January to purchasers of four months' names at 7 to 8 per cent., and the banks were not in the market as buyers, anticipating a bond issue. In February rates were 6 per cent. for the best indorsements and for first-class single names until toward the end, when the quotations were 5 to $5\frac{1}{2}$ per cent. for sixty- to ninety-day bills receivable and $5\frac{1}{2}$ to 6 for four months' acceptances and first-class four to six months' single names. More or less important failures caused close scrutiny of names in March, the banks refrained from buying, and rates were unchanged until early in April, when the quotation was $5\frac{1}{2}$ to 6 per cent. for indorsements and 6 for four months' acceptances and for first-class single names, but toward the close of that month a better demand caused a fall to $4\frac{1}{2}$ to 5 per cent. for indorsements, $4\frac{1}{2}$ to $5\frac{1}{2}$ for acceptances, 5 to $5\frac{1}{2}$ for prime and $5\frac{1}{2}$ to 6 for good four to six months' single names. There was a good inquiry for paper in May, and at the end of the month rates were 4 to $4\frac{1}{2}$ per cent. for indorsements, $4\frac{1}{2}$ to $4\frac{1}{2}$ for acceptances, and $4\frac{1}{2}$ to 5 for first-class single names, and the offerings were moderate. In July the paper market was almost stagnant, and after the middle of the month rates were firm at $5\frac{1}{2}$ to 6 per cent. for indorsements and 6 to 7 for other classes of the best paper. In August the market became very firm, and it so continued until after the election, with the exception of a brief interval in September, and rates generally ruled at 7 to 9 per cent. for indorsements and 9 to 12 for choice single names. In November there was a good demand, and rates fell to 4 to $4\frac{1}{2}$ per cent. for bills receivable, $4\frac{1}{2}$ to 5 for first-class and 5 to 6 for good four to six months' single names. In December the market was dull, and quotations were $3\frac{1}{2}$ to 4 per cent. for indorsements and 4 to $4\frac{1}{2}$ for first-class single names.

Bank conditions were more or less affected during the early part of the year by the settlements for the \$100,000,000 bonds. Then followed some derangement in July caused by the exchange of gold for legal tenders at the Treasury, and during September and October there was disturbance due to the withdrawals of gold and currency for hoarding, and also in response to the demands for money for crop purposes. After the election all the items largely increased by reason of the return of hoarded capital, and during November there was a gain of \$21,638,500 in loans, \$13,834,900 in specie, \$16,740,000 in legal tenders, \$52,696,700 in deposits, and \$16,601,225 in surplus reserve.

The loans of the associated banks fell from \$465,580,700 at the beginning of the year to \$447,142,700 by February. Then there was a gradual rise to \$479,540,900 by July 18, followed by a fall to \$442,179,700, the lowest, Nov. 7, and at the end of the year they were \$487,673,300, the highest. Specie was \$68,954,700 at the beginning of the year, and at the highest—\$77,500,900—Feb. 8. Then, influenced by payments for the Government bonds, there was a fall to \$58,515,300 by March 21, fol-

lowed by a rise to \$62,456,000 by May 29. The lowest of the year was \$46,254,700, Aug. 1, due to the withdrawal of gold for the relief of the Treasury, and thereafter, influenced in part by deposits of imported gold, the movement was upward, and the specie held at the end of the year was \$76,768,000. Legal tenders at the beginning of the year were \$73,728,700, and the amount gradually increased to \$92,727,400 by Aug. 1. Then, influenced by the demand from the interior for currency, there was a reduction to \$60,717,200, Nov. 7. At the end of the year the amount held was \$89,001,200. Deposits at the beginning of the year were \$491,614,900, and they were \$505,991,100, July 18. Gradually they were drawn down to \$438,437,600, the lowest, Nov. 7, and at the end of the year they were at the highest, \$525,837,200. The surplus reserve was at the highest—\$40,182,425—Feb. 8, and at the lowest—\$8,228,550—Sept. 5. At the end of the year it was \$34,309,900. One fact worthy of note is that the loans and deposits of the banks were lower in November than they had been at any time since 1893, loans on Sept. 23 that year being \$392,145,600, and deposits, on Aug. 19, 1893, \$370,302,400.

The condition of the New York Clearing House banks, the rates of interest, exchange and silver, and the prices of United States bonds on Jan. 2, 1897, compared with the same items for the preceding two years are given in the above table.

average condition of winter wheat, reported by the Department of Agriculture on April 1, was only 77½ against 81½ last year, and this low average was ascribed to the fact that the weather at seeding time was dry, thus preventing the grain from germinating and having a good start before the winter. Influenced by the favorable weather the condition improved, and at the beginning of May the percentage of fall-sown wheat was 82½. During that month this crop made good progress, but planting of spring wheat was delayed by excessive rains. In June the weather was again favorable, and the growth of the grain was rapid, indicating an enormous crop, and consequently prices began to decline, and by July wheat sold in the New York market at 62 cents. Then came news of damage to spring wheat, of a short crop on the Continent, and of probably urgent demands from India, where famine was threatened, and the price reacted to \$1.06½ at the end of the year, while corn was also strong. The price of this grain rose in New York from 34½ cents in January, to 41 in April, later declining because of the enormous crop to 29½ cents. September estimates of the yield indicated a smaller crop of spring wheat than in 1895, and a total of 412,000,000 bushels, spring and winter, against 467,000,000 the year before, while the corn crop was estimated at 2,200,000,000 bushels. The demand for wheat for export was so great in September that the trans-

The preceding is the New York Clearing House statement of totals at the beginning of each quarter of 1896 and at the end of the year.

The Crops.—The weather was unfavorable during February and March, and consequently grain-crop prospects were discouraging and speculators took advantage of the fact to advance the price of wheat. But about the middle of April the weather changed to mild springlike temperature, stimulating the development of the fall-sown grain. The

portation routes were taxed to their utmost capacity and there was a scarcity of berth room for the grain at the outports. Wheat was shipped in large quantities from the Pacific coast to India and Australia, and there was a decided increase in the exports of corn to Europe. The rise in the price of wheat was partially checked by stringent money late in October, but the market was firmly held to the close of the year. The cotton crop was large, and it began to be marketed fully three weeks earlier than usual.

moving to Europe quite rapidly. Good prices were maintained, and in September there was an advance to $8\frac{1}{2}$ cents against $7\frac{1}{2}$ at the end of August, the price later falling, by reason of favorable crop advices, to $6\frac{1}{2}$ cents in December. The statistician of the Department of Agriculture reported average farm prices on Dec. 1 as follow: Corn, $21\frac{1}{10}$ cents against $26\frac{4}{10}$ last year; wheat, $72\frac{7}{10}$ against $50\frac{9}{10}$; oats, $40\frac{3}{10}$ against 44; and cotton, $6\frac{9}{10}$ against $7\frac{3}{8}$. Pursuant to the usual custom in this review, the table given at the bottom of preceding page shows the value of the crops on the basis of prices at New York at the beginning of the year.

Stocks.—The stock market was active and generally better during the first four months of the year, and unsettled and lower after May until the election; but the rise following that event was only temporary, and the tone was inclined to be heavy thereafter. The market was more or less disturbed at the beginning of the year by the tension in London caused by the Johannesburg raid, and also by the pending bond issue, the outcome of which was felt to be somewhat uncertain, and, moreover, it was feared that it would result in stringent money. Gradually a more encouraging view prevailed, and the market rose under the lead of the Grangers and Sugar. After the middle of the month more favorable news from London, indicating a relaxation of the political tension, and good buying of stocks by the arbitrage houses and by local traders kept the tone strong to the close of the month, and the greatest improvement was in Sugar. Central New Jersey, the other coal shares, Consolidated Gas, Electric, Illinois Central, Lake Shore, the Grangers, Southern preferred, and Union Pacific. The large popular subscriptions for the Government bonds and a modification of the terms of payment, so that there was less probability of disturbance to the money market, stimulated an improvement in stocks early in February, but subsequently realizing sales by local and arbitrage operators caused more or less important declines. The payment of the first installment on the Government bonds was prompt, and this fact, and also the large increase in the Treasury net gold, encouraged rebuying to cover short contracts after the middle of the month, and the tone was strong until toward the close, when disquieting rumors regarding the financial condition of the Baltimore and Ohio Railroad and the action of Congress in the matter of the Cuban belligerents caused liberal selling, and the market closed generally lower, though, compared with the opening, there was an advance in Sugar, Consolidated Gas, the Grangers, Louisville and Nashville, and Chicago Gas. The appointment of receivers for the Baltimore and Ohio, the beginning of a contest between the American Tobacco Company and the rival manufacturers, and reports that there were large stocks of corn in farmers' hands combined to make the market irregular and generally heavy during the early part of March, but later there was an improvement in the tone and gradually prices advanced and, though irregular and at intervals feverish, the market was generally better at the close, with Tobacco showing the greatest improvement on a report that the differences with the rival manufacturers had been settled, and there was also a sharp rise in General Electric, due to rumors of negotiations with the Westinghouse. The Northern Pacifics were unfavorably influenced by the announcement of the plan of reorganization, which provided for heavy assessments on the stocks. The tendency of the market was generally upward in April, stimulated by good buying of railroad mortgages and of first-class investment properties for domestic and foreign account, by encouraging crop prospects, easy money, and by an improvement in

general trade. Toward the end of the month a feverish fall in Tobacco and in General Electric had a partially disturbing effect. The most important advances during the month were in Sugar, the Grangers, Louisville and Nashville, Missouri Pacific, Lake Shore, and Manhattan. In May the market began to be influenced by preparations for the presidential campaign, and operators were disposed to be cautious. The prominent features were a rise in Bay State Gas on reports of consolidation schemes, a fall in Rubber, due to dissensions in the management, a drop in Tobacco, and a decline in Manhattan, which was affected by competition of surface railway lines, but later this stock recovered on the decision of the Court of Appeals against the constitutionality of the rapid-transit act. After the middle of the month the feeling grew better on assurance that the Republican National Convention would adopt a gold plank in the platform. The trend of the market for the month was shown by sharp declines, compared with the opening, in Tobacco, the Grangers, Chicago Gas, Electric, Manhattan, Missouri Pacific, Reading, the Rubbers, and Tennessee Coal and Iron. In June the market was generally heavy. The trading was small early in the month, but after the second week there was more activity and an improved tone on the nomination of McKinley and Hobart at St. Louis. This was followed by large realizing sales and by some bearish pressure encouraged by reports that the Democratic National Convention at Chicago would advocate free silver coinage, and subsequently engagements of gold for shipment to Germany had a disturbing effect. The market was unsettled and weak at the close, and the most important declines for the month were in Sugar, the other industrials, Bay State Gas, General Electric, Manhattan, Tennessee Coal and Iron, and Western Union.

The dominating factor in the market in July was the action of the Democratic National Convention at Chicago in nominating William J. Bryan on a platform advocating free silver coinage. Early in the month it was felt that the advocates of silver would be in control, but it was then thought unlikely that such radical resolutions would be advocated as were subsequently embodied in the platform. There was some arbitrage buying of stocks during the early part of the month, and this encouraged local purchases, but free selling of Sugar and of Tobacco later made the market irregular, and after the middle of the month shipments of gold to Europe on order, liquidation of speculative accounts in stocks, and the serious illness of Mr. Cornelius Vanderbilt contributed to make the market weak and at intervals panicky. A crisis was narrowly averted on the 20th. Persistent selling based upon the nomination of Mr. Bryan at Chicago, and by the Populists at St. Louis, and also upon large engagements of gold, a strong tone for exchange, and the low Treasury gold reserve, caused sharp declines in the leaders. At this juncture prominent bankers took measures to arrest the outward gold movement, and thereupon the market recovered, and it was generally strong to the close. The important declines for the month were in Sugar, the other industrials, the Atehisons, the Coal shares, General Electric, Manhattan, Louisville and Nashville, Missouri Pacific, Southern preferred, Tennessee Coal and Iron, Pullman, and Western Union. The continued selling of stocks influenced by the growing fear of the election of Mr. Bryan kept the market unsettled early in August, and on the 7th vigorous raiding by the bears, aided by the failure of the Diamond Match deal at Chicago, caused a panicky fall, and in many cases the lowest prices for the year were then recorded. Then came a re-

action due to somewhat less apprehension of the success of Mr. Bryan, and, though irregular, the market was generally better for the remainder of the month, buying being stimulated in the third week by a rapid fall in exchange, by the engagements of gold in Europe for shipment hither, and by Mr. McKinley's letter of acceptance. The stocks showing the greatest declines at the close were Louisville and Nashville, Pullman, Manhattan, the Grangers, and Western Union. Growing confidence in the success of the campaign for sound money, the improvement in the Treasury situation, and the large imports of gold stimulated activity and higher prices in September. The Republican success in Vermont and Maine and the nomination of Palmer and Buckner at Indianapolis were followed by important advances in the market, and the tone was quite strong to the close. The most decided gains for the month were in Sugar, all the other industrials, the Atchisons, the Coal shares, Consolidated Gas, Lake Shore, Louisville and Nashville, Manhattan, Missouri Pacific, the Northern Pacifics, Southern preferred, Tennessee Coal and Iron, Union Pacific, and Western Union. The strong tone continued until about the middle of October, when active money, evidence of hoarding of gold, some feeling of apprehension of the election of Mr. Bryan, and liquidation of speculative accounts made the market irregular and lower, but later there was a recovery on positive assurances from the Republican National Committee of the election of Mr. McKinley, and the tone was strong to the close notwithstanding money on call loaned during the last few days of the month at the highest rates of the year. The most important gains for the month were in Sugar, the Atchisons, the Grangers, Chicago Gas, Louisville and Nashville, Manhattan, Pullman, Reading, Tennessee Coal and Iron, Union Pacific, Leather preferred, and Rubber, while the weakest stock was Tobacco, which was vigorously raided. Immediately after the election there was a sharp rise in the market, during which those who had bought prior to that event sold their stocks and withdrew their support. Prices gradually sagged off, and though there were occasional reactions the tone was generally heavy to the close of November, influenced in part by some fear of action either by the President or by Congress in the matter of the Cuban belligerents. The most important gains, compared with the opening, were in Sugar, Cleveland, Cincinnati, Chicago and St. Louis, Lake Shore, Manhattan, Missouri, Kansas and Texas, Northern Pacific preferred, Pacific Mail, Tennessee Coal and Iron, Rubber, and Consolidated Gas, while the greatest losses were in Bay State Gas, Central New Jersey, Long Island, and Leather preferred. The market was unfavorably influenced in December by liquidation and by some bearish pressure induced by the action of the Senate in the Cuban matter, and on the 18th a radical proposition introduced by Senator Cameron, recognizing the independence of the "Republic" of Cuba, had a disturbing effect, causing a panicky fall in all the leaders. There was a recovery on the following day on the statement by Secretary Olney that the resolution would be regarded simply as an expression of opinion by those who voted for it, and also that in the matter of recognizing an independent state Congress has no power whatever to bind the executive department. Congress adjourned for the holiday recess in the following week, and the Cuban matter ceased to be a disturbing factor, but toward the end of the month the failure of the Illinois National Bank of Chicago, followed by failures of other banks in the West, encouraged the bears to renew their demonstrations, and the market was heavy to the close. The most important declines were in Sugar, Consolidated Gas, Delaware and Hudson, Long Island, Manhat-

tan, Chicago, Burlington and Quincy, Pullman, Tennessee Coal and Iron, and Rubber preferred.

Total sales of stocks at the New York Stock Exchange for 1896 were 54,490,643, against 66,583,232 in 1895; 49,075,032 in 1894; 80,977,839 in 1893; 85,875,092 in 1892; 69,031,689 in 1891; 71,282,885 in 1890; and 72,014,600 in 1889.

The following table shows prices of leading stocks at the beginning of the years 1895, 1896, and 1897:

STOCKS.	1895.	1896.	1897.
New York Central	98	97	93½

* Before payment of assessments.

Foreign Exchange.—The exports of merchandise for the year ending Dec. 31, 1896, were \$181,018,281 above those for 1895, and the imports of domestic and foreign merchandise were \$121,113,114 less. The excess of merchandise exports over imports for the year was \$325,322,184, against \$23,190,789 for 1895. The excess of exports over imports of merchandise, coin, and bullion for 1896 was \$311,332,971, against \$123,599,538 in 1895. Gold imports were \$47,777,097 in excess of the exports in 1896, against \$70,571,010 exports in excess of imports in 1895. The merchandise balance for the year was in excess of that for any previous year in the history of the country, and the merchandise exports were the largest for any calendar year on record.

The foreign exchange market opened strong at \$4.88½ to \$4.89 for sixty-day and \$4.90 to \$4.90½ for sight, and the fluctuations during January were within a narrow range with a downward tendency, the rates closing at \$4.88 to \$4.88½ for long and \$4.89½ to \$4.90 for short. Gold was imported and exported almost simultaneously, the metal being brought out in response to a premium of 1 to 1½ per cent. paid by those who intended to subscribe for the \$100,000,000 Government bonds, and it was shipped as an exchange operation, the amount going forward from New York being \$8,600,000, and the first consignment of imported gold was \$1,030,000. The market opened in February at \$4.88 to \$4.88½ for sixty-day and \$4.89½ to \$4.90 for sight, and the tone was weak to the close, when the rates were \$4.87 to \$4.87½ for long and

\$4.88½ to \$4.89 for short. The success of the Government loan led to some buying of securities for European account, and comparatively high rates for money kept the tone heavy. The premium on gold was from ⅞ to ½ of 1 per cent., and the imports of the metal were \$9,754,476, while the exports were \$1,897,845. In March exchange opened at \$4.87 to \$4.88 for sixty-day and \$4.88½ to \$4.89 for sight, and there was no special change until the 23d, when the tone grew firmer and it closed at \$4.88½ to \$4.89 for long and \$4.89½ to \$4.90 for short. These were the opening rates in April, and there was no change until the 14th, when there was a fall of half a cent followed by a prompt reaction, and the market closed at the opening figures and \$2,200,000 gold was shipped to Germany on order. The market was remarkably steady during May at \$4.88½ to \$4.89 for long and \$4.89½ to \$4.90 for short. It was quite bare of commercial bills and the supply of bankers' drafts came almost wholly from exports of gold. The shipments of the metal were made generally on order, and they amounted to \$19,158,000. The market was again steady in June, opening at \$4.88 to \$4.88½ for long and \$4.89 to \$4.89½ for short, and closing at \$4.88 for the former and \$4.89 for the latter. The supply came chiefly from blocks of securities placed in Europe. Exports of gold were \$6,350,000. The market was weak early in July, rates falling from \$4.88 for long and \$4.89 for short at the opening to \$4.87½ to \$4.88 for the former and \$4.88½ to \$4.89 for the latter by the 6th, but on the 13th there was an upward reaction and the tone was strong until the Bankers' syndicate, formed for the purpose of preventing exports of gold, began operations on the 23d. Then there was a fall, followed by a slight reaction, and the market closed at \$4.88 to \$4.88½ for sixty-day and \$4.89 to \$4.89½ for sight. The exports of gold were \$5,045,000, but none of the metal went forward after the 23d. The market was directly influenced in August by the operations of the Bankers' syndicate, which, in addition to taking effective measures to arrest the outflow of gold, undertook so to manipulate the exchange market as to take advantage of the movement of cotton and breadstuffs later in the season. Bills were judiciously sold early in the month at the ruling rates, which were \$4.88½ for long and \$4.89½ for short, and also at the subsequent advance to \$4.88½ to \$4.89 for the former and \$4.89½ to \$4.90 for the latter, but on the 10th the rates began to fall, influenced by dear money, by an expected early movement of cotton, bills against which were made available, and by improved foreign trade conditions, imports being light and exports, especially of grain, large, and after the middle of the month there was an unsettling decline in rates which kept the market weak to the close, and then rates were \$4.82½ to \$4.84 for sixty-day and \$4.84½ to \$4.85½ for sight. Imports of gold were \$2,235,344, and at the end of the month it was estimated that there were \$17,500,000 in transit. The market was weak during September, influenced by a large movement of cotton and of breadstuffs, the latter in response to an urgent European, Australian, and Indian demand. The Bank of England rate of discount was advanced from 2 to 3 per cent., thus widening the difference between long and short bills. The market opened at \$4.82½ to \$4.84 for long and \$4.85 to \$4.85½ for short, and there was no material change until the 14th, when there came a fall to \$4.82 to \$4.83 for the former and \$4.84½ to \$4.85 for the latter, and these were the rates to the close. Imports of gold were \$33,136,694, and the amount in transit at the end of the month was estimated at \$10,000,000. Early in October there was a premium of ½ to ¼ of 1 per cent. on gold, induced by a

desire to procure the metal for hoarding through fear of the possible election of Mr. Bryan. Gradually the premium rose, and then foreign bankers imported gold for sale, in almost every instance disposing of it to arrive, and the movement was not checked by a rise in the Bank of England rate to 4 per cent. At the same time rates for exchange were weak, influenced by offerings of commercial bills against cotton, by loan drafts, and by active money. The market opened at \$4.83 to \$4.83½ for long and \$4.85 to \$4.86 for short, and it gradually fell to \$4.80½ to \$4.82 for the former and \$4.84 to \$4.84½ for the latter, the lowest since August, 1893. Subsequently there was a reaction due to a check to the outward movement of wheat and cotton by the high prices, and though money was very active it had no effect upon the tone. The market closed at \$4.82 to \$4.82½ for sixty-day and \$4.85½ for sight with a good demand for investment, and also to insure against possible loss resulting from the election of Mr. Bryan as the feature. Imports of gold for the month were \$29,307,150. In November the market opened at \$4.82½ for long and \$4.86 for short. The day following the election there was a sharp fall to \$4.81½ for the former and \$4.84½ for the latter, due to the offerings of some of the bills which had been bought for insurance against loss, but before the close of the day there was a reaction, and thereafter for the remainder of the month there was a good demand for long sterling for investment to hold until it ran to short for the purpose of making interest, rates for money being low here and discounts high in London. As the market rose more of the bills which had been bought previous to the election were sold, but these were promptly absorbed and early in the month there was an inquiry to remit for securities sold for European account, including \$4,000,000 of Government 4-per-cent. bonds. The market closed at \$4.84 to \$4.84½ for sixty-day and \$4.87 to \$4.88 for sight. Gold imports were \$9,132,000, including \$4,310,000 at San Francisco from Sydney, New South Wales, and from Australia. In December the market opened at \$4.84 to \$4.84½ for sixty-day and \$4.87½ to \$4.88 for sight, and the tone was heavy until the 18th, when it grew firmer at \$4.85 for long and \$4.88½ for short in consequence of a demand for remittance and also for investment, and there was some expectation that gold would be sent to Germany via London, but soon after the tone became easier and the market closed at \$4.84 to \$4.84½ for long and \$4.87 to \$4.87½ for short. The foreign trade continued to show a large balance in favor of this country, and the comparatively high rates for exchange were chiefly due to dear discount rates for money in London and low rates here.

Manufacturing Industries.—All branches of manufacturing were more or less depressed during the year, reflecting the check to business caused by the agitation of the Cuban question in Congress in the first quarter and the anxiety regarding the outcome of the presidential election and the stability of the monetary standard in the ensuing six months, and it was not until the result of the election was announced that there was any decided revival. Then mills started up all over the country, manufacturing establishments which had been employing a limited number of people increased their working force, and the era of prosperity which was promised by the Republicans during the presidential campaign seemed to be dawning. But the revival was soon checked by speculation concerning the proposed changes in the tariff, consumption did not keep pace with production, and at the end of the year the markets were glutted, and one feature was an immense overproduction of print cloths at Eastern mills, the stocks increasing from 200,000

pieces in September to 2,198,000 at the close of the year. The iron trade was also greatly depressed, and the output declined to 180,532 tons per week by July 1 and to 112,782 tons by Oct. 1, or at the rate of about 5,000,000 tons per year. After the election there was a little better feeling, and at the end of the year the output was 163,576 tons per week, though without any real improvement in the trade. Toward the close of December the steel-rail pool made a reduction of \$3 per ton in the price, unsettling pig and manufactured iron. The copper trade was active during the year, and the situation was quite encouraging at the close. Exports were 125,913 tons of fine copper; home consumption, 77,296; and the production was 203,209 tons. Exports of manufactured goods were large during the year, chiefly refined mineral oil, copper ingots, agricul-

September; and the St. Joseph and Grand Island in December. The reorganization plan of the Northern Pacific was submitted in March. A rate war broke out in July between the Southern and the Seaboard Air Line Railways, which continued until September, and in November the last-named line passed under new control. In December a Kansas State court appointed receivers for the Atchison on the ground of a technical violation of the alien land law, but later the receivership was vacated. The foreclosure suit of the New York and Northern was reopened by the Court of Appeals in October. The Southern Railway Company declared the first dividend on the preferred stock in December.

The following shows gross and net earnings of the trunk lines:

tural implements, colored and uncolored cotton cloth, builders' hardware, sewing machines, bicycles, typewriting machines, and manufactures of wood. The collapse of the speculative deal in the Diamond Match and New York Biscuit Companies in July somewhat disturbed these industries during the summer, and the former suffered by the competition of the Continental Match Company. The American Tobacco Company was engaged for the greater part of the year in a contest with the Western manufacturers. In December it was announced that Arbuckle & Co. had decided to engage in the refining of sugar, whereupon the American Sugar-Refining Company bought a controlling interest in the Woolson Spice Packing Company, of Toledo, intending to compete with Arbuckle & Co. in their coffee business. A classification of the failures for the year shows that there were 3,418 suspensions of manufacturing establishments, involving \$98,463,851, against 2,635 suspensions in 1895, involving \$73,920,073; banking failures numbered 198, involving \$50,718,915, against 132 in 1895, involving \$20,710,210. The total of all failures for the year was 15,088, involving \$226,096,834, against 13,197 in 1895, involving \$173,196,060.

Railroads.—Among the important railroad events of the year was the dismissal in May, by Judge Wheeler of the United States circuit court, of the Government bill and the denial of the injunction asked for against the roads forming the Joint Traffic Association, which organization, since the beginning of the year, had been a powerful factor in the maintenance of rates. The principal receiverships during the year were the Baltimore and Ohio at the close of February; the Central Vermont in March; the Detroit, Lansing and Northern in April, and the Louisville, New Albany and Chicago in August. The principal sales at foreclosure were the Omaha and St. Louis in January; the New York, Pennsylvania and Ohio in February; the Louisville, St. Louis and Texas and the Green Bay, Winona and St. Paul in May; the Cedar Falls and Minnesota and the St. Louis and San Francisco in June; the Northern Pacific and the Oregon Railway and Navigation in July; the Norfolk and Western and the Philadelphia and Reading in

FINE ARTS IN 1896. Under this title are treated the principal art events of the year ending with December, 1896, including especially the great exhibitions in Europe and the United States, the sales and acquisitions of works of art, and the erection of public statues and monuments.

Paris: Salon of the Champs Elysées.—The exhibition of the Société des Artistes Français, in the Palais de l'Industrie (May 1 to June 30), comprised 4,879 numbers, classified as follow: Paintings, 2,093; cartoons, water colors, pastels, miniatures, enamels, porcelain pictures, etc., 1,073; sculptures, 756; engraving on medals and precious stones, 58; decorative art, 168; architecture, 246; engraving and lithography, 505.

Honorary awards in 1896: Section of Painting: The medal of honor was awarded to Benjamin-Constant for his "Portrait de mon fils André," bought by the Government. No first-class medal was awarded. Second-class medals: Lionel Royer, Charles Amable Lenoir, John Henry Lorimer, Jules Boquet, Louis de Schryver, Charles Duvent, Thomas Cooper Gotch, Jean Alfred Marioton, Gustave Popelin, Henri Cain, Paul Chabas, Mme. Daniel Lesueur, Henri Biva, Charles H. M. Franzini d'Issoncourt, Marie Augustin Zwiller. Third-class medals: P. Melton Fisher, Albert Gosselin, Mlle. Jenny Fontaine, Edmond Debon, G. Harcourt, Ernest Gaston Marché, Evert Pieters, Maurice Levis, Léon Fauret, Mme. Marthe Abram, Mlle. Madeleine Carpentier, François Charles Cachoud, Maurice Réalier-Dumas, Louis Maurice Pierrey, Paul Albert Steek, Émile Louis Thivier, Arthur S. Cope, Paul Édouard Mérite, Henri Perrault, William Didier-Pouget, Henri Guinier, Mlle. Noémie Schmitt, Edouard Paupion, Georges Marie Julien Girardot, César Patein, Numa Gillet, Maurice Dainville, Mlle. Mattie Dubé, Mlle. Laura le Roux, Henri J. F. Bellery-Desfontaines.

Section of Sculpture: Medal of honor awarded to Gustave Michel for "La Pensée" (marble statue) and "L'Aveugle et le Paralytique" (group in stone). First-class medals: Paul Gasq, "Héro et Léandre" (marble bas-relief) and "Médée" (marble statue); Jean Marie Mengue, "Cain et Abel" (marble group). Second-class medals: Corneille Henri Theunissen, "La Défense de Saint-Quentin"

(bronze group); Hippolyte Lefebvre, "Le Pardon" (marble statue) and "La Douleur" (plaster relief); Emmanuel Fontaine, "Fascination" (marble group); Jean Marie Boucher, "Un Soir" (plaster group); Henri Greber, "Le Coup de Grison" (marble statue); Jules Derebœuf, "Daphné changée en Laurier" (plaster statue). Third-class medals: Aimé Jérémie Octobre, Victor Segoffin, Charles Louis Picard, Jean Baptiste Champel, Sylvain Salieres, Hippolyte P. H. Roussel, Luca Madrassi, Louis Gaetan Veber, Mlle. Jeanne Itasse.

Section of architecture: Medal of honor awarded to Seclier de Gisors for his plans for the "Dépôt central du matériel des Postes et Telegraphes" and for "Monument à l'Amiral Coligny." No first-class medal awarded. Second-class medals: Louis Marie Henri Sortais, Boutron et Schoellkopf, Louis Guillaume Delaunay, Louis Joseph Ypermann, Paul Dusart, Paul Hippolyte Bouscay, Dupont et Guilbert. Third-class medals: Émile Bertone, Jules Léon Chiffot, Adrien Rey, Eugène Bourdon.

Section of engraving in medals and precious stones: First-class medal: Alfred Borrel. Second-class medals: Paul Charles Galbrunner, Charles Philippe G. A. Pillet.

Section of engraving and lithography: Medal of honor, Henri Lefort, "Le Miracle de Saint-Marc" (etching), after Tintoretto. First-class medal: Antoine Dezarrois (steel). Second-class medals: Georges Auguste Thévenin (wood), Albert L. P. E. A. Duvivier (etching), Ludovic Alleaume (lithograph), Jean Emile Buland (steel). Third-class medals: Henri Eugène Bourmand (wood), Lucien Dautrey (etching), Joseph Sornbier (lithograph), Arthur Mayeur (steel), Camille Fonce (etching), Alfred Jean Marie Broquelet (lithograph), Adolphe Crauk (steel), Léon Saullès (etching), Georges Sauvage (lithograph).

Section of decorative art: Second-class medals: René Lalique, Auguste Ledru. Third-class medals: Jean Louis Brémond, Gustave Guerehet, Robert Carrier-Belleuse.

Among the canvases which attracted most attention was a superb allegorical composition by Fernand Pelez, entitled "L'Humanité," representing the phases of human history in the lottery of life. In the middle are those who enjoy life, honestly or otherwise, the two classes looking at each other with mutual disdain. On the left are workmen without work, old men without bread, and babes without milk, and on the right is Revolt, wan and somber and seeming to be meditating crime, while in the background is seen Christ shrouded in mist and stretching out his nail-pierced hands over all.

Rochegeois exhibited a canvas entitled "Angoisse Humaine," illustrative of a somewhat similar idea, but far from making the same impression. A throng of sufferers of all conditions, in coats and blouses, gloved hands and naked hands, white cravats and no cravats, raise their arms in despair toward celestial figures in the upper part of the picture.

Julian Story's "Le Laboratoire à Saint-Lazare" is a scene evidently painted in all its details from life. The shiver which passes over the face and figure of a young woman whom a doctor is inoculating is cleverly and faithfully depicted. The sickly daylight of morning which touches the walls with a mysterious illumination produces a powerful effect.

A large canvas illustrative of the horrors of war is "Les Bouches Inutiles" of François Tattegrain, which, notwithstanding its loathsome details, attracted much enmity. The scene is at the siege of Château-Gaillard by Philippe Auguste in 1203, when the besieged expelled the old men, women, and children, whose "useless mouths" were an in-

cumbrance without adding to the means of defense. Driven back by the besiegers as a proper means of bringing the town to reason, the poor wretches are gathered, about a hundred of them, lame, halt, and blind, in the fosse of the town, where they are forced to dig out of the snow roots, dead dogs, and corpses, to eke out their existence. It is a very realistic but unpleasant picture.

"Un Brave," by Henry Bacon, of Boston, represents a sailor with his arm in a sling, who has come home with high reputation from an oversea fight. He is seated in a pew in the church of his native place, and causes an evident commotion among the young women behind him.

There were more American exhibits this year than usual. From many offered, canvases were accepted from the following: Aaron Altmann, San Francisco; Henry Bacon, Boston; William Baird, Chicago; Ellen Kendall Baker, New York; Milton Bancroft, Boston; Wilson Nesbitt Benson, Arkansas; Henry S. Bisbing, Philadelphia; William Blair Bruce, Hamilton, Canada; Ernest L. Blumenschein, Pittsburg; Frank M. Boggs, New York; Dwight Frederic Boyden, Boston; Frederic Arthur Bridgman, Alabama; Thomas R. Congdon, New York; Edwin D. Connell, New York; Louis Paul Dessar, Indianapolis; M. T. Dickson, St. Louis; Henry Patrick Dillon, California; William Leitch Dodge, Richmond; Mrs. Mattie Dubé, Canada; Frank Vincent Du Mond, Rochester; Benjamin Eggleston, New York; James Wall Finn, New York; John H. Fry, United States; Elizabeth Jane Gardner, New Hampshire; Mary Shepherd Greene, New York; Joseph Greenebaum, San Francisco; Anne Lawrence Gregory, New York; Peter Alfred Gross, Allentown; John McClure Hamilton, Philadelphia; Hermann Hartwich, New York; Miss Daisy Haven, New York; Miss Eudora Hereford, Covington; Howard Logan Hildebrand, United States; George Inness, United States; Miss Anna Elizabeth Klumpke, San Francisco; Daniel Ridgway Knight, Philadelphia; Henry L. Levy, New York; Louis Loeb, Cleveland; William H. McEntee, United States; Miss Bertha Menzler, Chicago; Humphrey Moore, New York; Mrs. Willie Betty Newman, Cincinnati; William Norton, Boston; Ralph C. Ott, St. Louis; Jules Pagès, San Francisco; Charles Sprague Pearce, Boston; Charles Hovey Pepper, New York; G. A. Reid, Toronto, Canada; Frank Henry Richardson, Boston; Orville Hoyt Root, United States; Miss Hannah Rusk, Canada; Frank Edwin Scott, New York; J. Henry Sharp, United States; John Smith-Lewis, Philadelphia; Miss Elizabeth Stevens, Portland; William Wright Stewart, Philadelphia; Frederick L. Stoddard, St. Louis; Julian Story, United States; Miss Elsie Stuart-Dodge, Boston; Mrs. Austa Sturdevant, Meadville; Henry O. Tanner, United States; Charles Jacques Theriat, New York; S. Seymour Thomas, United States; Henry Stanley Todd, St. Louis; Ernest Percival Tudor-Hart, Montreal; Simon Harmon Vedder, New York; William Francis Warden, New York; Edwin Lord Weeks, Boston; Mrs. Cecilia E. Wentworth, New York; Charles Lennox Wright, Boston.

Paris: Salon of the Champ de Mars.—The seventh annual exhibition of the Société Nationale des Beaux Arts (April 25 to June 30) comprised 2,283 numbers, classified as follow: Paintings, 1,265; designs, etc., 392; sculpture, 151; engraving, 137; art objects, 277; architecture, 61.

The officers are: President, Puvis de Chavannes. Vice-Presidents: Section of Painting, Carolus-Duran; Sculpture, Rodin; Engraving, Walter; Art Objects, Cazin. Secretaries, René Billotte, Jean Bérard. The society consists of: Honorary members, 19; societaries, 205; associates, 170.

One of the strongest and most studied pictures of the year, and the one which attracted most attention, is "La Cène" by Dagnan-Bouveret. The artist has endeavored in this to free himself from the customary treatment of the Last Supper, followed by nearly all the painters from the twelfth century, when the Monk Denis, of Mount Athos, established the rules of its composition, down to the fifteenth century, when Fra Angelico varied it by representing the joys of the communion rather than the dismay of the apostles at the approaching betrayal of their Master. Dagnan-Bouveret, in like manner, has painted the mystic banquet, the institution of the eucharist. Christ, standing among his disciples, raises in his right hand the cup of the new covenant, in the transparent glass of which the blood-red hue of the wine is enhanced by greenish tones around it, and rests his left hand upon the bread, which is not yet broken. John, his head resting on his hands and his elbow placed on the shoulder of the disciple next to him, gazes eagerly and tenderly into the face of the Master. On the left of Christ is seated Judas, the only one of the company who does not dare to lift his eyes. Though a work of undoubted merit, this picture has too much of a stage effect. The disciples are not the poor fishermen of Gennesaret, but poets and philosophers, all posed as if they were conscious of being looked at.

Puis de Chavannes exhibited five additional decorative panels belonging to the series painted by him for the walls of the Boston Public Library. They are entitled: "Virgile (poesie bucolique)"; "Eschyle (poesie dramatique: Eschyle et les Océanides)"; "Homère couronné par l' 'Iliade' et l' 'Odyssee'"; "L'Histoire (L'Histoire évoque le Passé)"; "L'Astronomie (les bergers Chaldéens observent la marche des Planètes)." Three others of this series were exhibited later in the season at the galleries of Durand-Ruel. They are entitled: "La Philosophie," "La Chimie," and "L'Electricité."

Carolus-Duran was represented by a dozen exhibits, of which eight were portraits in his usual style. A sketch entitled "Souvenir du Siège de Paris," showing a mass of dead bodies heaped together in confusion, attracted much attention for its masterly details. Two Venetian sketches, "Un Coin de Saint-Mare" and "Crépuscule du Matin," were also noteworthy.

John S. Sargent, the pupil of Carolus-Duran, contributed a portrait of W. Graham Robertson, which was among the best, if not the best, of the exhibition.

Humphrey Johnston, another American, exhibited four pictures, of which the "Portrait de ma Mère" won high commendation.

Cecilia Beaux, of Philadelphia, an associate of our National Academy, was represented by six pictures which fully justified her reputation at home. No portrait by any other woman in the exhibition could compare with her striking "Portrait du Dr. Grier." Her other pictures were "Ernesta," "Une Dame de Connecticut," "Sita et Sarita," "Réverie," and "Cynthia."

Gervex exhibited a decorative landscape for the Salle de Physique in the Sorbonne, representing a large panorama of a valley, over which a sort of portico opens, a masterly work with happy effects of perspective.

Roll sent, among other exhibits, an unfinished portrait of Alexandre Dumas, in a dressing-gown, which represents the man as he was, but which, report says, was displeasing to the author, who refused to sit any longer, asserting that an academician should not be introduced to the public in such deshabille. The "Femme qui dort," by the same artist, is a wonderful picture with flesh tints marked by pearly reflections.

Paris: Miscellaneous.—A statue representing Greece crowning Lord Byron, the work of the French sculptors Chapu and Falguière, was unveiled at Athens on March 1, in presence of the King and royal family and a notable gathering.

The sale of the remaining pictures of the late Alexandre Dumas (the best of his collection was sold in 1892), in March, brought in the aggregate 384,860 francs. Among the best prices obtained were the following: Corot, "Solitude," 11,000 francs; Fromentin, "Centaures et Centaureses," 10,600; Jules Lefebvre, "Femme nue," 13,500; Troyon, "Le Pâturage," 7,900; Vollon, "Le Dessert," 12,500; Meissonier, "L'Affaire Clemenceau" (aquarelle), 9,100. The remarkable volume "L'Affaire Clemenceau," illustrated on the margins with 160 water-color and pen-and-ink designs and 16 full-page illustrations, by the most celebrated contemporary artists, was sold for 23,000 francs.

At a sale in Paris in May Delacroix's "Education of Achilles" sold for 28,500 francs and Meissonier's "Dragon de l'Armée d'Espagne" for 20,000 francs.

The collection of the late M. Lefebvre, of Roubaix sold in Paris May 4, realized 321,180 francs. Best prices: Corot, "Ronde de Nymphes," 29,100 francs, and "En Picardie," 13,100; Delacroix, "Fantasia Arabe," 10,100; Diaz, "L'Abandonnée," 19,000, and "Forêt de Fontainebleau," 10,000; Eugène Isabey, "Cour de Château," 10,400; Théodore Rousseau, "Paysage en Picardie," 17,000, and "Marais dans une Plaine Boisée," 20,100.

At the sale of the collection of M. D. de G—, in Paris in June, the pictures brought 367,260 francs. Among the highest prices were: Meissonier, "Le Liseur," 31,000; Troyon, "La Mare aux Canards," 25,000; Benjamin Vautier, "Le Départ des Mariés," 29,900; Vibert, "Le Départ des Mariés (Espagne)," 20,000.

The statue of Jeanne d'Arc, by Paul Dubois, exhibited at the Salon of 1895, was unveiled at Rheims on July 15. M. Dubois has been made grand cross of the Legion of Honor.

A noteworthy monument to Jules Ferry, by Antonin Mercié, was inaugurated at Saint-Dié (Vosges) on July 26. A statue of M. Ferry, with his hands clasped behind him, stands on a pedestal elevated on several steps, at the base of which is Liberty, with a flag in her hand, shielding two other figures. The monument is peculiar in being wholly of bronze—pedestal, steps, and figures.

An equestrian bronze statue of Gen. Faidherbe, by Antonin Mercié, was unveiled at Lille on Oct. 25. The general, in full uniform, mounted upon an Arab horse, is saluting with his sword. At the foot of the pedestal of red granite are female figures, on one side the city of Lille dictating to History, on the other the North offering laurels.

London: Royal Academy.—The year was an eventful one in the history of the Academy, having been marked by the decease of two presidents and the election of a third one. Lord Leighton, who was raised to the peerage when on his deathbed, was succeeded in the presidency by Sir John Everett Millais, who, elected on Feb. 20, died in the following August. In November, Edward J. Poynter, director of the National Gallery, was elected to succeed Millais, the other candidates being Briton-Rivière, Dicksee, Orchardson, and Val Prinsep.

Elections of members: Solomon J. Solomon and Edwin A. Abbey, Associates; Adolph Menzel and Paul Dubois, Honorary Foreign Academicians; George H. Boughton, Academician.

The twenty-seventh annual winter exhibition, which closed on March 14, comprised, besides the usual old masters, two novel sections, the first devoted to pictures by deceased French painters, the

second to objects of the goldsmith's art. Corot was represented by his "Avignon," "Rome," and "Vue de Ville d'Avray"; Millet by "Les Scieurs de Long" and "Rêverie"; Meissonier by "Bravi" and "Polichinelle"; Daubigny by "Clair de Lune"; and, among the older masters, Delacroix by "Portrait de Paganini" and "Execution de Marino Faliero"; and Watteau by "Le Bal sous la Colonnade." The best of the British artists, Reynolds, Lawrence, Gainsborough, etc., were well represented.

The one hundred and twenty-eighth summer exhibition was scarcely up to the standard of some of the late ones, as it contained few good subject pictures and many crude portraits. By the Royal Academy's law that but one work by a deceased member shall be admitted to the exhibition immediately following his death, the late Lord Leighton was represented only by his "Clytie," a work which was left on his easel nearly finished. It represents a life-size figure, in an olive-colored dress, kneeling with outstretched arms before an altar raised upon a lofty platform, her head thrown back in passionate adoration, hailing the uprising of Phoebus Apollo. Her auburn tresses have broken from their fillet and roll in masses upon her shoulders. The altar is laden with pomegranates, grapes, and other fruit. The dawn fills the atmosphere and, firing the east with golden pomp, rolls away masses of white vapor that impart a striking character to the scene.

"A Forerunner" is the title of the principal contribution of Sir John E. Millais, Lord Leighton's successor. It represents the tall, worn figure of a young man of the earliest Christian epoch, standing in a gloomy landscape before a stone altar on which lies a knife, in the act of binding a cross-piece near the head of a tall reed so as to form a cross, on which he looks with passionate interest. The sentiment is intensified by a lurid twilight, which glows upon the horizon and lights by its reflections the attenuated figure.

Mr. Poynter, the new president, was represented by only two small canvases, the more important one illustrating the twelfth ode of the third book of Horace. The fair Neobule sits in a chamber lined with colored marbles, brooding in an angry mood, her embroidery lying neglected at her feet, and pouting because she is not allowed to go where Hebrus is to be seen swimming, riding, or running victoriously. The second picture, "An Oread," is a half-length, nearly half life-size figure running, with the locks of her dark hair tossed about her beautiful face, in a wild mountainous landscape, while a storm gathers overhead.

Alma-Tadema's "The Coliseum" represents three classically draped maidens in a marble balcony of the Baths of Titus watching the crowds pouring out of the Coliseum below. One of the ladies is in a warm white robe, another in pale grayish blue, and all are exquisitely harmonized with the marble and contrasted with the delicate rose of a child's dress in the center. The subject, a larger one than the artist usually handles, is broadly treated and yet with his customary skill in details.

J. W. Waterhouse's "Pandora" gives a nearly life-size whole-length figure of the maiden who brought all evil into the world, kneeling before a gray altarlike rock in a wood of ilex and pines before the golden casket. A still, green pool near her feet is overflowing by a tiny cascade to a lower rocky bed. Pandora has cautiously lifted the lid, and the slowly curling smoke that issues from it takes a dragon's shape before it drifts away into the shadows of the wood.

London: New Gallery.—The winter exhibition, which closed on April 8, was devoted to a collection

illustrative of Spanish art, including, besides pictures, tapestries, embroideries, laces, jewelry, *faiences*, etc. About half the paintings shown were attributed to Velasquez and Murillo, but there were also good examples of Zurbaran, Ribera, and Alonso Cano, and among the more modern ones Fortuny, and Madrazo.

To the summer exhibition Sir Edward Burne-Jones contributed two pictures: "Aurora," a single, full-length, nearly life-size figure of a damsel clad in a bronze-green robe, shot with red and tinged with rosy light by the coming day, which reveals her walking lightly across a bridge spanning a stream in a village and clashing cymbals as she goes. A larger picture is "The Dream of Lancelot," representing the knight, who, exhausted by his long quest for the Chapel of the San Grael, has sunk to sleep before the entrance, a small half-ruined shrine in the heart of a wood. It is somber and melancholy in color and sentiment, but dramatic in treatment.

G. F. Watts sent his "Earth," a ruddy, vigorous figure, holding an armful of fruits, and "Time, Death, and Judgment." Alma-Tadema exhibited a portrait group of himself, wife, sister-in-law, and others, in half-length figures, gathered around an easel, and Mrs. Alma-Tadema "The Ring," showing two lovers in a window seat.

London: Grafton Galleries.—The winter exhibition was devoted to a loan collection of the Dutch and the Barbizon schools. Of the former were 17 canvases by Joseph Israels, which were given a room by themselves, and examples of James Maris, Mauve, van Marcke, and others. The Barbizon pictures included 67 by Corot, 40 by Millet, 33 by Daubigny, 30 by Diaz, and examples by Jules Dupré, Troyon, Charles Jacque, Théodore Rousseau, Georges Michel, Courbet, and others. There were also 200 original black-and-white drawings by Paul Renouard, John Charlton, W. Small, and Florian.

London: Miscellaneous.—The most important picture sale of the year was that of the collection of Sir Julian Goldsmid, Bart., which realized in all £67,342. Seventeen pictures brought more than 1,400 guineas each, a goodly proportion of the twenty-eight canvases that reached that amount in the sales of the year. The highest price attained was 7,500 guineas for the well-known portrait of "The Hon. Mary Moneton," by Sir Joshua Reynolds, the same price which it brought in 1894. Other Reynolds portraits were: "Barbara, Countess of Coventry," 3,800 guineas; "Charles Manners, Fourth Duke of Rutland," 1,400 guineas; and "Mr. Mathew," 4,000 guineas. The last sold in the Wynn-Ellis sale in 1876 for 900 guineas, and in the Duchess of Montrose's collection, 1894, for 4,400 guineas. Gainsborough pictures were: "Dorothea Lady Eden," 5,000 guineas; "Mr. and Mrs. Dehany and Daughter," 2,100; "A Grand Landscape," 3,100. Roinney: "Lady Urris Shore," 2,000; "Miss Harriet Shore," 2,750; "Mrs. Oliver," 3,100. Turner: "Rockets and Blue Lights," 3,700; "Sea Piece," 2,050. Sir W. Beechey, "Catherine Duchess of York," 1,400. Clarkson Stanfield, "A Guardia Costa," 3,200. Constable: "Embarkation of George IV at Whitehall on the Opening of Waterloo Bridge," sketch for the finished picture, 2,000. Sir John Millais, "Little Speedwell's Darling Blue," 1,400. Alma-Tadema, "Expectations," 1,950.

The highest price paid for a single picture in 1896 was given by Mr. Charles Wertheimer for Romney's well-known "Caroline Viscountess Clifden and Lady Elizabeth Spencer," which fell to him, after a spirited competition, for 10,500 guineas. The same gentleman was the buyer also, at private sale, for a similar large sum, of Rem-

brandt's famous "Standard Bearer," at Warwick Castle.

At the sale of the pictures and effects of the late Lord Leighton, in July, four fine Corots, "The Four Seasons," panels painted by the artist for the walls of his friend Decamps's dining room at Barbizon, were sold for 6,000 guineas. Alma-Tadema's "Corner of the Studio" brought 1,800, and Sir J. E. Millais's "Shelling Peas" 710 guineas. The prices obtained for the late president's own works were disappointing.

At the Haskett-Smith sale "The Cherry Sellers," by Morland, brought 1,000 guineas. At the sale of Viscount Eversley's pictures Hoppner's "Emma Whitbread" fetched 1,800 guineas, and Gainsborough's "Samuel Whitbread" 1,750 guineas. Among the Thomson-Bonar family pictures, Romney's "Mrs. Anne Bonar" fetched 1,500 guineas. In the Angerstein collection, Lawrence's "Mrs. Amelia Angerstein" sold for 2,150 and Reynolds's "Mrs. Angerstein" for 1,150 guineas. At the Arthur Seymour sale Romney's "Maria and Catherine Thurlow" sold at 2,550 guineas. As a contrast to these high prices, Fuseli's "Deluge," a canvas 10 by 7 feet, was knocked down for one guinea.

New York: National Academy of Design.—The officers of the year are: President, Thomas W. Wood; Vice-President, James H. Hart; Corresponding Secretary, E. Wood Perry; Recording Secretary, Geo. H. Smillie; Treasurer, James D. Smillie. The Academy consists of 90 academicians and 51 associates. Among the latter are 3 women, Miss Cecilia Beaux, Miss Fidelia Bridges, and Mrs. Henry A. Loop.

The seventy-first annual exhibition (March 30 to May 16) contained 408 numbers. The annual prizes were awarded as follows: The Thomas B. Clarke prize for the best American figure composition (\$300), to Henry Mosler's "Helping Grandpa," representing an old man and a boy mowing; the Norman W. Dodge prize for the best picture painted by a woman (\$300), to Miss Ida Waugh for her "Portrait of Dr. Paul Sartain"; first Julius Hallgarten prize for the best picture in oils by a citizen under thirty-five years of age (\$300), to Mrs. Hazleton, of Boston, for her "In a Studio"; second Julius Hallgarten prize (\$200), to J. H. Hatfield, of Canton Junction, Mass., for his "After the Bath"; third Julius Hallgarten prize (\$100) to Miss Louise Cox for her "Pomona."

Among the noteworthy figure pieces in the exhibition were Henry Mosler's "A Ghost Story," a group of Breton peasants gathered around an open kitchen fireplace listening to a narrator who has apparently just reached the thrilling part of his tale; Childe Hassam's "Summer," a large canvas of young women enjoying themselves in a garden nook surrounded by houses; F. S. Church's "St. Cecilia"; F. D. Millet's "An Overture"; Louis Paul Dessar's "Louise"; and F. H. Lungren's "The Snake Dance," the last a remarkable life-size illustration of a strange religious rite of the Moqui Indians of Arizona. Another large painting was the late Thomas Hovenden's unfinished "Founders of a State," representing pioneers resting in a grassy valley on their way to new homes in the West.

The fifteenth annual autumn exhibition (Nov. 23 to Dec. 19), though not a large one, was up to the usual standard. Carroll Beckwith was represented by an interesting portrait of Miss Polly Ogden, and F. A. Bridgman by two Algerian studies. A good picture of the civil war, by Hugh Witter Ditzler, represented soldiers playing cards on a drumhead while a comrade revives the smoldering camp fire.

New York: Society of American Artists.—The eighteenth annual exhibition (March 28 to May 2) was held as usual in the Fine Arts Galleries.

The Shaw Fund prize (\$1,500) was awarded to Frank W. Benson for his "Summer," a charming damsel in thin fluttering draperies advancing in a bright-green meadow, and the Webb prize (\$300) to W. L. Metcalf for his "Gloucester Harbor" seen from a height above the town. Among the best figure pieces were Will H. Low's "Little God Pan," a nude boy piping by a still stream with the sunlight falling through thick foliage; Childe Hassam's "Girl in a Green Gown," ensconced in a sunny corner among rocks; Robert Reid's "Autumn," a barefooted and bareheaded country girl, laden with goldenrod and asters against a sunlit background; Robert Van Voorst Sewell's large decorative composition "The Groves of Persephone"; and Humphrey Johnston's "Le Domino Rose," a lady in a crimson gown with red ribbons in her auburn hair, which won the Temple gold medal at the exhibition of the Pennsylvania Academy of Fine Arts. Noteworthy landscapes were Twaechtman's "Grand Cañon in Winter" and "Waterfalls," E. M. Taber's "A Winter Evening," Margaret Wendell Huntington's "From Hill to Sea—Mount Desert," Leonard Ochtman's "Frosty Meadows at Sunrise," and J. Evans's "The Strand Gate—Winchelsea." John S. Sargent, Carroll Beckwith, Lilla Cabot Perry, Mary Challoner O'Connor, and Irving R. Wiles sent portraits, and McMonnies contributed bronzes of "Shakespeare" and of "Venus and Adonis."

At the annual meeting of the society, April 11, John La Farge was elected president to succeed E. H. Blashfield, who declined a re-election.

New York: Metropolitan Museum.—The last yearly report shows that the corporation is wholly out of debt. The receipts during 1895 were \$245,340.60 and the expenses \$244,518.62, showing a small balance. The number of visitors during the year was 526,488, of whom 190,168 attended on Sundays.

The thirtieth semiannual exhibition was marked by the addition to the Wolfe collection of several valuable works. A characteristic example of the art of the late Lord Leighton, a tall canvas entitled "Lachrymæ," represents a draped female figure leaning in an attitude of grief on a marble column. Rousseau's "Edge of the Woods," a powerful landscape, was bought at the Schaus sale. A Turner, entitled "Hurrah for the Good Ship Erebus!—another Fish," represents a large whale which has just been pierced with a harpoon overturning by a lash of its tail a boat, with a large ship under full sail in the background. This picture came from the Sir Francis Seymour Haden collection. A new wing in the sculpture gallery was opened, containing reproductions of some of the finest works of sculpture in Europe, from mediæval days down to Michelangelo. In this, three sections are devoted to mediæval sculpture and sculpture of the Renaissance, especially early French and Italian works.

New York: Architectural League.—The eleventh annual exhibition held at the Fine Arts Galleries (Feb. 15 to March 9) was thrown open to the public free, excepting on Tuesdays and Thursdays. Noteworthy among the exhibits were four of the six competitive models for the proposed equestrian statue of Gen. Sherman, by H. K. Bush-Brown, C. H. Niehaus, J. Massey Rhind, and Loester & Zimm. Herbert Adams exhibited a tympanum with figures, and Philip Martini a corner of a cove with figures, both intended for the new Library of Congress. Messrs. Vedder and Cox also exhibited decorations for the same building, and the Tiffany Glass Company beautiful glass mosaic decorations for the Chicago Public Library and window designs for several churches. Competitive designs for the decoration of the main hall of the new

Hotel Manhattan were submitted by C. Y. Turner, who was the successful one, and Edward Simmons, Frank Fowler, Herbert Denman, and Will H. Low.

Miscellaneous.—The collection of David H. King, Jr., consisting of 161 pictures, sold in New York, Feb. 18 and 19, brought in the aggregate \$279,780. Among the best prices obtained were: Corot, "Catching Crawfish," \$2,100; Diaz, "Gypsies in the Forest," \$4,350; Reynolds, "Countess Hynford," \$2,000; Romney, "Master Pemberton," \$2,050; Lawrence, "Hon. Mrs. Van Sittart," \$2,050; Reynolds, "Mrs. Arnold," \$4,900; Beechey, "Portrait of a Lady," \$3,000; Detaille, "Champigny," \$2,100; De Neuville, "Champigny," \$2,100; Bouguereau, "The Bather," \$3,500; Mauve, "Cattle in Haarlem Meadows," \$6,675; Schreyer, "Cheveaux dans la Neige," \$5,100; Troyon, "Driving Home the Flock," \$17,250; Knaus, "The Coquette," \$3,200; Lerolle, "End of the Day," \$2,000; Lawrence, "Portrait of a Lady," \$3,000; Copley, "Miss Hill," \$3,200; Rembrandt, "Portrait of John Asselyn," \$11,100; Corot, "Souvenir of Normandy," \$6,700; Daubigny, "Evening on the Oise," \$3,400; Dupré, "Rentre dans la Cabane," \$2,500; Mauve, "Crépuscule," \$5,900; Corot, "Chemin Borde de Saules," \$4,300; Jaeque, "Sheep Pasture," \$3,500; Mauve, "Summer Day in Holland," \$5,200; Constable, "Hampstead Heath," \$3,200; Turner, "Blois, on the Loire," \$9,800; Romney, "Mrs. Angerstein," \$2,550; Reynolds, "Mrs. Angelo," \$4,000; Lawrence, "Countess Charlemont and her Son," \$10,700; Hoppner, "Mlle. Hillsberg," \$10,100; Pourbus, "Isabella of Austria," \$8,000.

Prizes for the best six plans for a new City Hall for New York, submitted to the New Municipal Building Commission, were awarded as follows: First prize, \$7,000, to John R. Thomas, New York; the other five, \$2,000 each, to Ernest Flagg, New York; Edward P. Casey, New York; Rankin & Kellogg, Philadelphia; Gordon, Bragdon & Orchard, Rochester; and P. D. Weber, Chicago.

The Liberal Art League is the name of a new art club, formed for the purpose of establishing a permanent art gallery in New York where artists can offer their works for sale.

The private collection of the late William Schaus, consisting of 31 pictures, sold at Chickering Hall, New York, on Feb. 28, for \$185,325. Among the highest prices obtained were: Rembrandt, "Portrait of an Admiral," \$18,600; Troyon, "Retour à la Ferme," \$24,500, and "Cattle in Pasture," \$10,000; Rousseau, "Edge of the Woods," \$25,200, and "Landscape," \$9,030; Diaz, "Sunset," \$18,900; Corot, "Landscape," \$8,000; Daubigny, "Coucher du Soleil," \$10,150.

An exhibition of bookplate designs, including those submitted in competition for a prize offered by Theodore Hoe Mead for a bookplate for the Author's Club, New York, was held in the club's rooms, in Carnegie Building, in April. The prize (\$100) was awarded to the design of George Wharton Edwards.

The prizes for designs for the mural decorations of the Chamber of the Common Council in the City Hall, Philadelphia, were awarded as follows: First prize, \$3,000, to Joseph De Camp, of Philadelphia; second prize, \$1,000, to Charles Y. Turner, of New York; third prize, \$750, to Frank W. Benson, of Boston.

The Jacob H. Lazarus scholarship of \$1,000 per year for three years, for the study of mural painting in Europe, was awarded to George W. Breck, President of the Art Students' League of New York. Bryson Burroughs, who had just returned after five years' study in Europe as winner of the first Chanler Paris prize, was elected to succeed him as president.

An equestrian bronze statue of Gen. Grant, by William Ordway Partridge, was unveiled on April 25 at Bedford Avenue and Dean Street, Brooklyn, the gift to the city of the Union League Club, of Brooklyn. It is of more than life size, and is elevated on an oblong granite pedestal about 16 feet high. The statue was unveiled by Ulysses D. Grant, son of Col. Frederick D. Grant, in the presence of Gov. Morton and staff, and a numerous company.

A bronze statue of John C. Calhoun, by J. Massey Rhind, of New York, a present to the city of Charleston by Southern women, has been erected in one of the public squares of that city. The statue, which is 12 feet 8 inches high, is on a granite pedestal 40 feet high, with bronze palmetto trees at its corners.

The first annual exhibition in the art galleries connected with the Carnegie Library, Pittsburg, was a great success. The following prizes, given by Mr. and Mrs. Carnegie, were awarded: First prize, \$5,000, for an American painting completed within 1896, and first exhibited in the Carnegie Galleries, to Winslow Homer, for "The Wreck"; second prize, \$3,000, to Gari Melchers, for "The Ship-builder"; gold medal, to John Lavery, Scotland, for his "Lady in Brown"; silver medal, to J. F. Raffaelli, Paris, for his "Nôtre Dame"; bronze medal, to Miss Cecilia Beaux, Philadelphia, for her "Ernesta."

The monument to John Boyle O'Reilly, the work of Daniel C. French, of New York, was unveiled in Boston in June. It is surmounted by a bronze group of 3 figures, larger than life, all seated. *Hibernia*, in the middle, is making a laurel wreath; at her right is Patriotism, a warrior in leather cuirass and sandals; and on her left, Poetry, a nude youth with a lyre and laurel branches, of which he offers one for the wreath. The statue of Mr. O'Reilly, crowning the group, is 14 feet high.

At the International Exposition of the Fine Arts at Berlin the great gold medal was awarded to Julius L. Stewart, of Philadelphia, and smaller gold medals to Walter Gay, of Boston, and George Hitchcock, of Providence.

FLORIDA, a Southern State, admitted to the Union March 3, 1845; area, 58,680 square miles; population, according to each decennial census since admission, 87,445 in 1850; 140,424 in 1860; 187,748 in 1870; 269,493 in 1880; and 391,422 in 1890. By the State census of 1895 it was 464,639. Capital, Tallahassee.

Government.—The following were the State officers during the year: Governor, Henry L. Mitchell; Secretary of State, John L. Crawford; Comptroller, W. D. Bloxham; Treasurer, C. B. Collins; Superintendent of Public Instruction, W. N. Sheats; Commissioner of Agriculture, L. B. Wombwell; Adjutant General, Patrick Houstoun; Attorney-General, W. B. Lamar; Chief Justice of the Supreme Court, Benjamin S. Liddon; Associate Justices, R. Fenwick Taylor and Milton H. Mabry—all Democrats.

The State Census.—The census of 1895 gives the white population as 271,561, and the colored as 193,039; Indians, 39. Since 1890 the white population has increased 48,530, decrease being reported in 8 only of the 45 counties; the colored population has increased 29,730, decrease being reported in only 6 counties. The greatest increase was in Hillsborough County, in which Tampa is situated. Tampa had but 5,532 inhabitants in 1890, and Jacksonville 17,201. Following is the present population of the larger places in the State: Jacksonville, 25,130; Key West, 16,502; Tampa, 15,634; Pensacola, 14,084; Ocala, 4,597; St. Augustine, 4,151; Tallahassee, 3,931; Gainesville, 3,152; Appa-

Iachicola, 3,061; Orlando, 2,993; West Tampa, 2,815; Palatka, 2,828; Fernandina, 2,502. The four cities Jacksonville, Key West, Tampa, and Pensacola in 1890 had an aggregate population of 52,523, and in 1895 of 71,354, a gain of nearly 36 per cent.

Finances.—The finances of the State are reported in a greatly improved condition, so that a lower tax rate was recommended by the Comptroller in January. A few years ago the rate was $4\frac{1}{2}$ mills, and the State was running behind at the rate of \$50,000 a year. The rate in 1895 was $3\frac{1}{2}$ mills; and according to the Comptroller's advice, it was reduced in 1896 to $2\frac{1}{2}$ mills, making a reduction of about \$75,000 on the State tax for the year.

Education.—The first semiannual apportionment of the 1-mill school tax for 1896 distributed \$49,936.80 to a school population of 62,421, averaging 80 cents to a pupil. The number of schools is 2,404, of which 1,775 are for white and 629 for colored pupils. The cost of these schools is \$653,175. The invested school fund amounts to \$617,100.

The Tallahassee Summer Normal School was in session seven weeks during the summer vacation, with a good attendance of teachers in both the white and colored departments.

The State Normal College for Colored Students graduated 4 in June, and opened in the autumn with the largest attendance in its history, 60 applicants taking the entrance examinations.

The State Agricultural College, at Lake City, graduated a class of 14 in June.

The so-called Sheats law, making it a penal offense for any person or persons, association or corporation, to conduct a school of any grade, public, private, or parochial, in which white persons and negroes shall be instructed or boarded in the same building or taught in the same class or at the same time by the same teacher, came before the courts and was decided against as regards the title, "An Act to prohibit white and negro youth from being taught in the same school," which was declared inadequate. No other point in the law appears to have been touched upon.

Products.—The cotton crop of the State was given in Hester's annual report at 48,000 bales.

The shipments of lumber and timber from the port of Pensacola for 1895 amounted to 150,797,695 feet of lumber, 132,173,000 feet of sawed timber, and 856,493 cubic feet of hewed timber.

Water Ways.—Several memorials from the Legislature asking appropriations for improvements in the State water ways were presented to Congress, and the following were included in the river and harbor bill: For continuing the improvement of Appalachicola Bay and river, \$12,000; of Pensacola harbor, \$100,000; of Key West harbor, \$80,000; of Charlotte harbor and Peace river, \$16,000; for improving Carrabelle bar and harbor, making a 10-foot channel from the mouth of the river to the channel in the bay, \$10,000; improving Caloosahatchee river, \$1,000; completing improvement of Chipola river, \$5,000. Preliminary examinations of the following waters were authorized: Anelote river, Jupiter inlet, Hillsborough Bay, Crystal river, and Cedar Keys. Surveys and estimates were directed to be made at Appalachicola Bay, Tampa Bay, Withlacochee river, and St. Lucia or Prospect inlet and river.

Disastrous Hurricane.—A terrible storm, which swept over several States Sept. 29, was most destructive in Florida. It struck at Cedar Keys on the west coast and passed northward over about 20 towns and villages. The destruction was greatest at Cedar Keys, where the water came up with the wind in a great tidal wave, and rushed in a torrent through the streets, carrying with it houses, boats,

and *débris* of every description. While the storm was at its height, 2 hotels and a dwelling took fire and were burned down. The town was almost completely destroyed, and 39 lives were lost. Early reports from 76 towns showed that 67 persons were killed and 62 injured; and the list was increased by later reports, while it was believed that many fishermen and spongers lost their lives on the coast in addition to those found. The destruction of the valuable timber, turpentine trees, farm crops, phosphate works, and buildings of every description was very great. The State Agricultural College, at Lake City, was badly damaged and many of the finest depots along the lines of railroads were wrecked. In many districts not a vestige was left of the growing crops. It was estimated that \$10,000,000 would not cover the loss, direct and indirect, in the State. The people of Cedar Keys were obliged to issue an appeal for aid.

Political.—The election of State and county officers was held Oct. 6. A Governor, Secretary, Treasurer, Comptroller, Attorney-General, Superintendent of Instruction, Commissioner of Agriculture, and justice of the Supreme Court were to be chosen, together with all the members of the House of Representatives and 16 of the Senate, half of the Senators holding over. The Legislature will elect a United States Senator to succeed Wilkinson Call.

The State Democratic Convention met at Ocala, June 16. The party in favor of free coinage of silver elected their chairman and secretary, but in the choice of delegates to the national convention 4 were given to the gold advocates and 4 to the silver men. The antisilver men carried their point in the adoption of the platform, a vote of 176 to 170 deciding in favor of the first resolution in the majority report of the platform committee, which was:

"Whereas, Questions of coinage and finance are matters prescribed by the Constitution for national legislation, and we recognize that it is the proper function of the Democratic National Convention, to assemble at Chicago at an early date, to prescribe the policy of the party on such questions, as well as all other national issues: *Therefore be it resolved*, That all such questions are properly referred for determination to the National Democratic Convention, and we pledge our support to the policy of the party which may be so enunciated."

After declaring in favor of a tariff for revenue only, and congratulating the Democratic party on its opposition to "all monopolies, syndicates, and trusts, holding that the aggregation of capital in the hands of a few is a menace to civil government and a shadow of death to free institutions," the resolutions commended the administration of Gov. Mitchell, recommended laws for increasing the efficiency of the militia, praised the work of the State Board of Health, expressed sympathy with the Cubans, urging the President to recognize them as belligerents, and said further: "And in this connection we take pride in commending the courageous manner in which the President has upheld the Monroe doctrine in Venezuelan affairs, which has given influence and dignity to the American name and commands respect for its flag."

The last resolution was as follows:

"Whereas, The last Legislature of Florida passed a statute prohibiting the teaching together of white and negro children in the public schools of our State: *And whereas*, The same statute has aroused general discussion and caused the expression of much doubt as to the position held by our people on the question: *Be it resolved*, That the Democracy of Florida, in convention assembled, declares its hearty indorsement of such law, and expresses the

hope that it may never be expunged from the statute books of the State, nor the principle it embodies be torn from the hearts of our people; that the convention expresses the emphatic hope that the State will never relax its efforts in the cause of education till every child within its limits shall have had opportunity to secure the rudiments of a sound knowledge of the English language and the principles of business, without distinction of race, color, or previous condition, but always and at all times in separate buildings, and with different teachers."

A proposition to refer all nominations of State officers to primary elections was defeated by a vote of 180 to 165. Following is the ticket: For Governor, William D. Bloxham; Secretary of State, John L. Crawford; Attorney-General, William B. Lamar; Comptroller, William H. Reynolds; Treasurer, Clarence B. Collins; Superintendent of Public Instruction, William N. Sheats; Commissioner of Agriculture, Lucius B. Wombwell; Justice Supreme Court, Milton H. Mabry.

The Republican State Convention for electing delegates to the national convention was held at Tallahassee in March. The so-called "organized" faction of the party outnumbered the so-called "lily-whites," and the latter left the convention after the report of the Committee on Credentials in reference to contesting delegations, and organized in a separate convention. Both factions selected delegates to the national convention, the former being in favor of McKinley, the latter of Morton, and both adopted resolutions expressing sympathy with the Cubans. The convention of the so-called "lily-whites" for nomination of State officers was held at Ocala in May. The following ticket was made: For Governor, E. R. Gunby; Secretary of State, H. S. Chubb; Superintendent of Public Instruction, J. E. Webster; Treasurer, Philip Walter; Judge of Supreme Court, George M. Robbins; Commissioner of Agriculture, E. E. Skipper; Comptroller, T. T. Munroe; Attorney-General, Stephen E. Foster; for Congressman from First District, E. K. Nichols; for Congressman from Second District, H. G. Garrett.

At a convention in Ocala, July 8, the "organized" faction nominated as follows: For Governor, George W. Allen; Superintendent of Instruction, Byron F. Marsh; Treasurer, W. A. Allen; Justice of the Supreme Court, Thomas E. Wilson; Commissioner of Agriculture, James Harden; Comptroller, John McDougall; Attorney-General, William B. Sheppard; Congress, Second District, J. N. Stripling.

The ticket finally put in the field was made up from these two, and was as follows: For Governor, E. R. Gunby; Secretary of State, T. F. McGourin; Attorney-General, William B. Sheppard; Treasurer, W. A. Allen; Comptroller, John McDougall; Superintendent of Public Instruction, Byron F. Marsh; Commissioner of Agriculture, Henry S. Chubb; Justice of the Supreme Court, Thomas E. Wilson.

The Populists, in their convention at Ocala in August, chose the following candidates: For Governor, William A. Weeks; Secretary of State, J. C. Keller; Comptroller, P. W. Knapp; Treasurer, L. H. Cohoon; Attorney-General, Frank Harris; Judge of the Supreme Court, D. L. McKinnon; Superintendent of Public Instruction, O. N. Williams; Commissioner of Agriculture, J. F. Richbourg.

Arthur C. Jackson was the candidate of the Prohibitionists for Governor. They made no other nominations.

The gold Democrats held a State convention at Jacksonville in August. Seventeen counties were represented. A State committee was selected, and delegates chosen to the national convention. Reso-

lutions were adopted approving the financial policy of the Cleveland administration, approving gold as a standard of values, condemning the attack of the Chicago convention on the Supreme Court, and expressing sympathy with the Cubans.

The campaign was very spirited, the interest centering largely in the choice of State legislators. Senator Call refused to recognize the State Executive Committee, and stumped the State upon his own account, denouncing corporations and advocating free silver. In many places where the regular Democratic nominees were against him, his friends made independent nominations. The Democratic candidate for Governor also made speeches through the State in favor of free silver.

Nov. 2 the chairman of the State committee issued an address to the Populists of Florida, in which he denounced the silver Democrats, declared for McKinley, and urged all Populists in the State to follow his lead. He declared the silver Democrats had treated the Populists with the utmost disrespect and would not only not adhere to the Chicago platform, but would knife the Populist party as soon as the opportunity presented itself.

At the October election all the Democratic candidates were chosen. The vote for Governor stood: W. D. Bloxham, Democrat, 27,172; E. R. Gunby, Republican, 8,290; W. A. Weeks, Populist, 5,270.

At the November election Bryan received 32,213 votes; McKinley, 11,389; Palmer, 1,778; Levering, 868.

FRANCE, a republic in western Europe, proclaimed Sept. 4, 1870, upon the deposition of the Emperor Napoleon III, and declared permanent in the Constitution of June 16, 1873. The President of the republic is elected for seven years by an absolute majority of the National Assembly, consisting of both chambers united in Congress. There are 300 Senators elected for nine years, one third retiring every third year. They are elected by commissions in the several departments and colonies, consisting of delegates chosen by the municipal councils of the communes and the Deputies and members of the council-general and district councils of the department. There are 584 Deputies, 1 to 70,000 of population, elected by *scrutin d'arrondissement*, those *arrondissements* which have over 100,000 inhabitants returning two Deputies. The President appoints a ministry from the Chamber, the members of which are usually selected by the leader, whom the President commissions to form a Cabinet. The ministers are jointly responsible to the chambers for the general policy of the Government and individually for their personal acts.

The President of the Republic is François Félix Faure, born in 1841, who was elected on Jan. 17, 1895, President Casimir-Périer having resigned. The Cabinet in the beginning of 1896 was composed of the following ministers: President of the Council and Minister of the Interior, Léon Bourgeois; Minister of Finance, Paul Doumer; Minister of Foreign Affairs, M. Berthelot; Minister of War, Godefroy Cavaignac; Minister of Marine, M. Lockroy; Minister of Justice, M. Ricard; Minister of Public Instruction and Worship, M. Combes; Minister of Commerce, Industry, Posts, and Telegraphs, M. Méunier; Minister of Public Works, M. Guyot-Dessaigne; Minister of Agriculture, Albert Viger; Minister of the Colonies, Pierre Paul Guieyesse.

Area and Population.—France has an area of 204,092 square miles. The population present at the taking of the census of April 12, 1891, was 38,095,170. Owing to a low birth rate, the population of France increases more slowly than in other countries of Europe, and between 1886 and 1891 was almost stationary, the annual rate of increase being 6.5 in 10,000 and the average number of births to a

marriage 2:1. In 1891 and 1892 there was an actual decrease of population, in 1893 a slight increase, and in 1894 a surplus of 39,768 births over deaths, the total number of births being 855,388, and that of deaths 815,620. There were 286,662 marriages in that year, against 287,294 in 1893 and 290,319 in 1892. The average birth rate in 1894 was 22 to 1,000 inhabitants; the death rate, 22; the excess of births over deaths, 1 to 1,000. The number of divorces in 1894 was 6,419. 83 in every 100,000 families. The census of March, 1896, makes the total population of France 38,228,989, an increase of 133,819 in five years, or 26,500 per annum, showing a birth rate of 1 to 1,500. The increase is largely confined to the cities, and is balanced by a decrease in many of the rural communes. The greatest increase has been in the departments of the Seine, the Nord, the Bouches-du-Rhône, the Rhône, the Seine-et-Oise, the Pas de Calais, the Meurthe-et-Moselle, the Var, the Gironde, the Alpes Maritimes, and the Vosges. In the departments of the Orne, the Manche, the Lot, the Calvados, the Dordogne, and the Gers the diminution was most marked.

The total emigration from 1857 to 1891 was 255,873, of which number 59,304 went to the United States. The number of emigrants in 1892 was 5,528, and in 1893 it was 5,586. The preliminary results of the census of 1896 make the population of Paris 2,511,955. The increase of population in none of the inland towns was important; it was only 28,000 in Lyons, 15,000 in Lille, and in St.-Etienne, Roubaix, Nancy, and Tourcoing it was also small, while Rouen, Toulouse, Rennes, Bourges, and other places show an actual decrease, indicating that the migration to the towns from the villages has greatly slackened. The ports on the channel and the Bay of Biscay are also stationary or declining, Nantes having actually fallen off from 122,000 to 105,000, St.-Nazaire remaining about the same, and Bordeaux having merely risen to 256,000 and Havre from 116,000 to 117,000; while Brest has fallen from 75,000 to 72,000, Calais shows a slight decrease, Lorient also, and Boulogne, Dunkirk, Cherbourg, and Rochefort are nearly stationary. The Mediterranean ports, on the contrary, show a remarkable growth, Marseilles having increased to 447,000 and Toulon from 77,000 to 94,000. The urban population of France in 1891, embracing all communes of more than 2,000 inhabitants, was 14,311,292, or 37·4 per cent. of the whole, while the rural population was 24,031,900, or 62·6 per cent.

The Army.—Every Frenchman is liable to service in the army, and may be called into the active army or the reserves from the age of twenty to that of forty-five, unless he is pronounced unfit. All the young men of the country belong to the active army from the age of twenty, unless exempted, and serve three years, after which they form part of the active army reserve for ten years, then of the territorial army for six years, and finally of the territorial reserve. Students in higher institutions of learning and seminarists serve but one year with the colors, and every soldier who has acquitted himself well in military exercises and can read and write, may be sent on indefinite furlough after a year of active service. The number of men composing the total war strength of France is estimated at 2,350,000 in the active army and its reserve, 900,000 in the territorial army, and 1,100,000 in the territorial reserve; total, 4,350,000, of whom 2,500,000 are counted on as available.

The peace strength of the army is estimated in the budget for 1896 to be 598,263 men, of whom 28,963 are officers, showing an increase of 22,036 over the preceding year. The number of horses is 142,661. The strength and distribution of the various arms and services were as follow:

DESCRIPTION OF TROOPS.	France.	Algeria.	Tunisi.	Total.
General staff	4,113	268	86	4,597
Military schools	3,255	3,255
Unattached	1,945	798	113	2,856
Gendarmerie	21,535	1,122	151	22,811
Garde Républicaine	3,050	3,050
Army corps:				
Infantry	315,988	36,620	8,744	361,361
Cavalry	67,482	7,806	1,853	77,201
Artillery	78,512	2,533	854	81,899
Engineers	12,016	801	325	13,142
Train	8,462	2,832	951	12,245
Administrative	11,844	3,583	494	15,876
Total army corps	494,304	54,199	13,221	561,724
Total	528,502	56,487	13,574	598,263

Deducting the sick and absent, the effective of the active army in 1896 was 528,147 officers and men of the total 572,402.

The Navy.—France has, next to Great Britain, the strongest navy in the world. There are 16 battle ships of the first class, 10 of the second class, and 4 of the third class, 17 port-defense vessels, 14 first-class, 26 second-class, and 110 third-class cruisers, and 100 first-class, 80 second-class, and 36 third-class torpedo craft. The vessels under construction comprise 2 battle ships, 2 corsair cruisers or commerce destroyers, 2 first-class cruisers, 2 second-class cruisers, 3 third-class cruisers, a dispatch vessel, a gunboat, a torpedo dispatch vessel, a torpedo gunboat, 3 seagoing torpedo boats, 7 first-class torpedo boats, and 5 aluminium boats. The navy budget has grown from 121,484,000 francs in 1872 to 278,000,000 francs in 1894. The navy is manned partly by conscription and partly by enlistments. The new commerce destroyers are designed to make 23 knots with 24,000 horse power and triple screws. They will have 2-inch deck armor, with a splinter-proof deck below. Their displacement is 8,500 tons. They will carry an armament of 2 6·2-inch, 6 5·5-inch, and a number of 1·85-inch guns. The iron-clad "Gaulois," launched in October, 1896, has a displacement of 11,275 tons, and, with engines of 14,500 horse power, was built to make 18 knots and carry an armament of 22 guns, besides 32 small guns for repelling torpedo attacks.

Finances.—The budget for 1896 estimates the total revenue at 3,448,317,093 francs, of which 522,101,183 francs are derived from direct taxes, 2,064,398,230 francs from indirect taxes, and 686,613,732 francs from monopolies, services, and domains, making the total ordinary revenue 3,273,113,145 francs, which does not include 64,816,354 francs of formal *recettes d'ordre*, 57,372,575 francs from various extraordinary sources, and Algeria's revenue of 53,015,019 francs. The direct taxes are the following: Land tax, 118,607,919 francs; tax on buildings, 80,042,227 francs; personal-property tax, 90,470,476 francs; door and window tax, 58,425,474 francs; trade licenses, 125,580,402 francs; tax on *première avertissement*, 1,054,100 francs; taxes on servants and carriages and horses, 47,920,585 francs. The indirect taxes are: Customs, 469,270,230 francs; registration, 555,689,500 francs; stamps, 188,402,500 francs; 4-per-cent. tax on movables, 66,220,000 francs; sugar tax, 196,473,000 francs; other taxes, 588,343,000 francs. The revenues from monopolies and state property were: Tobacco, 376,301,800 francs; matches and gunpowder, 39,959,300 francs; posts, telegraphs, and telephones, 215,014,350 francs; domains and forests, 45,019,420 francs; various, 10,318,862 francs.

The budget estimated for 1896 fixed the expenditures for all purposes at 3,447,918,198 francs, divided as follows: Public debt, 1,219,792,036 francs; President, Chamber, and Senate, 13,171,720 francs; Min-

istry of Finance, 19,471,260 francs; Ministry of Justice, 35,320,233 francs; Ministry of Foreign Affairs, 15,984,800 francs; Ministry of the Interior, 75,786,209 francs; Ministry of War, 609,145,480 francs for ordinary, and 42,029,340 francs for extraordinary purposes; Ministry of Marine, 272,614,898 francs; Ministry of Public Instruction, 195,018,342 francs for education, 8,148,985 francs for fine arts, and 44,125,953 francs for worship; Ministry of Commerce, Industry, Posts, and Telegraphs, 198,213,197 francs; Ministry of the Colonies, 79,018,500 francs; Ministry of Agriculture, 30,115,090 francs; Ministry of Public Works, 270,639,764 francs; *régie* and collection of taxes, 204,469,771 francs; repayments, 40,842,000 francs; Algeria, 74,010,620 francs.

The expenses of the departmental and communal administrations are paid by levying additional centimes in connection with the land and building taxes, the personal and property tax, and the taxes on doors and windows, trade licenses, and carriages, horses, and bicycles. These additional centimes amounted in 1896 to 375,684,784 francs.

The capital of the public debt on Jan. 1, 1894, was 31,035,252,522 francs, of which 22,005,373,951 francs represented the consolidated debt, 243,788,253 francs the Morgan loan, 3,986,320,000 the redeemable debt, 3,347,428,776 francs the capitalized value of annuities, 1,146,889,547 francs the floating debt, and 305,451,995 francs the guarantee debts. The expenses of the debt for 1896 were 693,761,924 francs for the consolidated debt, 298,813,194 francs for interest and amortization of redeemable debt, and 227,216,918 francs for the floating debt.

Commerce.—The general commerce in 1894 consisted of 4,795,000,000 francs of imports and 4,125,000,000 francs of exports. The total value of the special imports was 3,850,000,000 francs, of which sum 1,198,000,000 francs represent articles of alimentation, 2,104,000,000 francs raw materials and products, and 548,000,000 francs manufactured goods. The special exports had a total value of 3,078,000,000 francs, of which 666,000,000 francs represent articles of alimentation, 755,000,000 francs unmanufactured products, and 1,657,000,000 francs manufactured goods. The values of the principal imports in 1894 were: Cereals, 363,000,000 francs; wool, 317,000,000 francs; oil seeds, 199,000,000 francs; raw silk, 183,000,000 francs; coal and coke, 172,000,000 francs; raw cotton, 169,000,000 francs; timber and wood, 148,000,000 francs; coffee, 147,000,000 francs; wine, 145,000,000 francs; cattle, 132,000,000 francs; hides and furs, 116,000,000 francs; ores, 53,000,000 francs; flax, 52,000,000 francs; sugar, 51,000,000 francs; woollen goods, 44,000,000 francs; silk goods, 42,000,000 francs; cotton goods, 33,000,000 francs.

The special commerce with the leading commercial countries had, in francs, the following values in 1894:

COUNTRIES.	Imports.	Exports.
Great Britain.....	480,000,000	913,000,000
Belgium.....	372,000,000	478,000,000
Germany.....	310,000,000	325,000,000
United States.....	327,000,000	186,000,000
Algeria.....	208,000,000	199,000,000
Spain.....	176,000,000	109,000,000
Italy.....	122,000,000	98,000,000
Russia.....	282,000,000
Argentine Republic.....	168,000,000	51,000,000
British India.....	212,000,000
Switzerland.....	130,000,000
Brazil.....	80,000,000

The values of the principal exports of French produce and manufacture were: Woollen manufactures, 242,000,000 francs; wine, 233,000,000 francs; silk manufactures, 224,000,000 francs; small wares, 154,000,000 francs; raw wool and yarn, 124,000,000

francs; cotton manufactures, 113,000,000 francs; linen goods and clothing, 101,000,000 francs; raw silk and yarn, 89,000,000 francs; leather, 81,000,000 francs; leather goods, 80,000,000 francs; cheese and butter, 66,000,000 francs; skins and furs, 66,000,000 francs; chemical products, 57,000,000 francs; tools and metal manufactures, 56,000,000 francs; spirits, 54,000,000 francs; refined sugar, 48,000,000 francs.

The imports of gold coin and bullion in 1894 were 461,543,561 francs, and of silver 88,596,733 francs; total, 550,140,294 francs. The gold exports were 107,602,070 francs, and the silver exports 108,462,180 francs; total, 216,064,250 francs.

Navigation.—The merchant navy consisted in the beginning of 1895 of 14,332 sailing vessels, of 398,567 tons, and 1,196 steamers, of 491,972 tons. Of the former, 266, of 29,118 tons, navigated between European ports in the neighboring seas, and 291, of 140,221 tons, were employed in ocean commerce, and the rest were coasting and fishing craft. Of the steamers, 237, of 169,821 tons, were engaged in navigating European seas, and 181, of 267,178 tons, in ocean commerce, while the rest were employed in port service, the coasting trade, or the fisheries. The crews on all the sailing vessels numbered 69,900 while the steamers employed 14,333 men.

During 1894 the number of vessels entered at French ports was 98,697, of 20,851,023 tons, of which 78,471, of 10,808,550 tons, were French, and 20,226, of 10,042,473 tons, foreign. Of the French vessels, 70,131, of 6,784,993 tons, were employed in the coasting trade and 8,340, of 4,023,557 tons, in foreign commerce. The total number of vessels cleared in 1894 was 99,484, of 21,257,790 tons, of which 8,755, of 4,236,299 tons, were French vessels in the foreign trade, 20,598, of 10,236,498 tons, were foreign vessels, and 70,131, of 6,784,993 tons, were French coasting vessels. Of the total arrivals of vessels engaged in foreign commerce, 7,496 French, of 3,891,816 tons, and 17,750 foreign, of 9,602,124 tons, were with cargoes; of the total departures, 7,269 French vessels, of 3,733,908 tons, and 12,805 foreign vessels, of 5,351,911 tons, carried cargoes.

Communications.—The railroads had a total length of 22,462 miles at the end of 1894. The state owns 1,700 miles. The lines constructed by companies are supervised by the state, which has assisted in the construction or guaranteed the interest on the cost. The guarantees of four of the six companies expire in 1914, of a fifth in 1934, and of the last in 1935. Between 1950 and 1960 the railroads revert to the state. France has 23,643,000 miles of national roads, 5,512 miles of navigable rivers, and 2,984 miles of canals.

The telegraphs have a length of 59,693 miles, with 197,622 miles of wire. The post office in 1893 carried 713,410,000 internal and 137,213,000 international ordinary letters, 35,832,000 internal and 2,098,000 international registered letters, 46,044,000 internal and 6,054,000 international postal cards, and 943,714,000 internal and 127,894,000 international newspapers, circulars, and samples.

Currency.—The French mint issued from 1795 to 1894 of gold coins 8,882,405,730 francs, of silver five-franc pieces 5,060,606,240 francs, and of minor silver coins 474,068,884 francs. In 1894 there were coined 9,831,060 francs of gold, 4,000,000 francs of silver, and the annual amount of 200,000 francs of bronze pieces. No five-franc pieces, which alone of the silver coins have full legal tender, have been coined since 1878. In consequence of the adoption of the gold standard by Germany in 1873, which led to a rapid depreciation of silver, the states of the Latin Union, created in 1865 by a monetary treaty between France, Belgium, Italy, and Switzerland, to which Greece acceded later, entered on

Jan. 1, 1874, into a supplementary convention, whereby the coinage of their five-franc pieces was limited to a certain amount for each nation. When gold disappeared from circulation at a rapid rate, notwithstanding this restriction, they entered into a further convention on Nov. 5, 1878, whereby the coinage of five-franc pieces was suspended altogether until authorized by the unanimous consent of the contracting parties. This provision was continued in force by the convention of Nov. 6, 1885, with a modifying clause authorizing any member of the union to resume the coinage of legal-tender silver on condition that it will redeem in gold all of its silver that circulates in the other states of the union. The Bank of France, which has a capital of 182,500,000 francs, has the exclusive privilege of emitting bank notes, which are protected by reserves of gold and silver, loans on securities and public funds, and loans made to the Government. The law of Jan. 25, 1893, raised the limit of authorized emissions from 3,500,000,000 francs to 4,000,000,000 francs. The notes are legal tender to any amount, and are redeemable in coin, unless in a time of crisis the Government should give them forced currency. The charter of the bank has been renewed many times. The present one expires on Dec. 31, 1897. The money in circulation in France in 1894 was estimated to be 4,000,000,000 francs of gold, 2,000,000,000 of silver five-franc-pieces, 300,000,000 francs of small silver, and 3,458,000,000 francs of bank notes.

Constitutional Crisis.—When M. Bourgeois assumed office he rejected the support of the Socialists, relying on the acceptance of his Radical programme, with necessary modifications by the Moderates. When he made known his reduced programme in January he no longer denounced socialistic ideas, but rejected the aid of the Rallied Republicans, leaving the Socialists to vote for him without repudiating their principles. The income tax to be incorporated in the budget was the main feature of the ministerial programme. The Cabinet proposed exemption of 2,500 francs; 1 per cent. tax on all over that amount up to 5,000 francs; 2 per cent. on the next 5,000 francs, or part thereof; 3 per cent. between 10,000 and 20,000 francs; 4 per cent. between 20,000 and 50,000 francs; and 5 per cent. on all above 50,000 francs. There was an abatement ranging up to 50 per cent. for large families. By way of a set-off the house tax was to be abolished, freeing 6,500,000 persons from direct taxation, lightening the burden for 1,000,000 more, and increasing the taxes of only 500,000, who would pay enough in additional taxation to make up for the house tax and provide 6,000,000 francs over, which would be applied to a readjustment of the land tax. On the motion of M. Méline, the Chamber voted in favor of another monetary conference, with a view of re-establishing international bimetallicism. A bill regarded as a first step toward the decentralization of higher education, originally introduced by M. Ribot, adopted by the Bourgeois Cabinet, and unanimously passed by the Chamber on March 5, gives the title of university to each of the local faculties, and allows each to apply to university purposes its separate income for class fees, but still leaves the government of the institutions in the hands of the state, which will continue to levy the diploma and examination fees.

The Radical Cabinet withdrew the bill of M. Trarieux, the former Minister of Justice, debarring Government and railroad employees from taking part in strikes, whereupon Senators framed a more stringent measure making any combination in military or naval establishments or on railroads for the suspension or prevention of work punishable with imprisonment and more heavily penalizing public

incitement to such coalition. The Minister of Commerce and Industry introduced in the Chamber a bill of opposite character, subjecting to imprisonment any person attempting to hamper the free exercise of trades-union rights under the law of 1884. The Senate passed a resolution censuring the Government for appointing Judge Poitevin to conduct an inquiry into the Southern Railroad scandals and passing over the regular judge of the district for fear he should show sympathy with the incriminated directors and politicians. When the subject was brought up in the Chamber on Feb. 13, M. Bourgeois demanded a vote of confidence, which was passed by a poll of 326 to 43. This appeal to the Chamber from the judgment of the Senate prompted the latter body to reaffirm by 161 votes to 71 the order of the day it had adopted on Feb. 11, thus making an issue of the constitutional question of the responsibility of the Cabinet in the Second Chamber, a matter on which the Constitution is silent and which had never been legally settled, though in the popular belief having its root in the idea of the omnipotence of universal suffrage and confirmed by the issue of the MacMahon crisis and by the dicta of Jules Simon, Jules Ferry, and other great statesmen, that the Senate can not make or unmake ministries. The Senate has nevertheless the power to withhold supplies and block legislation in a way to render the continued existence of a ministry impossible, and the opposition in that body to the progressive income tax, the labor sympathies, the separation of church and state, and the whole tendency of the Bourgeois Cabinet, was intense enough to drive it to make use of its power. The Cabinet, not at all reluctant to place the Reactionary majority of the Senate in the position of taking the unpopular and antidemocratic side in a constitutional conflict, issued a declaration that the recent votes of the Chamber "made it their duty to follow the policy that had obtained for them that mark of confidence." M. Bourgeois, reaffirming the intention of the Government to remain so long as it was supported by the Chamber, obtained on Feb. 20 a new vote of confidence by a majority of 309 to 185, but an amendment censuring the Minister of Justice was defeated by only 45 majority, so that the Socialists saved the Government from defeat by their 60 votes. On the day following the Senate, which the Government protected from any possible outbreak of mob violence by a large force of cavalry and police, adopted a declaration protesting against the contention that the ministry can govern without the Senate and appeal from one chamber to the other as an infringement of the Constitution which would justify the refusal of further co-operation with the Government, but announcing its intention, in order not to stop the legislative life of the country, to deliberate independently on the ministerial proposals with no other object than the interests of the country, leaving the country to judge between the ministers who have dared to provoke the most serious of crises and the Assembly which abstains from augmenting the constitutional crisis in order not to endanger the public peace, although it has on its side right and law. This declaration was affirmed by a vote of 184 to 60.

The bureaux of the Chamber were hostile to the income-tax proposals of the Government, and the Budget Committee was accordingly so constituted that by 28 votes to 5 it resolved to reject any income tax based on aggregate receipts, individual returns, or vexatious investigations, and to call on the Government to submit a fresh scheme effecting a more equitable adjustment of public burdens. In like manner the Army Committee by three quarters majority pronounced against the scheme of the Minister of War for reducing the garrisons in Al-

geria and Tunis and making them a part of a colonial army. After a memorable debate the Chamber, by a majority of 286 to 270 on March 26, approved the substitution for the house tax of a general tax on income, with graduated exemption of incomes below a certain sum, leaving the question of personal declarations and of the basis of taxation to be discussed between the Budget Committee and the ministry. On March 28 M. Berthelot, whose manner of conducting negotiations with England respecting the Soudan expedition had given occasion for various criticisms, resigned his portfolio on the plea of ill health. His threatening note of March 17 was brought up against him, and he was censured for rashly and undiplomatically inviting a serious conflict without having sounded other governments, and thereby reconstructing the triple alliance to the advantage of England. M. Bourgeois assumed the direction of the Ministry of Foreign Affairs, transferring the portfolio of the Interior to M. Doumer. M. Sarrien on March 30 accepted the Ministry of the Interior, a post that he filled under M. Brisson in 1885 and later in the Goblet and Tirard Cabinets. On March 31 M. Bourgeois replied in the Senate to interrogations of M. Bardoux on the foreign policy of the Government, denying that there had been any loss of French influence in China, declaring that Madagascar had not been annexed, but that the sovereignty of the Queen and the foreign relations of Madagascar were controlled by France, and affirming that Russia shared the views of France in regard to Egypt. When similar questions were put in the Chamber on April 2, the minister made no revelations, declaring that delicate negotiations were going on, on the strength of which statement he obtained a vote of confidence. On the day following an interpellation was moved in the Senate by M. Milliard, who said it was impossible to approve the position to which France had been reduced in Egypt and in Madagascar, and when M. Bourgeois declared that he should make no reply the Senate passed, by 155 votes to 85, an order of the day pronouncing the ministerial explanations inadequate and refusing its confidence to the Government, and then adjourned till April 21 without discussing the Madagascar credits. The Cabinet met and decided unanimously that the vote of confidence adopted by the Chamber made it the duty of the ministers to remain in office. The action of the departmental assemblies, two thirds of which condemned the scheme of an income tax proposed by the Government, confirmed the Senators in their resistance to the Cabinet. When the Senate reassembled M. Demôle presented a motion approved by the Republican groups, that, having three times refused its confidence to the ministry, which persisted nevertheless in remaining in office in violation of the Constitution, the Senate, while disclaiming any intention of haggling over credits necessary to soldiers defending in distant French possessions the honor and the flag of France, postpone the voting of the credits until it has before it a constitutional minister possessing the confidence of both chambers. M. Bourgeois simply challenged the statement that his ministry existed in violation of the Constitution, and protested that the interpretation of the Constitution was not the prerogative of one chamber, but belonged to Parliament as a whole. The motion was carried by 171 votes to 90. The Cabinet announced the intention of resigning as soon as the Chamber of Deputies reassembled, being no longer able to guarantee the direction of affairs since the Senate's refusal to vote credits had the result of obstructing the maintenance and relief of the troops in Madagascar. When the Chamber came together on April 23 the Premier tendered the

resignation of the Cabinet to the President, and it was accepted. In his declaration to the Chamber M. Bourgeois reaffirmed the doctrine that the initiative and general direction of politics belongs to the body issuing directly from universal suffrage. The resolution submitted by M. Ricard, declaring that the Chamber affirms once more the preponderance of the elect of universal suffrage and its resolve to continue a policy of democratic reforms was carried by 258 votes, no one voting in the negative. Before a new ministry was appointed the Senate held a special meeting and adopted unanimously the Madagascar credits. President Faure asked M. Sarrien to undertake the formation of a ministry. Having consulted with politicians as to the prospects of forming a conciliation Cabinet, he declined the task on finding the Radicals bent on demanding revision and on thus prolonging the conflict with the Senate. On April 27 M. Méline, the Protectionist leader, was summoned by the President and intrusted with the formation of a Cabinet, although he had been prominent in the minority that opposed the income tax as proposed by the Bourgeois Cabinet.

The Méline Cabinet.—M. Méline formed a Cabinet composed exclusively of Moderate Republicans, Radicals having refused to join, just as Moderates had declined to join M. Bourgeois when he attempted to form a mixed Cabinet. The new ministry was constituted on April 28 as follows: Premier and Minister of Agriculture, Félix Jules Méline; Minister of Foreign Affairs, M. Hanotaux; Minister of Finance, Georges Cocheru; Minister of Justice, M. Darlan; Minister of the Interior, M. Barthou; Minister of War, Gen. Billot; Minister of Marine, Admiral Besnard; Minister of Public Instruction and Worship, A. Rambaud; Minister of Commerce, Henri Boucher; Minister of the Colonies, André Lebon; Minister of Public Works, M. Turrel. The new Premier was born in the Vosges in 1838, entered the Chamber in 1876, was Minister of Agriculture under Jules Ferry from 1883 to 1885, President of the Chamber in 1889, and since then has been chairman of the Tariff Committee. Of his colleagues, M. Hanotaux was Minister of Foreign Affairs in the Casimir-Perier, Dupuy, and Ribot Cabinets; Gen. Billot was Minister of War in 1882 in the Freycinet and Duclere Cabinets; M. Barthou was Minister of Public Works under Dupuy; M. Lebon was Minister of Commerce in the Ribot Cabinet; and Admiral Besnard was Minister of Marine in the Ribot Cabinet.

The first aim of the new ministry was declared in the ministerial statement to be the re-establishment of the indispensable harmony between the public bodies, securing preponderant action in the general direction of politics to the Chamber of Deputies, based directly on universal suffrage, but recognizing that it is impossible to legislate and to govern without the co-operation of the Senate. The bills that interest the working classes and the reform of the drink duties and that of the death duties, already before the Senate, would be prosecuted, and as for direct taxes the budget for 1897 would contain a system of reforms which, without vexatious, inquisitorial, or arbitrary measures, would insure a better division of taxation, relieve small taxpayers, take into consideration family burdens, and relieve agriculture. The interests of agriculture would receive special attention. The colonial army would finally be organized. Bills would be pushed relating to the regulation of the hours of labor, to responsibility in case of accidents, and to the development of provident and benefit societies. The organization of workmen's superannuation funds by the co-operation of the state and individual initiative would also receive attention. The minis-

try looked to the Republican majority to set aside irritating and sterile discussions and devote its energies to the assemblage of democratic reforms long ripe and immediately feasible, for working France was weary of agitation and thirsting for peace and tranquillity. The Chamber rejected Radical motions demanding revision of the Constitution and one from M. Goblet protesting against the existence of a ministry formed from the minority, adopted a resolution affirming the sovereignty of universal suffrage, approved the declaration of the Government by a vote of 231 to 196, voted the order of the day by 299 to 256, and then adjourned from April 30 until May 28. The Senate rejected a Radical resolution for revision by 214 to 42 votes. Inasmuch as not only the Rallied Republicans, but the Monarchists of the Chamber voted for the Cabinet, the Radicals denounced the Cabinet as reactionary, just as the fallen ministry had been accused of being socialistic.

The municipal elections held in the beginning of May showed little alteration in the strength of parties. In Paris 11 Conservatives, 13 Moderates, and 45 Ultras and Socialists were elected. Conservatives gained a majority in 17 of the principal towns, Rallied Republicans in 3, Moderates in 234, Radicals in 64, Ultra-Radicals in 15, and Socialists in Marseilles, Toulon, Dijon, and 3 others, but in Lyons they lost the ascendancy. M. Coehery presented his plan for satisfying the popular demand for an income tax. Under another name France already had a partial income tax, a heavy one of 4 per cent. levied on French railroad bonds and shares and on all French industrial undertakings and every dividend of a French company, but none was levied on French Government stock or on foreign coupons or dividends. In lieu of the existing tax on French companies alone, M. Coehery proposed one of $4\frac{1}{2}$ per cent. on all coupons or dividends, French or foreign, including French *rentes*, from which he expected to obtain 30,000,000 francs, while French companies would yield 7,000,000 francs and foreign stocks 18,000,000 francs. Houses would have to pay $4\frac{1}{2}$ instead of $3\frac{1}{2}$ per cent., producing 18,000,000 francs; an equal tax on the interest on mortgages, the debtor deducting the tax, would yield an equal sum; and 91,000,000 francs would be raised by a tax on rent, servants, and horses, varying in different towns according to population. The existing house and furniture taxes and the door and window tax were abolished, the tax on land not built upon was reduced, and mortgaged property was released from taxation to the extent of the mortgage in order to avoid double taxation. These remissions amounted to as much as the new taxes would produce. The new house tax was graduated according to the size of families, and for unmarried householders the rent limit of exemption was fixed 50 per cent. higher than for married. The substitution of a tax on the outward signs of wealth for the taxes on doors, windows, and furniture, and the exemption of dwellings renting for less than 400 francs a year in Paris and 30 francs in the country relieved 6,000,000 of the 10,500,000 households in France from taxation and removed from the working classes the motive for excluding air and sunlight and reducing to a minimum their household implements and comforts. The tax on the higher rentals was to be increased by 5 per cent. for every female servant, 10 per cent. for every male servant, and 10 per cent. for every carriage or riding horse. A law to make marriage easier was promulgated on June 24, by virtue of which a man over twenty-five or a woman over twenty-one may marry without the consent of parents after having given formal notice a month beforehand to the unwilling parents, whereas previ-

ously the age of free disposition was thirty for men and twenty-five for women, and three successive respectful notifications were necessary. The first protectionist measure proposed by the Méline ministry, a duty on lead, was rejected by a majority of 26 in the Chamber. The Radicals carried a motion in favor of an early discussion of revision, for Bonapartists, Boulangists, and Royalists also demand revision for their various ends, desiring especially to have the President of the republic elected by universal suffrage. The Duke of Orleans, chafing under the inaction of the Orleanist party, contemplated bringing his cause before the eyes of the public by having working-class voters of Cholet, a constituency in Maine-et-Loire, cast complimentary ballots for him as Deputy. The Royalist committee on hearing of the project showed disapprobation, whereupon the pretender, on May 5, addressed a caustic letter to the Duc d'Audriffet-Pasquier, president of the committee, declaring that he meant and knew how to do his entire duty and was himself the judge of royal dignity, which could not be impaired if in the humblest of the French villages, for all were alike dear, the electors should designate him to serve his country. He desired no longer to play at monarchy, but to make it a reality, which could not be done by the affectation of inert and expectant dignity, standing motionless on distant shores because of the greatness of its traditions and deeming itself too lofty to mix with men and things. He was unable to justify the absurd tradition of an alleged incompatibility between monarchical and elective right, deeming that the two principles tend constantly to blend in a system of compromise. In the same spirit he rejected the advice of those who exhorted him to disavow his cousin, Henri of Orleans, because that prince had accepted from the republic the cross of the Legion of Honor given for his explorations, which would furnish a precedent for good citizens who had been or still were Republicans refusing to receive at his hands, if he were the head of the country, the recompense of their merits and services. The harsh rebuke of the young pretender drove the veteran chief of the Royalist organization to resign his office. The first attack upon the Méline Cabinet, which was defeated by a majority of 53, was occasioned by the Royalist utterances of Bishop Mathieu, of Angers, who in confirming the Duc de Montpensier, brother of Philippe d'Orleans, the pretender, said that France banished its kings and killed its prophets. A second attack made by the Socialists, on the occasion of the removal of the prefect of Tarn that the Bourgeois ministry had appointed to satisfy the Carmaux strikers, was defeated by a majority of 80. M. Doumer's project of an income tax was brought to a vote on July 7, and was rejected by a majority of 283 to 254, M. Méline having previously announced that its adoption would be tantamount to a vote of no confidence. The proposal to tax French *rentes* was subjected to as vigorous an onslaught by M. Rouvier, M. Ribot, and other Moderates as the progressive income tax ever was. The assailants argued that it was a breach of public faith, because ever since the revolution *rentes* had been regarded as exempt from taxation; that it was a financial blunder, defeating the future conversion of $3\frac{1}{2}$ -per-cent. into 3-per-cent. *rentes*, and the 3 per cents. into $2\frac{1}{2}$ per cents., and depreciating the Government credit when additional loans were in prospect, the very announcement having caused a fall in *rentes* of 640,000,000 francs at a time when Government bonds were rising; and that it was impolitic and likely to turn 2,500,000 small holders against the republic. The majority of the Chamber was against the scheme, and though Radicals and Socialists affected to support it in order to force the

ministers to defend and press it, and thus bring about their own fall, the Cabinet succeeded in having the subject postponed, and on July 10 carried a bill renewing for a year the existing taxes by 424 votes to 66. A bill for the protection of sugar refiners raises the import duty on foreign sugars and offers a direct bounty on exportation. The Chamber adjourned on July 11. Three days later, during the national festival, a pistol shot fired at President Faure in his carriage caused alarm until it was discovered that the assailant was an irresponsible lunatic. A cry having been raised against the competition of 800 foreign doctors in France who have obtained their diplomas more easily than French doctors, and against the 1,054 medical students in French schools who were likely to add to the competition, the Minister of Education issued a decree that foreign students if they intended to practice medicine in France would be required to produce the usual baccalaureate diplomas showing studies in science and the classics according to French standards, the regulation not to apply to persons already studying, or to students intending to return home, or to natives of countries that had concluded conventions on the subject.

Visit of the Czar.—The proceedings that attended a visit of the Emperor of Russia in October were intended to impress on the world the binding character of the Franco-Russian understanding and the reality of the military convention that has been supposed to exist since August, 1892. This alliance has enabled France to emerge from her isolation and reassert her influence among the great powers, and has enabled Russia to draw upon the savings of the French people for the pecuniary means that have helped immensely to develop her military and economic resources. In Bulgaria, in Turkey, in Egypt, in Abyssinia, and in China the diplomacy of both countries has spoken with one voice.

The reception given to the Czar by the people of France was more enthusiastic than sovereigns often receive from their own subjects. The festivities attracted 1,500,000 people from the provinces to the capital. At the banquet in the Élysée on Oct. 7 President Faure, in proposing the toast to the Emperor, said that his presence had sealed the bonds uniting the two countries in a harmonious activity and in a mutual confidence in their destinies, and that the union of a powerful empire and a hard-working republic had already exercised a beneficent action on the peace of the world and, strengthened by a proved fidelity, would continue to spread abroad its fortunate influence. The Czar replied that, faithful to an unforgettable tradition, he had come to France to greet the head of a nation to which he was united by such precious bonds, and he begged the President to interpret to the whole of France his sentiment that this friendship could not but have the happiest influence.

The Autumn Session.—Parliament was reopened on Oct. 27. The Budget Committee had reduced the estimates by 10,000,000 francs, leaving a surplus of 9,000,000 francs to be devoted to the redemption of treasury bonds. A scheme of decentralization of local government submitted by M. Barthou enlarges the powers of departmental and municipal councils by dispensing in certain cases with the approval of the prefect. M. Cochery announced the definitive abandonment of the proposed duty on *rentes*, and proposed instead to tax the interest on loans, increase the duty on bonds payable to bearer, raise the transfer duty on registered bonds, and fix the duty on bourse transactions at $\frac{1}{10}$ per cent. The duty on interest on loans is to be enforced by requiring the lender to register within twenty days on pain of losing his right to recover the interest. Casting about for a new

source of revenue to meet the ever-increasing expenses of the state, the ministers took up the project of a Government monopoly of spirits, in connection with which the dangerous spread of alcoholism in France was thoroughly discussed. As a preliminary measure, a bill was submitted requiring alcohol to be tested at Government depots to prevent frauds and deleterious adulterations. The Ministers of Education in the two previous Cabinets had ordered anti-alcoholic instruction to be given in the schools, M. Poincaré's order applying to normal schools being extended by M. Combes to teachers of physiology, hygiene, and chemistry in secondary and elementary schools. The question of the renewal of the charter of the Bank of France, which no Cabinet had ventured to bring to an issue and brave Radical and Socialistic assaults, was made the subject of a bill which could no longer be delayed, as the present charter expires in 1897. The Radicals had a majority over the Government on the question of electing the delegates who elect Senators by universal suffrage, for which the Premier himself had formerly voted. The motion was carried on Nov. 17 by 297 votes against 238, but the matter was shelved by the Senate. An attempt to overthrow the Cabinet by an interpellation on its allowing priests to hold congresses and refusing the same right to professors and school-teachers was defeated on Nov. 12 by 324 votes to 225. Gen. Billot's scheme for forming a colonial army dependent on the Ministry of War was condemned by the army committee, which adhered to the view that it should be controlled by the Ministry of Marine. The extraordinary session was brought to a close on Dec. 20.

Algeria.—The government of Algeria has been assimilated to that of the republic to such an extent that it is regarded as a detached part of France, administered by a civil governor general in accordance with laws passed for Algeria by the chambers or with decrees of the President of the republic. The present Governor General is Jules Cambon, appointed in 1891. The area of the three departments of Algiers, Oran, and Constantine is 184,474 square miles, with a population of 3,636,967 in the civil territory and 487,765 in the military territory; total, 4,124,732, of whom 271,101 were French, 47,564 Jews, 3,554,067 Algerian natives, 18,617 Moors and Tunisians, and 233,353 Spaniards, Italians, Maltese, and Germans. The city of Algiers has 82,585 inhabitants. The native Jews have been admitted to French citizenship. The rest of the indigenous population are Mussulmans. There are 3,481,285 persons engaged in agriculture, of whom 201,541 are Europeans. The latter cultivate hard and soft wheat, barley, oats, and other crops on 417,624 hectares, while the natives till 2,653,487 hectares. The vineyards cover 116,392 hectares, yielding 3,772,778 hectolitres in 1893. Alfa is gathered for export to England for the manufacture of paper, but not so extensively as formerly. Other products are olives, tobacco, flax, colza and other oil seeds, and ramie. There were 360,025 horses, 268,078 camels, 1,193,915 cattle, and 3,829,740 goats in 1893, mostly belonging to the natives, and 9,502,046 sheep, which are sold in France for mutton. Iron and other metals are mined, and a large export of phosphates has sprung up. Some concessions have been annulled on account of corruption. There is a bank of phosphates in the department of Constantine that is said to be 10 feet thick and 50 miles long. In the district of Tebessa are deposits of unknown extent that are 50 feet thick. English companies were formed to work the deposits, and the royalties were fixed by the Algerian officials at 1 franc 50 centimes a ton or less, while the prices charged to French farmers for the phos-

phates were from 70 to 100 francs. The Radicals in the Chamber raised a discussion which resulted in the dismissal of corrupt officials and the cancellation of several concessions. There was a general demand that this valuable product should be preserved for the benefit of the colony and of French agriculture, and export duties were proposed for restricting its shipment to foreign countries. Another suggestion was for the Government to acquire all the rights that had been alienated and work the phosphate deposits as a monopoly, furnishing the quantity required by French and Algerian farmers at 2 or 3 francs a ton. It was estimated that 15,000,000 or 20,000,000 tons could be extracted annually for centuries to come. The total value of the general imports in 1894 was 265,134,026 francs, of which 199,319,483 francs came from France and 65,814,543 francs from foreign countries and French colonies. The total value of the exports was 265,713,285 francs, of which 213,848,297 francs went to France and 51,864,988 francs to foreign countries and French colonies. The special imports were valued at 259,300,000 francs and the special exports at 242,100,000 francs.

The local revenue in 1896 was estimated at 53,015,019 francs, viz., 12,472,649 francs from direct taxes, 11,695,300 francs from registration and stamps, 16,250,100 francs from customs, 5,267,450 francs from monopolies, 3,002,300 francs from domains and forests, 1,022,040 francs from other sources, and 3,305,180 francs *recettes d'ordre*. The budget of expenditures is 74,010,620 francs—in detail, 2,806,450 francs for justice, 11,795,868 francs for the interior, 7,616,691 francs for instruction, 1,491,190 francs for agriculture, 33,169,975 francs for public works, 696,078 francs for other departments, 15,400,068 francs for *régie*, and 1,034,300 francs for repayment. Algeria still costs France about 75,000,000 francs per annum, including 56,000,000 francs for the army, 16,000,000 francs for railroad guarantees, and 3,000,000 francs for other charges.

Tunis.—Though nominally a part of the Ottoman Empire, the regency of Tunis has been administered by France since 1881. The minister resident acts under instructions from the Minister of Foreign Affairs. The resident in 1896 was R. P. Millet. The Bey of Tunis is Sidi Ali, born Oct. 5, 1817, who succeeded his brother on Oct. 28, 1882.

Tunis has an area of about 45,000 square miles and a population estimated at 1,500,000, composed of Bedouin Arabs and Kabyles. The city of Tunis has 153,000 inhabitants. The revenue in 1895 was estimated at 22,480,000 francs, derived from land taxes, customs, monopolies, and State domains. The estimate of expenditure was 22,436,924 francs. The debt was consolidated in 1884 into a perpetual 4-per-cent. *rente* of 6,307,520 francs a year. In 1896 a new loan of 40,000,000 francs was authorized for public works, to be guaranteed by France. When France absorbed Tunis, it had got into financial difficulties through the loans raised by the beys, a small part of the nominal amount of which reached the treasury, and was applied to useful purposes. The bondholders then received 5 per cent., but with the French guarantee they are now content with 3 per cent. The savings from the conversion have regularly been devoted to public works, enabling roads to be made at the rate of 150 miles a year and railroads to be extended. The new loan was intended for roads and railroads and the construction of dams and aqueducts. Though Tunis has prospered under French administration, the benefits have not gone to French colonists or residents, of whom there are only 10,000, against 25,000 Europeans of other nationalities. The city of Tunis contains only 3,000 French inhabitants, whereas there are 7,000 Maltese and 8,000 Italians. The

Italians are largely preponderant, which accounts for the fact of the keen resentment felt still in Italy against the French occupation. French colonists are desired, and inducements are held out to them. Half fares on steamers and railroads are offered to intending settlers. Farms of from 100 to 130 acres are offered at 12 to 30 francs an acre, two years being allowed for payment. Although slavery is abolished, natives may be engaged to work on shares, receiving a hut, implements, and seeds, and handing over three fifths of the crop.

Agriculture is the principal industry. Barley was grown on 472,960 hectares, and wheat on 464,050 hectares in 1894. The product of olive oil in 1893 was 9,617,000 hectolitres. Italians are engaged in the fisheries, producing anchovies, sardines, sponges, and sepia. The total value of the imports in 1894 was 41,922,715 francs, and of the exports 36,932,766 francs. Besides dates, olives are the staple product of the country. France derives 40 per cent. of its olive oil from Tunis. The olives are crushed a second time, yielding wagon grease, and then pressed into fuel bricks with an admixture of turpentine. There are many vineyards, some of large extent with admirable equipments belonging to firms in France. The olive and the grape crops are alike liable to loss or destruction by the sirocco, and grain crops to drought and locusts.

Great Britain in the convention with Tunis of July 19, 1875, waived a perpetual treaty of commerce which places it on the same footing with France, agreeing that either party might call for a revision of the treaty after seven years. In the Anglo-French agreement of Jan. 15, 1896, relating chiefly to Siam and the upper Mekong, England agreed to open negotiations immediately for the revision of the Anglo-Tunisian treaty. A new treaty between Italy and Tunis, concluded in October, 1896, signifies the renunciation of the hopes and designs of Italy against France in Tunis, and removes the standing cause of friction and animosity between the former allies and the incentive that led to the long and disastrous economic difficulties between them. The convention of commerce and navigation gives to Italy the privileges accorded to the most favored nation, and opens the ports of both countries to the coasting vessels of both. France reserves the right to reduce tariff duties at will. A consular convention virtually abolishes the capitulations, and reserves to the Italian consul only the right of appearing in the tribunal when Italians are interested. A convention of extradition puts the Italians in Tunis on the same footing on which they are in other countries, abolishing the right that the consul has hitherto possessed of arresting Italian fugitives from justice without appealing to the tribunals. The Italian schools and hospitals remain under Italian direction, but they pass under the jurisdiction of the local authorities in regard to police and sanitation. All other special privileges enjoyed by Italy are abolished.

The new general tariff, which converts *ad valorem* into specific duties and is a copy of the maximum tariff of France, went into force on Oct. 16 to countries having no commercial treaty. England under her commercial treaty pays 8 per cent. *ad valorem*, and under the most-favored-nation treatment this extends to Austria, Italy, Russia, and Switzerland, all of which had entered into agreements to recognize the right of French imports to exceptionally low tariffs, to be settled later. Subsequently Germany, Holland, and Spain made like arrangements.

Indo-China.—The dependencies of Cochinchina, Tonquin, Annam, and Cambodia have been brought partly under the central control of a Superior Council, which fixes the budget of Cochinchina.

China, and advises as to the budgets of the protectorates. They have been united in a customs union since 1887.

Cochin-China is a French colony, represented by one Deputy in the Chamber. It has an area of 23,082 square miles, and a population estimated at 2,034,453, mainly Annamites, with a sprinkling of Cambodians, Malays, and Malabarians and numerous Chinese immigrants. There are fewer than 3,000 French. Over four fifths of the people are Buddhists. Rice is the chief product, and it is exported to China, Java, and Europe. Other exports are cotton, pepper, fish, and copra. The total value of the imports in 1894 was 36,695,460 francs, and of the exports 87,650,880 francs. There were 1,830 French troops and 2,800 Annamite soldiers in 1894. There are 51 miles of railroad and 1,840 miles of telegraphs. The local revenue in 1895 was estimated at \$11,226,595. The expenditure of France for 1896 is fixed at 3,158,654 francs.

Cambodia, has an area of 38,600 square miles and a population of 1,500,000 or more. King Norodom accepted a French protectorate in 1863. The budget for 1895 was \$1,736,600. Fish, cotton, beans, tobacco, rice, betel, and silk were exported in 1894 to the amount of \$3,320,949, while the imports were \$398,564 in value.

A French protectorate was established over Annam in 1884. Thanh Thai was made King in 1889. The area of Annam proper is 27,020 square miles, and of the dependent territories 19,300 square miles. There are between 2,000,000 and 5,000,000 inhabitants, Annamites in the level, cultivated country, and Moïs in the hills. French officials supervise the administration of the Annamite functionaries. There are 600 French and 3,000 native soldiers. The products are sugar, cinnamon, rice, corn, areca nuts, tobacco, betel, manioc, bamboo, timber, silk, caoutchouc, dyes, and medicinal plants. Coal is mined by a French company. The imports in 1894 amounted to 4,683,979 francs, and exports to 3,066,105 francs. There are 420,000 native Catholics.

Tonquin, which was annexed by France in 1884, has an area of 34,740 square miles, with an estimated population of 9,000,000. The native Roman Catholics number 400,000. The chief crop is rice, of which 1,060,000 piculs were exported in 1892, mostly to China. Other products are silk, cotton, pepper, sugar, oils, and tobacco. Coal mines are worked by Frenchmen. The imports in 1894 were valued at 30,775,645 francs, and the exports at 15,001,295 francs. The trade with Yunnan by way of the Red river amounted to 5,000,000 francs for exports and 3,200,000 francs for imports in 1894. In 1895 the total trade increased to 7,500,000 francs of exports to Yunnan, mainly cotton goods, and 4,500,000 of imports. The local revenue of Annam and Tonquin in 1895 was estimated at 7,074,000 dollars. The expenditure of France for 1896 was 25,250,000 francs. The native troops in 1892 numbered 6,500 and the French garrison 12,055. The railroad from Phulong to Langson, 64 miles, is to be extended to Nacham, on the frontier of the Canton province of China. A loan of 80,000,000 francs for Tonquin was authorized in January, 1896.

The rainfall in Indo-China was so meager that partial famine afflicted Tonquin, Cochin-China, and Cambodia in 1896. There was not more than two thirds of a crop of paddy. Annamite parents were reduced to selling their children, and pillage increased to an alarming extent. The Chinese pirates, who had been pacified by the conciliatory policy of Gov.-Gen. de Lanessan, had already resumed their hostilities, owing to the change of policy made after his recall in 1894. He had arranged with the court of Annam for the use of its police to drive the pirates into the mountains, then armed the inhabitants of the

delta so that they could defend themselves against raids, and afterward negotiated with the pirate chiefs, one of whom surrendered before M. de Lanessan left, and others followed this example and settled on lands assigned to them near Langson to follow a peaceful and useful mode of life. When a policy of force was substituted for one of conciliation the acts of violence and robbery, which had almost ceased, became frequent again.

FRIENDS. A review of the statistics of the Society of Friends (orthodox) in the United States, published by the "American Friend," Philadelphia, shows that the number of members in the 14 yearly meetings increased 2,278 during the year covered by the reports for 1896, making the whole present number 90,436; while in all the rest of the world outside of America there were 19,863 Friends, making a total of 110,299. Aside from the Philadelphia Yearly Meeting, of which the reports are not at hand, there are in Great Britain and America 1,618 enrolled ministers, 1,293 regularly established meetings, and 988 Bible schools, with a total enrollment of 87,003 attendants. Further, Friends are maintaining 19 mission stations in Japan, China, India, Madagascar, South Africa, Syria, and Turkey, 7 in Mexico, 8 among the American Indians, 2 in Jamaica, and 2 in Alaska, with 118 resident missionaries and 4,004 members, 925 of whom are included in the numbers already cited. The reports of the various missionary organizations and committees given in the American meetings show that \$30,311 were spent in maintenance of this mission work in 1895. The more prominent features in the religious life of the orthodox Friends during 1896 were increased interest in the educational institutions, with movements to augment their influence and efficiency, and a more vigorous prosecution of evangelistic work, particularly in the new fields of the far West, which has also been more fruitful of results.

The Friends of the Unitarian order in the United States have 7 yearly meetings, of which that of Genesee includes a few meetings in Canada. They number, according to the latest enumeration, 115 ministers, 201 churches, and 21,992 members. Previous to 1896, and beginning with 1890, 3 general meetings had been held for the consideration of the interests, principles, and work of the society, at Fall Creek, Ind., in 1890; Lincoln, Va., in 1892; and Chappaqua, N. Y., in 1894. A fourth meeting of the kind was held at Swarthmore, Pa., Aug. 19 to 26, and was attended by between 2,000 and 3,000 persons. Four of the sessions held during seven days were devoted to the First-day schools of the society, 2 to its secular schools, 3 to religious topics, and 6 to philanthropic work. The discussions concerning Sunday schools were participated in by many young men and women, members of those institutions. At one of the sessions the Friends' adult school work in England was described by John William Graham. Among other special subjects considered were the "Three Needs of the Church," viz.: Increased consecration to aggressive work, a stronger and more effective ministry, and better modern knowledge of the Bible; "The Ministry"; and "Past and Future of the Society of Friends."

The body of Friends popularly called the "Wilburites," with 7 yearly meetings, adhere to the old ways, and oppose all the recent changes and innovations which have found a footing in some of the other branches. They return 38 ministers, 53 churches, and 4,329 members.

The Primitive Friends have 11 ministers, 9 churches, and 232 members.

The total numbers of American Friends, as given at the end of the year 1896, are 1,314 ministers, 1,087 churches, and 116,989 members.

British Friends.—The tabular statement of membership in the London Yearly Meeting shows a growth for each year about equal to that of the population at large. The growth, however, is not by that natural increase that might be expected. Friends record each year about 150 births and about 250 deaths, a net loss of 100 heads, which has to be made up by acquisitions from outside before any increase can be chronicled. The result is that of every three persons who enter the society only one enters by the gate of birth: for those admitted during the middle periods of life appear in the list only at death. The children of mixed marriages, however, are not admitted at birth. One of the principal sources of supply to the membership is found in those associations of the best of the workmen known as adult schools, in which 42,000 pupils were returned, two thirds of them adults.

The session of the London Yearly Meeting began May 21. At the first sitting a letter was received from the woman's meeting stating that a woman Friend wished to visit the body. The woman, a young lady Friend, was received, and made an address full of religious fervor, which was very acceptable to the meeting. It is not unusual for the Yearly Meeting to be visited and addressed by woman friends, but the visitation generally takes place at a later stage of the proceedings, and this was the first instance in which it has occurred at the opening session. A woman visiting the meeting thus has first to present her call or conviction of her duty to do so to the Woman's Meeting and receive its sanction. Perhaps the most important action of the Yearly Meeting was the granting, after long and deliberate consideration, of the "woman's charter," whereby the Yearly Meeting will henceforth consist of both men and women, and persons of either sex will have an equal voice in the decisions reached. It is understood, however, that both separate and joint meetings will continue to be held. A request of several Friends was granted to be permitted to hold meetings for young Friends for "the exposition of the positive message of Quakerism to the world to-day and the spiritual meaning of the teaching for the souls of men." A minute was sent down to the subordinate meetings asking them to consider what new effort they can make for the benefit of those around them. The holding of the "preparative meetings," which now takes place monthly at the close of a Sunday morning for worship, was authorized to be made on weekday evenings; and the meetings may be occasions for the reading and discussion of papers of congregational interest. A proposition was offered, consideration of which was deferred, to authorize the preparation beforehand of a programme of the

discussion "On the State of the Society" by a committee, who should have a few papers written, fix the time for the discussion, and give notice of it. A discussion on social purity resulted in the meeting's resolving that a letter on the subject be sent down to parents.

The annual meeting of the Friends' Foreign Mission Association was held in London, May 25. J. B. Hodgkin presided. A letter was read from the committee of the Church Missionary Society asking sympathy and prayer for the three years' centenary effort of that society. It was not the aim of the scheme to magnify any particular agency. Diversity among the Christian churches was not inconsistent with unity of purpose and of guidance. The chairman referred to this letter as one more testimony to the fact that real missionary work broke down the barriers, and showed the heathen the real unity of Christendom. The treasurer of the society reported that the year's income had been £12,771, including £1,837 in legacies and special gifts, while a further sum of £2,000 from those sources had been placed in reserve. The expenditures had been £3,560 for Madagascar, £1,664 for medical work (toward which the London Missionary Society had refunded £500), £4,979 for India, and £1,193 for China, with £896 for home expenses and £182 for life assurance. Last year's deficit of £1,240 had been reduced to £405. The annual report represented that the inauguration of French rule in Madagascar appeared to have had beneficial results in many ways. The former oppression and injustice were ended, laws against the sale of intoxicants had been re-enacted, full religious liberty was promised and the Government was considering means of mitigating, if not abolishing slavery. The French authorities had uniformly treated the missionaries with courteous consideration, the assistance rendered by them to the French sick and wounded having doubtless contributed to this kind feeling, and were now using and paying for the greater part of the missionary hospital. A deputation of Protestants from Paris had produced an excellent impression on the natives. All the missionaries of the association were now in the capital, where the schools were as largely attended as ever; but steps were being taken to revive the country congregations. A Foreign Missionary Conference, held at Darlington in September, was attended by nearly 400 delegates from all parts of the United Kingdom and Ireland. Papers were read upon the history of Friends' mission work, methods of conducting the work, and other kindred subjects. One of the papers, contrasting the state of the society now and sixty years ago, maintained that more harmony prevailed now, and less disposition to be contentious about nonessentials.

G

GAME-PRESERVING IN THE UNITED STATES. It is only within very recent years that attention has been given in any notable degree to the preservation of the larger game animals. It is true that most of the States have enacted game laws to the extent of making a close season. These have in the main been carelessly enforced till very lately, and the action of the States has been negative rather than positive except in the work of their fish commissions. Attempts have been made from time to time to interest the legislatures of different States in the establishment of game preservation with a view to the breeding of the large wild animals as well as of game birds; but they have not been effective except in New York, and

there only in a limited degree. The United States, too, has made some praiseworthy experiments in the same direction. The four national parks in Colorado, the magnificent Yellowstone Park in Wyoming, and the Yosemite Park in California are illustrations of far-sighted public spirit. It is only in the latter two, however, that any careful attempt has been made to propagate and preserve the noble game animals which had been so rapidly disappearing from the limits of the United States. The importance of human effort given to the salvation and not to the destruction of the most interesting forms of the *feræ naturæ* has for a good while been seen to be indispensable to such animals as the buffalo, the moose, and the elk, once

so abundant in the land. The care of the United States at the Yellowstone and Yosemite Parks has, however, been set at naught by lawless poaching in spite of their military police. The buffalo and elk herds there will soon be annihilated, and it has been recommended that the buffaloes especially shall be distributed among the private parks, where they can be more effectively guarded. So, after all, it will be to private enterprise in game-preserving that valuable results will be due in the augmentation of the finer types of wild animals; and that enterprise has been very encouraging within the last decade especially, though something had been done previously. Deer parks had been by no means uncommon on the country estates of the wealthy in all times of our history, but the first well-planned attempt at game-preserving seems to have been made about forty years ago by the late Judge J. D. Caton at Ottawa, Ill. An enthusiastic naturalist and sportsman, he brought together in one park nearly all the varieties of our native game except the moose and caribou, which only thrive under conditions of a wooded country and an extended range. This experiment was imitated in a small way, but it was not till the magnificent results of the late Austin Corbin's enterprise in the establishment of the Blue Mountain Forest at Newport, N. H., were made evident that there was a noticeable movement in this direction.

Blue Mountain Forest is not surpassed in extent by any preserve in the United States. In the number and variety of its game, the care with which all the rightful conditions of habitat are reproduced, and the vigilant interest which watches every detail of the wild life harboring there, it ranks, though only eight years old, among the foremost game preserves of the world. It lies near Newport, N. H., and consists of 36,000 acres inclosed by a woven-wire fence 8 feet high. The tract, oblong, about 12 miles by 5, is nearly bisected by a mountain range which rises to an altitude of 3,000 feet. The densely wooded slopes and the second-growth forests of the lowlands furnish an admirable covert for the more timid game, while in the extensive meadows graze the buffalo and elk herds under happy conditions. The environment is so natural and extensive that all the animals live as in their native wilds, unconscious of captivity, and the range is such that many of them probably never have looked on the face of man. This may be specially said of the moose, which is one of the shyest of all wild animals and secludes itself on the mountain acclivities amidst the most obscure thickets. The inhabitants of the park get their own living as in a state of aboriginal Nature, the buffalo only excepted. The moose and elk feed on grass, leaves, and twigs in summer, while in winter they eke out subsistence by devouring bark and moss. On the other hand, the buffalo (properly the bison) is fed during the extreme cold season with hay and green cornstalks from the silo. Shelter, too, is provided for the buffalo alone, but the well-grown animal disdains the winter shed, preferring to stand all the fury of the elements. The deer herds, including the red deer or stag and the roe and fallow deer of Europe, as well as the white-tailed or Virginian variety, find no difficulty in securing their own food in winter. The same may also be said of the wild swine, which were originally imported from the German Black Forest. It has been the fundamental idea of the management of this great preserve to give its denizens the most favorable advantages of a wild life and protection against the violence of man; otherwise to leave them absolutely to themselves. The wisdom of this treatment has been shown in the immense increase of the wild stock in all its kinds. The forest was inclosed in

1889, and the original progenitors put in it consisted of 25 buffalo, 60 elk, 12 moose, 70 deer of 4 varieties, 18 wild hogs, 6 caribous, and 6 antelopes. The latest report (1896) shows buffalo, 75, with an expectation of 100 at the spring colony; elk, about 1,200; deer, 1,200; moose, about 150; and wild swine, 1,000. The antelopes and caribous died, though there appeared to be no reason for their failure to thrive. But on the whole the increase has been so extraordinary as to justify the belief that we can multiply all the types of our native fauna *ad libitum*. The Corbin buffalo herd alone has shown itself so healthy and prolific that it would be able gradually to spare breeding stock for all the other parks asking for them. During the winter of 1896 indeed it contributed 20 of these animals to Van Cortlandt Park, New York city. Aside from the breeding of indigenous varieties, the fruitful adaptation of some that belong to the Old World, such as the stag or red deer and the German wild boar, a type of swine markedly different from our domestic pig, promises interesting results in animal stockbreeding and increase in the kinds of our large game.

Other Preserves.—Shortly after the declared success of the Austin Corbin experiment at Blue Mountain Forest, similar enterprises were begun on a goodly scale and in different sections of the country, undoubtedly inspired by that noble project. Among these a few may be mentioned. Litchfield Park (named for its owner, Mr. E. H. Litchfield) is an inclosure of 9,000 acres near Tupper Lake, in the Adirondacks, established in 1893. This picturesque tract is diversified by 5 small lakes and the preserve is mostly devoted to the cervine tribes, 2 varieties of the smaller American deer and the wapiti or elk. There are at present somewhat more than 200 animals in the park, so far as can be estimated, and the number is rapidly increasing. Dr. W. Seward Webb has also a game preserve of 9,000 acres in the Adirondacks known as He-ha-sa-ne Park, founded about five years ago, which has a present showing of 16 moose, 35 elk, and 275 deer, all varieties breeding well. Besides the many club preserves in the Adirondacks, there is a noble park of 30,000 acres belonging to the Adirondaek Timber and Mineral Company, which since its inclosure a year ago has increased its stock by 500 through purely natural laws. The presence of a fenced animal park seems at once to attract to it the wild inhabitants of the woods for many miles about.

In the Catskills, New York, Mr. George J. Gould's preserve of 600 acres at Furlough Lodge confines about 70 elk and as many deer, and the herds are swiftly and healthily increasing. Mr. Rutherford J. Stuyvesant's game park at Allamuchy, N. J., includes 4,000 acres under fence, and is stocked with 40 elk and 200 Virginian and black-tailed deer, which are propagating their numbers rapidly, while the same story can be told of his interesting colony of beavers. Another notable New Jersey preserve is that of Mr. C. C. Worthington, who has 3,500 acres in a ring fence near Delaware Water Gap, which has within its bounds more than 600 deer, besides a small colony of elk. Among other enterprises that may be cited is that recently inaugurated by M. Menier, of chocolate fame, at Anticosti island, off the eastern coast of Maine. A tract has been fenced off 40 miles by 35 miles, and this is now stocking with moose, elk, caribou, deer, and buffalo. In other parts of the United States parks specially worth notice are those of the Page Fence Company at Adrian, Mich., where a small buffalo herd is steadily growing in numbers, and of the St. Louis Park and Agricultural Company at Springfield, Mo., an enterprise of very recent inauguration. This preserve of 5,000 acres already makes a splen-

did showing of elk, deer of 4 varieties, including the European stag, the fallow deer, and Angora goats, with a few buffalo.

In most, if not all, of these animal preserves as much attention has been given to the introduction of game birds as to that of quadrupeds. The English pheasant, the Mongolian pheasant, the black cock, and that giant of the grouse order, the capercaillie, have been in some cases successfully bred, though the work has been discouraging on account of the destruction wrought by owls, foxes, pine martens, and fishers among the young of the newly introduced species. An even more interesting experiment than that of establishing prosperous colonies of these foreign birds is the attempt to reintroduce in the Northern and Eastern States the wild turkey and the pinnated grouse or prairie elicken. Both these noble game birds were once indigenous to the whole Atlantic coast section, and there seems to be no reason why with patient and intelligent effort the regions once stocked by Nature should not be again stocked by art. Enough has been achieved in this line to give certainty to the future, and we may look forward to the time when the forests of the Northern and Eastern States will furnish a much richer variety of fine game birds through the efforts of wealthy owners of game preserves. No private preserve can ever save more than a moiety of the birds for the proprietor, unless all their wings are clipped.

The game parks which have been specially mentioned are only a few amid a great number of smaller ones. Long Island, northern New York, the mountainous part of New Jersey, and northern Pennsylvania have scores of parks from 200 to 2,000 acres where the art of game preserving and propagation is pursued with science and patience. The revelation of possibilities given by the Corbin preserve in New Hampshire has been of great value in awakening public and private interest and in spurring rivalry. It is now beyond question that the ravages of wasteful shooting which a score of years ago threatened to depopulate the country of some of its noblest game fauna will be obviated. Experience has shown what can be done in restoring affluence of animal life, and to do it has become an enthusiastic fad among rich men. What can be easily effected has been shown in Vermont. Ten years ago there were no deer in the State. A few were imported from the Adirondaeks and from Maine, and a law was passed forbidding their shooting till 1900. Now the deer swarm so thickly in the mountain sections that they herd with the cows, destroy the crops, and compel the farmers to clamor for an immediate repeal of the "close" law.

GEOGRAPHICAL PROGRESS AND DISCOVERY. The Arctic Regions.—The great event of the year was the successful termination of Dr. Fridtjof Nansen's arctic expedition, begun in 1893 (see "Annual Cyclopædia" for 1893, page 335). His theory of arctic currents and the course that should be taken to carry a ship directly across the pole, founded in part on the finding of the much-talked-of "Jeannette" relics on the western coast of Greenland as well as on the peculiar construction of his ship, are explained in the "Annual Cyclopædia" for 1890, page 361.

It was announced in February that Dr. Nansen had discovered the north pole and was on his way back to Europe. The news came from Siberia and was understood to have been sent by Peter Kouchanareff, who lives near the mouth of the Lena river and had charge of the dog supplies for the expedition. The correctness of the information was doubted, though some of the explorers who were interviewed saw nothing improbable in the story; but there had been other reports (one published in

Paris in April, 1895) that Dr. Nansen had found the north pole, that it was situated on a chain of mountains, and that he had planted the Norwegian flag there. Another, received in September, 1895, in London, from the trading station of Angmagsa-

FRIDTJOF NANSEN.

lik, on the east coast of Greenland, said that a ship, supposed to be Dr. Nansen's "Fram," had been sighted at the end of July, stuck fast in an ice drift.

A conjecture that gained some credence was that the explorer seen by the New Siberian islanders and supposed to be Dr. Nansen might be John M. Verhoeff, who was lost in Greenland from the Peary party in 1892, and was believed by some of the party to have been alive when they left Greenland and to have had the design of living among the Eskimos and making independent explorations.

But the most serious doubt arose from a story that was published in regard to the supposed relics of the "Jeannette," the finding of which at Julianehaab, on the western coast of Greenland, led Dr. Nansen to believe that they had been carried from the ocean north of Siberia across the pole; that therefore there must be a current taking that course, and that a ship constructed so that it could not be wedged in the ice might enter the current and be carried over the same course that the relics had traveled. After the report of his return it was made public that the genuineness of these relics was open to question. The story was as follows:

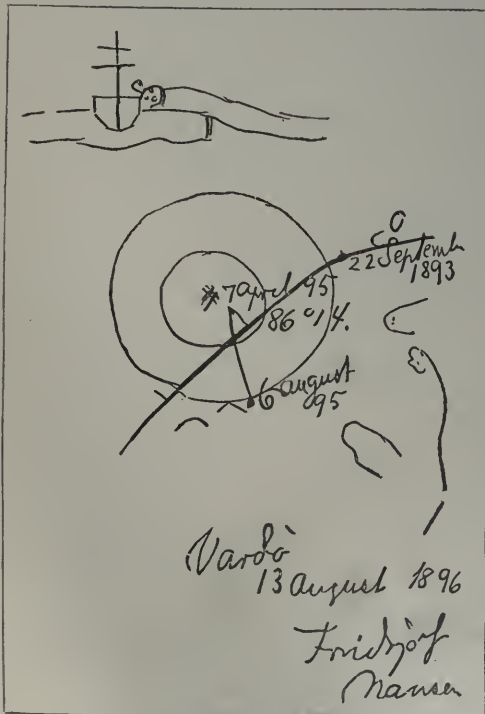

In 1883, the year before the discovery of the relics by the Danish governor of Julianehaab, the United States steamer "Yantic" went to Greenland as part of the unfortunate Greely relief expedition of that year. The "Yantic" went as far north as Littleton island, near which her consort, the "Proteus," was crushed in the ice at the mouth of Smith Sound. Under rigid examination by officers of the Smithsonian Institution, her sailors united in the statement that some of the younger officers of the ship, the midshipmen or ensigns, had made up a lot of alleged relics and put them on an ice floe near the ship to fool some of their superior officers. It was simply intended as a naval-academy prank, a boyish joke. The floe drifted off, the "Yantic's" officers did not find the relics, but, as subsequently appeared, they fell into the hands of the Eskimos, and passed thence to the Danish governor. After the joke had miscarried, its seriousness became apparent to the perpetrators, and for their own safety and to avoid probable court-mar-

tial they pledged to secrecy all the sailors who knew about the affair.

The Smithsonian communicated these facts to the Danish Government, and this may account for the disappearance of the relics after their exhibition at Amsterdam, but it seems the knowledge never reached Dr. Nansen. It is certain that these relics were the main support of his theory of a current. He refused to entertain doubts of the verity of these relics, and declared "that there should be any mistake or deceit is certainly much more improbable than the drift of a floe from Siberia to Greenland, which is certainly not at all improbable, seeing that a great many objects known must have drifted and constantly do drift the same way." The above-mentioned facts seem to speak for themselves and need no further testimony.

The story did not receive credence everywhere, and the Geographical Society of San Francisco appointed a committee to examine into the matter. As the relics had been destroyed and no photographs or detailed descriptions of them were to be found, it was impossible to reach absolute certainty; but the report of the committee, signed by Prof. George Davidson and Henry Lund and published in June, was in favor of the genuineness of the relics, and expressed the belief that Nansen would return successful.

In August dispatches were received that the explorer had arrived at Vardo, on the northern coast of Norway, on board the steamer "Windward," which went to Franz Josef Land to carry supplies to the Jackson-Harmsworth party. No very complete report of the voyage has been published, but brief accounts were given to the newspapers. Perhaps the most important result is the discovery

DR. NANSEN'S SKETCH SHOWING HIS ROUTE.

that there is a great deep sea around the pole, instead of the shallow ice-filled water heretofore supposed, and that this sea is comparatively warm

beneath, being above the freezing point at a depth exceeding 100 fathoms. Dr. Nansen reached a point nearly 3 degrees nearer the pole than has been attained by any other explorer, Lockwood and Brainerd having reached 83° 24'.

His account of his journey, as published in the London "Chronicle," follows:

"The 'Fram' left Jugor strait Aug. 4, 1893. We had to force our way through much ice along the Siberian coast. We discovered an island in the Kara Sea, and a great number of islands along the coast to Cape Cheljuskin. In several places we found evidence of a glacial epoch, during which northern Siberia must have been covered by inland ice to a great extent.

"On Sept. 15 we were off the mouth of the Olenek river, but we thought it was too late to go in there to fetch our dogs, as we would not risk losing a year. We passed the New Siberian islands Sept. 22. We made fast to a floe in latitude 78° 50' north, and in longitude 133° 37' east. We then allowed the ship to be closed in by the ice.

"As anticipated, we were gradually drifted north and northwestward during the autumn and winter from the constantly exposed and violent ice pressures, but the 'Fram' surpassed our expectations, being superior to any strain. The temperature fell rapidly, and was constantly low, with little variation, for the whole winter. During weeks the mercury was frozen. The lowest temperature was 62° below zero. Every man on board was in perfect health during the whole voyage. The electric light, generated by a windmill, fulfilled our expectations. The most friendly feeling existed, and the time passed pleasantly. Every one made pleasure his duty, and a better lot of men could hardly be found.

"The sea was up to 90 fathoms deep south of 79° north, where the depth suddenly increased, and was from 1,600 to 1,900 fathoms north of that latitude. This will necessarily upset all previous theories based on a shallow polar basin. The sea bottom was remarkably devoid of organic matter. During the whole drift I had good opportunity to take a series of scientific observations, meteorological, magnetic, astronomical and biological, soundings, deep-sea temperatures, extra means for the salinity of the sea water, etc.

"Under the stratum of cold ice water covering the surface of the polar basin I soon discovered warmer and more saline water, due to the Gulf Stream, with temperatures from 31° to 33°. We saw no land and no open water, except narrow cracks, in any direction. As anticipated, our drift northwestward was more rapid during the winter and spring, while the northerly winds stopped or drifted us backward. On June 18, 1894, we were on 81° 52' north, but we drifted southward only. On Oct. 21 we passed 82° north. On Christmas Eve, 1894, latitude 83° north was reached, and a few days later 83° 24', the farthest north latitude previously reached.

"On Jan. 4 and 5 the 'Fram' was exposed to the most violent ice pressure we experienced. She was then firmly frozen in ice of more than 30 feet of measured thickness. This floe was overridden by great ice masses, which pressed against the port side with irresistible force and threatened to bury, if not to crush her. The necessary provisions, with the canvas kayaks and other equipments, had been placed in safety upon the yacht. Every man was ready to leave the ship if necessary, and was prepared to continue with the drift, living on the floe. But the 'Fram' proved even stronger than our faith in her. The ice was piled up high above the bulwarks, she was broken loose and slowly lifted out of her bed in which she had been frozen, but not

the slightest sign of a split was to be discovered anywhere in her. After that experience, I consider the 'Fram' almost equal to anything in the way of ice pressure. Afterward, we experienced nothing more of the kind, but our drift was rapidly continued north and northwestward.

and I could not easily have found a better companion in every respect. The leadership of the expedition on board the 'Fram' I left to Capt. Sverdrup. With my trust in his qualifications as a leader, and his ability to overcome difficulties, I have no fear but that he will bring all the men

"As I now with certainty anticipated that the 'Fram' would soon reach her highest latitude north of Franz Josef Land, and that she would not easily fail to carry out the programme of the expedition, viz., to cross the unknown polar basin, I decided to leave the ship in order to explore the sea north of her route. Lieut. Johansen volunteered to join me,

safely back, even if the worst should happen and the 'Fram' be lost, which I consider improbable. "On March 3 we reached 84° 4' north. Johansen and I left the 'Fram' March 4, 1895, at 83° 59' north and 102° 27' east. Our purpose was to explore the sea to the north and reach the highest latitude possible, and then to go to the Spitzbergen via Franz

Josef Land, where we felt certain to find a ship. We had 28 dogs, 2 sledges, and 2 kayaks for possible open water. The dog food was calculated for thirty days and our provisions for one hundred days.

"We found the ice in the beginning tolerably good traveling, and so made good distances, and the ice did not appear to be drifting much. On March 22 we were at 85° 10' north. Although the dogs were less enduring than we hoped, still they were tolerably good. The ice now became rougher and the drift contrary. On March 25 we had only reached 85° 19' north, and on March 29, 85° 30'.

"We were now evidently drifting fast toward the south. Our progress was very slow. It was fatiguing to work our way and carry our sledges over the high hummocks constantly being built up by the floes grinding against each other. The ice was in strong movement, and the ice pressure was hard in all directions. On April 3 we were at 85° 50' north, constantly hoping to meet smoother ice.

"On April 4 we reached 86° 3' north, but the ice became rougher until on April 7 it got so bad that I considered it unwise to continue our march in a northerly direction. We were then at 86° 14' north. We then made an excursion on *skis* farther northward in order to examine as to the possibility of a further advance. But we could see nothing but ice of the same description, hummock beyond hummock, to the horizon, looking like a sea of frozen breakers. We had had low temperature, and during the early three weeks it was in the neighborhood of 40° below zero. On April 1 it rose to 8° below zero, but soon sank to 38°. When a wind was blowing in this temperature, we did not feel comfortable in our too thin woolen clothing. To save weight, we had left our fur suits aboard ship. The minimum temperature in March was -49° and the maximum was -24°. In April the minimum was -38° and the maximum -20°. We saw no signs of land in any direction. In fact, the floe of ice seemed to move so freely before the wind that there could not have been anything in the way of land to stop it for a long distance off. We were now drifting rapidly northward.

"On April 8 we began our march toward Franz Josef Land. On April 12 our watches ran down, owing to the unusual length of the day's march. After that date we were uncertain as to our longitude, but hoped that our dead reckoning was fairly correct. As we came south we met many cracks, which greatly retarded our progress. The provisions were rapidly decreasing. The dogs were killed one after the other to feed the rest.

"In June the cracks became very bad, and the snow began falling rapidly. The dogs and sledge runners broke through the superficial crust and sank deep in the wet snow. Only a few dogs were now left and progress was next to impossible. But, unfortunately, we had no line of retreat. The dogs' rations, as well as our own, were reduced to a minimum, and we made the best way we could ahead. We expected daily to find land in sight, but we looked in vain. On May 31 we were in 82° 21' north, and on June 4 in 82° 18' north, but on June 15 we had been drifted to the northwest to 82° 26' north. No land was to be seen, although, according to Payer's map, we had expected to meet with Petermann Land at 83° north. These discrepancies became more and more puzzling.

"On June 22 we had a last shot at a bearded seal, and as the snow became constantly worse I determined to wait. We now had a supply of seal meat until it melted away. We also shot 3 bears. We had only 2 dogs left, which were now well fed upon meat. On July 22 we continued our journey over tolerably good snow. On July 24, when about 82° north, we sighted unknown land at last, but the

ice was everywhere broken into small floes, the water between being filled with crushed ice in which the use of the kayaks was impossible. We therefore had to make our way by balancing from one ice piece to another, and we did not reach land until Aug. 6, at 81° 38' north and about 63° east longitude.

"This proved to be entirely ice-capped islands. In kayaks we made our way westward in open water along these islands, and on Aug. 12 we discovered land extending from the southeast to the northwest. I still could find no agreement with Payer's map. I thought we were in longitude east of Austria Sound, but if this was correct, we were now traveling straight across Wilczek Land and Dover glacier without seeing any land near us.

"On Aug. 2 we reached a spot in 81° 13' north and 56° east, evidently well suited to wintering, and as it was now too late for the voyage to Spitzbergen I considered it wisest to stop and prepare for winter. We shot bears and walrus and built a hut of stones, earth, and moss, making the roof of walrus hide, tied down with rope and covered with snow. We used the blubber for cooking, light, and heat. The bear meat and the blubber were our only food for ten months. The bear skins formed our beds and sleeping bags. The winter, however, passed well, and we were both in perfect health. Spring came with sunshine and with much open water to the southwest. We hoped to have an easy voyage to Spitzbergen over the floe of ice and the open water. We were obliged to manufacture new clothes from blankets and a new sleeping bag of bear skin. Our provisions were raw bear meat and blubber.

"On May 19 we were at last ready to start. We came to open water on May 23 in 81° 5' north, but were retarded by storms until June 3. A little south of 81° we found land extending westward and open water, which reached to the northwest, along the north coast. But we preferred to travel outward over the ice through a broad sound.

"We came, on June 12, to the south side of the island and found much open water trending westward. We sailed and paddled in this direction in order to cross to Spitzbergen from the most westward cape, but Payer's map was misleading."

Explorer Jackson thus describes the meeting with Nansen: "On June 17 I met Dr. Nansen 3 miles out on a floe, south-southeast of Cape Flora, and under most extraordinary circumstances. He had wintered in a rough hut within a mile or two of our northern limit in 1895, and this spring we unwittingly came within a few miles of his winter quarters."

The "Fram" reached Tromsø Aug. 20, having drifted from a point 85-95° north. It reached open water Aug. 13, and the next day called at Danes island, where Prof. André had been waiting for a favorable wind before attempting his proposed balloon trip across the arctic regions. The "Fram" still had provisions sufficient for three years. The deepest sounding taken was 2,185 fathoms. In the highest latitude reached birds were seen, but no other organic life was visible. The lowest temperature was 62° below zero.

In regard to the results of Nansen's expedition, Dr. Supan says, in "Petermann's Mitteilungen": "Nansen himself calls it successful, and such it was in the highest degree. That the mathematical pole was not reached matters little; the task of bringing to light a part of the arctic region hitherto wholly unknown was fully performed. It has rectified the notion heretofore entertained that the polar sea was a shallow basin filled with islands. A few islands were discovered in the southern part near the coast; other parts appeared to be landless.

While drifting northward Nansen took soundings of 3,000 to 3,500 metres. The fact that there is a sudden increase of depth north of the seventy-ninth parallel above the Asiatic coast is evidence of deep water at the pole."

Great interest has been felt in the project of S. A. Andr e to cross the polar sea in a balloon. The Swedish Academy of Science and the Swedish Society of Anthropology and Geology recommended Prof. Andr e's plan and promised to bear a share of the expense. King Osear of Sweden, Alfred Nobel, and Oscar Dickson also subscribed for the costs of the expedition, and the Foreign Ministry of Sweden sent a notice to Russia, Denmark, Great Britain, and the United States with reference to the projected balloon voyage to the north pole, asking the co-operation of the countries whose territories have coasts on the polar seas: they also asked these countries to distribute thousands of leaflets asking for information from any one who might chance to secure it, of the time the balloon was seen and the direction of the wind at the time.

The balloon was made in Paris, and combines extreme lightness with great durability. It contains 4,500 cubic metres and has a diameter of 22.5 metres; it is provided with a waterproof covering. It was taken to Spitzbergen and filled, but Prof. Andr e was obliged to defer the expedition till another year, having waited in vain this summer for favorable conditions until it was too late to venture.

Discoveries in Franz Josef Land have been made by the Jackson-Harmsworth expedition, which went there in 1894 under the lead of F. G. Jackson. The story of their experiences in 1894-95 was told by their London representative as follows:

"It appears, then, that on Sept. 7, 1894, the expedition safely made the coast of Franz Josef Land, in the locality of Cape Flora. On the 10th of that month they began to discharge the ship's valuable and carefully selected cargo, and two days later the ice closed round the 'Windward' and she was frozen in for the winter. By November the two large Russian log houses had been built, treble-walled houses, which had been taken from England, erected, and all the stores, instruments, equipments, dogs, and ponies safely landed and housed. Everything had been done, as we had hoped would be done, and the expedition was established in comfort and completeness at its base on the coast of Franz Josef Land. The crew, it seems, remained on the ship, but while separated from the exploring party as to its domicile, it shared in the results of the activity of Mr. Jackson and his colleagues in procuring fresh meat for food. No fewer than 60 polar bears were killed.

"On Feb. 23 the sun returned, and Mr. Jackson and his small party started on their northern journey on March 10. They went forward with a quantity of stores, and made their first depot, returning to the base for more provisions on the 16th. Again starting with all the sledges heavily loaded in April, they once more returned for a final load in May. Traveling had now become exceedingly heavy owing to the softness of the snow, and when the 'Windward' started on her southern journey the explorers were preparing to advance northward again, but on this occasion they were going to utilize their boats. The most northern depot which had been made was in latitude 81° 20', or about 100 miles from camp. A short time after Mr. Jackson first marched north scurvy made its appearance among the crew. On July 3 the 'Windward' began her southern journey, and at once entered on a series of adventures of great peril. The ice pack proved to be about 300 miles wide and unusually formidable. The floes were much heaped up, and exceedingly thick and heavy. The efforts to break through them used up immense

quantities of coal and fuel, and, finally, nearly everything on board that would burn was utilized to keep up steam. Even the ship herself was laid under requisition, and all detachable portions that could be spared were broken up and burned. For sixty-five days this struggle with the ice continued, and then at last the 'Windward' broke out of the pack and open water lay before her. The incessant labor, and the lack of fresh food told severely on the men. One after another they became victims of scurvy, until 12 were invalided. But they appear to have behaved nobly, and to have volunteered for and to have actually performed most arduous tasks when they were scarcely able to stand. On Sept. 6 they broke out of the ice, but, having exhausted their fuel and meeting with constant head winds, shaped their course for Vardo, the nearest port, and arrived there on Sept. 10."

The work done in the summer of 1895 is described briefly in one of Mr. Jackson's letters:

"We have entirely altered the map and character of a great portion of Franz Josef Land, and have found a sea and islands where mainland was supposed to exist. We have also carefully mapped Markham Sound, and, of course, laid down our route to the farthest point we reached, 81° 20' north. Markham Sound and the country farther north are totally different from what Payer's map represents them to be, and the character of the small portion of Ziely Land, which borders on Markham Sound, is absolutely unlike the description published in the narrative of the Austro-Hungarian expedition. Moreover, the mountains in that work can not be observed even on the clearest day."

In this journey north Mr. Jackson took with him a sufficient quantity of stores to form three well-equipped depots, and deposited as far north as 81° 21' 2 boats for use at the latter end of the summer.

In another letter he says of the summer of 1896: "We went on a month's expedition to the northwest in a little boat, the 'Mary Harmsworth,' and discovered a large tract of land westward of hitherto unknown limits, and a magnificent headland, composed of ice from its summit to its foot and having at its base a huge, unsightly rampart of ice. We named it Harmsworth cape, and only approached the base of the headland with the greatest difficulty, owing to surging masses of heavy ice and furious gales. We landed on the coast as often as possible and ascended the high peaks and made numerous geological and botanical collections. Far up Cambridge Bay we discovered an ice headland, and named it Cape Fridtjof Nansen. There our boat was nearly lost, owing to her sea anchor having been carried away, and a huge block of ice which was swerving around stove in several of her planks. But we managed to bail her out, and then rigged another anchor.

"This spring has been phenomenally mild. Although we marched north a great distance, using 16 dogs and a pony, we met after a fortnight open water reaching from the face of a huge glacier east to the precipitous end of another huge glacier west. Advance by sledges was thus cut off. We then struck southeast, down Markham Sound, and added greatly to our discoveries of 1895. But we were again stopped by open water reaching entirely across the sound, so we turned westward and explored the entire western shores. During April terrible snowstorms, coupled with rises in the temperature, broke up the ice and prevented marching, but we took valuable photographs."

The great sea discovered was named Queen Victoria Sea, and a channel passed through to reach it from Markham Sound was called the British Channel. Mr. Jackson thinks the sea extends within about 3 degrees of the pole. He regards it as the

most favorable route, and expects to take it in the spring of 1897.

Referring to the criticisms upon Payer's map, Dr. Wichmann says in "Petermann's Mitteilungen": "In these attacks upon Payer, Jackson has overlooked the one important fact that Payer never was in Markham Sound, and did not touch the south coast of Zichy Land, bordering on that sound, but only the east coast, bordering on Austria Sound. His observations were taken from that point, and the probable outlines of the land were sketched into the map. Capt. Jackson's position in Markham Sound is about 100 kilometres from Austria Sound; and observations made at such a distance can have no topographical exactness."

In regard to the possible routes to the pole, Lieut. Peary says: "Nansen's drift of thirty-five months through the Sibero-arctic segment without discovering any signs of land or finding his trans-polar current has definitely eliminated that region from further consideration as a possible polar route. There remain, then, the Franz Josef Land and Greenland routes, on neither of which has the land limit been reached. On the former, Jackson is working with dogged determination, but if he has achieved no very considerable northing in two seasons' work, he is scarcely likely to make an extraordinary spurt in the third. There is left the Greenland route. Loekwood, standing on his island, in 83° 24', saw the broken coast extending still northward, not knowing it to be detached lands. Standing on the cliffs overlooking Independence Bay, in 81° 37' and 81° 47' in 1893 and 1895, I saw the other side of those same detached land masses extending northeastward until hidden below the horizon. Here, then, is land, the most northerly known, extending certainly to 84° or 85°, and more than probably beyond this, to serve as a point of departure. But how to reach this? With an ample supply of provisions at Sherard Osborne fiord (and the chances of forcing a ship there are as good as to Discovery Harbor), a party of two white men and the remainder of my faithful, hardy, and loyal friends from Whale Sound could, by the close of the season in which the ship reached the fiord, have the shores of that archipelago largely determined, and a station as high as 85° or 86° from which to start across the ice northward or follow the islands, as the case might be, in the spring. The relief ship need only come to Whale Sound, for the retreat across the ice cap from the head of Sherard Osborne fiord with light sledges could be accomplished in two weeks or less."

The Peary relief expedition returned with Lieut. Peary and his companions in September, 1895. Of his work during his sojourn in the north, Prof. R. D. Salisbury, who was with the expedition, said: "Lieut. Peary, besides accomplishing a large amount of work of general scientific import, both as to geography and geology, has authentically established the northern limits of Greenland, made an accurate chart of 1,000 miles of the west coast, discovered 11 hitherto unknown islands, collected a series of valuable meteorological records, and obtained more knowledge of the native inhabitants than has ever been secured."

Prof. Salisbury's own work is thus described: "The coast of Greenland was examined at close enough range to study its geological features to advantage from 64° to 78° 45'. Stops were made at many points between 74° 45' and 77° 45'. At these points geographical and geological studies were carried on. The eastern coast of America was also seen between 78° and 78° 45' continuously from Ellesmere Land to Dexterity Harbor, in 71° 30'. Also much of Disco coast. Many glaciers between 74° 45' and 77° 45' were studied in detail, and

some determinations of importance concerning glacier motion were made. A considerable body of evidence was gathered in reference to the former extension of the Greenland ice cap. Determinations were also made at several points regarding recent land changes, some of which amounted to 500 feet. No evidence was found of any great extension of the Greenland ice cap toward America in former ages. The Jacopshaven glacier was examined in detail, and fossils were found at Atenikerdleukus. Both the American and Greenland coasts are unequaled as fields for the study of glacial geology. The line of snow is found much lower and the ice comes much lower down on the American than on the Greenland coast."

Lieut. Peary made another expedition to the north in the summer of 1896, intending to bring home the 40-ton meteorite that he discovered at Cape York. He was accompanied by Profs. Alfred Burton and George H. Barton, of the Massachusetts Institute of Technology; G. H. Putnam, assistant in the United States Coast and Geodetic Survey; Prof. Ralph S. Tarr, of Cornell University; Prof. M. C. Gill; several students of Cornell University, and others. Observations were taken and valuable and interesting collections were brought back, but no geographical discovery was made, with the exception, perhaps, of a mountain, which the Cornell party named Mount Schurman, in honor of their president. Of the great meteorite Lieut. Peary says:

"Returning to Cape York on Aug. 23, the ice had broken up enough to allow the 'Hope' to penetrate Melville Bay and reach the site of the great meteorite. We were fortunate in effecting a landing, but 2 hydraulic jacks were rendered useless in trying to tear the iron monster from its frozen bed. A third attempt a few days later succeeded in moving the meteorite, but before it could be embarked the 'Hope' was compelled by ice to retreat."

The arctic expedition, led by Sir Martin Conway, accomplished the first crossing of the mainland of Spitzbergen from sea to sea, going from Advent Bay to Agardh Bay on the eastern coast and back, examined the glacial phenomena, and passed around Spitzbergen to the Seven Islands and through Hinlopen strait to the vicinity of King Karl Land. The complete circumnavigation of the island was prevented by great masses of ice in the Stor fiord. Three of the party climbed the highest peak in the island, Hornsund mount, 1,400 metres high.

Antarctic Regions.—C. E. Borchgrevink, the Norwegian explorer, gives an account of his antarctic experiences in an article illustrated by himself, in the "Century Magazine" for January, 1896. He describes the first landing on the antarctic continent as follows:

"We landed at Cape Adare that night (Jan. 23, 1895), being the first human creatures to put foot on the mainland. A peculiar feeling of fascination crept over each of us, even to the most prosaic natures in our boat, as we gradually drew near to the beach of this unknown land. Some few cakes of ice were floating about, and looking over the side of the boat I even discovered a jelly fish, apparently of the common light-blue, transparent kind.

"I had painted a Norwegian flag on a large box, which we fastened on a strong pole near the place where we landed, and leaving the rest of the crew to be entertained by the penguins I proceeded alone to investigate the peninsula and to make collections. I found seaweed on the beach. Our landing place was a sort of peninsula gently sloping down from the steep rocks of Cape Adare until it ran into the bay as a long, flat beach covered with pebbles. The peninsula forms a breakwater for the inner bay.

"I believe that Cape Adare is the very place where a future scientific expedition might stop safely even

during the winter months. From the spot where we were several accessible spurs lead up to the top of the cape, and there a gentle slope runs on to the great plateau of Victoria Land. The presence of the penguin colony, their undisturbed old nests, the appearance of dead seals (which were preserved like Egyptian mummies, and must have lain there for years), the vegetation, and lastly the flat table of the cape above, all indicated that here is a place where the powers of the antarctic circle do not display the whole severity of their forces. Neither ice nor volcanoes seemed to have raged on the peninsula at Cape Adare. On this particular spot there is ample space for house, tents, and provisions."

Commercially the expedition was a failure, as the kind of whale valuable for bone was not found; but the explorer discovered guano beds which he considers of great commercial importance. The highest latitude reached was $74^{\circ} 10'$. Borchgrevink is to lead another expedition to Antarctica, the expense of which will be borne by a commercial company in England formed for whaling and bringing cargoes of guano to England.

America.—The work of the survey to establish the eastern boundary of Alaska was carried on during the summer of 1895. Gen. Duffield, chief of the Coast and Geodetic Survey, was the commissioner appointed for the United States, and D. F. King served for Great Britain. The reports were made in January. From these it appeared that the greatest difference between the lines run by the surveyors of the two governments is but 6 feet 7 inches, or 15 seconds of longitude. The lines drawn by the Canadian engineer, Mr. Ogilvie, in 1893, in marking the course of the one hundred and forty-first meridian, were verified by the United States surveyors. Forty-mile creek falls east of the line. There are, however, grounds for contention on some points. One is on the construction of that clause in the treaty of 1825 between Russia and Great Britain which stipulates that at no point shall the line be more than 10 marine leagues from the shore. The United States Government interprets this to mean 10 leagues from the coast of the mainland, while it may be interpreted to mean 10 leagues from the shore line of the islands.

But the portion of the frontier line that really threatens a grave dispute is one that extends from the southern point of Prince of Wales island up to Mount St. Elias, where it strikes that meridian, and thence proceeds to the Frozen Ocean. That treaty of 1825 makes the starting point of the boundary line the southernmost point of Prince of Wales island, saying that the said line shall thence "ascend to the north along the channel called Portland channel as far as the point of the continent where it strikes the fifty-sixth degree of north latitude." It is contended by some Dominion authorities that what was called Portland channel in the treaty is really the Behm Canal of to-day. This runs west of Portland channel, and the result would be, were the Dominion interpretation conceded, to take away a large tract of United States territory, including two important islands, and a still larger portion of the mainland. Mr. Ogilvie says that British Columbia objects to taking Portland channel as the boundary, because the treaty says that the line beginning at the point already spoken of "shall ascend to the north," whereas "a northerly line from the southernmost point of Prince of Wales island would never reach Portland channel at all, but would go up the channel known as Behm Canal." A map published recently by Commissioner Martin, of British Columbia, marks Behm Canal as the boundary line. In a report made by a committee to the Seattle Chamber of Commerce it is declared that the line through Portland Canal was recognized by the whole world

from 1825 to about 1884, and by British Columbia itself on its official maps as late as this last date. Again, when Alaska was bought of Russia United States troops were stationed soon afterward at Fort Tongass at the mouth of Portland channel, and United States custom officials were maintained there for more than twenty years without protest from Canada or any other power. In the third place, it is asserted that both Behm Canal and Portland Canal were well known at the time of the convention of 1825, the latter having been named by Vancouver as early as 1793. Here it may be noted that Annette island, the smaller of the two cut off by the British claim, was set apart by an act of Congress, approved in 1891, as a reservation for the Metlakatlah Indians, who removed from British territory to this island. The secretary of these Indians says that when they went to Annette island, in 1887, they were regarded as foreigners by the Canadian authorities, and a steamer that arrived to take their goods to Annette island was treated as coming from a foreign country, the British customs officer at Port Simpson trying to detain it. They also had to receive clearance papers at Port Simpson. Besides, the Canadian Indian agent gave up all attempts to control them when they had gone to Annette island. Other circumstances cited prove that the territory between the two canals has been in the possession of the United States with the consent of Canadian authorities; and the claim, if made by Canada, must be based on alleged errors in the maps of Canadian surveyors. The theory is based on the fact that, starting from Cape Chacon, the line, if carried through Portland channel, would have to be carried east before running north. But this eastern extension is very slight, and might well have been omitted as being implied when Portland channel was specifically prescribed as the boundary.

Another point of difference may be on the meaning of the terms "winding of the coast," which under a new interpretation might give Canada the ownership of the heads of certain bays and inlets.

Prof. Grove K. Gilbert, of the United States Geological Survey, has been making some calculations as to the depth of Niagara river. He says: "For about two miles below the Horseshoe Falls the current is comparatively quiet, and soundings have been made there, showing that the water is from 100 to 200 feet deep. But in the long stretch of rapids above and below the whirlpool the current is altogether too violent, and only indirect methods are available. I have tried to obtain an approximate result by means of the speed, the width, and the volume of the water. It is evident that, as all water must pass each point of the channel, the rate at which it passes will depend upon the width and depth, or the cross section, and so if the volume of water is known and the width and speed of the water are measured, the depth can be inferred. Choosing a stretch of the river 900 feet in length where the sides are nearly parallel, I found the width to be 350 feet and the current in the middle of the stream to be 23 miles an hour. The average volume of the river is about 250,000 cubic feet per second, and the combination of these figures, in accordance with the ordinary engineering formula, gives the central depth as about 40 feet." Prof. Gilbert adds that the maximum speed of the water in the whirlpool rapids is 27 miles an hour.

An account of the discovery of a most beautiful and hitherto unknown region in Montana was reported in the summer of 1895. This region, rivaling for grandeur and unique beauty, it is said, the Yosemite valley and the Grand Cañon of the Colorado, is north of Lake McDonald, near the boundary between Flathead and Teton Counties, and is surrounded by almost impenetrable forests.

The party of scientists who visited the lake were guided by two frontiersmen, half-breeds, and for many miles they were obliged to chop their way through dense forests and tangled undergrowth, where nothing but the trails of deer and footprints of bear could be detected.

After two days they came upon a basin in the shape of a horseshoe, about 2 miles long and a mile or more wide, surrounded by walls of rock, rising almost perpendicularly 3,000 or 4,000 feet. In the floor of this basin is a beautiful deep lake a mile and a half in length by half a mile in width. The surrounding ledges are surmounted by numerous peaks, rising to dizzy heights, their summits white with snow. At the head of the basin are 2 streams of icy water pouring in beautiful cascades over the cliffs. The total height of these streams was estimated to be at least 2,500 feet. Along a portion of the southern wall a slope extends from a height of 2,000 feet down nearly to the border of the lake.

The sinking of the bed of Lake Chapala, in the State of Jalisco, Mexico, was reported by E. H. Coffey, of San Diego, in January. This lake, which is south of Guadalajara and northwest of the city of Mexico, is 50 miles long and 10 miles wide. "On the forenoon of Jan. 8 the residents of one of the small settlements near the western end of the lake were terrified to see a gigantic whirlpool far out on the water, the cause of which was a mystery, and a rumbling noise was heard. The whirlpool resulting, apparently, from this sinking of the lake's bottom, was of wide extent, and many pleasure boats and fishing craft were sucked into the abyss. The natives on shore could plainly see the boats, none of which were near the center of the whirlpool at first. But as the rush of waters continued the irresistible force could not be overcome by the men in the boats, and their efforts to escape the death that reached out for them were awful to witness. The whirlpool continued for nearly twenty minutes, and the lake receded several feet from its former shore line. Prof. Coffey explored much of this lake's coast line in 1888. At that time he found petroleum and coal in quantities that proved the existence of vast wealth in that region. Since the strange occurrence just described petroleum has been found running in small streams above the surface on the southern shore. Lake Chapala is in the center of a distinctly volcanic district, and it is not far from the active volcano of Colima. It is also very near Jorullo volcano, which rose in a night from the level plain in 1789. After the sinking of the lake no unusual activity was noticed in the volcanoes or in that region."

A journey of exploration in the western part of the Argentine Republic, under the lead of Dr. F. P. Moreno, director of the Museo de la Plata, seems to have had important results. Joining a company of 26 engineers, cartographers, geologists, and botanists who had been at work for some time, Dr. Moreno traveled from Mendoza to the neighborhood of St. George's Gulf, in latitude 47° south, examining closely the coasts and the higher lands, and gathering data for correcting and filling out the map. The La Plata lake, discovered about three years ago to the west of Fontana lake, was visited. At Fontana lake coal was found, and near Senguerr river a great aërolite, 130 kilogrammes in weight, was discovered and taken away. This expedition was the last of a series begun in 1894, in the course of which 25,000 miles have been traveled over; the collections made are very extensive, and 2,000 photographs were taken. The most minute studies made were in the territories of Neuquen, Rio Negro, and Chubut. The native races were studied, and two hitherto unknown tongues were discovered—those of the Guenna-

quenes and of the northern Tehuelehen. Eight new lakes were found north of Lake Nahuel Huapi, and 15 south of it, some of them as much as 34 kilometres in length. The mysterious river Tetelefnu was explored to its source, and in some places it was found to be 8 metres deep. The beauty and fertility of the region about Nahuel Huapi were greatly praised. Dr. Moreno thinks the Bariloche pass, heretofore unidentified, lies on the Lago de Gutierrez.

An examination of the islands on the western coast of Patagonia by the Chilean navy seems to have proved that the supposed large islands there are really groups of numberless small islands, separated by narrow, fiordlike channels. As the Chonos and Wellington islands were found to be archipelagoes, so now it appears that Queen Adelaide's island is also an archipelago.

Dr. Otto Nordenskjöld led a small party from Sweden in an examination of Tierra del Fuego, beginning in the autumn of 1895, intending also to visit the eastern slopes of the Cordilleras in southern Patagonia if weather should permit. The party penetrated far into the interior from Sebastian Bay on the east and Admiralty Sound on the west, and visited Last Hope inlet on the western coast.

Europe.—A number of members of the Manchester Geographical Society, called the "Victorians," have established a system of free lectures on geographical subjects illustrated with lantern pictures. During the past five years they have given over 300 lectures in Manchester and its vicinity, to more than 90,000 hearers. The audiences consist principally of working people, but include also students and members of literary and scientific clubs. Among the subjects of lectures that have been given are the following: "Polar Explorations," "Uganda," "Across the Rocky Mountains," "China, Korea, and Japan," "Shaping of the Earth's Surface by Water Action," "Canada," "India," and "Map Projection."

Asia.—Much has been done in surveying and mapping the northern coast of western Siberia during the past three summers. The mouths of the Obi and Yenisei rivers, being of first commercial importance, were examined first, together with the coast between them. A new island was discovered opposite the peninsula Matte-Sale. In the Gulf of Obi it was found that the eastern side is wrongly represented on the maps, not running in a straight line, but curving often toward the south. The difference between the real and supposed coastlines is about 45 leagues. The Kara Sea was examined in the summer of 1896. Capt. Wiggins, who began his voyages to the Obi and Yenisei rivers twenty-two years ago, has maintained that the route through the Kara Sea was perfectly practicable. In a paper read in London he gave a general survey of the various expeditions (25 in number, beginning from 1874, in which not fewer than 37 vessels have taken part) accomplishing voyages to the mouths of the Obi and the Yenisei, and also up these rivers. He enumerated the voyages made under his command, and was firmly convinced that no wrecks were caused by the influence of the ice, but those that had occurred should be ascribed to fogs and other causes, which might be met during navigation in any other quarter of the globe.

The total number of trading vessels sailing on the Kara Sea during the past twenty years was 230. An immense timber trade, he said, was in store for enterprising exporters. With regard to gold mining, the greater part is conducted in a very primitive manner.

A book on the advisability of turning the waters of the Amu-daria into their old channel leading to the Caspian Sea, and thus acquiring a water way

from the frontiers of Afghanistan to the Caspian, the Volga, and the Baltic, was published in 1893 by Gen. Glukhoosky. The scheme has been revived lately in consequence of the destruction by the inhabitants of the khanate of Kliwa of a dam that directed the river to the Aral Sea. The waters of the Amu-daria began to flow partly into the Uzboi, and they filled in part the Sari-Kamish depression southwest of the Aral. The Ministers of War and Communication have sent an expedition to examine and report upon the feasibility of turning the river into its old channel.

Several expeditions have been journeying in central Asia this year, and some have returned. Mr. and Mrs. Littledale were obliged to turn back after reaching a point 65 kilometres from Lhassa—nearer than their predecessors had gone. The Pamir Boundary Commission under Col. Holdich collected a good deal of accurate topographical information. Dr. Sven Hedin continued his explorations in Turkestan. Prince Henry of Orleans crossed the Indo-Chinese frontier and journeyed to the source of the Irrawaddy. This was discovered at 28½° north latitude and between 98° and 99° east longitude. The principal stream forming the Irrawaddy is the Towrong. The prince found that the river does not rise in Tibet, and that it is not identical with the Lu-Kiang, as some travelers have supposed. The journey was accomplished without any resistance from the natives.

M. Bonin, French vice-resident in Tongking, lately explored the region between the upper Yang-tse-Kiang and its tributary the Yalung-Kiang. The London "Geographical Journal" says he discovered that below the sharp angle made by the Kin-Sha near the town of Li-Kiang the river makes a wide sweep to the north, joining the Yalung in about 28° north latitude, instead of 26° 35', as heretofore supposed. The stream that has been considered the upper Yang-tse-Kiang turns out to be merely a tributary. The current delineation of the river has been taken from D'Auville's map, and that was based upon vague reports only, as the Jesuits were not able to visit the upper waters. M. Bonin was the first European to visit the town of Li-Kiang. Ascending the stream for several days, he reached the plateau of T'cong-Tien by a snow-covered pass 14,500 feet high, and by a rugged and difficult path arrived at Yunning-Tu-Fu, about which very little has been known. It is peopled by a mixture of Chinese from Yunnan, Kutsongs, Mosos, and Sifans. North of this town M. Bonin traversed the Tibetan kingdom of Meli, into which the Chinese even have never penetrated. It is entirely in the hands of yellow lamas, to whom the king himself belongs; on this account it is known to the Chinese as "Huang-lama" (yellow lamas). The lamasery (on the side of a mountain) was composed of three-storied houses with white walls, balconies, and verandas, recalling towns of southern Europe.

The island of Celebes has been thoroughly explored by two cousins, P. and F. Sarasin. Two lakes hitherto known only by name were measured and mapped—Lake Towuti, which is the largest lake in Celebes, and Lake Matana. On the latter, which is about 36 miles long and 9 miles broad, is a settlement of people who busy themselves with pottery and bronze work. Towuti lake is shallower than the other, and has in it a mountainous island. The race of the Toradjas, who inhabit the southeastern peninsula and who are often at war with the lowlanders, are pure Malays. The Sarasins explored Lake Posso. The discovery of this lake has been credited to a Dutch missionary, Rev. A. C. Kruijt, in 1893, but Dr. Wichmann thinks it proved that it was first visited by Jonkherr J. C.

W. D. A. van der Wijck, a Dutch official, in 1864, although his map and reports have been lost.

Africa.—Interest in Africa this year has been centered on military and political movements, but there had been some activity among explorers, without great results, it is true, but tending to fill up the topography of districts little known hitherto and settle some doubtful points. Journeys have been made in northern Africa by explorers Foureaux and Couper. The Rev. C. H. Robinson traversed the Soudan over an unusual route. Another expedition in the Soudan giving especially good results was that of French surveyors, who made accurate maps of the series of lakes recently discovered in the vicinity of Timbuctoo. Lake Faguibine, the largest, is 68 miles long. An expedition by 2 officers of the Congo State, MM. Nils and De la Kéthulle, in 1894, was cut short by the presence of bands of Mahdists, rendering it dangerous to proceed. Their route was from the Welle to Darfur. Further exploration in the same region has been since made by Lients, Hanolet and Van Calster, who traveled to the watershed between the Schari and the Kotto, a tributary of the Ubangi, and went as far as Alambengleben, not far east of El Kouti, where Paul Crampel was murdered in 1891 when trying to open the way for communication between the Congo and Lake Tchad.

In consequence of the expedition of Clozel, which crossed the watershed between the Sanghi and the Schari and reached the Wom, the upper course of the Logone, the administrator Ventil was intrusted with the transportation of a steamer to this river in the expectation that, according to the conditions discovered, there would be no difficulty in reaching Lake Tchad. He took the little steamer "Leon Blot" in sections from Loango to Brazzaville, where he put it together and went up the Congo on some alteration of the original plan. He has chosen the Ubangi or one of its northern tributaries as the point from which he will take the steamer to the Nana, which flows into the Gribingi, one of the upper tributaries of the Schari discovered by Maistre, whence he will reach the main stream.

In eastern Africa noteworthy journeys have been made in Somaliland and in the regions about Kilimanjaro and the large lakes. Capt. V. Böttge is on his second journey in southern Somaliland. From Lugh, the most important Somali town on the Juba, he wrote that the Bardua district is more thickly peopled than the most densely settled portions of the valley of the Po, apart from the large cities. He founded a station on the upper Juba or Ganana, at 3° 48' 20" north and 42° 50' 40" east. Salt is found throughout the whole district beyond Lugh and along the Dana in large deposits east of the Web river, where there is a mine near the ruins of an ancient city. He heard of a river Sagan flowing into a lake, which he thinks not identical with the Omo.

Other interesting researches in this region have been made by an American traveler, Dr. Donaldson Smith. He describes a series of beautiful caves that have been excavated by the Web river, having columns, arches, and formations like altars apparently of white marble. He named them the Caves of Wyndlawn. His intended explorations in the upper valley of the river were interfered with by a predatory excursion of Abyssinians into the country of the Arusa-Galla. He turned to the southeast and crossed the steppe to the Juba, reaching it near the mouth of the Dana, and after following up the river in Böttge's route for some distance, then turned westward to Lake Rudolph, which he reached at the mouth of the Nianan after turning aside to visit Lakes Abaya and Stephanie, which are connected by the outlet of the former,

the Galana Amara. Following the Nianam up to 6° north, where he received information regarding its upper course which raised the question whether this stream is to be identified with the Omo. Passing south from the eastern shore of Lake Rudolph to the Tana, he followed it down to the coast. The topography of this part of Africa will be quite complete when the questions regarding the Omo and the watershed between the Nile and Lake Rudolph are settled. Dr. Smith reports having discovered some new tribes, among them a race of pygmies. "These people are of negro type and coal black and absolutely naked. Although of great physical beauty, with well-formed limbs, they are barely removed from animals, and their code of morality is very lax. They are all between 4 and 5 feet high and live in primitive wood huts. The only industries are eorn raising and the rearing of sheep and goats. They are born hunters. In warfare they use poisoned arrows, the wounds inflicted by which prove fatal in an hour." Dr. Smith brought home maps and valuable natural-history collections.

Another route through this part of Africa was taken by M. Versepuy and Baron de Romans. Leaving Zanzibar in July, 1895, they went to the Kilimanjaro country, where they were prevented by the hostility of the Massai from going on to Mount Kenia and Lake Rudolph. Turning westward, they visited Victoria lake and Mengo, the capital of Uganda, and went to Lake Albert Edward, where they again fell into conflict with the natives. Crossing over to the Congo between the routes of Goetzen and Stanley, they reached the western coast by way of that river.

Other journeys in the Kilimanjaro region have been taken by Mr. P. Weatherly, Dr. M. Schöller, and W. H. Nutt. The first-named, in going from Lake Tanganyika to Lake Moero, took a more southern route than any of his predecessors have done, and Mr. Nutt reported reaching Lake Rikwa by a route between Nyassa and the southern end of Tanganyika. Mount Nakitumbe rises to a height of 2,100 metres, and gives a view over the whole Rikwa plain. This traveler confirms the opinion of others that the lake is gradually drying up. In the rainy season it covers the plain to the foot of the mountains, but in the dry season its bed is covered with a stiff, hard crust. The territory about Rikwa lake is the least known portion of German East Africa.

Dr. Oscar Baumann describes Chakwati lake in German East Africa, not newly discovered, but not yet laid down upon the map. It lies back of Kifmangao, a village on the coast between Dar-es-Salam and the mouth of the Rufiyi. Dr. Baumann says Kifmangao is a miserable village of scattered clay huts inhabited by a mixed population; in one part is a dirty settlement of Mohammedan traders who have had a station there for years. Much cleaner are the huts of the negroes who are mostly from the inland districts. The place has a population of about 1,000, and, miserable as it appears, is not unimportant as the center of a trade in caoutchouc and copal. Between the coast and the lake is first a sandy stretch with light bush vegetation, and on the eastern side of the lake rise the Kibunpuni hills, whence a fine view of the lake with the island groups of Kwale and Koma is obtained. The water is brownish yellow with a scarcely perceptible salty flavor. It has no visible inlet or outlet, though at the north end there is a swampy arm, which in the rainy season may connect with the little lake Kiputi, lying just to the west, and having on its eastern shore the little village of Kiputi. The people about both these lakes are Wadengereko, speaking a different language from the dwellers on the Rufiyi. They raise potatoes, leguminous plants,

sorghum, and manioca, the last-named especially since the grasshopper plague appeared. The cultivation of this plant has greatly increased in East Africa from the fact that the grasshoppers do not touch it. There is no stone in the neighborhood; what little they use is brought from the coast. The people have a legend of the origin of Lake Chakwati, saying that a village formerly occupied the site of it, which was suddenly flooded and the inhabitants turned into fishes, and they say that there are still fish there which are warm-blooded and which they will not eat. They are shy and timid, most of them running away at sight of strangers. Another lake still smaller than Kiputi, called the Lufute, is said to lie still farther inland.

The rapid development of Nyassaland in recent years was described by Mr. H. H. Johnson, British commissioner in British Central Africa, in an address before the Royal Geographical Society. Some of the details he gave were these: "Agricultural land four years ago was selling at from 1 cent to 6 cents an acre. To-day unimproved land ranges in price from 25 cents to \$1.50 an acre. Those who have read Livingstone's description of this wilderness when he first made it known to the world will be struck by the amazing contrast which Blantyre and the other European settlements present to-day. In these towns are clean, broad, level roads, bordered by handsome avenues of trees and comely red brick houses, with rose-covered verandas peeping out behind clumps of ornamental shrubs. The natives who pass along are clothed in white calico. A bell rings to call the children to school. A planter gallops past on horseback, or a missionary trots in on a white donkey from a visit to an outlying station. Long rows of native carriers pass in Indian file, carrying loads of European goods, or a smart-looking policeman in black fez, black jacket and trousers marches off on some errand. Native bricklayers and carpenters are building houses in the European style. Through the open doors of the printing office natives may be seen setting type for the little newspaper that appears every week. The visitor will see a post office, a court of justice, and, perhaps, a prison, whose occupants, however, during the working hours are out repairing the roads under charge of a black policeman. On the outskirts of the towns are brickyards, where the natives turn out thousands of bricks as well made as those used in our own building operations.

"The most interesting features in the neighborhood of these settlements, however, is the coffee plantations, which are the chief cause and support of the prosperity of Nyassaland. Sixteen years ago a small coffee plant was sent from the Edinburgh botanical gardens to Blantyre, and from this plant the greater part of the 5,000,000 coffee trees now growing are descended. The mother tree is still alive in the mission grounds at Blantyre."

The course of the Zambesi has been carefully examined by Capt. Gibbons, and several of its tributaries explored. His route lay through one of the least traveled parts of the Zambesi basin.

In the island of Fernando Po, on the western coast, a Spanish missionary, P. Juanola, discovered a small lake lying at a height of 1,350 miles. He named it Lago Loreto.

By a treaty between the Congo State and France concerning their possessions in the Welle region, the sultanate Bangasso, on the right bank of the Mbonu, was conceded to France, and the Belgian officers who had been administering it for a short time were withdrawn.

The English and French commission for establishing the line between Sierra Leone and the French Soudan determined the source of the Niger,

finding it to be farther northwest than appeared by the explorations of Zweifel and Moustier, in 1879. It was found to be at the village Tembi Kundu, at 9° 5' 20" north latitude and about 10° 50' west longitude.

GEORGIA, a Southern State, one of the original thirteen, ratified the Constitution Jan. 2, 1788; area, 59,475 square miles. The population, according to each decennial census, was 82,548 in 1790; 162,686 in 1800; 252,433 in 1810; 340,985 in 1820; 516,823 in 1830; 691,392 in 1840; 906,185 in 1850; 1,057,286 in 1860; 1,184,109 in 1870; 1,542,180 in 1880; and 1,837,353 in 1890. Capital, Atlanta.

Government.—The following were the State officers during the year: Governor, William Y. Atkinson; Secretary of State, Allen D. Candler; Treasurer, Robert U. Hardeman, who retired and was elected to the State Legislature, but died in December; Comptroller General, William A. Wright; Attorney General, Joseph M. Terrell; Adjutant General, J. McIntosh Kell; Commissioner of Agriculture, Robert T. Nesbitt; School Commissioner, S. D. Bradwell—all Democrats; Chief Justice of the Supreme Court, Thomas J. Simmons; Associate Justices, Samuel Lumpkin and Spencer R. Atkinson—Democrats.

Finances.—Bonds were issued in the spring to pay off the part of the public debt due July 1, \$242,000. The bonds will fall due in 1920.

A suit involving the question of the liability of the Central Railroad for certain taxes along the line of the road was decided by the Supreme Court in favor of the State. The court decided that a tax on the property was not a tax on the capital stock of the company and upheld the constitutionality of the Georgia law.

Penal Institutions.—The convicts in the State, of whom there are over 2,000, are worked on the lease system. Charges of mismanagement and ill-treatment having been brought against some of the lessees, an investigation was held before the Governor at the Capitol, lasting more than a week.

As a result of the investigation, Gov. Atkinson decided that the charges against the camp lessees had been substantiated, and he imposed fines on the companies amounting to about \$2,500.

When it became evident to the Governor that the Dade Company would not pay the fine, he decided to remove the convicts and abolish the lease. The 407 convicts who had worked in the mines of the Dade Company were scattered among other camps.

Banks.—The volume of business done by the banks in the Atlanta Clearing House Association increased 18 per cent. in 1895 over the preceding year. The total for 1894 was \$56,589,228.04; for 1895 it was \$65,318,254.91. The Merchants' Bank of Atlanta, after a successful career of nearly twenty-four years, failed in October. The principal reason given for the failure was the fact that the assets of the bank are composed principally of real estate, on which the officers of the institution could not realize sufficient ready money to meet the requirements.

Railroads.—A report rendered in October says that most of the Southern lines showed increased earnings from July 1. On the Atlantic seaboard the railroads failed to make a good showing during July and August because of the rate war. The losses, however, were in the freight department, where the war raged. Passenger earnings have steadily increased.

Up to Oct. 1 the passenger earnings of the roads entering Atlanta were larger than for the corresponding period of 1895, notwithstanding the fact that they had the exposition travel last year.

From Jan. 1 to Oct. 1 the Georgia and Alabama increased its earnings \$248,000.

The report of the South Carolina and Georgia Railroad Company for the year ending June 30 shows gross earnings \$1,077,146, a decrease of \$77,236; net earnings, \$359,691, a decrease of \$97,768; and surplus, \$38,396, a decrease of \$11,729.

The Seaboard Air Line is to establish along its line, at intervals of 10 miles, 100 experiment farms.

Industries.—By the report of Secretary Hester, Sept. 1, it appears that the year's cotton crop of Georgia amounted to 1,079,000 bales, being second only to that of Texas.

Energetic and systematic work is being done in river mining in Georgia. Although this is only experimental work, yet it is on a practical scale, and the firm operating the dredge find that their expenses are about \$18 a day, while the gross returns have been from \$40 to \$120 a day. The nature of the bed rock, which is decomposed and soft, makes it very favorable for dredging, not only in this river, but in others of the State.

At the beginning of the year report was made of the discovery, about 10 miles northwest of Canton, on the eastern slope of the Oaky mountain, of a large vein of slate and quartz, which is 5 miles long and is more than 100 yards wide. Assays of the ore showed an average of about \$3.50 the ton. The report says: "Ore here can be milled and chlorinated for not exceeding one third the cost at almost any of the Western mines now being so successfully worked."

Textile Manufacturers.—A Southern Textile Manufacturers' Association was organized at Atlanta, May 13. In view of the facts that prices are low and production is greatly in excess of demand—some factories running half time, and some running full time and losing money—the following resolution was adopted:

"That it is the sense of this association that production be at once curtailed, and, in order to carry out this idea, that the chair appoint a special committee of 9, whose duty it shall be to at once correspond with all Southern mills with that purpose in view, and to call a meeting of all Southern mills at as early a date as possible to consider and take action on the curtailment of the production."

The manufacturers of colored goods met after the adjournment of the association to discuss the question of closing their mills. It was unanimously resolved that the colored-goods mills of the South curtail production not less than one third during June, July, and August, and a committee was appointed to secure the enforcement of the resolution.

The Exposition.—The number of visitors at the Atlanta Exposition was 1,286,863. Of this number, there were 817,028 paid admissions, including adults and children. The total figures include the admissions at the pass gates, paid-admission gates, and wagon gates. The Exposition Company realized from the paid admissions \$364,072.95. The percentage received through the concession department is figured at \$115,654.32. The expenditures of the Woman's Board amounted to \$17,913, the total receipts being \$18,495.

Colonies.—At Fitzgerald, a Grand Army colony in Irwin County, permanent building is getting under way. Sites have been selected for hotels, schools, and stores. All the shops and living places now are temporary, although some comfortable homes are in course of erection. There has been very little sickness.

A Congregational colony is being organized, and will come into Georgia as soon as the land can be secured.

A Lutheran colony is being worked up in Brooklyn and New York city.

A German colony has bought the town Norman-

Jale, 69 miles below Macon, and has changed its name to Missler.

Fruithurst, Ala., and Tallapoosa, Ga., are two colonies which are not exactly new, but they are making a steady growth. Eight hundred farmers, mechanics, and capitalists are known to have gone from Atlanta to Tallapoosa and Fruithurst since the exposition opened.

Legislature.—The Legislature convened Oct. 28. R. L. Berner was elected President of the Senate, and H. A. Jenkins Speaker of the House.

A United States Senator was to be chosen in place of John B. Gordon, whose term will expire in 1897. Among the names presented to the Democratic caucus, Nov. 6, were those of Gov. Atkinson, Alexander S. Clay, J. W. Robertson, and H. T. Lewis. Much opposition was manifested to the candidacy of the Governor, as that would involve another election, in which it was feared the Democratic party might be beaten by a combination of Republicans and Populists.

H. G. Turner, L. F. Garrard, Evan P. Howell, and Gen. Evans were also among the candidates. The Populists voted for Gen. William Phillips. On the twenty-fifth ballot, in Democratic caucus, Nov. 12, the vote stood: Clay, 61; Howell, 57; Atkinson, 52; scattering, 3. The twenty-sixth ballot resulted: Clay, 74; Howell, 51; Atkinson, 47. At length the Governor withdrew from the contest, and on Nov. 16 Alexander Stephens Clay was nominated, receiving 95 votes, and he was elected Nov. 17. The number of votes cast was 198, of which 161 were for Clay, 34 for Phillips, the candidate of the Populists, and 3 for Major J. F. Hanson, the Republican candidate.

The General Assembly adjourned Dec. 19.

Among the bills passed was a so-called antitrust bill, providing that "all arrangements, contracts, agreements, trusts, or combinations between persons or corporations made with a view to lessen, or which tend to lessen, full and free competition in the importation or sale of articles imported into this State, or in the manufacture or sale of articles of domestic growth or of domestic raw material, and all arrangements, contracts, agreements, trusts, or combinations between persons or corporations designed or which tend to advance, reduce, or control the price or the cost to the producer or to the consumer of any such product or article, are hereby declared to be against public policy, unlawful, and void." Any corporation, chartered under the laws of the State, found violating the provisions of the act shall forfeit its charter and franchise, and any foreign corporation so violating shall be prohibited from doing business in the State. A penalty is added of a fine from \$100 to \$500, and imprisonment one to ten years. It is provided that the provisions of this act shall not apply to agricultural products or live stock while in the possession of the producer or raiser.

Both houses passed a bill authorizing the Governor to advertise for sale the Northeastern Railroad, at a price to be not less than \$287,000, the purchaser to pay \$50,000 cash and the remainder in five years in equal annual payments, interest at 3½ per cent. Each bidder is to be required to deposit \$10,000 as a guarantee of good faith.

The following concurrent resolution was adopted: "That the Senate of Georgia, the House of Representatives concurring, requests the Representatives of this State to use their influence in Congress to obtain belligerent rights for the Cubans."

The office of Commissioner of Pensions was created, and the Governor appointed Richard Johnson to the office.

For the support of common schools the Assembly appropriated \$600,000 for 1897 and \$1,000,000 for

1898; for the School for the Deaf, \$36,000 for 1897 and \$25,000 for 1898; for the Lunatic Asylum, \$280,000 for 1897 and \$290,000 for 1898; to pay interest maturing, \$350,630 in 1897 and \$346,130 in 1898.

The total appropriations for the two years amount to \$5,232,528. In addition to the items given above, about \$545,000 will be set aside for the common-school fund, which will be raised by rental of the Western and Atlantic Railroad and other sources.

The funds necessary to meet the appropriations are to be raised by taxation as follow: General tax on each \$1,000 worth of property, \$3.45; special tax for educational purposes on each \$1,000 worth of property, \$2.50; special tax to create a sinking fund, 0.26 mill on each \$100 worth of property; in addition to the general and special taxes mentioned, the State will raise revenue from special taxes on the usual lines of business.

Political.—Political agitation began early in the year with the contest in the Democratic party between the silver and the antisilver advocates. In March Hon. Hoke Smith and Hon. Charles F. Crisp began a series of debates on the question in different parts of the State.

In March Hon. C. F. Crisp, who had announced his candidacy for the office of United States Senator, requested the State Democratic Committee to recommend that voters at the June primaries indicate their choice for United States Senator, but this the committee declined to do. Then Mr. Crisp addressed a letter to the Democratic executive committees of all the counties, asking that they adopt this plan. The refusal of the committee was understood to be inspired by opposition to the choice of Judge Crisp, and in favor of Mr. Du Bignon, whose candidacy was announced at about the same time that the State committee's chairman declared in favor of holding the senatorial primaries on the same day with the October election. About half the counties acted upon the senatorial question June 6, and Judge Crisp received the suffrages of so many that his selection as the popular choice was practically assured. The primaries at this time showed that the Democratic party in the State was overwhelmingly in favor of free coinage.

The State Central Committee decided to hold but one convention, though there were strong protests against such action. It was held at Macon, June 25. The ticket nominated was: For Governor, W. Y. Atkinson (renominated); Secretary of State, A. D. Candler; State Treasurer, W. G. Speer; Attorney-General, J. M. Terrell; Comptroller, W. A. Wright; Commissioner of Agriculture, Robert T. Nesbitt.

The delegates to the Chicago convention were instructed to cast the vote of the State as a unit, according to the decision of the majority of the delegation. The platform commended Gov. Atkinson's administration; favored a law to prevent lynchings; demanded the free and unlimited coinage of both gold and silver, independent of the action of any other government, at the ratio of 16 to 1, and the making of both legal tender for the payment of all debts; condemned the issuing of bonds and the policy of retiring the greenbacks and Treasury notes; favored payment of the public debt as rapidly as possible, a tariff for revenue only, repeal of the tax upon State bank issues, and a constitutional amendment authorizing the collection of a graduated income tax. A resolution commending Treasurer Hardeman's work was adopted.

The Republican State Convention met at Atlanta April 29. There had been a lively contest for the control of the convention between those that favored and those that opposed the nomination of McKinley, and this was continued in the convention. The delegates were left uninstructed.

No State ticket was put up by either the Republicans or the Prohibitionists. The Republican Executive Committee advised the members of the party in the State that they were at liberty to support either the Democratic or the Populist State ticket, as seemed to each individual to his own interest, the committee having decided against putting out a State ticket. The chairman issued a circular letter to the Republicans of the State, urging them, unofficially, to support the Populist ticket.

The People's party, having selected its delegates to the national convention in 1895 and instructed them so far as the platform was concerned, held but one State convention in 1896. They met, Aug. 6, at Atlanta, and made the following ticket: For Governor, Seaborn J. Wright; Secretary of State, J. A. Parsons; Comptroller General, Seaborn J. Bell; Treasurer, William C. Sibley; Attorney-General, Donald Clark; Commissioner of Agriculture, W. D. Smith. The resolutions approved the platform of the St. Louis convention of the People's party, favored the abolition of the convict lease system and the employment of convicts on the public roads, also the establishment of reformatories for juvenile offenders; declared in favor of extending the public-school system, the furnishing of primary school books by the State, and the payment of teachers monthly; condemned the practice of public officers in receiving free passes from railroad corporations and franks from telegraph and express companies; condemned lynching and called for rigid enforcement of the laws against it; demanded that all public officers be elected by the people, and denounced the present system of electing judges and solicitor generals by the Legislature; demanded the abandonment of the fee system in payment of public officials; declared for a free ballot and a fair count; and favored the continuance of pensions to needy and deserving Confederate soldiers and widows of Confederate soldiers. They also declared in favor of controlling the sale of liquors.

After the October election the Populists proposed to fuse with the Democrats on the national ticket. The State Executive Committee adopted resolutions proposing to withdraw 7 of their electors in favor of 7 Democrats, in consideration of the electoral vote of the State being cast for Bryan and Watson.

The reply of the Democratic State Committee follows:

"Resolved, That the Populist committee having made a proposition which completely ignores fusion by eliminating entirely the candidacy of the Democratic nominee for Vice-President, Mr. Sewall, and has cut off the Democratic committee from further consideration of the question by fixing an arbitrary limit, which expires to-day, giving this committee no opportunity for a consideration of a movement for proper fusion; therefore, be it

"Resolved, That the chairman of this committee appoint a committee of 5, of which he shall be chairman, to properly present to the public the attitude of this committee on the refusal to accept the unreasonable and unjust *ultimatum* of the Populist committee, clothed as it is, in offensive and unbecoming language."

After this the special committee appointed to act for the Populists withdrew their ticket.

In the October election W. Y. Atkinson, the Democratic candidate for Governor, received 123,557 votes, and Seaborn Wright, the Populist candidate, 84,971. The other Democratic candidates for State offices were elected by majorities from 55,525 to 56,323.

Two constitutional amendments were submitted to vote, and both were carried by large majorities. One was to provide that the State school commissioner shall be elected by the people instead of being appointed by the Governor. The other was to

increase the number of judges of the Supreme Court from 3 to 6, with the provision that the judges be elected by the people. The question of increasing the number has been submitted before, but without this provision. Under the act, an election for the choice of the 3 additional judges took place Dec. 16. The Democrats nominated W. A. Little, Andrew J. Cobb, and W. H. Fish for the additional judges, and Samuel Lumpkin, whose term had expired, was nominated to succeed himself. The Populists decided to make no nominations.

The returns of the November election showed 60,190 votes for McKinley, 94,332 for Bryan, and 2,708 for Palmer. Eleven Democrats were elected to Congress.

GERMANY, an empire in central Europe under a federal government. The King of Prussia as German Emperor has supreme charge of political and military affairs, with power to conclude treaties and to declare war if the territory of the empire is attacked, but for an offensive war he must have the consent of the federated governments. The legislative bodies are the Bundesrath and the Reichstag. The acts upon which they agree become law on receiving the Emperor's assent and being countersigned by the Chancellor of the Empire. The Federal Council, or Bundesrath, is composed of 58 members, appointed by the governments of the federated states. The Reichstag contains 397 members, 1 to 124,500 of population, elected by universal manhood suffrage and by secret ballot for the term of five years.

The German Emperor is Wilhelm II, born Jan. 27, 1859, eldest son of Friedrich III, of Prussia, whom he succeeded on June 15, 1888, and grandson of Wilhelm I, the first German Emperor. The Chancellor of the Empire is Prince Hohenlohe-Schillingsfürst, appointed Oct. 29, 1894, on the retirement of Gen. Caprivi. The imperial ministers in the beginning of 1896 were as follow: Minister of Foreign Affairs, Freiherr A. Marschall von Bieberstein; Minister of the Interior, Dr. Karl Heinrich von Bötticher; Minister of Marine, Vice-Admiral Hollmann; Minister of Justice, A. Nieberding; Minister of the Treasury, Graf A. von Posadowsky-Wehner. Dr. von Stephan was Director of the Imperial Post Office, Dr. Schulz of the Railroad Bureau, Herr von Wolff of the Exchequer, Dr. Rösing of the Invalid Fund, Dr. Koch of the Imperial Bank, and Herr Meinecke of the Debt Commission.

Area and Population.—The area of the states of the German Empire and their population on Dec. 2, 1895, are given in the following table:

STATES.	Square kilometres.	Population.
Prussia	348,487	31,849,795
Bavaria	75,865	5,797,414
Saxony	14,998	3,756,936
Württemberg	19,517	2,080,898

A census of trades and professions taken on July 14, 1895, shows that 349 persons in every 1,000 are dependent on agriculture; 84 on forest industry and fishing; 35.7 on mining; 355.5 on industry—specifically, 25.4 on the treatment of mineral substances, 41.6 on metallurgical industry, 20.1 on the manufacture of machines and instruments, 5.6 on chemical industry, 36.7 on textile industry, 5.9 on paper manufacturing, 8.3 on the copper industry, 32.6 on wood manufactures and sculpture, 40.1 on the manufacture of alimentary articles, 57.4 on the clothing industry, 71.6 on the building industries, 4.9 on the printing industry, and 5.3 on various industries; 115.2 per mille on commerce and transportation—specifically, 56.8 on commerce, 38.7 on transportation, 18.4 on the hotel business, and 1.3 on insurance; 17.1 per mille on domestic service outside the house and hired labor; 40.6 per mille are employees, clergy, and literary workers; 14.2 per mille are in the army and navy; and 64.3 per mille have no trade or employment. Of 51,770,284 individuals enumerated 22,913,691 are directly engaged in business or labor and 28,856,593 make up their dependent families and domestics.

