## IRELAND AND THE POOR LAW.

The Political Economist.

IRELAND continues to be not only the great political difficulty of England, but even more so-the source of the greatest pain and disquietude to every humane and reflecting man. Every measure for the amelioration of Ireland seems equally doomed to failure. The most that can be said for any is, that it has not aggravated the evils which it was intended to alleviate. During the last session of Parliament, an act was passed to facilitate the sale of encumbered estates, which seemed to strike so directly at the great apparent difficulty of Irish improvement, that all were alike sanguine that at length one measure was adopted which would soon yield the fruits of increased industry, prosperity, security, and peace. yield the fruits of increased industry, prosperity, security, and peace. The greater part of a year has since passed, and already is it ap-parent that such is the vicious condition of Irish property—such the deplorable position of the Irish population,—that that act of itself is a dead letter. One-third of Ireland may be said to be now virtually, if not publicly, in the market for sale. There never was a period, probably, when there was more capital seeking investment in safe and permanent securities, ready to be embarked both in the purchase and improvement of the soil—when more were ready to under-take cultivation, and even improvements, as farmers. Land, too, can be bought in abundance, on the most tempting terms of sixteen to nineteen years' purchase, on very low and improvable sixteen to nineteen years' purchase, on very low and improvable rentals. Farms can be had on long leases, on such terms as would in any other part of the United Kingdom secure an ample fortune In any other part of the United Kingdom secure an ample fortune to the cultivator in a few years. But capitalists and farmers alike look to the net and not the gross income from investments. The purchase money may be small, the rental may be low, but the other legal liabilities of the property are so enormous in some cases, so uncertain in others, that no price however low, tempts the prudent capitalists : no rent however moderate, no terms however promising, can induce the enterprising farmers of England and Scotland to transfer their capital and skill to many parts of Ire-land, where apparently, and at first sight, the greatest inducement land, where apparently, and at first sight, the greatest inducement exists. A sagacious Scotch farmer recently said to an Irish noble-man, when he declined what appeared a most tempting offer-"If we come to Ireland, it is to farm, and not to pay poor rates." In short, the operation of the poor law in Ireland, in its present

state, has rendered wholly inoperative the measure of last session, from which so much was hoped.

No. 284.

from which so much was hoped. Still there is probably no subject on which public opinion is less matured or united, on which there is greater differences of views, even amongst those who are not only immediately interested in the property of Ireland, but who, also living on the spot, devote their whole time and attention to the state of the Irish popula-tion and Irish property. At a meeting of nine Irish members held in Dublin last week, five distinct and different plans for remedying the evils of the poor law were proposed; and, from what we have otherwise seen, this is no unfair example of the state of opinion in Ireland generally. All legislation derives one material element of success from the fact of its being in accord-ance with public opinion. In Ireland, particularly, however ance with public opinion. In Ireland, particularly, however wise legislation may be, its success would be greatly endangered if undertaken against the strong sentiments and opinions of those through whom, in a great measure, it must be administered. It is a great misfortune for the success of any law, when its failure furnishes evidence of the accuracy of the objections and anticipations of those who are called upon to administer it. To undertake to amend the Irish poor law without affording a full opportunity for testing, by evidence, the chief contending opi-nion, would be doing nothing to settle the question; for one that would be satisfied with any measure, four, at least, would be dissatisfied. It is, therefore, due to Ireland—due to the Irish population—due to Irish proprietors—due to the inte-rests of the empire, which are deeply involved in this question— and, above all, due to the interests of humanity,—that before any other act of legislation is passed, a careful and patient hear-ing should be given by a Parliamentary Committee to the evi-dence offered in support of them. It is a question not alone of property—it is one also affecting the lives and existence of mil-lions of our fellow-subjects. anticipations of those who are called upon to administer it. To

property—it is one also affecting the lives and existence of mil-lions of our fellow-subjects. We do not, in this place, propose to consider the merits of any of the numerous schemes which are proposed for the im-provement or amelioration of Ireland. We wish shortly to glance at the facts as they have occurred during the last four years, and to the effects of the poor law as far as they are yet known, and which have placed Ireland in its present condition. The failure of the potato crop, less or more, in each of the last four years, has produced a greater social revolution in Ireland than perhaps ever occurred in any country within so short a period. The sole support of the great majority of the population of the west and south-west of Ireland has been annihilated. We have often referred to the vicious systems and propensities of the Irish, often referred to the vicious systems and propensities of the Irish, which at once rendered them so dependent on such a precaricus means of subsistence, and depived them of all other and more permanent sources of reliance. It is enough for our present pur-pose to refer to the fact, that when the new poor law was intro-duced it found many parts of Ireland, and those just where its provisions were most pressingly required, less or more abandoned to sterility and unproductiveness, either through the hopeless neglect of cultivation, or from the blight of the crops. The unproductive-ness of the soil alone, at the moment, rendered masses of the people entirely dependent on the poor rate; but the poor rate in those districts was alone to be derived from the produce of the soil. Where there was least produce there were most dependants on the rate, and least means of raising it. The same cause which rendered rate, and least means of raising it. The same cause which rendered so many dependent on the rate, diminished, in the same proportion, the possibility of collecting it. In the same proportion its source was destroyed. Where the aid of a poor rate, on the other hand, was destroyed. Where the aid of a poor rate, on the other hand, was least necessary, the fund was the more readily and easily col-lected. In looking, therefore, to the facts connected with the operation of the poor law in Ireland, it is necessary never to lose sight of the very different circumstances in which the different provinces of Ireland are placed.

Nothing could lead to a more erroneous estimate of the effect of the poor law iu Irelaud than to treat it as a whole. The average poor rate collected throughout Irelaud in the year end-ing the 30th of last September was about 2s. 6d. in the pound; but, in many electoral divisions the expenditure varied from

## THE ECONOMIST.

an

8s. 4d. in the pound to upwards of 40s. Take, for example, the 8s. 4d. in the pound to upwards of 40s. Take, for example, the union of Westport, in which the expenditure of the year was 31,444, but in which only 8,863l could be collected, in which the rate actually collected was but 4s 64d in the pound—in which the sum expended varied from 8s 44d to 41s 94d, the excess amounting to 19,226l—having been supplied in part by the Government—in part by the British Association. The following is as nearly as possible a correct account of the condition of this union, for the year ending the 30th September last.

Debt on Sept. 29, 1818 ..... 8,355

Total of expendi-ture and debts 31,444

In twenty-one unions in Ireland, of which we give the particu-lars in the following table, the amount expended in the year end-ing the 30th of September last was 448,742*l*, leaving debts due by them on that day to the amount of 120,087*l*, making a total of them on that day to the amount of 120,0877, making a total of 568,8291, which would have been needful to have cleared the en-tire claims, while the whole amount which it was possible to col-lect was only 198,5562. For the remainder of the actual expendi-ture these unions were beholden to the generous aid of the Bri-tish Association and to that of the Government, to the extent of no less than 236,3502. The estimated produce of the rate for the current year is 273,4811, while the claims will certainly not be di-minished. The following is a list of the unions in question, and the particulars of each :-the particulars of each :-

STATEMENT of the Liabilities, Expenses, and Receipts, for the year ended 29th Sep-tember, 1842, of the twenty-one Unions, to which (with the exceptions noted at foot) the advances were made by the British Association and the Government,

The estimated demands upon these twenty-one unions for the next year amounts to 568,829/, whilst the available rate is not expected to produce more than 273,481/, leaving a deficiency of 295 3481

Looking to Ireland in its great subdivisions, it appears that the provinces of Ulster and Leinster are able, without much difficulty, to maintain their own poor. In the former, the average rate for 1848 was about 2s in the pound, while the maximum did not exceed 4s 6d in the pound; and only two unions, those of Glenties and Cavan, received any aid from the British Association. In the latter, Leinster, the average rate was also about 2s in the pound, and the maximum about 4s 5d; the unions of Athlone and New Ross alone having received aid each to a very small amount from the British Association. These two highly favoured provinces present however a striking contrast to that of Munster, and still ore so to that of Connaught.

In Munster the average rate was 3s 3d in the pound, and the maximum about 6s 8d; but in particular cases the expenditure was as high as 11s, the difference being contributed by the British

The Unions not included in this statement, to which advances were made, are the lowing :-- Athlone, Nenagh, and New Ross, 5001 each; Boyle, 1,1001; Dingle (for ich returns are wanting), 2,4007, and Cavan, 3007.

Association and the Government. From the British Association only the following Unions received relief to the extent placed against each :-

of the prosperity and industry of this district. In Connaught, the average rate which it has been possible to collect was about 2s 6d in the pound, while the maximum was about 3s 7d. But these figures form no criterion whatever of the expenditure for the maintenance of the poor of this district. Out of *eighteen* unions in Connaught, no less than *fifteen* received extensive aid from the British Association; the amount of the expenditure having been as high as 13s 10d and 15s 10d in two of the unions. The following are the particulars of the fifteen unions which received aid from the British Association :-

-	

Total 13.077.307 The average amount expended on the poor for the whole of Ire-land was 2s 9½ d in the pound—while the average rate collected was 2s 9½ d. But these averages again convey a very erroneous impression of the operation of the law in those districts where it is most required, and where too its opposition deters from all im-provement. This will be best seen by showing the average amount expended and raised by rate in each province. It stands thus-

Averag per pour					amount collected.

In Ulster and Leinster the average collections rather exceed the average expenditure ; in Munster the collection is below the expenditure, but in Connaught the collection is less than half the expenditure. The sums advanced to each province by the Go-vernment and by the British Association will best show how the remainder was made up :-

Amount advanced by the Government

and the	British Assoc	ati
Uister Munster Leinster Connaught	£ 6,414 34,653 1,000 189,369	
Total	231 436	

So that in the whole of Connaught the largest sum which could So that in the whole of Congaught the largest sum which could be raised by rate was 183,270*l*; the amount actually expended was 372,639*l*—or more than double. The actual liabilities of all Ire-land in the year amounted to about 2,000,000*l*, while the amount collected in rates was only 1,600,000*l*, leaving 400,000*l* to be sup-plied from arteanous courses. plied from extraneous sources, or remaining as debts due by the different unions.

These facts have reference to the year ending Sept. 30, 1848. The total failure of the potato crop, even when planted in 1848, in the west of Ireland, gives us little room for hope that matters will

the west of Ireland, gives us little room for hope that matters were be in any degree improved in the present year. The parts of Ireland in which the act for the sale of encumbered estates was expected to be most beneficial, were the provinces of Munster and Connaught; but can it be a matter of surprise, when we see the manner in which Connaught in particular is exhausted by the operation of the poor law as it is, that that act has been a dead letter? We have there a dense population, the great majo-rity of which is dependent on the poor rate; and the cultivation

## Feb. 3,

## 1849.]

THE ECONOMIST.

of the soil being abandoned more and more every day, because its products yield no profit to the cultivators, but aid only in increasing the amount collected as poor rate. So that in place of new capital, new enterprise, and greater skill—which alone could furnish a demand for labour, and simultaneously diminish the poor rate, and which it was hoped the acts of last session would promote,—we find only exhausting capital, diminishing cultivation, and increasing pauperism, as the inevitable consequences of the poor law applied as it now is to that country as it is now circumstanced. It is quite clear that if there be any farmers with capital they will make their escape the best way they can with what they have, for to remain exposes them only to inevitable exhanstion and ultimate pauperism. Nor will there be any chance of a turn in this tide until some method is adopted, whereby the unfortunate population of this district shall be so provided for or disposed of, that capitalists and farmers can undertake the cultivation of the land, with a certainty that their charges for poor rate shall not exceed some defined amount,—that they shall be securely protected equally in their lives and property, and from the exhaustive process of the poor law as it now stands. From that moment, but not till then, can we hope to see a change. Every new acre of land that is then taken into cultivation will furnish employment to some who are now dependant solely on the poor rate ; and, ultimately, by such wise regulations, strenuously enforced and firmly maintained, there is every reason to hope that the population of Connaught may be changed from being miserable dependants on the most precarious system of conacre, to a reliance upon employment and regular wages : and if the population be less, it will, at least, be more happy. In another paper we will consider the merits of some of the proposals which are most likely to accomplish so desirable an end.

#### OPENING OF PARLIAMENT.

The Session of Parliament was opened by her Majesty in person on Thursday, and the Royal Speech, which we insert entire in another part of our journal, gives us hopes that peace on the Continent will, by negociations, be established ; it informs us that her Majesty's Government is bent on maintaining and promoting peace, that the Revenue is in a state of progressive improvement, that commerce is reviving, and that large reductions are to be made in the estimates of last year. A rebellion in the Punjaub is mentioned ; the navigation laws are referred to the consideration of Parliament ; and the continuance of the powers necessary to preserve the peace of Ireland is demanded. It might, we think, have been expected that the Address echoing such a speech, which implicates no hon. member or noble lord by asserting any line of policy repugnant to general opinion, should have been, as usual, agreed to as a matter of course ; but Lord Stanley in the Upper House, and Mr. Disraeli in the House of Commons, moved an amendment to the Address, declaring that neither the foreign relations, the condition of the Revenue, or of the commercial and manufacturing interests, warrant the use of language of congratulation ; and that large portions of the agricultural and colonial interests of the empire are labouring under progressive depression. The injudiciousness of the amendment was at once shown by the Duke of Wellington. Papers, he said, were promised, and yet the house, before they were laid on the table, were discussing the topics to which they related, and expressing an opinion on them. His excellent remarks were not of much avail with their lordships, for they agreed to the Address by only the small majority of two ; and we may anticipate, from the equality of parties in the House of Peers, that the discussion there in the ensuing session will be numerous, animated, and probably bitter.

The amendment to the Address was moved in the Commons by Mr. Disraeli, who pronounced a fervent panegyric on the departed nobleman, Lord G. Bentinck, whose place he seems to have been chosen to occupy. The Commons came to no vote on this amendment, the debate having been adjourned; but against a minor amendment relative to Ireland, moved by Mr. Grattan, it decided by 200 to 12. The session has begun, therefore, with a determined opposition; parties are no longer to be mingled in one chequered confusion—here a Protectionist, there a Free-trader, here a Whig, and there a Tory—but must group themselves, if the Government is to be maintained, around the Ministers and their opponents. For the due understanding of the questions debated, and for properly carrying on the proceedings of Parliament, we regard this as beneficial. It is better that contention should be there than in the public; that it should animate parties rather than leagues, and better that it should be directed to changing our policy by changing the Ministry, than by first destroying the authority of the Government.

ment. The three great points likely to be disputed are—our Foreign Policy, Protection or Free Trade, and Reduction of the Expenditure. Our foreign policy embraces many topics on which there are great varieties of opinion. They can only be discussed and judgment fairly given on them as they arise in detail. On them, however, the Ministry seems likely to be weaker than on either of the other topics. The determined opposition, led by Lord Stanley and Mr. Disraeli, may be on some points of our foreign

policy supported by the friends of Sir R. Peel, by some of the Radicals, and some Free-traders; while the Ministers will be able to count only on the votes of their own party. The able Foreign Secretary is a host of himself, but it will probably require all his talents and all his energies to make good his position in face of the adverse elements that may on some questions of his administration be brought together to destroy him. Protection was at once fiercely advocated by Lord Stanley and

Protection was at once fiercely advocated by Lord Stanley and the Duke of Richmond in the one house, and by Mr Disraeli in the other. That principle will probably have a much greater proportionate number of followers in the House of Lords than in the Commons, but in neither will it be supported by many persons. The Peel party and all the Radicals and Free-traders will, on that question, unite with the Ministers, and guarantee them a sure, and probably a large, superiority. We have no fear that protection will gain the upper hand. Whatever may be the opinions of the Peers, the Commons will be against it, and their lordships will not risk on such a question a collision with the other house, and a disgraceful defeat.

other house, and a disgraceful defeat. Economy and reduction, though demanded by a party of the public, were at once denounced by the Earl of Winchilsea and the Duke of Richmond. The Protectionists then will oppose the Ministers on their proposed reductions. We are pretty certain that in the majority of cases the propositions under this head will be supported by the Peelites, who may perhaps be disposed to go even further than Ministers. So far as they go too, they will be supported by all Mr Cobden's followers, who, though desirous to go further than the Ministers, will not allow their reduced estimates to be thrown out by those who advocate larger establishments. Against the demands for excessive reduction they will be supported by the great majority of the house, and seem on this point to be assured of a complete command over their position. Placed between two extreme parties, each of which will support them against the other, their position is a proof of the judiciousness of their course. They have probably chosen the happy medium, and will both gratify the public by the extent of their reductions and by preserving the efficiency of all the establishments necessary for safety and good government. If the session has begun well by defining and distinguishing parties, and by at once settling most of the great subjects which will

If the session has begun well by defining and distinguishing parties, and by at once settling most of the great subjects which will engage attention, it has also commenced well by going at once to business. Ministers have met the Parliament with their measures prepared. Yesterday the Chancellor of the Exchequer was to move for leave to bring in a bill to consolidate the two departments of Stamps and Taxes and the Excise; on Monday the First Lord of the Treasury is to move the sessional orders; on Tuesday the Secretary of State for the Home Department will move for leave to bring in a bill to continue the suspension of the Habeas Corpus Act in Ireland for a limited period; on Wednesday the Chancellor of the Exchequer will move, in committee of the whole house, a vote for the relief of Irish distress; on Friday the Secretary for Ireland will move the appointment of a select committee on the Irish poor-law, and for leave to bring in bills to amend the law relating to the qualification of Parliamentary voters in Ireland, to limit the duration of elections and the appointment of pollingplaces in that country; on the same day the Chancellor of the Exchequer will move the appointment of a select committee on the army, navy, and ordnance estimates; and on Monday, the 12th instant, the President of the Board of Trade will move that the house do resolve into committee of the whole house on the navigation laws.

Ministers are aware that they can do much to facilitate public business. They have indeed been reminded of their power by the committee of last session, and they have begun with an evident desire to marshall the proceedings of Parliament in proper order. If they succeed the session will not drag its length into August, and the house will not then separate because the shooting season has commenced, rather than because all the public business has been effectually done. Considering our improving revenue, our extending commerce, and the general hopeful aspect of our domestic affairs, we think the Parliament begins under favourable auspices, and begins well.

## THE CAUSE OF THE FARMERS' DISTRESS.

Two of our morning contemporaries have attracted public at ention to the statements of a Mr Cayley Worsley, which deserve notice, as giving the best explanation we have seen of the difficulties of the farmers. This gentleman writes a letter, addressed to Lord John Russell, from East Grinstead, Sussex, in which he describes himself as occupying upwards of 1,000 acres, in two farms of nearly the same extent; the one, poor cold clay, at a very low rent; the other, cf the very best description of wheat land, at a very high rent. "My farms are both on lease (he says); for the former I "pay under 10s the acre, for the latter upwards of 34; and as I "agreed for these farms prior to your free importation act of Par-"liament, both my landlord and myself calculated the above to be "a just rent at the *then* price of wheat, v z., between 60s and 70s "a quarter." Mr. Worsley scems, by his own statement, never to have made much by his bargain; but by dint of employing artificial manures he did at one time clear on the bad farm about 10 per cent for his time, skill, and capital. "But now," he goes

THE ECONOMIST.

on to say, "I must be a great loser, for against an increased "expenditure I have to place a price diminished from 65s to 40s "per quarter—the price I am now obliged to take for my wheat." His loss on his good farm he thus explains :—" The farm is cropped His loss on his good farm he thus explains :--" The farm is cropped "with 200 acres of peas and beans, and 200 of wheat: the latter, "this year, yields 6 qrs per acre; this, at the time I took the "farm, would have sold at 65s per quarter, or very nearly 20s per "acre; the price I now receive is 40s, or 12s per acre. I there-"fore lose 8l an acre on wheat by *free importation*. This, on 200 "acres, amounts to 1,600l, and this sum multiplied by the 21 years "of my lease amounts to 33 600l lost to my femily during the "acres, amounts to 1,600/, and this sum multiplied by the 21 years "of my lease amounts to 33,600/, lost to my family during the "period of my contract. These farms," he afterwards says, "represent the worst and also the best land of England. Let us, "therefore, take the mean; it will give 7/ 10s per acre as the diminished return on the wheat crop of this year. Taking the rental of England at 40,000,000/, and calculating this loss on only one-tenth, as the supposed proportion of wheat, we shall have "this year the trifling sum of 30,000,000/. deducted from the farmers' case, and it is worth examining in order to see the real grounds of their complaints." grounds of their complaints.

Mr Worsley says he took his farm when wheat was between 60s and 70s per quarter, and his rent was calculated on the suppo-sition that wheat was at 65s. At present he is obliged to take 40s : and on these two sums and the difference between them are based all his calculations and all his complaints. We have examined the returns of the prices of corn which have been collected in our own pages and in Mr Tooke's work on prices, and we find that between 1815 and 1828 inclusive, thirteen years, during which time the first corn law we index the prices the prices of the prices first corn law was in existence, there were only five years when the annual average price of wheat was equal to, or above, 65s, and the average for the whole period was 64s 11d. We apprehend that it is not likely Mr Worsley took his farm before 1828. Between 1828 and 1842 inclusive, during the existence of the second corn law, there were only two years out of fourteen when the annual average price average to or above 65s and the average of the whole there were only two years out of fourteen when the annual average price was equal to or above 65s, and the average of the whole period was 58s 8d. From 1842 to 1847 inclusive, there has been only one year, 1847, when the average yearly price reached 65s, and the average of the five years was 53s 3 §d. Mr Worsley does not mention the year when he took his lease, but he must have se-lected as extraordinary a year as 1847 to make his bargain : but if not mention the year when he took his lease, but he must have se-lected as extraordinary a year as 1847 to make his bargain; but if he entered on his farms since 1842, he must have pledged himself to pay a rent calculated at 12s 81d per quarter of wheat too high; if he entered on them at any time between 1842 and 1828, he pro-mised a rent calculated at 6s 4d per quarter higher than the aver-are market price; and if he entered on them even hefore 1828 and age market price; and if he entered on them even before 1828, and subsequent to 1815, he promised to pay something more than he was warranted in promising. The average prices, it must be re-membered, are the prices at the place of consumption, and between them and the sum netted by Mr Worsley, the sum necessary to pay the carriage of the wheat to market must be deducted; so that this of the sum netted by Mr Worsley. that, taking the average at any period since the war, it is clear he has promised to pay a much greater rent than the market price of wheat justified. He has miscalculated, and made a bad bargain. Other farmers have done the same; and thus the secret of their Other farmers have done the same; and thus the secret of their continual distress and of their present complaints, as explained by one of themselves, is, that they have, at every period, undertaken to pay a higher rent than the land has been fairly worth to them. They have given more for its produce than they could sell it for. They remind us of an old friend, to whom it was demonstrated that the average price of hops for a quarter of a century was nearly one-third less than the average sum it cost him to grow them; he must therefore less in the long rune, he could prove get hold for must therefore lose in the long run; he could never get back from the public the price he gave for his hops; nevertheless he continued to cultivate them at a loss, and the consequence was that he wasted a handsome property and died a pauper.

Mr Worsley says he loses 8/ an acre on wheat by free importation, but this is a scandalously erroneous statement, and the other farmers who repeat it do, as he does, great injustice. The six weeks' average price of wheat is 46s 5d, and that his wheat sells for only 40s is only a proof of its inferiority. For 6s 5d of his loss he should blame the seasons or his own bad cultivation —not the law. Again, we cannot, according to the general averages, state the rent he has promised to pay at less than 10s per quarter too high: that sum he loses by his own conduct—not by the law. We must, therefore, deduct 16s 5d per qr. from his estimate, making his loss by free competition only 8s 7d per quarter, on his own shewing, instead of 25s. In point of fact he lowes nothing by it, as we shall presently show. It is very customary, we know, but it is nevertheless very erroneous, for gentlemen farmers to blame free trade for their own miscalculation, and the unproductiveness of the seasons. he should blame the seasons or his own bad cultivation -not the of the seasons.

