SUGGESTED IDENTIFICATION

U. S. Bureau of the Census. U. S. Census of Business: 1948. Vol. IV: Wholesale Trade—General Statistics. U. S. Government Printing Office, Washington, D. C., 1952

This volume replaces the 1948 Census of Business Subject Bulletins, Series 2-W.

PREFACE

This is one of a series of seven volumes presenting final results of the 1948 Census of Business for Wholesale, Retail, and Service Trades. Statistics for Wholesale Trade are contained in two volumes—Volume V, Area Statistics, and this volume. The Census, which was conducted by personal canvass of business establishments, was taken in accordance with the provisions of the act of June 19, 1948 (62 Stat. 478; 13 U. S. C. 121–123). This act provides for a Census of Business to cover the year 1948 and every fifth year thereafter. Previous business censuses covered the years 1929, 1933, 1935, and 1939.

Important to the conduct of the 1948 Census of Business was the assistance of many private and public organizations in the planning phase of the census and the excellent cooperation of some 3,000,000 business establishments in supplying the information required, as well as the work of the several thousand Census employees who participated in the field enumeration, editing, tabulation, and other census operations.

The advice of trade associations, individual businessmen, research and marketing organizations, and Government agencies was invaluable in determining the feasibility of collecting various types of data and the methods for minimizing the burden of reporting, as well as in determining the types of information which would be of greatest value. Because of budgetary and other limitations, it was not possible to collect all of the data recommended by these groups. Timely publicity given to the Business Census by business organizations, trade papers, local newspapers, and radio stations aided greatly in informing businessmen of the nature and objectives of the census and facilitated the collection of census reports.

The primary responsibility for the 1948 Census of Business was centered in the Business Division of the Census Bureau. Other divisions of the Bureau, particularly the Field Division and the Machine Tabulation Division, also had important functions in the census.

The Business Census was taken under the supervision of William C. Truppner, Chief of the Business Division. Harvey Kailin, Assistant Division Chief, Program Branch, was appointed Acting Chief January 2, 1951, to succeed Mr. Truppner who was detailed to the National Production Authority. Major contributions to the planning of the 1948 Census of Business were made by William A. Ruff, Assistant Chief, who retired January 1, 1948, and Earl D. Krickbaum, Chief of the Procedures and Processing Section until November 1, 1948.

The following personnel in the Business Division had important responsibilities in the census:

Max A. Bershad was Chief of the Statistical Methods Section. Henry Wulff, in charge of Quality Control, worked on field enumerating techniques, and office editing and tabulating procedures. Aaron Sabghir, in charge of Sampling Techniques, worked on the post-enumeration survey and measures of census coverage and accuracy.

John Albright was Chief of the Wholesale Trade Section and William P. McInerny was Assistant Chief. George L. Whalley, Max E. VanHorn, Frank R. Alvis, and Bruce B. Spratling, participated in the planning and developing of report forms, publication plans, and manuals; the writing of texts; and the handling of technical problems arising during the processing of reports and tabulations.

Louis Greenberg was responsible for review of all text material and table forms, and assisted on publication problems.

M. D. Bingham, Chief of the Procedures and Processing Section, was subsequently appointed Assistant Division Chief, Processing and Management Branch. Sol Dollcck was Assistant Chief of the Procedures and Processing Section; Richard S. McCurdy, succeeded by R. M. Micoly in July 1949, and assisted by Jervis Braunstein, was in charge of the Directory Subsection, responsible for receiving report forms and the handling of special problems connected with multiunit firms. Leroy H. Groeper was Chief of the Wholesale Trade Processing Subsection, and was in charge of editing, coding, and tabulating Wholesale Trade reports. J. Stanley Werking participated in the design of forms and all problems of printing and preparation of material for publication.

In the Field Division, Jack B. Robertson, assisted by Arthur Cook directed the field work for the Census of Business. Lancelot W. Armstrong, Machine Tabulation Division, assisted by Hugh Jones, was responsible for machine tabulation techniques and procedures; and Franklin L. Thatcher and Robert H. Brooks, Administrative Services Division, were responsible for the printing and publishing of the Census of Business.

INTRODUCTION

Scope of the census and area covered.—The 1948 Census of Business covers Retail, Wholesale, and Service Trades. Retail and Wholesale Trades in the Business Census correspond with minor exceptions to these trade divisions as described in the Standard Industrial Classification Manual, issued May 1949, under the sponsorship of the Bureau of the Budget, Executive Office of the President. For a discussion of the census scope of Service Trade, see Introduction to Volume VI: Service Trade—General Statistics. All previous Business Censuses covered Retail and Wholesale Trades; Service Trades were first enumerated in the 1933 Census.

The 1948 Census of Business includes business establishments located in continental United States and the Territories of Alaska and Hawaii. Data for Puerto Rico, obtained in a Census of Business for 1949, are published separately. The 1939 Business Census covered the same areas as the 1948 Census, and, in addition, Puerto Rico. All earlier Business Censuses were conducted only in continental United States.

Period covered by the census.—The 1948 Census of Business is basically a report of business activity in the calendar year 1948. However, the relatively small proportion of establishments that maintained their records on a fiscal-year basis and were unable to report on a calendar-year basis, were permitted to use a fiscal year ending between September 30, 1948, and March 31, 1949. In a very few cases, reports were accepted for fiscal years not falling within this range. Regardless of the fiscal year used, all establishments were required to report employment and payroll (except annual payroll) for the pay periods specified on the report forms.

Method of canvass.—The 1948 Census of Business was conducted primarily by means of field enumeration. For purposes of enumeration, 308 Census field offices were established with responsibility for canvassing the some 37,000 enumeration districts into which the Nation was divided. Full-scale field operations for the 1948 Census of Business were begun near the end of May 1949, shortly following the principal appropriation of funds for the census. The field work was divided into two broad phases, each of which is described below. The listing of business establishments, phase 1, was completed late in September, about 4 months after starting full-scale operations. The collection of report forms, phase 2, was substantially completed by the end of November 1949.

Enumerators were required to list all recognizable businesses (except medical, dental, and law offices, Government offices, and also farms), and in the course of listing, to go into each business establishment to record the name of the business and of the owner, general kind of business conducted, whether the establishment was part of a multiunit organization, and other items required for subsequent operations. Each establishment was listed by the enumerator as encountered while systematically canvassing each city block and each road or highway in rural areas in a preassigned pattern. A separate Listing Book (see. IV of which is reproduced in appendix G) was used for each enumeration district.

During the listing operation, phase 1, appropriate report forms were left with business establishments for subsequent return to Census District Offices by mail. In a small proportion of cases (usually small retail or service businesses) the completed Census form was obtained by the enumerator in the course of the listing operation. In the case of business establishments which were units of multiunit organizations no report form was left for completion, unless requested by the establishment. In general, the reports for establishments operated by multiunit organizations were prepared at the central offices of the organizations. The reports so obtained were checked against a card file prepared from enumerator listings, thus insuring completeness of multiunit organization reporting.

A large percentage of the business establishments with which reporting forms were left during the listing operation completed the forms and mailed them to the Census District Office without further contact from the Bureau. Where necessary, reminder letters were mailed to establishments which had not submitted their report. Those establishments which did not file their report in response to the reminder letters were again visited by an enumerator who was instructed to secure the report.

To insure that the reports received were not only usable but met Census quality requirements, a field office coding and editing operation was conducted. This operation, along with the follow-up activities to obtain reports not promptly submitted, became phase 2 of the field operation. All reports which did not contain required information together with those which did not meet other quality standards were held in the field offices until a further check could be made with respondents and the reports corrected as necessary.

Because the completeness of coverage of the census depended so largely on the quality of the work done by individual enumerators during phase 1 of the enumeration, considerable effort was expended in verifying and correcting this work.

First, the work of each enumerator was checked in the

field by a crew leader or supervisor by recanvassing a sample of the work. Wherever the listing was found to be unsatisfactory, the enumerator was given further instructions before being allowed to proceed.

Second, a complete card file of firms reporting to the Social Security Administration's Bureau of Old Age and Survivors Insurance was obtained. These cards were arranged by enumeration districts and within enumeration districts by street and road to facilitate checking the cards to the listing books. The cards were individually checked to the listing books and a record made of whether or not the firm was listed. A check was then made to determine whether firms not listed were still at the location indicated. If found to be at such location, they were added to the listing. Further, if more than a fixed percentage of listings so added were of readily recognizable places of business, the entire district was recanvassed. This latter provision was necessary because the file included only establishments having one or more paid employees while the census covered all establishments including those having no employees. By recanvassing completely those districts having a significant number of establishments included in the Bureau of Old Age and Survivors Insurance files missed by the enumerator, it was possible to minimize misses among establishments with no employees.

Third, when the field operations were substantially complete, but prior to closing the field offices, a careful check by counties was made to verify establishment totals which differed significantly from trends in neighboring counties or those with similar economic characteristics. This check did not disclose any systematic faults in the canvass.

One other step taken to insure completeness of coverage is worthy of mention. As indicated above, the census listing operation began in late May 1949, by which time a number of businesses active at the end of 1948 had discontinued operations. Because it was not always feasible to locate the 1948 owners of such businesses or to get a report of their 1948 activities, it was sometimes necessary to estimate their sales volume based on information supplied by the 1949 occupants or other sources. This procedure was used only to account for businesses properly within the scope of the 1948 Census.

The "Post Enumeration Survey" (PES), which was made after the completion of the enumeration, is discussed below. It provides measures of the undercoverage of business in the census which occurred despite the procedures noted above.

Scope of Wholesale Trade.—The Standard Industrial Classification (SIC) Manual, Volume II, Nonmanufacturing Industries, defines Wholesale Trade as including "establishments or places of business primarily engaged in selling merchandise to retailers; to industrial, commercial, institutional, or professional users; or to other wholesalers; or acting as agents in buying merchandise for, or selling merchandise to, such persons or companies."

The 1948 Census of Business was conducted in accordance with this definition.

Comparison of 1948 and 1939 Wholesale Trade scope.—With minor exceptions, the scope of Wholesale Trade in the 1948 census is the same as for 1939. Changes from 1939 were made with respect to coffee roasting and leaf tobacco stemming and redrying establishments. which were excluded from the 1948 Census of Business. but covered in the 1947 Census of Manufactures. Motion picture film distributors were included with Wholesale Trade in 1939 but not in 1948. Data for this industry were collected and published in a special Census of Business release, No. BC-2P-1, entitled "Motion Picture Film Distributors." Administrative offices and auxiliary units of wholesale establishments were omitted in 1939, but included in 1948. Some adjustments in 1939 data were made in the case of individual companies which were classified differently in 1948 from 1939. Adjustments and scope changes are reflected in those tables which contain comparative statistics.

Type-of-operation classification.—Wholesale Trade, as defined above, is much broader than the conventional concept of "wholesaler" selling primarily to retailers, as it also includes foreign trade merchants, industrial distributors, manufacturer-owned wholesale outlets, agents, brokers, and assemblers of farm products. As the scope is so broad, the primary approach in classifying wholesale establishments is on the basis of type of operation of the establishment. In the Standard Industrial Classification Manual, wholesale establishments are divided into two major groups, one of which is further subdivided into four groups:

50 Merchant wholesalers.

51 Wholesale Trade, other than merchant wholesalers.

511 Sales branches and sales offices of manufacturing and mining companies.

512 Petroleum bulk stations.

513 Agents and brokers.

514 Assemblers, mainly of farm products.

These major groups are recognized in presenting Census of Business findings, but, in some tables, are broken into more detailed types with the result that data are shown for as many as 36 separate types of operation. Descriptions of these 36 types are shown in appendix B, and comparative Census classifications used in the 1948, 1939, and 1929 Censuses for the major groups are given in appendix D of this volume. A comparison of classifications used in the 1948 Census and in the Standard Industrial Classification Manual is presented in appendix E.

Establishment basis of the census.—Census of Business figures represent a summary of reports for individual "establishments" rather than for the combined activities of "companies." A separate report was obtained for each location at which business was conducted, including each location of multiunit organizations. For such

organizations, a separate report also was obtained for each central warehouse, administrative and district office, and each other location (other than a manufacturing plant) which serviced, or was auxiliary to, establishments of the organization reported to the Business Census. Each report was tabulated in accordance with the physical location of the establishment.

Kind-of-business classification. - In addition to "location" and "type of operation" classification, each establishment was assigned a kind-of-business classification. A total of 145 kind-of-business classifications are recognized in presenting census results for Wholesale Trade. The 145 detailed classifications are grouped into 53 classifications which, in turn, are further arranged according to 17 major groups. A complete listing of kinds of business together with their descriptions is given in appendix C of this volume, accompanied by a comparison of census classifications used in the 1948, 1939, and 1929 Business Censuses. In contrast to 145 Census classifications, SIC groups wholesale establishments under 57 kinds of business. A comparison of Census and SIC classifications including an outline of the differences in these two classification systems is given in appendix E.

Report forms.—Five report forms were used in enumerating wholesale establishments in the 1948 Census of Business. Form BC-30 was used for reporting operations of merchant wholesalers and manufacturers' sales branches and offices primarily engaged in selling consumer goods such as foods, drugs, clothing, jewelry, etc.; Form BC-31 was used in enumerating merchant wholesalers and manufacturers' sales branches and offices engaged in selling industrial, commercial, or professional goods such as electrical goods, lumber, machinery, metals, etc.; Form BC-32 was a specialized questionnaire used for reporting operations of petroleum bulk stations and distributing terminals; Form BC-33 was used for enumerating merchandise brokers and agents; and Form BC-34 was used for reporting activities of assemblers and marketers of farm products. The five forms were identical with respect to the basic information on number of establishments, sales, personnel, payroll, and inventories. They differed materially, however, in the amount and kind of detail called for on sales by commodity lines, expenses, cash and credit business, trucks, etc.

