allen, of Nebraska, who had objected to the second reading of the bill on that day, in speaking in answer to the question whether he would insist on the objection, said:

"Now, there will arise a question which this committee ought to consider, and consider well. The Constitution invests in Congress, not in the President, the power to declare war. The President is not invested with any power to declare war or conclude peace. It is a power vested in Congress. Are we to give the President power to appoint a commission without any approval upon our part after his selection of a commission to visit Venezuela or the disputed territory, or to sit elsewhere and acquire information upon this subject, and then are we to be called upon to act upon the report of that commission without ever having had the power ourselves of inquiring into it by a joint committee of Congress or a committee of either House? It occurs to me that that is a very important matter. I do not believe the Constitution of this country ever contemplated that the President of the United States should have that power. I think that when our fathers conferred upon us, through the Constitution, the power to declare war and conclude peace, they impliedly conferred upon us the sole power and the sole means of ascertaining the circumstances under which war should be declared and peace concluded.

"I am not prepared to say that the President of the United States may choose men whom he may see fit, regardless of the attitude of Congress, and invest in them this high and delicate power. If the President has power or is given power to appoint this commission, one of the important things the Committee on Foreign Relations must consider is, whether the names of the commissioners should not be sent to the Senate for its consideration and approval before they receive their commissions."

Senator Hawley, of Connecticut, said:

"Mr. President, I do not propose to discuss the probabilities of war. I regret the rather warlike tone of the distinguished Senator from Indiana. He even ventured to point out the direction in which England would find herself comparatively weak, and to indicate those considerations which would prevent her from declaring war or accepting our declaration of war. It is not wise to assume that either the great British nation or the great American people will refuse to fight in any imaginable contingency. People do not always fight when they ought. They do not always fight upon the very best of grounds. They are sometimes unjustifiable. They are sometimes ill tempered. They sometimes yield to an undue and oppressive ambition. I do not discuss the question of war at all.

"But what do we desire here? Information. There is not a citizen in this chamber, or the other, or in the United States, who would not be very glad, indeed, to receive to-day the careful report of five of our leading jurists or great legislators or diplomats upon the merits of this question, its correct history from the beginning, boundaries successively established or claimed, and the correspondence that ensued between the different countries. Nobody knows what the facts are upon which we are expected to act. Great Britain herself does not know. I judge by the map here issued by Venezuela, which gives six different boundaries that may be found upon British maps from time to time or in British demands, each one creeping northward. Now, if that is not a case for a commission, I do not know what can be. I desire this matter to be referred to the committee because that is the dignified and deliberate and proper way."

A memorial to the President and Congress signed by 354 members of the British House of Commons, together with an accompanying letter, were read at request of Mr. Chandler and Mr. Cockrell. The letter and memorial follow :

"[From W. Randal Cremer, M. P., St. Paul's Chambers, 23 Bedford Street, Strand, London, W. C.]

"LONDON, Jan. 1, 1895.

"DEAR SIR: I have the honor to forward you a copy of a memorial signed by 354 members of the British House of Commons. As the object of the memorial is of the highest importance, and the signatures represent all shades of political opinion in the British Parliament, I venture to ask for the prayer of the memorialists your earnest consideration.

Respectfully yours,

"W. RANDAL CREMER.

"HON. JOHN SHERMAN."

"To the President and Congress of the United States of America :

"In response to the resolution adopted by Congress on April 4, 1890, the British House of Commons, supported in its decision by Mr. Gladstone on June 16, 1893, unanimously affirmed its willingness to co-operate with the Government of the United States in settling disputes between the two countries by means of arbitration. The undersigned members of the British Parliament, while cordially thanking Congress for having, by its resolution, given such an impetus to the movement and called forth such a response from our Government, earnestly hope that Congress will follow up its resolution, and crown its desire by inviting our Government to join in framing a treaty which shall bind the two nations to refer to arbitration disputes which diplomacy fails to adjust. Should such a proposal be made, our heartiest efforts would be used in its support, and we shall rejoice that the United States of America and the United Kingdom of Great Britain and Ireland have resolved to set such a splendid example to the other nations of the world."

Senator Teller, of Colorado, spoke in favor of referring, and cited instances to show that the American Government has always stood by the principle known as the Monroe doctrine.

The bill was read a second time Dec. 20. Senator Morgan presented some amendments in the form of a substitute for the House bill, which were offered by the Committee on Foreign Relations, which had had the matter under consideration, anticipating that it would be acted upon within a day or two. The amendment was to strike out all after the enacting clause, and insert :

"That the sum of \$100,000, or so much thereof as may be necessary, be, and the same is hereby appropriated for the expenses of a commission to consist of three members, to be appointed by the President, by and with the advice and consent of the Senate, to investigate and report to him the facts in regard to the divisional line between the republic of Venezuela and British Guiana: *Provided*, That section 2 of the act approved July 31, 1894, making appropriations for the legislative, executive, and judicial expenses of the Government, and for other purposes, shall not apply to any commissioners appointed under this act."

In explanation of the proviso Mr. Morgan said :

"The proviso is intended to exempt the three commissioners who are suggested in the substitute from the operation of an act passed in 1894, the general legislative, executive, and judicial appropriation act of that year, which in section 2 prescribes that any officer receiving \$2,500 a year salary shall not be permitted, under that act, to receive any addition to his salary, although he may

be appointed to some additional duties or to some other or different office. In the event that we provide for the three commissioners, it is suggested by the Secretary of State, in a note to the committee, that we ought to exempt them from the operation of that statute. That is the object of the committee in putting the proviso in the substitute. If we do not amend the House bill of course it is irrelevant and unnecessary."

Senator Platt, of Connecticut, objected to the amendments, as not essential. He said :

"I desire to remark that any amendment made in the Senate will be construed in England as a hesitation on the part of the Senate to sustain the President in the position he has taken. Unless it becomes absolutely necessary, then, to make amendments I should refrain from making them, that our attitude may not be misunderstood in England.

"There seems to be an opinion on the other side of the water that the assertion of American rights and of the American determination to sustain those rights is a campaigning idea, and is put forth at this time for political effect. England must be disabused of any such opinion or belief. The American people were never more in earnest than the breaking out of the Revolution to this day than in their determination to assert and maintain what they believe is essential to the safety of the republic of the United States, namely, that no foreign power shall establish governmental institutions upon this continent, or unfairly or unrighteously extend such institutions now existing upon this continent. We must be careful, then, to do nothing here which will give plausibility to the already prevalent idea in England that the United States are not united and in earnest upon this matter."

Senator Sherman spoke in favor of the amendments, and deprecated hasty action in the matter.

Senator Mills, of Texas, spoke in part as follows :

"The question for the people and the Government to consider, when about to embark in war with confessedly the first nation of the globe on the ocean, is, where are the revenues to be obtained to come into the pockets of the Government? How are we to get money enough to carry on this war, and carry it on successfully?

"Mr. President, during the great civil conflict in the United States the Government was not burdened with vast expenditures as it is to-day. We did not have from \$140,000,000 to \$150,000,000 of annual pensions to meet. We did not have from \$30,000,000 to \$40,000,000 of annual revenues to be expended in the payment of interest on the public debt. We had an income tax unquestioned. We had a tax on domestic manufactures that brought in one year \$127,000,000. The income tax brought to the coffers of the Government one year \$72,000,000. All this, sir, is gone. The Constitution declares that you shall not tax real estate except in proportion to population. The Supreme Court has stretched the authority of the Constitution and declared that you shall not tax personal property except in proportion to population. The tax you have got to-day on whisky and on beer and on tobacco is a tax declared unconstitutional by the highest court in the land. It is a tax that exists simply by sufferance.

"Then, what are we to depend upon for revenues to carry on this gigantic struggle? Duties on imports? Where are your imports to come from when you are in a death grapple with the greatest naval power in the world? When privateers are swarming out from all the ports of all Christendom on both sides, making the heavens lurid with the flames of burning cargoes in every direction, as they did in 1812, how much imports are going to come into the United States to get you revenues? The amount

even to-day is less than \$200,000,000 a year. Your annual expenditures require \$500,000,000 a year to-day without any war.

"Before we adjourn for the holidays we ought to submit an amendment to the Constitution giving Congress the power to levy and collect taxes on both real and personal estate all over the country in accordance with its value and not in proportion to population. The American people will never submit to a tax of that kind, unjust, wicked, nefarious, as it is, if a large amount is drawn from their pockets in such an unequal proportion, but the American people will submit to any taxation that is just and fair when it is levied for the purpose of vindicating the honor, the safety, and the good name of the republic. They will be lavish in both money and blood.

"The Legislatures of a number of States will be in session in a few days. We, without distinction of party, in both branches of Congress, ought by a unanimous vote to submit to the Legislatures an amendment to the Constitution giving to the National Government the power to reach the pockets of all the \$70,000,000,000 of wealth in this country, so as to enable the Government to carry on the war which it may wage, and to carry it on in accordance with the interests and the honor of the American people."

Senator Lodge withdrew the amendment he offered the day before, and spoke in favor of the substitute of the committee.

Mr. Stewart, of Nevada, spoke in favor of the bill as it came from the House. He said:

"He [the President] has put himself in the breach, and declared for the American doctrine of self-defense and noninterference of any European power with the governments or territories of any country in all the Americas—he has put himself squarely there. Give him the money, and let him make the investigation.

"I do not believe there is danger of war. I do not believe Great Britain will insist upon an unjust demand against Venezuela when she knows that it involves war with the United States.

"When the people of the United States are called upon to defend the principles which they cherish as most sacred, and to defend their rights against any country, and particularly against Great Britain, there will be no lack of money. Seventy million people can furnish all the money necessary to vindicate their honor. There can be nothing more injurious to the American people than to submit to the arrogance of Great Britain. It breeds toadyism; it breeds dependence; it destroys American manhood; it destroys the pride of being an American citizen.

"War under any circumstances is to be avoided if possible. War is a great calamity, but it is nothing to the sacrifice of honor. There are other things worse than war. We have had twenty-five years of abundant harvests and profound peace, and there is more suffering to-day in the country than ever before in its history. I am not sure but the people of this country would welcome the change, if it was from peace to war, in view of the general distress which prevails."

Senator White, of California, concurred in all that had been said as to the necessity of enforcing the Monroe doctrine, but did not see any reason for great excitement or cause to expect war. He was in favor of a full examination into the matter, and thought the President should be allowed to select his own commission. He said:

"The only question, as I understand it, before the Senate is whether we will concur in enacting a statute giving to the President the means to enable him to carry out the laudable desire which he ex-

presses, and which we all wish may eventuate in a final clear and convincing report and recommendation. So far as the means of accomplishing this end are concerned, if I had my way about it I would rather appropriate \$100,000 for the purpose of enabling the President to take such action in this matter as may comport with his views of his executive duty. I would rather omit the word 'commission' from the bill, and merely give the President the money to enable him to obtain the essential facts, by commission or otherwise, and report the same to Congress, and, failing in this, I prefer the House bill without amendment."

He cited the resolution in regard to Hawaii adopted by the Senate at the last session of the late Congress as expressing the principle in reference to aggressions by foreign powers.

Senator Mitchell, of Oregon, asked whether, in case that Venezuela should from any cause consent to transfer a portion of the territory in question to Great Britain by treaty stipulation, the United States could, in the opinion of the Senator from California, consent and still be held as upholding the Monroe doctrine. Mr. White declined to make any statement as to the proper course of the country in a contingency which had not yet arisen.

Senator Mitchell, of Oregon, said he would answer his own question by saying that the United States could not consent to such a settlement and at the same time vindicate the Monroe doctrine, because, as he believed, the true construction of the doctrine is that no European power shall, without our consent, be permitted, either by force or by treaty stipulation, to acquire one foot of soil they do not now own or control on this hemisphere.

Senator Caffery, of Louisiana, concurred in Senator Sherman's opinion in favor of a conservative and temperate course of action. He said, in part:

"Let us give a breathing time. The people of the United States are excited. I do not feel that I am saying too much in saying that the members of Congress are excited on this question. All the facts surrounding it, every circumstance connected with it, ought to be diligently inquired into and temperately considered before we launch upon this tremendous scheme of battle.

"Senators say that there is no danger of war. I do not share with them in that opinion. I hope they are correct; I pray that they are correct. Feeling the deep responsibility entailed upon me as a member of this Senate and a part of the war-making power of this Government, while I do not take counsel of any fear in my breast, it behooves me to take counsel of my prudence; and in taking counsel of that prudence, I consider it wise and proper and just that the bill which has passed the House of Representatives be amended as suggested by the Senator from Ohio."

Senator Chandler, of New Hampshire, was in favor of the bill as it came from the House. He was willing to leave the selection of commissioners to the President. In the course of his speech he said:

"The President of the United States in this emergency has risen above party. He has shown himself to be patriotic and wholly American. Inspired by the spirit of Massachusetts, which now pervades and prevails in the State Department, he has taken American ground, from which the United States will never recede. I am in favor of meeting the President upon that ground. Is there a Democrat here who is in favor of doing any more than ought to be done, hoping thereby to promote the interests of his party? I do not believe there is. Is there a Republican here in favor of doing less than ought to be done, thinking thereby to promote

the interests of his party? I do not believe there is; and if the President, whether he be himself a candidate for re-election next year or whether some other distinguished member of his party shall be a candidate for election as President next year, has done his utmost in the sight of the whole world to remove this question of foreign affairs from the disputes of American politics, shall not the people all over the country, without distinction of party, respond to his efforts and sustain his hands in every direction and in every particular?

"Mr. President, I am told that stocks have gone down—that Wall Street is agitated and State Street is agitated—because a Democratic President, sustained by a Republican Congress, proposes to defend the national honor. If stocks have gone down materially, I undertake to say that they are stocks which ought to go down, irrespective of national complications. No stock of any real value in the American or English markets will be seriously affected because the American honor is to be preserved in this crisis of our fortunes. For one I do not propose, and I do not believe any member of the Senate or of the House or any American citizen proposes to be intimidated in this emergency by the declarations of foreign capitalists, by any conspiracy of foreign bankers, to destroy the credit of this country or the value of American stocks in the markets of the world in order to prevent the Congress of the United States from appropriating money to enable President Cleveland to do exactly what he thinks he ought to do in this decisive hour in our affairs.

"I read a cable dispatch to the New York 'Sun' of to-day:

"LONDON, Dec. 19.

"A grave but inevitable consequence of President Cleveland's message upon the British-Venezuelan dispute has arisen perhaps sooner than might have been expected. A meeting of prominent financial leaders who have important interests in the United States was held in a London banking office to-day for the purpose of considering the advisability of united action in calling in their American credits. It is undoubtedly within the power of English capitalists by such a combined movement to deal America a blow which would temporarily be terribly embarrassing and disastrous. It would, however, prove, to a certain extent, a boomerang, and this view had its influence upon the majority of those who attended to-day's meeting. The conference was private, and it was not intended even that the fact that it took place should be allowed to be made public. I am permitted to cable only the general trend of the discussion and the result."

"The article proceeds:

"A strong sentiment of resentment against President Cleveland, and a spirit of retaliation were expressed at the outset of the consultation by several gentlemen. In fact, personal feeling, instead of financial astuteness, seemed to control two or three of those present until cooler counsels prevailed. The point chiefly debated was the question how far the exigencies of domestic politics influenced the President's action, and to what extent his position was supported by the real public sentiment of the country."

"Mr. President, I hope a voice may go out from the Senate to-day which will pronounce the opinion of the American Senate that the exigencies of domestic politics did not influence the President or the Secretary of State in the action which they have taken, but that they were guided in this instance, at least, solely by a regard for the public interest and the public welfare.

"There were no defenders of the President among those present."

"Alas, Mr. President, has it come to this! I ask the Senators upon the other side of the Chamber to contemplate the fact that their President, who has done more for England than any President that ever sat in the White House, has now fallen so low that there are none to do him reverence, and that when the great financiers of Great Britain assembled and made a determination and quietly allowed what they had done to leak out so that it might go to Wall Street and to State Street, 'there were no defenders of the President among those present.'"

"On the contrary, he was denounced unsparingly, and his conduct was described by several as insane."

"Mr. President, what is to be your answer to that assault upon your President? What is to be the answer of Senators upon the other side to that attack upon their Chief Magistrate? What is to be the answer of Republicans upon this side of the Chamber? Do we propose to sit here when the President has adopted a course and announced a policy that is approved by every one of us and hear him called insane upon the other side of the ocean, while we debate the petty question whether we should or not insist upon our right to confirm or reject the commissioners whom he may appoint?"

Senator Allen, of Nebraska, asked whether Rothschild was at the meeting in London.

Senator Chandler answered:

"Mr. President, the Senator's inquiry is appropriate. It is the old game that is being practiced upon us. There are no names mentioned. It was a conference purely for effect on this side of the water. They pretended that it was a private affair, but they intended that it should be public, and it has had its influence to-day in Wall Street and State Street, and telegrams are being sent in here now by the score, warning the Senate not to protect the honor of the United States for fear stocks may go down a little."

Senator Allen then said:

"I should like to ask the Senator whether he does not think there is more danger from that source than from any other source, and whether it would not be wise to pursue such a policy as would cause the withdrawal of English capital from this country and the transaction of business upon our own money. Then there would never be occasion for any Englishman or any congregation of Englishmen to say that they believe the President of the United States is insane."

Senator Chandler answered:

"I am willing, with the Senator from Nebraska, to try to accomplish American financial independence of England and our industrial and commercial independence of England. But let us take one thing at a time. I dislike very much the disposition of the Senator from Nebraska and the Senator from Nevada, if he will allow me to refer to him, to mix together different questions.

"Now, we are dealing with only one thing, the question of national honor in reference to the Venezuelan controversy. I say this is a deliberately concocted scheme of English financiers to frighten the United States. They believe the pocket nerve is sensitive; that the conservative property-holding and bond-holding people of the United States will check those insane persons who are trying to precipitate war between the two countries, one of whom—our own country—ought to remain perpetually in commercial and financial dependence upon the other.

"So, Mr. President, not only was I called insane when a few weeks ago I calmly announced that I thought the grave questions between us and England would have to be settled by war some time within twenty years, but now behold President

Cleveland, but lately the great apostle of English principles of American tariff reform and the idol of the British aristocracy, the British manufacturers, and British financiers, is to-day, in a conference of British bankers in London, pronounced insane. If no one will further interrupt me I will finish this article:

"Most of those present refused to believe that the American people seriously indorse his action."

"Mr. President, I propose that the Senate of the United States to-day give an emphatic utterance of indorsement of his action. I say that any hesitation whatever, any failure to pass the bill now, will be an indorsement of the insult to the President and the attack upon the national credit which the money lenders and the bankers of Great Britain have made, feeling themselves able, by threats and bullying, to frighten the people of the United States."

Senator Tillman asked Senator Chandler whether he would vote for the bill if he knew the result would be that the gold reserve would disappear and we should get to a silver basis, as is threatened.

Mr. Chandler: "There is the same tendency of our Populist friends to mix up questions."

Mr. Tillman: "I beg the Senator's pardon. I thought the Senator understood that I am not a Populist. If I am not a Democrat there are no Democrats here."

Mr. Chandler: "I did not hear the Senator. What are the Senator's politics, may I ask?"

Mr. Tillman: "They are those which I learned from Jefferson and Calhoun and Lincoln. My politics are American. The Senator from New Hampshire does not answer the question, however."

Mr. Chandler: "I will say to the Senator from South Carolina, first that we are all of that politics now."

Mr. Tillman: "Would the Senator from New Hampshire still vote for the bill if he knew that the gold reserve would disappear; that Wall Street would swallow it up?"

Mr. Chandler: "I will answer the Senator from South Carolina by saying that I will vote for any sacrifice, even for the resolution of the Senator from Nebraska, which is the concrete absurdity of all his schemes for financial blundering. I will vote for that, if it is necessary to defend the national honor."

Mr. Tillman: "We join hands."

Senator Turpie, of Indiana, spoke in favor of the amendments. In reference to the construction of the Monroe doctrine, he said: "The Monroe doctrine has been enforced over seventy years. No legislative definition of it has ever been made. There is no reason why it should be. All Americans understand what it is. What is meant by it? Like many cases in the courts that concern specific performance, those concerning the quieting of titles the courts refuse to define, to make any definition, but at the same time they do not hesitate to apply the doctrine whenever a proper case is presented."

"Now, Mr. President, it may be asked and has often been asked, will the Government of the United States then assume the guardianship over all the republics of the American Continent? No, Mr. President, we do not assume any such guardianship. The guardianship has been cast upon us. It has come to us by the force of political gravitation, and by reason of our primacy among the republics of the American hemisphere and among the governments of the world. Our primacy is determined first by the great victory of the American Revolution, the seniority of this Government to all other existing republics except one; next, by the wealth, the resources, and the territorial extent of the United States; third, by her accredited and

proved naval and military strength. It is this which has drawn to us the guardianship of the other republics upon this hemisphere. We can not avoid it. We can not evade it. It belongs to that class of duties indicated in private life by the maxim 'Noblesse oblige.' We are bound by this condition to maintain that supremacy, and, as master of the situation, as leader in the line of liberty, to repel every assault, from whatever quarter, which shall interfere with governments by the people established on this continent."

Senator Call, of Florida, did not see the necessity for a commission, but believed that if such were to be appointed it should be approved by the Senate. He said:

"What are they to do, Mr. President? They can not decide this question of the boundary. If they do decide it, will the Congress of the United States respect that opinion? And, should they respect it, is it not an abrogation of the functions of this body? Are they merely to collect information? Is there, then, no established method by which that can be done? Why shall we appoint commissioners to get documents from abroad, to examine witnesses? Is it not within the competency of this body and the other House to obtain any documents that may be required, and will not the action of Congress be embarrassed if these gentlemen, either three or more, shall declare that Great Britain is right, and that the boundary line named by her is the proper boundary line?"

"The Senator from Indiana says that it is not desired to have the opinion of these commissioners upon the law, but simply as to the facts. Suppose they say that the facts of the case are that the boundary line is as claimed by Great Britain, what is to be the action of Congress? Are we to adopt that report or not; and if we are not to adopt it, will it not be an embarrassment to the Congress of the United States in ascertaining the proposition laid down by the Senator from Indiana that we declare that it is our concern what is the boundary line and what is not when we appoint a commission to report facts here, and that report is not to be binding upon the Congress of the United States?"

"As to the appointment of three commissioners, or any number of them, to do that which it is the duty of the Congress of the United States to do—not to express an opinion, not to decide this question—but to gather information. What kind of information? Information already obtainable, documentary information, facts of history to be obtained in different portions of the world. What necessity is there for it? What will we derive from the opinion and judgment of these gentlemen, however eminent they may be, that the boundary line is at this place or the other place or that the facts relating to it are of this character or the other? The Senate of the United States and the House of Representatives speak with an authority in conjunction with the President, which no commission can do, and I fail to see the practical necessity of it."

Senator Teller, of Colorado, opposed the amendment. He read another extract from the article cited by Senator Chandler, as follows:

"Most of those present refused to believe that the American people would seriously indorse his action. They opposed any suggestion of financial retaliation against American interests on the magnanimous ground that it would be unfair to punish the whole nation on account of the conduct of its deluded Chief Magistrate. No one believes that any actual danger of war is included in the present situation."

"The meeting finally resolved with practical unanimity, to postpone any action until it became clear to what extent the President's course represented the will of the American people."

He said:

"I am not frightened by the little disturbance in London, nor am I frightened at the disturbance which is said to exist in the city of New York. Suppose stocks do fall; what of it? That is not a matter that the American people as a nation care very much about. I am told railroad stocks went off 4 points to-day in New York. I do not care if they did. I do not suppose that will affect the price of wheat or of corn or of cotton; it will not affect the country generally, but only a few speculators; and if the English capitalists who hold our securities conclude that they want to return them to this country, let them return them. We shall not suffer by that. They will return them here to be put upon our markets and sold, and if they fall 20 points or 40 points or 50 points we need not be disturbed about it. We shall find plenty of money in this country to take them up at those reduced values."

The proposed amendment was laid upon the table, and the bill was reported without amendment, read the third time, and passed. It was signed by the President Dec. 21. On that day a message of congratulation from the Congress of Brazil on the message of the President was sent to the Senate by the Secretary of State.

The Financial Condition.—The following message was laid before the Senate Dec. 20. It was read, ordered to lie on the table, and be printed:

To the Congress:

In my last annual message the evils of our present financial system were plainly pointed out and the causes and means of the depletion of Government gold were explained. It was therein stated that after all the efforts that had been made by the executive branch of the Government to protect our gold reserve by the issuance of bonds amounting to more than \$162,000,000, such reserve then amounted to but little more than \$79,000,000, that about \$16,000,000 had been withdrawn from such reserve during the month next previous to the date of that message, and that quite large withdrawals for shipment in the immediate future were predicted.

The contingency then feared has reached us, and the withdrawals of gold since the communication referred to, and others that appear inevitable, threaten such a depletion in our Government gold reserve as brings us face to face to the necessity of further action for its protection. This condition is intensified by the prevalence in certain quarters of sudden and unusual apprehension and timidity in business circles.

We are in the midst of another season of perplexity caused by our dangerous and fatuous financial operations. These may be expected to recur with certainty as long as there is no amendment in our financial system. If, in this particular instance, our predicament is at all influenced by a recent insistence upon the position we should occupy in our relation to certain questions concerning our foreign policy, this furnishes a signal and impressive warning that even the patriotic sentiment of our people is not an adequate substitute for a sound financial policy.

Of course there can be no doubt in any thoughtful mind as to the complete solvency of our nation, nor can there be any just apprehension that the American people will be satisfied with less than an honest payment of our public obligations in the recognized money of the world. We should not overlook the fact, however, that aroused fear is unreasoning and must be taken into account in all efforts to avert possible loss and the sacrifice of our people's interests.

The real and sensible cure for our recurring troubles can only be effected by a complete change

in our financial scheme. Pending that, the executive branch of the Government will not relax its efforts nor abandon its determination to use every means within its reach to maintain before the world American credit, nor will there be any hesitation in exhibiting its confidence in the resources of our country and the constant patriotism of our people.

In view, however, of the peculiar situation now confronting us, I have ventured to herein express the earnest hope that the Congress, in default of the inauguration of a better system of finance, will not take a recess from its labors before it has, by legislative enactment or declaration, done something not only to remind those apprehensive among our own people that the resources of their Government and a scrupulous regard for honest dealing afford a sure guarantee of unquestioned safety and soundness, but to reassure the world that with these factors, and the patriotism of our citizens, the ability and determination of our nation to meet in any circumstances every obligation it incurs do not admit of question.

I ask at the hands of the Congress such prompt aid as it alone has the power to give to prevent, in a time of fear and apprehension, any sacrifice of the people's interests and the public funds or the impairment of our public credit in an effort by executive action to relieve the dangers of the present emergency.

GROVER CLEVELAND.

EXECUTIVE MANSION, Dec. 20, 1895.

The following day Senator Stewart, of Nevada, spoke on the subject in the Senate, in part as follows:

"Mr. President, yesterday the President's patriotic course was commended and indorsed not only by the two Houses of Congress but by the American people. The loyal people of the United States were resolved and are resolved to stand by the President in his patriotic vindication of the Monroe doctrine, in which is involved the safety of the republic.

"I regret, and I suppose all patriotic citizens must regret, that the President, immediately after that grand indorsement, placed himself on a lower level. Why this was done is not explained by words in the message which he sent to Congress, but it is coincident with proceedings on the other side of the Atlantic which were of such a threatening character that they appear to have diverted him from his grand purpose. The meeting in banking houses, the financial war made upon American securities, the threat to destroy American credit, reached to the White House, and the President has yielded before it.

"What does he command us to do? To carry out the recommendations of his annual message. What are those recommendations? Five hundred million dollars of gold bonds and \$500,000,000 less money with which to pay them by the destruction of the greenbacks.

"If the President means what he says in his patriotic message to Congress, he means that if the demands of the United States are resisted specie payment will be suspended, and that the United States will exercise its inherent constitutional right and power to clothe any material that may be necessary with the monopoly of paying debts and taxes, and with that kind of money to defy the world.

"We knew very well that if the United States attempted to assert her rights against England, British financiers would make financial war. We expected it; it has come. The President should not yield to it. We must hold up his hands in this emergency and get him to understand that there is

power enough in 70,000,000 people and resources enough in this country to cope with all the world, and that we have also the power, which has been frequently exercised and should always be exercised in great emergencies, to create money good at home.

"The last clause of his message indicates that he is panic-stricken, so to speak. Just listen to what he says. He needs support; he needs the assistance of a brave Congress.

"He tells us that his apprehensions are such that he wants Congress to come to the rescue, lest, by executive action, he should increase the dangers in the present emergency. What does he contemplate? I hope and I believe that he does not contemplate a submission to the demands of Great Britain. I hope he does not contemplate a submission to the demands of Wall Street or Lombard Street. I hope he does not contemplate another bond issue to placate the enemies of this country. I hope the fears which he says he has are not such as to prevent him from executing the law. It is plain. All he has to do in order to save the credit of the country is to pay the Government obligations according to contract. If he has not gold, the law says he may pay silver. Let him announce that he will do that, and there will be no more raids on the Treasury. We owe no gold obligation. Every obligation of this Government is payable in silver, except the gold certificates, and there is enough gold in the Treasury to meet them. There need be no apprehension."

Senator Dubois, of Idaho, said:

"Mr. President, I regret very much that the President has seen fit to send his last financial message to Congress at this time. He must know, as the country does, that Congress is not going to retire the greenbacks, nor are they going to give him authority to issue gold bonds.

"I see in the New York 'Sun' of this morning the statement of ex-Gov. Flower, in which he says:

"Congress will, in my opinion, pass a resolution in accordance with President Cleveland's request, and, if necessary, give him authority to issue \$500,000,000 in short-time bonds."

"President Cleveland must know, and Congress certainly does, that no such authority will be given him, and at this crisis all that the President accomplishes is suddenly to precipitate upon the country a tariff discussion. If anything at all is accomplished by Congress it will be a revision of the tariff on Republican lines, and this the President will veto. Nobody that I know of wants to issue bonds. Nobody to speak of wishes to retire the greenbacks, and it seems to me that it is extremely unfortunate that the President has precipitated this discussion at the present time. He might have put it off, or he should have recommended something that there was some hope of passing.

"The Senate, if they are allowed to vote on it, will pass as soon as they can get to it on the next legislative day the resolution submitted this morning by the Senator from Missouri, declaring that outstanding paper obligations shall be paid in silver as the law directs. The country might just as well understand that. We understand it here. Yet the supporters of the President in this chamber will probably not let us vote on that proposition. They surely will not until after considerable debate and the consumption of much time. It is utterly, absolutely impossible to legislate financially in accordance with the recommendations of the President, because the Congress is not in favor of it, and no one knows it better than the President. The sooner the people clearly and distinctly understand it the better, it seems to me, it will be for the country."

The Dingley Bill.—On Dec. 26 Mr. Dingley, of Maine, introduced in the House a revenue bill from the Committee on Ways and Means—"to temporarily increase revenue to meet the expenses of the Government and provide against a deficiency." Mr. Crisp protested that the minority of the committee had not been allowed time to prepare a statement of their views.

Mr. Henderson, of Iowa, presented from the Committee on Rules the following resolution:

"Resolved, That immediately after the adoption of this resolution it shall be in order in the House to call up for debate, the previous question being considered as ordered, a bill reported by the Committee on Ways and Means entitled 'A bill to temporarily increase revenue to meet the expenses of Government and provide against a deficiency'; that at 5 o'clock, without delay or other motion, the vote shall be taken. General leave to print is hereby granted for ten days."

In reply to a request for an explanation of this rule, Mr. Henderson said:

"The effect of the adoption of this rule is to permit debate upon the bill just reported by the chairman of the Committee on Ways and Means for raising revenue, the debate to continue until 5 o'clock to-day, when a vote is to be taken upon the bill. I refer to the bill changing the tariff rates in some particulars, for members of the House will understand, I think, that another proposition will be brought in later. That other bill, however, will not be brought up until to-morrow, so that this day until 5 o'clock will be devoted entirely to the discussion of this tariff bill. The provisions of the bill we will not now stop to discuss. The discussion of them will come on when the forty minutes allowed for debate upon this rule are exhausted. I may say this, however, at the present time that the bill is in no sense a general revision of the tariff law, but is legislation designed to promptly and efficiently provide sufficient revenue for carrying on the Government. The Chief Executive of the nation has by a special message called our attention to the financial condition of the country. He has sent us two messages, in fact, which have produced a high degree of excitement throughout the country, and we are given to understand that the business centers are staggering under the weight of the consternation that has followed what I may call two feverish declarations from the White House. The object of the bill just reported to the House is to exercise the judgment of Congress, to which the President referred the subject of his message. The President has stated the conditions as he sees them, and has referred them for action to the wisdom of Congress. The Executive and the majority of the members of this House may perhaps differ as to the causes and the nature of these troubles, but these bills are designed to meet the existing difficulties as the majority of the House see them."

The rule was debated by Mr. Crisp, of Georgia, Mr. McMillin, of Tennessee, and Mr. Turner, of Georgia, against; and by Mr. Dalzell, of Pennsylvania, and Mr. Henderson, of Iowa, in favor.

Mr. Crisp said, in part:

"This rule relates to a tariff bill—the gentleman from Iowa says not a general, but a temporary bill. Sir, a bill may be general although temporary. This is a general tariff bill that affects all the schedules on the list. As to some it prescribes a specific rate of duty; as to others it prescribes a horizontal increase. Now, under the rules of the House (and I refer to those rules because there are many members here who are not yet acquainted with the rules)—under the rules adopted by this body 'all motions or propositions involving a tax or charge upon the people shall have their first con-

sideration in Committee of the Whole.' The special rule now reported deprives the House of that right.

"Do gentlemen understand that if this rule be adopted no amendment will be in order? What authority is it that is so powerful, so omnipotent on the Republican side of the House that it can say to you: 'Here is a general tariff bill affecting the interests of every district and community in the United States, and you must take it without the right to offer a single amendment.'

"There is no necessity for this bill. This bill is not demanded by any department of the Government. There is no suggestion from any source that there is an insufficiency of revenue. Yet, under whip and spur, without giving members of the Committee on Ways and Means, as I have said, an opportunity even to send this bill to the Treasury Department and invite the judgment of an expert as to its effects, you are required to vote yea or nay."

Mr. Dalzell said:

"Mr. Speaker, there is no gentleman within the sound of my voice who does not know that we face to-day as a people a peculiar exigency. Since the 4th day of March, 1893, when the Democratic party came into power, we have been issuing bonds, borrowing money, and day by day, month by month, year by year, our revenues have been showing a greater and greater deficiency. The President of the United States and Secretary of the Treasury have both become alarmed. The President of the United States, appealing to a party that is not his own in the House of Representatives, has asked them with all the solemnity that pertains to his high office to come to his aid. He has said: 'Gentlemen, will you not forego the pleasures even of a holiday season and address yourselves to legislation that shall aid the Government?' Under these circumstances, in this most extraordinary emergency, the Committee on Ways and Means have addressed themselves for the last three or four days, and I may say nights, to the solution of the problem—to ascertaining the best solution possible under the circumstances.

"I agree with my friend from Georgia that a tariff bill, if it were now presented in the first instance as a new one, ought to be considered and prepared with great care and proper deliberation, after due hearings upon the various schedules. But the gentleman knows, as every member of the House knows, that if the House responds at all to the Executive call, it must respond immediately, and must content itself with such deliberation only as is possible under the existing circumstances. But this is not a tariff bill; it is not a revision of the tariff at all, in any general sense of the word. It is not an attempt to correct the many manifest absurdities, incongruities, and injustices of existing law. It is merely an emergency revenue measure, intended to bring relief to the suffering Treasury of the country.

"The gentleman from Georgia says that we are to be driven into the support of this measure to-day under the party whip. It is refreshing to hear from the gentleman from Georgia about the 'party whip' and 'ironclad rules.' Is his memory so short that he forgets the act which I hold in my hand, with over 600 amendments, not one of which was ever considered by this House, and which was passed through the House with but two hours' debate pursuant to a rule framed by the gentleman from Georgia himself? Does the gentleman from Georgia forget that, in violation of all precedents and of parliamentary decency, bills were introduced in this House, and, without reference to any committee, passed under a rule framed by the gentleman from

Georgia with but fifteen minutes' debate on each side? Does he forget that a bill which dealt with the great coal interests of this country, a bill that dealt with the great sugar interests of this country, and a bill that dealt with the ore interests of this country, each and every one of them never deliberated upon in the Committee on Ways and Means at all, were presented in open House and passed in thirty minutes under a gag prepared by the gentleman from Georgia himself? Is it not refreshing?

"Now, gentlemen on both sides of the chamber, what are we called on to do? You are called on to-day to answer, as best you can, and to answer under the circumstances existing, the request of the President of the United States. It is not in answer to the party whip; but rising, as the Republican party always rises, above the plane of party consideration or party prejudices to the high level of patriotic purpose, we propose to afford to the President of the United States and to the Treasury of the country the relief that he has asked."

Mr. McMillin said in part:

"You are called upon to pass upon a general tariff bill to-day without the right to amend—a bill which affects every item on the dutiable list, I believe, in the tariff schedules, except sugar, amounting to more than 4,000 in number, and you are asked to come blindly up and cross your hands and let the gentleman from Maine and his colleagues tie you hand and foot, hard and fast, and surrender your right even to present an amendment to the bill. You are called upon to take such a course in connection with this bill as has never been taken in connection with any revision of the tariff in the history of the House of Representatives since the organization of the Government.

"The gentleman from Pennsylvania attempts to confound the action taken by the House on the Senate bill in the last Congress in connection with the Wilson bill, and to offer that as a comparison to this proposed rule. But the gentleman fails to tell you, Mr. Speaker, that on that bill we had elaborate hearings in the Committee on Ways and Means, where he had a right to bring his friends. We had ample arguments and ample opportunities for hearings before that committee. He should also remember that after the time that bill had been agreed upon an opportunity was given to him and his colleagues to present and have considered the views of the minority. But how different is it here! Yesterday, a holiday, when the departments of the Government were closed, when the Treasury was closed, when even the Library of this Capitol was closed, and no man had an opportunity to get the bill proposed by the gentleman from Maine, that measure was brought in to the Committee on Ways and Means, never having been introduced in the House at all, never having been considered, was never read before the Committee on Ways and Means, and even amended materially after it was brought there, and in thirty short minutes we are asked to take and swallow it whole, without even an opportunity for amendment!

"When they get it into the House they propose to impose \$44,000,000 of taxes on more than 4,000 different articles in less than four hours, or \$11,000,000 an hour."

Mr. Turner said, in part:

"Reference has been made here, Mr. Speaker, to what took place at the heel of the last Congress. Gentlemen who were members of that House understand fully the condition which then prevailed.

"The House had sent to the Senate a bill embodying the view of my party. The Senate put upon that bill a great number of amendments, and with reference to their course upon it I dare not offer my sentiments in stricture. I can not do that

without violating parliamentary proprieties. After two or three months' consideration of the bill in the Senate it went to a committee of conference, and was there considered for two months; and, as a last resort, in order to get a measure in some form of the nature we desired upon the statute books, it went through the House in some such way as the gentleman from Pennsylvania has stated. Then, after the question of coal had been discussed through weeks and months, incidentally, in both houses, after the sugar question had been considered in both houses, and after the ore question had been debated for a long and almost indefinite time in both houses, then, in the closing hours of the session, when there was no hope or opportunity for consideration and deliberation, we passed those measures to which the gentleman from Pennsylvania has referred. Ours is not now that situation. We are at the very beginning of the session, or at the opening of a Congress of which the friends of the gentleman have the majority. Why is it that they do not give us an opportunity for the discussion of this great question? If they are actuated by any spirit of deference to the department of Government which now holds our fortunes in its hands, why do not they put some other measure in front instead of seeking in this Christmas time to tax the American people to the amount of \$40,000,000 or \$50,000,000—an imposition against which the Treasury itself protests?"

Mr. Henderson said in the course of his reply:

"They talk of speed in behalf of the Treasury. Do they forget the speed with which Democratic policies have emptied the Treasury? They have emptied it, and we propose to put money there. Since this Administration came into power it has kept this nation oscillating between chills and fever. We propose to stop these diseases and let the American regain a normal condition. We will do our part of it.

"Talk about war: as one Democratic statesman said, the President comes in here one day and makes a declaration of war, and in three days afterward files his petition in bankruptcy. We are not for war. The Republican party is against war. It has made no declaration in this House for war. Let the country take observation of that. True, the President demanded money to carry out his constitutional functions, and the Republican party said it would supply him with the money; but we have not declared for war.

"The statement is made that the Secretary of the Treasury says there is plenty of revenue. Mr. Speaker, that is not true. I join issue with that statement, but will leave the discussion of it for the proper time, after this rule shall have been adopted. Then we will demonstrate that the Treasury has not sufficient funds. Then we will demonstrate, by proofs that can not be refuted, that this country is suffering for want of revenue to pay its legitimate expenses. Greenbacks and gold are being taken out of the Treasury to pay current expenses; yet the gentleman from Georgia last on his feet dares to sustain the statement of the Treasury Department that we have sufficient revenue.

"Gentlemen of the House of Representatives, this is a business matter. The pending bill is not a general tariff measure. It represents neither the aggregate judgment of the Republican side nor of the Democratic side on the tariff question, but the President of the United States has laid before us the condition of the Treasury and the business interests of the country.

"The business interests of the country say that financially we are in a crippled condition. Now, we all know that if we were to go into a general revision of the tariff every member would feel bound

to investigate details and to stand up for his local interests. That has been done by both sides of the chamber whenever there has been a general revision. To enter upon such a course now would be to tie our hands for months, and that would bring about a crisis in this country compared with which the Democratic crash of 1893 was a holiday entertainment."

Mr. Crisp said:

"This rule is brought in not only for the purpose of preventing this side of the House from offering amendments, but to prevent gentlemen on the Republican side from voting for amendments. It is not necessary that you should tie us up by this rule, because, if you all agree to this bill, you have a majority far more than sufficient to vote down every amendment that we might offer. The purpose of the rule, Mr. Speaker, is to prevent any gentleman on your own side from voting for any amendment which he might conceive to be in the interest of his constituents."

Mr. Henderson replied:

"The gentleman from Georgia wholly misconstrues my statement. It was upon the ground of want of time alone that I called attention to the fact that differences are dangerous in dealing with this subject. As to Democratic amendments, of course we would vote them down, for no Democratic tariff proposition would justify any patriot in voting for it."

The resolution was passed by a vote of 208 yeas to 90 nays, 57 not voting.

The revenue bill was then read. It follows:

"*Be it enacted, etc.*, That from and after the passage of this act, and until Aug. 1, 1898, there shall be levied, collected, and paid on all imported wools of classes 1 and 2, as defined in the act hereinafter cited, approved Oct. 1, 1890, and subject to all the conditions and limitations thereof, and on all hair of the camel, goat, alpaca, and other like animals, except as hereinafter provided, and on all noils, shoddy, garneted waste, top waste, slubbing waste, roving waste, ring waste, yarn waste, and all other wastes composed wholly or in part of wool, and on woolen rags, mungo, and flocks, a duty equivalent to 60 per cent. of the duty imposed on each of such articles by an act entitled 'An Act to reduce the revenue and equalize duties on imports, and for other purposes,' approved Oct. 1, 1890, and subject to all the conditions and limitations of said act; and on all wools and Russian camel's hair of class 3, as defined in said act approved Oct. 1, 1890, and subject to all the conditions and limitations thereof, there shall be levied, collected, and paid the several duties provided by such act approved Oct. 1, 1890. And paragraph 279 of Schedule K, and also paragraph 685 in the free list of an act entitled 'An Act to reduce taxation, to provide revenue for the Government, and for other purposes,' which became a law Aug. 27, 1894, are hereby suspended until Aug. 1, 1898.

"Sec. 2. That from and after the passage of this act and until Aug. 1, 1898, there shall be levied, collected, and paid on all imported articles made in whole or in part of wool, worsted, or other materials described in section 1 of this act, except as hereinafter provided, 60 per cent. of the specific pound or square-yard duty imposed on each of such articles by an act entitled 'An Act to reduce the revenue and equalize duties on imports and for other purposes,' approved Oct. 1, 1890, and subject to all the conditions and limitations thereof, in addition to the *ad valorem* duty now imposed on each of such articles by an act entitled 'An Act to reduce taxation, to provide revenue for the Government, and for other purposes,' which became a law Aug. 27, 1894; and on carpets, druggets, bockings,

mats, rugs, screens, covers, hassocks, bedsides, art squares, and other portions of carpets or carpeting, made in whole or in part of wool, the specific square-yard duty imposed on each of such articles by said act approved Oct. 1, 1890, and subject to all the conditions and limitations thereof, in addition to the *ad valorem* duty imposed on such articles by said act which became a law Aug. 27, 1894.

"SEC. 3. That from and after the passage of this act and until Aug. 1, 1898, there shall be levied, collected, and paid on all imported lumber and other articles designated in paragraphs 674 to 683, inclusive, of an act entitled 'An Act to reduce taxation, to provide revenue for the Government, and for other purposes,' which became a law Aug. 27, 1894, a duty equivalent to 60 per cent. of the duty imposed on each of such articles by an act entitled 'An Act to reduce the revenue and equalize duties on imports, and for other purposes,' approved Oct. 1, 1890, and subject to all the conditions and limitations of said last-named act; but pulp wood shall be classed as round unmanufactured timber exempt from duty: *Provided*, That in case any foreign country shall impose an export duty upon pine, spruce, elm, or other logs, or upon stave bolts, shingle wood, pulp wood, or heading blocks exported to the United States from such country, then the duty upon the lumber and other articles mentioned in said paragraphs 674 to 683, inclusive, when imported from such country, shall be the same as fixed by the law in force prior to Oct. 1, 1890.

"SEC. 4. That on and after the passage of this act, and until Aug. 1, 1898, there shall be levied, collected, and paid on all the imported articles mentioned in Schedules A, B, C, D, F, G, H, I, J, L, M, and N, of an act entitled 'An Act to reduce taxation, to provide revenue for the Government, and for other purposes,' which became a law Aug. 27, 1894, a duty equivalent to 15 per cent. of the duty imposed on each of said articles by existing law in addition to the duty provided by said act of Aug. 27, 1894: *Provided*, That the additional duties imposed by this section shall not in any case increase the rate of duty on any article beyond the rate imposed thereon by the said act of Oct. 1, 1890, but in such case the duty shall be the same as was imposed by said act: *And provided further*, That where the present rate of duty on any article is higher than was fixed by said last-named act, the rate of duty thereon shall not be further increased by this section, but shall remain as provided by existing law."

In the debate of three hours and a half which followed the bill was supported by Mr. Dingley, of Maine; Mr. Payne, of New York; Mr. Dalzell, of Pennsylvania; Mr. Hopkins, of Illinois; Mr. Grosvenor, of Ohio; Mr. Johnson, of Indiana; Mr. Arnold, of Pennsylvania; Mr. Dovenor, of West Virginia; Mr. Watson, of Ohio; Mr. Knox, of Massachusetts; Mr. Dolliver, of Iowa; Mr. Wilson, of Ohio; and Mr. Meiklejohn, of Nebraska. It was opposed by Mr. Crisp, of Georgia; Mr. Dockery, of Missouri; Mr. Wheeler, of Alabama; Mr. Turner, of Georgia; Mr. McMillin, of Tennessee; Mr. Underwood, of Alabama; and Mr. Bell, of Colorado.

Mr. Dingley said in part:

"The Committee on Ways and Means immediately took up the subject and proceeded to consider what measures of relief could be proposed. The first thing that attracted the attention of the committee—the first in order because the most important and lying in large measure at the very foundation of the difficulties through which the Treasury had passed—was the fact that for two years and a half there has been a constant deficiency of revenue—an insufficiency of current income to meet the ordinary expenses of the Government—until that condition has become chronic.

"Gentlemen have said in the debate upon the rule which was presented that there is no demand for more revenue, that the revenue is sufficient. I remember that in the last House, almost a year ago, when I presented upon this floor what seemed to me the urgent demand for an increase of revenue, it was replied by gentlemen on the other side that 'next week,' 'next month,' there would be revenue sufficient. And so we have gone on with this cry of hope all through this year up to this hour; and almost every month from the 1st day of July, 1893, up to to-day there has been an insufficiency of revenue to meet the current expenditures of the Government, amounting now to the enormous sum of \$132,000,000. And in the present fiscal year, commencing on the 1st day of July last, up to night before last, there was, as shown by the official report in my hand, a deficiency of \$18,500,000; and in this very month of December, as shown in the same way, there has been a deficiency approximating \$3,000,000.

"Now, gentlemen tell us that there is revenue enough to meet the expenditures of the Government. What do they mean? What does the Secretary of the Treasury mean when he says that we need no more revenue? What did he mean one year ago when he communicated to one of the Houses of Congress that there was no need of additional revenue? His own reports presented from day to day show that there has been a deficiency all through this fiscal year, and never larger than at this moment. He means simply this (and I ask the attention of the House to the manner in which this issue is being avoided, for I wish to show the evil results which flow from it)—he means that after he has borrowed gold under the resumption act of 1875 for the purpose of redeeming United States legal-tender notes as they are presented for redemption, and after those notes have been thus redeemed by the proceeds of bonds sold, he has taken the very United States notes thus redeemed and immediately paid them out to meet a deficiency of revenue from day to day, from month to month, and from year to year. I ask, gentlemen, if so plain and practical a matter as this is to be met in this manner, what difference does it make if the Secretary of the Treasury sells bonds and immediately uses the proceeds to pay a deficiency in the revenue, or, having first used the proceeds of the bonds to redeem greenbacks, then to turn around and use the greenbacks to pay the necessary expenses of the Government and meet the deficiencies of the revenue? I ask gentlemen to point out the difference. Is not this in effect practically selling bonds to pay the deficiency?

"Now, Mr. Speaker, if this policy is to be pursued, if we are to go on with insufficient revenues to meet the expenses of the Government, and then when bonds are sold for gold to redeem outstanding legal-tender notes those notes are to be immediately used to pay deficiencies of revenues, then I say to you that the 'endless chain' of which the Secretary of the Treasury complains is fully established, and he may continue selling bonds without limit to put gold into the Treasury, taking the greenbacks to pay the deficiency in revenue, and never stop the raids upon the Treasury gold. Is there any doubt of this? Can it be questioned? And yet gentlemen say to us that because we have to-day \$75,000,000 of cash above the redemption fund in the Treasury—\$25,000,000 being required for a working balance, leaving \$50,000,000 of free United States notes—gentlemen tell us that we may proceed to use those notes to meet a deficiency in the Treasury, placing the notes so that they may be presently presented for a second redemption in gold, and still need no more revenue. Is there any

doubt that if we are to stop this run on the Treasury, to stop the issue of bonds to be sold for gold to maintain the redemption fund, that the first thing in order, the first step, is to provide sufficient revenue to meet the daily and monthly and yearly expenses of the Government? It is admitted that we do not have sufficient revenue for these purposes, and that the deficiency must be made up by taking the redeemed notes and immediately paying them out again. This is practically using the proceeds of the bonds to meet the deficiency of revenues of the Government.

"Now, how did it happen that from 1879 up to 1893 there was no serious run on the Treasury gold? We had the greenbacks existing during that period, and preferred everywhere to gold. But why? Because, in the first place, the revenues of the Government were equal to or greater than the expenditures; and there was no necessity for creating an 'endless chain,' which must exist as long as there is insufficient revenue; in the second place, because there was maintained a redemption fund up to the minimum of \$100,000,000, which created confidence every day and every hour; and third, because there was existing such a policy in the country as put all the people at work, all the spindles turning, and all the machinery moving, while consumption was up to the highest point, and prosperity existing in all directions. These conditions have been set aside since 1893, and insufficiency of revenue is a potent cause of existing distrust.

"As long as this condition exists I contend that you may continue to sell bonds to maintain the redemption fund indefinitely, and yet, unless you furnish sufficient revenue to carry on the Government without a deficit at the end of each month and each year, that you are making simply an endless chain which will sustain the run on the gold in the Treasury—a run inaugurated by distrust.

"The first duty, then, that confronts the House is to provide sufficient revenue to meet the expenditures. How much revenue is required? Up to Jan. 1, the close of the first half of this fiscal year, the deficit will reach nearly \$20,000,000, and, assuming that that condition will exist during the next six months—for it is hardly reasonable to suppose that there will not be a deficiency during that period—it will bring the total up to at least \$30,000,000, probably \$35,000,000, and this may be greatly increased in certain contingencies.

"Now, the majority of the Committee on Ways and Means, in view of this situation, have felt it to be their duty immediately—first in order because first in importance, upon which everything else depends—to provide about \$40,000,000 of additional revenue annually during this exigency. We do not know how long this exigency may continue, but we believe that it is safe in any event to provide \$40,000,000 additional revenue annually for two years and a half. Hence the measure which has been reported by the committee is limited in its operation to two years and a half, the additional revenue to begin on the passage of the bill which has been presented and to terminate on the 1st day of August, 1898. It is exigency legislation which we have presented. It is legislation demanded by the special condition of the Treasury, to which our attention has been called by the President of the United States.

"The majority of the Committee on Ways and Means, in looking around to see where this revenue could be obtained, have agreed that it should be obtained from the customs side of our revenue system for two reasons: First, on the excise side we already raise over \$150,000,000, which is all that should come from internal taxes; second, it was always the intention of the founders of this Gov-

ernment to raise revenue for the support of the National Government from duties on imports.

"We have held, therefore, that it was our duty—especially in view of the fact that the balance of trade during this fiscal year has turned against us, and, having turned against us, has created a demand for gold for export—to raise additional revenue by increasing duties at some points in order that we might thereby increase the volume of goods to be made in this country, incidentally, and at the same time diminish the imports of that class of goods, and thus turn the balance of trade in our favor instead of against us. For it must be remembered that so long as the balance of trade is against us gold must be exported to pay that balance, or else securities payable in gold, which are precisely the same thing.

"Therefore it seemed to us that for these reasons we should look to the import side for the purpose of raising \$40,000,000 additional revenue. Looking in that direction, with the urgent demand upon us for instant action, we have, of course, found it impossible to revise the tariff, especially upon our ground; and looking at the fact of the great necessity, we have decided, by the simplest possible measure, to raise \$40,000,000 or thereabouts of additional revenue, and to stop this deficit that is causing such serious injury to the finances of the country. In raising revenue in this way we have been obliged to turn, in large part, to a horizontal increase of duty.

"Now, I admit that under other conditions, when there was no urgency, this would be an improper way to modify the tariff for the purpose of obtaining more or less revenue. But there is no time to go through the tariff and to examine the condition of each industry and adapt legislation to the wants of each and make a thorough revision of the tariff. Whatever is done, if it is to accomplish any good, must be done at the earliest possible moment, and it must be done in a way which will not provoke the aggressive hostility of others who differ with us on the point of the tariff in order to bring it into law. And for that reason we have proposed, as to a large number of schedules—all the schedules except the sugar and woolens schedules—simply to increase the duty 15 per cent. during the next two years and a half. It is estimated that from this increase of duty, on the basis of the imports of last year under the existing tariff, we shall secure an additional revenue of \$16,500,000 or thereabouts; but assuming that even this slight rise of duty, amounting really to an addition of only about 8 per cent. *ad valorem*, may cause—especially as to those articles which this country can make for itself without any climatic disadvantage—somehow of a decline in imports, we reduce the estimate of revenue from this part of the bill to \$15,000,000.

"Now, turning to wool, the great revenue producer: Wool was placed upon the free list by the act of 1894, unjustly, as it has always seemed to me, to the farmers of this country. We propose to take wool from the free list by the bill which has been presented, and to give clothing wool—that is, wool of classes 1 and 2—a duty of 60 per cent. of the duty given by the act of 1890, which is 66 cents per pound as to most clothing wool.

"But as to carpet wools, we have retained the same duty (32 per cent.) as provided by the act of 1890, simply for the fact that carpet wools are not produced to any general extent in this country, and therefore that the duty on carpet wools is essentially a revenue duty.

"Now, it is found by computation that should there be an importation of wool during the next fiscal year equal to the importation of the last year we should obtain a revenue of \$12,000,000 on wool

alone. We imported last year about 100,000,000 pounds of carpet wool. Carpet wool is valued on the average at 9½ cents a pound, which gives substantially a duty of 3 cents per pound, and 3 cents per pound on 100,000,000 pounds gives us \$3,000,000 revenue. We imported last year about 138,000,000 pounds of clothing wool. Now, if there should be as much imported next year under this tariff, if it should become law, there would be, as I have already said, an increased duty of about \$9,000,000, making about \$12,000,000 revenue from wool.

"It is more than probable, therefore, that in each of the next two fiscal years we shall be obliged to import as much clothing wool as we imported in the last fiscal year, and that being the case, we shall obtain \$12,000,000 additional revenue from this source during that period.

"From woolen goods, on which is to be laid a compensatory duty equivalent to the duty on wool, there would be a further increase of revenue to the extent of \$16,000,000 if the importation should continue as large as it has been since the new tariff on woolen goods went into operation last January; but I assume that when this duty shall be laid, being specific, its effect will be to cut off, to some extent, the importations of foreign manufactures of wool coming into this market, which have already seriously injured that industry in this country. Nevertheless, supposing such an effect should result from the passage of this bill, with a reduction even to the extent of one third of our current imports of woolen goods, we should get about \$12,000,000 additional revenue from this source. It must be remembered that in 1892 we imported only \$36,000,000 of woolen goods, while in the present calendar year the importations will exceed \$60,000,000, and that on an undervaluation, because the duty now is exclusively *ad valorem*, which has unquestionably resulted in the importation of goods that on a fair basis of valuation would come nearer to \$90,000,000. Now, we shall get from the imposition of the proposed duty on wool an increased revenue of \$12,000,000, and we shall get at least \$12,000,000 more upon goods, making \$24,000,000 increase of revenue from these two sources; and if we obtain \$15,000,000 from the horizontal increase on the other schedules, that, added to the \$24,000,000, will make \$39,000,000. In addition to that, it is estimated that there will come about \$1,000,000 increase of revenue in consequence of the transfer of certain lumber from the free list to the protected list at a rate of duty only 60 per cent. of that which was imposed by the act of 1890.

"So, Mr. Speaker, it is well-nigh certain that this measure, if enacted into law, would give us additional revenue of not far from \$40,000,000 during the year following its enactment, and it is just this \$40,000,000 that we need to make our revenue equal to or slightly more than our expenditures, to restore confidence and to give to the business of the country the moral influence of a government that is solvent, that is paying its bills from its revenue, and that has a credit second to that of no government upon the face of the earth."

Mr. Crisp said in part:

"Mr. Speaker, I shall occupy but little of the time that has been assigned to this side for the discussion of this bill. I shall not attempt to follow my friend from Maine along the devious path which he has trodden. I shall not undertake to reply to his first argument, that this is a bill purely for revenue, and then to his last argument, that this is a bill to protect the wool industry. Those inconsistencies answer each other. But, sir, I do desire to call attention to certain facts which controvert the position assumed by the gentleman. The gentleman from Maine says that this extraordinary

spectacle, this extraordinary haste, this extraordinary bill, is all caused and all justified by a message of the President of the United States. I suggest, Mr. Speaker, that in making that statement the gentleman from Maine does not practice his habitual candor. If this bill is intended to be responsive to any suggestion from the President of the United States, then the action proposed ought to be in line with the suggestion made. The excuse the gentleman from Maine gives for the hurried manner in which this bill is presented and proposed to be rushed through is that there is a deficiency of revenue, and that therefore the Government can not live without some such legislation. Now, the Secretary of the Treasury, in his report made to the House the other day, says:

"The cash balance in the Treasury on the 1st day of December, 1895, was \$177,406,386.62, being \$98,072,420.30 in excess of the actual gold reserve on that day, and \$77,406,386.62 in excess of any sum that it would be necessary to use for replenishing that fund in case the Secretary should at any time be able to exchange currency for gold. There is, therefore, no reason to doubt the ability of the Government to discharge all its current obligations during the present fiscal year and have a large cash balance at its close without imposing additional taxation in any form upon the people."

"This great fiscal officer, charged with the duty of making estimates and setting before us the condition of the Treasury, says that there is absolutely no necessity for imposing additional burdens in the shape of taxation upon the people. But the gentleman from Maine cites what he calls a deficiency, and claims that this demonstrates the necessity for an immediate increase of revenue.

"Mr. Speaker, that gentleman knows—no man knows better—that there is in the Treasury to-day over and beyond the gold reserve largely more free money by three times over than any deficiency that can occur during the fiscal year. It is not a question, Mr. Speaker, of borrowing money to meet expenditures—the money is already borrowed; the money is in the Treasury—but it is a question whether you will use an asset which you now have, or whether you will run posthaste to impose additional burdens upon the people in order to pile up money in the Treasury of the United States.

"Now, let us understand this matter. There has been a deficiency. Why? What law caused it? I listened in vain to the gentleman from Maine to hear some confession that the deficiency and the withdrawal of gold began under what is known as the McKinley law. Not one breath did we hear indicating there had been any financial disturbance under that celebrated law. Yet, Mr. Speaker, the receipts under the McKinley law had fallen until during the four months next preceding March 1, 1893, the expenditures exceeded the receipts by \$4,094,021.30. That was before the inauguration of the new Administration, and, of course, it was years before the passage of what is known as the Wilson tariff bill.

"The first deficiency, therefore, we find arose under what is known as the McKinley law. That law was then peculiarly the pet of the Republican party. In that day there was none on that side to criticize or arraign the supremacy of the gentleman whose name had been given to that bill. It was the typical Republican idea of imposing taxation—that is, to reduce the receipts going into the Treasury by increasing the receipts going into the pockets of the protected manufacturer, to put at the water's edge of our country a tax collector with rates so prohibitory that no goods could come in in competition with goods made at home, thus reducing the revenue coming into the Treasury and thus

increasing the profits of the domestic manufacturer by putting a burden upon his competitor. That is the Republican idea, and that was the idea embodied in the McKinley bill. Under that bill, Mr. Speaker, the revenues fell.

"My friend from Maine, so far as I could understand him at this distance, stated that there were no withdrawals of gold until after the advent of the Democratic Administration. I will not say that I apprehended his statement correctly, but that is what I understood him to say—that the withdrawals of gold did not begin until after the inauguration of the present President of the United States. What is the fact? During the nine months next preceding March, 1893—the date when the Democratic President was inaugurated—the withdrawals of gold were \$58,746,000. That was under the McKinley law and under a Republican President. You gentlemen recollect very well the apprehension that existed in the Treasury Department as the time for the inauguration of Mr. Cleveland approached—the apprehension that there might be a necessity to issue bonds before that event took place. You recollect the stories that went through the press—I do not vouch for them—that already in the Bureau of Engraving and Printing they were preparing bonds to be issued to build up the gold reserve.

"Now, Mr. Speaker, there is no additional taxation needed. We have that information from the Secretary of the Treasury. We ought to be candid with each other. Suppose you passed this bill; suppose it increases taxation \$40,000,000, and that \$40,000,000 goes into the Treasury each year. How will that help the existing condition? The President's message to which my friend from Maine has referred does not appeal for more revenue. It appeals for a particular kind of money. If you agree with him that that particular kind of money ought to be piled up in the Treasury, then you ought to provide some method by which it may be accumulated. The method now suggested, as stated by the Secretary of the Treasury, will be wholly inadequate to prevent or remedy that condition of things which alone prompts the President and the Secretary of the Treasury to appeal to Congress for relief. They ask for a particular kind of relief, and you offer them a supposed measure of relief which you know they do not want."

Mr. Payne said:

"The gentleman from Georgia says that there was a deficiency of revenue under the tariff act of 1890. Mr. Speaker, the tariff act of 1890 produced sufficient revenue to meet the expenses of the Government down to the 1st day of November, 1892. Not only that, it put into the Treasury a surplus of over \$38,000,000. I can not stop to describe the other benefits that are known and read of by all men that followed from the tariff act of 1890 into every nook and corner of the United States.

"In November, 1892, there was a deficiency in the revenue. There was not quite enough to meet the expenditures. But the gentleman from Georgia seems to have forgotten what also occurred in 1892, when the Democracy was placed in power in the White House and in both ends of the Capitol, and their destructive hand was cast like a shadow over every industry in this broad land. It was that shadow that brought a deficiency of revenue in November, 1892. It was followed by their acquisition of power, on the inauguration of their President in March, 1893, and by the events which followed, until the Wilson-Gorman bill was written upon the statute books; and from the very day and hour that you placed that bill upon the statute books there has been a deficiency in the revenue of the Government. It is true, that for two months the Treasury Department figured out a surplus;

but it is equally true that in each of the months that followed there was an excess of expenditures over the expenditures of the month preceding of \$7,000,000 to \$10,000,000. Your deficit in the revenue brought further distrust among the people.

"When we assembled in the summer of 1893, the President of the United States informed us that all that was necessary to bring prosperity to this country was the repeal of the so-called Sherman silver act. The Republican party united with a few of you who voted for it on the other side and repealed that silver act; but we told you then that if you wanted to bring prosperity back to the country you should follow it by the further declaration that you would not have any tariff legislation; that you would not interfere with the industries of this country. And we predicted to you then that if you persisted in your agitation, that if you persisted in the passage of your bill, evils would come upon the country; and they have come since that time and have followed as surely as night follows the day. We have had this run upon the Treasury. Now, the gentleman from Georgia says that there is \$175,000,000 in the Treasury—\$100,000,000 of redemption fund and \$75,000,000 more—and that is true; but you have borrowed \$181,000,000 since you came into power; and if you had not borrowed a dollar of that money the \$175,000,000 would be gone and the Treasury bankrupt by a sum of over \$6,000,000. Do you want to continue that state of things? Do you want to deal with syndicates that charged a premium of \$10,000,000 upon a \$60,000,000 loan?

"We propose a business method. We propose that the income shall equal the outgo. Now it lacks nearly \$40,000,000 or \$50,000,000 per annum. We offer it to you. We offer it to you in the shape of your own tariff bill, with a horizontal increase of 15 per cent.

"How can any of you refuse to vote for it? Why, you often cry that you favor a tariff for revenue with incidental protection. This is your kind of a tariff. We give it to you as a temporary measure. We give it to you to increase the revenue. We give it to your President and your Secretary of the Treasury to help lift the business of the country and the Treasury out of the bankrupt condition which seems to be the result of every Democratic administration that ever had full control of the country from the time of Monroe's inauguration down to the time of Grover Cleveland."

Mr. Bell spoke in favor of the double standard of gold and silver as a remedial measure, and Mr. Meiklejohn said that if amendments had been permitted to the bill, he would have proposed one on the imposition of duties on sugar which were not touched upon in the bill.

Mr. Dockery said in part:

"Mr. Speaker, the adverse business conditions prevailing in 1892, under the McKinley law, contributed largely to the overwhelming defeat of Mr. Harrison. Gentlemen will remember the cyclone of disapproval which swept over this country from Maine to California. Why, even the eminent Speaker of this House, with his distinguished colleagues from Maine, only escaped the wreck made by that cyclone because they 'got over the bridge' before it went down in November, 1892; and the bridge went down largely because of adverse trade conditions. It was the paralysis prevailing in business circles which compelled the Republican party to extend \$25,000,000 of maturing Government bonds and take \$54,000,000 of trust funds belonging to holders of national bank notes and cover them into the general Treasury. All this occurred long before the election of Mr. Cleveland.

"We find that the original outflow of gold from

the Treasury of the United States was the effect of untoward trade conditions and of the passage of the Sherman act, which, under the Treasury construction, resulted in an issue of \$150,000,000 of gold obligations, with no gold in the Treasury to redeem them."

In the course of his speech Mr. Grosvenor said: "First, let me point out to the gentleman from Georgia, who has attempted a comparison between the two administrations, that it is an unfortunate suggestion of his that we should now institute a comparative statement between the two administrations. During the administration of Benjamin Harrison we paid off nearly \$250,000,000 of the national debt and destroyed the bonds, and put an end to the necessity to relieve the country of that burden. Under Mr. Cleveland's administration we have already increased the national debt, first, by \$162,500,000 of bonds, bearing a high rate of interest, added to an additional floating debt or deficit, which present the sum total of about \$200,000,000, and within the next ten days it is safe to predict that the sum will be increased by another \$100,000,000 of bonds. All these are the true elements of comparison which the gentleman from Georgia has entirely omitted to refer to."

Mr. Turner said in the course of his speech:

"We have more money in the Treasury than we need; why, then, should we want to put more of the same kind of money there? I have here a statement from the Treasury showing the form in which our customs duties have been paid during the last few days. From this statement it appears that not a cent of gold has been paid into the Treasury, not a gold certificate has been paid into the Treasury, not a cent of anything has been paid into the Treasury under our customs laws but greenbacks and Sherman notes. Why, I ask, should gentlemen seek by another tax levy to pile up in the Treasury forty millions more of this same kind of money, which will no more relieve the situation than the money of which we have already a surplus of over seventy millions.

"But, sir, gentlemen to commend this bill claim for it magnanimity on their part. They assume that they are coming to the relief of this Administration. The Administration declines it.

"Mr. Speaker, there lies behind this measure a motive which is not apparent on its face or in the avowals made by its friends and champions on the other side. My friend from Tennessee adverted briefly to the motive which directs this measure. It is proposed by this measure to put the tariff question behind for the session. What has come over the 'grand old party' that its chieftains dare not meet responsibilities on their own account? What is it that has induced them to tent on our abandoned camp grounds? This is a bill which treats in a special way, with a sort of popgun policy, one or two articles; and you ought to send by express an apology to William M. Springer, among the savages in the Indian Territory. You denounced that great Democratic statesman, William R. Morrison, for a horizontal bill, as has been said here; yet you have to-day simply adopted his policy, and you ought to send a resolution of thanks to him for having instituted a policy which you are copying here in a great emergency.

"And, sir, as was also stated by my friend who preceded me, this is a bill which is claimed by the gentlemen advocating it to be a bill 'for revenue only.' In view of the history of this country since 1876, you ought to apologize to the Democratic party and the whole world. I again ask you what has come over the spirit of the 'grand old party'? When I first came to Congress I heard one of the gentlemen, now supported by his friends for the

highest office in the gift of the American people, declare that he was for a tariff for protection with incidental revenue. He afterward gave to the tariff which was constructed strictly on that principle the benefit of his name. You say you can not afford to enter now on general legislation. Why can you not follow his lead? He was once a doughty champion in your cause.

"If, as the gentlemen from Pennsylvania has said, the existing law is wicked and iniquitous, why did you not in two or three sentences provide that the existing law be repealed and the McKinley act reinstated? It would have taken but a few words, and it would have brought into the ranks all the followers of protection. But you do not do that. You see fit not to adopt the policies of your own distinguished men. You repudiate their leadership. You go back on all your own traditions, and you misapply and pervert devices of ours that we have long since repudiated. If you did not see fit to repeal the Wilson act and re-enact the McKinley law, why did not my good friend from Maine, the distinguished chairman of the Committee on Ways and Means, offer here a bill to tax beer \$1 a barrel more—a proposition which he favored during the last Congress? On this one item alone he could have raised nearly all the money which he now expects to raise by a tax on the necessities of the American people; and it would not in any degree have disturbed the business of the country.

"Why is it, Mr. Speaker, that after distinguished Democrats have been by Republican orators here and elsewhere accused of dreadful crimes and combinations in connection with the sugar-trust scheme in the present law, the gentlemen on the other side have simply passed over that so-called iniquitous feature without touching it up or touching it down? They have simply followed their denunciation of that scheme by letting it severely alone. Senators were put under investigation on account of it, and the President also came in for some share of abuse in this connection; but this bill stays its hand at the sugar schedule!

"Why is it, if the Wilson tariff act is bad, that this bill does not attempt to correct its wickedness? Where is the courage of that great party? Even during the last Congress, as during all my service here, there sat on that side a man from whom a stern look was like the frown of offended majesty. There was on that side a courageous hand the mere motion of which could put down or put up every member on that side. That same hypnotic hand, once so potent in action, now silences associates and represses their ardor while it wields the gavel of this House. I think it is wise in him. I think he will rejoice still more at the end of two years from now than he did at the end of the last four years if he can congratulate himself on having suppressed a reiteration of the tariff during his primacy in this Congress. But the country will take up this battle."

Mr. Arnold said:

"But the gentlemen on the other side say there is no deficiency and no need of revenues. I refer them to the report of the Secretary of the Treasury, page 52, wherein he states that the expenditures exceed the receipts from July 1, 1893, to Dec. 1, 1895, over \$130,000,000. How the gentleman from Georgia can arrive at the conclusion that there is no deficit it is difficult to understand, and it can only be explained by believing that he calculates from the Treasury reports with the same peculiar system of mathematics which he applies to the silver question—namely, that the one half of 100 cents is \$1. For months and months and many months the deficit has been millions per month, and this is known to all people who read. Your

Wilson-Gorman bill of the Fifty-third Congress is not one of 'tariff for revenue only,' but a tariff for deficit only. So your revenue and financial measures are absolute failures, and you are continuing in that pathway, which has all along been strewn with the wrecks of your failures and with the evidences of your incompetency. All this now being history, you on the other side should thank and support us when we propose to help you in your extremity of threatened bankruptcy.

"And the financial methods of the Cleveland administration are as discreditable as the revenue law it placed upon the statute books. Think of its selling \$62,000,000 of 4-per-cent. gold bonds at \$1.04 to a syndicate which made \$10,000,000 profit in the transaction. Mr. Speaker, up in my State, in Philadelphia, Mayor Warwick issued and sold to his own people \$1,250,000 of bonds at 3 per cent. interest, at par, and no syndicate or other person got one penny in commission. And the Pennsylvania Railroad Company negotiated lately a large loan at 3½ per cent. interest at par. All this was accomplished by competent business management, while this great nation must pay 4 per cent., and in addition give \$10,000,000 to negotiate \$62,000,000. And with this fact in his possession the gentleman from Tennessee a few moments ago compared the present Secretary of the Treasury to Alexander Hamilton, the most versatile genius our country has ever produced. Shades of Hamilton, what profanation! 'Pygmies are pygmies still on mountain tops, and pyramids are pyramids in vales.'"

Mr. Dolliver said:

"I do not propose to enter into a controversy on the subject of protection. Everybody must judge that for himself; but I do say that my Democratic friend from Georgia ought to be very careful about attributing any very great amount of American prosperity to the operation of the law of 1894. If the American people can be persuaded of that it will do more to popularize perfidy and dishonor than anything that has ever happened in this world.

"My friend asks the Republican majority why we do not bring in a general tariff law, and he refers to the leadership of this House as wanting in courage; but the leadership of this House can always be relied on not to 'fight as one that beateth the air.' But we know, and everybody knows, that a Republican tariff law can not be enacted by this Congress. We do not know that the President of the United States would not sign the present bill. Does my friend speak by some commission when he says that the Administration declines this relief? We have the best reason for knowing that this law will please the Chief Magistrate. We had a letter from the President in the last session of Congress which contains evidence that he will sign this law, restoring a reasonable revenue duty upon wool; and if my friend will listen to me I will read exactly what he says. He says:

"In these circumstances it may well excite our wonder that Democrats are willing to depart from this most Democratic of all tariff principles and that the inconsistent absurdity of such a proposed departure should be emphasized by the suggestion that the wool of the farmer be put on the free list and the protection of tariff taxation be placed around the iron ore and coal of corporations and capitalists."

"The present law leaves a duty upon iron ore and coal substantially equivalent to 60 per cent. of the law of 1890.

"With all his eloquence and all his ability the gentleman from Georgia can not explain how this great agricultural interest of the country was put

on the free list, while 60 per cent. of the McKinley rate was retained upon iron ore and coal. So I say that there is no man who knows the heart of the President as it has been revealed to us in these delicate communications we have had from the throne. Who is authorized to say that he will put the signature of his executive disapproval upon this bill for the relief of the Treasury?