Lest it should be supposed that Mr Cayley Worsley's land generally produced wheat of a superior descridtion, worth generally produced wheat of a superior descridion, worth more than the average market price, and that, therefore, he was justified in promising 65s for rent, we must remark, that such a supposition is not in accordance with the fact that he sells it for 40s, while the average of the London markets is 46s 5d; his wheat, therefore, is not better than the average, but worse, for the difference in price cannot be wholly made up by the cost of bringing wheat from East Grinstead to market. If we suppose deseridtion,

that his wheat is permanently only half this difference worse than the average, we must add 3s 9d to the too large sum which he has promised to pay for rent, and deduct that from his loss. He complains of the present price of 40s, but the six weeks' average price at present is 46s 5d. In the month of November 1822, under price at present is 46s 5d. In the month of November 1822, under a high protection, the average price was 38s 10d, and in De-cember 1822, 38s 11d. Again the average price of November 1835, was 35s 6d, of December 35s 4d, and of January 1836, 36s 1d. No such prices have been known since the duties on corn were reduced in 1842, and the prohibition to import other ar-ticles of food abolished. On the contrary, in 1844 as in 1834, the harvest was very abundant: in 1844 we had comparatively free trade, in 1834 we had not; and the average price for the year 1845 was 50s 10d, while the average price for 1835 was 39s 4d. So far from free trade having beaten down price, there is abun-So far from free trade having beaten down price, there is abun-dant reason to believe, from the low prices in 1822 and 1835, and the comparatively higher prices in 1845 under somewhat similar circumstances of abundant harvests, with the existence of greater freedom for trade in the latter than in the former period, that free trade, as it certainly equalises prices, also prevents them from falling so ruinously low as under a system of protection. The explana-tion of the circumstances lies on the surface. The very high prices under protection impede manufacturing processes, lessen employment, or lower wages, and a number of persons perish from want of food, or from the diseases brought on by priva-tions, or a less number of persons is born than in seasons of abundance. The high price, therefore, which free importation prevents, narrows very much the market for the farmers produce abundance. The night price, therefore, which free importation prevents, narrows very much the market for the farmers produce in abundant years, and consequently free importation really ex-tends the home market, or prevents its being unduly limited, and ensures the farmer a reasonable price when his fields are fruitful. The importations in 1842, 1843, and 1844, sustained a large number of people, and allowed of manufacturing prosperity which supplied the farmers with extended markets, and compara-

Feb. 3,

tive high prices for the abundant crop of 1844. Let us remind the complaining wheat-growers that at this time the hop-growers are much worse off than they are. Throughout the weald of Kent and Sussex, the former, it has been stated at pubweald of Kent and Sussex, the former, it has been stated at pub-lic meetings, are almost ruined. But there is no free trade in hops: none of any consequence are imported. The duty is suffi-cient to protect the farmer from foreign competion;—nevertheless the hop-grower is ruined. He grows a commodity at a greater cost than he can on the average sell it for. Like Mr Worsley, he gives more for his produce than it is worth, and loses his capital mean after wear year after year.

It was recently anticipated by one of the speakers at the Sus-sex Protection meeting, that the price of wheat would probably rise on the extinction of the corn laws. We can announce that such is the fact. The corn markets have risen all over the country. Of course free trade excites industry, and gives rise to an increased demand. With protection, Mr Worsley and his friends might have had prices in 1845 down to 36s, and might now see them, for his bad wheat even below 40s. Thus he and the farmers, instead of having been injured by free trade, have gained by iteven overlooking the certainty of their being emancipated by it from their own credulity, which has made them believe the law in preference to the markets, and promise higher rents than they ought to pay. Free trade has preserved and extended the home markets for the farmers; it has brought into and kept more peo-ple in existence in England than would otherwise have been; it has permitted more manufacturing wealth to be created than otherwise, and people possessed of other wealth than agricultural

otherwise, and people possessed of other weater than agricultural produce constitute the market for the farmer's productions. According to Mr Worsley's figures—supposing them to repre-sent the rent promised or paid by farmers generally, and accord-ing to the average prices of wheat in this country for the last 32 years, -the farmers have been continually paying, or promising to pay, too high rent. They have paid it continually out of their capital, and have lost their capital or gone to decay. If, instead of complaining of burdens and asking relief from the law, they were to regulate the obligations they came under by the market price of grain—if they were to employ more people and to lessen the rates—if they were to win more from the soil, and to make the rates—if they were to win more from the soil, and to make all their fixed obligations, such as tithe, rent-charge, rent, taxes, annuities, mortgages, &c., a smaller and still diminishing propor-tion of the gross produce,—they would have no reason to com-plain of prices not being remunerating. But if, while they pro-mise too high rents, they have not the means properly to cultivate the soil—if to high rent they add debt bearing interest, which is remerably their ensement to debt and high rent they add exorbithe soil—If to high rent they and door bearing interest, which is generally their case—and to debt and high rent they add exorbi-tant rates, because they do not employ sufficient labourers to cul-tivate the land properly, while they must pay all the burdens imposed on it,—they can expect nothing, and probably the world will think they deserve nothing, but the ruin which always over-takes improvident misceleuleting people. takes improvident, miscalculating people.

THE END OF THE CORN LAW. BANQUET AT MANCHESTER. The last day of the corn law was worthily honoured on Wednes-day by a great gathering at Manchester. Most of those who had, as members of the League, taken an active part in informing the

public mind on the great question of free trade, were present, and shared the triumph they met to celebrate. They could boast of a great victory, while there was nobody vanquished. Their conquest was over evil. There were no mangled remains—no ruined lands—to make them sigh over their success; but flourishing trade, better fed people, and most hopeful prospects, gave to their triumph all the grace of unalloyed beneficence. They could look back on the community preserved in peace, mainly by their successful agitation, through a period when all the countries around them, vexed and harassed with commercial and other restrictions, have been the prey to the most disastrous social convulsions.

been the prey to the most disastrous social convulsions. "If," said Mr Villiers, with great truth and excellent effect, "I may refer at all to what has occurred since the act passed "for the abolition of the law, I believe that if Sir Robert Peel "had proposed that the duties should cease on the 10th of "April, 1848, instead of the 1st of February, 1849, I believe you "would have had all our friends in 17, Old Bond street sent "down here to celebrate its expiration (laughter). I believe "you would have had all the Protectionists blessing the efforts "you have made, for I never met with any person at that time "last year—so great was then the alarm that we should follow "the example of our neighbours—who did not think it a God-"send and a blessing that this sore and grievance had been re-"moved. I believe they were ready to have asked my friend Bright to the Carlton (laughter and cheers), as a man who had assisted "in time to remove the greatest, and, perhaps, the only excuse "for such convulsions occurring there, as had taken place in "neighbouring countries" (cheers). They can look forward to increasing trade—to the resources of the country improving—to the strengthening and enlarging of

They can look forward to increasing trade—to the resources of the country improving—to the strengthening and enlarging of our peaceful relations with all foreign countries—to an extending demand for all the productions of home industry, as well as for those of foreign lands,—as the consequences of the principle they have espoused; and they may well not only be unshaken, as Mr Villiers said, in their great faith, though attempts have been made to shake them, but virtuously and magnificently proud that they adopted it. Their great principle—ensuring at once prosperity at home, and tending to promote peace abroad—may well make them look forward to economy in the public expenditure, and justifies those judicious retrenchments and reductions in the estimates which are announced in the speech from the Throne. If ever men had reason to rejoice in their advocacy of a great principle it is the members of the League, who see, even from its partial adoption, the greatest advantages, and feel assured, with all the strength of a firm faith, that it is the only policy which can restore prosperity and peace to the panting, struggling, wealth and power-seeking people of the Continent. With the members of the League we share these convictions; with them we fought to establish that principle; with them, though on some minor points, about which they are not agreed amongst themselves we differ from them, we shall always be found ready to maintain it though some of its foremost advocates seem, in a moment of hurried agitation, to have forgotten its character, being convinced that it is in all points purely and undeviatingly beneficial. Amongst the principal speakers were Mr. G. Wilson, the active and one of the principal speakers were Mr. G. Wilson, the active and one of the principal speakers were Mr. G. Wilson, the active and one of the principal speakers were Mr. G. Wilson, the active

Amongst the principal speakers were Mr. G. Wilson, the active and energetic chairman of the League, who, on this, as on all occasions, was frank, clear, and confident—he presided; Mr Villiers, Mr Cobden, Colonel Thompson, Mr Bright, Mr Milner Gibson, and Mr Hope, the free-trade farmer of East Lothian. It was well shown by Mr Villiers that the character of their agitation was consistent with their great principle. Everything was done deliberately—the appeals were all made to reason—there was no passion, no hurry—the agitation was peaceful, and it was for a practical object. It was successful because it was righteous. It was aided by time—by the seasons—by the breaking up of parties—by the necessities of the country,—because the object aimed at was consistent with the course of society. The men of the League only pointed out these facts to the rest of their countrymen; they did not with strong self-will enforce their own views; and they helped to put down disorder and convulsion by promoting the removal of a great obstacle to the peaceful progress of mankind. Forward man must go. It is the law of his being. He who does not strive to improve his condition is derided as a ninny or a recreant from manhood; and to remove the obstacles which ignorance has heretofore laid in the way of the general progress, must now be the great policy of all wise and enlightened legislators. The merit of the League is, that it took the lead in forwarding that necessary policy. Mr Villiers gave an admirable summary of many of the arguments by which the doctrines of free-trade had been opposed, demonstrated their fallacy, and the prejudices and ignorance of those who used them.

Mr Cobden was eloquent and indignant against the Duke of Richmond and his silly attempts still to delude the people; and fervent in expressing his conviction that protection can never be restored. "We," he emphatically and justly said, "are in power on the corn laws." That is, the population, even including many of the farmers, are firmly convinced that we cannot successfully retrograde, but must go forward in giving freedom to every kind of houest industry. He showed very conclusively, we think, in the following passage, that the abolition of protection had been beneficial to the farmers, contrary to the somewhat unhappy admission he threw out a short time ago as a bait to them :—" They

"say that they want high prices as a condition to their trade being "carried on. I tell them, on the other hand, that such a wish is "incompatible with the interests of the community, and that we "will not foster the class of farmers at the expense of the other "classes of the country. Let them go back and test the condition "of the country in every respect during the last ten or twenty "years, and they will find that in proportion as the prices of food "have been high—in proportion, in fact, as they have had their "own wishes, have the rest of the community suffered in every "phase, moral, social, political, and pecuniary, in which it is possi-"ble to view them (cheers). Then, I say that we cannot, and we "will not, submit to a principle which, if it be successful, "results in increase of crime, increase of pauperism, dimi-" inshed comforts, diminished means of general education, and " diminished prosperity (hear, bear)/" On all those subjects the farmers are as deeply interested as any class in the kingdom; and it can only be from their ignorance and prejudices, which Mr Cobden has done so much to dissipate, that they can for one moment suppose that the agitation to obtain free trade and food at the smallest possible cost can ever have inflicted the least injury on them. No other class is more concerned in having the cost of food reduced than the farmers. In proportion to their capital they are greater employers of labour than any other men of business. To no class is it more necessary that the great principles of cost of production, and of supply and demand, as determining the price of what they raise and have to sell, should not be obscured by any interposing laws;—to no class is it so necessary to rely on these great penefit conferred than on the farmers, by the League which agitated for the abolition of the laws which deceived the farmers, and for the introduction of these great principles other men have been eminently successful ; and they are so all-powerful, that it is only by following them, inste

The meeting at Manchester buried the corn law in a most appropriate manner. The great principles on which it was extinguished were honoured, and their effects justly held up to the admiration of the world.

#### THE NAVIGATION LAWS. IMPRESSMENT.

MR. G. F. YOUNG, in another essay against the repeal of the navigation laws, quotes the evidence of Sir Thomas Byam Martin, Vice-Admiral of the United Kingdom, in favour of having in the mercantile marine a large store of seamen on which to pounce, in order to supply the royal navy when war breaks out. The evidence was to this effect :--

The evidence was to this effect :--1 confidently assert that the mercantile marine is everything to the navy, and that the navy could not exist without it. The great battle of the 1st of June, 1794 (Lord Howe's), was fought, and that important victory gained, chiefly by the merchant seamen of the kingdom. We had not 20,000 seamen, and those scattered over the globe, when the war broke out in 1793; it was, therefore, the merchant service that enabled us rapidly to man some 60 sail of the line, and double the number of frigates and smaller vessels. It was by promptly bringing together about 35 or 40,000 seamen of the mercantile marine, that Admiral Gardner could speedily proceed to the West Indies, with seven sail of the line; that Lord Hood could have 22 sail of the line in the Mediterranean, while other squadrons were sent to America and the East Indies, to protect our interests in those quarters; and Lord Howe to protect the Channel with 27 sail of the line; thus giving security to our own homes, and protection to our colonies and commerce all over the world. We are not about to gainsay a single word the Admiral spoke.

We are not about to gainsay a single word the Admiral spoke. It is true that at the breaking out of the war in 1793, and at the breaking out of almost every preceding war the government of the period was enabled rapidly to man the fleet, by means of the merchant seamen; but it is also true that it was only so enabled by a practice which outrages all justice, which is condemned by every man, and which has never been defended but on the ground of an assumed inevitable necessity. It will be difficult now, or at any future time, to convince the public, averse as it has become from war, and anxious as most governments now are to avoid war, that any such necessity exists, and most difficult, with the present temper and knowledge of our seamen, to compel them to submit to impressment. The United States offer them a secure asylum, plenty of employment, and good wages; and there will be some risk if an attempt be again made on their freedom, that they will not regard as very sacred their employers' ships, and will borrow them to take refuge in a land where they are not subject to impressment. We doubt very much, therefore, the practicability of again manning our fleet by impressment; and while we admit the correctness of the gallant Admiral's statements, we demur to Mr G. F. Young's inference, that because the royal navy was supplied with seamen by that means in 1792-1793, it could again be supplied by the same means, from the same source, in 1849 or any

## THE ECONOMIST.

## subsequent year. Mr G. F. Young obviously wishes the public to believe that the means then adopted will hereafter give security to our homes, and protection to our colonies and commerce all over the world, and thus he places himself before the public as the advocate of the most odious and detestable practice, derived from a period of barbarity, that any civilised government ever adhered to.

Few or none of our readers can be wholly ignorant of the enormous evils which Mr G. F. Young advocates. To get hold of the seamen implies the employment of a considerable physical force to seize them, which might be better employed in giving security to our colonies and our trade. Men-of-war—either small squad-rons or single ships—are dispatched to catch and stop the home-ward bound merchant vessels at the mouth of either Channel, and off the ports of the North Sea. If the ships reach their destina-tion, the men rush ashore and hide themselves; and it is much easier to seize them, therefore, before the ships cast anchor than afterwards. To grab all those, however, who may be in port, or who may escape on shore, another portion of the physical force of the empire is employed, and press-gangs, who might defend the people from foreigners, are engaged in violating the liberty of their own countrymen. After the seamen are impressed, officers, marines, and volunteer sailors are necessary on board guardships, receiving ships, and tenders, to guard the men who have been stolen, and a very considerable portion of the public means of defence—pecuniary as well as physical—must necessarily be wasted on this coercive service, and in oppressing our own people. Its nature is as hateful, too, as it is destructive. The officers and men entrusted with the task of seizing the men, whether at sea or on shore, are made arrogant, insolent, and cruel-qualities which spread their taint over all the profession. Men rushing with drawn cutlasses on board an unarmed ship, or hunting out the seamen in the alleys and public houses of the seaports, and drag-ging them away from their sweethearts, wives, and employments, do not recommend the service which requires such practises to supply it with men; and the royal navy is stigmatised in the public mind, and made abhorrent to the seamen and to all the maritime population of the empire. Such treatment natu-rally made the seamen discontented, and the mutinies of 1797 were not very remote consequences of the impressment of 1792-3. It is notorious that the threat of the press-gang supplied, in the maritime districts, the place of all supersitious bugaboos, and that no evil was there considered so great—no punishment so se-vere—as to be sent on board a man-of-war. Even admitting the practicability of impressment hcreafter, therefore, and admitting that it really provided the fleet with a great number of seamen in 1792-1793, it had and has an amazing number of evils corresponding to its hateful character, which must make every rea-sonable statesman resolve never again to adopt it.

But if impressment be not revived, how can a great demand for merchant seamen contribute to supply the navy? The shipown-ers ask for encouragement to sail their ships, and pay their sea-men by taxing the other classes. They allege, that by so doing they will rear seamen who will serve in the navy; but unless their their seamen who will serve in the navy mants men, which is not shipping be laid up at the time the navy wants men, which is not always the case, their demand for seamen is an addition to the demand of the navy, and must increase the difficulty of finding seamen for both. Such was in fact the case during the war which began in 1792. Our trade expanded then, and our merchant navy, instead of supplying our royal navy with seamen, tempted them to desert from their pay of 30s per month in the king's ships, by the offer of 60s or 80s, and even 105s. Not denying that a great mercantile marine may tend to raise a large population familiar with the management of ships it carting in not by criticized with the management of ships, it certainly is not by artificially increasing the demands of that marine on our seamen, excluding all help from all other shipping and other seamen when a double demand is made on our own seamen for the purposes of war and for the purposes of trade, that the navy can most readily obtain the services of a fair proportion of our maritime popu-Experience has convinced our statesmen of the fact, and lation. in almost every war they have, for the purpose of satisfying the double demand, relaxed or suspended the navigation laws, both as regards the employment of foreign ships to carry on some branches of our trade, and as regards the employment of foreign seamen in our own ships. It is only by having recourse to im-pressment, and only at the commencement of a war, that the navigation laws can in any manner be made instrumental in pro-curing seamen for the royal navy; and we must profess our astonishment that a shipowner should deliberately propose to rear seamen as a preserve for the press gang. For that purpose Mr G. F. Young recommends the navigation laws; and the end proposed seems to us, apart from all other considerations, a per-lact condemnation of the many fect condemnation of the means.

Mr G. F. Young is not very consistent, though he makes a great parade of logic. While he demands that the navigation laws be maintained, in order that the country may have British seamen, he complains of that part of them which obliges him to employ a certain number of British seamen. "The bill sets out," he says, " by repealing entirely the navigation act, the registry act, and other acts constituting what are termed the navigation laws; and then, by section 6, it re-enacts the present obligation upon the owners of British registered ships to man their ships with British

"seamen." " I ask, on what principle short of State necessity re-"quiring that British sailors should be reared and trained in " merchant ships for the public service, can Mr Labouchere de-"fend this gross interference with the employment of labour? "Is Mr Cobden or Mr Bright restricted by law to domestic "labourers in their cotton-mills—Lord Fitzwilliam in his fields— "or President Gladstone in his warehouses? No! Why, then, "this exception?" We ask, with Mr G. F. Young, why this ex-ception? Why continue a clause which is contrary to the prin-ciples professed in repealing the law? We reject the notion that any such enactment is required. The qualities of the British sea-man, the connection between him and the British shipowner, will always, as the rule, secure him a preference. A law is no more merchant ships for the public service, can Mr Labouchere dealways, as the rule, secure him a preference. A law is no more required to enforce that, than to compel a farmer to employ the labourers that live around him. A law to compel Lord Fitzwilliam to employ only English labourers, or Mr President Gladstone only to employ only English labourers, or Mr President Gladstone only natives of Liverpool—to compel Mr Cobden to employ only Eng-lishmen, or to compel the manufacturers of Spitalfields to employ only labourers born in their vicinity,—would be an unnecessary restriction. We agree with Mr G. F. Young in objecting to such a restriction—though there is in regard to British ships a reason in their being, however remote from the metropolis, a part of the empire—for defining by law what shall constitute a British ship, which does not apply to the employments adverted to. On that which does not apply to the employments adverted to. On that account there may be a necessity to enact that one of the con-ditions shall be that the crew are British. But we do not understand how Mr Young asks for the continuance of the navigation laws on the mere ground that they are a nursery for British sea-men, who may be taken to serve in the navy, and yet raises an objection to the output of the serve in the navy. objection to the only stipulation in the enactment which can se-cure that object. In both his arguments he adheres to his own interes<sup>\*</sup>. He advocates the law which increases the employment interes<sup>\*</sup>. He advocates the law which increases the employment and freight of shipping, and he objects to that part of it which precludes him from employing foreign seamen, if he can get them at lower wages than English seamen. He is in that respect an indignant advocate of free trade, and speaks of the law to compel him to employ British seamen as a gross interference with the employment of labour; but he is quite insensible to the cqually gross interference which is implied in his advocacy of a law which gross interference which is implied in his advocacy of a law which prevents the English merchant from employing foreign ships. We would give equal freedom in both cases, and equally allow the British merchant to employ what shipping he pleases, and the British shipowner to employ what seamen he pleases. Both will naturally give, when other circumstances are nearly equal, the preference to their own countrymen; and we regard the law in both cases as quite unnecessary, and therefore impolitic.

## EXPORTS TO OUR COLONIES AND TO FOREIGN COUNTRIES.

COUNTRIES. We have received the following letter from a correspondent:— To the Editor of the Reconstit. Sir,—In your article headed "Financial Reform" in last Saturday's number of the Economist, you appear to have made a mistake in summing up the exports to the different colonies, by taking in turn the amounts of those to North America and West Indies, by which you make the total to be 16,263,8677, instead of 9,984,6681. The error tells against your own argument, as it makes the trade of the colonies appear much larger than it really is. I would also beg to remark, that the exports to Gibraltar ought to be de-ducted, as they are merely sent there for re-exportation, and should come under the head of exports to foreign countries. Again, another sum should be taken off, for the capital taken by or sent to emigrants, as no returns are made, and such amount really is only a transfer of capital to the colonies. I cannot say what the value may be, but it cannot on an average of years be much under 1,000,0001. So the bona fide exports to our colonies, exclusive of India, do not much exceed 7,000,0001. In stating the number of emigrants for 23 years, you make it appear that about equal numbers proceeded to the United States and to our own colonies; of the latter, the North American provinces take the greater number, but you

about equily handling proceeded in the other states and to our contents, of the latter, the North American provinces take the greater number, but you must bear in mind, that a very serious number of emigrants that land in Canada go over to the United States, so that it may be near the truth to state that during the period in question the latter have taken off two-thirds of all our emigrants.

Towards the end of the article you say, " but all the commerce that is thereby obtained (by our colonies) is at least additional to what we should otherwise possess." To this I demur. If we had not had a single sugar colony, we should have had more trade with the Brazils, &c, so that I take it, your conclusion is only true in part.—I remain, dear sir, yours respectfully. Jan. 29, 1849. ALPHA.

Jan. 29, 1849. ALPHA. The error to which our correspondent refers in the summary of our exports to the different classes of British dependencies abroad, arose from our having copied the column from an official paper presented to the Committee of the House of Lords last ses-sion on Colonization, and published in the appendix to the third report of that Committee, at page 7. When this clerical error is corrected, the amount of our exports of British produce and manu-factures to our various colonies will stond thus :-factures to our various colonies will stand thus :

North American	3,490,018 2,789,211
Other colonias	., 3,705,439

Total colonies ...

But this return does not include the East India possessions, to which, in the same year, our exports amounted to 6,703,778/, which, with the amount to the colonies, makes a sum to British dependencies of all kinds of 16,688,446/, out of a sum of 60,111,082/, the entire amount of our exports to the whole world. The amount of our exports to the colonies in 1830, 1835, and

9,984,668

## Feb. 3,

1840, as given in our last number, included those to India, and it was the nearness of the amount, as erroneously given in the official document, to what it should have been, when the India exports were included, that caused us to overlook the error.

exports were included, that caused us to overlook the error. Our correspondent is quite tight in saying that the trade to Gibralter should strictly come under the head of foreign exports, as the great bulk of the British goods imported into that possession are for con-sumption in Spain. But, to some extent, the same may be said of our exports to the West Indies, and especially to Jamaica, from whence a considerable quantity of our goods are exported to the neighbouring islands, as well as to the Spanish Main. The same may be said, to some extent, with regard to British North America, from whence a considerable amount of goods are smuggled into the neighbouring portions of the United States. And, with regard to the trade to India, a very large portion of our goods find their way into trade to India, a very large portion of our goods find their way into countries not dependencies of this. But still, in all these cases, as in that of Gibralter, it may fairly be said that this trade would not exist, at least to the same extent, except for the facilities offered by our

It is also quite true, as our correspondent observes, that a large number of the emigrants who leave this country for Canada actually remove into the United States; but we prefer in these matters not to exaggerate our statements by facts of which no very precise infor-mation exists.