In addition to the five forms described above, Form BC-10 was required for each administrative office, warehouse, or other auxiliary unit, primarily engaged in performing functions for the wholesale establishments within their own organization. Reproductions of the report forms used in enumerating Wholesale Trade appear in appendix G.

Type of operation and kind of business detail in tables.—The detail in which data are presented by type of operation and kind of business in the tables in this volume is determined, basically, by the number of establishments in the areas to which the data shown relate. Because of the relationship between the number of establishments and the number of different classifications

for which data can be presented without violating census laws designed to prevent disclosure of confidential information, the amount of detail shown varies.

For presentation of wholesale data, a "collapsible" stub was employed where the small number of establishments in an area or kind of business resulted in inability to present statistics without disclosure. In such cases, all kinds of business for which data could not be separately shown were lumped together in an "n. e. c." (not elsewhere classified) group. Thus, in a number of areas, data are presented for such classifications as "Merchant wholesalers, n. e. c.," or "Manufacturers' sales branches, n. e. c.," etc. Data in different tables for "n. e. c." groups usually are not comparable since they can consist of a varying number of kinds of business.

Preference was given to a different procedure in certain tables where it was feasible to use a common stub for a number of areas. Where information for a classification might result in disclosure of figures for an individual establishment in this type of table, all data for the classification except "Number of establishments" were suppressed. To prevent derivation of the suppressed figures by subtraction it was necessary that data for another classification also be withheld.

Standard metropolitan areas.—In addition to States, counties, and cities, Census of Business statistics are presented for standard metropolitan areas. These are areas which have been defined and established cooperatively by a number of interested Federal agencies under the direction of the Bureau of the Budget for purposes of compilation and presentation of a wide variety of statistical data on a uniform area basis.

The general concept adopted in defining a standard metropolitan area was one of an integrated economic unit with a large volume of daily travel and communication between a central city and the outlying parts of the area. This resulted in an area considerably more restricted, especially for the larger cities, than the "market" or "trading" area. Each area (except in New England) consists of one or more entire counties. In New England, metropolitan areas have been defined on a town rather than on a county basis. A complete statement of the principles adopted as a guide in applying this general concept to the definition of individual areas will be found in a document issued by the Bureau of the Budget, Executive Office of the President, dated July 28, 1950, entitled "Standard Metropolitan Area Definitions."

The 147 standard metropolitan areas for which 1948 Census of Business data are included in the Area Statistics Volumes are those defined by the Bureau of the Budget as of June 5, 1950, on the basis of 1950 population statistics available at that time. Subsequent to the preparation of Census of Business tabulations, the list of metropolitan areas was increased to 168 areas. The list of 147 standard metropolitan areas included in the Census of Business and the description of the territory which they cover will be found on page 38. These areas are also shown on the map on page 40.

THE POST ENUMERATION SURVEY

To permit an appraisal of the accuracy of its published statistics, the Bureau of the Census conducted an intensive investigation, on a sample basis, of the 1948 Census of Business enumeration. This investigation, known as the Post Enumeration Survey (PES), was designed primarily to measure the completeness of coverage of wholesale, retail, and service establishments in the 1948 Census.

Strict precautions were taken to make the PES an independent and objective check of the census enumeration. The location of the sample areas, which the PES was to cover, was not revealed to the Bureau's field organization until after the census enumeration had been certified as completed and records concerning the enumeration returned to Washington.

Census concepts and procedures.—The 1948 Census of Business was defined as a census of "recognizable" establishments which would provide a measure of the volume of sales of such establishments in 1948 and of the number of their employees. "Recognizable" establishments, for census purposes, were defined as all establishments with one or more employees, whether or not "recognizable" as business places, as well as no-employee establishments which, because of appearance, sign, or marking, were recognizable to enumerators as business places.

The 1948 Census, by definition, excluded from the count of establishments those which were in business during 1948 but which went out of business before December 31, 1948. The 1948 sales of such establishments, referred to subsequently as "part-year" establishments, also were omitted from the census except in a relatively few cases where a successor establishment included in its Census report its own 1948 sales volume and that of its predecessor; i. e., the "part-year" establishment, and also in those cases where multiunit organizations supplied data on business units which had been discontinued during 1948.

The census enumeration was initiated by a listing operation in which Census enumerators in each of their enumeration districts were required to enter in a Listing Book the name, owner, address, major category of business, etc., for each recognizable place of business. Because of a delay in the appropriation for the census, the full-scale listing operation did not begin until almost June 1949 and was not substantially completed until

late September 1949. As will be indicated later, a portion of the census "undercoverage" is attributable to the unavoidable delay in the start of the listing operation.

Analysis of PES data for coverage.—The program of analysis of PES data with respect to coverage has been designed to answer the following questions:

- 1. What is the extent of census "undercoverage" resulting from the failure of Census enumerators to list business establishments?
- 2. What is the extent of net census "undercoverage" resulting from the omission of establishments which were in business as of the end of 1948 but went out of business before the enumerator listing operation was conducted and from the erroneous inclusion in the census of establishments which entered into business in 1949?

A separate PES report, planned for later issuance, will provide additional measures including (1) a measure of the 1948 sales volume not in the census because of the definition excluding "part-year" businesses, (2) a measure of differences in the 1948 sales and employment reported in the census and, subsequently, in the PES, and (3) a measure of differences between the census and PES in establishment classification (that is, whether an establishment was classified as "wholesale" or as "other than wholesale").

Design and procedures of the PES.—The PES had the following features which were introduced with the aim of assuring accurate measurement of coverage error:

- 1. The area sample for the PES consisted of about 2,500 small areas (segments) ranging in size from part of a building and part of a city block to an entire town or village. These segments were located in about 530 counties throughout the United States. This sample, drawn on a probability basis, was designed to include about 1 in 200 of the wholesale establishments in the United States. Within the sample segments, enumerators were instructed to reenumerate and to make a thorough field search for establishments missed in the consus. As an aid to this search, special mapping materials, including Sanborn maps which show and describe individual structures, were provided.
- 2. The re-enumeration procedure was entrusted to a relatively small group of highly selected and specially trained interviewers. Prior to the canvass of each segment, the interviewer was provided with the general Census listings for the enumeration district in which the segment was located. He was also provided with Social Security Administration (BOASI) establishment cards for the district. In canvassing the segment the interviewer had to account for all in-segment addresses whether or not they were included on the Census listings or in the BOASI cards. Also, the interviewer had to write, in effect, a business history of the segment for the period January 1, 1948, to the date of his recanvass. He was required to obtain a listing of all the occupants of each business address in the segment for that period. The interviewer

was instructed to obtain for each occupant sufficient information on the nature of the business activity to permit a classification into four major types: (i) wholesale, (ii) retail, (iii) service, (iv) other; i. e., not in the scope of the Census of Business. Finally, for each occupant in the first three classes, the interviewer was required to obtain from the best possible respondent information on 1948 sales and employment.

3. The materials obtained during the PES field work were thoroughly reviewed and a careful re-examination made of the Census listings to make sure that every establishment treated as missed in the census or erroncously included properly belonged in these categories.

PES findings on coverage of wholesale establishments.—The estimated undercoverage in the census enumeration of wholesale establishments, because of (1) the failure of enumerators to list wholesale establishments—"enumerator misses" and (2) omission of establishments in business on December 31, 1948, which went out of business in 1949 before the Census listing was begun—"late start of listing," was determined through the PES analysis to be 0.7 percent of the 1948 sales volume and 1.3 percent of the November 15, 1948, employment.

The PES data further indicate that this undercoverage was produced primarily by the failure to canvass or list small establishments. The omitted wholesale establishments had, on the average, 2.3 paid employees on November 15, 1948, as against 10.1 paid employees for the enumerated wholesale establishments. Salcswise, the situation is similar. The omitted wholesale establishments had, on the average, sales of \$100,000 in 1948 as against \$778,000 for the enumerated wholesale establishments. In terms of number of wholesale establishments they represented 5.5 percent of the 1948 Census total.

The following table indicates the undercoverage caused by "enumerator misses" and by "late start of listing," respectively:

| Component of undercoverage | Undercover lishments total) | rage of who s (as percer | olesale estab- nt of census | |
|----------------------------|-----------------------------------|-----------------------------|----------------------------------|--|
| Component of undercoverage | Sales | Employ- ment | Number of establisb- ments | |
| Total | 0.7 0.7 (1) | 1, 3 0, 9 0, 4 | 5. 5 3. 6 1. 9 | |

¹ Less than 0.05 percent.

Interpretation and limitations of PES under coverage findings.—The PES findings are subject to the following limitations:

1. The estimates of undercoverage of the total number of establishments is subject to a sampling error of approximately 0.8 percent; that is, the chances are 2 out of 3 that the "percent of Census total" estimates will not differ by more than 0.8 percent, absolutely, from the true value. The sampling errors of the estimates of uncoverage of sales and employment are approximately 0.4 and 0.6 percent, respectively.

2. In general, the weight given to each wholesale establishment enumerated in the PES was inversely proportional to the probability of its inclusion in the sample. In the case of three exceptionally large establishments (two of which were accounted for by the late listing), weights of unity rather than the appropriate sample weight were assigned because the bias thus resulting would be far less than the sampling error which would otherwise be introduced.

3. The "undercoverage" measures above refer only to losses occasioned by "enumerator misses" and the "late start of listing." These measures do not account for any differences which a change of census definition might cause (e. g., a change which would include establishments which went out of business in 1948); or for any differences resulting from differences in census and PES scope and kind-of-business classifications; or from differences in the reporting to the census and PES of 1948 sales volume or employment.

Measures of undercoverage of retail and service establishments will be found in the PES discussion in volumes I and VI, respectively, of the 1948 Census.

SUMMARY OF FINDINGS

SUMMARY OF WHOLESALE TRADE

Number of establishments.—In 1948 there were in the continental United States 244,705 establishments or places of business primarily engaged in Wholcsale Trade. Of this number, 243,366 were classified as wholesale establishments primarily engaged in marketing or selling merchandise at wholesale and 1,339 were administrative offices, district offices, warehouses, or other auxiliary units engaged chiefly in administering or servicing wholesale establishments. Data for "wholesale establishments" and for "administrative offices, auxiliary units" are presented separately in tables 1A and 1B of this volume. Other tables in this volume are limited to wholesale establishments, except where the inclusion of administrative offices and auxiliary units is specifically noted.

Each wholesale establishment of organizations operating at more than one place of business is counted separately. An establishment is considered to be primarily engaged in Wholesale Trade when its principal function is to sell merchandise at wholesalc, or to act as an agent in the marketing of goods at wholesale. "At wholesale" represents marketing or selling to retailers; to other wholesalers; or to industrial, commercial, professional, and similar types of end users rather than to household consumers, individual buyers for personal use, or to farmers. Although the 1948 Census of Business enumerated all wholesale establishments regardless of size, tabulations exclude those that operated during the entire year 1948 but had sales of less than \$5,000. In the 1939 Census of Business the corresponding figure for exclusion from the tabulations was \$500.

The number of wholesale establishments in 1948 was 45 percent larger than at the time of the first Census of Business (then called Distribution) which covered the year 1929. The number increased from 168,262 in 1929 to 199,726 in 1939, an increase of 19 percent for the 10-year period; then to 243,366 in 1948, or an increase of 22 percent in the 9-year period. Correspondingly, the number of retail stores in the United States increased by 20 percent during the decade 1929 to 1939, but recorded little or no change from 1939 to 1948. The number of manufacturing establishments showed a different trend by declining 16 percent from 1929 to 1939, then increasing by 39 percent from 1939 to 1947, or a net gain of 17 percent for the 18-year period.

Sales, entire year.—Total Wholesale Trade sales for the year 1948 amounted to \$190.5 billion, \$188.7 billion of which was reported by wholesale establishments and \$1.8 billion by administrative offices and auxiliary units. "Sales" as the term is used here (see appendix F, Explanation of terms) includes receipts from merchandise sold, together with any receipts from repairs or other services to customers, after deducting returns and allowances and trade discounts. Sales of merchandise for others on an agency or commission basis are included as well as sales for the account of the reporting establishment. The above totals do not include wholesale sales made by manufacturers direct from manufacturing plants, nor wholesale sales made by retailers. However, they do include retail sales by wholesale establishments. A measure of wholesale sales by retail stores is presented in volume I, chapter 15.

Salcs of wholesale establishments decreased from \$66.7 billion in 1929 to \$54.9 billion in 1939, a decline of 18 percent, then increased to \$188.7 billion in 1948—a net gain from 1929 to 1948 of 183 percent. Correspondingly, sales of retail stores were down 13 percent, 1939 compared with 1929, but increased by 210 percent from 1939 to 1948—a net gain 1948 over 1929 of 170 percent.

Total 1948 Wholesale Trade sales as shown in this volume exceeded total sales of all retail stores during the year 1948 by \$58.2 billion. This is occasioned by the fact that Wholesale Trade, as defined in the Standard Industrial Classification system—a definition adopted for Census purposes—is much broader than the concept of "wholesalers" or "jobbers" selling primarily to retailers, as it also includes establishments primarily engaged in selling (but not producing) merchandise to wholesalers; to industrial, commercial, professional, and similar end users; or to governmental bodics; and exporters. Sales of wholesale establishments are analyzed by class of customer in chapter 4 of this volume, where it is noted that sales to retailers constituted less than one-half of the total dollar volume.