"To-day we come and offer to the uneasy Treasury of the United States an increment of revenue of \$40,000,000 annually, and then we propose to clothe the Secretary with discretion to make a legal, salutary use of the national credit to protect the solvency of the Government and to maintain the value and parity of all the outstanding currency of the United States. There can be no permanent disaster in a country like this. As my friend from Iowa has said, a country with assets and integrity is always safe in the business world. There is one thing that we ought all to be agreed upon, whatever else we are divided about, and that is that the Treasury of the United States should no longer be left at the mercy of the organized avarice of the world without money to pay or power to borrow or means for increasing the public revenue."

The question was taken, 228 voting yea, 83 nay, and 44 not voting.

The bill was read twice by its title in the Senate, Dec. 27, and referred to the Committee on Finance. It was reported back Feb. 4, 1896, with an amendment to strike out all after the enacting clause and insert:

"That from and after the passage of this act the mints of the United States shall be open to the coinage of silver, and there shall be coined dollars of the weight of 412½ grains troy, of standard silver, nine tenths fine, as provided by the act of Jan. 18, 1837, and upon the same terms and subject to the limitations and provisions of law regulating the coinage and legal-tender quality of gold; and whenever the said coins herein provided for shall be received into the Treasury, certificates may be issued therefor in the manner now provided by law.

"SEC. 2. That the Secretary of the Treasury shall coin into standard silver dollars, as soon as practicable, according to the provisions of section 1 of this act, from the silver bullion purchased under authority of the act of July 14, 1890, entitled 'An Act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes,' that portion of said silver bullion which represents the seigniorage or profit to the Government, to wit, the difference between the cost of the silver purchased under said act and its coined value; and said silver dollars so coined shall be used in the payment of the current expenses of the Government; and for the purpose of making the said seigniorage immediately available for use as money, the Secretary of the Treasury is hereby authorized and directed to issue silver certificates against it, as if it was already coined and in the Treasury.

"SEC. 3. That no national bank note shall be hereafter issued of a denomination less than \$10, and all notes of such banks now outstanding of denominations less than that sum shall be, as rapidly as practicable, taken up, redeemed, and canceled, and notes of \$10 and larger denominations shall be issued in their stead under the direction of the Comptroller of the Currency.

"SEC. 4. That the Secretary of the Treasury shall redeem the United States notes, commonly called 'greenbacks,' and also the Treasury notes issued under the provisions of the act of July 14, 1890, when presented for redemption, in standard silver dollars or in gold coin, using for redemption of said notes either gold or silver coins, or both, not at the option of the holder, but exclusively at the option

of the Treasury Department, and said notes, commonly called 'greenbacks,' when so redeemed, shall be reissued as provided by the act of May 31, 1878."

It was also proposed to amend the title, making it read: "An Act to provide for the free coinage of silver, and for other purposes."

A motion by Senator Quay, of Pennsylvania, to recommit the bill to the committee with instructions to report the original bill and the amendment as separate propositions was objected to and brought up again Feb. 6, when Senator Morgan, of Alabama, offered an amendment adding the following to the resolution:

"And with the further instruction, that the committee report the following as an amendment to the House bill No. 2749:

"That there shall be deducted from the customs duties that are or may be imposed by law upon articles imported from other countries into the United States for consumption 10 per cent. of such duties when such imports are made in vessels of the United States or in vessels of the country in which such imported articles were produced: *Provided*, That the country in which such articles are produced shall by law provide so that silver bullion the product of mines in the United States shall be admitted to coinage in the mints thereof on equal terms with gold bullion, and shall be received, without discount or discrimination, in payment for all customs dues on articles imported into such country, as full legal-tender money."

Senator Stewart offered the following resolution:

"*Resolved*, that the Secretary of the Treasury be, and he hereby is, directed to furnish the Senate an estimate of the probable increase of the revenue if bill H. R. 2749, entitled 'A bill to temporarily increase revenue to meet the expenses of Government and provide against a deficiency,' should become a law; and what would be the duty per pound in United States money on the different grades of imported wool according to the present market price; and is the proposed duty on wool provided for in said bill sufficient to compensate for or correspond with the increased duties proposed on woolen goods.

On Feb. 13 Senator Morrill, of Vermont, moved to take up the bill; but the motion was defeated by a vote of 21 for to 29 against, 39 not voting.

Feb. 19 Senator Carter, of Montana, offered a resolution to recommit the bill to the committee, with the request that it be read for information and lie on the table. Feb. 25 Senator Morrill again moved to take up the bill for consideration, when the motion was lost by a vote of 22 in favor to 33 opposed, 34 not voting.

After the announcement of the vote, Senator Morrill said:

"Mr. President, permit me to say that when on the 13th of this month I made the motion to take up the tariff bill, and it was lost by a vote of 21 to 29, I then thought the bill was hopelessly defeated, but I felt that it was my duty in so important a matter to give an opportunity for any change of mind on the part of the voters.

"Now, it is perfectly obvious that the Republican party is in a minority in this Senate. The bill on Feb. 13 was defeated by 5 Populist and 4 silver Republican votes. I do not think there has been any change so far as the vote now discloses since that occasion. I think that the Republicans on the Committee on Finance will be willing to welcome any decent bill to add something to the revenue of the Treasury Department, whether it is in conformity to their views or not as to the principle of tariff, and will be ready to support any such bill which we have an opportunity to support before

the session shall close. But so far as this bill is concerned, I wish to say that I do not think that it will become me to ask the Senate for any further consumption of time."

Senator Teller, of Colorado, replied, accusing Senator Morrill of attempting to read out of the party those Republicans who voted against the consideration of the bill, and the Republican metropolitan press of reading out of the party those who voted for the free-coinage amendment to the bond bill; and charging that the revenue bill was brought in, not to be passed, but for the purpose of political advantage.

Senator Sherman, of Ohio, said:

"Mr. President, as a member of the Committee on Finance I disclaim all partisan feeling in respect to the bill which the Senator from Vermont moves to bring before the Senate. That bill does not belong to any party; it is not the representative of any party. The only merit in the bill is that it proposes to furnish \$40,000,000 of revenue for the support of the Government, enough to meet the current expenses of the Government. I do not think any one can claim that that bill is a Republican measure, or that it is to be voted for by any one on that ground, or that it has any merit whatever except the fact that it would relieve the Treasury from the deficiency now occurring and accruing and increasing every day. It is a bill prepared for an occasion, not a political one. The gentleman who prepared that bill in the House of Representatives did it in order to secure revenue for the support of the Government. I say now, Mr. President, I shall vote for any tax whatever which may be proposed by anybody, whether Democrat, Populist, or Republican, which shall supply sufficient revenue for the support of the Government.

"It is a disgrace to our civilization, it is a disgrace to the country itself that we are now expending \$30,000,000 a year more than the receipts of the Government, and that Congress, now in session, with both Houses fully armed with power to furnish the revenue, is idle and refuses to act.

"Every man within the sound of my voice knows that we need more revenue. Here is a statement showing that since the 1st day of last July, and up to the present month of February, 1896, there has already been a deficiency in the current revenues of \$20,696,000, and that before the end of the fiscal year at the same ratio the amount of the deficiency will be \$30,000,000.

"If such a condition should occur in Great Britain or in any other country where they have a parliamentary law, it would dethrone any party in power, and an immediate effort would be made either to increase the income tax or to provide some other form of taxation to meet the current expenses. Yet now and every day and every hour since the passage of the present law, and even before, in view of its passage, we have been running in debt and increasing our debts. There is no occasion for it.

"A tax on tea and coffee would be paid cheerfully by the people of the United States. Any tax whatever, the most obnoxious that could be collected, would be supported by the people of the United States rather than to see the funded debt increased. Already \$263,000,000 of bonds have been issued during the present Administration. The issuance of the great body of those bonds was made necessary by a deficiency of revenue, and as for the remainder, it was caused by the doubt whether, under this process of financiering, we should be able to maintain the standard of our money in this country.

"My honorable friend the Senator from Vermont has done all he could to pass the bill.

He has reported it and called it up twice, and now he has had a vote. I shall not analyze that vote, or say anything about why Senators of any party voted this way or that way. It is sufficient for us to know that our duty is not yet performed, and if the Senator from Vermont does not, I will, at the proper time and under proper circumstances, move to take up the bill and then see what the defects are.

"Every Senator here appreciates the necessity for increased revenue. Every Senator knows that the hopes and expectations of the President and the Secretary of the Treasury as made in their reports have been erroneous, not from any willful design on their part, but because they did not see the natural tendency of a course of measures which every day left the Government more and more in debt, and every month the necessity—"

Senator Harris, of Tennessee, asked Senator Sherman why he did not advise the Treasury Department to coin the \$55,000,000 of seigniorage and the balance of the silver lying idle in the Treasury and use it for the purposes of the Treasury, "as they are in duty bound to do under the third section of what is called the Sherman act."

Senator Sherman replied:

"The Senator from Tennessee wishes to divert me to the question of the free coinage of silver. That has been tried and tested, and if ever that question met its final solution it was in the House of Representatives, freshly elected by the people, where, by a majority of almost 2 to 1, the judgment of the House of Representatives, the representatives of the people from equal and exact districts throughout the country, pronounced their denunciation of the most foolish and dangerous policy of departing from the now lawful standards of money in the country.

"Sir, it is not enough for the Senator to say to me that the Senate could provide a remedy by providing for the free coinage of silver, when the fact is that 10 States whose 20 Senators voted for the free coinage of silver contain a less population than two thirds of that of the State of Ohio. The Senate does not represent the people. It represents the States, and rightfully so, and I do not complain about it. But in the House of Representatives the people are represented according to their numbers in every portion of the United States. Let me prophesy to my honorable friend that his remedy will never be so strong in the future as it has been in the past. In my judgment the sober conviction of the people of the United States will settle down in favor of having the best standard that can be found, or that is yet known as the standard of value, with ample paper money always maintained at par with gold, to circulate in all parts of the country freely and without danger of its breaking up.

"Mr. President, I have said a great deal more than I intended to say. I will merely add that I shall not consider my duty in the Senate discharged during the present session until some action is taken according to the wishes of the President and the Secretary of the Treasury, not their form of action, but until we give them as the executive department of the Government sufficient money, collected from the people of the United States, to carry on the expenses of the Government. If we go home to our constituents without performing that duty, every man who can be held responsible for that condition will be severely dealt with, as I believe, by the people of the United States."

Senator Stewart, of Nevada, speaking against the bill, said, in part:

"Mr. President, I can not afford to hold my peace and allow the false pretense that this bill is designed to produce revenue, or that there is any necessity for a bill to produce revenue, to go unheeded. The

most oppressive and the most wicked part of the bond sales is the impounding of the people's money in the Treasury Department. Financial journals in this country declare that that is one of the modes of retiring greenbacks, and the favorite mode. There will be in the Treasury when the last loan shall have been paid in nearly \$300,000,000 of cash balance. A deficiency of \$30,000,000 a year will not draw down the cash balance in the Treasury to where it ought to be in less than four years. It will take four years for the people to get back into circulation the money which has been unlawfully taken from them by these bond sales. It will take four years to reduce this unhealthy surplus in the Treasury, it matters not how it has got there. It is a sham, a pretext. Any one who seeks to put more money there wants to impound the greenbacks to a greater extent. Additional taxation, when there is about \$300,000,000 in the Treasury, when there is a cash balance which at the present rate of deficiency can not be drawn down to a reasonable limit in less than four years, it seems to me, is outrageous, and I hope that Congress will not adjourn until it takes some means of relieving the Treasury of the surplus that has been taken away from the people.

"The gold standard and the policy of impounding what little money is left has distressed the country, and when it is said that the country is anxious for more taxation, that the country is rich and abounding in money and anxious for further taxation, I deny it. I deny that in all the history of this country there was ever such general distress as prevails to-day after twenty-five years of peace and abundant harvests. I deny that with the money impounded as it is now, with contracting circulating medium, the resources of this country can be made available. The wealth of the United States is not in its debts, but it consists in its productive power. There has not been 33 $\frac{1}{3}$ per cent. of that productive power made available for the last three years because of want of money. Falling prices paralyze industry, and here we have a proposition to put \$40,000,000 a year more in the Treasury and contract the currency that much more.

"This an emergency bill! This bill that is not for legislation, but for agitation; a bill to keep the tariff question open; a bill to run only two years; a bill to disturb business interests; a bill to set the country quarreling about the tariff for the purpose of burying other issues upon which the prosperity of the human race depends!

"I wonder if there is any truth in what we constantly hear? It comes to me in letters every day that there is an arrangement whereby this bill, if it can go to the Executive without amendment, is to be signed by the President. I have received hundreds of letters saying, 'Do not amend it; the President is going to sign it as it is.' I wonder if the partnership between Cleveland Democracy and gold Republicanism is perfected and satisfactory? Is this a scheme between the gold forces at both ends of the Capitol to get a bill through to retire the greenbacks?

"It has been forty years since the Republican party came into existence. It has served its day. It has betrayed its cause. It has become an enemy of the people. It started as a friend of the people. It started in favor of free labor; in favor of free men. It has now become a party of slavery, a party of bonded slavery, a party which if its principles can succeed, according to the desire of the Senator from Vermont, will relegate the people to the same condition of feudal slavery and serfdom from which mankind emerged by the discovery of gold and silver in Mexico and South America. The same causes produce like effects, and it is to be presumed that the Republican party

mean to enslave the people of the United States, because they are using the only means by which slavery can be produced, the only means by which any great nation was ever reduced to serfdom. They are depriving the people of their money, and they propose to do it. In this very bill they propose to add to the grievance under the pretext of raising revenue. Under the pretext of raising revenue and increasing taxation they want to take from the people more of the means by which they can pay taxes, reducing them faster than the gold standard will do it if legitimately operated. We tell you that the people will not indorse the union of the Republican and Democratic parties for the purpose of oppression and wrong. They will not do it."

A discussion upon the position of the Republican party on the question of bimetallism followed between Senator Allen, of Nebraska, Senator Stewart, of Nevada, and Senator Teller, of Colorado, on one side, and Senator Aldrich, of Rhode Island, Senator Platt, of Connecticut, and Senator Gallinger, of New Hampshire, on the other.

Senator Frye, of Maine, said :

"Mr. President, I have been instructing my constituents, business men, for the last month and a half that there was not the slightest possibility of the House tariff bill becoming a law. I think I have known for a month that it was dead. After the two votes, one of a fortnight ago and the other of to-day, there is not a Senator here who does not know that it is as dead as Julius Caesar, and that there is no resurrection whatever for it. The business men of this country ought to know it now, and they ought to conduct their business with a view to the fact that it is dead. When the Democratic party of the Senate and the Populist party of the Senate both announce that they by their votes will not support this tariff bill, that they will not consider it, it is utterly hopeless for any Republican to undertake to obtain its consideration.

"Suppose, as the Senator from Ohio suggested, it should be taken up and could be amended, there is not a Senator here who does not know that more than 600 amendments would be offered to it, and Senators know perfectly well that more than three months' time would be consumed in its consideration, and that the business of the country would be held on the ragged edge for the whole of that period. Business has had blows enough during the last two or three years. Congress should not inflict any more upon it.

"I trust, sir, this bill will not be heard from again, and that no Republican Senator, no friend of protection, will ask the Senate to give it any further consideration. Let it be dead, and let the responsibility lie where it belongs."

On Feb. 26 Senator Allen, of Nebraska, introduced an amendment to the bill, adding three sections providing for silver coinage, and making the title read: "A bill to promote the prosperity and happiness of the people of the United States, and for other purposes." In introducing the amendment he said, in part :

"I took occasion yesterday to ask the Senator from Rhode Island and the Senator from Connecticut, who are representative Republicans, if there were any circumstances under which they would agree to the free and unlimited coinage of silver at the ratio of 16 to 1, and they both emphatically said there were no circumstances under which they would agree to that. I asked them if they were willing to take this House bill 2749, providing for a temporary increase of the revenues to meet the expenses of the Government with a free-silver amendment—taking the protective features of the bill together with a free-coinage amendment—and they said no. I asked them, at the suggestion of

the Senator from Alabama, if they were willing to take the McKinley bill, which now seems to be the shibboleth of the Republican faith, with a free-coinage amendment attached to it, and they said no.

"Mr. President, I do not believe in this House bill 2749, and I want to announce to the Senate and to the country that I do not commit myself to its policy or to the rate of taxation it imposes. But to show the venerable Senator from Vermont, the honorable chairman of the Finance Committee, that he has strength enough to carry this bill through here, I want to say to him if he can unite the Republican party upon this measure with a free-coinage amendment—not a free-coinage substitute, but a free-coinage amendment—by which the tariff therein provided shall become a law and silver shall be coined at the ratio of 16 to 1, the Populist party have votes enough to give you in this chamber to make both those provisions a law."

The amendment consisted of the four sections offered by the Finance Committee, as given above, which were added to the bill as passed by the House.

Senator Baker, of Kansas, asked Senator Allen if he would pledge himself and his party to vote for the tariff bill with a proviso for the free coinage of American silver only. Mr. Allen answered that he would not so vote, but declined to answer for his party, and asked if Mr. Baker would vote for the bill as introduced by him with the free-coinage amendment, to which Senator Baker replied that he would not, "because it provides for the free coinage of all the silver of the world at the ratio of 16 to 1, and would put us down as simply silver monometallists."

The amendment was ordered to lie on the table.

The same day the resolution of Senator Carter, of Montana, to recommit the bill to the Committee on Finance was laid before the Senate. Before he spoke on the resolution Senator Lindsay, of Kentucky, offered an amendment, adding these words :

"And said Committee on Finance is instructed to report an amendment to the said H. R. bill 2749, in the way of an additional section, in substance as follows :

"SEC. 5. That so much of section 182½ of Schedule E of the act which became a law Aug. 27, 1894, entitled "An Act to reduce taxation and to provide revenue for the Government, and for other purposes," which provides as follows: "And upon all sugars above No. 16, Dutch standard in color, and upon all sugars which have been discolored, there shall be levied, collected, and paid a duty of one eighth of 1 cent per pound, in addition to the said duty of 40 per cent. *ad valorem*," be, and the same is hereby, repealed, and the collection of said additional duty, from and after the passage of this act, is hereby discontinued."

Referring to charges of party disloyalty made against himself and 4 other Senators, Senator Carter said in the course of his speech in support of his resolution :

"Before the convening of Congress it was very generally understood throughout the country that the President would announce in his annual message an existing need for additional revenue to meet a deficiency and to provide against its recurrence. Republicans were generally united in a determination to meet this demand of the Executive by tariff legislation along Republican lines. To the surprise of every one the President did not make the anticipated demand in his annual message, but in various ways has directly and indirectly announced to Congress that the executive department is not in need of additional revenue to conduct the Government, and it has been steadily maintained by the friends of the Administration, in and out of Con-

gress, that additional revenue is wholly unnecessary. Notwithstanding this declaration, a tariff bill was formulated wholly at variance with all past professions of the Republican party on the tariff question. It is admitted everywhere that the House bill is not and was not intended to be an expression by the party of its views. It has been and is now distinctly asserted that it is not a Republican measure. It is a measure to meet an alleged emergency which the chief executive officer of the nation, chosen by a majority of the people in 1892, stoutly asserts does not exist at all. The party, then, is in the attitude of forcing uncalled-for relief upon a reluctant Democratic administration.

"Aside from this unenviable attitude and the manifest embarrassment that must come to the party in the future in consequence of it, the method employed is seriously objectionable. It builds upon existing law as a foundation. The Wilson tariff bill has been everywhere condemned by Republicans as notoriously inequitable and unjust. It assumed to protect the manufacturers and east the producers of so-called raw material throughout the country into open competition with cheap labor everywhere. The pending bill now proposes to make this injustice more glaring. The Wilson bill was framed upon a theory favoring *ad valorem* in preference to specific duties. On high authority it is asserted that an *ad valorem* tariff has been repudiated by the principal commercial nations in their tariff systems; by Austria, Denmark, England, France, Germany, Italy, Norway, Russia, Sweden, and Spain. 10 nations which, with tariffs on 3,957 articles, have only 10 on the *ad valorem* basis and the remainder specific. When and where did this obsolete and discarded cloak for fraud and evasion become sacred in Republican eyes? An *ad valorem* tariff has been condemned so emphatically by the Republican party on all occasions that it stands no better with the party than does the Wilson bill. The pending bill makes a 15-per-cent. horizontal raise on 12 schedules of the Wilson bill. When and where did the Republican party become committed to the horizontal movement in tariff legislation? The Wilson bill, the *ad valorem* tariff, and the horizontal scheme have each in turn been emphatically condemned by Republican platforms, orators, and papers, and never commended anywhere by Republican authority. How then, sir, could it become treasonable for a Republican to oppose all three of these elements combined? Well-settled convictions, supported by practically one half the electors of this country, should not be lightly sacrificed on the altar of supposed expediency.

"But, assuming that the Administration requires funds, which it avers it does not, and that in the name of patriotism we must sacrifice ancient and time-honored principles and convictions, let us endeavor while making the sacrifice to be reasonably just. This bill is not understood by the country correctly. I submit that the general belief obtains that it provides a slight duty for wool and lumber, and then increases the existing duties 15 per cent., except as to sugar. Even Senators and members of the House generally accept this view of the bill. I freely admit such was my general understanding until brought to a critical analysis of its provisions in regard to wool.

"It will be observed that while the first paragraph allows 60 per cent. of the duty imposed on first and second class, and restores the *ad valorem* duty of from 32 to 50 per cent. on third-class wool by the McKinley act, it expressly retains all the limitations and conditions of that act. Experience has clearly demonstrated the fact that the conditions and limitations thus expressly retained were

so faulty and unjust in practice that the protection intended was reduced about one half; that where the McKinley act provided 12 cents per pound on a given grade of wool the conditions and limitations reduced the figure in actual practice to about 6 cents per pound.

"The retained 'conditions and limitations' would reduce the proposed tariff to a trifle more than one fourth of the nominal rate of duty fixed by the McKinley act.

"Turn to section 2 of the bill and mark well the manner in which the manufacturer of woollens is taken care of. You will find no 15 per cent. horizontal increase here. It must be borne in mind that the woolen goods referred to in the first subdivision of the section are subject to *ad valorem* duties ranging from 25 to 50 per cent. and averaging about 40 per cent. under existing law. To the existing duty the bill proposes to add 60 per cent. of the specific square-yard duty imposed on each of the articles by the McKinley act. In the second subdivision of the section it will be observed that per centum is wholly omitted and the entire specific square-yard duty imposed by the McKinley act on carpets and other articles is added to the *ad valorem* duty imposed by existing law.

"I do not assert that these provisions will increase the duties on manufactured woollens beyond the rates fixed by the act of 1890, but I do assert and call attention to the fact that the proviso in section 4, intended to preclude such result under the operations of that section, does not apply to the section under consideration. Nor do I assert that unreasonable or even adequate protection will be afforded woolen manufacturers by the doubling up of duties in the manner provided. I do, however, emphatically maintain that the bill displays manifest partiality for the manufacturer.

"Entertaining these views, I can not vote for the bill as presented. Amendment in the open Senate would be wanting in that careful consideration for the revenue-producing quality of the measure which is the only possible justification for its existence. The motion to recommit the bill to the Committee on Finance without instructions will leave that honorable body at liberty to prepare and present to the Senate a fair and just bill which every Republican can conscientiously support. The veto message of the President on a true Republican measure would raise an issue; while his veto message on the pending bill would raise a laugh at the expense of the Republican party."

Senator Carter then spoke upon bimetallicism, with a review of measures to show that its advocates had been loyal to Republican principles.

"In the plain view of these facts, the drift of the Republican party in this Eastern section of the country toward Clevelandism and the gold standard is to me an appalling spectacle. In the name of all the Republican party means to human civilization, let Republicans in and out of Congress take counsel of their own party platform and traditions and cease blind devotion to the false god who deals in mysterious phrases. Upon our own platform of protection and bimetallicism honestly and fairly carried into law we may securely rest the present and the future prosperity and greatness of this republic; under that platform honestly carried out the clearing house of Christendom would be inside of a decade transferred from London to New York; internal activity would be so far stimulated and vitalized that our exports would exceed our imports, giving unto us the power to proclaim a money system of our own, based upon gold and silver as money of final redemption. In conformity with that platform, the departed greatness of our merchant marine would be restored; our navy would

be increased to a strength second to no naval police force in the world; the Nicaragua Canal would be constructed; the trade of Central and South America, China, Japan, and India would be transferred to our shores from the shores of the British Isles; in short, all that the Republican party stands for and means for good government and vigorous administration can be secured under an honest construction and a fair administration in accordance with the the Republican platform of 1892."

Senator Hoar of Massachusetts asked two questions: Whether Senator Carter would say that the interpretation put upon that platform by Mr. Harrison was delusive, fraudulent, or misleading; and whether he was to be understood as saying that "if he fail to convince the majority of the American people, if he fail to convince the majority of his Republican associates that they are wrong and he is right, he proposes to say to them, 'You shall not pass any protective tariff unless you surrender your honest convictions, the opinions of the majority, and come over to us.' If a protective tariff bill be hereafter presented, fair and just to the whole country, based on Republican principles, providing for the industries of the Northwest and the new States, with a just tariff on wool, a just tariff on lead, and the other products of those States, and a just tariff on the fruits of California, do you mean to say to us, 'You shall not pass that tariff, if we can help it, unless you surrender your honest convictions on what is true bimetalism'?"

In the course of his remarks Mr. Hoar said:

"I desire to remind my honorable friend that this protection upon wool has been supported by the votes of New England against the votes of the wool-growing States themselves. When Ohio halted between two opinions, when California gave her vote for free trade, when Texas sent her representatives here to champion in this and the other House the policy which struck down one of their own most important industries, the manufacturing interests of New England have stood firm and stanch in its support. When the wool schedule was on its passage two years ago I rose in my place here and asked the representatives from the wool-growing States if they could suggest any one thing which the New England Senators had failed to do which would help to save the tariff on wool, or which they could then do to avert the destruction of that protection. I asked that question of the then Senator from Montana, the predecessor of my honorable friend, and the other representatives of the wool-growing States, and one after another, the Senator from Montana, the Senator from Colorado, and one or two other Senators, with a candor which became them, replied that there was nothing of which they complained of New England in that particular.

"I do not justify the views of the Eastern press of my honorable friend and his companions, but I think that if the Senator reads the papers in his own section of the country he will find that they are not far behindhand. I have myself had the honor of being hanged in effigy in a bimetalist State for advocating in secret session on a treaty what I thought were the true principles of the Constitution of the United States and the Declaration of Independence. I have had my mail packed with abusive and scurrilous articles against me, insignificant and humble as I am on this question and on this floor, whose scurrilous vituperation would have set Dean Swift crazy and made him turn green with envy. I wonder how posterity will think of the great, useful life of John Sherman if they read the account of him in the Western press as the thief, the trickster, the man who defrauded the American people by stealth by getting silver demonetized, and who was so anxious to keep it a

secret that he only had the bill printed thirteen times! That chorus comes up from the whole West against the old and honored leaders of the Republican party, the men who carried this country through war and calamity. It is a very trifling matter, after all. Nobody yet was ever hurt by a little talk, a little abuse, a little printer's ink.

"But this is the one question about which the serious people of my part of the country are concerned, the question whether we are acting in good faith and on an equality.

"Now, I say to you, vote me down on this question of free coinage of silver or any policy that seems to you to be inconsistent with your opinions upon it, and, sorry and mortified and humiliated as I shall be, I shall walk straight up in half an hour afterward and vote for any measure which the Senator from Idaho or the Senator from Colorado or the Senator from Montana may show me is to the interest of his State; and if out of revenge, out of anger, out of a desire to force my miserable little notions against the judgment of the majority of my associates, the majority of the representatives of the American people, I did not do it, I should not dare to go back to New England and face my constituents. I should be hurled out of power, if I did that thing, with an indignation and scorn and contempt which would make miserable the rest of my life and the life of all my posterity for generations to come.

"Some persons have understood the gentlemen who stand with my honorable friend from Nevada to say something different from that, and say that, 'unless you will surrender and swallow your convictions on this matter of bimetalism and undertake to have the United States do this thing alone, you shall not have, if we can help it, the protective tariff or any other measure which will benefit you more than it benefits us.'

"I should like the further information whether we are to understand the Senator from Montana as occupying that attitude, or whether, if it shall turn out that he fails to convince the majority of the American people that he is right in this matter of silver, he is going to say, 'I shall destroy every interest of the American people that I can strike at.'

In answer to the first question Mr. Carter said:

"The interpretation of the platform by President Harrison, who proved by his action to be conscientiously and honestly disposed to give full and free expression to it and to the administration of the law, coming from that source, was reasonably satisfactory to our people as furnishing a beacon light for hope.

"If, upon the other hand, the interpretation of the platform is to be considered in the light of a majority party action on this floor since then, I say we could not accept the interpretation. They seem to assume that the Minneapolis platform commanded them to wipe the last vestige of legislation favorable to silver from the statutes. With that construction of the platform we are at war now and shall continue to be at war."

In reply to the second question he said:

"Mr. President, the question is further propounded, if defeated in an honest effort made to secure legislation in conformity with this particular principle of the party platform, shall gentlemen from west of the Missouri river who affiliate with the party now and contemplate doing so in the future absolutely refuse then and there to further co-operate with the party on its pronounced principle of adherence to protection? In reply to that, I say that the Republicans who believe in the platform as construed in our portion of the country will be the very last to desert the ship. If gentlemen elect to accept the gold theories of Mr. Cleveland and

walk away from our party, we will gaze upon them in sorrow."

Mr. Hoar said:

"If the Senator will allow me a word there, I wish to say that, so far as I know, there is not a Republican in either House of Congress from the East, and there is not, so far as I know, in the State of Massachusetts, or in the 6 New England States, 2 per cent. of the entire Republican party who hold the theories of Grover Cleveland, as I understand them. There are no gold monometallists there.

"He thinks that a double standard of value, that undertaking to have by any assent of anybody or everybody two metals which may fluctuate somewhat in their reference to one another, is an absurdity and an impossibility. The Republicans of the Eastern States deny that proposition. They believe that there can be a double standard of value, just as when the astronomer wishes to get a clock whose pendulum shall be so accurate in its length and in its beat that the most delicate measurements, upon which depend great astronomical calculations, shall not be disturbed by atmospheric influences, he puts rods of three metals which pass through the disk of the pendulum and by which it is suspended so that the fluctuation caused by the atmospheric influences on one will be corrected by the atmospheric influences on another.

"That is the doctrine of Alexander Hamilton; it is the doctrine of the Constitution; it is the doctrine of every one of the fathers, without an exception; it is our doctrine, and the American doctrine to-day. There is where we all agree; where the Senator from Colorado and I agree, I suppose, if I understand him, though I do not know that he will consent to agree with me on any subject whatever. But where we differ is this: We believe that to do that thing by one nation alone is impossible; that you drive out the more valuable metal and you have monometallism not only of the cheaper metal, in which all transactions will sooner or later discharge themselves, but you have a standard of value that is a fluctuating, a disturbing, and a degenerating measure, so that no transaction expressed in money is a record of what it is to be in the future. Whether we are right or wrong, there is where our difference comes in; and the Senator has no more right to turn on me and say I agree with Grover Cleveland, or I am a monometallist, than I have to turn on him and say he is a silver monometallist. I take his statement of his opinions as he utters them, not as I translate them, and I demand of him, if he does me the honor to allude to my opinions at all, that he shall take my statements of opinions as I utter them and translate them. There is where these two parties differ in the Republican party as they do in the Democratic party; and what I want to know is, if any Senator says on either side of that difference, 'If you do not come to my views, whether you believe them or not, and vote with me, whether you like it or not, I will not do anything else that is for the interest of the country in regard to which we agree.'"

Senator Teller, of Colorado, spoke in reference to his share in drawing up the Minneapolis platform, which had been brought up by Senator Gear, of Iowa, and on the true meaning of bimetalism as follow:

"Bimetalism means the free access of both metals to the mint on equal terms, and I now here challenge the Senate, I challenge the country to find that prior to 1892 any person had ever suggested that any other definition could be given to bimetalism. Dr. Giffen, the great statistician of England, a gold man, equal in his adherence and devotion to gold even to the Senator from Vermont or the Senator from Ohio, has declared over and over again that there can be no bimetalism without the coinage of

both metals on equal terms; that that is what it means.

"Any man who asserts that it means anything else is either ignorant or means to deceive. He either has not studied the question and does not know, or, having studied the question, he does not mean to tell the truth. He who says that bimetalism means maintaining silver as subsidiary coin writes himself down in opposition to the entire thought of the intelligent and educated world on this subject."

Senator Sherman said:

"My idea of bimetalism is that both metals shall be adopted and used in this country as far as possible and to the extent that they can be maintained at a parity with each other. In order to bring about that condition, as a matter of course the silver dollars and the silver coins must be maintained at a parity with gold.

"We maintain the parity of the two metals by limiting the supply of the cheaper one. We buy the bullion from the people of the United States or in the markets of the world, and we coin it into money upon the old basis of 16 to 1. But in order that we may maintain the silver coins at a parity with gold we limit the amount and only make it an act of the Government which maintains those coins, of less market value, at a parity with gold.

"I know that the free coinage of silver is quite a plausible idea, but the effect would be merely to cheat the creditor of one half of his debt. The United States of America has contracted debts upon the basis of gold to the amount now, under the present Administration, of \$750,000,000. Suppose we should have the free coinage of silver, and gold were demonetized practically or excluded from circulation, because none but the cheaper metal will circulate, we would cheat the creditors of the Government out of one half of their investment.

"There is a narrow difference between those of us who believe in what I call bimetalism and those who believe in the free coinage of silver. If you open the doors of your mints to all the silver that may come to us from all parts of the world, now estimated to amount to \$3,800,000,000, how long will it be before the silver of other countries will flow in here and pass for more than it is worth and I think revolutionize the whole monetary system of our country? I believe, therefore, that if we maintain the two metals as we ought to do, at full use as money, it must be under such circumstances and conditions that there will be no difference in their value as money."

Senator Teller said:

"The question here is, what did the Republican platform mean by bimetalism? If it did not mean that we should go to bimetalism to-day it meant at least that we believe in bimetalism and that under any construction which could be put on it we should go there as speedily as we could. The question now is whether we who believe in bimetalism as bimetalism is defined by the economic writers of the age are recreant to Republican principles or whether we can be driven out of our party because we do not agree with this most astonishing, unheard-of, and unusual bimetallic definition of the Senator from Ohio, which it seems that the Republican party is about to accept. That is the question, Mr. President; it is not the question whether we can maintain free coinage or not. If the Senator from Ohio and the Senators who agree with him have got wiser than the convention they had better wait until they go to St. Louis, and change the platform. The question is, did we not declare for bimetalism? Did we not say we are in favor of it? Does not that give us the right to insist upon having bimetalism and still keep within the party?"

Senator Sherman said:

"The convention to which the Senator refers always assumed the same kind of bimetalism that I have alluded to. They always insisted as a condition that the money coined from silver should be maintained by the Government at a parity with gold. That has been declared over and over again, and it is not necessary even to repeat it now."

Senator Teller replied:

"That is not a correct statement. That convention never suggested a bimetalism so ridiculous as I have read to the Senate. I believe if that had been suggested in the convention it would have been laughed out of the convention. The Senator can not put the Republican party on that kind of bimetalism. Why did we want to say anything about it if that was the kind of bimetalism? Everybody knew that you could not get along without subsidiary silver money, and that is all that the Senator is now contending for; and he is contending that when you have subsidiary silver money you have got bimetalism. Does he mean to say that Great Britain has got bimetalism, does he mean to say that Germany has got bimetalism because they use subsidiary silver money? Mr. President, he knows better. Everybody knows better. Bimetalism means, as I have stated, the use of the two metals as legal-tender money upon equal terms.

"When you make silver subordinate to gold it is no more standard money than a national bank note. A man must be ignorant of the philosophy of money or unwilling to admit the truth and the logic of his position when he claims that because you use silver with gold and subordinate to gold you have bimetalism. What we contend for is silver as standard money; silver that shall measure values as gold measures values; that the double sum of silver and gold in the world shall determine prices."

March 13, Senator Palmer, of Illinois, submitted the following resolution:

"Resolved by the Senate, First. That it is the policy of the United States to maintain the existing legal and commercial standard of value.

"Second. That the unlimited coinage by the United States of silver dollars of 412½ grains of standard silver with forced legal-tender quality for all debts, public and private, would subvert the existing legal and commercial standard of value by establishing a standard of value based upon silver coinage only."

The House bill to increase revenue was laid before the Senate again the same day, and Senator Cockrell, of Missouri, spoke, confining his remarks to the free-coinage substitute reported by the Finance Committee. Reviewing the operations of the Treasury, he said in part:

"Secretary Foster redeemed not one solitary Treasury note in silver. Secretary Carlisle has redeemed more than \$19,377,000 of the Treasury notes with standard silver dollars, and has retired and canceled them, and no harm has come. Had every ounce of the silver bullion in the Treasury been coined into standard silver dollars, and every Treasury note redeemed and canceled, no harm would have come. Secretary Foster redeemed in gold from the 14th day of October, 1891, to the expiration of his term, over \$34,000,000 of the Treasury notes, and Secretary Carlisle up to October last had redeemed over \$43,000,000. Over \$41,000,000 of them were presented at Boston, New York, and Philadelphia. It was simply a meek surrender to the gold gamblers, as a convenience to them to get gold upon which to speculate. There is no law upon the statute book requiring the Treasury to maintain \$100,000,000 gold reserve. Secretary

Carlisle has so decided. All the funds in the Treasury are deposited in the general cash.

"Now, let us look as to what has been done by reason of this meek and unjust and improper surrender of the option of the Government to pay in silver as well as in gold. To maintain this imaginary gold reserve of \$100,000,000, the executive administration, January, 1894, sold \$50,000,000 of 5-per-cent. ten-year bonds for over \$58,000,000 of gold, and put the gold in the Treasury and proclaimed its purpose to continue to redeem greenbacks and Treasury notes in gold whenever demanded.

"From January, 1894, to November, 1894, \$103,000,000 of gold was taken out of the Treasury, and in November, 1894, the Government issued and sold \$50,000,000 more of ten-year 5-per-cent. bonds for more than \$58,000,000 of gold, and put the gold in the Treasury and used the Treasury notes to pay current expenses. More raids were made. It had only whetted the appetites of the bond lovers and the gold-standard advocates to get more bonds and to fasten the gold standard by permanent legislation, naming gold as the money of final payment. Between the sale of bonds in November, 1894, and Jan. 28, 1895—only about two months—\$69,000,000 of gold was taken from the Treasury. On Jan. 28, 1895, the President gave to Congress the message I have quoted, recommending the issue of \$500,000,000 of bonds payable in gold. In February, 1895, Congress having refused to authorize the issue of any gold bonds, the executive administration issued and sold more than \$62,000,000 of thirty-year 4-per-cent. bonds for a little over \$65,000,000 under the now famous, if not otherwise, Rothschild-Belmont-Morgan syndicate contract to guard our Treasury. Sixty-two million dollars of United States thirty-year bonds were sold at the rate of \$104.50. They have since sold in the open market at over \$123.

"A magnificent speculation called patriotism. Think of it! Peans of praise sung to the Belmonts and the Rothschilds and the Morgans for their patriotism in buying American bonds at \$104.50 on the \$100, and then selling them for \$122 for every \$100 of bonds. But the raids were renewed, and only recently \$100,000,000 more of thirty-year 4-per-cent. bonds were sold for \$111,000,000 and a little over, as reported, a total increase of our bonded interest-bearing debt of more than \$262,000,000 in time of profound peace. To do what? To maintain the gold reserve and to show our patriotism.

"What is this proposed remedy, Mr. President? We have seen it. It is a miserable makeshift. It simply substitutes for a noninterest-bearing debt, for the full legal-tender greenbacks and Treasury notes—mere demand obligations, whose debt quality has been absorbed in their money function, and which are to-day money used by the people in the daily transactions—an equal amount of interest-bearing gold bonds. It contracts the legal-tender currency of the country to that amount, reduces the selling price of all the products of the soil, the mine, and the factory, and is in violation of that cardinal principle of every honest republican government that when in debt it should maintain in circulation the largest possible amount of its indebtedness in the shape of noninterest-bearing obligations that the people of the country will keep in circulation without depreciation.

"What is further proposed in the proposition of the President? To surrender to the national banks the absolute control of the paper circulation. It proposes to give to the banks the right to deposit bonds, draw interest upon the bonds thus deposited in the Treasury, and then receive from the Treas-

ury dollar for dollar of legal-tender money and loan it to the people at interest—double interest upon the bonds paid by the Government and interest upon the loans paid by the money borrowers. The banks invest their capital and receive interest upon it, get an equal amount of money, and then receive interest upon that from the borrowers. In 1895 we paid to the national banks over \$8,000,000 in interest on their bonds, and they were loaning to the people an amount equal to 90 per cent. of those bonds and receiving the highest rate of interest the people would pay.

"That is not all of this proposed remedy for our financial ills. It proposes to give the national banks entire control of the paper currency. Suppose they issue only \$350,000,000 of notes and then loan them to the people for fifty years, say, at only 5 per cent. interest; the money borrowers will pay in interest \$17,500,000 annually, \$875,000,000 of interest in the fifty years.

"Now, Mr. President, the question arises, can the national banks maintain gold redemption? If the whole United States can not maintain a gold reserve, can the national banks do it? It is a pertinent question. To retire the United States notes is to transfer the whole of the demand for gold on the banks, their notes then being redeemable only in gold. Now, if they can maintain the gold redemption of their circulation, it will prove conclusively, beyond a shadow of a doubt, that there has existed and now exists a combine, to say the least of it, to raid the gold reserve, force the issue of bonds, vest in them the absolute control of our currency, and then, when clothed with this absolute power to manage and direct the currency of the country, redeem it or not, just as they choose, and just as they did in 1893, when they refused to honor drafts in money to their customers and country banks, and resorted to \$38,000,000 of clearing-house certificates in the city of New York.

"Mr. President, it is easy to criticize a policy, but what should have been done instead of this disastrous, costly policy, paralyzing to the business of the country? The answer is plain. The executive branch, in obedience to the legislative will and to existing law, should have reserved the option to redeem in silver dollars as well as gold; should have coined all the silver bullion in the Treasury into standard silver dollars; should have redeemed and canceled every one of the Treasury notes and retired them, as the law required, when redeemed in silver dollars; should have redeemed the greenbacks in silver dollars as well as gold, and to-day we would not have one solitary dollar of Treasury notes outstanding. Every one of them would have been redeemed and canceled. In lieu of them, we would have had outstanding an equal amount of standard silver dollars and \$53,000,000 of surplus added to the balance in the Treasury, which would have prevented the issue of any bonds to replete the Treasury exhaustion, and not one dollar of the \$262,000,000 bonded indebtedness would be in existence to-day."

Senator Cockrell cited the votes in Congress from the Forty-fifth Congress down, and the declarations of Democratic platforms to show that the party had been in favor of free coinage. He discussed the prediction that the double standard would drive all the gold from the country and contract the currency, and the question of overproduction of silver. On this latter subject he said: "These are the recorded facts and figures of history, and they conclusively prove, first, that there is no silver bullion in the world stored away; second, that the annual production of silver is wholly consumed year by year and more too; and third, that as in the past so it will be in the future, the annual

product of silver will be consumed in the world. It must be so. Why? No nation can do with gold only. No nation can ever get along with gold as its only metallic money. You can not make your dollars and half dollars out of it. You have to use silver, and every gold nation on earth to-day is using silver as a limited legal tender and as small money. That silver must be annually added to. It rapidly disappears. It is abraded and worn. It is lost. It has to be supplied annually, and some nations have a fixed law prescribing an annual increase of silver coin in proportion to the population, and the annual increased consumption is equal to the annual product. Then the gold nations can not do without silver, because silver is the money of the world to-day, in which 90 per cent. of the individual transactions are had. England can not part with her silver; Germany can not; France can not. None of the nations of the world can, and they must add to their coinage every year."

Senator Hoar asked: "What does the Senator from Missouri understand to be the motive of all those European nations, then, in limiting the coinage of silver?"

Mr. Cockrell: "Simply because their governments are in the hands of the aristocratic, the wealthy classes, and they want to increase the purchasing power of the dollars named in their bonds and securities and to depress the selling price of all the products of the world that they have to buy."

Mr. Hoar: "But my question is not exactly answered. If, as the Senator understands, opening the mints to the free coinage of silver will not decrease the purchasing power of gold at all, but it will remain the same—"

Mr. Cockrell: "I do not say it will not decrease the purchasing power of gold. I say it will. I did not say it will not."

Mr. Hoar: "I thought the Senator claimed that the standard money of the country would remain of equal value—"

Mr. Cockrell: "It would."

Mr. Hoar: "If we opened the mints to the coinage of silver?"

Mr. Cockrell: "It would, by silver going up and gold coming down."

Mr. Hoar: "Very well. Then those moneyed men and aristocrats have not increased the purchasing power of the dollar of the country or have not affected it by closing their mints—"

Mr. Cockrell: "They would if they were to open their mints to the coinage of silver. They did affect it by stopping the coinage of silver. They doubled the purchasing power of every dollar of their securities by demonetizing silver, and they want to hold to it. If you will read Mr. Rothschild's statement before the Berlin conference, at which the distinguished Senator from Iowa was present, you will see he says: 'The low prices of wheat and other products is not a curse; it is not injurious to us.' Certainly not."

Mr. Hoar: "I understand the Senator to claim that the quantity of silver used in different countries as money would not be changed, that none of the silver of other countries would come here any more than there is now, by opening our mints to the free coinage of silver; that they would keep their silver as they have it now, and we would keep ours as we have it now; that there would be no change. I do not see, if that doctrine be true, what difference the limiting of the coinage of silver by the great European nations has made to anybody. That is my trouble."

Mr. Cockrell: "The limiting of it is in the fact that they have got it as a minor coin, a legal tender for not exceeding \$10, and the Rothschilds are never bothered with silver. They do not have ten-

dollar transactions, as Mr. Alfred de Rothschild said in the Berlin conference. He said: 'Why, we can not have full legal-tender silver. My house transacts business amounting to several million dollars at a time, and we could not have silver dollars.' Oh, no, that kind of money must not be made for that race and that class of bankers."

Mr. Hoar: "Perhaps that is very good sarcasm on Baron Rothschild, if he be a baron, but it does not quite answer my inquiry. I understand the Senator to say that if we opened our mints to the free coinage of silver there would be no temptation whatever to bring the silver from any part of the earth here; that it would remain as now performing its functions. To be sure, there is a limited coinage there, but it would remain just where it is now. The limited coinage of silver in all those countries is the equal of gold at a ratio, as the Senator has just stated. I can not understand, if that proposition be true, how it is that the limitation of the coinage of silver in those countries or in this country makes any difference to any mortal man."

Mr. Cockrell: "It makes all the difference in the world, as I have said."

Mr. Hoar: "The silver in this country now, under our limited coinage of silver, our \$500,000,000 or \$600,000,000, is equal to gold."

Mr. Cockrell: "Oh, no."

Mr. Hoar: "It is quite as good."

Mr. Cockrell: "Oh, no."

Mr. Hoar: "Certainly. It is true that in the panic several years ago silver was 3 per cent. above gold in value."

Mr. Cockrell: "Certainly it was, and Secretary Carlisle refused to receive gold for it at that time."

Mr. Hoar: "I understand. I am not talking about the bullion values; I am talking about the money values."

Mr. Cockrell: "That is it exactly."

Mr. Hoar: "The silver in this country which we have coined is equal in money value to gold to-day. It is equal in the other countries in money value to gold, where it is coined, the limited amount, and the silver of the world exists, that in money and that in the arts, with that value. Now, I am not asking about whether the fact be so or not, but I take the Senator's statement. He says for us to open our mints to silver would not change that."

Mr. Cockrell: "It would not cause that silver to come to our mints."

Mr. Hoar: "It would not cause it to come to this country. Therefore it would leave the silver of the world exactly where it is—unaffected. If that be so, what earthly difference does it make whether the existing condition shall continue or not?"

Mr. Cockrell: "There are two things. Silver is a limited legal tender there, and in that capacity it is not a measure of value."

Mr. Hoar: "If the Senator will pardon me, the coined silver is a full legal tender there as it is here."

Mr. Cockrell: "No; I beg pardon. There are two kinds of coined silver."

Mr. Hoar: "It is of full legal value."

Mr. Cockrell: "There is the limited legal tender, \$619,909,000. That is limited in legal tender, anywhere from \$2 up to \$10—40 shillings in England. That does not pay any of the debts and obligations. Silver is not the standard and measure of value. The standard and measure of value in England is gold. In Germany it is the gold standard. In other nations it has been the gold standard. The amount of gold is the measure of value of the products of the world, and silver is not estimated in it. Therefore gold has doubled in its increased purchasing power, and silver does not affect prices.

Gold does affect prices, and its scarcity decreases prices."

Mr. Teller: "Will the Senator from Missouri allow me to suggest to the Senator from Massachusetts that the silver in this country would perform exactly the same function if it was paper that it does now?"

Mr. Hoar: "Undoubtedly."

Mr. Cockrell: "Precisely. It is not treated as money of final payment at all."

Mr. Teller: "It would not measure value."

Mr. Hoar: "That is transferring the question to another thing. My question was to test the soundness or correctness of the Senator's argument, which has been so very interesting and so very powerful and clear. I will state my proposition. It does not make any difference whether the gold is the standard or not with reference to this proposition. The Senator says there is in Germany and in France and in England a certain amount of silver. Being a limited amount—whether in terms it is a legal tender in small sums or large—in fact, the coined silver of those countries is equal in its existing value—not bullion value, but the value after it is coined to gold."

Mr. Gray: "In exchangeable value."

Mr. Hoar: "In exchangeable value. You can at any time take silver dollars or their equivalent in this country, in England, or elsewhere, and exchange them for corresponding gold coin on equal terms. So far that is agreed. The Senator says if you were to open the mints of this country to the unlimited coinage of silver, instead of limiting it to the limited amount of circulation here, there would not any more silver come to this country than there is now; that the same amount of silver would remain over there, because there is no temptation to bring it here. Then the silver of the world would be in exactly the same condition."

Mr. Teller: "No; not in the same condition."

Mr. Hoar: "Abroad they would have it in the same condition. The silver of the world would maintain in those countries precisely the same relation to gold that it has now, and the silver here would have the same relation to gold that it has now."

Mr. Cockrell: "Oh, no."

Mr. Hoar: "Now, what earthly advantage is there in those countries to the gold men, to these Rothschild demons, in maintaining their limited coinage, if taking away the limit does not change the relation between coined silver and coined gold and does not make a flow of the silver of the world to one country, to the country where the coinage is unlimited from the countries where it is limited? What earthly difference does it make? That is my proposition."

Mr. Cockrell: "Mr. President, I have explained fully that the silver money of the world where it is will remain there and will not come if we restore the free and unlimited coinage. It is limited in its power there. There are \$679,909,000 of limited legal-tender silver. It is coined at the ratio of about 14½ to 1. There is much less silver in it, from 5 to 10 cents less silver, and it will not come here. The amount of the silver as full legal tender there is limited. There is no free coinage. It is limited in amount. It is the full equal of gold there; they are using it as such; they will not part with it; they must have it in the character in which it is used now, and they must add to it."

Mr. Hoar: "Should we have any more silver coined here than we have now?"

Mr. Cockrell: "I think we should have more coined here."

Mr. Hoar: "Where would it come from?"

Mr. Cockrell: "I think perhaps not so much

would go into the arts and manufactures, and there would probably be a stimulated production of silver in our own country. The silver product has fallen off in the past few years, but it would not come in an amount sufficient to flood the country or be more than we could consume as we have done in the last twenty years."

Mr. Hoar: "As I understood the Senator a little while ago, he said that he did not think the amount of silver in the arts would be diminished?"

Mr. Cockrell: "I said that that which is already used in the arts would not come to us."

Mr. Hoar: "Does the Senator suppose that some would come from other countries to be used in the arts?"

Mr. Cockrell: "I suppose that there would but little come."

Mr. Hoar: "Practically——"

Mr. Cockrell: "Practically it would go back to just what it was before."

Mr. Hoar: "It would make no substantial difference."

Mr. Cockrell: "But just for the time being. I say the mere fact of our opening our mints might for a short time bring some silver to us that would not otherwise come, but there would be no flood, no deluge, no danger from it; no more would come than we could assimilate and absorb as money of final payment and redemption and the equal of gold."

Mr. Hoar: "Does the Senator understand that by having the unlimited coinage of silver in this country there would be an increased silver product occasioned by the stimulus for the mining of silver which would have an effect on the proportionate value in its relation to gold?"

Mr. Cockrell: "No; I do not think it would have any effect on the value. There would be a little increased product, but not an unlimited one, because it never has been and never could be produced in unlimited quantities."

Mr. Hoar: "Then my original question is, what earthly difference does it make whether we maintain or do not maintain free coinage?"

Mr. Teller: "If the Senator from Missouri will pardon me a moment, I should like to state to the Senator from Massachusetts the contention of the bimetalists. It is that the standard money, which is gold now everywhere (for silver in this country, whatever may be its relation to gold, is a subordinate money), determines the prices of products the world over. I saw that recently disputed in the "New York Tribune," and I went to-day to look up what old Blackstone said on the subject, and he lays that down as early as his time as an unquestioned law of money. We say if that is true, when you open the mints to silver and make silver and gold equal in their money functions and money privileges you have done exactly what you would have done if you had transmuted by some process all of that silver into gold. As I have heard the Senator from Delaware say, it is the potentiality of all the silver bullion in the world to perform the functions of gold. That is what makes it."

In the further course of his speech Mr. Cockrell said:

"I want now, for the benefit of my good friend from Massachusetts, to show how the English are benefited by the single gold standard. I quote from the "London Statist," a gold-standard authority, I understand, a reliable statistical paper. It said in one of its recent issues:

"The cash value of our imports in 1895 was £416,687,000, but at the 1890 level of prices the value would have been no less than £507,100,000. The benefit to this country, therefore, from the fall in prices of foreign and colonial produce in 1895

compared with 1890 thus amounted to the enormous sum of £90,400,000."

"Four hundred and fifty million dollars of benefit by the decreased prices of commodities the English people had to buy between 1890 and 1895. But the paper goes on and says:

"On the other hand, our exports in 1895 were of the cash value of only £226,169,000, whereas at the prices of 1890 the value would have been £267,600,000, thus entailing a loss of £41,500,000, due to the fall in prices. On balance, therefore, the fall in prices in 1895 compared with 1890 gave a profit to this country amounting to about \$49,000,000."

"About \$250,000,000 they made by the decreased price in the commodities they had to buy. England thus in the last five years bagged \$250,000,000 net of the substance of other nations (chiefly of the American people) because of the decline of prices during the past five years. It was able to do this, first, because it is a creditor country, and, second, because, while its exports were manufactures, the stuff it bought in other lands was chiefly raw material. The manufacturer can always, in a measure, protect himself from shrinkage, because if he must sell cheap he can also buy his raw material cheap. The loss falls heaviest upon the producer of primary substances, like the farmer, who begins the work of production and can not recoup his losses by moving back upon any other producer. England can not feed her people; but she has compelled us to give them food below the real value; she grows no cotton, but she has forced our planters to supply her mills with the staple at half price; she mines no silver, but she has bought for use in her Eastern trade American silver after driving down the price from \$1.29 an ounce to 65 cents. How did she contrive thus to filch from our people their substance? By inducing us to adopt her gold standard and enlisting in behalf of the maintenance of that robber system the American press, the American bankers, and a great body of American citizens who do not perceive the true character of the conspiracy.

"I quote from Mr. Alfred de Rothschild, a delegate from England to the Brussels conference in 1892, to show the effect of law upon the price of the metals. He said:

"Gentlemen, I need hardly remind you that the stock of silver in the world is estimated at some thousands of millions, and if this conference were to break up without arriving at any definite result there would be a depreciation in the value of that commodity which it would be frightful to contemplate, and out of which a monetary panic would ensue the far-spreading effects of which it would be impossible to foretell."

"I want it recorded in the annals of our country that one gold advocate has made one prediction that has been fulfilled, and the only one that has ever been fulfilled. He predicted in 1892 the crisis which was then approaching if that conference should adjourn without rehabilitating silver. It did adjourn without rehabilitating silver, and the results have followed just as he said."

March 16, Senator Pugh, of Alabama, asked that the bill and amendment be laid before the Senate in order to enable him to speak upon the amendment. In the course of his address, which was finished March 17, he said:

"In this connection, I will call attention to a most remarkable state of things. Three years ago there was not a Democratic voter in Alabama or a Democratic newspaper who would not have resented any prediction that at any time in the future, under any circumstances, they would be found opposing the restoration of silver to free coinage and supporting the single gold standard. There was uni-

versal agreement and the most perfect harmony upon the question of finance prevailing in the Democratic party of Alabama and all the Southern States. While this is conceded to be an undeniable fact, it is claimed that those Democrats who now oppose free coinage and advocate the gold standard had the right to change, and it was their duty to change their opinions when additional information and additional reflection satisfied them that they had been in error, and seeing they were wrong they gave up silver and took to gold. This is all conceded, but how long will it be before they will make another change? How old must their opinions become before the authors of them can be accepted as standard authority on finance? For fifteen or twenty years, while the new Democratic converts to the single gold standard were advocating and struggling for free silver coinage in the Democratic party, the Republicans in Congress and their public speakers and newspapers in the country were flooding the country with every one of the identical facts and arguments these new converts are now parading and urging as the grounds for their conversion to the gold standard in the last two years.

"The whole theory of bimetalism is founded absolutely on the unrestricted right of free and unlimited coinage and indiscriminate use of both metals. Free and unlimited coinage into money of both metals is an unalterable law of bimetalism. What is the unquestioned cause of the wide difference in the bullion value of gold and silver? It is that gold bullion can be now taken to the mints of the United States by its owners and coined into money. If any person owns 22·33 grains of pure gold he can take it to any mint and have it coined into a standard dollar with one tenth alloy, making 25·8 grains of standard gold worth 100 cents. This right that the owners of gold bullion have to take it to the mints and have it coined into money free of expense makes the gold bullion as valuable to its owners as it is when coined into money. Stop the coinage of gold and take away the right of its owners to have it coined into money free of charge, and how much would gold bullion be worth as mere merchandise with all the demand for it as money taken away by law? Without the right to be coined into money there would be no demand for it except by jewelers and manufacturers for use in the arts, but when gold bullion can be coined into money as soon as it is turned out of the mint the whole world joins in the scramble to get it.

"When at any time in the history of any country in the world, where gold and silver had the same equal right of free and unlimited coinage at a fixed ratio, has silver bullion or silver money been worth less than gold, or had less purchasing power than gold in the markets of the world? And to-day in gold-using countries where silver is excluded from coinage over 2,000,000,000 of legal-tender silver coins are in circulation side by side with gold, and having less silver in the coins than in the silver dollars of the United States; and, also, in the face of the undeniable fact that silver was never dropped out of the coinage laws of any country in the world because silver bullion or silver money was worth less than gold as bullion or money.

"If the conventions of the two national parties refuse to pledge themselves to the restoration of silver to free coinage, and declare in favor of continuing gold as the only standard of value and the only redemption basis of currency, they will be compelled to pledge themselves to repealing the law requiring greenbacks to be reissued when redeemed, and leaving the national banks the sole power of supplying the people a currency and regulating thereby the prices of labor, property, and productions in the United States. It is a sig-

nificant fact that the same Democratic party that elected Tilden President also elected the members of the Congress that passed the Bland-Allison silver law in 1878, and at the same session, within a few days of each other, passed the act requiring greenbacks to be reissued when redeemed; and, most remarkable to relate, a Democratic President asks that same Democratic party to join him in repealing both these laws, to destroy both silver and greenbacks, and thereby strangle its own offspring.

"If Congress can ever be induced to repeal the law requiring the reissue of greenbacks when redeemed, and authority granted to the President and Secretary to issue 3-per-cent. bonds payable in gold without limit, in amount to sustain the gold standard, and retire and cancel the greenbacks and Sherman coin notes, amounting to about \$500,000,000, thereby contracting the currency over one third of the entire amount in existence, and over one half the present amount in circulation, such a panic would follow as would drive this country into revolution, and the only suggestion of any remedy to mitigate the evils of such unprecedented contraction is to trust to the national banks to fill up the vacuum created by the destruction of greenbacks and Sherman notes with the bills of national banks, to be issued at their will and pleasure to the amount of \$500,000,000, to be added to their present circulation of \$207,000,000, making over \$700,000,000 of national bank bills.

"Who is reckless enough to express the belief that the national banks can be trusted to issue such an amount of their bills to fill up the vacuum created by the destruction of the greenbacks and Sherman notes? If the banks could be compelled to issue their bills to the amount of \$700,000,000, how could the banks float that amount of currency redeemable in gold? It would be impossible, and the banks will take no such risk. The national bank bills would instantly take the place of the greenbacks and be absorbed by gold sharks and gamblers to draw gold out of the banks just as they now do so with greenbacks out of the Treasury. No, Mr. President, the gold system of finance can not be made to operate successfully in this country without inevitable disaster and ruin. It is bound to work its own destruction."

Senator Carter's resolution to recommit the bill to the Committee on Finance was again read April 9 at the request of Senator Mantle, of Montana, who spoke at length upon it. A large part of his address was devoted to the tariff provisions of the Dingley bill. In reference to the silver States, he said in part:

"I have grown up from childhood among the people of the West, in what are now known as the silver States. I think I may therefore justly say that I know something of their character, something of their lives, their hopes, and their ambitions. And it is for this reason that I feel impelled to say a few words in their defense and to repel the unjust and indiscriminate charges of lawlessness, of selfishness, and lack of patriotism which it seems to be the fashion just now upon the part of the metropolitan press of the East to bring against them, as well as their representatives upon this floor—charges which I deeply regret to note have recently found expression to some extent through the Chief Executive of the nation, and that, too, in a notable Christian gathering, which, it would seem to me, over and above all others, should have been found exercising that rare virtue of charity which was the distinguishing trait of Him in whose name and for whose cause they were gathered together, rather than to have made it the occasion for a wholesale, uncharitable, and untruthful arraignment of a great mass of their fellow-citizens who are bound

to them by every tie of kindred, of religion, and of citizenship.

"But, Mr. President, these ill-natured charges against the Western States, and particularly against what are known as the silver States, are not true. I believe I may truthfully say that they have their origin in the fact that the representatives of those States in this body hold financial opinions and have seen fit to cast their votes in opposition to the views and the wishes of the present Administration and its Republican sympathizers and supporters. I assert without fear of successful contradiction that in every attribute of good citizenship, in industry and sobriety, in respect for law and property, in obedience to constituted authority, in reverence for religious forms, and in point of public spirit the citizens of the silver States will easily take rank with those of any other State in this Union. Further than this, Mr. President, I assert that within a radius of 5 miles of Carnegie Hall, in the city of New York, where the Presbyterian Home Mission Society recently held its meeting to beg funds with which to convert the wicked people of the 'badly regulated municipalities' and 'undesirable States' of the West, there is twenty times more of squalid poverty, of pauperism, of ignorance, of crime and criminals, than can be found in all the silver-producing States of the West combined."

The speaker followed with a comparison of statistics of illiteracy, pauperism, debt, and money expended on education, between five Eastern and five Western States, much to the disadvantage of the former; and, further, compared the population of certain silver States with the smaller Eastern States, and referred to the failure to elect Senators in Delaware and Kentucky in connection with the fact that "two years ago the States of Montana and Wyoming were held up to public scorn and ridicule by the Eastern press as being totally incapable of self-government because their Legislatures had failed to elect Senators."

"There is probably no section of our country," he said, "that derives so little direct benefit from the protective system as the silver States. They are producers solely of what are called 'raw materials' and purchasers of finished products. They are also large and increasing producers of gold, and as gold is constantly appreciating in purchasing power, it may be openly questioned whether they would not be the greatest gainers by a policy which would permit them to buy their manufactured commodities in the open markets of the world, unrestricted by tariff or other legislation. But up to this time the Republicans of those States have not permitted themselves to be swayed by selfish considerations in the discussion of the tariff question. They have always taken the broad ground that the protective system was correct in principle, and that it meant the greatest good to the greatest number. But with the policy of protection they have also united the policy of bimetalism, believing that that, too, was a cardinal principle of Republican faith. Upon this platform of protection and bimetalism they have won their political battles in the past and held their States in the Republican column."

The subject was again debated May 22, when the Senate bill for the regulation of bond issues was under discussion, and June 2 Senator Morrill spoke upon the Dingley bill.

Bill authorizing Issue of Bonds.—Another measure for the relief of the Treasury was reported by the House Committee on Ways and Means, entitled "A bill to maintain and protect the coin reserve fund and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue."

A resolution offered by Mr. Henderson, of Iowa,

Dec. 27, that the vote on the bill should be taken the following day at 3 o'clock without delay or other motion, separate votes being taken on the sections if demanded, was debated and passed by a vote of 196 yeas to 102 nays, 57 not voting.

The bill was as follows:

"A bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

"*Be it enacted, etc.,* That in addition to the authority given to the Secretary of the Treasury by the act approved Jan. 14, 1875, entitled 'An Act to provide for the resumption of specie payments,' he is authorized from time to time, at his discretion, to issue, sell, and dispose of, at not less than par in coin, coupon, or registered bonds of the United States, to an amount sufficient for the object stated in this section, bearing not to exceed 3 per cent. interest per annum, payable semiannually, and redeemable at the pleasure of the United States, in coin, after five years from their date, and payable in fifteen years after their date, with like qualities, privileges, and exemptions provided in said act for the bonds therein authorized. And the Secretary of the Treasury shall use the proceeds thereof for the redemption of United States legal-tender notes, and for no other purpose: *Provided,* That nothing in this act shall be construed to repeal or modify an act approved May 31, 1878, entitled 'An Act to forbid the further retirement of United States legal-tender notes.' Whenever the Secretary of the Treasury shall offer any of the bonds authorized for sale by this act or by the resumption act of 1875, he shall advertise the same and authorize subscriptions therefor to be made at the Treasury Department and at the subtreasuries and designated depositories of the United States.

"**Sec. 2.** That to provide for any temporary deficiency now existing, or which may hereafter occur, the Secretary of the Treasury is hereby authorized, at his discretion, to issue certificates of indebtedness of the United States, to an amount not exceeding \$50,000,000, payable in three years after their date to the bearer in lawful money of the United States, of the denomination of \$20, or multiples thereof, with annual coupons for interest at the rate of 3 per cent. per annum, and to sell and dispose of the same for not less than an equal amount of lawful money of the United States at the Treasury Department and at the subtreasuries and designated depositories of the United States and at such post offices as he may select. And such certificates shall have the like qualities, privileges, and exemptions provided in said resumption act for the bonds therein authorized. And the proceeds thereof shall be used for the purpose prescribed in this section and for no other."

Mr. Dingley, of Maine, said in explanation of the intent of the bill;

"Mr. Speaker, the pending bill contains two simple propositions. Section 2 (reversing the order in which the sections are placed in the bill) authorizes the Secretary of the Treasury to issue certificates of indebtedness to an amount not exceeding \$50,000,000, to be paid within three years, bearing 3 per cent. interest—to be used for one purpose and one purpose only—to meet temporary deficiencies in revenue—temporary deficiencies—deficiencies that may occur not only now, but at any future time, for this second section is to be permanent law.

"I have only to say in respect to that section that it is in substance the exchequer-bill system which prevails under many governments, and is intended to be a form of loan for temporary purposes, of a popular nature, that can be paid out even by the Secretary of the Treasury for current objects of

expenditure. The committee have provided that these certificates of indebtedness shall be used only for that purpose. Our object in so limiting their use is to separate as far as possible in the accounts the cash in the Treasury available for current expenses and the reserve that is retained for redemption purposes.

"One great difficulty we have had in maintaining the redemption fund in the past, as I suggested yesterday, arises from the fact that the reserve or redemption fund has been used not exclusively for the purpose for which it was established, but in part to meet the deficiency in the revenue; and therefore it seemed to the Committee on Ways and Means desirable that there should be two forms of obligations—one temporary in the form of certificates of indebtedness to meet merely temporary deficiencies, and to be set aside and to be devoted to that purpose entirely; and another to maintain the redemption fund, with a provision that the proceeds of that obligation should be set aside as a reserve and so maintained, in order that if we are to continue to use circulating notes of the Government as currency—as we have been doing for thirty years—we may maintain the same financial condition that a bank does in permanently maintaining its reserve and not allowing it to be encroached upon for merely current expenditures.

"This section, as I have said, is intended to present a remedy not simply for present exigencies, but for any possible exigencies that may arise in the future, and in the judgment of the Committee on Ways and Means it ought to be on the statute books without reference to the existing situation.

"Passing now, Mr. Speaker, to section 1 of the bill, it simply proposes to add another description of bonds to those already authorized by existing law for the maintenance of the redemption fund. Under the resumption act of 1875 two descriptions of bonds are authorized, namely, ten-year bonds bearing 5 per cent. interest, and thirty-year bonds bearing 4 per cent. interest. These are the only two descriptions of bonds authorized and that have been issued under the resumption act.

"Under that act the Secretary of the Treasury during the past two years has issued one hundred millions of 5-per-cent. ten-year bonds and sixty-two and one third millions of 4-per-cent. thirty-year bonds, realizing from the sale about \$182,000,000 in gold. He has the authority to continue to issue such bonds for the purpose of maintaining the redemption fund under the resumption act to-day. He has been exercising that authority, and has indicated in his report that if there is no further authority given to him—no other description of bonds authorized—if the exigency arises, which it will, evidently, in a very short time, he will proceed to issue, sell, and dispose of additional bonds bearing interest at 4 per cent., with thirty years to run, or bonds bearing interest at the rate of 5 per cent., with ten years to run. With that authority on the statute books to-day, this bill simply provides for the authorization of the issuance of another description of bonds for the same purpose, and that is a 3-per-cent. bond, redeemable five years after date and payable after fifteen years from date.

"The only practical question involved, then, in this first section of the bill is simply this, shall we, in the interest of the Treasury—in the interest of economy—authorize the issuance of bonds bearing a lower rate of interest, to wit, 3 per cent., when we know that if we have no legislation the Secretary of the Treasury will proceed to issue either a ten-year 5-per-cent. bond or a thirty-year 4-per-cent. bond?

"Now, it seems to me that in this situation, as practical men representing the interests of the taxpayers of this country, when the simple question is

presented whether or not we will issue the lower-rate bonds, in the face of the fact that the Secretary of the Treasury has the right to issue a higher rate of bonds, we ought to act as legislators here precisely as we would act in our own business, and to that extent defend and protect the interests of the people, and authorize the lower-rate bond.

"There are two points of legislation presented in the first section of the bill that relate not only to the proposed issuance of 3-per-cent. bonds, but which also relate to any other issue that may be made hereafter under the resumption act of 1875 of either of the other descriptions of bonds that I have referred to. The first provision is that whatever bonds are sold, or offered for sale, whether they are the bonds authorized under the resumption act of 1875 or those to be authorized by the bill now pending, they shall be first offered to the people of the United States by advertisement, and that our own people shall have an opportunity to purchase such bonds if they so desire. It seems to me that some such provision ought to accompany this legislation, and not only that it should accompany this legislation, but it ought to also apply to the resumption act of 1875. The loans, whether issued under the resumption act or under this bill, should be of a character; for I believe that when a 3-per-cent. bond of this character shall be offered, as is proposed by this bill, to the people of the United States, they will respond from the Atlantic to the Pacific and from the Great Lakes to the Gulf.

"Second. There is another provision of legislation in this first section, and that is that the proceeds of the bonds thus sold under this act and under the resumption act of 1875 shall be devoted, as was intended when the act was passed, and as ought to be made clear, exclusively to redemption purposes.

"It was supposed that in using that language it would not be understood that it authorized in any way the retirement and cancellation of the United States legal-tender notes; but to make that clear, to put it beyond dispute, carrying out precisely the object that the committee had when they first drafted this bill, the committee have placed in the bill itself, immediately after this direction that the proceeds shall be used for this one purpose, a proviso that nothing in this act shall be construed to repeal or to modify the act of May 31, 1878, which forbids the further retirement and cancellation of United States legal-tender notes.

"If the second section of this bill should become a law, then only the proceeds of the certificates of indebtedness can be used to meet deficiencies of revenue, and the proceeds of bonds sold for the redemption fund can not be used to meet such deficiencies. When there is no deficiency few greenbacks will be presented for redemption, and those that are so presented can be used, just as they were from 1879 to 1893, to redeem and pay the interest-bearing debt. The intention, of course, is not to have any permanent deficiency of revenue. The second section is intended to apply only to temporary conditions which may arise and which do arise in all governments; it is not intended to apply to a permanent, chronic deficiency that shall run two years and a half, as the present one has done. The purpose is simply to do what other governments do under like circumstances. The intention is to avoid deficiencies by providing revenue. That is the normal condition of every government. That is the policy which is contemplated by the legislation which we have already inaugurated in this House. But accidentally, through some unforeseen condition, there may be for a short time, when Congress is not in session, a deficiency of revenue, and at such a time the Secretary of the

Treasury should have the means of laying hold upon some form of obligation that he can issue for the purpose of obtaining funds to meet that temporary condition. That is the intention of the second section.

"Further, it is intended that obligations that are issued for the purpose of meeting temporary deficiencies of revenue shall run for only a short period; hence we limit the amount to \$50,000,000. It is expected that such obligations will be paid by surplus revenue within a brief period, for the section provides that these certificates of indebtedness must be paid within three years. It is precisely the same thing that is done, for example, by Great Britain under certain conditions. She authorizes the issue of exchequer bills, which are almost exactly the same as what are here denominated certificates of indebtedness. Those bills are issued, under the British system, not for permanent loans, but to meet any temporary deficiency of revenue that may occur, and are paid in a comparatively short time from surplus revenues which Parliament is expected to provide."

Mr. Cox, of Tennessee, asked why the certificates of indebtedness were to be redeemed in "lawful money" and the bonds in "coin"?

Mr. Dingley answered:

"Because we require a coin fund for redemption purposes; the law so provides. But current obligations of the Treasury we can pay in any kind of lawful money that may exist at the time.

"There has been no bond issued by this Government up to this hour but that provides that it shall be paid, both principal and interest, in coin, and we are simply meeting the conditions of pre-existing legislation. We have heretofore contracted these obligations, and we propose to meet them as an honorable people. But as to temporary deficiencies of revenue, where there has been no such previous obligation, they can always be paid in lawful money. How is the gentleman paid his salary as a member of this House? In lawful money, whatever that may be. But whenever you undertake to make a loan, and especially to borrow coin, you can not expect to obtain it unless you are ready to pay in the same kind of money that you borrow. We have always borrowed gold, and hence coin as used in our bonds means the same kind of coin that we have borrowed. It is because we have preserved good faith with our creditors that we have been able, up to within two years, to borrow on so favorable terms."

Mr. Lacey, of Iowa, asked if the gentleman thought the bill guarded sufficiently against the legal-tender notes, after they are redeemed according to the provisions of the first section, being paid out to meet current expenses.

Mr. Dingley said:

"Of course, if the Secretary of the Treasury desires to so use them and finds that there is a necessity, there is no absolute provision otherwise in this bill. But the suggestion here, and it is a suggestion which is exceedingly important, is that the Secretary of the Treasury shall adopt the policy of separating the two funds and shall use the greenbacks or any other forms of currency precisely as they were used from 1879 up to 1893. At one time during President Cleveland's first administration there was in the Treasury of the United States \$130,000,000 of greenbacks. They were the result in large part of deposits of United States legal-tender notes by banks retiring their circulation or going into liquidation. Those were gradually drawn out, but it took several years, and it was not until the act of July 12, 1890, was passed that those funds were turned into the Treasury. The same policy that prevailed from 1879 to 1893, provided we can have

revenue sufficient to meet expenditures, will be repeated by the operations of the bill which is now before the House.