The following cities had more than 50,000 inhabitants on Dec. 2, 1895: Berlin, 1,677,135; Hamburg, 625,552; Munich, 407,174; Leipzig, 399,969; Breslau, 373,140; Dresden, 336,440; Cologne, 321,548; Frankfurt-on-the-Main, 229,299; Magdeburg, 214,397; Hanover, 209,560; Düsseldorf, 176,024; Königsberg, 172,758; Nuremberg, 162,380; Chemnitz, 161,018; Stuttgart, 158,378; Altona, 148,944; Bremen, 141,133; Stettin, 140,731; Elberfeld, 139,168; Strasburg, 135,608; Charlottenburg, 132,383; Barmen, 127,002; Danzig, 125,639; Halle, 116,302; Brunswick, 115,138; Dortmund, 111,235; Aachen, 110,489; Crefeld, 107,278; Essen, 96,163; Mannheim, 90,677; Kiel, 85,668; Karlsruhe, 84,004; Mulhouse, 82,986; Cassel, 81,738; Augsburg, 80,798; Erfurt, 78,167; Mayence, 76,957; Wiesbaden, 74,122; Posen, 73,235; Luisburg, 70,287; Görlitz, 70,172; Lübeck, 69,812; Würzburg, 68,714; Darmstadt, 63,769; Metz, 59,794; Frankfurt-on-the-Oder, 59,049; Potsdam, 58,452; Münster, 57,018; Spandau, 55,813; Plauen, 55,197; Bochum, 53,788; Gladbach, 53,666; Freiburg, 53,081; Liegnitz, 51,519; Zwickau, 50,391.

The number of marriages in the empire in 1893 was 401,234; of births, 1,928,270; of deaths, 1,310,756; excess of births, 617,514. During 1894 the emigration was 40,964, against 87,677 in 1893, 116,339 in 1892, and 120,089 in 1891. Of the emigrants 35,902 sailed for the United States, 1,288 for Brazil, 2,638 for other parts of America, 760 for Africa, 225 for Australasia, and 151 for Asia. The total emigration to the United States from 1820 to the end of 1894 was about 5,150,000; from 1871 the number was 2,333,460, and during the same period 47,000 went to Brazil.

Finances.—The budget estimates for the year ending March 31, 1896, made the total imperial revenue 1,224,773,500 marks, including 46,379 marks of extraordinary receipts. Of the ordinary revenue, amounting to 1,178,395,000 marks, 627,003,400 marks were derived from customs and excise duties, 54,629,000 marks from stamps, 29,778,900 marks from posts and telegraphs, 1,474,200 marks from the imperial printing office, 23,173,000 marks from railroads, 7,182,100 marks from the Imperial Bank, 11,950,500 marks from various departments, 26,393,700 marks from the invested Invalid fund, 10,000 marks from other funds, 800,000 marks from various sources, and 396,000,100 marks were the contributions from the federated states, whose governments are assessed in proportion to their population for the difference between the imperial expenditures and the receipts from customs, excise, posts, railroads, and telegraphs.

The total expenditures for the financial year 1896 were estimated at 1,239,250,500 marks, including 133,166,200 marks of nonrecurring and extraordinary expenditure. Of the ordinary expenditures, amounting to 1,106,084,300 marks, 651,000 marks were for the Reichstag, 153,800 marks for the Imperial chancery, 10,556,500 marks for the Ministry of Foreign Affairs, 29,725,600 marks for the Ministry of the Interior, 472,212,400 marks for the army, 55,261,500 marks for the navy, 2,085,400 marks for the Ministry of Justice, 378,910,000 marks for the imperial Treasury Department, 346,900 marks for the Railroad Bureau, 73,967,300 marks for the service of the debt of the empire, 735,500 marks for the auditor's office, 55,034,800 marks for the Pension fund, 26,393,700 marks for the Invalid fund, and 49,900 marks for the reform of the salary system. Under the Franckenstein clause the imperial treasury receives from the customs, the tobacco duties, and certain other imposts the fixed sum of 130,000,000 marks a year, the surplus being divided among the federal states according to their population. The receipts from these sources have so increased that of late years the sums distributed among the states have considerably exceeded their matricular contributions to the empire, which has reaped no benefit from the increase in the revenue. Hence Dr. Lieber, the leader of the Center party, proposed, in March, 1896, to divide the surplus receipts over and above the matricular contributions between the states and the Imperial Government, and to devote for two years the share of the latter to the creation of a sinking fund for the extinction of debts of the empire, for the redemption of which no provision has as yet been made. Count Posadovsky, the Minister of the Treasury, accepted this scheme, to which the Bundesrath and the Reichstag gave assent. The surplus to be thus applied in 1896 amounts to 13,000,000 marks.

The following table gives, in marks, the budgets and debts of the several German states for 1896, or in the case of some of them for 1895:

STATES.	Revenue.	Expenditure.	Debt.
Alsace-Lorraine.....	50,909,323	50,909,303	24,676,200
Anhalt.....	22,487,000	21,487,000	1,038,592
Baden.....	77,011,066	82,628,551	333,279,447

Saxony.....	99,401,689	99,401,689	669,521,350
Schaumburg-Lippe.....	881,958	881,958	360,000
Schwarzburg-Rudolstadt.....	2,757,700	2,757,700	3,910,000
Schwarzburg-Sondershausen.....	2,764,455	2,764,455	2,699,458
Waldeck.....	1,261,952	1,261,952	2,100,300
Württemberg.....	67,166,287	69,129,462	463,714,292

The main part, in some states the whole, of the debts were incurred for railroads and other remunerative works.

The funded debt of the empire on March 31, 1894, stood at 1,915,714,500 marks, of which 450,000,000 marks paid 4 per cent., 775,714,500 marks 3½ per cent., and 690,000,000 marks 3 per cent. interest. The treasury notes amounted to 120,000,000 marks. The Invalid fund amounted on March 31, 1893, to 457,194,900 marks. The war treasure is a sum of

120,000,000 marks in gold set aside from the French war indemnity and locked up in the fortress of Spauldau. The total liabilities of the empire on March 31, 1895, amounted to 2,091,250,000 marks. During the financial year 1895 they were increased by 120,300,000 marks. Of the total amount received from loans, which was 129,233,550 marks less than the nominal figure, 1,254,500,000 marks were spent on the army, 278,750,000 marks on the navy, 262,000,000 marks on railroads and military defenses connected with them, and 62,750,000 marks on the postal service. The Baltic Canal cost 105,250,000 marks, and 52,000,000 marks were expended in bringing the free ports of Bremen and Hamburg into the customs union. To offset the debts the Imperial Government possesses valuable assets, such as land and buildings acquired with the loans contracted for the army, which are valued at 900,000,000 marks, railroads and property relating thereto valued at 700,000,000 marks, and postal and telegraph offices of the value of 300,000,000 marks, besides the war treasure and unspent balances and credits amounting together to 360,000,000 marks.

The Army.—Every German capable of bearing arms is liable for military service between the ages of twenty and forty. The period of service in the active army is two years for the infantry and three years in the cavalry and horse artillery. Out of 360,000 young men who are physically fit and legally liable to serve each year on the completion of their twentieth year some 60,000 are drafted into the army. In addition, about 8,000 who have passed their examinations in the gymnasia are admitted as volunteers, who have to serve one year only and find themselves. All able-bodied men between the ages of seventeen and forty-five who are not in the standing army, the Landwehr, or the Ersatz reserve are enrolled in the Landsturm. The peace strength of the army was fixed by the army law of Aug. 3, 1893, at 479,229 men, exclusive of officers, for the five years ending March 31, 1899. The actual strength in 1896 was 22,618 officers and 562,116 men, with 97,280 horses. There were 11,774 officers and 363,432 men in the 173 regiments of infantry, 410 officers and 12,027 men in 19 battalions of rifles, 734 officers and 5,413 men distributed in 290 district commands, and 2,714 surgeons, instructors, etc., making the total strength of the infantry 12,918 officers and 333,586 rank and file. The cavalry consisted of 93 regiments, containing 2,352 officers and 65,499 men, besides 828 on special service. The field artillery of 43 regiments, containing 2,671 officers and 58,424 men, besides 809 on special service. Of foot artillery there are 17 regiments and an extra battalion, having 869 officers and 22,857 men, besides 132 on special service. The pioneers, consisting of 23 battalions, 3 railroad regiments, 1 balloon detachment, 1 railroad battalion, and 3 railroad companies, numbered 729 officers and 19,018 men, besides 124 on special service. There are 21 battalions of train, containing 307 officers and 7,631 men, besides 69 on special service. The special formations number 486 officers and 2,896 men. The army is organized in 20 *corps d'armée*, of which Bavaria forms 2, Saxony 1, Württemberg 1, and Prussia in common with the other states 15, besides the corps of the guards. From 3 to 5 corps constitute an army inspection, of which there are 5. Each *corps d'armée* consists ordinarily of 2 divisions, composed of infantry and cavalry, with 1 brigade of field artillery, to which is attached a battalion of train, 1 regiment or 1 battalion of foot artillery, and 1 battalion of pioneers. Each division is composed of 2 brigades of infantry and 1 of cavalry, each brigade comprising 2 regiments of 3 battalions. The strength of a battalion in time of peace is 544 men, which is raised in war

to 1,002 men by calling in a part of the reserves. The guards and the regiments garrisoning Alsace-Lorraine have a peace strength of 686 men. There are 494 field batteries, of which 47 are mounted. The war strength of the German army is estimated at 3,000,000 men, who have been trained in military duties. Those who escape conscription and are inscribed in the Ersatztruppen are expected to undergo twenty weeks of drill, divided into three periods. By the army bill of 1893, increasing the peace strength of the army by about 70,000 men, in return for which the Government granted the country the reduction of the period of service to two years for the infantry, there were created incomplete *cadres* of fourth battalions, which were attached to each regiment. These half battalions were expected to relieve the three full battalions of extra work, to train one-year volunteers, and to lighten the task of mobilization. The difficulty of training these half battalions in war manœuvres and other disadvantages outweighed their positive value, and consequently this system of organization was changed in the army bill of 1896, whereby the 173 existing fourth battalions were combined to form 86 battalions proper, each 500 strong, and these were formed into regiments of 2 battalions, every 2 regiments making a new brigade. For the reorganization 10,500,000 marks were voted, and the annual increase in expenses was reckoned at 500,000 marks.

The Navy.—The vessels of the German navy are divided between the Baltic and the North Sea squadrons. The Kaiser Wilhelm Canal across Schleswig-Holstein, connecting the naval ports of Kiel and Wilhelmshaven, which was opened in June, 1895, was built to enable the forces to be safely and instantly concentrated in either sea. The navy consists of 4 first-class battle ships, 5 of the second class, and 4 of the third class, 12 ships for port defense, 9 first-class cruisers, 11 of the second class, and 23 of the third class, and 23 other effective fighting ships, besides 128 first-class and 4 second-class torpedo boats. The Government subsidizes 7 ocean steamers as auxiliary merchant cruisers. The navy is manned by conscription of the seafaring population, which is estimated at 80,000, of whom 48,000 are serving in the merchant navy of Germany and 6,000 on foreign vessels.

The programme of naval construction which was to have been executed before the end of 1895, provided for 4 first-class battle ships, 9 coast-defense armor clads, 11 cruisers, 7 of them deck-protected, 2 dispatch vessels, and 2 torpedo division boats. On April 1, 1888, the fleet numbered 79 vessels, while on April 1, 1895, it numbered 91 vessels, not including torpedo boats. The aggregate tonnage of the navy was 182,470 tons in 1888, and in 1895 it was 266,237 tons, while the aggregate horse power was increased from 189,605 to 305,220. The annual current expenditure for the navy has grown from 37,000,000 to 55,000,000 marks. The total expenditure for extraordinary purposes during the eight years was 233,000,000 marks, and the value of the fleet is estimated at 307,000,000 marks. The programme still lacks much of being carried out in its entirety. The 4 first-class ironclad battle ships recommended in the programme have been built, also the 9 armored vessels, but of 11 cruisers only 1 has been completed; 2 more first-class cruisers have been begun, and plans have been approved for 2 second-class cruisers. In the estimates for 1896 more than 7,000,000 marks were set down for new vessels. The Reichstag authorized the building of a first-class battle ship to replace the antiquated "Friedrich der Grosse," and 1 third-class and 2 second-class cruisers, a torpedo division boat, and additional torpedo boats. The gunboat "Ilitis" was driven upon the rocks by a typhoon on July 23,

1896, in the China Sea and lost with 75 men. The new battle ship "Kaiser Friedrich III," launched on July 1, 1896, is designed to surpass in fighting power any naval ship yet built.

Commerce.—The total value of the special commerce in 1894 was 4,285,533,000 marks for imports and 3,051,480,000 marks for exports. The various classes for merchandise imported and exported were valued in marks as follows:

MERCHANDISE.	Imports.	Exports.
Live animals.....	280,483,000	23,446,000
Animal products.....	123,936,000	27,875,000
Articles of consumption.....	1,156,668,000	390,561,000
Seeds and plants.....	63,641,000	31,245,000
Fuel.....	94,163,000	142,924,000
Fats and oils.....	247,025,000	31,707,000
Chemicals, drugs, etc.....	271,484,000	304,619,000
Glass, stone, and clay goods.....	62,126,000	115,815,000
Wood manufactures.....	508,756,000	426,936,000
Paper manufactures.....	17,010,000	89,768,000
Leather and leather goods.....	181,415,000	205,967,000
Textile manufactures.....	931,051,000	796,367,000
Rubber and rubber goods.....	29,795,000	23,093,000
Machinery and instruments.....	61,116,000	159,977,000
Hardware.....	21,995,000	77,912,000
Books and objects of art.....	32,371,000	100,985,000
Miscellaneous.....	929,000
Total.....	4,285,533,000	3,051,480,000

The imports of horses were 61,624,000 marks in value; of hogs, 80,754,000 marks; of wheat, 117,916,000 marks; of rye, 54,544,000 marks; of barley, 104,380,000 marks; of coffee, 202,793,000 marks; of petroleum, 45,536,000 marks; of hides, 97,293,000 marks; of cotton, 199,605,000 marks; of wool, 222,520,000 marks; of woolen yarn, 100,633,000 marks; of silk, 77,407,000 marks. The exports of hops were valued at 21,505,000 marks; of sugar, 209,174,000 marks; of coal, 136,715,000 marks; of aniline dyes, 53,183,000 marks; of wood manufactures, 46,692,000 marks; of paper, 55,452,000 marks; of leather goods, 72,317,000 marks; of cotton cloth, 54,431,000 marks; of mixed silk and cotton cloth, 79,061,000 marks; of woolen goods, 117,714,000 marks; of hosiery, 81,973,000 marks; of trimmings, etc., 85,532,000 marks. Of the total imports 2,160,187,000 marks were subject to duty and 2,125,346,000 marks were free. The duties paid averaged 18.1 per cent. of the value of the goods. The imports of gold and silver in 1894 amounted to 322,278,000 marks, and the exports to 88,826,000 marks.

The participation of the various countries in the commerce of the German customs union is shown in the following table, giving the values in marks, of the imports from and the exports to each country in 1894:

COUNTRIES.	Imports.	Exports.
Free port of Hamburg.....	12,718,000	37,454,000
Great Britain.....	608,866,000	635,114,000
Austria-Hungary.....	581,749,000	401,653,000
Russia.....	543,938,000	194,806,000
Netherlands.....	199,179,000	244,017,000
France.....	214,049,000	188,130,000
Switzerland.....	136,228,000	188,334,000
Belgium.....	171,628,000	149,888,000
Italy.....	141,436,000	82,470,000
Norway and Sweden.....	82,607,000	113,471,000
Denmark.....	73,126,000	83,387,000
Spain.....	39,349,000	30,567,000
Balkan states.....	91,385,000	83,379,000
Portugal.....	12,790,000	10,865,000
British India.....	164,130,000	39,169,000
Other Asiatic countries.....	87,669,000	60,120,000
Africa.....	72,142,000	38,678,000
North America.....	582,875,000	305,246,000
South America.....	369,014,000	142,537,000
Australia.....	98,917,000	21,372,000
All other countries.....	1,433,000	923,000
Total.....	4,285,533,000	3,051,480,000

The total value of the imports in 1895, apart from the precious metals, was 4,092,000,000 marks,

and of the exports 3,310,000,000 marks. The returns indicate an improvement in the industrial conditions, and in so far justify the commercial treaties which the Agrarians have attacked. The merchandise exports, amounting to 2,961,000,000 marks in 1894, increased 349,000,000 marks in a single year. At least two thirds of this increase was due to the augmented exportation of purely industrial products, especially iron manufactures. The imports of merchandise increased 782,000,000 marks, and amounted in 1895 to 4,092,000,000 marks. A large part of the increase was due to the greater demand for raw materials.

Navigation.—The number of vessels of various nationalities entered at German ports during 1893 and their total tonnage are given in the following table, each vessel, though calling at different ports, being counted only once:

ENTERED.	WITH CARGOES.		IN BALLAST.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
German.....	41,647	7,033,496	7,436	593,850
British.....	5,087	4,228,746	271	274,602

The number entered with cargoes was 57,224, of 13,582,967 tons, and in ballast 9,431, of 1,038,667 tons; total, 66,655, of 14,621,634 tons.

The number and tonnage of the vessels cleared from German ports under the different flags are given below:

CLEARED.	WITH CARGOES.		IN BALLAST.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
German.....	39,226	6,209,956	10,455	1,524,167

The total number cleared was 67,219, of 14,734,653 tons, of which 49,815, of 10,008,581 tons, carried cargoes and 17,404, of 4,726,072 tons, sailed in ballast.

The merchant navy in 1895 comprised 2,622 sailing vessels, of 660,856 tons, and 1,043 steamers, of 893,046 tons. Of the sailing vessels 630, of 118,912 tons, belonged to Baltic ports, and of the steamers 390, of 158,992 tons, while 1,992 sailing vessels, of 541,944 tons, and 653 steamers, of 734,054 tons, belonged to the ports of the North Sea.

Communications.—The Imperial and state governments own all the railroads except 3,170 miles. The total length open to traffic in 1895 was 27,851 miles, built at a cost of 11,105,722,000 marks. There were 242,389,000 metric tons of freight carried in 1894, paying 928,509,000 marks, and 521,479,000 passengers, paying 372,377,000 marks. The net earnings were 4.95 per cent. on the capital, the total receipts being 1,413,523,000 marks, and expenses 863,309,000 marks. The rivers of Germany have 5,649 miles of navigable waters, exclusive of 1,357 miles of canalized rivers. The length of canals is 1,390 miles, not counting the 61 miles of the strategic Kaiser Wilhelm Canal. This ship canal, which was begun on June 3, 1887, and opened for traffic on June 19, 1895, is 72 feet broad at the bottom and 213 feet at the surface, and has a uniform depth of 29½ feet. Its cost was 7,800,000 marks. The canal was not used as much as was expected, the receipts for the first eight months being only one fifth of what was estimated, and consequently the Government determined to allow after

the first year a higher speed than 10 kilometres an hour, and to reduce the tolls for vessels which save the least by following this route in preference to that of the Scandinavian straits.

The imperial post office in 1894 carried 1,147,742,678 letters, 407,009,652 postal cards, 510,093,581 circulars, pamphlets, and books, 32,988,580 samples, and 861,778,329 newspapers, and money orders amounting to 19,371,152,127 marks. The Bavarian post office carried 118,130,150 letters, 26,307,720 postal cards, 42,375,440 circulars, etc., 2,602,280 samples, 120,948,409 journals, and money orders of the amount of 1,736,680,951 marks. The business of the Würtemberg post office comprised 46,281,572 letters, 14,806,508 postal cards, 22,769,779 circulars, etc., 1,069,640 samples, 45,859,834 journals, and 848,245,936 marks of remittances. The receipts of the imperial post office were 269,778,002 marks, and expenses 249,360,749 marks; the receipts of the Bavarian post office were 23,977,433 marks, and expenses 21,966,266 marks; the Würtemberg post office took in 11,906,133 marks and expended 10,357,150 marks.

The telegraphs of the imperial post office had in 1894 a total length of 68,108 miles, with 256,034 miles of wire; the number of internal dispatches in 1894 was 19,842,797, and of international dispatches 9,258,728. The Bavarian telegraph lines have a length of 7,907 miles, with 24,825 miles of wire, and in 1894 they transmitted 1,746,610 internal and 506,285 foreign messages. Würtemberg has 3,052 miles of lines, with 7,906 miles of wires, over which during the year 609,767 internal and 170,285 foreign messages were sent.

Currency.—After the establishment of the empire an imperial currency system was adopted and the former currencies of the individual states were called in. Gold was made the sole standard, whereas silver had been the principal medium of internal payments, and the new mark currency was coined from 1872 out of gold paid by France as war indemnity. When it was found that a large proportion of the gold left the country the decree abolishing the legal-tender quality of the thaler, the former unit of value in the German monetary union, was suspended, and a large quantity of thalers that had been redeemed were reissued. In later years the thalers, while still legal tender, were gradually withdrawn from circulation, so that there remained in 1895 only about 400,000,000 marks of the old currency, of which 51,500,000 marks were Austrian thalers, coined before 1867. Of the new German currency, 2,891,452,900 marks had up to the end of 1894 been coined since 1872 and remained in circulation, except the indeterminate amount exported and melted. Of the new silver subsidiary currency, 475,493,900 marks had been coined and not withdrawn; of nickel coins, 52,429,000 marks; and of copper, 12,660,700 marks—making the total amount of the new imperial coinage 3,432,036,500 marks. The treasury notes, amounting to 120,000,000 marks, are not legal tender. The number of banks of issue decreased from 13 in 1890 to 8 in 1894, owing to the heavy tax on emissions exceeding the coin reserve. The bank notes in circulation at the end of 1894 amounted to 1,173,629,000 marks, of which 45,986,000 marks were covered by the reserve funds. The 20-mark piece, or double krone, contains 7.96495 grammes of gold 900 fine, equal to 7.16846 grammes of pure gold. The silver mark weighs 5.5 grammes and contains 5 grammes of pure silver. The mark is divided into 100 pfennige. There are 5-mark and 2-mark silver coins, as well as mark pieces and fractional coins worth 50 and 20 pfennige. The value of the mark is 23.8 cents in United States currency.

The Reichstag.—The 397 members of the Reichstag in 1896 were divided in respect to party as fol-

low: German Conservatives, 58; Reichspartei, or Free Conservatives, 27; National Liberals, 49; German Reformed party, 13; Anti-Semites, 2; Liberal Union, 14; People's party, 25; Farmers' Union, 4; Center, or Clerical party, 96; Guelphs, 7; Poles, 19; Alsations, 9; Danes, 1; Social Democrats, 47; Independents, 10; vacancies, 4.

The rejection by the Reichstag of the antirevolutionary bills introduced in 1895 by Prince Hohenlohe impelled the Government to apply with greater rigor any provisions in existing laws that were calculated to hamper the activity of the Socialist party. The growing frequency of prosecutions for *lèse majesté* and the restriction as far as the law permitted of the liberty of speech and of combination and meeting caused more alarm among the Liberals than among the Socialists. The Anti-Semitic and Christian Socialist movements ended by being tributary feeders to the Socialist agitation. Dr. Stöcker, forced to resign from the Conservative party, added, from the few adherents who clung to him, the new group of the Christian Socialists to the long list of German political parties. They remained antagonistic to the Social Democrats, with whom the Radical Young Christian Socialists affiliated. The Extreme Conservatives were dismayed by the misdeeds and flight of their former leader, Baron von Hammerstein, who was arrested at Athens and finally tried and convicted of forgery and embezzlement on April 22. The National Liberals remained without purpose or initiative. Radicalism was permanently disabled by the split in its ranks by the secession of 1893, and has not been able to recover lost ground, except the branch called the People's party, which flourishes in south Germany. The Roman Catholic Center still presented an unbroken front to its adversaries both of the Right and of the Left, and still held the balance of power. The Social Democrats, with 2,250,000 voters behind them, formed a solid phalanx that no other party could rival for discipline or numbers. The most aggressive element in politics was the Agrarian group. On Jan. 16 Graf Kanitz and his friends introduced in the Reichstag a bill for the establishment of a state monopoly of imported cereals, a proposal that had already been twice rejected. Its Conservative and Anti-Semitic supporters could now muster only 97 votes, while 219 were cast adversely. The Colonial party, greatly encouraged by the Emperor's message to President Krüger of the Transvaal and by the toast which he proposed to a greater German Empire beyond the seas, clamored for a stronger navy. A bill for increasing the taxation and bounties on sugar, introduced on March 2, was the first measure that the Government ever presented after carrying it through the Federal Council by a narrow majority. Against this measure for the benefit of the sugar growers and refiners of Saxony, Hanover, Brunswick, and Anhalt were arrayed all the south German states except Hesse and four of the north German states, as well as the two Hanse towns. Not in this measure alone, but in a margarine bill, rendering the manufacture and sale of this article of food for the poorer classes as difficult as possible by the insertion of numerous restrictions and regulations, and most of all in the Stock Exchange Reform bill, did the Government bow to the demands of the Agrarian League. The margarine bill was intended by the Government as an extension of the law of 1887, which had proved inadequate to prevent the sale of that product as real butter. In its final form some of the vexatious amendments tacked on by the Agrarians for the purpose of crushing the margarine industry were stricken out. The ministry accepted a regulation forbidding the sale of butter and margarine in the same room. Another important point is the prohibition of the use

of all coloring matter. This measure was afterward rejected by the Federal Council. The Stock Exchange bill prohibited all time contracts for the purchase or sale of grain. Judgments obtained in foreign courts to enforce such contracts were declared incapable of being enforced in Germany. When grain dealers arranged to establish branch houses and banks in Antwerp, Amsterdam, and Brussels, on the motion of Count von Kanitz, the Agrarian leader, the Reichstag requested the Government to negotiate treaties with foreign powers prohibiting traffic in grain and produce futures. The bill provided for a public register of prices. All German stock and produce exchanges are placed under the control of a special commission selected for the purpose by the Federal Council, and composed half of representatives of commerce and industry and half of representatives of agriculture. Each exchange is administered by its own local committee. Complicated provisions regulate the fixing of prices and the admission of new securities. Exceptionally severe regulations, enforced by heavy penalties, are applied to the drawing up of prospectuses and the publication of statements with a view to obtaining official quotations of shares. Speculation in shares of mining and industrial enterprises is forbidden, and in the shares of any company having a smaller capital than 20,000,000 marks. The Federal Council is intrusted with discretionary power to forbid time dealings in any class of goods or securities. Conservatives, Clericals, National Liberals, and Anti-Semites voted for the bill, which was strenuously opposed by the Radicals. The Socialists also voted against it eventually on the ground that it would make bread dearer. The sugar-tax amendment bill was passed after a long debate and went into effect on June 1. The Government proposed to increase the export bounties from $1\frac{1}{4}$ mark to 4 marks per 100 kilos, averring that an increase would lead the sooner to an international agreement for the total abolition or gradual diminution of all sugar bounties. Prior to 1837 the German sugar tax was calculated on the amount of beet root employed, 20 centners of green roots being expected to produce 1 centner of raw sugar. The bounty, being intended as a drawback on exports, was made the same for a centner of exported sugar as the tax collected on 20 centners of beet roots. When with the advances in machinery and chemical processes and the improvement in the quality of the beets $1\frac{1}{2}$ to 2 centners of sugar were extracted from 20 centners of roots, the drawback became a bounty which absorbed the entire revenue from the sugar tax. In 1837, when the state was paying a bounty of $4\frac{1}{2}$ marks on every 100 kilos exported, this was cut down to $2\frac{1}{2}$ marks, and a new duty was imposed based on the consumption of sugar. In 1891 the Reichstag further reduced the bounty to $1\frac{1}{4}$ mark as a preliminary to the entire abolition on July 31, 1897, provided that in the mean time Austria and France, the other bounty-paying countries, should agree to do likewise. Failing to obtain such an agreement, the Government proposed to raise the bounty to 4 marks, partly as a means of pressure on those governments. The Reichstag, however, voted to restore the export bounty of $2\frac{1}{2}$ marks. It raised the duty on raw sugar intended for home consumption from 18 to 21 marks, fixed the limit of production for the next season at 17,000,000 double centners, and introduced a graduated tax on production, beginning with 10 pfennige per 100 kilos for the first 4,000,000 kilos, with 25 per cent. increase in the duty for every additional 1,000,000 kilos produced in the same factory.

Another measure originated by the Agrarians provides for the expenditure of 3,000,000 marks in erecting grain warehouses in agricultural districts,

and for the construction of numerous light railways to facilitate the transportation of grain.

Prince Hohenlohe, who early in 1895 expressed his readiness to take into consideration the question of international negotiations for the rehabilitation of silver, explained on Feb. 8 the results of his efforts. The preliminary interchange of views with the English Government led him to conclude that there was no probability of the Indian mints being reopened for the unrestricted coinage of silver, and since this was acknowledged by bimetalists to be the indispensable preliminary condition for any international measure in favor of silver, without which, in his own opinion, all attempts to raise the price of silver would be in vain, a monetary convention could not at the present time be expected to bring the questions at issue nearer to practical solution; therefore it did not appear advisable for Germany to take the initiative in summoning such a conference. Under the influence of this conviction the federal governments unanimously determined not to comply with the request for a conference contained in the resolution carried by the Reichstag on Feb. 16, 1895. If, however, any acceptable and promising proposals were made by any other state the Chancellor was ready to contemplate Germany's participation in an international discussion of such plans. The disadvantages involved for Germany in the fluctuation and depression of the price of silver were defined as the reduction of the value of the metal as a trustworthy medium, the increased likelihood of the circulation of forged coins, the injury to the German silver-mining industry, and the loss in the export trade to countries having a silver currency.

The death, on April 12, of Baron von Schrader, the King's chamberlain, as the result of a duel with Librecht von Kotze, whose arrest he had caused on the charge that he had circulated slanderous letters reflecting on the private lives of members of the court, was the occasion for interpellations of Clericals, Socialists, and Radicals regarding the connivance of the civil and military authorities in the illegal and barbarous practice of dueling, which was becoming more and more common. Herr von Kotze was afterward tried, and was sentenced to two years' confinement in a fortress, yet duels occurred with the same frequency, in many cases by decree of the courts of honor established to avert them, sometimes when one of the principals, as Herr von Kotze himself, had intended to seek redress in the law tribunals. The increase in dueling was attributed to the influence of the Emperor himself, who in a rescript had declared that officers who know not how to defend their honor can not be tolerated in the German army.

Reforms in the procedure of military courts, particularly public sessions and oral testimony, were demanded by the people and by the most intelligent of the army officers. A bill for this purpose was prepared and advocated by Gen. Bronsart von Schellendorf, the Prussian Minister of War. When the military cabinet of the Emperor still continued to obstruct this and other long-promised reforms, Gen. Bronsart von Schellendorf resigned his portfolio, which was given on Aug. 15 to Lieut.-Gen. von Gossler. Measures to regulate military service in the German spheres of influence provide that recruits may serve their time in the colonial forces instead of in the active army, and that officers who have resigned to join the colonial troops may be readmitted to the army or navy.

A new law against unfair competition is directed mainly against the use of false weights and measures, the publication of misleading descriptions of articles of commerce with a view to increase their sale, and the disclosure of trade secrets, which latter

offense is punishable with a year's imprisonment. A manufacturer or trader can proceed against a rival who employs unfair methods, either by civil or by criminal complaint. Newspapers intentionally printing untruthful advertisements come within the scope of the act, also persons who knowingly indulge in or circulate commercial slander. The prosecution of Socialist leaders and the dissolution of their organizations under an antiquated Prussian law led the Reichstag to approve a project for the reform of the law of association emanating from the Radical party. A bill to amend the industrial code, prohibiting hawking and peddling and the solicitation of orders, failed to pass. The Reichstag adjourned on July 2 till Nov. 10.

In the autumn session an interpellation was raised regarding Prince Bismarck's newspaper revelations of a secret treaty with Russia, existing from 1884 till 1890, assuring the neutrality of that power in the event of a war with France and the neutrality of Germany in the event of Austrian aggression against Russia. The first legislative proposal of the Government was a bill to grant compensation to persons unjustly convicted of crime or misdemeanor.

The agitation against aristocratic dueling was coupled in the autumn session of the Reichstag with a discussion more nearly affecting popular rights, that of the old subject of military arrogance toward civilians. Since the Emperor uttered the sentiment that whoso insults the Kaiser's uniform insults the Kaiser's person, the demeanor of officers has grown more unbearable. In October a shocking example of military ruthlessness roused the indignation of the country. At Carlsruhe Lient. Morned von Brüsewitz, while sitting in a coffee house, was jostled by an artisan who passed his chair, and when the latter refused to apologize except to say that it was unintentional, the officer rose to run him through the body with his sword, which he finally accomplished after being momentarily restrained by the landlord in order to allow the frightened civilian time to escape. The murderer's companions justified his act, for which, after the whole country had denounced it, he was brought before a military court, which sentenced him to two years' imprisonment in a fortress. The outcry against such misdeeds, other instances of which were recalled or brought to light, hastened the reform of military judicial procedure. An important amending bill to extend and regulate old age and sick insurance was also brought forward. Other measures affecting workmen were the new industrial code and a bill for the compulsory organization of artisans.

The budget for 1896-'97 showed a deficit of 57,000,000 marks, caused by the demand for extraordinary naval expenditure amounting to 70,500,000 marks, of which 62,000,000 marks are required for building a first-class ironclad to take the place of the "König Wilhelm" and the construction of 2 second-class cruisers, gunboats to take the place of the "Hlyäne" and the "Ilitis," a torpedo division boat, and 8 torpedo boats. The budget contains a proposal to convert the 4-per-cent. consols to 3½ per cents. The saving in interest is to be applied to increasing the pay and pensions of civil and military officers.

The Civil Code.—The work which completes and crowns German unity, the new code of laws, was laid before the Reichstag by the Imperial Chancellor in January. The Government formed the design of giving the country a complete code of law soon after the empire was founded, deeming that this would do more to break down the old barriers of particularism and consolidate the nation than the customs union, the imperial postal service, or even the common military system. Germany has hitherto been governed by half a dozen

systems of law and a multitude of local customs and laws. Of the six general systems the most important are the French code, tenaciously adhered to in the Rhine provinces after being introduced by Napoleon, the Saxon laws established in 1863, and the common law founded on the Roman. These great systems were modified by local statutes and usages. In the Prussian provinces a score of codes superseded the common law. In the same state, even in the same city, there was such diversity that the aid of a local lawyer was required in transactions that in other countries involve no question that an ordinarily intelligent person can not solve for himself. In one town in Bavaria the estates of three persons dying in different rooms of the same house would have to be distributed according to three different legal systems. To restore the lost idea of uniform justice and to strengthen the newly founded empire, the ambitious task of codifying and unifying the whole body of civil law was early taken in hand. The Government framed a mercantile code, a criminal code, a code of criminal and civil procedure, and a number of minor measures, such as the law of copyright and trademarks, and these were adopted and put into practice while the main work was still being deliberately and rigidly elaborated. After the plan was sketched out by 5 eminent jurists, a commission appointed in 1874, composed of judges, officials connected with the ministries of justice in the different states of the empire, and professors of universities, was engaged for thirteen years in drafting and revising a scheme. This first draft was then published and criticisms were invited. These were abundantly offered from all quarters at home and abroad. The thoroughness and impartiality of the work were everywhere acknowledged, the infinite care that had been taken to come to right conclusions and to hold the balance just between diverse interests. But to progressive jurists the result did not seem to accord with the spirit of the age. There were knots that should have been severed, and antiquated forms that were needlessly retained. The phraseology was too pedantic and formal. Those who were inspired with the fresh German patriotism devised a system more distinctly modern and national and condemned this one as a body of Roman laws only slightly modified. In 1890 the Government appointed a third commission, consisting for the most part of jurists who had not served on the first, to consider and review this draft. The work of revision was carried on for several years longer, though the main lines of the first draft were adhered to. In this code the Government had to deal with scores of vexed questions, and in the commissions the various social and political parties and schools were represented and fought out their differences in so far as they were not irreconcilable. The Socialists and their opponents joined battle over the clauses relating to tenancy of land and houses and contracts of service. The commissions embodied important and far-reaching innovations in the new code. In defining the duties of masters and servants some large concessions were made to the latter, but not enough to satisfy the Social Democrats, who discerned in the draft code features that seemed to favor the capitalists. The commissions spent much time in defining the legal position of married women and in putting the law of divorce on a rational basis. The unavoidable opposition of the Church parties was encountered here, for the Clericals can not accept divorce and civil marriage in any form. The draft was referred to a committee of the Reichstag and was finally passed in very nearly the original shape. Amendments proposed by Herr Bebel to secure for married women complete

control of their property were rejected, but another Socialist amendment was adopted, fixing twenty-one as the limit of age beyond which parental consent is not necessary for marriage. Articles allowing legal compensation for damage done to crops by hares were stricken out. Civil marriage was made compulsory. The Catholics succeeded in eliminating from the code a clause making incurable mental disease a legal cause for divorce. This party, one of whose members, Baron von Buol-Berenburg, was the president of the Reichstag, sacrificed religious scruples in order to bring a great national work to completion. The Radicals accepted the code as a uniform system for the whole of Germany in spite of what they considered serious defects. The Anti-Semites criticised it because it was based more on Roman than on Germanic law. The Socialists combated it to the end, denouncing it as a lump of class legislation designed to facilitate the exploitation of the proletariat. A mass meeting of women from all parts of Germany was convened in Berlin to protest against the clauses relating to marriage and the family. The new code will not go into effect until Jan. 1, 1900. The code, which contains 2,359 sections, deals with private law only, excluding not only all subjects that are clearly within the domain of public law, but such as are determined to a great extent from the point of public policy, although they regulate private rights. Aside from such subjects, it does not embrace the whole of private law, for mercantile law has been codified separately, and the results are being revised by a new commission, with the intention of bringing the rules of commercial law into force at the same time as the civil code. The Reichstag gave its final vote on July 1, when the whole code was adopted by a majority of 174.

Under the new code the principles of equity find a wider application than the former codes allowed. For example, a landlord can not now enforce exact compliance with the lease when the tenant finds the premises he has hired for a dwelling to be unfit for habitation. Considerable advance, too, has been made in regard to the right to evict and distrain for rent. The article ordaining compulsory civil marriage merely renders obligatory a practice that has already come to be generally observed since Prince Bismarck carried the law sanctioning the civil form in the beginning of his conflict with the Roman *curia*. It has not, however, supplanted the religious ceremony, but is observed as a safeguard against legal complications. As a compensation to the Catholics for their acquiescence in this article, divorce is rendered more difficult than it has been hitherto in Prussia and other states where incompatibility of temper has been recognized as a sufficient cause. Even a judicial separation is difficult to obtain under the new code, and divorce from the bonds of matrimony may be granted only in cases of proved infidelity or incurable insanity.

Court Reaction against Social Reform.—When the young Emperor inaugurated the policy of conciliating the working classes by remedial legislation, and heralded a period of social peace and reform by calling the International Labor Conference of 1890, Prince Bismarck, unwilling to approve the scheme of imperial socialism, resigned the Prussian Ministry of Commerce and Industry, and Baron von Berlepsch, who in addition to technical qualifications was thoroughly in sympathy with the Emperor's ideas, was appointed to the place. When in spite of the Emperor's promises and good intentions Social Democracy still spread among the workingmen, when these even grumbled because the Government failed to fulfill all its promises, the reform movement came to an end with all except Baron von Berlepsch, who, with the help of the commission

of labor statistics that he had organized, continued to draw up schemes for the amelioration of the conditions of labor, such as the compulsory closing of shops at 8 o'clock, a maximum working day for bakers, the compulsory organization of trade guilds, and the state regulation of chambers of commerce. All these measures encountered so much opposition that they had to be abandoned. The Emperor Wilhelm left no doubt of his altered sentiments when, in reference to Pastor Stöcker, he sent a message, and allowed it to be made public, saying that "Christian Socialism is nonsense and leads to arrogance and intolerance." His characterization of political divines as "monstrosities" evoked from the evangelical ministers who met in a social congress a vote of praise and thanks to Dr. Stöcker for his political agitation. In June Baron von Berlepsch resigned his place in the Prussian Cabinet, and the King appointed Herr Brefeld in his stead. The reactionary tendency in influential quarters was reflected in Saxony in a new electoral law for the Diet introducing the Prussian system of indirect election, which requires voters to possess an income of 2,800 marks, except in the lowest class, which must therefore invariably be outvoted in the final polls by the representatives of the small minorities qualified to vote in the two higher classes. The avowed object of the change is to keep the Social Democrats out of the Saxon Diet, where they now hold 14 of the 82 seats.

Socialist Trial.—The Berlin police, acting under the orders of Herr von Köller, then Prussian Minister of the Interior, on Nov. 25, 1895, raided the office of the Socialist newspaper "Vorwärts" and entered the houses of leading Socialists, where they seized all kinds of documents. A few days later a police order was issued dissolving the chief committees and associations connected with the central organization of the Social Democratic party in Berlin, on the ground that they had transgressed the Prussian law of 1850 regulating the right of association and assembly by communicating with each other by means of committees, correspondence, pecuniary support, etc. The dissolution of the associations was confirmed by the courts in December, 1895, and on May 15 the accused, numbering 47 persons, among them the Deputies Auer, Bebel, Singer, and Gerish, were called up for trial in Berlin. They denied the police accusation that they maintained a secret organization, and pointed out that in the employment of agents for various legitimate purposes the Socialist party did not differ from the other political parties in the country. The result of the trial was a moral defeat for the police. Of the accused, 32 were acquitted, and the rest were fined from 30 to 75 marks, while the ordinance of dissolution was confirmed only for the chief committee and 4 of the 6 electoral associations of the capital.

Berlin Industrial Exhibition.—An exhibition of German products and industries more extensive and complete than the exhibition of 1879 was opened at Berlin on May 1, 1896. The site was the park at Treptow, embracing 271 acres and containing 2 or 3 large sheets of water that were employed for various exhibits and spectacles, such as miniature naval engagements. The exhibits were divided into the following 23 groups: 1, Clothing; 2, textile wares; 3, machinery; 4, porcelain and glass; 5, engineering and architecture; 6, fishery; 7, sport; 8, electricity; 9, woodwork; 10, leather; 11, fancy goods; 12, metal work; 13, scientific apparatus; 14, photography; 15, paper; 16, chemicals; 17, musical instruments; 18, gas; 19, health and sanitation; 20, education; 21, gardening; 22, colonial; 23, articles of food. Scientific, fishery, sporting, and food exhibits were contained in a

series of buildings along the bank of the Spree, where also a full-sized model of a North German Lloyd mail steamer was erected, and there was a panorama of Alpine scenery. The science hall contained, besides the space allotted to individual exhibitors, a large auditorium in which a comprehensive series of lectures was given throughout the season. In front of the sport building stood an equestrian statue of the Emperor, the only one that had ever been executed. The interior was decorated with mural paintings representing the national sports. The main grounds, containing the great exhibition building in which 14 of the groups were housed, was encircled by an electric railroad, with 10 stations at the chief points of interest. Distinct from the exhibition proper was the colonial exhibition. German travelers and the authorities in Africa contributed to make this exhibition as far as possible a faithful representation of indigenous life and customs in the new German colonies. Natives from the various spheres of influence were brought to Berlin with their household goods and accustomed implements and weapons in order to display their habits and occupations and give an idea of the variety and extent of the colonial empire of Germany. Old Berlin was a reproduction of a quarter of the city as it was in the seventeenth century, with its narrow streets and archways, and quaint, small, irregular houses. There was also a realistic imitation of a part of Cairo, with the tombs of the khalifs, mosques, a great pyramid, hotels, houses, and bazaars, where a collection of arms and other articles lent by the Khedive was displayed and a numerous colony of Arabs plied their usual trades and furnished much amusement to the visitors.

The Miners' Congress.—The International Miners' Congress, which would have met in Belgium if the Belgian Government had been willing to rescind its decree of expulsion against Deputies Basly and Lamendin, the two leading French representatives, held its annual meeting in Germany, near the Belgian frontier, at Aix-la-Chapelle. Mr. Burt, the English labor representative in Parliament, was made president. The Northumberland and Durham miners were present in double their usual numbers to oppose the legal eight-hour day, which was advocated by the British Miners' Federation, seconded by the French and Belgian delegates, and was finally approved by a large majority. A resolution in favor of a minimum wage adapted to the conditions of life and industry in each country, which should serve as a base for further agitation to secure higher wages, was carried by the votes of delegates representing 961,000 miners, the Northumberland delegates, who represent 36,000, voting against it, and the Durham delegates abstaining. A resolution demanding the prohibition of all overtime tending to increase production was carried by the votes of all except the British National Union, and one to limit the production of coal in all countries according to the requirements so as to prevent overproduction was adopted unanimously. A resolution in favor of the nationalization of mines was carried by the votes of the French, the Belgian, the Welsh, and a part of the English delegation; the German delegates abstained from voting, on the ground that the German Empire was not yet sufficiently democratic to be intrusted with the ownership of mines, while the German states were still less so, as was evidenced by the recent abolition of universal suffrage in Saxony. By votes representing 911,000 miners against 126,000, the congress approved a resolution to the effect that the employer should be held entirely responsible in case of accident unless he can prove that it was not due to his fault. A resolution in favor of prohibiting

women from working in and about mines was carried unanimously. The Germans proposed to hold congresses biennially, but all others voted in favor of meeting every year. London was chosen as the place for the congress of 1897, to which Russian and American representatives were invited.

GIFTS AND BEQUESTS. The following list comprises the most notable gifts and bequests for public purposes, of \$5,000 each and upward in amount or value, that were made, became operative, or were completed in the United States during 1896. It excludes the ordinary denominational contributions for educational and benevolent purposes, and all State and municipal appropriations to public and sectarian institutions. The known value of the gifts and bequests enumerated exceeds \$27,000,000.

Adriance, John P., Poughkeepsie, N. Y., children of, gift to the city of a public library; cost, \$50,000.

Ames, Oliver, Easton, Mass. (died Oct. 22, 1895), gift to the town of Easton, a public high-school building; cost, \$60,000, exclusive of land and foundation; begun before his death, completed in 1896.

Rollins, Daniel G., New York, gift to the Congregational Society of Somersworth, N. H., a parsonage valued at \$10,000.

Roth, John, New York, bequests to the Swiss Benevolent Society, German Hospital Dispensary, and Isabella Heimath, each one third of an estate of \$90,000, subject to the life interest of his widow.

Rutgers College, New Brunswick, N. J., gift from a friend for a chair in Greek, \$10,000, and from friends on Charter Day, \$15,000.

Sabatie, A. E., San Francisco, Cal., and Bordeaux, France, bequest to the French Benevolent Society of San Francisco, property in California valued at \$100,000.

St. Augustine's Roman Catholic Church, Brooklyn, N. Y., gift from friend for stained-glass windows, \$25,000.

St. Mary's Free Hospital for Children, New York and Rockaway Beach, gift from a woman, \$20,000.

St. Joseph's Roman Catholic Seminary, Dunwoodie, near Yonkers, N. Y., gifts from the estate of the Rev. Patrick Brady, a collection of 50 paintings and a library of 10,000 volumes; from that of the late Vicar-General Preston, his library of very rare and old books; and from the Rev. James Corrigan, a collection of rare books on historical and ecclesiastical subjects—the three gifts having a value of \$100,000.

Sammet, Philip, New York, bequests to Mount Sinai Hospital, the Montefiore Home, and the Hebrew Sheltering Guardian Society, each \$2,000.

Salisbury Stephen, Worcester, Mass., gifts to the city, cash \$100,000 and land valued at \$70,000, for a new art museum.

Schenley, Mrs. Mary E., Allegheny, Pa., gift for a public manual-training school in that city, \$250,000.

Schiff, Jacob H., New York, gift to Barnard College, \$5,000.

Scott, William, Brooklyn, bequest to the City

Mission, available on the death of his widow, an estate of about \$100,000.

Sears, J. Montgomery, Boston, Mass., gift to Yale University, the library of 3,500 volumes of the late Ernst Curtius.

Shepard, Frederick M., Orange, N. J., gift to Orange Memorial Hospital, a pavilion for consumptives; cost, \$10,000.

Shoenberger, John H., Pittsburg, Pa., bequest for the erection and endowment of a hospital in that city \$800,000.

Skidmore, Charlotte H. F., New York, bequests to the Hahnemann Hospital, \$10,000, and to the Presbyterian Hospital \$5,000.

Sly, Emmeline, New York, bequest to the charity fund of the New York Association of the New Church, \$5,000.

Smith, De Witt, New York, gift to Smith College, Mass., a dormitory; cost, \$150,000.

Spaulding, Dr. Miles, Groton, Mass., bequests to educational and church societies, \$11,500; and to three missionary societies, on the death of his widow, the residue of his estate.

Stanford, Leland, San Francisco, bequest to Leland Stanford Junior University, made available by the decision of the United States Supreme Court in favor of his estate, in a suit brought by the General Government, \$2,500,000.

Stearns, A. W., Lawrence, Mass., bequest, conditional, to the Lawrence General Hospital or for a Home for Aged People, \$50,000.

Steinway, William, New York, gifts to local charities, \$5,000.

Stickney, Joseph Henry, Baltimore, Md. (see GIFTS AND BEQUESTS, "Annual Cyclopædia" for 1893). On a contest of his will in the Circuit Court of Maryland, Judge Dennis decided, June 2, 1896, that the \$350,000 willed to Congregational churches in New York and Boston should go to the heirs. The general residuary clause, containing these bequests, was declared void. During the year the Congregational Home Missionary Society received the Stickney legacy of \$150,000.

Storrs, Rev. Dr. Richard Salter, Brooklyn, N. Y., friends of, on fiftieth anniversary of his installation as pastor of the Church of the Pilgrims, gifts to him \$5,000, and to the church \$20,000.

Stranahan, Mrs. J. S. T., Brooklyn, gift to Barnard College, \$5,000.

Snydam, Adrian M., Brooklyn, N. Y., bequest to Bushwick Avenue Congregational Church toward the new building, \$25,000.

Swift, Elizabeth R., Milton, Mass., bequests to local charities, \$25,000, and to Harvard College, \$3,000.

Thomas, W. H., Portland, Me., bequests to the Maine General Hospital, Bowdoin College, Widow's Wood Society, Old Ladies' Home, Female Orphan Asylum, Portland Benevolent Society, all in Portland; Temporary Home at Deering and the American Board, each \$5,000; Second Parish Society and Mechanics' Association, each \$3,000; and Bible and temperance societies, \$2,000.

Troup, John F., Providence, R. I., bequests to Rhode Island Hospital, \$25,000; and to ten charitable and missionary societies, each \$2,500.

Tucker, Joseph H., Essex, Conn., bequests for a free library, \$3,000; and for a new Protestant Episcopal church building, the bulk of his property.

Tuttle, Isaac Henry, D. D. See OBITUARIES, AMERICAN.

Upham, Mrs. William H., of Wisconsin, gift to the University of Wisconsin, a self-made collection of stuffed birds, principally of that State; value, over \$5,000.

Urbino, Samson B., Boston, bequests to German, Hebrew, and public institutions, \$5,800.

Van Nest, Mrs. A. R., New York, gift to Peabody Home for Aged Women, \$5,000.

Vanderbilt, Cornelius, and wife, New York, gift to the Church of St. Bartholomew, improved real estate, valued at \$60,000.

Vanderbilt, Maria Louisa. See OBITUARIES, AMERICAN.

Vose, Mrs. Josiah, Boston, bequests made available by the death of her daughter, to the Massachusetts General Hospital, McLean Asylum, Home for Aged and Indigent Females, and Home for Aged Men, each \$30,000; the Children's Mission, \$20,000; Institute of Technology, \$25,000; New England Hospital for Women and Children, \$25,000; Museum of Fine Arts, \$25,000; Children's Friends Society, \$20,000; Farm School, Female Orphan Asylum, and Eye and Ear Infirmary, each \$15,000; Seamen's Aid Society, Industrial Aid Society, Benevolent Fraternity of Churches, Institution for the Blind, Barnard Memorial, Provident Association, Christian Union, and Society for the Prevention of Cruelty to Animals, each \$10,000; Temporary Home for the Destitute, \$15,000; Home for Colored Women, \$5,000; and to the Institute of Technology and the Museum of Fine Arts, the residue of an estate of about \$400,000 in equal parts.

Wales, George W. See OBITUARIES, AMERICAN.

Walker, Mrs. Abigail, Concord, N. H., bequest for an annual course of free lectures, \$30,000.

Walker, Joseph, Portland, Me., bequest to the library of Bowdoin College, \$8,000.

Walworth, Miss Anne, Cleveland, Ohio, gift to Euclid Avenue Presbyterian Church, \$100,000.

Washburn, Rev. Alfred, Boston, bequests to the Diocesan Board of Missions of Massachusetts and the Episcopal City Mission of Boston, each \$5,000.

Weeks, De Witt C., New York, bequests to the Methodist Hospital, Brooklyn, the Methodist Deaconesses' Home and Training School, the Women's Foreign Missionary Society, St. Christopher's Home, the New York City Church Extension and Missionary Society; and Mott Avenue Methodist Episcopal Church, each \$5,000; and any residue to the Methodist University, Washington, D. C.

Wheeler, Mrs. Charles J., Providence, R. I., bequests to missionary, educational, and charitable organizations, \$65,000.

Wheeler, Mrs. Mary B., New York, bequests to the Board of Home Missions of the Presbyterian Church, \$10,000; Hampton Normal and Agricultural College, \$5,000; Society for Relief of Half-Orphan and Destitute Children, \$5,000; and missionary, Bible, and tract societies an aggregate of \$21,000.

Whitcomb, Maria R., Fitchburg, Mass., bequest to the city for the relief of the poor and needy not in the poorhouse, \$13,000.

White, Mrs. Joseph M., New York, gift to the Children's Aid Society of New York city, \$25,000.

White, Alfred T., Brooklyn, N. Y., gift to the city, a clock tower and office building for Wallabout Market, cost \$12,800.

Whiting, Prof. Harold, Cambridge, Mass., bequests to Harvard University for a fellowship in physics, \$20,000; and the University of California, for the physical department, \$20,000.

Wild, Joseph, Brooklyn, N. Y., bequests to the Brooklyn Baptist Church Extension Society, \$10,000; Baptist Home for the Aged, \$10,000; New York Baptist Union for Ministerial Education at Rochester, \$10,000; orphanage to be founded by the Long Island Baptist Association, \$10,000; Greenwood Baptist Church, \$10,000, and its poor, \$3,000; American Baptist Bible and Publication Society, \$5,000; American Baptist Home Mission Society, \$5,000; American Baptist Missionary Society, \$5,-

000; Brooklyn Home for Incurables, \$5,000; Carson Normal College, Massey Creek, Tenn., \$5,000; Norwegian Hospital, Brooklyn, \$2,500; Brooklyn Hospital for Consumptives, \$2,500; West End Baptist Church, Brooklyn, \$1,000; and the Howard Colored Orphan Asylum, Brooklyn, \$1,000.

Williams, Dr. Edward H., Philadelphia, Pa., gift to the University of Vermont, equipment (\$60,000) of the science building presented by him.

Williams, Mrs. George H., Baltimore, Md., gift to Johns Hopkins University, the library and collection of minerals made by her late husband, Professor of Geology in the university.

Winants, Mrs. Amanda, Bergen Point, N. J., gift to Rutgers College, \$10,000.

Wyckoff, Edward G., gift to Cornell University, a practice building for its navy; cost, \$8,000.

Wyman, Thomas T., Boston, bequests to 20 institutions, each \$20,000; to Massachusetts General Hospital, Massachusetts Homœopathic Hospital, and Boston City Hospital, his residuary estate in equal shares; total value of bequests, over \$500,000. Contested.

Yale University, New Haven, gifts from friends, 6,000 volumes relating to Scandinavia, with 19,000 dissertations of the Universities of Upsala, Lund, and Abo; and the library of the late Count Paul Ryant, containing 5,100 bound and 500 unbound volumes and 16,000 dissertations relating to the Crusaders.

Yerkes, Charles L., Chicago, Ill., gift to Chicago University, an astronomical observatory at Lake Geneva, Wis., equipped with a telescope having the largest lens in the world; total cost, about \$500,000. The lens was finished in October, 1896, and represents a cost of \$100,000, the glass plates alone having cost \$40,000 in Paris.

Zabriskie, Mr. and Mrs. N. Lansing, Aurora, N. Y., gift to Auburn Theological Seminary, \$5,000.

GREAT BRITAIN AND IRELAND, a monarchy in western Europe, formed by the union of the British Kingdom, composed of the Kingdoms of England and Scotland and the Principality of Wales, with the Kingdom of Ireland, holding supreme dominion over the Empire of India and dependencies and colonies of various kinds—self-governing colonies, colonies administered by the Crown, and protectorates under native rule—the whole constituting the British Empire. The reigning sovereign is the Queen-Empress Victoria, born May 24, 1819, daughter of Edward, Duke of Kent, who was the fourth son of George III, of England. The heir apparent is Albert Edward, Prince of Wales, born Nov. 9, 1841, whose son, George, Duke of York, the only surviving male offspring of his marriage with Alexandra, Princess of Denmark, is next in succession.

The power to legislate for the United Kingdom of Great Britain and Ireland, and except so far as is delegated to local legislative authorities for the whole British Empire, is vested in the British Parliament, consisting of a House of Lords and a House of Commons. Members of the House of Lords are royal princes, spiritual lords, who are the metropolitans of ancient sees of the English Church, hereditary peers of England, of Great Britain, and of the United Kingdom, law lords and other life peers created by the sovereign, and representatives elected from the Scotch and the Irish peerages. There were altogether 571 peers on the roll of Parliament in 1895. Of the existing hereditary peerages about two thirds have been created since the beginning of the nineteenth century, and only 16 date back four hundred years. The House of Commons consists of 670 members, of whom 253 represent English counties with 2,820,374 electors. 237 are chosen by

237 English boroughs having 2,122,730 electors, and 5 by 16,701 electors belonging to English universities, making the total number of English members 495, representing 4,950,805 electors; of the 72 Scotch members, representing 636,097 electors, 39 are elected by 349,604 county electors, 31 by 268,509 electors in the boroughs, and 2 by 17,984 electors belonging to universities; and of 103 members representing the 736,552 voters of Ireland 85 are chosen by counties containing 622,991 electors, 16 by 109,055 electors of borough constituencies, and 2 by 4,506 university electors. The total number of electors in the United Kingdom in 1895 was 6,332,454, about one sixth of the population. The representation of the people act of 1884 extended the voting franchise to householders and lodgers in counties, the same classes in boroughs having already received it by the reform bill of 1867. No clergymen of the Established Church of England nor minister of the Scotch Established Church nor clergyman of the Roman Catholic Church can sit in Parliament, nor can any peer of Parliament or Scotch peer, but the disqualification does not extend to Irish peers unless they sit in the other House. Government contractors are not eligible and sheriffs and returning officers may not be candidates in the constituencies for which they act. The fourteenth Parliament of Queen Victoria was convened on Aug. 12, 1895. The committee of ministers called the Cabinet exercises the executive authority that is nominally vested in the sovereign, making all appointments, directing the administration of internal, colonial, and foreign affairs, and having the initiative in legislation so long as it is supported by a majority of the House of Commons.

The Cabinet first formed on June 25, 1895, by the Marquis of Salisbury consisted in the beginning of 1896 of the following members: Prime Minister and Minister of Foreign Affairs, Lord Salisbury; Lord President of the Council, Lord Halsbury, formerly Sir Hardinge S. Giffard; Lord Privy Seal, Viscount Cross, formerly Sir Richard Cross; Chancellor of the Duchy of Lancaster, Lord James of Hereford, formerly Sir Henry James; First Lord of the Treasury, Arthur J. Balfour; Secretary of State for the Home Department, Sir M. White Ridley; Chancellor of the Exchequer, Sir Michael E. Hicks-Beach; Secretary of State for the Colonies, Joseph Chamberlain; Secretary of State for War, the Marquis of Lansdowne; Secretary of State for India, Lord George Hamilton; First Lord of the Admiralty, G. J. Goschen; President of the Local Board, Henry Chaplin; President of the Board of Trade, C. T. Ritchie; Lord Lieutenant of Ireland, Earl Cadogan; Lord Chancellor of Ireland, Lord Ashbourne, formerly Sir Edward Gibson; Secretary for Scotland, Lord Balfour of Burleigh; First Commissioner of Works, A. Akers-Douglas; President of the Board of Agriculture, W. H. Long.

Area and Population.—The area of the United Kingdom is 120,979 square miles. The population according to the census was 38,104,975 on April 5, 1891, comprising 18,608,337 males and 19,496,638 females. The population of England and Wales increased 11·65 per cent. between 1881 and 1891, and that of Scotland 7·76 per cent., while the population of Ireland decreased 9·1 per cent. The total population of the United Kingdom on June 30, 1895, was estimated at 39,134,166, exclusive of the army and navy and seamen abroad. Of this number 30,394,078 belong to England and Wales, 4,155,654 to Scotland, and 4,584,434 to Ireland.

Of the total population of England and Wales in 1891 nearly 72 per cent. lived in towns. The urban population had increased 15·3 per cent., and the rural population 3·4 per cent. in ten years. The 6 largest towns contained 22 per cent. of the popula-

tion, but the rate of growth in these was not half as great as in the lesser ones. London, however, increased 18·2 per cent., chiefly on the outskirts, the central area showing an actual decline. The population of greater London, which was 4,766,601 in 1881 and 5,633,332 in 1891, increased further to 6,048,555 in the middle of 1895, according to the estimates of the Registrar General. The estimated population of the principal municipal boroughs in 1895 was: Manchester, 524,865; Liverpool, 503,967; Birmingham, 496,751; Leeds, 395,546; Sheffield, 342,768; West Ham, 249,473; Bristol, 228,139; Nottingham, 226,658; Bradford, 226,384; Kingston-upon-Hull, 216,722; Salford, 208,253; Newcastle-on-Tyne, 207,021; Leicester, 193,839; Portsmouth, 174,751; Cardiff, 155,637. The population of Glasgow, in Scotland, was estimated in 1895 at 695,876; of Edinburgh, 273,535; of Dundee, 160,163. In Ireland, Dublin in 1891 had 361,891 inhabitants and Belfast 255,950.

The annual rate of mortality in England and Wales decreased from 21·27 per 1,000 for the ten years between 1870 and 1880 to 19·08 per 1,000 in the ten years ending with 1890. The number of marriages in England and Wales in 1894 was 226,109; of births, 889,242; of deaths, 498,515; surplus of births, 390,727. In Scotland the number of marriages was 27,561; of births, 124,337; of deaths, 71,112; surplus of births, 53,225. In Ireland the number of marriages was 21,602; of births, 105,354; of deaths, 83,528; surplus of births, 21,826.

The number of persons who emigrated from the United Kingdom in 1895 was 271,854, of whom 195,676 sailed for the United States, 26,000 for South Africa, 22,391 for British North America, and 10,788 for Australasia. In 1894 the total number was 226,827, of whom 130,662 were males and 96,165 females. In that year there were 185,799 immigrants, British and foreign, with which number deducted the net emigration was 41,028. Of 74,015 foreigners who landed at the ports 35,512 were on their way to the United States. The total number of emigrants, in 1895 who belonged in the United Kingdom was 185,366, of whom 112,653 were English, 18,227 Scotch, and 54,486 Irish, showing an increase over the previous year of 13,063 in English, 3,795 in Scotch, and 12,478 in Irish emigration.

Finances.—The budget estimates of revenue for the year ending March 31, 1895, amounted to £94,175,000, and the budget and supplementary estimates of expenditure to £94,538,685. The actual receipts of the exchequer were £94,683,762, and the actual disbursements £93,918,421. The total amount collected was £94,872,631, of which £78,735,698 were the produce of taxation and £16,136,933 came from other sources. The receipts from customs amounted to £20,138,948, of which tobacco paid £10,415,139, tea £3,587,632, rum £2,069,347, brandy £1,274,991, other spirits £852,922, wine £1,143,698, raisins £216,839, currants £110,043, and coffee £170,024. The excise duties yielded £25,875,626, of which £15,269,296 were paid on spirits, £10,102,050 on beer, £236,086 in license duties, £260,694 by railways, and £7,506 came from other sources. The yield of stamp duties was £14,587,684, of which £3,447,185 came from the new estate duty, including £665,606 payable on the property of persons dying before Aug. 2, 1894, £1,108,360 were collected in probate duty from estates demised before that date, £2,808,967 came from the legacy duty, £1,350,430 from the succession duty, £2,858,302 from deeds, £1,202,747 from receipts, £626,142 from bills of exchange, £234,880 from patent medicines, £166,900 from licenses, £159,870 from the duty on the capital of companies, £126,883 from marine insurance, and £487,018 from other sources. The

yield of the land tax was £1,021,705, and of the house duty £1,462,373. The income and property tax produced £15,649,362. Of the receipts from sources other than taxation, £10,748,014 came from the post office, £2,598,986 from the telegraph service, £518,819 were the gross receipts from Crown lands, £412,977 were the interest on Suez Canal shares owned by the Government, and £1,858,137 came from fee stamps, the civil departments, the naval-defense fund, the Bank of England, &c.

In the budget for 1897 the rate of 8*d.* in the pound was continued for the income tax, though it has not yet been definitely accepted by the property class as a normal peace rate. Before the income tax was first imposed—in 1841—that class paid 27 per cent. and the consumers 73 per cent. of the national taxes. At the present time the sums raised by indirect taxation constitute 52 per cent. of the tax revenue, while the direct taxes yield 48 per cent. of the whole. The rate of income tax in 1895 and 1896 was 8*d.* in the pound, having been 7*d.* in the previous year, and before that 6*d.* for five consecutive years, to which it was reduced from 7*d.* in 1888 and 8*d.* in 1886 and 1887. The annual value of property and profits assessed to income tax in 1894 was £706,130,875, of which England's share was £602,388,699, while £65,188,840 was the share of Scotland and £38,553,336 that of Ireland. The total value of assessable incomes has increased from £465,478,688 in 1871. The assessed income from land has declined from £57,694,820 in 1891 to £56,212,734 in 1894, of which latter amount £40,065,831 belonged to England, £6,251,898 to Scotland, and £9,895,005 to Ireland. The assessed income from mines in 1894 was £12,321,709, of which England produced £10,809,842, Scotland £1,500,313, and Ireland £11,554; the income from iron works was £1,832,308, of which £1,355,178 accrued in England and £476,590 in Scotland. The assessed annual profits of railways were £35,786,668, of which £29,956,168 belonged to English, £4,297,961 to Scotch, and £1,532,539 to Irish lines. The annual profits of canals was assessed at £3,493,590; of gas works, £4,770,885; of quarries, £1,043,054; profits of waterworks, salt springs, alum works, &c., £6,400,457.

Various financial laws passed between 1888 and 1895 surrendered to the local authorities a share in various duties collected by the Imperial Government—viz., the duties on local taxation licenses, half the probate duty paid on the property of persons who died before Aug. 1, 1894, and a share of the new estate duty amounting to 1½ per cent. of the net value of the estates on which the tax is levied, and the additional duties of 6*d.* per gallon on spirits and 3*d.* per 36 gallons of beer. The payments made in the fiscal year 1895 were £7,013,542, the additional beer and spirit duties making £1,321,541, licenses £3,538,942, and the local-share of probate and estate duties £2,153,059. The local taxation in England and Wales, exclusive of gas and water rates, amounted in 1894 to £30,250,000, levied on a rateable value of £160,000,000. The taxes had increased £11,000,000 in eleven years.

The expenditure under the three main heads in 1894-'95 was £26,642,421 for the consolidated fund charges, £35,445,000 for the army and navy supply services, and £31,831,000 for the civil and miscellaneous services. The service of the national debt absorbed £25,000,000, made up of £16,069,869 interest on the consolidated debt, £6,422,410 for terminable annuities, £461,830 interest on the unfunded debt, £150,675 for adjustments under the act of 1894, £176,953 for management of the debt, and £1,718,263 for the new sinking fund. The payments for other consolidated fund services, amounting to £1,642,421, consisted of £407,774 for the civil list, £316,758 for annuities and pensions, £81,618

for salaries, &c., £514,633 for courts of justice, and £321,638 for annuities and miscellaneous charges. The expenditure for the army was £17,900,000, of which £3,036,000 were for pensions and retiring allowances. The expenditure for the navy was £17,545,000. The civil services consumed £18,915,000, the customs and inland revenue £2,646,000, the post office £6,869,000, the telegraph service £2,674,000, and the packet service £727,000.

The expenditure for the year ending March 31, 1897, was estimated at £100,047,000, or, including the contributions in relief of local taxation, £111,357,000. The customs revenue was estimated at £21,020,000; excise, £27,000,000; estate duties, £10,950,000; stamps, £6,700,000; land tax, £1,000,000; house duty, £1,475,000; and property and income tax, £16,200,000; making the total exchequer receipts from taxation £84,345,000. The estimated revenue from the post office was £11,660,000; from the telegraph service, £2,940,000; from Crown lands, £415,000; from Suez Canal shares, £695,000; miscellaneous, £1,700,000; making the total for nontax revenue £17,410,000 and the total receipts of the exchequer £101,755,000, showing an expected surplus of £1,708,000.

The revenue paid into the exchequer for the year ending March 31, 1896, was £101,974,000, an increase of £7,290,000 over the receipts of the previous twelve months and an improvement of £5,812,000 on the estimates. The general prosperity of the country was shown in an increase of £641,000 in customs, which yielded £20,756,000, and of £750,000 in excise receipts, which reached the total of £26,800,000, nearly half the increase being due to the increased demand for British spirits. Tobacco, tea, and wine were the main sources of the increased receipts from customs. In the postal and telegraph service there was an increased net profit of £880,000. The stamp duties, which are an index of commercial activity, showed an increase of £1,629,000. In estate duties there was an increase of £2,881,000, which is to a great extent accounted for by the fact that the full annual proceeds had been collected for the first time. The collections for the year amounted to £11,600,000, besides £2,450,000 paid to the local taxation account. Including £7,366,000 collected and paid over to the local taxation accounts, the total revenue was £109,340,000.

The estimated expenditure for the year 1895-'96 was £96,246,000, inclusive of supplementary estimates. The actual expenditure was £97,788,000, the difference being attributable to the increased armaments undertaken by the Government and sanctioned subsequently by the naval works act, which will swallow up also the surplus of £4,186,000 that otherwise would go into the sinking fund.

The national debt is the legacy of wars. The war to retain the American colonies increased the annual charge from £4,500,000 to £9,500,000, and the war with France from 1793 to 1815 added £23,000,000 to the annual interest charge. A considerable part of the capital was paid off during the period of peace supervening, but it was increased by new loans necessitated by the Crimean War, at the close of which the annual expense of the debt was £28,500,000. It still increased to nearly £30,000,000 in 1883, but since then has been decreased to £25,000,000, which sum includes the provision for the sinking fund, amounting in 1895 to £6,551,784. The capital on March 31, 1895, was stated to be £660,998,941, made up as follows: Funded debt, £586,015,919; capitalized value of terminable annuities, £53,582,722; unfunded debt, £17,400,300; other liabilities, consisting of the Russian-Dutch loan and loans under the imperial defense act of 1888, the barracks act of 1890, and the telegraph act of 1892, £3,161,666. The assets offsetting the

debt have a value of £25,892,955, consisting chiefly of the Suez Canal shares purchased from the Khedive, of which the market value in 1895 was £23,892,955. The balances to the credit of the Government in the Banks of England and Ireland amounted, on March 31, 1895, to £6,300,827. The gross liabilities of the Government on March 31, 1896, were stated to be £652,026,000. The funded debt was then £589,147,000, the value of the terminable annuities £49,218,000, and the unfunded debt £9,976,000; and £3,685,000 had been raised under special acts.

Sir Michael Hicks-Beach made no important changes in Sir William Harcourt's system of progressive death duties that old-fashioned Tories had inveighed against and denounced as communistic and confiscatory. He proposed to allow for any portion of a duty that had been already paid under the former law, and to prevent duty being paid when property reverted to the person who had created a life interest in it or became absolute owner on the decease of his heir to whom he had conveyed a life interest subsequent to his own. He adopted the legacy-duty rule to enable annuitants to pay the estate duty by installments. With regard to the estate duty to be paid on works of art, or other objects or collections of national or historical interest, about which a sharp controversy was raised when the duty was first imposed in 1894, he made the rule that duty was not to be charged on such articles until they were sold or came into the possession of a person competent to sell them. The changes involved a loss of revenue amounting to £200,000, leaving £1,500,000, which the Chancellor of the Exchequer intended to apply mainly to the relief of agriculture. In accordance with the recommendations of the Royal Commission, he proposed to reduce the maximum rate of the land tax from 4s. to 1s. in the pound on the assessed value, and to alter the terms of redemption by reducing the number of years' purchase to thirty. The alterations in the land tax were expected to cost £100,000 of annual revenue.

The Army.—The regular army, exclusive of the troops drafted into the Indian service, numbered 7,501 commissioned officers, 1,044 warrant officers, 15,020 sergeants, 3,682 drummers, trumpeters, etc., and 127,156 privates in 1895; total, 155,403. The general staff consisted of 332 officers. The cavalry, including the Life Guards and Horse Guards, numbered 553 officers, 1,371 noncommissioned officers, etc., and 11,396 men; Royal Artillery, 556 officers, 2,095 noncommissioned officers, etc., and 20,393 men; Royal Engineers, 592 officers, 1,235 noncommissioned officers, etc., and 5,621 men; infantry, including Foot Guards, 2,804 officers, 6,642 noncommissioned officers, etc., and 79,208 men; colonial corps, 158 officers, 373 noncommissioned officers, etc., and 4,696 men; departmental corps, 139 officers, 1,291 noncommissioned officers, etc., and 2,937 men; army service corps, 245 officers, 914 noncommissioned officers, etc., and 2,730 men; military schools of Woolwich and Sandhurst, gunnery and musketry schools, and other establishments, 239 officers, 500 noncommissioned officers, and 159 men; army accountants, chaplains, surgeons, veterinarians, etc., 1,121. The number of horses was 14,650. The total effective of the British army, including 77,492 troops in India, was 222,151, with 26,916 horses and mules, on Jan. 1, 1895. There were 12,413 cavalry, 17,358 artillery, 5,476 engineers, and 72,563 infantry and special corps maintained in the United Kingdom—a total of 107,810 officers and men, of whom 78,563 were garrisoned in England and Wales, 3,985 in Scotland, and 25,262 in Ireland. In Egypt 5,066 British troops were serving, and in the colonies 31,783. The effective strength of all

the various military forces reported for the year ending March 31, 1896, was as follows: Regular forces at home and in the colonies, 144,081; army reserve, first class, 84,732; army reserve, second class, 141; militia, 121,752; yeomanry, 10,014; volunteers, 231,368; regular forces serving in India, 77,465; total effective, 669,553. The volunteer corps have grown to their present strength from 119,146 in 1860. Of the enlisted men in the regular army 162,801 were English, 15,978 Scotch, 26,206 Irish, 7,777 born in India and the colonies, and 147 foreigners.

The Navy.—With the addition of the 70 new vessels provided for in the naval defense act of 1889 and estimated to cost £21,500,000, comprising 10 first-class battle ships (the "Royal Sovereign," "Empress of India," "Ramillies," "Repulse," "Resolution," "Revenge," "Royal Oak," "Hood," "Centurion," and "Barfleur"), 9 first-class, 29 second-class, and 4 third-class cruisers, and 18 torpedo gunboats, the British navy in the beginning of 1896 numbered 19 first-class, 5 second-class, and 8 third-class battle ships, 23 port-defense vessels, 19 first-class cruisers of over 5,000 tons and having a speed of over 17 knots, 11 other armored cruisers of the first class, 54 cruisers of over 2,000 tons and a speed of 14 knots or more, 181 smaller cruisers and gunboats, 62 torpedo destroyers, and 32 first-class, 4 second-class, and 20 third-class torpedo craft. There were building 9 first-class battle ships of the type of the "Majestic" and the "Magnificent," having 14,900 tons displacement, 1 of 12,350 tons (the "Renown"), 18 first-class cruisers, 2 second-class, and 2 third-class cruisers, 20 torpedo-boat destroyers, designed to make 30 knots, and 17 first-class torpedo boats. There were 300 ships in commission at the end of 1895, of which 48 were armor clads, 196 were unarmored fighting ships, 25 were training ships, and 31 were receiving and store ships, coast-guard tenders, etc. The Government pays subventions to 11 merchant steamers (the "Campania" and "Lucania" of the Cunard line; the "Himalaya," "Australia," "Victoria," and "Arcadia," of the Peninsular and Oriental Company; the "Empress of India," "Empress of China," and "Empress of Japan," belonging to the Canadian Pacific Railway Company; and the "Majestic" and "Teutonic," of the White Star line), which are held at the service of the navy as reserved merchant cruisers in case of war and have their armaments prepared. Many others are held at the disposal of the navy, if needed, as troop ships or the like. The vessels of the navy on foreign service at the end of 1895 were distributed as follow: Mediterranean and Black Sea, 34; Channel squadron, 9; North America and West Indies, 12; East Indies, 9; China, 25; Cape of Good Hope and West Africa, 15; Pacific, 9; Australia, 12; South America, 4; surveying, 7; special service, 11; training squadron, 4; total, 151.

The steel battle ship "Mars," of 14,900 tons and 12,000 horse power and built to carry 16 guns in the main battery, was launched at Birkenhead on March 30, 1896. The "Majestic" and the "Magnificent" were already in commission. The "Mars" is one of the 9 sister ships including the "Majestic," "Prince George," "Cæsar," "Magnificent," "Illustrious," "Victorious," "Jupiter," and "Hannibal." The Harveyized armor is 9 inches thick on the sides and 14 inches on the barbettes, and the protective deck is 4 inches thick. The armament consists of 4 wire-coiled 12-inch and 12 rapid-fire 6-inch guns, with 18 12-pounders, 12 3-pounders, 8 machine and 5 field guns. Of the new first-class cruisers the "Talbot," "Eclipse," and "Minerva" were ready for sea before the end of the summer. The "Pelorus," the first of the new type of third-class cruiser, was completed in June, and the "Proserpine" was

building. Four new sloops (the "Torch," "Alert," "Phœnix," and "Algerine") were finished and ready for service by spring, and there were 22 destroyers in commission. One of the latest of the torpedo-boat destroyers is the "Desperate," 210 feet over all, with 19½ feet beam and a depth of 13½ feet, built of mild steel, with engines of 5,600 horse power that, with a consumption of 2½ pounds of coal per horse power per hour, give her a speed of 30½ knots. The battle ship "Renown" was completed in the summer. The cruisers of the "Niobe" or "Andromeda" class are called small "Powerfuls." They have a length of 435 feet, a breadth of 69 feet, a draught of 29½ feet, a displacement of 11,000 tons, 16,500 horse power, intended to give a speed of 20½ knots, a coal capacity of 2,000 tons, and a battery of 16 6-inch guns, with a strong auxiliary armament and 2 torpedo tubes. The protective deck is 4 inches on the slope. In the new programme are 7 cruisers of the "Arrogant" class, resembling the "Doris" type, but a little heavier, having a displacement of 5,750 tons and a speed of 19½ knots. The new first-class deck-protected cruisers, besides the "Eclipse," "Minerva," and "Talbot," comprise the "Diana," "Dido," "Doris," "Isis," "Juno," "Venus," "Powerful," "Terrible," "Diadem," "Europa," "Niobe," "Argonaut," "Ariadne," "Amphitrite," and "Spartiate," which were all ordered and several were launched before December, 1896. The 9 of the "Talbot" class have 5,600 tons displacement, 9,600 horse power, a speed of 19½ knots, and an armament of 5 6-inch, 6 4·7-inch, and smaller quick-firing guns. The "Powerful" and "Terrible" have a displacement of 14,200 tons, engines of 25,000 horse power, a speed of 22½ knots, and an armament of 2 9·2-inch, 12 6-inch, 18 12-pounder, and 12 3-pounder quick-firing guns. These were the first ships to be fitted with water-tube boilers. Their length is 500 feet, with a breadth of 71½ feet and 27 feet draught. The others are improved "Blenheims" of 11,000 tons displacement, a 4-inch protective deck with a rise of 10 feet, engines producing 16,500 horse power, or in the last 4 18,000 horse power, making a speed of over 20 knots, and an armament of 16 6-inch rapid-fire guns, 14 12-pounders, 3 3-pounders, 8 Maxims, and 3 torpedo tubes. Three new cruisers of the improved "Talbot" type have been ordered, and these will have a length of 360 and a breadth of 54 feet, with a displacement of 5,870 tons, a wood and copper sheathing, Belleville boilers developing 10,000 horse power, giving a speed of 20 knots, and greater coal capacity and a better battery than the vessels of this type already built. Of these the "Venus" was ready in September. The speed was 19½ knots. These vessels are armed with 5 6-inch, 8 4·7-inch, and 8 12-pounder rapid-fire guns, all protected with shields, and machine guns in military tops. There were under construction 8 battle ships, 21 cruisers, and 40 torpedo-boat destroyers in the spring of 1896, when Mr. Goschen announced a new ship-building programme, to embrace 5 battle ships of the "Renown" type improved, 4 first-class cruisers of the "Diadem" class, 3 second-class cruisers of the "Talbot" class, 6 third-class cruisers of the "Pelorus" class, and 28 torpedo-boat destroyers. The latest battle ships will have a length of 390 feet and a breadth of 74 feet, the same coal endurance as the "Majestic" class, though of 2,000 tons less displacement, and the armament will be the same, and the speed somewhat greater, owing to the water-tube boilers, but the armor is not so thick. All the ships, both of the new and of the old programme, are to be completed and ready for sea by July, 1899. Ordnance will be turned out as rapidly as possible, not only to equip the new, but to rearm the older ironclads.

The naval-works bill of 1895 involved the expendi-

ture of £8,500,000 and the new programme will require £5,500,000 more, including the expense of 2 docks at Gibraltar in addition to the one already building. These improvements will cost £3,000,000. Docks are also to be constructed at Simon's Bay and Mauritius. The augmented navy will require an increase in the *personnel* of 4,900 officers and men, making 93,700 in all.

In January, 1896, soon after President Cleveland sent his message to the Senate on the Venezuelan question, and immediately after Kaiser Wilhelm addressed his congratulations to President Krüger, of the South African Republic, on his victory over the Jameson raiders, a flying squadron was hastily placed in commission, consisting of the flagship "Revenge," the battle ship "Royal Oak," the first-class cruisers "Gibraltar" and "Theseus," the second-class cruisers "Charybdis" and "Hermione," and 6 torpedo-boat destroyers. It was never definitely announced what particular object the Government had in view when the squadron was formed. It proceeded to Ireland, and remained there till the middle of May, when it was disbanded.

Commerce.—The total value of the imports in 1895 was £416,687,630, against £408,344,810 in 1894. The exports of British products were £226,169,174, against £215,824,333 in the preceding year, and the exports of foreign and colonial products £59,970,763, against £57,961,534, making the total imports £702,827,567, against £682,130,677. There are no protective duties levied by the British Government, but only revenue duties on a small list of articles, comprising chicory, cocoa, coffee, dried fruits, spirits, tea, tobacco, and wine, the imports of which in 1894 amounted to £27,882,822, while the imports free of duty had a total value of £380,461,988. The imports of dutiable articles of food and drink during the calendar year 1895 were valued at \$25,097,513; of tobacco, £3,472,256; of articles of food and drink free of duty, £140,125,616; of live animals for food, £8,966,252; of metals, £18,645,036; of chemicals, dyes, and tan, £6,558,249; of oils, £8,110,625; of raw textile materials, £70,772,860; of raw materials for various industries and manufactures, £44,114,973; of manufactured articles, £75,625,242; of miscellaneous articles, £14,355,380; imports by parcel post, £978,101; total value of imports, £416,687,630. The imports of wheat were 152,598,320 bushels, not including flour. Of flour 18,368,410 hundredweight was imported, and of this 13,131,850 hundredweight came from the United States. The total imports of cereals and flour were 179,927,450 hundredweight: of bacon and hams, 5,352,936 hundredweight; of butter, 2,825,682 hundredweight; of margarine, 940,168 hundredweight; of cheese, 2,133,809 hundredweight; of beef, 2,410,523 hundredweight; of preserved meat, 856,255 hundredweight; of fresh mutton, 2,610,375 hundredweight; of spirits, 8,214,345 gallons; of wine, 14,635,568 gallons; of tea, 221,800,140 pounds; of raw sugar, 17,010,002 hundredweight; of refined sugar, 14,147,273 pounds. The values of the principal imports in 1895 were: Cereals and flour, £49,178,252; raw cotton, £30,429,070; wool, £26,031,550; meat, £23,769,638; raw and refined sugar, £17,685,013; butter and margarine, £16,802,400; timber and wood, £15,782,936; silk manufactures, £15,090,707; tea, £10,278,602; woollen manufactures, £10,275,279; flax, hemp, and jute, £9,715,312; animals, £8,966,252; oils, £8,110,625; leather, £8,051,511; chemicals, dyestuffs, etc., £6,558,249; seeds, £6,266,230; fruits and hops, £5,510,330; wine, £5,412,084; cheese, £4,674,181; eggs, £4,003,440; coffee, £3,786,958; tobacco, £3,337,783; iron manufactures, £3,299,374; iron ore, £2,977,952; copper ore, £2,807,558; tin, £2,631,038; copper partly manufactured, etc., £1,831,806; currants and raisins,

£1,655,362; lead, £1,654,063; zinc, raw and manufactured, £1,309,062; iron bars, £549,522. For every man, woman, and child England imports an average quantity annually of 256 pounds of flour or wheat, 7½ pounds of rice, 13½ pounds of bacon and hams, 3 dozen eggs, 80 pounds of sugar, 7¼ pounds of butter, 6½ pounds of cheese, 5½ pounds of tea, and 1½ pound of tobacco.

The imports of gold in 1895 amounted to £36,006,038 and the exports to £21,269,323; the imports of silver were £10,669,682 and exports £10,367,436 in value.

The values of the imports from and the exports of British produce to the colonies and dependencies of Great Britain in 1894 were as follow:

BRITISH POSSESSIONS.	Imports.	Domestic exports.
India.....	£27,648,857	£29,300,069
Australasia.....	31,859,210	16,025,573

Total.....	£914,432,644	£143,184,048

The domestic exports of live animals for food during the year ending Dec. 31, 1895, were valued at £790,812; of articles of food and drink, £11,051,209; of raw materials, £18,334,292; of textile fabrics and yarns, £101,423,997; of metals and

metal goods, £28,907,347; of machinery, £15,215,110; of apparel and articles of personal use, £9,319,939; of chemicals and medicinal preparations, £8,295,400; of all other manufactured or partly manufactured articles, £31,493,137; exported by parcel post, \$1,337,931; total exports of British produce, £226,169,174; exports of foreign and colonial produce, £59,970,763; total exports, £286,139,937. The exports of cotton manufactures were valued at £63,772,054 in 1895, including yarn of the value of £9,292,594. The exports of woollen manufactures were £25,124,920 in value, of which sum £5,374,883 represents woollen and worsted yarn. The exports of manufactured linen were £5,357,140 in value, and of linen yarn £965,467. Those of jute manufactures were £2,232,427, and of jute yarn £356,118. The exports of apparel and haberdashery were £5,886,490. The total value of the exports of iron and steel were £19,695,382, of which £4,244,795 represents tin plates, £3,740,887 cast and wrought iron, £3,352,874 hoop, sheet, and plate iron, £2,570,682 wrought and unwrought steel, £2,075,549 pig iron, £1,901,802 railroad iron of all sorts, £849,050 bar, angle, bolt, and rod iron, £711,070 wire, and £248,673 scrap iron. The exports of hardware and cutlery amounted to £1,862,958. Copper exports were £2,825,486 in value. The value of the coal exported was £15,442,702.

In 1894 a royal commission was appointed to investigate the agricultural and industrial capabilities of Ireland. The commission reported that Irish crops and live stock, the product of which was £115,000,000 in 1894, might be doubled by means of improved methods; that the yield of potatoes, for instance, which averages 2.6 tons per acre, could be made to approach the 15 or 20 tons that are raised on the Continent, and that Ireland could supply a large part of England's demand for butter, bacon, and eggs by the use of better dairy machinery, a rational method of feeding hogs, and the breeding of improved races of poultry. These and the flax industries have declined, owing to Continental competition. To restore flax-growing the Irish farmers should have technical instruction, such as has been imparted by trained instructors to the farmers of Holland and Belgium. Instead of shipping live cattle to England, they should be slaughtered in Ireland, by which course employment would be found for much Irish labor and the Irish leather industry would be restored.

Navigation.—The number of vessels engaged in foreign commerce that were entered at the ports of the United Kingdom during 1894 was 61,931, of 39,818,000 tons, of which 37,970, of 29,033,000 tons, were British and 23,961, of 10,785,000 tons, were foreign; the number cleared was 62,237, of 40,718,000 tons, of which 37,874, of 29,649,000 tons, were British and 24,263, of 11,070,000 tons, were foreign. The tonnage of vessels entered with cargoes was 31,141,000, of which 22,727,000 tons were British and 8,414,000 tons were foreign; the tonnage of vessels cleared with cargoes was 35,778,000, of which 26,683,000 tons were British and 9,095,000 tons foreign. Of a total foreign tonnage of 21,854,712 tons entered and cleared, Norway had 5,418,954; Germany, 3,828,128; Holland, 2,278,387; Sweden, 2,089,130; Denmark, 2,000,127; France, 1,766,026; Spain, 1,253,133; Belgium, 1,023,812; Russia, 648,868; the United States, 536,446; Italy, 452,516; and Austria, 201,281 tons. The tonnage entered and cleared at the port of London was 14,433,580; at Liverpool, 10,489,578; at Cardiff, 10,478,391; at Newcastle, 4,948,113; at Hull, 3,933,123; at North and South Shields, 3,707,002; at Glasgow, 2,760,274; at Newport, 2,383,651; at Southampton, 2,323,516; at Sunderland, 2,084,519.

The number of British vessels engaged in the

home and foreign trade in 1894 was 16,547, of 8,716,285 tons, employing 240,458 seamen, of whom 31,050 were foreigners. The total number of vessels registered as belonging to the United Kingdom was 21,206, of 8,956,181 tons, of which 12,943, of 2,987,161 tons, were sailing vessels and 8,263, of 5,969,020 tons, were steamers. The total shipping of the British Empire comprised 36,181 vessels, of 10,512,272 tons. During 1894 there were 322 sailing vessels, of 258,700 tons, and 521 steamers, of 434,091 tons, built and first registered in the United Kingdom. There were 7,920 sailing vessels, of 503,727 tons, and 2,597 steamers, of 404,684 tons, engaged in the coasting trade; 246 sailing vessels, of 31,669 tons, and 338 steamers, of 222,462 tons, engaged partly in the home trade and partly in the foreign trade, and 1,845 sailing vessels, of 2,286,829 tons, and 3,601 steamers, of 5,266,914 tons, engaged exclusively in the foreign trade.

Communications.—The railroads in operation at the beginning of 1895 had a total length of 20,908 miles, of which 14,536 miles were in England and Wales, 3,328 miles in Scotland, and 3,044 miles in Ireland. The share and loan capital amounted to £985,387,355. There were 911,412,926 passengers carried during the year, exclusive of holders of season tickets. The receipts from passengers amounted to £36,495,488 and from goods traffic £43,379,078; the total receipts from all sources were £84,310,831. The working expenses amounted to £47,208,313, which was 56 per cent. of the gross income. The canals of the United Kingdom have a total length of 3,813 miles, of which 1,204 miles belong to railroad companies. The total capital is £20,959,820. The Manchester ship canal, completed in 1894, has a length of 35½ miles and is 26 feet deep, with a width at the bottom of 120 feet. The capital of the company is £15,412,000.

The number of letters delivered during 1895 was 1,502,000,000 in England and Wales, 156,000,000 in Scotland, and 113,000,000 in Ireland; total, 1,771,000,000. The number of post cards, which have partly taken the place of letters, owing to an extension of facilities, was 271,600,000 in England, 28,700,000 in Scotland, and 12,500,000 in Ireland; total, 312,800,000, showing an increase of nearly 26 per cent. over the previous year. The number of book packets was 522,500,000 in England, 60,800,000 in Scotland, and 31,300,000 in Ireland; total, 614,600,000. The number of newspapers was 117,500,000 in England, 17,300,000 in Scotland, and 17,000,000 in Ireland; total, 151,800,000. The number of parcels was 47,200,000 in England, 6,100,000 in Scotland, and 3,800,000 in Ireland; total, 57,100,000. The total number of money orders was 10,685,206, of the amount of £28,923,127, of which 9,190,304, of the amount of £24,953,532, were inland orders; the total number of postal orders was 60,681,078, of the amount of £22,759,282. The gross revenue of the post office, exclusive of telegraphs, was £10,748,014 and working expenses £7,978,284, leaving a net revenue of £2,769,730.

The telegraph lines of the British post office had on March 31, 1895, a total length of 33,062 miles, with 193,095 miles of wire, besides which there were 27,880 miles of private wire. The number of messages sent was 71,589,064, of which 60,216,708 were sent in England and Wales, 7,334,094 in Scotland, and 4,038,262 in Ireland. The gross revenue was £2,598,985 and the working expenses £76,354 greater, causing a total deficit for the year of £452,803, including interest on the price paid for the telegraphs when they were sold by the companies to the Government in February, 1870.

Currency.—When the United Kingdom provided in the coinage act of 1816 for the resumption of specie payments, which was effected three years

later, after having had an inconvertible paper currency since 1797, the single gold standard was adopted. Previous to the French war silver was the principal currency. The unit of value adopted in the act of 1816 was the gold sovereign, containing 123·27447 grains of standard gold, 22 carats or 0·91666 fine, equal to 113 grains, or 7·3224 grammes of gold, equivalent to a pound sterling or 20 shillings of silver, whereas the guinea, which the sovereign superseded, was worth 21 shillings. The value of the sovereign, or pound sterling, in United States currency is \$4·8665. The quantity of English gold coin in actual circulation was estimated in July, 1896, at £62,500,000; the reserves in the banks at £17,500,000, and the foreign coin and bullion reserve of the Bank of England at £30,000,000; total, £120,000,000. Silver is legal tender up to 40 shillings. The silver coin in circulation amounts to about £25,000,000. The paper currency circulating at the end of 1895 amounted to £41,400,000, of which £25,900,000 consisted of notes of the Bank of England, £1,800,000 of issues of English joint-stock and private banks, £7,300,000 of notes issued by chartered and joint-stock banks in Scotland, £2,500,000 of Bank of Ireland notes, and £3,900,000 of those of Irish joint-stock banks. The Bank of England notes are legal tender, but the bank is obliged to redeem them on demand in gold. The bank is also required by its charter to give its notes in exchange for gold bullion at the rate of £3 17s. 9d. per ounce of standard gold, the persons presenting the gold having to bear the cost of assaying. The mint price thus established by law is less than the value of the gold when coined by ¼d., which thus constitutes the mint charge for coining an ounce of gold.

The Session of Parliament.—The parliamentary session of 1896 was opened on Feb. 11. The Queen's speech, after mentioning the Venezuelan dispute, the Armenian troubles, the Transvaal affair, the Afghan boundary settlement, the Siamese boundary arrangement with France, the subjugation of Ashanti, the conquest of Chitral, and the extension of naval defenses, enumerated twelve principal measures as representing the legislative policy of the Government. The list comprised bills dealing with naval defense, relief of agriculture, elementary education, employers' liability, Irish land, Scotch public health, trade conciliation, light railways, alien immigration, metropolitan water supply, an Irish Agricultural Department, and the law of evidence in criminal cases. Measures for mitigating the distress of classes engaged in the agricultural industry were placed at the head of the list, and the condition of agriculture was declared to be disastrous beyond recent experience. The creation of voluntary schools, the regulation of pauper immigration, and the construction of light railways for the rural districts were mentioned next in order, and then the employers' liability bill, the Irish land bill, and the formation of an Irish Board of Agriculture. Some of the bills, dealing with the less urgent of these subjects, were introduced, but never came to discussion, and others, notably those relating to the liability of employers and alien immigration, were not brought before Parliament at all. Certain subjects, on the other hand, demanded more than one measure, such as the English agricultural rating bill, which involved equivalent legislation for Scotland and Ireland, and the British light railways bill, which was accompanied by a bill for similar railways in Ireland. Ministerial measures were introduced that were not mentioned in the Queen's speech—twice as many as were mentioned—and several of these consumed much time in their discussion, such as the cattle diseases bill, the coal mines regulation bill, the London cabs bill, the

truck bill, the laborers bill for Ireland, and the locomotives on highways bill, all of which became law, together with the companies bill, the London University bill, the Irish education bill, the reserve forces bill, the military works bill, the military lands bill, and the military manœuvres bill, which failed of enactment. The introduction of complicated and contentions bills that provoked angry controversies, and the careless and easy management of Arthur J. Balfour as leader of the House, resulted in the failure of the Government, in spite of its enormous majority, to bring about results that resembled in any degree the programme. The lamentable fiasco of the chief Government measure, the education bill, was a victory that the weak and divided Opposition hardly dreamed of attaining. Mr. Balfour was able, however, to carry an important new rule of procedure that insures an allotment of time for the consideration of supply by which the more important classes of estimates can be adequately discussed. In the discussion in March of the resolution of Herbert Whiteley that the Government should do everything in its power to secure by international agreement a stable monetary par between gold and silver, Sir Michael Hicks-Beach declared that, while the Government was willing to make an effort in the direction of an international agreement, through a conference or through negotiations with other powers, with the object of establishing a stable monetary par of exchange between gold and silver, it would do so only on the distinct understanding that it was not prepared to abandon the gold standard in the United Kingdom. He said that in this determination all the members of the Cabinet were united, including those who were confirmed and pronounced bimetalists, and Mr. Balfour followed with an argument for bimetalism that he concluded with an admission that it was absolutely impossible to force upon the commercial community a currency which it mistrusted and was not willing to accept. The principal Government measures were brought in with promising and timely readiness. The Lord Chancellor's law of evidence bill, Lord James's water bill, the reserve forces bill, the Scotch public health bill, and the companies bill were initiated in the upper house. The Irish education bill, which was not brought in till May 5, was withdrawn because the Roman Catholics declined to accept the boon of 10s. for each pupil in denominational schools without the conscience clause, when the offer was accompanied with the condition that such schools would have to submit to inspection. The London University bill was introduced in the House of Lords on July 6 and the Irish light railways bill in the House of Commons on July 9. The Scotch and Irish rating bills had to wait till the fate of the English measure was decided. In redemption of the Conservative promise to relieve local taxation for the benefit of agricultural property, the Government carried, against the strenuous opposition of the Liberals, this agricultural land rating bill, granting for five years a subvention from the imperial treasury to the local authorities, estimated at from £1,500,000 to £2,000,000 a year, equal to half the rates on agricultural land, the relief amounting to about 1s. an acre on the average. Houses and buildings continue to pay in full and are separately assessed. To facilitate the passage of the bill, which was assailed by urban Conservatives as well as the Radicals, the Government agreed to limit its operation to five years, and promised an inquiry into the reform of the whole system of local taxation. This measure affords only a temporary relief to the tenant farmers, for after a few years their rents will be raised in proportion. A Scotch rating bill was passed giving an equivalent

grant to Scotch farmers, and the Irish equivalent grant was dealt with by temporary legislation. A cattle importation act makes permanent and strictly binding the existing enforcement of the compulsory slaughter of cattle and sheep at the port of landing, which has been discretionary with the Minister of Agriculture. This measure, which practically protects the breeders of Great Britain against American and Canadian competition, provoked a great deal of criticism, and resistance was offered in behalf of the breeders of Forfarshire and Aberdeenshire, who fatten store cattle from Canada. The plea of Mr. Long that producers ought to be protected from foreign disease when they took so much trouble to stamp out disease at home was so effective that the bill was passed on June 22 by a vote of 232 to 75.

The Irish land bill was finally passed by the House of Commons on July 29, though it was condemned by Mr. Healy as inadequate and denounced as a fraud by Mr. Dillon and was opposed to the last by the Irish landlords, who saw in it the confiscation of the remnant of their property left by previous legislation. When the bill reached the House of Lords the Government, deserted by Irish landlords and their English sympathizers, was defeated repeatedly, though Radical peers came to its support, and the bill was so transformed and amended as to be unrecognizable. The Commons reinstated the provision bringing pastoral holdings of between £50 and £100 ratable value within the operation of the land laws, accepted in another form Lord Inchiquin's amendment declaring that mere occupation did not entitle a tenant to a deduction from the fair rent, and compromised on other points. The chief value of the bill in the view of its authors was that it will help to extinguish, by the development of a system of purchase, the dual ownership arising out of Mr. Gladstone's land bill of 1881 and promote the more rapid and effective working of the land purchase acts passed by the Unionist Government in 1885 and 1891. It provided for the sale to the tenants of the estates administered by the Landed Estates Court, but it was feared that the price would have to be fixed so low as not only to wipe out the interest of the encumbered owners, but a part of the property of a great majority of the mortgagees. Mr. Morley and the Irish members condemned the bill for not going far enough to meet the demands of tenants for further reductions of rent, and they asked that the period of judicial settlement should be reduced from fifteen to ten years. The champions of property rights denounced as the thin end of the wedge a clause providing that where three fourths of the tenants on an estate desire to purchase, the other fourth shall be compelled to join them. While not reducing agricultural rents to the prairie value desired by Parnell, which he said Mr. Morley's bill of 1895 would have done, Gerald Balfour so framed his own bill as to empower the court, after allowing for the value of the tenant's improvements, to allot to him also a share of the value elicited by them from the inherent qualities of the soil. The bill also recognized turbary as a tenant's right. It states that a tenant shall not be held to be compensated for improvements by anything save money or money's worth. No improvements antedating 1850 can be reclaimed. Gerald Balfour proposes to increase the statutory term of fixed rents to thirty years, subject to a revision every five years automatically determined by the rise and fall of prices. The act abolished the jurisdiction of county courts in land cases and seeks to reduce the enormous cost of procedure. To render purchase under the act of 1891 more attractive the guarantee fund and the insurance deposit are abolished, and the period given to pur-

chasing tenants to repay the money borrowed from the state is extended from forty-nine to seventy years. Evicted tenants are allowed to return as purchasers by agreement.

The light-railway bill for England, to be followed by similar measures for Scotland and Ireland, provides that the maximum sum of £1,000,000 may be advanced from the imperial treasury to assist the construction of light railways to aid transport from agricultural districts or fishing centers. Companies already in existence undertaking to build such agricultural feeder lines can borrow of the Government 25 per cent. of the capital at 3½ per cent. interest and an equal proportion on the same terms from the local authorities. One half of the amount required for the railway must be provided by stock subscriptions, and 50 per cent. of these must be paid up. Land taken for such railways will not be made to pay higher rates than it has before. Three commissioners are appointed to superintend the working of the act, and these shall have power, subject to the approval of the Board of Trade, to condemn and take land for the railways. The Government is empowered to have a quarter of the million pounds at its disposal in special advances as loans or free gifts for building railways of particular utility that would not otherwise be built. A bill to prevent the adulteration of beer, introduced by Protectionists who desired to foster the cultivation of British barley, prescribed that malt and hops should be the ingredients used in the brewing of beer. The bill was withdrawn when the Lord Chancellor gave a promise to institute an inquiry as to whether fresh legislation was needed to prevent the use of deleterious ingredients in the brewing of beer, and whether it is possible and desirable to define the materials of which beer is composed without undue interference with the liberty of the brewer to compose it as he pleases, so long as it is not poisonous. To please the various schools of temperance reform, a royal commission was appointed, with Lord Peel at its head, to inquire into the operation and administration of the laws relating to the sale of intoxicating liquors, and to examine and report on the proposals which may be made for their amendment in the public interest, due regard being had to the rights of individuals.

One of the most important pledges that the Conservative party gave before the election was to carry an education bill that would satisfy the friends of religious education. The bill was elaborately drawn up in such fashion as to attract the support of the Irish members by its provisions for aiding Catholic as well as Anglican and other denominational schools. After a thorough discussion of the principle the Government carried it on the second reading by a majority of 267. It was obnoxious, however, to the great majority of the nonconformists, so much so that a serious dissension between the Conservatives and a large section of the Liberal Unionists was likely to result if the Cabinet attempted to force its proposals through Parliament. The education bill proposed to decentralize the administrative control of the schools by setting up a new education authority in every county and borough. The county or borough council would appoint an education committee, and through it control the administration of the parliamentary grants, have charge of the inspection of elementary schools, and assist in the development of secondary schools, which would be under the control of the committee, with the powers conferred by the technical education act and the handling of the portion of the beer tax allocated for the assistance of secondary schools. In addition to the Parliamentary grants already prescribed by law the new local education authority would have to

distribute 4s. for every child among the voluntary schools. Schools would be allowed to federate themselves by districts or by denominations and receive the whole grant due to all the schools in the federation. Eventually the local or denominational authorities would be intrusted to alter the code of education to suit their particular requirements. In board schools or others receiving Government aid, whenever a reasonable number of parents unite in demanding separate religious instruction for their children, the managers must arrange to allow it to be given. The limitation of parliamentary aid to 17s. 6d. for each pupil in average attendance was abolished and elementary schools were exempted from the payment of rates. The additional grant of 4s. per child was to be applied to improving the teaching staff and increasing the pay of teachers in the voluntary schools, which in the poor and crowded districts labored under financial distress. Sir John Gorst, in defending his proposals against the attacks of the advocates of secular state education, pointed out that the voluntary schools were an established institution, and that in 1895 they educated 2,445,812 children, against 1,879,218 educated in the board schools, and could not be replaced except by the expenditure of £25,346,000 for buildings and equipments and £2,250,000 a year for maintenance. The bill was read a second time on May 12 by the unprecedented majority of 423 to 156, all sections of the Irish Nationalists having decided to vote for it, though Mr. Dillon threatened to oppose its details. The breach between the Radicals and the Irish gave rise to a lively controversy and was welcomed by many English nonconformists as being final. In committee it was found that the Ministerialists were divided in regard to the application of the principle of decentralization in details, and that not only the nonconformists and the secularists, but many of the Church party also clamored against the clause providing for religious instruction, condemning it as a departure from the existing compromise. The managers both of Anglican and of Roman Catholic schools declared the 4s. grant to be insufficient. Some county councils protested against the responsibility thrown upon them; separate treatment was demanded for London, and a grave difference of opinion arose among the strongest supporters of voluntary schools as to whether aid should be given by an imperial grant or by allowing voluntary schools to obtain a share of the rates. An amendment accepted by Mr. Balfour, though Sir John Gorst demurred, allowing separate education committees to be established in nonecounty boroughs containing 20,000 inhabitants, thus multiplying the number of these authorities, roused a general protest from the county councils against being deprived of the best rate-paying areas. Mr. Balfour, seeing that it was now impossible to pass the bill if the session was to close in the middle of August, proposed that the House adjourn at that time till the middle of January, and then go on with the bill. This plan having been pronounced impracticable, as it would place the ministry at the mercy of the minority, since the new session must begin in March, he withdrew the bill, promising that the Government would convoke Parliament early in the following year in order to fulfill the pledges given to the voluntary schools.

The labor legislation was not extensive or remarkable. The truck bill that was passed is very similar to the one prepared by Mr. Asquith for the previous Parliament, but it was declared unsatisfactory to the working people because it contains a loophole in the interest of the employer, legalizing contracting out on the part of the worker. The mines regulation bill had also been prepared by the

preceding Government. The various truck acts that have been passed make it illegal to give food or goods as part remuneration for labor, or to provide tools or materials for work if they are reckoned as a reward for labor, or to deduct the price of food or other articles supplied from wages, or of tools given to the workman to keep, or in home industries in wool, silk, etc., to make any deduction from the contract price; but when the workman acquiesces his wages may be paid to his wife or for dues or subscriptions; and it is legal for the workman to contract how his wages shall be expended, unless it is for goods or materials; moreover, deductions beyond the actual loss may be deducted from wages for spoiled work or materials, and fines imposed for lateness or absence or misconduct, but women or children may be fined only to the extent of the employers' damage. A conciliation-in-disputes act gives expression to a public sentiment against industrial war without providing any effective means for preventing or settling disputes. The boards of conciliation and arbitration created by a former act—if mediation has failed and the parties to a dispute agree to submit to arbitration—may act as arbitrators, or may appoint arbitrators. The arbitrators shall have power to examine witnesses under oath, and call for the production of documents, but employers can not be required to produce their books, nor officers of trade unions their records. If the agreement to arbitrate is enforceable in law, the award of the arbitrators is binding and enforceable.

Among the minor measures that became law was one altering the law restricting the use of locomotives on highways so as to permit the development and enjoyment of automobile carriages, which have hitherto been practically debarred from the use of English roads by the regulations intended for heavy traction engines and the like. A majority was found in the House of Commons for a bill requiring foreign and colonial meat, cheese, butter, and other agricultural produce to be labeled, so that it shall not be sold for English, and the question was afterward referred to a select committee. The House passed a unanimous resolution in favor of the increased employment of discharged soldiers by the Government. A bill to enable the army authorities to bring battalions up to the war strength when required for service in the field, the system of linked battalions, the attempted territorial organization, and all other devices having failed, was the reserve forces bill, which provided that when a warlike expedition is contemplated men belonging to the first class of the army reserve may be called out during the first year after their discharge for permanent service, thus prolonging the seven years' service to eight if the ordinary exigencies of the army require it. The bill was not pressed when military expert opinion was found to be divided regarding the utility of such a makeshift.

Lord Cranborne's benefices bill, based on the recommendations of a royal commission, is intended to put an end to the scandals arising from the abuse of Church patronage, such as the traffic in livings, the sale of advowsons by auction, and the presentation through venality, caprice, or nepotism of grossly immoral or incompetent incumbents. The bill gives to the bishop power, on the prayer of any of the parishioners, to refuse institution on any one of various grounds involving incapacity or misconduct. The presentee or the patron may appeal to the archbishop, assisted by a judge of the High Court, and their decision shall be final. The bishop may, after an investigation through commissioners, inhibit an incumbent who is unwilling or through his own fault unfit or incompetent to discharge the cure of souls, and may then appoint a curate, to be

paid out of the proceeds of the living. Some of the grounds on which a bishop may condemn an incumbent are evil report concerning his moral conduct, pecuniary embarrassments, and neglect of duty in any previous employment. This bill, though carefully prepared and supported by public opinion, was thrown out, owing to pressure of business. The same fate overtook Sir John Lubbock's early-closing bill providing that the local authorities should be empowered to close the shops at a certain hour when two thirds of the shopkeepers of the district agreed upon the hour. This measure, to the principle of which the House of Commons assented in a unanimous resolution in 1893, was supported by the clergy, the medical profession, and the trade councils of all the principal towns. The deceased wife's sister bill, which for the first time had been passed in all its stages by the House of Lords, obtaining moderate majorities, was wrecked at last in the House of Commons, not because it would not command a majority, but because the minority would offer an energetic resistance and demand facilities for discussion that the ministers could not afford. Sir Alfred Hickman obtained an opportunity to argue at some length his bill to provide workingmen with freehold dwellings by a grant of assistance out of the public funds. His proposition, which was described by Radical members as the first step of the Tory democracy toward socialism, and as the thin end of the wedge for the nationalization of the land, was to empower local authorities to make to workingmen, clerks, and others earning not more than £3 a week a maximum advance of £150, to be secured by a terminable annuity for the purchase or building of a dwelling, the borrower being required to raise one fourth of the purchase money or to provide the site. The Lord Chancellor brought in a bill to give power to the judges of the High Court to forbid the publication of indecent evidence, such as is likely to be prejudicial to public morality.

The Government promised an inquiry into the circumstances of Dr. Jameson's filibustering expedition into the Transvaal Republic, but Mr. Chamberlain insisted that it should not be instituted until after the trial of the prisoners whom the South African Republic had delivered up to be dealt with by British justice. A few days before the House of Commons rose a select committee was appointed. The determination of the Government to proceed on a larger scale with the forward policy in Uganda was vigorously resisted by the Radicals. A resolution authorizing the expenditure of £2,000,000 on a railroad from Mombasa to the Victoria Nyanza was carried by a vote of 255 to 75. The Egyptian advance up the Nile was the subject of a spirited controversy. A motion to adjourn, that was made by Mr. Labouchere to afford an opportunity to attack the ministry on this question, was defeated by 268 against 126 votes. The ordering of Indian troops to Suakim raised a still more serious question, for many Ministerialists were surprised when it was learned that Lord George Hamilton, after he had previously refused to charge India with any part of the cost of two native regiments borrowed to serve at Mombasa, had now decided, against the vigorous protest of the Indian Government, to require the Indian treasury to provide the pay and all the ordinary expenses of the Suakim contingent. The mean injustice of requiring the Indian Government to bear the full charges of all British troops sent to India for any extraordinary emergency and of its own troops also when borrowed for an imperial emergency caused the Radicals to inquire derisively: "Who are the little Englishers now?" An amendment to Lord George Hamilton's motion imposing the charge on

the Indian taxpayers was moved by Mr. Morley and supported by Sir Henry Fowler, and when it came to a division the normal ministerial majority was reduced by nearly half, the vote being 275 against 190. Parliament was prorogued on Aug. 14.

The Irish Parties.—As soon as Parliament met, Justin McCarthy definitely resigned the leadership of the anti-Parnellite section of the Irish Nationalist party, and on Feb. 18 John Dillon was elected chairman in his place. At the same time Thomas Sexton, whom the anti-Parnellites vainly invited to be their leader, applied for the stewardship of the Chiltern Hundreds and retired from active politics. As the result of his refusal, the division in the party became more pronounced until, in April, Timothy Healy and his followers definitely seceded. The Irish party was thus split up into 3 factions—the Dillonites, numbering 42; the Healyites, 28; and the Parnellites, under John E. Redmond, 12. In August John Daly, Dr. Thomas Gallagher, Albert George Whitehead, Thomas Devany, and other Irish political prisoners were set free. Several of them were broken down mentally and physically by solitary confinement and the rigors of English prison discipline. On Sept. 1 a convention of the Irish race met in Dublin, consisting of 2,000 delegates from Great Britain and Ireland, the United States, Canada, Australasia, South Africa, and other countries. The Healyites and Parnellites held themselves entirely aloof from the convention, in which resolutions were passed urging the Irish factions to cease their quarrels and unite once more into a single party, bound together by the principle of home rule and disciplined under the rule of the majority. The report of a royal commission appointed to examine into the fiscal relations between Ireland and Great Britain raised a fresh Irish question. The commission, in which Conservatives and Liberal Unionists were preponderantly represented, reached the conclusion that Ireland is now and has for very many years been paying into the imperial exchequer a sum exceeding by £2,500,000 at least the annual amount of taxation that would be proportionate to the wealth and population of the island. In September the London police supposed that they had discovered a dynamite plot, directed presumably against Queen Victoria and the Emperor of Russia, in which Irish Fenians were implicated with anarchists. They caused the arrest, on Sept. 13, in Boulogne, of Patrick J. P. Tynan, accused of being the "No. 1" or chief conspirator in the Dublin plot resulting in the murder of Lord Frederick Cavendish and T. H. Burke, on May 6, 1882. Two Irishmen, named Kearney and Haines, were arrested at Antwerp; and Edward J. Ivory, a native of New York, traveling under the name of Edward Bell, was arrested in Glasgow. The French Government refused to extradite, because the evidence of his identity with "No. 1" was insufficient, and, if he had been identified as the same person, proof was lacking that he participated in the Phoenix Park murders, which, moreover, were now covered by prescription. In the end Ivory also was discharged.

Resignation of Lord Rosebery.—When in the autumn the Armenian agitation was renewed in England, and Mr. Gladstone by his letters and other Liberal leaders by their speeches, accused the Conservative Government of pusillanimity in not attempting to coerce the Sultan singlehanded, Lord Rosebery, who has long felt his position of leader of the Liberal party irksome for a peer, and had before sought to resign, announced on Oct. 7 his decision to relinquish the responsibility definitively for the reason that he could not countenance the policy urged by Mr. Gladstone and a considerable mass of the Liberal party, and desired to resume

his liberty of action and speak his mind freely on the Eastern question. This he did later, pointing out that independent action would be likely to plunge England into war without support from any quarter, and that the first effect would be the destruction of the Armenians.

International Workers' Congress.—A Congress of International Socialist Workers and Trade Unions that met in London on July 27, and sat six days, was greatly divided and disturbed during the first three days by the dissensions of different schools of social theorists and politicians. About 800 delegates were present, representing all the principal industrial countries. The previous congress, in Zurich, had resolved that anarchists should not be admitted, and had excluded delegates holding credentials from societies that professed revolutionary doctrines and condemned political and constitutional action. The anarchists sought admission again to the London congress in great force, having this time secured their mandates from the syndical chambers or trade unions of France, Italy, and Spain, in many of which they form the majority. The socialists in France, who are represented prominently and numerous in the French Chamber of Deputies and in the municipal councils of the cities, in several of which they have elected the mayors, are the preponderant element among the working people of the country, while trade-unionism, often tinged with anarchism, has little influence. In England, on the contrary, the trade-unionists dominate the working classes, and socialism is numerically weaker. Owing to the fact, however, that the Social Democratic Federation of the Independent Labor party has a multitude of branches, while the trade unions are great societies embracing in some cases many thousand workers, the British socialist organizations were able to send 262 delegates to the congress, when there were only 185 direct representatives of the trade unions. The leaders of the Social Democratic Federation decided to give as many offices to the trade-unionists as to the socialists, but this policy was not carried out by their followers, who elected an overwhelming number of socialists as officials and members of commissions. Jules Guesde and M. Deville proposed in the French delegation that no anarchist should be allowed to sit as a delegate of any labor organization, putting a forced interpretation on the Zurich resolution that was not acceptable to the delegation, which rejected it by 57 to 56 votes. Thereupon 47 of the French socialists left the room. These representatives of the French Collectivists, including most of the deputies and municipal councilors, formed themselves into a second French section, which was recognized by the congress. M. Vaillant and the Blanquists, while disclaiming anarchist principles, remained with the French majority, of whom not more than 20 were genuine anarchists. When the question of the admission of representatives of anarchist bodies arose in the congress their cause was supported by a large number of the French trade-unionists and of the delegates belonging to the English Independent Labor party. The advocates of anarchism were at last excluded. In framing rules for the next congress it was desired, to avoid a repetition of the contest, to disqualify anarchists who manage to secure mandates from foreign trade unions. The British Social Democratic Federation proposed to exclude all trade unions that did not subscribe to the entire socialist programme, but the foreign delegations as well as the British trade-unionists objected to the exclusion of the powerful British trade unions that still condemn socialism. The rule that was finally adopted states that the next congress will be open only to the following two classes: 1,

Representatives of those organizations which seek to substitute socialist property and production for capitalist property and production, and who consider legislative and parliamentary action as one of the necessary means of attaining that end; 2. purely trade organizations which, though taking no militant part in politics, declare that they recognize the necessity of legislative and parliamentary action. Consequently anarchists are excluded. To prevent the anarchists from creating the same disturbance that they did at Zurich, and again in London, it is provided that all credentials shall be examined and passed upon by a special commission, from which there shall be no appeal to the congress. It was decided to hold the next congress in Germany, the town to be chosen by the German delegation, in 1899.

The congress could not decide upon any practical solution of the agrarian question, which has such different phases in different countries that the national organizations should deal with it locally, but an ultimate socialistic solution was approved, in which land, like the other means of production, shall become common property, which society in its corporate capacity will cause to be cultivated in the common interest by the most scientific methods. In regard to political action, the congress, declaring that, with the view of realizing the emancipation of the workers, the enfranchisement of the humanity of the citizen, and the establishment of the International Socialist Republic, the conquest of political power is of paramount importance, called upon workers of all countries to unite, independent of and apart from all bourgeois political parties, and to demand universal adult suffrage, one adult vote, and the secret ballot. The congress also declared for the emancipation of woman, and in favor of the full autonomy of all nationalities, and concluded by declaring that, whatever the pretext, whether religion or civilization, colonial extension is only another name for the extension of the area of capitalistic exploitation in the exclusive interest of the capitalistic class. The resolutions in regard to economic and industrial action affirmed the need of the socialization of transport and exchange, and the complete organization of workers in view of the disappearance of free competition and the rapid growth of huge combinations of capitalists. The great coal mines, the great iron and chemical works, the railroads, and the larger factories should therefore be nationalized and socialized. The congress approved the increased economic and political action of trade unions, and desired in the near future international co-operation of the proletariat for the abolition of all tariffs and duties, and for factory and labor protection laws. The resolutions of the Paris Congress in favor of a legal eight-hours' day, abolition of child labor under fourteen, prohibition of night work, abolition of the truck system, and the inspection of all industries, were reaffirmed, but the congress resolved to limit action temporarily to securing the eight-hours' day, the abolition of the sweating system, and the introduction of perfect legislative protection for home workers by the recognition of the unassailable right of combination and coalition of both sexes. The congress considered strikes and boycotts necessary weapons to attain the objects of trade unions, and stated that it should be the special duty of the societies in each country to take care that workers coming from other countries shall become members of the unions and not work for less than the union rate of wages; in case of strikes and lockouts trade unions of all countries should assist each other. Another resolution impressed upon the proletariat the imperative necessity, in view of the rapid industrial and economic development that is going on,

of learning how to administer the public business for the common good. A minority report in favor of a general strike, which was alleged to have been successful in Belgium, Sweden, and Austria, was disapproved. Amendments that were incorporated in the resolutions affirmed that no woman should be allowed to work in factory or workshop for six weeks before and six weeks after her confinement; that the age of employment should be raised from fourteen to sixteen years; that, in view of the great and serious question of the unemployed, where private employers fail public employment should be found for all workmen that are affected; that immigration of aliens is desirable; that home work should be abolished wherever possible; and that apprentices, in the same way as women, should be admitted to trade unions for their socialistic and technical education. On the question of state education the congress voted in favor of a free course from the kindergarten to the university for every pupil. A vote was passed for the abolition of standing armies and for the establishment of a tribunal of arbitration, which was coupled with the assertion that while the capitalist class exists universal peace is impossible.

GREECE, a constitutional monarchy in south-eastern Europe. The legislative power is vested in the Boule, a single chamber of 207 members, elected for four years by universal male suffrage. The King is Georgios I, born Dec. 24, 1845, a son of the present King of Denmark, elected by the Boule on March 18, 1863, and confirmed by the protecting powers—England, France, and Russia—in the protocol signed at London on June 5, 1863. He married Olga, daughter of the Grand-Duke Constantine of Russia. The heir apparent, Konstantinos, Duke of Sparta, born Aug. 2, 1868, is married to Sophia, Princess of Prussia.

The ministry constituted on June 10, 1895, is composed as follows: President of the Council and Minister of Finance, Theodore Delyannis; Minister

M. THEODORE DELYANNIS, THE GREEK PRIME MINISTER.

of the Interior, Kyriakoulis Mavromichalis; Minister of Foreign Affairs, Alexander Skouzes; Minister of Justice, Philip Varvoglis; Minister of Marine, Nicholas Levides; Minister of War, Col. Smolentz; Minister of Public Instruction, Demetrius Petrides.

Area and Population.—The area of Greece is 25,041 square miles. The population at the census of 1889 was 2,187,208, composed of 1,133,625 males

and 1,053,583 females. The results of the latest census show a total resident population of 2,418,000 in 1896. There are about 3,500,000 Greeks in European Turkey, 400,000 in Crete and the other islands of the Ægean, and 2,000,000 in Asia Minor. Athens, the capital, had 107,251 inhabitants in 1889 and 128,000 in 1896. The number of marriages recorded in Greece in 1890 was 19,899; of births, 78,226; of deaths, 55,813.

Finances.—The estimated revenue receipts for 1895 were 91,331,118 drachmai, of which 19,706,908 drachmai were set down to direct taxation, 29,101,000 to customs and excise, 18,366,500 to stamps and dues, 11,073,250 to monopolies, 3,644,560 to state property, 994,900 to sales, 1,024,000 to repayments, 2,355,000 to arrears, 2,595,000 to elementary instruction, 1,200,000 to municipal police, 650,000 to international telegraphs, 300,000 to lighthouse dues, and 320,000 to extraordinary sources. The total expenditure for 1895 was estimated at 90,150,380 drachmai, of which 21,926,326 drachmai were for the public debt, 5,311,600 for pensions, 1,325,000 for the civil list, 496,560 for the Chamber of Deputies, 2,024,119 for foreign affairs, 5,458,139 for justice, 11,110,984 for the interior, 7,643,618 for instruction, 15,359,250 for the army, 5,492,929 for the navy, 2,578,467 for finance, 9,349,384 for the collection of revenue, and 2,074,000 for various purposes. The public debt on Jan. 1, 1895, consisted of 470,034,822 drachmai of amortizable gold loans, comprising the sinking-fund loans of 1880, 1884, and 1887, the loan of 70,621,012 drachmai due to the three powers, and a railroad loan of 59,926,500 drachmai; 34,778,960 drachmai of amortizable paper loans; 155,000,000 drachmai of gold consols, issued in 1889; 31,801,295 drachmai of permanent debts issued in 1874, 1876, 1878, and 1880, and payable in currency; 16,800,000 drachmai of gold-currency debt; 102,000,000 drachmai of forced paper currency; and a floating gold debt of 14,194,075 drachmai; making the total liabilities 656,028,897 drachmai in gold and 168,580,255 drachmai in paper. In 1884 the sums voted for interest were 8,532,768 drachmai in gold and 12,002,140 drachmai in paper. By the financial act of March 19, 1894, the Government was authorized to suspend the sinking fund of the gold debt and pay only 30 per cent. of the interest.

Defense.—All able-bodied Greeks are liable to military service. The period of active service is two years, but it may be shortened by long furloughs. The nominal strength of the active army in 1895 was 1,880 officers and 22,997 men, with 3,739 horses and 120 field guns. The reserves include 104,500 men, and the territorial army numbers 146,000.

The navy consists of 2 old ironclads carrying Krupp guns, 3 armored cruisers armed with Canet guns, 4 unprotected cruisers, 12 gunboats, and 17 torpedo boats, besides a torpedo vessel and 2 Nordenfeldt submarine boats. The *personnel* comprises 185 officers and 3,165 men. The navy is manned partly by enlistment and partly by conscription for two years among the seafaring population.

Commerce.—The total value of the imports in 1895 was 106,822,000 drachmai, or francs, against 109,959,000 drachmai in 1894. The importation of cereals was 27,581,000 drachmai; of cloth and yarns, 20,331,000 drachmai; of coal, 7,318,000 drachmai; of drugs and chemicals, 6,914,000 drachmai; of metals and minerals, 5,724,000 drachmai; of timber, 4,635,000 drachmai; of dried fish and caviare, 4,154,000 drachmai; of metal and stone manufactures, 3,631,000 drachmai; of skins, 2,934,000 drachmai; of sugar, 2,909,000 drachmai; of paper, 2,522,000 drachmai; of coffee, 2,289,000 drachmai; of live animals, 2,279,000 drachmai; of rice, 2,110,000 drachmai; of glass and pottery, 1,231,000 drachmai; miscellaneous imports, 10,260,000 drachmai. The total

value of exports in 1895 was 71,156,000 drachmai, against 74,291,000 drachmai in 1894. The exports of currants was valued at 21,807,000 drachmai; of metals and ores, 18,627,000 drachmai; of wine, 4,476,000 drachmai; of olive oil, 3,183,000 drachmai; of figs, 2,884,000 drachmai; of gallnuts, 2,346,000 drachmai; of tobacco, 2,011,000 drachmai; of silk, 1,690,000 drachmai; of sponges, 1,525,000 drachmai; of olives, 1,391,000 drachmai; of brandy, 1,273,000 drachmai; of fruits, 952,000 drachmai; miscellaneous exports, 8,991,000 drachmai.

The commercial intercourse with foreign countries in 1894 is shown in the following table, giving the values of imports and exports in drachmai:

COUNTRIES.	Imports.	Exports.
Great Britain	30,143,700	22,150,850
Russia	28,699,225	5,076,450
Austria	14,885,425	7,603,425
Turkey	9,873,800	9,348,825
France	8,565,500	9,509,800
Germany	9,144,850	2,060,275
Italy	2,577,225	4,828,150
Belgium	1,577,175	7,572,575
United States	3,123,400	2,104,500
Holland	829,650	2,696,175
Other countries	1,074,875	1,339,875
Total.....	109,958,825	74,290,900

A crisis in the currant trade has had a serious effect upon the prosperity of Greece. When a demand for the dried currants produced only in Greece arose in France, where they were used for the manufacture of wine, a great area in the Morea was planted out to the vines, and in fifteen years the crop was doubled. The French vintage then began to recover, and to protect the native wine-growers the French Government enacted decrees against manufactured wine and laid a heavy duty on Zante currants. The French demand, which had seemed to be unlimited, suddenly vanished, and in consequence the Morea produces 30,000 or 40,000 tons of currants more than the world requires. Prices have fallen so low that they scarcely cover the cost of cultivation, and if the crisis continues, and no new outlet for dried currants is found, the plantations will have to be abandoned and the communities sunk in ruin. When the crop was about 130,000 tons, a quantity just sufficient to satisfy the normal demand, the growers realized 50,000,000 drachmai for their crop, but since the crop has increased to 170,000 tons, it is worth in the market only a little over 25,000,000 drachmai. In 1895 a law was passed requiring all exporters to deposit 15 per cent. of the currants intended for export in Government stores, where they will be used in making wine and spirits in the country. Currant dealers abroad received the bill favorably, but the Opposition in the Boule loaded it with conditions and limited its duration to a year. It succeeded nevertheless in keeping the price of currants above a fixed figure. The crop of 1895 was 150,000 tons, of which 50,000 tons remained in Greece. Great Britain is now the chief consumer, taking half the total export, while France takes about a fifth.

Navigation.—The merchant marine in 1894 consisted of 125 steamers, of 134,687 tons, and 762 sailing vessels, of 343,442 tons. During 1893 there were 5,778 vessels, of 2,214,764 tons, entered and 5,201, of 2,202,467 tons, cleared. Of the vessels entered 2,639, of 314,196 tons, were Greek. The Greeks have a large proportion of the carrying trade of Levantine, Euxine, and Danubian ports.

Communications.—The length of railroads open to traffic in 1894 was 555 miles, of which 92 miles belonged to the Government. The building of roads, of which there are now 2,043 miles, has recently been prosecuted in earnest. The telegraphs,

including cables, had a total length of 4,781 miles in the beginning of 1895, with 5,836 miles of wire. There were 865,870 internal and 197,569 international telegrams sent during 1894. The post office in 1893 conveyed 3,791,000 internal and 5,287,000, international letters and postal cards, and 5,058,000 internal and 2,919,000 international newspapers, circulars, and samples. The postal receipts were 1,542,844, and expenses 1,570,121 francs; the telegraph receipts in 1894 were 1,062,983, and expenses 1,392,453 francs.

Currency.—Greece joined the Latin monetary union in 1868. A forced paper currency was issued in 1877 and succeeding years. In December, 1884, the redemption of specie payments was decreed, but in September, 1885, the notes were reissued. In June, 1886, notes of less than 5 drachmai were authorized. The National, Ionian, and Epiro-Thesalian Banks have authority to issue notes, which are declared legal tender, up to the amount of 88,000,000 drachmai, including 14,000,000 drachmai of fractional currency. The notes of the National Bank in circulation on Sept. 1, 1895, amounted to 108,200,000 drachmai.

The Boule.—The death of Trikoupis, in April, left the Opposition party with no leader when the Chamber opened its session on Nov. 5. The budget was drawn up as usual to show a surplus, 95,344 drachmai of revenue and 93,753,000 drachmai of expenditure, but a deficit was expected. No arrangement had been reached with the foreign creditors, who had disappointed Delyannis in rejecting the best terms that Greece could offer, with taxation at the maximum and expenditure reduced to the lowest possible limit. Negotiations were still pending. In regard to the Cretan question, the Premier said that Greece and Crete must remain quiescent until the pledge of the powers to enforce the execution of the recently conceded Cretan reforms was definitely belied. While the Opposition parties were raising a heated discussion and inveighing against the Government on account of its apathy toward Crete, the King announced in a rescript the necessity for military manoeuvres on a large scale, the withdrawal of troops from police duties, the summoning of 12,000 men from the reserve, and the need of a more modern rifle. The proposals made by Delyannis to the bondholders differed fundamentally from those of Trikoupis, who proposed to pay to the creditors either a fixed perpetual annual sum or a rate of interest that would be increased with the return of prosperity. Delyannis was willing to grant a certain proportion of the *plus values*, or the improvement of revenue and gain by a reduction of the *agio*, proposing to add to the sum set aside for the service of the debt an amount equivalent to two fifths of the surplus yield of the specially conceded revenues, and one fourth of the profit to be gained by the conversion of the interest money from paper into gold in case of a fall in the rate of exchange. His proposals were rejected by the bondholders' committee in Paris, and the subsequent correspondence he declined to lay before the Boule.

Olympic Games.—The revived Olympic games attracted 129 contending athletes from foreign countries, including 42 Germans, 23 Englishmen, 21 Americans, 18 Frenchmen, 7 Italians, 6 Swedes, 6 Austrians, 5 Danes, and 1 Australian. The Stadion was restored, forming an immense auditorium, with an ample arena made in marble. The games began on April 6, the anniversary of the declaration of Greek independence. They were preluded by a choral ode written by M. Samaras, a Greek composer. R. Garret, of Princeton College, bore away the prize for throwing the discus from the Greek champion, and also that for putting the weight.

F. A. Lane, Curtis, Jameson, and other college athletes from Princeton, T. E. Burke, of Boston, and other Americans gained prizes in the foot races, one of which was won by the Australian amateur Flack. In lifting the Danish competitor was first, and in fencing a Frenchman won the contest with the foils. In a dash on a bicycle a French contestant was the victor, and in an all-day race an Austrian. In exercises on the parallel bars, the fixed bar, and the vaulting horse, and in turning on the horizontal bar, German athletes were victorious. A German wrestler bore off another prize. Greek marksmen excelled in rifle and pistol shooting. The long foot race from Marathon was won by a young Greek named Louis, who was loaded with honors for his admirable performance. At the final feast, on April 15, olive branches and medals were distributed among the victors by the King, to whom one of the contestants from Oxford University addressed a Pindaric ode. The athletic meeting of 1900 will be held in Paris. The American athletes in parting presented a memorial to the King, asking that the Olympic games be perpetuated at Athens. M. Averoff, of Alexandria, who gave 1,000,000 drachmai for the restoration of the Stadion, offered to contribute 500,000 drachmai yearly until the structure was completed in Pentelic marble. The Government decided to ask the Boule to provide for a celebration of the Olympic games every fourth year in the intervals between the games that the international committee intend to hold.

GUATEMALA, a republic in Central America. The members of the National Assembly are elected for four years by universal male suffrage. The President is elected for six years. For the term ending March 15, 1898, J. M. Reyna Barrios was elected.

Area and Population.—Guatemala has an area of 63,400 square miles. The population was estimated in 1895 at 1,800,000, about three fifths of whom are pure Indians and the rest of mixed white and Indian blood, with a very small proportion of pure whites. There were 5,735 marriages, 64,738 births, and 27,020 deaths in 1893. The capital is Guatemala la Nueva, which has a population of 85,000, of whom 70,000 are of European origin. Education is free and compulsory, and in 1893 there were 43,789 children in 1,304 Government schools.

Finances.—For 1894 the revenue collected was \$11,831,815, nearly half of it from customs, a third from monopolies of spirits and tobacco, and a sixth from other taxes. The expenses of the Government in 1894 were \$13,577,034, of which 70 per cent. went for the debt, the army, and education. The revenue for the year ending June 30, 1896, was estimated at \$12,482,000, of which \$6,706,000 are from customs; and the estimated expenditure is \$10,705,442. The budget for 1897 estimates the total revenue at \$14,780,000, of which \$8,751,000 comes from customs, \$1,911,000 from taxes, \$3,790,000 from monopolies, and \$328,000 from other sources. The total expenditure is estimated at \$14,464,840, of which \$1,741,734 are assigned to the interior and justice, \$267,290 to foreign affairs, \$6,475,143 to finance, \$1,243,994 to the department of Fomento, including public works, agriculture, telegraphs, and roads, \$2,655,461 to war, \$1,812,536 to public instruction, and \$268,082 to miscellaneous expenditure.

The foreign debt in May, 1895, amounted to £887,700 sterling, and the internal consolidated debt to \$6,025,900, equal to £964,144. An arrangement was made with the bondholders whereby both debts were unified into a new consolidated debt of £1,600,000, bearing 4 per cent. interest and secured by a special tax on the exports of coffee. Other loans not included in this arrangement amount to

\$3,500,000, besides a floating debt of \$500,000. The public debt on Jan. 1, 1896, was reported to be \$14,055,822, including \$4,704,810 of domestic obligations, \$6,562,848 of external debts, and various other loans and liabilities amounting to \$2,788,164.

Commerce.—The imports in 1894, including specie, amounted to \$6,937,000 in silver, against \$6,383,835 in 1893. The value of the exports officially reported in 1894 was \$20,324,000, against \$19,087,000 in the preceding year. The coffee crop in 1892 was 74,652,985 pounds, gathered on 115,681 acres. The yield of sugar was 6,064,080 pounds of refined and 37,991,770 pounds of raw, with 4,802,000 pounds of molasses. The tobacco crop was 979,682 pounds. Other crops are wheat, corn, cacao, rice, cotton, bananas, and coconuts. The chief export is coffee, of the value of \$18,550,518 in 1893. Of comparatively small importance are the others, except silver, of which \$1,149,901 was exported in coin and \$21,384 in bars. Other exports are cinchona, rubber, cacao, bananas, and hides. The exports of coffee, cacao, and cinchona are increasing. Of coffee \$20,889,166 worth was exported in 1884. The sugar and fruit trades are growing likewise. The majority of the vessels calling at Guatemalan ports are steamers from the United States. Of the total imports in 1893 the value of \$1,517,165 came from the United States, \$1,472,178 from Great Britain, \$1,278,205 from Germany, and \$771,524 from France.

Communications.—There is a railroad, 114 miles long, connecting the capital with San José, and one, 32 miles long, connecting Champerico with Retalhuleu, with a branch to San Felipe. There are 210 miles of new railroad under construction, and others have been undertaken with a Government guarantee of \$8,150 a mile.

The post office in 1894 forwarded 5,150,926 and delivered 4,379,654 letters, etc. There are 2,475 miles of telegraph lines, over which 702,433 messages were sent in 1893.

Attempted Insurrection.—The administration of Gen. Barrios has been in the main progressive and was approved by the masses of the people, especially the Indians, whose economic condition and general intelligence he has endeavored to improve by education and the diversification of industry. The Ultramontane, or Extreme Conservative, party has looked upon his policy with some disfavor, regarding it as tending to subversive ideas and a menace to their wealth and position. In June the garrison at Chiquimula attempted to start an insurrection, but it was promptly suppressed. A few weeks later arms were discovered in bales of hay imported at Ponte Barrios, and 2 American contractors who were engaged in constructing a railroad from that point into the interior were arrested on the charge of smuggling munitions of war, they being the owners of the hay.

H

HAWAII, a republic occupying the Hawaiian Islands in the Pacific Ocean, proclaimed July 4, 1894, succeeding a Provisional Government that was formed on Jan. 13, 1893, when Queen Liliuokalani conditionally abdicated the throne. The legislative power is vested in a Senate and a House of Representatives. The Senate is composed of 15 members elected by indirect suffrage for six years, one third being renewed every two years. The House of Representatives has likewise 15 members elected by indirect suffrage, but the whole House is renewed every two years. To qualify for a Senator a man must possess a capital of \$3,000 or an income of \$1,200, and to sit in the other House it is necessary to have been domiciled in Hawaii three years and to have property worth \$1,000 or an annual income of \$600. Every Hawaiian citizen can vote who is twenty years old and is able to read and write either the English or the Hawaiian language. The President, who is elected for six years by the two Houses in joint session, must be a born Hawaiian or a resident of the islands of fifteen years' standing. He is not re-eligible for the next succeeding term. The Council of State is composed of 15 members, of whom 5 are chosen by the President, 5 by the Senate, and 5 by the House of Representatives. Sanford B. Dole is President for the term ending Dec. 31, 1900. The ministry in the beginning of 1896 was as follows: Foreign Affairs, F. M. Hatch; Interior, J. A. King; Finance, S. M. Damon; Attorney-General, W. O. Smith.

Area and Population.—The area of the islands is 6,640 miles. The census of Dec. 28, 1890, made the population 89,990, made up of 34,436 pure Hawaiians, 6,186 half-castes, 21,119 whites, 15,301 Chinese, 12,360 Japanese, and 588 Polynesians. Of the white population 7,495 were born in the islands and 8,602 were Portuguese from Fayal, 1,928 Americans, 1,344 British, 1,034 Germans, 227 Norwegians, 70 French, and 419 of other nationalities. Of the total population 58,714 were males and 31,276 fe-

males. Between 1884 and 1890 the native race decreased 5,578. Most of the immigrants in recent years are Japanese and Chinese. In 1891 there were 7,536 arrivals and 3,037 departures, in 1892 the arrivals numbered 5,468 and departures 4,103, in 1893 the arrivals were 5,672 and 3,926 departed, in 1894 there were 8,114 arrivals and 5,477 departures, and for 1895 the figures are 8,090 and 4,636. In 1890 and 1891 4,438 persons were born and 4,177 died, giving an excess of births of 261 for two years. The total population on Jan. 1, 1895, was estimated at 101,661. Honolulu, the capital, situated on the island of Oahu, had 28,061 inhabitants in 1895. Chinese and Japanese are imported under time contracts to labor on the sugar plantations, and the great majority of them are returned to their own countries when the contracts expire. The Portuguese and a few Scandinavians who were formerly brought in as plantation hands have settled in the country. The present population of the islands is estimated at 105,000, comprising 10,000 English-speaking whites; 15,000 white Portuguese, one third of whom speak English; 30,000 Hawaiians, of whom one third speak English; 10,000 half whites, most of whom use the English language; 15,000 Chinese; and 25,000 Japanese. Hawaii has one of the most complete systems of public elementary education in the world. The entire population, with the exception of the Asiatics and the adult Portuguese, has been trained in the public schools.

Finance.—The revenue for the Government for the year 1895 was \$2,031,610, of which \$547,149 came from customs, \$592,692 from internal taxes, \$205,332 from the Department of the Interior, \$66,270 from judicial receipts, \$60,719 from the post office, \$29,539 from the national savings bank, \$31,462 from stamps, \$46,318 from water supply, \$32,220 from the state lands, \$46,843 from sales, \$81,515 from various sources, and \$291,545 from the surplus of the preceding year. The total expenditures were \$2,009,114, of which \$35,507 went for the civil list

and legislation, \$85,452 for justice, \$51,885 for foreign affairs, \$160,774 for public works, \$176,683 for sanitary measures, \$186,025, for the Department of Finance, \$288,521 for the public debt, \$274,488 for the Attorney-General's office, \$218,127 for public instruction, \$118,131 for the armed forces, \$157,783 for the suppression of rebellion and cholera, and \$257,748 for divers purposes.

The public debt on Dec. 31, 1895, amounted to \$3,811,064, paying interest at various rates from 5 to 12 per cent.

Commerce and Production.—The islands are of volcanic origin and to a great extent mountainous. The rugged ranges of mountains and lava rock are infertile, but the larger part of the surface of the islands consists of arable land of remarkable productiveness. The sugar lands produce twice the crop of West Indian land, and two thirds of the area adapted to this culture are already taken up. The crop nets about \$65 a ton or \$100 for the product of an acre requiring fifteen months' cultivation, if milled on half shares. Most of the owners have their own mills. Two crops of rice are harvested annually, the product being of a high grade, commanding good prices. This culture, which is carried on by the Chinese, can be largely increased. Cattle-raising is profitably carried on in some of the islands, and in certain localities sheep-growing is the principal industry. The food plants and fruit trees (some indigenous, others acclimated) are very abundant and diversified, and in bananas, pineapples, and coconuts a profitable export trade is carried on. The taro plant, which furnishes the staple food of the people, and the sweet potato and the yam grow in abundance. Grapes, figs, pomegranates, guava, alligator pears, papaia fruit, and Ohea apples grow spontaneously. Tobacco is raised plentifully by the natives for their own use. It flourishes admirably, but owing probably to the absence of the proper ferment or perhaps of skill in curing, the flavor of the leaf is coarse. A recently introduced and prospectively profitable crop is coffee, which can be produced of an excellent quality in the gulches and on the uplands and mountain sides. The Government seeks to promote the cultivation of coffee, as there are extensive tracts adapted to this product. The principal article of exportation is sugar, the exports of which in 1895 were valued at \$7,976,000, against \$8,474,000 in 1894 and \$10,201,000 in 1893. The exports of rice likewise fell off from \$327,000 in 1894 to \$162,000 in 1895. The value of the banana exports was \$103,000 in 1895, against \$125,000 in 1894. The chief articles of importation are provisions, groceries, clothing, grain, timber, machinery, hardware, and cotton cloth. The total value of the imports in 1895 was \$5,713,000, of which \$4,516,000 came from the United States, \$471,000 from Great Britain, \$224,000 from China, \$207,000 from Japan, \$123,000 from Australia, \$111,000 from Germany, and \$62,000 from other countries. The total value of the exports was \$8,358,000, of which \$8,337,000 went to the United States, \$3,000 to Australia, and \$18,000 to other countries. In 1894 the total imports were \$5,713,000, and exports \$9,053,000 in value.

Navigation.—There were entered at the port of Honolulu 318 vessels in 1895, of 337,817 tons, and cleared 312, of 339,970 tons. The merchant marine in 1895 numbered 52 vessels, of 21,678 tons. Of these, 23 constituted the fleet of steamboats furnishing intercommunication between the islands.

Communications.—There are 70 miles of railroads on the islands of Hawaii, Maui, and Oahu. The telegraphs and telephones furnish communication between all the principal points. The postal traffic in 1894 was 1,333,196 pieces in the internal and 921,559 in the external service.

Political Affairs.—While the members of the Government and their supporters have steadfastly clung to the policy of seeking annexation to the United States, a party opposed to annexation has sprung up among German owners of sugar plantations and others who are actuated in their resistance to admission to the American Union either as a State or a Territory by the consideration that contract labor would be certainly forbidden, and the supply of cheap laborers from China and Japan cut off. Annexationists see in the possible lapse of the reciprocity treaty a danger to the sugar interest greater than the loss of servile labor. Many think it feasible to extend the plan of dividing the large sugar estates and allotting the land to planters who will largely do their own work. The diversification of agriculture is expected to increase the number of small planters and lead to a solution of the labor problem. The hope of annexation has united many diverse elements in support of the republic, and has not grown weaker. The islands, by virtue their geographical position, belong commercially to the United States, and in political and social sentiment the ties are even closer, their civilization having been brought about by American agencies, both Christian and commercial, the schools and teachers, laws and lawyers, habits of life, dress, occupations, currency, and amusements being mainly American. The Hawaiian annexationists have been very desirous of a cable between the United States and Pearl harbor or other point in the islands. Applications for a cable franchise have been made by three American companies and one English company. A bill to tax incomes above \$2,000 was signed by President Dole on June 12, the tax being 1 per cent. A loan for refunding the public debt at 4 per cent. interest was authorized to be negotiated in London. A special loan of \$2,000,000 for public improvements was approved, the bonds, bearing 5 per cent. interest, to be placed in Honolulu as funds are needed. Of the proceeds of this loan \$850,000 was authorized to be expended in two years. On Oct. 23 the Council of State granted a full pardon to ex-Queen Liliuokalani, who had been convicted of complicity in the Royalist plot of 1893 and sentenced to five years' imprisonment. After her release the ex-Queen visited the United States.

HAYTI, a republic on the island of Hayti in the West Indies. The legislative body is the National Assembly, consisting of a Senate, of 39 members, and a House of Commons, containing 95 members, elected for three years by the direct vote of all adult male Haytians. The Senators are elected for six years by the House of Commons from a list prepared partly by the President and partly by the electors, one third of them being replaced every two years. The President is elected by the two houses united in the National Assembly, and serves seven years. Gen. L. M. F. Hippolyte, who entered Port au Prince at the head of the revolutionary troops on Sept. 2, 1889, was elected President on Oct. 17 of that year for the term ending in May, 1897.

Area and Population.—The area of the republic is about 11,070 square miles. An ecclesiastical enumeration made in 1894 makes the total population 1,210,625. About 90 per cent. of the people are of pure negro blood and the rest, with the exception of a minute proportion of whites, are mulattoes. French is the language of the country, and the Roman Catholic is the state religion, but all others are tolerated.

Commerce.—The value of the imports in 1895 was \$6,232,335, against \$7,540,524 in 1894, and of the exports \$13,788,562, against \$11,258,763. Of the imports in 1895 \$4,021,000 came from the United States, \$1,501,000 from France, \$399,000

from Germany, \$258,000 from England, and \$53,000 from other countries. The products exported are coffee, cacao, cotton, honey, logwood, mahogany, hides, goatskins, and guaiacum. Plantains, rum, and some rice and corn are produced and consumed in the country. The imports are flour, rice, salt pork and beef, salt codfish, herring, and mackerel, hams, butter, cheese, lard, olive oil, sugar, soap, tobacco, kerosene oil, hardware, tools, lumber, cotton cloth, apparel, canned goods, and medicines. The import duties are about 43 per cent. The prices vary greatly with the rates of exchange. There were entered during 1893 at Port au Prince, the chief commercial harbor, 188 steamers, of 274,761 tons, and 79 sailing vessels, of 22,225 tons. In July, 1896, a company was organized in New York with a capital of \$1,800,000 to lay a cable from New York to Hayti.

Finances.—The receipts for the year ending Sept. 30, 1894, were \$6,650,000. The expenditures from Oct. 1, 1894, to Sept. 30, 1895, were \$8,042,705.

The public debt on April 3, 1896, amounted to \$22,608,650, of which \$4,255,369 represented foreign loans, \$4,262,100 internal loans, \$300,000 a forced loan, \$250,000 a loan constructed on March 31, 1896, \$5,449,950 obligations to be paid off under the law of Sept. 28, 1895, \$4,050,436 various other liabilities, and \$4,040,795 paper money.

Armed Forces.—There is an army, raised partly by conscription and partly by voluntary enlistment for seven years, comprising a Government guard of 650 men of all arms, an artillery corps of 1,000 men, 6 regiments of infantry, numbering 3,200, and 1,978 gendarmes; total, 6,828 men. The fleet is made up of 5 iron steamboats, carrying 32 guns, and 1 steel gunboat, built in 1886.

Currency.—The silver gourd, or dollar, is nominally equivalent to the French 5-franc piece. In addition to old worn pieces a new silver currency was emitted between 1880 and 1890, but the silver pieces, coined in France, are only 0.835 fine. The Government has for a long time aimed to replace the national currency, silver and paper, with a new one having a metallic standard on a parity with that of the United States. The national currency was actually withdrawn from circulation about twenty years ago, and American gold and silver were the only circulating medium, but since then Haytian paper and silver currency have been issued as an incident to political revolutions, until there are over \$8,750,000 in circulation, each successful party having acknowledged the emission of its predecessors in power. United States gold is, however, the actual standard for all commercial transactions, though the national currency circulates from hand to hand among the people, and is held at a premium fluctuating greatly, according to the political state of the country and the conditions of the export trade in coffee and other produce and the import trade in provisions. In the spring of 1896 this premium rose to 60 per cent., owing to a financial crisis; in the summer it fell to 40 per cent.; and at the beginning of the year, if shipments of coffee are large, it may decline to 20 per cent. The Government has recently made fresh efforts to bring the gourd and centime currency up to a par with United States gold. There were in circulation in the middle of 1896 \$4,117,197 of paper gourdes, \$4,452,000 of silver gourdes and fractional silver, \$225,000 of copper, and probably \$4,000,000 of American gold; total, \$12,794,197, estimated at \$10.66 *per capita*. The silver and paper gourd is declared by law to be equivalent to a United States gold dollar, and its redemption in gold is guaranteed by the Government, half the export duty on coffee of 50 cents per 100 pounds being reserved for that purpose. This pledge has not been kept,

the reserved revenue, amounting to \$300,000 per annum or more, being invariably used for some other purpose of the Government. All export duties are to be paid in United States gold, while import duties are payable in Haytian currency. The paper, silver, and copper currency is issued by the Government through the medium of the National Bank, which has the coins manufactured in France. It requires a special law each time a new issue is made. The final effort of the Government to reform the finances of the country and at the same time to reduce the national currency and establish a lasting parity with United States money is embodied in the act of the Legislature of Sept. 27, 1895, authorizing the Government to contract a loan of 40,000,000 francs, at a rate not exceeding 9 per cent. per annum for interest and sinking fund, for the purpose of converting the outstanding local public debt, which pays 18 per cent. per annum, and for the withdrawal of the current paper money. Under this law \$500,000 of paper gourd were redeemed at par with American gold during the first half of 1896.

Change of Government.—The political state of the country was restless and the discontented elements renewed their activity on the eve of the elections of Jan. 10, 1896. Minister of Public Works Prophète resigned from President Hippolyte's Cabinet. The elections passed off without disturbance because extraordinary military precautions were taken to prevent an outbreak. The Government candidates were elected to the Assembly from all places except Aux Cayes. Early in March a quantity of hidden arms was discovered in Port au Prince, indicating an intended rising of the adherents of the exiled Gen. François Manigat. Three weeks later the hoary-headed President who has ruled Hayti with a rod of iron since his advent to power at the head of the revolution that overturned President Légitime in 1889 died suddenly of apoplexy. Since his execution of the leaders of the rebellion of 1891 who fell into his hands his administration had been one of sleepless vigilance and mistrust toward the enemies that he created by that severe act of retaliation. But the ability that he then displayed in forestalling the plans of his enemies and his quickness in nipping in the bud every subsequent conspiracy and guarding against invasion inspired the banished leaders with such awe that they have not made a second serious attempt to overthrow the man who threatened to smite with a heavier blow whoever lifted a hand against him. Although Hippolyte won his victory over Légitime with the aid he received in money and arms from the United States, he has always resisted every outside influence and has discouraged American and other immigration, believing that foreigners on the island, in order to make money, stirred up revolutions and smuggled arms and were always ready to overthrow the existing Government, no matter how well it conducted affairs.

President Hippolyte's death was kept secret from the people until measures for preserving the peace could be perfected. Gen. Tiresias Augustin Simon Sam, Secretary of War, was elected President by the National Assembly over Gen. Fouchard, Secretary of Finance. The latter retained his portfolio, and P. Faine that of Foreign Affairs and Justice. While M. Buteau became Secretary of the Interior, M. Chanzy Secretary of Public Instruction, and M. Artean Secretary of Public Works. The new President promised many reforms. Some of the partisans of Manigat attempted at Jaemel to start a revolution on the night of Gen. Hippolyte's funeral, but they were overpowered by the troops after a combat in which several men were killed and many wounded. Gen. Manigat, the champion of the negro element,

who had attempted to upset President Salomon in 1858, and after Légitime was deposed had plotted incessantly against Hippolyte, was conciliated by being recalled from exile in Jamaica to be appointed Haytian minister in Paris. Returning exiles fraternized with members of the Government, and the people manifested joy at the signs of a lasting peace, greeting President Sam everywhere with enthusiasm. In July Calisthène Fouchard, the Minister of Finance, was charged with embezzlement of public funds, and an investigation was begun by the Chambers, but the proceedings were afterward dropped. Later in the year discontent was manifested against the Government in Cape Haytien, in Gonaïves, and even in the capital in consequence of the delay in granting the reforms for which the people clamored.

HOBART, GARRET AUGUSTUS, twenty-fourth Vice-President of the United States, born in

the district school, and next attended the classical school of Mr. Woodhull in Freehold, and later that of Mr. Schermerhorn at Matawan. He made such rapid progress in his studies that he was more than fitted for college at the age of fourteen, and a year later he entered the sophomore class at Rutgers. He took the prize in mathematics, and at his graduation, in 1863, was chosen to deliver the English salutatory.

Shortly after leaving college, in September, he became a teacher in Marlborough, N. J., and three months later he entered the law office of Socrates Tuttle in Paterson, whose daughter, Miss Jennie Tuttle, he married in 1869. In order to support himself while he was studying law, he worked early and late, copying law papers and acting as a clerk in the First National Bank of Paterson, of which institution he afterward became a director.

Mr. Hobart was admitted to the bar of New Jer-

GARRET AUGUSTUS HOBART.

Long Branch, N. J., June 3, 1844. The members of the Hobart family for several generations, in England and in America, have been either teachers, lawyers, or ministers. Addison W. Hobart, father of the Vice-President, began life as a schoolmaster in the academy at Long Branch, in which place he married Miss Sophia Vanderveer, and some years later removed to Keyport, Monmouth County, N. J., where he kept a store. Garret Hobart was sent to

sey in 1866, and was very successful in business. His practice has been for the most part as a counselor, and he has been the executor of many estates. When, in 1875, he was made receiver of several New Jersey railroads, he succeeded in the course of a very few years in making them pay their debts, and was able to return them to their stockholders with a surplus. In 1865 he was appointed clerk to the grand jury, which laborious office he filled so

well that he received the thanks of the court for his services.

In April, 1868, Mr. Hobart was given his first political office, that of judge of election in the Fourth Ward of Paterson, and three years later he was made city counsel. In May, 1872, he was elected counsel to the Board of Freeholders of Passaic County, and in the autumn of the same year he was elected an assemblyman by the largest majority that the Third District ever gave to any candidate. A year later he was re-elected, and, though only twenty-seven years old, was chosen Speaker of the House. He strongly supported the General Railroad Law bill, and urged the passage of measures to reduce the salaries of officials and to diminish local expenses. In 1874 a third nomination was pressed upon him, but he firmly declined the unprecedented honor.

Mr. Hobart was elected to the State Senate in 1874, and in 1879 was re-elected by the largest majority as yet given to a candidate in Passaic County. He presided over the Senate in 1881 and 1882, and

received the chairmanship of the Republican State Committee at his own request, Mr. Hobart worked zealously during the campaign, and Mr. Griggs was elected by a majority twice as great as New Jersey had ever given to any Governor.

Five times successively Mr. Hobart has been sent as a delegate at large to the Republican National Convention. The first time, which was in 1876, and also in 1880, he urged the nomination of Mr. Blaine, and in 1884, when Mr. Blaine was nominated, he was made a member of the Republican National Committee.

When, at the St. Louis convention, Mr. Hobart was spoken of in connection with the vice-presidency, he was desirous of having some one else selected, and told the New Jersey State delegation that he would not ask any delegate to vote for him.

HOLLAND. (See NETHERLANDS.)

HONDURAS, a republic in Central America. The Congress is a single chamber, containing 46 members, who are elected by direct universal suffrage for four years. Congress meets every second

year. The President is elected by the popular vote for four years. Dr. Policarpo Bonilla, who is President for the term ending in 1897, became chief of the state by a revolution, and was elected President by the constituent assembly on Dec. 24, 1893. He was elected afterward in the regular way for the term beginning Jan. 1, 1895.

Area and Population.—The republic has an estimated area of 45,250 miles. The population in 1889 numbered 396,048. The great bulk of the population consists of the Indian aborigines, among whom are scattered comparatively few white families, descended from early Spanish settlers. Tegucigalpa, the capital, has 12,600 inhabitants.

Finances.—The revenue in 1892, the latest year reported, was \$1,764,137, and the expenditure

\$2,603,650. For 1895 the revenue was estimated at \$1,544,785 and the expenditure at \$1,542,917. Of the estimated receipts, \$532,056 represent the customs revenue and \$814,529 internal taxes on spirits, tobacco, stamped paper, etc.

The foreign debt on Jan. 1, 1895, consisted of loans amounting to £5,398,570, raised between 1867 and 1871, with interest in default since 1872, making the total nominal debt £15,622,450. The domestic debt in 1892 amounted to \$2,742,574.

The monetary unit is the dollar, or peso, containing 25 grammes of silver 0.9 fine, the same weight and fineness as the French 5-franc piece. The adoption of a gold standard and a new coinage, the same in quality and value as the gold coinage of the United States, was announced in November, 1894, the previously existing gold currency having been demonetized.

Commerce and Production.—The cultivation of tobacco, sugar, corn, coffee, coconuts, and bananas is extending. Indigo, rice, and wheat are also grown, and the cattle-ranges are extensive.

SCHOOLHOUSE IN WHICH MR. HOBART WAS TEACHER IN 1863, NEAR BRICK CHURCH, N. J.

was a general favorite with Senators of both parties. More than any other member he introduced and secured the passage of bills favoring general legislation, the payment of officials by salaries instead of fees, and the reduction of the taxes. He secured a law giving more protection to the owners of mortgaged property, and he was instrumental in the appointment of a commission, in 1877, to form plans to encourage the making of woven and ornamental fabrics in New Jersey. This was the indirect cause of the establishment of the Bureau of Labor and Statistics. He urged the arbitration of labor disputes, and favored the founding of technical schools in the cities.

In 1880 Mr. Hobart was made chairman of the Republican State Committee. He has been offered many offices which he has declined. In 1880, 1888, 1890, and 1892 he was offered the nomination for Congressman, but he always refused. The nomination for Governor was urged upon him in 1892 and in 1895, but he again declined, and worked to secure the nomination of John W. Griggs. Having re-

Gold, silver, copper, antimony, and lead are mined. The imports in 1892 were valued at \$1,368,310 and the exports at \$1,873,000. The chief exports were live stock of the value of \$636,277, bananas for \$211,940, coconuts for \$91,990, tobacco for \$22,159, coffee for \$36,393, sarsaparilla for \$19,883, silver worth \$652,500, and gold worth \$25,000. In 1892 there visited the 5 ports of the republic 943 vessels, of 267,023 tons, 201 of the vessels belonging to the United States and 153 to Great Britain. More than half the export and import trade is with the United States. A railroad, 37 miles long, connects Puerto Cortes with San Pedro Sula. A company has undertaken to build one from Tegucigalpa to the Pacific, 93 miles.

Political Conspiracy.—The signs of a revolution against the administration of Policarpo Bonilla

were so apparent in March, 1896, that the entire territory of the republic was placed under martial law. In June Dr. Juan A. Arias resigned as Minister of the Interior. President Bonilla at the beginning of August proclaimed absolute amnesty to all political offenders, civil and military, but this did not remove all danger. A movement was on foot to place in his stead Señor Arias, and, in preparation for a rising, munitions of war were smuggled into the country. The Government was sufficiently on the alert, however, and confiscated 80,000 cartridges that were concealed in bales of hay shipped from New Orleans to Puerto Cortes. Outward tranquillity was preserved, and the conclusion of the treaty uniting Honduras with Salvador and Nicaragua in the Greater Republic of Central America strengthened Bonilla's position.

I

IDAHO, a Northwestern State, admitted to the Union July 3, 1890; area, 84,800 square miles; population, according to the census of 1890, 84,385. Capital, Boise City.

Government.—The following were the State officers during the year: Governor, William J. McConnell, Republican; Lieutenant Governor, Vincent Bierbower; Secretary of State, Isaac W. Garrett; Treasurer, C. Bunting; Auditor, Frank C. Ramsey; Attorney-General, George M. Parsons; Adjutant General, A. H. Capwell; Superintendent of Public Instruction, C. A. Foresman; State Engineer, Frederick J. Mills; Chief Justice of the Supreme Court, John T. Morgan; Associate Justices, J. W. Huston, I. N. Sullivan; Clerk of the Court, Solomon Hasbrouck.

Assessment.—The assessment of the various counties for 1896, as reported in August, amounted to \$22,608,069.25, against \$22,878,500.50 in 1895. For several years it has been urged upon the counties to increase the valuation of property and decrease the tax levy; but Cassia County is the only one that has done this, its valuation last year being \$736,310, and this year \$898,480.

The railroad assessment was made the same as last year, the conditions and number of miles of road being the same. All main lines were assessed at \$6,500 a mile, and all standard-gauge branch lines at \$5,000. There are over 900 miles of railroad in the State.

Banks.—According to the report of the United States Comptroller of the Currency, on July 14, 1896, Idaho had 11 national banks, whose combined capital was \$725,000, and the combined resources of which amounted to \$3,187,307, the loans and discounts aggregating \$1,265,434. The total liabilities were \$2,025,382, and the average reserve held was 27.16 per cent.

Idaho has no State banking law. Incorporated banking associations are governed by the general corporation laws. There is no restriction as to classes or kinds of banks, except that a special partnership can not be formed for the purpose of banking. Banking business is done by private parties without incorporation and without capital. There is no law regarding the organization of savings banks, and there are none in the State.

Appropriations.—The river and harbor appropriation bill, passed in April, carried \$25,000 for the improvement of the Clearwater and \$5,000 for the Kootenai between Bonners Ferry and the British boundary, and directs that a survey and estimate be made of Pend d'Oreille river.

The appropriation for the Boise City public build-

ing was increased from \$150,000 to \$200,000, and a building site costing \$17,500 has been selected.

The Mineral Land Commission, consisting of 12 members, whose duty is to examine and classify lands within the limits of the Northern Pacific grant in Idaho and Montana, was continued by an appropriation of \$25,000.

Education.—In the semiannual apportionment of school money to the counties, made in July, \$7,265.03 was apportioned. As the number of school children in the State is 39,288, the amount *per capita* was about 18½ cents. The State normal schools at Lewiston and Albion, established by the Legislature of 1893, were dedicated in June.

Penitentiary.—At the Penitentiary a building to be used as a schoolroom and chapel has been put up, in which the better-educated convicts will instruct those who are under twenty years of age. A hospital, a laundry, and additional cell room are needed. In May there were 40 prisoners for whom there were no cells.

There is a law in the statute books of Idaho giving the State board authority to enter into contract with some responsible person for the maintenance of the prisoners in the Penitentiary, the contractor being given the privilege of working the prisoners for his own benefit. To test its constitutionality, the board, under the law, in December advertised for bids for the care of prisoners.

Insane Asylum.—Gov. McConnell reported in May that the increase in the number of inmates at the Idaho Asylum for the Insane was so rapid that the extra accommodations provided for by the last Legislature will be crowded before the next session.

Soldiers' Home.—The number of inmates in July was 57, as many as can be properly cared for. The expense is about \$15 a month *per capita*, and toward this charge the General Government pays \$100 a year for each inmate.

Irrigation.—The first biennial report of the State Engineer to Jan. 1, 1897, estimates the acreage in the State cultivated by irrigation at 315,000 acres, and the total area under ditch, or that can be covered by laterals and distributaries from existing canals, at 1,250,000 acres.

The first withdrawal of land under the Carey act was made in January. It consists of 66,430 acres on Snake river, which are to be reclaimed by means of a canal leading out of it, water rights to be furnished for \$10 an acre, the payments to extend over a period of nine years.

Metal Output.—During 1895 the production of gold was 125,517 fine ounces, valued at \$2,594,666; of silver, 4,033,180 fine ounces, valued at \$5,214,-

498; of lead, 65,752,037 pounds, valued at \$2,301,321. In the output of gold there was an increase over the previous year of \$285,891, in silver an increase of \$334,643, and in lead a decrease of \$304,129, some of the largest lead mines having shut down for some time on account of labor troubles.

Timber.—The State Land Estimator during 1895 estimated the timber in 39,480 acres in Latah and Shoshone Counties at 410,297,000 feet, divided as follows: White pine, 144,219,000 feet; yellow pine, 25,791,000; white fir, 49,671,000; red fir, 27,386,000; tamarack, 96,601,000; and cedar, 47,129,000 feet. This timber was offered for sale in 1896.

Fruit Acreage.—In April the State Horticultural Inspector reported that about 20,000 acres in Idaho are devoted to fruit culture, 6,695 acres producing apples, 5,632 prunes, 1,838 pears, 1,030 berries, 972 peaches, and 526 cherries, various other fruits being cultivated on the remainder of the 20,000 acres. From experiments he has conducted he says that Idaho soil will produce an average of 17 tons of sugar beets on an acre, the Idaho product containing from 17 to 21 per cent. of saccharine matter.

Live Stock.—The United States Department of Agriculture in July estimated the number and value of farm animals in the State as follows: Horses, 134,705, value \$3,328,570; milch cows, 28,034, value \$567,689; oxen and other cattle, 395,852, value \$5,583,492; sheep, 1,011,852, value \$2,281,726; and swine, 77,518, value \$398,290; total value, \$12,189,741.

Political.—The Prohibitionists held 3 district conventions, at each of which a presidential elector was nominated and delegates to the National Prohibition Convention were chosen. The platform declared for "the complete overthrow and annihilation of the drunkard-making business in our country"; equal suffrage; the free coinage of silver at the ratio of 16 to 1; Government control of railroads and telegraph lines; the election of United States Senators and the selection of postmasters by direct vote of the people; the measure known as the initiative and referendum; and a statutory enactment for the protection of the Christian Sabbath. On Sept. 25, at Caldwell, the Prohibitionists nominated the following ticket: For Governor, M. F. Fowler; Lieutenant Governor, H. C. McFarland; Secretary of State, W. J. Boone; Attorney-General, W. A. Hall; Treasurer, I. P. Marcellus; Auditor, Paul Cann; Superintendent of Public Instruction, J. H. Barton; Inspector of Mines, David Farmer; Congressman, James T. Smith.

The Republican State Convention, held at Pocatello, May 16, to select delegates to the national convention, adopted resolutions approving the action of Senator Dubois in the Senate "in behalf of the free coinage of silver and protection to American industry and reciprocity, one and inseparable"; demanding "that the United States, independent of any other nation on earth, immediately reinstate silver to all its rights, powers, and privileges as money at the ratio of 16 to 1"; favoring protective duties especially upon lead and wool; favoring reciprocity; and declaring "the reinstatement of silver to be the paramount issue in the policy of the United States." On Aug. 8 the Republican State Central Committee convened at Boise City, and the meeting resulted in a division of the committee, both sides reorganizing and claiming to be the regular committee, and both sides filling the vacancies caused by the withdrawal of the other members. The silver Republicans met in convention at Boise City, Aug. 17, and made a declaration of principles similar to those promulgated at the May convention, and in addition congratulated Congressman Wilson "on his able and exceptional work" in

Congress, and unequivocally approved "the action of Senators Teller, Cannon, and Dubois and their associates who left the national convention," and the nomination of Bryan and Sewall. A declaration in favor of equal suffrage also was made.

At the Republican State Convention, which met at Boise City, Aug. 26, the following nominations were made: For Representative in Congress, John T. Morrison; Justice of the Supreme Court, Drew W. Standrod; Governor, David H. Budlong; Lieutenant Governor, Vincent Bierbower; Secretary of State, Isaac W. Garrett; Attorney-General, John A. Bagley; Auditor, Elmore A. McKenna; Treasurer, Frank C. Ramsey; Superintendent of Public Instruction, Charles A. Foresman; Inspector of Mines, Theodore Brown.

On Sept. 26, being dissatisfied with the regular Republican nominations, the silver Republicans named a ticket headed by W. E. Borah for Representative in Congress, Edgar Wilson for Justice of the Supreme Court, and Frank Steunenberg for Governor. This ticket was filed with the Secretary of State as the regular ticket of a Republican State convention, and the same ticket was also filed by petition as the "electors' Democratic ticket."

The delegates to the St. Louis Populist Convention were named by the Populist State Central Committee at Boise City, May 28, as well as the time and place of holding the State nominating convention, which met at Boise City on Aug. 18, as did also the Democratic State Convention. Fusion between the People's party and the Democratic party was agreed upon, and a conference committee determined that the two parties "shall meet in joint convention and form an organized assemblage of electors of the State of Idaho representing the principle of free and unlimited coinage of silver at the ratio of 16 to 1 with gold by the Government of the United States independent of and without waiting for the advice or consent of any other nation, and that such joint convention or organized assemblage of electors so representing such principle shall be known as the People's-Democratic Party Convention, and, as such, nominations shall be made for candidates." The nominations to be made by each party were also agreed upon, and later the following certified resolution from the Democratic Convention was received by the Populist Convention:

"That it is the sense of the convention that when the Legislature convenes in January, 1897, that the candidate for United States Senator be selected from the present Populist party; and we pledge ourselves to use all honorable means to secure that end."

Resolutions were passed that approved the platform of the national People's party; denounced the extravagance, incompetence, and corruption of the present Republican State administration; and demanded the enforcement of that article of the State Constitution which declares "that the making of profit, directly or indirectly, out of State money, or using the same for any purpose not authorized by law, shall be deemed a felony"; favoring the adoption of the equal-suffrage amendment; pledging the party to the enactment of such legislation as will protect in their just rights the users of water for irrigation; demanding the abolition of the "fee system" and the reduction of State expenses to the lowest possible point; declaring that the use of the public domain for the purpose of grazing is subject to State control; demanding legislation to preserve the public ranges for the benefit of *bona fide* residents of the State; and favoring the enactment of a law making State, county, and city warrants receivable for taxes at their face value, under proper restrictions. After

the selection of candidates to fill the places on the People's-Democratic ticket allotted to the People's party, the convention adjourned.

At the Democratic State Convention, held in Pocatello on June 16, all the 21 counties in the State were represented except Lincoln. The resolutions adopted were all in favor of the remonetization of silver, and delegates to the Democratic National Convention were selected. It met again at Boisé City on Aug. 18, when fusion with the People's party was agreed upon, as stated above. The resolutions reaffirmed the platform adopted by the Democratic Convention at Chicago; favored such legislation as would make the public schools most effective; demanded the preservation of the public ranges to the use of citizens of the State; favored the adoption of the constitutional amendment for granting equal suffrage; demanded just legislation for the purpose of relieving ditches owned by settlers from burdensome taxation; and pledged the party to enact such legislation as will fully protect the rights of settlers in the use of water for irrigation, and to the strictest economy in the administration of State and county governments. Nominations to fill the Democratic quota on the ticket of the People's-Democratic party were made.

At ten o'clock Saturday night, Aug. 21, the delegates to the Populist and Democratic conventions convened as the People's-Democratic party, and nominated a State ticket as follows: By the Democrats were named the candidates for presidential electors, and for Supreme Court Justice, R. P. Quarles; Governor, Frank Steunenberg; Attorney-General, R. E. McFarland; Treasurer, George H. Storer; and Inspector of Mines, B. F. Hastings. The Populists named: For Representative in Congress, James Gunn; Lieutenant Governor, C. C. Fuller; Auditor, James H. Anderson; Secretary of State, George J. Lewis; and Superintendent of Public Instruction, Lewis Anderson. On Oct. 5 George F. Moore was selected by the Populist and Democratic State committees as their candidate for Lieutenant Governor, in place of Mr. Fuller, resigned.

At the election in November the People's-Democratic ticket was successful. Steunenberg—the candidate of the Populists, the Democrats, and the silver Republicans—receiving 22,094 votes, and Budlong 6,411. The vote for presidential electors was: Bryan, 23,192; McKinley, 6,324; the Prohibition vote for presidential electors was 181. The constitutional amendments providing for county attorneys and county superintendents were carried, and the equal-suffrage amendment received 6,000 more votes than were cast against it, though not a majority of the votes cast at the election. The matter having been taken before it, on Dec. 11 the State Supreme Court decided that when any proposed amendment to the Constitution receives a majority of the votes cast on the proposition, whether or not it is a majority of all the votes cast at that election, the amendment is carried.

ILLINOIS, a Western State, admitted to the Union Dec. 3, 1818; area, 56,650 square miles. The population, according to each decennial census, was 55,162 in 1820; 157,445 in 1830; 476,183 in 1840; 851,470 in 1850; 1,711,951 in 1860; 2,539,891 in 1870; 3,077,871 in 1880; and 3,826,351 in 1890. Capital, Springfield.

Government.—The following were the State officers during the year: Governor, John P. Altgeld, Democrat; Lieutenant Governor, Joseph B. Gill; Secretary of State, William H. Hinrichsen; Auditor, David Gore; Treasurer, Henry Wulff; Superintendent of Education, Samuel M. Inglis; Adjutant General, Alfred Orendorff, who resigned and was succeeded Jan. 4 by C. C. Hilton; Attorney-General,

Maurice T. Mahony; Commissioner of Insurance, Bradford K. Durfee; Chief Justice of the Supreme Court, Alfred M. Craig; Associate Justices, Joseph W. Wilkin, Jesse J. Phillips, J. H. Cartwright, Benjamin D. Magruder, David J. Baker, and Joseph N. Carter.

Finances.—The amount of all funds in the State treasury Oct. 1, 1894, was as follows: General revenue fund, \$1,293,173.44; State school fund, \$144,794.04; unknown and minor heirs' fund, \$11,334.24; local bond funds, \$474,160.35; total, \$1,923,462.07. The receipts from all sources from Oct. 1, 1894, to Sept. 30, 1896, inclusive, were: General revenue fund, \$6,746,067.62; State school fund, \$2,009,011.89; local bond funds, \$2,763,513.58; total receipts, \$13,442,055.16. The disbursements from Oct. 1, 1894, to Sept. 30, 1896, inclusive, were: From general fund, \$7,675,511.54; State school fund, \$2,135,251.90; unknown and minor heirs' fund, \$53.71; local bond funds, \$2,744,891.88; total, \$12,555,709.03. Balance of all funds in State treasury Oct. 1, 1896, \$888,346.13.

The principal of the bonded debt of the State outstanding Oct. 1, 1896, was \$18,500. These bonds, called in by the Governor, have ceased to draw interest, but have not been surrendered.

The receipts of the general revenue fund from Oct. 1, 1894, to Sept. 30, 1896, inclusive, are made up in part as follow: From taxes, 1893, \$54,640.09; taxes, 1894, \$1,479,102.57; taxes, 1895, \$2,918,103.30; from 7 per cent. on gross earnings of Illinois Central Railroad for six months ending Oct. 31, 1894, \$276,729.14; for six months ending April 30, 1895, \$296,723.78; for six months ending Oct. 31, 1895, \$318,264.39; for six months ending April 30, 1896, \$317,609.91; from United States Government on account of aid to Illinois Soldiers' and Sailors' Home from Oct. 1, 1894, to June 30, 1896, inclusive, \$239,075; from fees collected by Secretary of State from April 1, 1894, to March 31, 1896, inclusive, \$195,134.87; from fees collected by Superintendent of Insurance from July 20, 1893, to Dec. 31, 1895, inclusive, \$328,475.42; from United States Government appropriation to colleges of agriculture from Oct. 1, 1894, to Sept. 30, 1896, inclusive, \$43,000; from Illinois and Michigan Canal, \$50,000; from unexpended balance of appropriations to State institutions, \$221,718.28.

The balance in the treasury belonging to the revenue fund Sept. 30, 1894, was \$1,293,173.44; Sept. 30, 1895, \$173,881.40; Sept. 30, 1896, \$363,729.52; Dec. 1, 1896, \$98,435.83.

Valuation.—In October the State Board of Equalization fixed the assessments for 1897. In Sangamon, Christian, Menard, and Morgan Counties reductions in valuation were made, ranging from a reduction of 50 per cent. on personal property in Morgan County, to 5 per cent. on lands in Christian County. The aggregate valuation of the 278 corporations that were assessed was \$14,950,288, an increase over last year of \$173,128. Of these corporations, 41 were new, while 37 old companies, with an aggregate capital stock of \$1,999,638, were either bankrupt or had retired from business.

Property belonging to 105 railroad corporations, with 9,794 miles of main track, was assessed at an aggregate valuation of \$78,996,324, or about \$300,000 less than the assessment for 1895.

Banks.—On Sept. 28, 1895, Illinois had 220 national banks, whose combined capital was \$38,671,000, and the total resources of which amounted to \$238,986,223.04. The amount of United States bonds held to secure circulation was \$7,461,750; excess of such bonds beyond requirement, \$2,062,750; amount of coin and coin certificates held, \$24,300,694.61; notes issued for circulation, \$62,010,395; redeemed, \$54,688,380; outstanding, \$7,-

322,015; and loans and discounts, \$143,200,898.31. The statement of the condition of the State banks March 17, 1896, shows that the aggregate resources were \$127,432,913.50; the loans and discounts amounted to \$85,077,209.50; stocks and bonds other than United States bonds, \$10,193,605.25; cash on hand, \$12,414,588.30; due from banks, \$14,448,656.92; checks and other cash items, \$2,742,247.81.

Insurance.—The tabular statement of the State Superintendent of Insurance, issued in April, shows that during 1895 the fire and marine insurance companies doing business in Illinois numbered 177, whose paid-up capital was, in the aggregate, \$71,430,299; assets, \$252,413,498; liabilities, \$189,774,776; surplus as to policyholders, \$134,187,573; surplus over liabilities, \$62,732,273; incomes, \$146,752,447; expenditures, \$131,270,211; risks written, \$1,110,636,979; premiums received, \$12,981,803; losses paid, \$6,696,050; losses incurred, \$7,608,628; risks in congested district Chicago, \$149,030,791.

The annual report, issued in August, shows the total amount of life insurance in force Dec. 31, 1895, as \$946,411,963, distributed as follows: Fixed or level premium, old line, \$321,073,021; fixed or level premium, industrial, \$28,634,343; assessment life, \$153,552,674; fraternal societies, \$443,151,925. The 28 fidelity, surety, and casualty companies issued policies in the State aggregating \$256,843,311; and paid losses, \$629,530. The business written by the 42 assessment life insurance companies in 1895 amounted to \$35,072,350, the total amount of insurance in force in these companies being \$153,552,674. The risks of the 18 assessment accident companies were \$87,562,200, of which \$46,064,900 was written during the year. The fraternal beneficiary societies numbered 49. During the year they wrote business amounting to \$102,797,725. Their death losses were \$3,739,400, and their losses through lapses, surrenders, and other means \$36,203,300. The amount of premiums collected by the windstorm companies was \$1,284.

Charitable Institutions.—The financial record of the State charitable institutions for the last quarter of 1895 shows that the total gross cost for maintenance was \$333,020.94. The total cost to the State was \$301,264.43. The number of inmates present at the beginning of the quarter, in the 12 institutions, was 8,059. There were present at the end of the quarter 5,058 males and 3,208 females.

A later report of the State Board of Public Charities shows the average gross cost *per capita* of the Eastern Hospital for the Insane to have been \$41.59, and the average net cost to be \$38.45. The average gross cost at the Central Insane Hospital (Jacksonville) was \$32.11, and the net cost \$28.39. At the Southern Insane Asylum (Anna) the gross *per capita* cost was \$30.62, and the net cost \$25.78. The Northern Insane Asylum (Elgin) was, gross \$36 and net \$34.60. The asylum for insane criminals at the Chester State Prison was, gross \$47.83, net \$43.18.

The highest gross and net cost *per capita* was at the Institution for the Blind at Jacksonville, and was, gross \$71.47, net \$65.11. The lowest was at the Soldiers' and Sailors' Home at Quincy, the gross being \$24.44, and the net \$24.30.

Prisons.—From Joliet, in August, the first trial of the new parole law was made. Under this law prisoners are released and are provided with employment with men who promise to try to keep them from evil associations. No two convicts may be employed at the same place. Each paroled man must report once a month to the penitentiary authorities, and six months of good behavior secures final release. Joliet prison is now self-sustaining.

In October the "Pioneer," a weekly newspaper published at the State Reformatory, at Pontiac, was

made a daily issue—the first daily newspaper published in a prison. The paper has turned out a large number of first-class printers.

Factory Inspection.—The report of the State factory inspectors was made in March. It shows that during 1895 48 cities and towns were visited and 4,540 establishments, employing 190,369 persons, were inspected. About 500 children under fourteen years of age were found at work, and 8,624 between the ages of fourteen and sixteen. For employing 80 children under fourteen years of age 56 convictions were secured, and 223 convictions for employing 408 children between the ages of fourteen and sixteen without the required affidavits. The number of tenement-house sweat shops in Chicago was 1,715, against 1,413 in 1894; the persons employed numbered 14,904, an increase of 3,802; and the child labor employed was 1,307, against 721. Of these, 1,180 were girls, two thirds of whom could neither read nor write English.

Board of Arbitration.—The first report of this board, covering the first six months since its organization, was made in March, and showed that the board had taken official action on about 40 disputes between employers and employees, some of which developed into strikes; all but one of these disputes were settled either by the contending parties themselves or through the mediation of a member of the board.

Building and Loan Associations.—The annual report for 1895 shows that during the year 30 new associations were admitted to do business, 20 surrendered their charter, and 2 failed. The associations, at the end of December, numbered 726; receipts for the year were \$46,306,969.96; assets, \$82,639,258.24; total number of shares during the year, 582,525 $\frac{1}{2}$; matured, 60,789; withdrawn, 535,455 $\frac{1}{2}$; in force, 2,230,435 $\frac{3}{4}$; loaned on, 165,343 $\frac{1}{2}$.

Crops.—The following reports on the crops were made on Aug. 1 by the State Board of Agriculture: Of the 1,919,598 acres seeded to wheat, 237,579 acres were not harvested; the total yield was 21,514,581 bushels, valued at \$10,447,439, the price per bushel, Aug. 1, being 48 cents. The production was 3,500,000 bushels more than in 1895. The yield of oats was 104,425,000 bushels, whose value at 13 $\frac{1}{4}$ cents a bushel was \$14,180,000. The corn area is given as 6,925,000 acres, a slight increase over last year. A report on the corn crop was made Dec. 1. With the exception of the yield of 1879, the corn crop of 1896 is the largest ever grown in the State, 288,750,000 bushels having been produced from 6,864,000 acres. The average quality is 96 points out of a possible 100. The average market price for corn throughout the State is 18 cents a bushel, the lowest price in twenty-five years. The United States Department of Agriculture early in 1896 gave the value put upon the crops of Illinois for 1895 as follows: Corn, \$56,130,042; wheat, \$10,102,177; oats, \$12,530,212; hay, \$13,521,113; potatoes, \$4,134,759; rye, \$680,115; barley, \$158,865; buckwheat, \$12,813.

Live Stock.—The United States Department of Agriculture in July reported the number and value of farm animals in the State as: Horses, 1,179,072, value \$34,502,959; mules, 97,453, value \$3,531,725; milch cows, 1,018,443, value \$27,966,445; oxen and other cattle, 1,430,976, value \$29,214,530; sheep, 694,470, value \$1,670,687; swine, 2,392,980, value \$12,301,830.

The State Live Stock Commission, in a report covering the two years ending July 23, 1896, says that during that period it has inspected and tagged 17,400 cattle; of these, 4,938 were held for post-mortem examination, 3,494 of which were tanked and rendered unfit for food, and the remaining 1,444 were sold at an average of \$5.50 per hundred,

dressed weight. By this system of inspection, \$335,000 was saved to the shipper and producer, the price secured being increased, and the consumer was protected.

Decisions.—The circuit court of Urbana, in June, ruled the "flag law" unconstitutional.

The State Supreme Court, in November, declared unconstitutional the Torrens land-title act.

The county court at Chicago, in November, rendered a decision that the new inheritance-tax law is unconstitutional because the act was not properly drawn and because the classification attempted in the act makes unjust discrimination between persons and is arbitrary and is not based upon sound principles of public policy.

Political.—The State Convention of the Prohibition party assembled at Springfield on April 8. The platform contained a preamble asserting the belief that "the prohibition of the liquor traffic is the most important issue in American politics," and resolutions declaring against all toleration of liquor for a beverage, and that its manufacture and sale for other purposes should be controlled by the State. It declared against alien ownership of land, and in favor of equal suffrage; the extension of the civil-service-reform system; the securing public-school facilities; the protection of the Sabbath; the election of United States Senators by vote of the people; arbitration between employers and employees; the creation of "a tariff commission representing all national political parties as nearly equal as possible, whose duty it shall be to recommend annually to Congress such changes in tariff laws as may be necessary to adjust the revenues to the needs of the Government and to enable our workmen to receive fair wages for their labor"; the suppression of "all combinations designed to enrich the few at the expense of the many"; and the control by Government of all means of transportation and communication. The following was the financial plank:

"We declare that money should consist of gold, silver, and paper, and be issued by the Government directly to the people, without the intervention of any private individual or corporation, and to be a full legal tender for all debt, both public and private; that the Government should not discriminate in favor of gold as against silver, and that its mints should be open upon equal terms to both at the ratio now established by law. We oppose the issuing of Government bonds in times of peace."

Delegates to the national convention and candidates for presidential electors were selected, and the following State ticket was put in nomination: For Governor, Hale Johnson; for Lieutenant Governor, E. A. Windell; for Secretary of State, Alonzo E. Wilson; for Auditor, Arthur J. Bassett; for Treasurer, E. K. Hays; for Attorney-General, Robert H. Patton; for Trustees of the State University, Mrs. Lucy Page Gaston, Mrs. Carrie L. Grout, Mrs. Ella M. Orr. On July 25 George W. Gere was nominated for Governor, in place of Hale Johnson, the former candidate, who resigned, having received the nomination for Vice-President, and H. B. Kepley for Lieutenant Governor.

On April 28 the Woman's Republican State Convention, composed of delegates from all of the 22 districts, met at Springfield and nominated as trustee of the State University Mrs. Mary Carriel.

The Republican State Convention was held at Springfield on April 29. The platform, after denouncing the Democratic administrations—national and State—declared in favor of a tariff to produce revenue and protect home labor, and of the unrestricted exchange of non-competitive articles; in favor of the Monroe doctrine and of strengthening our coast defenses and enlarging our navy; ex-

pressed sympathy with Cuba; recommended to the people that they vote for the proposed amendment to the Constitution submitted to them by the act of the Legislature of 1895, permitting three articles of the Constitution to be amended at one time; favored submitting to the people an amendment providing that the Legislature shall enact suitable laws to regulate contracts between employees and employers; recommended a revision of the revenue laws and further provision for the creation of a board of assessors; provision for an improved method of levying and collecting special assessments for public improvements; and the enacting of a law providing for the care and treatment of all adjudged insane persons in State asylums. It declared also: "The Republicans of Illinois are now, as we ever have been, unyielding and emphatic in our demands for honest money. We are opposed to any and every scheme that will give to this country a currency in any way depreciated or debased or in any respect inferior to the money of the most advanced and intelligent nations of the earth. We favor the use of silver as currency, but to the extent only and under such restrictions that parity with gold can be maintained." Delegates to the national convention and candidates for presidential electors were selected, and the following State ticket was nominated: For Governor, John R. Tanner; for Lieutenant Governor, William A. Northcott; for Secretary of State, James A. Rose; for Auditor, James S. McCullough; for Treasurer, Henry L. Hertz; for Attorney-General, Edward C. Akin; for Trustees of the State University, F. M. McKay, Mrs. M. T. Carriel, Thomas J. Smith.

In May, at Chicago, the Socialist-Labor party entered the field of State politics for the first time, adopted a platform which declares that the economic evils from which the people suffer are not caused by the gold standard and will not be remedied in any way by the free coinage of silver, but that what is wanted is to destroy the money power by establishing the co-operative commonwealth; and nominated presidential electors and a complete State ticket, headed by Charles Bastain for Governor. On Sept. 28 this ticket was filed by petition, 1,569 names being signed thereto.

The State convention of the Democratic party met at Peoria, June 23, and the 1,065 delegates, after selecting delegates to the national convention and candidates for presidential electors, voted unanimously for a platform that demanded "the immediate restoration of the free and unlimited coinage of both gold and silver at the ratio of 16 ounces of silver to 1 ounce of gold of equal fineness, with full legal-tender power to each metal, without waiting for or depending on any other nation on earth."

Other declarations denounced the McKinley tariff law, favored a tariff for revenue only, and declared that Government should collect "no more taxes than are necessary to defray the expenses of the Government honestly and economically administered"; demanded the "abolition of government by injunction"; approved the administration of Gov. Altgeld; demanded such legislation as will require all property not exempt, and all men to pay their fair share of taxes, and favored a constitutional amendment that will allow local taxation for local purposes; condemned the last General Assembly for crippling the industrial arbitration law, and demanded the abolition of child labor in factories; demanded the repeal of the flag law; favored legislation to prevent competition between convict and outside free labor; demanded legislation for the protection of miners; favored an income tax, legislation in behalf of good roads, and the constitutional amendment permitting three articles of the

Constitution to be amended at one time. John P. Altgeld was renominated for Governor; for Lieutenant Governor Monroe C. Crawford was selected, and the ticket was completed as follows: For Secretary of State, Finis E. Downing; for Auditor, W. F. Beek; for Treasurer, Edward C. Pace; for Attorney-General, George A. Trude; for University Trustees, Julia Holmes Smith, R. P. Morgan, M. W. Graham. On Sept. 15 (the People's party having agreed to support the Democratic ticket if allowed to nominate the Auditor and three presidential electors on that ticket) W. F. Beek and three electors who had been selected by the Democrats in June resigned, and A. L. Marshall was nominated by the Populists for Auditor.

On Aug. 12, at Springfield, representatives of the People's party met and adopted a platform which approved that adopted by the National Populist Convention, demanded a more equitable system of taxation, and favored local option in taxation to that end; an amendment to the Constitution giving the Legislature power to enact laws regulating contracts between corporations and their employees; the proposed amendment to the Constitution which provides that the Legislature may submit three amendments to be voted upon at a general election; the prevention of competition between the products of convict and free labor; the adoption of a system of direct legislation in dealing with State and local affairs; and declared that the administration of Gov. Altgeld deserved unstinted praise.

The Gold-standard Democrats met in State convention at Chicago Aug. 25. The platform had but little to say regarding silver, but was uncompromising in its declaration for the gold standard. It demanded "the retirement of the United States from the banking business and the gradual redemption and cancellation of the United States and Treasury notes"; denounced the Republican convention at St. Louis as being in the control of "intriguing attorneys of favored interests"; declared the Chicago convention to have been dominated by "agitators, sectionalists, and demagogues," and denounced "the shameful demand for a debased dollar" of the latter convention; extolled President Cleveland; and declared in favor of the constitutional independence of the United States Supreme Court. The convention selected delegates to the Indianapolis convention and chose presidential electors at large and nominated the following ticket: For Governor, John C. Black; for Lieutenant Governor, Chester A. Babcock; for Secretary of State, Charles S. Wiley; for Auditor, F. E. Brink; for Treasurer, Edward Ridgeley; for Attorney-General, William S. Forman; for University Trustees, S. H. Busey, C. E. Babcock, August Niehaus. On Sept 9 Gen. Black notified the committee that he could not accept the nomination for Governor, and William S. Forman was nominated for that office, and the nomination for Attorney-General, thus made vacant, was given to Daniel V. Samuels.

At Chicago, on Sept. 15, the Middle-of-the-Road section of the People's party met and adopted the following resolution: "We do most heartily indorse the wisdom of the national convention in the nomination of Thomas E. Watson for Vice-President of the United States, and most emphatically denounce any action which prevents the Populists of any State from using the privilege of casting their ballots for him." Electors at large were selected, and a State ticket, excepting the Governor, was nominated. Following is the ticket: For Lieutenant Governor, Henry D. Lloyd; for Secretary of State, L. A. Quelmalmz; for Auditor, Grant Dunbar; for Treasurer, Joseph Schwerzen; for Attorney-General, E. I. Burdick; for University Trustee, Mrs. Fanny Kavanaugh.

In October a nominating petition bearing 1,523 names was filed with the Secretary of State by the National party. A full electoral and State ticket was named, with Isaac W. Higgs for Governor. The National party represents the broad-gauge wing of the original Prohibition party.

At the election in November there were 13 tickets on the ballot, as follows: Democrat, Republican, Prohibition, Peoples' party, Socialist Labor party, National party, Middle-of-the-Road party, Independent Gold-standard Democracy, Independent party, Independent Democratic party, Independent Silver party, Independent Republican party, and National Silver party.

At the election in November the Republican ticket was successful. For Governor, Tanner received 587,587 votes; Altgeld, 474,270; Gere, 14,582; Forman, 8,100; Bastain, 985. The vote for presidential electors was: Republican, 607,130; Democratic, 464,523; Prohibition, 9,796; Gold Democrat, 6,390; Social Labor, 1,147; Middle-of-the-Road People's, 1,090; National, 793. The constitutional amendment was adopted by a vote of 163,057. The Legislature of 1897 will be divided politically as follows: Senate—Republicans 39, Democrats 11, Populist 1; House—Republicans 87, Democrats 64, Populists 2.

INDIA, an empire in southern Asia, subject to Great Britain, and governed under general acts of the British Parliament by a Governor General under instructions from the Secretary of State for India, a member of the British Cabinet. The Earl of Elgin and Kincardine has been Governor General since October, 1893. The ordinary members of the Governor General's Council in the beginning of 1896 were Sir A. E. Miller, Sir Charles B. Pritchard, Lieut.-Gen. Sir H. Brackenbury, Sir James Westland, Sir Charles H. T. Crossthwaite, and J. Woodburn. The ordinary members are nominated by the Crown. The commander in chief of the forces and the governor or lieutenant governor of the province where the Council sits act as extraordinary members. The ordinary members of the Council are re-enforced by 10 to 16 additional members nominated by the Governor General, 5 of them on the recommendation of the provincial councils and the Calcutta Chamber of Commerce, to form the Legislative Council, which frames regulations to be submitted to the Governor General and drafts of law that he forwards to the Government in London to lay before Parliament. The Secretary of State for India in the Cabinet of Lord Salisbury is Lord George Hamilton.

Area and Population.—The Indian Empire, including the protected states and territories in Asia and Africa placed under the control of the Indian Government, has a total area of 1,987,427 square miles, with a population of 291,381,000. The area directly administered by the Governor General is 965,005 square miles, having a population in 1891 of 221,172,952, divided into 112,542,739 males and 108,630,213 females. The average density of population in British India was 229 per square mile. The Bengal Presidency, including Bengal, Behar, Chota Nagpur, and Orissa, had 471 inhabitants to the square mile, the total population being 71,346,987. In the Northwest Provinces and Oudh, with a population of 46,905,085, the density was 436 to the square mile; Bombay, with a total population of 15,985,270, had 207; Madras, with 35,630,440 inhabitants, had 252; the Punjab, with 20,866,847 population, had 189; Assam, with 5,476,833, had 112; Berar, with 2,897,491, had 164; the Central Provinces, with 10,784,294, had 125; Sind, with 2,871,774, had 60; and Upper and Lower Burmah, with 7,605,560, had 44 to the square mile. The Berars are only provisionally placed under British administration. The native

states that are ruled by their own princes under the supervision and control of the Indian Government have an aggregate area of 595,167 square miles, with a total population in 1891 of 66,050,479. The largest is the Mohammedan state of Hyderabad, covering 82,698 square miles, and having 11,537,040 inhabitants. Baroda has 2,415,396 inhabitants; Mysore, 4,943,604; Cashmere, 2,543,952; the states of Rajputana, 12,016,102; the Maratha states of Indore, Rewah, Gwalior, and Bhopal, and other states in Central India, 10,318,812; Travancore, in Madras, 2,557,736; Bengal states, 3,296,379; Punjab states, 4,263,280. Of the total population of India, 85,670,000 speak Hindi, 41,340,000 Bengali, 19,880,000 Telugu, 18,890,000 Marathi, 17,720,000 Punjabi, 15,230,000 Tamil, 10,620,000 Gujarati, 9,750,000 Canarese, 9,010,000 Uriya, 5,930,000 Burmese, 5,430,000 Malayulium, 3,670,000 Urdu, 2,590,000 Sindhi, 1,710,000 Santali, and smaller populations the Pahari, Santali, Assamese, Gondi, Marwadi, Pushtu, Karen, Tulu, Kol, Kachhi, gypsy, Oraon, and Kond tongues. The English-speaking population numbered 238,499 in 1891; the number of British birth was 100,551. The total number born outside of India was 661,637, of whom 478,656 came from neighboring countries, 60,519 from remote Asiatic countries, 10,095 from Continental Europe, America, and Australia, and 11,816 from Africa. The emigration of coolies in 1894 was 17,932, against 12,636 in 1893 and 13,751 in 1892; of these, 1,029 went to Mauritius, 3,429 to Natal, 3,896 to the British West Indies, 7,277 to British Guiana, 1,082 to the Fiji Islands, and 1,219 to Surinam. The average death rate in British India was 25.52 per thousand in 1893, whereas in 1880 it was only 20.98. The largest Indian cities are Calcutta, with 861,764 inhabitants: Bombay, with 821,764; Madras, with 452,518; Hyderabad, with 415,039; Lucknow, with 273,028; and Benares, with 219,467. Mandalay, Cawnpur, Bangalore, Rangoon, Lahore, Allahabad, Agra, Patna, Poonah, and Jaipur have over 150,000; 11 others have over 100,000, 37 more over 50,000, 40 between 35,000 and 50,000, and 109 smaller ones have over 20,000.

Finances.—The final accounts for 1894-'95 give as the total ordinary gross revenue Rx 95,187,429, of which the land tax produced Rx 25,408,272; the opium duty, Rx 7,323,757; the salt monopoly, Rx 8,665,749; stamps, Rx 4,625,680; excise, Rx 5,527,676; provincial taxes, Rx 3,541,154; customs, Rx 3,854,955; licenses, Rx 1,808,060; forests, Rx 1,631,548; registration, Rx 418,200; tributes, Rx 780,070; interest, Rx 815,062; posts, telegraphs, and mint, Rx 2,645,618; legislation and justice, Rx 679,360; police, Rx 406,222; marine, Rx 154,883; public instruction, Rx 388,495; public works, Rx 24,275,452; the military department, Rx 1,010,197; miscellaneous sources, Rx 1,227,019. The total expenditures amounted to Rx 94,944,319, of which the interest on the debt took Rx 5,124,017; repayments, Rx 1,786,905; cost of collection, Rx 7,935,136; posts, telegraphs, and mint, Rx 2,466,175; administration, Rx 2,086,903; legislation and justice, Rx 3,975,715; police, Rx 3,989,003; the navy, Rx 672,642; foreign affairs, Rx 897,584; public instruction, Rx 2,012,611; ecclesiastical and medical affairs, Rx 1,200,751; pensions and aid, Rx 5,098,693; printing office, etc., Rx 967,012; famine relief and insurance, Rx 610,235; public works, Rx 31,917,830; the army, Rx 24,313,958; provincial deficits, Rx 560,860.

The improvement in the revenue over the original estimate was Rx 2,823,096. The rise in the price of opium accounted for Rx 1,569,000. There was an increase of Rx 941,000 in customs, due mainly to the taxation imposed at the beginning of the year. The increase of expenditure was Rx

1,828,000, which was more than accounted for by a loss of Rx 2,121,468 in exchange. The average value of the rupee was 13¹/₄d. instead of 14d. as estimated. The total expenditure was Rx 848,000 under the estimate; instead of the estimated deficiency of Rx 301,900 there was a surplus of Rx 693,100. The total loss by exchange amounted to Rx 14,615,300, being 26 per cent. of the total net expenditure.

The budget for 1895-'96 made the total receipts Rx 96,924,300 and the total expenditure Rx 96,878,000. In the revised budget of 1895-'96 the Government had to provide for the unexpected expedition to Chitral, which cost Rx 1,600,000, besides which the addition to the famine insurance fund was Rx 530,000, the revision of the cotton duties entailed a loss of Rx 260,000, and Rx 400,000 were repaid to the provincial governments. Nevertheless the revised estimates showed a surplus of Rx 905,000 and the gross accounts one of Rx 1,604,000. Revenue showed an increase of Rx 873,000, of which Rx 532,000 was due to a further improvement in opium. The remission of the cotton duties, on the other hand, cost Rx 495,000. The saving in exchange was Rx 1,601,000, the price of the rupee, estimated at 13⁰/₄d., having been 13⁶/₈d.

In framing the budget for the year ending March 31, 1897, Sir James Westland, the Indian Minister of Finance, was able to arrive at a surplus of Rx 463,000 by reducing the famine grant from Rx 1,500,000 to Rx 1,000,000 a year and by estimating the rate of exchange at a figure which, though apparently justified by the course of the market, was much higher than he would have ventured to propose a year before. In the space of ten years new taxation to the extent of Rx 6,000,000 or Rx 7,000,000 per annum has been laid upon the Indian people, and during the same period an equal amount has been added by the expansion of pre-existing taxes. Of this, Rx 2,300,000 represents the augmentations in the salt revenue, and Rx 4,600,000 more is levied on the land, both additional burdens resting on the poorest classes. For the extensive public works contemplated by the Government a loan of Rx 4,000,000 was authorized to be raised at 3 per cent. The rise of the rupee and the improvement in the finances, changing a deficit of Rx 1,500,000 in 1894 to a surplus of Rx 1,600,000 in 1896, had a favorable influence on the credit of India in the London market; whereas a 4-per-cent. loan could only be floated below par in 1889, in 1896 the 3-per-cent. loan was covered several times over and taken at 110. The consolidated debt on March 31, 1895, amounted to Rx 218,379,566, of which Rx 104,373,740 were payable in India and Rx 114,005,826 in England. The unfunded debt was Rx 13,907,320, making the total liabilities Rx 232,286,886.

The Army.—Under the act of Parliament passed in 1893, which went into force on April 1, 1895, the Indian troops are united into one army, the separate commands of the Bombay and Madras presidencies being done away with. There are now 4 corps, each under a lieutenant general, and the whole army is directly commanded by the commander-in-chief and controlled by the Government of India. The Punjab command consists of 3 British and 15 native regiments of cavalry, 14 British and 40 native battalions of infantry, 17 British and 5 native field batteries, and 5 batteries of British and 1 of native fortress artillery, with 2 native companies of engineers, the total strength for 1896 being 20,633 British and 40,895 native troops. The Bengal command comprises 3 regiments of British and 9 of native cavalry, 17 British and 25 native infantry battalions, 18 British field and 9 British fortress batteries, 2 native mountain batteries, and 1

native engineer corps, having a total strength of 22,673 British and 28,625 native troops. The Madras command comprises 2 British and 3 native cavalry regiments, 10 British and 30 native infantry battalions, 11 British batteries of field and 4 of fortress artillery, and 9 companies of native engineers, a total strength of 13,940 British and 16,422 native troops. The Bombay command consists of 1 British regiment of cavalry and 8 native regiments, 11 British and 25 native battalions, 15 field and 9 fortress batteries, 2 native mountain batteries, and 2 corps of native engineers, the whole numbering 16,422 British and 29,175 native troops. The native contingents of Hyderabad, Central India, and Rajputana and the imperial service troops in the other native states number 29,320, making the total strength of the active forces in 1896 under the control of the Indian Government 239,758 men, comprising 73,668 British soldiers and 166,090 natives. The native reserves have been increased from 7,093 to 15,567 men in five years. The imperial service troops in April, 1896, numbered 19,013. The European volunteers numbered 30,000. The Indian army has been rearmed with Lee-Metford magazine rifles for the British infantry, Martini-Henry rifles and carbines for the native troops, and 12-pounder breechloading guns for the horse and field artillery. The system of mixed battalions and regiments that has been followed for the native troops since the mutiny is being changed, and the men are being redistributed into class regiments of Brahmins, Rajputs, Jats, and Mohammedans, Goorkhas, Sikhs, and Punjabis. The pay of the native infantry has been increased to 2 rupees.

The Navy.—The naval force of the Indian Government consists of 2 old ironclad turret ships, 2 dispatch vessels, 2 first-class torpedo gunboats, 7 first-class torpedo boats, 4 troop ships, and a submarine mining flotilla.

Commerce.—The total imports for the year ending March 31, 1895, were valued at Rx 83,110,200, against Rx 95,482,688 in 1894; total exports, Rx 117,139,850, against Rx 110,603,561. The imports of merchandise from Great Britain in 1895 amounted to Rx 51,105,757; from British possessions, Rx 6,721,417; from foreign countries, Rx 12,340,264; imports of Government stores, Rx 3,361,555; imports of precious metals, Rx 9,581,207. The exports of Indian produce to Great Britain were Rx 32,795,328; to British possessions, Rx 20,645,366; to foreign countries, Rx 50,316,744; exports of Government stores, Rx 98,779; exports of foreign merchandise, Rx 5,057,561; exports of precious metals, Rx 8,226,072. Of the merchandise imports 9.3 per cent. in value consisted of articles of food and drink, 8.3 per cent. of raw materials, and 82.4 per cent. of manufactured products; of the exports, 40.6 per cent. consisted of articles of food and drink, 46.9 per cent. of raw materials, and 12.5 per cent. of manufactured articles.