Comparative summaries of Wholesale Trade, 1948, 1939, and 1929 are presented in tables 1C and 1D of this volume.

Employment and payroll.—A total of 2,627,000 persons were actively engaged in Wholcsale Trade in November 1948. Of this number, 164,000 were active proprietors or partners of unincorporated businesses, and 2,463,000 were employed on a salary or wage basis. Payroll, including commissions and bonuses, of the 2.5 million paid employees amounted to \$159.5 million for the workweek ended nearest November 15, 1948, or an average

of slightly less than \$65 per week per employee. It should be noted that the \$65 represents a general average for the country as a whole, all classes of employees in all types of wholesale establishments. It is not necessarily representative for any particular group of employees.

Number of employees and payroll were tabulated for the workweeks ending nearest March 15, July 15, and November 15. Employment during the workweek ended nearest November 15 averaged slightly higher than during either of the other two periods, but the difference in most instances was small, generally less than 5 percent. Variations from this general trend, however, may be noted in table 1E of this volume and in table 101, Volume V, Wholesale Trade. In tables providing figures for only one week of employment and payroll the data shown are for the workweek of November 15.

Of the 2.5 million paid employees, 2.4 million were engaged in wholesale establishments and the remainder at administrative offices and auxiliary units. The number of paid employees at wholesale establishments increased from 1.6 million in 1939 to 2.4 million in 1948, or 50 percent. During the same period the number of paid employees of retail stores increased by 43 percent.

Stocks.—Inventories of merchandise on hand for sale at the end of 1948 were valued (at eost) at \$10,329 million, \$10,167 million of which was reported by wholesale establishments and \$162 million by administrative offices and auxiliary units. Postwar 1948 sales were up 245 percent over prewar 1939, compared with an increase of 164 percent in the dollar value of inventories.

Dollar value of inventories of all wholesale establishments reporting both beginning- and end-of-year stocks were up 8 percent December 31, 1948, over December 31, 1947. Not all types of establishments, however, followed this general trend. As shown in table 5A, dollar inventories in some classes of establishments, notably assemblers of farm products, decreased during the year 1948. These declines may have resulted primarily from price changes.

Wholesale Trade geographically.—Wholesale Trade, as measured in censuses for a State, city, or county represents the total business of all wholesale establishments, together with any administrative offices and auxiliary units, located within the area. Geographic measurement is according to the location of establishments from which business is conducted. Traveling salesmen, together with their sales, are credited to establishments from which they operate.

States.—Table 1B of this volume presents a summary of Wholesale Trade by States for the year 1948. Table 1D is a comparative summary by States, 1948, 1939, and 1929. New York led all other States with sales in 1948 totaling \$43.6 billion, or 22.9 percent of the national total. Illinois ranked second with \$18.3 billion sales, followed by California and Pennsylvania, each with sales totaling more than \$10 billion. Considered together, these four States contributed 45.4 percent of the total for continental United States.

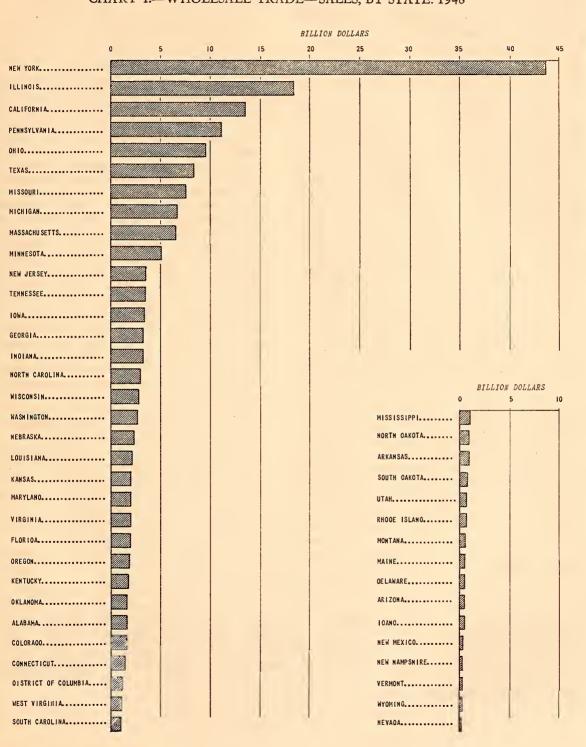

Data on establishments, sales, expenses, payroll, employment, and stocks are presented for each State by kind of business and type of operation in table 101, Volume V, Census of Business: 1948.

Standard metropolitan areas.—The next areas smaller than States for which Census of Business data are presented separately are standard metropolitan areas. These are areas which have been defined and established cooperatively by a number of interested Federal agencies under the direction of the Bureau of the Budget for purposes of compilation and presentation of a wide variety of statistical data on a uniform basis. Data on establishments, sales, payroll, and employment are presented separately in table 102, Volume V, Census of Business: 1948, for 147 standard metropolitan areas those defined by the Bureau of the Budget as of June 5, 1950, on the basis of 1950 population statistics available at that time. Subsequent to preparation of the Census of Business tabulations, there were additional metropolitan areas defined. The list of the 147 standard metropolitan areas identified separately in the Census of Business, together with their definitions appears on page 38 of this volume. The areas are also shown on the maps, pages 40 and 41, Standard Metropolitan Areas. Table 1H of this volume presents for merchant wholesalers the number of establishments and sales in standard metropolitan areas with 300,000 inhabitants or more by 49 kinds of business.

Significance of the 147 standard metropolitan areas as wholesale trade centers may be illustrated by the fact that although as a group they contained only slightly more than one-half (54.4 percent) of the population of the country in 1950, they accounted for two-thirds of the wholesale establishments, 84 percent of sales, and 78 percent of employment in Wholesale Trade in 1948. Their significance is further illustrated by the fact that the 14 areas each having a million or more inhabitants in 1950 contributed, as a group, 29 percent of the population of the country, 100,000 of the 243,000 wholesale establishments, and slightly more than one-half of wholesale sales. The 43 areas with 250,000-499,999 inhabitants accounted for about the same proportion of the total population (9.6 percent) as of wholesale sales (9.4 percent). Stated differently, per capita wholesale sales for metropolitan areas with a quarter to a half million population is approximately the same as for the country as a whole. Metropolitan areas with more than one-half million inhabitants recorded per capita wholesale sales in excess of national average whereas the reverse held true in smaller areas.

Weekly payroll of paid employees of wholesale establishments tends to be related to the size of the population center. Compared with an average of almost \$65 per employee per week for the country as a whole, employees in metropolitan areas of a million or more inhabitants received an average of \$73 per week. From this high the average decreased slightly but consistently with a decrease in the population size of the area to \$54 a week

in the 2 areas with fewer than 100,000 inhabitants and to \$48 in the nonmetropolitan areas. Here also it might be noted that these figures are average for all classes of employees in all types of establishments and may not be representative of any particular group.

Counties and cities .- Wholesale Trade data on number of establishments, sales, personnel, and payroll are presented in Volume V, "Wholesale Trade—Area Statistics"-for counties and for cities of 5.000 inhabitants or more. Table 103 presents these basic data, arranged by States, for each county and each city within the county. Data for countics with 50 or more wholcsale establishments in 1948 are classified by type of operation and kind of business in table 104, which also is arranged by States. A separate Wholesale Trade bulletin consisting of tables 101, 102, 103, and 104 was published for each State and for the District of Columbia. For presentation of Wholcsale Trade statistics a "collapsible" stub was employed where a small number of establishments in an area or kind of business resulted in inability to present data for all classifications without disclosure of individual operations. In such cases, all kinds of business for which data could not be shown separately were grouped together in an "n. e. c." (not elsewhere classified) group. Detail published was essentially determined by provisions of census law directed at preventing disclosure of figures for individual concerns.

Summary by type of operation.—Wholesale Trade as defined in the Standard Industrial Classification Manual, a definition adopted for purposes of conducting the 1948 Census, is much broader than the usual concept of "wholesale" or "jobber" as it also included foreign trade merchants and industrial distributors; manufacturers' sales branches and offices; petroleum bulk stations and terminals; merchandise brokers and agents; and assemblers (mainly farm products). For purposes of presenting census findings, wholesale establishments are divided into five more or less homogeneous type-of-operation groups and each establishment is assigned to one of the

groups according to the character of its operations and the nature of functions performed. The five type-ofoperation groups are:

Merchant wholesalers.

Manufacturers' sales branches, offices.
Petroleum bulk stations, terminals.

Agents, brokers.

Assemblers (mainly farm products).

The five type groups are further subdivided into a total of 36 detailed types of operation, all of which are described in appendix B of this volume. Summary data are presented separately for each type of operation in table 1E, and for each of the detailed types by kind of business in table 8D.

Of the five type-of-operation groups, merchant wholesalers are most important both in terms of number of establishments and sales. They operated 146,518 of the 243.366 wholesale establishments in the United States in 1948 and accounted for 42.3 percent of the sales. Manufacturers' sales branches and offices were second from the standpoint of sales, contributing \$52.7 billion, or 28 percent of the \$188.7 billion recorded by all wholesale establishments. These totals represent only the sales of branches and offices operated by manufacturers apart from the manufacturing plant and do not include wholesale sales made by manufacturers direct from plants nor from their general offices. Agents and brokers were third with sales (transactions negotiated) totaling \$34.6 billion, followed by assemblers with \$11 billion, and petroleum bulk stations and terminals with \$10.6 billion.

Historically, merchant wholesalers also recorded the largest increase in count of establishments since the first Census of Business which covered the year 1929. Their number increased from 79,178 in 1929 to 100,961 in 1939, a gain of 28 percent, and to 146,518 in 1948, an additional gain of 45 percent, or an increase of 85 percent for the 19-year period. All type-of-operation groups except assemblers of farm products recorded increases in establishment counts from 1929 to 1939, and except for as-

2 Based on advance 1950 population estimates.

semblers and petroleum bulk stations, again in 1948 over 1939. In contrast to the general trend, the number of assemblers decreased from 34,143 at the time of the first Census in 1929 to 28,931 in 1939 and to 19,268 in 1948, a trend related to changes in transportation facilities.

All type groups reported substantial increases in dollar volume of sales for 1948 over 1939 and also for 1948 over 1929. Some shifts in the pattern are noted, however. when sales for each of the type groups is expressed as a percent of total sales for all type groups combined. Mcrchant wholesalers, although their number of establishments increased rather sharply, barely held their own from the standpoint of sales—decreasing slightly from 43.7 percent of the total for all types in 1929 to 41.0 percent in 1939, then increasing modestly to 42.3 percent in 1948. Manufacturers' sales branches and offices increased their portion of sales of all wholesale establishments from 24.2 percent in 1929 to 26.0 percent in 1939, and 28.0 percent in 1948. Agents and brokers, on the other hand, contributed a decreasing portion of the total, declining from 21.8 percent at the time of the first census in 1929 to 21.5 percent in 1939 and 18.3 percent in 1948. Petroleum bulk stations and terminals—engaged primarily in the wholesale distribution of motor fuels. lubricants, and heating oils—accounted for 3,6 percent of the total dollar volume of wholesale establishments in 1929, 6.9 percent in 1939, but only 5.6 percent in 1948. The relative decline from 1939 to 1948 may have been partly a function of price.

Assemblers, their number declining consistently for the three census years, recorded a decrease in their portion of sales from 6.9 percent in 1929 to 4.6 percent in 1939, then an increase to 5.8 percent in 1948. Here also price trends may have been a contributing factor in the shift in their portion of total sales of all wholesale establishments. The fact that assemblers of farm products recorded an increase, 1948 over 1939, coupled with a decline in number of establishments indicated a substantial increase in the average sales per establishment.

Additional information on types of operation for the three census years appears in table 1C of this volume.

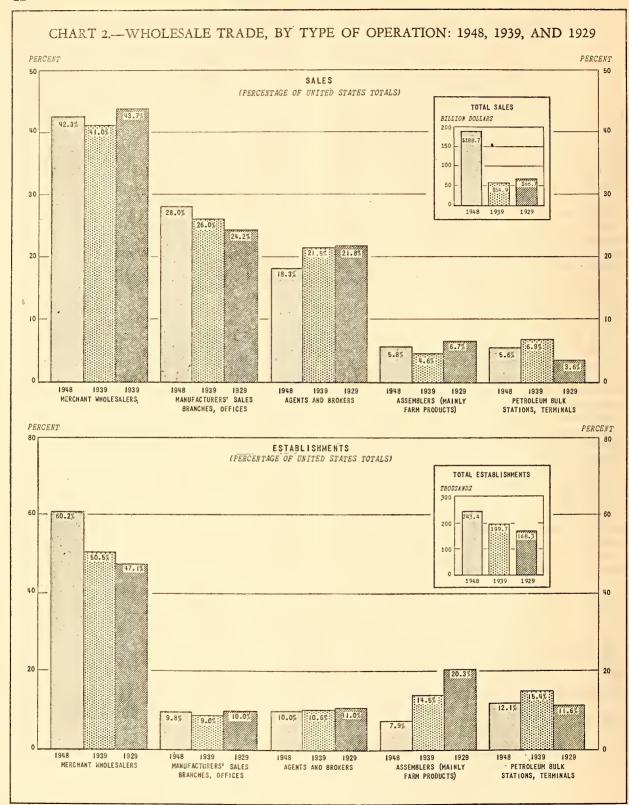

Summary by kind of business.—In addition to being classified according to functional type, each wholesale establishment was also assigned a kind-of-business classification for purposes of preparing totals by kind of business or trade. In general, the kind-of-business classification assigned was based on the analysis which each establishment reported of its total sales for the census year classified into individual commodity or merchandise lines. Establishments that handled lines broad enough to overlap Census classifications were assigned the kind of business according to their predominant activity and all of the business included in the one kind-of-business classification. The kind-of-business classification, while primarily on a commodity basis. should not be confused with the total volume of business in any one commodity or merchandise line since many establishments handled more than a single line of merchandise. Measures of commodity or merchandise lines handled by the various classes of wholesale establishments are given in tables 10, 11, 12, 13, and 14B of this

Wholesale establishments were classified into 145 detailed kinds of business. These detailed kinds were grouped into 53 trade classifications which were further arranged according to 17 major groups. Each of the detailed kinds of business is described in appendix C. In presenting the results on Wholesale Trade, the data are arranged first by type of operation, then for each of the major type groups by kind of business. As the functional type groups represent somewhat different levels of marketing, kind-of-business totals, independent of type of operation, are not presented in the census findings.