## Agriculture.

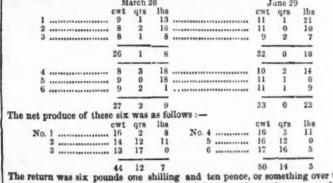

MALT AS CATTLE FOOD. WHETHER barley, raw or after it has undergone the process of malting, is more valuable for its feeding properties, is at present one of the mooted points of husbandry. In fact, the subject is one on which very few experiments have been made. Malt-dust, as it is called— the dried radicles of the barley,—has long been known as a valuable food for milch cows and ewes with lambs ; but malt itself has been so little used for feeding cattle, that scarcely anything is known of its feeding value, except the two sets of experiments we shall refer to. The two sets of experimenters have arrived at diametrically opposite conclusions. In Scotland small quantities of malt have been given to horses. to hor

In 1846, at the request of the Commissioners of Excise, Dr T. Thomson and Dr R. D. Thomson instituted an investigation repect-ing the value of malt in feeding cattle. In the report made by these gentlemen, very detailed statements were made of the progress experiments, but which we must endeavour to compress into of the into more

gentlemen, very detailed statements were made of the progress of the experiments, but which we must endeavour to compress into more reasonable compass. Two bullocks were commenced feeding on the 1st of Oct., 1845. Bullock A, weighing 9 cwt 7 lb, had 6 lb of bar-ley a day for two days, then increased to 9 lb for a like time, and then advanced to 12 lb a day till the 15th of Oct., by which time it had increased in weight to 10 cwt 4 lb. Bullock B, on the 1st of Oct, weighed 10 cwt 106 lb; received in the same way 6 lb of malt daily for two days, then 9 lb for two days, and afterwards 12 daily until the 15th of Oct., when its weight was 11 cwt 84 lb. The difference of result is but little. The beasts were then attacked by a malady which interrupted the experiment until the 8th of November. On that day bullock A weighed 9 cwt 83 lb, and was fed until the 22nd of Nov. on 8 lb of *barley* and 56 lb of turnips, with a varying portion of hay daily; to the 26th he had 10 lbs of barley, and from the 26th to the 29th of Nov. 12 lb a day. His weight on the latter day was 10 cwt 49 lb. Bullock B received precisely the same quantity of *malt*, hay, and turnips as the other, and he increased in weight from 11 cwt 63 lb on the 8th of Nov. to 11 cwt 96 lb on the 29th of Nov. Here the barley fed beast gained the most weight. The subsequent feeding of the two beasts to the 20th of Feb., the one on 10 lb of barley daily, with small quantities of oilcake and bean-meal, and part of the time with a few turnips; and the other on the same allowances, with 10 lb of

small quantities of oilcake and bean-meal, and part of the time with a few turnips; and the other on the same allowances, with 10 lb of malt a day in the place **f** the barley; and the result was, the barley fed beast advanced from 10 cwt 41 lb on the 29th of Dec. to 11 cwt 16 lb on the 20th Feb. The malt-fed bullock weighed 12 cwt 8 lb on the 29th Dec, and only 11 cwt 68 lb on the 20th of Feb. The experi-ment of the chemists, therefore, was decisively adverse to the no-tion that malt is more feeding than barley. On the other side of the question is the experiment of Mr Hudson, of Castleacre, Norfolk, which he has thus stated :--On the 26th March, six Highland stots were tied up; they had each a bushel of mangel wurzel a day, and the same quantity of clover. Nos. 1, 2, and 3, had

each a peck of barley meal is and 4, 5, 6, a peck of malt per day, from the 26th of March, 1846, to the 1st of July, when they were slaughtered. The following results were then obtained. Their live weights were :---March 26 June 29 cwt qrs lbs cwt qrs lbs

44 12 7 50 14 5 The return was six pounds one shilling and ten pence, or something over two pounds per head, in favour of the animals fed upon malt; and moreover, from the report of the carcass butcher, it seems that "the beasts Nos. 4, 5, and 6, of a much better quality than the others. The grain was finer, and alto-

gether of a superior description." And when before a committee of the House of Lords, Mr Hudson said that he should consume half his own growth of barley, if he was allowed to make it into malt, and that he deemed a peck of malt to be equal to 14 lb of linseed cake.

The above we believe to be literally all that is known, or has been affected to be ascertained by experiment.

There are, however, now so many articles for feeding cattle, to be obtained at a cheap rate, that the more or less feeding properties of malt is one of very little importance to the farmer. It is but a small ingredient in the malt tar question ingredient in the malt tax question.

LIQUID MANURE. MANURE, when applied in a liquid state to land, is well known to act on vegetation with great rapidity, and wonderful effects have fre-quently been produced on grass land and clover leys by its constant use. We do not enter into any disquisition on the chemical pro-perties of liquid manure, or the comparative values of the different kinds; but our object is to test some of the most practically useful means of applying it on an English farm. We assume that the farmer preserves his liquid manure, and uses the ordinary means to promote its putrefaction. But hitherto we have not in this country applied liquid manure to arable land, or used it in the most important branch its putrefaction. But hitherto we have not in this country applied liquid manure to arable land, or used it in the most important branch of husbandry, the growth of turnips and other roots. Now, in grow-ing turnips liquid manure would form a most valuable auxiliary, as it will give that rapid growth to the young plant in its earlier stages, which is indispensable to a good crop. In the south of England es-pecially our turnips are so frequently devoured by the fly, that in dry and hot seasons it is no uncommon thing to sow swedes two and three times, and after all to obtain only a partial crop. The essen-tial element of moisture being absent, the plant cannot grow fast enough to get out of the way of its active enemy the fly; it is obvi-ous, therefore, that any plan by which liquid manure can be conve-niently used for turnips must be an immense advantage to the farmer. But it is in connection with such a cattle establishment as that at Howick, which we last week described, that the full importance of liquid manure in modern husbandry becomes apparent. It is the liquid manure in modern husbandry becomes apparent. It is the object of the noble owner, Earl Grey, to have two sets of beasts fed off every year, and as the feeding-house holds 48 head, it certainly will be no mean exploit in husbandry to fatten 96 bullocks yearly on 225 acres of arable land. But this can only be done by applying all the available resources of the farm to the growth of turnips and roots. It will be recollected that the stock of turnips was exhausted by the 19th of June, and that the beasts could not be kept up by grass used as a substitute for the turnips. Besides turnips, therefore, there should be a supply of mangold wurzel to carry the beasts through the summer mouths. At Howick there are three tanks capable of holding 2,500 gallons each, a rich store for giving that start to the turnips neces-sary to secure a heavy crop in all seasons. The question has been, how is it to be applied to turnips? Among the may ingenious agricultural implements brought ont dur-

Among the many ingenious agricultural implements brought out dur-Among the many ingenious agricultural implements brought out dur-ing the last few years, one of the most valuable is a liquid manure drill, manufactured by Messrs Reeves of Bratton, in Wiltshire. It was exhibited at the York Meeting of the Royal Agricultural Society, where it obtained the society's medal, and is described in the recent number of the journal as " both novel and ingenious," and is stated to have " performed its work extremely well." Here, then, we have the implement required for applying liquid manure to turnips. The inventor, Mr Chandler, of Stockton, Wilts, has used the drill on his own farm of 1,000 acres, for three seasons, with great advantage, and some of the best agriculturists in the West of England speak of it in terms of high commendation. For using superphosphate the drill is invaof high commendation. For using superphosphate the drill is inva-luable. The reader will best understand its construction and plan by the following extracts from the maker's description of the implement :-

There are four very important points gained by this machine over the com-

There are your very important points gained by this machine over the com-post drills, viz :— Economy in the manure—the more even distribution of it— the greater expedition in its delivery—and the certainty of obtaining a plant. The apparent difficulty of supplying the drill with liquid has, after many un-successful attempts, been entirely overcome, by the following simple method :— A common oil pipe, which may be purchased for 10s, should be placed in a one-horse cart, on two blocks of wood fitted into the bottom of it, hollowed on the top sides, for the casks to rest on : it should have a large bung-hole to allow it to discharge quickly : but instead of a plug a tin pine should be attached to the the top sides, for the casks to rest on : it should have a large bung-hole to allow it to discharge quickly; but instead of a plug a tin pipe should be attached to the barrel with leather to form a joint, so that the nozzle of the tube may be turned up to the top of the cask and be fastened there with a strap. A small tub will be required in the field at the end of the furlong, into which the superphosphate should be put and diluted with 20 or 30 gallons of water, and well stirred till properly mixed, which will be in a few minutes. The drill should then be set in its work, the water-barrel be brought alongside of it, and enough water put in to go a turn or bout; the attendant should at the same time take a bucket of the mixture from the tub and pour it into the drill: he can then proceed with the drilling immediately. of the machine from the tub and point it into the drill; he can then proceed with the drilling immediately. The same quantity of mixture should be applied in all cases; the quality will be improved in proportion to the superphosphate added. Three water-barrels, two on the road and one filling (which may be accomplished with two horses), will convey sufficient liquid for a one-horse drill to put in five acres per day, at a distance of a mile from the tank or river; and in the same proportion with the larger drills. The merits of this implement will be more clearly explained by stating that disclored horses.

The metris of this implement will be more clearly expanded by stating that dissolved bones (superphosphate of lime), or any soluble manure, is more evenly distributed in liquid than in compost; insamuch as the difficulty of mixing pro-perly the superphosphate in a sufficiently friable state for drilling is entirely superseded, by the revolution of the cups keeping the liquid in a constant state of motion from the bottom of the drill—thereby giving to each plant an equal

of motion from the bottom of the drill—thereby giving to each plant an equal share of the manure. The various enemies to which the turnip is subject in its earlier stages are, by this system, in a great measure defeated—the manure being so regularly de-posited in the drills, that immediately the seed germinates it finds its food so congenial to its growth that it is soon placed in safety. The drill is very simple in its construction, and may be made to any size. Of the two sizes that the neutron has been dependent encount that for one hows.

the drift is very simple in its construction, and may be made on any size. Or the two sizes that the patentee has found must convenient, that for one horse, is 44 feet wide, which is best adapted for the ridge system, depositing two rows at 27 inches (this has been highly approved of for drilling mangolds), it can also be worked on the flat at the same distance, or three rows at 18 inches.

## Feb. 3,

incluster is 0 rect while, the counters of which may be varied to five rows at 14 inches, four at 18, four at 20, three at 24, or seven rows for corn at 9 inches, with liquid manure, or ten rows of corn without manure, and for spreading liquid broad cast.

The liquid manure can be removed, and the drill worked as a common corn when manure is not required. drill

The liquid manufe can be removed, and the dum worked as a common over drill when manufe is not required. A great number of experiments with special manures are recorded in the Royal Agricultural Society's Journal, and in every instance the application of manufe in a state of solution produced a quicker growth of turnips than the same manufe in a dry state. Mr. Pusey has shewn by an accurate experiment that there is a point beyond which even a large increase of dung ceases to act. A moderate dose of manufe, with the addition of liquid manufe, either that produced from the tanks or superphosphate solution, will therefore grow a better crop of turnips or mangel wurzel than very heavy dressings of dung. This is of importance as enabling a larger breadth of roots to be grown. The manufe drill is a very manageable and not an expensive implement, that of 4½ feet costing only 221; and it is equally useful as a broadcast drill for applying liquid manufe to grass land. The following is the Duke of Richmond's experiment, which fully confirms the advantages of using manufe in a liquid state :-of using manure in a liquid state :-

of using manure in a liquid state :--In a comparative experiment, made in 1843, on the home-farm of Gordon castle in Morayshire, one acre was manured with 8 bushels of bone-dust and 14 yards of farm-yard dung; one with 315 lb of guano; one with 16 bushels of bone-dust; one with 2 bushels of bone-dust, dissolved in 38 lb of subphuric acid, previously diluted with 12 gallons of water,-the mixture allowed to remain between two and three days in a tub, and then diluted with 388 gallons of water, and applied to the drills by means of a water-cart; and one with 8 bushels of bone-dust, mixed with 83 lb of subphuric acid, previously diluted with 12 gallons of water,---and the mixture, nearly in a dry state, sown by hand along the drills. The soil on which the experiment was made was poor, light, and sandy; the turnips, raised immediately upon the manures, were Dale's hybrid, sown in drills 27 inches apart, and the one-half drawn for cattle in the yards, the other half eaten on the ground by sheep; the land was afterwards, without any manure, sown down with barley and grass-seeds. After, in each case, deducting the cost of manure, the total value of the turnips and barley crops was, on the bone-dust alone, 64 4s 114; on the liquid application of bone-dust and diluted sulphuric acid, 71 los 13d; and on the powdery application of bone-dust and diluted sulphuric acid, 6l 16s 9d. To that recently-introduced and valuable plant, the Italian ryegrass,

To that recently introduced and valuable plant, the Italian ryegrass, liquid manure is necessary to render it thoroughly productive. Mr. Dickinson, who, on the London clay, when drained, has grown from seven to ten crops of the grass every year, has given an account of a cheap plan of making tanks in a clay soil, which cannot be too widely circulated. He says :--

circulated. He says:--"My land is clay 250 feet deep, in this soil only have I had experience, so for this only do I prescribe. Having well considered where the liquid is to be used as well as where it is made, and resolved upon the most convenient situation, I have a hole dug full 7 feet in diameter and 12 deep, the bottom being shaped like a basin, and rammed well with a little water into good puddle. The con-struction of the tank is commenced by the brick layer, forming a circle with bricks (4 inch work) round an opening of 5 feet, leaving a space behind the brick work to be filled and rammed well in with clay puddle by the labourers, as the building is worked up, no mortar being used with the bricks or anything also till the dome is to be formed; mortar or cement is then required, the roofs arched in, a man-hole left in the centre of each tank, and covered with a arched in, a man-hole left in the centre of each tank, and covered with a 3-inch yellow deal cover (2-inch oak would do better). One of these tanks con-taining 1,000 gallons costs 21 178 6d in the following items, calculating to farmers to have the horses and carts in possession :--

	æ	- 8	0
Two farm labourers, each & day )	G	2	0
Two labouring lads, each I day Occupied in digging the hole,	0	3	0
One man, I day manufacture anting away alor propaging and dies	0	2	0
a wo others, I day man mana	0	5	0
Une prick hyer, I day	0	4	6
One ditto labourer, 1 day	0	2	6
Three horses and carts drawing away } mile for want of nearer, short ; day	0	4	6
8 feet of 3-inch deal for cover, at 5gd per foot	0	3	8
Labour and mails	0	0	10
Lime and sand for man hole	0	2	6
900 place bricks	1	7	0

Several of these tanks should be made adjoining each other; they then form a must excellent filter to keep back any hay or straw that would prevent the egress of the liquid from the water cart receiving it into the first from the stables, egress of the liquid from the water carf receiving it into the first from the stables, and pamping out of any other one of them. It must be observed also, the tanks being formed, the drainage into them is the next feature to be considered. I have adopted a mode economical and effectual, by laying down in the pave-ment what is called at the iron works, an iron angle gutter, of a very small size, and covering the surface of it with a flat iron bar, just to lay within the surface of the gutter wherein all the urine is received and conveyed away immediately, and all the straw, dung, and dirt, are kept out; this is highly advan-tances at the wrine is conversed immediately without come of a many is diversed. immediately, and all the straw, dung, and dirt, are kept out ; this is highly advan-tageous as the urine is conveyed immediately without escape of ammonia, and the little gutter may be uncovered as often as you please, and swept out with a broom. There is no under-drain to get stopped, and all can be seen and kept in order by a commonly useful person, without the sid of what is called a tradesman. I should like to see three of these little gutters down a stall, whereby all the urine would be caught, 3 gallons per diem from each moderately sized horse, more from cart horses that drink freely, considerably more from cows, and a much larger quan-tity from pigs than is usually calculated. If all the water is caught from farm horses, cows, pigs, farm horses, household servants, the tanks would be filled very quickly, and whenever the tank containing 1,000 gallons of urine is filled the second time, and properly applied to Italian rye-grass, the result will show it is not too high an estimate to calculate the tank and drains paid for. It will generally be found that many of the best means of acrical-

It will generally be found that many of the best means of agricultural improvement may, with the exercise of a little ingenuity, be applied to existing homesteads, at comparatively small expense.

SPIRIT OF THE TRADE CIRCULARS.

(From Mr Henry W. Eaton's Circular.) The silk market, as is usual at this period of the year, has been comparatively quiet. In prices, however, there is no alteration to report. The arrivals of Italian silk have continued large, and, as anticipated, have

doubtless tended to check for the moment any advance in China silk that might have arisen from the further confirmation on the 20th inst, of the deficiency in the shipments as compared with the same period in 1848. In Bengal silk the transactions have been limited, but not, comparatively,

In Bengal silk the transactions and the second seco

Cucuruchos  $4\frac{3}{2}$  5 15 0 15 7 The subjoined tables will show the exports of sugar to the end of November, and it will be seen that they are, upon the whole, about the same as last year, there being an increase from hence, and a decrease from Matanzas. During the present month, to the 23rd, 6,600 boxes were shipped to the United States, present month, to the 23rd, 6,600 boxes were shipped to the United States, 1,800 boxes to Spain, 8,300 boxes to British ports, and 1,800 boxes to other places, making together 18,500 boxes. Grinding has been proceeding slowly, owing to the unfavourable condition of the cane; and the accounts from the in-terior, as to the prospects of the yield, have become increasingly gloomy. Some estates are not likely to make half of the quantity produced last year, and there are few districts on this side of the island in which an equal quantity is antici-pated. On the south side appearances are better, though not so good as was at first described. The last intelligence from thence gives reason to expect about an average groop. It is to be recollected that the proportion of sugar furnished an average crop. It is to be recollected that the proportion of sugar furnished from thence is very trifling, in comparison to the production on this side. On the whole, we fear that we cannot estimate the deficiency of the growing crop The whole, we fear that we cannot estimate the deficiency of the growing crop as compared with that of the present year, at less than one-third. New sugars will not make their appearance until a much later period than usual. The first receipts will, no doubt, be taken for Spain, at higher rates than will be offered for other places. The inquiry for the United States is likely to be active, as their home crop will yield 50 or 80 m. hads less than was afforded this year. Sales of new clayed molasses have been made at 2½ rs., and none of the dealers are willing to accept less, while some still ask 3 rs. There are, however, scarcely any purchasers even at 2½ rs., and the price is likely to decline, as soon as sup-plies begin to accumulate. Very little muscovado molasses has made its ap-pearance as yet, and we do not hear of any transactions. Exports of Sucar, from Jan. 1 to end of Nov. 1847 and 1848. From Havana. From Matanzas.

are in a position unusual at this season, van, unusual at this season, van, unusual at this season, van, unusual at spinners After the most minute inquiries, we feel warranted in saying, that spinners and manufacturers in this county, and in Fife, are in a better position than they have been since the beginning of 1844. Raw material keeps low, and is likely to do so; stocks of yarns (unless of tows of very inferior quality) are quite ex-hausted, and goods of almost every description are light in stock. It gives us pleasure, in this our closing number for 1848, to congratulate our

1349.]

## THE ECONOMIST.

spinners and manufacturers on their prospects for the coming year, which pro-mises to be the most satisfactory one since 1844. When we keep in view the improvements which are daily taking place in our machinery, and the spirit of healthy enterprise which is manifesting itself in all branches of industry in this district, we think that, in the absence of undue speculation among us, and care in suiting ourselves to growing wants and consumptive demand, our town, now the great centre of the linen trade of the country, is likely to grow in import-ance, and improve its position among the great seats of commercial enterprise. Our markets close with firmness; and, by the middle of January, as soon as trade fairly re-opens, it is thought that the tendency of prices will be upward.

## Foreign Correspondence.

#### From our Paris Correspondent.

Paris, Jan. 31, 1849. We lived during the whole week in the midst of alarming and ominous events. The struggle between the assembly and the cabinet had so threatening an aspect, that it was generally believed that we were on the brink of a new revolution. The cabinet had boldly adopted several new measures which were not of a very satisfactory nature. M. Leon Faucher, the minister of the home department, presented on Friday last a bill for the suppression of the clubs. It was publicly known that he had a mind to demand such a law ; but it seemed imprudent to introduce it to the present assembly, whose majority turns out to be rather revolutionary. Indeed his bill was Paris, Jan. 31, 1849. majority turns out to be rather revolutionary. Indeed his bill was received by an outbreak of the wrath of the *Montagne*; 48 of them signed a resolution which they presented to the assembly, de-manding the accusation of the ministry for having violated the con-

manding the accusation of the ministry for having violated the con-stitution by their anti-club bill. At the same time, a decree of M. Leon Faucher reorganised the mobile guard, and was the cause of discontent in that body, which was on the eve of producing a new revolution. The mobile guard, were engaged for one year, and their time of service was to finish at the end of March. The government ought, then, to have waited un-til that moment to dissolve them, or at least it was just to pay them until the 31st of March. The socialists availed themselves of the discontent of the mobile guard, and they formed a conspiracy with them. them.

It seemed very strange that the cabinet, who were already in a state of hostility with the assembly about the question of dissolution, should take such important measures two days before the sitting on which M. Rateau's proposition was to be discussed. It was b-lieved that the government had secret intentions, that it desired by the that the government had secret intentions, that it desired by the club bill to increase the animosity of the country at large against the assembly, who refused to suppress the clubs, and by the decree for the reorganisation of the mobile guard to tamper with the soldiers of the line, who were jealous of the mobile guards on account of the high pay of the latter body. Indeed, on Saturday last, there was a great sensation in the public when it was known that the assembly had refused, by a pretty large majority, to vote the club bill imme-diately, and had sent it for the examination of the *bureaux*. Grave apprehensions were entertained for Monday last, as the assembly was on that day to discuss M. Grevy's report upon the propositions, which on that day to discuss M. Grevy's report upon the propositions, which demanded to fix the moment of the dissolution.

On Monday morning the rappel was beaten in every quarter of the town-all the regiments which are in and about Paris were on the alert-great forces were gathered around the assembly. Rows of ordnance and several batteries of artillery were stationed upon the Boulevards towards the Bastile, as the national guards of those quarters are dissolved since the events of June. In a word, Paris re-sembled a besieged town. It was known that the mobile guard sembled a besieged town. It was known that the mobile guard was in revolt; four superior officers had been arrested as well as about 90 guards. It was reported that they would make a manifesta-tation against the cabinet, and they would be joined by the socialists. It seemed that a general battle was again near at hand. A coup d'etat was much spoken of. It was said that, if the assembly adopted M. Grevy's report, and consequently refused to dissolve, the President much exhibit impediators. would publish immediately a decree, purporting that the assembly was dissolved; that, as none of the promises which were made in February, 1848, had been kept, an appeal was made to the people to declare what was the form of government they desired.

It is probable that the immense show of military force which was displayed, and the apprehension of again throwing the country into a Grevy's report. Besides, a secret ballot was demanded instead of the usual division, so that 416 votes out of 825 declared themselves against M. Grevy's report, leaving a majority of only 11 members for the disso-M. Grevy's report, leaving a majority of only 11 members for the disso-lution. However, the question is not yet completely resolved, and I fear that the majority of the assembly will not be easily prevailed upon to fix a term of dissolution. If the report had been adopted, all was over with the question. But as it demanded to reject not only M. Rateau's propositions, which desired that the dissolution should take place on March 19, but also several other propositions demanding that another term should be fixed, or that the chamber should only declare it would dissolve after voting three of the organic laws, the vote does not prove that M. Rateau's term of March will be adopted. M. Lamartine, who contributed to the result of the ballot, declared that he would propose a mezzo termina at the second read-ing. The majority seemed inclined to dissolve only after the vote of several organic laws, and in this case it may easily protract its exis-tence during many months.

tence during many months. The President has declared that he would sustain his cabinet to the st; and this declaration, which was officially published by the offi-

cial Moniteur, increased the public persuasion that a coup d'etat was meant as a last resource against the assembly. If the government had taken such a decisive step, it is probable that they would have been vic-torious; but the victory might have been dearly bought. They would have been obliged to arrest about 400 representatives, who are truly republicans, and 80 of whom are of the mountain or socialists. If they republicans, and 80 of whom are of the mountain or socialists. If they had been free, they would certainly have protested against the coup d'etat—would have transported anywhere the National Assembly, following the example which has already been given of the assembly of Berlin. It is probable that General Cavaignac would have put himself at the head of the republican party, and would have put followed by a part of the army and of the national guards. Victory would probably have remained to Louis Napoleon, but it would have been a dearly-bought victory. The cabinet had certainly very good motives to demand the total suppression of the clubs. It is impossible to imagine what horrible plans were concocted in those meetings, where the citizens were con-tinually excited to murder the President, and revenge the insurgents

tinually excited to murder the President, and revenge the insurgents of June, who have been transported. The Prefect of Police received a week ago, the advice that a widely-spread conspiracy was about to be executed against the government, and the whole society. The be executed against the government, and the whole society. The conspirators were 10,000 in number ; all were armed, and had in their possession a hundred cartridges. Their guns were concealed in the midst of the walls of manyhouses situated in a great number of quarters. They intended, on a fixed night, to set fire to many buildings in Paris, and to avail themselves of the bustle and confusion to take hold of the Hotel de Ville, of the Post-office, of the telegraphs, and of all the principal administrations. The names of several chiefs are already known, and many arrests have been effected. Among those who are arrested, they mention M. D'Alton Shee, the late peer of France, who has been by turn a page of Louis XVIII, a devoted legitimatist, an exalted conservative, and lastly a red republican and a socialist.

The following are the variations of our securities from Jan. 25 to Jan. 30 :

	1	c		٢			f	e

Marseilles	2	50	1	85	0		180	0

HALF-PAST Four.—The market was animated, in consequence of the operations which took place at half-past two, for the premiums. But the rente was declining at the end of the Bourse, as the situa-tion of our political and financial affairs appeared more serious than ever.

It was announced that the Austrian Metalliques had declined more than 1½ per cent at the Bourse of Jan. 25, because bad news had been received from Italy and Hungary. It was said that a body of 50,000 Russians had entered Transylvania.

The Three per Cents varied from 45f 50c to 45f 40c, the Five per Cents from 75f 75c to 75f 40c, the Loan from 75f 25c to 75f 15c, the

Bank Shares from 1725f to 1705f. Orleans were done from 715f to 712f 50c, Rouen from 445f to 450c, Havre from 237f 50c to 240f, Marseilles from 185f to 182f 50c, Bordeaux from 382f 50c to 381f 25c, Vierzon from 250f to 251f 25c.