"The only question really for us now is whether, in the interest of the people of this country, we shall not authorize the issue of a lower-rate bond, and thus have the lower-rate bond sold in preference to the higher-rate bond, with the provision that when sold it shall be first offered to the people of this country, and the further provision that the proceeds shall be separated from ordinary cash in the Treasury and maintained as a reserve. That is all there is in this bill."

Mr. Marsh, of Illinois, asked:

"You have told us that it would be a great saving of interest to the people if we could negotiate a 3-per-cent. bond instead of a 4-per-cent. bond. Now, that argument is significant if true, but I ask the gentleman from Maine if it is not true that when a 3-per-cent. bond can be sold at par, a 5- or a 4-per-cent. bond will sell at a rate of premium that will be less than 3 per cent.? In other words, when a bond runs for ten years, is it not worth more than one that runs for five?"

Mr. Dingley: "Undoubtedly. What I say is this, that when you offer a bond to the people of the country—to the plain people, who do not stop to make calculations as to premiums—you will find that a large proportion of them would prefer to purchase a 3-per-cent. bond at par rather than a 4-per-cent. bond on which they will have to pay a premium. People do not like to pay a premium on their investments. But when they can get a 3-per-cent. bond at its face, the plain people of this country will take that in preference to paying what would be less than the equivalent for a 4- and 5-per-cent. bond at a premium. That is the practical working of it."

Mr. Turner, of Georgia, in speaking in opposition to the bill, said:

"I now venture to suggest to my friends on the other side that either they have not been entirely candid or they themselves do not understand this measure. It is said that out of abundant caution a proviso was added to the first section to prevent the retirement of the legal-tender notes. Gentlemen who are the friends of all these notes may find themselves unwittingly entrapped. There is in the first section of the bill a provision to this effect:

"And the Treasury shall use the proceeds thereof—that is, of these bond sales—for the redemption of United States legal-tender notes, and for no other purpose."

"And to that is added this morning a proviso, which I will now read:

"Provided, That nothing in this act shall be construed to repeal or modify the act approved May 31, 1878, entitled 'An Act to forbid the further retirement of United States legal-tender notes.'"

"Now, in the first place, Mr. Speaker, what is to become of the United States legal-tender notes into which this gold reserve may glide by the process of redemption?"

"My friend from Maine in the outset of his remarks, which I failed to hear distinctly, seemed to hold that by the operation of this bill the Treasury will have to open two accounts and segregate the proceeds of this redemption into a separate fund and a separate account. I deny it. There is nothing, absolutely nothing, in this bill which would have this effect. It would in no way change the Treasury policy in this respect. The proceeds of these bonds, when they reach the Treasury in the form of gold or coin and are converted into legal-tender notes by redemption, will take their place side by side with such legal-tender notes as are

already there for any lawful purposes to which the Treasury can devote them. This provision, therefore, is not even a suggestion to the Treasury, as the gentleman has said. 'The proceeds thereof' are the gold procured on the bonds, and not the notes that may be redeemed with the gold.

"But I take a step further. The proviso just quoted, out of abundance of caution, to save the power to reissue legal-tender notes thus accumulated, takes care of that class of these notes which are specified in the act of May 31, 1878, commonly called United States notes, or greenbacks. Let me read it again:

"Provided, That nothing in this act shall be construed to repeal or modify the act approved May 31, 1878, entitled 'An Act to forbid the further retirement of United States legal-tender notes.'"

"What, then, becomes of the Sherman notes under the act of 1890, the power to reissue which depends not on the act of 1878, but on the provisions of the Sherman act of 1890? There is no reference whatever to this latter act. Hence this bill may be construed by the Secretary of the Treasury in accordance with strict law to authorize the retirement of the Sherman notes.

"But first let me say to gentlemen on the other side that, while they may claim that this measure is a response to the demands of the Treasury and of the Executive, they are sailing under false pretenses.

"In the first place, the bill does not contain a single provision or a single policy which the Administration or the Treasury recommends. If gentlemen mean to meet the emergency which the Administration depicts in urgent messages, why do they not at least allow some of us the poor privilege of offering such provisions as the Administration desires? Yet we are cut off from that opportunity.

"The Secretary of the Treasury and the President of the United States believe—and there are some of us who believe the same way—that there ought to be provision made for the retirement of all our paper money, so called. Gentlemen on the other side, who have now the laboring oar, felt that way at one time, but now they will not even allow us the opportunity to offer such a provision in response to the demand of a Democratic administration. It is also a part of the policy recommended by the Administration that these bonds which are to be offered on the market shall be made payable in that sort of coin which it receives for the protection of our legal-tender money; but we are not allowed to offer that amendment.

"Not a single one of these bonds, whether exchequer certificates or 3-per-cent. bonds payable in coin, can be sold at par in any market in this country or anywhere else, in my opinion. Why, sir, on the 26th of the present month United States fours maturing in 1925 were bid for at 116, which, when ciphered out, makes a rate of income of over 3 per cent.—three and one tenth and a fraction. With the market in that condition, with a bond already on the market which is bid for at a rate which would produce a larger rate of interest than the bond you offer, having a much longer time to run, do you suppose you can hold up a 3-per-cent. bond at par which is itself an addition to the supply of our bonds? I believe that you can not dispose of these obligations in a popular way, as this bill presupposes, in amounts of \$20 and multiples thereof.

"In the next place, there is at this time a large surplus in the Treasury available for the current expenses of the Government. I regret to have to say that that large surplus itself is a peril. Let us suppose, if you please, that our friends on the other side should, by some inscrutable providence, realize

their hopes next year, and that they should come into power with a large surplus in the Treasury and an added revenue under the bill which they have just passed. I ask (if we may judge by experience), would they not repeat the budget of the Fifty-first Congress and so make exchequer bills necessary? The power to spend, coupled with the power to supply deficiencies with these certificates, would be dangerous in the hands of a party devoted to large expenditures."

Mr. Johnson, of California, said:

"Mr. Speaker, I desire to state the reasons why I, as a Republican, oppose this bill. I went over my district in California recently, and upon every stump in that district I proclaimed the undying hostility of the Republican party to the issuance of bonds in the time of peace. I proclaimed the undying hostility of the Republican party to the action of the President of the United States and the Secretary of the Treasury in issuing bonds in time of profound peace to defray deficiencies in the revenues, caused by their own conduct in making contracts with a bond syndicate that would not bear investigation by a hostile Congress. And I regard this bill as giving the lie to everything we said before the elections in reference to the issuing of bonds; and for one I can never by any act or vote of mine condone what I believe to be an error not merely of the heart, but of the head; not merely of general policy, but an error arising almost to the dignity of an offense against the commonwealth, of allowing the bonds of the United States Government to be taken and controlled in the manner they were by the Treasury of the United States and a bond syndicate in a time of profound peace.

"This bill, in my judgment, stamps the seal of approval by the Republican party upon the action of these officers and upon the issuance of these bonds in the manner I have stated. It continues in force the laws which now authorize the selling of bonds at 4 per cent. and at 5 per cent., and in addition to that gives authority to the Treasury to issue bonds at 3 per cent.

"I am opposed to it also because it does attempt to retire the greenbacks—because it does retire the greenbacks, as I look at the law. I am one of those who believe the greenbacks to be the best currency we have ever had in the United States. I am old enough to remember the days before the war, and I remember that then when you went out of your own town, your own county, or your own State, into any other county or State in the nation, you were obliged to take a Thompson's 'Bank Note Reporter' with you and change it every week in order to know whether you were getting good money or bad.

"Now, the greenback goes current in any State of this American Union, and it ought to be protected and not injured in the house of its friends, for we Republicans originated it. I believe this bill will retire the greenbacks because of the second section of the bill, which provides that the Secretary of the Treasury shall have the right to issue short-term certificates with which to pay the necessary expenses of the Government. If he issues those certificates to defray the necessary expenses of the Government, and at the same time if he issues bonds and redeems the greenbacks, as he has a right to do, emphasized and almost demanded by this bill, what is to become of the greenbacks? He will not need them to defray the expenses of the Government, because he will have these short-term certificates, and the greenbacks will remain locked up in the Treasury vaults of the nation, and the currency will be contracted to that extent and nothing given in lieu.

"Now, to-day we are called upon to undo all the work we did yesterday. To-day we are called upon to contradict everything that we said, everything

that we did, and every vote that we cast yesterday. We were told yesterday by speeches upon the Republican side that the tariff bill which we then passed would give the necessary revenue to carry on the Government, that it made \$44,000,000 in addition to that which we now receive. We were told by the distinguished gentlemen upon the Democratic side that we did not need the bill, that we have \$70,000,000 already in the Treasury to pay the expenses of the Government. But we passed the bill, and now we were either wrong yesterday, and the Democrats were right, or we are wrong to-day in attempting to pass this bill; for, after having passed the tariff bill to give \$44,000,000 more of revenue, we now propose to pass a bond bill to give them \$50,000,000 of certificates, and God knows how many hundred millions of dollars of short-time bonds, to build up a Treasury that we said yesterday—and voted also—a horizontal raise would fill up inside of a few months."

The debate was continued through the 27th and until three o'clock on the 28th, long addresses being made by Mr. Grosvenor, of Ohio; Mr. Patterson, of Tennessee; Mr. Swanson, of Virginia; Mr. Lacey, of Iowa; Mr. Johnson, of North Dakota; Mr. Wheeler, of Alabama; Mr. Terry, of Arkansas; Mr. Wellington, of Maryland; Mr. Wilson, of Idaho; Mr. Bowers, of California; Mr. Adams, of Pennsylvania; Mr. Gibson, of Tennessee; Mr. De Armond, of Missouri; Mr. Northway, of Ohio; Mr. Tarsney, of Missouri; Mr. Shafroth, of Colorado; Mr. Brosius, of Pennsylvania; Mr. McLaurin, of South Carolina; Mr. Cannon, of Illinois; Mr. Bartlett, of New York; Mr. Tawney, of Minnesota; Mr. Bailey, of Texas; Mr. Payne, of New York; Mr. Russell, of Connecticut; Mr. Crisp, of Georgia; Mr. McCall, of Massachusetts; and Mr. Dalzell, of Pennsylvania.

When the question was taken there were 171 yeas and 136 nays, 48 not voting.

In the Senate the bill was referred to the Committee on Finance and reported back Jan. 7 with an amendment and recommendation that it should pass as amended. The report was to strike out all after the enacting clause and insert:

"That from and after the passage of this act the mints of the United States shall be open to the coinage of silver, and there shall be coined dollars of the weight of 412½ grains troy, of standard silver, nine tenths fine, as provided by the act of Jan. 18, 1837, and upon the same terms and subject to the limitations and provisions of law regulating the coinage and legal-tender quality of gold; and whenever the said coins herein provided for shall be received into the Treasury, certificates may be issued therefor in the manner now provided by law.

"SEC. 2. That the Secretary of the Treasury shall coin into standard silver dollars, as soon as practicable, according to the provisions of section 1 of this act, from the silver bullion purchased under the authority of the act of July 14, 1890, entitled 'An Act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes,' that portion of said silver bullion which represents the seigniorage or profit to the Government, to wit, the difference between the cost of the silver purchased under said act and its coinage value, and said silver dollars so coined shall be used in the payment of the current expenses of the Government; and for the purpose of making the said seigniorage immediately available for use as money, the Secretary of the Treasury is hereby authorized and directed to issue silver certificates against it, as if it was already coined and in the Treasury.

"SEC. 3. That no national bank note shall be hereafter issued of a denomination less than \$10, and all notes of such banks now outstanding of denomi-

nations less than that sum shall be, as rapidly as practicable, taken up, redeemed, and canceled, and notes of \$10 and larger denominations shall be issued in their stead under the direction of the Comptroller of the Currency.

"SEC. 4. That the Secretary of the Treasury shall redeem the United States notes, commonly called 'greenbacks,' and also the Treasury notes issued under the provisions of the act of July 14, 1890, when presented for redemption, in standard silver dollars or in gold coin, using for redemption of said notes either gold or silver coins, or both, not at the option of the holder, but exclusively at the option of the Treasury Department, and said notes, commonly called 'greenbacks,' when so redeemed, shall be reissued as provided by the act of May 31, 1878."

Senator Jones, of Arkansas, spoke upon the bill Jan. 10. In regard to the issuance of bonds proposed by the bill he said in part:

"It is claimed, I believe, that this bill was framed and passed through the House in response to the wishes of the President of the United States. It is also said that the bill is entirely unsatisfactory to the President and the Secretary of the Treasury, from the fact that the bonds provided for are not specifically payable in gold. It seems that the President considers the Treasury in an unsatisfactory, if not in a critical, condition. The majority of the Finance Committee of this body believe that the financial condition of the people generally is anything but what it should be, and we regard it as the first duty binding on the consciences of members of Congress to undertake to provide a remedy for the widespread distress now existing through the country, especially if it is in any sense the result of congressional action. If a condition of reasonable prosperity can be restored among the masses of the people there will be no difficulty whatever about the condition of the Treasury. The present deficiency results, in our opinion, from the much greater evil of the unsatisfactory condition of the people. The bill amended as proposed by us will, we firmly believe, bring this relief, and for that reason we urgently urge its passage by the Senate.

"It would seem that the advocates of a single gold standard regard the issue of bonds as a panacea for every ill, that with them it is a remedy ready in every emergency. No matter what financial difficulty is to be met, an issue of bonds is at once and promptly proposed. Those who think as I do, on the contrary, look upon them as an unmitigated evil, especially as they have been and are now about to be issued. An issue of bonds is doubtless a boon to that small class of persons who have large incomes, which they have not the knowledge, industry, or courage to use profitably, who long for investments upon which they may draw interest without any greater labor than clipping coupons; but to no other class is an issue of bonds desirable.

"It is true that the Government is not collecting as much revenue just at this time as is needed, and some steps should be taken to provide for the deficiency. The Secretary of the Treasury, however, in his official report, shows that this deficiency will be temporary and not continue beyond a few months.

"The amendment proposed by the committee, if enacted into law, will amply provide for this, for the issue of about 50,000,000 silver certificates against the seigniorage now held in bars in the Treasury is one of its features, while the deficiency estimated by Mr. Carlisle is far below that sum. A sale of bonds, as proposed by the House, could accomplish no good result, and, in my opinion, would be productive of much evil.

"The issue of bonds can not alter existing conditions, and the causes which have brought about the

present situation will speedily bring about like results and another sale of bonds will soon be just as necessary as this, and this "endless chain" of bond sales might continue until a thousand millions had been sold, and yet we would be no nearer a solution of the difficulties which encompass us than we are now. In fact, the President in his last annual message to Congress says, after issuing 160,000,000 bonds, that, at that time (the beginning of this session), to use his language, 'we are nearly where we started'; and we will continue to be 'nearly where we started' under the system proposed by the House of Representatives or the President.

"There was a time when, with a much smaller population and much less wealth than we now have, we had no difficulties in the Treasury—no deficiency of revenue, and what was of much more consequence, no distress among the people. If the causes which produce the present difficulties with the people can be removed we certainly will return to the old condition of prosperity and happiness. It would seem that there should be no difficulty in finding out what changes have occurred and in ascertaining beyond question the cause of our present troubles. There must be something radically wrong somewhere if the richest and freest nation on the globe is in such a condition of absolute helplessness and dependence as the President of the United States seems to consider us now.

"In this country the people are the source not only of all power, but also of all wealth and prosperity. When they are prosperous, business will flourish, all branches of commerce will be active, and no financial difficulties will come to the Treasury except as the result of insufficient revenue laws; but no revenue system, no matter how wisely or judiciously framed, can provide revenue unless there is commerce and active business. A time of industrial depression and commercial stagnation must be and ought to be a time of embarrassment for the Government.

"The laws we now have on the statute books will, with the revival of business, provide ample revenue. The change needed is not in the revenue laws, but in the financial condition of the people at large. Whatever embarrassments the Government may now have to encounter are the result of the depressed condition of all branches of business and the unsatisfactory condition of the people generally. If we can devise a means of relieving these, there will be no difficulty about the condition of the Government or of the revenues.

"There is, however, one commodity which, when affected in its value, necessarily affects all other things in the world, in all countries, and among all civilized people, to wit, money. Suppose money to be doubled in value suddenly, it would take then just one half as much of it to buy any given article as it would have taken before the rise in its value; what would before have cost \$1 would then cost 50 cents, because the 50 cents is worth as much as the dollar was before. This rise in the value of money, then, would find its expression, its visible manifestation, in a fall of general prices to 50 per cent. of their former scale, while money would remain nominally just as it was before; and the superficial observer might think, and a modern gold bug would be sure to think, that this change in prices had resulted from overproduction and improvements in methods of production and transportation, and not in the change in the value of money.

"It is often the case that there are two causes operating at the same time and in opposite directions, and that these counteract each other to some extent. For instance, suppose the value of money doubled as already suggested; this would tend to divide the price of cotton, for instance; but sup-

pose at the same time, as was the fact last year, that there should be produced one half of an ordinary crop of cotton. Under normal conditions this falling off in the crop would tend to double the price, while the increased value of money would tend to reduce it 50 per cent. These two causes operating in different directions against each other would have a tendency to keep cotton at its old value. It would not fall by reason of the scarcity of money; it would not advance by reason of the shortness of crop, but remain at the old price. But the two causes operating in directly opposite directions with exactly equal force would paralyze each other, leaving the price of cotton where it had been before. The two evils of an increase in the value of money and a short crop would both be borne by the community, though the effects of both might be hidden. This was practically the condition during the fall of 1895."

The remainder of the address was devoted to the consideration of the proposed amendment—the subject of silver coinage.

The bill came up for further discussion Jan. 13, when Senator Morgan, of Alabama, spoke in favor of the amendment. He said in part:

"The Senator from Ohio says that the balances of trade are against us and must be paid in gold. If that is so, it is not because we produce or export less in recent years than we did formerly. It is because the gold policy in Europe, which is but the policy of the feudal age repeated in different form, has deprived those people of the ability to consume our surplus productions except at pauper rates. But, whatever is the cause, is it the business of this Government to furnish gold to pay balances of trade? When did that sort of paternalism become a part of the creed or practice of the Democratic party? When England and France find that gold is leaving them to pay foreign balances of trade, they raise the rate of interest and stop the outflow. We tax the people to raise gold to facilitate the outflow and refuse to pay our debts in silver according to the contract, because the foreign creditors of our merchants demand gold of them.

'No man knows what is the approximate amount of the stocks and bonds of our corporations that are held abroad. We know that it includes every variety of stocks and bonds created in this country, and their name is legion.

"We know that bonds of our corporations are seldom sent abroad for hypothecation unless they are accompanied with equal amounts of the stocks to be held as collateral. These stocks are voted in the corporate proceedings and draw dividends if any are declared.

"The foreign money that comes here under such conditions comes as an investment, and if the investors came with it they would consent to collect their dividends in the money earned by their companies. Then we would have no trouble in paying them. But they do not come here and use our greenbacks, Sherman notes, and silver certificates as the resident stockholders use them, and we are required to repudiate our coin contracts to raise gold to keep them in a good humor and to maintain our respectability in their eyes and in the eyes of the snobs at home who worship them and barter their wealth for titles for their daughters which the Constitution forbids their fathers to receive.

"It is these feudal princes, at home and abroad, now united in the control of the empire of gold monopoly and owing their highest allegiance to the Shylocks of Europe, that object to any plan for breaking the endless chain that has become such a terror to this Administration.

"If the wheel that carries this chain continues to revolve, the Treasury crank by which it is kept in motion will grind out an increase of our bonded

obligations that will amount to \$1,000,000,000 in the next three years, at the rate at which it has progressed in the last two years. This, added to the remaining war debt, including the greenbacks, aggregating more than \$1,000,000,000, will throw the country back to a worse condition than we were in at the close of the civil war. Does this dreadful prospect, this certain fate, alarm the bondholding princes of the houses of Rothschild and Belmont? They rejoice, indeed, in the return of the old *régime*, the new phase of the feudal power and the vassalage of the people!

"The threats of the President that the wheel that carries the endless chain shall continue to revolve and the renewed diligence of the Secretary of the Treasury in grinding out bonds bring dismay to the people, who are ready to cry out, 'Tax us, tax us to buy gold to destroy the paper money on which our industries depend. We will make bricks for you without straw; but do not turn our children over to the gold princes as feudatories, to become their vassals and slaves when their fathers have passed away.'

"The present condition of our country as to indebtedness, finance, and taxation is a state of prostration, almost of despair, in which the will of the people, the votes of the representatives in Congress, and the injunctions and mandates of the Constitution are all in turn silenced and nullified by the will of a single man. What one man has done to shelter wealth from taxation by a judicial sentence will never be forgot while a record remains of the eloquent expressions of the Senator from Missouri.

"The President declares that our coin contracts are only and exclusively gold contracts, and vetoed a bill demanded by the people to coin the silver bullion in the Treasury because his approval of such a measure would be an admission that silver is a money metal.

"He demands that Congress shall change all our coin bonds and other contracts into gold contracts by express statute so that when they mature our children shall have no excuse for demanding from the bondholding princes the right to pay them in silver. We have that right, and the President demands that we shall surrender it on pain of having the wheel to run with increasing velocity that drags the endless chain through the heart of the country. One word—an honest, sincere, and just word, the word of truth—uttered by the President would relieve the country of these terrors. That word would be, 'The rights of the people, as they are expressed in their obligations, must and shall be preserved.'

Consideration of the bill was again resumed Jan. 14, when Senator Butler, of North Carolina, submitted an amendment to the amendment, proposing to strike out section 4 and to insert in lieu thereof:

"SEC. 4. That the issuance of interest-bearing bonds of the United States for any purpose whatever, without further authority of Congress, is hereby prohibited; and that the Secretary of the Treasury when redeeming United States notes, commonly called greenbacks, and Treasury notes issued under the provisions of the act of July 14, 1890, and when liquidating either the interest or principal of any of the Government's coin obligations is hereby directed to make such payment in gold coin whenever the market value of 25·8 grains of standard gold is less than the market value of 412½ grains of standard silver, and to continue to pay in such gold coin until the market value of 25·8 grains of standard gold shall be equal to the market value of 412½ grains of standard silver; but when the market value of 25·8 grains of standard gold shall be greater than the market value of 412½ grains of standard silver, he shall pay the interest and the principal of said coin obligations as they become due in silver

coin, and continue to pay the same in silver coin until the market value of 412½ grains of standard silver shall be equal to the market value of 25·8 grains of standard gold, and said notes, commonly called greenbacks, when so redeemed, shall be re-issued, as provided by the act of May 31, 1878."

In support of his amendment Senator Butler said:

"The provisions of this section are perfectly simple and plain. It simply directs the Secretary of the Treasury, in express terms, with no option, to do what everybody thought he or any patriot would do in exercising the option of the Government in paying our coin obligations. The law expressly declares that he shall use this option to keep gold and silver at a parity. If that law means anything it means that whenever, for any cause, there is a greater strain on gold—that is, a greater demand for gold than for silver—that then he shall use the Government's option to pay our coin obligations in silver, and, on the other hand, whenever silver is scarce, whenever there is a greater demand for silver and the price goes up, that then he shall equalize the demand for the two metals by paying our coin obligations in gold and continue the strain on gold until the two metals come back to a parity.

"I will answer here a question asked me by a distinguished citizen a few days ago. He asked why I insisted on putting this provision on the bond bill along with a provision reported by the committee providing for the free and unlimited coinage of silver. That gentleman, whose name I shall not call, rather chided me and said: 'You and every other advocate of free silver all over the world have been claiming that the free and unlimited coinage of silver on equal terms with gold would bring silver to a parity with gold—that is, have claimed that 412½ grains of silver would always practically be worth as much as 25·8 grains of gold.' That is true, provided that there are no other laws or conditions created by law to artificially disturb this parity.

"I will illustrate. We can coin gold and silver on equal terms, but the Secretary of the Treasury can send silver to a premium or gold to a premium, just as he chooses, by an improper use of the option which is vested in him by law of paying out gold or silver on our coin obligations. This option was vested in him so that he could keep the two metals at a parity, but if he cares nothing for his oath of office, or for the interests of the people, or the credit of this Government, he can use this option to cause a disparity between the two metals. So far he has used his option for the profits of the gold trust, against the interests of the American people, and to the detriment of the credit of our Government.

"There is another reason, and I wish to call particular attention to it. In the Bland-Allison act of 1878 there was inserted a clause, known as the exception clause, making it lawful for a private individual, corporation, or company to take notes or mortgages stipulating payment in gold only. This was a very unwise and unjust provision. It was slipped into that act in the interest of the monopolists, the gold combine, and the creditor class, and was done to depreciate silver and to appreciate gold. Under this law—which, by the way, was inserted into a bill which claimed to restore silver as money—there have been thousands and millions of dollars of mortgages and notes taken in this country requiring payment in gold. There is practically not a town or hamlet in the whole United States to which the banks have not sent orders to the business men calling upon them to take gold mortgages and gold notes only.

"That is the case in the State of the Senator from Mississippi; it is so in my State; it is so all over the country. There are probably a thousand million dollars to-day due under mortgages con-

taining this gold clause. Until every one of these notes and mortgages are paid there will be a greater strain all over the country on gold than on silver, which, of course, will have the inevitable result of artificially increasing the price of gold. Therefore if we pass a free-coinage bill here to-day gold and silver can not come to a parity until every one of these gold obligations are paid, unless the strain on gold is offset by a like and equal strain on silver, unless the Secretary of the Treasury and the President will observe and carry out the letter and spirit of the law."

Mr. Butler said further:

"Are not ninety-nine people out of a hundred in this country to-day suffering from the present evil conditions brought on us by bad legislation and mismanagement of Government affairs? Who brought about these evil conditions? It is not God's fault that this country is in distress. He has not visited us with plagues, famines, or pestilence, but has he not blessed us with sunshine and showers? Has he not blessed the American freeman with health and strength to labor and to make two blades of grass grow where one grew before?"

"It is not the fault of the people, for have they not used in an extraordinary degree the opportunities that have been placed before them? Each year they have worked harder than the year before. Each year they have created more wealth per head. In fact they have created so much wealth that the gold bugs and the monopolists have raised the cry that the people are ruining the country by creating too much wealth—by making an overproduction of wealth. In short, Heaven has given us the opportunity to make ourselves rich and prosperous; we have used that opportunity and created enough wealth to make this country blossom like a rose and to surround every man who will work with comforts commensurate with his wants.

"Then what has brought this distress to the country? What has thrown our laborers out of employment and turned them into tramps on the highways of the nation? What has brought starvation and poverty to the door of every farmer in the land? What has ruined millions of merchants and business men? I stand here to-day and charge—and defy contradiction—that it has been brought upon us solely by infamous laws enacted in this Capitol and by a still more infamous execution or defiance of law by the administration at the other end of Pennsylvania Avenue.

"The same thing has gone on whether the Republican party was in charge or the Democratic party in charge. The people are not to be blamed except in one particular, and that is in allowing themselves to be cajoled or fooled or aroused by partisan prejudice into voting for and keeping in power their faithless agents who have robbed them. The great majority of voters in this country are opening their eyes to this infamy and to this betrayal of trust. The great majority of the people are throwing off their party yoke which they have worn so faithfully and so disastrously. They are anxious to get together under one banner and drive from power these gold conspirators.

"The greatest hindrance to-day in the way of this, the men who are to-day the most to blame for keeping apart the people who would come together and right their wrongs and re-establish the Government of Lincoln, Jefferson, and Jackson, are some of the men who claim to stand by the people and for good government, the men who claim to oppose the gold standard and the rule of monopoly, but yet who sacrifice every principle of good government, who sacrifice the interests of the people for party success that they may remain in power and continue to draw their salaries. It is the duty of such men, placed

in positions of trust by a confiding constituency, to put patriotism above party when the interest of the nation is at stake, and to point out to their people at home the sure way to relief. They ought to do it even if their advice resulted in crushing their own parties, for is not the country greater than party? Is not the welfare of the people more important than the success of any party? It is criminal for the people's representatives to try to hide the real issues and allow the people to be robbed in order that a party may triumph, in order that a few politicians may hold office."

Jan. 15, Senator Pugh, of Alabama, introduced a concurrent resolution, explaining that it was an exact copy of what is known as the Stanley Matthews resolution, which passed both houses of Congress in 1878 by a two-thirds vote.

The resolution follows:

"Whereas by the act entitled 'An Act to strengthen the public credit,' approved March 18, 1869, it was provided and declared that the faith of the United States was thereby solemnly pledged to the payment, in coin or its equivalent, of all interest-bearing obligations of the United States, except in cases where the law authorizing the issue of such obligations had expressly provided that the same might be paid in lawful money or other currency than gold or silver; and

"Whereas all the bonds of the United States authorized to be issued by the act entitled 'An Act to authorize the refunding of the national debt,' approved July 14, 1870, by the terms of said act were declared to be redeemable in coin of the then present standard of value, bearing interest payable semi-annually in such coin; and

"Whereas all bonds of the United States authorized to be issued under the act entitled 'An Act to provide for the resumption of specie payments,' approved Jan. 14, 1875, are required to be of the description of bonds of the United States described in the said act of Congress approved July 14, 1870, entitled 'An Act to authorize the refunding of the national debt'; and

"Whereas at the date of the passage of said act of Congress last aforesaid, to wit, the 14th day of July, 1870, the coin of the United States of standard value of that date included silver dollars of the weight of 412½ grains each, declared by the act approved Jan. 18, 1837, entitled 'An Act supplementary to the act entitled "An Act establishing a mint and regulating the coins of the United States,"' to be a legal tender of payment, according to the nominal value, for any sums whatever; Therefore,

Resolved by the Senate (the House of Representatives concurring therein), That all the bonds of the United States issued, or authorized to be issued, under the said acts of Congress hereinbefore recited, are payable, principal and interest, at the option of the Government of the United States, in silver dollars of the coinage of the United States containing 412½ grains each of standard silver; and that to restore to its coinage such silver coins as a legal tender in payment of said bonds, principal and interest, is not in violation of the public faith nor in derogation of the rights of the public creditor."

The amendment to the coin redemption bill was further debated Jan. 16, by Senator Peffer, of Kansas, and Jan. 22, by Senator Teller, of Colorado; Senator Gorman, of Maryland; Senator Platt, of Connecticut; Senator Sherman, of Ohio; Senator Aldrich, of Rhode Island; Senator Lindsay, of Kentucky, and others.

Senator Dubois, of Idaho, spoke on the subject Jan. 23, and the following day Senator Baker, of Kansas, spoke on an amendment which he had

offered, the addition to section 1 of the bill the following proviso:

"Provided, however, That this section shall apply to the coinage of the silver mined in the United States of America only."

Senator Nelson, of Minnesota, and Senator Bacon, of Georgia, addressed the Senate on the subject Jan. 27, the following day Senator Clark, of Wyoming, and Senator Gray, of Delaware, and Jan. 29, Senator Tillman, of South Carolina. Senator Call, of Florida, spoke Jan. 29 and 30, followed by Senator Mitchell, of Oregon, Senator Perkins, of California, Senator Stewart, of Nevada, and others. The debate was resumed Jan. 31, when Senator Vilas, of Wisconsin, addressed the Senate. He said in part:

"This bond bill as it came from the House was a mere sham. It merits to be consigned to the hecatombs of folly's progeny, where the financial deeds of Congress for many years seem to belong. It is with no lamentation for the destruction of the primal stem that I turn to the graft which the Finance Committee has sprouted on it. It was a bad stock, though it has been budded with a worse scion. The best hope is that both will shrivel and die in the air of the Senate.

"Mr. President, there are three classes of people who urge this legislation, and it serves to develop its undemocratic nature to consider them by way of introduction to argument.

"Those of the first class are at least under no sort of hallucination or delusion in respect to their purpose. They desire by this means to raise the price of silver in the market, either because they are producing it or might profitably work their lean or refractory ore if the price were higher, or because they are so connected in trade or community with the mine owners they think their pecuniary interests will thus be subserved. Comparatively few in number, yet this class is wonderfully potential. With them the silver agitation had its inception and has found its incessantly driving impulse. For them this is a measure of so-called protection, like a high tariff on home manufactures. Of course, argument avails nothing with them, no more than with the money-gathering favorites of the tariff, or with the daughters of the horse-leech. Their only cry is more, more.

The second class might deserve sympathy, if they did not shock it. They are those who, owing heavy debts, wish to secure their discharge by one half the amount of them; or by whatever less the silver dollar may be worth than the dollar they owe. The number of these is vastly less than the number of debtors. It might be thought there could be few such, and doubtless few there are who plainly avow it. The avowal is, however, not infrequently made, sometimes accompanied with sophistries of argument in attempted self-exculpation. I have heard persons privately maintain it, with brutal frankness; rarely in public.

"For, Mr. President, let it be recorded to the good name of our country, it is not from either of these that this demand for free coinage derives its dangerous and menacing strength. Its power comes from the remaining class—the many—of whom some are profoundly convinced, and some have persuaded themselves into real belief, of the excellence of "bimetallism" for mankind; that the only road to it lies through free coinage, and that its ultimate benefits will compensate the misery and injustice through which it must be attained; or, perhaps, in some instances, that the injuries to immediately ensue will not prove so serious as they are represented. Enrolled among these are found characters of the highest grade, who command admiration and esteem, advocates of splendid powers

to charm an audience and win favor. They are here, as we all know; and that they are constituting with the people of this country the principal stay of this menacing agitation. 'There's the respect that makes calamity of so long life.' It is because of them and their advocacy that the duty arises to enter upon the patient and thorough discussion, with the hope that in the end error shall give way to sound understanding.

"Let me now recall somewhat from the turmoil of twenty years, which all must recognize.

"Until about the time of the civil war there had never been any production of silver in the United States worth mentioning for quantity nor any mines of silver developed. Discoveries just made led, however, to some development during the sixties, but not to such extent as to affect the market. Silver, indeed, even after the act of 1873, was worth more than the \$1.29 per ounce which makes the silver dollar equal in value to the gold. But in 1873, for purely public reasons, as seem to me proved by the evidence beyond all doubt, that law was enacted to revise our statutes relating to the mints and coinage by which the silver dollar was dropped from the system because its coinage and use had long been practically abandoned.

"There was at the time no body of silver producers such as has since arisen; there was no silver interest which was conscious of any peril in that law. No one seems to have foreseen the future fall of silver in the market, or then to have dreamed that the act of 1873 could have effect upon it. Afterward, some years afterward, it became the policy of the silver agitation to arraign that law as the origin of the fall in price, and now to denounce the 'crime of 1873' as essential to the silver faith as a hell to Calvinism.

"For, sir, the contest for silver was not set on foot until after increase of its production had become vast in this country and its price had necessarily begun to fall. Then it was, and not before, that the act of 1873 came to be so unopposed. I will not delay to inquire whether that act had any influence, or whether increasing production and the world's action outside of us were more effective of the decline, for it is now immaterial. But it has been proved to reasonable satisfaction that there was nothing unusual in its promotion or passage, that its entirely public purposes were abundantly declared in public debates and in public reports while it was under consideration by Congress for nearly three full years before adoption, and no fact or circumstance justifies the imputation of stealth or fraud in the manner of its enactment, or of wrong, in deed or purpose, to any one who recommended or voted for it. The imaginary charge, also, that sought to link with its enactment the deceased bimetalist, Mr. Seyd, as a secret agent of a foreign conspiracy, was so utterly exploded in the debate of 1893 as to render that figment of disordered suspicion henceforth ridiculous. Whatever the effect of it, the act of 1873 can no more be denominated 'crime' than the act of 1837 or any other piece of legislation. It was not until 1876, when the silver product of the United States had arisen to \$38,000,000 during the year, and silver stood at nearly 18 to 1 of gold in commercial rating, that public interest came to be manifested in Congress in behalf of silver.

"Then it was, sir, although the silver dollar of the United States had never been a thing of common use or necessity, although in all the preceding years of our nation's experience, with the privilege of free coinage proffered to all, but 8,000,000 silver dollars had been made, and these chiefly exported or melted in the arts, then, when the mine owners of this country discovered the lessening price of silver

while their produce of the metal was rapidly increasing, then it was that they sought partnership in the booty of protection and went into the councils of the 'confederacy of rapine,' demanding help to throw on the shoulders of the American people the burden of making a market and holding up the price for the produce of silver mining.

"I turn now to the consideration of the nature of the claim for free coinage which actuates the second class of promoters, debtors who hope thereby to discharge their debts with dollars of far less value than those they owe.

"Here, also, as throughout this argument, my purpose is to point out how abhorrent to Democratic principles is every motive, every suggestion of reason or basis for such a measure, while, at the same time is shown its insupportability by every just standard of public judgment, and, as well, its futility to advance the ends proposed.

"Their postulate, plainly stated, is that the Government of this country shall debase the standard of its coin, making it a legal tender for a double value, simply that debtors may have the help of Government to defraud their creditors of what their promises and the law entitles them. Let ingenuity and sophistry say what they may, such a proposal can never enter into the judgment of the world, except as a measure of wrong and outrage. It has sometimes been the trick of kings to cheat their subjects, but never without the execration of mankind, not more for its immorality than for its evil consequences.

"What does it mean, sir, in its best aspect? What one thing but this: that by law there shall be taken from one class to be given to another; that upon them to whom debts are due there shall be laid an enormous penalty, in hope that some of the gain of it may help the debtors. The Congress of the United States is invoked to enact a law that every man who happens to have his property in credits shall yield up one half or whatever the proportion of his substance. For what? For any end of government? No; but that other men who happen to owe the debts shall escape one half of their rightful obligations.

"No sophistry can sweeten this to my mind or mitigate the horrors of its injustice. It means nothing less than the use of public power in destruction of the very objects for which government was instituted among men. If this may be done avowedly there remains no rule but the will of a temporary majority, unrestrained by law or justice."

Senator Bate, of Tennessee, spoke at length in favor of the silver-coinage amendment, as did also Senator Paseo, of Florida.

Senator Palmer, of Illinois, offered an amendment to the substitute reported by the Committee on Finance, as follows:

"Amend the bill by adding after the words 'seventy-eight,' in line 11 of page 5 of the bill, the following:

"But it is the declared policy of the United States to maintain the parity between the gold coinage of 25 $\frac{1}{10}$ of standard gold and the dollar of 412 $\frac{1}{2}$ grains of standard silver, authorized to be coined by the first section of this act, and to maintain the equal power of the said silver dollars of 412 $\frac{1}{2}$ grains of standard silver and the gold dollar of 25 $\frac{1}{10}$ grains of standard gold in the markets and in the payment of debts. And the Secretary of the Treasury is directed to exercise the discretion given to him by the fourth section of this act, so as, in his judgment, to best advance and promote the policy hereinbefore declared."

Senator Caffery, of Louisiana, spoke in opposition to the committee's amendment, summing up his argument as follows:

"First, that value only originates from the estimation that parties to an exchange of commodities place upon the commodities offered in exchange.

"Second, that metallic money is a commodity and is subject in every exchange to this estimate.

"Third, that the estimate, being subjective and mental, can not be made by governmental statute.

"Fourth, that when two metals are attempted to be held by a legal tie, one or the other will become underrated by the commercial ratio, which is the estimate placed upon it by exchangers, and therefore will leave circulation.

"Fifth, that consequently bimetallism is really monometallism.

"Sixth, that in case the United States adopted 16 to 1, when the commercial ratio is 32 to 1, gold would leave circulation, and we would be on a silver basis.

"Seventh, that no man can contemplate this result without a shudder at the fearful loss, ruin, and disorder that would ensue."

Senator White, of California, spoke in favor of the committee's substitute, and Feb. 1 Senator Morrill, of Vermont, followed with an argument on the other side, discussion following by Senators Teller, Gray, Daniel, Lindsay, Butler, Jones, Allen, Cockrell, Stewart, Dubois, Bacon, and others.

Senator Butler's amendment to the amendment was voted upon and rejected by a vote of 13 yeas to 60 nays, 16 not voting.

Senator Allen, of Nebraska, offered an amendment proposing to add at the close of section 4 the following:

"Provided, That after the passage of this act the Secretary of the Treasury shall be deprived of the power to issue the bonds or other interest-bearing obligations of the Government unless Congress shall first declare the necessity therefor, any act of Congress now in force to the contrary notwithstanding."

This was rejected by a vote of 21 to 54—not voting, 14.

Senator Morrill offered the following amendment:

"Add at the end of the first section of the committee amendment the following proviso:

"Provided, That the seigniorage upon all coinage of silver under this act shall be retained by the United States equal in amount to the difference between the coining value and the commercial value of silver bullion when presented at the mint."

Senator Squire, of Washington, spoke in favor of the amendment. He said:

"I believe the expansion to be derived from the adoption of the amendment of the honorable Senator from Vermont would give to the people additional money, and additional silver money. It will simply preserve in the Treasury an amount of silver that shall be equal to the difference between the coin value and the bullion value, while the silver coin representing the entire gold value of the full amount of silver bullion received would be issued as money, thus increasing the primary money of the country. In other words, it would be conforming somewhat to the amendments proposed some years ago by the honorable Senator from Missouri and others, increasing the ratio from 16 to 20 or 24, or some other practicable ratio, without changing the size and weight of the coin, as he proposed to do. That is what it would amount to; and I believe we ought, if possible, to get such legislation as will afford some measure of relief to the people of the United States, and I do not think there will be any injustice in it to the mine owners. I think they would get an additional market for their product, and the people of the United States, who create this additional value, under present existing circum-

stances, would have the benefit of the difference and not the mine owners."

Senator Lodge, of Massachusetts, said:

"Mr. President, I am in favor of this amendment, but I do not rise for the purpose of discussing it at this moment. As all debate is to end at 2 o'clock, I desire to explain at this time an amendment which I propose to offer to this bill when it comes out of Committee of the Whole and into the Senate, an amendment which has already been laid before the Senate, and on which there has been some slight discussion. The bill that came from the House of Representatives, as I said before, it is quite obvious can not pass the Senate. The silver substitute reported by the majority of the Finance Committee, to which I am utterly opposed as a measure utterly disastrous to business and leading directly to silver monometallism, can not pass the House of Representatives. We know that it is merely to go into conference and end there. The amendment I intend to offer does not bear on the question of gold or silver or the redemption of greenbacks; and as this free-silver substitute is an amendment to a bond bill, it is attempted to make provision for a popular loan, to be paid for in lawful money as needed for the purpose of coast defenses.

"The Secretary of War has informed the country that it would take twenty years, at the present rate of progress, to supply the guns necessary for coast defenses; that it will take seventy years, at the present rate of progress, to supply the positions to put those guns on. The highest military authorities say that with a lump appropriation for a comprehensive plan we can have our coasts defended adequately and as they ought to be inside of three years; and it should be done in a simple, economical, intelligent method.

"The amendment which I propose to offer bears simply on the creation of a popular loan in order to put that money into the Treasury. No one would undertake to raise \$80,000,000 or \$100,000,000, which is needed for coast defenses, from revenue at once. It can not be done. The only way is a loan.

"I desire to offer the amendment at this time. If the silver substitute is to perish in conference, as we know, and the bond bill is to perish in conference, there seems to be no good reason why out of the wreck we should not at least save a measure which will provide for coast defenses to be established by law hereafter under such acts as Congress may see fit to pass.

"I merely desire to give this explanation of the amendment which I propose to offer, because I can see that the debate will be cut off before the bill reaches the Senate."

Senator Gorman, of Maryland, moved to lay the amendment reported by the Committee on Finance on the table. The Senate refused by a vote of 34 yeas to 43 nays, 12 not voting. The question then recurring to Senator Morrill's amendment, it was lost by a vote of 33 to 44—not voting, 12.

Action on other amendments having been cut off by an agreement entered into the day before, that the question should be put to vote at two o'clock, the vote was taken upon the substitute reported by the committee, and it passed—yeas, 43; nays, 34; not voting, 12.

Following is the vote upon the bill as amended: YEAS—Allen, Bacon, Bate, Berry, Blanchard, Brown, Butler, Call, Cameron, Cannon, Carter, Chilton, Clark, Coekrell, Daniel, George, Harris, Irby, Jones of Arkansas, Jones of Nevada, Kyle, Mantle, Mitchell of Oregon, Pasco, Peffer, Perkins, Pettigrew, Pritchard, Pugh, Roach, Shoup, Squire, Stewart, Teller, Tillman, Turpie, Vest, Voorhees, Walthall, Warren, White, Wilson—42.

NAYS—Allison, Baker, Burrows, Caffery, Chandler, Davis, Elkins, Faulkner, Frye, Gallinger, Gear, Gibson, Gorman, Gray, Hale, Hawley, Hill, Hoar, Lindsay, Lodge, McBride, McMillan, Martin, Mills, Mitchell of Wisconsin, Morrill, Murphy, Nelson, Palmer, Platt, Proctor, Sherman, Thurston, Vilas, Wetmore—35.

NOT VOTING—Aldrich, Blackburn, Brice, Culom, Dubois, Gordon, Hansbrough, Morgan, Quay, Sewell, Smith, Wolcott—12.

So the bill was passed.

Its title was amended so as to read: "A bill to restore the coinage of silver dollars and for other purposes."

In the House the bill as amended was referred to the Committee on Ways and Means Feb. 3, from which it was reported back with the recommendation that the House nonconcur in the Senate amendment and insist upon the bill as it originally passed the House. The minority report recommended concurrence. The House resolved itself into a Committee of the Whole for its consideration Feb. 5, and after long debate the vote was taken Feb. 14, on concurring in the Senate amendment with the result:

YEAS—Abbott, Aitken, Allen of Mississippi, Allen of Utah, Bailey, Baker of Kansas, Bankhead, Barham, Bartlett of Georgia, Bell of Colorado, Bell of Texas, Black of Georgia, Bowers, Broderick, Clardy, Coekrell, Cooper of Texas, Cox, Crisp, Culberson, Curtis of Kansas, De Armond, Dinsmore, Dockery, Doolittle, Downing, Ellis, Gamble, Hartman, Hermann, Hilborn, Hutcheson, Hyde, Johnson of California, Jones, Kem, Kendall, Latimer, Layton, Lester, Linney, Little, Livingston, Lockhart, Loud, Maddox, Maguire, Marsh, McClure, McCullough, McKenney, McLaehlan, McLaurin, McMillin, MeRae, Meredith, Mondell, Money, Moses, Neill, Newlands, Ogden, Otey, Pearson, Richardson, Robbins, Robertson of Louisiana, Sayers, Shafroth, Shaw, Shuford, Skinner, Spencer, Stokes, Strait, Strowd of North Carolina, Swanson, Talbert, Tate, Terry, Towne, Tyler, Underwood, Walker of Virginia, Wheeler, Williams, Wilson of Idaho, Wilson of South Carolina, Woodard, Yoakum—90.

NAYS—Acheson, Aldrich, Andrews, Apsley, Arnold of Rhode Island, Atwood, Avery, Babeock, Baker of Maryland, Baker of New Hampshire, Barney, Bartholdt, Bartlett of New York, Beach, Bennett, Berry, Bingham, Bishop, Blue, Boatner, Bou-telle, Brewster, Bromwell, Brosius, Brown, Brumm, Bull, Burrell, Burton of Missouri, Burton of Ohio, Calderhead, Cannon, Catchings, Chickering, Clark of Iowa, Clark of Missouri, Cobb of Missouri, Coddling, Coffin, Colson, Connolly, Cook of Wisconsin, Cooke of Illinois, Cooper of Florida, Cooper of Wisconsin, Corliss, Cousins, Crowther, Crump, Curtis of Iowa, Curtis of New York, Dalzell, Danford, Daniels, Denny, De Witt, Dingley, Dolliver, Dovener, Draper, Elliott of South Carolina, Erdman, Evans, Fairchild, Faris, Fenton, Fiseher, Fletcher, Fowler, Gardner, Gibson, Gillet of New York, Gillet of Massachusetts, Graff, Griffin, Grosvenor, Grout, Grow, Hadley, Hager, Hall, Halterman, Hardy, Harmer, Harris, Harrison, Hart, Hatch, Heatwole, Heiner of Pennsylvania, Hemenway, Henderson, Hendrick, Henry of Connecticut, Hepburn, Hicks, Hill, Hitt, Hooker, Hopkins, Howe, Howell, Hubbard, Huliek, Huling, Hull, Hurley, Jenkins, Johnson of Indiana, Johnson of North Dakota, Joy, Kerr, Kiefer, Knox, Kulp, Lacey, Lawson, Lefever, Leighty, Leisenring, Lewis, Long, Loudenslager, Low, Mahany, Mahon, McCall of Massachusetts, McCall of Tennessee, McCleary of Minnesota, McClellan, McCormick, McCreary of Kentucky, Mercer, Meyer, Miles, Miller of West Virginia, Minor of Wisconsin, Moody, Murphy, Noonan, Northway, Odell, Otjen, Over-

street, Owens, Parker, Patterson, Payne, Perkins, Phillips, Pitney, Poole, Price, Prince, Pugh, Quigg, Ray, Reeves, Reyburn, Royle, Rusk, Russell of Georgia, Sauerhering, Scanton, Settle, Shannon, Sherman, Simpkins, Smith of Illinois, Smith of Michigan, Snover, Sorg, Southard, Southwick, Spalding, Sperry, Stahle, Steele, Stephenson, Stewart of New Jersey, Stewart of Wisconsin, C. W. Stone, W. A. Stone, Strode of Nebraska, Strong, Sulloway, Sulzer, Taft, Tarsney, Tawney, Tayler, Thomas, Tracewell, Tracey, Treloar, Tucker, Turner of Georgia, Turner of Virginia, Updegraff, Van Voorhis, Wadsworth, Walker of Massachusetts, Walsh, Wanger, Warner, Washington, Watson of Indiana, Watson of Ohio, Wellington, White, Wilber, Willis, Wilson of Ohio, Wood, Wright—215.

NOT VOTING—Adams, Anderson, Arnold of Pennsylvania, Barrett, Belknap, Black of New York, Buck, Clarke of Alabama, Cobb of Alabama, Cowen, Crowley, Cummings, Dayton, Eddy, Ellett of Virginia, Fitzgerald, Foote, Foss, Griswold, Hainer of Nebraska, Hanly, Henry of Indiana, Howard, Huff, Hunter, Kirkpatrick, Kyle, Leonard, Linton, Lorimer, McDearmon, McEwan, Meiklejohn, Miller of Kansas, Milliken, Milnes, Miner of New York, Morse, Mozley, Pendleton, Piekler, Powers, Raney, Robinson of Pennsylvania, Russell of Connecticut, Sparkman, Stallings, Wilson of New York, Woodman, Woomer—50.

Alcohol used in the Arts.—Another financial measure was introduced in the House by Mr. Charles W. Stone, of Pennsylvania, in a bill to repeal section 61 of an act to reduce taxation, to provide revenue for the Government, and for other purposes, which became a law Aug. 25, 1894. It was referred to the Committee on Ways and Means and reported with an amendment April 22. The bill and report were referred to the Committee of the Whole House on the State of the Union.

The bill, which provided for repeal of the free-alcohol provision in the Wilson-Gorman act, was debated May 25 and 26. Mr. Evans, of Kentucky, led the discussion in favor of the bill. He said in part:

"Section 61, which it is proposed by this bill to repeal, is in the following language:

"Any manufacturer finding it necessary to use alcohol in the arts, or in any medicinal or other like compound, may use the same under regulations to be prescribed by the Secretary of the Treasury, and on satisfying the collector of internal revenue for the district wherein he resides or carries on business that he has complied with such regulations and has used such alcohol therein, and exhibiting and delivering up the stamps which show that a tax has been paid thereon, shall be entitled to receive from the Treasury of the United States a rebate or repayment of the tax so paid. (28 Stat. L., 567.)"

"The practical operation of this provision, as I think you will see, is that it allows anybody calling himself a 'manufacturer' to get alcohol, pay the market price for it, use it in what he calls the arts, or in medicinal or other like compounds, sell it at a full price, including the tax, and after that has been done come to the Treasury and get \$1.10 a gallon by way of a gift from the Treasury for every gallon of alcohol he has used. I shall endeavor to show to the members of the committee precisely how that act operates to a result such as I have described.

"All of us who are in the least degree acquainted with the internal-revenue service of the country know that what are called distilled spirits under the internal-revenue laws embrace what we call whisky, what we call high wines, and what we call alcohol. Whenever any distilled spirits are made the law requires them to be put in a bonded ware-

house, and they are not permitted to be removed therefrom until the tax of \$1.10 per proof gallon has been paid to the Government, and just as soon as that is done, at that moment those distilled spirits must be removed from the warehouse.

"Right there comes an important suggestion in connection with this matter. The owner can not get the spirit out of bond until the tax is paid. He pays the tax and charges his customer the full amount of that tax, \$1.10 a gallon, and probably a profit upon that, and after he has spread his product over the country and collected the cost of its manufacture, including the cost of the alcohol, after having received from his customer the full value of his goods, including the \$1.10 tax which he paid on the alcohol, which is a part of the cost of the goods, he comes to the Government of the United States and says, 'I want the \$1.10 paid to me again by you.'

"The House can see that his purpose in trying to get free alcohol in this way is not to benefit the consuming public. Far from it. The retailer gets no part of the benefit of it; the man who buys the goods made with the free alcohol does not get any abatement in the price. The manufacturer collected the whole price from the man to whom he sold the goods, including the cost of the alcohol and the amount of the tax; and then, if section 61 is operative, he gets \$1.10 per gallon again.

"The Commissioner of Internal Revenue states, in a letter from which I shall read an extract, that in one district in New York claims of this nature to the amount of about \$1,000,000 have originated and probably have been presented. To illustrate—what I may as well do now as at any time—the extreme expansibility, so to speak, of this section 61, I will read what the Commissioner has stated to the committee as to the amount and character of these claims. In the report which the committee had the honor to submit to this House will be found the letter of the Commissioner, in which he says:

"An investigation of claims presented in one of the collection districts of New York for rebate on alcohol claimed to be used under section 61 of act of Aug. 23, 1894, shows that the same will amount in this district alone to about \$1,000,000 annually. From information obtained in this district it is believed these claims will be largely increased in number and amount when it is generally known that the rebate will be paid.

"These claims cover a vast number of articles, such as tinctures, medical compounds, flavoring extracts, essences, patent medicines, bay rum, bay salt, Florida water, medicine extracts, peptomangan, homeopathic medicines, root beer, witch-hazel, medicinal and other like compounds, fruit extracts, nutrolactics, pharmaceutical preparations, barbers' supplies, tobacco, smoking tobacco, celluloid and fancy goods, hair tonics, bovine extract, varnish, bitters of various kinds, essential oils, essence of pepsin, medicinal saumetto, tricopherus, perfumery, Jamaica ginger, ethers, oils, wine and liquor flavors, toilet waters, confectioneries, black-berry brandy, cherry brandy, household panacea, soothing sirup, Radway's Ready Relief, sarsaparilla, Venetian liniment, etc.'

"I am not here to say that there ought not to be a plan devised by which persons may get free alcohol for employment in the useful arts, and I am authorized to say in this connection on behalf of the Ways and Means Committee that they will propose a second section. This second section which we propose to offer will provide a method by which we can investigate deliberately and intelligently the whole question, and if there be a way of providing for the use of free alcohol in a manner safe for the interests of the Government, the committee which

this second section proposes to raise can find that out. It is as follows:

"SEC. 2. That a joint select committee is hereby authorized, to consist of 3 Senators, to be appointed by the presiding officer of the Senate, and 3 members of the House of Representatives, to be appointed by the Speaker of the House, which select committee shall consider all questions relating to the use of alcohol in the manufactures and arts, free of tax, and to report their conclusions to Congress on the first Monday in December, 1896.

"Said joint select committee is authorized to sit by subcommittee or otherwise during the recess or session of Congress at such times and places as they deem advisable; to summon witnesses, administer oaths, print testimony or other information, and to employ such stenographic, clerical, and other assistance as may be necessary, one half of the expense to be paid from the contingent fund of the Senate and one half from the contingent fund of the House of Representatives."

"While that section was foisted upon that bill, as I said a while ago, as an internal-revenue excrescence upon a tariff system which was vicious enough, as exemplified by the Wilson bill, luckily it was placed upon the bill in such hot haste that the author of it, whoever he may have been, used language not sufficiently explicit and apt to make it operative; and that is the only thing that saved this country \$20,000,000 up to date by way of mere gift to those that were no more entitled to it than are we, the members of this committee who are deliberating upon this question to-day. It is all a bounty, nothing else. When the Secretary of the Treasury undertook to frame regulations he found that he could not do it. He was unequal to the duty. The Commissioner, after a most elaborate effort and careful investigation of the subject, was unequal to the task, a most fortunate failure, in my judgment, for the good of the country in this day of deficiencies of revenue, when our expenses exceed by \$2,500,000 per month our income.

"We are told that there is great justice in these claims. Individually I have a conviction which I intend to declare here and let it go upon record, namely, that there is not one particle of justice or merit or anything like equity in a single claim that has been presented under section 61. And why? Because in not a single instance did the man who presented that claim lower his price in consequence of the rebate. Not in one instance was the price lowered to the consumer or the general public. The proof is clear enough about that. So that to start with there is nothing but a promise to give these people something, and there never was any consideration to uphold that.

"But that is only an exceedingly minor and insignificant point compared with what I am about to state. Anybody who proposed to operate upon section 61 read in the most unmistakable and significant language the following:

"Any manufacturer . . . may use the same under regulations to be prescribed by the Secretary of the Treasury, and on satisfying the collector of internal revenue for the district wherein he resides or carries on business that he has complied with such regulations . . . shall be entitled to receive from the Treasury of the United States a rebate or repayment of the tax so paid."

"He had no claim and knew that he had no claim until he complied with the regulations, and for that very reason, among others, he charged to his customers and consumers the whole \$1.10 per gallon, and those two things, in my judgment—first, the absolute knowledge upon his part that he had no right, except as it was based upon regulations which he knew did not exist, coupled with the fact that he

charged the customer the whole price of this alcohol and then sought to get back the rebate as a mere gift and bounty—effectually excludes the idea of any justice, equity, or anything of that sort in these claims against the Government. So that the Government of the United States will inflict no wrong or injustice upon any claimant if it shall in the progress of time deny every one of these claims, through the courts or otherwise, upon the grounds that I have just indicated. The condition precedent to the allowance of these claims does not exist, has never existed. There have never been any regulations, and these claimants knew it. They knew they had no claim until regulations were made and they complied therewith, and, in my judgment, they have no claim. But, fortunately, that is for the courts to determine, and if the courts determine that these claimants have any just or equitable claim, that is all right."

Mr. Russell, of Connecticut, said in the course of an argument in favor of the report:

"Now, I say repeal section 61, if you see fit, because it is crude and possibly impossible of execution; but in its stead at the same time as you repeal it, or as soon as practicable thereafter, give us a law which shall allow free alcohol for use in the manufactures and the arts. Do not let the only single, well-defined tariff enactment of this Republican House of the Fifty-fourth Congress be a repeal of a protective feature of existing law without the substitution of more effective and pronounced protection. Do not let patriotic duty to a Democratic administration entirely outweigh protective consideration for American industries. It is very proper to consider the deficiency of revenue and the distressed financial conditions of the Government and seek to relieve and reimburse the Treasury; but it is not necessary to do it according to the dictum of a Democratic administration and in a way hostile to Republican policy."

Mr. Hill, of Connecticut, speaking in opposition to the bill, said:

"The only feature of the whole bill that was intended to operate in the interest of American labor and for the benefit of home industries was this section 61, put in by a Republican, left in by accident, and damned by the Administration from that day to this. Can it be possible that this Republican House will select this sole exponent of its own principles, the only leaven in the whole lump, the one redeeming feature of Democratic free-trade legislation, and, repealing that, allow the rest to stand, to bring paralysis, decay, and death to every American industry for two years more? Was it for this and this only that this House was made two thirds Republican by an indignant people? Think you that the members from doubtful States—yes, from any State—will glory in such a record as this upon the stump this fall?"

"But the Secretary of the Treasury, the Democratic members of the Ways and Means Committee, and, I am sorry to say, a few Republicans upon that committee, claim that because the enforcement of this law would inure to the benefit of the industries of this nation to the estimated amount of ten millions annually, and because large claims for rebates under its provisions are being prosecuted in our courts, it must, therefore, be repealed. I admit that large claims are being made: it only shows the necessity for the enforcement of the law. I deny that ten millions of revenue or one quarter of that amount is possibly lost thus far by this one section of the bill, but I do know that one hundred and thirty millions have already gone by reason of the other sections, and that the next two years will add another hundred millions, and all at the expense of our own people; and yet this committee deliberately

proposes to repeal the helpful clause and leave the rest untouched.

"Mr. Chairman, there seem to be three parties interested in the repeal of this law. First, the whisky trust, from profit; second, the wood-alcohol trust, from the same motive, but, as I think, mistakenly; and third, the Democratic party, from principle, honestly believing in large internal revenues and low customs duties. In full accord with this idea, immediately upon the passage of the law, when manufacturers applied for regulations as required by section 61, a positive refusal was given, based upon the puerile excuse that the department was unable to formulate regulations that would protect the Government from fraud, and this in the face of the fact that such regulations for accomplishing this object had some time before been prepared in the department at the request of a Senator and had been submitted by him as an amendment to the bill while it was pending in the Senate.

"Oh, for one straight, square, outspoken, honest, manly declaration of Republican tariff principles by a House of Representatives elected by the people on that issue and on that alone!

"This is our opportunity to say to the industries of this land, 'We can and will at least stop the increase of internal-revenue taxation now, and if you stand by the party in November another Congress will enact a tariff law that will bring again to the American people the prosperity of 1892.'

"Let me give you a practical illustration of the effect of this bill upon a single industry in this country. I refer to the manufacture of hats. The cost of a proof gallon of alcohol is 15 cents. Commercial alcohol is 188° proof and is worth 28 cents. The tax on a proof gallon is \$1.10, and on the commercial article is \$2.07, or between 700 per cent. and 800 per cent. The competing English manufacturer is allowed to use methylated spirit, or a mixture of 10 per cent. of wood alcohol with 90 per cent. of grain alcohol, free of tax, which costs him 30 cents. The cost of alcohol for stiffening a dozen hats thus becomes \$1.25 here as against 15 cents there. Aside from this the labor cost is more than four times as much here, and the use of machinery, contrary to the prevailing idea, is far more prevalent there than here. In this country a man who works at stiffening hats gets \$25 per week, whereas in Stockport, England, and in Brussels, in Belgium, he gets \$6 per week. And yet the Wilson bill at the same time that it added to the cost by increased taxation here reduced the duties 15 per cent. on the imported article, thus seriously handicapping the American producer. There have been more failures in the hat trade in my own district in two years under the Wilson bill, both in number and amount, than in any ten years before. The high tax has compelled the use of wood alcohol except in the finest work. Prior to 1894 wood alcohol sold at \$1.40 per gallon. Immediately upon the passage of section 61 the price dropped to 70 cents, but when Mr. Carlisle refused to enforce its provisions it advanced to 90 cents—now \$1.05. What our manufacturers now fear is that if this section is repealed it will go back to \$1.40 as before. I said that the wood-alcohol trust was urging this repeal mistakenly for their own interest. I believe that the untaxed use of methylated spirits would make a larger demand for their product than now."

Mr. Dolliver, of Iowa, said, in the course of his argument:

"We say that this section ought to be repealed because, unless that is done, we are inviting a mountain's weight of claims against the Treasury of the United States. And for whose benefit, Mr. Chairman? Why should this section be retained in the law? Certainly not for the benefit of the manu-

facturers, because they are required by the section to pay an internal tax and no regulations are in force for the rebate of the tax paid on alcohol used in the industrial arts. It is not for the benefit of the American public, because everybody knows that the uncertainty about the collection of that rebate has prevented the manufacturer from extending to his customers any advantage whatever by reason of this law."

Mr. Knox, of Massachusetts, said:

"We should, Mr. Chairman, have a Republican bill, drawn and completed on Republican principles, ready to be offered when the extra session of the Fifty-fifth Congress comes in, in March, 1897, without compelling the people to wait till the coming fall for such provision to be had. We have very little to do, in the discharge of our duty with the Senate; and we have very little to do with Grover Cleveland.

"But Mr. Chairman, I am opposed to any partial or piecemeal change in the present law. I am opposed to the repeal or substantial change of any of its important provisions without changing other important provisions, especially those which relate to the very enactments sought to be changed. I say it is not right or just to repeal this section and give no consideration whatever to the other provisions of our tariff and revenue laws which depend upon it and are connected with it. The rates of duty upon many articles of manufacture, it is to be presumed, were considered in relation to this tax upon alcohol. If that is not so, then it is fair to presume that when the tax on alcohol was fixed its effect upon these articles was considered. We at one sweep undertake to repeal this single section, caring nothing and considering nothing as to what or whom it affects in this country. Now, we have done very little for the manufacturers of this country. We have done nothing for its industries. Let us be very careful that we do not, in addition to that failure, strike a blow and do an injury to already existing industries."

Mr. Bartlett, of New York, said:

"Let me, before passing on to consider the merits of this bill, call the attention of the committee to the fact that only a few days ago we had a bill passed hurriedly through this House, under the guidance of the gentleman from Kentucky, a bill in the interest of the distillers of Kentucky and of the whisky trust; a bill which will do incalculable damage to the city of New York, which I have the honor to represent in part. I am told that it will deprive the Federal Government in licenses of \$750,000; and for what purpose—to give the distillers of Kentucky an opportunity to bottle their liquor and sell it for their own added benefit and advantage, and not through the dealers.

"That was the measure passed last week, and now we have another measure proposed in favor of the distilling interests and the whisky trust.

"The only objection which I understand the committee made to the existing law is that it is impracticable to execute. Can it be possible, Mr. Chairman, that we, the Congress of the United States, confess our incapacity to frame adequate laws? Can it be possible that the Secretary of the Treasury or the Commissioner of Internal Revenue finds it beyond his brain power to frame regulations adequate to control this matter?

"Let me call your attention to the fact that section 61 of the Wilson tariff bill of 1894 is very broad. It leaves the whole matter to the Secretary of the Treasury. He has absolute power in his discretion to frame proper regulations. Then the collector of internal revenue in each district must be satisfied about the manufacture. So that it is first only necessary that the Secretary of the Treasury should

frame the proper regulations, however stringent they may be, and it is all within his discretion. Then it is incumbent upon the manufacturer to satisfy the collector of internal revenue that he has complied with the law, and when he has executed it he is entitled to a rebate. This repeal will work a great deal of harm to the manufacturing interests of New York; to the great drug trade; to those who are engaged in the manufacture of perfumes, varnishes, and paints, and in many other industries."

Mr. Dingley, of Maine, said:

"What is the effect of this provision as we have it now? If we do nothing, if we allow this provision to run along for a year, it is the opinion of the Commissioner of Internal Revenue that at least \$10,000,000 of claims will be piled up during that time which the Republican administration next year will be called upon to pay in case the courts sustain the contention of the claimants. And I ask gentlemen on this side whether they are prepared to pile up such claims against the Administration which we know will come in on March 4 next.

"Let us, then, at once repeal the unworkable free-alcohol provision of the act of 1894. Let us then turn over this subject to a careful committee of inquiry. Let them consider what can be done without depriving the Government of revenue, and let them report at the next session. And then when we come to frame a new tariff bill, when we undertake the task of providing sufficient Federal revenue, let us take up this question and consider to what extent and under what regulations and restrictions we can safely grant this exemption to certain industries of this country. But if we propose to open the door in the manner provided in the existing provision of law, certainly the Treasury must suffer; and no one among the great mass of the people can possibly be benefited, because no manufacturer, no person using alcohol under the existing law will reduce his price on the goods manufactured because of the fact that the rebate of the tax is so uncertain. It would not be good business for him to do so. Yet these claims are already piled up and are piling up every day; and if these gentlemen recover in the Court of Claims, then the Treasury of the United States will suffer in the future."

The amendment given above in the address of Mr. Evans was adopted, and the bill passed by a vote of 166 yeas to 69 nays, 120 not voting.

In the Senate the bill was referred to the Committee on Finance, was reported favorably without amendment, debated May 29, passed, and signed by the President, June 3.

Cuban Affairs.—Several joint resolutions were introduced during the first months of the session to accord belligerent rights to the Cuban insurgents; authorizing and requesting the President to inquire into the state of war in Cuba; providing for intervention; and to recognize the republic of Cuba. These were referred to the Committee on Foreign Relations after more or less debate. The President sent four messages, two transmitting correspondence relative to affairs in Cuba, and two relating to the arrest and trial of American citizens there.

On Jan. 29 Senator Morgan reported back from the Committee on Foreign Relations a number of petitions and resolutions on the subject, and offered as a substitute two resolutions, accompanied by a written report. The report, after expressing the sympathy of Congress with the Cubans, and speaking of the care with which the United States Government has observed the neutrality laws in former contests, and the anxiety, trouble, and expense to which it has been put to enforce our treaty obli-

gations in repressing unlawful incursions by sympathizers among us—called attention to the treatment of wounded soldiers and prisoners of war, and said:

"In this feature of the warfare it becomes a duty of humanity that the civilized powers should insist upon the application of the laws of war recognized among civilized nations to both armies. As our own people are drawn into this struggle on both sides, and enter either army without the consent of our Government and in violation of our laws, their treatment when they may be wounded or captured, although it is not regulated by treaty and ceases to be a positive care of our Government, should not be left to the revengeful retaliations which expose them to the fate of pirates or other felons.

"The inability of Spain to subdue the revolutionists by the measures and within the time that would be reasonable when applied to occasions of ordinary civil disturbance is a misfortune that can not be justly visited upon citizens of the United States; nor can it be considered that a state of open civil war does not exist, but that the movement is a mere insurrection and its supporters a mob of criminal violators of the law, when it is seen that it requires an army of 100,000 men and all the naval and military power of a great kingdom even to hold the alleged rebellion in check.

"It is due to the situation of affairs in Cuba that Spain should recognize the existence of a state of war in the island, and should voluntarily accord to the armies opposed to her authority the rights of belligerents under the laws of nations."

The resolutions follow:

"*Resolved by the Senate (the House of Representatives concurring),* That the present deplorable war in the island of Cuba has reached a magnitude that concerns all civilized nations to the extent that it should be conducted, if unhappily it is longer to continue, on those principles and laws of warfare that are acknowledged to be obligatory upon civilized nations when engaged in open hostilities, including the treatment of captives who are enlisted in either army, due respect to cartels for exchange of prisoners and for other military purposes, truces and flags of truce, the provision of proper hospitals and hospital supplies, and services to the sick and wounded of either army.

"*Resolved further,* That this representation of the views and opinions of Congress be sent to the President, and, if he concurs therein, that he will, in a friendly spirit, use the good offices of this Government to the end that Spain shall be requested to accord to the armies with which it is engaged in war the rights of belligerents, as the same are recognized under the laws of nations."

Senator Cameron presented a report from the minority of the committee, offering the following resolution:

"*Resolved,* That the President is hereby requested to interpose his friendly offices with the Spanish Government for the recognition of the independence of Cuba."

The accompanying report reviewed the history of Spanish rule in Cuba and the attitude of our Government from the beginning of the Cuban struggle that broke out in October, 1868. Following are paragraphs from it:

"The precedents are clear, and if our action were to be decided by precedent alone we should not be able to hesitate. The last great precedent was that of the civil war which broke out in the United States in the spring of 1861. In that instance, without waiting for the outbreak of actual hostilities, further than the bloodless attack on Fort Sumter and its surrender April 13, 1861, the British Government issued its proclamation of neu-

trality on the 13th of May following, before it had received official information that war existed, except as a blockade of certain insurgent ports. The French Government acted in concert with Great Britain, but delayed the official announcement until June. The Spanish Government issued its proclamation of belligerency June 17, and the first battle of our war was not fought until July 21, or known at Madrid until August.

"In this great instance the outbreak of insurrection and the recognition of belligerency were simultaneous. The United States protested against the precipitancy of the act, and have never admitted its justice or legality. Neither in 1869 nor in 1895 did the President enforce the precedent against Spain in regard to the insurrection in Cuba. Not even in 1875, when the insurgents held possession of a great part of the island and seacoast, with no restraint but the blockade, did the United States recognize their belligerency.

"Yet belligerency is a question of fact, and if declared at all it should be declared whenever the true character of neutrality requires it or the exigencies of law need it. The nature of such action may be political or legal, or both. As a political act, impartiality requires that belligerency should be recognized whenever, existing in fact, its denial is equivalent to taking part with one of the belligerents against the other. In such cases the unrecognized belligerent has just ground for complaint. The moral support of the neutral government is given wholly to its opponent. That the Cuban insurgents were belligerents in fact as early as 1869 was expressly stated by Mr. Fish when he explained the meaning he attached to his phrase regarding 'the civil war now ravaging the island.' The word 'war' in such conditions necessarily implies the fact of belligerency. President Cleveland, in his annual message of last month, informs us that the present war is more active than the preceding one.

"Nevertheless, our Government has still refrained from what Mr. Fish called 'any public recognition of belligerent rights to the insurgents.' No legal necessity arose to require it, and the political exigency was not absolute. Yet, after the victory of Bayamo, in the month of July last, when the insurgents defeated and nearly captured the Captain General, Martinez Campos, and gained military possession of the whole eastern half of the island, the fact of their belligerency was established; and if further evidence was needed it was fully given by the subsequent victory at Coliseo, on Dec. 24, when the insurgents drove the Captain General back to Havana and gained military control of the western provinces.

"If the Government of the United States still refrained from recognizing the belligerency of the insurgents after this conclusive proof of the fact, the reason doubtless was that in the absence of any legal complications the question became wholly political, and that its true solution must lie not in a recognition of belligerency, but in a recognition of independence.

"In 1875, when the situation was very far from being as serious as it is now, President Grant, after long consideration of the difficulties involved in public action, decided against the recognition of belligerency as an act which might be delusive to the insurgents, and would certainly be regarded as unfriendly by Spain. He decided upon a middle course. The documents above quoted show that he proposed to the Spanish Government a sort of intervention which should establish the independence of Cuba by a friendly agreement. In doing so he not only necessarily recognized both parties to the conflict as on an equal plane, but he also warned Spain that if such mediation should not be ac-

cepted, direct intervention would probably be a necessity on the part of the United States.

"Spain preferred to promise to the insurgents terms so favorable as to cause for a time the cessation of hostilities. Since then twenty years have passed. The insurrection, far from having ceased, has taken the proportions of a war almost as destructive to our own citizens as to the contending parties. The independence of Cuba was then regarded by the President of the United States as the object of his intervention, and has now become far more inevitable than it was then. Evidently the Government of the United States can do no less than to take up the subject precisely where President Grant left it, and to resume the friendly mediation which he actually began, with all the consequences which would follow its rejection."

The committee reported, Feb. 5, a substitute for the majority resolutions given above. It read:

"Resolved by the Senate (the House of Representatives concurring), That in the opinion of Congress a condition of public war exists between the Government of Spain and the government proclaimed and for some time maintained by force of arms by the people of Cuba; and that the United States of America should maintain a strict neutrality between the contending powers, according to each all the rights of belligerents in the ports and territory of the United States."

Debate began Feb. 20, when speeches in favor of the resolution were made by Senators Call, Cameron, Lodge, and Morgan.