Basic data on number of establishments, sales, operating expenses, payroll, employment, and stocks are presented for the major types of operation by kinds of business in summary for the United States in tables 1A, 1C, and 1E of this volume. In Volume V, Census of Business: 1948, the basic data are presented by type of operation and kind of business for each State in table 101, for each standard metropolitan area in table 102,

TABLE B.—COMPARATIVE SUMMARY FOR THE UNITED STATES: 1948, 1939, AND 1929

| Item | Total, all types of operation | Merchant wholesalers | Manufacturers' sales branches, offices | Petroleum bulk stations, ter- minals | Agents and brokers | Assemblers (mainly farm products) |
|--|----------------------------------|-------------------------|--|--|-----------------------|---|

and for each county with 50 or more wholesale establishments in table 104.

Table C, below, derived from table 1E of this volume, measures in terms of number of establishments and dollar volume of sales the importance of the 17 kind-of-business groups under the 5 major types of operation. Measured in dollar sales "Groceries, confectionery, meats" constituted the most important classification of merchant wholesalers and also of manufacturers' sales branches and offices. "Farm products (raw materials)"—principally grain and livestock commission merchants—constituted the most important kind of business of agents and brokers. Assemblers are found chiefly in the farm products trade; and by definition, petroleum bulk stations and terminals are limited to the petroleum trade.

Again measured in terms of dollar volume of sales, merchant wholesalers constituted the most important type group for 12 of the 17 major kind-of-business classifications. Manufacturers' sales branches and offices predominated in the case of "Drugs, chemicals, allied products"—principally chemicals; "Machinery, equipment, supplies"; and "Metals, metalwork (except scrap)." Agents and brokers—chiefly commission merchants—constituted the principal type of marketer of "Inedible farm products." Petroleum bulk stations, terminals contributed the largest portion of sales in "Other kinds of business," as shown in the accompanying table C.

Trends in the number of establishments and sales of merchant wholesalers—1929, 1939, and 1948—are shown for the 52 kinds of business in the accompanying table D. Generally, the trend both in establishments and sales was upward for 1948 over 1939 and also for 1948 over 1929. Exceptions to the general trend are noted in the count of establishments for the general-line trades (general-line groceries, general-line drugs, general-line

dry goods, and general-line electrical merchandise). Here in each case the number of establishments in 1948 was lower than in 1929. "General-line dry goods" also recorded smaller dollar sales in 1948 than in 1929. Other kinds of business showing a smaller number of establishments in 1948 than in 1929 included: Fish, sea foods; Farm products (raw materials); Nonferrous metals, metal work; and Petroleum and products.

Sales gains, 1948 over 1929, amounted to 500 percent or more in six trades or kinds of business for which data are shown separately in table D, below, and gains of 300–499 percent were recorded by twelve trades. Industrial, heavy, and durable goods trades generally recorded larger percentage gains than did the consumer goods trades.

Additional historical information is presented by kind of business in table 1C of this volume.

Briefly reviewed in the following pages are findings derived from chapters 2 through 14 of this volume.

Sales Size and Expense Analysis

Service wholesalers, a portion of the merchant wholesaler group, and manufacturers' sales branches (with stocks) were selected for sales size and expense analysis studies in chapter 2. The term "service wholesaler" as used here includes the following types of operation as described in appendix B of this volume:

Service wholesalers (domestic market):
Wholesale merchants, jobbers.
Converters (textile).
Industrial distributors.
Foreign trade merchants:

Importers.

Exporters are excluded, but it was necessary to include a small number of retailer-cooperatives—limited service establishments—in the drug trade in order to avoid possible disclosure of individual information.

n. a. Not available or not applicable.

Prohibition era.

Service wholesalers, as described above, and manu-

facturers' sales branches were selected for statistical study in chapter 2 because of their importance, their similarity of operation, and because they are found in most kinds of business into which Wholesale Trade is classified. Both type groups customarily warehouse merchandise for sale, make deliveries from stock, grant credit, and generally sell through salesmen. Manufacturers' sales branches (with stocks) differ from service wholesalers, however, in that the latter buy and sell merchandise on their own account while the former are primarily engaged in selling products of their owners' factories.

Chapter 2 includes six tables. Tables 2A and 2B elassify service wholesalers and manufacturers' sales branches (with stocks) by 1948 sales size. Tables 2C, 2D, and 2E analyze operating expenses of the two type groups, while 2F shows the count of service wholesalers by sales size and operating expense ratios.

Sales size.—Of the 138,439 service wholesale establishments in the United States in 1948 only 1,734 (or slightly more than 1 percent) reported sales for the year of \$5 million or more. Sharply contrasted with this relatively small number of establishments in the uppermost sales-size bracket were 29,389 establishments (22 percent) in the less-than-\$50,000 bracket. The lessthan-\$50,000 bracket actually represented \$5,000-\$49,999, as establishments reporting sales of less than \$5,000 for the year were omitted from all Wholesale Trade tabulations. Although the 1,734 houses in the

⁽⁻⁾ Denotes decrease.

upper bracket represented less than 2 percent of the establishments, they contributed 26 percent of the sales of all service wholesalers. On the other extreme, the under-\$50,000 establishments as a group accounted for only 1 percent of sales. The number of establishments increased consistently with a decrease in sales-size bracket. Despite this increase in number of establishments, however, total sales decreased by sales bracket.

Operating expenses which includes payroll but not cost of merchandise sold nor any allowances for active proprietor-owners of unincorporated businesses, when expressed as a percent of sales, increased consistently with the decrease in sales size. For service wholesalers as a group, the range was from a low of 7.4 percent of sales in the \$5-million-and-over bracket to a high of 24.3 percent in the under-\$50,000 group.

Manufacturers' sales branches (with stocks) reported larger annual sales per establishment, on the average, than did service wholesalers as indicated by the fact that 1,266, or 8.1 percent, of the 15,716 branches were in the \$5-million-and-over group, while only 1,400, 8.9 percent, were in the under-\$50,000 bracket. In contrast to service wholesalers, the number of manufacturers' sales branches varied little by sales size. However, there was a high degree of concentration of sales in the upper brackets; 60 percent of total sales were in the largest sales bracket, 20 percent in the second bracket, and 10 percent in the third bracket. In total the 5,056 sales branches each with sales of a million dollars or more in 1948. accounted for approximately 90 percent of the sales of all manufacturers' sales branches for that year. Like service wholesalers, operating expenses of sales branches, when expressed as a percent of sales, increased from larger to smaller sales-size bracket.

Data similar to the above are presented for service wholesalers and for manufacturers' sales branches (with stocks) in summary for the United States by kind of business in table 2A, and for service wholesalers, kinds of business by geographic divisions and standard metropolitan areas with 1,000,000 inhabitants or more in table 2B. The number of size brackets or areas for which data are presented separately varies with the kind of business according to the number of establishments involved, the

objective being to present as much significant information as possible without disclosing information for any individual concern.

Operating expenses.—In tables 2C, 2D, and 2E of this volume, the operating expenses of service wholesalers (as defined above) and manufacturers' sales branches (with stocks) are divided into the following functional classifications: Administrative expenses; selling expenses; shipping, delivery expenses; warehousing expenses; occupancy expenses; and other expenses. All service wholesalers and manufacturers' sales branches (with stocks) with total sales for the year 1948 exceeding \$200,000 were asked to report their expenses on this basis. Where expense records were not kept in a manner readily permitting this grouping of accounts, respondents were requested to make adjustments on the basis of their best judgment. A description of the expense terms is given in appendix F of this volume.

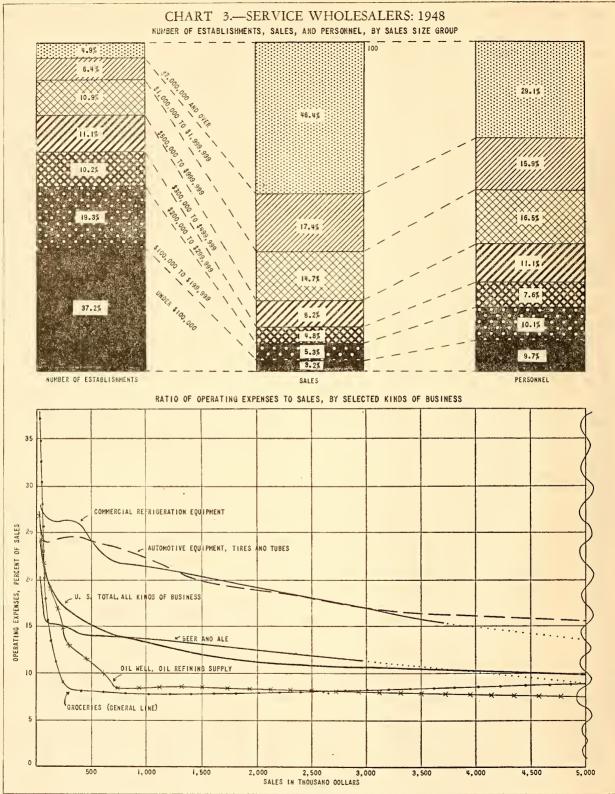

Data are presented for the two type groups in summary for the United States in tables 2C and 2E by kind of business. Within sales-size groups of service wholesalers, table 2C, information is shown for incorporated, or "corporate" businesses separate from unincorporated or "noncorporate" businesses. The latter consists primarily of sole proprietorships and partnerships. Detail by sales size and corporate versus noncorporate structure varies by kind of business depending upon the number of establishments. Expense data are presented in table 2D for service wholesalers by kind of business in standard metropolitan areas of 1,000,000 inhabitants or more.

Tables 2C, 2D, and 2E, are limited to service wholesalers and manufacturers' sales branches (with stocks) whose sales for the year 1948 amounted to \$200,000 or more.

As not all service wholesalers and manufacturers' branches with sales of \$200,000 or more submitted complete expense analyses, the number of establishments for which data are shown for a classification may be somewhat less than the total number in the classification with sales above the cutoff. The tables provide a measure of coverage for each classification by showing the number of establishments, sales, and expense ratios (expenses as a percent of sales) for all establishments

above the cutoff as well as information for those reporting the expense detail.

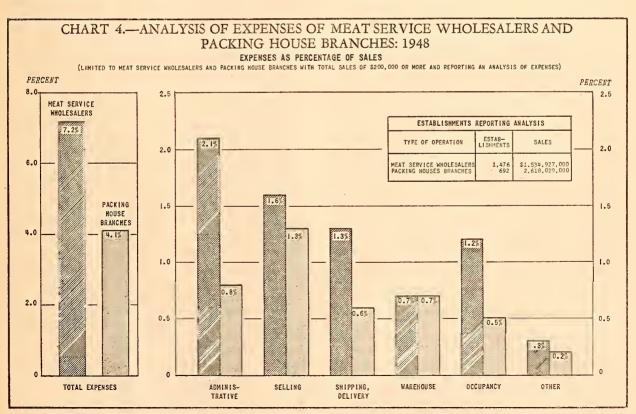

Operating expenses in the meat trade.—An expense analysis carries significance when considered in connection with a given kind of business. Meat wholesaling has been selected for consideration here although similar analyses could be prepared for other kinds of business. Data reviewed here appear on pages 2.80 and 2.111 of this volume.

Of the 2.059 meat (service) wholesalers in the United States with sales of \$200,000 or more during the census year, 1,476 analyzed their expenses according to the six functional groups. Sales of these 1,476 wholesalers analyzing their expenses totaled \$1.534.927,000 and their operating expenses amounted to 7.2 percent of sales for the year. Stated differently, it cost this group of meat wholesalers \$72 to market a representative bill of goods amounting to \$1,000. The \$72 was divided as follows: \$21 for administrative expenses; \$16 for selling expenses; \$13 for shipping expenses; \$7 for warehouse expenses; \$12 for occupancy expenses (or \$19 for warehouse and occupancy combined); and \$3 for other expenses. Wholesalers in the larger sales brackets—those with sales of \$5,000,000 or more—as a group recorded a somewhat smaller cost, \$47, to market a \$1,000 bill of goods. Smaller ratios are noted in the upper brackets under all expense items except "Other."

As was found to be true in general in the review of table 2A, smaller establishments in the meat trade recorded higher operating expense ratios than larger ones. Particularly was this true with respect to administrative, selling, shipping, and occupancy costs.

Within sales-size brackets, "noncorporate" businesses generally show lower total operating expense ratios than the incorporated businesses. Lower ratios are noted for "noncorporate" particularly under administrative expenses. This difference may be attributed, in part at least, to the fact that operating expenses as presented in census findings include no allowances for withdrawals by active proprietors and partners, the number of whom is shown in the last column of tables 2C, 2D, and 2E.