Paris, Feb. 1, 1849. The official papers have contradicted the statement that Prince The official papers have contradicted the statement that Prince Louis Napoleon, on riding upon the Boulevards, had been met on Monday last by repeated shouts of "Down with the Ministers!" "Long live the National Assembly!" It is certain that the present cabinet is supported by the majority of the nation, not because it is a very good government, but only because it sets at defiance the ultra-republican party. However, it is very true that shouts have been heard wherever the President has passed, and some reports are again afloat of an approaching partial change of cabinet. It is said that M. Dufaure will replace M. Leon Faucher at the home depart-ment, M. Vivien would return to the Public Works, and M. Lamori-ciere would be named Minister of War. M. Changarnier would pre-serve the command of the national guard of the Seine Department, but the troops of the first military division would be commanded by General Bedeau. General Bedeau.

Such a modification of the cabinet would give general satisfaction. M. Dufaure and M. Vivien, who have been the ministers of General Cavaignac, are esteemed by all parties, and they would certainly be considered as a pledge of conciliation between the two contending parties of the chamber. M. Leon Faucher, on the contrary, is not liked by one half of the representatives. He has compromised him-self by his last appointments of prefects and sub-prefects. As to Cancer Lamonic and the set of the set of the set of the set.

Inter by this last appointments of prefects and sub-prefects. As to General Lamoriciere, he has a great influence upon the army. It would be desirable that the cabinet would be thus modified before Saturday next, when the debate will take place upon the second reading of M. Rateau's proposition, because the majority second reading of M. Rateau's proposition, because the majority would, in this case, be ready to accept a compromise, and vote an amendment, by which the assembly would fix their dissolution to-wards the end of April. But if this debate takes place with the pre-sent unmodified government, the chamber will hardly grant any con-cession. It has been seen, by last Monday's ballot, that the assem-bly was divided into two nearly equal parts. Then the majority may be changed if ten or fifteen members, who were not present last time, come to the next division. Then, also, about twenty or twenty-five wavering members, who have voted against M. Grevy's report because it was too peremptory, refusing to admit a compromise, but

## THE ECONOMIST.

they will vote for an amendment which will remove, as far as possi-ble, the date of dissolution, or, perhaps, which will decide that the assembly will only dissolve after voting on the three principal organic laws.

organic laws. The assembly have been called upon by some members to make The assembly have been called upon by some members to make an inquiry upon the events which may have justified the extraordi-nary measures which were taken on Monday last. The demand of an inquiry was made by M. Sarrens, jun., a talkative member of the mountain, who contended that no conspiracy was dreaded from the socialists, but hinted that there was probably a secret desire on the part of the government to make a *coup d'etat*. The imisters, and chiefly M. Changarnier, were accused by him to have exceeded their power, when they ordered the Colonel of the sixth legion of the national 'guard, named Forestier, to be arrested. He said that there was no other charge against that Colonel but a letter which he had national 'guard, named Forestier, to be arrested. He said that there was no other charge against that Colonel but a letter which he had written to the President of the assembly, in which he declared that if any attempt were made against the National Assembly it [could safely come in the midst of the sixth legion. M. Leon Faucher and M. Odilon Barrot answered that the arrest had not been ordered for such a motive, and they refused to give any other explanation, as the question was in legal hands. I know that the motives of this such a motive, and they refused to give any other explanation, as the question was in legal hands. I know that the motives of this arrest were the following :-M. Changarnier, as Commander-in-chief of the national guard, sent to M. Forestier an order to be ready for a military movement. The Colonel answered that he would not obey and what were the intentions of the Commander-in-chief. He added, that his legion was not ready to move beyond the precincts of its dis-trict. Such a declaration was quickly considered by M. Changarnier as a want of discipline which deserved to be punished. Yesterday the bureaux met to name the fifteen members who will examine whether an inquiry must be instituted upon the events of the bureaux. Some of them have not yet named their commissa-ries, but it is probable that the majority will be favourable to M. Sar-rans' proposition of an inquiry.

rans' proposition of an inquiry. The assembly have debated the famous proposition of M. Billault, who proposed that the assembly should establish the budget of rewho proposed that the assembly should establish the budget of re-ceipts, and engage the government to limit the budget of expendi-ture by the budget of receipts, and to make a report to the chamber within the period of one month upon the economies which are pos-sible. M. Passy has spoken against the proposition. He has proved that the sum of irreduceable sums amounted to 690 millions, so that the reductions would be but on 688 millions. They had already in-troduced, in the budget of 1249, for 154 millions of economies, and it would be impossible to go beyond that figure without disorganising the public administrations. M. Billault, the author of the proposition, answered the Minister of Finance. He declared :--

That there was a probable deficiency of 260 millions upon the budget of 1849. That the deficiencies of the preceding years accumulated at the end of 1849 rould amount to 610 millions.

That it was impossible to increase the existing taxes and duties, which are already oppressive, in the present critical circumstances. That it was equally impossible to raise a new loan at reasonable terms. That they could not, for a long period, hope for a progressive increase of the public revenue.

public revenue Since there is a permanent deficiency, it must lead to a bankruptcy if an eroic remedy is not applied.

M. Billault's system has been negatived by the majority. 397 votes

have voted against the proposition and 390 have voted for it. M. Passy had announced to all his friends that if such a proposition had been adopted he was determined to resign. It is true that such a consideration had not a great weight with the majority of the

chamber, who desire a change of the cabinet. The chamber had also taken another vote favourable to the minis-try. The demand to accuse the cabinet for the presentation of the anti-club bill has been repelled by a majority of 458 to 250. The chamber decided that the proposition should not be sent to the

bureaux.

P.S.—The following are new particulars of the conspiracy, which seems to have existed before Monday last, and which has decided the government to take extensive measures on that day.

government to take extensive measures on that day. The clubs and secret societies of Paris and the provinces, recruiting the workmen of the suburbs, and forming an army of about 40,000 men, had determined to spread in the morning through all the quar-ters of the town—to take hold of the assembly, the Hotel de Ville, the Tuilleries—to make prisoners one hundred of *reactionary* representa-tives, who were specified beforehand; then, if the first attempt had succeeded, they would have declared the assembly disolved, the con-stitution supponded and they would have formed a committee of succeeded, they would have declared the assembly dissolved, the con-stitution suspended, and they would have formed a committee of public safety. A secret meeting had taken place during the night of Sunday last, in the office of the Journal la Revolution Democratique et Sociale, which is quite devoted to the mountain, in order to make the last arrangements for the execution of the plan. General Changarnier, warned of what was taking place, had ordered a visit to the office of that paper; but the members of the meeting, who had received a hint of the visit, had escaped, and no one could then be found of the conspiracy. On the morning of Monday last, when the conspirators descended to the streets, they were quite astonished when they saw that the suburbs were filled with troops and pieces of ordnance, that twenty pieces of cannon were stationed near the as-sembly, and that the Louvre, the Tuileries, and the Pantheon, were occupied by the troops. occupied by the troops.

Many arrests have been made, in consequence of that conspiracy, and several important documents have been seized at d'Alton Shee's and several other chiefs of the socialists. Among these documents, there is a curious programme of the revolutionists, where some names are appointed for the committee of public safety. The following are some of the clauses of this programme :-

The dissolution of the National Assembly, and the formation of the com mittee

The ansolution of the National Association, and the banaparte family. The annihilation of the constitution. The imprisonment of all the members of the Bonaparte family. The suppression of the liberty of the press during two years. The suspension of the habeas corpus during three months, for the purifications epurations). The judgment by a committee of all the officers or magiatrates who have been

- a party to the judgment of the transported. The establishment of a paper money for the repayment of the rente. The accusation of all those who were committed since 1830.

The right to labour.

The dissolution of the national guard. The adoption of the red colours with the triangle of the associations. The progressive imposts, the confiscation of the estates of all the emigrants, and of all those who should be condemned by the revolutionary tribunal.

The Moniteur publishes to-day the following telegraphic despatch, which proves that the conspiracy had adherents in several towns of departments :-

acpartments :---"The prefect of the Cote d'or department to the minister of the interior :---The conspiracy which was to break out at Paris was connected with the secret societies of this department. They have remained in permanence during the night of the 29th to the 30th. Some dragoons, led by two well-known socialists, having taken the regimentals of dragoons, have attempted to trouble, during the night, the public tranquillity. This little assemblage of people have broken an arm to an agent of police. The two chiefs, as well as the dragoons, will be arrested." arrested.

HALF-PAST FOUR.—There was a slight improvement of prices at the beginning of the market, in consequence of the majority which has negatived M. Billault's proposition : but as this majority is but of seven votes, and depends on the presence of a very limited number of representatives, the speculators had not yet great confidence. Everybody spoke of the great conspiracy which had been discovered. It was said also that M. Armand Marrast, on summoning M. Chan-garnier, on Monday last, into his cabinet, intended him to have been arrested by M. Forestier and M. Guinard. The funds had a down-ward tendency at the end of the bourse. The Three-per-Cents varied from 455 55c to 455 45c : the Five-per-

The Three-per-Cents varied from 45f 55c to 45f 45c ; the Five Cents, from 75f 80c to 75f 70c; the loan, from 75f 50c to 75f 35c; the bank shares, from 17f 25c to 17f 20c. Orleans, from 715f to 712f 50c. Rouen, from 455f to 452f 50c. Havre was at 241f 25c; Marseilles, at 182f 50c; Vierzin, at 253f 75c; Bordeaux, from 382f 50c to 385f.

689,378,734 58

689,378,734 58

<sup>689,375,734</sup> <sup>58</sup> We said last week that the Bank, desiring to remove as much as possible the moment when it will be forced to adopt a measure, in consequence of the increase of its circulation, which was fast ap-proaching the maximum of 450 millions, had begun to give specie instead of notes for all its small payments. I know that several par-ties who had to receive sums under 500f, could not obtain 100f notes, and were obliged to accept coin.

It is not, then, wonderful that the present return of the Bank shows, for the first time since many a week, a diminution on the item of notes. That decrease, however, is not yet important; it amounts but

## 1849.

## THE ECONOMIST.

to two millions ; and the bullion has undergone at the same time a w increase of five millions.

The bills discounted in Paris are nearly stationary, but they have decreased in departments by a sum of about three millions, and this result proves that the provincial trade is as much affected as the trade of Paris.

We see, for the first time, a sum of one million placed under the item of an advance to the Seine department.

The protested bills continue to decrease in a very satisfactory man-ner. At the beginning of June last they amounted to a total of 49 millions; now, the Bank has but 14 millions of protested bills, and it is probable that two-thirds of this sum will be paid back.

The account current with the Treasury continues to increase. It has improved this week by five millions; but it must be borne in mind that the Treasury received, on January 20, a new instalment of the last loan of 175 millions: a part of that sum has been sent to the Borne Bank.

The preceding accounts, compared with those of last week, exhibit

An increase of bullion in Paris of	2,106,076	2	
An increase of ditto in branch banks of	3,234,996	0	
A decrease of overdue bills of	159,733	36

### From our Monte-Videan Correspondent.

From our Monte-Videan Correspondent. We hear from private letters that the French government have at length determined on sending out a military expedition. One fact is certain : the French authorities here have received orders to sus-tain Monte Video at all risks, and the contingent of 40,000 f monthly is for the present to be continued. Mr Southern was, as I informed you, not admitted by Rosas as minister plenipotentiary. It appears that, not satisfied with being rejected, he wrote another dispatch, in which he affirmed that the British government had a right to interfere in the Plate question, as it was pledged to maintain the independence of the Banda Oriental. This communication gave rise to a long rejoinder from Rosas, who per-sisted in refusing to receive Mr Southern as minister, and stated that he could receive no further official communication from him ! Mr

sisted in refusing to receive Mr Southern as minister, and stated that he could receive no further official communication from him! Mr Southern, therefore, remains at Buenos Ayres as a private individual. It appears that half-an-hour after he had received Rosas's letter, for-bidding further official correspondence, he received a handsome pre-sent of sweetmeats from Mannelita, Rosas's daughter. Of course Mr Southern, who was married to a Spanish lady, and was a resident for many years in Spain, understood the additional delicate insult. Sir Thomas Herbert was recently on the point of leaving this for Rio Janeiro, but was detained at the request or by the order of Mr Southern, and he does not appear well pleased at it. A French man-of-war transport has recently arrived with stores and ammunition, which, it was reported at Rio and here also on her arrival, were in-tended for the French settlements in the Pacific, but the ship being leaky will be dismantled and remain here. It is believed this is merely a blind, and that her real destination was the River Plate. It Rosas is daily increasing the number of his soldiers, and has lately Rosas is daily increasing the number of his soldiers, and has lately passed troops and horses over to Entre Rios, which are believed to be intended for this country, to act under the orders of Urquiza,

## Amperial Parliament.

HOUSE OF LORDS.

Thursday, Feb. 1, 1849.

On Thursday the session was opened by the Queen in person, with the usual rmalities. The following was

THE ROYAL SPEECH.

My LORDS AND GENTLEMEN. The period being arrived at which the business of Parliament is usually resumed, I have called you together for the discharge of your important duties.

duties. It is satisfactory to me to be enabled to state that both in the north and in the south of Europe the contending parties have consented to a suspension of arms for the purpose of negociating terms of peace. The hostilities carried on in the Island of Sicily were attended with circum-stances so revolting, that the British and French Admirals were impelled by motives of humanity to interpose and to stop the further effusion of blood

I have availed myself of the interval thus obtained to propose, in conjunction with France, to the King of Naples, an arrangement calculated to produce a permanent settlement of affairs in Sicily. The negociation on these matters is

still pending. It has been my anxious endeavour, in offering my good offices to the various contending Powers, to prevent the extension of the calamities of war, and to lay the foundations for lasting and honourable peace. It is my constant desire to maintain with all Foreign States the most friendly relations. As soon as the interests of the public service will permit, I shall direct the papers connected with these transactions to be laid before you. A rebellion of a formidable character has broken out in the Punjaub, and the Governor-General of India has been compelled, for the preservation of the peace of the country, to assemble a considerable force, which is now engaged in military operations against the insurgents. But the tranquillity of British India has not been affected by these unprovoked disturbances. I again commend to your attention the restrictions imposed on commerce by the Navigation Laws.

the Navigation Laws. If you shall find that these laws are in the whole or in part unnecessary for the maintenance of our maritime power, while they fetter the trade and industry, you will no doubt deem it right to repeal or modify their provisions. GENTLEMEN OF THE HOUSE OF COMMONS, I have directed the Estimates for the service of the year to be laid before you ; they will be framed with the most anxious attention to a wise economy. The present aspect of affairs has enabled me to make large reductions on the Estimates of last year. My LOORDS AND GENTLEMEN, I observe with satisfaction that this portion of the United Kingdom has remained tranquil amidst the convulsions which have disturbed so many parts of Europe.

Europe. The insurrection in Ireland has not been renewed, but a spirit of disaffection The insurrection in iretand has not been renewed, but a spirit of disarcetion still exists, and I am compelled, to my great regret, to ask for a continuance, for a limited time, of those powers which in the last session you deemed necessary for the preservation of the public tranquillity. I have great satisfaction in stating that commerce is reviving from those shocks which, at the commencement of last session, I had to deplore.

The condition of the manufacturing districts is likewise more encouraging than has been for a considerable period. It is also gratifying to me to observe that the state of the revenue is one of proit I gre eive improvement.

I have to lament, however, that another failure in the potato crop has caused

I have to lament, however, that another tailure in the poteto crop has caused very severe distress in some parts of Ireland. The operation of the laws for the relief of the poor in Ireland will properly be a subject of your inquiry; and any measure by which those laws may be bene-ficially amended, and the condition of the people may be improved, will receive

my cordial assent. It is with pride and thankfulness that I advert to the loyal spirit of my people, and the attachment to our institutions which has animated them during a period of commercial difficulty, deficient production of food and political revolution

I look to the protection of Almighty God for favour in our continued pro-gress, and I trust that you will assist me in upholding the fabric of the con-stitution, founded as it is upon the principles of freedom and of justice.

After the delivery of the speech, her Majesty withdrew, and the house adjourned until 5.

The evening session in the House of Lords was opened by Lord Bruce, who, after congratulatory remarks upon the state of our foreign relations, our financial condition, and the pacification of Ireland, moved the address, which was as usual an echo of the speech. Lord Bateman seconded it. Lord Brougham disapproved of the proposed reduc-tion in the army and navy, and condemned in strong language the agitation for reterement

retrenchment.

After a few words from Lord Beaumont, and the Earl of Winchelsea, Lord Stanley rose to move an amendment. He considered the alleged in-crease of prosperity to be greatly exaggerated; dwelt at some length on the unfavourable state of our foreign relations and the fruitlessness of the policy lately pursued, considered the condition of the continent, and the disaffection existing in Ireland, and our colonies, as alarming, and professed to be aslounded at the audacity with which the ministers had made her Majesty declare that the aspect of affairs was such as to enable them to effect large reductions in the 

such as to entitle us to address you in the language of congratulation; and that a large portion of the sgricultural and colonial interest of the empire are labouring under a state of progressive depression calculated to excite serious sourcements and arguing the series of the series of the series and the series of the ser apprehen sion and anxiety.'

The Marquis of Lansdowne, in a speech of considerable length, defended e ministerial policy, which was again warmly attacked by the Duke of the Richmond.

Their lordships then divided on the amendment of Lord Stanley, when the numbers were-For the amendment, 56; sgainst it, 52; majority for minis-

ters, 2. Their lordships then adjourned till Monday.

HOUSE OF COMMONS.

## Thursday, Feb. 1.

In the House of Commons the address to Her Majesty was moved by Lord H. Vane, and seconded by Mr Bunbury. Mr Disraeli considered that facts did not bear out the speech from the throne in its assertion of increased national prosperity. The hon, member then en-

tered upon a pungent criticism of the state of our external relations, from which tered upon a pungent criticism of the state of our external relations, from which he passed to the subject of financial reform, ironically complimenting the min-isters upon having become converts to this great principle, and expressed his supprise that the "large reductions" promised in the speech should be the result of the "present aspect of affairs," which, in his opinion held out little promise of means of reduction. Mr Disraeli closed with moving an amendment declaring that neither our relations with foreign powers, nor the state of the revenue, manufactures or commerce, were subjects of congratulation. Mr H. Grattan rose to propose an amendment of the paragraph relating to Ireland. The urged the necessity of repealing the Irish poor law, stigmatised the proposition for continuing the suspension of the habeas corpus act, and de-taied that there had been any insurrection in Ireland. The purport of his amendment was to pledge parliament to remedy the distresses of the Irish people.

amendment was to pledge parliament to remedy the distresses of the Irish people. This amendment was seconded by Mr. John O'Connell; and after a short speech from Mr Fagan, also upon Irish topics, Lord John Russell rose. With respect to Ireland, he begged the house to suppend its opinion, until the subject should, as it would shortly, come on for specific discussion; and with respect to the Irish poor law, his intention was to propose that its operation should be inquired into by a committee. The noble Lord replied very briefly to some of the observations of Mr Disraeli respecting the state of our commercial and foreign relations, upon which he said the house was not yet in a condition to form an opinion. Europe had been convulsed, yet, had this country been even in danger of being involved in hostilities? If much had been the result of their measures, Government at least deserved this— most to be condemned on the first night of the session. Mr E. B. Roche, spoke at some length in support of Mr Grattan's amendment. After a few words from Mr H. Herbert, Mr Hume complained that nothing was said of the inequality of taxation and of the burden of taxation. The hon. member then denounced what he termed

Mr Hume complained that nothing was said of the inequality of taxation and of the burden of taxation. The hon member then denounced what he termed the disgraceful proceedings in our colonies, which he wondered had not driven them to desperation.

The house then divided upon Mr Grattan's motion, when the numbers were— or the original motion, 200; for the amendment 12; majority, 188. On the motion of Mr Stafford, the debate upon the other amendment was adto th

#### Friday, Feb. 2.

Friday, Feb. 2. The Speaker took the chair at four o'clock. New writs were ordered for the county of Donegal, and for Cardigan. After the presentation of petitions on various subjects, and some conversation respecting the proposed improvements in the business of the house, the claims of the Raja of Sattara, Church Reform, police, and the Tooting affair; and after Mr Grattan had given notice of his intention to move for returns respecting the late Irish insurrection, and should move a call of the house, when the continuance of the suspension of the habeas corpus act was proposed, the house resumed the adjuncted debate on the adjunct. adjourned debate on the address.

adjourned debate on the address. Mr A. Stafford considered that there was a manifest re-action on the question of free trade, and drew attention to the late meetings in proof of the change that had taken place in public opinion. He expressed his surprise that the govern-ment should propose to leave the question of the Irish poor law to a committee, and after giving utterance to his opinion on the state of Ireland, and some remarks on colonial affairs, stated that he should support Mr Disraeli's amend-ment. ment.

ment. Sir William Somerville defended the policy of the government in the matter of the Irish poor law, and proceeded to criticise the exaggeration of Mr Grattan, in doing which he succeeded in raising a laugh at his expense. After Mr Grattan had explained, Sir John Walsh followed the example of Mr Stafford, in condemning the

Sir John Walsh followed the example of Mr Stafford, in negligence of the government respecting the Irish poor law.

He then entered in the Sicillian question, and was [LEFT SPEAKING.]

## News of the Weteek.

### COURT AND ARISTOCRACY.

THE QUEEN and the royal family remained at Windsor Castle until Wed-meday, when her Majesty returned to town for the opening of Parliament. On Thursday the Queen went in state to open the Houses of Parliament, and in the course of the afternoon the royal party returned to Windsor. The following visitors have taken their departure from Windsor Castle this week:--The Prince of Orange, attended by Count Schimmelpenninck, the Netherlande' Minister, Admiral Arnens, Captain Gudicher, the Hereditary Prince and Princess of Parma, attended by the Countess Lopez, the Countess of Jersey, Lady Clementina Villiers, the Earl of Lincoln, Sir George and Lady Grey, Sir Charles and Lady Mary Wood, and the Right Hon. T. P. Leigh.

On Wednesday evening, Lord John Russell gave a parliamentary dinner to a numerous party of members of the House of Commons. On Wednesday evening, the Marquis of Lanedowne, as Lord President of the Council, gave a grand full dress banquet, at Lansdowne-house, to a numerous circle of the supporters of the ministry in the House of Lords, and to the mover and seconder of the address to her Majesty. Lord Stanley also, as leader of the opposition in the House of Lords, gave a grand political entertainment on Wednesday evening, at his residence in St James's square, to an influential circle of protectionist peers. Mr G. Anderson, who was some time acting governor of Bombay, and a member of the council, was on Wednesday appointed by Earl Grey to the governorship of the Mauritius.

ember of the council, was wernorship of the Mauritius.

Mr Wyse is forthwith to be appointed British Minister at the Court of Athens. FOREIGN OFFICE.—Mr William Burnett has been appointed as Consul at Demerara, for the Republic of Venezuela, and Eustace W. Barron, Esq., to be her Majesty's Consul at San Blas.

#### METROPOLIS.

TRINITY CORPORATION.—Lord J. Russell has been elected one of the elder brethren of the Trinity house, in the room of Viscount Melbourne. \_ Mr Lane, the Egyptian traveller, has had a pension of 100*i* a year bestowed upon him by Lord John Russell.

REFORM IN THE DOCKTARDS .- On Saturday an Admiralty circular was issued ARFORM IN THE DOCKTARDS.—On Baturday an Admiratly circular was issued to the various dockyards, transmitting 26 minutes, which consist of a plan for reducing the expenditure and increasing the efficiency of the dockyard estab-lishments. The circular, which is signed by the secretary, says:—"The only way to disarm the jealousy with which the growing expenditure of the naval yards

is viewed, is, to satisfy parliament and the country, that these great national es-tablishments are conducted with the same regard to economy, the same honest desire to make promotion dependent upon merit, and the same scrupulous at-tention to those minute details of management upon which the loss or gain of a manufacturing establishment depends that in all private enterprises have com-stituted the secret of success." After which the circular proceeds to specify the various changes in organisation and finance that are to be made. MORTALITY IN THE METEOPOLIS.—Number of deaths from all causes regis-tered in the week ending Saturday, Jan. 27, 1849—Males, 573; females, 635; total, 1,208. Births in the week—Males, 814; females, 762; total, 1,576. Population enumerated in 1841, 1,948,369. The 1,208 deaths registered in the week show an increase of 39 on the average of five winters, but give a more favourable result than was obtained in the two previous weeks, when they were respectively 1,448 and 1,845. respectively 1,448 and 1,845.

Tavourable result than was obtained in the two provides weeks, when they were respectively 1,448 and 1,845. THE TOOTING CHOLERA CASES.—Another verdict of manslaughter was re-turned on Wednesday against Mr Drouet. This second verdict was found by the jury who have been for some days investigating before Mr Wakley the cases of the deceased pauper children removed from the asylum at Tooting to Chelses. REPRESENTATION OF THE CITY.—On Wednesday afternoon, a meeting of the electors of the City of London, who supported Baron Lionel Rothschild at the last election, was held at the London tavern, Bishopsgate street, Raikes Currie, Esq., M.P., in the chair, for the purpose of ascertaining the opinion of the constituency as to the course Baron Rothschild should alopt in the forthcoming session of parliament. A letter from Lord J. Russell was read, together with the pre-amble of an accompanying bill which proposed to modify the oaths. The follow-ing resolution was passed—" That this meeting having considered the draft of a bill to alter the oaths to be taken by members of parliament uot professing the Roman Catholic religion, and proposed to be introduced to parliament by Lord John Russell early in the approaching session, approves of the same, and tenders its thanks to his lordship for the earnestness, ability, and judgement with which he has advocated the claims of the Jews to be admitted to the legislature."