The imports of cotton cloth in 1895 were Rx 29,822,000 in value; machinery and rolling stock, Rx 4,039,000; iron and steel goods, Rx 4,021,000; sugar, Rx 2,875,000; cotton yarns, Rx 2,851,000; petroleum, Rx 2,123,000; woolen cloth, Rx 1,542,000; coal, Rx 1,474,000; apparel, etc., Rx 1,304,000; copper manufactures, Rx 1,298,000; raw silk, Rx 1,277,000; salt, Rx 842,000; spices, Rx 777,000; spirits, Rx 730,000. Among the exports rice stood for Rx 13,807,000; jute, Rx 10,576,000; opium, Rx 9,065,000; cotton, Rx 8,073,000; tea, Rx 7,556,000; linseed, Rx 6,746,000; skins, Rx 6,560,000; cotton yarns, Rx 5,672,000; indigo, Rx 4,746,000; jute manufactures, Rx 4,211,000; cereals, Rx 3,250,000; rapeseed, Rx 2,860,000; coffee, Rx 2,122,000; sesame, Rx 1,881,000; cotton goods, Rx 1,477,000; wool, Rx 1,377,000; peanuts, Rx 1,303,000.

The agitation raised in India in 1894 against the exclusion of cotton yarns and fabrics from the import tariff schedules resulted in a duty being imposed on them in December of that year, while to deprive it of any protective character and to satisfy the Lancashire manufacturers a countervailing internal tax was placed upon cotton yarns of all counts above No. 20. The British manufacturers then began to agitate for the repeal of the cotton duties. Early in 1896 the rate of duty on dyed yarns was reduced to $\frac{1}{2}$ of 1 per cent., and when this did not appease the Lancashire mill-owners the Government in February, 1896, reduced the import duty on all cotton manufactures from 5 per cent. to $3\frac{1}{2}$ per cent. and at the same time placed the same duty of $3\frac{1}{2}$ per cent. *ad valorem* upon all cotton manufactures produced in Indian mills. This affected severely not only the Indian consumers but the Indian manufacturers, who had not suffered from the duty on fine yarns, of which a comparatively small quantity is spun in India.

For the year ending March 31, 1896, the total imports of merchandise were Rx 69,316,000 in value, against Rx 70,167,000 in 1895. The imports of cotton goods fell off nearly Rx 7,000,000, the markets having been oversupplied in anticipation of the duty on cottons. Nearly all other articles, coal and woolen goods being notable exceptions, showed an increase.

The export trade in 1895 '96 showed large increases in most articles of importance, especially cotton, but there was a decline in jute, opium, oil seeds, and wool. The imports of gold were on a scale unknown since 1891. The share of the trade taken by Great Britain was not as great as in 1895 in consequence of the decline in cotton imports. Trade with Germany, Austria-Hungary, and Belgium continued to make great advances, a direct export from India having followed upon a great opening of the Indian market to their goods. The development of the trade with Japan was still more marked and rapid, the demand for Indian cotton for the rapidly expanding Japanese cotton manufacture being succeeded by a constantly increasing importation of Japanese products and manufactures. The exportation of Indian cotton yarns to Japan has decreased greatly since the Japanese have been able to spin their own yarns, but the new trade is enormously greater. The trade with China has recovered from the shock it received consequent upon the closure of the Indian mints. The high price of opium in 1896 and the increased demand in China for cotton yarns from Bombay made the total value of the trade much greater than in 1894. The trade with Asiatic Russia is expanding rapidly in consequence of the development of the Indian market for Russian petroleum, while the trade with the United States is falling off proportionately; the imports of Russian petroleum are now 85 per cent. as great as those of American.

Navigation.—The number of vessels entered at the ports during the year 1894-'95 was 5,309, of 4,156,386 tons, against 5,030, of 3,797,911 tons, in 1893-'94; the number cleared was 5,268, of 4,099,436 tons, against 4,965, of 3,867,975 tons, in the preceding year. The total arrivals comprised 2,209 British vessels, of 3,406,546 tons; 997 British Indian, of 145,711 tons; 618 foreign, of 525,233 tons; and 1,485 native, of 78,896 tons. The departures comprised 2,208 British, of 3,378,303 tons; 996 British Indian, of 142,481 tons; 564 foreign, of 500,760 tons; and 1,500 native, of 77,892 tons. The number arriving by way of the Suez Canal was 811, of 1,834,009 tons, against 712, of 1,575,836 tons, in 1894; the number cleared for the Suez Canal route was 903, of 1,980,900 tons, against 928, of 1,987,474 tons, in 1894.

Communications.—The railroads in operation on March 31, 1895, had a total length of 18,855 miles, of which 8,767 miles were state lines worked by companies, 5,377 miles state lines worked by the state, 2,588 miles lines worked by guaranteed companies, 407 miles lines worked by assisted companies, 672 miles lines owned by native states and worked by companies, 146 miles lines owned by native states and worked by the state railroad agency, 839 miles lines owned and worked by the native states, and 59 miles foreign lines. The capital cost of the state railways was Rx 155,027,644; of state lines leased to companies, Rx 31,185,523; of guaranteed railways, Rx 49,738,028; of subsidized lines, Rx 208,044; of assisted railways, Rx 6,088,092; of lines belonging to native states, Rx 10,537,806; of foreign railways, Rx 1,688,136; of new surveys, Rx 471,317; of coal mines, Rx 308,449; total, Rx 255,253,039. The gross earnings of the railroads in 1894 were Rx 25,508,856, against Rx 24,087,547 in 1893. The working expenses were Rx 11,983,920, or 46.98 per cent. of the receipts, in 1894, compared with Rx 11,354,806, or 47.14 per cent. The net earnings were Rx 13,524,936 in 1894, giving a mean profit of 5.69 per cent. on capital, against Rx 12,732,741, giving an average return of 5.46 per cent. in 1893. For 1895 the gross earnings were about Rx 26,000,000 and the net revenue Rx 14,000,000, giving a return of 5.78 per cent. on the capital invested. The length of railroads under construction and authorized before March 31, 1896, was 4,573 miles, requiring an expenditure of Rx 35,000,000, nearly one third of which was to be expended by the state and by private companies during the ensuing year. During 1895-'96 there were 822 miles of new railroads built. The total length of railroads either built or sanctioned was 26,466 miles on March 31, 1896; the length open to traffic, 19,677 miles.

During 1894 the number of letters, postal cards, and money orders that passed through the post office of British India was 335,617,159; of newspapers, 26,363,793; of parcels, 2,339,416; of packets, 14,702,537. The receipts were Rx 1,557,597; expenses, Rx 1,558,281.

The Government telegraph lines had on March 31, 1895, a length of 44,648 miles, with 138,256 miles of wire. The number of paid dispatches forwarded during the year was 4,391,226; receipts, Rx 978,699; expenses, Rx 807,881.

Currency.—The fall in the price of silver in the course of twenty years has added greatly to the burden of taxation on the people of India and to the difficulties of the financial administration of the Indian Government, because fixed charges amounting to £16,000,000 have to be paid in England annually, consisting of interest on loans, salaries of the higher officials, pensions, etc. When 10 rupees uniformly exchanged for a pound sterling the salaries of the British civil and military officers and their pensions were reckoned indifferently in Indian or British currency. As soon as a discrepancy in the former parity of silver and gold began to appear the Government decreed that the salaries and pensions of the covenanted civilians and army officers should be paid in gold at the old rate of £1 for Rx 1, in order that they should be enabled to maintain and educate their families in England on the same scale as formerly and lay by as much money. With the rupee worth only 1s. 4d. instead of 2s. the Government has to raise Rx 24,000,000 to meet the fixed charges in England where formerly Rx 16,000,000 was enough. The difference is called the loss by exchange. In 1892, when the exchange value of the rupee fell to 1s. 1d., the English Government decided to attempt to establish the gold standard in India as a means of relieving the

creasing embarrassment of the Government finances and the inconveniences and impediments caused to trade by the fluctuations in the gold value of silver. In accordance with the recommendations of a committee over which the English Lord Chancellor presided the Governor General carried through the Legislative Council on June 26, 1893, a bill providing for the closure of the Indian mints to the coining of silver for the public, and establishing 1s. 4d. for the rupee or 15 rupees to the sovereign as the rate at which gold coin or bullion would be received at the mints and English sovereigns of full weight at the treasuries. Coinage on Government account was still continued. Silver has been the legal standard since 1835, and large amounts were coined annually before the closure of the mints. Silver also passes current by weight, and since 1893 the native princes have coined silver rupees to such an extent that the Indian Government concluded to take measures to arrest the importation of silver bullion by the imposition of an import duty. Gold is coined in small quantities by the Indian mints, but it is not current as money and is not legal tender. The Calcutta and Bombay mints issued Rx 13,163,474 rupees of silver coin, in 1892 the coinage was Rx 5,553,974, and in 1893 it was Rx 12,691,526; in 1894 it was reduced to Rx 4,812,500, and in 1895 to Rx 94,595. A Government paper currency has been issued for limited districts, within which it is legal tender, since 1861; the amount of these notes in circulation on March 31, 1895, was Rx 30,700,010. The value of the rupee is not determined by the market price of silver since the closure of the mints and the placing of an import duty on silver, but the changes in the exchange rates for the rupee have had an important influence on the silver market, if indeed this has not been the dominant factor. A wide, and apparently widening, distance is established between the bullion and the exchange values of the rupee, and their fluctuations have not coincided. During 1896 the exchange rates for the rupee remained steady, with an upward tendency. While the Indian mints were opened and the United States Treasury was a purchaser of 34,000,000 ounces of silver, India and the United States were the only large consumers of silver in the world, but when both these outlets were closed India remained a large wholesale market for silver, the only one still open. The imports of silver in 1896 were rather more than half as large as they were before the closure of the mints. Before the closure most of the silver imported went into the mints, but it was only for the purpose of obtaining material of ascertained purity for the manufacture of ornaments, into which a large proportion of the rupees were commonly converted as soon as they were coined. The manufacture of ornaments goes on unabated, but, rupees being now too dear, imported bars and coin are used for the purpose. This demand for silver in India for ornaments takes about one sixth of the world's annual production and has hitherto been the only constant and uniform demand since demonetization. Every material rise in the sterling value of the rupee is followed by an active demand for and fresh importations of silver bars, and thus produces an approximately equivalent rise in the price of silver. In February, 1896, A. J. Balfour announced that the British Government would be willing to consider in conjunction with the Indian Government the reopening of the mints of India if such a measure could be made part of a satisfactory scheme of currency reform. In December, 1896, the Legislative Council voted to add 2 crores of rupees to the paper-currency reserve, making it 10 instead of 8 crores, and thus releasing Rx 2,000,000 of coin in order to relieve the existing monetary stringency.

Boundary Delimitations.—The demarcation of the boundary between Afghanistan and India, as provided by the Durand treaty of 1893, was practically brought to a conclusion by the operations of Col. T. H. Holdich and Capt. A. H. MacMahon, who traced the line between Persia and Beluchistan northward from Kuhak and the Afghan line westward to the point where Afghanistan, Persia, and Beluchistan meet. By a later agreement, concluded with Salar Gholam Haidar Khan in December, 1895, the territory in the basin of the Chitral river, called Bashgal or Arnawai, was withdrawn from the British sphere and added to the possessions of the Ameer. During 1895-96 Capt. MacMahon and an Afghan commissioner traced the line from the Khwaja Amran range past Shorawak and across the desert to the Helmund valley and thence southward to Persian Seistan. There remained about 100 miles of unfixed boundary between Asmar and Lundi Kotal in the Khyber. The Ameer in his agreement promised not to interfere in Swat, Bajaur, or Chitral and to relinquish his claim to the Waziri country, except Birmal, and to Chageh, while he was allowed to retain Asmar and the valley above it. In the spring of 1896 a body of Afghan militia occupied the Mattai valley in Bajaur, the clans of which country had been called upon to pay taxes to the Ameer. To insure the obedience of the conquered state of Kafiristan the Ameer made a durable road from Jellalabad to Asmar.

Insurrection of the Moplahs.—Encouraged, perhaps, by the insurrection of the natives against the Portuguese authorities in Goa, which began with a mutiny on Sept. 14, 1895, of the battalion ordered to Mozambique, the Moplahs of the British coast districts of southwestern India declared a *jehad* against the Hindus, and committed many fanatical outrages before they were reduced to subjection by the Indian troops. The Moplahs are a sect originally planted in Malabar by Arabian settlers who converted low-caste Hindus to Islam, and they now number about 1,000,000 of the most ardent and fanatical Mussulmans in India, many of whom are dedicated to God by their parents before birth, and hence regard the destruction or conversion of the infidel as their chief duty. On March 1, 1896, an English regiment attacked a large body of the fanatics and killed over 100. Other bands were pursued by the soldiery and the police, and were not reduced until nearly all were slain. The soldiers mowed them down from a distance, beyond the range of their old muskets. All offers of mercy they scorned, and they deliberately presented themselves as targets for the British bullets, believing that to die thus for the faith was to render secure their admission to paradise. On one occasion 92 of them who had taken up a position in a Hindu temple, armed with matchlocks and swords, died fighting to the last man, declaring, when implored to lay down their arms, that death was the thing they most wished for.

Famine and Plague.—Failure of the winter rains in northern India caused early in 1896 great distress among the population of the Northwest Provinces and Oudh, the Central Provinces, and Rajputana. The provincial governments gave employment on relief works to many thousands, and the commencement of railroads that were contemplated was hastened in order to provide work. In the summer there was complete drought in northern and central India. All crops also failed, and the prices of food rose to double the normal figures. Grain riots occurred in several places. For a considerable time the numbers employed on relief works exceeded 300,000. Wheat was shipped from California to Calcutta in the autumn. The wheat-eating population of the Northwest Provinces and the Punjab

suffered the most. The exports of wheat from India, which have decreased since 1887, when over 22,000,000 hundredweight was exported, except in the exceptional year of 1892, when they were 30,000,000 hundredweight, have fallen below 10,000,000 hundredweight a year in the past three years. From the beginning of 1896 very little was shipped abroad. As the drought continued, the autumn crops were seriously damaged in a large part of the Northwestern Provinces, in most of Oudh, in southern and central Punjab, in several districts in the Central Provinces, in parts of Bombay, and in Upper Burmah. The parts of India affected corresponded closely with the famine area in 1877, but within these districts the irrigated area has since then been increased by many million acres, and the railroads open have two and a half times the length, and carry freight much cheaper. The Indian people feel sore against the British for having diverted the famine insurance fund of Rx 1,500,000 a year to military expenses. Though agricultural operations have been extended, and the population has increased by 50,000,000, British administration has impoverished India by destroying the old industries and draining a large share of the profits of commerce and of the taxes out of the country. The average annual earnings in India are estimated at 28 rupees for each individual, a twentieth as much as in England. The salt tax in many districts has been increased five-fold by the British, and the mass of people do not obtain half enough of this necessary article, and great numbers get but one scanty meal a day. Sir C. A. Elliott has estimated the number of half-starved people at 70,000,000, and Sir W. W. Hunter at 40,000,000. The deterioration of the physique of the population is a matter of common observation among officials, and is telling on the productive capacity of the laborers, and also on the recruiting of the Indian army, compelling the Government to obtain her soldiers among the Goorkhas of Nepal and the Beluchis and other better-fed peoples of the native states. While there were 13 famines and an estimated loss of 5,000,000 lives from 1802 to 1854, there were 16 famines with a loss of over 12,000,000 of lives from 1860 to 1879. The Government in its scheme of famine insurance, which has been several times interrupted for the sake of pushing the frontier defenses, has advanced the railroads for the distribution of food in preference to irrigation canals and reservoirs for extending its production, on the presumption that the latter works tend to encourage a local increase of population up to the limits of the enlarged production. The larger protective canals irrigate at present an area of 8,500,000 acres, and petty works constructed out of local revenues a further area of 5,000,000 acres, producing together crops valued at Rx 37,000,000, and earning from 4 to 7 per cent. on the capital invested by the state, except in Bengal and Bombay, where the canals do not pay. The whole expenditure on the main systems has not exceeded £30,000,000, and on the minor works Rx 3,000,000. When the distress first showed itself some of the local authorities devoted their relief funds to the digging of wells, and these immediately helped the situation of the people, enabling them to sow rabi and other crops. Actual famine began to be felt in November, when the autumn crops failed to ripen and winter crops could not be sown except where there were wells. Throughout the whole length and breadth of India the rainfall was deficient, except in a few localities. In the Allahabad, Lucknow, Faizabad, and Agra divisions of the Northwest Provinces there was a total failure of crops over an area containing 13,000,000 inhabitants, and a severe failure over an area containing 26,500,000. In Oudh and in the neighborhood of Benares wells were sunk to relieve the distress, which had

been felt from the beginning of the year. In the plateau districts of the Central Provinces, in the Patna division and other parts of Bengal, in the central part and the rice-growing coast districts of Bombay, through Berar, in the Circars and Deccan districts of Madras, in Upper Burmah, in a large part of the Punjab and several districts of Rajputana, and in Hyderabad, Bhurtpur, Dholpur, Jaisalmer, Bikanir, Tonk, Gwalior, Baghelkhand, and Bundelkhand among the native states, the people were immediately affected by the failure of their crops; but owing to the improvements in railroad communication actual starvation was averted in the stricken districts by spreading the distress over the whole of India. When grain merchants advanced prices to four times the customary rates, serious riots occurred at Sholapur, Kurnai, and other places, and the police were obliged to fire upon the mobs that broke open and looted shops and granaries. The population suffering from total drought was 36,000,000, while 18,000,000 were threatened with famine unless rain came in time to sow the spring crop, not counting 18,000,000 more in the native states stricken or threatened with famine. In December a good rainfall saved the crops in Madras and Bombay, and improved the prospects in other provinces, but it was generally very light. The storm visited the Deccan, passed through the Central Provinces, was felt in the Northwestern Provinces, and reached the Patna division of Bengal. An offer of wheat to be paid for by public subscriptions in Russia was not favorably received by the Indian Government. In London a generous fund was raised by the Lord Mayor. The Hindu landowners and merchants combined intelligently the native religious duty of almsgiving on a great scale with furnishing work for the idle villagers and importations of grain to be sold at low prices. Relief so directed benefited the worthy and industrious, and reached the zenanas, whose inmates in former famines starved to death rather than demean themselves by coming forth to seek public charity. The famine was complicated in its incipient stage by the plague, in addition to the usual epidemics of fever and typhus that follow in its train. In September there was an outbreak of bubonic plague in Bombay. The mortality increased till the end of the year, when 50 deaths occurred daily. During December 250,000 people deserted the city. There were 2,437 cases of plague and 1,735 deaths in Bombay up to Dec. 31. The Europeans and the well-fed classes generally escaped infection. Out of 10 Europeans attacked 1 died. The disease was not as malignant as in Canton and Hong-Kong, and far less so than the epidemics that formerly depopulated European cities at intervals of about three hundred years. The symptoms of the type that appeared in Bombay and spread to neighboring towns are a slight pain in the groins on the first day, on the second an enlargement of the glands, the fever rising to 105°, and on the third day, or on the fourth at the latest, death. It most commonly attacks persons between the ages of five and thirty.

INDIANA, a Western State, admitted to the Union Dec. 11, 1816; area, 36,350 square miles. The population, according to each decennial census since admission, was 147,178 in 1820; 343,031 in 1830; 685,866 in 1840; 988,416 in 1850; 1,350,428 in 1860; 1,680,637 in 1870; 1,978,301 in 1880; and 2,192,404 in 1890. Capital, Indianapolis.

Government.—The following were the State officers during the year: Governor, Claude Matthews, Democrat; Lieutenant Governor, Mortimer Nye, Democrat; Secretary of State, William D. Owen, Republican; Auditor, Amerieus C. Dailey, Republican; Treasurer, F. J. Scholz, Republican; Superintendent of Education, David M. Greeting,

Republican; Attorney-General, William A. Ketchum, Republican; Statistician, Simeon J. Thompson, Republican; Geologist, W. S. Blatchley, Republican; Adjutant General, Irvin Robbins, Democrat; Chief Judge of the Appellate Court, George E. Ross; Associate Judges, Theodore P. Davis, Orlando J. Lotz, George L. Reinhard, and Frank E. Gavin, all Democrats; Chief Justice of the Supreme Court, Leonard J. Hackney, Democrat; Associate Justices, James H. Jordan and L. J. Monks, Republicans, and Timothy E. Howard and James McCabe, Democrats.

Finances.—The balance in the treasury Nov. 1, 1895, was \$573,726.42; the receipts from all sources during the year were \$6,315,808.58; the disbursements were \$6,363,112.31, leaving a balance Oct. 31, 1896, of more than half a million. The disbursements from the general fund were \$2,087,160.09; from the benevolent-institutions fund, \$292,109.78; Soldiers' and Sailors' monument fund, \$26,000; educational institutions fund, \$105,197.42; school-revenue fund, \$2,395,149.30; State University endowment, \$89,235, and interest on same, \$24,577.23; college fund, \$12,234.41; interest on same, \$9,854.23. The expenses of the Governor's office were \$12,655.07; of the Secretary of State's office, \$11,607.46; Auditor's, \$15,109.97; Treasurer's, \$8,460; Attorney-Generals', \$11,693.25; Superintendent of Instruction's, \$9,224.73; State Library, \$9,391.89; department of geology, \$11,339.89; Supreme Court, \$28,916.25; Appellate Court, \$21,476.74; State Judiciary, \$205,756.07; custodian, \$18,933.51. The public printing cost \$52,931.38; the State militia, \$44,213.55. The expenses of the Chickamauga commission were \$850.12, and of the same for infantry and cavalry \$20,747.69, and for artillery \$3,058.14. The expense of election commissioners was \$13,088.32. The Bureau of Statistics cost the State \$8,259.90; agricultural and horticultural societies, \$11,000; and the Board of Charities, \$6,000.

The foreign indebtedness of the State in 1894 was \$7,436,615.12, with annual interest of \$233,525; it is now \$6,436,515.12, the annual interest of which is \$200,005. The domestic debt is represented by \$340,000 of Purdue University 5-per-cent. bonds, and \$143,000 of Indiana University 5-per-cent. bonds, the interest of which is \$24,200 annually.

The aggregate valuations amount to \$1,286,050,531. The present tax levy is 9 cents on the \$100 for general fund of the State treasury and 5 cents on the \$100 for the benevolent-institution fund. The railroad assessments for 1896 were about \$60,000 more than those for 1895, amounting to \$156,259,260. The mileage was 6,279.88, an increase of about 12 miles.

Insurance.—The report of the insurance department of the Auditor's office shows that there are authorized to do business in the State 50 life, accident, and surety companies, 103 fire and plate-glass companies, and 88 assessment life and accident companies, organized under the laws of other States or nations. There are also operating in the State 40 assessment life and accident companies, 2 mutual fire companies, and 1 stock fire insurance company. These companies have paid into the State treasury as taxes and fees \$156,220.86.

Education.—The school enumeration for the year amounted to 734,474, a decrease from that of 1895, which was 799,077. The decrease is largely in the cities, Indianapolis showing 8,373 fewer school children than in 1895. Terre Haute 4,469 fewer, Fort Wayne 2,165, New Albany 1,819, Lafayette 1,628, La Porte 1,523, and Logansport 1,287. This showing is due to the operation of a law passed by the last Legislature designed to prevent padding of the returns in order to increase the proportion of moneys to be drawn from the

State funds. The amount apportioned in January was \$1,110,110.28, and in June \$1,086,000.80. The State Normal School received \$15,000 at each apportionment.

The State Normal School, at Terre Haute, opened the year with an attendance of 500, the largest number ever registered for the winter term with one exception, and this notwithstanding the fact that the standard of admission has been raised. A class of 94 was graduated in June.

The building of the Ohio Valley Normal School, at Corydon, was dedicated April 9. It was built by popular subscription at a cost of \$5,000. The school began with 125 pupils.

In 1895 the Grand Army of the Republic of Indiana appointed a committee to confer with the State Board of Education concerning the United States histories in use in the public schools. The part devoted to the civil war they regarded as unfair to the national cause and army, untrue, and misleading. As the term of the contract had nearly expired, the time was favorable for securing changes in the text-books or replacing them by others. The committee presented charges against the books to the State board and the publishers replied. The board then appointed 3 of its members to consider the revision, and they recommended 14 very essential changes in the account of the war. The publishers consented to most of them, but the board insisted on complete revision of the objectionable paragraphs.

At the seventy-sixth annual commencement of the State University, at Bloomington, in June, a class of 94 was graduated. At its fifty-seventh commencement De Pauw University sent out a class of about 56. The graduating class at Purdue University numbered 82, degrees having been conferred earlier in the year on 26 graduates in pharmacy and 11 on pharmaceutical chemists. More than 40 were graduated at Earlham College, and 22 at Hanover. Wabash College graduated 24.

Indianapolis has now a university which has been formed by the union of institutions already existing—Butler College and the schools of law, medicine, and dentistry. The first class graduated under the auspices of the university was that of the law school of this year, consisting of 56 young men and 2 young ladies.

State Institutions.—From the figures furnished to the State Board of Charities, the secretary compiled the following statement, published in March:

"In the last fiscal year the cost to the State of caring for the insane in the hospitals was \$609,889.66. In addition to this the counties expended for clothing, transportation, inquests, and other items of expense connected with declaring persons insane and sending them to the hospitals, \$76,364.66, making a total for insane in the hospitals of \$686,254.32. The cost of maintaining the other benevolent institutions of the State during the same period amounted to \$307,035.63. To this add \$25,000 (estimated), expended by counties in providing clothing, transportation, and other expenses of sending persons to the institutions, and we have a total of \$332,035.63. The cost of conducting the reform schools and prisons, with the added cost of prosecution of criminals, support of prisoners in the county jails, maintenance of courts, etc., amounted to \$1,075,481.13.

"The cost of relief given to the poor by counties for maintaining poor asylums and orphan asylums, and \$630,168.79 in the form of relief given by township trustees and pauper medical attendance, make a total of \$1,020,535.99.

"The total number of patients in the four insane hospitals of the State on Jan. 31, 1896, was 2,861. The number of children in the Soldiers' and Sailors'

Orphans' Home was 632; in the Institution for the Deaf, 304; in the Institute for the Blind, 126; in the School for Feeble-Minded, 491; total in all the State charitable institutions, 4,414. On the same day the number of convicts in the Northern Prison was 847; in the Southern Prison, 841; in the Woman's Prison, 37. The number of inmates in the Reform School for Girls was 181, and in the Reform School for Boys 517. Total in all the State correctional institutions, 2,423. The whole number of persons in the State charitable and correctional institutions on Jan. 31, therefore, was 6,837.

"The cost of a day's board for each patient in the insane hospitals during the quarter ending Jan. 31, 1896, was 12.4 cents. At the Soldiers' and Sailors' Orphans' Home each day's board cost 14.5 cents; the Institution for the Deaf, 11.7 cents; the Institute for the Blind, 11.3 cents; the School for Feeble-Minded, 11.9 cents; the State Prison, North, 8.7 cents; the State Prison, South, 9.5 cents; the Reform School for Girls and Woman's Prison, 15.9 cents; the Reform School for Boys, 5.5 cents."

On Aug. 1 3,174 patients were being cared for at the 4 State institutions for the insane, an increase of 149 over last year. In the correctional institutions 2,519 were imprisoned.

The fifteenth annual report of the trustees of the Institute for the Blind, filed in November, shows that the management has kept the expenses within the appropriation of \$27,000 for the maintenance and has a balance of \$135.25.

The State Soldiers' Home, 3½ miles from Lafayette, was dedicated July 4. The Legislature of 1895 appropriated \$75,000 for the buildings and \$126 a year for the maintenance of each inmate. The Government gives \$100 a year for each inmate in addition. The land for the home had already been presented to the Grand Army of the Republic of the State by Tippecanoe County and citizens of Lafayette. Tippecanoe County also gave \$5,632.50 in cash. More than half of the inmates will be cared for in cottages to be erected by Grand Army posts, counties, and citizens.

Only the main buildings were provided for by the State appropriation. In March there were 105 regular inmates and 7 irregular, with 25 more applications approved.

Banks.—The changes made at the last session of the Legislature in the State banking law have made possible more effective supervision. The fixed fees for examinations have proved more satisfactory to the banks than the old method. There are 97 banks of discount and deposit, 5 savings banks, and 4 trust companies under the supervision of the Auditor's department. A comparison of the business of the State banks for 1896 with that for 1895 shows a decrease of nearly \$1,000,000, the resources amounting to \$14,711,472.25. The resources of the 5 savings banks amount to \$4,534,196.13.

A decision handed down by the Supreme Court in May upholds the State law that makes it a criminal offense for an officer of a bank to receive deposits when he knows the bank is insolvent, and makes the failure of the bank within thirty days after the receipt of such deposit *prima facie* evidence of such knowledge and intent to defraud.

Products.—Within the past three years the production of crude petroleum has grown to large proportions. The area in which the oil is found has steadily increased, and comprises parts of Adams, Wells, Huntington, Grant, Blackford, Jay, Randolph, Delaware, Pulaski, and Allen Counties. In addition a few producing wells are in operation in Terre Haute. The production of oil in the State has increased from 33,375 barrels, of 42 gallons, in 1889 to 3,688,666 in 1894, and 4,380,000 in 1895.

The average initial or rock pressure of natural

gas decreased from 325 pounds in 1889 to 230 pounds in 1895.

From the coal fields 4,202,084 tons were mined in 1895.

Figures given in a crop bulletin of the Board of Statistics were compiled from reports received from 574 thrashers, representing every county in the State. The acreage for 1896 is 2,862,286, an increase over last year of 144,047 acres. The total number of bushels is 24,574,853. This takes no account of abandoned or uncut acreage.

Another bulletin gives statistics of 4 industries—namely, iron, glass, farm, and flour machinery. There are in 47 cities and towns 166 iron plants, devoted to 46 different branches of production. The number of people employed in these factories is 16,073, of whom 13,951 are men. In the glass industry 9,728 persons find employment, of whom 7,229 are men, 2,056 are boys, and 443 are girls. In 21 cities there are 36 establishments for the manufacture of farm implements and machinery. In these factories 3,622 people are employed, of whom 3,228 are men. There are 4 plants in Indiana devoted to flour-mill machinery, in which are employed 526 people, of whom 470 are men.

There are bicycle factories in 9 cities of the State, Indianapolis having 9. The entire investment is placed at \$640,107, with the cost of material for the year at \$1,072,275. The gross value of product is \$3,085,377, with wages paid amounting to \$636,094.

For the manufacture of furniture there are 116 factories. The value of grounds, buildings, and machinery is \$2,734,985; the value of material used the past year was \$3,243,333; and the gross value of the manufactured product was \$6,600,818.

The bureau has reports from 14 woolen mills, representing 13 localities. There is invested in buildings, grounds, and machinery, \$935,182; cost of material used past year, \$891,197; gross value of manufactured product, \$1,415,298; amount paid in wages, \$298,546.

Among the industries are 6 cotton mills located in 5 cities, in which are manufactured yarn, warp, sheeting, and batting. There is invested in these 6 plants \$1,155,000. The cost of material used the past year was \$936,910; the gross value of the manufactured goods was \$1,392,980; the amount paid in wages was \$328,440.

The State Boundary.—The Indiana-Kentucky Boundary Commission met at Evansville Feb. 3, and decided on the dividing line between the two States at Green River island. By a decision of the United States Supreme Court the island was given to Kentucky.

Miners' Interests.—A strike began May 1 among the coal miners in parts of the State; they demanded 60 cents a ton, while the operators were willing to give only 55 cents. Nov. 23, when the strike was still unsettled, but many miners had gone back to work, the president of the operators' association furnished a statement showing that miners at mines which have 580,000 tons of the annual output of 1,700,000 tons in the State were at work at 60 cents. Working at less than 60 cents were the men at mines with 410,000 tons output, leaving mines representing 710,000 tons idle, the operators insisting on the 55-cent price.

A case was brought before the Supreme Court, involving the so-called miners' screen law. The decision given in February does not touch the constitutionality of the law, but is against the miners on account of ambiguous wording of the statute.

The Nicholson Law.—Statistics showing the results of the operation of this law for controlling the liquor trade (see "Annual Cyclopædia" for 1895, page 366) for the first nine months after it went into effect were given out in April. From reports

received from 63 of the 92 counties, it appears that in June, 1895, there were 2,222 saloons, and in April, 1896, there were 1,933. This did not include what was done at the March term of the commissioners' court. Out of the 684 townships reported, 267 now have saloons and 417 have none. Many places report fewer cases in police court; in some of them the number is reduced one half, mainly due to the removal of games from the saloons.

The Roby Races.—To avoid liability under the law passed by the Legislature to break up the racing at Roby, three tracks were used in the vicinity, so that after fifteen days at one, the racing could be transferred to the second, and after fifteen days there to the third for the same length of time. The thirty days having then elapsed since the first had been used, it could be used again, and so on through the season. The Governor, in order to stop the continuous racing, had a suit filed for an injunction, alleging that the associations were practically one and the same. The case was decided against the Governor in the lower court, but the Supreme Court declared the method of continuous racing by means of the three tracks to be as unlawful as the use of one alone would be.

The Apportionment Law.—In February the Supreme Court declared the legislative apportionment acts of 1893 and 1895 to be unconstitutional. This made it necessary to fall back on the apportionment of 1885, unless a special session of the Legislature should be called and a new act passed; the acts of 1879 and 1891 had been previously pronounced unconstitutional. As the law of 1885 was not only rendered unfair by the changes of population since its enactment, but was deemed by the Republicans grossly unfair to them at the time, the State committee presented a memorial to the Governor, Feb. 24, asking him to call an extra session, and setting forth that the act of 1885 was open to the same objections that had caused the other acts to be declared invalid.

The Governor made a formal reply, refusing to call a special session, on the grounds that it would cause unnecessary expense; that it did not seem to be demanded by the people; that he could not assume the law of 1885 to be invalid until it should have been so declared by the Supreme Court; and that there was no certainty that the Legislature, if called in extra session, would do any better than it had done in 1895.

After receiving the Governor's answer, the Republican committee filed a complaint and brought suit to enjoin officers from conducting an election under the law of 1885, on the ground that it was unconstitutional according to the decisions against the other laws. When the case reached the Supreme Court in May, the decision of the lower court which had granted the injunction was reversed, and the act of 1885 was declared in force.

Political.—The Prohibitionists met in State convention Feb. 27, with 400 to 500 delegates. The National or "broad-gauge" wing of the party was in control. The platform demanded prohibition of the manufacture and sale of intoxicants as a beverage, and Government and State control, without profit, for other purposes; declared in favor of woman suffrage, and free coinage of silver and gold in the ratio of 16 to 1 without reference to the action of other nations; favored Government ownership of natural monopolies, restrictive immigration laws, Sunday observance laws, arbitration of domestic and foreign difficulties, election of President, Vice-President, and Senators by direct vote of the people, and liberal pensions; and denounced "the policy of the Government in issuing bonds in time of peace for the purpose of maintaining the gold standard whereby our national indebted-

edness is greatly increased at the dictation of Wall Street and the money lords of Europe."

A resolution was adopted declaring that the minor parties should have representation on political boards.

Following is the ticket as finally arranged: For Governor, James G. Kingsbury; Lieutenant Governor, Sampson J. North; Secretary of State, James E. Ellsworth; Auditor, Hans C. Hansen; Treasurer, Sylvester Johnson; Attorney-General, Helen M. Gougar; Reporter of the Supreme Court, Vincent P. Kirk; Superintendent of Instruction, Cyrus Hodgson; Statistician, John E. Woodard.

There was afterward a division in the party, and the "Narrow-gauge" Prohibitionists nominated Leonard M. Christ for Governor, William Edgerton for Lieutenant Governor, H. C. Pitts for Secretary, S. M. Thompson for Auditor, Preston Ryder for Treasurer, C. S. Dobbins for Attorney-General, W. F. Lenfesty for Reporter of the Supreme Court, Elwood Haines for Statistician, and C. M. Lemon for Superintendent of Instruction.

The Republican State Convention met at Indianapolis May 7. Interest centered in the question whether the delegates to the national convention would be instructed. Many of the leaders who were in favor of instructing for Mr. McKinley declared that the delegation would support Harrison if he at any time should appear to be a factor in the convention, and that instructions for Mr. McKinley would not be binding against Mr. Harrison. The instruction to vote for Mr. McKinley was incorporated in the resolutions, which were voted upon as a whole and adopted. They commended the administration of Mr. Harrison, made a strong declaration in favor of protection and reciprocity, declared in favor of restricted immigration, condemned the pension policy of the Administration, and said: "We favor the use of silver as currency, but to the extent only and under such regulations that its parity with gold can be maintained, and in consequence are opposed to the free, unlimited, and independent coinage of silver at a ratio of 16 to 1."

Following is the resolution instructing:

"Believing as we do in a protective tariff, the leading issue before the people, we favor the nomination as President of the United States a man who perfectly represents a protective tariff and the cardinal principles of the Republican party; a man who has devoted his life to the defense of his country in war and in peace; one who at seventeen years of age fought with Hayes and Crook and Sheridan at Antietam and in the Shenandoah in defense of our flag against foes within, and for fourteen years in Congress contended against our country's foes from without, beating back British free trade and aggression, which finally, under the present Democratic administration, obtained possession of our markets and had almost destroyed our industries; a man who with the resistless shibboleth 'Protection and Prosperity' has challenged the attention of the commercial world and won the support of every patriotic workingman of our country; whose life and work, open as a book, are in themselves a platform, whose very name is magic, that loyal American citizen, soldier, statesman, and Christian gentleman, William McKinley, of Ohio; and the delegates to the Republican National Convention selected by this body are directed to cast their vote for William McKinley, as frequently and continuously as there is any hope of his nomination."

The State ticket nominated was: For Governor, James A. Mount; Lieutenant Governor, W. S. Haggard; Secretary of State, W. D. Owen; Auditor, A. C. Dailey; Treasurer, F. J. Scholz; Attorney-General, W. A. Ketcham; Reporter of the Supreme

Court, Charles F. Roney; Superintendent of Public Instruction, D. M. Geeting; Statistician, S. J. Thompson; Judges of the Appellate Court, Woodfin D. Robinson, William J. Henley, James B. Black, D. W. Comstock, and U. Z. Wiley.

The Democrats abandoned the old custom of holding separate conventions for choosing delegates to the national convention and for nominating State officers, the free-coinage men desiring to bring out a full vote at the primaries. The convention was held at Indianapolis June 24. The contests in the districts had resulted in a large majority in favor of free coinage, but as the minority made determined opposition, the convention was most exciting. The platform recommended Gov. Matthews as the Democratic candidate for the presidency, and instructed the delegates to vote for him. The two Senators were commended; it was declared that belligerent rights should be accorded to Cuba; that Senators should be elected by direct vote of the people; subsidies and land grants to corporations were opposed; pensions favored; a policy favorable to organized labor and an act providing for jury trials in the Federal courts in cases of contempt recommended; and protest entered against "the increase of the public debt by the issue of interest-bearing bonds or otherwise in time of peace."

On the tariff and the currency the following declarations were made:

"We reaffirm our adherence to and faith in the Democratic doctrine of bimetalism, and therefore we demand the immediate restoration of bimetalism by the free and unrestricted coinage of both silver and gold as primary money at the ratio of 16 to 1, without waiting the co-operation of Great Britain or any other foreign power, all such coinage to be full legal tender in the payment of all debts, public and private.

"We believe the existing tariff laws will be fully equal to all demands for needed revenue for the expenses of government economically administered, under the conditions which will arise from the restoration of bimetalism."

The ticket follows: For Governor, Benjamin F. Shively; Lieutenant Governor, John C. Lawler; Secretary of State, Samuel M. Ralston; Auditor, Joseph T. Fanning; Treasurer, Morgan Chandler; Attorney-General, John G. McNutt; Reporter of Supreme Court, Henry Warrum; Superintendent of Instruction, William B. Sinclair; Statistician, Omer H. Downey; Judges of the Appellate Court, Edwin Taylor, Frank E. Gavin, Theodore P. Davis, Orlando J. Lotz, and George E. Ross.

The candidate for Governor, Mr. Shively, received 1,643 votes against 104 in favor of G. W. Cooper, the nominee of the gold Democrats.

The People's party met in convention at Indianapolis July 28, with about 350 delegates in attendance. The platform declared for free coinage.

Measures to effect fusion with the Democratic party were defeated, but the Democratic candidates for the offices of Auditor, Attorney-General, and Reporter were afterward indorsed by the majority of the party.

Following is the Populist ticket: For Governor, Thomas Wadsworth; Lieutenant Governor, Adam P. Hanna; Secretary of State, Silas M. Holcombe; Auditor, Nathan M. Jennings; Treasurer, F. J. S. Robinson; Attorney-General, D. H. Fernandes; Reporter of the Supreme Court, Thomas W. Force; Statistician, James S. McKibben; Judges of the Appellate Court, Adam Stockinger and John R. Thornburger.

The Socialist-Labor party nominated, Aug. 11, Philip H. Moore for Governor, Harry C. Shoop for Lieutenant Governor, Fred. Adams for Secretary of

State, Frank Helbieh for Treasurer, and Joseph Brunner for Statistician.

The gold-standard Democrats nominated an electoral ticket, but no State ticket. The silver Democrats and Populists fused on presidential electors.

At the election the vote for President stood: McKinley, 323,754; Bryan, 305,573; Levering, 3,056; Palmer, 2,145; Bentley, 2,268; Matchett, 329; McKinley's plurality, 18,181.

The entire Republican State ticket was successful. Following is the vote for Governor: James A. Mount, Republican, 321,032; Benjamin F. Shively, Democrat, 294,855; Leonard M. Christ, Prohibitionist, 2,996; James G. Kingsbury, National Prohibitionist, 2,500; Thomas Wadsworth, Populist, 8,525; Philip H. Moore, Socialist, 283; Mount's plurality, 26,177.

Of the 13 members of Congress elected 3 are Democrats and 1 was elected on a fusion ticket, the other 9 are Republicans. The Legislature stands: Republicans—Senate 33, House 52; Democrats—Senate 14, House 39; Populists—Senate 3, House 9.

IOWA, a Western State, admitted to the Union Dec. 28, 1846; area, 56,025 square miles. The population, according to each decennial census since admission, was 192,214 in 1850; 674,913 in 1860; 1,194,020 in 1870; 1,624,615 in 1880; and 1,911,896 in 1890. Capital, Des Moines.

Government.—The following were the State officers during the year: Governor, Francis M. Drake; Lieutenant Governor, Matt Parrott; Secretary of State, William M. McFarland; Auditor, C. G. McCarthy; Treasurer, John Herriott; Attorney-General, Milton Remley; Superintendent of Public Instruction, Henry Sabin—all Republicans; Adjutant General, H. H. Wright; Railroad Commissioners, George W. Perkins, C. L. Davidson, and Edward A. Dawson; Labor Commissioner, W. E. O'Blens; Dairy Commissioner, W. K. Boardman; Fish Commissioner, George E. Delevan; Chief Justice of the Supreme Court, J. H. Rothrock; Associate Justices, L. G. Kinne, C. T. Granger, G. S. Robinson, H. E. Deemer, Josiah Given—all Republicans except Justice Kinne, who is a Democrat.

The Census of 1895.—The total population, according to the census, is 2,058,069, of whom 1,065,130 are males and 1,068,062 are twenty-one years of age and over. The colored population is 11,889; the Indian, 394. Those born of native parents number 1,168,853. The number of dwellings is 435,007, and of families 434,392. The school population is 736,818, and the number of persons subject to military duty 413,000. The urban population is 871,774 or 42.36 per cent.

The aggregate value of buildings owned by cities and towns is placed at \$1,736,142, and of parks so owned \$1,117,350. The value of buildings owned by counties is \$5,495,231. The value of church property is estimated at \$17,597,991, and the total value of property not taxable at \$46,803,739. The value of public buildings owned by societies, not including churches and parsonages, is \$2,245,400.

The populations of some of the principal cities in 1895 were as follow: Des Moines, 56,359; Dubuque, 40,574; Davenport, 30,010; Sioux City, 27,371; Burlington, 25,246; Clinton and Lyons, 23,377; Cedar Rapids, 21,555; Council Bluffs, 20,189; Clinton, 17,375; Ottumwa, 16,761; Keokuk, 14,287; Muscatine, 12,237; Marshalltown, 10,049; Fort Madison, 10,022.

Finances.—The State finances are in a very unsatisfactory condition. The report of the Treasurer, made to the Legislature in February, said:

"At the commencement of the last biennial period, beginning July 1, 1893, there was a balance of \$412,981.45 on hand. Up to July 1, 1895, there was re-

ceived from all sources \$3,524,251.35; total, \$3,937,232.80. State Auditor's warrants redeemed during the period amounted to \$3,624,378.39. The sum paid out in excess of revenue received was \$100,127.04. The balance in the treasury July 1, 1895, was \$312,854.41. The total revenue from all sources received from that date up to Jan. 4, 1896, was \$845,823.58, which, added to the balance of July 1, 1895, equaled \$1,158,677.99. The disbursements for this six months were \$1,120,029.97. The available cash on hand Jan. 4, 1896, was \$38,648.03 of general revenue. With this amount and the January collections, \$143,319.02, the State had to meet its regular pay roll of \$30,000, the dues of the several State institutions, reaching fully \$250,000, and the additional warrants necessitated by the meeting of the Legislature and the payment of one half the salaries of the members, aggregating \$50,000, due Feb. 13. During each of the past three biennial periods the amount of back taxes has grown on an average of \$200,000 for each period. But the most potent cause of the lack of revenue has been the decline in the amount of taxable property in the State as reported by the county auditors. Our taxing machinery needs to be remodeled throughout if we are to see any marked improvement in the future. Property should be assessed at its real value and the levy made upon that valuation."

In December the amount of unpaid warrants was nearly \$500,000.

The State has lost about \$13,000 by the defaulting of G. J. Spaulding, Secretary and Treasurer of the State Board of Pharmacy Commissioners.

The Executive Council in August placed the State tax levy at $2\frac{7}{8}$ mills, an increase of $\frac{1}{8}$ over that of 1895, made necessary by the larger appropriations as well as by lowered valuations. In an opinion given by the Attorney General on the question of county taxes he holds that 6 mills tax is the aggregate amount that may be levied for both ordinary county revenue and the support of the poor.

Education.—At the State Convention of Teachers in January it was the unanimous opinion that more normal schools should be established, and that a more efficient plan for determining the qualifications of applicants for places as teachers should be found. A committee reported that Nature studies should have a place in the grades below the high school, and that one hour a week for eight years should be given to such studies. The committee on classification of colleges reported improvement in many instances in preparatory work, and recommended a minimum of six chairs in addition to the teaching force of preparatory and special departments, as a condition of admission to the list of colleges eligible to membership. On this basis and that of the preparatory requirements already laid down, the following colleges were recommended for membership: Iowa Wesleyan, Parsons, Upper Iowa, Grinnell, Drake, Luther, Coe, Penn, Tabor, Iowa, Simpson, Des Moines, State University. In addition the Agricultural College was recommended, "though standing apart from the colleges and the university in the amount of requirements for admission, and differing largely in the character and scope of its courses of study, yet possessing an exquisite equipment and strong faculty, and doing its appointed work with efficiency and general approval as a State technical college."

The first Danish University in the country was dedicated in Des Moines, Sept. 27. The building already erected is to be the east wing of the completed structure.

The enrollment at the State University in September was 1,010. In June there were 106 graduates from the law department. Drake University graduated 124 in all departments.

State Institutions.—The main building of the State Institute for Feeble-Minded Children, at Glenwood, was destroyed by fire Aug. 29. All the children were taken out safely, and a large part of the furnishings saved. The building cost \$85,000, and the loss was total. It was finished in 1892. There were 510 children in the institution. About 70 teachers and employes were on the grounds.

A new insane asylum is to be built at Cherokee. The foundations are already done and the contract let for the structural work, the bid being \$295,173. Two years are allowed for the buildings, this part of which will accommodate 420 patients.

The members of the Visiting Committee of the Legislature confirmed the report that Iowa's institutions are crowded beyond their capacity to care for inmates.

Banks.—The report of the Auditor in July showed that there were then 169 savings and 201 State banks. The deposits amounted to \$43,966,793.79, an increase over the previous year of \$139,657.54. The increase in capital stock amounted to \$250,100, and in surplus to \$116,751.22.

The Sioux City National Bank failed in August, and two others in the same city (the First National and the Sioux City Savings Bank) in November.

Railroads.—By the assessments in March the valuation of railroad property was raised on the total \$4,951 over that of 1895. The mileage is 8,487,132.

The Railroad Commission reduced in August the minimum weight for car loads in 34-foot cars from 20,000 pounds to 18,000. The commission is trying to abolish grade crossings.

For several years there has been litigation over the charges made by the Milwaukee road on goods shipped from Sioux City to Akron, Hawarden, and other Iowa points in the same neighborhood. On the ground that the road passed a part of the way through South Dakota, the company has insisted that it had the right to make its charges under interstate rules. The shippers maintained that, as the shipments started in Iowa and ended in the same State, the charges were subject to State regulation, which would make them considerably lower. This view having been sustained by the Supreme Court in its decision in a similar case in Pennsylvania, the road has settled the cases by paying back all money claimed as overcharge.

The Omaha and St. Louis Railroad was sold at Council Bluffs in January for \$1,876,170. The property is in four counties of Iowa and four of Missouri, a distance of 143 miles.

Farm Statistics.—Figures of the census of 1895 show that there are 204,385 farms in the State, comprising 31,297,813 acres. The average size is 153 acres. The number of acres is 25,870,189; unimproved, 5,427,624; cultivated, 16,099,951. The value of farms is placed at \$1,088,063,068. The number managed by owners is 141,979. The total number of horses was 1,383,302, and their value \$41,564,546. The number of cattle was 3,197,584, value \$53,820,197; number of hogs, 5,044,577, value \$23,596,962; number of sheep, 492,875, value \$1,160,535. The value of products of the forest, not including wood for fuel, was \$141,496. The number of acres of planted timber was 141,863, and of natural timber 1,506,611. The value of the principal products was estimated: Corn, \$55,235,667; oats, \$26,420,646; barley, \$3,301,735; spring wheat, \$3,264,225; winter wheat, \$1,295,481; flaxseed, \$1,549,688; timothy seed, \$1,119,710; Irish potatoes, \$4,497,627; timothy hay, \$11,741,929; clover hay, \$1,022,922; prairie hay, \$5,859,449; corn stalks, \$9,262,534; apples, \$1,357,300; and grass in 3,104,230 acres of pasture, \$14,700,792. Of the farms, 83,552 are mortgaged, the net indebtedness amounting to \$138,585,720.

Manufactures.—The statistics of factories compiled for the State census show that, while several great factories have left the State, the number of smaller institutions has been greatly increased. In 1890 the State census showed the aggregate of the manufactured product to be \$70,000,000. The statistics just compiled show the total of manufactured product in 1895 to be \$63,798,025. The beer and malt product has decreased \$1,000,000, lumber \$5,000,000, barb wire \$2,000,000. This loss is made up by the many smaller institutions which have sprung into existence, and counting in the butter and cheese product the \$63,000,000 is raised to \$73,000,000.

The product of the greatest value in the classified list is that of pork and beef, which is placed at \$18,422,630. The value of butter made on farms and in creameries was \$15,727,206.

Soldiers' Monuments.—An equestrian statue of Major-Gen. John M. Corse in bronze was unveiled July 4 at Crapo Park, Burlington. It was designed originally for the State Soldiers' Monument at Des Moines, and Burlington was to have a duplicate; but as the monument commission was not ready to receive it, Burlington secured the original cast.

The Iowa Soldiers' and Sailors' Monument, which has been a subject of discussion by four Legislatures and of much criticism by the public, is not yet completed. The question of drapery on the allegorical figure of Iowa was settled by the commission in April. It was decided to leave the upper part of the body nude, as designed by the sculptor. There were 32 medallions to be placed upon the monument, portraits of certain soldiers and sailors of the State; but these were so strongly objected to on account of the invidious distinction they made that the Legislature ordered that no medallion portraits should be used, and directed the monument commission to have inscribed upon the monument the name of each regiment and organization, the number of men enlisted, and the date of its muster and discharge.

The medallions will be turned over to the care of the Secretary of State and placed in the memorial hall which is to be built. The appropriations so far made will not complete the monument.

Semicentennial Celebration.—The celebration of the fiftieth anniversary of the admission of Iowa to the Union began at Burlington, Oct. 1, with a parade and public speeches during the day and at night a banquet and a "river carnival" in which a barge representing a fortress was attacked by a fleet of 100 small boats using Roman candles and bombs. It was estimated that 20,000 people watched the display at the river front, and that 10,000 were at the park in the afternoon.

The celebration continued through the week, one day being set apart as "Old Settlers' Day" and one as "Educational Day."

Land Claims.—A tract of land forfeited by the Sioux City and St. Paul Railroad, 22,000 acres in extent, in O'Brien and Dickinson Counties, in the northwestern part of the State, was thrown open for settlement Feb. 27. Over 1,100 men and women were in the line when the Federal land office opened, waiting to file papers. Hundreds of them camped in the alleys and streets around the building the night before, and they formed a line at daybreak. There is an average of 9 filings on each tract.

In the hearings on disputed cases, preference was given to the settlers who bought the lands in good faith from the railroad company when it was believed the company had the right to sell them.

The Anticigarette Law.—A decision was given in July in the United States Court at St. Paul that the Iowa anticigarette law was uncon-

stitutional so far as it has interfered with the sale of cigarettes in the original packages in which they are shipped into Iowa; but the decision does not really affect the sales in the State, because the cigarettes can not be shipped into the State in the small packages in which they are sold.

Legislative Session.—The twenty-sixth General Assembly of the Legislature opened Jan. 13 and closed April 11. The session was important, as the revised code was to come before the Assembly, and also the question of resubmitting to the voters the constitutional amendment to incorporate prohibition in the fundamental law of the State.

United States Senator William B. Allison was elected to succeed himself for the term beginning March 4, 1897. W. I. Babb was the Democratic candidate. The resubmission question came up for the first time Jan. 20 in the form of a resolution in the Senate, which was referred to the Committee on Constitutional Amendments. It was reported from the committee Feb. 27, with the recommendation that the resolution to resubmit be passed and naming June 3 as the date for the special election. It was defeated in both houses. The amendment proposed was passed for the first time two years ago, when the Legislature enacted the mullet liquor law, which is now in force.

A bill to allow the manufacture of liquor in the State on terms similar to those required by the mullet law for its sale—that is, providing that it might be manufactured if consent were given by 55 per cent. of the voters in the city or county—was defeated in both houses, in the lower by a vote of 46 to 43 against considering the bill, and in the Senate by 22 to 2.

The Senate tabled a joint resolution to submit an amendment to the Constitution permitting woman suffrage.

A House bill requiring the superintendent of the new hospital for the insane at Cherokee to be a homeopathist was lost in the Senate.

A bill was passed giving the Commissioner of Labor authority to visit, enter, and inspect factories, mines, and other places, public or private, for the purpose of securing data relating to wages, hours of labor, wages received, and the sanitary environments of laborers, etc.

A bill for governing building and loan associations was passed.

Among other bills passed were the following:

Changing the election law so that only five days' notice is required for nominating papers.

Exempting towns of less than 3,500 from operation of the registration law.

Prohibiting combinations among fire insurance companies or agents to keep up rates.

Providing a tax of 1 per cent. on the gross earnings of express companies.

Declaring express companies common carriers and subject to the control of the Railroad Commissioners.

Giving city library trustees authority to levy a tax of 1 mill on the dollar for library purposes and to make appointments as they may see fit for running libraries.

Giving cities and towns power to regulate plumbing and sewerage.

Declaring bicycles vehicles.

Requiring thirty days' notice to-work forfeiture of contract for sale of real estate.

Making a chattel mortgage invalid unless signed by both husband and wife.

Appropriating \$5,000 to purchase books to be sent from the State Library to other libraries or societies in the State for temporary use upon request, transportation to be paid by local libraries.

Authorizing kindergartens in independent districts.

Adding civics and economics to the branches in which teachers must be examined.

Requiring levy of $\frac{1}{10}$ mill for six years for buildings for State University.

Allowing school boards to supply text-books in schools; election on the subject to be called by petition.

Giving aliens right to inherit property in the State and to own any amount of city property or 320 acres of country property.

Providing that in claims against the estates of decedents the burden of proving the claim shall not be placed on the claimant.

Providing for a tax of 5 per cent. on all property devised to any person other than blood or adopted relation, charitable, educational, or religious institution.

Forbidding sale of malt liquors by registered pharmacists.

Allowing common carriers to sell unclaimed goods after three months.

Ordering that the Russian thistle must be destroyed by occupier of land before Aug. 15; fifteen days later authorities must destroy and tax cost to land.

Requiring persons in charge of newly born infants to notify a practicing physician of any soreness of eyes within twelve hours of such discovery.

Placing secret society insurance under charge of the State Auditor; requiring examinations and reports, and giving the Auditor power to prohibit their doing business if he thinks their insurance feature is not safe in method or condition.

Authorizing the State to accept gifts, devises, etc., absolutely or in trust.

Making Government currency taxable.

Granting to the United States consent to purchase and have jurisdiction over 25 acres of land in Delaware County and land in any part of the State for the purpose of establishing fish hatcheries.

Providing for a commission to locate the positions of Iowa troops at Vicksburg, and appropriating \$2,000.

Raising the age of consent to fifteen years.

Requiring prisoners under eighteen to be kept separate from those older.

Declaring to be nuisances houses used as opium or hasheesh dens.

Prohibiting the importing, printing, and distributing obscene literature and pictures; punishment, \$100 fine or a year's imprisonment.

Prohibiting the manufacture and sale of cigarettes and cigarette papers.

Following are the principal appropriations made: General, for State expenses, \$2,800,000; Memorial Hall, \$25,000; hospital for insane, Independence, \$19,300; hospital for insane, Cherokee, \$212,140; hospital for insane at Clarinda, \$199,300; hospital for insane at Mount Pleasant, \$49,100; State Agricultural College, \$54,500; State Normal School, Cedar Falls, \$48,000; State University, \$46,000; Fort Madison Penitentiary, \$13,200; Anamosa Penitentiary, \$66,198; Benedict Home, at Des Moines, \$9,200; Soldiers' Home, at Marshalltown, \$51,800; Home for Blind, at Knoxville, \$18,000; Iowa Industrial School, at Eldora, \$18,500; School for the Deaf, at Council Bluffs, \$17,000; Soldiers' Orphans' Home, at Davenport, \$18,800; industrial school, Mitchellville, \$17,000; Institution for the Feeble-Minded, Glenwood, \$65,800; College for the Blind, Vinton, \$10,500; New Orleans Exhibition, refund to those that advanced money, \$12,000; Semicentennial Celebration, Burlington, \$10,000; Fish Commission, \$6,000; infantry uniforms, \$2,500;

dam for Okoboji lake, \$1,000; mileage of visiting committees, \$766; inauguration expenses, \$277; additional for National Guard, \$5,200; repairs for Capitol, \$7,100; for a silver service for the battleship "Iowa," \$5,000; for an exhibit at the Trans-Mississippi Exposition in 1898, contingent on appropriation of \$250,000 by the Government and \$500,000 by Nebraska, \$10,000.

The report of the Code Commission appointed by the twenty-fifth General Assembly was made to the twenty-sixth this year, and some work was done upon it by committees; but as the revision makes material changes in the law relating to insurance, building and loan, and other corporations, the time of the regular session was insufficient to complete its consideration in addition to the ordinary work of the Legislature, and therefore a demand was made early in the year for an extra session for this special work. The Legislature passed a concurrent resolution asking the Governor to call the extra session. This he did by proclamation Nov. 7, naming as subjects to be acted upon the code report and the provision for replacing the buildings of State institutions that had been destroyed. The extra session was to begin Jan. 19, 1897.

Political.—The results of the city elections, March 2, were generally favorable to the Republicans, though there were Democratic gains in some places. Burlington, which has usually been Democratic by about 500, elected a Republican Mayor by about 400.

The Republican State Convention for choosing delegates to the national convention met at Des Moines March 11. A set of resolutions proposing Senator W. B. Allison as candidate for President was adopted unanimously.

The convention for nomination of State officers was held July 15 at Des Moines. The platform was devoted to national issues—the tariff and the currency. It approved the St. Louis platform, and said further:

"We recognize the revolutionary character of the convention lately held in Chicago. We appreciate the dangers of its startling doctrines and the immeasurable disasters that would follow their adoption by the Government. We have seen the ruin accomplished by the free-trade declaration of 1892, and we have now heard a demand that the ruin shall be made complete by the overthrow of our financial system and the substitution of an experiment that can result only in untold misery and incalculable loss."

The ticket follows: For Secretary of State, G. L. Dobson; for Auditor of State, C. G. McCarthy; for Treasurer of State, John Herriott; for Attorney-General, Milton Remley; for Railroad Commissioner (both terms), E. A. Dawson; for Judge of Supreme Court, Scott M. Ladd.

The Prohibitionists met in convention May 13 at Des Moines with 300 delegates. The resolutions declared in favor of free coinage at the ratio of 16 to 1, independent of the action of the other nations, of woman suffrage, of an income-tax law, of arbitration to settle international disputes, of Sunday observance, of the initiative and referendum, of restricted immigration, and of Government control of railroads, telegraphs, and the like. It opposed appropriations for sectarian schools and the teaching of foreign languages in the public schools. On State issues it demanded tax reform, nonpartisan control of public institutions, and legislation to regulate charges of railway, telegraph, telephone, and express companies. On the subject of liquor laws, it declared that so-called regulation by license, mullet, or taxation is complicity with crime and corrupting to the public conscience, and that no party not openly opposing the traffic can be relied

upon to resist the liquor interest. Of the State mullet law it said:

"We denounce in unmeasured terms the so-called mullet law of this State, and we arraign the Republican party which enacted it for perfidy and treachery to the vote of the sovereign people cast for prohibition June 27, 1882, and we declare that no one, layman or priest, is worthy of the public confidence of the people who aided or abetted the enactment of this infamous statute or who now palliates its continuance."

William G. Wright was nominated for Secretary of State, J. W. Wonders for Auditor, E. J. Bye for Treasurer, Samuel Holmes for Justice of the Supreme Court, F. M. Ford for Attorney-General, and William Pelle for Railroad Commissioner. C. E. Boardman was afterward made the candidate for Attorney-General.

The convention of the People's party for choosing delegates to the national convention was held April 22 at Des Moines, with the largest attendance in its history. The majority of the committee on resolutions submitted the following only:

"That the delegates to the St. Louis convention be instructed to do all in their power to secure a union of all reform forces on a common ticket or a platform embodying the fundamental principles of the Omaha platform, and in addition recommend the adoption of the initiative and referendum."

Another convention was held at the same place Sept. 10, and a platform favoring free coinage and other principles of the party was adopted, and the nomination of Bryan and Sewall was approved. No State ticket was formed, an agreement having already been made to unite with the Democrats on the ticket placed in nomination Aug. 12.

The Democratic State Convention for choosing delegates to Chicago took place May 20 at Dubuque. A large majority of the counties had sent free-coinage delegations, and on the vote to adopt the platform to that effect presented by the majority of the Committee on Resolutions there were about 675 in its favor to about 270 for the minority report against free coinage. The delegates to the national convention were instructed to nominate ex-Gov. Horace Boies for the presidency, and the unit rule was adopted. The resolutions favored the appointment of a Cabinet officer to be known as Secretary of Labor.

The convention for naming candidates for State offices was held Aug. 12 at Ottumwa. According to agreement, a fusion ticket was arranged, one elector at large and two district electors being chosen from the People's party, as well as the candidate for Auditor. It was desired to unite all free-coinage advocates of whatever party. A free-silver Republican was nominated for Railroad Commissioner for the long term. One nomination for member of Congress was given to the Populists, and one to the silver nonpartisans. Following is the ticket: For Secretary of State, L. H. Carr; Auditor of State, G. W. Davis; Attorney-General, William D. Boies; Treasurer, Charles Ruegnitz; Supreme Judge, R. L. Bolter; Railroad Commissioner (long term), Amos Steckel; Railroad Commissioner (short term), Thomas J. Denson.

The platform approved the action of the Chicago convention and invited all voters, irrespective of past party affiliations, to unite in the effort to secure financial relief for the country.

The gold Democrats held a conference Aug. 7, and decided to meet in State convention in order to adopt a platform in accordance with their views and choose delegates to the Indianapolis convention. About 700 delegates were present at the Des Moines convention, Aug. 26. Delegates to Indianapolis and electors were chosen, and resolutions

adopted condemning the Chicago platform as being false to Democratic principles, and therefore not entitled to the support which one proclaimed by the majority of the party could otherwise claim; and said further: "The mere election of a President, pledged to these policies without any congressional action whatever will precipitate a financial crisis, the consequence of which no man can predict."

"We are opposed to any policy that will have the effect of reducing the currency of the country to silver monometallism, which would be the immediate result of undertaking the free and unlimited coinage of silver at the ratio of 16 to 1."

The Socialist-Labor party placed a ticket in the field as follows: For Secretary of State, J. Wetzenbach; Auditor, J. B. Travis; Treasurer, W. A. F. Westphal; Railroad Commissioner (short term), C. H. Jensen; Railroad Commissioner (long term), A. Rindler.

The National or "Narrow-gauge" Prohibition party held a convention, Aug. 4, at Marshalltown. After much discussion, in which the greater number appealed for a united party in Iowa and deprecated making the financial and other questions greater than prohibition, resolutions were adopted approving the candidates for State offices named by the party in May. Candidates for presidential electors to vote for Bentley and Southgate were chosen.

The total vote cast Nov. 3 was 521,547, divided as follows: McKinley, 289,293; Bryan, 223,741; Palmer, 4,516; Levering, 3,192; Bentley, 352; Matchett, 453.

The whole Republican State ticket was successful, the vote for Secretary of State standing 288,715 for G. L. Dobson against 224,812 for L. H. Carr, the candidate of the Democrats and Populists, and 3,533 for W. G. Wright, Prohibitionist. All the candidates of the Republicans for members of Congress were elected.

ITALY, a constitutional monarchy in southern Europe. The throne is hereditary in the house of Savoy by male descent in the order of primogeniture. The reigning monarch is Umberto I, born March 14, 1844, the eldest son of Vittorio Emanuele II, of Sardinia, the first king of united Italy, whom he succeeded on Jan. 9, 1878. The heir to the throne is Vittorio Emanuele, Prince of Naples, born Nov. 11, 1869. On Oct. 24 he married the Princess Helena, born Jan. 8, 1873, fourth daughter of Prince Nicholas of Montenegro.

The legislative power is vested in a Senate and a House of Deputies. The Senate is composed of the princes of the blood and 390 nominated members, and the Chamber of 508 members, elected by the direct suffrage of all citizens able to read and write and paying 20 lire a year in direct taxes. The Council of Ministers, constituted on Dec. 15, 1893, was composed of the following members: President and Minister of the Interior, Francesco Crispi; Minister of Foreign Affairs, Baron Blanc; Minister of Finance, Paola Boselli; Minister of the Treasury, Giorgio Sonnino; Minister of Justice and Worship, Andrea Calenda di Tavani; Minister of War, Gen. Stanislao Mocenni; Minister of Marine, Admiral Constantino Morin; Minister of Public Instruction, Augusto Bacelli; Minister of Public Works, Giuseppe Saracco; Minister of Commerce, Industry, and Agriculture, A. Barrazuoli; Minister of Posts and Telegraphs, Dr. M. Ferraris.

Area and Population.—The area of Italy is 110,623 square miles. The population was estimated on Dec. 31, 1895, at 31,102,833. The number of marriages in 1895 was 228,000; of births, 1,092,000; of deaths, 784,000; excess of births, 308,000. The number of emigrants in 1895 was 293,181, against 225,323 in 1894, 246,751 in 1893, 223,667 in 1892, and 293,631 in 1891. The emigration

to the United States in 1895 was 44,003; to the Argentine Republic, 41,203; to Uruguay, 3,557; to Brazil, 97,344. The population of the principal cities, as estimated on Dec. 31, 1895, was: Naples, 527,192; Rome, 471,801; Milan, 451,682; Turin, 348,124; Palermo, 282,698; Genoa, 224,197; Florence, 206,481; Venice, 155,428; Messina, 150,373.

Finances.—The receipts of the treasury for the year ending June 30, 1895, were 1,807,372,533 lire, and the expenditures 1,806,963,455 lire, leaving a surplus of 4,090,778 lire. For the year ending June 30, 1897, the ordinary receipts were estimated at 1,647,177,171 lire, and the extraordinary receipts at 80,802,016 lire; total, 1,727,979,187 lire. The ordinary expenditures were estimated at 1,607,973,691 lire, and the extraordinary expenditures at 104,597,775 lire; total, 1,712,571,466 lire. The revenue from railroads and other property is 87,141,330 lire; from direct taxation, 481,562,300 lire, including 286,662,300 lire from the income tax, 106,400,000 lire from the land tax, and 88,500,000 lire from the tax on buildings; from taxes on transactions, 213,745,000 lire, including 68,500,000 lire from stamps, 58,000,000 lire from registration, 18,770,000 lire from railroad receipts, 10,000,000 lire from commercial companies and banks, 35,000,000 lire from succession duties, 6,300,000 lire from mortmain revenues, and 7,000,000 lire from a duty on mortgages; from customs, monopolies, and excise, 664,550,000 lire, including 191,000,000 lire from the tobacco monopoly, 72,700,000 lire from the salt monopoly, 44,000,000 lire from duties on the manufacture of alcohol, beer, mineral waters, gunpowder, and sugar, 64,500,000 lire from the lottery, 52,350,000 lire from excise duties, and 240,000,000 lire from customs duties; from public services, 83,975,000 lire, including 52,000,000 lire from the post office, 12,600,000 lire from telegraphs, 1,350,000 lire from the cadastral survey, 2,700,000 lire from assay stamps, 6,100,000 lire from scholastic fees, 5,405,000 lire from prisons, 1,660,000 lire from fines, and 2,160,000 lire from various services; from repayments, 38,237,962 lire from various sources, 9,021,740 lire; from rent of domains, 15,510,556 lire; from interest on invested funds, 27,942,350 lire; communal contributions of Rome and Naples, 27,942,350 lire; miscellaneous, 4,680,541 lire; from railroad construction account, 801,718 lire; various extraordinary receipts, 10,306,563 lire; from sales of domains, ecclesiastical lands, etc., 14,839,260 lire; from recovery of debts, 4,000,000 lire; from new loans, 43,500,000 lire; miscellaneous receipts, 7,354,475 lire. The principal expenditures are: Interest on the consolidated debt, 472,916,407 lire; interest on extinguishable debt, 66,344,919 lire; annuity for the purchase of the railroads of upper Italy, 27,122,594 lire; floating debt, 121,384,609 lire, including 18,842,198 lire for interest on treasury warrants, 15,580,210 lire due to railroad companies, 83,039,142 lire of railroad guarantees, and 3,923,059 lire on accounts current; pensions, 78,800,000 lire; civil list and appanages, 15,050,000 lire; Senate and Chamber of Deputies, 2,120,000 lire; general expenses, 9,709,152 lire; various services, 1,026,420 lire; reserve for unforeseen expenses, 3,500,000 lire; service of the amortizable debt, interest, and domains, 25,200,759 lire; amortization and other extraordinary expenses, 33,723,202 lire; administration of the Ministry of Finance and the cadastral survey, 16,527,761 lire; cost of collecting revenues and of monopolies, lottery, etc., 145,821,103 lire; extraordinary expenses of the Ministry of Finance, 3,712,352 lire; Ministry of Foreign Affairs, 9,445,280 lire for ordinary and 53,000 lire for extraordinary purposes; Ministry of Grace and Justice, 32,753,037 lire for ordinary and 65,780 for extraordinary purposes; Ministry of Public Instruction, 40,824,295 lire for ordinary and 672,738

lire for extraordinary purposes; Ministry of the Interior, 56,416,572 lire for ordinary and 2,088,701 lire for extraordinary purposes; Ministry of Public Works, 26,437,523 lire for ordinary and 55,012,130 lire for extraordinary purposes; Ministry of Posts and Telegraphs, 56,271,179 lire for ordinary and 56,515 lire for extraordinary purposes; Ministry of War, 267,252,843 lire for ordinary and 2,223,000 lire for extraordinary purposes; Ministry of Marine, 94,961,646 lire for ordinary and 4,375,000 lire for extraordinary purposes; Ministry of Agriculture, Commerce, and Industry, 8,362,901 lire for ordinary and 2,615,350 lire for extraordinary purposes. The total expenditure on account of the debt in 1895-'96 was 595,377,987 lire for interest and 7,515,287 lire for amortization.

The Army.—The Italian conscripts are required to serve two, three, or four years with the colors after the completion of their twentieth year. The present peace effective was fixed for the year 1895-'96 at 205,000 men. Men who escape conscription by lot may receive from two to six months of training, but those who are the support of their families are only called out for thirty days of drill and in time of war are assigned to garrison duty. Conscripts possessing a superior education, who submit to a special examination, and pay a sum fixed annually and varying from 1,200 to 2,000 lire, can obtain their discharge after one year with the colors. By the law of July 12, 1896, fixing the contingent at 98,000, all the men born in 1876 who are not drawn and who are not exempt on account of family duties or of disabilities are inscribed in the second category and required to drill, and those born in 1874 and 1875 who were drawn but received leave of absence are summoned to the colors to serve two or three years. The peace effective for 1896, not counting the African troops, was 14,238 officers and 220,460 men, with 46,744 horses and mules. There were 3,558 officers and 4,250 noncommissioned officers and men in the general staff and military establishments; 340 battalions and 98 district companies of infantry, numbering 7,148 officers and 127,670 men; 144 squadrons and 24 cavalry depots, numbering 865 officers and 28,289 men; 207 batteries and 76 companies of artillery and 40 companies of train, numbering 1,307 officers and 30,016 men; 64 companies of engineers and 10 companies of train, numbering 285 officers and 7,376 men; 12 sanitary companies, numbering 191 officers and 2,375 men; 12 commissary companies, numbering 126 officers and 1,865 men; 12 legions of carabineers, numbering 562 officers and 23,639 men; and 196 officers in the veterinary corps. The total war effective is 1,494,843 officers and men.

The Navy.—The Italian navy comprises 12 first-class battle ships having an aggregate displacement of 148,710 tons, 152,977 horse power, 204 guns of over 10 centimetres caliber, 344 smaller ones, and 63 torpedo tubes; 4 second-class, 6 third-class, 5 fourth-class, 8 fifth-class, 13 sixth-class, and 2 seventh-class vessels of the line of battle; 5 first-class, 94 second-class, 38 third-class, and 21 fourth-class torpedo boats; 2 first-class, 8 second-class, 11 third-class, and 18 fourth-class auxiliary vessels; 8 auxiliary cruisers; 16 torpedo launches; 1 submarine boat; 6 river gunboats; and 54 vessels for port service. The aggregate armament is 555 large guns, 1,187 small ones, and 591 torpedo boats. There are building 2 armored cruisers of 6,500 tons and 1 of 2,540 tons. The personnel consists of 1,540 officers and 18,822 men, besides 4,189 men in the coast-defense service.

The scheme of naval construction decided upon in 1887 was to be completed at the end of 1897, but since 1891 no extraordinary credits have been voted, the naval budget has been gradually cut down from

214,000,000 lire to 93,000,000 lire, and the sum of 27,000,000 lire fixed upon for the annual cost of renewal has been reduced to 22,000,000 lire. The fleet falls short of the strength fixed by the law of 1887 by 28 armor clads and 61 seagoing torpedo vessels. The Minister of Marine asked for an extraordinary credit of 7,000,000 lire for 1898 to be devoted to building torpedo boats and destroyers of high speed and for maintaining the efficiency of the existing ships and armaments.

Commerce.—In the special commerce for 1895 the imports and merchandise figured for 1,187,300,000 lire; imports of precious metals, 7,300,000; exports of merchandise, 1,037,700,000 lire; exports of precious metals, 21,300,000 lire; transit trade, 80,000,000 lire. The principal articles of import and their values were: Cereals, 131,200,000 lire; silk, 120,800,000 lire; cotton, 96,800,000 lire; coal, 86,100,000 lire; hides and skins, 47,300,000 lire; iron 45,300,000 lire; machinery, 43,200,000 lire; woollen cloth, 35,600,000 lire; timber, 33,400,000 lire; fish, 31,600,000 lire; coffee, 28,800,000 lire; colors and dyes, 28,600,000 lire; wool, 28,000,000 lire; chemical products, 26,300,000 lire; animals, 25,800,000 lire; tobacco, 25,200,000 lire; cotton cloth, 23,000,000; silk fabrics, 22,400,000 lire; sugar, 19,800,000 lire; jewelry and precious stones, 19,200,000 lire; seeds, 18,500,000 lire; gums and resins, 17,700,000 lire; petroleum, 12,000,000 lire; linen yarns, 11,700,000 lire. The principal exports in 1895 were: Silk, 325,000,000 lire; wine, 49,300,000 lire; olive oil, 46,400,000 lire; hemp, 40,500,000 lire; lemons, 33,000,000; eggs, 32,100,000 lire; wood manufactures, 31,400,000 lire; silk tissues, 29,600,000 lire; skins, 25,500,000 lire; animals, 25,500,000 lire; coral goods, 21,900,000 lire; fruits, 21,900,000 lire; cotton cloth, 20,400,000 lire; sulphur, 20,000,000 lire; tartar, 15,600,000 lire; almonds, 15,400,000 lire; colors, 13,560,000 lire; marble and alabaster, 13,500,000 lire; cheese, 12,900,000 lire; poultry, 12,900,000 lire; rice, 12,400,000 lire; butter, 10,700,000 lire. The commercial intercourse with the different nations in 1895 is shown in the following table, giving the values of the imports from and the exports to each in lire:

COUNTRIES.	Imports.	Exports.
England	234,700,000	114,600,000
France	162,600,000	136,400,000
Germany.....	144,100,000	170,200,000
Austria-Hungary.....	133,000,000	114,400,000
Switzerland.....	45,600,000	187,300,000
Russia.....	103,800,000	12,700,000

Navigation.—There were 107,251 vessels, of 27,857,794 tons, entered at Italian ports during 1895, including 91,510 coasting vessels, of 19,598,534 tons, and cleared 106,735 vessels, of 27,832,025 tons, of which 90,959, of 19,261,817 tons, were engaged in the coasting trade. Of 15,741 vessels, of 8,259,260 tons, entered from distant ports, 9,121, of 1,985,720

tons, sailed under the Italian flag and 6,620, of 6,273,560 tons, under foreign flags. The number entered with cargoes in ocean commerce was 13,374, of 7,721,951 tons, and the number cleared with cargoes was 10,449, of 5,396,829 tons. The total number of steam vessels entered was 37,179, of 24,797,836 tons, of which 1,521 were Italian steamers engaged in ocean commerce, of 1,444,381 tons, 5,292, of 6,107,980 tons, were foreign steamers in the ocean trade, and 26,426, of 13,444,179 tons, were Italian and 3,940, of 3,801,296 tons, foreign coasting steamers. The Italian merchant fleet in 1895 numbered 6,231 sailing vessels, of 571,605 tons, and 328 steamers, of 207,530 tons.

Communications.—The Government leased its railroads to companies in 1885 for sixty years, with the privilege of terminating the lease at the end of twenty or of forty years. The state lines constituted two thirds of the total network at that time. The length of lines open for traffic on Jan. 1, 1895, was 9,280 miles.

The telegraph lines of the Government had a total length on June 30, 1894, of 22,374 miles, with 71,527 miles of wire. There were sent during the year 7,080,943 paid internal and sent and received 1,761,440 international telegrams. The post office in the year 1894 carried 201,770,325 private letters and postal cards, 42,775,128 official letters, 5,625,661 manuscripts, and 227,304,585 newspapers and circulars. The money orders numbered 9,037,957, of the total value of 671,561,934 lire. The net earnings of the Government from posts and telegraphs in 1894 were 13,362,770 lire, the gross receipts being 66,771,986 lire and expenses 53,409,216 lire.

Currency.—Italy as a member of the Latin monetary league has coined no silver for several years. A small amount of gold has been coined recently, and in 1894 there were 3,700,978 lire of bronze and 17,780,200 lire of new nickel coins minted. From 1862 to the end of 1894 the total coinage of the Italian kingdom has been 426,332,990 lire in gold, 567,037,025 lire in silver, 17,780,200 lire in nickel, and 83,636,121 lire in bronze pieces. The only banks of issue are now the Banca d'Italia, the Banco di Napoli, and the Banco di Sicilia. The bank notes in circulation on June 30, 1894, amounted to 1,128,598,000 lire, inclusive of 2,445,000 lire of paper of the defunct Banca Romana. There were also 492,149,000 lire of state notes out.

Session of the Chambers.—The Italian reverse near Adowa (see *ABYSSINIA*) compelled Crispi and his colleagues to retire. The decision was announced when the Chamber met March 5. When the ministers arrived at the Chamber they were hooted, and in spite of the intervention of the soldiers the crowd refused to leave the neighborhood. Signor Crispi stated that the resignation had been accepted by the King, and the announcement was received with passionate applause by the Chamber. The situation in Rome was so critical that the troops were made ready for prompt action and the university was closed to prevent a riotous demonstration of the students. The calling out of the reserves born in 1872 added to the popular dissatisfaction. Thousands of Italians fled over the border to emigrate across the seas in order to escape military service in the fatal African climate. Disturbances occurred in Naples, Brescia, Palermo, Catania, Florence, Venice, and Sassari. At Milan there were collisions between the citizens and the police. The members of the Extreme Left gave notice in the Chamber of a motion demanding the impeachment of Premier Crispi and the ministry.

On March 6 riotous demonstrations were renewed. At Pavia a mob tore up the railroad track to prevent the departure of troops. At Pisa students marched to the station, threatening to stop the

transport of recruits by force. The socialists and anarchists cheered for Menelek. In Rome 300 arrests were made. At Naples crowds filled the streets and showed a determination to oppose the embarking of troops. At Pavia the mob held possession of the town for several hours on March 7.

Signor Saracco was first summoned by King Umberto, but his efforts to form a ministry came to naught, so Gen. Ricotti was commissioned to construct one. He yielded the premiership to Marquis di Rudini, and on March 10 the list was accepted by the King, as follows: Premier and Minister of the Interior, the Marquis di Rudini; Minister of War, Gen. Ricotti; Minister of Marine, Signor Brin; Minister of Foreign Affairs, the Duke of Sermoneta; Minister of Justice, Senator Costa; Minister of Finance, Signor Branca; Minister of the Treasury, Signor Colombo; Minister of Public Works, Senator Perazzi; Minister of Public Instruction, Prof. Gianturco; Minister of Agriculture, Count Guicciardini; Minister of Posts and Telegraphs, Signor Carmine. The Marquis di Rudini, who had before succeeded Signor Crispi as Premier and had held the office from Feb. 6, 1891, to May 5, 1892, was not invited to constitute the ministry because he declined to adopt the African programme demanded.

The first decision of the new ministry was to pardon all persons sentenced by the military courts for participation in the risings in Sicily and Massa-Carrara in the winter of 1893, except those sentenced for homicide. Consequently 120 political prisoners were released from prison, including Deputy de Felice-Giuffrida and Signori Bartato and Bosco, who had been elected to the Chamber after their incarceration. In the ministerial statement made on March 17 the Marquis di Rudini said that the Government had stopped the dispatch of troops to Africa because Gen. Baldissera had no need for the second half of the re-enforcements. He announced that negotiations for peace would be continued. On April 6 a new form of government was instituted in Sicily for a year. A civilian royal commissioner was appointed to preside at Palermo and administer the powers appertaining to the Ministers of the Interior, Finance, Public Works, Education, and Agriculture; to direct the prefects in all matters relating to public safety and local administration; and to undertake a revision of the municipal and provincial budgets in order to keep them within the limits of the local tax-paying capacity. Count Codronchi, a member of the Senate, who was appointed to this office, was at the same time made a minister without a portfolio. On April 27 the people of Paterno were incensed to riot by the imposition of communal taxes. A new Government loan of 4,000,000 lire was subscribed by Italian financiers, being taken at 97 for 4½ per cent. Italian *rente*. The expected surplus of 8,870,000 lire for 1896 had been turned into a deficit of 12,000,000 lire by the extraordinary credit of 20,000,000 lire demanded for Africa. The new Cabinet obtained a total credit for African operations of 140,000,000 lire, of which 45,500,000 lire were set down for 1896-'97, while 96,500,000 lire belonged in the budget for 1896. The Chamber approved the determination of the Government to try Gen. Baratieri by a vote of 278 to 133. Deputy Cavalotti and his followers continued to demand the impeachment of Signor Crispi, although the judges ruled that the charges were insufficient to sustain a legal action. On May 30 the ministry escaped defeat by a narrow majority of 3 on the question of investigating charges of immorality brought against Crispi and his colleagues. Premier di Rudini desired to dissolve the Chamber, but the King refused his sanction. The Duke of Sermoneta resigned his portfolio

in consequence of the strictures of English Cabinet ministers at the indiscreet publication in an Italian green book of secret negotiations relative to the retention of Kassala, though the Italian minister was not the instigator of the publication, which was intended as an attack on the late ministry. Gen. Ricotti offered his resignation on July 11 in consequence of the rejection by the Cabinet of his proposal to reduce the numerical strength of the army. In view of his action Premier di Rudini and the other ministers placed their resignations in the hands of the King. The Marquis di Rudini was charged with the reconstruction of the ministry. The Cabinet adjourned pending the crisis, which was ended on July 14 by the appointment of the following Cabinet: President of the Council, Minister of the Interior, and *ad interim* Minister of Foreign Affairs, the Marquis di Rudini; Minister of Marine, Admiral Brin; Minister of War, Gen. Luigi Pelloux; Minister of Justice, Signor Costa; Minister of Finance, Signor Branca; Minister of the Treasury, Luigi Luzzati; Minister of Public Works, Giulio Prinetti; Minister of Public Instruction, Signor Giantureo; Minister of Agriculture, Count Guicciardini; Minister of Posts and Telegraphs, Emilia Sineo; minister without portfolio, Count Codronehi, Civil Commissioner in Sicily. Gen. Pelloux insisted on restoring the military budget from 234,000,000 lire to the original figure, 246,000,000 lire. The Cabinet was completed on July 17, when the Marquis Visconti-Venosta accepted the portfolio of Foreign Affairs.

The principal subject of debate at the opening of the winter session on Nov. 30 was the definitive treaty with Abyssinia. Major Nerazzini as plenipotentiary of the Italian Government signed at Adis Abeba on Oct. 26 the final treaty of peace with Menelek, King of Shoa and Emperor of Ethiopia, whose forces crushed the Italian army at Abba Karima, near Adowa. By this treaty Italy acceded to Menelek's original demand, which had been granted in the provisional agreement, that Italian sovereignty should be restricted to the Massowah-Keren-Asmara triangle, the exact boundaries to be determined after a year by special delegates of the two governments. In the meantime the *status quo ante* and the Mareb-Belesa-Muna boundary shall be respected. In a separate convention Menelek agreed to release all the Italian prisoners of war, a large number of whom had already been given up. Italy recognized the absolute independence of Abyssinia. Italy also engaged not to cede to other powers any part of the colony of Erythrea. It was stipulated that, if the Italian Government should spontaneously wish to abandon any portion of its territory, this would return to Ethiopian rule. While abrogating the treaty of Ucciali and renouncing the Italian

claim to a protectorate over Abyssinia, the treaty, according to the interpretation of the Italian Prime Minister, equally bars the assertion of any similar claim by any other European power. The treaty secured to Italy possession of the Okule Kusai, which had previously been in dispute. In the convention for the release of prisoners Menelek agreed to send them to Harrar, whence they would leave for Zeila as soon as the ratifications of the treaty were exchanged. This took place a month after the signature, and the prisoners were sent on their way home. The Negus stipulated for an indemnity for the heavy expenses incurred in supporting and bringing together the prisoners, leaving the determination of the amount to the sense of equity of the Italian Government. Although the treaty was made and ratified without the consent of the Italian Chamber, its discussion and that of the fate of the Italian colony in Africa were inevitable. When the Chamber met on Nov. 30 and immediately began to discuss the treaty and the African policy of the Government, Signor Imbriani, the Radical leader, supported by the Socialist representative, Signor Agnini, proposed the speedy evacuation of Erythrea and complete withdrawal from Africa. The Marquis di Rudini in his explanation left the door open for the ultimate abandonment of the territory, or for its transfer to a commercial company, or for its development as a national colony, but said that the success of the colony and the interests of Italy depended upon its transformation from a military into an agricultural and commercial colony. He said that the time had not arrived for a definite decision, and moved the indefinite adjournment of the debate. The lack of a quorum saved the Government from a defeat on this motion. The Duke of Sermoneta, the late Minister for Foreign Affairs, was active in supporting the proposal to abandon the African enterprise. The Government had a majority of 220 to 33 on a motion censuring its domestic policy. On Dec. 3 came the news of the massacre by Somalis of the acting Italian consul to Zanzibar, Signor Cecchi, and 7 Italian officers and 6 men, deserted by their escort of 70 Askaris near Mogadoscio, where the consul was engaged as a special commissioner in transferring the administration of the Benadir coast to a private Italian company. Signor Cavalotti renewed his assaults on the character of ex-Premier Crispi, but the Chamber would not listen to a revival of scandal. After discussing the Tunisian treaty and ratifying it by a vote of 232 votes against 64, the Chamber adjourned for the holidays on Dec. 22, having previously voted an annual allowance of 1,000,000 lire to the newly married Prince of Naples, which the King promised to return to the treasury every year from the civil list.

J

JAPAN, an empire occupying an archipelago lying eastward of the Asian continent, between the Spanish and Russian possessions, extending from the twentieth to the forty-ninth degree of north latitude. The two largest islands are Hondo and Formosa. The various groups officially recognized because of habitation or Government use (out of the known total of nearly 4,000) comprise Hondo with 166, Kiushiu 150, Shikoku 74, Riu Kiu 55, Chishima (Kuriles) 22, Bonin 17, Yezo 12, and Tsushima 5 islands; total, 411. Formosa and the Pescadores constitute the newer group. In this article, unless specially stated, the statistics do not

include Formosa. The coast line of the empire and the area, based on the great map of T. Ino, made about 1830, are 175,728 linear and 155,966 square miles respectively. Of the total area, Hondo has 59, Hokkaido or Yezo 20, Kiushiu 11, Shikoku 5, and Chishima 4 per cent. Hondo, the main island, is 900 miles long and, on an average, 90 miles wide. A volcanic range of mountains extends from the northern to the southern end. The population numbers 280 to the square mile.

The Emperor Mutsuhito ("gentle or peaceful man") was born Nov. 3, 1852. The Empress Haruko, born May 28, 1850, was married Feb. 3, 1869.

The heir apparent, Yoshihito, was born of one of the ladies of the harem, Aug. 31, 1877. The Emperor is sole executive, but is advised by a Cabinet made up of the heads of the 10 departments, presided over by a Minister President of State, and consults with the Privy Council, composed of 20 statesmen of rank and experience. Though both gold and silver are coined and paper money is circulated, the unit of value is the silver yen (value 50 cents), in which all statements concerning money, except those otherwise specified, in this article are expressed. One hundred sen make 1 yen.

In theory the Emperor voluntarily limited his prerogative of absolute authority, and on Feb. 11, 1889, gave the nation a written Constitution. This instrument was adopted after four month's scrutiny and debate by the Emperor's leading advisers. Count (now Marquis) Ito Hirobumi, often called "the Father of the Constitution," was one of its chief composers and wrote a volume of commentaries on it, which is an authority of great value. The Diet consists of an upper house, composed chiefly of nobles and imperial nominees, and a lower house elected by voters who pay 15 yen of national taxes. Ten regular sessions have been held. Only a fraction of the national expenses is under the control of the two houses, most of the items in the budget being fixed by law. The ministers are responsible to the Emperor, but not to the Diet. The trend of the Japanese politics is steadily forward toward democracy. The tenth regular session of the Diet began Dec. 25, 1896.

Population.—According to the census returns made up by the Home Department and published in the "Official Gazette," the population of Japan Dec. 31, 1895, numbered 42,270,628, of whom 21,345,750 were males and 20,934,878 females, living in 9,935,969 houses. Of these, 4,162 belonged to the nobility, of whom 644 were heads and 3,518 members of families; 2,050,144 to the gentry, of whom 432,458 were heads and 1,617,686 were members of families; 40,216,314 to the common people, of whom 7,948,026 were heads of families. There were 4,242 unadopted foundlings, and 1,319 prisoners unregistered. During 1895 there were 1,246,457 births. Of 852,422 deaths, 448,873 were of males and 403,549 of females, 117,215 being still-born. There were 365,633 marriages and 110,838 divorces. The Government imposes a tax on the registration of marriages and divorces.

The old artificial checks upon human increase having been removed, Japan gains over half a million souls yearly. The acquisition of Formosa and its adjacent islands has added 3,500,000 or more souls, making the population of the empire over 45,700,000. The cities in old Japan having over 50,000 number 18, and the 5 having over 100,000 are Kobe, 161,406; Yokohama, 170,577; Kioto, 339,896; Osaka, 490,009; Tokio, 1,342,153.

Resources.—The chairman of the Budget Committee in 1895, Hon. T. Taketomi, estimates the entire capital of the empire to be at least 5,000,000,000 yen, computed as follows: Capital upon which the occupation tax is imposed, 644,000,000; invested in the wholesale trade (and used thrice yearly), 196,000,000; invested in retail trade (and used five times yearly), 202,000,000; invested in buildings (rents reckoned as 8 per cent. of the capital), 429,000,000; total of the entire capital of the 24 occupations specified in the new national tax bill, 1,471,000,000 yen. Reckoning also the property of those who evade the national tax (1,730,000) and who pay prefectural taxes (2,300,000) on occupations, there is an estimated capital of 2,207,000,000 yen taxable, making the capital invested in the nonagricultural occupations 3,678,000,000 yen. The value of the cultivated land of the whole country is 1,353,000,000 yen. Add-

ing to this the values of the crops (rice, 320,000,000; wheat and barley, 120,000,000) and subtracting the land tax (38,000,000) and rent (6 per cent., or 79,000,000) and dividing by 1.05 will give 300,000,000 yen as the amount of circulating capital, or 1,653,000,000 yen as the total capital employed in agriculture. Adding the totals of all occupations, we get a grand total of 5,833,000,000 yen as the entire capital of the whole country (old Japan) as the basis for taxation.

Coinage.—At the imperial mint at Osaka the total coinage during the year ending March 21, 1896, of gold, silver, and nickel, amounted to 37,823,400 pieces, of the value of 20,462,935 yen: the pieces and values being as follows: Gold, 282,000 5-yen pieces, valued at \$1,410,000; silver, 1-yen pieces, 16,500,000 (value, 16,500,000 yen); 20-sen pieces, 5,003,010; 10-sen pieces, 15,008,270; nickel, 5-sen, 1,630,120. Compared with the previous year, this shows a decrease in value of \$270,000 in gold, 10,800,290 yen in silver, and 298,530 yen in nickel. Since December, 1870, when the mint was founded, a total value of 12,418,055,740 yen has been coined. During the year 155,639 copper, 70,385 silver, and 5 gold medals were struck, and 2,622 puncheons for the stamping of weights and measures required by the Department of Agriculture and Commerce were struck. The war medals were made from 53 captured Chinese guns. The mint employs 250 persons.

Railways.—The railway system, which began in 1870 with 200 Englishmen to superintend affairs, is now managed exclusively by natives, who employ only 5 foreigners as advisers. Except the first short road between Yokohama and Tokio, the work has been accomplished by Japanese capital and mostly by native talent and toil. On March 1, 1895, there were 2,118 miles of railway in operation, of which 580 were owned by the Government and 1,538 by private companies. In Yezo the equipment is American; in Kiushiu, German; in Hondo, English. The American engines cost 10 per cent. more, and burn 14 per cent. more fuel than the English. The Japanese, with English assistance, now build excellent locomotives in their own shops, saving over \$2,000 on each engine. At the great shops in Tokio and Kobe over 3,000 skilled native mechanics are employed, who turn out yearly 120 passenger and 480 freight cars. The coach used is apparently of the American style, with platforms at ends, but having 3 compartments, each holding 6 persons. Almost all the railways are single-track and narrow-gauge of 3 feet, 6 inches. Slow trains and moderate fares are the rule, as best suiting the people. Only 6 per cent. of the passengers travel first or second class, and the fare for 100 miles is but 16 cents. There are no sleeping or dining cars, but refreshments of the native sort are provided at every important station. For baggage the checking system is in use, the checks being large and heavy. Comparatively little business is done in freight, for Japan's relatively large coast line and numerous steamers do not allow profitable competition on rails.

The whole matter of railway charters, building, etc., is under the control of a Government board of 22 members, consisting mostly of military and naval men and members of the Diet, with but 2 railway officers. The average earning of private lines is about 9 per cent. The whole system is of vast strategic value, the various lines connecting the military headquarters of army divisions, such as Tokio, Sendai, and Nagoya, etc., with the important seaports. At the end of 1896 2,700 miles of rail were in operation, and nearly as much mileage is under construction. In Formosa the railway extends from Kelung to Taipeh and 50 miles beyond, and has been surveyed to Taiwan.

Finances.—The budget for the empire for the financial year 1896-'97, often amended and supplemented and finally accepted by the Diet, was divided by the Minister of Finance into three parts: (1) The special war fund; (2) the Chinese war indemnity; (3) the general finances of the empire and their disposal. Including one paid installment of the war indemnity (40,093,389 yen), the revenue is set down at 138,000,000, and the expenditure at 152,000,000, showing a deficit of 14,000,000 yen. Interest on the war loans and temporary loans, the increase of the army and navy, enlarged enterprise in public works, the extension of education, and the encouragement of industries have greatly increased national expenditure, as follows: Interest on loans, 8,700,000; pension fund, 1,200,000 (a continuous expense); expansion of the navy, 94,000,000 (to be expended during the next seven years); increase of the army, 43,000,000; 1,000,000 for encouraging industries and education; 9,000,000 for extending communications; and 1,500,000 yen for embankments of rivers and administration. The revenue, apart from indemnity, is but 97,200,000, or an increase of but 7,000,000 yen over last year. The deficiency of 14,000,000 yen is to be met by the new registry and business tax (1896), increased *sake* tax (1898), and the tobacco monopoly (1898). Owing to improved conditions of living, these taxes are not expected to be a strain. The wages of laborers, now 18 cents a day, are double what they were a decade ago. The import duty on raw cotton is abolished. The total proceeds possible from the new taxes is 52,668,400 yen, but the estimate of the Minister of Finance is for 16,000,000 in 1897 and 26,000,000 yen in 1898. The deficiency for 1896-'97 is made up by a special supplementary budget. In the expenditures for 1896-'97 the heaviest items are, in their order, for the finance, war, communication, home, naval, judicial, and imperial household departments, or 39,000,000, 168,000,000, 7,000,000, 7,000,000, 7,000,000, 5,000,000, 3,000,000, 4,000,000, and 3,000,000 yen, respectively. In the revenue the chief items are the general taxes on land, etc., and the profit from Government industries and properties. All show an encouraging increase over the preceding year: the land tax, 180,000; income, 140,000; *sake*, 1,020,000; soy, 120,000; customs, 78,000; post and telegraph, 3,300,000; railways, 1,500,000 yen. Japan's liabilities now amount to 385,773,119 yen, but, adding the public undertaking loan (for the extension of railways, telephone service, tobacco monopoly, administration, etc.), 135,000,000 yen, we have a total of 520,773,119. The debt is to reach its highest figure in 1901, and all is to be redeemed in thirty-eight years. The burden of the national debt of Japan is now but 65 yen, and the taxation (1892-'96) 2.18 yen per inhabitant (not including Formosa). Under the new estimates (1896-1900) the taxation will be about 50 per cent. more.

The Army.—The military establishment of Japan in 1894-'96, on a war footing, consisted of 737 superior officers, 4,911 officers, 17,240 subalterns, 2,262 cadets, 265,247 privates, and 1,147 noncombatant employees, making a total of 291,544. Besides the Imperial Guard of 16,725 in Tokio, composed of picked men, there are 5 other divisions, stationed at Sendai, Nagoya, Osaka, Hiroshima, and Kumamoto. The reserves, territorial militia, and armed police number 129,551 in all. The army on a peace footing consists of 73,941 men and 8,857 horses. The official announcement (1896) of the reorganization of the empire's fighting force shows that it is to be nearly doubled, the divisions, apart from the Guards, being 12, and the total number of regiments 52, instead of 28. A total effective force of over half a million, with a peace organization of 144,070 men and 19,650 horses, is thus in prepara-

tion. Of the 43,000,000 yen voted for military expansion (1896-1901), the items are: For forts, 17,342,070; construction and equipments, 17,342,070; arms, 8,486,766; arsenals, 2,949,107; military buildings, 429,574 yen. The total amount required for the new army (1896-1902) is 181,522,612 yen. The war expenses of 1895-'96 (China, conquest of Formosa, etc.) amounted to 225,000,000 yen.

The Navy.—In 1894 Japan had 33 men-of-war, of 61,372 tons displacement and of 100,115 horse power, mounting 355 guns, besides 26 torpedo boats, manned by 76 superior officers, 534 officers, and 6,882 men—a total *personnel* of 7,542. In September, 1895, there were 49 war ships afloat or nearly ready, all but 17 (iron, wood, and composite) being of steel and of the finest make and equipment. There are now over 50 war vessels, of 80,000 tons displacement, in good order. Of the great steel battle ships building in England, each of 12,000 tons, the "Yashima" is ready for delivery and armament. In the programme of expansion 29,392,750 yen have been already voted, 12,749,647 yen being for new ships, 7,147,529 for their armament, and 1,759,298 for dockyards, etc. The programme of expansion (1896-1902) requires a total of 94,776,225 yen, and looks to the further possession of 4 battle ships of 15,000 tons each, 4 cruisers of 7,500 tons each, 5 second-class cruisers of from 2,000 to 4,850 tons each, 3 torpedo tenders of 1,200 tons, and a torpedo depot ship of 6,700 tons—a total addition of 101,860 tons, or a grand total by 1906 of 121,860 tons, making, with the fleet now serviceable, 226,000 tons. Contracts for 2 steel war ships have been placed with American builders. The "Fuji" battle ship is now on her way home from England.

Formosa.—This island, 220 miles long and 70 wide, consists of a back bone of mountains rising between 2,000 and 10,000 feet. Its resources are coal, iron, gold, rice, camphor, and indigo, with many varieties of woods, spices, fruits, and grain. The conquest of aborigines and Chinese, after cession by China, has cost Japan 12,000 lives, mostly by disease, and nearly 25,000,000 yen. Local outbreaks were numerous during 1896, and a large force of soldiery in several detachments was kept busy. The civil administration is making steady progress in the introduction of Japanese law, education, ideas, and institutions. In the supplementary budget voted by the Diet the revenue from Formosa, the chief item (3,557,827 yen) being the Government sale of opium (prohibited among the Japanese, but allowed to the Chinese), is calculated at 6,182,232 yen. The total needed revenue of 38,413,503 yen is supplied by special appropriations. Among the items of expenditure (38,413,503 yen) we find 6,031,714 yen for the details of civil administration, 4,597,399 yen for industrial development, 6,378,271 for ordinary military expenses, and the remainder for gendarmerie and garrison expenses (including 1,571,052 yen for Wei-Hai-Wei, where troops are still kept until China's indemnity is paid).

A submarine cable to Formosa is being laid and is in working order to the southern end of the Okinawa Islands. Lighthouses are in process of erection on the chief promontories in Formosa, and the Riu Kiu Islands, one of which, at Iyujima, when finished will be the highest (100 feet) in the empire. Riu Kiu is now the potato farm of Japan, 320,000 tons having been harvested last year.

Events.—The Diet that opened Dec. 28, 1895, was prorogued from Feb. 15 to 25, and sat until March 29, the Government encountering less opposition than in any session since the Constitution went into force. Of 135 Government bills submitted, 129 were passed, and 17 out of 57 private measures became law. In January the cruiser "Kohei" was lost with

many of her crew off the Pescadores. The envoy Miura and 47 other Japanese were acquitted of complicity in the murder of the Korean Queen Min, in Seoul, Oct. 8, 1895.

Feb. 14, the foreign quarter of Kobe was nearly destroyed by fire. On the 17th the centenary of Franz Siebold, the scholar, was celebrated in Tokio, and a subscription to build a statue of Dr. Jenner, whose introduction of vaccination in Japan has so greatly helped to increase the population, was opened. His centenary was celebrated in Tokio, May 14, under the presidency of Hachisuka, President of the House of Peers, by a dinner. Rinderpest prevailed extensively, making great havoc among cattle.

The "Tosa Maru," the first of the new line of Japanese steamers to Europe (London and Antwerp), left March 15, reaching Kobe on her return trip Aug. 7. The southern and western coasts were visited by a severe typhoon, May 19 and 20, which did much damage to shipping.

June 10, at a meeting of the Nippon Yusen Kaisha (Japanese Navigation Company), the capital was raised from 8,800,000 to 22,000,000 yen for extension and opening of new lines, one to cross the Pacific to Seattle, one to ply to Australia, one to Europe. June 15, a tidal wave rolled over the north-eastern coast of the main island, by which 30,000 people lost their lives and 60,000 were rendered homeless. Aug. 1, memorial postage stamps, bearing portraits for the first time, were issued in four kinds to the number of 14,000,000. They were in honor of the Princes Arisugawa and Kitashirakawa, who died during the late war. Marquis Ito resigned, and Marquis Matsugata was called Sept. 18 to form a new Cabinet, which was duly announced. Oct. 1, by treaty with England, a parcel post is now in operation between the two countries. Oct. 3, the new line to Australia was inaugurated by the sailing of the "Yamashiro Maru." Orders have been issued for the establishment of legations in Hawaii, Peru, Brazil, and Siam, and consulates at Chicago, Sydney, and Antwerp. By virtue of a treaty with Germany, securing to Germans protection in Japan of their inventions and trade-marks, steps have been taken by other powers in regard to trade-marks, patents, and designs, under the favored-nation clause.

The statistics of Japan's foreign trade for the six months from January to June, 1896, show the following: Imports, 80,256,231 yen; exports, 53,442,401 yen; total, 133,678,632 yen. Of this total, Great Britain and her colonies had a share amounting to 44,697,746 yen in imports and 17,505,626 yen in exports; total, 62,203,372 yen, or nearly one half. The share of the United States was 7,449,197 in imports and 12,283,838 in exports; total, 19,733,035 yen. Germany sold to Japan 7,757,676 yen of goods and bought 1,634,212 yen; total trade, 9,391,888 yen. Figures for the last six months of 1896 are not ready in detail, but they show an excess of imports over exports.

JEWS. The coronation of the new Emperor of Russia was not followed by any proclamation of civil religious freedom. The chief of the counselors of the late Czar declared that the Jewish question in Russia is purely social, and its solution requires a long period of time. Perhaps it is unreasonable to expect that the Slav can hurry the process; but so long as unjust and proscriptive legislation prevails the Jew will not cease to be a pariah. It is one of the paradoxes of the situation that it has been reserved for a Russian Jew, Dr. Dembo, to vindicate the Jewish method of slaughtering animals that is now introduced in the military hospital of Kovno. There have been, happily, no outbreaks in the past year, and the Government

seems inclined not to neglect entirely the Jewish question. Anti-Semitism—which met its Waterloo in Germany when Hammerstein was convicted and Stoecker disgraced—continues in Austria, with the result that Vienna is likely to lose some of its commercial prestige, to the benefit of Buda-Pesth. Lueger's success is simply an outbreak of populism, aided by the Clericals, who hope thus to defeat the Liberals for all time. But a revulsion may be anticipated, as the Emperor has repeatedly expressed his displeasure at the agitation that would ruin the fair Kaiserstadt. In his despair at the situation Dr. Herzl, a Vienna journalist, proposes a Jewish state and travels east and west to propagate his ideas. In France Marquis de Mores's death signifies a lull in anti-Semitism, which never had a deep hold and was a kind of fad with Drumont and his friends, to favor their political advancement. The literary movement fostered by the Society for Jewish studies continues. Already Jewish *Wissenschaft* in Germany has close rivals in Hungary and France. With the broadening of French universities, Jewish scholars may find more inspiration in Paris in certain lines of research than in Berlin or Breslau. In England, which has just witnessed the inauguration of a Jewish Lord Mayor of London in the person of Sir George Fandel Phillips, the liberal movement in ritual and life only awaits a courageous leader. Claude G. Montefiore is its Melanethon, but its Luther has not yet appeared. Baroness de Hirsch has given £50,000 for the endowment of a Jewish Home for Consumptives. "Jewish Ideals," by Joseph Jacobs; "The Bible for Home Reading," by Claude G. Montefiore; "Jewish Life in the Middle Ages," by Israel Abrahams; and S. Schechter's "Studies in Judaism" are four notable English books of the year which can not but lead to a juster estimate of the Jew and Judaism. Israel Gollancz was elected English lecturer at Cambridge, which university conferred the degree of LL. D. on Prof. Felix Liebermann, of Berlin, and Prof. Asser, of the Hague. Michael Emanuel was elected Mayor of Southampton, and Hon. Emanuel Cohen, of Sydney, Supreme Court judge in Australia. Owing to the death of Sir Julian Goldsmid, Claude G. Montefiore was appointed president of the Anglo-Jewish Association. The vacation in Parliament was filled by the election of his son-in-law, Herbert M. Jessel. New synagogues were erected in London and in Cardiff and Pontypridd, Wales. Baron de Worms was raised to the peerage with the title of Lord Pirbright. Solomon J. Solomon was elected an associate of the Royal Academy.

In the Orient the process of education continues slowly but satisfactorily. The schools of the Alliance Israelite are centers of useful influence, which with more liberal support would be still more fruitful of results. The lads from the Orient who acted as guard of honor at Baron de Hirsch's funeral were an object lesson to the Jews of Europe. The political background in Persia, Morocco, Arabia, and Syria may delay further amelioration in the condition of the Jews, but the Alliance acts as a watchful protector. The colonization of Palestine seems to continue in exact proportion to the benevolence of Baron Edmond de Rothschild, but even so generous a donor may tire of the colonizing fad. The movement has a few enthusiastic adherents, but not the elements of permanence and success. The energy with which the Jews settle in new lands is shown by the new synagogues dedicated in Johannesburg, South Africa, and Perth, Australia. On Dec. 8, the anniversary of Baron de Hirsch's birthday, Baroness de Hirsch distributed his bequests to charities in Moravia amounting to 1,000,000 francs, half of which went to Jewish in-

stitutions. She created on the same day a pension fund of 2,000,000 francs for employees of the Oriental railways who were in service before 1890, when the connection of the late Baron de Hirsch with the company ceased.

Among the candidates returned to the Hungarian Parliament were the following Israelites: Drs. Moritz Mezey, A. Neuman, Nemenji, Heltay, Vison-tay, and Leo Lanczy. A large number of awards were won by Jewish exhibitors at the Nijni Novgorod fair, proving, first, that Jews take interest in the industries and technical arts, and, second, that the prejudice against them can not be so overpowering as is usually supposed. Two firms received the highest prize (the Russian eagle), 13 the gold medal, 68 the silver medal, and 42 diplomas of merit. Diplomas of honor were awarded to the Society for promoting Culture among the Jews, the Jewish Deaf and Dumb School, the Jewish Technical School at Thirsk, and the Jewish schools at Orscha and Olraha.

Among the new Senators appointed by the King of Italy in commemoration of the marriage of the Prince of Naples were Giacomo Malvano and Ulderico Levi.

The record of the year in the United States has witnessed further efforts in the educational field and increased interest on the part of the public. The lectures under the auspices of the Gratz Trust of Philadelphia spread information on Jewish studies, and introduced later in the year Joseph Jacobs, of London, who gave a series of addresses in various cities on "The Philosophy of Jewish History." Special appeals were made to strengthen the endowments of the two Jewish seminaries, East and West. The needs of the Sabbath schools are being met by special courses of lectures in New York and by the establishment of two papers, one in New York and one in Philadelphia, while the Union of American Hebrew Congregations has incorporated in itself the Hebrew Sabbath-school Union. The Publication Society has brought to American readers some valuable works by English Jewish authors. The Baron de Hirsch Trust maintains its agencies to promote industrial, technical, and agricultural training. At the Woodbine (N. J.) Agricultural Colony a new synagogue was built and dedicated by the colonists, while the Rev. Dr. J. Krauskopf's National Farm School for the immigrants has made rapid strides. The twenty-third annual report of the secretary of the Union of American Hebrew Congregations, at the convention held in Louisville, Ky., in December, showed that since the opening of the Hebrew Union College, in 1875, a total of \$311,019 had been contributed for its support. The chief matters discussed at the convention were the proposal to raise a large endowment fund for the college and a resolution against the sectarianism in the President's Thanksgiving proclamation. During the year the United Hebrew Charities of New York had received \$147,623 and spent all but \$1,350. The total number of applicants was 34,294. In relief alone \$110,918 was expended. In the employment bureau work was secured for 6,318. The immigration consisted only of 23,802 persons, of whom 18,000 remained in New York. The financial budget for the year of the Montefiore Home for Chronic Invalids gives the best insight into the character of the Jewish institutions of New York, although this home, like the Mount Sinai Hospital, is open to others than Israelites. The receipts amounted to \$88,000, half of which was contributed by subscriptions from different classes of members. Of the expenditures, \$51,000 went to the support of the home, while the

perpetual fund was increased by \$45,000, last year's balance being over \$50,000. The Hebrew Orphan Asylum of New York opened its new wings on Thanksgiving Day, thus furnishing accommodation to 1,200 orphans. A new edifice for the Hebrew Technical Institute of New York was begun and is now ready for occupancy, but the formal opening is deferred. Cincinnati has organized a United Hebrew Charities. Chicago's Jewish Training School has made rapid advances. The Hebrew Technical School, in Philadelphia, under the auspices of the Order of Benai Berith, meets the expectations of its founders.

The real interest of the year centered in the work of the Jewish Council of Women, which had its first session in New York, Nov. 15-20. Among the speakers were Mrs. Mary Lowe Dickinson, President of the National Council of Women, and Mrs. Henrotin, President of the General Federation of Women's Clubs. The Council reported a membership of 4,000 members, included in 51 sections. Its work was thus summarized: 87 circles, with 1,500 members, study Jewish history and literature. Libraries of Judaism were formed in 5 cities. Fourteen mission schools have been opened and maintained. While no stress has been laid on active philanthropic work, the sympathy of the members for those less fortunate than themselves has expressed itself in 13 sewing schools, 2 girls' clubs, 1 night school, 2 kindergartens, 1 employment bureau, 3 free baths, 1 boys' summer manual-training school, 1 circle of friendly visitors, 2 home libraries, 2 summer sewing schools, and 2 vacation societies caring for about 800 children. The papers read before the Council were by Mrs. Nellie L. Miller, of Memphis, Tenn.; Mrs. Rachel H. Sulzberger, of New York; Miss Etta L. Nussbaum, of Marion, Ind.; Miss Julia Telsenthal, of Chicago; Miss Julia Richman, of New York; Miss Carrie S. Benjamin, of Denver, Col.; Miss Rose Sommerfield, of Baltimore; Mrs. Sophie C. Axman, of Kansas City; Miss Lilian Wadd, of New York; Miss Elizabeth Hirschfeld, of Buffalo; Mrs. Henrietta Frank, of Chicago; Mrs. Henry Hahn, of Philadelphia; and Miss Clara Block, of Cincinnati. The subjects embraced such topics as Sabbath schools, Bible study, charity organization, children's training, New York's crowded districts, circle study, and mission schools. A good idea of the spirit that pervaded the Council can be gathered from these words in the president's address: "Let us hope for a time when the pure robe of religion will no more be trailed in the dust to cover national sins, greed, and ambition. A true Jewish womanhood, a Jewish life and home true to our spiritual inheritance, true to the flag under which we live, faith in God's providence—these are the ties that bind us—this the Jewish thought that shall belt the globe, bringing its message of higher life, of spiritual aims and purposes, practicing justice, loving mercy, and walking in modesty and humility before God in his light. For this have we come together."

The election resulted as follows: President, Mrs. Hannah G. Solomon, of Chicago; Vice-Presidents, Mrs. Sophie Beer, of New York, and Mrs. Emanuel Mandel, of Chicago; Treasurer, Miss Carrie Wolf, of Chicago; Secretaries, Miss Sadie American, of Chicago, and Miss Gertrude Berg, of Philadelphia.

Among the books of the year were Miss Emma Wolf's "The Joy of Life," the seventh part of Dr. Jastrow's "Talmudic Dictionary," "Sermons of American Rabbis," David W. Amram's "The Jewish Law of Divorce," Hecht's "Compendium of Jewish History," in addition to the English reprints furnished by the Publication Society.

K

KANSAS, a Western State, admitted to the Union Jan. 29, 1861; area, 82,080 square miles. The population, according to each decennial census, was 107,206 in 1860; 364,399 in 1870; 996,096 in 1880; and 1,427,096 in 1890. By the State census in 1895 it was 1,334,668. Capital, Topeka.

Government.—The following were the State officers during the year: Governor, Edmund N. Morrill; Lieutenant Governor, James A. Troutman; Secretary of State, W. C. Edwards; Auditor, George E. Cole; Treasurer, Otis L. Atherton; Attorney-General, F. B. Dawes; Superintendent of Public Instruction, Edwin Stanley—all Republicans; Adjutant General, S. M. Fox; Bank Commissioner, John W. Breidenthal; Superintendent of Insurance, George T. Anthony, who died Aug. 5; Railroad Commissioners, S. T. Howe, J. M. Simpson, and J. G. Lowe; Labor Commissioner, W. G. Bird; Secretary of Board of Agriculture, F. D. Coburn; Chief Justice of the Supreme Court, David Martin; Associate Justices, S. J. Allen and W. A. Johnson; Justices of the Appellate Court, W. A. Johnston, G. W. Clark, T. F. Carver, A. W. Dennison, E. C. Cole, and A. D. Gierson.

Finances.—The total valuation of taxable property as fixed by the Board of Equalization this year is \$321,846,698, and upon this a total levy is made of \$1,367,845.48 for State taxes. The total assessed valuation of all railroad property, including telegraph and Pullman and Wagner cars, for 1896 is \$59,341,535. In 1895 it was \$59,503,654.

The total State debt on June 30, 1896, was \$752,000, of which the permanent school fund of the State owned \$487,000 and the university permanent fund \$9,000. Seventy thousand dollars of the bonds matured July 1, 1896, and have been paid off. Bonds amounting to \$200,000 at 7 per cent. will mature in 1897 and \$220,000 in 1898.

Bonds aggregating \$6,853,987 are held by the various school funds, and on many of the county bonds among these no interest has been paid for a number of years. Several counties also owe large balances to the State on account of taxes levied in former years, some dating as far back as 1862.

The expenditures for the State departments and institutions for the year ending June 30, 1896, aggregated \$753,146.61; in 1894 the aggregate was \$816,123.23; and in 1895 was \$900,083.98. At the beginning of the fiscal year July 1, 1894, there was \$842,326.23 on hand. The receipts during the fiscal years ending June 30, 1895 and 1896, were \$4,898,092.83, making a total of \$5,749,419.06. The disbursements for the two years were \$5,135,889.96, leaving a balance in the treasury, June 30, 1896, of \$604,529.10. The report for the year ending Dec. 31, 1896, shows that the balance on hand was \$363,333.38, and that the permanent school fund amounts to \$7,016,993.10.

In December the commissioners of Lane County formally declared the county insolvent and issued instructions to the county treasurer to refrain from further payment of interest on the county's bonded indebtedness. The funded debt of the county is \$125,000. The city and county of Leavenworth are also reported in financial straits. The number of delinquents in the city is increasing each year, and the inability of the authorities to sell property for taxes has placed both the city and county in peculiar circumstances.

Education.—The tenth biennial report of the department shows that there are 9,284 organized

school districts in the State. The school population is 495,771. The enrollment in the public schools is 378,339; number of teachers, 11,700; average salary paid male teachers, \$43.82; average salary paid female teachers, \$35.58; average length of school year in weeks, 24; average levy for school purposes, 11.19 mills; value of school property, \$10,145,631; total expenditures for schools during the year, \$4,133,195.24. The bonded indebtedness of the school districts was \$44,545,708. One hundred and five counties held teachers' institutes, which cost \$38,776.60.

It was found, by a committee appointed by the Legislature to examine the condition of the school fund, that about \$200,000 has been invested in securities of doubtful value, aside from the Lawrence bonds.

The total attendance at the State Normal School, at Emporia, for the past year was 1,739, an increase of 90 over the preceding year. The increase in the regular normal classes was 241. The graduating class in 1896 numbered 100, and that for 1897 numbered 179. Kansas sends pupils from 89 counties, and 13 States and Territories are represented.

The State Agricultural College graduated 66 in June. It has 647 students.

The enrollment at the State University at the end of the year was 915. The law class graduated in June numbered 41, and that from the school of music 2.

The Dunkard College, at McPherson, has just been cleared of debt, and has an increased attendance—about 180.

Bethany College, a Swedish institution at Lindsay, has received benefactions this year from the King and Queen of Sweden.

A new university at Kansas City is under the presidency of H. J. Heintz, of Pittsburg, Pa.

The Haskell Indian School, at Lawrence, was allowed by Congress \$167 for each of 500 pupils a year, and for other expenses \$6,500. It graduated 7 from the normal department and 13 from lower classes.

Charities.—Both insane asylums are overcrowded. The last Legislature provided for a new central building and other improvements at the Ossawatimic Asylum, and these have been completed, but others are called for.

The Asylum for Imbeciles, at Winfield, has 117 pupils, with accommodations designed for 110. The report of the Board of Charities says there are not fewer than 1,000 children in the State who should be in an institution of this kind.

The School for the Deaf and Dumb has an enrollment of 240.

A gymnasium and industrial building has been erected at the Asylum for the Blind, in Kansas City.

The average number of inmates at the State Soldiers' Home the first half of the year was 421, and the cost of maintenance \$14,083.51.

The Soldiers' Orphans' Home has had in its care 329 children since its opening, of whom 151 have been returned to relatives who have become able to provide for them. The report of the board says that the increase in its capacity is likely to lead to making many children permanent wards of the State; the laws should be so amended as to give the State power to place them in homes where they can be kept under its supervision and care.

From the 8 institutions under the supervision of

the Board of Charities appropriations to the amount of \$71,444 were returned in July to the treasury.

Prisons.—The Penitentiary contained 891 prisoners, June 30, 1896. Of these 17 were women. For the fiscal year ending June 30, 1896, the expenditures of the institution were \$151,600.29, the earnings \$148,916.50.

The Hutchinson Reformatory has received 133 inmates—33 of them from the Penitentiary and 100 from the courts of the State. All are between the ages of sixteen and twenty-five. There were 107 remaining June 30. Thirteen per cent. can neither read nor write, and only 12 per cent. have ever studied anything higher than the common branches. The inmates on entering are placed in the second of 3 grades, and are then advanced or put back according to their conduct. The Industrial School for Girls, at Beloit, and the Reform School for Boys, at Topeka, are lacking in proper facilities.

The military prison at Fort Leavenworth was abolished June 30, 1895, and the control of the property was transferred from the War Department to the Department of Justice, and by this same act this first United States penitentiary came into existence July 1, 1895. By the law the military officers remained in charge until the Attorney-General could appoint and commission civil officials, and the final transfer was made Sept. 1, 1895. The number of convicts in 1896 was 525.

Militia.—The State National Guard consists of 133 commissioned officers and 1,480 men, exclusive of the Governor's staff.

Banks.—One new national bank has been organized during the year. The total number of suspended banks in two years was 15. In 1895 the deposits of all suspended banks amounted to \$159,553.96, of which 60 per cent. were adjusted during the year and the total losses did not exceed \$70,000. In 1896 the failures amounted to \$177,000, of which one bank has paid \$53,234.78.

The banks that failed in 1896 were the Stock-growers' and Farmers' Bank in Meade, the State Bank of Argonia, and the Argentine Bank in Argentine.

Railroads.—The thirteenth annual report of the Railroad Commissioners, issued in February, covers the year ending Nov. 30, 1895.

The following table shows a recapitulation of the business of the Kansas lines for the year ending June 30, 1895:

ITEMS.	Amount.	Net decrease.
Traffic earnings.....	\$114,898,845 31	\$10,517,608 70
Operating expenses.....	\$80,670,223 63	\$5,763,709 82
Income from operation.....	\$34,168,621 58	\$4,752,918 98
Income from all other sources	\$40,853,464 84	\$5,133,569 84
Total compensation of employees.....	\$49,448,571 25	\$4,106,044 75
Tonnage.....	26,001,169	3,450,322
Number of employees.....	81,054	7,990

Of the 24 roads in the preceding comparisons, 13 are now in the hands of receivers and 2 others have recently been in like situation. Only 2 of the 26 roads making operating reports to the board paid a dividend for the year, and these dividends were light, one $2\frac{1}{2}$ per cent. and the other $2\frac{1}{2}$ per cent.

One hundred persons were killed during the year, and 424 were injured.

A controversy arose in January over the freight charges for grain shipped to Gulf ports. A reduced rate which had been in operation was withdrawn Jan. 20.

The arbitrators prepared a tariff of rates on Kansas roads, lowering some and raising others, apparently to meet the requirements of the interstate commerce act, prohibiting higher rates from inter-

mediate points on the same haul than from terminal points.

A hearing of the complaint made by the Railroad Commissioners was had by the Interstate Commerce Commission, and a decision was rendered in September. The Kansas "Capital" says that when the hearing was had the commissioners and their counsel "surprised both the railroads and the Interstate Commission by seizing advantage of the decision just rendered by the Supreme Court, compelling beneficiaries of rebates to give testimony of any secret advantage enjoyed. At this hearing the first of such testimony ever offered in such a case was given, and the immediate results were important. The railroad managers learned of secret cuts and rebates in violation of agreements among themselves and the information given before the commission was immediately followed by greatly reduced published rates."

Changes were also made in the rates for shipping cattle, and on complaint, the Railroad Commissioners ordered the old rates restored in April.

In November an action was brought against the Santa Fé road, under the Kansas law of 1891, which provides that no corporation more than 20 per cent. of whose capital stock is owned by aliens, shall acquire real estate in Kansas, and that if any real estate should be acquired in violation of this statute it shall be forfeited to the State. It was charged that the action was inspired by those who were opposed to the reorganization plan recently adopted by the stockholders of the road. The court appointed a receiver and ordered him to take charge of the property, which consists of nearly 500 miles of railroad, together with depots, shops and engine houses, office buildings, real estate and other property. The alien land law was aimed at corporations formed for the purpose of acquiring and holding lands in the State, and was not intended to apply to railroads which own lands by special statute and by virtue of their State charters and whose stock is a merchantable commodity, 20 per cent. of which might at any time be purchased by aliens. In December a decision was given in the Jefferson County circuit court that the alien land law does not apply to railroad corporations.

Insurance.—The 61 foreign fire insurance companies doing business in the State have paid \$13,176 which was levied upon them under the law of 1895 providing for a 2-per-cent. levy for the benefit of the Fireman's Relief fund. Payment was generally resisted by the companies, and an effort was made by some of them to have the constitutionality of the law tested. The money collected is apportioned among the cities of the State. The Superintendent of Insurance reports also that many companies disregard the "valued-policy" law.

Products.—A bulletin of the Board of Agriculture shows the yield of the more important crops grown in the State in 1896. The total yield of winter wheat is 27,153,365 bushels, or 11,641,124 bushels more than in 1895. Its total value is put at \$13,016,229. The corn crop is 221,419,414 bushels, or 19,962,018 bushels more than last year. Its value is \$35,633,013, against \$46,189,772 for the previous year's crop. Of oats the yield is 19,314,772 bushels, against 31,664,748 bushels the year previous. The value of the crop was \$2,706,652. Spring wheat shows a yield of but 601,523 bushels. The combined value of winter and spring wheat, corn, and oats raised in 1896 is \$51,596,859, and that of the same crops in 1895 was \$59,273,079. There is an increase of \$626,641 in the value of live stock over that reported last year.

There are at present nearly 3,000 private irrigation plants in the State.

From the report of the Inspector of Mines it ap-

pears that there were mined in 1895, 3,190,843 tons of coal, valued at \$3,590,141; 9,021 men and 36 boys were employed in the industry; and the net product was 420,371 tons less than in 1894, owing, no doubt, to the fact that excessive freight rates and low-priced corn made it cheaper for farmers in the western and central portions of the State to burn their corn rather than coal. Distress has been caused among the miners in Osage County by the decreased demand for their product and the reduced price of their labor. The amount produced fell from 426,000 tons in 1885 to 263,000 in 1895, and the wages declined 34 per cent., while the number of men employed was reduced only from 1,936 to 1,604. The decline is due largely to the fact that the Santa Fé Railroad Company has used much less of the Osage County coal than formerly, and that other coal fields have had better freight facilities.

The first oil refinery in the State is building at Neodesha. The oil fields have been at a disadvantage on account of the rates of freight. Half a million acres were leased by the Standard Oil Company about the beginning of the year, and the oil was placed upon the market in June.

The natural-gas industry in Allen County is growing rapidly. In Iola and its vicinity there are 9 gas wells, closed in and packed ready for use, having a daily capacity as follows: Three wells each furnishing 3,000,000 cubic feet, 1 of 7,014,000 cubic feet, 2 of 8,000,000 cubic feet, 2 of 12,000,000 cubic feet, and 1 of 9,000,000 cubic feet—a grand total of 65,000,000 cubic feet of gas daily, equivalent to 3,000 tons of coal.

The report on the salt industry in Reno County shows the total amount of capital invested in the 17 plants to be \$1,052,000. There were 387 hands continuously employed, who received \$159,885 in wages. The amount of salt manufactured was 18,000 barrels.

The zinc product of the State in 1895 was 25,775 short tons; the previous year it was 25,588.

Decisions on Legislative Acts.—In May the United States Supreme Court decided a case coming under the Kansas mortgage-redemption act of 1893. It reversed the decision by Chief-Justice Martin and upheld all previous decisions by Chief-Justice Horton and Judge Hazen of a district court, to the effect that the law could not be applied to mortgages or contracts made before its passage. The law gives the mortgage debtor and other debtors the right to redeem their property sold under foreclosure or execution within eighteen months thereafter, by paying the amount bid by the purchaser at foreclosure sale, with interest. The Supreme Court holds that the law would impair the contract by changing the conditions of the remedy for the lender in case of default of payment if applied to contracts made before its passage.

The law of 1893 requiring railroads to provide car scales at every station shipping a considerable amount of grain was in April pronounced unconstitutional, on the ground that the title of the act states that it was for the protection of the shipper, while the body of the statute looked to the protection of the consignee; and the Constitution provides that the purposes of an act shall be clearly stated in the title.

The law of 1893 providing for weekly payment of wages was declared unconstitutional in April, on two grounds: The first, that it is class legislation, as it provides that only certain kinds of corporations shall pay wages weekly. The second, that it interferes with the right of contract, which is given in the State Constitution.

Political.—The Republicans held their first State Convention, March 10, at Wichita, with 614

delegates. The Committee on Resolutions reported that it seemed not appropriate to present a "platform of defined policy on national administration." The resolutions therefore were limited to general declarations of confidence in the Republican party and condemnation of the Democratic administration in national affairs and of Populist rule in the State, together with instructions to the delegates to support Mr. McKinley. The primaries and county conventions had instructed for McKinley. There was considerable factional fighting in the party during the interval between the two conventions.

The convention of Republicans to nominate State officers was held Aug. 11 at Topeka. A majority of the county conventions and primaries had instructed for Gov. Morrill, and he was renominated by acclamation. Following is the ticket: For Chief Justice, T. F. Carver; Governor, E. N. Morrill; Lieutenant Governor, H. E. Richter; Secretary of State, W. C. Edwards; Auditor, George E. Cole; Treasurer, Otis L. Atherton; State Superintendent, E. Stanley; Attorney-General, F. B. Dawes; Congressman at Large, R. W. Blue.

The convention of the People's party met at Hutchinson, March 18, and chose delegates to the national convention. The resolutions declared loyalty to the party and its principles and the following policy:

"First, we are in favor of the strictest honesty and economy in the administration of the government, both State and national; second, we are in favor of the overthrow and destruction of all monopolies and combines organized for the plunder and oppression of the people; third, we demand strict and effective control and supervision by Government of all corporations, performing public or quasi-public functions, and, if necessary to protect public interests, the ownership by the Government of all public utilities; fourth, we demand that the President and the Secretary of the Treasury be deprived of the power to issue or sell bonds without the authority of Congress being first given for each separate issue; fifth, we believe that all the money of the country, either coin or paper, should be issued by the Government and not by corporations or by individuals; sixth, we demand the free and unlimited coinage of both gold and silver at the ratio of 16 to 1, independent of the action of any other nation, and we believe that the United States is capable of maintaining such a system of finance as will promote the prosperity of its own people, without asking the consent of any other Government; seventh, we demand that the constitutional right of trial by jury shall be extended to every form of action, whether civil or criminal, and we denounce the trial of our citizens by injunction and contempt proceedings without the right of a trial by jury, as contrary to the spirit of our Constitution."

The second convention of the People's party met Aug. 5 at Abilene. The resolutions approved the national Populist code of principles, severely arraigning the Republican State administration and demanding the enactment of a maximum-freight-rate bill by the next Legislature. The committee's report did not mention Bryan and Watson, but after a lively debate a resolution approving their nomination was carried. Afterward a plan of fusion with the Democrats was accepted. The electors named by the Democratic convention were approved. The ticket follows: For Governor, John W. Leedy; Lieutenant Governor, A. M. Harvey; Secretary of State, W. E. Bush; Treasurer, D. H. Heflebower; Attorney General, L. C. Boyle; Auditor, W. H. Morris; Chief Justice, Frank Doster; Congressman at Large, Rev. J. D. Botkin; Superintendent of Education, William Striker.

The action of the convention was not satisfactory to the middle-of-the-road Populists, and they issued a call for a convention at Topeka, Sept. 19, in which it was said:

"The trafficking office hunters who have secured the control of the People's party organization have entered into a shameless bargain with the Democratic party of Kansas, trading off our principles and our candidate for Vice-President, Thomas E. Watson, nominated upon our St. Louis platform, for the sake of a chance to capture the State and congressional offices of Kansas.

"We, your standard bearers in the campaign of 1890, believing that the Populists of Kansas will stand by the St. Louis convention of 1896 and its candidate for Vice-President, Thomas E. Watson, in preference to the traitors and office hunters of the State of Kansas who made this trade in the last State convention, and thereby demand that the Populists of Kansas shall vote the Democratic electoral ticket, call this convention."

The plan for a convention was abandoned, as the managers learned of a movement to pack it and compel the acceptance of the fusion ticket; and they therefore selected Bryan and Watson electors, to be nominated by petition. Mr. Watson ordered his name taken off from the fusion ticket, on the ground that it was placed there to deceive Populist voters. Each wing of the party entered a protest before the State Board on Nominations against the admission of the electoral ticket of the other to the official ballot. The board decided against both protests. Later, the chairman of the Central Committee, J. W. Breidenthal, brought mandamus proceedings in the Supreme Court against the Secretary of State to compel the insertion of the name of Thomas E. Watson as candidate for Vice-President in the appellation of the People's party ticket on the official ballot, and the court granted the application. Associate-Justice Johnston dissented from the judgment of the court, for the reason that the alternative writ alleged that this addition to the appellation of the People's party was intended to deceive the voters of the State, and that this fact stood confessed under the pleadings in the case.

The first Democratic convention was held at Topeka, June 2. In the contest over the basis of representation at the meeting of the Central Committee the silver wing of the party was successful, and in the convention only four votes were opposed to the adoption of the platform, which declared for free coinage at the ratio of 16 to 1 without reference to the action of other nations, and instructed the delegates to Chicago "to demand and insist that said resolution [on coinage], or one that in all respects is equivalent thereto, be incorporated in the national platform, and that said delegates be further instructed to vote for no man for President or Vice-President whose history and past public record do not give full assurance that he is in entire harmony therewith, and to vote as a unit on all questions arising in said national convention." The sentiment of the convention was in favor of fusion with the Populists.

The Democratic convention for nominating State officers was held at Hutchinson, Aug. 4. A conference committee was sent to meet the Populists, who were holding their convention at Abilene, and at length a plan of fusion was agreed upon. It was agreed that if Watson should get more electoral votes outside of Kansas than Sewall, then the Democratic-Populist electors of Kansas, if chosen, should cast their votes for him; otherwise they should cast them for Sewall; and the Democrats were to ratify the State nominations made by the Populists.

A free-silver convention was held at Topeka, July 16. Delegates to the national convention at

St. Louis were chosen, and the delegates were instructed to vote for Bryan. The platform was confined to declarations upon free coinage, and Senator Teller and his associates were commended for leaving the National Republican Convention.

The Prohibition party held a State convention at Topeka, July 17, with 27 delegates. Presidential electors were chosen and the following State ticket: For Governor, Horace Hurley; Lieutenant Governor, George Hollingberry; Secretary of State, H. H. Geyer; Treasurer, John Biddison; Auditor, J. D. Talmadge; Attorney-General, J. T. Merry; Superintendent of Public Instruction, Mrs. Virginia Greevar; Congressman at Large, M. Williams.

The National party met in convention Aug. 18, and named electors and the following ticket: For Chief Justice, R. S. Silver; Governor, Henry L. Douthard; Lieutenant-Governor, Edward Clark; Secretary of State, T. S. Walker; Auditor, Levi Belknap; Treasurer, J. H. Murray; Attorney-General, M. Lucio O. Case; State Superintendent, C. H. McClerkin; Congressman at Large, J. D. Botkin.

The National Democratic party held a convention at Topeka, Aug. 25, and named delegates to the Indianapolis convention, but no State ticket. The resolutions repudiated the Chicago platform as undemocratic and unpatriotic and the nominees of that convention, and declared the gold-standard Democracy of Kansas to be in favor of the nomination of a third candidate for President and Vice-President by the convention to be held at Indianapolis.

In an effort to unite the temperance voters of the State, a convention was called to nominate independent Prohibition candidates at Topeka, Sept. 30. Rev. J. E. Brant was nominated for Governor, and promised to accept if the other two Prohibition candidates would withdraw. This they refused to do, and Mr. Brant declined. Rev. A. E. Kepford was nominated Oct. 14.

In the November election the Bryan electors received 171,810 votes; McKinley, 159,541; Palmer, 1,209; Levering, 1,921. The vote for Governor stood: Leedy, Democrat-Populist, 168,041; Morrill, Republican, 160,530; Hurley, Prohibition, 2,347; Kepford, Independent Prohibition, 703; Douthard, National Prohibition, 757. The entire fusion ticket was chosen. In 4 congressional districts Populists were elected, Republicans in 2, and a Democrat in 1. The Republicans will have 11 votes in the State Senate and 49 in the House; the Populists will have 27 in the Senate and 64 in the House; the Democrats 2 in the Senate and 9 in the House; and the Free-silver Republicans 3 in the House. The Populists have 5 of the 6 judges of the Appellate Court.

KENTUCKY, a Southern State, admitted to the Union June 1, 1792; area, 40,400 square miles. The population, according to each decennial census since admission, was 220,955 in 1800; 406,511 in 1810; 564,135 in 1820; 687,917 in 1830; 779,828 in 1840; 982,405 in 1850; 1,155,684 in 1860; 1,321,011 in 1870; 1,648,690 in 1880; and 1,858,635 in 1890. Capital, Frankfort.

Government.—The following were the State officers during the year: Governor, William O. Bradley; Lieutenant Governor, W. J. Worthington; Secretary of State, Charles Finley; Treasurer, G. W. Long; Auditor, Samuel H. Stone; Superintendent of Public Instruction, W. J. Davidson; Attorney-General, W. S. Taylor; Commissioner of Agriculture, Lucas Moore—all Republicans; Insurance Commissioner, D. N. Comingore; Land Register, C. O. Reynolds; Inspector and Examiner, Columbus W. Lester; Inspector of Mines, C. J. Norwood; Chief Justice of the Court of Appeals, William S. Pryor; Associate Justices, Joseph H. Lewis, James

A. Hazelrigg, John R. Grace, Thomas H. Paynter, George Durell, and B. L. D. Guffy—all Democrats except the two last named. Judge Grace died Feb. 20, 1896, and Joseph I. Landes was appointed to succeed him. Judges Pryor and Landes retired Dec. 1, and were succeeded by A. R. Burnam, Republican, and J. D. White, Democrat.

Finances.—At the end of the fiscal year June 30, 1895, there was a deficit in the treasury of \$40,968.17 and \$39,981.77 to the credit of the school fund. On Dec. 31, 1895, this deficit is said to have been \$19,355. There was at that date \$113,683.94 in the sinking fund, set apart to pay military bonds and interest then due. The sheriffs had paid in all taxes due the State except \$5,922. The bonded indebtedness of the State was as follows: Military bonds, \$174,000; certificates of indebtedness, \$500,000; railroad securities—past due, \$394; thirty-year issue, of 1835, \$5,000; also old issue, 1841 to 1846, \$1,000—\$6,394 (the last-named bonds supposed to be lost or destroyed); bonds held by the Board of Education, \$2,312,596.16; total indebtedness, \$2,992,990.16. As the revenue bill which passed the House was lost in the Senate, no relief was provided, and the debt was larger at the end of the year, when the total outstanding warrants amounted to more than \$1,000,000.

Products.—The total product of bituminous coal in 1895 was 3,138,023 tons, and of cannel coal 69,747 tons. The total value of both was \$2,455,406. The number of employes at the mines was 10,637; the average number, 7,865; and the time they worked averaged 146 days of ten hours each.

The acreage of tobacco in 1895 was 223,574, and the product 179,753,000 pounds.

The acreage and yield of the various crops in the State for 1896, as compiled by the Commissioner of Agriculture from the reports of the county assessors, are: Corn, 2,473,321 acres, producing 63,550,093 bushels; wheat, 790,061 acres, producing 10,441,806 bushels. Of oats there were produced 4,025,614 bushels; tobacco, 298,614 acres, produced 229,972,482 pounds; hay, 409,830 acres, produced 924,982 tons. The total for the hemp crop is 8,840,717 pounds. There were produced 99,067 bushels of barley and 272,257 bushels of grass and clover seed.

The Tax on Whisky.—All but 6 of the 300 distilleries in the State closed in August for a period of eighteen months on account of the depressed market. This was due partly to overproduction and partly to the increase in the tax—from 90 cents to \$1.10. The revenue bill, which passed the Legislature several years ago, contained a clause providing that owners of whisky in bond need not pay the State, county, or city taxes on it until it was withdrawn from bond or until the eight-year bonded period expired. The Franklin County authorities concluded to test the constitutionality of this law, and brought suit to compel several distillers to pay taxes on their whisky at the same time they paid on other property, and the Court of Appeals decided their point well taken, declaring the law unconstitutional. The present assessed valuation of whisky by the State Board of Valuation is \$8 a barrel, and at this rate there are several million dollars' worth of whisky upon which two or three years' taxes are due the State and the cities and counties where the warehouses are.

Destruction of Toll Gates.—In many of the counties the people have declared in favor of free turnpikes. The county authorities have delayed carrying out the will of the voters and buying the toll roads, and this has been the occasion for a display of mob violence in many places. Bands of men have gone out at night and broken down the gates, burned the tollhouses, and warned the gate keepers to collect no more toll, on pain of death.

Presidents of turnpike companies were also threatened. In some counties all the gates were destroyed. The United States Supreme Court decided against the State in a case involving the constitutionality of the law of 1890 prescribing rates of toll.

Mob Violence.—A street battle was fought at Winchester, Nov. 4, between a posse of policemen and a squad of negroes, in which 9 people, 6 colored and 3 white, were shot, 3 negroes being fatally wounded. The real cause of the trouble can hardly be ascertained.

A mob of 500 masked men lynched a negro who had been arrested charged with assault, Dec. 20, at Mayfield.

Monument to Pioneer Women.—The Lexington Chapter of the Daughters of the American Revolution, on Aug. 18, held a memorial service and unveiled a monument at Bryan's Station to the women of that place who, as the inscription records, "faced a savage host in ambush, and with heroic courage and sublime self-sacrifice that will remain forever illustrious, obtained from this spring the water that made possible the successful defense of that station."

Legislative Session.—The Legislature convened Jan. 7, and adjourned March 17. William Goebel was President *pro tem.* of the Senate, and Charles Blanford Speaker of the House. The Republicans had a majority in the House, and the Democrats in the Senate. On joint ballot they were tied, each having 68, while the Populists had 2 representatives. There were some contested seats in the House. A committee of 3 Republicans and 2 Democrats was appointed for considering these cases. It was reported that the Senate would take measures to unseat some of its Republican members if the House should unseat any Democrats, and the following resolution was adopted by the Senate, Jan. 16:

"Whereas, It has been published and openly charged that certain Senators now occupying seats in this body are ineligible, by reason of holding incompatible offices, and also by reason of having forfeited their office of Senator by accepting and using free passes upon railroads; now, be it

"Resolved, That a special committee, composed of William Geebel, G. S. Fulton, Rozel Weissinger, Fenton Sims, and C. J. Bronston, be and the same is now created, and said committee is now empowered and directed to investigate and determine whether any Senator or Senators are ineligible to seats now held by them, and to report by resolution what disposition shall be made of such Senators. In order to make thorough and effective such investigation, said committee may summon Senators and witnesses, with books and papers."

As the 5 Senators named were all Democrats, a motion was made to add 2 Republicans to the committee, but this was defeated by a vote of 16 to 21. The House committee reported in favor of the Republican contestant in one of the cases where election fraud was charged; but it does not appear that changes were made till near the close of the session.

The election of a United States Senator to succeed J. C. S. Blackburn, whose term expires in 1897, was in order. From the Democratic joint caucus 14 members opposed to the renomination of Mr. Blackburn, the candidate of the "free-silver" wing of the party, absented themselves, declining to be bound by its action. Those present gave 37 votes to Senator Blackburn, 13 to J. B. McCreary (the "sound-money" candidate), and 6 to ex-Gov. J. Y. Brown. The Republicans nominated Dr. W. Godfrey Hunter. Some question arose as to his eligibility, and it was found that his first step toward naturalization was taken in 1859, when he was eighteen years of age and therefore a minor; but, on the other hand, it was claimed that the statutes do not require a minor to make any declaration, but

only to continue to reside in the country and be naturalized when of age; and further, as Dr. Hunter did not finally take out his naturalization papers until 1865, having in the meantime served as a surgeon in the army, he came under the special statute permitting aliens who served in the army to be naturalized without any preliminaries. A resolution was introduced in the House, calling for a committee to inquire into the matter, but the Speaker ruled it out, deciding that this would be for the United States Senate to decide in case Dr. Hunter were elected.

One of the Populists voted with the Republicans most of the time, and the other with the Democrats; but at no time did either candidate receive the requisite number upon the ballot, though Hunter more than once lacked but one vote of it. Representative Wilson had died on Jan. 10, and the Democratic members proposed to postpone voting till after his successor should be elected and qualify, which was agreed to. But 5 of the Democratic members steadily opposed the election of Blackburn. Secretary Carlisle was appealed to to use his influence to bring them to Blackburn's support, but he declined to interfere. Scattering votes were given on the various ballots to J. Y. Brown, J. G. Carlisle, Henry Watterson, Walter Evans, S. B. Buckner, W. H. Holt, W. M. Reed, J. A. Hazlerigg, J. R. Grace, A. E. Wilson, C. E. Bate, J. B. McCreary, and others. Later, 4 of the Republican members withdrew their votes from Hunter. In February a letter signed by Dr. Hunter was brought forward, in which he agreed to "favor such legislation and support such measures as will restore silver to the position it occupied as primary or redemption money prior to 1873, when it was the standard of values." In explanation, Dr. Hunter said that he had signed this pledge, but he did not construe it as meaning the free and unlimited coinage of silver; but that it meant, just as the Republican national platform said, that every dollar, whether of gold, silver, or paper, should be worth 100 cents. He declared that he was a sound-money man and for the gold standard, and opposed to the free and unlimited coinage of silver. It was agreed in caucus that another effort should be made to elect him, and should it fail the Republicans should unite upon another candidate. Accordingly the next day, Feb. 29, Dr. Hunter withdrew from the contest. The votes formerly given to him were at first scattering, but finally St. John Boyle was made the party candidate. Senator Weissinger one of the sound-money Democrats, died on March 9, and the report that his colleagues had promised him before his death to stand by their principles to the last destroyed the hope that the Democratic vote would finally be concentrated on Blackburn.

The contested seats cases came up in March with a proposition to consider the claim of a Republican, Dunlap, to a seat in the House held by a Democrat, Kaufman. The point was made that, as the contestant had withdrawn, there was no longer any contest; but the chair decided that the Commonwealth was interested, and that it came within the province of the House to decide the matter. The vote was taken March 11, on the minority report of the committee, in favor of unseating Kaufman, and it was adopted by a vote of 49 to 46. The final vote was then taken on the majority report, as amended by this minority unseating report. All the Democrats left the House, and Kaufman was unseated, 51 members being present. This was immediately followed by retaliatory measures in the Senate, where two Republican members, James and Walton, were unseated amid wild excitement, and a crowd collected around the doors, declaring that the two unseated Senators should never go into the House to

the joint session; one of them, however, had slipped in while the vote was being taken in the Senate. The other was roughly handled when he was leaving the Senate Chamber. When the roll was called, the Republicans refrained from voting. Soon after this, six outsiders were sworn in as deputies by the sergeant-at-arms of the Senate—Jack Chinn, Eph. Willard, Jim Williams, John Williams, John McElroy, John Sneed, and Walter Sharp. The Governor sent word to the sheriff that it was his duty to take such steps as were necessary to prevent the collection of persons in the lobbies who were interfering with the free access of members, and to preserve the peace. The sheriff did not succeed in removing the armed deputies. The situation on March 14 was described by the Frankfort correspondent of the "Courier-Journal." He said that there was not a score out of the 132 members at Saturday's session who did not have one or two pistols concealed, to say nothing of knives and other weapons. Even the peaceably disposed legislators were tempted to arm for self-defense, and both parties had chosen leaders on the watch at commanding points about the hall. James and Walton, whose presence was obnoxious to the Democrats, were placed among Republican associates, and one of the most fearless of the party, well armed, was deputed to open fire on any one who attempted to molest them. The Democrats had several trustworthy men in a position to cover this Republican in case of a signal for close action. The Democratic leader, seated in the center aisle near the door, was another storm center.

The next day, March 15, the Governor issued a proclamation, reciting the facts and calling out a strong force of militia.

When the sergeant-at-arms appeared at the Statehouse, with six deputies, they were refused admittance by the officer in command. The presence of the militia caused excitement in the city, and an indignation meeting was held.

The proceedings on Monday went on without violence, but both parties refused to vote. In the House a Republican sent up resolutions approving the Governor's action, and a Democrat offered a substitute condemning it. After some disorder, both were withdrawn. In the Senate, resolutions were introduced, accusing the Governor of usurpation of power, and one was adopted, providing for a committee to investigate "such contempt and breach of privilege."

March 17 was the last day of the session, according to the constitutional limit of sixty days. Only two members voted when the roll was called in joint session for the fifty-fourth ballot, and the adjournment was taken without a Senator's having been chosen. The Governor appeared before the Senate committee and presented affidavits to show that violence had been feared at the Statehouse, and that the civil authorities were not in position to preserve the peace. The committee brought in a report censuring the Governor, which was adopted by a party vote.

There was also a deadlock on the election of a State librarian through the month of January, when by law it should have taken place. The Democratic candidate was elected in February, but the right of the incumbent to hold over was asserted.

There was very little legislation during the session. Less than 40 of the bills introduced became laws. Nine resolutions were passed. It was important that provision should be made for revenue, as the State is deeply in debt; and two bills passed the House, one to provide for borrowing money "in order to meet the existing deficit in the revenue of the Commonwealth, and to specify the purpose for which the same is to be used," and the other "for

raising revenue to pay the deficit for the fiscal year ending June 30, 1896," but the Senate refused to take action on them.

Among the more important of the measures passed were the following:

To create a more speedy remedy for the setting aside of fraudulent conveyances.

Appropriating \$10,000 to erect monuments in Chickamauga and Chattanooga National Parks, and providing for a commission to serve without pay except for defraying necessary expenses.

To prevent fraud in canning fruit and vegetables.

Establishing two houses of reform, one for boys and one for girls.

Providing for the reorganization of railroad and bridge companies.

Amending the law in regard to the issuing of bonds for common-school purposes.

Making it a felony to engage in a prize fight or a fight for a bet, wager, or stakes, and prescribing a penalty of imprisonment in the Penitentiary one to five years.

To enable the commissioners of the sinking fund to sell and transfer the State's interest in turnpike roads.

To prohibit the wearing of society badges by other than members.

For the protection of purchasers, lessees, and incumbrances of real estate, providing for the filing of notices of actions, liens, etc., affecting titles.

Amending the law concerning liens, so that a lien may be held when contract has been made with a contractor, architect, subcontractor, or authorized agent, as well as with the owner.

Amending one section of the law for the creation and regulation of private corporations.

To provide free turnpike and gravel roads. On petition of 15 per cent. of the voters of any county, the county judge shall appoint an election to determine whether a majority is in favor of issuing bonds for the purchase and maintenance of the turnpike roads of the county free of toll to the traveling public; and the act prescribes the method of procedure in case the vote is in favor of such purchase.

Prohibiting private brands on stamp heads of whiskey barrels.

Providing for compulsory education by requiring that every child of school age shall attend school not less than twelve weeks in each year, and forbidding the employment of children who have not so attended.

The following amendment to the Constitution was agreed upon, and will be submitted to the voters:

"The General Assembly may, by general laws, provide for taxation by municipalities, of property other than lands and improvements thereon, based on income, licenses, or franchises, which may be either in addition to, or in lieu of, *ad valorem* taxes thereon."

Political.—The Republican State Convention met at Louisville, April 15-16. T. L. Morrow was temporary and C. R. Bradford permanent chairman. Both were so-called "Bradley men." The "McKinley men" had 742 votes to 834 of the "Bradley men." Delegates to the national convention were instructed to support Gov. Bradley as presidential nominee, and to vote for him so long as his name should remain before the convention; but if it should be withdrawn, they were then to vote for Mr. McKinley. Three of the four delegates at large were the men preferred by the friends of the Governor.

The resolutions favored protective tariff and reciprocity; declared for the Monroe doctrine; ex-

pressed sympathy for Cuba; declared in favor of maintaining and extending the free-school system; and on the currency question said:

"We are opposed to the free and unlimited coinage of silver, believing that it would involve the country in financial ruin. The gold dollar is the best dollar and the less liable to fluctuation, and for these reasons and in order to conform our standard to that of other great commercial nations, we favor it as the standard money of the United States and the maintaining on a parity with it every other dollar, whether of silver or paper."

Following is the only resolution on State affairs: "We indorse the Republican majority in the State House of Representatives for its prompt and adequate measures for the relief of the State treasury and the payment of the large deficit left by the late Democratic administration, and condemn the Democratic majority in the State Senate for its refusal to assist the House in preserving the honor and maintaining the credit of the Commonwealth."

At the Democratic county conventions a large majority of the delegates chosen to the State convention were in favor of free silver. Both factions had made a vigorous canvass. The State convention was held in Lexington, June 3. C. J. Bronston, candidate of the silver delegates, was elected temporary chairman by a vote of 691 to 206. All the delegates chosen to the national convention were free-silver men. They were instructed to cast the vote of the State in the convention as a unit for Hon. J. C. S. Blackburn for President, and to use all honorable means to secure his nomination.

The resolutions expressed opposition to the national bank system and the retirement of greenbacks declared in favor of tariff for revenue only; condemned the A. P. A.; condemned the calling out of the State militia by the Governor; and said of the currency:

"We are in favor of an honest dollar, a dollar worth neither more nor less than one hundred cents. We favor bimetalism, and to that end we demand free and unlimited coinage of both gold and silver at the ratio of 16 to 1 as standard money, with equal legal-tender power, independent of the advice of any other nation.

"We hold that the Secretary of the Treasury should exercise his legal right to redeem all coin obligations in gold or silver, as may be more convenient, and are opposed to the issue of bonds in time of peace for the maintenance of the gold reserve or for any other purpose."

At the State convention of the People's party, in Paducah, July 20, a platform strongly opposed to the plan for the adoption by the national convention of the Chicago ticket and platform was carried by a vote of 240 to 170. A plan of fusion with the silver Democrats was arranged Sept. 22, by which 2 of the Populist electors were to be placed upon the ticket and the others withdrawn.

The National Democrats held a convention at Louisville, Aug. 20, with about 300 delegates. J. R. Hindman was elected temporary and J. Q. Ward permanent chairman. The report of the Committee on Resolutions was adopted unanimously. After approving the teachings of Jefferson, Jackson, Benton, Tilden, and Cleveland, the report demanded a currency measured by the existing gold standard, to consist of gold with a bank currency well secured and redeemable in gold, with the use of silver and other metals within the reasonable limits prescribed by convenience and safety and to be kept at par with gold. A tariff for revenue only was demanded. The platform and candidates of the Chicago convention were declared undemocratic, and 12 reasons were given for pronouncing

them so. Mr. Bryan was declared a Populist, and Mr. Sewall a subsidized shipbuilder and a high protectionist. The resolutions said further in justification of the attitude of the party:

"We hold that Democratic delegates appointed by the State conventions to represent the party in national conventions are the mere agents of the Democratic party of the United States, with powers delegated to them to apply the fundamental principles of the Democratic party to the solution of existing political problems, and limited to the selection of candidates for office who are members of the party and are true apostles of its teachings; that the Chicago convention, by declaring the principles of Populism to be Democratic principles, and by nominating as its candidate for President a confessed Populist, exceeded the authority delegated to it by the Democratic party; and that its unauthorized and revolutionary action in thus betraying the party is not binding upon the Democratic voters of the country. We believe that when a convention willfully repudiates the fundamental principles of the party no Democrat remains under any moral obligation to support it, nor is there any tradition of the party that requires him to do so. On the contrary, it is evidence of moral weakness for any free man to vote to enforce policies which his judgment tells him are inimical to the welfare of the people or the integrity of the nation."

In the election, the vote for McKinley was 218,171; for Bryan, 217,890; for Palmer, 5,114; for Levering, 4,781; giving McKinley a plurality of 281. One Democratic and 12 Republican electors were chosen. J. D. White, Democrat, was elected judge of the Court of Appeals from the First District by a vote of 40,653 to 25,085 for Landes, the Republican candidate, and in the Fifth District A. R. Burnam, Republican, was elected by 37,664 to 36,508 for W. S. Pryor, Democrat. The Republicans elected 4 of the 11 members of Congress. The Republican candidate in the Third District filed notice of contest in December.

KOREA, an independent kingdom between the Japan and Yellow Seas, bordering on Russia and China. It is an island, though usually reckoned as a peninsula, the Tumen and Yalu rivers flowing from the same lake in the top of the Long White mountain on the northern central border. The coast line measures over 17,000 miles, and the area is over 82,000 square miles. A census to be taken on scientific principles is now in progress. The people inhabit the 8 provinces and hundreds of fertile or occupied islands among the thousands forming the Korean archipelago, which are counted as belonging to the kingdom. In 1866, when the present dynasty came to an end in the male line, power centered in the hands of the regent Tai-Wen-Kun ("Great Royal Prince"), father of the heir of the throne, who was then a boy of fourteen. This Korean Mayor of the Palace, the head of a powerful party and clan, has been the chief political figure during the past thirty years in persecution of the Christians, in anti-foreign measures and edicts, in plots and counter-plots, in outbursts of Korean Chauvinism, and in the violently pro-Japanese Cabinet of 1895. Opposed to him, as his implacable enemy and counter-foil, has been the Queen Min, head of the powerful pro-Chinese clan of that name, who repeatedly nullified the measures of the Japanese, of the King's father, and of the pro-Japanese party until her assassination, Oct. 8, 1895. Direct Chinese influence, so powerful from 1882 to 1894, was annihilated after the decisive battle at Ping-Yang, Sept. 16, 1894. The Japanese prestige, maintained at court by force from June, 1894, to Feb. 11, 1896, has waned to a shadow. Russia now holds the chief influence in the peninsula. In the recent

reforms already carried out or in process, old Korea is rapidly passing away, and new theories and conditions prevail.

Government.—Korea is a constitutional monarchy, the King's powers being limited by his own oath of Jan. 8, 1895, in which he bound himself to a programme of reforms founded on modern and Western ideas. He is assisted by a Cabinet, or Council of State, called the Enye-Chong-Pu, consisting of 13 members, including a Prime Minister and a Vice Prime Minister (who is also Minister of the Interior), who preside over the various departments—Foreign, Home, Finance, Army, Justice and Agriculture, Trade and Industry. With these are 5 counselors well versed in diplomacy and a chief secretary. They hold their appointments directly from the throne. The King or the heir apparent attends the meeting of the ministers, at least two thirds of whom must be present to form a quorum. The ordinance giving the details of the Constitution of this Council of State were formulated and published in the "Official Gazette" of Sept. 26, 1896. In place of the 8 provinces, which are now only geographical expressions, and mainly river basins, and instead of 23 prefectures of 1894, are now 13 provinces.

Finance.—Korea has a silver standard. The unit used in this article is the Japanese yen (50 cents). In 1895 the revenue of the kingdom was 4,809,410 yen; expenditure, 6,316,831 yen, showing a deficiency of 1,507,421 yen. The Government loan amounts to 1,507,431 yen. In the budget for 1896 the items of revenue are: In land tax, yen, 1,477,681; house tax, 221,338; miscellaneous, 9,132; ginseng tax, 150,000; gold-dust licenses, 10,000; customs, 429,882; uncollected taxes of 1895, 130,000; various incomes, 5,000; output of mint, 1,282,450; surplus (unexpended portion of loan from Japan), 1,093,927; estimated deficiency, 1,380,669; total, 6,190,079. The items of expenditure are (of ordinary expenditure): Civil list, 500,000; foreign office, 71,932; home affairs, 1,446,630; treasury, 1,740,106; army, 1,028,401; justice, 47,294; agriculture, commerce, and public works, 183,416; total, 5,017,779. Adding extraordinary expenses—Queen's funeral, 70,000; home affairs, 19,300; treasury, 282,300; army, 700; reserve fund, 800,000—the grand total of expenses, balancing expenditure, is 6,190,079. Notable reforms in the matter of levying and collecting local taxes, including a rigid inspection, have been introduced. Dr. McLeavy Brown is foreign inspector of the treasury. There is a foreign debt to Japan of 3,000,000 yen, which the Government is to pay by borrowing the same amount from the Russo-Chinese Bank.

Foreign Trade.—The total net trade coming under the cognizance of the maritime customs during 1895 amounted to the sum of 12,884,232 yen, an increase of about 2,000,000 yen over 1894 and of nearly 5,000,000 yen over 1893. Allowing for undoubted expansion due to the presence of the Japanese armies in 1894 and 1895, there are evidences of improved economic conditions. The ports open for foreign commerce are Chemulpo (near Seoul), Fusan in the southeast, and Won-Sen in the northeast. Owing to the absence of the Chinese traders, the native merchants of Won-Sen attempted an unprecedented active enterprise in going to Shanghai to purchase foreign goods, while a large class of petty vendors is springing up to distribute foreign goods in small quantities, buying up with the proceeds native produce suitable for export. The discharge of many thousands of unnecessary employees from Government service compels to new enterprises for livelihood. Transportation from the interior to the ports is greatly hindered by the absence of roads, the primitive means of moving freight

being mainly the backs of bulls and men. The anarchy prevailing in certain provinces has also thus far checked the healthy development of commerce. Probably double the amount of gold leaves the country beyond that declared at the custom-house. The chief products of the country are rice, cotton, beans, tobacco, silk, hides, fish, and gold dust. At Chemulpo during the five years before 1893 the volume of trade by the Japanese and Chinese was in the ratio of 62 and 216. During 1894, the year of war, the Japanese trade with Koreans amounted to 3,088,010 yen, against 1,894,422 yen by Chinese; and this discrepancy remained till August, 1895; but during four months of 1895 the Chinese merchants distanced their rivals. In imports, those from Japan are driving out those from Great Britain. The Japanese weavers, having studied the Korean market closely, adopt the texture, length, and width of cotton goods of native make in the southern provinces, which are deservedly popular for their durability; and the width, 18 inches, is especially adapted to the making of Korean clothing without waste. These imported goods are much cheaper than the native article. Hence the import of Japanese cheap goods, which before the war was insignificant, has grown from the value of \$67,000 in 1894 to \$390,000 in 1895. The ratio of increase at one port, Won-Sen, was as $3\frac{1}{2}$ to 39 in one year. The Japanese yarn, though coarser and less evenly spun, is \$5 a picul (133 pounds) cheaper than the British article, and is rapidly supplanting both that and the native yarn, for the native manufacture of cotton goods. Miscellaneous Japanese piece goods are also a formidable rival of those from Great Britain. The total net trade of Korea for the past five years is: 1891, \$10,249,199; 1892, \$9,669,400; 1893, \$7,986,840; 1894, \$11,067,000; 1895, \$12,884,232.

The Army.—Under Japanese and American officers the military forces of the kingdom have been reconstructed, and the men armed, drilled, and uniformed in modern style. Most of the work, in the face of great difficulties, has been creditably done by American officers, Gen. William McE. Dye and Col. Niusted. During the past year the soldierly appearance of the troops and their ability shown in coping with the insurrections in the southern provinces, won much praise from foreign critics. The soldiers are partly drilled by Russian officers, and are uniformed in Russian style. There is no navy.

Events.—The year opened with the pro-Japanese Cabinet in power, some of the members of which had been concerned in the murder of the Queen. The King had been forced by them to sign a document transferring the Government of the country from the sovereign to the Cabinet. By his people the King was believed to be virtually a prisoner in the palace. The hair-cutting edict, which compelled the people to alter the fashion of five hundred years and to clip their hair short, was so very unpopular that it was resisted, even to insurrection, in some places. The news of the acquittal in Japan of the Japanese envoy Miura and 47 other persons, believed to have been implicated in the attack on the palace (led by the Tai-Wen-Kun) and in the murder, by irresponsible Japanese ruffians, of the Queen, Oct. 8, 1895, caused intense indignation in Korea. It being openly declared that some of these Japanese would return to Seoul and be given important offices, the people of Chung-Chong rose against the authority of the Cabinet and threatened to march on Seoul. The King, fearing a plot that would endanger his personal safety, determined to escape to the Russian legation. The plan was elaborated chiefly by the palace women. Early on the morning of Feb. 11 the King and the Crown Prince made secret flight in one of the common closed chairs used by the female

servants of the palace. The day before the Russian legation guard was increased by the arrival of 127 men from the Czar's men-of-war at Chemulpo, so that inside the gates the force was strong enough to protect the King in case forcible attempts should be made to remove him. By night every member of the old Cabinet was dead or fugitive, and two members—the Prime Minister and the Minister of Agriculture (who was known to have prevented the Queen from escaping from her murderers)—had been killed and their naked bodies outraged by the mob, which sympathized with the King in his escape. On the same day the King issued an appeal to his soldiers to protect him and to "go after the chief traitors (members of his former Cabinet); to cut off their heads at once, and bring them." A later edict modified this, and ordered the traitors to trial.

A new Cabinet was appointed, and the troops were recalled from Chung-Chong province, because the rebels laid down their arms when they heard that the pro-Japanese Cabinet had ceased to have power. In other parts of the country anti-Japanese riots broke out, in which the telegraph wires and poles were cut down. In all, 62 Japanese, mostly telegraph workmen or operators, were killed. The other events of that day were the repeal of the obnoxious law ordering the cutting off of the top-knots, the release of prisoners from the prisons, and the removal of the Queen Dowager and the Crown Princess also to the Russian legation, where the King still holds his government, though going to the palace to receive foreign envoys, one of whom presented the claim of the Mikado's Government for \$146,000 indemnity for Japanese subjects killed during the February riots.

The official report of the judicial commission appointed by the King to examine into the murder of the Queen and the result of the trial, conducted before ex-United States Consul C. R. Greathouse and by the Minister of Justice, Yi-Pom-Chin (now Korean minister in Washington), was made public in March. It showed that the actual assassins of the Queen were Japanese ruffians, and that the Japanese dressed in plain clothes and armed with swords and pistols who were directly engaged in the affair (exclusive of the regular Japanese military, whose officers facilitated their entrance) numbered about sixty.

On April 7 appeared the "Seoul Independent," a journal of Korean commerce, politics, literature, history, and art, printed in Korean and English, and edited by Philip Jaison, a Korean by birth, but now an American citizen.

The Memorial Dispensary in honor of James Hall, M. D., an American missionary at Ping-Yang, was begun in May.

Dr. McLeavy Brown was appointed adviser to the Finance Department.

The forty-fifth birthday of the King was celebrated Sept. 2 by native and foreign dignitaries and by a great gathering of Korean Christians who, Church members and adherents to the number of about 2,000, assembled in the pavilion near the old Mo-Ha-Kwan ("Gate of Welcome and Blessing"), where formerly before the ambassadors from China the King of Korea used to perform the act of vassalage to the Chinese Emperor. The ceremonies consisted of prayer, songs, and addresses, and were highly approved of by the King, who also received later the students of the Royal English School. These, in their foreign uniform, with hair cut in Western style, after wishing his Majesty long life, gave him three cheers.

On Sept. 4 a great procession left the palace, bearing the remains of the late Queen, and through a vast concourse of people moved to the Spirit House and House of Preparation, where the body was deposited with solemn ceremonies. On the

same day rules and regulations for the approaching census were issued.

The new Korean minister, Yi-Pom-Chin, reached Washington Sept. 9. Seven Korean students are in Howard University, and an increasing number in other American schools.

In the spring of 1896 the Independence Club, composed of 2,000 natives interested in the social and the material development of their country, as well as in her independence, was formed. With financial aid from the Crown Prince, they laid, on Nov. 31, the corner stone of Korea's Independence Arch, to take the place of the old gateway of vassalage to China, which was torn down in the spring of 1895.

Enterprises.—The telegraphs, which were made over to the Japanese during the war, are now in Government hands. The wires stretch from Wiju, on the Chinese frontier, to Seoul, with offices also at Ping-Yang and Sung-Do; and from Seoul to Pusan, affording communication in Korean, Chinese, or English with Europe by way of either China or Japan. Surveys have been made for railways along the same routes, and from Chemulpo to Seoul. Concessions for building the railways have been given to French, Japanese, and American par-

ties, respectively. The contract with the Five-Lille Company to build, equip, and work the Seoul-Wiju line was signed July 3. James R. Morse, of the American Trading Company, has the privilege of constructing the Seoul-Chemulpo line. In each case the Korean Government gives the land for the roadbed, but allows no mining concessions, while holding the option of purchase after fifteen years from the running of the first train. In Seoul handsome brick buildings in Western style have been erected. The foreign quarter, with its pavements, improved drainage and the removal of garbage, and private and legation buildings, is a stimulating object lesson. A solid stone French Catholic Cathedral, capable of holding 3,000 worshippers, is in process of erection in Seoul, with subordinate seminaries, nunneries, orphanages, and churches in the capital, suburbs, and ports. Protestant churches, schools, and dispensaries have been erected in the same places, all of which shows the liberality of the Government. There are now 200 foreigners and 7,000 Japanese residents in Korea. The American Methodists report 818 probationists and members. The Tri-Lingual Press, which issues "The Korean Repository," a monthly magazine in English, printed 2,634,800 pages in 1896.

L

LITERATURE, AMERICAN, IN 1896.

Of the making of books there is indeed no end. The record of book production in the United States during the year shows an increase of 234 books over the largest number ever previously sent forth. The total gives 5,703 new books and new editions for 1896, against 5,469, in 1895, but of this number only 3,300 were by American authors, whereas native talent was responsible for 3,396 the year previous; 5,189 new books appear against 5,101 in 1895, and 514 new editions show a marked increase over 368 of that year. Of the whole number of books produced in this country, 1,261 were by English or other foreign authors, and 1,142 were imported, either bound or in sheets. Exactly the same number of works of fiction appeared both years (1,114), and of these 270 were from the pen of native Americans. A decided improvement in the character of the work done was noted, for not only is the American novel far beyond the average English production in point of morals and decency, but works in other departments achieved a higher level than usual, except, it is sad to say, in the case of poetry, which fell below the conceded low level of recent years. The greatest numerical increase was shown in books of literary history and miscellany, of history, of description and travel, of the fine arts, of sports, of law, and of biography, while works on theology and religion, on science, on political and social science, on physical and mathematical science, on mental and moral philosophy, as well as books of humor and satire, of poetry, and juvenile productions show a decided increase.

Biography.—"The True George Washington," by Paul Leicester Ford, presents the Father of his Country more as a man than a historical figure, making him speak, as far as possible, for himself; and from Prof. Woodrow Wilson we had another exhaustive study of George Washington, illustrated by Howard Pyle, Harry Fenn, and others. "The Life, Public Services, Addresses, and Letters of Elias Boudinot, LL. D., President of the Continental Congress," was edited by J. J. Boudinot, and filled two volumes; a "Life of Major-General James

Jackson," by Thomas U. P. Charlton, commemorated another revolutionary hero in an edition limited to 250 copies; and "A Typical American, Benjamin Franklin," was the subject of an address by Joseph Medill, delivered before the Old-Time Printers' Association of Chicago, Jan. 17, 1896. Vol. III appeared of "The Life and Correspondence of Rufus King," edited by his grandson, Charles R. King, M. D., and to an earlier date belong "The Life of Thomas Hutchinson, Royal Governor of the Province of Massachusetts Bay," by James X. Hosmer, and "The Journal of Captain William Pote, Jr., during his Captivity in the French and Indian War, from May, 1745, to August, 1747," with an account of the journal by its discoverer, John Fletcher Hurst, and a historical introduction and notes by Victor H. Palsits. "Samuel Gorton: A Forgotten Founder of Our Liberties, First Settler of Warwick, R. I.," found a biographer in L. G. James, and "The Life of Roger Sherman" was written by L. H. Boutwell. Henry E. Legler published "Chevalier Henry de Tonty: His Exploits in the Valley of the Mississippi," enlarged (with illustrations) into "The Man with the Iron Hand," and "Nathaniel Massie: A Pioneer of Ohio," by David Meade Massie, gives much of the early political history of that State. "Pioneers of Science in America" was the title of 50 sketches of their lives and scientific work edited and revised by William J. Youmans, M. D., and accompanied with portraits, and Isabella Field Judson edited "Cyrus W. Field: His Life and Work (1819-1892)," outlining her father's remarkable career. Two volumes contained the "Life and Letters of Oliver Wendell Holmes," for which we are indebted to John Torrey Morse, Jr., and the same genial poet is again presented to us, with various of his contemporaries, by Mrs. Annie Adams Fields in "Authors and Friends," and in the charming autobiographic "Chapters from a Life" of Elizabeth Stuart Phelps. "A Few Memories" of Mary Anderson, Countess de Navarro, proved also delightful reading, and "My Reminiscences," by Louis Arditi, were sent out as an American book. Two distinguished American authors were commemorated,

Harriet Beecher Stowe, in an edition of her "Writings" in 16 volumes, with biographical introductions, and Eugene Field in a Sabine edition of his "Works" in 10 volumes, with a memoir by his brother, Roswell M. Field, and introductions by Richard Henry Stoddard, Edward Everett Hale, Francis Wilson, James Whitcomb Riley, and others. "Bayard Taylor" was added to the series of "American Men of Letters" by Albert H. Smyth, and a volume was collected of "Little Journeys to the Homes of American Authors" originally contributed to "Putnam's Monthly" in 1853 by various writers of distinction, all but two of whom have since died. "Whittier: Prophet, Seer, and Man," was from the pen of Benjamin O. Flower, while from John Burroughs we had "Whitman: A Study," and from Thomas Donaldson "Walt Whitman, the Man." The life, letters, and journals of "Maria Mitchell" were compiled by her sister, Phebe Mitchell Kendall, and "Leaves from Juliana Horatia Ewing's Canada Home" were gathered and illustrated by Miss Elizabeth S. Tucker. "The Story of a Busy Life," by Dr. James Russell Miller, contained recollections of Mrs. G. A. Paul (Minnie E. Kenney). In the series of "Women of Colonial and Revolutionary Times" "Dolly Madison" was chronicled by Mrs. Maud Wilder Goodwin; "Mercy Warren," by Alice Brown; and "Eliza Pinckney" (with facsimile reproduction), by Harriott Horry Ravenel. Great educators were not neglected: "Horace Mann" was the subject of an address delivered by Hon. William T. Harris, United States Commissioner of Education, before the National Educational Association; "The Life of James McCosh," a record chiefly autobiographical, was edited by William Milligan Sloane; "Memoirs of Frederick A. P. Barnard, D. D., LL. D., D. C. L., Tenth President of Columbia College, in the City of New York," were prepared by John Fulton, and the "Celebration of the Fiftieth Anniversary of the Appointment of Professor William Henry Green as an Instructor in Princeton Theological Seminary, May 5, 1896," contained a bibliography of his published writings. "The Life and Letters of Charles Bulfinch, Architect," with other family papers, were edited by his granddaughter, Ellen Susan Bulfinch, proving a most timely and instructive record of the work of the builder of the Statehouse of Massachusetts and Faneuil Hall, who also completed the Capitol at Washington; and another architect of distinction, "John Wellborn Root," designer of the general plans for the structures of the Chicago Exposition of 1893, had a study of his life and work made by his relative, Miss Harriet Monroe, accompanied with etchings and drawings and facsimiles of his designs. The life of "Edward Hodges," at once founder and representative of the Anglican Cathedral School of Music in America, was written by his daughter, Faustina Hasse Hodges. Frederick E. McKay and Charles E. L. Wingate edited the 45 sketches of "Famous American Actors of To-day." In the "American Statesman Series" we have "William Henry Seward," by Thornton K. Lothrop; "The True Story of Abraham Lincoln, the American," was told for boys and girls by Elbridge S. Brooks; "The Lives and Campaigns of Grant and Lee" was a new and interesting narrative comparison of the two great opponents in the civil war by Samuel W. Odell, to which introductory personal reminiscences were contributed by Gen. O. O. Howard and Bishop John P. Newman; "Lincoln and his Cabinet" were the subject of a lecture delivered by Charles A. Dana, March 10, 1896, before the New Haven Colony Historical Society; "Words of Lincoln" were compiled by Osborne H. Oldroyd, and furnished with an introduction by Hon. Melville W. Fuller, Chief Justice of the Supreme Court of the United States, and Hon. Ten-

nis S. Hamlin. Melancthon W. Stryker published "Hamilton, Lincoln, and Other Addresses"; William H. Egle, M. D., edited "Andrew Gregg Curtin: His Life and Services"; and Josiah Morrow performed a similar service for the "Life and Speeches of Thomas Corwin, Orator, Lawyer, and Statesman." "A Hero's Grave in the Adirondacks," by Katherine Elizabeth McClellan, tells the story of John Brown. The "Life of William McKinley" was written by Robert P. Porter, the life and speeches of the same statesman being again given by Byron Andrews under the title of "One of the People," while "McKinley's Masterpieces" were edited by R. L. Paget for the "Famous Men Series." John S. Ogilvie edited the "Life and Speeches of William J. Bryan" in the "Peerless Series," Col. A. C. Fisk supplying an introduction. The first of the four superb volumes in which William Milligan Sloane tells the "Life of Napoleon Bonaparte" was published at the close of the year, and a volume of "McClure's Biographies" commemorated "Napoleon, Gladstone, Bismarck, Dana, Stevenson, and Others." One of the surprises of the year was the revelation of Samuel L. Clemens (Mark Twain) as the anonymous author of the "Personal Recollections of Joan of Arc," purporting to be those of the Sieur Louis de Conte, her page and secretary. Another exhaustive study of "Joan of Arc" we owe to Francis C. Lowell. M. Louise McLaughlin entitled her memoir of Elizabeth Charlotte, Duchesse d'Orleans, "The Second Madame," and Ida M. Tarbell made use of newly discovered data in her biographical study of "Madame Roland." "François-Séverin Marceau, 1769-1796," was the subject of a memoir by T. G. Johnson. To religious biography belong "Adoniram Judson Gordon," by E. B. Gordon, accompanied with letters and illustrative extracts; a "Memorial of the Life and Labors of Right Rev. Stephen Vincent Ryan, D. D., Second Bishop of Buffalo, N. Y.," by Rev. Patrick Cronin; "Myron Adams: A Memorial"; the "Life, Letters, and Journals of the Rev. and Hon. Peter Parker"; the "Life of Alonzo Ames Miner, S. T. D., LL. D.," by George H. Emerson, D. D.; the "Autobiography of A. C. Morehouse," an itinerant minister of the New York East Conferences of the Methodist Episcopal Church, to which Bishop Newman contributed an introduction; "Fifty Years on the Skirmish Line," also an autobiography of Elisha B. Sherwood, D. D.; the "Sunset Memories" of Rev. Nicholas Van Sant; and "The Indian Chief Journeycake," whose record as a Christian minister is given by Rev. S. H. Mitchell. "Mary Dyer, of Rhode Island, the Quaker Martyr, hanged on Boston Common, June 1, 1660," was commemorated by Horatio Rogers. A volume was devoted to "Robert W. MeAll, Founder of the MeAll Mission, Paris"; "Heroes of the South Seas" were the theme of Martha Burr Banks; "For His Sake" was the title given to extracts from the letters of Elsie Marshall, martyred at Wha-Sang, Aug. 1, 1895; and "The American Jew as Patriot, Soldier, and Citizen," by Simon Wolf, was edited by Louis E. Levy. John Mullin Batten, M. D., entitled his autobiographic reminiscences "Random Thoughts," and William Dean Howells vouchsafed a number of his "Impressions and Experiences." "The Story of the Hutchinsons (Tribe of Jesse)," told by John Wallace Hutchinson and edited by Charles E. Mann, proved no less interesting than remarkable. "American Lutheran Biographies" came from J. C. Jenson. Nearly one hundred of "Our Army Nurses" are the subject of the sketches, addresses, etc., compiled by Mary A. Gardner Holland, while "Mothers of Maine" were treated by Mrs. Helen Coffin Beedy, and a second edition was issued of "Authors and Writers associated with Morristown," by Mrs. Julia Keese Colles. "Lees of

Virginia, 1642-1892," edited by Edmund Jenning Lee, M. D., contained biographical and genealogical sketches of the descendants of Col. Richard Lee, with brief notices of the related families; "The Cabells and their Kin," was a memorial volume, historical, biographical, and genealogical on Dr. William Cabell, the founder of the family in Virginia and his descendants and kinfolk, by Alexander Brown; "The Genealogy of the Steiner Family, especially of the Descendants of Jacob Steiner of Frederick Co., Md.," was traced by Bernard C. Steiner; and Samuel M. Sener compiled "The Schner Ancestry." "The Ashley Genealogy," by Francis B. Trowbridge, was the history of the descendants of Robert Ashley, of Springfield, Mass.; "A Partial History of the French Huguenots by Name Soblets, who emigrated to America in 1700 and settled at Manakin, in Powhatan Co., Va., 18 Miles West of Richmond City," was written by Samuel S. Sublett, as was the story of the "Early Family," by Samuel S. Early. "The Century Book of Famous Americans," by Elbridge S. Brooks, told the story of a young people's pilgrimage to historic homes, and Vol. VIII was issued of John Lord's "Beacon Lights of History, covering Nineteenth Century Writers," and containing also a life of the author by Dr. Alexander S. Twombly. "Reminiscences of an Octogenarian of the City of New York, 1816-1860," were vouchsafed by Charles H. Haswell and were full of local interest, while "Famous Givers and their Gifts" were chronicled by Mrs. Sarah K. Bolton. Vol. IV completed the collection of "The Writings of Thomas Paine," made and edited by Moncure D. Conway; a memorial edition in four volumes was made of the "Writings of Severn Teackle Wallis"; A. W. Stevens edited "Enfranchisement and Citizenship," addresses and papers by Edward Lillie Pierce; as did James De Witt Andrews the "Works of James Wilson, Associate Justice of the Supreme Court of the United States," in two volumes. "Selected Arguments, Lectures, and Miscellaneous Papers of Randall Hunt," were edited by his nephew, William Henry Hunt.

Criticism and General Literature.—Among books falling under this head are to be mentioned Charles Dudley Warner's discussion of "The Relation of Literature to Life"; "Mere Literature and Other Essays," by Prof. Woodrow Wilson; "Books and Culture" and "Essays on Nature and Culture," by Hamilton Wright Mabie; and "Aspects of Fiction, and Other Ventures in Criticism," by James Brander Matthews, who also contributed "An Introduction to the Study of American Literature." Two unpublished essays of Ralph Waldo Emerson upon "The Character of Socrates" and "The Present State of Ethical Philosophy" were given to the public in one volume, with an introduction by Edward Everett Hale; "The Spirit in Literature and Life" was the theme of the E. D. Rand Lectures in Iowa College for the year 1894, delivered by John Patterson Coyle, D. D.; Theodore Whitefield Hunt made a study of "American Meditative Lyrics"; "A History of American Literature" was written by Prof. Frederick Lewis Pattee; "Some Representative Poets of the Nineteenth Century" was the title of a syllabus of University Extension lectures by Melville B. Anderson; and William H. Hudson contributed "Studies in Interpretation: Keats, Clough, Matthew Arnold." A new edition was issued of Hon. William T. Harris's study upon "The Spiritual Sense of Dante's Divina Commedia" and "The Masterpieces of Michelangelo and Milton" were examined by Rev. Alexander Stevenson Twombly. "Shakespeare the Boy" was presented to us by Prof. William J. Rolfe, the well-known authority upon all things concerning the Bard of

Avon, and Alfred Trumble lured us into spending hours "In Jail with Charles Dickens." "The Love Affairs of a Bibliomaniac" possess a melancholy interest as being the last work from the pen of Eugene Field, and is full of a delicious literary flavor. "Chap-Book Essays" of Thomas Wentworth Higginson, Louise Chandler Moulton, and others were collected into a volume, and "Love in Letters" was traced by James Grant Wilson as illustrated in the correspondence of eminent persons, of whom biographical sketches are included. "Myths and Legends of Our Own Land," by Charles M. Skinner, filled two volumes, and H. A. Guerber considered "Legends of the Virgin and Christ" and "Legends of the Middle Ages" with special reference to literature and art. "Regeneration" was an anonymous reply to Nordau. "Nuga Literaria," by William Mathews, was the title of brief essays on literary, social, and other themes, and Dr. George Birkbeck Hill was irresistible in his "Talks about Autographs." Benjamin W. Wells made a study of "Modern French Literature"; "The Mastery of Books," by Harry Lyman Koopman offered hints on reading and the use of libraries; Arthur Shadwell Martin wrote "On Parody"; and "How to study History, Literature, and the Fine Arts" was told in a pamphlet for Chautauquans by Albert Bushnell Hart, Maurice Thompson, and Charles Mason Fairbanks. "Mystic Masonry" was dealt with by J. D. Buck, M. D., and Fanny D. Bergen compiled "Current Superstitions" collected from oral traditions of English-speaking folk in America, published among the memoirs of the American Folklore Society, with notes and an introduction by William Wells Newell. Marie Ada Molineux was the author of "A Phrase-Book from the Poetic and Dramatic Works of Robert Browning," and "Metaphors, Similes, and Other Characteristic Sayings of Henry Ward Beecher" were compiled from discourses reported by T. J. Ellenwood, with an introduction by Homer B. Sprague. Vol. I of "Studies in Classical Philology" of the University of Chicago was issued; "Sunrise Stories," by Roger Riordan and Tozo Takayanagi, gave a glance at the literature of Japan. "Rational Elocution" was a thoroughly practical treatise on the science and art of human expression by Isaac Hinton Brown; Arlo Bates gave "Talks on Writing English"; Edward Everett Hale, Jr., discoursed on "Constructive Rhetoric"; William B. Cairns upon "The Forms of Discourse," with an introductory chapter on style; a new and revised enlarged edition was issued of "The Verbalist," by Alfred Ayres (Thomas Embley Osmon); "Pitfalls in English," by Joseph Fitzgerald, was a manual of customary errors in the use of words; "Public Speaking and Reading" was the title of a treatise on delivery according to the principles of the new elocution by E. N. Kirby; while from Henry Hardwicke we had an exhaustive "History of Oratory and Orators." Lorenzo Learns wrote "The History of Oratory from the Age of Pericles to the Present Time." Lillian Whiting gave us a second series of "The World Beautiful"; Katharine Abbott Sanborn, "My Literary Zoo"; and, coming to that delightful class of books about Nature, we have "Notes of the Night and Other Outdoor Sketches," by Dr. Charles Conrad Abbott, who published also "Birdland Echoes," illustrated by William E. Cram, in line with which was "Spring Notes from Tennessee," by Bradford Torrey. "A Book of Country Clouds and Sunshine" was welcomed from Clifton Johnson, who also repeated "What they Say in New England" in a book of signs, sayings, and superstitions. Rowland E. Robinson was at home "In New England Fields and Woods"; and Joseph Edgar Chamberlain was delightful alike as "The Listener in the

Country" and "The Listener in the Town." "The Singing Mouse Stories" were told by E. Hough; "A Year in the Fields," selections from the writings of John Burroughs, was illustrated from photographs by Clifton Johnson; and Mary E. Burt edited "Little Nature Studies for Little People," in two volumes, from the essays of the same student of Nature, who published "A Bunch of Herbs and Other Papers." Brief "Studies in American Colonial Life" were contributed by Edward Everett Hale, and Mrs. Alice Morse Earle wrote two books, on "Colonial Days in Old New York" and on "Curious Punishments of Bygone Days." Mrs. Mary Alden Ward entitled her five essays "Old Colony Days," while William Root Bliss gave his attention to "Quaint Nantucket." "The Colonial Parson of New England" was pictured by Frank S. Childs, and Dr. John Wright wrote a descriptive account of "Early Prayer Books of America." "The Happy Life" was outlined for young people by President Charles W. Eliot, of Harvard; "The Perfect Whole," by Horatio W. Dresser, was the title of an essay on the conduct and meaning of life; "Around the Hearthstone; or, Hints for Home Builders" and "Men who Win" and "Women who Win" were from the pen of William Makepeace Thayer; while "Architects of Fate: or, Steps to Success and Power," by Orison Swett Marden, was intended as a companion volume to his "Pushing to the Front." Bishop Anthony Wilson Thorold wrote "On Marriage" and "On Money"; Mrs. A. D. T. Whitney published timely "Friendly Letters to Girl Friends"; and Mrs. Helen E. Starrett asked "After College, What? For Girls." "With my Neighbors," by Mrs. Margaret E. M. Sangster, offered suggestive hints, while "Traicings," by E. Scott O'Connor purported to be a reflection of Nature. Mrs. Julia Ward Howe asks "Is Polite Society Polite?" with other essays. Katharine B. Woods compiled "Quotations for Occasions," and other compilations worthy of note were "About Children," by Rose Porter; "Concerning Friendship," by Eli Atkins Stone; "Tobacco in Song and Story," by John Bain, Jr.; and "Blossoms of Thought," by C. E. Russell. "Sermonettes from Mother Goose" for big folks were delivered by Fanny M. Harley. Robert Hunter and others edited "The Encyclopædic Dictionary," in four volumes, and S. Pollock Linn supplied a want with his "Dictionary of Living Thoughts of Leading Thinkers." Among *éditions de luxe* published during the year may be mentioned that of Henry J. Van Dyke's "Little Rivers," limited to 150 copies.

Education.—"Teaching in Three Continents," by W. Catton Grasby, consists of personal notes on the educational systems of the world, while "Education," by H. Holman, was intended as an introduction to its principles and their psychological foundations, and Herman T. Lukens traced "The Connection between Thought and Memory" in a contribution to pedagogical psychology on the basis of F. W. Dörpfeld's monograph "Denken und Gedächtnis." In Appleton's "International Education Series" appeared "Herbart's A B C of Sense-Perception and Minor Pedagogical Works," translated, with an introduction, notes, and commentary, by William J. Eckoff; the "Principles and Practice of Teaching," by James Johannot, first published in 1878 and now revised by Sarah Evans Johannot; Compayre's "Intellectual and Moral Development of the Child," part I; and "The School System of Ontario (Canada)," by George W. Ross. Patterson Du Bois dwelt upon "The Point of Contact in Teaching." David Starr Jordan delivered a series of addresses on the higher education, published under the title "The Care and Culture of Men," and Harry Pratt Judson considered briefly "The Higher Education as a

Training for Business." "The Schoolmaster" was the subject of the address of George E. Hardy as President of the New York State Teachers' Association, at Saratoga, July 9, 1894. "School Interests and Duties" were developed by Robert M. King, from Page's "Mutual Duties of Parents and Teachers," from various public reports and documents, and from the bulletins of the National Bureau of Education, and a second revised and enlarged edition was printed of "The History of Modern Education," by Samuel G. Williams. Frederick Ludlow Luqueer wrote upon "Hegel as Educator" in the "Columbia University Contributions to Philosophy, Psychology, and Education," and Levi Seeley treated of "The Common-School System of Germany and its Lessons to America." In the "Republic of Childhood Series" appeared "Kindergarten Principles and Practice," by Kate Douglas Wiggin (Mrs. George C. Riggs) and "Froebel's Occupations," by the same author in collaboration with Nora Archibald Smith, and "The Songs and Music of Friedrich Froebel's 'Mother Play'" had the songs newly translated and furnished with new music by Susan E. Blow for the "International Education Series." Marion Strickland offered "Suggestions for Kindergarten Work," and Frank Sewall considered the kindergarten in the education of the citizen "The Angel of the State." Yet another issue of the "International Education Series" was Burke A. Hinsdale's volume upon "Teaching the Language Arts—Speech, Reading, Composition"; William Morton Payne edited "English in American Universities"; Elizabeth H. Spalding proposed suggestions for the solution of "The Problem of Elementary Composition"; C. G. Ainsworth compiled "Lessons in Literature," with illustrative selections, as a text-book for schools and academies; Mary E. and Abby L. Sargent prepared a "Supplement to 'Reading for the Young,' by John F. Sargent," James Baldwin retold "Old Stories of the East"; Emerson E. White added "A School Algebra," designed for use in high schools and academies to "White's Series of Mathematics"; Hudson A. Wood devised "Short Cuts in Arithmetic"; Book VII of "Macmillan's Geography Readers" covered "The United States Ocean Currents and Sides"; "A Manual of Clay Modeling," for teachers and scholars, was the work of Mary L. H. Unwin; W. A. Stecher edited "Gymnastics," a text-book of the German-American system of gymnastics; and John W. Tufts proffered "A Handbook of Vocal Music, illustrating Normal Methods through 'The Normal Music Course,' 'The Cecilia Series of Study and Song,' and 'The Common-school Course.'" Vol. I appeared of "Union College Practical Lectures (Butterfield Course)." For primary pupils Nellie Walton Ford wrote of natural science as "Nature's Byways," and Mrs. M. A. B. Kelly told "Short Stories of our Shy Neighbors." "A History of the Public Education Association of Philadelphia," by L. R. Harley, had an introduction by Edmund J. James, and "Stanford University and Thereabouts" was described by O. L. Elliott and O. V. Eaton.

Fiction.—From the well-known authors of fiction came a reasonable supply of new works. Gilbert Parker's "Seats of the Mighty" was one of the successes of the year. "Taqnisara" was a new Italian story by Marion Crawford, and his "Adam Johnstone's Son," had an English hero. William Dean Howells published "The Day of their Wedding: A Novel" and "A Parting and a Meeting," more modestly described as a "story," both dealing with life among the Shakers; "The Other House" and "Embarrassments," by Henry James, delighted the admirers of that author; and Mrs. Frances Hodgson Burnett made a new departure in her portrayal

of "A Lady of Quality" of the olden time. Eugene Field described humorously "The House: An Episode in the Lives of Reuben Baker, Astronomer, and of his Wife, Alice"; T. Hopkinson Smith dealt with the labor question in the forceful pages of "Tom Grogan"; Bret Harte contributed only a volume of tales entitled "Barker's Luck and Other Stories"; Richard Harding Davis was represented by "Cinderella, and Other Stories"; and James Brander Matthews by "Tales of Fantasy and Fact." From the new novelist Stephen Crane we had "The Little Regiment, and Other Episodes of the American Civil War," "George's Mother," and "Maggie: A Girl of the Streets"; Frank R. Stockton gave "Captain Chap: or, The Rolling Stones" and "Mrs. Cliff's Yacht"; Joel Chandler Harris (Uncle Remus) told of "Sister Jane: Her Friends and Acquaintances"; and a rising author of the same State, Harry Stillwell Edwards, aroused creditable comment by his story of "Sons and Fathers." Julian Russell Sturgis portrayed "A Master of Fortune," Albion W. Tourgée finally raised "The Mortgage on the Hip-roof House"; Elizabeth Knight Tompkins did not reach the level of her last year's venture, "Her Majesty," with her romance of "The Broken Ring"; Margaret Sherwood, who published "An Experiment in Altruism" in 1896, under the pen name of Elizabeth Hastings, described "A Puritan Bohemia"; and from Katharine Pearson Woods, the author of "Metzerott, Shoemaker," we had "The Crowning of Candace" and "John: A Tale of King Messiah," the last of singular excellence. Molly Elliot Seawell wrote, this time for grown-up people, "The Sprightly Romance of Marsac" and "A Strange, Sad Comedy," while Maria Louise Pool published no less than four of her attractive studies of life and character, entitled "Buncombe County," "In a Dike Shanty," "In the First Person," and "Mrs. Gerald." Anna Fuller described "A Venetian June" with the romance then transpiring, and "Madelon" was the sole production of Mary Eleanor Wilkins. Lillian Bell, the author of "The Love Affairs of an Old Maid," portrayed "The Under Side of Things"; Harold Frederic gave us the benefit of observations in Philistia under the title of "Mrs. Albert Grundy"; he was successful also in delineating "The Damnation of Theron Ware" and in his cheerier tale of "March Hares." Rev. Edward Everett Hale republished his popular account of "My Double and How he Undid me," telling its history (of thirty-three years) in a preface; "Rose of Dutcher's Coolly" was a realistic novel by Hamlin Garland; and "Summer in Arcady," a tale of Nature, by James Lane Allen. Ruth McEnery Stuart wrote "Sonny" and "Solomon Crow's Christmas Pockets, and Other Tales"; Elizabeth Stuart Phelps (Mrs. Herbert D. Ward) "The Supply at St. Agatha's"; and Julia Magruder, the author of "The Princess Sonia," "The Violet," and "Miss Ayr of Virginia, and Other Stories." Capt. Charles King was heard from in four military novels, "Trumpeter Fred: A Story of the Plains," "A Garrison Tangle," "An Army Wife," and "A Tame Surrender," the last a story of the Chicago strike. Mrs. C. Stewart Dagggett told the story of "Mariposilla," and Cornelia Atwood Pratt that of "The Daughter of a Stoic," in addition to a number of short stories entitled "A Book of Martyrs." "A Knight of the Nets" was Mrs. Amelia E. Barr's only novel; Julian Hawthorne proclaimed "Love is a Spirit" and also portrayed "A Fool of Nature"; "Missing" was a romance by Julius Chambers; and "One of the Visconti," a novelette by Mrs. Eva Wilder Brodhead (formerly Eva Wilder McGlasson). Mrs. Madeleine Vinton Dahlgren in "The Secret Directory" revealed a romance of hidden history. Langdon Elwyn Mitchell, a son of Dr. Weir Mitchell, pub-

lished two stories, "Love in the Backwoods: Two Mormons from Muddlety" and "Alfred's Wife," in one volume, while Mrs. Rebecca Harding Davis filled two with the adventures of "Frances Waldeux" and "Doctor Warwick's Daughters." Harriet Prescott Spofford traced the evolution of "A Master Spirit." "The Picture of Las Cruces" was a romance of Mexico by Frances C. F. Tiernan (Christian Reid), and from the same author we had also "A Woman of Fortune." John Kendrick Bangs amused us with "The Mantelpiece Minstrels, and Other Stories," in addition to the difficulties experienced with "A Rebellious Heroine." "Vawder's Understudy" was a study in platonic affection by James Knapp Reeve; Clive Holland, who achieved success last year with his story of "My Japanese Wife," published "The Lure of Fame," "An Art Failure," by John W. Harding, claimed to be a story of the Latin Quarter as it is, and art is again the theme of "Alda Craig," by Pauline King. "A Chord from a Violin" opened a love story, according to Winifred Agnes Haldane, and "The Baritone's Parish," by James M. Ludlow, appeared in the series of "Renaissance Booklets." Historical novels were "King Noanett: A Story of Old Virginia and the Massachusetts Bay," by Frederick Stimson (J. S., of Dale), who also wrote "Pirate Gold"; "White Aprons," a romance of Bacon's rebellion, Virginia, 1676; "The Regicides," a tale of early colonial times, by F. Hull Cogswell; "The Governor's Garden" (the executive in question being "Thomas Hutchinson, sometime Captain-General and Governor-in-Chief of his Majesty's Province of Massachusetts Bay"), by George R. R. Rivers; "A Lady of the Olden Time," by Emily Malbone Morgan; "Saxenhurst," a story of the Old World and New, in which Roger Williams is prominent, by Daniel C. Eddy, D. D.; "Massasoit," by Anna Holman Burton, a romantic story of the Indians of New England; "Sir Mark," a tale of the first capital of the country, by Anna Robeson Brown, who also wrote "The Black Lamb"; "John Littlejohn of J.," being in particular an account of his remarkable entanglement with the king's intrigues against Gen. Washington, by George Morgan; "The Scarlet Coat," a tale of the siege of Yorktown, by Clinton Ross; "Will o' the Wasp," a sea yarn of the War of '12, by Robert Cameron Rogers, the author of "The Wind in the Clearing"; "Ocean Rovers," another story of the same period, by William H. Thomas; "His Perpetual Adoration: or, The Captain's Old Diary," by Rev. Joseph F. Flint, a story of the civil war; and "At the Sign of the Guillotine," as its name bespeaks, a story of the French revolution, by Harold Spender. A local flavor attaches to "Uncle Scipio," a story of uncertain days in the South, by Mrs. Jeannette R. H. Walworth; "The Peacemaker of Bourbon," a tale of the new South, by S. J. Bumstead; "The Wonderful Wheel," with its scene among the Creoles of Louisiana, by Mary Tracy Earle; "Betty of Wye," by Amy E. Blanchard; "Stories of a Sanctified Town," by Lucy S. Furman; "Princess Anne: A Story of the Dismal Swamp, and Other Sketches," by Albert R. Ledoux; "My Young Master," "The Jucklins," and "The Captain's Romance," by Opie P. Read (The Arkansas Traveler); "The Country of the Pointed Firs," by Sarah Orne Jewett, meaning, of course, the State of Maine; "The Tin Kitchen," by Rev. J. Hatton Weeks, and "The End of the Beginning," anonymous, both with the scene laid in New England; "The Victory of Ezry Gardner," an idyl of Nantucket, by Imogen Clark; "Behind Manhattan Gables," a story of New Amsterdam, 1663-'64, by Rev. Edward A. Rand; "Green Gates: An Analysis of Foolishness," by Mrs. Katharine Mary Cheever Meredith (Johanna Staats); "Stonepastures," by Eleanor Stuart, the

story of a Pennsylvania mining and manufacturing town; and "The Fur Traders of the West: or, Adventures among the Redskins," by Ernest R. Suffling. "Yekl: A Tale of the New York Ghetto," by A. Cahan, awakened much favorable comment; Frank Pope Humphrey described "An American Dog Abroad"; "Mr. Billy Buttons," by Walter R. Lecky, proved a story of Canada; George de Valière gathered "Opals from a Mexican Mine"; "Little Daughter of the Sun," by Julia P. Dabney, had its plot worked out in the Canary Islands, and Duncan Campbell Scott told short stories of what took place "In the Village of Viger," in France. Novels which dealt with social problems were "Jerry the Dreamer," by Will Payne; "White Satin and Homespun," by Katrina Trask (Mrs. Spencer Trask); "A Silver Baron," by Carlton Waite; "The Social Crime," by Minnie L. Armstrong and George N. Seets; "A Daughter of Humanity," by Edgar Maurice Smith; and "Some Modern Heretics," by Cora Maynard. "The Tower of the Old Schloss" was a pretty love story by Jean Porter Rudd, and Mrs. Laura E. Richards wrote for grown folks "Some Say" and "Neighbors in Cyrus," both in one volume. Allen Upward, the author of "A Prince of Balkistan," wrote "A Crown of Straw," while Abner Thorp, M. D., made a study of "A Child of Nature." "Trains that met in the Blizzard" was a composite romance by R. Pitcher Woodward, which chronicled the adventures of twelve men and one woman in the blizzard of March, 1888; and "The Story of a Train of Cars" was told by Wallace Peck. "Your Money or Your Life" was the title of an unusual romance by Edith Carpenter, and George A. Woodard published "The Diary of a Peculiar Girl." Elizabeth Phipps Train gave us "The Autobiography of a Professional Beauty"; Emma Wolf, the author of "Other Things being Equal," examined "The Joy of Life"; while to the realm of the improbable belong "The Gold Fish of Gran Chimú," by Charles F. Lummis, and "The Man who became a Savage," by William T. Hornaday. "Master Ardick, Buccaneer" was by F. H. Costello; John D. Barry was the author of "The Intriguers" and Jeanie Drake of "The Metropolitans"; "In Sight of the Goddess" was a tale of Washington life by Harriet Riddle Davis, and society at the capital was described in "Not all the King's Horses," by Katherine Elwes Thomas. "The Exhibits in an Attachment Suit" were set forth by Charles Peale Didier; and "The Epistolary Flirt in Four Exposures" came from Esmerie Armory. Lula B. Davis wrote "A Modern Argonaut"; Celia E. Gardner, "Won under Protest"; James Barnes, "A Princetonian"; Martha Caroly Davis, "The Refiner's Fire"; Maurice Francis Egan, "The Vocation of Edward Conway"; George Douglas Tallman described "Tom's Wife and How he Managed her"; Alwyn M. Thurber told of "Quaint Crippen, Commercial Traveler"; "Ladies First," by Mrs. Dominique F. Verdenal, recalls California in the sixties; and the same State is the scene of "The Quicksands of Pactolus," by Horace Annesley Vachell. Frank H. Converse described the search for "The Lost Gold Mine"; "Posie: or, From Reveille to Retreat" was an army story, by Mrs. M. A. Cochran; and "Out of the Woods" a romance of camp life by George P. Fisher, Jr. "Dedora Heywood" was by Gertrude Smith; "A Bad Penny," by John T. Wheelwright, and "The Romance of Guardamonte," by Arline E. Davis; while from Julia McNair Wright we had "The Pooles' Millions: The Story of a Card House," "Cynthia's Sons," and "The House on the Bluff: A Western Flood Story." "A Matter of Temperament," by Edward Irenæus Stevenson (Janus), was musical in its theme; William W. M. Cornish wrote "Behind Plastered Walls";

Henry Block, "Property of Don Gilbar"; and William J. Locke, "Some Women and a Man." Books, more or less religious in tone were "The Quiet King: A Story of Christ," by Caroline Atwater Mason; "The Hero of the Ages: A Story of the Nazarene," by Catherine Robertson McCartney; "Asa of Bethlehem and his Household, B. C. 11-A. D. XXX," by Mary Elizabeth Jennings; "My Brother," by Vincent Brown; "The Parson's Proxy," by Kate W. Hamilton; "From Hollow to Hilltop," by Mary Lowe Dickinson; "Strange Conditions," by Fannie E. Newberry; "Friends for Good," by Mrs. Mary E. Neely Bradley; "The Rainproof Invention," by Emily Weaver; "The Hathaways' Sister," by Mrs. Annie Kendrick Benedict; "A Jesuit of To-day," by Orange McNeill; "A Year at Dangerfield," by Kate Neely Festetics; "Only Susan," by Mrs. Emma Martin Marshall; "As Queer as she could be," by Jessie E. Wright; "His Brother's Keeper," by Charles M. Sheldon; "Ben Abbott," a temperance story, by Fanny Long; and "A Tower in the Desert," by Mrs. Virginia D. Young. Mrs. Nathaniel Conklin (formerly Jennie M. Drinkwater) told of "Paul French's Way" and "Dolly French's Household." "True to the End" was a story of the Swiss Reformation by Henry S. Burrage, D. D.; Mrs. Harriet A. Cheever described the work of "A Rescued Madonna"; "Gold, Grace, and Glory" was a story of religious life among the wealthy classes of the West and South; and W. B. Bohner prophesied "The Time is Coming" for the second advent. "The Log of the Lady Grey" was a pleasing tale by Louise Seymour Houghton, and Mrs. James Carey Coale combined in one volume "The Cottage by the Sea" and its sequel "The Egmont Brothers." To a more exciting class belong "The Love Adventures of Al-mansur," by Archibald Clavering Gunter, who published also "Her Senator"; H. G. Wells pictured a horrible possibility in "The Island of Doctor Moreau"; Richard Henry Savage wrote alone "Lost Countess Falka: A Story of the Orient" and in collaboration with Mrs. Archibald Clavering Gunter "His Cuban Sweetheart." "Under Three Flags" was a story of mystery by B. L. Taylor and A. T. Thois, while Mrs. Gertrude Franklin Atherton's sole contribution was "A Whirl Asunder." "The Third World," a tale of love and strange adventure, by Henry Clay Fairman, may be classed with "Beyond the Palæocrystic Sea," by A. S. Morton; and considerable imagination was also required to conceive the adventure of "The Captured Cunarder," by W. H. Rideing. "The Crime of the Century" was one of the popular detective stories by Rodrigues Ottolengui, and "The Strange Schemes of Randolph Mason" were set forth by Melville Davison Post. It is impossible to more than enumerate "The Juggernaut of the Moderns," by Rosa Hudspeth; "Edgar Fairfax," a story of West Point, and "The Twin Sisters," both by Florence Nightingale Craddock; "That Girl from Bogotá," by Clarice Irene Clingham; "A Daughter of Cuba," by Helen M. Bowen; "Checkers," by Henry M. Blossom, Jr.; "A House of Cards," by Alice S. Wolf; "Robert Atterbury," by Mrs. John R. Jarboe; "Deborah, the Advanced Woman," by Mary Ives Todd; "Mr. Mercer of New York," by Annie H. Wilson; "Dainty Iniquity," by Margaret Granville; "Paradise Wold," by Alice V. Carey; "Wheels: A Bicycle Romance," by "A Wheeler"; "The Woman with Good Intentions," by Meg Merriles; and "An Ambitious Man," by Mrs. Ella Wheeler Wilcox. Hypnotism is the theme of "Mark Heffron," by Alice Ward Bailey, and of "Blind Leaders of the Blind," the romance of a blind lawyer, by James R. Cocke, M. D.; "Karma," by Paul Carus, went through a second edition, printed and illustrated by Japanese artists in colors

on Japanese *crêpe* paper; "Siegfried the Mystic" was by Ida Warden Wheeler; "Out of the Past," by E. Anson More, Jr.; "Birkwood," by Mrs. Julia A. B. Seiver; "Vashti, Old and New," by Marvel Kayve; "Libra," an astrological romance, by Mrs. Ellen M. E. Ames (Eleanor Kirk); "Whose Soul have I now?" was asked by Mary Clay Knapp; "Daybreak: A Romance of an Old World," by James Cowan, deals with life on the planet Mars; "Forty Years with the Damned," by Charles Aikin, describes life inside the earth; "A Fearless Investigator" was anonymous; and "A Triumph of Destiny," by Julia H. Twells, Jr., was directed against marriage.