Meat packers' sales branches.—Of the 731 meat packers' sales branches with sales of \$200,000 or more, 692 analyzed their expenses. Total expenses of those analyzed amounted to 4.1 percent of sales compared with 4.2 percent for all branches with sales above the cut-off. Expenses-as-a-percent-of-sales for packer branches were lower than those reported for service wholesalers. This may be explained in part by the fact that the buying function is subordinated or nonexistent for branches. This is reflected in the difference in administrative expenses as between the two types: 2.1 percent for service wholesalers compared with 0.8 percent for packers' sales branches.

Sales size and expense ratios.—Although larger establishments generally have lower operating expense ratios than small ones, the correlation is by no means perfect. Table 2F of this volume shows for service wholesalers the number of establishments for each kind of business by 1948 sales-size brackets and operating-expense-ratios brackets. The portion of the table relating to Meat, Meat Products Wholesalers is reproduced in table F, below.

Of the 3,336 meat (service) wholesalers in the United States in 1948, 919, or almost 30 percent, recorded expense ratios of less than 5 percent. On the other extreme, 188 recorded expenses of 20 percent or more with the number of establishments decreasing rather consistently from lower- to upper-expense-ratio brackets. Not only does the largest number of establishments for each sales-size bracket appear in the lowest expense ratio bracket but the greatest "low-expense" concentration appears in the largest sales bracket-with two-thirds of the 36 meat wholesalers with sales of \$5,000,000 or more reporting expense-to-sales ratios of less than 5 percent. The fact that expense ratios vary widely within sales-size brackets reflects the many functions influencing operating expenses other than size, among which are: amount and type of services rendered; geographic location with respect to supplier and customer; type of customer served; amount of processing, if any; and class of merchandise handled.

Credit Sales, Receivables, Bad Debt Losses

Report forms used in the 1948 Census of Business provided for reporting of credit sales, beginning- and endof-year receivables, end-of-year number of credit accounts, and bad debt losses during 1948 by merchant
wholesalers and manufacturers' sales branches. Credit
terms are described in appendix F of this volume. Results of these inquiries are presented in table 3A in
summary for the United States for merchant wholesalers
and for manufacturers' sales branches (with stocks) by
kind of business; and in table 3B for standard metropolitan areas with 500,000 inhabitants or more for merchant wholesalers by kind of business. Table 3C crosstabulates credit information of merchant wholesalers by
sales size and number of credit accounts. This table is
limited to a summary for the United States.

Tables 3A and 3B include, for their respective areas,

all merchant wholesalers and manufacturers' sales branches (with stocks) indicating that they did any credit business during 1948. Establishments selling on a cash basis only are not included. The importance of those making credit sales compared with totals including those doing a cash business only may be measured for the United States as a whole by comparing totals in table 3A with those in table 1E of this volume, and may be measured for standard metropolitan areas having 500,000 inhabitants or more by comparing table 3B of this volume with the respective areas in table 102, in Volume V, Census of Business: 1948. Generally, establishments doing no credit business have considerably smaller annual dollar sales volume than those extending credit.

Not all establishments selling on credit submitted complete information on this inquiry. The findings are expressed in terms of ratios or relationships that are based on those supplying credit information. Extent of coverage of this inquiry is indicated by the fact that total sales of those submitting complete returns averaged approximately 90 percent of sales of all establishments doing a credit business, and that with few exceptions credit data are not shown separately for classifications with credit-sales coverage of less than 70 percent.

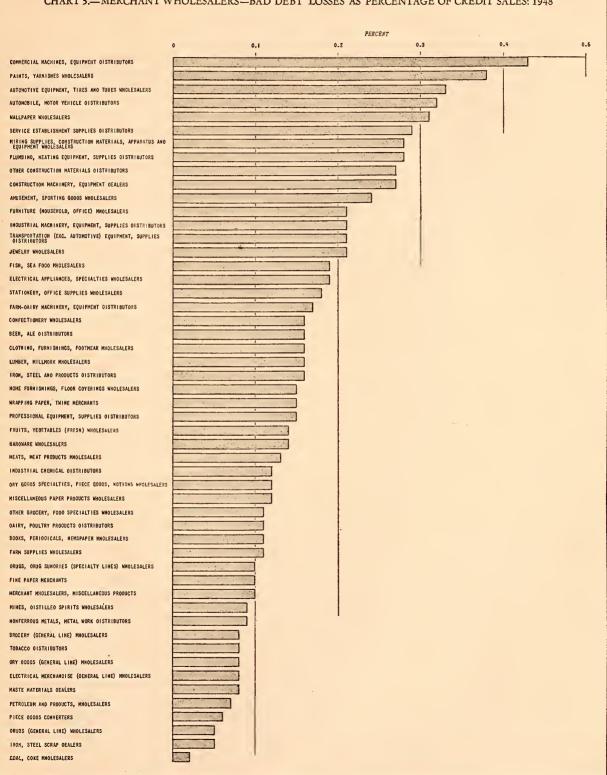

Credit sales.—Of the 146,518 merchant wholesalers in the country, 122,289 reported that at least a portion of their 1948 sales were on credit. Total sales of the 122,289 establishments amounted to \$73.7 billion, 85.5 percent of which was on credit. Similarly, 15,301 of the 15,716 manufacturers' sales branches reported that they sold on credit. Total sales of the 15,301 branches amounted to \$29.1 billion, 84.5 percent of which was on credit.

Credit sales as a percent of total sales of those extending credit varied considerably for merchant wholesalers by kind of business, but with few exceptions, notably cash-carry grocery wholesalers making some "time" sales, beer-ale wholesalers, and automobile and other motor vehicle wholesalers, credit represented more than one-half of their business. Approximately one-half of the kinds of business show credit sales, as defined above, accounting for 90 percent or more of their total business. Manufacturers' sales branches reported an even larger proportion of credit sales for most kinds of business than did merchant wholesalers.

Table F.—MEAT, MEAT PRODUCTS—NUMBER OF SERVICE WHOLESALERS, BY SALES SIZE AND OPERATING EXPENSE RATIOS

| 0.000 | Establish- | Number of establishments with 1948 sales of— | | | | | | | | |

CHART 5.—MERCHANT WHOLESALERS—BAD DEBT LOSSES AS PERCENTAGE OF CREDIT SALES: 1948

Receivables.—Accounts and notes receivable resulting from the sale of merchandise, and held by merchant wholesalers at the end of 1948, amounted to 8.4 percent of credit sales during the year. This would indicate receivables turnover at the rate of approximately once a month. End-of-year receivables of manufacturers' sales branches represented 9 percent of their credit sales during 1948, a slightly higher ratio than for merchant wholesalers. As might be expected end-of-year receivable ratios varied considerably by kind of business ranging. for merchant wholesalers, from a low of 3,2 percent for retailer-cooperative grocery wholesalers to a high of 19.3 percent for general-line jewelry wholesalers. Variations by kind of business were greater for manufacturers' sales branches than for merchant wholesalers, ranging from a low of 3.1 percent for meat packer sales branches to a high of 40 percent for sales branches of laundry, dry cleaning equipment manufacturers.

Receivables of both merchant wholesalers and manufacturers' sales branches were higher at the end than at the beginning of the year 1948. They were up 6.5 percent in the case of merchant wholesalers and 3.4 percent for sales branches.

Bad debt losses.—Bad debt losses (receivables written off during 1948 as uncollectible) represented 0.14 percent of credit sales for merchant wholesalers and 0.04 percent for manufacturers' sales branches. The loss ratio for merchant wholesalers varied considerably by kind of business or trade, ranging from a low of 0.01 percent for railroad equipment and supplies distributors to a high of 0.61 percent for store machines, fixtures distributors. Losses of manufacturers' sales branches ranged from a low of less than 0.01 percent for a number of kinds of business to a high of slightly more than 1 percent for books, periodicals, and newspapers.

Number of credit accounts.—Merchant wholesalers doing a credit business averaged 300 credit accounts per establishment compared with 592 credit accounts per manufacturers' sales branch. Average 1948 credit sales per credit account amounted to \$1,873 for merchant wholesalers and \$2,842 for manufacturers' sales branches. Considerable variation may be noted by kind of business in table 3A, both in number of credit accounts and in average 1948 credit sales per account.

As indicated above, credit data for merchant wholesalers are cross tabulated in table 3C by sales size and by number of credit accounts. For each size group the number of establishments, bad debt loss ratios (losses expressed as a percent of credit sales), average annual credit sales per account, and average number of credit accounts are presented by kind of business for the United States as a whole.

Information in this table may be summarized as follows: Bad debt loss ratios tend to bear an inverse relationship to size as measured by annual credit sales volume. Larger establishments in general tend to have lower bad debt loss ratios than smaller ones. For example, the loss ratios decreased from 0.36 percent for mer-

chant wholesalers with credit sales of less than \$200,000 per year to 0.26 percent for those in the \$200,000-\$499,999 bracket, to 0.19 percent for those in the \$500,000-\$999,999 bracket, and to 0.09 percent for those in the \$1,000,000-and-over bracket. Within credit-salessize brackets the pattern of bad debt losses varies considerably by size as measured in terms of number of credit accounts with some tendency toward a decline in losses for establishments with the smaller number of accounts.

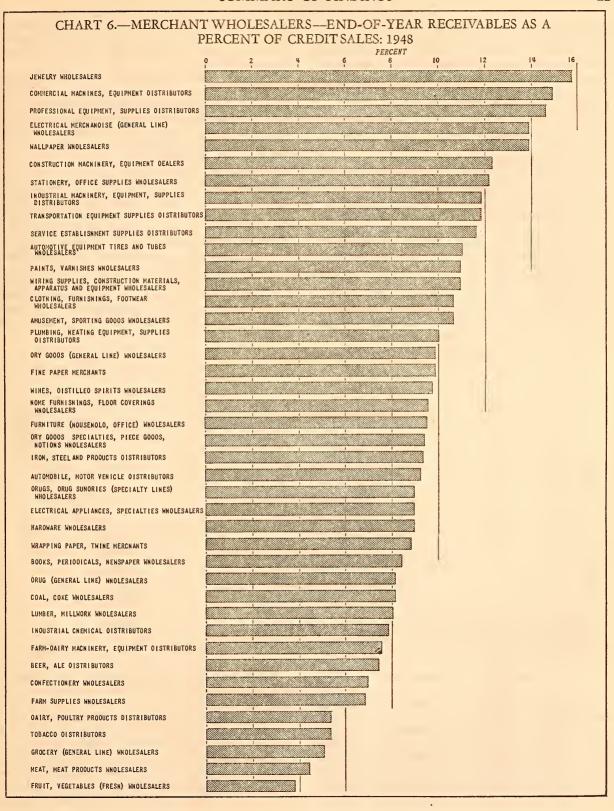

Sales by Class of Customer

Each of the five report forms used in enumerating wholesale establishments (see reproductions in appendix G of this volume) provided for reporting 1948 sales by class of customer. Four of the five forms provided for reporting separately: sales to retailers; sales to industrial, institutional, professional, and other similar type of end users; sales to wholesale organizations; sales to household consumers and individual users (retail sales); and export sales. These five classifications were designed to encompass all sales. Form 32, the one used in enumerating petroleum bulk stations and terminals, provided for only a two-way break: sales to resellers and sales to consumers or users. Terms used in this inquiry are described more fully in appendix F.

Findings of these inquiries are presented in tables 4A and 4B of this volume. Table 4A is a summary for the United States by type of operation and kind of business. Table 5B presents class-of-customer information for each of the 32 standard metropolitan areas with 500,000 inhabitants or more. Table G, below, presents a comparative summary, by type of operation, of sales by class of customer, 1948, 1939, and 1935. Similar information was not developed in the first Business Census covering the year 1929.

Class-of-customer information was generally available from book records, or on the basis of reliable estimates. Records of assistance in supplying this information included among others: sales by functional discounts; State sales tax reports, particularly in States with differential functional ratios; export declarations; and farm accounts. The extent to which establishments supplied this information for any particular classification is indicated in the tables by a comparison between the entry in the column "All establishments—sales, entire year" and the corresponding entry "Establishments analyzing sales . . . sales, entire year." For most classifications the analysis is 90 percent or more complete.

Of the total \$79.8 billion sales of merchant whole-salers, \$75.8 billion, or 95.1 percent, was analyzed by class of customer. The \$75.8 billion was distributed as follows: 46.9 percent, or less than one-half, to retailers; 31.8 percent, or slightly less than one-third, to industrial and similar end users; 13.7 percent to wholesale organizations, presumably duplicated elsewhere in Wholesale Trade; 1.6 percent to home or individual users (retail sales); while 6.0 percent represented exports. Histori-

cally the portion of sales to retailers declined from 59.2 percent in 1935 to 59.0 in 1939 and to 46.9 percent in 1948. Relative increases are noted historically in other customer classes, except the household consumers classification. Sales to industrial, commercial, and institutional users increased from 23.7 percent of the total in 1939 to 31.8 percent in 1948.

Manufacturers' sales branches and offices recorded relatively little change in sales by class of customer, postwar 1948 compared with prewar 1939; but, like merchant wholesalers, sales to retailers showed a relative decline since 1935, offset by increases for all other customer classes. Approximately one-third of their 1948 sales was to retailers, two-fifths to industrial and similar end users, and one-fourth to wholesale organizations.

Petroleum bulk stations and terminals reported that five-eighths of their 1948 sales were to resellers and threeeighths to users. The portion going to users increased substantially 1948 over 1935.

As expected, agents and brokers sell primarily to, or buy for, industrial users and wholesale organizations. Only about one-sixth of their transactions in 1948 were with retailers, and minor portions with home consumers and for export. Sales to, or purchases for, industrial users recorded relative gains 1948 over 1935, offset by declines in sales to retailers and sales to wholesale organizations.