Senator Call, of Florida, after reviewing the history of revolt in Cuba in recent years and giving reports from the United States consul at Santiago as to the status of the insurrection, said:

"And the statements from this consul go on up to the present time, showing almost every day a battle between the insurgent forces and the armed and regular forces of Spain, and they exhibit the fact that in all these cases he reports victories on the part of the insurgent forces, contrary to the reports which we see in the newspapers of Spanish engagements, and he reports that the people of Cuba are unanimous that in these different contests they have maintained by force of arms their superiority and their control of the island. These facts are to be found in this diplomatic correspondence of the consul of the United States at Santiago de Cuba.

"Mr. President, if this be so—and that is the information we have from a reliable authority, from our own consular agent, giving dates, giving numbers, and giving the circumstances that surround the case and confirming his statements—I ask the question: Spain having acknowledged the belligerent rights of the Southern Confederacy, and England having acknowledged the belligerent rights of the Southern Confederacy in its very inception, we having acknowledged the sovereign right of the new Government of France in the very first days of its existence, having these examples before our eyes of the action of our own Government in recognizing the independence of the revolted Spanish colonies, what reason can we now give for withholding our recognition of the independence of Cuba, when we see that blood is running from the cruel and brutal outrages committed upon the people of Cuba for the purpose of suppressing by cruelty, and not by force of arms, what? Their aspirations for freedom under the lessons we have taught and the advice we have given to them.

"What grounds of public policy are there to be considered in this matter? Can Spain preserve her dominion of Cuba? We have said for many years that she can not. Is it to her interest that she should continue this terrible war? Is it to our

interest, as a matter of policy, that Cuba should be destroyed, and that reprisals of blood and murder, the shooting of prisoners captured in war, and the killing of people who were found away from their homes shall be continued? I call attention to the recent order of the Spanish general, with power of life and death over every human being in that island, for the summary shooting of all Cubans found away from their homes without a pass or a license or a permit, his proclamation of death to be inflicted by his subordinates upon suspicion alone of any kind of complicity, of any kind of sympathy, with the rebellion and the attempt to establish the independence of Cuba.

"Mr. President, this is the result of our action. We proclaim that if there be any shipment of arms for the purpose of aiding the insurgents they shall be arrested by our people. We proclaim the utmost rigor, not only in the detention of vessels and expeditions which may be openly ascertained and proclaimed to be for the purpose of aiding the insurgents, but in every possible method of inquisition where they sail for another country, for another port, and have on board munitions of war of any kind, we take all the circumstances surrounding the case to prove that their destination is to the island of Cuba, and we are waging this war ourselves against the Cuban people by these acts of extreme and severe exercise of the power to prevent aid and sympathy and active assistance to them."

Senator Cameron, of Pennsylvania, who presented the minority resolution, said:

"For my own part I regard the question of belligerency as a false issue—a mistake, into which the friends of Cuba should not fall. If Spain wishes to impede or delay effective action on our part, she will encourage us to waste our energy and our initiative in struggling with the legal difficulties that involve this question of belligerency, which, when stripped of all its popular notions, is at most an empty, or perhaps a mischievous, legal form."

"I object to it, in the first place, for the same reasons which caused Gen. Grant to reject it in 1875, because it is offensive to Spain and delusive to Cuba. The contest is no longer one of belligerency but one of independence.

"In the second place, I object to it because it concedes to Spain the belligerent right of searching our ships on the high seas, and seizing them whenever they have anything on board which can be considered contraband of war. You will observe that the resolution proposed by the majority does not mention the rights of belligerency on the high seas, but it confers them nevertheless.

"I object to it, in the third place, because it imposes belligerent duties as well as belligerent rights and relieves Spain of all further responsibility for the destruction of American property in Cuba by transferring that responsibility to the insurgents. The insurgents hitherto have been alone obliged to destroy property for military objects, and the belligerent duty will work to their injury alone.

"For my own part, I wish the Government to act. I want to see the chronic misery of Cuba ended. I know that the course I favor was the fixed policy of the Republican party of the United States and of the American people. The course I prefer is, as I believe, the true expression of public feeling, which is unanimous in demanding action in favor of freedom. I do not wish or intend to antagonize the action of the committee in its assertion of the fact that the Cubans are belligerents—a fact which hardly needs discussion. The true question is whether the Government had best satisfy itself with the assertion of that fact or do more."

Senator Lodge, of Massachusetts, said:

"Our immediate pecuniary interests in the island

are very great. They are being destroyed. Free Cuba would mean a great market to the United States; it would mean an opportunity for American capital, invited there by signal exemptions; it would mean an opportunity for the development of that splendid island.

"Those, Mr. President, are some of the more material interests involved in this question, but we have also a broader political interest in the fate of Cuba. The great island lies there across the Gulf of Mexico. She commands the Gulf, she commands the channel through which all our coastwise traffic between the Gulf and our Northern and Eastern States passes. She lies right athwart the line which leads to the Nicaragua Canal. Cuba in our hands or in friendly hands, in the hands of its own people, attached to us by ties of interest and gratitude, is a bulwark to the commerce, to the safety, and to the peace of the United States.

"Spain may ruin the island. She can never hold it or govern it again. Cuba now is not fighting merely for independence. Those men are fighting, every one of them, with a price on their heads and a rope around their necks. They have shown that they could fight well. They are now fighting the battle of despair. That is the condition to-day in that island. And here we stand motionless, a great and powerful country, not six hours away from these scenes of useless bloodshed and destruction."

Senator Morgan, of Alabama, said in the course of his address:

"Why is it that every time an outbreak has occurred in Cuba the first thing which has been done by the President of the United States was to issue a most radical proclamation, warning our people and forbidding them in the strongest possible manner from going into the island of Cuba and from violating our laws intended to prevent them from doing so? What has caused this? It has been, on every occasion, some wrong done by Spain to the Cuban people, the recognition of which we could not shut out from our own consciences and our own hearts. We have stood here as a guard, as a picket post, as an outline of defense of the monarchy of Spain through the medium of these laws and the proclamations of Presidents of the United States for very nearly a century, during which time five great insurrections or revolts have occurred in Cuba.

"What has it cost us thus to guard a people whose resentments have been so justly excited, but are reluctant to interfere with foreigners or with foreign governments? What has it cost us to keep in check and hold down the Cuban refugees who have come to the United States from time to time, driven out of the islands by the stress of persecution? Think of the lives of American citizens that have been sacrificed! think of the men who have been leaped up against adobe walls before sunrise in the morning and shot to death by Spain because, following their sympathies, they felt that they could go to Cuba and give a helping hand to their relatives, their own kindred, in Cuba, who went there, as Lopez did, for the purpose of relieving their own relatives from these barbarities!

"What has it cost us? In money, Mr. President, a very large sum; in blood, a very great treasure; in anguish of feeling, an unutterable thing; in national distress, great discomfort; in our commercial relations with Cuba, and even with other parts of the earth, immense losses; in the honor of our flag, frequent searches and visitations, outrageous wrong, which we have put up with for the time being rather than to resent, because we preferred peace to war, although there might have been an occasion when we should have been entirely justified in going to war. That is what it has cost us; that is what it is costing us now. The record of our losses and

of our sufferings and of our wrongs, wrongs to our own people which have been inflicted upon them through the cruelties of Spanish dominion in Cuba, is a record which, if it were written up consecutively, would astonish the world."

Senator Platt asked:

"Does the Senator understand that the passage of the pending concurrent resolution by the two Houses without its sanction by the President amounts to anything? Does he understand that it amounts to a recognition of belligerent rights?"

Senator Morgan said:

"I think it does, if the concurrent resolution is adopted. I do not deny the delicacy of that question, nor do I deny the fact that we have never settled it by a statute in the United States. That question is left open simply as a constitutional question, and the measure of the rights of Congress and of the President of the United States in respect to it is found only in the Constitution. What the proper interpretation of that instrument is as bearing upon the particular right or matter that the Senator from Connecticut suggests is something not really necessary in this debate, because the form of the resolution is not such as to evoke the question.

"Nevertheless, if it becomes necessary, or if the Senate of the United States desires to pass a resolution of the actual recognition of the independence of Cuba on this occasion, then we would have to give consideration necessarily to the question whether a recognition by a concurrent vote of the two Houses would be a full recognition or whether the President of the United States must participate in the act before it becomes a full recognition.

"I will refer the Senator again to the language of this resolution, which has been very carefully drawn. If he will refer to that language I think he will discover that the action of the House and Senate, if the resolution shall be adopted just as it is, amounts to an absolute and irrevocable declaration in favor of belligerency and neutrality, and in favor of the Republic of Cuba."

Mr. Platt: "Then the question arises whether the two Houses can do that?"

Mr. Morgan: "Then that would be a question as to whether the two Houses in passing a bill have the right to instruct the President of the United States as the Commander in Chief of the Army and Navy to see that its will in regard to war is executed, and that would throw it back to where I suggested when I first set out—to a question which, not being regulated by statute, as it ought to be regulated by statute, is a question which must look for its solution alone to the Constitution of the United States; and there is no other source of law or power and no regulator in that case except the Constitution of the United States."

Mr. Platt: "I wish to say that I think there is, to say the least, very great doubt as to whether the action of the two Houses alone can change in any sense our relation with other countries."

Mr. Morgan: "Perhaps the Senator from Connecticut will be prepared to admit that there is still greater doubt as to whether the action of the President of the United States, Congress being in session, can change the relation of the people of the United States to Spain. There might be still greater doubt. It is a question, after all, that has to be settled, I will remark again, by a proper consideration of the bearing of the Constitution of the United States upon it; and there is no other law that controls it."

Mr. Frye: "What is the Senator's own opinion?"

Mr. Morgan: "My opinion is that Congress has the perfect, independent, absolute right to make this recognition of belligerency or a declaration of inde-

pendence, and if it is necessary to enforce it by any military movement at sea or on land, it has the right to command the Commander in Chief of the Army and Navy to go on the field if it is necessary and in person to see to the execution of that order. That is my opinion."

The subject was debated further Feb. 24. Senator White, of California, offered a resolution as a substitute, expressing sympathy with the Cubans and trust that the executive department would recognize their belligerency as soon as the facts should warrant, and on Feb. 26 Senator White spoke on his resolution, in reference to leaving the declaration to the President. He spoke of the right of the Executive to withhold information, and said:

"The executive right to withhold delicate diplomatic correspondence is incidental to the Presidential office. Can it be that the Constitution has placed upon Congress the burden of deciding and the duty to determine issues concerning belligerent or other relations to foreign powers and has not at the same time compelled the President to give us everything within his knowledge? Can it be that we are to pass upon a part of the case and not upon the whole? Can it be that under the law we are deprived of material evidence and yet are expected to render final and determinative judgment upon an imperfect record—a fraction of the aggregate proof? I say not. The President has before him all information. He reviews a complete history. Plainly, he is in a better condition to judge of the true state of affairs than are we. He has the means to secure all relevant information.

"Having in charge the diplomatic relations of the Government, he is, or should be, better advised than the Senate or the House of Representatives.

"Mr. President, I refer to this controversy not because of its bearing upon this isolated case, but to show that under the governmental scheme pursuant to which we are acting, it is improbable that it ever was the intention to place the power to recognize either belligerency or independence in such a condition that a conflict could arise between Congress and the Executive for the settlement of which no adequate remedy is provided."

Senator Morgan asked:

"Will the Senator from California insist or argue that the President of the United States in his discretion may withhold information from Congress, and then when he withholds the information he can act upon it himself without informing us of it, and conclusively bind this Government either to a declaration of belligerency or any other condition he wishes to impose upon us?"

Senator White said:

"Not so broadly as that, but the President of the United States has the power to withhold information. This the Senator does not deny. From the beginning of this Government the Executive has recognized or refused to recognize belligerency, and his determination has passed unchallenged. No one has heretofore disputed executive authority to accord belligerency. There is not a case, and I do not think the Senator from Alabama can discover an instance, where the belligerency of a country has been recognized by Congress despite the Executive.

"During the efforts of the South American republics to gain their freedom the President recognized belligerency, and for many years thereafter consistently refused to acknowledge the independence of the revolted territory.

"This recognition of belligerency was always executive. Subsequently Congress ratified presidential liberality, but such action was a mere affirmation of that which was already conclusive. No one ever disputed the adequacy of presidential action.

The ratification by Congress was indirect. So in the case of Texas and Mexico. While President Jackson refused to recognize the independence of Texas for years, still belligerency was recognized openly and clearly by the act of the Executive."

Continuing, Senator White said:

"Mr. President, our wishes are for Cuban freedom, but can we accomplish this by mere naked declaration? Senators have condemned Spain and have criticised her policies with severity, but all this is futile. We should appreciate the truth that we can not peaceably, or with due respect for international obligations, go further than sympathetic expression. If the President determines to announce that the Cubans in revolt are entitled to the rights of war they will still be subject to sections 5283-5286 of the Revised Statutes of the United States. This would be true if Cuban independence were recognized by us, and must remain true while war lasts. Our declaration of neutrality itself implies that we will vigorously enforce the law as against all parties to the contest. We are in honor bound to do so. It is well to keep these facts before us. All should remember that in no way can we relieve the people of Cuba from the effect of our neutrality laws unless we boldly deny Spain's right and take charge of the issue and declare war."

Senator Vest, of Missouri, said:

"I should like to know from the Senator from California—for that is the practical question—whether he believes that Spain can suppress that insurrection and whether he does not believe that the cause of Spain to-day with a view to that end is desperate?"

Senator White answered in part:

"Mr. President, I do not know. I sincerely hope that the people of Cuba will be successful in establishing a government of their own choice, but I do not know whether they will or not. The information which I have upon the subject is of a character not satisfactory to my mind. The Senator may believe the situation as to Spain to be desperate, but when we find Spanish power surrounding this island, when we find her in possession, apparently secure, of the centers of population, when we find that not a single port, not a single avenue of trade is in the control of the insurgents, that they have not a ship upon the ocean, that they have no commercial or international representation, I am far from believing that a point has been reached to justify a recognition of independence."

Senator Vest said:

"If my friend will permit me, it seems to me manifestly unjust in the determination of that which is the vital question in this whole controversy, and all the balance is leather and prunella, to ignore the one fact to which he does not allude, and that is that these same people, the Cubans, without having a ship upon the ocean, without being in possession of a single important port, successfully resisted the Spanish power for ten long years, and then only laid down their arms upon certain conditions—one of which was the abolition of slavery in the island—which were immediately violated by the Spanish Government.

"Now, if they could for ten years maintain themselves by force of arms against the Spanish dynasty without ships, without munitions of war except those that they manufactured themselves, why can they not now maintain the same sort of struggle until Spain is forced to admit, as she did before, that it is impossible to put down the insurrection? All those things must be considered together, and I submit to my friend the Senator from California that if we content ourselves with simply an expression of sympathy we had better drop this question, for it will be a miserable farce from end to end."

He said further:

"I can not resist stating that if the Senator from California is correct as to his legal propositions, and I think he is so far as concerns the rights of belligerents or the effect of the recognition of belligerent rights, our action here will amount to nothing. If he is correct in regard to what should be done as to recognizing the independence of a country at war with another and attempting to assert its independence, then until the whole result has been achieved by that country itself we are powerless in the premises. That, sir, it seems to me, is a most astonishing proposition. We must wait, according to the Senator from California, until all vestige of Spanish power has been swept by force of arms from the island of Cuba before we can, without violating international law, recognize the independence of that struggling people.

"If the doctrine be correct that all vestige of military power on the part of the mother country or the country that seeks to put down the insurrection must be swept away before we can act, then our action is simply *brutum fulmen* and amounts to nothing. The people themselves have already struck the blow that made them free, and we can only accept results and say that the fiat of the god of battles has been put upon their endeavor to assert the right to govern themselves. If we as the great republic of the world mean to stand by these people who are imitating us and endeavoring to make a government for themselves like that of this country, we must help them in their hour of need, and if we do not go so far as to do it by arms, which is not advocated by anybody in this chamber or out of it, we can at least do so by stating to the world that we believe the attempt of the monarchy of Spain to suppress this insurrection, as they term it, this endeavor to form a republic upon the island of Cuba, is absolutely hopeless and desperate, as I believe under God it is to-day. There will never come the hour when Spain can reassert her dominion over the island of Cuba. It is impossible that she should do so, and I speak from the great teachings of history and experience.

"We, Mr. President, are confronted now with one overwhelming, overruling, absolute, and determinate question in this debate: Shall we, the great exemplar of republican institutions throughout the world, declare that in our opinion the people of Cuba are able to maintain their independence and have achieved it? Are we to wait until that island is desolated by fire and sword? Are we, a Christian and God-fearing people, to stand silent and dumb while the Spanish governor, called a general, declares that he intends to pen up the people of Cuba and butcher them into subjection to the Spanish throne? Sir, if we do it, God will curse us. If we do this thing and stand here until a desert has been made of that splendid island, you may be certain that the time will come when there will be retribution upon us as a people, because we have not been true to the task assigned us by Providence, because we have not cherished the legacy of self-government as bequeathed to us by our fathers."

Senator Gray, of Delaware, spoke in favor of Senator White's resolution. He said:

"That is as far as the Congress of the United States has ever gone in regard to the struggles of a people for an independent government—further than they went in the case of the revolted colonies of South America, further than they went in the case of Mexico, further than they have gone with Hungary or Greece, with whom the Government and the people of the United States so cordially and heartily sympathized during the pendency of their struggles."

The subject was again debated, Feb. 28, by Sena-

tors Lindsay, Sherman, Frye, Caffery, and others. Senator Allen, of Nebraska, offered a substitute for the pending resolution, as follows:

"Resolved, etc. That the President of the United States be, and he is hereby, authorized and requested to issue a proclamation recognizing the Republic of Cuba as it exists under the constitution and form of government proclaimed at Jimaguaya, under President Cisneros, in the month of May, A. D. 1895, as a free and independent nation, and according to the envoy extraordinary and minister plenipotentiary of said republic all the rights and privileges accorded to the envoy extraordinary and minister plenipotentiary of the Government of Spain."

In the course of his address on his resolution Senator Allen said:

"Mr. President, I would go further in the interests of humanity than these resolutions propose to go. I would not only recognize the belligerent rights of Cuba, but I would establish her as one of the republics of this earth. If need be, I would muster every man in the United States and every war vessel necessary to the accomplishment of the task, and I would erect on the ashes and ruins of Spain's control of that island a republic modeled after the institutions of our own. Sir, I would not only do that, but if I had it in my power, I would admit the minister of the Republic of Cuba, feeble as it may be, unimportant in the eyes of the world as it may be, to the diplomatic circles at this capital on an equality with the minister from Spain."

Senator White's amendment was laid on the table by a vote of 57 yeas to 12 nays, 20 not voting, and Senator Allen's by a vote of 52 to 17, 20 not voting. There was some discussion as to the propriety of securing action by the President by making it a joint instead of a concurrent resolution, but that was not done. The concurrent resolution, with the addition of an amendment submitted by Senator Cameron and accepted by unanimous consent, was passed Feb. 28. It was:

"Resolved by the Senate (the House of Representatives concurring), That, in the opinion of Congress, a condition of public war exists between the Government of Spain and the Government proclaimed and for some time maintained by force of arms by the people of Cuba; and that the United States of America should maintain a strict neutrality between the contending powers, according to each all the rights of belligerents in the ports and territory of the United States.

"Resolved further, That the friendly offices of the United States should be offered by the President to the Spanish Government for the recognition of the independence of Cuba."

The vote follows:

YEAS—Allen, Allison, Bacon, Baker, Bate, Berry, Brown, Burrows, Butler, Call, Cameron, Cannon, Carter, Chandler, Clark, Cockrell, Cullom, Daniel, Davis, Dubois, Elkins, Faulkner, Frye, Gallinger, Gear, Gibson, Gorman, Gray, Hawley, Hill, Irby, Jones of Arkansas, Jones of Nevada, Kyle, Lindsay, Lodge, McBride, McMillan, Mantle, Martin, Mills, Mitchell of Oregon, Morgan, Nelson, Pasco, Pepper, Perkins, Pritchard, Proctor, Quay, Roach, Sherman, Shoup, Smith, Squire, Stewart, Teller, Thurston, Turpie, Vest, Walthall, Warren, White, Wilson—64.

NAYS—Caffery, Chilton, George, Hale, Morrill, Wetmore—6.

NOR VOTING—Aldrich, Blackburn, Blanchard, Brice, Gordon, Hansbrough, Harris, Hoar, Mitchell of Wisconsin, Murphy, Palmer, Pettigrew, Platt, Pugh, Sewell, Tillman, Vilas, Voorhees, Walcott—19.

In the House, March 2, Mr. Hitt, of Illinois, moved that the Committee on Foreign Affairs be discharged from further consideration of Senate

concurrent resolutions in regard to the relations between the United States and Cuba, and that the House adopt as a substitute the following:

"Resolved, That, in the opinion of Congress, a state of public war exists in Cuba, the parties to which are entitled to belligerent rights, and the United States should observe a strict neutrality between the belligerents.

"Resolved, That Congress deplors the destruction of life and property caused by the war now waging in that island, and believing that the only permanent solution of the contest, equally in the interest of Spain, the people of Cuba, and other nations, would be in the establishment of a government by the choice of the people of Cuba, it is the sense of Congress that the Government of the United States should use its good offices and friendly influence to that end.

"Resolved, That the United States has not intervened in struggles between any European Governments and their colonies on this continent; but from the very close relations between the people of the United States and those of Cuba in consequence of its proximity and the extent of the commerce between the two peoples, the present war is entailing such losses upon the people of the United States that Congress is of opinion that the Government of the United States should be prepared to protect the legitimate interests of our citizens by intervention, if necessary."

After debate by Mr. Hitt; Mr. McCreary, of Kentucky; Mr. Adams, of Pennsylvania; Mr. Sulzer, of New York; Mr. Turner, of Georgia; Mr. Smith, of Michigan; Mr. Tucker, of Virginia; Mr. McCall, of Massachusetts; Mr. Thomas, of Michigan; Mr. Boutelle, of Maine, and others, the resolutions submitted by Mr. Hitt were adopted by 362 yeas to 17 nays, 76 not voting. The following members voted nay: Atwood, Black of Georgia, Boutelle, Cobb of Alabama, Culberson, Elliott of South Carolina, Gillett of Massachusetts, Grout, Harrison, McCall of Massachusetts, Moody, Russell of Georgia, Simpkins, Tucker, Turner of Georgia, Walker of Virginia, Wright.

The Senate and House agreed to a committee of conference, which reported, March 5, as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the House of Representatives to the concurrent resolution of the Senate (Con. Res. 19, part 5), having met, after full and free conference have agreed to recommend and do recommend to their respective houses as follows:

"That the Senate recede from its disagreement to the amendments of the House, and agree to the same.

"JOHN SHERMAN,

"JOHN T. MORGAN,

"H. C. LODGE,

"Managers on the part of the Senate.

"ROBERT R. HITT,

"JAMES B. MCCREARY,

"ROBERT ADAMS, JR.

"Managers on the part of the House."

The report was debated at great length in the Senate March 9, 12, 16, 17, 19, and 20. In his argument against the resolutions, Senator Hale, of Maine, said:

"The insurgents have no government except on paper. They have no legislature. It is not pretended that they have. They have no courts to administer justice. That is not claimed. They hold no ports. Their power is seated, as Gen. Grant described it in 1870, in the straggling bands that occupy straggling camps, and to the present day not only has the insurrection not won a battle, but it has hardly fought what deserves the name of

battle. It is, as suggested by the Senator from Connecticut, a case of clean, outright guerrilla warfare.

"I do not claim that everything goes on in the island of Cuba and in the conflicts there as it would go on under an Anglo-Saxon people. We are dealing with another race, and I now come to the piece of testimony showing the manner in which the insurgents are doing their fighting, if indeed it can be called legitimate fighting, struggling for liberty—if that is the phrase—taken from the "New York Journal." The heading is:

"Maceo's great raid—The insurgent general has devastated the whole of Pinar del Rio."

"That is the name of a province. The next heading is:

"Thirteen towns burned—All the tobacco crops destroyed and people wandering about without clothing."

"What is the next heading?"

"Spain beaten everywhere."

"That is the method, Mr. President, that the insurgents are taking to beat Spain everywhere—'thirteen towns burned—all the tobacco crops destroyed'—'people wandering about without clothing.' Here is the report in full, with further heading:

"The true story of the result of the raid made by Antonio Maceo into Pinar del Rio is beginning to crop out. So effectual was the work of the insurgent general that 13 towns held by the Spaniards have been destroyed and the rich tobacco lands throughout the province have been laid waste. Practically all of the island west of Havana is a wilderness. This news has heretofore been suppressed by the Spanish censors, and it is believed that matters are much worse than the news depicts.

"HAVANA, March 5.

"The reopening of telegraphic communication with the region of Pinar del Rio brings the first detailed information of affairs in that province for several weeks."

"This is where the insurgents had been with their bands in possession of this territory for several weeks, and were at last driven out, when the Spanish troops occupied the territory, and then, as this Cuban organ says, for the first time light was let in on the situation. Now, let us see how these patriots in their struggle for freedom dealt with this province:

"The condition of affairs disclosed is little less than appalling. The rich Vuelto Adajo tobacco district seems to have been put to the torch and is apparently reduced to a wilderness.

"Whole towns have been obliterated or reduced to a heap of ashes, and their inhabitants are wandering helpless over the face of the country, without a place to lay their heads or wherewithal to be clothed, and many of them starving.

"TOWNS DESTROYED.

"The villages and towns of Cabañas, Bahía Honda, San Diego de Nuñez, Santa Cruz de los Pinos, Los Palacios, Piso Real de San Diego, and San Diego de los Baños are known to be reduced to ashes, and reports of others will bring the number destroyed up to thirteen. All of these were important and thriving centers of population and business.

"The last town which has succumbed to the insurgents' torch is San Juan y Martínez. The tobacco from this town is famous the world over to all connoisseurs for its matchless flavor. Its cultivation brought great wealth to the people of the district and gave material for a large commerce in the town and support to over 1,000 families.

"San Juan de Martínez is, however, no more."

"Mr. President, it is not even war; it is not even

battle; it is incendiarism; it is the torch of destruction; it is pillage; it is murder; it is outrage. It is what Faulconbridge calls 'the wildest stroke of savagery.' If I vote alone, I shall vote for no resolution which gives aid and comfort to the red-handed foray of this guerrilla leader whose exploits are so exultantly chronicled as I have read them here."

Senator Hoar offered the following resolutions, March 9:

"Resolved, That the consideration of the report of the conference committee on the Senate concurrent resolution 19, relating to Cuba, be postponed until Monday, April 6, and that the Committee on Foreign Relations be directed before that time to report to the Senate the facts which, in their opinion, justify the passage of said resolution, together with the evidence thereof.

"Resolved, That the President be requested, so far as in his opinion may be compatible with the public interest, to communicate to the Senate all facts which may be in his possession relating to the existing conflict in the island of Cuba, and especially such as affect the interests and duty of the United States in the premises."

March 23 the Senate agreed to the following resolution:

"Resolved, That the Senate insist upon its disagreement to the amendment of the House of Representatives to the resolution of the Senate in regard to the insurrection in Cuba, and ask a further conference with the House on the disagreeing votes of the two houses thereon."

Senator Platt submitted the following, which was referred to the Committee on Foreign Relations:

"Resolved, That the Senate (the House of Representatives concurring) hereby expresses its earnest desire and hope that Cuba may soon become a free, independent, and republican government, and that the friendly offices of the United States should be offered by the President to the Spanish Government to secure such result."

The next day Senator Mills, of Texas, spoke upon a resolution he had offered, as follows:

"A joint resolution (S. R. 109) directing the President of the United States to request the Government of Spain to grant to the people of Cuba the power of local self-government, and in case the Government of Spain shall refuse, to take possession of the island of Cuba and hold it until its inhabitants can institute such government as they may wish and organize and arm such forces as may be necessary to support it.

"Resolved by the Senate and House of Representatives, etc., That the President of the United States is hereby directed to request the Government of Spain to authorize the people of Cuba, subject to the sovereignty of Spain, to institute such local government as they may wish, and invest it with such powers as they may think necessary to secure to the people of Cuba the right to life, liberty, and the pursuit of happiness.

"SEC. 2. That in case Spain shall refuse to grant to the inhabitants of Cuba the rightful power of local self-government, then the President of the United States is hereby directed to take possession of the island of Cuba with the military and naval forces of the United States, and hold the same until the people of Cuba can organize a government deriving its just powers from the consent of the governed, and arm and equip such military forces as may be necessary to protect them from invasion."

April 3, Mr. Hitt presented the conference report to the House. After reciting the facts already given as to the Senate resolutions and the substitute offered by the House, and the acceptance of that substitute by the conference committee, he said:

"They [the members from the Senate] and many other Senators made an earnest effort to have them adopted by the Senate; but after weeks had passed away in debate which appeared likely to be indefinite in length, the Senate, on the motion of the chairman of the Committee on Foreign Relations, who had urgently pressed those resolutions, nonconcurrent and asked for another conference. We met them again, and they assured the House conferees that while they were as earnestly of opinion as ever that the resolutions which the House had adopted ought to pass, yet they could give no assurance that they would at any time pass the Senate, as there was manifestly an organized obstruction, which, under the antiquated rules of that body, where there is no means of stopping debate and bringing on a vote, might continue indefinitely. They asked us to now act in the same liberal spirit in which they had met us, to agree to the Senate resolutions, take them back to the House, and pass them. This would at once secure final and complete action and defeat the dilatory debate.

"Remembering the great majority by which the House had adopted our resolutions and considering the vote an instruction, we who were conferees for the House for a long time insisted upon the action of the House being adhered to. The first resolution, that which favors the recognition of the belligerency of those struggling in Cuba, is substantially the same as passed by the Senate and as passed by the House. The second, which relates to the 'independence' of Cuba, as stated in the Senate resolution, and to 'a government by the free choice of the people of Cuba,' as stated more cautiously in the House resolutions, aimed at the same thing, the tender of good offices to secure that purpose. The third House resolution, which related to the protection of American interests in Cuba, though wholly unobjectionable, though in accordance with international law, the usage of nations and the practice of our Government, so plainly that the only objection to it would seem to be that it was hardly necessary for Congress to make such a suggestion to the Executive—this resolution they asked us to drop.

"It would be in no worse position if it were dropped than if we persisted, and all of the resolutions would fail because there was no limitation on debate there. All of them would be talked to death if they once got back to the Senate, though there were not a dozen votes that could be mustered against them. Accordingly your conferees agreed to the two Senate resolutions. We now ask their adoption by the House.

"The second resolution differed from ours in that it proposed the tender of the good offices of this Government to secure the recognition of the independence of Cuba by Spain. It was said—I said it and others said it on this floor in the former debate—that the expression 'independence' seemed harsher than was necessary, and we said so to the conferees; but it was urged, and it is true, that while a proposition to any Government in ordinary time of peace to recognize the independence of a part of its territory as independent would be offensive, the reason why it is offensive is because it is on its face manifestly intended to offend."

The report was debated in the House that day and the next, and a vote was taken April 6, resulting in the adoption of the report—yeas, 247; nays, 27; not voting, 80. So the resolutions were passed in both houses.

May 15, Senator Morgan, of Alabama, submitted the following, which was passed the next day:

"Resolved, That the Committee on Foreign Relations is directed to inquire and report to the Senate what are the rights of the United States, under

our treaties with Spain, as to the trial of our citizens arrested in Cuba, and now under condemnation and sentenced to death by the Spanish military tribunals for alleged offenses of a political or other character against the Spanish laws or Government, and to report on that subject by bill or otherwise.

2. "That the Secretary of State is directed to send to the Senate literal copies of the original text of a protocol of conference and declarations concerning judicial procedure, signed by Caleb Cushing, as minister of the United States, and Señor Don Fernando y Collantes, minister of the King of Spain, on Jan. 12, 1877, as the same was executed and interchanged, both in the English and Spanish languages; and that he will inform the Senate whether the established or agreed original text of said protocol is in the English or the Spanish language.

3. "That the Secretary of State is further directed, if it is not incompatible with the public service, to communicate to the Senate copies of any correspondence that has taken place between the governments of Spain and the United States respecting the said protocol and its bearing or effect upon the trial and condemnation of citizens of the United States who were recently captured on or near the vessel called the 'Competitor,' that was seized under Spanish authority in Cuban waters, or near to that island."

The Armenian Question.—The following concurrent resolution was submitted to the Senate Dec. 12, by Senator Call, of Florida.

"Resolved by the Senate (the House of Representatives concurring), That humanity and religion and the principles on which all civilization rests demand that the civilized governments shall by peaceful negotiations, or if necessary by force of arms, prevent and suppress the cruelties and massacres inflicted on the Armenian subjects of Turkey by the establishment of a government of their own people, with such guarantees by the civilized powers of its authority and permanence as shall be adequate to that end."

It was referred to the Committee on Foreign Relations as were also other resolutions and many petitions and memorials upon the subject. The committee, reported Jan. 22, the following resolutions, which were debated Jan. 24:

"Whereas the supplementary treaty of Berlin of July 13, 1878, between the Ottoman Empire and Great Britain, Germany, Austria, France, Italy, and Russia contains the following provisions:

"LXI. The Sublime Porte undertakes to carry out without further delay the ameliorations and reforms demanded by local requirements in the provinces inhabited by the Armenians, and to guarantee their security against the Circassians and Kurds.

"It will periodically make known these steps taken to this effect to the powers, and will superintend their application.

"LXII. The Sublime Porte having expressed the wish to maintain the principle of religious liberty, to give it the widest scope, the contracting parties take note of this spontaneous declaration.

"In no part of the Ottoman Empire shall difference of religion be alleged against an individual as a ground for exclusion or incapacity as regards the discharge of civil and political rights, admission to the public service, functions and honors, and the exercise of the different professions and industries.

"All persons shall be admitted, without distinction of religion, to give evidence before the tribunals.

"Liberty and the outward exercise of all forms of worship are assured to all, and no hindrance

shall be offered either to the hierarchical organization of the various communions or to their relations with their spiritual chiefs.

"The right of official protection by the diplomatic and consular agents of the powers in Turkey is recognized both as regards the above-mentioned persons and their religious, charitable, and other establishments in the holy places"; and

"Whereas the extent and object of the above-cited provisions of said treaty are to place the Christian subjects of the Porte under the protection of the other signatories thereto, and to secure to such Christian subjects full liberty of religious worship and belief, the equal benefit of the laws, and all the privileges and immunities belonging to any subject of the Turkish Empire; and

"Whereas by said treaty the Christian powers parties thereto having established, under the consent of Turkey, their right to accomplish and secure the above-recited objects; and

"Whereas the American people, in common with all Christian people everywhere, have beheld with horror the recent appalling outrages and massacres of which the Christian population of Turkey have been made the victims:

"Resolved by the Senate of the United States (the House of Representatives concurring), That it is an imperative duty, in the interest of humanity, to express the earnest hope that the European concert brought about by the treaty referred to may speedily be given its just effect in such decisive measures as shall stay the hand of fanaticism and lawless violence, and as shall secure to the unoffending Christians of the Turkish Empire all the rights belonging to them both as men and Christians and as beneficiaries of the explicit provisions of the treaty above recited.

"Resolved, That the President be requested to communicate these resolutions to the governments of Great Britain, Germany, Austria, France, Italy, and Russia.

"Resolved further, That the Senate of the United States, the House of Representatives concurring, will support the President in the most vigorous action he may take for the protection and security of American citizens in Turkey, and to obtain redress for injuries committed upon the persons or property of such citizens."

Senator Cullom, who presented the report, spoke in favor of the resolutions. He said in part:

"Mr. President, it is unnecessary for me to say that it is amazing to the people of this country, at least, to witness such a terrible slaughter of those innocent people, and at the same time witness the apparent indifference manifested by the powers who agreed to see that they were protected.

"Mr. Henry Norman, of the 'London Chronicle,' in an article published recently, in the 'Star' of this city, says:

"Yet Abdul Hamid II seems to sit firmly on his throne, secure in the jealousies of the great powers unable to agree upon the division of his kingdom. One of them will do nothing to introduce stability or further autonomy into the Balkan peninsula, preferring to wait until the ripe and rotten fruit shall drop into her lap, and the hands of the others are thereby paralyzed. And if the Sultan loses heart for a moment in the desperate game he is playing, he can find fresh courage by thinking, as Prof. Grosvenor in his great book has recently reminded us, that the British embassy stands upon land presented to England in gratitude for help against France in 1801: that the site of the French embassy was given to France in thankfulness for aid against England in 1807; that the shaft among the cypresses of the cemetery at Scutari commemorates English and French support against Russia in

1857, and that another column on the Bosphorus tells how Russia saved Mahmud II his empire in 1833. "You think us weak," said a Turkish statesman recently to a foreign ambassador, "but the truth is we are very strong, for our strength is rooted in your divisions."

"Before the Treaty of Berlin was entered into by the great powers in 1878, Great Britain announced its own treaty of defense with the Porte, which, it is said, caused a great sensation among the allied powers. This treaty between Turkey and England provides that England was to join his Imperial Majesty the Sultan in defending certain portions of his territory against any future attempt on the part of Russia to take possession of the same, and the Sultan promised England to introduce the necessary reforms, to be agreed upon between the two powers, in his Government, and for the protection of the Christian and other subjects of the Sultan. As a guarantee of good faith, the Sultan consented to the occupation by England of the island of Cyprus. That compact was secretly signed at Constantinople on the 4th day of June, 1878, only a few days before the congress convened at Berlin to make the treaty of 1878.

"So that, Mr. President, the English Government, making greater pretensions to the observance of the rights of the people than perhaps any other Government in Europe, has an additional obligation resting upon it to protect the Armenians in Turkey, and yet nothing has been done by it, notwithstanding this double obligation resting upon it, nor by any of the other powers looking to the enforcement of their treaty obligations beyond a mere diplomatic correspondence between them and the Sultan."

Senator Frye, of Maine, said in part:

"The Senator from Louisiana rather indicates by his first remark, in which he says he is glad that the Committee on Foreign Relations has at last evolved something, that there has been neglect on the part of the committee and on the part of Congress to take notice of the horrible condition of affairs in Turkey. From letters which I have received and from remarks I have heard made I am inclined to think that the religious people of America have looked upon Congress as moving very slowly in this affair.

"Mr. President, I desire, in behalf of the Committee on Foreign Relations, to say that at the last session of the last Congress two missionaries appeared here from Armenia, both of whom I knew personally, one of whom was formerly a resident of my own city, and stated the grievances, the troubles, the massacres, their fears. They were asked what was the remedy, and they said to the committee that in their judgment if a consulate could be established at Erzerum and another at Harpoot and consuls appointed, then there would be no trouble in that great interior, because the eye of America would then be upon it. In less than a week after that the Committee on Foreign Relations reported a bill establishing two consulates, one at Erzerum and the other at Harpoot, and it became a law. The President of the United States appointed the consuls.

"Surely the committee and Congress did everything then as expeditiously as anybody could ask, and did exactly what these missionaries desired should be done. Turkey refused *ezequators* to those two consuls. I do not know what the executive department has done as to that refusal. I do not know what the executive department can do as to it: but it seems to me that some pressure ought to be brought somehow, that when there can be no objection to the persons of the consuls appointed *ezequators* shall be granted.

"Now, Mr. President, consider this incident. If

that consul had been received by Turkey, had gone to Harpoot, a consulate building had been provided for, and an American flag raised, more than 20,000 lives would have been saved. One of the most terrible massacres perpetrated anywhere in Turkey took place at that point.

"The good people of the United States have planted in Turkey over \$6,000,000 for a single purpose, to improve and better the condition of the people of that country. They have erected as fine colleges as there are in the world. They have been maintained by American money. They have educated thousands and hundreds of thousands of Turks, or Armenians, who are subject to Turkey. It has been a work of wonderful beneficence, a work which has had marvelous success, and yet it is stopped absolutely to-day. That American capital now is held up; it can not do an ounce of work. At Harpoot the American colleges were burned down and the Americans themselves were compelled to flee for their lives.

"I do not know how far the United States of America can interfere in Turkey. I am in favor of these resolutions as an expression of our opinion upon the awful tragedies there; but if I had had my way, after the powers of Europe have waited now a solid year looking each other in the face with suspicious eyes and neither one daring to make a move lest the other shall receive a benefit—I say if I had had my way, I would have Congress memorialize Russia and say to her: 'Take Armenia into your possession. Protect the lives of these Christians there. And the United States of America will stand behind you with all its power.' That is the memorial and resolution I would have passed.

"If Great Britain owned a college worth \$1,000,000 at Harpoot and by Turkish orders that college had been burned down, and if the teachers, they being British citizens, had been compelled to flee for their lives, does the Senator from Texas believe that the voice of Great Britain would have been silent? Does he not believe that the demand would have been made at once for damages for that destruction of property and that those citizens should be protected?"

Senator Mills, of Texas, said:

"There is some difference between the Government of Great Britain and that of the United States. The Senator from Maine is now speaking in the Congress of the United States, that has the sole power to declare war and use the armed power of this Government. It is not so with Great Britain. There the King can make war whenever he pleases to do so. If my friend would be for war, I do not know but that I would go with him; wherever people of the United States residing in foreign countries are not protected by foreign governments I would send the ships of the United States, and I would batter down their capital, as Jefferson did in 1802 with the pirates."

Senator Frye said:

"I have no doubt that the Senator would, and I agree with him entirely in his theory about the protection of American citizens. I do not cite Great Britain because I am fond of her.

"Mr. President, one could not help admiring the glowing eulogy of England so eloquently uttered a day or two since by the junior Senator from Colorado, but while I was compelled to unite in admiration of the speaker, I dissented from almost every word of the speech. I do not love Great Britain. I recognize her power on the land, her magnificent dominion on the sea, but I assert that in all our life as colony and republic she has never done us a kind act or offered us a helping hand. While we were hers, her conduct toward us was antagonistic to all of our interests, repressive of our industries,

domineering, unjust, and despotic, so that we were compelled to rebel.

"As a republic she was no more friendly. I can not forget that for fifty years she taunted us about our 'flag of the free,' our Declaration of Independence, our asserted equality of man, while we held black men in bondage, put manacles on ankle and hand, and yet when the South rebelled, undertook by arms to establish another republic whose corner stone should be slavery forever, she was prompt to recognize belligerent rights; aided France to establish a monarchy in Mexico, a perpetual menace to us; built, fitted out, and manned ships to destroy our commerce; did all in her power to establish the Confederacy, so that she might have a customer.

"Sir, the British rulers are no friends of ours. Now she is sitting quietly by seeing the Armenians for a solid year murdered because they were Christians, when she was one of the very agencies agreeing to protect their lives or compel Turkey to do it, and she had the power in her hands any day to do it. So I say, regardless of what Great Britain might have thought, if I had had my way Congress would have memorialized Russia at once to take possession of Armenia, and the United States would back her in the doing of it.

"Now, so far as American citizens are concerned, I would protect them there at any cost. We never agreed that the Dardanelles should be closed to us. There can not be found a line in the policy of the United States of America which ever permitted any great navigable water to be closed to our ships; not one. On the contrary, we have been ready to go to war at any time to keep navigable waters open to our ships. We have given no assent to the agreement of the concerting nations over there that the Dardanelles shall be closed. If it was necessary to protect our American citizens and their property, I would order United States ships of war, in spite of foreign agreements, to sail up the Dardanelles and plant themselves before Constantinople, and then demand that American citizens should have the protection they are entitled to.

"Mr. President, I think one of the grandest things in the history of Great Britain, and one thing for which I admire her, is that she does protect her citizens everywhere and anywhere, under all circumstances. Her mighty power is put forth for their relief and protection, and it is admirable. I do not wonder that a British citizen loves his country.

"All that I ask of this grand republic of ours is that it shall model itself after Great Britain, if it pleases, in this one thing, that the life of an American citizen shall be protected wherever he may be, whether in Great Britain or in Turkey, and in no other thing whatsoever."

Senator Call said:

"The resolutions of the Committee on Foreign Relations are very feeble and emasculated utterances compared with the speech of the Senator from Maine. We fight our battles here on the Committee on Foreign Relations' report of a resolution that has no significance in it, that protects no American citizens, and the Senator from Maine arises here and commends Great Britain for doing that which we refuse and fail to do, viz., not only protecting her subjects, but asserting her power everywhere.

"I introduced a resolution in the Senate which I will send to the desk to be read, which did propose something for the relief of the people of Armenia and did support the dignity and power of the American Republic. Here we have a tame, insignificant declaration of opinion and sympathy, giving no protection and no relief to these people.

"I agree with the Senator from Maine that the

Armenian people should have the protection of this Government, not because they are citizens of the United States, but because the people of the United States have a duty to civilization, have a duty to the progress of mankind, to perform. It is not because of any treaty between Russia and England or any other powers, but because it is our duty to maintain the principles upon which this Government and our civilization are founded. But when I introduce resolutions to that effect we find the Committee on Foreign Relations holding back, taking no action, and then introducing a mere expression of their sympathy, while murder, outrage, and ferocity such as beasts of the forest do not possess are perpetrated upon these Armenian people and upon the people upon our own immediate borders in the island of Cuba."

Senator Hoar, of Massachusetts, said:

"The Government of the United States (whether right or wrong I will not now detain the Senate by discussing) has undertaken to deal with this matter diplomatically, and diplomatic negotiations are now going on. A lady, an intimate friend of mine, who I am proud to say is my constituent and personal friend, is on her way to Turkey with the ministrations of the Red Cross at her command. Whatever we may think of the opinion of the Senator from Florida, however much we may sympathize with my honorable friend from Maine, to whose stirring speech we all listened with pleasure, I hold that it is wrong for the Senate to thrust these extreme statements, which I sympathize with almost altogether, into the diplomacy of the United States. The Senator's indignation will keep for a week. Until we learn from our President that the function of diplomacy is over, I hope that we may content ourselves to withhold the expression of our natural indignation, however difficult for manly spirits like that of my friend from Florida it may be.

"Now, I appeal to him. I think I know the opinion of the Armenians; there are more of them in my city than in any other. I think I know the opinion of the American Board for Foreign Missions, with whom I have a thousand ties of personal union in the past and in the present. We may be obliged to come to what the Senator proposes, but let us wait until the diplomatic means are exhausted. When the President and the Secretary of State of the United States are endeavoring to save the families, the wives, of American missionaries still in danger from these lawless fanatics, when Clara Barton is on her way with the Red Cross in her hand, it is a pretty serious thing to thrust our intemperate and angry utterances into that diplomatic condition.

"As to what the Committee on Foreign Relations have done, does any one suppose that my friend from Illinois is not as much stirred to the bottom of his heart with indignation at these things as anybody? Yet he, as the organ of that great committee, unanimously, as I understand the committee have acted, proposes for to-day this temperate and guarded expression. I say to the Senator from Florida he is taking great responsibility—and great responsibility in regard to the lives and the honor of women, which he has so much at heart—when he thrusts himself into that situation and breaks it up."

Senator Call said:

"Mr. President, I object to the pending resolutions. I object to them because they mean nothing; I object to them because it is an insult to the suffering people of Armenia and because the nations of the civilized world will look upon it as an empty and unmeaning declaration of sympathy.

"We have a duty to perform. We are a great people, the light of the world, and we owe it to civilization and humanity that the power which has

been given to us shall be exercised. We owe it to every principle of civilization that the people of Armenia, and by a greater interest and obligation that the people of Cuba, shall not be murdered by the brutal military despotism which now threatens to extinguish that entire race, and we owe it to the people of Armenia that we shall pass something more than an empty declaration of sympathy.

"I offer the resolution heretofore submitted by me as a substitute for the resolutions reported by the committee."

Senator Call's substitute was laid on the table and the resolutions reported by the committee were agreed to.

In the House, resolutions, petitions, and memorials on the subject were referred to the Committee on Foreign Relations, which prepared a report substantially the same as the resolutions passed in the Senate. The committee therefore substituted these resolutions for the report, and submitted them to the House. In the debate which followed the resolutions were supported by Messrs. Quigg, of New York; Hitt, of Illinois; McCreary, of Kentucky; Henderson, of Iowa; Smith, of Michigan; and others. They were objected to, on the ground that the United States, not being a party to the Treaty of Berlin, has no right to interfere or give any advice on the subject to the powers concerned, by Messrs. Bailey, of Texas; Turner, of Georgia; and others; while they were criticised as weak and inadequate by Messrs. Hepburn, of Iowa; Mahany, of New York; Grosvenor, of Ohio; Walsh, of New York; and others.

Mr. Quigg, of New York, said in support of the resolutions:

"It will be conceded, Mr. Speaker, that our interest in the situation in Armenia is chiefly humane and but slightly political. Although newspaper dispatches from Oriental points have from time to time mentioned American citizens as having been killed or injured in the Kurdish-Armenian riots, our official information is to the contrary. And it gives me pleasure, in behalf of the Committee on Foreign Affairs, to accept the assurances of the State Department as to the zeal and activity that it has manifested in its efforts to protect the rights of American citizens throughout the Turkish Empire, and also to testify to the good work that has been performed by our minister to Turkey, to whose prompt intervention, supported by the near presence of three American ships of war, the fact is no doubt due that the perpetrators of these outrages have been so scrupulously careful to overlook those persons of American or Armenian birth who are known to be able to claim the protection of the American flag.

"But however remote we may be, Mr. Speaker, whether by distance or political interest, from the scene of these shocking iniquities, the fact of their occurrence excites the profound grief of the American people, and imposes upon Congress the duty of uttering such a protest as will be heard by those who, of their own free motion, have given bonds to civilization for the good behavior of Turkey. We do not need to inquire too cursorily into the motives of those Christian sovereigns of Europe who uphold with one hand a Government that they constantly menace with the other. We are not interested in their jealousies, and have no part in their ambitions. But since they have chosen, sooner than take the risk and consequences to themselves of allowing events to follow their natural course, to assume the place of guardian and trustee of the Ottoman Porte, frankly professing the responsibility that thereby attaches to them—since they in the name of peace and humanity have pledged the Sultan to just and liberal policies toward his Christian

subjects—since he has acknowledged their right of supervision, and he for them and they for him have given solemn assurance to the Christian world that liberty of conscience and freedom of worship shall exist in every part of the Turkish Empire, that the Armenian Christians shall be protected against Kurds and Circassians, and that the local administration of the Porte in the provinces inhabited by the Armenians shall be thoroughly reformed, we have the right to summon them into the high court of national honor and good faith and ask why these pledges have not been performed, and upon what excuse they stand idly and shamefacedly by while 10,000 Christian homes are being plundered and devastated, and while men are murdered, women dishonored, and children sold into unthinkable slavery, and all because they will not cry out that Mohammed is the prophet of God.

"I dare say, Mr. Speaker, that the resolutions which have been read are probably inadequate to accomplish what needs to be accomplished upon the conscience, and perhaps upon the fears, of the rulers of the Turkish Empire; but if they shall succeed in showing that the American people are watching occurrences in Armenia, and watching them with solicitude and regret, it is possible that the protest and the warning they contain may not pass wholly unheeded."

Mr. McCreary, of Kentucky, said:

"The members of the Committee on Foreign Affairs of this House have endeavored this session and last session to do all in their power as regards Armenia. During the last Congress we received information of these robberies and murders in Armenia. Hoping and believing that we might accomplish something, we authorized the appointment by the President of the United States of a consul at Erzerum and a consul at Harpoot, in the Turkish provinces where the greatest atrocities had been committed. These consuls were appointed by the President, but they were at first denied their *exequaturs*. After months of delay I believe they have at last reached their posts of duty. At this session of Congress, to still further aid them, we authorized in the diplomatic and consular appropriation bill the appointment of interpreters for those consuls.

"I wish to say further, Mr. Speaker, that the very fact that *exequaturs* were denied to our consuls when duly appointed, accredited, and sent to Harpoot and Erzerum is another important reason why the Congress of the United States should take an interest in this matter and do all that can properly be done."

Mr. Bailey, of Texas, said:

"I have no doubt that it is obviously improper for this Government to practically censure other nations for violating a compact made among themselves, and with which the United States has no connection. This resolution, if adopted, is an impertinence, if not a downright insult, to the nations making this treaty. It says in effect that the great powers of Europe have entered into a combination and assumed an obligation which they have so grossly disregarded that this Government feels it incumbent upon it to call attention to their offense.

"I submit to the judgment of the House that this is not different from the case where two parties enter into a contract in which a third party who has no interest should demand of them that they enforce its stipulations. I believe that it is as gross an affront to a nation to tell it that it has violated its treaty as it would be to an individual to tell him that he had disregarded the obligation of his contract. I can see no difference between them.

"I had supposed that this Government had no policy better settled than that it will not interfere

with the affairs of a foreign nation and will not suffer a foreign nation to interfere with its affairs. I submit, in conclusion, to the judgment of the House that while we are denying the right of foreign nations even to interfere in the affairs, not of our country, but of this continent, we ought not to attempt an interference with the affairs of other nations. To do so must involve us in a departure from our traditional policy, and for that reason I believe the resolution ought to be amended so as to eliminate all reference to the Treaty of Berlin."

Mr. Turner, of Georgia, said:

"Our wise forefathers committed our foreign relations and our delicate diplomatic affairs to a confidential channel, in which they are conducted by the President and the Senate. They carefully endeavored to isolate these questions from the temptations and emergencies of party politics, which too often overmaster and dominate us all.

"But it seems to me, sir, that this question presents itself: Is it wise, is it prudent, is it dignified in the high forum of international ethics and comity for us to intrude in this foreign quarrel and in this manner? In addition to this constitutional policy to which I have already adverted, we have also established another great principle of American policy, the converse of that which has been called the Monroe doctrine.

"Why, sir, looking further at this matter, let it be remembered that these great powers undertook by that famous treaty to effectuate a pacification of the Eastern nations, which for ages have been engaged in the terrific conflicts between the followers of Christ and those of Mohammed, an international and imperial undertaking which ought to add imperishable fame to Lord Beaconsfield and his illustrious associates in that mighty enterprise of piety, peace, and humanity; and we ought not to forget that the gravest complications growing out of recent wars and their bitter results, jealousies as to the balance of power, and mutual fears in the face of the insatiable militarism which holds Europe in its grasp, embarrass the orderly execution of the compact made at Berlin. The great armies and armaments of Russia, the mighty military establishments of Germany and France, of Austria and England, with the consequent lust of power and dominion, what would they do with Turkey if they were to undertake to subdue that country. They seem, in fact, to be fully occupied just now in watching each other. A spark in the present temper of Europe might kindle a flame which would appall mankind!

"Do we regard ourselves as wiser and better than the statesmen who are keeping the peace in Europe?"

"Will not our interposition under these most extraordinary circumstances be regarded as a rash and unjustifiable intrusion?"

"The last of these resolutions declares to the world and the Turkish Government that whatever the President may do, whatever step he may take for the protection of American citizens in Armenia shall meet with our sanction and our support. How far, Mr. Speaker, does that resolution fall short of a declaration of war? He might send the American navy to bombard the whole Turkish coast, to lay Constantinople in ruins, and level it with the waters of the sea. I have no doubt of the wisdom and conservatism of the honorable gentleman who occupies that high position; but I would not, under the conditions which now exist, charge him with such a menace."

Mr. Heppburn, of Iowa, said:

"Mr. Speaker, the recital of outrage and wrong that has just been made to this House by the gentleman from New York and the gentleman from Kentucky is one that seldom falls upon human ears.

It is seldom, indeed, in this day of civilization, that such a story is told to men; 30,000 Christian people, within twenty months, slaughtered by the unspeakable Turk solely because of their religious views! And what do we propose to do about it? This resolution contains, first, our mild protest against outrages like these. Then we express our sympathies for those that yet remain in Armenia and that may be the subject of slaughter. Sympathy for the people menaced with a peril like this, or suffering grief for slaughtered friends! They do not want sympathy, Mr. Speaker; they want rescue. They do not want our mere words; they want Christian people to come to their relief. And we ask that those nations that have witnessed all these transactions of outrage, that are as familiar with all of these facts as we are—we ask these people who for years have been derelict of duty now to respond to the dictates of duty and see to it that their treaty stipulations are enforced. That is what we do. We protest, and the gentleman from New York tells us that he scarcely thinks it possible—that it is 'barely possible'—that something may come from this action which has been reported by our Committee on Foreign Affairs after a month of deliberation.

"Mr. Speaker, we all know that the English Government owns largely of Turkish bonds. We know that English capital, to the extent of hundreds of millions, is invested in Turkey, and that capital is intent upon preserving the autonomy of Turkey in order to protect those investments. We know that it is that and that alone which has kept this foul blot of a Government upon the map of the world for the last twenty years. We know that Russia stands anxious to get to the Mediterranean Sea, and that France and Germany and Austria and England are unwilling that the balance of power in Europe shall be disturbed. We know that they will continue the situation as it is, and yet we appeal to them to do that which humanity says we should do and that we know they will not do. We have it in our own hands to do something more than make this mild protest, and at the proper time I intend to offer this amendment:

"That for the purpose of emphasizing our protest against the murders and outrages above recited, the President is directed to furnish the Turkish minister his dismissal as a representative of the Sultan at this capital, and terminate all diplomatic relations with the Government of Turkey."

"Mr. Speaker, that kind of a protest would mean something. Gentlemen around me say that this is too drastic, that this is not diplomacy. It may be that it is not diplomatic and that it is drastic, but it means something more than mere words. It is within the limitation of that action that we can take. We can say here to all the world that we will not recognize as a civilized government that government which permits the outrages against its citizens that the Turkish Government has permitted. We can do that. We can say that it is unworthy of a place among the nations, and we ought to do it."

Mr. Hitt, of Illinois, said:

"I have no want of sympathy such as the gentleman expresses for those who suffer; but his remedy, dismissing the Turkish minister, to be certainly followed by the dismissal of our minister at Constantinople, is a strange, extraordinary one—to take away the one instrumentality by which we now are protecting many: an instrumentality which, by the code of the world, by international law, stronger than the applause of the gallery, enables us to put out our arm and save an American anywhere in the midst of massacre, of burning, and of blood, and it has done it.

"That is the testimony. No one regrets more than I do that these resolutions seem so weak, that the remedy is so feeble. But how far can we go? Our action is limited by our power. Gentlemen have suggested to the committee and numerous letters from eminent men and from societies have proposed that we seize the ports of Turkey. That is still more drastic than dismissing the Turkish minister. It has been proposed that we send a fleet. Another distinguished gentleman, whose name it would not be proper to mention here proposed, that we should join with Russia in what is substantially an invasion of Turkey.

"These are not methods consonant with our traditions or our policy. We can do something—not much.

"Any swagger which we may ourselves indulge toward Turkey will be wholly ineffectual. Dismissing their minister and bringing home our own, we will simply exasperate them and take away from ourselves the power we have now of preventing the property and lives of our citizens in Turkey from being destroyed. The Turkish Government is responding to the claim for property being destroyed, that every cent will be paid in full. They are taking the same time to examine the bill that we took in making out the bill. That is not only the usage of nations, but of individuals in private disputes.

"Protection has been given to Americans in perhaps overabundance, in order that we might not have a claim for intervention on behalf of those unhappy victims of cruelty and fanaticism who are falling all about the Americans there."

Mr. Smith, of Michigan, said:

"While I would not go so far as my friend from Iowa and sever all official relations with the Government of the Sultan, I would not dispatch this joint resolution expressing the sentiment of the American people by the ordinary method of transmission, but after it passes and receives the sanction of the Executive, I would authorize him to place it in the hands of a captain of an American man-of-war and ask him to deliver it in person to the reigning authority on the shores of the Black Sea."

Mr. Mahany, of New York, said:

"Mr. Speaker, in the speech of the gentlemen from Georgia I notice that he laid especial stress upon the fact that we are indebted in a marked degree to the Government of Turkey for 'special and particular protection to our citizens.' I do not apprehend that the people of this republic are under any especial obligation to the Turkish or to any other government for not murdering in cold blood citizens of the United States. Nor should we be grateful to any foreign power for refraining from practicing on American citizens such villainies as may be perpetrated on the defenseless subjects of its own sovereignty.

"Mr. Speaker, the gentleman [from Texas] said that this question, viewed from the standpoint of the signatory powers that participated in the Treaty of Berlin, was somewhat in the nature of a contract, in which the obligation concerned only the contracting parties to fulfill or not to fulfill the terms of the agreement; but, if the gentleman from Texas will permit me to observe, there is no contract known to man that will permit either or any of the contracting parties an unlimited license in murder, in brutality, in every conceivable atrocity. International law, in its development, has a tendency to narrow and to crystallize. From time to time great revulsions of human sentiment, great declarations of allegiance to higher principles, sweep aside these crystallizations of outworn conditions and establish new ideas and new phases of thought and action for the government of mankind. And it seems to me, Mr. Speaker, the time has arrived

for us to state squarely and fairly to the Government of Turkey that we, as a civilized nation, in the forefront of human progress and human enlightenment, will not sit idly by and see these outrages perpetrated without at least lifting a manful voice of protest against them.

"There is manhood in nations as well as in individuals. If one of you gentlemen sitting in this hall—if my friend from Georgia or my friend from Texas—were to see a helpless woman or a defenseless child assaulted upon Pennsylvania Avenue and did not raise his voice in protest or offer other resistance to prevent the outrage he would be, in the eyes of the law, a participator in the crime; and I say that as the representatives of the United States sitting here in this magnificent Capitol, dedicated to tolerance and to human liberty, we shall be guilty participators in the Armenian outrages and atrocities if we do not lift our voice in protest against the infinite and unspeakable villainies perpetrated by the Turkish Government. My friends who oppose these resolutions have laid great stress upon the view that it is not our duty to interfere in the domestic concerns of foreign nations and that we ought to keep distinctly to ourselves. Well, my friends, if we let these slaughters pass without protest, if we sit here in suppliance, if we sit here in silence and in cowardice while such wrongs shame the eternal heavens, then everything that we stand for among the governments of earth, all the national mission and destiny to make for truth and freedom which is the just pride of American citizenship, is but the empty phrasing of still emptier words, and that magnificent statue in the harbor of New York which holds up the light of tolerance and of liberty to all the world is a delusion and a lie.

"What the distinguished gentleman from Iowa said is the gist of this whole question. We may with justice and propriety turn aside from the minor considerations of international law and say to the Executive, as the eminent Representative from the State of Iowa urges us to say: Give back to the Turkish minister his passports; send him home to the Sublime Porte with the message that the Congress of the freest, the most moral, the most intelligent, and the most tolerant country on earth protests against his outrages on defenseless women and helpless children, and that we want no fraternity with a man or a sovereign whose hands are dripping with the gore of the innocent."

Mr. Grosvenor, of Ohio, said:

"If the outrages committed in Turkey are so great as to call upon us to demand the execution of the provisions of that treaty by the other powers of Europe, why may we not, in a proper manner, protest to Turkey herself, directly, against the outrages she has committed? Why may we not say to Turkey in some sort of diplomatic language, that will mean a little something: 'You have murdered 30,000 people for no other reason than that they were Christians and did not belong to the religion of your nationality. We in America protest to you against it as an outrage and protest in the name of Christian civilization.' Why should we call upon other nations of Europe to do that which we have a perfect right to do for ourselves?"

"That is not all. Why may we not say to a nation that murders 30,000 people in a very few months' time, by a line of atrocities that has stirred the blood of the American people as nothing has ever done heretofore, except it be the recitation of the murders committed in the Wyoming valley and other scenes in our own country by the Indians under the stimulus of the same nation that stands across the pathway of the protection of Christians in Turkey—why may we not protest, in thunder tones, against such treatment as that, by saying plainly and

emphatically to that sort of nation, 'We do not want anything to do with you.'

"The argument is now that Turkey has hostages in the person of our representatives abroad. Turkey, we are told, has in her camp some of our prisoners that will be scalped and burned at the stake. You must not disturb the peace and harmony of the Emperor of Turkey, because they are such a peculiar people, they are such a class of men, they belong to such a peculiar race of people, that if the United States should protest against the outrages already committed they might work destruction, and kill some of our American citizens and burn American property. And so, in the face of this dire threat, the protest comes that we must waive our manhood, we must sink our national independence and make our protest through somebody else who will transmit our language lest the deadly Turk should drive his scimitar, already gory with the blood of 30,000 Christians, into the bodies of some of our own people.

"We have in that way on this floor to-day given notice to Turkey how she can protect herself. She needs no ships, she needs no army, she needs nothing but her murderous purpose. She has been informed by distinguished gentlemen, representatives of the Committee on Foreign Affairs, that she has a means of redress in her own hands. They have said: 'Go on, Mr. Turk, with your outrages, murder as much as you please, disgrace civilization, kill and burn, and we dare not do anything, for you have hostages in your camp, and we fear you will kill our people; and therefore, in the interest of saving the lives of American people who are to-day in the Ottoman Empire, we will make ourselves contemptible in the sight of the world.'

"So, Mr. Speaker, I adopt the position taken by the gentleman from New York who made this report. There is nothing in these resolutions; and when a great nation, when a great power like the United States opens its mouth to say something and says nothing, she has lowered herself in the estimation of all the nations of the world. Let foreign diplomacy take hold of this insignificant paper. Let foreign diplomats analyze the meaning of all this, and what have you got? You have an enunciation, coming from the champion of this resolution, speaking, I take it, by authority of the committee, that they dare not attack Turkey lest Turkey shall retaliate against the United States. I should like to have the gentleman tell me when the time will come that that argument will not be an absolute barrier to an expression of the manly independence of this Government against any nation on the face of the earth?"

Mr. Hepburn's amendment was rejected by a vote of 19 to 121. Mr. Taft, of Ohio, offered an amendment proposing to add the following to the concurrent resolutions:

"Resolved, That the conscience of humanity fastens upon the six Christian powers above named the responsibility of the continuance of the butchery of Armenian Christians; that the spectacle of these six leading Christian powers permitting the murder of Christians who by treaty stipulations were placed under their special care is humiliating to the last degree and discredits the Christian religion throughout the world.

"Resolved, That that one of the signatory powers which first takes action under the Berlin Treaty to prevent the further butchery of defenseless Armenian Christians will receive the grateful recognition not only of the American people, but of the entire civilized world."

This was rejected, as was also a motion to recommit with instruction, and the resolution passed by a vote of 143 yeas to 26 nays.

Appropriations.—The appropriations made at the session were the following:

Agriculture.....	\$3,255,532.00
Army.....	23,378,402.73
Diplomatic and consular.....	1,642,558.76
District of Columbia.....	5,905,082.48
Fortifications.....	7,397,888.00
Indian.....	* 7,390,496.79
Legislative, etc.....	21,518,834.71
Military Academy.....	449,525.61
Navy.....	30,562,739.95
Pension, including deficiencies *.....	141,328,580.00
Post office.....	92,571,564.22
River and harbor.....	+ 12,621,800.00
Sundry civil.....	33,031,132.19
Deficiencies, except for pensions.....	+ 15,326,503.05
Total.....	\$596,280,660.49
Miscellaneous.....	\$ 425,000.00
Total regular annual appropriations.....	\$396,705,660.49
Permanent annual appropriations.....	119,054,160.00
Total.....	\$515,759,820.49

* This sum is exclusive of \$1,660,000 for second installment on account of purchase of Cherokee Outlet, which has been paid under "permanent annual appropriations," but is not included in the estimates thereunder for 1897. A like sum was included in the Indian appropriation act passed at the last session of the last Congress.

† This does not include \$3,000,000 estimated to be necessary under indefinite appropriation made in river and harbor act of this session to purchase property of Monongahela Navigation Company.

‡ This sum includes \$1,496,679.56 for objects that are in no sense deficiencies; \$3,614,133.77 to pay judgments of the courts and audited accounts certified by the accounting officers for 1893 and prior fiscal years; in all, \$5,110,813.33.

§ Estimated.

¶ This is the amount originally submitted to Congress by the Secretary of the Treasury as estimated to be necessary under permanent specific and permanent indefinite appropriations, except that to the amount thus submitted for 1891, \$101,628,453, there are added expenditures under permanent appropriations made by the Fifty-first Congress subsequent to said estimate, as follows: Salaries diplomatic and consular service, \$27,756.79; redemption national bank notes, \$23,553,298.50; expenses of Treasury notes, \$218,362.60; coinage of silver bullion, \$210,893.14; rebate tobacco tax, \$770,082.39; and repayments to importers and for debentures and drawbacks, customs service, \$4,915,285.28; in all, \$29,695,678.70.

The river and harbor bill was vetoed in the following message:

To the House of Representatives:

I return herewith without approval House bill No. 7977, entitled "An Act making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes."

There are 417 items of appropriation contained in this bill, and every part of the country is represented in the distribution of its favors.

It directly appropriates or provides for the immediate expenditure of nearly \$14,000,000 for river and harbor work. This sum is in addition to appropriations contained in another bill for similar purposes amounting to a little more than \$3,000,000, which have already been favorably considered at the present session of Congress.

The result is that the contemplated immediate expenditures for the objects mentioned amount to about \$17,000,000.

A more startling feature of this bill is its authorization of contracts for river and harbor work amounting to more than \$62,000,000. Though the payments on these contracts are in most cases so distributed that they are to be met by future appropriations, more than \$3,000,000 on their account are included in the direct appropriations above mentioned. Of the remainder, nearly \$20,000,000 will fall due during the fiscal year ending June 30, 1898, and amounts somewhat less in the years immediately succeeding. A few contracts of a like character, authorized under previous statutes, are still outstanding, and to meet payments on these more than

\$4,000,000 must be appropriated in the immediate future.

If, therefore, this bill becomes a law, the obligations which will be imposed on the Government, together with the appropriations made for immediate expenditure on account of rivers and harbors, will amount to about \$80,000,000. Nor is this all. The bill directs numerous surveys and examinations which contemplate new work and further contracts, and which portend largely increased expenditures and obligations.

There is no ground to hope that in the face of persistent and growing demands the aggregate of appropriations for the smaller schemes not covered by contracts will be reduced or even remain stationary. For the fiscal year ending June 30, 1898, such appropriations, together with the installments on contracts which will fall due in that year, can hardly be less than \$30,000,000; and it may reasonably be apprehended that the prevalent tendency toward increased expenditures of this sort and the concealment which postponed payments afford for extravagance will increase the burdens chargeable to this account in succeeding years.

In view of the obligation imposed upon me by the Constitution, it seems to me quite clear that I only discharge a duty to our people when I interpose my disapproval of the legislation proposed.

Many of the objects for which it appropriates public money are not related to the public welfare, and many of them are palpably for the benefit of limited localities or in aid of individual interests.

On the face of the bill it appears that not a few of these alleged improvements have been so improvidently planned and prosecuted that after an unwise expenditure of millions of dollars new experiments for their accomplishment have been entered upon.

While those intrusted with the management of public funds in the interest of all the people can hardly justify questionable expenditures for public work by pleading the opinions of engineers or others as to the practicability of such work, it appears that some of the projects for which appropriations are proposed in this bill have been entered upon without the approval or against the objections of the examining engineers.

I learn from official sources that there are appropriations contained in the bill to pay for work which private parties have actually agreed with the Government to do in consideration of their occupancy of public property.

Whatever items of doubtful propriety may have escaped observation or may have been tolerated in previous executive approvals of similar bills, I am convinced that the bill now under consideration opens the way to insidious and increasing abuses, and is in itself so extravagant as to be especially unsuited to these times of depressed business and resulting disappointment in Government revenue. This consideration is emphasized by the prospect that the public Treasury will be confronted with other appropriations made at the present session of Congress amounting to more than \$500,000,000.

Individual economy and careful expenditure are sterling virtues which lead to thrift and comfort. Economy and the exaction of clear justification for the appropriation of public moneys by the servants of the people are not only virtues but solemn obligations.

To the extent that the appropriations contained in this bill are instigated by private interests and promote local or individual projects, their allowance can not fail to stimulate a vicious paternalism and encourage a sentiment among our people, already too prevalent, that their attachment to our Govern-

ment may properly rest upon the hope and expectation of direct and especial favors, and that the extent to which they are realized may furnish an estimate of the value of governmental care.

I believe no greater danger confronts us as a nation than the unhappy decadence among our people of genuine and trustworthy love and affection for our Government as the embodiment of the highest and best aspirations of humanity, and not as the giver of gifts, and because its mission is the enforcement of exact justice and equality and not the allowance of unfair favoritism.

I hope I may be permitted to suggest at a time when the issue of Government bonds to maintain the credit and financial standing of the country is a subject of criticism that the contracts provided for in this bill would create obligations of the United States amounting to \$62,000,000 no less binding than its bonds for that sum.

GROVER CLEVELAND.

EXECUTIVE MANSION, May 29, 1896.

The House Committee on Rivers and Harbors reported the bill back, recommending that it should pass notwithstanding the disapproval of the Executive. The report took up and answered each objection to the bill which the message presented as follows:

"Your committee feel that they would be remiss in their duty to the House of Representatives if they should fail to make some statement regarding the merits of said bill, and especially as the same may be affected by the criticism thereof contained in the message of the President. It may be well to state at the outset that of the 417 items of appropriations contained in the bill, all of them except 27 are for projects contained in river and harbor bills heretofore enacted into law, and which projects now and for some years have been in process of construction and completion by the Government. No new projects were added to the river and harbor bill of 1894. It will thus be seen that the principal work of the Committee on Rivers and Harbors has been the investigation and examination of works of improvement to which Congress has by repeated acts committed itself. The river and harbor bill of 1892 also contained a very limited number of new projects. The river and harbor bill of 1890 appropriated \$25,136,295, and placed certain works under the contract system, which involved the additional expenditure of \$15,282,980. It appears, therefore, from this statement that by far the greater number of projects appropriated for in this bill were also appropriated for in the bill of 1890 and which are not yet completed. That bill was referred by President Harrison to Gen. Thomas L. Casey, then chief of engineers, who was noted for his rugged honesty, his great executive capacity, and his superb mastery of all matters coming under his supervision, for his opinion as to the merits of the several projects therein contained. After an examination of the bill he reported to President Harrison that only 8 items in the bill, in his judgment, seemed to be of limited or local benefit. The gross amount appropriated for these items was \$72,500. All other items in that bill were considered by him to be in the interest of commerce. From this it will be seen that by far the larger part of the projects contained in the present bill passed the scrutiny and received the approval of Gen. Casey and have gone unchallenged until now. The bills of 1890 and 1892 were approved by President Harrison, and the bill of 1894 was permitted by the present Executive to become a law by limitation.

"The President in his message states:

"Many of the objects for which it appropriates public money are not related to the public welfare,

and many of them are palpably for the benefit of limited localities or in aid of individual interests."

"Your committee is not advised as to the objects against which this criticism is directed. They can only state that this bill was prepared after a most careful examination of the reports of the engineers and after giving hearings to delegations and others interested in the various projects named in the bill, and they respectfully submit that they were careful to avoid making provision for any objects which were not directly related to the public welfare and in the interests of commerce.

"The President also states that—

"On the face of the bill it appears that not a few of these alleged improvements have been so improvidently planned and prosecuted that after an unwise expenditure of millions of dollars new experiments for their accomplishment have been entered upon."

"Your committee, in the absence of any direct information upon this point, have concluded that this criticism is based upon a misconception of the language used with regard to quite a number of the projects named in the bill. It has often occurred that after a project had been adopted in accordance with certain defined plans submitted by the engineers the interests of commerce required that a greater and more effective improvement than that first contemplated should be made. In such cases it has long been the custom of Congress, amply justified by results, to order from time to time new surveys and estimates to be made with a view to enlarging the scope of these projects. In making appropriations for these enlarged projects the bill often directs that the money appropriated shall be expended in accordance with the modified or enlarged projects submitted by the engineers. It may be that the President inferred from the language so used that the original plans had been improvident and ill-advised, and the money expended upon them had been wasted, whereas the truth is that the money expended upon the original plans was judiciously expended and would have been expended even if the modified or enlarged plans had been originally adopted, the work under the original plans being in all cases included in that embraced in the modified plans. Instances of these so-called modified or enlarged projects may be found in the cases of Baltimore harbor; Portland harbor, Maine; Newtown creek, which is a part of New York harbor; Wilmington, Del.; St. John's river, Florida; Savannah harbor, and many others.