Among volumes of short stories are to be enumerated "The Suburban Sage" and "Love in Old Clothes," by Henry Cuyler Bunner; "The Holy Cross, and Other Tales" and a "Second Book of Tales," by Eugene Field; "Break o' Day, and Other Stories," by George Wharton Edwards; "A Guest at the Ludlow, and Other Stories," by Edgar Wilson Nye; "That First Affair, and Other Sketches," by John A. Mitchell; "The Land o' the Leal," by David Lyall; "A Mountain Woman," by Elia W. Peattie; "Compound Interest, and Other Stories," by Mrs. O. W. Scott; "The Flower that grew in the Sand, and Other Stories," by Mrs. Ella Higginson; "A Wonderful Christmas, and Other Stories," by Katherine E. Vernham, chiefly of waifs and strays; "The Real Issue," by William Allen White, the scene of which is laid in Kansas; "A Hypocritical Romance, and Other Stories," by Caroline Ticknor; "Hopkins's Pond, and Other Sketches," by Robert T. Morris; "One Day's Courtship" and "The Herald's of Fame," in one volume, by Robert Barr (Luke Sharp); "The Maker of Moons," by Robert W. Chambers; "The Story of the Innumerable Company, and Other Sketches," by David Starr Jordan; "The Cat and the Cherub, and Other Stories," mostly of the Chinese quarter of San Francisco, by Chester B. Fernald; "An Elephant's Track, and Other Stories," by Mrs. Mollie E. M. Davis; "Uncle Jerry's Platform, and Other Christmas Stories," by Gillie Cary; "Meg McIntyre's Raffle, and Other Stories," by Alvan F. Sanborn; "Penhallow Tales," by Edith Robinson; "Mrs. Hallam's Companion, and the Spring Farm and Other Tales," by Mrs. Mary J. Holmes; "Six Stories and some Verses," by Robert Beverly Hale; "My Fire Opal, and Other Tales," by Sarah Warner Brooks; "A Reluctant Evangelist, and Other Stories," by Alice Spinner; "Cinder-path Tales," by William Lindsey; "A Round Table of the Representative American Catholic Novelists," stories by Eleanor C. Donnelly, Anna Hanson Dorsey, Ella Loraine Dorsey, and others; "The Ebbing of the Tide: South Sea Stories," by Louis Becke; "Tales of Languedoc," by Samuel Jacques Brun, with an introduction by Harriet W. Preston and illustrated by Ernest C. Peixotto; "Old Dorset," chronicles of a New York countryside, by Robert Cameron Rogers; "The Fatal Gift of Beauty, and Other Stories," by C. E. Raimond; "The Lucky Number," a collection of slum stories, by I. K. Friedman; "Artie," a story of the streets and town, by George Ade, illustrated by John T. McCutcheon; "Fables for the Times," by H. W. Phillips; "A Chance Child," "Comrades," "Hendrex and Margotte," and "Persephone," four tales by Marah Ellis Ryan, in one volume; a compilation of "Fireside Stories Old and New," in three volumes, by Henry T. Coates; and "Stories from the Chap-Book," by many celebrated writers. A new uniform library edition of Mark Twain's works was entered upon.

Fine Arts.—Prominent among works of this class is Russell Sturgis's historical study of "European Architecture," embellished with 10 full-page plates

and 250 illustrations in the text; and from Prof. A. D. F. Hamlin we have "A Text-book of the History of Architecture," while "The Story of Architecture" was told by Charles T. Mathews, giving an outline of the styles in all countries. "A History of Greek Art" was written by F. B. Tarbell for the "Chautauqua Reading Circle Literature Series," and contained an introductory chapter on art in Egypt and Mesopotamia. "Architectural Masterpieces of Belgium, Holland, etc.," were collected into an expensive volume. A "Text-book of the History of Sculpture" for use in schools and colleges was written by Allan Marquand and Arthur L. Frothingham, Jr. "Modern French Painters," a series of biographical and critical reviews by American artists, edited by John C. Van Dyke, with 37 wood engravings and 28 half-tone illustrations, was a superb volume, and "The Florentine Painters of the Renaissance," by Bernhard Berenson, formed Vol. II of his work upon "The Italian Painters of the Renaissance." "How to listen to Music," by Henry E. Krehbiel, offered hints and suggestions to untalented lovers of the art. Anton Seidl, assisted by Fanny Morris Smith, Mr. Krehbiel, and others, edited "The Music of the Modern World," explained and illustrated for American readers in 25 parts, of which 6 were published during the year. "Shakespeare's Heroes on the Stage," by Charles E. L. Wingate, was a companion volume to his "Shakespeare's Heroines"; William H. Birkmire wrote on "The Planning and Construction of American Theaters"; while "Audiences," by Florence P. Holden, contained a few suggestions to those who look and listen. George C. Seilhamer's completed "History of the American Theater, 1749-1797," filled three volumes. An exceedingly costly work was that entitled "Oriental Ceramic Art illustrated by Examples from the Collection of W. T. Walters," with 115 plates in colors and over 400 reproductions in black and white, the text and notes of which were by S. W. Bushell, M. D., the whole being complete in 10 sections, and the edition limited to 500 copies. W. P. Jervis, in "Rough Notes on Pottery," claimed to give a complete history of pottery, ancient and modern; Mrs. L. Vance Phillips contributed the "Book of the China Painter" to the "Art Amateur Handbooks"; and Mrs. N. di R. Monachesi prepared "A Manual for China Painters." "Ornaamental Fragments, Scrolls, etc.," were the subject of a volume by Theodore v. Kramer and W. Behrens; and "A Collection of Scale Drawings, Details, and Sketches of what is commonly known as Colonial Furniture" were measured and drawn from antique examples by Alvan Crocker Nye, architect. Mrs. J. W. Shoemaker, George B. Hynson, and John H. Bechtel were the joint authors of an "Advanced Elocution." Among illustrated gift books are to be mentioned "Venice of To-day," by F. Hopkinson Smith, in 20 parts, illustrated with 40 plates, half in color, and 126 typographical; "The Eternal City: Rome," by Mrs. Clara Erskine Clement Waters, in two volumes; "Pictorial Wagner," by Ferdinand Leeke, with an introduction by Henry T. Finck; "Pictures of the People," by Charles Dana Gibson; "Captive Memories," commemorative verses interwoven with California flowers, by James Terry White, illustrated by J. S. Daniell, M. I. Morrison, and others; "Friar Jerome's Beautiful Book," by Thomas Bailey Aldrich, with decorations in old missal style, by W. S. Haddaway; drawings by Albert B. Wenzell entitled "In Vanity Fair"; a new illustrated edition of Hermann Grimm's "Life of Michel Angelo"; the Surrey edition of Irving's "Bracebridge Hall"; "The Alhambra," of the same author, illustrated with drawings of the places mentioned, by Joseph Pennell; Thoreau's "Cape Cod," with 100 sketches in colors by

Amelia M. Watson; and two illustrated editions of the "Constantinople" of Edmondo de Amicis. "Posters in Miniature" had an introduction by Edward Penfield. "Mural Painting in the Boston Public Library" was the subject of a pamphlet by Ernest F. Fenollosa.

General Science.—Beginning with our planet, we have "The Earth and its Story," a first book of geology, by Angelo Heilprin, and "The Geological Story briefly told," by James D. Dana, while both the "Manual of Geology" of the last author and the "Elements of Geology" of Prof. Joseph Le Conte went through a fourth edition during the year, the former being wholly rewritten and the last revised and enlarged, and accompanied with new plates and illustrations. Ten monographs on "The Physiography of the United States," by Major John W. Powell, Profs. N. S. Shaler, Israel Clark Russell, and others, were collected into a volume, and "The Story of a Piece of Coal" was told by Edward A. Martin in the "Library of Useful Stories." Gen. A. W. Greely published a "Handbook of Arctic Discoveries" in the "Columbian Knowledge Series," and G. F. Wright, D. D., and Warren Upham illustrated from original photographs their exhaustive study of "Greenland Ice Fields and Life in the North Atlantic," which contained a new discussion of the causes of the ice age. "The Method of Darwin" was considered by Frank Cramer in a study in scientific method; Edward Drinker Cope marshaled "The Primary Factors of Organic Evolution"; while Prof. John M. Tyler delivered the Morse Lectures of 1895 upon "The Whence and Whither of Man," giving a brief history of his origin and development through conformity to environment. "The Biological Lectures delivered at the Marine Biological Laboratory of Wood's Holl, in the Summer of 1895," by various authorities, were collected into a volume; "The Cell in Development and Inheritance" was the theme of Edmund B. Wilson in the "Columbia University Biological Series"; David Starr Jordan and others opened with "The Fishes of Sinaloa" the "Leland Stanford, Jr., University Contributions to Biology," other issues of which were "The Fishes of Puget Sound," by the same author and Edmund Chapin, and "New Mallophaga," by Vernon L. Kellogg; and "The Survival of the Unlike" was the title of a collection of evolution essays suggested by the study of domestic plants, by Liberty Hyde Bailey. John A. Mandel prepared a "Handbook for the Biochemical Laboratory." "Queen Moo and the Egyptian Sphinx," by Dr. Augustus Le Plongeon, contends for the earlier civilization of the Western Continent than the Eastern, in contradiction of the usually accepted hypothesis, and a new third edition was issued of Dr. Daniel Garrison Brinton's treatise on "The Myths of the New World." "The Pith of Astronomy," by Samuel G. Bayne, contained the latest facts and figures as developed by the giant telescopes, without mathematics, and Herbert A. Howe made "A Study of the Sky" for Chautauquans. A new revised edition of "The Sun," by C. A. Young, appeared in the "International Scientific Series," and Ernest W. Brown wrote "An Introductory Treatise on the Lunar Theory." The first volume of "An Illustrated Flora," covering the northern United States and the British possessions, by N. L. Britton and Edison Brown, covered "Ferns to Carpet Weed," and will be followed by two more. Ferdinand Schuyler Mathews described "Familiar Trees and their Leaves," illustrating them with 200 original drawings, L. H. Bailey contributing an introduction to the work; Mrs. William Starr Dana's "Plants and their Children" was illustrated by Alice Josephine Smith; Caroline E. Hilliard proffered "Lessons in Botany"; and Vol. II ap-

peared of William J. Beal's "Grasses of North America." Parts XIII and XIV were issued of the second volume of H. Nehrling's "North American Birds"; "A Popular Handbook of the Ornithology of Eastern North America," by Thomas Nuttall, went through a new enlarged edition, revised and annotated by M. Chamberlain; "Every Bird" was a guide to the identification of the birds of woodland, beach, and ocean, by Reginald H. Howe, Jr.; C. J. Maynard wrote "A Handbook of the Sparrows, Finches, etc., of New England"; Florence A. Merriam went "A-Birding on a Bronco" through southern California; Ernest D. Wintle described "The Birds of Montreal"; and "Papers presented to the World's Congress on Ornithology," held at the Columbian Exposition, Chicago, 1893, were edited by Mrs. E. I. Rood, under the direction of Prof. Elliott Coues. Mrs. Olive Thorne Miller, the author of "Bird Ways," was equally successful in her treatment of "Four-Handed Folk," and Rush C. Hawkins pronounced on animal friends, also the subjects of personal observation, as "Better than Men." Edward Knobel wrote briefly of "The Turtles, Snakes, Frogs, and Other Reptiles and Amphibians of New England and the North." John H. Comstock and Vernon L. Kellogg prepared an outline of "The Elements of Insect Anatomy" for the use of students in the entomological laboratories of Cornell and Leland Stanford, Jr., Universities. E. Dana Pierce offered "Problems in Elementary Physics"; Preston Smith, "Easy Experiments in Physics"; and R. P. Williams, "Chemical Experiments, General and Analytical," for use with any text-book of chemistry or without a text-book. "Chemical Notes on Equations," inorganic and organic, were made by G. H. Gemmel; "A Manual of Quantitative Chemical Analysis," by F. A. Cairns, was issued in a third edition, revised and enlarged by Elwyn Waller; Frank Hall Thorp wrote on "Inorganic Chemical Preparations"; and Arthur Messinger Comey prepared "A Dictionary of Chemical Solubilities (Inorganic)." "What is Electricity?" was asked by John Trowbridge for the purpose of elucidation in the "International Scientific Series," and "The Story of Electricity" was told by John Munro in the "Library of Useful Stories." Vol. II of a "Text-book on Electro-magnetism and the Construction of Dynamos," by Dougald C. and John Preece Jackson, was given to "Alternating Currents and Alternating-Current Machinery"; Frederick Bedell laid down "The Principles of the Transformer"; F. C. Allsop's "Induction Coils and Coil-making" went through a second revised and enlarged edition; Silvanus P. Thompson wrote on "Polyphase Electric Currents and Alternate-Current Motors"; Vol. I of Francis B. Crocker's "Electric Lighting" appeared, being devoted to "The Generating Plant"; Edwin J. Houston and Arthur E. Kennelly contributed six volumes to the "Elementary Electro-Technical Series," upon "Electric Incandescent Lighting," "Electric Arc Lighting," "The Electric Motor," "Electric Telegraphy," "Electric Telephone," and "Electric Street Railways." Edward P. Thompson wrote at length of the "Roentgen Rays and Phenomena of the Anode and Cathode"; "The X Ray," by William J. Morton, M. D., and Edwin W. Hammer, went through a fifth edition, which contained appendices by Prof. Röntgen, Thomas A. Edison, and Dr. Oliver Lodge; and William H. Meadowcroft set forth "The A B C of the X Ray," in addition to publishing the "Scholar's A B C of Electricity." "Parakites" was a treatise on the making and flying of tailless kites for scientific purposes and for recreation, by Gilbert Totten Woglom. Mansfield Merriman and Robert S. Woodward edited "Higher Mathematics for Classical and Engineering Colleges"; "Ele-

ments of Plane and Spherical Trigonometry," together with which were included "Logarithmic and Trigonometric Tables Five Decimal Places," were prepared by C. W. Crockett; Andrew W. Phillips and Irving Fisher collaborated upon "Elements of Geometry"; Charles A. Hobbs set forth "The Elements of Plane Geometry"; as did A. R. Hornbook "Concrete Geometry for Beginners"; and "Plane and Solid Geometry" was the work of Wooster W. Beman and David Eugene Smith. Vol. I was issued of a new edition of William M. Gillespie's "Treatise on Surveying," revised and enlarged by Cady Staley, and W. G. Raymond published "A Text-book of Plane Surveying." The contributions to intellectual philosophy were not numerous. They included "The Power of Thought," by John Douglas Sterrett, to which Prof. J. Mark Baldwin furnished an introduction; "The Truth of Thought," by William Poland, termed in the subtitle "Material Logic"; F. Ryland's "Logic," an introductory manual for the use of university students; and two works on "Inductive Logic," the same title having been selected by John Grier Hibben and William G. Ballantine. Bulletins of the Department of Geology of the University of California published during the year included "The Geology of Point Sal," by Harold W. Fairbanks; "On Malinite," by Andrew O. Lawson; and "The Great Valley of California: A Criticism of the Theory of Isostasy," by F. Leslie Ransome; and in the "Bulletins of the University of Wisconsin" appeared "Electrical Engineering in Modern Central Stations," by Louis A. Ferguson; "A Complete Test of Modern American Transformers of Moderate Capacities," by Arthur Hillyer Ford; and "The Problem of Economical Heat, Light, and Power Supply for Building Blocks, Schoolhouses, etc.," by G. A. Gerdtzen. The "Fifteenth and Sixteenth Annual Reports of the United States Geological Survey" were issued, and a new enlarged edition of the "Science Sketches" of Prof. David Starr Jordan may be as well mentioned here as anywhere.

History.—Quite a number of books of history were published during the year, many of exceptional value. George Park Fisher, D. D., gave "A Brief History of the Nations and of their Progress in Civilization," and George Shelley Hughes reviewed "Ancient Civilizations." Vol. II appeared of George Ticknor Curtis's "Constitutional History of the United States," edited by Joseph Culbertson Clayton, completing that valuable work; Edward Channing and Albert Bushnell Hart were the joint authors of a "Guide to the Study of American History"; Edward Eggleston in "The Beginnings of a Nation" traced the history of the source and rise of the earliest English settlements in America, with special reference to the life and character of the people; two volumes contained "The History of the Last Quarter Century in the United States, 1870-1895," by Prof. E. B. Andrews; John Bach McMaster's "With the Fathers" consisted of studies in the history of the United States; while James Schouler presented "Historical Briefs," including a biography. "Beneath Old Roof-trees," by Abram English Brown, in the series of "Footprints of the Patriots," gave a view of the opening of the Revolution; the first of five volumes which will contain "The People's Standard History of the United States, from the Landing of the Norsemen to the Present Time," by Edward S. Ellis, was issued, and from the same author we had "Stories from American History" and "Epochs in American History," both in the "American History Series." Arthur Middleton Reeves edited "The Finding of Wineland the Good," the history of the Icelandic discovery of America, translated from the earliest records; "The Evolution of an Empire,"

by Mrs. Mary P. Parmele, in the "Evolution of Empire Series" gave a brief historical sketch of the United States; William A. and Arthur May Mowry wrote "A History of the United States for Schools"; and Thomas Hunter "A Narrative History of the United States" for the same purpose. The first of about 60 volumes destined to contain "The Jesuit Relations and Allied Documents" was edited by Reuben Gold Thwaites, and covered "Acadia: 1610-1613," and S. M. Hamilton performed a similar service for "The Hamilton Facsimiles of Manuscripts in the National Archives relating to American History," Part I of which was given to the "The Monroe Doctrine: Its Origin and Intent," and appeared in the series of "The Study of History from Original Sources." William Hayden English wrote an extensive work upon the "Conquest of the Country Northwest of the River Ohio, 1778-1783," including a life of Gen. George Rogers Clark, which filled two volumes. Dr. Ezra Hoyt Byington made a study of "The Puritan in England and New England"; William Bradford's "History of the Plimoth Plantation" was reproduced in facsimile by photography of the original manuscript, and published with an introduction by John A. Doyle; three volumes of "Old South Leaflets," published by the Directors of the Old South Work, Old South Meeting House, 1896, were issued; and Edward Field gave an historical account of "Revolutionary Defenses in Rhode Island." The "History of the Transition from Provincial to Commonwealth Government in Massachusetts" was written by Harry A. Cushing in the "Columbia College Studies in History, Economics, and Public Law"; and "The Bay Colony" was a civil, religious, and social history of the Massachusetts colony and its settlements from the landing at Cape Ann in 1624 to the death of Gov. Winthrop in 1650, by William Dummer Northend. Sydney G. Fisher told of "The Making of Pennsylvania"; and two novelists appeared in a new rôle, Frank R. Stockton telling "Stories of New Jersey" and Joel Chandler Harris (Uncle Remus) "Stories of Georgia" in serious vein. "Miscellanies of Georgia," historical, biographical, descriptive, etc., came from Absalom H. Chappell. Two volumes contained the "Economic History of Virginia in the Seventeenth Century," by Philip Alexander Bruce; and the "Proceedings of the Virginia State Society of the Cincinnati from the 6th of October, 1783, to the Disbanding of the Society, Oct. 13, 1824" were put in print. In the "Johns Hopkins University Studies" appeared "Causes of the Maryland Revolution of 1689," by Francis Edgar Sparks; and "A Study of Slavery in New Jersey," by Henry Schoufield Cooley; "Naval Actions of the War of 1812" were chronicled by James Barnes "The Story of Canada" was written by John G. Bourinot for the "Story of the Nations Series"; while "The Province of Quebec and the Early American Revolution" was a study in English-American colonial history, by Victor Coffin, published in the "Bulletins of the University of Wisconsin." "One Hundred Years of American Commerce, 1795-1895," in two superb volumes, was edited by Chauncey M. Depew, being a history of the first century of American commerce by 100 Americans. In the series of "Harvard Historical Studies" we had "The Contest over the Ratification of the Federal Constitution in the State of Massachusetts," by Samuel Bannister Harding; "A Critical Study of Nullification in South Carolina," by David Franklin Houston; and "The Suppression of the African Slave Trade to the United States of America, 1638-1870," by W. E. B. Du Bois. "Modern Battles of Trenton" was a history of New Jersey's politics and legislation from 1868 to 1894, by William Edgar Sacketts; "A Bibliography of

the State of Maine," from the earliest period to 1891, by Joseph Williamson, filled two volumes; "Soldiers in King Philip's War" were the theme of George Madison Bodge; Elizabeth Shelby Kinkead wrote "A History of Kentucky." Vol. IV of "The Winning of the West," by Theodore Roosevelt, covered "Louisiana and the Northwest, 1791-1807"; "In Unnamed Wisconsin" was a collection of studies in the history of the region between Lake Michigan and the Mississippi river, by J. N. Davidson; and "Exploration of Lake Superior: The Voyages of Radisson and Groselliers," by Henry Colin Campbell, formed No. 2 of the "Parkman Club Publications," No. 1 being "Nicholas Perrot," by Gardner P. Stickney. Vol. I was issued of "Pacific History Stories," arranged and retold for use in the public schools by H. Wagner. Books relative to the late war include "From Manassas to Appomattox: Memoirs of the Civil War in America," by Gen. James Longstreet; "Was General Thomas Slow at Nashville?" by Gen. Henry V. Boynton, with a description of the greatest cavalry movement of the war, and Gen. James H. Wilson's cavalry operations in Tennessee, Alabama, and Georgia; "The Trent Affair," by Thomas L. Harris, including a review of the English and American relations at the beginning of the civil war, to which James A. Woodburn contributed an introduction; Vol. IV of "Sketches of War History, 1861-1865," published by the Society of the Army of the Cumberland after its twenty-fifth annual reunion, 1895, and edited by W. H. Chamberlin; Vol. X of "Critical Sketches of some Federal and Confederate Commanders," edited by Theodore F. Dwight for the Massachusetts Military Historical Society; "The Fifth Army Corps (Army of the Potomac): A Record of Operations during the Civil War in the United States of America, 1861-1865," by William H. Powell; a "History of the Independent Loudon Virginia Rangers, U. S. Vol. Cav. (Scouts), 1862-'65," by Briscoe Goodhart; and "Mosby's Rangers," a record of the operations of the Forty-third Battalion Virginia Cavalry, from its organization to the surrender, by James J. Williamson. George W. Wingate wrote a "History of the 22d Regiment N. G. N. Y. 1861-1895." A "History of the Impeachment of Andrew Johnson, President of the United States, by the House of Representatives, and his Trial by the Senate for High Crimes and Misdemeanors in Office, 1868" was written by Edmund G. Ross, and "Lincoln's Campaign: or, The Political Revolution of 1860" was contributed by Osborn H. Oldroyd to the "Pastime Series." James Albert Woodburn re-edited Alexander Johnston's "American Orations: Studies in American Political History," the revised work being made to include political oratory only, and lengthened to four volumes, of which the first appeared during the year. "Niagara," by Daniel B. Lucas, told of the war of the filibusters, and "The Story of Cuba" was written by Murat Halstead. "Muh-He-Ka-Ne-Ok" was the title of a history of the Stockbridge nation, by J. N. Davidson. "Europe in the Middle Ages" was the theme of Oliver J. Thatcher and Ferdinand Schwill, and Charles McLean Andrews traced "The Historical Development of Modern Europe, from the Congress of Vienna to the Present Time," in two volumes, of which the first covered 1815-'50. "A Short History of Italy, from 476 A. D. to 1875 A. D." was written by Elizabeth Stansbury Kirkland, while "Italy in the Nineteenth Century, and the Making of Austro-Hungary and Germany" were exhaustively treated by Elizabeth Wormeley Latimer. Poultney Bigelow devoted two volumes to a "History of the German Struggle for Liberty," illustrated with drawings by R. Caton Woodville; Herbert B. Adams

contributed a biographical sketch to Prof. Herbert Tuttle's "History of Prussia under Frederic the Great, 1756-1757"; while George Burton Adams not only outlined "The Growth of the French Nation" for Chautauquans, but gave the reasons "Why Americans dislike England" in the "Belles-Lettres Series." B. O. Flower reviewed "The Century of Sir Thomas More." Alexander W. Hidden followed the fortunes of "The Ottoman Dynasty," and "Armenia and her People" contained the story of Armenia told by an Armenian scholar, Rev. George H. Filian. "The Story of Greece" was furnished to "Eclectic School Readings" by H. A. Guerber, and Earle Wilbur Dow drew up Course 2 of "Brief Outlines in European History" for students of the University of Michigan. "A Cycle of Cathay: or, China South and North," with personal reminiscences, came from William Alexander Parsons Martin, D. D., and a "Young People's History of the Chinese" was written by W. G. E. Cunyngnam. A brief "Constitutional History of Hawaii" was added by Henry E. Chambers to the "Johns Hopkins University Studies." To compilations of local history belong a "History of the Town of Plymouth, Ct.," by Francis Atwater, containing an account of the Centennial Celebration, May 4, 1895, and also a sketch of Plymouth, Ohio, settled by local families; and "Tax Lists of the Town of Providence during the Administration of Sir Edmund Andros and his Council, 1686-1689," in an edition limited to 250 copies, by Edward Field; Martha Bockée Flint made a colonial study of "Early Long Island"; a new revised enlarged edition was made of Mrs. Martha J. Lamb's "History of the City of New York," the twenty-first chapter of the second volume of which was published separately by Mrs. Burton Harrison as a "History of the City of New York: External of Modern New York." "The History of Yonkers," by Rev. Charles Elmer Allison, was issued under the auspices of the Board of Trade of that city; and John F. Edgar described "Pioneer Life in Dayton and Vicinity, 1796-1840." Miss Mary E. Perkins published "Old Houses of the Antient Town of Norwich, 1660-1800," with maps, illustrative portraits, and genealogies, and Norman M. Isham and Albert F. Brown made an historical and architectural study of "Early Rhode Island Houses." A handsome holiday edition of John Fiske's "American Revolution" was issued, and Charles Morris added two new volumes to his "Historical Tales," being respectively "Greek" and "Roman." Bill Nye's "History of England" may be inserted here, for want of a better place—although strictly a work of humor.

Jurisprudence.—Works of this class were numerous. William P. Fishback prepared "A Manual of Elementary Law," in which he summarized the well-settled principles of American law, and Walter Denton Smith contributed a work bearing the same title to the "Hornbook Series." W. A. Keener compiled "Selections on the Elements of Jurisprudence"; Eli F. Ritter defined "Moral Law and Civil Law Parts of the Same Thing"; Henry Campbell Black added to the "Hornbook Series" a "Handbook on the Construction and Interpretation of the Laws," with a chapter on the interpretation of judicial decisions and the doctrine of precedents; "You Should Not," by Samuel H. Wandell, was a book for lawyers, old and young, containing the elements of legal ethics; Roswell Shinn filled two volumes with "A Treatise on the Pleadings and Practice in the Courts of Record of Illinois, at Common Law in Civil Causes." Wilber A. Owen proffered "Questions and Answers on Common Law Pleading," a fourth edition was issued of "Puterbaugh's Chancery Pleading and Practice," and a sixth edition of Samuel Maxwell's "Treatise on

Pleading, Practice, Procedure, and Precedents in Actions at Law and Suits in Equity." "A Practical Treatise on Criminal Procedure," by the last author, also went through a second revised and enlarged edition. Vol. I was also issued of a revised edition of William Lansing's "Forms of Civil Procedure"; Vol. IV of an "Encyclopædia of Pleading and Practice," compiled under the editorial supervision of William M. McKinney, covered "Certiorari to Contracts"; Part I of "A Preliminary Treatise on Evidence of the Common Law," by James Bradley Thayer, was devoted to "Development of Trial by Jury"; three volumes upon "The Law of Evidence in Civil Cases," by Burr W. Jones, appeared; "The Code of Evidence both Civil and Criminal" of the State of Ohio was by W. H. Whittaker; H. L. Wilgus compiled "Cases on the Law of Evidence"; and a work similar in title was also sent out by T. W. Hughes. "A Treatise on the Law of Circumstantial Evidence," by Arthur P. Will, was illustrated by numerous cases; William B. Hale contributed a "Handbook on the Law of Torts" to the "Hornbook Series"; W. C. Sprague prepared "Leading Cases upon the Law of Torts"; James Paige, "Illustrative Cases in Torts," with analysis and citations; and S. B. Fisher, "Problems and Quiz on the Law of Torts." John G. Hawley and Malcolm McGregor expounded "The Criminal Law"; Vol. II of the fourth edition of Joel Prentiss Bishop's "New Criminal Procedure," a new work based on former editions, covered "Specific Offenses and their Incidents"; H. W. Chaplin's "Cases on Criminal Law" went through a second edition, revised and enlarged by Carleton Hunneman; and a similar service was performed by William Draper Lewis for the tenth edition of Francis Wharton's "Treatise on Criminal Law." "Cases on Equity Jurisprudence" were selected chiefly from Fetter's and Pattee's Cases; Henry Budd contributed the notes upon "American and English Decisions in Equity," of which the first annual volume (first series) appeared during the year. William C. Sprague published "Illustrative Cases on Equity Jurisprudence," in addition to "Illustrative Cases on Personal Property" and "Selected Cases on Criminal Law," and W. S. Pattee's "Illustrative Cases in Equity" went through a third edition. Leonard A. Jones wrote "A Treatise on the Law of Real Property" in two volumes, and Chapman W. Maupin was the author of "Marketable Title to Real Estate." George W. Warvelle drew up "Principles of the Law of Real Property" for the use of students, and Earl P. Hopkins added a "Handbook on the Law of Real Property" to the "Hornbook Series." The three parts of W. S. Pattee's "Illustrative Cases in Realty" were entitled respectively "Land," "Estates," and "Titles," and James W. Gerard's "Digestive Treatise and Compendium of Law applicable to Titles to Real Estate in the State of New York" went through the fourth revised and enlarged edition. James Schonler's "Treatise on the Law of Personal Property" went through a second edition, in two volumes; John D. Lawson published "Select Cases in the Law of Personal Property"; Philip T. Van Zile, "Illustrative Cases on Personality"; and "Cases on Personal Property" were compiled by Prof. Levi T. Griffin and Walter Denton Smith. Frederick H. Comstock was the author of "An Index to Wills, Deeds, and Other Instruments, and to Litigations affecting the Title to Real Property which have been judicially considered in the Courts of the State of New York"; a third edition was published of "Intestate Succession in the State of New York," by Daniel S. Remsen; also a second edition of Benjamin F. Dos Passos's work upon "The Law of Collateral and Direct Inheritance, Legacy, and Succession Taxes." "The Law of Charitable

Uses, Trusts, and Donations in New York" was set forth by Robert Ludlow Fowler, and "The Poor, Insanity, and State Charities Laws" of the same State, by Robert C. Cumming and Frank B. Gilbert. "Combination, Consolidation, and Succession of Corporations," by Andrew J. Hirsche; Vol. VI of "Commentaries on the Law of Private Corporations," by Seymour D. Thompson, completing the work; Vol. IV of the American Corporation Legal Manual," edited by Charles J. Borgmeyer; the two parts of "A Selection of Cases in Private Corporations," by Jeremiah Smith; together with "Illustrative Cases on the Law of Corporations," compiled by Walter Denton Smith; "A Treatise on the Law of Municipal Bonds of the Municipal Corporations of the United States," including bonds issued to aid railroads, by Thomas C. Simonton; and a second edition of "White on Corporations," represent all that was published upon this fruitful subject, excepting, perhaps, a work by Robert C. Cumming and Frank B. Gilbert upon "Membership and Religious Corporations." Edward Avery Harriman wrote for the "Student's Series" on the "Elements of the Law of Contracts"; Randolph Sailer prepared for the press "A Treatise on the Law of Contracts," by Samuel S. Hollingsworth; Charles Fisk Beach, Jr., gave two volumes to "A Treatise on the Modern Law of Contracts," and Earl P. Hopkins arranged "Selected Cases on the Law of Contracts" with reference to Clark's "Handbook of Contracts." A second edition of Charles B. Elfrott's "Outline on the Law of Insurance," with illustrative cases, was the only work upon insurance. Amos M. Thayer prepared especially for the St. Louis Law School his compilation upon "Jurisdiction of the Federal Courts"; Albert H. Walker's "Text-book of the Patent Laws of the United States" went through a third edition, and a second revised edition of George Haven Putnam's discussion of "The Question of Copyright," with additions, had the record of legislation brought down to March, 1896. "Cases on the Law of Admiralty" were printed at the request of Hon. H. B. Brown, Justice of the United States Supreme Court, for use in connection with his lectures at the Georgetown (D. C.) University Law School; John Day Smith compiled "Illustrative Cases on Constitutional Law"; and a simple statement of the principles of "International Law" was made by Herbert Wolcott Bowen. Floyd R. Mechem explained the "Elements of the Law of Partnership"; Conrad Reno touched upon "Employers' Liability Acts"; Frederic Jessup Stimson (J. S. of Dale) was the author of a "Handbook to the Labor Law of the United States"; Walter C. Tiffany, of a "Handbook on the Law of Persons and Domestic Relations" in the "Hornbook Series"; and Ernest W. Huffelt edited "Cases on the Law of Agency." Eugene Wambangh prepared "A Selection of Cases on Agency"; Albert S. Bolles was the author of "The Elements of Commercial Law"; Reuben M. Benjamin, of "The General Principles of the American Law of the Sale of Goods," in the form of rules with comments and illustrations, and containing also the English "sale of goods act"; and S. B. Fisher proposed "Problems and Quiz on the Law of Sales." Roswell Shinn gave two volumes to "A Treatise on the American Law of Attachment and Garnishment"; John D. Lawson's "Principles of the American Law of Bailments" was intended as a companion to the author's work on contracts; C. W. Sams wrote "A Treatise on the Law of Attachment and Bail in Virginia and West Virginia"; and Orlando F. Bump's "Treatise upon Conveyances made by Debtors to defraud Creditors" went through a fourth edition revised and enlarged with reference to all American and English cases by James McIlvane Gray. Elias F. Johnson selected

and annotated "Illustrative Cases upon the Law of Bills and Notes." "The Elements of the Law of Bailments and Common Carriers" were set forth by Irving Browne, and the "Hornbook Series" was supplied with a "Handbook on the Law of Bailments and Carriers" and "A Handbook on the Law of Damages," by William B. Hale. "The Law of Passenger and Freight Elevators" was made clear by James Avery Webb, and a second edition was made of Emlin McClain's "Selection of Cases on the Law of Carriers of Goods and of Passengers." Vols. IV and V appeared of "A Digest of Railway Decisions," by Stewart Rapalje and William Mack. Simeon E. Baldwin compiled "Illustrative Cases on Railway Law." Vols. IV and V were published of "American Electrical Cases," edited by William W. Morrill, as well as Vols. II, III, and IV of "American Negligence Cases," prepared and edited by T. F. Hamilton. "The Law of Negligence: Rules, Decisions, Opinions," formed the theme of Edward B. Thomas. Sidney Perley wrote on "Mortuary Law," and Vols. III and IV completed "Medical Jurisprudence, Forensic Medicine, and Toxicology," by R. A. Witthaus, M. D., Tracy C. Becker, and others. A second revised edition was also made of "A Manual of Medical Jurisprudence and Toxicology," by Henry C. Chapman, M. D. Vols. XXIX, XXX, and XXXI appeared of the "American and English Encyclopædia of Law" (the last two volumes being an "Index Digest" of the same) as well as two volumes of a second edition of the same work, edited by D. S. Garland and Lucius P. McGhee, under the supervision of James Cockroft. A new series was also inaugurated of "American and English Corporation Cases," edited by F. C. Smith, of which the first volume was issued. Books XX to XXVII, inclusive, of United States "Federal Cases" were sent out, as were Vols. XLVI, XLVII, XLVIII, XLIX, and L of "American State Reports," selected, reported, and annotated by A. C. Freeman; and the "Digest of the Decisions of the Courts of Last Resort of the Several States, from the year 1892 to the year 1896," covering Vols. XXV to XLVIII, inclusive, of the same; Vol. VIII of "American Probate Reports," with notes and references by A. A. Greenhoot; Vol. V of "Interstate Commerce Commission Reports;" Vol. XII of "American Railroad and Corporation Reports," edited and annotated by J. Lewis; Vol. IX of "American Criminal Reports," by John Gibbons; Vols. XV, XVI, XVII, XVIII, and XIX of "Reports of United States Circuit Court of Appeals"; Vols. XXI to XXXV, inclusive, of "Reports of United States Courts of Appeals"; and Vols. LXIX to LXXIV of the "United States Federal Reporter" (permanent edition). Vols. CLIX to CLXIII, inclusive, of "United States Supreme Court Reports" came from J. C. B. Davis, and the annual "American Digest, 1896" saw the light. Among law books having special value in the various States are to be mentioned a "History of the Court of Common Pleas of the City and County of New York," by James Wilton Brooks, with full report of all important proceedings; a third edition of "The Rules of Practice in the Civil Courts of Record of the State of Texas," by John Sayles; "Probate Practice" in the State of Illinois, by Henry Binmore; "Maine Probate Law," by George A. Wilson; "Tennessee Constitutional Law," compiled by Douglas Anderson; "The Laws relating to Statutory Liens" in Indiana, in two volumes, by B. F. Watson; and "The Drainage Laws of Ohio," by Florian Giauque; while a second edition was issued of "The Justice's Manual," by Charles S. Bundy. "Story's Legal Digest and Directory of Lawyers" went through its eleventh annual issue during the year; and other

volumes of the same class were "Sharp and Allen's Lawyers' and Bankers' Directory for 1896"; J. B. Marindale's "American Law Directory," which completed its twenty-eighth year of annual issue; "Boyer's Legal Directory"; the "American Law Digest and Legal Directory," edited by William F. Wernise; the "National Legal Bureau Directory"; and Vol. VI of the "Attorneys' and Agencies' Association Legal Directory," revised to March 20, 1896. The record of several "Extraordinary Cases" was given to the public in a volume of much interest by Henry Lauren Clinton.

Juvenile.—Still books continue to be written for young people and read by older ones. Among them none were more heartily welcomed than "Marn Liza," by Kate Douglas Wiggin (Mrs. George C. Riggs), and Marguerite Bouvet told the charming story of "Pierrette." Hezekiah Butterworth's "Wampum Belt" was a tale of Penn's treaty with the Indians. Molly Elliot Seawell in "A Virginia Cavalier" gave the history of Washington's boyhood and early youth; "In the Days of Washington" was a story of the Revolution, by William Murray Graydon; and "The Green Mountain Boys" were the heroes of Eliza F. Pollard. "For King or Country," by James Barnes, and "Three Young Continentals," by Everett T. Tomlinson, belong to the same period, the last in the "War of the Revolution Series." The same author contributed "Teumseh's Young Braves" to the "War of 1812 Series"; and James Barnes published "Midshipman Farragut." Favorite authors were well represented. John Townsend Trowbridge published "The Prize Cup"; Horatio Alger, Jr., "Frank Hunter's Peril" and "The Young Salesman"; Kirk Munroe, "Rick Dale," a story of the Northwest coast, and "Through Swamp and Glade," a tale of the Seminole War; Harry Castlemon (Charles Austin Fosdick), "The Mystery of Lost River Canyon," "The House-Boat Boys," and "The Young Game Warden"; and William Osborn Stoddard, "The Windfall" and "The Swordmaker's Son," the last a story of the year 80 A. D. Charles Ledyard Norton contributed "A Medal of Honor Man; or, Cruising among Blockade-Runners" to the "Fighting for the Flag Series"; William T. Adams (Oliver Optic), "On the Staff" to "The Blue and the Gray Series." "Under the Liberty Tree," by James Otis Kaler (James Otis), continued the "Stories of American History Series," being a story of the Boston Massacre, and from the same prolific author we had also "With Lafayette at Yorktown," "The Boy Captain," "A Short Cruise," "On Schedule Time," "Wrecked on Spider Island," and "Teddy and Carrots, Two Merchants of Newspaper Row." Albert Stearns's "Sinbad, Smith & Co." was illustrated by Reginald B. Bireh; Edward S. Ellis's addition to the "Boone and Kenton Series" was "Shod with Silene" and its sequel, "The Phantom of the River," and he also wrote "Uncrowning a King," a tale of King Philip's War, "Four Boys," in the "Through on Time Series" and three volumes for the "River and Wilderness Series," entitled "The River Fugitive," "The Wilderness Fugitives," and "Lenawingo, the Mohawk." Willis Boyd Allen showed the spirit of our fathers exemplified in "A Son of Liberty"; "Under the Tamaracks," by Elbridge S. Brooks; described a summer with Gen. Grant at the Thousand Islands; W. Drysdale wrote "The Fast Mail," the story of a train boy, for the "Brain and Brawn Series"; "Not without Honor," by William D. Moffat, was the story of an odd boy; and "Walter Gibbs the Young Boss, and Other Stories" was the title of a book for boys by Edward W. Thomson. "Boys of the Central" was a high-school story, by I. T. Thurston, and from Mrs. I. T. Thurston we had "Don Malcolm," "The Gingham Bag,"

by Mrs. Harriet M. Lothrop, beloved of children as Margaret Sidney, told the tale of an heirloom; "Isa Heron," by Mrs. Laura E. Richards, a companion volume to her "Nautilus," was illustrated by Frank T. Merrill; Sarah E. Morrison described "Chilhowee Boys at College"; Elizabeth Westyn Timlow told of "Cricket at the Seashore"; Amy E. Blanchard wrote "Taking a Stand"; Alida W. Graves, "A Little Maiden's Victory"; Mary A. Denison, "An Everyday Heroine"; and Mrs. Myra S. Hamlin, "Nan at Camp Chicopee; or, Nan's Summer with the Boys." "Christine's Career" was a story for girls, by Pauline King; "Malvern," a neighborhood story, by Ellen Douglas Deland; "Bushy," a romance founded on fact, by Cynthia M. Westover (now Mrs. John Alden), while from Eliza Orne White we had "A Little Girl of Long Ago"; from Joel Chandler Harris (Uncle Remus), "The Story of Aaron (so named) the Son of Ben Ali"; from A. G. Plympton, "The Black Dog, and Other Stories"; from Mrs. Evelyn H. Raymond, "A Cape May Diamond"; from Amanda M. Douglas, "A Little Girl in Old New York" and "The Mistress of Sherburne, the last for grown-up folks; from Edith Robinson, "A Loyal Little Maid"; from Nora Perry, "Three Little Daughters of the Revolution"; and from Barbara Yechton (Lydia F. Krause) "We Ten." "One of the Sweet Old Chapters" was a fragment by Rose Porter, in the series of "Renaissance Booklets." Mrs. Jeanie Gould Lincoln pictured "A Genuine Girl"; Mrs. Clarke Johnson told of "Her College Days"; "Above the Range" was a story for girls by Theodora R. Jenness; "The Boys of Cloverbrook," by Mary Barnes Beal, told the story of five boys on a farm; and Mrs. Mary H. Henry (Howe Benning) made "Grandpa's Desk" interesting. Mary M. Mears published "Emma Lou: Her Book"; Mrs. Kate Tannatt Woods, "Mopsy: Her Tangles and Triumphs"; Anna Chapin Ray, "Dick: A Story for Boys and Girls"; Marshall Saunders, "Charles and his Lamb" and "For the Other Boy's Sake, and Other Stories"; Lily F. Wesselhoft, "Jerry the Blunderer"; Mrs. M. A. H. Fisher, "Max and Zan and Nicodemus"; Rev. Charles S. Wood, "Alice and her Two Friends"; Winifred Johns, "Memoirs of a Little Girl"; Mrs. Lucy C. W. Lillie, "Elinor Belden: or, The Stepbrothers"; Mrs. Alicia Aspinwall, "Short Stories for Short People"; and Virge Reese Phelps (Victor Meredith Bell) "Little Nin." "Happy Children" were the theme of Mrs. Ella F. Pratt; "Tommy-Anne and the Three Hearts," by Mabel Osgood Wright, was illustrated by Albert D. Blashfield; "Sir Knight of the Golden Pathway" was tenderly outlined by Anna S. P. Duryea; Annie Key Bartow added "The Sign of the North Star" to the "Little Heroine Series"; as R. H. Jayne did "The Golden Rock" to the "St. Nicholas Series"; and Mrs. Helen H. Farley (Ernest Gilmore) told the story of "Sweetheart." "Zigzag Stories of History, Travel, and Adventure," by Hezekiah Butterworth, contained selections from the best stories from the "Zigzag Series"; and among the tales of the marvellous with which the young are never satiated are "The Wallypug of Why," by G. E. Farrow, with page illustrations by Harry Furniss and vignettes by his daughter, Dorothy; "The Dwarf's Tailor, and Other Fairy Tales," compiled by Mrs. Zoe Dana Underhill; "Sayings and Doings in Fairyland," by D. S. Sinclair; "The Fairies of Fern Dingle," by Mrs. Harriet A. Cheever, who convey information concerning natural history in pleasing form, as "The Wonderful Fairies of the Sun," by Ernest Vincent Wright, and "Seed-Babies," by Margaret Warner Morley, explain various workings of Nature. "What the Dragon Fly Told the Children" was repeated by Frances Bell

Coursen. Henrietta Christian Wright was the author of "Children's Stories in American Literature, 1861-1896." A handsome new edition was issued of "The Boys of '61," by Charles Carleton Coffin which has held its own for thirty years.

Medicine and Surgery.—Vols. V and VI appeared of "Twentieth Century Practice," an international cyclopædia of modern medical science, by authorities of Europe and America, edited by Thomas L. Stedman, M. D., and George M. Gould edited "The American Yearbook of Medicine and Surgery," being a yearly digest of scientific progress and authoritative opinion in all branches of medicine and surgery. "Physical and Natural Therapeutics," by Georges Hayem, M. D., and Dr. Hobart Amory Hare, discussed the remedial use of heat, electricity, modifications of atmospheric pressure, climates, and mineral waters; Frank P. Foster, M. D., edited a "Reference Book of Practical Therapeutics," by various authors, in two volumes; Dr. Hare's "Text-book of Practical Therapeutics" went through a new fifth edition; George Frank Butler, M. D., was the author of "A Text-book of Materia Medica, Therapeutics, and Pharmacology"; James B. Herrick, M. D., of a "Handbook of Diagnosis"; and Dr. Jacob M. Da Costa's "Medical Diagnosis" went through a new eighth edition, revised and enlarged. The first of five volumes containing "A System of Medicine, by Many Writers," edited by Thomas Clifford Allbutt, M. D., contained "Prolegomena and Infectious Diseases"; George Roe Lockwood prepared a "Manual of the Practice of Medicine"; an eleventh revised edition appeared of Dr. Alfred L. Loomis's "Text-book of Practical Medicine"; and a fourth revised and enlarged edition of Dr. C. G. Rand's "Special Pathology and Diagnostics, with Therapeutic Hints." "An American Text-book of Physiology," by Henry P. Bowditch, M. D., John G. Curtis, M. D., Henry H. Donaldson, M. D., and others, was edited by William H. Howell; Dr. Henry Newell Martin's work upon "The Human Body" went through a seventh revised edition; Dr. George A. Piersol's "Text-book of Normal Histology" through a fourth edition. "The Eye and its Care" was the theme of Dr. Frank Allport; "Epidemic Ophthalmia," of Sydney Stephenson; and Dr. Thomas Barr's "Manual of Diseases of the Ear" appeared in a second revised and rewritten edition. "Cutaneous Medicine" was the title of a systematic treatise on diseases of the skin by Dr. Louis A. Duhring; Dr. H. Radcliffe Crocker's "Atlas of the Diseases of the Skin" was completed by the issue of Parts XI to XVI; and from S. P. Impey, M. D., came "A Handbook of Leprosy." "A Guide to the Aseptic Treatment of Wounds" was supplied by Dr. C. Schimmelbusch; and Dr. John K. Mitchell dwelt upon "Remote Consequences of Injuries of Nerves and their Treatment," making an examination of the present condition of wounds received in 1863-'65, with additional illustrative cases. A new second edition was published of Dr. Landon Carter Gray's "Practical Treatise on Nervous and Mental Diseases," and a third revised enlarged edition of Dr. Byron Bramwell's "Diseases of the Spinal Cord." "The Treatment of Pulmonary Consumption" was considered in a practical manual by Vincent Dormer Harris, M. D., and Edwin Clifford Beale, and Dr. Charles Wilson Ingraham laid down "Don'ts for Consumptives." "Voice Building and Tone Placing," by Dr. H. Holbrook Curtis, M. D., showed a new method of relieving injured vocal cords by tone exercises. A new fifth edition was issued of Melville C. Keith's "Diphtheria," and a third edition of Dr. Alexander Haig's "Uric Acid as a Factor in the Causation of Disease." "Eating and Drinking: The Alkalinity of the Blood the Test of Food and Drink in Health

and Disease" came from Albert Harris Hoy, M. D.; William Ewart, M. D., wrote on "Gout and Goutiness and their Treatment"; Dr. Sidney Martin on "Functional and Organic Diseases of the Stomach"; Dr. Max Einhorn on "Diseases of the Stomach"; while "Lectures on Appendicitis" came from Robert T. Morris, M. D. "Diagnosis and Treatment of Diseases of the Rectum," by Dr. S. G. Gant, had two chapters, on "Cancer" and "Colotomy," by Dr. Herbert W. Allingham, and a second revised edition was issued of "A Treatise on the Diseases of the Rectum, Anus, and Sigmoid Flexure," by Joseph M. Matthews. Parts I and II were issued of a third edition of Dr. Byron W. Cheever's "Select Methods in Inorganic Quantitative Analysis," revised and enlarged by Frank C. Smith. Dr. Donald Campbell Black wrote on "The Urine in Health and Disease, and Urinary Analysis, Physiologically and Pathologically Considered"; Dr. R. W. Stewart, on "The Diseases of the Male Urethra"; Henry Morris, on "Injuries and Diseases of the Genital and Urinary Organs"; Robert W. Taylor, M. D., on "The Pathology and Treatment of Venereal Diseases"; Eugene Fuller, M. D., was the author of a "Treatise on Disorders of the Sexual Organs in the Male"; and Drs. James Nevins Hyde and Frank H. Montgomery collaborated upon a "Manual of Syphilis and the Venereal Diseases." Richard C. Norris edited "An American Text-book of Obstetrics," by well-known American teachers and specialists, the art editor being Robert L. Dickinson, M. D.; "A System of Gynecology by Many Writers" was edited by Thomas Clifford Allbutt and William Smout Playfair; W. A. Newman Dorland, M. D., drew up a "Manual of Obstetrics"; "Obstetric Accidents, Emergencies, and Operations" were treated by Dr. L. C. Boisliniere; Dr. John M. Keating and Dr. Henry C. Coe were joint authors of "Clinical Gynecology, Medical and Surgical," for students and practitioners, for whom also "Pediatrics: The Hygiene and Medical Treatment of Diseases in Children" were written by Dr. Thomas Morgan Rotch. Dr. John L. Smith wrote "On Children," being a treatise on the diseases of infancy and childhood; Abraham Jacobi, M. D., on "The Therapeutics of Infancy and Childhood"; A. Brothers, M. D., delivered the William Furness Jenks prize essay of the College of Physicians of Philadelphia on "Infantile Mortality during Child-birth, and its Prevention"; Dr. Louis Starr prescribed "Diets for Infants and Children"; and "Mother, Baby, and Nursery" was a manual for mothers by Dr. Genevieve Tucker.

To surgery belong "Aids to Surgical Anatomy," by Eugene S. Yonge; "A Manual of Anatomy," by Irving S. Haynes, M. D.; "Surgical Pathology and Therapeutics," by Dr. John Collins Warren, illustrated by W. J. Kaula, and "Surgery of the Chest," by Stephen Paget; "Clinical Lectures on Abdominal Surgery and Other Subjects," by Dr. Charles T. Parkes, were edited by A. J. Ochsner; Nicholas Senn, M. D., sent out a work upon the "Pathology and Surgical Treatment of Tumors"; and the Lettsomian Lectures for 1896 were delivered by W. Watson Cheyne on "The Objects and Limits of Operations for Cancer," "The Deformities of the Human Foot," with their treatment, were the theme of W. G. Walsham and William Kent Hughes. "Medical Electricity," by Drs. H. L. Jones and W. E. Stevenson went through a second edition, and a new edition of "The Medical and Surgical Uses of Electricity" was entirely rewritten by Dr. A. D. Rockwell from the former book by Beard and Rockwell. C. Caspari, Jr., was the author of a "Text-book on Pharmacy" for students and pharmacists; Dr. S. A. Matthews published a "Syllabus of Lectures on Pharmacology and Therapeutics in the University

of Michigan"; George M. Sternberg, M. D., "A Text-book of Bacteriology"; Joseph McFarland, M. D., "A Text-book upon the Pathogenic Bacteria"; and George E. De Schweinitz, M. D., "The Toxic Amblyopias: Their Symptoms, Pathology, and Treatment." A third revised and enlarged edition of Alexander Wynter Blyth's work on "Poisons" appeared, as well as a fourth revised and enlarged edition of Dr. Clifford Mitchell's "Dental Chemistry and Metallurgy." A. C. Hasslock published a "Compend of Veterinary Materia Medica and Therapeutics"; F. Smith's "Manual of Veterinary Physiology" went through a second revised and enlarged edition; and John Sutcliffe Hurndall wrote on "Veterinary Homœopathy in its Application to the Horse." Closely connected with medicine are "The Theory and Practice of Hygiene," by J. Lane Notter, M. D., and R. H. Firth; "In Sickness and in Health," a manual of domestic medicine and surgery, hygiene, dietetics, and nursing, edited by J. West Roosevelt, M. D.; "Diet Lists and Sick-Room Dietary," by Dr. Jerome B. Thomas; and "Practical Points in Nursing for Nurses in Private Practice," by Emily A. M. Stoney. Dr. J. Jackson Clarke treated briefly "Post-Mortem Examinations in Medico-Legal and Ordinary Cases," and Vol. I was issued of the second series of the "Index-Catalogue of the Library of the Surgeon-General's Office, U. S. A., covering A-Aziori."

Poetry.—Little can be said in praise of the poetry given to the American public during 1896. Thomas Bailey Aldrich published "Judith and Holofernes," and we have a volume of "Songs and Other Verse" from Eugene Field, while "Songs of Childhood," by the same author, were set to music by Reginald De Koven and others. "A Child World," by James Whitcomb Riley, and "In Childhood's Country," by Louise Chandler Moulton (the last pictured by Ethel Reed), may be mentioned in this connection, both full of natural charm and sweetness. Rudyard Kipling sent out a book of ballads, entitled "The Seven Seas." "Songs of the Soul" represented the poems written by Joaquin Miller during the past ten years collected into a volume. "More Songs from Vagabondia," by Bliss Carman and Richard Hovey, were accompanied with designs by Thomas B. Meteyard; Julius Madison Cawein published "The Garden of Dreams"; Edith Matilda Thomas, "A Winter Swallow, with Other Verse"; Isaac Bassett Choate was at home "With Birds and Flowers"; and George Mead Gould declared himself "An Autumn Singer." "Lyrics of Lowly Life" was the title of a remarkable collection of poems by Paul Lawrence Dunbar, a negro, born of negro parents who were slaves, to which William, Dean Howells contributed an appreciative introduction. Fifty short poems by Irene Putnam were entitled "Songs without Answer"; Frank E. Sawyer contributed "Notes and Half Notes"; Howard J. Truman, "Eehoes"; and Anne Virginia Culbertson, "Lays of a Wandering Minstrel." "The River Bend, and Other Poems" came from Tacitus Hussey; "Soul and Sense" were the theme of Hannah Parker Kimball; Eleanor M. Ladd's "Cherry Bloom" had a cover design by Stella Holmes Aird; Mrs. Belle Van Derveer published "Soul Waifs"; Archibald Lampson, "Lyrics of Earth"; Frank W. Gunsaulus, "Songs of Night and Day"; Francis Sherman, "Matus"; and C. E. D. Phelps, "Eehoes from the Mountain." "The Substance of his House," lyrics and sonnets, came from Prosser Hall Frye; "Blue and Gold" from William S. Lord; "Songs of Exile" from Herbert Bates; "Lovelore, and Other Poems" from William James Linton; "Sonnets" from Albert J. Rupp; "Poems" from Ernest McGaffey; "The Acrobatic Muse" from Richard

Kendall Munkittrick; "The Skeleton's Message, and Other Poems" from Mrs. Lydia Landon Elliott; "The Pilgrim, and Other Poems" from Sophie Jewett (Ellen Burroughs); "The Road to Castalay" from Alice Brown; and "A Quiet Road" from Lizette Woodworth Reese, the author of "A Handful of Lavender." "Poems" of Caroline and Alice Duer were given to the world; "Out of a Silver Flute" was the title of a volume by Philip Verrill Mighels; David W. McCourt wrote "The Treasures of Weinsberg, and Other Poems"; Belle Gray Taylor, "Captive Conceits"; John Langdon Heaton, "The Quilting Bee, and Other Rhymes"; and George Benson Hewetson, "The Strike, and Other Poems." "Custer, and Other Poems," by Ella Wheeler Wilcox, and "The March to the Sea," by Samuel H. M. Byers, may be termed military poetry; "Abraham Lincoln" was the subject of a poem by Lyman Whitney Allen; "What Cheer? or, Roger Williams in Banishment," by Job Durfee, was revised and edited by Thomas Durfee; and "Ballads of New Jersey in the Revolution" were collected by Charles D. Platt. "The Poems of Celia Thaxter" appeared in an Appledore edition, edited by Sarah Orne Jewett, and new editions were made of the "Poems" of H. C. Bunner and "The Collected Poems" of Dr. Silas Weir Mitchell. Among collections of poetry are to be especially mentioned the "Book of Old English Ballads," with an accompaniment of decorative drawings by George Wharton Edwards and an introduction by W. Hamilton Mabie; "A Cycle of Sonnets," edited by Mabel Loomis Todd; "National Epics," compiled by Kate Milman Rabb; "Our Nation's History and Song," with the campaign songs our fathers sung from Washington to Cleveland, by Joseph M. Clary; "Songs of the South," compiled and edited by Jennie Thornley Clarke, with an introduction by Joel Chandler Harris (Uncle Remus); "Love's Deinesne," a garland of contemporary love poems gathered from many sources, by George H. Ellwanger, in two volumes; "In My Lady's Name," poems of love and beauty compiled and arranged by Charles Wells Moulton; "Nine Love Songs and a Carol," set to music by Kate Douglas Wiggin (Mrs. George C. Riggs); "Through Love to Light," a selection of songs of good courage, by John White Chadwick and Annie Hathaway; the two volumes of the third series of Horace Parker Chandler's "Lover's Yearbook of Poetry," devoted to "The Other Life"; and "The Medical Muse, Grave and Gay," a collection of rhymes up to date by the doctor, for the doctor, and against the doctor, compiled by John F. B. Lillard. "A Metrical History of the Life and Times of Napoleon Bonaparte" was arranged by William J. Hillis from poems and songs; "Songs from the Greek" were translated by Jane Minot Sedgwick; "Armenian Poems rendered into English Verse" were compiled and translated by Alice Stone Blackwell; and "Songs chiefly from the German" came from Bishop J. L. Spalding. "Kallirrhoe" was a dramatic poem by Philip Becker Goetz, and "Daphne; or, the Pipes of Arcadia—Three Acts of Nonsense," the libretto of a comic opera, by Marguerite Merington, the author of "Captain Letterblair"; "The Puppet Booth" was the title of twelve plays by Henry B. Fuller; John Kendrick Bangs published "The Bicyclers, and Three Other Farces"; and "Three Irish Bardic Tales" were metrical versions of the three tales known as the "Three Sorrows of Story Telling," by John Todhunter.

Political, Social, and Moral Science.—Works of this class were of necessity numerous during 1896, a few possessing lasting value, but many of ephemeral interest. The history and influence of "Political Parties in the United States" was traced by Jacob

Harris Patton, and "Problems of Modern Democracy" was the title of political and economic essays by Edwin Lawrence Godkin. Westel W. Willoughby made "An Examination of the Nature of the State," as a study in political philosophy. John R. Commons wrote on "Proportional Representation" for "Crowell's Library of Economics and Politics"; "Biennial Elections" were briefly treated by Raymond Langdon Bridgman; "The Speaker of the House of Representatives," by M. P. Follett, had an introduction by Albert Bushnell Hart; "A Catechism of the Constitution of the United States of America," by John W. Overall, was adapted to students and statesmen, and William Bondy considered "The Separation of Governmental Powers in History, in Theory, and in the Constitutions" in the "Columbia College Studies," other issues of which comprised a "History of Proprietary Government in Pennsylvania," by William Robert Shepherd, and "Municipal Government in Michigan and Ohio," by Delos F. Wilcox. "The Legislation of Congress for the Government of the Organized Territories of the United States, 1789-1895," was traced by Max Farrand. "Municipal Reform in the United States," by Thomas C. Devlin, appeared in the "Questions of the Day Series," another issue of which was the suggestion of "A General Freight and Passenger Post," by James L. Cowles. A. Lawrence Lowell devoted two volumes to "Governments and Parties in Continental Europe," and Herbert M. Thompson investigated "Russian Politics": "Southern Side Lights," by Edward Ingle, in the "Library of Economics and Politics," gave a picture of social and economic life in the South a generation before the war; and Frederic L. Hoffman wrote on "Race Traits and Tendencies of the African Negro" for the "Publications of the American Economic Association." In the "Johns Hopkins University Studies" appeared "Southern Quakers and Slavery," a study in institutional history, by Stephen B. Weeks; "Colonial Origins of New England Senates," by F. L. Riley; "Representation in Virginia," by Julian A. C. Chandler; a "History of Taxation in Connecticut, 1636-1776," by Frank Robertson Jones; "Slavery and Servitude in the Colony of North Carolina," by Frank Spencer Bassett; "Government and Religion of the Virginia Indians," by Samuel Rivers Hendrin; and "The City Government of Baltimore," by Thaddeus P. Thomas. "America and Europe: A Study of International Relations," by eminent authorities, formed one of the issues of the "Questions of the Day Series," and the "Proceedings of the American Conference on International Arbitration, held in Washington, D. C., April 22 and 23, 1896," were also published. John Bach McMaster wrote on "The Origin, Meaning, and Application of the Monroe Doctrine" for the "Belles-Lettres Series"; and Lindley M. Keasebey discussed "The Nicaragua Canal and the Monroe Doctrine" at full length in a political history of isthmus transit, with special reference to the Nicaragua Canal project and the attitude of the United States Government thereto, and also in one of the brief publications of the American Academy of Political and Social Science. Finance, the leading issue of political parties, was discussed at fullest length and from every conceivable standpoint. "A History of Money and Prices" from the thirteenth century to the present time was written by J. Schoenhof in the "Questions of the Day Series"; "An Essay on the Present Distribution of Wealth in the United States," by Charles B. Spahr, for the "Library of Economics and Politics"; Logan C. MePherson studied "The Monetary and Banking Problem"; Alexander Del Mar's "History of Monetary Systems" went through a second revised edition; Charles A. Dana contributed a pamphlet on "Prou-

dion and his "Bank of the People"; M. W. Howard arraigned "The American Plutocracy"; Albion W. Tourgée announced "The War of the Standards" to be coin and credit *versus* coin without credit; Francis A. Walker discussed "International Bimetallism"; J. Laurence Laughlin's "History of Bimetallism in the United States" went through a new edition, with 16 charts and numerous tables; the author translated "The Indian Silver Currency," by K. Ellstaetter, for the "Series of Economic Studies" of the University of Chicago; Marcus A. Miller asked "Gold or Silver?" C. M. Stearns advocated "Silver *versus* Gold: Free Silver and the People" in a campaign handbook for the struggling millions against the gold-hoarding millionaires, and also published "Bryan and Sewall and the Great Issue of 1896"; Wharton Barker, in "Bimetallism," showed the evils of gold monometallism and the benefits of bimetallism; "The Battle of the Standards," by James H. Teller, had an introduction by Henry M. Teller; "Joint Metallism," by Anson Phelps Stokes, went through a fifth enlarged edition; Richard Lowry asked "Shall the United States undertake alone the Free Coinage of Silver at the Ratio of Sixteen to One?" "Gold and Silver Coinage under the Constitution" contained the laws enacted thereon by Congress from the organization of the Federal Government to the present time; Andrew D. White's *brochure* on "Fiat-Money Inflation in France," first published in 1876, went through a new revised edition; "Sound Currency, 1895," was a compendium of accurate and timely information on currency questions; Thomas May Thorpe asked "What is Money?"; George B. Waldron was the author of "A Handbook on Currency and Wealth"; Erick J. Onstad, Charles A. A. McGee, and others undertook to tell "The Truth about Money"; Robert E. Preston wrote a brief "History of the Monetary Legislation and of the Currency System of the United States"; James B. Goode told the story of the rapid rise and dangerous designs of "The Modern Banker"; and H. E. Taubeneck examined "The Condition of the American Farmer." William Dodsworth edited "A History of Banking in all Leading Nations," in four volumes, two of which appeared during the year; Charles A. Conant wrote "A History of Modern Banks of Issue," with an account of the economic crises of the present century; Arthur Twining Hadley, in "Economics," gave an account of the relations between private property and public welfare; Herbert J. Davenport drew up "Outlines of Economic Theory"; John B. Clark examined "The Theory of Economic Progress," with which was included "The Relation of Changes in the Volume of Currency to Prosperity," by Francis A. Walker; W. DuBois Brookings and Ralph Curtis Ringwalt edited "Briefs for Debate on Current Political, Economic, and Social Topics," and J. H. Hollander edited "Letters of David Ricardo to John Ramsay McCulloch, 1816-1823," in the "Publications of the American Economic Association," another issue of which was "Appreciation and Interest," by Irving Fisher. Hon. William McKinley, Hon. Levi P. Morton, and Hon. Thomas B. Reed contributed introductions to "Protection and Prosperity," an account of tariff legislation and its effect in Europe and America, by George B. Curtiss; Frederic C. Howe gave an historical sketch of "Taxation and Taxes in the United States under the Internal Revenue System, 1791-1895"; and David H. Mason wrote "A Short Tariff History of the United States, 1783-1789," with a preliminary view. "Wages and Capital," by Prof. Frank W. Taussig, was an examination of the wages-fund doctrine; Frank H. Dixon wrote on "State Railroad Control," with a history of its development in

Iowa; John Chetwood, Jr., exposed "Immigration Fallacies"; Frank L. MeVeey considered "The Populist Movement" in "Economic Studies"; and Hermon W. Craven refuted "Errors of Populism." "The Principles of Sociology," by Prof. Franklin H. Giddings, was an analysis of the phenomena of association and of social organization from an undoubted authority; Prof. George Harris made a study of "Moral Evolution"; and Henry Osborn Taylor devoted two volumes to "Ancient Ideals." Prof. Kuno Francke wrote on "Social Forces in German Literature: A Study in the History of Civilization." "Individual Freedom: The Germ of National Progress and Permanence" was the subject of an address delivered by Hon. Thomas F. Bayard before the Edinburgh Philosophical Institution, Nov. 7, 1895. "The Industrial Army," by Fayette Stratton Giles, discussed methods of relieving and eliminating poverty and crime, and "The Adjustment of Wages to Efficiency" was the title of three papers by Henry R. Towne, F. A. Halsey, and F. W. Taylor. An illustrated record of the papers and addresses of the National Purity Congress, held in Baltimore, Md., Oct. 14, 15, and 16, 1895, was edited by Aaron M. Powell, and "Platform Pearls for Temperance Workers and Other Reformers" were compiled by Lillian M. Heath. A sixth revised and enlarged edition of "The Woman's Manual of Parliamentary Law," by Harriette R. Shattuck, was issued during the year. Publications of the American Academy of Political and Social Science were: "The Relation of Sociology to Psychology" and "The Theory of Social Forces," by Simon Nelson Patten; "An Early Essay on Proportional Representation," by Edmund J. James; "The Multiple Money Standard," by J. Allen Smith; "Pennsylvania Currency," by C. W. MacFarlane; "The Principles of Sociology," by Prof. Lester F. Ward; "The Nicaragua Canal and the Economic Development of the United States," by Emory R. Johnson; "The Advantages of the Nicaragua Route," by J. W. Miller; "Financial Procedure in the State Legislatures," by E. L. Bogart; "The Growth of the French-Canadian Race in America," by John Davidson; "The Union Pacific Railway," by John P. Davis; "Rudolf von Gneist," by Conrad Bornhak; "Political and Municipal Legislation in 1895," by E. D. Durand; "Postal Savings Banks," by Edward T. Heyn; "Recognition of Cuban Belligerency," by Amos S. Hershey; and "Railroad Pooling," by Martin A. Knapp.

Sports and Pastimes.—"Hunting in Many Lands," Vol. II of the "Book of the Boone and Crockett Club," was edited by Theodore Roosevelt and G. Bird Grinnell, and a new popular edition was given to the public of "Ranch Life and the Hunting Trail," by the first-named author, illustrated by Frederic Remington. Archibald Rogers, W. S. Rainsford, D. D., Frederic Inland, and others contributed "Hunting" to the Out-of-Door Library; Frank A. Bates furnished a descriptive check list of "The Game Birds of North America"; "Caribou Shooting in Newfoundland," by S. T. Davis, M. D. (Shongo), contained a history also of England's oldest colony from 1001 to 1895; while "Hunting and Fishing in Florida," by Charles B. Cory, included a key to the water birds known to occur in the State. "Angling," in the Out-of-Door Library, was the work of Leroy M. Yale, M. D., J. G. A. Creighton, and others, while E. T. D. Chambers concentrated his energies upon "The Ouananiche and its Canadian Environment." The sumptuous volume of Francis T. Underhill upon "Driving for Pleasure; or, The Harness Stable and its Appointments," contains 125 full-page illustrations, and is of undoubted authority. Maria E. Ward wrote upon "Bicycling for Ladies"; "Who

Won? The Official American Yacht Record for 1896" was compiled by James C. Summers, completing the tenth year of the annual; and from W. H. Lewis we had "A Primer of College Football." A superb volume upon "Korean Games," with notes on the corresponding games of China and Japan, by Stewart Culin, contained 153 illustrations and 22 colored plates by native artists. Major-Gen. A. W. Drayson gave us "Whist Laws and Whist Decisions"; "Winning Whist" was described by Emery Boardman, as "Short-Suit Whist" was by V. W. Starnes; Emanuel Lasker (Champion) accompanied "Common Sense in Chess" with illustrations of positions; and John F. B. Lillard edited "Poker Stories." Norman D. Gray was the author of "Ninety-six Charades"; Herbert T. Ingalls followed his successful "Boston Charades" with "The Columbian Prize Charades"; and Katharine I. Sanford offered "A New Book of Charades." Daniel C. Beard described "Outdoor Games for all Seasons: The American Boy's Book of Sport"; Mary White wrote "The Book of a Hundred Games"; Eleanor Withey Willard compiled "Children's Singing Games"; and Grey Burleson's "Marching Plays" were illustrated by L. J. Bridgman. "Gobolinks: or, Shadow Pictures for Young and Old" were supplied by Ruth McEney Stuart and Albert Bigelow Paine, and an anonymous volume of "Pantomimes" furnished amusement for many. "How to lead the German" was told anonymously.

Theology.—Among prominent books of the year are to be mentioned a "History of Christian Doctrine," by Dr. George Park Fisher, in the "International Theological Library"; "Old Faiths and New Facts," by William W. Kinsley; "Agnosticism and Religion," by the President of Cornell University, Jacob Gould Schurman; "Evolution and Dogma," by Rev. J. A. Zahm; "The Warfare of Science with Theology," by Andrew D. White; and "The Gospel for an Age of Doubt," by Dr. Henry Jackson Van Dyke. R. C. Moberly, D. D., wrote on "Reason and Religion," presenting some aspects of their mutual interdependence; Dr. J. Macbride Sterrett discoursed briefly on "Reason and Authority in Religion"; Dr. Randolph H. McKim wrote on "Christ and Modern Unbelief"; Josiah Gilbert, on "Nature, the Supernatural, and the Religion of Israel"; "The Inspiration of Holy Scriptures," and six other essays, by Rev. Francis Longridge and others, were edited with an introduction by H. R. Percival, D. D., and had a preface by Isaac Lea Nicholson, Bishop of Milwaukee; "The Inspiration of History" was the theme of James Mulcahey; and from D. MacDill, D. D., we had "The Mosaic Authorship of the Pentateuch defended against the Views and Arguments of Voltaire, Paine, Colenso, Reuss, Graf, Kuenen, and Wellhausen." "The Theology of the Old Testament" was examined by W. H. Bennett for "The Theological Educator," and "The Church and the Bible" was an explanation and vindication of the just claims of the Bible to inspiration by Rev. William Brevoort Bolmer. Dr. Daniel Dorchester gave us "Christianity vindicated by its Enemies"; Frank Byron Jevons wrote "An Introduction to the History of Religion"; Rev. James L. Meagher told of "The Religions of the World, and how the Fifty-eight Grandsons of Noe and their Descendants founded the Nations after the Flood"; Rev. E. W. Donald delivered six lectures upon "The Expansion of Religion" before the Lowell Institute; John McDowell Leavitt published "The Christian Democracy: A History of its Suppression and Revival"; Dr. Andrew C. Zenos, a "Compendium of Church History," to which Dr. John De Witt contributed an introduction; Charles Foster Kent

was the author of "A History of the Hebrew People from the Settlement in Canaan to the Division of the Kingdom"; Burdett Hart, D. D., of "Biblical Epochs"; and Leonard Woolsey Bacon, of "Irenics and Polemics, with Sundry Essays in Church History." The first of four or five volumes to contain "The History of the Christian Church," by Dr. George H. Dyer, was given to the "The Founding of the New World, 1-1600 A.D."; Dr. Marvin R. Vincent contributed "The Age of Hildebrand" to the series of "Ten Epochs of Church History," and Dr. William Bright sent out "The Roman See in the Early Church, and Other Studies in Church History." "A History of Auricular Confession and Indulgences in the Latin Church" was written by Henry Charles Lea, in three volumes; and Rev. P. A. Baart described "The Roman Court." "Protestantism," by Edward P. Usher, was a study in the direction of religious truth and Christian unity, and Rev. J. Gregory gave his attention to "Puritanism in the Old World and in the New," while "Sabbath and Sunday" was the theme of Dr. William de Loss Love and "Sabbath Day Journeys" of Rev. W. J. Harsha. Henry Clay Trumbull, in "The Threshold Covenant," traced the beginning of religious rites, and Dr. P. Bergstresser discoursed of "Baptism and Feet Washing." "From Jerusalem to Jerusalem" was the title of lectures by Rev. Alfred J. Belt; "Studies in English Church History," of five lectures, by Rev. Hamilton Schuyler; and "Unity and the Lambert Declaration," of addresses delivered under the auspices of the Minnesota Church Club. "The Historic Episcopate," by Dr. R. J. Cooke, made a study of Anglican claims and Methodist orders; Rev. William Montgomery Brown advocated "The Church for Americans"; Dr. John Atkinson traced "The Beginnings of the Wesleyan Movement in America and the Establishment therein of Methodism"; Dr. J. M. Reid's work on "Missions and Missionary Society of the Methodist Episcopal Church" was revised and extended by Dr. J. T. Gracey, bringing the story of the Methodist mission work down to the present date through three volumes; Dr. Robert M. Patterson followed the course of "American Presbyterianism in its Development and Growth"; "Christian Unity" was the theme of five lectures delivered in the Union Theological Seminary of New York during the winter of 1895, by Dr. Charles W. Shields, E. B. Andrews, Dr. John F. Hurst, and others; and lectures delivered in 1895, under the auspices of the Church Club of New York, were published by that organization under the title of "Christian Unity and the Bishop's Declaration." "Thirty-seven Sermons by American Rabbis" were edited and published under the auspices of the Central Conference of American Rabbis. A new second enlarged edition was published of "Loyalty to Church and State," by Cardinal Satolli, and William Heth Whitsitt investigated "A Question in Baptist History: Whether the Anabaptists in England practiced Immersion before the Year 1641." "The Gospel of the Divine Sacrifice" was a study in evangelical belief, with some conclusions touching life, by Dr. Charles Cuthbert Hall; Dr. Charles J. Vaughan published twelve sermons on "Christ, the Light of the World," as well as two other volumes, entitled "Characteristics of Christ's Teaching drawn from the Sermon on the Mount" and "Plain Words on Christian Living." From Dr. David James Burrell we had "For Christ's Crown, and Other Sermons"; from Rev. Andrew Murray, "The Master's Indwelling"; from Dr. F. A. Noble, "The Divine Life in Man, and Other Sermons"; from Dr. J. Elder Cumming, "Through the Eternal Spirit," a biblical study on the Holy Ghost; from Dr. John Robson, "The Holy Spirit, the Paraclete," a study of the work of the Holy

Spirit in man; from Rev. Philip Stafford Moxom, 17 sermons upon "The Religion of Hope"; from Samuel Bond Randall, "Walking with God," to which Dr. Hamilton C. Mabie contributed an introduction; and from Rev. Samuel P. Hotchkiss, "The Unseen Christ." "The Shadow Christ," by Gerald Stanley Lee, was intended as an introduction to Christ himself. "The Great Meaning of Metanoia," by Treadwell Walden, went through a new edition with a supplementary essay. "Death and the Resurrection" was an inquiry into their true nature by Dr. Calvin S. Gerhard. Dr. James H. Brooks published "He is not Here: The Resurrection of Christ"; Dr. Everett Stackpole, "Prophecy: or, Speaking for God"; Dr. Daniel S. Gregory, "Christ's Trumpet Call to the Ministry: or, The Preacher and the Preaching for the Present Crisis"; while Floyd W. Tompkins, Jr., described "The Christian Life: What it is, and How to Live it"; and B. W. Maturin prescribed "Some Principles and Practices of the Spiritual Life." Dr. James Russell Miller defined "Things to Live for," and advocated "A Gentle Heart" above all things. Dr. William C. Roberts wrote on the manifoldness of "New Testament Conversions": George T. Lemmon promised "Better Things for Sons of God"; M. W. Gifford laid down "Laws of the Soul"; Ralph Waldo Trine defined "What all the World's a-seeking" to be the vital law of true life, true greatness, power, and happiness; and H. J. Harald made a contribution to the study of religions, entitled "The Knowledge of Life." "Beyond the Horizon," by Dr. Henry D. Kimball, was the title of bright side chapters on the future life; Dr. Burdett Hart presented "Aspects of Heaven"; and "Heaven" was the subject of six sermons by Dr. Richard Montague. M. C. Hazard compiled a collection of poems entitled "The Tearless Land." Deeply religious in tone were the "Story of the Heavenly Camp Fires," by "One with a New Name"; and "The Farmer and the Lord," by George H. Hepworth, a companion volume to his "Hiram Golf's Religion." "Good Cheer for a Year" was selected from the writings of the Right Rev. Phillips Brooks, and "New Starts in Life, and Other Sermons" was the title of the eighth series of his sermons given to the public. "The World for Christ" was the title of a series of addresses on missions delivered at Syracuse University in the Graves Foundation, 1896, by Dr. Adolphus J. F. Behrends; "Visions and Service," of 14 discourses delivered in college chapels by William Lawrence, Bishop of Massachusetts; "Mornings in the College Chapel," of short addresses to young men on personal religion, by Francis Greenwood Peabody; and "Progress in Spiritual Knowledge," of a memorial volume of Rev. Chauncey Giles. "Sermons" of Dr. John R. Warner were published, with a sketch of his life by his daughter, Mary Warner Moore: B. B. Comegys spoke "Last Words for my Young Hearers and Readers"; "The Fisherman and his Friends" was the title of a series of revival sermons, by Dr. L. A. Banks; Dr. S. D. McConnell issued "A Year's Sermons"; Rev. George Hodges delivered eight lectures on "Faith and Social Service" before the Lowell Institute; and sermons by Rev. John Tunis on "The Faith by which we Stand" had a preface by Bishop Potter. George A. Gates, D. D., contributed a biographical introduction to "The Imperial Christ," by John Patterson Coyle, D. D., whose Sunday-evening sermons for the people, entitled "Workmen and the Church," were also published. Rev. Cortland Myers preached on "Midnight in a Great City"; Dr. Lyman Abbott was heard from on "Christianity and Social Problems" and collaborated with Rev. Francis Brown, Rev. George Matheson, and others on "Prophets of the

Christian Faith." "Heroes of Faith" was a study of a chapter from the Greek New Testament, for beginners, by Burriss A. Jenkins; "The Table Altar" was a series of meditations for a month of mornings, by Bishop J. H. Vincent; and Rev. Bonaventure Hammer arranged "The Spiritual Exercises of an Eight Days' Retreat" for general use. Rev. Joseph L. Andreis wrote upon "The Christian at Mass"; and devotional addresses, by B. W. Randolph, on the Ten Commandments, were entitled "The Law of Sinai"; "David's Harp in Song and Story," a history of the Psalms in all the ages of the Church, by Dr. Joseph Waddell Clokey, had an introduction by Dr. W. J. Robinson; "Sermons on the Gospels," published during 1896, covered the period from "Advent to Trinity"; "Annotations on the Gospel according to St. John" were made by Dr. A. Spaeth; Rev. Frank J. Goodwin was the author of "A Harmony of the Life of St. Paul according to the Acts of the Apostles and the Pauline Epistles"; and Rev. S. W. Pratt, of "The Life and Epistles of St. Paul, harmonized and chronologically arranged in Scripture Language." "Annotations on the Epistles of Paul to the Ephesians, Philippians, Colossians, and Thessalonians," by Drs. E. T. Horn and A. G. Voigt, appeared in the "Lutheran Commentary," as did "Annotations on the Gospel according to St. Luke," by Dr. H. L. Baugher. "Pauline Charity" was the theme of discourses on First Corinthians, by Dr. Joseph Cross, and "The Theology of the Apostles Peter and Paul, in their own Words," was the work of Dr. Augustus Schultze. "Patmos: or, The Unveiling," by Rev. Charles Beecher, was, as its name indicates, an exposition of the Apocalypse of St. John. Lucy Rider Meyer, M. D., edited "The Shorter Bible chronologically arranged," to which Bishop John H. Vincent contributed an introduction; R. A. Torrey told "How to study the Bible with Greatest Profit"; and Dr. F. S. Schenck supplied "The Bible-Reader's Guide." A new enlarged edition was published of "The Critical Handbook of the Greek New Testament," by Dr. Edward C. Mitchell, and Part I appeared of "The Open Bible," helps for the Bible reader, arranged according to the Chautauqua system of education, by Henry Berkowitz. Richard Green Moulton edited Vols. II, to X of "The Modern Reader's Bible," a series of works from the sacred Scriptures in modern literary form, and was the author of a work upon "The Literary Study of the Bible," in addition to contributing, with Drs. John Punnett Peters, Alexander Balmain Bruce, and others, to "The Bible as Literature," the introduction to which was by Dr. Lyman Abbott. "The Jewish Scriptures" were reviewed in anything but a reverent spirit by Amos Kidder Fiske. The twenty-second series of "Sermons on the International Sunday-school Lessons" for 1897, by the "Monday Club," appeared, as did "Sunday-school Studies" on the same, by Dr. E. E. Hoess, and "Illustrative Notes, 1897," by Jesse Lyman Hurlbut and Robert Remington Doherty. The "Epworth League Reading Course, 1896-'97" filled four volumes, and E. H. Rawlings wrote on the interdependence of "The Pastor and the League." "Child Life in our Mission Fields: or, Pen Pictures from Busy Workers" were compiled by Daisy Lambeth and Kate Harlan; Calvin Dill Wilson and James Knapp Reeve described "Bible Boys and Girls"; Rev. Ernest B. Layard wrote on "Religion in Boyhood"; while "Beulah Land; or, Words of Good Cheer to the Old" came from Dr. Theodore L. Cuyler. "Beauty for Ashes: or, Consolation for the Bereaved," by Rev. William C. Wilbur, had an introduction by Bishop J. H. Vincent. "Bible Selections for Daily Devotion" were selected and arranged by Dr. Sylvanus Stall. "Primitive Buddhism" had

its origins and teachings investigated by Elizabeth A. Reed. "Turkey and the Armenian Atrocities," by Rev. Edwin Bliss and Rev. Cyrus Hamlin, had an introduction by Miss Frances E. Willard; and "Armenia's Ordeal," by Armayis P. Vartoogian, went through a second edition. "The Mystery of Sleep" was explained by John Bigelow as the means of developing the spiritual power of man; and "True Memory; the Philosopher's Stone; its Loss through Adam; its Recovery through Christ" was a theory advanced by Mrs. Calvin K. Reifsnider. "Contributions to the History of Christ Church, Hartford" filled a large volume; "History and Records of the First Congregational Church, Hanover, Mass., 1727-1865, and Inscriptions from the Headstones and Tombs in the Cemetery at Center Hanover, 1727-1894," by L. Vernon Briggs, was the first volume of a work upon "The Church and Cemetery Records of Hanover, Mass." "A Silver Jubilee" celebrated the twenty-fifth anniversary of the First Congregational Church, Montclair, N. J., and of the pastorate of Amory Howe Bradford, its first and only minister, 1870-'95. "Our Seminaries" was the title of an essay on clerical training, by Rev. John Talbot Smith, and the "Alumni Record of Drew Theological Seminary, 1869-1895" was published. Frank Landon Humphreys traced "The Evolution of Church Music," the work having a preface by Bishop Henry C. Potter; and Hiram Corson wrote on "The Voice and Spiritual Education." Anna Robertson Brown advocated "Culture and Reform," and Charles Sumner Nickerson edited "Noble Living," a series of studies as to the development of the deeper life in men.

Unclassified.—Books of a general character not falling under any of the classifications heretofore made include: "The Story of the Mine as illustrated by the Great Comstock Lode of Nevada," contributed by Charles Howard Shinn to the "Story of the West Series"; "The Mineral Industry: Its Statistics, Technology, and Trade in the United States and Other Countries from the Earliest Times to the End of 1895," edited by Richard P. Rothwell; "The Story of American Coals," by William Jasper Nicolls; and Vol. I of "Great American Industries," described for young people by W. F. Rocheleau. "Whom to Trust" was a treatise on mercantile credits by P. R. Earling; J. H. Lewis told "How to buy Life Insurance"; and "Pennsylvania Securities, 1894-'95," was published by the Securities Company. "Poor's Manual of Railroads of the United States for 1896" completed its twenty-ninth year, and the tenth annual issue was also made of "Poor's Directory of Railway Officials." J. Glover prepared "Formulae for Railway Crossings and Switches," and L. E. Loree discussed "Emergencies in Railway Work" in the "University of Wisconsin Engineering Series." A new rewritten and revised edition appeared of John B. Henck's "Field Book for Railway Engineers." "Cavalry Studies from Two Great Wars" formed No. 2 of the "International Series"; Laurence L. Bruff prepared "A Text-book of Ordnance and Gunnery" for the use of cadets of the United States Military Academy; and "Cadet Life at West Point" was described by Lieut. Hugh T. Reed. "The Final War" was anticipated by Louis Tracy. "The Ship's Company and Other Sea People," by James D. Jerrold Kelley, consisted of eight articles about life on the water board, on the great Atlantic steamers, on yachts, and on men-of-war; and "Whalers and Whaling" were the theme of Nannie Belle Maury. J. Slater Lewis wrote on "The Commercial Organization of Factories"; R. R. Williams compiled "The American Hardware Store"; "Modern Stonecutting and Masonry" came from John S. Siebert and F. C. Biggin; "The Chronicle Fire Tables for 1896"

was an expensive volume; and William Paul Gerhard selected "Theater Fires and Panics: Their Causes and Prevention" for his consideration. Edward Wegmann chronicled "The Water Supply of the City of New York, 1658-1895"; Harold Collet published "Water Softening and Purification"; E. Barley Denton, "Sewage Purification brought up to Date"; Henry Robinson, "Sewage and Sewage Disposal"; and M. N. Baker, "Sewerage and Sewage Purification." James J. Lawler gave rules for "American Sanitary Plumbing," and P. J. Davis's "Standard Practical Plumbing," in two volumes, went through a fourth revised edition. Edmund B. Weston published "Tables showing Loss of Head due to Friction of Water in Pipes"; Lute Wilcox gave his attention to "Irrigation Farming"; Gifford Pinchot and Henry S. Graves made a study of "The White Pine," with tables of volume and yield; Abbot Kinney advocated the cultivation of "Eucalyptus"; Andrew S. Fuller advised "The Nut Culturist"; and a fourth edition, revised and rewritten, of "American Grape Growing and Wine Making," by George Hussmann, contained several added chapters on the grape industries of California. Daniel Denison Slade traced "The Evolution of Horticulture in New England"; "American Highways," by Prof. N. S. Shaler, gave a popular account of their conditions and of the means by which they may be bettered; and Alfred Perkins Rockwell described "Roads and Pavements in France." A manual for "Bicycle Repairing" was compiled by S. D. V. Burr from articles in "The Iron Age," and "Bicycles and Tricycles" were the subject of a volume by Archibald Sharp. "Occupations of the Negroes," by Henry Gannett, was published by the trustees of the John F. Slater fund; Charles W. Reinhardt wrote on "Lettering for Draftsmen"; and Charles F. Jackson on "Mechanical Drawing." James E. Munson gave much space to the "Art of Phonography"; Rev. D. A. Quinn to "Stenotypy; or, Shorthand by the Typewriter"; Norman P. Hestley prepared "A Complete Manual of the Pitman System of Phonography"; and W. L. Mason arranged "Phonographic Lesson Cards in Isaac Pitman's Phonography." "The Complete Bachelor: Manners for Men," came from the author of the "As Seen by Him" papers; "Social Observances," from "Au Fait"; and "Official, Diplomatic, and Social Etiquette of Washington" was compiled by Katherine Elwes Thomas, and had an introductory note by Mrs. John A. Logan. W. H. Bailey, Sr., wrote of "The Detective Faculty as illustrated from Judicial Records and Actualities of Experience"; Henry W. McViekar described "The Evolution of Woman"; and George Wolfe Shinn gave "Friendly Talks about Marriage." "Among the Freaks," by William L. Alden, was illustrated by J. F. Sullivan and Florence K. Upton; "Vikings of Today," by Wilfred T. Grenfell, told of life and medical work among the fishermen of Labrador; and Kansas in 1856 was the scene of "For Freedom's Sake," by Arthur Paterson. "The New Charter" was a discussion of the rights of men and the rights of animals by J. C. Kenworthy, A. L. Lilley, J. Oldfield, and others. Morgan Homer Dyer was the author of "Dyer's Index to Land Grants in West Virginia"; "A Manual for Boards of Health and Health Officers" was the work of Lewis Baleh. Charles Comins treated of "Newspaper Bookkeeping and Accounts"; and J. Harrington Keene (Grapho) of "The Mystery of Handwriting." "Cyanide Processes" were described by E. B. Wilson; "Professional Papers" on mining and metallurgy, read by Thomas A. Rickard before the American Institute of Mining Engineers, were collected into a volume; Oberlin Smith treated of the

"Press Working of Metals"; and William Metcalf of "Steel." John Newman's book on "Metallic Structures: Corrosion and Fouling and their Prevention," was of special value, and "A Practical Treatise on Compressed Air and Pneumatic Machinery" came from E. A. Rix and A. E. Chodzko. A third revised edition of "The Steam Engine considered as a Thermodynamic Machine," by J. H. Cotterill, appeared, and George J. Bell prepared "A Practical Treatise on Segmental and Elliptical Oblique or Skew Arches." J. H. Knight offered "Notes on Motor Carriages"; Richard Anderson treated of "Lightning Conductors: Their History, Nature, and Mode of Application"; and "Shop Kinks and Machine-Shop Chat," by Robert Grimshaw, consisted of 500 practical paragraphs in familiar language, showing special ways of doing work better, more cheaply, and more rapidly than usual. "A Synopsis of Current Electrical Literature" was compiled from technical journals and magazines during 1895 by Max Osterberg. Henry Wood published 22 lectures and essays entitled "Studies in the Thought World"; Arthur E. Waite described "Devil Worship in France"; Thomas S. Blair asked of "Human Progress: What can Man do to Further it?" and Otto A. de La Camp made "A Spiritual Tour of the World in Search of the Line of Life's Evolution." "Ye Thoroughbred," by "Novus Homo," propounded a new theory; and "My Soundspeed Discovery expanding into a Constructive Medley of Wit and Song" was declared by George Winslow Pierce to be a four years' after-florescence of "The Life Romance of an Algebraist." "The Seat in America" was the theme of Peter Ross. H. L. Russell furnished "Outlines of Dairy Bacteriology," and Richard Baxter, "Baxter's Practical Receipt Book for Bakers." Hamblen Sears gave an outline of "Governments of the World To-day," for the use of newspaper readers; James Baldwin offered "A Guide to Systematic Readings in the Encyclopædia Britannica"; and Vol. I appeared of "Alden's Living Topics." "The Annual Literary Index, 1895," was the work of William I. Fletcher and R. R. Bowker; Luther S. Livingston compiled "American Book Prices Current"; "The American Catalogue, 1890-1895," appeared, as did the "English Catalogue of Books for 1895"; "United States Government Publications, July 1, 1890-June 30, 1895," was compiled under the editorial direction of R. R. Bowker by J. H. Hickcox; and "Appletons' Annual Cyclopaedia and Register of Important Events of the Year 1895" was issued, as usual.

Voyages and Travels.—Several delightful volumes recorded the pleasures of travel enjoyed by Americans in 1896. "By Oak and Thorn" was a record of English days by Alice Brown; William H. Rideing told of "At Hawarden with Mr. Gladstone, and Other Transatlantic Experiences," while Mrs. Anna Bowman Dodd was at home "On the Broads," her narrative being illustrated by Joseph Pennell. E. Boyd Smith illustrated his own descriptions of French life in what he terms "My Village"; "On the Trail of Don Quixote" was a record of rambles in the ancient province of La Mancha by Augustus F. Jaceaci; Mrs. Louise Chandler Moulton described "Lazy Tours in Spain and Elsewhere"; and H. C. Chatfield Taylor also visited "The Land of the Castanet." Thomas Sedgwick Steele made "A Voyage to Vikingland," and Mrs. Sarah S. T. Baker gave brief "Fireside Sketches from Swedish Life." Laurence Hutton traced the "Literary Landmarks of Venice." "Three Gringos in Venezuela and Central America," by Richard Harding Davis, brings us back to our own continent; and again we have "Venezuela" described as a land where it is always summer

by William E. Curtis. "Through Jungle and Desert," a record of travels in eastern Africa, by William Astor Chanler, contained numerous illustrations and photographs taken by the author; Eben J. Loomis described "An Eclipse Party in Africa chasing Summer across the Equator in the U. S. S. 'Pensacola'" in a manner to delight the general reader as well as to instruct the scientist, the handsome volume being illustrated with nearly 100 photographs; "The Edge of the Orient," by Robert Howard Russell, brought before us cities and peoples out of the beaten track; and Albert Payson Terhune, a son of Marion Harland, saw "Syria from the Saddle." "Alone in China," by Julian Ralph, told of travel under the guise of fiction; "Kokoro" was the title of hints and echoes of Japanese inner life by Lafcadio Hearn; and the same country is the theme of "Dragons and Cherry Blossoms," by Mrs. Robert C. Morris, and Katherine Schuyler Baxter's "In Bamboo Lands." "The Island of Cuba," by Andrew S. Rowan and Marathon Montrose Ramsey, gave a descriptive and historical account of the Great Antilla, and Ellen Blackmar Maxwell told of "Three Old Maids in Hawaii." Anthony J. Drexel Biddle, in eight papers upon "The Madeira Islands," conveyed much useful and interesting information. "Thlinkets of Northern Alaska" were described by Francis Knapp and Rheta Louise Childe; "The Last Cruise of the 'Miranda'" was a record of arctic adventure by Henry Collins Walsh and others; Vol. I of "Mazama: A Record of Mountaineering in the Pacific Northwest," was published by The Mazamas, a society of Portland, Ore.; Jonathan Carver: His Travels in the Northwest in 1766-'68" was published in a limited edition by John Goadby Gregory; and John McDougall, in "Saddle, Sled, and Snowshoe," described pioneering on the Saskatchewan in the sixties. "On Snowshoes to the Barren Grounds," by Caspar W. Whitney, told of 2,800 miles traversed after musk oxen and wood bison; "Camping in the Canadian Rockies," by Walter Dwight Wilcox, contained 25 full-page photogravures and many text illustrations from photographs by the author; and tales of adventure told "Around the Camp Fire" during a canoeing trip to New Brunswick were repeated by Charles C. Douglas Roberts. "Fort Reno: or, Picturesque Cheyenne and Arapahoe Army Life before the Opening of Oklahoma" was described by Mrs. D. B. Dyer; and in the series of "American Summer Resorts" we had "The North Shore of Massachusetts," by Robert Grant; "Bar Harbor," by F. Marion Crawford; "Newport," by W. C. Brownell; and "Lenox," by George A. Hibbard. A third edition of "California of the South," by Drs. Walter Lindley and J. P. Widney, was rewritten and brought down to date; and a second revised and enlarged edition was also sent out of "The White Mountains," by Rev. Julius H. Ward. "Appletons' European Guide-Book" was issued in two handsome volumes. Juvenile books of travel were respectively "The Land of the Kangaroo," by Thomas W. Knox, in the "Travel and Adventure Series"; "Four Young Explorers: or Sightseeing in the Tropics," by W. T. Adams (Oliver Optic), in the "All-over-the-World Library"; "The Long Walls: An American Boy's Adventure in Greece," by Elbridge S. Brooks and John Alden; and "Witch Winnie in Holland," by Mrs. Elizabeth Williams Champney. Charles Morris compiled four volumes of "Half Hours of Travel at Home and Abroad," the first being given to America and the others respectively to Europe, Asia, and Africa and Australia; Robert Meredith described a trip "Around the World on Sixty Dollars," and Edgar Magness told "Tramp Tales of Europe."

The following are the figures of book production during the year as given by the "Publishers' Weekly":

CLASSIFICATION.	1895.		1896.

LITERATURE, BRITISH, IN 1896. The production of books in England increases at a far less rapid rate than in our own country, the record showing 6,573 volumes sent out in 1896 against 6,516 in 1895—an increase of but 57 in all. Of this number, moreover, but 5,234 were new books, a falling off of 347 from the 5,581 new books of the year previous, while the excess of new editions was more than 400. This is the more remarkable when we remember that the excess of new books published in 1895 was 281 over the number produced in 1894. The number of new works of fiction was 1,654, an excess of 110 over 1,544 in 1895, and 525 new editions stand against 347 of that year. The most remarkable increase shown was in the departments of history and biography, and of arts, sciences, and illustrated works; and more works on political and social economy, and on law appeared, as well as volumes of poetry, while a decrease of 270 books was shown in *belles-lettres*, essays, etc., and of 510 in books of a miscellaneous character. Fewer books of educational, classical, and philological character were written, fewer medical books, and fewer of voyages and travels, while theological works remained almost absolutely stationary.

Biography.—This department of British literature is always inviting, and several works of permanent value are to be noted among the numerous contributions made during the year. "The Life of Cardinal Manning" was written by Edmund Sheridan Purcell in two volumes, and two others contain the "Life and Letters of John Gibson Lockhart," by Andrew Lang. "The Life and Letters of George John Romanes," written and edited by his wife, was a valuable record of an eminent philosopher, and "An Autobiography, 1834-1858," by Philip Gilbert Hamerton, accompanied with a memoir by his wife, 1858-1894, possessed a rare charm. "My Long Life," by Mrs. Mary Cowden Clarke, compiler of the "Concordance to Shakespeare" and author of "The Girlhood of Shakespeare's Heroines," was a charming autobiographic sketch, and Augustus J. C. Hare told "The Story of my Life," publishing also "Biographical Sketches." "Our Seven Homes" contained the autobiographical reminiscences of Mrs. Rundle Charles, the author of "The Schönberg-Cotta Family," and Frederick Locker-Lampson imparted "My Confidences,"

full of the finest literary flavor. The first installment of "I Well Remember," by Felix Moscheles, was entitled "In Bohemia with Du Maurier," and contained 63 original drawings by that accomplished author and artist. Two volumes contained "The Story of my Life" as told by Sir Richard Temple, ably supplementing his previous books on "India in 1880" and "Men and Events of my Time in India"; "The Life, Letters, and Works of Louis Agassiz," came from Jules Marcou, and the "Life and Letters of Sir Charles Hallé," in two volumes, containing his autobiography, 1819-'60, his correspondence and diaries, edited by his son, C. E., and his daughter, Maria Hallé. To scientific biography belong also the "Autobiography of Sir George Biddell Airy;" "The Scientific Papers of John Couch Adams," edited by William Grylls Adams, the first volume of which contained a memoir by J. W. L. Glaisher; and "C. Pritchard, Late Savilian Professor of Astronomy in the University of Oxford," being memoirs of his life compiled by his daughter, Ada Pritchard, an account of his theological work by the Bishop of Worcester, and of his astronomical work by H. II. Turner. "Francis Orpen Morris," a memoir by his son, Rev. M. C. F. Morris, told of a gentle student of Nature as well as an active clergyman; and "The Life of Sir F. A. Gore Ouseley," by F. W. Joyce, of the work performed by that Professor of Music at Oxford. "The Life and Letters of Samuel Butler, D.D. (Head Master of Shrewsbury School, 1798-1836, and afterward Bishop of Lichfield), in so far as they illustrate the Scholastic, Religious, and Social Life of England, 1790-1840," were given to the public by his grandson, Samuel Butler; F. St. John Thackeray contributed a "Memoir of Edward Craven Hawtrey," the Head Master of Eton; and Prof. Knight a "Memoir of John Nichol, Professor of English Literature in the University of Glasgow." The "Life and Letters of Fenton John Anthony Hort, D.D." came from A. F. Hort, and "John Veitch, Professor of Logic and Rhetoric in the University of Glasgow," from Mary R. L. Bryce. In the "Century Science Series" appeared "Humphry Davy, Poet and Philosopher," by Thomas E. Thorpe; "Charles Darwin and the Theory of Natural Selection," by Edward Bagnall Poulton; and "James Clerk Maxwell and Modern Physics," by R. T. Glazebrook. The other well-established series received important additions. "Lorenzo de' Medici," by Edward Armstrong, "Jeanne D'Are," by Mrs. Oliphant, and "Charles XII," by R. Nisbet Bain, appeared in the "Heroes of the Nations Series"; "Dundonald," by J. W. Fortescue, in the "English Men of Action"; "Grover Cleveland," by James Lowry Whittle; "Don Emilio Castelar," by D. R. Hamay; "Pope Leo XIII.," by Justin McCarthy; and "The Right Hon. Joseph Chamberlain," by S. H. Jeyes, in the "Public Men of To-Day"; "Riche-lieu," by Richard Lodge, and "Philip Augustus," by William Holden Hutton, in the "Foreign Statesmen"; George Barnett Smith contributed "William Tyndale, the Translator of the English Bible," and "General Gordon, the Christian Soldier and Hero," to the "Popular Biographies"; "George Fox," by Thomas Hodgkin, was the only addition to the "Leaders of Religion," as "Thomas Hardy," by Annie Macdonell, was to the "Contemporary Writers." In the "Famous Scots Series" we had "Thomas Carlyle," by H. C. Macpherson; "Sir James Y. Simpson," by Eve Blantyre Simpson; "Hugh Miller," by W. Keith Leask; "Allan Ramsay," by Oliphant Smeaton; "John Knox," by Alexander Taylor Innes; "Robert Burns," by Gabriel Setoun (Thomas Hepburn); and "The Balladists," by John Geddie. In the "Great Writers Series" we had "Henry David Thoreau," by Henry S. Salt,

who was also the author of "Percy Bysshe Shelley, Poet and Pioneer." Arthur Waugh wrote a study of the life and work of "Alfred, Lord Tennyson"; and "Sheridan," by W. Fraser Rae, in two volumes, had an introduction by Sheridan's great-grandson, the Marquis of Dufferin and Ava. "Leigh Hunt" was commemorated by Richard Brinsley Johnson in the "Dilettante Library"; Percy Fitzgerald rewrote his "Life of Laurence Sterne," adding new matter based on newly discovered documents; John Mackinnon Robertson discoursed of "Buckle and his Critics"; Mamie Dickens described "My Father as I recall him"; J. Fitzgerald Malloy devoted two volumes to "The Most Gorgeous Lady Blessington"; and Adam Scott told "The Story of Sir Walter Scott's First Love." "Charlotte Brontë and her Circle" were the subject of a volume by Clement K. Shorter; George Somes Layard gave us "George Cruikshank's Portraits of himself," with more than 40 illustrations; "Frances Trollope: her Life and Literary Work, from George III to Victoria," came from her daughter-in-law, Frances Eleanor Trollope; and Annie E. Ridley wrote of "Frances Mary Buss, and her Work for Education." "The Life of Sir John Franklin, R. N." was written by H. D. Traill. "Nelson and his Companions in Arms: The Nelson Memorials" was an excellent biography by John Knox Laughton; from Thomas Power O'Connor came a book about "Napoleon"; and S. Baring-Gould wrote also "The Life of Napoleon Bonaparte." "The Private Life of Warren Hastings" was described by Sir Charles Lawson. "John Russell, R. A." was the subject of a biography by G. C. Williamson; "The Life and Letters of Frederick Walker" came from John G. Marks; and a record of the life and work of "Ford Madox Brown," by H. Ford Madox Hueffer, was accompanied with numerous reproductions. "Jean François Millet: His Life and Letters" was by Mrs. Julia Cartwright Ady. Vol. I appeared of "The Political Life of W. E. Gladstone," anonymous, illustrated with cartoons, etc., from "Punch"; two volumes contained Part I of "Roundell, Earl of Selborne: Memorials, Family and Personal," covering the period 1766-1865; "The Paget Papers," diplomatic and other correspondence of the Right Hon. Sir Arthur Paget, G. C. B., 1794-1807, were arranged and edited by his son, Sir Augustus B. Paget, in two volumes, with notes by Mrs. J. R. Green; "Letters of Frederic Lord Balfour" were edited by George Eden Marindin; a "Memoir of Sir John Drummond Hay," sometime minister at the court of Morocco, appeared anonymously; and a "Life of Brian Houghton Hodgson" was written by Sir William Wilson Hunter. Lady Ferguson wrote of "Sir Samuel Ferguson in the Ireland of his Day," and "Some Records of the Life of Stevenson Arthur Blackwood" were compiled by a friend and edited by his widow. "The Jerminham Letters, 1780-1843," edited with notes by Egerton Castle, filled two volumes, and "The Girlhood of Maria Josepha Holroyd (Lady Stanley of Alderley) recorded in Letters of a Hundred Years Ago, from 1776 to 1796," were edited by J. H. Adeane. "Queen Elizabeth," by Mandell Creighton, D. D., Bishop of Peterborough, contained 40 illustrations from original paintings and miniatures in the collections of Queen Victoria and others, and was intended as a companion volume to Dr. Skelton's "Mary Stuart." A. S. Martin Hume also devoted a volume to "The Courtships of Queen Elizabeth," and "The Life of Sir Kenelm Digby" was written by one of his descendants. "With H. M. 9th Lancers during the Mutiny" was the title of the letters of Brevet-Major O. H. S. Anson, edited by his son, Harcourt S. Anson; "The Memoirs of the Gemini Generals" contained personal anecd-

otes, sporting adventures, and sketches of distinguished officers by Major-Gen. Osborn Wilkinson and Major-Gen. Johnson Wilkinson; "Under Crescent and Star" contained reminiscences of the Sudan and Egyptian campaigns by Lieut.-Col. Andrew Haggard; the "Life and Letters of the Late Admiral Sir Bartholomew James Sullivan, 1810-1890" were edited by his son, Henry Norton Sullivan, and Mrs. Frederick Egerton wrote a biography of "Admiral of the Fleet Sir Geoffrey Phipps Hornby, G. C. B." "The Life and Correspondence of William Connor Magee, Archbishop of York," by Dr. John Cotter Macdonnell, in two volumes, gave an excellent portrait of a great orator, wit, and ecclesiastical statesman; C. H. Simpkinson, M. A., dwelt upon "The Life and Work of Bishop Thorold"; Rev. Herbert Birks gave us "The Life and Correspondence of Thomas Valpy French, First Bishop of Lahore"; and Marian S. Benham, a memoir of "Henry Callaway, M. D., D. D., First Bishop for Kaffraria." "The Last Years of St. Andrews" were described by the author of "The Recreations of a Country Parson" (Dr. Boyd). "John Ellerton: Being a Collection of his Writings on Hymnology, with a Sketch of his Life and Works," came from Rev. Henry Housman, and "Vavasor Powell," the Baptist evangelist of Wales in the seventeenth century, from Rev. D. Davies. "England and her Churchmen in the Middle Ages" was a collection of sketches by L. G. "Margaret Ogilvy," by her son, James Matthew Barrie, won all hearts. In the "New Irish Library" appeared "Swift in Ireland," by Richard Ashe King; "Owen Roe O'Neill," by J. F. Taylor, and "A Short Life of Thomas Davis," by Sir Charles Gavan Duffy. "The Life of William Carleton," being his autobiography and letters, with an account of his life and writings from the point at which the autobiography breaks off, by David J. O'Donoghne, filled two volumes. "Ulster as it is; or, Twenty-eight Years' Experience as an Irish Editor," by Thomas MacKnight, was also contained in two, and from Charles A. Cooper we had "An Editor's Retrospect: Fifty Years of Newspaper Work." "De Quincey and his Friends," being personal recollections, souvenirs, and anecdotes of the famous "opium eater," his friends and associates, written and collected by James Hogg, were edited by the son of the latter, and a "Journal of a Few Months' Residence in Portugal and Glimpses of the South of Spain," by Mrs. Edward Quillinan (Dora Wordsworth), was edited with a memoir by Edmund Lee. "Reminiscences of Literary London, 1779-1853," by Thomas Rees, M. D., with extensive additions by John Britton, were edited by "A Book Lover." "Joseph Thomson, African Explorer," found a biographer in his brother, J. B. Thomson. David Bapcic published "Musicians of All Times," a concise dictionary of musical biography, containing 12,000 names, and also "Sketches of the English Glee Composers, Historical, Biographical, and Critical, from about 1735-1866." "Cheer, Boys, Cheer: Memories of Men and Music," came from Henry Russell, the octogenarian composer. "The Story of Nell Gwynn and the Sayings of Charles II," related and collected by Peter Cunningham, were edited with an introduction and additional notes, and a life, of the author, by Henry B. Wheatley. "Victoria: Her Life and Reign," an illustrated biography of the Queen from the year 1819 to the present time, was written by Alfred E. Knight; "William I, German Emperor, and his Successors," by Mary Cochrane; and "Human Documents," by Arthur Lynch, contained characteristic sketches of representative men and women of the time. H-r-n published "Here and There Memories," and Vol. V appeared of "Biographies" of eminent persons reprinted from the "London Times,"

covering the year 1891-92. D. Byrne was the author of a volume of critical and biographical notices of living "Australian Writers." "Lord Rosebery's Speeches, 1874-1896" were collected in book form, and "Archbishop Benson in Ireland: Record of his Irish Sermons and Addresses, 1896" was edited by J. H. Bernard. "Eton in the Forties" was a book of school reminiscences, by Arthur Duke Coleridge. "Camps, Quarters, and Casual Places," by Archibald Forbes, contained the experiences of the veteran war correspondent, and Charles E. Ryan narrated what he saw "With an Ambulance during the Franco-German War." "Running the Blockade" was a personal narrative of adventures, risks, and escapes during the American civil war by Thomas E. Taylor, to which Julian Corbett contributed an introduction; and equally thrilling was "The Journal of a Spy in Paris during the Reign of Terror," by Raoul Hesdin. "The Autobiography of an English Game-keeper (John Wilkins, of Stanstead, Essex)," edited by Arthur H. Byng and Stephen M. Stephens, went through a third edition, and Augustine Birrell was the editor of a new six-volume edition of Boswell's "Life of Johnson." Vols. XLIV, XLV, XLVI, XLVII, XLVIII, and XLIX were issued of the "Dictionary of National Biography," edited by Sidney Lee, the last covering "Robinson-Russell."

Essays.—Under this head fall books of miscellaneous literary character also. Among essayists *pur et simple*, however, few have met with such popular favor as Mrs. Alice Meynell, who published during the year "The Color of Life, and Other Essays on Things seen and heard," "The Rhythm of Life," and some delightful short chapters on "The Children." Austin Dobson contributed a third series of "Eighteenth Century Vignettes," as Edmund W. Gosse did "Critical Kit-Kats"; A. T. Quiller-Couch made "Adventures in Criticism"; Sir Herbert Maxwell "Spent Rainy Days in a Library" to profit; Isaac Zangwill professed himself "Without Prejudice"; E. H. Lacon Watson contributed "The Unconscious Humorous, and Other Essays"; "Essays and Critical Reviews," by C. H. Pearson, the author of "National Life and Character," were edited with a biographical sketch by H. A. Strong; George Saintsbury published "Essays in English Literature, 1780-1860," as well as "A History of Nineteenth Century Literature, 1780-1895," and W. H. Crawshaw wrote on "The Interpretation of Literature." Vol. I of "The Intermediate Text-book of English Literature," in the "University Tutorial Series," came from A. J. Wyatt and W. H. Low. "The Lute of Apollo" was an essay on music, by Clifford Harrison. Violet Paget (Vernon Lee) gave us "Renaissance Fancies and Studies," being a sequel to "Euphorion"; Thomas Whittaker, "Essays and Notices, Philosophical and Psychological"; John Taylor, "Antiquarian Essays"; Mrs. Russell Barrington, "A Retrospect, and Other Articles"; Dr. Augustus Jessopp, "Frivola"; H. S. Wilson, "History and Criticism"; Richard Le Gallienne, a second series of "Prose Fancies"; and Frederick Wedmore, "Orges and Miradou," a collection of delicate sketches, hardly fiction. To the same class belong "Gaston de Latour," an unfinished romance, by Walter Pater, containing some of the deepest of his thought and teaching, and "Old French Romances" done into English by William Morris, with an introduction by Joseph Jacobs. "Among the Untrodden Ways" was a volume of studies and stories by M. E. Francis Blundell, and "Moorland Idylls," by Grant Allen, may be mentioned with "In the Garden of Peace," by Helen Milman Crofton (Mrs. Caldwell Crofton), and "By Tangled Paths," stray leaves from Nature's byways, by H. Mead Briggs. "Riverside Letters," by George D.

Leslie, continuing his "Letters to Marco" (Mr. Stacy Marks), proved as delightful as their predecessors, and were illustrated by the author. L. F. Austin was heard from "At Random." "Father Archangel of Scotland, and Other Essays," by G. and R. B. Cunningham Graham, and "Scholar Gypsies," by John Buchan, were not altogether biographical. "The Works of Max Beerbohm" consisted of essays on varieties of dandies, and other subjects; "Essays Fin de Siècle" were by "An Optimist." G. L. Dickinson contributed "The Greek View of Life" to the "University Extension Series," another issue of which was "English Poetry from Blake to Browning," by William Macneile Dixon; J. P. Mahaffy, D. D., wrote "A Survey of Greek Literature" for the "Chautauqua Reading Circle Literature"; A. E. Haight studied "The Tragic Drama of the Greeks"; William Cranston Lawson discoursed of "Art and Humanity in Homer"; "Soerates and Athenian Society in his Day" was termed a biographical sketch by A. D. Godley; Lewis Richard Farnell examined "The Cults of the Greek States," and F. W. Bussell wrote on "The School of Plato: Its Origin, Development, and Revival under the Roman Empire." "Summers and Winters at Balmawhapple" was a second series of "The Table Talk of Shirley," in two volumes, by John Skelton. William Macneile Dixon was again heard from in "A Tennyson Primer with a Critical Essay"; Morton Luce supplied "A Handbook to the Works of Alfred, Lord Tennyson"; and Richard Herne Shepherd was the author of "The Bibliography of Tennyson." Prof. Henry Jones wrote of "Browning as a Philosophical and Religious Teacher," and "Browning and the Christian Faith" came from Dr. Edward Berdoe. William A. Craigie was the author of "A Primer of Burns." "The Age of Dryden," by Dr. R. Garnett, appeared in the series of "Handbooks of English Literature," edited by Prof. Hales. "The Five Great Skeptical Dramas of History" were examined by John Owen, and "The Epic of the Fall of Man," by S. H. Gurteen, the author of "The Arthurian Epic," was a study of Cædmon, Milton, and Dante. Thomas N. Orchard, M. D., selected for his theme "The Astronomy of Milton's 'Paradise Lost.'" "Shakspeare and his Predecessors" came from Frederick S. Boas in the "University Series." John Pym Yeatman praised "The Gentle Shakspeare," Edward W. Naylor treated of "Shakspeare and Music," and Canon Henry Nicholson Ellacombe of "The Plant Lore and Garden Craft of Shakspeare." "Shakspeare's Town and Times," by H. Snowden Ward and Catherine Weed Ward, was richly illustrated from photographs. Jessie L. Weston told "The Legends of the Wagner Drama," and Constance Maud dwelt on "Wagner's Heroines: Brunhilda, Senta, Isolde." Vol. III appeared of Edwin Sidney Hartland's study of "The Legend of Perseus." John Ashcroft Noble wrote on "The Sonnet in England." Andrew W. Tuer devoted two volumes to a "History of the Horn-Book"; a series of facsimiles of "Early English Printing" had an introduction by E. Gordon Duff; and "Rare Books and their Prices," by W. Roberts, contained chapters on pictures, pottery, porcelain, and postage stamps. "Reliquiæ Philologiæ: or, Essays in Comparative Philology," of Herbert Dukinfield Darbishire, were edited by R. S. Conway, with a biographical notice by J. E. Sandys. Charles William Heckethorpe produced an interesting volume on "Lincoln's Inn Field, and the Localities Adjacent," tracing their historical and topographical association; and E. Brimley Johnson edited "Christ's Hospital: Recollections of Lamb, Coleridge, and Leigh Hunt." "Soho and its Associations, Historical, Literary, and Artistic," by the late Dr. Rimbault, was edited by G. Clinch; "Lon-

don City Churches," as described by A. E. Daniell, were illustrated by Leonard Martin; and Mrs. Basil-Holmes made notes on the history of "The London Burial Grounds" from the earliest times to the present day. John Ashton also gave us "Hyde Park from Domesday Book to Date." F. H. Haben made a study of "London Street Names," and Isaac Taylor published "Names and their Histories alphabetically arranged as a Handbook of Historical Geography and Topographical Nomenclature." G. Buchanan Gray made "Studies in Hebrew Proper Names"; "Old English Customs extant at the Present Time," by Peter Hampson Ditchfield, may be classed with "Curiosities of Olden Times," by S. Baring-Gould; and from Rev. Duncan Anderson we had "Scottish Folklore: or, Reminiscences of Aberdeenshire from Pinafore to Gown." "The Lawyer in History, Literature, and Humor" was edited by William Andrews. C. H. Herford edited "English Literary Criticism," with an introduction by C. E. Vaughan, and "English Pastorals," with an introduction by Edmund K. Chambers. Vol. V of Henry Craik's "English Prose Selections, covering the Nineteenth Century," completed that work; and "Literary Anecdotes of the Nineteenth Century: Contributions toward a Literary History of the Period," were edited by W. Robertson Nicoll and Thomas J. Wise. The fourth volume was sent out of "Slang and its Analogues, Past and Present," compiled by John S. Farmer and W. E. Henley, and Part I was issued of "The English Dialect Dictionary," founded on the publications of the English Dialect Society and on a large amount of material never before printed, edited by Joseph Wright. Vols. III, IV, and V of "A New English Dictionary on Historical Principles," edited by James A. H. Murray, brought the work down to "Fish to Flexuose." To William Archer and R. W. Lowe we were indebted for three volumes of "Dramatic Essays," uncollected essays of Leigh Hunt, William Hazlitt, John Forster, and George Henry Lewes.

Fiction.—The two most noted novels of the year came one from a dead and the other from a living author. "Weir of Hermiston," although left unfinished by Robert Louis Stevenson, is classed as perhaps his strongest work, and "Sir George Tressady," by Mrs. Humphry Ward, continues the life story of her "Marcella." Sir Walter Besant published "The City of Refuge" and "The Master Craftsman"; William Black wrote only "Briseis"; John Watson (Ian Maclaren), "Kate Carnegie"; while James M. Barrie made a sympathetic study of a boy entitled "Sentimental Tommy." Samuel R. Crockett gave his attention to "Cleg Kelly, Arab of the City," and wrote also "The Gray Man," of an earlier day. "The Seats of the Mighty," by Gilbert Parker, carried us to Quebec in 1759 and made us present at the taking of the city, and the days of the Indian mutiny were recalled by "The Herb Moon" of John Oliver Hobbes (Mrs. M. Craigie). Yet another historical novel, "The Silk of the Kine," by L. McManus, gave promise of power in a new writer, and dealt with the terrible "transplanting" done by order of Cromwell; "A Child of the Jago," by Arthur Morrison, was a piece of strong work, ruthlessly done; and Benjamin Swift (William R. Patterson) aroused favorable comment with "Nancy Noon." George Gissing published "The Paving Guest," "Sleeping Fires," and "The Unclassed"; Guy Boothby, "The Beautiful White Devil" and "Dr. Nikola"; Robert Buchanan, "Effie Hetherington" and "A Marriage by Capture"; William Clark Russell, "What Cheer? The Sad Story of a Wicked Sailor"; Ernest W. Hornung, two stories of Australasian life, "Irralie's Bush-ranger" and "The Rogue's March"; and W. E.

Norris, "Clarissa Furiosa" and "The Dancer in Yellow." "His Honor and a Lady" came from Sara Jeannette Duncan Cotes: "The Madonna of a Day," from Lily Dougall; "The Wrong Man," from Dorothea Gerard; "The Idol Maker," "The Failure of Sibyl Fletcher," "Marjory Moore," "No Ambition," "Roger Vanbrugh's Wife," "Erica's Husband," and "A Rogue's Daughter," from the prolific pen of Adeline Sergeant; Edward Christopher Benson followed "Dodo" with two stories of Cambridge University, "Limitations" and "The Babe, B. A."; Frances Frederica Montrésor added to the reputation she gained last year with "False Coin or True?" and "Worth While"; John Bloundelle Burton was the author of "Denounced" and "In the Day of Adversity"; Justin McCarthy, of "The Riddle Ring"; H. Seton Merriman (H. S. Scott), of "Flotsam" and "Christian Vellacott, the Journalist"; Ada Cambridge (Mrs. Cross), of "A Humble Enterprise"; James Payn, of "The Disappearance of George Driffell"; Frank Frankfort Moore, of "Phyllis of Phylistia," "Daireen," and "Dr Koomadhi of Ashantee"; J. S. Fletcher, of "Mistress Spitfire"; Anthony Hope Hawkins, of "The Heart of Princess Osra"; J. Meade Falkner, of "The Lost Stradivarius"; Stanley J. Weyman, of "A Little Wizard"; and Lucas Malet (Mrs. M. K. Harrison), of "The Carissima." The author of "The Fight at Dame Europa's School" sent out "Venus and Cupid"; William Le Queux was responsible for "The Temptress"; Albert Kinross told the story of "The Fearsome Island"; Elsa d'Esterre Keeling described "Old Maids and Young"; "Clara Hapgood" came from Mark Rutherford (William Hale White); "An Outcast of the Islands" from Joseph Conrad; and "When Greek meets Greek" from Joseph Hutton. "The Broom Squire," by S. Baring-Gould; "The Wizard," by H. Rider Haggard; "The Exploits of Brigadier Gerard," by Arthur Conan Doyle; and "Green Fire," "The Sin Eater," and "The Washer of the Ford," all three by Fiona Macleod, deserve mention, as do Mrs. L. B. Walford's "Successors to the Title" and Mrs. Alexander's "A Winning Hazard," "A Fight with Fate," and "A Golden Autumn." Mrs. Oliphant wrote but one novel, "The Unjust Steward," and Charlotte M. Yonge but one, "The Wardship of Steepcombe." "Beneath the Sea," a story of the Cornish coast, was by G. Manville Fenn, who also wrote "Black Tor," for young folks; Marie Corelli was represented by "Comeos," "Jane," "The Mighty Atom," and "The Murder of Delicia"; Rosa Nouchette Carey wrote only "The Mistress of Brae Farm"; S. R. Keightley published "The Crimson Sign" and "The Cavaliers"; "The Wonderful Flower of Woxindon" was a historical novel of the time of Queen Elizabeth, by Rev. Joseph Spillman, as "A Thane of Essex" was a story of the great Viking raids into Somerset, by Charles W. Whistler; and "The X Jewel," a Scottish romance of the days of James VI, by Frederick Moncreiff. "The Sign of the Red Cross," a tale of old London, came from Evelyn Everett Green, who published also "Judith: The Money-lender's Daughter," as well as "Dominique's Vengeance," a story of France and Florida, and "Hope," for juvenile readers. "The Quest of the Golden Girl," by Richard Le Gallienne; "The Story of Hannah," by W. J. Dawson; "Fellow-Travelers," by Graham Travers, the author of "Mona Maclean, Medical Student"; "A Financial Atonement," by B. B. West; "The Touch of Sorrow," anonymous; "My Lady's Heart," by Ellis Markoe; "The Apotheosis of Mr. Tyrawley," by E. Livingston Prescott; "In Search of Quiet," by Walter Frith, purporting to be a country journal, May-July; "Mother Molly," by Frances M. Peard; "The Green Graves of Balgowrie," by Jane

Helen Findlater; "When Hearts are Young," an idyl, by Deas Cromarty; "Andria," by Percy White; "The Great Jester" and "The Earth Mother," by Morley Roberts; "On the Face of the Waters," by Mrs. Flora Annie Steel; "A Spoilt Girl," by Florence Warden; "Nephelê," by Francis W. Bourdillon, a weird, musical novel; "Behind the Magic Mirror," by Miss O. Birrell; "In the Valley of Tophet," by Henry W. Nevinson; "The Sentimental Sex," by Gertrude Warden; and "A Flash of Summer," the story of a simple woman's life, by Mrs. W. K. Clifford, found readers, as did "A Clever Wife," "An Important Man and Others," and "The Second Opportunity of Mr. Staplehurst," by W. Pett Ridge; "Kriegspiel," pronounced an unrivaled novel in its portrayal of gypsy life, "A Bubble Fortune," "Kincaid's Widow," and "Rachel Langton," by Sarah Tytler (Henrietta Keddle); "Lady Val's Elopement," by John Bickerdyke, and "A Faithful Traitor," by Effie Adelaide Rowlands. "Lancashire Idylls," by J. Marshall Mather, received much commendation, and were followed by a novel, "The Sign of the Wooden Shoon." The Duchess (Mrs. M. H. Hungerford) sent out "A Lonely Maid," "An Unsatisfactory Lover," and "A Point of Conscience," and John Strange Winter (Mrs. H. E. V. Stannard) wrote "I married a Wife" and "The Truth Tellers." Thomas Hardy collaborated with Florence Henniker upon a volume of short stories, "In Scarlet and Gray," which appeared in the "Keystone Series," other issues of which were "Ugly Idol," by Claude Nicholson; "Maris Stella," by Marie Clothilde Balfour, who wrote also "White Sand"; "Nobody's Fault," by Netta Syrett; "Platonic Affections," by John Smith; "Where the Atlantic meets the Land," stories of the Irish coast, by Caldwell Lipsett; "Nets for the Wind," by Una Taylor; "In Home-spun," by Edith Nesbit; "Day Books," by Mabel E. Wotton; "Shapes in the Fire," by M. P. Shiel; and "Dust in the Balance," by George Knight. "Life the Accuser" was by Emma F. Brooke; "Persis Yorke" came from Sydney Christian; Francis Gribble wrote of "The Things that Matter" and "The Lower Life"; while from Martin J. Pritchard (Mrs. Augustus Moore, a daughter of Lady Monckton) we had "Without Sin," audacious and revolting as impossible in theme. Volumes of short stories include Rudyard Kipling's "Soldier Stories" collected into book form; "Wandering Heath," by T. Quiller-Conch; "Old Country Idylls," by John Stafford; "Lancaster Idylls," by Marshall Mather; "Vignettes," by Hebert Crackanthorpe; "Tyne Folk: Masks, Faces, and Shadows," by Dr. Joseph Parker; and several volumes of "Stories by English Authors" concerning Africa, England, France, Ireland, Italy, London, Scotland, Germany, and the Orient. In conclusion, last, but not, by any means, least, we have "The Well at the World's End," the last romance of William Morris.

Fine Arts.—Two superb volumes were devoted by Sir James D. Mackenzie to "The Castles of England: Their Story and Structure," illustrated with 40 full-page plates, 158 other illustrations, and 70 plans, about 300 castles being treated in each volume, and "The Ecclesiastical Architecture of Scotland from the Earliest Christian Times to the Seventeenth Century" came from David Macgibbon and Thomas Ross, the authors of "The Castellated and Domestic Architecture of Scotland." "The Sculptures in the Lady Chapel at Ely," by Montague Rhodes James, were illustrated with 55 collotype plates. E. P. Evans wrote on "Animal Symbolism in Ecclesiastical Architecture," and Fletcher Banister and Fletcher F. Banister were the joint authors of a "History of Architecture for the Student, Craftsman, and Amateur," giving a

comparative view of the historical styles from the earliest period. "Renaissance Architecture and Ornament in Spain" was a series of examples selected from the purest works executed between the years 1500 and 1560, measured and drawn together with short and descriptive text, by Andrew N. Prentice. Four volumes contain "A History of Design in Painted Glass," by N. H. J. Westlake, and "Maiolica" was the title of an historical treatise on the glazed and enameled earthenwares of Italy, by C. Drury E. Fortnum, superbly illustrated, with some notice also of the Persian, Damascus, Rhodian and Hispano-Moresque wares. Vols. III and IV were issued of the "Catalogue of the Greek and Etruscan Vases in the British Museum," the former covering "Vases of the Finest Period," by Cecil H. Smith, and the latter "Vases of the Latest Period," by H. B. Walters. The translation was completed of "The History of Modern Painting," by Richard Muther, the first volume of which was issued in 1895, the three containing 1,300 illustrations and constituting one of the handsomest art works of the year, and another book of the same order was the rendition into English of Vallery C. O. Greard's "Meissonier: His Life and Art," by Lady Mary Loyd and Miss Florence Simmons, with 40 full-page plates and upward of 200 illustrations in the text. Two of the three volumes which will contain "Painters and their Works," by R. N. James, a dictionary of great artists not now alive, were issued, bringing the work down to "Ibbetson to Rysbregts," and a new enlarged edition was sent out of "A Dictionary of Artists who have exhibited Works in the Principal London Exhibitions, from 1760 to 1893," compiled by A. Graves. "In the National Gallery," by Cosmo Monkhouse, gave us the opinions of that author on the Italian Pre-Raphaelites contained therein; and the first of a series of ten volumes was issued of "Pictures in the National Gallery, London," with notes by C. L. Eastlake, keeper and secretary of the gallery. Rev. E. L. Cutts was the author of a "History of Early Christian Art." "Addresses delivered to the Students of the Royal Academy," by the late Lord Leighton, were collected into a volume. Arthur Thomson prepared "A Handbook of Anatomy for Art Students" and Ernest E. Thompson made "Studies in the Art of Anatomy of Animals," for sculptors, painters, etc., illustrated with 100 drawings by the author. "A Book of Studies in Plant Form, with some Suggestion for their Application to Design" came from A. E. V. Lilley and W. Midgley. "The London Pleasure Gardens of the Eighteenth Century" were the subject of a volume by Warwick W. and Arthur E. Wroth; "Choir Stalls and their Carvings," by Emma Phipson, contained examples of misericords from English cathedrals; "The Carved Stones of Islay," by R. C. Graham, were illustrated; F. Romilly Allen contributed a chapter to A. J. Langdon's work on "Old Cornish Crosses," with 297 illustrations; and Percy Gardner gave his attention to "Sculptured Tombs of Hellas." "Old Cambridge Plate," by J. E. Foster and F. D. Atkinson, was an illustrated catalogue of the Loan Collection of plate exhibited in the Fitzwilliam Museum, May, 1895. "The Coin Collector," by W. Carew Hazlitt, appeared in the "Collector Series"; Part II was issued of G. Coffey's "Catalogue of Irish Coins in the Collection of the Royal Irish Academy"; a "Catalogue of the Great Coins of Troas, Æolis, and Lesbos," by Warwick Wroth, with a map and 43 autotype plates, was printed by order of the British Museum; and W. de Gray Birch was the author of Vols. II-IV of a "Catalogue of Seals in the Department of MSS. in the British Museum." W. Y. Fletcher wrote on "Bookbinding in England and France," and "Ladies' Book-plates"

was an illustrated handbook for collectors and book lovers, by Norna Labouchère. Frank G. Jackson's "Theory and Practice of Design" was an advanced text-book on decorative art. Works on music were exceptionally numerous during the year. "The Evolution of the Art of Music," by C. Hubert Hastings Parry, formed Vol. LXXXVI of the "International Scientific Series"; R. A. Streatfield sketched "The Development of the Opera"; Sir George Grove wrote of "Beethoven and his Nine Symphonies," and contributed an introduction to "The History of Mendelssohn's 'Elijah,'" by T. G. Edwards; "Famous Violinists and Fine Violins" came from T. L. Phipson; and A. J. Hipkins wrote a "Description and History of the Pianoforte, and of the Older Keyboard Stringed Instruments"; James E. Matthew reviewed "The Literature of Music," in the "Book Lover's Library," and the "National Portrait Gallery of British Musicians," edited by John Warriner, was illustrated with 35 plates. Among illustrated books may be mentioned "A Breath from the Veldt," a magnificent and epoch-marking work, by John Guille Millais, illustrated by the author, and with a frontispiece by Sir John E. Millais, portraying the animals of South Africa; "The Book of Beauty (Late Victorian Era)," containing portraits mostly of celebrated artists, edited by Mrs. F. Harcourt Williamson, in two volumes; Du Maurier's "English Society"; Aubrey Beardsley's illustrations of "The Rape of the Lock"; "The Nude in Art," by H. S. Nichols; "Pictures of People," by Charles Dana Gibson; "John La Farge, Artist and Writer," by Cecilia Waern in "The Portfolio"; and "Phil May's Gutter Snipes," 50 original sketches in pen and ink.

History.—The history of "The Rise and Growth of the English Nation," by William Hickman Smith Aubrey, was completed by the issue during the year of the third volume, covering the period 1658-1895; Arthur Hassall added "The Making of the British Empire" (A. D. 1714-1832) to the "Oxford Manuals of English History"; another issue of which was "King and Parliament" (A. D. 1603-1714), by G. H. Wakeling; and Montague Burrows traced "The History of the Foreign Policy of Great Britain." Vol. III appeared of James Hamilton Wylie's "History of England under Henry the Fourth," completing that work, and covering the period 1407-1410. Edgar Powell gave a volume to "The Rising in East Anglia in 1381"; James Gairdner fought again "The Battle of Bosworth," and, with the assistance of R. H. Brodie, arranged and catalogued Parts I and II of the fourteenth volume of "Letters and Papers, Foreign and Domestic, of the Reign of Henry VIII.," while a new edition was made of the "Paston Letters," edited by him, in three volumes. Ernest George Atkinson edited the "Calendar of the State Papers relating to Ireland of the Reign of Queen Elizabeth: 1598, January-1599, March"; John Gerard, S. J., asked "What was the Gunpowder Plot?" testing the traditional story by original evidence, and "The Jacobite Attempt of 1719" was the title given to letters of James Butler, second Duke of Ormonde, edited, with an introduction and an appendix of documents, by W. K. Dickson. George Washington Prothero edited "Ireland, 1494-1868," with two introductory chapters by William O'Connor Morris, in the "Cambridge Historical Series," to which Edward Channing, an American, contributed "The United States of America, 1765-1865." In the "Cambridge Historical Essays" appeared "The Reign of Antoninus Pius," by E. E. Bryant, and "The Theory of the Divine Right of Kings," by J. Nelville Figgis. "The Union of England and Scotland" was a study of international history by James Mackinnon; Vol. V of "Social England," edited by H. D. Traill, embraced

the period from the accession of George I to the battle of Waterloo; and John Ashton portrayed for us the condition of England "When George IV was King." Arthur T. Pringle edited Vol. IV of "The Diary and Consultation Book of the President, Governor, and Council at Fort St. George, 1685," which gives much light on the early history of England in Madras. "The Early Chartered Companies, 1296-1858" found historians in George Cawston and A. H. Keane, and "The Pioneers of Empire," by an anonymous "Imperialist," vindicated the principle of these companies, with special reference to the British South Africa Company. "The Great Irish Famine" was the title of a retrospect of fifty years (1845-'95) by W. P. O'Brien. "The 'Black Watch': The Record of an Historic Regiment" came from no less an authority than Archibald Forbes, and "A History of the 17th Lancers (Duke of Cambridge's Own)" was written by Hon. J. W. Fortesque. "With Kelly to Chitral," by W. G. L. Beynon, and "Fire and Sword in the Sudan," by Slatin Pasha, translated by F. R. Wingate, belong to the history of recent days, as do "The Downfall of Premph," a diary of life with the native levy in Ashanti, 1895-'96, by R. S. S. Baden-Powell; "Madagascar in War Time," by E. F. Knight; "Two Campaigns: Madagascar and Ashantee," by Bennet Burleigh; "Sunshine and Storm in Rhodesia," by F. C. Selous; and "Dr. Jameson's Raid," by Rev. James King. "A Diary of the Home-Rule Parliament, 1892-1895" was published by Henry W. Lucy. "Lectures on the Council of Trent," delivered at Oxford in 1892-'93 by James Anthony Proude, were collected into a volume; "Documents Illustrative of English Church History" were compiled from original sources by Henry Gee and William John Hardy; Dr. Clinton Locke contributed "The Age of the Great Western Schism" to the "Epochs of Church History Series"; and "The Life and Times of John Kettlewell," by the author of "Nicholas Ferrar," edited by Canon Carter, was a valuable addition to English Church history. Rev. W. Stephen wrote a "History of the Scottish Church," in two volumes. In the "Story of the Nations Series" we had "The Story of Bohemia," by Charles Edmund Maurice, and "The Balkans: Roumania, Bulgaria, Serbia, and Montenegro," by William Miller. "Undercurrents of the Second Empire" was the title of notes and recollections of Albert D. Vandam, and from Thomas March we have "The History of the Paris Commune of 1871." J. D. B. Griddle published Vol. I of "A History of the Decan"; "Studies in Ancient History: The Second Series," by the late John Ferguson McLennan, comprising an inquiry into the origin of exogamy, were edited by his widow and Arthur Platt. "The Empire of the Ptolemies" was from the pen of J. P. Mahaffy; W. M. Flinders Petrie covered the seventeenth and eighteenth dynasties in the second volume of "A History of Egypt"; and the second of James F. McCurdy's work on "History, Prophecy, and the Monuments" carried us to "To the Fall of Nineveh." A "Historical Sketch of Armenia and the Armenians in Ancient and Modern Times" was written, with special reference to the present crisis, by "An Old Indian." Major-Gen. W. C. F. Molyneux described "Campaigning in South Africa and Egypt"; George McCall Theal wrote of "The Portuguese in South Africa"; and W. E. G. Fisher, a brief history of "The Transvaal and the Boers." "Jewish Life in the Middle Ages" was the theme of Israel Abrahams, and "The Story of Extinct Civilizations of the East" was written by Robert E. Anderson for the "Library of Useful Stories." The "Modern History of the City of London," tracing its municipal and social progress from 1760

to the present day, by C. Welch, was illustrated; and from Rev. James Raven, D. D., we had "A History of Suffolk"; while "Bygone Sussex" was revived by W. E. A. Axon. Vol. X was issued of the "Transactions of the Royal Historical Society" (new series), and Vol. VIII of "Cameos from English History," by C. M. Yonge, brought us to "The End of the Stewarts, 1662-1748."

Physical, Moral, and Intellectual Science.—The "Address to the British Association for the Advancement of Science," delivered at Liverpool, Sept. 16, 1896, by its president, Sir Joseph Lister, was a remarkable one in that, being the first surgeon who has held that position in the association in virtue of his professional attainments, he dwelt upon the interdependence of science and the healing art, and with the extreme of modesty reviewed the progress of pathology with which his name is so closely connected. One of the most important scientific books of the year was "The Scenery of Switzerland and Causes to which it is due," by Sir John Lubbock, the result of a study of the physical geography of Switzerland made by the author in company with Profs. Huxley and Tyndall, in 1861. "Ice Work Present and Past," by T. G. Bonney, appeared in the "International Scientific Series." John W. Judd edited "The Student's Lyell," a manual of elementary geometry, and "The Story of Atlantis" purported to be a geographical, historical, and ethnological sketch, by W. Scott Elliot. Alfred W. Bennett devoted two volumes to "The Flora of the Alps," and two also contained "A Vertebrate Fauna of the Moray Basin," by J. A. Harvie-Brown and T. E. Buckley. "Problems of Biology" were submitted by George Sandeman, and Sir Benjamin Ward Richardson, M. D., wrote on "Biological Experimentation: Its Functions and Limits." E. Bonavia, M. D., made "Studies in the Evolution of Animals," and C. J. Cornish wrote of "Animals at Work and Play: Their Activities and Emotions." Conway Lloyd Morgan published a work upon "Habit and Instinct." "Prehistoric Man and Beast" were the theme of Rev. H. N. Hutchinson, and John Smith treated of "Prehistoric Man in Ayrshire." "The Gases of the Atmosphere" had the history of their discovery traced by William Ramsey. "Mechanics: Dynamics, Statics, and Hydrostatics," by R. T. Glazebrook, appeared in the series of "Cambridge Natural Science Manuals." Vol. II of "The Cambridge Natural History" appeared, edited by S. F. Harmer and A. E. Shipley, and Part I of Vol. V contained, respectively, "Peripatus," by Adam Sedgwick, "Myriapods," by F. S. Sinclair, and "Insects," by David Sharp. Volume VI of "The Royal Natural History," edited by Richard Lydekker, reached "Invertebrate Animals." In "Allen's Naturalists' Library" we had two volumes of "A Handbook to the Order Lepidoptera," by W. F. Kirby; Edward Meyrick was the author of "A Handbook of British Lepidoptera"; Vol. II of "The Lepidoptera of the British Islands," by Charles E. Barret, covering "Heterocera, Sphingids, Bombyces," appeared; W. J. Gordon wrote "Our Country's Butterflies and Moths, and how to Know them"; J. W. Tutt devoted himself to "British Moths"; L. N. Badenoch became interested in "Romance of the Insect World"; and E. A. Butler in "Our Household Insects"; while "The Butterflies and Moths of Tenerife" engrossed A. E. Holt-White, and T. Thorell prepared a "Descriptive Catalogue of the Spiders of Burmah." "Notes on the Birds of Northamptonshire and Neighborhood," by the late Lord Lilford, were illustrated by A. Thorburn and G. E. Lodge; "The Ornithology of the Straits of Gibraltar," by Lieut.-Col. L. Howard L. Irby, was much enlarged and beautified in a second edition, and Part IV of

a "Dictionary of Birds," by A. Newton and Hans Gadow, covered "Sheathbill-Zygodactyli." J. A. Owen edited "The Wild Fowl and Sea Fowl of Great Britain," by "A Son of the Marshes," and "By the Deep Sea" was an introduction to the wild life of the British shores, by E. Steg, who also published Vol. I of "Favorite Flowers of Garden and Greenhouse," illustrated with 316 plates, and containing cultural directions. George Murray wrote "An Introduction to the Study of Seaweed," and "Life in Ponds and Streams," by William S. Furneaux, appeared in the "Outdoor Library." "Round the Year: Short Nature Studies," by Prof. L. C. Miall, were illustrated by A. R. Hammond. Ralph S. Tarr was the author of an "Elementary Physical Geography"; "The Story of the Solar System" was told for general readers by George F. Chambers, in the "Library of Useful Stories"; and Francis Darwin prepared "The Elements of Botany" for the use of medical students. "The Indian Village Community" was examined by Baden Henry Baden Powell, with reference to the physical, ethnographic, and historical conditions of the provinces, and Major-Gen. Robley was an authority on "Moko: or, Maori Tattooing." Lina Eckenstein published "Women under Monasticism," chapters on saintly and convent life between 500 and 1500; A. R. Cleveland, "Woman under the English Law, from the Landing of the Saxons to the Present Time"; and Georgiana Hill, "Women in English Life from Mediæval to Modern Times." Roy Devereux traced "The Ascent of Woman." "Elements of Psychology" were edited from notes of lectures delivered by George Croom Robertson, at University College, London, 1870, 1892, by C. A. Foley Rhys Davids; G. F. Stout published an "Analytic Psychology" in two volumes; William Caldwell examined "Schopenhauer's System in its Philosophical Significance"; as W. H. Fairbrother did "The Philosophy of Thomas Hill Green," and Lewis Carroll sent out Part I of "Symbolic Logic." R. P. Halleck advised "The Education of the Central Nervous System"; James Sully made "Studies of Childhood"; and "The Child and Childhood in Folk-Thought (The Child in Primitive Culture)" was the subject of Alexander Francis Chamberlain.

"The Principles of Sociology" complete the "Synthetic Philosophy" of Herbert Spencer, undertaken thirty-six years ago, of which it forms the eighth volume. Two of its divisions, "Ecclesiastical Institutions" and "Professional Institutions," have been previously printed, but the third, "Industrial Institutions," is entirely new. Two volumes were published of "Social Rights and Duties," addresses to ethical societies, by Leslie Stephen; and two of William E. Hartpole Lecky's opinions on "Democracy and Liberty." Sir Henry Wrixon gave a volume to "Socialism," being notes on a political tour; Egmont Blake and O. E. Wesslau described "The Coming Individualism"; and "The State and the Individual," by William Sharp McKechnie, was intended as an introduction to political science, with special reference to socialistic and individualistic theories. Sir J. R. Seeley offered an "Introduction to Political Science"; Leonard Whibley made a study of the character and organization of "Greek Oligarchies"; and Vols. I and II of "A Dictionary of Political Economy," edited by R. H. Palgrave, brought the work down from A to M. Geoffrey Drage attacked "The Labor Problem"; William Cunningham, D. D., considered "Modern Civilization in some of its Economic Aspects"; and F. W. Galton edited "Workers on their Industries," in the "Social Science Series," and Vol. I of "Select Documents illustrating the History of Trade Unionism," given to "The Tailor-

ing Trade," which had an introduction by the editor and a preface by Sidney Webb. The last work appeared in the series of "Studies in Economics and Political Science," another issue of which was "The History of Local Rates in England: Five Lectures," by Edwin Cannon. J. Shields Nicholson wrote on "Strikes and Social Problems"; William Smart published "Studies in Economics"; and Vols. VII and VIII were issued of Charles Booth's "Life and Labor of the People of London," both being given to "Population classified by Trades." "Money and its Relations to Prices" formed the theme of L. L. Price. Thomas Mackay offered critical and constructive essays on "Methods of Social Reform"; and in the "Criminology Series" appeared "Criminal Sociology," by Enrico Ferri. J. E. Vincent gave his attention to "The Land Question in North Wales," and F. A. McKenzie added "Sober by Act of Parliament" to the "Social Science Series." M. G. Mulhall was heard from on the "Industries and Wealth of Nations." "Federation and Empire" was a study in politics by Thomas Alfred Spalding, the author of "The House of Lords: A Retrospect and a Forecast"; "South Africa: Its People, Progress, and Problems" was a handbook for the present situation, by W. F. Purvis and L. V. Biggs; Olive Schreiner and C. S. Cronwright Schreiner (her husband) also wrote on "The Political Situation" in Cape Colony; and Percy A. Molteno wrote of "A Federal South Africa." "The Lost Possessions of England," by Walter Frewen Lord, presented history from a political standpoint; and yet two other political works remaining to be mentioned are "England's Wealth, Ireland's Poverty," by Thomas Lough, M. P., and "Egypt under the British," by H. F. Wood. "The Duties and Liabilities of Trustees" were the subject of six lectures delivered by Augustine Birrell in the Inner Temple during the year at the request of the Council of Legal Education.

Coming now to theological books, we have "The Philosophy of Belief: or, Law in Christian Theology," by the Duke of Argyll; "Eden Lost and Won," studies of the early history and final destiny of man as taught in Nature and revelation, by Sir J. W. Dawson; "The Doctrine of the Incarnation," by R. L. Ottley, in two volumes; and "The Principle of the Incarnation," by H. C. Powell. Hon. W. E. Gladstone edited "The Works of Joseph Butler, Sometime Lord Bishop of Durham," in two volumes, and also contributed "Studies Subsidiary to the Works of Bishop Butler": "The Traditional Text of the Holy Gospels," as vindicated and established by Dean John W. Burgon, was followed by a sequel, from the same author, entitled "The Causes of the Corruption of the Traditional Text of the Holy Gospels"; William Wright, D.D., edited "The Illustrated Bible Treasury," by Sir Charles Wilson, A. H. Sayce, E. Naville, and others; S. D. Salmond edited a "Critical Review of Theological and Philosophical Literature"; in the "International Critical Commentary" appeared "A Critical and Exegetical Commentary on the Gospel according to St. Mark," by Rev. Ezra P. Gould, and a similar work upon the gospel of "St. Luke," by Dr. Alfred Plummer; "St. Paul the Traveler and the Roman Citizen" came from W. M. Ramsay. From the Rev. John Watson we have two volumes—"The Cure of Souls," the Lyman Beecher Lectures on preaching delivered at Yale University during the year; and "The Mind of the Master," a collection of essays or sermons. "Nature and Christ: A Revelation of the Unseen" was the theme of Dr. Joseph Agar Beet, and "Creation centered in Christ" of Henry Gratton Guinness. Rev. Stopford A. Brooke preached upon "The Old Testament and Modern Life"; "Wholesome

Words" came from Dr. C. A. Heurtley; Dr. Alexander Balmain Bruce published "With Open Face; or, Jesus Mirrored in Matthew, Mark, Luke, and John"; Rev. E. F. Sampson, "Christ Church Sermons"; Dean Edward Clarence Paget, "Silence, and Other Sermons"; Rev. H. W. Webb-Peploe delivered 13 addresses before the Northfield (Mass.) Bible Conference, in August, 1895, which were collected into a volume entitled "The Life of Privilege, Possession, Peace, and Power," and also post-conference addresses on the same occasion, upon "The Victorious Life." Bishop William Boyd Carpenter and other eminent authorities offered "Sermon Preparation Recollections and Suggestions"; Dr. Robert F. Horton discoursed on "The Teaching of Jesus" and "On the Art of Living together"; and Dr. Alexander Whyte of "The Four Temperaments," the last in the series of "Little Books on Religion," another issue of which was "The Seven Words from the Cross," by W. Robertson Nicoll. "Paths of Duty," by Archdeacon F. W. Farrar, offered counsels to young men. James Martineau contributed a preface to "A Spiritual Faith: Sermons," by John Hamilton Thom. "The Child, the Wise Man, and the Devil" was a poetic homily in prose on revealed religion, by Coulson Kernahan, and "The Work of the Church in London," a series of lectures delivered in St. James's Church, Piccadilly, during the summer of 1896, consisted of "1. East London," by the Bishop of Stepney; "2. West London," by the Bishop of Marlborough; "3. South London," by the Bishop of Southwark; and "4. London Over the Border," by the Lord Bishop of St. Albans, the Archbishop-elect of Canterbury contributing an introduction. T. W. Rhys Davids wrote on "Buddhism," and William Simpson published "The Buddhist Praying Wheel," a collection of material bearing upon the symbolism of the wheel and circular movements in custom and religious ritual. W. Garrett Horder compiled and edited "The Treasury of American Sacred Song." George Jacob Holyoake wrote on "English Secularism," and collaborated with Dr. F. W. Horton and others on "Good Reading about Many Books."

Books of a miscellaneous character which may as well be inserted here as in any other place include "Stock Exchange Investments," by William Hickman Smith Aubrey, and "Stock Exchange Values: A Decade of Finance, 1885-1895," by S. F. Van Oss and Frederick C. Mathieson & Sons; "Naval Policy," by G. W. Stevens, and "Naval Administration," by Sir R. Vesey Hamilton, the last in the series of "Royal Navy Handbooks," edited by Charles Napier Robinson; "The Romance of the Sea: Its Fictions, Facts, and Folklore," by Frederick Whymper; "The Romance of Commerce," by J. Macdonald Oxley; "The Post Office Service," by Arthur H. Norway; and "On the Track of the Mail Coach," by F. E. Baines, an authority on postal affairs; "The Natural History of the Marketable Marine Fishes of the British Islands," by Robert Oliver Cunningham, M. D.; Vol. II of "Battles of the 19th Century," by Archibald Forbes, G. A. Henty, A. Griffiths, etc.; "Guns and Cavalry," by Major E. S. May; "Navigation for Yachtsmen," compiled by Vincent J. English; "Calcareous Cements," by Gilbert R. Redgrave; Vol. I of "Cotton Spinning," by William Scott Taggart, including all processes up to end of carding; a manual of "Artistic and Scientific Taxidermy and Modeling," by Montagu Browne; "The Tears of the Heliades: Amber as a Gem," by W. A. Buffum; "Eyelight and School Life," by Simeon Snell; and "Public Health in European Capitals," by Thomas Morrison Legge, M. D. "A Complete Bibliography of Fencing and Dueling" was the work of Charles A. Thimm; Sir R. Payne-Gallwey sent out a third series of "Letters to Young Shoot-

ers," containing 200 illustrations; W. Smith wrote "The Life of a Fox" for the "Sportsman's Library"; "Red Deer," in the "Fur and Feather Series," had the "Natural History" written by H. A. Macpherson; "Deer-Stalking," by Cameron of Lochiel; "Stag Hunting," by Viscount Ebrington; and "Cookery," by Alexander Innes Shan. Theodore Taunton chronicled "Famous Horses," and Nat Gould was at home "On and Off the Turf in Australia." "The Hastings Chess Tournament, 1895" was edited by Horace F. Cheshire, and E. Freeborough edited "Chess Endings," a companion to "Chess Openings." "The Feasts of Antiochus," by Elizabeth Robins Pennell, appeared in the "May-fair Series," to which Julia Constant Fletcher (George Fleming) contributed "For Plain Women only." "A Book of Scoundrels," by Charles Whibley, presented the novel view of the artist as a thief.

Poetry.—Noble and beautiful has been pronounced "The Tale of Balen," by Algernon Charles Swinburne, who again selected a British subject for a poem, and the "New Poems, Hitherto Unpublished or Uncollected" of Christina Rossetti were edited by William Michael Rossetti, and accompanied with a portrait from a pencil drawing by Dante Gabriel Rossetti; "The Rossetti Birthday Book" was also edited by Olivia Rossetti; Sir Lewis Morris published "Idyls and Lyrics"; and Frederick Tennyson, "Poems of the Day and Year." "Selections from the Poems of George John Romanes" were accompanied with an introduction by T. Herbert Warren; and the "Poems" of Cecil Frances Alexander were edited with a preface by William Alexander, Archbishop of Armagh and Primate of Ireland. To a younger generation belong "New Ballads," by John Davidson; "The Purple East," a series of sonnets on England's desertion of Armenia, by William Watson; and "England's Darling, and other Poems," by the poet laureate, Alfred Austin. "From the Hills of Dream: Mountain Songs and Island Runes" was by Flora Macleod; "Poems and Ballads" came from Q; "Under Quicken Boughs," from Nora Hopper; "Spring's Immortality, and other Poems," from J. Mackenzie Bell; "Songs and Rhymes," from B. W. J. Trewaldwyn; "Poems," from Jennings Carmichael (Mrs. Francis Mullis); "Under Cross and Crescent," from Violet Faue; "Sonnets and Songs," from May Bateman; "A Lover's Breast-knot" and "Miracle Plays: Our Lord's Coming and Childhood," from Katharine Tynan Hinkson; "Piccadilly Poems," from J. L. Owen; "More Hawarden Horace," from C. L. Graves; "Song Favors," from C. W. Dalmon; "Verses," from J. A. Nicklin "Random Rhymes," from Sam Wood; "Aëromancy," from Margaret L. Woods, who also published "Wild Justice," a dramatic poem; and "The Christ upon the Hill," a ballad by Cosmo Monkhouse, was illustrated with etchings by W. Strang. "Christ in Hades," by Stephen Phillips, the author of "Eremus," and a first book of "London Visions," by Laurence Binyon, "Post-Mortem, and Other Poems" by Reginald A. Beckett, deserve mention, as do "The Flower Seller, and Other Poems" of Lady Lindsay and "Day Dreams," by Rev. Alfred Gurney. "A Sestet of Singers," who were respectively George Barlow, J. H. Blaikie, Paganus (L. Cranmer Byng), Vincent O'Sullivan, Walter Herries Pollock, and Sidney R. Thompson, provoked another volume, "Sung by Six," namely, S. K. Cowan, J. H. Cousins, W. M. Knox, L. J. McQuilland, W. T. Anderson, and J. J. Pender. Arthur Munby told of "Ann Morgan's Love"; James Dryden Hosken published "Christopher Marlowe and Belphegor," two short poems; Frederick Langbridge, "The Scales of

Heaven"; Gustav Kobbé, "My Rosary, and Other Poems"; Vincent O'Sullivan, "Poems"; T. Wrat-islaw, "Orchids"; Arthur Christopher Benson, "Lord Vyet, and Other Poets"; Mrs. G. Colmore, "Poems of Love and Life"; Norman R. Gale, "Songs for Little People," which were supplemented by Gabriel Setoun's (Thomas Hepburn) "Child World" and William Canton's "W. V., her Book, and Various Verses." Louisa Shore's "Poems" were accompanied with a memoir by her sister and an "appreciation" by Frederic Harrison; Winifred Lucas contributed "Units" to the poetry of the year, as F. B. T. M. Coutts did "Poems"; Charles W. Cayzer, "Poems of Love and Nature"; F. W. Kingston, "Julian's Vision, and Other Poems"; Eleanor Foster, "With the Tide, and Other Poems"; Percy Hemingway, "The Happy Wanderer"; and A. E. Hoosman, "A Shropshire Lad." Robert Bridges wrote the "Ode for the Bicentenary Commemoration of Henry Purcell, and Other Poems"; "The Poems of Joseph Le Fanu" were edited by Alfred Percival Graves; and among volumes of collections may be mentioned "West Country Poets," edited by W. H. K. Wright; "Lyra Celtica," edited by Elizabeth A. Sharp, with an introduction and notes by William Sharp; "Lyrical Verse from Elizabeth to Victoria," selected and edited by Oswald Crawford; two volumes of "Elizabethan Sonnet Cycles," edited by Martha Foote Crow; "A London Garland," selected from five centuries of English verse, by William Ernest Henley, with pictures by members of the Society of Illustrators; Vol. V of "English Minstrelsy," edited by S. Baring-Gould; Vol. II of "Lyrical Poetry from the Bible," edited by Ernest Rhys; "Ros Rosarum ex Horto Poetarum," by E. V. B. (Mrs. Eleanor Vere Gordon Boyle); "Poetry of Sport," selected and edited by Hedley Peek, in the "Badminton Library"; and "Book Verse," an anthology of poems of books and bookmen from the earliest times to recent years, edited by W. Roberts. The Burns centenary called forth numerous editions of the works of the poet, among which that edited by Andrew Lang, with the assistance of W. A. Craigie, may be mentioned; nor is the Eversley "Wordsworth," edited by Prof. Knight, to be overlooked. Vol. I was also issued of "The Works of Lord Byron," edited by W. E. Henley; Robert Bridges contributed an introduction to the "Poems" of John Keats, edited by G. Thorn Drevry; and in the series of "Nineteenth Century Classics," edited by Clement K. Shorter, we had Matthew Arnold's "Alaric at Rome, and Other Poems," with an introduction by Richard Garnett, and "The Strayed Reveler, Empedocles on Etna," and other poems, to which William Sharp supplied an introduction. Among the dramatic words of the year are to be noted "Attila, my Attila!" by Michael Field; "Charlecote; or, The Trial of William Shakespeare," by John Boyd Thatcher; and "The Husband of Poverty," who was St. Francis of Assisi, according to Henry Neville Mangan. The "Selected Works" of Sir John Vanbrugh were edited in the series of "The Best Plays of the Old Dramatists," and T. Donovan gave us a volume of "English Historical Plays."

Voyages and Travels.—Hugh R. Hawsell filled two volumes with "Travel and Talk, 1885-'93-'95," detailing the 100,000 miles traversed by him in visiting all quarters of the globe; "Across Greenland's Ice Fields," by M. Douglas, told of the adventures of Nansen and Peary on the great ice cap; and "The Cruise of the 'Antarctic,'" by H. J. Bull, of a voyage to the outly polar regions in 1895; while "Through the Subarctic Forests" was the record of a canoe journey made by Warburton Pike from Fort Wrangel to the Pelly lakes and down the

Yukon river to the Bering Sea. "Camping in the Canadian Rockies," by Walter Dwight Wilcox, was superbly illustrated, with 25 full-page photogravures and numerous text illustrations from photographs taken by the author. "In the Northman's Land," by Major A. F. Moekler-Ferryman, the author of "Up the Niger," described travel and folklore in the Hardanger Fiord and Fjeld, while William A. Baillie Grolman wrote of "Sport in the Alps in the Past and Present," and Rev. Walter Weston of "Mountaineering and Exploration in the Japanese Alps." Stuart Henry published "Paris Days and Evenings," and Capt. the Hon. D. Bingham, "Recollections of Paris," in two volumes. "In the Volcanic Eifel," by Katherine S. and Gilbert S. Macquoid, told of a holiday ramble through some of the grandest scenery of Germany, and H. Ellen Browning described "A Girl's Wanderings in Hungary." David G. Hogarth was "A Wandering Scholar in the Levant." E. A. Brayley Hodgetts went "Round about Armenia," and James Wells, D. D., gave "Travel Pictures from Palestine." Sir Edwin Arnold had a new volume on "East and West," and "With the Yacht and Camera in Eastern Waters" was by the Earl of Cavan. Rev. G. Cockburn described "John Chinaman: His Ways and Notions"; R. S. Gundry wrote on "China, Present and Past"; and Mrs. Archibald Little published "My Diary in a Chinese Farm." "The Heart of a Continent" was a narrative of travels in Manchuria, across the Gobi Desert, through the Himalayas, the Pamirs and Chitral, 1884-'94, by Frank E. Younghusband, and two volumes on "The Exploration of the Central Caucasus," by Douglas W. Freshfield, were magnificently illustrated. Walter B. Harris went "From Batum to Baghdad via Tiflis, Tabriz, and Persian Kurdistan"; Gen. Sir Thomas Edward Gordon told of "Persia Revisited"; E. Treacher Collins was at home "In the Kingdom of the Shah"; and Major-Gen. Sir Charles Wilson edited a "Handbook for Travelers in Asia Minor, Trans-Caucasia, Persia, etc." "The New Siberia," by H. de Windt, was an account of a visit to the penal island of Sakhalin and political prison and mines of the Trans-Baikal District, Eastern Siberia; F. St. J. Gore described "Lights and Shades of Hill Life in the Afghan and Hindu Highlands of the Punjab"; as Samuel J. Stone did "Travel and Sport in and beyond the Himalayas," the last work being illustrated by Charles Whymper. "Fifty Years' Reminiscences of India," by Col. Pollok, "Leaves from a Diary in Lower Bengal," by C. S. Retired, and "With the Jungle Folk," a sketch of Burmese village life, by E. D. Cuming, illustrated by a Burmese artist, may be classed together, and from Mrs. Gwendolen Trench Gascoigne we have "Among Pagodas and Fair Ladies." "Through the Buffer State" was a record of recent travels through Borneo, Siam, and Cambodia, by Surgeon-Major Macgregor, and Henry Ling Roth wrote of "The Natives of Sarawak and British North Borneo," Andrew Lang contributing a preface to the two volumes. Henry Duff Traill journeyed "From Cairo to the Soudan Frontier," and Stanley Lane-Pool edited "Cairo Fifty Years Ago," by E. W. Lane. "Hausaland; or, Fifteen Hundred Miles through the Central Soudan" came from Charles Henry Robinson, and G. F. Scott Elliot was "A Naturalist in Mid-Africa." Walter B. Harris was again heard from in "Taflet," the narrative of a journey of exploration in the Atlas mountains and the oases of the northwestern Sahara; "The Great Rift Valley," by J. W. Gregory, gives the results of a new East African expedition; Alice Blanche Balfour traveled "Twelve Hundred Miles in an Ox Wagon" through South Africa; and A. H. Keane was the author of the second volume of

"Africa" in Stanford's "Compendium of Geography and Travel," being devoted to "South Africa." Rev. James Sibree pictured "Madagascar before the Conquest." Edward A. Fitzgerald published "Climbs in the New Zealand Alps," being an account of travel and discovery; Albert T. Calvert, "The Exploration of Australia"; and "A Peripatetic Parson" visited "Parts of the Pacific." James Rodway was heard from on "The West Indies and the Spanish Main," and British Guiana and its Resources" were treated by the author of "Sardinia and its Resources." "The Journal of the Right Hon. Sir Joseph Banks during Captain Cook's First Voyage in H. M. S. 'Endeavor,' in 1768-'71" was edited by Sir Joseph D. Hooker, and a handsome volume was made of George Borrow's "The Bible in Spain," edited, with notes and a glossary, by Ulick Ralph Burke. For young folks were written "Sweetheart Travelers," by Samuel R. Crockett, illustrated by Gordon Browne and W. H. C. Groome, and "How Dick and Molly saw England," by M. H. Cornwall Legh. "Strathendrick and its Inhabitants from Early Times" came from John Guthrie Smith; "Rambles in Galloway," from Malcolm McL. Harper; and "Scotland, Picturesque and Traditional" from George Eyre-Todd; while Edmund Bogg went "From Edendale to the Plains of York"; David Dippie Dixon described "Whittingham Vale, Northumberland," and John Lloyd Warden Page, "The Coasts of Devon and Lundy Island." A new cheaper edition was issued of "Walks in Florence and its Environs," by Susan and Joanna Horner, in two volumes.

The following are the figures of book-production in England during the year, from the "Publishers' Circular":

DIVISIONS.	1895.		1896.	
	New books.	New editions.	New books.	New editions.
Theology, sermons, biblical, etc.	501	69	503	100
Educational, classical, and philological	660	111	529	114
Novels, tales, and juvenile works.	1,544	347	1,654	525
Law, jurisprudence, etc.	57	33	132	50
Political and social economy, trade and commerce	163	23	247	99
Arts, sciences, and illustrated works.	96	16	315	65
Voyages, travels, geographical research	263	75	191	32
History, biography, etc.	353	68	580	137
Poetry and the drama	231	16	284	123
Yearbooks and serials in vols.	311	...	313	...
Medicine, surgery, etc.	153	53	117	45

LITERATURE, CONTINENTAL, IN 1896.

Though the restrictions of space necessarily increase with increasing publishing activity, the following summary is believed to represent with reasonable fullness the literary record of the various lands, movements, and writers, books of great momentary interest as well as those of lasting importance being noted:

Belgium.—Various phases of national history and development are illustrated in Ed. van Even's important "Louvain dans le Passé et le Présent" (now completed); the interesting "Pages d'Histoire locale gantoise" (third series), by Prosper Claeys; Herman van Duyse's "Les Cosaques à Gand (1814)"; Romberg's curious "Les Journaux à Gand pendant les Cent Jours"; Demarteaux's "historical study of

the democracy in Liège from 1384 to 1419"; Gen. Wauvermans's "Histoire de l'École cartographique belge et anversoise du 16^e Siècle"; Prosper Poullet's shrewd remarks upon "public feeling in Belgium during the French occupation of 1795-1814 and during the early years of the kingdom of the Netherlands"; Eugène Hubert's essay on the "Mémoires de Goswin de Fierlant" (dealing with the abolition of torture in the Netherlands in the eighteenth century); Part II of Paul Fredericq's "Corpus Documentorum Inquisitionis Neerlandicæ," edited with critical thoroughness; P. Alexandre's "Histoire du Conseil Privé dans les anciens Pays-Bas"; Armand Heins's suggestive "Étapes de l'Histoire sociale de la Belgique"; Godefroid Kurth's "La Frontière linguistique en Belgique et dans le Nord de la France"; Edmond Marchal's exhaustive and erudite "La Sculpture et les Chefs-d'Œuvre de l'Orfèverie belges"; and J. Halkins's curious "Étude sur la Culture de la Vigne en Belgique." In biography there are Kurth's finely illustrated volume on Clovis, picturesque in style and erudite; Ch. Moeller's piquant "Eléonore d'Aurtriche et de Bourgogne"; "Mgr. Seghers, l'Apôtre d'Alaska," by the Abbé de Baets; and Ernest Dicaillies's lifelike portrait of "Charles Rogier," the great Liberal statesman.

A. J. Wauters and A. Buyl have compiled a useful "Bibliographie du Congo, 1880-'95." Jules Leclercq's "Au Pays de Paul et Virginie" is a "most remarkable book of travel." H. Pirenne studies the "Origines des Constitutions urbaines au Moyen-Age"; O. Laurent gives information about "Les Universités des deux Mondes"; O. Merten, in "Les Limites de la Philosophie," protests against the "newer tendencies of experimental psychology." F. A. Gevaert has issued a masterly work on "La Mélodie antique dans le Chant de l'Église latine." Contributions to literary criticism are: G. Hecq and L. Paris's "La Poésie française au Moyen-Age et à la Renaissance"; Ferdinand Loise's "L'Histoire de la Poésie italienne"; and Eugène Gilbert's interesting "Le Roman en France pendant le 19^e Siècle." J. Defrecheux and Ch. Gothier have brought out an "Anthologie des Poètes wallons." The dissensions in the camp of "Les jeunes Belges" appear to increase. New works by the younger writers are: Maurice Maeterlinck's mystical "Le Trésor des Humbles"; Ch. Lemonnier's "Contes flamands"; Georges Rodenbach's "La Voitation" and "Les Vies enclous" (verse); and Émile Greyson's "Sous les Brumes et les Clartés des Flandres." Others deserving notice are: Louis Delattre's "Une Rose à la Bouche." Alfred Lavachery's "Dinah Didière," Frantz Mahutte's "Sans Horizon," Sander Pierron's "Berthilde d'Hageleere," and Émile Verhaeren's rather incoherent "Poèmes" and "Les Villes tentaculaires." Georges Eekhoud, in "Philaster, ou l'Amour qui saigne," translates Beaumont and Fletcher's "Love lies a-bleeding."

Flemish historical works of varying importance have been published by Frans de Potter, E. Poffé, J. Broeckaert, Scheire, E. Gendens, E. Gailliard, and others. Victor de Hoon offers an important exposition of "Grondbeginselen van het belgisch Strafrecht"; O. Pijsfren investigates "Het Gebruik der Talen in burgerlijke Zaken" (the use of French and Flemish in Belgian law courts); Mme. Lievevrouw-Coopman deals with the education of "Het Volkskind." Mlles. M. E. Belpaire and Hilda Ram, Pol de Mont, Aug. Gittée, J. van Landschoot, and A. de Cock have compiled collections of popular tales and traditions; L. Simons has made an excellent translation of Beowulf; J. Vereoullie has edited the mystic writings of Zuster Hadewijch; an interesting sixteenth-century drama, "Van Charon

den Helsen Scippere," has been unearthed by W. de Vreese; and K. de Flou and E. Gailliard have published two erudite reports on Flemish MSS. in London libraries. "Stijlaffectatie bij Shakespeare" are revealed by Maurits Basse. "Oude and nieuwe Kunst" in Belgium and Holland is dealt with by Max Roose, and F. van Duyse has a masterly essay on "Het eenstemmig fransch en nederlandsch wereldlijk Lied in de belgische Gewesten." There has appeared the third and last volume of the works of Jan van Rijswijk, a polemical writer and noted journalist. Flemish literature is characterized by a calm that stands in marked contrast to the discord in the French ranks. Fiction is plentiful and includes important work. Mlle. Virginie Loveling (whose masterly "Een dure Eed" won the five-yearly prize of 5,000 francs for the encouragement of Flemish literature) has published "Het Land der Verbeelding" (two stories depicting Flemish village life with her keen psychological analysis and picturesque description) and "Mijnheer Connehaye." The veteran Slecckx has written an important historical romance, "Vesalius in Spanje." Tried writers such as Gustaaf Segers and Omer Watez are supporting their reputation, while Herman Bogaerd, Eug. Leën, F. Stockmans, Leo van Nerum, and other young authors are making their way. No remarkable poetical or dramatic work has appeared, though much has been published. The volumes of verse by Gustaaf de Mey, O. Kops, Vict. van de Weghe, R. de Cneudt, and Hélène Lapidoth-Swarth ("Blanke Duiven," sweet and graceful verses) may be mentioned, as also Isidoor Albert's "Bondewijn Hapken," a historical drama based upon the mediæval history of Flanders.

Bohemia.—Vol. III of "Städte- und Urkundenbücher aus Böhmen," edited by L. Schlesinger for the Verein für Geschichte der Deutschen in Böhmen, has appeared. New books of travel are Kořenský's voluminous description of his travels round the world in 1893-'94; Paul Durđík's recollections of life in Sumatra and description of Spanish bull fights; and Guth's account of his travels "After the Midnight Sun." Z. Winter, in "Život Cirkevny v Čechách: kulturně-historický obraz z Xv a XVI Století," contributes to the ecclesiastical history of Bohemia in the fifteenth and sixteenth centuries. Alex. Neklan considers "Die böhmische Frage." The Cecho-Slavonian Ethnographic Exhibition, held at Prague in 1895, is described in a profusely illustrated volume; the "Gesellschaft zur Förderung deutscher Wissenschaft, Kunst und Literatur in Böhmen" has issued Part I (by J. Neuwirth) of "Forschungen zur Kunstgeschichte Böhmens," dealing with "Mittelalterliche Wandgemälde und Tafelbilder der Burg Karlstein"; and "Manes," the new society of young painters, has issued "Sketches and Drawings of M. Aleš," a most original artist. In literary criticism there are Krejčí's reports on the Bohemian literature of the day; Vorel's essay on the novel; and F. X. Salda's sharp criticism of contemporary literary productions.

The desire for a regeneration of literature finds expression in various ways and in different circles. The Clerical party, controlling the two important journals "Hlídká" (critical) and "Nový Svět" (publishing original matter), expects literary salvation only from strictly religious principles. This view, upheld by prominent writers, such as Vychodil and Bouška, is supported by Julius Zeyer, who has published "Three Legends of the Crucifix," in prose ("full of earnest religious zeal"), and a fairy drama, "Radovid and Mahulena" (published in the "Květy"), the subject of both being drawn from the national tales of the Slavonians. On the other hand, we have the principles and tendencies of the group of young writers connected with the "Moderní

Revue," vehement admirers of the French, German, and English decadents, though striving for individual freedom of expression. Or, again, the new men standing aloof from both these schools: O. Březina, author of "The Dawn in the West" (poems), Šlejhar, with his stories "What Life passes by," and Šova, author of "A Broken Soul." Unsuccessful attempts to bring these conflicting elements to agreement were the manifesto issued by a number of new men under the name of "Moderna," and the "Almanac of the Secession," to which writers of all tendencies were asked to contribute by the "Moderní Revue." But we are assured that while literary effort is in consequence limited and scattered, the increased and lively interest in literary matters promises well for the future. Numerous collections of short stories again characterize the trend of prose fiction. Such are "Kalibuv zločin," by Rais, and Stasek's "Blouznivci našej hor," both strong descriptions of Bohemian highland life; Svoboda's "Short Tales"; and Kaminský's "Studies and Tales." Stech's "Hloží" and "Koleje" deal with the social life of small towns. No special originality marks the efforts of the female writers Božena Víková Kunečická ("Minulost"—"The Past"—interesting novel of modern life), Gabriela Preiss ("Stories from Carinthia" and "Pictures without Frames"), and Ružena Svobodová ("On Sandy Ground" and "An Overburdened Ear of Corn"). New poetry is Klášterský's "Living Shadows"; Kaminský's "Two Tales in Verse" and "Motives from Sychrov"; the well-known story writer Šimáček's successful "A-woing"; Kvapil's "Oddanost"; and "Book of the Parcae" and "Atropos," tinged with a mournful resignation, by the prolific Vřehlický, a collected edition of whose works is appearing. The new movement referred to is felt in dramatic works by young authors, notably Hilbert's "Vina" and Kvapil's "Bludička" (cleverly characterizing Prague society and artist life), both very successful.

Denmark.—A new and enlarged edition of Trap's useful statistical and topographical work on Denmark has appeared. The active Selskab for Udgivelse af Kilder til dansk Historie is publishing a "Samling af Danmarks Lavsskraaer fra Middelalderen." E. Löventhal, a missionary, describes "Indien för og nu," and the Lithuanians are depicted in Aage Meyer's "A People that awakens." H. J. Hansen reflects upon "Germanisring af dansk Videnskab." H. Höfding considers "Jean Jacques Rousseau og hans Filosofi." Alfred Lehmann continues his important work "Over Tro og Trolddom fra de ældste Tider til vore Dage," and V. Bang writes of "Hexevæsen og Hexefølgelser især i Danmark." Of archaeological interest are J. Magnus Petersen's "Beskrivelse og Afbildninger af Kalkmalerier i danske Kirker"; V. Boye's "Fund af Egeklister fra Bronzealderen i Danmark"; and J. Steenstrup's "Det store Sølvfund ved Gundestrup i Jylland 1891." Vol. I of Konrad Gislason's "Efterladte Skrifter" comprises "Forelæsninger over oldnordiske Skjaldekvad." "Danmarks Litteratur i Middelalderen, med Henblik til det øvrige Nordens" forms the theme of J. Paludan.

Reference was made last year to the gradual disappearance of crass naturalism, and now Johannes Jürgensen, writing of his conversion to Romanism, charges his former literary partisans with loose morals. The year's fiction includes Holger Drachmann's mediæval novel "Kitzvalde"; Peter Mariager's posthumous novel on Sparta; Henrik Pontoppidan's "Dommens Dag" (completing a trilogy of novels describing the Grundtvigian movement); Peter Nansen's "Guds Fred"; "Æbelø," a fantastic love idyll, by Sophus Michaëlis; Carl Evald's "Den gamle Stue"; J. Möller's "Tabte Tøiler"; K. Larsen's "Doktor IX"; S. Schandorph's "Alicie

og mindre Fortællinger"; and J. Schjörning's "Svundne Drømmer." Ludvig Holstein, a young writer, has made his mark with a volume of melodious verse. Among new dramatic publications are Holger Drachmann's volume of short "Melodramer," and E. Brandes's "Muhammed: Skuespil."

Sigurdur Kristjansson, the Icelandic publisher, is bringing out a cheap edition of the Icelandic sagas, and a series of 20 biographies of noted Icelanders, the first 2 treated being the historian Jon Espolin and the poet Magnus Jonsson.

France.—The stream of printed matter dealing with the Revolution and the Empire still pours out with unabated force. Thus we have Armand Dayot's finely illustrated work on the revolution; Eugène Spuller's "Hommes et Choses de la Révolution"; A. Challamel's "Les Clubs contre-révolutionnaires" and "Actes de la Commune de Paris pendant la Révolution," by S. Lacroix, both in the "Collection de Documents relatifs à l'Histoire de Paris"; "La Préparation de la Guerre de Vendée, 1789-93" and "La Vendée patriote, 1793-94," by Ch. L. Chassin; "Vie à Paris pendant une Année de la Révolution," vividly described by Isambert; "Journal d'un Prêtre Parisien" during the revolution, published by C. d'Héricault; L. Sciout's "Le Directoire"; G. Lenôtre's "Un Conspireur royaliste pendant la Terreur: le Baron de Batz, 1792-95; Albert Tourner's attempts to rehabilitate "Vadier, Président du Comité de Sûreté générale pendant la Terreur"; the interesting "Mémoires, 1771-1815" of Madame de Chastenay; "Le Mariage de Madame Roland: trois Années de Correspondance amoureuse (1777-1780)," edited by A. Join-Lambert (not telling much that is new); Geoffroy de Grandmaison's "Napoléon et ses récentes Historiens" (studied from the standpoint of a Christian moralist); Joseph Turquan's "La Générale Bonaparte"; L'Impératrice Joséphine" (aiming at a true picture of the empress), "Les Sœurs de Napoléon," and "La Reine Hortense"; Henri Bouchot's "La Toilette à la Cour de Napoléon: Chiffons et Politique de grandes Dames, 1810-15"; the Marquis de Sassenay's authoritative "Les derniers Mois de Murat"; Huon de Penanster's "Une Conspiration en l'An XI et en l'An XII"; "Opérations du 3^e Corps, 1806-7: Rapport du Maréchal Davout, Duc d'Auerstaedt, publié par son Neveu, le Général Davout," a literary document of much value; the "Mémoires" (1802-32) of the Général Comte de Saint-Chamans; Sebastien Blaze's "Mémoires d'un Aide-Major sous le 1^{er} Empire," an account of the Spanish war, 1808-1814, supplementing Thiébault; and Col. de Poyen's "Les Guerres des Antilles de 1793 à 1815." "Les Complots militaires sous la Restauration," by E. Guillon; A. Calmon's "Histoire parlementaire des Finances de la Monarchie de Juillet"; Count d'Osmond's "Reliques et Impressions"; the letters of the Duchesse de Broglie; Othenin d'Haussonville's impartial and sympathetic essay on the Comte de Paris; and Vol. I of the "Mémoires" of the Baron d'Haussez, 1814-24, cover the following period. Napoleon III and the second empire are dealt with from various standpoints in the Duc de Persigny's somewhat cynical "Mémoires"; De Normandie's "Notes et Souvenirs," of the siege of Paris and the Commune, described also in A. Barron's "Sous le Drapeau rouge"; Thirria's "Napoléon III avant l'Empire"; Pierre de Lano's "L'Amour à Paris sous le Second Empire"; Étienne Lamy's valuable "Etudes sur le Second Empire" ("marked by a reaction against the violent attacks on Napoleon III"); Rousset's military history, "La seconde Campagne de la France: Histoire générale de la Guerre franco-allemande"; and Henri Rochefort's "Les Aventures de ma Vie." Still other works dealing with various periods and phases of French

history are: E. Carette's "Les Assemblées provinciales de la Gaule romaine"; Richard Waddington's "Louis XIV et les Préliminaires de la Guerre de Sept Ans" and "Louis XV et le Renversement des Alliances"; "Le Grand Siècle Louis XIV: les Arts, les Idées," by Ém. Bourgeois; the Duc d'Amalme's "Histoire des Princes de Condé" (completed); E. Rodocanachi's "Renée de France, Duchesse de Ferrare," conscientious, yet brilliant; E. de Broglie's "Les Portefeuilles du Président Bouhier: Extraits et Fragments de Correspondances littéraires, 1715-46"; "Précis historique des Assemblées parlementaires et des hautes Cours de Justice en France, 1781-1895," by Léon Muel; Amédée Delorme's spirited "Lettres d'un Zouave: de Constantine à Sebastopol"; P. de Coubertin's frank and thorough account of the political and constitutional "Évolution française sous la troisième République"; Ch. de Lacombe's monograph on Berryer, the noted Legitimist orator; Germain Bapst's biography of Canrobert; Chesnelong's "Campagne royaliste de 1873"; the Duc de Broglie's "Mission de M. de Gontaut-Biron à Berlin," relating the story of the resumption of diplomatic relations between France and Prussia, 1871-78; the Marquis de Gabriac's "Souvenirs diplomatiques de Russie et de l'Allemagne"; Elie de Cyon's "Histoire de l'Entente franco-russe, 1886-94: Documents et Souvenirs" (second edition); Mme. Edgar Quinet's moralizing "La France idéale"; Gabriel Hanotaux's "L'Affaire de Madagascar"; "La Vérité sur la Guerre de Madagascar," by Col. XXX; and H. Galli's "La Guerre à Madagascar: Histoire anecdotique de l'Expédition. Historical works dealing with other countries are: Léon Cahun's positive "Introduction à l'Histoire de l'Asie: Turcs et Mongols des Origines à 1405"; "Une Princesse romaine au XVII^e Siècle, Maria Mancini Colonna," by Lucien Perey (Lucie Herpin); Gabriel Syveton's "Une Cour et un Aventurier au XVIII^e Siècle: le Baron de Ripperda"; René de Kerallain's "La Jeunesse de Bougainville et la Guerre de Sept Ans" in Canada; Désiré Charnay's translation of "Lettres de Fernand Cortes à Charles V sur la Découverte et la Conquête du Mexique"; Auguste Moireau's "Histoire des États Unis"; Émile Gebhardt's delightful "Moines et Papes: Essai de Psychologie historique"; Thureau-Dangin's "Saint-Bernardin de Sienne"; A. G. Drandar's "Les Evénements politiques en Bulgarie depuis 1876 jusqu'à nos Jours"; L. Dupuy-Peyou's "Bulgarie aux Bulgares, hier, aujourd'hui, demain," and G. Bley's "La Roumanie: Étude économique et commerciale." Ch. V. Langlois's "Manuel de Bibliographie historique" is a handy and efficient guide; G. Capus takes us "A travers la Bosnie et l'Herzégovine"; Bazin's "La Terre d'Espagne" is marked by graceful simplicity; Dugard's "La Société Américaine" and Auguste Lutaud's "Aux États-Unis" are appreciative though not always accurate; Th. Bentzon describes "Les Américaines chez Elles" with fidelity and grace; and Grille and Laborde tell of "Les Travaux publics aux États-Unis." Noteworthy publications in economics are Henry Michel's masterly critical essay upon "L'Idée de l'État" in France since the revolution; Paul Lafitte's "Le Parti Modéré, ce qu'il est, ce qu'il doit être"; "Organisme et Société," by René Worms (author also of "La Science et l'Art en Économie politique"), attempting to "resuscitate the metaphysical conception of the state"; Count de Luçay's interesting historical account of "decentralization," with special reference to the transformation of the French provinces into *départements*; Charles Benoist's original and daring treatment of universal suffrage; M. de Marcère's proposed reformed municipal law; Colson's study of

railways and the budget; "Les Chemins de Fer aux États-Unis," by L. Paul-Dubois; Paul Leroy-Beaulieu's quite monumental "Traité théorique et pratique d'Économie politique"; and "Les Tribunaux de M. Faubert," by Yves Guyot (author also of "L'Économie de l'Effort"), a humorous and sensible criticism of the graduated income tax. The "Mécanisme de la Vie moderne" is dissected by G. d'Avenel; B. Malon discusses "La Morale sociale"; and Léon Bourgeois "Solidarité." Concerned with the ever-present question of socialism are Léon Say's "Contre le Socialisme" (posthumous, like his "Les Finances" in the "Vie Nationale" series); G. de Molinari's brilliantly polemical "Comment se résoudra la Question sociale"; "Demagogues et Socialistes," by Joseph Reinach (author also of "L'Histoire d'un Idéal"), in which "the Liberal principles of 1789 are contrasted with the collectivist doctrines of the school of Karl Marx"; Léon de Seilhae's discriminating "Le Monde socialiste: Groupes et Programmes"; and G. Deville's "Principes socialistes." Arthur Desjardin considers "P. J. Proudhon, sa Vie, ses Œuvres, sa Doctrine"; Georges Weil traces the development of the school of Saint-Simon, as does S. Charléty in "Histoire du Saint-Simonisme, 1825-64"; Clémenceau makes his *début* as a philosopher in his idealistic "Le grand Pan," tedious in treatment and "declamatory and turgid" in style; M. de Freycinet has produced a graceful and lucid "Essai sur la Philosophie des Sciences." Gustave Vapereau presents notes and impressions on "L'Homme et la Vie"; La Vtsse, d'Adhémar discourses on "Nouvelle Éducation de la Femme dans les Classes cultivées," G. Compyré on "L'Enseignement secondaire aux États-Unis" and "L'Enseignement supérieur aux États-Unis," and Jacques Parmentier on the "Histoire de l'Éducation en Angleterre." Ferdinand Brunetière's somewhat acrimonious "Éducation et Instruction" deals with the educational value of Latin. Sully-Prudhomme's "Que sais-je?" contains some exquisite passages. J. Grand-Carteret tells of "Les Almanachs français, publiés à Paris, 1600-1895." "La Critique littéraire: Étude philosophique" is by A. Ricardon. Contributions to literary history are a notable "Histoire de la Langue et de la Littérature françaises des Origines à 1900," by various eminent writers, edited by Petit de Julleville; Raoul Rosières's valuable critical "Recherches sur la Poésie contemporaine"; G. L. Fonsegrive's "Les Livres et les Idées, 1894-95," studied from the Christian standpoint; René Doumic's "Études sur la Littérature française" and the somewhat ephemeral "La Vie et les Mœurs au Jour le Jour"; Jusserand's excellent "Histoire abrégée de la Littérature anglaise"; Augustin Filon's "Le Théâtre anglais, hier, aujourd'hui, demain"; Amédée Roux's history of Italian literature (4 volumes); Charles Rabany's "Carlo Goldoni: le Théâtre et la Vie en Italie au 18^e Siècle"; J. Kont's "La Hongrie littéraire et scientifique"; E. Combe's "Profilis et Types de la Littérature russe"; and Arsène Houssaye's light and not very important "Souvenirs de Jeunesse, 1830-50." Important monographs on individual writers are: Eug. Ritter's "La Famille et la Jeunesse de J. J. Rousseau," offering much new material; Léo Clarétie's "Jean Jacques Rousseau et ses Amis"; J. Texte's "Jean Jacques Rousseau et les Origines du Cosmopolitisme littéraire. Étude sur les Relations littéraires de la France et de l'Angleterre au 18^e Siècle"; the interesting "Chateaubriand, sa Femme et ses Amis," by G. Pailhès; Paul Stapfer's "La Famille et les Amis de Montaigne: Causeries autour du Sujet"; Le Breton's lenient account of "Rivarol: sa Vie, ses Idées, son Talent"; Lafenestre's "Lafontaine" (in the series "Grands Écrivains français"); François Descostes's

enthusiastic account of "Joseph de Maistre, pendant la Révolution"; P. Régnier's "Le Tartuffe des Comédiens," an instructive edition from the actor's point of view; "Un Roman d'Amour," a contribution to Balzac literature by Spalberch de Lovenjoul; "Souvenirs et Correspondances" of Mme. Octave Feuillet; André Theuriet's autobiographical "Années de Printemps"; Nourrisson's "Voltaire et le Voltairianisme"; Henri Lion's conscientious "Les Tragédies et les Théories dramatiques de Voltaire"; "L'Italie du XVI Siècle: L'Arétin," by Pierre Gauthiez; and Émile Grucker's "Lessing." Collective literary biography and criticism is supplied in T. de Wyzewa's "Écrivains étrangers"; "Penseurs et Poètes," by Gaston Paris; Vol. VI of Jules Lemaitre's "Les Contemporains," composed principally of an appreciative article on Lamartine; and René Doumic's "Les Jeunes: Études et Portraits." Of the "Journal des Goncourt" (that curious document on the literary life of France in the latter half of this century) Vol. IX has appeared—the last, for Ed. de Goncourt is dead. Vol. IV of Coppées "Mon Franc-Parler" contains excellent reading on Bourget, Les Parnassiens, and Alexandre Dumas. The Vicomte Eugène Melchior de Vogüé's "Devant le Siècle" has noteworthy pages on Hérédia, Taine, Montégut, and Canrobert; the late Jules Simon's "Quatre Portraits" depicts Lamartine, Cardinal Lavigerie, Renan, and William II; James Darmesteter's valuable "Nouvelles Études anglaises" have been collected by his widow; the "Lettres intimes 1842-'45" of Ernest and Henriette Renan have seen the light. O. Uzanne studies the "Physiologie des Quais de Paris." Jules Martin writes interestingly of "Nos Académiciens" and Comte de Franqueville traces "Le premier Siècle de l'Institut de France." Noteworthy publications on art subjects are: G. Larroumet's "L'Art et l'État en France"; André Michel's "Notes sur l'Art moderne"; Edmond de Goncourt's monograph on the great Japanese painter "Hokousai"; Gruyer's "La Peinture au Château de Chantilly"; "La Peinture en Europe," a series on the galleries of Europe, begun by Lafenestre and Richtenberger. E. Maïndron has brought out a new volume of "Les Affiches illustrées, 1885-'96." Of archaeological interest are Hamdy Bey and Théodore Reinach's "Une Nécropole royale à Sidon" and G. Schlumberger's "Mélanges d'Archéologie byzantine." Gounod's "Mémoires d'un Artiste" and Camille Bellaigue's clever "Portraits et Silhouettes de Musiciens" are interesting contributions to musical biography; Adolphe Jullien has issued "Musique: Mélanges d'Histoire et de Critique musicale et dramatique."

Of the always considerable number of novels, many are ephemeral. Still, the noteworthy or even readable ones are numerous. Zola's "Rome" has naturally excited much varying criticism, the consensus of which seems to be that the book, with its commonplace historical and descriptive details, its pessimistic view of Roman ecclesiasticism, its various limitations and defects, yet shows a marvelous power of observation and word painting. Bourget lays bare his weak points in "Une Idylle tragique"; his power of analysis and description seems to wane and his style to deteriorate. The irresistible charm and beautiful language of Pierre Louÿs's "Aphrodite" are offset by unwarranted license. The psychological method is exemplified in E. Estaunié's "L'Empreinte"; "L'Effort," by Paul Margueritte; and Jean Bertheroy's interesting "Le Roman d'une Ame." "Chemin fleuri," by Gaston Deschamps; Georges Ohnet's forcible and bright "La Fille du Député" and "L'inutile Richesse"; "Céphise," by Mme. Henry Gréville; "O mon Passé," by Hugues Le Roux; R. Dombasle's delightful and witty "Tante

Rabat-Joie," are proof that "there are still novels published in France which a young girl may read." Further works of fiction are: the brilliant "Le Roi Apépi" and "Après Fortune faite," by Victor Cherbuliez; "Dernier Refuge," by E. Rod (who has written also "Scènes de la Vie suisse"); Jean Aicard's "Notre Dame d'Amour" ("full of sunshine"); M. Prevost's "Le Mariage de Juliette" and "Le Jardin Secret" (dealing with Parisian femininity in high life); P. Hervieu's "Le petit Duc"; J. Reibrach's "Par l'Amour" and "La Brise"; Jean Ricard's "Le Chemin de la Paix"; A. Daudet's "Soutien de Famille"; E. Daudet's "Don Rafael" (one of his "slightly heavy but valuable historical romances") and "Drapeaux ennemis"; H. Lavedan's "Petites Fêtes" and "Les petites Visites"; P. Capual's "Un noble Cœur" ("healthy and clean"); "Miracle d'Amour" and its "suite et fin," "Le petit Charbonnier," by P. Sales; J. Rameau's charming and clean "Le Cœur de Régine"; "Une double Épreuve" (short stories), by Mme. Blanc (Th. Bentzon); Jean Kermohr's "Marcel André" ("interesting, spirited, highly moral"); P. Mael's "Les derniers Hommes rouges: Roman d'Aventures" and "Petit Ange"; Ch. De Rouvre's realistic "A deux"; D. Lesneur's "A Force d'aimer"; R. Maizeroy's "En Volupté"; Roujon's "Miremonde" (a "spirited picture of Don Juan's remorse"); J. Richepin's "Flamboche" (scourging society) and "Les Étapes d'un Réfractaire"; J. H. Rosny's "Le Serment"; the prolific A. Theuriet's characteristic "Cœurs meurtris"; Paul Adam's "La Force du mal" (strong, though at times repulsively naturalistic); "Le Chemin du Cœur," "Gog," and "La Maison de la Vieille," by Catulle Mendès, whose facile style and insincere eroticism degrades his fine talent; Paul Arène's "Contes choisis" (some admirable, others commonplace); and "La Princesse sous Verre: Contes pour Catherine Pozzi," by the *décedant* Jean Lorrain, who has given also his "Sensations et Souvenirs." There is little new poetry to speak of. The late Paul Verlaine published "Confessions: Notes autobiographiques" (1844-'71), and of his poems a posthumous volume, "Invectives," has been issued. Verlaine, it appears, has also edited the poems of his friend Arthur Rimbaud, the "poète maudit." The Société de l'Histoire littéraire de France has published "Les dernières Poésies de Marguerite de Navarre," which had remained unpublished for over three centuries. In the dramatic field there is little of note: Meilhac's "Grosse Fortune"; Maurice Talmeyr's "Les Mufles" (substituting apparently unstudied pantomime for monologues and soliloquies); Pierre Valdagne's comely "La Blague" (interesting, but lacking in the national quality indicated by its title); and "Au Bonheur des Dames" (after Zola's novel), by Charles Hugot and Raoul de Saint Arroman. Josephin (Sar) Péladan's Romanesque drama "Prince de Byzance" has fine passages, but is full of vague mysticism. At Vittel, the folk-drama "Jeanne d'Arc" was given by peasants of Dombasie and Menie.

The Provençal success of the year was "Li Rouge dou Miejour" ("The Reds of the Midi") a vivid recital of the doings of the Marseilles battalion during the French Revolution, by Félix Gras, the official head of the Félibrige, described in E. Lintilhac's "Les Félibres: a travers leur Monde et leur Poésie." Frédéric Mistral, whose play "La Reine Jeanne" was announced for performance, has completed "Lou Pouèmo dou Ros" ("Le Poème du Rhone"), a 4,000-line poem which he holds to be the crowning effort of his life.

Germany.—The late Ludvig von Giesebrecht's thorough and readable "Geschichte der deutschen Kaiserzeit" ("the best history of the German Em-

pire . . . of which our German literature can boast") has been brought to a premature end with the sixth volume, written by B. von Simson from fragments left by the author. Giesebrecht was a distinguished pupil of Leopold von Ranke, whose memory is worthily honored in Moritz Ritter's "Leopold von Ranke, seine Geistesentwicklung und seine Geschichtschreibung" and whose "History of the Popes" has found a rival in the equally impartial and objective "Geschichte der Päpste seit dem Ausgange des Mittelalters," by Ludwig Pastor, a Roman Catholic. Friedrich Reuter's "Die Erlanger Burschenschaft, 1816-'33: ein Beitrag zur innern Geschichte der Restaurationszeit"; J. v. Verdy du Vernois's "Im grossen Hauptquartier, 1870-'71: persönliche Erinnerungen"; Graf F. Frankenberg's "Kriegstagebücher aus 1866 und 1870-'71"; and Karl Bleibtreu's "Kritische Beiträge zur Geschichte des Krieges 1870-'71," are devoted to special periods.

New publications in local history are Eugen Schneider's "Württembergische Geschichte"; Joseph Partsch's well-studied "Schlesien: eine Landeskunde für das deutsche Volk auf wissenschaftlicher Grundlage"; "Italienische Beiträge zur Geschichte der Provinz Ostpreussen," edited by Hm. Ehrenberg; and "Das Deutschtum in Elsass-Lothringen 1870-'95: Rückblicke und Betrachtungen von einem Deutschnationalen." Max Zimmermann's "Boheit oder Unkenntnis? Eine Entgegnung auf die beiden Flugschriften des ehemaligen bayrischen Premier-lieutenants Rudolf Kraft 'Glänzendes Elend' und 'Kasernen-Elend'" is an answer to the two pamphlets on the life of the German officers on starvation pay and of privates which caused such a stir last year. R. Pitzner's "Deutsches Kolonial-Handbuch" is a comprehensive and authoritative account of German colonial policy. Various phases of history are treated in Eduard Graf Wilczek's suggestive and instructive "Das Mittelmeer, seine Stellung in der Weltgeschichte und seine historische Rolle im Seewesen"; Georg Grupp's "Culturgeschichte des Mittelalters"; and A. Stauffer's "Zwölf Gestalten der Glanzzeit Athens im Zusammenhange der kulturentwicklung." Otto Simon's "Französische politische Mauer-Anschläge, 1870-'71" shows the extravagant tone of these political posters. In "Armenien und Europa" Dr. Lepsius arraigns both Turkey and the Christian powers. Part IV of Konrad Miller's noteworthy series of "Aelteste Weltkarten" is a monograph on the circular world map of the thirteenth century preserved in Hereford cathedral. Kiepert and Huelsen's excellent "Forma Urbis Romae antiquae" is based upon the latest surveys and discoveries. New works on the "Dark Continent" are "Deutsch-Ost-Afrika: wissenschaftliche Forschungsergebnisse . . ."; Oskar Lenz's "Wanderungen in Afrika" (the "result of original observation and ripe experience"); Graf von Götzen's interesting "Durch Afrika von Ost nach West"; Passarge's "Adamana: Bericht über die Expedition des deutschen Kamerun-Komités in den Jahren 1893-'94" (laying most stress on the scientific results of the expedition); "Nama und Damara" (a full account of "German Southwest Africa"), by H. von François; E. J. von Bilow's "Deutsch-Südwestafrika"; and L. Hevesi's "Wilhelm Junker: Lebensbild eines Afrikaforschers." Rudolf Slatin Pascha's "Feuer und Schwert im Sudan" was well received. Anton Tuma's "Serbien" (useful, not profound); Hm. Abich's "Aus kaukasischen Ländern: Reisebriefe" (posthumous); C. Hahn's "Kaukasische Reisen und Studien"; P. D. Fischer's well-written "Betrachtungen eines in Deutschland reisenden Deutschen"; "Bericht über eine im Auftrage der k. bay. Staatsregierung ausgeführten Reise nach

Nordamerika und zur Columbischen Weltausstellung in Chicago" (chiefly a condensed account of the achievements of civil and mechanical engineering in the United States), by G. Ehrne v. Melchthal and V. Zehender; and Rudolf Lindau's "Aus China und Japan," are other works of description and travel. New biographies are Gen. v. Conrady's "Leben und Wirken des Generals . . . Carl v. Grolman: ein Beitrag zur Zeitgeschichte der Könige Friedrich Wilhelms III. und Friedrich Wilhelms IV.,"; Friedrich Meinecke's "Das Leben des Generalfeldmarschalls Hermann von Boyen" (Vol. I, 1771-1814); "Erzherzog Carl von Oesterreich als Feldherr und Heeresorganisator," by von Angeli; Otto Pfülf's "Cardinal v. Geissel," "one of the first and principal representatives of modern ultramontanism"; and Bruno Gebhardt's "Wilhelm v. Humboldt als Staatsmann." New Bismarckiana includes Karl Streckler's "Das Bismarck-Museum" (reproducing diplomas of honorary citizenship, addresses presented by societies, etc.), and "Bismarck's Briefe an den General Leopold von Gerlach," edited by Horst Kohl. "Gräfin Elise von Bernstorff, geborene Gräfin von Dernath: ein Bild aus der Zeit von 1789 bis 1835. Aus ihren Aufzeichnungen" is a fine addition to memoir literature. Graf Ernst von Münnich's "Memoiren" and "Aus meinem Leben: Erinnerungen und Rückblicke," by the late Carl Vogt, are further autobiographical works. Noteworthy volumes of correspondence are Theodor Billroth's delightful "Briefe"; "Ausgewählte Briefe" of David Friedrich Strauss, edited by E. Zeller; "Briefe Ferdinand Lassalle's an Georg Herwegh" and "Briefe von und an Georg Herwegh," both issued by the latter's son Marcel; three parts of Moltke's "Militärische Korrespondenz," forming the first division of his "Militärische Werke," issued by the "Grosse Generalstab"; the correspondence of Count von Roon with Clemens Theodor Perthes, published by Otto Perthes; "Nikolaus Lenau's Briefe an Emilie von Reinbeck und deren Gatten Georg von Reinbeck von 1832 bis 1844," edited by A. Schlossar; and Hans von Bülow's "Briefe und Schriften." The scattered and unfinished writings ("Schriften und Entwürfe") of F. Nietzsche are being collected by his sister, Mrs. Elizabeth Foerster. Georg Plechanow furnishes "Beiträge zur Geschichte des Materialismus." W. Wundt gives a "Grundriss der Psychologie." A fitting tribute to the memory of the late Georg von Gizycki, noted for his "scientific systematization of ethics," is paid by Paul von Gizycki in "Vom Baume der Erkenntnis: Fragmente zur Ethik und Psychologie aus der Weltliteratur." Gizycki's gifted widow founded "Die Frauenbewegung," a journal, covering a specialty contributed to also in Julius Duboc's "Fünfzig Jahre Frauenfrage in Deutschland: Geschichte und Kritik" and A. Albert's pamphlet "Die Frauen und das Studium der Medicin" and Dr. Em. Hannak's "Die Frauen und das Studium der Medicin kritisch beleuchtet," the first arguing against, the second for, the admission of women to the university for the study of medicine. "Die Judengemeinden des Mittelalters, insbesondere die Judengemeinde der Reichsstadt Ulm: ein Beitrag zur deutschen Städte- und Wirthschaftsgeschichte," is by E. Nübling. Theodor Herzl, in "Der Judenstaat: Versuch einer modernen Lösung der Judenfrage," proposes the reconstitution of the kingdom of Israel. Sigm. Riezler has an exceedingly valuable "Geschichte der Hexenprozesse in Bayern." In economics there are Münsterberg's "Japan's auswärtiger Handel, 1542-1854"; Rich. Ehrenberg's "Hamburg und England im Zeitalter der Königin Elisabeth," illustrating Germany's superiority to England in commerce and economic development during a period dealt with

by the same author in "Das Zeitalter der Fugger: Geldkapital und Creditverkehr im 16. Jahrhundert"; Eugen v. Bergmann's "Die Wirthschaftskrisen: die Geschichte der nationalökonomischen Krisentheorien"; L. Grossmann's "Die Mathematik im Dienste der Nationalökonomie"; and A. Schaeffle's "Die Steuern" (clear, if subjective). Adph. v. Wenckstern writes of "Marx." Vol. I of Georg Waitz's "Gesammelte Abhandlungen" is devoted to "Abhandlungen zur deutschen Verfassungs- und Rechtsgeschichte," and F. Keutgen's "Untersuchungen über den Ursprung der deutschen Stadtverfassung" is a brief, scholarly view of the whole voluminous discussion of this question. Sepp tells of "Neue hochwichtige Entdeckungen auf der zweiten Palästinafahrt. Erwerbung Kapharnaums für das katholische Deutschland und des Johannerspitals für Preussen." Under the auspices of the Saxon Ministry of Worship and Public Instruction, Conrad Cichorius has undertaken an exhaustive account of "Die Reliefs der Traianssäule." Goethe literature is increased by C. Ruland's "Aus dem Goethe Nationalmuseum" (published by the Goethe Gesellschaft), dealing with the "great Olympian" as a draughtsman, and Albert Bielschowsky's masterly "Goethe, sein Leben und seine Werke." Shakespeare is considered from various standpoints in "Der Anekdotenschatz Bacon-Shaksperc's," E. Bormann's new attempt to support the Bacon theory, which J. Schipper opposes in "Der Bacon-Bacillus: zur Beleuchtung des Shaksperc-Bacon-Unsinnes"; Reh. Koppell's "Shakspeare-Studien"; E. W. Sievers's posthumous "Shakspeare's zweiter mittelalterlicher Dramen-Cyclus," characterized as profound; and Leop. Wurth's valuable "Das Wortspiel bei Shakspeare." Karl Rosner represents "Shaksperc's Hamlet im Lichte der Neuropathologie" as the victim of nervous disease, indicating the poet's own psychical condition, a theory refuted in F. Rubenstein's "Hamlet als Neurastheniker." Fritz Reuter, that classic in Platt-Deutsch, is receiving increased attention, as witness G. Raatz's "Wahrheit und Dichtung in Fritz Reuter's Werken, Urbilder bekannter Reuter-Gestalten"; K. T. Gädertz's "Aus Fritz Reuter's jungen und alten Tagen," and "Fritz Reuter's Briefe an seinen Vater. . . 1827-41; hrg. von Frz. Engel." In German literary history we have Eug. Wolff's excellent "Geschichte der deutschen Literatur" brought down to the present; Alfred Biese's "Lyrische Dichtung und neuere deutsche Lyriker"; Karl Borinski's suggestive "Geschichte der deutschen Literatur seit dem Ausgang des Mittelalters," covering 1483-1832; Alfred Beet-schen's "Literarische Begegnungen" with Karl Spitteler, Arnold Ott, Laura Marholm, Hermann Lingg, Joseph Joachim, Meinrad Lienert, Martin Greiff, Öla Hansson, and others; Hans Grasberger's "Naturgeschichte des Schnaderhüpfels"; Aug. Holder's useful "Geschichte der schwäbischen Dialektdichtung"; and Louis Wael's monograph on Nikolaus Becker, the author of "Sie sollen ihn nicht haben, den freien deutschen Rhein." Two useful handbooks are Kürschner's "Handbuch der deutschen Presse," giving information about every German periodical, and Dahm's "Das literarische Berlin," giving data regarding all periodicals in that city. Georg Zimmermann introduces us to "Firstliche Schriftsteller des 19. Jahrhunderts." Roman Woerner considers "Henrik Ibsen's Jugenddramen." Julius Stettenheim is witty as always in his quasi-autobiographical "Heitere Erinnerungen: keine Biographie." A series of "Künstler-Monographien," begun under the direction of H. Knackfuss, already includes volumes on Raphael, Rembrandt, Menzel, and Knaus. Rudolf Lehmann has published interesting "Erinnerungen eines Künstlers." "Die Bücherliebhaberei" is described by Otto Mühl-

brecht. The custom of honoring persons by issuing memorial volumes has occasioned "Karl Immermann: eine Gedächtnisschrift zum 100. Geburtstage des Dichters, mit Beiträgen von R. Fellner, J. Geffcken, O. H. Geffcken, R. M. Meyer u. Fr. Schultess"; a volume in honor of the completion of twenty-five years of academic work by Eduard Sievers, edited by Prof. Kaufmann and John Meier; and "Adolf Bastian, als Festgruss zu seinem 70. Geburtstage, 26 Juni, 1896," containing essays on anthropology, etc., by "his friends and admirers."