Wholesale organizations constituted the principal customer of assemblers of farm products, taking 51.8 percent of their 1948 sales. Industrial users were second with 32.6 percent of their sales, followed by other customer classes with lesser portions. Sales to industrial users recorded relative increases historically, offset by a decline in sales to retailers.

Findings in table G, below, may be summarized briefly as follows: Retailers constituted the most important class of customer for only two of the five major type-of-operation groups—merchant wholesalers and petroleum bulk stations, terminals. Each of the five major type groups recorded relative decreases in sales to retailers historically. As customers of wholesale establishments, the importance of industrial and similar end users is increasing. For most classifications, retail sales of wholesale establishments are relatively unimportant. "Export sales" represent but a small portion of the total and show a tendency to fluctuate from one census year to another.

Table G.—COMPARATIVE SUMMARY OF SALES BY CLASS OF CUSTOMER: 1948, 1939, AND 1935

¹ Including those not analyzing sales by class of customer.
² 1939 and 1935 data not revised for minor scope changes.

Legal Form of Organization

Approximately one-half, or 49.9 percent, of the 243,366 wholesale establishments in the United States in 1948, were operated as incorporated businesses, approximately one-third were sole proprietorships, one-sixth were partnerships, and a small number were classified as "other forms," which include such miscellaneous ownership types as nonincorporated cooperative associations. receiverships, estates, etc.

Incorporated businesses accounted for 75.7 percent of sales of all wholesale establishments, followed in turn by 12.8 percent for partnerships, 10.7 percent for sole proprietorships, and 0.8 percent for "other forms." In terms of sales, corporate businesses represented the most important legal form for each of the five type-ofoperation groups, both in prewar 1939 and postwar 1948. In 1948 they contributed approximately three-fourths of the sales of merchant wholesalers, almost all, 99.5 percent, of the business of manufacturers' sales branches

Excluding taxes.

Entry under "To industrial users" represents sales to all types of rescilers.

Entry under "To industrial users" represents all sales to users or consumers.

Cooperative sales agencies were included with assemblers in 1939 but with agents and brokers in 1948. Their sales totaled \$579,000,000 in 1939 and \$1,255,000,000 in 1948. These establishments were not separately identified in 1935.

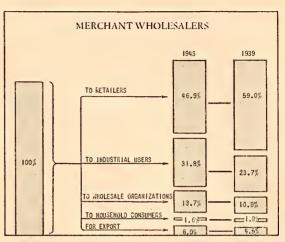

CHART 7.—WHOLESALE ESTABLISHMENTS—DISTRIBUTION OF SALES, BY CLASS CUSTOMER: 1948 AND 1939

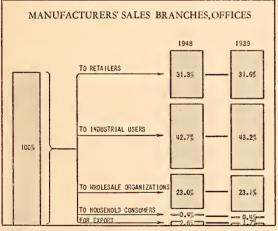

(SALES ANALYZED = 100%)

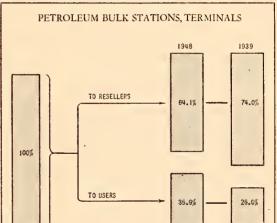

| TOTAL SALES AND SALES | ANALYZED | BY CLAS | SS OF CUS | TOMER | | |

² Cooperative sales agencies were included with assemblers in 1939 but with agents and brokers in 1948. Their sales totaled \$579 million in 1939 and \$1,255 million in 1948.

and offices, 90 percent for petroleum bulk stations, terminals, and about one-half of the sales of agents and brokers, and also of assemblers. Their portion of total sales remained about the same for each of the type groups 1948 compared with 1939 except in the case of assemblers. where corporations registered an increase from 37.1 percent to 53.6 percent.

In terms of number of 1948 establishments, corporations also constituted the most important legal form for all but one of the five major type groups—agents and brokers, where sole proprietorships predominated by operating 55.8 percent of the establishments. Sole proprietorships operated 48.9 percent of the establishments classified as assemblers in 1939 but by 1948 were outnumbered by corporations.

Legal form data are presented in table 5A for the United States as a whole by type of operation and kind of business, and in summary for each State in table 5B.

^{1 1939} data not revised for minor scope changes.
2 Less than 0.05 percent.

Size by Number of Employees

Data for wholesale establishments, classified by size based on the number of paid employees during the workweek ended nearest November 15, 1948, are presented in chapter 6. The chapter includes two tables: Table 6A is a summary for the United States, type-of-operation groups by kind of business, while table 6B presents a summary for each State by employee size. Data for the country as a whole are summarized in table I, below. Data in this table are limited to "wholesale establishments" and do not cover "administrative offices, auxiliary units." An explanation of terms is given in appendix F.

A total of 2,555 wholesale establishments had 100 or more employees as of November 15, 1948. As a group these 2,555 establishments accounted for one-fifth of all paid personnel at that time and had an annual payroll totaling \$1.7 billion, or 21.4 percent of the total for all wholesale establishments.

On the other extreme 36,682 establishments had no paid employees as of mid-November, 1948. A total of 42,602 proprietor-owners, however, were actively engaged in these businesses. Many of these establishments had paid employees at other times of the year as indicated by the fact that while they had no payroll for the workweek ended nearest November 15, their total payroll for the year 1948 amounted to \$25 million.

Payroll for the workweek ended nearest November 15, all employee-size groups combined, averaged over \$64 per paid employee. The weekly average was about the same for all employee-size groups except in the lower brackets where the number of active proprietors, not included in paid employees, is most significant.

Trucks, Truck-Tractors, Trailers

Four of the five report forms used in enumerating wholesale businesses provided for reporting number of trucks, truck-tractors, and trailers operated in December 1948. The inquiry did not appear on Form BC-33, used in enumerating merchandise brokers and agents; for, as a rule, they do not handle the merchandise sold. Provision was made for reporting the number of trucks and truck-tractors by manufacturers' rated capacity as follows: Under 1½ tons; 1½ tons; over 1½ tons, under 5 tons; and 5 tons and over; also provision was made for reporting the number of semitrailers and trailers. Results of this inquiry are presented in chapter 7 which includes three tables: Table 7A, United States Summary, type groups by kind of business; table 7B, United States Summary by geographic divisions and States; and table 7C, each State by type of operation and kind of business. The data are limited to company-operated (private carrier) vehicles owned or leased and do not include contract or common carrier vehicles. A summary for the United States by

¹ Based on total number of employees as of November 15, 1948. ² Proprictors of unincorporated husinesses.

type of operation and rated capacity is shown in table J, below.

Wholesale organizations, other than agents and brokers, operated 366,330 trucks, 26,762 truck-tractors, and 30,594 semitrailers and trailers, or a total of 423,686 road-type vehicles as of December 1948. Among the trucks, those with manufacturers' rated capacity of 11/2 tons were most common, numbering 144,251. Merchant wholesalers differ from other types of operation in that they use more under-11/2-ton trucks than any other size. "Over 1½ tons, under 5 tons" constituted the most common type of truck-tractor in total and for each of the four type groups.

Of the 146,518 merchant wholesalers in the country, 78,910 or 53.9 percent, each reported that they operated one or more trucks, truck-tractors, or trailers during December 1948. The 78,910 establishments reported a total of 237,774 trucks, 14,503 truck-tractors, and 17,003 trailers and semitrailers, or a total of 269,280 vehicles, an average of 3½ per establishment. In the count of trucks, dairy and poultry products wholesalers ranked first among the kinds of business with 38,684, beer and ale distributors ranked second with 20,269, followed in turn by fruit and vegetable wholesalers with 17,662, and general-line grocery wholesalers with 15,993 trucks.

Less than one-half of manufacturers' sales branches

(with stocks)—6,537 of 15,716—reported a total of 32,350 vehicles or an average of approximately 5 per sales branch. Each of the 29,451 petroleum bulk stations and terminals reported one or more trucks, truck-tractors, or trailers for a total of 91.271 vehicles—an average of 3 per establishment. Among the types of operation, petroleum bulk stations and terminals constituted the principal user of truck-tractors and trailers, 8,761 of the former and 9,066 of the latter having such vehicles. 9,226 of the assemblers of farm products reported that they operated 26,445 vehicles in December, or an average of slightly fewer than 3 per establishment.

Miscellaneous Subjects

This discussion reviews briefly findings derived from chapter 8. The chapter includes nine tables, as listed below, each table presenting statistics on a limited phase of Wholesale Trade.

| Table No. | Subject |
|-----------|---|
| 8A | City size. |
| 8B | Firm size. |
| 8C | Date acquired, or established. |
| 8D | Detailed types of operation. |
| 8E | Voluntary group grocery wholesalers. |
| | Retailer-cooperative grocery wholesalers. |
| | Transactions by agents and brokers. |
| | Kinds of business by States. |

City size.—Wholesale establishments are grouped in table SA according to the size of the city (based on preliminary 1950 population counts) in which they are located. The table presents basic information on number of establishments, sales, expense-as-percent-of-sales ratios, payroll, employment, and stocks by type-of-operation groups, kind of business, and city size. A brief summary is presented in table K below.

A total of 88,830 of the 243,366 wholesale establishments in the country in 1948 were located in cities of 500,000 inhabitants or more. These 88,830 establishments accounted for 51.7 percent of the sales, 49.1 percent of the 1948 payroll, and 42.0 percent of the paid employees of all wholesale establishments for that year. In contrast the 18 cities in this size bracket contained only 17.5 percent of the country's population in 1950.

Concentration of Wholesale Trade in the larger cities is further illustrated by the fact that 131,491, or more than one-half of all establishments, were located in the 106 cities of 100,000 inhabitants or more. Establishments in these cities accounted for almost three-fourths, 73.3 percent, of the sales, 72.7 percent of the annual payroll, and 65.8 percent of the paid employees of all wholesale establishments. However, these cities contained only 29.2 percent of the population of the country. As shown in table A, above, if the measure is based on metropolitan areas rather than cities, the concentration is even greater.

Of the total of 243,366 wholesale establishments, 41.838 were located in incorporated places having less than 2,500 inhabitants, or in unincorporated places and rural areas. These establishments—chiefly petroleum bulk stations and assemblers of farm products—recorded 8.4 percent of the sales, 6.2 percent of annual payroll, and 9.0 percent of the paid employees of wholesale establishments, contrasted with 42.9 percent of the country's population. It should be observed that in census results all sales, payroll, and employment (ineluding traveling salesmen) are credited to the city or area in which the establishment from which the business is conducted is located. Consistent with the findings in table A, average weekly payroll per paid employee is

highest in the largest population centers and decreased with city size. Compared with the average of \$64 per week for the country as a whole, payroll for the workweek ended nearest November 15, 1948, amounted to \$74 in cities of 500,000 inhabitants or more. From this high it declined with the decrease in city size to \$47 in the next to the lowest city-size bracket.

Firm size.—Wholesale Trade is analyzed in table 8B according to the number of wholesale establishments under a single ownership into the following classifications: 1 wholesale establishment only; 2 establishments; 3 to 5 establishments; 6 to 9 establishments; 10 to 14 establishments: 15 to 24 establishments: 25 to 49 establishments: 50 to 99 establishments: and 100 or more wholesale establishments. Administrative offices and auxiliary units are included, but shown separately in the summary totals. A comparative summary by firm size, 1948 and 1939, limited to wholcsale establishments, is given in table L, below. Data as shown in table L for the year 1939 are unadjusted for scope changes of 847 establishments and \$377 million sales. Changes from 1939 were made with respect to coffee roasting and leaf tobacco stemming and redrying establishments, which were excluded from the 1948 Census of Business but covered in the 1947 Census of Manufactures. Motion pieture film distributors were included with Wholesale Trade in 1939 but not in 1948. Administrative offices and auxiliary units were omitted in 1939 but included in 1948. Scope changes are further explained in the introduction to the volume under the heading "Comparison of 1948 and 1939 Trade Scope."

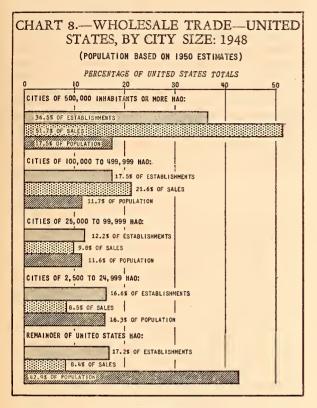

The 243,366 wholesale establishments in the country in 1948 were operated by 181,745 different companies, firms, or other ownerships. More than two-thirds, or 172,142, of the 243,366 wholesale establishments in 1948 were owned by companies, concerns, or individuals who had only one wholesale establishment. Importance of the single-unit establishments is indicated by the fact that as a group they accounted for approximately one-half, 49.7 percent, of the sales of all wholesale establishments. On the other extreme 133 firms each operated 50 or more wholesale establishments. These

¹ Proprietors of unincorporated businesses.

133 firms as a group operated 30,126 establishments with sales amounting to approximately one-sixth, 17.2 percent, of the total.

All firm-size groups recorded increases in number of firms and in number of establishments, 1948 over 1939, with the largest increase in the single-establishment firms. Some slight changes are noted, however, in the portion of total sales accounted for by the various firm-size groups, with a slight tendency toward an increase in larger size brackets. Single-unit establishments—although their number increased by 35,255, or 82.4 percent of the total increase in establishment count—recorded a decrease from 52.1 percent to 49.7 percent of total sales.