#### PROVINCES.

EIGHT LIVES LOST AT LANCASTER .- An inquest was held on Wednesday week, upon eight men who lost their lives by the upsetting of a boat on the river Lune, at Lancaster.

river Lune, at Lancaster. REDUCTION OF THE TAXES.—A meeting, principally consisting of farmers, was held in the County hall, Taunton, on Saturday, to petition parliament for a reduction of taxes and just economy. B. Escott, Esq., was called to the chair, and having addressed the meeting in support of its objects, moved the adoption of a petition, which he read, and which was carried unanimously. ANTI-MALT-TAX AGITATION.—A meeting of owners and occupiers of land was held at Newmarket on Tuesday last, when it was unanimously resolved, "That in the opinion of this meeting the malt tax is a most unjust and op-pressive burden upon the producing classes of this great kingdom. That the immediate and total repeal of the tax would be hailed as the commencement of just legislation towards the agricultural portion of the community, who are now obliged to compete with the comparatively untaxed foreigner." A petition to parliament was resolved upon.

obliged to compete with the comparatively untaxed foreigner." A petition to parliament was resolved upon. A VILLAGE DESTROYED BY FIRE.—On Thursday weak a fire broke out in the picturesque village of Greenend, near Sawtry, which destroyed nearly forty houses, nearly one half of the place. About half-past seven o'clock flames were observed issuing from the premises in the occupation of Mr Flanders, and a furious storm existing at the time, scattered the flames to the houses adjacent, which, on account of being thatched, ignited rapidly, the bulk of them being te-nanted by poor farming labourers. Two engines were brought into play, but were of no avail against the strong wind. The conflagration was not checked till nearly twelve o'clock at night. Every exertion was made by the rector and principal inhabitants to provide temporary shelter for the unfortunate people who had been burnt out of their houses. who had been burnt out of their houses.

who had been burnt out of their houses. REFEAL OF THE MALT TAX. — On Saturday a numerous meeting of farmers took place at Cambridge, to discuss the repeal of the malt tax, and agricultural prospects generally. It was argued that it was absurd to suppose that the farmer could pay the same wages with wheat at 40s as he could with wheat at 60s. It was therefore only justice to the poor man, that as government had given him low wages, it should also give him cheap beer. The following resolution was passed : — "That the tax on malt is most oppressive, crue!, and intolerable, as it is a most excessive tax on the principal ingredient of the poor man's bever-age, who, from his diminished wages in consequence of the reduced value of agricultural produce, is unable to procure it as heretofore." A petition to par-liament having been brought forward and multitudinously signed, the meeting dispersed.

AGRICULTUBAL MEETING AT BRIGHTON .- The Duke of Richmond took the AGRICULTURAL MEETING AT BRIGHTON.—Ine Duke of Richmond 2008 she chair at Brighton, on Friday, at the meeting of the Sussex Society for the Pro-tection of Agriculture. Speeches were made by Mr F. Ellman, the Duke of Richmond, and others, in the usual protectionist style; after which a memorial to Lord J. Russell was determined upon, in which it was stated that "the malt Alchioba, and others, in the usual protectionist style; after which a memorial to Lord J. Russell was determined upon, in which it was stated that "the malt tax is admitted by all parties, even by our greased opponents, to be agross injus-tice done us; but to this we have hitherto patiently submitted, partly owing to its importance in the national revenue, and partly in consideration of other com-pensatory circumstances. But henceforward we see ourselves about to be de-prived of every compensation, while the barley and hop growers, in particular, are rapidly approaching to insolvency, the growth of hops being attended, no-toriously, with a very heavy outlay in addition to the duty, and barley being at present almost unsaleable, in this maritime country, by the importation of a much heavier quality from France and other foreign countries." FINANCIAL MOVEMENT IN MANCHESTER.—On Thursday morning a meet-ing, composed of a number of gentlemen who attended the Free trade banquet the previous evening, convened by circular, was held in Newall's buildings, for the purpose of originating a new Financial Reform Association. It was moved by Mr. John Bright, M.P., and seconded by Mr. Richard Cobden, M.P., " That the resolutions of the meeting held in the Free trade hall, on the 10th of January, be confirmed and adopted by this meeting." A series of resolutions were proposed and carried forming an association for maintaining an efficient care over the registration of electors in boroughs and counties, and to promote the increase of the county electors by the extension of the 40s. freehold franchise,"

STOPPAGE OF RECRUITING .- Orders have been transmitted to the recruiting

STOPPAGE OF RECRUITING.—Orders have been transmitted to the recruiting officers throughout the country, to suspend all recruiting till further notice. REPRESENTATION OF BOLTON.—Sir Joshua Walmsley is pursuing his canvase indefatigably, it being his intention to call upon every voter. The friends of Mr Bridson are also in the field; but it is evident that, amongst the conservative party, there is an unusual degree of apathy.—Manchester Guardian. FATAL ACCIDENT ON THE NORH STAFFORDSHIRE RAILWAX.—On Thursday, as one of the porters at the Stoke station on this line was passing across the rails, he was knocked down by the engine of a train, which was just then run-ning in. The wheels went completely over parts of his body, causing such dreadful mutilation that he died in a few hours.

## 1849.]

THE FREE TRADE BANQUET AT MANCHESTER Took place on Thursday evening. The Free Trade hall was fitted up for the occasion, and accommodated, inclusive of the galleries, nearly 3,000 persons. At seven o'clock the chair was taken by Mr G. Wilson, who was surrounded on the platform by seventy of the most distinguished guests, including Mr Cobden, Colo-nel Thompson, Mesers Villiers, Gibson, M. Philips, Henry, Bright, Jackson, Williams, and several other members of parliament. Grace was said by the Der T. Snencer.

Williams, and several other members of parliament. Grace was said by the Rev. T. Spencer. After the repast had been concluded the chairman opened the proceedings by briedy referring to the apologies for absence which had been received from Mr Hume, Mr Fox, Dr Bowring, Mr Porter, Rev. Baptist Noel, M. Bastiat, and others, he concluded his introductory speech, by giving the health of the Queen. The next toast proposed by the chairman was the health of the Gueen. The next toast proposed by the chairman was the health of the Gree trade Members of both Houses of Parliament.—Mr Villiers responded to the toast in a speech in which he gave a brief history of the free trade agitation. He concluded a powerful speech amidst loud cheers. Mr Cobden, who was received with prolonged shouts of applause, next ad-dressed the meeting. He ridiculed the threatened attempt to bring back the days of protection, and took the character of the meeting before him as a suffi-cient proof that public opinion was unchanged as to the benefits of free trade. He felt somewhat indignant at the barefaced attempt now being made by the Duke of Richmond and others, to delude the farmers into the notion that the old cient proof that public opinion was unchanged as to the benefits of free trade. He felt somewhat indignant at the barefaced attempt now being made by the Duke of Richmond and others, to delude the farmers into the notion that the old system could be re-enacted. Fublic feeling had not gone back, it had advanced. It was not merely protective duties that were getting out of favour in this country, but, however strong or weak it might be at present, still there was firmly and gradually growing an opinion decidedly opposed, not only to duties for protection, but to duties for revenue at all. He ventured to say they would not live to see another statesman in England propose any customs duty on a raw material or article of first necessity like corn (cheers). He questioned whether any statesman who had any regard for his future fame would ever pro-pose another excise or customs duty at all. After some advice to the farmers, Mr Cobden said—the toast he had to propose was, "Free trade and peace, the best guarantees of popular rights, the best promoters of national industry, and the most effectual means for the reduction of national burdens." If free trade and peace were united, they would have something yet to do before they had finished their work. They might consistently co-operate to carry out the second object in the toast. Having secured free trade in oorn, they must secure peace also. He had no fear of war; he had not had for a long time. The nations of the world had all spent so much money in previous wars that they should reap the fruits of peace; they had not peace now, it was nothing but an armed truce; our warlike establishments cost us more every year now than a war cost us in the middle of last century : he did not call that peace. Notwithstanding all that had been said on that subject he ariteriat the second time. the fruits of peace; they had not peace now, it was nothing but an armed truce; our warlike establishments cost us more every year now than a war cost us in the middle of last century : he did not call that peace. Notwithstanding all that had been said on that subject he reiterated there never was a time when Europe was so predisposed to listen to advances made by the people of England on that subject as now. He was very glad to hear that there were prospects of making some little progress in the right direction during she ensuing session. This was a sign of progress, and the people in their different localities must united not only to put down the spirit of war, but to help those who in the House of Commons were prepared to bring forward measures to reduce our ex-penditure for warlike purposes (cheers). The hon gentleman, after some fur-ther remarks to the same effect, concluded amidst loud cheers by declaring that the germ of a great revolution had been laid by the meetings in that hall, and that it would expand and circulate round the globe, while its influence would only end with time itself.

that it would expand and circulate round the group that the propose the healths of only end with time itself. Colonel Thompson came forward amid loud cheering to propose the healths of the popular constituencies of the country, which had returned free-traders. He expressed his great satisfaction at the prospect of retrenchment, and held out the example of France, which was about to disband a large part of its army, as one worthy of our imitation.

promoted by the removal of all legislative restrictions." Mr Hope, of Fenton Barnes, having spoken, a party of glee-singers, stationed in the orchestra, gave Mackay's popular song "There's a Good Time Coming, Boys." The song was commenced a few minutes before 12 o'clock, and termi-nated at a few minutes past midnight. At its termination it was loudly ap-plauded. When the chairman could make himself heard, he proceeded to say— I believe, whilst our friends here were singing about the good time coming, the time has come (great applause). I propose we show our appreciation of it by giving three tremendous cheers. The proposition of the chairman met with an enthusiastic and prolonged res-nonse. Cheer followed cheers until the choices of the magnificent hall were

The proposition of the chairmain met with an entransmatc and protonged res-ponse. Cheer followed cheer until the echoes of the magnificent hall were awakened, hats and handkerchiefs were waved, and a scene of joyous and fer-vent welcome greeted the arrival of the 1st of February, 1849, the day upon which free trade, in its most extended sense, comes into active operation. G. Thompson, Esq., M.P., having addressed the assembly, and cheers having been given for sundry members of the late League, the assembly dispersed at at half-nest twelve.

at half-past twelve.

## SCOTLAND.

FINANCIAL REFORM .- A public meeting of the inhabitants of Leith favour-

FINANCIAL REFORM.—A public meeting of the inhabitants of Leith favour-able to financial reform was held in the Assembly rooms there on Saturday last; Provost M'Laren in the chair. A letter from the Lord Advocate, the member for the burgh, dated 17th Jan., was read, stating that no oue could be more deeply impressed than was his lordship with the necessity for financial reform; but that he regretted that it would not be in his power to attend. AN EXPLOSION startled the inhabitants of Edinburgh on Thursday. An in-tense vibration of the earth shook the houses near the Canongate; the inmates were in some cases thrown down, and windows were broken. The attention of the crowds who soon thronged to the spot was drawn to a sheet of bright flame arising from the gas-holder of the Edinburgh Gas Company. The fire continued to blaze with great fury until gradually, as the gas was consumed, the gas-holder immerged in the tank amongst the water beneath. There were in the gas-holder at the time nearly 300,000 cubic feet of gas. The total damage was es-timated at about 2,000!. ated at about 2,0002

Imated at about 2,000%. EXTENSIVE FORGERIES IN GLASGOW.—On Wednesday week a series of for-geries were discovered to have been perpetrated by Mr Alexander Buchanan, the senior partner in the firm of Buchanan and Anderson, gingham and pullicate manufacturers, 62, Queen street. Buchanan, it is said, for a considerable period was in the habit of returning the forged documents a day or so previous to their becoming due; but on Wednesday this precaution had been neglected, and a

bill of 6794. was presented by one of the banks to the ostensible acceptors, W. B. Higgins and Co., who, of course, were astonished at the production of such a document. This caused the bank to communicate with the individual, who, on the pretence of coming to the office to explain, made his eccape, and has not since been heard of. The extent of the forgeries is variously stated at from 12,000/ to 20,000/, but at any rate it is generally believed that there have been forgeries to the amount of 7,000/ on use of the Glasgow banks, and 5,000/ on an-other. oth

125

THE ANCIENT STONE BRIDGE AT INVERNESS has been destroyed by an over-flow of water coming down from Lochness. The west side of the town has been much flooded, and most of the poorer population will suffer considerably. THE PAPER DUTY.—The paper makers are again bestirring themselves to get rid of the excise duties. At a meeting held in Edinburgh last week, these parties submitted the various grounds on which they claim relief from an impost which they allege presses with peculiar hardship on their manufacture. In the glass trade the visitations of the excise and the numerous and perplexing re-strictions that attended the levying of the duty were felt to be so oppressive, besides retarding the advance of the manufacture, that the government of Sir Robert Peel at length consented to sweep away the impost entirely. The paper makers have all along contended that they have as relevant ground for relief, whether looking to the annoyances they were exposed to in the course of the process, or to the public policy in removing the obstructions to the due development of an important branch of national industry.—Caledonian Mercury.

### IRELAND.

DUBLIN WEEKLY TRADE REPORT .- The indications lately visible of resuscitation and amendment in the commercial prospects continue, and a cheerful and buoyant feeling has prevailed during the preceeding week. Collaterally with this feature, the growing ease and extension of credit have induced hope with this feature, the growing ease and extension of credit have induced nope and favourable surmises regarding fature prospects, though the tangible results must necessarily be tardy. However, indications of the reverse still continue to be many and powerful: the state of the country is discouraging, affording ample and grievous exemplification of the existence in unabated force of social evils, entailing the destruction of classes, and the spread of destitution in the country. In the markets of foreign and colonial produce an average extent of business has been transacted, without alteration in the value worthy of notice, and the conservation continues for the assume very steady — frequency formed.

and the consumption continues for the season very steady.—*Preeman's Journal*, CATHOLIC ENDOWMENT.—It is confidently asserted that the question of en-dowing the Irish catholic clergy will be brought before parliament in the middle of the present session by Mr Keogh, the conservative and catholic M.P. for Athlon

A NEW WEEKLY JOURNAL, The Province of Munster, has been started at Cork, on the ultra-popular interest. It flings overboard repeal, and says that nationality, in any of the senses in which that word has been understood in Ire-land for the last fifteen years, is impossible.

In the union of Listowell, in Kerry, the rates are 12s in the pound. There are 14,000 paupers receiving out-door relief, besides 2,000 paupers now in the workhouse.

AMERICAN PORK.-The importation into Dublin this week of fresh American pork has startled some of the Irish graziers. Mr Smith, a Dublin provision mer-chant, has been the importer of fifty pigs packed in ice, and they were perfectly sweet and fresh.

chant, has been the importer of firty pigs packed in the, and they that particular sweet and fresh. THE ANTL-POOR-LAW AGITATION still continues. A meeting of the gentry and ratepayers was held in Clare on Saturday, at which a string of resolutions similar to those lately adopted at such meetings, were passed. FLIGHT OF FARMERS.—The migratory panic seems to be on the increase. The subjoined extract of a letter from Cloumel, illustrates the progress of the social revolution :—" The flight of tenants and small farmers to America from this part of the country continues unabated—indeed, it is on the increase ; dozens and dozens of what were considered sound and respectable farmers are giving up their lands and leaving the homes of their fathers. Their flight is in many cases unaccountable, and not attributable to harsh landlordism. INCENDIARISM IN ULSTER.—A flax mill, the property of Mr. Ledlie, at Mul-laglass, was destroyed by incendiaries on Monday night. Everything in the in-terior of the concern was consumed. FLIGHT OF LANDLONDS.—The Limerick Ecaminer states that " no less than twenty Clare proprietors are about to sell out their estates and seek a home in

talked of. CENTRAL GERMANY. A congress of German princes is about to be held at Frankfort. Chevalier Bun-sen is said to have been the bearer of an important note from Berlin, in which the government, more or less distinctly, recommends the holding of such a con-gress, with the view of adjusting those points which still offer an obstacle to the definitive settlement of the German constitution. Among other arrangements, it would suggest that while the other integral parts of the late confederation are moulded, as is proposed, into one Federatine State, Austrin shall remain on the same footing with this re-constituted whole that it occupied previously as a con-federate state. federate state.

The Frankfort Assembly has decided that the title of the Regent of Germany

The Frankfort Assembly has decided that the title of the Regent of Germany shall not be heriditary, by a majority of 270 to 216. This is considered as a de-feat of the Prussian party. The National Assembly also decided, by a majority of 214 to 205, that the title of the supreme head of Germany should be "Emperor of the Germans;" that he reside at the seat of the government of the empire, and permanently so during the sitting of the diet; that during his absence he be accompanied by one of the central ministers; that the Emperor have a civil list; that his person he invited her over the power through responsible ministers. Notice one of the central ministers; that the Emperor have a civil list; that his person be inviolable; that he excercise his power through responsible ministers, nomi-nated by himself; that the signature of at least one of the central ministry be affixed to every state document, in order to render it valid; that the Emperor appoint the ambassadors and consuls of the empire; that he have the privilege of declaring war, making peace, concluding treaties with foreign powers (with the co-operation of the diet, so far as is constitutionally prescribed), convoking and closing the diet, discolving the people's house, and proposing laws. The result of the Prussian elections is said to have given considerable alarm to the Frankfort ministry, and has rendered them doubtful of popular sup-port.

AUSTRIA. On the 19th the Diet was occupied with the discussion of the 4th section of the Bill of Fundamental Rights. This motion, which embodies the principle of the Habeas Corpus Act, was unanimously voted. Count Collerodo Walsee has been nominated ambassador extraordinary and minister plenipotentiary at the court of St James's. The army corps of Count Nugent, 35,000 strong, has received orders to march to Italy. It is thought that Kossuth will endeavour to pass into the Mamroscz district, in order to proceed through the pass of Urok towards Unghvar, or towards Verecke. Prince Windischgratz has arrived in Olmutz. According to some accounts Gen. Bern was marching tewards Lemberg (Gallicia) closely pursued by the imperial troops. pursued by the imperial troops.

#### PRUSSIA.

By accounts of the 29th ult. it is stated that the electors who are to nominate the deputies of the Upper Chamber for Berlin had been chosen on that day. The result of the election had, in nearly all the districts, been favourable to the

The result of the election had, in nearly all the districts, been favourable to the Conservative party. The Prussian Cabinet had published a circular note to its ministers at all the German courts, in which it distinctly states that the King of Prussia will not accept any position that may be offered him by the Central Government without the assent of the other powers. The primary elections have terminated in favour of the democratic party— not less than 800 out of the 1,225 chosen electors in the second degree being their partisans. In Madgeburg the democrats returned 237 out of 275 electors in the secondary degree. Even in Westphilia they have gained the upper hand. A complete panic had set in at court, and it is generally believed that, like the Nothomb ministry, in Belgium, the Prussian one will retreat "before the elections," without awaiting the approaching storm. It was rumoured as pro-bable that in consequence of this unexpected result some modification of the system of election would be attempted.

### SAXONY.

SAXONY. At Dresden ministers announced, on the 26th instant, in both chambers, that they all Lad tendered their resignations to the king, after representing to his majesty the difficulties which beset them in their attempts to promote the wel-fare of their country. This announcement created a great sensation. The vice-president subsequently stated that the chambers did not present any difficulty in the way of ministers, but that the obstacles to their continuance in office must be sought for in the introduction into Saxony of the fundamental rights of the German nation, as drawn up at Frankfort. In political circles the resignation of the Saxon ministry is accounted for on these grounds: first, that they would experience insurmountable difficulty in carrying out that portion of the bill of fundamental rights which declares that no state church shall exist, and that no religious community shall enjoy any privileges over and above those of any other; second, that there is a general repugnance in a certain high quarter to promulgate that bill in Saxony; and, third, and this is, perhaps, the real ground—that on almost every occa-sion on which ministers opposed motions in either chamber, those motions were carried; so that, in point of fact, the cabinet does not possess the confidence, it would secem, of the parliamentary majority.

#### ROMAN STATES.

ROMAN STATES. The provisional government on the 17th ult, issued a proclamation stating that the National Constituent Assembly of Rome will assume the powers of an Italian Constituent Assembly, in so far as it would form a part of that Assembly. It shall not have the character of a partial or local representation, but of that of twenty five millions of Italians, all united in the same sentiment, that of developing in common the eras of the great regeneration. Rome will thus lay the first stome of that edifice which shall unite in one end, in one existence, in one nation, the different people of the ancient Queen of Europe-the Italian Constituent Assembly. When this proclamation was read at Civita Vecchia, the enthusiasm was unbounded. Constituent Assembly. When the enthusiasm was unbounded.

the enthusiasm was unbounded. On the 19th a skirmish occurred between some soldiers and the dragoons on guard. They were principally recruits enlisted by General Zamboni, who was lately arrested for high treason, and some of them were literated convicts whom Zaochi had let out of gaol at Bologna. It was not difficult to pursuade them to get up a cry for the liberation of Zamboni; and, in spite of their officers, they went up in a body to the ministers then sitting in council at the Quirinal, to require his instant enlargement. While some of them were admitted to parley with government, the rest, impatient of delay went in arms to the spot where they met with their discomfiture. All chance of an outbreak against govern-ment on the part of the military is rendered less probable than ever by the ridiculous figure made on this occasion. According to letters from Rome of the 22d ult., the election of the members

diculous figure made on this occasion. According to letters from Rome of the 22d ult., the election of the members the Constituent Assembly had taken place there with the most perfect of the Co

#### NAPLES.

NAPLES, On the night of the 18th, ac collision took place between two government steamers, running between Naples and Gaets, one having on board the King of Naples and Count Trapani, and the other M. Oustenhoff, secretary of the Rus-sian Legation, Count Caraffa, and four cardinals. Frightened at the shock, M. Oustenhoff, Count Cataffa, and some others, threw themselves into the sea. M.

Oustenhon, count catana, and some others, threw definition of the second casion of the eternal hatred was sworn.

eternal hatred was sworn. The censorship of the press is being carried to a great extreme in the Neapo-litan dominions. There have been several fresh suppressions, and these have been made in a most offensive manner: police authorities nail up the printing offices, thus throwing out of employment many persons, and adding to the misery and poverty which stalk through our streets at noon-day. As regards the *Tele-*grafo, not being able to find the printer, the authorities arrested his son, and imprisoned him moreover. The office was afterwards nailed up, the types hav-ing first been mixed and thrown purposely into the greatest disorder, and the printer dragged to prison. Other papers have received the same treatment.

#### UNITED STATES.

sened the demand for all descriptions of live stock. All the circumstances, how-ever. within their knowledge and anticipation led them to hope for a highly favourable business henceforward.—The report having been adopted and some routine business executed, the meeting broke up. BELIANCE MUTUAL ASSURANCE SOCIETY.—The half-yearly meeting of the members of this society was held on Tuesday at the society's offices, King Wil-liam street; H. F. Prinsep, Esq., in the chair.—The chairman said is alforded him great satisfaction that he was able to state that the society was in a pros-perous condition. The property of the society might be stated at 25,0004, and of this amount 17,0001 was invested in the public funds. As a proof of the caution exercised by the directors when ensuring lives he might state that they had declined proposals to the amount of 29,0004, and that the average age of the members of the society was only forty years. He was happy to inform them that the business of the society was not confined to the United Kingdom, for one agency had already been established in Germany, and another in India. After some further business had been disposed of, the report was adopted, and a vote of thanks having been given to the chairman and directors, the meeting separated. separated.

a vote of thanks having been given to the chainman and directors, the intering separated. UNITED MEXICAN MINING ASSOCIATION-—The half-yearly general meeting of the members of this association was held on Wednesday at the offices, No. 5, Finsbury circus; Sir John Easthope in the chair. In eleven months of the year 1848 the outlay in that mine had been 400,024 dollars, the returns 634,985 dollars, and the profit 234,961 dollars; whilst in eleven months of the year 1848 the outlay in that mine had been 400,024 dollars, the returns 634,985 dollars, and the profit 234,961 dollars; returns 315,046 dollars, and the profit 13,547 dollars. The amount received towards the payment of the debt was, in 1848, 126,176 dollars, which now reduced the debt to 543,262 dollars. The receipts of the company for the past year amounted to 51,113/ 138 2d, including 14,174/168 4d in Exchequer bills, cash in bankers' hands, &c., interest 719/887d, and transfer fees 47/ 128. The expenditure had been 51,113/ 138 2d, including the following items: viz., quicksilver shipped to Mexico, 9,307/108 11d; expenses in London, and sundry payments, 11,816/ 178 11d; Exchequer bills and bills of exchange, &c. 22,989/ 4s 4d; and 500 bottles of quicksilver for shipment to Mexico, 6,000/. A dividend of 7s 6d per share having been declared payable, a vote of thanks was given to the chairman and directors, and the proceedings terminated.