Acuteness of psychological analysis distinguishes the writings of two female authors, Goswine von Berlepsch and *Emil Marriott* (Emilie Mataja) from the many products of purely narrative fiction. The first-named writer, in "Mutter," deals with the same problem as did Max Nordau in his play "Die Kugel," but "with far more delicacy and depth." Emilie Mataja, who "makes a special study of psychological problems such as can only originate in Romanist circles and orders," in "Seine Gottheit" illustrates the crass contrast between a highly refined spiritualism and an honest but almost brutal materialism. The usual ballast of historical or archaeological learning is carried with varying degrees of grace in Felix Dahm's "Chlodovech"; "Kyparissos," by E. Eckstein; W. Jensen's "Der Hohenstauner Ausgang"; K. Berkow's "Schuldlos geopfert"; and F. von Koepen's "Das Opfer für das Vaterland" (introducing Bluecher and other celebrities of his time). New fiction furthermore includes F. Spielhagen's "Zum Zeitvertreib"; Paul Heyse's "Ueber allen Gipfeln"; A. Wilbrandt's "Vater und Sohn, und andere Geschichten"; W. Jensen's "Auf der Ganerbenburg: eine tragikomische Historie"; Im. Heiberg's "Fluch der Schönheit"; A. Zapp's "Offizierstöchter: sozialer Roman aus dem Frauenleben"; Rdf. Elcho's "Petrus"; F. v. Zobeltitz's "An der Wende"; Emil Ertl's "Opfer der Zeit: zwei Novellen aus dem Wiener Leben"; Js. Cotta's "Verweibt: ein Cyklus moderner Novellen"; Heinz Tovote's "Heisses Blut" (short stories, including three excellent sketches—"Auf Vorposten," "Ein Sommerabend," and "In den Schütten"—the rest being either trifles or dismal attempts at naughtiness or pathological description); Paul Lindau's "Der kleine Finger"; Rhld. Ortmann's "Um eine Fürstenkrone"; Marie v. Ebner-Eschenbach's "Rittmeister Brand und Bertram Vogelweide: zwei Novellen" (not equal to her best work); S. Junghans's "Geschieden"; O. Schubert's "Con fiocchi"; F. v. Kapff-Essenther's "Schulden"; Anna v. Gersdorff's "Am Arbeitsmarkt" (an interesting work by a promising writer); X. v. Esehstruth's "Der Stern des Glücks"; B. v. Suttner's "High Life"; "Die Erbin von Rose-neck," a story for young girls by Agnes Willms-Wildermuth, the worthy daughter of the noted Ottilie Wildermuth; Bobertag's "Mit allen Waffen"; R. Lindau's "Erzählungen eines Effendi"; H. Wachenhusen's "Eine Frauenschuld"; Richard Voss's "Villa Taverna"; Th. Fontane's "Effi Briest"; E. v. Wolzogen's "Eccce ego. Erst komme ich"; E. Wichert's "Die Schwestern"; and L. Ganghofer's "Schloss Hubertus." The collected poems of the young Marie Eugenie delle Grazie, marked by lofty pathos and deep, tender feeling, hold high rank. Though issued as a third edition, the book is practically new, thanks to her ruthless self-criticism. Martin Greif, who occupies a foremost place as a lyric poet, has begun an issue of his poems and dramas, the latter hardly of lasting interest. The "naïve simplicity" of Greif is akin to the note struck by the *Naturpoeten* coming from the ranks of the people, such as Johanna Ambrosius, the peasant woman (whose poems have gone through the twenty-eighth edition), Beechert, a master furrier, and Katha-

rina Koch, a poor servant girl, who has become known by *vers d'occasion*. J. G. Fischer, a veteran of the Swabian school, shows remarkable intellectual freshness in "Gedichte eines Achtzigjährigen." "Herbstblätter," the posthumous poems of F. W. Weber, reveal goodness and amiability rather than sublimity. "In Freud und Leid: letzte Lieder" is a posthumous volume by Julius Sturm, noted for his religious poems, of whom A. Hepding has written "Julius Sturm ein Gedenkblatt." The prominent dramatic works of the year were: "Florian Geyer," by Gerhart Hauptmann (who here ventured for the first time into the historical field, while remaining faithful to his favorite subject and form)—which play, with all its flaws, was a literary and dramatic event, a "strangely monstrous and strangely fascinating picture of popular wrath and popular delusion"—and Ernst von Wildenbruch's tragedy "Heinrich und sein Geschlecht," introducing Pope Gregory VII and Emperor Henry IV, and noted as a triumph of idealism. The latter author's "Jungfer Immergrün" (one act) and "Der Junge von Hengersdorf," Volksstücke of no account, were written for the "Alt Berlin" theater of the "Gewerbeausstellung," as were also E. v. Wolzogen's "Die schwere Noth" (one act), Karl Bleibtreu's "Wendetaufe," and Konrad Alberti's "Büsserin." Other plays are: A. Wilbrandt's "Die Eidgenossen" (dealing with the Burgundian wars and the inspired hermit monk Klaus von der Flühe); "Gräfin Fritzi," by O. Blumenthal; Felix Philippi's successful "Wer war's?"; the comedy "Lebenswende," disappointing to the admirers of Max Halbe (called in exaggerated terms "the most modern of Germans"); actress Clara Ziegler's "Flirten," a one-act comedy; Ludwig Fulda's dramatic *Märchen* "Der Sohn des Kalifen"; Paul Blumenthal's comedy "Einmaleins"; Schönthan and Koppel-Ellfeld's comedy "Comtesse Guckerl"; Paul Lindau's "Die Erste" and "Der Abend," which made a strong impression, as did also his dramatization of his novel "Die Brüder"; "Die Offizielle Frau" Hans Olden's dramatization of R. H. Savage's novel, sensationally effective; the inexhaustible Gust. v. Moser's "Moralische Menschen"; Natalie von Esehstruth's *Lieutenants-Komödie* "Sie wird geküsst"; Hans Hochfeldt's "Der Kampf der Frau," a striking picture of the struggle for existence; "Fräulein Doktor," by Oskar Walther and Leo Stein, treating the woman question in an amusing manner; "Savonarola," by Rich. Voss; "Das Hungerloos," by Heinrich Vollrat Schumacher; Lubliner's "Die junge Frau Arneck," amusing and not at all deep; Viktor Leon's "Gebildete Menschen," a capital, healthy Volksstück; "Goldene Herzen," deservedly successful, by E. Karlweis (Karl Weiss); Arnold Ott's very promising one-act "Frangipani" and the first act of his "Karl der Kühne," performed at the Stadttheater of Basle (valuable to Swiss literature by its courageous support of talent); and Hermann Sudermann's much-discussed "Fritzen," the first of a cycle of one-act dramas showing "how men behave some hours before going to certain death." Adolph L'Arronge has written "Deutsches Theater und deutsche Schauspielkunst"; a six-volume folio work on "Die Theater Wiens" is in course of publication (Vol. II, on "Das neue Hofburgtheater," by F. J. Bayer; Vol. III, on the "Burgtheater," by Ö. Tenber); Sittinger considers "Die dramatische Tradition in Oesterreich"; Ludwig Eisenberg writes interestingly of "Adolf Sonnenthal: eine Künstler-Laufbahn als Beitrag zur modernen Burgtheater-Geschichte"; Ferd. Struck tells of "Die ältesten Zeiten des Theaters zu Stralsund (1697-1834)"; and Eugen Guglia is sincerely enthusiastic about "Friedrich Mitterwurzer."

Greece.—The most important historical publication is the "History of Ali Pasha," by Spyridon Aravantinos, describing the tyrant of Epirus and his times with a full knowledge of the literature of the subject and the addition of much new material. "Memorabilia in Contemporary History," by Spyridon Malakis, contains much readable matter on the recent history of Greece; M. Gedeon, in "Prokonnesos," gives an interesting account of that island in the Sea of Marmora, and has also edited the first printed edition of the "Typicon" of the Auxentius Monastery in Bithynia; George Hatzidakis adduces strong proofs of "The Hellenism of the Ancient Macedonians," and in his "Downfall of the Idols," a reply to E. Rhoidis's "Idols," deals with the "much-disputed problem of the language which the modern Greeks should write"; Anton Vallindas contributes a useful "History of the Island of Cythnos"; Demetrios Philios, who directed the excavations at Eleusis during 1884-'94, has published in French a graceful account of "Eleusis, ses Mystères, ses Ruines, et son Musée"; Tryphon Evangelidis offers a monograph on Genadios Scholarios, the first patriarch after the capture of Constantinople; the "Population of Ancient Attica" forms the theme of Aristides Panagiotidis; the Greeks of the Diaspora are described in Johannes Lambridis's "Greek Colonies"; and G. Paraskevopoulos records somewhat superficial personal observations in "Journeys through Greece." The revival of the Olympic games has called into existence a literature of its own. Of "The Olympic Games, 776 B.C.—1896 A.D.," published in elegant form by Carl Beck in Greek, French, German, and English, the first portion, by S. P. Lambros and N. G. Politis, is devoted to "The Olympic Games in Antiquity," and Part II to the new Olympic games held in Athens in April, 1896. Another work on "The Olympic Games," published by G. Kasdonis, contains historical-archaeological essays by G. Sotiriades, C. Tsundas ("Olympia" and "Greek Games"), E. Lykudis, Sp. Lambros ("Gymnastic Games among the Byzantines"), etc. "Greece during the Olympic Games," published at the office of the "Akropolis," handsomely illustrated, gives "a picture of the political, social, and educated life of Greece." "On the Spuriousness of 'The Laws' of Plato," by Miltiades Pantazis, and "Critical Emendations of Theocydides," by J. Argyriades, are noted among philological publications. The inscriptions of Eressos in Lesbos have been collected by Emmanuel David, who prefixes an introduction on the Æolian dialect. A. Papadopoulos Kerameus has printed from a tenth-century manuscript of Jerusalem the treatise of Theodoret of Kyrros in answer to some questions put to him by certain of the bishops of Egypt; it appears that it had hitherto been incorrectly ascribed to Justin Martyr. In a collection of Greek tales issued by the publisher Kasdonis are represented the best story writers in Neo-Hellenic literature, which has sustained a loss in the death of G. Bizyenos. The ranks of novelists are increased by Alexandra Papadopulu, Arinoe Papadopulu, and Eugenie Zographu (author of some promising novelettes), the last two being included among the female authors scored in a witty though exaggerated criticism by E. Rhoidis, which stirred up a vigorous controversy. In poetry the most noteworthy publication is "Poems new and old," by A. Provelengios, who writes partly in the language of the educated classes ("the so-called *katharevousa*"), partly in the popular dialect, and whose charm is said to be specially irresistible in his poems of the sea. "From the Rock of Phreattys," by the blind D. Sakellaropoulos, "contains much verse, but little poetry." Not much can be said of the drama. Worthy of note are "Marcella," by B. Demetra-

kopulos, and "Pädomezoma," a prize play, by Demetrius Kamburoglos. The former author (with his tragedy "Irene the Athenian") and the latter (with the comedy "The Key of the Till") were successful in the dramatic competition of Lassanis, for which, it is said, 13 comedies and 31 other plays were sent in, most of them not worthy of note, the comedies being remarkably coarse and commonplace.

Holland.—(For Flemish authors, see Belgium.) Various phases of national history are treated in Bussemaker's discussion of the "separation of North and South Netherland in 1579"; H. Brugmans's "Verslag van een Onderzoek in Engeland naar Archivalien," relating to Holland; E. W. Moes's meritorious "Iconographia Batavia"; A. J. M. Brouwer-Ancher's book on "De Gilden" of Amsterdam; and F. van Rijnsens's "Geschiedenis van ons Vaderland." New works on the Dutch East Indies include G. B. Hooijer's important "Krijgsgeschiedenis van Nederlandseh-Indië, 1811-'94" and J. W. Youngs's "Uit de Indo-Chinesche Samenleving"; a new weekly, "Insulinde," has appeared, and new letters of Multatuli and his wife, as well as the correspondence of W. K. Baron van Dedem, have been published. The Chinese form the subject of Henri Borel's "Wijsheid en Schoonheid" (modern, philosophical, and artistic) and the unassuming, matter-of-fact, and humorous "Chinesche Karaktertrekken" of Meischke Smith. Ch. Boissevain's volume of lively and interesting newspaper letters from Palestine and Egypt, J. Th. de Visser's account of a similar trip, F. J. v. Uildriks's "Bij Turken en Arabieren," W. van Geer's "Opkomst van het nederlandsch Gezag over Ceilon," C. B. Spruyt's "Afrikaners en Nederlanders" are also noted. G. Kalf writes of the literature of Amsterdam in the seventeenth century in his exceedingly clever "Literatuur en Tooneel"; W. Kloos of "Vertien Jaar Literatuur-Geschiedenis, 1880-'93"; and Henri Viotta of "Onze heden-daagsche Toonkunstenaars." Roosegaarde Bischoop traces "De Opkomst der Lond. Geldmarkt van 1640-1826," "Jos. Alberdingk Thijm in Zijne Brieven geschetst als Christen, Mensch, Kunstenaar" is issued by C. Alberdingk Thijm. Among the many philosophical works are K. O. Meinsma's excellent "Spinoza en Zijn Kring"; translations of Spinoza's "Ethica," by Meyer and Gorter; an introduction to the study of modern philosophy, "Opmerkingen over de Vorming en den Aard onzer Kennis," by R. P. Mees; D. G. Jelgersma's "De Ontkenning der Moral" (defending "the conventional conception of morality against revolutionists like Ibsen and Nietzsche"); Prof. Hoekstra's somewhat dogmatic "Wijsgeerige Godsdienstleer" and his "Geschiedenis van de Zedenleer"; and philosophical studies by Dr. van Deventer (on Plato) in the "Tweemaandelijksch Tijdschrift" and Bieren de Haan in the weekly "De Kroniek," the two principal organs of the younger men. The year's prose fiction includes Aletrino's pessimistic and dreary "Martha" (showing, however, his "marvelous descriptive talent"); Mme. Snijder van Wissenkerke's "Zwarte Vlinders" (extremely grave stories); W. G. van Nouhuys's "Zijn Kind"; C. P. Brandt van Doorne's "Huiselijk Leed" and Miss A. de Savornin Lohman's "Miserere," both insisting on the burden of life; Frits Lapidoth's "Ironisch en Tragisch"; "De vreemde Plant," a graceful little tale by Phocius; "Anarchisten," by Louise Stratenus; Vosmeer de Spie's "Felicia Beveridge" (a "woman who did"); T. Hoven's "Vóór alles Vrouw"; S. La Chapelle-Roobol's "Hesje's Engagement, Strijd"; Vc. Loosjes's "Rinske Sonnema"; "Marathon" ("a collection of antiquities held together by the tie of a tale"), in which G. H.

Betz has "endeavored to complete Herodotus with the aid of Zola and Tolstoi"; Ten Brink's "Paris tijdens de Roode Terreur" and "Augustin Robespierre" (glorifying that character); and Miss M. W. Maclaine Pont's "Het Huis aan de Haven" and "De Eer gewroken." Frederik van Eden again shows his philosophical tendency in "Lied van Schijn en Wezen," and wins the approbation of Van Deyssel, once an ardent devotee of naturalism, who, in "Prozastukken" announced his conversion to the theories which he had formerly so vehemently opposed; Verwey's "Johan van Oldenbarneveld" is somewhat disappointing; H. J. Boeken, a new man, shows a love for classical beauty in his poems "Goden en Menschen"; Henriette van der Schalk's "Verzen en Sonnetten" and Ed. Brom's "Opgang" are too often philosophically prosy. Verwey has edited a reprint of the works of the old Dutch poet Jan van der Noot; and a good translation of Shakespeare is offered by Ed. B. Koster (author of "Natuurindrukken en Stenmingen"). Mrs. Snijder van Wissenkerke's drama "Sirokko" is not very remarkable.

Hungary.—The literary outcome of the Hungarian millennial celebration includes a mass of printed matter, notably the voluminous "History of the Magyar Nation" (noticed last year), Gyula Lauroencic's topographic "Millennial Hungary" (in four languages), and the "Millennial Album" (with contributions by popular writers). The University of Buda-Pesth is issuing the "Opera omnia" of Cardinal Pt. Pázmány. István Ambius writes of "Socialism." Hungary's modern literature—comprising Herezeg, Bródy, Toldy, Csiky, Kozma, Justh, Dóczy, Agai, Mikszáth, etc.—is characterized by "a popular spirit approximating to general European forms, subjects, and styles." In prose fiction "Young Hungary" is represented this year by Kálmán Mikszáth's "The Lubló-Ghost, and other Stories" (finely descriptive, like all his work); Odön Gerő's "Individualities" (sketches, decidedly promising, presented with realism and psychological analysis); Janka Horváth's novel of Transylvanian life, "Fatum"; and Sarolta Geőze's "True Stories." Some good plays have been produced: Ede Kabos's witty and spirited one-act play "The Raven"; Ferencz Herezeg's "Honthy's House"; and Sándor Somló's comedy "Royal Family Life," which gained the prize offered by the new Court Theater (founded and conducted by the noted literary critic Adolf Silberstein). A recent writer informs us that the annual product of the Magyar press is 1,500 volumes, and that 676 periodicals in the Magyar language are issued in addition to 187 in other tongues.

Italy.—Contributions to national history, such as Pesci's "Come siamo entrati in Roma," A. G. Barrili's "Con Garibaldi alle Porte di Roma," and the last volume of Bersezio's highly important "Il Regno di Vittorio Emanuele," remind us of the twenty-fifth anniversary of the entry of the Italian troops into Rome. Carlo Tivaroni's voluminous "Storia critica del Risorgimento italiano," Gen. Corsi's "Italia," Vayra's "Carlo Alberto e le perfidie Austriache," and Faldella's "I Fratelli Ruffini" throw much light on the period of the *risorgimento*, to which the "Rivista storica del Risorgimento italiano" (recently begun by publisher Roux, of Turin) is also devoted. Other phases of Italian history are depicted in Vol. III of Gabotto's "Lo Stato Sabauda da Amedeo VIII a Emanuele Filiberto"; V. Cian's "Italia e Spagna nel Secolo XVIII: Giovambattista Conti e alcune Relazioni letterarie fra l'Italia e la Spagna nella seconda Metà del Settecento"; Raulich's "Storia di Carlo Emanuele I, Duca di Savoia"; Guido Biagi's curious little work on "The Private Life of the Renais-

sance Florentines"; the unfinished "Storia di Roma," by the late Ruggero Bonghi, a learned and sympathetic writer; Molmenti's "Banditi della Repubblica Veneta"; Bruto Amante's "Giulia Gonzaga, Contessa di Fondi, e il Movimento religioso femminile nel Secolo XVI"; Michele Rossi's valuable "La Riforma religiosa in Liguria"; Spinazzola's "Gli Augures," a noteworthy contribution to the history of the Roman clergy; and Vittorio Cian's "L'Immigrazione dei Gesuiti spagnoli in Italia." In "La Elezione del Papa: Storia e Documenti" Giovanni Berthelet traces the development of the laws governing papal conclaves. "L'Italia degli Italiani" is by C. Tivaroni. A. Milani's "Le Anni italiane in Abissinia" and V. Mantegazza's "Gli Italiani in Africa" and "La Guerra in Africa" deal with recent affairs. The papers of Giacomo Dina have been edited by Luigi Chiala. Tebaldi, in "Napoleone: una Pagina storico-psicologica del Genio," strives to show the neurotic nature of his subject. Robecchi-Bricchetti's "Iarrar" (dealing with Abyssinia), Leonardo Fea's "Quattro Anni fra i Birmani," Bottego's "Le Sorgenti del Giuba," and Guido Boggiani's "I Caduvei" are books of travel. Socialism, spreading rapidly throughout Italy, is the theme of "Società, Socialismo e Anarchia," by Augias, who suggests the anticipation of the movement by the adoption of some socialist measures; Pancera's "Il Socialismo e la Scuola" (proposing to arrest social evolution through the schools); Gius. Biraghi's "Socialismo"; Villari's "La Sicilia e il Socialismo"; and Ed. Soderini's "Socialismo e Cattolicesimo." The Sardinian problem is attacked, though hardly disposed of, in Paolo Orano's "Psicologia della Sardegna" and De Stefani's "Le Condizioni economiche e sociali della Sardegna." Vol. IV of Caverni's exhaustive "La Storia del Metodo sperimentale in Italia" has appeared. Francesco Edelman has written a not very important volume on "Relazioni dell'Italia col Papato in Caso di Guerra." Morselli impartially examines "L'Eredità materiale, morale e intellettuale del XIX Secolo." F. Cavazza's "Le Scuole dell'antico Studio Bolognese" and G. B. Gerini's "Gli Scrittori pedagogici italiani del Secolo Decimoquinto" (filling a gap by its attention to the earlier Italian humanists) are contributions to the history of education. In this connection, one is reminded of the rapid progress in public instruction, including a reform in method which finds expression also in books for children, such as Luigi Bertelli (Vamba) and Ferdinando Martini have issued. Art matters are treated of in Angelo Lupatelli's "Storia della Pittura in Perugia," Antonio Dondi's "Il Duomo di Modena: Notizie storiche ed artistiche," and Le. Beltrami's "Storia documentata della Certosa di Pavia." An important "Dizionario dei Comici italiani" is by Luigi Rasi. In literary history and criticism we have "Vita e Poesie di Sordello di Goito," by De Lollis, giving a new view of Sordello's character; Mme. Zampini Salazar's appreciative essay on "Roberto ed Elisabeth Browning"; Gius. Chiarini's "Studi Shakespeariani"; Ugo Ojetti's "Alla Scoperta dei Litterati" and "L'Avvenire della Letteratura in Italia"; and studies in psychopathy, such as "Sullo Stato mentale di Lord Byron," by Giovanni Mingazzini, and M. L. Patrizi's "Saggio psico-antropologico su G. Leopardi e la sua Famiglia." G. A. Scartazzini has produced "a monument of painstaking devotion" in "Enciclopedia Dantesca: Dizionario critico e ragionato di quanto concerne la Vita e le Opere di Dante Alighieri." Vol. XIX of G. Pitrè's great undertaking, the "Biblioteca delle Tradizioni popolari siciliane," deals with "Medicina popolare siciliana." The study of Italian dialects has resulted in a number of creditable works, a recent one being "Il 'Gelindo,' Drama sacra piemontese

della Natività di Cristo," rescued from oblivion by Rodolfo Renier.

Noteworthy in prose fiction is Ant. Fogazzaro's "Piccolo Mondo antico," pronounced a masterpiece. Girolamo Rovetta shows progress in "Il Tenente dei Lancieri"; Matilde Serao's "L'Indifferente" is not equal to her former efforts; "Sulle due Rive," by the vigorous and profound *Bruno Sperani* (Beatrice Speraz) and "Anima Sola," by *Neera*, are worthy of praise; and Gemma's "Il Fascino" was very successful. Further productions in this field are Castelnovo's "La Bottega del Cambiovalute" (pleasant reading); Farina's "Il Numero 13" (with a curious preface on the art of novel writing); Marco Praga's mediocre stories of the stage; F. de Roberto's "L'Amore" ("dallying midway between science and romance"); Adolfo Albertazzi's "L'Ave" and "Vecchie Storie d'Amore"; Dino Mantovani's "Passioni illustri"; O. Grandi's "Il Destino"; G. A. Cagna's "Quando Amore spira"; C. A. Levi's "Le Trasfigurazioni"; and A. G. Barrili's "Il Prato maledetto." In poetry the book of the year was Ada Negri's "Tempeste," which appears to show all the defects of her earlier volume, "Fatalità," lessening the hopes concerning this author, who attained success so quickly. Further poetical productions are Arturo Colautti's original and vivacious "Canti virili"; Antonio dalla Porta's curiosities in ancient meters; Mario Rapisardi's "Nel XX. Settembre" and "Africa Orrenda," both not remarkable; works by Diego Angeli ("La Città della Vita"), C. Giorgeri-Contri ("Convegno dei Cipressi"), and F. Pastonchi, all three disciples of D'Annunzio; F. Galanti's "Spirito e Cose"; Domenico Oliva's "Il Ritorno"; G. A. Cesareo's "Gli Inni" (delightful in thought and form); Marino Marin's "I Sonetti Secolari," with a eulogistic preface by Panzacchi; and Alberto Cioci's "Myosotis."

Norway.—There is not much historical or scientific literature to record. Miss Clara Tschudi has issued the third and last volume of her life of Marie Antoinette. W. Concheron Aamot, in "Gjennem de Gules Land og Krigen i Ostasien," gives a picturesque account of personal experiences in China. W. C. Brøgger and Nordahl Rolfsen write enthusiastically of "Fridtjof Nansen, 1861-93," and the late Eivind Astrup describes Peary's journey "Among the Neighbors of the Pole" in Greenland. With Vol. V, Part II, the valuable collection of "Norges gamle Love intil 1387," edited by Gustav Storm and Elbbe Hertzberg, has been completed. Fritzer's "Dictionary of Old Norwegian" and Hans Ross's "Dictionary of Norwegian Dialects" have both met with approval. Worthy of note in literary history are Vilhelm Olsvig's incisive and somewhat dictatorial essay on Ludwig Holberg, the "Northern Molière," and the influence exerted on him by his English contemporaries (calling forth much adverse criticism, notably a sharp reply from Christian Brunn); Hjalmar Christensen's excellent character studies of "Nordiske Kunstnere," such as Arne Garborg, the late Kristian Elster, and Ola Hansson; and the brilliant and masterly essays of Nils Kjør on Blaise Pascal, Edgar Poe, etc. Bjørnstjerne Bjørnson's article on "Modern Norwegian Literature," in the "Forum" for May and June, 1896, attracted much attention in Norway, but aroused contradiction also by its attitude toward dialect literature.

The chief literary production has been fiction. Jonas Lie's "Naar Sol gaar ned," though not in his best style, was very successful; "Life" and "The Lowland" are two finished and refined stories by Sigbjørn Obstfelder, well known as a poet; T. P. Krag reveals his artistic disposition in "Kobberlangen"; and poetical feeling marks Vilhelm

Krag's "Homesickness" and Miss Alvide Prydz's "Bellis" (collection of stories), as well as the strange "A Dreamer's Book," by Mons Lie, who is psychological in "The Confession of a Criminal." Others in the list of fiction are Bernt Lie's "Nye Kraefter"; Amalie Skram's "Paa Sankt Jørgen" (a vivid picture of life in lunatic asylums); her son Jacob Worm Müller's well-written and spirited stories, "Stormen" and "Four Days"; Gabriel Finne's "Emmanuel Daah"; Miss Nanna Thrane's, novelette "A Peasant House"; O. Hansson's "En Uppfostrare"; Sven Nilssen's "The Dwarfs"; Mrs. Anna Munch's "Roses and Thistles"; and K. Janson's "Ægteskal og Skilsmisse" and "De Fredløse." Peasant life finds masterly delineators in Jens Tvedt, Hans Aanrud, Rasmus Loeland, and is depicted also by Sylfest Muldal, Hans Seland, Vete Vjelic, and Per Sivle. One may name also Peter Egge (sketches of middle-class life in small towns), Jacob Hilditch ("Vandreliiv"), Constantin Flood ("Sommerliv i Fjorden"), Jacob Bull, Oscar Agaard, Johan Bojer, Thorval Klavenæs, Ole Bang, Dikken Zwiilmeyer, and Rosenkrantz Johnsen. The artist Otto Sinding displays both feeling and humor in his "Day of Judgment" (poetry). The important literary event of the year was the publication of the second part of Björnson's powerful and effective "Over Aevne" (Part I published 1883), dealing with the labor problem, and characterized as "the psychology of anarchism." Other plays are Knut Hamsun's wildly paradoxical "Livets Spil"; Hans Aanrud's witty "The Stork"; Gabriel Finne's drama "Konny"; and two short, refined plays by Vilhelm Krag.

Poland.—In history and description we note O. Balzer's "Genealogy of the Piasti" (the first royal dynasty of Poland): a controversial and historical account of "The Year 1863 in Poland," by K. Bartoszewicz; Count K. Lanckoronski's "The Cities of Pisidia and Pamphylia"; Count P. Potocki's "Sketches of a Sportsman in the Far East" (India and Ceylon); and A. Reman's "The Carpathians." P. Chmielowski's "Outlines of the History of the most Recent Polish Literature"; a monograph on the old Polish poet M. Rej, by S. Windakiewicz; a comprehensive "Study of Hamlet," by the late W. Matlakowski; and "Literary Essays," by S. Krzemiencki, a talented and conscientious critic, form noteworthy contributions to literary history. In his brilliant "Quo Vadis?" H. Sienkiewicz returns to historical romance, taking his subject from the persecutions of the Christians at Rome, and combining plastic descriptions with psychological truth. Mine. Orzeszko's remarkable talent seems to be still developing, to judge by "An Australian" and "Melancholy Beings." Other additions to prose fiction are: "Sewer's Biedronie" (a story of peasant life); K. Junosa's novelettes "The Notary's Villa," "With the Hero," and "Country Photographs" (describing so well the life among the minor nobility and in the small towns); A. Krechowicki's historical novelette "The Daughter of Master Tarlo"; "On the Steppes" (historical), by F. Rawita, who in "Dreams" attacks pedantry among women; K. Glinski's "The Founders of Fortune" and "The Tarantula" (both showing want of observation); "She is alone" (characterized by freshness of observation), by T. T. Jez; M. Gawalewicz's "Ivy: The Story of a Marriage"; Madame Marrenn's somber and pessimistic "Against the Stream"; "On the Heights" and "The Rose of Jericho," by Mlle. Rodziewicz, who is not always true to nature; Hajota's "Like a Shadow" (describing social conditions on the island of Fernando Po); the works of the talented A. Dygasinski and of promising beginners, such as J. Lada ("Pastels"), S. Zeromski ("Tales"), W. Berent, and M. Zych. New poetry has

been published by Mme. M. Konopnicka ("pessimistic"), W. Gomulicki ("an optimist"), and A. Asnyk, the three leading modern poets, as also by younger and rising writers, such as A. Lange, W. Rapaeki, Jr., and J. Zulawski (who made a promising *début*). In dramatic literature there has been much activity. E. Lubowski's "The Prince" (introducing the type of a sympathetic ne'er-do-well who reforms); Z. Sarnecki's fairy play "The Mountain of Glass"; Z. Krzywdzic's "Reawakened Love"; A. Konar's "The Butterflies"; K. Zalewski's "The Son" (showing excellent character studies); Sewer's peasant play "Marcin Luba"; and the comedies "The Woman's Question," by M. Balucki, "Hedwig the Widow," by R. Ruszkowski, and "The Wolf and the Lamb," by Jordan, have all attained success on the stage. K. Glinski's historical drama "King Boleslav the Bold," W. Lebinski's "Ambitious," and W. Rabski's "The Vanquished" are also noted.

Russia.—There is not much to be said of the historical literature of the year. Vol. I of the "Russian Biographical Dictionary," the fine monumental undertaking of the Imperial Historical Society, has appeared. Russian political and juridical history are contributed to in the second and materially altered edition of V. Stehegloff's "The Council of State during the Reign of the Emperor Alexander I," the late Dityatin's essays on the history of Russian law, and Serguévitch's "Russian Juridical Antiquities" (Vol. II); while "The Correspondence of Ivan Aksakoff" (Vol. IV) and the "Notes" of Olga Smirnova, who had a brilliant *salon*, are interesting as illustrating the history of Russian social movements. Derioujinski writes of "The Habeas Corpus Act and its Suspension by English Law"; Kamenski describes "Six Years of Tory Administration in England (1887-88—1892-93)"; A. P. Tverskoy, a Russo-American, author of "Sketches from the United States of North America," has been enthusiastically called "the Russian Bryce." The economic discussions between the "Populists" and the "Marxites" appear to have shifted from theory to politics and actuality. Karév, keeping within the domain of pure theory, met little sympathy with his indictment of "economic materialism" in "Old and New Studies of Economic Materialism," while the success of the day was won by Volguin (pseudonym), who followed up the criticism on Mikhailovski and Karév in Beltov's "Monistic View of History" with an attack on the practical programme of the Populists formulated in the numerous works of Vorontzov. The latter's latest book is "The Artel System as the Basis of Russian Society," *artels* being the peculiar co-operative collectivist labor organizations in this country. We are told that the remnant of the Populist party has deserted the "Russian Treasury" and founded a journal of its own, the "New World." However much opinions may differ regarding the Populist idea that the village commune and the home industries may form the basis of a new collectivism, yet the moderate element of society shows solicitude for the future of the village commune. Thus the Liberal Th. Turner advocates state protection in his "The State and Land Tenure; Vol. 1: Peasant Proprietorship," while the Conservative K. Golovin is indefinite in "Peasant and no Progress or Progress but no Peasant." Alexis Vesselovski's "The Influence of Western Europe on Modern Russian Literature" has been entirely revised; Vol. II of "The Handelsel," the publication of the Moscow Society of the Lovers of Russian Literature, contains very interesting historical and literary material; and an important collection of "Great Russian Popular Songs" is well edited by Sobolevski.

In *belles-lettres* there is no production of real

note. The prolific Boboruikin's usual timeliness is lacking in "The Princess"; happier in its theme, but coarse in literary workmanship, is Nemirovitch-Dantchenko's "A Wolf's Prey"; the veteran Grigorovitch's "Folle-Journée" is a slight affair; the posthumous "Unfinished Novel" of the poet Apoukhin, depicting the old cultivated aristocracy during the period of serfdom, surprised the public by its elegant prose; Potapenko has published "Sins"; Tchekhoff is not particularly happy in his short stories "Murder," "Ariadne," and "The House with the Maisonnette"; Vol. II of Garin's melancholy "Tales" gives a disagreeable picture of peasant life; "Youssilavo Farfara" and "The Enemy" are two short tales by D. Mamin; and a newcomer, Melshin (a pseudonym), has been very successful with "From the World of Castaways," sketches of convict life. D. S. Merejkoffski's "The Apostate," an extremely and disagreeably realistic picture of society in the days of the Emperor Julian, is wanting in plot and coherence; while the short stories "New People" and the novel "The Chrysanthemum," both by Madame Hippus (pseudonym Merejkoffskaya) have been characterized as "hideous" expressions of the "new æstheticism" of the group of "new poets" whose decadence and symbolism have been championed by the review "Severnny Viestnik" and its chief critic, Volynski, who has written a volume directed against veteran "Russian Critics." One Russian critic in America, speaking of the close connection between politics and letters in Russia, says (January, 1896): "The confusion, uncertainty, and haziness of the political situation is fully reflected in the life of the country. The land . . . is now without a single definite literary school or movement." Another tells us that "To-day in the field of *belles-lettres* there is not practically a single noted name except Korolenko."

Spain.—There is an increased interest in national history, and the unearthing and publication of documentary authorities goes steadily on. Thus we have the hitherto-unpublished memoirs of the Marquis de Ayerbe; "Documentos históricos del Archivo municipal de San Sebastian" (1200-1813); "Documentos ineditos del Arxiu municipal de Barcelona"; the "Diario de Jovellanos"; "Índice de los Privilegios y Franquicias de Mallorca" and "Informaciones judiciales sobre los Adictes á la Germania," both brought out by Quadrado; "Monumenta Historica Societatis Jesu" (eighteenth part); the "Antigüedades de Valencia" of Padre Teixidor, issued by Chabás; Vol. X of the important "Bibliotheca Arabico-Hispana"; Padre Cobo's valuable "Historia del Nuevo Mundo," annotated and published for the first time by Jimenez de la Espada; "Refutación de D. Jerónimo Valdés al Manifiesto de D. Joaquín de la Pezuela, 1821," edited by Count de Torata; "Noticia de las Fiestas en Honor de la Marquesa de Denia" (given in Seville in 1599) and other documents, published by Tenorio; "Cancionero Catalán de la Universidad de Zaragoza," issued by Baselga; the "Testamento de Raimundo Lulio"; and three autograph letters of Antonio Tallander, printed by Bofarull. New original works of historical research are: J. Costa's "Estudios ibéricos," C. Fernandez Duro's "Armada española desde la Unión de . . . Castilla y León," both important; Barado's "Sítio de Amberes"; "La Separación de Guipuzcoa y la Paz de Basilea," by the Duke of Mandas; Alcazar's history of the Spanish possessions in Oceania; Padre Castellanos's "Apostolado seráfico en Marruecos ó sea Historia de las Misiones franciscanas en aquel Imperio"; "Jansenismo y Regalismo en España" (interesting but polemical), by Padre Miguez; Concas's curious narrative of the "Combate Naval del Papudo"; and, of publications relating to America, Padre Cappa's "Estudios

críticos" (Vol. XV), Sanchez Moguel's "España y América," and "La Compañía de Jesús en Colombia y Centro-América," by Padre Perez. The assiduous study of local history is not always accompanied by sufficient historiographic knowledge. Important new works in this field are a history of Vigo by Santiago y Gomez; L. Ferreiro's "Fueros municipales de Santiago y de su Tierra" (throwing light on the social history of the Middle Ages); Montsalvatje's "Noticias históricas" (Vol. VI, relating to the district of Camprodón); C. de Echeagaray's "Provincias vascas á Fines de la Edad Media"; Diaz Cassou's list of the bishops of Cartagena; "Los Benedictinos de Monforte," by L. Pelaez; Salvá's "Burgos en las Comunidades de Castilla"; Grahit's account of the sieges of Gerona, 1808-'9; and Balari's "Historia de la Real Academia de Ciencias y Artes de Barcelona." There are some biographies: Arigita's "El Doctor Navarro D. Martin de Azpilcueta y sus Obras"; Labayru's "Vida del illmo y venerable Vizcaino D. Fr. Juan de Zumarraga"; Padre Cornejo's "Santa Isabel de Aragón, Reina de Portugal" (second edition, revised and enlarged by Padre Coll); Vicente Orbi y Brull's costly life of Doña Maria Manuela de Aragon and Pignatelli, Duquesa de Villahermosa (supplying interesting details regarding French and Spanish society in the eighteenth century); Mitjana's "Juan del Encina, Músico y Poeta" (giving new facts); and Araujo's sympathetic "Goya." R. Guerrero supplies a "Crónica de la Guerra de Cuba." "Bocetos ingleses" is of interest among books of travel. The ex-Jesuit Padre Mir's "Los Jesuitas de Puertas adentro, ó un Barrido hacía fuera en la Compañía de Jesús," an attack on the Jesuits, provoked a reply, "Los Jesuitas y el Padre Mir," signed "El Bachiller Francisco de Estepa." Antiquarian research has again resulted in noteworthy works, such as Almagro's three volumes on the museum of Arabian antiquities at Granada; "Las Ruinas del Monasterio de San Pedro de Arlanzo," by A. de los Rios; Villaamil's "San Francisco de Lugo"; Bassegoda's "La Real Capilla de Santa Agueda del Palacio de los Reyes de Aragon en Barcelona"; Montsalvatje's "Monasterios del antiguo Condado de Besalú"; Gispert's "Indumentaria en los Crucifijos"; D. de los Rios's Cathedral of Leon; Botet y Sisó's work on the sculptured sarcophagi of Romano-Christian times extant in Catalonia; La Torre and Aznar's "San Juan de los Reyes" (in their "Biblioteca artistica"); Rodriguez Marin's curious "Los Refranes del Almanaque"; Garcia Llansó's "Armas y Armaduras"; and Sagarra's description of the seals of Don Pedro IV of Aragon. In philology there are an important volume on the peculiar jargon of Spanish criminals by Salillas, Arana's etymological treatise on Basque names, and two tracts on Catalan grammar and phonology by Balari and Padre Nonell. Bibliographical studies of interest are: P. Pastor's voluminous catalogue, "La Imprenta en Medina del Campo"; "Bibliografía crítica de las Obras de M. Cervantes Saavedra," by Rius; a monograph on the Catalan manuscripts in the National Library, by Massó Torrents; Retana's "Archivo del Bibliófilo filipino"; F. Duro's "Algunas Obras desconocidas de Cosmografía y Navegación"; Churrat's "Apuntes para escribir una Bibliografía enciclopedia valenciana"; and Rada's notes to the "Monumentos arquitectónicos de España." Literary and artistic criticism is supplied by Balart's "Prosaismo en el Arte"; a volume of essays by Victor Balaguer; the "Obras catalanas de José Ixart"; Palau's "Acontecimientos literarios," a kind of literary annual, apparently rich in facts and poor in criticism; and Cascales's "Sevilla intelectual," indiscriminately laudatory biographies of artists

and writers. Hazañas has edited the "Obras de Gutierre de Cetina," and Foulché-Delbosc has unearthed some poems of Yglesias é Yriarte. Padre B. Garcia's "Literatura española en el Siglo XIX," Part III, deals, not very adequately, with local and Spanish-American literature, to which latter P. M. Poncelet's "Literatura hispano-americana" is also devoted, and Diaz Cassou presents a curious volume on the popular literature of Murcia. Colmeiro writes of the plants and animals mentioned in "Don Quixote," and Carreras of "Lo Cervantisme en Barcelona."

The fiction of the year includes Galdós's interesting "Nazarin"; Valera's "Juanita la larga," admirable in language and description; Pereda's "Pachin Gonzalez," a short story, pure and bright in style; "Los Majos de Cadiz," by P. Valdés, inferior to his former work; "Cuentos morales," by Alas (Clarín) and "Cuentos de mi Tiempo," by Picón, both collections of short stories of real merit; "Novelas ejemplares," "Por la España pintoresca," "Vida contemporánea," and "Arco Iris," four volumes in which Señora Pardo Bazán has collected short stories, sketches of travel, etc., by herself; and "Arroz y Tartana" and "Flor de Mayo," two Valencian stories by Blasco Ibañez, a new writer, promising despite his crudities, showing "intensity of observation and color and beauty of description." Poetry still languishes. Nothing original or powerful in the verse produced, except, perhaps, the sonnets, madrigals, and tender love poems of Rodriguez Marin and the verse of Maragall. Nor is there much to say of the drama. Dicenta's "Juan José" proved the greatest success of the season—a realistic drama of passion and low life. Echegaray's "El Estigma" made only a moderate hit, and "La Mujer de Loth," by Sellés, and Gaspar's "La eterna Cuestión," were both unsuccessful, as was also "Voluntad," by P. Galdós, a dramatization of whose novel, "Doña Perfecta," has been well received. Feliu y Codina's drama "Maria del Carmen" is inferior to the play ("La Dolores") which made his reputation. It is reported that an independent theater (Catalan) has been founded at Barcelona, where modern authors like Ibsen and Maeterlinck are given a hearing.

Sweden.—New historical works include L. Stavenow's "Den store engelska Revolutionen i det sjuttonde Århundredets Midt" and "Studier i Ständsríktsdagens senare Historia"; H. H. van Scherwin's "Hielgoland; historisk-geografisk Undersökning" and R. v. Koch's "Statsministern. II. Hans Exc. Friherre Krabbe." Oscar Montelius is the author of "La civilisation primitive en Italie depuis l'Introduction des Métaux." "I Gog og Magogs Land; Skildringer och Studier från en Resa i Kaukasien" is by M. Anholm. A. Ahlström writes "Om Folksagorna." H. Schück and K. Warburg are issuing an "Illustrerad svensk Litteraturhistoria," similar in general treatment to Koenig's German and P. Hansen's Danish work, and promising to be a real contribution to Swedish thought. C. E. A. Söderström, in "Carmina selecta," consisting mostly of translations from Swedish into Latin, shows fluency in the latter tongue. Contributions to prose fiction are: V. Lindhé's "Ragnhild"; A. Lundegård's "Fru Hedwigs Dagbok"; I. Fitinghoff's "Gamla Näset"; and "Fideikommissarien till Halleborg," by Sigurd (pseudonym of A. Hedenstierna). The reaction in the direction of idealism, referred to last year, is dealt with in an interesting paper on "Le Roman Suédois," by O. G. de Heidenstam, in the "Revue des deux Mondes" of June 1 and 15, 1896, "though," we are told, "it is necessary to add that as yet there are not in Sweden schools or systems of literature, but simply individual writers."

LOUISIANA, a Southern State, admitted to the Union April 30, 1812; area, 48,720 square miles. The population, according to each decennial census since admission, was 152,923 in 1820; 215,739 in 1830; 352,411 in 1840; 517,726 in 1850; 705,002 in 1860; 726,915 in 1870; 939,946 in 1880; and 1,118,587 in 1890. Capital, Baton Rouge.

Government.—The new State Government was inaugurated May 18. Three of the State officers were elected for the next term: The Governor, Murphy J. Foster; the Auditor, W. W. Heard; and the Attorney-General, M. J. Cunningham. Robert H. Snyder is the present Lieutenant Governor, Alex. V. Fournet succeeded John Pickett as Treasurer. John T. Michel succeeded T. S. Adams as Secretary of State, and Joseph V. Calhoun took the place of A. D. Lafargue as Superintendent of Education—all Democrats. Other State officers were: Adjutant General, Allen Jumel, succeeding T. E. Bell; Commissioner of Agriculture and Immigration, Jordan G. Lee, succeeding A. V. Carter; Chief Justice of the Supreme Court, Francis T. Nicholls; Associate Justices, Samuel D. McEnery, Lynn B. Watkins, Joseph A. Breaux, Henry C. Miller—all Democrats.

Finances.—The Governor's message says: "Every current obligation of the State has been met and promptly paid in cash when due. There have been paid and canceled: Warrants outstanding for 1885-'86, \$318,116; interest coupons 1 to 11, \$483,183.91; total, \$801,299.91, at a total cost to the State of \$413,858.97; consolidated constitutional bonds, \$712,000, at a cost of \$690,731.57; and baby bonds, \$359,510, at a cost of \$148,834.84. Without increasing assessments to any appreciable extent, and after providing for all the current expenses and all lawful demands, there have been paid out of the surplus of the treasury \$1,872,809.91 at a cost of \$1,253,425.38, and when the taxes for 1895 are collected and every current obligation met, there will be a surplus to the credit of the two funds of about \$300,000. The consolidated bonds retired, amounting to \$712,000, bore interest at 4 per cent., which will result in an annual saving in interest of \$28,480. At the close of business April 30, 1896, there had been collected 97 per cent. of the collectible taxes for 1892, 96.9 for 1893, and 96.3 for 1894."

From the direct tax fund of \$314,500.84, received from the national Treasury, claims amounting to \$210,761.71 have been paid.

Education.—Since the last report to the General Assembly the number of public schools has increased 249, the number of teachers 293, while the aggregate increase of revenues devoted to public education for the same period is \$239,273.24. The following figures will give some idea of the present condition of the public-school system: Number of schools in 1895, 2,894, of which 825 were for negroes; number of teachers in 1895, 3,537; number of pupils in 1895, 164,317; amount devoted to school purposes, \$1,321,392.95. This includes the $\frac{1}{2}$ of 1 mill of State tax taken from the interest fund and added to the school fund; the disbursements were \$1,256,595. For 1895 the school term for whites was 164 days, and for negroes 129 days.

The number of private schools reported in 49 parishes is 546, and of these 170 are denominational. In many of the parishes, notably in Caddo and Calcasieu, modern and handsome school edifices have been erected, and large sums have been devoted to public education by the police juries in almost all the parishes.

The State Normal School, at Natchitoches, had 359 students at the beginning of the year, and 15 professors and instructors. In the ten years of its existence it has graduated 170.

The Industrial Institute and College of Louisi-

ana, established in 1895 at Ruston in Lincoln Parish, had, at its first session, 221 students, and in 1895, 250. The pupils were taught practical blacksmithing, carpentry and mechanical engineering, printing, telegraphy, typewriting, bookkeeping, drawing, shorthand writing, surveying, civil engineering, analytical chemistry, agricultural chemistry, biology, geology, etc.

The Southern University, a State institution for colored youth, gives instruction in agriculture and mechanical trades, and in academic subjects. A farm has been bought for it. There are 332 pupils.

Tulane University has 69 professors and instructors, and 923 students. Three hundred and seventy-four young men, representing many States, were engaged in the study of the science and practice of medicine and surgery, while 63 were in the department of law. There were 139 free scholarships, of which 54 were filled by members of the Legislature. The medical department has been moved to new quarters in the building erected as a memorial to Dr. T. G. Richardson, who was for many years dean of the department.

The Sophie Newcomb College, which was liberally endowed, has 233 pupils enrolled.

Charities.—During the biennial period 1,230 persons were under treatment at the insane asylum, with a daily average of 809. Of those admitted, 39 per cent. have recovered and 9 per cent. have died. Two large three-story brick buildings have been added, and one enlarged.

The report of the board of control of the Leper Home shows that progress has been made, and gives promise of great usefulness.

The number of patients at the Shreveport Charity Hospital, which two years ago admitted 90 to 125 patients monthly, had during the last biennial period from 175 to 350.

At the New Orleans Charity Hospital the number of admissions in 1895 exceeded those of the preceding year by 748, and the outdoor clinics by 1,614. A half million cases have been treated in the hospital in the sixty years of its existence.

Militia.—A naval-reserve battalion has been organized as a part of the National Guard. The strength of the militia is reported at 2,033 officers and enlisted men.

Banks.—There were 3 bank suspensions in New Orleans, Sept. 9-11—of the Union National, the Mutual National, and the Bank of Commerce. The American National had failed before. Two of the individual bookkeepers of the Union National were arrested, charged with falsifying accounts. One gave bonds, but the other died from morphine administered by himself. The amount of the defalcations was about \$500,000. The president and the cashier of the Bank of Commerce were arrested, charged with having accepted a deposit the day before the failure, when they knew the bank was insolvent.

Products.—The season of 1895 was a prosperous one. The crops of sugar and cotton were short, but good prices prevailed. The cotton crop was estimated at 360,000 bales—about 57 per cent. of the amount in 1894. The sugar crop was estimated at about 80 per cent. of the previous year's. The corn crop was 28,000,000 bushels, the oat crop about 714,000, and that of sweet potatoes about 3,500,000. The rice crop was very large.

In 1896 there was great suffering and loss in the northern part of the State from a long drought in the spring and summer. The yield of rice was very short, especially in the prairie district. On the river, the absence of rain was in some measure made up by irrigation.

"The Mineral Collector" says of the sulphur in Calcasieu Parish: "The Standard Oil Company has

finally solved the great problem, on which hundreds of thousands of dollars have been spent in vain, of getting at the immense mass of sulphur which lies hundreds of feet below the surface. For thirty-five years, company after company has experimented with this deposit of sulphur, which is probably the largest in the country, and is valued at \$30,000,000 to \$100,000,000. There was no doubt about the sulphur being there, but between it and the surface lay an immense quicksand. Within the last few weeks the Standard Oil Company has got control of the property. Instead of using freezing as the means of getting at the sulphur, it is trying heat. Superheated water is forced through a 10-inch pipe on the sulphur, melting it, and the liquid sulphur water is then pumped up. A little exposure to the air, to evaporate the water, leaves almost pure sulphur."

Commerce.—The growth of the foreign trade of New Orleans is indicated by the report of the Bureau of Statistics for November. New Orleans was first, not only in cotton exports, as usual, but also in corn, having exported 3,044,932 bushels. Baltimore came next, with 2,636,632 bushels. Compared with 1895, New Orleans has nearly doubled. In wheat, flour, and lard the shipments have increased, the exports of the last amounting to 23,500,000 pounds during eleven months, while in 1895 the total for the same period was 673,000 pounds.

Public Works.—The Governor, in his message, says: "For the last two years our State has been free from overflow. The system, inaugurated by the National Government, of continuing provisions for river protection and improvement, the organization of the State into separate levee districts, and the method adopted in the State system, have all aided in giving us immunity from the floods. Since the last reports the levee districts have built 4,868,812 cubic yards of earth, at a cost of \$686,283.22. The State has built 2,777,806 cubic yards, at a cost of \$293,008.27, while the National Government has added 12,018,289 cubic yards, at a cost of \$1,419,245.46.

The navigation of Red river was much improved by work done in October and November. The entire dangerous reach of the river, a distance of 140 miles, was gone over. The report of work done is suggestive: "Snags pulled, 315; stumps pulled, 1,007; logs removed from the channel, 253; stumps blown from the channel, 69; shore snags cut, 4,572; stumps cut out, 4,506; leaning trees cut down, 42,515; trees girdled, 260; yards of brush cut, 390."

An appropriation of \$100,000 for the Algiers Dry Dock was incorporated in the naval appropriation bill in March. It is to be made of timber instead of concrete, which will reduce the cost from \$1,200,000 to \$800,000.

The Government has begun the work of remodeling and renovating the fortifications guarding the approaches to New Orleans and to the Mississippi valley. Work is in progress on a battery at Fort St. Philip, on the east bank of the river.

Decisions.—The constitutionality of the State law under which juries are formed was brought into question on account of alleged informalities in its enactment, but it was declared valid in March by the judges of the criminal district court.

The United States Supreme Court, in May, sustained the constitutionality of the Louisiana law requiring railroads to provide separate coaches for white and colored passengers.

The Supreme Court gave the following decision in July in regard to insane criminals: "Where a party has been indicted, and his counsel suggests his insanity before trial, and a commission is appointed to inquire into his mental condition and reports him to be insane, and the jury returns a

verdict accordingly, and the judge of the criminal district court remands him to the parish prison without a commitment to the insane asylum, the judge of the civil district court has authority—if, in his opinion, he is dangerous to the citizens and the peace of the State—to commit him to the insane asylum of the State."

Mob Violence.—A man and a woman of vicious, but apparently not criminal habits, living in a house boat in Jefferson Parish, were murdered by a mob in January, and the house was burned above them. Two men charged with assault upon a woman were taken from a jail in St. James Parish in February and lynched. One had confessed.

For an attempted assault upon two girls a negro was lynched at Emporia in March.

Three Italians charged with murder were taken from a jail at Hahnville, in August, and lynched. The Italian ambassador at Washington asked an explanation from the State Department, and the Governor was called upon for a report in reference to the crime.

Legislative Session.—The Legislature met on May 11 and adjourned on July 8. There were 28 Democrats, 7 Republicans, and 1 Populist in the Senate, and 60 Democrats, 24 Republicans, and 14 Populists in the House. Albert Estopinal was chosen President *pro tem.* of the Senate, and Samuel P. Henry Speaker of the House. The returns of the election were considered on May 14 in joint session, and by a vote of 86 to 48 it was decided not to go behind the returns. The election of a United States Senator to succeed N. C. Blanchard was next in order. The candidates were Mr. Blanchard, Walter D. Denegre, Mr. Price, Judge Blackman, and Judge S. D. McEnery. Mr. Denegre was the candidate of the Citizens' League, and was supported also by Republicans and Populists. Judge McEnery was his strongest opponent, and was elected by a majority of 3 after a long contest, at the end of which the other candidates withdrew, leaving only Mr. Denegre opposed to him.

The Governor sent a special message, June 24, urging the Legislature to pass a resolution in favor of calling a constitutional convention, and to amend the election laws. He recommended that a special election be held for passing upon the question of holding a convention, and at the same time electing delegates to serve in case the vote should be in favor of it.

The Legislature passed the resolution providing for a constitutional convention. The Republicans favored a convention unlimited as to the subjects on which it might change the present provisions of the Constitution, and the Democrats were in favor of limiting. When the question of prescribing the subjects to which action should be limited came up, it was found difficult, and the decision was that the convention should be prohibited from action that would disturb existing conditions in certain departments of the government. The date for the election is fixed for the second Tuesday in January, 1898, and the opening of the convention for the second Tuesday in February, 1898.

A new election law was passed, to go into effect immediately. The Australian ballot law is prescribed for New Orleans, while the State at large has a modified form of the same system. A new registration law was also made to go into effect Jan. 1, 1897. It provides for entire new registration all over the State.

A new charter was provided for New Orleans, completely reorganizing the system of municipal government, as demanded by the Citizens' League. Other measures for the city were: An Act providing for the establishment of a port commission to

take charge of the wharves; a drainage act; and amendments to the police-board act.

Other acts were:

Amending the act concerning forgery or altering of railroad or steamboat tickets or passes.

To establish a State naval battalion.

Providing for a jury commission in each parish except Orleans.

Fixing the age of consent at sixteen years.

Prohibiting the sale of liquors, except for medicinal uses, etc., within certain distances (3 to 8 miles) of certain colleges and high schools.

Providing for an additional building at the Blind Institute.

Making it a misdemeanor to gamble with dice for money or any representative of money.

Authorizing any married woman to deposit money or other funds in any banks in Louisiana, whether national or State banks, and to withdraw same from said banks without the authorization, assistance, or intervention of her husband.

Making it a misdemeanor for any owner, lessee, proprietor, or manager of any theater, hall, etc., where an admission fee is charged, to permit any person or persons to wear during the performance a hat sufficiently high to obstruct the view of the persons sitting behind.

Appropriating \$30,000 for an additional building at the State University.

To encourage and develop the oyster industry.

Making April 6 a legal holiday.

Protecting lessees of public ferry privileges on the Mississippi river and other streams in the enjoyment of their rights; to prohibit the crossing of persons in skiffs or other craft over said streams, except by ferry lessees, within two miles of any established public ferry landing.

Among the concurrent resolutions were these: Authorizing the Bureau of Agriculture to make an exhibit at the Omaha Exposition; congratulating Tennessee on its one hundredth anniversary and recommending private exhibits by Louisiana citizens at the exposition; memorializing Congress to grant belligerent rights to the Cubans; requesting Senators and Representatives of the State to urge the appropriation by Congress of \$20,000 to remove obstructions from Bayou Vermillion.

Political.—The State election took place on April 21. There were two tickets in the field—the Democratic and the combination ticket of Republicans, National Republicans, and Populists.

There were 20 amendments to the Constitution to be voted upon. These were prepared by a commission appointed by the Governor and Legislature, and were intended to give a practically new Constitution to the State without the intervention of a constitutional convention. For a list of the proposed amendments, see the "Annual Cyclopædia" for 1894, page 443. The one on qualification for the suffrage, requiring that every citizen who is to have the right to vote shall be able to read and write in his mother tongue, or to own \$200 worth of taxable property, and to have paid his poll tax, was one of the important issues in the campaign. The Democrats generally were in favor of it, though some of their local organizations declared against it; the Republicans and Populists opposed it.

The Democratic ticket was placed in the field Dec. 18, 1895. The Governor, Auditor, and Attorney-General were renominated. The other candidates were: For Lieutenant Governor, Robert H. Snyder, Jr.; Secretary, John T. Michel; Treasurer, A. V. Fournet; Superintendent of Education, J. V. Calhoun.

The convention refused to give any expression on the currency question, leaving that for the later one for choosing delegates to the national conven-

tion. The resolutions suggested that the State Central Committee, in issuing its call for the next State convention, should fix the representation; approved the action of the Legislature on the suffrage question; commended the action of the Federal Government in respect to the Mississippi; and approved the appropriations for improving the river.

The National Republicans are composed of the sugar planters and those in their interest who went over to the Republican party in 1894 on the tariff issue. They refused to admit negroes to their conventions as the regular Republicans do. They held a State convention on Jan. 4. The resolutions dwelt particularly on the question of protection. They made State nominations, headed by E. N. Pugh for Governor, and later in the month, Jan. 29, they combined with the Populists on the following ticket: For Governor, J. N. Pharr; Lieutenant Governor, J. B. Kleinpeter; Secretary of State, J. W. McFarland; Treasurer, John Pickett; Attorney-General, Lucien D. Suthon; Auditor, H. P. Kernochan; Superintendent of Education, G. A. M. Cook.

The Populists met at Alexandria Jan. 8 and named the following candidates: For Governor, A. B. Booth; Lieutenant Governor, S. Whitehead; Secretary of State, J. W. McFarland; Treasurer, H. E. Nelson; Auditor, John B. Kleinpeter; Superintendent of Education, G. A. M. Cook; Attorney-General, left for Executive Committee to fill.

A movement to combine with the Republicans and sugar planters and accept their candidates for Governor and other officers was not successful, but a motion was carried to empower the State Central Committee to fill the vacancies that might occur by resignation or otherwise.

The resolutions demanded free coinage of silver and free and fair elections, and denounced the proposed suffrage amendment as a vicious fraud. They declared against ring rule, bossism, and machine politics, which they asserted to be prevalent in Louisiana.

The committee authorized to complete the State ticket met at Alexandria, Jan. 23, and agreed upon the fusion ticket headed by J. N. Pharr.

The Republican State Convention met at New Orleans on Jan. 29. There was a lively contest between the delegates favorable to Mr. McKinley and those in favor of Mr. Reed. The result of the voting was a moderate victory for the Reed men. The resolutions were as follow:

"Whereas, The defeat of the suffrage amendment and securing of free and honest elections in this State is of paramount importance to the Republican party;

"Whereas, The convention of the People's party and the convention of the National Republican party have in their platforms declared against the adoption of said suffrage amendment and in favor of honest elections;

"Whereas, Both conventions have declared in favor of protection to American industries and American labor; be it

"Resolved, By this convention, representing the Republican party of this State with its 100,000 votes, that it does hereby indorse and recommend to all Republicans to support by their suffrage the ticket nominated by the People's party at Alexandria on the 23d of this month and by the National Republicans on the 27th of this month."

Trouble arose between the parties in some of the parishes, the most serious in St. Landry. At Palmetto, the center of the negro section of that parish, are about 400 negroes who usually register and vote. When the registration office was opened the supervisor of registration appeared accompa-

nied by 200 white "regulators," representing the "white supremacy" faction, armed with Winchester rifles. These men gave notice that no negro should register or vote there, and laid down the following as their platform:

"The white men of St. Landry claim that, as the negro is a purchasable political commodity, who will sell out without regard to principle, they are determined that the only way to prevent themselves from being included in the sale is to take the manly plan and prevent the consummation of an infamy that no brave people can stand. They do not believe in ballot-box stuffing, and are therefore compelled to take this course to free themselves, and are prepared to take all consequences."

Several negroes who had declared their intention to vote were flogged by the regulators, and in a shooting affray 2 negroes and 2 white men were killed. On April 7 there was another riot in the parish. A party of 100 negroes left Grand Prairie for Opelousas, but were intercepted about halfway by a band of regulators and told they would not be allowed to register. They attempted to pass, when they were fired upon and 2 were killed and 6 or 7 wounded. The others were given 50 lashes each and returned home.

On April 20, the day before the election, 200 armed and mounted men surrounded Opelousas in St. Landry Parish, and as many others were armed to oppose them. There was a skirmish 3 miles from the town, in which some blood was shed, and a desperate fight was expected on election day; but the regulators dispersed in the morning, having, it was asserted, forced many negroes to surrender their registration papers and pledged others not to vote. There were disturbances also before or after election in St. John Baptist and Natchitoches parishes, and militia was ordered to both places.

The face of the returns gave the election to the Democrats; but their opponents charged fraud, and claimed that their candidates had been elected. They claimed that they had sworn evidence that the vote in the black parishes was not one fourth as large as the majorities returned for Foster by the election commissioners, and that about 50,000 votes were counted for Foster in the black belt.

The election result remained unsettled until May 14, when the tellers of the General Assembly made two reports. The majority report was as follows: "We have examined the returns as furnished by the Secretary of State, and find the result to be as tabulated on the accompanying statement. We recommend that the presiding officers declare the result so ascertained—M. J. Foster to be elected Governor, and R. H. Snyder Lieutenant Governor." The vote was: Foster, 116,216; Pharr, 90,188; Snyder, 118,477; Kleinpeter, 86,487.

The minority report was as follows: "The undersigned beg leave to report that they have not been able to examine and correct the vote as provided by Article LIX of the Constitution, because what purport to be the returns of election are mere tabulated statements from the board of supervisors of the several parishes, and no legal returns were presented to your committee. The undersigned beg further to report that they are informed that the legal returns are now in the office of the Secretary of State, whose office is in this building, and we therefore pray that the Secretary of State be ordered to produce *instantly* and lay before the General Assembly said legal returns, consisting of the original tally sheets, compiled statements of voters and lists of voters, in order that this honorable body may examine and count the vote for Governor and Lieutenant Governor of this State as provided by Article LIX of the Constitution."

The Legislature refused to go behind the returns

by a vote of 48 to 86, and the majority report was adopted.

The constitutional amendments were defeated.

In New Orleans the regular Democratic ticket was opposed by the Citizens' League, an independent organization, aiming at the reform of alleged gross abuses in the city government. It included members from all parties. The interest in the result was intense, and the success of the League ticket by a large majority was the signal for a display of great enthusiasm.

The Democratic State Convention, June 15, declared for free coinage, and instructed the delegates to Chicago to vote for it and to vote as a unit on all important matters.

The regular Republicans and the National Republicans (Planters) each named a set of electors. The latter body dropped the word "National" from their party name.

The Populists, at Alexandria, Aug. 4, named a full set of presidential electors, having refused all propositions to combine with the Democrats. But on Sept. 25 an agreement was reached by which four electors from the Populist ticket and four from the Democratic were placed on a fusion ticket. All were pledged to vote for Bryan, and each was left to vote for Sewall or Watson, as he pleased.

The National Democrats, at their convention in New Orleans, Aug. 28, denounced the action of the Chicago convention, declared for the gold standard and the retirement of the Government "from the banking business," elected delegates to the Indianapolis convention, and provided for the organization of a State central committee, which should have power to name electors.

The State gave Bryan 77,175 votes, McKinley 22,037, of which 3,717 were polled by the Planters' party, and Palmer 1,834. All the members of Congress elected are Democrats.

LUTHERANS. The statistics of the Church in the United States and Canada, based on the reports of 1896, and published in the "Church Almanac," present the following totals: Four general bodies and 14 independent synods, embracing 60 synodical organizations. All accept the Augsburg Confession as the standard of faith, and nearly all synods and general bodies accept all the parts of the symbolical books of the Lutheran Church as they are contained in the Book of Concord of 1580. The 60 synods number 5,958 ministers, 9,734 congregations, and 1,441,486 communicant members, with a total population of more than 6,000,000. They maintain 4,125 parochial schools, and they employ 2,643 teachers, who have under their care 203,340 pupils, mostly of German and Scandinavian families. The parochial-school system is maintained chiefly among the congregations and synods composed of those who have emigrated from countries where the system is universally maintained by the state, and they try to perpetuate it in this country, but with the anglicising of their descendants less stress is laid on the maintenance of the parochial school. The Sunday schools number 5,842, with 51,969 officers and teachers and 508,010 pupils. These are found to exist chiefly in congregations composed of American-born Lutherans, though in many of the German and Scandinavian congregations flourishing Sunday schools are also maintained. The benevolent contributions for the year, reported through the regular synodical boards, amounted to \$1,000,467.60; but this does not include contributions by individuals and congregations for the educational work of the Church in this country, nor the contributions from similar sources toward benevolent operations not under synodical control, nor the large amount of money sent directly to missionary and other benevolent societies in other countries.

The educational institutions of the Church in this country, or under denominational control, number 122, of which 26 are theological seminaries, 42 colleges, 41 academies, and 13 ladies' seminaries, aggregating property valued at \$4,620,839, and endowment amounting to \$1,478,541, employing 747 professors and instructors, and having 11,350 students, of whom 2,738 are in course of preparation for the office of the ministry. There are 92 benevolent institutions, which report property valued at \$2,667,525, endowment amounting to \$200,562, and 34,875 inmates. There are 156 periodicals published in English, German, Norwegian, Swedish, Danish, Icelandic, Finnish, French, and Slavonian. The Gospel is preached to Lutherans in this country in 14 languages.

Since the census of 1890 the Church in this country has gained very largely in numerical strength. The census presented the following statistics: 4,591 ministers, 8,595 congregations, and 1,231,075 communicant members. The net increase since that time is 1,367 ministers, 1,141 congregations, and 210,411 communicant members. But the Church has gained also in other respects, especially in the matter of having its history, principles of faith, and worship brought to the attention of the American people by means of numerous publications in English. Dr. Jacobs's history in the "American Church History Series" and "The Lutheran Commentary," not to mention others, have largely been instrumental in making known the nature and position of this Church, whose literature has hitherto been confined almost entirely to languages other than the English.

The following tabular statement shows the numerical strength of the four general bodies and the independent synods:

NAME.	Organized.	Ministers.	Congregations.	Communicant members.
General Synod.....	1821	1,155	1,467	180,587
General Council.....	1867	1,153	1,900	328,622
Synodical Conference....	1872	1,672	2,008	492,580
United Synod.....	1886	211	437	41,304
Independent Synods.....	1,746	3,912	397,469

Of the four general bodies, only the Synodical Conference held a convention during the year.

Synodical Conference.—The sixteenth biennial convention of this body, composed almost entirely of German synods and congregations, was held at Evansville, Ind., Aug. 12–17, 1896. The opening sermon was delivered by the Rev. Carl Gausewitz, of the Minnesota Synod. The convention was formally organized by the election of the following officers: The Rev. John Bading, Milwaukee, Wis., president; the Rev. P. Brand, Pittsburg, Pa., vice-president; Prof. John Schaller, New Ulm, Minn., secretary; and Mr. H. A. Christiansen, Detroit, Mich., treasurer. Prof. Lauritz Larsen, Decorah, Iowa, was received as delegate of the Norwegian Synod and advisory member of the convention. This general body is composed of the large synod of Missouri, Ohio, and other States, with its 13 district synods, embracing nearly all the States and Territories of the United States, and portions of Canada; the general synod of Wisconsin, Minnesota, and Michigan; and the English synod of Missouri and other States, representing more than 2,000 congregations and nearly 500,000 communicant members. The district synods in connection with this general body maintain 1,747 parochial schools, with 854 teachers and 97,310 pupils. The benevolent contributions of the congregations during 1896 amounted to \$281,020.85. Within the bounds of this general body and under its control are 3 theo-

logical seminaries, 10 colleges, 7 academies, 10 orphanages, and 9 institutions of mercy.

The morning sessions of the convention were devoted to the discussion of a thesis on "Church Practices," prepared and presented by Prof. August L. Graebner, of the St. Louis theological faculty. Business matters occupied the attention of the convention in the afternoon sessions. The mission among the freedmen of the South, carried on by the conference, received a large amount of attention. Thirty-two missionaries are supported, who have under their care 52 congregations, and 35 schools have been established and are supported in the Southern States. The congregations have a membership of 10,000. Seven new chapels were reported to be a necessity for the prosecution of this work, and the Board of Missions was authorized to secure means and build the chapels as soon as possible. Missionary operations are also carried on among the Indians, including the maintenance of schools for the training of the young. The work of inner or home missions occupied much of the time of the convention. These missionary operations are carried on among the Germans in many of the States and Territories, notably in the Eastern and the extreme Western States. The statistics for 1896 are not yet at hand; but in 1895 the amount expended for this work aggregated \$48,011.04. The amount expended in 1896 for the same work is rather more, as the work is constantly advancing. The next convention will be held in Cincinnati, Ohio, in August, 1898.

General Council.—Although this general body held no convention during the year, yet numerous events that deserve to be noticed took place. The Ministerium of Pennsylvania, the oldest and largest of its synods, is preparing for the celebration of its sesquicentennial in 1898, and is at the same time pushing the missionary, educational, and benevolent operations on its territory. The General Council itself has assumed the publication of an official organ and its own Sunday-school literature in the English language. Its home-missionary operations—English, German, and Swedish—extend from the Atlantic to the Pacific coast, and up into Manitoba and Nova Scotia in the Dominion of Canada. Its educational and benevolent operations are widening out and becoming stronger from year to year. The present year has witnessed great progress in these interests all along the line. There are under the control of synods connected with this general body 3 theological seminaries, 7 colleges, 4 academies, 12 orphanages, and 26 other benevolent institutions. The benevolent contributions for the year that have gone through the regular Church channels amount to \$265,314.35.

The 14 independent synods have a membership of nearly 400,000 communicants; they support 1,890 parochial schools, 1,169 teachers, and 81,769 pupils; 2,079 Sunday schools, with 5,881 officers and teachers, and 95,466 scholars. The benevolent contributions of the congregations amounted to \$197,546.25. These synods carry on their own educational, missionary, and benevolent operations. Of these, the Joint Synod of Ohio, which has a membership of 85,000 communicants, held its thirty-first biennial convention at Dayton, Ohio, Sept. 1-10, 1896. The opening sermon was delivered by the president, the Rev. Conrad H. L. Schuette, of Columbus, Ohio. Reports were received and acted on from the 8 district synods, from the various boards, and from the 4 educational institutions supported by this body. A proposition was made to consolidate the 4 theological seminaries—at Columbus, Ohio; St. Paul, Minn.; Woodville, Ohio; and Hickory, N. C.—and establish one strong and well-equipped institution, but a large majority maintained that

the time had not yet come for this. The synod supports 53 missionaries in 20 States at an annual expense of \$10,000. The benevolent contributions of the congregations amounted to \$46,380.28.

Deaconess Conference.—The first general Conference of Lutheran Deaconess Mother Houses in America was held, Sept. 16-18, 1896, in the Mary J. Drexel Home for Deaconesses, Philadelphia, the Rev. Carl Goedel, pastor. Wednesday evening, Sept. 16, divine service was held, when the address of welcome was delivered by the pastor, and the Rev. Prof. Adolph Spaeth, D. D., LL. D., delivered the opening sermon. On the following morning the first business session was held. The Rev. Dr. Spaeth, professor in the Lutheran Theological Seminary at Mount Airy, Philadelphia, was elected president, and the Rev. Dr. Jeremiah F. Ohl, director of the Deaconess Home in Milwaukee, Wis., English secretary, and the Rev. Carl Goedel German secretary. Four of the 6 existing mother houses united in the organization of this general conference, and were represented by delegates, to wit: Mary J. Drexel Home, Philadelphia, Pa.; Milwaukee Deaconess Mother House, Milwaukee, Wis.; Immanuel Deaconess Institute, Omaha, Neb.; and the mother house of the General Synod, Baltimore, Md. The convention was called for the purpose of establishing a permanent bond of union among the deaconess institutions of this country in connection with the Lutheran Church, and formulating the fundamental principles of the female diaconate in the Church. To this end the following theses, presented by Dr. Spaeth and setting forth the fundamental principles of this office, were discussed:

"I. As evangelical Christians, we look to the Word of God for a sound basis of the female diaconate. We believe that this ministry of the Church of Christ rests on a sure and indisputable Scripture foundation. But at the same time, we freely admit that the present form of this ministry can not be traced in all its details to certain clearly defined rules or precepts of the New Testament. In its present organization the female diaconate is the result of a growth and development in which we recognize the sound Lutheran principle that nothing can be tolerated in the Church of Christ that would in any wise be in conflict with the Word of God, but that there may be a great deal in the details of the present character and *modus operandi* of the female diaconate which can not be found directly in certain Scripture passages.

"II. The Scripture passages which speak directly of women as recognized office bearers of the Church—as female *διάκονοι*—are very few indeed. With Rom. xvi, 1, 2 and 1 Tim. iii, 11 their whole number is completed.

"III. The office or ministry (*διακονία*) for the building up and governing of the Church of Christ is originally one, and only one—the ministry of the Word, committed to the apostles, bishops, presbyters, or pastors.

"IV. At a very early time in the history of the apostolic Church this ministry of the Word called to its assistance certain helpers, with other gifts, functions, and ministrations. These were appointed for the support of the ministry of the Word, as the circumstances might require for the 'daily ministrations.'

"V. To this ministry of love during the apostolic times women also were called, who, like Phœbe of Cenchrea, served the congregation as female *διάκονοι*, thus becoming a successor of many and even of the apostle himself.

"VI. The female diaconate is not a ministry of the Word. We do not recognize or train deaconesses as preachers or evangelists. The New Testament nowhere makes provision for the ordinary

preaching of the Word by women, but rather for bids it in direct words (1 Cor. xiv, 34, 35; 1 Tim. ii, 11, 12). This we maintain, notwithstanding the exceptional cases mentioned in the Old and New Testament of prophetesses who by a direct and special divine call and inspiration were privileged to speak the Word. Nor is this position in conflict with the fact that we train and employ teaching sisters for the instruction and education of our female youth.

"VII. The deaconess, then, is one who accepts and performs the ministry of charity as the calling of her life, discharging her duties in the name and to the honor of the Lord, as a member and helper of the Church of Christ.

"VIII. While in the ancient Church the sphere of the deaconess was confined to the congregation, the present organization of the female diaconate has most successfully adopted the idea of the mother house as a training school of deaconesses, both for the religious and the technical side of her calling; as an association of those that are united in the same faith and for the same life work; and as a guarantee for the protection and support of the deaconess in time of infirmity and old age.

"IX. While this idea of the association in a sisterhood of a mother house has been adopted after the model of certain organizations established by Vincent de Paula in the Roman Church of the seventeenth century, the female diaconate of our Lutheran Church preserves its truly evangelical character over against Rome in the following points: There is (1) no special vow in distinction from the baptismal vow; (2) no binding obligation to a life of celibacy; (3) no 'religious life' as distinguished from the life and calling of any other Christian; (4) no special 'order' in the sense of the mediæval Church; (5) no merit or expectation of special reward for a work of supererogation.

"X. As the indispensable condition of true unity and a sound development, we demand for a deaconess mother house the unity in the faith which finds its expression in a clear confession and gives to the institution an unmistakably churchly character. In every aspect the life of the mother house must reflect the life of the Church whose faith it professes. And as a small community, based upon the voluntary union of its members, it is able to unfold the life of the Church in even greater purity, richness, and consistency than larger congregations. To insure this churchly character of the mother house, the ministry of the Word, as represented by one or more pastors, must have a permanent and leading position in its organization."

The discussion of this subject was followed by a discussion of theses on "The Organization of the more Important Mother Houses in Germany," presented by Pastor Goedel. Papers were read and discussed, among which was "The Female Diaconate in America outside of the Lutheran Church," by the Rev. Dr. Ohl. Other matters of importance were considered with reference to the successful prosecution of the work in this country. The convention closed on Thursday evening, with an earnest appeal by President Spaeth for complete harmony in principles and methods of work among all the institutions. He referred briefly to the history of this work in the Lutheran Church of America, dating from 1846, when the Rev. Dr. William A. Passavant made the beginning by bringing the first deaconesses to this country from Fliedner's celebrated institution at Kaiserswerth, which is the first institution of its kind in the world. In closing, he set forth the principles according to which all institutions of this kind should be established and maintained. The 7 Lutheran mother houses in the United States, with 143 sisters, have property valued

at \$700,000, whose annual expenses amount to \$70,000. The sisters are employed as nurses in hospitals, as superintendents of orphanages and homes for the aged, as teachers in Church schools and attendants in benevolent institutions, and are engaged in parish work.

Luther League.—The second national convention of the Luther League of America was held in Chicago, Ill., Nov. 17-20, 1896. The convention was opened with devotional service and an address of welcome by the Hon. George B. Swift, Mayor of Chicago. He spoke of his interest in the league and in the work it is doing, and in closing said: "I, as Mayor of Chicago, the greatest city of America, the wonder of all continents, representing people from every civilized spot on the globe, welcome you as you have a right to be welcomed. I voice the sentiments of the great majority of the people of Chicago, when I welcome you, because that great majority believes in fostering and developing that which is good for their fellow-men." Mr. E. F. Eilert, of New York city, President of the National League, responded to the welcome. The convention consisted of 232 delegates, who represented 16 States and a membership of 50,000. The officers elected are: E. F. Eilert, New York, president; M. C. Olsen, Chicago, general secretary; William C. Steever, Philadelphia, recording secretary; Miss Katherine Meister, Lancaster, Pa., assistant secretary; and Cornelius Eckhardt, Washington, D. C., treasurer. The business of the convention consisted in the consideration of reports from the State and central leagues, acting on matters of general interest for the work of the organization, and the discussion of subjects presented in addresses delivered and papers read. The Committee on Literature presented a list of books to be read by the members in pursuing the literary course of the Luther League. The "Luther League Review," published in New York city, the official organ of the general organization, received the hearty approval and support of the body. The proper observance by all local leagues of the four-hundredth anniversary of the birth of Philip Melancthon, Preceptor of Germany and author of the Augsburg Confession and of the Apology, was recommended to be held on Feb. 16, 1897. A resolution was passed proposing the holding of a convention at Wittenberg, Germany, in 1900, for the purpose of organizing a "World's Luther League" among the 50,000,000 Lutherans in the world. The following papers were discussed: "Literature," by the Rev. H. Frank Scheele, of Staunton, Va.; "The Official Organ of the Luther League," by the Rev. Gustavus A. Bierdeman, of Utica, N. Y.; "Organization," by E. Augustus Miller, Esq., of Philadelphia, Pa.; "The Luther League and Church Music," by Prof. F. Muench, Ph. D., of Charleston, S. C.; and "Sociability and its Position in League Work," by the Rev. John A. W. Haas, of New York city. On Wednesday evening three meetings were held simultaneously in three of the largest Lutheran churches of Chicago—English, Swedish, and Norwegian, at which addresses were delivered, of which only the titles can be given here: "Twentieth-Century Christianity," by the Rev. Luther M. Kuhns, of Omaha, Neb.; "The Luther League as an Inner Mission Agency in Large Cities," by the Rev. Frederick A. Kaehler, of Buffalo, N. Y.; "Our Young People and the Reformation," by the Rev. H. Louis Baugher, D. D., of Gettysburg, Pa.; "The Value of Trained Christians," by the Rev. John Telleen, of Rock Island, Ill.; "The Relation of our Church to the Future of our Country," by the Rev. Hugh M. Bannen, of Rockford, Ill.; "Our Church and her Mission in the World," by the Rev. Prof. Samuel A. Ort, D. D., LL. D., President of Wittenberg College and

Theological Seminary, Springfield, Ohio; "The Rising Generation of the Lutheran Church," by the Rev. Prof. Edmund G. Lund, of Minneapolis, Minn.; and "The Mission of the Lutheran Church in America," by the Rev. Ferdinand W. E. Peschan, D.D., of Greensburg, Pa. The convention closed with a mass meeting in the Auditorium, at which addresses were delivered by the Hon. Isaac S. Motter, of Ohio, on "The Growing Appreciation of the Lutheran Church's Power"; by the Hon. Cyrus R. Lantz, of Pennsylvania, on "Our Church: Her Spirit, Duty and Destiny"; and by Judge P. S. Grosscup, of Chicago, on "The Influence of Christianity on American Institutions." The next national convention will be held in New York city in 1898.

The history of this movement among the young people of the Lutheran Church, whose second national convention closed amid the enthusiasm of thousands gathered in Chicago's largest auditorium

is very brief. The first local league was organized in one of the congregations in New York city not more than a dozen years ago, whence it gradually worked its way into other New York churches; then into central leagues, embracing numerous local organizations; then into State leagues, of which there are now 16; and finally into a national organization, the first convention of which was held at Pittsburg, Pa., in 1895. The movement is intended to bring together the members of the various congregations and synods throughout the country, in order to become acquainted with each other, to discuss doctrinal and practical subjects, to inspire the youth of the Church with loyalty to their Church and zeal for the active prosecution of its great mission in this country, and to cultivate a spirit of churchliness in worship and practice among all the members of the Lutheran Church of America.

M

McKINLEY, WILLIAM, twenty-fifth President of the United States, elected for the twenty-eighth quadrennial term, born in Niles, Trumbull County, Ohio, Jan. 29, 1843. The long low two-story frame building in which he was born served the double purpose of a country store and dwelling. His birthplace stood until late in 1895, when it was removed from the old site and torn down, and the hard woods of the mantels and baseboards were made into canes and sold throughout the country among his admirers. On his father's side his ancestry is Scotch-Irish; his forefathers came to America one hundred and fifty years ago. Authentic records trace the McKinlays in Scotland back to 1547, and it is claimed by students that James McKinlay,

Elegy"—was a kinsman, contemporary with the McKinleys of the Revolution in this country. The change in spelling the final syllable from *a* to *e* is explained by the reply that Major McKinley himself made at a meeting of the descendants of the clan, an association embracing 200 or 300 people, from six or eight States, at the Columbian Exposition in Chicago, in 1893, to a lady of the same name but spelled in the old way. "Your ancestors of the McKinlay clan," said he, "came to this country directly from Scotland, while mine came from the north of Ireland; but we are probably of the same original Covenanter stock." About 1743 one of the Scotch-Irish McKinleys settled in Chanceford Township, York County, Pa., where his son David (the McKinley of the Revolution, great-grandfather of the President) was born in May, 1755. The records of the Pension Bureau show that he served as a private in the Pennsylvania line for about two years, and that he participated in the capture of Paulus Hook and in the engagements of Amboy and Chester Hill. After the Revolution he resided in Westmoreland and Chester Counties, Pennsylvania, until 1814, when he went to Ohio, where he died in 1840, at the age of eighty-five. James McKinley, son of David, moved to Columbiana County, Ohio, in 1809, when William, father of the President, was not yet two years old; and in that State the family has since mainly resided, although James and his wife, who died on the same day, are buried in the same grave at South Bend, Ind. The grandmother of the President, Mary Rose, came from a Puritan family that fled from England to Holland and emigrated to Pennsylvania with William Penn. Her father, Andrew Rose, Jr., was also a patriot of the Revolution, participating in the battle of Monmouth and rendering good service at his trade as a molder in the manufacture of ammunition for the American army. William McKinley, Sr., father of the President, born in Pine Township, Mercer County, Pa.,

BIRTHPLACE OF WILLIAM McKINLEY, NILES, O.

"the trooper," was one of William's ancestors. The crest of the McKinlay clan was a mailed hand holding an olive branch, and its motto "Not too much." The tartan was a somber plaid of green and blue, with a larger plaid of red stripes. The Rev. James McKinlay—mentioned by Burns in his poems "The Ordination" and "Tam Samson's

vania with William Penn. Her father, Andrew Rose, Jr., was also a patriot of the Revolution, participating in the battle of Monmouth and rendering good service at his trade as a molder in the manufacture of ammunition for the American army. William McKinley, Sr., father of the President, born in Pine Township, Mercer County, Pa.,

in 1807, married in 1829 Nancy Campbell Allison, of Columbiana County, Ohio, whose father, Abner Allison, was of English extraction, and her mother, Ann Campbell, of Scotch-German. The union was blessed with nine children, of whom four are now living, William being the seventh child. Both the grandfather and the father of the President were iron manufacturers, or furnace men. His father was identified with that business all his active life, superintending both the erection and operation of furnaces, and gaining thereby a fair competency. At an early age he became manager of a furnace near New Wilmington, Lawrence County, Pa., and filled the place for twenty-one years. During this extended period he drove every Saturday to his home in Poland, Ohio, and returned on Monday to his duties at the furnace. He was a devout Methodist, a staunch Whig and Republican, and an ardent advocate of a protective tariff. He was a man of strong common sense, intelligence, probity, and force of character; industrious, temperate, frugal, successful—respected and esteemed wherever known. He lived to see his son and namesake rise to a post of national prominence as chairman of the Ways and Means Committee in the popular branch of Congress, and to hear his name heralded around the globe either in terms of endearment or execration, but died during William's first term as Governor of Ohio, in November, 1892. The mother of the President, Mrs. Nancy Allison McKinley, commonly and lovingly known as "Mother McKinley," is still living at the age of eighty-eight. It may be observed of them, as Mr. Winthrop said of Washington and his widowed mother: "Few sons ever had a more lovely and devoted mother, and no mother a more dutiful or affectionate son." She declares with tender pride, "William was always a good boy," while he ascribes to mother and home those traits and habits which have made him the model of the American household.

William received his first education in the public schools of Niles, but when he was nine years old the family removed to Poland, Mahoning County, Ohio, a village noted for its educational facilities, where he was at once admitted into Union Seminary and pursued his studies until he was seventeen. He excelled in mathematics and the languages, and was the best equipped of all the students in debating the exciting public questions of the day, in which he was encouraged by his preceptors. In 1860 he was sent to Allegheny College, Meadville, Pa., where he was easily admitted to the junior class, and would have been graduated in the following year but for the failure of his health. Intense application to his studies had so weakened his system that he was obliged to return home for rest and recuperation, but even then he did not escape severe illness. As soon as he was able, he sought a change by engaging as a teacher in the public schools, and for a term or two he taught in the Kerr district, near Poland. A friend says of him at this time: "He was always studying, studying—studying all the time." He was fond of athletic sports, and was a good horseman. At the age of sixteen he became a member of the Methodist Episcopal Church in Poland, and was noted for his diligent study of the Bible and his interest in the discussions that took place in the Bible class. When the civil war broke out, in the spring of 1861, he was a clerk in the Poland post office. Here, in the Sparrow tavern, a war meeting was held, and the principal speaker closed his address with this appeal: "Our country's flag has been shot at. It has been trailed in the dust by those who should defend it, dishonored by those who should have cherished and loved it. And for what? That this free Government may keep a race in the bondage of slavery. Who will be the

first to defend it?" "Presently," says one writer, "a space was cleared in front of the eloquent speaker. One by one some of the choicest of the young men of Poland stepped forward. Among them was a slight, gray-eyed, boyish figure, too much impressed with the seriousness of the situation to put himself in evidence, who went up with the rest." This was William McKinley. He went with the recruits to Columbus, and was there enlisted as a private in Company E of the Twenty-third Ohio Volunteer Infantry, June 11, 1861. This regiment is one of the most famous in the history of the Ohio organizations. It numbered among its field and staff such officers and civilians as Gen. William S. Rosecrans, Gen. E. Parker Scammon, Gen. Rutherford B. Hayes, nineteenth President of the United States, Gen. James M. Comly, minister to Hawaii, Col. Stanley Matthews, United States Senator and Associate Justice of the Supreme Court, Gen. Russell Hastings, Dr. Joseph T. Webb, a noted surgeon, Robert P. Kennedy and William C. Lyon, Lieutenant Governors of Ohio, and several other State officers and congressmen. From the date of its organization, June 1, 1861, to the time it was mustered out at Cumberland, Md., July 26, 1865, its rank and file included 2,095 men, of whom 169 were killed in battle and 107 died of wounds and disease. It is estimated (in 1897) that about 500 of its members are still living. It was engaged in 19 battles, marched hundreds of miles, endured great privation, and encountered all the perils and hardships of war with a bravery and fidelity, which, while perhaps not exceptional, did it great credit and honor. Its career, like that possibly of no other Ohio regiment, verifies the words of President Lincoln in his first message to Congress in speaking of the high character of the volunteer soldiers. "There are many single regiments," said Lincoln, "whose members, one and another, possess full practical knowledge of all the arts, sciences, professions, and whatever else, whether useful or elegant, is known to the world; and there is scarcely one from which there could not be selected a President, a Cabinet, a Congress, and perhaps a Court abundantly competent to administer the Government itself."

Young McKinley found the drill, discipline, and out-of-door life of the soldier beneficial to his health, and emerged from his four years' arduous service stronger than when he entered the army. Concerning this period of his life, he said to a visitor in the executive office at Columbus, when serving as Governor: "I always look back with pleasure upon the fourteen months I served in the ranks. They taught me a great deal. I was but a school-boy when I went into the army, and that first year was a formative period in my life, during which I learned much of men and facts. I have always been glad that I entered the service as a private and served those months in that capacity." He participated in all the early engagements in West Virginia. The first of these was at Carnifex Ferry, Sept. 10, 1861, and its effects were of much consequence to the regiment. "It gave the boys confidence in themselves," he once said, "and faith in their commander. We learned that we could fight and whip the enemy on their own ground." In the winter's camp at Fayetteville he earned and received his first promotion, commissary sergeant, April 15, 1862. He was never a corporal and does not fancy the title of "Little Corporal" or his much-talked-of resemblance to Napoleon. "Young as McKinley was," said ex-President Hayes at Lakeside in 1891, "we soon found that in business and executive ability he was of rare capacity, of unusual and surpassing capacity, for a boy of his age. When battles were fought or a service to be per-

formed in warlike things, he always took his place. The night was never too dark, the weather was never too cold, there was no sleet or hail or snow that was in the way of his prompt and efficient performance of every duty. When I became commander of the regiment, he soon came to be on my staff, and he remained on my staff for one or two years, so that I did literally and in fact know him like a book and love him like a brother." He participated in the engagements at Clark's Hollow, May 1, and Princeton, May 15, 1862. This point was abandoned and a camp established on Flat Top mountain in July, whence the regiment subsequently marched to Parkersburg, 104 miles, in three days to Camp Piatt, on the Great Kanawha. Here they took the cars for Washington, D. C. (which McKinley now saw for the first time), and a few days after their arrival joined McClellan's forces and drove the enemy out of Frederick, Md., and on Sept. 14 and 17 participated in the battles of South Mountain and Antietam. The Twenty-third made three successful charges in the first of these battles, and lost heavily in both. "During the day (at South Mountain) the Twenty-third," says Whitelaw Reid in "Ohio in the War," "lost nearly 200 men, of whom almost one fourth were killed on the field or afterward died of their wounds. Only seven men were unaccounted for at the roll call after the action. The colors of the regiment were riddled, and the blue field almost completely carried away by shells and bullets." At Antietam the regiment bravely held its position in the hottest of the fight. It was engaged from dawn until nearly night without breakfast or dinner, food or refreshment of any sort, save that brought them by one of the youngest of the comrades. Sergeant McKinley was in charge of the commissary department of his brigade, and necessarily his post of duty was with the supplies, about two miles from where his famished and exhausted comrades were fighting to hold their advanced position and for their lives and probably for the fate of the army. As is the case in all hot fights, there were some stragglers who found their way back to the supplies, and these McKinley saw he could utilize to get together provisions and coffee and carry them to the front. This was at the time when the fortunes of the battle were swaying to and fro, and it was doubtful whether Antietam would be a victory or a defeat. It was nearly dark when suddenly there was heard tremendous cheering along the front of the Twenty-third Ohio. Gen. Seamon sent an aid to ascertain the cause of the Union cheering, and he galloped off to find that the cheers were for McKinley and his coffee. He had filled two wagons, and in the midst of the desperate fight, with shells and bullets flying in all directions, had hurried the cans of coffee and other supplies to his dispirited comrades, who took fresh courage after the refreshment. The mules of one wagon became disabled under the terrific fire, but this plucky boy of nineteen pushed on and got the other wagon safely through to the regiment. Col. Hayes was badly wounded at South Mountain, and when he went home to Ohio to recover he told Gov. Tod the story. "Let McKinley be promoted from sergeant to lieutenant," said the war Governor, and it was accordingly done, his commission dating from Sept. 24, 1862. In his speech at the Lakeside Chautauqua, in 1891, to which reference has been made, Gen. Hayes described this incident most effectively. "From Sergeant McKinley's hand," said he, "every man in the regiment was served with hot coffee and warm meats, a thing which had never occurred under similar circumstances in any other army in the world. He passed under fire and delivered with his own hands these things so essential for the men for whom he was laboring." Col.

Hayes kept a diary during the war, and when he went to Lakeside he hunted up the old notebook and in it found this entry: "Saturday, Dec. 13, 1862. Our new second lieutenant, McKinley, returned to-day—an exceedingly bright, intelligent, and gentlemanly young officer. He promises to be one of the best." And under later date: "He has kept the promise in every sense of the word."

The regiment returned to its winter quarters near Parkersburg. During the year it had marched over 600 miles—a service cheerfully borne by young McKinley, although he was often footsore and weary—and it is said that in its entire service the regiment marched more than double that distance. It intercepted the Confederate raider John Morgan at Buffington's Ford, July 19, 1863, and assisted in the capture of that bold leader and his command. In May, 1864, it took part in the battle of Cloyd's Mountain, from whose summit the enemy was finally driven, after a long march by what was supposed to be an impassable route. "It was a rough and trying march over mountains and through deep ravines and dense woods," McKinley once described it, "with snows and rains that would have checked the advance of any but the most determined. Daily we were brought in contact with the enemy. We penetrated a country where guerrillas were abundant, where it was not an unusual thing for our men to be shot from the underbrush—murdered in cold blood."

While at Camp Piatt he had been promoted to first lieutenant, Feb. 7, 1863, and under his leadership his company was first to scramble over the enemy's fortifications and silence their guns. His only reference to the achievement is to be found in his address upon President Hayes, at Delaware, Ohio, after his death, in 1893. "The advance across the meadow, in full sight of the enemy," said McKinley, "and in range of their guns, through the creek, and up over the ridge, was magnificently executed, and the hand-to-hand combat in the fort was as desperate as any witnessed during the war. Still another charge was made, and the enemy again driven back. On we hurried to Dublin depot, on the Virginia and Tennessee Railroad, burning the bridges there, tearing up the track, and rendering the railroad useless for the transportation of soldiers or supplies. There the New river bridge was destroyed, and then, with frequent encounters, we went on to Staunton, Va." They again advanced until within two miles of Lynchburg, where, after a successful encounter with the enemy, the regiment camped so near them that men of both sides took rails for their fires from the same fence. Four days later they were attacked by a superior force, which they at first repelled, but were compelled to retire. Then began one of the remarkable retreats of the war. "All our commissary supplies were consumed," says McKinley; "but almost without food we marched and fought our way back, closely pursued by the enemy." It began on June 19, near Lynchburg, and continued until June 27, when a supply train was reached on Big Sewell Mountain, and there, to quote Col. Hayes's diary again, "we stopped and ate, marched and ate, camped about dark, and ate all night." In these nine days the Twenty-third marched 180 miles, fighting nearly all the time, with scarcely any rest or food, and very little chance for either. They had crossed three ranges of the Alleghanies four times, the ranges of the Blue Ridge twice, and marched several times all day and all night without sleep. In this memorable expedition the Twenty-third participated in engagements at Cloyd's Mountain, New River Bridge, Buffalo Gap, Lexington, Buchanan, Otter Creek, Lynchburg, and Buford's Gap, but finally got safely back to camp and fought under

Gen. Crook in the battle of Kernstown, near Winchester, July 24, 1864. Lieut. McKinley had conducted himself with gallantry in every emergency, and at Winchester won additional honors. Crook's army was attacked by the whole of Early's, the National forces being 6,000 strong, and the Confederate 20,000. Hayes had charge of the first brigade on the extreme right, and was soon attacked with such fury that he was obliged to fall back toward Winchester. The movement was successfully executed, except that the Thirtieth West Virginia Regiment (Col. William Brown commanding) failed to retire and was in imminent danger of capture. McKinley was directed to go and bring it away, if it had not already fallen, and, putting spurs to his horse, he started in a fierce gallop, obliquely toward the advancing enemy. Russell Hastings, then major of the Twenty-third, gives a graphic description of the incident: "Hayes loved McKinley as a father loves a son, and only imagine what must have been his feelings when the necessities of the moment demanded that he should order this boy to do this dangerous work! None of us expected to see him again as we watched him push his horse through the open fields, over fences and across ditches, while the fire from the enemy poured upon him, with shells exploding around and over him. Once he was completely enveloped in the smoke of an exploding shell, and we thought he had gone down; but no, out of this smoke emerged his wiry little brown horse, with McKinley still firmly seated and erect as a hussar. Now he had passed under cover from the enemy's fire, and a sense of relief came to us all. Thus far he was all right, but we knew his danger was just beginning, for the enemy was still coming on. McKinley gave the colonel the orders from Hayes to fall back, and added, 'I supposed you would go to the rear without orders.' The colonel replied: 'I was about concluding I would retire, and am now ready to go wherever you lead; but, lieutenant, I p'intedly believe I will give them fellows a volley or two before I go.' McKinley commanded, 'Then up and at them as quickly as possible,' and as the regiment arose to its feet the enemy came into full view. Col. Brown's boys gave them a crushing volley, and, following it with a rattling fire, retreated toward some woods directly in their rear. At this they halted along Brown's front, and for some distance to the right and left, feeling for the secondary line, during which hesitancy McKinley led the regiment through the woods toward Winchester. As Crook and Hayes saw the regiment safely off, they turned, and following the column, with it moved slowly to the rear, down the Winchester pike. At a point near Winchester, McKinley brought the regiment to the column and its place in the brigade. He was greeted by a cheer, for all of us felt and knew one of the most gallant acts of the war had been performed. As he drew up to the side of Hayes to make his verbal report, I heard Hayes say, 'Lieutenant, I feared I would never see you alive again.'" The retreat continued until after midnight: the men were very weary, after their hard fight and forced march, and without food, for none could be provided, owing to the stampede of the wagon train in the afternoon. In this plight they came upon a battery of artillery of four guns and their caissons, which had been left in the way, an easy capture for the enemy. McKinley asked permission to bring it off, but his superior officers thought it impossible, owing to the exhausted condition of the men. "The Twenty-third will do it," said McKinley, and calling for volunteers, every man of his company stepped out, and the guns were hauled off to a place of safety. The next day, July 25, 1864, at the age of twenty-one, and with a reputation for bravery in

which every comrade took pride, McKinley was promoted to captain.

On the retreat through Winchester many of the inhabitants were seen at their doors, making demonstrations of joy or sorrow according as their sympathies were Union or Confederate. One old Quaker lady stood at her gate with the tears running down her face when Capt. McKinley reined in his horse and said in a low tone: "Don't worry, my dear madam, we are not hurt as much as it seems, and we shall be back here again in a few days."

The brigade continued its fighting up and down the Shenandoah valley, skirmishes occurring almost daily. A fierce engagement took place at Berryville, Sept. 3, 1864, in which Capt. McKinley's horse was shot under him, and the fighting between Crook's and Longstreet's forces continued until nightfall, when both commanders wanted to withdraw their men. Hayes dispatched McKinley for this purpose with the proper orders, but he encountered a strange situation, which is best described in his own words: "This engagement," he once said, "will not soon be forgotten. It was a brilliant scene; the heavens were illuminated by the flashes of our own and the enemy's guns. Later, when both armies determined to retire, it became my duty to direct a regiment at some distance from the others to move. A stranger, and in the darkness, I knew nothing of the country. When I started on my mission some one on the other side was doing just what I was, as I could tell from what I could hear. I had not gone far when I was halted by a sentinel with 'Who comes thar?' The distinct Southern brogue was warning enough, and I hastened the other way. Very soon I was stopped by a voice with a shrill Western accent demanding, 'Who comes there?' and recognized friends. I gave the countersign, and soon had the regiment moving."

At Opequan and Fisher's Hill McKinley again distinguished himself. In the former battle occurred an incident that showed both firmness and readiness of mind. As an aide on Gen. Crook's staff, he was sent with an order to Gen. Isaac H. Duval to move his command quickly to a position on the right of the Sixth Corps, but Duval, not knowing the topography of the country, asked the young aide, "By what route shall I move my command?" Capt. McKinley was without definite orders or knowledge of the country, but having a general idea of the direction of the water courses and location of the troops, replied, "I would move up this creek." Duval then said, "I shall not move without definite orders." McKinley knew that any delay was hazardous, and so, acting on his own view of the position of the armies, at once replied: "This is a case of great emergency, general, and so I order you, by command of Gen. Crook, to move your command on the road up this ravine to a position on the right of the army." The movement proved exactly right, and Duval's command was soon in position to do effective work. It drove the enemy in confusion from their works and contributed to the victory of the day. Still, it is not hard to conjecture what would have been the young aide's fate if the order had been a mistake.

In describing the fight at Fisher's Hill, Gov. McKinley called it "one of the most brilliant of the many brilliant achievements of Gen. George Crook. It was a flank movement through the mountains and woods to the enemy's right. Never did troops advance with greater difficulty, on what appeared to be an impassable route, over the mountain side, where it seemed the foot of man had never trod. Hayes led the charge down the gorge and up the hill. He led repeated charges. I can see him now, encouraging his men to make another and still another charge—until we had captured the whole of

the enemy's works and every piece of their artillery. Nothing was more brilliant or decisive during the entire war, considering the numbers in the affair."

Soon after this battle the regiment was detailed as train guard to Martinsburg and marched to Winchester, where a brigade of the enemy's cavalry was reported to be. On the march (Oct. 11) the men voted in the election that decided whether the war should be continued to success or abandoned and acknowledged a failure. Capt. McKinley's first ballot was cast for Lincoln. He voted in an old cracker box, which served for a ballot box, in company with Gens. Sheridan, Crook, and Hayes, the latter of whom was chosen to Congress at this election. The other two generals never had voted, and considerable amusement was afforded the clerks of the election by their efforts to decide in what townships in Perry and Montgomery Counties, Ohio, their votes ought to be recorded.

On the morning of Oct. 19, 1864, the National forces at Cedar Creek were surprised by Early's army and for a time were thrown into confusion and routed. Gen. Sheridan had been at Winchester, "20 miles away," but, hearing the roar of the artillery down the valley, mounted his horse and rode rapidly to the scene of action. On working to the front, he met Capt. McKinley, who, with other officers, had been striving to keep the men in line and establish a position. He had just returned from planting a battery of Col. Henry A. Dupont, of the Fifth United States Artillery, part of Gen. Crook's corps, by his orders. "Where's Crook?" asked Sheridan. Capt. McKinley turned, and together they rode off to find the general, and as Sheridan dashed down the line he yelled to the troops, amid their enthusiastic cheers: "Never mind, boys, we'll whip them yet. We'll sleep in our quarters to-night." Evidently "the wave of retreat checked its course then because the sight of the master compelled it to pause." Gens. Crook and Wright soon came up and briefly described the events of the morning to Sheridan, and under his leadership the National forces eagerly attacked and badly defeated the confident enemy. It was suggested to Sheridan during the fight that he take off his great coat, which was covered with dust, and ride down the line, and he did so. Capt. McKinley helped him remove it, when it was seen that Sheridan had on a bright new major general's uniform, which he had just obtained on his trip to Washington. "He looked every inch a soldier," said McKinley, in a speech before the Grand Army of the Republic Ohio State Encampment of 1894, "and proved the hero that day we had all along believed him to be."

A short time after this battle a successful cavalry raid by the enemy on the Baltimore and Ohio Railroad, at New Creek, caused Gen. Crook to move one of his divisions to that place. He admired Capt. McKinley and took him along. Here Gens. Crook and Kelley were captured, and Gen. Hancock took charge of the department. He retained McKinley on his staff for several months. McKinley was then assigned as acting assistant adjutant general on the staff of Gen. Samuel S. Carroll, commanding the Veteran Reserve Corps at Washington, where he remained through that exciting period which included the surrender of Lee to Grant at Appomattox and the assassination of Lincoln. Just a month before this tragedy, or on March 14, 1865, he had received from the President the document he most values of any of his papers. It is a commission as major by brevet in the volunteer United States army, "for gallant and meritorious services at the battles of Opequan, Cedar Creek, and Fisher's Hill," signed "A. Lincoln." He participated in the last great act of the war, the final

grand review in Washington, where the armies of Grant, Sherman, and Sheridan were united in May, 1865, with the same modest department that had characterized his entrance into the service in 1861. He was urged to remain in the army, but, wisely deferring to the judgment of his father, he availed himself of the opportunity to return home, and was mustered out with his regiment July 26, 1865, and returned to Poland, where the family was again reunited, his younger brother, Abner, having, like him, been a volunteer in the National army. He never was absent a day from his command on sick leave; he had only one short furlough in his four years of service; he never asked or sought promotion; he was present and active in every engagement in which his regiment participated; and he performed bravely and well every duty assigned him. His career as a soldier was in the highest degree creditable and gained for him the lifelong respect, confidence, and good will both of his superior officers and of his comrades in the ranks. On his return to Poland with his old company, a complimentary dinner was given them, and he was selected to respond to the welcoming address, which he did in a speech of rare eloquence and beauty.

He at once began the study of law under the preceptorship of Judge Charles E. Glidden and his partner, David M. Wilson, of Youngstown, Ohio, applying himself diligently during the week at Poland, and going to their office on Mondays for review and examination. After a year of such drill, during which he made astonishing progress, he completed his course at the law school in Albany, N. Y., and in March, 1867, was admitted to the bar at Warren, Ohio. On the advice of his elder sister, Anna, to whom he frequently and tenderly acknowledges his obligations, he settled in Canton, Ohio, where she was then and for many years after a beloved teacher in the public schools. Here he soon attracted attention, and by his exemplary life and devotion to his profession achieved success at the bar and great popularity. He was already an ardent Republican, and did not forsake his party because he was now a resident of an opposition county. On the contrary, in the autumn of 1867 he made his first political speeches in favor of negro suffrage, a most unpopular doctrine throughout the State. Nominations on the Republican ticket in Stark County were considered empty honors; but when, in 1869, he was placed on the ticket for prosecuting attorney he made so energetic a canvass that he was elected. He discharged the duties of this trust with fidelity and fearlessness, but in 1871 he failed of re-election by 45 votes. He thereupon resumed his increasing private practice, and during the next five years made rapid strides at the bar. As an advocate and in the studious preparation of cases he had few superiors, and he was remarkably successful.

He would undoubtedly have attained eminence and affluence in his profession but for the pressing demands of his party and the general public, whose appeals he felt he could not deny. Consequently his voice was heard in every campaign, and his services were so eagerly sought that he spoke more frequently in his county and district than even the principal candidates on the ticket. He was thoroughly informed on every issue; he presented his arguments with moderation and earnestness; and then, as in all his subsequent career, both restrained those of his own party who were wavering in their devotion to the cause and won men to it at every meeting. In the gubernatorial campaign between Hayes and Allen, in 1875, at the height of the greenback craze, he made numerous effective speeches in favor of honest money and the resumption of specie payments. Hon. Stewart L. Wood-

ford, of New York, spoke at Canton that autumn, and McKinley was prevailed upon, very reluctantly, to close the meeting. Animated by the eloquence of their visitor, McKinley captivated both the audience and the orator who had preceded him. So deep was the impression made upon him that on his return to Columbus, Mr. Woodford made it a point to see the State Committee and urge them to put McKinley upon their list of speakers. They had not heard of him before, but they put him on the list, and he has never been off it since. The next year, 1876, McKinley was nominated for Congress over several older competitors, on the first ballot, and was elected in October over Leslie L. Lanborn by 3,300 majority. During the progress of the canvass, while visiting the Centennial Exposition in Philadelphia, he was introduced by James G. Blaine to a great audience which Blaine had been addressing at the Union League Club, and scored so signal a success that he was at once in demand throughout the country. He has spoken hundreds of times since, and in almost every State and Territory, to more of his fellow-countrymen than ever were addressed by any other public man in the history of the republic; but it can be safely said that he never has failed to meet expectation or benefit the cause he advocated. He is more like Webster in personal appearance, style, and delivery than any other American orator. The simplicity of his addresses and their lofty and disinterested patriotism afford other points of similarity. They are always logical, forcible, and convincing. They appeal to Americans everywhere, not simply to citizens of one State or party, but all who love their country and seek its highest good.

Entering Congress on the day when his old colonel assumed the presidency, and in high favor with him, McKinley was not without influence even during his first term. He delivered a notable address this year at the dedication of a soldiers' monument at the President's home, Fremont, Ohio. But he devoted himself strictly to his congressional duties, and on April 15, 1878, made a speech in opposition to what was known as "the Wood tariff bill," from its author, Fernando Wood, of New York, the first of the measures designed (according to its opponents) to cripple our protective system. To this McKinley was unalterably opposed, and he not only exposed the incongruities and absurdities of the proposed law, but the impolicy and recklessness of such legislation. His views were evidently entertained by the majority of his colleagues, for, although the House was Democratic, the pending measure was postponed until the short session, and then was abandoned altogether. His speech was published and widely circulated by the Republican Congressional Committee, and otherwise attracted much attention. Mr. Blaine, in his "Twenty Years of Congress," says, in reviewing the Forty-fifth Congress: "William McKinley, Jr., entered from the Canton district. He enlisted in an Ohio regiment when but eighteen years old, and won the rank of major by meritorious services. The interests of his constituency and his own bent of mind led him to the study of industrial questions, and he was soon recognized in the House as one of the most thorough statisticians and one of the ablest defenders of the doctrine of protection."

In 1877 Ohio went strongly Democratic, and the Legislature gerrymandered the State, so that McKinley found himself confronted by 2,580 adverse majority in a new district. His opponent was Gen. Aquila Wiley, who had lost a leg in the National army, and was competent and worthy. Not deterred, McKinley entered the canvass with great energy, and after a thorough discussion of the issues in every part of the district, was re-elected to the

Forty-sixth Congress by 1,234 majority. No measures of greater importance than the attempted repeal of the Federal election laws then occupied public attention. Against their repeal McKinley was firmly committed both by personal conviction and party affiliation, and he spoke with much eloquence in opposition to the pending bill at the extra session, April 18, 1879. His speech abounds with historical and legal citations of such value that it was issued as a campaign document by the Republican National Committees of that and the following year. As chairman of the Republican State Convention of Ohio of 1880, he made another address devoted principally to the same issue. Speaker Randall gave the rising young member a place on the Judiciary Committee, and in December, 1880, appointed him to succeed President Garfield as a member of the Ways and Means Committee, an honor much sought, but which came to McKinley unsolicited, and it was repeatedly tendered him until the termination of his congressional career, in March, 1891. The same Congress made him one of the House Committee of Visitors to West Point Military Academy, which duty he greatly enjoyed, as it brought him into contact with some of the bright young men of the country, for whom he has always manifested much interest and concern. He was also chairman of the committee having in charge the Garfield memorial exercises in the House in 1881.

The Ohio Legislature of 1880 restored his old congressional district, and he was unanimously nominated to the Forty-seventh Congress. His election was assured, but he made a vigorous canvass, and was chosen over Leroy D. Thoman, subsequently one of the Civil Service Commission, by 3,571 majority. He was chosen by the Chicago convention as the Ohio member of the Republican National Committee, and accompanied Gen. Garfield on his speaking tour through New York. He opened the State campaign at Portsmouth, Ohio, in July, and also spoke in Maine, Indiana, Illinois, and other States.

The Forty-seventh Congress was Republican, and, acting on the recommendation of President Arthur, it proceeded to revise the tariff. After much discussion it was agreed to constitute a commission, who should prepare such bill or bills as were necessary and report at the next session. In the debate on this project McKinley delivered an interesting speech, April 6, 1882, in which, while not giving his unqualified approval to the creation of a commission, he insisted that a protective policy should never for an instant be abandoned or impaired. "My own preference," said he, "would be that Congress should do this work, and delegate no part of it to commissions or committees unknown in this body. This, however, is a matter of personal judgment, about which men equally intelligent and honest, equally devoted to the principle of protection, may differ, and which from any point of view is in nowise essential or material. If we can get as good work, or better, from a commission of practical experts, all ought to be satisfied and all will be. . . . Free trade may be suitable to Great Britain and its peculiar social and political structure, but it has no place in this republic, where classes are unknown, and where caste has long since been banished; where equality is the rule; where labor is dignified and honorable; where education and improvement are the individual striving of every citizen, no matter what may be the accident of his birth or the poverty of his early surroundings. Here the mechanic of to-day is the manufacturer of a few years later. Under such conditions free trade can have no abiding place here. We are doing very well; no other nation has done better or

makes a better showing in the world's balance sheet. . . . We find ourselves in the beginning of the second century of the republic without a superior in the industrial arts, without an equal in commercial prosperity, with a sound financial system, with an overflowing treasury, blessed at home and at peace with all mankind. . . . The creation of a commission will give no alarm to business, it will menace no industry in the United States. Whatever of good it offers on the first Monday in December next we can accept, all else we can and will reject." During this speech occurred an amusing colloquy between Abram S. Hewitt, of New York, and McKinley, in which the latter showed that while Hewitt was now contending that "wages in this country are not regulated by the tariff," he had in his correspondence with Jay Gould, President of the Erie Railway, some years before, declared that "free trade would simply reduce the wages of labor to the foreign standard," and that "the ability of the laborers to consume would be reduced, and a serious loss inflicted on commerce, general industry, and the business of railways especially."

The elections of 1882 occurred while the tariff commission was still holding its sessions, and the Republicans were everywhere most disastrously defeated. The Democracy carried Ohio by 19,000, and elected 13 of the 21 congressmen. McKinley had been nominated, after a sharp contest, for a fourth term, and was elected in October by the narrow margin of eight votes over his Democratic competitor, Jonathan H. Wallace. At the short session an exhaustive report by the tariff commission was submitted, and from this the Ways and Means Committee framed and promptly introduced a bill reducing existing duties, on the average, about 20 per cent. McKinley supported this measure in an explanatory and argumentative speech of some length, Jan. 27, 1883, but it was evident from the start that it could not become a law, and the Senate substitute was enacted instead. In contrasting the respective advantages of the two revenue systems, he said: "If labor was degraded on this side of the Atlantic as on the other, we might compete with the best manufacturers of the world in any market. No lover of his race, no friend of humanity, wants reduced wages. I do not speak for capital. Capital can take care of itself. Rob it of its profits in any of the so-called protected industries, and it will seek other avenues of investment and profit. I speak for the workingmen of my district, the workingmen of Ohio, and of the country." Here Mr. Springer, of Illinois, interjected: "They did not speak for you very largely at the last election." Quick as a flash, McKinley replied, amid great applause on both sides of the Chamber: "Ah, my friend, my fidelity to my constituents is not measured by the support they give me! I have convictions upon this subject which I would not surrender or refrain from advocating if 10,000 majority had been entered against me." Although his seat in the Forty-eighth Congress was contested, he continued to serve in the House until well toward the close of the long session. In this interval he delivered his great speech on the Morrison tariff bill, April 30, 1884, which was everywhere accepted as the strongest and most effective argument made against it. Speaking of the course of the majority of the Ways and Means Committee, he said: "They have determined upon doing something, no matter how mischievous, that looks to the reduction of import duties, and doing it, too, in spite of the fact that not a single request has come here either from the great producing or the great consuming classes of the United States in the direction proposed. With the power in their hands,

they have determined to put the knife in, no matter where it cuts nor how much blood it draws. It is the volunteer surgeon, unbidden, insisting upon using the knife on a body that is strong and healthy, needing only rest and release from the quack whose skill is limited to the horizontal amputation, and whose science is barren of either knowledge or discrimination. And then it is not to stop with one horizontal slash; it is to be followed by another and still another, until there is nothing left either of life or hope. And the *doctrinaires* will then have seen an exemplification of their pet science in the destruction of the great productive interests of the country, and the 'starving poor,' as denominated by the majority, will be found without work, shelter, or food. The sentiment of this country is against any such indiscriminate proposition." This seemed certainly the case, for at the conclusion of the general debate, May 6, 41 Democrats, under the leadership of Mr. Randall, voted with the Republicans to defeat the bill.

At the Ohio Republican State Convention of that year, 1884, McKinley presided, and, despite his repeated declinations and protestations that he preferred the selection of others, he was unanimously elected a delegate at large to the national convention. He disliked to oppose Senator Sherman, but he was an avowed and well-known supporter of Mr. Blaine for the presidency, and did much to further his nomination. There were few more popular or prominent delegates. He served on the Committee on Platform, drafted its tariff planks, and read it to the convention with fine effect. At more than one critical moment he held the Blaine men in line in the movements on the floor, and, as one of the vice-presidents, had admirable control of the convention while in the chair. So great was the admiration for him that several of the delegates gave him their votes in the balloting for the presidential nomination. In the campaign he was equally active and prominent. The Democrats had carried the Ohio Legislature in 1883, and he was again gerrymandered into a district supposed to be strongly against him. He accepted a renomination, made a diligent canvass, and was again elected, defeating David R. Paige, then in Congress, by 2,000 majority. But his energies were by no means confined to his own district. He accompanied Mr. Blaine on his celebrated Western tour, speaking constantly with him from the same car or platform, and, after the October election in Ohio, devoted his time to the campaign in West Virginia and New York. Excepting the candidates themselves, there was hardly a more popular or successful speaker in the country.

In the Ohio gubernatorial canvas of 1885 Major McKinley was equally active, conspicuous, and popular. He also went to Virginia in October and spoke for Mahone and Wise at Petersburg, urging the people of the Old Dominion to declare for protection as the best promoter of their material prosperity. "Make it possible," said he, "to break down the prejudices of the past. Get out from under your ancestral tree. Recognize and give force to the Constitution, permit every man to vote for the party of his choice, and have his ballot honestly counted. Push to the front where you belong as a State and a people. Be assured that the Republicans of the North harbor no resentments—only ask for the results of the war. They wish you the highest prosperity and greatest development." His district had been restored in 1886, and he was again unanimously nominated for Congress from the old Eighteenth District for the sixth time, and elected by 2,550 majority over Wallace H. Phelps, the Democratic candidate.

In the State campaigns of 1881, 1883, and 1885,

and again in 1887, he was on the stump in all parts of Ohio, two of his strongest speeches being those at Ironton, Oct. 1, 1885, on equal suffrage, and at Dayton, Oct. 18, 1887, on the Cleveland administration. In the Forty-ninth Congress, April 2, 1886, he made a notable speech on arbitration as the best means of settling labor disputes. "I believe in arbitration as a principle," said he. "I believe it should prevail in the settlement of international differences. It represents a higher civilization than the arbitrament of war. I believe it is in close accord with the best thought and sentiment of mankind; I believe it is the true way of settling differences between labor and capital; I believe it will bring both to a better understanding, uniting them closer in interest and promoting better relations, avoiding force, avoiding unjust exactions and oppression, avoiding the loss of earnings to labor, avoiding disturbances to trade and transportation, and if this House can contribute in the smallest measure by legislative expression, or otherwise, to these ends, it will deserve and receive the gratitude of all men who love peace, good order, justice, and fair play." He also spoke at this session on the payment of pensions and the surplus in the Treasury, and both speeches merit attention as forcible statements of the position of his party on those questions.

The State of Ohio designated James A. Garfield as one of the two of her sons, "illustrious for their heroic renown or distinguished by civic or military services," whose statues should be placed in the Statuary Hall at the Capitol, and he delivered a memorial address on the occasion of its presentation to Congress, Jan. 19, 1886. "Great in dealing with all public questions," he said of Garfield, "dull and commonplace in none, to me he was the strongest, broadest, and bravest when he spoke for honest money, the fulfillment of the Nation's promises, the resumption of specie payments, and the maintenance of the public faith. He contributed his share, in full measure, to secure National honesty, and preserve inviolate our National honor. None did more, few, if any, so much to bring the Government back to a sound, stable, and constitutional money. He was a very giant in those memorable struggles." At the second session, Feb. 16, 1887, he delivered a memorial address on Gen. John A. Logan, of Illinois, much admired for its beauty and tenderness. "The old soldiers will miss him," said he; "the mighty oak around which their hearts were entwined, to which their hopes clung, has fallen. The veterans have lost their steady friend, Congress one of its able counselors, the Republican party one of its great leaders, the country one of its noble defenders." He advocated the passage of the dependent pension bill, Feb. 24, over President Cleveland's veto, as a "simple act of justice," and "the instinct of a decent humanity and our Christian civilization." It was the plea of a veteran for deserving comrades; the protest of a true soldier who revolted at the thought of any veteran dying of hunger or privation, or being driven to the unwilling and grudging shelter of an almshouse in the land which he would have died to save.

The attention not only of the Fiftieth Congress, but of the country was sharply arrested by Mr. Cleveland's third annual message, Dec. 6, 1887, for it was largely devoted to a harsh assault on our protective tariff laws, upon which he was previously thought to hold a conservative position. He denounced them as "the vicious, inequitable, and illogical source of unnecessary taxation," which "ought to be at once revised and amended," because "their primary and plain effect is to raise the price to consumers of all articles imported and subject to duty, by precisely the sum paid for such duties." A bill was immediately prepared and in-

troduced in the House by Mr. Mills, embodying the President's views and policy, and the two parties were arrayed in support or opposition to it. Then occurred the most remarkable debate, under the inspiration and encouragement of the presidential canvass already pending, in the history of Congress. It may be classed as the opportunity of McKinley's congressional life, the very occasion for which, in the interests of his constituents, and according to his firm convictions from boyhood among the furnaces of the Mahoning valley, he had been unconsciously preparing himself, and never was such an opportunity more splendidly improved. Absenting himself from Congress a few days, he returned to Canton, Dec. 13, 1887, and delivered a masterly address before the Ohio State Grange on "The American Farmer." In this he declared against alien land holding and advised his hearers to remain true to their faith in protection. "We must avoid in this country," said he, "the holding of large tracts of lands by nonresident owners for speculative purposes, and set our faces against alien land holding in small or large tracts. Our public domain must be rededicated to our own people, and neither foreign syndicates nor domestic corporations must be permitted to divert it from the hallowed purpose of actual settlement and cultivation by real farmers. . . . Let us accept the advice of the fathers of the republic, heed their patriotic counsel, walk steadfastly in their faith, preserve the mutual helpfulness and harmony of the industries, and maintain our independence—National, industrial, and individual—against all the world, and thus advance to the high destiny in store for us and our posterity." He also went to Boston and discussed before the Home Market Club, Feb. 9, 1888, the question of "free raw material," upon which the majority in the House counted so confidently to divide their Republican opponents, with such breadth and force that the doctrine was abandoned in New England, where it was supposed to be strongest, as untenable and unworthy the support of any great interest or party. McKinley took the position from which he has never changed or retreated: "If protection, as a broad National policy, is not sound in principle and wholesome in practice, then it ought to be abandoned, provided something better is offered in its place. The real interest which the people of New England, as well as the people of other sections, have in this question is not narrow or sectional, but general and National. If any other system will better promote industrial growth, conserve National ends, reward individual efforts, and the just aspirations of the people, then it should be adopted, and adopted at once. . . . I warn you against false teachers who appeal to individual greed and narrow selfishness. They are sowing the seeds of destruction to a system that has produced results which are the wonder of the present century, and which, if continued, will be the marvel of the next."

On Feb. 29 he addressed the House on the bill to regulate the purchase of Government bonds, not so much in opposition to the measure, for he heartily favored their retirement as speedily as possible, but because of the wrong impression sought to be conveyed. The President and the Secretary of the Treasury, he said, had always had abundant authority to buy bonds as fast as the revenues admitted and "their ulterior motive in piling up a surplus" of \$60,000,000 in the Treasury, without retiring any of them, was evidently for the purpose of creating a condition of things in the country which would get up a scare and stampeaded against the protective system." He was willing to do anything to help "put in circulation the millions they had been hoarding, and pay off that

amount of Government debt, but he would first have the country understand why the Administration had not done this long ago."

On April 2 he presented to the House the views of the minority of the Ways and Means Committee on the Mills tariff bill, which he had himself mainly prepared, after careful investigation and study. In concluding this report, they said: "The minority regard this bill not as a revenue reduction measure, but as a direct attempt to fasten upon this country the British policy of free foreign trade. So viewing it, their sense of obligation to the people, and especially the working people employed in manufacturing and agriculture in all sections of our common country, impel them to resist it with all their power. They will assist the majority in every effort to reduce the redundant income of the Government in a direct and practicable way; but every effort of fiscal legislation which will destroy or enfeeble our industries, retard material development, or tend to reduce our labor to the standard of other countries will meet with their persistent and determined opposition." On May 18, the day the general debate was to close, McKinley delivered what was described at the time as "the most effective and eloquent tariff speech ever heard in Congress." The scenes attending its delivery were full of dramatic interest. The speaker who immediately preceded him was Samuel J. Randall, who had insisted on being brought from what proved his deathbed to protest against the passage of the proposed law. He spoke slowly and with great difficulty, and his time expired before his argument was concluded. There were cries of "Go on" and Randall asked permission to finish, but Mills walked to the front and shouted, "I object," and so the distinguished ex-Speaker was obliged to take his seat. The chair announced that "the gentleman from Ohio had the floor," and McKinley was instantly on his feet, and, as the tumult subsided, calmly but clearly spoke. "Mr. Chairman," he said, "I yield to the gentleman from Pennsylvania out of my time all that he may need in which to finish his speech on this bill." The crowded galleries, including nearly every reporter in the hall, broke into a mighty cheer, members applauded, ladies waved their handkerchiefs, and Randall again arose, thanked his "friend from Ohio" with deep feeling, and laboriously concluded his address. It was a graceful, characteristic act, true to the spirit and courtesy of the man who performed it, and the speech that followed fully justified the high expectations that the incident naturally aroused. It can not be given piecemeal, but will be read with interest as long as political orations have a permanent place in our literature. By arguments the most lucid and irrefutable, and illustrations the most pleasing and convincing, he showed that no single interest or individual anywhere was suffering either from high taxes or high prices, but that all who tried to be were busy and thrifty in the general prosperity of the times. In a well-turned illustration, at the expense of his colleague, Mr. Morse, of Boston, he showed by exhibiting to the House a suit of clothes purchased at the latter's store, that the claims of Mills as to the prices of woollens were absurd, and by equal tact he convinced his hearers of the bad policy of our Government importing foreign blankets for the army, at the expense of domestic manufacturers and home labor, for the sake of saving about 30 cents apiece on them. Many of his statements as to the bad effects of such legislation have proved prophetic, and some of his objections to the bill, as it was then before the House, were so cogent and conclusive that its authors felt constrained to amend it in the particulars enumerated. His statement of the false theo-

ries concerning "the world's markets" and the effect of protective laws upon trusts was timely and beneficial, and never has been controverted. He held that protection was from first to last a contention for labor, whether it should be well paid and independent, as befitted citizens of the republic, or poorly paid and degraded, as was conspicuously the case in governments where its opportunities and privileges were most contracted. "The hope of the country," said he, in conclusion, "is in the ballot. The future, and, as I conceive, the welfare and progress of the republic, the future condition of the wage-earners, depends upon the issue to be settled in November. Americans who love their country must be on guard on that day of supreme concern; it is their duty, their one great opportunity. Parties must be subordinated to the great interests of the masses. No party necessity is great enough to force its adherents against the country's best interests. I care not what in the future may be the party name which stands for this system, which stands for the people, I will follow its flag under whatever designation or leadership, because it is my country's flag and represents its greatness and its glory." Both Congress and the country heartily applauded this speech. The feeling among his colleagues may be shown by an incident of the day. Judge Kelley, the Republican leader of the House, had chosen McKinley to close the debate, but Mr. Haskell had begged that privilege, and McKinley, hearing of it, at once conceded it to him. When McKinley sat down, Haskell leaned over his desk, just back of McKinley's, and, clasping the latter's hand enthusiastically, declared: "Major, I shall speak last, but you have closed the debate." The press of the country gave it unusual attention, Republican committees scattered millions of copies of it, and it everywhere became a text-book of the campaign, the basis of more speeches, perhaps, than any single tariff speech yet made.

At the Ohio convention of 1888 McKinley was elected a delegate at large to the Republican National Convention, and took an active part in its proceedings. As chairman of the Committee on Resolutions he had a large share in the preparation of the platform, reported it to the convention, and secured its unanimous adoption. He was from the start the choice of many delegates for President, and when it was definitely ascertained that Mr. Blaine would not accept the nomination, a movement in his favor began that would doubtless have been successful had he permitted it to be encouraged. All the Republican congressmen then in Washington, considering his availability greater than that of any name presented, united in a telegram urging his selection. But he had gone to the convention committed to John Sherman, and viewed with abhorrence the idea of himself accepting an honor which he was earnestly seeking for another. The first day's balloting was indecisive, but on Saturday morning it was evident that sentiment was rapidly centering upon him, and this the next roll call soon developed. McKinley leaped upon his chair at the head of the Ohio delegation, and in the hush of the moment was heard by every man in the hall. "I am not insensible to the honor you would do me," he said, "but in the presence of the duty resting upon me I can not remain silent with honor. I can not consistently with the wish of the State whose credentials I bear and which has trusted me; I can not with honorable fidelity to John Sherman, who has trusted me in his cause and with his cause; I can not consistently with my own views of personal integrity, consent, or seem to consent, to permit my name to be used as a candidate before this convention. I would not respect myself if I could find it in my heart to do, or per-

mit to be done, that which could even be ground for any one to suspect that I wavered in my loyalty to Ohio, or my devotion to the chief of her choice, and the chief of mine. I do not request, I demand, that no delegate who would not cast reflection upon me shall cast a ballot for me." The effect on the convention was as he intended; no honorable man could fail to respect his demand; but the pressure from the country for his nomination was by no means abated. The convention adjourned until Monday, and Saturday and Sunday groups of delegates were constantly meeting and resolving to support him. The Connecticut and New Jersey delegations both determined to vote for him unanimously; but he went to their rooms and, in the words of a delegate, implored them "almost with tears in his eyes" not to do so. His labors for Sherman were incessant and effective, but while he could not accomplish his friend's nomination, he did preserve his own integrity and increase the general respect and confidence of the people in himself. He did not consider the matter in the light, as the newspapers stated it, of "casting aside a crown," but as the only course that true rectitude admitted. To one who suggested that he had done as noble a thing as was ever known in politics, he simply asked, "Is it such an honorable thing not to do a dishonorable act?" and from that standpoint only did he view it. Although Congress remained in session through most of the campaign, he nevertheless spoke throughout the country as widely and frequently as his official duties admitted. His best address, perhaps, was at Atlanta, Ga., where he spoke before the Piedmont Chautauqua Association, Aug. 21, on the benefits of protection to the South, ever a favorite topic with him. "The protective system must stand as a whole or fall as a whole," he declared. "As Burke said of liberty, it is the clear right of all or of none. It is only perfect when universal. It must be a protective tariff for all interests requiring the encouragement of the Government, or it must be free trade, or a revenue tariff, and rest alike upon all classes and all portions of the country. . . . Men of Georgia, upon this great industrial question there should be no North or South. To us of every section the interests of our homes are uppermost; we have not been intrusted with the care of other nations and other peoples. We will not interfere with them; we bid them not to interfere with us. In this conflict, influenced by patriotism, National interest, and National pride, let us be Americans."

He was for the seventh time nominated and elected to Congress in the following November, defeating George P. Ikert by 4,100 votes. The Mills bill passed the House, but a substitute was framed and adopted by the Senate, upon which, however, the House declined to accede to a committee of conference, and so, with seeming discourtesy, the matter dropped. Major McKinley protested against this action in a speech (Jan. 26, 1889), in which he pointed out that the revenues could be reduced from \$35,000,000 to \$40,000,000 per annum, "without the majority surrendering one jot of their free-trade, or the minority of their protection principles, and still preserve for future settlement the general policy of taxation respectively adhered to by the two parties."

In the Ohio campaign of 1889 he took an active and prominent part, making about 60 speeches in half as many counties. One of the best of these was on "Protection and Revenue," before a great audience in Cleveland, Oct. 5. At the organization of the Fifty-first Congress he was a candidate for Speaker, but, although strongly supported, he was beaten on the third ballot in the Republican caucus by Thomas B. Reed. He resumed his place on the Ways and Means Committee, and on the death of

Judge Kelley, soon afterward, became its chairman.

Thus devolved upon him, at a most critical juncture, the leadership of the House, under circumstances of peculiar difficulty, his party having only a nominal majority, and it requiring always hearty concord and co-operation to pass any important measure. The minority had resolved upon a policy of obstruction and delay, declaring they would clog the wheels of legislation, and, by refusing to participate in business, prevent anything being done. They held to the extraordinary doctrine that, though actually present, they were constructively absent whenever they refused to respond to roll call, and could not then be counted to make up a quorum. The Speaker proceeded nevertheless to count them, and this brought about a bitter contest over the rules of procedure, upon which McKinley spoke (Jan. 30, 1890) with moderation, thoroughness, and strength, and with his usual effectiveness. His argument in favor of the Republican position was pronounced the ablest made, and has been characterized as "more like the brief of a great lawyer than a speech in a heated political controversy." The Republican side had wavered in the first attack of the opposition, but they now rallied solidly to McKinley's support, and the cause was won, the Speaker himself heartily thanking him for his great and timely assistance. On April 24, 1890, he spoke in favor of sustaining the civil-service law, to which there was decided opposition. "The Republican party," said he, "must take no step backward. The merit system is here, and it is here to stay. We may just as well understand and accept this now, and give our attention to correcting abuses, if any exist, and to improving the law, wherever it can be done, to the advantage of the public service."

On Dec. 17, 1889, he introduced the first important tariff measure of the session—a bill "to simplify the laws in relation to the collection of the revenue." Its object, as explained by him, was "to protect the honest importer in the United States against the unscrupulous and dishonest importer; to protect American producers and dealers from the undervaluations and frauds that had long been practiced upon them; to take the business of importing out of the hands of dishonest men and place it, as it once was, in the hands of honest agents, factors, and merchants." It looked strictly "to the faithful collection of the import duties justly due this country, for it was notorious that for years past, by an iniquitous system of consignments and undervaluations, and the establishment of foreign agencies on this side of the Atlantic, there had not been collected by from one fourth to one half of the tariff properly due the United States on the true valuation of the goods and products imported." The bill passed the House March 5, and the Senate, as amended, March 20, went to a conference committee, who agreed upon a report that was concurred in, and was approved June 10, 1890. It is known as the "customs administration bill," is similar in its provisions to a bill introduced in the Fiftieth Congress, as the outgrowth of a careful, nonpartisan investigation by the Senate Committee on Finance, and has proved a wise and salutary law. Meanwhile (April 16, 1890) he introduced the general tariff measure that has since borne his name, and that for four months had been under constant consideration by the Ways and Means Committee, during which time every interest in the country that had asked for it had been given a hearing. Manufacturers, laborers, merchants, farmers, importers, agents and factors, free traders and protectionists, all who presented themselves to the committee, were freely, fully, and patiently heard. The minority, equally with the majority, were given

every opportunity to present their views and testimony, and to hear those of the opposition. All this entailed a burden of work and trouble upon the chairman that it is impossible to conceive, but it was borne with a patience and consideration perfectly amazing. His speech in support of the measure, May 7, fully sustained his high reputation as an orator and dispassionate advocate, and, despite the many sharp differences of opinion as to the particular schedules or items, its reception by the House proved conclusively that the passage of the bill was assured. Seldom, if ever, in the annals of Congress, has such hearty applause been given to any leader as that which greeted him at the conclusion of this eloquent address. It seemed as if every Republican on the floor united in the demand for an immediate vote when with ringing tones he declared: "With me this position is a deep conviction, not a theory. I believe in it, and thus warmly advocate it, because enveloped in it are my country's highest development and greatest prosperity. Out of it comes the greatest gain to the people, the greatest comfort to the masses, the widest encouragement to manly aspirations—with the largest reward, dignifying and elevating our citizenship, upon which the safety, purity, and permanency of our political system depend." The bill was passed by the House on May 21, but was debated for months in the Senate, that body finally passing it, as amended, on Sept. 11. The amendments were numerous, but mostly verbal, or other slight changes, upon which the conference committee quickly agreed. The House accepted the reciprocity amendment, proposed by the Senate, which McKinley had unavailingly supported before the House Committee, and the Senate accepted the internal-revenue sections insisted upon by the House; and thereupon the bill became a law, subject to the approval of the President, which was given Oct. 6, 1890.

In the midst of the innumerable difficulties of this protracted struggle, Major McKinley had displayed qualities of leadership and self-control, of management and tact, and of patience and good nature, that were indeed remarkable, and without which the measure must inevitably have failed. A single rash or hasty move, an angry or bitter word in debate, a failure of proper recognition or respectful attention to any one of a dozen contentious members of his own party, as well as the united Democracy, would have lost the fight. But no such excuse for opposition was ever given, and so the bill received the support of all the Republicans in Congress who voted upon it, except three. Its passage was hardly effected, however, before the general election occurred, and in this the Republicans were, as anticipated, badly defeated. His own district had been gerrymandered again, so that he had 3,000 majority to overcome. Hardly a month elapsed from the adjournment of Congress before the election, but he accepted the nomination for Congress and entered the fight with the determination to de-

THE GERRYMANDER OF THE 16TH OHIO DISTRICT, BY WHICH MCKINLEY WAS DEFEATED IN 1890.

serve success, even though the odds against him were invincible. Never was a congressional campaign more fiercely fought, the contest immediately

assuming a National phase, and attracting attention everywhere, similar to that given the noted Lincoln-Douglas debate in Illinois thirty-two years before. His competitor was Hon. John G. Warwiek, recently Lieutenant Governor, a wealthy merchant and coal operator of his own county, who was ably supported by the strongest Democratic leaders of the country. Despite the fact that the tide of public sentiment was clearly against his party, and that the most outrageous imposition was practiced upon the people in the outcry about the prices of all kinds of goods being advanced by the new tariff, McKinley still ran largely ahead of his ticket and came within 300 of being elected. No Republican had ever received nearly so many votes in the counties composing the district, his vote exceeding by 1,250 that of Harrison in the previous presidential campaign. He returned to Congress for the short session, where but little general legislation was attempted, with the same confidence in the justice and ultimate triumph of the great principle he had so long advocated that always has animated him. Immediately after the election a popular movement began in Ohio for his nomination for Governor. It was evident before the winter was half over that he would be nominated, and the sentiment continued to increase so strongly that when it was learned that he would accept the State convention in June, 1891, made him its candidate by acclamation. Meanwhile he made speeches and addresses that added to his reputation as an eloquent and ready orator. In Congress he spoke and voted for the eight-hour law; he advocated efficient antitrust and antioption laws; he supported the direct-tax refunding law in an argument that abounds with pertinent information; and he presented and advised the adoption of a resolution declaring that nothing in the new tariff law should be held to invalidate our treaty with Hawaii. In December, 1890, he responded to the toast "New England and the Future," at the New England dinner in Philadelphia. On the occasion of the seventieth anniversary of the birth of Judge Thurman, at Columbus, in November, 1890, Mr. Cleveland spoke upon "American Citizenship," and "made cheapness the theme of his discourse, counting it one of the highest aspirations of American life." Major McKinley, replying to this address at the Lincoln banquet in Toledo, Feb. 12, 1891, to the contrary held that such a boon as "cheap coats" meant inevitably "cheap men," with all the evils of cheap and degraded labor. He spoke of the future most confidently, and, while not arrogating to himself undue credit, he in nowise shirked responsibility for the new tariff law, which was then condemned throughout the country by both the Democratic and independent parties and press, as well as by many wavering Republican leaders and prominent journals. "Time and experience have vindicated the protective system," he said, "and time and truth will vindicate the new law, which was founded upon it. False witnesses will be confounded by the unimpeachable testimony of trade and experience. Their portents have already been impeached; false prophecy must fall before good times and abounding prosperity. Campaign prices have already been convicted as campaign lies." He spoke at the jubilee of the "Tribune," New York, April 10, 1891, in the same hopeful vein: "The issue may be blinded by other considerations, it may be subordinated for a time to other questions, but when it is once clearly presented, the plain people, whose interests and industries are involved, whose wages and homes are affected, can not be induced to vote against themselves, against their families and fellow-citizens, and in opposition to the progress and glory of the republic. I have an abiding faith in the people."

His popularity with the old soldiers is very great, and no speaker of his time has ever been more heartily greeted by them. He has spoken frequently at their National Encampments—at San Francisco, Indianapolis, Washington, and Pittsburg—and made many patriotic addresses by their special request, such as that on "The American Volunteer Soldier," Memorial Day, 1889, in New York, or on "Pensions and the Public Debt," Canton, Ohio, May 30, 1891. In his speech accepting his first nomination for Governor he declared: "The public credit and sound finances must be preserved, and every scheme to destroy them must be met with courage and intelligence and repelled by the mighty force of public opinion. Better risk defeat, which can only be temporary, than capitulate with the demagogue or surrender to dishonesty." He spoke at Mr. Bowen's Fourth-of-July celebration at Woodstock, Conn., and opened the Ohio campaign at Niles, Aug. 22. In this speech, as in every other of the 134 made by him in that wonderful campaign, during which he visited all the 88 counties in Ohio but three, and often spoke to three or four audiences at different points in a single day and night, he declared his unalterable opposition both to free trade and free silver. "My opponent, Gov. Campbell," said he, "declared in a recent newspaper interview that, while he had his doubts about it, he was 'willing to chance the free and unlimited coinage of silver.' I am not willing to 'chance it.' Under present conditions, the country can not afford to chance it. We can not gamble with anything so sacred as money, which is the standard and measure of all values. I can imagine nothing which would be more disturbing to our credit and more deranging to our financial affairs than to make this the dumping ground of the world's silver." The campaign was earnest and spirited; both candidates made a thorough canvass, and met once in joint debate at Ada, Hardin County, in September. Here, as in the State at large, McKinley made heavy gains over the usual Republican strength. He won a decisive victory, polling the largest vote so far cast for Governor in the history of Ohio and redeeming the Legislature by safe majorities in both houses. Campbell had been elected in 1889 by 11,000 plurality in a vote of 775,000; McKinley now defeated him by 21,500 in a total of 795,000. His inaugural address, Jan. 11, 1892, was devoted exclusively to State topics, except in its reference to congressional redistricting, in which he advised that "partisanship should be avoided." He declared that "free suffrage was of little service to the citizens if its force could be defeated by legislative machinations in the form of gerrymanders," and the "large majority in the Legislature should require from every member of the dominant party the exercise of the greatest conservatism."

Soon after his inauguration as Governor the presidential campaign began, and he was importuned by friends everywhere to allow the use of his name as a candidate, many newspapers and party workers declaring their intention to support him. To every such suggestion he promptly replied that he believed Gen. Harrison justly entitled to another term and heartily favored his renomination. He was again elected a delegate at large from Ohio to the national convention, and was by it selected permanent chairman. The opponents of the President persisted in urging his name, and the delegations from Kansas and West Virginia told him that they intended to vote for him. He asked them not to do so, but urged them to support Harrison, and made the same request of every individual delegate who approached him on the subject. His wishes were so well known that no delegate ventured to

present his name, knowing he would immediately withdraw it; but when the ballot was taken many persisted in voting for him, the Ohio delegation responding 44 to 2 for him. He at once challenged this vote, from the chair, and put himself on record for Harrison, who on the entire roll call received 535 votes; Blaine, 182; McKinley, 182; Reed, 4; and Lincoln, 1. Leaving the chair, he moved to make the nomination unanimous, and it prevailed without objection. For the second time he had been greatly embarrassed by the efforts of devoted friends to make him the presidential candidate of their party, and as he left Minneapolis expressed a hearty sense of relief that he would, at any rate, never be present to witness and endure such an experience personally again. He was chairman of the committee to notify the President of his renomination, June 20, and from that time until the campaign closed was more busily engaged than perhaps any other national leader of his party, speaking in Maine, Massachusetts, New York, Pennsylvania, Michigan, Illinois, Indiana, Missouri, Kansas, Nebraska, Iowa, and Ohio, and always to great and enthusiastic audiences. His principal political addresses of the year were those at Ann Arbor, Mich., May 17, to a national convention of college clubs; on "the triumph of protection," before the Nebraska Chautauque at Beatrice, Aug. 2; and on "the issues of 1892" at Philadelphia, Sept. 23.

The fight was lost through no fault of his, but the people seemed to have repudiated protection, and, as in 1890, the law bearing his name, as well as he himself, was the subject of sneers and jests from every quarter. Members of his own party were everywhere complaining, timid, or openly hostile, and ready to turn their backs on the party's record. But he lost neither courage nor confidence. He had no apologies or excuses to offer. He had not sought credit for his efforts for protection, and he feared no criticism. In 1890, speaking of the Ohio campaign and his own defeat, while his friends were still in the gloom of despair, he declared: "Protection was never stronger than it is at this hour. And it will grow in strength and in the hearts of the people"; and he saw his prediction fully verified the next year. Again, in 1892, men of his own party gathering about him at his hotel in New York, distressed at defeat and disturbed for the future, had new faith when he said: "My friends, be firm. This is only a cross current, a choppy sea; the tide of truth flows surely on beneath;" and in a year longer they saw it was so. In responding to the toast "The Republican Party," at the Lincoln banquet in Columbus, in 1893, he again manifested the same high spirit. "The defeat of 1892 has not made Republican principles less true," said he, "nor our faith in their ultimate triumph less firm. The party accepts with true American spirit the popular verdict, and, challenging the interpretation put upon it by our political opponents, takes an appeal to the people, whose court is always open, and whose right of review is never questioned. . . . What our political enemies may do is no measure of our duty. Whatever they do or fail to do, our course is plain. Whether they keep faith or break it, let us keep ours unsullied and in honor. We must stand for Republican doctrines, and for every one of them. The best our opponents can do will be bad enough; little or much, it will unsettle business and force industrial changes. Even inaction will cause anxious suspense, which will shake confidence."

In his first annual message, Jan. 3, 1893, he called attention to the financial condition of the State, enjoined economy in appropriations, and the application of strict business principles in every part of the public service. His sympathy with laboring men is

apparent in his recommendation of additional protection to steam and electric railroad employes, and his interest in the problems of municipal government by his approval of what is called the "Federal plan" of administration. On the seventy-first anniversary of the birth of Ulysses S. Grant he delivered an address in Galena, Ill., and on June 20 a memorial address on Rutherford B. Hayes in Delaware, Ohio, both of which were greatly admired for their research and beauty. At the Republican convention in Ohio he was unanimously renominated for Governor, and he entered upon the campaign with a vigor and confidence that insured success from its very beginning. He made an exhaustive canvass and was re-elected by an overwhelming majority, the greatest ever recorded, with a single exception during the war, for any candidate up to that time in the history of the State. His competitor was Lawrence T. Neal, who, as a member of the Committee on Resolutions at the Democratic National Convention of 1892, had written the plank denouncing the new tariff law as a "fraud," as "unconstitutional," as a "sham," and as "the culminating atrocity of class legislation." The issues discussed were National, and McKinley's voice was again heard in every locality in the State in earnest condemnation of "those twin heresies, free trade and free silver." His election was predicted, but by none was it expected by so great a preponderance—his vote aggregating 433,000 and his plurality 80,995.

The country viewed this result as indicative of what would be recorded at the next National election, and he was everywhere hailed as the most prominent Republican aspirant for President. His second annual message ranks high among such papers. He recommended biennial sessions of the Legislature; a revision of the tax laws by a commission created for the purpose; condemned any increase of local taxation and indebtedness; called attention to the annual report of the State Board of Charities, a nonpartisan body, which declared that "the general condition of the benevolent and correctional institutions of the State was never better than at present"; enjoined the necessity for economy; and warned his party, which had elected three fourths of the Legislature, that the greater its power the vaster were its responsibilities, and the less excusable was needless or reckless legislation. The affairs of the State were never more prudently or capably administered, the only complaints being about details of official inattention that never had been given any notice whatever.

On Feb. 22, 1894, McKinley delivered an address on the life and public services of George Washington, under the auspices of the Union League Club in the Auditorium at Chicago, which gave much gratification to his friends and admirers. Nothing could have exceeded the interest and delight of the vast audience, and the address will always command attention among the many great lectures on this most familiar of American characters. He reluctantly consented to speak in Minneapolis on the tariff question March 28, fearing it would be impossible to procure a representative audience at so early a season. Every county and town in the State was represented, and the large exposition hall in which the national convention had been held was filled to its utmost capacity by an enthusiastic audience. Contemplating the condition of the country and the effects of the agitation then going on, he said: "A revenue tariff is the sure precursor of national poverty and individual bankruptcy and distress. It is a forerunner of hard times. It is without a single worthy triumph. The years in which it has been tried in the United States excite neither our respect nor our pride. It has furnished no inspiring page in

our history. Its record has been one of deficient revenue, greater bonded indebtedness, and universal want among the people." Beginning at Bangor, Me., Sept. 8, and continuing through the next two months, he was constantly on the platform, his tour from State to State being such an ovation as was never before given any public speaker. The Wilson-Gorman tariff law had just been enacted, and to this he devoted his chief attention, his arraignment of the measure being warmly applauded by the country as a deserved and proper rebuke of the party in power. "The Administration and Congress," he declared, "are without compass or rudder. They have at length passed a tariff law, such as it is; but if we credit Democratic testimony alone the people burn with impatience for an opportunity to repudiate both it and them. We could bear with resignation their party differences and demoralization, if the Democratic party was the sole sufferer; but when we contemplate the widespread ruin to business, enterprise, and employment, we appreciate the dreadful sacrifice which this Administration has entailed and the appalling mistake of 1892."

At Indianapolis, Sept. 26, Gen. Harrison introduced him to an audience such as had never before assembled in that city on the occasion of the opening of a State campaign, in the following felicitous words: "Major McKinley has endeared himself to all by his record as a gallant soldier, battling for the flag. He has honored himself, his State, and the country by his conspicuous services in high legislative and executive places. No man more than he is familiar with the questions that now engage public thought. No man is more able than he lucidly to set them before the people. I do not need to invoke your attention to what he shall say. He will command it." After returning to Ohio to open the State campaign at Findlay, Gov. McKinley set out for the West, and in a series of speeches through Missouri, Kansas, Nebraska, Iowa, Minnesota, Wisconsin, Illinois, Indiana, Michigan, and again in Ohio, was greeted apparently by the entire populace. He proved himself one of the most remarkable campaigners the country has ever known. Traveling in special trains, under the auspices of State committees, his meetings began at daybreak and continued until nightfall or later from his car, or from adjacent platforms, crowds greeting him at every station, and, whether stops had been arranged or not, blocking the track until he appeared and addressed them. He frequently spoke a dozen times a day, and two, three, or four times at night in the largest halls of the chief cities on his route. In his trip through Wisconsin he spoke twenty-three times in sixteen hours, and his itinerary in Iowa was so arranged that he visited every congressional district but two. Turning southward from Cincinnati on a Friday morning, he made the long trip to New Orleans to address a monster mass meeting there Saturday night, as well as smaller audiences in Kentucky, Tennessee, Alabama, and Mississippi *en route*. The 2,000 miles were traveled, with all the intervening speeches and thousands of personal greetings, without a single appointment in West Virginia being missed on Monday, or an audience anywhere detained. Thence from Wheeling via Pittsburg and Erie to Buffalo, the tour was continued through northern and central New York, the last four meetings being at Philadelphia on Saturday night. From this city he was induced to travel directly to Olney, Ill., where he spoke Monday morning to 10,000 people before breakfast, and journeyed through the central and most populous district of the State, addressing great audiences at every station, over 200 miles, to speak at Chicago that night. Here the greatest political meeting in the history of the city greeted him; but at daylight

he was again speeding through Ohio, to conclude the campaign by a tour of his own State. On undertaking the journey he had agreed to make 46 speeches. He made them, and 325 more, in 300 different towns. For over eight weeks he averaged seven speeches a day, ranging in length from ten minutes to an hour; and in this time he traveled over 16,000 miles and addressed fully 2,000,000 people. Never were more effective speeches delivered, for at every point visited his party achieved phenomenal victories, carrying the popular branch of Congress, largely by the impetus he gave to the campaign, by more than a two-thirds majority.

During the ensuing winter his official duties as Governor were made the more arduous by the prevalence of great distress in the mining districts of the Hocking valley. Here at one time 7,000 people were without food, except that furnished by the public. Employment could not be had; but Gov. McKinley, by appeals to the generous people of the State, raised by voluntary contributions sufficient funds and provisions to meet every case of actual privation, through relief committees of his own selection, the bulk of the work being done under his personal direction at Columbus. Several serious outbreaks occurred during his administration, at one time requiring the presence of 3,000 of the National Guard in the field and entailing an outlay of more than \$60,000, but this extraordinary expense was met by most advantageous arrangements with private capitalists without the expense and delay of an extra session of the Legislature. On three occasions prisoners were saved from mobs and safely incarcerated in the State Prison. His declaration that "lynchings must not be tolerated in Ohio" was literally made good for the first time in any State administration. In February, 1895, he delivered notable addresses at Albany, N. Y., before the Unconditional Republican Club, on Lincoln, and at Rochester, on "The Business Man in Politics." In the following April he visited Hartford, Conn., and spoke to a State club that bore his name, and on Memorial Day he delivered an oration on Grant at his tomb in Riverside Park, New York city. In the ensuing political canvass he confined his speaking to Ohio, where, under his magnetic leadership, a brilliant and decisive Republican victory was won, and his party, for the first time for thirty years, succeeded in the effort to elect both United States Senators.

On the expiration of his term as Governor he returned to his old home at Canton, at which he quietly remained during the next six months, except for a visit to Chicago to fill a deferred engagement of the previous year to address the Marquette Club on the life and public services of Lincoln, Feb. 12, 1896. The country was already ablaze with political excitement, and many friendly advisers urged him to break his promise and not give his rivals the advantage of any possible mistake on such an occasion. But, disdaining these suggestions, he spoke with his usual candor and sincerity, and not only delivered a splendid historical address, but, using Lincoln's views on the tariff as a text, boldly advanced his views upon what should constitute the Republican platform in the pending campaign. The people applauded his position, and simultaneously throughout the country began a movement in his favor that proved almost irresistible in every popular convention. State after State and district after district declared for him, until, when at length the national convention assembled, he was the choice of more than two thirds of the delegates for President, on the very platform that four months before he had so clearly outlined. In the presidential canvass this confidence and love were again signally manifested in a manner new to the zeal and enthu-

siasm of even these remarkable campaigns. Early in the contest he announced his determination not to engage in the speaking campaign, his only contribution to the cause to be his expected letter of acceptance. This proved to be one of the strongest papers of its kind in the annals of American politics, but the people were not content. Realizing that they could not induce him to set out on what he thought an undignified vote-seeking tour of the country, they immediately began to flock by the thousand to his modest home in Canton, and here from his doorstep he welcomed and spoke to them. In this manner more than 300 speeches were made from June 19 to Nov. 2, 1896, to the more than 750,000 strangers who came in special excursion trains from all parts of the country for that express purpose. Enthusiastic visitors from States as distant as Nebraska, Kansas, Missouri, Tennessee, Virginia, Maryland, Vermont, and New York came daily to mingle with the shouting thousands from all parts of Illinois, Indiana, Michigan, Kentucky, West Virginia, Pennsylvania, and Ohio. About 30 States sent such delegations, and more than thirty times as many political clubs and organizations were represented in them. Men of both old parties and both old sections, and equally enthusiastic women and children, with every species of music and decorations. More than 50,000 came at the formal opening of the speaking campaign, and nearly as large crowds on three other great days. They tore down and carried away the wooden fences piecemeal, but were always good natured and devoted to the leader, whose charming personality attracted them. His speeches were as remarkable for their good sense, originality, versatility, and effectiveness as these pilgrimages were unique and unprecedented. In spite of the enormous strain upon Major McKinley's mental resources, his physical powers were put to the sorest trial, yet no visitor was ever repelled or disappointed. Not only was every delegation satisfied, but the country each morning was given some new text for contemplation and conversation, always patriotic and encouraging to the cause he espoused. Nothing like it was ever before known. His only departure from home during the campaign was a hasty trip to Cleveland to speak at the centennial anniversary of that city, where he reviewed a procession said to number more than 250,000 people.

In the Republican National Convention held in St. Louis in June, 1896, he was nominated for President on the first ballot, and in the ensuing election he received a popular vote of 7,104,779, a plurality of 601,854 over his principal opponent, William J. Bryan. In the electoral college McKinley received 271 votes, against 176 for Bryan. The prominent issues in the canvass were the questions of free coinage of silver and restoration of the protective tariff system. The States carried by Major McKinley were: California, Connecticut, Delaware, Illinois, Indiana, Iowa, Kentucky, Maine, Maryland, Massachusetts, Michigan, Minnesota, New Hampshire, New Jersey, New York, North Dakota, Ohio, Oregon, Pennsylvania, Rhode Island, Vermont, West Virginia, and Wisconsin. For a further account of the election, platforms, etc., see the articles POLITICAL CAMPAIGN OF 1896 and UNITED STATES in this volume.

He married, Jan. 25, 1871, Miss Ida Saxton, daughter of James A. and Catherine Dewalt Saxton. Her grandparents were among the founders of Canton, nearly a century ago. Her father was a banker of large means, who, after giving Ida, his youngest daughter, many advantages of education and travel, began her business training as cashier in his bank, that she might be fitted for any change in fortune that could overtake her. Miss Saxton naturally had many admirers, but she preferred William McKinley from the moment their acquaint-

ance began. Tradition has it that they used to meet at first on the way to their respective churches, she to teach in the Presbyterian, and he to superintend the Methodist Sunday school. Similarity of tastes led to an acquaintance that soon became a mutual friendship, and before long the parents were induced to consent to their early marriage. The home life of President McKinley in its beauty and tenderness is both charming and ideal. The discipline of misfortune has developed the best in both these noble characters. Two daughters were born to them—Katie on Christmas, 1871, and Ida in 1873—but both were lost in early childhood. Mrs. McKinley's health, not robust at any time, never has rallied from the terrible blow of these two deaths in quick succession. Since then, more ardently than ever, her comfort, her wish, her happiness, under every conceivable circumstance, has been her husband's first thought and constant concern. At home no hour passes that he does not see her; and she rewards this homage with all the intensity of a proud, ardent, unselfish affection. Though not strong, Mrs. McKinley is a charming hostess, and has presided over their happy home with all the delight of a bride.

See "Speeches and Addresses of William McKinley," compiled by Joseph P. Smith (New York, 1893), and the campaign "Life of Major McKinley," by Robert P. Porter (Cleveland, 1896). For portrait, see frontispiece of this volume.

MADAGASCAR, a kingdom occupying the island of Madagascar, in the Indian Ocean. The French, after three years of military operations, concluded a treaty with the Queen of Madagascar on Dec. 12, 1885, by which she acknowledged the right of France to control the foreign policy of her Government. The treaty recognized the right of the Hova Queen to sovereignty over all the tribes of the island, and permitted the French Government to maintain a Resident General with a guard of soldiers at Antananarivo, the capital. Great Britain recognized the French protectorate by the Anglo-French convention of Aug. 5, 1890. The Hova Government still disputed the claim of France to exercise protectorate rights. After a long controversy the matter came to a crisis in 1895, and in May of that year a French expedition was landed on the western shore of the island. The French troops occupied the capital, and on Oct. 1 the Queen signed a new treaty recognizing the protectorate with all its consequences. Not only was the French Government to represent Madagascar in all its external relations, but the French Resident General was to treat directly with the representatives of foreign powers in Madagascar, decide all questions affecting foreigners, and have control over the internal administration of the island, which would be permanently occupied by a French military force. The Queen was interdicted from contracting any loans without the previous authorization of the French Government. Rainilairivony, the Prime Minister and Prince Consort, was deposed and deported to Algiers.

The Queen of Madagascar is Ranavalona Manjaka III, born in 1861, who succeeded Ranavalona II on July 13, 1883. The island has an estimated area of 228,500 square miles, and the population has been estimated at 3,500,000. Antananarivo, which was supposed to have over 100,000 inhabitants, was found by a census taken in 1896 to contain only 43,000, and the entire population of Imerina, the Hova kingdom in the center, to be only 600,000. Of the Hovas, the dominant race, about 40 per cent. have embraced Christianity, most of them following the Protestant ritual introduced by representatives of the London Missionary Society. The Protestants on the island are estimated at 450,000, the Roman Catholics at 50,000. In 1886 a loan of

15,000,000 francs was raised in France, of which 10,000,000 francs went to the French Government as a war indemnity. The revenue of the Malagasy Government is derived from customs duties, a poll tax, and royalties paid by gold-miners. The imports are cotton cloth from the United States, rum from Mauritius, and hardware and crockery from England and France. The exports are caoutchouc, hides, cattle, horns, coffee, lard, sugar, vanilla, wax, copal gum, rice, and seeds. The French 5-franc piece and the corresponding coins of Italy, Belgium, and Greece circulate as money. The chief port is Tamatave, on the east coast, and all merchandise is transported on the backs of native bearers, called *maromita*, who also carry passengers through the swamps and rivers and over the mountains to Antananarivo. Arab dhows carry on a trade with the Sakalavas of the west coast, and have brought great numbers of slaves to the island from Africa. There is a telegraph line, built by a French company and acquired by the Malagasy Government, running from Tamatave to the capital, a distance of 180 miles. The natives make cloth from the raffia palm fiber and from silk and cotton, and are expert in metal work. Gold and copper are mined, and the forests contain many valuable woods.

French Annexation.—On Jan. 18, 1896, the Queen signed an agreement brought by M. Laroche, the new Resident General. M. Hanotaux had determined to modify the treaty prepared for the Hova Queen because the resistance to the French troops had been prolonged, but his telegram did not reach Gen. Duchesne until after the treaty was signed. That officer considered that the treaty could not honorably be modified by a one-sided arrangement, but the new Minister of Foreign Affairs, M. Berthelot, influenced by the annexationists, who feared that American, German, and English merchants would obtain the benefit of French sacrifices unless the commercial treaties were abolished and a protective tariff established, sent M. Laroche with the new treaty securing the advantages of annexation in respect to foreign relations and the regulation of tariff duties, but at the same time exempting France from the responsibilities of annexation in respect to the preservation of internal order. The Queen is maintained in her prerogatives and honors as a medium between the French Government and the natives, and all the elements and machinery of the native Government continue in operation, subject to the control of the French and any modifications that they may introduce.

As a natural consequence of the occupation of Madagascar the colonies of Diego Suarez, Nossi Bé, and Ste. Marie were placed under the authority of the French Resident. The powers were on Feb. 11 notified that France had taken possession of Madagascar *de facto*. The Resident was made subject to the directions of the French Ministry of the Colonies. The unilateral act signed by the Queen was as follows:

"Her Majesty the Queen of Madagascar, after taking cognizance of the declaration of assumption of possession of the island of Madagascar by the Government of the French Republic, declares that she accepts the following conditions:

"1. The Government of the French Republic shall be represented with her Majesty the Queen of Madagascar by a resident general.

"2. The Government of the French Republic shall represent Madagascar in all its foreign relations. The resident general shall have charge of the relations with the agents of foreign powers. Questions affecting foreigners in Madagascar shall be treated through him. The diplomatic agents and consuls of France in foreign countries shall have charge of the protection of Malagasy subjects and interests.

"3. The Government of the French Republic reserves the right of maintaining in Madagascar the military forces necessary for the exercise of its authority.

"4. The resident general shall control the internal administration of the island. Her Majesty the Queen of Madagascar undertakes to proceed to the reforms which the French Government shall judge desirable for the economic development of the island and the progress of civilization.

"5. The Government of her Majesty the Queen of Madagascar debars itself from contracting any loan without the sanction of the Government of the French Republic."

While the other governments represented by diplomatic and consular agents at Antananarivo and Tamatave accepted the French view of the consequences of the act described as a "taking of possession recognized by the Queen," including the abolition of extraterritorial consular jurisdiction, the governments of the United States and Great Britain asked for enlightenment regarding the international and legal status of Madagascar and the exact effect which France desired to give to the conversion of the protectorate into a French possession without annexation. The United States Government declined to accept the notification as equivalent to the annulment of the commercial treaties made with the Hova Queen, and was prepared to demand equal treatment under the favored-nation clause if French products were admitted duty free. The process of establishing French rule in Madagascar proceeded in rapid progression. When M. Laroche first came he announced that gold-seekers of all nationalities would be allowed to locate claims on payment of a license fee of 25 francs. Soon after American and British miners arrived he rescinded the order and refused to grant prospecting permits to any except French citizens. French officials arrived by every steamer. Roads, of which the island was totally deficient, were built on a large scale, the Hovas and Betsileo engaging willingly in the work. A new telegraph line was erected, connecting Antananarivo with Mojanga, on the west coast. The French officials watched over the *corvée* and the collection of taxes to see that no abuses were committed by the Hova governors. When M. Hanotaux returned to the Ministry of Foreign Affairs he decided that complete annexation was necessary in order to abrogate the commercial treaties and secure for French traders and settlers an exceptional position. On May 30 he introduced in the French Chamber a bill declaring Madagascar and dependent islands a French colony. French laws were to be extended to Madagascar according to the common-law system in colonial matters, but only by degrees, as they are made the object of special promulgation. Meanwhile the individual status of the inhabitants of the island and the laws, customs, and local institutions would be preserved. Queen Ranavalô would preserve her title, with the advantages and honors that it confers, and the native chiefs with whom the French officials could cooperate, would continue to govern the populations not subject to the Hovas. The Chamber agreed to the bill by a vote of 312 to 73 on June 20. The United States Government had conceded that the old treaties lapsed upon the island becoming a French colony, having previously, on April 16, received an assurance that France would extend to American citizens all the rights enjoyed under the conventions in France and French possessions. On the insistence of the Socialists, but against the wish of the Colonial Minister, who pleaded for time and for compensation to owners, the Prime Minister accepted and the Chamber passed by a unanimous vote a resolution declaring that, slavery hav-

ing been abolished by the fact of Madagascar being declared a French colony, the Government will take measures to insure immediate emancipation. The demand of M. Jaurès and his followers admitted no postponement, because slavery was declared by an act nearly half a century old to be entirely abolished in all French colonies. The bill passed the Senate on July 1.

The spread of the rebellion in the central plateau and the Mojanga valley gave an opportunity to the Radicals, the Clericals, and others to attack the administration of the Protestant Resident General, M. Laroche, and to bring charges of political intrigue against the English Methodists. When the French troops that formed the army of occupation returned home in May and June the anarchy on the island increased, as the Hovas and Hova forces that replaced them were insufficient to cope with the growing rebellion. Hence the French Government decided to replace M. Laroche with Gen. Gallieni, in whom were united the functions of governor general and commander-in-chief. M. Laroche was not recalled till November, lest the Malagasy should think the French inconstant.

When Gen. Gallieni arrived, in September, he declined to call on the Queen until she had made the first call on the representative of France, and when she finally presented herself, on Sept. 28, he made it plain to her that Madagascar had another ruler, telling her that it was now French territory and its native inhabitants French subjects, who would be treated with paternal mildness, severity being reserved for rebels. On Sept. 27 the proclamation was issued declaring that all the inhabitants of Madagascar were free. The military authorities published a notice saying that slaves could remain with their masters. The liberation of upward of 1,000,000 slaves was not attended with the disturbances that many apprehended, although some proportion of the slaves went to recruit the lawless elements. The Hova flag was abolished, and the tricolor substituted as the only emblem of sovereignty by Gen. Gallieni.

Rebellion.—The disarmament of the Hovas by the French and the supplanting of their power encouraged various tribes whom they had held in cruel subjection to take vengeance upon their former masters or to break out in lawless disorders and depredations. The Ambodirano tribes, west of the capital, formed a league which conspired to kill all the Europeans and Christians in the country. They planned an attempt to capture the capital on Nov. 29, 1895, but fell to murdering and plundering missionaries a week before that day. A French force of 300 men marched out to suppress the disorders. The tribes gathered in great numbers and attacked the French with fanatical fury, and continued their assaults when mowed down with bullets until the French had to fall back upon the capital as their ammunition became exhausted. A considerable French force being stationed in their country, and Rainihanjalaly, the commander-in-chief of the Hova forces against the French, being placed as governor over them, they attempted no further uprising. Later the Betsimisaraka, a timid people whom the Hovas have wantonly oppressed, rose against their oppressors, burned Anosibe, captured other towns, and drove the Hova Governor and his soldiers and all the Hova traders and teachers back to Imerina. The Mavrongo, a turbulent tribe that joined the rebellion, continued plundering merchandise on the road between Tamatave and Antananarivo, on which all traffic was suspended in consequence. Other bands of robbers and insurgents gathered in the south of Imerina, menacing the lives and property of all Europeans.

In March the brigand tribes all over the island renewed their activity and committed deeds of violence, now against the Hovas, who no longer held them in check, and now against white men and Christians. Gradually all the elements of heathen opposition to foreigners and Christianity and savage revolt against all law and civilization united in a patriotic campaign of massacre and pillage. The French occupation reawakened the old hatred of all white men and foreigners and united all factions, tribes, and races against the French conquerors. Riotous insurgent bands roved through the forests, surrounding Christian villages without warning, putting the inhabitants to death if they resisted, and, if they submitted, seizing and carrying off their chattels. Before the middle of summer between 300 or 400 churches were burned, and white missionaries as well as hundreds of native teachers and converts were slain. In the south the rebel chieftain, Rainibetsimisarak, made himself master of the Betsilco province and cut off all communications with the capital. In May he raided the stations of the Norwegian Lutheran missionaries and burned 50 of their churches. He attacked and destroyed the town of Antsirabe, where about 60 white women and children and invalids were defended valiantly by the French garrison of 27 men against 1,500 assailants until, when ammunition, food, and water were about exhausted, a relieving party of 250 soldiers under the Malagasy governor arrived and put the besieging force to flight. The Sakalavas became the most determined and fanatical of the rebellious peoples, closing all communications between Antananarivo and Mojanga. The road on the other side of the island to Tamatave was rendered unsafe by brigands. The rebellion spread through Imerina till it embraced the whole of the western and southern districts and was rife also in the north. Attacks were made upon the capital and upon the French forts. Provision trains and the mails were constantly stopped and plundered. The disbanded soldiers of the Queen's army joined the rebels for the sake of pillage, and, although the Hovas were the most loyal of the tribes except the Betsileo, it became apparent after Gen. Gallieni came that the organizers and ringleaders of the rebellion were courtiers of the Queen and men in authority in Antananarivo. Under the system of civil administration M. Laroche and Gen. Duchesne, with their garrison of 3,000 men, could do little to repress the Fahavallo brigandage and rebellion carried on by 20,000 insurgent guerrillas in all parts of the island. The flying columns that they sent out only aggravated the condition of the peaceful and Christian population; for after a village had been relieved or protected by a French force, the Fahavallos invariably returned to punish the villagers for receiving the foreigners or Hovas. Gen. Gallieni adopted sterner military measures. The French troops were as unable as ever to come upon the rebel bands that were familiar with all the nooks of the island, and marched without baggage four times as fast as their pursuers could move. But the chiefs of the anti-French party at the capital were made to feel the power of their conquerors, and when the prime movers of the revolt were out of the way the disturbances were quickly brought within bounds. The Queen's Minister of the Interior, Rainandrianampandry, was tried by court-martial at Antananarivo in October, found guilty of complicity in the rebellion, and put to death. Prince Ratsimanga, an uncle of the Queen, was executed for the same offense. The Prime Minister, Rainitsincazafy, was dismissed in disgrace, and no one was appointed to succeed him. Princess Ramasindrazana, the Queen's aunt, was accused of being

an English agent and exiled to Ste. Marie with her secretary, Capt. Fitz James. With considerable forces the French commanders cleared the country immediately surrounding the capital of rebels. Col. Gonard surrounded a large band in the north, and killed 163. Capt. Thevenin was alike successful south of Antananarivo. Military operations were carried on also in the outlying districts. At Imerimandroso Col. le Canus rescued the English prospector, Hutchinson, who had been held a prisoner four months. After the execution of the leaders Gen. Gallieni issued a proclamation in which he said that the people of the lower classes who had been betrayed by those high in authority into becoming Fahavalos or rebels should not suffer alone, but that all persons, great and small, would be compelled to return to duty or experience French justice, which is equal for all, of which the Government of the republic had just given proof by abolishing slavery. In December he informed the Minister of the Colonies that he was almost complete master of the insurrection in Imerina, having driven the last bands back into the forests, where arrangements were completed to harass them and track them down.

MAINE, a New England State, admitted to the Union March 15, 1820; area, 33,040 square miles. The population, according to each decennial census since admission, was 298,269 in 1820; 399,455 in 1830; 501,793 in 1840; 583,169 in 1850; 628,279 in 1860; 626,915 in 1870; 648,936 in 1880; and 661,086 in 1890. Capital, Augusta.

Government.—The following were the State officers during the year: Governor, Henry B. Cleaves; Secretary of State, Nicholas Fessenden; Treasurer, F. M. Simpson; Attorney-General, F. A. Powers; Superintendent of Schools, W. W. Stetson; Adjutant General, Selden Connor; Commissioner of Labor, S. W. Matthews; Insurance Commissioner, S. W. Carr; Forest Commissioner, Charles E. Oak; Bank Examiner, F. E. Timberlake; Liquor Commissioner, J. W. Wakefield; State Librarian, L. D. Carver; Superintendent of Public Buildings, E. C. Stevens; Inspector of Prisons, Augustus W. Gilman; Railroad Commissioners, J. B. Peaks, B. F. Chadbourne, Frederick Danforth; Commissioner of Sea and Shore Fisheries, O. B. Whitten; Commissioners of Inland Fisheries and Game, L. T. Carleton, C. E. Oak, H. O. Stanley; Cattle Commissioners, G. W. H. Bailey, T. O. Beal, J. M. Deering; State Assessors, Otis Hayford, George Pottle, W. C. Marshall; Commissioner of Wrecks, W. F. Walker; Secretary of the Board of Agriculture, B. W. McKeen; Chief Justice of the Supreme Court, John A. Peters; Associate Justices, Charles W. Walton, Andrew P. Wiswell, Lucilius A. Emery, Enoch Foster, W. P. Whitehouse, Thomas H. Haskell, and Sewall C. Strout—all Republicans except Justice Strout.

Finances.—The report of the State assessors, rendered in January, 1897, shows the number of polls returned to be 180,176, an increase for the past two years of 3,491. This indicates an increase in population of about 15,000.

The total valuation of the State is \$328,500,994. The increase over two years ago thus indicated is \$4,022,628. The wild lands and timber rights are valued at \$17,529,865. Live stock shows a reduction approximately of \$700,000 from 1894. The number of horses is 132,334, an increase of 7,150 over 1894. The number of cows is 146,044, an increase of 4,782 above 1894. The number of sheep returned was 276,386, a loss of 48,164 from 1894. The report says: "We have to meet the depreciated condition of values of all classes of property, both real and personal. We find that the late act relative to shipping places the present value at \$2,531,693, against the value in 1894 of \$6,346,228. While real-estate

property has more generally been returned at nearly its former value, personal-property valuations have largely fallen off. We have a total State valuation of \$328,500,949, against \$324,478,321 in 1894."

The amount of State taxes assessed for 1896 was \$731,941.70, against \$813,072.30 for 1895. The largest assessment on any county is on Cumberland, which paid for 1896 \$155,634.87, of which \$92,128.92 was on Portland; Bangor paid \$31,520.85; Lewiston, \$30,972.68; Augusta, \$17,368.63; Bath, \$15,590.07; and Auburn, \$15,556.34.

The balance in the treasury at the beginning of 1895 was \$458,195.85; at the end of 1896 it was, in round numbers, \$200,000. The expenditures during the two years exceeded the receipts by more than \$250,000.

The bonded debt has been paid for several years at the rate of about \$50,000 a year, and is now, in round numbers, \$2,303,000.

Education.—The number of persons between the ages of four and twenty-one in the State is 209,798; increase, 1,756. Average registered attendance per term for the year, 114,584; decrease, 218.

There were 6,786 teachers employed in 1896; 6,636 in 1895. The average monthly wages of male teachers for 1895 is \$35.11, and \$34.39 for 1896; for female teachers in 1895, \$20.04; 1896, \$22.44.

There are 4,391 schools for 1896, 5 more than for 1895. There are 46 fewer schoolhouses in the State, with present number 4,196. The estimated value of school property is \$3,738,506 for 1896, against \$3,677,715 for 1895. The total expenditures were \$1,638,598 for 1896.

The attendance at the 3 normal schools was 397 for 1895, and 474 for 1896.

The State College registered for the full term 102 regular students, 16 in the two-year pharmacy course, and 8 specials, making a total of 126 in the entering class. The attendance at the college has doubled in the past three years, being now about 300. The college has an endowment of \$231,000.

The school fund apportioned in 1896 was \$509,933. In 1895 it was \$518,185.

The State Librarian reported that a larger amount than before was appropriated in 1896 for the support of free libraries, 4 cities having been added to the list. The State adds 10 per cent. to the amount appropriated by the town or city. The 20 communities in the list gave for the purpose in all \$14,218.

Military.—The strength of the National Guard was reported in April as follows: Officers of the staff of the commander in chief, 11; First Regiment, 43 officers, 564 enlisted men; Second Regiment, 44 officers, 565 enlisted men; Ambulance Corps, 1 officer, 4 non-commissioned officers, 17 privates; Signal Corps, 1 officer, 3 non-commissioned officers, 15 privates; total, 100 officers, 1,168 enlisted men. The Signal Corps has been provided with 2 sets of telegraph and telephone instruments, 500 yards of cable, a heliograph, a compass, and signal flags.

The Maine Relief Corps Home, at Newport, which now has about 7 residents, is to be provided with a new building with accommodations for about 60, that number of applications being now on file.

State Institutions.—The report for 1895 of the Bath Military and Naval Orphan Association, rendered in February, states that the whole number of children that have been inmates of the home during the year is 61. There are at present 39. The average age is ten years and a half. The home has accommodations for 75. Grandchildren of veterans are admitted, and the children of soldiers and sailors that have served in the quota of other States, but now reside in Maine.

The corner stone of the insane hospital for the eastern part of the State, at Bangor, was laid July 15, and the buildings were inclosed at the beginning

of winter. The total length of the buildings is 235 feet, and the total width 110 feet. The hospital at Augusta is overcrowded.

The State Industrial School for Girls, at Hallowell, received 24 new inmates during the year, making a total of 463 since the opening in 1875. The average number in 1896 was 76. The number now in homes is 27; married before reaching majority, 92; reached majority while unmarried, 130; returned to friends, 56; dismissed as incorrigible, 7; deceased, 23; escaped and not recovered, 5.

In May there were 173 convicts in the State Prison, of whom 5 were women and 19 in the insane department.

At the Reform School for Boys 34 were received during the year. The whole number committed since the establishment of the institution is 2,181.

Banks.—The bank examiner reports that the banks have been unexpectedly prosperous amid the trying circumstances of the past two years. The increase in the assets of the State's banking institutions during the past official year is nearly \$2,000,000. The number of depositors in the savings banks increased almost 3,000, while the deposits increased over \$1,000,000, the average for each depositor rising from \$85.22 in 1895, to \$86.94 in 1896.

There are 52 savings banks, 34 loan and building associations, and 18 trust companies. The American Banking and Trust Company, at Auburn, closed its doors Dec. 23. It holds mortgages on farm and city property in Nebraska, Minnesota, and South Dakota, and the lateness of the wheat crop, together with the holding by the farmers of their wheat for higher prices, caused the stringency of money.

Insurance.—The returns from all the fire and marine insurance companies (except domestic mutual companies) transacting business in Maine during 1895 show that the premiums received amounted to \$1,576,489, the largest amount ever collected in this State in a single year, while the losses paid were the smallest since 1891 (\$795,533).

Returns from all life insurance companies doing business in the State, except one, show that, excluding the industrial business, there was an increase over 1894 of \$186,264 in the amount of insurance written, and an increase of \$95,264 in the premium receipts of the companies. There was also an increase of \$2,845,129 in the insurance in force.

The returns of the stock casualty and surety companies doing business in Maine for 1895 show that they wrote business to the amount of \$21,755,393, the premiums on which amounted to \$110,208. This shows an increase of \$13,877 in the receipts for 1895 over those of 1894.

Railroads.—The mileage of steam railroads was increased in 1896 by 91.78 miles, of which 43.35 was on the Bangor and Aroostook, and 30.88 on the Rumford Falls and Rangeley Lakes. The total mileage is 1,718.53.

The returns to June 30, 1896, show an increase in earnings in Maine over those of 1895 being \$8,111,507.26, against \$7,611,127.22.

The large increase of passengers on steam railroads shown by the Boston and Maine Railroad is largely due to the fact that 423.57 miles was added to the mileage of that road by the lease of the Concord and Montreal system.

For the year ending June 30, 1896, there were carried on the street railways 12,302,326 persons, one being injured to 1,118,393 carried.

The tax on railroads, including horse and electric roads, for 1895 was \$144,962.91, and for 1896 \$152,869.72. Of the latter \$67,066.22 was on the Maine Central, and \$65,093.96 on the Boston and Maine.

The law requires that all railroad companies shall pay $\frac{1}{4}$ of 1 per cent. if they have average gross receipts of \$1,500 a mile. For every \$750 addi-

tional $\frac{1}{5}$ of 1 per cent. is added, with the limitation that no road shall pay over $3\frac{1}{2}$ per cent. on its gross receipts. An additional limitation is made on roads used only for carrying freight, $1\frac{1}{2}$ per cent. being the highest required. Street railroads having average gross receipts per mile of \$1,000 and under pay $\frac{1}{10}$ of 1 per cent., and for every \$1,000 additional the same tax is added.

Cattle Report.—The Cattle Commissioners held 228 inspections of horses and cattle during the year, a number largely in excess of any previous year. The number condemned is approximately the same.

The quarantine against Massachusetts was supplemented on Nov. 12, 1895, by another much more sweeping in its provisions, which had become absolutely necessary to prevent droves and ear loads of cattle coming into Maine from other infected States.

Fish and Game.—The Commissioner of Sea and Shore Fisheries says: "There are licensed in the customs district of the State 512 fishing vessels, measuring 10,122 tons, being 75 more under fishing licenses than at last report. There are 14,690 persons connected with the fisheries."

The total valuation of the fishing industries is \$4,326,692.60, of which the largest item is the sardine industry, \$1,928,546.50; the lobster comes next, with \$790,276.70, and the fresh-fish industry third, with valuation of \$504,294. The first hermetically sealed sardines canned in the country were put up at Eastport in 1875. The cod and mackerel industries have declined, and the menhaden industry was poor during 1896, few of the fish, for some unknown reason, having come north of Cape Cod.

The Commissioners of Inland Fisheries and Game say more moose were killed in 1896 than for a long period. The number of hunters has greatly increased. They hunt not only in the season, but in August and September, hiding the game until October, when they bring out the head only, leaving the body to rot. The report says: "The rich poacher cares nothing for a fine so long as he can secure a head. Our forests are so vast that no system of wardenship could be arranged to stop summer killing. The law should step in and do it. There is no question that at least 10,000 deer have been killed in Maine during 1896. Deer are now found in every county, and there seems to be no great decrease, notwithstanding the great numbers killed. From the best information obtainable, the caribou are fast disappearing, and very soon practically will be extinct, unless more stringent laws are enacted for their protection."

A peculiar question has arisen in reference to fishing in a stream that runs from East Winthrop pond to Lake Cobbosseecontee. The law says that no salmon or trout shall be taken from any tributary to any ponds or lakes in that section. But the stream is very slow, especially since the dam of the lake was raised, and fishermen contend that it is not a tributary, but a part of the lake itself, or a connecting channel.

Labor Interests.—The ninth annual report of the Labor Commissioner, issued in March, gives the following statistics:

"The number of manufacturing establishments during the year has been largely increased over that of the previous year, the amount of capital invested being more than doubled.

"From investigations made among men in eighteen lines of industry, the whole number of reports received amounted to 556; number American born, 433; number foreign born, 123; number owning homes, 188; value of homes, \$253,725; number homes mortgaged, 43; amount of mortgages, \$17,800; number renting, 327; number having savings-

bank accounts, 228; number who have accumulated savings in former years, 436; during past year, 63; run in debt during past year, 63; neither gained nor lost during past year, 161.

The daily average of total expenditure per individual in families was found to be 31 cents; the daily average for rent, food, fuel, and lights for same, 21 cents, while the daily average for board, which covers the above-mentioned items, of men without families, is 46 cents.

"According to similar figures obtained in 1891, these same items cost at that time, respectively, 33 cents, 23 cents, and 49 cents.

The report of the Factory Inspector of the same date says: "The State has over 5,000 manufacturing establishments, giving employment to more than 75,000 workmen and paying out nearly \$27,000,000 in wages, using over \$51,000,000 worth of raw material and producing over \$95,000,000 in manufactured articles. During the year 23 factories and workshops were visited. The total number of children under sixteen years of age found employed were 1,190, of whom 643 were over fifteen and 547 under fifteen years old. By far the larger part, 970, were at work in the cotton mills, while 154 were in the woolen mills, and 43 in the shoe shops.

There was a strike of weavers at Saec in February, and one of lasters at Auburn in March.

South Portland.—A town meeting was held Feb. 20 in South Portland, which by a vote of 157 to 51 rejected a charter granted by the Legislature incorporating the town as a city.

Penobscot Indians.—The appropriations for these Indians in 1896 were \$8,019.70 and the receipts \$8,418.30; expenditures, \$8,418.30. The leases of a few of the island shores expire Jan. 1, and are to be sold by auction in April. The tribe numbers 392, an increase of two over last year. The Legislature of 1895, upon petitions of the tribe, passed a law regulating the adoption of members. The attendance at school during the year has been remarkably good, 52 being registered, with an average attendance of 48. The tribe forms an industrial community and is very largely self-supporting.

Political.—The Republican Convention for nominating presidential electors and delegates to the national convention met at Portland, April 16. The convention was unanimous and enthusiastic in favor of Thomas B. Reed as candidate for the presidency. The platform was exclusively devoted to declaring his attitude toward public questions. The resolution on the currency reads:

"He is opposed to the free and unlimited coinage of silver, except by international agreement, and, until such agreement can be obtained, he believes the present gold standard should be maintained. He has always been uncompromisingly for the maintenance of the highest national credit by the utmost good faith toward the public creditor, not for the creditor's sake, but for the nation's sake, for the sound reason that the most valuable possession of any nation in time of war or distress, next to the courage of its people, is an honorable reputation. Whoever pays with honor, borrows with ease. Sound finance and certainty at the treasury and protection for the producers will mean prosperity and peace."

The Republicans met again at Bangor, June 2, for nominating a candidate for Governor. Hon. Llewellyn Powers was chosen.

The resolutions advocated the restoration of the policy of protection taught by Lincoln, illustrated by the signal prosperity of the country for thirty years and rounded out by the reciprocity policy of Blaine, a policy adapted to the business of the country and adjusted from time to time to change in the conditions.

The financial plank was as follows:

"We are opposed to the free and unlimited coinage of silver, except by international agreement; and until such agreement can be obtained we believe that the present gold standard should be maintained."

A vigorous foreign policy was urged, also restriction of immigration and just administration of pension laws.

The Prohibitionists met in convention at Waterville, April 30. On the subject of the liquor traffic the platform said:

"We declare that the State of Maine presents a condition of lawlessness that disgraces its civilization; that nullification of the liquor law is widespread and open; that whole communities are compelled to consent to a shameless and illegal traffic; that county officials work the law for purposes of revenue; and that long-continued familiarity with illegal rum selling has begotten in a considerable number of citizens a disrespect for the authority of law in general. We hold the Republican and Democratic parties responsible for this deplorable condition; the officials of these parties nullify the law, and the voters of these parties condone the nullification at the ballot box."

Ammi S. Ladd was made the candidate for Governor.

The Populists convened at Lewiston, June 4. The resolutions reaffirmed the principles of the party and called for the free coinage of silver. Luther C. Bateman was nominated as candidate for Governor.

The Democrats met in convention at Portland, June 17. There was a contest over the resolutions. The majority report of the committee, which was adopted by a vote of 7 to 6 in the committee, was adopted in the convention by a vote of 193 to 101 against the minority report, which differed from it in declaring in favor of placing gold and silver on an equality. The resolutions that were adopted declared against sumptuary laws, interference with local affairs of municipalities by the State, unnecessary increase in public officers, and increase of salaries, and demanded the abolition of all unnecessary offices and impartiality in the laws. It called for the repeal of the act of 1893 abolishing school districts, and favored the protection of American shipping, denouncing the Republican policy.

The financial plank was as follows: "We oppose the free coinage of silver, and favor the single gold standard unless a different standard be adopted by international agreement."

Edward B. Winslow was nominated for Governor. He deferred signifying whether he would accept until after the Chicago Convention, when he declined.

The question was raised whether the State committee had power to fill the vacancy. The Secretary of State held that they had not, and another convention was called which met Aug. 6 at Waterville. A resolution was adopted approving the Chicago platform and nominees, and the gold plank in the platform adopted in June was stricken out. The gold men withdrew from the convention.

Melvin P. Frank was chosen candidate for Governor.

Later in the day the gold Democrats convened and nominated W. H. Clifford for Governor. On Aug. 20 they held a convention at Portland and chose delegates to the Indianapolis convention on a platform equivalent to the one adopted at the June State convention.

At the State election, Sept. 14, Llewellyn Powers, Republican, was elected Governor. Following were the returns as reported to the Legislature and accepted: Powers, 82,876; Frank, Democrat, 34,453; Ladd, Prohibition, 2,714; Bateman, Populist, 3,306; Clifford, National Democrat, 610; scattering, 31.

At the presidential election the vote stood: Total, 118,364; McKinley and Hobart, 80,425; Bryan and Sewall, 32,217; Palmer and Buckner, 1,864; Levering and Johnson, 1,571; Bryan and Watson, 2,287.

All the representatives in Congress will be Republican, and on joint ballot the State Legislature will have 176 Republicans to 6 Democrats.

MANITOBA, PROVINCE OF. Government and Politics.

—This province has had two years of exciting political history. In consequence of the local school question becoming a Dominion issue, the province has been kept to the front of current discussion, and has passed through an election of its own, while furnishing the chief question between the two Federal parties at another general election. In 1895 the legal question whether Mr. Greenway's Government in Manitoba had the right to abolish the Catholic separate schools of the province passed on appeal from the Supreme Court of Canada to the Judicial Committee of the British Privy Council. Judgment was given to the effect that the provincial Government had the right to do so, but that the Catholic minority of Manitoba possessed the right of appeal to the Governor General in Council—the Federal ministry—upon the question of injury to established interests. This at once brought the matter into party politics, and the Bowell Government decided to hear an appeal of this nature. The question was duly argued by opposing counsel, and the Government decided that it was their duty to order the province of Manitoba to redress the injuries done to the minority. The remedial order was consequently issued with an intimation that Parliament would be asked for legislation to enforce it, if the mandate were not obeyed. When it is remembered that the Manitoba Government was Liberal in politics, and the Dominion Cabinet Conservative, it will be seen what complications were rendered possible. Protests against the order came from various Protestant organizations in Ontario and elsewhere, while earnest demands for its enforcement came from the hierarchy of Quebec and Manitoba. The province refused to obey, and in the parliamentary session of 1896 a remedial bill was introduced "to coerce Manitoba," as opponents declared. The Liberal party blocked its progress, and the country, upon being appealed to by the Tupper ministry, which had succeeded that of Sir M. Bowell, blocked it still more effectually by defeating the Government and placing Mr. Laurier in power.

In November following it was announced that the Liberal Government of Canada and Manitoba had effected a compromise by which separate schools were not restored, but the Catholics and other denominations were given a certain period in each day for religious instructions in the school, and were allowed, in places where the majority was of the Roman Catholic faith, to have teachers of the same belief—subject, however, to provincial regulations and standard. Meantime, in December, 1895, the Greenway Government had appealed to the province upon the general question of public as opposed to denominational schools, and had been sustained by a large majority. On Feb. 6 following the ninth Manitoba Legislature was opened by the Lieutenant Governor, the Hon. J. C. Paterson, with a "speech from the throne," reading as follows:

"The harvest of the last season has been the most bountiful in the history of the province since its settlement. It is greatly to be deplored that the abundance of the products of the soil has been to some extent offset by unusually low prices. The value of such products at the point of production, compared with the cost of conveying them to the markets of the world, emphasizes the well-known fact that freight rates upon outgoing grain are most

exorbitant, and any relief which can be obtained from such rates will be eagerly welcomed.

"It was deemed wise to anticipate the time when the Legislative Assembly would be dissolved in the ordinary course in order to afford the people of the province an opportunity of expressing themselves upon the attitude assumed by my Government in relation to the pending application of the minority for a restoration of their former privileges in regard to education. The result of the election leaves no room for doubt that the attitude of my Government is in accord with the wishes of a very large majority of the people of the province.

"Foreign relations of the motherland have recently proved of an exciting and menacing character. The people of this province join with the rest of the Dominion in declaring their unswerving loyalty to the empire."

Findlay M. Young was re-elected Speaker of the House. On Feb. 26 a long resolution was introduced by Attorney-General Sifton (since a member of the Laurier Government at Ottawa) denouncing the whole policy of the Federal power regarding the Manitoba school question, and concluding with the assertion that "no case has been made out for interference with our school law by the Dominion Parliament which will justify such Parliament in overriding the well-recognized principle of provincial autonomy, a principle the maintenance of which is essential to the satisfactory operation of our Constitution," and the further statement "that this House does therefore most solemnly protest against the passage of the remedial act, which has been introduced into the House of Commons, and does hereby declare that the said act is an unnecessary and unjustifiable attack upon the constitutional rights of the Legislature and people of Manitoba." The resolution was carried by a good majority, and adjournment took place on March 19, after the following, among other, measures had been passed:

- To amend the real property act.
- To amend the municipal hail insurance act.
- To amend the vital statistics act.
- To amend the bills of sale act.
- To amend an act respecting aid to railways.
- To amend the distress act.
- To incorporate the Home Investment and Savings Company.
- For codifying the law relating to the sale of goods.
- To amend the dairy factories incorporation act.
- To incorporate the Manitoba Trusts Company.
- Respecting the profession of civil engineers.
- To amend the assessment act.
- To amend the public schools act.
- To amend the public health act.
- To amend the liquor license act.
- To amend the mechanics' lien amendment act, and to make further provision respecting the liens of mechanics and laborers.
- To amend the master and servants act.

Education.—The annual report for 1895 showed a school population of 44,932, against 36,459 in 1894, and a registered attendance of 35,371, as against 32,680. The average attendance was 19,516—an increase of some 3,000 during the year. There were 570 male and 523 female teachers, while the number of organized school districts was 956, or 40 more than in 1894. The average teacher's salary was \$427.89, or \$53 less than in the preceding year. The total receipts of the Education Department was \$855,783, a decrease of \$20,000. The expenditure was \$797,542, an increase of \$22,000. The total assets are stated at \$1,560,700, the liabilities at \$972,912. The special grants were as follow: To collegiate institutes, \$5,895; to intermediate schools, \$4,950; to ordinary schools, \$95,865; to Manitoba

minority, \$3,500; maximum grant to each school, \$130. There were 403 schools closed with religious exercises, and 396 with prayer; 295 used the Bible, and 674 had temperance instruction; 205 schools taught the Ten Commandments, and 629 gave moral instruction of some kind.

Agriculture.—The production in the province during 1895 was exceptionally good, as will be seen in the following statistics: Wheat, 1,140,276 acres, 31,755,038 bushels; oats, 482,658 acres, 22,555,733 bushels; barley, 153,839 acres, 5,645,036 bushels; potatoes, 16,716 acres, 4,042,562 bushels; turnips, 6,685 acres, 2,225,283 bushels. The area of new land broken in was 99,835 acres; the expenditure for new farm buildings was \$792,640; and the total area under all crops was 1,887,796, an increase of 295,000 acres over 1894. The export of stock, fat cattle, and hogs from Manitoba has become a valuable feature in its trade, and 22,000 head of cattle and 10,000 hogs were shipped in 1895, showing an increase of 100 per cent. in the one case and of 25 per cent. in the other. The total stock in the province, held by 25,000 farmers, amounted to 91,194 horses, 192,525 cattle, 35,766 sheep, and 59,457 pigs. A strong effort was made to increase the cheese production of the province, and at the end of the year there were 52 cheese factories, with an output of 1,553,192 pounds, valued at \$107,600. There were 19 creameries, which made \$85,650 worth of butter.

Miscellaneous.—In 1882 the gross debt of Manitoba was \$108,151; in 1895 it was \$4,679,794, but with assets estimated at \$7,146,031. The province also owns many buildings, valued at a total of \$732,000, and has lands of a partially reclaimed and available nature valued at over \$1,000,000.

MANUFACTURERS, NATIONAL ASSOCIATION OF AMERICAN, an organization containing about 10,000 members, with branches in the manufacturing States of the Union. The association was formed in 1895, and the first annual meeting was held in Chicago, Jan. 21–24, 1896. The second annual meeting was held in Philadelphia, Jan. 26–28, 1897. The association is wholly outside of political lines. It takes no position on the tariff and similar questions, although it seeks to develop and extend the trade of the United States in Central America, South America, Japan, China, and in other countries where that trade can be improved. Other objects of the association are: To secure a uniform bankruptcy law; to embody the principle of reciprocity in national legislation; to promote a judicious system of subsidies as a means to the restoration and extension of the American merchant marine; to advance the interests of the Nicaragua Canal under the control of the Federal Government; to seek the improvement and extension of the natural and artificial water ways of the Union to the full needs of commerce, with the immediate object of connecting the Great Lakes with the rivers of the Mississippi valley and the Atlantic seaboard; to show, through the consular service, where American manufacturers can secure a foreign market for their products; to establish a permanent headquarters for the exhibition of American manufactures; and to secure the creation of another officer in the Cabinet of the President of the United States, to be known as the Secretary of Manufactures and Commerce. The latter effort is the one that is now most prominent in the association. In favor of this plan, it is said that nearly every country in Europe has an officer of this sort and a bureau where manufacturers can obtain the latest and most trustworthy information as to the class of goods in demand in foreign countries. It is claimed that the bureau, if created, would do for the manufacturing interests what the Department of Agriculture has already done for the agricultural interests.

MARINE HOSPITAL SERVICE. One of the bureaux of the United States Treasury Department is distinctively an American institution, there being nothing exactly like it in any foreign country. It is not for the benefit of the navy, but is devoted to care of sick and disabled seamen of the merchant marine. Through the agency of the Boston Marine Society, as early as 1792, the attention of Congress was first directed to the needs of this class of citizens, whose lives become almost necessarily improvident while spent in the interests of commerce. No decisive action was taken until 1798, when, through the exertions of the Hon. Edward Livingston, of New York, a bill was passed establishing the Marine Hospital Service. Under its provisions a tax of 20 cents a month was placed on the pay of every seaman employed on vessels engaged either in foreign or coasting trade, and the President of the United States was authorized to use the fund thus derived for the benefit of sick and disabled American seamen. Medical treatment, under the direction of the new establishment, was begun in 1799 in Boston by providing for the care of patients at local hospitals and the appointment of a physician to look after them. The first marine hospital owned by the Government was at Washington Point, Norfolk County, Va., purchased by the United States in 1800. The General Court of Massachusetts authorized the erection of a marine hospital at Holmes Holl, now Vineyard Haven, Marthas Vineyard, in 1798, and it was in use for many years. In 1803 the first marine hospital erected by the service was completed, its site being Charlestown, Mass., for the port of Boston, and it is now standing in the navy yard at that port.

As first initiated, the service contemplated including naval officers and seamen under its operations, but in 1811 separate hospitals were established for the navy. As for several years all expenses had to be met out of the fund created by the tax on merchant seamen, and the amount collected was not sufficient to meet the demands, restrictions were necessary to limit the expenditures. Chronic and incurable cases were excluded, and in no case was relief allowed for a longer period than four months. Foreign seamen were admitted to United States marine hospitals on certain conditions, the rate of charge being 75 cents a day. In 1801 the State Department received petitions from New Orleans (which did not then belong to the United States) calling attention to the deplorable conditions existing in that city from the fact that numbers of American citizens, principally boatmen from the Mississippi and its tributaries, arrived each year during the sickly season. The constitutions of these robust Western men were enervated by climatic influences on these long flatboat voyages; frequently three out of the five composing a crew died during the trip, and it was not uncommon for the entire crew to perish, leaving the cargo deserted. The survivors, after their employers' markets were made, were left stranded in New Orleans far from home and friends, victims of fever in that low flat country, unable to enter the already crowded Spanish Poor Hospital, and refused admission to the better class of public houses. Residents of New Orleans urged the United States Government to place a tax on the pay of every boatman, in order that a sum might be raised to afford accommodations for their sick. It was also recommended that American physicians be sent to look after their welfare, as there was added to the general distress a prevalent prejudice against the Spanish doctors. In response to these representations, provision was made for sick and disabled boatmen in local hospitals at New Orleans in 1804, but a marine hospital was not erected in that city till 1837.