"The President also states:

"I learn from official sources that there are appropriations contained in the bill to pay for work which private parties have actually agreed with this Government to do in consideration of their occupancy of public property."

"When this bill was originally reported your committee were not aware that it contained such appropriations as those described by the President. Since the reception of his message they have re-examined the bill and made diligent inquiry to ascertain if in fact it does contain such appropriations, and they feel justified in asserting and do assert that the information upon which the President bases this charge is wholly without foundation. There is nothing in the reports of the engineers or in any information laid before your committee from any source whatsoever calculated to suggest even a suspicion that any such appropriations as indicated by the President are contained in the bill.

"The President states that this bill—

"Directly appropriates or provides for the immediate expenditure of nearly \$14,000,000 for river and harbor work."

"In so far as this statement is calculated to produce the impression that it is contemplated that the

whole amount of cash appropriated by this bill is to be immediately expended it is an error. It is well understood that only one river and harbor bill is passed by each Congress. The cash appropriated therefore by this bill is intended to cover the expense of the prosecution of works named in the bill, except as to those placed under the contract system, for the whole of the two fiscal years ending June 30, 1898. The actual cash appropriation carried by this bill is \$12,621,800, which includes the cash appropriation amounting to \$2,525,500 for projects placed under the continuous contracts in the bill.

After alluding to the \$3,000,000 carried by the sundry civil bill for works heretofore placed under contract the President adds:

"The result is that the contemplated immediate expenditure for the objects mentioned amounts to about \$17,000,000."

"For the reason already given, it is obvious that this statement is an error. As already stated, \$12,621,800 is intended to be expended during the two fiscal years ending June 30, 1898.

"The President is also mistaken in his statement that this bill authorizes contracts for river and harbor work amounting to more than \$62,000,000. The true amount for which such contracts are authorized is \$59,616,404.91.

"The President also states in connection with his discussion of these contract works:

"Of the remainder, nearly \$20,000,000 will fall due during the fiscal year ending June 30, 1898, and amounts somewhat less in the years immediately succeeding."

"This is also an error for the reason that if all the contracts authorized by this bill are promptly entered into by the Secretary of War for the full amounts estimated for the completion of each by the chief of engineers the maximum amount that can be expended under the limitations of this bill in any one fiscal year is \$16,612,873.91.

"The President also says:

"There is no ground to hope that in the face of persistent and growing demands the aggregate of appropriations for the smaller schemes not covered by contracts will be reduced or even remain stationary. For the fiscal year ending June 30, 1898, such appropriations, together with the installments on contracts which will fall due in that year, can hardly be less than \$30,000,000."

"The President here falls into the error of assuming that there will be another appropriation for the 'smaller schemes' not covered by contracts to be expended during the fiscal year ending June 30, 1898. As a matter of fact, the next river and harbor bill, should one be passed, will only cover the cost of prosecuting these smaller works for the two fiscal years ending June 30, 1900, and no additional appropriations for the smaller works will be made for the fiscal year ending June 30, 1898.

"The accusation of extravagance in this bill is most effectually disproved by a comparison with the appropriations for river and harbor improvements already made for the six years ending June 30, 1896:

There has been appropriated, commencing with the river and harbor bill of 1890, including \$3,000,000 carried in the pending sundry civil bill.....	\$100,200,000.00
Or an average per annum of.....	16,700,000.00
The amount carried under contract in the present bill, which will be distributed over a period of six years, is.....	59,616,404.91
Our experience with the contract system in the past, together with positive statements laid before your committee, justify the expectation that these contract works will be completed for at least 30 per cent. less than the amount stated, or in round figures, say	42,000,000.00
To this should be added necessary to complete harbor works hitherto undertaken...	4,000,000.00

And it is safe to assume that the river and harbor bills which will probably be passed in 1898 and 1900 will each carry not exceeding.....	10,000,000.00
Add to this cash appropriated in the present bill.....	12,621,800.00
And it may be estimated that during the ensuing six years there will be expended for river and harbor improvements in all.....	78,621,800.00
This would involve the expenditure during each of the next six years of.....	13,100,000.00
As against.....	16,700,000.00

during each of the past six years. This does not include the item for probable expenditure under condemnation proceedings authorized for dams and locks upon the Monongahela river. This amount can not be definitely stated.

"It should be borne in mind that the sum of \$59,000,000 and more embraced in these continuous contracts provided for in this bill are the estimates of the engineers upon the old plan of doing the work by piecemeal, and that these estimates were many of them made three, four, five, or more years ago, when the cost of construction was much greater than it is now; that in formulating this bill we have limited in all cases the cost of any projects put upon the continuous-contract plan to the estimates of the engineers, and there is every reason to believe that the experience of the past will be the experience of the future in the saving upon these contracts; and when we say that we believe these contracts will all be completed for \$42,000,000 we think we are easily within the range of accurate statement."

To the report was added a comparison of amounts appropriated, as below:

Amounts appropriated in river and harbor appropriation acts, Forty-eighth to Fifty-third Congresses:

Forty-eighth Congress, first session.....	\$13,949,200
Forty-ninth Congress, first session.....	14,473,900
Fiftieth Congress, first session.....	22,397,616
Fifty-first Congress, first session.....	25,136,235
Fifty-second Congress, first session.....	21,154,218
Fifty-third Congress, first session.....	11,643,180

Fifty-fourth Congress, pending bill..... \$12,621,800

The bill was passed over the veto without debate by the following vote: Yeas, 219; nays, 61; not voting, 74. In the Senate it was debated and passed by a vote of 56 yeas to 5 nays, 28 not voting.

Among the "riders" carried by the appropriation bills, the most important was the Updegraff bill to abolish the fee system as to United States district attorneys and marshals, and to substitute salaries, which was reported from the Committee on the Judiciary of the House of Representatives and engrafted upon the legislative, executive, and judicial appropriation bill. It is estimated that the direct result of the legislation will be a saving of at least \$1,000,000 a year, of which the Treasury will receive the benefit of about \$600,000.

Contested Seats.—The case of Mr. Du Pont's title to a seat in the Senate from Delaware (see "Annual Cyclopaedia," 1895, pages 227, 228) was debated at length and decided against him. In the House there were no fewer than 32 cases of contest. In 17 of these the committees unanimously decided in favor of the sitting members, who were Democrats; in 2 cases committees unanimously decided in favor of contestants, who were Republicans; in 9 cases majorities of committees decided against sitting members, who were Democrats (in one of these cases declaring the seat vacant), and one case was not disposed of by the committee which had charge of it. The net result has been the seating of 2 Populists and 8 Republicans in the place of 10 Democrats, the unseating of 2 Democrats, which created vacancies, and the leaving of the titles of other sitting members whose seats were contested undetermined.

Bond Investigation.—Late in the session the Senate adopted a resolution for an investigation by a subcommittee of the Committee on Finance of the bond transactions of the present Administration, and the inquiry was begun.

Other Measures.—Among the more important acts passed were the following:

Amending the land grant forfeiture acts "so as to extend the time within which persons entitled to purchase lands forfeited by said act shall be permitted to purchase the same in the quantities and upon the terms provided in said section, at any time prior to Jan. 1, 1897: *Provided*, That actual residence upon the lands by persons claiming the right to purchase the same shall not be required where such lands have been fenced, cultivated, or otherwise improved by such claimants, and such persons shall be permitted to purchase 2 or more tracts of such lands by legal subdivisions, whether contiguous or not, but not exceeding 320 acres in the aggregate."

Requiring purchasers of forfeited railroad lands who "have paid only a portion of the purchase price to the company, which is less than the Government price of similar lands, before the delivery of patent for their lands, to pay to the Government a sum equal to the difference between the portion of the purchase price so paid and the Government price, and in such case the amount demanded from the company shall be the amount paid to it by such purchaser."

To open forest reservations in Colorado for the location of mining claims.

Providing that in considering claims filed under the pension laws the death of an enlisted man or officer shall be considered as sufficiently proved if satisfactory evidence is produced establishing the fact of the continued and unexplained absence of such enlisted man or officer from his home and family for a period of seven years, during which period no intelligence of his existence shall have been received.

Repealing the act which provides that no person who held a commission in the army or navy of the United States at the beginning of the war of the rebellion and afterward served in any capacity in the military, naval, or civil service of the so-called Confederate States, or either of the insurrectionary States, shall be appointed to any position in the army or navy.

Appropriating \$75,000 to carry out stipulations of treaty for investigation and adjudication of Bering Sea claims, and providing that the commission when sitting at San Francisco shall have power to compel the attendance of witnesses.

Appropriating \$75,000 for the joint expense of locating and marking the boundary line between Alaska and British North America by an international commission.

Amending section 3255 of the Revised Statutes so as to provide that distillers of brandy exclusively from fruits may be exempted from all provisions of the internal-revenue law, except as to the tax thereon, whenever the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall deem it expedient.

Authorizing and directing the Commissioner of Labor to correspond and confer with the census officers of other governments for the purpose of securing conformity in the inquiries relating to the people, to be used in future censuses, and to report to Congress as soon as practicable a plan for a permanent census service.

To provide for the immediate destruction of all income-tax returns and all statements and records relating to them.

Authorizing foreign exhibitors at the Tennessee

Centennial Exposition to bring in foreign laborers to prepare and display their exhibits, and allowing articles for such exhibits to be imported free.

Making it a felony for any person in Indian Territory to shoot at or into, or throw any rock or other missile at or into, any railway vehicle.

To provide for the safety of passengers on excursion steamers.

To amend the act granting right of way upon public lands of the United States for reservoir and canal purposes.

To make one year's residence in a Territory a prerequisite for obtaining divorce there.

To regulate marriages in the District of Columbia.

Providing for the extension of the time within which suits may be brought to vacate and annul land patents.

Prohibiting prize fighting and pugilism in the Territories and the District of Columbia.

To enable the Secretary of State to reconvene the delegates from the United States to the International Marine Conference of 1889 in case Parliament should propose amendments to the rules which the conference reported.

Extending the time within which vessels in the foreign trade may unload.

Abolishing days of grace on promissory notes, drafts, etc., in the District of Columbia.

Incorporating the national society of Daughters of the Revolution.

Providing that the chaplain of the United States Military Academy shall be appointed for a term of four years, shall be eligible to reappointment, and shall receive the same pay and allowance as a captain of cavalry.

To improve the merchant marine engineer service and increase the efficiency of the naval reserve by providing that American vessels shall employ only United States citizens as engineers and assistant engineers, regulating the terms of license, and providing for drafting them into the naval service in case of war.

Making advance freight charges and contributions in general average a lien in favor of the ocean carrier upon goods imported.

Not signed by the President.—Among the bills allowed by the President to become laws without his signature was one authorizing the leasing of school lands in Arizona and others relating to rights of way for railroad companies through the Indian Territory and Indian reservations. He did not sign the joint resolution directing the Secretary of Agriculture to buy and distribute seeds, bulbs, etc., as had been done in previous years, nor the public acts making appropriations for the support of the Department of Agriculture, which contained a like provision.

Pacific Railway Funding Bill.—Bills to amend the acts of 1862, 1864, and 1878 in regard to aid to Pacific railroads, and to provide for a settlement of claims growing out of the issue of bonds for that purpose, were introduced into the Senate by Senators Frye, of Maine, and Thurston, of Nebraska. Mr. Allen, of Nebraska, introduced one "directing the foreclosure of the Government lien on the Pacific railroads and for other purposes." The Committee on Pacific Railroads, to which these were referred, reported a substitute, which Senator Gear, of Iowa, who presented the report, described briefly as follows:

"The original debt of the Pacific railroad companies to the United States is paid and the money is in the Treasury of the United States. This bill simply deals with the interest. Whether the matter is dealt with in the best manner is for the Senate to decide. The bill provides for certain pay-

ments, \$1,000 a day for the first ten years, \$1,500 a day for the next ten years, and \$2,000 a day thereafter until final payment. And also the payment of some annual interest."

This bill provided for refunding the debt of the roads. A minority report adverse to the bill was presented by Senator Morgan, of Alabama. The matter was finally left over, the proposition to refund the indebtedness having received the approval of the majority of the committees on Pacific railroads in both houses.

Passed the House only.—A bill to amend the immigration laws by adding to the classes of aliens excluded all male persons between sixteen and sixty years of age unable to read and write the English or some other language, passed the House only, as did also the general pension bill, and one concerning tonnage tax, proposing to do away with present provisions by which foreign vessels are enabled to escape the payment of \$100,000 annually, while United States vessels save by the same provision only \$3,000 or \$4,000.

Bills offered.—The total number of bills and joint resolutions offered in the House of Representatives was about 9,664, and in the Senate about 3,457, many of the Senate bills, however, being duplicates of House bills, and many of the House bills duplicates of Senate bills. A large proportion of these consisted of private bills, of which about the usual proportion passed and became laws. The vetoes of individual pension bills were less numerous than in any session of Congress in President Cleveland's first administration.

Work of Committees.—To the House Committee on Ways and Means 178 bills and resolutions were referred, of which 32 were reported to the House, and of these 18 passed that body and 5 passed the Senate and became laws. In the consideration of these measures about 80 hearings were held and testimony was taken which made a volume of about 1,000 pages.

The number of bills and resolutions referred to the Committee on the Judiciary was 282, of which 42 were favorably reported and 28 passed.

There were referred to the Committee on Naval Affairs of the House 326 bills and resolutions, of which 124 were favorably reported to the House. The bill making appropriation for the naval establishment was formulated in committee, and in it were included several subjects separately embodied in bills, as the provisions for a model tank for naval construction, for the increase of the enlisted force of the navy, for the improvement of the naval reserve, and for certain local improvements at navy yards and stations. The long contest between the House and Senate in regard to the number of battle ships to be authorized resulted in a compromise, by which the number was fixed at 3 instead of 4, as proposed by the House, and 2 as proposed by the Senate. The Senate, however, rejected the compromise, and this matter is still undetermined.

An important measure recommended by the Navy Department and agreed upon unanimously by the committee was the bill providing a retired list for enlisted men and petty officers of the navy after thirty years' service.

Upon a resolution to investigate the alleged abuses of the civil-service law in the administration of the Brooklyn Navy Yard, the Naval Committee had hearings and examined voluminous documentary evidence furnished by the Navy Department.

The Committee on Merchant Marine and Fisheries reported some important bills, several of which passed the House, and one of which was rejected owing to the temporary absence of many members when the vote was taken and a misunderstanding among other members as to the scope of the meas-

ure. It was one to abolish compulsory pilotage as to vessels engaged in the coastwise trade.

The Committee on Military Affairs reported a bill to reorganize the line of the army.

Another important bill reported from the Military Committee authorizes the duplicating of the machinery at the Springfield Armory, where rifles are manufactured. The bill appropriates \$150,000. The proposition, if adopted, will make it possible for the armory to turn out annually twice as many rifles as at present. Another measure favorably reported by the committee is that establishing a military park on the battlefield of Vicksburg.

To the Committee on Invalid Pensions were reported 2,446 House bills and 233 Senate bills. They reported upon 614 claims and measures, and about 225 were approved by the House.

Two important bills were reported from the Committee on Interstate and Foreign Commerce, one to allow a submarine cable to Hawaii, Japan, and China, and one in the Nicaragua Canal.

Bills on the Calendars.—Among the bills on the Senate calendar at the date of adjournment which had been favorably reported from committees were a number of considerable importance, among which were the following: House bill to prevent the extermination of the Alaska fur-seal herd; House bill to reduce the cases in which the penalty of death may be inflicted; Senate bill to provide for seacoast defenses; Senate bill for relief of Indian citizens; Senate bill to amend the navigation laws; Senate resolution to open to public entry the Ucompahgre Indian Reservation in Utah; Senate bills for admission of New Mexico and Arizona as States; Senate bill for the appointment of a nonpartisan labor commission; Senate resolution authorizing the appointment of a board of naval officers to report upon the cost of establishing a coaling station on Navassa island; Senate bill providing for the election of a Delegate in Congress from Alaska; Senate bill to establish a uniform system of bankruptcy; a bill to reclassify railway postal clerks and prescribe their salaries; Senate bill to refund indebtedness of Pacific railroads to United States (identical with House bill on same subject); Senate resolution to facilitate reorganization of Northern Pacific Railroad Company; Senate bill for establishment of a bureau of animal industry; Senate bill to amend laws relating to American seamen; Senate bill to protect forest reservations; Senate bill for laying a cable between the United States and Hawaii and Japan; House bill for protection of yacht owners and shipbuilders; Senate bill directing the Interstate Commerce Commission to prepare a uniform freight classification.

Among the more important measures on the House calendars were the following: To establish a classification division in the Patent Office; to aid the public-land States to establish and support schools of mines; to codify the pension laws; to amend the postal laws relating to second-class matter; to promote the efficiency of the revenue-cutter service; to reclassify railway postal clerks and prescribe their salaries; to provide for final adjustment of swamp-land grants; to increase the pay of letter-carriers; to establish a bureau of animal industry; to fix the pay of superintendents and crews of life-saving stations; to duplicate machinery at Springfield Armory; to amend the civil-service law; to classify the clerks in first-class and second-class post offices; to create a special commission on highways—the "Good Roads Commission"; to refund the indebtedness of the Pacific railroads to the United States; the Hawaii-Japan-China cable bill; the Nicaragua Canal bill; to protect public forest reservations; to amend the navigation laws; to provide for a commission on the subject of the

alcoholic liquor traffic; to authorize the people of Oklahoma to form a constitution and State government; to grant *per diem* service pensions to honorably discharged officers and soldiers of the war of the rebellion; to prevent the purchase of or speculating in claims against the Government by United States officers; to amend the copyright law; to regulate mail matter of the fourth class; to increase the circulation of national banks; to amend and revise the patent laws; to protect the wages of seamen; to protect free labor from convict competition; to prevent forest fires on the public domain; to provide for the election of a Delegate in Congress from Alaska, and bills to provide for the admission as States of Arizona and New Mexico.

CONNECTICUT, a New England State, one of the original thirteen; ratified the national Constitution Jan. 9, 1788; area, 4,900 square miles. The population, according to each decennial census, was 237,946 in 1790; 251,002 in 1800; 261,942 in 1810; 275,148 in 1820; 297,675 in 1830; 309,978 in 1840; 370,792 in 1850; 460,147 in 1860; 537,454 in 1870; 622,700 in 1880; and 746,258 in 1890. Capital, Hartford.

Government.—The following were the State officers during the year: Governor, O. Vincent Coffin, Republican; Lieutenant Governor, Lorrin A. Cooke; Secretary of State, William C. Mowry; Treasurer, George W. Hodge; Comptroller, Benjamin P. Mead; Adjutant General, Charles P. Graham; Chief Justice of the Supreme Court of Errors, Charles B. Andrews; Associate Justices, David Torrance, Augustus H. Penn, Simeon E. Baldwin, and William Hamersley; Clerk, C. W. Johnson.

Finances.—The receipts of the State treasury for the fiscal year ending Sept. 30, 1896, were as follow: Military commutation tax, \$147,016.60; tax on mutual insurance companies, \$273,049.09; tax on railroads, \$862,439.25; tax on nonresident stock, \$102,640.87; tax on savings banks, \$340,404.81; avails of courts and forfeited bonds, \$20,573.05; national aid to soldiers' homes, \$33,972.86; Commissioner of Insurance, \$68,334.79; collateral inheritance tax, \$135,836.50; tax on investments, \$48,576.77; interest on deposits, \$24,474.31; tax on telegraph and telephone companies, \$10,533.91; tax on express companies, \$9,722.50; sundry taxes and receipts, \$34,700.10; miscellaneous, \$5,543.86; total yearly receipts, \$2,117,819.27. The funded debt of the State, Sept. 30, 1896, less cash in the treasury to credit of civil-list funds, was \$2,949,466.15.

Banks.—According to the last published report of the United States Comptroller of the Currency, Connecticut had, on Sept. 28, 1895, 82 national banks, with a combined capital of \$22,391,070, and total resources amounting to \$77,912,968.69. The last report of the Bank Commissioners, Oct. 1, 1895, shows that in the 8 State banks the deposits during the year increased \$597,282, and the undivided profits \$37,238, a gain of \$26,507. In the savings banks the number of accounts opened during the year was 53,534; the number of accounts closed, 41,313; the amount deposited (including interest credited), \$33,829,196; the amount withdrawn, \$26,973,732; the income of the year was \$7,488,492, of which \$5,451,233 was paid to depositors for interest; the number of depositors on Oct. 1 was 346,758, and the total of deposits \$143,159,123. The total of assets was increased during the year \$6,507,780, and the surplus \$367,563. The 9 trust companies have an aggregate capital of \$1,135,000, and their surplus and undivided profits have increased \$22,237, and their deposits \$839,275. The Commissioners report the banks of the State generally in a healthy condition, and recommend a number of changes in the banking laws of the State.

Insurance.—The receipts of the Connecticut insurance department for the fiscal year ending Sept. 30, 1896, amounted to \$67,870.70, which amount was paid to the State Treasurer. The expenditures during the year were \$33,781.12, an increase, compared with 1895, of \$7,594.94. The surplus was \$34,089.58. The General Assembly of 1895 passed an act placing secret or fraternal insurance societies under the supervision of the Insurance Commissioner. The act went into effect Aug. 1, 1895, and during that year two of these societies received permits to transact business in Connecticut. During the first six months of 1896, 26 additional societies received such permits.

Railroads.—The forty-third annual report of the Railroad Commissioners, covering the operations of the steam railroad companies for the year ending June 30, 1895, and of the street railway companies for the year ending Sept. 30, 1895, submitted to the Governor in January, 1896, gives the total miles of single track, excluding sidings and trackage rights, as 3,059.17. The capital stock of companies reporting was \$90,008,363.38; funded debt, \$44,261,372.76; current liabilities, \$13,087,867.41; gross earnings, \$35,206,110.71; operating expenses, being 68.43 per cent. of the gross earnings, \$24,091,893.56; net earnings, \$11,114,217.15; dividends paid, \$4,743,256; taxes paid to the State, \$731,070.15; total of taxes paid, \$1,807,710.35. During the year the New York, New Haven and Hartford Railroad Company acquired control of the New England Railroad. The casualties were many more than during the preceding year.

The last General Assembly passed an act requiring street railway companies to make annual returns to the Railroad Commissioners. From these returns it appears that the number of companies organized and reporting is 25, representing 299.55 miles of single track, or 317.22 miles including sidings. The capital stock is \$8,604,240; bonded indebtedness, \$7,966,000; floating indebtedness, \$1,123,457.79; total, \$17,723,697.79. The gross earnings were \$2,232,201.37; operating expenses, constituting 68.24 per cent. of the gross earnings, \$1,523,191.13; net earnings applicable to interest, taxes, and dividends, \$708,860.24; interest paid, \$278,136.26; taxes paid, \$76,522.34; dividends, \$168,630. All but one of the street railway lines are operated by electricity, and that one is now being electrically equipped. An act of the last Legislature provided that no electric, cable, or horse railroad should thereafter be constructed at grade across a steam railroad, nor a steam road across an electric, cable, or horse railroad.

In November, 1895, the State Board of Equalization fixed the valuation of the various steam railroads, for State taxation, at \$74,510,704.45, and the valuation of street railways at \$2,747,300.

Education.—The enumeration in 1895 of children of school age gave their number as 174,529, an increase over the preceding year of 3,940. For each such child the several towns are entitled to collect from the State \$2.25; \$1.50 to be paid from the civil list and 75 cents from the school fund. The civil-list dividend in 1896 amounted to \$261,793.50, and the school-fund dividend to \$130,896.75, a total of \$392,690.25.

At the Connecticut School for Boys, on Oct. 1, there were 409 inmates. The superintendent says: "It is asserted on good authority, by well-founded facts, that 75 per cent. of the boys who leave the school are reformed."

State Prison.—The latest report covers the year ending Sept. 30, 1895. On that date there were 395 prisoners; during the year 186 had been received and 172 discharged, the average number for the year being 403, an increase over 1894 of more than 50.

By an expenditure of \$7,200 the prison has secured a permanent and greatly improved system of heating and ventilation; a new and enlarged kitchen has also been arranged, and three large wire cages, in which incorrigible convicts may secure outdoor exercise in suitable weather, have been erected in the prison yard. The warden's report says:

"The continued and persistent efforts toward improvement in heating and ventilation, the destruction of disease germs by disinfectants, and the sterilizing by steam of all clothing, the greater variety, better quality, and larger quantity of food allowed, together with the compulsory outdoor exercise of the men, begin to show their beneficial effects. With the improvement in the general health there is shown also a marked improvement in the disposition of the inmates as a whole."

During 1896 the Bertillon system for identification of prisoners was applied at the State Prison. In October a new department in the prison, for the encouragement of prisoners to reform their conduct, was opened, and 21 prisoners were selected to occupy it. According to their conduct, the prisoners are divided into three classes, and it is those of the first grade who are eligible for this department. These are given a uniform different from the other prisoners, of cadet-blue cloth, with steel buttons; their food, which is better than the others receive, is served to them in crockery, and they are given many privileges. The construction of this new department was authorized by the last Legislature. There are 32 cells, and they are all made of burglar-proof steel, each being 5 feet by 7 feet, and 8 feet in height. The interior of the cells is painted a light buff. The cell is furnished with a bed that hangs by strong chains from the side of the cell and can be folded close to the steel wall when not in use. The bed is furnished with fine-fiber mattress and comfortable clothing for covering. The floor is covered with ingrain carpet. There is a sink in the cell and a faucet for running water. The sanitary arrangements are excellent. A comfortable chair, a mirror, lamp and rack, and shelf complete the furnishing of the cell. Each cell is furnished with a radiator that enables the occupant to regulate the heat.

State Institutions.—The State institutions are: The Normal Training Schools, at New Britain, Willimantic, and New Haven; Storrs Agricultural College; Fitch's Home for the Soldiers and Soldiers' Hospital; Hospital for the Insane; State Prison; School for Boys; and Industrial School for Girls. The last Legislature authorized the establishment of a reformatory for wayward men and women, and a site in Hartford was purchased, plans accepted, and work begun. But on Nov. 17 an injunction was served upon the board of directors, restraining them from continuing the work until the city of Hartford has withdrawn its objections and given its consent to the erection of the buildings in the place selected.

Highways.—In December, 1895, the new State Highway Commission made the appropriation of money to be paid at once to towns for work done on roads during that year to the amount of \$30,643.25. The balances due towns for work begun in 1895 but not completed, which must be finished July 1, 1896, aggregated \$44,280.39. The Commission also made allotments to towns that have taken preliminary steps to improve their highways, amounting in the aggregate to \$74,923.64. The maximum amount allotted to any town was \$980.

Labor Bureau.—The report for 1895 of the Bureau of Labor Statistics says that on July 1, 1895, in the 1,000 manufacturing establishments from which the figures were obtained, there were 112,002 employees on the pay rolls, a gain of 13,385,

or 13.57 per cent. over the number employed in 1894, and a decrease of 4.04 per cent. from the number in 1892. Of the 167 establishments making general changes in wage-rates, 33 increased rates, 106 made partial or full restoration to former wages, and 28 reduced wages. The number of employees affected by reduction in wages rates was 1,287, or 1.15 per cent. of the whole number reporting; the number affected by change in the other direction being 22,814, or 20.37 per cent. of the whole. The average weekly hours of labor in the whole number of establishments reporting was 54.46. The report estimates the loss in wages to those involved in "strikes" which have been adjusted during the year at \$934,500, and the loss to the employers at \$92,800.

In the matter of town and State aid to the poor it is stated that the number of persons assisted in all institutions and outside of them at the expense of the towns and State in 1894 was 17,729, at an average cost per person of \$56.10, or a total of \$994,615.18.

The State Board of Mediation and Arbitration was organized Sept. 18, 1895.

Factory Inspection.—The report of the Factory Inspector for the ten months ending Sept. 30, 1895, shows that during the period there were inspected 1,091 factories, employing 93,467 persons. Of this number of factories, 600 were found in good condition, and in 491 changes were ordered, a total of 943 orders being given, of which 190 were intended to protect the health of the operators and 753 to insure greater security against accidents. There were 25 factories with insufficient means of egress. The report states that Connecticut stands ninth among the States of the Union in the value of its manufactured products.

Local Option.—Out of the 168 towns in the State, 97 voted in 1896 to have no license and 71 in favor of license. There are in the State 51 towns of more than 3,000 inhabitants, and of these only 11 are no-license towns. The license list includes all the 18 cities; all but 3 of the 20 borough towns, and almost every factory town in the State. The statistics indicate that notwithstanding the large majority of no-license towns, with almost corresponding strength in the Legislature, about four fifths of the State have adopted the license system.

Militia.—The latest report of the Adjutant General was for the fiscal year ending Sept. 30, 1895. The annual muster shows 192 commissioned officers and 2,573 enlisted men. The expenses during the year amounted to \$150,878.99. In the disbursements of the quartermaster general's department \$45,857.36 was expended between Oct. 1, 1894, and Jan. 9, 1895; \$40,660.93 from Jan. 9, to Oct. 1, 1895. A six days' encampment was held from Aug. 12 to 17, inclusive.

Fisheries.—In October, 1895, 4,300,000 young shad were turned from the State's retaining ponds into the Farmington and Connecticut rivers. The shad fry were hatched in May and June preceding in the State hatcheries, and all fish indigenous to the waters were netted from the retaining ponds before the shad fry were placed in them. In the spring of 1896 several million smelt and pike-perch fry were distributed, and 1,250,000 trout fry. The engineer of the Fish Commission in 1896 returned his report in the fresh-water area of the State and the mileage of the rivers and steamers of Connecticut. The total acreage of waters is 43,637; the total mileage of rivers, 7,619.

The Shellfish Commission was more than self-supporting last year. The receipts were \$6,862, and there was a balance of over \$1,000. The number of oyster steamers is 144, and the oyster lands held by private owners aggregate 69,610 acres, or

over 100 square miles. The catch from the three natural beds during the year was over 1,000,000 bushels, and it gave employment to 200 boats and 600 men for three months.

Live Stock.—In July, 1896, the United States Department of Agriculture estimated the number and value of farm animals in the State as follows: Horses, 43,913, value, \$2,922,361; milch cows, 136,206, value, \$4,072,559; other cattle, 69,390, value, \$1,745,494; sheep, 34,520, value, \$91,892; and swine, 53,737, value, \$480,406; total value, \$9,312,712; a decrease in valuation since January, 1895, of \$202,825. The decrease in number is in horned cattle and sheep.

Monuments.—The Legislature of 1893 provided for the erection of memorials on the battlefields of the civil war, commemorating the service of the Connecticut troops thereon engaged. The Twelfth Regiment monument, at Winchester, in the Shenandoah valley, was dedicated Oct. 19, and the monument in honor of the Second Connecticut Heavy Artillery, originally the Nineteenth Connecticut Infantry, was unveiled in the National Cemetery at Arlington, Oct. 21. The Eleventh Regiment monument, erected two years ago on the battlefield of Antietam, was this year removed from its original site to the position at Antietam bridge which was gallantly held by the regiment during the battle.

Woman Suffrage.—At the town elections in October women voted on school questions in only 45 of the 162 towns in which elections were held, and the total vote was about one fourth the number of women who registered, that number being 5,289. The vote this year was 1,399; in 1895 it was 2,001, and in 1894, 2,425.

Political.—The Republican State Convention, held at New Haven on April 22, declared in favor of protection with reciprocity, restriction of immigration, and supplying the Government with the men and munitions necessary to uphold the Monroe doctrine. Other declarations were as follow:

"We are unalterably opposed to the issue of unsecured paper currency, either by the Government or the banks, or the free coinage of silver, at any ratio, and favor a single standard of value, and that standard gold. We believe that this policy, with a sound and stable currency upon a gold basis, will furnish sufficient revenue to meet all requirements of the Government and properly support it.

"We believe in such discriminating duties in favor of American bottoms as will again revive our shipping interests, and extend our trade and commerce to every land."

On June 10 the Democratic Convention was held in Hartford. It approved the administration of President Cleveland, expressed itself in favor of a system of tariff taxation for revenue which should provide a surplus for the payment of the Federal debt, and passed also the following resolutions:

"As a necessary consequence, the honest payment of public debts and the preservation of the public faith and credit require that the gold standard of money, as a measure of value, shall be maintained.

"While we favor the most liberal use of silver consistent with the enforcement of a gold standard, we are unalterably opposed to the free coinage of silver, deeming it a device for the debasement of our currency, and to the compulsory purchase of silver by the Government. Under existing circumstances to pay public debts in silver coin is repudiation; to pay private debts in the same coin is to rob the wage earner; and to provide for the free coinage of silver means the destruction of legitimate business and great suffering among the laboring classes.

"We believe the safety of our national finances requires a system of sound banking, by which a

bank-note currency ample to supply the needs of the whole country shall be created, safely secured, and always and everywhere redeemable in gold."

On Sept. 1 the Republican State Convention, held in Hartford, to nominate presidential electors and candidates for State officers adopted the following:

"We, the Republicans of Connecticut in convention assembled, while reaffirming the principles of the Republican party, as enunciated in the platform adopted by the National Convention at St. Louis, and in the masterly letter of acceptance of our presidential nominee, William McKinley, and in the admirable platform recently adopted by our State convention, recognize in the crisis which has been forced upon this country by the un-American and revolutionary action of the so-called Democratic Convention, held at Chicago, that the question of supreme importance at present is the preservation of the life, honor, and integrity of our nation.

"We realize that this can only be accomplished by the maintenance of our judicial system, which is the bulwark of our liberties and the admiration of the world, and by the continuance of a financial policy which makes gold the standard of value until a different policy is adopted by international agreement.

"We favor a tariff which will provide revenue sufficient to meet the ordinary necessary expenses of the Government, and so adjusted as to place American labor, without the sacrifice of our high wage system, on at least equal terms in our own market with the labor of other lands.

"We commend the wise and economical administration of the affairs of this State by Governor Coffin and his associates."

On the first ballot Lorrin A. Cook was nominated for Governor; James D. Dewell was the nominee for Lieutenant Governor; Charles Phelps for Secretary of State; Charles W. Grosvenor for Treasurer; and Benjamin P. Mead for Comptroller.

The Prohibition State Convention was held in New Haven Sept. 8. The 3 declarations of its platform favored the suppression of the manufacture or sale of alcoholic beverages. A woman-suffrage clause was excluded after a vigorous debate. The nominations for State officers were: For Governor, Edward Manchester; for Lieutenant Governor, Charles E. Steele; for Secretary of State, Wilbur L. Chamberlain; for Treasurer, George P. Fenner; for Comptroller, Elijah C. Barton.

When the Democratic State Convention assembled at New Haven on Sept. 16, one of the first proceedings was the resignation of 12 members of the regular State Committee, and of its chairman and its secretary. Two vacancies already existed in the committee, whose original number was 24, and 2 members were not in attendance at the convention. A proposition from the People's party for a conference "for the selection of candidates for presidential electors and also candidates for State officers to be presented for the consideration of the Democratic State Convention now in session," was received, and an adjournment of an hour was taken for the conference. Among the rules adopted on reassembling was one to the effect that members of the State Central Committee take office immediately upon election, instead of on Jan. 1, as formerly. The platform adopted included the following:

"We indorse the platform adopted at Chicago by the Democratic National Convention, and that we pledge our earnest and faithful support to William J. Bryan and Arthur Sewall, the candidates nominated by the Democratic party.

"Growing industrial disaster and distressful pov-

erty and idleness have been the ever-increasing result of the demonetization of silver in 1873; we therefore invite the united support of the electors in the effort to restore the coinage system which existed during the years of our national prosperity, and which is the coinage system recognized in our national Constitution. We denounce the recent bond issues and the useless increase of the national debt in time of peace.

"As labor is a great producing industry, we recognize the certain result of depression in business to be less money to be paid for the labor product and a limited market for its employment. We therefore invite labor to unite to save itself from the danger which threatens it if money shall continue to increase in purchasing power, and all else to decrease in exchangeable value in the markets of the world."

The State ticket nominated was the following: For Governor, James B. Sargent; for Lieutenant Governor, S. Ashbel Crandall; for Secretary of State, Homer S. Cummings; for Treasurer, A. M. Ross; for Comptroller, E. M. Ripley.

The State convention of the People's party met at New Haven, Oct. 3, fewer than 40 delegates being in attendance. No ticket was nominated, the principal vote of the convention being one instructing members of the party to vote for all the candidates of the Silver Democrats.

A call therefore having been issued in September, the Sound-money Democrats met in convention at Hartford on Oct. 8. The resolutions of their platform were the same as those adopted at the Democratic Convention in June. It was also resolved that the party title to be placed at the head of the ballots containing the names of the candidates of the National Democracy in Connecticut should be "National Democratic." Presidential electors were nominated, as well as the following State ticket: For Governor, Joel A. Sperry; for Lieutenant Governor, William Waldo Hyde; for Secretary of State, William Belcher; for Treasurer, George H. Hoyt; for Comptroller, H. W. Curtis.

At the election in November the Republican State ticket was successful. Four Republican members of Congress and 24 Republican State Senators were elected. The vote for presidential electors was: McKinley, 110,285; Bryan, 56,740; Palmer, 4,336; Levering, 1,806; Social Labor and scattering, 1,227. McKinley's plurality was 53,545, the total vote cast being 174,394.

COREA. See KOREA.

COSTA RICA, a republic of Central America. The Congress is composed of a single Chamber of 21 Representatives, elected for four years by electoral colleges chosen by all the respectable citizens. Rafael Iglesias was elected President for the term of four years ending May 8, 1898.

Area and Population.—With an estimated area of 23,000 square miles, Costa Rica has about 275,000 inhabitants, including 3,500 aborigines. Immigration has been encouraged by granting concessions of land. There were 1,490 marriages in 1893, and 10,567 births and 6,027 deaths. Education is free and compulsory.

Finances.—The revenue for the year ending June 30, 1895, was 6,021,615 pesos, and the expenditure 6,824,243 pesos. The foreign debt was compromised in 1887 by giving new bonds for £2,000,000 sterling, bearing interest at 5 per cent., and for the arrears of interest, amounting to £2,119,500, stock in the Costa Rica Railroad for 2½ per cent. of the amount. In 1895 the Government defaulted again, on account of the premium on gold, and offered a new compromise. The Bank of Costa Rica has the privilege of issuing notes, of which 3,107,000 pesos were in circulation in 1895, protected

by a specie reserve of 1,155,000 pesos. There were about 1,000,000 pesos of silver in circulation. The Government in July, 1896, passed a law prohibiting the importation of foreign silver coin and requiring that in the possession of the people after thirty days to be sent to the mint and exchanged for Costa Rican currency.

Commerce and Communications.—The cultivation of coffee is rapidly extending and all available land is being planted to this crop, which brings a high price in the European market. The number of plantations is 8,595. The coffee crop in 1895 was 15,160,868 kilogrammes, representing a value of more than \$9,000,000. The mining and agricultural resources of the country will be expanded when the railroads that are projected have been built. Of the original Costa Rican Railroad 147 miles are in operation on the Atlantic side and 14 on the Pacific side, earning 2,449,893 pesos in 1895. An American company with a capital of \$1,500,000 has undertaken to construct a line from San José, the capital, to the Pacific coast.

Boundary Settlement.—Costa Rica and Nicaragua came to an agreement in April, 1896, through the mediation of the President of Salvador, regarding the demarcation of the boundary between the two republics. There was a dispute as to the interpretation of the boundary treaty of 1858, which was referred to the President of the United States for arbitration. After President Cleveland had rendered his decision disputes arose as to the location of certain points of the line. The new convention provides for a joint commission of delimitation, which shall be accompanied by an American engineer selected by President Cleveland to act as referee in any dispute that may arise.

CUBA, the largest of the West Indian islands, the last remaining American colony of Spain excepting the neighboring island of Puerto Rico. The head of the civil and military administration is a captain general appointed by the Spanish Government, as are also the members of his council. In the Spanish Cortes Cuba is represented by 30 Deputies and 16 Senators.

Area and Population.—The island has an area of 41,655 square miles. The population in 1894 was estimated to be 1,631,696. Slavery ceased in 1886. Havana, the capital, had 198,271 inhabitants in 1887. The population of Santiago de Cuba in 1892 was 71,307; of Puerto Principe, 46,641; of Holguin, 34,767; of Cienfuegos, 27,430; of Sancti Spiritus, 32,608. Of the total population 65 per cent. are white and the rest negroes and mulattoes, except about 50,000 Chinese laborers on the plantations. The bulk of the plantation laborers, however, are negroes and mulattoes, numbering about 575,000. The white population is divided into the Peninsulares, or immigrants from Spain, a small but influential class, comprising officials and ex-officials, wealthy planters and merchants, and professional men, and the Insulares, or Cuban creoles, descended from the original Spanish conquerors, numbering nearly 1,000,000.

Finances.—The revenue for the fiscal year 1893-'94 was \$20,492,764, and the expenditure \$26,230,176. The military expenditure was \$8,541,200, and the naval expenditure \$1,097,385; the cost of the civil administration, \$3,663,909. The debt amounted to \$159,849,000, consisting of the Spanish debt of \$570,000 due to the United States, amortizable bonds for \$179,000, \$114,410,000 of Cuban bonds at 6 per cent. issued in 1886, and \$47,690,000 of 5-per cent. bonds of 1890. In 1895 the expenses of the war added \$122,500,000 to the debt, not counting \$10,000,000 of arrears of salaries and unpaid obligations. In 1896 the war expenses were \$10,000,000 or more every month. With the increased debt the

annual interest charge would amount to over \$20,000,000 a year. The Government in 1895 and 1896, owing to the civil war, could collect no taxes, and the customs receipts at Havana fell off to one quarter the normal amount. The destruction of sugar estates and tobacco fields took from the people their principal means of support and deprived the Government of its main sources of revenue for many years to come. The sugar crop, which was 1,050,000 tons in 1894, was estimated at less than 200,000 tons in 1896, and the tobacco crop at 50,000 bales instead of the normal amount of 450,000 bales. The total exports were valued at \$60,000,000 still in 1895, but in 1896 they were not expected to exceed \$15,000,000. The Government estimates of expenditure for 1896-97 were \$92,000,000, and of revenue \$30,000,000. The increase of revenue over that even of 1894 was expected to come from a higher tax on imports, although the whole produce of the country would hardly pay for the foreign breadstuffs needed to feed the starving population huddled in the cities. When merchants and bankers exported all their gold to Spain and the United States, and thousands gave up business and returned to Spain, the Spanish Government authorized the Bank of Spain in Havana to emit \$12,000,000 of notes for the payment of current obligations in Cuba, to be guaranteed by a reserve of \$3,000,000 in silver coin deposited by the Government and redeemed in gold. When the merchants refused to take the new currency except at a discount the Captain General issued a decree ordering all persons to accept the bills on a par with gold, and endeavored to enforce it against the retailers until they began to close their shops, against the wholesalers until they emigrated, against the stock exchange, and against the bankers, including the Bank of Spain, which refused to accept them in payment for gold drafts on Spain, until the banks closed their exchange departments.

Failure of Martínez Campos.—When the Spanish Government found that it had to deal with an uprising in Cuba as general and as formidable as the ten years' rebellion of 1868-78, Marshal Campos was placed in command of the great army that was sent to reduce the new revolt because he was the pacificator who had brought the former war to an end, not by strategy and military organization alone, though in these arts he stood pre-eminent in the Spanish army, but by a conciliatory policy that won the confidence of the Cuban people. When the reforms that he promised and that were partially carried out proved illusory the Cubans did not blame him, but they lost all faith in the promises of the Spanish Government. The crux of their grievances was that the metropolis and Spanish placeholders drained the island of between 40 and 50 per cent. of its annual income and steadily diminished its wealth-producing capacity and impoverished the people. The Cubans did not respond to the efforts of Campos to rally a strong party to the support of the Government. The Integrist, composed exclusively of European Spaniards, were upholders of the existing colonial organization, which conferred special privileges upon them, though even they had a programme of reforms. So were the Reformists, who proposed a decentralized local administration, loyal to the Government, and this party contained a small Cuban element. The large Autonomist party, composed of native Cubans, who aimed to establish a system of legislative, fiscal, and economical independence like that of the self-governing English colonies, denounced the revolution as vigorously in the beginning as did either of the Spanish parties. Campos, while trying not to give offense to the Spanish parties, encouraged the Autonomist hopes of a peaceful and constitutional solution of the Cuban troubles. The strength

of the revolutionary movement was much greater than he anticipated. The Autonomist leaders in Havana and some from the interior condemned the revolution in a violent manifesto, but as Gomez made his progress westward into the populous provinces the party, which had listened in silence to the voice of its leaders, began to melt away. Some emigrated, but the majority went to swell the ranks of the Cuban army or gave their hearts and labor to the cause. The rebels, who numbered about 20,000 fighting men in October, 1895, had been organized by Gen. Maximo Gomez into groups adapted for guerrilla warfare. Orders were then issued that sugar-planters should make no crop during the season of 1896, and to enforce this decree the rebels decided to invade the provinces of Matanzas, Havana, and Pinar del Rio. This invasion was successfully carried out in December and January. The white Cubans joined the insurgents in such numbers that the rebellion distinctly assumed the character of a war between the Cubans and the Spaniards, fought on the principle of driving the Spaniards out of Cuba by exhausting the resources of Government revenue and Spanish wealth. As Gomez marched from the mountains of Santiago westward through the length of the island to Pinar del Rio, his approach gave the signal for the uprising of five provinces in succession. The strategic lines that Campos attempted to hold proved inefficient, his garrisons were weak, and the constant shifting of his troops was fatiguing and demoralizing as well as useless. The Captain General was forced, when nearly all his Cuban supporters disappeared, to rely on the political support of the two Spanish parties. He endeavored to harmonize the Conservatives and the Reformists by dividing his favors between them, but failed to compose their quarrels. Gomez was able to make effective his decree forbidding the grinding of sugar cane, and thus deprived the Government of its revenues and arrested all industry. The complete failure of all the strategic plans of Campos and the losses and stoppage of business and consequent distress produced by the successes of the rebels made the Spaniards more bitter and vindictive. The Captain General could not satisfy the Conservatives except by adopting more rigorous methods, such as the introduction of a reign of terror in the cities by the imprisonment of all suspected sympathizers with the revolution and the shooting of prisoners of war. The Spaniards in Havana, frightened at the proximity of the Cuban forces, despairing at seeing the large Spanish army unable to check the advance of the rebels or to protect the zones of cultivation that Campos undertook to guard, finally coalesced against him, and demanded his recall. At the opening of 1896 the whole interior of the island was in the hands of the rebels, while the Spaniards held the towns. Ships had been bought to blockade the coast, yet arms and ammunition were continually being landed, and as yet no filibuster had been taken. The Spanish army was practically standing on the defensive, although Campos had received the re-enforcements that he wanted. Except the towns, certain positions on the coast, and the railroads that were kept in operation for short distances from the principal towns, the island was practically Free Cuba under the military rule of the insurgent generals. The Spaniards seldom ventured inland in any direction from their base, and never with a force of less than 2,000 or 3,000 men. Even then the disorganization of their commissariat and the hostility of the country rendered it impossible for them to keep the field longer than a few days at a time. Of the Cubans, the rich and the poor, white and black, the intelligent and the uneducated classes, even the children

of Spanish parents, were against Spain. American and English planters, too, and managers of mines usually wished for the success of the patriots, and aided them in many ways. The mild methods professed by Marshal Campos were not practiced by Lieut.-Gen. Pando and the other commanders in the eastern part of the island, where persons were continually arrested on suspicion and either shot or deported to Africa. The Spaniards did not dare to attack the Cubans in the mountains back of Santiago and could not keep railroad communications permanently open for any distance in the eastern province. The fighting there was left to guerrillas, some of whom, especially the band of Lolo Benitez, committed atrocities. On Dec. 26, 1895, the guerrillas of Col. Tejeda attacked the rebel bands of Cabreco and Pancho Sanchez in San Prudencio, driving them from one position, but finally being themselves put to flight by a *machete* charge in a difficult position on the mountain.

In the central provinces the Cubans effectually held the plains. The planters, who feared to grind cane lest the rebels should burn their fields, were threatened with court-martial by Lieut.-Gen. Pando if they did not grind. José Maceo replied with an order to destroy machinery if grinding was begun, and when any attempted to grind cane their cane fields were set on fire the same day.

The sugar estates in the eastern division of the island were permitted to grind because at the beginning of the war arrangements were made between the proprietors and the Cuban leaders whereby the privilege of grinding under the protection of those leaders was obtained by the payment of a war tax. In all other parts of the island the Cuban leaders prohibited and prevented the grinding of cane. In the beginning the Cubans forbade the people to supply the towns with food, but later they removed the interdiction for the sake of the families of patriots and noncombatants and allowed food to enter on the payment of an import duty to the revolutionary Government.

A decree of the Republican Junta imposed later a tax of 2 per cent. on the valuation of sugar estates, machinery, and buildings, in return for which the insurgent forces undertook to protect the property against molestation from any source, provided no attempt was made to grind against orders. This tax Gen. Gomez was unable to collect from the planters.

A civil government was instituted, with the aged Cisneros Betancourt, Marquis of Santa Lucia, as President of the republic, but Maximo Gomez and Antonio Maceo were the controlling spirits. The insurgent forces were maintaining themselves in the field without expense, while the Spanish army was an ever-increasing burden upon the resources of Spain, which was becoming almost unbearable. Some of the rebel officers were black, but most of them were white Cubans. In the east the rank and file were black, but farther west they were almost exclusively white. The insurgent troops were trained when in camp, sometimes by Spanish drill sergeants who had deserted on account of ill usage. The cavalry were much better trained than the infantry. They were well mounted, and were accustomed to charge the Spanish infantry in square, often with success. In the broken country of Santiago province the fighting was of a guerrilla character, planned by the officers but executed by the men as units. The army was organized in five army corps, of which two operated in the eastern province, one in Camaguey, and two in Las Villas and the western department. Maximo Gomez was general-in-chief and Antonio Maceo lieutenant general. Both infantry and cavalry carried the *machete* as a side arm and were armed with rifles,

usually a Remington. Some carried the new small-bore Mauser magazine rifle of the Spanish army, taken from dead or captured Spaniards. There were about 30,000 Cuban rebels in the field, while 17,000 more were employed as artificers in the army shops, postmen, and farmers growing food for the army in the mountain plantations. This force could at any time be doubled if there were arms enough. The supply of ammunition was often short, but fresh supplies of arms and ammunition were constantly being run into the country. The Spanish Government had spent on the war from Feb. 24, 1895, to Jan. 1, 1896, more than \$85,000,000.

Invasion of the Western Provinces.—When the Spanish forces had been pushed back by the advancing revolutionists from Cienfuegos to Colon, and then from Colon to Jovellanos, and finally to Coliseo, Gen. Campos, who was in personal command, determined to crush the enemy there on Dec. 23, 1895. He held Gomez in check and his line was pouring a deadly fire into the insurgents, but his command to charge at the critical moment was not given, the bugler having fallen. During the delay Gomez received re-enforcements, and, renewing the attack, broke the Spanish line. When Campos tried a flank movement the insurgents set fire to the cane fields that the Spanish troops were crossing. This demoralized the Spaniards, who fell back. When Gomez's advance columns, under Laeret and Serafin Sanchez, first entered Havana province and attacked the Spanish outposts at Guines a panic ensued in Havana, for it was supposed that the Spanish troops had driven back the insurgents as far east as Santa Clara province. The rebel forces, as they marched eastward, destroyed bridges and tore up the railroad tracks. The province of Pinar del Rio was already overrun with small bands of Cuban *guerrilleros*, who destroyed cane fields and burned tobacco in the *Vuelta Abajo*. In Matanzas Gomez and Maceo had captured 17 Spanish forts, releasing the garrisons. The insurgent armies advanced in the direction of Havana in 3 columns, under Maximo Gomez, Antonio Maceo, and Quintin Bandera, burning and plundering plantations as they pushed onward. On Jan. 5 the force commanded by Gomez made a vigorous onslaught on the center of the Spanish line of intrenchments, broke through after a fierce fight, and marched onward into Pinar del Rio, capturing isolated garrisons, destroying railroad bridges and stations, and burning towns where resistance was offered. Fresh troops were embarked in Spain to re-enforce the Spanish army in Cuba, already 150,000 strong. Marshal Campos planned to strengthen his strategic line in order to pen Gomez in the west and cut off re-enforcements and supplies. Gen. Navarro, Gen. Luque, and Gen. Valdez pursued the insurgents into Pinar del Rio and attempted to bring on a battle, which the rebels evaded by countermarching, losing 20 or 30 men whenever the pursuing columns overtook them. Gen. Gomez recrossed the dead line prepared by Gen. Campos, and on Jan. 12 had a severe encounter with Suarez Valdez near Batabano, turning the position and passing eastward along the southern coast of Havana province. Maceo terrorized the loyalists of Pinar del Rio and devastated their plantations, though pursued by 5 Spanish columns. The towns of Cayajobos and Queiba Paeha, on the north coast, were burned by rebel raiders, and Cabanas was held by Perico Delgado until he was shelled out by a Spanish gunboat, which completed the destruction of the place. While Gov. San Pedro, of Pinar del Rio, was calling for new re-enforcements to protect his province, the province of Havana was at the mercy of the forces of Gomez

and Angel Guerra, who eluded the columns of several Spanish generals, and yet were able to stop and destroy railroad trains and ravage villages in the center of the province. The town of Managuas, only a few miles from the capital, was attacked on Jan. 12, and many houses were destroyed before relief came. The inhabitants of Havana could hear the firing of the Spanish artillery. All railroad and telegraph communications were cut by the rebels, and the people of the capital felt that they were practically besieged and feared lest the town might actually fall if the rebel forces of José Maceo and Rabi, which had appeared on the borders of Matanzas, should join Gomez. The volunteers of Havana were in mutiny, refusing to fight unless Campos changed his policy for one that would create alarm and terror among the revolutionists or was relieved by a general who would carry out the drastic methods advocated by the Conservatives. A meeting of business men and political leaders reiterated this demand. While Campos remained firm, the Madrid Government gave way. On his refusing to resign, he was ordered to transfer the civil government to Lieut.-Gen. Sabas Marin, which he did on Jan. 17, giving as the explanation of his laying down the command when the enemy was at the gates of the capital under orders from Madrid: "Popular opinion believes that a mild policy should not be continued with the enemy, while I believe that it should be; these are questions of conscience."

The Revolutionary Government.—The revolutionary Junta, which in the early part of the rebellion had its seat in the Sierra Maestra range, at the eastern end of the island, and later near Las Tunas, also in Santiago de Cuba, established itself permanently, after Gomez and Maceo, driving the forces of Campos before them, carried the war into the western provinces, on the mountain of Cubitas, in Camaguey, 25 miles from Puerto Principe. This impregnable position, which could not be reached by Spanish artillery, was occupied by President Cisneros with his band of 800 followers, despite the strenuous efforts of Marshal Campos to prevent it, while the Spanish forces were occupied by the raid of Gomez into Santo Clara and Maceo's movements on the border of Matanzas. Cubitas was made the chief storehouse and manufacturing establishment of the revolutionists. There were compounded the dynamite and giant powder which the Cubans employed for destroying railroads and making mines to protect the approaches to their strongholds. Mail service was established late in 1895, which was not confined to dispatches and reports, but was the only postal system in operation over two thirds of the island, replacing the Spanish post offices in the greater part of Santiago de Cuba, Camaguey, Santa Clara, and Matanzas. In these provinces, and eventually in Havana and Pinar del Rio, Gomez and Maceo organized a system of local government that was respected by the people generally. Gomez districted each province, and while moving about with no apparent object, except to keep out of the way of the Spanish troops, he completed the organization of the country. In each district he appointed civil and military governors. The whole island was divided into prefectures, and each prefecto had a list of the adherents of the revolution within his jurisdiction, and was able to collect taxes regularly for the republican Government in four of the six provinces, and to administer the law and adjudicate disputes, filling the place formerly occupied by the Spanish *alcaldes*, whom Gen. Weyler replaced with military commanders. President Cisneros boasted that peace reigned and civil laws were administered in the provinces where the republic was supreme, and war was waged only in the sections that Spain still attempted to control.

The local officials kept the rebel commanders advised of every movement of the Spanish troops. The organization of the rebel Government in Pinar del Rio was intrusted to Maceo.

Gen. Marin's Campaign.—The Spanish forces in Cuba had the nominal strength of 120,000 regulars and 80,000 volunteers, the latter remaining in the cities and towns for home defense, except a few regiments that were sent into the field. Gen. Campos had drawn all the available troops from Santiago, Santa Clara, and Puerto Principe, and massed an army of 50,000 men in the narrow part of the island formed by the provinces of Matanzas and Havana, in the hope of shutting up the rebel forces after Gomez had accomplished his boast that he would invade the western provinces and stop the grinding of cane, in order to cut off Spain's main revenue. Gomez avoided all the traps that were laid for the purpose of surrounding and crushing him, sometimes by a narrow escape. Repeatedly his vanguard or his rearguard was sharply engaged, and once he found himself in the midst of a Spanish camp, and escaped only by shooting down the soldiers who surrounded his horse. After destroying about one third of the cane in the fields and compelling most of the planters to stop grinding, he issued a proclamation forbidding the further burning of cane fields, but threatening to destroy buildings and machinery on the sugar estates if the planters resumed operations. Gen. Pando drafted more troops from Santiago to Havana. The operations against Maceo were continued with greater vigor. In the numerous skirmishes the rebels lost 200 men. Gen. Marin threw a new strategic line across the island between Havana and Batabano, and prepared to mass there troops enough to prevent Maceo's return from Pinar del Rio. Gen. Marin, hoping to strike a decisive blow, went to take personal command of the operations against Maceo, but was unable to draw the insurgents into a battle. Perico Diaz, on Jan. 30, set a trap on the strong line itself, not far from Artemisia, for a large force under Gen. Canella that was sent out from Guanajay to head off Maceo. After 400 rebel infantry had thrown the Spanish ranks into confusion by suddenly opening fire from behind a stone wall, the rebel leader dashed down with 1,000 cavalry in a *machete* charge, killing nearly 200. Two Spanish battalions which advanced from the trocha through a blunder attacked each other, and before they had recovered from their confusion Gen. Jil, who had a force of rebels concealed, fell upon them. While the Spaniards were thus engaged with Gen. Diaz and Gen. Jil, Maceo proceeded to the southern end of the trocha and crossed with 600 men near the coast. When the Spanish commander became aware of that he concentrated his forces to prevent Gomez from making a junction with Maceo, which gave the opportunity to the bulk of Maceo's army, now almost bare of ammunition, to cross the trocha without opposition. On Feb. 1 a rebel force of 400 captured a train carrying a large quantity of Mauser rifles and cartridges on the strong line south of San Felipe. Col. Seguro, leading the vanguard of Gen. Canella's column, was surrounded by rebels a few days later, but was saved by the opportune arrival of the cavalry of Col. Ruiz. Usually the rebels vanished when the Spaniards appeared in force. They were able to hold the field and harass the Spanish, because all the common people were their friends. Gomez had but 2,000 men under his immediate command, and Maceo 6,000 or 8,000, while the detached bands of Miro, Bermudez, Sotomayer, Delgado, and Zayas numbered fewer than 2,000 all told. The insurgents were short of ammunition, and therefore could not meet the Spaniards in an infantry battle with even forces. But by evading

battle they could keep the Spanish army busy, for they had complete intelligence of its movements. At Paso Real, however, they formed in line of battle and charged the Spanish regulars commanded by Gen. Luque. Afterward they besieged Candelaria until Gen. Canella came to its relief and drove them out with artillery, his own infantry sustaining several severe *machete* charges. Gen. Marin was obliged to send detachments to the relief of several other towns. While heavy fighting was going on in the west, the eastern rebels, by order of Gomez, remained on the defensive, saving their ammunition in case it should be needed for the western campaign. On Feb. 11, at the sugar estate of Nueva Empresa, near Candelaria, where Maceo had his headquarters, a severe battle was fought, in which the Spanish commander, Gen. Cornell, was killed. On Feb. 18 Maceo attacked the city of Jaruco and captured the forts with 80 guns, but retired after burning the place when Spanish troops arrived by train. The next day he joined Gen. Gomez, and together they inflicted a defeat on a Spanish column near the sugar estate of Moralito, and afterward attacked Catalina de Guines and put the Spaniards to flight. A serious encounter occurred near Elgato, where the Spaniards again retired. After this they passed all the Spanish lines and marched eastward.

Gen. Weyler's Policy.—The Government at Madrid appointed to succeed Martinez Campos as Captain General and commander-in-chief of the forces Gen. Nicola Valeriano Weyler, the man most desired by the vindictive Cuban Spaniards, who in the former war had exasperated the Cubans by his harsh and cruel acts, while the humane methods of Campos brought the bitter struggle to an end. Gen. Marin and Gen. Pando were continued in high commands, while Gen. José Arderius and the other coadjutors of Campos returned with him to Spain. Autonomists who were mayors of towns or officials under Gen. Campos resigned their posts. Numbers of people left Havana on vessels, and a great many escaped through the Spanish lines to swell the ranks of the insurgents.

The new Captain General arrived on a Spanish cruiser on Feb. 10. About 18,000 Spanish troops sailed for Cuba a few days later. A large proportion of the re-enforcements were cavalry, for whom horses were procured in Cuba and the United States. The Spaniards hitherto, although contending with a foe consisting mainly of mounted infantrymen, had no effective mounted troops. Their cavalry was weak and worthless alike for scouting or action in masses, sometimes even being placed for safety in the center of the Spanish squares. On Feb. 11 Gen. Weyler published a series of proclamations addressed to the army and the inhabitants of Cuba. He said that the recent march of the principal leaders of the revolution indicated indifference on the part of the inhabitants and also fear and discouragement, and that all who were on the Spanish side must demonstrate the fact with acts and sacrifices; towns must establish their own defenses and guides must be provided for the army and intelligence of the enemy's movements promptly furnished so that it should not again be the case that the insurgents had better information than the Spanish commanders. The civil and military authorities were ordered to arrest all who show in any way help or sympathy for the rebels. In his proclamation to the people of Cuba he threatened that such persons would be punished with the utmost rigor. He declared that he had no political mission, but he would not oppose the Government if, after he had re-established peace and order, it should be thought convenient to give reforms to Cuba in the spirit of love that actuates a mother who gives all things to

her children. One of Weyler's first acts was to cancel a decree under which some political prisoners from Santiago were being shipped to Centa.

Capt.-Gen. Weyler issued a decree on Feb. 16 declaring the following offenders to be liable to court-martial and punishable with death or life imprisonment: Those who invent or circulate news or information directly or indirectly favorable to the rebellion; those who destroy or damage or interrupt the operation of railroads, telegraphs, or telephones; persons guilty of arson; those who sell, carry, or deliver arms and ammunition to the enemy, or fail to cause the seizure of such arms or ammunition; telegraph operators delivering war messages to other persons than the proper officials; those who by word of mouth, through the medium of the press, or in any other manner belittle the prestige of Spain or the army, the volunteers, or any other forces operating with the army; those who by the same means praise the enemy; those furnishing the enemy with horses or other resources of warfare; those who act as spies; those who act as guides for the enemy and fail to surrender themselves immediately and give proof of their loyalty and report the strength of the enemy's forces; those who adulterate the food of the army or alter the prices of provisions; those using explosives without authority; and those employing pigeons, rockets, or signals to convey news to the enemy. Another proclamation of the same date required all the inhabitants of the provinces of Santiago and Puerto Principe and the district of Sancti Spiritus to present themselves at the military headquarters and provide themselves with a document proving their identity, and forbade any person's going into the country without obtaining a special pass from the mayor or the military commander. It further ordered all stores in the country districts to be vacated at once. The towns and plantations were still deprived of their guards, Gen. Weyler requiring the troops for operations in the field. Consequently the rebels invaded the towns at their pleasure and supplied themselves from the stores; and they stopped all agricultural work, hanging laborers who did not obey their decree. The energetic campaign begun by Marin against Maceo was carried on with still greater vigor after the arrival of Gen. Weyler. In Santa Clara Col. Lopez attacked near Palo Prieto the forces of Serafin Sanchez and Mirabel as they were escorting the Cuban President and his Cabinet, and after several bayonet charges on the one side and *machete* charges on the other the revolutionary forces retreated, having lost more than 100 killed and wounded. The insurgents became more active in this part of Cuba, destroying bridges and attacking towns. Quintin Bandera and Rodriguez were repelled by the Spanish garrison at Guaraacabulla. Stations on the Matanzas Railroad were burned by rebels. When it was reported that 24 political prisoners were shot on Feb. 12 in the Cabañas prison, Gen. Gomez gave notice that if Cubans in the cities were shot he would retaliate by shooting Spaniards in the interior. Gen. Weyler publicly announced that prisoners taken in action would be subject to summary trial by court-martial, but required death sentences to be submitted to him for ratification. Nevertheless from that time it was a common practice to shoot prisoners captured by the Spaniards, and even the wounded Cubans on the field of battle or in captured hospitals. Gen. Weyler endeavored to curb the inhumanity of his subordinates. Gen. Canella he deprived of his command for shooting 17 prisoners; but after he had appointed the ranking military officers to fill the places of *alcaldes* whom he distrusted, they applied military methods in dealing with noncombatants and neutrals, think-

ing to please him by severe measures. When 18 citizens were reported to have been butchered in the village of Guatao, Gen. Weyler promised to investigate, but no examination took place. The rebel forces in Havana province were strengthened by detachments from Maceo's division, which crossed the trocha south of Guanajay. A party of insurgents entered Managua, 15 miles from Havana, where the volunteers surrendered and joined the invaders with arms and ammunition. At times the rebels raided the outskirts of Havana to get horses. In order to prevent the insurgents from receiving aid from the people of the country, Gen. Weyler ordered all inhabitants of the country districts to be brought into the fortified towns, which no one would be permitted to leave for any purpose without a permit. By a later decree the property of all persons whose absence from their homes could not be satisfactorily accounted for was ordered to be confiscated.

Gen. Weyler's Strategy.—The Spanish forces posted along the line from Havana to Batabano made an effort to inclose the joint forces of Gomez and Maceo concentrated in Havana province east of the Managua mountains after Maceo had marched rapidly eastward through the center of the province. Three columns of Spain's best troops, with cavalry, infantry, and artillery, were extended in the form of a triangle and closing in on the two patriot leaders, but Gomez cut through one side of the triangle and Maceo pushed back the other. Gen. Linares, Gen. Aldecoa, and Col. Segura killed a large number of the insurgents with their artillery fire, compelling them to evacuate their camp and disperse several times, but could not come up to them. Maceo made his way eastward, following the same route by which he had come west. Gen. Prato attempted to intercept him near Jovellanos and killed 42 in a fight at close quarters. Maceo's force, estimated at 4,000, retired into the Guamacaro mountains. Gomez marched eastward through the southern part of Matanzas. The revolutionary force of Masso was defeated on Feb. 25 by the column of Gen. Linares. Maceo and Gomez continued their march toward the province of Santa Clara, where Gen. Pando and Gen. Arolas disposed their forces in two strategic lines to prevent the invasion of the central sugar district. The troops from Havana followed the rebel leaders into Matanzas, and other columns were sent ahead by rail and by steamers to head them off. When they disappeared in their stronghold in the everglades of Cienega de Zapata the Spanish forces were speedily massed there and disposed in a way to hem them in effectually, but before this stratagem was completed the rebels had slipped by all obstructions with only a few skirmishes, and were countermarching westward through Matanzas, having left their sick and wounded in the hospitals of Cienega de Zapata, and provided themselves with ammunition and strengthened their forces with new troopers fresh from Puerto Principe and Santiago. Gomez stopped in the heart of Matanzas to stop all grinding of cane, effectually refuting Weyler's proposition to clear the western provinces of insurgents for the grinding of the crop by the middle of March. While Weyler's forces were still concentrating in Santa Clara, Maceo was again at the gates of Havana with his original force of nearly 5,000 men almost doubled by re-enforcements from the orient. On March 2 there was a skirmish in the suburban town of Jesus del Monte. Trains were fired on just beyond the city on the Matanzas road, and attacks were made on the forts of Quemado, Guines, and Potosi. Bridges and stations of the Cardenas and Matanzas railroads were destroyed. The rebels were as bold as ever in spite of the

constantly arriving Spanish re-enforcements. While a considerable force engaged the fort in a fortified place small parties searched the town for arms and stores and burned the houses of Spaniards. The telegraph wires were cut as fast as they could be repaired, and railroad trains, consisting of armored cars, were piloted by an exploring engine carrying workmen who replaced missing rails and sawed ties. After Maceo had left Pinar del Rio the guerrilla bands remaining there had operated more ruthlessly than he had done, burning tobacco houses in the Vuelta Abajo and several hamlets and estates. Similar bands ravaged the sugar districts in the absence of the regular forces, destroying mills and, in one case, hanging a wealthy planter. In the east of Cuba the Spanish guerrillas, who committed murders and outrages before the coming of Weyler, were guilty of horrible massacres. The rebels early in the year began to use dynamite extensively to destroy railroad bridges. The Vuelta Arriba tobacco district, in Remedios, was devastated in the autumn of 1895; the Partidos district, in the province of Havana, was laid waste in the winter by Maceo's men while skirmishing, and the Semi Vuelta suffered greatly from the operations of both armies, and later the Vuelta Abajo, in Pinar del Rio. When the campaign in Pinar del Rio was pushed more energetically by Gen. Weyler, the province was laid waste, and finally the whole crop was destroyed. Houses in the country were burned by the rebels, lest they should serve as fortified posts for the new civic guards. In Matanzas and Havana provinces Gen. Gomez ordered the inhabitants to take the roofs off their buildings, and destroyed those wherever his order was disobeyed. The Cubans destroyed towns and hamlets that the Spaniards might occupy, and the royal forces destroyed those that gave aid or succor to the Cubans. In Havana province, Bejucal, Jaruco, Wajay, Melena, Bainoa, La Catalina, San Nicolas, and Nueva Paz were laid in ruins; in Pinar del Rio, Cabañas, Cayajabos, Palacios, Vinales, San Juan Martinez, Montezuelo, Los Arroyos, Cuano, Bahía Honda, San Diego, Nuñez, Quiobra, and Hacha; in Matanzas, Macagua, San José, Los Ramos, Roque, and Torriente; in Santa Clara, Amaro, Salamanea, Mata, Flora, Malt tiempo, San Juan, and Ranchuelo. Besides these more than 25 towns were half burned by the insurgents for resisting attacks, or because they were being used as depots for supplies for Government troops. In some cases, like that of Cabañas, the royal troops demolished the town to prevent the insurgents from occupying it. On March 27 Gen. Weyler issued an order declaring that, "inasmuch as the rebels are eluding engagements with the Government troops and are committing arson and other crimes, such bands will hereafter be regarded as bandits, and treated in accordance with the latest decrees relating to such persons."

A month after the arrival of Gen. Weyler the Cuban field army was 15,000 men stronger than it had been before. When the main part of the Spanish land forces moved into Pinar del Rio after Maceo and Gomez, and the Spanish fleet was engaged in watching the coast of that province, three of the largest expeditions of the war succeeded in landing men and munitions in the far east. The Cuban forces were therefore no longer short of ammunition, and when Weyler adopted more aggressive tactics they also became more active and aggressive and engagements were more frequent and sanguinary. Maceo equipped an artillery corps with 11 field guns taken from the enemy and 5 brought from the United States and Santo Domingo.

Attempted Pacification.—Premier Canovas was determined to hold elections for the Cortes in Cuba

despite the existence of war. Gen. Weyler was therefore anxious to raise the state of siege in the provinces of Pinar del Rio, Havana, and Matanzas. On March 8 Gen. Weyler issued an edict in pursuance of his plan to insure the occupation of the two first provinces before the date of the elections. He ordered that *guardia civil*, or rural military police, should be restored to regular duty, and permitted a guerrilla force to be organized by each town. The insurgent bands operating in the western provinces were practically placed under the bandit laws of Spain. Amnesty was offered to all rebels who surrendered within fifteen days, except members of bands that had been guilty of robbing or burning property. The town authorities were required to report the names of all persons who had joined the rebel forces, and unless the latter gave themselves up within the stated period their property would be confiscated. All residents along the lines of railroads and telegraphs were made responsible for prompt information of damages done to the lines, and were required to co-operate actively in the work of repairs—a dangerous task, since the insurgents were in the habit of hanging or shooting persons thus engaged. Another circular, dated March 5, offered terms of amnesty to the rebels of Matanzas, Santa Clara, Puerto Principe, and Santiago de Cuba, provided they had been guilty of no other crimes than that of rebellion, on condition that they surrendered themselves with their arms. Those who thus surrendered would remain under surveillance, and if they came without arms they would be confined in the towns or fortresses. On March 9 he published a circular granting pardon to all persons who had been arrested in Havana and Pinar del Rio provinces provided they denied having belonged to rebel bands, had no charges of common crime against them, and were willing to take the oath of allegiance to Spain. At the same time numbers of fresh prisoners were being brought to Morro Castle from Santa Clara. There Lieut.-Gen. Pando issued an order for the enlistment of all persons able to bear arms, those between the ages of twenty and forty years in the battalions of volunteers and those between forty and sixty in the home guards, those failing to comply to be treated as suspects. This order was not approved by the Captain General, nor were the wholesale arrests of suspects. The elections were ordered to be held on April 12. The Reformist party declined to take part. Then the Autonomists, in spite of the entreaties and threats of the Captain General, refused to nominate candidates or to vote except for representatives of the university and the Economical Society of Havana. Consequently the Conservative or Union Constitutional candidates were the only ones named, and they were declared elected.

With the view of inflicting a serious blow on Weyler at the very time when the Captain General was announcing the pacification of the western end of the island, Gen. Maceo determined to attack Batabano, which the Spaniards regarded as one of their strongest ports. Entering the town in the evening of March 13 in three columns, the Cuban infantry overcame the garrison and captured 50 guns and destroyed the town before withdrawing. A large detachment under Leoncio Vidal was sent by Gomez into the city of Santa Clara in the night of March 22. The rebels compelled the volunteers to surrender 240,000 rounds of ammunition, all there was in the city. Similar raids in smaller places became frequent, and they were facilitated by a recent decree of Gen. Weyler forbidding the sale of petroleum. After joining the column of Perico Garcia, Maceo, on March 15, entered Pinar del Rio. At the sugar estate of Neptuno his cav-

alry compelled a force of Spanish infantry to retreat, and when another Spanish column came up he attacked it so impetuously that it retired without being able to use its artillery. On March 16, near Candelaria, Maceo engaged a Spanish force commanded by Gen. Linares and Col. Inclan and routed it by a timely cavalry charge, capturing many prisoners with their arms and thousands of rounds of ammunition and killing and wounding hundreds. On March 18, after the Cuban cavalry had again forced a Spanish column to retreat, a strong force made a fierce attack on Maceo near Cayajabos and the Spanish artillery was brought into action with effect, but with his strong cavalry force Maceo was able to flank the Spaniards and finally compel them to retire with a loss of 300. Maceo made an attack on the town of Pinar del Rio, which he held for several hours, destroying many buildings.

Gomez, who invaded Santa Clara province while Maceo was beginning his fresh campaign in Pinar del Rio, established his headquarters within 15 miles of Las Cruces, when Gen. Pando, rather than risk a battle with the rebels, who were about 8,000 strong, retired to the port of Cienfuegos. For this Gen. Pando was relieved of his command and sent back to Spain. So also were several other distinguished generals. Gen. Gomez was not hindered in his operations in Santa Clara by the Spanish troops, though they largely outnumbered his. Gen. Godoy's force, which was placed in ambush to entrap Gomez on March 24, fired by mistake on another Spanish column led by Gen. Holguin, and in the encounter 17 soldiers were killed and 89 wounded. Blunders of this kind were frequent.