On the other extreme, sales of firms operating 50 or more wholesale establishments increased from 14.0 percent to 17.2 percent of the total. Each of the firm-size groups from 1 through 10–14 establishments, except one, recorded some decrease in portion of total sales, 1948 compared with 1939, while all groups above this level recorded increases. Firms operating two wholesale establishments accounted for the same portion of sales in 1948 as in 1939—5.2 percent.

Data on number of firms are shown in table 8B at the summary level only, not by type of operation or kind of business. Firm size is based on the total number of wholesale establishments operated by a company during 1948, regardless of the type of operation or kind of business. For example, a company that may have operated a wholesale drug house, a wholesale hardware house, and two petroleum bulk stations was counted as one firm with four establishments. However, a company that operated one or more wholesale establishments and other establishments in business or industries other than wholesale, was classified by the number of wholesale establishments only.

Date acquired.—Census report forms provided for reporting for each wholesale establishment "Date of acquiring or establishing this business in this city under present ownership: (month) (year)." In tabulating the results of this inquiry, establishments which at the end of 1948 were operated by original owners were classified according to the date business was started. Others were classified according to the latest date the business changed ownership prior to the end of 1948. Change of name, without a change of the actual owners, was not considered change of ownership; neither was a change of location of the establishment within the same city, if it continued at the new location under the same ownership. However, a change in the legal form of organization, e. g., from partnership to corporation or a change from partnership to sole proprietorship, was considered a change in ownership; and the acquisition date reported was that of the latest change in legal form.

Findings of this inquiry are presented in table SC for the country as a whole by type of operation and kind of business. Establishments are grouped histori-

^{1 1939} data not revised for minor scope changes.

cally according to the time the business was acquired, or started, by 1948 owner. In addition to table 8C, a brief summary for the United States is presented by type of operation in table M, below.

Of the 243,336 wholesale establishments in the United States, 29,951, mostly establishments of multiunit organizations, failed to report this item of information. The following statements refer only to the 213,415 wholesale establishments that reported "date acquired" information and to the sales of these establishments.

Of the 213,415 wholesale establishments in the country at the end of the census year that reported this information 19,162, or 9 percent, either changed ownership during or were started in 1948. Approximately one-third, 31.5 percent, were acquired, or were started, by their 1948 owners since 1945. On the other extreme, 2,976 establishments operated continuously under the same ownership in the same city for more than 49 years, having been acquired by their 1948 owners prior to 1900.

Considering all types of establishments together, businesses started or acquired in 1948 accounted for 3.7 percent of the sales, and those operated under continuous ownership since 1945 accounted for 19.4 percent of sales. On the other extreme establishments operated continuously under the same ownership since 1899 contributed 4.4 percent of the sales and those operated under the same ownership for 21 years or more (acquired or started by 1948 owner prior to 1928) accounted for 20.3 percent of the total.

Large annual sales per establishment are generally associated with long operation under the same ownership. Establishments, all types of operation combined, acquired prior to 1900 by 1948 owners had an average annual sales

volume in 1948 of \$2,404,000. From this high, the average dropped rather consistently to \$529,400 for those started or taken over during the period 1946–47. Average sales of places of business established or acquired in 1948 amounted to only \$309,000, but many of these did not report for a full 12-months' operation.

Detailed types of operation.—Thirty-six detailed types of operation are identified in census findings on Wholesale Trade. Basic data on establishments, sales, expenses, payroll, and employment are presented separately for these detailed types in summary for the United States by kind of business in table 8D. Sequence or arrangement of the detailed types in the table, together with a statement of the number of kinds of business shown separately for each type, is shown below:

Descriptions of the above classifications are given in appendix B

Voluntary groups, retailer cooperatives.—Some characteristics of two of the newer types of operationvoluntary group wholesalers and retailer cooperative warehouses-in the wholesale grocery trade are measured in tables 8E and 8F. The information was developed from replies to inquiries 2 (c) and 2 (d) of Form BC-30, Census of Business: 1948. (See reproductions in appendix G.) Terms used in this table are explained in appendix F.

Tables 8E and 8F present basic data on establishments, sales, expenses, payroll, personnel, and stocks for the United States as a whole and for Census geographic divisions. Establishments are grouped under geographic areas according to the percentage of their 1948 sales to retail members of the group; i. e., according to group participation. Findings of these tables may be summarized briefly as follows: The great majority of sales, for those reporting this information, of retailerowned wholesalers in the grocery trade is to retail members of the group. The portion of total sales of voluntary group wholesalers to retail members varies widely, but in general the larger the participation the smaller the expenses-to-sales ratios of the wholesaler.

The importance of these two types of operation in the wholesale grocery trade is indicated in table 1E, page 1.10 of this volume.

Transactions by agents and brokers.—The Census definition of agents and brokers, based on the definition in the Standard Industrial Classification Manual, Volume II, includes in Wholesale Trade businesses primarily engaged in negotiating sales (or purchases) for the account of others on a commission basis. Many of them also conduct some business on their own account-"jobbing" business. "Sales" as shown in Census publications on Wholesale Trade for agents and brokers represents the total selling value of the goods in transactions negotiated for others, their principals, plus any sales on their own account. Tables 8G and 8H provide a measure of the two types of transactions. Table 8G presents a summary for the United States by kind of business and table 8H presents data separately for each standard metropolitan area with 1,000,000 inhabitants or more, by kind of business.

Agents and brokers who also did some jobbing business are distinguished in the tables from those operating exclusively on an agency basis. Not all respondents segregated their sales between agency and jobbing, hence those not making the segregation are shown as a separate classification. Therefore, three classifications are distinguished: (a) those negotiating transactions for others on an agency basis only, (b) those negotiating transactions for others and also buying and selling on their own account, and (c) those that did not report the analysis. In many instances it was necessary to combine classifications to avoid disclosure of individual operations. A summary of the information in table 8G is presented in table N, below.

Of the 24,361 wholesale establishments operated by wholesale agents and brokers, 17,976 reported that all of their 1948 business was on an agency basis; i. e., that they did not buy and sell on their own account. Transactions of these establishments amounted to \$26.8 billion during the census year. Three thousand, nine hundred and twenty-three establishments reported varying amounts, but not to exceed 50 percent of the total, of sales on their own account. Total "sales" of this group amounted to \$5.4 billion; \$691 million, or 12.8 percent, of which was on their own account. Of the total, 2,462 establishments with sales amounting to \$2.4 billion failed to report whether or not they did any jobbing business.

Kinds of business by States.—Published bulletins of the 1948 Census of Business included a series of 51 trade releases—Release Series BC-2-W—each presenting basic data on number of establishments, sales, expenses, payroll, personnel, and stocks for one or more kinds of business, by geographic divisions and States. Most of the 51 releases represented a rearrangement of information that appears in the State tables—table 101, Volume V, Census of Business: 1948. Eighteen of the 51 releases

Laundry Supply Houses.

Leather and Shoe Findings Jobbers.

Oil Well Supply Houses.

Optical Goods Wholesalers.

Paint (With Glass, Wallpaper) Wholesalers.

Restaurant, Hotel Equipment Supply Houses.

School Supply Houses.

Shoe Wholesalers.

Surgical, Medical, Hospital Supply Houses.

Voluntary Group Grocery Wholesalers.

Wholesale Florists.

Alaska and Hawaii

In addition to the continental United States, the 1948 Census of Business also covered the Territories of Alaska and Hawaii. Information published on Wholesale Trade for these Territories is similar to that presented for States.

Basic data on number of wholesale establishments, sales, expenses, payroll, employment, and stocks are shown for each of the Territories as a whole by type of operation and kind of business in table 101. Data are shown in table 103 for judicial divisions in the case of Alaska and for counties in Hawaii. In each instance information is shown separately for cities of 5,000 inhabitants or more. Table 104 presents the basic information for each division or county with 50 or more wholesale establishments, by kind of business. Tables 101, 103, and 104 appear in Volume V. Census of Business 1948, Wholesale Trade, Area Statistics. Table 102 does not appear in this series as neither Territory contains any of the 147 standard metropolitan areas for which data are shown in 1948 Census of Business volumes. Summary information from table 101 is presented by type-ofoperation groups in the accompanying table O.

There were 111 wholesale establishments in the Territory of Alaska in 1948 with sales amounting to \$32.2 million and a total payroll for \$1.5 million for the census year. Paid employees of the 111 establishments numbered 460 during the workweek ended nearest November 15, 1948, at an average wage of \$60 for the week. Hawaii had 702 wholesale establishments with sales totaling \$480.7 million and a total payroll for the year of \$27.8 million. Payroll for the 8,221 paid employees of wholesale estab-

lishments in this Territory averaged \$65 for the workweek ended nearest November 15, 1948. Petroleum bulk stations and terminals constituted the principal type of operation in Alaska while merchant wholesalers led in Hawaii.

The Territories were covered in only one of the previous Censuses of Business, the 1939 census. For both Territories the number of wholesale establishments was about the same in postwar 1948 as in prewar 1939, but sales increased 257.3 percent in Alaska and 395.4 percent in Hawaii.

Tabular material included in this volume for the Territories is outlined below, together with table references to similar material for States.

Sales by Commodity or Merchandise Lines

Four of the five report forms used in enumerating wholcsale establishments in the 1948 Census of Business provided for analysis of sales during the census year by commodity or merchandise lines. The arrangement of the inquiries may be seen in the reproduction of the report forms in appendix G of this volume. Form BC-33, used in enumerating agents and brokers, did not provide for the commodity-line analysis of sales. Chapters 10 through 14 present the findings developed from these inquiries.

Reviewed in this section are chapters 10 through 13 only. Chapter 14, which presents the findings for petroleum bulk stations and terminals as developed from Form BC-32, is described in the following section. Chapters 10 through 13 were published as a separate subject bulletin entitled "U. S. Census of Business: 1948, Wholesale Trade—Commodity Line Sales—Bulletin No. 2-W-10 to 13."

Chapter 10 is a summary for the United States and consists of four tables, each presenting commodity-line information for a type-of-operation group, by kind of business as follows:

Table No.: Type of operation

10A...... Merchant wholesalers.

10B...... Manufacturers' sales branches (with stocks).

10C..... Manufacturers' sales offices (without stocks).

10D..... Assemblers (mainly farm products).

Chapters 11, 12, and 13 consist of one table each, presenting similar information by Census geographic divisions. States comprising the geographic divisions are indicated on the map, page 42.

Table 11 covers merchant wholesalers and presents commodity-line data for the various kinds of business by geographic divisions. Table 12 presents similar information for manufacturers' sales branches (with stocks) and table 13 for assemblers (mainly farm products). Commodity-line information for manufacturers' sales offices (without stocks) is limited to the United States as a whole—table 10C.

An index to the kinds of business in tables 10, 11, 12, and 13 is given on page 10.02. Also, as a guide to locating information, a kind of business and geographic division index appears on the first page of each of the chapters 10, 11, 12, and 13.

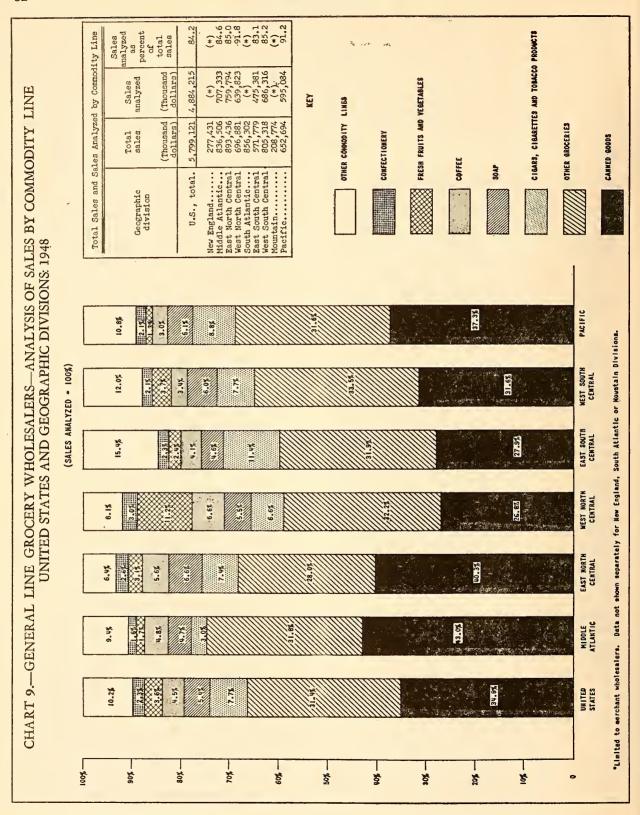

Meaning of "commodity line".—The term "commodity line," as used in this volume, represents a group of related commodity items. Sometimes the group of items is broad enough to be referred to as a merchandise line. The groupings were established, for census purposes, in consultation with the representatives of suppliers of the information, and with users of census data. Consideration was given to the more common groupings of lines maintained by business establishments for sales record purposes as well as to needs for detailed sales analyses.

All commodity or merchandise items were grouped, for census purposes, into 126 principal commodity lines. Fifty-eight of the 126 principal or major lines were further subdivided into 274 detailed lines, giving a total of 400 classifications. "Receipts from services and sources other than sale of merchandise" was considered as a commodity line (No. 126), hence the sum of all commodity-line sales items is equivalent to total sales.

Commodity coverage and limitations of data.—Respondents were requested to select from the lines listed (see pp. 10.03 and 10.04 for complete list of commodity lines) the particular ones that applied to their business and to report book figures where available; otherwise, they were to report on the basis of the best possible approximation. Additional space was provided for writing in items not on the standard list. Written-in items subsequently were allocated to their proper place among the 400 commodity lines, or were included in "Miscellaneous lines of merchandise."