The principle on which the slender funds of the service were administered was to regard them as auxiliary to the provision made for charitable objects by the municipal authorities, and this principle worked a hardship in the new cities that sprang up on the banks of the Western lakes and rivers. At these places the only bond of community seemed to be the survival of the fittest, and there were few accommodations for the care of sick strangers, for the most part boatmen returning from their commercial expeditions, when left helpless on shore by the steamboats of the Mississippi. The cholera epidemic of 1832 gave a new impetus to the Marine Hospital Service. At the inland ports shocking cases occurred of boatmen ill with various diseases, huddled promiscuously into one room and almost inhumanly neglected. From such emergencies sprang the energy of this beneficent government institution. The President was authorized to receive donations of personal property and real estate to increase the Marine Hospital fund, and each year that a shortage occurred in its accounts Congress appropriated a small sum to cover the deficiency. The petitions of the lake and river districts began to win attention. The act of 1842 authorized the purchase of sites for marine hospitals at Cleveland, St. Louis, Pittsburg, Natchez, and other rising towns. The first marine hospital at Chicago was begun in 1848, but it has been far eclipsed by the present fine building designed by A. B. Mullett, which, when opened for the reception of patients in 1873, was pronounced "the finest structure of its kind in the country." During the civil war all the marine hospitals in the country were put to excellent use in providing for wounded soldiers, North and South.

While the good work of the service was ever increasing, abuses were also creeping into the system. Politics were perverting its efficiency, dishonest and incompetent administrators were sometimes intrusted with the management of the most important hygienic measures, and many of the old hospitals gained a bad reputation from simple lack of cleanliness and ventilation. The most proficient surgeons twenty-five years ago regarded fire as the only effective antiseptic, and advocated the burning of all hospital buildings after a definite term of years. To diminish the mischief resulting from misrule, a reorganization of the service was deemed essential, and in 1870 Dr. John S. Billings, surgeon general of the army, was summoned to Washington to assist in this work. The Secretary of the Treasury was then authorized to appoint a supervising surgeon at a salary of \$2,000, and the late Dr. John M. Woodworth, of Illinois, appointed in 1871, was the first person to fill this office. It was also determined to institute examinations for admission to the service, after passing which the applicants were appointed by the Secretary of the Treasury; and the duties of all employees were strictly defined. Another important change was increasing the tax levied upon each seaman to 40 cents a month, to be collected by the collector of customs at every port, and a system of outdoor dispensary relief was inaugurated in 1872 for distributing medicine. An investigation of the accounts of the service showed that an aggregate of \$4,830,994.34 had been appropriated by Congress, contributions by taxation and gift had amounted to \$7,096,968.89, and there was a surplus of \$288,028.57 to the credit of the Marine Hospital fund. The service was self-supporting and required no further aid by appropriation except for new buildings. In 1884 the hospital tax was abolished, and in its stead the tonnage tax received from foreign vessels was made available.

Soon after its reorganization the service began to attract attention abroad, and the conservative Lon-

don medical journals forgot their insular pride and were enthusiastic in according praise to the American institution. The "Lancet" even went so far as to say: "Our transatlantic neighbors, ahead of us in many things, are most decidedly in advance of the old country in providing for the care of their sick sailors," and recommended that "a leaf be taken out of the book of the Marine Hospital Service of the United States" for the improvement of the military hospitals in Great Britain.

As early as 1851 the service had been extended to San Francisco, under what is known as "the contract system," by which patients are farmed out to the lowest bidders (a practice still in operation at small ports); and subsequently a building was rented for hospital purposes, but as this was injured by the earthquake of 1868, the contract system was resumed until 1875, when the first marine hospital of the pavilion style of architecture was completed. Prior to that date all the hospitals of the service had been built according to the plan drawn by Robert Mills in the shape of the letter H, the only departure from this model being the building at Detroit, which was laid off in the shape of the letter T. The pavilion hospital was built with long wings connected with the main office by narrow passageways, the object being to isolate each ward, give increased ventilation and produce better sanitary conditions. The advantages of this style of architecture over the block hospital has caused much discussion, but a final judgment has been rendered that as good results may be obtained in one as in the other, if they are conducted under proper management. The pavilion style of architecture requires more space and is much more expensive than the older type. There are pavilion hospitals at San Francisco, New Orleans, Memphis, Cincinnati, St. Louis, Baltimore, Evansville, Ind., and Cairo, Ill.

In 1875 the supervising surgeon was made a commissioned officer, and the title of his office was changed to supervising surgeon general, his salary being increased to \$4,000 a year. The same act directed the medical officers of the establishment to inform themselves specially as to the local health laws in force at their stations, and to render promptly all the aid in their power to maintain them. This was the first practical exercise of quarantine jurisdiction by marine hospital officers, which has since been developed until the service is recognized as the guardian of the public health of the nation. In 1878 a national quarantine was established by act of Congress which embodied so many of the opinions of the supervising surgeon general relative to preventing the introduction into our country of contagious diseases from foreign ports that it has been called "the Woodworth law." Dr. Woodworth did not long survive the success of his energetic crusade against "the careless and offending people" who imported pestilence. In 1879 he died, and Surgeon John B. Hamilton, who had been temporarily in charge of the bureau, was appointed to fill the vacancy. The same year a national board of health was intrusted with the executive authority of the national quarantine on account of the yellow-fever scourge; but at the expiration of four years this important duty reverted permanently to the care of the Marine Hospital Service, and made rapid progress toward a high standard of excellence. In 1891 Dr. Hamilton resigned his office, Surgeon Walter Wyman, of Missouri, was appointed to succeed him. The most comprehensive legislation affecting the national quarantine service and the country at large was embodied in the act of Feb. 15, 1893. Under its provisions officers of the Marine Hospital Service have been detailed to serve in association with the consuls at various foreign

ports, and to authenticate the regular consular bill of health by a certificate as responsible physicians relative to the sanitary condition of vessels, cargo, crew, and passengers about to depart for the United States. Extensive investigations have been conducted by Dr. Wyman in person and by his subordinate officers in relation to the cause of yellow fever at Havana, and the strictest vigilance is maintained at all Southern ports that are exposed to the menace of disease from the island of Cuba. Regulations prohibiting shipment of Egyptian rags from infected ports during the outbreak of cholera in 1896 have been rigidly insisted upon, and, in view of the possible danger to the public health of the United States from the prevalence of the bubonic plague in India and China, the Marine Hospital Service has issued a circular, dated Jan. 18, 1897, addressed to all consular officers, masters and owners of vessels, collectors of customs, national, State, and local quarantine officers, and others, calling attention to existing quarantine regulations of the Treasury Department, and promulgating additional precautionary measures to be observed—viz., fifteen days' detention of all crews and passengers who have been exposed to the infection, and other requirements relating to cholera.

At New York, Boston, and New Orleans the maritime quarantines are owned and operated by the State and municipality; but the Marine Hospital Service is required to co-operate with these local authorities in enforcing not only their own rules and regulations, but those of the Secretary of the Treasury. The most harmonious relations exist between the Marine Hospital officers and the local boards of health, and there is a growing sentiment throughout the country in favor of yielding all control of quarantine to the General Government. Pennsylvania and North Carolina have set an example by practically surrendering their functions in this matter, and a similar proposition has been favorably discussed in Maine and in Texas. During the past year the Marine Hospital Service acquired entire control of the quarantine that guards the port of San Francisco. The quarantine system of the United States is acknowledged to be far superior to that of every other country in one important respect, viz., the precautions required to be taken by vessels at foreign ports. The regulations of the Secretary of the Treasury served as a model at the late Sanitary Conference held in Paris for the preparation of precautionary restrictions to be imposed upon cholera-bearing pilgrims. The vigilance of the Marine Hospital Service at home is equally unremitting. By an arrangement with the Immigration Commissioner at the port of New York, the destination of every immigrant arriving on a vessel that has had contagious disease on board is noted, the health officers for each State interested are warned by telegraph, and the same facts are published in the weekly pamphlet issued by the bureau, entitled "Public Health Reports." This pamphlet also contains interesting sanitary statistics. Upon the appearance of an epidemic disease in the United States, information is telegraphed from the Marine Hospital Service to all portions of the region likely to be infected; and where the contagion is threatening, officers of the service are sent to represent the Government and enforce the regulations of inland quarantine. A sanitary cordon is established round the stricken district; detention camps are equipped to segregate the well from the suspects, and these again from the sick; and a system of railroad inspection is inaugurated for the examination of passengers and the disinfecting of baggage. Depopulation of the infected district is recognized as a valuable means of controlling the epidemic, and probation camps are opened outside

the cordon as places of refuge for the fugitives, where they may be detained "under observation" for the period required for the incubation of the disease. Since 1873 the service has controlled, wholly or in part, every epidemic of yellow fever or smallpox that has occurred, the last scourge being the Brunswick epidemic of 1893. In 1885 the service took charge of railroad quarantine against small-pox in Canada, and stamped out the disease.

In the interests of the public health, the service maintains a hygienic laboratory in the building known as "the Butler House," which has been assigned to the Marine Hospital Bureau in Washington. Here experiments are constantly conducted in regard to diphtheria, antitoxin, vaccinia, and the serum therapy of smallpox. The origin and remedy for pneumonia are studied; the water supply of cities and the alleged sources of tuberculosis are also investigated. Recently special attention has been given to a new disinfecting agent, formaldehyde gas, which promises to simplify the process of disinfection.

Although cholera has been violently epidemic in Egypt and yellow fever has continued prevalent at Havana and Rio Janeiro during 1896, the watchfulness of the service has prevented the appearance

Relation of the national quarantine system to State and local quarantines.

Prevalence of cholera, yellow fever, smallpox, plague, and leprosy, and special efforts of the service to prevent introduction or spread of them.

Minor responsibilities have been imposed upon the service, growing out of the needs of other branches of the Treasury Department with which it is intimately and necessarily connected. For example, the Revenue Cutter Service relies upon it for the physical examination of officers and men; the Life Saving Service relies upon it for the physical examination of keepers and surfmen, and is indebted to it for the rejection of hundreds of men physically unsound who have sought to obtain employment under the Government as surfmen; the Steamboat Inspection Service relies upon it for determining the ability of pilots to distinguish signal lights, a number of applicants for pilot's license being rejected annually on account of color blindness; and the Immigration Bureau relies by law upon it for the medical inspection of immigrants.

The regular corps of the service consists of a supervising surgeon general, 16 surgeons, 30 passed assistant surgeons, 15 assistant surgeons, 76 acting assistant surgeons, 33 hospital stewards, and a full complement of attendants for each hospital. All

THE UNITED STATES MARINE HOSPITAL, CHICAGO.

of either scourge on our shores. Smallpox, indeed, was present in twenty-two States, and assumed an epidemic form in New Orleans, but even there the progress of contagion was arrested by the prompt order enforcing a general vaccination of all crews arriving at the stricken city. Thus it may be seen that apart from the charitable object for which it was originated—namely, the care of sick and disabled merchant seamen—the Marine Hospital Service has risen from small beginnings till it has become the mainstay of the National Government in warding off foreign pestilence and in aiding State and municipal boards of health in arresting local epidemics. Its name might appropriately be changed to the Sanitary Service of the United States. The last annual report formulates the direct efforts of the service for preservation of the public health under the following heads:

Hygienic laboratory of the Marine Hospital Service.

Sanitary reports and statistics.

Sanitary inspection service.

The national quarantine service.

Revision of maritime quarantine relations.

Promulgation of interstate quarantine regulations.

medical officers of the service are appointed by the President and confirmed by the Senate, after passing examination before a board of Marine Hospital surgeons. The original appointment is to the grade of assistant surgeon, and no officer can be promoted to the rank of passed assistant surgeon till after four years' service and a second examination. Acting assistant surgeons and hospital stewards are appointed by the Secretary of the Treasury, and all hospital attendants are employed by the medical officer in charge, subject to the approval of the department. The officers of this corps are stationed at every important port on the coast, lakes, and rivers, and, as they have all been trained in the execution of Government business, and nearly all have had quarantine experience and a practical acquaintance with epidemics, it is always feasible for the service, on the shortest possible notice, to have qualified agents at any point of danger. The corps numbers among its members men whose names have become widely known by reason of their prompt and effective services during various epidemics.

The Marine Hospital office or dispensary is generally located in or near the customhouse of a seaport, and when there is an assistant surgeon one of

the two medical officers in charge is required to be at the customhouse during the hours of business, to examine applicants, to issue a permit to enter the hospital when necessary, or to prescribe for less serious cases. At small ports the customs officials are authorized to make arrangements with local physicians for the relief of sick seamen or to furnish them transportation to the nearest hospital. The total number of seamen treated during 1896 was 53,804. Of this number, 12,954 received relief in hospitals and 40,850 were aided through the several dispensaries. Sick pilots and the sick of the Revenue Cutter Service, also the keepers and crews of life-saving stations, when sick or disabled during the active season, are admitted to the benefits of marine hospitals, and a proposition to include the employees of the Lighthouse Establishment under the same privileges has been discussed.

There are 21 marine hospitals in the United States, situated at the following ports: Boston, Mass., Portland, Me., Vineyard Haven, Mass., New York, Delaware Breakwater, Del., Baltimore, Md., Wilmington, N. C., Key West, Fla., Mobile, Ala., New Orleans, La., Louisville, Ky., Cincinnati, Ohio, Evansville, Ind., St. Louis, Mo., Memphis, Tenn., Cairo, Ill., Chicago, Ill., Cleveland, Ohio, Detroit, Mich., San Francisco, Cal., and Port Townsend, Wash. There are also 84 reliefs stations where patients are treated by Marine Hospital officers and acting assistant surgeons in local hospitals. At 20 other localities also relief is furnished under special conditions.

Recently the attention of the service has been directed to the hardships experienced by oystermen during their busy season on Chesapeake Bay. Cold, long exposure, bad food, and injuries from the dredging machines—all unite to make these men especially liable to disease and worthy of consideration. Two stations now exist, one on the Chop-tank, the other on the Patuxent, near the mouth of each river, for the relief of oystermen during winter. In the interests of humanity, the service has also been actively employed for several years endeavoring to compel the owners of steamers on the Western rivers to provide adequate protection from exposure for the deck crews of their vessels. A bill to this effect is before Congress.

There are 11 national quarantine stations, located as follows: Delaware Breakwater Quarantine, at Cape Henlopen, Del., and Ready Island Quarantine, in the Delaware River, to guard the port of Philadelphia, 40 miles above; Cape Charles Quarantine, to protect Norfolk, Fortress Monroe, Newport News, Richmond, and Washington City, the hospital being on Fisherman's island; Southport Quarantine, for Wilmington, N. C.; South Atlantic Quarantine (hospital at Blackbeard island, Ga.) for all ports along the southern Atlantic coast; Tortugas Quarantine, at Garden Key, and Gulf Quarantine, on Ship Island, Miss., to guard the ports on the Gulf of Mexico; Brunswick Quarantine, at Brunswick, Ga., also for the Gulf ports; San Diego Quarantine, at San Diego, Cal.; San Francisco Quarantine, on Angel island, Cal.; Port Townsend Quarantine, at Port Townsend, Wash., for the protection of that port and of those on Puget Sound.

But little is generally known of these stations, owing to their remoteness from populous centers; but those who have visited one of them are surprised at the completeness with which they are equipped with hospitals, detention barracks, and all the modern appliances, as well as at the scientific care exercised in isolating the sick, in segregating the suspects from the well, and in the cleansing and disinfecting of vessels. The service also maintains a small fleet in attendance upon these stations, to receive and house people in quarantine.

MARYLAND, a Middle Atlantic State, one of the original thirteen, ratified the Constitution April 28, 1788; area, 12,210 square miles. The population, according to each decennial census, was 317,728 in 1790; 341,548 in 1800; 380,546 in 1810; 407,350 in 1820; 447,040 in 1830; 470,019 in 1840; 583,034 in 1850; 687,049 in 1860; 780,894 in 1870; 934,945 in 1880; and 1,042,390 in 1890. Capital, Annapolis.

Government.—The following were the State officers during the year: Governor, Lloyd Lowndes, Republican; Secretary of State, Richard Dallam; Comptroller, Robert P. Graham; Treasurer, Thomas J. Shryock; Attorney-General, Harry M. Clabaugh; Insurance Commissioner, J. Albert Kurtz; Superintendent of Public Instruction, E. B. Prettyman; State Tax Commissioner, Thomas J. Keating; Chief Judge of the Court of Appeals, James McSherry; Associate Judges, David Fowler, A. Hunter Boyd, Henry Page, Charles B. Roberts, John P. Briscoe, William Shepard Bryan, and George M. Russum; Clerk, J. Frank Ford.

Finances.—In the treasury proper, at the beginning of the fiscal year Oct. 1, 1896, there were \$704,568.19, and cash to the credit of the funds account \$2,000; the receipts during the year were \$3,156,875.64; total, \$3,863,443.83, an excess over the previous year of \$547,631.35. This increase is the result of the issue of the Penitentiary loan for \$500,000 and the Insane Asylum loan for \$100,000, authorized by the Legislature of this year. Deducting the amount of these loans, the receipts were \$2,544,091.64, a sum less by \$65,152.45 than the receipts for 1895. The disbursements during the year were \$2,945,401.07, an increase of \$490,650.70, occasioned in part by the payment of \$150,000 for free schoolbooks, \$200,777.70 on account of the Penitentiary loan, \$99,500 to the Second Hospital for the Insane, and \$128,392.12 expenses of the Legislature.

The funded debt, Sept. 30, 1896, was \$9,384,986.24, productive assets were \$5,946,433.11. For the balance of \$3,388,553 the State had as an offset \$8,140,626.99 of unproductive stocks and \$761,579.99 due from accounting officers and incorporated institutions.

The amounts held by the several sinking funds were: General account, \$459,789.56; defense redemption loan \$3,204,770.05; exchange loan of 1889, \$160,403.50; exchange loan of 1891, \$25,000. The sinking-fund receipts were \$359,321.25, which was invested in stock of the defense redemption loan.

The receipts to the credit of the free-school fund during the year were \$70,055.36, which with the balance of \$2,000 from last year makes an aggregate of \$72,055.36. Preferred 6-per-cent. stock of the Baltimore and Ohio Railroad Company to the amount of \$118,100 is held by the State for the benefit of this fund, and on this the last semiannual 3-per-cent. dividend was not paid.

The receipts to the credit of the oyster fund during 1896 were \$64,244.02, included in which was a temporary loan from the treasury proper of \$15,000; the balance on hand at the beginning of the year was \$3,583.67; the disbursements during the year were \$67,340.86; leaving a balance of \$486.83. It is stated that the credit of the balance from last year is misleading; that had the pay roll of the officers and men and the bills contracted and then due on account of the oyster-fishery force been paid, as was afterward done, instead of there being this balance on hand there would have been a deficit of \$14,017.20. Under legislation in 1896 the receipts to the credit of this fund will be greatly increased.

Valuation.—The value of property assessed for the State levy of 1896 was \$540,461,747, an increase during the year of \$5,531,271, and the amount of

levy, \$959,319.53, of which amount \$844,620.35 was collected, being \$63,790.83 less than the collections during 1895. The total balance, exclusive of interest, due from collectors of State taxes Sept 30, 1896, was \$672,179.91.

The amount received from the tax on the gross receipts of railroads and other corporations was \$118,291.81, being \$13,496.90 less than was received in 1895. From the tax on the capital stock of incorporated institutions the receipts were \$82,078.50, an increase of \$4,383.20. From licenses and from tax on premiums paid by insurance companies \$130,865.11 was collected, an increase of \$6,464.63. From traders' licenses \$194,614.42 was collected, and from high liquor license in Baltimore city \$533,575.39. Registers of wills paid in \$139,767.70.

The levy for public schools, at 10½ cents on \$100, amounted to \$567,484.79; the receipts of public-school tax from all sources during 1896 were \$573,768.91; the balance from 1895 was \$272,368.41; the total disbursements during the fiscal year 1896 were \$591,753, leaving a balance of public-school money applicable to the school year beginning Oct. 1, 1896, of \$254,384.32. The Legislature of 1896 appropriated \$150,000 for the purchase of free text-books for schools, and authorized a levy of 2 cents on \$100 for that purpose, which levy aggregated \$108,092.34. Only \$63,629.78 was collected, and the deficiency paid from the treasury proper.

The reassessment of the property of the State under the new law was not completed during 1896, the periods at which the work was to be finished having repeatedly been advanced at the request of the assessors.

Education.—At the beginning of each quarter of the year the public-school tax was distributed, \$100,000 to white schools and \$24,500 to colored. In July the distribution of the \$49,055.36 of the free-school fund was made. The average daily attendance of children in the public schools during 1896 was 49,790.

The Legislature of 1896 made provision for free text-books in schools throughout the State by an appropriation of \$150,000 each year, the apportionment to be made "as the State school tax is now apportioned." Under this apportionment \$118,013.57 was given to the use of the white schools and \$31,986.16 to the use of the colored schools. Much discontent was created, it being claimed that the distribution should be on the basis of the actual attendance upon schools, instead of on the persons of school age, as other funds are distributed.

The attendance during the year at the Maryland School for the Deaf and Dumb averaged 100.

The Legislature appropriated \$3,000 a year for two years for the establishment of Farmers' Institutes as a department of the agricultural college, with the provision that at least one such institute shall be held in each year in each county. The first of these institutes was held in December at Upper Marlboro.

State Institutions.—In the Spring Grove Hospital for the Insane, at the end of the year, there were 187 patients, and 23 patients had been sent thence to the new hospital at Sykesville, known as Insane Hospital No. 2. The Spring Grove Hospital received an increase of \$29,000 to meet a deficiency in its running expenses, and \$35,000 for the maintenance of the new hospital.

To institutions that have not before received appropriations the Legislature this year gave as follows: Hollywood Children's Summer Home, \$500; Home for Mothers and Infants, \$500; Northeastern Day Nursery, \$1,000; Baltimore School of Medicine, \$1,000; Aged Men's and Women's Homes, \$15,000; St. Elizabeth's Home for Colored Children, \$500.

To provide for constructing and equipping an extension of the Penitentiary, an issue of \$500,000 of State bonds, bearing interest at 3-65 per cent., was authorized by the Legislature of 1896. The present Penitentiary is inadequate to the demands upon it. The number of prisoners has greatly increased during the past few years, the average number in 1892 being 274, in 1895 328, and in February, 1896, 450, while there are proper accommodations for only 232. The annual appropriation of \$20,000 was this year increased \$5,000, and an appropriation of \$50,000 was made for the new building.

Immigration.—An appropriation of \$5,000 a year for the expenses of a Bureau of Immigration was made by the Legislature of 1896, which also provided for the appointment of 3 commissioners, one of them to be superintendent of the bureau, at a salary of \$2,000 a year. Once a year he must go to Europe and remain there at least four months, in the interest of intending citizens. The term of office of the commissioners began May 1, and continues two years.

New Offices.—To provide for the extermination of the San Jose's scale, an appropriation of \$3,000 was made this year, and a State entomologist was appointed.

The office of State Geologist was created by the Legislature this year, which authorized a geological survey of the State. There are to be no salaried officers, but a moderate *per diem* allowance will be made for work actually performed in the service of the survey. Dr. William B. Clark, Professor of Geology at Johns Hopkins University, was appointed State Geologist.

The Maryland Game and Fish Protective Association was instrumental in securing the passage at the last legislative session of a stringent fish and game law, and the appointment of a game warden for the State.

Fish Hatchery.—The report of the Fish Commissioner shows that in 1895 4,685,000 young shad were hatched at the Salisbury station, 2,335,000 of which were distributed in Wicomico river; at the Sharptown station 6,075,000 were hatched, 1,600,000 of which were distributed in Nanticoke river. In April of this year more than 800,000 young perch were placed in Tom's creek, Frederick County.

Key Monument.—The Legislature appropriated \$5,000 to be applied to the fund for erecting a monument at Frederick to Francis Scott Key.

Militia.—The militia force in the State is 1 general, 24 members of the general staff, 40 members of the regimental field staff, 70 company officers, 354 noncommissioned officers, 51 musicians, 1,156 privates—an aggregate of 1,671 men. The number of men available for military duty, unorganized, was estimated at 260,000.

War Records.—Under an act of 1896 the Governor, in May, appointed a military commission, to serve without pay, to superintend the compilation and publication of the records of the soldiers, sailors, and marines accredited to Maryland during the civil war. An appropriation of \$15,000 was made to pay for such publication. The commission has issued a circular asking for the co-operation of old soldiers.

Fortifications.—Acting upon information that it is the purpose of the United States Government to begin the work of erecting extensive fortifications for the protection of the city of Baltimore so soon as authority be obtained from the State for the acquisition of sufficient land for the purpose, and upon the request of the Secretary of War, the Legislature passed an act consenting to the purchase or condemnation by the United States for fortification purposes of 29 acres at North Point, 100 at Rock Point, and 13 at Hawkin's Point.

Farm Animals.—The number and value of these in 1896 are given by the Department of Agriculture as follow: Horses, 134,955, value \$6,040,939; mules, 13,213, value \$806,321; milch cows, 150,477, value \$3,686,687; oxen and other cattle, 116,045, value \$2,241,000; sheep, 129,884, value \$348,375; swine, 318,650, value \$1,800,651.

Legislative Session.—The Legislature met on the first day of the year, and remained in session ninety days. But little legislation was effected until after the election of a United States Senator to succeed Charles H. Gibson, which began in joint session on Jan. 14. On the first ballot the vote was: George L. Wellington, Republican, 14; J. C. Milliken, Republican, 7; A. L. Dryden, Republican, 7; S. E. Mudd, Republican, 1; R. P. Dixon, Republican, 1; H. C. Forbey, Republican, 1; J. W. Smith, Democrat, 21; S. M. Henry, Democrat, 9. The ninth ballot, on Jan. 22, resulted in the election of Mr. Wellington, the vote standing as follows: Wellington, 63; Goldsborough, 1; Smith, 23; John R. Pattison, Democrat, 7; James E. Ellegood, Democrat, 1. Several legislators who had conscientious scruples about voting for any but an Eastern Shore candidate were excused from voting.

The most important measure passed was the election bill. Its sections are manifold, and introduce many changes. It provides that every two years the Governor shall appoint supervisors, who shall select judges of election and clerks, these judges to be the registers of voters. A new registration is to be made in the counties at intervals of eight years after the registration of 1896, but the registration in Baltimore must be annual. Any voter may be present in the place of registration with the right to challenge. Nominations for office may be made by convention or by primaries, or a certificate signed by a certain number of voters, and filed with the proper official will constitute a nomination. Ballots must be provided by supervisors, and sample ballots must be conspicuously and securely posted in each precinct four days before election; for marking the ballot when voting, something other than an indelible pencil may be used. Canvassing boards shall consist of the supervisors. Twenty-seven sections of the bill cover punishments for offenses, the provisions regarding the revelation of the ballot and against intimidation being especially stringent. Among the miscellaneous provisions is one to the effect that the Attorney-General shall prepare full instructions for voters at least thirty days before any State election. Before the first general registration under the law, and before every subsequent general registration next preceding a presidential election, the election districts and wards must be reprecincted by the supervisors, and no precinct in Baltimore city shall contain more than 450 voters. The passage of this bill repeals the Eastern Shore law.

Provision was made for a reassessment of the property in the State. Listing is required of every taxpayer, for real as well as personal property, and every person is required to put a valuation upon his own property, this valuation to be used only as a guide to the assessor. Scales for the valuation of mortgages and for the valuation of bonds are adopted. The mortgages of homestead and building societies are exempted from taxation. The measures providing for reassessment were introduced in the House of Delegates, were altered by many amendments, and, though not satisfactory in all their provisions, were passed during the last week of the session because both parties had pledged themselves to reassessment.

Much time was given to the discussion of a civil-service bill, with the result that it was determined to submit the question to popular vote.

At the request of the Legislature of Virginia, a joint committee of the Senate and House was appointed to confer with a similar Virginia committee to consider questions relating to fishing in the Potomac and Pocomoke rivers and Pocomoke Sound. A commission was created to prepare and report a modification of the Australian Torrens land registration system. Provision was made for the appointment of a board of commissioners for the promotion of uniformity in laws.

Bills were passed regulating the oyster industry and providing for increase of revenue therefrom; abolishing compulsory pilotage; providing that laborers employed by coal-mining corporations in Allegany County shall be paid at least once in two weeks; fixing the maximum charge for telephone service between any two cities, towns, or villages; making criminal written or oral threats to accuse a person of something which, if true, would bring the person into disrepute; allowing witnesses in an equity suit to be examined orally in open court; providing for free schoolbooks; and regulating the sale of liquor in various localities.

Among other laws enacted are the following:

To exempt from taxation property used by survivors of the civil war as sites for monuments or monumental parks, with an amendment that the exemption shall extend to all such monuments and parks in the State, and not be confined to those at or near Antietam battlefield.

To enable the Mayor and City Council of Baltimore to appropriate \$5,000 to the Association of Mexican Veterans to aid in erecting a monument.

To direct the collection and safekeeping of flags carried by Maryland organizations in the civil war.

Raising the age of consent to eighteen years.

To prohibit the sale of spurious articles marked "sterling," "sterling silver," or "coin silver."

To provide penalties for willfully placing tacks, broken glass, etc., upon any public highway, in case a pneumatic bicycle tire shall be punctured thereby.

To punish the manufacture of clothing under circumstances liable to transmit disease.

To provide for protection of workers in sweatshops.

To protect reporters in refusing to disclose the source of their information.

To do away with days of grace on bills of exchange and promissory notes.

To punish desertion of wife or child with imprisonment in the House of Correction.

To appropriate \$30,000 to compensate heirs of the late ex-Governor Bradford for property destroyed during the war.

Political.—The Populists of Maryland held the first State convention of the year at Baltimore, April 16, 55 delegates being present. Delegates to the St. Louis convention and candidates for presidential electors were selected and a platform was adopted which, after a preamble, consisted of this single resolution:

"That the delegates from this State are hereby instructed to use all honorable means and their best endeavors to effect a union for the coming campaign of all who are opposed to the rule of the money bags, if not under the same name at least under the same leaders."

The Republican State Convention met at Baltimore, April 22, and selected delegates to the National Convention and candidates for presidential electors. The platform declared "for protection to American industries, believing that only in protection can prosperity again come to this nation"; in favor of reciprocity, as tending to build up our commerce with our South American neighbors";

and commending the legislation of 1896 and the present State government. The money declaration was as follows:

"We believe in the gold standard upon which to base our circulating medium, and are opposed to free and unlimited coinage of silver until an international agreement of the important commercial countries of the world shall give silver a larger use."

The State Convention of the Democratic party was held at Baltimore, June 10. A double delegation at large, with half a vote each, was sent to the national convention and candidates for presidential electors were chosen. The platform called upon all Democrats in Maryland "to unite in a vigorous and harmonious effort to preserve our people from the evils of McKinleyism"; expressed belief in the declaration in the Chicago platform of 1892 as to tariff reform; and adopted a money plank as follows:

"Believing that the true interests of the people require that the earnings of agriculture and trade and the wages of labor should be paid in money that is intrinsically worth in all the markets of the world what it purports to be worth, we demand the maintenance of the existing gold standard of value, and further that the Government shall keep all its obligations at all times redeemable and payable in money of the greatest intrinsic value, and of the highest standard adopted by the civilized nations of the world, and we therefore resolutely oppose the free and unlimited coinage of silver at the ratio of 16 to 1."

The Platform Committee was divided on the money plank; the 5 silver men urging the adoption of a substitute that declared for free, unlimited, and independent coinage of gold and silver at the coinage ratio of 16 to 1. They were defeated by a vote of 87½ to 29½.

The Prohibition party, in State convention at Baltimore, in April 23, selected delegates to the national convention at Pittsburg and adopted a brief platform whose distinguishing feature was the reference to the fact that the party's "reasonable appeals for the enactment of the local veto bill by Legislature have been again ignored and rejected."

A second State convention was held in Baltimore, July 28, when candidates for presidential electors and members for the State Central Committee were selected, and a platform was adopted which confined itself to the liquor question.

The National party in Maryland held its first State convention at Baltimore, on Aug. 4, and chose candidates for presidential electors. The platform, with some slight changes, is similar to the national platform of the party.

The Sound-Money Democrats at Baltimore, on Aug. 26, selected delegates to the National Convention and adopted a platform which reaffirmed in every detail the platform promulgated by the Democratic State Convention on June 10; denounced the "unmerited assault" by the Chicago Democratic Convention upon President Cleveland, and heartily commended the policy of his administration; denounced the Chicago nominee as undemocratic; welcomed "the convention which is about to assemble at the city of Indianapolis to place before the country a Democratic platform in opposition to the Populist platform adopted at Chicago"; and continued as follows:

"We are irrevocably opposed to the financial policy of the Chicago platform. We believe that the free and unlimited coinage of silver at the ratio of 16 to 1 is simply a synonym for repudiation; that it is unjust and dishonest; that it will inevitably reduce the standard of American wages; that it will debase the currency of the country, and

cause ruin and disaster among every community in the land."

At the election in November the Republicans carried the State by a plurality of 32,232, the vote being: McKinley, 136,978; Bryan, 104,746; Levering, 5,922; Palmer, 2,507; Matchett, 588; Bentley, 136. Six Republican Representatives in Congress also were chosen.

MASSACHUSETTS, a New England State, one of the original thirteen; ratified the Constitution Feb. 6, 1788; area, 8,315 square miles. The population, according to each decennial census, was 378,787 in 1790; 422,845 in 1800; 472,040 in 1810; 523,159 in 1820; 610,408 in 1830; 737,699 in 1840; 994,514 in 1850; 1,231,066 in 1860; 1,457,351 in 1870; 1,783,085 in 1880; and 2,238,943 in 1890. By the State census in 1895 it was 2,500,183. Capital, Boston.

Government.—The following were the State officers during the year: Governor, Frederick T. Greenhalge, who died March 5, when Lieut.-Gov Roger Wolcott became acting Governor; Secretary of State, William M. Olin; Treasurer, Edward P. Shaw; Auditor, John W. Kimball; Attorney-General, Hosea M. Knowlton; Adjutant General, Samuel Dalton; Secretary of the Board of Education, Frank A. Hill—all Republicans; Chief Justice of the Supreme Court, Walbridge A. Field; Associate Justices, Charles Allen, Oliver W. Holmes, Marcus P. Knowlton, James M. Morton, John Lathrop, and James Barker.

Finances.—The condition of the State debt and of the sinking fund at the beginning of the year were as follow: Total funded debt, \$29,675,229.40; less armory loan, Fitchburg Railroad security loan, metropolitan sewerage loans, metropolitan parks loans, and metropolitan water loan, \$16,090,000; total, \$13,585,229.40. Amount of sinking funds for the redemption of the above, exclusive of the armory, Fitchburg Railroad securities, metropolitan sewerage, etc., \$7,444,001.42; net debt, \$6,141,227.98. The deductions are made because the armory and sewerage loans are to be paid from a sinking fund created and endowed by taxation of the cities and towns benefited.

The metropolitan parks loan will be paid by a sinking fund created and endowed by the taxation of what is known as the metropolitan district and the metropolitan parks loan, series 2, half of which—that is to say, \$250,000—will be paid in the same manner; also the Fitchburg Railroad securities loan, \$5,000,000. The principal and interest will be paid by the Fitchburg Railroad Company bonds, which, with the Fitchburg Railroad Company's stock, constitute the sinking fund for their redemption.

At the end of the year the net debt was reported to be \$5,000,000 larger. Bonds to the amount of \$11,730,000 were issued during the year for the following purposes: Grade crossings, \$3,500,000; armory loan, \$150,000; metropolitan park loan, \$1,400,000; metropolitan sewerage loan, \$30,000; metropolitan sewerage, Neponset valley, \$150,000; metropolitan waterworks, \$4,775,000; State highways, \$600,000; Statehouse loan, 1901, \$500,000; Statehouse construction loan, \$625,000; total, \$11,730,000.

The current expenditures for 1895 amounted to about \$8,292,338.

Education.—In 1885 the number of pupils of all ages enrolled in the public schools was 359,714; in 1895, 412,953. The average extent of tuition in 1885 was nine months; in 1895, nine months and six days. In 1885 the amount expended for each pupil was \$16.33; in 1895, \$19.98. New normal schools have been established at Barnstable, Fitchburg, Lowell, and North Adams. The normal school at Fitchburg was organized in September, 1895, with

43 pupils. The Board of Education directed that in 1896 and thereafter candidates for admission to the normal schools must be graduates of high schools, or must have received an equivalent education.

The increase in 1895 over 1894 in average membership of the public schools was about 13,000, and in the average attendance about 15,000. The cost of the public schools was \$11,820,191.

The Nautical Training School has an average of more than 100 cadets, and graduated in 1895 a class of 24, and in 1896 one of 25.

The annual report of the Perkins Institute for the Blind, rendered in October, shows a total of 261 inmates, an increase of 17 during the year.

The acquisition of the Bradford estate enables the institution to offer equal advantages for girls as well as boys. A cottage has been erected 4 stories in height, with a capacity for 30 girls. The Howe Building also has been doubled in its capacity. Bequests have been made during the year aggregating \$26,770.

The main building of Mount Holyoke College was burned Sept. 27, with a loss of \$150,000.

The report of the Free Public Library Commission shows that there are 256 towns and cities in which free libraries are owned and controlled by the municipality, and 36 towns and cities have free libraries in which the municipality has some representation in the management. There are 17 in which the free libraries have no connection with the town, and 20 that have no free library.

Charities.—Of these institutions, the Governor's message says: "The opening of the Medfield Insane Asylum in May last relieved in a considerable degree the overcrowding of other institutions. At the Hospital for Epileptics 3 new buildings are approaching completion. A healthful site in Rutland has been secured for the Hospital for Consumptives and Tubercular Patients, and the building is well advanced."

The Legislature provided for 2 buildings at the School for the Feeble-minded, at Waltham, at a cost not exceeding \$60,000, and for a hospital at the Eye and Ear Infirmary, not to cost more than \$100,000.

Prisons.—The net cost for support of the State Prison in 1896 was \$137,843, which is \$632 less than in the preceding year. The total sum spent was \$150,011. The warden's report upon the industries gives the sum of \$44,421.28 as the profit from the labor of prisoners. By deducting this amount from the cost of support there is given a balance of \$93,421.97, which is the actual cost of the prison for the year ending Sept. 30, 1896. The net cost shows a decrease of \$16,149.76, compared with the preceding year.

Just 234 prisoners were committed; 111 prisoners were discharged, 8 died, 6 were removed to the lunatic hospital, 7 were pardoned, 2 were removed to the Reformatory, and 7 were given permits to be at liberty; 796 remaining in custody at the close of the year.

In the Massachusetts Reformatory there were 1,011 prisoners Oct. 1, 1895. During the year succeeding 799 were committed and 877 discharged, leaving 933 Oct. 1, 1896. The cost of maintenance during the past year was \$204,817, and the net cost was \$196,752. The prisoners earned \$25,798.18. By taking this amount from \$196,752.40 there remains a balance of \$170,954.22.

The numbers in other prisons, Jan. 1, were as follows: In the county prisons, 3,421; Boston House of Industry, 1,529; State Farm, 823; Reformatory for Women, 342.

The Prison Association held a meeting in December. The reports showed that the expenditures for relief during the year amounted to \$683. Board has been paid while the discharged prisoners sought

employment, tools have been supplied, and in many cases the beneficiaries have been sent to their homes.

The principal successful legislative work of the year was a law authorizing the establishment of a reformatory by Suffolk County in place of the House of Correction.

Militia.—The number of the enrolled militia of the prescribed age is 406,835, an increase of 17,864 over last year. The amount paid to cities and towns for armories is \$35,350 out of \$39,000 appropriated. All the expenses amount to \$181,877.97. On Jan. 1, 1895, there was standing to the credit of Massachusetts on account of the appropriation by the General Government for equipping the militia of States \$10,861.42. The allotment of July 1, 1895, was \$12,574.31.

Banks.—During the year ending Oct. 31, 1895, the 187 banks received 1,214,171 deposits, amounting to \$80,768,468.89, and there were placed to the credit of depositors \$16,025,893.44 in dividends; during the same period 962,205 withdrawals were made, the amount withdrawn being \$74,309,785.76, leaving the aggregate amount at the credit of depositors on that date \$439,269,861.15, represented by 1,302,479 accounts, an average of \$337.25 to each account. The total assets of the banks amount to \$466,426,722.72.

In addition to the large increase in the deposits of the saving banks, the returns of the 119 co-operative banks show an increase of "dues capital" paid in of about \$1,550,000, and an increase of nearly \$1,940,000 in assets.

Cattle.—During 1895 there were examined upon request 235 herds, comprising 2,325 animals, of which 265 per cent. were diseased. The owners of cattle killed received about \$35 a head.

Highways.—The system of mile lengths of model State roads has proved very successful. In 1894 \$300,000 was appropriated for the purpose; in 1895, \$400,000; and in 1896, \$400,000. The money is obtained by the sale of State 4-per-cent. thirty-year gold bonds; the State also furnishes steam rollers free to certain towns.

Cambridge.—On June 3 Cambridge celebrated her fiftieth anniversary as a city and her two hundredth and sixty-sixth as a settlement, with a procession, an entertainment for children, memorial tree exercises, a firemen's muster, a display of fireworks, a banquet, and a reception.

The Veterans' Preference Act.—The act passed by the Legislature of 1895 over the Governor's veto for giving preference to veteran soldiers for employment in the public service was brought to a test in the Supreme Judicial Court in a case in the detective department of the district police, where the civil-service commissioners gave preference to a veteran who had passed no examination over an applicant who stood first on the list. The court decided that this was illegal, because it is of opinion "that sections 2 and 6 of the Statutes of 1895, Chapter 501, so far as they purport absolutely to give to veterans particular and exclusive privileges, distinct from those of the community, in obtaining public office, can not be upheld as enactments within the constitutional power of the General Court."

Legislative Session.—The session opened Jan. 2, and closed in June. George P. Lawrence presided in the Senate, and George V. L. Meyer was Speaker of the House.

The Governor's message advised the Legislature that care should be taken to improve the quality of citizenship; and to this end he urged a stricter enforcement of the naturalization laws in the State courts, with perhaps a probationary period of residence after naturalization, to be prescribed by con-

stitutional amendment. The twenty-third amendment was such a constitutional provision, this was repealed as unnecessary and oppressive, but existing circumstances may seem to justify at least a shorter term of probation. As to woman suffrage, the recent vote on the municipal proposition seemed to prove that "public opinion will not for some time be prepared to accept any radical change in the established system." The Governor recommended that the amendment making State elections biennial be passed again and submitted to the people; that the liquor-license question be placed on a nonpartisan basis; that restrictive legislation be enacted for trust companies and for gas and electric companies; that mutual benefit and insurance companies be subjected to stricter supervision; that the taxation laws be carefully revised. He said the application of the civil-service rules to the employment of laborers, which had been in operation in Boston for twelve years, has been highly commended by the mayors. The system has since been applied in Cambridge, New Bedford, Brookline, and Everett, and citizens of other places have asked that it be applied in their municipalities.

The constitutional amendment for biennial elections was passed for the second time, after which it was submitted to popular vote.

An act was passed providing for a new South Union Railroad station in Boston. Federal Street is to be closed south of Summer and Essex Streets, and the space between an extension of the line of Cove Street from Kneeland to Summer and the Fort Point channel is to be taken for railroad purposes. The real property there is assessed at about \$3,000,000. The train house will cost from one to two millions.

An important measure presented to the Legislature was the so-called "Greater Boston" bill. It provided for a new county, including Boston and the surrounding cities and towns, namely: the municipal areas of Boston, Chelsea, Revere, Winthrop, Arlington, Belmont, Cambridge, Everett, Lexington, Malden, Medford, Melrose, Newton, Somerville, Stoneham, Wakefield, Waltham, Watertown, Winchester, Woburn, Lynn, Nahant, Saugus, Swampscott, Brookline, Dedham, Hyde Park, Milton, and Quincy, in case a majority of the electors in the said district should vote in favor of it. The joint committee to which the matter was referred recommended that it should be left over for the next Legislature.

The election laws were amended in many particulars. Provision was made for carrying on the work of the park commission and other great public works. Agents of the State Board of Education were forbidden to be pecuniarily interested, directly or indirectly, in the publication or sale of any text-book or article of school supply used in the public schools. Some changes were made in the laws relative to insurance companies, banks, and mutual associations. A part of the law on civil service was amended.

Among other measures passed were:

Making changes in methods of taxation.

For the redistricting of the State for councilors, Senators, and Representatives.

Incorporating the Massachusetts Pipe Line Company.

Ordering preference to be given to veterans of the war in the public service.

Abolishing days of grace on commercial paper, except on sight drafts.

Providing that preference be given to citizens of the United States in the employment of mechanics and laborers on public works.

Providing that women over twenty-one years old may be appointed special commissioners.

Amending the act in regard to the surrender value of endowment policies.

To facilitate the collection of small debts for labor performed.

Defining the persons who shall be deemed tramps.

Regulating the sale of commercial fertilizers.

Among the resolves and resolutions were the following:

Condemning such discrimination on account of color as was shown by certain hotels in Boston which refused entertainment to a colored bishop of the Methodist Episcopal Church.

Favoring an amendment to the United States Constitution placing within the power of Congress to enact laws regulating the hours of labor in the several States according to some uniform system.

Providing for the acquisition of land and the erection of tablets or monuments on the battlefield of Antietam.

Providing for the collection and circulation of information relating to abandoned farms.

Providing for erecting in the Statehouse or on the Statehouse grounds a bronze equestrian statue of Major-Gen. Joseph Hooker.

Appropriating \$100,000 to continue the work of suppressing the gypsy moth.

Political.—The earliest State convention this year was that of the People's party, held in Boston, Feb. 22. Delegates were chosen for the national convention, and resolutions were adopted, among which was the following:

"We should welcome the co-operation of all those opposed to the money powers that are attempting to force upon this country the British gold standard, and to secure its defeat we should endeavor to unite all forces into one address, forming an irresistible phalanx that will secure free coinage of both silver and gold at 16 to 1 and the issue of all property by the United States without the intervention of banks of issue, and be receivable for all debts, public and private."

At the second convention of the People's party, Sept. 25, a State ticket was chosen, and resolutions were adopted opposing the proposed amendment providing for biennial elections, and calling for free coinage of silver, an income tax, and taxation of mortgages. By agreement with the Democrats, one of the candidates for presidential electors on their ticket was named by this convention. George F. Williams was made the candidate for Governor, Archibald Dakin for Lieutenant Governor, Asa Hall for Secretary of State, W. W. Knox for Treasurer and Receiver General, William Proctor for Auditor, and W. H. Norse for Attorney-General.

The Republicans held their State convention March 27. Delegates to the national convention were chosen, and were "urged to give their earnest united and active support" to Thomas B. Reed as presidential candidate. The resolutions declared in favor of protection to American industries in general, and said in reference to protection of shipping interests:

"We have always given protection to our shipbuilders. In late years we have neglected to protect our shipowners. We believe the time has come to return to the policy of Washington and Hamilton, which, by discriminating duties in favor of American bottoms, secured 90 per cent. of our carrying trade to American ships, and which, if now restored, would again revive our shipping and cause American freights to be paid to Americans."

On the silver question they said: "We regard the silver agitation as harmful to business and destructive of confidence, and, as has recently been shown, it is hostile to tariff legislation, designed to give protection to our industries and revenue to our

Treasury. We are entirely opposed to the free and unlimited coinage of silver, and to any change in the existing gold standard, except by international agreement."

Further, they opposed the system of State banks, and called for enforcement of the civil-service laws, restricted emigration, and the upholding of the Monroe doctrine.

The Republican candidate for Governor was the acting Governor, Roger Wolcott, and for Lieutenant Governor W. M. Crane. All the other State officers were renominated.

The Prohibitionists met in Boston, April 19, chose delegates to the national convention, and instructed them to support Joshua Levering as candidate for President.

The new Prohibition party, the National, or "Broad-gauge," was organized in the State, June 26, by the choice of a State committee.

Both wings of the party held conventions in Boston, Sept. 9. The following nominations were made by the Prohibition (Narrow-gauge) party: Lieutenant Governor, William W. Nash; Secretary of the Commonwealth, Willard O. Wylie; Treasurer, R. C. Habberly; Auditor, Thomas H. Friswell; Attorney-General, Wolcott Hamlin.

The nominations of the National party were as follow: For Governor, John L. Nicholls; Lieutenant Governor, William E. Cole; Secretary, Morrill Smith; Treasurer and Receiver General, William P. Howe; Auditor, James W. Cole; Attorney-General, James P. Morton, Jr.

Allen Coffin was afterward made the Prohibition candidate for Governor.

The Democratic State Convention, held in Boston April 21, named William E. Russell as their choice for presidential candidate. The platform said upon the currency question:

"Believing that the true interests of the people require that the earnings of trade and the wages of labor be paid in money that is intrinsically worth, in all the markets of the world, what it purports to be worth, we demand the maintenance of the existing gold standard of value, and that the Government shall keep all its obligations at all times redeemable and payable in gold; and we oppose the free coinage of silver and any further purchases of silver bullion or the coinage thereof on Government account."

The admission of raw material free of duty was recommended; suppression of trusts and regulation of monopolies demanded; further civil-service reform called for; sympathy with the Cubans expressed; and the A. P. A. disapproved.

The Democratic convention for nominating State officers was appointed at Boston Music Hall, Sept. 26. The State committee, which was controlled by the gold-standard men, decided to admit delegates to the hall by credentials and not by ticket. Five hundred silver men therefore took possession of the hall the night before and stayed, announcing their intention to remain until the adjournment. The committee appealed to the manager of the hall, who was unable to deliver it to them, and to the police commissioners, who declined to interfere as long as no breach of the peace occurred. The doors were not opened even for delegates who had not gone in at night or who had left the hall before the hour of the convention. A young man who climbed out by a fire escape, in order to get food to carry in, accidentally took hold of a live wire and died instantly. The sympathizers on the outside held a meeting in Hamilton Place and ratified the action of those in the hall. A platform was adopted pledging the support of the party to Bryan, Sewall, and free silver, declaring that the country is dominated by an oligarchy of millionaires, and

insisting that unjust taxation, monopolies, and an appreciating dollar are the three methods of despoiling the people.

George F. Williams was nominated for Governor, C. T. Callahan for Lieutenant Governor, Thomas A. Watson for State Treasurer, Dr. J. H. Potts for Secretary of the Commonwealth, J. B. O'Donnell for Attorney-General, and M. B. Cavanaugh for Auditor.

Mr. Cavanaugh declined the nomination.

Meantime the committee, not being able to secure the hall, and having failed in an attempt to secure a compromise conference, called a convention to meet at Faneuil Hall in the afternoon. This convention approved the nomination of Bryan and Sewall, whereupon 16 gold-standard men belonging to the State Committee resigned and left the convention with their sympathizers. George F. Williams was nominated for Governor and C. T. Callahan for Lieutenant Governor. A committee of 5 was empowered to complete the ticket.

The cause of difference between the two factions, since they agreed upon national policy and upon State nominations, seems to have been the control of the State organization. Each convention named a State committee, the two agreeing on only these names.

The gold-standard Democrats nominated electors to support Palmer and Buckner, and put out the following State ticket: For Governor, Frederick O. Prince; Lieutenant Governor, James E. McConnell; Secretary, Waldo Lincoln; Treasurer, Horace P. Tobey; Auditor, Charles C. Spellman; Attorney General, Henry F. Hurlburt.

The National Silver party held a convention in Boston, July 15, and selected delegates to the national convention of the party.

T. C. Brophy was nominated for Governor by the Socialist-Labor party.

The Republican ticket was successful at the polls, the vote for Governor standing as follows: Wolcott, Republican, 258,204; Williams, Democrat and Populist, 103,662; Prince, National Democrat, 14,164; Coffin, Prohibition, 4,472; Brophy, Socialist-Labor, 4,548.

The vote for President stood: McKinley, 278,976; Bryan, 105,711; Palmer, 11,749; Levering, 2,998.

Of the 13 members of Congress elected, 12 are Republicans. The Legislature for 1897 stands on joint ballot: Republicans, 232; Democrats, 44; Independent Republicans, 3; Democratic Citizens, 1.

The proposed amendments to the Constitution making elections biennial and the terms for State officers two years were defeated.

METALLURGY. Iron and Steel.—While the roasting of ores has long been employed as preliminary to reduction, but only incidentally to effect the purpose of simultaneously eliminating elements, like sulphur or arsenic, that could detrimentally influence the iron produced, it is only very recently, says Prof. Wedding, of Berlin, that it has also been employed in order to render iron ores magnetic, so that they could be subsequently freed from constituents not containing iron and be enriched in iron. In the constant decrease by consumption of ore deposits rich and pure enough for open-hearth and blast-furnace treatment, the question of the concentration of ores is becoming year by year more pressing. The most effective means of enriching and improving unsuitable iron ores is afforded by magnetic concentration. Dealing, then, with the magnetization of the various iron ores—viz., magnetites, spathic iron ores, red hematites, brown iron ores, and pyritic ores—Prof. Wedding observed that the pieces to be roasted should be as nearly as possible of the same size, and that the requirements for the roast-

ing of different kinds of ores necessitate the construction of different kinds of furnaces. As a rule, the magnetization takes place the more readily the more the ore is in the form of small but solid pieces, but uniformity of size is still more important. The magnetized ores, after the roasting, must be submitted to concentration, which may, in the first instance, be mechanical, to separate from each other the ore particles of different sizes, and then magnetic, or it might be magnetic from the beginning. This must depend largely on whether or to what extent the ores include constituents not containing iron and iron oxides. In blast-furnace practice the pieces should be about the size of hens' eggs; while small and even pulverulent ore may be utilized in the open hearth. In the discussion of this paper in the Iron and Steel Institute Mr. S. P. Martin spoke of the Davis-Colby kiln used in the United States as enabling sulphurous magnetic ore to be separated.

In a process for the magnetization and concentration of iron ores, described by Prof. Phillips before the American Institute of Mining Engineers, pieces of hematite ore the size of an egg are heated to redness, and carbonic oxide or producer gas is passed over them; when they become more or less magnetic, and if only a small portion of the sesquioxide is converted into magnetic oxide, a strong magnet will remove the whole of the iron ore from the gangue. As an average result of a working of this process, it is represented that fossiliferous red ore, containing 40 per cent. iron and 30 per cent. insoluble matter, was concentrated so as to produce an ore with 58 per cent. iron and 28 per cent. insoluble matter. The best result was the obtaining of 1 ton of concentrates from 2 tons of ore, and the worst of 1 ton from 10. It is believed that the process will be found important in the working of the red and brown iron ores of the South.

A paper by Mr. H. D. Hillard, of New Jersey, read in the Iron and Steel Institute, dwelt upon the evil effects of sand in pig iron and the desirability of avoiding it. An increasing demand, the author said, is arising for sand-free pig iron for the basic open-hearth steel process. Sand is, chemically speaking, silica, and in the basic open-hearth process silica in the furnace is the troublesome agent. The sand in the pigs begins the destruction of the bottom of the furnace as soon as it is brought in contact with it at a sufficiently high temperature. It is evident that a great reduction of labor about the blast furnace could be effected by the use of a mechanical appliance. Such an appliance is described in the author's paper.

Experiments made by Thomas Wrightson, M. P., and repeated many times in order to ascertain whether the welding of iron is attended with a fall of temperature, as in the regelation of ice, appear to show that the application of pressure to plastic iron heated within the range of temperature at which it could be welded is certainly attended with that effect. The welding of iron and the regelation of ice would thus appear to be analogous phenomena.

The failure of any rail, however perfect, is, in the opinion of Mr. Beaumont, as expressed in a paper read at the British Association, chiefly a question of the number of trains passing over it. The result of the rolling is a gradual compression of the upper part of the rails, and this produces internal stresses that are cumulative and reach great magnitude. That which takes place in the material of a rail head under the action of very heavy rolling loads at high speed is precisely that which is purposely brought into use every day in iron works, but the effect is obscured by the slowness of the growth and transmission of the forces which are ultimately de-

structive. When a piece of iron or steel is subjected to pressures exceeding the limit of elastic compression by a rolling or hammering action or by both combined, the result is spreading of the material and general change of the dimensions. This is equally the case with a plate hammered or rolled on one side while resting on a flat surface. Generally the material thus changed in form suffers permanently no greater stresses than those within its elastic limit of compression or expansion. When, however, the material is not free to flow or to change its form in the direction in which the stresses set up would act, the effect of continued work on the surface is the growth of compressive stress exceeding elastic resistance. In the case of railway rails the freedom for the flow of material is very limited. Hardening of the surface takes place and destructive compression of the surface material is set up. If the material be cast iron the destructive compression causes crumbling of the superficial parts and the consequent relief of the material immediately below it from stress beyond that of elastic compression, but when the material is that of steel rails the stress accumulates, which gives rise to molecular stresses analogous to those which, on the compressive side or inner curve of a bar bent on itself, originate transverse flaws on that side. This condition of compression exists along the whole length of a rail, so that when its magnitude is sufficient to originate crumbling or minute flaws, any unusual impact, stress, or a stress in the direction opposite to that brought about by the usual rolling load, the rail may break in two or into numerous pieces. Various criticisms were made during the discussion on this paper at different points in Mr. Beaumont's exposition, to which he replied that he had submitted facts and not speculations to explain the breakage of rails. There was much yet to learn, and he had put forward his paper mainly with a view to raising discussion.

It is well known that the brittleness of steel due to the presence of phosphorus is more marked when the percentage of carbon is high than when but little carbon is present, and that with the same percentage of carbon the brittleness is more marked when the metal is hardened than when it is in its annealed or normal state. Since the fact suggested that there might be some relationship between the carbon and phosphorus in steel, and that the chemical condition in which phosphorus exists in steel may be capable of being changed by varying the heat treatment, an investigation was undertaken by E. D. Campbell and S. C. Babcock to determine whether phosphorus might exist in steel in two forms. It was found that with low percentage of carbon the effect of high treatment upon the solubility of phosphorus is slight, and probably if carbon were entirely absent there would be no effect; that with increase of carbon the effect of hardening is to diminish the solubility of the phosphorus; and that with high percentage of carbon the solubility is increased by slow cooling. These three facts, the authors observe, point very strongly to the probable formation, at a very high temperature, of a compound of difficult solubility of iron with carbon and phosphorus, which is transformed on slow cooling into an easily soluble substance.

In a paper contributed to the English Iron and Steel Institute in 1888, Messrs. Harbord and Tucker showed that a large quantity of arsenic in steel is injurious. The results of experiments made since on the effect of small quantities were communicated by Mr. J. E. Stead to the Institute at its spring meeting (1895). The general conclusions drawn by the author are that between 0.10 and 0.15 per cent. of arsenic has no material effect upon the mechanical properties of steel used for structural purposes.

A slight difference is noticed with 0.20 per cent., chiefly in an inferiority in bending properties in pieces cut from the plates of acid open-hearth steel across the direction of rolling after they have been tempered. With 1 per cent. of arsenic the tenacity is increased and the elongation slightly reduced, while the bending properties are fairly good. The changes are more evident when about $\frac{1}{2}$ per cent. of arsenic is present; contraction of area is reduced, and the bending properties are poor. With 4 per cent. the tenacity is increased and the contraction is reduced to zero. The trials with higher percentages of arsenic were, however, not considered fully satisfactory, on account of the small size of the ingots used. An alloy containing 4 per cent. of arsenic will stand about as much heat without burning as a steel containing 1 per cent. of carbon. When heated below the burning point, the material can be hammered and rolled, and appears to be as soft in that state as steel containing about 0.5 per cent. of carbon. Hence the author infers that arsenic has no tendency to produce red-shortness. The effect of quenching steel containing arsenic in large quantity after heating to a red heat was to improve its bending property. Arsenical steel was found not more liable to corrosion than similar material without the arsenic; in fact, oxidation appeared to be retarded by the presence of small quantities of arsenic. Arsenic appears to be most injurious in steel that is to be welded; and in such steel even small quantities should be avoided.

Summarizing the existing knowledge of the molecular structure of hardened steel, M. Osmond represents that in highly carbonized steels, containing more than 1.3 per cent. of carbon, quenched at temperatures above $1,000^{\circ}\text{C}$., there are two constituents, A and B, which differ widely in their properties. The constituent A is the ordinary hard, strongly magnetic substance of which hardened steel containing 1 per cent. of carbon is almost exclusively composed. Its hardness is greater than that of orthoclase. B, on the other hand, is only about as hard as fluorspar, and, so far as can be judged by a study of its properties while mixed with A, is nonmagnetic. The author, however, has not hitherto been able to prepare B free from A, although by quenching steel containing 1.6 per cent. of carbon at a temperature of from $1,000^{\circ}\text{C}$. to $1,100^{\circ}\text{C}$. in ice-cold water, he has obtained a mixture of A and B in about equal proportions. This mixture is comparatively very feebly magnetic. The constituents both contain carbon, and exist side by side in separate polyhedra. The author concludes that B is the allotropic form of iron (denoted γ), which is especially stable above 860°C ., and is present to the exclusion of the other forms of iron in steels containing 25 per cent. of nickel, or from 12 to 13 per cent. of manganese, which steels are nonmagnetic. The hard constituent, A, would then be the allotropic form B.

The cause of "mysterious" fractures in steel used by marine engineers has been investigated by A. E. Seaton and J. O. Arnold. Specimens were examined of a shaft of Siemens steel made by a well-known firm of qualities duly certified to, which suffered a "sudden and unexpected total failure" after having been in continuous service for twelve years and often tested. A quadrant of the transverse section of the shaft was examined chemically and microscopically by Prof. Arnold. The result of the chemical examination indicated that the ingot from which the shaft was forged must have been cast very hot. In round numbers the carbon in the center of the shaft was 50 per cent. higher than that near the circumference. The manganese had liquated with the carbon to some extent. The phosphorus and sulphur of the core were each three

times greater in quantity than at the circumference. The composition of the steel proved highly unsatisfactory as regarded purity, and the metal was also too hard for the purpose intended. From this and the microscopical examinations, Prof. Arnold concludes that the core of the shaft had suffered from bad chemical composition aggravated by liquation, from pipe, and from unfavorable structural arrangement of the constituents of the steel. The center of the shaft, weakened by pipe, carbon, and phosphorous hardness and brittle structure, and riddled with sulphide of iron, was little tougher than good gray pig iron. It is almost certain that a number of sulphide flaws in the interior gradually worked outward along the crystalline junctions of the fairly tough metal outside, until under a vibratory shock of unusual force the whole mass ruptured. To this finding, Mr. Seaton adds some observations on the superiority of microscopic to chemical analysis for determining the qualities of steel, and the deduction that Prof. Arnold's results tend to show the liability of all steel shafts to begin disintegration from the center, whence the fractures and fissures, when started, no doubt gradually spread until they reach the surface. Also that such degradation proceeds without visible indication, and total rupture occurs without warning and apparently mysteriously. There is every reason to believe that as many fractures occur with wrought iron as with steel; but, owing to the laminated nature of wrought iron, the fractures have been small and localized, and seldom of so large and important a character as with steel.

The advantages of using small cast-steel ingots for certain purposes are set forth in a paper by Richard Smith Casson, of Birmingham, England. A system of casting such ingots, patented by Mr. Thomas Turner and Mr. Casson, is specially contrived for the ingots to be run from the bottom. Its chief features are the grouping of several molds in one ingot-mold casting, the combination therewith of the piling of the molds one upon the other in the casting pit, and the insertion of a small fire-clay ferrule or division brick in a hole in the top of each mold. In this way the steel rises from the lower row of molds into the second row, and from the second row into the third, and so on, till as many as 120 ingots, containing from 10 to 15 tons of steel, have frequently been successfully cast through one runner pipe. The ingots are virtually joined together without a runner at their adjacent tops and bottoms; but, notwithstanding this joining, they practically fall away from one another during the stripping, from the effect of contraction and of the presence of the fire-clay division ferrule, which maintains heat, and therefore softens in the neck during the shrinkage of the remainder of the ingot.

A discussion of the merits of the Walrand process of manufacturing steel in the meeting of the British Iron and Steel Institute at Bilbao, Spain, was introduced by a paper by Mr. G. J. Snelus, who named six important industrial centers where that process is used. The process is a modification of the Bessemer process, adapted to the requirements of small steel foundries, etc. The only modification that had been made in the method since a paper was read upon it two and one half years ago was the adjustment of a detail whereby the metal was not so highly oxidized, and a superior material was obtained. The process was commended as being very economical; as lending itself specially well to the manufacture of alloys; and as probably capable of being applied to larger operations of the Bessemer process. It was shown to afford a remarkable facility for using up scrap iron or steel; the inventor, it was said, had melted as much as 75 per cent. of scrap by special means, and had made good castings with

it, although in an ordinary steel foundry the proportion of scrap was only 25 per cent.

The results of testings of nickel steel made by William Beardmore with a view to determining its value as a material for structural and shipbuilding purposes, mark it as possessing a higher tensile strength, with greater toughness and ductility than ordinary carbon steel. Plates of two grades of steel were experimented upon, mild steel (D. 300), corresponding to ordinary boiler-plate quality, and steels of a higher grade (D. 366), suitable for such work as the shells of torpedo-boat destroyers, etc., where lightness of section combined with great strength were desired. Bars of mild quality were subjected to fatigue tests, and their behavior under that treatment compared with that of ordinary carbon steel, nickel-steel bars and rivets, and steel of a quality suitable for engine forgings. The higher grade steel gave a tension strength and an extension considerably surpassing the British Admiralty requirements. The loss of strength due to punching was found to be much less than in carbon steel. Rivets made of it were considerably tougher than ordinary rivets. When nicked with a chisel and hard hammer and then broken, the fracture in nickel steel was fibrous and the metal appeared to have torn gradually, while the ordinary carbon-steel rivet broke short. The bend tests from D.-300 steel did not differ from those of carbon steel, but the results of the bends from the other quality were superior to anything the author had ever seen in carbon steel of the same grade. The experiments with nicked bars proved that nickel steel offers greater resistance to breaking after being nicked than carbon steel, and also—the fracture being fibrous—indicate that if a fracture were to appear, say in a propeller shaft made of nickel steel, it would not develop so readily as in a shaft forged from carbon steel. Ingots of nickel steel show less piping and honeycombing than ordinary carbon-steel ingots, and the metal is more solid when cast. Thus in nickel steel we have a decided gain in tensile strength without the dangers attendant upon this result when it is obtained by raising the percentage of carbon. In the author's experience nickel steel could be welded as easily and as satisfactorily as carbon steel, but there is considerable diversity of opinion on the subject.

A proposition made at the spring meeting of the British Iron and Steel Institute by Baron Hans von Jüptner von Jonstorff, of Neuberg, Austria, for the establishment of an international laboratory in Switzerland to furnish standard analyses of irons and steels, was received with much favor. The author cited several startling instances of discrepancies in analyses in evidence of the need of such an establishment. It is contemplated that all the important nations shall nominate directors of the work; but for the purpose of making analyses, paid investigators will be necessary. The estimated cost of the laboratory is £3,000 (or \$15,000) a year.

In experiments made in Brooklyn, N. Y., on the endurance of steel and cast-iron columns under load at high temperatures, the columns were placed upright in a furnace supplied from a producer of the ordinary type, and were loaded by hydraulic pressure. A test of a built-up steel column showed that when at a red heat it failed to carry more than a small load. Such a column appeared to be reduced in strength seven eighths when raised to a temperature of 1,200° F. The next experiments were on hollow cast-iron columns having an estimated breaking strength of 902,000 pounds. The column when at a red heat failed under a load equal to 848 tons. In another experiment a cast-iron column under the same load had a jet of water thrown on it when the pyrometer indicated a tem-

perature of 675°, without showing any signs of injury. This experiment was repeated at 775° and 1,075°, and finally when the column had reached a light-red heat and was beginning to yield. In no case did the water seem to have any injurious effect upon the column.

Aluminum.—Aluminum is found by Percy A. Richards to be extremely susceptible to attack by mercury in whatever form that substance may be present; and the author deduces from the fact a warning that the greatest care should be taken to prevent any aluminum apparatus, etc., from being brought into contact with it or its combinations.

Studying the alloys of aluminum, M. Henri Gautier finds that, while that metal fuses at 625° C. and antimony at 432° C., an alloy of the two metals resists a temperature of 1,100° C. The alloy of tin and aluminum falls to powder when left in the air; but when protected against oxidation, as when under a stratum of water free from air, it continues unchanged.

Boron bronze, or aluminum boron bronze, is prepared by the introduction of aluminum containing boron, not as aluminum boride, but with the boron existing as graphite does in cast iron. As described by H. N. Warren, the commercial process consists in heating in a specially constructed oxyhydrogen furnace a mixture of fluorspar and vitrified boric anhydride until the dense fumes of boron fluoride begin to appear. At this stage ingots of aluminum are introduced into the liquid mass. Reduction at once takes place, with the formation of free boron, which dissolves in the aluminum, rendering it crystalline and somewhat brittle. When the aluminum thus prepared is alloyed with copper to the extent of from 5 to 10 per cent., a bronze is obtained, denser and more durable than ordinary aluminum bronze, and free from brittleness. The most important property of the alloy is the readiness with which it melts and casts, whereas in the manufacture of aluminum bronze one of the greatest difficulties is in the insuring of a uniform mixture.

Reviewing the growth of the aluminum industry under the stimulus given it by the employment of the electro-metallurgical methods, a writer in the *Journal of the Franklin Institute* mentions as two epochs of great advance the beginning of operations of the Cowles electrical-furnace plant in 1886 and the application of the Hall electrolytic process in 1889. While in 1883 only 85 pounds were produced, and only 263 pounds in 1885, the amount rose in 1886 to 3,000 pounds, and in 1887, with the Cowles process in full operation, to 18,000 pounds. In 1889, the year of the introduction of the Hall process, the amount was 47,468 pounds; while it rose in 1890 to 61,281 pounds, in 1891 to 150,050 pounds, and in 1892 to 259,885 pounds. Five hundred and fifty thousand pounds were produced in 1894, and the American output for 1895 was estimated by the *Iron Age* at 850,000 pounds, while the production of 1896, in the opinion of that journal, would exceed 2,000,000 pounds, or 6,000 pounds a day.

The reduction that has taken place since 1856 in the cost of aluminum is represented as follows: Cost in 1856 (spring), \$90 per pound; in 1856 (autumn), \$27.50; in 1859, \$18.25; in 1862, \$11.88; in 1878, \$11.88; in 1886, \$12; in 1887, \$8.25; in 1888, \$5; in 1889, \$2.13; in 1895, 38 cents per pound.

The Precious Metals.—The ores specially adapted to cyanide lixiviation, according to an article in the *Engineering and Mining Journal*, seem to be those of chemically neutral or slightly basic character, in which the gold occurs in a very fine state of division. Included in these ores are the auriferous calcites of Mercur, the siliceous ores of Cripple Creek, and many pyrites in which oxida-

tion has not begun. The ores unadapted to the cyanide process are especially those containing coarse gold, those containing copper, which consumes the expensive chemical potassium, and for the same reason those containing ferrous sulphate or acid soluble salts. With respect to telluride ores, the question is not yet satisfactorily settled. As to the comparative cost of cyanide lixiviation and chlorination, there are not yet sufficient data for speaking dogmatically, even where ores are equally adapted to the two processes. Both are valuable contributions to the metallurgy of gold, and are assisting immensely in increasing the production of that metal.

W. Mietzchke has observed that auriferous pyrites, whether in solid rock or in a loose condition, display the peculiar behavior that the gold uniformly distributed in the mass in the state of sulphide, in proportion as it is converted into an oxidized product, moves toward the middle of the mass. Hence the pyritic nucleus of a half-weathered crystal shows double the proportion of gold that does the average mineral before decomposition. In a fully weathered specimen the author found a granule of gold with crystalline surfaces. The confirmatory specimens were obtained from the Orenburg government, Russia.

The Cassel-Hinman gold and bromine process is applied for the extraction of gold from low-grade ores, and from those which will not give up their gold to amalgamation. The expensiveness of bromine, making its use without recovery impracticable, has prevented its employment in many cases in which it would otherwise be preferable. Stating its advantages, Mr. Parker C. McIlhiney observes in the "Journal of the American Chemical Society" that it is a much less powerful oxidizing agent than chlorine, so that oxidizable materials like pyrites are much less acted upon by it than by chlorine. In fact, it is impossible to treat with bromine water pyrites containing gold, and to extract most of the gold as bromide without attacking much pyrites, which it is not possible to do with chlorine water. Further, bromine dissolves gold much more easily than does chlorine. These facts make it evident that if some means can be devised for recovering the bromine which has been used in the treatment of the ore, much better results can be obtained than by chlorination. The Cassel-Hinman process consists in adding to the liquor which has acted upon the ore, and which still contains a large excess of bromine as well as some bromides, sufficient chlorine or oxidizing agent and acid to liberate the bromine from the bromides and then to distill off the bromine by steam. The amount of liquid which it is necessary to distill off for this purpose is surprisingly small. The liquid thus freed from bromine is in an ideal condition for the precipitation of gold, and this may be accomplished by any convenient method.

Experiments described by Parker C. McIlhiney go to show that hydrochloric acid in presence of air is without action on metallic gold, and that ferric chloride is without action on gold unless oxygen is present, but that ferric chloride acts as a very efficient carrier of chlorine in the presence of hydrogen and oxygen. This fact, the author remarks, helps to account for the solubility of gold in mine waters and in other waters containing iron, acid, and common salt.

Difficulties met in assaying gold extracted by certain processes and containing base metals, notably lead and zinc, have been investigated by Mr. Edward Matthey, who finds that in such alloys the gold is concentrated toward the center and lower portions, whence it is impossible by the usual processes to ascertain their true value from the assay

of specimen pieces with even an approximation to accuracy. When silver is also present, however, these irregularities are greatly modified. The method of obtaining "cooling curves" of the alloys shows that the freezing points are very different when silver is present in the alloy and when it is absent from it. This fact leads the author to believe that if the base metal present does not exceed 30 per cent., silver will dissolve and form a uniform alloy with gold. His conclusion is sustained by experiments which he cites, and which, in fact, lead up to it.

A method of separation of silver from gold by volatilization is proposed by Dr. Joseph W. Richards. He has found that on heating to a bright-yellow heat (not to whiteness) upon chareol an alloy of gold and silver, before a sharp-pointed oxidizing flame, the silver volatilizes easily and steadily until less than 3 per cent. of that metal remains in the gold. The volatilization is estimated to take place a little above the melting point of copper, say at from 1,100° to 1,200° C. To remove the remainder of the silver, the heat is raised nearly to whiteness, to about the melting point of steel (1,500° C.). When the silver is entirely eliminated, the gold begins to volatilize also; in fact, a trace of gold will be carried off with the last of the silver. The author has tested this method of separation in many different ways, and has found the separation to be absolute when the conditions he describes in detail are observed. It was suggested in the discussion of his paper at the Franklin Institute that the method might be practicable in the ordinary assay of gold and silver at assay offices if an electrically heated furnace could be devised in which the buttons could be placed on suitable supports and kept at the proper temperature to volatilize silver, with a current of air passing over them.

The principle on which the process of D. Tommasi for the electrolytic desilverization of argentiferous lead is founded consists in electrolyzing a lead solution which not merely possesses an extremely weak electric resistance, but does not give rise to lead peroxide (PbO_2), and, in taking the argentiferous alloy itself as anode and cathode, a metallic disk which can not be attacked by the bath. Under the action of the current the lead of the anodes enters into solution and is transferred, in the state of spongy crystals, upon the disk which serves as cathode; while all the silver contained in the lead, being insoluble in the bath, is deposited in the bottom of the vat in a perforated receiver destined for its collection.

In the extraction of the precious metals by lead at Amador City, the mineral is reduced to a powder of suitable fineness and is then roasted to drive away sulphur, arsenic, and antimony. While it is still hot it is drawn into the bottom of a receiver containing melted lead and supplied with a series of grates placed one above another, between which the shakers turn. The mineral is thus brought into close contact with the melted lead, and when it comes out contains no gold or silver.

Copper and Nickel.—The processes of treating copper ores are divided by Dr. J. E. Mackenzie into 3 classes: 1, Of ores free from sulphur; 2, of ores containing sulphur; 3, of ores containing very small percentages of copper (3 per cent. and under). The minerals worked by processes of the first class are cuprite, malachite, and azurite. The metal is run from them by fusion with charcoal in a small blast furnace, and the impure metal is refined by melting in a small furnace with a hemispherical bed, a blast of air being directed upon the metal to oxidize the impurities. The minerals treated by methods of the second class are copper pyrites (or

chalopyrite, bornite (or purple copper ore), copper glance (or redruthite), and indigo copper. The ores first undergo calcination in heaps, "stalls," kilns, or reverberatory furnaces. The first two methods are somewhat wasteful, and are adopted only where timber is abundant. Kilns are generally used for ores poor in sulphur. In the Swansea district (Wales) reverberatory furnaces are mostly used. The temperature of the furnace is not raised so high that the ore fuses. In calcination most of the arsenic and part of the sulphur are converted into oxides and carried off with the products of combustion. The calcined ore now undergoes the "melting" or "fusion" process after mixing with "metal slag." The resulting product, known as "coarse metal," is granulated by running into water. It should approximate the formula CuFeS_2 . The granulated metal is again roasted, and the iron sulphide is converted into oxide. The "roasted coarse metal" is now fused with refinery slags, so that the iron is carried off in the slag as a silicate, and the copper separates as "white" or "fine metal." This should contain about 75 per cent. of copper and nearly correspond to the formula Cu_2S . It is then roasted, by which process sufficient Cu_2S is converted into Cu_2O , so that when melted they may react and form Cu and SO_2 . On fusion the reaction takes place with violent boiling. The crude copper is known as "blister" or "pimple copper" from its appearance, and it should contain about 95 per cent. of copper. It is refined by melting and oxidation of the impurities, and then "poling" to reduce the copper which has been oxidized. As to the third class of methods, burned pyrites from sulphuric-acid works frequently contain small amounts of copper. They are calcined with rock salt, by which means copper chloride is produced. By scrap iron the copper is precipitated from its solution. The crude copper is purified as above or by electrolysis. Certain ores, on treatment with dilute sulphuric acid, give up their copper as sulphate, which in its turn may be treated with scrap iron.

In a process applying electrolysis to the treatment of low-grade copper ores, the finely ground ore is leached with a hot solution of cupric chloride, previously mixed with calcium solution, in a rotating barrel, through which a low voltage alternating current is passed. The solution is then run through a receptacle containing copper oxides or hydrates, which remove iron and other impurities from it, and is then conveyed into rectangular vats fitted with asbestos diaphragms and electrodes. The copper being deposited, the fluid is pumped back for re-use. The resulting ore, being freed from copper and chemically disintegrated, is said to be in an excellent condition for treatment by the cyanide or other similar process.

The Refractory Metals.—Important additions have been made within the past two or three years to our knowledge of the refractory metals through the researches of M. Moissan with the electric furnace, in which he had the advantage of higher temperatures than it had previously been practicable to attain. His success in the reduction of several of these metals, including some of the most difficult, was recorded in the "Annual Cyclopædia" for 1895. His experiments have been continued, but chiefly with respect to the combinations of those metals and the properties of their compounds, particularly of their carbides. Some of the results of these experiments are of interest to the metallurgist.

The question of the fusibility of platinum in a furnace fed with carbon and air has been complicated by the possibility that metal which was so fused might be contaminated by carbon or other substances in the furnace. Victor Meyer has, how-

ever, recently melted platinum inclosed in a thick block of refractory earth under conditions in which a certainty existed that no impurities were present. At the same time an alloy of 25 per cent. iridium and 75 per cent. platinum remained unattacked, and kept its outer form and its luster quite unaltered.

A coal mine in the high plateau of the Andes, about 16,000 feet above the sea, has been found to be an important source of vanadium compounds. The ash, constituting about 2 per cent. of the product, contains from $\frac{1}{4}$ to $\frac{1}{2}$ of its weight of vanadium, besides some silver, with traces of zirconium and platinum. The vanadium has been extracted on a considerable scale by M. K. Hélonis, who has applied it to the preparation of aniline black, to the coloring of porcelain, and in metallurgy.

In the reduction of vanadic acid with charcoal in the electric furnace, M. Moissan has obtained easily and in abundance a melting of vanadium titrating from 4 to 5 per cent. of carbon. With a longer continued heating, a new, definite, and crystallized carburet is obtained. This compound does not act upon water at the ordinary temperature, and is more stable than melted vanadium in the presence of acids. Pure vanadium unites at the temperature of the electric furnace with iron, copper, and aluminum, but does not form an alloy with silver.

The properties of molybdenum obtained from its amalgam by distillation in a vacuum at a low temperature are found by M. J. Féréé to be different from those of molybdenum as hitherto obtained. The substance is pyrophoric, and ignites in the air, yielding molybdic oxides which are partially volatilized by the heat liberated. It loses this property if heated above 400° C. It becomes incandescent in a current of sulphurous acid, which is entirely absorbed, forming molybdenum sulphide and molybdic oxides. Nitrogen, carbonic acid, and hydrogen sulphide seem to have no action at the ordinary temperature or at a gentle heat. Carbon monoxide is rapidly decomposed.

It results from the researches of M. Guichard on molybdenite and the preparation of molybdenum that it is easy to produce by the action of the electric arc a melting of molybdenum free from sulphur. This very simple preparation may, perhaps, present some interest in connection with the manufacture of molybdenum steels, and also with the use of the metal in the treatment of iron in the Bessemer converter; for M. Moissan has shown that molybdenum has the advantage over manganese of giving a volatile oxide, and of not sensibly modifying the properties of iron.

M. Moissan finds that rhodium, iridium, and palladium dissolve carbon with ease at the temperature of the electric furnace, and give it, on solidifying, in the form of graphite. No combination to form a carbide appears to take place.

Pure tungsten is obtained by M. Moissan by the reaction of tungstic acid with carbon in the electric furnace. With a large excess of carbon the carbide CW_2 is formed, which in the fused state readily dissolves more carbon, graphite crystallizing out on fusing. The pure metal can be readily filed and forged, welds easily, has no action on the magnetic needle, and has a melting point higher than that of chromium or molybdenum.

Alloys.—It is now quite usual, says Prof. W. C. Roberts-Austen, to think of alloys as being solid solutions and to recognize that the atoms of solid metals are in active movement. That this must be the case is revealed by the passage of metals to allotropic modifications in which the physical properties differ widely from those of the same metals in their normal state. The subject was first brought

to attention by Matthiessen thirty years ago; and the investigations of Graham have shown that solid metals are true solvents for gases, which move and diffuse freely in them, sometimes to reappear with gaseous elasticity. The experimental portion of Graham's work was conducted by Prof. Roberts-Austen, who has given some of the results he reached in the Bakerian Lecture of the Royal Society and in "Nature." The experiments show that metals diffuse in one another just as salts do in water. Tables are given showing the diffusibility of certain metals—as gold, silver, lead, rhodium, and platinum, in lead, tin, bismuth, and mercury, in square centimetres per day. A method is described by which it is shown that molten metals actually pass into one another by diffusion. The belief has long been prevalent that diffusion can take place in solids, and is supported by the practice in conducting important industrial operations, as in the "cementation" process employed in steel working by the carbonization of solid iron, and in that for the removal of silver from a solid gold-silver alloy. The electro-deposition of metals also affords evidence of their interpenetration. The author observed in 1887 that an electro-deposit of iron on a clean copper plate will adhere so firmly to it that when the metals are severed by force a copper film is stripped from the copper plate and remains on the iron. Mr. Edward Sonstadt gilded a platinum crucible inside and out, when upon warming it the color began to change as soon as the heat reached the platinum, and the gilding had disappeared—by absorption—before visible redness was attained. Faraday and Stodart showed in 1820 that platinum will alloy with steel at a temperature at which even the steel is not melted. Evidence has long existed of the volatilization of solid metals, and the fact is confirmed by the experiments. Some of them, for instance, furnish evidence that slow diffusion of gold in lead occurs at the ordinary temperature. If clean surfaces of lead and gold are held together in a vacuum at a temperature of only 40° F. for four days, they will unite firmly, and can be separated only by the application of a load equal to the breaking strain of lead. The nature of welding, however, remains to be investigated, as there is probably interlocking of molecules and atoms, which precedes true diffusion. Gold placed at the bottom of a cylinder of lead 70 millimetres long which is apparently solid will diffuse to the top in notable quantities at the end of three days. At 100° the diffusibility of gold in solid lead can be readily measured; and experiments which are still in progress show that the diffusibility of solid gold in solid silver or copper at 800° is of the same order as that of solid gold in lead at 100°.

In his elaborate researches upon the alloys of copper and zinc, M. C. Charpy has found that if the maximum temperature of annealing is maintained for some time the mechanical and micrographical properties of test pieces of similar composition depend only on the temperature. Reheating has no effect on the tensile strength of copper unless the temperature exceeds 280° C., when there is a progressive lowering of the tensile strength until the temperature reaches 420° C. Above that point a further increase of temperature has no effect on the metal, the annealing being complete. Finally, when the temperature is so high that the copper is "burnt," the tensile strength again falls off rapidly. In tests made upon completely annealed bars, in which all accidental differences were believed to be eliminated, the author found that the tensile strength increases with the percentage of zinc, passes through a maximum when the alloy contains about 45 per cent. of zinc, and then decreases rapidly. The elongation increases similarly with the

percentage of zinc, but passes through a maximum when the alloy contains 30 per cent. of zinc, and then decreases rapidly. It follows that there is no advantage in using for industrial purposes alloys containing less than 30 per cent. of zinc, as they are more costly, and possess less resistance and less malleability than those richer in zinc. If more than 43 per cent. of zinc is present, the alloys are brittle. Thus only those alloys with from 30 to 43 per cent. of zinc can be recommended for use. When the reheating is carried to a very high temperature, near the melting point of the alloy, so that it is "burnt" blowholes appear, increasing in number as the temperature rises and fissures develop around the crystal, eventually forming a complete network. The microscopic structure revealed by etching polished surfaces makes it possible to divide the alloys of copper and zinc into three classes, corresponding with certain proportions of the constituents. It enables the observer to determine whether the metal has been cast, whether the casting has been made at a high or a low temperature, and what is the nature of the mold; and shows the effect of hardening, of annealing at various temperatures, and whether or not the metal has been burnt.

In order to obtain the best castings of aluminum bronze, special care is taken not to overheat the metal, for if it is heated at too high a temperature, the aluminum will oxidize; the oxide will make the entire casting "dirty," and the metal will be spongy from the presence of occluded gases. The scum which floats on the top of the melted bronze must be prevented from going into the crucible, and the shrinkage has to be counteracted. The last two objects are secured by special provisions in the apparatus.

Alloys of refractory metals are obtained by M. Moissan by projecting a mixture of the oxide with powdered aluminum into a bath of liquid aluminum. The heat set free by the oxidation of the aluminum has been found sufficient to carry on the reaction. In this manner alloys of aluminum with nickel, molybdenum, tungsten, uranium, and titanium have been obtained.

Reostene, a new resistant metal described in the British Association by Dr. J. A. Harker and Mr. A. Davidson, is an alloy containing iron and nickel. Its specific resistance is higher than that of manganese, being about 46 times that of Matthiessen's copper. Its temperature coefficient is positive and constant, and is equal to about 0.0011 per degree centigrade.

New Processes.—The new process for the direct production of iron and steel from the ore introduced in Sweden by Dr. De Laval is said to consist in mixing pulverized iron ore with carbon, and subjecting the same in a rotating cylinder to heat, after which it is brought into direct contact with an electric arc of immense power, which reduces the ore to metallic iron. The melted iron then flows into a large and highly heated furnace, where it can either be manufactured directly into steel or cast in any suitable form for further treatment.

A new electrolytic process for the manufacture of aluminum recently patented in Europe consists in the decomposition by the electric current of anhydrous alumina rendered fusible by an appropriate flux. The anhydrous alumina is dissolved in a bath composed of fluor spar and chloride of sodium, or of an alkaline silicate or an alkaline borate, and decomposing the same in the solution by the electric current.

A process, by Alexander Diek, for the production of metallic bars by extension applies to the production of all kinds of metallic sections, from thin wire or plain bars to complex designs, by simply forcing

metal heated to plasticity through a die by hydraulic pressure. It consists in placing the red-hot metal in a cylindrical pressure chamber or container, at one end of which is a die. Upon pressure being applied at the opposite end, the plastic metal is forced through the die, issuing from it as rods or bars of the required section and length. The cost of labor per ton involved in the process is small. Samples of sections thus produced, exhibited by Mr. Perry F. Nursey to the Iron and Steel Institute—in aluminum, aluminum bronze, delta metal, brass, and other alloys—ranged from wire weighing about $\frac{1}{16}$ of a pound per foot run to heavy rounds, squares, and hexagons weighing 40 pounds and upward per foot run.

Electric smelting processes as generally carried on are discontinuous—that is, the furnace is charged with a given amount of material to be reduced or converted, and when the process is complete the furnace is emptied and a new charge inserted. This method of working usually puts the furnace out of operation for a time, so far as actual smelting is concerned, and to that extent entails a loss of time. To effect a desired economy in respect to this point, Mr. J. A. Vincent, of Philadelphia, has devised an electric furnace in which all the operations are continuous.

The process of M. Tommasi for the desilverization of argentiferous lead depends upon the electrolyzation of a solution of very weak electrical resistance. The argentiferous lead itself is taken for the anode, while the cathode is constituted of a turning metallic disk, from which the silver is removed by scrapers as it is deposited. The silver which is not dissolved in the bath is precipitated to the bottom of the electrolyzer. The author claims that the cost of his process is not more than about one fourth that of the ordinary process.

In the method of M. A. Demalgrt for closing cracks or pores in cast iron, the cylinder or vessel is filled with a certain quantity of perchloride of iron. The liquid is then compressed until globules appear on the external surface. The cylinder is thus impregnated with perchloride of iron all through its thickness. Any perchloride in the cylinder is then emptied out, and the cylinder is wiped until the polished surface is again made brilliant. It is next filled with ammonia at 22 Baumé, which is also subjected to compression. The effect of this operation is soon noticeable in the perchloride of iron in the metal becoming transformed under the influence of the ammonia into hydrated oxide of iron, which is at first somewhat frothy and afterward, under the influence of the external pressure, rough and compact. Some hydrochlorate of ammonia also remains, which will soon afterward react upon the iron, converting it eventually into an oxide compound, adding itself to the first. The leaks marked at the beginning of the operation will be entirely stopped up as soon as the ammonia begins to move out externally. The operation occupies about two hours.

A new process for the production of malleable-iron castings consists in melting in a modified Siemens-Martin furnace, using crude petroleum, 20 per cent. of pig iron, 78 per cent. of wrought-iron scrap, and, adding to this after it has reached the fluid state, 2 per cent. of a composition which is not named. These proportions may vary either way, according to the quality of metal desired. In other words, by changing the proportions of the pig, scrap, and of the composition, the resulting casting may be made to vary in its physical characteristics. The metal is said to flow very perfectly, and to produce a casting practically free from blowholes. It has a shrinkage of $\frac{1}{4}$ inch to the foot. A casting of this metal can be forged as wrought iron, welded

without trouble, and under the cutting tool it exhibits the characteristics of soft steel.

In a new method of face-hardening armor, one face of the ingot intended for the armor plate is carbonized direct at the time of being run into the mold. This is effected by lining one wall of the mold with the necessary carbonizing material, which must, it is stated, be free from occluded gases and of great durability, so as to remain stable during the process of casting. Experience has shown that the amount of cementation obtained varies with the carbonizing material used, about twice as much effect being obtained with charcoal as with coke. On withdrawal from the mold, the cemented surface is slightly wrinkled, but this disappears in the after-working of the ingot. The heaviest ingot yet dealt with in this way weighed a ton, and this was reduced from the initial thickness of 16 inches to 4 inches by forging and rolling. An examination then showed that for 1.5 inch from the face the metal contained from 1.78 to 1.5 per cent. carbon, which decreased regularly to between 0.25 and 0.15 per cent. at the back of the plate.

Miscellaneous.—In a discussion in the British Iron and Steel Institute having special reference to the Harveyzing process, Prof. Roberts-Austen showed how rapid is the motion of particles of what are called solid bodies. If, for instance, he said, a piece of pyritic ore containing 4 per cent. of copper is heated to a dull redness for some time, the iron pyrites would oxidize, while the copper would travel to the center; silver, on the other hand, passes outward. If gold and lead are placed in contact in a vacuum for twelve hours at a heat of 43°, they would unite, against gravity, in the same way as salt and water. These questions are interesting, especially in relation to the Harveyzing process; and the speaker thought it would be worth while for investigators to take the trouble to find out what are the true laws governing the carbonizing of iron.

The application of higher steam pressure has led to the introduction of iron fittings instead of the old brazed-copper fittings where these pressures are used, and the application of electric welding, or fusing, as some engineers prefer to call it, where joints, such as elbows, T-pieces, etc., are required. In the Benardos system, ordinary low-tension continuous-current dynamos are used; to the terminals of these a battery of Benardos accumulators is connected, into which the current flows continuously. When the welding circuit is closed, the current flows from the dynamos and accumulators, and large resistances are used when necessary. In this way a large discharge is attained, equal to about twice the capacity of the dynamos, and the load factor of the apparatus is high. Special attention is called by Mr. McCarthy in describing this process before the Institution of Mechanical Engineers to the length and size of the electric arc which is used in welding. With a short arc the carbon point is brought down too close to the steel, and the result is inferior work, not only from the presence of the carbon, but because the heat is concentrated upon so small a surface that the strains set up in cooling are considerable. The larger the arc, the softer and more defined is the heat, and any slight strain which may be set up can be got rid of by careful annealing. A long arc is therefore indispensable to the proper working of the system.

Concerning the difference between iron and steel, Mr. James observes that it is possible to have two metals yielding identical results by chemical analysis, one of which may be true fibrous wrought iron, and the other what we know as steel. The sole difference would be in the molecular structure, and this difference would be determined by the

temperature employed in the conversion of the malleable metal from its primitive form. When we speak of structural steel, in contradistinction to structural wrought iron, it should be understood that the distinction lies in the mode of manufacture (the former being prepared by fusion and the latter by agglutination), and not necessarily in any essential difference in the composition of the metals. During the puddling process iron will not agglutinate until the extraneous elements, principally carbon and silicon, are almost entirely removed. Broadly speaking, there is little variation in the physical properties of iron properly worked. Its tensile strength will not vary much from 50,000 pounds per square inch of sectional area, and it remains nearly uniform in hardness. On the contrary, by the fusion process the finished metal may retain carbon varying from nothing to $1\frac{1}{2}$ per cent. or more; it may also contain, by choice or necessity, a considerable quantity of manganese or silicon. Its tensile strength may vary from 50,000 pounds to 150,000 pounds per square inch of section. It may be softer than ordinary iron produced by agglutination or it may be the hardest tool steel; yet in all its gradations, which insensibly merge together, it possesses certain characteristics which are common to all, so that we can not discern any dividing line and assert that all metal on one side is steel, and all on the other side is not steel. While it may be true to a limited extent that the composition of steel is not an index of its physical properties, it is the tendency of the modern open-hearth practice to produce metal of more uniform composition than formerly, varying the carbon content according to the tensile strength or hardness desired, with the result that the physical properties are also more uniform than before. It is probable that each element modifies to some extent the influence of others, so that the interplay of the whole, due to varying proportions, becomes a matter of great complexity. The great impetus given to the production of structural steel in recent years is due, not to its superiority over good wrought iron, but to the fact that it can be produced more cheaply. Besides the source of weakness from the formation of cavities in the interior of the mass, another liability arises from the tendency of the extraneous materials in the metal to separate from the mass just before solidification, and accumulate, generally near the middle, making there a hard, possibly a worthless, part of the metal. If the ingot is forged into a shaft, the segregated mass will probably be drawn out to a slender core along the central axis. There is, therefore, a practical advantage in boring a hole through the center of important shafts, as it probably removes a segregated core. Welding of structural steel has been abandoned for all work of vital importance. Structural steel for buildings, bridges, etc., of excellent quality, will analyze as follows: Carbon, 0.10 to 0.25 per cent.; manganese, below 0.60 per cent.; silicon, below 0.10 per cent.; phosphorus and sulphur, each below 0.06 per cent. Steel, whether of high or low tensile strength, has a uniform modulus of elasticity—that is, all grades extend or compress or deflect alike under similar loads below the elastic limit of the material. Therefore high tensile strength is not always available, as the engineer has to consider stiffness and rigidity as prime factors in the satisfactory use and endurance of structures. The production and manipulation of steel require a higher degree of skill and intelligence to obtain satisfactory results than were formerly devoted to wrought iron.

A method of making chains of steel, iron, and other metals without welding has been invented by Mr. W. Walkington, of Leeds, England. The weldless link is made by slitting each end of the bar,

and then so manipulating the holes that they are large enough to allow the bar forming the next link to pass through them. It is contended that the weldless chain can be produced at less than half the cost of the ordinary welded article. Prof. Goodman, of Yorkshire College, has subjected a sample of the new steel chain to a test, along with a straight bar of the steel of which the links were made, and specimens of chains of the same size made from the best Yorkshire and best Staffordshire iron. The straight steel bar broke at 6.72 tons, but the weldless steel chain only gave way with a pressure of 10.21 tons. A welded chain of Yorkshire iron—said to be the best procurable in the market—broke with a pressure of 10.03 tons. Subsequently, experiments made were even more favorable to the new chain, a specimen of which stood 10.20 tons, while a Yorkshire iron chain broke at 9.70 tons, and one made of best Staffordshire iron at 9.57 tons.

Recalling the observations of Prof. Ramsay on the reduction of the vapor pressure of mercury by dissolved metals, from which the conclusion was drawn that at the boiling point of mercury the molecular weight of the metal in solution is in general equal to its atomic weight, M. Guntz puts forward the idea that in the case of metals extracted from their amalgams at a low temperature the residue consists, for the most part, of the element in its atomic state. This, and not merely the fine state of division, he regards as the explanation of the energetic properties exhibited by such metallic solutions. In support of this view thermo-chemical data are given for ordinary fused manganese and manganese from its amalgam, the heats of combination with oxygen showing that the conversion of the latter into the former is accompanied with the evolution of heat. Chromium and molybdenum also, which after being fused are unchanged in air, are pyrophoric when extracted from their amalgams at low temperatures. M. Guntz purposes to study the heats of polymerization of several metals, more especially of iron.

Investigations have been carried on by Prof. A. J. Fleming and Prof. Dewar to determine, by the use of the cold of liquid air, the effect of temperatures more than 200° below the freezing point of water upon the principal magnetic and electric properties of metals. It is found that the conductivity of pure iron wire, which at ordinary temperatures is only about one sixth that of copper wire of the same size, is increased nine or ten times under the influence of the cold of liquid air. But while pure metals thus have their conductivity immensely increased by intense cold, alloys, such as brass or German silver, experience under the same circumstances a comparatively small increase in conducting power, or not more than 10 per cent. By carefully examining the variations in the electrical resistance of a large number of chemically pure metals, the authors have established that every pure metal would probably have no electrical resistance at the zero of absolute temperature, or, in other words, would become a perfect conductor of electricity. In this condition the passage of an electric current would generate no heat in it. Another consequence would be that a pure metal at the absolute zero would form an absolutely opaque screen to electro-magnetic radiation. The experiments furnish an additional proof that the process by which an electric current is conveyed from place to place is primarily dependent upon actions going on outside that which we usually speak of as the conductor. At the absolute zero any electrical power, however large, can be transmitted along metallic wires, however small, without loss of energy, the wire becoming then a mere boundary and the en-

ergy-conducting process being all effected in the nonconductor outside of it. The neutral temperature of two thermo-couples—that is, the mean temperature of the two junctions when they are at different temperatures at the instant when the current in the circuit is at zero—and the temperatures of inversion of electro-motive force have been fixed by the author for an extensive series of metals at low temperatures between 0° C. and -200°; and in the thermo-electric lines of several metals sudden alterations in direction have been found indicating molecular changes at certain low temperatures. Stress is laid upon the value of the knowledge gained about the electrical resistance of metals at low temperatures as a means of testing the purity of a metal rivaling the spectroscopic in delicacy.

The special rules under the factory acts (1878 to 1895) issued to all brass manufacturers by an English departmental committee on the conditions of labor certify the processes in the mixing and casting of brass, gun metal, bell metal, white metal, delta metal, phosphor bronze, and manilla mixture, to be dangerous or injurious to health; order the provision of adequate means for facilitating as far as possible the emission or escape from the shop of any noxious fumes or dust arising from them, and for preventing their entrance into any other shop; direct the cleaning of the shops every nine months and the provision of suitable washing facilities for the workmen; forbid the employment of young women and girls in the mixing rooms or in any other rooms that are not wholly separated from them; and prohibit the eating or cooking of food in such shops within a period of at least ten minutes after the completion of the last pouring of metal in the room. The committee say in their report that they were fully satisfied that the symptoms commonly described as brass-founder's ague were caused by the inhalation of the fumes of deflagrated zinc or by eating food contaminated with the fumes.

Until recently no definite compounds of carbon with metals had been certainly determined except the acetylides of some of the metals of the alkalies and alkaline earths, which were known only in an amorphous and impure state. The application of the electric furnace by M. Moissan, enabling him to work at extremely high temperatures, has led the way to the formation of definite metallic carbides of great stability and having properties of great interest; and experiments in the preparation and investigation of them have been systematically carried on by M. Moissan. Such metals as gold, bismuth, lead, and tin have not been found to form carbides at any temperatures yet reached, or to dissolve any carbon. The metals of the platinum group dissolve carbon readily, but deposit it all on cooling in the form of graphite, without themselves being changed. Copper, silver, and iron take up carbon in small quantities, but sufficient to cause considerable changes in their physical properties. No definite crystalline compound has been obtained with iron. A considerable number of carbides are decomposed under the influence of water; thus carbide of potassium gives out acetylene; carbide of aluminum gives the pure metal; the carbides of cerium, lanthanum, and yttrium decompose into a mixture of carbides; carbide of uranium separates from three fourths of its carbon, which escapes in liquid carbides. Among the carbides not decomposable by water are those of molybdenum and tungsten, which are stable. Chromium is the only example of a metal giving two carbides at different temperatures of the electric furnace.

The experiments of M. Moissan in producing diamonds by the action of the pressure of solidifying cast iron suggested to M. Rosell that the conditions

under which very hard steels are now made should also result in their formation. He examined a large number of the steels, and found that his theory was borne out by the fact. The diamonds are obtained by dissolving the metal and then submitting the residue to the influence of concentrated nitric acid, fused potassium chlorate, hydrofluoric acid, and sulphuric acid. The diamonds are almost microscopic, but are true diamonds.

Recognizing the possibility of finding new materials for construction affording desirable qualities, in themselves or in combination, among the rare metals, Prof. R. H. Thurston has given much study to the properties of magnesium. Pure, it resembles the other white metals in color, is soft and weak, oxidizes more readily than nickel and aluminum, and in the form of a ribbon or powder burns readily, steadily and brilliantly. Its light is very rich in the actinic rays, and is so bright as to be visible at the distance of 30 miles or more at sea. Chlorine and hydrochloric acid attack it rapidly, sulphuric acid but slowly. It is very light, weighing only about two thirds as much as aluminum, and between one fourth and one fifth as much as steel. It seems more likely to prove serviceable in alloys than pure. It combines readily with many of the other metals, and forms alloys which are usually too hard and brittle to be useful in the arts. It is sufficiently malleable and rolls into ribbons and sheets. It has not that combination of strength and ductility requisite for successful wire drawing. Its flame has a temperature of 2,444° F., but the light is similar to that of an ordinary flame at three times this temperature. Its radiant light energy is higher than that of any other known flame, and constitutes three fourths its total energy of combustion and four times that of illuminating gas. Its tenacity is low, but exceeds that of pure aluminum. The author has not been able to obtain an alloy of magnesium and copper. Brass will take up a minute proportion of this metal, but with no sensible useful result. The presence of the lighter metal produced neither accession of strength nor increased tenacity, but in every instance the alloy was unsound and weaker than the brass itself. Iron refuses to alloy with magnesium in any sensible amount, and the magnesium seems to have no value either as flux or as a strengthening element. Magnesium and aluminum alloy with increase of strength up to 10 per cent. magnesium, when the alloy becomes brittle and valueless for constructive purposes. The addition of magnesium to cast aluminum increases its tenacity by a percentage which exceeds five times that of the per cent. of admixture. The best of these alloys are ductile. The author estimates that magnesium is capable of sustaining from 30,000 to 40,000 lineal feet of its own substance or the equivalent of steel of from 100,000 to 150,000 pounds tenacity. Were it practicable to construct engines, their weights would be reduced about 50 per cent., but the advantage would still be on the side of steel if the ultimate tenacity of absolutely pure steel in the form of fine wire or watch spring could be used. Magnesium has thus no promise of competition with steel in general construction.

The ancient Egyptian copper mines of the Sinaitic peninsula, which were extensively worked in their day, have been examined by M. de Morgan, who has shown M. Berthelot specimens of the mineral, the fluxes used in the working, and the residual scoræ. The mineral consists of hydrosilicates mingled with carbonates, phosphates (or turquoises), and sandstones, impregnated with salts of copper, and is very poor in ore, which occurs in nodules or veins. The copper (the metal) was reduced under the action of charcoal, with a ferruginous sandstone

as a flux. Fragments of carbonized wood were also discovered, and three tools—a pointed hammer to break the blocks of sandstone, a graver, and a needle. The hammer is of copper, hardened with arsenic, and the graver is of copper containing some tin, but not bronze. The arsenic in the hammer was obtained from the working of some other mineral, for there is none in the mineral of Sinai.

While carbon is still the material chiefly used for incandescent electrical conductors within lamps, attempts are still made to substitute metallic filaments of high melting points. Mr. J. W. Aylesworth, of Newark, N. J., employs for an incandescent conductor such refractory metals as niobium, tantalum, molybdenum, titanium, zirconium, and other metals of the same group. The filament is prepared by heating a base or support in the vapor of a volatile halogen compound of the element which it is desired to deposit, and simultaneously mixing it with a reducing gas, such as hydrogen. In practice, the author obtains the oxide of the metal from the ore, converts it into a volatile halogen compound, and heats as described. The result is the deposition of the pure metal upon the support or carbon filament, which is continued till the same is covered.

An experiment is described by Thomas D. West to prove that the blast exerts little or no power or pressure in the center body of a cupola. It consisted simply in getting inside of the cupola after the bottom is put up and holding a handkerchief at varying distances from the tuyère openings. When the handkerchief was held a foot away from the opening the blast had no perceptible effect upon it. The conviction that the blast thus expends its power most largely at the entrance of a tuyère led the author to try to utilize the "center blast," with satisfactory results. He enumerates several advantages which he has found in favor of this as compared with other methods, as follow: Reduction of fuel from 1 to 8 to 1 to 12; less wear on the lining; increased speed of melting; less wasting of chilled iron and shot; less absorption of sulphur by the iron; and absence of flame escaping out of the stack at closing or other part of the heat.

The principle of a crucible melting furnace invented by Mr. William Kirkham seems to consist in the displacement of the usual ganister lining in favor of a special silica brick, which is conserved by a wrought-iron casing and an outer air space communicating with the flue. The inventor claims for this furnace a saving of half the coke; that it requires renewal only once in fifty days; that it conserves the heat better; and that it is not liable to excessive need of repair. A trial of the furnace is said to have resulted satisfactorily.

METEOROLOGY. Temperature.—With balloons carrying automatically registering instruments French meteorologists have explored the air to the height of nine miles. At that distance from the earth's surface the temperature was found to be -60° C. or -76° F. The difficulties of exploration of course increase enormously with each mile of ascent, but it may be assumed that refrigeration also goes on in an ascending ratio at these great altitudes. The kites sent up from the Blue Hill Observatory, Massachusetts, have furnished records from a height of more than 9,000 feet. The success which has thus far attended this and other experiments in atmospheric exploration with kites encourages the belief that they will be found very complete and valuable instruments in the study of meteorology.

The kites used in the experiments at Blue Hill Observatory are box-shaped, with their ends open and their sides partly covered with cloth or silk,

and when piano wire is employed instead of twine are excellent flyers. Good results have been obtained by means of a self-recording instrument that gives readings of temperature, pressure, humidity, and wind velocity. Among important observations made with it are those relating to the presence of cold waves and warm waves at considerable elevations several hours before temperature changes are noted at the surface of the earth.

The calculation for each of the 145 stations of the Scottish Meteorological Society has been completed the averages of mean temperature and mean barometrical pressure for the forty years ending with December, 1895. The inquiry carried on by Dr. Buchan and Mr. Osmond for several years on the influence of fog, cloud, and clear weather, respectively, on the diurnal fluctuations of the thermometer and barometer has been extended into other regions, particularly the arctic regions and Portugal, which furnish data of the utmost importance. Among the questions more immediately related as the investigation proceeds is the influence on the pressure at the two observatories of the vertical distribution of temperature and humidity through the intervening stratum of air between the top and bottom of the mountains.

The temperature records of Australia for January, 1896, seem to contradict the common opinion that icebergs act as coolers to the weather, for, according to the words of Mr. Russell, Government Astronomer of New South Wales, the extreme hot weather and the neighborhood of icebergs were nearly coincident. The temperature of 108.5° was recorded at Sydney, Jan. 13, and 108° at Melbourne.

Among the results of three years' continuous observations by Prof. E. Wollny, of Munich, as summarized by Prof. Cleveland Abbe, are that the quantity of moisture evaporated from the soil into the atmosphere is considerably smaller than that evaporated from a free surface of water; that the evaporation is smallest from naked sand, and largest from naked clay, whereas naked turf and *humus* or vegetable mold have a medium value; and that the evaporation is increased to a considerable extent by covering the ground with living plants. Dr. Wollny further finds that evaporation as a process depends both on the meteorological conditions and on the quantity of moisture contained in the substratum of the soil; that temperature is the most important external circumstance affecting it, but its effect is modified according as the other factors come into play, and in proportion to the quantity of water supplied by the substratum; that the influence of higher temperatures is diminished by higher relative humidity, greater cloudiness, feebler motion of the wind, and a diminished quantity of moisture in the soil, whereas its influence increases under opposite conditions. On the other hand, low temperature can bring about greater effects than high temperature if the air is dry, or the cloudiness small, or the wind very strong, or a greater quantity of water is present within the evaporating substance. For the evaporation of a free surface of water, or for earth that is completely saturated with water, the important elements are, first, the temperature, next the relative humidity of the air, and then the cloudiness, direction, and velocity of the wind; while the quantity of rain on which the soil depends for its moisture is an important additional consideration. The evaporating power of the soil is in itself dependent upon its own physical properties; the less its permeability for water or larger its capacity for water and the easier it is able to restore by capillarity the moisture that has been lost, by so much the more intensive is the evaporation. Hence

evaporation increases with increase in the proportion of *humus* in the soil, and diminishes as the soil is sandy and coarse-grained.

Clouds.—A paper by Mr. W. Ellis on the mean amount of cloud on each day of the year at the Royal Observatory, Greenwich, on the average of the fifty years 1841–90 shows that a principal maximum occurs in winter and a principal minimum in autumn, with a secondary much less pronounced maximum in summer and a secondary minimum in spring. There is, however, considerable irregularity in the succession of daily values, the differences in which on consecutive days are in numerous cases relatively large. Cloudless days are most numerous in spring and autumn, and days of little cloud are somewhat less numerous in winter as compared with other parts of the year, while days of medium cloud are much more numerous in summer than in winter.

An ingenious nepheloscope, or instrument for observing the clouds, has been suggested by M. L. Niesten, of the Royal Observatory, Brussels. Our observations, as usually taken, are necessarily defective because of the impossibility of establishing fixed lines or points in the sky by means of which the position of objects projected upon it may be estimated. If, however, we could have such lines or points, if we could divide the celestial *calotte* into invariable segments, observations of nebulosity might be made methodically and in a uniform way at the different meteorological stations. By turning toward different points in the horizon the observer, in order to obtain the total cloudiness, would have only to add the segments or parts of segments covered with clouds. Such lines, though they can not be found or placed in the sky, can be traced on a spherical mirror, whence the part of the sky visible within the compass of the horizon will be reflected in all its details.

Among the various devices for measuring the heights and velocities of clouds, the observers of the Meteorological Council at Kew have used photographic cameras fitted with theodolite mountings and provided with altitude and azimuth circles. Mr. Rotch, at Blue Hill, Mass., measured the velocities of clouds by timing the movements of shadows cast by them at points whose distance was known. During 1896 cloud observations were made in all parts of the globe under the special direction of the International Meteorological Committee. Not all the stations used instruments, and the majority of those which did only employed nepheloscopes which gave the direction and apparent velocity of the clouds by means of a mirror and graduated circles. At some of the principal observatories theodolites and photogrameters were used. Each of the last two methods has its advantages and disadvantages; theodolites are simpler and cheaper, while photogrameters require a certain amount of skill in photography. The theodolite requires the two observers, each placed at one end of the measured base to agree upon some fixed point in the cloud and the precise instant at which the observation should be taken, which it is not always easy to do, even by telephonic correspondence. The calculation of the observations is subsequently made from trigonometrical formulas, or by a slide rule or plotting machine. With the photogrammeter, which is a theodolite provided with a small telescope and a *camera obscura*, an agreement as to the special point to be observed is not necessary. It is sufficient that both observers photograph the same part of the sky at the same moment.

Mr. John Aitken brings forward a new view of the manner in which ripple-marked cirrus clouds are produced. The common explanation of this form of cloud is that the ripple markings are due to the

general movements of the air giving rise to a series of circles, the axes of the eddies being horizontal and roughly parallel to one another. Mr. Aitken believes, on the other hand, that they are clouds in decay. They are generally formed out of some strato-cirrus or similar cloud. When these strato-cirrus clouds are observed in fine weather, it is found that they frequently change to ripple-marked clouds before vanishing. The process of the formation of these would seem to be that the strato-cirrus gradually thins away till it attains such a depth that if there are any eddies at its level the eddies break the stratus cloud up into parallel or nearly parallel masses, while the clear air is drawn in between the eddies. It will be observed that this explanation requires the eddies, but not to produce the clouding, only to explain the breaking up of the uniform cirrus cloud into ripple cirrus. The hypothesis is supported by the fact that lenticular cirrus clouds are frequently observed with ripple markings on one or more sides of them, just where the cloud is thin enough to be broken through by the eddies. If we watch these lenticular clouds under these conditions, we frequently see the ripple markings getting nearer and nearer the center as the cloud decays; and at last, when nearly dissolved, the ripple markings will be seen extending quite across the cloud.

A new classification of clouds is proposed by Mr. Aitken into clouds in the process of formation and clouds in the process of decay. The cumulus clouds are taken as an example of the former class, and the nimbus of the latter. The author's observations on the clouds themselves have shown that there is a difference in structure of these two classes. In clouds in formation the water particles are much smaller and far more numerous than in clouds in decay; and while the particles in clouds in decay are large enough to be seen with the unaided eye when they fall on a properly lighted micrometer, they are so small in clouds in formation that, if the condensation is taking place rapidly, the particles can not be seen without the aid of a lens of considerable magnifying power. In the former case the number of particles falling per square millimetre is small, while in the latter they are so numerous that it is impossible to count them.

Precipitation.—It is generally considered that near the equator the rains are everywhere heavy and of nearly daily occurrence. Dr. A. Woeikoff shows in a paper on the rainfall of the Malay Archipelago that in many localities—in the open sea, for example—this is not the case. In the region in question some of the wettest and some of the driest stations lie within $1\frac{1}{2}^{\circ}$ north and 1° south of the equator. The most rain falls on the west coast of Sumatra; the more level eastern Sumatra and western Borneo have less rain and also less contrasts. On the north-east peninsula of Celebes the rains are comparatively light, and there is a well-marked dry season. In Java the rainfall is lightest in the east, and the dry season is longer and more sharply defined, so that vegetation has a time of arrest corresponding to our winter.

Records of the relative fall of rain in the day and night, kept for ten years at Sevenoaks, England, by Mr. W. W. Wagstaff, show that the mean annual rainfall for the day was 40 inches and for the night 60 inches; that in winter the nights are much wetter than the days, and are also wetter in spring and summer, but with less marked difference, which is least in summer.

The white vapors or light fogs which form over meadows and in narrow valleys after sunset on bright summer days are ascribed to condensation from evening radiation of the vapors that saturate the air near the ground. A phenomenon of an op-

posite character is described by M. A. Lancaster, of Brussels, when mists were raised by the shining of the sun into a narrow valley when the air was full of moisture after a heavy dew. In a few moments a white vapor rose from the ground, thickening gradually to the height of about a metre, and then stretched along, under the influence of the wind, forming a long ribbon of mist. The vapors behaved exactly like the steam rising from a strongly heated surface of water. New beds of the mist were formed as the sun's rays advanced into the valley, while the former ones disappeared. Similar vapors arose from the trees and shrubs along the road, to disappear very soon without greatly expanding.

None of the fogs in high latitudes, as observed by Prof. W. H. Brewer, are so white and opaque as those seen south of latitude 50°; and they are rarely so opaque that large, dark objects can not be seen at a distance of 200 feet. In the Greenland seas the fogs were, as a rule, very much wetter. Often when the fog was so transparent that objects could be seen for half a mile or even a mile from the ship, the water would drip like rain from the rigging. On returning to the south, where the fogs were very dense and objects could not be seen at a ship's length, there was a marked contrast in their wetness. The air did not appear as if entirely saturated. The dust particles in the air over the southern water were ample to collect all the moisture, while in the Greenland fogs condensation went on as if these was not nearly dust enough in the air to supply the demand.

It has been shown by R. H. Scott concerning the difference between fogs as relating to the weather systems that accompany them that at least two distinct classes of phenomena are described under the generic name of "fog." In the case of anticyclonic fogs, no rainfall takes place; the temperature is low in the morning, and a considerable rise takes place during the day; while in the case of cyclonic fogs, rainfall does take place, and the temperature is high in the morning, frequently approaching or even equaling the maximum for the day.

The following definitions of fog, mist, and haze are proposed by a member of the Royal Meteorological Society: Fog, an obscuration due to condensation of aqueous vapor when the particles are too small to be seen by the naked eye; mist, when the particles are large enough to be seen with the naked eye; smoke fog, obscuration without water particles; haze, an obscuration of distant objects so slight that the cause is not visible to the observer.

F. A. Rollo Russell observes that haze is most prevalent when the wind is from the northeast, and is due probably to excess of dust brought about by conflicting currents. The causes of fogs are to a great extent the same as the causes of haze, although radiation in certain states of the air and the ground plays a more conspicuous part. The main cause of fogs is mixture of airs of different temperatures, and the attainment of a size of water particle so much larger than in the case of haze is due to suddenness of mixture, greater humidity, or greater differences of temperature. The conditions favorable to visibility are dryness of the air near the ground level, uniformity of temperature and moisture, radiation below the mean, steady and homogeneous winds through a great depth of the atmosphere, approximation of the temperatures of sea and land, and a number of dust particles less than the mean.

Observations made by Mr. E. D. Fridlander with a form of Aitken's pocket dust counter during a voyage round the world showed that considerable variations in the quantity of dust in the atmosphere

often occur in a very short space of time. Dust was found not only in inhabited countries and over the water surfaces immediately adjoining them and up to an altitude of 6,000 to 7,000 feet among the Alps, but it was also found in the open ocean, and that so far away from any land as to preclude the possibility of artificial pollution; and its existence has been directly demonstrated at a height of more than 13,000 feet.

Winds.—The committee of the British Association appointed to consider the effect of wind and atmospheric pressure on the tides reported the conclusions, from information obtained from various parts of England, that the tides are influenced both by atmospheric pressure and by the wind to an extent that considerably affects their height; that the height of about one fourth of the tides is affected by wind; that the atmospheric pressure affecting the tides operates over so wide an area that the local indications given by the barometer at any particular spot do not afford any trustworthy guide as to the effect on the tide of that particular port; that although, so far as the average results go, there can be traced a direct connection between the force and direction of the wind and the variation in the height of the tides, yet there is so much discrepancy in the average results when applied to individual tides that no satisfactory formula can be established for indicating the amount of variation in the height of the tide due to any given force of wind; that the results given in the tables attached to the report relating to atmospheric pressure indicate that the effect of this is greater than has generally been allowed, a variation of half an inch from the average pressure causing a variation of 15 inches in the height of the tides.

In a discussion of the scientific aspect of balloon voyages, Prof. von Bezold, starting with the fundamental physical principles which underlie the events taking place in cyclones and anticyclones as also in the general atmospheric circulation, proceeded to show the necessity for more exact measurements of temperature and humidity in the upper strata of the air, and of ascertaining the height at which air passes over from a cyclone into an anticyclone.

Thunderstorms.—Prof. von Bezold, speaking on the unstable equilibrium that precedes a thunderstorm, observes that the fact that in the interior most thunderstorms occur in the afternoon and during the summer, whereas near the coast they are most frequent at night and in the winter, shows that there must be different causes for the instability. As a matter of fact the author shows that not only overheating of the lower layers of air, but also excessive cooling of the upper layers, must lead to unstable equilibrium and a correspondingly powerful upward current of air. A similarly unstable state is brought about by the sudden solidification of strongly cooled water drops, or the condensation of air highly supersaturated with moisture. The conditions for realizing these states are different in the interior and at the coast or over the sea, and the mode of formation of a thunderstorm is correspondingly different.

Mr. H. Harries has shown, in the Royal Meteorological Society, that hail and thunderstorms are not, as has been supposed, extremely rare in the arctic regions. He has examined 100 logs of vessels that have visited those quarters and 75 of them gave records of hail having been encountered at some time or other. Thunderstorms are not so freely mentioned as hail, but they have been observed in seven months out of the twelve—most frequently in August.

Miscellaneous.—The International Meteorological Congress, which met in Paris in September, was attended by directors of meteorological stations

from nearly every country in the world. The United States was represented by Mr. Rotch, of Blue Hill Observatory, Massachusetts, and Mr. J. Page, of the Hydrographic Office, Washington. M. Mascart, of France, presided. The resolutions adopted concerned the provision of thermometer shelters and uniformity in the models of them; the addition of symbols to those already adopted for distant and sheet lightning, for lightning and thunder, and the classification of showers with respect to these phenomena; recommended observation, in the present condition of the science, of the duration of sunlight rather than its intensity; and advised a uniform height of a metre and a half for pluviometers. A committee report on the adaptation of aeronautics to meteorology recognized its great importance, and advised that scientific ascensions be encouraged and multiplied; that whether with free or fixed balloons they be made simultaneously from different stations; that while specific instruments could not at present be recommended, those employed in simultaneous ascensions be identical in character; that as prompt publication as possible is important of the actual observations, especially of those made in simultaneous ascensions; that observations in captive balloons be executed regularly; and that "in view of the satisfactory results which kites carrying registering instruments to the height of 2,000 metres have given at Blue Hill, it is desirable that like researches be undertaken elsewhere." Another committee reported that an international organization for the observation of clouds had been effected, in which nearly all the countries participated, and observations either direct or indirect and photo-grammetrical were now made in Sweden, Norway, Russia, France, Prussia, and the United States, and photogrammetric stations would shortly be installed in Hungary and India, and at Manilla, Batavia, and Sydney.

An historical investigation made by Mr. H. C. Russell, of New South Wales, of the theory of a weather cycle of nineteen years, has resulted in an apparent confirmation of it. The investigation was made by means of a comparison of the notices of droughts that are found in the records of recent times, and in modern and ancient times as far back as they occur. Droughts are selected rather than any other special feature because, their effects being more intense, they are more likely to receive attention. A weak point in the evidence adduced by the author is that history has not kept a regular and continuous record of droughts, but has recorded them only when they become very prominent. It has, on the other hand, the strong point that all the data that history gives us is in favor of the nineteen years' cycle. First, Mr. Russell finds that during the whole period from the foundation of the colony of New South Wales to 1896—one hundred and eight years—the most pronounced droughts have recurred regularly every nineteen years. Indian droughts seem to have coincided with Australian ones in many instances. Examining historical records previous to the Australian era, the author finds that of 52 repetitions of droughts possible on his theory since A. D. 900, 44 are mentioned as having occurred at various places on the earth, and all at dates that fit well into the nineteen-year period. In the years before Christ, mentions of 20 droughts are found, all of which, with one exception, occurred at intervals which are multiples of nineteen years. Besides these "great droughts" another set of dry periods, more intense and relatively shorter than the first series, were found, falling regularly between pairs of the more extensive ones, and also marking a nineteen-year period. Further, 69 records of falls of red dust "obviously a proof of drought somewhere, other-

wise the dust could not rise," and proofs of drought entirely apart from the others, and "recorded not as droughts but as marvels," all of which "fit into the nineteen years' cycle." The author is continuing his investigation, and is preparing a paper in which he will try to show a connection between this weather cycle and the lunar cycle of nineteen years.

Prof. Cleveland Abbe has shown that geology and agriculture, as well as meteorology, are interested in the part played by the small quantity of carbonic-acid gas that exists in the atmosphere. The leaves absorb and eliminate a portion; the falling raindrops and the surface water of the ocean absorb another portion; it is exhaled from the lungs, and given off in still greater quantities from every burning substance. It may accumulate temporarily in some regions, but slow diffusion and swifter winds carry it away. It ought to diminish as we ascend above the earth's surface, but the rapidly rising and falling currents of air tend to preserve a fairly uniform mixture very much as they do in the case of water vapor. Evidently there is a general balance between the production and absorption of carbonic-acid gas, so that, like the temperature of the air and the quantity of rain or any other meteorological element, we find no great progressive secular increase or diminution.

Some interesting general conclusions are drawn by Prof. Ramann from his researches on the richness of the water content of wooded soils. The experiments were prosecuted at Eberswalde in 1893, when the spring was dry, on a sandy, slightly clayey soil, with a dry subsoil. Compact soils proved to contain less moisture than cultivated soils; and soils which had been bare for a long time were no exceptions to the rule. The dry periods of the spring, till the beginning of the vegetal activity of the trees and the opening of the leaves, exercised no sensible influence on the richness in water of the soils of a compact mass. After the appearance of foliage, there was first a rapid and then a slower, continuous drying out of the deeper strata of the soil. On tilled lands kept clear of weeds the upper strata were not dried below 5 or at most 10 centimetres, while the deeper strata suffered only an insignificant loss of water. During the dry period of the spring of 1893 the water content of the soil fell for a notable depth to half, and in many cases to a third of the normal. These observations are of course valid only as to soils like those on which they were made, and other results might be obtained with other, especially with clay soils.

Some noteworthy facts in the audibility of fog signals have been commented upon by Prof. H. A. Hazen in the "American Meteorological Journal." A passenger steamer had grounded on Great Gull island about 5,000 feet due west of a fog signal which was sounding at the time. The siren had been heard to a distance of 20 miles under favorable circumstances, but the captain of another steamer, which approached the island from the west at the time of the accident, said that his lookout was not able to hear any sounds as they approached the island, whereas, after passing, the whistle could be plainly heard.

The most prominent feature of the climate as shown in the record of results of meteorological observations at Boroma, on the Zambesi river, in 16° south latitude, is the contrast between the dry and wet seasons. The approach of the rainy season is announced by lightning in the north and north-east during October; rain begins in November, and continues, on and off, for about five months; hail also occasionally occurs during thunderstorms. The dry season begins in April, and till the follow-

ing November no measurable quantity of rain falls. It is worthy of remark that during the seven dry months, though under a tropical sun, vegetation is not arrested, although even slight dew is very rarely observed. The daily barometric range is very regular, and amounts to about 0.15 inch. The atmospheric waves are so similar that the barometric curves overlie each other as nearly as possible; depressions such as are frequent in our latitudes do not occur at any part of the year; even the passage of a thunderstorm is not shown upon the barograph traces. The absolute highest temperature recorded was 109.9° F., in November, and the lowest 54.5° F., in August. The annual rainfall amounted to 29.6 inches, of which 10 inches fell in December. The greatest amount observed in twenty-four hours was only 1 inch.

METHODISTS. I. Methodist Episcopal Church.—One hundred and forty-five annual organizations are included in the plan of episcopal visitation of this Church, of which 124 are classed as conferences, 9 as mission conferences, and 12 as missions. The statistical tables of the Church, as published in the "Methodist Yearbook" for 1897, give it 21 bishops, 17,234 traveling ministers in full connection and on trial, 14,086 local preachers, 2,825,694 lay members and probationers, 30,849 Sunday schools, with 355,899 officers and teachers and 2,607,241 pupils, 25,849 churches, valued at \$109,641,191, and 10,059 parsonages, having a probable value of \$16,880,417. The number of baptisms during the year was 88,360 of children, and 118,315 of adults.

The total sales of the two publishing houses—in New York and Cincinnati—with their depositories at Boston, Mass., Pittsburg, Pa., San Francisco, Cal., and Detroit, Mich., for 1896, amounted to \$7,950,096. The aggregate amount of sales since the division of the Church in 1844 is returned at \$60,679,380.

The receipts of the Sunday-school Union for 1895 were returned to the General Conference as having been \$23,889; and for the four years ending with that year, \$96,150. The receipts of the Tract Society for 1895 were \$20,653.

The National Association of Local Preachers was organized in 1858, and was incorporated under the laws of the State of Maryland in 1883. Its objects as set forth in its charter are to unite more closely all accredited local preachers of the Methodist Episcopal Church, to promote education and temperance, and to secure pecuniary relief for sick and disabled members. It is composed of delegates chosen by local and conference associations, who have the exclusive right of voting when a ye-and-nay vote is taken, and local preachers attending and having themselves enrolled, who may participate in the business and vote on general questions. It holds annual meetings, and has about 300 members. It owns and controls Taylor University, at Upland, Ind., publishes the "Local Preachers' Magazine," and maintains an aid society.

The organization of the young people of this Church was first agitated in 1872, when a memorial of the "Church Lyceum" was presented to the General Conference. Several societies were formed, independent of one another. A general desire being felt for a single organization, the representatives of five of these bodies met in Cleveland, Ohio, in May, 1889, and formed the Epworth League. This society was formally recognized by the General Conference of 1892. At the celebration of its seventh anniversary, during the General Conference of 1896, it had 16,306 regular chapters and 4,663 junior chapters, with an aggregate of 1,500,000 members. The League is managed by a Board of Control, the members of which are partly appointed

by the bishops and partly elected by General Conference districts.

Twenty-three deaconesses' homes in the United States, 7 in Germany and Switzerland, 6 in India and Malaysia, 1 in China, and 1 at Cape Palmas, Africa, with a number not specified under the care of conferences and the Woman's Home Missionary Society, return 630 deaconesses and probationers, with property valued at \$644,175, 6,250 meetings held or assisted in, 3,767 sick cared for in hospitals, and 1,630 sick cared for in their homes.

Ten institutions for children, 10 hospitals, 6 homes for the aged, 1 mission institute, 8 missionary (woman) and deaconesses training schools, 28 City Evangelization Unions (organized into a National Union), and 8 historical societies are enumerated in the "Methodist Yearbook" as being under Methodist direction.

The annual meeting of the College Presidents' Association of this Church was held at Evanston, Ill., Nov. 17 and 18. President H. W. Rogers, of Northwestern University, presided. A paper by Dr. Planz, President of Lawrence University, Appleton, Wis., favored the grouping of the institutions of the Church about a few larger universities as centers, where most liberal provisions might be afforded for post-graduate study. Other papers were on "Teaching Religion in Colleges," by Chancellor McDowell, of Denver, Col.; "College Morals and College Discipline," by Dr. C. H. Payne, of the Board of Education; "To fulfill its Ideal should the Church College include a College Church?" by President Warren, of Boston University; and a general discussion took place of the question, "What should be the Educational Policy of the Methodist Episcopal Church?" The principals of academies and preparatory schools were invited to meet with the association at its next session, with a view to forming an organization of schools of that class.

Church Extension Society.—The General Committee on Church Extension met in Pittsburg, Pa., Nov. 5. The receipts for the year were reported to have been \$226,753—viz., \$145,831 for the general fund available for donations and \$80,922 for the Loan fund (for loans only). Four hundred and seventy-one formal applications for donations or loans had been received, of which 367 were granted, and allowed donations of \$23,700 and loans of \$89,050. These amounts were considerably below what were asked by the churches. In the great majority of the 104 cases of applications declined the refusal was on account of lack of funds. "The value of the Loan fund in Church extension," the report avers, "has been fully established. It has afforded temporary aid in the general work of the board which would not have been possible without it." The capital of this fund, including annuity funds, had nearly reached a million dollars, and in the use of this capital and of loans returned the board had been able to afford temporary aid to churches by loans of more than \$2,000,000. The collection of loans had been greatly hindered by the severe financial depression. The board were instructed to maintain a vigorous and strict administration of the Loan fund, but authorized where the borrowing church can not pay the principal without great sacrifice to extend the loan on condition of payment of the interest to date and prompt payments in the future. The sum of \$303,225 was decided upon as the amount to be asked from the annual conferences during the ensuing year, and to be appropriated to them in turn. The reception of a legacy of \$5,000 was reported to the General Committee during the meeting.

Freedmen's Aid and Southern Education Society.—The General Committee of the Freed-

men's Aid and Southern Education Society met in Pittsburg, Pa., Nov. 9 and 10. The receipts for the year ending June 30, 1896, had been \$214,071, and the expenditures \$212,922. Twenty-two schools were sustained among the colored people, including 1 theological seminary, with 4 teachers and 96 students; 10 schools of collegiate grade, with 161 professors and 3,242 students; and 11 academeical schools, with 52 teachers and 4,881 students. Twenty-two schools were also sustained among the whites—namely, 3 colleges, with 74 professors and 1,248 students, and 19 academies, with 71 teachers and 2,210 students. The whole number of teachers in all the schools, including 96 "practice teachers" in colored schools and 25 in white schools, was 477, and of students 8,396. Of these students, 225 were preparing for the ministry, 226 were taking courses in medicine, 10 were studying law, and 1,540 colored students were enrolled in manual training and trade departments. The total value of the property of the schools was \$1,978,800. Appropriations were made for the ensuing year of \$64,225 to the schools, and \$45,450 for other purposes.

Missionary Society.—The seventy-eighth annual meeting of the General Missionary Committee was held in Detroit, Mich., beginning Nov. 11. The receipts for the year ending Oct. 31 had been \$1,221,258, and the expenditures \$1,409,112. The indebtedness of the treasury at the close of the year was \$299,054, having been diminished \$15,288 during the year. The receipts to the account of "special gifts" had been \$43,410, which, with the amount (\$18,421) on hand at the beginning of the year, made \$61,831 available for the purposes for which the gifts were intended. Of this amount, \$42,889 had been paid out. The ordinary receipts and those for "special gifts" combined showed an increase of \$22,009 in the total receipts for the year. The sum given as the amount of the receipts included the avails—\$78,098—of a special collection taken for paying the debt of the society. Appropriations were made for the next year's work as follow: *Foreign missions:* China, \$114,011; Japan, \$48,576; Korea, \$14,285; India, \$133,058; Malaysia, \$9,378; Germany, \$30,350; Switzerland, \$7,500; Norway, \$12,760; Sweden, \$16,724; Denmark, \$7,589; Finland and St. Petersburg, \$4,650; Bulgaria, \$11,371; Italy, \$41,000; South America (Chili, Peru, Argentine Republic, Uruguay, etc.), \$71,348; Mexico, \$49,500; Africa (Liberia) and the Congo Mission Conference, \$14,700; total for foreign missions, \$586,800. *Missions in the United States:* White work in the South (Delaware and Maryland excepted), \$46,538; colored work, mostly in the South, \$43,545; other English-speaking missions, \$186,907; missions to non-English-speaking populations (Welsh, Swedish, Norwegian and Danish, German, French, Spanish, Chinese, Japanese, Bohemian and Hungarian, Italian, Portuguese, and Hebrew), \$146,756; American Indians, \$8,937; total for domestic missions, \$432,693; miscellaneous appropriations, \$120,000; grand total of appropriations for 1897, \$1,139,493.

Woman's Societies.—The fifteenth annual meeting of the Woman's Home Missionary Society was held in Springfield, Ill., Oct. 21. The receipts of the society for the year had been \$139,218, and the expenditures \$138,129. The property held by the society, consisting of schoolhouses, homes, etc., was valued at \$465,800. A debt which amounted at the close of 1893 to nearly \$50,000 had been reduced nearly one half, without having to withdraw any of the teachers from the field. Supplies had been sent out during the year to families of frontier ministers to the value of \$70,000. Reports were made of the condition of industrial homes at Greensboro and Asheville, N. C., Orangeburg and Camden, S. C.; 8 mission homes and deaconesses' homes in Utah;

the Mothers' Jewels Home; the Watts de Peyster Home, at Tivoli, N. Y.; and the Glen Industrial Home, Cincinnati. A gift of 40 acres of land had been received from Mrs. Mary Eldridge by the New Mexico and Arizona Mission, on which an adobe house had been erected. Special reports were made of missionary work among the Indians, particularly the Navajoes.

The twenty-seventh annual meeting of the Woman's Foreign Missionary Society was held in Rochester, N. Y., beginning Oct. 29. The income of the society for the year had been \$285,770, or \$3,457 less than the receipts of the previous year. Twenty-five missionaries had been sent out—a larger number than in any previous year except 1888, when 26 were commissioned. The society supported 170 missionaries, of whom 22 were medical; 750 Bible readers, assistants, and teachers; 390 day schools, with about 12,000 pupils; 50 boarding schools, with about 4,000 pupils; 11 orphanages, with 450 orphans; 10 training schools, with 200 pupils; and 14 hospitals and dispensaries, administering to about 60,000 women annually. The society issues much literature, having circulated 1,000,000 pages of leaflets during the year and publishing 3 English and 1 German periodicals in the United States and 5 in India in as many languages, while the young women connected with the school at Nagasaki, Japan, publish a paper quarterly. Many of the missionaries in foreign countries were giving attention to literature for women and children, and had translated several books. The society owned in India, China, Japan, Korea, Mexico, South America, Bulgaria, and Italy real estate to the aggregate value of more than \$400,000, and held an invested fund of \$25,000, the interest of which was reserved for the publication of its zenana papers in India. Appropriations were made for the ensuing year to the amount of \$327,309.

General Conference.—The twenty-second General Conference met in Cleveland, Ohio, May 1. A question was raised during the process of organization concerning the eligibility of four women who had been returned as lay delegates. In the formal protest which was presented on the subject their eligibility was challenged on the grounds—

"1. That prior to 1868 only ministers, and they under specific conditions, were eligible to membership in the General Conference.

"2. That provision was constitutionally made for the admission of laymen, under certain specified conditions, and that laymen were seated in the General Conference in 1872.

"3. That the history of the movement culminating in the admission of lay representation shows that the Church did not contemplate nor intend the election of women; that whenever attention was called to the subject it was definitely understood that women were not eligible under the constitution.

"4. That in 1888 five women were elected, and the credentials of four of them were presented; that the question of eligibility was referred to a special Committee on Eligibility, which committee reported women to be ineligible under the constitution.

"5. That the General Conference adopted the said report declaring women ineligible, and pursuant thereto declared the seats vacant which they came to fill, and seated the first reserves in said seats.

"6. That a proposition to alter the constitution so as to admit women was submitted to the Church, and lost for the want of more than 2,000 votes than it received.

"7. That the action of the General Conference of 1892 did not reverse the action of 1888 declaring

women ineligible, or take any action equivalent to a reversal of the same.

"8. That the proposition submitted previous to 1892 was resubmitted during the year and lost; and that therefore all women professedly elected, though their credentials are in proper form, are not eligible to membership in this General Conference."

The question was referred to a committee partly appointed by the delegates in their several General Conference districts and partly appointed by the bishops. While the subject was pending, a communication was received from three of the women delegates (the fourth, from China, not having yet arrived) offering—in the belief "that were the Conference relieved from the tension which our presence occasions, it might speedily devise a plan of admission upon which the great majority of the members could agree"—"to relinquish all claims to membership in your honorable body, and await such a settlement of a long-vexed question as your wisdom may devise, confident that your action will embody the spirit of the golden rule." The fourth woman delegate subsequently withdrew also. The report of a majority of the committee to whom the subject was referred held that the challenge was not sustained, and that the lady delegates were not ineligible to the body. The report of the minority presented a historical review of the question and arguments deduced from it, and found that the challenge of the eligibility of the women was sustained; that the elections of women by the lay electoral conferences were illegal acts; and "that to seat the claimants would tend to destroy all respect for the constitution of the Church and for the decisions and interpretations of the General Conference." The question was recommitted for the purpose of securing a report upon which all could agree, and in pursuance of this the following was presented:

"Your Committee on Eligibility respectfully submits the following report:

"We agree on the following points:

"1. That the question of eligibility is a constitutional question.

"2. That the General Conference has full power in its judicial capacity to interpret the constitution, the question being raised on a case which properly invokes the judicial function.

"3. That the terms of ¶ 62 are such as to admit of serious doubt and raise questions on which your committee is unable to agree.

"We therefore recommend for your consideration, first, that under ¶ 68 the General Conference act upon the following:

"That § 2, ¶ 67, be altered by striking out all the words in said section following the word 'provided' in the fifth line of said section, and substitute the following:

"That no person shall be chosen a delegate to the General Conference or to an electoral conference who shall be under twenty-five years of age or who shall not have been a member of the Church in full connection for the five consecutive years preceeding the election; and provided, also, that no conference shall be denied the privilege of one ministerial and one lay delegate, provided, that where there shall be in any conference a fraction of two thirds the number which shall be fixed for the ratio of representation, such conference shall be entitled to an additional delegate for such fraction'; so that the entire section shall read:

"Sec. 2. The General Conference shall not allow more than 1 ministerial representative for every 14 members of an annual conference, nor of a less number than 1 for every 45, nor of more than 2 lay delegates for any annual conference; provided,

that no person shall be chosen a delegate to the General Conference or to an electoral conference who shall be under twenty-five years of age or who shall not have been a member of the Church in full connection for the five consecutive years preceeding his or her election; and provided, also, that no conference shall be denied the privilege of 1 ministerial and 1 lay delegate, provided, nevertheless, that where there shall be in any conference a fraction of two thirds the number which shall be fixed for the ratio of representation, such conference shall be entitled to an additional delegate for such fraction."

"Resolved, That, the foregoing having received a majority of two thirds of this General Conference, the bishops be and are hereby instructed to submit to the several annual conferences, at their first sessions following the adjournment of this General Conference, the foregoing alteration of § 2 of ¶ 67 for the concurrence of the members of said annual conferences; and if it shall be found that a majority of three fourths of all the members of the several annual conferences concur in such alteration, they shall declare the fact through the official papers of the Church, proclaiming that § 2 of ¶ 67 has been amended as above, in accordance with the provision 68 of the Discipline.

"Resolved, That, in consideration of the general desire for the early and final settlement of the whole question, and in view of the proposed submission to the annual conferences, we recommend that no formal decision of the question of eligibility be made at this time.

"The challenge not having been judicially passed upon, those occupying the seats in question do so under a title in dispute, yet without prejudice to the rights of either challengers or challenged, and without establishing a precedent."

This was adopted by a vote of 425 to 98.

A communication from the General Conference of the Methodist Episcopal Church, South, announcing the appointment of a commission of federation with power to enter into negotiation with similar commissions that may be appointed by other Methodist bodies with a view to abating hurtful competitions and the waste of men and money in home and foreign fields, was referred to the Board of Bishops.

A minute was adopted justifying the work of the Methodist Episcopal Church in the South, and showing why it should be regarded as permanent.

A proposition was adopted for submission to the vote of the Church in the usual form to make the number of lay delegates from each conference to the General Conference equal to the number of ministerial delegates the conference is entitled to send.

An address was adopted to the President of the United States in favor of international arbitration. A petition to Congress was adopted that it authorize the President to negotiate with the European powers most immediately interested, with reference to putting an end to the atrocities in Armenia.

The Board of Control of the Epworth League was made to consist of 15 members appointed by the bishops, one of whom should be a bishop and president of the League and the Board of Control, and one member from each General Conference district, to be elected by the General Conference delegates of those districts, and was directed to meet twice in each quadrennium. With regard to the fraternity of the Epworth League with the Young People's Society of Christian Endeavor, the General Conference resolved:

"The need and demand for the Epworth League as a distinctively denominational young people's society have been fully demonstrated by its wonder-

ful growth and healthful influence in all departments of our Church work. We believe there is as much reason for a denominational young people's society as for a denominational Sunday school or a denominational church. We are ready for fraternal co-operation in the broad work in which all Christians unite, and in which each society preserves its identity and does its special work in its own way. We favor fraternal local unions with all young people where such local unions do not take the name of any one society. We can not, therefore, consent that Epworth Leagues shall become known in such unions as Epworth Leagues of Christian Endeavor, as asked by the memorials, since we have been constituted by the General Conference as Epworth Leagues of the Methodist Episcopal Church. Cherishing most friendly feeling for all, we deprecate any plan which would tend to attract our young people away from our own peculiar forms of work."

In declaring Bishops Thomas Bowman and Randolph S. Foster unable, on account of their advanced age, to perform the full duties of bishops for four years longer, the Conference recorded its gratitude to God "for the extraordinary services rendered by these venerated and beloved servants of the Church in the various capacities which they filled prior to their election to the episcopacy, and particularly for the distinguished ability with which they have filled the office of general superintendent for nearly a quarter of a century; for the purity of their character and lives, the sweetness of their spirit, and the fidelity to the interests of the Church which has uniformly characterized their official life and administration"; left them at liberty to select their residences; proffered them welcome on all occasions; and advised the Book Committee to make the most generous appropriations for their support. The following resolution was passed with reference to the election of a colored bishop: "In the election of bishops there should be no discrimination on account of race or color; but men should be chosen because of their worth and fitness for the position. In the presence of this statement often reiterated by various bodies of our Church, we believe the time has come when the General Conference may safely and wisely choose a bishop from among our 1,700 ministers of African descent." In the election that afterward took place a colored candidate received a considerable number of votes, but not enough to elect him. The Rev. C. C. McCabe, D. D., and the Rev. Earl Cranstons, D. D., were chosen bishops.

Episcopal residences were established at Boston or vicinity, New York or vicinity, Buffalo, Philadelphia or vicinity, Washington, Chattanooga, New Orleans or Fort Worth, Cincinnati or vicinity, Detroit, Chicago or vicinity, St. Louis, Topeka or Omaha, Minneapolis, Denver, San Francisco or Los Angeles, and Portland, Ore. The rule authorizing the bishops to select their residences every four years according to seniority was modified so as to provide that no place shall be open to selection which is already occupied by an effective bishop. It was ordered that the bishops shall be required to live at the residences they select. Missionary-Bishop William Taylor, of Africa, was also declared non-effective, and a minute was adopted respecting him recording that "with a deep sense of the intrepid heroism which has characterized his career as a pioneer missionary in California, in Australasia, India, and South America, in Africa prior to his appointment as missionary bishop when past sixty years of age, and for twelve years since that appointment, his fervor and power as a preacher, his astonishing success as an evangelist, and the permanency of the fruits of his labors, and also with

an affection for him which has increased with every hardship he has endured, we profoundly regret that a similar fidelity to conviction to that which has always characterized him compels us to this conclusion." The Rev. J. C. Hartzell, D. D., was elected Missionary Bishop of Africa to succeed him.

A rule was adopted, having special relation to conditions in Germany, permitting any annual conference to receive any synod, conference, Church society, or other body of Christians agreeing in doctrines with this Church, bodily into its communion—the members of the same to be as fully members of the Methodist Episcopal Church and entitled to their privileges as if they had been individually received in the usual way.

The resolutions on temperance declared that "the Christian's only attitude toward the liquor traffic is that of relentless hostility, and that all members of the Methodist Episcopal Church who enjoy the elective franchise should use that solemn trust so as to promote the rescue of our country from the guilt and dishonor which have been brought upon it by a criminal complicity with the liquor traffic." A memorial to Congress was determined upon asking for such an adjustment of the internal-revenue laws "as not to seem to legalize the traffic in ardent spirits in sections of the Union when prohibitory laws exist. The people of the Church were asked to aid in the enforcement of all restrictions of the liquor traffic found in State and municipal statutes and ordinances. A protest was made against the use of any property under the control of the United States Government for the manufacture or sale of intoxicating liquors, and a pending bill prohibiting such sale in the Capitol building was approved.

A proposition to remove from the Book of Discipline the clauses specifying certain amusements as improper for Christians to indulge in was rejected, and the rule and its specifications were left unchanged.

In view of the law enacted in the State of Florida to prevent the association of white and colored teachers in the same school or in a boarding house connected with a school, the Conference, deprecating such legislation as "repugnant to the genius of our Christian civilization and sympathizing with the Congregationalists who are suffering under the enforcement of the law," proffered its approval to any efforts that may be made to contest its constitutionality or secure its repeal.

The Conference gave its approval to the demand for a permanent tribunal of international arbitration "as a rational and Christian substitute among the English-speaking races for a resort to the bloody arbitrament of war," and suggested that it be established immediately. Denominations representing 27,000,000 of the people of the United States having given up all dependence on the General Government for financial aid in the support of their schools among the Indians, the immediate cessation of all appropriations in aid of denominational schools among that people, now limited to a single denomination, was demanded.

II. Methodist Episcopal Church, South.—The estimate of the statistics of this Church for 1896—the reports of the conferences not having been fully tabulated at the time of preparing this article—gives it 5,861 ministers, 13,673 churches, and 1,437,672 members.

The missionary collections for 1895 amounted to \$240,802, in addition to which \$70,349 were collected by the Woman's Board, making a total of \$311,151. The society maintains missions among Germans, Indians, and Cubans (in Florida) in the United States, and foreign missions in China, Japan, Brazil, and Mexico. The foreign missions

returned 105 missionaries (including wives), 113 native traveling preachers, 155 native helpers, 7,888 members, 71 day and boarding schools with 2,081 pupils, 247 Sunday schools with 6,862 pupils, 19 Epworth Leagues with 587 members, 1 hospital and 3 dispensaries, at which 12,015 patients were treated during the year, and property valued at \$458,406.

The Woman's Parsonage and Home Mission Society aided in the year 1895-96, through its Central Committee, 21 parsonages in the amount of \$5,475, while the local organizations aided 39 parsonages in the amount of \$1,584; and supplies were sent out to the amount of \$3,096. The society publishes and distributes a considerable literature; sustains a mountain work; is collecting building money for a school at London, Ky.; has a school at Brevard, near Asheville, N. C., with 36 pupils, for which the citizens of the place have given land for a site; has a home and school at Greenville, Tenn., with a building nearly completed; sustains a Cuban mission work with 2 day schools, 4 teachers, and 150 pupils, and a new building at Ybor City approaching completion; and maintains city mission work, employing 9 missionaries, in several large cities. The total receipts of the society for the year were \$17,500, or \$9,301 more than the receipts of the previous year.

The Woman's Board of Foreign Missions received for the year ending in April, 1896, \$121,157 and expended \$73,393. The whole amount of the appropriations made at the annual meeting for the ensuing year was \$93,300; of which sum \$27,960 were for the missions in China, \$14,225 for those in Brazil, \$37,965 for those in Mexico, and \$6,150 for those in the Indian Territory.

III. African Methodist Episcopal Church.—The statistical summary of this Church, published in the "Independent" for Jan. 7, 1897, gives it for 1896 4,680 ministers, 4,850 churches, and 615,854 members.

The General Conference met in Wilmington, N. C., May 4. The financial secretary reported that the Church had collected for general expenses during the past four years \$351,942. The report of the secretary of education represented that work in that department was increasing. The sum of \$269,762 had been applied to it during the past four years, in addition to which amounts had been spent for the improvement of property which would swell the total to \$301,026. Fifty-two schools had been sustained, with 167 teachers and 5,533 students. During the past twelve years the colleges of the Church had sent out 496 graduates. The school property was valued at \$571,532. The editor and publisher of the "African Methodist Episcopal Church Review" reported that that publication had been self-sustaining during the past four years, and had a small balance in hand.

The business of the Conference consisted chiefly in provision for the business, benevolent, and educational enterprises of the Church. The Rev. William B. Derrick, the Rev. James H. Armstrong, and the Rev. James C. Embree were elected bishops. Other officers elected were manager of the Book Concern, editor of the "Christian Recorder" (the weekly newspaper organ of the Church), secretary of missions, editor of the "African Methodist Episcopal Church Review," secretary for the Sunday-school Union, corresponding secretary and treasurer of the Church Extension Department, and secretary of education.

The editor-elect of the "Church Review" being a layman, the Conference decided to commit the editing of the books, which had been under the charge of that officer, in the hands of a committee of the bishops. Reports were received from the

educational institutions—Wilberforce University, the largest and most influential colored school in America; Allen University, South Carolina; and Paul Quinn College, Waco, Texas. A resolution was presented and referred, looking to the admission of women as delegates in the General Conference.

IV. African Methodist Episcopal Zion Church.—According to the summary of statistics given by the "Independent" newspaper in its review of the Churches of the United States for 1896, this Church has 2,561 ministers, 1,615 churches, and 492,888 members.

The General Conference met at Mobile, Ala., May 6. More than 300 delegates attended it, representing 34 States, Canada, and Africa. Legislation was enacted for the further development of the educational, missionary, Christian Endeavor, and publication work of the denomination. The Rev. George W. Clinton, the Rev. Jehu Holliday, and the Rev. John B. Small were chosen additional bishops.

A celebration of the one hundredth year of the existence of this Church was held in the city of New York during twelve days, beginning Oct. 1. In connection with the event a detailed history of the Church was published in the "Star of Zion," its newspaper organ. It originated in the withdrawal, in 1796, of James Varick and other colored men from the John Street Methodist Episcopal Church, New York, under a feeling of the existence of caste prejudice among the white members preventing the freest and fullest development of the religious life of the colored members. Permission was obtained from Bishop Asbury for these colored men to hold meetings by themselves, and an old stable, afterward occupied as a cabinetmaker's shop, was secured as a place for worship. A Church organization was formed three years later, trustees were elected, and a church, called Zion Church, was erected on the corner of Church and Leonard Streets. This church gave its name to the denomination—African Methodist Episcopal Church (Zion), under which designation the Church was incorporated in 1801. In the same year the Church was recognized by the visitation of a fraternal delegate from the General Conference of the Methodist Episcopal Church. White preachers from this Church were employed to serve the congregation for the first twenty years. The first three colored preachers were ordained elders in 1821 by elders of the Methodist Episcopal Church. The first conference was held in 1821, under the presidency of the Rev. William Phœbus, of the Methodist Episcopal Church, when Elder James Varick, the founder of the Church, was chosen bishop or superintendent. The Discipline, with the articles of religion and polity of the Methodist Episcopal Church, had been adopted in 1820. The Church, with 70 members at its organization, had grown slowly, and now had less than 500 members, all in the State of New York, and property valued at about \$35,000. After 1823 it began to extend into other Central and Eastern States, but could not gain a foothold in the slave States. In 1860 it had 85 organized congregations, 64 church buildings, 5 annual conferences, 4,600 members, \$248,000 of property, and occupied territory in 11 States. The organization of churches in the South was begun in 1863, under the ministrations of Bishop Joseph J. Clinton and Elder James W. Hood, now bishop, when the first North Carolina Conference was organized. The Church now has one or more conferences in nearly every Southern State. It has in all 36 regularly organized conferences in the United States and Canada, and 1 missionary annual conference in Africa: 1,750 organizations, 411,000 members, and 1,600 churches owned by the denomination, with church and other property valued at \$2,750,130; 2,250 ministers,

elders, and deacons; a publication house at Charlotte, N. C.; 17 educational institutions of high grade, including Livingston College, at Salisbury, N. C.; Jones University, at Tuscaloosa, Ala., Atkinson College, at Madisonville, Ky., and Greenville College, at Greenville, Tenn.; and occupies territory in 36 States of the Union, Canada, Africa, and the islands of the sea. It publishes a weekly general newspaper, a "Quarterly Review," an official directory, Sunday-school literature, a college magazine ("The Livingstonia"), and of books, the Discipline, 3 histories, a hymnal containing 29 hymns by its own ministers, 4 books of sermons, a number of pamphlets, and smaller publications by authors who are members of the Church; and has in press a "Centennial History," by Bishop Hood.

Representatives of other Methodist Episcopal Churches of both the white and colored races took part in the celebrations and tendered the sympathies of the bodies they represented. Bishop J. W. Hood, senior bishop of the Church, presided at the opening meeting; Bishop Charles W. Fowler, of the Methodist Episcopal Church, preached the opening sermon; and Bishop W. B. Derrick, of the African Methodist Episcopal Church, delivered the address of welcome. Other persons presided at the succeeding meetings. Papers were read and addresses made on subjects pertaining to the history, growth, and work of the Zion Church; the "Relations of the Union African Methodist Episcopal Church to the American Methodist Episcopal Zion Church," by Bishop J. H. Cook, of the Union American Methodist Episcopal Church; the "Relations of the Colored Methodist Episcopal to the African Methodist Episcopal Zion Church," by the Rev. C. H. Phillips, D. D., editor of the "Christian Index"; "The Attitude of the Protestant Episcopal Church to the other Protestant Denominations," by the Rev. Hutchens Bishop; on subjects related to missions, the Young People, and the Christian Endeavor Societies; the literature of the Church; the Christian Sabbath. The subject of "Religious Education the Hope of the Afro-American" was presented by the Rev. T. H. Johnson, D. D., editor of the "Christian Recorder" of the African Methodist Episcopal Church; "The Resources of Africa" were described, with especial reference to African emigration, by Bishop H. M. Turner, of the African Methodist Episcopal Church. One day was designated as "Woman's Day," when Mrs. Hood, wife of Bishop Hood, presided, and papers were read by women of the Church on "Woman's Work in the Missionary Field"; "Our Women Preachers and their Influence"; "Woman as a Philanthropist"; "Woman in the Pioneer Work of the Church"; "Woman in the Literary Field"; "Woman's Influence in the Antislavery Movement"; "The Old Ship of Zion"; and "Africa as it was and is, from Sacred and Profane Sources," the last paper being by Mrs. Hilgard, a returned missionary from Africa. The exercises concluded Nov. 2 with a public meeting in Carnegie Music Hall, at which the Hon. W. L. Strong, Mayor of the city of New York, presided, and a banquet.

V. Union American Methodist Episcopal Church.—According to the address of Bishop J. H. Cook at the centennial celebration of the African Methodist Episcopal Zion Church, this body was the result of the withdrawal of Peter Spencer and other colored Methodists from Asbury Church, Wilmington, Del., in 1805, who formed a local church called "Ezion Church." In 1823 Mr. Spencer and William Anderson founded the Union Church of African members. In organizing churches in various places, Mr. Spencer established schools wherever it was possible, and insisted on the support of them. He died in Wilmington, Del., July 25, 1843. This Church has not enjoyed the

numerical and educational growth that have fallen to the lot of the larger Methodist Episcopal Churches of colored members, having been kept back, Bishop Cook represented, by the failure in early times to establish an itinerant system, to make provisions for the support of pastors, and to promote an educated ministry. The statistical reports of this church for 1896 give it 62 ministers, 60 churches, and 2,642 members.

VI. Methodist Protestant Church.—The report of the Committee on Statistics to the General Conference gave the following numbers: Of ministers and preachers, 1,550; of unstationed ministers and preachers, 1,116; of members of the Church, 179,092; of probationers, 4,624; of churches, 2,267; of parsonages, 484; value of church property (not including college property), \$4,519,357; number of Christian Endeavor Societies, 595, with 27,693 members; of Sunday schools, 2,018, with 17,567 officers and teachers and 107,490 pupils. The figures show an increase in four years of 65 ministers and preachers, 37,821 members, and \$967,998 in the value of church property. The reported number of members includes 94 members of the Japan mission.

The report of the Committee on Publishing Houses showed that the publishing house at Pittsburgh had an excess of \$53,437 of assets over liabilities, and the house at Baltimore of \$8,271.

The Board of Missions had received \$52,261 during the past four years, and had distributed \$52,491. The Woman's Foreign Missionary Society had distributed \$17,822. The foreign mission is in Japan, where reports were made to the mission conference in 1895 from 10 charges with 25 appointments and 17 Sunday schools, 275 full members of the Church, and 44 probationers. Two native theological graduates and 3 additional missionaries had been added to the force, and the whole number of missionaries was 15. The school of the Woman's Society at Yokohama returned 50 pupils, with 2 missionaries, and 1 missionary and 4 native Bible readers were engaged in evangelistic work at Nagoya.

The seventeenth quadrennial General Conference met at Kansas City, Mo., May 15. Dr. J. W. Hering, of Westminster, Md., a layman, was re-elected president. The president made an opening address relating to his official transactions during the interim since the preceding General Conference. No powers are attached to the office except the purely ministerial one of receiving and answering such official correspondence as might be addressed to him. Such correspondence usually grew out of differences of opinion in regard to Church law as bearing on the duties of the writers of the letters. Recognizing that he had no authority to make a binding decision in any case, the president had simply given such advice and counsel as he deemed wise. The president reported the result of the vote of the annual conferences on three overtures that had been sent down by the previous General Conference. The first overture, to insert in the constitution clauses prohibiting the election of women as representatives to the General Conference, was lost, 13 conferences voting against it to only 1 in favor of it, while 5 conferences were reported as not voting. The second and third overtures, recognizing presidents of Christian Endeavor Societies and relating to the election of stewards, were carried. A new overture concerning the position of women in the Church was sent down, declaring, in the affirmative form, that "the General Conference shall consist of an equal number of ministers, either male or female, and laymen, either men or women: *Resolved*, That women be made eligible to the order of elder in the Church." Another overture

sent down proposed that the General Conference meet every six years instead of every four years, as now. A committee appointed several years before on revision of the Articles of Faith reported that very little interest had been manifested in the subject, and recommended that it be indefinitely postponed. The Conference agreed to this. The word "catholic" was stricken out of the Apostles' Creed as it is published in the Discipline of the Church, for the reason that it is often confounded with "Roman Catholic." Reports were made from Western Maryland College (for which 3 new buildings had been erected), Westminster Theological Seminary, and Adrian College. Steps were advised for improving the school of theology of the last institution, and it was directed that the Board of Trustees be composed of members of the Methodist Protestant Church. A permanent Committee on Revision was instituted, and was instructed to make a complete revision of the Discipline and Ritual, and report to the next General Conference. An application was received from the Providence, R. I., Conference of Primitive Methodists to be admitted to the Methodist Protestant Church, and a committee was appointed to take the subject in charge and report to the next General Conference. The administration of baptism by immersion, if the candidate desires it, was sanctioned.

The resolutions on Sunday observance included a condemnation of "the demoralizing Sunday excursion, whether on train, steamer, or bicycle," and recommended the enforcement of all Sunday laws and the enactment of further laws on the subject.

During the meetings of the General Conference, May 23, the corner stone of the new Kansas City University, an institution affiliated with this Church, was laid at Kansas City.

The African Union Methodist Protestant Church returns for 1896 80 ministers, 70 churches, and 7,000 members.

VII. Methodist Church in Canada.—The statistical reports of this Church for 1896 give it 1,257 ministers engaged in active circuit and mission work, 300 supernumerary and supernumerary ministers, 3 evangelists, and 20 ministers without appointment, with 227 probationers. The whole number of ministers and probationers is 2,051.

The annual meeting of the General Board of Missions was held in Toronto, beginning Oct. 1. The treasurer reported that the year's receipts from ordinary sources had been \$2,529 less than in the previous year, but that the income from legacies was sufficiently in advance to make the total amount received \$252,740, an increase in the gross amount of \$5,243. Of the total receipts, \$183,479 were on account of ordinary income, \$25,146 from legacies, \$22,568 for the Indian department, and the rest miscellaneous. The accounts presented of the condition of the mission fields comprised reports from missions in Japan, China, Chinese work on the Pacific coast, work among the Japanese in British Columbia, the Indian missions in Canada, and missions among the French in Canada. A special report was presented from official visitors to missions in British Columbia, embodying accounts of conversations with Indians, representatives of the British Columbia Conference, and the Indian department of the Government, and suggestions of methods by which the missions might be made stronger. A memorandum dealing with the domestic missions represented that some of them had enough members to warrant the expectation that they would be self-supporting. It dealt with the causes under the influence of which missions remain on the Mission fund longer than is defensible, and suggested that all domestic missions with 150 members should be placed upon a diminishing scale of grants. The

memorandum was referred to a committee. A plan of co-operation was arranged with the Students' Campaign movement, an enterprise among the Methodist students in all the universities and colleges in behalf of missions. It was organized in March, 1895, and was intended to set the students at work distributing literature and delivering addresses during the vacation seasons. Two hundred and seven young men and women had been engaged in it. It contemplates further the formation of mission bands among the Epworth Leagues.

VIII. Wesleyan Methodist Church (British).—The statistics of this Church, including the British and affiliated conferences, as returned to the Conference in July, give the following numbers: In Great Britain, 2,127 ministers, 17,224 lay preachers, and 466,711 members and probationers; in Ireland, 231 ministers, 561 lay preachers, 27,576 members and probationers; in the foreign missions, 400 ministers, 1,918 lay preachers, 52,058 members and probationers; in the French conference, 38 ministers, 1,492 members and probationers; in the South African Conference, 193 ministers, 2,872 lay preachers, 62,812 members and probationers; in the West Indian conferences, 108 ministers, 840 lay preachers, 50,365 members and probationers. These conferences also return in all 9,317 Sunday schools, with 142,554 officers and teachers and 1,109,293 pupils.

The Conference met at Liverpool, July 21. The Rev. Marshall Randles, D. D., was chosen president. Returns of membership were reported, giving the following numbers: Of full and accredited members, 435,420, showing a net decrease for the year of 2,302; of persons on trial for church membership, 31,291; of members of junior classes, 71,880; of new members received, 41,337; of persons ceased to be members, 25,105; with 5,668 deaths so far as reported, and 593 emigrations; of accredited local preachers, 17,224; of lay class leaders, 24,646. An address, the first of the kind ever presented from the denomination, was received from the Unitarian Society of Liverpool, offering cordial fraternal greetings, recalling the services to the nation of John Wesley, and referring especially to the work in Liverpool of the Rev. Charles Garrett, in whom, the address said, "we recognize the very type of brave and generous Christian manhood, and we are grateful to a Church which places in our midst so well beloved a fellow-citizen." The committee on the extension of the term of ministerial appointment to a circuit presented a voluminous report to the effect that they had not been able to discover any methods more convenient than such as were already in operation for extending the term unless by an appeal to Parliament; and that if the Conference decided to make such an appeal it should proceed by the introduction of a private bill. The Conference resolved that it was desirable to appeal to Parliament for a private bill to repeal such clauses in the deed poll as prohibit the appointment of ministers for more than three years successively to the use and enjoyment of any chapel and premises; that a committee be appointed to prepare a statement of the reasons for recommending the Methodist people to sanction the proposed appeal, which should also explain the limitations, conditions, and safeguards under which such emancipation from state control might be safely conceded to the Conference; and that the statement be submitted to the synods in May for criticisms and suggestions, to be returned to the committee, revised and reported by them to the next Conference, with a view to its formal submission to the various local representative bodies of the Church in 1898. The Executive Committee were authorized to collect information respecting the number of children of Wesleyan Methodist attending Church of England or national, elementary, and

denominational schools; the nature of the religious instruction given in such schools, and the character of any catechisms or books of devotion used in them; the operation of the "conscience clause," and the nature and effect of any religious tests imposed upon Methodist scholars as a condition of becoming pupil or assistant teachers. A transfer of the Connectional Missions in Germany to the Methodist Episcopal Church in the United States was authorized, provided a satisfactory arrangement can be made. Seeing that no nonconformist can obtain a degree in divinity at any English university, the general committee of the theological institutions were instructed to consider how that religious disability might be modified; and to take into special consideration the provision of a divinity faculty open to nonconformists in any new or supplementary charter granted to any university body.

IX. Primitive Methodist Connection.—The following is a summary of the statistics of this body as they were reported to the Conference in June: Number of ministers, 1,113; of local preachers, 16,743; of class leaders, 16,534; of chapels, 4,653; of other preaching places, 1,154; of members, 196,628; of hearers, 615,156; value of Connectional property, £3,710,549; present debt on property, £1,099,960.

The receipts for the year for the Home and Colonial fund had been £18,217, and the expenditures £14,022. The total receipts for the African fund had been £4,420, and the expenditure £3,351. This income was the largest in the history of the fund. The reports from the home missions denoted rapid growth, and those from the foreign field were very hopeful.

The seventy-seventh Conference met at Burnsley, June 10. The Rev. William Jones was chosen moderator. The total income of the Connectional fund was returned as £11,591, and, after paying all claims, a balance was left of £1,017. The income for the Jubilee fund had been £4,279. Of the £50,000 which it was sought to raise on the account of this fund, £46,141 had been promised. The year's sales of the "Book Review" had amounted to £32,018, the largest aggregate in the history of the institution. The whole number of issues of all kinds for the year was 2,719,294. The total income for missions had been £37,670, an increase of more than £4,000 over the income of the preceding year. The society had 8 principal stations in Africa, with 20 out stations, 9 European and 4 native ministers, 8 native evangelists, 45 native lay preachers, 6 day schools with 600 pupils, a training institution with 27 students, and 1,186 church members, an increase of 146. The home and colonial missions reported steady progress in the face of great difficulties. A resolution embodying the attitude of the Conference (of opposition) regarding the education bill was adopted, to be distributed throughout the denomination as a manifesto. A resolution concerning the troubles in Armenia deplored the fact that horrible slaughter and outrage had not been stayed either by the concert of Europe or the intervention of England.

X. Methodist New Connection.—This Church returns for 1896 200 ministers, 1,225 lay preachers, 37,102 members and probationers, and 483 Sunday schools, with 10,978 officers and teachers and 84,423 pupils.

The total ordinary Connectional increase for the year was returned at £10,221, as against £9,963 in 1895; in addition to which the profits of the Book Room, ministers' subscriptions to the Beneficent fund, dividends and other items amounting in all to £5,883, brought up the total income to £16,115 as against £14,310 in 1895.

The one hundredth Conference met at Batley,

June 15. The Rev. Elisha Holyoake was chosen president. In the revision of the rules, the Conference decided to add the words "Founded 1797" after the name of the Church in all official documents. The relations of the Christian Endeavor Societies and their members to the Church were considered, and special regulations were established concerning the admission of members of them to the Church and the representation of the societies in the leaders' meetings. Instead of requiring the appointment of men representatives for women's class meetings as heretofore, the women leaders themselves were made eligible as members of leaders' meetings, and women were made eligible for appointment to the leaders' meetings as representatives of the church, the Sunday school, etc. The annual church meeting was given the prerogative of approval of the appointment of officers and representatives of leaders' meetings, and provision was made for the direct representation of the church meeting in the leaders' meeting. With a view to making the provision for married ministers more secure, stricter regulations were enacted concerning the employment of single ministers. Propositions for extending the permissible ministerial term beyond the fifth year were defeated. The report of the Committee on Methodist Union embodied its reply to a letter from the Joint Committee of the Primitive Methodists and Bible Christians asking for "an expression of their views as to the possibility of a union between the minor bodies of Methodism and the basis on which such union might be practicable." The committee, after expressing full sympathy with the movement for union, and saying that no action could be taken without the direct sanction of the Conference, suggested "that proposals for union might with advantage be extended to include not only the minor Methodist bodies, but also the parent Church," believing that such a consummation, if found practicable, would strengthen Methodism and indefinitely enlarge its usefulness, as had been done in Canada; but that whether the present "is the most favorable time for achieving this larger union is a question requiring careful consideration. The committee is of opinion that it is an object worthy to be kept before the Methodist people, and that in order to its ultimate realization all the Methodist churches should endeavor to promote closer intercourse and acquaintance with each other and co-operate in Christian work in all practicable ways, and thus exhibit to the world how good and how pleasant it is for brethren to dwell together in unity."

The missionary report spoke of progress in Ireland and China. The income had been about the same, and the expenditure rather less than in 1895. The total debt was still more than £6,000.

XI. United Methodist Free Churches.—The statistical reports of this body for 1896 give it 417 ministers, 3,448 local preachers, 89,618 members, and 1,350 Sunday schools, with 25,296 officers and teachers and 203,712 pupils.

The annual meeting in behalf of the home and foreign missions was held in London, April 27. The report represented that progress was being made in all the mission stations. Special attention was given to village churches. The East African stations had been in great peril on account of the prevalence of a warlike spirit among the tribes. A contribution of £200 had been given for a new hospital at Whichow. The numerical returns from the foreign stations gave 73 missionaries, 351 local preachers, 562 leaders, 11,276 members, 2,698 on trial, 331 chapels and preaching rooms, 11,784 pupils, and 1,115 teachers. The expenditure had been £22,139, and left a deficit of £340 on the year's work. The Mendi mission in Africa, though

only recently established, had 5 churches, 70 members, and 490 catechumens.

The Conference met at Newcastle-on-Tyne, July 14. The Rev. George Turner, of Sheffield, was chosen president. The Statistical Committee reported that there had been an increase of 633 members on the home and 320 on the foreign circuits, but the amalgamation of the New Zealand district with the New Zealand Methodist Church, subtracting 982 members in a mass, had resulted in producing an ultimate nominal decrease. The number of local preachers and junior church members had increased, while those of leaders and of teachers and pupils in Sunday schools had decreased. An effort to raise £20,000 for the endowment and extension of the Theological Institute had resulted in securing subscriptions of £17,450, of which £7,340 had been paid in. Applications having been received from ministers desiring to undertake other work than that of the ministry for some arrangement under which they might be released from circuit responsibilities without losing their connectional standing; a resolution was passed stipulating that the "years without charge" should not count in the number of years of service as considered in making up the allotments of the Superannuation fund, and requiring that the released minister should maintain his membership with a Free Methodist Church, and should render some ministerial service to churches of the connection.

XII. Bible Christians.—The Bible Christian Church returns for 1896 295 ministers, 1,937 lay preachers, 34,304 members, and 546 Sunday schools, with 9,219 officers and teachers and 57,171 pupils. The missionary report represented 138 missionaries, 743 local preachers, 398 chapels, 98 preaching places, 11,767 full members, 2,915 teachers, and 23,522 pupils. The increase for the year had been 6 local preachers, 334 full members, 123 on trial, 84 teachers, and 419 pupils.

The Conference met at Portsmouth, July 29. The Rev. Daniel Murley was chosen president. The receipts for home missions had been £6,020, an increase of £253, while £7,400 had been expended, including the previous year's balance, and the debt was increased by £611—a result due principally to extension. The returns from the mission churches showed a decrease in membership. The treasurer of the Foreign Mission fund reported a debt of £1,369. The mission in China was prospering. Measures were adopted looking to the opening of a mission in South Africa as soon as it should appear practicable. The success of an effort to raise a "James Thorne Centenary fund," the interest of which shall be applied in the form of a scholarship for the training of a probationer or candidate selected by the Conference, had not been encouraging, but considerable interest had been shown in the object. Provision was made for the framing of a special code of rules for the Christian Endeavor Societies of the connection. One hundred and eight such societies were reported, with 2,172 active and 619 associate members. A motion was passed recognizing the union of the Bible Christians with the Wesleyans and United Methodist Free Churches in New Zealand. A resolution was adopted commending the working, as a whole, of the existing system of public elementary education; deprecating interference with the school board system; calling for efficient public control when public money is granted; and asking that measures be taken for normal training under Government auspices.

XIII. Wesleyan Reform Union.—This body includes 16 ministers, 548 lay preachers, 7,400 members and probationers, and 173 Sunday schools, with 2,761 officers and teachers and 20,724 pupils.

The annual Conference met at Bradford, Aug. 3.

Mr. H. Heaton was chosen president. A decrease of 721 members was reported, which was caused largely by two churches withdrawing from the Union to unite with another Methodist body.

The Conference directed that a trust deed be prepared for placing the chapel property of the Union upon a uniform basis, it being contemplated that the deed should secure for the individual church the right of local self-government, and at the same time constitute a substantial connectional bond.

XIV. Australian Methodists.—The Australasian Methodist Church has 661 ministers, 4,955 lay preachers, 97,730 members, and 3,465 Sunday schools, with 16,868 officers and teachers and 183,044 pupils. It has the charge of the Wesleyan missions in the South Sea Islands, New Britain, and New Guinea.

A plan for the union of all the branches of the Methodist Church in Australasia and New Zealand has been approved by all the conferences and the subordinate meetings, and is now passing a final vote in the churches.

MEXICO, a federal republic in North America. The Constitution, following that of the United States, vests the legislative powers in a Senate and a House of Representatives. The Senate consists of 56 members, 2 from each State, thirty years old at least, elected for four years by indirect suffrage, half being replaced every two years. The House of Representatives consists of 227 members elected by indirect suffrage for two years. Every Mexican is eligible who is a voter, the qualification being the age of eighteen years for married men and twenty-one years for bachelors. The President of the republic, who must be a Mexican, thirty-five years of age, is elected by the direct secret vote of the nation for a term of four years. Gen. Porfirio Diaz was elected President for the third time on July 15, 1896, his new term ending on Nov. 30, 1900. The Cabinet was composed in the beginning of 1896 of the following members: Foreign Affairs, I. Mariscal; Gobernacion, Gen. Gonzalez Cosio; Justice and Public Instruction, J. Baranda; Fomento, M. Fernandez-Leal; Finance and Commerce, J. I. Llan-tour; Communications and Public Works, Gonzalez Cosio; War and Marine, Gen. P. Hinojosa; State Treasurer, F. Espinosa.

Area and Population.—The area of the several States and their population as determined by the census of Oct. 20, 1895, were as follow:

STATES.	Square miles.	Population.
Federal District.....	463	484,608
Aguas Calientes.....	2,950	103,645
Campeche.....	18,087	96,458
Chiapas.....	27,222	313,078
Chihuahua.....	87,802	266,891
Coahuila.....	68,569	235,638
Colima.....	5,272	55,677
Durango.....	38,009	294,366
Guanajuato.....	11,370	1,047,238
Guerrero.....	24,996	417,621
Hidalgo.....	8,917	548,029
Jalisco.....	31,846	1,107,863
Mexico.....	9,247	828,737
Michoacan.....	22,874	889,795
Morelos.....	2,773	159,800
Nuevo Leon.....	29,592	306,607
Oaxaca.....	35,382	882,529
Puebla.....	12,304	979,723
Queretaro.....	3,556	227,233
San Luis Potosi.....	25,316	570,814
Sinaloa.....	33,671	256,414
Sonora.....	76,900	191,281
Tabasco.....	10,072	134,794
Tamaulipas.....	32,128	204,206

Vera Cruz.....	29,201	855,075
Yucatan.....	35,203	297,507
Zacatecas.....	24,757	452,720
Lower California.....	58,328	42,287
Yepic.....	11,275	144,308
Islands.....	1,420
Total.....	767,005	12,570,195

Mexico, the capital city, had 339,935 inhabitants on Oct. 20, 1895; Puebla, 91,917; Guadalajara, 83,-870; San Luis Potosi, 69,676; Monterey, 56,855; Pachuca, 52,189. It is estimated that 19 per cent. of the inhabitants of the country are of European descent or origin, 38 per cent. are of Indian extraction, and 43 per cent. of mixed blood.

Finances.—The budget for the year ending June 30, 1897, makes the total revenue of the Federal Government \$47,220,000 in Mexican currency, derived from the following sources: Customs, \$21,000,000; Federal contribution from *octrois*, \$1,680,000; direct taxes, \$1,500,000; posts and telegraphs, \$1,700,000; mint, \$2,540,000; stamps, \$15,800,000; tax on salaries, \$700,000; miscellaneous receipts, \$2,300,000. The total expenditure is estimated at \$47,554,926, apportioned among the departments as follows: Legislation, \$1,011,644; executive, \$60,972; Supreme Court, \$435,197; foreign affairs, \$519,476; interior, \$3,361,849; justice and public instruction, \$2,031,907; Pomento, \$660,587; finance, \$24,541,185; communications and public works, \$4,635,089; army and navy, \$10,297,020. The budget for 1897-'98 makes the revenue \$49,962,000 and expenditure \$20,000 less. The actual receipts in 1895-'96 were \$50,521,470 and the expenditures \$45,070,123, leaving a balance of nearly \$5,500,000. The budgets of the 27 States amounted in 1895 to \$18,000,000.

The debts of the Federal Government outstanding on June 30, 1895, were \$51,450,700 of the 6-per-cent. loan of 1888, \$29,700,700 of the 6-per-cent. loan of 1890, \$13,500,000 of obligations of the Tehuantepec Railroad, paying 5 per cent., \$14,944,600 raised in 1893, \$74,888,275 of internal interest-bearing debt, and \$5,422,701 paying no interest; total, \$189,906,976. The annual interest charge amounts to \$9,402,385. The internal debt was converted in 1896 into consolidated 3-per-cent. bonds.

The Army and Navy.—The Mexican military forces consist of an active army and its reserve and the general levy. There are 4 infantry divisions of 2 brigades each, the brigade consisting of 3 regiments of variable strength. The infantry is armed with Remington rifles and the artillery with Bange cannon of a caliber of 79 centimetres. The peace strength of the army in 1895 was as follows: 1,110 officers and 19,380 men forming 30 battalions of infantry, and 60 officers and 944 men forming 30 *cadres*, with 3 auxiliary battalions containing 79 officers and 1,253 men; 1 battalion of pioneers, consisting of 35 officers and 731 men; and 1 invalid battalion numbering 9 officers and 129 men, making the total infantry 1,293 officers and 22,437 men; 4 battalions of artillery, each with 6 batteries, numbering 148 officers and 1,688 men; 1 battalion of fortress artillery, numbering 25 officers and 1,688 men, and 1 squadron of train numbering 11 officers and 101 men, making the artillery consist of a total of 184 officers and 2,120 men; 481 officers and 6,359 men forming 13 regiments of cavalry; 1 corps of gendarmerie, consisting of 21 officers and 229 men; 6 auxiliary troops, numbering 126 officers and 1,488 men; and 9 corps of rural guards, numbering 165 officers and 2,200 men, making the total for the cavalry 793 officers and 10,276 men, and the total for all arms and services 2,270 officers and 34,833 men.

The naval force consists of 2 dispatch vessels, 2 gunboats built in 1874, and 1 school ship, having together a total armament of 18 guns. There were 5 torpedo boats of the first class building in 1896, and in contemplation 1 armor clad, 1 cruiser, 4 gunboats, and 2 transports. The *personnel* of the navy was 84 officers and 3,450 men in 1895.

Commerce.—The value of the imports in 1895 was \$34,080,440 in Mexican currency, and of the

exports \$90,854,953. The exports of precious metals have increased from \$36,256,372 in 1891 to \$52,535,-854 in 1895, and the exports of merchandise from \$27,020,023 to \$38,319,099. The values of the principal articles of export in 1895, besides silver and gold, were: Coffee, \$12,671,000; henequen, \$7,724,000; timber, \$2,689,000; hides and skins, \$2,350,000; copper, \$2,148,000; lead, \$1,807,000; animals, \$1,744,000; tobacco, \$1,460,000. The trade with different countries in 1895 was as follows, in Mexican dollars:

COUNTRIES.	Imports.	Exports.
United States	\$15,130,000	\$67,323,000
Great Britain	6,068,000	15,261,000
France	5,577,000	2,130,000
Germany	3,262,000	3,113,000
Spain	1,919,000	914,000
Belgium	320,000	380,000
Other countries	1,024,000	1,734,000
Total	\$34,000,000	\$90,855,000

Navigation.—During the year ending June 30, 1895, there were 9,575 vessels, of 3,428,973 tons, entered and 9,557, of 3,359,684 tons, cleared at Mexican ports. The steamers numbered 4,078, of 3,083,050 tons, entered and 3,547, of 2,540,043 tons, cleared.

The Mexican merchant fleet comprises 274 vessels, of which 52 are steamers.

Communications.—The railroads in operation had a total length of 7,122 miles in 1896. Of 6,506 miles completed in 1894 Mexican capital built 889 and foreign capital 5,617 miles. British investments in Mexican railroads up to 1891 amounted to £14,601,380 and American investments to \$245,126,249 in United States currency. The Tehuantepec inter-oceanic railroad from Coatzacoalcos to Salina Cruz is the property of the Government. A New York company, acquiring the Guray concession of 1841, undertook to build the railroad under the direction of Gen. J. G. Barnard. This project came to nothing, as did another started in 1857 and the plan of a ship railway devised by Captain Eads. In 1870 another company was formed in New York which, after being reorganized in 1879, built 22 miles of railroad. Then, its charter having lapsed, it secured a large payment for what it had accomplished, and the Federal Government undertook to complete the road itself. Sanchez, a Mexican contractor, constructed 60 miles in an imperfect manner, and afterward contracts were made with Edward McMurdo, of London, in 1888, and Stanhope and associates in 1892. When the line was finally completed in 1896, the Government leased it to Pierson & Son, of London, for fifty years, agreeing to contribute \$150,000 a month for three years for the improvement of the road and the construction of harbors at both termini, after which time the receipts are to be divided between the Government and the lessees.

The Federal Government had 28,000 miles of telegraph wires and the individual States 13,000 miles on June 30, 1896.

The post office in 1895-'96 handled 23,533,939 letters and postal cards in the internal and 6,933,290 in the international service. The receipts were \$1,105,990 and expenses \$1,471,571.

Political Affairs.—In the message to Congress on April 1, 1896, President Diaz, after stating that friendly relations existed between Mexico and all foreign powers, expressed his approval of the declaration of President Cleveland in his message to the United States Congress asserting the Monroe doctrine as a part of the public law of America. This doctrine President Diaz regarded as a guarantee of the independence of the American republics against European encroachments, but he thought

that the United States ought not to be left alone in the rôle of protector and that all the American republics should proclaim principles similar to those of the Monroe doctrine and should protect each other whenever necessary. A Pan-American Congress was to meet at the suggestion of Ecuador in the city of Mexico during the summer, and the principal feature of the *agenda*, besides the discussion of the means of promoting progress and the development of industrial enterprise and commerce by enacting measures conducive to their extension, was the enactment of a public law of America, which, while respecting all legitimate rights, should give to the American Monroe doctrine all desirable extent and all the guarantee necessary to enforce its being respected. Gen. Felip Berriozabal, who was appointed Secretary of War on March 19, on the resignation of Gen. Pedro Hinojosa, unfolded in the autumn a scheme for the reorganization of the Mexican army in connection with the introduction of compulsory service. The adoption of the European system was approved by the higher officers of the army, because the present method of conscription brings in undesirable elements. The reorganization contemplated will give 20 battalions, or 10 regiments of 1,000 men each. When drought caused a scarcity of food in some of the central States President Diaz in May issued a decree removing the duty on corn at the port of Vera Cruz. Charles W. Rowe, a fugitive from justice whom the Mexican Government refused to extradite because he had become a naturalized Mexican citizen, was convicted under Mexican law for the embezzlement of county funds in Iowa, and was sentenced to twelve years' imprisonment. The improvement in import duties, stamps, and other sources of revenue proving not only sufficient to restore the equilibrium, but to leave a large surplus, Minister Limantour, in December, proposed a decrease of certain taxes and the abolition of others, especially the tax on the salaries of Government employees. The constitutional reform of the abolition of the *alcabalas*, or *octroi* duties, has been put into force throughout the republic, and the laws issued by the Government to substitute other taxes in the place of these duties have not met with the difficulties that were feared.

Re-election of Diaz.—In the presidential election of 1896 Porfirio Diaz was the only candidate. His nomination was demanded by the whole native Indian population, of whose blood he is on his mother's side and to which by his education and sympathies he belongs. There was practically no opposition, although there is an anti-Diaz party, the Clerical Conservatives, who resent the confiscation of lands given to the Church by the Spanish kings and the secularist policy pursued under Diaz, as it had been under Juarez and under the empire of Maximilian as well. But this party is too weak in the country to re-establish the dominion of the Church. Gen. Bernard Reyes, the popular and progressive Governor of the State of Nueva Leon, who had announced himself as a candidate, withdrew when he saw that the demand for the renomination of Diaz was irresistible, supported by the signatures of 531,000 citizens. When the election took place on July 13 the votes of all the electors were given to Gen Diaz, the first and only President who had been able to conserve the peace and good order, the credit, and the progress of Mexico. Having been a political and military leader from his youth, he shared with Juarez, the first Indian President, the glory of redeeming his country from the French, and when Juarez in his old age became the tool of railroad speculators and grasping corporations, Diaz headed the opposition against his early friend and benefactor and against Lesdo, the latter's successor, and in 1876 as chief of the suc-

cessful revolution assumed the supreme power. He was elected President in a constitutional manner in the following year, but had to retire in 1880 because the Constitution prohibited a second term. As minister he was the actual ruler when Gonzalez was President; in 1884 he was elected and in 1888, the Constitution having been altered to allow him to succeed himself, he was re-elected and again in 1892, and now for the fourth successive term, the fifth in all, in 1896. He was inaugurated amid general rejoicing on Dec. 1.

Yaqui Disturbances.—The half-civilized Yaqui tribe, a branch of the ancient Aztecs that was never conquered by the Spaniards, have often risen against the State authorities of Oaxaca and defied the Federal Government on account of some real or fancied grievance. Of late they have been stirred up to fanatical outbreaks by a pretended saint among them, one Teresa Urea, who fell into a cataleptic trance in consequence of a disappointment in love and when she awoke said that she had seen paradise and was gifted with the power to heal the sick. Thousands of Yaquis came to Cabora, where her father's ranch was situated, to be cured by Santa Teresa, and Mexicans made pilgrimages from Sonora and Chihuahua. Finally her followers were instigated to purchase arms and ammunition and attempt a revolution against the Government. A large detachment of Government troops was sent to quell the impending rising and arrest the girl who was its cause. When they attempted to carry out their orders the people gathered from far and near to defend her, and bloodshed was only averted by the timely arrival of an overwhelming force of soldiers. A large company of her followers afterward banded together to deliver her and her father from prison, whereupon the Mexican authorities conveyed the Yaqui saint, who was called the witch of Sonora by unbelievers, across the United States frontier to Nogales. The armed body of fanatics followed her thither, and shortly afterward she led a column of rebellious Indians whom the Mexican troops nearly annihilated at Tomochic, Chihuahua, killing more than 200. She was again taken prisoner, and was sent once more across the border into the United States, with a strict injunction never to return to Mexico. After living quietly for several months in a small place near El Paso, she set out to visit other towns and exhibit her wonderful powers. Soon she collected a band of several hundred Mexicans, with whom she crossed the Rio Grande and proclaimed another revolution against the Mexican Government. The soldiers at the frontier posts attempted to disperse the mob of fanatics, and a number of sharp skirmishes occurred, in all of which Santa Teresa was victorious until a large force was dispatched from Chihuahua, which routed the revolutionists. The woman leader fled across the river and lived at El Paso until she again disappeared and placed herself at the head of another army of fanatics who believed her to be a saint appointed from heaven to lead them to victory in a war against the Mexican Government. On Aug. 12 about 60 Yaquis attacked the Sonora part of the town of Nogales, killing the guards and breaking into the customhouse. Citizens of the American town came to the assistance of the Mexican authorities, and finally the Indians were driven out, crossing over into United States territory. A month later they attacked the customhouse at Juarez, opposite El Paso.

MICHIGAN, a Western State, admitted to the Union Jan. 26, 1837; area, 58,915 square miles. The population, according to each decennial census since admission, was 212,267 in 1840; 397,654 in 1850; 749,113 in 1860; 1,184,059 in 1870; 1,636,937

in 1880; and 2,093,889 in 1890. By the State census of 1894 it was 2,241,641. Capital, Lansing.

Government.—The following were the State officers during the year: Governor, John T. Rich; Lieutenant Governor, J. R. McLaughen (acting); Secretary of State, Washington Gardner; Treasurer, James M. Wilkinson; Auditor, Stanley W. Turner; Attorney-General, Frederick A. Maynard; Adjutant General, Charles M. Green; Superintendent of Public Instruction, Henry R. Pattengill—all Republicans; Bank Commissioner, T. C. Sherwood, resigned in November, succeeded by D. B. Ainger; Insurance Commissioner, T. R. Giddings; Oil Inspector, Neil McMillan; Land Commissioner, W. A. French; Railroad Commissioner, S. R. Billings; Food Commissioner, C. E. Storrs; Labor Commissioner, C. H. Morse; Fish and Game Commissioner, H. W. Davis; Chief Justice of the Supreme Court, Charles D. Long; Associate Justices, Claudius B. Grant, Robert M. Montgomery, Frank H. Hooker, Joseph B. Moore—all Republicans.

Finances.—The treasury receipts during the year were \$5,256,059.37, and the disbursements \$4,634,054.73; the cash balance at the close of the year was \$912,422.43. In 1895, at the close of the fiscal year, the general fund was overdrawn about \$128,000, but in 1896 there was a balance in the fund of \$450,537.21. The total receipts to the general fund were \$4,220,143.58, and the disbursements \$3,769,606.37. During the year the railroads operating in the State paid in specific taxes \$735,040.74; fire insurance companies, \$127,143.45; life insurance companies, \$80,823.90; guarantee insurance companies, \$3,661.07; plate-glass insurance companies, \$290.05; steam-boiler insurance companies, \$576.23; telephone companies, \$23,459.36; telegraph companies, \$19,036.75; express companies, \$2,742.34. A total of \$960,364.77 was paid to the different funds from the specific taxes collected; 55 co-operative insurance associations doing business in the State paid fees amounting to \$1,190. The rate of taxation in 1895 was 2-6 mills; in 1896 it was 1-6 mill.

The State's bonded debt is \$10,992.83, and the balance of the trust fund debt is \$5,766,702.72.

Following are some of the larger items in the appropriation bills: University of Michigan, \$194,333.32; Industrial School for Boys, \$66,750; State House of Correction, \$18,000; State Normal School, \$64,062.50; Michigan Mining School, \$40,000; Agricultural College, \$19,800; Industrial School for Girls, \$53,416.40; military account, \$111,665.64; Soldiers' Home, \$84,000; School for the Deaf and Dumb, \$70,771; School for the Blind, \$22,000; Home for Feeble-minded, \$39,500; five asylums, including the Asylum for the Criminal Insane at Ionia, \$125,327.63. Outside of the regular appropriations the State paid for the support of the insane in the several asylums \$492,420.04.

Valuations.—The Auditor's tabulation of the assessed and equalized valuations of the counties shows the following items: Real estate, valuation as assessed, \$775,046,084; personal property, \$138,944,544.25; total valuation as assessed, \$924,994,237.25; valuation as equalized, real estate, \$654,439,656.30; personal property, \$112,155,493.70; total valuation as equalized, \$814,536,028.

Statistics of Voters.—According to the last State census, the total number of voters was 651,920, an increase of 21-13 per cent. in ten years. Of this number, 393,225 are native and 258,695 foreign born. The percentage of the foreign born is greater in the north; in the southern four tiers of counties it is 30-82; in the central, 44-50; in the northern counties of the lower peninsula, 48-44; and in the upper peninsula, 74-71. In the incorporated cities the males of voting age number 230,786, of whom

113,335 are foreign born. Outside the cities are 421,134, of whom 145,360 are foreign born. There are 34,545 males of voting age, or 5-30 per cent. of the total, unable to read or write. Of these, 10,877 are native and 23,668 foreign born.

Charities.—The number of inmates at the Soldiers' Home in March was 609, with 45 in the women's building. The running expenses for the year aggregated about \$82,000. The State gave \$8,000 for the women's building.

The Kalamazoo Asylum for the Insane had under treatment in the spring 1,197, with a normal capacity of only 1,000.

Prisons.—The biennial report from the Jackson State Prison shows the following statistics: Number of inmates July 1, 1894, 856; received since, 494; total, 1,350; remaining in custody July 1, 1896, 824. The total earnings for the two years were \$226,103.27; total expense, \$246,058.11; or a net expense to the State of \$19,954.84. The expense of the prisoners *per capita* per day for two years has been 43-3 cents; the earnings *per capita* per day for two years have been 38-4 cents. The daily expense for food *per capita* has been 8-6 cents; for clothing, 2-7 cents.

The number under contract during the past two years was 418, representing 260,820½ days, for which the State received a trifle over 50 cents a day a man.

The new parole law has thus far worked very successfully.

The report of the Marquette Prison shows the daily average of prisoners in 1895 to have been 148, and in 1896 it was 210. The *per capita* cost to the State in 1895 was \$148.64, and in 1896 \$147.62. Owing to the great business depression, it has been impossible to secure any contracts for the employment of inmates, and the warden has put aside all labor-saving machinery, in order to give employment to as many men as possible. Military drill has been introduced.

Education.—The report of the President of the University of Michigan, rendered in October, shows the attendance to have been 3,019, which is larger than that in any preceding year. Degrees to the number of 757 were conferred. The proportion of women to men in the university was 20-5 per cent.

The last Legislature directed the regents of the university to establish a homœopathic medical college as a branch of the University of Detroit, and discontinue the existing homœopathic college maintained at Ann Arbor. The regents declined to comply with the act, and a mandamus was applied for to compel the regents to comply. The ground for refusal was that it was not, in their judgment, for the best interests of the university, and that the Legislature has no constitutional right to interfere with its management. These contentions are both held good in the opinion of the court, which concludes that the regents have the sole control of the university.

The State has always paid 7 per cent. upon the university funds as on the primary-school funds; but the present Auditor held that the Legislature, having in 1887 made legal interest 6 per cent., the university is entitled to only that amount; and the regents appealed to the Supreme Court. The decision was in favor of the university, because it is a general rule of construction that where an act is passed for a particular purpose it is not abrogated by general legislation, sufficiently broad to include it, unless the intent to abrogate it is clear.

The annual report of the public schools shows the total enrollment in ungraded schools to be 212,055, and that in graded schools to be 264,626. The total number of schoolhouses is 7,835, and their value \$16,766,822. The average monthly wages of male teachers was \$46.17, and of female teachers

\$35.09. The amount received from the State Treasurer for institutes was \$1,810.36; amount received from county treasurers for institutes, \$10,762.16; total amount of primary-school money apportioned, \$1,000,312.06; rate *per capita* for the year, \$1.44.

The enrollment at the Agricultural College in the spring term was 208. The long vacation has been changed from winter to summer, and a course for women was introduced at the fall term.

Health Statistics.—The State Board of Health estimates that, through compliance with the recommendations of the board during the five years 1890-'94, there were probably saved to the people of Michigan about 112,843 cases of sickness and about 5,261 deaths from diphtheria, scarlet fever, typhoid fever, and measles. At a very low estimate, the money value thereby saved the State during these five years is \$5,097,800. The basis on which this estimate was made is as follows: For medical attendance in each case of sickness, \$20; for each funeral prevented, \$40; value of each life saved, \$500.

Banks.—There are more than 170 State banks and 3 trust companies in the State, with liabilities to depositors amounting to \$95,000,000. From the time the State Banking Department went into active operation, Jan. 1, 1889, to Nov. 1, 1896, 110 State banks were organized; while during the same time there was a decrease of 25 in the number of national banks. During these years 6 State banks and 6 national banks have failed. By the report showing the condition of the State banks, Oct. 6, it appears that the savings deposits were \$41,915,262, a falling off of about \$1,000,000 from the amount in July.

Insurance.—The annual report on insurance, rendered in July, shows that the whole number of regular or level-premium life companies transacting business in the State during the year was 40, being one more than for the previous year. The total business transacted by these companies was as follows: Amount of policies issued, \$24,502,848; policies in force, Dec. 31, \$127,850,365; premiums received, \$4,356,715; losses incurred, \$1,584,765. The amount of insurance issued shows a decrease from the previous year of about \$7,000,000, but there was a slight increase both in premiums and in losses.

The total assets of the 40 regular companies were \$1,173,094,778.82, an increase for the year of \$93,331,952.73. The total liabilities were \$1,002,884,431.63, an increase of \$76,972,732.61.

The number of stock casualty insurance companies at the close of the year was 17. There were 6 fidelity guarantee companies and 32 co-operative or assessment life companies. Four assessment or co-operative accident companies ceased to transact business in the State during the year, leaving 15 in operation. Since the beginning of 1896 one company has been authorized to do a life business on the assessment plan.

Products.—The crop report gives the estimate of wheat production as 11'48 bushels to the acre, and the total yield, 17,109,991 bushels. Oats are estimated to yield 23'43 bushels an acre; barley, 26'50 bushels; and corn, 70 bushels of ears. Potatoes on high ground and on the lighter soils were a full average crop, but on low ground and clay soils were badly damaged by the rains.

The report of the State salt inspector shows that 183,130 barrels were inspected in December.

The State lumber product in 1895 was 2,731,029,535 feet of lumber and 1,360,535,500 shingles. The total output of lumber was only a little over 1,000,000 feet more than the product of the State in 1894.

A gold mine has been in operation near Ishpeming for about fifteen years. During this time the output has been \$750,000, but the mine has never paid a dividend.

Industrial Interests.—The thirteenth annual report of the Commissioner of Labor shows that during 1895 3,137 factories were inspected, of which 2,836 were running, and 2,561 of these were on full time. There were found 140 children under the age of fourteen years working. They were employed in 64 factories, and were all discharged, the law being rigid in this respect.

Statistics are given of the vehicle industry, which is one of the most important in the State. On a canvass of 126 establishments, it was found that 46 of them are incorporated firms, 39 are copartnerships, and 41 are doing an individual business. The incorporated firms have an authorized capital stock of \$3,201,700, divided into 196,520 shares. The invested capital of the 126 firms canvassed is \$4,626,553. They employ 289 salaried officers and clerks, 178 traveling salesmen, and 5,776 persons in the shops. The reports show an average of about 50 persons employed in each establishment.

The value of material used in 1895 was \$3,674,717, while the product of the business was estimated at \$8,044,222.

From a personal canvass of 4,650 employees, it was found that less than 9 per cent. belong to labor organizations. About one third belong to fraternal societies, most of which have life insurance attached.

The Labor Bureau canvassed 237 unions, covering a membership of 19,494 persons. In 23 of these unions there were 302 female members. There were initiated in 165 of these unions during the year 2,203 members, and during the same time 1,236 members were suspended from 118 of the unions. The annual dues for members range from \$1 to \$33 each, the average being \$7.81.

The Pingree Potato Commission in Detroit made a report of its operations in 1896. It shows that the commission began in the spring with about 475 acres, which were apportioned among 1,700 heads of families, representing 5,973 children, or 7,673 persons in all. From this land had been produced, with an outlay of less than \$2,300 for seed and other expenses, upward of 45,000 bushels of potatoes, besides a quantity of beets, cabbages, corn, pumpkins, beans, etc.

In August the last of the Rockefeller mines was shut down at Bessemer, only enough men being retained to keep the mines free from water—about 1,000 being employed where at one time were 8,000.

About 1,500 men were forced into idleness by the closing of mines at Ironwood in July.

On the other hand, a dispatch from Houghton, Nov. 14, says: "Evidences of the return of prosperity in this part of the State are being made manifest every day, and in a very substantial manner. The mining companies are preparing for a season of work that will eclipse anything for several years, and thousands of men will be given employment at once."

Public Lands.—The annual report of the Land Commissioner shows that the number of acres of State land sold during the year was 14,988; the number of acres of swamp land licensed, 6,207; the number of acres entered as homestead land, 40,125'49; number forfeited as only part paid, 836; swamp homestead land forfeited, 5,116; deeded to the State under certain laws, 213,036; total held June 30, 1896, 642,778'59. The lands sold amounted to \$53,208.

High License.—The Auditor General gave out in May statistics furnishing a comparison of the receipts for retail liquor licenses for the years 1894, the last year under the old system, and 1895, the first year under the uniform tax. For the year ending May 1, 1894, there were 3,011 dealers in spirituous liquors, and the total tax paid was

\$1,410,804.87. The number of dealers in 1895 was 3,928, and the tax amounted to \$1,886,966.24. In 1894 there were 1,524 dealers in malt, brewed, or fermented liquors, and they paid a total tax of \$415,193.50. The number of dealers in malt liquors in 1895 was but 120, and the total tax receipts received from them \$12,786.28.

Sault Ste. Marie.—The great lock at this place, said to be the largest in the world, was officially opened Aug. 3. It was begun in 1889; it is 800 feet long between the gates, 1,100 feet in length over all, 43 feet high, 100 feet wide, and will accommodate boats drawing 21 feet of water.

Ontonagon.—The village of Ontonagon, which was destroyed by a forest fire Aug. 25, less than 20 buildings having been left standing and 373 being burned, has been partly rebuilt, and the people are looking about for new industries to take the place of the great mills of the Diamond Match Company, which may not be rebuilt, as but a few years' more cut of the pine timber they use remains on the Ontonagon and its branches.

Political.—At the city and township elections, April 6, Democratic mayors were elected in Manistee, Flint, Grand Haven, Stanton, St. Ignace, Marshall, Traverse City, Coldwater, Charlotte, and Adrian. A factional fight among Republicans in Saginaw gave the election of city officers to the Democrats. The Republicans elected mayors in Kalamazoo, Benton Harbor, Muskegon, Owosso, Grand Rapids, Battle Creek, and Eaton Rapids. In Ishpeming the labor candidate was elected over the citizens'.

The Australian ballot caucus law passed by the Legislature of 1895 was put into operation. It applies to cities having population from 15,000 to 150,000.

The Attorney General decided that the so-called "antifusion" law applies to village, city, and township elections, no candidate being allowed to have his name upon two tickets.

Jan. 16, a nonpartisan bimetallic conference was held at Lansing. The object was not to form a new party, but to unite bimetalists in influencing the action of the old parties. Resolutions were adopted to the effect that, in case neither the Democratic nor the Republican party should adopt a platform and nominate candidates in favor of treating "gold and silver on an absolute equality as to coinage at the ratio now provided by law, we then recommend that all friends of free silver in all parties join in the organization of an independent party."

A "Free-silver Democratic party" was organized at a conference held at Lansing, March 12. The address declared that three fourths of the Michigan Democrats favored free silver and that there was a conspiracy to send a gold-standard delegation to the national convention, which would rob the free-silverites of an opportunity to give an expression of their views where it would have the greatest effect.

But the Democratic State Convention, held at Detroit, April 29, was controlled by the gold-standard men. It approved the foreign and financial policy of the Administration, denounced the American Protective Association, and chose 4 gold-standard delegates at large and sent 24 district delegates to the Chicago convention, of whom 13 were counted gold monometallists and 11 silver bimetalists.

At a conference in Lansing, June 15, a call was extended "to all persons, irrespective of past party affiliation, who favor the free and unlimited coinage of silver and gold at the ratio of 16 to 1 by the United States, without waiting for the consent of any other nation, to meet in mass convention in the city of Lansing, July 16, for the purpose of electing 34 delegates and alternates to the St. Louis silver convention, to be held July 22."

The Democratic convention for nominating State officers was held at Bay City, Aug. 25. At the same time and in the same city, the State convention of Populists and the State silver convention were held, and a conference from the 3 reached an agreement to unite upon a ticket on which the Populists and silver men together should have equal representation with the Democrats. A platform approving the Chicago convention's action was adopted. Following is the fusion ticket: For Governor, Charles R. Sligh; Lieutenant Governor, Justice R. Whiting; Secretary of State, Almon G. Bruce; Treasurer, Otto E. Karste; Auditor, Arthur E. Cole; Attorney General, Alfred J. Murphy; Commissioner of the Land Office, Martin G. Loennecker; Superintendent of Instruction, David E. Haskins; Member of the State Board of Education, Frank S. Dewey. The organization was named the Democratic People's Silver Party.