The Spanish forces after the arrival of the ninth expedition numbered about 130,000 officers and men. The number killed in the last three-months' campaign of Marshal Campos was 1,900, and on March 1 there were 5,500 sick and wounded in the hospitals. The insurgent forces increased after the arrival of Gen. Weyler to 44,800 men, sufficient to keep the royal army employed protecting the seaports and large towns and guarding the coasts and railroads, leaving but a small force available for aggressive field operations and none for the protection of plantations and small towns, which duty devolved upon the local volunteer forces.

Filibustering Expeditions.—An attempt to land 300 men and a large quantity of military supplies in Cuba was made by Gen. Calixto Garcia, one of the leaders of the former rebellion, but the "Hawkins," on which the expedition sailed, was lost at sea. The "Bermuda," a fleet British steamer, when laden with arms and ammunition, on Feb. 24, 1896, was detained by United States federal officers in the harbor of New York, together with the lighter "Stranahan," but the vessels were surrendered to their owners on March 1. Gen. Calixto Garcia and others who were about to sail on the "Bermuda" were arrested and tried on the charge of setting on foot a military expedition against Cuba. On March 3 the "Stephen R. Mallory," which Enrique Collazo and his friends had loaded with munitions of war at Cedar Keys, was chased and seized by a United States revenue cutter. A day or two later a vessel put out from Philadelphia with arms and ammunition, which were safely landed in eastern Cuba and delivered into the hands of the insurgents. Another expedition left Philadelphia on March 11. The rifles, field guns, machine guns, *machetes*, and ammunition taken from the "Bermuda" and afterward restored to the Cuban patriots were placed on board that vessel again, which sailed from New York on March 15, and off Atlantic City took on board the expedition, consisting of Gen. Garcia and 108 followers.

By taking a course far to the east the vessel avoided the Spanish cruisers that were on the watch, and finally made a landing in eastern Cuba. With some of the munitions that were not landed the vessel proceeded to Puerto Cortez, where the arms were seized by the Honduras Government. The "Competitor" was captured in April by a Spanish vessel off the coast of Pinar del Rio after Col. José Monzon had landed an expedition of more than 100 men, half of them Americans, with 3,000 rifles, 400,000 cartridges, a quantity of dynamite, and several Hotchkiss and Gatling guns in the harbor of Mariel.

Gen. Collazo and 57 men were transferred off Alligator Key from a schooner to the new steamer "Three Friends," which took the "Mallory" in tow with her cargo, consisting of 900,000 rounds of ammunition and 1,600 rifles, 1,000 pounds of dynamite, a 12-pound Hotchkiss cannon, revolvers, and *machetes*, and landed them on the coast of Matanzas province on March 25, where a part of the expedition was lost in an encounter with the Spaniards. The Danish steamer "Horsa" was seized by the United States authorities for carrying an armed expedition intended for Cuba, and her captain and mates were tried and sentenced to sixteen months' imprisonment for violating the neutrality laws. The "Commodore" got off with a filibustering expedition from Charleston on March 12 and reached Cuba in safety. In April several expeditions were landed at different points on the coast. On April 27 the "Bermuda" sailed from Jacksonville with another cargo of arms and ammunition, including machine guns and torpedoes and a company of about 400 men, nearly half of them Americans, under Col. Layte Vidal and Col. Torres. When a part of the men and arms were being landed in small boats a Spanish gunboat sank one of the boats. The "Bermuda" steamed away to Honduras with the rest of the expedition and the arms and ammunition were thrown overboard. Another expedition under A. F. Gonzalez left Fort Meyers on May 12. On May 16 the "Three Friends" slipped away from Jacksonville on her second voyage with a large quantity of munitions, which were landed on May 29 in Santa Clara. The "Laurada" landed a cargo of arms and a company under Gen. Juan Fernandez Ruz on May 16, and on May 25 sailed from Charlton with another expedition organized by Rafael Portuonto, the Cuban Secretary of State. On June 18 the "Three Friends" made a fourth trip, carrying an expedition commanded by Julian Zarraga, and on June 26 a fifth under Dr. Joaquin de Castillo, who landed men, arms, and dynamite close to Havana. On its return that vessel and the "City of Richmond," with arms on board, were seized at Key West by a United States revenue cutter. The steamer "Commodore," which was carrying another party of Cubans with military supplies, was chased in Tampa Bay by a revenue cutter, but escaped. The filibusters arrested on the "City of Richmond," having been acquitted by a jury, sailed with the munitions, which had been restored, on the "Three Friends." They landed near Havana, but before the rebel guides arrived a Spanish detachment appeared, and the filibusters fled. Before they reached the insurgents several perished in the forest and others were intercepted and killed by the Spaniards. On July 12 the "Laurada" sailed from Philadelphia. Late in July Capt. Cabrera landed an expedition in the vicinity of Cienfuegos.

On July 30 a proclamation was issued by President Cleveland directing attention to the judicial interpretation of the neutrality laws, according to which any combination of persons organized in the United States for the purpose of proceeding to and

making war upon a foreign country with which the United States are at peace, and provided with arms to be used for such purpose, constitutes a military expedition or enterprise within the meaning of said neutrality laws, and the providing or preparing of the means for such military expedition or enterprise includes furnishing or aiding in transportation, and therefore warning all citizens of the United States and others that violations of these laws would be vigorously prosecuted.

Gen. Weyler published a decree offering a reward of \$24,000 to any person giving information leading to the capture of a filibustering expedition on board a steamer by a Spanish man-of-war, and one of \$9,000 for information of any expedition on board a sailing vessel, and if the master of a vessel chose to earn the reward by betraying his passengers and cargo he was offered immunity from criminal responsibility. After President Cleveland issued his proclamation the filibusters were careful to transfer shipments of arms to the blockade-runners on the high seas. Gen. Carlos Roloff, the Cuban Secretary of War, landed a large supply of cartridges and dynamite and 4 Hotchkiss guns for Maceo on the coast of Pinar del Rio. Two other expeditions escaped the vigilance of the Spaniards. Lieut. Alvarez brought 500 recruits for Maceo on the "Hartway," half of them American sharpshooters. Rafael Cabrera conducted another of the expeditions, which brought 1,900,000 rounds of ammunition. Later Juan Ruiz Rivera landed in Bahia Honda from the "Three Friends" 1,000 rifles, 460,000 cartridges, 2,000 pounds of dynamite, and a pneumatic dynamite gun. The "Dauntless" and other vessels landed fresh supplies for Gomez in the east. Gen. Carlos Roloff, Col. Emilio Nuñez, and Dr. J. B. Castillo were at different times arrested by the United States authorities on the charge of fitting out military expeditions. The "Dauntless," the "Three Friends," and the "Commodore" were in the St. John's river early in October, closely watched by revenue cutters, with the man-of-war "Newark" outside ready to intercept them if they sailed with warlike cargoes. Nevertheless the "Dauntless" stole out and took on a large quantity of arms, including 2 melenite guns, at Palm Beach. A large expedition from France, commanded by Fernando Freire y Andrada, brought 5,000 rifles and 1,000,000 cartridges, which were landed at the extreme end of Pinar del Rio. The "Commodore" sailed with an expedition from Jacksonville on Jan. 1, 1897, but foundered off the coast of Florida.

Outrages on Americans.—Consul-General Ramon C. Williams had frequent controversies with the Spanish Captain General over illegalities committed by the authorities or outrages by the officers or soldiers on American citizens. In the case of Julio Sanguilly, who was sentenced to death by court-martial as one of the chief instigators of the rebellion, the American representative insisted, under the treaty, on a civil trial, and when similar cases arose later he took the same stand. Soon after the arrival of Gen. Weyler the relations between him and the American consul general became so unsatisfactory that Mr. Williams offered his resignation, which was not accepted at the time. Gen. Melguizo's men killed all the employees on the Garrido estate and severely wounded Dr. Garrido, an American citizen, on March 30. The killing of *pacíficos* by the troops of Melguizo, Bernal, Tort, Segura, Molina, and other Spanish commanders gave grounds for frequent complaints. The residence of the brothers Farrar, Americans, who owned a coffee plantation, was looted and destroyed by Spanish soldiers. The French Government made a claim for damages done to the estate of Domingo Betarte and the murder of Duarte, the manager.

The United States Government was continually called upon to seek redress from Spain for injuries to citizens who were maltreated by Spanish soldiers or imprisoned on charges of sedition or sometimes shot as being guilty of the crime of rebellion. Capt.-Gen. Weyler, to put an end to the confusion caused by persons who took advantage sometimes of their Cuban birth and sometimes of their American naturalization, issued a decree in July ordering all aliens to register themselves.

Diplomatic Complications.—In a note mailed on April 9 to the minister at Madrid, the United States Government tendered its good offices to secure the cessation of the rebellion on the basis of the reforms promised by the Spanish Government after an interchange of views with the Washington Government in 1870. These reforms included an equitable levy of the taxes of the island, no discrimination against native Cubans in the matter of holding office, security of persons and property, the separation of the judiciary from the military authorities, and the granting of greater freedom of religion, speech, and the press. Mr. Olney suggested that if the new Spanish Cortes would frame a measure of home rule that would be satisfactory to Cuban taxpayers this would go far toward restoring peace. The justification of his friendly advice was the fact that the estates of many Americans had been damaged by the conflict, and the great and growing commercial interests of the United States in the island were suffering from its continuance. The Secretary of State, in conferences with the Spanish minister at Washington, Señor Dupuy de Lome, expressed the belief that the Cubans and their friends in the United States would withdraw their pecuniary assistance and moral support if the proposed reforms were inaugurated. Overtures were made by the Vatican, looking to the mediation of the Pope between the Spanish Government and the insurgent leaders; while the revolutionary Junta declared, through J. Estrada Palma, its American representative, that those who have already established an independent government in Cuba were not concerned with supposed reforms, but were resolved to shrink from no sacrifice of property or life in order to emancipate the whole island from the Spanish yoke. The Spanish Government made no direct reply to Mr. Olney's note. A scheme of autonomy was discussed, including an administrative council, half of its members to be appointed and half of them elected from among the officials and the highest taxpayers of the island. No reform, however, would be granted or considered until after the insurgents had laid down their arms. The speech from the throne at the opening of the Spanish Cortes, on May 11, announced a measure for establishing in Cuba an administrative and financial department of an exclusively local character, in order to give the country a share in the management of its pecuniary affairs, while maintaining intact the sovereign rights of Spain; but the rebels desired independence and not local autonomy, and the Government therefore accepted the view of the Captain General that the application of reforms would not now contribute to peace, but would retard it. The interests, industry, and commerce of Cuba could not prosper with independence; and if the insurrection triumphed Cuba would take a step backward in civilization. The insurrection was said to be declining, and it would already have been stamped out if the insurgents did not receive great and frequent aid from abroad, where public opinion was deceived regarding the political and administrative situation in Cuba.

Gen. Weyler issued a decree, intended to give an advantage to the cigar manufacturers of Havana

over those of the United States, prohibiting from May 26 the export of leaf tobacco to all countries except Spain. The United States consul general protested against the prohibition as in contravention of existing treaties. A modification of the decree allowed Americans to export tobacco which they had already purchased. Five American sailors captured in the filibuster "Competitor" having been condemned to death by court-martial, Consul-General Williams demanded a civil trial, which was ordered by the authorities at Madrid in consequence of a threat that the American consulate would be closed if the men were shot. Mr. Williams was succeeded by Fitzhugh Lee. The new consul general arrived in Havana on June 3.

The Trocha.—A new military strong line was established late in March from Majana to Mariel, parallel with the boundary between Havana and Pinar del Rio provinces. This was strengthened until it was fortified through the entire length and guarded by 28,000 troops stationed in forts at intervals for the purpose of preventing Maceo's forces from escaping again from Pinar del Rio. Blockhouses, forts, and earthworks were erected at the intersections of roads, barbed wire was stretched across the fields, artillery protected the critical points, and the garrisons at all the salient points were in communication with each other by telegraph and well supported. There were about 10,000 more regulars operating against Maceo just west of the trocha, divided into flying columns of 1,500 or 2,000 men each. In all the other provinces there were not more than 15,000 regular troops in the field, which left Gomez, Laeret, José Maceo, Calixto Garcia, and the other rebel leaders practically unopposed and in full possession of three quarters of the island. The total effective Spanish force at the opening of the rainy season was not more than 100,000 men, fully 25,000 having succumbed to bullets and disease during the year's fighting and 15,000 being sick or disabled. In spite of the strengthened trocha some of Maceo's bands crossed over into Havana province, where he effectually stopped the grinding of sugar cane as well as in Pinar del Rio. After he had demolished the machinery and stock on half a dozen plantations the planters sent a deputation to Gomez, offering to pay a heavy contribution to the Junta in New York if they were allowed to harvest their crop, but Gomez would allow none to grind save those with whom the arrangement was made in the beginning. Gen. Arolas afterward made the trocha so strong with barricades, ditches, and forts supplied with rapid-firing guns that the rebels could not cross it without great risk and loss. One of the Spanish flying columns, commanded by Col. Debos, was nearly cut to pieces by Maceo's men on April 11 at Lechuza. The troops in their advance from Mariel were opposed at every step, and finally, finding themselves encircled by 5,000 rebels, retreated to the San Claudio estate and fortified themselves there, and were only saved by the fire of the gunboat "Alerta" and the arrival of Col. Inelan's column. This disaster to Spanish arms occurred immediately after the repulse of a rebel band that attempted to surprise the garrison at La Palma and obtain for Maceo the arms and ammunition in that town.

The destruction of plantations in April was greater than at any previous period. The Spanish troops retaliated by burning those belonging to insurgents. Great numbers of country people, in obedience to Weyler's decree, went into the towns, others sent their families, and there was much suffering and destitution. The Spanish commanders ordered cultivators to plant vegetable gardens in the vicinity of the towns to supply the people with food, but the rebels would not allow this. Many of

the people who did not go into the towns went off, men and women, to join the insurgents. While Maceo's forces were kept on the western side of the trocha José Maceo entered Havana province with a large force from Santiago, and was joined by Serafin Sanchez, the bands of Mayia Rodriguez, Laeret, Masso, Aguirre, and other leaders until 18,000 rebels were concentrated on the eastern side of the trocha. Gomez held sway in the province of Santa Clara, where the Spaniards were shut up in Cienfuegos, rallying occasionally to attack the rebel positions on the neighboring hills. Col. Vasquez was killed and his column routed in one of these expeditions. Col. Gonzalez, the insurgent chief of the Remedios district, put to flight the column of Gen. Oliver near Campana by sweeping the ranks with rapid-firing guns placed in ambush. Nearly all the rebel guns were served by American gunners. Wherever the Spanish forces went they treated all the men as rebels who were still found on the plantations or in the small towns and hamlets. Some of the commanders killed all who fell into their hands; others who declined to slay unarmed or wounded men delivered their prisoners to Gen. Weyler in Havana, where they were likely to be shot as bandits in accordance with Gen. Weyler's decree. To deprive the enemy of resources the Spanish columns killed all the cattle and horses that they found. A meeting of 66 young men of Havana who plotted an uprising was betrayed by a woman and surrounded by troops, but 50 escaped. Confessions extorted from the prisoners implicated over a hundred persons, and these were arrested, among them a Baptist missionary from the United States named Albert Diaz, accused of furnishing the insurgents in the field with medicines, who was afterward expelled from Cuba. Soon after the battle of Lechuza three Spanish columns made a second attempt to dislodge Maceo from his camp, which resulted in their being attacked and defeated separately. The rebels in the vicinity of Havana burned suburban places every night. Vieja Bermeja was in great part reduced to ashes by El Inglesito's band. Batabano was again invaded and partly burned.

Gen. Inclan attacked the rebels under Delgado and Socorras in a strongly fortified position in the mountain passes at Cacarajicara, but was repelled repeatedly. Finally the rebels charged and drove the Spanish back to Bahía Honda with heavy losses. Early in May the rebels captured Punta Brava, compelled the soldiers in the forts to give up their arms and uniforms, and reduced the town to ashes. Gen. Weyler concluded that he could not conduct operations in the interior of Pinar del Rio without depriving the towns of necessary garrisons, the volunteers having proved useless. When the decree of amnesty expired on May 13 the Captain General extended it and declared it of effect throughout the island. The offer had thus far proved absolutely fruitless of results. An edict issued on May 15 ordered all corn to be delivered at the nearest military post, to be purchased for the army at current prices or stored for the owners. Corn not thus delivered within twenty days would be confiscated as contraband of war. The rebel leaders had already issued an edict forbidding any produce to be brought into towns, and this their ubiquitous patrols were able to enforce, even against Havana. An edict that affected the interests of many Americans who hold mortgages on Cuban estates suspended for a year all judicial proceedings against planters in regard to their property. A severe engagement took place near Consolacion, where Gen. Suarez Valdes drove Maceo from his position, but afterward retired. On June 22 Gen. Melgnizo with a large column and 16 field pieces marched out to attack Maceo in the Rubi hills. Maceo fell back

from one height to another, firing on the Spanish troops whenever they approached until they were so cut to pieces that they retreated, harassed by the rebel cavalry. The trenches dug along the trocha caused so much fever and mortality among the Spanish garrisons that Gen. Arolas called for re-enforcement after the rainy season began. Simultaneously Gen. Weyler concentrated all his cavalry and other troops on the eastern border of Havana province to prevent the entrance of Gomez, who was collecting a force in Santa Clara to march again into Matanzas and Havana province to co-operate with Maceo. Calixto Garcia, Collazo, and other leaders who had organized and trained new forces in the eastern provinces marched westward to join Gomez. The insurgents blew up two railroad trains and destroyed bridges. Col. Segura's whole battalion was captured by Gomez on May 14. Stories of explosive bullets used by the rebels made the Spanish soldiers afraid to go into action. The Cubans said that these were the new brass-capped bullets imported for the Spanish troops which they had captured.

The volunteers, when ordered to re-enforce the trocha, refused to go to the field. A third advance upon the positions of Maceo in the hills west of the trocha was unsuccessful. After that the Spaniards resumed the defensive. The trocha was guarded by 50,000 men against Maceo's 11,000 rebels. The other half of the Spanish regular army was employed in garrisoning the principal towns and fortified places, guarding lines of communication, and marching in columns through the country with the object of keeping the rebels on the move. In the province of Santiago the rebels under José Maceo continued in possession of the greater part of the country. Bands all over the island went no burning cane fields and destroying houses and property. Machinery was destroyed on more than 50 plantations. Nowhere were incendiary and destruction more common than in the immediate neighborhood of Havana. Gen. Oliver evacuated the Remedios district after an encounter with Col. Gonzalez at Santa Rosa, where two dynamite bombs killed a large number of Spanish soldiers and caused the rest to flee in disorder. In June Gen. Gonzalez Muñoz and Gen. Inclan marched into the Tapia hills, had several skirmishes with the rebels, and when the latter retired destroyed all the dwellings and plantations. Maceo caught the Spaniards in an ambush at Vega de Morales when they pursued small bodies that had been attacking the trocha.

Summer Operations.—Although Gen. Weyler boasted that Spanish troops could fight in the mud as well as Cubans, the flooded condition of the country and the deadly climate prevented any large operations, and in the skirmishing and raids that continuously went on the rebels were more aggressive than the Spaniards, especially in the east, where the troops had difficulty in preserving their lines of communications and were subjected to damaging attacks when escorting provision trains to their inland posts. Gomez, after conducting a large convoy of newly imported munitions through Santa Clara till they were safe on the way to Antonio Maceo, returned to Najasa to organize a new army for the winter campaign. Calixto Garcia aided in the gathering of new forces, being joined by young men of the best families of Cuba. Whereas in the beginning the majority of the rebel fighting men were blacks, now nearly three fourths were whites, drawn from all classes and supported by the aid and sympathy of nearly the whole community of native Cubans. There were thousands of Spaniards, too, in the rebel ranks, a large proportion of them deserters from the Spanish army. In the eastern districts the rebels were most active, and when the Spanish general-in-

chief made preparations for an aggressive summer campaign against Maceo in Pinar del Rio they created diversions in Santa Clara or Santiago to prevent the concentration of Spanish troops. The rebels were masters in the Sierra Maestra and the hills commanding the roads from Bayamo. Rabi, with his guerrillas, constantly attacked the Spanish convoys and captured provisions and cattle. After a rebel raid Spanish columns moved out to overtake the rebels or assail their strongholds, but they found only small skirmishing detachments so well posted in the hills that they inflicted considerable losses by their rifle fire, and when the Spaniards forced these to retire they returned to Bayamo. Several times the Spaniards planned a movement upon the strongholds of Maceo, Gomez, or Garcia from two or three directions at once, but in each case, instead of surrounding and surprising the rebels, one or more of the Spanish columns were caught in a ravine or on an awkward declivity, led there perhaps by false guides, and compelled to retreat before superior forces. In Santa Clara Col. Oliver tired out his forces marching between Remedios and Seborucal, but finally had to abandon the line of communications between Remedios and the provincial capital. Col. Segura invaded the valley of Siguanica, but could not long hold it. On June 9 Gen. Jimenez Castellanos, with 3,500 men of all arms, met the forces of Gomez and Calixto Garcia at Saratoga, near Najasa, and the battle lasted two days, at the end of which the Spanish troops, driven from their positions by incessant cavalry charges, fought their way back to Puerto Principe in hollow squares. To prevent the reinvasion of Santa Clara by Gomez, Gen. Basan reconstructed the eastern trocha, between Jucaro and Moron. Calixto Garcia, whose first exploit was the defeat of a Spanish force on the Cauto river, where later a convoy of transports was captured with stores and munitions, met the force of Gen. Gasco near Venta de Casanova and again near Bayamo and was both times victorious. The first detachments of the new rebel troops from the east entered Havana province in the beginning of July under Zayas and Lacret. The railroad communications of the Spaniards were frequently interrupted when Gen. Weyler attempted to move bodies of troops by rail. Several trains were blown up by dynamite and many soldiers and passengers killed. Although 25 per cent. of the Spanish soldiers were on the sick list, Gen. Weyler made an energetic but ineffectual effort to keep the rebels from invading Havana province in force. In Matanzas a Spanish column attacked the bands of El Inglesito, Betancourt, and Sanchez in an entrenched position and drove them into the Mogote hills. At Sabate de Guanamon three Spanish battalions captured a rebel camp. The forces of Aguirre were defeated by the Spaniards near Cardeñas by Col. Albergota. In an engagement near Gabriel the rebel leader Juan Bruno Zayas was killed when leading a small force that was surrounded and annihilated. In a skirmish near Macagua Clotilde Garcia captured a part of Col. Najera's force.

In Santiago province a spirited engagement occurred on July 5 at Louna del Gato between the forces of José Maceo and Perequito Perez and the columns of Gen. Albert and Col. Vara del Rey. The Cubans held their own, but José Maceo was killed. On the same day a rebel force defeated Gen. Gasco and captured a convoy of provisions and ammunition between Manzanillo and Bayamo. A large band of rebels under Pancho Sanchez defeated a battalion of regulars and the guerrillas of Tejada, on July 8, at Banabacoa.

Gen. Linares encountered the forces of Garcia and Cebreco, 2,500 strong, and by a persistent assault drove them into the town of Santa Ana, and

again attacked them on the following morning, and by the aid of his artillery dislodged them from a strong position.

On July 23 Gen. Linares advanced from Santiago upon the positions held by Garcia's men, with the intention of capturing the Cuban general and his camp, but the Cubans were enabled to take up an advantageous position while their sharpshooters held the Spanish column in check, and as they gathered in greater force to intrench themselves on a higher hill farther back, where the artillery of the Spaniards could not harm them. The Spaniards attempted to carry this position by assault, in spite of heavy losses, and on the following morning made another attempt. After feigning a retreat to draw the Cubans on, the Spaniards, re-enforced by the column of Gen. Sandoval, which, however, had been harassed by the cavalry of Perequito Perez all the way from Guantanamo, advanced anew on July 26, but finally withdrew to Songo, having lost several hundred men. A third Spanish column had marched from Manzanillo to co-operate in an attack on the positions of Garcia and Gomez, and this also encountered a strong insurgent force, the Cuban generals having been informed beforehand of the concerted movement. In Puerto Principe an important convoy from Minas, escorted by Gen. Godoy, was thrice attacked and a part of it captured before it reached Guamaro by a large rebel force under Avelino Rosa.

During the muddy season, when no important operations could be undertaken, the Spaniards made frequent raids in the central provinces and the west, destroying the property of rebels and capturing cattle and food supplies. They sought out rebel hospitals, one venturesome commander penetrating the Cienega de Zapata, and the wounded rebels were carried off as prisoners or killed on the spot. Gen. Bernal attacked the insurgents intrenched in the caves of Vacas and captured the camp and munitions. The province of Pinar del Rio was devastated by both armies, the insurgents destroying plantations and buildings, and the Spaniards the huts of the peasantry and the gardens and fruit trees. In a battle between Bernal's column and the rebel bands of Varona, Gallo, and Ybarra at Sitto Nuevo the latter were beaten and evacuated their camp. On July 15 Gen. Suarez Inclan advanced upon Maceo's position and was badly beaten by the Cubans, who opened fire upon his troops unexpectedly when they were in an unfavorable position. Maceo disposed his forces in the Vuelta Abajo in a line extending from Quebracha to the south coast, Quintin Banderos commanding one camp, Bermudez another, Socorras the next, Perico Delgado one in the Rubi hills, and Nuñez one south of Cayajabos, while Maceo himself remained intrenched at Cacarajicara. In Havana province the rebels appeared again in August in considerable bodies, having been able all along to control with their small guerrilla bands the agricultural districts there as well as in all other parts of the island. When the dry season approached the insurgents took the offensive on the trocha at Bahía Honda, at the very doors of Havana, and in the neighborhood of Bayamo. On Aug. 17 a rebel force attacked 1,000 Spanish troops at San José de las Lajas, 20 miles from Havana, charging through their line and taking up a position on an eminence from which the troops could not dislodge them. Two days later the rebels derailed a train on the railroad between Havana and Pinar del Rio, and, driving off a column of 500 soldiers that came to the relief of the escort, burned the cars. The execution of many hundreds of political prisoners and prisoners of war in the fortresses of Cabañas and San Severino, tried by summary court-martial and condemned of the

crime of rebellion, instead of deterring Cubans from joining the insurgents made them more eager to fight for Cuban independence. During a rain storm Quintin Bandera succeeded in crossing the trocha near the south coast with 60 men, raided the outskirts of Batabano to obtain supplies, collected a force of 1,600 men, and marched eastward toward Cienfuegos to meet re-enforcements for Maceo. Early in September a serious engagement was fought in the mountainous part of Havana province and another near Bayamo, where Rabi routed the Spaniards and captured military supplies and money. While 10,000 freshly equipped Cuban troops under Francisco Carrillo were encamped near Sancti Spiritus, Gomez manoeuvred a force of 5,000 in the vicinity of Santiago and captured two munition trains. Raids were frequent in Havana and Matanzas. The Spaniards pushed forward the forts of the Moron-Jucaro trocha and sent re-enforcements to prevent Gomez from reinvading the central sugar district, yet there a force of 300 troops in charge of a convoy was captured.

Salvador Cisneros issued a proclamation forbidding all work on plantations during the coming season and warning planters that no one would be allowed to grind cane until peace should be obtained, all able-bodied farm hands being required for the service of the Cuban republic. Another decree of the Provisional Government suspended the collection of debts or rents and interdicted transfers of property pending a treaty of peace, and forbade property holders to pay taxes levied by authority of the Spanish monarchy. To prevent any arrangement between planters and the Cuban Government whereby the former would be allowed to harvest their crops on payment of a subsidy, Gen. Weyler issued, in his turn, a decree forbidding all field work on the coffee and sugar plantations throughout the island.

The killing of *pacíficos* by the troops of Melguizo, Fondeviella, Aguilera, and Molinas became more frequent when the rebels renewed their activity, and the latter retaliated by killing unarmed Spaniards and the families of volunteers. One or more prisoners in Cabañas or Morro Castle were shot daily through the summer. These executions became commoner until a climax was reached on Sept. 13, when 51 insurgents were shot. Many of the leading citizens and professional men of Havana were arrested and thrown into prison. Among them were the supposed members of the revolutionary Junta, and later others were imprisoned on the suspicion that they were reviving the committee. Early in September Gen. Gomez made a long march through Santiago and Puerto Principe, gathering many fresh recruits near the capital of the latter province. Gen. Garcia besieged Guaimaro and forced the garrison to surrender on Oct. 28.

The Autumn Campaign.—The Spanish Government between Aug. 23 and Sept. 20 sent 40,000 troops to re-enforce the army in Cuba, to be followed by 20,000 more when needed. With their new supply of war materials the Cuban leaders had been able during the summer to train and equip fresh forces in proportion. Maceo had 20,000 men in his army, and the other commands aggregated between 50,000 and 60,000. While 12,000 of the fresh recruits from Spain were sent to guard the eastern trocha, the rebels of Pinar del Rio, who had been menacing Pinar del Rio city and destroying smaller places, made a combined attack on the western trocha, firing on all the forts and on the trains that brought re-enforcements. To prevent the landing of the expeditions of Juan Ruiz Rivera and Leyte Vidal, Maceo massed his men on the plains west of Pinar del Rio city. Weyler dispatched a large body of the newly arrived troops to

intercept the convoy and possibly crush the rebels. Several battles were fought, and Maceo came out victorious and conveyed the munitions to a place of safety in the hills near San Diego de los Baños. When the dynamite gun was first brought into action, on Sept. 13, two Spanish columns were put to flight, abandoning their camp and stores. The same troops, with re-enforcements, made a stand at Las Tumbas Torino, but after a few shots of the new weapon fled in confusion, leaving munitions and provisions. Then Maceo returned and fell upon the brigade of Sanchez Echeverria on Sept. 20 at San Francisco, put it to flight with dynamite bombs, and kept up a fierce running fight all the day, harassing the flanks of the Spanish with his sharpshooters as they retreated to the town. The French expedition was conveyed to the hills; though five separate columns attempted to intercept it, they were beaten with heavy losses in as many battles. At Guayabita the forces of Echague, Melguizo, and Inclan, numbering 12,000, attacked Maceo's position, but were held in check and finally forced to withdraw after two days of fighting, the dynamite shells having demoralized the Spanish troops. On Sept. 25 Maceo defeated a Spanish column at Vinales.

The rebel bands in Havana province tore up sections of the western railroad and blew up bridges and raided many villages. Gen. Melguizo, military governor of Pinar del Rio, began active operations at the commencement of October. Col. Frances and Col. Hernandez led their columns against the rebel positions on the heights of San Felipe, but after initial success they found the rebels in strong force in superior positions, and were compelled to retreat to the coast with heavy losses. Gen. Melguizo commanded the Spanish forces at Tunibar del Torillo, where the artillery was brought into play and did effective execution until the insurgents, in many desperate attempts to capture the guns, which were met with bayonet countercharges, had killed nine tenths of the artillerymen. The Cubans captured 6 field pieces. At Manaja the Spanish troops fought well until the rebels brought their dynamite gun into action, which did terrible execution and spread terror among the Spaniards, who fled and were cut down with the *machetes* of the Cuban horsemen. Gen. Bernal, on Oct. 4, attacked and finally carried the Cuban intrenchments at Ceja del Negro, near Pinar del Rio city. One of the Spanish battalions was surrounded by the rebels at Guamo, and was rescued from total destruction only by the timely arrival of the column of Col. Granados. On Oct. 8 Gen. Echague attacked the rebels in their strong intrenchments on the heights of Guayabitos, raked their flank with artillery fire, and took the position by a bayonet charge.

While Gen. Weyler was preoccupied with Maceo's movements in the west, rebel forces organized by Gomez marched westward in separate columns under Maya Rodriguez, Rabi, Quintin Bandera, and Pancho Carrillo, from 5,000 to 7,000 strong. Passing the trocha without difficulty, they crossed Santa Clara and invaded Matanzas. Calixto Garcia and Avelino Rosa moved northward and menaced Puerto Principe. Gen. José Maria Aguirre had already in Havana province 3,200 men. In Santiago Gen. José Toral, with 2,000 soldiers, tried vainly to dislodge the insurgents under Luis Bonne in the Escandel hills. Gomez laid siege to the town of Cascorro, and after it was relieved by the Spaniards fought a successful engagement with Gen. Jimenez Castellano. The forces of Serafin Sanchez and Calixto Garcia joined those of Gomez and Rabi, making an army of 17,000 men.

Maceo made an artillery attack upon Artemisi,

the central position on the trocha, in the night of Oct. 22, trying the dynamite shells, which produced terror and destruction in the town. Gen. Muñoz with a picked force made an attempt to penetrate the hills and capture Maceo's fortified camp at Cacarajicara, but, like Gen. Inclan's advance upon Taco Taco, it ended in a decided defeat for the Spanish troops. Col. Segura surprised and captured a rebel outpost at Soroa, which the insurgents made two vain attempts to retake. Maceo's position in the hills, extending 200 miles, could be defended by a few men at any point against a great number, and in this range of hills, 16 to 24 miles wide, the Cubans could grow food crops and maintain a complete commissariat service, including saddlery and shoe factories. Though every fertile spot was planted to vegetables, food was sometimes scarce, and clothing was very scantily supplied, for there were 30,000 noncombatants to feed, since Gen. Weyler had compelled the families of the revolutionists to flee for refuge to the rebel camps. For ammunition and medicines his army had to depend mainly on outside sources. Limited quantities of powder, cartridges, and dynamite were made by the Cubans themselves. Some of the men were armed with Mauser rifles, but the majority had Remingtons or Winchesters, which, however, in the hands of good marksmen were more effective than the Spanish magazine rifles handled by half-trained youths, such as made up the latest re-enforcements from Spain. The hills were naturally protected by the thick woods or underbrush that covered their sides, and their summits could be reached only by narrow mule paths, which the Cubans protected by obstacles and a great number of dynamite mines. Maceo's army was divided into groups of 500, more or less, each operating in a given district and all in constant communication with the general headquarters. Maceo with his staff and about 4,000 men had his headquarters in the hills between San Cristobal and Cayajabos. The inhabitants of Pinar del Rio were in many districts adherents of Spain, for the tobacco plantations belonged largely to Spaniards, and the cultivators were natives of the Canary Islands. The southern and western parts of the province were originally placed under the command of Roberto Bermudez, a Cuban officer who believed in retaliation and reprisals, and whose inhumanity toward the Canary Islanders and the families of volunteers drove the peasants to seek Spanish protection in the cities. Maceo, who was opposed to such a policy, relieved Bermudez, placing Ducasse, a French mulatto, in command of the western territory. Gen. Maceo pursued Fabian tactics whenever the Spaniards advanced in force upon his intrenched positions in the hills, never giving battle unless the troops could be caught in some awkward defile or hollow and his men were posted on the neighboring heights in sufficient numbers to overwhelm the Spanish force. Ordinarily the Spaniards advanced slowly with their artillery ready for use, and arrayed themselves in line of battle and opened fire with their guns whenever Perico Delgado with his sharpshooters, who formed the Cuban vanguard, fired upon them from the cover of a wood. Before the Spaniards were able to get the range the Cubans vanished, and when after the cannonade the Spanish infantry advanced they found the position deserted. The Spanish column, tired out by the long march, having consumed their rations, returned to their post, content with the hollow victory. If they reached an intrenched position commanding a turn in the road the Cubans sometimes did terrible execution at the exposed spot and fired their last cartridges before the Spaniards could bring their guns to bear on the already deserted earthworks. Gen. Muñoz and Gen. Inclan made a

combined attack near Manuelito on the rebel outposts, and after several hot engagements forced Perico Diaz and Perico Delgado to retreat into the Rubi hills. Re-enforcements had been sent from Spain until the army in Cuba numbered 200,000 men. The cavalry force, which had formerly been deficient, was now supplied, and there were field pieces and mountain guns were abundant. The Spaniards at home and in Cuba demanded speedy and decisive results from the sacrifices they had made before the means that were painfully provided for the prosecution of the war should be exhausted, for the mothers of Spain had made riotous demonstrations when the troops embarked, and the last loan of \$50,000,000 was a contribution of the people of Spain raised after the financial houses of Europe had declined to float another Spanish loan.

Gen. Weyler went to the field to direct the operations, the first objective being Maceo's position in the Rubi hills, against which he sent, not one or two columns, but 36,000 men under 6 generals. He advanced with the main body from Guanajay, intending to enter the hills by the principal road and assail the front of Maceo's position, while Gen. Gonzalez Muñoz set out from Cabañas to cut off the retreat of the Cubans, Col. Segura moved forward from Soroa, Gen. Melguizo attacked Maceo's left, and Gen. Echagne left Cayajabos to shut them in on their right. The Spaniards closed in on their objective point simultaneously on Nov. 11. Gen. Echagne was the first to encounter the rebels, engaging the force of Vidal Ducasse near Rosario, which fell back after fighting three hours in order to support Maceo's rear, as it was menaced by Segura's column. Gen. Weyler, with the principal attacking forces under Gen. Aguilar and Gen. Sanchez Echeverria, was unable to enter the hills, but Gen. Muñoz did after being held in check for a whole day by Perico Diaz, for Maceo and his forces had quietly abandoned the position and retreated to Valparaiso, and thence into the Roble hills. The troops of Muñoz were decimated at the foot of the hills by a withering fire delivered by the rebels from behind rocks and trees, and when at length they reached the top hundreds were slain by the explosion of a dynamite mine. The next day Maceo was attacked in a stronger position by Echagne's column, which by the aid of his dynamite gun he repelled with heavy losses. Gen. Weyler marched around to Soroa, harassed continually in the forest by Cuban sharpshooters, while Gen. Muñoz followed up Maceo, who again evaded battle, striking into the wild and inaccessible Tapia hills, where in May he had inflicted a crushing defeat on Gen. Inclan's column at Cacarajicara and at Guimones had routed a column led by Serrano Altimiro. Weyler's operation cost him a great many officers and men and subjected the troops to excessive fatigue and disease without any valuable result. While the Spaniards in Havana were disheartened over the apparent futility of Weyler's plan of campaign they were overcome with dread on account of the bold raids of the insurgents in the neighborhood of Havana and the arrival in Matanzas of fresh rebel forces. On Dec. 1 Raoul Arango and Nicolas Valencia stirred the Havana garrison to nervous activity by attacking the town of Guanabacoa, within 5 miles of the capital, where they secured a large quantity of provisions. Trains were blown up by dynamite and skirmishes took place constantly between small bodies of troops in Havana and Matanzas in which now one side and now the other was victorious, while both despoiled and devastated the country. Gomez meanwhile was moving westward by slow stages, stopping to burn sugar plantations where preparations were being made for grinding sugar cane. In Pinar del Rio Gen. Melguizo's force rav-

aged the hill country that had been occupied, destroying the growing crops. Gen. Inelan explored the Gobernadora hills, where he had an encounter with a rebel band on Dec. 4. On that day Antonio Maceo crossed the trocha unobserved with his staff and a small force, intending to join Gomez. In the vicinity of Punta Brava the party was surrounded by the column of Major Cirujeda, and more than 40 were killed, including Maceo. Dr. Maximo Zertucha, Maceo's surgeon general, was the only member of the staff who escaped, and when he immediately afterward gave himself up to the Spanish authorities and obtained amnesty, the Cuban patriots felt sure that this man had betrayed their chief to the Spaniards for money, either leading the party into an ambush or getting word to the enemy of their arrival and probable route.

Gen. Ruiz Rivera succeeded Maceo as commander-in-chief of the Cuban army of the west. The Spanish troops in Pinar del Rio continued their operations in the hills, which the Cubans opposed no

longer in considerable bodies, but by harassing the Spanish forces in small parties. Their principal fastnesses were still safe from Spanish attack. In the east a large body of insurgents crossed the Moron-Jucaro trocha after making a breach by blowing up some of the forts with dynamite. The "Three Friends" was fired upon by a Spanish gunboat when attempting to land a large cargo of arms and ammunition on Dec. 19 at the mouth of the San Juan river, between Cienfuegos and Trinidad, and put to sea again with her cargo and party of filibusters, setting them down on a desert Florida key, where they were rescued by the "Dauntless." The main body of Gen. Gomez's forces at the close of the year was encamped in the Cienega de Zapata. Guerrilla fighting was still as lively as ever in Havana, Matanzas, Santa Clara, and Puerto Principe. The Spanish troops made further attempts to occupy the rebel positions in the mountainous parts of Santiago and Camaguey and in the southern swamps, with no permanent success.

D

DELAWARE, a Middle Atlantic State, one of the original thirteen; ratified the Constitution Dec. 7, 1787; area, 2,120 square miles. The population, according to each decennial census, was 59,096 in 1790; 64,273 in 1800; 72,674 in 1810; 72,749 in 1820; 76,748 in 1830; 78,085 in 1840; 91,532 in 1850; 112,216 in 1860; 125,015 in 1870; 146,608 in 1880; and 168,493 in 1890. Capital, Dover.

Government.—The following were the State officers during the year: Governor (acting), William T. Watson, Democrat; Secretary of State, J. H. Whiteman, Democrat; Treasurer, Charles H. Atkins, Republican; Auditor, B. L. Lewis, Democrat; Attorney-General, Robert C. White, Democrat; Adjutant General, Garrett J. Hart, Democrat; Insurance Commissioner, Peter K. Meredith; Chancellor, John R. Nicholson; Chief Justice of the Court of Errors and Appeals, Charles B. Lore; Associate Justices, Ignatius C. Grubb, Charles M. Cullen, and David T. Marvel, Democrats.

Finances.—The report published in March shows the following summary of the condition of the State finances: The general fund receipts of 1895 were \$174,767.94, and the expenditures \$187,119.15, leaving a deficiency of \$12,351.21, which was converted into a balance of \$7,648.79 by borrowing \$20,000 from the school fund. Other balances at the end of the year were: School fund, \$16,017.33; sinking fund, \$4,529.38; State Hospital improvement fund, \$36,052.64; State Hospital current fund, \$5.39; total balances, \$64,253.53. The school disbursements during the year were \$127,759.98.

In its general fund the State has bank stock to the amount of \$92,100 and railroad mortgages to the amount of \$385,000; also a real-estate mortgage of \$10,000. The bonded debt of the State is \$684,750, and the excess of investments over the bonded debt is \$347,092.

Education.—The report of the State College for the year ending June 30 has the following details: The number of students enrolled for the year was 71; in arts, 35; in civil engineering, 10; in mechanical engineering, 13; in agriculture, 7. The number of graduates for the year was 14; in arts, 8; in civil engineering, 3; in electrical engineering, 2; in agriculture and science, 1. Of the past year's income, \$2,473.82 was expended for apparatus, machinery, and laboratory supplies, and \$895.38 for reference books.

The Agricultural Experiment Station has again given much attention to the study and investigation of animal diseases, especially those affecting horses and cattle, including anthrax, tuberculosis, etc. Investigations have been made as to the San José scale insect; also other scale insects, the elm-leaf beetle, and other insects injurious to vegetation. Valuable tests have been made with strawberries, and studies of varieties of apples suitable for profitable culture in Delaware. The receipts for the year were \$39,871.44, and the expenditures \$37,321.20.

The State College for Colored Students was opened Oct. 7, 1895, with 20 students, and the formal opening took place about two weeks later. The college offers facilities for learning carpentering, blacksmithing, printing, and other trades, as well as scholastic training.

The new State Library has been finished. The whole cost was about \$10,000. The second story has been fitted up as a hall, and this is in use by the Constitutional Convention.

Charities.—The number of inmates at the Insane Hospital Dec. 1 was 252. The biennial report of expenses shows that the cash on hand Dec. 1, 1894, received for treatment of patients, was \$5,272.44; during the two years \$7,023.87 has been received for treatment and \$64,002.01 from the Legislature, while \$76,161.06 has been expended. At the December meeting of trustees it was decided to charge annually \$152.18 per patient, which is \$14 more than is now charged at the hospital and \$60 less than the average charge in institutions of like character in other States. Three employees at the hospital—Supervisor Michael Lynch and attendants Daniel Brown and John J. Swan—were arrested in December, 1895, charged with the murder, on Oct. 5, of Leon Pisa, *alias* Leon Lewis, a patient. The arrests were made on the strength of warrants which were sworn out by Dr. Paris T. Carlisle and Thomas B. Smith, trustees of the hospital. The verdict acquitted Lynch, but convicted Brown and Swan of manslaughter. A motion for a new trial was denied, and the convicts were sentenced each to one year's imprisonment and a fine of \$400—the lightest penalty permitted by law.

The annual appropriation for the maintenance of the hospital is \$32,000, which has proved inadequate even to keep up the expenses incurred under the present *régime*. There are 17 attendants in the in-

stitution to take care of 251 patients, while, in accordance to the custom in well-regulated asylums, there should be about 25.

The annual report of the Delaware Hospital, made in March, shows that there were 451 admissions during the year. Of the total number, 327 recovered, 79 improved, 6 were unimproved, and 43 died; and on Dec. 31, 1895, 11 remained in the hospital.

The subscriptions for the year ending Dec. 31, 1895, amounted to \$3,170.50, and the cash donations to \$1,830.84. The assets of the hospital are: Real estate, \$41,137.82; furnishing and outfit, \$2,434.39; endowment fund, \$1,709.40.

Granite.—The value of this product in 1895 fell far below that of the years immediately preceding, attributed to the general depression of business. The value of the product for the six years 1890-'95 was: 1890, \$211,194; 1891, \$210,000; 1892, \$250,000; 1893, \$215,964; 1894, \$173,805; 1895, \$73,138.

Railroads.—The report of the Delaware Railroad Company in January gave the following figures: Earnings from passengers, \$345,186.43; from freights, \$834,719.64; from mails, express, etc., \$7,923.88; total gross earnings, \$1,259,129.95. The operating expenses were \$830,682.52; interest on equipment, \$22,949.63; total, \$853,632.15. The net earnings were \$405,497.80, from which deduct interest on bonds paid and accrued, \$29,200; dividends paid and accrued, \$157,471.44; taxes, \$4,695.96; total, \$191,367.40; surplus, \$214,130.40. The result for 1895, compared with the previous year, shows an increase in passenger receipts of \$10,842.50; freight, \$80,121.64; mails, express, and rents, \$12,930.40; total increase, \$103,894.54.

The report of the Wilmington and Northern, in May, includes the following: Receipts from passengers, \$76,149.98; milk, \$9,937.82; marketing, \$1,292.03; express, \$2,859.96; mails, \$4,683.64; freight, \$386,609.68; telegraph, \$459.62; miscellaneous, \$6,322.66; gross earnings, \$488,315.39. Operating expenses, \$410,578.55; taxes, \$5,840.92; total, \$416,419.47. Receipts, less operating expenses and taxes, \$71,895.92; interest on bonds, \$38,500; receipts, less operating expenses, taxes, and interest on bonds, \$33,395.92. Compared with the previous year, there was an increase in gross earnings of \$48,159.44, or 10.94 per cent., and an increase in operating expenses of \$39,100.57, or 10.35 per cent.

The new Queen Anne Railroad connects lower Delaware with Baltimore. It was finished in October to the State line, and is to be carried to Rehoboth.

Water Ways.—The following appropriations were in the river and harbor bill reported to Congress in April: For continuing improvement of Appoquinimink river, \$5,000; of Smyrna river, \$5,000; of Murderkill river, \$6,500; continuing improvement of the inland water way from Chincoteague Bay to Delaware Bay, at or near Lewes, to be used from Delaware Bay to Indian river, \$25,000; provided that no part of this appropriation shall be expended until the right of way is secured without cost to the United States; continuing improvement of Broad Creek river, \$5,000; of Choptank river, \$2,000; of Chester river, \$1,500; of Manokin river, \$4,000; of Wicomico river, \$3,700; of Warwick river, \$2,000; improvement of Patapsco river and channel to Baltimore; for maintenance from main ship channel to Curtis Bay, \$50,000; continuing improvement of Nanticoke river, \$3,000; continuing improvement of Delaware Breakwater, \$80,000; constructing harbor of refuge, Delaware Bay, in accordance with plans submitted by the chief of engineers, Jan. 29, 1892, \$5,000; continuing improvement of harbor at Wilmington and Christiana river, \$20,000; repairing the iron pier in Delaware Bay near Lewes, \$7,660.

Crane Hook Monument.—A stone marking the site of Crane Hook Church was dedicated Oct. 17 by the State Historical Society. This is the first memorial of the kind in Delaware. The site of the old church, built in 1667, is about halfway between Wilmington and New Castle. The church was of logs and rested upon large foundation stones at the corners and sides.

The Senatorship.—The question of the legality of the election of Henry A. Du Pont to the United States Senate (see "Annual Cyclopædia," 1895, page 227) was settled adversely to his claims by a vote of 31 to 30 in the Senate, May 15, thus leaving the State without full representation. May 26 the Senate voted an appropriation of \$2,500 for the payment of his counsel fees, and a like amount for counsel on the opposing side.

Political.—The Prohibitionists met in State convention at Dover, May 14, to select delegates to the national convention. They declared for the gold standard; favored the retirement of the tariff question from partisan politics and its reference to a non-partisan commission; protested against the granting of divorces by the Legislature and the supporting of schools by the proceeds of liquor licenses; favored Sunday laws and woman suffrage; and declared for a nonpartisan constitutional convention. Joshua Levering was recommended as candidate for President. The convention for nominating Governor, member of Congress, and presidential electors met at Dover, Aug. 11. Daniel M. Green was made the candidate for Governor and William Fairies for member of Congress.

The Democratic Convention for the election of delegates to the national convention was held at Dover, June 16. The resolutions, which were adopted unanimously, declared for the gold standard.

In reference to the senatorship the resolutions said: "We congratulate our party and the people of our State that the ability and standing of our only representative in the Senate of the United States has protected the water ways of our State from outside encroachment. His course in this and in resisting the misrepresentation of our State in that body by the admission of any one claiming to represent our people as the result of the most corrupt, debasing, and dishonorable political contest that could possibly be waged meets with our approval."

On Aug. 18 the convention for the nomination of presidential electors and State officers was held at Dover. As candidate for Governor, Ebe W. Tunnell received 108 votes against 77 for Peter J. Ford. For member of Congress, L. Irving Handy was nominated. The resolutions were limited to declarations on State affairs, except that the electors were pledged to the support of Bryan and Sewall.

A meeting of "sound-money" Democrats was held at Wilmington, Aug. 25. A league was organized, and delegates were chosen to represent the "Honest Money League of Delaware" at the Indianapolis convention, Sept. 2. They held a State convention at Wilmington, Sept. 30, and adopted resolutions ratifying the nomination of Palmer and Buckner and the platform of the Indianapolis convention. Ebe W. Tunnell was made their candidate for Governor and Thomas F. Bayard, Jr., for member of Congress, Mr. Handy having repudiated the declaration in favor of the gold standard by the convention that nominated him. Candidates for presidential electors were also chosen; the nominees of the Democratic Convention for the State Legislature, the Constitutional Convention, and county offices were adopted.

The contest between the Addicks and Higgins factions in the Republican party was reopened at the meeting of the State Central Committee, April 6, when a resolution introduced by an Addicks

member, providing for minority representation on the board of election officers at the election for delegates to the State convention, was rejected by the committee. The convention was held at Dover, May 12. The Addicks men were in the majority in the proportion of 97 to 52, as shown by the vote on a motion for the chair to appoint the Committee on Credentials, the Higgins men seeking to have the committee named by the district caucuses. When the Committee on Credentials reported in favor of unseating several Higgins delegates from Wilmington, the Higgins men, after vainly protesting, left the convention. The delegates to the national convention were left uninstructed. The platform declared loyalty to the principles of the Republican party, opposed free silver, "except after international agreement," and on State matters said: "We again denounce the conspiracy which, under the name of the Democratic party, continues to misgovern the State; which confines to odious officials the power to deny our citizens the equal opportunity to qualify to vote, and has, by an act of unparalleled centralization, given to the Governor the power to appoint everywhere his partisans as registrars.

"We call the attention of the people of the State to the fact that this prolonged and hitherto successful undertaking to control our State government by the disfranchisement of its citizens has brought its legitimate fruit in a crop of defalcations of officials, and to an extent hitherto happily without precedent in our history; and that the only remedy is to let all public officials know that they hold their offices under a responsibility to the people, untrammelled and free by their votes to pass judgment upon their public servants."

A resolution offered by Mr. Addicks increasing the representation in the State conventions from 160 to 200 delegates was passed. The increase is all in Kent and Sussex counties, giving each 20 additional delegates. Mr. Addicks's strength is in those counties. A new State committee was appointed.

The bolters held a separate convention, elected a set of delegates to the national convention, and adopted a platform. The declarations on national politics were substantially the same as those of the other convention, except that the delegates were instructed to vote for McKinley. The following in reference to State matters were adopted: "That the Republicans of Delaware express faith in the election of Henry A. Du Pont as a Senator of the United States, and insist that he be given a seat in that body." "That this is a Republican convention for the naming of six delegates to nominate Republican candidates for President and Vice-President of the United States; that only men of true and tried party fidelity can fitly represent this body; that J. Edward Addicks is not a Republican; that he betrayed the party of this State by conspiring with the Democrats to defeat the election of a Republican to the Senate of the United States, and that he is, therefore, not a fit person, either politically or morally, to represent the Republicans of Delaware in any capacity."

At the national convention the Committee on Credentials reported in favor of seating the delegation from Delaware headed by Senator Higgins.

The Addicks men met in convention at Dover, July 14, to nominate State officers and presidential electors. A resolution was adopted declaring the organization to be the Republican party of Delaware, and designating as its emblem an eagle with outstretched wings, which should be placed on the election tickets. John Henry Hoffecker was selected as the candidate for Governor, and Jonathan S. Willis was renominated for member of Congress. J. G. Shaw, D. M. Wilson, and D. J. Fooks were named for presidential electors. Resolutions con-

demning the action of the national convention in seating the Higgins delegates were adopted.

The Higgins, or Regular Republicans, held a convention at Georgetown July 17, and made the following nominations: For Governor, John C. Higgins; representative in Congress, Robert G. Houston; presidential electors, W. C. Spruance, Manlove Hayes, and D. J. Fooks. A resolution was adopted declaring: "The title of this party shall be the Republican party, and the device on the ballots by which the candidates shall be designated will be an eagle with outstretched wings."

On State matters the platform read as follows: "We favor such legislation as will permanently improve the public roads of this State.

"We insist that the coming Constitutional Convention shall, in the framing of a new constitution, deal with old conditions in a spirit of the broadest and most liberal reform. The people demand the abolition of life tenure of office, the limitation within narrow limits of the power of appointment to office, and the extension of their right to elect to office. They also demand the widest application of the principle of local self-government, and especially that of district representation in the General Assembly. They further demand such an adjustment of representation in both houses of the General Assembly as shall approximate to representation according to population. We urge upon the convention the necessity of vital reforms in the judiciary and collecting of taxes. The payment of a poll tax as a prerequisite to voting, which has proved a prolific source of fraud and corruption at election, should be abolished."

The question as to which faction was entitled to the name Republican party of Delaware and the device of the eagle with outspread wings on the official ballot was settled in favor of the Higgins faction by the clerks of the peace at Dover, July 23.

The contest between the factions was considered by the National Republican Committee, Sept. 2, with a view to securing harmony on the electoral ticket, and on Sept. 30 the State committee of the regular or anti-Addicks Republicans accepted the resignation of Messrs. Spruance and Hayes, thus leaving but one electoral ticket, as the third candidate, Mr. Fooks, was also on the Addicks or Union Republican ticket.

The advocates of the single-tax theory began a vigorous campaign in the State in the spring, organizing clubs and distributing literature. For addressing public meetings in the streets of Dover some of the speakers were arrested and fined. Not paying the fine, they were committed to the county jail. *Habeas corpus* proceedings were instituted, and on Aug. 10 the Chancellor released one of the prisoners, on the ground that the judgment entered against him was defective, but decided against the others, affirming the right of the town to suppress public speaking in the streets. The Kent County Levy Court advertised to put the prisoners up at auction and sell their labor to the highest bidder. The cases of 2 of the 12 prisoners were brought up as a test in the United States court before Judge Wales, who decided against them.

At the State single-tax convention, Sept. 5, Lewis N. Slaughter was nominated for Governor.

The official count of the election returns gave the following figures: For McKinley, 20,452; for Bryan, 16,615; for Palmer, 956; for Levering, 602. The vote for Governor stood: Ebe W. Tunnell, Democrat, 16,219; John C. Higgins, Regular Republican, 7,432; John H. Hoffecker, Union Republican, 12,235; Daniel Green, Prohibition, 546; Lewis N. Slaughter, Single-tax, 914. L. Irving Handy, silver Democrat, was declared elected to Congress by a plurality of 3,820.

As the name of one of the McKinley electors was given James G. Shaw on the regular Republican ticket and James G. Shaw, Sr. on the Union Republican, the question arose whether this did not give the election to the Bryan elector having the highest number of votes. Gov. Watson issued a proclamation declaring the three Republicans elected, since the omission of the word "Sr." implies that the older one of the name is intended.

Trouble arose over the returns from Kent County, from which two certificates were received by the Governor, one not including returns from all the precincts, and the other not signed by a majority of the Board of Canvassers. The question came before the courts in the form of an application for mandamus proceedings against the board, directing them to reconvene and canvass the returns. In the hearing the fact was brought out that no election inspectors had been legally elected since 1891.

The majority of the Supreme Court, Justice Grubb dissenting, granted the writ of mandamus prayed for by the Republicans, and issued an order directing the Kent County Board of Canvassers to reconvene and canvass the returns. The counsel for the Democrats appealed and the case goes to the Court of Errors and Appeals.

Congressman Willis served notice in December on Irving L. Handy, Congressman-elect, that he will contest the election on the ground of fraud and irregularities. He avers that voters were intimidated and kept away from the polls in Kent and Sussex; that he had 400 plurality in Kent County; that the party name and emblem was illegally placed on the Regular Republican ballots; and that the vote in Kent County was not canvassed.

The Constitutional Convention.—This body began its sessions in Dover, Dec. 1. Efforts had been made to make its membership nonpartisan or equally divided between the two leading parties; but this proposition was rejected, apparently by the Republican managers. Each party therefore nominated a full ticket. When the convention met the election dispute in Kent County was still undecided, and it affected 10 of the 30 seats in the convention. Party conferences were held, and various ways of settling the matter were proposed, and at a conference held by the Democratic members and those Regular Republicans whose titles were undisputed, it was agreed to compromise by admitting half of each of the contending delegations. This arrangement was not satisfactory to the Union Republicans, who decided not to accept any compromise but to claim their seats in the convention and await the decision of the court. At the opening session the Committee on Credentials reported that certificates had been received from the sheriffs of New Castle and Sussex Counties, showing that certain people had been elected, and that from Kent County one certificate had been received which was signed by the sheriff and six members of the canvassing board, certifying that 10 men had been elected, and another certificate had also been received which was signed by the coroner and 10 members of the canvassing board, certifying that 10 other men had been elected. The report recommended that 5 of each of the contending delegations should be seated. The report was adopted, the Kent County Union Republicans not voting. One of them who had been declared entitled to a seat objected to the arrangement, and moved that the convention adjourn for a week in order to give the committee time to count the vote. His motion was declared out of order, and all the Union Republicans then withdrew.

The convention adjourned with John Biggs as permanent chairman, Charles R. Jones secretary, D. V. Hutchins, sergeant-at-arms, and Walter E.

Avery chaplain. The following resolution was referred to a committee of 3, with instructions to report later in the session:

"Whereas, The act calling this convention expressed the opinion that any constitution framed by this convention should be submitted to the people of this State for their formal approval before the same should go into effect, which expression of opinion in the wisdom of the General Assembly was but the wish of the people of this State put in words by their representatives when calling for the election of delegates to the convention; and

"Whereas, It is the sense of this convention that said opinion and wish should be duly respected and complied with by the convention; therefore, be it

"Resolved, That the work of this convention, whether resulting in amendments to our existing Constitution or in the substitution of a new constitution as a whole, shall be, and of right should be, first submitted to the people for their ratification or rejection, for the same shall be considered as of binding force or ordained and proclaimed as the fundamental and organic law of this State."

Among the committees appointed was one to consider whether the members should be sworn, and if they decided in the affirmative, to decide on the nature of the oath. The committee recommended that no oath be required, and their report was accepted.

DENMARK, a constitutional monarchy in northern Europe. The legislative body is called the Rigsdag, which is composed of 2 chambers, the Landsting, having 66 members, of whom 12 are nominated for life by the Crown and the rest are elected by indirect suffrage for eight years, and the Folkething, consisting of 126 members elected by direct universal manhood suffrage in the proportion of 1 member to 16,000 inhabitants.

The reigning king is Christian IX., born April 8, 1818, who belongs to the family of Schleswig-Holstein-Sonderburg-Glücksburg, a younger branch of the house of Oldenburg that became extinct on the death of Frederick VII, whom Christian succeeded on Nov. 15, 1863, having been named heir to the throne in the treaty of London, signed May 8, 1852.

The State Council at the beginning of 1896 was composed of the following ministers: President of the Council and Minister of Foreign Affairs, Baron K. T. T. O. Reedtz-Thott, appointed Aug. 7, 1894; Minister of the Interior, H. E. Hørring; Minister of Justice and Minister for Iceland, J. M. V. Nellemann; Minister of Finance, C. D. Lütichau; Minister of War, Gen. C. A. F. Thomsen; Minister of Marine, Commander N. F. Ravn; Minister of Education and Ecclesiastical Affairs, V. Bardenfleth; Minister of Public Works, H. P. Ingerslev. The last-named minister died in April, and his office was merged in the Ministry of the Interior. On April 25 Gen. Thomsen resigned his portfolio on account of ill health and was succeeded by Col. Schnack. A Ministry of Agriculture was created, and M. K. de Sehested was placed in charge of it on May 22, 1896. Minister Nellemann, who for twenty years has been the most prominent member of the Government, resigned on June 13 and was succeeded by M. Rump, another Conservative.

Finance.—The revenue for the year ending March 31, 1895, was 67,342,857 kroner (1 krone = 26.8 cents). The budget for the year 1896-97 makes the revenue 67,423,955 kroner, of which 40,834,100 kroner are derived from customs, excise, and other indirect taxes, 10,084,170 kroner from direct taxes, 8,739,515 kroner from property and the sinking fund, 4,941,376 kroner from interest on state assets, 1,260,000 kroner from lotteries, 814,071 kroner from domains, 665,810 kroner from special sources, and 84,913 kroner from posts and tele-

graphs. The total disbursements are estimated at 67,419,059 kroner, of which 15,315,507 kroner are for improvement of state property and reduction of debt, 10,244,513 kroner for the Ministry of War, 6,858,350 kroner for interest and expenses of the state debt, 6,851,848 kroner for the Ministry of Marine, 5,779,933 kroner for the Ministry of the Interior, 4,048,666 kroner for the Ministry of Public Instruction and Worship, 4,485,914 kroner for extraordinary state expenditure, 3,984,486 kroner for the Ministry of Justice, 3,790,356 kroner for the Ministry of Finance, 3,215,401 kroner for military and civil pensions, 1,155,200 kroner for the civil list, 679,649 kroner for the Ministry of Public Works, 606,456 kroner for the Ministry of Foreign Affairs, 319,016 kroner for the Rigsdag and Council of State, and 83,764 kroner for Iceland. The reserve fund preserved for sudden emergencies amounted on March 31, 1895, to 17,850,992 kroner. Other investments of the state brought the active assets up to 50,553,395 kroner, not including the domains nor 190,080,660 kroner invested in railroads. The national debt was 208,428,026 kroner, bearing mostly 3 per cent. interest and held by Danes, excepting foreign loans amounting to 61,907,283 kroner.

Commerce.—The total value of imports in 1894 was 348,969,131 kroner, and of exports 263,664,535 kroner. The values, in kroner, of the principal classes of imports and exports were as follow:

CLASSES OF ARTICLES.	Imports.	Exports.
Colonial goods.....	29,926,485	8,477,150
Drinks.....	4,234,151	1,969,120
Textile goods.....	41,691,889	5,414,402
Metal goods.....	34,095,835	5,473,494
Coal.....	22,458,687	1,816,808
Animals.....	1,372,687	35,954,215
Butter, eggs, lard, etc.....	40,433,228	149,807,249
Grain.....	42,359,060	10,536,422

The commerce of 1894 was divided among foreign countries in the following proportion:

COUNTRIES.	Imports.	Exports.
Great Britain.....	68,650,727	152,642,311
Germany.....	118,993,945	65,973,025
Sweden and Norway.....	55,102,697	31,011,448
Russia.....	42,565,657	2,423,212
United States.....	13,642,752	934,922
Netherlands.....	8,115,388	340,968
Danish colonies.....	4,418,233	3,988,376
Other American countries.....	5,123,103	234,726
Belgium.....	6,427,078	1,009,917
France.....	5,669,187	1,754,418

Navigation.—The number of vessels entered at Danish ports during 1894 was 27,738, with 2,334,640 tons of cargo, and the number cleared was 27,657, with 590,040 tons of cargo, not including 34,283 coasters entered and 34,426 cleared.

The mercantile marine on Dec. 31, 1894, comprised in Denmark and the colonies 3,591 vessels, of 334,899 tons, of which 389, of 141,994 tons, were steamers.

The Army and Navy.—At the age of twenty-two every able-bodied Dane can be called into the service, in which case he is attached to the regular army and its reserve for eight years and for eight years more is inscribed in the extra reserve. The period of training lasts three months for the field artillery and engineers, four months for the siege artillery and technical corps, six months for the infantry, and eight months for the cavalry. A part of the troops, especially those who have shown the least aptitude or diligence, are put through a second period of drill, lasting eight months for the infantry, eleven months for the cavalry, and twelve months for the artillery and engineers. Every corps is called out further for annual exercises, last-

ing about a month. The strength of the army in 1894 was 778 officers and 13,152 men on the peace footing and 1,214 officers and 42,919 men on the war footing, not including the civic corps, numbering about 18,000 officers and men, and the extra reserve liable to be summoned in emergencies, numbering 16,500.

The Danish naval force is designed for coast defense. It comprises a battle ship of 5,300 tons, armed with a 36-ton and 4 22-ton guns, 4 ironclads, 3 first-class armored cruisers, one carrying a 52-ton gun and the others 2 28-ton guns, a second-class cruiser, 15 smaller cruisers, and 7 first-class, 3 second-class, and 2 third-class cruisers. A first-class torpedo vessel and an armor-clad were ordered in 1896. Most of the vessels were built in Copenhagen.

Communications.—The Danish railroads in 1894 had a total length of 1,332 miles, of which 1,067 miles were owned by the Government.

The postal traffic in 1894 embraced 64,934,658 letters and postal cards and 61,741,703 newspapers, circulars, and samples.

The state telegraph lines on Dec. 31, 1894, had a total length of 3,013 miles, with 8,515 miles of wire. The number of dispatches in 1894 was 1,796,527, of which 627,564 were domestic, 1,130,198 international, and 38,765 official.

Legislation.—Although the Folkething last elected is as Agrarian and Radical in its tendencies as any of its predecessors, the deadlock in legislation and the constitutional crisis that lasted nine years ended with the compromise of 1894 and have not recurred notwithstanding much friction, the principal cause having been removed when the fortifications of Copenhagen were completed. The Landsting in 1896 approved additional expenditure for the increase of the army, and the Folkething voted to nationalize a line of coasting steamers, to contribute to the International Peace Bureau at Berne, and to increase the salaries of a certain class of school teachers. A provisional financial law was prepared, but it was not needed, as the two houses at the last moment came to an agreement on a budget in which both withdrew the extraordinary demands. The Government made a concession to the Agrarian party in the shape of legislative proposals for the amelioration of the unfortunate condition of the rural population made by the newly appointed Minister of Agriculture, whose very creation marked a great change in the relations between the Government and the rural constituencies. These proposals were very obnoxious to the urban supporters of the Government. The Radical majority defeated several important measures proposed by the Government during the session.

Iceland.—The ancient colony of Iceland has its own Constitution and its Legislative Assembly, called the Althing, which is composed of 2 Chambers, the upper one of which consists of 12 members, half of them nominated by the Danish Government and the other half elected by the popular Chamber, which has 36 members, all elected by the people except 6, who are nominated by the Crown.

The area of Iceland is 39,756 square miles, of which 16,180 are inhabited. The population at the last enumeration was 70,927, having greatly diminished in recent times owing to death on the island and consequent emigration, chiefly to the United States. The imports in 1894 were valued at 3,235,536 kroner, and the exports at 2,716,719 kroner.

To protect the Icelandic shore fisheries from British steam trawlers and other poachers, a law was passed forbidding foreign fishing craft from entering territorial waters or using the ports. The British Government protested against this, and after the matter was discussed a provisional agree-

ment was reached in August, 1896, whereby British trawlers may enjoy the hospitality of any Icelandic port and may use some of the water ways over the Icelandic sea territory provided their trawls are stowed and not ready for fishing. Danish Government vessels, which patrolled the territorial waters in the fishing season in May, seized a number of English steam trawlers, and the courts confiscated their catch and fishing gear.

Greenland.—The Danish colony on the east coast of Greenland has an estimated area of 46,740 square miles, with a population of 10,516 persons. The imports in 1894 were 387,961 kroner, and the exports 336,144 kroner.

DISASTERS IN 1896. Any general list of casualties may be divided into three classes, namely, unavoidable, preventable, and doubtful. Exact figures, therefore, are unattainable, but a moderate estimate of what may fairly be termed accidental deaths from all causes gives a total of about 30,000 for the year. Of these, about 20,000 were practically unavoidable. The rest of the fatalities might with reasonable prudence and foresight have been avoided.

The statistics as to fires and railway accidents may be accepted as approximately correct. They are from the "Journal of Commerce and Commercial Bulletin" and from "The Railroad Gazette."

January 1. Shipwreck: English bark Janet Cowan lost on Vancouver's Island, British Columbia, 7 drowned. Train wrecked near Malta, Col., 2 killed. 2. Explosion of natural gas, Columbus, Ohio, 6 killed. Earthquakes in Persia, Jan. 2-5, about 1,000 killed.

3. Train derailed, Meadville, Pa., 16 hurt, cause a misplaced switch.

4. Locomotive boiler explodes, Fultonham, Ohio, 4 killed. Train derailed, Schooley's Station, Ohio, 5 killed, 3 hurt, cause a misplaced switch.

5. Trains in collision, Chillicothe, Ohio, 4 killed, 2 hurt.

7. Train falls through an open drawbridge at Rigolets, La., fireman and several tramps drowned.

9. Earthquake in Persia, about 1,100 lives lost.

11. Train derailed, Middlesborough, Ky., 1 killed, 1 hurt, cause a landslide.

14. Fatal heat in Australia, many deaths in Sydney and other cities.

15. Shipwreck: steamer Cigar sinks in collision, 19 drowned.

20. Train wrecked, Hazleton, Pa., 1 killed, 1 hurt. Fire: theater burned in Russia, about 75 lives lost.

22. Locomotive boiler explodes at South Charleston, Ohio, 2 killed, 7 hurt.

24. Train wrecked, Riverton, Va., 1 killed, 1 hurt, cause a fallen rock.

25. Shipwreck: American liner St. Paul ashore at Long Branch (floated Feb. 4).

26. Train wrecked, South San Francisco, Cal., 1 killed, 4 hurt, cause a washout.

25-28. Severe storm in Queensland, Australia; houses, shipping, etc., destroyed to the value of \$2,500,000, many lives lost.

27. Tornadoes in Texas and Mississippi. Floods in Greece, 70 persons drowned near Athens.

29. Panic at Baroda, India, a crowd of sight-seers became jammed in a narrow gateway, 29 killed, 35 hurt.

Fires in November: Cambridgeport, Mass., bridge works, loss, \$160,000; Spencer, W. Va., business block, \$250,000; Long Island City, N. Y., fertilizer works, \$200,000; Mercier, Pa., sundry buildings, \$100,000; Elberton, Ga., \$100,000; Richmond, province of Quebec, \$100,000; St. Paul, Minn., grain elevator, \$100,000; Portland, Ore., shingle mills, \$100,000; Nelsonville, Ohio, \$100,000; and 128 others; aggregate loss, \$5,211,800.

Summary of train accidents in November: 49 collisions, 54 derailments, 4 others; total, 107. Killed, 10 employees, 1 passenger, 3 others; total, 14. Hurt, 41 employees, 11 passengers, 3 others; total, 55.

December 1. Floods and ice gorges cause much hardship and destruction of property in Wisconsin. Earthquake in southern Illinois.

2. Heavy snows in Virginia, North Carolina, and Georgia.

3. Floods reported in the island of Montserrat, 75 drowned.

4. Plague: a disease known as the bubonic plague, hitherto confined to natives, has spread to Europeans in Bombay.

7. Shipwreck: North German Lloyd steamer Sailer off the coast of Spain, 275 lives lost.

8. Explosion: boiler bursts, Seville, Ga., 6 killed.

9. Shipwreck: German steamer Rajah capsized in Bristol Channel, 19 drowned.

10. Explosion: boiler bursts on French steamer Sagharien off Hong-Kong, several of the crew killed. Mining disaster, San Diego, Cal., 4 killed, 5 hurt.

11. Building falls, Jerez, Spain, about 100 killed.

12. Shipwreck: 7 vessels lost off the coast of Newfoundland.

14. Washington (State): highest, most destructive floods ever known; 9 inches of rain fell in eleven days, many lives lost.

17. Earthquake of considerable violence in the south of England.

18. Drowning accident: 5 persons perish near St. John's, Quebec.

19. Explosion, Resilza, Russia, fire damp in a coal mine, 40 killed, many more hurt and missing.

23. Floods in Greece, wide tracts laid waste.

24. Shipwreck: a steamboat capsized in the river Dnieper, Russia, many lives lost.

27. Train wrecked, Birmingham, Ala., 17 killed, 54 hurt; alleged cause, train wreckers.

28. Landslides: County Kerry, Ireland, house buried, with 9 inmates; also in Pelago, Italy, village of Santa Anna destroyed.

31. Deaths by accident in New York city during the year, 2,493 (report of Health Department).

Fires in December: New York city, factory and hospital, loss, \$600,000; Newark, N. J., electric power house, \$175,000; Rockford, Ill., hotel, etc., \$180,000; Ottawa, Ontario, business blocks, \$275,000; New Orleans, La., grocery warehouse, \$155,000; Winston, N. C., tobacco factory, \$150,000; St. Paul, Minn., business block, \$300,000; Elizabethport, N. J., sundry buildings, \$150,000; New Brunswick, N. J., theater, etc., \$350,000; Buffalo, N. Y., \$150,000; and 214 others; aggregate loss, \$11,362,000.

Aggregate loss by fire in 1896, \$115,655,500.

Summary of train accidents in December: 29 collisions, 60 derailments, 6 others; total, 95. Killed: 43 employees, 17 passengers, 2 others; total, 62. Hurt: 53 employees, 34 passengers, 3 others; total, 90.

Summary of train accidents in 1896: 514 collisions, 792 derailments, 51 others; total, 1,357. Killed: 318 employees, 128 passengers; total, 446. Hurt: 601 employees, 618 passengers; total, 1,219.