The commodity-line classification shown on a particular census report form was limited to those lines which might reasonably be handled by kinds of business required to report on that form. In the relatively few instances where businesses did not report on the correct form, data may not have been analyzed in the same detail as by other establishments in the same kind of business which reported on the correct form. The effect of this was to increase the amount in the "miscellaneous" category. This led to some loss of detail; however, a careful examination of the schedules leads to the conclusion that the loss for individual commodity lines which this occasioned is statistically insignificant.

Not all respondents reported their sales by commodity lines. Had all returns been analyzed on this basis, sales

of establishments analyzed would have been the same as total sales of all establishments and commodity coverage would have been 100 percent. The extent to which the analysis was complete for any trade or area may be measured by comparing sales for "All establishments" and sales of "Those analyzing commodity lines, total" as presented in the tables. Commodity coverage varied by kind of business and type of operation but for most trades it ranged upward from 90 percent.

Company records vary in the detail in which sales analyses are maintained and also as to grouping of lines. Respondents who maintained only limited records and those whose merchandise lines or departmental sales classifications differed from classifications on the report form were asked to make entries on the basis of best possible approximations. There is some indication that in such cases there was a tendency to overstate sales of the commodity lines most commonly handled in the trade and to understate the volume of business in secondary lines.

Presentation rules, chapters 10 through 13.—At the United States level, commodity-line detail is presented for a kind of business when 50 or more establishments reported their sales by commodity line. At the geographic division level, commodity-line detail is presented for a kind of business when 10 or more establishments reported their sales by commodity lines, provided that a total of at least 100 establishments in the same kind of business, throughout the United States, reported their sales by commodity lines.

Commodity-line detail is presented for a kind of business only where more than 80 percent of total sales are analyzed. Individual commodity-line data are presented when four or more establishments reported sales of the item and where the item, dollarwise, amounted to at least one-tenth of 1 percent of total sales analyzed.

Because of tabulating techniques used, there may be small differences between the sum of geographic division data for a particular commodity line when compared with the data shown for that commodity line at the United States level.

Commodity line number.—For convenience in locating items in the tables, and for determining types of merchandise sold by the various classes of wholesale establishments, each of the major commodity lines was assigned a number (see Commodity Lines, p. 10.03) and the number remains constant throughout the set of tables. The numbers are arranged in numerical sequence, so far as they appear, under a kind of business in any table. Absence of a number under a kind of business or geographic division generally indicates that the commodity line is not sold in significant amounts.

Column headings

Amount (column 1).—Entries in this column of the table show the amount of reported sales of each of the commodity lines. Where the commodity analysis or "coverage" is incomplete, they may represent less than

the total amount of sales of the commodity line for the kind of business. Coverage for the trade is indicated by the relationship between "sales of establishments analyzed" and "sales of all establishments."

Percent distribution (column 2).—Entries in this column are established by relating reported sales of principal or numbered commodity lines to total sales analyzed for the trade. Percentages represent the importance or significance of commodity lines to kinds of business.

Percentages are shown for the major or numbered commodity lines only, not for the detailed commodity items. In relating sales as reported for detailed commodity lines to the total analyzed for the trade, consideration should be given to any amounts that may appear opposite "Not analyzed in detail." Such amounts (if any) represent sales analyzed only to the major or numbered commodity line level, not to the detailed commodity lines under the numbered items.

Number (column 3).—Entries in this column represent the number of wholesale establishments identified with the kind of business, geographic division, and commodity indicated in the stub. For each kind of business or geographic division the first entry represents total number of establishments in the classification. The second entry represents the total number of establishments in the classification or area that reported the commodity-line analysis. Other entries for the kind of business or geographic division represent the number of establishments that reported each specified commodity line.

Total sales (column 4).—Entries in this column represent total sales of all commodities (including any retail sales and service receipts) of the establishments which reported sales of the specified commodity line.

Column 1 as percent of column 4 (column 5).—Entries represent the relative importance of specified commodity lines to total sales of establishments reporting that they handled that line and are derived by dividing entries in column 1 by entries in column 4, line by line.

Sales Analyses—Petroleum Bulk Stations, Terminals

A special questionnaire, Form BC-32, was used in enumerating petroleum bulk stations and terminals in connection with the 1948 Census of Business. This form (see reproduction in appendix G) provided for reporting, among other things, bulk storage capacity for specified petroleum products as of December 31, 1948—inquiry 4 (b); and "Analysis of sales by commodity or merchandise lines"—inquiry 8. Gallonage sales of specified bulk petroleum products were called for in inquiry 8 as well as an analysis of dollar volume of sales by commodity lines.

Dollar sales as measured in this inquiry exclude the total amount of gasoline, oil, and other sales or turnover taxes (local, State, and Federal) paid directly by the reporting establishment to any governmental taxing agency.

Results of these inquiries are presented in chapter 14, which includes tables 14A through 14G. These tables were published in a separate bulletin entitled "Petroleum Bulk Stations and Terminals," Bulletin No. 2-W-14. A table of contents to the various tables in chapter 14 is given on page 14.01:

Table 14A presents basic data on number of bulk stations and terminals, their sales, expenses, payroll, personnel, and stocks, by geographic divisions and States. This information also appears by States in table 101, Volume V, Census of Business: 1948.

Table 14B is similar to tables 10, 11, 12, and 13 in that it presents an analysis of dollar sales by commodity lines. Explanations given in connection with those tables apply here for the most part. Data are shown in table 14B for the United States as a whole and for Census geographic divisions.

Tables 14C, 14D, and 14E measure sales, in gallons, of gasoline; kerosene, range oil, No. 1 fuel oil; light heating oils (Nos. 2-4); and light Diesel type fuel oil. Table 14C is a summary for the United States. Table 14D presents data for each State by counties. Table 14E presents information separately for distributing terminals and district offices. Data for distributing terminals are also included in tables 14C and 14D.

Table 14F measures storage capacity assigned, as of December 31, 1948, to: gasoline, kerosene, distillate fuel oils, and Diesel fuel oils and residual fuel oils. Data are presented at the geographic division and State levels. This is the first Census of Business in which information has been developed on storage capacity for bulk petroleum products. Information from this table is summarized in table Q, below.

Table 14G shows, for geographic divisions and States, the number of establishments and dollar sales (excluding taxes) for each of the following types of petroleum outlets.

Petroleum Bulk Stations: Independent Stations. Commission Stations. Salary Stations. Cooperative Stations. Distributing Terminals.

Descriptions of the above classifications are given in appendix F.

Limitations of data in chapter 14.—Business establishments are classified, for census purposes, according to their primary operation during the census year. As chapter 14 deals primarily with the distribution of bulk petroleum products, data for establishments primarily engaged in selling packaged petroleum products are not included here; but they are included in other tables of this volume, classified according to their type of operation and kind of business. Firms handling bulk petroleum products as secondary lines are not included in these tables. Stations conducting a combined wholesaleretail business are classified as wholesale or retail according to their major activity during the census year.

Data for all tables except 14B are exclusive of operations of liquefied petroleum gas stations and distributing terminals. Sales made directly from petroleum refiners to retailers or to industrial and other users are not included. Transfers from bulk stations to gasoline service stations operated by the same company as the bulk plant, however, are included in the data. There is duplication in the data reported in these tables to the extent that refiner marketers sell from district offices. terminals, or from larger bulk stations to "jobbers" who in turn operate bulk stations.

Not all bulk stations and distributing terminals reported the analysis provided for in tables 14B, 14C, 14D, and 14E. A measure of "coverage" is shown in each table. Allowance should be made for the extent to which the analysis is incomplete as indicated by the relationship between "sales of establishments analyzed" and "sales of all establishments," or by percentage figures.

Gallonage sales.—Excluding the 324 bulk stations primarily engaged in selling liquefied petroleum gas, there were 29,127 petroleum bulk stations and terminals in the United States in 1948 with sales (excluding taxes) for the census year amounting to \$8.9 billion. Of this number, 28,394, with sales totaling \$6.7 billion, were classified as bulk stations, and 733, with sales of \$2.2 billion, as distributing terminals. Data for the 29,127 establishments are summarized in table P, below.

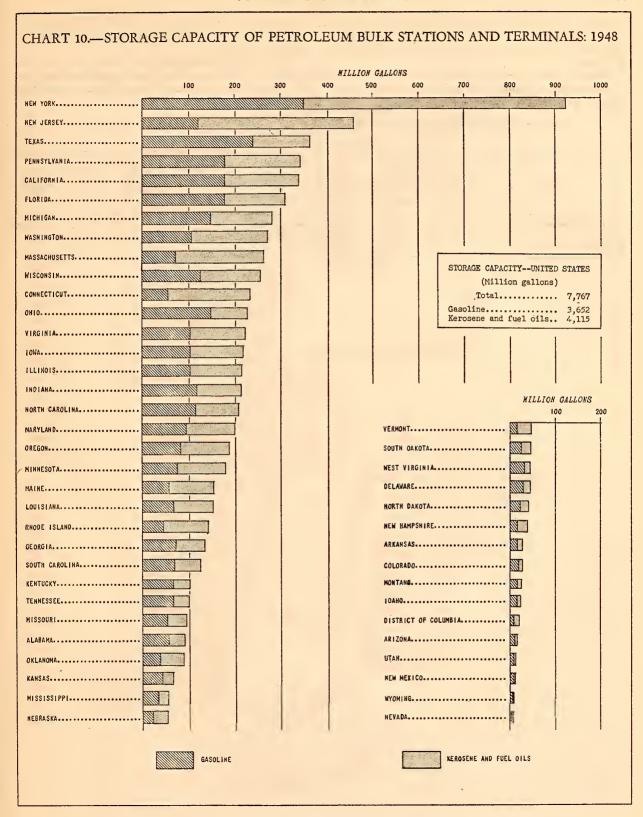

Bulk stations and terminals, accounting for 92.8 percent of all dollar sales, reported gasoline sales totaling 32.3 billion gallons; and fuel, heating, and Diesel oils totaling 15.7 billion gallons. Assuming that the oper-

¹ Including items other than petroleum products, ² Percent of sales of all establishments accounted for by stations and terminals returning gallonage information.

ations of those not reporting gallons separately paralleled the experiences of those that reported this information, the above gallonage figures should be increased by about 8 percent.

Storage capacity.—Storage capacity of the 29,127 petroleum bulk stations and terminals amounted to 7.7 billion gallons at the end of 1948; of which 3.7 billion

was allocated to gasoline, 1.1 billion to kerosene, 1.9 billion to distillate fuel oils, and 1.1 billion to Diesel fuel oils and residual fuels.

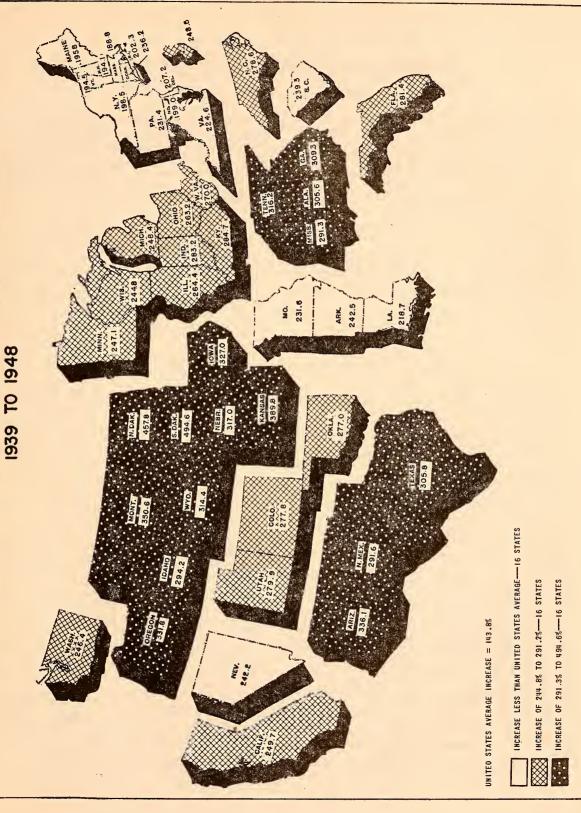

Of the 7.7 billion gallons total capacity, 6.0 billion was reported by refiner-marketer stations and terminals, and 1.7 billion by other stations and terminals—principally jobbers.

TABLE Q.—PETROLEUM BULK STATIONS AND TERMINALS STORAGE CAPACITY, DEC. 31, 1948

[Excludes liquefled petroleum gas bulk stations]

| Product | Total capacity, all bulk stations, terminals (1,000 gallons) | Refiner- marketer stations, terminals (1,000 gallons) | Other stations, terminals (1,000 gallons) | Product | Total capacity, all bulk stations, terminals (1,000 gallons) | Refiner- marketer stations, terminals (1,000 gallons) | Other stations, terminals (1,000 gallons) |

LIST OF CORRECTIONS

This volume has been prepared primarily by assembling and binding the statistical portions of previously issued Subject Bulletins together with additional chapters covering other phases of Wholesale Trade which were not issued in bulletin form. This publication plan was adopted to conserve public funds and expedite the issuance of the volume. It was found desirable to reprint completely the following Subject Bulletins for

volume publication: United States Summary; Sales Size and Operating Expenses; Sales by Class of Customer; Commodity Line Sales; and Petroleum Bulk Stations and Terminals. In some instances, therefore, data will differ from that shown in the bulletins as originally issued. The corrections appearing below represent revisions made after volume copy was returned from the printer.

["Line" and "Column" indicate the position of the item on a page. Thus "line 10" means the tenth line from the top of the table stub, counting every line in which printing appears regardless of presence of entries in field. "Column 5" means fifth column from the left, not counting the stub column]