The National Democrats also had a ticket in the field. The provisional committee of Gold-standard Democrats met in conference at Lansing and called a mass convention to meet in the same place, Aug. 26, to elect delegates to the Indianapolis convention and nominate presidential electors and State officers. At that convention resolutions were adopted condemning the Chicago convention as revolutionary and Populistic, approving the national administration and declaring a belief that free coinage of silver at the ratio of 16 to 1 would ruin industries, rob savings-bank depositors and pensioners of their due, and cut workingmen's wages in half. The following ticket was nominated: For Governor, Rufus F. Sprague; Lieutenant Governor, A. B. Eldredge; Secretary of State, S. L. Boyce; State Treasurer, Wilder D. Stevens; Auditor General, Irving W. Conkey; State Land Commissioner, A. M. Tinker; Attorney-General, Cyrus E. Lthrop; Superintendent of Public Instruction, William Heap; Member State Board of Education, John S. Taggart. Later Theodore A. Felch was made the candidate for Lieutenant Governor and Howard Edwards for Member of the State Board of Education.

The Prohibition State Convention for the election of delegates to the national convention, at Lansing, April 16, was controlled by the "Broad-gauge" wing of the party. The platform stood for prohibition, free silver, election of the United States Senators by the people, woman suffrage, liberal pensions, Government issue of all money, and Government control of railroads and telegraph lines.

In July the two wings of the party held separate conventions, and each nominated a ticket. That of the "Narrow-gauge" was: For Governor, R. C. Safford; Lieutenant Governor, Henry Andrus; Secretary of State, George Roelofs; Treasurer, W. C. Edsell; Auditor, W. A. Heardt; Attorney-General, Noah W. Cheever; Land Commissioner, Wm. Parmenter; Superintendent of Instruction, R. S. Avann; Member of the State Board of Education, Elmer Houser. Robert King was later the candidate for Treasurer.

The candidates of the National or "Broad-gauge" Prohibition party were: For Governor, John Giberson; Lieutenant Governor, Harvey B. Hatch; Secretary of State, Salem A. Dean; State Treasurer, Isaac N. Shepherd; Auditor General, Abram G. Jackson; Attorney-General, John S. Evans; Land Commissioner, Rodolph R. Atkins; Member State Board of Education, Joseph B. Steere; Superintendent of Public Instruction, Mrs. Lucy S. Morehouse. There was doubt as to the legality of the nomination of Mrs. Morehouse, and the Attorney-General held that she could not hold office; as women are not eligible to offices created by the Constitution, they can hold no offices for

which they can not vote. The name of Charles C. Willett was substituted. Charles K. Perrine was later the candidate for Attorney-General.

The first Republican convention met in Detroit, May 7. There was a contest over the question of the currency plank in the platform, which was compromised by an agreement to adopt the expression on the subject of the Minneapolis convention of 1892. The other resolutions were in favor of protective duties and reciprocity, and of the nomination of William McKinley; and the delegates were instructed to support him.

The second State Republican convention of the year was held at Grand Rapids, Aug. 5. The resolutions approved the national platform and ticket. The nominations were: For Governor, Hazen S. Pingree; Lieutenant Governor, Thomas B. Dunstan; Secretary of State, Washington Gardner; Treasurer, George A. Steel; Auditor General, Roscoe D. Dix; Attorney-General, Fred. A. Maynard; Commissioner State Land Office, William A. French; Superintendent of Public Instruction, Jason E. Hammond; Member of State Board of Education, James W. Simmons.

In October the Supreme Court granted a mandamus against the Board of Election Commissioners of Wayne County, compelling the board to give the Prohibitionists second place on the ballot, which was claimed for the fusion ticket. The opinion said that that ticket could not be treated as the ticket of the organization known as the Democratic party two years ago, and said further: "The ticket results from a combination with two other political parties. The evident purpose was to unite the forces of these organizations for the present campaign, and the result was the formation of a new party for the time being, under a new name."

The canvass of the returns of the November election gave McKinley 293,582, Bryan 236,714, Palmer 6,879, Levering 5,025, Bentley 1,995, and Matehett 297. The State officers elected were all Republicans. Following is the vote for Governor: Pingree, Republican, 304,431; Sligh, Democrat-Populist, 221,022; Safford, Prohibitionist, 5,499; Sprague, National Democrat, 9,738; Giberson, National Prohibitionist, 1,944. The votes for the other Republican candidates ranged from 292,785 to 294,525. Ten of the 12 representatives in Congress will be Republicans, and on joint ballot the Legislature will stand 108 Republicans to 24 Democrat-Populists.

MILLAIS, Sir **JOHN EVERETT**, P. R. A., English painter, born in Southampton, June 8, 1829; died in London, Aug. 13, 1896. He was the most conspicuous figure in the English art of his day, and, judged by popular standards, the most successful of English painters of the century, with the possible exception of Landseer. His career was rendered remarkable not only by the facility and evenness of his work, his sympathy with popular sentiments, and his early and almost uninterrupted popular success, but also from a historical point of view by his youthful association with the pre-Raphaelite Brotherhood and the eulogies of Mr. Ruskin. For over forty years his pictures were centers of attraction at the London exhibitions, and few painters of any time have known so brilliant a career.

John Everett Millais came of an old Jersey family, and his parents were residing only temporarily in Portland Place, Southampton, when he was born. In 1835 his family went to live in Dinant, Brittany, where his precocious talent for drawing showed itself as vividly as the infantile genius of Mozart. Recognizing this strong predilection, his parents took him to London and submitted him to the judgment of Sir Martin Archer Shee, P. R. A., whose first offhand advice, "Rather make him a

chimney-sweep than an artist," was changed to enthusiastic admiration by an inspection of young Millais's drawings. The boy was therefore entered in the best art school of that day—Mr. Sass's academy, in Bloomsbury—where in 1838 he won the silver medal of the Society of Arts with a drawing from the antique. In 1840 he became a student at the Royal Academy, winning the silver medal in

SIR JOHN EVERETT MILLAIS.

1843 and, indeed, every prize for which he competed in his six years at the academy. In 1846, when in his seventeenth year, he exhibited his first painting in the Royal Academy, "Pizarro seizing the Inca of Peru." The judgment of a French critic that this was one of the two best historical works of the year received a confirmation the next year when the British Institution's gold medal was awarded to Millais's "Tribe of Benjamin seizing the Daughters of Shiloh." In 1847 also he sent a large cartoon, "The Widow's Mite," to the Westminster competition.

In spite of these early successes, Millais knew something of the time of struggle and neglect which so few artists escape, and there are tales of drawings made for a few shillings and portraits painted for two or three pounds. This was the prelude to the formation of the pre-Raphaelite Brotherhood by D. G. Rossetti, Holman Hunt, Woolner, Millais, and three others—a brotherhood of which Ruskin, its foremost champion, said that the principles were neither Pre- nor Post-Raphaelite, but everlasting. There is a familiar story that Lasinio's engravings of the frescoes in the Campo Santo at Pisa inspired these young artists to a movement toward freedom from academic trammels and a direct and sincere delineation of all the facts and details of Nature as they actually exist. The literal imitation of Nature was the watchword of this group, whose unquestioned sincerity has furnished one of the memorable episodes of the century's art history. But the name was erroneous, since imitation of other paintings and mannerisms existed before the Renaissance in Italy and before Raphael, as Leonardo observed in the case of the school of Giotto. Their principle was an impossible shibboleth which enthroned analysis and left synthesis no place, to go no farther into its misconceptions. Their prophet, while one of the most eloquent of writers upon art, was for young men one of the most dangerous and misleading. On the other hand, the earnestness and sincerity of the movement were ennobling and stimulating, and the arduous and exact training of hand and eye which was involved was not without its advantages. The first important picture painted by Millais under the influence of the new cult was his "Lorenzo and Isa-

bella," exhibited in 1849, containing portraits of Mrs. Hodgkinson, the Rossetts, William Bell Scott, and others of the pre-Raphaelite circle. The ridicule bestowed upon the primitive treatment and naïve detail of this picture was doubled the next year when he showed the "Christ in the House of his Parents," which the "Times" denounced as an example of "a morbid infatuation which sacrifices truth, beauty, and feeling to mere eccentricity." Only a few comprehended the attitude of the brotherhood or attempted to understand their religious symbolism, yet a movement for the union of art, truth, and morality was quite in keeping with that time of moral exertion over the Oxford movement and the later Gothic revival, a time when Ruskin, writing as an art critic, proclaimed his fear lest some of the brotherhood should be "touched by Tractarian heresies."

Although it is obvious that individualities like those of Millais, Hunt, and Rossetti could not remain long so closely united, it was not until 1858 that Millais may be said to have adopted a more elastic and eclectic art in his "Black Brunswicker." Before this, however, he had painted pictures of enduring popularity, notably "A Huguenot" (1851), while his "Mariana," "Autumn Leaves," "Order of Release," and particularly his "Ophelia," have held their own as distinguished examples of his art. But by 1857 Ruskin, whose praise had been unbounded, was beginning his equally strenuous lamentations over Millais's fall. This period can not be dismissed without an acknowledgment that in developing some of these earlier ideas Millais showed himself truer to high artistic ideals than amid the later brilliant successes of his life. This early influence was shown not only in the "Autumn Leaves" of 1856, but also in "The Vale of Rest" of 1859 and the "Eve of St. Agnes" of 1862. It has been said, and disputed, that in these pictures Millais reached his highest artistic expression. From 1862 onward, while his career offers an unbroken series of successes, there is too much which shows a change from the earnestness and high endeavor of those earlier years to a greater or less content with an external effectiveness sometimes realized by loose and perfunctory means. The popular opinion of Millais, as of most successful artists, has been that his career represented a steady growth and a culmination of triumphs, and this opinion has found expression again and again in the criticisms or rather eulogies of English writers who hailed almost every new picture as the impeccable work of a great master and unhesitatingly placed his name beside those of Gainsborough and Reynolds. It is true that the technical facility and assured self-command shown in work like the "Isabella," which recalled the loving care of Van Eyck, in the "Autumn Leaves," and in his trilogy of love scenes—"The Huguenot," "The Proscribed Royalist," and "The Order of Release"—indicated a talent broad as well as fine; but in reviewing his career it can not be safely main-

tained that the possibilities and promise of these early years ever reached their highest development.

One point should be emphasized in entering upon the second period of Millais's art—that Nature never equipped him for the career of a great imaginative artist. While his enormous facility and the stimulus of his companions enabled him to hold his own and more for a time in the symbolic painting of the pre-Raphaelites, it may be questioned whether his heart was fully in his work, for by nature he was a painter of the present—of the *actuelle*. From 1860 to 1871 came an almost unbroken succession of historical, biblical, and poetical subjects, *genres*, and portraits. After 1871 he painted few historical and romantic subjects, and devoted himself, with the exception of some landscape work, to portraits

RESIDENCE OF SIR JOHN MILLAIS, PALACE GATE, LONDON.

and *genres*. His success was constant, his rewards were great. From the long list of pictures painted between 1860 and 1871 we may single out "The Boyhood of Raleigh" and "The Widow's Mite" as examples of sympathetic expression, and from his later works "Effie Deans" and "The Princes in the Tower" as illustrations of his effective storytelling. In 1872 he broke new ground with his "Chill October," still regarded by many as the finest of his landscapes, which was followed by "Flowing to the Sea," "The Fringe of the Moor," and many others. His abundant sympathy with children showed itself at every stage of his career, especially after 1870, when, as subjects, they began to assume a more real and important character. In some of these studies it may be said that he showed a certain indebtedness to Reynolds, but this did him no discredit. Like some of the pic-

tures which we have mentioned, many of these child pictures—"Little Miss Muffett," "Pomona," and others—were reproduced everywhere in black and white or colors. In portraiture, no artist probably of this century has had so long a list of distinguished sitters. The roll bears the names of Gladstone (painted in 1879, and again in 1885), John Bright, Carlyle, Tennyson, Beaconsfield, Sir James Paget, Sir Henry Thompson, the Marquis of Salisbury, Cardinal Newman, and Sir Henry Irving, with others whose names are familiar at least to readers of the "Peerage." From a material point of view, no artist could hope for a more successful career.

The popular prestige of Millais's examples of sentimental anecdote and of child life overshadowed some early and excellent work in black and white. In his pre-Raphaelite days he made an etching for the never-published fifth number of "The Germ." A few years later he drew some illustrations for an edition of Tennyson, and later still he contributed drawings to "Once a Week," "Good Words," and the "Cornhill Magazine," for which he illustrated "Orley Farm," "Framley Parsonage," and two other of Trollope's novels. His last illustrative work was for "Barry Lyndon," in a special edition of Thackeray. With his engravers Millais was noted for his skill in drawing upon the block, and, quite aside from this, the artistic mastery of line and effect which he displayed imparts to his work a high distinction.

Of official honors Millais received his fill. His first election as an associate academician was before he had reached the age of qualification, but he was chosen again in 1854, and he became an academician in 1864. He received a second-class medal at Paris in 1855 and a medal of honor in 1878, when he was made an officer of the Legion of Honor. In 1883 he was chosen a member of the Institute of France, and he was a member of the academies of Edinburgh, Antwerp, Madrid, and Rome. Special exhibitions of his works were held in London in 1881 and in 1885. In 1885 he was made a baronet. After the death of Sir Frederick Leighton, early in 1896, he was elected President of the Royal Academy, but the honor came late, and was his in name for only a few months. Death came to him after a long and painful struggle with a laryngeal disease, and, attended by representatives of the Queen, the Prince of Wales, and the Prime Minister, by the commander-in-chief of the army, and by a host of distinguished mourners, his remains were laid at rest in St. Paul's Cathedral, beside Leighton, his friend and predecessor.

Of Millais's sympathy and facility, his executive ability, his skill in drawing, and his considerable but not magisterial command of color, there is abundant evidence in his work. His limitations are no less apparent. He was a delineator of the more obvious qualities, and therefore, to a certain extent, superficial. He was not a great master of brush work or of color, charming as he often was in both. The more candid English criticism which followed his death recognized his limitations. "Neither a profound thinker nor a learned scholar," said one critic, "but a man of singularly sympathetic, observant, and apprehensive mind." "We would not be understood," wrote the critic of the London "Academy," "to rank Millais among the few great world painters. He lacked the fire of creative genius, the imagination, and the poetry that may be possessed by men of much smaller achievement. But within his limitations, like those of Dryden in English literature, he accomplished an honorable life's work, of which his country does well to be proud." As a delineator of the actual, of contemporary life, though only of certain sym-

pathetic aspects of humanity, Millais has been ranked with Hogarth and Tenniel—a much truer classification than that which has sought to place him with Gainsborough and Reynolds. But when we consider the vast amount of vigorous, interesting, and often singularly impressive work which he has left, it is impossible not to wonder at his power, and to predict that his highest achievements will keep some hold upon the future. That he was mourned so sincerely is a tribute to his art and to his personality as well. Frank, jovial, sunny, generous, devoted to fishing and hunting, and appreciative of the luxuries of his splendid London home, he embodied many of the most agreeable English characteristics, and became in a way a typical and peculiarly lovable figure in the London social world. "Over and above their technical merits," an English writer has said, "it was the healthy sentiment of his subjects that won for him his great reputation. Here, as always, it is the man that appeals to the public; not the painter." The French point of view and the purely artistic judgment represent very different standards, and, bearing them in mind, it may be said that this quotation forms a most suggestive commentary upon Millais's art.

A pathetic feature of the early relations between Ruskin and Millais was involved in the divorce obtained by the former's wife with his consent, and her marriage afterward with Millais.

Only a few of his paintings are owned in this country. There are examples in the Walters and Vanderbilt galleries and a few portraits and landscapes elsewhere. For articles upon Millais, the reader may be referred to "Notes on Millais's Pictures," by F. G. Stephens (London, 1881 and 1883); "Art Journal" (1886); "Spectator" (Jan. 2, 1886); "Magazine of Art" (October, 1896); "London Saturday Review" (Aug. 22 and 29, 1896); and "Scribner's Magazine" (December, 1896).

MINNESOTA, a Western State, admitted to the Union May 11, 1858; area, 83,365 square miles. The population, according to each decennial census since admission, was 172,023 in 1860; 439,706 in 1870; 780,773 in 1880; and 1,301,826 in 1890. By the State census of 1895 it was 1,573,350. Capital, St. Paul.

Government.—The following were the State officers during the year: Governor, D. M. Clough (acting); Lieutenant Governor, Frank A. Day (acting); Secretary of State, Albert Berg; Treasurer, A. T. Koerner; Auditor, R. C. Dunn; Attorney-General, R. W. Childs; Adjutant General, H. Muehlberg, all Republicans; Superintendent of Education, W. W. Prendergast; Commissioner of Insurance, C. H. Smith; Railroad and Warehouse Commissioner, George L. Becker; Librarian, C. A. Gilman; Labor Commissioner, L. Y. Powers; Chief Justice of the Supreme Court, Charles M. Start; Associate Justices, William Mitchell, Daniel Buck, Thomas Cauty, L. W. Collins. Justices Start and Collins are Republicans, the other three are Democrats.

Finances.—The assessed valuation of the State, which was \$552,560,000 in 1894, was but \$478,742,000 in 1896. The reduction was due to the changes in real-estate valuation in the three largest cities. Upon the basis of the present State tax of $\frac{1}{4}$ mill the State revenue will be smaller by \$110,000 a year. The delinquent taxes now amount to \$950,000, some having been due for twenty years.

The State Treasury had to the credit of the several funds, Nov. 30, 1896, a total of \$850,114, of which \$215,137 was in the funding tax fund, \$168,797 in the revenue fund, and \$110,235 in the grain inspection fund.

Education.—The total value of buildings and sites for public schools, including normal schools and the State University, has increased from \$14,-

049,704 in 1894 to \$16,232,839 in 1896. The pupils enrolled have increased from 341,478 to 359,189, and the gain in average attendance was from 121,496 to 135,702. The school enrollment has increased faster than the population, and the average attendance nearly twice as fast.

The State University has about 2,000 students. In 1895 it conferred degrees upon 285, and in 1896 upon 337.

The first State Convention of Boards of Education was held in Northfield in April.

Charities.—The population of the Soldiers' Home increased from 76 in 1888 to 418 in 1896. The net cost of maintenance in 1896 was \$31,133.41. From the "Soldiers' Relief fund" about \$41,000 was distributed to veterans living with their families, over 700 families having been aided.

The School for the Feeble-minded is crowded to its utmost capacity, and there are 180 applicants who can not be admitted.

The three hospitals for the insane also are crowded; a fourth one is to be established at Anoka.

Banks.—The report to the Comptroller of the condition of Minneapolis banks, Dec. 17, showed an "increase in the loans and discounts, and a slight decrease in the individual deposits over the statement made by the same banks Oct. 6. There is a slight decline in the volume of gold coin held, the December statement showing \$889,432 in gold, whereas in October the banks held \$943,192 in gold. The volume of legal-tender notes declined during the same period from \$679,124 to \$488,634. The loans and discounts in December were \$11,217,563, against \$10,788,168 in October, and individual deposits decreased only \$9,000."

The reports of the five national banks of St. Paul were made at the same time, showing that the banks had "strengthened their reserves materially since Oct. 6. During the period from December, 1895, to October, 1896, the banks slightly relinquished their gold holdings, and their stocks of gold fell from \$2,198,188 to \$1,947,879, but according to the present statement their gold holdings have increased to \$2,152,000. No increases were made in the volume of national bank notes issued by the banks during the period, the amount remaining at \$225,860."

The Bank of Minnesota, a State bank in St. Paul, was closed Dec. 22. This failure was followed by that of three other St. Paul banks—none of them national—and by three in Minneapolis. The Marine National Bank of Duluth suspended in October.

Railroads.—The report of the Auditor gives figures in reference to grants of land in the State to railroad companies by Congress and by the State. They amount to more than 20,000,000 acres. A reasonable valuation of these railroad lands is \$103,000,000, or about \$32,000 a mile. The companies have already received over 10,000,000 acres, and under the swamp land act from the State they have received over 3,000,000 additional.

He calls particular attention to the grant originally made to the Little Falls Railway and now owned by the Northern Pacific. It consists of 300,000 acres and was given to aid in the construction of that railroad from its eastern terminus to the western boundary of the State. For uncompleted portions of the line the land should revert to the State.

Five lines added during the year a total of 58 miles to their roads.

The State is opposing the proposed scheme of co-operation between the Great Northern and the Northern Pacific roads.

Public Lands.—One of the most important questions affecting the interests of the State of Minnesota is that of the ownership of the swamp lands in the Indian reservations. Under the act of Congress

of March 12, 1860, the State received the grant of all the swamp lands within its borders not disposed of by the United States prior to the date of the grant. The Government surveys show that in these reservations in Minnesota there are 975,869 acres of swamp lands.

The commissioners of the general land office decided in March that the State had no right to these lands, since they were not a portion of the public domain at the time of the survey (1874) which was needed to determine their character and to confirm the title of the State.

Of 4,077,597 acres of swamp lands selected for the State only 3,402,689 have been approved to the State by the Interior Department. A large proportion of these lands have been granted to 9 railroad companies and 3,062,141 acres have been absorbed in 12 legislative grants, including 525,000 acres for State institutions.

The land where the rich mountain iron mine is was selected in 1883 by the State Auditor for indemnity school land. In 1888 the same official (apparently through an error or oversight) executed a relinquishment to the Government. This land is valued at not less than \$12,000,000. The Auditor takes the ground that possibly the State still holds title to these lands under the original selection, and that the relinquishment was null and void.

The agricultural lands of the Red lake reservation, about 900,000 acres, were thrown open to settlers May 15. The pine lands, of about the same extent, were offered for sale later. Several thousand men were ready to make the race across the boundary line at the earliest possible moment. Generally, order was observed, but there was some fighting.

Growth of Cities.—The growth of the cities now having over 5,000 is shown by the following comparison:

CITIES.	1890.	1895.
Minneapolis.....	164,738	192,833
St. Paul.....	133,156	140,292
Duluth.....	33,115	59,306
Winona.....	18,208	20,640
Stillwater.....	11,260	12,004
Mankato.....	8,838	10,173
St. Cloud.....	7,686	9,178
Red Wing.....	6,294	7,685
Faribault.....	6,520	7,616
Brainerd.....	5,703	7,031
Rochester.....	5,321	6,429
Little Falls.....	2,354	5,116
Austin.....	3,901	5,087

Forests.—The chief fire warden, from investigations into the extent of the forests and the varieties of wood and timber in them, estimates that the total amount of white pine is 14,424,000,000 feet, and of red or Norway pine 3,412,475,000 feet. In 23 counties there are 10,889,000 acres of natural forest, and in the whole State there are 11,890,000 acres of natural forest, not including mere brush and swamp land. The annual cut of pine for each of the past three years is estimated at 1,500,000,000 feet. The consumption of merchantable hardwood lumber in Minnesota is estimated at 100,000,000 feet annually. In 1895 (a wet season) only 8,265 acres were burned over in the forest region, against 600,000 in the dry year of 1894.

Mob Violence.—In Minneapolis, March 21, a riot grew out of trouble between strikers and nonunion men employed in an iron foundry. The nonunion men were going home under police guard, trouble having occurred before when they were attacked by a mob. It is estimated that 3,000 persons were in the neighborhood, many of them taking part in the fight. The nonunion men opened fire after they had been pelted with bricks and stones, and the fire

was returned by the strikers. Three men were shot, one of them fatally, and several were injured. Sept. 6, 2 men who had killed a sheriff were taken from jail and hanged by a mob of about 100 men. One of them had been tried and convicted of murder in the second degree. The mob was the result of public indignation at the verdict.

Political.—The Republicans held a State convention at Minneapolis, March 24. A platform declaring opposition to free coinage of silver was adopted, and delegates to the National Convention were instructed for McKinley, Senator Davis having withdrawn his name from consideration.

The convention for nominating State officers was held in July in St. Paul. The resolutions approved the St. Louis platform and nominations, favored taxation of unused railroad lands, called for legislation favorable to labor and good roads, and approved the State administration. Gov. Clough's name headed the ticket, John L. Gibbs was made candidate for Lieutenant Governor, and the other State officers were renominated.

The Free-silver Republicans published a manifesto dissenting from the party position.

The Democratic convention that was held in June declared for the gold standard by a vote of 436 to 323, but the second convention was in control of the free-silver element.

In July a mass convention of advocates of free coinage from all parties was held at Minneapolis, and delegates were chosen to the national free-silver convention.

An agreement was entered into by the Democrats, Populists, and Free-silver Republicans, whereby the last-named were to have one of the candidates for presidential electors and the other parties each 4.

The Democratic convention met in Minneapolis, Aug. 5. The resolutions approved the Chicago platform and candidates; denounced the Republican party of the State as subservient to corporations, rings, and trusts; condemned all efforts to control votes of employees; demanded taxation of iron mines and unused railroad lands, and repeal of the struck-jury law; favored good-roads legislation; and demanded that the United States Constitution be so amended as to provide for the election of President and Senators by direct vote of the people. John Lind, a Free-silver Republican, was nominated for Governor; for Secretary of State, Julius J. Heinrichs; and for Treasurer, Alexander McKinnon.

The Populists, in convention at Minneapolis, Aug. 26, ratified the nominations of the Democrats, and completed the ticket, according to agreement, as follows: For Lieutenant Governor, J. B. Bowler; for Attorney-General, John A. Kass.

W. J. Dean was the Prohibition candidate for Governor. W. B. Hammond was nominated by the Socialist-Labor party, and A. A. Ames was an independent candidate.

The State gave the following vote for President: McKinley, 193,503; Bryan, 139,735; Palmer, 3,222; Levering, 4,363; Matchett, 954.

For Governor the vote stood: Clough, 165,906; Lind, 162,254; Dean, 5,154; Ames, 2,890; Hammond, 1,125; scattering, 25; total vote, 337,354; Clough's plurality, 3,652.

The pluralities for the other State officers were much larger: Gibbs, for Lieutenant Governor, had a plurality of 30,216; Berg, for Secretary of State, 38,339; Koerner, for Treasurer, 48,121; and Childs, for Attorney-General, 41,294. For members of Congress, the Republican candidates were all elected. In the Legislature, on joint ballot, there will be 134 Republicans, 18 Populists, 14 Democrats, and 2 Silver Republicans.

Constitutional Amendments.—Six proposed constitutional amendments and 3 acts of the Legislature were submitted to vote at this election. The amendments were:

1. Changing the qualifications for voting by foreign-born residents by repealing the present provision of the Constitution permitting voting by those who have declared their intention of becoming citizens, so that a residence of five years and full citizenship is required. The voter, by the terms of the amendment, must have been a citizen of the United States for three months preceding the election, must have resided in the State for six months, and in the election district for thirty days instead of ten as heretofore.

2. Taking the pardoning power from the Governor and vesting it in a Board of Pardons, to consist of the Governor, the Attorney-General, and the Chief Justice.

3. Providing that the permanent school and university funds of the State may be invested in the purchase of the bonds of any county, school district, city, town, or village of the State.

4. Giving to every city the right to frame its own charter, subject to the limitations imposed by the laws of the State. The Legislature may classify cities on the basis of population alone, and may pass general laws applicable to each class.

5. Authorizing the taxation of the property in the State of sleeping, parlor, and dining-car companies; of telegraph and telephone companies; of foreign and domestic insurance companies, and of the owners and operators of mines; of boom companies and shipbuilders doing business in the State and having a part therein.

6. Inserting the words "destroyed or damaged" after "taken" in the section that says: "Private property shall not be taken for public use without just compensation therefor first paid and secured."

The legislative acts voted upon were:

1. Providing for the holding of a convention to revise the Constitution.

2. Providing for the appropriation of the income derived from the investment of the internal improvement land fund to the road and bridge fund, so that such moneys shall be used only for making public roads and building bridges on public roads.

3. Providing for the taxation of unused railroad lands in the State, provided that the companies shall continue to pay the tax on gross earnings as now. The Constitution provides that any law repealing or amending the gross-earnings law must be submitted to popular vote.

All these were carried at the election, except the one providing for a constitutional convention. The majority in favor of this proposition was 25,750, but this is not a majority of the total vote cast at the election, which is necessary.

MISSISSIPPI, a Southern State, admitted to the Union Dec. 10, 1817; area, 46,810 square miles. The population, according to each decennial census since admission, was 75,448 in 1820; 136,621 in 1830; 375,651 in 1840; 606,526 in 1850; 791,305 in 1860; 827,922 in 1870; 1,131,597 in 1880; and 1,289,600 in 1890. Capital, Jackson.

Government.—The following were the State officers during the year: Governor, Anselm J. McLaurin; Lieutenant Governor, J. H. Jones; Secretary of State, J. L. Power; Auditor, W. D. Holder; Treasurer, Albert Q. May; Attorney-General, Wiley N. Nash; Superintendent of Education, A. A. Kinnannon; Adjutant General, William Henry; Revenue Agent, Wert Adams; Land Commissioner, J. M. Simonton; Railroad Commissioners, J. D. McInnis, M. M. Evans, J. J. Evans; Chief Justice of the Supreme Court, Timothy E. Cooper; Associate Justices, Thomas H. Woods, Albert H. Whitfield (until Dec.

1, when—Chief-Justice Cooper having sent in his resignation, to take effect at that time—Justice Woods became Chief Justice, according to the State law; Thomas R. Stockdale was appointed to serve until the end of Justice Cooper's term, May, 1897, and S. H. Terral to succeed him for the following term. All the State officers are Democrats.

Education.—The Legislature appropriated \$10,000 for repairs at the State University, and passed an act for the sale or lease of lands selected under the grant by Congress of 23,040 acres for the university in 1894; also one authorizing the trustees to add a school of medicine to the university.

For replacing burned buildings at Alcorn Education and Mechanical College the Legislature gave \$7,000, and \$6,595 for other expenses for two years. This school receives annually \$6,814.50, interest on a fund given by the Government. The school has 223 boys, colored. Of these, 36 are learning printing, 47 farming, 54 carpentry, 40 blacksmithing, and 46 shoemaking.

The Normal School at Holley Springs received an appropriation of \$4,000 for the next biennial period.

Tuition in the Industrial Institute and College is made free for five years to girls residing in the State, with the exception of music, for which charge is made. The Legislature appropriated \$40,980 for salaries for the biennial period, and \$12,068 for improvements.

The Legislature of 1896 created a State board of examiners to examine applicants for licenses to teach and for the office of county superintendent.

The Agricultural and Mechanical College had from the Legislature \$45,000 for support and \$5,000 for repairs, on condition that the officers and employees shall receive as compensation from the State 10 per cent. less than the amount paid them by the State for 1893. A class of 15 was graduated in June.

Charities.—The appropriation for two years' support of the State Lunatic Asylum was \$195,000, and an additional \$8,000 was given to build a hospital on the grounds.

The East Mississippi Asylum received \$75,200 for support and \$6,000 for repairs.

For the maintenance of the Charity Hospital at Vicksburg \$24,000 was given for the two years, on condition that the city or county or both give, in addition, one third of that amount. To the Natchez Hospital \$17,500 was appropriated, provided the city and county give \$3,333 a year, and that no person shall be admitted who is able to pay a reasonable charge.

The Institute for the Blind has an appropriation of \$18,514 for 1896 and 1897.

The Institution for the Deaf and Dumb receives for two years about \$50,000. The Legislature authorized the trustees to sell the lands and buildings occupied by the colored department, which are dangerously near railroad tracks, and to provide others more suitable.

Militia.—The National Guard of Mississippi is composed of 3 regiments, consisting of artillery, cavalry, and infantry, and numbering 1,800 men—the limit by law. A ten-days' encampment was held at Jackson in August. The Legislature appropriated \$4,000 for the militia, on condition that \$2,000 should be reserved for use only in the suppression of riots.

The Penitentiary.—There were on the rolls in October 937 convicts, 877 of whom are able-bodied and are employed on the farms. The Board of Control has the management of 18,000 acres, 8,000 of which is the property of the State, and 10,000 leased lands in the great Yazoo-Mississippi delta and specially adapted to the production of cotton. Only 11,850 acres are cultivated; the rest is timber

lands and pasture. In the cultivation of the leased land the State furnishes the labor in exchange for the use of the land and the teams, and receives half the proceeds. The net earnings of the prison for 1896 were \$55,419. The value of the property, including the farms, is estimated at \$327,266.

Railroads.—By the opening of the Gulf and Ship Island Railroad from Gulfport, on the sea, to Hattiesburg, about 70 miles northward, where connection is made with the New Orleans and North-eastern, travelers from any part of the State can reach the Gulf coast direct without going outside Mississippi territory.

Water Ways.—Congress appropriated the following sums to be spent on the waters of the State: Pearl river, below Jackson, \$10,000; Yazoo river, \$20,000; mouth of Yazoo and harbor at Vicksburg, contracts authorized, \$860,000; harbors of Vidalia and Vicksburg, \$40,000. Besides this, it was provided that \$50,000 may be expended on the Tombigbee from Demopolis, Ala., to Columbus, Miss.

Products.—The total cotton crop of the State for 1895-'96 in commercial bales was estimated at 1,013,358. The acreage was 2,487,119.

The cash valuation of the lumber exports from Mississippi ports in May alone was \$270,000. The standing timber in the State is estimated at 75,000,000,000 feet.

There are 29,958,400 acres in the State, and only 6,849,390 acres of this land are under cultivation.

The average size of farms decreased from 370 acres in 1860 to 193 in 1870, to 156 in 1880, and to 122 in 1890.

The Poll Tax.—It has been held that poll taxes could not be collected by seizure and sale of property exempt from taxation. A bill was passed by the Legislature to compel the payment of the tax, but by some delay it failed to reach the President of the Senate in time to receive his signature legally. In May the Attorney-General was appealed to for an official opinion as to exemption, and replied that nothing is exempt from seizure for the poll tax except the clothes on a person's back. A test case was brought before the courts; a county sheriff levied on a negro's bed to collect his poll tax, and the decision was that the tax can not be collected by levy and sale of any property that is exempt from taxation.

Important Suits.—A suit involving the titles to 363,000 acres in the State was argued before the United States Supreme Court in October. The case was Ford and Levy against the Delta and Pine Land Company. Ford and Levy claimed the title under execution sale against the Selma, Marion and Memphis Railroad Company. They claimed that titles coming from tax sales were invalid because the lands were exempt from taxation by the act incorporating the railroad company. The Delta and Pine Land Company claimed title through the Liquidating Levee Board under a sale of the lands of that board by authority of the decree in the case of Joshua Green vs. Hemingway and Gibbs. These liquidating levee tax titles have been fortified by legislation and strengthened by a long line of judicial decisions of the Supreme Court of the State, until they are regarded as invulnerable. The decision of the court was in favor of the company. This establishes the titles of many private owners in the delta.

A suit involving the validity of bonds issued by the Levee Board of the State for improvement of the Mississippi came before the United States Supreme Court in April. The bonds were made payable in gold, and the Supreme Court of the State had decided that they were void because the law did not authorize the payment of the bonds in any particular kind of money. The opinion of this

court was reversed by the United States Supreme Court, and the case remanded. It was held that "the obligation was to pay what the law recognized as money when the payment was to be made. The bonds were therefore legally solvable in the money of the United States whatever its description, and not in any particular kind of money, and it is impossible to hold that they are void because of want of power."

Legislative Session.—The Legislature was in session from Jan. 7 to March 24. James T. Harrison was President *pro tem.* of the Senate, and James F. McCool Speaker of the House.

Among the candidates mentioned to succeed the Hon. J. Z. George, whose term in the United States Senate will expire in 1899, were Hernando D. Money, Charles E. Hooker, Robert Lowry, John M. Stone, A. J. McLaurin, W. G. Yerger. On the twentieth ballot in Democratic caucus Mr. Money was nominated, and he was elected Jan. 24.

The Capitol has for some time been regarded as unsafe. A special committee was appointed to prepare a bill for a new Capitol, and an examination by a skilled and disinterested expert was ordered. The foundations were found to be defective, and the walls not only cracked and crumbled in places, but leaning and sunken at one corner. The roof supports were in part rotted away. The report of a second architect was still more unfavorable. The Senate voted for a building to cost \$1,000,000, and to be on the Penitentiary site; the House passed a bill for one to be on the site of the present Capitol, and to cost \$550,000. No bill was agreed upon, but a committee consisting of the Governor, the Attorney-General, and the Secretary of State was appointed to receive and decide upon plans and specifications for a new building. A plan was accepted in December, but the commission had no power to make a contract. The proposed total cost, exclusive of furnishing, is to be \$750,000, and it is to be finished in two years.

A revenue bill was passed imposing a long list of privilege taxes. There were also "an act to raise revenue by making contracts valid which were null under previous laws for nonpayment of privilege taxes upon terms of payment of previous years' dues and 100 per cent. damages within sixty days from the passage of this act," and one "to raise revenue by requiring the assessment and collection of an *ad valorem* tax upon stocks of goods, wares, and merchandise offered for sale in stores, when the business is commenced after the first day of February of the current year."

The issue of \$400,000 of 5-per-cent. nontaxable bonds, payable in ten years, with the option of redemption in five years, was authorized. They were issued and sold at an average price of 1.03½.

The State tax was fixed at 6 mills on the dollar.

An act to encourage manufactures exempts from taxation for ten years permanent factories for working cotton, silk, etc., or metals and pork-packing and cold-storage plants where the capital amounts to \$10,000 or more, if established before Jan. 1, 1906; also factories for manufacturing machinery, implements, carriages, clothing, shoes, barrels, boxes, etc. Any factory that has been abandoned for not less than three years, if resuming within two years from Nov. 1, 1896, comes under the act, and also creameries established since April 1, 1894, and those that shall be established before 1906. An establishment belonging to or being a trust combine or pool is not exempt.

The "valued-policy law," which is complained of by insurance companies as a cloak for fraud, was modified so as to provide that the owner of the property applying for insurance thereon must make a sworn statement as to its value, and if such state-

ment is willfully false and fraudulent, and the insurance company is thereby misled, then the insured shall not have the benefit of the valued-policy law. The bill further provides that all insurance companies which make no extra charge on account of the valued-policy law, and whose charges for insurance are in no way affected, fixed, controlled, or influenced by any insurance association, trust, or combine, shall only pay a tax of 2 per cent. on their gross earnings. All other fire insurance companies are required to pay a privilege tax of \$1,000.

A joint committee was appointed to examine the seacoast. They reported in favor of improving the harbors and approving the project for a railroad through the center of the State from north to south.

The Governor sent in a special message, March 3, recommending the passing of a law prohibiting the making hereafter of contracts payable exclusively in gold. A bill to that effect passed the House with only 18 dissenting votes, but it did not go before the Senate for final action.

Other acts were:

Adding ester pomace to the list of exceptions from the definition of fertilizers in the law regarding them.

Allowing druggists and physicians to sell alcohol in any quantity not less than one gallon, without the license required by chapter xxxvii of the code of 1892.

To provide a record of the descent of property, real and personal, in cases where persons die wholly or partially intestate.

To enable *bona fide* residents of the State to select other lands in lieu of the lands lost by failure of title.

To relieve certain purchasers of lands claimed by the State, wherein the lands sold were the property of the United States.

Designating as navigable waters all rivers, creeks, and bayous in the State, 25 miles in length, that have sufficient depth and width of water, for thirty consecutive days in a year for floating a steamboat with carrying capacity of 200 bales of cotton.

Requiring supervisors to hire out the labor of county convicts.

Forbidding the sale of land at public outcry under deeds of trust or contracts hereafter executed outside the county of its location.

Allowing attachment for debt not due in cases where the creditor has reason to believe the debtor will remove himself or his effects from the State before the debt becomes payable.

Appropriating \$40,000 for the State Board of Health for two years.

Prescribing imprisonment for not more than five years in the Penitentiary for keeping or exhibiting any gaming table, faro bank, or the like, or for being interested or concerned in one.

To make the office of treasurer of municipalities elective by the people.

Authorizing the Mobile, Jackson and Kansas City Railroad Company to locate its railroad within the State.

Allowing surety companies with paid-up capital of not less than \$250,000 to be received as sureties on bonds.

Amending the law concerning the liability of corporations to employees, giving to an employee injured the same rights and remedies for an injury suffered by him from the act or omission of the corporation or its employees as are allowed by law to other persons not employees, where the injury results from the negligence of a superior agent or officer, or of a person having the right to control or direct the services of the party injured, and also when the injury results from the negligence of a fellow-servant engaged in another department of

labor from that of the party injured, or of a fellow-servant on another train, or one engaged about a different piece of work. Any contract or agreement, expressed or implied, made by an employee to waive the benefit of this section shall be void.

To develop internal commerce by giving the Railroad Commissioners power to grant leave to industrial establishments to build side tracks.

Authorizing supervisors to buy and maintain hounds for the use of sheriffs in the capture of criminals in certain cases.

To render a claimant incompetent as a witness against estates of persons of unsound mind.

To allow persons affected by any trust or combine to recover an absolute penalty of \$500 and actual damages.

Increasing the Pension fund from \$67,500 to \$75,000.

Making the maximum penalty for carrying concealed weapons three months in the Penitentiary and a fine of \$100.

Appropriating \$40,000 of bonds of the Gulf and Ship Island Railroad, now owned by the State, to the promoters of the improvement of Gulfport harbor.

Among the resolutions passed were:

Memorializing Congress to grant a township of United States land for the support of a hospital, medical college, and bureau of vital statistics of the university to be at Vicksburg.

For securing the passage of the bill in Congress for the "relief of the book agents of the Methodist Episcopal Church, South," compensation for property destroyed during the war.

Memorializing Congress to grant belligerent rights to the Cuban republic.

Asking that Congress appropriate \$500,000 to be used in dredging a channel, 500 feet wide and 25 feet deep, to connect Ship Island harbor with the pier of the Gulf and Ship Island Railroad at Gulfport.

Both houses passed resolutions strongly in favor of free coinage of silver.

Political.—The People's Party State Convention met in Jackson, Feb. 26. Delegates were chosen to the national convention, and an electoral ticket made. The platform favored free coinage and the other principles of the party. The following resolution, with a facetious preamble, was adopted: "That the People's Party of Mississippi are opposed to spending \$1,000,000 or any other amount at this time for the erection of a new Capitol."

The Republican convention met at Jackson, March 4. There was a contest over the seating of delegates, and one party withdrew and held a separate meeting. Each faction chose delegates to the national convention, one delegation headed by James Hill, the other by John R. Lynch.

Early in the year there was a movement among Democrats in the State to put forward William C. Whitney for the nomination for the presidency. A call to him to "enter the race" was signed by large numbers in different parts of the State, and, being circulated among members of the Legislature, received the signatures of many of them. Fifteen State Senators afterward said they signed it under the impression that Mr. Whitney was in favor of the free coinage of silver. Mr. Whitney answered in a letter to the "Clarion-Ledger," saying that the movement had been without his knowledge or sanction, and that he was not a candidate, and giving his opinions on the currency question.

The Democratic convention was held April 29 at Jackson. The resolutions declared in favor of free coinage at the ratio of 16 to 1, without reference to the attitude of other nations, and the delegates to the national convention were instructed to vote as a

unit and to vote for no man for either President or Vice-President who was not fully and unequivocally in favor of free coinage. A resolution was adopted also favoring effort for a deep-water harbor on the coast, and one instructing the delegates to present the name of Senator E. C. Walthall for nomination for the vice-presidency.

A small number of Prohibitionists held a State convention at Jackson, May 6, and chose delegates to the national convention of the party. The resolutions favored, besides prohibition, Government control of railroads, telegraphs, etc., limitation of individual and corporate ownership of land, reclamation of unearned land grants to railroads, exclusion of nonresident aliens from ownership of land, Sunday observance, arbitration of national differences, and suppression of speculation in margins and of the formation of pools and trusts for controlling prices. They opposed appropriation of public money to sectarian schools, and declared the volume of the currency should be fixed at a definite sum *per capita*, and should be made to increase with our increase in population.

The Gold Democrats held a convention at Jackson, Oct. 6, with 98 delegates. The resolutions declared that the great principles of the party had been denied or perverted by "the party recently organized at Chicago, which has assumed the name and claims to exercise the functions of the Democratic party."

Attempts were made to unite the Populists and the Democrats, but they were unsuccessful. Bryan and Sewall received 55,933 votes, and Bryan and Watson 7,320. Each of the Republican factions put out an electoral ticket, one of which received 2,702 and the other 2,147. The vote for President stood, therefore: Bryan, 63,253; McKinley, 4,849; Palmer, 1,021; Levering, 390. All the members of Congress elected are Democrats. In the Legislature are 2 Populists in the lower house. All the other members are Democrats.

After the adjournment of the Republican State Executive Committee in December, the colored men present held a meeting and formed an organization, the purpose of which is to take steps to test the constitutionality of the suffrage clause of the State Constitution. An executive committee was appointed, and it was made their duty to investigate and determine, first, whether it is possible or practicable to test the constitutionality of the suffrage clause of the present Constitution through the Federal courts, and if they find it can be done, to take the necessary steps for that purpose; second, to bring this matter to the attention of the President and the Congress of the United States, with a view of having an investigation made by the Government of the United States to find out whether the State has a republican form of government; third, to ascertain whether it is possible or practicable to secure a reduction of the representation in Congress from the State as long as the present suffrage clause of the State Constitution remains in force.

MISSOURI, a Western State, admitted to the Union Aug. 10, 1821; area, 69,415 square miles. The population, according to each decennial census since admission, was 140,455 in 1830; 383,702 in 1840; 682,044 in 1850; 1,182,012 in 1860; 1,721,295 in 1870; 2,168,380 in 1880; and 2,679,184 in 1890. Capital, Jefferson City.

Government.—The following were the State officers during the year: Governor, William J. Stone; Lieutenant Governor, John B. O'Meara; Secretary of State, Alexander A. Lesueur; Auditor, James M. Seibert; Treasurer, Lon V. Stephens; Adjutant General, Joseph A. Wickham; Attorney-General, R. F. Walker; Superintendent of Educa-

tion, John R. Kirk; Commissioner of Labor, Henry Blackmore; Chief Justice of the Supreme Court, Theodore Brace; Associate Justices, Thomas A. Sherwood, Shepard Barclay, James B. Yantt, Gavin D. Burgess, George B. Macfarlane, Walter M. Robinson. All are Democrats except J. R. Kirk and W. M. Robinson, Republicans.

Finances.—The Board of Fund Commissioners met June 19, and ordered warrants drawn for \$99,445 to pay the interest due July 1 on the outstanding bonded debt of the State, and \$26,923.95 to pay the interest on the school and seminary certificates of the State.

The board also ordered a warrant drawn for \$337,000 to pay off and retire 337 of the old Hannibal and St. Joe bonds, maturing July 1. With this payment there will remain but 11 of the 6-per-cent. bonds outstanding against the State. They mature in July, 1897, but there is money in the treasury to pay them. All the bonds of the State then outstanding will be 3½ per cent., and the public debt will amount to only \$5,086,000. It is estimated that the indebtedness can be cleared off by the end of the next administration without any increase of taxation.

The tax levy for State purposes is 25 cents on the \$100 valuation; 10 cents of this is for bond and interest fund to pay the interest and principal upon the debt, and 5 for public schools.

Education.—The school funds of the State amount to \$12,283,491. The schoolhouses are valued at as much more.

At the commencement of the State University, June 3, 3 students received the degree of M. D., 3 that of B. S. in electrical engineering, 5 that of B. S. in civil engineering, and in the law department the degree of LL. B. was conferred upon 41, while 2 received the degree of Bachelor of Agriculture. There were 5 graduates in the normal department, and in the academic 11 received the degree of A. B., 14 that of B. L., and 2 that of B. S.

A new main building for the Lincoln Institute at the capital, a school for colored youth, was dedicated Sept. 12. It takes the place of one destroyed by fire in August, 1894. Lincoln Institute was established in 1865 by the Sixty-second and Sixty-fifth Regiments, United States Colored Infantry. They gave for this purpose from their pay the sum of \$6,379. There is a dormitory for the young women and one for the young men. An industrial department was established some years ago, and for this purpose alone the Legislature appropriated \$25,000, \$10,000 of which was used for the erection of the building, \$9,000 for machinery, and the remainder for the purchase of land for a farm. Every person who visits the institute and sees the engines, dynamos, furniture, and other articles that have been made by the students is convinced that this is one of the most useful departments of the school. All the young men, unless excused by the faculty, are expected to take a course in this department.

The Missouri Military Academy, a mile southwest of Mexico, was burned to the ground Sept. 24, causing a loss of over \$75,000, with insurance of only \$37,000.

The Second District Normal School sent out a class of 92 in the two-year course. The school has graduated 1,277 in this course during the twenty-five years of its existence. The Southeast Normal School at Cape Girardeau, graduated 30, June 9, in the two-year course. The Normal School at Warrensburg had an enrollment during the year of 1,094. A class of 42 was graduated June 11.

Banks.—In a statement of the Secretary of State on the condition of the banks, Aug. 10, the following items appear: United States bonds on hand, \$183,431.25; other bonds and stocks, \$6,026,648.86;

real estate, \$3,524,346.42; checks and other cash items, \$1,817,353.33; national bank notes, legal tender United States notes, and gold and silver certificates, \$7,136,292.75; gold coin, \$3,270,501.33; silver coin, \$577,380.26; surplus funds on hand, \$8,497,356.56; deposits subject to draft at sight, \$59,153,120.42; deposits subject to draft at given date, \$16,318,074.74; bills payable and bills rediscounted, \$715,943.94.

The Missouri National Bank, in Kansas City, closed its doors Nov. 30.

Internal Revenue.—The report of the Internal Revenue Commissioner, Dec. 12, shows the collections for the past fiscal year in Missouri to have been \$6,959,915.32. Spirits valued at \$1,564.24 were seized, 4 illicit stills were destroyed, and 9 persons were arrested.

The number of retail liquor dealers in Missouri paying license to the Government is 7,641; the number of wholesale dealers, 189; rectifiers, 100; manufacturers of oleomargarine, 1; retail dealers in oleomargarine, 111. The number of fruit distilleries operated in Missouri is 63. The amounts of spirits gauged in 1896 were: For the First District, 5,823,846; and for the Sixth District, 1,079,108.

The Mississippi.—The report of Major Thomas Hanbury, in charge of the work on the Mississippi between the mouth of the Missouri and the mouth of the Ohio, was published in July. During the year the wreck of the sunken steamer "Hudson" was taken from the river and 2,979 snags; 19,648 leaning trees were cut away and 11 drift piles removed. The amount expended on this work during the fiscal year ending June 30, 1896, was \$80,395.

On the subject of the improvement of the channel between St. Louis and Cairo, Major Hanbury says: "The object of the improvement is to obtain a minimum depth at standard low water of 6 feet from the mouth of the Missouri river to St. Louis, 16 miles, and of 8 feet from St. Louis to the mouth of the Ohio, 178 miles, the natural depth being in many places from 3½ to 4 feet."

The Missouri.—The annual report of the Missouri River Commission shows that the snagboat of the commission during the last fiscal year has destroyed 1,758 snags, cut 182 trees, and removed 7 drift piles.

On the reach of the river undergoing systematic improvement, from a point 5 miles above Jefferson City to the mouth of Gasconade river, 45 miles, there is now a navigable channel at low water having a depth of 6 feet. Previous to the improvement the ruling depth was 2½ feet. Congress has provided for an annual expenditure of \$300,000 on the Missouri river below Sioux City for the next four years.

Court Decision.—The Supreme Court decided in December that the ordinance in Kansas City imposing a fine of \$2.50 on a voter who casts no ballot at a general election is invalid, as it associates the franchise with a money value.

Political.—A call was issued to Democrats opposed to the free coinage of silver to meet in St. Louis Feb. 29, and about 300 were present. An address to the Democrats of the State was adopted unanimously. It declared that "the unprecedented action of calling the State convention to meet in Sedalia on April 15, to elect delegates to the national convention, was done with the avowed purpose of influencing the party in other States and committing the national Democracy to the free and unlimited coinage of silver at a ratio of 16 to 1 of gold, regardless of the relative commercial value of the two metals and regardless of the action of the other commercial nations of the world," and called upon the voters of the party in the State "to make on open, active, and organized opposition to

the effort to commit the party to a policy which can only end in disaster."

But at the State convention April 15, at Sedalia, the free-coinage Democrats were in control, and a platform was adopted which demanded free coinage of silver, and declared "we are opposed to the issuing of interest-bearing bonds of the United States in time of peace; especially are we opposed to placing the Treasury of the Government under the control of any syndicate of bankers and the issuance of bonds to be sold by them at an enormous profit for the purpose of supplying the Federal Treasury with gold for maintaining the policy of gold monometallism."

The delegates to the national convention were instructed to vote as a unit. The convention declared for R. P. Bland as candidate for the presidency.

The second Democratic convention was held Aug. 5 at Jefferson City. The State ticket follows: For Governor, Lon V. Stephens; Lieutenant Governor, A. H. Bolte; Secretary of State, A. A. Lesueur; Auditor, James M. Seibert; Treasurer, Frank Pitts; Attorney-General, E. C. Crow; Justice of the Supreme Court, Theodore Brace; Railroad and Warehouse Commissioner, Timothy J. Hennessey.

The Prohibitionists, at their State convention in Sedalia, May 8, refused to incorporate in the platform a plank favoring the free coinage of silver at a ratio of 16 to 1, and tabled a resolution recommending that the national convention change the name of the Prohibition party to National party. The resolutions favored an income tax, Government ownership of railroads, restricted immigration, and just pensions, and opposed appropriation of public money to sectarian institutions. The currency resolution read: "The money of the country, whether gold, silver, or paper, should be issued by the general Government only, and in sufficient quantity to meet the demands of business, and no individual or corporations should be allowed to make any profit through its issue; all money should be legal tender of all debts, public and private."

Following is the ticket: For Governor, H. P. Faris; Lieutenant Governor, J. M. Ritchey; Secretary of State, E. E. McClellan; Auditor, J. O. Rolfe; Treasurer, Rev. I. T. Hull; Attorney-General, J. C. Hughes; Judge Supreme Court, Lewis Adams; Railroad Commissioner, W. E. Sullivan.

The first State convention of Republicans was held in St. Joseph, May 12, and there was a lively contest between two factions. It was not until after 11 o'clock at night that the Committee on Credentials was ready to report and the convention was finally called to order. The committee submitted two reports, the majority favoring the Filley delegations and the minority favoring the seating of all the contesting delegations and dividing the vote between the two factions. The majority report was adopted without debate.

The convention did not adjourn until 4:30 in the morning. The resolutions declared for protection, reciprocity, and the gold standard, and instructed the delegates to vote for McKinley. Mr. Filley was elected chairman of the State Central Committee and one of the delegates at large to the national convention.

The Republicans met again in convention in Springfield, July 22, but the first day passed before they were able to effect a permanent organization. The second day the report of the Committee on Credentials was ready and was accepted, and the business of the convention was completed. The resolutions, besides approving the action of the national convention, denounced the employment of convicts in competition with free labor, opposed appropriations of public money to sectarian insti-

tutions, declared for fair play in the apportionment of the congressional, senatorial, and judicial districts, and deplored the "communistic tendencies of the Democratic party as enunciated in the Chicago platform."

Robert E. Lewis was nominated for Governor on the sixth ballot. The other candidates were: Lieutenant Governor, Abra C. Pettijohn; Judge Supreme Court, Rudolph Hirzel; Secretary of State, William P. Freeman; Treasurer, J. F. Gmelich; Auditor, John G. Bishop; Attorney-General, John Kennish; Railroad Commissioner, George N. Stille.

The convention of the People's party met in Sedalia, July 30. About 600 delegates were present. The resolutions approved the national platform, declared belief "in a national issue of Government money direct to the people, without the intervention of banks, sufficient to do the business of the country on a cash basis, and made receivable in payment of all debts, dues, and demands, public and private," and declared for "the free and unlimited coinage of gold and silver at a ratio of 16 to 1 and their application to the payment of the national debt." They opposed issues of bonds, demanded the "enactment of a statute providing that all evidences of debt, not in judgment, shall be presented the assessor, and assessed, and have his stamp upon them, to be collectible by law"; demanded also that mortgaged property be assessed to both mortgagor and mortgagee, and taxes collected from them in proposition to their interest. They called for reductions in salaries, exclusion of aliens from ownership of land, some form of initiative and referendum, restricted immigration, and revision of the Federal Constitution.

Various resolutions were offered on the subject of fusion with the Democratic party of the State, and the matter was finally left to the State Committee. The ticket chosen was: For Governor, O. D. Jones; Lieutenant Governor, James H. Hillis; Secretary of State, Thomas Day; Auditor, Sheridan Webster; Treasurer, Oscar Wood; Attorney-General, Frank E. Richey; Railroad Commissioner, E. F. Cowan; Justice of the Supreme Court, John M. Voris.

An arrangement was made in September by which the Democrats and the Populists united on an electoral ticket, four places being given to the Populists. In October Mr. Jones withdrew from the State ticket, and the place was not filled.

The Socialist-Labor party chose a ticket, as did also the Silver party; but the court decided that the latter ticket could not be printed on the official ballot, many of the signers of the petition having participated in other conventions.

The Gold-standard Democrats assembled in convention in St. Louis, Aug. 26. The resolutions reaffirmed the Democratic platform of 1892, approved President Cleveland's action in sending troops to Chicago, declared for the use of both gold and silver as standard money, for coining both gold and silver into money of equal intrinsic and changeable values, such equality to be secured by international agreement or by such safeguards of legislation as will insure the maintenance of the parity and equal power of every dollar at all times.

Delegates to the national convention at Indianapolis and presidential electors were chosen. The State ticket follows: For Governor, John McD. Trimble; Lieutenant Governor, Albert F. Osterman; Secretary of State, Daniel McIntyre; Treasurer, William Mellrath; Auditor, Edward R. Porter; Attorney-General, Nicholas D. Thurmond; Railroad and Warehouse Commissioner, H. A. Koster; Justice of the Supreme Court, Theodore Brace.

The vote for presidential electors stood, as fol-

cially announced: Democratic, 363,652; Republican, 304,940; Prohibition, 2,169; Socialist-Labor, 610; National Democratic, 2,355; National (Prohibition), 292; 4 of the 17 electors voted for Watson for Vice-President. For Governor the vote stood: Stephens, Democrat, 351,062; Lewis, Republican, 307,729; Farris, Prohibitionist, 2,588; Fry, Socialist-Labor, 757; Trimble, National Democrat, 1,809. All the Democratic candidates were chosen. Of the 15 members of Congress the Republicans have 3, all from the St. Louis districts. In the Legislature there are on joint ballot 98 Democrats, 62 Republicans, and 14 Populists.

MONTANA, a Western State, admitted into the Union Nov. 8, 1889; area, 146,080 square miles; population, according to the census of 1890, 132,159. Capital, Helena.

Government.—The following were the State officers during the year: Governor, John E. Rickards; Lieutenant Governor, Alexander C. Botkin; Secretary of State, Louis Rotwitt; Treasurer, Frederick W. Wright; Auditor, Andrew B. Cook; Attorney-General, Henri J. Haskell; Superintendent of Instruction, Eugene A. Steere; Adjutant-General, C. F. Lloyd—all Republicans; State Land Agent, James M. Page; Register of the Land Office, S. A. Swiggett; Chief Justice of the Supreme Court, William Y. Pemberton, Populist-Democrat; Associate Justices, W. H. De Witt and W. H. Hunt, Republicans.

Finances.—The revenues from all sources for the several funds amounted during the fiscal year 1896 to \$667,747.03. Of this total sum, \$436,978.12 belonged to the general fund, and the remainder was distributed among the several special funds.

The indebtedness of the general fund, Dec. 1, was \$357,830.18, but in that month it was reduced by a warrant call to the amount of \$150,000.

The expenses attending the sessions of the fourth Legislative Assembly, 1895, were \$61,475.

According to the report of the State Board of Equalization, published in February, "the total assessed valuation of the State is \$124,076,585.50. Of this, nearly \$2,000,000 is valuation of lands belonging to the Northern Pacific (now in the hands of receivers) upon which taxes can not be collected."

The mines in Silver Bow County are assessed at \$1,644,590, and those in Lewis and Clarke at \$397,700.

Militia.—The cost of the National Guard was \$23,764.79 in 1895, and \$18,834.61 in 1896.

Education.—The State received a bronze medal for its fine school exhibit at the Chicago Columbian Exposition.

The State Normal School building at Dillon was completed in the spring.

A class of 4, the first to be graduated at Montana College, at Bozeman, took their degrees in June.

The corner stone of the State School of Mines was laid at Butte, Dec. 29.

At the Fort Shaw Indian School there were about 165 pupils in 1896. They range in age from five to twenty, and are full bloods and half breeds. The majority are Piegans, the remainder being Cheyennes, Assiniboines, Crows, and Arapahoes. There are 20 instructors. All the pupils are trained in some kind of industry. Several trades are taught, and all the boys above a certain age are expected to work on the farm. The school, which occupies the buildings and 5,000 acres of the old Fort Shaw reservation, has been in operation since 1892. The course of instruction occupies three years.

Penal Institutions.—The report of the Reform School, published in February, showed that 28 boys and 2 girls had been received during the year, making the whole number 44. The boys have done the greater part of the work in the erection of 2 new

buildings—a barn and a cottage which will accommodate 80 boys. A farm of 100 acres is attached to the school.

The cost of maintaining the inmates of the State Prison for 1895-'96 was 35 cents a day *per capita*. Out of the appropriations for 1895 and 1896 enough was saved to build, with the help of the convicts, a new prison with a capacity of 288 prisoners.

Charities.—The care of the insane for 1896 cost the State \$118,600.40, about one fourth of the total receipts of the general fund.

The buildings for the Orphan's Home and the Deaf and Dumb School were nearly completed at the close of the year.

The corner stone of the Soldier's Home was laid, May 30, at Columbia Falls, and at the end of the year the home was ready for the reception of veterans. It is a two-story building, 76 x 84 feet, designed to accommodate 50. The Legislature appropriated \$10,000 to cover the expense.

Bank Failure.—The First National Bank at Helena failed, Sept. 4, with total liabilities of \$3,450,000. It was organized in 1866. The individual deposits at the time of the failure amounted to \$2,930,000, and the amount due other banks was \$395,000. Dec. 16 the grand jury indicted the vice-president, who was manager of the bank, the assistant cashier, and one of the directors on the charge of wrecking the bank. The report of the jury specified serious irregularities. The president and directors are censured for negligence.

Railroads.—Fifty-six miles of railroad were built in the State in 1896. In August 5,298,598 acres of Northern Pacific lands in the State were sold at auction on foreclosure sale for a total of \$937,900, being bid in by the president.

The question as to the ownership of the town site of Boulder, the county seat of Jefferson County, which has been in dispute for some time, has been passed upon by the commissioner of the general land office, who decides that "in view of the settlement, use, and occupation of the land by the residents of Boulder it was not subject to homestead entry irrespective of the railroad land grant."

Sheep and Wool.—The number of sheep assessed in Montana in 1896 was 2,812,829, an increase of 210,727 head over the number assessed in 1895. By the rule adopted last year, 5 per cent. is added to cover the number of shearing sheep that escaped assessment. It was estimated that the wool clip of Montana for 1896 was 21,790,289 pounds, an increase of 2,451,316 pounds over 1896. It appears that Montana has more sheep and raises more wool than any other State or any Territory. The prices in 1896 were not nearly as good as in 1895. In 1895 the average price received for wool, which was very largely bought for cash at Montana shipping points by buyers on the ground, was 10½ cents a pound, the proceeds of the clip aggregating \$1,997,716. In 1896 the price was about 2½ cents less.

Fruit.—The following is from the Helena "Independent": "There is no section of country east of the Missouri river that equals the Bitter Root for fruit. In Ravalli County alone, which constitutes a large part of the Bitter Root valley, there were 265,225 fruit trees growing last year. Many new orchards were planted the present year, and additions made to others. Of the fruit-growing trees last year in Ravalli County, 30,622 produced 29,894 bushels of apples, plums, prunes, apricots, peaches, and pears."

Mining.—There are in operation in Montana 10 gold mills, 18 silver mills, 7 lead and 8 copper smelters, and 25 concentrators, with a combined capacity of 5,000 tons of ore a day. The value of the annual output of gold, silver, copper, and lead in is

over \$45,000,000, of which the mining districts tributary to Butte produce over \$25,000,000.

The first annual report of the Anaconda Copper Mining Company for the year ending June 30, 1896, was published in December. The president estimates the profits for the year at \$4,258,514. The total expenditures at the mines were \$5,071,677.61, and at the works in Anaconda \$5,616,516.78, of which amount \$1,235,000 was expended on machinery.

The report of the Boston and Montana Consolidation Copper and Silver Mining Company shows net earnings amounting to \$2,357,703.61. The gross earnings were \$4,999,231.39.

Many new discoveries of gold and silver deposits have been reported recently, one 42 miles from Great Falls, and one in the Little Rocky mountains not far from Landusky. Madison County, on the western side of the Tobacco Root range, is found to have a rich deposit of gold. A shaft has been sunk in the heart of the city of Butte, which is built over a rich mineral deposit.

The Cree Indians.—A bill appropriating \$5,000 to remove the Crees from Montana passed Congress and went into effect in May. The Indians showed a disposition to resist deportation unless their chiefs, who had been leaders of the Riel rebellion, should be pardoned by the Canadian Government; and the Federal troops were sent to deport them over the border, in June, by special train. One, who had been implicated in a murder in the Northwest Territory a dozen years ago, shot himself at the Great Falls railroad station rather than be forced to go back.

Bounties on Animals.—Since the bounty law enacted by the Legislature of 1895 went into effect, claims have been filed for the killing of wolves and coyotes amounting to \$137,427, and \$59,475 of this had been paid in warrants up to Dec. 1, 1896. The number of coyotes killed during the fiscal year 1896 was 18,216. The last Legislature repealed the old bounty law, which paid \$2 for killing wolves and coyotes, \$5 for mountain lions, bear, lynx, and bob cats, and passed the present law, which confines the bounty to the most dangerous of the stock-destroying animals, wolves and coyotes, paying on each a bounty of \$3.

The fund is raised by an act of the Legislature setting aside 5 per cent. of the money collected from licenses and a tax of 1½ mill levied on the live stock of the State.

Opening of Reservations.—In February the Secretary of the Interior sent to Congress for ratification agreements with the Indians of the Blackfoot and Fort Belknap reservations. The Blackfoot Indians agreed to give up about 1,000,000 acres of mineral lands for \$1,500,000, to be expended for their benefit at the rate of \$150,000 a year, beginning in 1897. The lands are to be disposed of under the mineral laws, and sold for \$2 to \$5 an acre. The Belknap Indians ceded 40,000 acres of mineral lands for \$360,000, to be expended for the Indians in sums of \$90,000 a year. In this case the price is placed at \$10. The agreement was ratified, and provision was made for a survey.

State Lands.—The report of the Register of Lands shows that the State educational institutions, together with the public schools, will have to their credit 9,000 square miles of land. The money derived from the sale of these lands goes into the permanent school fund, the principal of which can not be touched. The minimum price at which these lands can be sold is \$10 an acre, and the principal of the funds arising from the sale of sections 16 and 36 must ever remain a permanent fund in trust for the support of the public schools of the State. Of the 9,160 sections that will be known as

State lands, over 3,000 sections have been surveyed.

The public building grant, of which the Capitol building fund is of most interest, includes 182,000 acres, of which 100,733 acres have been selected.

Two hundred three-year leases and permits, embracing 93,500 acres of land, were issued during the fiscal year, from which there is due the State as rental annually \$9,285.75.

The Register received \$38,185.23 during the year, divided among the following funds: School fund, income \$22,107.56; Capitol building fund, \$1,771.06; school fund, permanent, \$8,015.18; university fund, income, \$5,445.43; School of Mines fund, income, \$30; State Normal School, income fund, \$816.

The list of grants made for the State institutions is as follows: Agricultural College, 140,000 acres; School of Mines, 100,000 acres; State Normal School, 100,000 acres; Deaf and Dumb Asylum, 50,000 acres; State Reform School, 50,000 acres; State University, 46,080 acres. These with the grant for the Capitol amount to 668,080 acres.

Important Decisions.—In the case of a negro who was convicted in a United States circuit court of murder committed on the Crow reservation, an appeal was sustained alleging want of jurisdiction. The prosecution in the Federal court relied upon the clause in the Montana enabling act providing that "Indian lands shall remain under the absolute jurisdiction and control of Congress of the United States," but Justice White said it was clear it was not intended that this provision should operate to deprive the State of power to punish crimes committed in reservation by others than Indians.

In a case involving the constitutionality of the license law, the judge of a district court in Silver Bow County decided that the whole license law was unconstitutional. If the decision had been upheld, the State would have lost about \$500,000 a year. But the Supreme Court reversed the decision of the lower court, which was founded upon an article of the Constitution which seems to prohibit the Legislature from enacting a license law where part of the proceeds go to the county. The Supreme Court decided that the intention of the framers of the Constitution was to limit the power of taxation and not that of license.

In a suit involving the question of priority of labor liens and mortgages upon mining property, the decision was in favor of the priority of the mortgage lien.

Immigration Convention.—A convention for effecting a permanent organization to work for the development of the State by securing desirable immigration and the enlistment of capital in mining enterprises, was held at Helena in March, and was very largely attended, every county being represented. For two days there was a series of papers by specialists setting forth the resources of their respective sections. A permanent bureau will be organized for the preparation of authoritative statements of the resources of the State and the dissemination of literature.

Political.—The Republicans held a State convention at Butte, May 11, at which delegates to the national convention were chosen. The platform included the following declarations:

"We reiterate our faith in and devotion to the great Republican principles of bimetallicism, protection, and reciprocity, announcing as our understanding of bimetallicism, the free and unlimited coinage of both gold and silver at the ratio of 16 to 1, independently by the United States. In the application of the principles of protection, we insist that the farmer, the miner, and the sheepherder shall receive equal consideration with the manufacturer, and that through reciprocity treaties the produc-

tions of our own country, whether of the farm, the factory, or the range, shall be accorded just and advantageous recognition at foreign customhouses in exchange for stipulated concessions accorded by our Government to the products of other countries which we can not ourselves produce; and that wool as one of the important products of the United States be accorded a duty not less than that provided by the McKinley bill."

The resolutions also declared in favor of the Monroe doctrine, expressed sympathy for the Cuban insurgents, and commended the State administration. They condemned the national administration for its foreign and pension policy; "for abrogating and refusing to carry into effect the reciprocity treaties of the last Republican administration, through which our national commerce and trade were being rapidly developed"; and "for increasing the national debt in a time of peace \$262,000,000, for its disreputable bond deal with foreign bankers, by the Chief Executive, through his law partner, at a cost to the people of more than \$9,000,000.

On Aug. 4 a conference of State party leaders was held at Butte to form a plan of action by which to hold the party together and elect a State ticket. Senator Mantle and Congressman Hartman had declared for Bryan; ex-Senators Sanders and Power were for McKinley. A compromise was reached providing that when the State convention should meet the State ticket should be nominated, and then the silver Republicans should withdraw, leaving the gold men to choose McKinley candidates for electors. This plan was carried out at the convention, which met at Helena, Sept. 9. Following is the ticket: For Governor, Alexander C. Botkin; Lieutenant Governor, Peter R. Dolman; Secretary of State, Louis Rotwitt; Treasurer, Charles M. Webster; Auditor, Albert L. Love; Attorney-General, Samuel G. Murray; Superintendent of Instruction, John P. Hendricks; Associate Justice of the Supreme Court, George H. Grubb.

After these nominations the silver men withdrew. They held a session, renominated Charles S. Hartman for Congress and adopted resolutions declaring approval of the national platform in every particular except the financial declarations.

The delegates remaining in the original convention nominated O. F. Goddard for Congress, chose candidates for presidential electors, and adopted resolutions approving the national platform and favoring "the extension of the suffrage to all persons of competent age, intelligence, and character resident within the limits of the State, without discrimination on account of sex."

The State Democratic Convention met at Butte, June 20, to select delegates to the national convention. The resolutions made no mention of the national administration. They declared for a revenue sufficient to meet the expenses of the Government, against the issuing of bonds in time of peace, denounced the A. P. A., and favored election of Senators by popular vote. On the currency they said, in part: "We demand that the mints of the United States be opened to the free coinage of silver as well as gold, at the ratio of 16 to 1, without awaiting the action of any other nation."

On the State ticket the Democrats and Populists combined, holding their State conventions Sept. 3 and 4, the Democrats in Missoula and the Populists in Helena. The Populists had one of the candidates for electors and the Democrats two, and the places on the State ticket were equally divided, the Populists naming the candidates for Governor, Lieutenant Governor, Secretary of State, and Superintendent of Instruction, the Democrats filling the other places. The nominations were: For Governor, Robert B. Smith; Lieutenant Governor, A. E.

Spriggs; Secretary of State, T. S. Hogan; Superintendent of Instruction, E. A. Carleton; Treasurer, T. E. Collins; Auditor, T. W. Poindexter, Jr.; Attorney-General, C. B. Nolan; Associate Justice, H. R. Buck. No nomination was made for member of Congress.

The silver Republican party made nominations for some offices, but their right to have the names placed upon the official ballot was disputed, and the courts decided against them.

Following is the result of the vote for presidential electors, the highest in each party being given: Democrat-Populist, 42,537; Republican, 10,494; Prohibition, 186. The vote for Governor stood: Smith, Populist, 36,688; Botkin, 14,993. The other candidates on the Democrat-Populist ticket were elected by majorities varying from 7,243 to 14,906. Charles S. Hartman, who was the candidate for member of Congress of all the silver forces, received 33,932 votes, to 9,492 for Goddard.

A proposed amendment to the Constitution was submitted to vote and defeated. It was intended to do away with wholesale naturalization just before election. The Legislature for 1897 stands: Senate, Republicans, 11; Democrats, 9; Populists 3—with 3 of these seats to be contested. House: Democrats, 44; Populists, 16; Republicans, 8.

MORAVIANS. The statistical reports of the Moravian Church in the United States and the Alberta District, Canada, for the year 1895 give it: In the Northern Province, 11,047 communicants, 1,116 noncommunicants, and 4,903 children, making a total of 17,066 members, with 1,152 teachers and 9,151 pupils in Sunday schools; in the Southern Province, 2,567 communicants, 165 noncommunicants, and 1,097 children—total, 3,829—with 351 teachers and 3,648 pupils in Sunday schools; total for the two American provinces, 13,614 communicants, 1,281 noncommunicants, and 6,000 children, making a total of 20,895 members, with 1,503 teachers and 12,799 pupils in Sunday schools. The total amount of contributions in the Northern Province for Church support was \$107,592, or \$3,684 less than in 1894; total contributions (Northern Province) for Church enterprises and general Christian objects, \$26,302, or \$2,959 more than in 1894. The statistics of membership show a net year's increase in the two provinces of 691 communicants, 19 noncommunicants, and 311 children—or 1,621 members—and of 105 teachers and 643 pupils in Sunday schools. Fifty-nine churches were visited during the year by the members of the Northern Provincial Board. One of the most important visitations was that to Alberta, Canada, which resulted in the establishment of a thoroughly organized mission work there. Of the members recorded in the Southern Province, the denominational newspaper of that province observes that "the smallness of the noncommunicant list shows how thoroughly the growing youth are being gathered into the communicant membership. It will be noticed, with interest, that the adult baptisms (121) are nearly as many as the confirmations (134). This fact arises not from a lack of testimony among us to the value of infant baptism, but to the coming in of new people. Much of our new strength consists of men and women who have come to Christ out of the great unbaptized world."

The mission in Alaska returned June 1, 1896, 4 brethren and 8 sister missionaries, 27 native helpers, 240 communicants, 210 noncommunicants, and 175 children—in all, 625 members; 102 day-school and 77 Sunday-school pupils, and 45 in training schools; with 28 adults baptized and 15 received, 61 children baptized and 8 received, and 30 members confirmed during the year. Number of "new people," 12; of candidates, 35. An increase of 224 members of all classes is shown. A conference held

at Bethel Station in August, 1895, was attended by 23 native helpers. Regulations were adopted concerning sponsors at infant baptisms, separate homes for the several families, the abolition of potlatch and other heathen customs and superstitions, and prohibiting card playing and gambling and the use of strong drink. Eight missionary trips were made up the Nushagak river, one of them also 200 miles up one of its tributaries, the Wood river, to the lakes, and over to Togiak. The longest trip occupied twenty-three days, and covered an estimated distance of 800 miles, and 8 preaching stations were established.

The annual meeting of the association (English) in aid of the Moravian missions was held May 11. Lord Kinnaird presided. The report showed that the year's income of the society had been £12,672, against £8,407 in 1895; the legacies had increased from £1,859 to £4,259. Four hundred missionaries were employed at 150 stations; and with the stations were connected 110 Sunday schools, with more than 22,000 pupils. The fact was mentioned that this was the oldest of Protestant missions to the heathen, work having been begun in the West Indies in 1732; in Greenland (where there were now 9,845 native Christians) a year later; among the North American Indians in 1734; in Dutch Guiana, 1735; and in South Africa in 1737; and here the first mission to lepers was started in 1818. The converts on these mission fields, 93,700, are three times as numerous as the parent Church. The missions are largely self-supporting, nearly two thirds of the £72,000 annually spent being raised by the native churches. More than 2,500 missionaries had now been sent out by the Moravian Church. Besides the fields already mentioned, the society has missions in Labrador, at 12 stations in Central America, among the aborigines of Queensland and Victoria, in Little Thibet in northwest Alaska, and near Lake Nyassa, and a leper home at Jerusalem.

MORRIS, WILLIAM, an English poet and artist, born in Walthamstow, Essex, on the northern outskirts of London, March 24, 1834; died in the London suburb of Hammersmith, Oct. 3, 1896. He was educated at Marlborough and at Exeter College, Oxford, and after taking his degree was for nine months in the employ of the noted architect George Edmund Street. In 1856 he founded "The Oxford and Cambridge Magazine," contributing frequently to its pages and sustaining its cost for the year of its existence. In 1858 he published "The Defense of Guenevere and Other Poems," a work which reflects in most dramatic original fashion the temper of the Middle Ages more completely than any modern volume can be said to do. But it met with scanty appreciation from the general reader, though estimated at its proper worth by the critical few. In 1867 appeared "The Life and Death of Jason," in 17 cantos of heroic couplets, a poem which had none of the occasional vagueness of outline of its predecessor, and revealed him in the aspect by which he is likely to be longest remembered, that of story teller to the world at large. To this epic succeeded the first volume of "The Earthly Paradise" in 1868, a series of classical and mediæval legends in a mediæval setting. Stirred by reports of an earthly paradise, certain gentlefolk and mariners of Norway set sail to seek it, and after years of wandering come as old men to a far western isle inhabited by descendants of ancient Greek colonists. The Greeks entertain the wanderers

and establish bimonthly feasts at each of which a classic and a mediæval story are told. Twenty-four tales are thus narrated in the course of the year, with interludes and preludes, and the advent of each month is heralded by a lyric of three seven-line stanzas. The first or spring volume of "The Earthly Paradise" contained "Atalanta's Race," "The Man born to be King," "The Doom of King Acrisius," "The Proud King," "The Story of Cupid and Psyche," and "The Writing on the Image." In 1869 the second portion of the work was published, and in 1870 the third and final part appeared, the poems in their order including "The Love of Alcestis," "The Lady of the Land," "The Son of Cræsus," "The Watching of the Falcon," "Pygmalion and the Image," "Ogier the Dane," "The Death of Paris," "The Land East of the Sun and West of the Moon,"

WILLIAM MORRIS.

"Acontius and Cydippe," "The Man who never Laughed again," "The Story of Rhodope," "The Lovers of Gudrun," which has also been published separately, "The Golden Apples," "The Fostering of Aslaug," "Bellerophon at Argos," "The Ring given to Venus," "Bellerophon in Lycia," and "The Hill of Venus." In the oft-quoted prefatory stanzas beginning

Of heaven or hell I have no power to sing,
I can not ease the burden of your fears

the poet tells us just what we are to look for from him. He does not intend to attempt the solution of any material problems; his purpose is merely to add to the sum of human enjoyment, and he therefore styles himself "the idle singer of an empty day." This characterization of himself has been very generally misunderstood, and he has been

reproached for making it. In reality, Morris by no means intended that to be considered his constant attitude, but rather as the perfectly natural one of the story-teller. His own life is the best answer to any reflections made upon him in this respect—a life many degrees removed from the indifference sometimes charged against him.

Morris took Chaucer very frankly as his master in "The Earthly Paradise," not only in his process-

not appear. But it is absent for a very good reason. In "Sigurd" the poet is no longer merely the narrator of a story, he is dealing with spiritual themes in the realm of national myth, the era of primeval passion. The poem has not yet received the attention it merits, save from the more intellectual of readers. That it is one of the great epics of the century seems hardly suspected by readers in general. The story of "Sigurd" is derived from the

Icelandic "Völsunga Saga," and the treatment is at once modern in its perception and grasp and primitive in its sympathetic rendering of the fierce loves and hates of ancient peoples of the north. The verse form chosen is not a common one with English writers of the present day, but, as may be seen in the lines that follow, it is well adapted for description and heroic utterance:

Then Gudrun girded her raiment,
on the edge of the steep she
stood,

She looked o'er the shoreless water
and cried out o'er the measure-
less flood:

"O sea, I stand before thee; and I
who was Sigurd's wife!

By his brightness unforgotten I bid
thee deliver my life

From the deeds and the longing of
days, and the lack I have won
of the earth,

And the wrong amended by wrong,
and the bitter wrong of my
birth!"

She hath spread out her arms as she
spake it, and away from the
earth she leapt

And out of her tide of returning;
for the sea waves over her swept,

And their will is her will hencefor-
ward; and who knoweth the
depths of the sea,

And the wealth of the bed of Gu-
drun, and the days that yet
shall be!

Before "The Earthly Paradise" was completed Morris had gone deeply into the study of Icelandic literature, the first fruits of which was "The Lovers of Gudrun" in the autumn division of that work. He became associated with Mr. Erikir Magnússon in Icelandic translations, the results of their joint labors appearing in "The Story of Grettir the Strong" (1869); "Völsunga Saga" (1870); and "Three Northern Love Stories and Other Tales" (1875). In 1863 Mr. Morris began the manufacture of wall paper, stained glass, and other fine-art decorations, an undertaking to which may be traced a large part of the reform that English and American taste in decoration, color, and design has undergone during the past generation; and many who hardly know his name have been influenced by Morris the craftsmen if not by Morris the poet. A few years before his death he established at Hammersmith the Kelmescott Press, whence were issued editions of Chaucer, Beowulf, Herriek, Rossetti, and other works, including his own volumes, in type and binding that were the admiration of some book lovers, but, as a natural consequence, at prices that were absolutely prohibitory for most people.

But William Morris was not only poet and craftsman, he was a social reformer as well, and for years was accustomed to address large gatherings of workmen in London parks and halls on the need of a

WILLIAM MORRIS'S HOUSE, HAMMERSMITH.

sional splendor of description, but in his verse itself, which is exclusively Chaucerian. He uses those verse forms, the seven-lined decasyllabic stanza, sometimes called "the Chaucerian heptastich," the heroic couplet, and the four-foot couplet, the Prologue, which recounts the toils of the wanderers, and is itself 2,759 lines in extent, being in the heroic measure. In spite of the great length of "The Earthly Paradise"—40,000 lines—the interest is very successfully maintained, while the high level of poetic excellence achieved and kept throughout is remarkable.

To all whose main object in reading is not merely to reach the end of the book the leisurely manner of Morris is not the least of his merits as a poet. It is the manner that the born story-teller should possess, the true mood of "the idle singer," which calls for a similar attitude on the part of the listener. "The Life and Death of Jason" had been narrated in the same leisurely fashion, but in "The Story of Sigurd the Volsung, and the Fall of the Niblungs," which many critics consider his masterpiece, and which Mr. Morris himself preferred above all his other works, this leisurely spirit does

social revolution and in denunciation of existing economic conditions. It is this side of his character that is least understood, and it may be frankly admitted that it is the most difficult to reconcile with what we know of the man in other directions. A capitalist who was also a socialist; a believer in the more equal distribution of this world's goods who published books in such a form that only the wealthiest could own them; a lover of beauty who advocated a social upheaval, one of whose first effects would necessarily be the destruction of the beautiful in very many of its forms at least—such a character must remain a problem to the generation in which he lived. And if we compare this wealthy socialist, who died leaving a great fortune to his family, with the Archbishop of Canterbury, who died in the same month leaving but a very small one, the contradictions which the character of Morris present become still more perplexing. In theory, at least, Morris stood for the equalization of social conditions, while in the minds of many who listened to him in London squares an Archbishop of Canterbury stood for the selfish withdrawal of property from the many for the exclusive benefit of the few. Yet of the thorough sincerity of William Morris there can not be the slightest question. His own words may offer a partial explanation of his theories, while they help to convince one that he had not pursued his opinions to their logical outcome in all cases, and that the road by which he had traveled toward socialism was artistic rather than utilitarian. He was not a sentimentalist in any weak interpretation of the phrase, but it was the sentimental side of the subject that most nearly appealed to him. He said: "I was led to socialism by noting how ugly civilization is. We have practically killed the beautiful in this nineteenth century. Railroads are ugly. Streets are ugly. Clothes are ugly. Lives are ugly. Capitalism has plunged us into a morass of ugliness, out of which there seems no escape. Of course this is much better expressed by Ruskin, but he thinks the remedy is a return to the past, whereas I look to a new future. My socialism has its origin in artistic longing." It is an open secret that Morris would have been offered the laureateship after the death of Tennyson but for his well known socialistic opinions, and it is equally certain that he would not have accepted it. He looked upon that office, as some one has said, "as that of a glorified government lackey, which, by some weird chance, had been filled by two great men."

In private life Morris was generous and kindly, attaching to himself the warm friendship of men of widely different social conditions. His interests were wide and concerned themselves in many ways with the life of the time. He was an enthusiastic lover of mediæval architecture, the spirit of which few men of his time understood better than he, and he could express himself in conversation and in writing in very vigorous English whenever, as has frequently happened of late years, certain indignities had been offered to that spirit in the name of "restoration."

In many ways the English-speaking world is a much pleasanter, a much brighter world to live in because of what this "idle singer" accomplished. Through his influence it has learned that ugliness in the surroundings of everyday life is unnecessary, that beauty may be the delight of the many instead of the joy of the few, while those who least sympa-

thize with his socialistic theories have taken pure delight in the music of his verse, in the charm of the old stories he re-told to his generation. Of his poetry one of his younger contemporaries has fitly said:

The little laugh of water falling down
Is not so musical: the clammy gold
Close hoarded in the tiny waxen town
Has less of sweetness in it; and the old
Half-withered reeds that waved in Arcady,
Touched by his lips, break forth again to fresher harmony.

Aside from the Icelandic translations produced with Mr. Magnússon, and already named, the works of William Morris include: "The Defense of Guenevere and Other Poems" (London, 1858); "The Life and Death of Jason" (1867); "The Earthly Paradise" (1868-'70); "Love is Enough, or the Freeing of Pharamond," a morality which displays some curious but successful experiments in meter (1873); "The Æneids of Virgil done into English Verse," in the meter of Chapman's Homer (1875); "The Story of Sigurd the Volsung and the Fall of the Niblungs" (1876); "The Decorative Arts" (1878); "Hopes and Fears for Art," a volume of lectures (1882); "The Odyssey of Homer done into English Verse" (1887); "The Dream of John Ball and a King's Lesson" (1888); "Signs of Change," seven lectures (1888); "The Tale of the House of the Wolfings," in prose and verse (1889); "The Roots of the Mountains"

of his house which was new and goodly ¹⁴
Smelling the sweet seats of the morning he
was clad in a goodly long gown of grey ^{wool} ^{lined}
with silver meet for the summer tide - for little
~~he~~ he wrought with his hands and much
with his tongue he was a man of 40 summer
black bearded and bushy and his name was
Clement Chapman When he saw Ralph he
smiled kindly and came and held his hands
and said welcome lord art thou come to
eat and drink and give a message in a poor
peolar's house ¹⁵ He said Ralph smiling (for
he was hungry ^{and King's my sister's guests} I wish eat & drink with thee
and to my lady) And he got off his horse &
the carle led him into his house And if it
were goodly without withon it was better
For there was a fair chamber furnished
with carven work well wrought, and a cupboard
of no sorry ^{regiment of silver plate} state and the chairs & stools
as fair as might be, no knips might be better
and the windows were glazed and there were
flowers & herbs & poses in them and ~~had~~
the bed was hung with goodly webs from
over sea such as the Sultan loveth Also
whereas his were bowers were hard by the chamber

FACSIMILE OF THE FIRST DRAFT OF MR. MORRIS'S LAST ROMANCE,
"THE WELL AT THE WORLD'S END."

(1890): "News from Nowhere" (1891); "The Story of the Glittering Plain" (London); "Poems by the Way" (1892); "Socialism: Its Growth and Outcome," with Belfort Bax (1893); "The Wood beyond the World" (1894); "The Well at the World's End" (1896); "The Water of the Wondrous Isles" (1897).

The admirers of "The Earthly Paradise" and "Sigurd" have not in most cases given such unstinted praise to his latest works in mingled prose and verse, like "The House of the Wolfings," or to

such a prose romance as "The Story of the Glittering Plain." The great beauty of certain portions is freely admitted, but as a whole they have not been popular.

N

NATIONAL ACADEMY OF SCIENCES. The officers of the Academy in 1896 were: President, Wolcott Gibbs; Vice-President, Francis A. Walker; Foreign Secretary, Alexander Agassiz; Home Secretary, Asaph Hall; Treasurer, John S. Billings. Two meetings were held in 1895. The first or stated meeting was held in Washington on April 21-23. On that occasion the following papers were read:

"The State of Carbo-dioxide at the Critical Temperature," "The Motion of a Submerged Thread of Mercury," and "On a Method of obtaining Variable Capillary Apertures of Specified Diameter," by Carl Barus; "The Olindiadæ and other Medusæ," by William K. Brooks; "Budding in Perophora," by William K. Brooks and George Lefevre; "Anatomy of Yoldia," by William K. Brooks and Gilman Drew; "On the Characters of the Otocœlidæ," by Edward D. Cope; "On a New Type of Telescope free from Secondary Color," by Charles S. Hastings; "Biographical Memoir of James Edward Oliver," by George W. Hill; "The Geological Efficacy of Alkali Carbonate Solutions," by Eugene W. Hilgard; "On the Color Relations of Atoms, Ions, and Molecules," by M. Carey Lea; "On the *Pithecanthropus erectus* from the Tertiary of Java," by Othniel C. Marsh; "Exhibition of a Linkage whose Motion shows the Laws of Refraction of Light," "Location in Paris of the Dwelling of Malus, in which he made the Discovery of the Polarization of Light by Reflection," and "(1) On Experiments that the X-Rays can not be polarized by passing through Herapathite; (2) The Density of Herapathite; (3) Formulæ of Transmission of the X-Rays through Glass, Tourmaline, and Herapathite," by Alfred M. Mayer; "Legislation relating to Standards," by Thomas C. Mendenhall; "Source of X-Rays," by Albert A. Michelson and S. W. Stratton; "On the Logic of Quantity," by Charles S. Peirce; "Judgment in Sensation and Perception," by John W. Powell; "Some Studies in Chemical Equilibrium," "The Decomposition of Diazo-compounds by Alcohol," and "On Double Halides containing Organic Bases," by Ira Remsen; "Notes on Röntgen Rays," by Henry A. Rowland; "On the Separate Measurement, by the Interferential Method, of the Heating Effect of Pure Radiations and of an Envelope of Heated Air," by William A. Rogers; "On the X-Rays from a Statical Current produced by a rapidly Revolving Leather Belt," by William A. Rogers and Frederick Brown; "On the Determination of the Co-efficient of Expansion of Jessop's Steel, between the limits of 0° and 64° C., by the Interferential Method," by Edward W. Morley and William A. Rogers; "Experiments on the Reflection of the Röntgen Rays," by Ogden N. Rood; "On a Remarkable New Family of Deep-Sea Cephalopoda and its Bearing on Molluscan Morphology," "The Question of the Molluscan Archetype, an Archi-Mollusk," and "On some Points in the Morphology and Phylogeny of the Gastropoda," by Addison E. Verrill; "The Relative Permeability of Magnesium and Aluminium to the Röntgen Rays," by Arthur W. Wright; and "Biographical Memoir of George Engelmann," by Charles A. White.

The following papers were presented by gentlemen not members of the Academy: "Biographical Memoir of Charles Henry Davis," by Charles H. Davis; "The Variability in Fermenting Power of the Colon Bacillus under Different Conditions," by A. W. Peekham; (presented by John S. Billings) "Results of Researches of Forty Binary Stars," by T. J. J. See.

At this meeting the following new members were elected: Charles Doolittle Walcott, Director of the United States Geological Survey, Washington, D. C., and Robert Simpson Woodward, Professor of Mechanics in Columbia University, New York city. The researches of the former in palæontology gained for him his election, while the studies of the latter in applied mathematics was the cause of his selection. The death of Gen. Thomas L. Casey was announced and the preparation of a biographical memoir on his career was assigned to Gen. Henry L. Abbott. The deaths of honorary members Louis Pasteur and Arthur Cayley were also announced.

Members of the council chosen at this meeting were: Benjamin A. Gould, Henry P. Bowditch, George J. Brush, Ira Remsen, Othniel C. Marsh, and Simon Newcomb. The following delegates were appointed to attend the sesquicentennial celebration of Princeton University, which was held in Princeton, N. J., on Oct. 22: Ira Remsen, of Johns Hopkins University; John Trowbridge, of Harvard University; and George J. Brush, of Yale University. The Academy was entertained by a reception given by Arnold Hague on the evening of April 23, 1896.

In response to a request of the Secretary of the Interior, President Gibbs, on March 6, appointed the following commission to report on a national forestry policy: Charles S. Sargent, Director of the Arnold Arboretum, Cambridge, Mass., chairman; Alexander Agassiz, Director of the Museum of Zoölogy, Cambridge, Mass.; Gen. Henry L. Abbott, of the United States Engineers; William H. Brewer, of Yale University, New Haven, Conn.; Arnold Hague, of the United States Geological Survey, Washington, D. C.; and Gifford Pinchot, a well-known arboriculturist. The communication from Secretary Smith called for an official expression on the following points:

"1. Is it desirable and practicable to preserve from fire and to maintain permanently as forested lands those portions of the public domain now bearing wood growth for the supply of timber?"

"2. How far does the influence of forest upon climatic soil and water conditions make desirable a policy of forest conservation in regions where the public domain is principally situated?"

"3. What specific legislation should be enacted to remedy the evils now confessedly existing?"

The scientific session was held in Columbia University, New York city, on Nov. 17-18, when the following papers were read:

"On the Geographical Distribution of Batrachia and Reptilia in the Medicolumbian Region," by Edward D. Cope; "A New Type of Telescope free from Secondary Color," by Charles S. Hastings; "The Jurassic Formation of the Atlantic Coast,"

by Othniel C. Marsh; "The Equations of the Forces acting in the Flotation of Disks and Rings of Metal, with Experiments showing the Floating of Loaded Disks and Rings of Metal on Water and other Liquids," by Alfred M. Mayer; "On Certain Positive-Negative Laws in their Relation to Organic Chemistry," by Arthur Michael; "On the Physical Causes of the Periodic Variations of Latitude" and "On the Solar Motion as a Gauge of Stellar Distances," by Simon Newcomb; "A Graphical Method of Logic" and "Mathematical Infinity," by Charles S. Peirce; "The Hydrolysis of Acid Amides" and "The Isomeric Chlorides of Paranitroorthosulphobenzoic Acid," by Ira Remsen; "On Flicker Photometers," by Ogden N. Rood; "The Evolution and Phylogeny of Gastropod Mollusca," by Addison E. Verrill; and "Memoir of Fielding Bradford Meek," by Charles A. White.

Owing to the illness of President Gibbs, Vice-President Walker presided at the meeting, and subsequent to the reading of the papers a stated session was held for the purpose of considering the annual report of the president.

NEBRASKA, a Western State, admitted into the Union March 1, 1867; area, 77,510 square miles. The population, according to each decennial census since admission, was 122,993 in 1870; 452,402 in 1880; and 1,058,910 in 1890. Capital, Lincoln.

Government.—The following were the State officers during the year: Governor, Silas A. Holcomb; Lieutenant Governor, Robert E. Moore; Secretary of State, Joel A. Piper; Treasurer, Joseph S. Bartley; Auditor, Eugene Moore; Attorney-General, Arthur S. Churchill; Superintendent of Public Instruction, Henry R. Corbett; Commissioner of Public Lands and Buildings, Henry C. Russell; Adjutant General, P. H. Barry—all Republicans except the Governor and the Adjutant General, who are Populists; State Engineer, R. B. Howell; Oil Inspector, J. H. Edmiston; Bank Examiner, E. L. Dodder, Jr.; Commissioner of Labor, John Powers; Chief Justice of the Supreme Court, A. M. Post; Associate Justices, T. O. C. Harrison, T. L. Norval—all Republicans.

Finances.—In his biennial report, the Auditor dwells on the fact that the financial condition of the State is steadily growing more unsatisfactory. The assessed valuation has been gradually reduced. For 1896 it was \$167,078,270.37, against a valuation of \$194,733,124.73 in 1893, while the rate of tax levy has increased from 6.49 mills in 1893 to 7.11 mills in 1896, yet the revenues are behind those of 1893.

The report says: "There are now outstanding general fund warrants to the amount of \$1,936,273.47, and in the State treasury, belonging to the general fund, \$589,370.39, which, less the amount now held by suspended banks on State depository bonds, will be applied to the payment of the floating debt. The appropriations of the last session of the Legislature were \$2,784,684, while the entire possible revenue of the State for the same period is but \$2,383,695.78."

The Treasurer's report gives the following summary: Balance at last report, \$1,121,387.34; received Nov. 30, 1894, to Dec. 1, 1896, \$3,667,594.95; total, \$4,788,982.29; disbursed Nov. 30, 1894, to Dec. 1, 1896, \$3,059,354.99; balance Nov. 30, 1896, \$1,729,627.30. From this amount deduct the amount in suspended banks that were State depositories, \$271,522.08, and the balance is \$1,458,105.22.

Education.—The report of public schools for the year ending July 8, 1895, shows that there were 6,693 districts having a total of 6,687 schoolhouses. The children between five and twenty-one years numbered 351,846, and the total enrollment was 274,282, with an average daily attendance of 171,859. There were 212 private schools reported. The

cost of education on average daily attendance was \$21.91. In graded schools the cost on average attendance was \$23.72. The number of teachers employed was 2,548 males, 6,943 females; total, 9,491. The average monthly wages were: Males, \$44.18; females, \$38.66.

The Board of Educational Lands and Funds has invested for the benefit of the permanent school fund \$3,327,511.35, making the total amount belonging to the permanent school fund \$3,864,082.06. Besides this there is \$5,000,000 of interest-bearing notes from the sale of school land, making a total of interest-bearing securities of \$8,327,511.35.

In the semiannual apportionment of school funds in May the rate for each pupil was nearly 74 cents.

The State Normal School, at Peru, graduated a class of 35 in June. For the years 1895 and 1896 the school had \$48,296.

The "free-attendance" law enacted by the last Legislature has proved popular in most of the counties, and has resulted in bringing into the high schools more than 2,000 students from the country districts. It provides for the free attendance of students whose education can not be profitably carried further in their own districts at some neighboring public high school, tuition at the rate of 50 cents a week being paid to such high school by the county in which the student resides.

The State University has about 1,500 students. A short school term in agriculture has been established at the university. A new structure, the "dairy building," was opened at the beginning of the term, and a series of 25 farmers' institutes has been held under the care of the university.

State Institutions.—In his biennial report, the Auditor gives the average monthly pay rolls for officers and employees of twelve State institutions, and says: "During the same period I find that these institutions had an average of 2,504½ inmates, while an average of 47½ officers and 390½ employees were in charge of them at an average expense of \$14,709.86 per month, or \$176,518.32 annually for salaries and wages alone; and when we understand that all these officers and employees are fed and housed by the State we can realize that they actually cost a greatly increased sum over the figures given. These statistics disclose that it requires the services of one employee for each 6½ inmates and one officer for each 52½ inmates."

The number of patients at the Norfolk Asylum for the Insane, Nov. 30, was 193, of whom 142 were men. There were 15 deaths during the biennial period. The average cost for each patient was \$348.83. A new building is called for; the superintendent says: "If the policy is continued of crowding every epileptic and aged poor person into asylums to save expense of counties in caring for them, then the capacity of the hospitals must be increased. The estimate for 1897-'98 is \$131,911.

At the Lincoln Asylum there were 351 patients, Nov. 30. During the past two years 823 have been treated, and 49 died. The expense *per capita* yearly is estimated at \$171.45. The estimate for 1897-'98 is \$162,520.

At the Hastings Asylum for the Incurable Insane there were 527 patients at the same date, while the normal capacity is 450. The total amount asked for current expenses for the next biennium is \$213,566.67, besides about \$72,000 for special purposes.

The Institute for Feeble-minded Youth, at Beatrice, had an average number of 208 during 1895-'96. The estimate of expenses for the coming biennium is \$96,425.

The School for the Deaf and Dumb, at Omaha, had an attendance of 184. Improvements costing \$16,577 have put the buildings in good condition. About \$83,000 is asked for 1897-'98.

The Institute for the Blind, at Nebraska City, had \$46,550 for maintenance in 1895-'96, and asks for \$48,125 for 1897-'98.

In the Soldiers' and Sailors' Home, at Grand Island, the number of inmates in May was 230. The appropriation for 1895-'96 was \$77,630, and the balance on hand Nov. 30 was \$13,580. A new building for which \$12,000 was appropriated was accepted in January.

The branch Soldiers' and Sailors' Home, at Milford, was dedicated Oct. 8, 1895. An appropriation of \$8,000 was made to it in 1895. The total expense for maintenance and fitting up the building has been \$18,515. The building will accommodate 120 persons; so far 48 have been admitted.

The Home for the Friendless, at Lincoln, had in May 155 inmates. The appropriation for 1895-'96 was \$30,500, and the balance Nov. 30 was \$5,288.

The State Industrial School, at Kearney, had 211 boys Nov. 30. In 1895 appropriations amounting to \$105,800 were made, and the balance remaining was \$15,013.

The Girls' Industrial School, at Geneva, had 75 pupils, and \$35,750 for its expenses in 1895-'96, of which \$8,449 remained unexpended.

The Industrial Home, at Milford, had 63 inmates, and a balance of \$7,123 from its appropriation of \$26,700 for the biennium.

The number of convicts at the State Penitentiary was 285, of whom 5 were women. Two years ago the total number of convicts was 351. The prisoners are employed in coeprage, and manufacture of stoves, harness, and brooms. The contractors pay from 30 to 45 cents per man per day for labor, the State furnishing steam power free in most cases.

The appropriation for 1895-'96 was \$138,700, and the balance remaining was \$31,978. The warden asked for \$63,875 for the coming biennium.

Banks.—The summary of the condition of incorporated, private, and savings banks, 438 in number, June 30, shows total resources \$24,582,087, and the general deposits \$13,207,338. There are 339 incorporated banks, 87 private, and 12 savings banks.

Among the failures of the year were those of the First National Bank of Beatrice, Sept. 1, carrying with it that of the Beatrice Savings Bank, and Sept. 16 that of the Midland State Bank, at Omaha. The Capital National, at Lincoln, and the Bank of Ogalalla are in the hands of receivers.

Within forty days preceding Nov. 23 26 banks in the eastern and southeastern parts of the State were robbed by burglars of more than \$30,000 in the aggregate.

Railroads.—The mileage of tracks in the State amounts to 5,542, and the total valuation of railroads, as determined by the State Board of Equalization, is \$25,425,308.

The Farmers' Alliance of Elwood asked from the Missouri Pacific Railroad Company the privilege of putting up an elevator on land belonging to the railroad, which was refused, and the Board of Transportation then issued an order requiring the company to grant the privilege. The Nebraska Supreme Court, when appealed to, rendered a decision adverse to the company, which took out a writ of error to the United States Supreme Court. The decision was reversed, the court holding that the case involved no question of rates, and the proceeding was an attempt to take private property for private use without due process of law and in violation of the fourteenth amendment to the Constitution.

The St. Joe and Grand Island road was sold in foreclosure proceedings, Dec. 23, for \$3,000,000, and was bid in by the chairman of the bondholders' committee.

Insurance.—There are 260 insurance organizations of all kinds authorized to transact business in the State. The companies made a large reduction in the summer in the price of tornado insurance; more of this has been written in the West this season than for many years.

The Auditor says the fire insurance laws are inadequate, and many of them ambiguous.

On Sept. 30 the nonresident joint-stock life and fire insurance companies transacting business in the State had \$24,882,089.57 loaned on Nebraska real estate, and at the same date the resident stock companies had invested in Nebraska securities about \$500,000. The average interest rate is 5.9 per cent.

Irrigation.—Statistics collected by the State engineer show that there were under construction in this State on April 4, 1895, when the present irrigation law became effective, about 2,219 miles of canal, covering 1,061,017 acres. Of this total mileage, 1,319 miles have been completed at an expense of \$1,456,369.

The decision of the United States Supreme Court sustaining the Wright irrigation law of California virtually settles questions that have been raised in regard to Nebraska laws, and establishes their constitutionality. These laws declare all water of every natural stream in Nebraska not heretofore appropriated to be the property of the public. State control of the water is assumed, and the formation of irrigation districts is authorized. These districts have power to borrow money, mortgage property, and issue bonds and levy taxes to pay the cost of construction of irrigation works.

At the State Irrigation Convention, at Lincoln, Nov. 21, a delegate showed the comparative cost of perpetual water rights under the district law and from private corporations to be \$3.50 and \$10 an acre respectively.

Prof. Barton, of the United States Geological Survey, who has been conducting an investigation of the underground flow of water in Nebraska, addressed the convention, saying that in the area covered, nearly 180 by 30 miles, the underground flow was enormous.

Important Decisions.—One of the State courts has decided that gold contracts are unlawful. The city of Lincoln had negotiated a loan for \$500,000, and was about to issue the bonds, payable in gold. An application was made for an injunction, and it was granted, and subsequently made perpetual. The court holds that the Constitution vests in Congress the power to determine what shall be legal tender, and Congress has conferred that function on gold and silver coin, Treasury notes, and gold and silver certificates. It concludes that State or municipal governments can not make contracts that would deprive any of these forms of currency of their legal-tender quality.

The curfew ordinance of Omaha was declared unconstitutional in the district court, in December, in the case of the only boy arrested under it, as being in conflict with the State law prohibiting inferior magistrates from incarcerating minors under sixteen years of age, and requiring such minors to be held to the district court for investigation as to their being subjects for the reform school.

Public Lands.—Settlers on lands of the Burlington and Missouri Railroad have been in trouble about their titles, the Government having brought suit against the company and the settlers for the recovery of lands said to have been erroneously patented to the company on account of its grant. The railroad made agreement with the Secretary of the Interior that proceedings against the settlers, who are protected by the laws, should be dismissed,

and the question at issue should lie wholly between the Government and the company.

Political.—The municipal elections took place April 7. The main issue was the liquor question, and in a majority of cases high license was carried.

The first Republican State Convention of the year met at Omaha, April 15, with 1,057 delegates. It had been arranged that delegates to the national convention should vote for Gov. McKinley so long as his name should be before the convention, but in case it were withdrawn their support should go to Mr. Manderson; but a resolution to that effect was rejected, and a substitute simply declaring for McKinley was adopted by a vote of 488 to 410. On the currency the platform declared:

"We pledge ourselves in advance to the platform of the forthcoming Republican National Convention, believing that it will declare against the free and unlimited coinage of silver and for a currency of gold, silver, and paper, 'as sound as the Government, and as untarnished as its honor,' and for that American system of protection of which McKinley is the best living exponent, and under which our people attained the greatest national and individual prosperity."

Other resolutions expressed sympathy for the Cubans; called for the enforcement of the Monroe doctrine; "for governmental supervision and control of transportation lines and rates; the protection of the people from all unlawful combinations and unjust exaction of aggregated capital and corporate power; a pension policy just and generous to our living heroes and the widows and orphans of their dead comrades; coast defense against foreign navies, pauper immigration, and the products of cheap foreign labor; and a rigid observation of our naturalization laws."

Declarations on State issues were left for the later convention, which met at Lincoln, July 1, with 1,057 delegates. On State matters the resolutions said: The Republicans of Nebraska "favor State legislation with proper restrictions for the safety and protection of the people, under which mutual insurance companies may be organized. The valued-policy act should not be repealed or modified in any way that will destroy the equity of its provisions."

Among the nominations were included two for judges of the Supreme Court in case the constitutional amendment increasing the number on the bench should be carried. Robert Ryan was nominated for the long term of four years, and M. P. Kinkaid for the two years' term. The other nominations were: For Governor, J. H. Maccoll; Lieutenant Governor, Orlando Tefft; Secretary of State, J. A. Piper; Auditor, P. O. Hedlund; Treasurer, C. E. Casey; Attorney-General, A. S. Churehill; Commissioner of Public Lands, H. C. Russell; Superintendent of Public Instruction, H. R. Corbett; Regent of the University, W. G. Whitmore.

The Free-silver Republicans called a mass convention, to meet at Omaha, Oct. 6. The Gold-standard Republicans "captured" the convention, and ratified the regular nominations of the party. The silver men then held a smaller convention, and made nominations as follow: For Governor, Robert Armstrong; Lieutenant Governor, C. A. Peters; Secretary of State, S. T. Percy; Auditor, J. R. Harris; Treasurer, S. A. Bryant; Attorney-General, J. M. Lead; Superintendent of Public Instruction, J. L. McNinn; Commissioner of Public Lands and Buildings, James D. Pattison. The former convention filed its certificate with the Secretary of State. The Silver Republicans afterward applied, but were unable to get their ticket filed.

Separate conventions were held in April by the Democrats favoring free coinage and those in favor

of the gold standard and the national administration. In those localities where the Silver Democrats controlled the regular county organizations the sound-money men elected delegates by mass conventions. The same methods obtained among the Silver Democrats in selecting delegates when the situation was reversed. The free-silver convention met at Lincoln, April 22, and chose a delegation to the Chicago convention. The resolutions declared for "the free and unlimited coinage of gold and silver at the present legal ratio of 16 to 1, as such coinage existed prior to 1873, without waiting for the aid or consent of any other nation, such gold and silver to be a full legal tender for all debts, public and private"; opposed the retirement of the greenbacks; and favored such congressional legislation as will, without interfering with valid contracts already in existence, prohibit for the future the making of agreements for the payment of any specific kind of legal-tender money. The resolutions also declared for tariff for revenue only, an income tax, election of United States Senators by direct vote, and in opposition to the American Protective Association.

A resolution instructing the delegates to support William J. Bryan for presidential candidate was offered, but was withdrawn at his request, as he was one of the delegates.

The "Sound-money" Democrats, to the number of about 600, met in convention at Lincoln, April 29, elected delegates to the Chicago convention, and declared against free coinage. Of the Silver Democrats, the resolutions said: "We deny the claims of a small faction who recently assumed to hold a convention in the name of the Democracy of this State and pretended to select delegates to the Democratic National Convention, because they have for years repudiated the national Democratic party and its platform: they have insisted on the withdrawal of Democratic tickets in the interests of the Populist party; they have refused to join in the nomination of Democrats for office, but instead have indorsed and supported Populist candidates, who accept none of the teachings of Democracy; they have sought and held office by appointment from a Populist Governor as a reward for treachery to the Democratic party; they have been repudiated by a two-thirds vote of the Democrats of the State; they have, by public utterance in their recent convention, declared that if the National Democratic Convention refuses to adopt their peculiar Populist notions they will not abide by its judgment, and sought to pave the way for their entrance to the Populist National Convention at St. Louis by the adoption of the most extreme of the many hare-brained theories of that party;" and further said: "We deprecate and denounce the inflammatory language used by a certain class of politicians and public speakers in recent days in their efforts to stir up strife and array one section of the country against another and one class of our people against the other."

The People's party in the State was in favor, early in the year, of making Senator William V. Allen the candidate for the presidency; but at the convention held at Grand Island, July 15, the delegates declared for Bryan by a vote of 699 to 24 on a resolution to that effect presented by Senator Allen. The resolutions declared free coinage of silver to be the paramount issue.

The State nominating convention was held Aug. 5 at Hastings. The "Middle-of-the-road" portion of the party was not strong enough to have candidates for electors chosen pledged to the support of Bryan and Watson, and the matter of electors was disposed of by the adoption of the following resolution:

"We refer the selection and nomination of electors to be voted for to the People's Independent Party State Central Committee of Nebraska, with full power to carry into execution and effect any agreement or adjustment that may be made by the said executive committee of National Democratic and People's parties; and in the event that no arrangement or adjustment shall be made by them respecting said electors, the People's Independent Party State Central Committee of Nebraska is authorized and directed to select eight qualified persons to be voted for as electors at said general election in said State, at least four of whom shall be members of the People's Independent Party."

The following ticket was formed, the place of Attorney-General being left vacant for the Democratic candidate: For Governor, Silas A. Holcomb; Lieutenant Governor, J. E. Harris; Secretary of State, W. F. Porter; Auditor, J. F. Cornell; Treasurer, J. B. Meserve; Superintendent, W. R. Jackson; Commissioner, J. V. Wolfe; Judge (long term), William Neville; Judge (short term), J. S. Kirkpatrick; University Regent, A. A. Munro.

At the second Democratic convention, held at Omaha, Sept 4, this ticket was adopted and completed by the addition of the name of C. J. Smythe for Attorney-General. Thomas Rawlings was finally the candidate for regent.

A "Middle-of-the-road" convention met at Lincoln, Sept. 28, but made no nominations, only adopting the nomination of Bryan and Watson.

The National Democratic Convention met at Omaha, Oct. 1. The nominations and platform of the Indianapolis convention were approved. A full State and congressional and electoral ticket was chosen. Following are the nominations for State officers: For Governor, R. S. Bibb; Lieutenant Governor, O. F. Biglin; Auditor, Emil Hallen; Treasurer, Frank McGibbons; Secretary of State, James Mattes; Attorney-General, R. S. Patrick; Superintendent of Public Instruction, S. G. Glover; Regent, Dr. J. S. Leas; Judges of the Supreme Court, Frank Irvine and W. H. Platte.

The Free-silver Democrats petitioned the Supreme Court for a mandamus to restrain the Secretary of State from certifying the National Democratic State ticket and national electors to the county clerks of the State. The petition was denied, and the ticket was placed upon the official ballot as "Democrat," while the fusion ticket stood as "Democrat and People's Independent."

The Prohibitionists held their first convention at Lincoln, Feb. 13. The currency resolution of their platform declared: "We favor a money composed of legal-tender Treasury notes based on the credit of the nation, and the full, free, and unlimited coinage of gold and silver at a ratio of 16 to 1, in which the bonded indebtedness of the country shall be paid."

Both sections of the party made nominations later in the year. Joel Warner was the candidate of the Prohibition party for Governor, and Richard A. Hawley the nominee of the National party.

The Socialist-Labor party nominated Charles Sadilek for Governor.

The result of the vote on presidential electors was: Democrat and People's Independent, 115,624; Republican, 102,564; Democrat, 2,797; Prohibition, 1,196; National, 738; Socialist-Labor, 172.

The vote for Governor stood: Holcomb, Democrat and Populist, 116,415; MacColl, Republican, 94,723; Bibb, Gold-standard Democrat, 3,557; Hawley, National, 930; Sadilek, Socialist-Labor, 578; Warner, Prohibition, 1,560.

All the Democrat-Populist candidates were elected.

The total vote was 230,692, the largest ever cast

in the State. The largest heretofore was 214,861, in 1890.

Of the 6 members of Congress, the Republicans elected 2 and the Democrat-Populists 4.

The Legislature of 1897 will stand on joint ballot: Democrats, 7; Republicans, 39; Fusion, 57; Independent, 30.

Constitutional Amendments.—Twelve proposed amendments to the Constitution were submitted to vote at the November election. They were:

1. To increase the number of judges of the Supreme Court to 5.

2. To provide that the Legislature, by a three-fifths vote, may fix the salaries of the judges of the Supreme and district courts, but the compensation so established could not be changed oftener than once in four years. The compensation fixed in the Constitution is \$2,500 a year.

3. To provide that, under the same conditions, the Legislature should fix the salaries of the officers of the executive department, and that all fees for their services should go into the State treasury.

4. To strike out the words "for cities and incorporated towns" from the section reading: "The judicial power of this State shall be vested in a Supreme Court, district courts, county courts, justices of the peace, and in such other courts inferior to the district courts as may be created by law for cities and incorporated towns," and substitute the words "in which two thirds of the members elected to each house concur."

5. Authorizing the Legislature by a two-third vote to increase the number of the justices of the Supreme Court or of judicial districts after 1897, and not oftener than every four years thereafter.

6. Authorizing the Legislature to provide by law for the rendering of a verdict in civil trials by five sixths of the jury, and also for the trial of such cases by a smaller number of jurymen than twelve in courts inferior to district courts.

7. Adding to the list of executive State officers three railroad commissioners, to be elected by the people for three years.

8. Authorizing the Legislature to create other State executive offices by a three-fourths vote. Any office thus established may be abolished by the Legislature by a two-third vote.

9. Authorizing the Board of Educational Lands and Funds to sell the securities in which the educational funds are invested for the purpose of investing the proceeds in other securities authorized by the Constitution that bear a higher rate of interest than those that are sold; and also authorizing them, in case warrants on any fund in the treasury are not paid for want of funds, to direct the State Treasurer to pay such warrants out of the permanent school funds of the State, and hold such warrants as an investment of the said permanent school funds.

10. Authorizing any metropolitan city and the county in which it is located to merge the government thereof, wholly or in part, by a vote of the electors of the said city and county. This amendment was intended to give relief to the people of Omaha and Douglas County who are embarrassed by the conflicting authority of the municipal and county governments.

11. To amend the section that reads "All votes shall be by ballot," by adding the words "or such other method as may be prescribed by law, provided the secrecy of voting be preserved," so that voting machines may be used.

12. Authorizing a city or county to exceed the 10-per-cent. limit of bonds that may be issued under the present Constitution to aid public improvements up to the limit of an additional 3 per centum by a vote of three fourths of the electors voting at such an election.

The vote in favor of these amendments was larger in every case than that against them; but it appears to be an unsettled question whether a majority of all the votes cast at the election is necessary to pass them. If so, no one of them was carried, the highest vote being 84,579 in favor of the first. The finding of the canvassing board was as follows: "We therefore declare the amendments lost if said amendments require the affirmative vote of all those voting at said election."

The Governor made out certificates of election to the two candidates who received the highest number of votes—Messrs. Kirkpatrick and Neville—in the usual form, except that the words "contingent upon the adoption of the constitutional amendments increasing the number of supreme judges" were added; the Secretary of State declined to countersign them.

NETHERLANDS, a constitutional monarchy in western Europe. The legislative authority is the States General, consisting of a First Chamber of 50 members elected by the provincial councils for nine years, one third retiring every three years, and a Second Chamber of 100 members elected by direct suffrage for four years, every Dutch citizen having a right to vote who pays 10 guilders of direct taxes over the limit of partial exemption or has a separate lodging. The reigning sovereign is Queen Wilhelmina, born Aug. 31, 1880, whose mother, Queen Emma, widow of Willem III, acts as regent during the minority of her daughter. The ministry, constituted on May 7, 1894, was composed as follows: President of the Council and Minister of Foreign Affairs, Dr. J. Roell; Minister of the Interior, Dr. S. van Houten; Minister of Finance, Dr. J. P. Sprenger van Eyk; Minister of Justice, Dr. W. van der Kaay; Minister of the Colonies, J. H. Bergsma; Minister of Marine, H. M. van der Wyck; Minister of War, C. O. H. Schneider; Minister of Public Works and Commerce, P. W. van der Sleyden.

Area and Population.—The area of the kingdom is 12,648 square miles. The population on Dec. 31, 1895, was estimated at 4,859,451 persons, comprising 2,228,487 males and 2,282,928 females. The number of marriages in 1895 was 35,598; of births, 165,741; of deaths, 97,618; excess of births, 68,123. The number of emigrants was 1,513, compared with 1,356 in 1894 and 5,712 in 1893. The population of Amsterdam was estimated at 456,324 at the end of 1895, that of Rotterdam at 276,937, and that of the Hague at 185,744.

Finances.—The budget for 1896 makes the total revenue 130,858,295 guilders, of which 12,030,000 guilders come from the land tax, 11,716,000 guilders from the personal tax, 6,850,000 guilders from the tax on incomes from investments, 4,523,000 guilders from the tax on professional incomes, 26,400,000 guilders from the tax on alcoholic liquors, 16,320,000 guilders from other excise taxes, 20,053,000 guilders from stamps, registration fees, and succession duties, 7,411,250 guilders from customs, 214,850 from fees for assaying gold and silver work, 2,425,000 guilders from domains, 8,179,000 guilders from the post office, 1,345,800 guilders from telegraphs, 657,800 guilders from the lottery, 131,000 guilders from hunting and fishing licenses, 1,500,000 guilders from pilotage, 5,175 guilders from mining royalties, 3,950,000 guilders from railroads, and 7,146,420 guilders from miscellaneous receipts.

The total expenditures are estimated at 135,781,461 guilders, of which 804,250 guilders are for the royal household, 672,633 for the superior state authorities, 5,367,404 guilders for justice, 13,852,476 guilders for the interior, 15,763,796 guilders for the navy, 23,736,335 guilders for the army, 32,334,915 guilders for the public debt, 8,871,941 guilders for finance, 8,571,457 guilders for indemnification of

communes for suppression of the *octroi*, 1,969,362 guilders for the central administration of the colonies, 19,941,528 for the interior and Waterstaat, 1,642,753 guilders for railroads, and 50,000 guilders for unforeseen expenses.

The budget for 1897 shows revenue amounting to 134,000,000 guilders and 137,330,000 guilders of expenditure. The ordinary expenditure is 4,000,000 guilders within the amount estimated for ordinary revenue, but the falling off of the receipts from the personal tax owing to its revision must be made up by contributions to the communes, and an increase of 1,330,000 guilders in the sum required for building war ships is called for. The abolition of tolls on roads and canals is promised in 1898. The accumulated deficits, amounting to 14,000,000 guilders, will be covered by a loan.

The public debt in 1896 amounted to 1,072,792,650 guilders, on which the interest, 29,215,365 guilders, and the cost of converting the 3-per-cent. obligations, of which there were 462,558,050 guilders remaining, and of amortization, as provided in the law of Dec. 30, 1895, was 2,519,550 guilders.

The Army and Navy.—Two thirds of the active army consists of militia recruited by lot among the young men that arrive at the age of twenty, the annual contingent being 10,400; the other third is raised by voluntary enlistment for six or eight years. Militiamen drawn for service may furnish substitutes. The peace effective consists of 73 officers of the general staff, 133 administrative officers, 46 battalions, 16 squadrons and 3 depots of cavalry, 21 batteries, with 3 divisions of train and 3 depots, 40 companies of fortress artillery, 4 of artillery for ironclad forts, 2 of pontonniers, 2 of torpedo miners, 9 of engineers, 3 of sanitary troops, 1 corps of marshals, and 2 depot companies for the enlistment of colonial troops, the total strength for 1896 being 1,882 officers and 26,972 men, with 5,628 horses.

The navy in 1896 comprised 10 armor clads, of which 3 (the "Holland," "Zealand," and "Friesland") were not completed, 12 ironclad monitors, 5 river gunboats, 22 seagoing gunboats, 37 torpedo boats, 6 frigates, 3 corvettes, 3 stationary vessels, and 23 school ships.

Navigation.—During 1895 there were 1,387 sailing vessels, measuring 964,017 cubic metres, and 8,213 steamers, measuring 18,203,983 cubic metres, entered at Dutch ports and 1,419 sailing vessels, measuring 1,066,318 cubic metres, and 8,129 steamers, measuring 18,059,443 cubic metres, cleared. Of the arrivals 1,138 sailing vessels, of 890,772 cubic metres, and 7,777 steamers, of 17,588,195 cubic metres, and of the departures 1,062 sailing vessels, of 575,162 cubic metres, and 5,507 steamers, of 10,094,659 cubic metres, carried cargoes. The sailing vessels flying the Dutch flag numbered 603, of 249,873 cubic metres, among those entered, and 624, of 330,899 cubic metres, among those cleared; of the steamers entered 2,139, of 4,884,250 cubic metres, and of those cleared 2,146, of 4,912,011 cubic metres, carried the Dutch flag.

The merchant navy on Jan. 1, 1896, comprised 405 sailing ships, of 289,740 cubic metres capacity, and 162 steamers, measuring 532,820 cubic metres.

Commerce.—The special imports in 1895 were valued at 1,443,800,000 guilders, including 5,400,000 guilders of specie, and the exports at 1,178,000,000 guilders, including 1,800,000 guilders of specie. Of the merchandise imports 450,200,000 guilders consisted of alimentary articles, 511,800,000 guilders of raw materials, 245,500,000 guilders of manufactures, and 230,900,000 guilders of miscellaneous merchandise; of the exports 296,400,000 guilders consisted of alimentary articles, 383,100,000 guilders of raw materials, 250,100,000 guilders of manu-

factured goods, and 146,600,000 guilders of miscellaneous products.

The amount of trade, in guilders, with the different countries in 1895 is shown in this table:

COUNTRIES.	Imports.	Exports.
Great Britain	238,200,000	267,600,000
Germany.....	295,400,000	595,500,000
Belgium.....	166,100,000	154,200,000
France.....	18,000,000	15,200,000
Sweden and Norway.....	20,800,000	8,900,000
Russia.....	198,200,000	5,200,000
Roumania.....	34,200,000
Turkey.....	9,700,000	6,400,000
Italy.....	5,500,000	5,000,000
Spain.....	27,200,000	900,000
Dutch East Indies.....	202,400,000	51,900,000
British East Indies.....	41,500,000	1,100,000
Africa.....	6,300,000	14,700,000
United States.....	110,800,000	37,400,000
Brazil.....	11,100,000	500,000
Peru and Bolivia.....	15,000,000
Other countries.....	43,400,000	13,500,000
Total.....	1,443,800,000	1,178,000,000

Communications.—There were 1,632 miles of railroads in operation on Jan. 1, 1896. The state telegraphs had a total length of 3,497 miles, with 12,511 miles of wire. The number of messages sent in 1895 was 4,673,224, of which 2,380,336 were internal and 2,252,921 international paid messages and 39,967 were official; the receipts were 3,106,766 francs and expenses 4,142,934 francs, excluding 382,121 francs of extraordinary expenditure. The post office in 1895 forwarded 64,695,000 internal and 23,225,000 foreign letters, 34,371,000 internal and 6,056,000 foreign postal cards, 113,487,000 internal and 13,640,000 foreign printed inclosures, and 3,194,000 internal money orders and letters of the value of 309,027,000 francs and 528,000 foreign ones of the value of 101,246,000 francs. The postal receipts were 15,958,718 francs and expenses 13,016,598 francs.

Legislation.—The Minister of the Interior's electoral reform bill was passed by both houses, although it was entirely acceptable to no party. The Second Chamber adopted it by the small majority of 56 to 43, and the First Chamber ratified it on Sept. 6 by the votes of 30 Liberals and 4 Roman Catholics against 12 Anti-Revolutionaries and Catholics. The franchise is conferred upon every male citizen who has reached the age of twenty-five years and pays a direct tax of a little more than a guilder, or has lived in a hired room or apartment for six months, or draws a pension from some public institution or has 100 guilders in a savings bank, or has passed an examination qualifying him to be a professor, an engineer, a surgeon, or the like. No one is disqualified who can support himself and his family, nor does the fact of receiving gratuitous medical aid constitute a bar. All officers are electors, and also noncommissioned officers not in barracks. The new law goes into force on May 15, 1897.

Candidates for the Second Chamber must be proposed in advance by at least 40 electors. When only one candidate is thus presented, the seat is given to him without the formality of an election. When there are several candidates, the burgomaster sends the list to every voter, with a notification of the day of election, which must not be a Sunday or holiday. Members are elected in single districts and not by *scrutin de liste*.

The elections for a renewal of a third of the members of the First Chamber took place in July. The Liberals lost seats in Zeeland and Gelderland, but still had a majority of 31 in the First Chamber over 13 Catholics, 4 Anti-Revolutionaries or Extreme Protestants, and 2 Conservatives. At the opening of the new session on Sept. 15 bills were announced providing for the compulsory insurance

of workmen against accidents and for reforms in the system of communal finance.

The city of Amsterdam is proceeding to municipalize the water, gas, telephone, and street-car services. The water company has been compelled under the terms of its charter to sell its plant to the city at about one third of the capitalized value. There was a long contest over this, and a similar contest took place over the gas franchise which resulted in notice being given of its termination in 1897. The telephone company succeeded in making an arrangement more acceptable to the shareholders. A majority of the municipal council favors the acquisition of the street railroads also and all public services with the aim, on the one hand, of furnishing cheaper gas, water, telephonic communication, transport, etc., to the citizens and, on the other, of improving the financial position of the city by profits from the undertakings.

The Dutch East Indies.—The Dutch possessions in Asia comprise the colony of Java and Madura and the outposts, which include Sumatra, Borneo, Dutch New Guinea, the Riau-Lingga Archipelago, Banca, Billiton, Celebes, the Molucca Archipelago, and the minor Sunda islands. The territories are divided as to their political status into directly administered, vassal, and confederated lands. Java, including Madura, is divided into 22 provinces, each governed by a resident and his staff through the medium of a large force of native officials, who receive sometimes fixed stipends and sometimes a percentage of the taxes that they collect. The system of government is quite despotic, the Governor General having power to make any laws and regulations that are not in conflict with the statutes. The Government owns the land, and under the culture system compelled the natives to produce the exportable products, such as sugar, indigo, tobacco, pepper, tea, etc., but forced labor is now required only on coffee plantations. The system has been extended also to the coffee lands in western Sumatra and Celebes. The Governor General is Jonkheer C. H. A. van der Wyck, appointed in 1893.

Java, with Madura, has an area of 50,554 square miles, and in 1894 had 25,067,471 inhabitants, of whom 24,746,368 were native Malays, 50,393 Europeans, 251,325 Chinese, 16,319 Arabs, and 3,066 Hindus and others. The total area of the outposts is 685,846 square miles, and the population 9,206,090.

The estimated revenue of the East Indies for 1896 was 131,823,666 guilders, and the expenditure 140,362,581 guilders. Of the revenue 22,618,588 guilders were the proceeds of sales of coffee, 114,840 guilders of cinchona, 5,083,085 guilders of tin, 17,167,000 guilders of the opium monopoly, 15,115,000 guilders of customs, 17,273,000 guilders of the land tax or tithes, 8,556,600 guilders of the salt duty, 1,875,800 guilders of posts and telegraphs, 10,219,000 guilders of railroads, and 33,800,753 guilders of various other revenues. The railroads in operation in Java had in 1894 a length of 1,095 miles, and 412 miles more were building. In Sumatra there were 197 miles completed and 20 miles building. The telegraph lines had a total length of 5,190 miles, with 7,607 miles of wire. The number of internal dispatches in 1894 was 427,447; of international dispatches, 160,055. The post office forwarded 12,951,772 internal and 8,321,676 foreign letters; receipts, 2,251,000 guilders; expenses, 3,729,000 guilders.

The merchandise imports of private persons into Java in 1894 were 112,115,000 guilders; into the outposts, 46,443,000 guilders; imports of the Government, 6,712,000 guilders; total merchandise imports, 165,270,000 guilders. The merchandise exports of private individuals from Java were 137,062,000 guilders; from the outposts, 45,122,000 guilders;

exports of the Government, 17,022,000 guilders; total exports of merchandise, 199,206,000 guilders. The total imports of specie were 9,946,000 guilders; exports, 879,090 guilders.

The shipping arriving in 1894 comprised 3,284 steam vessels, of 3,435,000 cubic metres, and 1,471 sailing vessels, of 568,000 cubic metres.

The army of the Dutch East Indies on Jan. 1, 1896, had a total strength of 1,360 officers and 38,611 men, comprising 380 staff officers and 3,608 men attached to the general staff, 684 infantry officers and 30,150 soldiers, 34 officers and 881 men in the cavalry, 121 officers and 3,308 men in the artillery, and 61 officers and 664 men in the engineers. The army consisted of 16,357 Europeans, 56 Africans, and 22,198 natives.

The fleet consists of the protected corvette "Sumatra," of 1,720 tons, the ironclad "Koning der Nederlanden," 12 gunboats, 3 steamers, and a torpedo boat.

War in Acheen.—The Dutch have maintained their sway over the larger external islands since these were restored to their possession by the peace of 1814 with but little friction or opposition on the part of the peaceably disposed inhabitants, mixed populations of Malay, Hindu, Arabic, Mongolian, and Papuan blood, except over the fierce Mohammedan Malays of northern Sumatra, descendants of pirates who subjugated the indigenous race in former centuries. These people are a small fraction of the population of the island, yet they have successfully resisted Dutch rule since they were deprived of their autonomy in 1874, and the warfare that they have since waged to maintain their independence has crippled the finances of Netherlands India and drained the national treasury of its gold and the country of its stalwart youth. The Sultan of Acheen was stripped of his possessions on the other islands by the Dutch in the last century, and in 1824 Great Britain, which for political and commercial reasons had upheld the independence of Acheen, acquiesced in a Dutch protectorate, in consequence of which the Netherlands assumed full responsibility for the security of trade and navigation on these coasts. In 1871 the treaty with England was modified so as to enable the Dutch to establish their authority over Acheen. The Sultan sent a secret embassy to the American diplomatic agent at Singapore to appeal for the military aid of the United States at the same time that he dispatched commissioners to treat with the Netherlands Government. Encouraged by the hope of support from the United States and England, the merchants of which countries actually supplied him later with weapons and ammunition, the Sultan rejected the terms proposed by the Government of Netherlands India. His contumacious and treacherous conduct led to the sending of an expedition in April, 1873, to bring him to terms and establish Dutch rule in Acheen. This expedition met with disaster, but a second one succeeded in capturing the capital, Kotaradja, in January, 1874, but not in subjugating the Acheenese, against whom a desultory warfare has been waged ever since. Gen. Karl van der Heyden, who was born and grew up in the East Indies and rose from the ranks to be commander-in-chief, understood the treachery, hypocrisy, and vindictive cruelty of the Malays, whose blood he had in his veins, and he succeeded in imposing an iron rule over them, but after he retired, in 1881, the revolt broke out afresh. Since then the Dutch have held only a small triangular district with a coast line from the port of Oleh Leh to the fortified post of Kota Pohama and a military dead line drawn in the interior, marked by an embankment surmounted by a railroad, inside of which a Malay rebel is shot on sight. Outside of this line no Dutch force can march without danger

of being caught in an ambush and annihilated, for every native is a rebel, and all are provided with repeating rifles, which they keep in concealment. These weapons are brought in from Singapore by the swift native *praus* that take out cargoes of pepper in spite of the vigilant blockade of the coast. The most formidable military leader of the rebels is Toekoe Oemar, who has repeatedly made terms with the Dutch and treacherously attacked them later when opportunity occurred. After making peace with the authorities, he massacred the crew of a boat that was conveying him to his country, and followed up this deed by murdering the crew of a Danish merchant ship. The Dutch proclaimed him a pirate and an outlaw, but when he placed himself in 1893 at the head of the Iloobalangs or peace party among the Acheenese and made war upon the Moslem, who under the preaching of the *mollahs* declared a holy war of extermination against the Europeans, he delivered up to the Dutch the posts that he captured from the fanatical faction and consummated an alliance with them in pursuance of which he thoroughly subdued the Moslem and formally acknowledged the rule of the Dutch. Thus peace was secured in the early part of 1894, and the Dutch authorities rested for two years in the fancied security that the exhausting and costly struggle was finally over. When, therefore, a Dutch detachment was attacked and badly beaten at Anak Bate in March, 1896, the colonial authorities were taken by surprise. They quickly awoke to the impending danger, and when it became clear that another general movement was being planned by the Acheenese immediate steps were taken to meet the emergency. They sent for their ally Toekoe Oemar, now a powerful and wealthy ruler under Dutch supremacy, and with him they drew up a plan of campaign against the rebellious chieftains on both sides of the Atjeh river. His share in the operations was to consist in a flanking march to the south of Lamkrak through the center of the rebel Toekoe Baid's district. After he had executed this movement and broken down whatever resistance he encountered, he was to join the Dutch forces at Anakgalong. To enable him to equip and maintain his native troops, he received 1,000 rifles of different patterns, with an ample supply of ammunition and a cash payment of \$18,000. By the end of March everything stood in readiness for the campaign. The military headquarters were transferred from Kotaradja to Lambaroe, at the apex of the cordon and close to the seat of the rebellion. Just as orders were about to be issued for the general advance, Gen. Deykerhoff received indisputable proof of the intended treason of Toekoe Oemar. He intended to attempt the extermination of the Dutch by seizing Kotaradja and the port of Oleh Leh when the colonial forces were concentrated in the interior, and, when all communications were thus cut off, falling upon them in conjunction with the revolted chiefs. His favorite wife had persuaded him that the moment had arrived when he could achieve the independence of his country by one decisive blow. A personal motive led her to exert all her influence over her husband to this end, for the *mollahs* had prophesied that her child, yet unborn, would be sultan over Acheen.

As soon as he knew of this fresh danger the Dutch general called in his advance posts and sent strong detachments to Lamdjamee and Lampernoet to guard against an attack on his rear. Almost simultaneously a concerted movement was observed in the ranks of the enemy, and fighting took place along the whole line. In a hotly contested engagement on March 30 at the Atjeh river, between Senelop and Lambirih, the Dutch lost

heavily. Oleh Leh was fortified, and large reinforcements were brought from Padang. Lieut.-Gen. J. A. Vetter, the victor of Lombok, took command of the Dutch forces. Toekoe Oemar, when he saw that his plans were discovered, took the field and raised an army among the tribes which he had subdued for the Dutch. He carried on a cruel and savage war, putting to death every wounded man and prisoner who fell into his hands. He showed all his old skill in entrapping and deceiving his enemies, and employed his art with desperate energy, having staked everything on the chance of victory. Large numbers of friendly Acheenese joined the rebellion from the Dutch part of Acheen with arms and ammunition furnished by the authorities. Gen. Vetter's plan was to attack Toekoe Oemar from the front and drive him by degrees to the west coast, where the Dutch war ships could aid in the final battle. The Dutch army crossed the cordon on May 23, in four columns, two of which marched upon the enemy's headquarters at Lampisang and Boekit Seboen, while the other executed a flank manœuvre farther south. The Malays resisted their advance with great courage. In the attack upon Lampisang many of the Dutch officers were killed, but the position was finally captured, Toekoe Oemar's *kampong* was destroyed, and a large number of rebels were slain. On May 24 the Dutch took Boekit Seboen, commanding the Beradin pass, after a severe combat. The combined columns proceeded from there directly to the coast and joined forces with the troops landed by the flotilla at Kroeng Raba. The enemy was dispersed, but not yet conquered. Toekoe Oemar with the remnant of his army escaped into the fastnesses of the mountains. The troops devastated the possessions of the rebel chiefs and then returned to Kotaradja. Negotiations were entered into with Toekoe Oemar, who acceded to any conditions that were offered, but took care not to place himself in the power of the Dutch, and let no opportunity pass to strike a blow at them. Gen. Vetter resigned his special command to resume his post as commander in chief of the forces in Batavia, and Gen. Moulin went to Acheen as civil and military governor. Flying columns attacked any bodies of insurgents that showed themselves in the accessible parts of the country. Sometimes Dutch patrols were taken by surprise, bands of rebels who were tilling the field when they passed forming suddenly and attacking them in the rear. Col. Stemfoort temporarily succeeded Gen. Moulin, who died of sunstroke on July 11. The campaign was pushed with greater vigor. The troops attacked the rebels on the mountains as well as in the lowlands, and chased Toekoe Oemar and the other chiefs from their places of refuge. Toekoe Baid surrendered after suffering a series of reverses. Gen. Swart, a veteran colonial officer, was appointed to the command of the forces in August. Toekoe Oemar, chased from Ielong, fled to Lambesoi, on the coast. When the plan of burning and devastating the places where rebellion showed its face was found insufficient, the new commander reverted to Gen. van der Heiden's system of occupying strategic positions as permanent posts was carried out with the object of completing the subjugation of Acheen.

NEVADA, a Pacific coast State, admitted to the Union Oct. 31, 1864; area, 110,700 square miles. The population, according to each decennial census since admission, was 42,491 in 1870; 62,266 in 1880; and 45,761 in 1890. Capital, Carson City.

Government.—The following were the State officers during the year: Governor, John E. Jones, until his death, April 10, when Lieut.-Gov. Reinhold Sadler became Governor; Secretary of State, Eugene Howell; Treasurer, W. J. Westerfield;

Comptroller, C. A. La Grave; Superintendent of Public Instruction, H. C. Cutting; Attorney-General, Robert M. Beatty, who died Dec. 10; Adjutant General, C. H. Galusha; Chief Justice of the Supreme Court, R. R. Bigelow; Associate Justices, Charles H. Belknap, M. S. Bloomfield—all Silver party except the Chief Justice and the Adjutant General, who are Republicans.

Finances.—The Comptroller reported that the deficiency on State expenditures for the past two years amounted to \$5,084.42.

The appropriation for the State Prison was \$63,000, and of this \$57,779.22 has been expended.

The asylum cost the State \$68,663.38, the weather service \$1,200, and the Board of Health \$1,000.

The State owes the military companies \$10,462.50 for rent of armories, and a railroad company \$531 for transporting militia for escort duty at the funeral of the late Governor.

Education.—The school population numbers 9,089. At the last semiannual apportionment of school funds \$77,038.25 was distributed, giving over \$8 *per capita*. The general school fund amounts to \$1,240,208.33.

At the teachers' institute in April, the following resolutions were adopted:

"Resolved, That we earnestly request the Legislature to provide a modern industrial school, which shall be a home, a school, a farm and a workshop in the best sense of all the terms.

"Resolved, That it is the wish of this institute that all consistent effort be exerted by the several members of this body, looking to the establishment of county high schools in all the counties of the State where the same can manifestly be maintained."

The State University, at Reno, has nearly 300 students. An artillery company was organized among the students in January, and 2 pieces of ordnance were procured for its use.

Railroads.—In February articles of incorporation of the California Eastern Railway Company were filed at San Bernardino. The object of the corporation is to repurchase the Nevada Southern Railway and continue it through to Goode Springs, Nev., making a total length of 75 miles.

There has been a lively demand for land on Virgin river in Lincoln County, made on the expectation that the proposed railroad from Los Angeles to Salt Lake City will traverse that region.

The suit of the Central Pacific Railway Company vs. the State of Nevada, involving the right of the State to tax the lands of the company, went to the United States Supreme Court on a writ of error sued out by the company. The State courts held that the State was entitled to levy taxes upon patented lands, and also for lands which had not been patented, but which had been surveyed, and on which the cost of surveying had not been paid. The opinion of Justice Brown of the United States Supreme Court affirmed this decision. "If," he said, "the railroad had a possessory claim to the lands, they are taxable under the statute of Nevada." Remarking upon the plea that the land could not be taxed where the Government reserved mineral lands from the grant, he said: "If the road has no possessory claim because the lands are mineral it certainly can not be injured by a sale of the lands to pay the tax." Justice Field dissented on the ground that the reservation of mineral lands from the grant made it impossible to determine what lands could be properly taxed against the company.

The Virginia and Truckee Railroad Company was assessed \$6,353.50 on its property in Storey County. The company offered to pay \$3,724.35. The county sued for the full amount and for a separate judgment against the real estate and other property of the company for \$6,353.50; for 10 per cent. dam-

ages; for a penalty of 25 per cent. and for all costs of the case. The verdict was in favor of the county for everything sued for save the 25 per cent. penalty. A stay of proceedings was granted and similar suit against the same company was brought in Washoe County.

Mining.—An article published in January said: "The existence of a new gold-mining district, said to be phenomenally rich, is brought to the attention of the general public by the quarrels of some of those interested in it. The district is in Nevada, close to the California and Arizona lines. The El Dorado district, as it is called, is reached either from The Needles, in San Bernardino County, Cal., or from Kingman, in Arizona. The distance to the last-named point by rail from The Needles is 120 miles, but thence a stage runs occasionally to the camp. From The Needles up the Colorado river it is only 80 miles, but so swift is the stream's current that Indians have to be employed to tow the boats by hand."

"The new mining district of State Line, near De Lamar," says a Nevada journal, "on the boundary between Nevada and Utah, embraces an area 6 or 7 miles wide by about 12 long. It is about 15 miles from Milford, the nearest railway point, with a wagon road from that station. There are about 100 men in the district prospecting and working claims. The mineral-bearing zone consists of a silver vein lying in porphyry. Some of it carries from 500 to 600 ounces of silver. The gold is found in hard quartz and is a free-milling ore. It runs from \$10 to \$12 per ton. The district has an elevation of 7,000 to 8,000 feet, and there is frost every month of the year."

Another new location is on the north end of the Brunswick lode, which includes a full claim of 1,500 feet in length by 600 in width. The vein is traceable for 3,000 feet on the surface by the outcroppings and shows a width of 40 feet just west of the point where a shaft is being sunk. The foot wall is clay and porphyry backed by syenite. Assays taken across the whole face of the vein, just below the surface, show an average of \$2 to \$5 a ton in gold, while picked samples from the 40-foot vein show free gold and give assay value of several hundred dollars a ton.

A new deposit of ore was recently opened in the new Chollar and Norcross south drift on the 300 level of the Brunswick lode, apparently a downward extension of one opened on the 200 level.

The Hale and Norcross was closed about March 17, the miners having gone out because they were dissatisfied with a new superintendent. The superintendent, through his attorney, appealed to the Governor to know if he would be protected in case he should insist upon his lawful right to continue his business as superintendent; and whether, if it were impossible for the State to afford such protection, the Governor would aid in making the proper representations to secure help from the Federal Government. The Governor replied that the sheriff of Storey County had assured him that he would extend all the protection in his power to the Hale and Norcross Company, or to any person connected with it, and that the executive department had received no official notice of any insurrection, riot, or resistance to the execution of the laws of the State, or any request from any proper source for assistance in the execution of those laws. A few days after the closing of the mine an armed mob took the superintendent from a barber shop, put him into a carriage, and took him some distance away from town, where they left him, having warned him never to return to Virginia City. The sheriff was appealed to to interfere while this was going on, but said he was unable to prevent it without assist-

ance. After being closed about a month, the mine was reopened under new management. It does not appear that specific charges were made against the superintendent, but he was accused of having, on former occasions, before his appointment, "infringed on the laws of the Virginia City Miners' Union, and otherwise made himself obnoxious to a large portion of the community by underhanded dealings."

Political.—The Republicans held a convention, May 9, at Virginia City, to elect delegates to the national convention. The platform congratulated the people of the State and country on the prospect of a Republican presidential victory; favored the restoration of the currency as it stood prior to 1873 and the free and unlimited coinage of silver at a ratio of 16 to 1; recommended the displacement of Nevada's Senators and Representative as non-residents; favored tariff protection and protection for American labor; opposed interference with non-sectarian schools, and aid to sectarian schools.

It favored national legislation to control the immigration of paupers and people holding views opposed to the American form of government; favored a change in the naturalization laws, requiring, as a qualification of citizenship, seven years' residence on the part of foreigners and the ability to read the Constitution of the United States. It favored the leaving of the delegates to the National Republican Convention unpledged except to use all honorable efforts to secure the nomination of a man favorable to silver.

The convention for nominating the State and electoral tickets was held at Carson City, Sept. 10. The platform was substantially the same as that of the May convention, with added demands for equal suffrage, settlement of labor strikes by arbitration, enforcement of the purity of elections laws, and representation of the State in Congress by residents of the State. The State ticket follows: For Lieutenant Governor, Col. Moore; Judge of the Supreme Court, M. A. Murphy; Regent (long term), J. M. Fulton; Regent (short term), Prof. McDiarmid; Congress, M. J. Davis.

A Democratic mass convention met at Reno, June 15. The platform commended the national administration, except for its financial policy, which was condemned; demanded free and unlimited coinage of silver at the ratio of 16 to 1; denounced all societies, secret or otherwise, which proscribe citizens on account of their religious belief, and demanded the calling of a constitutional convention to make radical changes for the better in the Constitution of the State.

On the State ticket the Democrats united with the Silver party. Both these parties pledged the electoral vote of the State to Thomas E. Watson should it appear that the contest for the vice-presidency is between him and Garret A. Hobart, the Republican nominee.

The following resolution was adopted by the State Central Committee, Aug. 29:

"Owing to the local political conditions at the present time, we deem it inexpedient and unwise to nominate any except an electoral ticket. The placing of the latter upon the official ballots is necessary to preserve the legal status of the Democratic party in Nevada, and we ask for its such support of all friends of the silver cause as we will cheerfully give to the candidates representing the opposition to the gold plutocracy party of the nation and State."

The State Central Committee of the Silver party met at Reno, June 20, chose delegates to the national bimetallic convention at St. Louis, fixed the date Sept. 8 for a State convention, and resolved that the following test be required of voters at the primary election: "I am in favor of the free and unlimited coinage of gold and silver at the ratio of

16 to 1, independent of any other nation, and will support the nominees of the Silver party."

The following resolutions were adopted: "*Whereas*, The Silver party of the State of Nevada and the People's party of the State of Nevada have for their paramount object the restoration of silver as a monetary coin of the republic and the free and unlimited coinage thereof; therefore be it

Resolved, By the Silver Party State Central Committee that a hearty and earnest invitation be extended to the People's party of Nevada, and all parties and factions and individuals in favor of a free and unlimited coinage at a ratio of 16 to 1, to meet us in joint convention at Elko, Nev., on the 8th day of September, 1896, to then and there nominate a State ticket for the consummation of our common object."

At the State convention at Elko, Sept. 8, the following ticket was named: For Lieutenant Governor, C. H. E. Hardin; Judge of the Supreme Court, W. A. Massey; Regent (long term), J. N. Evans; Regent (short term), H. S. Starrett; Member of Congress, Francis G. Newlands.

The People's party convention, Sept. 5, declared for free coinage of silver and adopted the following resolution:

"That we are in favor of inviting all parties in the State of Nevada pledged and supporting that issue to unite in a fusion with the People's party on presidential electors and invite all parties in favor of the election of W. J. Bryan for President of the United States to appoint a committee to confer with a like committee from this convention, effect a fusion on presidential electors if possible and pledge our nominees for presidential electors to abide by the action of the committee appointed by that body."

An electoral ticket was named, and the following State ticket: For Member of Congress, J. C. Dougherty; Judge of the Supreme Court, B. F. Curler; Regent (long term), Rev. T. Magill. An executive committee was appointed with power to fill vacancies on the ticket.

At the November election the total vote of the State was 10,315. The Bryan and Sewall electors received 7,802; Bryan and Watson, 575; McKinley and Hobart, 1,938. The State ticket of the Silver party was chosen. The vote for Representative in Congress stood: Newlands, Silver Democrat, 6,529; Davis, Republican, 1,319; Dougherty, Populist, 1,948.

In proclaiming the election of candidates, the Governor omitted that of C. H. E. Hardin for Lieutenant Governor "because of a legal opinion delivered on Nov. 13 by the late Gen. Beatty, in which he declared that under proper construction of Section 17 and 18 of Article V of the Constitution of Nevada, upon the death of the Governor the powers and duties of the office devolved upon the Lieutenant Governor, and that no vacancy in the office of Lieutenant Governor exists."

The Legislature for 1897 will stand: Senate—9 Free-silver party, 4 Republicans, 1 Democrat, 1 Independent; House—26 Free-silver party, 2 Republicans, 1 Democrat, 1 Independent.

NEW BRUNSWICK, PROVINCE OF. Government and Legislature.—On July 17 the Hon. A. G. Blair, having accepted a portfolio in the new Liberal Cabinet at Ottawa, James Mitchell became Premier, with the following ministry: Attorney-General, James Mitchell; Provincial Secretary, L. J. Tweedie; Commissioner of Public Works, H. R. Emmerson; Surveyor General, A. T. Dunn; Solicitor-General, A. S. White; without office, C. H. Labillois, L. S. Fallis.

The Legislature had meanwhile been opened for the first time since the provincial elections by

Lieut.-Gov. Fraser on Feb. 13, who said in his "speech from the throne":

"Owing to a recent act readjusting the representation in the Assembly, I am happy to be now enabled to meet a Legislature more truly representative of the various sections of the province than any which has hitherto assembled. "The year just closed has been a period of contentment and average prosperity.

"The threatened disturbance of the friendly relations which have existed without any serious breach during living memory between the Government of Great Britain and the United States is to us a matter of profound concern. In common with Canadians of all classes and parties, I sincerely trust that this menace to civilization and the world's progress may be averted, and that we may ever remain upon terms of amity with our kinsmen and neighbors of the great republic. If, unhappily, trouble should arise, I believe there is no portion of the empire which would more heartily and loyally than this province maintain and defend connection with the mother land.

"The policy of my Government in encouraging in every possible way the growth of the dairying industry continues to meet with marked success. Advanced methods of agriculture, a growing appreciation of the benefits arising from improvement in stock, and an awakened eagerness and aptitude on the part of our farmers to meet and avail themselves of the changing conditions of successful agriculture promise hopefully to those engaged in this important pursuit. The several importations of thoroughbred stock heretofore made by my Government have proved of such permanent benefit that you will be invited to consider the advisability of making a grant for a further importation.

"The mineral development of New Brunswick under the healthy stimulus of recent legislation has been prosecuted with much energy by private skill and enterprise, but it is a question whether individual effort in this direction should not be further supplemented by public assistance if we are to be well and accurately informed as to the true extent and value of our mineral resources."

Adjournment took place on March 19, after the passage of the following, among other bills:

Relating to the education of the blind.

To amend chap. xlv of the Consolidated Statutes of absconding, concealed, or absent debtors.

For the incorporation of the Evangelical Church Society of New Brunswick.

To amend the liquor license act of 1887.

To authorize a loan for the importation of stock, sheep, and swine.

Amending the acts providing for the payment of succession duties.

In amendment of chap. cxv regarding sewers and marsh lands.

To further amend the New Brunswick dental act of 1890.

To exempt butter and cheese factories from taxation.

To amend 58th Victoria, chap. vi, respecting assignments and preferences by insolvent persons.

To amend the act imposing taxes on certain life insurance companies.

To incorporate the Barnesville and Norton Railway.

Consolidating acts relating to arrest and imprisonment of debtors.

Amending the joint stock companies act.

Amending the game law.

Incorporating the Aroostook Junction and Limestone Railway Company.

To aid the St. John Exhibition.

To consolidate and amend the law respecting the sale of intoxicating liquors.

Relating to surveying of lumber.

Temperance Legislation.—During the session a distinct advance was made by the passage of a bill consolidating the existing laws regarding licenses and still further restricting the sale of liquor. The measure increases the amount of the license fee, limits the number of hotels and taverns in a given district, declares that in wards or parishes where no licenses had been granted none should be given in future, and makes it necessary for half of the voters of a division or section to be upon the petition for the renewal of a license. Meanwhile, a Prohibition meeting in St. John declared that issue to be the supreme question before the people. Since then a decision of the imperial Privy Council has established the principle that the provinces have the power to regulate, but not to prohibit the traffic, so that this part of the agitation is turned into Dominion politics.

Finances.—Mr. Mitchell, as Provincial Treasurer, made his budget speech on Feb. 20. During the year, he said, the farmers had reaped good harvests, the lumber business had been fairly active, and business men were able to meet their obligations. The bonded indebtedness of the province stood at \$2,709,000—an increase of \$84,000, caused by special expenditures upon the Woodstock and sundry international bridges and the Nelson Railway. The receipts for the year were \$687,437, and the expenditure under warrant \$684,634. Under this latter head were included \$14,385 spent upon the administration of justice, \$22,370 upon agriculture, \$189,795 upon education, \$210,469 upon public works, roads, bridges, etc., \$10,475 upon the Legislative and other buildings.

Agriculture.—During the year there were 53 cheese factories in operation, with a production of 1,263,266 pounds. The average price was 8½ cents, and the total value \$104,229. The increase in the output was 369,000 pounds. Nine creameries were in operation, and produced 113,890 pounds of butter at an average price of 18½ cents. The total value of cheese and butter exported was \$125,289, compared with \$110,739 in 1894. In his budget speech Mr. Mitchell referred to the "peculiar flavor and richness of New Brunswick cheese," the excellence of the dairy products shown at the St. John Exhibition, and the very fine horticultural display at the same place. In this latter connection a small bonused school has been established, similar to one in Wolfville, Nova Scotia. Cattle, sheep, and swine have been imported to improve the home stock, and other efforts made to improve the farmer's opportunities.

Miscellaneous.—The registered tonnage of New Brunswick in 1896 was 1,140,172, divided between 390,608 coming inward and 749,564 going outward. There was a total decrease of 27,000 tons. On Sept. 29 the Boards of Trade of the provinces of New Brunswick, Nova Scotia, and Prince Edward Island met at St. John, New Brunswick, and passed resolutions in favor of encouraging immigration, reduction of freight from the coal mines to inland towns, criticising certain freight rates of the Intercolonial Railway, recommending cable communication with the West Indies entirely under British control, favoring a fast Atlantic line to Liverpool, a cold-storage freight system, and telegraphic communication with Prince Edward Island. During the year Chief-Justice Sir John Allen resigned, and was succeeded by Judge Tuck, who, in turn, was replaced by Mr. E. McLeod, ex-M. P. The death of Hon. J. J. Fraser left the governorship vacant, and to this office the Dominion Government appointed Senator McLellan.

NEWFOUNDLAND, an island, forming a British colony, at the entrance of the Gulf of St. Lawrence; area, 42,200 square miles; population in 1891, 202,145.

Legislative Session.—The following were the principal acts passed during the session of 1896:

To amend the Crown lands act of 1884 as to survey, etc.

Respecting the payment of royalty on timber. It abolishes royalties on timber cut but provides for a ground rent of \$2 per square mile in addition to the bonus.

Granting \$70,000 for constructing and repairing roads, streets, and bridges and other works.

For the conversion of certain debentures of the colony.

For granting to her Majesty certain duties on goods, wares, and merchandise imported into the colony; continuing the revenue act previously in force, and amending it by adding to the free list; mining machinery and dynamite when imported by persons engaged in mining; agricultural implements and machinery when imported by persons engaged in agriculture; oil cake, cotton seed, meal, and preparations for cattle feed. Duty is increased on fruit cake to 7 cents per pound; fancy biscuit to 40 per cent.; brooms and whisks to 50 per cent. Goods made by prison labor are prohibited.

To amend the education grant of 1895, making an annual appropriation for all educational purposes of \$153,585.

Respecting the preservation of deer, providing a ten years' close season for elk or moose, a breach of provisions rendering offenders liable to a fine of \$200 or imprisonment for three months. Caribou can not be killed from Feb. 1 to July 15, and from Oct. 7 to Nov. 10; and no person not domiciled in the colony, except officers of her Majesty's ships stationed there, shall hunt or kill without a license, paying therefor \$100. Not more than one carcass of caribou can be exported by any one person, and it must be accompanied by the owner. Not more than 3 stags and 2 does shall be killed by any one hunter; and, in parties of 3 or more, 2 stags and 1 doe for each member of the party, exclusive of guides. Snares or traps for caribou are prohibited, also hunting with dogs and the use of hatchets, spears, etc. Violations of the provisions of this act make liable to a penalty of \$400 or six months' imprisonment.

Constituting a medical board, holding office during good behavior, but removable by the Governor on petition of 5 members of the board. It provides that no person shall enter upon the study of medicine in the colony without first passing a matriculation examination.

To authorize the raising of a sum of money for the redemption of certain debentures of the colony.

To amend an act for the maintenance and operation of the line of railway from Whitbourne to Port-au-Basques, providing that grants of land issued under the amended act shall convey all mines, ores, and precious metals of every kind on or under the land granted.

Railways.—The whole line from St. John's to Port-au-Basques will be 550 miles in length, and only 30 miles of it remain to be built. The contractor is building a steamer to ply between Port-au-Basques and Sydney, Cape Breton island. Newfoundland will soon almost cease to be an island, and will obtain a daily mail service.

Fisheries.—The bank fishery in 1895 employed 785 men and 58 vessels, the catch being 54,544 quintals of cod; the average catch per man, 69 quintals. The steamers engaged in the seal fishery of 1896 numbered 20; their crews, 4,486; and the number of seals taken, 187,517, being much below

an average. In 1895 the export of dried codfish was 1,312,608 quintals: value, \$3,876,964. The total value of fishery products in 1895-'96 was \$5,853,132. The value of the imports in 1895-'96 was \$5,986,571; of the exports, \$6,638,187. A company with a capital of \$100,000 has been formed to prosecute the whale fishery around the shores of the island. The whales met with here are not the right or Greenland whale, now becoming extinct, but the humpback, sulphur bottom or blue whale, and the finback. These are in myriads around the shores in summer. In Norway a similar fishery has been prosecuted for years with profitable results.

Events.—The year 1896 was one of steady progress, industrially and financially, and was unmarked by any very striking events. The wonderful recuperative energy of the country after the great fire of 1892, and the far more serious financial crash of December, 1894, has been displayed continuously, so that at the close of 1896 the colony was in a sounder economic condition than before these disasters occurred. The credit system has been greatly curtailed. The result has been a marked improvement in the mode of conducting the fisheries, a better cure of fish, and greater energy in prosecuting the work, while the feeling of confidence has been completely restored.

The revenue is derived almost entirely from duties on imported goods, so that an increase of revenue indicates increased purchasing power on the part of the people, and consequently an improvement in the returns derived from their industries. The fiscal year has been changed, and now terminates on June 30. The revenue for the year ending June 30, 1896, amounted to \$1,564,303, an advance of \$206,493 on the revenue of the preceding year. The total expenditure for the year ending June 30, 1896, was \$1,357,810, so that the surplus for the year was \$206,493. This prosperous condition of the revenue continued till the close of 1896, the amount of revenue collected during those six months being \$800,000—a sum considerably over the estimates and also over the anticipated expenditure.

There is now placed at interest to the credit of the colony \$360,000, being the unexpended balance of the late loan, and also \$200,000, being surplus revenue—in all \$560,000 at 3 per cent. to meet any emergency.

On Sept. 30, 1896, the savings-banks deposits amounted to \$1,291,686, the increase during the year being \$51,839.

On Dec. 31, 1896, the public debt was about \$14,659,715. The interest on this is over \$570,000. As a set-off, there is the saving effected by the retrenchment policy of the Government, amounting to \$564,000; so that the interest on the public debt has been almost covered by this saving. This economy was accomplished by the reduction of official salaries, and of the grants to the public services, without impairing the efficiency of either.

Very striking developments in mining industries have been made during the year. A new outcrop of coal, the largest seam yet found, was discovered in Codroy valley, late in the autumn. It is on the new line of railway. Borings for petroleum have been successful on the west coast, north of Cow Head. Two companies have been operating here, and both have struck oil. The Canada Petroleum Company, at a depth of 1,030 feet, have reached a large well, the supply being abundant and the quality excellent. The other found oil in abundance at a less depth.

Besides the immense deposit of iron ore on Belle Isle, Conception Bay, which has been vigorously worked during the year, several other deposits of the same kind of ore (red hematite) are reported to

have been discovered on the north shore of the same bay. A new and extensive deposit of lead and silver ore has been found on Placentia Bay, not far from Silver Cliff Mine.

A few months ago a still more important discovery was made at Cape Broyle, 40 miles south of St. John's. Here operations were begun on a large quartz reef, and samples were found to contain three ounces of gold to the ton. As soon as the news was published a gold fever was developed, and in a short time 45 square miles were covered with mining licenses. Preparations are being made to work these reefs.

From the iron pyrites mine, Pilley's island, Exploits Bay, 36,496 tons were exported during the year; value, \$182,480. The value of copper ore exported in ingots, regulus, and green ore was \$483,814. Asbestos has been found over a large area.

The new coal field near Grand lake, close to the railway, is of great extent.

NEW HAMPSHIRE, a New England State, one of the original thirteen, ratified the Constitution June 21, 1788; area, 9,305 square miles. The population, according to each decennial census, was 141,885 in 1790; 183,858 in 1800; 214,460 in 1810; 244,022 in 1820; 269,328 in 1830; 284,574 in 1840; 317,916 in 1850; 326,073 in 1860; 318,300 in 1870; 346,991 in 1880; and 376,530 in 1890. Capital, Concord.

Government.—The following were the State officers during the year: Governor, Charles A. Busiel; Secretary of State, Ezra S. Stearns; Treasurer, Solon A. Carter; Attorney-General, Edwin J. Eastman; Adjutant General, Augustus D. Ayling—all Republicans; Insurance Commissioner, John C. Linehan; Bank Commissioners, Alpheus W. Baker, K. P. Hatch, John Hatch, Thomas J. Walker; Superintendent of Public Instruction, Frederic Gowing; Labor Commissioner, John W. Bourlet, succeeded by Julian F. Trask; Bank Examiner, F. E. Timberlake; Chief Justice of the Supreme Court, Charles Doe, who died March 9, and was succeeded by Alonzo P. Carpenter, Republican; Associate Justices, William M. Chase, Democrat, Frank N. Parsons and R. M. Wallace, Republicans, and Isaac N. Blodgett and Lewis W. Clark, Democrats, and Robert G. Pike, Republican, succeeding A. P. Carpenter.

Finances.—The annual statement of the Treasurer for the year ending May 31 gave the following summaries: Cash on hand June 1, 1895, \$143,192.81; receipts during the year, \$1,528,863.36; total \$1,672,056.17; disbursements, \$1,460,547.30; cash on hand June 1, 1896, \$211,508.87; net debt June 1, 1896, \$1,827,741.37; reduction of debt during the year, \$198,559.28. The principal sources of revenue were: State tax, \$500,000; railroad tax, \$127,822.12; insurance tax, \$22,526.36; telegraph tax, \$3,000.40; telephone tax, \$2,699.53; income from the Benjamin Thompson estate, \$13,694.22; fees, insurance department, \$8,127.40; license fees, \$2,075.

The valuation by counties for 1896 is \$200,957,600. The taxable savings deposits amount to \$56,884,200, the insurance capital is \$1,275,000, and the valuation of railroads is \$21,222,500. From this deduction is made of all sums assessed in towns and paid by the companies upon property not required for general use in operating the roads. Upon the remainder the tax is the same as the average taxation of property—\$1.60 upon the \$100.

Education.—Dartmouth College graduated a class of 53 in June. The class of 1900 numbers 160, the largest ever entered. The enrollment in the academic department in September was about 450, and in all the departments about 600. An Alumni Memorial Hall is to be built on a lot north

of the campus which was bought by Gov. Morton for the college.

There were in April only about 35 towns without free public libraries, 15 having lately taken steps to organize under the law of 1895.

State Institutions.—The State Board of Charities and Corrections made its first report in December. It was established for the purpose of providing homes for dependent children found at the county farms. At some of these there are no separate buildings for children, and they were obliged to associate with criminals. The law of 1895 made it the duty of the overseers of the poor of towns and cities and of county commissioners to have such minors supported at some orphan asylum or home or with some private family of good repute, and the State Board of Charities was given supervision of the contracts made by overseers of the poor and county commissioners for the support of such minors. The number of children supported by the towns and counties is 420.

The Orphans' Home, at Franklin, is shown by the annual report to have had 145 children in its care during the year, of whom 14 were placed in homes, 29 returned to friends, and 5 died. The treasurer's report showed receipts of \$22,508.27, and expenditures of \$22,304.65. Of this latter sum \$13,223.08 was new investments.

The number of patients in the Asylum for the Insane has been largely increased by the transfer from county almshouses and other places of detention of persons found to be insane. The buildings are sufficient for the comfortable accommodation of 350 patients, while the number is 426, all but 7 or 8 of whom are residents of the State.

The number of inmates of the State Industrial School at the end of the year was 147.

The Penitentiary has been more than self-sustaining the past two years, having paid into the State treasury nearly \$12,000.

Insurance.—Reports from 235 towns for the six months ending July 1 show that 128 had no fires. The entire fire loss in all (3 were not reported) was \$499,931, and the amount of insurance on the property was \$968,400.

The summary of reports of business done by fire companies in 1895 was: New Hampshire companies—risks, \$39,686,016.34; premiums, \$512,730.89; losses, \$225,330.88. Foreign companies—risks, \$41,782,575.28; premiums, \$565,431.14; losses, \$221,701.52. The percentage of losses to premiums in 1894 was 53.44. In 1895 it was 40.19. The percentage of losses to premiums of the town mutual companies is not included.

There are 32 life companies doing business in the State.

Banks and Savings Institutions.—A large number of these institutions have failed within the two years just past, with heavy liabilities. The most notorious case is that of the Granite State Provident Association, of Manchester. Its business extended into 29 States. The association was directed in January to discontinue taking new business. It was investigated by the Bank Examiner, who asked for a receiver in March. The Bank Commissioners reported that they found a deficit of \$261,918; and if to this were added \$548,672, the amount of dues taken for expenses and fines, \$810,590 is found to be the amount the association must earn in order to pay back to the members what they have paid in. The total liabilities were figured at \$3,132,161, and the assets at \$2,870,243. From the peculiar nature of its methods, the association could not be declared insolvent, but it was put into the hands of a receiver.

In May W. F. Putnam was sentenced to imprisonment for five years on the charge of converting the

funds of the Granite State National Bank of Exeter to his own use, and on other charges of violation of the national bank laws, the United States Supreme Court affirming the decision of a district court.

Another disastrous failure was that of the Sullivan County Institution for Savings, at Claremont. The funds of the bank and trust funds which were in the keeping of the president had been largely invested in Western mortgages, and though there was an apparent excess of assets over liabilities to the amount of \$58,000, the shrinkage in the securities created a large deficit.

The former President of the Lake National Bank, of Wolfboro, who was appointed to wind up its affairs, has been indicted for embezzling as agent and president \$38,691. The Cheshire Provident Institution of Keene was enjoined in August from receiving or paying out money.

The trials of Dr. Joseph C. Moore, charged with assisting Cashier Lane, of the Merchants' National Bank of Manchester, in embezzling funds of that institution, have taken up much of the time of the courts within the past three years (see "Annual Cyclopædia," for 1893, page 512). On a trial this year for knowingly and fraudulently overissuing the stock of the Union Publishing Company, of which he was for fifteen years treasurer and principal owner, he was convicted in April; exceptions were filed, another trial was granted, and he was again convicted a month later. In December his counsel were arguing to secure still another trial. On a trial in 1894 on account of the bank transaction he was acquitted because the indictment had "of" where "at" should have been used.

Railroads.—The burning question in reference to railroad affairs this year was whether the proposed Manchester and Milford road should be built. When the act allowing consolidation of competing lines was passed, it was provided that no new railroad should be built until the Supreme Court had decided that the public good required it. This decision was to be arrived at through a board of commissioners, or of referees appointed by the court. When the law was revised, a change was made which seems to make it the business of the court to make the decision as to public utility after the commissioners or referees have reported on facts bearing on the question. On the interpretation of this law the difficulty has been made. The promoters of the scheme petitioned the court for a charter, and the court appointed referees who reported on the facts, but refused to say whether the interests of the public would be promoted by the building of the road. The court recommitted the report with directions to the referees to add this to it, and the referees then resigned.

In November the Governor nominated Henry Robinson for Railroad Commissioner, but his council refused to confirm. After sending in the same name twice again and having it rejected, the Governor named in succession 12 other candidates, all of whom were rejected.

Manchester.—A celebration was held at Manchester, beginning Sept. 7, in honor of the fiftieth anniversary of its incorporation as a city. The exercises included a sermon on Sunday evening by the President of Dartmouth College, a parade on Monday, gymnastic exercises, band concerts, an athletic exhibition, a Grand Army of the Republic camp fire, an oration, and the reading of a poem. The first white settlement within the present limits of the city was in 1722. The town of Derryfield was incorporated in 1751. The canal around the falls was finished in 1807. In 1846 the town, which had changed its name from Derryfield to Manchester, became a city. The population was then 10,125; it is now about 55,000. The valuation

in 1846 was \$3,187,726; in 1896 it was \$29,361,418. The first cotton mill was built in 1809.

Legislative Reunion.—The first reunion of the past and present members of the Legislature was held in Concord, in June, with more than 1,000 present. Three members of the Legislature of 1840 were among them. With a view to holding similar reunions hereafter at fixed intervals, a permanent organization was formed, with the Hon. Samuel B. Page as president, and the Hon. J. O. Lyford as secretary.

Political.—The State Republican Convention for choosing delegates to the national convention met in Concord, March 31, with 679 delegates present. United States Senator William E. Chandler, who presided, said in his address: "In 1894 there was a Republican uprising, which gave greater majorities against the Democracy than ever had been known since the organization of the Republican party, and to-day there is a settled determination in the minds of the American people to restore, in November of this year, the Republican party to more complete power in State and nation than it ever yet possessed; all this we hope and trust to be accomplished under the banner of our energetic, strong, positive, and magnificent New England leader, Thomas B. Reed." The mention of Mr. Reed's name aroused great enthusiasm; nevertheless the convention adopted the platform submitted by the Committee on Resolutions, which declared equally for Reed and McKinley. After congratulating the country upon the prospect of release from Democratic misrule, it continues:

"We demand of the national convention, soon to assemble at St. Louis, the nomination of candidates whose election will mean the speedy repeal of the infamous and ruinous Democratic tariff and the substitution thereof of one based upon the principles of the McKinley act; the enactment of currency laws that will provide a circulating medium in gold, silver, and paper, which will always be interchangeable at its face value because each and every dollar of it is of the same purchasing power as a gold dollar; liberal appropriations for an adequate navy and harbor defenses, and internal improvement; fair and generous treatment of Union veterans; a foreign policy characterized by sturdy Americanism, including the assertion of the Monroe doctrine and the moral and material support of the Cuban patriots if they have not already achieved their independence, and an immediate return to all policies in which the Republican party has so successfully illustrated the soundness of its principles, and to the methods by which it has demonstrated its ability to apply those principles in the administration of the Government.

"We recognize as most conspicuous among such candidates New England's noble and illustrious son, the Hon. Thomas B. Reed, of Maine, and that pure and able statesman and champion of protection, the Hon. William McKinley, of Ohio.

"We will give the electoral vote of New Hampshire to any nominee who worthily represents the party, but we prefer one of these, because either is in himself a platform."

At the State convention, Sept. 3, George A. Ramsdell was nominated for Governor. The platform declared adherence to the position of the party on national issues.

The Democratic State Convention for choosing delegates to the national convention was held May 20, in Concord. Hon. Harry Bingham presided. In his address he said: "The enemies of the Democracy are tauntingly proclaiming to the world that we shall be compelled, in the National Democratic Convention, to adopt a platform favoring the free coinage of silver at a ratio of 16 to 1. The paraly-

sis of all business, the ruin and bankruptcy that inevitably would follow the enactment of such a proposition into law, are so palpable that all sane men who consider would instinctively oppose it."

The resolutions were:

"We declare, first, that under present conditions there can be but one standard of value, and that every kind of currency should rest upon a gold basis so long as gold is the standard recognized by the great commercial nations of the world; and we heartily commend the action of President Cleveland in so firmly maintaining our public credit and faith in the face of formidable opposition.

"We favor a system of tariff taxation so adjusted as to produce the necessary revenues to meet the present expenses of an honest government with the least possible burden upon the people, and afford such incidental protection as will meet the requirements of American capital and labor.

"The Monroe doctrine embodies our idea of national self-defense and should be vigorously maintained.

"The civil and religious rights of all our people as guaranteed them under the Constitution should be sedulously guarded, and no proscriptions on account of religious opinions should be countenanced or tolerated."

At the convention for naming candidates for Governor and electors held in Concord, Sept. 2, the platform, besides condemning the prohibitory law and calling for a license law, condemned the State legislation of the Republican party, especially the districting of the State and of cities, and the substitution of police commissioners for home rule in cities; and contained the following:

"We, the Democracy of New Hampshire, in delegate convention assembled, recognizing the action of the national convention held in Chicago on the 7th day of July last as authority for party action on all political subjects therein stated, hereby adopt the platform of said convention and pledge ourselves to the earnest support of William J. Bryan and Arthur Sewall, the candidates for President and Vice-President."

The convention rejected a substitute for this, offered from the side of the gold Democrats, as follows:

"Whereas, The Democratic party is divided upon the question of the acceptance of the platform and ticket of the Chicago convention; and Whereas, It is desirable that no breach should be created that will prevent the future united action of the party; therefore,

"Resolved, That we recognize the right of every Democrat of New Hampshire to act and vote on the national ticket as his judgment may dictate without affecting his standing in the party, and that the nominations by the convention of presidential electors is binding upon him only so far as he may approve the same."

Only 67 delegates voted for this amendment; and one approving the national administration received only 91 affirmative votes, while the following was adopted:

"Resolved, That we have observed with gratification the triumphant tour of our national standard bearer, Hon. William Jennings Bryan, his masterly exposition of Democratic principle, and his valiant struggle for the rights of the people."

The gold men then withdrew after protesting against the resolution approving the Chicago platform and announcing that they would take no further action in any political affairs based upon that platform.

Henry O. Kent was nominated as candidate for Governor.

The Gold-standard Democrats held a convention

in Concord, Sept. 10, approved the administration and the Indianapolis platform, appointed a State committee, and chose an electoral ticket. They made no nomination for the office of Governor.

Delegates to the national convention of Prohibitionists were chosen by the State committee, March 31. At a meeting on July 3, the chairman and other members resigned, having decided to join the "Broad-gauge" wing of the Prohibitionists—the new National party. That party was organized for the State at a convention held in Concord, Aug. 4, when a State committee was appointed, presidential electors named, and George W. Barnard nominated for Governor.

The Prohibition party (Narrow-gauge) met in convention in Concord, Aug. 5. The State committee was reorganized, electors named, and John C. Berry chosen as candidate for Governor. The resolutions made no reference to the currency, but declared for Prohibition, woman suffrage, nonsectarian schools, restricted immigration, and stringent naturalization laws.

Delegates to the national convention of the People's party were appointed by the State committee. At the State convention in Manchester, Sept. 9, G. J. Greenleaf was nominated for Governor.

The Socialist-Labor party held a convention in Manchester, July 19. The platform declared for the gold standard. Electors were nominated, and Harry H. Acton was the chosen candidate for Governor.

The election returns showed the following vote for electors: Republican, 57,444; Democratic, 21,271; National Democratic, 3,520; Prohibition, 779; National Prohibition, 49; People's, 379; Socialist-Labor, 228.

The vote for Governor stood: Ramsdell, Republican, 48,387; Kent, Democrat, 28,333; Berry, Prohibitionist, 1,052; Greenleaf, Populist, 286; Barnard, National Prohibitionist, 229; Acton, Socialist-Labor, 483.

Both the Representatives in Congress chosen are Republicans.

The Legislature stands: Senate—22 Republicans and 2 Democrats; House—291 Republicans and 66 Democrats.

After the use of the Australian ballot law at 3 elections, the general opinion seems to be that the process prescribed for this State should be simplified. The Governor says, in his message, that it was estimated that at least 5 per cent. of the ballots cast at the November election were rejected by reason of imperfect or erroneous marking.

NEW JERSEY, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 18, 1787. Area, 7,815 square miles. The population, according to each decennial census, was 184,139 in 1790; 211,149 in 1800; 245,562 in 1810; 277,426 in 1820; 320,823 in 1830; 373,306 in 1840; 489,555 in 1850; 672,035 in 1860; 906,096 in 1870; 1,131,116 in 1880; and 1,444,933 in 1890; by the State census of 1895, 1,672,942. Capital, Trenton.

Government.—The following were the State officers during the year: Governor, John W. Griggs, Republican; Secretary of State, Henry C. Kelsey; Treasurer, George B. Swain; Comptroller, William S. Hancock; Commissioner of Banking and Insurance, George S. Duryee, who died in November, Attorney-General, John P. Stoekton; Adjutant General, William S. Stryker; Superintendent of Public Instruction, Addison B. Poland, until March, and C. J. Baxter; Chief Justice of the Supreme Court, Mercer Beasley; Associate Justices, Bennet Van Syckel, David A. Depue, Jonathan Dixon, William J. Magic, Job H. Lippincott, Charles G. Garrison, William S. Gummere, and George C. Ludlow; Clerk of the Supreme Court, Benjamin F.

Lee; Chancellor, Alexander T. McGill; Vice-Chancellors, Henry C. Pitney, John R. Emery, Alfred Reed, John T. Bird until April 7, Frederic W. Stevens from April 27, and Martin P. Grey from May 19.

Finances.—The balance to the credit of the State fund Nov. 1, 1895, was \$893,747.88; the receipts during the year were \$2,133,532.88, made up in part as follows: From tax on railroad corporations, \$1,079,687.84; tax on miscellaneous corporations, \$707,951.45; official fees, \$145,321.24; collateral inheritance tax, \$82,247.47; State Prison receipts, \$45,016.83; judicial fees, \$31,098.70; sinking fund account, \$20,000; dividends, \$18,870. The disbursements during the year amounted to \$2,072,651.78, leaving a balance in bank, Oct. 30, 1896, \$959,628.98. The following extraordinary disbursements are included in the above-named amount: For State Prison Building Commission, \$100,000; State Reformatory, \$100,000; improvement at Morris Plains Hospital, \$49,544.12; Camden Armory, \$44,996.40; revision of statutes, \$18,000; Passaic Valley Sewerage Commission, \$10,000; Trenton battle monument, \$6,600; political and legislative history of New Jersey, \$4,500. An amount of \$107,658.82 heretofore paid from the income of the school fund was this year paid from the State fund. The receipts were \$37,398.95 less than in 1895, and there was a decrease in expenditure of \$196,388.08. The estimated resources for the year 1897 are \$3,046,498.98; the estimated disbursements, \$2,273,371.32.

The condition of the school fund is shown to be: Total amount of securities Oct. 31, \$3,589,274.71; total amount of securities on same date last year, \$3,498,490.77; increase in school fund securities, \$90,783.94. The cash balance Nov. 1, 1895, was \$165,619.63; gross receipts during the year, \$495,061.27; total, \$660,680.90; gross disbursements, \$605,677.21; balance Oct. 31, 1896, \$55,003.69, out of which sum there must be reinvested in school-fund securities \$26,529.32, leaving for amount of appropriation of \$200,000 for free public schools \$28,474.37.

The assets of the sinking fund Oct. 31 amounted to \$398,739.92.

The war debt was reduced by a payment of \$67,000, leaving a balance Oct. 31 of \$573,400. A certificate of the State for \$31,600 was issued during the year to the Agricultural College, which sum and the war debt still unpaid makes the total indebtedness of the State Oct. 31, 1896, \$605,000.

Valuation and Taxation.—The value of the property in the State, as returned in 1896 for taxation in 1897 for school and local purposes, was \$840,767,779, divided as follows: Real estate, \$702,368,090; personal property, \$138,399,689. The valuation of taxable property was \$794,428,048, an increase of \$7,429,978.

The valuation of railroad property in 1896 was \$221,757,969, an increase of \$1,052,147. The total railroad tax of the year was \$1,521,495.92, divided as follows: Tax for State uses, \$1,108,789.84; for local uses, \$412,706.08. This is an increase of \$7,084.68.

Banks.—On Feb. 28 the individual deposits in the national banks of the State amounted to \$52,502,094; the loans and discounts were \$51,866,773; the gold-coin reserve was \$1,658,148.

Legislative Session.—The Legislature met Jan. 14, and continued in session until March 26. The elective judiciary act of 1895, which the Supreme Court had declared to be unconstitutional, was repealed, and a constitutional amendment was passed remodeling the judiciary. It provides for a Supreme Court of not fewer than 15 members, though the Legislature may increase the number. This

court shall have all the jurisdiction and powers now possessed by the Court of Errors and Appeals, the present Supreme Court, the Chancellor, the Court of Chancery, and the Prerogative Court, which jurisdiction and powers shall be exercised in three divisions—viz., a law division, an equity division, and an appellate division. Circuit court shall be held in every county by one or more judges of the law division. Other constitutional amendments, providing for biennial sessions of the Legislature and granting suffrage at school elections outside of the cities to women, were passed, and also the anti-race-track resolution, prohibiting pool selling, bookmaking, and all kinds of gambling, which was passed at the last session, but must be passed again before it is voted upon by the people as a constitutional amendment. A measure abolishing the office of lay judge in the Court of Common Pleas in the various counties was enacted; changes in the election law were made, stringent provisions requiring registration by streets and houses in the larger cities; another provision makes it a misdemeanor to solicit from a candidate money or other property, or to urge him to purchase any ticket to a ball or other entertainment, with a proviso that this shall not apply to a request for a contribution from an authorized representative of the party that nominates him. Corporations engaged in manufacturing, mining, quarrying, and lumbering are required to pay their employees at least once in two weeks, each payment to be of all wages due up to a date within twelve days. Provision was made, on terms liberal to the railroad corporations, for the abolition in certain cities of crossings of a highway and a railroad at grade. Many laws in the interest of traction companies were passed, and also a law prohibiting trolley cars from carrying freight, except when specifically authorized to do so. By a strict party vote the boundary line between the townships of West Amwell and Delaware in Hunterdon County was changed. Provision was made for a teachers' retirement fund; the borough laws of 1888, 1890, and 1891 were repealed, as was also the charter of the West Jersey Game Association.

The report of the commission created by the last Legislature to investigate the usefulness of the epileptic institutions of several States suggested the establishment of a colony of the 2,000 epileptics in the State. The commission appointed in 1895 to consider the advisability of accepting a gift of over 130 acres with buildings at Englishtown as the site of a blind asylum reported in favor of its acceptance. The Senate investigating committee was authorized to continue its inquiry, the commission to investigate the penal laws was continued, and the Governor was authorized to reappoint a commission to determine whether it is advisable to erect a home for disabled soldiers and their wives. He also was directed to appoint a commission of five to investigate the subject of assessment and taxation of the property of the State and report to the next Legislature, and a commission of three to consider the subject of the pollution of the Passaic river and of a general system of sewerage disposal for the relief of the valley of the Passaic.

Among other important measures adopted were the following:

Requiring all nonresidents of the State to obtain a license before hunting for rabbit, quail, pheasant, deer, dove, squirrel, plover, or fishing for brook trout in any county of the State.

Allowing fishing and gunning upon any of the lands or meadows over which the tide ebbs and flows.

Declaring that the meaning of "a majority of legal voters" shall be those voters who actually vote upon the question.

Prohibiting any person who has not been for six months an actual resident of the State from raking or gathering clams, oysters, or shellfish.

Giving property of an illegitimate child dying intestate to his wife.

Authorizing cities by ordinance to raise money for free public libraries.

Giving municipalities power to pass ordinances regulating the use of bicycles.

Imposing fines on any one throwing in streets broken glass, bottles, metal, loose stones, earthenware, or other substance likely to cause injury to travelers, carriages, or bicycles.

Authorizing township committees to build bicycle and foot paths at the expense of the township.

Authorizing voters of towns to direct a tax for the construction of hard roads.

Securing creditors an equal division of estates of debtors who convey for the benefit of creditors.

Allowing women to be appointed masters in chancery.

Permitting a man who has been separated seven years from his wife, or who has received a final decree, to transfer property.

Fixing 7 per cent. as the rate of interest on arrears of taxes and assessments in cities.

Providing that no person shall give or sell cigarettes to any person under the age of sixteen years; penalty, \$20 for each offense.

Education.—The school tax distributed in 1896 amounted to \$2,196,240; the State appropriation was \$200,000; the number of school children, according to the school census of 1895, was 424,959. The total amount disbursed for free schools by the State was \$5,337,597.30, made up in part as follows: For the Normal School, \$31,988.07; for manual training, \$49,800.63; for the Farnum Preparatory School, \$1,200; for the Deaf-mute School, \$38,076; for school libraries, \$9,060; for teachers' libraries, \$200; for text-books and apparatus, \$280,918.58; for teachers' salaries, \$3,029,777.91. The average cost per pupil for the year, calculated on the enrolled attendance, was \$14.40. The school tax levied in 1896 amounted to \$2,124,795, a decrease of \$71,445. During the year 1,257 teachers' certificates were granted.

The enrollment of the Normal School was 594; of the Model School, 591; and of the Farnum, 132. The number of graduates from the Normal School was 149, and from the Model School 39.

The disbursements for the Agricultural Experiment Station were \$15,998.72, of which \$1,000 was for expenses incurred for an investigation of the San José scale and its natural enemies.

This census, completed in December, shows the number of children in the State between the ages of five and eighteen years to be 438,969, an increase of 14,010. Of this number, 45,021 attend private schools, 89,210 do not attend any school, and there are 1,581 children over ten years old who can not read, and 5,650 children under fifteen years of age at work in mines, stores, and factories. There are 12,689 colored children in the State and 195 children who are deaf-mutes.

The certificate of the Colored Industrial School of New Jersey was filed in July. In 1894 the Legislature passed an enabling act designating this school as the school provided for by the act of Congress of Aug. 30, 1890, and appropriating to it the portion of money that it would be entitled to receive under the provisions of said act; also giving it the benefit of all the industrial school laws of the State.

The disbursements at the two institutions at Vineland for the feeble-minded were: For 94 women, 33 of whom are epileptics, \$19,490.82; for 202 children, \$51,328.02. New Jersey paid to other States for the maintenance of 44 feeble-minded pupils, \$10,315.78,

and for the instruction and maintenance of the 48 blind wards of the State \$12,943.22.

Hospitals.—The number of patients admitted to the State Hospital for the Insane at Trenton was 251; the number under treatment Oct. 31 was 1,252, of whom 880 were county patients. The disbursements amounted to \$241,380.25, of which sum \$154,321.37 was paid by the counties. An extension to the main building is in process of construction, and also a dwelling for the medical director. The number of patients admitted to the hospital for the insane at Morris Plains was 280, of whom 215 were public patients; the number under treatment Oct. 31 was 1,088. The disbursements were \$281,507.72. An addition to cost \$69,000 has been begun. At the end of the year the various county hospitals were caring for a total of 1,499 insane patients.

Soldiers' Home.—The State paid to this institution during the year \$15,166.66, and the United States paid \$43,732.05. The average age of the beneficiaries was 63-67 years.

Penal Institutions.—The expenditures for the State Prison were \$175,221.49, the cost of maintaining the daily average of 1,000 prisoners being \$74,835.92. The number of convicts Oct. 31 was 1,023, an increase of 46 since the report of 1895. Under the parole law of 1891, 212 prisoners were released, of whom 5 were returned before and 4 after the expiration of their parole. The new wing and hospital are finished.

There were 125 commitments to the Reform School for boys, and 381 boys remaining in confinement Oct. 31. The disbursements for maintenance were \$69,277.76. One hundred and twenty boys received instruction in sloyd at a cost to the State of \$2,622.57.

At the Industrial School for Girls on Oct. 31 there were 118 girls, and 47 were out at service, under indentures. The expenses for maintenance and general repairs were \$24,127.82; for permanent improvements, \$6,935.63. A laundry building was completed early in the year.

The plan adopted for the new Reformatory at Rahway will require an additional outlay of \$670,000. One wing, with 228 cells, has been finished.

Road-building.—The Road Commissioner reports, as work done under the commission, that 56½ miles of highway have been completed, that 70½ miles to be completed next year have been approved, and that many applications must lie over for lack of appropriations. The materials used in construction are stone, gravel, bog ore, and shells.

Fish and Game.—During the year ending Nov. 1, 1896, the State planted 43,475,524 trout, shad, pike perch, and smelts of various ages. The destruction of all the carp in the Passaic river was begun, the intention being to stock the river with pike, perch, channel catfish, and bass.

By changes in the game law made by the last Legislature the open season is made as follows: Rabbits and quail, from Nov. 10 to Jan. 1; woodcock, July, and from Oct. 1 to Dec. 10; snipe, March, April, and September; ruffed grouse and all kinds of partridges, Oct. 1 to Dec. 10; reed and rail birds, September; squirrels, September, and from Nov. 10 to Dec. 10; plover and dove, August and September.

State Flag.—Feb. 28, 1780, the Continental Congress directed that New Jersey and all States should have a State flag as well as the national flag. A joint resolution of the last Legislature provided for a State flag, of buff color, having in the center the coat of arms of New Jersey, and directed that the State flag shall be the headquarters flag for the Governor on State occasions.

Industries.—Of the 700 manufacturers to whom blanks were sent by the Bureau of Labor and In-

dustries, 309 returned reports, from which it is learned that the amount of capital invested by them was \$37,664,201; the value of stock or material used was \$26,327,427; the value of goods made or work done, \$49,139,345. The aggregate average number of persons employed was 37,591, the largest number employed during the year being 41,214; the amount paid in wages was \$14,305,972; and the average yearly earnings, \$379.70.

The building and loan associations numbered 322, whose total assets were \$41,059,215.68; total receipts, \$17,913,791.54; total disbursements, \$17,775,374.53; number of shares, 750,486-75; number of shareholders, 89,150.

Miscellaneous.—In September the Supreme Court declared constitutional the law legislating out of office on April 1 the lay judges of the Common Pleas Court.

Bernard J. Ford, formerly Superintendent of the State Capitol, withdrew his plea of not guilty to the five indictments against him, and entered the plea of *non vult*, and in March he was sentenced to pay a fine of \$1,000.

A three days' celebration of the one hundred and fiftieth anniversary of the founding of Princeton College was begun Oct. 20.

Political.—The Republican Convention met in Trenton, April 16. Delegates to the national convention were chosen, and a platform was adopted which contained the following:

"We believe that the Monroe doctrine should be inflexibly maintained.

"In our diplomacy there should be more of the virile force and emphasis which command respect. Our navy should be enlarged so that it may be made an effective factor in any controversies which may arise, and our harbors and seacoasts should be protected by an adequate system of defenses.

"The practical sympathy of this nation should be extended to all peoples who have been driven by oppression and wrong to take up arms in behalf of the right of self-government.

"The standard of value in this country and in the other principal commercial nations of the world is gold. Wages and prices have been made and fixed in accordance with this standard, and the welfare of the people demands that it should be maintained.

"Such a tariff should be imposed upon imports as will afford adequate income for the expenses of the Government.

"The reciprocity policy adopted by a Republican administration and destroyed by the Democrats should be restored.

"Immigration laws should be amended so as to more effectually prevent the admission of criminals, paupers, anarchists, and other persons whose presence here endangers the social order and disastrously affects the interests of our workmen.

"We approve the policy of national protection to our shipowners and the shipbuilding interests."

The hope was expressed "that redeemed New Jersey may be represented on the national ticket in the person of her able and distinguished citizen the Hon. Garret A. Hobart."

On Aug. 27 the Republican Convention again met in Trenton, selected candidates for presidential electors, and on the prominent issues of the campaign made the following declarations:

"We believe that the debasement of the currency by the free coinage of silver at the ratio of 16 to 1 would work irreparable injury to every class of our citizens.

"We are unalterably opposed to the proposition to destroy the protection we enjoy under the Supreme Court of the United States."

The Prohibition State Convention was held in

Trenton, May 6, when candidates for presidential electors and delegates to the national convention were chosen. The platform declared the traffic in intoxicating drink to be the crying evil of the day, and demanded its total suppression; expressed confidence in the stability and progress of the Prohibition party; declared for equal suffrage; for the extension of civil service; for the establishment of courts of arbitration to settle disputes between nations as well as those between capital and labor; and for the restraint of monopolies. "Those who vote in favor of any party which recognizes, advocates, or upholds the license system are jointly responsible for the results of the liquor traffic with those who are directly engaged in the business."

The Democrats met in State convention in Trenton, May 7, and selected delegates to the national convention. They adopted a platform containing the following declarations:

"We are in favor of a firm, unvarying maintenance of the present gold standard. We are opposed to the free coinage of silver at any ratio, and to the compulsory purchase of silver bullion by the Government.

"We believe that the Federal Government should be divorced from the business of banking; we therefore demand the repeal of all laws authorizing the issue or reissue of legal tender or Treasury notes by the Government.

"We are opposed to any effort to alter materially the present just and conservative tariff."

The platform favored liberal expenditures for coast defense and for the navy, approved of President Cleveland and his stand on the Monroe doctrine, and advocated recognizing the Cubans as belligerents.

On Sept. 9 the convention again met in Trenton and selected candidates for presidential electors, and adopted a platform approving the candidates and the platform adopted by the Free-silver Democratic National Convention in Chicago, insisting that the latter was "thoroughly Democratic and purely American, and with its enforcement we firmly believe that relief will come to the toiling masses and will advance the general prosperity of our country."

The State convention of the People's party met in Trenton, May 30, and selected delegates to the national convention. The platform urged the national convention to insert a plank in its platform favoring the initiative and referendum, and reaffirmed the national platform of 1892.

At a second meeting of the convention in Newark, Aug. 14, a State committee was chosen, which was instructed to name 10 candidates for presidential electors at its first meeting. Resolutions were reported which approved the platform and nominees of the People's Party National Convention; opposed the proposed amendment of the State Constitution to lengthen the terms of office of Senators and Assemblymen; favored woman suffrage; and opposed the control of the State's watershed by private corporations. In September the State committee sent out this circular:

"In order to prevent confusion and to save the labor and expense of separate tickets, the People's Party State Committee recommends all Populists to vote the electoral ticket printed for the Democracy, as it will contain the same names which have been chosen by this committee."

July 6 the State convention of the National Silver party was held in Trenton, when delegates to the national convention were chosen and a declaration of principles was adopted, containing the following:

"That this convention demands the free and unlimited coinage of gold and silver at a ratio of 16

to 1, without the concerted action of other countries.

"That we denounce the attempt to retire the greenback and Treasury note, together with that of silver, and in their place to substitute interest-bearing bonds to the amount of over \$800,000,000, upon which to base a national-bank currency, as class legislation of the most infamous nature."

The Socialist-Labor party held its State convention, Aug. 1, choosing candidates for presidential electors and making congressional nominations in the Second, Third, Sixth, Seventh, and Eighth Districts. The platform concluded with these words:

"The Socialist-Labor party repudiates and warns the toilers of New Jersey against the damnable snares set by the Democratic, Republican, and Populist parties in the shape of protection, free trade, free silver, and gold standard, to catch the producers of all wealth and to further exploit and rob them of what they produce, and urges the toilers to turn a deaf ear to their cries and rally around the standard of the only party that stands for the emancipation of labor from the competitive system of wage slavery that is crushing humanity to-day."

The Sound-money Democrats met in Trenton, Aug. 26, appointed delegates to the national convention at Indianapolis, authorized the State committee to name candidates for presidential electors, and adopted a platform containing the following:

"We are in favor of a firm, unvarying maintenance of the present gold standard. We are opposed to the free coinage of silver at any ratio, and to the compulsory purchase of silver bullion by the Government.

"We believe that the Federal Government should be divorced from the business of banking.

"We condemn the assault upon and the threatened degradation of the Supreme Court of the United States.

"We condemn the approval of mob violence contained in the censure of a Democratic administration for suppressing mob violence."

"The principles announced by the Chicago convention and advocated by the candidates that convention nominated are not the principles of the Democratic party. Such principles, carried into effect, would dishonor and revolutionize the Government. We refuse to support either the platform or nominees of that convention."

At the election the electoral tickets received votes as follows: Republican, 221,367; Democratic and People's, 133,675; National Democratic, 6,373; Prohibition, 5,614; Socialist-Labor, 3,985. The Republican plurality was 87,692, and the whole vote cast was 371,014. Neither the National Democrats, the Prohibitionists, nor the Socialist-Labor party received the necessary number of votes to enable them under the law to nominate their next State ticket by convention.

For Congress, the present 8 Republican members were all re-elected, the Republican plurality on the congressional ticket being 87,153.

The composition of the Legislature of 1897 is: Senate—Republicans 18, Democrats 3; Assembly—Republicans 56, Democrats 4.

NEW MEXICO, a Territory of the United States, organized Sept. 9, 1850; area, 122,580 square miles. The population, according to each decennial census, was 61,547 in 1850; 93,516 in 1860; 91,874 in 1870; 119,565 in 1880; and 153,593 in 1890. Capital, Santa Fé.

Government.—The following were the Territorial officers during the year: Governor, William T. Thornton, Democrat; Secretary of State, Lorion Miller; Auditor, Marcelino Garcia; Treasurer, S. Eldodt; Adjutant General, G. W. Knaebel; Solicitor General, J. P. Victory; Superintendent of Pub-

lic Instruction, Amado Chavez; Chief Justice of the Supreme Court, Thomas Smith; Associate Justices, N. C. Collier, N. B. Laughlin, G. D. Bantz, H. B. Hamilton; Clerk, George L. Wyllys.

Finances.—The following statement, taken from the report of the Governor, dated Sept. 22, 1896, shows the collections and expenditures from Sept. 2, 1895, to Aug. 29, 1896: Cash on hand Sept. 2, 1895, \$105,971.03; received from taxes, \$194,778.63; from fees paid by district clerks, \$8,043.53; from cattle sanitary board, \$14,000; from interest on deposits, \$2,023.39; from Penitentiary, \$6,079.99; from insurance licenses, \$1,147.50; from Pullman Palace Car Company, \$93.65; from district attorney, \$1,880.25; total receipts, \$334,017.97. The warrants and coupons paid amounted to \$265,195.15, making the cash on hand Aug. 29, 1896, \$68,822.82.

On Jan. 1, 1895, the bonded debt of the Territory amounted to \$909,500. The Legislature of 1895 provided for issuing bonds to the Territorial institutions to the amount of \$80,000, and for the issue of \$75,000 of bonds to rebuild the Capitol; but these bonds have not been delivered except to the normal schools to complete their buildings, for the reason that the Territory had reached its limit of indebtedness.

Appropriations.—The appropriations made by Congress for the Territorial Government of New Mexico for the fiscal year ending June 30, 1897, include \$20,400 for the executive and judiciary and \$26,000 for legislative expenses. An appropriation of \$2,000 was made "for repairs of the adobe palace at Santa Fe." It was provided that hereafter the Legislature shall meet on the third Monday in January of every odd-numbered year, and the number of officers of each house was limited to 7, including a translator and an interpreter. In addition to these, the last Legislature employed 23 minor officers in the Council and 30 in the House.

Valuation and Taxation.—The total assessed valuation of the real and personal property for 1895 was \$43,178,280.17, an increase during the year of \$2,049,659.22. The exemptions amounted to \$2,660,232.50, and upon the remaining \$40,518,047.67 the tax of 7-75 mills on the dollar produced \$314,014.87. The tax of half a mill on the assessed valuation of cattle produced \$2,305.68.

Immigration.—The extension during the year of the Pecos Valley Railway 75 miles, to the head of the valley, has resulted in the settlement of the town of Hagerman, which, although not a year old, has several business houses, a good school building, a newspaper, and settlers on many thousands of acres, the average size of each holding supporting a family being 40 acres.

Court of Private Claims.—In this court only 4 cases were tried and determined during the year, and 163 are still pending. In January the United States grand jury returned 5 indictments against James Addison Peralta-Reavis, who fraudulently claimed over 12,000,000 acres in Arizona and New Mexico; his conviction of conspiracy to defraud the Government followed, and in July he was sentenced to two years in the Penitentiary and to pay a fine of \$5,000. Seven tenths of New Mexico is still public land.

Education.—During the school year ending Oct. 1, 1895, the number of district and city schools open in the Territory was 499, with 594 teachers, an enrollment of 24,220, and an average attendance of 15,964. The number of children of school age was 48,733. For teachers' salaries, \$128,781.83 was paid; for rent, fuel, etc., \$24,496.13; for schoolhouses and grounds, \$20,642.23. The average cost for each pupil in the district schools during the four months they were open was \$9.22; in the city schools, which were open eight months, the cost was \$24.42. The

actual receipts for school purposes were \$219,876.39, to which must be added the balance on hand Dec. 1, 1894, \$48,107.02; the total expenditures were \$225,022.85, of which amount \$54,976.70 was disbursed on account of the 5 Territorial institutions of learning.

The university enrolled 93 students; the College of Agriculture, 161; the Normal School, at Silver City, 73. The Asylum for the Deaf, Dumb, and Blind had under instruction during the year 11 deaf and 5 blind pupils. On July 2 the Ramona Indian School, at Santa Fé, was consolidated with the Government Indian School, whose pupils numbered 200.

Charities.—The crowded condition of the Insane Asylum remains unchanged, as the proposed issue of \$35,000 of bonds to erect additional buildings has not yet been approved by Congress. The balance to the credit of this institution Sept. 2, 1895, was \$7,534.31; the expenditures amounted to \$14,426.10; and the balance Aug. 29, 1896, was \$3,324.56. The aid granted to the other hospitals is sufficient. St. Vincent Sanitarium was destroyed by fire on June 14, but it is being rebuilt.

Penitentiary.—There were in the Penitentiary June 30, 1895, 191 prisoners, 108 were received during the year, and there remained in prison June 30, 1896, 207, being an increase of 16 prisoners over the number confined on the same day last year. The daily cost of maintenance averaged 39-56 cents each, an increase of 0-72 of a cent. A large and efficient electric-light plant has been established in the prison and is operated entirely by convict labor.

Militia.—To the effective militia of the Territory, which at the beginning of the year consisted of 5 companies of infantry and 3 troops of cavalry, 2 strong troops of cavalry and 1 Gatling-gun company have been added.

Coal Output.—During the fiscal year 1,430 men were employed in mining 666,619 tons of coal, the estimated value of which was \$1,046,400.

Farm Animals.—The United States Department of Agriculture gives as the number and value of farm animals in New Mexico in 1896: Horses, 83,862, valued at \$1,398,569; mules, 3,747, value \$129,850; milch cows, 18,383, value \$422,809; oxen and other cattle, 793,506, value \$8,056,069; sheep, 2,738,030, value \$2,732,554; swine, 31,787, value \$178,898; total value \$12,918,749.

Political.—The first Territorial convention was held by the Republicans at Las Vegas early in June, when delegates to the national convention were selected. On Sept. 26 they met again in the same place and renominated Thomas B. Catron for Delegate to Congress. A platform was adopted which wanted artesian wells sunk at Government expense; declared that the Republican party stands for the nationality of the American Government; demanded New Mexico's admission as a State; and commended Delegate Catron "for his able efforts in behalf of the admission of New Mexico as a State, and other interests beneficial to the people of our Territory." It also declared: "We are in favor of international bimetalism as a final and desirable settlement of the money question. We believe it to be the duty of the United States to coin free of charge the product of its gold and silver mines so long as the equality of the dollars coined can be preserved."

On June 15, at Las Vegas, the Democrats met in convention, selected delegates to the national convention, and adopted resolutions declaring in favor of an income tax; in favor of a tariff for revenue; "in favor of taxing those articles that will be in the interest of the masses of the people without danger of fostering monopolies"; approving Rich-

ard P. Bland as candidate for President; condemning Thomas B. Catron, Delegate to Congress, "for the reason that by his actions as such Delegate he has held up the people of this Territory to the scorn and ridicule of the nation, and especially do we denounce him for his failure to do more as Delegate from the Territory than to provide sinecures for his own family"; denouncing the Territorial Republican party because in convention it had made no declaration "on the silver question and other vital issues before the people"; and declaring in favor of personal liberty and religious freedom and denouncing the A. P. A. The following was the coinage resolution: "We are in favor of the free and unlimited coinage of silver and gold, independent of the action of foreign nations, at a ratio of 16 to 1."

On Sept. 29 a second Democratic convention was held at Santa Fé, when Harvey B. Fergusson was nominated for Delegate to Congress, and a platform was adopted which approved "every sentence of the Chicago platform" and declared "we believe it to be the best expression of Democratic faith ever emanating from an assembly of Democrats."

The Populists held their Territorial convention at Las Vegas on Sept. 23, and nominated L. Bradford Prince as their Delegate to Congress, selecting him "not as a Populist, but as a silver Republican." On Oct. 6, as Mr. Prince had not severed his connection with his own party, his nomination was rescinded, and the Democratic candidate for Delegate was put in nomination by the Populists.

The Gold-standard Democrats met in convention in Albuquerque on Oct. 19, and nominated W. E. Dame for Delegate to Congress.

At the November election the Democratic candidate for delegate was elected. The vote was: Fergusson, 18,947; Catron, 17,017; Dame, 66. The Territorial Legislature is tied between Republicans and Democrats in each branch.