DISCIPLES OF CHRIST. The forty-seventh annual meeting of the American Christian Missionary Convention was held in Springfield, Ill., beginning Oct. 19. Mr. J. H. Hardin presided. The statistical secretary reported the numbers in the churches as follows: Of churches, 9,607; of members, 1,003,672; of Bible schools, 6,657, with 699,531 pupils and teachers; of Endeavor Societies, 3,766; of ministers of the Gospel, 5,360; value of church property, \$15,805,447. The national Sunday-school superintendent reported almost 8,000 Sunday schools—a larger number than that given by the statistical secretary—with 90,000 teachers. The report of the Board of Church Extension showed that 52 out of the 304 congregations which had been aided had paid back all their loans, the amount thus returned with the interest being \$57,130. This board was formed in 1888, starting with a fund of \$10,663 and 22 loans in operation. Since then, or during eight years, \$119,079 had been added to the permanent fund, while no loss had been incurred. The Educational Board reported progress in the work of collecting and distributing information concerning the educational institutions of the Disciples as an aid in securing their endowment and improvement. It contemplated an effort to raise a fund in aid of students preparing for the ministry and of other distinctly religious work. The report of the Board of Negro Evangelization mentioned substantial advance, with augmented income and diminished expenditure. The Southern Christian Institute, at Edwards, Miss., and the Bible school at Louisville, Ky., were increasing in influence. A new school had been started by the colored brethren of Alabama at Mount Willing. The Board

of Ministerial Relief had received \$5,840 and expended \$4,422. Counting the children in the preachers' families, it had aided 56 persons, including 17 preachers and their wives and 7 widows of deceased preachers.

The total receipts for the year of the American Christian Missionary Society were \$32,943, or \$10,301 more than those of the previous year. Of this amount \$1,479 had been contributed by the Ladies' Aid Societies. The debt of \$8,667 had been paid and the accounts closed with a balance in the treasury. The 47 missionaries had organized 7 new churches, visited 46 new places, and reported 2,090 accessions by letter and otherwise, and \$20,395 raised on salaries and \$10,152 raised for other purposes. Progress was reported in the work of city evangelization.

The previous convention had directed that the headquarters of the society be removed from Cincinnati, Ohio, to St. Louis, Mo. The legality of such removal was afterward called in question. The opinions of counsel were taken on the subject, and were to the effect that the contemplated action would subject the corporation to a forfeiture of its charter, with loss thereby of the power to enjoy the benefit of bequests which had been made to it and the invalidation of contracts into which it had entered. It would be possible, however, while continuing the chief office at Cincinnati and the ultimate control of affairs in the hands of the acting board there to transfer much of the business of the society to any other place where it should be in the hands of subordinate boards reporting periodically to the Board of Managers at Cincinnati.

The year's receipts of the Foreign Christian Missionary Society had been \$93,867, showing an increase of \$10,553 over that of the previous year. Ten thousand five hundred dollars had been received from bequests and invested. The plan of apportioning to the churches amounts which they should be asked to raise was growing in favor. Four new missionaries had gone out to China, and one to India. A missionary had been under appointment to Africa two years, while the committee had been looking for a suitable associate for him. Buildings had been erected in China and Japan. Eleven places in Turkey returned 28 additions during the year, 645 members, 374 in Sunday schools, and 260 in day schools. Thirteen disciples had suffered martyrdom. Nine missionaries in India reported from 4 stations 513 in Sunday schools, 360 in day schools, 53 in Christian Endeavor Societies, and 124 members. Twelve missionaries in China reported from 5 places, 86 in day schools, 95 in Sunday schools, 92 church members, and 12,392 patients treated. Eleven missionaries in Japan returned 169 members, 324 in Sunday schools, and 373 in day schools. The mission in Denmark included 2 preaching stations with 3 helpers, 199 members, 34 added during the year, and 100 in Sunday schools, and had raised \$800 for self-support and \$17 for foreign missions; that in Norway, 8 helpers, 24 preaching stations, 879 members, 95 additions, 269 pupils in Sunday schools, \$1,700 raised for self-support, and \$36 for foreign missions. The English Association, England, included 14 churches, 2,007 members, 313 additions, 2,184 in Sunday schools, \$13,571 raised for self-support, \$1,510 for home missions, and \$896 for foreign missions.

The receipts of the Woman's Board had been \$61,122. The board sustained 50 missionaries in the United States, India, and Jamaica. Special work was done in the several States under the direction of the auxiliary societies thereof; and general evangelists were sustained in different parts of the West and South. The board maintained chairs of Biblical Instruction in the Universities of Michi-

gan (where 95 students were enrolled in the past, its third year), California, and Virginia; and it was represented that the Universities of Colorado, Kansas, Oregon, and Georgia had invited the establishment of similar chairs. The board directed that measures be taken at once for establishing them. Reports were made of the progress of the Junior and Children's Mission Boards.

DODGE, MARY ABBY ("Gail Hamilton"), author, born in Hamilton, Mass., in 1833; died there Aug. 17, 1896. Her first occupation was teaching. In 1851 she taught in the high school in Hartford, Conn., and later in Washington in the family of Dr. Gamaliel Bailey, editor of the "National Era." Miss Dodge contributed to this paper, and was for a while a member of its staff. She was one of the editors of a Boston children's magazine, "Our Young Folks," from 1865 to 1867. In 1862 she published her first book, and from that time until 1876 every year, excepting 1869, brought one or two volumes from her pen. The earlier works, in the order of their appearance, are: "Country Living and Country Thinking," "Gala Days," "A New Atmosphere," "Stumbling Blocks," "Skirmishes and Sketches," "Red-Letter Days in Applethorpe," "Summer Rest," "Wool-Gathering," "Woman's Wrongs: A Counter-Irritant" (which was written in answer to a series of articles by the Rev. John Todd on "Woman's Rights"), "A Battle of the Books," "Woman's Worth and Worthlessness," "Little-Folk Life,"

tem," in 1881 "Divine Guidance: A Memorial of Allen W. Dodge," in 1885 "The Insuppressible Book," and in 1896 "X Rays." The last work she undertook was a life of Mr. Blaine, who bequeathed to her all his papers. The work is considered her best, but her last illness and death prevented her from quite completing it, and Mrs. Harriet Prescott Spofford did what little work was necessary to finish the last chapter.

Miss Dodge, though an outspoken opponent of woman suffrage, was very positive in her ideas of the powers and duties of women. In her "Country Living and Country Thinking" she says: "I do not blame men for not understanding women. It is, perhaps, not in the nature of things. Two organisms so delicate, yet so distinct—so often parallel, yet so entirely integral—can, perhaps, never be thoroughly understood objectively. But I do blame them for obstinately persisting in the belief that they do when they don't. Instead of going quietly on their way and letting us go quietly on ours, giving and receiving help when it is needed, and standing kindly aloof when it is not, they are continually projecting themselves into our sphere, putting their officious shoulders to our wheels, poking their prurient fingers into our pies. They seem to have no idea that there is any corner of our hearts so hidden that their half-penny tallow candles can not illuminate it, and at the first symptom of doubt the tallow candles are accordingly pro-

*For, as the foundation of all civ-
ilization is the supremacy of the best,
the record of that supremacy should
be faithfully kept, to the end that
noble and valiant deeds may be pre-
served in perpetual remembrance*

FACSIMILE OF MISS DODGE'S MANUSCRIPT.

"The Child World," "Twelve Miles from a Lemon," "Nursery Noonings," "Sermons to the Clergy," a novel entitled "First Love is Best," and "What think ye of Christ?" Miss Dodge was a cousin of Mrs. James G. Blaine, and was a great help to her in the many social duties of official life, and she also assisted Mr. Blaine with her large knowledge of public affairs and her ability to write. Her presence made the Blaine homestead a literary center, and her brilliant mind was enthusiastically spoken of by those who visited there. During one season Miss Dodge organized a class of bright people who were especially interested in studying the Bible. Her idea was that they all study and discuss together; but her own superior perception and learning induced the members to urge that she teach the class, and at their solicitation the papers she had presented were published in a volume entitled "A Washington Bible Class" (1891). Miss Dodge took an active interest in all that concerns women, and had an especial fondness for children. She is said to have known as much of public affairs as almost any statesman. She worked vigorously for the release of Mrs. Maybriek from Woking Prison, England. Miss Dodge frequently contributed to the magazines, always under her pen name of "Gail Hamilton." In 1877 she contributed to the New York "Tribune" a series of strongly written letters on civil-service reform. In 1880 she published a volume entitled "Our Common-School Sys-

duced. Assuming that they are entirely conversant with woman's nature, conscious with all their stolidity that there is friction somewhere, and perfectly confident that they can tinker us up 'as good as new,' with the best of motives and the clumsiest of hands, they begin forthwith to hammer away, right and left, on the delicate wheels and springs till we are forced to cry out: 'Dear souls, we know you are good and honest and sincere. You would die for us; but your fingers are all thumbs. Let us alone!' Do you think they will? Not they."

During the civil war she wrote: "Emancipation is the touchstone of this nation. By this sign shall it be known whether we work the works of God or of the devil. The Government that we are fighting to uphold is not the old hulk, dismantled, water-logged, rolling, helpless, becalmed, on slavery's dead Sea of Sargasso, but a new, strong, oaken-ribbed, ironclad man-of-war, with her steam up, her portholes open, her banner streaming, bearing down with her whole fire and force and speed and strength upon that mystery of iniquity; and her sealed orders are to loose the bonds of the oppressor and to let the oppressed go free."

Her earlier books had an immediate success and a wide circulation. Her later writings, though much more able, were on heavier themes and had not so great popularity. We believe no portrait ever has been published.

DU MAURIER, GEORGE LOUIS PALMELLA BUSSON, an English artist and author, born in Paris, March 6, 1834; died in London, Oct. 8,

GEORGE DU MAURIER.

1896. His father was a French *rentier*, and his mother an Englishwoman. They first lived in the Champs Élysées, then removed to Belgium, later to England, next back to France, and when George was seventeen years old went again to London. There he studied chemistry at University College and in the laboratory of King's College, and in 1854 had a laboratory of his own. His father intended to have him become an analytical chemist, but one journey to Devonshire, where he was sent to investigate a gold mine, was his only effort in that profession. He gave himself instead to the study of art, and worked under M. Gleyre in Paris, with Whistler and Paynter among his fellow-students. Later he studied in Antwerp and in Düsseldorf. His eyes troubled him so much that he feared blindness, and was obliged to wear peculiar glasses and draw objects on a large scale. Mr. Du Maurier was very poor at this time, and when he had finished his education his mother, now a widow, gave him £10, with which he went to London to establish himself as an artist, taking with him a letter of introduction to Charles Reade. His earliest drawings were published in the "Leisure Hour," "London Society," and "Once a Week." Then his work appeared in "Punch" and the "Cornhill Magazine." In 1864 he became a member of the staff of "Punch," and for thirty years nearly every issue contained something from his pencil. He composed the legends for these pictures,

and wrote a tale entitled "Jack Spratts." He illustrated Fox's "Book of Martyrs," Thackeray's "Ballads," "Henry Esmond," "The Story of a Feather," and many other books. A collection of his pictures in "Punch" was published in 1880 under the title "English Society at Home," and in 1885 the Fine Arts Society made an exhibition of his drawings.

Mr. Du Maurier's first novel, "Peter Ibbetson" (1891) is by many critics considered his best. This was followed by "Trilby" (1894) and "The Martian" (1897). "Trilby" was written as the result of a talk between the author and Mr. Henry James, when the latter had complained of the dearth of good plots, and Mr. Du Maurier, having told the outline of "Trilby," was prevailed upon to write the story. It had an immediate and phenomenal success. Du Maurier's artistic work has justly won him a wide reputation. Ruskin and Millais have praised him as one of the most truly artistic men of his time. He was an associate of the Royal Society of Painters in Water Colors. The personages in his illustrations are always of much the same type, especially the women, which were often pictures of his wife and his daughter. There is sometimes a slight suggestion of the grotesque in his work, and generally an indescribable little touch of humorousness pervading the whole scene.

Many pleasant anecdotes are told of Du Maurier, all of which show him as an amiable man, with keen sensibilities and genuine modesty. He saw Thackeray but once, at the House of Mrs. Sartoris. His hostess wanted to introduce him, but he refused. "I was too diffident," he told a friend. "I was so little, and he was so great. But all that evening I remained as close to him as possible, greedily listening to his words. I remember that during the evening an American came up to him

DU MAURIER'S HOUSE, HAMPSTEAD HEATH, LONDON.

—rather a common sort of man—and claimed acquaintance. Thackeray received him most cordially, and invited him to dinner. I envied that American. And my admiration for Thackeray increased when, as it was getting late, he turned to his two daughters, Minnie and Annie, and said to them, 'Allons,

mesdemoiselles, il est temps de s'en aller," with the best French accent I have ever heard in an Englishman's mouth." When "Trilby" had its enormous vogue Du Maurier had one regret. "This boom," he confessed, "rather distresses me when I reflect that Thackeray never had a boom." Not that Du Maurier imagined that a "boom" was any proof of literary excellence, but it meant money. He is reported to have said that the success of "Trilby" killed him. That novel has been dramatized and played with great success, a son of the author being in the cast. That son recalls some interesting reminiscences of his father. He says:

"Father never thought that 'Trilby' would be a success as a play when he was first told that it was going to be dramatized. However, he said he didn't care what was done with it, so long as he was not obliged to see it. He always hated the theater, anyway, and never went unless he had to, for the sake of some one else. But he rather changed his mind later about 'Trilby.' That is, he thought it was awfully clever to be able to make a play out of it at all, and was quite pleased at the way in which several of the scenes were reproduced. He went to the dress rehearsal, and several times after that.

"As for the book 'Trilby,' my father grew very tired of the *furor* which that created. Everything in the shops was 'Trilby' for a time—gloves, boots, shoe laces—it was ridiculous, and the very name grew wearisome to him. Personally, I like 'Peter Ibbetson' much better than 'Trilby,' and I think father also thought it was the better book of the two. He was very much interested in the new book, 'The Martian,' and preferred it to the others."

"He had not the slightest idea of fashion, or what was the correct thing in dress. People supposed that he noticed those things, of course, and girls used to come to call upon my mother and sisters got up beautifully, and expecting that father would want to put them into his drawings, or would at least get some ideas from them. But, dear me, he hadn't the least notion of what they had on! My sisters looked to it that he got the right things in his pictures. He would come home sometimes and sketch something which had attracted him in a passer-by on the street. Often it would be some impossibly queer arrangement, and my sisters would protest: 'Why, father, you mustn't use that in "Punch." Nobody wears those things now; they're dreadfully old-fashioned,' and he would give in immediately to what he recognized as their superior judgment.

"He put himself into all his books; perhaps more directly into 'Peter Ibbetson' than the others. The dislike of cruelty to dumb animals which he mentions in several places was a characteristic of his. He never would shoot or hunt in any way when he was a young man. He didn't mind boxing, or any sort of reasonable encounter between men, but the idea of hurting helpless creatures lower in the scale was very repulsive to him.

"People used to send him jokes from all over England, but he didn't use so very many of them. At least three fourths of all those which appeared were his own. It was a tax. Sometimes it worried him not a little, and to see him walking up and down the room trying to think of a joke—oh, it was awful!"

E

EAST AFRICA. In the last century the Imams of Muscat expelled the Portuguese garrisons from Zanzibar and the African mainland, and established their dominion over the native tribes sufficiently to protect the trade routes into the interior. In 1861 a dispute having arisen as to the succession between the sons of the deceased Seyyid Said of Muscat, Seyyid Majid set up a separate Government in Zanzibar, which, by the arbitration of the Governor General of India, Lord Canning, was recognized as independent. Seyyid Majid established custom-houses in the ports along the coast from Warsheikh, in 3° of north latitude, to Tunghi Bay, in 10° 42' of south latitude, and maintained a considerable military force for the protection of the caravan routes for Europeans and East Indians, as well as for Arabs. In 1884 agents of the German East African Association concluded treaties with native chiefs back of the coast opposite Zanzibar. The association was chartered as the German East African Company, and received a patent of imperial protection from the German Government on March 3, 1885. In 1886 an agreement was made between England, France, and Germany, whereby the Sultan of Zanzibar was recognized as holding sovereign rights over a strip of coast only 10 miles wide, a German sphere of influence was recognized extending from the Portuguese possession of Mozambique to and including the Kilimanjaro mountains and inland to the boundary of the Congo Free State, and the region north of the German sphere, from the Umba to the Tana river, was recognized as England's sphere of influence, save the sultanate of Vitu, with which Germany had concluded a treaty of protection. The German East Africa Company in May, 1888, leased

the customs of its coast line from the Sultan of Zanzibar for fifty years for the sum of 4,000,000 marks. The Imperial British East Africa Company obtained by charter on Sept. 3, 1888, the right to administer the British sphere, and acquired from the ruler of Zanzibar a lease of the ports and the collection of customs and administration of the coast as far north as Kipini. In 1889 it acquired the ports and islands north of the Tana, including Lamu, Manda, and Patta. In 1890, by agreements with Germany and France, Great Britain acquired permission to establish a protectorate over the Sultan of Zanzibar, and an extension of the British sphere of influence northward to the Juba river. Germany at the same time ceded Vitu to England. A British protectorate was effectively established over Zanzibar in October, 1891, when the Government was reorganized, with Sir L. Mathews at its head, and the British consul general was placed in control of all expenditure and new undertakings. Zanzibar was declared a free port on Feb. 1, 1892. On Aug. 26 the Sultan of Zanzibar, at the instance of the British Government, ceded to Italy the Somali ports of Brava, Merka, Mogadoscio, and Warsheikh, of which the Italian Government took possession on Sept. 26, 1893. The British East Africa Company evacuated the territory between the Tana and Juba rivers on July 31, 1893, handing over the administration to the Sultan of Zanzibar. On June 15, 1895, a British protectorate was proclaimed over the whole territory of the British East Africa Company from the coast to the boundaries of Uganda, and on June 30, 1895, that company evacuated the strip of coast leased by the Sultan of Zanzibar, the administration of which was transferred to the British Im-

perial Government, and placed under the control of the consul general at Zanzibar. On Aug. 31, 1896, a decree was published placing under a single administration all the British territories in East Africa except the islands of Zanzibar and Pemba, and the Uganda protectorate. This East African protectorate includes the territories bounded on the north by the river Juba, on the east by the Indian Ocean, on the south by the German sphere, and on the west by the Uganda protectorate, and also all adjacent islands between the mouths of the rivers Juba and Umba.

Zanzibar.—The island of Zanzibar has an area of 625 square miles, with about 150,000 inhabitants. Pemba, where Arab proprietors cultivate cloves by slave labor, has an area of 360 square miles and 50,000 inhabitants. In the town of Zanzibar are about 50 Englishmen and 50 Germans engaged in trading, and some American, French, Italian, Greek, and Roumanian traders besides, but the bulk of the trade of East Africa is conducted by the Banian merchant caste of India, of which there are about 7,000 representatives in Zanzibar. The sultans of Zanzibar derived a considerable revenue from customs duties and taxes on clover and other products. Under the British protectorate all the revenues are taken out of the hands of the Sultan and his court officials, and he receives instead a privy purse of about two lakhs of rupees. There is a regular army of 1,000 men, including police, which is commanded by Gen. G. P. Hatch. The commerce of 1894 amounted to £1,197,681 for imports and £1,096,240 for exports. Of the imports, £219,746 came from German East Africa, £177,171 from the Sultan's dominions, £47,369 from British East Africa, £31,183 from Benadir, and £722,212 from foreign countries. The chief exports were: Ivory, £152,181; cloves, £138,859; copra, £25,697; rubber, £21,022; gums, £12,807; hides, £6,002; chillies, £5,083. The imports in 1895 amounted to £1,293,646. The chief importing country is British India, whence are brought piece goods, rice, and specie. Among European countries Great Britain takes the first place, but the imports from that country show a decline, especially in piece goods and hardware, owing to the competition of other countries. The most important article of import into Zanzibar is cotton cloth, of which all importing countries showed an increased trade excepting England, whose imports of piece goods declined 25 per cent. The most important class of piece goods is the gray cloth that in certain parts of Africa forms the only currency. The best part of this trade is obtained by the United States, whose goods were first in the field, and are superior to any furnished by Manchester at the same price, being free from sizing, unshrinkable, stouter than English cloth, and of more uniform weight. Dutch and German prints, Belgian iron goods, and French brass wire are supplanting the English products. During 1894 the trading vessels calling at Zanzibar numbered 126, of which 44, of 71,235 tons, were English, 46, of 66,862 tons, German, and 28, of 47,776 tons, French. The Maria Theresa dollars coined in Zanzibar are the standard currency. Indian rupees are current at the rate of 47 cents for the rupee, and are the common money.

Seyyid Hamed bin Thwain was placed on the throne on the death of Seyyid Ali on March 5, 1893, having been selected from among several claimants as the one most amenable to British control. His cousin Khalid, son of the Sultan Barghash, who was the choice of the Arabs, after his claims had been rejected by the English agent, Rennell Rodd, planned to seize the throne in defiance of British wishes, but his designs were frustrated. Seyyid Hamid bin Thwain died suddenly on Aug. 25, 1896.

Seyyid Khalid bin Barghash proceeded at once to the palace, and, disregarding the orders of Basil S. Cave, the acting British agent, and Sir Lloyd Mathews, took command of the deceased Sultan's bodyguard and other Arabs and retainers, who flocked to his support all fully armed. Capt. Saleh, commander of the palace guard, had the guns presented by the German Emperor and others so planted as to command each entrance to the palace square. Meanwhile the British commander called together his *askaris* and summoned aid from the British ships of war "Philomel" and "Thrush," which landed 150 marines. The Arabs arrayed in the palace square numbered 2,500, all ready armed, and with field guns and Maxims loaded for action. After they had buried the late Sultan, Seyyid Khalid, in defiance of the messages of Mr. Cave, who warned him that it would be an act of rebellion against the protecting power, proclaimed himself Sultan and raised his flag, while guns fired a royal salute. The British war ships took their station opposite the palace, while the acting diplomatic agent waited for instructions from Lord Salisbury. Other British war vessels arrived opportunely, increasing the naval force and the troops landed for the protection of the British in the city, which consisted of 550 marines and sailors with guns, and 700 native troops.

On receiving a reply from London leaving the authorities on the spot free to act according to their own discretion, Admiral Rawson conferred with emissaries of the usurping Sultan, and when the latter refused to leave the palace, sent him an *ultimatum* stating that if he did not haul down his flag and evacuate the palace before nine o'clock the next morning, Aug. 27, the palace would be bombarded. The *ultimatum* was renewed in the morning, and when Khalid still refused to capitulate the "Raccoon," "Thrush," and "Sparrow" fired on the palace. The Arabs made an ineffectual defense with their guns in the palace and the old brass guns of the "Glasgow" and two small steam launches. The Arabs fought pluckily until the palace was a heap of ruins. The bombardment lasted fifty minutes. Seyyid Khalid's followers even then contested the position from behind their barricades, keeping up a steady fire on the British marines and Indian soldiers till the position was carried. Seyyid Khalid, when the British took possession of the town, escaped from them by taking refuge in the German consulate. Many of the leading Arabs fought on Khalid's side. Of 3,000 persons who were in the palace when it was bombarded 500 were killed or wounded. During the disturbance there was much looting of property, and many Indians were murdered. The same afternoon the British officials had Seyyid Hamid bin Mahomed proclaimed Sultan. The Sultan's guns were taken away by the British cruiser "St. George," and the palace *askaris* were disbanded. Many of Khalid's adherents escaped to the mainland or neighboring islands. The British consul general requested the German consul to deliver over Khalid and the leading Arabs who had sought an asylum in the German consulate. As the consulate and other German property in Zanzibar possess the attribute of extraterritoriality under the treaty made by Germany with the Sultan of Zanzibar in 1885, and as the extradition treaty between Germany and Great Britain declares that offenses of a political character are not extraditable, and that a fugitive shall not be extradited if the real object of the demand for his extradition is to prosecute or punish him for a misdemeanor or crime of a political nature, the German Government discussed with the English Foreign Office the question of handing over Khalid on condition that he should be treated as a

prince, and not be prosecuted or in any way punished for his opposition to the British authorities. While this matter was still the subject of diplomatic correspondence, the refugee was taken on board the German cruiser "Seeadler," and conveyed to German East Africa, a proceeding against which the English consul in Zanzibar lodged a protest. The estates of 12 wealthy Arabs were confiscated by the British authorities in Zanzibar, in consequence of their complicity in Khalid's rebellion. This caused many Arabs to remove their effects and take refuge in the German possessions or elsewhere.

The Salisbury Cabinet shortly after assuming office pledged itself to carry out the promise of the Liberal ministers to abolish the legal *status* of slavery in Zanzibar and Pemba at as early a date as possible. In the session of 1896 Mr. Curzon, on being pressed by the representatives of the Anti-slavery Society, renewed this pledge and said that the Government would come to a decision as to the final measures to be adopted with a view to their being put into execution in the autumn. The number of slaves on the islands working on the plantations was said to have trebled within a dozen years. It was estimated that there were from 144,000 to 266,000 of them, and of these 90 or 95 per cent. were illegally held in slavery in defiance of the Sultan's decree of June 5, 1875, which made it unlawful to introduce new slaves into the islands. The Sultan's proclamation of Aug. 1, 1890, prohibited all traffic in slaves. The continuance of slavery at Mombasa, Zanzibar, and Pemba makes it impossible to suppress slave raiding in the interior and the slave trade with Arabia which Great Britain has endeavored for many years to stop by patrolling the seas with a large and expensive naval force. The movement of slaves in the mainland is always toward the coast, now under a British protectorate. Pemba, besides being one of the principal slave countries in the world, using up a great number by its hard and cruel plantation system, is, moreover, the chief source of supply for the slave dhows that carry on a secret and illicit trade with Arabia.

British East Africa.—The British East Africa Company had occupied the whole country as far as Uganda, and that between Uganda and the river Semliki and Lake Albert Edward, when it retired from Uganda in March, 1893. On June 19, 1894, a British protectorate was proclaimed over Uganda. On June 15, 1894, a protectorate was proclaimed over the country between the coast and Uganda, including Vitu. The British sphere in East Africa is assumed to include, besides Uganda, the native territories of Unyoro, Usoga, Ankori, Mpororo, Koki, part of Ruanda, the former equatorial province of Egypt, part of Kordofan and Darfur, and a large part of Somaliland, embracing a total area of over 1,000,000 square miles. Ernest L. Berkeley is the British commissioner for Uganda proper, under Arthur H. Hardinge, the British agent and consul general at Zanzibar, who has direct control of the coast strip leased from the Sultan of Zanzibar, while a sub-commissioner under Mr. Berkeley has charge of communications between the coast and Uganda. The customs revenue for 1893 was 261,554 rupees. The value of the imports was 1,807,208 rupees, and of the exports 1,287,399 rupees. The principal exports are sesame, ivory, rubber, gums, copra, coir, orchilla weed, and hides.

It was decided before the Conservative Government took office in England that the projected Uganda railroad should be built by the British Government. The estimated cost for a very light railroad was £1,157,000. The Salisbury Government proposed one of broader gauge and heavier rails that will cost not less than £3,000,000, and this plan was finally approved by Parliament

on Aug. 1, 1896. The distance from Mombasa to the east corner of Victoria Nyanza is 657 miles. The gauge is 3 feet 6 inches. The first rail was laid on May 29, 1896. Native laborers and about 2,000 Indian coolies have been employed on the work.

In 1895 a rebellion broke out on the mainland north of Zanzibar, which at the beginning of 1896 attained serious and grave dimensions. Two or three important chiefs were drawn into the rebellion, and the troops of the protectorate on the spot were not capable of dealing with it satisfactorily. The movement spread over a wider area, until it was necessary to bring over a Sikh regiment from India to cope with the difficulty. The trouble began when the British, in February, 1895, set up the youth Rashid as successor to his father, Salim, the late chief of Takaunga, a district halfway between Mombasa and Malindi, rejecting the claims of Mubarak-bin-Rashid, whom the tribe desired and followed. When the latter refused to abdicate the forces of the protectorate destroyed his headquarters at Gonjoro. He took refuge with the chief of Gazi, who threw in his lot with the Takaunga rebels at Mweli. On Aug. 17, 1895, this place was attacked and captured. The rebellion spread until Indian troops had to be imported in March, 1896. In February the rebels attacked and set fire to Molindi. The operations were carried on until in April Mubarak and his followers crossed over into German territory. Negotiations were then entered into with Major von Wissmann, the result of which was that Mubarak agreed to lay down his arms, the German Governor allotting him a tract of land at Mau, south of Tanga.

Operations carried on against Kabarega, King of Unyoro, in the summer of 1895 had the result of driving him across the Nile. The expedition, commanded by Capt. T. Ternan, consisted of 20,000 Waganda levies and a small column of Sudanese, who defeated Kabarega's army at Umruli, pursued Kabarega over the Nile and for some distance into the Wakeddi country, set free 2,000 captive women and children, captured the Wanyoro queen, who afterward induced many natives to return to their homes in the occupied region, seized a great number of cattle, and built a fort at Masindi, in the heart of Kabarega's country, over the whole of which British rule was established.

The Waganda have made great progress under British administration. Many of the chiefs have built stone and brick houses and supplied themselves with European furniture and other conveniences of civilized life. The English Protestant and the French Catholic missionaries pursue their work in amicable rivalry, having abolished the former division of territory between them. Mengo has an efficient police force that patrols the town day and night. The Nubian troops are trained in English tactics. The native people are loyally co-operating with the white men in repairing the ravages of war with signal success. Banana gardens are replanted, bridges built, roads cleared, and swamps drained. The English resident, George Wilson, has made considerable plantations of coffee, tobacco, and English fruit trees.

German East Africa.—The German sphere in East Africa is estimated to embrace 380,000 square miles, with a population of 2,900,000. The German Government after suppressing the Arab revolt of 1889, assumed the political administration of the territories, being represented by an imperial Governor, Major von Wissmann. The Government grants subsidies for railroads to the interior and steamers on the lakes, and maintains a school at Bagamoyo. The total expenditures for 1895-'96 were estimated at 5,837,000 marks. The value of the imports in 1894 was \$2,913,317 in silver, and of

the exports \$1,982,272. The chief exports were: Ivory, \$873,467; rubber, \$247,470; sesame, \$80,100; coconuts, \$44,140; copra, \$24,862. A railroad is projected that will connect Bagamoyo and Dar-es-Salaam with the lakes, and have a total length of 1,120 miles. A syndicate has undertaken to build the first section of 182 miles, reaching to Mrogoro, in Ukami, at a cost of 12,000,000 marks, and expects to have it done before the end of 1897. The cost of the entire line to Lake Tanganyika and Victoria Nyanza, by way of Tabera, is estimated at from 30,000,000 to 40,000,000 marks.

After the death of Stokes, who was hanged by the Congo Free State authorities, Ruoma, a powerful chief in Bukoba, sent word to the neighboring sultans, including the notorious Lukonge, to cease paying tribute to the Germans and to join him in paying it instead to the Belgians, who, having shown their power by killing Stokes, would drive the Germans out of the country. Lukonge immediately attacked Ukerewe, Stokes's chief station on the lake Victoria Nyanza, which had been acquired by the White Fathers, and this resulted in the massacre of a large number of French native Christians and the burning of the station. Two German expeditions were consequently dispatched, one against each sultan. In the end Lukonge was banished, his country was given to another chief, and Ruoma was killed. The killing of Stokes had a disturbing effect throughout the country, for the natives never had supposed that one white man would kill another. A German punitive expedition had to be sent early in 1896 against the powerful chief Kitangule for stealing firearms. In the summer the Wawemba tribe of slave raiders in British East Africa, who were severely punished in 1893 by Major von Wissmann, made a fresh incursion into German territory near the northern end of Lake Tanganyika. In September occurred a rising of the Wabehe tribe that Col. von Schele subdued with great difficulty. Having repaired their fortress of Kwikuru, they expelled from their country the detachment of German troops under Lieut. Fugger. The acting Governor, Lieut. von Trotha, sent an expedition of 200 soldiers to reduce them again to submission.

The acts of Dr. Peters while administrator of the Kilimanjaro district led to greater precautions being taken against the ill treatment of natives by German officials and settlers in East Africa. This famous explorer after he had been elected to succeed Prince Arenberg as President of the Berlin branch of the German Colonial Association was charged in the Reichstag with having caused his black mistress and her negro paramour to be hanged without any trial. In July the manager of the German East African Plantation Company, Friedrich Schröder, was condemned to fifteen years' imprisonment for extreme cruelty to natives.

Nyassaland.—Missionary stations of the Scottish Presbyterians and trading posts of the African Lakes Company have been maintained for many years in the Shire highlands and on the shores of Lake Nyassa. On the strength of their occupation of this district the English Government compelled Portugal to renounce its claims to all the region now known as British Central Africa, embracing an area of 500,000 square miles, with 3,000,000 inhabitants. The whole region was declared a British protectorate on May 14, 1891, and the Barotse country and other districts except Nyassaland were ceded to the British South Africa Company. In Nyassaland a separate administration was organized under Sir Harry H. Johnston, for which the British South Africa Company paid half the costs and the Imperial Government half, the share of each being £27,000 for 1893. The town of Blantyre has

a population of 6,000 natives and 100 Europeans. Besides a native police a force of Indian Sikhs is maintained, numbering 200 men. Coffee has been planted extensively by the British settlers, and considerable quantities are exported already. The population of the protectorate is 844,995. There are 289 European settlers and 263 East Indians, inclusive of the Sikhs who form the Indian contingent of the armed force. Rice is produced abundantly on lands drained by native labor. A hut tax is collected from the natives. Telegraph connection has been established between Zomba and British South Africa. The value of the imports for the year ending March 31, 1896, was £82,700, the goods being chiefly provisions, textiles, hardware, arms and ammunition, and alcohol. The exports, valued at £19,668, were ivory, coffee, tobacco, cotton, fiber plants, and rubber. The English victories over the slave-raiders have attracted many thousands of natives who had fled to the chilly and unproductive highlands to the fertile low country, where cultivation is consequently increasing at a rapid rate. Banian traders have come in considerable numbers and are doing an active business with the natives, who now seek to obtain and accumulate money instead of putting their savings in cloth. Numerous substantial brick houses have been built in Blantyre. The cedar forests still remaining on Mlanje mountain, in the southeastern corner of the British territory, have been reserved as Crown property. In the autumn of 1895 Major Edwards with 65 Sikhs and 256 negro soldiers marched against the slave-trading chief Zarafi on Mangoche mountain, which was captured, though valiantly defended by the Yaos, and the chief's capital and minor towns were destroyed on Oct. 29. In subsequent expeditions for the capture of Zarafi and his people, who refused to return and submit to disarmament, the stronghold of the chief Makandanji, an old enemy of the British, was taken. The stronghold of the Yao chiefs Makanjiri and Matapwiri were destroyed also. In the beginning of December, 1895, an expedition was undertaken against the Arabs at the north end of Lake Nyassa, and these operations were entirely successful after three days' fighting, the stockades being taken and destroyed and the chief Mlozi captured, tried, and executed. The Arabs lost 210 killed and many prisoners, and 569 slaves, who were released. Mpemba and Tambala, whose stockaded towns were close to the western shore of Lake Nyassa, were defeated later. In January, 1896, a successful expedition was carried out against the Angoni chief Mwasi Kasunga, the last of the slave-trading chiefs remaining in the British Central Africa protectorate, whose 20,000 warriors were defeated by 150 regulars and 5,000 native allies. All these chiefs who defied the English and contested with them the supremacy over the native tribes of Nyassaland were of alien origin, either Arabs, Yaos, or Zulus. A successful expedition against an Angoni chief in the interior of the Marimba district who had attempted to form a league of the Angoni tribes against the British did not remove all danger of attacks from the Angoni Zulus on the west. The chiefs who were driven out of the British protectorate took refuge in Portuguese Yaoland, where they were still able to carry on their slave-trading operations, as there were no Portuguese forces or officials in the country. The Portuguese authorities, however, soon took measures to prevent their territory being made a refuge for Yao chiefs or slave traders who had been expelled from the British protectorate.

Portuguese East Africa.—The Portuguese possessions, which once extended far into the interior and were supposed to embrace the whole basin of the Zambesi and to reach from ocean to ocean, are

restricted by the Anglo-Portuguese agreement of 1891 to the coast region and the banks of the Zambesi as far as Zumbo. This territory, having an area of 261,700 square miles, and an estimated population of 1,500,000, was organized by a decree of Sept. 30, 1891, into the state of East Africa, divided by the Zambesi river into the provinces of Mozambique and Lourenço Marques. The revenue of Mozambique was estimated in 1895 at £296,857, and expenditure at £345,587. The imports in 1894 were valued at £203,716, and exports at £155,380. The chief articles of export are ivory, rubber, oil seeds, earthnuts, and sugar.

ECUADOR, a republic in South America. The executive power is vested in a President, elected for four years, and the legislative power in a Congress consisting of two houses. Senators are chosen by the provinces for four years, two from each province, one being replaced at every biennial election. The Deputies, elected by adult male Roman Catholics who can read and write, serve two years. Gen. Eloy Alfaro was Provisional President of the republic in the beginning of 1896.

Area and Population.—The undefined state of the boundaries between Ecuador and the republics of Peru and Colombia render uncertain any calculation of the area, which is vaguely estimated at 120,000 square miles, containing a population of about 100,000 whites, 300,000 of mixed blood, and 870,000 Indians. The official estimate of the population of the 16 provinces is 1,191,861, and of the territory of Oriente 80,000. Quito, the capital, has about 80,000 inhabitants, and Guayaquil, the seaport and chief commercial city, 45,000. The Roman Catholic has been the religion of the republic to the exclusion of all others, and the income of the Church, in substitution for tithes, is provided in the annual estimates of the Government. Education is gratuitous and obligatory.

Finances.—Customs duties provide 70 per cent. of the revenue; taxes on cacao, land, rum, and tobacco, 15 per cent.; salt and gunpowder monopolies, 6 per cent.; and excise duties, rents of state property, and the post office, 9 per cent. The budget is voted for biennial periods. In 1888-'89 the revenue was 7,356,606 sucres; in 1890-'91, 7,766,957 sucres; in 1892-'93, 8,125,006 sucres. The customs receipts for 1894 were 3,102,340 sucres.

The debt consists of the balance recognized by Ecuador as its share of the debt of Colombia at the time of the secession in 1830. Interest unpaid since 1867 amounted to £428,640 in 1892, when the British bondholders accepted £750,000 of new obligations in exchange for their bonds. The Government agreed to pay 4½ per cent. interest for five years, 4¼ per cent. for the next five years, and 5 per cent. and a sinking fund of 1 per cent. thenceforward. In 1895, the Government having withdrawn from this arrangement, and refused to pay the coupons, regarding the interest rate as too heavy, the bondholders agreed to reduce the interest to 4 per cent., with a sinking fund of 1 per cent. For the service of the debt a surtax of 10 per cent. was added to the import duties. The foreign bonds outstanding in 1895 amounted to £708,160. The internal debt was 1,333,000 sucres at the end of 1893. The Government maintains an army of the nominal strength of 3,341 officers and men, and a naval force consisting of a cruiser, a torpedo launch, two river gunboats, and a transport.

Commerce.—The principal exportable product is cacao, which was exported in 1894 to the amount of 7,783,884 sucres. The value of the coffee exports was 1,158,336 sucres; of rubber exports, 164,520 sucres. The export of ivory nuts in 1893 was 636,528 sucres in value. Gold mines are operated by American companies at Cachavi, Uimbi, and Playa

d'Oro. Placer mines are worked by domestic companies. The country is rich in petroleum, silver, copper, lead, iron, and coal. The total value of imports in 1893 was 10,052,163 sucres; of exports, 14,052,514 sucres.

Communications.—A railroad connects Chimbo, opposite Guayaquil, with Duran, 58 miles. Various projects for continuing it to Riobamba having failed, the Government decided to go on with the work at its own expense. During all the disturbances of the civil war in 1896 the construction was proceeded with. The money is raised by special taxes on freights and insurance.

The telegraphs of Ecuador have a total length of 1,242 miles.

Attempted Counter Revolution.—When Gen. Eloy Alfaro triumphed over the Government forces in September, 1895, and installed himself as Provisional President at Quito amid the joyous acclamations of the people, he began to disband the revolutionary army. Before the end of the month, however, there were outbreaks of the Conservatives against his authority, and combats took place at several places in the province of Imbabura. The clergy showed an unappeasable antagonism to his rule. An attempt on his life was made and a widespread conspiracy to bring about his overthrow was unearthed. Danger of war with Colombia arose. He restored outward tranquillity for a time by expelling from the country a large number of his adversaries, including the Government commander who had fought against him, and by enforcing vigorous measures for the maintenance of his authority. In January, 1896, fresh plots against Alfaro were scented, in consequence of which many other malcontents were sent into exile. The rumors of an intended rising created such serious apprehensions in the mind of Alfaro that he issued a decree providing that in the event of an outbreak the property of the leaders concerned in it should at once be seized as a means of meeting the expenses of suppressing the revolt, such property to be disposed of as he should dictate. Before March Gen. Plutarcio Bowen raised the cry of revolt in a manifesto denouncing Alfaro as a man incapable of governing the country and as a robber of the public treasury. Gen. Ventamilla was put forward by the exiles in Peru as a revolutionary leader. Numerous political arrests gave an additional stimulus to the revolutionary movement. In April bands of hostile guerrillas appeared in the north. A manifesto predicting the speedy downfall of the usurper created considerable agitation. In May fighting bodies of the Conservative party, which was supposed to have been obliterated, appeared in the field and defied the Alfarists. The President called out his army again. Bodies of Clericals entered the country from Colombia. A serious conflict occurred at Cuenca, where the rebels, headed by Col. Muñoz, were beaten. There was more fighting in other places, the election of Deputies having roused political passions anew. The election was an unqualified triumph of the Liberal party. The revolt spread from province to province until in June Alfaro was compelled to organize a campaign and go to the field, leaving one of his ministers, Dr. Homero Morla, as acting executive. At the head of a force of 3,000 men he proceeded to Cuenca, which had fallen into the hands of the enemy. Alfaro met the enemy in the mountains while on the march. He defeated the force of Gen. Rivadeneira after a hard fight, in which 80 rebels were killed or wounded. They fled, leaving their fieldpieces, arms, and ammunition, and Alfaro marched on the enemy's stronghold in the district of Cuenca, captured it, and dispersed its defenders after a hard campaign. When Gen. Alfaro assembled his forces

at Riobamba he was confronted with a formidable revolt in the central part of the country, led by Gen. Vega, whose forces, numbering 600 at first, were augmented by fresh accessions until he had 2,000 men under him. The insurgents held no important town, but they were constantly aided by the Clericals in the south and joined by filibustering expeditions from Colombia. Gen. Bowen, who had been pardoned by President Alfaro, was arrested again at Buenaventura on the charge of attempting to organize a revolutionary force. Gen. Vega's forces were routed in the mountains near Chimba, where their Gatling guns and stores were captured, and retreated toward Cuenca. In the southern province of Azuay the Clericals overturned the regular authorities. On July 24 the Government troops met the rebel force led by Col. Muñoz Vernada and fought a stiff battle, in which the losses were heavy on both sides. They finally won the day, compelling the insurgents to retreat toward Cuenca. The country was freed from disturbances by this victory, except the Cuenca district and the south. A band that invaded the province of Manabi was soon broken up by the Government troops. On Aug. 24 the rebel stronghold in the mountains of Cuenca was captured and the revolution was virtually at an end. President Alfaro resumed his executive functions on Sept. 7 and prepared to convoke the National Convention in Guayaquil. All those who took part in the insurrection received amnesty.

The main strength of the counter revolution was the Church in Ecuador. From the time when Alfaro placed himself at the head of the revolution he encountered the determined opposition of the Church. Some of the ecclesiastics, notably Bishop Schumacher, took up arms against him. He complained that the religious orders spent millions of dollars from their funds to compass his defeat. The greatest difficulties of his campaign he ascribed to the pretense of the enemy that they were fighting in behalf of religion. As soon as he had brought the revolution to a successful issue he began to enforce severe measures against his clerical enemies as a precaution against a counter revolution. His threats alarmed the priests so that a large number fled from Ecuador and took refuge in Peru and Colombia. Whole convents also escaped the dreaded retaliation by the flight of their inmates to other republics, some of them to the United States. Land and other property of the Church the revolutionary chief confiscated by virtue of his dictatorial powers on the plea that the legal owners had employed the property against the revolution.

The National Convention.—The National Convention met at Guayaquil at the appointed date, Oct. 9, just after a conflagration had destroyed three quarters of the city and caused great suffering among the population. A new plot involving a hostile invasion from Colombia, funds and ammunition for which had been provided by priests and a few members of the Conservative party, was discovered at Quito and frustrated by the prompt action of the President, who announced that he would be as severe in the future as he had been magnanimous in the past if any attempt was made to overthrow the Government. The hostility of the Clericals to the successful revolution was as active as ever. Bands that had fled to Colombia and Peru again made their appearance on the borders and endeavored to stir up the people anew. President Alfaro, on his part, manifested his antagonism to the Church party in the National Convention in an aggressive way. He induced the convention to adopt provisions for limiting the power of the Church, for diverting portions of the Church's income, and for putting restrictions upon the control

of its property by the Church. He also secured the adoption of constitutional provisions inimical to the religious orders. The new Constitution granted tolerance and freedom to other creeds besides the Roman Catholic. The Government decreed that foreigners who have resided two years in the country may be elected to the municipal councils without change of allegiance. The convention authorized the Government to provide free transportation for sufferers by the great fire who desired to go to other places, and to supply food and clothing to destitute persons. A decree was issued prohibiting any rise in the prices of necessaries of life. The fire, which was supposed to be the work of incendiaries, caused losses amounting to over 80,000,000 sucres and left homeless and destitute more than 35,000 persons. A bill was passed by the convention to introduce a gold currency concurrently circulating with the paper and silver, the premium not to exceed 100 per cent. The silver currency, which was coined in Chilean and Peruvian mints and in Birmingham, England, amounted to about 2,500,000 sucres in 1892, of which the Bank of Ecuador and the Banco Internacional had 1,488,900 sucres in their vaults. The notes of the Bank of Ecuador in circulation in 1894 amounted to 2,832,000 sucres, and those of the other bank of issue amounted to 1,233,141 sucres. The value of the sucre in exchange has fluctuated with the price of silver, sinking from 96.5 cents in 1874 to 49.1 cents in January, 1896.

The National Convention ordered the restoration of all property confiscated during the revolution. In November, after Alfaro was elected constitutional President and the National Convention was dissolved, the Government ordered the Jesuit fathers settled in the eastern part of the country to leave the republic, on the ground that they had been fomenting revolutionary movements. A treaty of amity and commerce has been concluded between Ecuador and Venezuela.

EGYPT, a principality in northern Africa tributary to Turkey. The Government is an absolute monarchy of the Mohammedan type, though the throne passes by the European law of primogeniture, and the Khedive or Viceroy is advised by a Council of Ministers. The reigning Khedive is Abbas Hilmi, born July 14, 1874, who succeeded to the throne on the death of his father, Mehemet Tewfik, Jan. 7, 1892. Since the intervention of Great Britain for the suppression of the military revolt of 1882 the country has been occupied by a British army, and since Jan. 18, 1883, an English financial adviser, who has a seat in the Cabinet, exercises the right to veto any financial measure and a dominating influence in all important acts of government. Egypt forms an integral part of the Ottoman Empire, in virtue of treaties in which all the great powers took part. The events that took place in 1881 and 1882 consequent upon the bankruptcy of the Egyptian treasury and the abdication of the Khedive, Ismail Pasha, led to a conference of the powers in Constantinople, where the principal powers signed a protocol by which they bound themselves to seek no territorial advantages and the concession of no exclusive privilege. But England, owing to the progress of the insurrection in Egypt, intervened by force of arms, and the conference then dissolved. Since then successive Prime Ministers of Great Britain have given assurances that England would evacuate Egypt as soon as Egypt should be able to maintain a firm and orderly government alone.

The Cabinet of the Khedive in the beginning of 1896 was composed of the following ministers: President of the Council and Minister of the Interior, Mustapha Pasha Fehmi; Minister of War and Marine, Mohammed Pasha Abani; Minister of

Public Works and Public Instruction, Hussein Pasha Fakhry; Minister of Foreign Affairs, Boutros Pasha Ghali; Minister of Finance, Ahmet Pasha Mazloum; Minister of Justice, Ibrahim Pasha Fouad.

Area and Population.—The territories under the rule of the Khedive of Egypt prior to the British occupation were estimated to embrace an area of 1,406,250 square miles, with a population of 16,952,000. The Soudanese and equatorial provinces were evacuated after the rebellion in the Soudan in 1884, though the sovereign rights of the Khedive were not relinquished. At the instance of the English counselors Wady Halfa was accepted provisionally as the limit of Egyptian rule and jurisdiction. Within this restricted boundary Egypt has an area of about 385,000 square miles, of which only 12,976 square miles, embracing the valley and delta of the Nile, are inhabited, the rest being desert. The population is 6,817,265, or 638 to the square mile in the settled area. The University and Mosque of El Azhar, in Cairo, has been for a thousand years one of the chief centers of Moslem learning. There are about 800,000 Copts in Egypt who have followed the Jacobite creed since the first century of the Christian era, and have for their ecclesiastical head the Alexandrian patriarch. The Coptic language is taught in their schools, and more than 50 per cent. of the community can read and write. There were 8,913 schools in Egypt in 1894, with 12,505 teachers and 196,610 pupils. Of the teachers, 10,491 were Mussulmans, 1,943 Christians, and 71 Jews.

Finances.—The budget for 1896 makes the total revenue £ E. 10,260,000 (1 Egyptian lira or pound = \$4.94), of which £ E. 4,870,000 are derived from the land tax and taxes on date trees, etc., £ E. 130,000 from urban taxes, £ E. 1,670,000 from customs and tobacco duties, £ E. 200,000 from *octrois*, £ E. 170,000 from salt and natron, £ E. 90,000 from fisheries, £ E. 75,000 from navigation dues, £ E. 1,720,000 from railroads, £ E. 43,000 from telegraphs, £ E. 120,000 from port dues of Alexandria, £ E. 105,000 from the post office, £ E. 85,000 from postal boats, £ E. 70,000 from lighthouses, £ E. 380,000 from the Ministry of Justice, £ E. 95,000 from exemptions from military duty, £ E. 90,000 from rents of Government property, £ E. 15,000 from the Suakin district, £ E. 57,000 from the pension fund, and £ E. 275,000 from various sources.

The expenditures are estimated in the budget at £ E. 9,630,000, of which £ E. 3,802,683 are for the public debt, £ E. 665,041 for the Turkish tribute, £ E. 100,000 for the Khedive's civil list, £ E. 97,927 for civil lists of the khedivial family, £ E. 55,934 for the Khedive's private Cabinet, £ E. 737,789 for the Ministry of Public Works, £ E. 387,726 for the Ministry of Justice, £ E. 328,026 for the administration of the provinces, £ E. 86,021 for the Ministry of Finance, £ E. 105,180 for the Ministry of Public Instruction, £ E. 84,322 for the Ministry of the Interior, £ E. 23,358 for the Council of Ministers, the Ministry of Foreign Affairs, and the Legislative Council, £ E. 155,810 for the customs administration, £ E. 34,504 for the administration of *octrois*, £ E. 44,726 for the salt and natron administration, £ E. 10,000 for the collection of fishery dues, £ E. 3,058 for navigation dues, £ E. 840,000 for railroad administration, £ E. 41,000 for telegraphs, £ E. 28,000 for the port of Alexandria, £ E. 97,525 for the post office, £ E. 85,707 for postal boat administration, £ E. 26,934 for lighthouses, £ E. 481,313 for public security, war, and the army of occupation, £ E. 120,457 for Suakin, £ E. 430,000 for pensions, £ E. 250,000 for suppression of the *corvée*, £ E. 5,682 for sundry purposes, £ E. 131,339 for various services of ministers, £ E. 40,000 for the sanitation of Cairo, and £ E. 30,000 for unforeseen expenses.

The revenue collected in 1895 was £ E. 10,568,000, and the expenditure was £ E. 9,480,000, an improvement on the estimates of £ E. 308,000 more of revenue and £ E. 120,000 less of expenditure, leaving a surplus of £ E. 1,088,000, the largest yet realized. During the first four years of the British occupation there was an annual deficit averaging £ E. 690,000; in the next three years the income and outgo nearly balanced; and since 1890 there has been a large surplus each year, averaging £ E. 699,000.

An international commission drew up a project in 1880 for the liquidation of the debts of the Egyptian Government, including the loans secured on the Daira Sanieh and Daira Khassa estates. The capital of the debt was then £98,398,020 sterling. The revenue from 1882 on was estimated at £ E. 8,411,622. Revenues amounting to £3,513,734 were assigned to the service of the debt, leaving £4,897,888 as the estimated balance available for all purposes of government. Railroad and telegraph income and the port dues of Alexandria were reserved for the interest of the privileged debt and a sinking fund that would extinguish it in 1941. The customs revenue and the taxes of the four provinces were similarly assigned to the service of the unified debt, the surplus to go if necessary to make up any deficiency in the requirements of the unified debt. In 1884 Austria, France, Germany, Great Britain, Italy, Russia, and Turkey guaranteed a new loan of £9,000,000 to take up £ E. 8,000,000 of floating debt, pay the Alexandria indemnities, and improve the irrigation works. This guaranteed loan bears 3 per cent. interest, the unified debt 4 per cent. The privileged debt originally paid 5 per cent. In 1888 a loan of £ E. 2,300,000 was issued to commute the revenue of Ismail Pasha and other members of the khedivial family from the domains, which loan was paid off in 1890. In that year the privileged debt was converted into a 3½-per-cent. loan issued at 91, the Daira Sanieh loan into a 4-per-cent. loan issued at 85, and £1,333,333 was raised on privileged bonds to be employed on irrigation works. In 1893 the domains loan was converted into 4½-per-cent. bonds, exchanged for the others at par. The capital of the Egyptian debt on Dec. 31, 1895, amounted to £104,636,900, of which £55,974,820 represented the unified bonds still outstanding, £29,393,580 the privileged debt, £8,699,300 the guaranteed loan, £6,644,360 the Daira Sanieh loan, and £3,924,840 the domains loan. The internal debts of the Government were not funded with the foreign debts, but for their partial repayment the Moukabalah annuity of £154,000 was provided, which will cease in 1930. The total debt charges for 1896 amount to £4,220,000. The actual receipts of the Government in 1894 were £ E. 10,321,523, and the expenditure £ E. 9,601,258, leaving a surplus of £ E. 720,265, of which £ E. 256,947 went to the reserve fund of the Caisse de la Dette, making its total amount £ E. 2,199,740; £ E. 118,843 went to the special reserve fund of the Egyptian Government, bringing it up to £ E. 279,186; and £ E. 344,475 remained on deposit with the Caisse as economy from the conversion, making this fund £ E. 1,408,161. The surplus of 1895 added £402,000 to the conversion economies, increasing the fund to £1,833,000, while the general reserve fund was increased to £2,717,000, and the special reserve fund at the disposal of the Egyptian Government to £471,000; giving a total of £5,021,000 in the reserve funds.

The Army.—After the army, which revolted against the Khedive and European control in 1882, was disbanded a new military force was organized by Sir Evelyn Wood. This army, commanded by 76 English officers, with Sirdar Sir Herbert Kitchener as commander-in-chief, had in 1896 a total strength of 15,133 men. Egyptians are liable to con-

scription at the age of nineteen, but are not usually called up for service until they attain the age of twenty-three, when they serve six years and are then drafted into the police for five years of service, or into the first reserve. Subsequently they are inscribed in the second reserve, and serve four years longer.

The British army of occupation had in the beginning of 1895 an effective strength of 5,066 officers and men.

Commerce and Production.—The total value of merchandise imports in 1894 was £ E. 9,266,116, and of exports £ E. 11,892,875. The imports of specie were £ E. 1,995,676, and the exports £ E. 1,816,256. The commercial intercourse with different countries in 1894 is shown in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain	£ E. 3,183,231	£ E. 6,517,946
Turkey	1,812,837	342,391
Russia	387,038	1,823,676
France	886,352	889,205
Austria-Hungary	747,353	496,292
Italy	337,967	587,145
Germany	230,942	257,852
British colonies in the East	493,989	53,070
Belgium	375,201	113,365
America	49,970	327,981
Spain	248,485
British Mediterranean colonies	113,358	12,090
China and the far East	87,949	17,060
Greece	58,998	7,725
French Mediterranean colonies	32,072	21,181
Morocco	37,124	1,166
Persia	74,176
Other countries	371,625	176,245
Total	£ E. 9,266,116	£ E. 11,892,875

The values of the leading imports in 1894 were: Cotton manufactures, £ E. 1,484,665; silk, woolen, linen, and other textile fabrics, £ E. 1,177,098; timber, £ E. 507,763; tobacco, £ E. 493,883; coal, £ E. 492,103; iron and steel goods, £ E. 462,941; clothing and hosiery, £ E. 371,861; petroleum and oils, £ E. 289,960; machinery, £ E. 287,258; wine, beer, and spirits, £ E. 283,232; coffee, £ E. 273,462; fresh and preserved fruit, £ E. 241,234; indigo, £ E. 200,959; live animals, £ E. 180,915; wheat and flour, £ E. 178,195; rice, £ E. 102,697; sugar £ E. 28,597. Nearly half the tobacco imported is re-exported in the form of cigarettes. The coal imports consist largely of steamer supplies put down at Port Said and re-exported after paying 1 per cent. duty.

The values of the principal exports in 1894 were: Cotton, £ E. 8,181,170; cotton seed, £ E. 1,457,729; beans, £ E. 681,046; sugar, £ E. 629,293; onions, £ E. 160,668; wheat, £ E. 110,936; rice, £ E. 96,307; hides and skins, £ E. 82,526; maize, £ E. 66,046; wool, £ E. 47,845; lentils, £ E. 17,595; flour, £ E. 8,244; gum arabic, £ E. 2,018. More of the long-fibered Egyptian cotton is imported into the United States each succeeding year, the amount having increased from 3,815 bales in 1885 to an estimated quantity of 50,000 bales, valued at \$3,750,000, in 1896. Of the crop of 1894, amounting to 639,582 bales, 276,294 bales went to Great Britain, 132,309 to Russia, 54,457 to Austria, 46,242 to France, 44,554 to the United States, 43,803 to Italy, 19,007 to Spain, 7,600 to India, 7,477 to Germany, and 7,839 to Belgium, Greece, Roumania, Turkey, Japan, and Sweden. The quantity raised in Egypt has increased from 406,000 bales of 750 pounds in 1886 to 691,333 bales, the estimated crop of 1896. The staple of the cotton from the Nile delta, varying from 1 inch to 1½ inch in length, is matchless for fine threads in strength and lustrous finish. It is a good substitute for Sea Island cotton, and usually brings 2 cents a pound more than good

American upland cotton. The export of cotton in 1895 was £ E. 1,332,000 more in value than in 1894, due to the rise in price. There was an increase in the exports of maize, skins, and leather, and a decrease in cotton seed, beans, and sugar cane. The total value of the imports in 1895, excluding tobacco, was £ E. 7,879,000, and of the exports £ E. 12,582,000. More than 60 per cent. of the exports went to Great Britain, 5 per cent. more than in the previous year.

The exports to Great Britain declined since 1892 from 58.8 per cent. of the total exports to 54.8 per cent., while imports from Great Britain increased from 33.7 per cent. to 34.4 per cent. Germany's share in the imports advanced from 2 to 2.5 per cent., France's from 9.4 to 9.6 per cent., Italy's from 3 to 3.6 per cent., and Russia's from 3.8 to 4 per cent., while that of British possessions in the East declined from 6.7 to 5.3 per cent., of Turkey's from 20.9 to 19.6 per cent., of Austria-Hungary from 8.6 to 8.1 per cent. The share of America in the exports increased from 1.3 to 2.7 per cent., of Russia from 13 to 15.3 per cent., of Italy from 4.6 to 4.9 per cent., and of Spain from 1.2 to 2.1 per cent., while the proportion of France declined from 8.1 to 7.5 per cent., that of Turkey from 3.5 to 2.9 per cent., and that of Germany from 2.3 to 2.2 per cent.

Communications.—The railroads belonging to the Government had a total length in the beginning of 1895 of 1,098 miles, besides which there were 72 miles belonging to private corporations. There were 809 miles in the delta and 361 miles in Upper Egypt. In process of construction were 137 miles. The receipts in 1894 from 9,827,813 passengers and 2,391,868 tons of freight were £ E. 1,007,070, while the working expenses were £ E. 776,753, being 43 per cent. of the gross receipts. A private company has agreed to build before June, 1897, a new line from Kench to Assouan, the Government guaranteeing £ E. 17,600 interest annually for eighty years, at the end of which the railroad will become its absolute property, and during that period profits in excess of £ E. 21,000 a year accrue to the Government, which will operate the line. The telegraphs belonging to the Government had on Jan. 1, 1895, a total length of 2,269 miles, with 7,164 miles of wire. The number of dispatches in 1894 was 1,988,765.

The postal traffic in 1894 consisted of 10,060,000 internal and 4,106,500 foreign letters and post cards, 4,490,000 internal and 2,413,500 foreign newspapers and circulars, and 424,700 postal orders and remittances of the total value of £ E. 14,200,000.

Navigation.—During 1894 the number of vessels entered at Alexandria was 2,375, of 2,221,145 tons; the number cleared was 2,397, of 2,201,885 tons. Of the vessels arriving, 689, of 988,850 tons, were British; 141, of 292,236 tons, French; 913, of 230,512 tons, Turkish; 137, of 220,275 tons, Italian; 139, of 196,302 tons, Austrian; 84, of 155,286 tons, Russian; 42, of 59,036 tons, Swedish and Norwegian; 23, of 33,475 tons, German; 153, of 32,314 tons, Greek; and 45, of 11,959 tons, of other nations.

Suez Canal.—The number of vessels that passed through the Suez Canal in 1894 was 3,352, having a gross tonnage of 11,283,855 tons and paying £2,951,073 in dues. Of the vessels, 2,386, of 8,326,826 tons, were British; 296, of 887,363 tons, German; 185, of 710,990 tons, French; 191, of 484,570 tons, Dutch; 78, of 278,799 tons, Austrian; 63, of 181,149 tons, Italian; 35, of 119,363 tons, Russian; 28, of 118,223 tons, Spanish; 41, of 92,323 tons, Norwegian; 33, of 57,038 tons, Turkish; 6, of 17,148 tons, Japanese; 5, of 5,436 tons, American; 2, of 3,175 tons, Egyptian; and 2, of 1,202 tons, Portuguese. The number of passengers who passed through was 165,968.

The net profits in 1894 were 40,367,324 francs. The gross receipts were 73,776,827 francs. The share and loan capital on Jan. 1, 1895, amounted to 458,127,682 francs. During 1895 there passed through the canal 3,434 vessels, of 11,833,637 gross tons, paying in transit dues 78,103,717 francs. Of the net tonnage in the latter year 71·8 per cent. was British, 8·2 per cent. German, 8 per cent. French, 4·3 per cent. Dutch, 2 per cent. Austrian, 1·7 per cent. Italian, 1·3 per cent. Norwegian, 1·2 per cent. Spanish, and 1·1 per cent. Russian. Of the vessels, 2,532, of 6,104,989 net tons, were merchant ships; 634, of 1,952,588 tons, mail steamers; and 106, of 128,081 tons, war ships and military transports. The mean duration of the passage in 1895 was eighteen hours forty-four minutes for vessels navigating both by night and by day, and nineteen hours eighteen minutes for all vessels, including 168 that navigated by daylight only and took the average time of thirty hours twelve minutes to pass through. The number of passengers on the vessels in 1895 was 216,936, of whom 118,635 were military, 74,876 civilians, and 23,423 pilgrims, emigrants, and convicts. The special traffic due to the Chinese war and the Madagascar and Abyssinian campaigns swelled the passenger receipts and more than made good the falling off in tonnage receipts.

Antislavery Laws.—In accordance with a new convention for the suppression of slavery and the slave trade that was made with Great Britain on Nov. 23, 1895, the Egyptian Government, in 1896, enacted stricter laws regarding the traffic in slaves and the manumission of slaves. The jurisdiction in the matter of crimes and offenses connected with slavery was transferred from courts martial to the judges of the native courts. The importation into any part of Egypt and the transit across its territories of any white, negro, or Abyssinian slave destined for sale is prohibited absolutely. No slaves can be exported from Egypt unless they are provided with letters of enfranchisement stating that they are free to dispose of their persons without restriction or reserve. Traffic in slaves was already forbidden, but purchasers are now made equally liable with the slave merchants, a point that was left obscure in the convention of 1877. Every slave on Egyptian soil is entitled to his complete freedom, and may demand letters of enfranchisement whenever he desires to do so. In the convention the Egyptian Government promised to use all the influence that it possesses among the tribes of Central Africa with the view of preventing the wars that they are in the habit of making upon one another in order to procure and to sell slaves. British cruisers may search and detain any Egyptian vessel in the Indian Ocean that is suspected of carrying slaves. The Egyptian department for the suppression of the slave trade will have a special force to keep watch over roads leading from the desert, as well as the shores of the Red Sea and all places through which slaves enter Egyptian territory.

The Soudan.—The Soudan of the dervishes, extending about 1,000 miles from the Egyptian frontier on the lower Nile along both branches of the upper Nile and an equal distance from east to west, and inhabited by several millions of people, has changed greatly since the Mahdi proclaimed a *jehad*, or holy war, and established his fanatical rule after wiping out the Egyptian army of 10,000 men under Hicks Pasha in 1883. Whole tribes have been obliterated by war, famine, and pestilence, and other tribes have changed the habitations of their fathers, their migrations being inspired by religious motives. The Khalifa's capital is Omdurman, a new city that has sprung up on the Nile opposite the ruined site of Khartoum. The Khalifa Abdullahi, whom the Mahdi chose from among his four generals and pro-

claimed as his successor, has been accustomed to summon to Omdurman, where they would be under his immediate control, any of the tribes who chafed under his exactions. The capital was consequently thronged with the cultivators of the oases, and the date groves and millet fields were neglected, which cause, in conjunction with the devastation of rebellious districts, led to scarcity of food that rose at times to the famine point. The population of the Soudan is supposed to be less than half, perhaps only a quarter, as great as it was under Egyptian rule. At the same time it has become more concentrated and so organized as to furnish the Khalifa great armies of valiant men, who are bound to him not less by interest than by religious fervor, for he has loaded with rewards the strong military clans of the desert who have shown devotion to him, the Baggaras and the western tribes, especially his own tribe, the Taashas, whom he brought to Omdurman from the southwest of Darfur. After crushing a rebellion of the Ashrais, in which two of the Mahdi's sons were implicated, the Khalifa became harsher and his tribesmen more oppressive. Suspected tribes were dispatched on distant and dangerous expeditions, and suspected individuals were condemned to death on false evidence by the Khalifa or his subservient judges. Tribes openly hostile were put to the sword and their women divided among the emirs, while he has crushed every tribe and city where disaffection culminated in overt revolt. The misery of the country, contrasting with its former state, is the cause of constant disaffection and of a great decline in the power of the Khalifa, who has talents as a military leader, but none of the qualities necessary for a political ruler to have. The complete embargo on external trade and intercourse, which the Egyptian Government on its side has kept up as strictly as the Khalifa on his, has operated not less than military tyranny and misrule to produce a widespread desire for a change of government that would lead to the revival of the caravan traffic with Assouan, Kassala, and the Red Sea, and restore the prosperity of the Arab merchants, the caravan men, the boatmen, the cultivators of grain, the gatherers of gum arabic, and others dependent on the commerce that was interrupted suddenly after flourishing for ages. Areas that once were flourishing and thickly peopled have been converted into deserted wastes. The great plains over which the Arabs of the west wandered are solitudes devoid of human life. The old locations of the dwellers on the Nile have been overrun by nomadic tribes, their rightful owners having been driven away or compelled to cultivate the land for their new masters and reduced to a condition differing from slavery only in name. The power of the Khalifa and the barbarous conquerors who uphold him has been waning for some years, though the most civilized of the communities of the Egyptian Soudan are now the most downtrodden and least able to throw off the yoke. The Mahdi's emirs have been deposed and men of the western tribes put in their place, with the single exception of Osman Digna. In the neighborhood of Suakin and Tokar Egyptian influence is again becoming predominant. The Italians in Kassala have compelled the Mahdists to maintain a strong line of defense on the Atbara river. The inhabitants of the mountain lands of Fazogi and the tribes on the banks of the Blue Nile have regained their independence, and now refuse to pay tribute to the Khalifa. English and Belgian influence is making itself felt in the far south. In the southwest the French advance is beginning to affect the political conditions of the country. In the northwest the authority of the Khalifa has been threatened by the potentates of the central Soudan. Slatin Pasha gave the fol-

lowing estimate of the armed forces of the Khalifa: 34,350 Jehadias, who are black soldiers armed with rifles, two thirds of them with Remingtons in good condition; 64,000 swordsmen and spearmen, of whom 25 per cent. are too old or too young to be effective; and 6,600 cavalry. The Khalifa's *mula-zamin* or regular army in Omdurman consisted of 15,000 Jehadias, 3,500 cavalry, and 45,000 spearmen and swordsmen. There were 49 guns in Omdurman, 14 in Berber, Abu Hamed, and El Obeid, and 12 in Dongola and Gadaref. Of these 75 guns 6 were Krupps of large caliber, for which there was very little ammunition, 8 were machine guns of various patterns, and 61 were brass muzzle-loaders of many shapes and sizes, for which very inferior ammunition was manufactured in Omdurman. After the expedition of an English force to Wadelai, which raised the British flag and then departed in 1894, and just before the visit of Major Cunningham to Dufile a year later, Refaj was reoccupied by the dervishes as their advanced post in the south. The same post had been for some time occupied in 1893 by the forces of the Congo Free State. The dervishes ascended the river in the steamers taken from the Egyptians, and forced the Belgians to evacuate their posts on the Nile, afterward following them into the basin of the Welle, where they themselves suffered defeat in two engagements fought in 1894. Later the dervishes were driven out of Lado and Refaj by the natives, and held no posts south of Shambeh and Bor, which they maintained with the help of the steamers, their authority being respected only along the banks of the river. In Bahr-el-Ghazal also the Dinkas and Shilluks succeeded in freeing their country from the oppressors, who still held out only in Dom Zobeir. In Darfur and Kordofan the Emir Mahmud was only able to hold the provinces for the Khalifa by constant fighting with the tribes in the Kebkebia and Kul-kul districts. Baron Dhanis in March, 1895, assembled a force of 3,000 troops on the upper Congo, and in September was reported to have reoccupied Lado for the Congo State. This part of the old Egyptian province of Equatoria was leased to the Free State in the Anglo-Congolese agreement of May, 1894, and the Franco-Congolese agreement of the following August, by which the sovereign of the Free State debarred himself from extending his frontiers into the Bahr-el-Ghazal, left him free to establish posts there, on the left bank of the Nile. The revolt of whole provinces and the dwindling of his power taught the Khalifa and his emirs to be more reasonable and lenient in the districts where their empire was as yet undisputed. Mahdism declined to the point of toleration, and encouragement was given to the reoccupation of the land. In Dongola taxes were made lighter and provisions were cheap and conditions so much improved that refugees in Egypt were desirous of returning to their homes.

The Dongola Expedition.—The dervishes in the Wady Halfa district, with the exception of two insignificant incursions, maintained a strictly defensive attitude throughout the year 1895, though they faced the Egyptian advanced posts in considerable strength. The wells of Murad, halfway to Abu Hamed, were occupied by the troops and connected with Korosko by telegraph. In the latter part of February, 1896, Lord Cromer transmitted to the English Government intelligence that he had received indicating unusual activity on the part of the dervishes. The dervishes were reported to be advancing in the Suakin district, after remaining quiet for three years: the Murad wells were threatened with attack; a force of dervishes was said to be advancing on Kokreb; and another and a larger force was on the march for Dongola. Later news told of the dispatch of Osman Digna to Kassala.

The defeat of the Italians by the Abyssinians at Adua seemed to have rekindled the embers of fanaticism throughout the Soudan. When the dervishes besieged the Italians in Kassala the English determined on an advance of the Egyptian troops, supported by English, up the Nile. They were to go to Akasheh and, if they encountered no serious opposition, to proceed to Dongola, and occupy that city and province so as to prevent it from being made a base for a dervish attack upon Egypt. The movement was intended not only to protect Egypt, but to divert the attention of the dervishes from the Italians. These were the reasons given by English ministers for the unexpected movement into the Soudan. Their political opponents, however, and the French and other foreigners saw no signs of a projected attack upon Egypt, and they could not understand how the beleaguered Italian garrison in Kassala could be helped by delivering a blow at dervishes six months' march from there. When it was known that the Italians were about to evacuate Kassala, which they only held as fiduciaries of Egypt and England, and that the Italian Government changed its intention when apprised of the British advance, the military grounds for the expedition seemed still more obscure. It was surmised therefore that the object was to reconquer the Soudan and at the same time render impossible for an indefinite period the realization of the condition on which England is pledged to evacuate Egypt, which is that Egypt shall be able to govern itself unaided. When the intention of the Italians to evacuate Kassala and Adigrat became known the British ambassador at Rome protested that the evacuation would leave the dervishes free to attack the Egyptian forces and to threaten the Suakin district. The result was that Italy held on to Kassala and the dervishes were driven off, but the advance up the Nile was not on that account given up. The holding of Kassala, Italy took pains to explain, was for political reasons, and the fictitious character of the military assistance involved in the Dongola demonstration was plainly intimated by the Italian minister. In communicating to the European cabinets the grounds on which it had been decided to make an advance up the valley of the Nile, the English Foreign Minister pointed out that in order to meet the expenses of the expedition a larger sum might be needed than was at the absolute disposal of the Egyptian Government. It was therefore hoped that the Caisse de la Dette would give its consent to the expenditure of £500,000, if it were necessary, from the general reserve fund of £2,500,000 which had accumulated and which was held to be applicable to extraordinary expenses. The Austrian, German, and Italian governments signified their assent at once. The British Government stated that, as the operation was being undertaken in the interests of Egypt, the cost would be entirely defrayed out of Egyptian funds. The representatives of France and Russia demanded delay, and furthermore denied the competence of the Caisse to decide a matter of the kind, and withdrew from the meeting. When the representatives of England and the members of the triple alliance voted nevertheless in favor of granting the money, they were cited before the mixed tribunal to answer for their conduct on April 13. The citation was made in the name of the French bondholders, who own 75 per cent. of the total Egyptian debt. A similar citation and protest were served on the Egyptian Government. When the Sultan made inquiries as to the nature and objects of the intended operations on the Nile, the Khedive, in reply, stated that the British and Egyptian governments had agreed that the moment is opportune for endeavoring to bring back Dongola under Egyptian administration. Although among

Egyptians the expedition was generally approved, many distrusted the motives of the English Government and feared that the reconquest of the Soudan would be made an excuse for the indefinite prolongation of the British occupation of Egypt.

The French Minister of Foreign Affairs, M. Berthelot, asked the English ambassador for information on the causes and aim of the project and called his attention to the gravity of its consequences. The French and the Russian governments took the ground that the unanimous consent of the six powers concerned was necessary to legalize a diversion of any of the reserve fund.

The decision of the mixed tribunal, delivered on June 8, was that the money advanced by the Caisse should be refunded by the Egyptian Government.

The dervish force at Dongola was estimated at 10,000 cavalry, camel men, and sparmen, with a body of Soudanese riflemen, while at Suarda, 100 miles from the Egyptian frontier, halfway between Dongola and Wady Halfa, there was an advanced guard of 2,000 or 3,000 picked men.