IMPORTATION OF GOLD FROM CALIFORNIA.-The Charles Brownell, from Valparaiso to Liverpool, has brought gold bars to the value of 15,000l, from California.

California. IMPORTATION OF CORN.—By virtue of the Act 9 and 10 Vic., cap. 23, from and after the 1st day of February, 1849, the following duties shall be charged, viz.: upon all wheat, barley, bere or bigg, oats, rye, peas, and beans, the quarter, 1s; upon all wheat, meal and flour, barley meal, oatmeal, rye meal, and flour, pea meal and bean meal, the cwt,  $4\frac{1}{2}d$ ; buck wheat, the quarter, 1s; buck wheat meal, the cwt,  $4\frac{1}{2}d$ ; maize or Indian corn, the quarter, 1s; Indian corn meal the cwt  $4\frac{1}{2}d$ meal, the cwt. 4 dd.

A PLAN FOR THE EQUALIZATION OF THE POOR RATES, &c. I L. HUTCHINSON. Second Edition. Printed for the Author By G.

It is not our intention to state any opinion in this part of our journal on an equalization of the poor rate, as proposed by Mr Hutchinson, of 1s 6d in the pound; or on a national rate for the relief of the poor, now advocated by some boards of guardians; or on the law of settlenow advocated by some boards of guardians; or on the law of settle-ment, the abrogation of which is involved in both schemes. Theoret-ically and practically there is no question more encumbered with difficulties than the poor law. We have proofs of the practical diffi-culties of the subject almost every session of parliament, for some measure concerning it is sure to be discussed and never satisfactorily disposed of. Theoretically it is easy enough to say that the rich, out of their superabundance, ought to provide for the poor; but when that assertion comes to be applied in detail, the anomalies and discrepancies are numerous. A rick man may be merely an indus-trious, careful man, who has toiled incessantly and denied himself enjoyments—who has made his land fruitful, and become rich by earnest labour and frugality. A poor man may be one who has been given up to sloth—who, in the vigour of youth, has indulged in all kinds of dissipation—who has wasted his health and talents, so that he has neither strength nor skill to work—and has wasted his sub-stance, so that he has lost more than the other has gained. It seems something like a monstrous injustice to compel the former to support something like a monstrous injustice to compel the former to support the latter. It is an encouragement to vice. If he choose, out of his superfluity, to give something in charity to the relief of a brother's wants and the improvement of his own heart, well; but to tax him to this end seems scandalous. Again: a rich man may be one who, by the action of the law, which the poor man combines with him to en-force, inherits great property; and the poor man may be one who has

laboured, like a farm-labourer, all his life, and never had the means of enjoyment--who has been denied his fair share of opportunities to get wealth, by the very law which he has supported : and there seems no injustice in compelling such a rich man to pay something to support his poor brother. One rich man's property may be the gift of the state—as the estates of Ireland that were bestowed by Crom-well on his followers,—and its increase in value may be the result of the growth of population and personal property. Another man may acquire wealth solely by his personal exertions, by some ingenious and useful invention, and by trading with other lands; he may owe nothing whatever to the laws which may have hemmed in his enter-prise and taxed its products, while the rich landowner is exclusively indebted to the law for the quiet and continued possession of his estates. To make such different kind of property pay equally to maintain the poor seems unjust. It is shown by the advocates of a national system of rating, that certain counties, chiefly agricultural —Bucks, Dorset, Essex, Oxford, Southampton, Sussex, and Wilts,— pay, on the average, at the rate of 28 9d in the pound; whilst Chester, Lancaster, Lincoin, Middlesex, Northumberland, Stafford, and York, pay only Is 6d. This difference may arise from good management in the latter counties, or from the introduction into them of new arts : and the rateought surely not be equalized—punishing the good management laboured, like a farm-labourer, all his life, and never had the means the rate ought surely not be equalized-punishing the good managem of some counties, and making those which are ingenious and skilful bear equal burdens to those which are less skilful and worse managed. The original idea apparently was, that the owners of the soil, who were also the masters, and almost the owners, of all the people on it, should support each one his own serfs and dependants. But such a should support each one his own serfs and dependants. But such a state of things has long passed away, and such an idea is not applic-able to the multifarious wealth and multifarious employments of modern societies. Theoretically, then, as well as practically, there are discrepancies, anomalies, and injustices, connected with the very principle of a poor law. Nevertheless, practically, the poor must be sustained—the various descriptions of property now in existence must be assessed to their support; and it is the business of the legislator, who never can act exclusively from abstract theories, but must con-nect what he wishes should be with what is and has been, to make at every moment those anomalies, discrepancies, and injustices, as small as possible. We are inclined to think that any general uniform as possible. as possible. We are inclined to think that any general uniform national system of rating for the support of the poor is not calcu-lated to fulfil this practical requirement. It looks pretty : it is per-haps a logical deduction from the principle assumed : but it is not adapted to the various and different kinds of property, nor to the various means by which wealth is acquired and poverty incurred. Without giving our assent, therefore, to Mr. Hutchinson's scheme of reform, we must say that he has drawn up a formidable bill of in-dictment against the present system ; that he has proved the present law of settlement to be full of wasteful absurdities—the present system of rating to be unequal and unfair : that he has taken a great system of rating to be unlequal and unfair; that he has taken a great deal of pains to investigate the working in detail of the present sys-tem; and that his book should be read in conjunction with the de-bates in parliament and the propositions there made for amending the

law, by those who wish to understand the subject. The present edition is both enlarged and improved.

## THE BRITISH QUARTERLY REVIEW. No. XVII. February. Jackson and Walford.

Jackson and Walford. THE British Quarterly opens its present number with a powerful essay on the Style of Macaulay. He is described as a superficial thinker, and contrasted with Carlyle, a more potent delver into the heart of man. The excellence of his writing is admitted and abundantly praised, but at the expense of his philosophy. The reviewer must himself be one of those profound thickers who see much further into matter than other men, and detect such qualities as the infinite, the invisible, and the impalpable. He seems to quarrel with Mr. Macau-lay because the latter is not for ever inquiring into the mysteries of "What an 13 Whence came 13 What do I here 3 Whither do I go 3" which inquirers of all ages have completely failed to solve. Religion alone explains them; and we cannot comprehend a religious man, in the ordinary sense of the words, either entertaining a doubt or thinking it worth while to make an inquiry. Nevertheless the reviewer does ample justice to the writings of the rhetorician : ex. gr.—" It is im-possible to read any number of pages without delight, and the stupid-est of his readers never yawned over his columns. One peculiarity in his fluent narrative is worthy of remark, and deserves imitation : it is the rarest of all peculiarities—graceful rapidity. There is no hurry, no abrutheses is all the transitions are argued is and none remained to the remetheless is the rarest here is no hurry. is the rarest of all peculiarities—graceful rapidity. There is no hurry, no abruptness; all the transitions are gradual; and nevertheless it dwells with such minuteness on every point that it would be inex-pressibly tedious, were not the selected points so salient and so well fitted, to convey the whole of what was intended, that in a brief time you are carried over a large space, and thus the valuable conjunction with brevity and fulness is secured." The essay on Mr Macaulay's style is an introduction to a notice of his history, evidently by another hand, in which Mr Macaulay is described as possessing and as wanting the is an introduction to a notice of his history, evidently by another nand, in which Mr Macaulay is described as possessing and as wanting the impartiality of Hallam. The history is greatly praised, even more than Mr Macaulay's style. The first essivist says that Mr Macaulay "has bettered no one;" the second, "we have read his work with ex-quisite pleasure, and meditated on it with profit." In spite of these verbal contradictions, the article is a masterly review of a reviewer, and a powerful essay on an essayist. Those who wish to understand why Mr Macaulay's writing is at once clayer and forcible, should why Mr Macaulay's writing is at once clever and forcible, should read the first part of the article; in preference to the second part, we

read the first part of the article; in preference to the second part, we recommend Mr Macaulay's history itself, which is more amusing than any comments, and more instructive than any criticism. The political article of the Review is on the state of opinion and parties in France, and contains a number of slight biographical notices of the chief politicians of the day. The scientific article of the Review is an elaborate account of Robert Boyle the philosopher, the Royal Society, Air Pumps, and Digestion, and will help to make many of the mysteries and some of the history of science known to the public. Bastiet Neel's Freeze on the Union of Church and State. the public. Baptist Noel's Essay on the Union of Church and State,

## THE ECONOMIST.

the Duke of Argyle's Presbytery examined, and a long article on the Duke of Argyle's Presbytery examined, and a long article on Modern Millenarianism, all concern religion. Readers of novels and light literature must this quarter be satisfied with a judicious notice of "Mary Barton." The patrons of sanitary reform will be gratified by the article on that subject, which is at once carefully and plea-santly written. A curious article on illuminated manuscripts of the middle ages, may be said to belong to the fine arts, as do several small articles at the end of the work, telling of pictures and engravings in hand. The contents of the Review are varied and in general supe-rior, and sustain its high character as an organ of earnest literary and sound political opinions. sound political opinions.

#### BLACKWOOD'S MAGAZINE. No. CCCC. February.

THE pleasant tale of the Caxton's is continued in the present number. THE pleasant tale of the Caxton's is continued in the present number. The opening article, however, is an interesting notice of the Caucacus and Cossacks, written up from a German publication of the present year. We are glad to see that books are still published in Germany, for we were afraid that the revolution would put an end to litera-ture. It is certain that the occupation of the brightest spirits of Germany with politics, has prevented the usual share of attention being bestowed on lighter and more agreeable matters. The new statistical accounts of Scotland are the subject of another article : "no other hook," it says, "affords the same insight into the various " no other book," it says, "affords the same insight into the various natural resources of the country; none describes so well and so natural resources of the country; none describes so well and so skilfully the most considerable branches of industry, and the methods of conducting them; none has brought together the same variety of statistics, with the same ample means of speculating on their mutual relations." It is to the credit of the clergy of Scotland that the work proceeds from them. The poetry of sacred and legendary art is sug-gested by a work of the same title by Mrs Jameson. We know not what to make of the "American Thoughts on European Revolution;" the article may have come across the Atlantic from Boston, but it seems to have a much more eastern origin. Dalmatia and Monteseems to have a much more eastern origin. Dalmatia and Monte-negro is a notice of Sir J. Gardner Wilkinson's work. Notices of negro is a notice of Sir J. Gardner Wilkinson's work. Notices of Beattie's Life of Campbell, of the Reform of the English Univer-sities, and of the Carlists in Spain, complete the number, except a spirited poem by Delti, entitled the Covenanter's Night Hymn. The number is rather deficient in articles of original suggestion, though those suggested by various books are extremely good.

#### To Readers and Correspondents.

#### Communications must be authenticated by the name of the writer.

W. B., Shildon.-There will be a supplement to the *Economist* published shortly, in which the index for last year will be given.

J. D., Kelso .- His communication has arrived at too late an hour to receive attention this week.

- J. P., Chippenham, and H. L., Winchester-street, will find the clerical error in summing up the exports to the colonies, last week, explained in another place.
- Mr. S. D .- The tariffs of imports into our colonies are not published in any One book, but are scattered through a variety of parliamentary papers. Our correspondent would most easily arrive at the information he re-quires by applying to some houses engaged in the various branches of trade to which he refers. There has been no published official account of the imports and stocks in the Australian Colonies,
- J. S. is reminded that the *Economist* is printed on the largest sheet allowed by law, and that consequently any increase in the size of the type, for the convenience of those who have impaired sight, must of necessity be at-tended by a diminution of the quantity of information given.
- A CONSTANT READER.—We cannot give any definite answer to his question. The yield of a quarter of wheat in four pound loaves is greatly dependent upon the mode of manufacture adopted. Different bakers would produce different results. We should recommend our correspondent to some one engaged in the business.

## The Bankers' Gazette.

BANK RETURNS AN BANK OF (From the AN ACCOUNT, pursuant to the dct 7th an a Saturday, the 27th day of Jan. 1849:	ENGLAND.
ISSUE DEP.	ARTMENT.
L. 28,315,870	L.         L.           Government debt         11,015,140           Other Securities         2,984,990           Gold coin and bullion         13,813,798           Silver bullion         502,072
28,315,870 BANKING DI	28,315,876 EPARTMENT.
Proprietors' capital	Government Securities, Includ- ing Dead Weight Annuity 13,882,267 Other Securities
34,674,394 Dated the 1st Feb., 1849.	34,674,394 M. MARSHALL, Chief Cashier.
The above bank accounts we present the following result :	D FORM. Duld, if made out in the old form,
Liabilities. L. Circulation inc. Bank post bills 19,790,365 Public Deposits	Assets. L. Securities
35,310,812 The balance of assets above liabilities bein	38,798,919 3,488,1071, as stated in the above accounts

THE preceding accounts, compared with those of last week, exhibit-

An increase of Circulation of	£ \$0,802
An increase of Public Deposits of	206,508
A decrease of Other Deposits of	84,718
An increase of Securities of	165,747
A decrease of Bullion of	6,480
An increase of Rest of	6,675
A decrease of Reserve of	55,570

The Bank accounts, made up to last Saturday, do not exhibit chauges of much importance. The circulation shows the further slight increase of 30,802l; the public deposits show an increase of 206,508l; while other deposits show a decrease of 84,718l. The securities continue to show an increase, amounting in the present week to the considerable sum of 165,747*l*. The bullion shows a slight decrease of 6,480*l*, and the reserve shows a decrease of 55,5701.

The demand for silver for the Continent, especially for Austria, Amsterdam, and Paris, continues to be considerable; and, in consequence, the price has advanced id. Dollars are now in demand at 4s 10id, and bars (silver) at 4s 11id per ounce. This mand at 4s 101d, and bars (silver) at 4s 113d per ounce. This continued demand for silver for the Continent, while the exchanges are in our favour, and which therefore shows that it is to meet an actual and bona fide demand, would lead us to one of two conclu-sions-either that coin continues to be hoarded as fast as it is issued from the different continental mints, or that trade is undergoing a considerable extension.

Money continues extremely abundant, and discounts on first class bills have been as low as 2 per cent. The Lombard street brokers continue to give 14 per cent on "call;" and on the Stock Exchange the rate has been the same for the week. On Monday, in consequence of the unfavourable accounts from Paris, Consols receded from  $91\frac{5}{8}$  to  $\frac{3}{4}$ , at which they were quoted on Saturday, to  $90\frac{7}{4}$  to 91, and they continued at about this rate till Wednesday, when they regained the whole fall, leaving off at  $91\frac{5}{6}$  to  $\frac{3}{2}$ . This morning they opened at  $91\frac{7}{6}$  to 2, but at the close of business had receded to  $91\frac{1}{6}$  to  $\frac{1}{2}$ . The following tables show the opening and closing prices of Consols on each day of the week, and the closing prices on Friday last and this day of some of the leading securities :--

he chief matter which has attracted attention during the past week has been the expiry of the temporary corn duties, provided

## 1849.

## THE ECONOMIST.

for three years by the act of 1846, and the adoption in their place of a fixed duty of 1s per quarter on all foreign wheat, and 44d per ewt on foreign flour. Contrary to the fears and alarms of the farmers, which have had so depressing an effect on the markets for some time past, in place of the great fall in price which it was expected would take place, a rise of 2s a quarter on wheat has taken place since last Friday. The small stocks on hand with the millers seem to indicate the probability of a still further rise, especially for wheat of good quality, which is much wanted.

especially for wheat of good quality, which is much wanted. In the Colonial market business has again been done to a very large extent, and prices have been very firmly maintained. The sales have been about 2,250 hhds of British West India sugar at full prices. Of Mauritius 6,400 bags have been sold with considerable ease, and at about 6d advance for qualities suited for re-fining; besides these large sales about 10,200 bags of Bengal, and 5,000 bags of Madras, have also been sold at extreme prices. A parcel of 220 casks of Ceylon sugar has been sold, at from 28s 6d, for very low and wet brown to 36s 6d for fair yellow. There have also been some considerable sales of foreign sugars. In other articles there has been a fair amount of business, and generally at good prices.

Accounts from Amsterdam of the 30th ult mention that the Dutch trading company has declared for public sale on the 6th of March, 24,697 baskets of Java sugar stored in Amsterdam, 20,869 baskets stored in Rotterdam, and 2,506 baskets stored in Middleburgh;—making in all 48,072 baskets. This declaration is less than was expected, as the accounts of the season, January included, amount to 65,000 baskets. A very spirited sale is expected, as refiners are said to be very low in stock. In the Dutch ports a decided improvement is visible in the demand for produce.

The reports from the manufacturing districts continue highly satisfactory; although in the cotton districts the advance of the raw material, though not equal to the advance in the price of goods suited for the Eastern markets, for which the demand con-tinues good, is more than any advance which can be obtained on goods suited for the home and the Levant markets. Yorkshire markets a considerable animation has prevailed, and prices, both of the raw material and of goods, show an upward tendency.

The following is an extract of a dispatch received by M. Van Zellu, the Portuguese Consul, from his government, in relation to the imports of goods from this country :

" It has been decreed by her Most Faithful Majesty's Government that the practise observed of granting dispatches for the re-exportation of goods imported to order, is contrary to law, and that in consequence of all such goods, which in future shall not be entered in the precise terms of the 1st article, 4th chap. of the decree of 10th July, 1834, here copied below, shall not be entitled to such dispatch, but be entered for consumption only—this after the term of sixty days.

days. "DECREE.—All captains or commanders of merchant vessels, whether national or foreign, who enter the port of Lisbon, must bring two manifests of the same tenor, containing the name and tonnage of the vessel, to what nation they be-long, the port in which she received her cargo, name of the shippers, and of the parties to whom they are consigned, specifying the quality and quantity of packages at full length, with the marks and numbers in the margin."

The following letter has been received from the agent of Lloyd's :-

"British Consulate, Dardanelles, Jan. 16, 1849. "Sir,—I have the honour to acquaint you, for the information of the Com-mittee of Lloyd's, and the shipping and mercantile interests in general, that, in accordance with instructions from the Turkish Government, the military governor of these castles has commenced to enforce a strict observation of the governor of these castles has commenced to enforce a strict observation of the regulations whereby merchant vessels of all nations coming from Constantinople, and bound to the Mediterranean, are required to deliver at these castles the firmans (or passes) with which they are furnished at the capital. These regu-lations, for some time past, had not been always conformed to by masters of vessels, and consequently several vessels have already been fired at with shot by the forts, and more or less damaged for disregarding them. "The passage of the castles between sunset and sunrise is strictly forbidden under any circumstances. (Signed) "F. W. CALVERT, "Consul and sub-agent to Lloyd's."

#### INDIGO.

INDIGO. The quarterly sales are now drawing near; they begin on the 13th inst and will probably last three weeks. The prompt is fixed for the 5th of May. The total quantity which will appear in these sales, amounts to 12,000 chests of all sorts, of which about 10,200 chests are in first, and 1,800 chests in second hands. There are about 10,000 chests Bengal and similar descrip-tions, 1,500 chests Madras and [Kurpah, 500 chests Oude, and a few dozen chests Manilla, &c. The assortments of the Bengal, &c., are good, and better than what they frequently are in the first quarterly sale, which, of course, can but consist of the remnants of the preceding year's crop. The Madras and Kurpah is mostly of inferior quality. The opinion now prevailing here is, that prices will rule rather higher in the February sales than in October 1848. This view seems to emanate for the expectation that the peace in Europe will not be disturbed, and from the first and the transactions in indigo in this market have been rather important ever since the opening of the last October auctions, and up to this day. These purchases, on the whole, amount to between 9,000 and 10,000 chests, of which a few thousand cheats have, however, not yet been cleared for consumption, but are still in the hands of dealers here. That the quantities bought in a February is four months, whilst it is three from February to the May sale, then no more than two to July, and again three months to the time of the October sale. If the value of the article is in-fuenced through this diversity of the intervals between the sales, it must be

attributed to the objectionable and faulty organisation of these quarterly auctions. It will be remembered that in February 1848 the value of indigo was driven up about 15 per cent, and that in the following May sale it went down again nearly as much.

131

It will afford some interest to show, how far our indigo trade is connected with, and dependant upon, the stocks in first hands. We extract the fol-lowing from the statistics which we have previously published :--1847 8.4 

847,	Feb. 1—Stock in first hands Supply of all sorts, from Feb. 1, 1847, to Jan. 31, 1848	14,500 29,25 <b>3</b>
	Deliveries for home consumption and export during the same period	43,753 30,278
	Stock remaining in first hands	13,475
	e actual quantity, however, was : Feb. 1—Stock in first hands Supply of all sorts, from Feb. 1, 1848, to Jan. 31, 1849	14,000 24,010
	Deliveries for home consumption and export during the same period	38,010 27,426
	Stock remaining in first hands	10,584
	e actual quantity, however, was:- Feb. 1-Stock in first hands Probable supply from Feb. 1, 1849, to Jan. 31, 1850:-	12,200
	From Bengal, &c	
		45,200
-229	Probable deliveries for home consumption and export during the same period	30,000
23	Probable stock of indigo in first hands Jan. 31, 1850	15,200

This shows that nearly our whole indigo trade is carried on with goods in first hands, and yet the stock in second hands should not be overlooked. It amounted here on Feb. 1, 1847, to 17,500 chests, on Feb. 1, 1848, to 17,000 chests, and is now 15,400 chests. Supposing now that the arrivals and the deliveries will in reality be ms we have estimated them above, then the stock in second hands on Jan. 31, 1850 would be the same as it is now, con-sequently about 15,000 chests, and the total stock in first and second hands would then be 30,200 cheets, or nearly 3,000 cheets more than at present, it being now 27,598 chests, whilst the above calculation holds out the proba-bility of an increase of from 10 to 12 per cent in the deliveries during the next twelve months.

next twelve months. The accounts from Calcutta are to Dec. 21, 1848; they do not report any-thing which might alter the position of the article. The quality of last year's (1848) produce is very good, the paste being soft and well dried. This is the reason why the weight turns out to be rather lighter, but the indigo will be more rich in colouring matter than we have known it for some years past. The deliveries of indigo from the London warehouses in the month of January were for evenest 1998 for the test of the some computation 569 chests total 2007

were—for export 1,198 chests, for home consumption 869 chests, total 2,067 chests, against 2,204 chests in January 1848, and 2,318 chests in 1847.

9,505,000 Leaves total deliveries for consumption in 1848 .....

stocks of foreign on the continent of Europe only exhibit a moderate reduction. In this country the consumption of sugar again shows an increase last year, the total of the clearances of all kinds for that purpose being close upon 6,200,000 cwt, against 5,817,000 cwt in 1847; but it must be borne in mind that of the 540,000 cwt of foreign sugar, on which the duty was paid immediately before the 6th of August, 1848, at 188 6d per cwt, about 147,000 cwt are yet remaining unconsumed in the docks; this reduces the actual increase in the consumption to 236,000 cwt, or about 4 per cent. On the continent of Europe, comparing the imports and stocks, the consumption of last year seems to have been nearly equal to that of 1847; but it appears almost certain that the stocks of sugar in the interior of Germany are, like those of other colonial produce, new unsually small: this is likewise confirmed by the demand which has now unusually small; this is likewise confirmed by the demand which has latterly prevailed for that quarter. There can be no doubt that the very moderate value of the article has tended

There can be no doubt that the very moderate value of the article has tended last year to increase the consumption; we observe that it is the great decline in the prices of sugar in this country in 1847 and 1848, against the two previous years amounting to 30 per cent and upwards, which has given the greatest im-pulse to the consumption in Great Britain. Foreign sugar has not declined in the same proportion, but was as cheap as ever before last Summer and Autumn; since then this description of produce has experienced an advance of from 10 to 15 per cent, and at the end of 1848 prices were nearly on a par with the close of 1847, but lower than at the termination of either of the two preceding versa. years.

Notwithstanding the difference in the duties of foreign and British plantation

years. Notwithstanding the difference in the duties of foreign and British plantation sugar, which is now on an average 7s per cwt, one fifth of the whole consump-tion in this country in the year 1848 is foreign sugar, against but one sixth in 1847. Next July a further approximation will take place in the rates of duties chargeable upon British plantation and foreign kinds, which will tend further to assimilate the bonded value of both descriptions; in 1848 several parcels of British plantation sugar of low qualities have been taken for export. Of the crops which furnish the supplies in 1848, those in the Brazils and Java were unusually plentiful and larger than in 1847; in Cuba and Porto Rico there was a slight deficiency, a more important one occurred in the French colonies, but the most important defalcation occurred in the crop of the Mauritius, the British West India colonis, and in the import from Bengal. As regards this year's supplies of sugar, the opinions are still unsettled whether they will reach the quantities yielded in 1848, or whether they are likely to surpass them. With the exception of Cuba and Mauritius, the weather is generally said to be favourable to the growing crops; from Louisiana, where a considerable deficiency had previously been reported, the last accounts promise a more satisfactory result. From the Brazils there will not only be increased quantities, but likewise su-perior and stronger qualities, to judge from the new cargoes which have lately arrived from Pernambuco. Java will not produce less than in the previous sea-sum, and it seems therefore doubtfal whether the quantities imported into Europe this year will be either smaller or larger than in 1848; at all events the differ-ence is not likely to be considerable.

likely to occur than a moderate advance. It is not probable that this year's import of coffee into Europe will ma-terially vary from that of 1848; the accounts of the crops which are to furnish the supply are, at least, not of a nature to induce the expectation of an increase. From the Brazils, the shipments to North America have latterly again been large, whilst those to Europe were not important. Our tables refer, as usual, only to the six principal markets of Europe. Those not mentioned, as Bremen, Bordeaux, Marseilles, Genoa, and Leg-horn, are not very important. The whole of the arrivals in these ports in 1848 amount to 479,000 cwt, against 481,000 cwt in 1847; the stocks, Dec. 81, 1848, were 66,000 cwt, against 77,000 cwt at the end of 1847.