NEW YORK, a Middle State, one of the original thirteen, ratified the Constitution July 26, 1788; area, 49,170 square miles. The population, according to each decennial census, was 340,120 in 1790; 589,051 in 1800; 959,049 in 1810; 1,372,111 in 1820; 1,918,608 in 1830; 2,428,921 in 1840; 3,097,394 in 1850; 3,880,735 in 1860; 4,382,759 in 1870; 5,082,871 in 1880; and 5,997,853 in 1890. According to a State census taken in 1892, the population was 6,513,344. Capital, Albany.

Government.—The following were the State officers during the year: Governor, Levi P. Morton, Republican; Lieutenant Governor, Charles T. Saxton; Secretary of State, John Palmer; Comptroller, James A. Roberts; Treasurer, Addison B. Colvin; Attorney-General, Theodore E. Hancock; State Engineer and Surveyor, Campbell W. Adams; Superintendent of Public Instruction, Charles R. Skinner; Superintendent of Insurance, James F. Pierce; Superintendent of Banking Department, Charles M. Preston, who was succeeded on Jan. 24, by Frederick D. Kilburn; Superintendent of the State Prisons, Austin Lathrop; Superintendent of Public Works, George W. Aldridge; Commissioner of Labor Statistics, Thomas J. Dowling, who was succeeded on March 30 by John T. McDonough; Railroad Commissioners, Samuel A. Beardsley, who was succeeded on Dec. 29 by Ashley W. Cole, Alfred C. Chapin, and Michael Rickard. On Dec. 17 Frank M. Baker was appointed to the vacancy caused by the death of Mr. Rickard; Chief Judge of the Court of Appeals, Charles Andrews; Associate Judges, Albert Haight, John C. Gray, Irving G. Vann, Edward T. Bartlett, Denis O'Brien, and Celora E. Martin.

Finances.—The balance in the treasury Oct. 1, 1896, was \$4,930,046, compared with \$1,411,085 on

Sept. 30, 1895. The receipts were \$30,029,386. Of this there was received on account of State tax for all purposes \$15,534,126, and from all other sources \$14,495,260. The latter amount was made up of the following: Corporation taxes, \$2,183,854; organizations (new corporation) tax, \$563,951; inheritance, \$1,796,652; excise tax, \$3,564,014. The rest is canal improvement, loan, and tax and miscellaneous receipts, amounting to \$6,446,786. On Jan. 1, 1896, there was in the treasury \$664,551, and on Jan. 1, 1897, \$2,377,565. The difference is more than made up by the receipts from the liquor tax. The increase of business during the past ten years is indicated by the fact that in 1886-'87 11,824 checks were paid, and in 1895-'96 the number had increased to 20,894.

The State tax rate is 2.69 mills, compared with 3.24 mills last year. This tax will raise \$961,116 for general purposes; \$4,062,903 for free schools; \$218,435 for new work on the canals; \$567,932 for the canal debt; \$1,135,865 for the maintenance of the canals; \$436,871 for extraordinary expenses of the canals; and \$4,368,712 for the State care of the insane; making a total of \$11,751,837. There is estimated this year \$3,000,000 in receipts from the new liquor tax law. Without any receipts from this source, the tax rate for 1896 would have been nine hundredths of a mill greater than in 1895. The increase of appropriations of 1896 over 1895, which amounts to about \$700,000, is due largely to an item of about \$120,000 for academies under the Horton law of 1895, interest and sinking fund on canal debt of about \$570,000, \$350,000 under the Raines law appropriation, and \$400,000 increase of the Capitol appropriation. The total appropriations other than the ones mentioned are less than last year.

Wealth of the State.—The State assessors during the year were Martin Heermance, Rollin L. Jenkins, and Edward L. Adams, each of whom receives a salary of \$2,500. The total amount of property in the State in 1895, as returned by the local assessors, was \$4,368,712,903. It was divided as follows: Real estate, \$3,908,853,377; personal property, \$541,621,122. Amount of assessed value of real estate taken from some counties and added to others by the equalization table of 1896, \$145,339,831; equalized value of real estate, 1896, \$3,908,853,377; total equalized value of real and personal property in the State, 1896, \$4,368,712,903.

Legislative Session.—The regular session of the Legislature began on Jan. 3, 1896, and continued until April 30. As elected, the Senate consisted of 35 Republicans, 14 Democrats, and 1 Independent Republican; and the Assembly consisted of 103 Republicans and 47 Democrats. Timothy E. Ellsworth was chosen President *pro tem.* of the Senate, and Hamilton Fish, Speaker of the Assembly. During the session 1,708 bills were introduced into the Assembly and 1,283 into the Senate. Of these, 1,003 became laws, against 1,045 last year. Of the 775 thirty-day bills left for the consideration of the Governor at the close of the Legislature, 576 were signed by him. The Governor did not use his veto power once during the session, but when he found an objectionable bill he induced its recall by concurrent resolution.

Two important measures met with energetic opposition at every stage, but finally became laws. The first, known as "the Raines bill," was entitled "An Act in relation to the traffic in liquors, and for the taxation and regulation of the same, and to provide for local option." It was essentially a high-license measure and required that two thirds of the receipts from the tax go to the municipality in which the saloon is located, and one third to the State, thus creating a new source of revenue. It is

claimed for it that "the duties hitherto exercised by almost 3,000 excise officers are, or will be, performed by less than 150 persons, including county treasurers, and probably \$12,000,000 will be collected for State and local purposes at an annual expenditure of less than \$250,000, where heretofore less than \$5,000,000 was collected at an annual expenditure exceeding \$500,000." By diminishing the number of saloons, it was claimed, the saloon would be largely removed from political influence.

The other measure of paramount importance was the passage of the "Greater New York bill," entitled "An Act consolidating the local governments of the territory within the city and county of New York, the counties of Kings and Richmond, and Long Island City, and the towns of Newtown, Flushing, and Jamaica, and part of the town of Hempstead, in the county of Queens, and providing for the preparation of bills for enactment into laws for the government thereof."

Among the more important measures adopted are the following:

Concerning New York city: A bill providing for an additional issue of Dock Department bonds to the amount of \$6,000,000.

Authorizing new buildings and additions for the Charities Department.

Providing for the laying of additional water mains from the Central Park reservoirs to Chambers Street.

Authorizing an expenditure of \$5,000,000 for additional public-school accommodations.

Providing for an addition to the Museum of Natural History.

Authorizing the rebuilding of the Tombs Prison and an addition to the Blackwell's Island penitentiary.

Authorizing the erection of public baths.

Increasing from \$150,000 to \$300,000 the sum annually allowed the Fire Department for buildings and improvements.

Incorporating a company to build a bridge over the East river at Ward's Island.

Authorizing the issue of bonds for \$150,000 to complete Riverside Drive.

Providing for the addition to Riverside Park of two city blocks in the immediate vicinity of Grant's Tomb.

Authorizing the expenditure of \$250,000 for a new bridge at City Island.

Providing \$100,000 for a new bridge over the Bronx at Westchester Avenue.

Providing for a public park at 196th Street, on the Kingsbridge road, in which the Poe cottage is to be placed.

The rapid-transit amendments, and the bill compelling the elevated road to light its cars properly.

Other bills of importance are included in the following list:

Requiring public accountants and horseshoers to be licensed.

The antitrust bills.

For the employment of convicts as required by the new Constitution.

For the more general study of the effects of alcohol and tobacco by public-school children.

Declaring that a bicycle is personal baggage, and must be carried free by railroads.

To stop prize fighting.

Prohibiting sparring exhibitions except by clubs leasing buildings for a year.

Making it a misdemeanor to deposit sharp substances on roads used by cyclists.

Authorizing electioneering to within 100 feet of a polling place, and prohibiting all posters except those authorized by law.

Providing that persons under twelve years of age

convicted of a felony may be sent to a house of refuge instead of a prison or penitentiary.

Making it a misdemeanor for a clerk or stenographer or other employee of an attorney to disclose any communication.

Prohibiting the sale of liquor within half a mile of county buildings other than a county jail.

Allowing the sale of milk, fruit, and flowers on Sunday.

Prohibiting the confinement of self-committed persons in the New York Workhouse.

Prohibiting foreign insurance companies whose home country legislates against American companies from doing business here.

For placing an equestrian statue of Major-Gen. Henry W. Slocum on the battlefield of Gettysburg.

To cede jurisdiction to the United States of America over lands in the town of Southfield, County of Richmond, to be occupied as sites for fortifications and seacoast defenses.

Judiciary.—In accordance with the Constitution framed by the convention of 1894, a new judicial system went into effect on Jan. 1, 1896 (see "Annual Cyclopædia" for 1894, page 532).

Banks.—These are under the supervision of a State superintendent, who is appointed for three years and receives a salary of \$5,000. Charles M. Preston was the incumbent until Jan. 24, when he was succeeded by Frederick D. Kilburn. His report for the year ending Sept. 30 showed that the amount of capital employed by the State banks was \$33,295,700, a net decrease of \$1,898,505 during the fiscal year. The number of State banks doing business was 213, a reduction of 2. Four banks went into voluntary liquidation, and 3 new ones were organized. There are 23 associations loaning money on personal security, which were formed under the law of 1895, 18 of which were formed between Jan. 1 and Sept. 30.

The total resources of all the moneyed institutions under the supervision of the department are as follows: Banks of deposit and discount, \$273,795,005; savings banks, \$806,751,426; trust companies, \$396,917,238; safe-depositaries companies, \$4,576,770; foreign mortgage companies, \$25,574,560; and building and loan associations, \$50,168,683; total, \$1,557,783,682. This is an increase of \$19,440,788 over the resources of 1895.

The following figures show the condition of the savings banks for the year ending June 30: Total resources, \$806,751,426; due depositors, \$715,032,899; other liabilities, \$41,157; surplus, \$91,307,370; number of depositors, 1,732,382; number of accounts opened, 346,147; number of accounts closed, 268,189; amount of deposits received, \$215,490,558; amount of deposits withdrawn, \$194,652,393; amount of interest credited depositors, \$24,958,727; current expenses of the banks, \$2,397,696.

The condition of the co-operative savings and loan associations, of which 385 are operating in this State, was said to be as follows: The total assets of the 360 associations whose reports have been tabulated are \$50,168,683, of which \$15,315,957 belongs to the "national" associations and \$34,852,725 to the "locals." Loans on bonds and mortgages by the "nationals" are \$12,284,400, and by the "locals" \$30,605,080. Seven new associations were formed during the year.

Civil Service.—On Dec. 9 Gov. Morton approved a reclassification of several thousand places which had been submitted to him by the State Civil Service Commission. This reclassification provided for 4 classes of office or employment instead of 4 schedules. Class 1 and Class 2 have to do with the best in the service. Class 3 includes skilled laborers and officers of a minor grade, which are subject to a noncompetitive examination. Class 4 includes un-

skilled laborers, and provides that they may be employed without examination.

The changes made by the new classification show that 116 offices have been taken from the noncompetitive and placed in the competitive class, and that 41 are taken from the competitive and placed in the noncompetitive class.

Education.—This department is under the supervision of a superintendent, whose salary is \$5,000 and whose term of office is three years. The present incumbent is Charles R. Skinner. In his annual report for the school year ending July 31, 1896, he gives the following statistics: Number of school districts, 11,800; increase, 29; schoolhouses, 12,027; increase, 42; value of schoolhouses and sites, \$60,333,126; increase, \$6,933,110; number of children of school age (five to eighteen years) 1,651,858; decrease, 294,387; number of children attending school some portion of the year, 1,176,074; increase, 17,731; average daily attendance, 777,054; increase, 14,360. The decrease in the number of children of school age is caused by the fact that the limit of school age has been changed from twenty-one years to eighteen.

There was expended during the year \$23,173,830 for educational purposes, against \$20,950,614 during 1895. Of the amount expended this year, \$15,542,071 was for the maintenance of the public-school system in the cities and \$7,531,759 in the country districts.

The first biennial special census taken by the Department of Public Instruction was completed on Feb. 28. The census was taken in 37 cities and 7 incorporated villages having a population of over 10,000. The total population between the age of four and twenty-one in these cities and villages is returned at 1,115,052.

The number of children between four and sixteen in the public schools was 480,285; in other than public schools, 162,226; employed, 57,032; truant, 7,039. There were also 149,291 children between the ages of four and eight who were out of school, but neither employed nor truant.

The annual report of the regents of the University of the State showed that the number of high schools increased from 285 in 1893 to 371 in 1895, and the number of academies from 125 in the former year to 133 in the latter. The charters of a number of small colleges have been revoked, driven out of existence by the influence of the larger colleges. The number of students in the academies, high schools, and colleges of the State increased from 63,872 in 1894 to 76,704 in 1895. The number of instructors in the high schools and academies was 2,542, and the number of students 49,347. The total expenditure of these institutions was \$3,133,218; the total receipts, \$3,143,824; total volumes in libraries, 585,369.

Reports to the regents for 1895-'96 show that there are 181 free circulating libraries of 1,000 volumes, a gain of 25 over the preceding year. Over 83,270 books were added to these libraries, and their circulation increased from 2,665,000 to 3,012,000 volumes. The gain in circulation for libraries of this class was 347,425 in one year and 768,122 in two years. The average circulation was 261 for each 100 volumes in 1894 and 287 in 1895.

Health.—The State Board of Health consists of Case Jones, president; Baxter T. Smelzer, secretary; Daniel Lewis, Owen Cassidy, Frederick W. Smith, George B. Fowler, Frank E. Shaw, together with the Attorney-General, the State engineer, and the health officer of the port of New York as members *ex officio*. Their annual report says that: "The last decade has been noticed for advancement in sanitary science, the result being a decided public demand for abundant supplies of pure water,

the most approved systems of drainage and disposal of garbage, the control of preventable diseases, and a systematic enforcement of every requisite for the maintenance of the health and comfort of the people."

Prisons.—The charge of the State Prison is under the supervision of a State superintendent, who receives a salary of \$6,000. The incumbent during the year was Austin Lathrop. The charges of malfeasance made against Superintendent Lathrop were dismissed by the Governor on Oct. 13.

For the year ending Sept. 30, 1895, the expenditures of the prisons in Auburn, Sing Sing, and Clinton were \$467,209. As the daily average of prisoners in 1895 was 97 greater than 1896, a rigid economy was practiced in the latter year. In 1894 the earnings were \$99,197; in 1895 the sum of \$135,181 was so credited. By this increase of net earnings the deficit of 1893 was reduced.

The number of inmates in the State prison for women at the close of the year was 99, or 17 fewer than at the beginning of the year.

The present prison system terminated with the current calendar year by constitutional provision. The future employment of the prisoners will be determined by the Legislature, with the prohibitions and limitations established by the Constitution.

Excise.—The Raines bill, which owes its name to Senator John Raines, of Ontario, was signed by the Governor on March 23, and went into full effect on July 1. In compliance with its demands, Henry H. Lyman was appointed excise commissioner. Concerning its value, Gov. Bleak said in his message: "The operation of the present excise law has been in many respects satisfactory. The revenue received from it from May 1 to Nov. 20 was \$11,000,083, more than twice as much as the receipts for licenses during the entire year of 1895. It has caused a large decrease in the number of saloons, and the expense of running the excise department is less than that of running the old excise boards."

Senator Raines described its working in New York city as follows: "Up to Aug. 1, 1896, the number of tax certificates issued to places selling liquor to be drunk on the premises in New York city was 6,497; the number issued to storekeepers and druggists was 813; total number of certificates issued, 7,310. The total amount received for such certificates was \$4,857,918.25. It will be seen that while there was a reduction in the number of places authorized to traffic in liquor of 2,808, or 27 per cent., there was an increase in net revenue of \$3,201,678.52."

Charities.—The number and classification of beneficiaries of the charitable institutions of the State for the year ending Sept. 30, 1895, were: Idiotic and feeble-minded, 1,828; epileptics in poorhouse and almshouses, 547; blind, 670; deaf, 1,453; dependent children, 27,974; juvenile offenders, 5,432; reformatory prisoners, 380; disabled soldiers and sailors, 1,100; hospital patients, 6,655; aged and friendless persons, 8,131; and poorhouse inmates, 13,658; total, 67,828.

This is exclusive of insane in State hospitals and almshouses, and of adult felons in reformatories.

The number of alien paupers removed from poorhouses and other charitable institutions and furnished passage to their homes in Europe was 261.

Insane.—The State Commission in Lunacy consists of 3 members, Carlos F. MacDonald, Goodwin Brown, and Henry A. Reeves. Their report shows a total net increase in all the institutions of 1,131 patients, divided as follow: In the State hospitals, 585; in the counties of New York and Kings, 515; in the private asylums, 31. The total number of committed and registered insane on Oct. 1, 1895, in

all the institutions was 20,216, of which 10,156 were in the State hospitals, 9,213 in the institutions of New York and Kings Counties, and 847 in the private asylums.

The taxpayers are saved over \$1,500,000 annually by the operation of the law providing for the State care of the insane.

State Engineer.—The engineering problems of the State are under the supervision of a State engineer, who receives a salary of \$5,000. The incumbent during the year was Campbell W. Adams. His reports discussed in detail the canal-improvement surveys and plans, concerning which he said: "Twenty-five fully equipped corps of engineers were in the field, making the surveys preparatory to letting the contracts under the \$9,000,000 bill. Nine of these corps were at work on the eastern division, 7 on the middle division, and 9 on the western division, the distance allotted to each being about 18 miles, making a total of about 450 miles, or the total length of the Erie, Oswego, and Champlain Canals.

Considerable space in the report was devoted to the topographical map of the State, which has been prosecuted under the joint supervision of the State engineer and the United States Geological Survey, the State and General Government each paying half the cost. One fifth of the State has already been surveyed and mapped in this manner at the cost of about \$10 a square mile.

Canals.—The care of these water ways is in charge of the Superintendent of Public Works, who receives a salary of \$6,000. The present incumbent is George W. Aldridge. His annual report shows that the whole number of tons of freight carried during 1896 was 3,714,894, of which the Erie Canal carried 2,742,438; Champlain, 802,510; Oswego, 57,245; Black River, 57,953; Cayuga and Seneca, 54,739. Of the total tonnage, 852,467 tons were products of the forests, 1,126,665 of agricultural products, 152,322 of manufactures, 270,603 of merchandise. The tonnage for the past season was 214,580 tons in excess of that of 1895. The average price for transportation of wheat from Buffalo to New York was $\frac{3}{4}$ of 1 cent a bushel—the highest since 1890.

Railroads.—This department is cared for by 3 commissioners, each of whom serves for five years and receives a salary of \$8,000. The incumbents during the year were Samuel A. Beardsley, who was succeeded on Dec. 29 by Ashley W. Cole; Alfred C. Chapin; and Michael Rickard, who was succeeded on Dec. 17 by Frank M. Baker. Their report for the year ended June 30, 1896, shows an increase of \$10,891,237 in the gross earnings of the lines within the State. They further report that the railroads are in better condition than they were in 1895, and consequently better prepared to reap the advantages of more prosperous business conditions. A decreased percentage of accidents to passenger trains is noted. Of the 179,315,449 passengers carried on the steam roads during the year, only 3 persons were killed from causes beyond their own control.

Labor Statistics.—This department is in charge of a commissioner, who receives a salary of \$3,000 a year. The present incumbent is John T. McDonough. His report showed that on July 1, 1894, there were 157,197 members in 860 labor organizations. These unions added 15,416 members to their lists during the year, while in the same time 67 new organizations were formed, with a membership of 7,618, making a total on July 1, 1895, of 927 unions and assemblies, with 180,231 members—an increase of 23,034.

In 198 trades and callings for 1895 112 organizations report an increase in wages, 70 a decrease, 704 report no change, while 41 did not give the wage rates. As to the working time in the same number

of occupations, 18 organizations report an increase, 68 a decrease, 789 report no change.

The figures show that 75.57 per cent. of the members of the unions were at work in July, 1894, while in July, 1895, 80.33 per cent. were employed.

Factory Inspection.—This charge is in the care of a State inspector, who receives a salary of \$2,000. James Conolly was the inspector until May 1, when he was succeeded by Daniel O'Leary. His annual report shows that 27,425 inspections were made—6,240 more than in 1895. In the establishments visited there were employed 537,702 persons, 159,226 of whom were women, including 53,997 under twenty-one years of age. There were 12,100 children over fourteen and under sixteen years of age in these establishments. Eighty-four children under fourteen years were found employed, compared with 211 for 1895, and only 185 illiterate children, compared with 310 for 1895. During 1895 there were 27 fatal accidents in the mines. For the year 1896 there were 9. During 1895 nearly 20 of the fatalities were the result of falling roof rock. In 1896 not a single death was reported from this cause.

Fisheries.—These are under the charge of a State fish culturist, who receives a salary of \$3,500. The present incumbent is A. N. Cheney. During 1896 217,936,751 fish fry were planted, of which 190,519,218 were supplied from the State hatcheries and 27,417,533 by the United States. In 1896 195,000,000 fish fry were planted in the waters of the State. During 1896 13,000,000 shad fry were placed in the Hudson river, together with 55,000 salmon. Fifty thousand white fish were planted in Lake Ontario, and the remaining fry otherwise distributed among the inland waters of the State.

National Guard.—The supervision of the State militia is chiefly under the charge of the Adjutant General on the Governor's staff. The incumbent during Gov. Morton's term of office was Major-Gen. E. A. McAlpin. His report shows that there are about 500,000 men in the State subject to enrollment for military duty who would be fit for such service. The Guard consists of 851 commissioned officers and 12,556 enlisted men. The work performed by the troops at State camp was satisfactory, and Col. Robert H. Hall and Capt. J. B. Burbank, U. S. A., on duty at the camp, deserve great credit. Six thousand and fifteen officers and enlisted men were paid for their services in camp. All the organizations of the National Guard and Naval Militia, including headquarters of brigades, are provided with quarters, with the exception of the Fourth Signal Corps and headquarters of the Fourth Brigade, but the quarters occupied by the Thirty-sixth and Thirty-seventh Separate Companies, in Schenectady, are unsafe and inadequate. The headquarters of the Twenty-ninth Separate Company, in Medina, are insufficient. The headquarters of the Ninth Separate Company, in Whitehall, are unsuitable. The pensions paid members of the Guard who were injured while on duty aggregate \$3,756 annually.

Historical Department.—The office of State historian was created by the Legislature in 1895, and to that place Hugh Hastings was appointed. In his first annual report he describes the means by which it is proposed to save the historical documents of the State. The plan adopted contemplates the publication of five series of works, as follow:

First, the colonial period up to the breaking out of the War of the Revolution.

Second, the period between 1775 and 1800.

Third, the period from 1800 to the close of the second war with Great Britain.

Fourth, the period from the close of the second war with Great Britain to the outbreak of the war of the rebellion, including the war with Mexico.

Fifth, the war of the rebellion.

The work of transcribing the muster rolls of the New York colonial organizations from 1715 to 1755 was accomplished. These transcribed rolls were completed in one volume to 1755, and contain the names of over 4,000 Americans. It is ready for publication, and will form the first volume of the history of the State under the enabling act of 1895.

The State Capitol.—Bids for completing the Capitol building by contract were received and accepted. The work of completing the eastern approach and side terraces and the western staircases was carried on by day labor. The building will be completed by contract and the contractors are at work. The Legislature in 1896 appropriated \$500,000 for the contract work and \$310,000 for day labor. An additional appropriation of \$856,388 will be needed to complete the contract work, and more than \$200,000 additional will be necessary to finish the work that is being performed by day labor.

Greater New York.—In 1890 a commission was created by an act of the Legislature to inquire into the expediency of consolidating the city of New York and the various municipalities and towns in the State of New York composing its suburbs. This commission presented a bill to the Legislature in 1893 submitting the question of municipal consolidation to a vote of the people of the various cities and towns proposed to be consolidated, but the bill failed to reach a vote. A year later the bill was again introduced and became a law. In 1895 the question was submitted to the people, with a favorable result from New York, Kings County, Queens County, Richmond County, East Chester, and Pelham, while Mount Vernon and West Chester voted against the bill. The territory to be included within Greater New York includes "all municipal corporations and parts of such corporations other than counties within the territory covered by the counties of Kings and Richmond, Long Island City, the towns of Newtown, Flushing, and Jamaica, and that part of Hempstead in Queens County west of a line drawn from Flushing between Rockaway Beach and Shelter Island to the ocean." The new metropolis will have an area of 359 square miles and a population of over 3,100,000. The bill that provided for the consolidation was passed by the Legislature of 1896, and required that a commission be appointed to report a charter by Feb. 1, 1897. On June 9 Gov. Morton named the following commission: For New York city, Seth Low, Benjamin F. Tracy, John F. Dillon, and Ashbel P. Fitch; for Brooklyn, Stewart L. Woodford, Silas B. Dutcher, and William C. De Witt; for Richmond County, George M. Pinney, Jr.; for Queens County, Garret J. Garretson.

The members of the commission named by the Consolidation act are: Andrew H. Green, Campbell W. Adams, Theodore E. Hancock, William L. Strong, Frederick W. Wurster, Patrick J. Gleason.

Mr. Fitch being unwilling to serve, Thomas F. Gilroy, ex-Mayor of New York city, was appointed to his place. Toward the close of the year Garret J. Garretson, having been elected a justice of the Supreme Court, resigned from the commission, and on Dec. 30 Harrison S. Moore was appointed to the vacancy. At the close of the year 13 chapters of the Greater New York charter had been made public. The consolidation will take place on Jan. 1, 1898, and a mayor for the new city will be elected in the autumn of 1897.

Political.—A Republican State convention was held in New York city on March 24. The gathering was called to order by Chairman Charles W. Hackett, of the State committee. Congressman George N. Southwick was made permanent chair-

man, and a platform was adopted with planks declaring a "firm and unyielding adherence to the doctrine of protection to American industries, protection to the products of the American farm, and protection to American labor"; also that "while gold remains the standard of the United States and of the civilized world, the Republican party of New York declares itself in favor of the firm and honorable maintenance of that standard." On this platform the name of Gov. Levi Parsons Morton was presented as "New York's Republican candidate for President." The four delegates at large and the candidates for presidential electors were then chosen.

A Democratic State convention was held in Saratoga Springs on June 24. The meeting was called to order by James W. Hinkley, chairman of the Democratic State Committee, and John Boyd Thacher made temporary chairman. Later the temporary officers were confirmed as permanent officers of the meeting. The platform declared: "1, In favor of gold and silver as the standard money of the country; 2, that 'the Democratic party has ever been and still is the hard-money party, and it will still preserve that record'; 3, it testified to an 'adherence to the principle of a tariff for revenue only.'" The delegates and alternates to represent New York at the national convention were chosen and instructed to vote as a unit.

A State convention of the members of the Prohibition party was held in Syracuse on Aug. 19-20. Francis E. Baldwin presided, and after the adoption of a platform the following State ticket was nominated: Governor, William W. Smith; Lieutenant Governor, Dr. Charles H. Latimer; and Judge of the Court of Appeals, Darius Root.

A Republican State convention was held in Saratoga Springs on Aug. 25-26. It was called to order by Benjamin B. Odell, of the State Executive Committee, and Frank S. Black was named as temporary chairman. Subsequent to the appointment of the committees Stewart L. Woodford was made permanent chairman. A platform was adopted favoring "the present gold standard" and approving the nominations of the national convention. On State issues it included the following:

"The Republican party has redeemed its pledge to enact a just measure of excise reform. The Raines liquor-tax law, passed by Republican votes as a Republican measure, against the bitter opposition of the Democratic party, has won, as it has deserved, the warm and general approval of public opinion. Nearly three fourths of the liquor-tax certificates have been granted for only ten months, and yet the revenues to the State are more than \$3,500,000. The rate of taxation for State purposes is 2.69 mills, and at this rate the receipts from the Raines act are equivalent to the placing on the tax rolls for State taxation the vast sum of \$1,300,000,000 of taxable property. More than \$7,000,000, moreover, has been placed by this law in the local treasuries of the cities and towns, and that is equivalent at the same rate to the placing on the rolls for local taxation of the further sum of \$2,600,000,000."

The names of the following candidates for Governor were presented: George W. Aldridge, Hamilton Fish, James A. Roberts, Charles T. Saxton, Archie E. Baxter, James W. Wadsworth, Frank S. Black, Edgar T. Braekett, John Palmer, J. Sloat Fassett, Timothy E. Ellsworth, Benjamin B. Odell, Jr., Clarence Lexow, Frank Hiseock. After four ballots for the highest office, the following ticket was chosen: Governor, Frank S. Black; Lieutenant Governor, Timothy L. Woodruff; and Associate Judge of the Court of Appeals, Irving G. Vann. A new State committee was also chosen.

A convention of "sound-money" Democrats was held in Syracuse on Aug. 31, with Daniel G. Griffin as chairman. A platform repudiating "the Chicago platform because it proposes to substitute for our present standard of value, which is equal to the best in the world, an unstable and depreciated standard, which has been rejected by every civilized and prosperous nation, and would put us on a monetary level with China, Mexico, and other countries where labor is notoriously underpaid." Delegates were chosen to represent New York at the convention of the National Democratic party.

A Democratic State convention was held in Buffalo on Sept. 16-17, presided over by Hosea H. Rockwell. A platform was adopted that approved the platform adopted by the Democratic party in Chicago and the nominations there made, and declared as its deliberate judgment that never in the history of the Democratic party has a platform been written which embodied more completely the interests of the whole people.

On State issues it said: "We denounce those provisions of the Raines liquor law which deprive municipalities of the right to restrict and regulate the liquor traffic within reasonable limits prescribed by law; which divert excise moneys from local treasuries, where they properly belong, into the State treasury, in order to make good deficiencies in State revenues caused by the extravagance of Republican Legislatures that otherwise would need to be supplied by additional direct taxation; which fasten upon the people a gigantic State political machine breeding corruption and intimidation, and which compel the granting of licenses to persons or places of notoriously bad character."

The names of John Boyd Thacher, William Sulzer, and Wilbur F. Porter were placed in nomination for Governor, and the following ticket was chosen: Governor, John Boyd Thacher; Lieutenant Governor, Wilbur F. Porter; Judge of the Court of Appeals, Robert C. Titus. A new State committee was also chosen, with Elliot Danforth as chairman. Mr. Thacher declined the nomination, owing to his unwillingness to make a canvass on a platform that advocated "free silver." Accordingly, at a meeting of the Democratic State Committee held in New York city on Sept. 28, the ticket was changed by nominating Wilbur F. Porter for Governor and Frederick C. Schraub for Lieutenant Governor.

Finally, the National Democratic party of New York, representing the "sound-money" Democrats, met in Brooklyn on Sept. 25, under the chairmanship of Charles S. Fairchild, and after adopting resolutions denouncing the platform adopted by the National Democratic Convention, held in Chicago, nominated the following ticket: Governor, Daniel G. Griffin; Lieutenant Governor, Frederic W. Hinrichs; and Associate Judge of the Court of Appeals, Spencer Clinton.

The election, held on Nov. 3, resulted in the success of the ticket containing the Republican presidential electors by a vote of 819,838, against 551,513 for the Democratic electors. On the State ticket, for Governor, Black received 787,576, Porter 574,524, Griffin 26,698, and Smith 17,449 votes; for Lieutenant Governor Woodruff received 793,845, Schraub 565,063, Hinrichs 25,593, and Latimer 17,136 votes; for Judge of the Court of Appeals, Vann received 799,122 and Titus 555,942 votes.

An amendment to the State Constitution to authorize the leasing of tracts of the Adirondack forest preserve, the exchange of State lands outside the preserve for those owned by individuals within the preserve or the sale of State lands outside the forest preserve, received 321,486 in favor and 710,505 votes against.

With the exception of the candidates from the Seventh, Ninth, Tenth, Eleventh, and Twelfth Congressional Districts (in New York city), the entire delegation elected to Congress was Republican, while the new Legislature consists of 114 Republicans, 35 Democrats, and 1 Independent Republican.

Watervliet, the thirty-eighth city of the State in the order of incorporation, was given a charter in May, 1896, to become operative on Aug. 1, following. The charter, in its general features, follows the charters of Gloversville, Ithaca, Johnstown, and others of the more recently created cities. The city included certain tracts, divided into 9 wards, in the towns of Watervliet and Colonie, in Albany County. The greater part of both the territory and the population of the new city came from the former village of West Troy. All the real estate and the personal property formerly belonging to that village and the board of education of the West Troy school district became vested in the city of Watervliet. The city is on the west bank of Hudson river, about 5 miles above Albany, and directly opposite Troy. The boundary runs along the river about two miles, and the city extends in land more than a mile. A combined railroad and wagon bridge gives access to Troy, and the Delaware and Hudson Railroad makes connections for the north, south, and east. The eastern terminus of the Erie Canal and the southern terminus of the Champlain Canal are within the limits of the city. Watervliet is on the electric railroad between Albany and Troy. The city, under its former name of West Troy, has been well known as a center for the manufacture of bells, railroad supplies, electric cars, hinges, stoves, hollow ware, cement, shawls, and knit underwear. The United States Government has jurisdiction over the 105 acres belonging to the Watervliet arsenal, where all the large guns for coast defense are made (see GUNS FOR COAST DEFENSE, in the "Annual Cyclopædia" for 1887, page 348). The recent enlargement of this plant has resulted in the making of 12-inch and 16-inch guns, together with their carriages. When the guns are ready for delivery they are placed on flat boats and towed to Sandy Hook, where they are tested before they are finally mounted. Next to Albany, Watervliet handles the largest amount of lumber in the vicinity, and there is a large trade in various commodities from the two canals. The deepening of the channel of the upper Hudson has also added to the commercial importance of the place. The population of West Troy was 10,693 in 1870; 8,820 in 1880; and 12,967 in 1890. The estimated population of Watervliet (1897) is 14,000. Owing to the proximity of Troy and Albany, but one newspaper is published, and that is a weekly. The city contains 10 churches and 7 schools.

NEW YORK CITY. Government.—The city officials who held office during the year were: Mayor, William L. Strong; President of the Board of Aldermen, John Jeroloman; Register, William Sohmer; and Sheriff, Edward J. H. Tamsen, all of whom were elected on the anti-Tammany ticket and took office on Jan. 1, 1895, except the Register, who is a Tammany Democrat, and took office on Jan. 1, 1896.

Finances.—The condition of the city debt on Dec. 31, 1896, is shown in the table on next page.

During the year the cost of permanent improvements amounted to \$26,191,845.91, and bonds for that sum were issued. The expenses of the municipality exceeded the income, and the net funded debt of the city was increased by \$8,391,689.11. During 1896 \$7,000,000 of the city's bonds, formerly bearing 7 per cent. interest, were redeemed by the issuance of other bonds at 3½ per cent. The returns as given beyond in the wealth of the city resulted, in

FUNDED DEBT.	Outstanding Dec. 31, 1895.	Issued during 1896.	Redeemed during 1896.	Amounts held as investments by the sinking fund.	Outstanding Dec. 31, 1896.
1. Payable from the sinking fund, under ordinances of the Common Council.....	\$2,512,100 00		\$11,500 00	\$41,500 00	\$2,500,600 00
2. Payable from the sinking fund, under provisions of chapter 383, section 6, Laws of 1878, and section 176, New York City Consolidation act of 1882.....	9,700,000 00				9,700,000 00
3. Payable from the sinking fund, under provisions of chapter 383, section 8, Laws of 1878, and section 192, New York City Consolidation act of 1882, as amended by chapter 178, Laws of 1889.....	69,832,321 12	\$18,752,383 32		37,107,430 99	88,584,604 44
4. Payable from the sinking fund, under provisions of chapter 79, Laws of 1889.....	9,810,100 00	12,000 00		465,100 00	9,822,100 00
5. Payable from the sinking fund, under provisions of the constitutional amendment adopted Nov. 4, 1884.....	33,670,000 00	5,100,000 00		14,373,000 00	38,770,000 00
6. Payable from taxation.....	445,000 00			45,000 00	445,000 00
7. Payable from taxation, under the several statutes authorizing their issue.....	49,598,246 05		14,324,443 18	11,318,902 87	35,273,802 87
8. Bonds issued for local improvements after June 9, 1880.....	9,355,429 91	1,813,018 70	1,450,000 00	8,768,448 61	9,718,448 61
9. Debt of the annexed territory of Westchester County (chapter 329, Laws of 1874).....	490,500 00		13,500 00		477,000 00
10. Debt of the annexed territory of Westchester County (chapter 934, Laws of 1895).....	175,000 00	514,443 89	73,309 62		616,134 27
Total funded debt.....	\$185,588,597 08	\$26,191,845 91	\$15,872,752 80	\$72,119,382 47	\$195,907,690 19
TEMPORARY DEBT.—Revenue Bonds.

SUMMARY.

Total funded debt, Dec. 31, 1895.....	\$185,588,597 08
Total funded debt, Dec. 31, 1896.....	195,907,690 19
Less amount held by commissioners of the sinking fund for the redemption of debt:	
Investments on account fund No. 1.....	62,602,304 81
Investments on account fund No. 2.....	11,085,494 54
Cash on account fund No. 1.....	3,302,642 07
Cash on account fund No. 2.....	640,050 21
Total sinking fund.....	\$77,630,491 63
Net funded debt, Dec. 31, 1895.....	109,885,509 45
Net funded debt, Dec. 31, 1896.....	118,277,198 56
Increase in net funded debt in 1896.....	8,391,689 11

\$96,700; salaries—city courts, \$376,000; salaries—judiciary, \$1,489,260; charitable institutions, \$1,527,051.51; miscellaneous, \$521,892.64; total, \$49,486,297.17; deduct general fund, \$3,800,000; grand total, \$45,686,297.17.

This statement shows that the amount allowed for 1897 is \$49,486,297.17, which is reduced by deducting from the general fund made up by receipts from various sources during the year, including the unexpended balance of previous years, \$3,800,000. The total amount to be raised by taxation is \$45,686,297.17, which represents an increase of \$1,689,726.86. This increase is due mainly to expenditures on permanent improvements, such as the purchase of lands for public parks and docks and their improvement, the purchase of land and the erection thereon of school buildings, police and fire houses, small museums, armories, bridges over the Harlem river, the repaving of streets and avenues, increasing the supply of wholesome water, hospitals and asylums, and similar improvements which the constant growth of the city imperatively demands and which can not be justifiably paid for from direct annual taxation, but are paid for from the issue of city bonds.

Wealth of the City.—This department is a county charge, and is cared for by a board of 3 tax commissioners, as follows: Edward P. Barker (president), Theodore Sutro, and James L. Wells, each of whom receives a salary of \$7,000 and the president \$1,000 additional. The office is at 280 Broadway. They report the total valuation of real and personal property, as assessed for taxation in 1896, to be \$2,106,484,905, against \$2,016,947,662 for 1895, showing a net increase of \$89,537,243, which is distributed as follows: Increase in real-estate assessments, \$85,480,488; increase in personal-estate assessments, \$4,056,755; total, \$89,537,243. The total taxation on personal estate was distributed as follows: Insurance companies, \$2,807,533; trust companies, \$4,881,188; shareholders of banks, \$82,624,193; railroad companies, \$13,181,407; resident corporations, \$47,945,164; nonresident corporations, \$20,797,434; personal nonresident, \$25,670,647; personal resident, \$90,984,047; and estates, \$86,084,149.

August, in the announcement of a tax rate of \$2.14 for each \$100 of assessment, compared with \$1.91 for 1895.

Board of Estimate and Apportionment.—This body, consisting of the Mayor, the President of the Board of Aldermen, the Comptroller (Ashbel P. Fitch), the President of the Department of Taxes (Edward P. Barker), and the Counsel to the Corporation (Francis M. Scott), allowed the following amounts for 1897: Mayoralty, \$42,155; Common Council, \$91,500; Finance Department, \$321,400; interest on city debt, \$5,654,258.53; redemption of city debt, \$4,172,669.35; State taxes and common schools, \$5,451,110.21; rents, \$171,352; armories, \$2,750; judgments, \$250,000; Law Department, \$197,550; Public Administrator, \$16,990; Department of Public Works, \$3,519,555.66; Department of Public Parks, \$1,333,125; Department of Street Improvements, \$779,750; Department of Public Charities, \$1,289,942; Department of Correction, \$471,500; Department of Health, \$581,358; Police Department, \$6,983,939.08; Bureau of Elections, \$323,500; Department of Street Cleaning, \$2,999,002.40; Fire Department, \$2,435,926; Department of Buildings, \$340,785; Department of Taxes, \$170,720; Board of Education, \$5,931,239.89; College of the City of New York, \$175,000; Normal College, \$150,000; printing, stationery, and blank books, \$235,000; municipal civil-service examining boards, \$30,000; coroners, \$57,700; commissioners of accounts, \$60,000; sheriff, \$134,982; register, \$129,250; armories and drill rooms, \$98,885; jurors' fees, \$75,000; preservation of records, \$40,640; street and park openings, \$756,857.90; libraries,

GREATER NEW YORK

Copyright, 1897, by The Brooklyn Daily Eagle.

R. D. SERVOS, N.Y.

City Bonds.—In September the city attempted to sell \$4,000,000 of bonds, but the bidding was so low that the securities were withdrawn. Business was then unsettled and money locked up by the free-silver agitation. Subsequent to the election \$16,046,590.70 of city bonds were advertised for sale. The bonds bore $3\frac{1}{2}$ per cent. interest, payable in gold, and matured in fifteen to twenty-five years. The proposals were opened on Nov. 10, and the number of bids received was 185. The entire amount of the bonds offered was bid for nearly five times over at premiums that average nearly 5 per cent. On Nov. 11 the Sinking Fund Commissioners met and awarded the entire issue of the bonds, amounting to \$16,046,590.71, to Vermilye & Co., who bid 104 71-100. The bonds, or premium, that the city will get for these is \$755,794.42.

Law.—The legal department of the city is under the control of the Corporation Counsel, who is appointed by the Mayor and receives a salary of \$12,000. The present incumbent is Francis M. Scott, and his office is in Tryon Row. His report shows that at the close of 1896 there were pending 4,210 actions and proceedings, 1,875 of which were begun during 1896, and during that year 1,160 actions and proceedings were terminated. Of the work performed by the Law Department there were 122 actual trials, 98 arguments, before the appellate division, and 30 arguments before the Court of Appeals, besides 1,353 attendances at court on call of cases, 19 hearings before the surrogate and district courts and commissions in lunacy, 86 references and condemnation proceedings before commissions in which testimony was taken, 1,200 appearances before referees and commissions, and 1,070 attendances on motions. Over 450 claims for collection were received, 352 of which were collected in whole, and the balance withdrawn, put in suit, and held to await decisions of test cases, or are still under examination. Over 1,080 opinions were rendered to the various municipal departments, while 740 contracts were examined and approved, and 645 claims sent by the Finance Department for examination, besides which 1,186 excise claims were presented for examination. The Law Department collected \$96,015.94, \$16,709.35 of which was collected in the general office, \$66,106.59 by the attorney for the collection of arrears of personal taxes, and \$13,200 by the corporation attorney. The results accomplished by the Law Department during 1896 entailed an expenditure of \$22,392.47 less than for 1895.

Judiciary.—The city magistrates include Robert C. Cornell, Charles A. Flammer, John O. Mott, Henry A. Brann, Leroy B. Crane, Joseph M. Deuel, Herman C. Kudlich, Charles E. Simms, Jr., and Thomas F. Wentworth, each of whom receives a salary of \$7,000. Their report shows that 112,160 persons were brought into the police courts, 559 fewer than in 1895. There were held for trial 73,537. The decrease was largely due to the smaller number of excise arrests. The number arrested for being drunk and disorderly was 60,906, an increase of 500. There was an increase of 20 per cent. in the number of persons held to have their sanity inquired into. The number was 625. The principal nationalities represented in the 73,537 held for trial were: Irish, 14,000; German, 6,500; English, 1,500; Scotch, 480; French, 500; Italians, 400; and Russians, Poles, and Austrians, 13,014. There were but 3,300 who gave the place of birth as the United States, and of these 75 per cent. were born of foreign parents.

On Dec. 7 District-Attorney John R. Fellows died, and on Dec. 16 Gov. Morton appointed William M. K. Olecott to the vacancy.

During 1896 the city by condemnation proceedings acquired a tract of land on the northeast cor-

ner of Madison Avenue and 25th Street for the use of the appellate division of the Supreme Court in the first department, the award therefor being \$370,500.

Public Works.—This department is under the charge of a commissioner appointed by the Mayor. He holds office for four years and receives a salary \$8,000. The incumbent during the year was Charles H. T. Collis.

Concerning the Elm Street widening the commissioners of estimate and appraisal were appointed on Feb. 27, 1895. This improvement involves the widening and straightening of Elm Street from Worth Street to Spring Street, making it of a uniform width of 80 feet. It also involves the cutting through of the blocks from Worth Street to Duane Street; the taking of property on the westerly side of Center Street between Duane Street and Reade Street; and the taking of the block bounded by Center, Reade, and Chambers Streets, together with the widening of Marion Street from Spring Street to its northerly terminus; and the cutting through of the blocks from Prince Street to Great Jones Street so that at the latter street the westerly line of the proposed Elm Street will be a continuation of the westerly line of Lafayette Place.

Proceedings were instituted for a grand boulevard or concourse from 161st Street to Moshulu Parkway. This boulevard extends over 4 miles, and in July the commissioners submitted to the court their first report, involving awards aggregating \$576,937.96.

The Harlem Speedway extends from 155th Street to Dyckman Street, about $2\frac{1}{2}$ miles along the westerly bank of Harlem river. The commissioners have filed their report, the evidence showing that the property owners along the Speedway claim damages to the extent of \$3,000,000, which the city's experts place at a little less than \$200,000, while the award by the commissioners was \$255,576.50.

Parks.—This department is under the direction of a board of 4 commissioners, of which the president receives a salary of \$5,000. During the year the board was composed of Stephen V. R. Cruger, president, Samuel McMillan, William A. Stiles, and Smith Ely. The secretary of the board is William Leary, and the office is in the Arsenal Building, Central Park. Sites for the following parks were selected in 1896: West Side Park, bounded by Ninth and Tenth Avenues and 27th and 28th Streets; the Eleventh Ward Park, bounded by Stanton, Houston, Pitt, Willett, and Sheriff Streets; Fort George Park, between Washington Bridge Park and Dyckman Street, Tenth Avenue and the Speedway; and the Little Italy Park, embracing the land on the East river between 111th and 114th Streets, east of First Avenue. Efforts were made to complete the proceedings for condemnation in order that these parks should be made available at the earliest day for the comfort and enjoyment of the people.

On Aug. 7 Fort Washington Park became a part of the city park system. The highest testimony as to its value given by the witnesses for the property owners aggregated \$1,584,183, while the highest testimony given on behalf of the city aggregated \$742,653.72, and the commissioners' award was \$804,868.20.

Vital Statistics.—The Board of Health consists of the president of the Board of Police, the health officer of the port, and 2 commissioners, one of whom must have been for five years a practicing physician. The commissioner that is not a physician is president of the board and receives a salary of \$5,000, while the other member is paid \$4,000. The *ex-officio* commissioners receive no salary. The officials during 1896 were as follow: President

Charles G. Wilson, Dr. George B. Fowler, Health-Officer Alvah H. Doty, and President Roosevelt. The secretary of the board is Emmons Clark, and the headquarters are in the Criminal Court Building, on Center Street. The vital statistics were as follow:

ITEMS.	1895.	1896.
Deaths under one year.....	11,120	10,683
Deaths under five years.....	18,100	16,856
Total deaths.....	43,419	41,652
Total reported births.....	53,731	55,623
Total reported marriages.....	20,612	20,573
Total reported stillbirths.....	3,372	3,542
Death rate per 1,000 living.....	23.10	21.54

The principal causes of death were the following: Pneumonia, 5,402; phthisis, 4,995; diarrhoeal diseases, 2,873—under five years, 2,543; Bright's disease and nephritis, 2,682; heart diseases, 2,397; diphtheria, 1,560; bronchitis, 1,299; measles, 719; whooping cough, 434; scarlet fever, 404; typhoid fever, 297; croup, 208; cerebro-spinal meningitis, 178; influenza, 103; malarial fever, 112; and smallpox, 1. Among the deaths by violence were the following: Accident, 2,639; sunstroke, 765; suicide, 380; and homicide, 70.

The division of food inspection, offensive trades, and mercantile establishments inspected 72 herds, comprising 1,120 cows, and 192 cows to which the tuberculin test was applied were condemned and slaughtered. The division of contagious diseases received reports of 29,909 cases, 11,093 of which were diphtheria, 5 smallpox, and 3 leprosy. There were 21,340 primary vaccinations and 61,481 revaccinations. The medical sanitary inspectors visited 79,389 cases and inspected 64,059 tenement houses. The disinfecting corps fumigated 26,822 rooms and removed 1,592 persons to hospitals on account of contagious diseases. The veterinarian examined 12,930 head of cattle and destroyed 245 glandered horses.

July 1 the estimated population was 1,934,077.

Street Cleaning.—This department is managed by a single commissioner, who receives a salary of \$6,000 a year. The present incumbent is George E. Waring, Jr. His report shows that during the winter months of 1896 there were removed about 390,000 cubic yards of snow, at a cost of \$163,374.75 paid to the contractor. During the winter of 1895-'96 about 385,000 cubic yards were removed, at a cost of over \$215,000. The whole of the city south of Houston Street, excepting a portion of West Street, was cleared. Between Houston and Fourteenth Streets about half of the street area was cleared. Between Fourteenth and Fifty-ninth Streets about one third. Above Fifty-ninth Street only certain avenues and main thoroughfares were cleared.

Concerning the difficulty of removing the snow, his report says: "Those who see the difference of the condition between the streets that have been cleared and those on which the snow is left to natural processes for disposal are wondering why we do not remove the snow from all the streets. The impossibility of this will be understood when it is said that, in order to do what has been done, we have entirely exhausted the supply of carts and trucks available for the work not only in New York, but in Brooklyn, Jersey City, and Long Island City as well. The average number in daily use has been 2,500. We can never get more than 3,000 at any one time. There have been employed on an average about 2,000 shovelers and 3,000 drivers."

Police.—This department is managed by a board of 4 commissioners, appointed by the Mayor for a term of six years, each of whom receives a salary of \$5,000. The board during 1896 consisted of Theodore Roosevelt, president, Avery D. Andrews, Fred-

erick D. Grant, and Andrew D. Parker. The Superintendent of Police is Peter Conlin, and the headquarters are at 300 Mulberry Street. On May 1 Col. Grant was reappointed to the place which had become vacant owing to the expiration of his original term, and on that date Mr. Roosevelt was again chosen president of the board. During the year the number of arrests was: Males, 110,995; females, 17,847; total, 128,842.

Of the 285 persons taken into custody for attempted suicide, 111 were females, and 3 of the 96 persons arrested for forgery were women. There were 2,397 lost children picked up during the year, and all but 39 of them were reclaimed. The number of foundlings that came into the hands of the police was 158, of whom 5 were colored. The police were asked to look for 174 missing persons, and they accounted for 129. The property clerk received 3,658 lots of lost or stolen property, and delivered 1,234 lots, the value of which was \$71,974.

Fire.—This department is under the control of a board of 3 commissioners, appointed by the Mayor for a term of six years, each of whom receives a salary of \$5,000. The board during 1896 consisted of Oscar H. Lagrange, president, James R. Sheffield, and Austin E. Ford. On Sept. 26 Thomas Sturgis was appointed to fill the vacancy caused by the death of Mr. Ford, and the board then reorganized with Mr. Sheffield as president. The chief of the department is Hugh Bonner, and the headquarters are at 157 East 67th Street. The force on Jan. 1, 1897, included 1,169 officers and men, 64 engine companies (including 3 fire boats), 22 hook-and-ladder companies, 96 steam fire engines (including 30 spare), 5 water towers (including 2 spare), 46 hook-and-ladder trucks (including 16 spare), and 450 horses. During the year there were 3,890 fires, of which 3,838 were confined to the building and 41 extended to other buildings. Of the total number, 11 were not in buildings. The estimated loss by these fires was \$3,492,604, on which the insurance was \$78,202,398. The average loss for each fire was \$900.52. There were 11 buildings destroyed by fire, and 1,656 fires resulted in nominal damages only. For arson 9 persons were arrested, 4 persons were convicted, and 13 cases are pending.

Education.—The board having control of this subject consists of 21 commissioners, who are appointed by the Mayor and receive no salary. The president of the board is Robert Maelay. The city superintendent is John Jasper, whose salary is \$7,500, and the headquarters are at 146 Grand Street.

In accordance with the Pavey bill, recently enacted, it was attempted to divide the city into 45 inspection districts; but after deliberation it was decided that 35 districts would be more satisfactory, and accordingly that division was made. Early in the year plans and specifications were procured for a new hall for the board, which it is proposed shall be erected on the corner of 59th Street and Park Avenue. The school year began on Sept. 14, when 242 grammar and primary departments of 152 school buildings were opened, at which there were 173,533 children registered in the grammar and primary schools, with 13 schools, having a normal attendance of nearly 13,000 pupils, unopened. Several thousands of these latter pupils found accommodation in other schools. The attendance at the opening last year was 159,500, showing an increase of about 25,000. There were 923 children to whom admission was refused to the grammar departments, of whom 426 sought admission to the lower grammar grades, and 6,320 to the primary departments, of whom 4,957 sought admission to half-day classes. At the same time that it was

found necessary to deny admission to so many children in certain districts, there were 20,615 vacant seats in the public schools, of which 12,216 were in grammar schools. At this time 2 new schools were opened. They cost \$410,000, and accommodate 3,950 pupils.

Changes in Government.—In accordance with the provisions of the law enacted by the Legislature of 1895, the Department of Charities and Correction ceased to exist on Dec. 31, 1895, and on Jan. 1, 1896, the new departments of Public Charities and of Correction came into existence. The first named is managed by 3 commissioners, each of whom receives a salary of \$5,000. The incumbents during the year were Silas C. Croft, president, James R. O'Beirne, and John P. Faure. The Department of Correction is controlled by a single commissioner, who receives a salary of \$7,500. Robert J. Wright was the commissioner during the year. His most conspicuous act was the prompt removal of Warden Fallon, keeper of the city prison, for "incompetency and inconsistent conduct." In consequence of the enactment of the Raines law, the Board of Excise (consisting of Commissioners Joseph Murray, president, Charles H. Woodman, and Julius Harburger, each of whom received a salary of \$5,000), ceased to exist on May 31. The regulation of the traffic in liquors is now a State charge, and the office in New York city is under the control of Deputy-Commissioner George Hilliard, who receives a salary of \$4,000, and has his headquarters in No. 1 Madison Avenue.

Pilots.—The pilots are under the jurisdiction of a board of commissioners consisting of A. F. Higgins, J. H. Winchester, W. B. Hilton, Thomas P. Ball, and W. I. Comes. Office, 24 State Street. Their report for 1896 says that the system of fewer boats and less extended cruising grounds has proved satisfactory. The cruising grounds are from Fire Island, on the Long Island shore, to Barnegat, on the New Jersey shore, and 7 boats are continually cruising. A chartered steamer has been used as a "take-off" boat with such success that a large steamer is now being constructed especially for the purpose. The number of active pilots is 106. The number of vessels piloted—inward and outward—was 5,410, with a gross pilotage earned of \$375,612.89. The number of vessels sunk within the harbor limits was 145.

Rapid-Transit Railroad Commission.—This body at the close of the year consisted of Alexander E. Orr, president, John Clafin, John H. Starin, George L. Rives, Woodbury Langdon, and Charles S. Stewart (the 3 last-named succeeding Seth Low, resigned, and John H. Inman and William Steinway, deceased), together with the Mayor and the Comptroller *ex officio*. The office is at 256 Broadway. The work of this commission received an unexpected check by a decision of the appellate division of the Supreme Court, handed down on May 22, denying the motion made in behalf of the Rapid-Transit Commissioners for the confirmation of the report of the General Term Commissioners in favor of the plan for the construction of an underground rapid-transit system. The court denied the motion because of the probable large cost of the undertaking and the lack of definite data regarding it.

The effect of this decision was to cast a doubt on the legality of the status of the commission, and accordingly an action was brought to have the rapid-transit act declared unconstitutional, and to restrain the Rapid Transit Commission from further action.

Concerning this action, the appellate division of the Supreme Court handed down a decision on July 28, declaring the rapid-transit act constitutional.

At the meeting held on Dec. 31, a new plan for a rapid-transit road, mostly underground, was announced.

Monuments.—A site for the Heine memorial Loreley monument (offered to the city, and refused by the Park Commissioners after a verdict against it by a commission of the Sculpture Society) was found at North Beach. A plot of ground 50 feet above water, known as Pine Woods, was chosen, and 5,645 feet were given to the Heine Association, who will erect waterworks for the sole purpose of supplying the fountain. The memorial is to be erected on a base many feet above the ground, so that it will be in full view of Flushing, College Point, Port Morris, and Glen Island.

At the annual meeting of the Grant Monument Association, on Feb. 26, it was reported that the total subscription up to date was \$515,113.07. The interest amounted to \$14,818.84. The total of disbursements to Feb. 25, 1896, was \$296,729.36, leaving \$233,202.55 cash on hand. The marble lining in the main structure and crypt, the stairways, interior decorations, carving, and the sarcophagi will be completed, and if no extraordinary delays occur the structure will be finished and ready to receive the remains of Gen. Grant and to be dedicated upon April 27, 1897, his birthday.

The Aquarium.—In 1889 the Board of Park Commissioners secured possession of Castle Garden, which had long been used as a receiving station for immigrants. Measures were at once taken to transfer it into an aquarium.

On Dec. 10 the aquarium was opened with a reception by the Park Commissioners. There were then in the aquarium 78 species of fish, 125 animal forms, and 12 species of aquatic plants, 9 of which are from fresh water and 3 from salt water.

Botanic Garden.—During the year the Board of Managers of the New York Botanic Garden appointed Prof. Nathaniel L. Britton director. Plans for the garden were prepared on Dec. 16, and one was accepted. There will be a broad plaza in front of the Bedford Park Railway Station, and a connection with the Moshulu Parkway will be carried on a bridge over the railway cut.

For the main museum building a site has been selected on an elevation about 1,000 feet from the railway station. It will have a frontage of 304 feet, a depth of 50, and two lateral wings of 200 feet in length. The horticultural building will be an equal distance from the station and the museum, and midway between them will be the heat and power house.

Zoological Park.—The New York Zoological Society, which for several years has agitated the question of a zoological park, secured the passage of a bill by the Legislature authorizing the city to set aside 300 acres for the purpose, the choice to be between Van Cortlandt, Pelham, Bronx, and Crotona Parks. Prof. Henry F. Osborn, in behalf of the society, made formal application to the Sinking Fund Commissioners for "all that portion of Bronx Park which lies south of Pelham Avenue, of about 261 acres in extent, to be used by this organization only under the terms of its charter as a public zoological park, and to be laid out for improvement and use upon a general plan, which shall be approved by the Board of Park Commissioners before any actual work is begun."

On April 6 William T. Hornaday was made director of the zoological park, and during the summer he was sent to Europe to inspect the zoological gardens of Germany, Belgium, Holland, France, and England.

Political.—At the election of 1896, held Nov. 3, the only city officer voted for was coroner. The registration showed a total of 331,214, being an in-

crease of 21,523 over that of 1892, which was the largest previous registration. The canvass turned largely on the question of sound money, and a business-men's parade in behalf of that cause on Oct. 31, "broke the world's record as a civic demonstration." It was said that "100,000 men were in the line; 100,000 flags blossomed above them; 100,000 throats sang 'The Star-Spangled Banner,' all in the line of march." On election day nearly 94 per cent. of the registered vote was cast, of which the Republican electors received a plurality over the Democratic and the People's ticket of 20,713 votes. The Republican State candidates also received majorities, as well as the Republican candidate for coroner. Of the candidates for the Assembly, 23 Democrats and 12 Republicans were elected.

Events.—On Feb. 28 Secretary Lamont approved the plans recommended by a board of engineer officers for the construction of the bridge across the East river from New York to Brooklyn. They provide that the height of the structure shall be 135 feet in the center at mean high tide, and for a distance of 200 feet on each side of the center. The pier heads are to be 117 feet high. On March 3, the Board of Aldermen changed the name of 59th Street from Fifth to Eighth Avenue to Central Park South; also the name of Fourth, Vanderbilt, Myrtle, and Railroad Avenues above the Bridge to Park Avenue. On March 6 the same body decided that the strip of land bounded by Barrow, Christopher, Grove, and West 4th Streets should thereafter be known as Sheridan Square, in honor of Gen. Philip H. Sheridan. On March 24 the Armory Board decided that the site for the new armory of the 69th Regiment should be that now occupied by the College of the City of New York, 22d and 23d Streets and Lexington Avenue, together with three additional lots of land, making in all a plot of 13 city lots. Also a plot on the south side of West 66th Street, between Central Park west and Columbus Avenue, was designated as the site for the new armory of the First Battery.

On June 27 the 9th Regiment took possession of its new armory, in 14th Street, west of Sixth Avenue.

NICARAGUA, a republic in Central America. According to the Constitution of July 11, 1894, the Congress is a single house composed of 2 members elected for two years by the people of each province and 2 others elected by each provincial legislative body, 48 representatives in all. The President is elected for four years by direct popular suffrage. He must be a citizen of Nicaragua or one of the other Central American republics, aged at least twenty-eight years. The President for the term ending Jan. 31, 1898, is Gen. Santos J. Zelaya. The following were members of his Cabinet in the beginning of 1896: Minister of the Interior, Justice, Police, Public Safety, and Ecclesiastical Affairs, Gen. F. Balladares Teran; Minister of Foreign Affairs and Public Instruction, Dr. M. C. Matus; Minister of Communications and Public Works and of War and Marine, Gen. R. Alonzo; Minister of Finance and Commerce, Col. S. Callejas.

Area and Population.—Nicaragua has an area of 49,200 square miles, and a population estimated in 1895 at 420,000, including 40,000 uncivilized Indians. The people are Indians, negroes, and mixed races. There are only about 1,200 persons of pure-white race, but their number is increasing through immigration. The town of Leon has 34,000 inhabitants, and Managua 20,000. The Mosquito Reserve, by the vote of the Indians, was incorporated in the republic on Nov. 20, 1894, forming the new department of Zelaya.

Finances.—The revenue is derived from Government monopolies on spirits, tobacco, and gunpow-

der, and from import and export duties and a tax on slaughtered cattle.

The internal debt amounts to \$7,000,000. A loan of £285,000, raised in London in 1894 at 6 per cent. interest, was secured by a mortgage on the railroads; but no interest was paid after July 1, 1894, till 1896, when payments were resumed in accordance with an agreement with the bondholders.

Commerce.—The raising of cattle and latterly coffee-planting are the principal industries. There are 400,000 head of cattle. Sugar, indigo, coconuts, cacao, Brazil wood, and cedar are exported, besides coffee and bananas, the culture of which also is extending. Over 100 gold and silver mines are worked by American companies. Most of the coffee plantations belong to Americans. The imports in 1892 were valued at \$6,006,806 in silver; the exports in 1891 at \$2,376,500. There were 123,180 quintals of coffee exported in 1894. The exports from the port of Corinto in that year were \$3,642,997, the coffee export being worth \$2,865,924. The foreign trade is with Great Britain, the United States, France, and Germany.

Communications.—There is a railroad from Corinto to Momotombo, 58 miles. Another between Managua and Granada is 33 miles long. The two cost the Government \$2,700,000. Concessions for lines from San Miguelito to the head waters of the Blue river, 100 miles, from the Pueblos district to Masaya, 25 miles, and from Momotombo to the Rio Grande, 200 miles, have been forfeited, and the Government has undertaken to extend the railroads itself, and in 1895 undertook to build one from San Miguelito to Rama, 102 miles. The Nicaragua Maritime Canal Company in 1896 secured a concession, with a grant of timber lands, for building a railroad from Rama to Santombaldo, 96 miles, with an extension to Tipitapa.

There are over 1,700 miles of telegraph lines.

Rebellion.—A third attempt to overthrow the administration of President Zelaya by force of arms was begun in February, 1896. The trouble arose from a division in the Conservative party that placed President Zelaya in power and from a revival of the local jealousy of the people of Leon, who resented the removal of the seat of Government to Managua. When a revolt broke out in the Northwest Department President Zelaya declared himself dictator. The movement was started by the Ultra-Conservative, or Clerical, wing of the party, and hence the sympathies of the Liberal Opposition were rather with the Government, but later some of the Liberal politicians made common cause with the revolutionists. Gen. José M. Chanvarria, Military Governor of Leon, Gen. Godoy, and Gen. Ruben Alonzo and Gen. Francisco Baca, ex-Ministers of War and the Interior, assumed the direction of the movement to upset Zelaya, and the revolution spread all over the western part of the republic. The revolutionists accused Zelaya of aiming so to change the Constitution of the republic as to create a permanent dictatorship. The Vice-President, Gen. Baca, on this ground declared against him, and, taking his departure from the capital and joining the malecontents at Leon, was proclaimed Provisional President of Nicaragua. As general-in-chief of the revolutionary forces was chosen Gen. Ortiz, who, after fighting with Zelaya in the revolution of 1893, had aroused his jealousy and was summarily banished, and who now landed in Corinto and took the lead in the revolution that was started on Feb. 24. Between 2,000 and 3,000 men living in Leon and the surrounding district at once joined his standard, obtained possession of the arms stored in the city, and made ready to march against Managua. By Feb. 24 the regular army, numbering 2,000 men, was under arms. The insurgent force,

equally strong, held the stronghold of Leon, against which Zelaya's army set out without waiting for the rebels to open the campaign. The insurrection spread northward and westward from Leon.

The Government of Honduras sent 2,000 troops to assist the President of Nicaragua in crushing the revolt. The United States war vessel "Alert" proceeded to Corinto, where all business was stopped by the rebellion, and landed marines on March 5 to protect American interests. The Honduras troops occupied Nueva Segovia on the same day. President Zelaya reconstructed his Cabinet, appointing José Dolores Gomez as Minister of the Interior and of Foreign Affairs, Dr. Leopoldo Ramirez as Minister of Public Works and of Finance, and Gen. Francisco Guerrero as Minister of War. The Liberals in the Congress identified themselves with the new movement and opened a session at Leon.

The whole of the Pacific coast country was in arms against the Government. The impressment of laborers on the *haciendas* was actively carried on by both parties, which stopped the gathering of the crop and the exportation of coffee. Until the end of February nothing took place but manœuvres for position and skirmishes in which a few shots were fired. There was some hard fighting at Momotombo, where the rebels attempted to seize a steamer on Lake Managua and were beaten off by the advance guard of Zelaya's army. The first battle was at Nagarote on March 1. The insurgents took the offensive and advanced from Leon against Managua. Their commander-in-chief, Gen. Anastacio Ortiz, announced that he would capture the capital, make a prisoner of Gen. Zelaya, and deliver the Government into the hands of Provisional-President Baca. The whole of the Government army, now numbering 4,000 men, with 20 field pieces, concentrated at Mateares, marched out to oppose the advance. The place where the forces met was 25 miles from the capital. The battle lasted all day, and resulted in a disheartening defeat for the rebels, who were forced to retreat, leaving behind 4 Krupp guns. The Government losses were 30 killed and 80 wounded. The regular troops then advanced northward and eastward. The victory at Nagarote caused waverers to give their adhesion to Gen. Zelaya and enabled him to borrow from capitalists money of which he was greatly in need. The rebel army fell back to La Paz and fortified themselves there on the railroad. The Government forces took up a position near by, but failed to follow up their victory. President Zelaya promised to spare the lives of all rebels who surrendered except the military leaders. The whole country was under martial law, and all business was at a standstill. Ex-President Zevala, whom Gen. Ortiz overthrew in 1892 and thus made way for Zelaya's succession, now joined forces with Zelaya. A second battle was fought at Pital, where about 1,500 were engaged on each side, and the Government forces under Gen. Paiz, Gen. Pablo Reyes, and Gen. Emiliano Herrere were again successful. The rebels retreated, leaving 200 killed and wounded on the field. On March 12 another engagement was fought at El Jablon, where the insurgents lost 35 killed, 80 wounded, and 42 prisoners, and left a Krupp gun and other arms and provisions in the hands of the regulars. The principal families of Leon fled to Honduras. Vice-President Prudencio Alfaro, of Salvador, and Gen. Canas were sent by President Gutierrez to endeavor to arrange terms of peace between the contending parties. The peace commissioners were unable to effect an arrangement, but continued their labors till April, when they returned home. There were several other engagements in the first two weeks of March, in which the Government forces generally outnumbered their oppo-

nents and were successful, although the rebels, who were armed with modern weapons, inflicted severe losses on the regulars. Zelaya's army advanced against Leon on March 17, and pressed the rebels back, capturing Mora and several other towns, and winning another battle at Metapa. The troops of Honduras, after remaining still a long time, apparently hesitating as to whether to aid the Government or join the revolutionists, came to the support of Zelaya's generals and gave valuable assistance. When nearly the whole country was in control of the Government, troops were posted on three sides of Leon. Both sides refused the intervention of the Honduras commissioners, and the rebels rejected Zelaya's demand for unconditional surrender. The commissioners succeeded on March 25 in arranging a truce, which lasted till April 5. On that day fighting was resumed at several places near Leon. President Zelaya took the field in person. Within a week he had won 5 or 6 engagements, none of them decisive. On April 11 Gen. Ortiz with 450 men attempted to capture the Government position near El Viego and was repelled by the Honduran troops under Gen. Bonilla, who routed the rebels when they reformed for a final desperate attack, and captured from them a large quantity of stores and ammunition. Desultory fighting was kept up till the end of April, and every day Zelaya's army approached closer to the rebel headquarters at Leon. New armaments, consisting of 1,000 rifles and 7 field guns, arrived from the United States and Germany for Zelaya's army. The rebels made a final unsuccessful effort to capture the stronghold of El Convento. On May 1 Provisional-President Baca and Gen. Ortiz took to flight, the resources of the revolution being at an end, and boarded a gunboat bound for Guatemala, to which the insurgents looked for aid that never came. The rebels in Leon laid down their arms and surrendered the city, but not unconditionally. On May 6 President Zelaya made an entry into the old capital at the head of his army. Many of the public buildings had been destroyed. Gen. Benjamin Ruiz, a Colombian, whose generalship had helped most to overcome the resistance of the rebels, was appointed commander-in-chief of the army and Governor of Leon. Many Conservatives of that town were arrested in spite of the amnesty. President Zelaya appointed a new Cabinet, as follows: Minister of Foreign Affairs, Manuel C. Matus; Minister of Finance, Luciano Gomez; Minister of Public Works, Leopoldo Ramirez; Minister of the Interior, Gen. Erasmo Calderon; Minister of War, Gen. Domingo Silva.

When the rebel Minister of the Treasury had endeavored to levy a contribution in the form of a loan on doubtful securities on the Leon branch of the London Bank of Central America, Capt. Hanford, of the "Alert," assured the manager of the bank that he would resist the forcible seizure of property belonging to citizens of governments friendly to the United States. When the same minister on April 16 sent a force to seize \$1,000,000 worth of merchandise in Corinto and carry it off to Leon on the pretense of saving it from capture by the Government forces, the commanders of the "Alert" and the newly arrived British cruiser "Comus" refused to allow the insurgents to remove it. After the escape of the rebel chiefs and the capitulation of Leon, the disbanded soldiers, maddened with drink, committed many outrages in Corinto and threatened to attack the customhouse. Hence 100 American and British marines were landed on May 2, and these dispersed the rioters and occupied Corinto till May 4. Meanwhile Gen. Metuta arrived with 30 Honduras soldiers, but to him the American and British commanders refused

to surrender the customhouse. The Honduran general threatened to occupy Corinto without waiting for orders from Gen. Zelaya, whereupon the British ship was cleared for action and the American marines were drawn up in line before the customhouse. Gen. Metuta then apologized and retired, and President Zelaya telegraphed approval of the action of the naval commanders.

The Conservatives who aided Zelaya to suppress the rebellion hoped for a larger share in the Government. Their expectations were not realized, and soon the President had more enemies than before. In September a plot was laid to capture the barracks and the palace and kill President Zelaya; but the conspiracy was disclosed on the eve of its execution. Some of the leaders were arrested, and others escaped.

The formation of the Greater Republic of Central America, which was ratified by delegates appointed by Presidents Gutierrez, Bonilla, and Zelaya at Amapala on Sept. 15, secured to President Zelaya the support of the existing governments of Honduras and Salvador, and also the hostility of Guatemala. A constitutional assembly was convoked in Managua in September, which reinserted the clause lately incorporated in the Constitution forbidding a President to succeed himself, and nominated Zelaya as candidate for the term from 1898 to 1902. Great Britain claimed \$75,000 as indemnity for losses of British subjects in the Mosquito Territory during the disturbance of 1894. A convention was concluded in London providing for the settlement of the claims by a mixed commission, to consist of one Nicaraguan, one British, and a third member, who should not be a citizen of any American state, and who was to be chosen by agreement between the contracting parties or, failing such agreement, by the President of Switzerland.

Colombia in the autumn revived an old claim to the Great and Little Corn island. The Nicaraguan Government raised a force in the Mosquito Territory to defend the islands if an invasion was contemplated, and the islands were fortified and protected by mines of dynamite.

NORTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution Nov. 21, 1789; area, 52,250 square miles. The population, according to each decennial census, was 393,751 in 1790; 478,103 in 1800; 555,500 in 1810; 638,829 in 1820; 737,987 in 1830; 753,419 in 1840; 869,039 in 1850; 992,622 in 1860; 1,071,361 in 1870; 1,399,750 in 1880; and 1,617,947 in 1890. Capital, Raleigh.

Government.—The following were the State officers during the year: Governor, Elias Carr; Lieutenant Governor, Richard A. Doughton; Secretary of State, Charles M. Cooke; Treasurer, W. H. Worth; Auditor, R. M. Furman; Attorney-General, F. M. Osborne; Adjutant General, F. M. Cameron; Superintendent of Instruction, John C. Scarborough—all Democrats except Mr. Worth, who is a Populist; Labor Commissioner, B. R. Lacy; Commissioner of Agriculture, S. L. Patterson; Chief Justice of the Supreme Court, William T. Faircloth, Republican; Associate Justices, D. M. Furches, Republican; W. A. Montgomery, Populist; and A. C. Avery and Walter Clark, Democrats.

Finances.—The assessed valuation of the State in 1895 was \$257,437,227.99, a decrease from the preceding year of \$2,127,222. There was a decrease on properties other than railroads, steamboats, and telegraphs of \$3,618,770, but an increase on the latter properties of \$1,491,548. The total tax levy by the State was 43 cents on the \$100—21½ for general purposes, 18 for schools, and 3¼ for pensions. The total revenue from all sources was \$1,503,403.98. The privilege taxes increased \$33,731.94,

mostly from the tax provided for by the last Legislature upon doctors, lawyers, dentists, hotels and boarding houses, and corporations other than railroad or banking.

The total number of pensioners was 5,324, who are divided into 4 classes, receiving from \$16 to \$64. The whole amount paid to the four classes was \$104,736.

The Auditor shows that the percentage of tax paid on real and personal property, other than railroads, steamboats, telegraph, stocks, or privilege taxes, for the public schools is 96¾ by whites and by colored 3¾.

The total assessment for 1896 was \$256,316,092.99, a decrease of \$1,121,135. The assessment of railroads, etc., included in the above, amounts to \$26,576,096.99.

The Treasurer's report shows that the balance at the beginning of the biennium was \$203,239.38, which was increased to \$1,433,423.85, Dec. 1, 1895. The disbursements that year were \$1,343,013.55; with the balance and receipts in 1896, the total that year was \$1,333,493.23, and the disbursements were \$1,245,140.20, leaving a balance of \$88,353.03, showing that the expenditures exceeded the receipts in 1895-'96 by more than \$200,000.

The balance in the educational fund Dec. 1, 1894, was \$8,087.72; the receipts in 1895 and 1896 brought it up to \$51,335.72; the disbursements were \$14,695.71 in 1895 and \$1,648.70 in 1896, leaving a balance of about \$35,000.

The bonded debt is \$3,360,700. Of the direct land tax, \$1,096.64 remains in the treasury. The date for refunding this tax expires March 2, 1897.

Education.—There are in the State 634,185 children of school age—six to twenty-one. Of these, 410,809 are white and 223,376 are colored. In 1895 there were 621,249 school children—403,812 white and 217,437 colored.

The percentage of school children enrolled in the schools shows a falling off of 4 to 6. In 1895 over 60 per cent. of the white and nearly 59 per cent. of the colored children of the State attended the public schools; during 1896 the percentage was 56 for whites and 52 for the colored race. Formerly a larger per cent. of the colored children attended the public schools than of the whites. There were 348,610 pupils enrolled in the schools during 1896, divided as follows: whites, 231,059; colored, 117,551. During 1895 the total enrollment was 373,563; of whom 245,413 were white and 128,150 colored.

The average attendance on the schools during the year 1896 was: Whites, 137,115; colored, 67,088. Total, 204,203.

White male teachers received an average salary of \$24.75 a month, and female \$21.64. Male colored teachers were paid \$26.70, and female, \$20.96.

During 1896 about 664 more schools were taught than during 1895.

The receipts of the school fund in 1895 were \$825,988.84, and in 1896 \$824,238.08; disbursements, \$834,711.79 in 1895 and \$817,562.31 in 1896.

The Legislature provided for special levies in counties in order to continue the schools for four months in the year, but the levy was resisted on the ground that it brought the amount of State and county taxes above the constitutional limit. The Supreme Court held that the school tax was included in the term "State and county tax," and so the children get but sixty-three days' schooling.

The Normal and Industrial School began its fifth year Oct. 5. It had 444 students and 23 teachers in 1896, having begun with 223 in 1892. A large majority of those who have left the institution have taught in the public schools.

The State University registered for the fall term

the largest number of students it has ever had at one time (525), of whom 266 were undergraduates in the academic course, 7 graduates, 35 medical, and 18 law students. This total includes the students of the summer law school and the summer school for teachers. During the past two years the university has lent nearly \$4,000 from the Deems fund, thereby aiding 51 students.

Subscriptions for a Young Men's Christian Association building amount to \$9,121, and those for a Centennial Alumni Hall to \$23,000. Work on the latter will begin when the sum of subscriptions reaches \$30,000. The new president, Dr. E. A. Alderman, took charge in August.

The College of Agricultural and Mechanic Arts had in December 230 students. The annual appropriation is \$10,000. Since its establishment in 1889 it has received from the State \$75,000. The Colored Agricultural and Mechanical College has 63 students.

Washington Duke has offered \$100,000 to Trinity College, at Durham, on condition that women be admitted on an equal footing with men, and the offer has been accepted. This will be the first co-educational college in the State.

Charities.—The number of patients in the Insane Asylum at the beginning of the biennium was 305. The whole number treated in 1895 was 442, and in 1896 488. The estimate for the coming biennium is based on an allowance of \$149.50 *per capita* for 410 patients.

The State Hospital, which receives the insane of the western district, has nearly 700 patients. The appropriation is \$100,000 annually. The percentage of recoveries in 1895 was 39.79; in 1896, 51.47. The death rate for the two years was 3.1 and 2.8. During the year 77 have been refused admittance for want of space. Buildings are being constructed which will accommodate 75 women additional.

The Eastern Hospital, for the colored insane, has 377 patients. A building has been added the past year, so that room is afforded for all applicants.

The Institution for the Deaf and Dumb and the Blind has 153 in the department for blind white children and 71 in that for colored, besides 89 deaf colored children. The deaf white children were removed two years ago to a separate institution at Morganton, which has 185 pupils and applications for 50 more, with accommodations for 200. There are 105 children in the Colored Orphan Asylum.

The Penitentiary.—There are 1,198 convicts on an average in the Penitentiary, compared with 1,237 in 1895. There are far more short-term convicts since the act of 1895 making one year the maximum penalty for the larceny of goods less than \$20 in value. The increased employment of convicts on the public roads accounts in some measure for the decrease. For the year 1896 the Penitentiary paid all its own expenses.

Insurance.—Thirty-nine life insurance companies and 84 miscellaneous companies did business in the State during 1895-'96. By the fire companies \$52,469,000 risks were written, \$911,875 premiums received, and \$501,142 losses paid. By the life companies \$13,028,000 risks were written \$1,328,922 premiums received, and \$573,022 losses paid.

Railroads.—The Roanoke and Southern Railway, between Winston and Roanoke, Va., 116 miles, was sold at auction under mortgage foreclosure at Winston, Nov. 24, for \$500,000. It was knocked off to a syndicate, who purpose to organize what will be known as the Norfolk, Roanoke, and Southern Railroad Company. The property is then to be leased to the Norfolk and Western Company.

The directors of the Atlantic and North Carolina Railroad leased the road, Nov. 2, to the Goldsboro and Morehead City Railroad Company for forty

years. This was not ratified by the stockholders, and on application of one of them an injunction was granted, restraining the directors from carrying out the terms of the lease.

The State Farmers' Alliance attempted to bring suits to test the validity of the lease of the North Carolina Railroad to the Southern Railway Company for ninety-nine years, but, on account of technical difficulties, the suits were abandoned.

All the railroad property in the State is now subject to taxation. The dividend of 6½ per cent. declared in January by the North Carolina Railroad made it subject to taxation.

Products.—The estimate of the cotton crop of the State for the year was 397,752 commercial bales. The acreage in 1895 was 1,050,183. The acreage of tobacco was 143,156 and the product 141,536,000 pounds; valuation, \$10,535,000. North Carolina has in operation 250 tobacco-manufacturing establishments, 76 warehouses, and 229 leaf factories, stemmeries, and prize houses, representing altogether an investment of over \$26,000,000.

The explorations during the year by the Geological Survey show very large quantities of clay of excellent quality along the lowlands of many of the large streams—the Neuse, Cape Fear, Yadkin, Catawba, and others. Many of the best of these deposits never have been developed to any extent.

Decision on Extradition.—Two men were convicted in 1893 of murdering a man over the border in Tennessee, while they themselves were in North Carolina. They appealed to the Supreme Court; a *nolle prosequi* was entered, and they were discharged. They were at once arrested for committing the murder in Tennessee and held in custody, awaiting extradition. The Supreme Court refused, ruling that it was not a case for extradition.

The Virginia Boundary.—By the new survey the State gained 90 acres. The line has been marked at an expense to the two States of \$2,386.

Roanoke Island.—A monument was dedicated Nov. 28 on the site of old Fort Raleigh, Roanoke island, in commemoration of the first English settlement on the continent, which was made there in 1585. The monument was erected by the Roanoke Colony Memorial Association.

The Willard Colony.—The Frances E. Willard Co-operative Colony has begun operations at Andrews, N. C. It is in the heart of Valley river valley, Cherokee County, in the extreme southwestern corner of the State. The railroad from Asheville to Murphy passes through the 20,000 acres purchased by the colony. The capital stock is \$500,000, divided into 10,000 shares. Preparations for farming, stock raising, dairying, and manufacturing are begun. One hotel has been opened and another is building. A gold mine and a marble quarry are about to be opened. A college, a public library, and a church are also building. Five thousand acres are set aside for co-operative labor. All the industries will be operated on this plan, and a scale of wages has been established. The colony will sell land and deed it to people who do not wish to come under their jurisdiction.

The entire valley is underlaid with marble of various colors. Iron ore is also found, while the land is well timbered. The elevation of the valley is 1,800 feet, and the surface is level. In a letter proclaiming their principles it is said: "We declare for a Protestant Union Church, based only on the Bible and the Apostles' Creed. Our religious motto shall be, 'In essential things, unity; in nonessentials, liberty; in all things, charity.' Our business motto shall be, 'Manhood before money; co-operation vs. competition.' Our political creed shall be the prohibition of trusts, natural monopolies, and the liquor traffic. Our only test for every candi-

date for office shall be, 'Is he capable? is he honest?'

Lawlessness.—In a fight between revenue officers and moonshiners in Kernersville, March 9, the two moonshiners were killed and the two officers seriously wounded. Another revenue officer was killed, Dec. 4, by a blockade distiller in Montgomery County, and the moonshiner himself was shot dead by some person unknown. Still another affair of the kind occurred in Bladen County, Oct. 2, when a moonshiner, resisting arrest, was shot dead.

A riot was reported in Person County, Oct. 22, between whites and negroes, on account of political differences. Troops were called out in Franklinton to prevent the lynching of a white man who had killed a negro in a political dispute.

Political.—The State Republican Convention met in Raleigh, May 14. A contest for the nomination for Governor had been going on for months, and there were many contested seats. Resolutions were adopted pledging the delegates present to use all honorable means for the re-election of Senator Pritchard to the United States Senate, and instructing the delegates to the national convention to support William McKinley for the presidential nomination. The platform declared for protection, and said: "We favor the use of gold and silver as standard money, and the restoration of silver to its functions and dignity as a money metal. We are opposed to the retiring of the greenbacks, the money of the people, the money favored by Lincoln. We are opposed to the issue of interest-bearing bonds in time of peace, and we condemn the policy of President Cleveland and Secretary Carlisle in secretly making the sale of Government bonds to a foreign syndicate on such terms as to enable it to realize the enormous profit of \$10,000,000, at the expense of the people."

It was declared that "the vital and paramount issue for North Carolinians in this campaign is the preservation of the great reforms enacted into law by the last General Assembly, to wit: local self-government and honest elections. No differences as to questions of currency and questions of tariff should deter us from standing together for the right preservative of all rights, the right to vote and have that vote honestly counted."

Further, the resolutions declared that the management of schools should be removed from politics, and that "the farmer and the householder should be allowed the same exemptions given to the bondholder and capitalist, and that every citizen in returning his property for taxation be permitted to deduct from the value thereof the amount of his just indebtedness."

The nomination for Governor was made after a bitter contest. The final ballot gave Daniel L. Russell 119 $\frac{3}{4}$, O. H. Doekery 104 $\frac{1}{4}$, and J. E. Boyd 13. The other nominations were: For Attorney-General, Z. V. Walsler; for Auditor, Ruff Henderson; for Associate Justice of the Supreme Court, R. M. Douglass. The places of the remaining candidates were left vacant for the People's party.

A State convention of colored Republicans was called to meet at Raleigh, July 2. Following is the preamble to the call:

"Whereas, The fraudulent nomination of Daniel L. Russell for Governor of North Carolina—a man who has proclaimed to the world that negroes are largely savages, that all negroes follow rascals, and steal six days in the week and go to church on Sundays and pray it off; that nonproperty holders should not under any circumstances exercise the full privilege of citizenship; and because he fomented racial strife and thereby jeopardizes our educational progress by subordinating all to corrupt politics and politicians," etc.

At the convention, where 65 counties were represented either by delegates or by letter, a series of resolutions was adopted, calling upon "every negro in whose heart there is still a spark of self-respect and manhood to exert himself to the utmost to defend the honesty and integrity of the race by doing all in his power to defeat the election of D. L. Russell, whose name has become a stench to the humble, honest, and intelligent negroes throughout the land, and whose election would be a blot upon the fair name of the State of North Carolina."

Further, the resolutions declared loyalty to the Republican party and to the National platform and candidates, and said: "In the event of the candidacy of Hon. William A. Guthrie, we do heartily recommend that he be voted for as a suitable and worthy candidate" (for Governor).

The Democratic convention met in Raleigh, June 25, with 900 delegates. Ninety-five of the 96 counties were represented, and there were no contests for seats. Delegates to the national convention were instructed "to advocate and vote as a unit, unflinchingly and at all hazards, for the restoration of silver," and to "use all their efforts to abrogate the two-third rule, if necessary to secure the nomination of a candidate in complete, in hearty, and in known accord with the principles herein enunciated by us." The gold standard and the McKinley tariff were declared "twin monsters going hand in hand in their mission of destruction, drawing the very sustenance from the body of the people, and concentrating all wealth and power in the hands of a few."

The repeal of the tax on State banks of issue was favored, and a graduated income tax.

The name of Cleveland was hissed.

On State matters the resolutions declared in favor of fair election laws, the continuance of the system of public education established by the Democratic party, and impartial administration of the criminal laws.

It had been expected that Julian S. Carr would be the candidate for Governor; but he withdrew his name just before the convention, and Cyrus B. Watson was nominated. The other candidates were: Thomas W. Mason for Lieutenant Governor, Charles M. Cooke for Secretary of State, Robert M. Furman for Auditor, Benjamin F. Ayeock for Treasurer, Frank I. Osborn for Attorney-General, John C. Scarborough for Superintendent of Public Instruction, A. C. Avery and George H. Brown for Justices of the Supreme Court.

At a meeting of the State Central Committee of the People's party in July a resolution was adopted inviting the advocates of free coinage, who were then electing delegates to the National Silver Convention to confer with the People's party at its State convention in Raleigh, Aug. 13. The committee chose 16 delegates at large to the national convention. The other 79 were appointed in their own congressional districts.

At the State convention one portion of the delegates desired to combine with the Republicans on a State ticket, another to put up a full Populist ticket. The latter controlled, and the following nominations were made: For Governor, William A. Guthrie; Lieutenant Governor, O. H. Doekery; Secretary of State, Cyrus Thompson; Treasurer, W. H. Worth; Justice of the Supreme Court, Walter A. Montgomery. The nominations for the second judgeship and the office of Attorney-General were left to the State committee. H. W. Ayer was named for Auditor.

The Gold-standard Democrats held a State convention, Aug. 26, in Greensboro, chose delegates to the Indianapolis convention, adopted resolutions in favor of a national ticket, and instructed a committee to chose electors.

The Prohibition party put up the following ticket: For Governor, Rev. Jeremiah W. Holt; Lieutenant Governor, Thomas M. Stephens; Secretary of State, W. O. Allen; Auditor, John R. Miller; Treasurer, Perry McLean; Superintendent of Instruction, J. C. Bain; Attorney-General, Yancey H. Cox. Oscar E. Winborne was afterward candidate for Treasurer.

James R. Jones was the candidate for Governor on the National Prohibition ticket, Henry Sheets for Lieutenant Governor, Thomas B. Johnson for Secretary of State, O. C. Sherrill for Auditor, Jonas Hoffmann for Treasurer, G. W. Holmes for Superintendent of Instruction, Walter R. Henry for Attorney-General.

The question of fusion between Populists and Republicans, and between Populists and Democrats, was agitated from the beginning of the year, and various schemes were proposed. Finally, the Democratic, People's, and Silver parties agreed on an electoral ticket, the Silver party to name 1 elector, and each of the others 5—all, of course, to cast their votes for Bryan, and each for his own party candidate for the vice-presidency.

On the State ticket the Republicans and Populists united, except as to the offices of Governor and Lieutenant Governor. The other candidates were: Republicans—Z. V. Walser for Attorney-General, and Robert M. Douglass for one of the Supreme Court Justices; Populists—Cyrus Thompson for Secretary of State, H. W. Ayer for Auditor, W. H. Worth for Treasurer, Charles H. Mebane for Superintendent of Instruction, and Walter A. Montgomery for the other place of Supreme Court Justice.

In most of the counties and congressional districts, the Republicans and Populists united.

The result of the official count gave 174,488 as the highest vote for Democratic-Populist electors; Republican, 155,122; National Democratic, 578; Prohibition, 676; National Prohibition, 245. The Republican candidates for Governor and Lieutenant Governor were elected, and for the other State offices the Republican-Populist ticket entire. Russell had 154,052 against 145,416 for Watson and 30,932 for Guthrie. For Congress, 2 Democrats, 3 Republicans, and 4 Populists were chosen.

In the Legislature the Republicans have 17 Senators and 49 men in the House, the Democrats 9 and 36 respectively, and the Populists 24 and 34.

NORTH DAKOTA, a Northwestern State, admitted to the Union Nov. 3, 1889; area, 70,795 square miles. The population in 1890 was 182,719. Capital, Bismarek.

Government.—The following were the State officers during the year: Governor, Roger Allin; Lieutenant Governor, John H. Worst; Secretary of State, C. M. Dahl; Treasurer, George E. Nichols; Auditor, Frank A. Briggs; Attorney-General, John F. Cowan; Superintendent of Public Instruction, Emma F. Bates; Commissioner of Agriculture and Labor, Andrew H. Laughlin; Commissioner of Insurance, Frederick B. Faneher; Railroad Commissioners, John W. Currie, George H. Keyes, John J. Wamberg; Forestry Commissioner, W. W. Barrett; Game Warden, George E. Bowers; Land Commissioner, George H. Winters; Oil Inspector, George B. Winship; Public Examiner, Mr. Langlie; Chief Justice of the Supreme Court, Alfred Wallin; Associate Justices, Guy C. H. Corliss and J. M. Bartholomew. All are Republicans.

Finances.—The Treasurer's statement for the six months ending June 30 shows the balance in the various funds Jan. 1 to have been \$56,549.25, the receipts \$472,131.76, not including the taxes received from counties, which were \$184,432.82, making the total \$656,564.58. The disbursements

amounted to \$436,630.92, and the balance on hand June 30 was \$219,933.66. Among the larger items of expense for the six months were: Salaries of Supreme Court judges, \$7,000; of district judges, \$14,875; expenses of the Board of School and Public Lands, \$5,248.33; maintenance of Capitol, \$8,583.56; State tuition fund (taxes, etc.), \$71,330.86; State tuition fund (interest and income), \$94,221.62; bond interest fund, \$22,156.26; refunding bonds, North Dakota Penitentiary, \$14,600; refunding bonds, North Dakota University, \$24,000; wolf bounty, \$1,492; funding warrant account (redeemed), \$55,000; redemption of Capitol building warrants, \$2,611.28; interest on funding warrants, \$4,333.35. The various items for the Insane Hospital amounted to over \$22,000.

The Equalizing Board raised the valuations on real estate in 11 counties an average of 29 per cent., and lowered them in 6 counties an average of 9 per cent.

The total valuation of personal property in the State, as returned by the counties, was \$19,538,061.

The tax levy was fixed at 3/8 mills for State revenue, and 0/5 mill for bond interest. The valuation of railroads was raised by more than \$1,000,000. Until 1895 all the roads in the State, with the exception of the Northern Pacific, paid on the gross-earnings plan. That law was repealed and the direct-tax system substituted. The roads were revalued for assessment, and the board fixed the valuation per mile. The side tracks were assessed this year for the first time; the rate of valuation fixed upon was \$750 a mile. The highest railroad valuation is that of the main line of the Great Northern—\$3,500 a mile.

The Insane Asylum.—There was serious trouble in the management of the Insane Asylum, at Jamestown, early in the year. The majority of the trustees voted to remove Dr. O. W. Archibald, the superintendent, against whom charges had been made, and appointed Dr. D. S. Moore in his place. The reason given was that Dr. Archibald had not obeyed the order of the board to discharge certain employees. Dr. Archibald refused to turn over the office to his appointed successor, claiming that the board had no right to remove him before the expiration of his term. The Supreme Court heard the case and issued a writ directing him to turn over the asylum to Dr. Moore or appear before the court and show cause why he should not do so, and he accordingly gave up possession. The decision of the court established several points of law as to the government of State institutions. It gives the board of trustees supreme control of any institution, and holds that the powers of the board can not be restricted or abridged by any by-laws, or by any action in appointing an officer for a fixed term, unless the term is provided by law. The court decides also that it has original jurisdiction in cases involving the sovereignty of the State, its privileges or franchises, it being the judge of each particular case.

The Governor requested the resignations of all the members of the Board of Trustees, but only one complied. The board claimed that they had been trying to economize in the conduct of the institution, and that they had been opposed by the executive force in charge. All this time an investigation of the charges of extravagance and immorality against the management had been going on before the Public Examiner. His report, rendered in March, concludes as follows: "The charges of gross extravagance in the management of the institution are not borne out by the testimony, although there may be room for improvement. The practice of offering liquors to visitors and guests of the institution should be discontinued. The law of the State

limits the State Examiner to the investigation of financial affairs; but owing to the fact that rumors have been afloat charging that immoralities have been practiced at the asylum, opportunity was given to the witnesses to testify as to their knowledge in reference thereto, but no evidence was given which in the least reflected upon the character of the employees of the institution."

The Examiner found that the evidence proved that one of the trustees had been interested in the asylum coal contract, and he was indicted, but the indictment was quashed in April on a technicality.

The Penitentiary.—The maximum number of prisoners at the Penitentiary during the year was 124, and the average the first half was 118. The average number of days' work by each prisoner for the first year was 239½, and for the eight months ending June 30 last, 133·79. Eighteen prisoners had been pardoned up to June 30, 1896. The estimate for the coming biennial period for maintenance is \$50,800, which is \$7,360 higher than that for the one just past, but certain items not covered in the appropriation for the past two years were stricken out of the old bill by executive veto.

Under the present law it is provided that all except life convicts who have no infractions of rules recorded against them at the end of the first month are entitled to a diminution of two days from their terms; at the end of the second month under the same conditions, four days from that month; at the end of the third month, six days; and six days from each month thereafter when they shall have no infraction of rules accorded against them. The maximum of good-time allowance, under the law, is sixty-six days from a year's sentence.

Reform School.—The Reform School in South Dakota had in 1895 18 inmates sent from this State, and in 1896 23. The aggregate cost for these convicts was \$5,752. A valuable tract of land has been given to this State for a reform school on condition that the school building be completed within a specified time.

Banks.—The Second National Bank of Grand Forks suspended on the last day of the year, on account of heavy withdrawal of deposits and the impossibility of realizing upon its assets. Immediately following the failure of the National Bank of Illinois and the Bank of Minnesota this bank sustained a shrinkage of \$40,000, while its deposits amounted to about \$17,000 during the fourteen days preceding the suspension.

In a report made in March it appeared that the 31 national banks of the State had total resources of \$8,809,797, of which loans and discounts were \$5,544,702, and reserve \$1,033,770, \$279,435 being gold. The deposits were \$5,205,617, and the average reserve held was 20·5 per cent.

Industries and Products.—The wheat yield of the State was given as 25,295,340 bushels. In 1895 it was 61,057,710, that being an extraordinary year in this respect.

The cattle shipments from the western ranges of the State, which amounted to 431,000 head in 1895, were estimated to have fallen off 37 per cent. in 1896. The wool clip of 1895 was over 2,000,000 pounds.

The average of the agricultural products in 1895, on an estimate attributed to the Commissioner of Agriculture, was \$339 *per capita*, which is \$43 more than that of Iowa.

An experiment for growing tea has been successfully tried by a colony of 20 Russian families in Mercer County. The variety grown is Asiatic Russian tea, and the quality is said to be much better than the black tea sold by merchants. The seed was brought from Russia.

There were at the beginning of 1895, according to a statement of the Commissioner of Agriculture, 7 cheese factories in the State, manufacturing 74,092 pounds of cheese, and 2 creameries, producing 2,200 pounds of butter. At the close of 1895 there were 26 cheese factories, producing 412,946 pounds of cheese, and 16 creameries, producing 336,943 pounds of butter, an increase over 1894 of 338,844 pounds of cheese and 334,743 pounds of butter. Add to this the increase of butter and cheese made in families, and the total increase for the year is 746,766 pounds of butter and 341,048 pounds of cheese. The average price received has been 8·1 cents for cheese and 15·2 cents for butter. The total receipts in 1895 from factory-made cheese were \$33,448·62, and from creamery butter \$51,215·33.

The increased value of cows in the State, owing to the presence of creameries and cheese factories, averages \$4·30, making a total of \$411,946·10 east of Missouri river. The wealth of the State was increased by the dairy industry \$1,499,468·80 in 1895.

Public Lands.—The report of the State Land Commissioner includes some figures showing the wealth of the State in land grants. The total grant of the Government to the different institutions is 668,080 acres, of which 650,491 acres have been selected and 515,528 acres patented. The school-land leasing for 1896 exceeded any of the past four years. The report includes a statement of all receipts from the beginning of Statehood to June 30, 1896, which shows the total acreage sold to be 130,302·67, the total purchase price, \$2,308,279·22. Of this there has been received about \$530,000 principal and \$429,000 interest. Rentals brought in \$250,000, and hay permits \$12,000.

The Fort Lincoln military reservation, about 25,000 acres, was opened for settlement this year. The price varies from \$1 to \$5 an acre, to be paid in five years.

Immigration.—In April 20 colonies of Dunkards, from 6 States, emigrated to North Dakota. They numbered 1,500 persons, and occupied, with their belongings, 4 trains of 20 passenger coaches and 102 freight cars. This is the second exodus of Dunkards from the East to North Dakota in the past three years. They come from old colonies, which have been sending out members to the West for half a century. The object of the movement is to possess more land. The country into which the emigrants are taken is along the line of the Great Northern Road in Traill, Steele, Grand Forks, Nelson, Ramsey, and Towner Counties.

The Northern Pacific, also, has begun to bring in colonies. The first large number brought in by this road, consisting of 6 earloads of people, arrived in April. Their home will be southward from the colonies established by the Great Northern, in Foster County. The railroad company has been enabled to furnish them with land by a recent decision giving it the right to throw open several large tracts to settlers.

A State immigration convention was held in January, and nearly all the counties have local organizations for the same purpose.

Health Statistics.—From the reports made to the State Superintendent of Health, it appears that the death rate of the State is among the lowest in the Union—less than 11 per 1,000.

Divorces.—Said a local newspaper in January: "A canvass of the hotels and boarding houses in Fargo shows that there are about 150 members in the local divorce colony. This means from \$3,000 to \$5,000 a month for the hotel men of the city. It also means from \$5,000 to \$10,000 for the local attorneys. In addition to these expenditures, the stores receive directly, perhaps, \$2,000 a month in

the way of divorce trade. The sentiment of the citizens is entirely in favor of the 'industry.' The matter is looked at purely from a business standpoint. The conditions which exist in Fargo are to be encountered in all the other larger cities of the State, but the business is conducted on a smaller scale."

Bismarck.—Fort Yates is to be removed to Bismarck, and a site south of the Penitentiary has been selected.

A bill passed Congress in May granting the city the right to use or lease Sibley island, in Missouri river, for public assemblies of a religious, literary, political, or scientific character, to use or lease the same for fair grounds or a driving park, together with the right to erect buildings and make improvements. The leases are to be for a period not longer than ten years, and it is forbidden to fell any timber on the island, except for the purpose of improving or beautifying the grounds.

The Prohibitory Law.—The following is taken from the report of the State Enforcement League: "The services of an experienced detective were secured, and he was placed in charge of a force of detectives who have gone over the State from Hamilton at the north to Havana at the south; as far west as Minot, on the Great Northern Railway, and Mandan, on the Northern Pacific. Evidence was found in 274 cases, injunctions were successfully served in 200 cases, 35 arrests were made, 19 have been fined \$200 and ninety days in jail, 2 broke jail and left the State before trial, 5 await trial, 9 were discharged in district court. Total disbursements, \$2,263.71. Receipts, \$1,772.55. Indebtedness, \$496.16, which is more than covered by uncollected membership subscriptions. It was not the purpose of the committee to see how many we could punish for breaking the law, but, rather, our aim was to create such a public sentiment in favor of sustaining and upholding the law that there would be no offenders."

Defective Laws.—An action was brought in April to determine as to the legal existence of district assessors under the new code, all provision for such assessors having been inadvertently omitted from the law. It was believed that the Governor would be obliged to call an extra session to remedy this defect, but the court held that the broad language of the repealing act which went into effect with the revised codes must be so limited by the obvious purpose of the new revenue law as to leave unaffected such portions of the laws as relate to the office of district assessors in unorganized townships.

An act of the last Legislature, establishing in cities of 5,000 (Fargo and Grand Forks) municipal courts having the jurisdiction of police magistrates, was declared unconstitutional by the Supreme Court, because it took from the police magistrates and their courts certain powers given to them by the Constitution.

Political.—The Republicans held a State convention at Fargo, April 15, and chose delegates to the National Convention. The convention was decidedly opposed to free coinage. The delegates were instructed for McKinley, and the following resolution was adopted:

"The Republicans of North Dakota are unyielding in their demand for honest money. We are unalterably opposed to any scheme that will give to the country depreciated or debased currency. We favor the use of silver as currency, but to the extent only and under such restrictions that its parity with gold can be maintained. We are therefore opposed to the free and unlimited coinage of silver until it can be arranged by international agreement."

The second Republican convention, at Grand Forks, July 22, approved the national platform, and on State issues said:

"We favor a just and impartial system of appraisal of all taxable property. Railroad companies and all other corporations should be treated the same as farmers and mechanics in the appraisal of real estate and personal property, so that all classes share alike in a just and impartial assessment; and believing that the valuation on railroad property in the State is below that placed on other property, therefore we pledge ourselves to increase its valuation to such an amount as will place it upon an equality with all other property in the State.

"We renew our pledges to the support of the present prohibitory law and urge the strict observance and enforcement of the same, and that inasmuch as North Dakota was received into the Union with a prohibitory amendment in her Constitution, we demand of Congress, as a right, that a law be enacted that shall prevent the obtaining of United States liquor licenses in States that have declared or shall declare for prohibition."

The ticket follows: For member of Congress, Martin N. Johnson; Governor, Frank A. Briggs; Lieutenant Governor, J. M. Devine; Secretary of State, Fred Falley; Treasurer, George E. Nichols; Auditor, N. B. Hannum; Attorney-General, John F. Cowan; Commissioner of Insurance, Fred B. Fancher; Superintendent of Public Instruction, J. G. Halland; Commissioner of Agriculture and Labor, H. U. Thomas; Railroad Commissioners, George H. Keyes, L. L. Walton, John F. Gibson; Justice of the Supreme Court, Alfred Wallin.

A convention of the People's party at Grand Forks, June 17, chose delegates to the national convention.

The second convention, July 29-30, adopted resolutions declaring that the money question was the supreme issue of the campaign, and that the party was resolved to sacrifice every prejudice and personal ambition to the settlement of this great question. A pledge was made to support the present liquor law of the State. The action of the present State Board of Equalization was condemned for reducing the tax valuation of all railroad property in this State, and the practice of hiring out convict labor was unequivocally condemned.

The report of a committee on a plan of fusion with the Democrats was adopted, according to which a part of the nominations were left to be made by the Democrats. Following are the Populist nominations: For Governor, R. B. Richardson; Auditor, J. T. Eager; Secretary of State, J. E. Hodgson; Railroad Commissioners, Oliver Knudson and O. G. Major; Commissioner of Agriculture, G. S. Reishus; Superintendent of Public Instruction, Laura J. Eisenluth. Two candidates for presidential electors also were named.

The State Democratic Convention, at Jamestown, June 4, chose delegates to the national convention and adopted resolutions approving the Wilson bill, favoring the election of United States Senators by direct vote, approving the utterances of Senator Roach on the currency question, and demanding legislation to restore silver as a money metal, admitting both gold and silver to free coinage at 16 to 1. The delegates were instructed to vote for a candidate who would stand on a free-coinage platform.

A convention for completing a fusion ticket with the Populists was held at Grand Forks, Aug. 12. Following are the candidates named: For Congressman, John Burke; Lieutenant Governor, J. L. Cashel; Treasurer, H. D. Allert; Attorney-General, Marion Conklin; Insurance Commissioner, F. T.

Parlin; Railroad Commissioner, W. S. Vent; Supreme Judge, C. F. Templeton.

The Prohibitionists met at Fargo, Sept. 15, and nominated A. J. Garver for member of Congress, Emma F. Bates for Superintendent of Public Instruction, and Herbert Rort for Attorney-General. They approved the fusion nominees for Governor and Secretary of State, but named no other candidates.

Following is the vote for presidential electors: Total vote, 47,381; for McKinley, 26,335; Bryan, 20,686; Levering, 358.

The vote for Governor stood: Briggs, Republican, 25,918; Richardson, Fusion, 20,690. All the Republican candidates for State offices were elected. The Prohibition candidate for Attorney-General received 513 votes; the candidate for Superintendent of Instruction, 3,011; and Garver, for member of Congress, 349. Johnson's vote was 25,233, and Burke's 21,172.

The Legislature, as certified by the returns, will have 23 Republicans in the Senate and 44 in the House; 2 Democrats in the Senate and 1 in the House; and of the fusion candidates 6 were elected to the Senate and 16 to the House; there is 1 Independent in the House. Notices of contests for a seat in the Senate and one in the House were filed.

A proposition to hold a constitutional convention was submitted to popular vote, and also an amendment to the Constitution; but both were defeated.

NORTHWEST TERRITORIES OF CANADA.

These divisions of the Dominion embrace an area of 906,000 square miles, and are not yet fully recognized provinces, although they possess most of the powers. They have four members in the Dominion House of Commons and representatives in the Senate.

The second session of the third Legislative Assembly was opened on Sept. 29, by Lieut.-Gov. Mackintosh, with a "speech from the throne," which dealt at length with all the interests of the Territories, and constituted, in fact, a complete record of the year. Its significant passages are these:

"Reports concerning crops and cattle received from various agricultural centers up to the 26th instant are satisfactory. The wheat crop in the Calgary district is above the average, but, owing to failure of crops in past years, the wheat acreage is from 40 to 50 per cent. less than usual. The root crop is noticeably fine, with a large surplus for shipment, and the cattle and dairying industries very favorable. In the Lethbridge district the crops sustained damage, consequent upon a heavy snowstorm. About 1,700 cattle and 142 horses have already been shipped from Lethbridge since June, and about 3,000 head remain to be sent forward. This will show a small decrease from 1895 in consequence of the herds being short. About 457 yearling steers are being brought from Ontario to mature on western grasses, and about 300 from Manitoba. In the Alameda district grain crops are reported very satisfactory, wheat averaging about 20 bushels to the acre, and oats from 40 to 50. The root crop is the best for many years, and is considered the best paying the district has ever had; 10 car loads of cattle were shipped from Alameda. In the Duck lake district grain and root crops are excellent, both as to quantity and quality, there having been no damage by frost. Cattle are in fine condition. The Moosomin district will yield from 750,000 to 800,000 bushels of wheat, averaging about 18 bushels to the acre. In Prince Albert district wheat will yield an average crop of superior quality. In the district of Fort Saskatchewan wheat, oat, and barley crops are larger than usual, and the demand for cattle greater than the supply. The opening by the Territorial authorities of a high-

way East from Fort Saskatchewan for 24 miles has proved a great boon to settlers, while the statute labor districts are doing good work. In the Fort Qu'Appelle district the wheat crop throughout is reported to be, without exception, the most favorable in its history. The yield is from 20 to 30 bushels, and on summer fallow about 40 bushels an acre. The acreage is about 20 per cent. larger than last year. About 1,000 head of cattle have been shipped from Qu'Appelle station this year. The creamery of Qu'Appelle station has manufactured about 30,000 pounds of butter, which found ready sale in British Columbia markets. The coal output at Anthracite and Canmore is steadily increasing. The Crescent creamery has given an impetus to separating stations, whence the cream is sent to Calgary. Altogether, the agricultural and stock-raising interests throughout the Northwest are eminently satisfactory, and although the cereal crops are not as large as in some years, other branches of farming industry have permanently improved. The several visits made to the Northwest by Prof. Robertson, Dominion agriculturist and dairy commissioner, have given an impetus to the more complicated branches of scientific farming. As a result of his efforts, a large number of creameries have been established in Manitoba, and more recently in the Territories, noticeably Moose Jaw, Indian Head, Prince Albert, and Regina. That at Moose Jaw has afforded an opportunity of thoroughly testing and ascertaining results. The total quantity of butter made from milk and cream supplied by 60 customers, was about 70,000 pounds, and the value at Moose Jaw railway station was \$19.31 per 100 pounds—most of it being shipped to Manchester, England. The rate of transport from Moose Jaw to Montreal is \$1.28 per 100 pounds, with a rebate of 12½ cents per 100 if and when the butter is shipped from Montreal. A general enactment dealing with the question of irrigation passed the Dominion Parliament in 1894, and has proved extremely beneficial to various portions of Alberta and parts of western Assiniboia. Up to last year (1895) the irrigating capacity of the ditches was 28,000 acres. Up to the present time the increase of area under irrigation and results from the application of water to growing crops have been most satisfactory. The number of ditches and canals constructed and in operation is 115, representing a length of 263 miles and an irrigable area of 334,250 acres. The estimated cost of ditches and canals constructed and in operation was \$110,000, and the estimated cost of ditches and canals surveyed and construction authorized is \$84,000, which includes the St. Mary's and Bow River Canals. J. S. Dennis, of the Survey and Irrigation Department, reports that practically in all the districts the effort to grow crops or to obtain hay under ordinary conditions, after much experience, owing to insufficient rainfall, has been abandoned, and it is recognized that only by the aid of this process can a sure and certain grain, fodder, or root crop be obtained. The progress of educational institutions in the Territories is very satisfactory. On Aug. 29, 1895, there had been proclaimed 384 public schools, 36 Roman Catholic public schools, 10 Roman Catholic separate schools, and 2 Protestant separate schools—in all, 432 school districts. During the thirteen months that have since elapsed 50 public schools, 2 Roman Catholic public schools, and 1 Protestant separate school have been erected, making a total of 485 schools, and the estimated number of pupils in attendance was 10,710. The total amount of school debentures issued since June 3, 1886, is \$233,500. The total number of insane patients from the Territories confined in the Selkirk and Brandon asylums is 74. Warrants were issued in 1894 for 33, in 1895 for 21, and in

1896 for 32. Prairie fires, though still extensive, have not apparently been so serious in results as during 1895, although the luxurious growth of hay and grass may yet prove disastrous in many districts. The mounted-police force has rendered very great service in endeavoring to reduce such damages to a minimum, and the report received from Commissioner Herchmer furnishes information with reference to the prairies fires and the localities in which they have taken place. A machine for extinguishing these fires is being tested."

Politics and Government.—The executive or ministry of the Territories consists of F. W. G. Haultain, the Premier, and Hillyard Mitchell, J. H. Ross, and J. R. Neff. On Sept. 30, 1896, Mr. Haultain introduced a measure in the Legislature to amend the school system in the direction of simplification, which was carried after a prolonged discussion. On Oct. 8 a committee was appointed to draft a memorial to the Dominion Government, asking for better financial terms and an increased subsidy from the Federal power, and for a clearer definition of the relations existing between the local and Dominion authorities. It was carried unanimously, though the debate that followed upon the framing of the memorial itself showed much dissatisfaction with existing conditions and indicated that the nominal rights of self-government possessed by the Territories were in reality very greatly restricted in practice. In dealing with the proposed railway through the mountains connecting the Canadian Pacific Railway and the territories with the gold-mining country of the Kootenay in British Columbia, the following resolution was unanimously carried;

"That the House takes the liberty to draw the attention of the Federal Government to the imperative necessity for immediate construction of the Crow's Nest Railway.

"That unless this is done the trade of the Kootenay district may be permanently deflected into American channels.

"That the Crow's Nest pass contains large areas of bituminous and cannel coals of a coking quality.

"That with these valuable coals the erection of smelters and refineries may be expected to follow.

"That the existence of this railway will at least permit these Territories to compete with eastern Washington in the supply of the necessarily large amount of food products required in the mining regions of southeastern British Columbia.

Finance.—Premier Haultain introduced his budget on Oct. 20, 1896. The expenditure had been kept within the revenue, but only by economizing in directions that really required expenditure, which he believed called loudly for Dominion help. The estimates of expenditure for 1896-'97 included \$15,500 for salaries of members of the Legislature, \$16,808 for the construction and improvement of bridges, \$164,000 for schools and education, \$7,500 for printing, etc., \$8,700 for hospitals, \$7,000 for liquor-license service, and \$4,834 for improvements to public works. The estimated revenue included the Dominion grant of \$242,879, and amounted to \$400,000, which about covered the expected expenditure. These figures seem small in comparison with the extent of territory, but the total population is not more than 100,000.

NOVA SCOTIA, PROVINCE OF. Government and Legislation.—Owing to the change in the Canadian ministry during 1896 many of the Liberal leaders in the provinces left for a wider sphere of work in the Dominion Cabinet. Among them was W. S. Fielding, who for many years had been Premier of Nova Scotia. The local ministry was therefore reconstituted as follows on July 20: Premier and Provincial Secretary, George H. Mur-

ray; Attorney-General, J. W. Longley; Commissioner of Works and Mines, C. E. Church; members without office, William Roche, T. Johnson, A. H. Corneau, A. McGillivray, T. R. Black. Meanwhile the Legislature had been called together on Jan. 9, when the speech read by the Lieutenant Governor contained the following passages:

"Although the year just closed has not been one of marked prosperity, there has been a fair degree of progress in our province. It is to be regretted that our fishing industry in some quarters failed to yield satisfactory returns. Mining operations were carried on with considerable vigor, but, owing to a limited demand for our coal, the output was somewhat less than that of the previous year. Happily the labors of the husbandmen, the largest class of our people, were rewarded by an abundant harvest. I have observed with much satisfaction the organization of the Provincial Farmers' Association, under an act passed at your last session.

"I am happy to be able to report the vigorous prosecution of work on the new line of railway from Yarmouth eastward. In the case of the other railway enterprises which have recently received encouragement under our legislation, no substantial progress has been made.

"The continued good work of the Victoria General Hospital is a source of much satisfaction to all who are interested in the treatment of the sick. I have noticed with pleasure several movements for extending the hospital accommodation of the province by the establishment of local institutions. I invite you to consider the advisability of giving these local hospitals some recognition and assistance."

The house adjourned on Feb. 15 after passing many bills, among which were the following:

To incorporate the Midland Railway Company.

To amend the law respecting public instruction.

To incorporate the Canadian Atlantic Cold Storage Company.

To incorporate the Causo and Louisburg Railway Company.

Respecting the adoption of children.

To incorporate the Atlantic and Inland Railway Company of Nova Scotia.

To encourage the establishment of local hospitals.

To incorporate the Home Fire and Marine Insurance Company.

To amend chap. ii of the act of 1895 entitled "An Act respecting the sale of intoxicating liquors."

To provide a subsidy to the Nova Scotia Steel Company.

To prevent the spread of diseases affecting fruit trees.

To incorporate the Halifax and Guysborough Railway Company.

To amend and consolidate the acts for the preservation of game.

To provide for an annual provincial exhibition.

Finances.—The estimated revenue for the year ending Sept. 30, 1896, was as follows: Dominion subsidy and allowances, \$432,811; royalty for mines, \$275,000; Crown lands, \$21,000; Hospital for Insane, \$50,000; succession duties, \$30,000; postal subsidy, \$14,500; miscellaneous, \$23,153; total, \$846,464.

The estimated expenditure was as follows: Agriculture, \$19,000; education, \$244,000; legislation, \$48,000; public works and mines, \$34,000; public charities, \$121,000; public printing, \$10,000; steamboats, etc., \$38,581; roads and bridges, \$100,786; debenture interest, \$126,578; interest, \$11,500; W. and A. Railway, \$14,500; miscellaneous, \$55,516; salaries, \$22,450; total, \$845,911.

Education.—The number of schools increased from 2,292 to 2,305; the pupils enrolled, from 98,710 to 100,555; the number of teachers, from 2,351 to 2,399; the number of normal-school trained teachers, from 499 to 616. At the same time the amount voted by the school sections, or boards, increased \$35,000, and that granted by the province was increased \$14,970. In 1895 the number of teachers who had been in the service of the province from five to seven years was 210, those from seven to ten years were 255, those from ten to fifteen years were 202, those from fifteen to twenty years were 113, and there were 110 teachers who had been twenty years or over in the service. There were 95,027 pupils in the common schools—an increase of 2,500 in the year—and 5,528 in the high schools, also a considerable increase. The total expenditure was \$811,804. There was an increase in the number of school libraries from 55 to 90, and of volumes in them from 6,537 to 8,274.

Minerals.—The production of minerals during 1895 was a little less than in the previous year. The coal areas extend over 635 square miles, and the workable thickness of the coal is from 25 to 70 feet. Lack of capital has hitherto prevented development, and the production in 1895 was only 2,089,245 tons, with an export of 633,041 tons—less by 38,000 tons than in 1894. The production of gold increased from \$358,839 to \$431,184, making a total of \$11,000,000 since 1862. There are 35 localities in the province where workable gold deposits have been found, and about 4,000 persons are engaged in the industry. The richness of the lodes varies from \$3 to \$16, while the general average of production has been \$14.50. Iron ore, gypsum, and limestone are also produced in the province.

Railways and Public Works.—During 1896 the Dominion Coal Company's railway from Bridgport to Louisburg was completed, the line from Yarmouth to Tusket along the coast advanced, and the South Shore Railway between Yarmouth and Glenwood was partially completed. Under the auspices of the Government 26 steel bridges and 16 wooden bridges were built, and repairs to 141 bridges of all sorts were effected. Tourist travel over Nova Scotian railways increased in 1895, as

did also the freight carried. The following are the official figures of the railways under provincial control: Return from passengers carried in 1894, \$272,512; in 1895, \$295,875; from freight in 1894, \$416,403; in 1895, \$497,077; from mails and sundries in 1894, \$75,540; in 1895, \$105,229; total in 1894, \$764,455; total in 1895, \$898,181.

Agriculture.—There were 83 agricultural societies in the province in 1895, with a membership of 4,597, an annual subscription of \$5,356, and Government grants of \$8,000. During the year the Government also paid \$2,400 to creameries, \$2,000 to a horticultural school, and \$2,913 to an agricultural school, and employed a special official to look after the farming interests. Fruit culture was very successful. Seven new creameries were started and received the first annual grant, poultry raising increased, and the making of butter improved in quality and quantity.

Interprovincial Trade.—There was a larger shipment from Nova Scotia to the other provinces this year than in the previous years. Montreal, Sorel, Quebec, and Three Rivers were the receiving points for coal, and the General Mining Association, the Dominion Coal Company, the Cape Breton or Burchell Company, and Pictou were the points from which the coal was sent. In 1895 the General Mining Association shipped to the four St. Lawrence ports just mentioned 115,432 tons, and during the past season 119,035 tons; the Dominion Coal Company, 454,513 tons in 1895 and 547,773 tons in 1896; the Cape Breton or Burchell Mine, 6,080 tons this year, but none in 1895; while from Pictou 66,571 tons were shipped in 1895 and 33,569 in 1896. This shows a grand total of Cape Breton and Pictou coal to the St. Lawrence during the past season of 706,457 tons, an increase over 1895 of 69,938 tons.

Miscellaneous.—The registered seagoing tonnage of the province in 1895 was 2,422,018, a decrease from that of the previous year. There was little shipbuilding, although Nova Scotia possesses large deposits of coal, iron ore, and flux in close proximity to each other. The gross indebtedness for 1895 was \$3,346,899, and the assets, not including public buildings, were placed at \$1,358,806.

O

OBITUARIES, AMERICAN, FOR 1896. **Abbott, Austin,** lawyer, born in Boston, Mass., Dec. 18, 1831; died in New York city, April 19, 1896. He was the second son of Jacob Abbott; was graduated at the University of the City of New York in 1851; and was admitted to the bar in 1852. Joining his elder brother, Benjamin Vaughan Abbott, he engaged in the practice of his profession, in literary work, and in legal compilations. He was associate counsel with William M. Evarts for the Rev. Henry Ward Beecher in the Tilton-Beecher trial, and was one of the counsel for the United States Government in the trial of President Garfield's assassin. In 1884 he began lecturing in the law school of the University of the City of New York, and since 1891 had been dean of the school. He received the degree of LL.D. from the university in 1886. Dr. Abbott was active in promoting international arbitration, international peace congresses, Indian rights, the Young Men's Christian Association, and many public and charitable measures. His publications included 2 novels, written in collaboration with his brother, "Cone-cut Corners" (1855) and "Matthew Caraby" (1858);

and, besides many legal contributions to periodicals, "New Cases, mainly New York Decisions" (17 vols., New York, 1877-86); "Official Report of the Trial of the Rev. Henry Ward Beecher" (2 vols., 1875); "Reports and Decisions of the New York Court of Appeals" (4 vols., 1873-78); "Digests of New York Statutes and Reports of the United States Courts and of the Laws of Corporations; Reports of Practice Cases" (33 vols., 1873), continued in annual supplementary volumes; "Trial Evidence" (1880); "Brief for the Trial of Civil Issues before a Jury" (1883); "Brief for the Trial of Criminal Cases" (1889); and "Brief on Questions on the Pleadings in Civil Cases" (1891).

Abbey, Henry Eugene, operatic manager, born in Akron, Ohio, June 27, 1846; died in New York city, Oct. 17, 1896. He received a public-school education; became his father's partner and successor in the jewelry business; and began his career as a manager at the Akron Theater in 1869. In 1870 he took the Akron company on the road; in 1871 took charge of the newly erected Academy of Music in Akron; and became manager of the Park Theater in New York city in 1877. Within a

few years, with partners, he managed Booth's Theater, New York; the Park Theater, Philadelphia; the Metropolitan Casino and the Grand-Opera House, New York; and the Park Theater, Boston, by turns. The Metropolitan Opera House, New York, was opened by Abbey & Schoeffel on Oct. 22, 1883, with Campanini and Mme. Nilsson in "Faust." Subsequently, Maurice Grau became a member of the firm, which gave a season of German opera at the Metropolitan, managed for short periods Wal-lack's and the Star Theaters, and at the beginning of the season of 1891-'92 secured control of the Metropolitan again and returned to Italian opera. In 1893 the firm produced a spectacular piece, "America," in the Chicago Auditorium, during the World's Exposition, and the same year built and opened Abbey's Theater, New York, and managed the Metropolitan, the Tremont Theater in Boston, and the Irving, the Coquelin and Hading, and the Bernhardt companies. The firm failed in May, 1896.

Alley, John Buffum, manufacturer, born in Lynn, Mass., Jan. 7, 1817; died there Jan. 19, 1896. He was apprenticed to a shoemaker, and subsequently engaged in the manufacture of shoes, and was in the hide and leather business till 1886, when he retired. Mr. Alley was one of the originators of the Free-soil movement. In 1851 he became a member of the Governor's Council; in 1852 was elected to the State Senate, in which he was chairman of the Committee on Railroads; and in 1853 was elected to the State Constitutional Convention. He was elected to Congress as a Republican in 1858, 1860, 1862, and 1864; was chairman of the Committee on Post Offices and Post Roads; and during the civil war was active in behalf of the soldiers, giving liberally of his wealth, and, with his wife, making regular visits to the hospitals. Mr. Alley was the financial manager of the Union Pacific Railroad at the most critical period in its early history, and placed it on a firm footing.

Allison, Joseph, jurist, born in Harrisburg, Pa., in 1819; died in Philadelphia, Pa., Feb. 8, 1896. He was admitted to the bar in his native city in 1843, and soon afterward removed to Philadelphia. In 1851 he was first elected to the bench of the Court of Common Pleas of Philadelphia as a Whig; and by re-election as a Republican—frequently adopted as the Democratic candidate also—he held the office till his death, a period of forty-five years, during the last thirty of which he was the presiding judge of the court.

Angeline, Indian princess; died in Seattle, Wash., May 31, 1896. She was a daughter of Chief Seattle, for whom the city was named, and was one of the celebrities of the north Pacific coast for many years. Of her early life nothing is known. At the time of her death she was nearly blind, and was popularly believed to be over a hundred years old. She was held in high esteem by the pioneers of the city and their descendants, because in the early fifties she had given timely warning of an intended Indian massacre, and so had probably saved several hundred lives. Her few wants thereafter were amply supplied by the citizens.

Anthony, George T., journalist, born in Matfield, Fulton County, N. Y., June 19, 1824; died in Topeka, Kan., Aug. 5, 1896. He was brought up on a farm, and learned the tinsmith's trade. At the beginning of the civil war he entered the National army as commander of the 17th New York Independent Battery, and he served with it in the Army of the Potomac till the close of the war. In 1865 he settled in Leavenworth, Kan., and established a Republican newspaper, in which his strong utterances made him widely known. He was successively President of the Kansas State Board of

Agriculture and collector of internal revenue. In 1876 he was elected Governor of the State. In 1895 he was appointed Superintendent of Insurance.

Arden, Thomas Boyle, military officer, born in New York city, May 27, 1813; died in Garrisons, N. Y., Aug. 13, 1896. He was graduated at the United States Military Academy in 1835; was assigned to the 7th Infantry; and was immediately ordered to active service on the Indian frontier. After serving at Fort Gibson, Ark., New Orleans, and in the Seminole Indian war in Florida, he returned to the Military Academy, and was assistant instructor in infantry tactics in 1837-'41. He resigned from the army in the following year. In 1861 he offered his services to the Government, and, while awaiting a reply, served through the Patterson campaign as aid to Gen. Sandford, of the New York militia. Soon afterward Gov. Morgan appointed him his military adviser and aid, with the rank of colonel. He was constantly visiting and supervising the camps of volunteers in various parts of New York State, and looking after the welfare of the New York troops in the field, particularly those in the Army of the Potomac.

Armitage, Thomas, clergyman, born in Pontefract, England, Aug. 2, 1819; died in Yonkers, N. Y., Jan. 20, 1896. He was early prepared for the ministry; delivered his first sermon when sixteen years old; and was a local preacher till 1838, when he removed to New York city. Soon afterward he entered the ministry of the Methodist Episcopal Church, in which he was active for ten years, and was then received into the Baptist Church. Almost immediately he received three calls to Baptist pastorates. In June, 1848, he accepted a call from the Norfolk Street Church, New York city. The day after he delivered his first sermon there the building was burned down. Another building was used till 1859, when the congregation built the edifice on the corner of Fifth Avenue and Forty-sixth Street, subsequently known as the Fifth Avenue Baptist Church. There he officiated till 1890, when he was made pastor emeritus, presented with a residence in Yonkers, and voted a substantial life income. He received the degree of D. D. from Georgetown (Ky.) College in 1855, and that of LL. D. from the University of the City of New York in 1886. Dr. Armitage entered upon the ministry without any college training, and became widely known as a classical and historical scholar. He was one of the founders of the American Bible Union, and its president from 1856 till 1875; and was active in promoting Bible revision. He published "Preaching: Its Ideal and Inner Life" (Philadelphia, 1880) and "A History of the Baptists" (New York, 1886).

Ashley, James Monroe, legislator, born near Pittsburg, Pa., Nov. 14, 1824; died in Alma, Mich., Sept. 16, 1896. His grandfather and father were Baptist ministers, and both desired him to take a college course as a preparation for the same calling, but he refused, and found employment on a Mississippi river steamboat. When sixteen years old he entered the office of the "Dispatch," at Portsmouth, Ohio; within two years he was assistant editor of the paper; and within another two years was editor and proprietor of the only Democratic newspaper in Scioto County. During this period he publicly avowed himself an uncompromising abolitionist, and became an enthusiastic temperance advocate. He studied law in Portsmouth; was admitted to the bar in 1849; and removed to Toledo in 1851. There he was engaged in the wholesale drug business till his election to Congress as a Republican in 1859. In this body he served continuously till March 3, 1869, being defeated for re-election to a fifth term. For eight

years he was chairman of the House Committee on Territories. He introduced the bill for the reconstruction of the Southern States, proposing that they should be governed as Territories till permitted by Congress to elect Senators and Representatives; a bill for the abolition of slavery in the District of Columbia; and an amendment to the Constitution abolishing slavery in all the States where it existed. When the thirteenth amendment, abolishing slavery, was before Congress, he was given charge of it in the House. Mr. Ashley opposed the dismemberment of Virginia and the creation of the State of West Virginia, as being unconstitutional, unnecessary, and indefensible even as a war measure. He introduced the resolutions that led to the impeachment of President Johnson. At the expiration of his fourth term in Congress he was appointed Governor of Montana, but for lack of harmony with the Administration he was removed in the following year. He returned to Toledo, became counsel for several railroad corporations, and was elected President of the Toledo, Ann Arbor and North Michigan Railroad Company. In 1892 he was defeated for Congress by 14 votes.

Ayres, Anne, philanthropist, born in London, England, Jan. 3, 1816; died in New York city, Feb. 9, 1896. She acquired a liberal education, and on removing to New York city, in 1836, opened a private school. In 1845 she determined to consecrate herself to the charitable work of the Church, and within a few days she was ordained by Dr. Muhlenberg as the first member of the Sisterhood of the Holy Communion of the Protestant Episcopal Church. Her first work was the establishment of a parish school on Sixth Avenue. When the cholera epidemic broke out, she became a daily visitor to the hospitals. She worked alone for eight years, and then the sisterhood gained a second member. For forty years she rendered the sisterhood a constant service in St. Luke's Hospital, the Church Industrial Colony at St. Johnsland, the two infirmaries established through her, and other activities of the Church.

Bacon, William Allen, missionary, born in Albany, N. Y., Oct. 17, 1822; died in West Farms, N. Y., May 7, 1896. When seventeen years old he became a tract distributor among the sailors at Oswego, N. Y. In 1857 he removed to New York city, and for two years was connected with the work of the Five Points House of Industry and the Newsboys' Lodge. He then united with the Baptist Church and removed to Essex, Conn., where he performed missionary labor for five years, going thence to Beaufort, S. C. In 1866 he was appointed superintendent of the Detroit City Union Mission, where he remained nearly two years, retiring on account of failing health. After a brief pastorate in Fair Haven, Vt., he returned to New York city, was placed in charge of the Leonard Street Mission, and remained in service till within a few months of his death. He was also connected with the Baptist City Mission, on Third Avenue. He was alike successful in conducting mission work and in organizing Baptist missions and churches.

Baker, Charles Henry, naval officer, born in Salem, Mass., Jan. 16, 1831; died in Washington, D. C., May 6, 1896. He was appointed a third assistant engineer in the United States navy, Aug. 2, 1855; was promoted second assistant, July 21, 1858; first assistant, Aug. 2, 1859; and chief engineer, Oct. 29, 1861; and was retired Jan. 16, 1893. He was engaged in the capture of the Barrier Forts, near Canton, China, in 1856; served in the Paraguay expedition in 1858-'59; engaged in the siege of Yorktown and the operations on the York and James rivers, Virginia, in 1862; was captured while aiding in the medical relief of sick Confederates at City Point, Va., on May 19 of that year; and was

confined at Salisbury, N. C., and Richmond, Va., for three months. After his release he served on the Examining Board till the latter part of 1863; was on special duty in the construction of machinery and iron vessels at Boston, 1863-'67; fleet engineer of the South Atlantic squadron, 1867-'69; on duty at the Naval Academy, 1873-'77; fleet engineer of the Asiatic station, 1877-'81; in charge of stores at the navy yard, Boston, 1881-'84; at the Washington Navy Yard, 1884-'87; fleet engineer of the European squadron, 1887-'89; and at the Norfolk Navy Yard and on special duty till his retirement.

Barlow, Francis Channing, military officer, born in Brooklyn, N. Y., Oct. 19, 1834; died in New York city, Jan. 11, 1896. He was graduated at Harvard in 1855; studied law and began practicing in New York city; and at the beginning of the civil war held an editorial place on the "Tribune." He enlisted as a private in the 12th New York Regiment, which was sent to the defense of Washington. At the end of his three months' term he had been promoted lieutenant, and on the return of his regiment he again volunteered, and was commissioned lieutenant colonel of the 61st New York Volunteers. During the siege of Yorktown he was promoted colonel, and for distinguished services in the battle of Fair Oaks he was promoted brigadier general, Sept. 19, 1862. He was commended by his superior officers for the skillful manner in which he handled his command when the base of the army was changed from the Chickahominy to the James. Two days before his promotion to brigadier general he captured two sets of Confederate colors and 300 prisoners in the battle of Antietam; was severely wounded while leading a charge; and was carried from the field apparently dead. He returned to the field as soon as his physical condition would permit. At the battle of Chancellorsville he commanded a brigade in the 11th Corps, and was assigned to the duty of harassing the enemy under Gen. "Stonewall" Jackson, who were attempting a flank movement on the right of the National line. While commanding a division in the first day's fight at Gettysburg he was again severely wounded, and was taken prisoner. He was soon afterward exchanged, and was able to resume field duty in the following spring. At Spottsylvania Courthouse he was given command of the 1st division, 2d Corps, which formed the advance in the storming of the Confederate defenses that resulted in the capture of the works, 3,000 prisoners, and Gens. Johnson and Steuart. He took part in all the movements of the army of the Potomac in Gen. Grant's final campaign; was present at the surrender of Gen. Lee; and on the conclusion of peace was mustered out of the volunteer service with the rank of major general. Returning to New York city, he resumed law practice; was elected Secretary of State of New York in 1865; served till 1868; was United States marshal for the Southern District of New York in 1868-'69; and Attorney-General of New York in 1871-'73. While holding the last office he rendered invaluable aid in the prosecution of the Tweed ring, and on retiring from it he applied himself wholly to private practice.

Barnes, David Leonard, engineer, born in Smithfield, R. I., Aug. 23, 1858; died in New York city, Dec. 15, 1896. He was educated at Brown University and the Massachusetts Institute of Technology. In 1879 he entered the machine shops of the Hinckley Locomotive Works, in Boston, whence he went to the Rhode Island Locomotive Works, in Providence. He remained in the latter place as chief draughtsman and mechanical engineer till 1887, and while there he was also employed as a consulting engineer. From Providence he went to Chicago, where he established his principal office, and

was consulting engineer in the erection and equipment of the Alley Elevated Railroad. Since 1888 he had had charge of the department of mechanical engineering in the "Railroad Gazette." His most important mechanical work in late years was the construction from original designs of standard electric locomotives. In his contributions to technical literature he made a specialty of railroad rolling stock and locomotive engineering. One of his most notable papers was on "The Distinctive Features and Advantages of American Locomotive Practice," contributed to the International Engineering Congress of 1893.

Barton, Robert M., jurist, born near Morristown, Tenn., June 20, 1820; died in Hill City, Tenn., Feb. 28, 1896. His parents were among the early settlers of the State, and their seven sons were educated for lawyers. In 1860 he was a member of the State Senate, and in that body, as well as in a canvass of the State, he opposed the secession movement. Subsequently and despite his protest he was elected a delegate to the secession convention. When Andrew Johnson became Governor of Tennessee he appointed Mr. Barton judge of the 2d Circuit Court of the State. At the expiration of his term he resumed private practice; became general counsel for the East Tennessee and Virginia Railway Company; and removed to Chattanooga in 1878.

Beach, Alfred Ely, publisher and inventor, born in Springfield, Mass., in 1826; died in New York city, Jan. 1, 1896. He was a son of Moses Yale Beach, proprietor of the old New York "Sun"; was educated at Monson (Massachusetts) Academy; and acquired a practical knowledge of newspaper work in his father's establishment. In 1846, in conjunction with Orson D. Munn, a former classmate, he established the "Scientific American," and for nearly fifty years he was active in its editorial management and in the direction of the patent business connected with it. A natural taste for mechanics led him into the field of invention, and about 1852 he perfected a typewriting machine, which was operated at the Crystal Palace and American Institute exhibitions, and was awarded the Institute's gold medal as one of the most ingenious and important inventions of the day. Subsequently he invented the system of carrying letters from street lamp-posts directly to the central post office by means of underground pneumatic tubes, which is now in use between the main post office and the newspaper offices, and, in a modified form, in many of the great office buildings in New York city and elsewhere. In 1867 he exhibited at the American Institute a working model of a section of a pneumatic elevated railway, and the favor with which it was received induced him to plan a system of underground railways for New York. Under authority of the Legislature he began constructing a section under Broadway between Warren and Murray Streets in 1869, the excavation of the tunnel being carried on without interfering with surface traffic by means of a hydraulic shield of his own invention, which was afterward used in the construction of several notable railway tunnels in the United States, Canada, and Europe. Nothing more than the experimental section was ever constructed; but the Broadway tunnel was long a matter of popular and engineering interest. Mr. Beach was a man of large private benevolence, and conspicuous among his acts was the founding of the Beach Institute for Freedmen, at Savannah, Ga.

Beal, George Lafayette, military officer, born in Norway, Me., May 21, 1825; died there Dec. 11, 1896. At the beginning of the civil war he was captain of the Norway Light Infantry, and with his company was mustered into the 1st Maine Regiment

for the three months' campaign. At the end of this term he volunteered for two years, and was commissioned colonel of the 19th Maine Infantry, which covered the retreat of Gen. Banks from Winchester to Williamsport, Va., and took part in the battles of Cedar Mountain and Antietam. Col. Beal was severely wounded at Antietam; was mustered out with his regiment in May, 1863; again volunteered, and was made colonel of the 29th Maine Regiment. With this command he took part in the Red river and Shenandoah valley campaigns, and did much in the first to save the army under Gen. Banks in the battle of Sabine Crossroads, La., and in the second his brigade was the first to advance and break the enemy's lines at Cedar Creek, after Gen. Sheridan's arrival from Winchester. He was promoted brigadier general of volunteers on Nov. 30, 1864, for his services in the Red river campaign. In the early reconstruction days he was in command of the eastern district of South Carolina. He was mustered out of the service with the rank of brevet major general of volunteers on Jan. 15, 1866. Gen. Beal was adjutant general of Maine in 1880-'85 and State Treasurer in 1888-'94.

Bean, Nehemiah S., inventor, born in Gilmanston, N. H., in 1818; died in Manchester, N. H., July 20, 1896. He was apprenticed to the machinist's trade; became overseer of the pattern room of the Amoskeag Company's machine shop in 1847, and superintendent of the locomotive department in 1850; and was superintendent of the Essex Manufacturing Company in Lawrence, Mass., in 1854-'57. During the winter of 1857-'58 he built his first steam fire engine, which he named the "Lawrence," and sold to the city of Boston. In 1859 he returned to the Amoskeag works in Manchester, to take the superintendence of the locomotive shops. The same year he built the "Amoskeag Steam Fire Engine, No. 1," the first of a class of engines that are now in use in all parts of the world. The success of this engine led the company to make a contract with him for manufacturing under his patents, and for twenty years he superintended this work, turning out about 600 engines. Subsequently he and the Amoskeag Company sold out to the Manchester Locomotive Works.

Begole, Josiah W., merchant, born in Groveland, N. Y., Jan. 20, 1815; died in Flint, Mich., June 5, 1896. He acquired a public-school education, and on attaining his majority removed to what is now the city of Flint, Mich., but was then an almost unbroken wilderness. Besides aiding in building many of the first houses erected in the village, he taught school two winters, and from 1839 till 1856 was a farmer. In 1856 he was elected county treasurer, an office he held for eight years, and in 1863 engaged in lumbering. He joined the Republican party on its organization, and remained with it till after President Grant's second inauguration, when he became a Greenbacker. He was elected to the State Senate in 1871, and to Congress in 1872; and in 1882 was the successful fusion candidate for Governor of Michigan.

Belknap, Robert Lenox, philanthropist, born in New York city, July 23, 1848; died there March 13, 1896. He was graduated at Columbia College in 1869; entered a mercantile and manufacturing house immediately afterward; became Vice-President of the Mercantile Loan and Warehouse Company in 1871, and Treasurer of the Northern Pacific Railroad Company in 1879; and subsequently organized and became president of the corporation that laid out the city of West Superior, Wis., in 1883. Mr. Belknap was widely known for his charitable and philanthropic work, and among the various interests to which he was deeply attached are the Presbyterian Hospital, American Bible So-

ciety, Princeton Theological Seminary, Lying-in Hospital, New York Sabbath Committee, Presbyterian Church in University Place, of whose Sunday school he was superintendent from 1880, and the Presbyterian Social Union.

Birdseye, Lucien, jurist, born in Pompey, N. Y., Oct. 10, 1821; died in Brooklyn, N. Y., Jan. 27, 1896. He was graduated at Yale in 1841; studied law in Utica, N. Y.; was admitted to the bar in 1844; and, after practicing in Albany till 1850, removed to Brooklyn. In 1836 he was appointed by Gov. Clark a justice of the Supreme Court of the 2d District, to fill an unexpired term, and in the following year he was defeated as the Republican candidate for the office for a full time. He then returned to private practice. One of his most interesting cases was for the foreclosure, in the courts of New Mexico and California, of the mortgage on the Maxwell tract of over 1,700,000 acres, granted by the Republic of Mexico to Messrs. Beaubien and Miranda in 1841, in which he was successful. Another was the Lake Shore and Michigan Southern Railroad litigation, which he brought to a successful close after fourteen years.

Blair, John B., painter and inventor, born near the boundary line of Ohio and Pennsylvania, in 1800; died in Chicago, Ill., Jan. 1, 1896. He was educated at Yale, studied painting in Europe, and made two journeys around the world, sketching and painting specimens of bird life; and on his return to the United States was employed for many years as a portrait painter. The portrait of President Taylor, in the White House gallery in Washington, was from his brush. He was the first to paint great panorama in the United States, his first one showing the birds of the world. Subsequently he became widely known by his panoramas of the civil war. From early youth he exhibited much inventive skill, and among his accomplishments in this line were a bicycle made fifty years ago, quite similar to the safety wheels of to-day; the silk-bag gas balloon; and the rubber tips for lead pencils.

Bliss, George, banker, born in Northampton, Mass., in 1817; died in New York city, Feb. 2, 1896. He was brought up on a farm, and subsequently learned the dry-goods business in New Haven. In 1845 he removed to New York city and entered the establishment of S. B. Chittenden. Afterward he became a member of the firm of Phelps, Bliss & Co. He continued in the dry-goods business till 1863, when he associated himself with Levi P. Morton in the banking business, under the firm name of Morton, Bliss & Co., of New York, and Morton, Rose & Co., of London. He continued in this relation till his death. Mr. Bliss was officially identified with many important financial concerns and with large charitable enterprises. In life, he gave to his birthplace a beautiful church edifice, and erected a church for the poor on Blackwell's Island, N. Y., which cost upward of \$100,000. He bequeathed to Yale University, \$50,000; the Woman's Hospital of the State of New York, \$20,000; Hospital of the New York Society for the Relief of the Ruptured and Crippled, \$20,000; Manhattan Eye and Ear Hospital, \$10,000; New York Mission and Tract Society, \$10,000; New York Protestant Episcopal City Missions Society, \$10,000; Domestic and Foreign Mission Society of the Protestant Episcopal Church, \$20,000; and the Old Woman's Home, Northampton, Mass., \$10,000.

Block, Washee, Indian heroine, born on the Cheyenne Reservation, then in Indian Territory; died in Watonga, Oklahoma, in February, 1896. She married Philip Block, a German, about 1874. For nearly a quarter of a century she was one of the most conspicuous members of the Cheyenne tribe, and was a strong champion of every movement

tending to improve the condition of the tribe. She early recognized the impending disintegration of tribal governments, and when the Federal authorities made overtures looking to the allotment of Indian lands in what is now known as old Oklahoma, the commissioners found in her a willing and valuable ally. Against the opposition of some of the most powerful chiefs, she succeeded in securing the signatures to the petition, and the success of the movement was largely due to her efforts. She had acquired the highest education in the eyes of an Indian, a thorough knowledge of Indian medicines, and would have become the medicine woman of the Cheyennes had she survived her mother, now believed to be over one hundred years old. "Washee" was a friend alike of the white man, the Government, and the Indian.

Bogan, Bernard, philanthropist, born in Lifford, Ireland, in 1820; died in Brooklyn, N. Y., Sept. 7, 1896. He came to the United States with his brother Charles in 1843, and, settling in Newark, N. J., the brothers established a large bakery. In 1858 Bernard removed to Brooklyn and engaged in the same business. He was a charities commissioner in Brooklyn for several years. For over sixty years he was a teacher in Catholic Sunday schools. Soon after settling in Brooklyn he conceived the idea of establishing a newsboys' home in that city, and he raised \$16,000 within two weeks and opened the St. Vincent Home. From this beginning newsboys' homes sprang up all over the country. His particular desire was the reclamation of homeless children from the life of the streets, and his love for boys especially was remarkable.

Bond, Elias, missionary, born in Hallowell, Me., in 1813; died in North Kohala, Hawaii, in August, 1896. He was graduated at Bowdoin College in 1837, and at the Bangor Theological Seminary in 1840; and was one of the company of six volunteer missionaries of the American board who landed at Honolulu, Hawaii, in 1841. With his wife he was assigned to work in North Kohala, and he labored there for more than fifty years. He was one of the first missionaries to decline the support of the American Board and to rely on his own resources for his maintenance. Soon after his arrival he was appointed general school agent, a post he held till 1869. During this period a number of schoolhouses were built under his supervision, and a large stone meetinghouse at Iole, and in 1874 he founded the Kohala Girls' School. He labored for many years to secure from his friends financial aid and employment for the natives, who were rapidly removing to Honolulu in search of work, and in 1863 he succeeded in establishing a large sugar plantation. Twelve years passed before any profits were made, and it was only the opportune passage of the reciprocity treaty between the United States and the Sandwich Islands in 1875 that saved the enterprise from ruin. The entire income from the plantation since that time has been applied to the promotion of religion and education in Hawaii as well as in foreign lands, and Mr. Bond's personal gifts in these directions exceeded \$100,000.

Bootes, Levi Clark, military officer, born in the District of Columbia, in 1809; died in Washington, Del., April 18, 1896. He served as a private and sergeant in the army in Mexico from June 19, 1846, till July 25, 1848, and for gallantry was commissioned a brevet 2d lieutenant in the 6th Infantry, June 28, 1848. In the regular army he was promoted 2d lieutenant, Sept. 28, 1848; 1st lieutenant, June 9, 1853; captain, June 5, 1860; major of the 17th Infantry, Sept. 20, 1863; transferred to the 26th Infantry, Sept. 21, 1866, and to the 20th Infantry, Dec. 15, 1870; lieutenant colonel of the 25th Infantry, Jan. 1, 1871; and was retired Oct. 7, 1874.

During the civil war he was brevetted major July 1, 1862, for services in the battle of Malvern Hill; lieutenant colonel Dec. 13 following, for Fredericksburg; and colonel July 2, 1863, for Gettysburg. He was engaged in the siege of Yorktown, the battles of Gaines's Mill, second Bull Run, and Chancellorsville, and in suppressing the draft riots in New York city in 1863. His field service was mostly as commander of the 6th Infantry.

Boreman, Arthur Ingraham, jurist, born in Waynesboro, Pa., July 24, 1823; died in Wheeling, W. Va., April 19, 1896. In early youth he accompanied his parents to West Virginia, where he acquired a common-school education, and in 1845 was admitted to the bar and settled in Parkersburg. He served in the Virginia House of Delegates from 1855 till the outbreak of the civil war, and was a vigorous opponent of the secession movement. In June, 1861, he presided over the convention of Unionists of the northwestern counties of Virginia, at Wheeling, to form the new State of West Virginia, and in October following was elected a judge of the circuit court. On the admission of the new State into the Union, in 1863, he was elected its first Governor. He was re-elected twice, but resigned in his third term on being elected United States Senator for the term ending March 3, 1875. After this senatorial term he served for eight years as judge of the 4th Judicial Circuit Court.

Bourke, John Gregory, military officer, born in Philadelphia, Pa., June 23, 1846; died there June 8, 1896. He served as a private in the 15th Pennsylvania Cavalry from Aug. 12, 1862, till July 5, 1865; was graduated at the United States Military Academy and commissioned a 2d lieutenant in the 3d United States Cavalry, June 15, 1869; and was promoted 1st lieutenant May 17, 1876, and captain June 26, 1882. In March, 1870, he was assigned to duty on the staff of Gen. George Crook, and for several years was almost constantly engaged in campaigns against the Indians in Arizona, Montana, and elsewhere. He was brevetted captain and major Feb. 27, 1890, for gallant services in action against Indians at the Caves, Arizona, Dec. 28, 1872; in the campaign in Arizona in April, 1873; in the attack on Indians on Powder river, Montana, March 17, 1876; and in the action on Rosebud creek Montana, June 17, 1876; and was awarded a medal of honor for gallantry in action at Stone river, Tennessee, Dec. 31, 1862, and Jan. 1, 1863. While engaged in the Indian country he wrote several ethnological treatises, and his abilities in this line led Gen. Sheridan to detail him for special duty in Washington, where he performed much work for the Bureau of Ethnology and served as sergeant-at-arms of the Pan-American Congress. In 1892 he rejoined his regiment at Fort Ringgold, Texas, and for his success in suppressing armed violations of the neutrality laws on the Mexican border he was officially commended by the general of the army. He was detailed for special service in the Latin-American Department of the Columbian Exposition in 1893, and was stationed at Fort Ethan Allen in 1895. Shortly before his death he completed a year's service as President of the American Folklore Society. Capt. Bourke was a most unique character: courageous to recklessness, apparently fatigue proof, an enthusiastic student, a charming writer, and withal so modest that he declined the brevets of captain and major for his services against the Indians because he felt that he had done nothing to merit them. His last paper presented to the American Folklore Society was entitled "Notes on Some Arabic Survivals in the Language and Folk Usage of the Rio Grande Valley." Besides many contributions to scientific periodicals, he published "The Snake Dance of the Mouquis" (1884); "On the

Border with Crook" (1886); "The Medicine Men of the Apaches" (1893); and "The Folk Food of the Rio Grande Valley and of Northern Mexico" (1895).

Bowen, Henry Chandler, editor and publisher, born in Woodstock, Conn., Sept. 11, 1813; died in Brooklyn, N. Y., Feb. 24, 1896. He was educated at the Woodstock Academy, and spent four years as a clerk in his father's store. In 1833 he went to New York city and found employment in the silk house of Arthur Tappan & Co. The Tappan brothers were well-known antislavery advocates, and their store was one of the many places marked for attack during the negro riots, and young Bowen aided in protecting the property. At the end of his five-years' engagement he went into the wholesale silk and dry-goods business with a fellow-clerk, Theodore McNamee. The young firm prospered till the panic of 1857, when it received of its creditors an extension, and Mr. McNamee retired. Mr. Bowen then formed a partnership with Samuel P. Hohnes, and again prospered till the beginning of the civil war, when, through inability to make collections, the firm closed its business. On Dec. 7, 1848, the first issue of "The Independent" appeared, under the joint editorship of Leonard Bacon, Richard S. Storrs, Jr., Joseph P. Thompson, and Joshua Leavitt, and the proprietorship of Mr. Bowen, Mr. McNamee, Simeon B. Chittenden, Jonathan Hunt, and Seth B. Hunt. The paper was begun as a Congregational, antislavery organ; its proprietors were all engaged in mercantile business, with large Southern connections, and within a brief period the radical opinions expressed in it caused the proprietors to lose their trade in the South. The other owners gradually relinquished their interests in the paper, and it finally became the sole property of Mr. Bowen. On his retirement from mercantile business, in 1861, he applied himself to publishing the paper, and in six weeks brought it from a losing to a paying condition. Dis. Bacon, Storrs, and Thompson were succeeded in the editorship by Henry Ward Beecher, and he by Theodore Tilton, and on the retirement of the latter Mr. Bowen assumed the editorial as well as the business direction. In 1862 Mr. Bowen was appointed collector of internal revenue for the 3d New York District, which comprised the greater part of Brooklyn, and he held the office till removed by President Johnson because "The Independent" opposed his reconstruction policy. Mr. Bowen was one of the first members of the Pilgrim Congregational Church, Brooklyn, a founder of Plymouth Church, and for many years an ardent friend of Mr. Beecher. He retained his connection with Plymouth Church till the Tilton-Beecher trial, in 1875. Though on terms of extreme intimacy with both parties, Mr. Bowen was not called as a witness; but he was tried by a committee of the church on charges of having slandered the pastor, and was expelled from the society because he refused to divulge facts which, he confessed, had come to his knowledge. Mr. Bowen established a beautiful summer estate in Woodstock, known as Roseland Park, where for many years he gave Fourth-of-July celebrations, with many of the most eminent public men of the country as speakers. He bequeathed the reversion of \$15,000 to Woodstock Academy and the same amount to the trustees of Roseland Park, and created a special trust of \$10,000 for the maintenance of the park.

Brady, Matthew B., photographer, born in Warren County, N. Y., in 1823; died in New York city, Jan. 16, 1896. While studying to be a portrait painter, he became intimate with Samuel F. B. Morse, who was successfully following that art, and when Daguerre's invention was first made public

in the United States, in 1839, Morse became deeply interested in the discovery and induced Mr. Brady first to investigate, and then to adopt the new method of portraiture. Mr. Brady soon abandoned portrait painting wholly, opened a small gallery, and began making daguerreotypes, seeking his early sitters among the best-known men and women of the city. His success was encouraging from the start, people willingly paying him from \$3 to \$5 each for portraits. In 1851 he took a collection of his daguerreotypes to the London Exhibition, where he took the first prize, and afterward he made a tour of the art galleries of Europe. About 1855 he discarded the daguerreotype and began to make photographs. At the beginning of the civil war Mr. Brady established a gallery in Washington, D. C., and perfected an elaborate plan for securing photographs of the principal scenes and actors in the struggle; and by the close of the war he had a collection of plates that had cost him over \$100,000 and comprised historical points, battle scenes, and portraits of military, naval, and other public men. After the war several ineffectual attempts were made to induce Congress to purchase the collection, which Mr. Brady had kept intact. The War Department bought a considerable number, and Mr. Brady either gave away or sold privately the remainder. Several years ago he lost most of his property, became nearly blind, and was incapacitated by an accident.

Brimmer, Martin, philanthropist, born in Boston, Mass., Dec. 9, 1829; died there Jan. 14, 1896. He was graduated at Harvard in 1849; spent several years in foreign travel; and on his return read law and was admitted to the bar, but never practiced. His business life was almost wholly occupied with the care of a large estate left by his father, from whom he inherited the oldest building on Washington Street, the Old Corner Bookstore, at the corner of School Street. He was a member of the Massachusetts House of Representatives in 1859-'61; a State Senator in 1864; and a presidential elector in 1876. As President of the Boston Museum of Fine Arts and a member of the board created by statute to pass on the artistic suitability of public monuments to be erected hereafter in the city, he became distinguished as a connoisseur. He spent much time and money in archaeological researches, was author of a work on "Egyptian Archaeology," and had gathered an extensive collection of paintings and works of art. He bequeathed to the Boston Museum of Fine Arts, after the death of his wife, half of his interest in the Old Corner Bookstore property; the Massachusetts General Hospital, \$25,000; Harvard College, \$50,000; Boston Children's Aid Society, \$10,000; and the Museum of Fine Arts, the surplus of the half interest in the Bookstore property placed in trust for his wife.

Bristow, Benjamin Helm, lawyer, born in Elkton, Ky., June 20, 1832; died in New York city, June 22, 1896. He was graduated at Jefferson College, Pennsylvania, in 1851; was admitted to the bar of Kentucky in 1853; practiced with his father at Elkton till 1857; and then removed to Hopkinsville. At the beginning of the civil war he aided in raising the 25th Kentucky Regiment of National troops, which he accompanied to the field as lieutenant colonel. He took part in the capture of Fort Donelson; was wounded at Shiloh; and, returning home, helped to raise the 8th Kentucky Cavalry, of which he was commissioned lieutenant colonel and soon afterward colonel. In 1863, while in the field and without his knowledge, he was elected to the Kentucky Senate, and, resigning his commission in the army, served in that body for two years. He then resumed law practice in Louisville. In 1865 he was appointed United States district attorney for Kentucky, and during his five-years' tenure of that

office he gained a thorough familiarity with the operations of the whisky producers in that State. After vacating this office he formed a partnership with John M. Harlan, now a justice of the United States Supreme Court; but within a few months he was appointed Solicitor-General of the United States. He resigned this office in 1872; was attorney of the Texas-Pacific Railroad for a short time, and then resumed practice in Louisville. In 1873 he was nominated by President Grant for Attorney-General of the United States, when the President desired that Attorney-General Williams should succeed the late Chief-Justice Chase: but neither nomination was confirmed. In June, 1874, the President appointed him Secretary of the Treasury, and during the ensuing two years he was actively employed in disclosing and prosecuting the great Western whisky combination, which had its headquarters in St. Louis. This prosecution was made memorable because of the large number of persons high in office or influence connected with the combination, and because of President Grant's official injunction, "Let no guilty man escape." Secretary Bristow held the office for two years. His fearless assaults on the whisky ring gave him a wide reputation as a reformer, and he received 113 votes on the first ballot for the presidential nomination at the Republican National Convention in Cincinnati in 1876. The same year he removed to New York city to practice. Mr. Bristow became general counsel of the New York, Lake Erie and Western Railroad; President of the American Bar Association; Vice-President of the Bar Association of New York city; a founder of the Society of the Army of the Cumberland; and counsel for the Westinghouse Electric Company in its many patent suits.

Bromley, Henry, missionary, born in Norwich, Conn., Dec. 5, 1812; died in New York city, April 20, 1896. He was graduated at Madison (now Colgate) University in 1838; was ordained pastor of the Spring Hill Baptist Church, in Mansfield, Conn., soon afterward; and, after a pastorate of six years, was sent to Wisconsin by the Baptist Home Missionary Society. In 1847 he returned to Connecticut, in 1849 made a tour as a revivalist, and in 1851 visited Baptist churches throughout the State in behalf of the Literary Institute, in Suffolk. On the establishment of the Long Island Baptist Mission, in 1852, he was appointed to preach and organize mission stations in the central part of the island. He then founded the Colgate Mission in New York city; put the straggling Hamilton Avenue Mission in Brooklyn in a self-sustaining position; established a mission in the Gowanus district, which became the Greenwood Baptist Church and from which two churches and two flourishing missions have sprung; and founded missions at Fourth Avenue and Thirty-fifth Street and at Windsor Terrace, New York. In 1857-'60 he founded three missions in New York city, two of which became churches, and the other the Howard Mission for Little Wanderers. Between 1861 and 1881 he labored with corresponding success in Jersey City, Orange, Montclair, Dover Plains, and elsewhere in New Jersey and in New York and Brooklyn, and in Philadelphia. In late years he was assistant pastor of the Greenwood Church.

Bunner, Henry Cuyler, editor, born in Oswego, N. Y., Aug. 3, 1855; died in Nutley, N. J., May 11, 1896. He received a public-school education in New York city, and took a clerkship in a commercial importing house. This occupation proved distasteful, and about 1873 he began writing for newspapers and became a member of the editorial staff of "The Arcadian." In 1877 the first number of the English edition of "Puck" was issued, with Mr. Bunner as assistant editor. Soon afterward he became editor, and he held the place till his death.

Mr. Bunner was an indefatigable worker, supervising the successive issues of "Puck," contributing special articles to it, writing stories for the magazines, and publishing several volumes of poetry and prose. Among his publications are: "A Woman of Honor" (1883); "Airs from Arcady and Elsewhere" (1884); "The Midge" (1886); "The Story of a New York House" (1887); "Zadoc Pine, and Other Stories" (1891); "The Runaway Browns" (1892); "Rowen" (1892); "Made in France" (1893); "Short Sixes" (1894); and "Jersey Street and Jersey Lane" (1896). In collaboration with Brander Matthews he wrote "In Partnership" (1884), and for Marie Wainwright he wrote a play entitled "The Tower of Babel," which was produced in 1883.

Cabell, Edward Carrington, military officer, born in Richmond, Va., Feb. 5, 1816; died in St. Louis, Mo., Feb. 28, 1896. He received a classical and university education in his native State, read law, and in 1837 removed to the Territory of Florida and became a cotton planter. In 1845-'53 he was a Whig representative in Congress, and in his last term he secured an appropriation for the protection of Key West and the Tortugas. During the civil war he was a general officer in the Confederate army, and afterward he removed to St. Louis, where he passed the remainder of his life. He was author of a history of Florida.

Callaghan, Michael, clergyman, born in County Cavan, Ireland, about 1842; died in New York city, Feb. 10, 1896. He came to the United States in early youth; was educated in St. Francis Xavier's College, New York city, and St. Joseph's Seminary, Troy; and was ordained in the Roman Catholic priesthood in 1869. After serving as a missionary in New York city, he received the rectorship of the Church of the Assumption in Peekskill, N. Y., in 1879; but his heart had been enlisted in missionary work, and his happiest hour was when he was appointed director of the Mission of Our Lady of the Rosary, founded for the protection of immigrant girls landing at New York. Within a short time he collected \$43,000 in an attempt to clear the mission home of a mortgage of \$16,000, the press and wealthy people, irrespective of religious faith, promoting his cause. In ten years more than 160,000 young women passed through the home, and more than 4,000 girls between the ages of fifteen and twenty-five found free shelter there.

Campbell, Loomis J., philologist, born in Oneonta, N. Y., in 1831; died there Nov. 6, 1896. He was a graduate of both Hamilton and Yale Colleges; was for many years at the head of the staff that, under the direction of President Porter of Yale, made the last revision of "Webster's International Dictionary"; and for many years was also editor of the "Farmers' Almanac." He was the author of a history of the United States and of the popular "Franklin Series," and edited a "Young Folks' Book of Poetry" and a "Handbook of Synonyms." He received the degree of LL. D. from Hamilton College.

Cannon, Harriet Starr (known in religion as MOTHER HARRIET), philanthropist, born in Charleston, S. C., in 1822; died in Peekskill, N. Y., April 6, 1896. In early life she inherited a fortune and removed to New York city to devote herself to Church work. Her first service was in the newly established St. Luke's Hospital, and while there she entered the Protestant Episcopal Order of Deaconesses. On Feb. 2, 1865, she established the Anglican Order of St. Mary, which now has a large membership, with the mother house at Peekskill, and of this order she became the executive head.

Carpenter, George M., jurist, born on the island of Rhode Island, Narragansett Bay, R. I., in 1844; died in Katwyk, Holland, July 31, 1896. He was

graduated at Brown University in 1864; was for several years a reporter on the "Press" and the "Journal," both of Providence; and then became a court stenographer, studying law in the meantime. After his admission to the bar he formed a partnership in Providence with his former preceptor. In 1889 he was appointed a member of the commission to revise the laws of the State, and soon afterward he was elected a judge of the State Supreme Court. On the advancement of Judge Colt to the circuit court, President Arthur appointed Judge Carpenter judge of the United States District Court of Rhode Island. Among the important cases heard by him were the trial of Dr. Azel Ames for alleged pension frauds, the still mysterious Wilson-Moen case, and the suit of the Government against the American Bell Telephone Company for annulment of the Berliner patent.

Carpenter, William, author, born in England in 1830; died in Baltimore, Md., Sept. 1, 1896. He learned the printer's trade, and worked for several publishers in London. He removed to Baltimore in 1879, and was afterward engaged in teaching stenography. In 1864 he first attracted attention by the publication of a poem entitled "The Earth not a Globe, by Common Sense." This work he soon followed with a prose version of his theories, entitled "Sir Isaac Newton's Theoretical Astronomy examined and refuted by Common Sense," which passed through many editions. He then published in rapid succession "Water not Convex: The Earth not a Globe"; "Bosh and Bunkum: Religious Arguments why the Earth is not Round"; and "Proctor's Planet Earth," a reply to Proctor's "Lessons in Elementary Astronomy." Some of his writings, through inability to secure a publisher, he printed, bound, and sold himself. Other publications were: "Something about Spiritualism"; "A Reply to Professor Airy's Ipswich Lectures to Workingmen"; "Mr. Lockyer's Logic"; "The Delusion of the Day"; "Carpenter's Folly," a small magazine, of which a few numbers were issued in 1887; and "Shorthand," another magazine, issued in 1893-'94. His theory, in brief, was that the earth is not a globe, but has a flat (circular) form, revolving on a central axis with the sun stationary over the center. The equator was the center of the earth's surface, and the polar regions the outer edge. He attempted to defend his theory both on scientific and religious grounds.

Carter, Susan Nichols, educator, born in Cambridge, Mass., Nov. 20, 1835; died in Arlington Heights, Mass., Aug. 8, 1896. She was a daughter of George Nichols, the American editor of Burke's works, and the second wife of Robert Carter, author of "A Summer Cruise on the Coast of New England." She was educated in Boston; studied art with William Hunt Vantine, in Boston, and Couture in Paris; and was principal of the Woman's Art School of Cooper Union from 1872 till within a few weeks of her death. Mrs. Carter edited a series of art text-books; wrote articles on art and foreign travel for "The Century," "Scribner's Magazine," and other periodicals; and devoted her life to the art education of women.

Casey, Thomas Lincoln, military engineer, born in Sackett's Harbor, N. Y., May 10, 1831; died in Washington, D. C., March 25, 1896. He was the oldest son of Gen. Silas Casey, and was graduated at the United States Military Academy in 1852, standing first in his class. He entered the service as brevet 2d lieutenant, and was assigned to duty in connection with works of improvement in Delaware river and bay, whence he returned to the Academy as assistant instructor of practical engineering, and later as assistant professor of engineering. In 1860 he had command of a detachment of

engineers, and engaged in the construction of a wagon road from Vancouver, Wash., to Cowlitz river, Oregon, and the important duty of selecting surveying military reservations on Puget Sound. From duty as assistant engineer at Fort Monroe, Va., on the staff of the commanding general of the

Department of Virginia, he was ordered in 1861 to that of superintending engineer of the permanent defenses and field fortifications on the coast of Maine. In 1864 he was on special duty with the North Atlantic squadron in the first expedition against Fort Fisher. Meanwhile he passed through the grades of lieutenant and captain and reached that of major. He was

brevetted in March, 1865, lieutenant colonel and colonel for faithful and meritorious services during the civil war. In 1868 he was ordered to Washington and given charge of one of the principal departments in the office of the chief of engineers, in which place he remained until 1877, having, however, in 1873, been sent to Europe on professional services, and in 1874 he was made lieutenant colonel. In 1877 he was placed in charge of the erection of the State, War, and Navy buildings, of the office of Public Buildings and Grounds, and of the Washington Aqueduct. The State Department building was completed in 1888, the State Department wing and a portion of the Navy Department wing having been erected before he took charge of it. He laid out the walks and drives of the White Lot, and built the pedestal for the statue of Gen. Thomas and the White House Conservatory, and later had charge of the construction of the Army Medical Museum and Library, the erection of the monument over the grave of President Jefferson, the one at Washington's headquarters in Newburg, N. Y., the one to mark the birthplace of Washington, and the Garfield statue and pedestal. In 1878 he was given charge of the completion of the Washington Monument, which had then been standing in an unfinished condition for a quarter of a century. The engineering problems connected with its completion were unique in magnitude and character. They consisted not only of the erection of the greater part of the marble and granite shaft, but of strengthening the foundations so as to render safe beyond question the entire shaft, weighing 32,000 tons, standing at that time. It was also necessary for Gen. Casey to construct a suitable terminal or pyramid for the shaft, and this was successfully accomplished and the capstone placed in position Dec. 6, 1884. He was President of the Board of Engineers for fortification and other public works at New York from 1886 to July 6, 1888, when he was appointed brigadier general and chief of engineers, United States army. Gen. Casey was charged by act of Congress, in October, 1889, with the construction of the Congressional Library building, and in appreciation of his ability Congress continued him after retirement in charge of the work. In 1890 he was elected to the National Academy of Sciences. He was also a member of the American Society of Civil Engineers and an officer of the Legion of Honor in France.

Caswell, Oliver, blind and deaf-mute, born in Connecticut, near Newport, R. I., in 1829; died there April 13, 1896. Excepting Laura Bridgman,

he was the most widely known blind mute in the country. Early in life he was sent to the Perkins Institute for the Blind, in Boston, where he attracted the attention of Dr. Samuel G. Howe, who undertook to educate him. With the assistance of Laura Bridgman, Dr. Howe taught him to read and to converse with his fingers, and, becoming convinced that he had both the capacity and inclination to learn, placed him under the care of an expert instructor. When Charles Dickens visited the Perkins Institute Oliver was thirteen years old, and just beginning to show results of Dr. Howe's preliminary instruction. The novelist was particularly interested in the lad, and in his "American Notes" devoted many pages to his condition and the method of his education. The triple affliction was the result of an attack of scarlet fever when Oliver was a little over three years old.

Catlin, George Lynde, journalist, born on Staten Island, N. Y., Feb. 13, 1840; died in New York city, Dec. 14, 1896. He was graduated at Yale in 1860; enlisted in the 5th New York Volunteers in 1861; and subsequently served with the 101st New York Regiment, having the rank of lieutenant at the end of the war. On his return he became an editorial writer on the "Commercial Advertiser" of New York, and also wrote the "Personal" column for that paper. About 1877 he entered the United States consular service, in which he remained till about a year before his death, serving at La Rochelle, France, Limoges, Stuttgart, and Zurich. While in Europe he contributed verse to various periodicals and published anonymously a book entitled "Bietigheim," which purported to narrate the details of a battle fought at a place of that name between the armies of France, Great Britain, Italy, Spain, Turkey, and the United States on one side, and those of Germany, Russia, and Austria on the other. This work was in the nature of a prophecy, and it is said that the German authorities, after its publication, recognized the value of Bietigheim as a strategic point and fortified it. In 1888 he published "The Presidential Campaign of 1896," in which, among other events, he detailed the election of John W. Griggs as Governor of New Jersey in that year, which occurred. Mr. Catlin resided in Paterson, N. J., where he had served as President of the Board of Education and for many years as superintendent of a large Sunday school.

Chambers, Talbot Wilson, clergyman, born in Carlisle, Pa., Feb. 25, 1819; died in New York city, Feb. 3, 1896. He was graduated at Rutgers College; studied theology in the Reformed Church Seminary there and at Princeton College; was licensed to preach at Clinton, Miss., in 1838; and was pastor of the Second Reformed Church, Somerville, N. J., in 1839-49. In the latter year he was installed one of the pastors of the Collegiate Dutch Church in New York city, and remained in association with the Middle Dutch Church congregation till his death. He received the degree of S. T. D. from Columbia College in 1853, and that of LL. D. from Rutgers College in 1885. He was the Vedder lecturer at New Brunswick in 1875; chairman of the Committee on Versions of the American Bible Society for many years; and a member of the Old Testament company of the American Bible Revision Committee. He published "The Noon Prayer Meeting in Fulton Street" (New York, 1857); "Mémorial of Theodore Frelinghuysen" (1863); "Exposition of the Book of Zechariah" in "Lange's Commentary" (1874); "The Psalter a Witness to the Divine Origin of the Bible" (Vedder lectures, 1875); and "Companion to the Revised Version of the Old Testament" (1885).

Child, Francis James, scholar, born in Boston, Mass., Feb. 1, 1825; died there Sept. 11, 1896. He

was graduated at Harvard University in 1846. He was for a time tutor in mathematics at Harvard, and subsequently tutor in rhetoric and history. After some months of European travel and study he was made Professor of Rhetoric and Oratory at Harvard in 1851, and he became Professor of English Literature there in 1876. He was, perhaps, the foremost American scholar in the department of Anglo-Saxon and early English literature, and his services to literature in the editorship of "English and Scottish Popular Ballads" (1883-'96) won instant and generous appreciation from all scholars. This was his principal work as editor, his other publication as such including "Four Old Plays" (1848); "Poems of Sorrow and Comfort" (Boston, 1865); "English and Scottish Ballads" (Boston, 1857-'59, 8 vols.; 1878, 4 vols.). He superintended the American issue of "The British Poets," and was also the editor of Spenser's works. He was well known to Harvard students for many years through his courses on Anglo-Saxon, Chaucer, and Shakespeare, and was held in most sincere esteem by his pupils. He lived a scholar's life in Cambridge, his chief recreation being the culture of roses, regarding which he was no mean authority, but he took a keen interest in general political issues and local municipal affairs, and never relapsed into the scholar's selfishness.

Claassen, Peter J., military officer, born in Arnheim, Holland, in 1831; died in Brooklyn, N. Y., Dec. 29, 1896. He was graduated at the University of Heidelberg, and removed to New York when a young man and engaged in banking. At the outbreak of the civil war he aided in organizing the 9th New York Volunteers, with which he returned to the field as colonel and served till the close of the war, when he was brevetted brigadier general of volunteers. On his return to New York he re-engaged in banking. After the failure of the Sixth National Bank, in 1890, Gen. Claassen was sentenced to State Prison for six years on charges made against him and several other directors but in 1893 he was pardoned by the President.

Clafin, Mary Bucklin, author, born in Hopkinton, Mass., in July, 1825; died in Whitinsville, Mass., June 13, 1896. She was for more than fifty years the wife of William Clafin, Governor of Massachusetts. She was a trustee of Wellesley College from its foundation and Boston University for eighteen years, a director in the North End Mission in Boston, and an active member of the Working Girls' Club. Her publications include "Brampton Sketches," depicting old New England country life; "Recollections of Whittier"; and "Under the Old Elms."

Cockerill, John A., journalist, born in Dayton, Ohio, in 1845; died in Cairo, Egypt, April 10, 1896. He learned the printer's trade in the office of "The Scion of Temperance," in Dayton; became one of the clerks of the Ohio Senate; joined Clement L. Vallandigham in editing and publishing the "Dayton Empire"; and afterward removed to Hamilton, Ohio, whence he was called by J. B. McCullagh to the Cincinnati "Enquirer." In the last office he rose from reporter to managing editor. During the Russo-Turkish War he was the special correspondent for the "Enquirer" with the Turkish army. On his return from Europe he was associated with Stilson Ilutchins in establishing the Washington "Post," from which he soon retired, and was then successively editor of the Baltimore "Gazette," the St. Louis "Post-Dispatch," the New York "World," the New York "Morning Advertiser," and the New York "Commercial Advertiser." In February, 1895, he was sent by the New York "Herald" as its correspondent to China and Japan, and wrote many letters concerning the war and the subsequent troubles in Formosa and Korea. He left Japan in

January, 1896, after the Emperor had personally presented him with the decoration of the Third Order of the Sacred Treasure. While resting at Cairo and studying the new Anglo-Egyptian campaign he had a fatal stroke of apoplexy.

Coe, George Simmons, banker, born in Newport, R. I., March 27, 1817; died in Englewood, N. J., May 3, 1896. He acquired a common-school education, became a grocery clerk when fourteen years old and a bank messenger when eighteen, served six years in a New York banking house, and was appointed cashier of the American Exchange Bank in 1854. Within a few months he was elected vice-president and in 1860 president, and he held the last office till 1894, when failing health caused his retirement. Soon after the first battle of Bull Run Salmon P. Chase, then Secretary of the United States Treasury, called a conference of bankers and capitalists at the house of John J. Cisco, the Assistant Treasurer of the United States, at New York. The financial straits of the Government were fully discussed, and Mr. Coe suggested a plan of relief that was received with favor by all present. This, in brief, involved the uniting of the banks of the North by some organization that would combine them into an efficient and inseparable body for the purpose of advancing the capital of the country upon Government bonds in large amounts, and through their clearing-house facilities and other well-known expedients to distribute them in smaller sums among the people in a manner that would secure active co-operation among the members in this special work, while in all other respects each bank could pursue its independent business. A committee was appointed to formulate the plan, which was accepted and adopted by the banks of New York, Boston, and Philadelphia, and within thirty days was in working order. So vast a responsibility had never before been attempted in the United States, and the assumption of it with such promptitude was without precedent. The capital of the banks thus associated aggregated \$120,000,000, an amount greater than that of the Bank of England and the Bank of France combined, each of which institutions had been found sufficient for the extraordinary emergencies of their respective countries. Mr. Coe also conceived the idea of bringing together the banks and the newly established clearing house in such a way that they could report every day the amount of their coin reserve and liabilities. This scheme enabled banks having an excess of surplus to contribute a sufficient amount to the other banks to make the general condition equal. He also devised the system of clearing-house certificates, by which many panics have been averted or lessened in severity, suggesting the organization of a company of bank officers with authority to assist weak banks and to issue certificates of trust to them based upon the deposit of their assets. Mr. Coe was elected President of the National Banking Association in 1881, and was a founder of the Children's Aid Society and its treasurer till within a few weeks of his death.

Coffin, Charles Carleton, author, born in Boscawen, N. H., July 26, 1823; died in Brookline, Mass., March 2, 1896. He was brought up on his father's farm; attended the district school and studied in the Boscawen and Pembroke Academies; learned land surveying and was employed on railroad work in 1845-'48; and, after a brief period of farming, became a telegrapher. In 1852, on the introduction of the electric fire-alarm system in Boston, he sent out the first alarm after installing the plant. He began contributing to newspapers before reaching his majority, and from 1855 till 1860 held various places on the Boston "Journal," "Atlas," and "Traveler." At the outbreak of the

civil war he went to the front as the correspondent of the "Journal," and his letters, written over the signature of "Carleton," attracted much attention because of their clearness and vivid descriptions. In 1866 he was sent to Europe to report the war between Austria, Italy, and Prussia, and on its termination he reported the Paris Exposition of 1867, and then made a tour of the world, sending weekly letters to his paper. Since 1870 he had applied himself largely to authorship. He was elected to the State Legislature in 1884 and 1885, and to the State Senate in 1890. His publications include "The Great Commercial Prize" (1858); "Days and Nights on the Battlefield" (1864); "Following the Flag" and "Winning His Way" (1865); "Four Years of Fighting" (1866); "Our New Way Round the World" (1869); "The Seat of Empire" (1870); "Caleb Krinkle" (1875); "History of Boscaewen" (1877); "Boys of '76" (1879); "Old Times in the Colonies" (1880); "Life of Garfield" (1880); "Building the Nation" (1883); "Drumbeat of the Nation" (1887); "Freedom Triumphant" (1891); "Abraham Lincoln" (1892); "Dan of Millbrook" (1894); and "Daughters of the Revolution and their Services—1769-1776" (1895).

Collins, Hiram, inventor, born in South Hampton, N. H., May 27, 1808; died in Amesbury, Mass., Jan. 15, 1896. He removed to Amesbury in early youth, and for many years worked in the mills there and in Boston. While milling he perfected several mechanical devices and invented the first continuous loom running machine for woolen mills. Subsequently he was engaged in dentistry and the jewelry business.

Colston, Raleigh Edward, military officer, born of Virginia parents in Paris, France, Oct. 31, 1825; died in Richmond, Va., July 29, 1896. He came to the United States in September, 1842; entered the Virginia Military Institute in the following year; and after graduation was Professor of French at the institute for ten years. He served in the Confederate army during the civil war, and at its close entered the service of the Khedive of Egypt. In 1876 he was one of the officers selected to assist in reorganizing and equipping the Egyptian army. During his service with that army he was engaged in battles with the Abyssinians, and on resigning his post he was appointed by the Khedive a knight commander of the order of Osmanieh. After his return he held an appointment in one of the departments in Washington, D. C., till 1892, when paralysis forced his retirement.

Comegys, Cornelius, physician, born in Cherbourg, Kent County, Del., in 1816; died in Cincinnati, Ohio, Feb. 10, 1896. He was a son of Gov. Cornelius P. Comegys and brother of United States Senator Joseph P. Comegys. After engaging unsuccessfully in business in Indiana, he studied medicine, and was graduated at the University of Pennsylvania in 1848. He settled in Cincinnati, spent 1851 in special study in London and Paris; was appointed Professor of Anatomy in the Cincinnati College of Medicine in 1852; and soon afterward resigned to become Professor of the Institutes of Medicine in the new Miami Medical College, Oxford, Ohio. In 1857 the last institution was merged with the Medical College of Ohio, and with the exception of 1860-'64 Dr. Comegys retained his chair till 1868. He also in 1857 became lecturer on clinical medicine in the Cincinnati Hospital, where he introduced important improvements. Dr. Comegys secured the organization of the University of Cincinnati in 1869; was a founder and president of the Cincinnati Academy of Medicine; was active in developing the Cincinnati Public Library; and for many years was a director of the board of education of that city. He translated Renouard's

"History of Medicine," and published medical papers, of which "The Pathology and Treatment of Phthisis" and "Cool Bathing in the Treatment of Enterocolitis" attracted special attention.

Cooke, Augustus Paul, naval officer, born in Cooperstown, N. Y., Feb. 10, 1836; died in Paris, France, Sept. 7, 1896. He was graduated at the United States Naval Academy in 1856; was promoted passed midshipman April 29, 1859; master, Sept. 5 following; lieutenant, Dec. 28, 1860; lieutenant commander, Aug. 11, 1862; commander, Aug. 15, 1870; and captain, Nov. 25, 1881; and was retired May 27, 1892. While serving on the steamer "Pinola" in the Western Gulf blockading squadron in 1862, he assisted in clearing obstructions in the Mississippi river below Forts Jackson and St. Philip, and took part in the capture of those forts and of New Orleans. He was then transferred to the "Estrella," of the gunboat flotilla operating in the waters of Louisiana under the command of Lieutenant-Commander Buchanan. The latter was killed in an engagement with the Confederate gunboat "Cotton," on Jan. 14, 1863, and Cooke succeeded to the command of the flotilla. In April following, with 3 vessels, he destroyed the Confederate steamer "Queen of the West" and captured her crew in Grand Lake, Louisiana, and also captured Fort Burton at Butte à la Rose, La., taking all the garrison prisoners. After the war he was on duty at the Naval Academy; commanded several practice, training, and receiving ships; was inspector of ordnance at the San Francisco Navy Yard and captain of the yard at the New York and Philadelphia Navy Yards; and from Sept. 15, 1890, till his retirement was President of the Board of Inspection of Merchant Vessels at New York city.

Cooke, Julia Montague, missionary, born in Sunderland, Mass., Nov. 12, 1812; died in Honolulu, Hawaii, Aug. 12, 1896. In November, 1836, she married Amos S. Cooke, of Danbury, Conn., and in the following month they sailed on the bark "Mary Frazier" for Hawaii, to engage in missionary work under the auspices of the American Board. They arrived at Honolulu on April 10, 1837, and there organized a school for native children, which they carried on twelve years. She continued in active work till within a few years of her death, and survived her husband but a year.

Corbin, Austin, financier, born in Newport, N. H., July 11, 1827; died there June 4, 1896. He was graduated at the Harvard Law School in 1849, removed to Davenport, Iowa, in 1851, and engaged in the banking business in 1854. In 1863, on the passage of the national banking law, he organized what became the First National Bank of Davenport. His private banking house was the only institution of its kind in the city that withstood the panic of 1857, and he was equally successful with his national bank. While looking after these interests he was first drawn into railroad operations, and became President of the Indianapolis, Bloomington and Western Railroad Company. In 1865 he removed to New York city, founded the Corbin Banking Company, and acquired interest after interest, till he became one of the foremost financiers in the city. One of his first operations was the purchase of $2\frac{1}{2}$ miles of beach and 500 acres of barren waste on Coney Island and the development of the Manhattan Beach property. His next step was the acquisition of the Long Island Railroad and several smaller lines, which he consolidated and brought to a high state of service. In 1886 he took hold of the affairs of the Reading Railroad Company, then in default, and on Jan. 1, 1888, turned the property over to the stockholders in a solvent condition. Subsequently he was President of the New England Railroad Company, resigning in 1892. For several

years he had been deeply interested in a project for establishing a transatlantic steamship line to run from Fort Pond Bay, near the eastern end of Long Island, to Milford Haven, Wales. His summer estate in New Hampshire consisted of 25,000 acres around Newport, all mountain and valley, and was the largest game preserve in the United States. The last large project in which he was engaged was the settlement of nearly 1,000 Italians on a tract of about 10,000 acres in Arkansas in a bend of the Mississippi river, 700 of whom reached the place in December, 1895. He was killed by being thrown from his carriage.

Corson, Hiram, physician, born in Plymouth Township, Pa., Oct. 8, 1804; died there March 4, 1896. He was graduated at the University of Pennsylvania in 1828, and from that year till within a year of his death was engaged in the practice of medicine. Prior to the civil war he was an active abolitionist, and his life was frequently in peril because of his kindness and aid to fugitive slaves. He was the originator of the ice treatment for scarlet fever and diphtheria, and the pioneer in blood-letting for pneumonia. Dr. Corson was the author of several contributions to medical literature, particularly on scarlet fever and diphtheria.

Cox, George D., journalist, born in Burlington, N. J., in 1843; died in Philadelphia, Pa., Sept. 30, 1896. He removed to Philadelphia in boyhood; became a dramatic critic and editor, serving as such on most of the principal newspapers of that city; and for many years was employed as French translator by a local publishing house. His most notable work was "Edmond Dantes," which for a long time was generally believed to have been Dumas's own sequel to his "Count of Monte Cristo."

Coxe, Arthur Cleveland, second bishop of the Protestant Episcopal Church in the diocese of Western New York, born in Mendham, N. J., May 10, 1818; died at Clifton Springs, N. Y., July 20, 1896. He was the son of the Rev. Samuel Hanson Cox, a Presbyterian clergyman, of Brooklyn, N. Y.

When a young man he returned to an older spelling of the family name. The Cox family removed to New York city in 1820, and in 1838 the son was graduated with honor at the University of the City of New York. The influence of some of his mother's relatives had attracted him to the Episcopal Church, much to

the dissatisfaction of his father; and finding that he could not conscientiously become a minister in his father's communion, he entered the General Theological Seminary, and was graduated in 1841. His literary tastes disclosed themselves early, and before his college days were over he had published a volume of verse—"Advent: A Mystery" (1837)—and two others, "Athwold: A Romaunt" and "Saint Jonathan: The Lay of a Seald," followed in 1838. The three books are in no way remarkable, but they show the early flowering of the poetic nature so strongly characteristic of Bishop Coxe throughout life. He possessed the soul of a poet, and under other circumstances it might have found more enduring expression. "Athanasion, and Other Poems" was published in 1842, "Halloween" in 1844, and "Saul: A Mystery"

in 1845. In 1845, also, he published the volume by which he is likely to be held longest in remembrance—the widely known and much-loved "Christian Ballads." They display many of the best features of devotional verse, and are a distinct advance upon anything previously published by their author, and, while deeply penetrated with the religious spirit, are controlled by a delicate literary sense not always noted in religious lyrics. They are, moreover, tender in expression and musical throughout. Bishop Coxe practically abandoned the field of poetry soon after this, and "The Ladye Chace" (1877), a new edition of "Halloween," with "Lays Meditative and Devotional" in 1869, and "The Paschal Poems" (1889) include the remainder of his poems. He was ordained deacon June 27, 1841, and at once took charge of St. Ann's Church, Morrisania, N. Y. On Sept. 25, 1842, he was admitted to priest's orders, and from 1843 to 1854 was rector of St. John's Church, at Hartford, Conn. In the latter year he became rector of Grace Church at Baltimore, exchanging that office for the rectorship of Calvary Church, New York city, in 1863. He had already risen to distinction in the Church at large, and having declined the bishopric of Texas in 1856, accepted that of Western New York in 1864, being consecrated assistant bishop at Geneva, Jan. 4, 1865, succeeding Bishop De Lancey on that prelate's death, on April 5 following. From his father he inherited an intense spirit of theological combativeness, which, though not infused with bitterness to any great extent, still sufficed to make the path of controversy sufficiently thorny for his opponents. In the earlier days of his ministry he had been classed with extreme High Churchmen, but in later life his attitude did not appear to so place him, and he even clung to one or two matters of detail supposed to characterize the opposite party. In point of fact, however, there was never any material change in his position, while in the Church itself there were very marked changes during his long career. His early sympathies had lain with the Oxford movement of his young manhood; but after the secession of Newman he no longer sympathized with it as a party, though still recognizing the truth of many of its positions—positions which the entire Church practically occupies at the present moment. His own standpoint is well shown in "The Criterion," which he published in 1866. The courage of his convictions was something which he never lacked at any period of his career. In 1850 he visited at Freiburg the noted divine Von Hirscher, who preceded Dr. Dollinger in the Old Catholic movement, and he issued a translation of Von Hirscher's "Sympathies of the Continent, or Proposals for a New Reformation." From that period he was always a staunch advocate of that movement and, as a natural consequence, an equally staunch foe of the Roman Church. In neither of these attitudes did he carry with him the sympathies of the entire Church, though the sincerity of his purposes was never doubted, and to many minds his ultra-Protestant vehemence expressed toward the Roman communion conveyed a far from pleasant impression of the prelate's capacity for tolerance and Christian charity. In 1867-'68 he published a series of papers on "Anglican Orders" in the "Union Chrétienne" at Paris, and in 1869 "An Open Letter to Pius IX" on the occasion of the convoking of the Vatican Council—a letter which was widely circulated in several languages, and certainly did not tend to the harmonizing of Christendom. He returned to the attack in 1872 with "L'Épiscopat de l'occident," and again in 1874 with "Catholics and Roman Catholics." He early took firm ground against any revision of the Scriptures, his "Apology for the Christian Bible" being issued

in 1854. The strength of his own position he never doubted, and perhaps it was mentally impossible for him to do so. In any case, he never retreated from ground once taken by him, however urgent the necessity for so doing might seem to others. In his extreme dislike (to call it by no harsher term) of the Roman Church, in his active opposition to Scripture revision, and in the various other ways in which Bishop Coxe set himself against the feelings and opinions of his age, the note of absolute sincerity was very firmly struck. If he fought the Roman Catholic Church with unflinching zeal for a whole life long, it was because he believed that Church to be a very citadel of error; if he opposed revision of the Scriptures, it was because he honestly feared such revision would weaken their hold upon men's minds; and all his other controversies were inspired by reasons that appeared to him equally unanswerable. In the general administration of his diocese, in matters affecting the Church at large, his course was marked by ability and judgment. When the wishes or needs of separate parishes or individual clergy came to be considered, he was more than once at fault. A naturally quick temper sometimes found an outlet in impatient expression; an imperious will now and then spurred him on to override opposition before examining the grounds of that opposition. Bishop Coxe was a man of great activity, and, in addition to the cares of a rapidly growing diocese, found time for a large amount of literary work both in the way of frequent contributions to periodicals and in published volumes. His latest important work was an American edition, with extensive additions and many notes, of the Edinburgh "Translation of the Ante-Nicene Fathers," a labor the extent of which can hardly be appreciated except by scholars. It appeared in 1885-'86. Of his many other works not already named, the following are the more important: "Sermons on Doctrine and Duty" (1855); "Impressions of England" (1856); "Thoughts on the Services" (1859); "Ritualism; A Pastoral Letter" (1867); "Moral Reforms with Remarks on Practical Religion" (1869); "Signs of the Times" (1870); "The Bible Rhyme" (1873); "Apollos, or the Way of God" (1873); "Covenant Prayers" (1875); "The Penitential" (1882); "Institutes of Christian History" (1887); "Holy Writ and Modern Thought" (1893).

Crisp, Charles Frederick, jurist, born in Sheffield, England, Jan. 24, 1845; died in Atlanta, Ga., Oct. 23, 1896. His parents, who were Americans and active in the dramatic profession, were on a visit to England at the time of his birth. When he was a few months old they returned to the United States and settled in Georgia. He received a common-school education in Savannah and Macon; entered the Confederate army in May, 1861, and served till May 12, 1864, when he was taken prisoner; and on his release in June, 1865, began studying law in Americus, Ga. In 1866 he was admitted to the bar; in 1872 was appointed solicitor general of the Southwestern Judicial Circuit of Georgia; in 1873 was reappointed for a term of four years; in 1877 was appointed judge of the Superior Court of the same circuit; and in 1878 and 1880 was elected to the same office by the General Assembly. He resigned from the bench in 1882 to accept the Democratic nomination for Congress in the 3d District; was elected, and held his seat till his death. In 1891 and 1893 he was elected Speaker of the House of Representatives, succeeding Thomas B. Reed, who in turn succeeded him in 1895. On the organization of the 54th Congress, in December, 1895, he was appointed a member of the Committees on Ways and Means and on Rules. At the time of his death he was a candidate for the United States Senate, and

within a week would have been elected. (See portrait in "Annual Cyclopaedia" for 1891, page 242.)

Crouch, Frederick William Nicholls, composer, born in London, England, July 31, 1808; died in Portland, Me., Aug. 19, 1896. He was the son of a musician; received his first instruction in music from his mother; and began his professional career in the Royal Coburg Theater when nine years old. Subsequently he sang with several traveling opera and concert companies; took a course at the Royal Academy of Music; and became a violoncellist in the orchestra of Drury Lane Theater and a member of the Queen's private orchestra. In 1849 he made a musical tour of the United States, and his first notable appearance was at the opening of the Astor Opera House in New York city. From New York he went to Boston, and thence to Portland, Me., where he remained seven years and was director of the Sacred Philharmonic Society. Afterward he was musical director of St. Matthew's Church, Washington, D. C., and chorister of St. Paul's Church, Richmond, Va., besides engaging in teaching music in those cities and in lecturing. He served through the civil war in the Richmond Grays, and at its close, having lost all his property, books, music, and manuscript, he engaged in service as a gardener at Buckingham Courthouse. While so employed he was recognized by old army friends and was aided in establishing himself in Baltimore as a teacher. His compositions included "Zephyrs of Love"; "Swiss Song of Meeting"; "O'Donnell's Farewell"; "The Emigrant's Lament"; "Sing to me, Nora"; "Dermot Asthore"; "The Soldier's Grave"; "The Widow to her Child"; "Would I were with Thee"; "My Heart is like a Silent Lute"; "Twenty Years Ago"; "Her I Love"; and "Friendship." His best-known composition is "Kathleen Mavourneen," the melody of which he wrote while in London from words sent him by their author, Mrs. Crawford.

Dawson, Andrew Rayzina, military officer, born near Hayesville, Ohio, May 10, 1835; died in Deadwood, S. D., July 19, 1896. He was educated at New Wilmington (Pa.) College. On April 19, 1861, he enlisted in the 15th Ohio Infantry, and he served with it as 1st lieutenant in West Virginia during the three months' campaign. When the regiment was reorganized for the three years' service, he was elected to a captaincy, and subsequently was commissioned colonel of the 187th Ohio Infantry. He took part in every battle, skirmish, and march of the army, corps, division, or brigade to which his regiment was attached, from Philippi, W. Va., in June, 1861, till the surrender of the Confederates under Gen. Wofford at Kingston, Ga., May 12, 1865; and was mustered out with the brevet of brigadier general of volunteers, Jan. 20, 1866. After the war he went to Yankton, Dakota. In 1876 he was appointed deputy collector of internal revenue at Deadwood, and in the following year became clerk of the newly established United States district court there. He held this office four different times and was its incumbent at the time of his death.

De Fontaine, Felix, journalist, born in Boston, Mass., in 1832; died in Columbia, S. C., Dec. 11, 1896. He became a journalist, and when the civil war began he was living in South Carolina and furnished the North with the first account of the attack on Fort Sumter. He wrote war letters for the "Charleston Courier" from the principal battlefields. After the war he removed to New York and was connected with the "Herald" almost continuously till his death, besides corresponding for several other periodicals. He was author of a "Cyclopaedia of the Best Thoughts of Charles Dickens," "Gleanings from a Confederate Army Notebook," and "Birds of a Feather flock together." He began the publication of his war letters under the title of "Army Letters of Personne,

1861-1865, News from the Front," and was preparing a work on the "Missing Records of the Confederate Cabinet" from documents that came into his possession early in 1865.

De Forest, Henry Swift, educator, born in South Edmeston, N. Y., March 17, 1833; died in Talladega, Ala., Jan. 28, 1896. He entered Yale College in the class of 1857, and in July, 1858, while a student in the theological seminary, was appointed tutor in mathematics in Beloit College, where he remained two years. During a part of 1860 and 1861 he was a student in Union Theological Seminary, when he became a Latin tutor in Yale. In August, 1863, he was ordained to the ministry of the Congregational Church in New Haven, and was appointed chaplain of the 11th Connecticut Volunteers. He was mustered out of the service Dec. 21, 1865; became pastor of the Plymouth Congregational Church, Des Moines, Iowa, Oct. 17, 1866; and was elected President of Talladega College in 1880, remaining there till his death.

Delano, Columbus, lawyer, born in Shoreham, Vt., June 5, 1809; died in Mount Vernon, Ohio, Oct. 23, 1896. When eight years old he removed with his parents to Mount Vernon, which was his home till his death. He received a public-school education, studied law, and was admitted to the bar in 1831. His successful management of a case involving important legal questions and considerable property, gave him high standing at the bar and led to his election as prosecuting attorney of his county, despite adverse political conditions. After serving for three years he was re-elected, but refused a second term on account of a growing private practice, particularly in criminal law. In 1844 he was elected to Congress as a Whig, and, taking his seat on Dec. 1, 1845, served on the Committee on Invalid Pensions, advocated the claims for the largest measure of territory on the Oregon question against the settlement that finally prevailed, and voted against the declaration that "war existed by the act of Mexico." He was a candidate for the Whig nomination for Governor in 1848, and lost it by 2 votes. In 1860 he was a delegate to the Republican National Convention; in 1861 was appointed commissary general of Ohio; in 1862 missed the Republican nomination for United States Senator by a few votes; in 1863 was elected to the Legislature; and in 1864 was again a delegate to the national convention and was elected to Congress. In his second congressional term he was chairman of the Committee on Claims, and every bill reported by him became a law. He was re-elected in 1866 and became a member of the Committee on Foreign Affairs. On March 5, 1869, President Grant appointed him commissioner of internal revenue, an office he held till Nov. 1, 1870, and during this period he reorganized the bureau and placed it on a better financial footing than it had ever had. He resigned to succeed Jacob D. Cox as Secretary of the Interior, and retained this portfolio till Oct. 1, 1875, at the request of the President, though he had tendered his resignation about a year before. He was a trustee of Kenyon College, for which he endowed the grammar school bearing his name.

Dodworth, Allen Thomas, musician, born in Sheffield, England, in 1821; died in Pasadena, Cal., Feb. 12, 1896. He was the eldest son of Thomas Dodworth, a famous musician and bandmaster, who came to the United States in 1826 and formed the Dodworth Band. In this Allen first played the trombone and afterward the bugle, and the music of the band was principally composed by the father and Allen. The band became the foremost organization of its kind in the country, and was engaged on many notable civil and military occasions. Allen also became a fine violinist, took the first-

violin stands at the concerts of the Philharmonic Society, and in 1845 established his first dancing school. On the death of his father, Allen assumed the leadership of the band, and on his resignation was succeeded by his brother Harvey. Allen continued teaching dancing till about seven years ago, when he retired from active work, and had since lived in Pasadena. He was author of "Dancing and its Relation to Education and Social Life."

Dodworth, Thomas Jefferson, musician, born in New York city in 1830; died there May 8, 1896. He was the youngest of the Dodworth brothers (see preceding sketch), and became a member of the band. His brother Allen first conceived the idea of a band composed entirely of valve instruments, so that the time could be thrown back to the men marching, and when the Dodworths organized the first cornet band ever heard in New York, the father and three of his sons formed four of its original ten members.

Doe, Charles, jurist, born in Derry, N. H., April 4, 1830; died in Rollinford, N. H., March 9, 1896. He was graduated at Dartmouth in 1849; was admitted to the bar in 1852; served as solicitor of Strafford County for several years; and was appointed an associate justice of the Supreme Judicial Court of New Hampshire in 1860. In the last office he served till the abolition of the court in 1874. Two years afterward he was appointed Chief Justice of the State Supreme Court, and continued in that office till his death. For a number of years he had presided at trial terms only in capital cases, or when some other member of the court was unable to be present.

Dorsey, Anna Hanson, author, born in Georgetown, D. C., Dec. 12, 1815; died in Washington, D. C., Dec. 26, 1896. She was a daughter of the Rev. William McKenney, and married Judge Owen Dorsey, of Baltimore, in 1837. Three years afterward she became a convert to the Roman Catholic faith. She began writing poems in girlhood, and at the time of her death had published more than thirty books, including dramas, poems, essays, and stories.

Ducat, Arthur C., civil engineer, born in Dublin, Ireland, in 1841; died in Chicago, Ill., Jan. 2, 1896. At the beginning of the civil war he raised a company of sappers and miners for the National army. He was promoted major for gallantry at Paducah, and lieutenant colonel for Forts Henry and Donelson. He also served as inspector general of the Army of the Tennessee under Gen. Rosecranz, and as inspector general of the Department of the Cumberland. After the war he became a fire insurance agent in Chicago.

Dudley, Lewis Joel, educator, born in Guilford, Conn., Nov. 11, 1815; died in Northampton, Mass., Feb. 27, 1896. He was graduated at Yale in 1838; was tutor in Latin and Greek there in 1840-46; was graduated at the Yale Law School in 1847; and was admitted to the bar in 1848. The practice of law proving distasteful to him, he abandoned it and opened a classical school for boys at Northampton, which he conducted with marked success for fourteen years. He was elected to the Massachusetts Senate in 1864 and to the General Court in 1865, 1866, 1867, and 1873. A daughter, born a deaf-mute, awakened in him an interest in all children similarly afflicted, and when in 1867 application was made to the Legislature for a charter for a school for deaf-mutes to be established at Northampton by a gift of \$50,000 by John Clarke, Mr. Dudley aided in securing the charter, and became one of the incorporators. The application had been opposed in the Legislature by friends of the sign system of deaf-mute instruction, who feared that the new institution would adopt the articulation plan. On securing the charter, the incorporators

decided to install the articulation system; Mr. Clarke paid the \$50,000, and, dying two years afterward, bequeathed to the institution \$265,000; and Mr. Dudley was chosen president of the school, which was named the Clarke Institute for Deaf-mutes. The great achievement of Mr. Dudley's life was his work for the deaf-mute, which ended only with his death. He caused the authorities to remove the Clarke Institute from the list of charitable institutions, and to make it a part of the educational system of the State and free to all; and through his persistent efforts the American Educational Association in 1886 decided to drop the word "dumb" in the familiar phrase "deaf and dumb," and to recognize such pupils as deaf children.

Eaton, Wyatt, artist, born in Phillipsburg, Quebec, Canada, May 6, 1849; died in Newport, R. I., June 7, 1896. He began studying art at the National Academy of Design, New York city, when eighteen years old, subsequently took up painting with Joseph Orion Eaton, and in 1872 went to Europe, where he spent some time in the studios of James A. Whistler, in London, and Gérôme, in Paris, and with Millet in Barbizon. His early work included figure subjects, landscapes, and portraits. In 1874 he exhibited in the Paris Salon "Reverie," and in 1876 "Harvesters at Rest," both of which pictures were also exhibited at the Universal Exposition of 1878. He returned to the United States in 1876, opened a studio in New York city, became a teacher in the life and antique classes at Cooper Institute, and was a founder and afterward secretary and president of the Society of American Artists. After he settled in New York his work was almost wholly in portraiture, his subjects being persons well known in literary, artistic, educational, and social circles. Among these were Bryant, Longfellow, Emerson, Whittier, and Holmes.

Ehols, John, lawyer, born near Staunton, Va., in 1823; died in Louisville, Ky., May 24, 1896. He studied law with his father and practiced it successfully till the beginning of the civil war. After serving in the Virginia Secession Convention, he aided in organizing the Virginia troops, and took the field as lieutenant colonel of the 27th Virginia Infantry, which was attached to Jackson's brigade. For gallantry at Manassas he was promoted colonel, and he remained with his regiment till the battle of Kernstown, in March, 1862, in which he was severely wounded. After his recovery he was promoted brigadier general and assigned to duty in Western Virginia. In 1863 he was detached from active command. He resumed the practice of law at Staunton after the war; established a national bank there, and became its president; was elected to the Legislature in 1878, 1879, 1880, and 1881; and was a presidential elector in 1880. In 1868 he was elected a director of the Chesapeake and Ohio Railroad Company, with which he was actively identified till his death. He was also Vice-President of the Chesapeake, Ohio and Southwestern Railroad; a founder, builder, and Vice-President of the Elizabethtown, Lexington and Big Sandy Road; and was Vice-President of the Kentucky Central.

Eddy, Daniel Clark, clergyman, born in Salem, Mass., May 21, 1823; died in Cottage City, Mass., July 26, 1896. He was received into the Baptist Church in 1842; was graduated at the New Hampton (N. H.) Theological Institution in 1845; and was pastor of the First Baptist Church in Lowell, Mass., from 1846 till 1856. In 1854 he was elected to the Legislature, and though he had had no experience in presiding over a deliberative assembly, he was chosen Speaker. He was called to the Harvard Street Church, in Boston, Mass., in 1856; the Tabernacle Church, in Philadelphia, Pa., in 1862; the Baldwin Place Church, in Boston, in

1864; and subsequently to churches in Fall River, Boston, and Hyde Park, Mass., and Brooklyn, N. Y. He received the degree of D. D. from Madison University in 1856. In 1876 he was the Prohibition candidate for Lieutenant Governor of Massachusetts. Dr. Eddy wrote a large number of books, some of which had an extended circulation. They included "Young Man's Friend" (1st series, Lowell, 1849; 2d series, Boston, 1859); "The Burman Apostle" (Lowell, 1850); "Europa" (1851); "The Percy Family" (5 vols., 1852); "Walter's Tour in the East" (6 vols., Boston, 1861); "Heroines of the Missionary Enterprise" (1854); "Angel Whispers" (Lowell, 1853); "City Side" (1854); "Young Woman's Friend" (1855); and "Waiting at the Cross" (Boston, 1859).