Gen. Kitchener depended more upon the excellence of the equipment than upon the size of his army, which consisted of about 15,000 infantry, 900 cavalry, and 1,000 fighting men in the camel corps. There were also several thousand Arab allies, good fighters and finely armed. About 2,000 more men were in the transport service. All the important officers were young Britons who had served in the Egyptian army, for which they were carefully selected. The whole force was composed of picked men. Three fourths of the soldiers were *fellahin* belonging to corps that had proved steady under fire, and were admirably trained. The rest were black Soudanese battalions, more active, eager, and self-reliant in battle, and better marksmen than the Egyptians, but less intelligent and amenable to discipline and direction. The artillery consisted of powerful Krupp field batteries and Maxim batteries. The advance from Wady Halfa began on March 19, and on the following day Major Collinson occupied Akasheh without opposition. The Khalifa proclaimed a *jehad* against Egypt, and called upon all dervishes capable of bearing arms to enroll themselves under the green banner. The Emir Osman Azrak advanced with re-enforcements to Suarda. The vanguard of the Egyptian expedition consisted of 1,200 men, including a camel corps of 500. The main force numbered 8,500 infantry and 630 cavalry, commanded by 120 British officers, with a Maxim battery served by British artillerists. Of the infantry 4,000 were Soudanese. English troops were dispatched at once to Egypt. Three British battalions and 7,000 Bedouins were organized there to join the expedition, bringing its strength up to 19,000 men. Native troops of India were sent to Suakin to relieve the Egyptian garrison there, and enable it to take part in the operations in the field. The Imperial Government agreed that the extraordinary expenses of this expedition should be borne by the Egyptian Government, while the ordinary pay and cost of maintenance of the troops would continue to be defrayed out of Indian revenues. A fort and intrenched camp were built at Akasheh, beyond which point a halt was made until transport camels and boats could be obtained. In the Suakin district the forces of Osman Digna moved toward Sinkat, and fighting took place between the dervishes and friendly Hadendowas and Amaras, who barred their advance. An Egyptian force went out from Suakin on April 15 to support the friendly Arabs, and several sharp skirmishes took place near Khor Wintri, in which Osman Digna lost over 100 killed and as many wounded. Not long afterward Osman withdrew his entire force, having no provisions.

On the Nile the campaign was opened on May 1 by Major Burn-Murdoch, who with his cavalry dispersed a force of dervishes in the vicinity of Akasheh.

Many sheikhs of the Bisharin, Ababdeh, and Kababish tribes who had formerly adhered to the Khalifa were won over by the British, who organized a large force of Arab irregulars to patrol the desert on both sides of the Nile, arming them with Remingtons, while the Egyptians carried Martini-Henry rifles. Contentment and division, jealousy, fear, and distrust paralyzed the central power at Omdurman. The *mulazamin* of the Khalifa attacked the bodyguard of Ali Wad Helu, and in the fight several hundred men were slain on both sides before peace was restored by the emirs. Ali Wad Helu, who was Khalifa Omar, one of the successors to Abdullahi nominated by the Mahdi, persuaded the Khalifa to lay aside his jealousy and suspicion, and endeavor to harmonize all factions in the presence of the enemy. Hence the Khalifa Sherif was released from prison and his followers brought back from banishment.

On June 6, after all the expeditionary force had been brought up to Akasheh, the troops were led out by the Sirdar to attack the dervishes intrenched at Ferkeh, 16 miles distant. The main body, 7,000 strong, with field artillery and machine guns, advanced along the river, while the camel corps and cavalry, with horse artillery and 2 Maxims, 2,100 men in all, took the desert route to occupy the heights east of Ferkeh. The intention was to surprise and entrap the 57 emirs there, who had only 3,000 troops with about 1,000 rifles. The black troops advanced rapidly to the attack at dawn on June 7, opening a well-directed fire. The dervishes were taken entirely by surprise. They returned a heavy, though inaccurate fire, and fought with desperate valor, but were steadily driven from their positions, being unable to resist the double attack, from the front and from the side of the desert. The desert column, which had successfully turned the position to cut off retreat, fell upon the retreating dervishes after they were driven out of the town, pursuing them beyond Suarda and capturing the camp there, with a great quantity of supplies. At Ferkeh all their camels, provisions, and ammunition fell into the hands of the Egyptians. The dervishes, who were some of the Khalifa's picked troops, led by his best emirs, did their best to resist the attack. The Baggaras among them refused to surrender when death was the certain alternative. The Jaalin, a religious people, who were once faithful Mahdists but now detest the Khalifa's *régime*, and the blacks, who fought for the Khalifa under constraint and afterward were eager to join the Egyptian army, constituted the bulk of the prisoners. Nearly 900 were killed in the camp, including 50 emirs. The brave commander, Hamnuda, was one of the slain. The Egyptian troops, composed of the most stalwart young men of the nation, finer in physique than any army in Europe, better fed and cared for than most European soldiers, and admirably trained and disciplined, by their coolness and firmness in repelling a charge of the dervish cavalry, and by the dashing enthusiasm with which their cavalry charged the enemy in position, dispelled all doubts as to their *morale* and courage. About 500 prisoners were taken by the Egyptians, whose total loss was only 20 killed and 80 wounded. The pursuit and the taking of Suarda brought the enemy's losses up to 2,000 killed, wounded, and prisoners. The Egyptian camp was established at Kosheh, close to Ferkeh.

The Khalifa, after the Ferkeh defeat, preached a holy war, and said he would send large re-enforce-

ments of 7,000 brave men to Dongola; but, surrounded by the disaffected, he dared not send many of his own tribe north. He sought support from the Nile population, whom the Baggaras had hitherto kept in cruel subjection, releasing the imprisoned Dongolese and Jaalin chiefs, and giving them commands. The dervish garrisons retired from the country between Suarda and Dongola, whence thousands flocked to the Egyptian camp, delighted with the prospect of a change of rulers. Wad el Bishara, Emir of Dongola, ordered a muster of all the males in the province capable of bearing arms. Determined as he was to defend his post to the last extremity, he collected a great quantity of grain, forcing the people to give it up as a contribution to the *jehad*. In July the cholera, which had broken out in a virulent form in lower Egypt, causing 90

communication with the enemy, began to treat the Nile populations more cruelly than ever before.

A forward movement of the Egyptian forces began on Aug. 25 with the occupation of Absarat by the Suarda garrison. The railroad was continued to this point, and the troops advanced to Fereig, the Staffordshire regiment which joined the force from England being transported on the large river gunboats, which were able to steam 14 miles an hour and carried each a 12-pounder Maxim forward, mounted in an armored citadel, a lighter Maxim amidships, 2 quick-firing 6-pounder guns, and 6 or 8 machine guns in a lofty tower, capable of sweeping the river banks and fitted with an electric search light. Some of the larger gunboats carried in addition 24-pound Armstrongs for long-range fire. At Fereig, skirmishing began with the

GETTING A BRITISH GUNBOAT THROUGH THE JURASH RAPID.

per cent. of deaths among the persons seized at Cairo, attacked the British soldiers in camp at Wady Halfa and the Egyptians at Kosheh, where there was a fatality of over 70 per cent. The epidemic ceased after raging about a month. By the end of July the railway was completed as far as Ferkeh. The advance on Dongola was delayed until the Nile should rise sufficiently to enable the stern-wheel steamers to ascend the second cataract and the new gunboats, armed with 12-pounders and 6-pounders, to be put together. The Khalifa and the Mahdists took courage, believing that God was fighting on their side, when they saw the Egyptians delay while cholera decimated their numbers and storms destroyed a large section of their railroad. The Baggaras, in exacting contributions for the war and punishing the people suspected of holding

Egyptian cavalry and the Kabadish and Foggara friendly who ascended the west bank. The dervish transport service was crippled by the desertion of the river boatmen to the Egyptians and the loss of several boats. Kerman, which was abandoned after Ferkeh, was reoccupied and fortified, and a strong force of spearmen and riflemen was entrenched at Haafir. The main Egyptian force advanced to Kaibar, and thence marched, on Sept. 18, against the dervish positions at Kerman and Haafir. At their approach Wad el Bishara and Osman Azrak evacuated Kerman, crossing the river to Haafir. The English field and horse artillery and gunboats opened fire on the strong fort at Haafir in the morning of Sept. 19, and the dervishes replied with their 4 guns and a well-directed musketry fire. Their only gunboat, one built by Gordon Pasha

during the siege of Khartoum, was sunk by a Krupp shell, and bursting shells silenced the guns in the fort and killed many of the defenders, while the Maxims cleared the shore of riflemen. The bombardment did not end till night, when the dervishes, supposing that the Egyptians intended to march by on the opposite bank to attack Dongola, retired to that town to oppose their crossing there. But meanwhile the English gunboats had steamed up the river and taken position in front of Dongola to prevent the dervishes from removing their supplies of grain. The Egyptians crossed the river at Hafir and pursued the retreating dervishes, whose two generals were severely wounded. The 5,000 dervishes were shelled out of Dongola on Sept. 22, and attacked in their camps by the cavalry. Here also the Baggaras fought till they were killed, but all the other Arabs fled or surrendered, and the blacks deserted and offered their services to the Egyptians. On the following morning Dongola was occupied by the Egyptians. After the capture of El Debbah, on Sept. 25, and subsequently of Korti, both of which were undefended, the command of the whole province was in the hands of the Egyptians, whose coming was generally welcomed by the natives. No further advance was contemplated before another year.

EVANGELICAL ALLIANCE. The International conference of the Evangelical Alliance was begun in London, June 29. As it marked the completion of the fiftieth year of the work of the Alliance, it was styled the Jubilee Conference. Previous to the opening of the conference a jubilee celebration was held in Liverpool, June 25, when special mention was made of the fact that the Alliance had been practically instituted in that city fifty-one years before, and a resolution of thankfulness at the success of its work throughout the world was adopted. The conference in London was opened by a jubilee meeting under the presidency of Lord Polwarth. The principal resolution adopted expressed thankfulness for the work of the Alliance in emphasizing for fifty years the oneness of the Church of Christ, and embodied a prayer for a continued blessing on its efforts to promote brotherly love, to uphold the cardinal doctrines of the Gospel, and to defend the persecuted. The Bishop of Exeter denied that the prayer of Christ for the oneness of his people had been unfulfilled. It had been fulfilled by essential unity, though not by ecclesiastical uniformity. The Rev. Dr. Pentecost, in seconding the resolution, said that Christian fellowship was infinitely more essential than ecclesiastical recognition, desirable as such recognition was. The unity of the Church was more imperiled by efforts to bring about external uniformity than by anything else. The Rev. Dr. Rigg expressed the opinion that uniformity would give a death-blow to real unity. The general secretary, epitomizing the history of the Alliance—which had been formed to promote brotherly love and union among Christians in different countries, to advance evangelical truths, and to counteract error and superstition—emphasized the services it had rendered for religious liberty and in opposing persecution. Almost its first efforts had been in behalf of the Lutherans in Russia and of the Armenians; and almost every country in Europe and many lands abroad had since witnessed the persistent but unostentatious efforts of the Alliance in behalf of religious liberty. The subjects were considered, in papers read, addresses, and general discussions, of "Religious Liberty," with particular reference to the Armenians in Turkey and the Stundists in Russia; "The True Unity of the Church, which is the Body of Christ in New Birth and Life"; "The True Unity of the Church in Growth and Develop-

ment"; "The Evangelical Alliance and Christian Co-operation"; "Natural Science as the Handmaid of Revealed Religion," by Sir William Dawson; "Christianity's Opportunity and Duty in the Press"; "The Dangers of Romanism and Ritualism"; "Evangelical Religion on the Continent"; "Christian Work among the Young"; "The True Unity of the Church as perfected in Glory"; and reports on the state of the Churches in the several countries represented in the meeting.

Two of the original founders of the Evangelical Alliance were present at this meeting, viz., the Rev. Dr. Angus and the Rev. Dr. Newman Hall.

EVANGELICAL ASSOCIATION. The following is a summary of the statistics of this denomination for 1890: Number of members, 113,733, showing an increase during the year of 3,638; of members newly received, 11,487; of itinerant preachers, 1,011; of local preachers, 434; of baptisms, 1,998 of adults and 6,472 of infants; of Sunday schools, 2,133, with 22,568 officers and teachers and 135,284 pupils; of catechetical classes, 801, with 9,495 catechumens; of Young People's Alliances, 888, with 30,407 members; of organized societies, 2,058; of churches, 1,808, valued at \$4,564,436; of parsonages, 676, valued at \$888,656; of other property, \$121,276.

The receipts for the year of the missionary society were \$161,342—representing average contributions of \$1.42 for each member of the Church. Of the whole amount, \$36,524 were received toward the payment of the debt. The increase of receipts over those of the previous year was \$25,804. From the mission fields were returned—of home missions, of which 22 were new missions, 492 missions, 498 missionaries, 40,824 members, and 5,470 accessions during the year; in the foreign missions, 89 mission stations, of which 6 were new, 132 missionaries, 12,573 members, and 1,655 accessions. An increase of 1,949 members from the previous year was shown. Notwithstanding the number of new missions and mission stations added, the whole number remained the same as in the previous year, 20 of the former missions having become self-supporting, and others having been united with other fields. The foreign missions were in Germany, Switzerland, and Japan. The Woman's Missionary Society had contributed \$3,788.

EVANGELICAL FREE CHURCHES, CONGRESS OF. The Fourth National Congress of Evangelical Free Churches of England met at Nottingham, March 10, the Rev. Hugh Price Hughes presiding. The president, in his opening address, explained that the movement represented by the congress was not political or philanthropic, but evangelical. Its causes were the entire disappearance from the churches represented of their internal differences, and the sad fact of a revival in the country of extreme mediæval clericalism, which their fathers believed had forever disappeared from England, the operation of which had forced them all together in self-defense. Papers were read during the meetings on "The Church and the Press"; "Preaching" (Dr. Joseph Parker); "Churches in Towns"; "Churches in Villages" (the Rev. John Smith, General Missionary Secretary of the Primitive Methodist Church); "Betting and Gambling"; "Purity"; and "Immediate Legislation affecting our Churches." Resolutions were passed denouncing the treatment of the Armenians, favoring international arbitration, urging legislation for the Sunday closing of licensed saloons, and discountenancing the further support of voluntary schools by the State. The name of the organization was changed, and instead of congress it will hereafter be known as the National Council of the Evangelical Free Churches. The constitution of this body, as presented to this meeting, declares the objects of the Council to be: to facilitate fraternal intercourse and

co-operation among the evangelical free churches; to assist in the organization of local councils; to encourage devotional fellowship and mutual counsel concerning the spiritual life and religious activities of the churches; to advocate the New Testament doctrine of the Church and defend the rights of the associated churches; and to promote the application of the law of Christ in every relation of human life.

The Federation of the Evangelical Free Churches has grown up since 1890, though a few local councils not entirely resembling the present bodies were already in existence at that time. It now comprises 209 councils, scattered over the whole of England and Wales. The movement is at work in the rural districts as well as the towns, the villages of a district being grouped around the nearest town. The councils have associated with them at least 7,500 churches, representing, in round numbers, a membership of about 1,000,000. Counting all the Methodist bodies as one, the federation includes nine denominations. Under it, house-to-house visitation has been undertaken in many towns; a nonconformist parochial system has been developed; great united missions have been held; interdenominational missions have been established in villages where no free-church cause existed; and in the towns exchange of pulpits, religious conferences, etc., are bringing Christians of different denominations into closer fellowship. The literature which has been created under the auspices of the Federation is mentioned as constituting one of the significant features of its growth. A catechism is in preparation dealing with the history and principles of the free churches, and a monthly organ and a series of shilling handbooks on nonconformist principles are projected.

EVENTS OF 1896. Hardly within a generation has a year opened with such threatening conditions. Within a few days came the news of the President's message regarding the Venezuelan boundary dispute; of the attempted seizure of Johannesburg by a party of British raiders, and with the connivance, as has since been ascertained, of officials very near the Government. Close upon this came the German Emperor's friendly message to President Krüger, and for a time, apparently, it required but a trifle to precipitate a war that would surely have involved the United States. The year ended, however, with peace in Europe and an international treaty for arbitration, ready for signature, by representatives of the two great English-speaking nations.

Italy has been in effect forced by an able native monarch to abandon her colonies in East Africa. Spain appears to be making no sensible progress toward suppressing the insurrection in Cuba, and, aside from minor wars that England has on her hands for the preservation of order in Africa, the world is at peace.

In the pages that follow, nearly all the events that may be supposed to interest ten thousand or more people are briefly recorded. Some of them may seem trivial, as, for instance, the annual meetings of certain societies and associations; but it is believed that in every case the membership of the society in question is large enough, or its importance is great enough to justify its mention.

January 1. Washington: The President appoints a commission to determine the true boundary of Venezuela. England: Alfred Austin appointed Poet Laureate by command of the Queen. Cincinnati, Ohio: An area of 12 square miles is annexed to the city. South Africa: Dr. Jameson with about 500 raiders, mainly English, engages a force of 2,000 Boers near Krugersdorp, in the Transvaal. Pasadena, Cal.: Annual "Tournament of Roses," 10,000 spectators. Leadville, Col.: Opening of ice palace.

2. South Africa: Dr. Jameson and his men surrender to the Boers.

3. Washington: L. M. P. Myers, of Richmond, Va., appointed assistant general superintendent of the railway mail service. Cuba: Martial law proclaimed in the provinces of Havana and Pina del Rio. Germany: The Kaiser in a published dispatch congratulates President Krüger on his victory over Dr. Jameson's raiders. Great war excitement follows in England.

4. Washington: By proclamation of the President, Utah becomes a State. Canada: Seven Cabinet ministers resign, favoring Sir Charles Tupper for Premier in place of Sir Mackenzie Bowell.

5. South Africa: Cecil Rhodes resigns the premiership of Cape Colony; Sir J. Gordon Sprigg succeeds him. Baltimore: The cardinal's berretta is conferred on Mgr. Satolli in the Roman Catholic cathedral. Germany: Prof. Wilhelm Konrad Roentgen publishes his discovery of the "X ray."

6. Washington: Call issued for a Government loan of \$100,000,000. Utah: State officers inaugurated. New York city: Opening of the new appellate branch of the Supreme Court. Chicago: Strike of stone cutters.

7. Ohio: The State Senate adopts resolutions recognizing the Cuban insurgents as belligerents. The German Kaiser announces that he will not recognize any claim of British suzerainty in the Transvaal. Kentucky and Mississippi: Meeting of the State Legislatures. Missouri: Lloyd Lowmes inaugurated Governor. Great Britain and the United States: The Evangelical Alliances of, order a week of prayer for peace. New York city: Report of the American Cup Committee on the Defender-Valkyrie races made public.

8. London: A movement inaugurated favoring a permanent court of arbitration. Oklahoma: Statehood convention breaks up in a fight about a location for the capital.

9. England: Denial by the Colonial Office that Venezuela has been trespassed upon. Germany: Meeting of the Reichstag.

10. England: Great activity in the navy yards and excitement over the Transvaal question. South Africa: Arrest of 22 persons in the Transvaal charged with treason.

11. Canada agrees to arbitration of the Bering Sea seizure claims. England: Appointment of Sir Claude MacDonald British minister to China. Cuba: Insurgents capture San Christobal and Bahia Honda. Italy: Adjournment of the Parliament.

12. Washington: The President recommends a commission on the Venezuelan question and warns that country against excesses toward Englishmen. New York: A steamer chartered by the Central Labor Union to carry 400 negroes to Liberia. England: Mr. Gladstone reaffirms his opinion in favor of arbitration between Great Britain and the United States. Germany again insists on the *status quo* in the Transvaal.

13. Ohio: Asa S. Bushnell inaugurated Governor. Cuba: An insurgent force appears within sight of Havana. Abyssinia: An attack of natives repulsed by the Italians at Makalla. Turkey: Exclusion of the Red Cross Society by a decree of the Sultan.

14. Chicago: The Board of Trade demands the retirement of greenbacks and Treasury notes. Germany: Prince Leopold resigns his commission in the army as the result of a quarrel with the Kaiser. Recall to England of Commissioner Booth of the Salvation Army. South Africa: The Transvaal Legislature authorizes an increase of the army. The British representative at Cape Colony is directed to look out for American prisoners. It is announced that Dr. Jameson and his followers will be sent to London for trial. England: The British flying

squadron is ordered into commission on five days' notice. Brazil: A contract made for the importation of 100,000 Europeans.

15. Canada: Sir Charles Tupper becomes Secretary of State; Cabinet ministers resume office. Manitoba: General election; victory of the Greenway party, the question at issue being whether separate schools shall be allowed for Catholics. New York: Opening of the building of the Clearing House Association. North Carolina: Expulsion from the State University of 12 students for hazing and conduct unbecoming gentlemen.

16. Iowa: F. M. Drake inaugurated Governor. New York: Annual meeting of the American Protective Tariff League. Nebraska: Secretary-of-Agriculture Morton is elected President of the Nebraska State Historical Society. London: United States Ambassador Bayard tenders thanks for kindness to Americans in the Transvaal. France: Émile Loubet elected President of the Senate. Pittsburg: Employees of the Westinghouse Electric Company strike against 25 per cent. reduction in wages. New York: Commander and Mrs. Booth, of the Salvation Army, announce their recall to England.

17. Canada: In view of possible war, Canadian lake captains offer their services to the Imperial Government. Siam: Settlement of boundary dispute between France and England. The Mecong river is accepted as the dividing line. Maryland: Deadlock in the Legislature over the election of United States Senator. Cuba: Recall to Spain of Capt.-Gen. Campos. Germany: Revision of the civil code presented to the Reichstag by Chancellor von Hohenlohe.

18. Detroit: President Angell of Michigan University elected President of the Deep Water Way Commission. Germany: Celebration of the twenty-fifth anniversary of the empire. Cuba: Appointment of Gen. Weyler to be captain general. Virginia: The Legislature authorizes the State University to issue \$200,000 bonds to make good losses by fire.

19. Africa: Submission of the King of the Ashantees to British authority.

20. Europe: Adverse criticisms of the press on the President's promulgation of the Monroe Doctrine.

21. Mississippi: A. J. McLaurin inaugurated Governor. New Jersey: John W. Griggs inaugurated Governor. Missouri: The Anti-Sunday Barber law declared void. Memphis, Tenn.: Annual convention of Southern cotton growers. Chicago: Annual convention of National Association of Manufacturers. Rhode Island: Meeting of the State Legislature. Utah: The election of Frank J. Cannon and Arthur Brown to be United States Senators.

22. Maryland: Hon. George L. Wellington elected United States Senator. Iowa: Re-election of Senator Allison. Washington: General conference of free-silver men.

23. Washington: Ex-President Harrison appointed counsel before the United States Supreme Court. Meeting of the National American Woman's Suffrage Association. Abyssinia: The Italian garrison of Makalla is permitted to evacuate the post.

24. Washington: First meeting of the Venezuelan Commission. Mississippi: Election of the Hon. H. D. Money as United States Senator. Florida: Meeting of the National Editorial Association at St. Augustine. Turkey: Conditional permission accorded to Miss Clara Barton to relieve Armenians. Washington: Annual meeting of the American Forestry Association. The Secretary of Agriculture is elected president. Ex-President Harrison pays a visit of courtesy to President Cleveland.

Coinage of standard silver dollars ordered at United States mint.

25. Russia: The Czar authorizes increased naval estimates for the coming seven years.

26. Washington: Great Britain officially accepts a commission to settle the Bering Sea claim.

27. Kentucky: Deadlock in the Legislature on the election of the United States Senator. Germany: The Kaiser celebrates his thirty-seventh birthday. St. Petersburg: Henry Lasker wins in the international chess tournament. Alabama: Coal barges pass for the first time down the Black Warrior river *en route* to tide water at Mobile. Scotland: Work resumed in the Clyde shipyards after a lockout of several months. Canada: Official opening of the Quebec winter carnival.

28. Washington: Meeting of the National Board of Trade.

29. Iowa: Indictment of the mayor and aldermen of Dubuque, because of the passage of an ordinance increasing their own salaries. Wisconsin: Sale of the street railway system of Milwaukee for \$5,000,000.

30. Indiana: Decision of the State Supreme Court that the legislative appointments of 1893 and 1895 are invalid (both parties involved). California: Decision by the State Supreme Court that the election commission law of the Citizens' Defense Association is unconstitutional. Agreement of the anthracite coal companies to limit production. Philadelphia: Meeting of the American Jewish Historical Society.

31. Forty-nine bishops of the Protestant Episcopal Church send a formal protest to the President against the Armenian atrocities. Similar letters are sent to the Archbishop of Canterbury, to the Czar, and to the Emperors of Austria and Germany. Louisville, Ky.: George Todd, Republican, elected mayor of the City Council in place of Henry H. Tyler, deceased.

February 1. California: Organization of a Pacific Coast Lumber Trust, representing \$70,000,000 of capital.

4. Ecuador issues a call for a Pan-American Congress. Washington: The President appoints Assistant-Secretary Uhl of the State Department to be ambassador to Berlin. Annual meeting of the National Farmers' Alliance. England: Mr. Chamberlain, Colonial Secretary, invites President Krüger of the Transvaal Republic to visit England for consultation touching existing complications. President Krüger declines with thanks.

5. Washington: Opening of bond bid for \$100,000,000. Italy: Tax riots in Piedmont, 6 killed, 30 hurt. Germany: Widespread labor agitation, strikes of cloth workers; the Government asks employers to arbitrate. New York: The price of coal advances 35 cents a ton by order of the trust.

6. New York: Both branches of State Legislature pass bills to retaliate for the exclusion of American insurance companies from Germany. Ohio: The State Senate raises the liquor tax to \$500; local option defeated in the lower house. South Africa: Beginning of the trial of the Uitlanders recently engaged in rebellion. Manitoba: Opening of the new Legislature at Winnipeg, a majority opposed to separate schools. Korea appoints a minister to the United States. Denver, Col.: Dedication of a home for consumptives.

7. Washington: The President signs a bill prohibiting prize fights and bull fights in the Territories and in the District of Columbia. Africa: Great Britain proclaims a protectorate over Ashantee. Turkey: The Sultan replies to Queen Victoria's letter, assuring her that everything is quiet in Armenia. Canada: The Press Association, in Session at Toronto, passes a resolution of loyalty to the

British Empire. Illinois: Decision of the Attorney-General against the reorganization of the Chicago Gas Trust. Nebraska: Ex-Congressman William J. Bryan brings suit to restrain the issue of refunding gold bonds by the city of Lincoln on the ground that such action discriminates against silver and other legal tender.

8. New York: Richard Croker withdraws from the leadership of Tammany Hall: receives a public dinner and a testimonial silver cup. John C. Sheehan is his successor. Washington: Allotment of bonds under the new loan completed at an average of 111.

9. Chicago: Judge Groscup sentences Joseph R. Dunlop, an editor, to two years in the penitentiary and \$2,000 fine for sending obscene matter through the mails. Africa: Cecil Rhodes permitted to return to duty with the South Africa Company.

10. Baltimore: Meeting of the League of American Wheelmen and a Good Roads Congress; Sterling Elliott chosen president. Cuba: Arrival of Gen. Weyler.

11. Washington: The President nominates William W. Rockhill, of Maryland, to be First Assistant Secretary of State. New York: Execution of "Bat Shea" for the murder of Robert Ross in an election fight. England: Queen's speech in Parliament. A statue to John Bright is unveiled in the Houses of Parliament. France: The Senate refuses a vote of confidence in regard to southern railway scandals. Korea: Revolt at Seoul, murder of the Prime Minister and seven officers.

12. Nicaragua: Re-establishment of civil law. Illinois, Minnesota, New Jersey, New York, and Washington observe Lincoln's birthday as a legal holiday.

14. Washington: The President consents to act as arbitrator between Italy and Brazil. New York: Gov. Morton signs a bill granting jurisdiction over the Hudson Palisades for a military national park.

September 1-4. Washington: General Conference of American Librarians. Vermont: Republicans carry the State by largely increased vote. England: International Convention of Representatives of the Irish Race in London.

2. Indianapolis: Convention of National Democracy, ex-Gov. Flower appointed temporary chairman, Senator Caffery, of Louisiana, permanent chairman. Cuba: Capt.-Gen. Weyler decrees compulsory circulation of bank notes at par with gold.

3. Indianapolis: The National Democracy nominates Senator John M. Palmer for President and Gen. Simon B. Buckner for Vice-President on a sound-money platform. Chili: The Congress proclaims Errazuriz President for five years, vote 62 to 60.

4. T. S. Clarkson elected Commander-in-chief of the Grand Army of the Republic.

5. Germany: The Czar and Czarina guests of the Emperor at Breslau.

7. Spain: Adjournment of the Cortez *sine die*. Scotland: Meeting of Trades Union Congress at Edinburgh. Arkansas: State election, Democrats win.

9. Spain: 1,500 soldiers sail for the Philippine Islands.

12. Senator Palmer and Gen. Buckner formally notified of their nomination.

14. Alleged discovery of a widespread dynamite plot in England and on the Continent, several arrests made. Maine: State election, Republicans win.

15. New York: United States steamship Ban-

croft sails for Constantinople. Richmond, Va.: Annual meeting of railroad conductors of the United States and Canada. Netherlands: Opening of the States General by the Queen Regent.

16. Mexico: Opening of Congress.

17. New York: United States steamship Cincinnati sails for the Bosphorus. Egypt: The Anglo-Egyptian expedition reaches Barja, near the principal derwish encampment.

18. Washington: The building of three new battle ships is awarded to the Newport News Company, the Cramps, and the Union Iron Works. Rome: The Pope officially pronounces invalid all ordinations under the Anglican rite, and warns Episcopal clergyman to return to the Church of Rome. London: Guards are doubled at the Houses of Parliament and other public buildings because of alleged dynamite plot.

19. Germany: First International Women's Congress in session at Berlin.

21. Canada: Opening of the Central Exposition at Ottawa. Colorado: Strikers attack the mine houses at Leadville; several killed. Philadelphia: Cricket match with the visiting Australian team; the visitors win.

23. Egypt: Capture of Dongola by the British expedition. England: Victoria's reign on this day becomes the longest in the history of Great Britain. Meetings to protest against Armenian atrocities held throughout the United Kingdom. Colorado: Strike leaders arrested, Leadville under martial law. Pennsylvania: Property of the Reading Railroad and Coal and Iron Companies sold under foreclosure.

24. England: Mr. Gladstone addresses a great meeting in Liverpool on the Turkish question. Col. Kitchener, commandant of the Egyptian army, is promoted major general.

25. The English Government makes a demand on France for the extradition of P. J. Tynan the alleged dynamiter. France refuses. Chicago: Atchison and Rock Island Railroads withdraw from the Western Freight Association.

26. China: Foochow and Hang-Chow open as treaty ports in accordance with the treaty of Shimoneseki. Cape Breton: Arrival of the Peary expedition. Vienna: Meeting of the anti-Masonic Congress.

27. Opening of the Iron Gates Danube Canal between Hungary and Serbia. The Emperor of Austria and Kings of Roumania and Serbia take part in the opening ceremonies.

28. Declaration of the Porte that disturbances in Constantinople are due to British supremacy. New England: A large number of mills and factories begin to work on full time. Canada: Strike of train dispatchers on the Pacific Railroad. Germany: Strike of dock laborers at Hamburg.

29. Rhode Island: Special session of the State Legislature.

30. St. Louis: Meeting of the National Association of Democratic Clubs. France and Italy: A commercial treaty signed at Paris. India: Agrarian riots occur in the northern and central provinces.

October 1. Iowa: Celebrates the fiftieth anniversary of her admission to the Union as a State. England: Strike of 1,500 cabmen in London.

2. Boston, Mass.: Strike of 1,500 garment workers. Zanzibar: The deposed Sultan takes refuge on board a German war ship. Vigorous protest on the part of the British. Spain: Emigration of young men liable to military service restricted.

3. New York: Arrival of the new papal representative the Most Reverend Sebastian Martinelli.

4. Washington: Cardinal Satolli relinquishes the office of papal legate to the United States. The

Right Rev. J. H. Keane announces his resignation as rector of the Catholic University.

5. Canada: Adjournment of Parliament. Connecticut: Town elections show large Republican gains. France: Arrival of the Czar and Czarina, who are received by President Faure. Philadelphia: American cricket players win the third series of matches against the Australians.

6. Georgia: State elections carried by the Democrats, 40,000 majority. Vermont: Meeting of the State Legislature. The President and family leave Gray Gables, their summer home, to return to Washington. Secretary Herbert awards contracts for building torpedo boats. Paris: Arrival of the Czar and Czarina: *fêtes* in their honor lasting till Oct. 10.

7. Galesburg, Ind.: Celebration of the Lincoln-Douglas debates of 1858; Chauncey M. Depew delivers the oration. England: Lord Rosebery resigns the Liberal leadership. Turkey declines to admit the United States steamship Bancroft.

8. Washington: Secretary Olney holds a diplomatic reception. Zanzibar: British war ships ordered to concentrate because of German action in regard to the late Sultan.

9. Washington: The President arrives at the White House. Chicago: Twenty-fifth anniversary of the great fire celebrated by a procession, more or less of a political character. Marked rise in the price of wheat, due to the failure of crops in Indiana and in South America.

10-14. Pittsburg: Meeting of the Brotherhood of St. Andrew—12,000 members. New Haven, Conn.: Harvard wins the intercollegiate championship.

11. London: Great anti-Turkish demonstration held in Hyde Park.

12. Washington: Reassembling of the Supreme Court. The justices pay a visit of ceremony to the President. Colorado Springs: Forty-third Annual session of the International Typographical Union. Notable speech of Archbishop Ireland in support of McKinley. Germany: Annual congress of the Socialist party at Siebichen.

13. Washington: First Cabinet meeting of the season. Eleventh annual encampment of the Union Veteran Legion. Spain: Mutiny on board a war ship at Ferrol, 40 men put in arms.

14. England: Cecil Rhodes announces that the Matabelan trouble is over.

15. France: Release of P. J. Tynan, the alleged dynamiter.

16. New York: Decision by the State Court of Appeals affirming the right of the National Democrats to use their name on official ballots. Maryland: Dedication of the Army Correspondent Monument at Gapland.

17. New York: Gov. Altgeld of Illinois addresses a great meeting at Madison Square Garden on the political issues of the day. Monsignor Satolli sails for Rome. Nicaragua, Honduras, and Salvador announce a treaty whereby they become a confederacy.

18. Germany: 26 American women enter for the new term at Berlin University.

19. Washington: Arrival of the new Turkish minister, Mustapha Tahsin Dey. Germany: The Kaiser visits the Russian Czar at Darmstadt.

20. Nashville, Tenn.: Meeting of the American Institute of Architects. Princeton, N. J.: Celebration of the sesquicentennial of Princeton College. Vermont: Re-election of United States Senator Justin S. Morrell. St. Louis: Fifteenth annual convention American Street Railway Association. New York: Convention of the House of Bishops of the Protestant Episcopal Church. Washington: Fourth Annual Convention National Spiritualists of the United States and Canada.

21. Capture off the coast of Florida of filibustering steamers Dauntless and R. L. Mallory by the United States cruiser Raleigh. Boston: The American Missionary Association begins its jubilee convention. London: Celebration of the anniversary of the battle of Trafalgar. Venezuela secures a German loan of \$10,000,000.

22. England: Seizure at the Chinese embassy of Sun-Yet-Zen for political reasons; his release is at once demanded and enforced by Lord Salisbury.

23. Germany: Much popular indignation over the arrogance of army officers toward civilians.

24. England: Appointment of the Right Rev. Frederick Temple to be Archbishop of Canterbury in place of Archbishop Benson (deceased).

26. China: Appointment of Li-Hung-Chang Minister of Foreign Affairs.

27. Japan and Russia agree to co-operate with the United States in protecting the fur seals.

28. Washington: Conclusion of the British case before the Venezuela Boundary Commission. New York: Fifty-third Annual Session of the Sons of Temperance, 400 delegates present.

31. Flag Day, great sound-money demonstration in many of the principal cities.

November 1. Gen. Fitz Hugh Lee, United States consul in Cuba, sails for New York on leave of absence.

3. Presidential election: William McKinley and Garrett A. Hobart chosen President and Vice-President of the United States by a popular vote of 7,113,103. Japanese contracts for armored cruisers given to Cramp & Son, of Philadelphia. Delaware: Appointment of the Rev. C. F. Thomas, Roman Catholic Bishop of Wilmington.

4. The President issues his annual Thanksgiving message, making marked reference to the result of the election: in Wall Street stocks go up from 3 to 7 points. England: Edward R. Poynter elected President of the Royal Academy in place of Sir John Millais, deceased.

5. New York: Many millions of hoarded gold returned to the banks and subtreasuries. Chicago: Reopening of the Stock Exchange, closed since Aug. 3. General revival of business noted all over the United States. Vienna: Marriage of Prince Louis Philippe Robert, heir to the throne of France, and the Archduchess Marie Borthe Émilie.

6. Massacres of Armenians resumed.

7. Ohio: 3,500 miners of Jackson County strike against the reduction of wages. Chili: Resignation of the Cabinet because of a vote of censure in the Chamber of Deputies. France presents a claim against Spain for damages in Cuba.

8. Germany: Prince Bismarck astounds the empire by revealing state secrets.

9. London: Lord Salisbury in a speech at the Lord Mayor's banquet refers to the Venezuelan controversy as practically ended, recognizes the Monroe doctrine, and congratulates the commercial world on the victory of sound money in the United States. Installment of Mr. A. Fendel Phillips as Lord Mayor of London. Cuba: Capt.-Gen. Weyler takes the field in person. India: Bread riots occur in the districts threatened with famine.

10. Rochester, N. Y.: Twentieth annual general assembly of the Knights of Labor. Nashville, Tenn.: Baptist Congress in session.

11. It is decided to establish a permanent headquarters of the National Republican Committee in Washington.

12. A formal organization of Italian socialists announced for America under Signor Verro.

13. St. Louis: National Woman's Christian Temperance Convention: Frances E. Willard re-elected president. Continued advance in the price of wheat in the markets of the world. China: Extensive

railway construction undertaken by the Government. Cuba: Contradictory accounts respecting an engagement in the Rubi mountains. Costa Rica and Colombia agree to arbitrate an ancient boundary dispute.

14. London: The implied acceptance by Lord Salisbury of the Monroe doctrine is widely commented upon by the English press. Indiana: Republican congressmen-elect agree to leave local post-office appointments to the choice of the people. Norfolk, Va.: A large force of men taken on at the navy yard. Italy: A treaty of peace announced with King Menelek; complete independence of Ethiopia guaranteed; Italy pays the expense of maintaining prisoners.

15. New York: First annual convention National Council of Jewish Women. It is announced that the Pope approves of the settlement of the Manitoba school question.

16. The President appoints W. S. Foreman, of Illinois, Commissioner of Internal Revenue in place of Joseph H. Miller, resigned. Washington: A decision of the Supreme Court sustains the constitutionality of California irrigation laws. Mexico: Session of the Pan-American Medical Congress.

17. Spain negotiates a loan of 250,000,000 pesos, more than twice that amount being offered. Georgia: Alexander Stephens Clay chosen United States Senator. Indianapolis: Annual congress of liberal religious societies. Germany: Heated discussion on military outrages in the Reichstag.

18. Norfolk, Va.: Congress of Protestant Episcopal Church in session. Trusts and monopolies discussed.

20. Washington: Appointment of the Rev. Dr. Thomas J. Conaty rector of the Catholic University. Germany: Opening of the Prussian Diet at Berlin.

21. Italy and Brazil sign a commercial treaty. Philippine Islands: It is announced that the insurrection has become general. St. Louis: Session of the International Order of King's Daughters and Sons. Boston: Collapse of the Wire Nail Trust.

22. London: It is decided by the Royal College of Surgeons to grant diplomas to women. Cuba: Capt.-Gen. Weyler returns to Havana, his troops having been very severely handled if not routed by the rebels under Gen. Maceo.

23. Washington: The President appoints Carl C. Nott, of New York, to be Chief Justice of the Court of Claims.

24. Washington: Wu-Ting-Fang appointed Chinese minister resident. Alabama: Gen. E. W. Pettus chosen United States Senator. Hamburg: The dock laborers' strike involves 10,000 men. Nicaragua: Amnesty granted to 500 persons engaged in the late uprising.

25. Central America: It is officially announced the new confederacy is to be known as the Greater Republic of Central America.

27. It is announced that President Cleveland will make his home in Princeton, N. J., after the expiration of his term of office.

28. England: Queen Victoria summons Parliament to meet Jan. 19, a week earlier than usual. Money wanted for the army. Russia: It is announced that the Czar will abolish ministerial offices and be an absolute autocrat.

29. Great Britain assures France that a proposed expedition of the River Niger Company will not trespass upon French interests in Africa.

30. Georgia: Bills introduced into the Legislature prohibiting the game of football and the sale of cigarettes and cigarette paper.

December 1. Conference of business men at Indianapolis to discuss plans for currency reform. Mexico: Fifth inauguration of Gen. Porfirio Diaz as President.

2-3. Cuba: Many reported engagements between Spanish troops and the insurgents.

3. Washington: The President announces a tonnage tax upon incoming German vessels in retaliation for a similar tax imposed upon American vessels in German ports.

4. Maceo, the most successful of the insurgent leaders, is killed in an engagement with the Spaniards.

5. Washington: A protest filed by Germany against the President's action regarding tonnage dues.

6. London: Ambassador Bayard declines a Christmas testimonial tendered by a leading daily newspaper.

7. Washington: Meeting of Congress. Memorandum announced of a preliminary agreement between Secretary Olney and Sir Julian Pauncefote in regard to the Venezuelan question. Russia and Great Britain arrive at an understanding regarding the Turkish question. It is definitely announced that the Sultan will be coerced.

8. Washington: "silver Senators" stay away from the Republican caucus. Paris: Sir Edmund John Monson presents his credentials as British ambassador to France, in place of Lord Dufferin. Scotland: Strike of firemen and seamen on the Clyde.

9. Washington: Permanent quarters secured by Chairman Hanna for the Republican National Committee. Colorado: Withdrawal of troops from Leadville. France: International bimetalism advocated by Premier Meline in the Chamber of Deputies.

10. San Francisco: Arrival from Honolulu of ex-Queen Liliuokalani.

11. Decision of the National Democratic party to establish permanent headquarters in New York.

12. Idaho: Decision of the courts that woman suffrage was adopted in the late election.

14. New York: Joseph H. Choate announces his candidacy for United States Senator.

16. Germany: Violent outbreaks among the striking dock laborers at Hamburg.

17. Switzerland: Dr. Adolphe Deucher elected President of the Confederation.

18. Cincinnati, Ohio: Samuel Gompers re-elected President of the American Federation of Labor. Italy: A disturbance and fight in the Chamber of Deputies over the allowance of the Crown Prince.

19. Declaration of Secretary Olney that the power to recognize Cuba rests with the President alone. Georgetown, S. C.: A public reception given to President Cleveland.

20. New York: Return to Cuba of Consul-General Fitzhugh Lee. Popular demonstrations in favor of the Cuban cause.

22. Army: Col. Charles G. Sawtelle promoted to be quartermaster general. Chicago: Failure of the National Bank of Illinois; runs on other banks. St. Paul, Minn.: Bank of Minnesota closed by order of the State examiner. London: Confirmation of Bishop Temple to be Archbishop of Canterbury and Primate of All England.

23. Washington: The President receives Señor Rodriguez, first minister of the "Greater Republic of Central America."

24. Germany: Arrest of several anarchists in Berlin.

25. Boston: End of the street-car strikes, pending negotiations; 800 strikers seeking re-engagement were refused.

28. Washington: It is announced by the State Department that the arbitration agreement is accepted by Venezuela.

31. New York: Gov. Morton removes Inspector-General McLewee for criticising State military officials in his report.

F

FARMERS' CONGRESS. The sixteenth annual session of the Farmers' National Congress of the United States convened in the hall of the House of Representatives at Indianapolis, Ind., Nov. 10, 1896. Hon. Benjamin F. Clayton, of Iowa, president of the congress, presided, and Hon. J. M. Stahl, of Chicago, was secretary, assisted by Prof. C. A. Stockwell, of Rhode Island, and D. O. Lively, of Texas. Hon. Claude Mathews, Governor of the State, in his address of welcome, said:

"Indiana, while but thirty-third in area in the list of States, has, through the great fertility of her soil and the intelligent development of her wonderful resources by her farmers, been placed in the front ranks of the great grain-producing and livestock States of the Union. Indiana, recognizing the great truth that the basis of wealth and prosperity of a people more largely rests upon a farm, has ever held out an encouraging hand to its agriculture, and through this wise and just encouragement has our State rapidly and continuously increased in wealth and in the happiness and contentment of our people. It has been eloquently said that you might burn your cities to the ground and soon a prosperous country would rebuild them; but destroy the prosperity of the farm, and grass would grow in the great commercial streets of our cities. But great as has been the encouragement which Indiana and doubtless other States have given to agriculture through equitable laws, public sentiment, and moral aid, there is yet more need, and through such meetings as this of yours may the way be pointed out to secure these needs."

Responding to the welcome of the Governor, President Clayton then delivered his annual address, in which he said:

"Our meeting follows in quick succession a determined and closely contested national campaign. In this campaign the interest of every farmer and producer has been involved. Laying aside the bitter personal attacks that usually characterize national politics, having as leaders men of the highest personal integrity and character, a campaign of education was inaugurated and 70,000,000 American people in the sacred right couched in the silent ballot rendered their verdict on Nov. 3, and, as a result of that campaign, no people so well understand the financial system of their government as do ours. While it is quite natural for a large and equally intelligent minority of our people to feel disappointed at the results, yet it is fair to presume that they will join with the majority in the hope that the verdict at the polls—the high and supreme tribunal before which great issues must be decided—will result in the restoration of life and activity to our commercial centers, and give employment to both capital and labor.

"At the fourteenth annual meeting, at Parkersburg, W. Va., in 1894, this organization, by a practically unanimous vote, passed a resolution, declaring that to whatever degree either great political party shall adopt the policy of protection, we, as representatives of the farming interest, demand that an equal protection be given to farm products. A committee was appointed to confer with a congressional committee as to the readjustment of tariff schedules on farm products. I regret that there has been no report from that committee, but I have been placed in possession of figures on farm products under the operation of the former and the present revenue laws, both of which are protective;

hence I shall give the facts without fear of party criticism. During the last fiscal year of the operation of the former law the agricultural imports of 20 articles the like of which we produce North and South amounted to \$65,804,446; during the first calendar year of the operation of the present law the importation of the same articles amounted to \$134,068,860, or an increase over the former law of \$68,264,314. In the exportation of farm products we find the discrepancy still greater in 27 chief articles produced on the farm. During the fiscal year 1894 we exported farm products to the amount of \$907,946,945, while during the calendar year 1895 there were exports in the same product to the amount of only \$751,833,937, a decrease of \$156,113,008. Adding the gain in imports to the loss in exports, the American farmer loses in one year \$224,337,322. The discrepancy between the last year of the former law and the fiscal year closing in 1896 discloses a loss of \$496,000,000, or a loss in two years under the late schedule of approximately \$721,000,000. It may be claimed with some show of reason that other conditions aside from the change in schedules produced this effect, as, for instance, on the article of hides, on the free list under both schedules, the increased importation was \$19,162,272, on wool the increase was \$27,662,718, while our exports in cotton and breadstuffs receded \$81,122,389.

"If these figures be true, a vigorous remonstrance to these schedules should go up from this body, and we should demand that the Agricultural Department investigate each item. Should protection be the policy of the Government, then it should be applied to farm products, and the Agricultural Department should recommend to the General Government such changes in the tariff schedule as will furnish the same protection to the product of the farm that is accorded to other grain interests.

"Notwithstanding the antitrust laws found in our statutes, combinations of the most gigantic proportions have been formed, which bid defiance to the courts of law and absolutely control the purchase and selling price of live stock and its products. In my judgment, it is a dark day when these combinations are permitted to invade any State. Gradually they are extending their powers and fastening their fangs upon the important trade centers of the States with a rapacious greed that threatens to sweep everything before it. Will any well-read man deny the proposition that these combinations can say to the farmer, 'You shall take your stock to the market and sell it to us at our price, or to others at prices dictated by us?' These charges have often been made, and they have never been publicly denied by those combinations. They have invaded our country with the foreign beef carcass; they have come within the gates of our cities, have destroyed the slaughter houses, and have driven the local business man to the wall through the siren song of cheap beef; and the time is not far distant when they will as absolutely control the price to the consumer. When you get behind the screen that conceals the National Grain and Millers' Associations, you will find the same conditions. Unless checked by State and national legislation, the Millers' Association will soon dictate to the farmer the price of his grain, and to the consumer the price of his breadstuff, as absolutely as the Whisky Trust controls the price of its goods. The meetings of these organizations are clandestine. Some time since I

understood from reliable authority that there was a national convention of oatmeal manufacturers at Des Moines, Iowa, and their movement was so quiet as to escape the sharp eye of the reportorial staff of the Des Moines press. If you will figure the margins between the price paid for grain and the price charged for mill products, there is no man but will agree with me that those engaged in the milling business are not rendering reciprocal justice to the producer of the cereal or to the consumer.

"By legislation and by courts we have settled the great principle that the public have a right to control these trusts, and corporations have accepted that principle. What we now want is, that the national and State executives lose no time in laying before Congress and the legislatures the evils complained of, and suggest such remedies as will check their further growth."

On motion of Judge Lawrence, of Ohio, a committee was appointed to examine the president's address and prepare a memorial to Congress upon the suggestions it contained. The committee consisted of Hon. William Lawrence, of Ohio; Mrs. O. S. Foley, of Illinois; Mrs. J. M. Strahn, of Iowa; J. F. Branson, of Nebraska; John Stotze, of Ohio; and J. A. Myers, of West Virginia.

The president then announced the following standing committees:

On Finance: Will B. Powell, Pennsylvania; J. C. Offutt, Indiana; J. G. Avery, Massachusetts; J. Quirk, Minnesota; J. H. Baker, Maryland.

On Location: Mrs. Ada M. Ewing, Iowa; F. H. Appleton, Massachusetts; Jason Sexton, Pennsylvania; D. O. Lively, Texas; D. G. Purse, Georgia.

On Resolutions: William Lawrence, Ohio; H. D. Land, Alabama; H. H. Harris, Illinois; Joshua Strange, Indiana; J. H. Whetzel, Iowa; J. H. Baker, Maryland; R. G. F. Candage, Massachusetts; W. M. Hayes, Minnesota; Mrs. A. M. Edwards, Nebraska; G. A. Stockwell, Rhode Island; D. O. Lively, Texas.

After a lively discussion the following memorial was adopted:

"To the Congress of the United States: The Farmers' National Congress is composed of 2 delegates at large from each State and 1 delegate from each congressional district of the United States, besides a large number of advisory delegates from each State. Its object is to advance the agricultural interests of the country. At the session of this congress in Indianapolis, Nov. 10-13, 1896, the Hon. Benjamin F. Clayton delivered his annual address and the undersigned committee was directed to consider it and prepare a memorial to the Congress of the United States.

"The Farmers' National Congress is not a political organization, but it has political objects, among which are to secure legislation, State and national, in the interests of agriculture on nonpartisan lines by the co-operation of men of all political parties. Besides this, like the Patrons of Husbandry, or Grange organization, this congress demands that the general policy of a protective tariff shall be adopted by the Government of the United States, and that the products of agriculture shall share its benefits equally with the most favored of other industries.

"The recent election for President and representatives in Congress has for a time settled the question that 'the most ample protection' shall be extended to agricultural products in common with those of other industries. This memorial, therefore, represents the requests of farmers of all political parties. In view of the policy settled by the recent election, the annual address of the distinguished and able President of the Farmers' National Congress discusses the effect of tariff legislation as found in the tariff acts of Nov. 1, 1890, and Aug.

28, 1894. In view of these considerations this memorial asks the Congress of the United States to give the 'most ample protection' for farm products of the classes mentioned—that is, protective duties which will give the whole market to American farmers. Among these productions may be named: 1, cotton; 2, hemp; 3, flax; 4, wheat; 5, corn; 6, barley; 7, oats; 8, potatoes; 9, hops; 10, dairy products; 11, garden vegetables; 12, poultry and eggs; 13, live stock for use as food; 14, some kinds of tobacco; 15, small fruits; 16, apples and other orchard fruits; 17, hay."

Hon. A. M. Soteldo, delegate from Venezuela, was introduced and spoke feelingly of the friendship between the two republics.

After the report of the committee fixing upon St. Paul, Minn., as the next place of meeting, ex-President Benjamin Harrison was introduced, and in part said:

"I came here this morning simply to make acknowledgment of the compliment you have shown me by inviting me to appear before this convention. I suppose that politics is barred and that this is strictly an agricultural meeting. I am not learned in agriculture, though I was born and reared upon the farm, and whatever education I acquired was paid for by the proceeds of corn and wheat and hogs. It is very much the custom of the time—and a very natural custom it is—that men of a particular vocation should associate themselves together with a view of promoting their interests, and not selfishly the interests of the few, but the interests of the great class to which they belong, to study the principles that underlie a successful prosecution of a particular calling, and to cultivate fraternity and acquaintance. The times are full of such associations, and I think they should be encouraged. When men engaged in a particular calling from high motives associate themselves together and pursue those high motives in their association only good can result. But we must not forget when we form a lawyers' association, or a farmers' association, or an association of laboring men, that our object and aim should not be wholly selfish. Indeed, I think I may say that if we were absolutely selfish in our purposes and thought only of our own good, the good of the class and of the individual of the class, we should find that good most highly promoted by taking a broad view of things and by admitting to our deliberations this thought: that it is not possible for one class to be highly prosperous while all other classes are suffering; that there is an interdependence in all our business and social relations, and that this is highly developed in a free government like ours. In other words, in a broad sense, we prosper together and we suffer together; we are interdependent. I think sometimes the conceit of the farmer has been unduly promoted when it has been said that he is at the bottom of everything and that he belongs to an independent class, that cities are not of much account, and that farms are God's work and enduring. What would the farm be without the town, and what would the town be without the farm? The cities furnish the population that consumes the product of the farm, and the farm furnishes the subsistence of the city. As I heard a friend say the other day, 'It is the city for the country, and the country for the city, and all for the flag.' We are all rejoicing with you just now—even those who have to buy our breadstuffs and provisions—that you are getting a little better price for wheat and corn than you have been getting, and we think it is highly unselfish on our part that we should be willing to pay a little more for flour and meal and bacon that you should have a better chance on the farm.

"My thought is, if you think there are wrongs

and grievances in the business conditions or in legislations, hunt them out and specify them, hold them up to public judgment, and have faith in your fellow-man. For I say to you that the great body of the people, an overwhelming majority, are in favor always of justice and fairness, and if you make that appeal to them they will respond. They only want to be informed. They want to have you specify. If you are going to have a fight, have something to hit and hit it hard. Men will applaud the blow that you deliver.

"I have rejoiced in all that has tended to make agriculture easier, to give leisure for thought and reading, for the cultivation of the intellect. I rejoice that the schoolhouse and the little church are found in every country neighborhood; I rejoice in the belief that our people are patriotic, and that never before in the history of our country was there a deeper and more universal love of the starry banner and the Constitution for which it stands."

After a discussion of the resolution asking for the extension of free mail delivery in rural districts, the amendment of antitrust laws, the construction of ship canals from the Great Lakes to the seaboard, and various measures affecting agricultural products, the congress adjourned.

FARMS, ABANDONED. The problem involved in the abandonment of farms—a process that has steadily gone on in the Northeastern States for the past quarter of a century—is a curious one, and is closely related to our general social and economic interests. This movement has not been confined to the rural districts of mountainous New England, though its effects have been more patent there, but, it is claimed, is also observable in New York, in New Jersey, and even in Ohio. It is not probable, however, that in the last-named States the tendency has become so marked as to modify the sum total of social interests in any material degree. This, however, can not be said of New England, and the danger is that causes which have operated there, added to other local agencies, may, unless neutralized by other influences, work further mischief like a contagion. It is asserted by statisticians that the tendency to desert the country for the city, to "speculate in futures," to quit agriculture for other occupations, is also a recently noticeable fact in England, France, and Germany, and it has bred uneasiness in the minds of statesmen and thinkers. One can, then, scarcely attribute the movement involved in the abandonment of farms to that restlessness which has been specially attributed to the American character. The latest exact information bearing on this subject is derived from the figures of the semi-decennial census report of Massachusetts for the five years ending with 1895—the only State that is both prompt and thorough in furnishing this important record. Massachusetts, too, furnishes a better test than any other State. If its great manufacturing interests, generally distributed over all the State, offer a ready diversion from the farm to the workshop, the large local demand for food products, creating a bigger home market, tends to offset this drain on the agricultural classes by making truck farming more profitable. If this farm abandonment proceeds persistently in any ratio, it is safe to conclude that such ratio is considerably exceeded in the other New England States.

On May 1, 1895, the 2,500,183 people in Massachusetts were divided into 547,385 families, giving an average of 4.57 persons to each. Taking private families alone—that is, excluding the population of hotels, public institutions, schools and colleges, and camps of laborers—the ratio was 4.49 persons. Years ago the families of farmers were large. The conditions of country life favored fertility and the healthfulness of children, as against city life. The same

facts of vital statistics would inhere in Nature today, other things being equal. But the figures tell another story. In Nantucket the family size is 3.07; in Dukes County (Martha's Vineyard and vicinity), 3.25; in Barnstable, 3.43. In these maritime regions of course the soil is poor and sandy, yet fifty years ago the average was fully equal to that of the rest of the State. Of the 14 counties in the State, 7 fall much below the average. Of the others, Essex shows 4.46; Franklin, 4.17; Norfolk, 4.54; and Plymouth, 4.09. Suffolk County, which includes Boston and several of its suburban feeders, has an average of 4.79. The lowest ratio is found in Ellington, Dukes County, 2.98, and Wellfleet, Barnstable County, 2.92. In some wards of the large cities the average ranges between 6 and 7 to the family, and in many cases it rises above 5, while in many small towns the average is below 3. Such figures teach a very plain lesson. They show the dwindling of population in the rural districts, especially of the young and sturdy, either in their desertion of the State or their movement from country to city. As a logical consequence, the number of persons necessary to keep land in effective tillage having greatly decreased, many of the less fertile farms or those more remote from a city market have been abandoned. With this, perhaps, has gone a direct falling off of fecundity in the rural population, following that law of supply and demand which is inevitable in every turn of existence whether of Nature or society.

While no very recent statistics are available as to the status of other New England States as regards the farming population, reports made a few years ago to the Legislatures of Vermont and New Hampshire bearing on the reapportionment of the States into election districts are full of significance. In many of the mountain townships (and these constitute a large portion of Vermont territory) population had so dwindled that in some cases there were scarcely more than half a dozen voters, and yet these had as much voting power in the legislative body as cities of 50,000 people. The traveler through such States as Vermont and New Hampshire in particular finds deserted homesteads at every turn, ruined and empty houses and their ramshackle barns, with open doors and windows looking like eye holes in a skull, and wide stretches of young forest, where once grew corn and potatoes. The inexorable forest comes down and claims its own as soon as the hand of man intermits his patient toil. The United States census statistics of 1880 and 1890, as showing the changes of ten years, shed some light on the course of farm abandonment in New England. These are given for 4 States where the action is more noticeable: Maine had in 1880 64,309 farms, with an average of improved or tillable land of 3,484,908 acres; in 1890, 62,013 homesteads, with average of 3,044,666 acres. New Hampshire in 1880 counted 32,181 farms, and an acreage of 2,308,112; in 1890, 29,151 farms of 1,727,187 acres. In Vermont, for 1880, we find 35,522 farms, and acreage 3,286,461; in 1890, 32,573 farms, and 2,655,943 acreage. Massachusetts showed in 1880 38,406 farms, of 2,128,311 acres; in 1890 the census record was 34,374 farms and 1,657,024 acres. The ratios of agricultural shrinkage in New York, New Jersey, and Pennsylvania are so slight, as shown in the two last national censuses, that they are far less significant. It is New England, especially mountain New England, that is peculiarly the region of abandoned farms, where the phenomenon assumes a startling vividness.

So much has been written in newspapers and periodicals on the subject of farm abandonment, with special relation to its causes, that it is scarcely needful to enter into that part of the subject, ex-

cept so far as the causes may suggest the partial cure of the evil. The tremendous development of Western railways, especially the building of the transcontinental systems, immediately after the civil war, opening vast fields of cereal and livestock production, and shifting the center of distribution, was the original disturbing factor. Incidental to the influence, involving loss of revenue to the Eastern farmer, was the loss of the old intensely thrifty, conservative spirit that made the farmer's family content with a parsimonious living. The new spirit of the times opened unknown vistas of pleasure and comfort in living, which the old life could not gratify. These two main causes assisted by other minor influences, drained the agricultural sections of the East of the more ambitious growing generation, and still continues to do so. A possible remedy may be suggested by the study of these causes. The farmer cut off from profitable production of the great staples, hay alone excepted, must learn to mix brains with his farming, and study the markets that are left to him, with a view to their supply. Eggs, butter, cheese, milk, poultry, winter roots and similar products, and general market gardening, when sufficiently near to populous trade and manufacturing centers, offer annually increasing outlets for remunerative toil. The farmer in the East must change his methods and become free of the old ruts. The social difficulty may be largely decreased by good roads, convenient alike for business and pleasure, and practically bringing families near to each other for the purposes of society and the producer near his shipping station. The subject of good roads has been greatly mooted of late years, and some steps have been taken to secure them. In a report to the New York Legislature four years ago it was estimated, as a conclusion based on careful study, that an adequate system of macadamized roads would add 25 per cent. to the value of agricultural property in the State. A similar appreciation, if not so great a one, would take place in all the agricultural sections. The necessity of scientifically built roads must be accepted as a prime factor in all schemes for the regeneration of farming interests. That the older agricultural regions, especially the more sterile sections, can ever be restored to their former importance in the general economic scheme is scarcely possible. But very much may be done by intelligent private and public effort to check the retrograde tendencies that have been operating powerfully for many years.

FINANCIAL REVIEW OF 1896. The presidential campaign of this year was an important disturbing factor, unsettling all financial, commercial, and industrial enterprises for nearly three months, and it was not until the election that there was any recovery. Then confidence was restored, and there was a decided improvement in the general situation, which continued to the end of the year. There were indications in May that the Democratic National Convention, which would assemble in Chicago, July 7, would be dominated by delegations in favor of the free coinage of silver, and some fears were entertained that the Republican National Convention, to be held at St. Louis, June 16, would fail to take decided ground in favor of the gold standard. All doubt regarding the attitude of the Republican party was dispelled by the adoption of a sound money platform, and William McKinley, of Ohio, and Garret A. Hobart, of New Jersey, were nominated for President and Vice-President. But as the time approached for the meeting of the Democratic Convention it became evident that the free-silver-coinage element would be largely in the ascendant. The conservative members of the party sought to avert the catas-

trophe, but without avail, and the platform adopted not only declared in favor of the free coinage of silver, but it contained resolutions assailing the courts for their interference by injunctions at the time of the Debs insurrection in 1894; declaring against life tenure in the public service; opposing further issues of Government bonds for the purpose of maintaining the gold reserve; and demanding that holders of Government obligations should be deprived of the option now enjoyed of choosing the kind of money in which they should receive payment. The platform was adopted by a vote of 628 to 307, and William J. Bryan, of Nebraska, and Arthur Sewall, of Maine, were placed in nomination for President and Vice-President. The Populist party met in St. Louis, July 22, and nominated W. J. Bryan and Thomas A. Watson, the latter of Georgia, while the silver convention met later in the month and nominated Bryan and Sewall, and in September the sound-money Democrats met in Indianapolis and nominated Palmer and Buckner. Immediately after the action of the Democratic Convention at Chicago a feeling of distrust begun to grow; prices at the Stock Exchange were depressed; gold was drawn from the Treasury for shipment to Europe and to Canada; savings-bank deposits were withdrawn, converted into gold, and the metal was hoarded; commercial failures increased; business and industrial enterprises were paralyzed; capital sought retirement; and the financial situation grew grave. There were periods of recovery from the depression as the canvass progressed, due to a more hopeful feeling regarding the result of the election, but during October fears of the possibility of the success of the Democratic ticket stimulated further hoarding of gold; the demand for the metal caused an advance in the premium of from $\frac{1}{4}$ of 1 to 1 per cent. for spot, and from $1\frac{1}{4}$ to $1\frac{1}{2}$ per cent. for options deliverable in November and December, which premium led to the import of gold from Europe; sterling exchange was largely bought for insurance against loss in case of the election of Bryan and Sewall; money on call gradually grew stringent; loans for fixed periods could not be obtained except at high rates; contracts for goods were made conditional upon the success of Mr. McKinley, and for at least ten days before the election nearly all financial, commercial, and industrial interests were in a state of partial stagnation. The stock market was, however, comparatively strong, owing to speculative manipulation. The election resulted in the success of the Republican national ticket, which received 271 electoral votes against 176 for Bryan and Sewall, and there was an immediate restoration of confidence. Money grew easy; the premium on gold vanished; hoards of gold and of currency were released; capital sought employment; business revived; industrial enterprises were resumed; the net gold in the Treasury increased; the loans, cash, and deposits of the banks were rapidly augmented; and prosperous conditions generally prevailed. The significance of the victory for sound money was shown by the fact that the popular plurality of 725,448 was the largest given at any presidential election since 1872, when Grant's plurality was 762,991: and all the Eastern, the Middle, and Middle Western States, the most populous and the most wealthy sections of the country, gave Mr. McKinley decisive majorities. The victory resulted from a phenomenal uprising of the people, regardless of party ties, who voted for the Republican candidate because he represented the principle of sound money and of good government as opposed to a debased silver currency and revolutionary methods.

Among the important events in Europe more or less influencing the financial situation were the

political tension in London, growing out of the raid by Dr. Jameson upon Johannesburg at the close of 1895. A telegram by the Emperor William of Germany to President Krueger of the Transvaal Republic, congratulating him upon the defeat of the raiders, was regarded in England as indicating that Germany was in entire sympathy with the Government of the republic, and that in the event of possible collision with England Germany would actively intervene. A feeling of resentment quickly spread, and it was intensified by the action of the English Government in placing in commission a naval flying squadron and in recruiting for the army. The excitement soon subsided, however, after explanations had been made by the Emperor William to the Queen, but the tone of the London markets did not immediately recover. In February it was reported that the English Government had decided to submit the Venezuelan boundary question to a commission, but this was not confirmed, though until it was denied the London markets were somewhat favorably influenced. On Nov. 10 arbitration was agreed upon between England and this country. The defeat of the Italians by the Abyssinians at Adua, on March 1, caused great excitement in Italy, leading to the downfall of the ministry. Overtures were then made to the Abyssinian King for peace, and concurrently England arranged an Anglo-Egyptian expedition in the Sudan. This movement was opposed by France, but later that Government yielded consent. On April 28 it was announced that 5 of the Johannesburg committee, who were connected with the Jameson raid, had been condemned to death, and this caused great excitement in England. The Government appealed to President Krueger to commute the sentence, and he consented to banish the condemned men, imposing heavy fines. The tension in Europe regarding the situation in Turkey grew quite severe in July and August, but the powers were not in accord, and therefore no action was taken. After the visit of the Emperor of Russia to England in September the French ambassador to the Porte insisted upon reforms in Armenia, the demand was complied with, and thereafter there was less friction regarding Turkey. The Anglo-Egyptian expedition up the Nile captured Dongola toward the end of September, and on Oct. 26 a treaty of peace between Italy and Abyssinia was signed.

The most important financial event at home was the offering on Jan. 6 for popular subscription of \$100,000,000 United States 4-per-cent. bonds, this course being taken instead of contracting with a syndicate, because of the opposition in the Senate to further private contracts for the sale of bonds. The subscriptions amounted to \$568,000,000 from 4,640 bidders, and the awards were \$66,788,650 at above 110-6877 and \$33,211,350 at that price. The bids were opened Feb. 5, and by the end of the month \$54,669,959.67 had been paid into the Sub-treasury and \$28,500,000 into specially designated depository banks. The bond sale yielded \$111,166,246, and if no gold had been withdrawn by intending purchasers of bonds the net gold would have been increased to \$155,729,739. But gold was withdrawn at frequent intervals during the bond payments, and the amount so taken from the New York Sub-treasury was \$51,434,957.50. The sale of bonds netted \$84,150,207 gold, to the Treasury. The bond issue was ordered for the purpose of replenishing the Treasury net gold, which was \$63,262,269 on Jan. 1, and reduced to \$49,845,508 on Feb. 1. It fell to \$44,563,494 by Feb. 10, some gold having been withdrawn immediately prior to the opening of the bids for the bonds. By the end of February the net gold was increased through payments for

the bonds to \$124,631,141, and by the end of March, when the bulk of the payments had been made, it was \$128,713,700. Then followed a gradual decrease to \$86,631,770 by July 23. Gold had been steadily moving out of the Treasury since the middle of the month, and as the Senate just before adjournment had practically tied the hands of the Administration by passing a resolution opposing the Government policy of issuing bonds for the purpose of restoring the Treasury reserve, it was felt that a resort to another bond issue was impracticable. The leading bank officers of New York had a consultation which resulted in an agreement to turn over to the Treasury from \$20,000,000 to \$25,000,000 gold in exchange for legal tenders. At the same time a syndicate of foreign bankers agreed to assist in checking the export of gold and to control exchange so as eventually to bring about gold imports. Over \$17,000,000 gold was turned into the Treasury by July 25, and exports of the metal ceased. By Aug. 4 the net gold was \$110,782,403, but withdrawals for hoarding and for transfer to Canada reduced it to \$100,957,562 by Sept. 2. Syndicate manipulation of the exchange market resulted in imports of gold from Europe in August. The metal thereafter came in increasing amounts, and as it was very generally deposited in the Treasury the net gold increased to \$125,600,065 by Oct. 6. Then followed depletions through hoarding, and the net fell to \$114,957,109 on Nov. 5, reflecting large withdrawals from the New York Sub-treasury on the day previous to the election. After that event there was a radical change. About \$6,500,000 of assay-office checks, representing imported gold bullion, which had been withheld from presentation, and receipts for imported gold coin deposited at the Subtreasury for examination, were either passed through the Clearing House as currency or cashed with legal tenders at the Treasury, and \$10,800,000 of gold deposited in the various banks was sent to the Clearing-House vaults before the end of November. Some deposits of gold were made at interior Subtreasuries in exchange for legal tenders, and whereas before the election there seemed to be a general desire to get gold, as soon as the result of the election was known holders of the metal were anxious to exchange it for currency. The net gold in the Treasury rose to \$130,407,237 by Nov. 30, and at the end of the year it was \$136,746,473.

The following tabular survey of the economical conditions and results of 1896, contrasted with those of the preceding year, is from the "Commercial and Financial Chronicle":

ECONOMICAL CONDITIONS AND RESULTS.	1895.	1896.
Coin and currency in the United States, Dec. 31.....	\$1,769,409,410	\$1,905,590,736
Bank clearings in the United States.....	\$53,348,081,562	\$51,183,004,954
Business failures.....	\$173,196,000	\$226,096,834
Imports of merchandise (year).....	\$801,626,678	\$680,556,223
Exports of merchandise (year).....	\$824,896,532	\$1,005,878,417
Gross earnings 205 roads (year).....	\$921,182,644	\$924,359,561
Railroad construction, miles.....	1,922	1,750
Wheat raised, bushels.....	467,102,947	412,000,000
Corn raised, bushels.....	2,151,138,880	2,211,000,000
Cotton raised, bales.....	6,500,000	8,500,000
Pig iron produced (tons of 2,240 pounds).....	9,446,308	8,623,127
Steel rails, Bessemer (tons of 2,240 pounds).....	1,159,000	1,100,000
Anthracite coal (tons of 2,240 pounds).....	46,845,761	43,177,485
Petroleum (runs) production, barrels.....	26,284,025	30,406,398
Immigration into the United States (fiscal year).....	343,267	258,538

The price of bar silver in London fluctuated during the year between $31\frac{1}{8}d.$ in March and $29\frac{1}{4}d.$ in October.

The prices of leading staples on or about Jan. 1, 1897, compared with prices at the same date in 1896 and 1895, were as follow:

days, $3\frac{1}{2}$ to 4 per cent. for ninety days to four months, and 4 for longer periods. Large amounts were placed on long sterling at 3 to $3\frac{1}{2}$ per cent. for sixty days, and later loans were made on such collateral at $2\frac{1}{2}$ per cent.

The business in commercial paper was limited in

STAPLES.	1895.	1896.	1897.
Cotton, middling uplands, per pound.....	$5\frac{1}{8}$	$8\frac{5}{8}$	$7\frac{1}{8}$
Standard sheetings, per square yard.....	$5\frac{1}{2}$	6	$5\frac{1}{2}$
Wool, Ohio XX, per pound.....	17 to 18	18 to 19	16
Iron, American pig No. 1, per ton.....	\$9 50 to \$13	\$12 to \$14 50	\$11 to \$13
Steel rails at mills, per ton.....	\$22 75	\$28 00	\$25 to \$28
Wheat, No. 2 red winter, per bushel.....	60 $\frac{1}{2}$	66 $\frac{1}{2}$	90 $\frac{1}{2}$
Corn, Western mixed No. 2, per bushel.....	51 $\frac{1}{2}$	34 $\frac{1}{2}$	29 $\frac{1}{2}$
Pork, mess, per barrel.....	\$12 75 to \$13 25	\$8 75 to \$9 25	\$8 25 to \$8 75

Money.—Money on call loaned at 1 and at 127 per cent. at the Stock Exchange during the year. The market was only moderately active until February, when there was a slight flurry, caused by the fear that, influenced by bond payments, the money rate might be disturbed; but a later modification of the bond circular allayed apprehension, and there was not the least derangement of the market caused by the bond settlements. Normal conditions prevailed until early in August, when the failure of the Diamond Match deal in Chicago and the panicky fall in stocks in the New York market caused an advance in the rate to 15 per cent.; but later there was a fall to $1\frac{1}{2}$, and money was fairly active in September. The withdrawals of currency from the banks gradually increased during October, and toward the end of the month there was little disposition to lend, owing to the uncertainty regarding the result of the presidential election. On the 30th there was an advance in the rate to 127 per cent., and a syndicate of leading banks was promptly formed for the purpose of turning over to the Clearing House Loan Committee \$10,000,000 to be loaned on the Stock Exchange in order to meet the most urgent demands and to avert a crisis. About \$5,000,000 of this bank money was loaned at from 6 to 25 per cent. per annum. On the day previous to the election loans were made at 96 per cent., but the day after election the rate fell to 6, and gradually the market grew easier, the rate falling to 1 per cent. by the last week in November, influenced by a large accumulation of capital at this center which was reflected by the bank statements. The average rate in December to the close of the year was about 2 per cent.

Time money was freely offered in January at 6 per cent. for domestic for five to six months, and 5 to $5\frac{1}{2}$ for foreign for ninety days to four months. Late in February rates were 4 per cent. for thirty to sixty days, $4\frac{1}{2}$ for ninety days, $4\frac{1}{2}$ to 5 for four to five months, and 5 for six to seven months on good stock collateral. There was no change in this branch of the market until after the middle of April, when rates fell to 3 per cent. for thirty to ninety days, $3\frac{1}{2}$ for four to five, and 4 for six to seven months, and these quotations ruled until the end of May, when, in consequence of a light demand, there was a decline to $2\frac{1}{2}$ per cent. for thirty to sixty days, 3 for ninety days to four months, $3\frac{1}{2}$ for five to six, and 4 for seven to eight months. In June rates were $\frac{1}{2}$ of 1 per cent. higher for these periods, but the inquiry was small. The offerings were light in July, but the demand was good, and rates were 5 per cent. for short and $5\frac{1}{2}$ to 6 for long periods. Early in August the quotation was 6 per cent. bid for all periods, but later a commission of from 1 to 2 per cent. in addition to 6 per cent. interest was demanded for negotiating the loan, and these rates remained unchanged until after the election in November, when the offerings grew more liberal, and rates gradually fell to 3 per cent. for thirty to sixty