#### ANNUAL STATEMENT OF COTTON.

The political events of the past year, the more abundant out-furn of the The pointies events of the past year, the more abundant out-turn of the crop in North America, large supplies from other producing countries, and consequently, the very moderate value of the article—these are the various circumstances which have caused the consumption of cotton in this country in 1848 to exceed the expectations which could fairly be entertained at the beginning of that year. Even on the European continent, notwithstanding all the political disturbances, revolutions, blockades, &c., we find that in 1848 a larger quantity has been cleared for consumption than in 1847. The table which we subjuin shows a total stock in the six principal continent. 1848 a larger quantity has been cleared for consumption than in 1847. The table which we subjoin shows a total stock in the six principal continental markets, at the close of last year, of only 70,700 bales, against 134,400 bales at the end of 1847; and it further exhibits for the year 1848 an increase in the total deliveries for consumption of 27,800 bales as compared with the preceeding year (1847). If, in addition to these facts, we are enabled to state, that the export of cotton thread from this country to Germany and Holland amounted in 1848 to fifty-eight million pounds, against forty-six million pounds in the previous year, and that from the mort carefully col-lected information it is entirely beyond a doubt that, in the interior of the chief consuming districts of Europe, the stocks of raw cotton, as well as yarn and manufactured goods, are now unusually light—we may justly aver that the low prices of cotton, &c, have overbalanced in their effects all the im-pediments which in 1848 tended to prevent an extension in the manufac-turing industry on the continent of Europe. Table of Stocks, Imports, and Deliveries, of Corrow in the Six principal merits of

The prospects for the trade of the present year are now far more favour- able than at the opening of last season; whilst at that time we were still in doubt as to the yield of the American crop, we are now in posses- sion of more accurate accounts which hold out the certainty that the total supplies will be large, and exceed those of last year.

The following is a carefully compiled account of the European cotton trade of last year, as well as an estimate for 1849 :--

\* Such countries as are not mentioned in our table-viz., Russia, Sweden, &c.

efore the total stock in Liverpool, London and Glasgow, in Autumn Nov. 1, 1849, is likely to be.....

To this review we have to add the following remarks :--- The American To this review we have to add the following remarks :--The American erop is now almost unanimously estimated at 2,500,000 bales, and this is the quantity upon which we have based our calculation of the supplies to be expected from the United States; in a few instances the out-turn is put down at 2,600,000 bales. From the East Indies and the Brazils we received in 1848 larger supplies than were expected, and this year they are not likely to be on the same scale; from the Brazils the importation in 1848 has been realised at a great loss; from the East Indies the shipments have likewise turned out unprofitable, and the Chinese markets have in the last few months abstracted increased quantities of Surat cotton from Bombay, in preference to European markets. The quantities of cotton now affoat between Bombay and Liverpool as well as London are unimportant. From this country the exort of cotton in 1848 was about 27.000 bales

From this country the export of cotton in 1848 was about 27,000 bales as than in 1847; for the present year we have, however, adopted the figure of 1847.

There remains the estimate of the consumption in Great Britain for the coming year. It has varied much in the last few years; the table, however, extending over ten years, which we published in our number of the 13th January last, shows that the consumption is regulated before all things by stock and supply, and then by the value of the article. The years of the largest consumption up to the present time have been 1845, when the value of raw cotton was nearly equal to what it is at present, and 1846, during the greater part of which year it was higher. We believe that in estimating the consumption at 30,000 bales per week, we have taken the minimum of what it is like to amount to, and we find the opinion more ceneral that it probe it is likely to amount to, and we find the opinion more general that it probably will exceed that quantity.

Notwithstanding the rise in the value of American cotton since the lowest point in October and November last, of 1d to 1d per lb, or 12 to 15 per cent. and a similar advance in Surat, cotton is yet moderate in value, and cheaper than at the corresponding period in 1848.

### COTTON.

[No American mail having arrived since our last, we are unable to give any later accounts of the state of the American cotton market .--- ED. ECON.]

#### LIVERPOOL MARKET .- FEB. 2.

The cotton market, though less animated this week than previously, has nevertheless been well attended by the trade, who have taken more than their average supply. The late imports of American continue to be offered as soon as landed, so that there has been a fair supply, though barely equal to the demand, and prices are consequently rather higher than on this day week ; we do not, however, alter many of our quotations. The sales to-day are 8,000 bales, with a very firm market.

Our market this week has been somewhat irregular; both buyers and sellers seem equally at a loss to know how to act, owing to the state of the Liverpool cotton market. Many manufacturers who are working to order decline selling more for the present, while others are demanding such ad-vances as to preclude all chance of doing business for a time; still many are found willing to meet the improved demand, and a rather large business has been done in cloth at the full prices demanded last week, and in some cases a further advance has been obtained. Our home-trade and Indian buyers have been the chief operators. The Greeks are resting on their oars at present. further advance has been obtained. Our home-trade and Indian buyers have been the chief operators. The Grecks are resting on their oars at present, consequently goods suitable for the Levant markets are neglected. In yarn there is less doing, relatively, than in cloth, with the exception of mule yarn suitable for India, which is now very scarce, and prices  $\frac{1}{2}$ d per lb higher than they were last week. The German buyers are watching the market anxiously, but not doing much business; it is quite evident they have large orders on hand, but at a lower limit than they can execute them at. It appears from the short telegraphic account of the arrival of the India mail, that the commercial accounts continue favourable. The failure of Messrs Eglinton and Co. will not effect this city, the whole of their Habili-tics being in Scotland, and with few and strong parties. Another very heavy week—business has been done in the Liverpool cottom markets, and prices  $\frac{1}{2}$ d per lb higher since Friday. LEEns, Jan. 30.—We have nothing narticular to report as to the transac-

LEEDS, Jan. 30.—We have nothing particular to report as to the transac-tions in our Cloth halls to-day, the halls having been thinly attended, owing penhaps to the very unpleasant weather. Goods remain scarce and prices firm, and, considering the upward tendency of foreign wools, there is little fear of any re-action in our market.

HUDDERSFIELD, Jan. 30.—The market to-day has been rather duller, al-though considerable business has been done in the Cloth hall, in goods adapted to the home trade. We have not heard of the attendance of a single foreign buyer. The approaching wool sales are looked forward to with con-siderable anxiety, and until the results are known we can hardly expect to

sideratic anxiety, and until the results are known we can hardly expect to report much alteration. ROCHDALE, Jan. 29.—We have had a thin attendance of buyers in the market to-day, and the business transacted would have been rather limited, but for some of the large manufacturers purchasing rather freely, which has been the case for two or three of the previous Mondays. The wool market has been very quiet; manufacturers have purchased sparingly, but prices are firmly maintained. HALLFAX, Jan. 27.—The sales of goods in the Piece hall, have been about

firmly maintained. HALIFAX, Jan. 27.— The sales of goods in the Piece hall, have been about as large as those of this day week; and in most cases the improved rat. s have been realised. In yarns we have no change to report. Wool continues quiet, and prices are, if anything, a shade in favour of the buyer.

LIVERPOOL MARKETS. WOOL. FRIDAY NIGHT. (From our own Correspondent.) The demand began to fall off about a week ago, but has again revived during the last faw days, and sales to a fair extent are reported, at full prices; stocks are rather light, and consisting chiefly of qualities that have been neglected of late. CORN.

(From our own Correspondent.) This morning the attendance of both town and country millers was tolerably numerous, and we experienced a good consumptive demand for wheat at the full prices of Tuesday. No change in flour, but meal was 3d to 6d per load dearer.

### METALS.

(From our own Correspondent.) There still continues a brisk demand for all kinds of manufactured iron at full prices, and considerable business has been done.

## STATE OF THE CORN TRADE FOR THE WEEK.

There was a limited supply of wheat at Mark lane on Monday, by land-carriage samples from Essex, Kent, and Suffolk ; all dry parcels met with a steady sale, at the full rates of that day se'nnight, but damp descriptions were taken slowly. The importations of foreign amounted to 6,740 qrs, and consisted of 800 from Ancons. 90 from Cuxhaven, 774 from Dankick, 52 from Harlingen, 800 from Leghorn, 3,500 from Odessa, 624 from Rostock ; the best quilties were in good request at quite former rates for free, whilst bonded were generally offered—duty paid for delivery on and after Thursday—at the prices for free. The arrivals of flour were, 1,873 sacks coastwise, 6,029 sacks per Eastern Counties Railway, with 2,838 sacks and 829 bris of foreign; good country marks were inquired for, and brought quite previous terms. The best qualities of malting barley were in tolerable good request, at quite as high rates. Fine dry beams were inquired for, and previous prices were realised. Peas brought last week's currency, but the sale was slow. The supplies of oats were, 2,201 qrs coastwise, 85 per Eastern Counties Railway, 2,450 of Scotch, 2,325 of Irish, and 600 of foreign ; a tolerably fair business was transacted, principally to the consumers, at the rates of that day se'nnight for good con. The arrivals of wheat at Liverpool were 1,160 qrs from Ireland, 20 coast-wise, and 993 from the United States. At Tuesday's market there was a full attendance of the trade, and a good demand was experienced at an advance There was a limited supply of wheat at Mark lane on Monday, by land-

of id to id per 70 lbs on the rates of that day week. The quantity under bond was about 190,000 qrs. The supplies of flour were 1,681 sacks and 2 bris from Ireland; 300 sacks from European ports, with 6,700 bris from the United States. The sales made were at an improvement of 1s per sack, and 1s to 1s 6d per bri. Fine malting barley brought 1s per qr more money; and outs were in request at \$d to 1d per 45 lbs higher rates. Beans and peas were dull without change in prices. The imports of Indian corn were 24,866 qrs, and with an improved inquiry rather enhanced terms were ob-tained. tained.

134

tained. There was a moderate supply at Hull and the farmers were reluctant sel-lers at an advance of 1s per qr: average 41s 2d on 799 qrs. There was a good inquiry for free foreign at an improvement of 1s to 2s per qr for all good qua-lities. Spring corn met with a moderate demand at quite as much money for

The arrivals of wheat at Leeds were limited, and with an improved de-mand holders were enabled to realize is per qr over last week's currency: average 468 ±1 on 3,478 qrs. Barley brought 1s per qr more money, and outs were in request at rather higher rates, whilst beans were 1s per qr deater

There was a small supply of wheat at Lynn, and the trade firm at 1s per tabove previous terms: average 42s 62d on 1,431 qrs. Barley was 1s per higher. Oats, beans and peas met with more inquiry, and good qualities gr above previ qr higher.

dr higher. Oats beans and peas met with more inquiry, and good qualities made rather over last week's terms. At Mark lane on Wednesday, the fresh arrivals of Euglish wheat were limited, but good of barley and oats, with a fair supply of foreign wheat, barley and oats. Wheat was in good steady demand at quite Monday's rates for all descriptions. Barley was in fair request at previous terms. Beans and peas were without change in value. Oats brought former prices for good corn. The weekly averages announced on Thursday were 45s 3d on 93, 355 qrs wheat; 28s 10d on 91,582 quesbarley, 17s on 21,184 qrs oats, 28s 11d on 14 qrs rye, 30s 3d on 3,557 qrs beans, and 32s 8d on 1,507 qrs peas. The duty on all grain as now 1s per qr. At Mark lane on Friday there were moderate arrivals of English wheat and good of barley and oats, with fair importations of foreign grain. The transactions in wheat were not to any extent; all descriptions were held for enhanced terms, and peas realised previous jterms. Oats brought former terms for all good corn.

### WEEK. (For Report of This Day's Markets see " Postscript.")

FRIDAY MORNING.

SUGAR .- The market has been firm, with a good demand at last week's rates A moderate amount of business has been done in all descriptions of British West India without alteration in prices, and the quantity of sugar on show is still mo-derate. The sale of Barbadoes on Tuesday, consisting of 146 casks 16 barrels, &c., went off well, and the whole sold at full prices to 6d advance, as follows :---

5

good to fine, 40s to 42s; low and soft to good middling yellow, 87s 6d to 29s By private contract, low to middling refining kinds have sold at 36s to 37s 6d; brown, 35s to 36s. Arrivals have again been large, particularly from the East Indies and the Mauritius; but there is a further improvement in the weekly deliveries: 2,542 casks West India were taken from the docks last week, against t week, against

deliveries: 2,542 casks West India were taken from the docks last week, against deliveries: 2,542 casks West India were taken from the docks last week, against 2,256 in the corresponding one in 1848. The stock on the 27th ultimo was 27,172 hdds and tierces, or 5,047 more than at same date last year. *Mauritius.*—There was a good demand in the public sales at the beginning of the week, and extreme rates to 6d advance paid. On Tuesday 6,440 bags all sold with some spirit, the quotations being as follow :—Good strong grocery, 39s to 39s 6d ; middling to fair, 37s to 38s 6d; good strong greyish refining kinds, 38s to 39s; middling ditto, 36s 6d to 37s 6d; low, 35s 6d to 36s; syrupy and washed, 31s 6d to 37s per cwt. Considerable business has been done by private treaty during the week at full prices. The deliveries continue to improve, being 9,394 bags 32 casks last week; but many cargoes have arrived since the 27th ultimo, and there is still an increase in stock .:s compared withthat of last season at this period. *Bengal.*—The demand has been good, and full prices paid by the trade. There were only 2,100 bags Dhobah offered at the beginning of the week, which sold

were only 2,100 bags Dhobah offered at the beginning of the week, which sold readily at stiffer rates: good to fine grainy yellow, 41s to 43s 6d; low to fair, 37s 6d to 40s 6d; good brown, 36s. Nearly the whole was damp. Privately, some parcels, white Benares, have sold at extreme rates; 222 casks 1 barrel Foreign.—Few sales have been effected in any description during the greater Cevic

Foreign.—Few sales have been effected in any description during the greater part of the week, but to-day a large business was done. Three cargoes of Brazil sold, viz., two Pernams at 18s 6d to 19s, also one of Maccio at 18s and 20s per cwt. Yesterday 3,810 boxes washed Havannah were nearly all sold at 40s to 45s for yellow and grey, and low to good brown 37s to 39s 6d. Another parcel of 495 chests was taken in at high prices; middling to good 41s 6d to 43s 6d. 396 chests 595 bags Pernambuco were withdrawn. 163 cases 3 birrels Bahia taken in above the market value; fair to good strong grey 42s to 43s 6d, middling to good yellow 40s 6d to 42s, and brown 37s 6d to 40s per cwt. Reduced.—The market has been firm this week with a steady demand, and

ed.-The market has been firm this week with a steady demand, and Refin there is a moderate supply of goods on show. Brown patent lumps are selling at 48s 6d to 49s; titlers, 48s to 52s for low to fine; loaves, 50s to 55s; wet lumps, 46s to 48s. Pieces and bastards have sold freely, and an advance in prices of the latter now demanded : low to fine, 30s to 37s. Treacle fully supprices of the latter now demanded: low to hne, 308 to 378. Treacte fully sup-ports the advance quoted last week, and the stock has become rather small; prices range from 17s to 21a, according to quality. The bonded refiners de-manding last week's rates, scarcely any business has been done for delivery, and the market is flat. English crushed is held at 28s and 29s, and No. 2, 28s. Loaves are quite nominal at 32s and 33s for 101b. There is some inquiry for treacle at the quotations. Other goods remain without alteration. MOLASSES.—The transactions in West India are rather limited at full prices.

MOLASSES.—The transactions in West India are rather limited at full prices. COFFEE.—The market is firm this week, and some speculative sales have been made at extreme rates. Several parcels Jamaica, amounting to 185 casks 95 barrels in the public sales, were about half sold, but the greater part con-sisted of low qualities of various marks; some lots of low middling sold at 45s to 53s 6d, fine fine ordinary 40s to 43s 6d, fine ordinary 34s to 36s 6d, shrivelled and very ordinary 27s to 33s per cwt. Several parcels native Ceylon have been sold during the week at rather stiffer rates, from 34s 6d to 35s, and yes-terday a parcel of 1,000 bags was reported sold at 35s for good ordinary quality. The sales of plantation yesterday were rather large, comprising 3,360 bags 214 casks, about half of which sold rather irregularly, fine marks bringing high rates, middling qualities went rather cheaper in some instances, about half was taken in by the importers; good middling to good coloury realised 60s to rates, middling qualities went rather cheaper in some instances, about half was taken in by the importers; good middling to good coloury realised 60s to 75s 6d, low middling to middling mixed 50s to 54s, fine to fine fine ordinary dingy 43s 6d to 49s 6d, and middling to good pea berry 53s 6d to 66s per cwt. The deliveries show a further increase, being 4,196 bags, &c, last week, and the stock on 27th ult, 126,953 bags, &c, against 100,788 bags, &c, in 1848. Padang and other kinds of East India have become so scarce, that we are without trans-actions to report. 160 bags Madras were taken in at 35s to 40s. Mocha is held at rather higher rates, and few parcels offering in the market; 30 bales common hown were, withdeawn at 552 per cwt. Excise continues were firm held at rather higher rates, and few parcels offering in the market; 30 bales common brown were withdrawn at 52s per cwt. Foreign continues very firm. 4,591 bags Rio offered by public sale were taken in at high prices; ordinary to fine ordinary dull mixed 29s to 31s 6d, a few lots sea damaged sold at 24s 6d to 28s. 602 bags Costa Rica sold at full prices, from 32s to 35s for fine ordi-nary. At the close of last week about 4,000 bags Rio were sold at 29s, and half a cargo afloat for a near port at 28s 6d per cwt. Riccs.—The market is quiet, but there has been a steady demand for white binds.

kinds.

TEA.-Considerable business has again been done in several descriptions this week, but not at any general improvement in prices. Fine congou has conti-nued in demand at 1s 3d to 1s 6d, likewise qualities ranging from 1s to 1s 2d. Other kinds of black remain without material alteration. Some fancy teas of superior make have obtained full prices. Green, with very few exceptions, are still inactive. Twankays have met with more inquiry, and prices are rather higher than last week. Common Cinton kinds of imperial and gunpowder have been sold at prices rather more favourable to the buyers than of late. Large supplies are still coming forward. Two vessels have arrived since our last report, viz., the Ursula and England's Queen, also another off the coast, the Grecian; the three cargoes contain about 1,500,000lbs congou. Few parcels are at present in the market. No public sales were advertised for the ensuing

are at present in the market. No public sales were advertised for the cusume week this morning. CocoA.—The market is steady, and a few small sales have been made in West India at extreme rates. The stock is much reduced; 187 bags Guay-aquil sold yesterday at former prices, from 265 to 265 6d for common greyish, and a small parcel fine Caracca at 80s per evt. PIMENTO.—A very large business has been done this week and at full prices, although 3,026 bags of the recent arrivals were brought forward in public sale; the whole found buyers chiefly for exportation at 33d to 33d for ordinary to good middling quality. The stock has increased to 3,388 bags, against 4,326 bags last year. PEPPER.—The transactions in black have been limited this week, and prices remain without further change. A few lots good white Singapore realised 5<sup>1</sup>/<sub>2</sub>d, being very full rates.

remain without further change. A new new provide the second secon 25 50 10 25 110 for common small to good brown ; 5 casks for export only were taken in at 28 6d per lb. Mace is rather more in demand at the late decline in prices. 43 barrels, &c, Jamaica ginger sold at full rates, from 3l 12s to 6s 4d per cwt. No public sales of cloves have taken place this week. A full account of the cinnamon sales will be found in another part. SAGO.—120 boxes sold steadily at 19s to 19s 6d for fair small grain, which

about previous rates.

were about previous rates. SALTPETRE.—The market has been quiet, and scarcely any business done privately, in consequence of public sales being declared for this day. 700 bags Bengal were withdrawn at 26s for 12g per cent refraction. The stock on 27th ult. was 1,813 tons against 931 tons at corresponding date last year.

## 1849.

## THE ECONOMIST.

#### NITRATE SODA .- Several sales have been made at 12s to 12s 6d, according to quantity.

quantity. COCHINEAL.—'The market is steady, with a good demand at full prices. At auction, 61 bags Honduras were chiefly so'd at last Friday's rates; silvers, low small to fair, 3s 9d to 4s 2d; common black grain, 4s 6d to 4s 7d; good mid-ding ditto, 5s 7d per lb. Some business has also been done privately. The stock is above 2,000 serons larger than in 1848. [] OTHER DETSALTERY GOODS.—The demand for safflower is good. 266 bales Percent eld steadily, the batter qualities at forware rates a common of a full.

! OTHER DRTSALTERT GOODS.—The demand for safflower is good. 266 bales Bengal sold steadily, the better qualities at former rates; common and middling barely supporting their previous value; from 2l 15s to 5l 17s 6d per evt for ordinary to good. Considerable business has been done in lac dye during the last fortnight, chiefly in the ordinary qualities, which continue very scarce. 128 bales Gambier were taken in at 10s 9d to 11s per cwt. DYEWOODS.—Sapan is rather higher. 170 tons selling at 13l 2s 6d to 14l per ton for good. 54 tons Brazil (branded) were principally taken in at high prices; pale 1, 85l; 2, 65l; 3, 53l 5s to 54l 15s. 110 tons, unbranded, were withdrawn. METALS.—The market for British iron continues atsady and no further al.

pale 1, 851; 2, 651; 3, 531 58 to 541 155. 110 tons, unbranded, were withdrawn. METALS.—The matket for British iron continues steady, and no further al-teration has occurred in prices of the various descriptions. Scotch pig has fluc-tuated in price during the week; but the market is now decidedly firmer and an advance demanded. Speller has continued steady at 151 108. The prices of British tin are again raised 41 per ton; common block being 871. Holders of East India are also asking rather higher rates, viz., Banca and Straits, 908. British copper and nearly all other kinds of metals remain without further observe the receiver. change this week. HEMP.-There

Change this week. HEMP.—There has been rather more business done in clean Petersburg, at a slight decline in prices. Manilla remains dull at the quotations. A parcel of East India Sunn sold by auction yesterday at 154 to 194 15s. Jute is in good demand. Rather more inquiry has been made for coir goods, at previous rates. LINSEED.—Tee market continues dull, and holders have submitted to very low prices for a few parcels on the spot: fine Odessa is quoted at 40s; East India, of good quality, has sold at the same price. Cakes are rather easier, and the demand does not improve: finest English have sold at 104 15s per thousand. Large supplies of foreign are still coming forward. OILS.—Rather more business has been done in several kinds of fish this week, and prices are firmer. Fine pale seal is worth 26l 15s; coloured descriptions also meet with more inquiry at the quoted sea prices. Southern and cod are held for rather bigher rates; several sales are reported in the latter at 23l 10s per ton. Sperm has been dull. The linseed market continues to improve, and the crushers are very firm. Several sales have been made at 23s 6d on the

held for rather arguer takes. per ton. Sperm has been dull. The linseed market contrasts a state the crushers are very firm. Several sales have been made at 23s 6d on the spot, being an advance of 3d on last week's quotations. Rape is a shade higher. Cocoa nut remains very dull, and the market has still a downward tendency. Palm is unaltered, fine quality being worth 31s 6d. TALLOW.—A further decline in prices has been submitted to, without causing any improvement in the demand, in consequence of the present large stocks and continued heavy arrivals. Yesterday there were sellers of 1st sort Peteraburg Y.C. at 39s to 39s 6d on the spot. There are no sales reported for future deli-very. The deliveries show some falling off, being 1,900 casks last week against 3,221 in 1848; the stock on 1st Feb. was 36,340 against 15,748 casks at same date last year. Large supplies of South American have again come in.

#### ENSUING SALES IN LONDON.

TUESDAY, Feb, 6.-150 hhds Barbadoes sugar; 50 casks and 400 bags Ceylon ffee; 350 bags Manilla do; 86 bags Mexican and 26 bags Teneriffe cochineal; ) tons ivory. coff

WEDNESDAY, Feb. 7 .---- 1,200 bags black pepper ; 30 cases of nutmegs ; 20 Cases mace; 175 boxes pearl sago; 1,100 bags Siam rice. THURSDAY, Feb. 8.-500 bags Ceylon coffee; 200 do Trinidad cocoa; 500 do Pimento; 50 brls Jamaica ginger. TUESDAY, Feb. 13.-12,071 chests E. I. indigo,

#### ADDITIONAL NOTICES.

SUGAR.—The home market for refined sugar is rather flatter, with very little alteration with respect to price. Treacle continues firm. Day Fautr.—The arrivals of currants continue unusually large, still the market looks healthy, with an upward tendency. Some public sales took place, which it is presumed went off better than usual, but there is so much dumb show in these antiquated exhibitions, no names being called out, it is impos-sible to get at the truth, as in other articles. show in the 29.

Clear	ances of	Dry	Fruit	for	the we	ek end	ing 1	an.

SEEDS.—The seed trade has been firm, and a fair business passing at the quo-tations. Carraway scarce, and short of supply, is worth 4s to 5s more money. Other seeds without material alteration. COTTON.—An active demand has prevailed for cotton this week, and a large business has been transacted, prices have slightly improved, and an advance of  $\frac{1}{2}$ d on East India may be quoted during the last fortnight. SALES of COTTON WOOL, from Friday, Jan. 26th, to Thursday, Feb. 1st, inclusive. Surat 6,000, 3d to  $\frac{3}{2}$ d, ordinary to good fair ; Madras  $\frac{300}{6}$ ,  $\frac{32}{2}$ d to  $\frac{3}{2}$ d, fair to good fair FLAX AND HEMP.—A few sales have been made in hemp this week, though at rather lower prices. Flax remains in the same quiet state. The French have been buying at the outports. TIMEER.—Considerable business has been done in low priced deals and bat-

TIMBER.-Considerable business has been done in low priced deals and battens, both colonial and Baltic, and market rates are well sustained. WOOL.—The market continues in the same healthy state, and prices looking WOOL.

still upwards.

METALS.—Copper is as last quoted, no alteration having taken place during the week. Iron is firm, a good demand existing for most kinds, both of pig and manufactured. Lead is in fair demand, and the price is well maintained. Spelter is quiet, and holders are not so firm. Tin has advanced 4l per ton, in

Speiter is quiet, and holders are not so nrm. In his novanced at per ton, in consequence of the demand being more than can readily be supplied. This plates are firm, and an advance expected. ENGLISH WOOL.—The English wool trade continues firm, and the advance in prices well sustained, but any further rise is firmly assisted by the manu-facturers. The corresponding advance in manufactured goods not being ob-tainable, they are, therefore, holding off buying, in the hope of checking any speculative action which may have arisen, this renders the market rather out the otherwise of the second s quiet than otherwise.

GREEN FRUIT .- The demand has not been so good this week. Oranges

GREEN FRUIT.—The demand has not been so good this week. Oranges have been sold at easier rates, 400 boxes ex *Pacha* steamer, from Lisbon, sold by Keeling and Hunt, at public sale, were taken freely by the trade at previous rates. 700 barrels apples, ex *Arlington*, from New York, sold by the same parties, went at a low figure, being landed in bad condition. LEATHER AND HIDES.—There has not been any alteration of importance in the prices of leather this week. There was not any public sale of foreign raw goods in the past week. By private contract there have been sold 500 dry Buenos Ayreshides for exportation, 8,075 salted ditto, and 4,245 salted Rio Grande, at exactly former rates.

POSTSCRIPT. FRIDAY EVENING. SUGAR.-The market was steady to-day, and prices closed without further alteration.

CCFFEE .- There was not a public sale of any description of coffee held to-day,

CCFFEE.—There was not a public sale of any description of coffee held to-day, but the market closed very firm. COCOA.—165 bags Bahia sold at previous rates, from 26s 6d to 27s. Rrce.—787 bags Bengal were bought in at 6d above the value, viz. 11s 6d for middling, rather broken. SAGO.—138 boxes fine large grain partly sold at 24s to 25s. COCHINEAT..—152 bags went at first prices. Honduras silvérs, 3s 9d to 4s 4d; blacks, 6s 1d to 5s 6d. Mexican silvers, 3s 10d; blacks, 4s 2d per lb. RUM.—The market has been dull this week. SALTPETER.—The large public sales went off at prices. HEMP.— 50 bales very fine Manilla realized 11/15s to 422 5s per ton. TALLOW.—At auction, 235 casks Australian partly sold at 35s to 39s; 736

TALLOW.—At auction, 235 casks Australian partly sold at 358 to 398; 736 casks South American, 338 to 408 6d; 50 Odessa, 388 6d; 74 Petersburgh soap, second sort, 31s per cent. OILS.—35 tuns seal partly sold at 23/ 5s to 25s 10s for brown to fair tinged; 25 tons sperm and head matter, at 9/ 15s to 80/; 12 tuns whale 25/ 5s per ton.

#### LONDON MARKETS.

PROVISIONS. The traisactions in butter are very limited, prices remain nearly the same, the stock heavy, and the bulk is of middling quality. Fine Friesland meet with ready sale at our quotations, but the inferior quality of foreign butter, as is the Irish, is diffi-cult to move even at a low figure. The bacon market brisk both for Irish and American, 5s on board being made for the former and the latter solling freely at 44, some superior lots making 46s. *Comparative Statement of Stocks and Deliveries*. #### NEWGATE'AND LEADENHALL MARKETS.

NEWGATE 'AND LEADENHALL MARKETS. MONDAY, Jan. 29.—Very large supplies of Scotch and country-killed meat have been received up to our markets since Monday last, viz., 410 carcasses of beef, 1,800 ditto of mutton, 600 ditto of veal, and 6,400 carcasses of pork. With meat slaughtered in the metropolis we have been but moderately supplied. Veal has sold freely at an advance in the quotations of quite 4d per 8 los. All other kinds of meat have met a very dull in-quiry, at barely stationary prices, at which clearances have not been effected. About 600 carcasses of foreign meat have appeared on sale. FRIDAY, Feb. 2.—These markets were dull, on the following terms :— *At per stone by the carcase*.

#### BOROUGH HOP MARKET.

MONDAY, Jan. 29. --We have nothing to report in alteration of last week's statement. Trade continues heavy at the quotations then noticed. FaiDAY, Feb. 2.-Although our market is rather scantily supplied with the best new hops in pockets, the demand for them has become heavy, and last week's quota-tions are with difficulty supported.

#### HAY MARKETS .- THURSDAY.

REGENT'S PARK.-Fine upland meadow and Type grass hay 72s to 74s, inferior ditto 50s to 60s; superior clover 88s to 90s, inferior ditto 68s to 80s; straw 23s to 30s per load of 36 trusses.

PORTMAR.-Old meadow hay 63s to 72s, useful ditto 50s to 60s, fine upland and erass ditto 70s to 76s, old clover ditto 84s to 95s, wheat straw 26s to 30s per load of

i trusses. Smilly Willow - Fine upland meadow and rye grass hay 70s to 73s, inferior ditto is to 60s; superior clover 90s to 93s, inferior ditto 68s to 80s; straw 23s to 29s

is to 60%; superior covers, r load of 36 strusses. NEW HUNGERFORD.-Fine upland meadow and rye grass hay 70s to 73s, inferior NEW HUNGERFORD.-Fine upland meadow and rye grass hay 70s to 73s, inferior tto 48s to 60s; superior clover 90s to 93s, inferior ditto 68s to 80s; straw 22s to 29

per luad of 36 trusses. WHITECHAPEL.-The market to-day was well supplied, but trade continued dull. Beet old meadow hay from 66s to 65s, inferior ditto 50s to 55s; new hay 50s to 60s, best old clover 90s to 100s, inferior ditto 0s to 0s; new clover 40s to 80s; straw 20s

#### FOREIGN MARKETS.

#### AMSTERDAM, JAN. 29.

AMSTERDAM, JAN. 29. Coffee remains very firm, without much businesshowever. Sugar (Raw)— The trade was confined to the sales of a few small lots Surinam. Sugar (Refined) – There was less doing last week, and former quotations were difficult to obtain. Indigo—About 90 chests and boxes Java were taken for export at full prices. Cochineal—Small lots changed hands at very full rates. Dyewoods—No transaction of any moment to report. Madders—Several lots were taken for export. Tea—364 chests Pecce have found purchasers: in other descriptions nothing is going on. Cotton well maintained ; about 400 bales North Amer.can and 50 bales Surinam found ready buyers at an advance. Metals—In the beginning of the week 100 slabs Banca tin were sold at 52f, afterwards 200 slabs fetched 53f, but holders keep at 55f. Rice —There was agood demand for spices, particularly for cloves, which fetched sold at 52f, afterwards 200 slabs fetched 53f, but holders keep at 55f. Rice —There was agood demand for spices, particularly for cloves, which fetched higher prices. Oils—Of all descriptions our market is badly provided, prin-cipally of Southsea whale, which remains well maintained, owing to the better accounts about the article from New York. There was a good deal of business in anchovies at advancing prices. Hemp—Since our former report St Petersburg clean was taken at 62f; half clean at 50gf; small lots Riga Polish clean brought 65f. Seeds—Rape for direct delivery and for the Spring 3f, and for the Autumn 6f lower. New Riga now fetched 15f per barrel. Corn—Business was of little importance, wheat found only buyers for home use. Barley remains the same. Nothing was done in oats. Buck-wheat without much doing.

PETERSBURG, JAN. 13. PETERSBURG, JAN. 13. Corn continues unnoticed for export. Flax—The brothers Ardamatsky and Koroleff have commenced their contract sales by 300 tons (some reports say more), 12, 9 and 6 heads to b. ro. 91, 81 and 71 money, which prices they now refuse. Other dealers have sold 150 tons 9 and 6 heads on con-tract at 78 and 66 money; and one, not a favourite, has accepted b. ro. 75 and 65 for 50 tons of these two qualities. Of Tow 60 tons have been con-tracted for at b. ro. 60 money, and of Codilla 100 tons at b. ro. 40 money. Hemp—A good deal has been doing both on the spot, and with 10 down on contract, and it is said to a large extent. There are sellers of clean on con-tract at b. ro. 90, and some at 89 with 10 down and at b. ro. 85 and 84 money. The certainty of a very short supply for 1850 makes the Russians firm and reluctant sellers. Linsced—1,000 chetverts Rjeff have been taken on contract at b. ro. 21 half, the money down. Tallow—The principal busi-ness consists of purchases for August delivery by Russians from exporters, but principally from capitalists, who re-purchase with all the money down, there are a supported and the support of the down and show the spot terms the row of the down on the spot terms the row of the down the spot terms the row of the down and be the money down, there are consists of purchases for August delivery by Russians from exporters, but principally from capitalists, who re-purchase with all the money down,

on contract at b. ro. 21 half, the money down. Tallow—The principal busi-ness consists of purchases for August delivery by Russians from exporters, but principally from capitalists, who re-purchase with all the money down, thus making an interest operation of it; the price with 10 down has been 124 and for money in one instance 114, but generally 115 and 116, and for May and June delivery 120. Sugars have been in extensive demand, and White Havannahs have advanced to b. ro. 30 paid. Latest accounts have brought the following prices :— Sr PERERSBURG, Jan. 20.—Corn continues unnoticed by the export houses. Flax—Nothing done; one of the minor dealers would accept b. ro. 78 and 68 money on contract for 9 and 6 heads, and some Codilla might be had at b. ro. 40 money. Hemp—Nothing appears to have been done in it this week, and it seems rather slacker on contract, especially outshot and half clean. Linseed—1;500 chetverts 'Rjeff deliverable in May and June have been contracted for at b. ro. 21 half the money down. Tallow on contract has been in good demand this week, and prices have rather stiffened in con-sequence: 121 and some say even b. ro. 1 to 2 more is offered money for May and June delivery, and 116 for August, for the former 129 and 130 with 10 down are offered, and for the latter 125. As usual a portion of the busin es has been purchases for cash, and re-sales with hand-money as a discount operation, but several buyers outright for export are also said to be in the market. The carriage of imports inland being cheap at present has led to an improved demand for logwood and some other bulky articles, without however materially raising prices.

NEW YORK, JAN. 12. Money was easy, and loans on call were made at 5 to 6 per cent per annum; Treasury Sixes were quoted at 108; United States Sixes, 1071; ditto Fives, 992. Exchange on Ergland, 85 to 9, closing heavy. Corrons.—The sales are 2.300 bales at firm prices—Upland and Florida good ordinary, 65; middling to good middling, 65 to 7; middling fair to fair, 7 to 73; fully fair to good fair, 75 to 74. BREAD-STUFFS.—The excessive cold months.

BREAD-STUFFS .- The excessive cold weather had caused a slight advance in DERAD-STUPS. -- The excessive cold weather had caused a slight advance in flour. Genesse wis quoted at 6 dol to 6 dol 12½c; extra ditto, 6½ dol to 7 dol 25c; Southern, 5 dol 56c to 5 dol 62½c. CORN-MEAL.--3 dol 12c. for Brandywine. The supply of grain is light.

Sales of prime Southern corn here made at 62c. PROVISIONS.—Pork was firm, with sales of mess at 16 dol to 16 dol 50c, and prime at 14 dol 25c to 15 dol. Beef in good demand at 17 dol 25c for prime

CHEESE .--6 to 61.

LARD. -71 to 73. FREIGHTS.-Cotton to Liverpool; 1d freely offered, and 5-16ths to 1d asked.

EPITOME OF RAILWAY NEWS.

EAST LANCASHIRE.— The half-yearly meeting of the shareholders in this railway was held at the station at Bury on Wednesday. John Grundy, Esq., the chairman of the board of directors, presided. The accounts showed that on capital account the entire receipts of the com-pany amounted to 2,722,774l 138 6d, and the expenditure to 2,628,519l 18 1d, leaving a balance in hand of 95,255l 128 5d. The revenue accounts showed that the receipts for the half-year amounted to 39,594l 168 4jd, and the expen-diture to 19,609l 88 9d, leaving a balance of profit of 19,985l 78 7½d. A dividend at the rate of five per cent per annum be paid upon the quarter shares of the company, and a dividend of six per cent upon the preference quarter shares were agreed to. A memorial to parliament was adopted complaining of the unfair principle

A memorial to parliament was adopted complaining of the unfair principle upon which railways are rated. On the East Lancashire line they paid  $12\frac{1}{2}$  per cent, and  $3\frac{1}{2}$  per cent income tax, besides the working expenses of the line, which amounted to forty per cent. A motion by Mr Greig, that no trains be allowed to run on a Sunday, was negatived.

negatived.

The retiring directors were re-elected, after which the meeting resolved itself into an extraordinary meeting, to consider the provisions of a bill intended to be submitted to parliament, to amend the existing acts of the company.

#### RAILWAY SHARE MARKET.

#### LONDON

MONDAY, Jan. 29.—There was a general fall in railway shares, quotations being in some cases as much as 2*l* and 3*l* lower than on Saturday. The heavy, priced securities were chiefly in disfavour, and the market altogether closed with a depresentee.

priced securities were chieny in distavour, and the market altogether closed with a depressed appearance. TUESDAY, Jan. 30.—The market for railway shares was firmer this afternoon and prices generally showed a tendency to improve. WEDNESDAY, Jan. 31.—A marked alteration has occurred in the appearance of railway shares, business in this department having been active throughot the

day, at a considerable advance in price. ERIDAY, Feb. 2.—The share mprket was very flat this morning, but recovered

later in the day. THURSDAY, Feb. 1.—The railway market was much less buoyant than yester-day, the most favourite shares closing at a sensible decline on the prices then recorded

RAILWAY SHARES. - There was a good demand for shares at Messrs Lamond and Co.'s sale on Wednesday last. The following are some of the prices ob-tained :- 20 Great Northern, 191 paid, 91 128; 20 London and Blackwall, 181 68 8d paid, 51; 20 Eastern Counties 61 per cent, 101 paid, 111 158; 10 Eastern Counties, 201 paid, 111 158; 20 London and Brighton, 61 per cent pref, 51 paid, 61 28 6d; 10 Eastern Counties, 201 paid, 111 148.

51 paid, 61 28 6d; 10 Eastern Counties, 201 paid, 116 145. PUBLIC HEALTH ACT — Upwards of 90 towns and places have petitioned the General Board of Health to send down a Superintending Inspector to make pub-lic inquiry, with the view to the application of the Public Health Act. STATISTICS OF POOR-RATES, &c.—From a parliamentary blue-book, just published, it appears that the gross total annual value of the real property rated to the poor-rates for the year ended 25th of March, 1847, in England and Wales, amounted to 67,320,587l, that the expenditure for the relief and main-tenance of the poor during the said year amounted to 5,298,785l, equivalent to a rate on the annual value of 1s 7d in the pound; that is to say, of 1s 6<sup>2</sup>/<sub>3</sub>d in England, and 1s 11<sup>2</sup>/<sub>3</sub>d in Wales. The highest rate levied was in the county of Buckingham (2s 4<sup>1</sup>/<sub>3</sub>d), and the lowest in the county of Derby (1s 0<sup>2</sup>/<sub>3</sub>d). In Middlesex the rate was 1s 4<sup>1</sup>/<sub>4</sub>d on a real property of 7,584,668l. PROCRESS OF RALLWAY TRAFFIC.—The traffic returns of railways in the United Kingdom amounted in the year 1842 to 4,400,000l, miles open 1,530; in 1843, to 4,550,000l, miles open 2,050; in 1844, to 5,611,000l, miles open 1,780; in 1847, to 8,976,000l, miles open 4,420. The total sum expended on the railways to which these returns refer amounted in July 1848, to 131,000,000l; The average receipts per mile per annum were; in 1842, 3,120l; in 1843, 3,080l; in 1844, 3,380l; in 1845, 3,470l; in 1846, 3,300l; in 1847, 2,870l; and in 1848, 2,530l; showing a decrease, which partly arises from the depression in trade and from the great extent of new railways opened during the past two years.

E A S T E R N A R C H I P E L A G O COMPANY. Incorporated by Royal Charter. John Macgregor, e.g. M.P. (late Secretary to the Board of Trade), Chairman. Bankers. Messrs Glyn, Hallifax, Mills, and Co., London. The objects of this Company are, to carry on mining, agricultural, and trading operations, in the Eastern Ar-chipelago, and the acquiring and disposing of land in the Island of Labuan and the parts adjacent (Borneo), a re-gion abounding in mineral wealth, most fertile in all the valuable tropical productions, and very happily situated for the purposes of commerce. Applications for detailed Prospectuses, and for the re-maining Shares, may be addressed to Mesers Carden and Whitehead, No 2 Royal Exchange Buildings; Messrs Gledstanes and Co., No 3 White Lion court, Cornbill; Mesers Pritchard and Dale, Liverpool; A Krauss, Esq., Manchester; Mesers T. F. Dickinson and Co., Newcas-tie-on-Tyne; William Bell, Esq., and Messrs. J. Wilson Fillans and Co., Ediburgh, B.J. Wilson, Esq., Dublin; ar to Mr Woolley, Secretary, No 1 Adam street, Adelphi.

THE WOOLLEN TRADE. - To be THE WOOLLEN TRADE. — To be DISPOSED OF, on reasonable terms, a WHOLE-LSAE and RETAIL WOOLLEN DRAPERY BUSI-NESS, which is situated in the most central and best locality in the first commercial town in Great Britain, except London. It has been carried on successfully for eventeen years, having been opened in March, 1832. The present proprietor's sole reason for wishing to retiro is, that having preak opened in March, 1832. The present proprietor's sole reason for wishing to retiro is, that having been opened in March, 1832. The present proprietor's sole reason for wishing to retiro bat could, in two months, be reduced to £5000 or £6000. The Advertiser cannot better convey an idea of the pro-gress and extent of the business than by giving here the amount of the yearly returns since the commencement. The receipts were (omitting the shillings and pence), in 1833, £16,226; 1838, £20,079; 1839, £27,406; 1840, 27,685; 1841, £26,389; 1842, £25,267; 1843, £28,400; 1844, £30,718; 1845, \$39,719; 1846, £40,509; 1847, £30,376; 1848, £30,293. The Advertiser would not ob-ject to allow a portion of the Capital to remain on interest, and to be paid by instalmenta, provided good security was given. Further particulars may be obtained from Messrs Stan

given. Further particulars may be obtained from Messrs Stan-ton and Sons, Stroud; Messrs D. and J. Cooper, Leeds; Messrs Starkey Brothers, Huddersfield; Mr J. G. Stra-chan, Basinghall-street, London; or Mr Wales, at the Lyceum, Bold-street, Liverpool.

Lyceum, Bold-street, Liverpool.

W. E. Washbourne's, Manufactory and Warchouses

## THE ECONOMIST.

DAKIN'S ROYAL PATENT COFFEE. -DAKIN and CO., of Number One St Paul's chyard, patentees of the improved principle and inery for roasting coffee in silver, and for preserv-ducing the process from the sulphurious and noxichurchyard, patentees of the millerer, and for preserv-ing it during the process from the sulphurious and noxi-ous vapour of the fire, have learned with much regret that it is the intention of the principals of some esta-blishments to pack and sell their iron-roasted coffee in glass bottles on a similar principle to that adopted by Dakin and Co. for the supplying of their Reyal Patent Coffee, roasted in silver cylinders : Dakin and Co. re-spectfully beg the a tention of the public to the fact that their name and the contents of the bottles supplied by them are raised on the glass, and that the bottles are corked down air tight and sealed with the royal arms ; in addition to which are raised on the seal the words, " Dakin's Royal Patent Coffee," and the price of the whole, namely, the coffee and bottles, as "28 64," " 3s," " 3s 6d," " 4s," meaning that the price of the two pounds of coffee packed in a bottle, and the bottle in-cluded, is 2s 6d, 3s, 3s 6d, or 4s, as the quality may be — DAKIN and CO., Patentees, Number One St Pant's churchyard. churchyard.

churchyard. SASSAFRAS CHOCOLATE for INVALIDS.—Dr DE LA MOTTE'S Nutritive, Health-restoring AROMATIC CHOCOLATE, prepared from the Nuts of the Sassafras Tree, and sold by the Patentee, 12 Southampton street, Strand, and also by Chemists. This Chocolate contains the peculiar virtues of the Sassafras Root, which has long been held in great estimation for its purifying and alterative properties. The aromatic quality (which is very grateful to the sto-mach) most invalids require for breakfast and evening repast, to promote digestion : and to a deficiency of this property in the customary breakfast and supper, may in a great measure be attributed the frequency of cases of indigestion, generally termed billous. It has been found bighly beneficial in correcting the state of the digestive organs, &c., from whence arise many diseases, such as eruptions of the skin, gout, theumatism, and scrotula. In cases of debility of the siomach, and the sluggish state of the liver and intestines, occasioning flatulence, costive-mes, &c., and in spasmodic asthma, it is much recom-mended.

THE PERCHA THE GUTTA PERCHA ESTAULISHMENT, 98 NEW BOND STREET. Now ready, splendid Picture Frames and Ornamental Work, Inkstands, Dessert and Card Plates, Buckets, Bowls, Riding and Driving Whips; Cricket, Tennis, Racket, and Golf Balls, acknowledged to be better than any other descriptions; Medallions; various Devices; many other Articles, b.th useful and ornamental. Tub-ing for Garden and other purposes will be found superior to any now in use. GUTTA

The Cart Harness, Headstalls, Tracks, &c., are worthy of particular attention, warranted to be as durable as leather, at much less expense. It is easily repaired, and

leafher, at much less expense. It is easily repaired, and requires no oiling. The Boot Department is carried on as usual, under the superintendence of first rate artists. All Boots are war-ranted to be impervious to wet, and, it may be remarked, keep your feet dry. Even the most prejudiced admit their superiority as to durability, ease, and comfort. We need oury refer to those who wear them to prove this as-sertion. Ladies and Gentlemen's Boots and Shoes, Clogs and Goloshes, and Soles. Mill and Leather Bands of every description. To the N-ryous the Gutta Percha Noiseless Curtain Rings are with confidence recom-mended, instead of the old brass ones now in use.-Post-office Orders payable to ALEXANDER THORN, 58 NEW BOND STREET.

K EATING'S COUGH LOZENGES. KEATING'S COUGH LOZENGES.— Under Patronage of Royalty and the Authority of the Faculty.—A certain remedy for disorders of the Pulmonary Organs—in difficulty of breathing—in re-dundancy of phlegm—in lincipient consumption (of which cough is the most po itive indication) they are of uner-ring efficacy. In asthma, and in winter cough, they have avere been known to fail. Prepared and sold to boxes, Is 1jd, and tins, 25 9d, 4s of and 105 6d each, by THOMAS KEATING, Chemist, &c., No. 79 St Pau's Churchyard, London. MORTANT FERTIMONIAL Cory of a Letter from "Colonel Hawker," (the well-known Author on "Guns and Shooting." Longparish House, near Whitchurch, Hants, October 21, 1846. SIR.—I caunot resist informing you of the extraordi-mary effect that I have experienced by taking only a few of your Lozenges. I had a cough for several weeks, that defied all that had been prescribed for me: and yet I got completely rid of it by taking about half a small box of your Lozenges, which I find are the ouly ones that re-lieve the cough without deranging the stomach or diges-tive organs.—I am, Sir, your humble servant. P. HAWKER. To Mr Keating, 79 St Paul's Churchyard.
